5936 (Lord Faber) Do not forget that the price of gold in the London market is never below 77s 9d. That is the standard at which the Bank of England has got to take it. Therefore, Sir Shapurji is right there, because you cannot get less than a certain price for sovereigns?—I understood Sir Shapurji's question to be whether it was possible to import gold into India in any cheaper form than in the form of sovereigns and I say that it depends upon the quality of the gold bar that is imported. It would not, of course, pay to import polished gold bars. If the rough gold bar contains a larger percentage of alloy than a sovereign, then it might be cheaper to import such gold bars but if the gold bars contain metal of the same fineness as the sovereign, then it is usually cheaper to import sovereigns than to import the gold in any other form

5937 (Sir Shapurji Broacha) Let me say that you are absolutely wrong, commercially?—I do not think so

5938 (Lord Faber) The price of bar gold varies in the London market, but the price of sovereigns never varies?—I take that from you

5939 (Sir Shapurji Broacha) You say in para graph 5 (a) of Part II of Appendix XXI (page 555) that no Council drafts should be sold under 1s 4½d., but now you have modified that and you are ready to give a grace to the Secretary of State to sell up to about 1s 4¼d.?—That passage means that he ought not to have sold at less than 1s 4½d. in 1898-9. That is what that paragraph refers to. You will see it has reference to the previous paragraph stating the policy which was followed in 1898

5940 It does not refer to subsequent times, you say?—No

5941 Can he sell now then, at any rate he likes?—Yes, but I think 1s 4½d. is a suitable rate

5942 Is he to be bound to your dictum of three years ago when you said it should be 1s 4d.?—The 1s 4½d. referred to the circumstances in those days

5943 You know you wrote letters to the papers including the "Economist," stating that the Secretary of State should not sell over 1s 4d. and must sell to all comers? That is what you advised the Secretary of State to do? Supposing he had done that then, would he be pilloried for not doing so now?—My present recommendation is that the rate should be 1s 4¼d.

5944 You have changed your opinion, then, in the last three years?—Yes, that is different to what I suggested five or six years ago

5945 No, three years ago?—I am not quite sure about that

5946 In July 1910, you sent a letter to the "Economist," when the Indian papers and the Indian chambers would pay no heed to your suggestion?—It is quite possible

5947 So you have changed your opinion now?—The rate that I now recommend is 1s 4¼d.

5948 We cannot both do what you recommend at one time, and what you recommend at another time?—Circumstances change

5949 So I say, and yet you ask us to follow the report of the Fowler Committee in its entirety?—Yes

5950 Suppose they are able to bring gold from Australia or from Egypt where they can get it to day at 1s 4½d. I suppose you have read in the papers that the Government has been receiving gold from Egypt?—Sometimes

5951 Is now?—I do not know what is happening at this moment. Do you say that gold is coming from Egypt to London?

5952 Yes, that is the principal country where gold is coming from. It means that gold could be sent to India at 1s 4¼d.?—Quite possibly

11 July 1913]

The Hon. MONTAGU DE P. WEBB, C. I. E.

[Continued.]

5953 Suppose gold is coming from Australia, Egypt, and other places, on the basis of 1s 4½d, and rupees are wanted, what should the Secretary of State do?—If the Secretary of State in those circumstances is short of funds, it would be necessary for him to reduce the rate, or to ship sovereigns home from India

5954 And lose ½th?—He would have to adjust matters

5955 He would have to do that in order to follow out your policy of making a profit?—In order to follow out my policy of getting the best possible terms for India

5956 You have laid down the dictum that the Secretary of State should not have more money than three millions, and that he should not sell under 1s 4½d, the Secretary of State would require about eight millions between April and November, would he not?—Quite possibly

5957 What is he to do for that extra five millions—he will not have any more money left to disburse?—I think I have already suggested that where the Secretary of State is unable to sell his drafts it may conceivably be necessary to ship home gold from India, or if his exchange be fixed at a rate which precludes him from selling drafts, it might be necessary to consider the rate

5958 The Secretary of State is not able to sell in the meantime between April and October at the price you fix for him?—Then let him ship home sovereigns from India

5959 If there are any?—Certainly

5960 But if there are not any?—If there are not any sovereigns in India, exchange will collapse

5961 Then your remedy is that the stability of exchange will collapse in circumstances like that?—No, I have not suggested any collapse

5962 Do you know that for such times Russia leaves 60 millions in Europe in charge practically of France and England?—You gave me that information this morning

5963 Having regard to possible contingencies should not the Secretary of State have a year's drawings in advance?—I do not think it is in the least necessary

5964 Yours is a hand-to-mouth policy. Where has the Fowler Committee fixed the exchange at 1s 4½d, is there any paragraph in which it has fixed it?—I do not think so

5965 Have you any support for these opinions of yours in India?—Yes

5966 Where?—In the Bombay Chamber of Commerce

5967 The Bombay Chamber of Commerce are not supporting you, are they?—In several respects

5968 Not in any one of these respects that I have been asking you about, nor the Calcutta Chamber of Commerce?—I do not know exactly to what particular point you are referring, but in several respects the Bombay Chamber of Commerce take the same view as the Karachi Chamber of Commerce and the Upper India Chamber of Commerce, in fact, all the Indian Chambers of Commerce, except Bengal and Madras, take the same view as the Karachi Chamber of Commerce on several of the questions which this Commission is enquiring into

5969 (Sir Robert Chalmers) Have you got any support outside Karachi for your fixed rate?—I do not think that question has been widely investigated, but some years ago when I personally suggested a fixed rate it met with no support generally

5970 (Sir Shapurji Broacha.) You say in paragraph 4 of Part II of Appendix XXI (page 555) that according to Professor Dunning MacLeod, a gold standard without a gold currency is unworkable?—That was Professor Dunning MacLeod's opinion.

5971 That has not been supported by the Fowler Committee?—The Fowler Committee, that is, the Indian Currency Committee, looked forward to a gold currency as an essential part of the scheme.

5972 I think there is no gold currency in any country at all. You put down the Indians for savages for not having a gold currency, but where is there a

gold currency—in England?—I think there is a gold currency in England.

5973 According to you they have not increased their gold reserve by a million in the last 10 years?—The Bank of England has not increased its reserve very much in the last 10 years

5974 That is not a very good example to follow, is it?—I think it is not a good example for India to follow

5975 Beyond England is there any country where there is a gold currency?—Yes

5976 Where is it?—There is a gold currency in Australia, and in Canada and in South Africa

5977 No, gold is not used in Canada, and South Africa does not want a mint?—I do not know what the authority for that assertion is

5978 Do you know that last December the people of Germany could not get gold under a premium of 1 per cent?—I do not know what happened last December

5979 Suppose there is a gold currency and Government is not able to supply against rupees, what then? If you have a gold currency that means you have to give gold against all rupees tendered, does it not?—No

5980 What is it then?—There is no connection between a gold currency and Government supplying gold for silver. I do not think the Government supplies gold for silver in any part of the world

5981 Allow me to differ from you. A gold currency means that you have to give gold against all rupees tendered?—I do not attach that meaning to it myself

5982 What meaning do you attach to it?—By a gold currency I mean gold used for the purpose of trade as between buyers and sellers

5983 That is not a gold currency, a gold currency means that you have to give sovereigns against all rupees tendered?—I have never heard that view of the question put forward before

5984 You have cheques and other instruments in England, so that no more gold is used here than the people have in their pockets, but if the Bank of England were asked against the tender of notes to give gold, the Bank of England is bound to give gold in accordance with the Act of 1844?—I believe that to be quite correct

5985 That is the meaning of a gold currency?—I have never suggested that a gold currency should mean that the Government of India should be under an obligation to supply gold in exchange for silver

5986 If language is meant to give a meaning to words, then a gold currency means that?—I have never heard such a meaning put to it before

5987 (Sir James Begbie) You think that the sovereign is the best gold coin to use as currency in India?—Yes

5988 Would you also issue a subsidiary gold coin?—I do not think so

5989 You would only issue a 15 rupee coin?—I think so at present. If subsequent experience showed that it was desirable that a smaller coin should be coined, then I should have nothing to say against it, but to start with I think it would be wise to take the coin that is already in circulation and is known

5990 Is it not the case that 10 rupee notes are more favoured in certain districts than in others?—Yes, I believe so

5991 And the same thing may also be said of the 5-rupee notes?—Yes

5992 Do you not think it is possible in those districts where metallic currency is wanted, a 10-rupee coin might encourage the use of gold?—Yes, I think it is quite possible

5993 (Mr Gillan.) It is quite obvious from the questions that were put to you by Sir Shapurji that the term "gold currency" is one that has different meanings to different minds, but you have, I think, defined what you mean. Will you look at Part VIII, paragraph 2, of Appendix XXI (page 568)? There you speak of a piece gold currency system of the British type, that is what is in your mind?—Yes

5994 The first thing I wish to ask you about that is whether you consider that that is really in accordance

11 July 1913 ]

The Hon MONTAGU DE P WEBB, C.I.E.

[Continued.]

with the recommendations of the Fowler Committee?—  
I think so

5995 In paragraph 54 of their report they said that they looked forward "to the effective establishment in India of a gold standard and currency"?—Yes, that is so

5996 But they went on in the next paragraph to point out that "Under an effective gold standard rupees would be token coins, subsidiary to the sovereign. But existing conditions in India do not warrant the imposition of a limit on the amount for which they should constitute a legal tender, indeed, for some time to come, no such limitation can be contemplated." Then they conclude in paragraph 59 that things being as they are in India, they must be content with a system such as exists in France and the United States?—That is so

5997 How do you reconcile your present recommendation with those recommendations?—I think those recommendations were very wise when they were made. I understand them to mean that in those days when the question of introducing a gold currency was being considered, the members of the Committee did not think it possible to impose a limit on the amount for which rupees should be legal tender, but I take it that in course of time when there is plenty of gold in the country it will be possible to impose a limit on the amount of token coinage that is legal tender, and that is the direction in which I imagine India is progressing. The time will come when the gold is circulating so freely that it will be possible and desirable to impose a limit on the amount of rupees that are legal tender.

5998 Then this British type of system that you speak of is not a thing that is immediately obtainable, but it is something to look forward to in the future?—In the near future

5999 You would not, as a matter of fact, have that type of currency system until you are able to make the rupee a subsidiary coin?—I would not suggest that a limit should be imposed on the amount of rupees that are legal tender until such time as there is a more general currency of gold than at present.

6000 But you recognise that the relegation of the rupee to a subsidiary qualification is a necessary condition before this particular type of currency system which you have in your mind can be established?—Yes

6001 I am not clear that I quite understand the general grounds on which you favour a gold currency. You do not object to notes, do you?—No, provided they are based on gold.

6002 Why should it be more necessary to convert silver notes, so to speak, into gold rather than paper notes? In the case of your silver currency you have a currency which carries, at any rate, a substantial portion of its value, and you have got to provide only against the margin of difference, whereas in the case of notes you have to provide a reserve covering the whole value?—That is so.

6003 Then why should you lay particular stress on converting your metallic currency into gold?—Because I think that in the eyes of the world a gold currency commands more respect and establishes greater confidence than a silver currency.

6004 What would your proposals actually involve? I think you have already said, in reply to Sir Shapurji, that they do not involve the undertaking by Government of any obligation to give gold for silver under all conditions?—No.

6005 As regards the practical steps to be taken, Government cannot refuse, as a matter of fact, to give rupees when a demand for rupees is made?—Not at present.

6006 It cannot refuse to coin rupees in order to meet those demands?—Not at present.

6007 I understood from an answer you gave Mr Keynes that in making payments it can show a preference, as it were, for gold, but only when the payee is, so to speak, indifferent?—I think it might go a little bit further. I think Government might use a little gentle persuasion to facilitate the further use of gold. I would not go so far as to suggest that Government should force gold upon reluctant payees,

but where a payee is more or less indifferent, Government can persuade the payee to accept payment in gold, or even where the payee demands payment in silver it may be suggested to him that he can take a portion in gold and a portion in silver. I would not carry the compulsion to the extent of declining to give the payee silver.

6008 (Lord Faber) Would you do what they do in English country banks who have a currency of their own? When a customer comes to the counter and presents a cheque for 10l, the cashier if the customer says nothing, gives him two notes, and then it is for the customer to say, 'I would rather not have the notes, I will have something else,' and he gets it?—Exactly, in the same way I should give the gold, and if the public said they would rather have rupees, very well, let them have it.

6009 (Mr Gillan) But the Government should tender gold?—Yes.

6010 I take it your general position is that you look forward at some future time to the establishment of the particular kind of currency you favour, but at the moment the only recommendation you can make to Government, apart from the establishment of a gold mint, would be that they should use persuasion of the kind that you have mentioned and tender gold in making any payment they have to make?—Yes.

6011 That is the only practical point at the present moment?—Yes—that Government should encourage the use of gold as currency—not force it, but encourage it.

6012 In connection with the questions put to you about giving rupees and coining rupees, there is one question I was going to ask with regard to paragraph 4 in Part V of Appendix XXI (page 362). Incidentally there you say, "The silver coinage ought to be replenished regularly and continuously in small sums (so "as not to inflate unduly the local currency)" how is that to be managed?—If Government were to coin regularly a fixed amount, say 5,000l a week, and they found that the silver proportion of the paper currency reserve was steadily increasing every week, I should then understand that Government are providing too much token currency, and I should cease coining token currency under those circumstances. What I would suggest is that the Government should buy silver regularly every week, and continuously coin token currency to replenish the coinage, but if after, say, a year the amount coined showed that the amount of silver in the paper currency reserve was increasing unduly, I should stop that policy. I should consider in that case that the currency was being unduly inflated.

6013 Would there be any difference in the amount of rupees that actually went out into circulation?—Any difference under what circumstances?

6014 Under the practice which is at present followed by the Government of India of coining occasionally, and under the practice you recommend of coining continuously?—No, not very much difference. The only difference would be that in one case the supply of token coinage would be regular and methodical, and in the other case it is irregular and spasmodic.

6015 Do you mean in supplying the currency reserve?—In supplying token currency—in creating token currency.

6016 (Sir James Begbie) The demand for silver currency in India might be irregular and spasmodic too?—Yes.

6017 (Sir Robert Chalmers) Would not the demand be your chief guide?—If the Government do as they have at present been doing waiting, perhaps, for years until they at last decide that the time has come to coin more silver, I think that procedure is undesirable, because it enables silver speculators to force up the silver market. I think it is desirable to coin a small quantity regularly, and to keep the currency supplied.

6018 (Sir James Begbie) When would you resume the purchases of silver under your scheme?—Straggle away.

6019 Under what conditions?—A small regular amount every week.

11 July 1913]

The Hon. MONTAGU DE P WEBB, C.I.E.

[Continued.]

6020 What would be the time to begin these purchases?—At any time—to-morrow

6021 Would it happen because the silver reserve was falling?—No I should suggest that the coinage goes on regularly week by week in small quantities, attention being paid at the same time to the amount of silver in the Paper Currency Reserve

6022 (*Chairman*.) Suppose the Indian Government had been pursuing that policy when the crisis of 1907-8 came upon them, at that time the public, instead of presenting a demand for more rupees, returned rupees?—That was so

6023 Would you have stopped at that moment?—Instantly, in fact, I should have stopped before that moment, I should have stopped when I saw that the proportion of silver in the Paper Currency Reserve was mounting up

6024 You would have stopped as soon as they ceased to take rupees out, without waiting for them to bring rupees back?—Yes

6025 And you would not have begun again until they began to take rupees out?—Yes.

6026 If in the meantime an unusual number of rupees had accumulated, you would postpone your recommencement until that unusual accumulation had been worked off?—Yes, if it were large

6027 Would it have made a very great difference if they had pursued that policy?—It depends on the amount that was coined week by week

6028 It took them a long time to work off the accumulations which resulted from the crisis of 1907-8, did it not?—Yes, many years

6029 You do not suggest that in the interval between that and the time when they came again, there was any shortage of rupees, do you?—No, I do not think so

6030 Possibly then the Indian Government might say that in effect they had carried out your policy, that when the demand began again it was a very unusually large demand, and that therefore they had to buy at once, and immediately, very large sums?—Such a point of view, of course, I can understand, although I do not concur in it

6031. You think they might well have begun by small amounts?—Yes, might I give Mr Gillan the information he asked for yesterday, which I was unable then to produce? Mr Gillan asked that I should give him the periods when the cash balances of the Government of India were as low as 7 millions I find these are the dates In 1905, in the months of November and December, in 1906, in the months of November and December, in 1907, in the month of December, in 1908, in the months of November and December, and in 1909, in the months of October, November, and December On all those occasions the cash balances of the Government of India were in the neighbourhood of 7 millions to 8 millions

(*Mr Gillan*) I am sorry, Mr Webb has had unnecessary trouble, because he is looking at the balance at a different time of the year That is the time of the minimum balances in every year

6032 (*Chairman*) You suggested 7 millions as a maximum, I think?—Yes, as a working balance

6033 Which ought not to be exceeded?—If it can be avoided

6034 If the Government of India made an endeavour not to exceed that figure, or only to exceed that figure by a very small sum at one time of the year, would it not follow that it would have a very much less sum at another time of the year?—I can quite conceive it

6035 In other words are you not measuring the maximum demand on the balances of the minimum?—I do not think it is a question of the demand on the balances, it is a question of the amount of cash which Government shall keep in its till. In those months it keeps 7 millions or 8 millions in its till, and if in the other months there is an excess over that amount, it might very well be given back to the public through the agency of the banks, so that it should not be kept locked up in the Government Treasury

6036 Whenever it exceeded that sum?—Yes, it might at once, because, I argue, from the existence of these sums, that it would be possible for Government to go on at other months in the year with the same amount in their Treasury

The witness withdrew

At the India Office, Whitehall, S.W.

FOURTEENTH DAY.

Thursday, July 17, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M.P. (*Chairman*)

SIR ROBERT CHALMERS, K.C.B.  
SIR ERNEST CARLE  
SIR SHAPURJI BURJORJI BROOCHA  
SIR JAMES BEEBIE

MR ROBERT WOODBURN GILLAN, C.S.I.  
MR HENRY NEVILLE GLADSTONE  
MR JOHN MAYNARD KEYNES  
MR BASIL P. BLACKETT (*Secretary*)

The Hon MONTAGU DE P WEBB recalled and further examined.

6037 (*Chairman*.) We took you through a good deal of your memorandum last week I want now to turn in the first place to the question of the Gold Standard Reserve. May I take it that you approve of the establishment of a gold reserve?—Yes.

6038. I think you say you would prefer to call it a gold reserve rather than a Gold Standard Reserve?—Yes.

6039 What is your idea of the total which should be reached by that reserve? If you have not fixed any figure in your mind, say so?—Yes, I have fixed a

figure. In past conditions I have regarded 20 to 25 millions as being adequate, but with the establishment of a gold currency I do not think any gold reserve is necessary at all. As we approximate to the condition where gold is in circulation and in common use as currency, so do we come to a stage when no gold reserve or Gold Standard Reserve will be necessary at all, but until that stage is reached I think it ought to be in the neighbourhood of 20 to 25 millions. That is quite sufficient, I think; in fact, I think it is more than sufficient as things are at present.

17 July 1913]

The Hon. MONTAGU DE P. WEBB

[Continued

6040 You gave your opinion of the establishment of a gold currency, and the effect of it, last week, and I do not propose to raise that again to-day. I am now dealing with the condition of things which prevails as long as there is no such gold currency as you desire to see established?—Then about 25 millions would be my answer.

6041 Of that amount how much do you desire to see kept in actual gold?—I should like to see the whole of it kept in gold.

6042 I think you speak in your memorandum of keeping a portion of the securities in London?—That is as a concession to the situation in London.

6043 But you would prefer that the whole should be in gold?—Yes.

6044 Whether in London or in India?—Preferably in India.

6045 Do you not think that there would be some excess of caution in locking up so large an amount of money as 25 millions without attempting to earn interest on any portion of it?—I do not think so. I regard it as essential.

6046 Now I come to the question of where the gold should be kept. You desire to have the whole of it kept in India, or as much of it as you can persuade the authorities to keep there?—Yes.

6047 You say in paragraph 5 of Part IV of your memorandum (page 560) that the object of the reserve "is to provide gold in India for export if required"?—I think so, yes.

6048 Why do you so limit it—that the object of the reserve is to provide gold in India for export?—Because that appears to me to be the only and complete object of the reserve.

6049 To where would it be exported?—Probably to London.

6050 Under what circumstances?—In the event of a reversal of the balance of trade or in the event of a crisis in London. That would involve, of course, a reversal of the balance of trade.

6051 Then you do contemplate that when you have to draw upon this gold reserve the place where you would want it ultimately, if not immediately, is London?—Probably, yes.

6052 I understand that you do not think that that is a reason for keeping it in London?—I think it is altogether outside the duty of Government to go so far.

6053 A great number of witnesses have put to us that, as London will be the place where the gold will be required in the circumstances which you have fore shadowed, London is the best place to keep it. That is not your view?—That is not my view, no. My chief reason being that for many years past it has been recognised that the reserves of gold in London are slender in the extreme, if not dangerously slender, and in those circumstances I do not deem it wise to risk the currency situation in India by putting 25 millions of India's reserve in that same centre.

6054 Your real objection, as I understand, to keeping it in London is a fear that if it were in London it would be used for the convenience of London, and not for the security of the Indian exchange?—That is my main objection, yes.

6055 You hold that view even though the gold here be earmarked, as it is called, at the Bank of England?—Yes.

6056 You are of course aware—at least, I presume you would be aware—that that is not the view held by London bankers?—Yes.

6057 They consider that earmarked gold at the Bank of England is wholly outside the reserves on which they work and count for the purposes of London?—That is the ordinary practice in ordinary conditions, but in a state of crisis or panic I could not imagine for one moment that that earmarked gold would not be appropriated for urgent needs of State.

6058 In fact, you are afraid that, under the stress of such a temptation, the Chancellor of the Exchequer would raid the Secretary of State?—I think he would be sure to.

6059 And in order to guard against that, you would keep the gold in India?—I think it would be an additional source of strength to both sides.

6060 That would mean that while you were building up the reserve you would have to be remitting the gold to India, would it not?—Yes.

6061 And when you were using the reserve you would have to be remitting the gold home from India?—Yes.

6062 Paying something for passing it first in the one direction and then in the other?—Yes.

6063 But in spite of that—as some people would say—wasteful expenditure, you desire it for the reason which you have given me?—Yes.

6064 As a security that it shall be available for India?—Yes. May I add that in my belief the gold which has been earmarked in the past has, on more than one occasion, been unearmarked, if I may so use the expression, at the discretion of the Secretary of State. I believe that on more than one occasion gold has been earmarked by the Secretary of State, and then on another occasion the Secretary of State has removed that restriction and used the gold in other ways.

6065 Can you give me any instance which you have in mind which would bring before us more exactly the circumstances in which it was done?

(*Sir Robert Chalmers*) With specific reference to metallic gold?—I cannot give the dates without making reference, but I remember distinctly that gold has been earmarked for the Gold Standard Reserve, and I think for the Paper Currency Reserve as well and it has been released from that restriction at the discretion and request of the Secretary of State but without any reference, that I am aware of, to India.

6066 (*Mr. Keynes*) Are you referring to the case of 1907-8, when, to meet his own needs, the Secretary of State unearmarked a certain amount of gold?—That is one of the occasions.

6067 (*Chairman*) Was not that a way of making the gold reserve available for the very purpose for which it exists?—In 1907-8, yes.

6068 There was no objection to doing that?—There was no objection, no. I am only drawing attention to the facility with which this gold is earmarked and the restriction taken away again as required by the Secretary of State. It is my belief that in a grave national emergency the Secretary of State would be persuaded to take similar action again. That is what I meant by the Secretary of State being raided.

6069 (*Sir Robert Chalmers*) By the Secretary of State and for India's needs?—In the judgment of the Secretary of State.

6070 (*Chairman*) I think you do not criticise his judgment in the past?—I think the judgment used has been very defective in recent years, and unreliable.

6071 But do you criticise the exercise of his judgment in this particular respect?—No.

6072 You have alluded to those occasions where he unearmarked gold to show the facility with which it could be done?—Yes.

6073 But I do not understand you to say that it was improperly done or done with an improper reason?—No.

6074 Now we pass to the Paper Currency Reserve, from the opening words of Part V of your memorandum (page 561), I gather that you approve of the existing system of paper currency managed by the State?—Yes.

6075 And that you would not advocate its transfer to a central bank?—No.

6076 You object to the holding in London of gold belonging to the Paper Currency Reserve?—Yes.

6077 On what ground—on the ground that the Paper Currency Reserve is for the encashment of notes?—Yes.

6078 And that the notes will be presented in India?—Yes, and that, therefore, the metallic reserve cannot be required under any conceivable circumstances in London.

6079 The reserve held in London, I think, is held in gold?—I believe so, yes.

17 July 1913 ]

The Hon MONTAGU DE P WEBB

[Continued

6080 We have had it in evidence that the great advantage of holding that gold in London is that it provides a means of making the paper currency elastic?—Some of the Paper Currency Reserve, if I may be permitted to correct myself, is held in London in securities, or has been held in London in securities

6081 I was talking of the bullion portion We have had it in evidence that the great advantage of holding gold in London is that it provides a means of making the paper currency elastic Do you follow that?—No, not at all I am familiar with the official argument, but I cannot accept it

6082 The argument being that that is because the circulating medium can be expanded quickly against that deposit of gold in London?—Yes

6083 You do not accept that argument?—No

6084 Do you think it untrue in fact, or is your criticism that it does not support the structure which is raised upon it?—I think that the manipulation of the paper currency has been effective in the respects to which you refer, but I regard it as a very undesirable manipulation.

6085 Apart from that, the paper currency system at present is very inelastic, is it not?—I am not quite sure that I understand the question

6086 There is little power of expansion to meet a great demand in trade pressure, I mean a temporary demand I will put it in another way—the fiduciary portion of the issue is a fixed sum?—Yes

6087 Beyond that notes can only be issued against the deposit of coin or bullion?—Yes, in that sense it is inelastic

6088 Do you think that advantage would be derived by India if more elasticity could be introduced into that system?—Yes

6089 It has been suggested to us by some witnesses that the fiduciary portion of the issue, instead of being a fixed amount, might be some proportion of the whole?—Yes

6090 What do you say to that?—I think that would be a wise principle to adopt

6091 Have you any figure in your mind as to the proportion to which you think it would be safe to go?—I think that a step further forward may be made than is at present being taken I do not know exactly what proportion, but I think that we might go further forward than we have done in the past.

6092 It has been also suggested to us that for the sake of meeting the trade needs in the busy times the whole of the fiduciary portion should not be permanently invested, but that a part of it, probably a small part of it, should be left to be lent out on the market in busy times Would that commend itself to you?—Yes, I think so

6093 If that were done would you still want the Treasury balances lent out in the manner which you explained to us last week?—Yes, I think so, I think if Treasury balances are accumulated in excess of the requirements of the State the right course for the State to take is to make that money which has been collected in excess of requirements available to the public through the banks

6094 In the course of your criticisms of the present management of the Paper Currency Reserve you quote the reply of the Under Secretary in the House of Commons to Mr Gwynne, it is subsection (c) of section 3 of Part V (page 562) "Investments in sterling securities in London are better for India than investment in Government of India rupee paper because such securities are not necessarily influenced by the causes which might shake public confidence in the Indian paper currency" I think you quote that observation for the purpose of condemning it, but is it not true?—It is true in a sense, but if there were no portion of the paper currency lying in London at all it could not be invested in English securities, and there, in my opinion the argument is unsound

6095 Because there ought to be none here?—Because there ought not to be any there My other reason for quoting that is merely to show that it is in conflict with other explanations and arguments which have been used

O 19067

6096 In paragraph 7 of the same part of your memorandum (page 563), at the end, you say "Indeed, did the crisis happen to be a western crisis rather than an Indian crisis, the gold"—you are speaking of the Paper Currency Reserve gold—"would be far more valuable to India (and possibly to Great Britain) were it held in India rather than in the United Kingdom" Will you explain that to me? I do not follow your reasoning?—If the crisis happened to be a western crisis there would probably be a shortage of gold in London, and in such circumstances the shipments of gold from India to London would tend to relieve that crisis, but if India's gold was held in London the demands of India for that gold would tend to accentuate the crisis

6097 Why would India demand the gold? If the ultimate need of the gold was in India, then if it were issued in India it would not come to London?—No, if the ultimate end was India, but in a case of crisis in London there would be a demand for money in London, and that demand would show itself in a request to the public of India to remit their money to London to assist in overcoming the crisis, but if the money were in London, then the recovery would be through the agency of the Secretary of State, that is to say, the public would go to the Government of India and take over the drafts from the Secretary of State which in a crisis he might not be able to cash, but if the reserve were held in India in gold there would be no difficulty in anybody taking their metal from the treasuries and shipping it to London

6098 But is not there exactly the same amount of gold *ex hypothesi* in either case?—Yes

6099 In one case it is in the control of the Government of India?—Yes

6100 And in the other case it is in the control of the Secretary of State in London?—Yes

6101 In either case it is wanted by India to settle an adverse balance of trade with London?—Yes

6102 Except in point of time, what difference is there between issuing from the treasuries in India and issuing the gold from the Bank of England in London?—The difference is this, that if the paper currency reserve is held in London, probably the whole of it would not be in gold, but largely in securities The portion that was in gold would be liable to be appropriated for other purposes in a severe crisis, whereas if the gold were held in India the gold would be obtainable for the public and would not be affected by the crisis taking place in London, so that the public could ship their gold home, and thereby re-establish confidence in London.

6103 I think it really comes to this, that you have confidence in the management of the Government of India if the gold is under their control, but you have not the same confidence in the management of the Secretary of State and the Council in London?—That is what it comes to

6104 Generally speaking, as regards these two reserves I think a considerable part of your criticism is directed to the interchange which has been made between them You object, for instance, to holding any silver in the gold reserve?—Yes

6105 You object to holding any gold in the silver reserve?—I do not object to that, no

6106 I beg your pardon, I misunderstood you, then?—I object to holding silver in the gold reserve, but I do not object to sovereigns being held in the Paper Currency Reserve I merely drew attention to the fact that a reserve which is accumulated for the purpose of paying out rupees is held in gold, and a reserve which is accumulated with the special object of paying out gold is held in silver, and I reflect on this management and I call it bad management.

6107 If the two reserves were amalgamated, and one reserve made to serve both purposes would that meet your criticism on that point?—I do not know how the two reserves could be amalgamated without an entire abandonment of the present machinery I have already pointed out that if there is plenty of gold in circulation, and plenty of gold in the Paper Currency Reserve, there would be no necessity for a second reserve (i.e., Gold Standard Reserve) at all.

17 July 1913 ]

The Hon MONTAGU DE P WEBB

[Continued

6108 I turn now to Part VI (page 563) I propose to deal very briefly with the remaining portion of your memorandum, which is in fact largely a summary of the preceding parts, and we have therefore dealt with it already?—Yes

6109 In Part VI you quote the opinion of the Indian Currency Committee, in recommending open gold mints and a gold currency and standard for India, that "with the growth of confidence in a stable exchange, capital will be encouraged to flow freely into India for the further development of her great natural resources"\* Do I understand you to imply that that hope has not been realised?—It has not been fully realised I can certainly say from my own personal knowledge that many people at present are afraid to invest in India because they think there is some uncertainty about the stability of the rupee

6110 That is what I was going to put to you, that it was in fact upon the growth of confidence in a stable exchange that the Currency Committee relied to produce that result?—Yes

6111 Only in so far as the stable exchange is obtained or supported by the opening of mints to gold and by a gold currency would they affect the proposition at all?—Yes

6112 As regards the financial organisation of the India Office, am I right in understanding that you suggest a committee of three in place of the present committee?—Yes

6113 Your principal objection, I understand, to the present committee is, perhaps I may say, the results which have followed from its management?—That is certainly very largely my objection, the results show that the committee is not wisely constituted, I think

6114 You dislike the fruit, and you judge the tree by the fruit?—Yes

6115 Your main objection, as I understand, to its composition is that London is too much represented and India too little represented?—Yes

6116 Your proposition is that there should be one London banker, one Indian banker, and one Anglo-Indian administrator?—Yes

6117 You speak of an Anglo-Indian banker It must be somebody who has retired, I suppose, from Anglo-Indian banking?—I presume so

6118 He must be somebody, at any rate, who is resident in London?—Yes

6119 He might be a London representative of one of the Indian banks?—Yes

6120 You have not, I suppose, and you could not have, any detailed knowledge of the working of the present organisation, you can only judge it, and do only judge it, by its results?—That is all

6121 There is only one further question I want to ask you I do not think that we have had your opinion as to whether it is desirable that some State or Central bank should be established in India?—So far as the suggestions which have appeared in the Press may convey a correct idea of the proposed State bank, I do not see that the advantages outweigh the disadvantages

6122 (Sir Robert Chalmers) As regards the Gold Standard Reserve, do I gather aright that you take some exception to it because it is entirely at the discretion of the Government, without any statutory sanction? Would you like to see a statutory sanction for the utilisation and management and control of the Gold Standard Reserve?—Yes

6123 You would be guided in that to some extent by the fact that in the case of the Paper Currency Reserve there is always, of course, statutory sanction?—Yes

6124 And statutory determination of the methods by which it should be conducted?—Yes

6125 I do not know whether you would be in a position to express any opinion on a proposition which I have heard discussed, that it might be possible to blend those two reserves?—Yes, it might be possible

6126 You are not in a position to express any thought out view on that matter?—I have never before heard it suggested that they should be blended

6127 Coming to the gold reserve in itself, suppose there were no metallic gold in the reserve in your millennial scheme, but a gold currency ample enough to meet your requirements, what do you think would happen if the balance of trade became adverse?—It would be necessary to ship gold from India to Europe

6128 The gold would be, in the main, in the hands of private individuals?—Yes

6129 You have great experience of human nature, particularly native human nature, in India Do you think you would get gold to come out? Do you not think the tendency might be to hoard it instead of helping bullion export?—I do not think there would be the slightest difficulty if gold were circulating freely

6130 Is that your deliberate opinion?—Yes

6131 Have you anything to support that in history, so far as there exists history on these matters in India?—There is no history in India that will help us in the matter, because we have not had a gold currency of large magnitude before

6132 Would it be a fair statement of history, in your opinion, to say that metal or coin has come out from hoards only under stress of famine in past times?—That has happened in the past, certainly I understand the question to be whether that is the only occasion upon which metal has come out from hoards

6133 So far as there is any history, is that your opinion?—Yes, that is approximately correct, I should say

6134 Do you feel really sufficiently safe, in your opinion, to trust to any currency distributed amongst the population as your ultimate reserve to support exchange? Do you feel safe enough to take this gigantic step of having no metallic gold in the reserve, and trust exclusively to a diffused currency of gold coins? Do you feel certain enough in that to take so big a step?—No, I am trusting to the gold in the Paper Currency Reserve largely There will be 30 millions or 40 millions in the Paper Currency Reserve, and it is from that reserve that the banks would draw the gold for export

6135 I am relieved to find that I had not gathered your opinion rightly How has the gold in question got into the Paper Currency Reserve under the circumstances you have in mind?—It usually finds its way by direct importation of gold by the public

6136 In the crisis that we are contemplating would not there be a tendency to present notes and to require encashment in gold?—Yes

6137 And that gold so drawn by encashment of notes in your judgment would be used for export?—That is the only purpose for which I can conceive it would be withdrawn from the Paper Currency Reserve

6138 That is not quite so much in my mind The point is whether the person who has drawn the gold would, as a matter of fact, export it Do you feel happy on that?—I feel perfectly happy

6139 In spite of the fact that one knows that of the previous 4½ millions withdrawn only about a quarter of a million came to England to support exchange?—That was because Government themselves by their own actions made it more economical for the public to hoard the gold than to give it to the banks to export

6140 That is your view?—Yes

6141 Coming to the Paper Currency Reserve, you are prepared to see that utilised for trade advances on gilt edged securities to Presidency banks?—A small proportion of it, yes

6142 Part of the fiduciary portion of that Paper Currency Reserve you would see utilised in that form?—Yes

6143 And you would regard that as adding elasticity to the issue and making it, perhaps you would feel, rather more scientific?—My object would be to make it a little more elastic for meeting seasonal requirements for currency

6144 As to the amount of that, would you give as much as would be required for trade at the time of seasonal pressure?—I think the first consideration would have to be the security of the paper currency

\* C 4380, paragraph 70 page 21

17 July 1913 ]

The Hon. MONTAGU DE P. WEBB

[Continued

6145 But assuming security, assuming that you have got the best floaters, if I may use the term, as the basis of the advance—assuming that you have got all the security needed—you would be prepared within the fiduciary portion of the Paper Currency Reserve to lend out what is required for seasonal pressure to the market? I am only asking your opinion?—I am not prepared to say “as much as is required,” but I should lend out substantial sums with the object of aiding the market

6146 Do you think much would be required?—Yes

6147 Are you in a position to suggest from your experience what might be taken as the amount which in a fairly busy year might be required by trade to supplement the existing resources available?—I am not prepared to say off hand without going into the matter more carefully

6148 Still, India is not a very big market, and a little shortage makes a very great difference, of course?—Yes

6149 Would you be disposed to imagine that it would be a large sum which would be necessary to make the difference between stringency and relative ease?—No, I should think comparatively a small sum, possibly a crore or two crores of rupees

6150 You would be prepared to advance that sort of sum from the Paper Currency Reserve?—Yes, if it could be done without jeopardising the currency

6151 On perfectly adequate security?—Yes

6152 And to the extent to which you would do it from the Paper Currency Reserve you would not need to do it from Treasury balances?—Presumably not. It is immaterial from the point of view of trade, where the money comes from. It is a matter of Government convenience

6153 There would be at any rate that element of *prima facie* propriety, that the Paper Currency Reserve would not want its fiduciary portion back at a given moment in the same way that the Government, which, after all, is a trader, requires its cash brought in for the purpose of making its payments?—Yes, quite so

6154 To that extent there would be an advantage, in your judgment, in the utilisation of the Paper Currency Reserve rather than the Treasury balances?—Yes

6155 (Sir Ernest Cable) I think you said that when the Gold Standard Reserve had reached a sum of 25 millions you would regard that as a safe figure?—Yes, in the present circumstances

6156 Then, when that sum had been reached, I presume you would agree that the profits on the silver coinage might then safely be utilized in the general expenditure of the country on productive public works?—Yes

6157 The whole tendency of your evidence, of course is in favour of a gold currency?—Yes

6158 And so far as that would be successful, those profits would be diminished?—Yes

6159 You would regard that loss of profits with equanimity?—Yes, I think that Government should not look at the profits on the token currency in the light of revenue

6160 But still, there would be a profit after your 25 millions had been reached?—Yes I think it would be necessary, though, to regard that profit with very great caution, so as to avoid any temptation on the part of Government to issue excessive token currency merely with the object of making a profit on it. I think that would have to be guarded against very carefully

6161 Then, that profit being lost, you would suggest, I suppose, that the requirements of the country should be met by raising more loans?—The Government requirements, yes

6162 I think you said the other day that a very large amount could be raised by 3½ per cent. loans on the present terms?—I think some more could be raised. I do not know that I said “very large,” but I think more money could be raised

6163. I think you will admit that India is paying rather less than the rest of the world for its money is it not?—Yes, that is the source of the difficulty. I

think if Government were to pay a trifle more for their loans, just as other Governments have been forced to do, there would be plenty of capital forthcoming

6164 If they revised the terms of the loans and brought them up to date, so to speak, in the matter of terms and conditions, we should not be in constant need of money for developing the country?—No, I think there would be practically unlimited money forthcoming

6165 (Sir Robert Chalmers) But, of course, every thing turns on price?—Yes

6166 If you offered 8 per cent you could get any amount of money?—Yes I think a great deal of the difficulty which the Government of India at present have in raising their funds arises from the fact that they are not paying perhaps quite enough in comparison with what other countries have been forced to pay for new capital issues

6167 Do you make that remark as a stricture on the Government of India?—No

6168 On the contrary, they have been husbanding their credit as much as they can?—Yes

6169 (Sir Ernest Cable) Do you not think they have done the country harm by delaying development owing to the too conservative terms upon which they are trying to raise money?—I do not think I would be prepared to go as far as to say that harm had been done

6170 (Mr. Keynes) In paragraph 6 of Part IV of your memorandum (page 560) you say “No other nation in the world, that I am aware of, holds its gold reserves in securities, silver, and short loans to private borrowers outside its own country.” When you say “gold reserves” you do not mean reserves of gold coin, you mean sterling reserves?—No, I mean reserves of gold coin

6171 Would you maintain that India holds her reserve of gold coin in silver?—She holds a substantial proportion of the Gold Standard Reserve, which was created with the special object of redeeming the gold currency, in silver

6172 I am putting it to you, that if by “gold” you mean gold coin, then, of course, no nation can possibly hold its gold coin in silver?—No

6173 If you mean by “gold” sterling resources?—No, I do not mean sterling resources

6174 Then are not there other countries which follow the same practice as India?—No, I mean gold reserve. I think I stated “gold reserve,” by which I mean a reserve of gold, and I argue that the Gold Standard Reserve was intended, and was originally meant, to be a reserve of gold. That is what it was intended to be—a reserve of gold—and, in so far as Government have departed from the recommendations of the Fowler Committee they are not holding reserves of gold, but they are holding silver, securities and loans, which I think is very bad.

6175 You are aware that there are other nations which hold their sterling reserves in the forms you describe?—Yes

6176 So that the reference to other nations in this connection is epigrammatic rather than argumentative?—I think the statement of fact as I have made it is quite accurate, I believe so

6177 I do not think anyone could deny it as a statement of fact if by “gold reserve” you mean gold coin reserve, and I will leave it at that. Would you maintain that the purposes for which India holds sterling reserves abroad is materially different from the purposes for which other countries hold sterling reserves abroad?—I believe it is materially the same, the reason is materially the same

6178. So that you will agree with me that the practice of India in this matter is the same, whether right or wrong, as certain other important countries?—Yes, it is the same in some respects.

6179 I should like to ask you one or two questions on this matter of holding gold in India or London. In reply to the Chairman this morning you gave it as your main reason for washing the gold to be held in India, as I understood, that if the gold was held in

17 July 1913 ]

The Hon. MONTAGU DE P. WEBB

[Continued]

London it probably would not be gold?—That is part of the reason.

6180 If it were gold you would not have so much objection?—Not so much, but I should still feel nervous lest the gold were appropriated in a crisis for London's needs rather than India's needs.

6181 There are two points. There is the form in which your sterling resources are to be held, whether securities or gold, and there is the second question. When it has been determined how much gold is to be held, where that gold is to be kept?—Yes.

6182 Putting aside the first point, after it has been settled how much gold is to be held, do you think there is then much advantage in holding the gold in India rather than in London?—Yes, so long as the gold reserves in London stand at their present figure, as a matter of caution I should certainly hold India's gold reserves in India.

6183 And your only reason for that is that you think the Secretary of State might un earmark gold when strictly from India's point of view it was not necessary?—Yes.

6184 I want to put to you in regard to that this question. In difficult times in London is not India quite exceptionally at the mercy of a high London bank rate? Supposing that the London money market was *in extremis*, and wanting gold from all possible sources, and putting up its bank rate, and taking other measures with that same end, could not India be forced to repay sums which she had borrowed at short notice, and so make her gold available to the London money market?—The sums which India borrows repayable at short notice are very small relatively. It is generally the other way about, recently, it has certainly been London that owes India money borrowed and repayable at short notice.

6185 You are aware, for example, that the banks raise very large sums in London at short notice?—Yes.

6186 And operate in India?—Yes.

6187 There are a great number of business houses with connections both in this country and in India, and with the London bank rate up to 7 or 8 per cent they would all wish to get as much money home as they could?—It depends on what the house was, and the nature of the business. It is not because there is such a high bank rate in London that therefore people necessarily remit money from India to London.

6188 But there would be the general tendency for at any rate some persons to wish to hold a larger proportion of their funds in London than usual, and a less proportion in India?—Yes, there would be a tendency.

6189 And, owing to the close relations between India and London, that would be so to a greater extent, perhaps, in the case of India than in the case of any other country?—Possibly.

6190 I suggest, therefore, that in a case of extreme stringency, such as you are considering, it is quite conceivable that it would be necessary for the Secretary of State to un earmark gold in the interests of India. If London really wants India's gold she can get it by perfectly legitimate means?—I think she can get some of the gold, yes.

6191 I will even go so far as to say this, that the very reason why India has to keep a gold reserve is because she is at the mercy of London when London is in difficulties of this kind, or that is one of the reasons?—I could not acquiesce in that view. I think that India is in a very powerful position indeed.

6192 I mean that a country which is a borrower rather than a lender, and can be compelled to pay money, has to keep larger reserves than a country which is a lender rather than a borrower?—Yes, but I do not think India borrows short period loans so largely as to make that a danger to India.

6193 The point I am trying to bring forward is, of course, independent of the balance of trade in commodities?—Yes.

6194 I am thinking not so much of the case where India is in difficulties because of the falling off of her exports, as of the case in which it is to the advantage of most private persons to remit funds back from India to London so far as they possibly can, and I am argu-

ing that the funds which are available to private persons in such circumstances are at any rate as large or larger, as between India and London than as between almost any other pair of countries?—I do not know.

6195 We know that even in the case of South American countries the power of a high bank rate in making people remit back is very strong, and I suggest to you that in the case of India it would really be stronger?—I should not like to say I can quite conceive that, in such an emergency, it might be necessary to raise the bank rate in India to prevent money going back, and I can quite conceive that India would most successfully carry out that operation.

6196 But why should India want to?—Because India has a large trade of her own to carry on which needs financing.

6197 (Sir Robert Chalmers) Where is the ultimate settlement of the financing of India's trade?—Probably in London.

6198 (Mr Keynes) I do not want to press this point any further because I think I have really got your opinion, but I should like your answer to this final question. You do not agree with me, I think, in holding that one of the reasons why India has to keep a large reserve is because of her close connection with London and because of her being borrower rather than lender in the international short loan market?—I do not think that is the principal reason.

6199 And it is a difference of opinion on that point which leads up to the other difference of opinion as to the likelihood of the Secretary of State being even tempted to un earmark gold in a crisis contrary to India's interest?—I have never heard it suggested or put forward as an argument that the Gold Standard Reserve has been created for the particular purposes which you suggest. The only object for which I know that the Gold Standard Reserve was created was to provide for a reversal in the balance of the trade necessitating gold exports from India—monetary exports from India.

6200 But there is not the slightest difference between the need for remittance caused by having to repay loans which are due and that caused by having to pay for new purchases, is there?—No.

6201 Your last point is not in the least relevant to the argument, is it?—It is relevant in this sense, that I have never heard it suggested that it was necessary to create a Gold Standard Reserve for other purposes than the reversal in the balance of trade in commodities, I have never heard it so argued. The ultimate effect, of course, is the same, however the reversal of trade comes about, but the Gold Standard Reserve has been created, so far as my knowledge goes, with the special object of providing gold for meeting a reversal in the trade balance and for no other reason.

6202 You mean simply that this point which I am suggesting, namely, that the Gold Standard Reserve also be used in cases where India is called on to repay, is a new one to you?—It may be so, but I do not regard it as an important point, because I do not think the amount which would have to be repaid in such circumstances as you suggest would be very large.

6203 Your previous answer merely meant that you had not heard people argue on the same lines as I was arguing now. You did not mean anything else?—Yes.

6204 In answer to the Chairman, you agreed with him, I think, that it would be a little unsafe at a crisis to rely wholly on gold in circulation, even if it was in circulation to a large extent?—Yes.

6205 And that you were relying on the gold in the Paper Currency Reserve?—Yes, that was in reply to a question by Sir Robert Chalmers.

6206 The amount of gold in the Paper Currency Reserve depends upon the circulation of notes being increased?—Yes, increased gold depends largely on an increased use of the paper currency.

6207 And upon the circulation of rupees not being diminished?—Yes, and upon the note circulation not being diminished.

6208 So that any measure which sets up a rival to the paper currency and to rupees is likely to have some tendency to diminish the amount of gold held in the Paper Currency Reserve?—Yes, some tendency.

17 July 1913 ]

The Hon. MONTAGU DE P. WEBB

[Continued

6209 If, therefore, you are relying mainly on gold in the Paper Currency Reserve, you would wish rather for a continuance and extension of the present arrangements rather than for some new ones?—Not necessarily

6210 In so far as you are depending on gold in the Paper Currency Reserve, you would wish for what I have suggested?—No, I do not follow that

6211 You agree with me that if notes are being used more, and if rupees are not being used less then there is the more gold in the Paper Currency Reserve than would otherwise be the case?—Yes

6212 Therefore, if you are relying mainly on gold in the Paper Currency Reserve, you must wish for an increase of notes which is accompanied by no great diminution in the use of rupees?—Yes

6213 And the contrary policy would lead to there being less gold in the Paper Currency Reserve?—Yes

6214 And therefore, in so far as you are relying upon gold in the Paper Currency Reserve, to more weakness rather than to more strength in a crisis?—I do not follow that last question

6215 In so far as you are relying on gold in the Paper Currency Reserve, an alteration of policy would lead to more weakness rather than to more strength in a crisis?—I am afraid I do not follow

6216 (*Chairman*) Would it help if it were put to the witness the other way? He would see better what you are meaning (*To the witness*) Suppose you diminished the number of notes in circulation and the number of rupees in circulation by increasing the amount of gold in circulation, you have *pro tanto* diminished the amount of gold in the Paper Currency Reserve, is not that so?—In the reserve, yes, that is right

6217 But the presence of gold in the Paper Currency Reserve in large quantities is essential to the success of your policy, is it not?—Yes

6218 Therefore anything which diminishes the amount of notes and rupees in circulation jeopardises the success of your policy?—Yes, I follow that line of argument

6219 That is only beginning at the other end?—I understand this line of questioning now is If you had no Paper Currency Reserve your scheme would be perhaps considerably jeopardised That is the direction in which the examination leads Do I follow that correctly? I understand it to be that if you did away with the Paper Currency Reserve you would have no gold in the Paper Currency Reserve, and therefore what would you depend upon for export

6220 That is the extreme case?—That is the extreme, yes

6221 And that in proportion as you diminish the notes and rupee circulation you diminish gold in the Paper Currency Reserve?—Yes, I have followed that correctly, I think

6222 (*Mr Keynes*) There is also the further point which I want to imply, namely, that if rupees are driven out of circulation the only home they would have would be in the Paper Currency Reserve, and that they must displace gold there, there is that point also?—It is so It is a theoretical possibility It has no practical probability about it, I think

6223 In paragraph 1 of Part VI (pp 563-4) you say that there has been delay in the growth of confidence resulting in cheap capital being withheld from India which would otherwise have flowed there?—Yes

6224 What evidence have you of that?—Evidence of my own practical experience as a financier and banker

6225 You could not make it in the least specific?—I could not write down for you individual instances of people whose nervousness had prevented their sending their money out to India, and I should not care to do so if I could

6226 But you have in your own experience met persons who were prevented from investing in India because of their lack of confidence in the stability of the rupee?—Yes

6227 There is no instance that you care to specify about that?—No, I can give no names

6228 I have only one final question to ask We are aware, of course, that you have written a great

deal in the press and elsewhere in regard to the questions which we are investigating?—Yes

6229 May we understand that in the memorandum which you have submitted (*see Appendix XXI, page 550*), and in your evidence of last week and this morning you have brought to our notice all those criticisms and considerations which you think important and deserving our attention?—Yes, I think so in relation to the matters referred to this Commission for consideration but not in connection with any other matters

6230 (*Sir Shapurji Bhoacha*) Your great objection to keeping gold here is that the temptation is too great in time of crisis?—Yes

6231 If the Secretary of State at a certain juncture wishes gold to come out from India to here, can the Government of India refuse the order?—I should think not

6232 Then where is the great safety of keeping it in India? If England requires it she will order it?—My line of argument was this, that it is recognised on all hands that there is not sufficient gold in London at the present moment proportionate with the banking liabilities of the London banks, and consequently it is common knowledge that the London banks are at the present moment putting their heads together to devise means by which they can persuade each other to hold larger gold reserves In those circumstances I think it would be safe for India in the meantime to hold its own gold reserves in India That is my line of argument

6233 Suppose it is called up?—If it is called up by the public it can be remitted

6234 Then there is not such great safety as you think by keeping it in India, it is safer here Do you not think so?—No, I do not think so At the present moment there are over 16 millions invested in London on behalf of India in the securities in the Gold Standard Reserve, and I do not think that six millions of those 16 millions could be realised to-morrow if the cash were urgently wanted in London

6235 You say all fiduciary securities should be invested in rupee securities and not in sterling?—As far as possible

6236 There is a danger of not being able to sell sterling securities, is not that so?—Except at a very heavy loss

6237 Would not that happen in India supposing there were a rebellion? You would have to sell at half the price where you could sell at all Is it not better to put your eggs into two baskets instead of one?—I regard the policy which I am advocating as precisely what you are suggesting, namely, putting my eggs into two baskets instead of one That is my policy If the money is in London, I regard the eggs as being in one basket, but if the money is half in London and half in India, I regard the eggs as being in two baskets

6238 I am talking of fiduciary securities You do not want two millions to be invested in London securities, but you would have 12 crores in Indian securities?—Yes

6239 In talking of the two baskets, I am speaking of those two securities?—No, I do not think it is desirable to invest a reserve against the Indian paper currency outside India, I do not think it necessary

6240 Would it not be safer to have half in English securities and half in Indian securities?—I do not think so, I do not think that that is necessary as a matter of practical business in connection with the Paper Currency Reserve

6241 When there is a raid in time of crisis in India, would it not be better that some surplus should be here which you could sell?—I do not know what the use of a surplus in London would be in such an emergency I do not know how it could be brought immediately to the assistance of the Government of India

6242 You say, of course, that you approve of the present currency arrangement—the notes, you think that it is well managed by the Government?—The paper currency, yes

17 July 1913]

The Hon MONTAGU DE P WEBB

[Continued

6243 And people think paper issued by Government safer than paper issued by a bank?—I think they do, undoubtedly

6244 It will take a long time to accustom them to bank paper?—Yes

6245 The fiduciary surplus in the paper currency is about 20 per cent at present, it is 14 crores against 70 crores, which is 20 per cent?—Yes, roughly

6246 In England it is about 33 per cent?—Yes

6247 When the Government are not able to afford any assistance to the trade, would you allow the Currency Department to lend between 20 and 33 per cent of the currency balances, would it be unsafe?—No, I do not think it would be unsafe

6248 (Sir Robert Chalmers) Your opinion would turn to some extent on the amount?—Yes, the amount and the conditions of the moment. It would be very difficult to lay down any hard and fast rule which would be applicable in any month and in any year, no matter what the political or other conditions might be

6249 (Sir Shapurji Broacha) You fix the liquid gold reserve at 25 millions?—In the Gold Standard Reserve, and under present conditions, yes

6250 Would it not be better if it were all put into gold?—If there is a large quantity of gold in the Paper Currency Reserve, and if there is gold freely in circulation, I do not think it would be ever necessary to hold more than 25 millions in the Gold Standard Reserve

6251 Do you know other countries are scrambling for gold and losing interest?—They always hold very large gold reserves. Every other country holds larger gold reserves than we do, in spite of the loss of interest

6252 Why should not India do that?—I think India should hold a larger reserve of gold. That is entirely my line of argument

6253 You said something about the organisation of the India Office. Would you prefer that every Finance Minister retiring should be on the Finance Committee until another Finance Minister retired, because then, of course, they will be fresh anyhow every five years?—There is much to be said for that

6254 For instance, a Finance Minister is retiring now. If he serves for five years or four years until the other retires, we should always get sufficient knowledge from India?—There is something to be said for that

6255 An Anglo-Indian retired bank manager would not be of much use unless he had only retired for two or three years, would he?—Possibly not

6256 Because the man who knows and is in intimate touch with India is a working manager?—Yes. It is possible that an appointment to the Secretary of State's Council might expedite his retirement

6257 Who ships gold in a crisis for the maintenance of exchange? Is it the people?—The banks, probably, and large mercantile firms

6258 According to you, they will have to go to the Currency Department?—Probably

6259 They will not get it from the people?—Partly from the people

6260 Do you think as long as they have rupees and notes enough for exchange they will ever part with their gold?—I think so

6261 Have you any reason to think so?—If gold is circulating freely, I have no reason to suppose that there will be any reluctance on the part of the people to pay gold

6262 You think so?—I think so, if gold is circulating freely

6263 Do you think I would give my gold in a time of crisis?—I do not know

6264 I can tell you one instance. In the acute crisis of the Balkans I am given to understand that a man just wrote a cheque for 100,000l. on the Bank of England and took it out in actual gold?—Yes

6265 Do you think that is less likely in India, where they know nothing but metal?—I do not think myself it would be so. If gold is circulating freely, in the event of a reversal of the balance of trade, I do not think that the great mass of the people, who know nothing about the balance of trade, would create any

difficulty in the way of passing gold from hand to hand any more than silver

6266 Again, if you are able to borrow largely in India for public works, part of that will be sent here again and more gold will be required, even in that case, in England than in India?—That will be adjusted in the balance of trade

6267 But how is the Secretary of State to take the gold out? The Government of India have to remit to England?—Not necessarily gold

6268 The Secretary of State must sell drafts?—Not necessarily in gold. Remittances may come to England in the form of surplus produce

6269 (Sir James Begbie) You remarked with regard to the silver branch of the Gold Standard Reserve that you think it should be transferred to the Paper Currency Reserve?—Yes

6270 When would you do that, would you do that at once?—Yes

6271 These are rupees which have been coined outside the public demand for rupees?—Yes

6272 I understood you to say that you would only issue rupees at a certain rate of exchange?—Yes

6273 You would not apply that principle to this silver branch?—I would apply it with regard to the rate at which the transfer was made, yes, in adjusting the book entry, I should make the transfer at the import specie point

6274 Do you think it is quite legitimate to add rupees to the currency in this way and to take gold in exchange for them?—Yes, I think it is quite legitimate in the present case of the Paper Currency Reserve and the Gold Standard Reserve

6275 It is an addition to the silver currency which is not demanded by the public?—Yes, I do not think that the present four millions of silver in the Gold Standard Reserve has ever been demanded by the public

6276 But you see no objection to putting that silver into the Paper Currency Reserve and taking gold out in exchange?—No, I see no objection in this particular case. I think it is desirable to do that to remove the present absurdity of holding silver in the Gold Standard Reserve

6277 With regard to your proposal about the Gold Standard Reserve, you suggest that seven millions should be held in securities and the balance in gold?—Yes

6278 In the event of the reserve being used, I understand you would draw upon the invested reserve first of all?—That would depend upon the conditions of the moment. If selling the securities in the reserve involved very heavy loss, then I should probably suggest shipping gold from India. If the securities could be sold at a profit I should sell them first, certainly

6279 There is a great advantage in shipping gold, is there not, in place of the present procedure of selling bills against the Gold Standard Reserve in London? If gold is exported from India to support exchange, the first effect is to reduce the Indian currency?—Yes

6280 The effect on the other side, supposing that the gold is shipped to London, is to increase the currency in London?—Yes, that is a very desirable and normal movement, in my opinion

6281 And that effect is lost if you sell bills instead of shipping the gold?—Yes, exactly

6282 With regard to the metal coming out of hoards, I am not quite sure that I understood what you said to day. Do you think that metal only comes out of hoards in famine times—I mean metallic gold?—I find it very difficult to say under what circumstances metal comes out of hoards, because I think there is a great deal of misunderstanding with regard to hoards. I regard a hoard as merely in many instances a merchant's floating cash which he keeps in his house. Under what circumstances he brings that cash out it is very difficult to say. Of course, in times of famine cash is released largely. It used to be silver ornaments before the closing of the mints, but now it would be cash, no doubt

6283 You remember the circumstances of 1894, when exchange fell to such an extent?—Yes.

17 July 1913]

The Hon MONTAGU DE P WEBB

[Continued

6284 At that time very large quantities of gold came out of hoards?—Yes, they did, tempted by the low rate of exchange

6285 And the high rate of gold?—And the high rate of the sovereign in India I remember that very large quantities of sovereigns came down from Persia at that time, and they were purchased by myself They were William IV sovereigns in perfect condition

6286 With regard to the loans from the Paper Currency Reserve, judging from past experience, comparatively small amounts would ease the market, you think?—I think so, yes

6287 But if the effect was to ease the market, that is to say, to lower the rate of discount, the demand for those loans might increase?—Yes, it probably would

6288 (Chairman) I want to ask one or two questions I think we have it quite clear that your great objection to keeping the Gold Reserve in London is the fact that the English gold reserves are insufficient, and therefore you think that the Indian Gold Reserve would be in danger of being used for other than its proper Indian purposes?—In the event of a grave national crisis, yes, not in any other circumstances

6289 You criticise the English position because in your opinion we have too little gold in reserve?—I think so, I think the reserves of gold in England are dangerously small

6290 They are less in proportion than those of any other great Power?—Yes, I do not think we should necessarily hold the same proportion as any other great Power, because I think that the smallness of our gold reserves is in a measure a barometer of our civilisation, but I do think that the reserves of gold in London at present have been cut a little too fine

6291 On the other hand, we have, I suppose, a larger gold currency in actual circulation than any other nation?—Yes, I should think so

6292 From this point of view is not the salient difference between our system, and, say, that of France, that they have their gold in reserve and tokens in circulation, whilst we, to a much larger extent, have our gold in circulation instead of in reserve?—That may be so to some extent, yes

6293 So far as that is true, does not the present Indian system approximate to that of France and differentiate itself from that of England?—Yes to some extent.

6294 The effect of the present system in India being to put a much larger proportion of gold into the reserve and a less proportion into the currency?—Yes, but in the case of India it is very much more dangerous, because I think India is not in a position to maintain the currency in the same way that France is I think it is attended with very much greater risks in the case of India than it is in the case of France

6295 Then am I right in thinking that if your policy were carried out you would reverse the position in India, you would draw the gold out of the reserves and put it into circulation?—No, not out of the reserves Assuming a large gold currency in India, there is only one reserve in which gold would or need be held, in my opinion, and that is the Paper Currency Reserve Apart from that, for the strengthening of the credit and reputation of India I should like to see as much gold in circulation as possible, but not at the expense of the Indian reserves

6296 We have already agreed that, in so far as gold in circulation takes the place of either notes or rupees, it must be at the expense of the Paper Currency Reserve?—Yes, in so far as it takes the place of that currency

6297 Would not the net result of that policy be to reproduce in India the position which you criticise in London, namely, to produce a condition of things in which there would be comparatively little gold in reserve, though there would be great quantities in circulation?—Not necessarily, I think, because gold in free circulation need not of necessity be accompanied by small gold reserves In the case of London the small gold reserves arise from no other reason

than the disinclination of the bankers to pay the cost of keeping higher ones, that is all

6298 Is it your view that Indian bankers would be wiser or more patriotic, and that they would make good the falling-off in the Paper Currency Reserve and keep as well any additional reserve that was needed?—I do not see that the Paper Currency Reserve will, or need, diminish with the increased use of gold as currency in India I think with the development of the country, which is going on at a very rapid pace, there will be an increasing use both of paper currency and of gold in India

6299 (Mr Keynes) May I ask a question? You are clear that the gold which you wish to be in circulation is not to be in place of notes, and is not to be in place of rupees?—Largely, yes In the course of the development of the country the gold will come in I do not think that the new gold will come necessarily with such rapidity as to displace the present token currency altogether It will possibly at first displace it to a small extent, but what I am anxious is that in the growth of the currency which is now taking place the additions should not be made in depreciated silver tokens, but rather in full value gold coins

6300 (Chairman) So that as that growth proceeded, the addition to India's gold would remain in the form of currency, but not in the form of reserve?—Both, I think

6301 How could it be both?—Because the country is growing the whole time, and needing more currency the whole time, and also it is advancing in civilisation, so that there would be, with an increasing use of gold as currency, a constantly increasing use of notes against which gold or securities would be held in the Paper Currency Department

6302 You look forward to such a growth that there would be plenty of room for the addition, I think you said, of something like 70 millions of gold to the circulation?—Yes

6303 And at the same time for a considerable addition of notes?—Yes

6304 Without any contraction of rupees?—Without any very serious contraction of the rupee circulation other than arises from the normal and regular export of rupees from India to East Africa, &c I think I estimated that it would take 7 to 10 years, perhaps, to bring about this state of affairs

6305 I think that is a sanguine estimate I have asked you all the questions which I want to put, but before you leave the chair I should like to give you an opportunity of adding anything If there is anything you would like to say to which our previous questions have not given occasion, that is, of course, anything within the terms of our reference, please say it—There are one or two matters in which I should like to supplement the answers I have already given

6306 Please do?—Firstly with regard to the questions put to me by Sir Shapurji Broacha on the subject of my opinions now being different from—in fact, diametrically opposite to—what they were 15 or 20 years ago Several critics have drawn my attention to this fact, and I should like to explain to the Commission the reason why I advocate a freer use of gold now rather than a freer use of silver Fifteen or 20 years ago prices all over the world were diminishing, prices were going down, and money was appreciating in value The construction which I put upon that was that there was not sufficient metallic money in the world to go round, and therefore that it was desirable to add to the metallic money available Therefore, in the case of India I advocated the further coinage and use of silver money But since then the position has been entirely reversed, and the output of gold has now become so enormous that to that gigantic output I attribute the fact that prices all over the world are rapidly rising, which I regard as an indication that the metallic basis, gold is more than adequate for current requirements In those circumstances, I think to add more silver to an already abundant supply of gold money is a very grave blunder, and that it is calculated to produce very serious economic crises all over the world owing to well-to-do people being tempted to over-trading and over-speculation and the poor

17 July 1913]

The Hon MONTAGU DE P WEBB

[Continued

population being pushed on to the verge of starvation. For these reasons I strongly protest against the coinage of further silver money where it can be avoided, and for those reasons I advocate the further use of gold. That is the explanation of why my attitude now is different from what it was 20 years ago. Then with regard to hoarding in India, upon which two or three questions have been put to me, I should like to correct, if I may, misapprehensions which exist with regard to hoarding in India. In the first place, a very large proportion of the population—over 90 per cent—are illiterate, and this Commission, I think, will easily see the difficulties of advocating the use of cheques and banking and paper currency amongst a population, 95 per cent of whom are unable to read or write. There are difficulties in the way of a very rapid development of banking and the use of paper money. Then, again, a very large proportion of the population live 20, 30, 40, or 50 miles away from a railway, and consequently it is extremely difficult for such people to put their money in banks and draw cheques on it. They must take their money away, and they must keep it in their houses, and for that reason they must keep a good deal of money on their persons or possibly buried in the ground, but I do not regard this as a sign of inherent viciousness on the part of the peoples of India, nor do I think that the peoples of India hoard gold so that it disappears and nobody will ever see it again. I am perfectly certain that, as education advances and as the railways are constructed, more and more of this money will come into circulation. The peoples of India are certainly as far seeing and shrewd in commercial matters as the peoples of any other country in the world, and I am quite certain that this money will come into use and will in time be banked and will be employed exactly as we use it. I do not see, therefore, any fear whatever of gold going into India in enormous volumes and never being seen again. I think that is a bogey, which only scares those who have no knowledge of present-day Indian conditions.

6307 You view is that at the present time the natives hoard because they really have no alternative?—From force of circumstances largely, partly, of course, from old associations and the feeling of insecurity, which has not altogether disappeared but also partly because of the force of circumstances—partly because there is no other way in which they can handle their money. That is a point which I want to make with regard to hoarding. Then there is one other point I should like to bring to the notice of the Commission, and that is this. Whilst advocating the increased use of gold in the general interests, because there is so much gold about that prices are rising very largely—that is the general argument—quite apart from that I maintain that everywhere in the world it is recognised that people who use gold money for everyday purposes are at a more advanced stage of material development than people who are using silver, and I am quite confident that if India were using a gold currency freely she would stand very much higher in the estimation of the world generally than she does at present.

6308 You take a gold currency as marking a superior stage in civilisation to a silver currency?—Yes, but not so advanced, of course, as paper. It must

not be supposed for a moment that I am not under standing of seeing the use of paper currency, but in the case of India the great majority of the people, as I say, cannot read or write, and circumstances force them to hoard. Another consideration is that the conditions of climate make the use of paper currency exceedingly unpleasant sometimes, as a great many people must know who have to handle extremely odorous 10 rupee and 5-rupee notes. With all those circumstances taken into consideration, I think it is advisable, in the interests of India, that she should use gold freely before advancing to paper in the same way as England has done. I am quite sure that in due course India will use notes and cheques, and the statistics show that banking is increasing at an enormous pace, and that the deposits by the public in indigenous banks are increasing at a phenomenal rate, so that everything is moving in the right direction, and my advocacy of an advance to a gold metallic currency is made largely because I think it will add greatly to India's credit and reputation if she uses gold the same as English people all over the world use gold. I feel that in this matter it is up to us to give to India the very best metallic currency that we can before we commence to talk about paper, and because I think we ought to give India the very best metallic currency we can, and because the world conditions permit of the use of gold without doing anybody else any injury. I have for two or three years past urged the opening of the Indian Mints to the free coinage of gold, and the use of sovereigns as daily currency in India.

6309 I will just ask one question on that. Would you agree that the tendency of recent years among the great financial powers has been to make gold less and less the medium of internal exchange and to reserve it merely for the purpose of balancing external exchange? Yes, undoubtedly, and at a later stage, when India is using gold very freely as currency throughout the country, there will be plenty of time, I argue, for India to think about reducing her use of gold, but in the case of India which is in many respects a backward country, it is impossible and undesirable to jump over the intermediate stage and to try to stimulate the universal use of paper before that widespread confidence has been established which you get from the free use of gold money.

6310 She must not profit by our experience, but she must really learn for herself?—You must go step by step, because the people cannot read and write, and in many respects are very ill-informed.

6311 (Sir Shapurji Broacha) May I ask one question of fact? You know that gold production had gone down in 1887 to about 19 millions, but in 1898 it had gone up 300 per cent again when you wrote that statement upon which I questioned you, and it was going up higher?—The output of gold was going up, yes, but up to 1898 the general level of prices had not been sufficiently affected to make it certain that it was desirable to alter our policy. Although the output of gold was increasing, the general level of prices throughout the world had not yet swung round, so that I could not be certain in 1898 that the output of gold was really so great as to make it desirable for India to use it then as currency.

The witness withdrew.

Mr WILLIAM BERNARD HUNTER called and examined.

6312 (Chairman) Will you state first of all what your experience has been?—I have been for 25 years in the service of the Bank of Madras, the last seven years of which I have been secretary and treasurer.

6313 You are resident in India?—I am resident in India, yes.

6314 You have submitted a memorandum of the evidence which you offer, and I propose to print that as an Appendix to our Report (Appendix XXIV, page 591). What, in your opinion, is the principal object of the sale of Council drafts? Is it to effect remittances to London on Government account?—Originally the sole purpose

was for the transfer of funds on Government account, but since the closing of the mints I think that that is of secondary importance now, especially with regard to the conditions of the London money market. Otherwise than by very large shipments of gold, at a time which would probably be inconvenient, there is no other means of paying for the balance of trade.

6315 So that, in your opinion, at the present time the primary use of the sale of Council bills is to settle the balance of trade?—I think so, yes.

6316 Will you please explain in rather greater detail the method which you suggest might be adopted

17 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued

for providing the Secretary of State with funds in London as an alternative to the system of Council drafts, so far as these latter are regarded as merely a means of effecting remittances home?—The Government of India would be able to buy bills on London in India quite easily, primarily from the exchange banks. They could do so daily through brokers at various centres, Calcutta, Bombay, Madras, Karachi, Rangoon, and even in Northern India, and to meet the requirements of trade in that way there would be no difficulty in purchasing sufficient bills, primarily from the Exchange banks, and, if they were not sellers, then from the open market.

6317 Do you see any advantage in following that course rather than the present one?—No, there is no real advantage in that.

6318 It being, in your opinion, the fact now that the main object of these sales, or the most important object which they serve, is to settle the balance of trade, what would you say to the criticism that that work is not really the business of a Government Department?—Since the closing of the mints, the Government of India have practically undertaken to keep exchange steady, and therefore it could not be done by anybody else. It must be kept on by the Government.

6319 Do you think that nobody but the Government could undertake that business?—I think not. I think the credit required to maintain exchange takes it beyond any bank.

6320 I think you are in favour of the establishment of a central bank?—I am.

6321 But even if such a bank were established, you do not think that this part of the business could be advantageously transferred to it?—It would naturally be transferred to the bank, but the bank would do the operation solely as agent for the Government, and any profit made on the transaction would be a profit belonging to the Government. As Government would be responsible for keeping up exchange, and any loss must fall upon the Government, they naturally would be entitled to any profit. The advantage of transferring it to the central bank would be that the bank would be more in touch with the general market, and would know what the requirements were—when to sell and when to cease to sell.

6322 But if the responsibility remained on the Government would not the Government have to be strongly represented on such a bank?—Naturally the Government would require to be represented.

6323 The advantage therefore would be that in doing the work they would be associated with experts familiar with the conditions of Indian trade?—That is so.

6324 I think it is your opinion that if the sale of Council drafts were abolished, or if it were limited to the actual requirements of the India Office, the result would be a large increase in the amount of gold shipped to India?—Yes, certainly.

6325 What do you think would happen to the gold when it got to India?—A large proportion would immediately go into the currency reserve for notes to be taken out in exchange. Eventually those notes would be again presented at the currency office for silver, probably silver required in the up country pieces.

6326 Then the first result would be a considerable accumulation of gold in the currency reserve?—A large accumulation of gold in the currency reserve.

6327 What would the next step be? Would the Government have to ship that gold home to London again?—The Government would eventually require to ship that gold home to meet their expenses, and also, when the silver supply ran short, to purchase further silver.

6328 Would the public have to ship gold home as well as the Government?—I do not think so—not at that stage. The public would only have to ship gold home later on should the exchange go against India.

6329 The net result would be the shipment of a good deal of gold to India, but it would only remain there temporarily, in your opinion, and it would have to be remitted home again?—Yes, it would have to be remitted home again.

6330 That would be a costly operation?—It would be a costly operation.

6331 With no advantage?—With no advantage. In fact, it would be a disadvantage, because it would tend to raise rates in London.

6332 I now turn to the question of the rate at which Council drafts are sold. I am not quite certain what your view is. Do you hold that no sales should take place under 1s 4d?—Yes.

6333 You assume that the gold point is always over 1s 4d?—I assume that the gold point is always over 1s 4d.

6334 Suppose the Secretary of State is absolutely in need of funds at home, but could not sell at 1s 4d, would you allow him to sell below?—No, I think he should not sell below 1s 4d. He would only be absolutely in need if the whole of the Gold Standard Reserve had disappeared. If it comes to that point, the next step, the final step, must be to borrow in London.

6335 You think that the moment he is unable to obtain the rate of 1s 4d he ought to have recourse to the Gold Standard Reserve?—If he is in absolute need of funds he ought to have recourse to the Gold Standard Reserve or the Currency Reserve, first, if there is gold in the Currency Reserve.

6336 I think for the last few weeks the Secretary of State has actually been selling 20 lakhs a week at a rate below 1s 4d. That you would say was wrong?—I would not approve of that.

6337 Unless he needed money immediately?—And even then, with gold in the currency chests in London, there is no necessity to sell below 1s 4d. Rupees could be placed in India and gold released here.

6338 What is the object of your proposal that when bills cannot be sold at 1s 4d in London, they should be immediately offered at 1s 3½d in India?—In order to maintain exchange at about 1s 4d, and to maintain confidence.

6339 The Government of India would make a profit on that transaction, would it not?—Having sold at a higher rate previously in London, they would make a profit.

6340 Would the business have any connection with the remittance of funds on Government account to London, or would it be done merely and openly for the convenience of trade?—I am inclined to put it rather that it would be done openly in order to maintain exchange, which the Government have practically undertaken to do. It is not only necessary for them to maintain exchange for their own requirements, but also for the benefit of trade.

6341 So that I take it it comes to this, that you want to see the Government supporting exchange continuously?—Continuously.

6342 And at an absolutely fixed point?—Yes.

6343 And not waiting, as they did in 1907, until the strain really threatens to break down the exchange altogether?—That is my opinion.

6344 Should I summarise your position rightly if I said that this Council draft system has two objects—I do not give them in your order of importance. First, the remittance to London of the funds required by the Secretary of State, and, secondly, the settlement of the balance of India's foreign trade?—Yes, I agree to that.

6345 Further, that as at present managed the sales of Council drafts do not fulfil their second function, which you regard as the more important, so well as they might do, because there is no settled policy as to the sale of similar drafts in India?—Yes, I agree to that.

6346 And that, consequently, it would be desirable to find some way of distinguishing clearly between the two functions of the sale of Council drafts?—I do not think there would be any object in distinguishing between the two.

6347 Provided the result is obtained?—Provided the result is obtained. It might be a facility if the Secretary of State kept two balances in London, one a working balance and the other an exchange balance but I do not think it would be necessary so far as the general public is concerned, that they should know how

17 July 1913]

Mr WILLIAM BERNARD HUNTER

[Continued

much was in the working balance and how much in the exchange balance

6348 With reference to your statement as to the way in which Council drafts should be met, have you any criticism of recent actions by the Government of India or the India Office in regard to the sources from which the sales have actually been made?—The sales are made always from the Treasury balances so long as sufficient rupees can be scraped together from anywhere. The consequence is that it makes restrictions in the money market in India. Of course, it is not so material at present, because in any case revenue as it is collected in India is locked away out of the hands of banks, and of no use to anyone

6349 From what source would you meet them if you would not meet them from Treasury balances?—I should meet the sale of Councils first of all for the Secretary of State's immediate requirements from the Treasury balances, and if money was really easy in India I should continue to draw on the Treasury balances. As soon as the rates stiffened up it might be drawn from the silver portion of the Gold Standard Reserve, and that would not necessitate the earmarking of gold in London. As a last resource, I would do it from the Currency Reserve, which would mean the earmarking of gold in London

6350 You would prefer to see a much freer recourse to the Gold Standard Reserve?—Yes, undoubtedly

6351 And you have no fear that, using it as freely as you propose, it might be found deficient in time of severe crisis?—I think not

6352 One of the features which the Indian Government and the Secretary of State have constantly to keep in mind is, of course, the amount of their liabilities in London, and particularly the interest on their debt incurred in London?—Drawing on the Gold Standard Reserve would be providing funds in London for that purpose, and equally on the Currency Reserve. The gold would be in the Currency Reserve and the silver would be released in India, which could be replaced, and the reverse operation put into force as revenue came in

6353 I suppose you would hold that the less the Government of India has to borrow in London the better?—Within certain limits I am strongly in favour of borrowing in London for further development of India so long as the London money market will take up the securities without unduly depreciating the price

6354 Would you or would you not prefer to borrow in India if you could borrow there on equally favourable terms?—If you could borrow in India on equally favourable terms, by all means borrow in India freely

6355 Would you go a point further and say that it was worth while to pay a little more in India in order to have fewer liabilities in London?—I think not, unless, by floating more loans, you could extract hoards

6356 Do you think more could have been borrowed in India than has been done in recent times?—Not to any material extent

6357 You do not think that the issue of loans in India would extract the hoards?—I think not

6358 There have been some very successful issues in India lately?—Yes

6359 Do you know whether small men have taken a share in those loans?—They are chiefly confined to large institutions and large people. Last year it was taken up practically by one man

6360 They do not get passed on to the little man?—Afterwards, there is a fair amount of investment demand throughout the year on the part of small people

6361 As that habit grows will it not tend to produce a bigger market for the loans?—Undoubtedly. It should be so

6362 At present you do not think there is any material demand on the part of small people?—Not any material demand. There might be if the negotiability of the notes and the collection of interest were made easier, and there was less trouble in the event of the death of the holder. If troubles of those descriptions could be minimized, Government paper would probably become more popular

6363 Are those troubles in regard to the registration of stock and transferring stock?—In India the paper is generally transferable by endorsement, unregistered, and then the great difficulty is when these notes come into the Public Debt Office, with regard to the endorsement—illegibility or slight differences in the signatures

6364 I turn now to the management of the balances. Have you any criticisms to offer as to the size of the balances, either in London or India, of recent years?—The balances have undoubtedly been abnormally large, but I think that is due to unusual circumstances, and I see no reason to complain of the position

6365 You recognise that they have been abnormally high, but under the circumstances you make no complaint of that?—I make no complaint of that

6366 Do you criticise the fact that so much of the balances has been brought to London or not?—I see no reason why the balances should not be brought to London as they were. There was plenty of money left in India, we were not restricted in any way by the fact of the large sales of Councils, because there was still plenty of money available to be lent out if it could have been

6367 You think that some of the money which was in India should have been available for the market?—It should have been available, yes

6368 Assuming the continuance of the present state of things, I will come to the question of the Central Bank later—to whom would you recommend that such loans should be made?—My contention is that the Government of India should never withdraw currency from actual circulation, as quickly as it is withdrawn it should be put back again

6369 Put back into the banks?—Yes, into the banks

6370 Would you think it right for the Indian Government to require security from the banks?—I do not think it is necessary

6371 The Indian Government, I think, already keeps considerable balances free with the banks?—They keep certain balances

6372 You do not propose a mere unlimited addition to their non interest-bearing balances with the banks do you?—I should say it would be in the interest of the country at large if their balances were put in freely without interest, in the same way that Government balances in England are placed with the Bank of England

6373 Without interest and without security?—Without interest and without security. If the banks have to pay high rates of interest to the Government of India it will then be impossible for the banks to finance trade at cheap rates. There would still be the higher rates of interest

6374 (Sir Robert Chalmers) Is that true universally? The rate at which you can lend depends on the rate that you pay, does it not?—Yes

6375 Therefore, perhaps you would qualify your previous statement and not make it too universal. There would always be the power of lending at a moderate rate if a moderate rate were charged?—If a moderate rate were charged, yes, to that extent it would be so

6376 (Chairman) And any addition to the amount of money available for loans would tend to the reduction of the rate?—Yes

6377 Would you advocate the closing of the reserve treasuries and the transfer of all the balances to the existing Presidency banks?—I think that would be a move in the right direction

6378 There are many places where there are Treasuries, but where the banks are not at present represented, are not there?—Yes, there are many places where the banks are not represented, but with more money the banks could then open many more branches

6379 I think we have had it in evidence that the Government have been endeavouring in recent years to get the banks to open at fresh points?—They offered certain conditions they offered a free balance of three lakhs of rupees for a term of five years for a new branch that was opened, but at the end of that

17 July 1913]

Mr WILLIAM BERNARD HUNTER

[Continued

five years the balance was then reduced to a mere nothing, and with the opening of that branch the bank has to undertake to do a lot of work for Government. It really means that you have to keep up a large staff, they have to keep two Europeans in the branch instead of one, and in other ways it is very expensive, so that the conditions offered are really no inducement excepting for the five years that they are in operation.

6380 So that, in your opinion, the extension, as far as it has taken place, has not been profitable to the banks?—It has not been profitable to the banks.

6381 On the other hand, we have had it in evidence that it has not been profitable to the Government in the sense that the balance which they have had to leave with the banks has been higher than the balance which they need have kept for themselves?—I think, as a matter of fact, so far as the Bank of Madras is concerned, which I represent, we only opened three new branches, and that meant nine lakhs of rupees, which is not a very large sum of money, and, so far as I know, there were not very many branches opened by the other Presidency banks.

6382 I think we have had it shown to us, that owing to the convenience which the Government possesses in the currency chests, they were actually able to work on smaller balances when they had the reserve treasuries open than they had to lodge with the banks in order to induce them to open and take the business over?—Yes.

6383 (Mr Gillan) That merely means that in the case of these three branches which you opened we could probably have run in place of those three branches three treasuries ourselves with less than a minimum of nine lakhs?—Yes, undoubtedly you probably would have run it on the balances that you now leave with us—about half a lakh at each branch, that is to say, about 3,000 at each branch.

6384 (Chairman) Altogether that does not seem a very hopeful reform, does it? You represent to us that it is unremunerative to the banks?—Yes.

6385 And the Government have represented to us that it locked up more of their money than was otherwise locked up?—Yes, but I think that perhaps indirectly the Government gain by the banks extending business.

6386 (Mr Keynes) You do not maintain that it is unremunerative to the banks during the five years, do you, it is only after the five years?—It is only after the five years. During the five years that the agreement is in existence it is quite a good remuneration, and a good profit is made.

6387 (Chairman) I had not understood that, I am glad of the correction. How far do the sales of Council drafts act in releasing funds in India? Suppose the India Office sold them in the busy season to such an extent as to use up the extra six crores which the Government collect as a balance against the summer and the autumn, would that meet your difficulty?—It would be an assistance, but the fact remains that the first step in the operation is the contraction of currency by the withdrawal of revenue from the market, and the sale of Council bills only comes into operation when the produce has reached the coast and is being exported. The inland trade is therefore starved, in fact the rates are high and it is difficult to get it financed, and people have to part with their crops at any rates that they can get for them.

6388 You spoke just now of the Indian Government imitating the English Government in keeping its balances with the Bank of England. I think the British Government from almost the commencement of its financial year is a borrower, the bulk of its revenue comes in late in the financial year, and therefore when that comes in the Government uses it to pay off debt incurred in the earlier portion of the year, and does not swell its balances. It does not remain in the Bank of England, though it may pass through the Bank of England. Is the position in India at all similar?—No, the position in India is not. The Government never borrow from banks except in the form of the open loans which they put on the market.

6389 So that the comparison with England is not quite complete. In England the Government is really returning to the money market money which is borrowed from it?—I misunderstood that. The statements of the Bank of England do not show that. They always show a very large sum deposited as public deposits.

6390 Perhaps I ought to say that I am speaking now of the Exchequer balances, not of the gross balances?—Of course the gross balances are what I was talking about. It always shows in the Bank of England statements very large sums due.

6391 If your policy were not adopted, would you advocate the making of loans from Government balances in the busy season to the Presidency banks?—Yes, I think that would be a step in the right direction.

6392 In that case interest would have to be charged?—In that case interest would have to be charged.

6393 Something a little below bank rate I suppose would meet the case?—I should put it at the rate which banks are offering for short term fixed deposits.

6394 Do you think such loans might be made to other banks besides Presidency banks?—I think within reasonable limits.

6395 Not without security, I take it?—To some banks I think decidedly without security.

6396 Would you lend to private firms as well?—I think not.

6397 Do you think that Government ought to lend to any bank either in India or London without security?—Do you mean lend to any bank without restriction?

6398 I mean no matter how secure the bank, I am not reflecting on the bank, I am assuming that they have chosen the soundest bank that they can find. Do you think that even then a Government ought to lend without security to a bank?—I see no great objection within limits.

6399 You think there would be no objection?—I see no real objection within limits.

6400 (Sir Robert Chalmers) There would be no objection on the part of the banks, anyhow?—Certainly there is no objection on the part of the banks.

6401 (Chairman) Do you think that a large sum would be taken by the banks if the Government were willing to lend it, or would a small sum meet all their requirements?—At first I do not think very large sums would be required, probably from three to four crores would see you through the busy season.

6402 (Sir Robert Chalmers) Do you mean for all the banks, taking India as a whole?—Yes, taking India as a whole I think three or four crores would ease the situation very much.

6403 (Chairman) You say that would be sufficient at first?—Yes.

6404 Do you look forward to the demand growing?—I look forward to the demand growing. Probably the banks would then be enabled to carry more Government securities, and so help on the development of the country.

6405 (Sir Robert Chalmers) You think that there would be a growing demand by the banks for assistance from the Government?—I think probably so.

6406 You do not think that that extra demand on the Government would be relieved as time went on by new sources in their own domain coming to the banks?—To a certain extent, but the deposits grow very slowly. We find that as we extend our branches out into the outlying countries the demand is always for loans, the amounts which have come in on deposit are quite infinitesimal.

6407 As I understand it, you told us that there would be a growing dependence on Government?—That as we extended we could utilise more funds.

6408 You have to get those from the Government?—Yes, because Government have withdrawn it from circulation at the busy season. India is so much a seasonal country, for six months in the year money is very tight and for the other six months it is very easy, and the time when money is very tight is the time when Government balances are particularly high.

17 July 1913]

MR WILLIAM BERNARD HUNTER

[Continued

6409 (*Chairman*) It is at the moment of the great demands that Government collects the major portion of its revenue?—Yes

6410 Or at any rate a large portion of its revenue?—Yes, it is just at that time

6411 You would not suggest that the Government could alter its period of collection?—No, I think that would be impossible. They collect the revenue as the crops come in, and if they did not do it then they would have difficulty in doing it at all

6412 It is a necessity of the situation that the demand of the Government should synchronise with the demand of the trade?—I think so

6413 If the market received such assistance as you have suggested through loans from the Government to the banks, and had got into the way of expecting it, what do you think would happen if in some particular year it was inconvenient to the Government, or impossible for the Government, to give it?—In such a year I should imagine that the reason why Government were unable to find the finance would be that the revenue was not coming in, and therefore the money would not have been withdrawn from active circulation and the crops would be short, and a very much less amount of money would be required to finance

6414 Is there not another possible contingency, that the revenue might be coming in but it might be going out even faster, that is to say, you might have a war, for instance?—There is a possible contingency there

6415 Would you fear the creation of a crisis by the sudden withholding from trade of the assistance upon which it had come to rely?—It would not be pleasant, but I do not see that there would be any great danger if the banks were given the power of borrowing elsewhere

6416 Borrowing where?—In London

6417 As an alternative to loans from the balances it has been suggested to us that loans might be made from the Paper Currency Reserve. Let me just ask one question at this point. Suppose such loans were made from the Paper Currency Reserve, would you regard that as a complete solution of the question, or would you still think it necessary that the large balances in reserve treasuries should be lent out as well?—I would not consider it as a complete solution. I think that undoubtedly the first place the loans should come from are the idle balances lying in the reserve treasuries and that the loans from the currency reserves should be more or less a last resource

6418 Would it not be the case that the time at which such assistance would be required by trade would be just the moment at which you could most readily afford to withdraw something from the currency reserve?—Yes, I think so

6419 I will put it in this way to make my meaning clear. That would be the time when the circulation of notes would be tending to rise, not the time when they would be coming back for encashment?—No, I think as a matter of fact during the busy season the demand is largely for specie from the currency, and that the notes in which the reserves at the bank are held are presented at the currency for encashment. It might not show actually in the note circulation returns because there you have to take into consideration the number of notes which have come back into the treasuries, and are held in the treasuries up country

6420 (*Sir Robert Chalmers*) But taking the circulation as a whole, it would be a time when the circulation would be larger?—Probably—the apparent circulation.

6421 But not the real circulation?—I do not think the active circulation would be larger

6422 (*Chairman*) Not the active circulation of notes?—No, but I cannot speak authoritatively upon that, because I have never had the figures to show what proportions of the Treasury balances held in those numerous treasuries up country are held in notes and coin

6423 (*Sir Robert Chalmers*) If the total circulation with which the Paper Currency Department is primarily concerned were large, then that would allow of the fiduciary portion of the issue being more safely lent out at a time when loans would be very valuable to the

trade and when it would be, on this hypothesis, safe to lend it out. Do you agree to that?—In my opinion it is the active circulation which is the important basis

6424 (*Mr Keynes*) Is it not the case that the active circulation is greatest in the busy season?—I do not think so

6425 I have the figures before me, and in all recent years the maximum circulation has been in January, February and March, and the minimum in June July and August. For instance, in March 1911–2 the active circulation was 44½ crores, and in June of that same year it was 38½, that is to say the active circulation was 6 crores higher at the end of the busy season than it was in the dull season?—Can you tell me exactly how the active circulation is arrived at?

6426 The active circulation is the gross circulation less the holdings of treasuries and Presidency banks?—Less the holdings of all the treasuries, or only the reserve treasuries?

6427 Of all treasuries, I think

(*Mr Gullan*) Yes. In the last Currency Report it says “As usual, the aggregate amount of notes in the hands of the public”—that is the active circulation—“was greater during the winter months than at other times of the year”

6428 (*Chairman*) Taking the figures which have been suggested to you, and assuming the accuracy of them—?—Then I must withdraw my statement

6429 Then you would agree with the suggestion I put to you?—Yes

6430 That the time when trade most requires assistance is the time when the currency reserve can best afford to give it?—Yes

6431 (*Chairman*) I come now to the question of the Gold Standard and the Paper Currency Reserves. Do you regard the keeping of a Gold Standard Reserve as necessary?—I do not know that it is essential, but it is desirable

6432 Do you approve of the present distribution of it between India and London?—Yes, certainly

6433 You raise no objection to keeping a portion of the Gold Standard Reserve in silver in India?—At times it will be necessary if you keep the reserves separate, at such times when India has to sell on London the proceeds of the drafts must go into the Indian silver branch. I do not know that it is necessary always to keep six crores in silver, but it is helpful to the currency reserve, and it enables more gold to be held in the currency reserve, and I see no objection to it

6434 As far as there is silver in the Gold Standard Reserve, I understand you think the proper place for that silver is India?—Yes

6435 On the other hand, so far as the Gold Standard Reserve consists of gold or gold securities you think the proper place for it is London?—Undoubtedly

6436 Will you give me your reason for that?—Because it is only in London where it will be required

6437 Have you any figure in your mind for the total to which it should be sought to raise the Gold Standard Reserve?—In my opinion the Gold Standard Reserve should be increased continually as long as new rupees are being coined. The difference between the price of the silver and the circulating price should practically be held in trust for the public, and should be invested

6438 Would you continue to put the whole profits of the silver coinage into the Gold Standard Reserve?—Yes, into the Gold Standard Reserve

6439 You would continue that practice indefinitely?—Indefinitely

6440 As regards the form in which the bulk of the Gold Standard Reserve should be kept, would you keep any portion of it in gold?—I do not think that it is necessary to keep actual gold when the gold in the currency reserve is strong

6441 Provided therefore there was a large amount of gold in the currency reserve, I understand from what you say and from your memorandum (Appendix XXIV, paragraph 11, page 592) that you would invest the whole of the gold reserve in securities?—Yes, that is right

17 July 1913]

Mr WILLIAM BERNARD HUNTER

[Continued

6442 Not merely in short dated securities?—No, a portion of it should be in short dated securities and temporary loans, but a large portion might safely be permanently invested.

6443 I think in paragraph 12 of Appendix XXIV (page 592) you suggest that in case of a heavy demand falling on the Gold Currency Reserve there would be no difficulty in realising such securities in London?—I think not, if your reserve of actual gold in the currency reserve was large, and you first released your gold and then immediately afterwards sold or borrowed on the securities.

6444 You would treat the gold in the currency reserve as—?—As the first line of defence.

6445 As the first line of defence for the exchange?—Yes.

6446 And only as you were coming to the end of that would you think it necessary to realise the securities?—No, I should do it practically simultaneously—release, say one million from the gold reserve and simultaneously either sell the securities or temporarily borrow upon them, but the releasing of the gold would prepare the markets.

6447 Suppose at the present moment it was necessary to have recourse to the Gold Standard Reserve, do you think that you could sell 10 millions of securities on the London market?—I think if you first released 15 millions of gold and placed that in the Bank of England you would not have very much difficulty in arranging for that. If they did not actually buy your securities they would temporarily advance against them. At present the proportion is one-and-a-half in gold to one in securities. That seems to me to be a very strong position.

6448 You think the gold released in India from the Paper Currency Reserve—?—It would have to be released in London. It must be released in London. You would immediately stop issuing gold in India at once.

6449 In the case of such a crisis you would refuse to issue gold in India?—I would refuse to issue gold in India, because the gold issued in India immediately goes into the hands of the bullion dealers. They take it up as a speculation, they can get it very much cheaper than they can by importing gold.

6450 Do you think the gold released in India or gold in circulation in India is not available for the support of exchange in a crisis?—I think not. I do not think it would ever be forthcoming in any large quantity.

6451 Then your suggestion that it is safe to keep the London portion of the gold reserve in securities is based upon two assumptions, first that there will be a large quantity of gold in the currency reserve, and secondly, that that will immediately be used in case of need in London?—Yes, in London.

6452 And would be refused to India?—It would be refused in India. It would not be necessary in India if the Government sells sterling bills immediately.

6453 (Mr Gillan.) May I ask at what point you would stop this giving out of gold in India? What I mean is that a crisis generally seems to come on very gradually, and you have, perhaps very considerable withdrawals of gold going on, presuming they are going on at this present moment, you are weakening your position before the actual crisis comes?—You are weakening your position by issuing the gold. I should stop issuing the gold from the reserve in India immediately the Secretary of State was unable to sell his Council bills at 1s 4d and simultaneously offer to draw on London.

6454 (Chairman.) I think the effect of what you have said is that you would to a large extent use the Paper Currency Reserve as a first line of defence for the Gold Standard. In view of that fact, and of what I think is a fact, that the Indian branch of the Gold Standard Reserve is very largely a Paper Currency Reserve, what would you say to the possibility of amalgamating the two reserves?—I do not think that the amalgamation is really desirable. I can see no benefit in so doing, and it rather hides the position. If you show great strength in a special reserve specifically for keeping up exchange it has a good effect.

If you amalgamate the two reserves, the only thing that I can see would happen would be that you would increase the amount of silver held by, say, six crores and the invested portion by 15 millions and perhaps two millions in gold, and against that you would have to issue in India the equivalent in notes, and if you utilise those notes for public works then your Gold Standard Reserve has disappeared, if not, you are simply holding the reserve nominally in India in notes.

6455 I think some of the criticism which has been directed against the management of the two reserves has been that they have been to the extent that you advise interchangeable. It has been objected, for instance, that the object of the Paper Currency Reserve is to guarantee the encashment of rupee notes in rupees, and therefore any gold there is out of place, but the object of the Gold Standard Reserve on the other hand is to guarantee the exchange, and therefore any silver there is out of place?—But if the reserve will answer the two purposes it surely would be a mistake to earmark it for one only.

6456 You do not think that any serious confusion arises from the existing practice?—Certainly not.

6457 In paragraph 16 of Appendix XXIV page 593, you say "The invested portion of the reserve"—I think you are speaking of the Paper Currency Reserve—"lacks elasticity, and in this respect the Paper Currency Act requires amending." Will you tell me what is in your mind as regards an amendment of the Paper Currency Act?—At present under the Act the total amount of fiduciary issue is limited to 14 crores against the circulation of something like 66 crores at the present moment, and at a time of active trade when there is a demand for more currency it would be a great advantage to increase the fiduciary issue. I think that probably it might safely be increased to a proportion of the total circulation.

6458 To what proportion would you say?—I would say up to perhaps 35 to 40 per cent, and that assuming that you had invested up to 40 per cent and notes then came in for encashment, it should not be necessary immediately to realise your securities until such time as the percentage reached something between say 55 and 60 per cent.

6459 I do not quite follow that. You would raise the proportion of the fiduciary issue by law to about 40 per cent?—Yes, you could invest up to 40 per cent. Assuming that you have invested that 40 per cent and notes come in for encashment, your specie reserve would then have fallen below 60 per cent, but I would not say that you must then immediately sell your securities, because that would tend to bring about a crisis, but you would allow the invested portion to rise to about 60 per cent.

6460 You would be getting into a rather dangerous position by that time, would you not?—Naturally, before you reached your 60 per cent you would be gradually realising. That would be the limit, but it would be dangerous to force you to realise immediately you reached the 40 per cent.

6461 It has been suggested to us that if the proportion of the fiduciary issue were increased, as you propose, it might be wise for the Government of India not to invest up to the full limit allowed in permanent investments, but to keep a proportion from which they might make those loans to trade which you think so desirable?—That was my idea—for that purpose specially.

6462 That they might lend temporarily?—Yes.

6463 On securities?—On various securities, trade bills among them. Perhaps the best class of security would be foreign trade bills, naturally they would turn themselves into cash in a very short time.

6464 You would not insist upon the deposit of Government securities?—Not necessarily, I think not. Of course, what I strongly advocate is a central bank with the note issue, and then the general assets of the bank would be held against it.

6465 Before we come to that I want to ask you one or two other questions. Have you any general observations or criticisms upon the present management of the note system apart from its inelasticity?—

17 July 1913]

MR. WILLIAM BERNARD HUNTER

[Continued

I think that more could be done to popularise the circulation of notes by the opening of numerous currency agencies where, not necessarily by obligation to be imposed, but in practice, notes would be freely encashed, and *vice versa*.

6466 Where Government would undertake to cash them as long as it was convenient?—Yes as long as it was convenient.

6467 But without undertaking a legal obligation?—Yes, and where they would be prepared to go to the expense of remitting coin when necessary.

6468 Would you suggest that the higher denominations of notes should be universalised?—I see no objection to it. I do not think it would cost so very much. It would undoubtedly cost something to Government, Government would lose what at present they make on the exchange which they charge for currency transfers, as for instance, from Calcutta to Rangoon they charge one eighth per cent, and from Madras to Bombay one sixteenth per cent, and so on. It would immediately lose that, but indirectly I think the gain would cover it.

6469 The internal transfer of money would then be done by notes?—It would be done by notes, and the mere fact that you could transfer notes from one place to another and obtain silver would to a certain extent in my opinion reduce the demand for the coin.

6470 Now let me turn for a moment to the question of a gold mint and gold circulation. You say that in theory there is something to be said on the side of the advocates of the gold mint. What have you in mind?—The mints are closed to silver, and I think it is reasonable that the holders of precious metal should be enabled to turn it into coin of the realm, and in India especially what I really had in mind is that in times of scarcity those that hold gold should be able to convert it readily into coin or the equivalent.

6471 From your observation that you believe in practice the mints would be silent, I gather that you do not think much gold would come in?—I do not think much gold would come in, not sufficient to justify the mints but in place of that the gold could be received and Government could bear the cost of shipping it home.

6472 From your point of view a mint is a rather expensive luxury?—Yes, it would be more economical simply to ship the gold home. While it is in transit it can be held as a portion of the currency reserve.

6473 You do not think they would get the gold produced by the Indian mines tendered for coinage?—They might, but that is quite a small quantity, it is about two or three millions, I think.

6474. You say that in times of stress there is something to be said in theory at any rate for having a gold mint, where natives who have hoarded gold can bring it to be coined?—Not necessarily to coin it in India, but simply to present the gold and have it assayed and refined and get cash for it.

6475 Then, as far as there is in your view any reason for a mint, the purpose would be equally served by an undertaking from the Government to purchase gold?—Yes.

6476 Would not the receipt of gold at the mint be simply a duplication of the existing system by which gold is received at the paper currency chests?—At the paper currency chests it is only sovereigns that are accepted at present.

6477 Not gold in bullion?—No, not gold in bullion, so I understand. Originally, when the mints were first closed to silver, gold in bullion was received, but I understand that that facility has been withdrawn.

6478 Does your experience lead you to think that the public have any difficulty in getting sovereigns when they want them in India?—Not any real difficulty. There are certain restrictions in Madras, I speak for Madras only. Sovereigns are issued in 10,000 at a time only, but I do not think that is any real difficulty. The banks can always get what they want. They build up the reserve themselves.

6479. There is not a very large demand for gold as currency in Madras, is there?—In two parts of Madras. In fact the two native States of Cochin and Travancore since 1903 we have financed entirely by gold, and in

Travancore and Cochin the gold is, you may say, in active circulation now, but that has been the case only since last year. Up till then in the busy season, that is, when the export season was on, gold was circulating very freely in the bazaar, but when the export season ceased and the import season was on—they import very large quantities of rice from Burma—the money that came down from up country in payment for the rice was entirely in rupees, but this last year I noticed that a certain portion of the accumulations in the slack season has been in gold, and I understand that in the Travancore Government treasuries there is a fair amount of revenue now paid by gold.

6480 Does that indicate a change in the habits of the people, does it mean that they are hoarding less?—I think that probably it means that the rupees which they had originally in hoards have all come out now and have been replaced by gold, and it now remains to be seen whether in the future they will be prepared to take all gold or whether we will not have to send a very large quantity of silver down there now. A curious thing is that in those places they will not look at notes.

6481 (Sir Robert Chalmers) Historically gold was a great portion of the currency in Madras?—Yes, but I think in those days the actual circulation was very small, and almost everything was paid in kind. All wages would have been paid in kind, and rents were paid in kind. In fact, in some places in Madras now rents are still paid in kind.

6482 The metallic currency of Madras in the old days was the swami pagoda?—Yes, the actual gold coin.

6483 Gold currency has a historical basis therefore in Madras?—Yes.

6484 (Chairman) I suppose you feel that as bankers your business is to give the public what they ask?—Yes.

6485 But you have a preference, if you could influence them would you influence them to take gold rather than notes or *vice versa*?—I do what I can to influence them to take notes. I am always prepared in the up country branches to buy bills on the centres at a cheaper rate if they will take the proceeds in notes, and to some extent we have been able to increase the circulation in this way.

6486 Will you tell me briefly your reasons for encouraging the circulation of notes rather than gold?—The chief reason to my mind is that the gold would then be in the central reserve, it would be obtainable when it was wanted, and also that the larger your circulation of notes is the smaller the quantity of gold which would be necessary because you would increase your fiduciary issue according to the increase of the issue.

6487 I take it that you hold that gold is a wasteful medium of circulation?—Yes, I agree to that.

6488 That the more it enters into circulation in displacement of notes or rupees the less the profit which the Indian Government can obtain?—Yes.

6489 Further I understand you to hold that gold in reserve is infinitely more valuable for the maintenance of the exchange than any amount of gold in circulation?—Yes, I agree to that.

6490 You say in paragraph 27 of Appendix XXIV (page 594) that the Mahomedan law of succession directly leads to the hoarding of gold. I do not want to go into that at length, but could you briefly explain to me how that is?—We will take the Hindu law of succession. I must exclude Bengal where the laws somewhat different but generally speaking all over India according to the Hindu law of succession the family is an undivided family and the property is divided among the male members of the family, so that although a man may have unlimited means, may have his investments in stocks and shares and deposits in banks, and may even specially insure his life in favour of his wife, yet the widow cannot claim twopence, the only things that she can claim are the gold ornaments which she possesses, and I believe it is now extended to actual gold coin which she has in her personal possession. The man might have no sons, but if there was some

17 July 1913 ]

MR. WILLIAM BERNARD HUNTER

[Continued

scamp of a nephew all the property must go to the nephew

6491 So that it is in fact the only provision that a man can make for his wife or daughters?—Yes. Then with regard to the Mahomedan law of succession that is different, because there the wife and daughters are entitled to a certain proportion, but then they are entirely *gasha*, that is to say, they cannot go out, and they are dependent entirely upon agents to look after their affairs, and they are very badly swindled, in fact, they practically get nothing. If I may say so, since I wrote this I have had the advantage of having a conversation with a member of the Egyptian Government connected with finance there. I was talking over the matter, and he told me that exactly the same thing exists in Egypt.

6492 Now I come to the question of a central bank. You are strongly in favour of the establishment of a central bank?—I think it would undoubtedly be a good thing for India.

6493 Am I right in thinking that you regard the reserve treasury system as the chief cause of the annual periods of stringency in India?—One of the causes—the reserve treasuries and also the accumulations in the other treasuries.

6494 It is to remedy that condition of things that you propose the establishment of a central bank which shall hold all the balances of the Government of India, and of the India Office?—Yes, that is one of the reasons.

6495 Will you give me your other reasons?—Such a bank would also have much greater credit, and, with a London office could in times of stress be in a position to raise further finances. Then again, it would do away with the trouble as to where the balances of the Indian Government were to be located. It would not matter whether they were with the London office of the bank or with the Calcutta office, because they would still be available in the reserve of that bank, and would enable it to finance more trade. If they were in London they would also be of assistance in London, because they would be with the Bank of England.

6496 You contemplate that such a bank would manage the paper currency system?—They would take over the paper currency and the bank would be in a position largely to increase the circulation. It would be so much to their interest to increase it, and they would be prepared to spend more in moving specie about for the encashment of notes, looking indirectly to the profits which they would make on the invested portion.

6497 Do you contemplate that the Government would transfer the whole of the profits of the note issue to such a bank?—That is perhaps a matter of detail to be arranged afterwards. I should not think that the bank would ask for the whole profit. I should think that probably the Government would be entitled to the average profit which they had made for the last so many years, and if they were interested in the bank in the way of shareholders as well—and I see no reason why they should not be interested—they would then benefit by the profit made by the bank.

6498 How do you contemplate that such a bank should be brought into existence? Is it to be superimposed on the present banking arrangements of India or is it to have its birth in the amalgamation of the existing Presidency banks?—By the amalgamation of the existing Presidency banks. I do not think there is room in India for a big central bank and the Presidency banks as well.

6499 The mere amalgamation of the banks with their existing resources would hardly answer your expectations, would it?—Necessarily if we were taking over the note issue we would have to increase our capital. That would be expected of us.

6500 You talked just now of having the Government as shareholders. Are you looking to the Government for the increase of capital, or only for a portion of it?—I thought, as a matter of fact, that it would be possible for the Government to take up a great portion of the new capital from their silver branch of the Gold Standard Reserve. They have at present got six crores there, and if they simply put

those six crores into the currency reserve, and issue six crores of notes, the transaction is complete, and it is interest bearing, and the rupees which you put into the currency reserve are just as useful there for the purpose for which they are held as they are at the present moment.

6501 You invest six crores of the currency reserve in bank shares?—Of the Gold Standard Reserve. You put the silver into the currency reserve and issue notes, and thus increase the capital of the bank.

6502 The rock bottom of the whole thing is that you have invested six crores of the Gold Standard Reserve in shares of the Bank of India?—In shares of the Bank of India. It is not necessary that the Government should hold the shares indefinitely, it is only if the central bank is approved that that would be the way in which it could be formed originally, and they could gradually get rid of the shares in the market if considered desirable.

6503 What control of or representation on such a bank do you think the Government would have?—It would be necessary to have a number of local boards in my opinion, you would have one in London, one in Calcutta, one in Bombay, one in Madras, and perhaps, if necessary, in other centres later on, and I think certainly that the Government would be entitled to have representatives on the directorate.

6504 Would you give the Government representatives a veto or would they only vote like their colleagues?—I think the mere fact of their being present would be sufficient. Of course, they would have, indirectly, practically a power of veto, as the central bank would be so much dependent on their goodwill, and if the central bank were doing things of which they did not approve, the Government would immediately withdraw the facilities. It would bring such pressure to bear, that really all that is necessary is to have directors who will watch what is being done.

6505 Supposing all the balances were transferred to a bank of this kind, do you think that in normal times it would set free much money which is now locked up?—I think so. I think that a large portion of the balances in the treasuries would be available, especially if, later on, they were able, as I surmise they would be able, to increase the circulation of notes. It would be then a very much simpler matter to bring all the funds as they are collected in the sub-treasuries, to the headquarters immediately by note remittances.

6506 This bank would combine in one reserve the banking and the currency reserves of India now divided between the Presidency banks and the Government?—Yes, banking, Government reserves, and treasury reserves.

6507 It would take over, as I understand, the whole of what you might call the banking business now done by the India Office?—Yes.

6508 The sale of drafts on India?—Yes.

6509 And the lending out of balances in the city of London, if necessary?—Yes.

6510 Would it also undertake the business of keeping exchange steady?—It could only do so as the agent for Government. The Gold Standard Reserve fund would remain a Government Fund, and the Government would still have the profits on the minting of silver, and they would have to bear the cost of maintaining the exchange.

6511 The responsibility for the management of the Gold Standard Reserve would still necessarily remain with the Government of India?—It would necessarily remain with the Government of India.

6512 And it would only be through the use by Government of that reserve that the exchange could be maintained?—Yes.

6513 Do you think that the Government could safely leave such very large balances with a bank of the character that you have described?—If it were a bank with roughly a capital of 10 millions as was suggested, the comparison would then be as I have shown in my statement, in the case of the Bank of England the percentage of capital to liabilities is 18.6 per cent., as compared with the Bank of France 8 per cent., the German Imperial Bank 7 per cent., and the suggested Bank of

17 July 1913]

Mr WILLIAM BERNARD HUNTER

[Continued

India 14 per cent, that is to say 14 per cent against the Bank of England which is 18 per cent. That is the largest, it is much higher than the others. If you take the proportion of specie reserve to liabilities the suggested bank would have 53 per cent as against the Bank of France, which is the largest, 60 per cent.

6514 Of the 10 millions pounds which you are allotting to the bank four millions would in effect be the Government's own money?—Temporarily, until they realised.

6515 Until they disposed of the shares?—Yes.

6516 Do you not think that, with the responsibility which you would leave to that bank for large Government balances, and above all for the note issue, it might be necessary to insist that the shares should have an uncalled liability. I understand that at present the Presidency banks are fully paid up?—The shares of the Presidency banks are fully paid. I think from one point of view it might be desirable, but it might put difficulties in the way of the scheme.

6517 I quite understand that?—I mean because so many of the shareholders are retired officials with pensions, and they would not like to saddle themselves with a liability of that description.

6518 Supposing that it were held that there must be uncalled capital in order to provide a sufficient guarantee of security, do you think that the objection to that would be so strong as practically to make it impossible for the Presidency banks to come into the scheme?—It might wreck the scheme. It is not possible to say definitely. It would be a pity I think to run the risk.

6519 Great importance has been attached by some witnesses to the present local management of the banks. If I may refer to a particular witness, here is what one witness says: "Each of the three Presidency banks has evolved a practice adapted to its own environment and their absorption by a State bank would in a large measure involve the sacrifice of the advantages to trade which this specialisation secures", and he goes on to say that he thinks it of great importance that there should be local management in order that the policy of the banks may be directed to meet the local requirements\*. You do not think that the necessary centralisation in creating a State bank would interfere with the banks' power to meet the different needs of the different localities?—I think not with local boards given sufficient powers.

6520 You would have to give considerable powers to the local boards?—Yes, you would, and certain safeguards, so that the resources of one Presidency would be available for that Presidency. It would all be a matter of the general arrangements, and I see no reason to anticipate that there will be any undue preference given to one centre over another.

6521 Did you contemplate having representatives of the Government on the local boards as well as on the central board?—Yes, I think so.

6522 I am not quite clear what position this bank would hold *vis à vis* of the exchange banks. Would it do general exchange business?—My idea would be that it would confine itself to doing exchange business for the exchange banks, buying and selling on London or on India practically for the exchange banks, i.e. discounting exchange bank bills in India, and selling on India in London to the exchange banks only. I realise that the exchange banks have done very good work in India and that it would not be right in any way to hamper them in their legitimate business. They have got vested interests which should be respected.

6523 Would you propose that the bank should have power to borrow in London?—Undoubtedly.

6524 I presume that would be objected to by the exchange banks?—I do not think that the exchange banks would object to our borrowing in London providing that there were safeguards with regard to exchange business. Their objections previously have always been that they thought it was the thin end of the wedge of getting into exchange business, they are frightened that we would borrow in London and then

in order to remit the money we have borrowed in London, go out into the market against them and buy bills in London on India, and *vice versa*, that to pay off the loan we should buy bills in India against them, and remit to London to pay off, and that we should keep the ball rolling and that we should borrow a great deal more than we wanted in order to enable us to carry out the operation.

6525 Your remedy for that is that you should buy or sell only through the exchange banks?—Only through the exchange banks. It really comes to this, that we are simply doing what Government are doing with regard to Council bills now and selling on London. The only addition to that that would be probable would be the possibility of re-discounting the sterling bills for the exchange banks in India at a time when discount rates were high in London and money was particularly cheap in India.

6526 If such a bank were established would you propose that the Government of India should issue fresh rupees when asked by them?—I should think that the Government of India would be guided largely by the advice of the central bank as to when it was necessary to coin fresh rupees.

6527 One further question, and I think I have done. Supposing that it were decided that there should be no such central bank, do you desire to recommend any alteration in the conditions which now govern the Presidency banks?—I think that the whole Bank Act should be amended, and especially that the banks should have access to London for borrowing purposes.

6528 That is what I had in mind, you think that they should be enabled to borrow in London?—Yes.

6529 But not to deal in exchange?—But not to deal in exchange, I would exclude dealing in exchange. They should borrow in London and remit through Council bills, and when they have to pay back the money they must remit through the exchange banks or by Government drafts.

6530 (Sir Robert Chalmers) In your experience is there any movement among the Presidency banks themselves towards amalgamation?—I cannot say that there has been a movement among them. I have personally discussed the matter with the Bank of Bengal but it was at very short notice, it was only when this Commission was appointed and I was asked to attend as a witness that I went up to Calcutta just for a short time.

6531 You are not aware of any movement among the Presidency banks?—No.

6532 There is nothing in the way of their own interest as trading concerns which has promoted such a movement so far as you know up to the present time?—Up to the present time there has been no movement.

6533 Outside the Presidency banks themselves is there in your observation any organic movement among the public to impel a union or confederation?—No, there has been nothing of the kind so far as I know.

6534 So that it is not a popular movement either in or outside the Presidency banks?—Not that I am aware of. I have put the thing forward because in my opinion it is a very desirable move and a step in the right direction, and it would help on India generally.

6535 Assuming that there were a State bank on the lines which you have indicated to the Commission your position is that the responsibility should to a very large extent be left with the Government they would be directors of the central institution and on the local boards and should have a power of veto I think you said in practice?—In practice they would.

6536 And they would be so far the biggest customer that they would be able to bring very great pressure to bear?—They would be able to bring very great pressure to bear, yes.

6537 Leading possibly if they pressed it far enough, to the upheaval and destruction of the institution?—Yes, but that is unthinkable, as they are so much interested themselves.

6538 So far as the responsibility is ultimately left with the Government, would the advantage from a State bank mainly be to the public through the bank

\* See Qu 3966 *supra*

17 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued

in the way of getting money available more readily for trading requirements?—I think so

6539 That is really the bedrock of your proposition?—Yes

6540 You want to get money available when trade wants it?—I want to get money for trade purposes, and the general development of the country, railways, and so forth—to economise the use of money

6541 Would not this advantage tend to be secured in another way, that is by lending out balances, or say a part of the fiduciary portion of the Paper Currency Reserve?—That would be a step in the right direction, but I do not think it would have the same effect

6542 Why should it not have the same effect? Suppose that under your State bank plan you get a crores of rupees available, if you got a crores of rupees available from the fiduciary portion of the Paper Currency Reserve, would not that be the same?—Unless the bank had the direct management it would mean long correspondence before the money was made available for trade, and the time would be passed when it was required

6543 You think there would be difficulties owing to creating machinery?—There would be difficulties in the machinery

6544 And it would come to this, that if the balances were so piled as to make the balances available, that would tend to meet your main object in connection with the State bank?—Quite so

6545 May I ask you a question or two about exchange? You say when exchange weakens and you cannot sell telegraphic transfers and Council bills at 1s 4½d. and 1s 4d. respectively, they should cease to be offered. That is the essential portion of your scheme so far as exchange is concerned?—To my mind it would strengthen exchange very much if that were done. When they are unsaleable at those rates it shows distinctly that there is no demand. It is easier to keep exchange up than to bring it up again when once it has dropped. The best way is to keep it steady

6546 You are not prepared to work exclusively therefore between gold import and gold export point?—No, I think that it is preferable to keep within narrower limits

6547 Are there any other countries which you can point to where exchange is not allowed to find its own level by the equation of supply and demand?—No, I do not think there is any other country

6548 Take France for instance. Let us assume that their specie points are 25 f 11 c and 25 f 33 c. p.—Yes

6549 They sell between those points, but you would make a difference in the case of India?—I would make a difference in the case of India

6550 You would stand out for a top price, you would not drop to the specie limit below?—No

6551 Suppose that theory of exchange were carried out in other countries, what would happen, it would tend, would it not, to stop exchange operation through banks? If a buyer stands out for the lowest price, and the seller for the highest price, you do not get any business done?—Yes, but through my scheme you are simply financing the bank, you are not financing the general public

6552 It has relation to the bank?—It has relation to the exchange banks only. The specie point between London and India is a much larger difference than that between London and France. There is plenty of room for the banks making their profits although you reduce the limits

6553 But that difference in amount does not affect the question of principle, does it? You are proposing to ignore at least one of the specie points, and to say that you will stand out for a top price. What I am asking you about is this. I would like to learn your reasons for departing from the practice which, I understand you agree, is the general practice of equating supply and demand?—In my opinion the closer you can bring the specie points the better

6554 Can you bring that closer?—No, you cannot bring the specie points closer, but by such an operation as this you make the transfer of funds from one market

to the other as cheap as possible. There is less risk in transferring funds freely from one centre to the other

6555 Would your system be cheaper than any other? Would not your system involve the shipment of gold to and from India?—No, practically there would be no gold shipment at all

6556 You think that, do you?—I do. It is with the object of saving gold from being shipped from here that I sell on India below specie point

6557 That is your view. You would not be prepared then to accept the doctrine that it would be the business of the Secretary of State to get his money across if and when it is available according to the terms of the day?—I think it is advisable that the rate should be such as will save gold from being withdrawn from London. My real object in keeping the rate below the specie point is to avoid the shipment of gold from London, because the withdrawal of gold from London reacts on the India export trade

6558 But you feel that your system is a more artificial one than the one usually in force?—Yes

6559 (Sir Ernest Cable) In talking about Government loans, you said that you thought that not much more money could be borrowed in India by Government than is now being borrowed?—I did

6560 You mean of course on the present terms and conditions?—On the present terms and conditions

6561 If the rate of interest were raised on a fixed term loan could not a great deal more be borrowed?—It is possible that larger loans could be floated if better terms were offered, but it would have the effect of depreciating the present securities

6562 You said just now with reference to a central bank that there was no popular movement in favour of a central bank in India, but in your experience of India do you find popular movements frequent and insistent, or are they somewhat rare and weak?—I think they are rare

6563 They are rare and weak, and so one has to move ahead of them?—Yes

6564 You said with regard to that simple operation of placing Government money at the disposal of the banks during the winter season, that there would be some delay, and, in Sir Robert Chalmer's phrase, that this would be creating in the machinery. It is one simple operation, but throughout the whole of your memorandum (Appendix XXIV, page 591), if you will glance through it from that point of view, I notice that you recommend most intricate banking operations should be performed in order to carry out your exchange policy and your lending policy and so on—banking operations which perhaps the Government could not carry out so well as a central bank. Is that your view?—That is my view. The central bank would carry them out more expeditiously, and would be in a position to know the pulse of the market, and to know what was required to meet the needs more quickly than a government possibly could do

6565 It has been said by some people on the subject of a central bank that the area over which this bank would extend its operations is too large to secure efficient management. Have you any views about that?—I do not think that that difficulty is insuperable. If we take the present sphere of the Bank of Bengal, it probably covers more than three-fourths of the area, leaving the other to the Bank of Madras and the Bank of Bombay, and with local boards I see no insuperable difficulty

6566 So you think that the amalgamated bank would simply proceed to extend those spheres of influence already marked out?—Yes

6567 Without much change?—Without much change

6568 You mentioned that Calcutta should be the head office. Have you any reasons to give for that?—Calcutta is the head office of the largest of the three banks, the capital of the Bank of Bengal is more than the combined capital of the other two banks, and I think that naturally on such an amalgamation the Bank of Bengal would be entitled to consider Calcutta as the head office.

17 July 1913]

MR WILLIAM BERNARD HUNTER

[Continued]

6569 Geographically there might be some difficulty?—Geographically Calcutta is more or less equidistant. If you take the distance from Calcutta to Delhi, Calcutta to Bombay, Calcutta to Madras, or Calcutta to Rangoon, it is more or less central.

6570 But if there were certain local jealousies which would militate against the immediate formation of this bank with a Calcutta head office, you would have no objection to having another centre for the head office?—No, if it was a case of elsewhere to save wrecking the scheme. I would raise no objection if it were Madras.

6571 The financial scheme which you suggested seemed to me to be open to the objection that we have had put before us by other witnesses of involving a very large capital, and if the Government were to come in as shareholders at the beginning, it would be necessary, I suppose, to capitalise the undertaking at the market price of the shares?—The new capital would have to be capitalised, of course.

6572 At the market price?—Yes.

6573 I might, perhaps, suggest an alternative scheme which is free from the objection of starting with a very large capital. Would it not be easy to make the ratio between capital and reserve the same in each of the Presidency banks? This is already more or less the case now, is it not?—They are more or less now. The reserve of the Bank of Bombay is slightly in excess of their capital, in Madras it is very close, and so is the Bank of Bengal.

6574 It could be done with more or less difficulty?—There would be very little difficulty in doing it.

6575 If they were brought up to the same ratio, then the shareholders of the central bank might receive share for share of their present holdings in the existing banks. That would be quite a fair distribution?—Yes.

6576 Then with regard to the new capital which, of course, is required, would you see any objection to this, namely, that the new capital—let us call it three crores of rupees for the sake of argument—should be offered to the existing shareholders *pro rata*, and that only 20 per cent of the new capital should be called up?—I see no objection to that proposal.

6577 That would create a very large reserve of uncalled capital, and would perhaps justify the Government in having the greatest confidence in the new bank?—I would suggest three crores with 25 per cent paid up.

6578 Let us say 20 per cent. This would give you all the capital you wanted, and you would also have a large amount of uncalled capital, which would, I think, help to induce the Government to hand over the whole of the balances?—I would have no objection to that. I have not set my heart on any special scheme at all, I am quite open to any suggestion.

6579 Do you think that this new central bank would have the effect of drawing out any money from the hoards?—In so far as it would increase the number of branches, it would probably bring out a small amount, but not very much.

6580 There are hoards of two classes in India, are there not, there are hoards by the princes and maharajahs?—Yes.

6581 Would not those be extracted?—Yes, I think probably we could get hold of more of those. Even now we have a fair amount.

6582 (Chairman) Why would the central bank get more of those than your existing Presidency banks do?—Because I think there would be more confidence. It would be recognised as being a very much bigger bank, and perhaps as being a Government institution.

6583 (Sir Robert Chalmers) That is so—because it would be a Government institution?—Yes, I think so, with the Government prestige.

6584 The Government prestige and Government responsibility?—It might be considered that there was Government responsibility.

6585 Given Government responsibility, that would tend to the purpose that Sir Ernest Cable has in view?—Even now the Presidency banks have more or less

that prestige. They are considered as Government banks.

6586 Then what is the added prestige if there is that feeling already about the Presidency banks?—As I say, to a certain extent, not among the less enlightened portion of the people—if you take the native states and native rajahs, they understand more clearly the true position.

6587 You put it practically on the direct responsibility of the Government being superadded?—Yes, and the stronger institution.

6588 (Sir Ernest Cable) Do you think this new State bank should as one of its usual functions lend out these balances to agriculturists, or I should say rather to co-operative credit societies?—I think it could within certain limits. Even now we in Madras indirectly finance, to a small extent, these co-operative societies. They have a central bank in Madras, and we discount their bills. The bills of the rural bank to the central bank we discount to a small extent.

6589 (Mr Keynes) I want to ask you a little more in detail about your proposal for making 1s 4d the lower limit for Council bills. In my own mind I am very doubtful which way the argument lies. I see that there are manifest advantages in reducing the fluctuations, because, as you said, it makes it much easier to transfer capital, but I want to put to you the argument on the other side and to know what you think of it. When exchange is weakening it is very important for the Secretary of State that people should not remit funds from India to England unless they absolutely have to do so. He wants the banks to bring back as little money as possible. If exchange is allowed to fall, within limits, that makes it less profitable for the banks and other persons to bring money home, and, therefore, reduces the amount which he need keep in reserve. I will put it in this way. If you were to fix exchange absolutely so that he would sell bills either way at 1s 4d, then enormous sums would be remitted backwards and forwards at the end of the busy season and at the beginning of the busy season?—Yes, probably.

6590 The Secretary of State would have to keep very much larger reserves than he does in order to be sure of being able to make remittances both ways at 1s 4d to whatever extent was required. Each one sixteenth fluctuation leads to a few persons who would otherwise remit not doing so, and a difference, for example, of one-thirty second in exchange is as much a protection as an alteration in the bank rate of 1½ per cent on three months' bills and 3 per cent on six weeks' bills?—Yes.

6591 All that being so, do you think that the Secretary of State would be much increasing his liabilities if he were to follow the policy which you have suggested?—I think not, because, assuming that he buys and sells at the same rate of 1s 4d, it would not affect the balance of trade. It would simply be this, that temporarily, if rates were suitable in India, and there were higher rates of interest, a large amount of money—capital—might be remitted from London which would give you gold here to start with and would then be brought back again. On the balance it makes no difference, whereas on allowing exchange to drop you will have a rush for remittances to get the money home for fear it will drop further. There may be a large number of sterling bills that are falling due very shortly, therefore they will be paid at once rather than run the risk of letting them run for another fortnight and then having to pay a lower rate of exchange, which costs them more.

6592 Let us take the case where it is fixed at 1s 4d both ways. I think it is evident that in the long run it would turn on the balance of trade, but within the limits of a given year would not the Secretary of State have not only the ordinary fluctuations in the balance of trade but also superimposed fluctuations due to the fact that money would be sent to India for part of the year and then taken back to England for another part?—Temporarily, when money was very easy in India, it might make big inroads

17 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued]

and uncomfortable inroads on the gold portion of the currency

6593 Quite apart from the balance of trade, persons in India might wish to bring back to England for three months, say, 10 million pounds?—Yes

6594 I mean quite apart from the balance of trade?—Yes, you mean if money was very easy in India and could be profitably employed here?

6595 Yes, so that the Secretary of State would have to meet not only fluctuations in the balance of trade, but also any desire there might be on the part of people to remit money to England because temporarily it could be used here more profitably?—Yes

6596 Every one sixteenth fluctuation he permits must reduce that risk?—Yes, that is so. I do not think there is any great danger by reducing the difference. It is possible, that I admit. In theory you are quite correct.

6597 I come back to the actual figures, and suggest that it might be more serious. Suppose that as at the present moment the rate is 1s 3½d, when an exchange bank or any other person is wondering whether it is worth while to remit funds back to England for a bit, which they will have to take out again in the busy season, one of the important things they must take into account is the loss on exchange?—That is so.

6598 A rather small loss on exchange corresponds to a rather large fluctuation in the bank rate?—Yes

6599 Hence even a difference of one-sixteenth might make them remit back temporarily very much more than they do at present?

6600 (Chairman.) What do you say to that?—I am not quite certain of the point. The exchange banks, as a matter of fact, always cover their operations in practice. They do not keep a large amount out standing either one way or the other.

6601 (Mr. Keynes.) To make 8 per cent in India for six weeks and to remit back at a loss of one sixteenth of a penny to the rupee is the same thing as to make 5 per cent in London for six weeks?—Yes

6602 Therefore the inducement to remit which is brought about by a fluctuation of one sixteenth of a penny in exchange is the same as an inducement brought about by a fluctuation of 3 per cent. in the bank rate for six weeks' loans?—Yes, that is so.

6603 You will agree that that is a consideration of which the Secretary of State has to take account?—Yes, I agree.

6604 I am not putting this as conclusive?—I admit that, but my contention is that the usual and more common operation would be to remit the capital from London to India in the first instance, and that the return of capital from India, where the reserve would necessarily be strengthened, would be uncommon. It would simply bring the same funds back again.

6605 There is a certain amount of money which is kept in India all the year round?—Yes

6606 What I am suggesting is that there will be a much greater tendency to bring that back in the slack season?—Yes, there might be. The money that they kept in India during the slack season is largely Indian money, Indian deposits, and it might be to their advantage, if you lessened the difference, to bring it home temporarily.

6607 I think it quite clear that the Secretary of State could not safely fix it both ways at 1s 4d?—No, quite so.

6608 It is simply a question at what point he sufficiently safeguards himself?—Yes

6609 I want your opinion upon that. Do you think he has sufficiently safeguarded himself if he allows a fluctuation between 1s 4d. and 1s 4½d?—I think that is fair.

6610 You think that the present fluctuation is more than he really requires?—Yes

6611 You have expressed the opinion, I think, that Government loans to the extent of three or four crores in the busy season would ease the situation. Other witnesses have put the figure even so low as two or three crores. In making that estimate, are you assuming that all the funds now available would still be available?—Yes, I am assuming that.

6612 That it would be the net addition?—Yes

6613 If it had the effect of reducing the bank rate from 8 per cent to 6 per cent, do you think all the funds now available would be forthcoming?—I think so, I do not think it would affect that. My idea is that the deposits would not fall off because the rate had gone down.

6614 That is one point. I was not so much thinking of that as of the transactions between London and India?—I do not think that those would be affected materially either.

6615 When an exchange bank is buying Council bills in order to obtain funds in India with which to discount sterling bills, I suppose they are much influenced by the rate at which they can discount them?—Yes, the London rate, not the Indian rate.

6616 But that must be connected with the Indian rate, because the rate of discount of sterling bills in India would not be altogether independent of the rate payable for other loans?—So far as I know the exchange banks base their rate entirely on the London rate, plus the rate at which they can buy their Councils. It is not influenced much by the local rate.

6617 I mean the rate at which people can borrow money by discounting their sterling bills cannot be altogether independent of the rate at which they pay for other kinds of accommodation?—I think it is. So far as I am aware the exchange banks base their rates entirely on the London rate for their sterling bills.

6618 It does not make the smallest difference to the exchange banks in any of their transactions whether the bank rate in India is 6 or 8 per cent then?—It makes a difference in their local business, but not in their exchange business.

6619 Are those two in absolutely watertight compartments?—They are more or less.

6620 You say the exchange banks are not influenced in the least in bringing out money by the fact that there is an 8 per cent bank rate in India?—I do not think so. Their local business is largely worked upon their local resources, and their exchange business upon the basis of the London rate. But I do not pretend to speak authoritatively upon this because I am not an exchange banker.

6621 I want your opinion on that point. You think that with a bank rate of 6 per cent the amount of money that is forthcoming would be practically the same as at 8 per cent?—I think so. I do not think it would affect the amount of money that the exchange banks would bring out.

6622 I come to the other side. Do you think that the demands for loans at 6 per cent are not much greater than at 8 per cent?—Yes, I think so, decidedly.

6623 You think the excess is only about three or four crores?—I think three or four crores, as I said before, would ease the market very considerably. It would be a very great help. I would not like to state definitely that no more could be utilised.

6624 Let us go a little more deeply into the causes of a high bank rate in India. You think that a bank rate of 8 per cent rather than 6 per cent is simply caused by there being three or four crores less loanable capital than there actually is?—I think three or four crores would reduce the rate from 8 to 6.

6625 (Chairman.) Three or four crores more?—Yes,

6626 (Mr. Keynes.) I do not want to press all this unduly, but let me put it to you in another way. I should have said that the bank rate in India was fixed in this way, you must either leave your money idle during the slack season, earning at best a very low percentage, or you must remit it back to England. In the first place, what you must consider is the average rate of interest throughout the year, and there is no evidence that that is higher in India than in other countries, or you must remit back and then you must make the loss on exchange which we have been talking about?—Yes.

6627 Must not the 8 per cent rate in a busy season exist in order to counteract either the low rate in the slack season or else the loss of exchange?—I see your point, but in my view, I think cheaper money in the height of the season would enable India to finance her trade for longer periods.

17 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued

6628 My suggestion is that a high bank rate is due to much deeper causes than to there being three or four crores more or less of loanable capital in the country, and therefore it is unlikely that it will be lowered by there being three or four crores more available. I mean that is a very small amount, as you will agree, in comparison with the extra sums which have become available in the last 10 years?—That is so.

6629 Each year you get an immense addition?—Yes.

6630 But still you find your bank rate going to 7 or 8 per cent?—Yes, it goes to 7 or 8 per cent, but that is largely due to the withdrawal of currency at the time when it is mostly required. There is always a big contraction of currency from January to March, just at the time when an expansion is necessary for the financing of trade.

6631 Do you think that the withdrawal of which you speak is of the same magnitude as the relief which you would get by three or four crores more?—Yes.

6632 You do really think that this high bank rate is due to this somewhat casual circumstance rather than to deeper underlying causes?—I think so. It appears to me to be so.

6633 I want to come on now to the general question of a State bank. Can you tell me a little about the relation of the other banks to the Presidency banks? Do you keep an important amount of deposits belonging to exchange banks?—Exchange banks keep their local working balance with Presidency banks.

6634 But is it important?—No, not very important. It is always what Presidency banks look on as a very dangerous balance, you never know what it will be. One day they will have a big balance and the next day they will have nothing. Occasionally they borrow.

6635 In the case of the new Indian joint stock banks, do they keep much with you?—There is only one very small one in Madras, and they keep nothing.

6636 Have you any knowledge of these Indian joint stock banks?—No personal knowledge. Bombay is the centre for that.

6637 You suggest that in the event of the currency notes being taken over by the State bank some part of the fiduciary issue must consist of sterling bills. Do you deliberately intend to exclude hundis?—No. I simply mention that as a particular form of security which I thought was a very good one for temporary security for a note issue.

6638 You think that the best class of local Indian bills would be quite suitable for the purpose?—I think it would be quite suitable.

6639 If, as you suggested, it was part of the general banking business to discount against the note issue, of course Indian bills would form a large part of it?—Yes, such a bank would have the power of discounting to the larger local banks, and their bills would go into the funds. It would be the best security available. In fact it would be the general assets of the bank, similar to the Bank of France, where there are no particular assets earmarked for the note issue.

6640 You argue that the paper currency would be much encouraged if there were currency agencies all over India. I suppose that in the event of there being a State bank the branches of the State bank would be those currency agencies?—Yes.

6641 That would be a much more economical way of managing them than to have separate agencies?—Yes.

6642 That is very much part and parcel of the State bank scheme?—Yes, but it would be quite possible for the Government, even without a State bank, to have currency agencies. Where they have got large treasury centres they can have currency agencies.

6643 You are proposing an arrangement almost exactly like that of the Reichsbank, which has agencies all over Germany, which are instructed to cash notes wherever they can, but are not under a legal liability to do so?—Yes, that is what I mean—as a matter of practice always to encash them, but not to have the legal liability.

6644 We have been told that there is not at present very much economy in setting up branches of the Presidency banks in place of treasuries. Is that to any extent due to the fact that the currency chest still remains outside the province of the bank in those places?—No, the currency chest is held by the bank, but the funds in the currency chest, of course, are not available, they are a special reserve for the note issue. What happens is this: revenue is drawn in during the week, and goes to the credit of the Government account. On a certain day in the week the whole balance, that is everything except a small working balance, which varies from 75,000 rupees to a lakh or two according to the size of the Treasury, is transferred into the currency chest. The bank then simply becomes a collecting agent for Government, and once a week the surplus is transferred to the currency chest, and that becomes the security for the note issue.

6645 When the Government reduce their three lakhs to one lakh, does that mean that they have absolutely no more than one lakh in the place, or that they have transferred the two lakhs into the currency chest?—It means that they have transferred it into the currency chest. They might have 50 or 60 lakhs in the currency chest.

6646 So that the rupees are still in that place?—They are still in that place.

6647 What the Government does is to take them out of the control of the bank?—Yes.

6648 What advantage to the Government is that?—As far as I know it is no advantage at all. They hold large notes in the reserve treasuries against them. Of course, in the height of the season their reserve treasury is what they look to to meet their large sales of Council bills. It provides for the sale of Council bills some considerable time before they are actually sold, by the withdrawal of cash in actual circulation.

6649 (Mr Gillan) In fact it is the Government method of holding their balances?—Yes.

6650 (Mr Keynes) I do not quite understand whether when they transfer the two lakhs to the local currency chest they keep it in there in rupees or only in notes?—It might be rupees and it might be in notes. In the chest you will have a large balance of notes and a large balance in rupees. The notes, as soon as they are put in there, I presume, are taken off the note circulation, and the rupees then form a portion of the reserve.

6651 There are a great many rupees there which the Government can use for replenishing its balances, but which the bank cannot use?—Yes, which the bank cannot use.

6652 So that the lack of economy in the present system merely results from the separation between the banking and the note issue part?—Yes, it results from the separation.

6653 If they were combined the Government would have no motive whatever for reducing the three lakhs to one lakh?—They would have no motive, that is so, provided also that their treasury balances were with the bank. Their reserve balances are kept with the Accountants General.

6654 Of course, when the reserve treasury balances were falling very low they might have to withdraw rupees, but except in that case it would be no inconvenience to them?—No, it would be no inconvenience. It is a matter of having sufficient confidence, in leaving large balances with the banks, that the money will be forthcoming at a time when Government require it. I think that is really the sole explanation.

6655 Except in cases when the balances in the reserve treasuries are running low this practice of the Government, which makes it unprofitable for the bank to have branches, is of no advantage to them whatever?—No, it is no advantage.

6656 I think I understand clearly the great advantages which, as you maintain, would accrue from the existence of a State bank, but I would like to question you as to how far you think those advantages might possibly be obtained without a State bank. First of all, with regard to the paper currency, I understand that you think that the bank could use methods of popularising it which absolutely could not be open to the Govern-

17 July 1913]

Mr. WILLIAM BERNARD HUNTER

[Continued

ment?—I think that they would have means I would not go so far as to say that the Government could not do the same if they would, but it would be more difficult for them than it would for the bank. We have direct dealings with the trading public and the Government have not, and we can induce our constituents to take notes by offering them more favourable rates than they could obtain by taking silver, which would cost us a lot of money to transfer.

6657 You suggested that against the paper currency a certain amount could be held in the form of bills?—Yes.

6658 Do you think that if there were no State bank the Government could possibly enter into the business of buying bills?—No, I should think it probably could not.

6659 So that part of your proposal is really contingent upon the State bank being established?—Yes, that is so.

6660 Would it be possible for the Government to lend to Presidency banks against the security of bills?—They might do it in that way.

6661 But you think that the use of the balances for discounting bills is essentially a banking operation?—I think it is. It could be carried out better by the bank, and more promptly.

6662 Then there is the point about the Government balances, which for various reasons which have been explained to us, are very big in India. Do you think that Government could possibly lend anything like all those balances to the existing Presidency banks?—No, I do not think they could use them—not the balances that they have at present of something like 20 crores. I do not think that would be a business proposition at present under present circumstances.

6663 So that your proposal for putting Government money at the disposal of trade is contingent on the establishment of a State bank?—Yes—the whole of them balances.

6664 There might be some increase even in the absence of a State bank?—I think under existing conditions very much more of the balance could be put at the disposal of the Presidency banks temporarily during the busy season.

6665 About how much more, do you think?—Of course, it would depend upon the season. It seems to me they could meet the requirements of the Presidency banks out of their funds which are doing nothing.

6666 Could they, do you think, lend enough of their balances to the Presidency banks really to meet your criticism, or could they only lend enough to meet your criticism if there were a State bank established?—I think that under existing circumstances they could lend us enough.

6667 So that that part of your proposal is not absolutely contingent on the establishment of a State bank?—It is not absolutely contingent on that.

6668 It would be more efficient though if there were one?—It would be more efficient if there were one.

6669 I come back to another point about which I think you have not said anything, or, at any rate, have not said much, in your memorandum, and that is the banking resources of the country. Do you think that there will be any substantial advantage in having the banking resources amalgamated, from the point of view of security?—Do you mean of the three Presidency banks?

6670 Yes, having their cash resources amalgamated?—It certainly would strengthen the position to a certain extent, in so far as the demand varies in point of time. In Bengal the demand arises earlier than it does in Madras. Our season continues longer. Therefore the amalgamation of banks in that way would strengthen the position. Do you mean whether it would make a stronger bank?

6671 I was thinking rather of the case of a crisis?—Yes, I think decidedly in the case of a crisis, if there were an amalgamation of the three banks the credit of the three banks would be stronger than the credit of an individual bank. A bank such as I have outlined would be able to command credit in London.

6672 Do you think that the present position is so safe that these are rather minor considerations, or do you think that the present position is not as good as it might be in the matter of meeting a crisis?—I think there are dangers about the present position.

6673 You would not feel perfectly happy in a severe banking crisis in India?—Certainly most unhappy. Unfortunately I went through a very serious crisis in Madras, and there was no outlet, absolutely none. I refer to the failure of Abbutnot & Co.

6674 What do you mean by no outlet?—There was no outlet for obtaining resources. We were tied up in the Presidency practically. We have no recourse to London, and no possibility of raising money elsewhere, we depend upon our own cash balance.

6675 Could you not even draft in money from Bengal?—If Bengal happened to be easy at the time you could borrow money up to a certain point, but then you have your Bank Act, which comes in and provides that you can only borrow against certain securities. The Bank Act precludes a Presidency bank from lending to another Presidency bank without specified security.

6676 I think in answer to a question earlier to day you discriminated between the effects of the sale of Council bills and of lending money in India in this way, that if Government released funds by the sale of Council bills that helps shippers rather than producers?—The Council bills are not applied for until the produce has been brought down for shipment.

6677 But if the Government money were available in numerous branches all over the country, you think that would strengthen the financial position of producers as against that of shippers?—I think so, they would be enabled to get financed more cheaply, and would be able to hold their produce if the market were unfavourable.

6678 That is to say, the money market in India is a very imperfect one?—Yes.

6679 Funds which are available to one class of borrower are not at all available to another class?—That is so. The producer has got to pay his kist, that is, the Government revenue, at a certain time, and, in order to pay that, he must either be able to sell his produce or to borrow on it. If the rates are high it practically means that the money is not available to lend, and, therefore, he has to sell, he sells to the exporting merchant, and the exporting merchant sells his bills to the exchange bank, and they obtain Council bills.

6680 I have only one more question to ask. Assuming that no State or central bank is established, you have said you would like an amendment of the Presidency Bank Act, by means of which they could have access to London?—Yes.

6681 Do you also ask for any relaxation in the matter of the rules regulating the terms upon which they can lend in India?—Yes, I should like those altered also.

6682 What sort of alteration would you wish in them?—The terms as to the security upon which one may lend are very stringent. You cannot lend on credit alone. You can discount a bill which has two names, but, as I say, even to the Bank of England I could not lend a lakh of rupees unless they put down certain securities which are specified in the Act. I say that the Bank of Bengal cannot lend to the Bank of Madras any money except if certain securities are put down. They can re-discount bills up to certain small limits, which would be of no use in the matter of helping the Presidency—up to five or six lakhs is about their limit.

6683 (Mr. Gladstone) In your memorandum you propose that in the event of a central bank being established the head office should be in Calcutta, and you gave as a reason that the Bank of Bengal has the largest capital. It is also the fact that the territory of that bank has also much the largest population, and much the largest trade?—Yes.

6684 Sir Edward Law, in a minute which has been given to the Commission, dated in 1901, referred to the difficulty of securing a thoroughly suitable board of

\* See Appendix XV., pp. 437-8, para. 53.

17 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued

directors, having the necessary leisure to devote to the business of a State bank. Do you agree in that?—I do not think that difficulty is insuperable.

6685 It is the fact as it not, that the business of Presidency banks is very largely controlled, and necessarily controlled by the managers and deputy managers, because the boards of directors are not men of leisure, they are all occupied with their own business, and are quite unable to give much time to the business of the banks?—That is so.

6686 Probably the managers of the Presidency banks exercise quite as much control as the managers of the exchange banks in India?—I think so, quite.

6687 And the exchange banks have no boards in India?—They have no boards in India.

6688 Do you not think that a much stronger board of directors would be obtainable in London, supposing instead of having the head office in Calcutta you had the head office in London, with the local boards as you have suggested, in the Presidency towns?—A London board would lack the local knowledge, which is a very great thing.

6689 Could not a board be got together in London consisting of business men with full experience, of good financial position, and the necessary leisure to admit of their giving time as in the case of the Bank of England?—That would be possible, but against the London board I would suggest that the Indian board's interests would be more for the benefit of India than those of the London board. They would look to India's interest, more than the London board are likely to do.

6690 Failing a satisfactory directorate in India, would you agree to a London board?—I have made my objections, although as I say I am not wedded to any particular scheme, but just the principle.

6691 But you have experience of your directorate and as I was a director myself I feel able to put the question? I think it is generally agreed that the directors of Presidency banks really have not got the time?—They cannot devote their whole time to the business of the bank and they cannot possibly have a thorough grip of the details.

6692 It would be almost impossible to get a satisfactory directorate of a large central bank so far as unofficial members are concerned in India?—I do not think you could get anything better in London. I do not think a board constituted in London could possibly have any better knowledge, or be able to control the real business of the bank, although they devoted their whole time to it. They would lack the local knowledge, which is a most important thing.

6693 I suggest that the central bank if established in London should be directed in the main by men of Indian experience?—Yes.

6694 It is a fact, is it not, that the bulk of the successful merchants return to England somewhere about forty?—Yes.

6695 In the prime of life?—Yes, but they very quickly lose touch, conditions change so rapidly in India.

6696 Many of them are in their own businesses as well in England?—Yes.

6697 They do not lose touch with India?—No, not to such an extent.

6698 Do you think that such an arrangement would meet with general approval in India supposing it was agreed that a satisfactory directorate could not be obtained in India?—I do not think it would be popular from an Indian point of view.

The witness withdrew.

At the India Office, Whitehall, S W.

### FIFTEENTH DAY.

Friday, 18th July, 1913.

#### PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G C B  
Sir ROBERT CHALMERS, K C B  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLAN, CSI  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P BLACKETT (*Secretary*)

Mr WILLIAM BERNARD HUNTER recalled and further examined

6699 (*Sir Shapurji Broacha*) You do not find any fault in the selling of Council Bills by the Secretary of State, do you?—No, I have found no fault with the sale, but I consider that it is advisable to sell below the gold point, that is the only thing—and I would not go below 1s 4d.

6700 With the manner of his doing it you do not find any fault?—No, I have no fault to find.

6701 Nor do you find any fault with the lending of money in this country?—No I have found no fault with that.

6702 Nor do you complain of the rapidity of the increase of the note circulation, which has increased about 400 per cent since 1890?—I advocate an increase of the circulation of currency notes, as far as possible.

6703 Up to now there has been a rapid increase. There has been an increase of 400 per cent since 1890,

of 100 per cent since 1903, and of 50 per cent since 1905. You say that the chief cause of the great fluctuation is the inelasticity of the currency accentuated by the withdrawal from the active currency by Government of vast sums just at the season of the year when the movement of the crops demands an increase, and that in this season, with an 8 per cent bank rate ruling in three presidencies, no less than 20 crores, or 13½ millions, were so withheld from the market. Indian currency notes are issued on the same lines as notes of the Bank of England, are they not?—That is so.

6704 Against fiduciary security?—It is a fixed fiduciary issue.

6705 Suppose the Government of India had thrown into the market this year about 5 crores to lend in the busy season, I do not think you would have seen

18 July 1913 ]

MR. WILLIAM BERNARD HUNTER

[Continued.]

8 per cent, would you?—You would not have seen 8 per cent

6706 That is the only reason, I think, which you gave for a State Bank, so far as I could follow it. If the seasonal demand for money, and the seasonal ruling of a high bank rate is the only cause, then, of course, we ought to ask Government to lend money out like other countries?—If that were done it would relieve the situation, but it would not meet everything

6707 Why have a great superstructure for such a small point as the reduction of the bank rate during the busy season—a bank rate that rules for five months, I think?—As a rule

6708 Do you know that before 1867 there were three State Banks in maturity?—How do you mean?

6709 The Government had shares in three banks?—Yes, the Government had shares in banks

6710 And the Government had directors on the board?—Yes, that was so

6711 The old Bank of Bombay had two millions of capital, but it was put into liquidation?—That is so

6712 And although the distribution to the Bank of Bombay shareholders came to 117 rupees only, the Bank of Bengal offered the shareholders 500 rupees to induce them to amalgamate with the Bank of Bengal, and an amalgamation resolution was carried?—That is so

6713 But the Bombay mercantile people created a great opposition to that, and would not have an amalgamation, and they carried deputation after deputation to the Bombay Government, is that not so?—I am afraid that I am not up in this ancient history

6714 I am taking you into the history of the State Bank. You will find that that resolution was rescinded, notwithstanding the fact that the shareholders would have got four times the money they ultimately got, the Bombay people would not have the amalgamation, and they only got 117 rupees while the Bank of Bengal offered 500 rupees. That was due to provincial jealousy, and, as you know, there is a great provincial jealousy between Bombay and Calcutta?—Yes, I am aware of that

6715 Do you know that, in consequence of the fact that there were Government directors on the Board, the shareholders petitioned to this country to have their money given back to them by the Government, because they alleged the Government was responsible?—No, I do not know that

6716 There was a motion brought forward in the House of Commons by Mr. Mill for the restitution of the money on the grounds that Government directors were on the Board, that it was done with their sanction, and that the Government were really responsible to the shareholders. That motion was lost by a very small majority. I suppose you want Government directors on the board of your proposed State Bank?—No, I have not said that I want them. I presume that as Government would have a big stake they would want representation on the board, but I do not think, so far as the Bank is concerned, it would be essential. It is merely a matter for the Government having such a big stake, to say what control they require

6717 The Government has been for so many years declining to lend any money for trade do you think therefore, they will open up all their treasures to a State Bank without some sort of guarantee or scrutiny or supervision?—No, I certainly think they would require some scrutiny or supervision, but that might be met by their having their own auditors

6718 What would the Government directors know about commercial credits?—They would only have a general knowledge of the business which the bank was conducting, and that it was being well managed and undue risks were not being taken

6719 If a State Bank were established and Government directors were on the Board, then, if anything were to go wrong, would not the Government directors be again held responsible for the losses, just as the Bank of Bombay shareholders tried years ago to make them responsible for losses and only failed by a narrow majority in the House of Commons?—They would be equally responsible with the other directors, un-

doubtedly, but beyond that they would carry no further responsibility

6720 When the Government directors come on the board, which representative of the State Department would you like to have on the Board, the Comptroller-General?—Someone from the Finance Department, speaking generally

6721 When a man in the State service becomes Comptroller General, he remains only a short period in his office, because he has reached the stage when only something like 5 or 7 years have to elapse before his period of service expires?—That is so; but then the Government directors, assuming they were appointed, would not be there really to take a very active part in the direction of the Bank. They would be there more to watch the interests of the Government

6722 So it would be a responsibility without control?—Without any detailed control

6723 How would you form the State Bank—by amalgamation?—By the amalgamation of the three Presidency banks and the issue of fresh capital

6724 If the Bank of Bengal owns two thirds of the share capital as compared with the Bank of Bombay and the Bank of Madras, I suppose the directorate selected would be the Bengal directorate?—There would be local boards. But these are details, and I have not prepared a detailed scheme for your consideration

6725 A State Bank is very nice, and all that, it is a very grand thing, but let us go to the details, and let see how we can reconcile the details in India. The details of such things can be settled in France by herself or in England by herself, but let us see what is required for India. I would like to have from you your idea of the composition of the board of directors? Of course, the board of directors would be appointed by the shareholders, and the Bank of Bengal shareholders having, therefore, the majority could choose directors from among themselves, unless you want to make some provision for Bombay directors, or anything like that?—You would naturally have a provision that the local boards should consist of local men

6726 I understand about the local boards, but I am talking just now of the Board of the Central Bank?—It would be possible to have a scheme whereby through the local boards the shareholders of the Bank of Bombay and the Bank of Madras are represented on the Central Board

6727 I suppose any local board would be formed by the direction of the Central Board?—Not necessarily.

6728 Is it not the shareholders' property, unless the Government have a State Bank of their own?—Yes, it is, and the local boards would be drawn solely from representatives of the locality

6729 I contend that the majority of the shareholders would be Bengal shareholders, that is, if the shareholders are given shares *pro rata* according to the present capital, and, therefore, Bengal or Calcutta will be able to appoint the full board by election?—There is no reason why representatives should not come on the Central Board from the other localities. There may be a provision that one member should come from Bombay, one member from Madras, one member from Rangoon, one member from Cawnpore, and so on, so that all the principal districts could be represented on the Central Board.

6730 Is there a bank or any other institution that has this method of selecting its directors? Is it not quite a new method?—Even assuming there is no other instance, that is no reason why a precedent should not be created.

6731 You really have to revolutionize the whole company system in order to do it?—It requires a special constitution undoubtedly

6732 The shareholders would have no control over it in the selection of their own directors?—Within certain limits they would have control.

6733 You do not tell us how the directorate would be formed, or who will appoint the Committee to work it at Madras, or the committee to work it at Bombay, or the committee to work it at Karachi, or the committee to work it at Lahore. Who would appoint those committees?—As I say, I have not

18 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued.]

worked out a detailed scheme, and I have only suggested the principle that at this stage it is worthy of consideration whether the formation of a Central Bank is not desirable

6734 We stumble at the very beginning in the formation of the board. How will the Government share in the election of the board?—They will probably have the right to nominate certain of the directors

6735 To nominate their own directors?—Yes

6736 That is to say, to nominate their own servants?—Yes, if they decide that they desire to be represented on the directorate. As I say, it is not essential that they should be, it is only on account of the large stake that they would have in the Bank that they might wish to have the control. They might, as I suggest, do so by having their own special audit

6737 Probably the Government would put the work in the hands of their servants, the Comptroller General, for instance because if the Government appoint anyone at all it must be someone from the Finance Department, which is the only Department with any experience of banking and bankers?—Probably they would select from people in the Finance Department

6738 Suppose they waived the appointment of Directors, do you think they would give up all the treasuries to a State Bank over which they would have no control?—I cannot say what the Government will do

6739 We will suppose that a board is appointed and that the majority, in the common way, until the laws relating to joint stock companies are changed, is composed of Bengalis, then I suppose the directors will appoint a committee at Madras to work that portion of the State Bank?—Presumably there will be a local board in Bombay and a local board in Madras

6740 Will they have power to lend to people known to them in Bombay without any supervision or central control?—It will be necessary for the local boards to have very large powers, but undoubtedly the Central Board must retain the power of veto

6741 Do you not think it would be a very awkward thing to veto Bombay credits? Do you think Bombay would submit to that?—I do not see that there is anything very outrageous in the suggestion. If you take the large joint stock banks in England, they have local boards in various centres, and I do not speak with authority, but I presume that those local boards are subject to the veto of the Central Board

6742 They are subject to central supervision?—Yes

6743 How many European directors have you on your Bank?—Seven

6744 And how many native directors?—There are none

6745 Perhaps you know that the same would be the case in a Central Bank. How many directors are there now who have been on the board for five years, say? Or I will put it in this way. Of the seven European directors that you have had in the Bank of Madras during the last five years, how many have left on furlough or have come back to England and left India altogether?—The Directors are constantly changing

6746 I suppose the European directors who come on the board are generally the heads of their firms?—Generally they are

6747 So they come on the board at about the time when they take their furlough every year or every second year?—No, not so often as that, as a general rule. It is usually every third year

6748 How often do you take your furlough yourself?—Perhaps once in five years

6749 It is not like the Bank of France and the Bank of England, you do not continue with the same Directors?—That is so. But when I personally take my furlough, my second in command knows the business just as well as I do, and he knows exactly my views. So when the second partner in a firm succeeds his senior partner in the directorate, he has often been on the board before, and he is not coming into something entirely new

6750 It will come to this, that the Governor, that is, the Secretary and Treasurer of the State Bank, would alone be occupied in dispensing the native credits, unless you employed some great baboo who would dispense those credits?—I do not think we should be quite so out of touch as you suppose. Naturally a board must to a very large extent be influenced by the head of the Executive who has all the details before him

6751 But really the entire control of the whole of India would be in the hands of the Governor of the Bank?—He would certainly have a large influence, but I would not go so far as to say he would have the entire control. Each bank manager would have very great powers

6752 The Government's nominee on the Board could not have any control over the credits if the Bank is to support the trade of the country?—Naturally, Government directors could not interfere in such small details as what amount of credit any individual person was to receive. They would have to be guided by the executive officers

6753 The Governor will be the sole possible judge of the credits given in Bombay, the credits given in Lahore, and the credits given in Madras?—By "Governor" do I understand you to mean the senior executive official?

6754 Yes?—He would undoubtedly have the power of veto as he has now in a smaller concern, but individual branch managers have very large powers with regard to their localities, the man on the spot must have large powers

6755 Do you not think, looking at all this, that it is not within one man's power to supervise the management of a State bank?—I do not see that there is any very great difference in it from what is done at present. You have got your different spheres of influence, you have got the Bank of Bengal sphere, the Bank of Madras sphere, and the Bank of Bombay sphere they are at present directed by the local boards, and they would continue to be

6756 I know there are spheres?—The fear of the central board vetoing in Calcutta any credit proposed to be given in Bombay is very unlikely, unless it was in the interests of the bank. There should be no jealousy between one quarter and another. The business should be carried on for the benefit of the bank as a whole, and if the trade of Bombay requires financing, and it is to the interests of the bank as a whole, Bombay would get the finance

6757 The State Bank would have the dispensation of proper credits all over India?—I would say so

6758 And they would be guided by their managers, who may be sent from one place to another just as they are now?—Quite so

6759 Do you know that even now the bills that are discounted in Bombay are bills of people who are known in Bombay, and the bills that are discounted in Calcutta are bills of people who are known in Calcutta?—I do not follow your question

6760 Even now, with the centralised Presidency Banks there is a difficulty in dispensing credits up country in the case of people not known at the bank, as at the bank they have to take their information from European officers and it is a European board that has to act. Perhaps, therefore, the natives do not get the credits they really want, which in the case of a State bank it would be necessary they should have. What, would you say, do the directors know now about Pondicherry or any of those places? Do they give credits there?—Naturally they do

6761 What supervision can they have over those credits?—Naturally they cannot go into details. They can only direct the general policy

6762 Did not the Bank of Madras lose large amounts in Ceylon some time ago?—I think it would be very extraordinary if a bank did not lose occasionally

6763 If all this happens in the comparatively small case of a Presidency Bank, how would it be if you were superintending the vast credits of India through European directors?—If the work is too large for the

18 July 1913]

Mr WILLIAM BERNARD HUNTER

[Continued

Central Board the remedy is to create more local boards, but at present the number of branches, if you take the amalgamated Presidency Banks, is quite small.

6764 Turning to another point, do you mean to say that the Government should lose their profits on the circulation, and give up the control of the large sums in the paper currency?—With regard to the profits on the circulation, I naturally suppose that if it is handed over to the proposed bank, the Government would expect to receive remuneration on an average of what their profits had been for the last two or three years.

6765 Do you think that if the Government handed it over to the State Bank, the Currency Department would not have work to do?—So far as the Currency Department is concerned, they would cease entirely. With regard to the Treasuries, in all probability they could reduce their staffs slightly as the Bank took over the work—not entirely, because the head officer of the Treasury has other considerable duties to perform in addition to the actual Treasury work, and probably it would give him more time to attend to those other duties.

6766 There would be no reduction of expenditure, anyhow, in the Government of India's Department because of the State Bank?—There would, so far as the Currency Department is concerned.

6767 Could they dispense with the services of the Comptroller General, of the accountants in the Presidencies, and of the other superior officers who supervise these banks, because under the proposed arrangement the Central Bank would supervise?—They cannot dispense with the accountants-general, because they have other entirely different duties to perform as well as looking after the Currency and the Reserve Treasuries.

6768 Would there be any economy in the Secretary of State's Department here, because the sale of Council bills is given over to the State Bank?—I should not think the economy is worth considering.

6769 So on the whole a State Bank means that the Government, according to your idea, might put about six millions or four millions into the Bank and make their officers responsible for work which they do not know anything about?—As I have said before, I do not suggest that the Government directors are essential.

6770 In that case, the Government might be bound on a motion in Parliament to provide for the restitution of the shareholders' money. That was attempted to be done, as I have mentioned, through Mr. Mill, but he lost by a narrow majority, otherwise the Government of that day would have had to pay the money?—I do not admit that, because there are Government directors of the Bank, the Government itself would be responsible.

6771 Why have you no native directors to give you some idea of the credits of the men in your Presidency, natives are shareholders?—A large proportion of the shares of the Bank of Madras are held by Europeans, and no native directors have been appointed by the shareholders, in fact, I do not think that there has been—certainly not within my recollection—a native director proposed.

6772 Have these directors a large interest in shares or are their interests nominal?—As a rule?

6773 Have they 20 or 30 shares only, and is it sometimes said they have got those shares after appointment?—The directors have naturally to hold their qualifying shares, beyond that I do not think I am entitled to say how many shares they hold.

6774 Would you compare a State Bank in India with the Bank of France, the Bank of Germany the Bank of England, and so on?—I admit that banking in India is not so fully developed. My object is so far as possible to develop India, and I think the time has now come for a step forward.

6775 If you take the governments in civilised countries, the taxes go to the banks and everything appears on the table, and the government are more

indebted to the banks than the banks are trying to get any money from them. For instance, the last account shows that there is 10 millions belonging to the State in the Bank of England, but the State has a debt of 11 millions to the Bank, so there is not much lending there. You want the Government of India to lend to the Bank 25 to 30 crores?—The State here may be indebted to the Bank of England, but on the other hand the Presidency Banks have large holdings of Government paper which, in other words, is a Government debt. I daresay there may be a difference from the legal point of view, and if anything happened to the Bank of England there might be the power of set off which, in the case of the Government paper held in the Presidency Banks, there would not be, but I do not see that that is an insurmountable difficulty, either.

6776 So you see there is no comparison. It is the same with the Bank of Germany and the Bank of France, they have State accounts, and they write them off by indebtedness to the banks. But this State Bank will be quite different, will it not?—In so far as there would not be the power of set off by the present holdings of the banks in Government paper which they hold instead of a specific debt.

6777 Knowing the way the Government of India works, the banks will add about double the money of the Government of India to their own capital?—I am quite aware that the Government of India might raise objections, but as to what their objections will be and how far they can be met it is impossible for me to say. My hope is that they will take a broad view and consider what is beneficial to the country. It will be right to take a certain amount of risk.

6778 Would you also have a branch in London of that Central Bank or State Bank?—I should say that would be an essential part.

6779 What position would that branch occupy?—That branch would be a very important one, and it would be essential that there should be a local board in London.

6780 Would it lend money?—It would both lend and borrow money. It would carry out exchange transactions on behalf of the Government between India and Europe.

6781 A State Bank does not borrow money?—A bank's business is entirely borrowing on the one side, and lending on the other.

6782 The Bank of France does not borrow and the Bank of England does not borrow?—You deposits are borrowings.

6783 Of course they borrow in a way?—I have a very vivid recollection of the Bank of England in 1891 borrowing three millions from France.

6784 Suppose you borrow in London for six months or a year, if you borrow for six months and then repay, it will cost you 3 per cent more than the Indian rate, and if you borrow for 12 months it will cost you 1½ per cent more for the remittances?—Naturally you would not borrow in London if you could borrow in India cheaper.

6785 That would be exchange business on a very large scale?—I do not quite follow the question.

6786 If you borrow in London for India, you would have to remit that money, would you not?—Yes, you would.

6787 And you would have to bring that money back when you repaid it?—Yes.

6788 If you have to get that money back in a crisis, the exchange will go against you?—If a crisis happens and you have suddenly to remit very large sums from India to London—and I assume the crisis is in London, that you have got money out in India and that you want to get it back to London—undoubtedly it might affect exchange. But if the bank is working the exchange business on behalf of the Government, they would have very large accumulations of gold in the currency reserve, which is earmarked in London, and it would be a very simple operation to increase your silver reserve in India and release the gold in England without any loss on exchange.

18 July 1913]

Mr WILLIAM BERNARD HUNTER

[Continued

6789 That will to some extent wipe out the exchange banks who are doing that business, and they have a certain sort of claim on the Government of India?—I think in the previous part of my evidence I distinctly stated that the interest of the exchange banks was not to be interfered with, and that any exchange business the central bank did would be restricted to re-discounting the exchange banks bills and selling on India, *vice versa*, in other words, it would simply be acting as the agent of Government for the sale of council bills

6790 It would be doing all that work with the view of profit for its shareholders?—It would not be to the detriment of the shareholders

6791 But it would be a much larger institution?—It would be a very much larger institution. My chief object is the development of India generally

6792 If you borrow or sell 25 or 30 millions, do you think that would be such a small operation that it would not wipe out the exchange banks who have now control of that business?—You are putting rather a hypothetical case which I do not admit in practice will ever come about, namely, that the State bank would borrow 25 millions in London

6793 Would you auction the bills?—No, my suggestion was that they should be sold at a fixed price

6794 Would that be fair to the exchange banks?—I do not see how that would be interfering with the exchange banks

6795 If you were to remit your own money to and from India by the auction of the bills, I can understand that the exchange banks might have some chance, but if you are to have the power of appropriating to yourself the Secretary of State's bills, and bid for your own requirements at rates of your own making, the exchange banks would certainly be wiped out?—It would not be interfering with the exchange banks' business

6796 Will the London branch be under the control of the Bank of Calcutta, or will the London branch be the central office?—My idea is that the head office of the Central Board should be in India, not in England

6797 Then the branch in England would be subordinate to the Central Bank in India?—It would naturally have very large powers

6798 Would the Secretary of State have no voice in it?—I presume the Secretary of State would have no actual control, but if the Government desire to be represented on all the boards, there is no reason why there should not be a representative on the London board as well as on the local boards in India

6799 Is it the idea that a State bank will help industries and agriculture?—Yes

6800 How can a State bank help agriculture?—Indirectly, by developing credit generally all round

6801 How will you actively assist agriculture?—Indirectly

6802 Will you lend to agriculturists?—Yes, I would lend to agriculturists, I do now

6803 That would mean very small bills, would it not?—They are naturally small bills on the security of their produce. When the harvest season comes on, they bring their produce in and put it in store under the bank's control, and they get an advance on it

6804 Who will advise you as to the credit of the small agriculturist, who, in the district itself, would know him?—We have means of finding out the position of the agriculturist. There are title deeds and registration offices where you can find if there is any encumbrance. It is done in practice now

6805 How will it help in increasing the note circulation if it is in the hands of a private bank? Do you know that in India a private bank or a central bank will be treated with suspicion, whereas the Government is not treated with suspicion, and that there is a greater chance of increasing circulation under Government than under a central bank? What experience have you which supports your view that the central bank's note circulation will grow with greater rapidity than a circulation through the Government?—

In my opinion the banks have more opportunities of inducing merchants and others to work by currency notes than Government have. Banks are *more* in touch with those people, and by having a large number of branches all over the country where these notes would be readily received, they could do a great deal

6806 Do you think a central bank could induce people to take notes in India?—I think so

6807 Do you think merchants would take the notes of the bank in preference to Government notes?—I do not go so far as to say that they would prefer the bank's notes to Government notes, but I do not look to any appreciable decrease in the circulation of the notes simply because there has been a transfer from Government to a central bank

6808 For public works I think you can borrow more money in India now?—Do you mean for Government loans, or railway loans?

6809 For railways and canals?—Undoubtedly, owing to the rising prosperity in India, there is more money available for investment in such securities

6810 The Government has lent about three or four crores to several municipalities?—Yes, and to port trusts

6811 But the last loan of three crores has been exhausted, and there is a backwardation of prices?—That is not shown so far as the price is concerned. The last loan, as far as I can remember, went at about 96 2, and the last quotation I saw from Bombay was just about the same rate

6812 Do you know that they cannot deliver the paper they have sold, and that they have to pay backwardation on it, as it is called?—Of course it might happen under any circumstances that a speculator would be found short

6813 I think Government could borrow about half of what is required for public works through these Indian loans, what do you say?—I think they might be able to do it in one year. I think they might increase the amount of the loan, provided there was some understanding that in the height of the busy season the balances in the reserve treasury which they were accumulating, would be available for advances. Undoubtedly the banks could carry very much heavier holdings of Government securities and other authorised securities, if there were an outlet such as that, and if there were also further powers of access to London in times of stress

6814 As you know, you have brought back in the last five or six years rupee paper from England to India?—Yes, that is true

6815 I think in the last four or five years we have bought rupee paper in London here and taken it to India to the extent of about 14, 15, or 16 crores?—Not quite so much as that. It was about 24 crores, was it not?

6816 It is now about 14 or 13 crores?—At present it is rather less than that. The holding in London is now about 12 crores, and I think some years ago it was as high as 24 crores

6817 They could not float the same loans here at 86 or 87 now, could they?—I know that to my sorrow

6818 If they needed money and they raised the interest to 4 per cent., or anything like that, they could have large sums floated in India, could they not?—Undoubtedly, if you raise the rate you ought to be able to float larger loans, but I think it would be hardly fair to the present holders of Government paper to depreciate the present holdings of 3½ per cent., it would only be in very extreme cases that that would be justifiable

6819 (Sir James Begbie) You favour the Council Bill system not only for providing the Secretary of State with funds, but also to meet the requirements of trade?—Yes

6820 The trade you refer to is I fancy, the foreign trade?—Yes

6821 But the foreign trade is only a part of the internal trade, is it not?—The foreign trade is only a part of the total trade

6822 The Council Bill system involves the holding up in India of the surplus Treasury balances, does it not?—Under the way it at present works it involves that by the collection of the revenue into the central

18 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued

treasures in preparation to meet the Council Bills that will be afterwards drawn

6823 I think you agree that that practice helps to bring about the high rates of interest which prevail in India at certain periods of the year?—Yes

6824 And is, therefore, disadvantageous for the internal trade?—It is disadvantageous

6825 If the surplus Treasury balances are lent in India to prevent those high rates, the money cannot be available for Council drafts, and *vice versa*, if held to meet Council drafts the money cannot be used to help the internal trade that is, it cannot be used to give loans?—As at present constituted that is so That is one of my strong arguments in favour of a Central Bank with a London office, because it would simply be a transference then of funds from the Indian branch of the bank to the London branch, and if actual currency is short in India it would only then be necessary to indent upon London gold to put into the currency reserve here and to withdraw it in India But that would not take effect except as the very last resort The Secretary of State's balances, which would be accumulating in the London office, would be practically available for the London market, because the Central Bank's reserve would be with the Bank of England.

6826 As at present conducted, it is a question, is it not, whether more consideration is due by Government to the business of the foreign trade than to that of the internal trade?—That is so

6827 You also favour the Council Bill system with the object of reducing the movement of gold coin from Europe to India?—That is so

6828 Does that apply also to bills sold for the purpose of restricting the imports of gold from Australia and Egypt? I ask the question because you mentioned especially the sending of gold coin from Europe to India?—It would perhaps be difficult to fix a rate that would prevent certainly Australian gold from coming in, unless you were to fix a very low rate

6829 Your object is to prevent gold coin coming into India?—To prevent unnecessary gold coin being withdrawn from London at times of pressure, as I hold that a tight money market in London reacts on the Indian export trade

6830 Your object is to prevent disturbance of the London money market?—That is my chief object

6831 You propose to achieve that by sales of bills in London to the extent that would be sufficient for that object?—Yes

6832 Would that prevent all possibility of disturbance to the London money market, do you think?—It would not prevent all possibility of disturbance, but it would mitigate it If you have Egypt and other places calling for large quantities of gold, and if India comes into the balance as well, that increases the difficulty, certainly

6833 If you sell bills in London, to a great extent that means, does it not, that you must sooner or later buy silver for coinage?—It will mean that, if the silver balances in India have run low

6834 If you sell bills in England for the purchase of silver, does not that merely transfer the demand for gold in London from India to some other country?—If the balance of trade has to be paid for by London, it might mean the withdrawal of actual gold from the market

6835 The effect would be that, instead of India wanting the gold some other country would want the gold?—Not exactly that they would want the gold They might pay off the obligations that they had in London

6836 Still, the gold would be due to them, whether they took it or not?—A certain sum would be due to them The gold might be withdrawn, I admit, but the probability is that they would be paying off another obligation or using it for investment in London generally

6837 You say gold is only preferable to silver as currency because it is more portable?—I referred there to India. There is really no demand for gold as currency from the people there generally, and it is a case of more or less persuading them to take it, but

once they have got the taste for it, they will continue to demand it

6838 Would you not say that if gold formed a substantial portion of the metallic currency in India, it would have greater advantages than mere portability?—I do not think there is any great advantage

6839 In the case of an adverse balance of trade, for example?—I do not think in the case of an adverse balance of trade, unless the proportion of gold in active circulation was very much larger than silver, that much of the gold would come back again.

6840 (Sir Robert Chalmers) Would it even then?—I am not prepared to say that it would

6841 (Sir James Begbie) You gave some figures relating to the Presidency Banks, these show a great increase in resources in the last 15 years?—That is so

6842 Can it be said that these banks actively promoted that increase?—I think they have done everything in their power to promote the trade of the country and to develop their banks

6843 To meet trade demands and to prevent a high rate of discount?—They have done everything they can

6844 You agree, I think, that it is not their fault that periods of high rates of interest recur?—It is certainly not their fault

6845 Regarding a centralised bank you would include, I understand, the whole of the Treasury balances in India and in London?—That is so

6846 Also the paper currency reserve?—Yes

6847 And the gold standard reserve?—No, the gold standard reserve would remain separate

6848 It would not be included with this?—It would not be included in the bank's holding

6849 If these balances were combined with the cash reserves of the Presidency Banks in one balance sheet, it would show a position of considerable strength, would it not?—It would show a position of great strength

6850 Do you think a better idea could be formed of the financial strength of India from the balance sheet than from the same reserves isolated and distributed as they now are?—It would be more apparent

6851 Would such a balance sheet affect the general credit of the Government of India in the eyes of the world generally?—I do not think it would affect the credit of the Government of India

6852 Would it not improve the credit?—I do not think it would have any great effect upon the credit of the Government of India. As far as I know, the Government of India's credit is unquestioned at present

6853 Under the scheme you outline you would look for smaller fluctuations in the discount rates?—I do look for smaller fluctuations in the discount rates

6854 And a lower maximum?—And a lower maximum.

6855 Would that be an advantage to the trade of India generally?—That would be a very great advantage, in my opinion, to the trade of India generally

6856 (Mr Gillan) What are these gold bars that come to India at present, I am told that they are refined and polished?—I understand so

6857 (Sir Robert Chalmers) Are they not 10-oz bars from the Australian mints in the main?—To a certain extent, and from London, too, I understand I may say that I do not profess to have a very great knowledge of this, because there is very little direct import of gold into Madras, it all comes through Bombay

6858 (Mr Gillan) What I want to put to you—I do not know whether you have any knowledge of the subject—is, whether it is true that they might be described as a sort of fancy article going at rather a fancy price?—Not that I am aware of

6859 They are manufactured in a sense, they are not rough bar gold, are they?—No

6860 They are not the sort of gold that probably would go to a mint?—No But so far as I know, they are not sold at any fancy price. There are certain marks that carry a slightly higher price than others.

6861 (Lord Faber) Do I understand you to say that these bars imported from Australia and from

18 July 1913 ]

MR WILLIAM BERNARD HUNTER

[Continued

England in the condition we have just had mentioned to us, would not go to a mint if there was one?—If there was a mint my suggestion is that so long as sovereigns are legal tender there would be no object in importing bars in preference to sovereigns

6862 But you do not really think that these bars are fancy articles because they are polished, and so on, do you?—No, I do not. These bars are imported very largely for ornaments, and, in fact, so are sovereigns very largely used for that purpose. I know in one small village in our Presidency they take between 300 and 400 sovereigns a week from Bombay, which are melted down immediately and manufactured into an imitation coin representing the old 5 franc piece, which is very popular as an ornament for a necklace. These imitation 5 franc pieces are not counterfeit coins, because while they have the head on one side, on the other side they are blank.

6863 (Mr Gillan) In the same connection you have mentioned South Africa, and I do not quite understand this remark of yours—you say the exports from India to Africa are negligible?—That is so.

6864 But there is a trade done there, because there are steamers going from India to South Africa?—That is so.

6865 What do they carry?—They carry various Indian produce.

6866 You mean that it is on a small scale?—Yes, it is not sufficient to take into serious consideration for repayment in gold.

6867 What do those steamers bring back from South Africa—I am told they bring back very little?—It is, so far as I am aware, very little.

6868 Would it not be worth the while of these steamer companies to offer very low freights to take the gold to India?—I believe it would.

6869 Then you think it is quite conceivable that you might have gold going to India?—Quite.

6870 In fact, do you think it might reach a pitch which would be inconvenient?—It might.

6871 Is that what you claim—that if it is possible at all it would be so?—If gold can be brought profitably from South Africa, then that gold would come until the exchange was knocked down to such an extent that it would be more profitable to send it round the old course.

6872 In regard to Council Bills I am not sure that I understood you properly in your reply to the Chairman yesterday. I think you said that the interests of trade were a more important factor than Government interests, is that so?—It seems to me that at present the functions of Council Bills are more important with reference to trade generally.

6873 The position is this, is it not, that the Secretary of State, having money in India, wants it at home?—He might require money at home.

6874 And a good many other people who have money here in London want it in India?—That is so.

6875 The Secretary of State and those other people simply exchange obligations?—That is so, up to a certain point.

6876 That being so, can he take money in London from those other people which he does not want here and pay out money in India, which *ex hypothesi* he requires there?—I think that that can be done through the Currency Reserve.

6877 Do you think that that is the proper thing for the Secretary of State to do?—I think that under the circumstances it is desirable, in order, as I have said, to avoid the withdrawal of large quantities of gold from the London money market, which would immediately react upon the export trade of India.

6878 I put it to you that the question is really one of the distribution of the Secretary of State's funds according to requirements, and that the advantage to trade is incidental, but you do not accept that?—I do not accept that with the closed mints. If the mints were again open to silver it would be a different matter.

6879 (Chairman) You do not recommend the reopening of the mints, do you?—No, certainly not.

6880 (Sir Robert Chalmers) Does anyone in India?—I have heard it.

6881 A voice crying in the wilderness?—Yes.

6882 (Mr Gillan) I think you recommended that Council Bills should not be sold at less than 1s 4d?—Yes.

6883 As a practical question, would you now at the present moment stop the sale of Council Bills?—Yes, I should stop it.

6884 Probably, then, the stoppage of these sales would continue for the next few months?—It might.

6885 Meantime, how would the Secretary of State supply himself?—If he has any need of funds, if his balance here is low he would do it through the Currency Reserve. You have many millions in London at present, so you could release gold here and put silver into the Currency Reserve in India.

6886 I thought yesterday you mentioned the Gold Standard Reserve?—I think I said the first operation should be to release gold from the Currency Reserve.

6887 In any case the Secretary of State is then reducing his sterling resources?—He is.

6888 Do you think that is a wise thing to do, in view of the possibility of a failure of rain?—So far as I can see, eventually it will make no difference. It is only that he has anticipated the sales by a short time. Selling Council Bills below 1s 4d indicates that there is no real demand. It will not affect the balance of trade eventually. The balance of trade has got to be met by Government unless they throw up the sponge, and it is easier to keep exchange steady than it is to bring it back again once it has dropped. My object is not to let it drop.

6889 It comes very much to the point Mr Keynes put to you yesterday, that you consider the Secretary of State is now in such a strong position that he can afford to attempt this mechanism of a higher exchange than hitherto, that is to say, he lets it drop now to 1s 3½d, but he can afford to keep it up to 1s 4d?—That is so.

6890 The general position of the Indian money market is, is it not, that you have almost what you may describe as a plethora of all the year round money and a temporary strain in the cold weather?—No, I think I should put it that the plethora is for quite a short time.

6891 What do you pay for your deposits?—I pay 4 per cent for all the year round, and in what I call the slack seasons I will not receive short deposits.

6892 I am speaking of 12 months' deposits, you pay 4 per cent there?—Yes.

6893 Do the other Presidency banks pay so much? I think the Bank of Bengal does not.

6894 Probably it pays less?—I know the Bank of Bengal pays less, they pay 3½.

6895 Is it within your knowledge that any of them have been turning away deposits?—It is not within my actual knowledge, but I have heard that deposits requiring higher rates have been refused.

6896 Supposing the giving out of Government balances was to reduce the rate of money in the cold weather, your deposits would be earning less then, would they not?—It is possible that the result would be a reduction in the rate of interest allowed.

6897 It might be possible?—It might, but I rather think that trade would develop the outlet for it, and that we would still be able to pay the 4 per cent.

6898 (Lord Faber) Of course, coming into the market with a big deposit must necessarily knock down the price of money?—It would knock down the price of money.

6899 (Mr Gillan) What is stringency due to? There is a need of money to finance the crops, and you say there is a withdrawal of money by Government?—From active circulation.

6900 Are those in your opinion the only two factors?—Those are the main factors.

6901 Could you have a stringency, we will say, in a time of indifferent or insufficient crops?—It is unlikely.

6902 How is this extra demand that comes in cold weather met? I presume you employ your deposits to a much larger extent than in the off season?—That is so.

18 July 1913]

Mr. WILLIAM BERNARD HUNTER

[Continued]

6903 That is one thing. Are there any local resources?—There are no other local resources.

6904 Only the deposits at the Presidency Bank?—For trade generally?

6905 Yes?—There are the exchange banks. They do to a certain extent finance the local trade. Then there are the native bankers.

6906 I suppose the other banks are really in the same position as you? They have been holding up a lot of money, and then taking that out and using it in the cold weather?—In the busy season.

6907 What do the exchange banks contribute? You have got all this money in India that has been lying idle say for a considerable part of the year, and that is brought out and used, do the exchange banks bring in some from outside?—They bring in to a certain extent from London.

6908 We have been told that there is a sort of hiatus between the time when money has to be taken out to finance the crops and the time when the money comes back through Council Bills, that is what you said yesterday, I think?—That is what I said.

6909 Do the exchange banks not, as a matter of fact, anticipate, if I may say so?—No, I do not think they do anticipate.

6910 There are no finance bills in India, are there?—I think not.

6911 They are drawn actually against produce?—They are drawn against produce, so far as I am aware.

6912 As regards the general relations of the Indian and English money markets, I think a witness told us that there was very little of such transfer of funds between the two countries which influenced the bank-rate as generally happens between any other two countries, is that your opinion?—That is my opinion.

6913 Then why is it that there seems to be so little interchange of capital, that is to say, why does not more go into India when you have a very high rate, and why does it not flow out when it is not usable in India?—There are two factors—there is the fear of the loss on exchange, and I think there is not the machinery. The exchange banks have not got many branches throughout the country, and their business is largely in financing the crops when they are ready for export.

6914 I take it the ruling factor is still this risk of variation in the exchange?—That has a great deal to do with it.

6915 That is the chief factor?—I think so.

6916 (Lord Faber) Is the variation in exchange enough to prevent money flowing into a country where the interest is very high, from a cheap country?—If the rate of interest is high for a short period only?

6917 Yes?—If money was brought in to any large amount, the rates of interest would immediately fall.

6918 It is not a big enough country to get an average high rate of interest?—I think not.

6919 (Sir Shapurji Broacha) And the cost of bringing it has also to be taken into consideration?—Yes.

6920 (Mr. Gillan) What happens to this money in the country? How far down, so to speak, does the money get? Consider the cultivator, what sort of interest do you suppose he is paying for the money he gets?—He pays a very high rate of interest—up to 18 per cent, perhaps.

6921 Not more than that?—I do not think a large cultivator would. A very small cultivator would probably pay very much higher.

6922 Is that inevitable under the conditions under which these loans are made, or is it due to some separation in the money markets of India which prevents the money getting down to the country?—I think it is largely due to want of competition by large institutions, which would enable the cultivator to get financed cheaper. At present he is very much in the hands of the local moneylender.

6923 Does the money get down from the central markets into the hands of these local moneylenders?—Indirectly it does.

6924 Is there any channel of communication?—The channel of communication is through the native bankers.

6925 I think you mentioned co-operative credit societies yesterday?—They were mentioned.

6926 Have you had anything to do with the financing of them?—To a small extent through the central bank in Madras. The rural banks borrow from the urban banks, the urban banks borrow from the central bank on promissory notes, and the Bank of Madras to a certain extent opens credits for the central bank.

6927 Have you developed cash credits in connection with these co-operative banking societies?—Yes.

6928 In connection with this question of the central bank a good deal of stress has been laid in the old correspondence on the restrictions of the powers of the Presidency banks. It was pointed out that there was no elasticity of funds or resources in case of stringency, and that when it is required to raise money in India there was no one else likely to be in a position to find the money, I presume that is so?—That is so.

6929 Government would not undertake to lend, and they cannot borrow in London, that was the case which was put. Would this need of elasticity in case of crisis or scarcity be sufficiently met by the proposal to give loans from the Treasuries or from the paper currency, or would a resort to London still be necessary?—A resort to London would be desirable.

6930 Do you think the situation is not sufficiently met by these loans which are proposed from Government funds?—It is conceivable that the Government balance would be very low, and that the notes also had gone down and would not be very much available for exchange. There is nothing gained by closing the outlet to London.

6931 On this question of bringing any money from London, can the exchange banks not bring out all that is required? I want to bring to notice in that connection a letter that was written from the Bank of Madras in 1903\*. It is a letter written by Mr. Kei. He said "The directors wish to say that owing to the growing confidence in the fixity of exchange, money finds its way to India when required through so many other channels that there is not any of that fear of the recurrence of stringency in the Indian money market which there was some years back. My directors therefore indicate that the occasions on which this bank—that is, the Bank of Madras—is likely to find it necessary to have recourse to the London market will not be frequent", that is to say, they were then apparently looking chiefly to the exchange banks to supply their needs?—Conditions have changed very much since this letter was written, but even now, if improved facilities in India were afforded, resort to London would not be very frequent, but what is desired is that in times of necessity there should be some door open.

6932 That you should have that resort?—Yes. You would not of course try to work up to a position which would make a resort to London necessary.

6933 As regards loans, or increasing the Government balances with the banks, as you know, great objection has been taken in the past on the grounds that the Government is already a very large depositor, and that it is exposed to sudden contingencies, and may be obliged to call up the cash at a moment's notice. That sort of position is particularly unsound in India, because, as I think Sir Clifton Dawkins said, although the Indian banks have excellent reserves, it would be very difficult for them to liquidate them at once, and there is no other resource to which they can suddenly go, as a bank at home would go?—That is, I think, a very strong argument in favour of giving the central bank power to go elsewhere.

6934 Under the present conditions you appreciate the difficulty of the Government's position?—Yes, I do.

6935 What is your rule as to the maintenance of a cash balance, what sort of principle do you work on?—Do you mean to what proportion?

6936 Do you keep a sort of minimum?—Yes, we have a minimum.

6937 How much is that?—About 33 per cent.

\* See Appendix XV page 468, para. 4.

18 July 1913 ]

Mr WILLIAM BERNARD HUNTER

[Continued.]

6938 That is what was, I think, considered about the proper figure in the correspondence that took place some years ago?—Yes

6939 You still go on that principle?—We still go on that principle of 33 per cent of the liability on demand

6940 (*Lord Faber*) What do you mean by cash?—Actual cash—either rupees or Government notes, and nothing else. Balances with other banks are not included

6941 (*Mr Gillan*) That is the proportion of cash to liabilities on demand and within one month?—Yes

6942 You do not extend it in the case of Government balances?—No, that goes in with the payable on demand

6943 Have you seen the figures Mr Abrahams gave us of the percentage of Government deposits to your capital and reserve?—No, I have not seen those figures

6944 In the case of your bank, the percentage of the Government deposits to cash seems to vary, it is between 30 and 40?—That would be about it. That is the Government deposits to cash

6945 Do you think that is unduly or dangerously high?—No I do not think so

6946 About the increase of capital which you proposed, I think you said 10 millions?—Bring it up to 10 millions, that was the figure I suggested

6947 There was a passage in the old correspondence when this was being discussed before, in which Sir Clinton Dawkins, I think, said that an increase in the capital would involve a corresponding increase in the cash balance, is that the case?—I do not quite follow. In what way would it involve a corresponding increase in the cash balance?

6948 It was not clear to me, and I thought I would ask you. That was apparently very much the reason why at that time they wanted an increase in the capital, so that they might get an increase in the cash balance. You suggested, I think, yesterday, that some increase of capital might be instituted in view of the transfer of the Paper Currency Reserve?—Yes, in view of the liability in connection with the note issue

6949 That liability would be covered, surely, by the reserve held?—Of course it would depend upon the constitution of the note issue. It does not follow that because the currency was transferred to the bank, the same law would apply to the bank as applies to the Government now, and that the fiduciary issue should be a fixed sum of 14 crores only

6950 I quite agree with that, but still, whatever decision was come to, some arrangement would be made?—Yes, probably there would be specific assets earmarked against the note issue, or it might not be so—it might be held in the general assets of the bank in the same way that the Bank of France's assets are generally held

6951 So why should you increase your capital on that ground?—There is a very large increased liability

6952 I am assuming that the liability is provided for in one way or the other—is sufficiently provided for otherwise?—But if the notes are to be partly secured by the general assets of the bank, it means that the bank's liability is much higher, and the usual thing is to proportion your capital to your general liabilities

6953 Apart from the Paper Currency, is there any other reason that strikes you for increasing the capital?—With the larger deposits that we expect to get from the Government balances, the liabilities generally all round I anticipate will be very much increased—practically doubled

6954 (*Chairman*) Your suggestion really comes to this, that if the Government is to put 4 millions of capital into the bank, it will be encouraged to lend the bank a larger sum than at present?—Yes. I suggest that as a means of raising capital. There would be a difficulty in raising such a large sum of money immediately elsewhere, but the Government could gradually dispose of those shares as the market took them up

It is only an immediate way of bringing that about without upsetting the markets in any way

6955 In the meantime the security of the Government's balances would not be increased?—No. That would be so, from the Government's point of view, but the general public would be much larger creditors than the Government, and from their point of view it would not be so. The Bank's liabilities to Government might be 12½ million, but to the public about 55 million

6956 (*Mr Gillan*) Would you be able, as a matter of fact, to use this 10 millions at once?—I think there would not be very great difficulty in finding outlets for it, I do not say immediately in the actual trade of the country, but so far as I am aware, India is calling out all round for development, in railways, in harbours, in every conceivable thing, and there would be no difficulty in utilising the money immediately. I could put it all out in Madras in a week for new railways if I had it

6957 It is rather curious, if that is the state of affairs, is it not, that the Presidency Banks should find so much difficulty in making use of their deposits?—We have no difficulty in making use of our deposits. We could immediately undoubtedly invest the whole of it in railways and other securities, but when the busy season came round, then there would be no money left to finance trade. We have to look to that

6958 I think Madras is somewhat different from Bombay and Calcutta, and of course Madras in itself would only be able to use a comparatively small sum.—I can put up a very large sum in the development of the country. If you develop the country the trade will develop in proportion

6959 Suppose you raised your capital to 10 millions, would you be able to maintain your present rate of dividend?—I conceive that in the immediate future there is a possibility that the earning power might be reduced, but in the long run it must be so beneficial to the country that they must share in any developments and the dividend power would rise

6960 That would be a very serious drawback, would it not, in the launching of the scheme?—I do not think so, because the earning power of the banks is not all paid away in dividends by any means

6961 You think it would not make it difficult to get the money, or to negotiate with the present shareholders, you think it would not embarrass the negotiations?—There might be some opposition on that score

6962 On this question of the capital it seemed to me that you are increasing capital in anticipation of requirements, and that it would be better to increase the capital gradually as you could find occupation for it?—The object of the increase of capital is to proportion it to your liabilities

6963 You must face the fact that for a little time you will not find full employment for it, so that probably you will not be able to keep up your rates of dividend?—I do not think it would be very long before we found we could put it into full employment, as long as railways and irrigation works are calling out for money

6964 (*Chairman*) You have said once or twice the drain of gold from London in your opinion reacts on Indian trade?—On Indian export trade

6965 I understand you to mean that it reacts injuriously?—Yes, injuriously

6966 Would you develop that for a moment?—A large export of gold from London naturally raises the rates in England, and as the export trade is financed in England that would make its finance more difficult. With higher rates, as I said the probability is that prices will drop, so that the consumers on this side of it would live from hand to mouth

6967 In your opinion, I understand, the bank rate in London is quite as important to Indian trade as the bank rate in India?—I would not go so far as to say quite as important, but it is a very important factor

6968 At least it ought never to be left out of account?—It ought not

6969 In considering the operations conducted by the Secretary of State?—I agree to that

6970 (*Lord Faber*) You do not appear to think that gold in circulation is an advantage?—Not in India—I do not think so

\* Appendix I, page 5      † Appendix XV, pp 397-8

18 July 1913 ]

Mr. WILLIAM BERNARD HUNTER

[Continued.]

6971 Is it not the fact that having gold in circulation is an advantage, because gold is the money of the world and can be used to pay foreign debt in case of need?—In my opinion, if gold is put in circulation in India, when the time came to pay the foreigner that gold would not be forthcoming.

6972 It would be hidden away, do you mean?—Yes. There is so much coin in active circulation in India and banking is not developed to any extent. There are large tracts of country where the actual coin goes out, and if the demand for the export of gold comes suddenly, I do not see how this money that is out in small sums in the country will come back again.

6973 You said another thing that was interesting, namely, that the banks would be inclined to carry more investments in their balance sheets if, at certain times of the year, there was a central institution where they could borrow on these investments?—That is so.

6974 Do you discount direct the small bills of agriculturists? We do not do that in England, but, as you know, many millions are spent in the discounting of bills under 51 by the Bank of France. Do you do that at all in India?—Not so small as that. We discount direct bills that are equal to about 1001 or less—down to 401 perhaps.

6975 (*Sir Shapurji Broacha*) Between 1898 and 1902, under Lord Curzon's Government, the mints were empowered to take gold wherever it came from at the English rate of 79s 9d per ounce, and then some gold came from Japan, and Mysore gold was given to the mint, Lord Curzon personally entering into an arrangement with the Mysore Mines to take gold on the English basis instead of its being sent to England?—I did not understand that the Indian mines ever gave gold to the mints. I understood that they had already made arrangements for the sale of their gold in London, and therefore that they could not do it.

6976 They did so for a certain number of years, and then Lord Curzon's Government backed out of the arrangement and the gold came to England. In those years no gold came from Africa, did it?—I am not aware of any gold coming from Africa then.

6977 Yet men would like to bring gold from any place in the world if they could save in exchange  $\frac{1}{10}$ th or even  $\frac{1}{15}$ th of 1 per cent as they have been doing now?—That means that they dispose of their gold in the better market.

6978 A question was asked of you about African gold, but do you not think the Secretary of State's method of selling bills is better? Last year he sold about 25 millions worth, and gold came to India to the extent of 29 millions, so there was no impediment to gold coming to India. Therefore, why should the sale

The witness withdrew

of Council Bills be an impediment to gold coming to India at all?—I conceive of no reason why there should be an impediment to gold coming out. If gold is actually demanded, gold must come.

6979 You say he should sell below the gold point in order to stop gold coming out to India?—So as not to encourage it.

6980 That raises a great outcry in India, and I think the Secretary of State's method is better, because though he sells more than the amount budgetted in the Council Bills, yet gold does come *pari passu*—it did last year and the year before?—It will come from Australia and also from Egypt.

6981 Not allowing the gold to come would rather raise an outcry?—I do not see why, because the Secretary of State sells Council Bills below the gold point, that will prevent gold coming in if it is required.

6982 I think the present method is the best, as there is no impediment to the gold coming in?—My opinion is that he should continue to sell below the gold point.

6983 (*Mr Keynes*) How are your directors appointed at present?—By the shareholders.

6984 Are they in fact appointed in that way, or is it, as is often the case in England, that the existing directors nominate their successors?—If a director retires in the course of the year, the vacancy is filled up by the directors, but at every annual meeting two directors retire, and it is open to the shareholders to re elect them or not.

6985 Is there any difficulty in getting the best available talent?—No, in my opinion we get the best available talent in Madras in this matter.

6986 You do not find cases in which men who would be exceedingly suitable cannot find the time for the work?—No, we have not found it so. It is considered an honour to be on the Board of the Bank of Madras, and the best men are always available to take it up.

6987 How are they remunerated?—The remuneration is so much per meeting—so much for a general board meeting, and so much for a committee meeting.

6988 Is it not any substantial amount?—It is not a very large sum.

6989 Nothing that you could expect a man to give a good deal of his time for?—No.

6990 Might not Sir Ernest Cable's suggestion of uncalled capital meet the point which was raised by Mr Gillan at the end of his examination?—Do you mean by uncalled capital, instead of calling up the full amount of capital—do you mean an uncalled liability?

6991 Yes?—I think it would to a certain extent.

At the India Office, Whitehall, S.W.

SIXTEENTH DAY.

Thursday, July 24th, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M.P. (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G.C.B.  
Sir ROBERT CHALMERS, K.C.B.  
Sir ERNEST CABLE  
Sir SHAPURJI BURJORJI BROACHA.

Sir JAMES BEEBIE  
Mr ROBERT WOODBURN GILLAN, C.S.I.  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MATNARD KEYNES.  
Mr BASIL P. BLACKETT (*Secretary*)

Mr CHARLES CAMPBELL McLEOD called and examined

6992 (*Chairman*) I think you are chairman of the Indian section of the London Chamber of Commerce?—Yes.

6993. And you represent that section here to day?—Yes.

6994 You also represent the Bengal Chamber of Commerce?—Yes.

6995 In the memorandum which you have submitted to us (see Appendix XXVI., page 597) you express general agreement with the letter which has

24 July 1913 ]

Mr CHARLES CAMPBELL McLEOD

[Continued

been addressed to the Commission by the Bengal Chamber\*?—I do

6996 I think it is your opinion that the fixing of the rate of exchange has been of great advantage to the trade of India?—I think there have been circumstances that have helped it, but I think on the whole it has proved so

6997 May I take it that in any case under the circumstances of to day you would not suggest any reversal of that policy?—No, I would not

6998 In regard to the balances which have recently been held both in India and in London by the Indian Government and the Secretary of State respectively, have you any observations to make on their size?—None

6999 In so far as the Secretary of State has with drawn those balances from India to London, do you approve his action?—I do

7000 I think in regard to the reserves which are kept, you express the opinion that the Gold Standard Reserve should be kept in London?—Yes, that is my opinion

7001 Just give me briefly your reason for that opinion, please?—I think that the gold is always better held in London than it is in India, and that the securities can be lent out perhaps to more advantage in London than in India, and would be more quickly realisable

7002 Perhaps one might add that if a crisis comes in which the Gold Standard Reserve has to be drawn upon, it would be in London that it would be needed?—That is so

7003 As regards the amount of the Gold Standard Reserve, you are of course aware of the way in which it has increased up to the present time?—Yes

7004 On one occasion the Indian Government withdrew for the purpose of railway development something like a million, which would have gone other wise to the Gold Standard Reserve, do you approve of that action?—Under the circumstances they had to find the money somewhere, and so long as they put it back again I approve of it, because it was urgent

7005 You say "so long as they put it back again"?—I would not approve of it permanently

7006 Am I to infer from that that you would not like that act to be repeated?—I would not

7007 Have you any figure in your mind as to the sum which the gold in the Gold Standard Reserve should reach?—Yes, at present 5 millions

7008 You say, "at present," but what exactly do you mean by that?—I mean that as the trade of India is at present, I consider 5 millions a prudent reserve to be held in gold, but if the trade of India increases as I think it will, then I think the reserve might reasonably be increased

7009 When you speak of 5 millions, do you mean 5 millions in actual gold?—Yes

7010 Would you increase without limit, from the sources by which the Gold Standard Reserve is now supplied, the amount to be held in securities?—Yes

7011 You say you think it is sufficient to hold 5 millions in actual gold, what process of reasoning has led you to fix upon that particular sum?—There is no actual process of reasoning, beyond the fact that I consider 5 millions is a sum that ought to be held in gold proportionate to the extent of the Gold Standard Reserve at present

7012 When in 1907-8 the Government had to have recourse to the Gold Standard Reserve, the amount they had to withdraw from it was very much in excess of that figure of 5 millions, was it not?—Yes, but then 1907-8 was an exceptional year

7013 I suppose it would only be in an exceptional year that the Government would need to have recourse to the Gold Standard Reserve?—That is so

7014 Do you think that 1907 and 1908 give you the measure of the possible demand which might be made on the Gold Standard Reserve under present conditions?—It is very hard to say I would not like to give a definite opinion

7015 One witness who came before us said the position would have been much more grave if what he

\* See Annex to Appendix XXVI, page 601.

called the storm centes in those years had been in London instead of New York, perhaps you would agree with that?—I do agree with that, certainly

7016 There was a famine in those years in India, but not a very severe famine, I think?—That is so

7017 India has known much greater and much more severe famines?—Yes, it has

7018 So the balance of trade might have been more adverse than it was?—It might

7019 Do you not think then that your figure of 5 millions is rather a low one?—I do not, looking to the present conditions

7020 I think the amount which was withdrawn at that time in different forms was something like 17 millions?—Yes

7021 I understand from what you have said that in fixing the actual gold in reserves as low as 5 millions, you rely upon the possibility of rapidly realising securities to the further amount required?—I do

7022 Do you think that recent experience would lead you to build very confidently on that hope? Suppose, for instance, you wanted to realise 10 millions of securities, even the best securities to day, do you think it would be very easy to do it?—I do not, but I consider the London market is in an exceptionally bad condition at the present moment It has not often been so

7023 Perhaps you would agree that the Gold Standard Reserve is, in fact, a form of insurance against bad times?—It is

7024 And that that being so, it should be large enough, and in a form liquid enough, to meet any strain which we can reasonably expect to be brought to bear upon it?—That is my opinion

7025 But you think with that 5 millions in gold and the rest in securities those conditions would be met?—At the present time I have stated that it might quite easily be increased to 10 millions in future, as the volume of trade increases

7026 I notice that the Bengal Chamber of Commerce say that they would like to see a larger sum than 5 millions held in actual gold\*?—Yes, I have noticed that

7027 In establishing a Gold Standard Reserve the Government of India followed the recommendations of the Fowler Committee, but in the matter of the establishment of a gold currency they have not, I gather from your memorandum that you think they have been wise to depart in that respect from the Fowler Committee's recommendation?—I do

7028 Do you regard gold currency as a wasteful form of currency?—I do

7029 You consider that gold in circulation is less valuable for the support of exchange than gold in reserve?—I do

7030 On the whole, therefore, may I take it that you would desire to see the Government of India push the circulation of notes as far as possible?—I would

7031 And keep their gold in their balances and reserves as much as possible, instead of forcing it into circulation?—That is so

7032 I think you also express the opinion that a gold mint is not needed in India?—I do not think it is at present

7033 If it were decided to open one, do you think they would get much gold to coin?—I do not

7034 Do you think that the mere opening of a mint in India would have any material effect in bringing out gold from the hoards?—It is difficult to say, but in my opinion it would not

7035 Am I right in thinking that you indicate in your memorandum that it is rather through an extension of banking facilities that the gold might be attracted from the hoards?—Yes, that is so

7036 That brings me to the question of banking. Are you in favour of the suggestion which has been made for the establishment of a State or Government bank?—No

7037 Perhaps you would tell us briefly your reasons for your opinion?—I have given them under the head of Central State Bank in my memorandum (page 597), and I do not know that I can improve on

\* Page 603, paragraph 7

24 July 1913]

Mr CHARLES CAMPBELL McLEOD

[Continued

what I said there I do not think an institution of that kind is necessary at present. The paper currency is very well managed by Government, the existing banks are quite capable of conducting the trade as it is at present, and also quite capable of great expansion, the shares of the three Presidency Banks are at a considerable premium, and so also the shares of the Exchange Banks are at a considerable premium, and none of these institutions, including the joint stock banks in India, would have any difficulty in extending its capital to a very large extent in India.

7038 You say in the passage to which you refer that you think "it would be quite impossible efficiently to control such an institution from one centre, and especially in a vast country like India" (page 597)?—That is my opinion.

7039 Do you attach great importance to the local management of the Presidency Banks at the present time?—I do.

7040 Would it be easy, in a country situated as India is, to compose a central board which would be representative of the different parts of India and would consist of men of sufficient leisure really to control the business?—I should say it would be very difficult indeed.

7041 It is not very easy at the present time, is it, to find men of sufficient leisure to keep a constant check upon the affairs even of the Presidency Banks?—No, there are very few men of leisure in India of that capacity.

7042 Do you think if there were a central bank, the management of it could be practically left either to the officials of the banks or to official representatives of the Government who might be appointed to give their whole time to the directorate?—If there were such a bank, I think it would require to have men who have studied the conditions in the various Presidencies in India.

7043 It would, I suppose, be necessary to have local boards acting under the central one?—It would be.

7044 May I take it generally that from your experience you do not think it would be possible to get a central board at once really representative of India and really capable of giving such time as would be required for the effective management of the affairs of the bank?—I do not.

7045 In that connection you suggest that the attention of the Government might be more wisely directed, I think, to the encouragement of co-operative societies in order to help the agriculturists?—I do.

7046 That is rather outside the scope of our reference, but I would like to ask you two questions upon it. Have you watched the progress of those co-operative societies in recent years?—Yes, I have.

7047 Are they tending to bring out money from the hoards, and to induce the native to deposit his money with them rather than keep it in his own house?—I think that is the case.

7048 Would you agree with some other witnesses who have been before us, who have thought that too much stress was laid upon the hoarding propensities of the Indian, and that, given his circumstances—in many cases far away from a bank, remote from communication—he did not keep more money in his house in proportion to his means than we keep under our immediate control here?—I would be inclined to agree with that opinion.

7049 If that is so, until those circumstances are changed you could not expect much of the money now held to come out of the hoards?—No.

7050 Now I want to ask you a question or two about capital expenditure. I think you have urged upon us in your memorandum that there is an enormous need for railway development in India (pp 598-601)?—Yes.

7051 And that the Indian Government might not only usefully spend, but would be obliged to spend, larger sums year by year on their capital development than they have been spending in the past?—That is so.

7052 Do you think that for those purposes they can borrow more freely in India itself?—I do.

7053 To what extent, do you think—I ask you only for a very rough answer?—I think they could borrow five millions per annum at present in India.

7054 On terms as good as they could borrow in London on a sterling security?—I am not prepared to go as far as that, but at the present moment you will notice that India 3½ per cent sterling securities are about 87, whereas last week an Indian Government loan of 3½ per cent was all taken up at 96½.

7055 The present circumstances seem to be specially favourable to borrowing in India?—They do. That is what I have stated—that there are periods when it is favourable.

7056 Speaking generally, over a period of years, is it your opinion that the Indian Government might wisely and safely borrow more than they do in India?—I would not like to give an opinion on that, except that I think they could borrow more for railway expenditure, if necessary, than they do at present in India.

7057 In any case you would like to see them borrow as much as they prudently can in India?—I would.

7058 Either in order to add to their total resources or in relief of their borrowings in London?—That is so.

7059 As regards the purchase of silver bullion for coinage, you say that recent experience seems to render it "highly desirable that purchases of silver should be made more regular than intermittent"?—Yes.

7060 I understand you to mean by that that the Government should purchase a moderate amount of silver bullion year by year in anticipation of future demands?—That is so.

7061 I think it has been the case in the past that the demand for rupees has varied very much and very rapidly from year to year?—It has.

7062 Do you think that the scheme of more regular buying that you recommend is practicable under those circumstances?—I do. Having regard to recent experience, there is no doubt that the hands of the Government have been forced to a certain extent, and I do not think they ought to allow themselves to be in a position to have their hands forced. I think therefore that their purchases of silver should be more regular, however small they may be, so as not to show to the public, or to those who are interested in the purchase of silver, that their silver bullion is at a low ebb, and thus give those people knowledge that the Government must come in to buy. I think the Government should always have a regular system of purchasing silver, as to the extent, they should be guided by the state of trade, and it might therefore be less one year and more another year, but the purchases should be more regular.

7063 I think that in the years preceding 1907-8 there had been a considerable demand for additional rupees from the Government, and in those years there was a great return of rupees to the Treasury, if I remember aright, and it took some little time to work them off. Supposing that you had been starting such a proposal as you have just made about 1907-8, when, instead of the public requiring more rupees they were returning them, then if you had gone on buying the silver you would have accumulated large quantities of silver in your Currency Chest or somewhere, which you could not pass on to the public for the time?—Under those circumstances the thing would be to stop purchasing for a time, undoubtedly, until those rupees were worked off.

7064 But as soon as they began to work off would you then begin to buy in moderate amounts?—I would.

7065 It was common knowledge, I suppose, before the Government began to buy a year ago that the time must be very close when they would have to buy?—That is so.

7066 And that they would have to buy in very large quantities?—That was the supposition.

7067 If I gather rightly, your feeling is that that places Government at the mercy of the market, and that Government ought not to be in that position?—That is so.

24 July 1913]

Mr CHARLES CAMPBELL McLEOD

[Continued.]

7068 So, even at the risk of having silver bullion lying idle in some quantity for some time, you would make regular purchases rather than wait until their hands were forced?—I would.

7069 In regard to the financial organisation and procedure of the India Office you suggest, "without offering any criticism," that the Finance Committee of the India Office should be composed of an ex-Civilian who has held the position of Financial Minister in India, an Indian Presidency bank manager, a London joint stock bank manager, a retired exchange bank manager, and a mercantile man with a considerable Indian experience. Will you give me your reasons for those proposals?—My reason for those proposals is, as I said, without offering any criticism on the past at all, that that combination would, in my opinion, be the mixture, if I may call it so, of the class of officer who would be best capable of conducting the financial dealings of the India Office and of the Indian Government.

7070 Does this indicate a feeling in your mind that Indian experience is not sufficiently represented in the present financial organisation of the India Office?—It does.

7071 On the other hand, speaking not of the organisation itself, but of the policy which it has pursued, I gather, both from what you have said and what you have written, that you do not suggest for a moment that that policy has been otherwise than in the interests of India generally?—I do not.

7072 (*Lord Faber*) With regard to your opinion that five millions of actual gold in the Gold Standard Reserve would be sufficient, you are aware, of course, that at the period of the last crisis, 1907, India only had one bad year, not two bad years running?—Yes, it was the financial year 1907-8.

7073 There was a bad monsoon in 1907?—Yes.

7074 In that year London was in a good condition to stand the demand on it for gold?—Yes.

7075 I suppose it would not be an unheard-of thing to have two bad monsoons running in India?—No, it would not be an unheard-of thing—we have had two, but it is not very probable.

7076 You may have to face two bad years running, and simultaneously a bad year in the London market that is possible, is it not?—It is possible.

7077 Bearing in mind that in 1907 the demand for gold was, I think, 17 millions on theseabouts, when India only had one bad year, and bearing in mind the possibility of two bad years and a bad year simultaneously in London do you think 5 millions would be anything like sufficient?—The case you put, to my mind, is rather extreme.

7078 I know it is?—I have said in my memorandum that it might quite reasonably be increased to 10 millions. I would not object to the 10 millions, but my opinion is that it should be 5 millions at present, and as the trade increases we could increase it to 10 millions.

7079 I suppose at the back of your mind, as at the back of the mind of all bankers, myself included, you think gold is a very expensive thing to keep?—It is a dead-weight, it does not earn anything.

7080 And you would rather run the risk of not being able to keep up the exchange than forgo some interest which you would have to forgo if you kept a large supply of gold is that a fair way of putting it?—That is right, I would.

7081 You are hardly in favour, I gather, of having much gold in circulation in India, you would rather have it in the banks, would you not?—I would rather have it in paper.

7082 Are you in favour of gold as against silver rupees for circulation generally?—No, I am not.

7083 I notice in the interesting letter from the Bengal Chamber of Commerce, paragraph 15 (page 605), that the amount of sovereigns now being used in India has increased very fast. That shows, does it not, that the population like gold as against rupees? If you look at the little table in paragraph 15 you will see that, while the receipts of sovereigns at the Post Offices in 1907-8 and 1908-9 amounted to big sums, from 1909-10 to 1911-2 they have been increasing markedly?—In

1908-9 it was down by 357,000 and in 1909-10 it was down by 750,000—that is, it was a quarter of the previous year.

7084 And now it has jumped again to higher than that?—It jumped up in 1911-2.

7085 Probably this year, I should think, you will find a further increase still, on account of the gold going to India?—But it is a very small proportion.

7086 Still, there it is and it is increasing. That shows rather, does it not, that the people of India are getting to like gold as a circulating medium?—I would not like to say that.

7087 (*Sir Ernest Cable*) I gather from the whole tenour of your memorandum that you approve of the policy which has been pursued in the past of cautious budgetting, of keeping taxation fairly level, and utilizing the surpluses, if any, for reproductive capital expenditure?—That is my opinion.

7088 You prefer that policy to close budgetting, which involves fluctuations in taxation?—I do, especially in India.

7089 With regard to your remarks on the Gold Standard Reserve, of course there is a point at which any cautious man would say that a safe limit had been attained, and that no further sums should be placed to that reserve. You would favour the suggestion, probably, that any further profits on coinage after that limit had been reached might be spent on railway development?—I should like to say in reply to that that it would depend entirely upon what progress was made in the country itself, and how the exports were increasing. As I state in the memorandum, I do not think that the minimum quantity of gold to be held should be laid down rigidly, I think it would have to be guided by the progress of the exports of the country.

7090 But with due regard to caution, profits might be so utilised?—With due regard to caution, I should certainly think that part of the money made in coinage might go to reproductive works, such as irrigation and railways.

7091 I think you said in reply to the Chairman that you thought the present banking facilities in India met the full requirements of trade?—That is my opinion.

7092 Of course you will admit that there are periodical stringencies in the money market?—There are periodical stringencies owing to what we might call good trade, but the rate of interest has not been very high.

7093 You would not say that that stringency has been caused, as has been said by some of the witnesses, by the withdrawal by the Government of money from the country in the collection of taxes?—No, I would not.

7094 Then you would not agree with the view that if there was a State bank into which those collections were paid at once, they would not have been withdrawn from the market and, therefore, the stringency would not arise?—That is so.

7095 I suppose you would agree that there are two classes of hoarding—there are the hoardings of the people in their huts who bury their few rupees, and there are also the enormous sums which we know are hoarded by the princes and maharajahs, and probably in the temples. Do you think that the institution of a State bank would give a feeling of security to those rajahs and princes to such an extent that they might bank their hoards?—No, I do not.

7096 With regard to financing agriculture in India, it has been suggested that a State bank would perform a very useful function in financing co-operative societies?—I do not think that is quite the way I put it.

7097 It is not in your memorandum, it was somebody else who suggested that. Do you not agree with it?—I am in favour of encouraging co-operative societies, but I am not in favour of encouraging co-operative societies through a State bank. I do not agree that a State bank is required at all.

7098 Do you think that the amalgamation of the three Presidency banks would render their cash more available for the general use of the country, instead

24 July, 1913]

Mr. CHARLES CAMPBELL McLEOD

[Continued

of its being, as it is at present, in watertight compartments?—No, I do not

7099 (*Mr. Gladstone*) Referring to your suggested composition of the Finance Committee of the India Office, to which the Chairman has alluded, you would approve, I suppose, of the India Office being also fully represented on that Committee? There is no official representative in your list, there is merely an ex-Civilian. Would you not consider it necessary to have the best expert official advice added to this Committee?—Certainly

7100 You think, I gather, that private enterprise should be encouraged, so that the direct capital commitments of the Indian Government may be reduced?—I do

7101 With regard to the purchase of stores by Government you are, of course, aware that a very large sum is expended in London for the purchase of railway and other stores on the grounds mentioned in my previous question, would you favour a policy by which the railways in India were encouraged to purchase and pay in India, thus reducing the obligations on the balances which the Government of India have in London?—If they were satisfied that the works in India could turn out wagons of the same class as they buy here, and that they could procure equally good and satisfactory stores, I would

7102 By my question I meant to include the purchase of material from this country, but that they should be purchased by those who used the material and stores, and ordered and paid for in India?—I am afraid I do not quite understand

7103 Under Government supervision in India the railway companies, for instance, would issue tenders in India, make their contracts there, make their own terms in regard to delivery, quality of goods and so on, and pay for the goods in India?—I see no objection to that

7104 At present a large sum of money has to be provided in London by the Government to pay for those stores, wagons, and so on?—I do not see any objection to their being paid for in India

7105 Would you not see a direct advantage in that being done? I would point out that managers and others, who may be ordering hydraulic machinery and things of that kind, would then be themselves in direct contact with the manufacturers and their agents, and so would probably get better value and, through competition on the spot, perhaps better prices?—What I understand you to ask me is whether it might not be more desirable for the Indian railways to purchase their stores in India than in London, I do not see any objection to their purchasing them in India.

7106 Would you see some advantage in lessening the direct commitments and the commercial work of Government by making such purchases in India?—Yes

7107 It would withdraw that particular section of work from the India Office here?—I am afraid I may not have understood you. What I thought you meant was, would there be any advantage in the Government of India purchasing stores for Indian railways by tender in India for stores that were made in India, giving the Indian people who made the stores, or partly made them and partly imported them, like axles for carriages and so on, the benefit of that. I say that there might be an advantage in that, and that these things could be paid for in rupees in India, but I cannot see how it would affect the balances one way or the other, if that is the point you have in your mind.

7108 It would not affect the trade balances obviously. We have had criticisms on the large extent to which the Indian Government, and the India Office more especially, are engaged in banking and what I call commercial work, such as buying railway stores. You are aware probably that not one shilling's worth of stores can be purchased at present without the direct sanction of the Secretary of State in regard to all the sterling railway companies?—Yes, I know that.

7109 Turning now to the letter of the Bengal Chamber of Commerce, in paragraph 10 (page 604) they say "The difficulty in India is the provision of the 'necessary security' for any loans that might be made in India. Do you not consider that there would be an

advantage in the Government making an issue of short-term bonds which would command a fixed price about par, which would thus largely increase the type of security which could be used for obtaining loans in India from the Government?—Is it your suggestion that the Government should issue short dated bonds and that these should be used by the holders of them as security for borrowing money from the Presidency banks?

7110 As they do in this country, where they issue all kinds of securities—what are called floaters, long-term loans, short term loans, registered stock, and bearer stock?—I do not see any objection to it

7111 That would meet the point made by the Bengal Chamber of Commerce as to the difficulty in India of the provision of the necessary security?—The explanation of that, which I daresay is known to you, is that there are practically only one or two classes of security in India which are available for strictly borrowing purposes under the terms of the constitution of the Presidency banks—that is, Government paper, and I am not sure, but someone here will know it, whether Post Trust debentures do not come within that too. At any rate, the security is confined to one or two classes, and there is nothing like the field that there is, of course, in England

7112 I am suggesting that these securities should be widened, that is why I suggest an issue of that kind?—I do not see any objection to it

7113 Perhaps you are aware that the Government of India now allow advances by the Presidency banks against the securities of Indian railways other than those guaranteed according to a schedule which is added to from time to time, so that those securities, especially if they were increased, would be available for this purpose. Perhaps you do not know that that is so?—I do not

7114 With the view also of meeting that point of the Bengal Chamber of Commerce, would you recommend that the branch line terms which are now given to railway companies with rupee capital should be extended to sterling capital?—Yes, I would

7115 I understand that you are not in favour of a State bank or even of an amalgamation of the existing Presidency banks?—No

7116 If such a bank were established, I suppose you consider the control of such a bank would naturally be in Calcutta, as being by far the largest trade centre and also having the largest population?—I do

7117 It was for these reasons, was it not, that the Government of India decided to retain the office of Head Commissioner of the Paper Currency in Calcutta?—I believe it was

7118 Do you think it would be possible to have the supreme control of such a bank, if set up, exercised from London?—No

7119 It would be obvious, would it not, that men of high standing with Indian experience and the necessary leisure, could be more easily got together in London than in India?—It would

7120 (*Mr. Keynes*) You express a doubt as to the practicability of a central bank in so vast a country as India, because the different races have different forms and different ideas of banking could you give some examples of the kind of differences of which you are thinking?—I am afraid I could not now, but I could if I had time to think it out. I think you would easily be able to collect evidence which would show that there are different forms of banking in Bombay, Calcutta and Madras, that the natives in these three Presidencies work upon different systems, that in some parts of the country they work pretty well by hundis or the exchange of paper, that in other parts they work more on silver and currency notes, and that in other parts, as I say in my memorandum more in the Western and Northern circle, there is a little gold in circulation.

7121 Is that the kind of difference you are thinking of—the difference between the comparative use of gold, notes, and silver, and in some places bills?—That had something to do with it, certainly, but what I was thinking of more was the different sets that you

24 July 1913]

MR CHARLES CAMPBELL McLEOD

[Continued]

meet in those three Presidencies, and their very different ways of doing business

7122 I can understand that there would be all sorts of little differences of that sort of which local boards would have to take account, but I was wondering whether there were differences of a kind which would in any way moonvencence a central board, clearly those you have mentioned would not, would they?—Not if you had on the central board men who were well versed in the different ways of doing business in all the Presidencies. But you must remember that India is a very large country

7123 The point as to whether payments should be made in silver, gold, or notes, would not be one on which the central board would wish to have any particular views?—No

7124 Are there any points which would necessarily come under the cognizance of the central board in which there are important differences between different localities?—I should think there were

7125 Will you mention any?—I can mention nothing beyond the fact that I know that all the three different Presidencies have different ways of doing their own trade

7126 But you cannot mention any precise point?—No, I cannot offhand

7127 With regard to the Finance Committee of the India Office, you are aware of course that it is a Committee of the Secretary of State's Council?—That is so

7128 And that the members of that Council have to advise on many important questions other than financial questions?—Yes

7129 You think that no less than five out of the twelve members of the Secretary of State's Council should be persons of the kind of experience you have suggested?—I have stated five in my memorandum

7130 The total number of members of the Council being twelve, I think?—I think that is so

7131 You think that five out of twelve members of a Council who have to advise on matters of every sort should be persons of the kind you suggest?—I do not go so far as that. My point is this. I suggest that the Finance Committee of the India Office, whatever its size is, would be best serving its purpose by having one of each of these denominations, or perhaps having four out of these five, leaving out one in any way that was thought suitable. That is the combination that I consider would be the best able to deal with those questions

7132 I can understand that that would be a good idea if the Committee was appointed purely for the purpose of financial advice, but that is not the existing system. Do you think that your proposal is compatible with the existing system?—I do not know whether it is or not. What I do know is that I consider that this is the foundation of a Committee that would best serve the India Office

7133 You were thinking of the composition of a Committee appointed *ad hoc*, rather than of the sort of Committee which you could get by forming a Committee out of the members of a Council who are appointed for general purposes?—I do not quite understand

7134 You were thinking rather of what sort of Committee you would appoint if you were appointing a Committee purely for financial purposes?—That is so

7135 You were not thinking whether that was compatible with the other functions which the members of the Council have actually to perform?—That was not in my mind

7136 (Sir Shapurji Broacha) You agree with the recommendation made by the Bengal Chamber of Commerce that the Gold Standard Reserve should be held in London, and that at least 5 millions should be held in gold?—Yes

7137 That was not the opinion of the Bengal Chamber of Commerce just after the exchange crisis. Does the Bengal Chamber of Commerce make that recommendation because it now thinks that half a loaf is better than no bread?—I think they have fully explained why they changed their opinion to a certain

extent. It was consequent on the change that was made

7138 I will read to you a dispatch of the Government of India which is an echo of the opinion of the Bengal Chamber of Commerce. This is from a letter of the Government of India to the Secretary of State, No 89, dated 1st April, 1909 (Appendix V, page 170, paragraph 7). "The point is one on which informed public opinion in India is singularly unanimous. We are frequently asked why we strain after interest on the Reserve which is the basis of our currency system, and consequently one of the chief pillars of the credit of India, and it is pointed out that other countries are careful to retain the ultimate foundation of their credit in bullion

"Moreover, we conceive that the position of the Government of India in the markets of the world would be much stronger as the possessor of a large store of liquid gold than as the possessor of a corresponding capital in Consols or similar securities. In the former case the Indian Government might in emergency be powerful to help the Indian market. In the latter there would always be the potential danger of their wishing to realise at an inconvenient season. We would therefore urge on your Lordship the propriety of building up a substantial share of the reserve in liquid gold, to be held under as nearly as possible the same conditions as the currency gold in London." They have changed their opinion since?—That is quite evident

7139 What are the reasons for the change?—I am not prepared to state what the reason for their change is, but I am prepared to state that the recommendations which I place at the beginning of my memorandum express their opinion now

7140 Did I understand you aright that you would rather lose the par of exchange than lose interest?—I do not think with 5 millions at present of liquid gold in the Gold Standard Reserve that there is any immediate danger of losing the par of exchange. You might get exceptional circumstances as was pointed out, which might bring forward a difficulty, but it does not appeal to a business man or a business community that money should be locked up in liquid gold which does not bring forward any interest at all when you have first class securities which are as near an approximation to liquid gold as you can have, and they are earning interest

7141 You say that now it is difficult to sell 10 millions of Consols?—I say it is at the moment, but the London market is in a peculiar position, as you know, and the reasons for it are very fairly well known to everybody

7142 There is nothing wrong in India and there is nothing wrong in this country, there has been no war, and yet you think that it might be difficult to sell 10 millions of gilt edged securities. What would be the condition if we were involved in a big war, or if there was a famine?—I should like to say that my opinion was asked whether I thought there would be a difficulty, and speaking from my rather limited knowledge of the London market, I should say there would be a difficulty at the present moment, for reasons which, as I say, are pretty well known to everybody

7143 And you are right?—Ordinarily there would be no difficulty in selling 10 millions

7144 Do you expect a market when the bank rate is higher than 4½ per cent?—We have had securities at a much higher level than they are to day, with the bank rate higher than it is to day

7145 May we not have exceptional times of difficulty? Would you allow exchange to go to 1s 3d again, and let all the wealth of India be disturbed for a paltry amount of interest?—I do not think that we should prepare for ultra exceptional times. The ordinary business man has got a certain amount of capital to work his business on, and he is not going to put that capital in a pot and seal it up and make no use of it

7146 Is not Germany an ordinary business country, is not France an ordinary business country, and is

24 July 1918]

Mr CHARLES CAMPBELL McLEOD

[Continued]

not Russia an ordinary business country?—Undoubtedly

7147 They do not deal commercially with their gold, they build up a large foundation of gold?—I am only prepared to give my opinion on it

7148 And what you have stated is your opinion?—That is my opinion

7149 (Sir James Begbie) In the paragraph headed Gold Currency and Coinage (page 598) you describe India as a country accustomed to a silver coinage, but you also refer to the advance which has been made in the circulation of gold coins, especially in Western India. Do you know whether there has been a great increase in the active note circulation?—I do not know. I say that the advance in the circulation of gold coins in India has not been very rapid, and is confined chiefly to the northern and western circles

7150 Can you tell me whether there has been a great increase in the figures for the various banks' clearing houses in India?—I believe there has, but I am not prepared to give you the figures

7151 You have the fact that there has been a considerable increase in the note issue and a considerable increase in the use of cheques, would you not therefore say that India is gradually becoming accustomed to other forms of currency than silver?—Yes, I would

7152 Do you think it is possible that the use of other forms of currency may be extended?—It is quite possible

7153 You are not in favour of coming gold in India, because you think it is not required at present, do you look forward to its being required some time in the future?—It is very hard to say. There is no doubt that there has been an advance in the circulation of gold coins in India to a certain extent, but how far it has gone I am not prepared to say

7154 You also object to the coming of gold because the process will be an expensive one?—Yes

7155 The cost of coming a purely Indian coin would be less than the cost of coming sovereigns, would it not?—That I am not prepared to say

7156 If gold were coined in India and had the effect of reducing the additions to the rupee circulation, could the cost of coming the gold not be set off against the saving there would be in the minting of rupees?—It might be

7157 You also say that if the coming of gold in India is decided upon "it should be in the most convenient form, and that is a sovereign (page 598)" In the case of the silver coinage the coins provided are of the face value of 1 rupee 8 annas, 4 annas, and 2 annas, would you say that these denominations suit the convenience of the Indian public?—Yes

7158 In the case of the note issue the lower denominations have the face value of 5 rupees, 10 rupees, and 50 rupees, do you think that those denominations have been found convenient by the public?—I do

7159 Would you say that a 15-rupee note would be a convenience to the public?—No

7160 But you think a 15-rupee gold coin would be the most convenient value for a gold coin?—Yes, and I give the reason why I say so—because the sovereign has become an international sovereign. The sovereign is not a 15 rupee gold coin, but it is a coin worth 15 rupees, that is the standard which has been fixed for it.

7161 It is not a matter of convenience to the public?—No, not more so than notes

7162 You also say that a 10 rupee gold coin would not be of any use for export, is it not the case that India exports uncoined gold regularly?—I understand that a 10-rupee gold coin would be of no use for export except as gold

7163 But it could be exported?—It might be exported, I suppose, as gold

7164 I asked the question because I understood you to say it would be of no use for export?—My opinion is that it would not be of any material use for export, on the supposition that the 10 rupee gold coin is being coined for circulation in India and for the convenience of the people of India. I do not take it that this 10-rupee gold coin would be one that would be

held up in large quantities like the sovereign or that it would be treated on the same basis as the sovereign

7165 Still it would be useful for exporting gold if you wanted to export gold?—It would be useful so far as its value is represented by gold, I cannot deny that

7166 (Chairman) If I rightly understood your meaning, you think that the 10-rupee gold piece when used for export would rank only as bullion?—That is all

7167 But you think that the sovereign ranks as a coin?—That is so

7168 (Sir James Begbie) I want to ask you about your remark that a 10 rupee gold coin "would tend to destroy the standing of the sovereign", do you mean the standing of the sovereign in the eyes of the Indian public?—Yes

7169 Is there any evidence that the sovereign stands especially high in the estimation of the public in India?—Yes, I think there is. I think that the natives of India look upon the sovereign as a coin of value. It has a certain value, it has a certain standing—it is sentimental perhaps, but it has

7170 Do you not think that they would look upon a 10-rupee Indian gold coin in the same way?—No, I do not think so

7171 You also think that a 10 rupee gold coin would encourage hoarding?—I do

7172 Do you think it is a great advantage to that portion of the Indian public who are given to hoarding to hoard up rupees rather than gold?—No. I meant to have added the word "ornaments" after "hoarding" in my memorandum, but I omitted to do so (page 598)

7173 Do you think the temptation to hoard gold is increased by an excess of rupees in circulation relatively to gold coins?—No, I do not think so

7174 You are aware, I suppose, of the great demand for bar gold in India?—Yes

7175 Do you see any objection to the continued issue of rupees on a large scale in the presence of that demand for bar gold?—Do you mean Government issuing more rupees and taking in bar gold?

7176 I mean the continued mintage of rupees, and the issue of rupees to the public, in the presence of the great demand for gold, which is evidenced by the demand for gold. Do you think it makes any difference?—No, I do not

7177 Does it not come to this, that when Government issues rupees which are largely used to buy gold, the ultimate result is that India uses gold to buy silver for coinage which is largely converted back into gold?—I am not prepared to say that is the case

7178 (Mr Gillan) I notice that in dealing with the question of Council Bills you refer to "the existing system, whereby the Secretary of State sells Council Bills and transfers in excess of his needs" (page 598)?—Yes

7179 We know that recently, having very large balances, the Secretary of State has brought home much more money than he wanted immediately, you do not mean that he should bring home money that he is not going to need at any time, do you?—No, I do not. What I mean is that I consider that as long as the Secretary of State sells bills and transfers to the extent of the full trade demand, that is, the balance of trade, there is no objection to it

7180 But he must foresee some use for the money which he is bringing home by means of Council Bills, must he not? You would not propose that he should bring home money that he is not going to need ultimately at home, would you?—He has always got the gold value for the bills and the transfers that he sells. If the money is required out there by the trade, I do not see any objection to his selling to the full difference between the exports and the imports

7181 If he brought home money in excess of his ultimate requirements, we will say, he would either have to keep that money here in England indefinitely, which I suppose no one would propose, or he would at sometime have to ship that back to India?—Yes

7182 You would not propose that?—No, I would not.

24 July 1913]

-Mr CHARLES CAMPBELL McLEOD

[Continued

7183 So that he has really to look after his requirements, and to consider what is the best distribution of his balances between India and England?—That is it

7184 Looking to his requirements and his interests?—Yes

7185 And this advantage which is secured to trade is an incidental advantage in the course of his transactions?—Yes, that is so

7186 With regard to the coinage of silver, you have expressed the wish that these purchases should be made more regular. With that of course the Government of India would agree. The difficulty, as the Chairman pointed out, I think, is that we have such extraordinary variations in the demand, so that the purchases, as I think you said in reply to the Chairman, could not be altogether regular, but there would be intermissions?—That is so

7187 I want to put this to you as a practical question. At the end of the crisis, which the Chairman noticed in 1908-9, we finished up with a balance of 47 crores of rupees. I will ask you to take it from me that what we regard as a working balance is 18 crores, in that case you would not purchase silver when you had 47 crores in hand, would you?—No

7188 At the end of 1909-10 we had 33 crores, still a very large excess. The time perhaps had not come then for a purchase of silver?—No

7189 At the end of 1910-1 we still had 29 crores, would you have started purchasing silver then?—Not unless I saw some reason for it. There is not very much difference between the balance then and the balance in the previous year, it is only a difference of 4 crores. I would not necessarily have started then, unless I saw some reason ahead for it

7190 At the end of 1911-2 we had only 18 crores, and, as you know, the Government of India at that time were making arrangements for the purchase of silver. I take it that on the whole all you mean is that we might have begun a little sooner than we did?—Exactly

7191 But not very much sooner?—No, not very much sooner

7192 About the question of the gold mint, there is one point that is not clear to me. You say the 10 rupee gold coin could not be of any use for export, is it not the general experience that gold coin of different kinds is exported from various countries merely as bullion?—As bullion it is exported. My intention was to say that "a departure to a 10 rupee gold coin would not in my opinion be a sound move as it would not be of any use for export" as against the sovereign

7193 Then you say it would encourage hoarding, this was a point that Sir James Begbie put to you?—Yes, I do

7194 I do not know that hoarding means more than, we will say, the retention in one's personal custody of one's savings or surplus, is that how it appears to you?—Yes

7195 How would the mere constitution of the currency affect the amount of one's savings, do you think that it could add to the total amount in hoards?—My intended meaning was that this 10 rupee coin, being of a less value than the sovereign coin, would fall within the means of a great many more people in India to buy and hoard it or to use it as an ornament, that the fact of its being five rupees less purchasable value would make it easier for a certain class in India to buy for hoarding and ornamental purposes

7196 That is to say, you would have a larger portion of your hoards in gold and less in silver than you have at present?—Yes, and in the same way in ornaments—they would substitute the 10 rupee gold piece for the present silver ornament

7197 Would you agree that the sovereign is too large a unit for the great bulk of the ordinary payments which the Indian people have to make?—In itself, yes

7198 I mean for purchases of grain or cloth or for any ordinary transactions of that kind?—Without the help of silver, of course it is

7199 I mean in the actual payment of something they have bought it is very seldom that they would have to pay a sovereign?—Yes, I should say it is

7200 I do not know if you would be able to answer this. Would you say that the same thing applied to what are larger and more important payments, that is to say, payments of rent? If a man has to pay his rent every six months, would you say that the bulk of those rents would be less than 15 rupees?—I am not prepared to say that. I have no experience of that

7201 Would you say that there is a tendency for the sovereign to be more useful for hoarding purposes and less useful for payment purposes?—I would not like to say that either

7202 Now about the State Bank. You say an institution of this kind is not necessary "at present" what is the meaning of that qualification?—The qualification "at present" means that there are sufficient facilities at the moment to meet all the trade of India in the institutions that are in India. I do not think it is required, I think the Presidency Banks, the Exchange Banks, and the Indian Joint Stock Banks, are quite capable of financing the trade as they are now

7203 You mean that an institution of this kind would not be required until the time, if that time ever comes, when the banking facilities of India are, for some reason, found to be inadequate?—That is so

7204 You refer in the same connection to the paper currency, I think you said in answer to the Chairman, that you consider it has been well managed by the Government Department which runs it?—I do

7205 What has been put to us is that our present paper currency system in India was based on the English system of 60 years ago, that that system has been left behind, that this country, by the development of the cheque and so on, and other countries, have developed newer systems, and that as a matter of fact this system is rather, even in India, out of date?—I do not agree with that

7206 Supposing that some other system were substituted for it, on the analogy, we will say, of the French system or the German system, that is to say, a more commercial and less stereotyped system, would you agree in that case that it would be better run by a bank than by a Government?—I do not think so. Of course a great deal would depend upon what the system was. I consider that the present system of paper currency in India is well managed, and is very suitable for the country, and should be encouraged

7207 What was in my mind was that the present system is a sort of cut-and-dried system, you have got so much in securities, and for the rest you have an actual deposit of coin against every note that goes out?—That is so

7208 You might have a more elastic system in which the circulation of notes would be covered not only by the actual deposit of coin, but it might be by bills or by some other form of security, and in that case it seems that a bank would be more able to deal with it than a Government Department?—That would be so

7209 Sir Ernest Cable, I think, asked you whether you do not think that a State Bank might attract more deposits, is it not possible that the prestige of Government would have that effect?—It is possible

7210 I noticed, for instance, that the other day some of these co-operative societies in the United Provinces had at their district banks been given cash credits by the Allahabad Bank, but the natives felt that this Allahabad Bank, as they call it, was some sort of unknown institution in the background that they knew nothing about. Suppose they were told that they were being financed by a Sirkar Bank, would that not have given them more confidence?—Very likely

7211 You refer to the difficulty of control in managing a central bank for India, is there not already an example of a very far reaching institution in the Bank of Bengal which reaches from Bengal to Peshawar?—Yes

24 July 1918 ]

Mr CHARLES CAMPBELL McLEOD

[Continued

7212 Are there not great differences between Burma, Bengal, and the up country districts?—There are different ways of dealing. I stated that it would be difficult to control, for the reason that it would have to control various parts of India with different customs and so on. To control efficiently an institution like that from one centre would, in my mind, be a very difficult thing indeed. As you say, the Bank of Bengal controls a good deal, but it would be infinitesimal compared to what you would require a State Bank, covering the whole of India, to control.

7213 Do you think that the Bank of Bengal must at present encounter difficulties of this kind, and that they would be extremely accentuated if you added on Bombay and Madras?—Yes I do.

7214 (*Lord Kibracken*) With regard to your suggestion about the financial organisation and procedure of the India Office, I think I may take it that you have not specially studied the constitution of the India Office or the Acts of Parliament under which it is carried on?—That is so.

7215 In making your suggestion of the composition of the Finance Committee, what you mean is that you put that forward as a sort of ideal committee for advising the Secretary of State in financial matters?—That is my point.

7216 I suppose you base that suggestion upon your observation and knowledge of the way in which the Secretary of State deals with financial questions, and of the nature of the work that he undertakes to do?—That is so.

7217 You say that you wish to offer no criticism, but as it is part of the duty of this Commission—I do not know whether you are aware of this—to report on the system and practice of the India Office in dealing with the finances of India, I should like to ask you whether you, bearing that in mind, have any faults to find, or any suggestions to make, on that particular point?—None.

7218 You are satisfied with the way in which the work is done?—Yes.

7219 You think the Secretary of State does not undertake what he ought not to undertake, that he does not go beyond his proper sphere, and that he transacts his work in a business-like and efficient manner so far as you have noted?—I do.

7220 (*Sir Robert Chalmers*) I should like to ask you a question or two on the subject of the metallic portion of the Gold Standard Reserve. If I caught you remarking recently, you, speaking as a business man, said that an ordinary business man prepares against ordinary risks?—That is so.

7221 That is to say, if he happens to be a prudent man of business. There might be a difference, might there not, between the way in which a man of business engaged in commerce would deal with his liabilities, and the way in which a Government with permanent and longstanding liabilities might deal with their business?—There might.

7222 What I want to put to you, in order to get the benefit of your opinion on it, is the possibility of what might be the extreme strain to which the Gold Standard Reserve might be subjected. Shall we take two years of bad trade, famine, and so forth in India, and couple that with a crisis in the London money market, that you perhaps would agree is a fairly black prospect?—Yes, that is as dark as you can put it, I think.

7223 Would you not be disposed to agree that the maintenance of exchange is in financial matters the paramount duty of the Government of India?—It is.

7224 You would possibly agree so far as to say that there is this difference between an ordinary business man and the Government of India, that they should be prepared for the abnormal, the extraordinary risks?—Yes.

7225 They should lay down funds to meet their obligations, which they know is a very practical thing when they have the extreme strain?—Yes.

7226 Would it be your feeling as a man of business, looking at this particular form of business, that in order to be able to meet their liabilities and to discharge this paramount obligation, they might hold an amount of gold which would of course cause a loss of

interest, but that loss of interest would be well foregone in the discharge of their paramount obligation?—If such a severe test came, yes.

7227 Looking at it from the point of view of the Government, you would be prepared perhaps to take a line of rather greater caution than would be taken by a prudent man of business in discharging obligations not so extensive in time as those of the Government of India?—Yes, perhaps.

7228 That would mean a greater stock of metallic gold held in lieu of securities?—That would be the meaning of that, decidedly.

7229 (*Sir Shapurji Broacha*) About the note issue, these notes are now issued by Government and the people have become accustomed to taking Government currency notes, they would not look with the same favour on notes which are issued by a bank, would they?—I do not think so—for a time, at all events.

7230 Having been accustomed to the Government guarantee, they would think the guarantee was reduced if the note were issued by a bank?—Yes.

7231 Would there be a greater facility of promoting the quick circulation of the notes if it remained in the hands of the Government than if they were issued in a bank's name?—I should say so.

7232 Mr Gillan spoke to you about the plethora of rupees when we had 47 crores. Suppose that plethora was brought about, not in response to commerce but against the wish of the Government of India, by the Secretary of State pushing silver, and suppose that about 20 million crores less had been coined, which would have reduced the plethora of 47 crores to 27 crores, if you knew that the plethora of 47 crores was brought about by the action of the Secretary of State, would your opinion in favour of gradually buying silver remain the same?—Yes, it would.

7233 If you had to remit to this country 30 rupees, would you not rather remit two sovereigns than three 10-rupee pieces, because the sovereign in foreign countries would be of greater value than 10 rupee gold pieces?—I would rather remit the sovereigns than the 10 rupee gold pieces.

7234 Because the rupees would be of less value in this country?—Yes.

7235 They would be charged with the exchange and also with whatever it would cost to send them back to India?—Yes.

7236 (*Sir Robert Chalmers*) Generally speaking, would your policy as regards the coinage of rupees be the very simple one of meeting the demand which trade and the population make?—Yes.

7237 (*Chairman*) Sir James Begbie put to you the suggestion that the demand for bar gold in India was proof of a desire for gold currency by the people, do you think that the bar gold which is now taken in such large quantities is in any sense to be considered as currency?—No, I do not.

7238 Have you formed any opinion as to the extent to which it is used as merchandise, that is, for the arts?—No I have not.

7239 Would you think that the bar gold is used mainly either for the arts or for hoarding?—I am not prepared to say, but I should think for both purposes.

7240 If no bar gold went in, and the equivalent amount of gold was sent to India in sovereigns, would it, in your opinion, result in the melting of a great many sovereigns back into bullion at once?—No.

7241 Do you think they would remain as sovereigns?—Yes, I do. I think that some portions of the hoards at present are in sovereigns.

7242 That answer seems to imply that bar gold is not much used for the arts?—I am not prepared to say whether it is or not.

7243 (*Lord Faber*) Do you think that the delightful little bars of gold that we have been shown appeal more to the hoarding instinct of the Indian than the sovereign does?—Possibly.

7244 (*Chairman*) In paragraph 4 of the letter of the Bengal Chamber of Commerce, page 602, they mention that they took exception to the formation, in 1906, of what, until within the last few weeks, has been known as the silver branch of the Gold

24 July 1913]

MR CHARLES CAMPBELL McLEOD

[Continued

"Standard Reserve," and is now known, I think, as the Indian branch. They do not, as far as I have observed, develop that opinion. Do you take any objection to the Indian branch of the Gold Standard Reserve as at present constituted?—Do you mean as regards the 6 crores of rupees?

7245 Yes?—I would prefer to see it in the Paper Currency Reserve than in the Gold Standard Reserve.

7246 If in practical working it is found a convenience to have a small quantity of silver, such an amount as that in India in the Gold Standard Reserve do you see any objection to it?—No.

7247 In paragraph 10 of the Chamber's letter, speaking of the practice of loaning balances and of the possibility of making loans in India, they say the great difficulty is the provision of the necessary security. They add, "That branch of the general cash balance which is held in India is also, like the India Office balances, greatly inflated at present. To suggest a satisfactory method of dealing with it is not easy." But the committee incline to the view that a partial solution might be found if transfers, from revenue to capital expenditure, were governed by principles somewhat less rigid than those that are understood to prevail in the finance department' (page 604). Could you tell me what the committee had in mind in that sentence?—I fancy it is railways.

7248 Could you explain to me a little more definitely?—The Indian community all over India—at Bombay, at Karachi, and at Calcutta—have been urging upon Government to give them more money for railway finance, and the Bengal Chamber of Commerce, observing that large balances are at present held by the India Office, think that they should be partly given out for capital expenditure, such as railways, without being so rigidly held. That, I think, is the correct meaning of it.

7249 It comes to this, that they think the surplus balances ought to be more immediately devoted to capital construction?—That is so.

7250 As regards the question of security for loans in India from the balances there, in the first place may I ask you whether, in your opinion it would be desirable that on good security the Government should, as far as they can, lend money say to the Presidency banks in the busy season of the year in India?—I should say that it would be very desirable up to a certain point, provided they gave the Presidency banks a pull in the rate. At present they will only lend to the Presidency banks at the official bank rate, which I am afraid is not much use.

7251 To make it of use you feel that the banks must have some reward for handling the money?—Yes, I should say 1 per cent.

7252 Subject to that, do you think it would be an advantage to India if these balances could be put at the disposal of the money market in the busy season through the banks?—Yes, to a reasonable extent.

The witness withdrew

At the India Office, Whitehall, S.W.

SEVENTEENTH DAY.

Friday, 25th July, 1913

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, MP (Chairman)

LORD FABER  
LORD KILBRACKEN, GCB  
SIR ROBERT CHALMERS, KCB  
SIR ERNEST CABLE  
SRI SHAPURJI BURJORJI BROACHA

SIR JAMES BEECHIE  
MR ROBERT WOODBURN GILLAN CSI  
MR HENRY NEVILLE GLADSTONE  
MR JOHN MAYNARD KEYNES  
MR BASIL P BLACKETT (Secretary)

MR MARSHALL F REID, CIE, called and examined

7264 (Chairman) You have, I think, spent a large portion of your life in India?—Yes, 25 years.

7253 It was suggested to us by a witness that if that were done, one result would be to enable the banks to hold a considerably larger amount of Government securities, do you think that would be so?—It might not be so in the busy season, it might be in the slack season.

7254 The suggestion that was made was that as they would be able to borrow against securities in the busy season, and as they would be glad to have that investment in the slack season, it would enable them to carry a larger amount of securities, because on the securities they could obtain the money they wanted to work their business in the busy season?—That is quite feasible I should think, and reasonable.

7255 That commends itself to you?—Yes, it does.

7256 Is there anything you would like to add to what you have said in answer to the questions put by the Commission?—I would like to add this on the question of Indian railway finance. I do not know whether I have made it quite clear in my evidence that it would be most desirable that Government should be prepared to state definitely that they would give a minimum sum of, say, 11 or 12 millions for a fixed period of three to five years irrespective of what they would be prepared to allot during these years out of balances. That would enable those who are controlling the railways to make their programme in advance much more efficiently and economically. That is really my main point as regards the railways.

7257 When you say "irrespective of what they would be prepared to allot out of balances," does that mean out of the surpluses of revenue?—Yes.

7258 When you say irrespective of that do you mean inclusive of it?—No. What I mean is, let us have a certainty for five years of 11 millions, then the railway boards can go to work upon that. Probably, the 11 millions is not sufficient, but the balances can be allotted annually without the fixed five years period.

7259 Do you think that the Secretary of State could safely and wisely have borrowed much more for railway construction under the circumstances of the markets in recent years than he has done?—I do.

7260 Without injuriously affecting the credit of India?—Yes.

7261 (Lord Faber) Do you think that the treatment, carried out with the utmost rigour according to the agreement, of the whole of the railway share holders in the past has discouraged investors now to take up Indian railway loans?—No, I do not.

7262 You know to what I refer—the repayment of the Madras railway people at a certain exchange which was held to be very hard at the time, you do not think that interferes with it now?—I do not.

7263 (Sir Robert Chalmers) People would realise that that was a business proposition?—Quite so. That has been forgotten.

The witness withdrew

25 July 1913 ]

MR MARSHALL F REID, C I B

[Continued

with the import and export business, and financing and managing cotton mills chiefly

7266 Most of your time, I think, has been spent in Bombay?—Mostly in Bombay, but partly in Calcutta and partly in Madras

7267 In the memorandum that you have submitted to us (see Appendix XXII, page 571) you draw attention to the size of the Government balances in India during the busy season. We have had it in evidence that the minimum working balance which the Government considers to be required is about 12 crores or 8 millions sterling, and that in order to be sure of having a balance of this amount in November, the Government aims at a balance of something over 18 crores or 12½ millions sterling on the 31st March. Do you think that 12 crores is too big for a minimum balance?—I am afraid I cannot express an opinion on that.

7268 May I take it on the whole that if you were assured that the Government of India had not arrived at that figure by guesswork, but that they had settled it after periodical re-examination of their requirements, you would not be inclined to challenge their decision?—That is so.

7269 Granted, then, that their view is right and that they require 12 crores in November, is it your view that they should find some means of making the extra 6 or 7 crores, which they accumulate from November to March, available for commerce during the busy season?—If it is wanted.

7270 Do you think that the trade of India would require large assistance?—It certainly would at such times as last year and the two previous years, and many others in my recollection.

7271 To what extent do you think, in round figures? Would the assistance they require reach such a figure as 3 crores?—It is very difficult to say. You would gradually feel the effect of money being taken off, and you would gradually feel the effect of it being put on. Our trouble is that it is taken off to such an extent that it seriously hampers our trade.

7272 Do you attribute the stringency, which I think occurs pretty regularly in the busy season, mainly to the fact of the activity of the Government in collecting their taxes at that moment?—I think it must always occur in India that you have stringency in the busy season. That cannot be avoided, I think.

7273 Even apart from the operations of Government?—Even apart from that.

7274 In your opinion, that stringency might be lessened, and it would be to the advantage of the trade to do so, if Government placed at the disposal of trade a portion of their balances?—Yes.

7275 Would you propose that they should lend to the Presidency banks?—I think they ought to have some system on which they lend. I do not think it is much good, unless you can rely on having the money at your disposal when you require it, and to the extent that you require it, as far as it is available.

7276 In what way do you think Government should make it available? Should they lend to the Presidency banks only, or to all banks, or to private borrowers?—My view is that they should have an organisation to which they should lend, or in which they should place their available funds for the use of the country.

7277 You mean a central banking institution?—Yes, practically that.

7278 Would you propose that they should lend to that institution without security, or simply deposit their balances with them, or that they should take security?—They would not require security, I think, if the bank were strong enough—that would be the security—and if they exercised control over the management and direction of the bank.

7279 Is the kind of institution which you contemplate a semi-Government financial institution?—Yes, certainly, with a good deal of Government control over it.

7280 That raises the question of a State bank, and I will return to that later. Suppose that the Commission did not recommend, or did not find it desirable to adopt the proposal for, a State bank, would you still consider it advisable that the Govern-

ment should lend out its balances in the busy season?—I think so.

7281 In that case, would you propose that they should lend to the Presidency banks?—Yes.

7282 Would you in that case ask the banks for security?—If Government were not satisfied with the banks' position, which they control very largely by the Banks' Act.

7283 You are, of course, aware that the Presidency banks have considerable Government balances under present circumstances?—Yes, they have.

7284 It might be, without in any way casting reflections on the security or stability of the institution, that any further sum should be required to be covered by securities?—That might be so.

7285 You do not hold a strong opinion, I gather, either way on it?—No.

7286 In so far as the sale of Council Bills has been carried on, does not that tend to release these balances for the benefit of the public?—It does.

7287 Do you think that the relief reaches the internal trade of India, or is it mainly confined to the export trade?—It can only reach the internal trade through those who have access to the London market.

7288 Do you think that through them it does reach the internal trade?—Yes.

7289 How far do you think the money reaches in the internal trade of India, does it go into the hands of the natives?—It passes from the banks into the hands of the native *shroffs*, as they are called.

7290 (See *Robert Chalmers*.) Would the *mahajans*, the native bankers, get the money?—Yes.

7291 (*Chairman*.) You are familiar with the system of reserve treasuries in India, I presume?—Yes, to some extent.

7292 Do you suggest that it would be well to close them, and to hand over all the balances in them to some financial institution?—Do you mean to say hand them over absolutely free?

7293 Not necessarily, but to make use of the branches of a bank or banks in place of maintaining official treasuries?—I think the reserve should be maintained very strictly.

7294 I am not speaking of the reserve in the sense of the Gold Standard Reserve or the Paper Currency Reserve, I am speaking of the reserve treasuries?—Where Government holds amounts which they think they will require?

7295 Yes. Do you think that if there were a central institution it would be possible for the Government to close the reserve treasuries, and to depend upon the banks to do what is in effect then banking in the different centres?—I think it would, very largely.

7296 The Government has offered, on certain conditions, to make loans to the Presidency banks at busy times even now, but those offers have not been taken advantage of, do you know why?—I was not aware of that. I understood they had refused to lend to individuals on security, that is all I have heard.

7297 It may be a question of the terms. You said just now that, in order to make this proposal work, it would be desirable that it should be placed upon a systematic basis, and that trade should be able to count upon that assistance, I think?—Yes.

7298 Have you reflected what might happen if that had been done, and for four or five years such assistance had been rendered in the busy season, and then, owing to adverse circumstances, the failure of the revenue, or very large expenditure, the Government was unable to give that assistance in a particular year?—If the Government had not the funds available, there would be no point in asking them for it.

7299 What has been suggested to us is that trade might come to count upon that assistance, and that when it failed in a bad year, the last state of trade would be worse than the first?—I am afraid we always count on a good many things which are dependent on other circumstances.

7300 In saying that you ought to be able to count upon that assistance, you recognise, do you not, that there might be times when the Indian Government could not give it?—Certainly.

25 July 1913]

Mr MARSHALL F REID, C I E

[Continued

7301 There is another point which has been put to us. What do you take to be the busy months of the year in which this trade demand arises?—I think in Bengal about October to December, in the west about January to March.

7302 It has been suggested to us that Government has no surplus balance to speak of until about the middle of January?—That might be so sometimes.

7303 In that case the relief which they could give would be partial?—Yes.

7304 I presume that, provided the relief be given, you would not mind very much from what source the funds were derived?—No.

7305 Have you ever thought whether they might be advantageously drawn from the currency reserve by some increase of the fiduciary portion, instead of from the Treasury balances?—I have not considered that.

7306 A suggestion has been made to us that the fiduciary portion of the note issue might be raised, and that the whole of the amount allowed to be in a fiduciary position should not be permanently invested, but that a portion of it should be kept for loaning out on security in the busy season, would that meet your view?—I am afraid I have not considered that point at all.

7307 You say in section A, paragraph 12 (page 572), it is remarkable "that the balances and currency of India should be under the control of authorities in India and London who may be said to be almost isolated from the money markets, and the chief commercial centres of India." Where do you think the control ought to be placed?—I think it ought to be in the market itself—in the money markets and the commercial centres.

7308 Can you translate that into practical measures for me?—We come back to this State bank question again.

7309 I suppose Calcutta would be the chief financial centre of India, would it not?—Calcutta and Bombay are both very large centres.

7310 But you must have your head office in one or the other?—Probably, yes.

7311 In the past the control has practically been centred in Calcutta?—It has been.

7312 Merely as a matter of geography you could not use a better place?—I do not suppose you could.

7313 It is not in your mind, supposing the Government of India had remained at Calcutta, that the Finance Department ought to have been centred else where in order to be in closer touch with banking and commercial centres?—No.

7314 Now I come to the question of a central bank. Will you tell me shortly why you make the proposal to have such a bank, what are the advantages which you think India would derive from it?—In the first place, the control of the finances would be in the commercial centres, where the money is wanted and where large financial operations take place. They would control the balances and the reserves, and make them available, as far as might be desirable, to trade. No doubt they would guide the people as to the best form of currency they ought to use, and, if it were paper currency, they would take steps to popularise it. I think it must be recognised that the conditions in India have changed a good deal of late, and that we are coming in one way to rather a critical stage. The people have become very much wealthier during the last few years, and they are beginning to learn to use their wealth. I do not suppose at any time they wanted more guidance in that matter than they do at present.

7315 Do you think that they would get the guidance better from a central institution than they do at the present time from the Presidency and joint stock banks?—Certainly I think so.

7316 For what reason?—It is nobody's particular interest to teach them now.

7317 What you want to teach them, I suppose, would be to bring their money out of the hoards?—That is so.

7318 And to turn it to profitable uses through the banks?—Yes.

7319 Is not that very much the interest of the existing institutions?—It may be their interest, but I do not think it is one of their avowed objects.

7320 India is a very big country, is it not?—Yes.

7321 *Prima facie* I should have supposed that, with all these varying circumstances in the different parts, local institutions would be more likely to get at the people than one great central bank?—But I think you could use your local institutions equally well under central control.

7322 You say in your memorandum that you do not propose to attempt to construct the organisation, but I want to press you a little to help us in that matter. Do you suggest that the three Presidency banks should be amalgamated?—Yes.

7323 It is not an entirely new institution that you suggest should be superimposed on them?—No.

7324 But they are to be amalgamated as the foundation of a new one?—Yes.

7325 What sort of capital do you think such an institution ought to possess?—Then capital and reserves at present seem to be sufficient for their purposes. I do not think I can go beyond that.

7326 Therefore, in proposing a central bank, it is not with a view of increasing the banking capital of India, but in order to make the best use of the capital which now exists?—That is so.

7327 I suppose you contemplate that they would have local boards in the different Presidencies?—Local boards, very much with the same powers and the same duties as they have now in each Presidency bank.

7328 With a central board somewhere advising the whole?—Yes.

7329 Where would you think of placing the central board?—One would like to have the constitution of the central board such as would represent the whole country as far as possible. That being so, I do not think it matters very much for what reasons you choose any particular place, so long as this is effected.

7330 In order to make the central board representative of the whole of India, you would have to take men in close touch, I suppose, with the trade and business of places very remote from one another?—You would.

7331 Wherever you put the head office of the bank, could you, in the circumstances of India, find directors who possess the local knowledge which you have made a condition, and yet who could afford to give the time to come to that centre whenever wanted?—I am afraid I regard the directors as not nearly so important as the executive, and therefore, if the directors could be kept in touch with the executive, I think that a great deal could be done in the way of letting the board represent the whole country.

7332 You do not contemplate in fact that the board would meet weekly, or anything of that kind?—No.

7333 The real management and control would be in the hands of certain executive officers?—Certainly.

7334 The general managers?—Certainly.

7335 You propose, I think you told me, to give to the bank the management of the currency, would you entrust them with the management of the sale of Council Drafts?—Yes.

7336 Would you allow them to deal in exchange generally?—No.

7337 Would you give them a London office?—Yes.

7338 Would they have the whole of the Government balances?—Yes.

7339 Do you think that a bank which was formed merely by the amalgamation of the capital and reserves of the existing Presidency banks would be of such strength as to justify the Government entrusting it, without security, with such a very large sum?—I have said that I have rather an open mind on that. All I say at present is that the banks' funds are sufficient for their requirements.

7340 Do you contemplate that the Government would have any control over the operations of this bank?—They would certainly have some, but I think their main control would be perhaps in nominating all the directors of the central board, and possibly the managers of the branches.

25 July 1913 ] -

Mr. MARSHALL F. REID, C.I.E.

[Continued

7341 Do you think that the Government should nominate the directors of the central board?—Certainly

7342 Not that the shareholders should?—No. If the Government are going to put their funds to such an extent into the hands of a bank, I think the Government should have the right to nominate the men who will be the controllers of that bank.

7343 In that case you will agree with me that the responsibility of the Government will be very heavy. If they nominate the directors who have the supreme control of the bank, the Government will in fact be themselves responsible for the safety and security of the bank?—They have got all their funds in the bank. I think Government are quite capable of taking the responsibility, and of carrying it out exceedingly well.

7344 If the Government is to play so large a part in the institution you contemplate as you have just described, is there a very great difference in fact between what they have to do now and what they will have to do then?—I think the difference is very great, because the people who control the finances at present, we, as merchants, never see, and we are not in touch with them.

7345 Would not the real difference be that the Government would be working through bank managers instead of through officers of the Finance Department?—On the spot, yes.

7346 I suggest to you that it even comes to this, that the managers of the bank would in fact be Government officials, though possibly trained in a different way, and no doubt entering the service through a different door. To all intents and purposes the men on whom the real practical responsibility would rest would be as much Government officials and as much responsible to the Government of India as the members of the Finance Department are now, would they not?—No, I think not.

7347 The directors of the bank would be nominated by the Government?—The Government would nominate to the central board.

7348 The control of the managers would be entrusted to the central board so nominated?—That is so.

7349 And the managers would act under the supervision and instruction, as far as given, of that central board?—The local managers would.

7350 And even the head manager, would he not?—I take it he would be one of the board, and a very important member of the board.

7351 Then in that case, the head manager or managers would also be nominated by the Government if he or they were members of the central board?—Certainly.

7352 Except in name, what would be the difference between their position and that of a Government official?—The manager of a bank would be absolutely independent. He would be working with his colleagues who were nominated by, but who were not under the orders of, the Government.

7353 But the Government could displace him at any moment subject to any agreement that was made, could they not?—Yes.

7354 If the Government were dissatisfied with a manager, that dissatisfaction would find expression by the nonrenewal of the Government on the central board?—Yes.

7355 Who would remove the manager?—Presumably.

7356 Why I am pressing you on this is because it has been put to us that, if there was any advantage in a central bank, the first and greatest advantage would be that it would relieve the Government of much of its present responsibility, but the organisation which you sketch seems to me to leave the Government at one or two removes still responsible for the management of the currency, for the sale of Council Bills and Drafts, and for the management of their balances, and to superimpose upon that responsibility a responsibility for all the ordinary banking business of India?—I do not think I quite regard it in that way. I think, having appointed them, they then do the work.

7357 I am going to take what is, I hope, an unlikely supposition. Suppose they managed the bank rashly

and landed it in difficulties, could the Government of India be indifferent to what would befall such a bank?—Certainly not.

7358 The people of India would look to them to maintain the bank?—Certainly.

7359 Do you think it would be regarded by those who have entrusted deposits to it, or who are otherwise its creditors, as having a sort of State guarantee behind it?—I do not think so.

7360 I think you do agree that at any rate it would be so intimately associated with Government that Government could not allow it to pay the penalty of its own mismanagement?—In the Government's own interest, yes.

7361 I think you did say to me that, provided there were local boards, the local interests would not suffer through the centralisation of the supreme power in a single place?—On the contrary, I think they would benefit, because they would have a direct officer to go to always available, instead of having to approach an officer of Government who might or might not be available.

7362 You told me that in your opinion this bank ought to have a London office. Would you propose that the London balances of the Secretary of State should be kept with this London office?—I think they would be under the control of the bank in India. They would place them wherever they thought desirable and expedient.

7363 As regards the management of the balances generally, apart from your desire to see them entrusted to a central bank and made available in that way for trade, have you any criticisms to make on the recent action of the Government of India or the Secretary of State?—No.

7364 Turning now to the Gold Standard Reserve, I think you approve of the establishment of that reserve?—Yes.

7365 But you think that the measures taken up to date have not gained public confidence?—That is so.

7366 And that you attribute in part to the experience of 1907 and 1908?—I do.

7367 In section B, paragraph 5 (page 573), you speak "of the uncertainty as to whether the authorities would take the steps they eventually did to maintain the exchange level at that time" what do you refer to specifically there?—They agreed to draw bills on London at 1s 3½d. I think the notice agreeing to that is dated March, 1908.

7368 At that time the Government of India and the Secretary of State were dealing with certain conditions, as it were, unfamiliar to them, were they not?—They were.

7369 Do you think there is still uncertainty as to whether they would use all their resources now to maintain exchange if exchange was threatened?—I think they would use their resources. They always intended to use their resources, and they thought their general resources were strong enough.

7370 May I take it that you yourself do not share the suspicion that "the maintenance of exchange is at times subordinated to other interests," though you feel that other people, or the Indian public generally, are not absolutely convinced that it is not so?—I am not convinced.

7371 You agree that it is probable that they would use all their resources for the maintenance of exchange?—But they might cause very heavy loss to us all before they did so.

7372 By acting too late, do you mean?—Yes.

7373 Will you tell me what you mean by "the suspicion which undoubtedly exists that the maintenance of exchange is at times subordinated to other interest in the handling of Council Drafts"?—Shall I take a specific instance?

7374 If you please?—Rightly or wrongly, the general view which one has heard expressed in Bombay this year when Councils were being sold in very large quantities and very much in excess of the Budget, was that they were not being sold with any idea of the maintenance of exchange, but that they were being sold rather in disregard of exchange.

25 July 1913]

Mr MARSHALL F REID, C I E

[Continued

7375 The Secretary of State had large sums which he wanted to transfer over here?—Yes

7376 Do you think he was wrong to transfer them?—We are getting on to rather another point

7377 Do you mind answering that question? I will put it to you rather differently, as perhaps you do not quite see what I am pointing to. The Secretary of State has a continuous need for new capital for development purposes in India, and a large portion of the expenditure is incurred in England for railway material and so forth?—That is so

7378 If he has unexpectedly large surpluses in India, can he use them better than by bringing them home to meet that expenditure?—If he has definite expenditure in view he cannot

7379 Even if he has not at the moment definite expenditure in view, but foresees that his future requirements will be large, does he not act wisely if he brings the money over when he can?—He does

7380 Then I do not quite see why you criticise him for having sold Council Drafts freely when the money was available in India, in order that he might bring it to this side for future use in that way?—Is there any reason to suppose that he did urgently require money then, and could not equally well bring it home later on? I have not got before me the figure of his gold balances

7381 Would your criticisms be met, do you think, if it were possible to put the management of the Gold Standard Reserve under statutory conditions?—I think it would be better on the whole

7382 In such a case, what are the kind of conditions that you would like to see laid down so as to insure the confidence of the Indian public in the management of the reserve?—I should like a certain proportion in gold, and I do not mind how large a proportion in short loans and such things in London. I have no definite idea as to the proportion

7383 In mentioning those two forms in which the reserve might be held, do you desire to exclude the Secretary of State from holding securities without any time for repayment?—I distinguish between the two

7384 In the meantime you are anxious that the whole profit of the rupee coinage should go to the Gold Standard Reserve?—That is the ideal

7385 On the subject of gold coinage and the opening of a gold mint, I think you do not yourself favour either of those proposals?—That is so

7386 I gather from your memorandum that your view is that gold coinage is wasteful compared with other methods of currency?—That is so

7387 And that gold in reserve is much more effective for the maintenance of exchange than gold in circulation?—Yes

7388 Do you think that in a time of crisis gold would come out from the hoards to support exchange?—I think it would be the very last thing to come out, because it is the one they would hang on to longest as being the best

7389 You yourself suggest to us that some serious attempt should be made to attract the mass of unproductive wealth from its hiding places?—Yes

7390 That would no doubt be a very desirable thing to do, but what have you in your mind as the steps which the Government might take? Is it anything more than the belief that you have already expressed that the establishment of a central bank would educate the people?—I think the effect of the organisation of a State bank would be to teach the people to bring out their money and to use their money

7391 I suppose in many cases these hoards are held by people who are too far away from any bank, or any place where a bank is likely to come, for a bank to take the place of a hoard with them?—The treasuries are pretty widespread over the country. I do not think there is any place in India that is inaccessible

7392 I think you suggest something might be done by raising the limit for Savings Bank deposits?—I have since learnt that that has recently been done

7393 And you do not suggest that it should be carried further?—I think not at present, it has been raised considerably

7394 (Mr Gillan) Are you referring to the raising to 500 rupees?—Yes, in 1912 I think, when it was raised to that from, I believe, 200 rupees

7395 (Chairman) Now I come again to a question which I touched upon just now in another connection. In section D, paragraph 12 (page 576), you criticise the practice which has recently been resorted to of providing for railway capital expenditure from revenue, or from accumulated cash balances which, as you say, is practically the same thing. I do not quite follow your objection there. Do you agree that India can hardly have too much railway development?—I do

7396 And that it is desirable that the authorities should devote as much money as they can to pressing that development forward?—Yes

7397 I suppose you would like to see the Indian Government and the Secretary of State adopt and carry through a steady policy of development?—Yes

7398 Irrespective of the fluctuations in the Budget?—That is the whole point

7399 Supposing they had done that, and had then got an unforeseen surplus of, let us say, 2 millions, could they spend that surplus better than in relief of borrowing for capital expenditure or in increased capital expenditure?—For relief of borrowing?

7400 Yes, I will put it in either of two ways. Suppose you had a programme of 10 millions a year, suppose that of that you hoped to carry through half out of revenue and that half remained to borrow—I am merely taking these figures for illustration—then in a given year you find you have got a surplus of 2 millions, and the question arises what should be done with that. You might in that year carry out a programme of 12 millions instead of 10, or you might borrow 3 millions instead of 5.—I would borrow 3 millions instead of 5. You cannot change your programme, I fancy, during the year

7401 You might keep the money in your balances for that year, with the hope of spending it as an addition to the 10 millions of the next year?—You might

7402 Would you object to that?—No, I would not object to that

7403 Provided that they are unforeseen windfalls, and provided that they are made available as rapidly as possible for railway construction, you would not criticise that policy?—No

7404 The essence of your criticism is that there should be a definite programme which should be irrespective of the fluctuations of the Budget?—That is my point

7405 Do you think that more money could be raised in India for capital purposes than has been raised in past years?—I think so, certainly

7406 Would you raise it in rupee securities?—Yes

7407 In your memorandum you suggest the issue of railway bonds. I am not quite certain whether you mean short dated bonds?—No, I mean the ordinary debentures, or such like

7408 How much money do you think you could get in India for these purposes?—There is no end to the amount on which we could count

7409 At what rate of interest?—If they go on getting wealthy as they are doing, I do not know how low you will get it

7410 Who are the people who will take such loans as are now issued?—Very largely, to begin with, the Presidency banks, but increasingly up country, I consider

7411 You think they will be taken by the Presidency banks or other banking institutions in the first instance, then will they be passed on to the small people or will they be passed on only to the big people, do you think?—I have no very definite information, but I gather that they will be passed on to both small and large

7412 Do you think there is a growing tendency on the part of the Indian people to hold securities of that kind?—I believe so, and I believe there is an enormous amount of money that will be available if can be got at

7413 Do I understand you to think that it would be possible, with more activity perhaps I should say in

25 July 1913 ]

Mr MARSHALL F REID, C.I.E

[Continued

advertising, to induce a good deal of money to come out of the hoards, and to come into securities of that kind?—I think a very great deal

7414 We have it in evidence from one witness that both the Mohammedan and Hindu laws of succession and customs, for different reasons, cause a good deal of gold to be hoarded?—I have no experience of that

7415 Do you desire to recommend the creation of any new class of securities in India differing from the rupee securities that have been issued in the past?—Possibly, but it is a very complicated subject, which one could not express an opinion on without a great deal of enquiry

7416 You would like to leave that to the managers of the State bank?—Yes

7417 (Lord Faber) Referring again for one moment to the central bank, if a central bank is formed, and that bank makes use of large Government balances, at present, at any rate, that bank must be practically a Government bank, and, therefore, would not relieve Government officials of their great responsibility, would it?—I hold that, having transferred the management of the bank to officers whom they approve, Government would then have fulfilled its duty

7418 The officers who would be really officers of Government, and not officers of the bank, would they not?—They would be officers of the bank nominated by Government

7419 But the Government would be the central figure, because the Government would supply a great deal of the money?—Yes, and that is why I say they must nominate—because they supply the money

7420 The difficulty, as the Chairman has said, is to many of us that, although we perhaps should like to relieve the Government of what may be more properly called banking business, at present we think that the preponderating influence of the Government money is so great that we cannot give them that relief. Is that your opinion? Apparently you think the Government can be divested of authority although the Government would find most of the money?—Yes

7421 Do you think that when the country advances further and becomes richer, the Government balances may not be such a preponderating influence, and then the Government supervision would not be so necessary? What is your opinion of that? This is a growing country, is it not?—Very much so

7422 Therefore, I say once more that when you get the condition of things that the Government money is not a preponderating force, then you may get outside commercial aid which at present you can not get. At the moment a central bank would be practically a Government bank, would it not?—To some extent

7423 In answer to the Chairman just now you made an interesting statement to the effect that you thought railway debenture bonds would be greedily taken up in India?—I think they would

7424 Do you think that, as the Chairman said, the way to get at the hoarded wealth of the country is to offer the public railway bonds at a fair rate?—I think so. They have shown already in the way they have taken feeder railway shares that they do like that sort of investment. One small company was oversubscribed before it actually asked for subscribers

7425 (Sir Robert Chalmers) What would be the relation, in your opinion, between the resources of the bazaar and the money market in India? Is there any relation, if so, is it a close relation, or how would your experience lead you to explain it? Does he borrow from the Indian money market as we have been speaking of it?—He borrows, I think, from the bank. The bunnas go to the bank to get their finance, which they then spread up country.

7426 It is from the European money market that some part of their funds come?—I think so, largely

7427 Do the rates they charge bear any resemblance to the rates they pay?—That is largely a matter of to whom you lend, is it not? The rate depends on the borrower a good deal. To a good borrower, I suppose, they would charge, perhaps, 1 per cent. more than they can borrow at, and to a bad

borrower, perhaps, 5 or 10 per cent more than they can borrow at

7428 Do you think it is within those limits, and do you think there is really an intimate relation between what I may call the native market and the European market for money?—Yes, but the substantial borrowers are not very numerous, and, therefore, the rate in the bazaar generally is high

7429 Coming now to the question of the State bank, is there any movement on the part of the Presidency banks to be amalgamated?—Not that I know of

7430 Do the public clamour for it?—The matter really had not been raised before I left India. I left India in April last, and I have heard nothing of it since then

7431 (Sir Ernest Cable) Did I understand you to say that the bunnas would actually charge the ryot only about 1 or 2 per cent more than he pays to the shroff?—I said up to 10 per cent more in the case of the bad borrower, or even more

7432 Is it not the fact that at the present time the ryot has to pay about 25 per cent to 30 per cent for his money?—I should not wonder

7433 In view of this, do you think that a State bank would relieve the situation? Do you think that, by financing agricultural societies and so forth, it might be a benefit to agriculture and to the country at large?—Yes, and it would make money circulate more freely, through having branches up country where the treasures are now

7434 You spoke about educating the people do you mean by that that a State bank would educate the people in the use of notes and cheques? Are you thinking of the ryot?—The ryot, if he had any money, and the rather better class, the small trader for instance

7435 You said just now in reply to a question of Lord Faber's that you thought any amount of money could be borrowed in India, would that be the case at the present rate of interest, 3½ per cent?—3½ per cent or 4 per cent

7436 You said that increased borrowing would bring out the hoards, you expected that the hoards would come out more and more in response to these loans?—The loans are not there. If the people were taught that they could get good security, they would then lend on that good security and make money thereby. That is my view

7437 The hoards that you have referred to, I imagine, are the hoards held by the princes, not by the peasants?—I think all the hoards—princes and peasants', workmen's, and everyone who has got a few sovereigns, or who has got his gold ornaments, or who has got his rupees or currency notes. It would be a good thing if they were taught, or had a chance of learning, how to utilise their funds

7438 With a view to this, I suppose it would be a very good thing if the denominations of the present Government paper were made smaller?—Yes

7439 That would be a useful suggestion from your point of view?—Yes

7440 You made some remarks in answer to the Chairman, with whom I think you agreed, to the effect that the Government would be responsible for the central bank?—In the event—

7441 In the event of disaster I think you said the Government would be responsible?—I think the Government of the country is more or less responsible, is it not, to keep itself and banking concerns together. It would be no greater responsibility

7442 (Sir Robert Chalmers) Do you affirm that about this country—that the Government is responsible for the Bank of England?—I am not a banker

7443 (Sir Ernest Cable) In every country where there is a State bank the Government is very much interested in the welfare of the bank, of course?—Very much

7444 So it is not a novel position?—No, the prosperity of the country is involved in the bank

7445 And the Government of India are also involved in various other undertakings, such as the port trusts. In these cases, I think the Government,

25 July 1913]

Mr MARSHALL F REID, CIE

[Continued]

although there is no actual responsibility, still have a moral responsibility, and they could not possibly allow any port trust to come to grief?—Quite so

7446 They have the same responsibility in various similar undertakings?—Quite so

7447 With regard to the situation of the bank, I think you said that Calcutta ought to be the place. Supposing there were very great local jealousies to be overcome between the various Presidencies, would you see any objection to the head office or the head directorate being in some neutral centre?—It must be in a commercial centre

7448 Do you think it must be in a commercial centre if each of the local boards had as full powers to carry on as existing boards enjoy, let us say?—Yes, otherwise I think it would be out of touch with the markets, which is the whole point.

7449 You want the central board also to be in touch with the market?—Certainly. If a difficult situation arose, you want at once to communicate with your manager, and get his decision at once

7450 Let us take the present boards in each of the Presidencies. Supposing they were continued with the addition of one Government officer on each board, for example, the Accountant-general of each Presidency that would secure Government supervision at each of those branches, would it not?—I do not think Government need worry much about the local boards. Boards would have certain statements put before them and certain matters referred to them, but the management would be in the hands of the manager, who would, according to my view, if he were the manager of a local branch, have been appointed with the Government's approval, anyhow

7451 The central board might be composed, let us say, of a chairman, who might be an English banker of eminence who would be attacked by a large salary and assisted by a managing director, who might be promoted from one of the branches in the meantime. Associated with them might be the Financial Secretary. That would give you the Government atmosphere that you suggest, would it not?—That would

7452 And it would not be a preponderating influence. If that central board travelled from Presidency to Presidency from time to time, much as the present Minister of Finance and Commerce does, would that not meet your view that it should be in touch with commerce? The central board could travel from their central office, wherever it might be, once or twice every month round the presidencies?—I think that would be rather difficult, and rather a waste of their time

7453 The present Minister of Commerce travels a good deal, does he not? He keeps in touch with the whole trade of the country by travelling?—Yes, he travels round like that. I do not think they would require to travel if they had their main office in one place. They would work from there, and when the busy season was over in Calcutta they could go to Bombay, and stay there during part of January to March, and then go to Madras, and so on

7454 I was only trying to get over the difficulty, which, of course, will be inevitable in making this amalgamation, that there may be local jealousies as to where the head office may be situated?—I think they will pass over in a year or two. I should hardly bother about the local jealousies if you are going to run a bank for the sake of India

7455 (Mr Keynes) The principal criticism that we have heard against the central bank is the difficulty of getting suitable directors, and, secondly, the difficulty of adapting the practice of the central institution to the needs of the localities. I should like to take the second of these points first. You favour, I think, local boards?—Yes

7456 You are a director of the Bank of Bombay now, are you not?—I was till I left India

7457 So that you know what functions the board of a Presidency bank actually performs?—I do

7458 Would your new local boards differ substantially from the present boards of directors?—I should say in no respect whatever

7459 Could you tell us a little more about what the functions of the boards are in relation to the

executive? Do they actively interfere, or are they rather channels of commercial communication?—I suppose the main functions of the directors are consultation and general supervision. They consider and discuss the various statements and questions which are submitted in ordinary course, they advise on points brought up by the executive, and inquire as may be necessary into matters affecting the policy and business of the bank. But it is not a part of their business to interfere in the daily work of the bank's executive

7460 If there were to be a central bank, you do not see any reason why the local boards should behave any differently from what they do now?—No

7461 Who would appoint the local boards?—If you had public shareholders I should think they would want to have some voice in the appointment. My suggestion would be that all shareholders who wanted to vote for directors should register in a certain district, and that they should appoint the directors for that district, that is to say, if you had some 500 shareholders in the Bombay Presidency, they would vote for the Bombay directors, and so on in Bengal, and so on in Madras

7462 It was that which you had in your mind when, in answer to the Chairman, you said that local boards should be appointed by the shareholders, but the central board would be wholly nominated by Government and would have overruling powers?—That is my idea, but you would not expect a central board to interfere with the local working of the bank, except on broad principles

7463 Would this central board which is nominated by the Government include commercial people or not?—If possible it would include one or two

7464 Would it be a small board or a large board?—A small board, I should say

7465 With a small number of Government representatives and a small number of commercial representatives?—Perhaps five—two Government representatives and three traders

7466 With what sort of questions would it chiefly concern itself, as distinct from the local boards?—It would have to deal with the currency generally. A point I make a great deal of is the education of the people as to currency, and the working out of the policy that should be pursued in the different branches in regard to these matters. Of course it would have to lay down to what extent the banks should be interested in any particular industry or any particular investment, and I presume it would have to deal with the funds of the bank as regards movements to London and backwards

7467 Would it have a bank rate policy for the whole of India?—I am afraid I do not understand the expression

7468 Would it determine what sort of bank rate ought to be established at different times all over India and aim at making this effective, would it do that?—It would do that, but it would not necessarily be the same rate in every town

7469 I suppose that the central or head office would have no direct dealing with the public at all?—No

7470 It would merely be the seat of authority over the local offices?—That is so

7471 So the actual locality of the head office, so far as the public is concerned, would be of no importance?—No, excepting that it should be in a large centre

7472 The chief importance of where it is located would be in the fact that if it is at Calcutta it would be rather difficult for Bombay people to be there, and vice versa?—Yes

7473 If you had a head office which has no direct dealings with the public, but is merely a ruling authority, would it be difficult, do you think, for it to move about?—I think it might be very inconvenient to move about freely

7474 I did not mean, of course, that it should have a habitation as it were in several places, you mentioned, I think, earlier in your evidence that the busy season in Bengal was on the whole from October to January, and in Bombay on the whole from January to March?—Yes

25 July 1913]

MR. MARSHALL F. REID, C.I.E.

[Continued.]

7475 Would it be feasible for the board to sit in Calcutta during the first three months and in Bombay during the next three months?—I think so. But if Calcutta were the centre, they naturally would not want to be so long in Bombay as in Calcutta. They would not aim at dividing the time in that way.

7476 The effect of the central board on the local board in the place where the central board was situated might work both ways. If the central office is in Calcutta, you might say that would leave less independence to the Calcutta local board, or you might say it would put the Calcutta local board in a better position to impress its views on the central board. Which of those views do you maintain?—I regard the local boards as being not interfered with, but as having the advantage of referring matters for immediate decision and getting an immediate decision from the central board; so that whether they are in Bombay or Calcutta is immaterial to my mind.

7477 Would you have more than two local boards? Would you, for instance, think of setting up one in Rangoon?—I think very likely.

7478 And one in Northern India, or not?—I doubt it. I think that is a matter on which you should move slowly, according to experience.

7479 You might think in course of time that it would be advisable to have a new local board somewhere else?—You might think so.

7480 I come now to the question of Government responsibility. You do not advocate the bank so much as a way by which the Government would get rid of its responsibilities, but as a policy involving the improvement of the machinery through which it exercises them?—That is my whole point.

7481 The Chairman suggested to you that in a sense the executive officers of the bank ought to be regarded as the servants of the Government, obviously, in a sense, the Chairman's suggestion has to be answered in the affirmative?—Yes.

7482 In what, in your opinion, would the distinction consist, is it that the officers of the bank are to be outside the machine of Government?—Yes.

7483 So that, although the executive officers would be subject to dismissal, they would not have to transmit their individual proposals for sanction in the way in which Government officers have to do, is that your point?—Yes, that is my point; they would not have to refer to Government on any point which arises unless they choose.

7484 The bank management would act on its own without reference to the Viceroy's Council, although it would be watched by some representative of the Viceroy's and be subject to dismissal by him in the event of very grave misbehaviour?—That is exactly my view.

7485 (Sir Ernest Cable) Do you suggest that the executive of the central bank should be dismissible by Government?—If they can be nominated, I think they can probably be dismissed, but that is a matter of agreement, is it not, between the bank, the Government, and the servant? I should certainly like someone to have the right to dismiss an inefficient manager.

7486 (Chairman) I think in answering my questions you indicated that you did not think the ultimate control should be left to shareholders?—Certainly not.

7487 (Mr. Keynes) I suppose the position would be that the management would be subject to dismissal by the central board, and the central board would ultimately be under the orders of the Government?—In that respect, yes.

7488 So your main point is that you want some officials existing as a separate entity from the ordinary Government machine, and able to act on details without reference to it, is that so?—That is so.

7489 I also understand that on the board of directors, while the directors would be nominated by the Government, some would not be Government officials but would be commercial persons?—Yes, I should prefer the majority not to be Government officials.

7490 Looking at the proposal mainly not from the point of view of the Government, whether it would

lessen or increase its responsibility and so forth, but from the point of view of the country and its general development, what have you to say about it?—I think it would make all the difference in the world if the bank made its main object to develop the country and to make the country progress, as I believe it can do. As I have said before, the change in the conditions in India during the last few years has been very remarkable. I quoted a figure in my statement of some 60 millions in gold going into India, simply on account of the balance of trade. That was sheer profit. It seems to me that that money should be got hold of and used for the good of the country, and it seems to me that a bank such as we are speaking of would be the body who would do it. By getting hold of the money, I mean getting people to invest their money in railway and other concerns and so making the country progress, as it is bound to do. But if something is not done, I do not know what the effect will be, if money is going to go on pouring into India and sinking out of sight, and lying there, it is impossible to say what the effect will be not only on India but on international finance.

7491 Is it your opinion that such a bank would attract any new classes of clients which the Presidency Banks do not attract?—I take it that it would have its organisation much more widely spread, and therefore it would get at people who are now out of reach of the banks.

7492 Do you mean that if it opened branches wherever there is now a Government Treasury, it would be having five or six times as many branches as the Presidency Banks now have?—Yes.

7493 Is there any prospect of its being worth the while of the Presidency Banks to open branches at all widely?—I am afraid not.

7494 Do you think that this matter of getting branches widely spread all over the country is absolutely contingent on the establishment of a State bank?—That is my opinion.

7495 I think you suggest that one of the duties of a State bank was to popularise investments and the use of paper currency?—Yes.

7496 Is that also contingent on having this great number of branches all over the country?—It would be a part of it, and a very important part.

7497 Would it be possible, do you think, for these numerous branches to push small Government Bonds with coupons which were payable at the branch?—Yes.

7498 They could push them upon the small investors?—Yes.

7499 So that the issue of Government loans, and so forth, to small investors would be part of the business of this bank?—Yes.

7500 In your own mind, when you are advocating this bank, are you thinking mostly of the details of the machinery of Government and so forth, or are you thinking chiefly of the various commercial activities of the great branches of trade all over the country?—As I have said, I think India is changing rapidly, and that we have in front of us a condition which we have never had before, and possibilities which we have never had before. Of course that is only my own feeling and my own opinion, and I may be optimistic.

7501 I have one other question not connected with a State bank. I understood you to say to the Chairman that you did not feel perfectly secure that the Secretary of State would always maintain exchange at 1s. 3<sup>3</sup>/<sub>4</sub>d. ?—That is so.

7502 Would a formal notification by him offering to sell Council Bills without limit at that rate increase your confidence?—It would.

7503 Would it actually influence you in your business?—It would.

7504 In exactly what does your doubt consist?—Are you doubting whether he would be able to support exchange, or whether he would vacillate as to the exact figure at which he would support it?—From experience our troubles as to when he would support it. Notwithstanding his support, we have suffered very heavy losses.

25 July 1913]

Mr MARSHALL F REID, C I E

[Continued

7505 Then you are hesitating not about his resources but as to his judgment?—I suppose so

7506 It is not that his resources are insufficient?—Conditions have recently changed to the extent that he has very much more gold in reserve altogether as against 1908. I suppose he has in the Paper Currency Reserve some 25 or 30 millions more in actual gold than he had then. So one does feel safer to that extent than one did before.

7507 It is not his ability to support exchange that you doubt, but as he is not bound to a figure, you do not feel certain of the figure he would take in the next serious crisis?—That is it.

7508 So your hesitation would be met almost completely by a binding notification?—And by a declaration of policy as to the lines he was going to follow in working his reserves and building up his reserves.

7509 Having made that declaration, you would not wish him to increase his reserves much beyond their present figure, I take it, or would you wish that also?—I think there are now some two millions in gold, and I should like to see very much more than that out of the 22 millions. We have been rather brought up in Bombay in the idea that we ought to have the whole lot in gold. That is an ideal, and I think beyond what we will ever get, but we certainly want more than two millions in gold and in liquid cash. On that point I should like to repeat what I have mentioned in my memorandum. To talk of limiting the reserve is very disturbing and it is not very helpful, because we have heard of 10 millions, 15 millions, 25 millions. Presumably, if my idea of development goes on, it may be 30 millions or 35 millions or 40 millions in the next few years. Such ideas coming from Government officials in official speeches and so on, are rather disturbing, and I do not think they can be sound.

7510 There is one point I should like to go back to about the State bank. If Government balances, as has been suggested, and some part of the Government Reserves ought to be loaned, I suppose they could not be loaned according to a cast iron rule?—Loaned by the State bank or apart from the State bank?

7511 Apart from the State bank they could not be loaned according to cast iron rules?—No.

7512 Some element of judgment would be involved on the part of the responsible officials?—Certainly. It would be at their option, and the Government would lend just as much or as little as they chose.

7513 Under existing circumstances do you think the officers of the Government are in a position to get the information on which they could base a sound judgment as to that?—As to what they should lend?

7514 As to what and when, and on what terms, and to whom?—No, I do not think they are.

7515 You would introduce an element of expert knowledge into their counsels by the State bank?—Yes.

7516 (Sir Shapurji Broacha) You have talked about the stringency which occurs in the busy season, and about educating the people, what do you mean by that?—I have been trying to explain, I have answered several questions as to what I meant by education.

7517 Educating them to make an increased use of notes? Do you think a State bank will help in increasing the circulation of notes?—In my opinion it will.

7518 In section D, paragraph 9 (page 575), you say "Distrustful as the people of India no doubt are, by nature and by tradition, of any security short of "possession," and so on. Do you think they would prefer a bank's note in preference to a Government note? A currency note is guaranteed by the State now, do you think these people would feel equally secure if the note were guaranteed by a State bank? Would they not think that the Government would be shirking their responsibility in putting it on to a State bank?—I have not worked out myself the question as to the form the currency note would take under a State bank, I have not considered that question.

7519, Is the circulation not fast enough now?—It is quite fast, but it might be very much faster.

7520 Have you the experience that in India it goes very much faster if issued by a State bank, than if issued by the Government?—I have not.

7521 They have had experience of the Government for the last 51 years, and, as you know, Indians are a suspicious people and full of suspicions?—Yes, they are.

7522 (Chairman) Do you think it might be necessary to keep the direct Government guarantee on notes?—I had not contemplated anything else.

7523 (Lord Faber) I think what Sir Shapurji really means is that if you circulate a note through the State bank, the natives might think it had become an ordinary bank note, instead of being a Government note. Do you not think there is something in that?—Yes.

7524 (Sir Shapurji Broacha) You want the Government to appoint the directors of the State bank?—Only of the central board, not of the local boards.

7525 That means that the shareholders are to give their money to the Government to invest for them at the best rate of interest?—Not to the Government, but to the bank.

7526 If the State appoints the directors, they are Government directors?—I have been trying to distinguish between the two, as far as I can, all the time. My point is that they are distinct, of course, I may be wrong.

7527 The Government appoints the accountant-general, and the Government appoints the directors of the State bank?—Yes.

7528 The Government is responsible for both?—The Government appoint many other people as well.

7529 But the Government has to bear the responsibility of his misdeeds?—Such responsibility as is involved in his misdeeds.

7530 Do you know that there were State banks before?—I did not know that there were in India.

7531 There were three State banks at one time. There was the Bank of Bombay, in which the Government held shares and had two directors, the same with the Bank of Bengal, and the same with the Bank of Madras, but the Government felt the danger of those institutions and severed their connection with them because the responsibility was too great?—That was 40 or 50 or 60 years ago, and the advance in the finance of the country has been very considerable in the last 50 years. There has been a considerable change, and, in my opinion, it will change still more.

7532 The responsibility will be larger?—But the machinery is more complete, and the danger is much less.

7533 Do you know that the Bank of Bombay refused to amalgamate with the Bank of Bengal, although they were offered 500 rupees per share?—I did not know that.

7534 All the merchants, I think, including your firm, went up to the Governor to ask him not to put Bombay under the control of the Calcutta Bank. Do you think these local jealousies are now quite obliterated, and that Bombay traders do not think Bombay is the first city in India?—I do not think it is a question of Calcutta and Bombay at all. My proposal is that Bombay shall have a local board, Calcutta shall have a local board, and Madras shall have a local board, exactly as they have now.

7535 There must be a central board, and wherever that is placed, do you think people will believe that the Bank of Bengal has the same independence as the Bank of Bombay, or the Bank of Bombay has the same independence as the Bank of Bengal, supposing the central office were in one of those cities?—I think the aim of anything that would be worked out should be to avoid hurting the feelings either of Bombay or Calcutta, or Madras.

7536 Do you think that the genius at the head of the central bank in Calcutta, say, will look to the commercial credit of Cape Comorin and the commercial credit of the Northern Provinces, or will he judge by the state of affairs around him?—People who have got to do business which is scattered over the country, usually try to look at it from all the points of the country.

25 July 1913]

Mr MARSHALL F REID, C I E

[Continued

7537 The Government directors will be responsible for the misdeeds of their managers?—Certainly

7538 I do not suppose there is an instance of one bank managing a whole continent Do you think the Bank of France could do that?—We are dealing with rather new conditions and new circumstances, we are dealing with a very peculiar place, India.

7539 Do you know that the Bank of France has a greater facility for acquiring knowledge of the whole country, because it is in a central place and the people on the board know the different districts of France and their credits, and that with the Bank of England it is the same thing? What would you offer in the shape of that to this central bank?—We think we know a good deal about the conditions of India.

7540 Do you know as much of the conditions of India as the bank directors here know of the credits in the Lincolnshire district, and the credits in the south of England, or in Manchester and Liverpool? Do you think bank directors in India are in the same condition to judge of the credit of Pondicherry, Cape Comorin, Lahore, Karachi, and all those places?—I have said that the local credit and the local finance would be in the hands of a local board, who are in a position, as I think, to judge of the credit of the people with whom they have to deal.

7541 You say you would do it for the education of the people, do you think this central bank will help agriculture?—I think it will help.

7542 Do you think the Bank of England does away with pawnbrokers? To go to another point, do the bunnas always charge 25 per cent? Is not their charge regulated according to the credit of the man?—That is what I have said.

7543 Do you know that merchants now buy supplies direct from the agriculturists, and that the agriculturists are not so much in the hands of the bunnas now as they used to be?—I think it is very likely so.

7544 In the Punjab they will not have the middleman now, as they deal direct with the exporter, is that not so?—I do not know.

7545 Do you not think the co operative banks would better help agriculture than a State bank?—I should think the State bank would help co operative banks, and so would help agriculture.

7546 Do you know that there is a co operative bank in Bombay which does help small co operative societies in the Deccan and those places, and that its board is composed of native gentlemen who have a knowledge of the localities?—I have mentioned these co operative societies as being the means of reaching the people.

7547 I think this education you speak of will come not through the State bank but through the co operative banks, because, if you send one manager of the central bank to one place and another to another place and they do not know the language of the country, how could they speak to the people, and how could they educate them? Do you think they could induce more deposits to be made with the State bank? Are not the Presidency banks just as good?—The equivalent of the Presidency banks would still be there.

7548 Does the State bank incorporate the Presidency banks?—The State bank would be there in the place of the Presidency banks, and the organisation which is now there would still be there.

7549 We want more certainty for the maintenance of exchange by the Secretary of State, do we not?—Yes.

7550 And why we want these stringent conditions in regard to the quantity of liquid gold is to be assured of the par of exchange in all emergencies?—That is so.

7551 People would be less urgent in asking for these things if the Secretary of State were to guarantee for all time the par of exchange at 1s 4d., that is, at  $\frac{1}{4}$  on one side and  $\frac{1}{4}$  on the other?—Yes.

7552 And, of course the people will not have confidence in any remedies until they have more or less a liquid gold reserve to the extent to which the Government are able to accumulate?—That is so.

O 19067

7553 (Mr Gillan) There are two small points in your memorandum that I wish first to refer to In paragraph 10 of section A (page 571) you say, "I am told they declined a request for a loan of 50 or 100 lakhs of rupees on the security of Government paper." That rather leaves the impression that the Government adopted an obstructive attitude, and not only were against the general policy of lending money but when the application was actually made to them they refused it Apart from the general policy the Government would always have to consider also, in the case of any particular application, the status of the applicant?—Undoubtedly.

7554 That may be a point to be taken into consideration?—Undoubtedly.

7555 In paragraph 7 of Section C (page 574) you say, "Payments by currency notes come next, and by far the greater proportion of the balance of payments is made in this form." Are you there referring specially to the Presidency towns?—To my own business, and others from whom I have enquired.

7556 That probably is not the case in currency transactions outside the Presidency towns?—I should think very likely.

7557 In paragraph 12 of this same section C (page 574) you say that it should be borne in mind that it has been nobody's special business in the past to educate the people in currency matters I am not clear yet what methods of education you would suggest I can understand that the Government or a bank might encourage different forms of currency, or that it might increase the facilities for the encashment, we will say, of currency notes, but what further points had you in mind?—My main point is that you should endeavour to educate the people as to the proper currency to use, and that is done, as most education is done, by telling people, one tells one's own particular merchants that one deals with, they tell their friends, and so on.

7558 As far as that goes, would the Government not have an efficient organisation in its Treasuries and Treasury officers and district officers all over the country?—They might have an organisation, but I have not heard that Government has ever told their officers to teach people that.

7559 You think from that point of view a State bank would be more effective?—Yes.

7560 That raises another rather important point If you are going to educate the people, you must have some clear idea of what you are going to teach them?—Certainly.

7561 The Fowler Committee, as you know, looked forward to an effective gold currency?—Yes.

7562 They said it was not possible at the time, but they hoped it would be established in the future?—That is so.

7563 When we come to examine what can be done to further that policy, we find that as a matter of fact there is actually very little that can really be done, and it remains to a large extent an ideal, but the ideal which one has in one's mind must influence one's action at various points?—Certainly.

7564 What is the ideal to which you are tending? Is it this effective gold currency which the Fowler Committee spoke of?—No, I do not agree with that, I am not in favour of that.

7565 Would you be prepared to put aside that policy definitely, and say that you have abandoned it?—Abandoned the gold currency?

7566 Yes?—I say encourage notes for everything, and I say avoid gold because of the risk of losing gold.

7567 Do you propose that the Commission should say that they so determine?—That is my suggestion, and I have said so very clearly.

7568 Next with regard to the reserves which are behind the currency policy in any case. You say in paragraph 5, section B (page 573), that there is a great lack of confidence, do you wish that the Commission should formulate and declare a policy?—Yes.

7569 In reply to the Chairman you said you would be prepared to lay down certain regulations governing the Gold Standard Reserve, and in reply to Mr Keynes I think you said that one of the regulations would be

U

Mr. MARSHALL F. REID, C.I.E.

[Continued]

to authorise the Secretary of State to sell unlimited amounts at a certain fixed rate?—That is to gain our confidence as merchants in the stability of exchange.

7570 Is there any other point of policy which you would like to have?—What I have said is that I should like to see a larger proportion of gold or cash statutorily fixed in the Gold Standard Reserve than there now is. We have now, I think, some 2 millions out of 22 millions.

7571 So that your declaration of policy would refer to this notification of unlimited sales at a certain fixed rate, and also to the constitution of the Gold Standard Reserve?—Exactly. I should like to see a certain sum fixed as the minimum of the gold or the equivalent of the gold in the Gold Standard Reserve and to have no limit put to the amount to which the Gold Standard Reserve would go.

7572 (Sir Robert Chalmers) In metal?—I do not say no limit in metal, but I say a minimum amount, or a minimum proportion in metal, short loans or gold.

7573 (Mr Gillan) With regard to the State bank, I think your general position is that after all Government and trade have enormous interests in common?—Their interests in common are very large.

7574 That at present those interests are not properly knit together, and that some effort should be made to improve the organisation?—That is so.

7575 There was a point that was not clear to me in an answer that you gave to Mr Keynes. You said, I think, that the extension of the branches of the Presidency banks was contingent on a State bank being founded?—I think that is very likely so.

7576 Why should that be?—A State bank supported by the Government would be able to extend its operations into places which a bank with shareholders would not feel itself justified in doing. A Presidency bank is a shareholders' bank which is making money for its shareholders, and it is not, in the same way as a Government bank would be, heavily involved in the education and development of the country.

7577 I quite see that, but would it not be possible to place the Government balances in the same way with the Presidency banks?—I have agreed that that would be an advantage.

7578 Would that not facilitate the extension of these branches?—If Government placed these balances with a guarantee that they would remain, but at present they are practically money at call.

7579 I do not know what distinction you are drawing between the Presidency banks and a single State bank in that matter, I am only talking now of making over the Government balances generally?—Suppose we had, say, some 18 crores taken as your minimum figure, then if you had 25 or 26 crores it would be admitted, I suppose, that about 7 or 8 crores would be available for the country. If these funds were placed in the hands of the Presidency banks, and Government undertook that they would not remove them for two months or three months, they would be of great value, but if Government merely paid in 30 lakhs to day and 40 lakhs to morrow and took out 60 lakhs the next day, then that money is of no real value from the bank's point of view.

7580 (Lord Faber) Is your argument that a State bank would open branches at unremunerative places where the Presidency banks would not do so because of their shareholders?—That is so.

7581 Would not the people of India suffer in consequence of the Government banking at a loss in certain places?—With very many big concerns in this world trade has to be carried on at a loss in places in order to carry it on as a whole. In some parts you must take a loss, but the advantage given to you in other directions is very large, and though you must first of all work for a year or two at a loss in certain places, you may eventually come on to a paying basis if you could influence the people, as I believe you would influence them, by approaching them and giving them advice as to investment and loans.

7582 Would you really go to these unremunerative banking places in order to give them education?—Yes, and you would possibly make them remunerative, but

I do not think the directors of a Presidency bank would always feel justified in doing that.

7583 (Mr Gillan) In reply to Mr Keynes you explained generally the sort of work that would have to be done by the central board which you suggested for the state banks. Your position is, as I said, that there are certain defects at present and that it should be possible to find some remedy for these defects, not necessarily your scheme or anybody else's scheme, but some remedy should be possible?—Yes.

7584 We can get to a conclusion on that subject only by examining the different schemes that are set before us. With regard to this central board the difficulty that strikes me is this. How often do you suppose it would be necessary for that central board to meet?—Once a month might be enough, on the other hand they might have to meet every week or every day at other times. In times of crisis and difficulty obviously they should be in the closest touch, but under ordinary conditions, such as we very often find, fortunately, in India they need never worry about meeting at all.

7585 You would have on that board, we will say, two Government officials?—Yes.

7586 You say it is essential that they should meet in Calcutta, Bombay, or some other commercial centre, have you considered the difficulty of those officials being away from their department?—Government have a number of high officials in Calcutta and in Bombay, and they might, in view of the enormous interest in the bank, put an even higher official there and find work for him to do in, say, Calcutta or Bombay.

7587 Did you mention the Financial Secretary?—No, I mentioned no officer.

7588 Would it not be almost essential that you should select for this central board some official who is not at the headquarters of the Government of India?—Yes, I suppose it would.

7589 The fact remains, of course, that in all questions of principle the Government would still be the authority?—No, I think not. They have handed the business over.

7590 I mean on broad matters of currency policy and so on?—I take it that they would work as banks and Governments often do and that they would be able to consult each other. The directors of the bank would not want to do some foolish thing or to act contrary to the Government's wishes, in fact, the bank would not want to act contrary to the Government.

7591 I take it that in all these matters of financial or currency policy it would be for the Government to decide and not the bank?—I do not see how you could have your bank if it did not decide. I do not think you will get a first class banker to go out to India and do this work if he is to be hampered and overruled.

7592 Supposing the question were raised of a change in the currency system the bank could not decide and carry out that change of itself, that sort of change would have to be decided on by the Government, surely?—I suggest that a case of that sort, an important point which you can foresee, should be mentioned as one which should not be decided without the consent of the Government. If you should make a recommendation in that form, I should suggest such important points should be included in your recommendation. You could say that the Government should reserve to itself the right to approve any alteration in the currency.

7593 There would then be cases which ought to be reserved for the consideration of the Government?—I think these should.

7594 They would be decided by the headquarters' staff of the Government of India?—Presumably.

7595 Who would not be represented on the central board?—Unless Government thought it worth while to create a post in Calcutta, if they have not got one, in which case they could have a member of their Finance Department or a man who has had great experience of their Finance Department.

7596 You think there is a difficulty in filling in the Government representatives, but it is a difficulty that may be overcome?—I think so.

25 July 1913 ]

Mr MARSHALL F REID, C I E

[Continued]

7597 (*Lord Faber*) Who do you propose would be the authority to decide the all important question, for instance, how much liquid assets the bank should hold, which goes to the root of a bank's existence? Who would decide that point, the Government or the directors?—I think the Government would have to make up its mind, before it formed the bank, on many essential points which it would include in its articles or charter or whatever it were called.

7598 As you will readily see, it would be very necessary for the directors to meet at least once a month in the case of a bank with all these ramifications, because the bank might easily get wrong or tied up as we say in banking parlance, as it might have assets which it could not realise readily, and unless that branch of the work was very carefully watched there would be trouble?—Surely it would be reasonable for the Government to say, you shall hold so much of your assets in a certain form.

7599, (*Lord Kilbracken*) The Government of India, according to your proposal, would have the ultimate control of all the bank's operations and would therefore be responsible for them, I suppose, to the Secretary of State?—I think that the Government of India would not have the control of the bank.

7600 Do you really think that, in view of the scheme which you have sketched out? Would they not practically be responsible?—I think not. Having given them their charter, and having given them their directors, they seem to have got clear of the bank altogether.

7601 Supposing that the bank—it is not very likely perhaps—were to do something foolish, do you think that the Government of India would not be held responsible for it by the public and by people in this country?—To me it is almost inconceivable that men at the very top of their profession should be so very foolish that such a position would arise. After all, this point arises in every business and in every bank.

7602 Of course, the conditions in India are peculiar. There is a tendency to look upon Government as responsible for many things for which the Government is not held responsible in this country, and I should have thought that a State bank of this kind, controlled, as it would be, by the Government of India, would be looked upon in India as being very much under the thumb of the Government, and the Government would be most distinctly held responsible for what it does in all great matters. Do you not think that would be so?—It would be so hypothetically—that is my only difficulty. But if a crisis arose anywhere, I take it that the Government's first duty in its own interest would be to go to the assistance of the bank.

7603 I am not talking of a crisis, I am talking of the policy of working the bank which might or might not be approved by some sections of the public. Surely the Government would be held responsible? Supposing it appeared to a large section of the public that the bank was pursuing an unfortunate policy, would not the Government be held responsible for it?—Do you mean, Would the public consider that they were entitled to look to the Government to get recompensed for the loss that they might suffer?

7604 That would follow, but would not the Government be expected to hold themselves responsible in the last resort for the action of the bank?—No, I do not think so.

7605 To a certain extent, I suppose you would say that they are responsible. They cannot wash their hands of the bank, can they?—No, nor do any government of any country wash their hands of the bank. The whole country is involved in it, and therefore the Government—because the Government is the country—are involved in the success of the bank.

7606 You must draw a distinction between a State bank, which this would be in a very special sense, and such banks as, for instance, the Presidency banks which now exist. Surely the Government would be far more responsible for the doings of this new bank than it is for those of the Presidency banks?—I should guess that in giving a charter to the State bank the Government would secure itself on the important points in which the bank might or possibly could go wrong.

7607 You think it is possible it might do that?—To a great extent I do.

7608 (*Chairman*) Let me put a case to you. You suggest that all the Government balances should be transferred to this bank, and you suggest that it should be within the discretion of the bank to keep those balances where they think desirable, either in London or in India. There has been a great deal of criticism of the Government of India—we do not want now to go into the question of whether it is well or ill founded—for withdrawing balances from India and lending them out in London. Suppose such a bank pursued exactly the same policy, would the Government of India escape criticism under your scheme, or would they be expected to intervene to control the bank?—I entirely approve of lending money which is in London.

7609 I am talking of the people who do not approve, against whom would their criticism be directed? I am not asking whether the policy is right or wrong, but you know there has been a great deal of criticism of it?—Yes, there has.

7610 Suppose the bank, having the management of the balances, instead of lending the money in India find it more desirable to lend it in London, and bring it over here and lend it here, we might expect the same criticism from the same quarters—you think ill-informed criticism—but we might expect the same criticism?—Yes.

7611 Would the bank act as a lightning conductor which would carry away all that criticism from the Government, or would people look past the bank to the Government and say to the Government, why do you allow the bank to do this?—The bank would be entirely responsible.

7612 (*Lord Kilbracken*) And would be held entirely responsible by the people in India?—Yes, I think so.

7613 (*Chairman*) And the public would be satisfied that in such a case they had no recourse to the Government of India, and that the Government of India was not open to any criticism?—I can only speak as one of the public.

7614 That is your opinion?—That is my opinion.

The witness withdrew

At the India Office, Whitehall, S.W.

EIGHTEENTH DAY.

Thursday, July 31, 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

Lord KILBRACKEN G C B  
 Sir ROBERT CHALMERS, K C B  
 Sir ERNEST CABLE  
 Sir SHAFUJI BURJOEJI BROACHA  
 Sir JAMES BEGGIE

Mr ROBERT WOODBURN GILLAN, C S I  
 Mr HENRY NEVILLE GLADSTONE  
 Mr JOHN MAYNARD KEYNES  
 Mr BASIL P BLACKETT (*Secretary*)

Mr F C LE MARCHANT called and examined

7615 (*Chairman*) Will you be kind enough to tell the Commission briefly what your experience has been in connection with Indian finance?—I was a member of the Council from February 1896 till my 10 years' term had expired in 1906. I succeeded to the Chairmanship of the Finance Committee when Mr Hardy retired, and in my actual appointment I succeeded Mr Bertram Currie.

7616 You were also, I think, a member of the Fowler Committee?—Yes.

7617 May I ask you one or two questions in regard to the Report of that Committee? The Committee in its Report recommended\* that a special reserve should be formed out of the profits on the coinage of rupees and kept in gold. Some question has arisen in the evidence we have had as to what you meant by "gold" in that connection, did you understand it as actual gold or as covering gold securities?—I think the predominant idea was actual gold, but the working out of the idea may not have been fully elaborated in the minds of the Committee, so that individually I should rather substitute "sterling" for "gold." Still, I think, especially in the earlier days of the development of the policy, that gold was predominant.

7618 Have you followed the policy of the Indian Government since?—In a general way I have, but I cannot say that I have official information on most of the subjects.

7619 You will very likely be aware that of actual gold in the Gold Standard Reserve there is comparatively little—rather under 2 millions—and that the major portion of the reserve has been invested in securities?—That is so.

7620 Do you think, in the light of the experience which has been obtained, that such a proportion of actual gold is sufficient?—I should doubt its being sufficient if the Gold Standard Reserve fund was taken by itself and separated from the Paper Currency Reserve. In the first instance, after the Fowler Committee Report there was no separation, and the Paper Currency Reserve was the whole fund. It was on its separation, if my memory is correct, that a recommendation came from the Government of India to invest primarily in Consols, and, following to some extent the precedent of the Paper Currency Reserve, and still more, having regard to the fact that the requirements of the gold fund would be mainly in London, I think that was not departing from the essential principle of the recommendation of the Committee. But, as I was saying before, if there were no gold in the Paper Currency Reserve, and no gold on that account in London, or easily available in London, it would be questionable whether so large a proportion of the Gold Standard Reserve fund should be in securities.

7621 In the light of recent events would you think it wise to invest any portion of the reserve in

first class securities such as Consols, but with no date of redemption fixed?—There is a great difference of feeling among many leading authorities in the City on that subject. Just at this moment there is a revulsion of feeling in favour of longer dated securities and I should think from my own point of view that they are right. The first question was, what was the security that was most easily saleable and most available at the Bank of England? One should bear in mind throughout that the relations of the Secretary of State to the Bank of England affect the choice of securities. At the time Consols were purchased they commanded a wide market, more than any other gilt edged security. But I would question how far investments ought to be made in Consols now. Looking at the proportion already in Consols, I think that it is wiser to buy stocks with maturities, and especially Treasury bills and other stocks that run off of themselves.

7622 As I understand you, the amount of gold which you would think it necessary to keep in the Gold Standard Reserve would be very much affected by the amount of gold you have in the currency reserve?—Yes, and by the views of the Secretary of State and the Government of India about the location of that gold.

7623 Was not the primary object of the Gold Standard Reserve to maintain the rate of exchange?—Certainly.

7624 And of the Currency Reserve to maintain and provide for the encashability of the notes?—That is so.

7625 To a certain extent, if I understand you aright, you are treating the currency reserve as a security for the maintenance of exchange?—Yes, to a certain extent, in fact to a material extent, I think I would say.

7626 Have you ever thought whether, if their objects are to be to that extent mingled, it might be desirable or possible to amalgamate the two reserves?—I think that as greater experience is gained—but experience is a matter of rather slow growth in currency questions—there might be some advantages, but at the moment the difficulty that would occur to me is that it is necessary that the Paper Currency Reserve should be under statute and fixed by statute. There is a certain amount of elasticity in the Gold Standard Reserve and the use of it, and though, in practice and by agreement between the Secretary of State and the Government of India, the applications of it are well defined, I think there have been instances in which the silver portion of the Indian branch has been used in a way that it might have been rather difficult to define by statute. Suppose, for instance it is desired to give very considerable freedom and discretion, that conflicts with the idea of a statute which implies precise limitation. So far as I can follow it at present, the views of the Secretary of State and the Government of India are so much in harmony, and they appear to agree so largely in

31 July 1913 ]

Mr F C LE MARCHANT

[Continued

principle and on the amount of the funds and the distribution of the funds, that I think it almost has the effect of a statute so far as concerns the Gold Standard Reserve for practical purposes.

7627 May I take it from what you have just said that you still think it would not be wise to bring the Gold Standard Reserve under statutory regulation?—I should rather hesitate to do it yet.

7628 Until a wider experience has been gained?—Yes.

7629 We have heard a good deal of criticism of this, which I have called, for want of a better term, in and out working of the two reserves. It has been put to us by some witnesses that it appears very anomalous that there should be silver in a reserve which is intended to preserve exchange, whilst, on the other hand, there should be gold in a reserve which is created in order to provide for the encashment of notes in rupees. What is your opinion about that?—It is anomalous, but each branch has grown up from the necessities of the case, viz., on the one hand to keep in London, and available there, as much gold as can be spared to maintain exchange, and on the other hand to have in India a supplement of silver which can be dealt with more freely than if it were under the Indian Paper Currency Act. When Council bills are paid by silver withdrawn from the Indian branch of the Gold Standard Reserve it is now the practice of the Secretary of State to add temporarily a corresponding amount in sterling to the London branch of the same reserve, by means of a deposit at the Bank of England, or in some other sterling form, and not immediately to earmark gold. If this silver were to be transferred to the Paper Currency Reserve it would seem necessary to amend the Act to secure continuance of the same powers.

7630 I think it is clear from the Report of the Fowler Committee that they intended that this Gold Standard Reserve should be kept in India?—I have not any clear recollection as to how far that was defined, but I think in the first instance that was the idea, that gold should be shipped to England if exchange fell. On the other hand, the moment the Secretary of State began investing it in Consols and sterling securities, that was a step in the direction of keeping it here.

7631 Even if kept in India, I understand that the Fowler Committee's idea of the use that would be made of it was that in a crisis it would be made available in India for shipment to London?—It was.

7632 If, then, when the crisis comes for which it is provided, it is needed in London, do you see any objection to the policy which the Secretary of State has actually pursued of keeping it in London?—It appears to me absolutely necessary to keep it in London, and I think the state of affairs that occurred in the years 1907-8 and 1908-9 emphasises that.

7633 Would you develop that?—The Fowler Committee recommended that the gold reserve should be made freely available for foreign remittance when exchange fell below specie point, the method to be according to circumstances. As one method they suggested remitting gold to England with a corresponding reduction in Council bills. Another course which was not specified, but would, I think, have been consistent with the principle of the recommendation, would have been to pay gold to the banks which needed remittances, to be applied to reduce indebtedness abroad. In the crisis year 1907-8 the reduction of Council bills, which had proved a potent instrument for maintaining exchange in previous years, was not sufficient, the balance of trade was exceptionally adverse, imports not having diminished in at all the same proportion as exports, and the Government, after apparently some hesitation, met the emergency by reversing the usual procedure, and offered in India sterling drafts on London. To meet those drafts the presence of the gold or sterling securities in London was a paramount necessity.

7634 When they made gold available in India in 1907 and 1908, did you think the result was satisfactory from the point of view of the support of exchange?—No. It is impossible to speak positively on this

subject, especially if one has no official contact with it. I cannot say whether it would have been possible to pay out the gold to remitting banks, to whom the sterling drafts were delivered. There are always great difficulties in discriminating. My answer to your question would be that it was not satisfactory in its results.

7635 As a matter of fact, in the way in which it was done, the major portion of the gold did not go to the support of exchange?—So far as I have been able to follow.

7636 Accordingly, in the light of experience, you have come to the conclusion that the Gold Standard Reserve ought to be retained in London?—Yes.

7637 Would you keep a portion of it in gold, which would vary according to the amount of gold that there might be in the Currency Reserve?—I think it might be convenient to have some minimum limit such as 5 millions, or, if gold in the Paper Currency Reserve was not available in London, I think then it would be necessary to have 10 millions.

7638 It has been put to us by some witnesses that, after all, we have to revise our ideas rather as to the saleability of securities in view of the recent course of events in London and elsewhere, and that whatever may have been thought 10 or 15 years ago, you want a strong defence in actual gold now to give you time to realise whatever securities you have?—That is so. The demands on the Government in London are spread over a certain number of months, for instance, when the bills I am speaking of, some 8 millions, were sold they did not all fall due at the same moment, and so also with the expenditure in London. There is, therefore, a certain latitude of time in dealing with the securities, and looking at the large amount of bills that are held, they would either run off or would be exceedingly convenient to borrow on for a short period, so that, looking at the list of securities so far as I have been able to examine it at present, I should feel that on the whole a large part was liquid.

7639 I think the Fowler Committee also contemplated the early establishment of a gold currency?—Yes.

7640 Do you consider that that recommendation has been fulfilled by the steps which have been taken?—A very large amount of gold has gone into India. I state that point first, because one of the objections to the gold standard as a whole that was urged by authorities of considerable importance was, that it would be impossible to get gold into India. Various expedients were suggested, and so first rate an authority as Lord Swaythling (as he subsequently became), suggested ways, such, for instance, as making duties payable in India in gold, and other expedients of that kind, which I have no doubt were perfectly sound in themselves, but proved to be not required. I merely refer to that as showing the ideas that were in the minds of experts as to the difficulty of getting gold at all. That difficulty, one may say, has surmounted itself.

7641 And, as I understand, it has so much surmounted itself that critics are beginning to suggest that too much gold goes to India?—It is so. It is the occasion for many of the criticisms on the policy of the Government. The objection which has most force is that the gold passes away from currency uses and is hoarded. Hoarding is an elastic phrase. It has been said by an Indian authority that in India every man is his own banker. Under these conditions much of the gold is not immediately effective as currency, though potentially it may come into use. In 1898 much was said of the possible use of silver ornaments as a domestic reserve. In some respects the same may now be said of gold, whether in ornaments or bullion, and still more of sovereigns. But I am not aware how far gold in any form came out of hoards in 1908. Sovereigns would have been merged in the circulation.

7642 In talking about the possibility of its coming forward again as currency you alluded to the contingency of famine, I gather you are a little doubtful how far it would come forward then?—It is a matter of degree and of place. Those parts of India where

31 July 1913 ]

Mr F. C. LE MARCHANT

[Continued.]

sovereigns are not hoarded would not have them to produce, and I gather from the currency reports on India that there is a very wide difference in the practice in the different parts, so that it would rather depend on the locality of the famine. Still I am not impressed with it as a matter of great importance.

7643 What I rather wanted to put to you was whether you thought there were any other circumstances, except the pressure of famine, which would be likely to bring this gold out. Suppose, for instance, you have an exchange crisis apart from the pressure of famine, would the man who hoarded gold be likely to produce then, in order to turn into food, whatever gold or ornaments he has?—No. I think the probability is, looking at the characteristics of races, that he would rather keep it.

7644 That being so, the development of events having been what you have described, do you hold now that it should be the business of the Indian Government to press a gold currency?—No, I certainly would not press it, least of all in those parts of India where the community appear to dispense with it conveniently. I think it has always been stated that in Bengal, for instance, in the jute country and in the rice country, the demand for gold is of an exceedingly slender character, and, so far as there is a demand, it is for ornaments. On the other hand, if you take the Punjab and Northern India, and, above all, Bombay, it appears to me that the statistics point to there being a very active demand. The reports give abundant evidence that in the parts just mentioned the sovereign is in increasing use as currency in an effective manner, and used by all classes in daily transactions.

7645 We have had evidence as to those very marked local distinctions in the use of gold. Do I interpret your view rightly if I say that you would recommend the Government of India to provide the people of India with what they ask for?—Yes, with one qualification. Where it is evident that the demand for sovereigns is only in place of bullion I should be in favour of restriction in the issues, especially when there are indications of impending famine or crisis. This is a matter of administration, restriction has already been exercised when the supply has run short, the Government is under no legal obligation to give gold. In France there is economy in the issue of gold, at least to the general public. I should be in favour of meeting the demand for sovereigns in the places where they form part of active circulation, but restricting issues where that is not the case. Every year adds to experience as to the local uses of sovereigns—at times there has been a falling off in the receipts of sovereigns from the public by railways and post offices latterly again a marked increase. Progressive experience is the best guide to action in regard to the distribution of gold.

7646 I think you told me that in your opinion gold in circulation, at any rate, until it reaches very large figures, is not of great efficacy for the support of exchange in a crisis?—That is so. I think it is a matter of degree. One often uses the word "circulation" in a way which it might be difficult to define. If one fixed the reserves of Government at any one given moment as fully adequate to maintain exchange, I am inclined to think that for any additional currency that has to be coined after that date, gold is as effective as rupees supported by a proportion of gold. I am not prepared to say that there is a marked difference.

7647 In the meantime, as long as you are coming rupees, you are adding to the Gold Standard Reserve, are you not?—You are.

7648 Provided that you do not exceed the real demand for currency in India, do you see any cause for alarm in the growth of the rupee circulation?—It is a difficult thing to forecast how the position would appear if one imagined it increased over a succession of years. Speaking at this moment I should feel no alarm, because the Gold Standard Reserve would increase, and a considerable proportion of the rupees that were coined would go out of circulation, so that

from that point of view I think the risks from additional coinage are exceedingly slight. It was just possible that a different set of circumstances might have occurred, and at one time it looked as if they would occur, it looked as if silver might rise to a point intermediate between, say, 27*d* or 28*d* and the 42*d*, which would approximately be the equivalent of the 1*s* 4*d*. In that case there might have been a much lesser proportion of gold accumulated in proportion to the coinage. I do not know that that would have been a very serious risk, but still it affects calculations if the accumulation in reserve is, say, half what it is at present. For the time being owing largely to the action of other countries in demonstating silver, that risk seems to have passed away.

7649 There is no way in which the Gold Standard Reserve is increased at present, I think, except by the coinage of new rupees and the interest on the sum already in reserve?—That is so.

7650 Suppose that when there is a demand for fresh currency you issue gold instead of rupees, your Gold Standard Reserve ceases to grow?—Except, if gold is being shipped out and being handed in to the treasuries or rather into the Paper Currency Reserve. Then you get gold, but otherwise you are not increasing reserves.

7651 Unless, therefore, the gold comes out of circulation and back into the currency reserve, the Gold Standard Reserve in the hands of the Government in support of exchange ceases to grow?—I should have thought that if there were large importations of sovereigns by the public, and those were handed to the Government for existing rupees or for notes, that at all events the Paper Currency Reserve gold would grow, and that that to some extent would fulfil the same purpose.

7652 May I take it that in either case you would hold that gold in one of the reserves is far more valuable for the support of exchange than gold in circulation?—It certainly is with the present uses of gold in India. How far if those change, if, for instance, the effective use of a gold currency develops in a considerable part of India, that might be to some extent modified, I am not prepared to say, but under present circumstances, it is as you say.

7653 May I ask your opinion about England, by way of getting more exactly your mind on this subject? We have a very large amount of gold in currency, do you think that gold is largely available for the support of exchange in a crisis, or does it represent in the main a certain amount of coin which we find it convenient to have in our pockets, and which we carry regardless of the condition of the money market?—I think if you distinguish between the gold in the pockets of the public and the gold in the banks it is so. No doubt there is a considerable amount of gold in the reserves of the various banks in England, and presumably that would be efficacious.

7654 I think that does explain to me what you were saying. As long as the gold goes into what we call hoards in India, or into gold ornaments and so forth, it is not of great value to exchange?—It is of none whatever.

7655 If it is accumulated in the reserves of the banks, or in the Indian treasuries, then you would consider it of great value to exchange?—No doubt.

7656 You have observed that the circulation of notes has increased very largely in India?—I think it has doubled in about 11 years.

7657 You said just now that you would be inclined if you were the Government of India, to give the public what they wanted, would you have any preference that they should take one form of currency rather than another?—I think notes would certainly be preferable. Of course, the habits of the people plainly bear on it but as to which is preferable I should say that notes are unquestionably preferable.

7658 If the Government of India could exercise any influence to increase the circulation of notes rather than gold or rupees, would you favour that course?—Decidedly.

7659 Now may I ask you a question or two about the opening of a mint in India for gold coinage, I

31 July 1913 ]

Mr F C LE MARCHANT

[Continued

think the Committee of 1898 recommended that?—They did.

7660 Can you tell me at all what importance they attached to it, and why they attached importance to it?—I think partly it was connected with the production of gold in India itself, which was taken at about two millions a year. There was no doubt that if that had been minted and remained as coinage in the country, after a certain succession of years it would have become an appreciable item. I think also there was the idea that it fell in with the sentiments of the country.

7661 Was the recommendation connected with the idea which, as you say, had been presented to you by witnesses of great experience, that you could not get gold into India?—Yes, to some extent.

7662 Did you consider it an important recommendation?—No. I think if it had been, the Government would have followed it up with greater force. One consideration that told against it was that the prospect of securing the gold produced in India was doubtful. There were some incidental circumstances that told against the Government securing it, and it was quite plain, I think, that if the gold was not obtained, the *raison d'être* for it mainly disappeared.

7663 Could you tell me whether those circumstances have changed since that time?—I should doubt whether they have. Of course there was always a possibility that some of the gold imported in bars might have gone to the mint, but that was not such a likely circumstance.

7664 There is no advantage to the importer, was there, in taking bars to the mint there, rather than in bringing gold to the mint here?—The bars presumably are largely imported for ornaments. I have at times heard that formerly the bars were imported when there was any degree of unsettlement in India. This I did not hear officially, but a friend who was in the Indian trade told me that he had extensive orders for bars if there was any political disquiet, on the ground, I suppose, that in that form it was easier to convey away or to conceal. Of course it might always have turned out that some of that gold would have come to be minted subsequently, but still that would not be a very important element.

7665 On the whole, the people who took bars under those circumstances did not take them for the purpose of tendering them for coinage, but for the purpose of putting them in a safe place until the disturbance passed away?—Yes, and probably retaining them altogether.

7666 The Fowler Committee had to deal with a great many subjects on which they had perhaps not very much experience to guide them, now that we have seen their recommendations at work or a portion of them, do you attach importance to the opening of a gold mint in India?—No, I do not. I am aware the opinion is held by people of great Indian experience that minting a purely Indian gold coin would be an advantage, but if the coming of Mohurs is excluded and there are decided objections to that course, I do not see the advantage of a mint for gold. The Mohur might conflict with the sovereign, which is the coin of the Empire.

7667 I am not quite certain how far you are prepared to express opinions on some of the subjects which have been remitted to us, but at any rate I should like to ask you whether you have formed any strong opinion as to the desirability or otherwise of the establishment of a State bank in India?—As a general proposition a well-constituted and managed bank is an advantage to the community, but in the particular case in question, that of a State bank, the circumstances differ widely from those of a bank on a commercial basis, and the forms which the constitution of such a bank might assume vary from types of strictly limited sphere to others designed to take a large share of the business of India abroad as well as at home. Among projects mentioned in 1899 was one by a very eminent authority, that of a bank with a capital of 14,000,000l., not necessarily to compete with the Presidency banks, who were to be invited to form the nucleus of it. This bank was to confine itself to internal business, and at in many respects like the Presidency banks, but with

larger Government funds and wider powers. It was designed, no doubt, to deal with one of the main questions of Indian banking, the demand for advances during the movement of crops. It is, however, a question whether such an institution would be remunerative, and whether the provision for seasonal demands could not be met by the Government through the Presidency banks as they now are. So far as I can draw an inference from English experience, the expense of extending numerous branches, with their management and staff, especially in India where distances are large, would be very considerable.

7668 You have spoken of the advantages, or the possible advantages, of such a bank to trade, and you have given us your opinion on that. One of the reasons that has been put and has been pressed most strongly on us by witnesses, I think, is the desirability of relieving Government of part of the intricate financial business which it now has to perform. The Government of India and the Secretary of State between them, do a great deal of what we ordinarily term banking and exchange business. Supposing that anybody saw their way to recommending the creation of such a bank and to framing a scheme for one, do you think that such a bank could relieve the Secretary of State and the Government of India of the responsibility which they now bear?—I should doubt its being able to relieve them entirely. I should have thought that at all events the Government of India and, to a certain extent, the Secretary of State, were so immediately concerned in the note issue, the security of Government balances, and the measures to meet emergencies as in 1908, that a bank could not take the burden entirely off their shoulders. I should have thought too there was some risk that the bank might become simply another Government institution—that the attempt to exercise control by a single representative, or perhaps by two representatives, might not work in a completely satisfactory way, and that there would be a risk that it would really become another Government department over again.

7669 You spoke just now of the difficulties of trade in the busy season and of the rates of interest then, I think you said that you thought Government and the banks ought to be able, under present circumstances, without the creation of a new institution, to do as much as could reasonably be done?—I do think so.

7670 Do you think Government might do a little more than it does now in the busy season to help trade?—I think it would be quite possible to make advances for, we will say, from two to three months at a time, from November to the end of March.

7671 To whom would you make those advances?—Exclusively to the Presidency banks.

7672 Would you require security from them?—I should assume that the money would be used to facilitate trade, especially the export trade, during the period before merchants are able to what is called make bills. When an exporter is in a position to draw a bill on London, he is in a position to sell it, we will say to an exchange bank, so that it is difficult to say that at that moment there ought to be any severe pressure on India, but there must be a considerable interval before the delivery of produce when the expenses of collection and other expenses up country have to be met, and at that season he is not in a position at all times to offer an immediately negotiable instrument. I should assume that the Presidency banks with their knowledge of local circumstances would be in a very good position for making advances at that period, and that in that case they could take the bills of these merchants, and then I should assume that those bills with their endorsement would be a reasonable security.

7673 Have you formed any idea in your own mind of the sort of sum that it would be desirable for the Government to lend to the banks under those circumstances?—I think there are two questions—what amount would be likely to be effective, and also what amount the Government could reasonably spare? Of course there is always a risk when advances of that kind are made, that in succeeding years trad. counts

31 July 1913 ]

Mr F C LE MARCHANT

[Continued

upon them, and that what might be sufficient in the first instance may not be sufficient in a subsequent year. Putting that aside, I should have thought that, say, something like three crores or presumably in some years four crores—of course, it would vary with the years, the produce, and the circumstances—some amount of that description would be sufficient. I indicate it rather generally, because the Government of India would have the opportunity of collecting the views of the exchange banks and chambers of commerce, and would be in a better position for naming amounts. But I assume some such amount as that in my argument. I should have thought that an amount of that kind might come out of that part of the currency reserve which at present may be called fiduciary, and that some of the securities there might, if need be, be diminished. The money would earn interest to some extent as those securities earn interest, and I think it would be more usefully employed.

7674 Have you considered whether it would now be safe to increase the fiduciary portion of the currency reserve? At present, I think I am right in saying, it is fixed at a particular sum by statute irrespective of the amount of notes in circulation?—I believe it to be so. I think the amount is 14 crores.

7675 Have you ever thought whether it would be safe to take not a fixed sum, but a proportion of the whole?—I should have thought it would be an improvement to take a proportion.

7676 That would give some elasticity to the currency system which it now lacks?—Yes. I think a proportion of the minimum circulation would be a safe practical basis.

7677 Do I understand you to say, take a series of years and average the minimum circulation over five or six years, say, and then fix your proportion on that minimum circulation?—I think that calculation would be a guide, but the increase of circulation has been so rapid in the last two or three years that, though that would give a principle, I think one would have to look to the circumstances of the last year or two particularly to see if they affected the result. I speak with hesitation, because it is a special subject, which the controllers of the currency would know better than I do, but I should have thought 25 per cent, or something of that kind, would do.

7678 In principle, at any rate, you would take no objection to that?—No.

7679 I go now to quite a different subject. We have been asked, amongst other things, to report on the financial organisation of the India Office, could you suggest any alterations for us from your experience?—Is that, if I may say so, rather bearing on the Departments or on the Council? The members of the Council, of course, are rather a separate matter from the staff organisation.

7680 I think our reference included both?—I could imagine that there might be use in individual members of the Council, each of them, having some individual province. I think possibly rather.

7681 Forgive me interrupting you, but perhaps my last answer might mislead you. You asked me if we had to deal with members of the Council, we are concerned only with them as they touch the financial organisation?—Of course, the practice differs at different times. Sometimes there have been members of Council with immediate Indian experience, then again there have been intervals without.

7682 When you were on the Finance Committee and chairman of that body, did you feel that you had in the ordinary course of the organisation as much Indian experience as you needed accessible to you?—Of course, the questions came forward from the Government of India in a very complete form, and there always must be serious responsibility in departing materially from their views on any purely Indian subject. An important side of the finance work was in relation to the home money market, the sale of Council bills, questions of issues, and of dealing with funds generally, and all this was apart from the consideration of purely Indian questions.

7683 Then your experience would rather lead you to say that what is required in the Finance Committee

here is what I may call London experience, the Indian experience being supplied by the Government of India?—I should say London experience is required for home affairs, but Indian for Indian affairs.

7684 I put the question to you, because one has become aware that a good deal of the criticism directed against the present organisation has its root in an impression, well or ill founded, that London is over-represented in the Council of the Secretary of State, and that Indian interests are sacrificed to London interests?—I should demur to that, so far as my experience went.\*

7685 (Lord Kilbracken) I think when you were on the Finance Committee, you had always on your side a member of Council who had had first-hand experience of Indian finance and commerce and had spent many years in India?—Yes, that was rather as apart from purely official experience.

7686 I meant to exclude official experience, I was trying to describe a man who had had long experience of trade and financial operations in India itself. You always had a man of that kind as a member of your committee when you were chairman?—That was so, and that was exceedingly useful. I was at the moment thinking of political experience and official experience rather than of business experience.

7687 (Chairman) From your experience would you say there was no ground for suggesting that owing to the character of the organisation, or for any other reason the interests of the London money market were allowed to outweigh the interests of India?—That is so. I would say the principal way in which the interests of the London money market came in was as bearing on the question of issues—on raising money—which after all was one of the material and most important functions of the committee.

7688 In fact, it really came to this—could you or could you not, on under what conditions could you, raise the money that India required?—Yes.

7689 (Mr Keynes) I believe you have had business relations with Russia?—I have some business connection with Russia.

7690 Have you any knowledge of the working of exchange in that country?—The State bank provides exchange on certain occasions.

7691 How close an analogy is there with India in the matter of keeping reserves abroad and so forth?—I should think the main distinction is that London is so eminently the capitalist partner of India, much more so than it is of Russia, that the circumstances are not similar. Of course, Russia has to remit for its coupons mainly to Paris and in a lesser degree to London, but it is not dependent on London for its finance in the same degree that India is.

7692 I did not mean so much its relation to London as its relation to foreign countries as a whole, do you think that the system works out in detail very much like the Indian system or not?—I think that most Russian banks have credits with the leading houses in London and Paris, and the State bank is in a position to draw when exchange is required. I do not know the facts as to what reserves it may have.

7693 Are they credits in the sense that the Government has a right to overdraw, or are they sums left with these houses? Do you mean by a credit that the Government can borrow from these houses, or that it can use funds which it has temporarily placed with them?—I am not able to answer the question. I have no doubt at times it has very large balances with these firms in London and Paris, but, if those balances were to diminish, I should assume it could draw by arrangement, but this is a matter of special knowledge, which I do not possess.

7694 It is rather an important point in connection with the Indian problem because the Government of India have either kept liquid funds, or else they assume they have to sell out their securities?—Yes, that is so.

\* Note by Mr Le Marchant. The ex-financial member of the Council of the Governor General of India was a member of the Council of the Secretary of State, and of the Finance Committee from 1899 to 1903, and was succeeded there by the ex-secretary to the Financial Department of the Indian Government.

31 July 1913 ]

Mr F C LE MARCHANT

[Continued

7695 With regard to the establishment of a State bank, you say there are a number of practical difficulties in setting it up. Some witnesses have spoken of the practical difficulties rather, if I may say so, in the abstract, and I think it is important to bring them to a head and to know exactly what they are. Even at the expense of some recapitulation of what you said in answer to the Chairman, would you enumerate what appear to you the most significant of them?—I think the first difficulty is the risk of interfering with existing institutions, which conduct the trade of India with very great success. It is difficult for a State bank, if it has sufficient funds provided by Government, to limit its transactions. Of course, there are different ideas of a State bank, some are that it should practically confine itself to internal business in India but on the other hand there is an idea that it should do a business on this side and control exchange.

7696 Are the other institutions you are thinking of exchange banks?—Mainly.

7697 You are not thinking of a case in which the State bank is additional to the Presidency banks?—I think it would be very difficult for it to be additional if it did precisely the same work. I believe that the exchange banks give liberal advances in India to their clients, how far the Government would be prepared to do the same business, I do not know. Then again it would be an important question on this side, what sort of representation the bank had, for instance, in the case of the State banks abroad, their representatives in London are the leading financial houses. It would make a great difference whether the State bank in India had as its representative one or two of the leading houses in London, or whether it had an office and a staff and business in London.

7698 Which would be the right way of doing it, in your opinion?—If you have an eminent London house as a correspondent, you have the advantage of their knowledge and their experience. It is difficult to compare different advantages together.

7699 If the State bank took over in London some of the work now done by the Secretary of State, that would really mean having an office, would it not?—Certainly, but if it did nothing more than that, I do not think there would be any advantage in conducting that which is not already enjoyed by the India Office. I should have assumed that in most of the original ideas of a State bank there was to be a large capital and business on this side, which would put the bank in more direct communication with the banking community and trade of London.

7700 These are your first two difficulties—the possible interference with the exchange banks, and the difficulty of finding the right way of representing the bank in London, what further points are there?—I attach a great deal of importance to the cost of having a sufficient number of branches in India to develop any business beyond the business now conducted by the Presidency banks.

7701 It has come out to us in evidence that the number of Government treasuries is much greater than the number of Presidency bank branches—I mean five or six times as great, perhaps?—It is some 270 odd against 35. I think.

7702 Would there be great expense do you think if the branches transacted the business now done at the Government treasuries in so far as related to holding the balances and the management of the paper currency?—Do you mean if the bank took over all the treasuries?

7703 Yes?—I have the impression that the officers in the treasuries are officers of Government, with pay and retirement, and whatever promotion Government may offer. If they become entirely officials of the bank it would be a very material change in their status, and an expensive one to the bank, I should think I do not know whether it would be contemplated that the officers should remain officials of the Government and yet do the work of the bank.

7704 I am not trying to get solutions of the difficulties from you, for that would not be reasonable, what I am trying to discover are your *prima facie* objections. That, I understand, is the third one—the

possible expense of setting up the numerous branches such as are contemplated. Is there any further difficulty?—I think all the incidents attaching to banking on a large scale have to be taken into account. There is, for instance, the question of advances, if they are conducted on a very strict scale I do not know that the bank would enter sufficiently into the commerce of the country to be of much use, if, on the other hand, they are on a very free scale, then there are all the attendant risks to the Government of being identified with business.

7705 I suppose you would agree that the Presidency banks at present are on a very strict scale?—I believe them to be so.

7706 Is there any further point that occurs to you at the moment on that head?—No.

7707 (Chairman) I think, in answering questions of mine, you did say that you thought there was a danger of the bank becoming merely another Government department?—I think, in view of the responsibility of the Government for its actions and the probable presence of representatives on it, that, looking at the extent to which the railways have become Government property, there would always be some possibility of the bank becoming a Government branch.

7708 Did I rightly understand you to express the view that, even if it did not go so far as that, the responsibility of the Government would be still so much involved that they really would get no relief or little relief?—I think they might get some relief in the ordinary transaction of business, but still no doubt much attention would be required. It would mean Government officers and Government work.

7709 In the last resort, if anything went wrong with the bank, how would its failure be regarded? Who would be blamed?—I think it is customary to blame the Government whenever a case can be made out, and they would have to accept the blame, probably.

7710 You do not think it would be possible for them to wash their hands of the responsibility?—No, I do not.

7711 (Lord Kilbracken) That responsibility would come ultimately on the Secretary of State in Council would it not?—Yes, I think it would.

7712 And he would have to be responsible to Parliament for any part of the operations of the bank of which individual Members of Parliament might disapprove?—I expect so.

7713 (Mr Keynes) I do not propose to take you in any detail over this question of the State bank so far as its positive advantages go, but suppose there were strong positive advantages, do you think the kind of objections which you have been outlining are insuperable ones? Is not your point of view rather, here are these difficulties, and I see no great positive advantage in the thing, and therefore there is not much to be said for it?—It is very difficult to contemplate the exact working of an institution which is in the air. It is difficult to give a conclusive opinion on what one might call a project.

7714 Do you regard the sort of difficulties that you have been mentioning as of a very far reaching kind?—I think taken in the aggregate, they are.

7715 (Sir Robert Chalmers) Still on the subject of the State bank, is there any local demand for a State bank in India that you are aware of?—No. I do not know that it would necessarily have come before me, but if I might transfer the question as to whether there is a local demand in London, I should have thought that the purchasers of Council bills prefer dealing with the Government through the Bank of England rather than through any other agency.

7716 As to the sale of Council bills, what would be your feeling, in the light of your experience and subsequent consideration of the matter? Would you sell Council bills when you want to, and have the funds in India, within specie points at whatever was the rate current?—Yes, with the view of fulfilling the object of selling Council bills to meet the expenditure against revenue in London.

7717 Would you sell sometimes below 1s 4d, and sometimes above 1s 4d, according to the market conditions of supply and demand?—Yes, of course,

31 July 1913 ]

Mr F C LE MARCHANT

[Continued

with the reserve of very much diminishing the sales in the slack season and not going beyond the trade demand

7718 It has been put to the Commission by witnesses that the Government of India should undertake a definite obligation to support exchange by selling bills in India on London at 1s 3 $\frac{1}{2}$ d whenever anybody came forward and applied to buy bills at that price, what would be your opinion of such an idea?—I should have thought it was better to undertake no obligation, but to carry out any transactions of that kind which the Government found desirable

7719 Does it come to this, that you in practice, as regards India, think as people do dealing with Russia and dealing with France, we will say, that is, that one should follow the market and not have any specific obligation at a specific price?—Yes

7720 Take the alternative. Suppose that there were such an obligation, do you think that the Secretary of State could hold out successfully for 1s 4d at all times when selling Council bills in London?—He could be undersold by gold under certain circumstances, when, say, the Australian exchange or the Egyptian exchange was promoting the shipment of sovereigns to India

7721 If that event happened, would it tend to this position of affairs, that he would not have sold his Council bills?—That is so

7722 But he would have gold which he would have to ship?—That is so

7723 Which would be an expensive operation on balance?—It would cost him about  $\frac{1}{2}$  per cent to ship it back

7724 You would follow the market rates?—Yes

7725 Do you think what has been called the initial hesitation of the Government of India in bringing forward its reserves to support exchange in 1907-8 had a certain moral effect of an unsatisfactory character? Do you think that people in India would have been happier if they had used their reserves immediately?—On the spot?

7726 Yes?—If the sterling drafts had been offered earlier that would no doubt have created a better feeling

7727 (Sir Shapurji Broacha) It is your recollection, as I understand, that the Fowler Committee intended that the Gold Standard Reserve should, at any rate as regards the major part of it, be in gold?—Yes

7728 Have you any recollection of any discussion on the subject of the division?—No, I have not any recollection of it being discussed in the Committee

7729 I suppose, in the first instance, the Government of India recommended putting a portion of the reserve into securities?—So far as I recollect that was so

7730 Do you know that they repented afterwards, in 1909, and said that a substantial part of the whole amount, or the major portion of it, should be in liquid gold?—I think I have seen a letter which seemed to convey a different view from the view originally expressed

7731 You are now of opinion that some of it may be safely kept in securities?—Yes

7732 Did I understand you to say that would be five millions or 10 millions?—I suggested five millions or 10 millions for the gold as apart from the securities

7733 Five millions or 10 millions out of 22 millions is not a preponderating part?—No, it is not

7734 So that would be a departure from the intentions of the Fowler Committee?—To that extent

7735 Suppose there were two crises, one in India and one in England, do you not think that the reserve being in securities would intensify the crisis and not mitigate it? Would not its being held in Treasury bills intensify and not mitigate the crisis?—I think, to some extent, any sales of securities do accentuate a crisis, whereas having gold and parting with that gold freely mitigates it, but it is a question of degree. If those securities run off, as, for instance, Treasury bills would run off of themselves, it would not be a sale, and there would be no withdrawal of gold

from the Bank of England. The obligations of the Secretary of State here are met, in fact, by cheque, they are banking transactions in the payment of interest and payment of contracts, and so on. The receipt of money through the running off of Treasury bills, and through the sale of securities, would not mean the withdrawal of gold from the Bank of England

7736 But somebody has to find it, it is no help in a crisis?—It is no help, but then whoever holds the Treasury bills would equally be paid. It is no additional demand, and it is not a demand on the gold supply of London

7737 But it is a demand on the Government at a time when Government can ill afford it. Take a time of war, or something like that?—But the Government would have to pay, whoever the holder was

7738 Suppose the Gold Standard Reserves were all in gold, that would relieve the Government's necessity rather than aggravate it, would it not?—I demur to saying it would be aggravated by payment of Treasury bills. I think, if it is a case of withdrawing gold from London, it would aggravate it, but I do not think the ordinary current transactions through the banks come to very much

7739 I am talking of a crisis and of the Gold Standard Reserve giving out gold instead of cashing its securities, would that not be better for mitigating the intensity of a crisis, while the other method would to some extent, though not altogether, aggravate it? As somebody has said, there is nothing like gold?—Of course you would have to take into account the period over which the payments have to be made

7740 I am thinking of the worst time under the worst circumstances?—It is the case that a large store of gold if disbursed in a crisis would affect markets favourably

7741 Are you in favour of uniting the Gold Standard Reserve and the Paper Currency Reserve?—I think that might be done eventually, but it appears to me that the purposes are different, though in many ways the Paper Currency Reserve is used for Gold Standard Reserve purposes

7742 Now you have 24 millions in the Paper Currency Reserve and 22 $\frac{1}{2}$  millions in the Gold Standard Reserve, and they make together about 46 $\frac{1}{2}$  millions. If you add 22 $\frac{1}{2}$  millions to the Paper Currency Reserve then the 46 $\frac{1}{2}$  millions would always look a large sum whenever the recommendation was made to pay out gold for rupees, but if the money were kept under two separate heads, then, if out of the 24 millions in the Paper Currency Reserve you take 10 millions against currency notes or rupees you think you have reached the danger point and that you should take time for reflection?—I think there is some advantage in keeping the systems separate

7743 Two and two make four, but if you keep the two separate and you only withdraw from the one, that makes you think?—There are considerations in favour of separation

7744 Do you know how many shillings a head in silver circulate in England, have you ever calculated it?—No. Of course it is a very different thing to the use of silver in India.

7745 Do you know that seven millions of rupees coined in five years only meant 1 $\frac{1}{2}$  annas per head per annum? That is not an excessive coinage, is it?—No

7746 When you know that in France there are 25 rupees a head in silver coins circulating, then the seven rupees in India do not appear to be too large. According to the calculations of Mr Keynes and others it is less than seven rupees a head now. A coinage of six rupees a head would not be an extensive coinage as compared with 25 rupees a head in France, would it? Then in Germany their Parliament has just passed a law to increase the circulation by another nine marks a head. Therefore, I think there is yet a good deal of room for the coinage of silver in India where the transactions are all in cash?—Certainly one may expect that there will be a demand for it

7747 You would not call six rupees a head a great redundancy?—No

\* See Appendix V, page 170, paragraph 7

31 July 1913]

Mr. F. C. LE MARCHANT

[Continued

7748. Even what they are coining now is not a token coin, when you take the silver value that is in the rupee and bear in mind that one third is put into the gold reserve. In France silver is 62*d*, in England it is 61*d* or 62*d*, and in Germany the same. In India 28*d* is put into the rupee, and, on the basis of 42*d*, 14*d* is put into the gold reserve, so it is not such a token coinage for redemption as some would take it to be?—You would not have a very ready market for your rupees. You would not be able to sell the rupees abroad with any very great facility.

7749. No! would France her francs?—I quite agree with you. It has always been held that the French 5-franc piece is supported by the large gold reserves.

7750. So there is room for increasing the Gold Standard Reserve by coming more rupees, as there is no redundancy yet?—That is so.

7751. The policy of other countries is to conserve gold and not to dissipate it by giving it out, at what stage should we stop giving in India gold against the tender of rupees?—I do not think it is possible to lay down a principle in this connection.

7752. Do you think we might do the same as France or Germany?—In paying out the gold?

7753. Yes?—That might have the effect of causing a discount in the rupee, would not that be so, if a premium were put on the sovereign?

7754. No, I think the exchange point would be preserved. To go to another point, in the formation of the Finance Committee of the Indian Council, do you think it would be wise to put in every five years the Finance Minister who has resigned in India, because he would come fresh from his last five years' experience and so could help the Council?—I should rather doubt the wisdom of setting that up as a definite principle. He might not always agree with his successor in India.

7755. There has been an outcry that there are too many representatives of London interests and too few representatives of Indian interests on the Council—not that I say so myself. Suppose that a part of the selection were given to the Indian Government, do you think that would be a wise step to take in order to abolish the outcry?—I would rather follow out the idea, if I understand it rightly, of Lord Kilbracken, of inviting some one or more persons of Indian banking and commercial experience.

7756. Do you know the formation of the State banks of Europe, generally speaking?—Yes, generally.

7757. They have not taken much money from the Government, because if the Government have put in what comes from taxation on the one side, you will see they are indebted to the bank on the other side, and the one cancels the other?—That is so.

7758. An Indian State bank, without lending anything to the Government, would have to take charge of 50 or 60 millions of Indian money?—Yes.

7759. So it is not on the same basis as are the European banks?—No, and the needs and the requirements of the population are different, and the markets are different.

7760. What I am driving at is that these banks do not use much Government money, if they use it at all. There is Government money in the Bank of England amounting to 10 millions, and against that there is a Government debt of 11 millions, that means that the one cancels the other. So it is in France, 30 millions on one side and 20 millions on the other side and the one cancels the other there. Therefore I think this instance is quite different. A State bank lends, but here the State can never depend much on borrowing from the State bank of India, because what the State would borrow from them would be its own money?—It would be so.

7761. So the two are quite distinct in that respect?—I agree with you.

7762. (Mr. Gillen.) The Chairman has put to you some questions about a gold currency in general and its effect in supporting exchange. I think we have had it in evidence, even from those who favour the gold currency, that there is not very much that Government can do immediately to encourage it, so that from that point of view the question might not seem to be a very

important one, but the ideal that we are to hold in front of us no doubt would influence the policy of Government in the various instances that came before them, and it may, I presume, be necessary for the Commission to say what in their opinion that ideal ought to be. It is on that point that I wish to ask you a question or two. The point that is taken, I think, as the chief reason for favouring a gold currency, is that it reduces ultimately the liability of the Government, while, on the other hand, people think that increases in the silver coinage increase that liability, and therefore they are unfavourable to any increase in the rupee coinage. The liability they speak of is the liability to find gold for silver when required?—It comes to that.

7763. In your opinion does the demand for gold in exchange for rupees depend chiefly on the balance of trade, or has it some relation to the amount of coin in circulation?—I think the demand for exchange on London, which was one form of giving gold for rupees when in 1908 there were some eight million sterling bills, had relation to the amount of money owed by importers or firms in India who had to pay debts in London and required remittance on London—of course they were able to pay for it, one may say, in rupees or notes. I think the form in which the payment was made would have some relation to the money in circulation, notes, rupees, or sovereigns.

7764. I will try to put it on the basis of some definite figures. Assume that the rupee circulation at present, we will say for the sake of argument, is 150 crores and the gold circulation is 25 crores. You have two alternatives. The rupee circulation may go on increasing in the first place, suppose in the course of the next 10 years it increases to 200 crores, and the gold circulation increases to 50 crores. That is the first alternative. The other alternative is that in some way or another the rupee circulation does not further expand, and you get at the end of 10 years the 150 crores of silver that you have at present, and, we will say, 100 crores in gold. At the end of the 10 years you get a crisis and there is an adverse balance of trade, we will say, of 50 crores. As I understand the point, there are those people who say that the liability of Government at that time will be the 50 crores of this adverse balance of trade, and that, as long as there are sufficient rupees in circulation to pay off that balance, the rupee being for the time depreciated in regard to gold, what the Government will get will be rupees and not gold. That is one alternative. The other alternative is to regard the liability that will then come on the Government as having some relation, as I say, to the constitution of the coinages in the currency, so that if you had increased in the meantime your gold circulation, your liability would be less?—I think if the gold is in the hands of banks or people who are at all likely to use it, it then is effective in diminishing the liability.

7765. Would it in your opinion be an advantage in these 10 years that I am taking for the purpose of argument, if the proportion of gold should increase in the circulation, or would it not in your opinion make much practical difference at the end of that time?—I do not think as an arithmetical point it makes much difference. As I said before, I think if it is gold largely in the form of what may be called *quasi* reserves at banks, for instance, or in the hands of leading firms then it has a distinct effect in diminishing the liability, but if it has passed out into the outer circumference of the circulation, it leaves matters very much as they would have been. You have the lesser amount of rupees, as your rupee circulation will not be increased.

7766. Would not the constitution of those reserves with banks, and so on, that you are talking of, to a certain extent depend upon the constitution of the general currency?—Yes.

7767. Would it be likely to be affected by it?—How far they might find it to their interest to pay the gold out, how far the demand of the customers might lead to their parting with the gold and keeping very little, would depend upon their own principles of management, but assuming that it was fairly propor-

31 July 1913]

Mr F C LE MAHOANT

[Continued

tionately divided, and that the banks and the mercantile houses had their *pro rata* proportion of the gold, that is *pro rata* to the whole circulation, I should have thought then it would diminish the liability.

7768 So that in your opinion it all comes round to the policy adopted by the banks and the keepers of these reserves?—Yes. I think it makes a great difference as to what is the destination of the gold that goes into circulation.

7769 There is another point in the same connection. I think it is in the minds of those people who favour a gold currency that at present your safeguard against any fall in exchange or crisis, consists entirely of your reserves. The point that we have so far got to with this Gold Standard Reserve is that it should accumulate until it reaches 25 millions and that when it has reached that limit the question should further be considered. I think some of the persons who support a gold currency are afraid that at some point or other the accumulation in the Gold Standard Reserve may be stopped. If that were done, any further increases in the rupee circulation would not be, so to say, protected?—Plainly. The one is automatic up to a certain extent, and the other depends on policy and management.

7770 Do you share that apprehension at all? To what extent would you favour what they call an effective gold currency?—I have not specifically thought of that particular risk.

7771 You see my point?—I do, and I think so far an effective gold currency (which of course is assuming a great part of the question) is the more satisfactory resource.

7772 There is only one point I wish to ask you in regard to what you said in answer to the Chairman about the organisation of the India Office. I think your general view there was that it is for the Government of India really to put the Indian point of view?—I think so.

7773 You said I think, that it would be a great responsibility if the Secretary of State were on any occasion to overrule the Government of India?—I think on material questions, certainly.

7774 At the same time, that is a responsibility, is it not, which he does not shrink from undertaking when necessary?—It may be taken possibly after an amount of correspondence and communication, or there may be an approximation of views rather than a distinct overruling.

7775 But constitutionally it is the Secretary of State who is the final authority?—Yes.

7776 And he cannot, of course, on all points and in all cases accept the views of the Government of India?—Precisely.

7777 When a question comes home from the Government of India with their recommendation, it is possible that that question may affect other than purely Indian interests?—Yes.

7778 And it rests with the Secretary of State finally to decide that question?—Certainly.

7779 So that from that point of view it is very important, is it not, that there should be some representation of the Indian views at home in addition to what is urged by the Government of India in support of those views?—Of course nearly all the members of the Council are representatives of Indian views.

7780 I was only putting it in a general way, that it would be unfortunate if on any occasion there was not sufficient representation here of Indian views?—Certainly.

7781 With regard to the State bank, you know that the general policy of the State bank was approved, and strongly approved, by the Government of India and the Secretary of State when it was last discussed?—It was.

7782 That was in 1901?—Yes.

7783 They said they favoured the policy, but they thought the time was not very opportune for its introduction?—Yes.

7784 So they put it off with a recommendation that it should be revived, I think, as soon as practicable?—Yes.

7785 Can you state from recollection at all what were the conditions at that time which were unfavourable to a State bank?—No. I have an idea that the general basis of the proposal for the bank had fallen away. The original suggestions were suggestions on a very grand scale and that appeared to have fallen out. I have no distinct recollection whether the Presidency banks had any decided wish for it, but they were consulted. The facts were more in the minds of other persons than myself.

7786 The idea of a State bank originally was more that it should be an instrument to help the Government in support of its new exchange policy, was that not so?—Yes, it was.

7787 And that rather fell away?—Yes.

7788 In your opinion, do you think that in the course of these 10 years the conditions for the institution of a State bank have become more, or less unfavourable?—It does not appear to me there is the same occasion for supporting exchange that there was at that time. It appears to me that the Government policy, and the experience gained, enable exchange to be maintained without any adventitious systems. So far as that was one of the original reasons, I think that is much diminished.

7789 Would you say that the time has come, then for some definite declaration as to whether a State bank is desirable for other reasons, or not, or is it a question that is likely to become more practicable in another 10 years?—I should rather doubt whether it would be. I should have thought the existing conditions of trade would probably continue, and that there would be no need for banking beyond the development of the existing institutions.

7790 There is an argument which I think has been put to us, that the Presidency banks have been in existence for a very long time and that it would be dangerous to make any very large change, what I may call an historic large change. That argument would grow stronger, I presume, in the course of time, so the longer the question is left alone the more conclusive that argument would seem to be?—Especially if they develop in their business relations with the community. I think it would very much turn on whether they had generally strengthened their hold on the country, or whether it had diminished.

7791 (Lord Kilbracken.) About a State bank, have you thought at all about the practical question of what the constitution of the government of such a bank should be?—In the foreign State banks the president, as a rule, is, I think, a member of the Government.

7792 I mean, bearing in mind the peculiar circumstances of India?—I think it would require a strong directorate.

7793 Would that be forthcoming, do you think, in India?—I rather hesitate to give an opinion about the personnel in India at this moment. I should not like to say Yes or No.

7794 I venture to think there is no reason why you should not answer that question. We know what the circumstances are in India. Do you suggest that the directors should be handsomely paid for their work at the bank, would they have to give their whole time to it?—I think if the bank was to do a really active business in India, the directors must attend to it. The managers no doubt, would do a great deal of the routine work, but, arguing from the banks in London, I should say that the directors would have to work.

7795 Would there not be a practical difficulty in getting directors in India? Would you take directors from the men who are already on the spot for purposes of their own, or would you expect to have to import men from England especially for the government and management of the bank?—I should have thought the latter would be an unpopular course. It might fairly be said that they are not familiar with the circumstances of the people. You could hardly take them from the exchange banks.

7796 It has been suggested to us by more than one witness that this is a very considerable practical difficulty. How would you get the men to govern your bank and to manage it, unless under the supervision of

31 July 1913]

Mr F C LE MARCHANT

[Continued]

Government? Does it seem to you that that is a large and important and serious difficulty?—If I might answer it in this way, when the project was originally before the Secretary of State the idea was that the Presidency banks would be amalgamated, and that consequently their experience in India would be at the service of the State bank and the Government. I do not know that the question of remuneration or time came up for discussion, but I take it that their directors were looked on as a nucleus of men who were familiar with Indian banking. If that passes out of consideration, I should have thought there would be a serious difficulty in getting men.

7797 I think to-day it is generally assumed that the State bank would be something altogether external to the Presidency banks?—I should think, then, that it would be a serious question.

7798 (Chairman.) On this point, supposing you create a Central or State bank in the first place by the amalgamation of the three Presidency banks, I presume you would contemplate that you would still require local boards in the Presidency towns?—Yes, certainly.

7799 But in addition to those, you would require a central board to supervise the whole?—Yes.

7800 Would it be possible, in the circumstances of India, to find such a board, unless you fixed the remuneration at such a point as enabled the members of it to make their place of residence where the head was located, and to give up their whole time to its management?—I should have thought that would be necessary.

7801 (Sir Robert Chalmers.) Would there be such men that you could find in India? Speaking generally, is it not the fact that mercantile men in India devote their whole time to their business and have very little leisure for other pursuits?—That is the idea generally entertained here, certainly.

7802 The general tendency is for men in commerce in India to go over there and work very hard, and then as they come to be senior partners of their firms, to come home?—Very often.

7803 But over there, men actually doing commerce on the spot are very fully occupied indeed?—I should think fully.

7804 That makes a very great practical difficulty in securing men with the necessary experience for this suggested work of the State bank in India?—Certainly.

7805 (Sir Shapurji Broacha.) Even if it were the intention of the Government at that time to make a bank by the amalgamation of the three Presidency banks, the shareholders would have to choose the board?—Yes.

7806 And the men whom they choose might not have the necessary experience?—Yes.

7807 You could not fix that board yourself without going to the shareholders?—It would be very difficult to do it, certainly.

7808 (Lord Kilbracken.) I should like to ask you a question about the machinery by means of which the India Office deals with finance, apart from the way in which the machinery has been used or worked. You are thoroughly acquainted, of course, with the India Office system and methods, and you have also had much experience of financial operations outside the India Office. I wish to address myself to you, not considering you as an ex-official, but as a man of much practical experience in financial operations outside the India Office. From that point of view, may I ask whether you have any fault to find, or any defects to indicate, in the India Office machinery?—No. I think the Office was fortunate in the men it had. Of course to some extent, you may separate the men from the Office.

7809 That is what I wish to do as far as possible, but I agree with you that it is impossible to separate all of it?—I should have said that the duties devolving on the financial secretary, Sir Henry Waterfield, when I first came, and subsequently his successor, were certainly onerous, both as regards the variety and the general nature of those duties. I think the Office was fortunate in having men who would work so conscientiously. It would have been perfectly conceiv-

able that with the same machinery the work might have been less adequately done.

7810 That rather leads to the question. Can you think of any better?—There is one point, but not, perhaps, of any great magnitude. The financial affairs were, first, in the hands of Sir Henry Waterfield, and then of Mr Abrahams, but, if I might say so, they had the advantage of an ex-official of the Treasury, your self, who attended at the Committee always. I mean there was a certain amount of other official experience of a financial character, which was brought to bear on the subjects which came before the Committee, but which happened to be incidental—it might not be so another time. I think, under those circumstances, it must certainly be useful that the present Assistant Under-Secretary of State is a man who has had a long experience in financial work, so that his successor on the Finance Committee has the opportunity of consulting with him and devolving a certain amount of work upon him. I think in that way the mechanism for the financial work has been strengthened since I was here, and I think that, or some similar mechanism, is exceedingly important in order to cope with the necessary growth of work in the India Office.

7811 Of course we must take it as we find it, and we do not want to go back to the time of Mr Abrahams' appointment as Under-Secretary. I am talking about the India Office as it stands?—I think some such system of having a man in that sort of position who can reinforce the financial department is a very important principle. I think the work otherwise very well divided. I think the Accountant-General had his immediate functions well defined. The functions of the store department were important, but I think equally the mechanism for that department was quite adequate.

7812 The store department do a very large business, and I think it has been done for many years with very little attention being attracted to it or blame?—Yes. Of course there were often communications of a minor nature from India as to stores, but I think the answers were always complete, because the system of testing and examination was so perfect.

7813 To go back to the machinery of what we call the finance department proper, do you think in matters which are really urgent it involves any unnecessary delay? Is there or is there not a means of dealing promptly with matters which are really urgent?—I think there are means. As I was saying, it depends on the occupant of the post. A person who always shields himself behind the Committee can always find occasions for postponing the consideration of any question, but that is not a necessary part of the mechanism.

7814 Are there proper checks and controls, in your opinion?—I should say that under the present system there are. I think that before there was rather a want of check, not so much on the action but on the way, perhaps, that papers were brought forward. Suppose, for instance, the preparation of all papers practically devolved on one man only in the Finance Department, as head, I think the Finance Department would be in a less fortunate position than they must be now when all that work can be checked.

7815 Do you think there are sufficient means of getting at the opinions of those who have first hand experience of India, including that of the Government of India?—I should have thought there were.

7816 You always have I think, on the Finance Committee, two or three men of long Indian experience representing Indian interests?—Yes.

7817 You said, in answer to Mr Gillan, that the ultimate decision on these financial matters lay with the Secretary of State, would it not be more correct to say with the Secretary of State in Council?—Certainly.

7818 The difference is not altogether unimportant, is it?—No, I agree with you.

7819 (Chairman.) Did your experience lead you to think that the Indian Government is required to refer to the Secretary of State in Council unnecessarily on questions of detail, or, to put it in other words, is the

31 July 1913]

Mr F C Le MARCHANT

[Continued]

control of the Secretary of State in Council unnecessarily minute?—I cannot recall any decided instance, but it is a very difficult thing to review 10 years I should not think the mechanism is at fault, but the question is more than I can answer at the moment.

7820 Mr Gillan put it to you that it was felt in some quarters that the enlargement of the gold currency in India reduced the ultimate liability of the Government, whereas an increase of the silver currency increased that liability. Suppose you had an absolute option of meeting a demand for an increased currency in India either by putting a million sovereigns into circulation, or by putting the equivalent rupees into circulation and the profit on their coinage into the gold reserve, which of the two courses would you favour? I am putting it to you purely as an instance of what you would do if the decision rested absolutely with you?—I think under existing circumstances the coming of additional rupees and putting aside gold in the reserve is the most effective course, but if, on the other hand, the uses of a gold currency so develop in India that it flows back to the centres with rapidity, which seems a question rather of time and not determined at present, I confess I should rather lean in the long run to the gold currency.

7821 But before you made your choice for the gold currency, you would wish for a change in the habits of the people, would you not?—Yes, I should I should not endeavour to deprive those parts of India that use a gold currency of the use of it, but I should not attempt to force it in any direction, and I should take advantage of all information from the spot as to the extended uses of the gold that had been paid out.

7822 I want to ask you two or three questions on subjects which we have not yet touched upon. Several of the witnesses who have come before us have advanced the opinion that it would be desirable that the purchases of silver for coinage should be more steady and consecutive, and that Government should not wait until there was a great urgent need which lends itself to the market being cornered against them, what would you say to that?—I do not think it possible to have a completely regular routine of purchases. It is plain, in a country where the monsoon determines the circumstances of the year, that in a very favourable year the demand for currency may be extreme, but it would be easy to accumulate a useless pile of rupees by adhering to some strict system. I do not think it would be possible to go on what was the system at one period in America, that is to say, buying and coming so much silver a year.

7823 Do you think that in recent years the Secretary of State has erred on the other side, or not?—Of coming too much, do you mean?

7824 No, of waiting too long before he purchases his silver?—It is rather difficult for me to answer your question categorically, because I was not here at the time you refer to, and I am not absolutely familiar with the dates. If the rupee portion of the Paper Currency Reserve was kept to an adequate figure, on which there was some correspondence between the Secretary of State and the Government of India comparatively recently, I should have thought that there would be time for the purchasing, shipping, and coming of whatever might be required.

7825 (Sir Robert Chalmers) Between the call for rupees and the time when you can provide the rupees, is there not a kind of buffer provided in the Indian portion of the Gold Standard Reserve of 6 crores?—Yes.

7826 And that, in your opinion, would be its justification, I suppose?—Yes. I do not know that it makes a difference whether it is there or in the Paper Currency Reserve, but I was viewing an aggregate of from 17½ to 24 crores of silver according to the time of the year.

7827 That is, to take another way of looking at it, a certain measure of till money to meet special demands?—Yes.

7828 (Chairman) You are aware, I think, that the balances both in India and in this country have been unusually high of recent years?—Yes, they have.

7829 And you would be aware, of course, that the

Secretary of State has largely withdrawn the surplus money from India and removed it to London?—Yes.

7830 Do you think he was right?—It appeared to me that it was hardly a withdrawal in quite the ordinary sense of the word. By selling Council bills it was a transfer from the Government treasuries to the mercantile world to whom those rupees were paid, so it was a change of hands. No doubt it diminished the power of the Government to use that money in any other way in India, supposing they had any project of public importance that they could have paid it out for, as that money was then removed from their control.

7831 Supposing that they brought it to England with the intention, as early as possible of either redeeming debt in London, or of preventing the creation of new debt, would you think they were justified?—Yes. I should say it came under the general question of the policy of using surplus revenue either to reduce debt or to avoid the contracting of debt.

7832 Do I understand you to think that was a wise policy in the circumstances of India?—Yes. I can understand another view being entertained of that question of policy. The existing policy has very considerable advantages.

7833 What is the alternative that you can see?—The alternative would be to borrow more largely in sterling for railways and for permanent works, but then we know that the markets were not favourable to larger borrowing and it would add to the burden of sterling debt.

7834 In that way you would have got the sums which were transferred to London by the sale of Council bills on India?—Yes, if the money was not obtained by sale of Council bills, it must have been raised by loans.

7835 What would you have done with the sums which in that event would have been retained in India?—There are works of a local kind in so large a country on which the sums retained in the Indian cash balances could be applied, but still, that would be a marked deviation from the policy up to date.

7836 But whether held in India or transferred to London, you would have taken advantage of the money to carry out some development work?—Yes.

7837 I do not think, when you were on the Finance Committee, or its chairman, your balances in London were ever so large that you had any difficulty in loaning out the surplus?—No.

7838 You are aware that in recent times they have grown so large that the ordinary approved list of borrowers was unable to take the whole of the money the India Office had to lend?—Yes. I think that may be partly owing probably to the fact that there are fewer borrowers of gilt edged securities than there used to be. Formerly such a very large amount of Consols, India stock, and similar securities were held to run against money, but I think that is diminishing in these years, and, besides, there is the increase in the balances.

7839 The difficulty having arisen, the Secretary of State lent the money to certain London bankers, and it appears that he lent it without security, do you think Government money ought to be lent, even to the highest class institution, without security?—I do not think the banks would have taken it on the terms they gave if the question of security had been raised.

7840 I think the County Council lends money sometimes and exacts security?—It does. That is rather a long standing arrangement with a particular bank.

7841 Is there any observation you would like to make to us which has not been elicited by the questions we have put to you?—No, nothing, thank you, personally.

7842 (Sir Ernest Cable) I think Mr Gillan was discussing with you the question of an effective gold currency. From that, I think, arises the further question whether the sovereign is a suitable circulating medium for the people of India, bearing in mind their poverty and other circumstances. What are your views on that?—Certainly there seems evidence that in certain parts of India it does circulate and is very eagerly applied for—I am assuming, from the reports, not with

31 July 1913 ]

Mr. F. C. LE MARCHANT

[Continued.]

an immediate view to hoarding or melting down I would rather base my view on those facts, and say that for a considerable number of the community of India it does appear to be a convenient coin, but I quite believe that for a large portion it never can be.

7843 It has been suggested as an alternative that a 10-rupee gold piece should be coined, would you favour such a coin being in circulation at the same time as the sovereign?—I should have thought there might be some confusion, and that it would not be available for exportation on favourable terms, but would only be taken over, say, at its pure gold value, or slightly above, perhaps I should have rather doubted whether it would bring out gold from hoards for the purpose of circulation.

7844 It might also, perhaps interfere with the circulation of the 10-rupee currency note?—Yes, of course, it would directly compete with that, and that appears to have gained ground in a satisfactory way.

7845 Some comment has been made to day on the difficulty of forming a board for the suggested State bank in India, the present three Presidency banks are managed by local boards, and as far as you know they are well managed, are they not?—Certainly.

7846 The question, however, that was put to you was narrowed down to the question of the one central board?—Yes.

7847 (Mr. Gillan.) With reference to what you said in answer to the Chairman just now on the subject of a gold currency, I understand you contemplate that it is possible that the stage might be reached at which the gold in circulation will come back to the centres?—Yes.

7848 It is not clear to me how that stage would be reached I can understand it being reached *per saltum*, with a sudden conversion of the currency, or something of that sort, but if you are only working to it gradually, as long as you have got a very large

volume of rupees in the country, as it not those rupees that will come back, and not the gold? If you start with this volume of silver currency of 150 crores or 200 crores, whatever it may be, does it make any real difference whether the gold in circulation is 25, 50, or even 100 crores? How do you get over that intermediate stage?—I should have thought that if the country was saturated with gold, if the gold was a very large proportion, its mere weight, as it were, would drive it round through the channels of circulation I have noticed one criticism made on the gold currency is that it flows back quickly to the treasuries, post offices, and railways. It is said that is a proof that the population do not want it. I am taking this fact as some evidence that gold is not necessarily retained, and it is likely that the circulation of it will develop, at all events in the parts of India referred to.

7849 No doubt it would go on developing, but is the process not reversed every time you get a crisis?—That it would be hoarded on that occasion, or kept back, rather?

7850 Yes?—I should have thought that depended on the development of the use of gold in circulation.

7851 So that you are preparing for a gradual change in the habits of the people, that is what you are anticipating?—Following on what they have done already.

7852 (Sir Robert Chalmers.) If I followed your earlier answer aright, you are contemplating a system in which banking, as we understand it in this country, would play a much greater part in the habits of the people?—I think that would be a material assistance. I think the development of banking—not necessarily large banks, but local banks—would be of very great use.

7853 You are contemplating a time when every man, to use your phrase, ceases to be his own banker?—Yes.

The witness withdrew.

Mr. L. G. DUNBAR called and examined.

7854 (Chairman.) You are Secretary and Treasurer of the Bank of Bengal, I believe?—Yes.

7855 Will you tell us briefly how long your experience of India has been?—I went to India in January 1886. I have been 26½ years in the service of the Bank of Bengal.

7856 We have had referred to us a series of questions, and I would like to take you through some of the points that arise on them. Have you any criticism to make on the size of the balances either in India or in London in recent years?—That question has been gone into by the Bengal Chamber of Commerce, and they addressed a letter dated the 28th May\* to the Secretary of this Royal Commission on the subject. They generally approve of the action of the Government in the matter.

7857 Am I to take it that you concur generally in the opinions expressed by the Bengal Chamber of Commerce in that letter?—I do.

7858 As regards the balances in India, some criticism has been addressed to us suggesting that the time of the collection of the Government revenue, and the delay in its disbursement, injuriously affect Indian trade, do you share that feeling?—It is no doubt the fact that a considerable sum of money is locked up in the Government civil treasuries, but the exception that is taken in India is, as far as I know, to the reserve treasury balances, which are unduly large. The amount required to make the rates a little lower in India is, I think, quite a small sum, comparatively speaking.

7859 You speak of the sums in the reserve treasuries as being unduly large, are you putting that as the general feeling in India, or is it your own personal opinion only?—I think it is the general feeling in India.

7860 And you share it?—There are a very large number of treasuries and sub-treasuries, and one

realises that there must be a certain balance kept in each one of them. Owing to the very large number of these treasuries, the aggregate balance must be large. But the reserve treasury is a mere "stocking."

7861 Setting aside for the moment the question of the creation of a State bank, to which I will come presently, do you think that the Government of India could afford to do without the reserve treasuries?—I think the amounts in the reserve treasuries should be made available to the Presidency banks, or a selected number of bankers, for loans when required, at a moderate rate of interest.

7862 You do not think a very large sum would be required for the purpose, do you?—I do not think so.

7863 Would you propose that the Government of India should not lend to anyone except the Presidency banks?—Only to approved bankers.

7864 Then that would mean the Presidency banks, or would it include certain joint stock banks as well?—It would include some few others. The Exchange banks could put up security if necessary.

7865 Would you expect to get loans without security, or would you anticipate that the banks would be called upon to deposit security with the Government?—I think the banks should be called upon to deposit security with Government.

7866 What sort of security?—¾ per cent Government paper.

7867 You say you expect the money would be lent at a reasonable rate, what sort of rate have you in mind?—I think if Government would lend at 4 per cent. per annum the bank rate in India would then never go above 6 per cent. The 2 per cent. trading profit would be quite fair to the Banks.

7868 You do not think a 2 per cent. profit is rather a large one?—I do not—not for the risk of lending in India.

7869 Would you think it wise that the Government of India should take bills for this security from

\* See annex to Appendix XXVI, page 601.

31 July 1913]

Mr L G DUNBAR

[Continued

the banks, or would you confine them absolutely to Government paper?—At present I would confine them to Government paper

7870 Do the banks carry, or would they carry, enough of that Government paper to enable them to obtain the sums required?—I think so. If any bank happened to be short they could come and borrow from the bank that had the paper

7871 You suggest that the Government of India should lend at a fixed rate irrespective of the bank rate at the time?—That was only because I hear that people complain about the idea of the bank rate going up to 8 per cent. If the money was available from the Government at 4 per cent I do not think the bank rate would ever then go up above 6 per cent

7872 Suppose the Government were to say that within certain limits they would lend at 1 per cent below bank rate?—The Bank of Bengal I do not think would ever take it. I do not know about the other two Banks

7873 You do not think the difference of 1 per cent would make it worth while to take it?—I am not sure that the Bank of Bengal would ever require to borrow even at 4 per cent. One cannot foretell, but we have not borrowed for six years

7874 (Sir Robert Chalmers) What has the bank rate been in that sort of time, what is the maximum?—It was 9 per cent for six weeks in 1906, and it was 9 per cent, I think, also in 1908 for about six or seven weeks, but since then it has never been above 8 per cent. In 1908, I believe, the price of the crop which comes into the market about that time—rice—was very dear, and more money was required than usual to finance it

7875 (Chairman) Apart from your desire to see a certain amount of the surplus balances made available in this way for trade purposes, do you offer any other criticism on the management of the finances in recent years?—That is rather a large question. I do not think the chamber of commerce has found any other fault

7876 In regard to the Gold Standard Reserve, do you concur in the opinion expressed, I think, by the chamber of commerce that it ought to be held in London?—I think it ought to be held in London and invested—not in gold

7877 As regards investment, do you suggest that the whole of it should be invested?—I think the chamber of commerce say about five millions should be kept in gold and the balance invested

7878 How do you arrive at that figure of five millions?—I take that as the amount that might possibly be required before the sale of securities became necessary

7879 On the whole, would you agree with me that the experience of recent years has shown that the sale of securities of the first class is not always such an easy or certain operation as we used to think?—Yes, quite so

7880 Having regard to that, do you think that five millions is a sufficient margin to allow in gold?—Opinions vary. This was discussed at the meeting of the chamber of commerce at which most of the leading merchants of Calcutta were present, and I think the words are 'a sum of not less than five millions. Some wanted to say "not more than five millions"'

7881 Is it your personal opinion that it would have been better to say "not more than five millions"?—I do not profess to have any special knowledge on the subject, but I was in favour of "not more than five millions"

7882 Of course that would mean that in any crisis you would have to sell securities?—Not necessarily. There are always a large number of sovereigns in the currency reserve. We could transfer the securities to the currency reserve and take the sovereigns out of it

7883 Could you do that without an alteration of the existing law?—I cannot say

7884 At the present time is it not the case that the amount of the securities that can be held in the currency reserve is strictly limited?—You are quite right, it is strictly limited. Government would have to pass a short special Act for the purpose

7885 So that in arriving at five millions as the amount to be held in the Gold Standard Reserve in London, you rely for making up any possible deficiency on the gold in the currency reserve?—At present I would as there is plenty of gold in the currency reserve which is not required

7886 If the gold in the currency reserve fell off, would you think it necessary to revise the limit of five millions of gold to be held in London?—I would not personally. It would depend whether Government could borrow against securities in London instead of selling them. If they could borrow at a reasonable rate of interest, I would always do that in preference to selling

7887 I suppose your object in desiring to invest as large a proportion as possible is to earn interest instead of having the money lying idle?—Simply to earn interest

7888 You would agree, I presume, that if you are to have a Gold Standard Reserve at all, the first thing to aim at is that it should be sufficient for the purpose for which it is established?—Yes, quite so

7889 Security is more important than profit?—Well, yes

7890 It is a question of degree, in your opinion?—Yes, it is a question of degree. I agree with what the Chamber of Commerce say, that it would be a very unbusinesslike proceeding to have all this sum lying idle

7891 Do you think it would be a good bank proposition, having regard to possible liabilities, to have only five millions in cash?—I personally think so

7892 You are, of course, cognisant of the existence of the Indian branch of the Gold Standard Reserve?—Yes

7893 Which is held in rupees?—Yes, four millions sterling or six crores of rupees

7894 Do you see any objection to that?—I personally see no objection to it

7895 The Fowler Committee made certain recommendations which have been accepted and acted upon by the Government, and some others which have not been followed out, amongst other things they recommended the establishment of a gold currency—what is your view about that?—I am opposed to a gold currency as not required in India and as a wasteful and expensive luxury

7896 With regard to the gold which finds its way into circulation in India, have you formed any definite opinion as to how much remains actually available as currency?—It is impossible to express an opinion. My own opinion is that India is very much more prosperous than it was, the people are better off, and the ladies of the country, who must be a very large number, say 150 millions, are now wearing gold jewellery rather than silver jewellery, only the poorest class have silver jewellery now

7897 You think then that a great deal of the gold, at any rate, that has gone into India, is not in circulation?—In the last four years India has had large crops, which have been sold at high prices. My own opinion, judging from what one sees—of course, the better class of women are not exposed to view in India—is that gold jewellery is now much more extensively worn than formerly, and in my opinion that is where a good quantity of the gold has gone

7898 As far as currency is concerned, do I understand your view to be that the rupee is a more convenient form of currency for India than the sovereign?—It all depends upon whether you take the view of the receiver or the view of the buyer of the grain. The buyer of the grain who has to transport this money about the country prefers the sovereign, but I think the receiver, the seller of the crop that has been marketed, prefers rupees

7899 The buyer prefers the sovereign as being handier to move?—Yes, and to count, and handle

7900 From that point of view the note is better still?—Yes, it is, but there is the difficulty of getting it cashed. There are very few places where it can be encashed throughout India at face value

31 July 1913]

Mr L G DUNBAR

[Continued

7901 The note circulation has risen very markedly in the last few years, has it not?—Very much of late years

7902 I suppose that has been largely stimulated by the greater facilities that have been afforded in the way of the universalisation of the smaller notes?—I think so to a certain extent I think the increase of the note circulation, which has gone up from 46 crores in 1909 to 66 crores in 1913, that is, in four years, is merely indicative of the increasing wealth of the country. It means that 22 crores more floating capital is available in India

7903 Does your bank attempt to encourage the circulation of notes in preference to other forms of payment?—In Calcutta and anywhere else where there is a currency office, such as Cawnpore and Lahore, we deal almost exclusively in notes, but in a place like Dacca, where there is no currency office, it is all rupees. The rupees are a great inconvenience to the bank, they are very heavy, and they cost a considerable sum to transport about, so we do all we can to encourage notes

7904 You would like to see an increase in the note circulation?—Yes, I think so

7905 Could Government encourage the circulation of notes any more than it does?—Yes, by opening more currency offices

7906 Could it encourage it in any other way than that?—There is a lack of civility on the part of the subordinate Government officers. People prefer to deal with the bank rather than with the currency office

7907 Does that affect the question of whether they get notes or rupees?—I do not think the ordinary person will go to a currency office if he can help it. He prefers to deal with a bank. I am speaking very generally, of course there are many exceptions

7908 Does the Government ever offer inducements to you to take gold rather than notes?—They have not offered any inducements on the Bengal side to take gold at all, and there is very little gold in circulation there

7909 But elsewhere?—Elsewhere they offer us inducements to take gold rather than rupees

7910 Will you tell me in what way?—For instance, at Lahore, at Agra, and at Delhi, to my certain knowledge when we take a currency transfer from Calcutta when money is wanted in those three places, if we take it in rupees there is a charge of  $\frac{1}{2}$  per cent premium, but if we take it in sovereigns there is a charge of only  $\frac{1}{4}$  per cent premium, so that traders get the money from us in gold at  $\frac{1}{4}$  per cent less than we charge them if they take it in rupees

7911 (Mr Gillan) In what centres is that?—The three places I know are Lahore, Agra, and Delhi

7912 (Chairman) Do you know the reason why the Government should make that distinction?—I understand that the Accountant-General at Bombay got alarmed at the very large influx of sovereigns, so he sent large remittances of sovereigns to those three places and others, to get rid of sovereigns at those places this inducement is offered

7913 To that extent the Government of India is actively using its influence at those centres to put gold into circulation rather than rupees or notes?—I do not know whose orders they are, I understood it was the Accountant-General of Bombay, but I suppose the Government of India must have approved. It is outside the Accountant-General of Bombay's province, but the sovereigns came from Bombay

7914 (Mr Keynes) Is this recent—within the last year or two?—I am not certain when it began, I should think it was fully a year ago

7915 Does it go on now?—It was going on when I left India.

7916 (Chairman.) So far as it goes on, it would not be correct to say that the Government of India is purely neutral in the question of what form the currency would take, and gives the people whatever they ask for?—This is a transfer of money from the buyers of crops in Calcutta to these outlying places, and Government offer an inducement of  $\frac{1}{4}$  per cent to anybody who will take gold at these three places.

They may do so at other places, but I do not know about it

7917 In the part of India with which you are mostly concerned, is there any growing demand for gold?—The people are well acquainted with gold, but I am not aware of any demand for gold. They will take notes now in Burma, and there is little demand for sovereigns there

7918 As far as you are concerned, would you prefer to see the Government of India encouraging the issue of notes and rupees, or would you like to see them encouraging the issue of gold?—I am not a believer in a gold currency, therefore I should prefer to see them encouraging the use of notes

7919 Do you think that gold currency, or gold in the other forms of which you spoke earlier, would be of much value for the maintenance of exchange in the case of a crisis?—We must have a gold standard. It is the gold currency that I think is unnecessary

7920 I was assuming that you required to maintain the standard. Do you think that gold in the currency, or the other gold in India of which you spoke which is used as ornaments, would come out for the support of exchange in a crisis?—Gold as ornaments certainly would not. I do not think the private gold would come out at all

7921 Therefore for the purposes of exchange you would prefer to have the gold in the currency reserve, but not in actual circulation or hoards?—That is so

7922 Now I come to the question of the State bank. Your directors have addressed a letter\* to the Commission, in which they are good enough to say that they desire to place your expert knowledge and experience of finance and banking in India at the disposal of the Royal Commission, but they wish it to be clearly understood that any opinions expressed by you are your own personal views, and cannot in any way be binding upon the Board of Directors or the shareholders of the Bank of Bengal. They add, however, that they have authorised you to say that they agree with the broad principles enumerated in the letter of 28th May 1913 from the Bengal Chamber of Commerce,† of which you have already spoken, and they go on to say that if the Commission pronounce in favour of the principle of a State bank for India, formed by the absorption of the three Presidency banks under a reconstructed bank, the directors will in consultation with the Government of India at once take steps to formulate a scheme, and to lay a scheme before their shareholders for their consideration and approval. Your directors do not express any opinion there as to whether it would be desirable in the interests of India that there should be such a State bank formed, would you let us have your views on that point?—My directors did not wish to commit themselves to anything until they heard what part of the banking business done by Government was to be made over to the State bank, and on what terms. At present when we do work for Government they pay us what they call our out-of-pocket expenses, and there is very little in it

7923 You have the use at present of considerable balances free, have you not?—We do an enormous amount of work for it—we keep up a very large establishment. I have got the figures here. Our establishment costs Rs. 2,40,000 a year, and we pay Rs. 23,000 for police guards to guard the currency chest which the bank keeps free of charge at our branches

7924 You would not like to lose it?—That is a very different thing

7925 I suppose if there were a State bank it would take over all the Government balances?—I think it should

7926 And I suppose it would have to take over the management of the note issue?—I think so

7927 Very probably it would do the business now done by the Secretary of State in London in the sale of Council bills and transfers?—I think a London office of the State bank should be established

\* Printed as supplementary note to Appendix XXV, page 596.

† Printed as annex to Appendix XXVI, page 601.

31 July 1913]

Mr L G DUNBAR

[Continued]

7928 Do you think it ought to be allowed to do business outside the requirements of the Secretary of State?—A proposal of that kind would meet with the combined opposition of the exchange banks. I think the State bank might be safely permitted to purchase sterling bills to the extent of, say, 20 millions a year to meet the requirements of the Secretary of State in London.

7929 You would not think it necessary to allow them to deal in exchange outside the requirements of the Secretary of State?—The exchange business is the cream of the Indian banking business, it is the best of it.

7930 What sort of capital do you think such a bank would require?—I put it down at five millions sterling.

7931 That is just about the capital of the present Presidency Banks, is it not?—The capital and reserves of the present Presidency Banks.

7932 On the establishment of such a bank would much more capital become available for Indian trade development?—All the Government money, or a considerable portion of the Government money, would be available. It would make the rates of interest lower in India.

7933 Do you think that the Government of India could safely entrust the whole of its balances to a bank with no larger capital than that?—Managed as the Presidency banks are at present, I should say Yes.

7934 Perhaps you would consider it would be reasonable that the Government of India should require representation on the board?—Certainly.

7935 I suppose it would be necessary to maintain local boards in the different Presidencies?—I think so.

7936 And then you would have a central board sitting somewhere?—In Calcutta.

7937 Is that a *sensu qua non*?—Yes.

7938 How would you propose to form that board?—There would be our Calcutta directors, and Bombay and Madras would be asked to send a director to this central board, whether they would or not I do not know.

7939 Do you think it would be easy to get and maintain a fair representation of other districts on a board which sat in Calcutta?—Calcutta is the most important town in India, and the richest and most prosperous district, and it is difficult to believe that the central board could be anywhere else.

7940 I was not intending to dispute that, but my point, as you can see, would apply equally whenever you placed the central board. What has been put to us by some witnesses is that India is so vast a country and the business men who are there are so busy with their own affairs that it would be impossible for them to meet in one central place and there to control the affairs of the bank?—That would be impossible.

7941 You think if you had a bank the supreme board would have to be for those reasons a Calcutta board?—It would have to be a Calcutta board in my opinion.

7942 Suppose that such a bank were established, and you had one or two Government representatives on the central board, ought it to have through them a right of veto?—If those duties which you have just enumerated are handed over to the new State bank, I think the Government directors should be in a position of very great authority.

7943 Of course in that case the responsibility of Government would be both very real and very great?—It is a question whether Government would be responsible. The Government directors would be acting on behalf of the Government, but I do not think the Government should take any responsibility to the public.

7944 Could they divest themselves of responsibility in the eyes of the Indian public, if directors nominated by them sat on the board and played an important part there?—I am not quite prepared to say what the Indian public would think. I do not believe the Indian public would think anything about it. They would merely know that the bank was controlled by Government directors.

7945 In your opinion would there be great advantages to India from the creation of such a central bank?—I think so, I have read the remarks of Mr Abrahams\* and also of Mr Keynes† on the subject, and they have put the case very fully and fairly, I consider.

7946 Do you think such a bank would increase the actual banking facilities in India?—I think, including all the banks in India and the great banking community of the shroffs, that the banking facilities in India are already pretty complete. The difficulty on the Bengal side that we find is reliable borrowers to lend to.

7947 One reason for the maintenance of so many Government treasuries is the absence of bank branches which might do the business for them, is it not?—India, as you have just said, is an enormous country. At the majority of the places where Government treasuries are established there is little banking business possible, not sufficient to pay the expenses of a branch, but the Government need their treasuries all over the country as revenue collecting centres.

7948 Then to that extent the creation of a State bank would not relieve the Government of the necessity of maintaining these treasuries?—It might in the case of a few of the bigger treasuries, but not in the case of the great number of sub-treasuries.

7949 Is there much tendency on the part of the banks to extend the number of branches?—The tendency, I think, in India is for the finance required by trade to be more and more concentrated in the seaports, these up country places are dying away, with the exception perhaps of Cawnpore, which is a manufacturing place, and one or two places on the Bombay side.

7950 Have the banks made any serious effort to attract to themselves the hoards of the people of India?—The Bank of Bengal used to offer 4 per cent for deposits fixed for 12 months. We got far more than we could employ, and we had to reduce the rate to 3 per cent per annum, 3 per cent is all we pay for fixed deposits, and we will not take deposits for short periods.

7951 Does that apply to the busy season as well as to the slack season?—The busy season is such a short period. We never borrow now for short periods even in the busy season.

7952 (Sir Ernest Cable) You have branches over a large area in India, have you not?—A very large area.

7953 Do you find in the management of your branches difficulty arising from the fact that you are dealing with a large number of different people with different interests, languages, and so on? You run from Burma, on the one hand, to the north west, do you find it hard to manage such a large area?—I do not think so. We send trusted agents to the various places, and the man on the spot is given a certain amount of control, under the strict supervision of the head office and directors, but what he does we really do not know of until, say, several days later, when his returns reach the head office.

7954 But you do not find a difficulty in managing the bank under such conditions?—No, I think not.

7955 So, from that point of view, the large area involved would be no difficulty in the case of a central bank?—I do not think so at all.

7956 You said that the cream of the business in India belonged to the exchange banks, did you not?—I meant to say that the finance of the foreign trade of the country was the cream of the business in India.

7957 I only put that to you because I understand that the exchange banks are engaging in local business as well?—So they are. We have had to reduce our rates in Calcutta for advances to jute mills to half per cent below the bank's published minimum in order to compete successfully with the exchange banks.

7958 I always understood that the exchange banks used to think the cream of the business was the local business?—No. Look at the enormous profits they make.

7959 It would be a *sensu qua non*, I think you said, that Calcutta should be the head office of the central

\* Appendix XIV, page 339.

† See Indian Currency and Finance, published by Mac Millan 1913. Chapter VII, paragraphs 28-31.

31 July 1913]

Mr L G DUNBAR

[Continued

bank If the scheme were retarded, or perhaps even vetoed, by reason of local jealousies between the Presidency towns, would you not concede the point that some neutral city should be the head office?—I do not think so. In my opinion Government should approach the Bank of Bengal and ask the Bank of Bengal to submit a scheme for a State bank. We would then approach the Bank of Bombay and the Bank of Madras, and, I think, personally, also the Allahabad Bank, the Alliance Bank, and the Delhi and London Bank, with what would be considered fair terms of absorption. Then if the banks do not choose to take them they can stay outside.

7960 Then you would suggest an amalgamation of other banks besides the Presidency banks?—That is my own personal opinion. The State bank would want more men and more offices.

7961 You have suggested, I think, in your memorandum that a central bank should undertake the management of the Gold Standard Reserve, do you mean by that that the bank should undertake the responsibility of maintaining exchange?—No, we would simply hold the fund.

7962 You would be the custodians of it?—Yes, and we would show the balances every week in our weekly statement.

7963 Has it ever been considered whether the Government of India should issue local Treasury bills if they happen to be short of money at any time?—I have heard it mentioned by brokers and other people. Mr Reid, a broker in Calcutta, has several times, I understand, been to see the Comptroller-General about it, but I have never heard that the Government have any intention of doing so.

7964 Do you think that they could raise money in that way if they wanted it for short periods?—I think so, or they could overdraw from the Presidency banks at a very moderate rate of interest.

7965 One of the reasons brought forward for the establishment of a central bank is that it would form a link between what might be called the great banks of the country and the agriculturists, that it would link the various money markets together, and that the central bank could undertake the task of lending to agriculturists, perhaps through co-operative societies, would that be possible?—Yes. The Bank of Bengal will only deal with the central co-operative societies—I am not quite certain of the names—and only then if they are guaranteed by their directors, who are men of a certain standing, and these societies lend to village banks. So we already do that business.

7966 At present the Presidency banks tender for Government loans, and presumably they sell them out gradually at a profit, that, I suppose, would not be possible if one central bank were formed, as it would be a Government institution?—There is a very large investment demand in India for Government paper. The ordinary investor quite knows the danger of buying bazaar paper, that is paper from the bazaar, so he comes to the Bank of Bengal—and it is a very large business on our side—and he buys paper direct from the Bank of Bengal, he then knows his title is good. We charge him 6 annas or 4 annas above the market rate for our good clean paper free of law suits.

7967 The issue of new loans is, of course, a source of profit, the Government would get that if the central bank issued the loans?—It all depends. The Government can deal in Government paper, as we do, through the central bank, or else it may do as at present—ask us to tender for the loan, accept our tender, and let us do the dealing.

7968 Do you agree with the suggestion that the central bank must inevitably become a Government institution?—I do not say that it should be a Government institution. I merely say the Government should be represented on the board of directors, and strongly represented.

7969 The staff would not be Government officials?—No.

7970 (Mr. Gladstone) I think you said that you would limit the securities to be given for Government loans to 3½ per cent. paper?—Perhaps I was wrong.

That is the only trustee security in India, but first class municipal debentures might be taken.

7971 Under the Bank Act you are allowed, are you not, to take port stock and municipal stock?—Municipal and port trust debentures.

7972 Would you include those?—Yes, they ought to be included.

7973 We have heard something about the way in which money can be more easily raised now on loan in India. It is the fact, is it not, that the Presidency banks are allowed to advance on certain railway securities, local companies not directly guaranteed by the Government of India, according to a schedule which they publish from time to time?—Yes.

7974 Perhaps you would favour those securities being included?—Personally, I would not.

7975 Do you not lend on those securities?—We are authorised to do so. There is one, the Darjeeling Himalaya, which is looked on as very good. Loans depend upon the character of the borrower.

7976 Raising capital for railways in India is rather in its infancy now, but you are probably aware that there is a very considerable move in that direction, and the expectation is that much larger sums will be raised in India for branch railways under contract with Government, with not what we might call trustee guarantees, but amply secured?—Yes.

7977 There are, for instance, rupee loans with a 3 per cent Government of India guarantee?—Yes.

7978 I suppose you would be willing to advance against those, and that those should be included?—There is no market, or a very small market, in India, and I think the bank would only take into consideration the character of the borrower.

7979 Have you personal experience of the working of the treasuries up-country, do you think they are economically worked?—I think they are very economically worked.

7980 Do you think the balances which are moved on from one place to another are kept as low as possible?—The bank's complaint is that some are kept too low.

7981 Apparently you think full advantage is taken of the improved railway facilities and telegraphic facilities as they now exist, we have had evidence, I think, that trade has increased, and the commitments of Government are larger, and the balances are now considerably greater up-country than they used to be?—I am not prepared to give an opinion on that point. I think they are very economically managed. Occasionally there may be a surplus of 50,000 or 60,000 rupees at one treasury, which is not immediately required, but will be required a little later on. It might possibly be moved somewhere else, but there would be the cost of moving.

7982 If that be the case at 200 or 300 treasuries it would amount to a large sum?—It would in the aggregate. It is only for a very short period of the year that there is any shortage of money in India, and that could easily be met of late years by the reserve treasury without touching any of this money.

7983 I am now dealing with the question whether any of these balances up-country are unnecessarily large and therefore, of course, wasteful?—Speaking generally, I should say not.

7984 (Mr. Keynes) You say you have rejected fixed deposits at 4 per cent?—We will not give 4 per cent. now.

7985 But you propose that the Government should lend to you at 4 per cent?—In times of pressure.

7986 Four per cent. is the rate that you would pay, then, in the busy season, not all the year round?—No, in the busy season. We as bankers do not mind 8 per cent. at all, it is the merchant who is to benefit by any reduction, and he often does extremely well when the rate is 8 per cent.

7987 Was your reason that if you were to employ all those funds you would lower the bank rate, and you do not wish to do that?—We had too much money. Our cash balances grew enormously and it was no good paying 4 per cent. for money which was lying in the till unused.

[Continued

7988 By too much money do you mean more money than you could use at the current bank rate?

—Yes

7989 So that you could only use the additional funds by lowering the bank rate?—No, we could not employ the funds at all—or, at any rate, only for a very short period of the year

7990 Do you hold that the funds that you could employ are largely independent of the level of the bank rate at a given moment?—I say that it is a question of supply and demand. We got more money than we could employ by offering 4 per cent, so we reduced our rate first to 3½ and now to 3 per cent

7991 Do you think that the demand for money at a given moment in India is independent of the rate charged for money, or not?—The demand for money in India is caused by the crops and the habits of the cultivators who want cash for the crops

7992 Then the reason for raising the bank rate is not to choke off a certain number of borrowers?—The reason for raising the bank rate is certainly that as the borrowers increase, not being a philanthropic institution, we make them pay more for the money when the demand is in excess of the supply

7993 If raising the bank rate chokes off borrowers, I suppose lowering it would bring new borrowers forward?—No, I do not think it would. There are times in India when we cannot lend money at any rates at all

7994 I am speaking now, not of the very dull season, but of the eight months of the year in which there is a good deal of business doing?—We are always open to lend money

7995 If you put the very dull season on one side, but keep your bank rate down, does that mean that more borrowers come forward who would have been deterred by a higher bank rate?—No, I do not think so at all. Money is required for trade, and borrowers pay the bank rate current for the time being

7996 Did I understand you to say that raising the bank rate choked off some borrowers?—I do not actually mean to say that, but as pressure for money increases we make the borrowers pay more for the accommodation

7997 That has no effect upon the number coming forward?—It ultimately has an effect

7998 Then I suppose lowering the bank rate ultimately would have the effect of making more come forward?—There are borrowers, but it is reliable borrowers who will pay us back that we want

7999 Do you argue that if the Government lent you money at 4 per cent in the busy season that would keep down the bank rate to 6 per cent? How much additional borrowing would be produced by that result?—I do not think the Bank of Bengal would borrow anything at all

8000 Do you mean that the Bank of Bengal could already meet all borrowers at 6 per cent if they chose?—If the Bank of Bombay and the Bank of Madras rates keep down to 6 per cent ours would not probably go up, but if their rates go up to 8 per cent or 9 per cent we must support those institutions by putting up our rate too

8001 Apart from that, do you think you could meet all demands at 6 per cent?—We would not keep to 6 per cent if we could get 8, but if we could get money from Government at 4 per cent there would be no excuse for our charging more than 6. I hold that 2 per cent would be a fair banking profit for the commercial risk of lending the money

8002 Do you think the mere offer on the part of the Government of lending at 4 per cent would keep the bank rate down?—That is my opinion

8003 That is based upon your theory that the urgency of a number of borrowers in India is, apart from the slack season, independent of the bank rate?—It is independent of the bank rate. It is caused by the marketing of the crops

8004 I am putting that point definitely, because it is a point which it is difficult for anyone used to the affairs of this country to understand?—Quite so but the conditions in India are absolutely different. Money there is required to pay for the crop coming to

market, and borrowers come to the Presidency banks first. It is not as if there were reliable borrowers going about who will borrow when our rate is 4 per cent and will not borrow when our rate is 5 per cent

8005 It is your deliberate opinion, in the peculiar circumstances of India, that the number of borrowers is, broadly speaking, independent of the bank rate, so that the offer to lend funds would prevent its rising to its present height?—Yes, I think so. If the Government offered to lend to the Presidency banks at 4 per cent, our rate would never go above six

8006 It seems a simple solution. If a State bank were to be established, do you think they could push notes in a way in which the Government cannot push them at present?—I think so

8007 In what sort of ways?—We could have far more branches than the Government have currency offices

8008 Do you mean that the facility of being able to cash them would encourage the people to use them?—Yes

8009 I think you mentioned this afternoon the fact that there was no currency office at Dacca, and the fact that Dacca was a long way from Calcutta was an important part of the reason why notes are so little used in Eastern Bengal?—Yes. There is no currency office in Eastern Bengal

8010 Have you any knowledge of why there is not? What has hindered the establishment of one?—The Government felt, I think, that they would have to transport large sums of money about the country. The Presidency Bank of Bengal in the busy season send seven crores of rupees to the Dacca district, and that gradually filters back to Calcutta. The cost of sending the seven crores is large. If there was a currency office in Dacca, the Government think they would have to provide whole rupees at their own cost

8011 If such a currency office had been introduced in the early years, then if people had wanted to cash the notes at Dacca it would have been expensive to Government?—But rupees were wanted to pay the ryot, not gold or notes, and the cost of sending the necessary rupees would have fallen upon the Government

8012 Do you think in the long run the extra popularity gained by the notes would recoup the Government for the initial expense?—Yes, and I also think if there was a currency office in Dacca rupees would be very much less used, and the people would take notes

8013 Then it has been rather a short-sighted policy, you think, based upon fear of the initial expense?—It has been a short-sighted policy undoubtedly, based upon the Government's idea that it is not its duty to assist and facilitate the financing of trade

8014 Are there any other important centres in the part of the country you have knowledge of, in which currency offices ought clearly to be opened, in your opinion?—There are a large number of centres where there are no currency offices

8015 But no outstanding cases?—Dacca is one big one, but it has a short season. There may be others

8016 (Sir Shapurji Broucha) I suppose you would rather the bank rate go to 8 per cent than take 1 per cent profit on Government borrowed money?—I do not think 1 per cent is good enough for the risk of lending the money

8017 You simply raise the rate to 6 or 7 per cent in a brutal way?—We do not raise the rate in a brutal way at all. We raise the rate as borrowers come and take away the money from us. If nobody came to borrow, our rate would remain at 3 per cent

8018 If your rate was 6 or 7 per cent, would not the commercial community have a voice in your action?—The commercial community are represented by our directors, and it is our directors who raise the rate

8019 It appears now—it has not been known to the Commission before—that a large amount of gold is taken in the north west parts, that is to say, in the Punjab at Agra, Delhi, and Cawnpore, because the Government give a concession of 1½?—I am not certain

31 July 1913]

Mr L G DUNBAR

[Continued

about Cawnpore, but I am about the other three places. I know that our agents ask for a currency transfer payable in gold. One day our assistant, in translating a code telegram, forgot to write "payable in gold." Then there was a hullabaloo because the agent was charged  $\frac{1}{4}$  instead of  $\frac{1}{3}$ . We checked the telegram and found the mistake.

8020 If the native merchants wanted to transfer a lakh from Bombay they would not like to go to the Government?—They would prefer the bank at even rates.

8021 Is that  $\frac{1}{4}$  on the gold forcing gold into circulation?—It suits the Government to get rid of the gold.

8022 Of course, it is owing to the Government forcing this circulation of gold that more gold is going to Lahore, Delhi, and Agra?—I do not know whether the Government is pressing the circulation at all. I merely know that they charge us  $\frac{1}{4}$  less for taking payment in gold.

8023 Are your directors in favour of a State bank?—They have got an open mind on the subject. They want to see the scheme. If there is nothing in it, they do not want it.

8024 They are not asking for it up to now?—The letter from the Bengal Chamber of Commerce\* says, like everybody else, that there are various pros and cons. They are keeping an open mind.

8025 That is not asking for it?—It has not been brought up much.

8026 Then there is no necessity for asking the Government to have a State bank?—I think in India there is no enthusiasm about a State bank.

8027 What benefits would you give the Government and what would be the duties of the State bankers?—The benefit is not to the Government. The benefit is to the populace at large.

8028 And what is the benefit?—Efficient management.

8029 What more would you do in your circle if there were a State bank?—All this money, instead of being locked up by Government under the names of various funds, would be available for trade, and everybody would get money cheap. That is the idea.

8030 And money being very cheap, you would not borrow from the Government at 1 per cent less?—No.

8031 What better service would you do for your circle by a State bank than you are doing now?—I do not think it would be any particular service to the shareholders of the Bank of Bengal, but it is thought by experts that a State bank would be of great service to the people of India.

8032 You cannot get more credit than at present in your circle, can you?—Not in our circle.

8033 France, England, and Germany have less than one third the area of India, but I suppose that, having three banks, better service is rendered to each of those three countries than if there were only one bank for those three countries, whether it be the Bank of England, or the Bank of France, or the Bank of Germany?—I am not prepared to express an opinion on that. I suppose those three countries are quite different to India. Perhaps in France, Germany, and Great Britain they are better with their three separate banks, but I am not certain that Bengal, Bombay, and Madras are—they are all one country.

8034 If you could not render more service to your circle, do you think the Bank of Bombay could render better service to its circle?—The Bank of Bombay are usually harder up than we are.

8035 You have, of course, much more money to spend, but you cannot do any better service by a State bank than you already do?—I think there will be a better service in Bombay.

8036 How?—All our Bengal funds would then be ready in times of need to help Bombay.

8037 I am talking of yourself. Will you do any better service for your circle by having a State bank?—Our circle is quite comfortable at present with the bank as it is.

8038 And you could not do better service there?—We are anxious to extend the benefits of the service to Bombay.

8039 How many directors have you in your bank?—Seven.

8040 How many of them are natives?—None.

8041 Are there not any native shareholders in the Bank of Bengal?—Very few in Bengal.

8042 Suppose these three banks were amalgamated, the Bank of Bengal has more than double the capital of the Bank of Bombay and the Bank of Madras, has it not?—Yes.

8043 So the directors would be elected by the shareholders of the Bank of Bengal, as they are elected now in the Bank of Bengal?—Yes.

8044 And then, of course, the board would be the board of the Bank of Bengal?—No, there would be local boards at Bombay and Madras.

8045 I am talking of the central board. The central board would be men of the Bengal Presidency Bank?—The present very able directors of the Bank of Bengal.

8046 I do not deny their ability. How many directors have gone to Lahore and travelled through Central India or Southern India to get an idea of the extent of the business that they should do?—I think they all of them go to Simla and various other places.

8047 Simla is not a banking place?—They are all men of the leading firms, with the greatest knowledge of the country. I do not know whether they have actually been to Madras, but they certainly all go to Bombay.

8048 Do you think people who have never been to India will be able to manage native credits in India?—There is not the slightest difficulty in its being done at present.

8049 That is very easy to say, but how is it to be done?—Why should it not be done?

8050 I suppose you discount bills in your branches?—Yes.

8051 One signature is nearly always from Calcutta, is it not?—No. We discount the bills of the local shroffs. We have a native accountant and a native sub-accountant at each of our branches. They are both men of considerable standing in the place, and they advise us as to the standing of the native firms that come to us.

8052 What has all your discount, apart from the Calcutta signature, done for your branches compared with Calcutta itself?—Our best bills come from Bombay, I think.

8053 Bombay is, of course, all right?—I said, I think, to the Chairman that my experience is that finance in India is now getting centred in the seaport towns. Up-country the shroffs our branches know are all well-to-do men who seldom or never discount.

8054 Do you think Bombay will submit to your Calcutta board?—I think they would be wise to do so.

8055 Do you not know that there were three State banks at one time, one at Calcutta, one at Madras, and one at Bombay, with Government directors and Government shareholders?—And they were brought into discredit by the bad behaviour of Bombay.

8056 Quite right, but you remember you offered as a bribe to give them for their shares 500 rupees, while the liquidation would only give them 100?—I do not think that is possible.

8057 You have not gone into that?—I have never heard of it.

8058 They would never submit, and would have nothing to do with the credits being distributed from Calcutta, how are you going to surmount that difficulty?—Calcutta, in Mr. Dickson's time, made an offer to the Bank of Bombay, and I think the majority by which it was carried was something like 136 for to 134 votes against, there was only a very small majority. That was a great mistake on the part of the Bombay people.

8059 The Bombay people would not submit to it?—Unwisely, they did not submit to it.

\* See annex to Appendix XXVI, page 606, paragraph 18 O 19067

31 July 1913 ]

Mr L G DUNBAR

[Continued

8060 Do you think there is a chance of their submitting now?—We will leave them outside if they will not submit

8061 Did you ask them recently their opinion whether they would like to amalgamate with your bank?—Not that I know of

8062 I thought you said something like that?—No I said we would offer to amalgamate if the Royal Commission decided that a State bank is advisable for India

8063 Do you think the Government of India would lend you two crores or three crores or four crores in a time of stress, and would take upon themselves all the responsibility without any control?—Every other country has a State bank, why should not we have a State bank in India?

8064 Those State banks lend to the Government but you State bank is to borrow from the Government?—We do not borrow from the Government at all. We support the Government very largely

8065 Would you take charge of the duties of bankers to the Government?—Yes

8066 There would be the management of the public debt of India, the management of the paper currency, which means about 42 lakhs or something like that, and the management of the Gold Standard Reserve Fund, would you use all that, or lock it up in a safe?—We would publish a weekly statement showing how it was used

8067 But you would use it?—Not necessarily

8068 What would you do with it?—It would be all in the till, and the information published weekly

8069 Would you lend nothing from it?—We would have it as we have it at present. How much is there to lend? Very little, it is all invested.

8070 The Government would have directors on the board?—Certainly I would have the Governor and the Deputy Governor Government officers

8071 Will not Government be responsible for any mistakes of the bank?—Not at all as the Government

8072 Do you know that Mr Mill wanted to make Government responsible for the loss of the Bank of Bombay money, and only lost his resolution by a small vote?—I believe so. It seems extraordinary

8073 Then you say that Bombay is not in a central position?—That is so. They could send a representative over

8074 How could they do that without the shareholders' consent?—It would have to be with the shareholders' consent

8075 You would have the majority?—We will offer terms to the Bank of Bombay, if they do not like it they can do the other thing

8076 Who are "we"?—The Bank of Bengal

8077 What has the Bank of Bengal to do with it?—I am only suggesting that if the Commission decides that a State bank is advisable for India, it must go to the biggest bank and ask that bank to formulate a scheme

8078 Perhaps the Commission may want you to formulate a scheme before they decide on a State bank, would you kindly formulate a scheme?—I am not prepared to do so. That should go to my directors

8079 (Sir James Begbie) Is it not your experience that when the bank rate is 8 per cent less bills are offered for discount?—The shroff keeps up his price, but we do not get hundis at a higher rate than 8 per cent

8080 (Mr Gillan) Your proposal to lend to the Presidency banks at a fixed rate suggests a question. Suppose the Government are prepared to lend in a particular district a crore of rupees at a fixed rate, how does the Government representative distribute the loan between the different centres?—That is premising that there will be any competition for it. It will be simply first come first served. The person who applied for it first would get the crore

8081 That is to say, the Government would simply wait for an application and then would grant the first application at the fixed rate?—It is merely suggested in the interest of the merchant, who wants a lower rate than an 8 per cent rate.

8082 According to that view you might get all the money at Calcutta and leave Bombay wanting?—We might do if the Government had only a crore, then Bombay would come to us, and we would charge them 1 per cent higher, and they could have the money

8083 It suggests this to me, that if you have a fixed rate for a loan from the Government with no method of judging where the money is most required?—I am merely mentioning a rate of 4 per cent with the idea of preventing the Indian banks from going above 6 per cent. My own idea is that if the Government will lend at 4 per cent, the banks will not be justified in making more than 2 per cent out of it, that is the only reason. If you make it 6 per cent 7 per cent, or 9 per cent, then the banks would make their rates 8 per cent, and so on

8084 The effect then would be, in your opinion, to lower the general bank rate through the busy season?—The effect, in my opinion, would be that the bank rate would not exceed 6 per cent in the busy season on the Bengal side, I cannot speak about Bombay

8085 That is to say, on the average of the year you would be making less on your deposits?—We can guard against that by paying less on our deposits

8086 What it means is a further reduction in the rate you are paying for your deposits?—Very probably, and the money we discard will then be available for railways and for opening up the country generally

8087 You have told us that you get far more money than you can use?—That is so

8088 At the same time everyone sees there is great scope for development in India?—There is a great scope for the honest development of India. We may desire to develop India, but whom can you trust to do so? The Government are the only people

8089 Do you mean that you have not got firms working at the development of India to whom money could be given?—The firms we would trust do not come to us. They are mostly wealthy firms who get their own money, their reputation is so good that the public take shares in their companies, and so they do not come to us for loans

8090 That is rather a curious position, is it not, where a bank refuses the provision of the capital required for the country?—I do not think it is any part of a bank's business to put up money to build, say, a railway, but it is quite a reasonable proposition to lend money to a first class firm who want to build a railway. How is the bank to check the mismanagement, contractors swindling, and things of that sort?

8091 At any rate, you have got the position that the bank has more money at present than it can use?—I hold the view that the bank has so much money that we will not pay more than 3 per cent. Of course 3 per cent is a high rate, English banks do not pay anything like that

8092 When you come to the stringency of the period when there is an increased demand for money, where is that demand met from, what are the additional resources that come into the market to meet that demand?—Council bills and wire, 50 lakhs, or 100 lakhs, or 150 lakhs a week, if there is any amount of extra wires taken. The Government have got the rupees and the notes, so we have to get local money from Government

8093 You are depending on Councils and the increase of the bank deposits in India to meet this extra demand for money?—Yes. The bank balances go down and down as the money goes to the districts to buy the crops

8094 A good deal of money is drawn off the market in order to finance the crops, and it is not till some time later that the market is reimbursed by the Councils being drawn?—The actual money to finance the crops is found by the Presidency banks who, having no access to London, have no means of getting Council bills. When the crops come to the seaports then the Exchange banks come in and the bills are offered to them, then they wire home to London saying perhaps, "Send 20 lakhs extra of Councils". The Presidency banks have no means of getting Councils from London.

31 July 1913]

Mr L G DUNBAR

[Continued

8095 I understand that the Exchange banks confine their business to dealing with these produce bills?—Yes, in a way, but they also finance mills and people who want to draw money to pay for produce

8096 They do not, as a matter of fact, draw Council bills in anticipation?—Take a bank agent in Calcutta, say the Calcutta manager of the Chartered Bank, he cannot afford to have money lying idle in Calcutta to await the demand.

8097 At the time when the money is being taken off the market to finance these crops I presume a certain condition of stringency has been established?—Yes

8098 I should have thought it would be an ordinary banking transaction for the Exchange banks to bring in some money in order to finance bills in anticipation?—Then they would have to gamble in what the rates of exchange would be. The rate of exchange does not go up until the stringency is established. The head offices of the Exchange banks are not in Calcutta, they have only an agent there, and it is questionable whether he would be permitted to borrow or draw from the head office large sums of money.

8099 There seems to be some difficulty then in the inflow and outflow of capital into India, or as between India and England. It does not come in very easily when the rate in London is high, and it does not find its way out when you have got too much money?—It is all explained in Mr Keynes's book.

8100 What have you got to say to that?—I entirely agree with what Mr Keynes says.

8101 As regards the relations of the Presidency towns to the up-country stations in the matter of finance, I want to read to you what was said by the Upper India Chamber of Commerce on that subject. They said, "When bankers and merchants of approved standing have to pay abnormally high rates for accommodation, it means that the less well-to-do class cannot get funds for trade purposes, except at an exorbitant cost. As high as 20 per cent has been paid by dealers of fair commercial standing during the current year on short-term drafts. Be the reason what it may, in times of dear money Bombay and Calcutta appear always to be in the position to pay much higher rates of interest than up country trade can stand, and, therefore, money is drained to these centres generally at the particular season of the year when it is most urgently needed in the Mofussil for produce."—I cannot imagine why a place like Cawnpore should expect to get money if they will not pay rates as high or higher than those ruling in Calcutta and Bombay.

8102 Is this a correct description, do you think, of the position?—I think we as a bank take first class shroff hundis up country at the same rates as in Bombay and Calcutta. I tell our agents that they ought to get at least  $\frac{1}{4}$  per cent more, but they very seldom can. What the bazaar have to pay for their money is quite another story.

8103 Going back to the import of funds from outside India, you were saying that the Presidency banks have no resort outside India at present?—They have no resort according to the charter.

8104 I want to ask whether the exchange banks are not sufficient to supply India's requirements?—The Exchange bank managers are in London, and while the Calcutta agent may have views as to the future course of money in Calcutta, it does not follow that the head office approve of his views, or that they have the funds available to let him have them.

8105 Do you think the position is affected by the fact that the Exchange banks are not purely Indian banks?—I think their head offices could with advantage be in India.

8106 But they are dealing with a number of other countries?—Yes, that is so.

8107 The Presidency banks, being purely Indian banks, perhaps take another view of the necessity of importing funds?—There is any amount of funds in India, it is simply that rupees are locked up by Govern-

ment. If we could get them out of Government there would be no necessity to import sovereigns.

8108 You mean that if Government lent its balances there would be no need or occasion to bring in funds from abroad?—We want rupees and we cannot import rupees. We can import sovereigns and Councils, but it is rupees that we want, and they are locked up.

8109 You know the Presidency banks have made a great point of their not being able to resort to the London market?—They did years ago, but I think that is out of date.

8110 You think it is unnecessary?—I think it is quite unnecessary.

8111 On the supposition that the Government of India lend out the balances in India?—As I have said, the Bank of Bengal has not for six years required any money, and, as far as I know, will not require it in future.

8112 Even in the busy season?—Even in the busy season we have enough to go round. The minimum cash balance which we require for our business is  $4\frac{1}{2}$  crores, and we have never borrowed until our cash balance got down, say, to four crores and 30 lakhs, of late it has never been anywhere near that—we have always been over six crores.

8113 I am not quite sure what advantages you foresee in the formation of a State bank, is it that the bank would be able to encourage further the circulation of currency notes, is that one point?—I think so.

8114 And that they would be the better people to deal with the Government balances?—Yes, and make the Government balances more useful than they are at present.

8115 Is there any other particular point that you have in mind?—I put down\* that their duties should be bankers to Government, to manage the Public Debt, which we do at present, to manage the paper currency, to manage the Gold Standard Reserve, and to establish a London office in order to take away the banking business now done by the India Office.

8116 Taking the internal banking arrangements of the country, that is to say, the development of the paper currency and the management of the Government balances in India, are those advantages, do you think, which are conditional upon the institution of a State bank, that is to say, could you or could you not attain them through any development of the Presidency banks?—Government does an enormous banking business of its own already, and the only question is whether a practical concern like a bank would manage that business better than Government offices now do.

8117 Could the Presidency banks manage it without amalgamation?—I think so, but it would be much better if they were amalgamated so as to have one bank. The relations between the Presidency banks I think are most friendly at present.

8118 Would it be possible under any system, for instance, to make over the paper currency to the three separate Presidency banks?—It seems difficult, but I daresay an arrangement could be arrived at.

8119 How would you divide the circulation?—That is a difficult problem and it requires much study.

8120 Could you make over the balances similarly to the Presidency banks without much calculation?—I think so. Of course I cannot speak for the other two banks.

8121 In the previous correspondence a difficulty was raised about giving the Presidency banks access to London separately without amalgamation, I take it from you the present point of view is that it is not essential or very necessary that that access to London should be given?—Since those proposals were made things have changed enormously. Money is cheap in India and dear in London, and, speaking for the Bengal Bank, we have had no occasion during the past six years to have any desire to borrow in London.

The witness withdrew

At the India Office, Whitehall, S.W.

NINETEENTH DAY.

Friday, 1st August 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M.P. (*Chairman*)

Lord FABER  
Lord KILBRACKEN, G.C.B.  
Sir ROBERT CHALMERS, K.C.B.  
Sir ERNEST CABLE  
Sir SHAPURJI BUREJORJI BROACHA

Sir JAMES BEGGIE  
Mr ROBERT WOODBURN GILLIAN, C.S.I.  
Mr HENRY NEVILLE GLADSTONE  
Mr JOHN MAYNARD KEYNES  
Mr BASIL P. BLACKETT (*Secretary*)

Mr H. F. HOWARD, C.I.E., called and examined

8122 (*Chairman*) Will you kindly tell the Commission what your Indian experience has been?—I first went out to India as a member of the Indian Civil Service in 1897, since then—confining myself to my work in connection with Indian Finance—I was Under Secretary in the Finance Department of the Government of India for three years from 1905 to 1908, and subsequently to that, since 1909, I have been Collector of Customs in Calcutta, with the exception of five months last year, when I officiated as Secretary to the Government of India's Finance Department.

8123 In the Memorandum (*see Appendix XXIII*, page 576) which you have submitted to us, I think you take the view that the total balances in India and London combined have undoubtedly been exceptionally high of recent years?—Yes, I do.

8124 But you attribute the size to exceptional causes?—Yes.

8125 In the main, to the Budget surpluses of revenue over expenditure and to lapses under the head of capital expenditure on railways?—Yes, but I think that there are certain other causes which must be mentioned, such as the fact of anticipatory borrowing, which Mr. Abrahams has drawn attention to, by which I mean that loans have been realised in anticipation of requirements to this extent—that they have been floated towards the end of one financial year, though it was intended to use them during the next financial year. Then, again, the balances have also been swelled by the postponement of the discharge of temporary debt. There are other minor points—I do not know whether you wish them referred to—such as the failure of the local Governments to spend up to their budgeted allotments.

8126 As regards the non-redemption of debt, and to a certain extent the borrowing in anticipation of requirements, would you say that at the time when that was done it was clear that the Budget surplus would be much larger than had been expected?—That is a matter which must always be doubtful. I think that we in India thought that the temporary debt might have been discharged sooner but of course in saying that I am speaking for myself rather than for the Government of India.

8127 Am I right in thinking generally that the Indian Budgets were framed on the assumption that the surpluses at the end of the year would be reduced to figures which were much nearer normal at any rate?—Yes, I think so.

8128 It was due to the non-realisation of the Budget Estimates, either by excess of revenue or underexpenditure, that the large surpluses accrued?—Yes. I may say, with regard to that, that in the case of opium the underestimation has been, as I have no doubt the Commission have been informed, deliberate. A figure was taken which was estimated to be the normal figure which would ordinarily come in as opium revenue, and any sums received in excess of that amount were to be put by for two purposes—two thirds

for the redemption of debt and temporary obligations of various kinds, and one third for various purposes, such as sanitation and education. That, I think, was definitely explained in the various statements both before and after it occurred.

8129 The revenue was knowingly underestimated to that extent, and it was stated so, is that the case?—I prefer to put it rather differently. It was stated that our opium position is most uncertain, we are not going to do a gamble in it, but we will take what we consider to be our normal revenue and enter that as our Budget figure, we shall very likely get more than that, and if we do get more than that we shall devote it to these purposes, it is not a normal item of revenue, it is a windfall, and it must be treated as such.

8130 Would that statement be found in the Financial Statement of the Financial Member of Council?—I think I am correct in saying it has appeared on two or three occasions.\*

8131 (*Sir Robert Chalmers*) As I understand it, you did estimate on a normal basis, even for your opium revenue?—I would not use the words "even for our opium revenue." The calculation was drawn up, I think, at the time when the last Treaty with China was made. A calculation was then made as to the amounts which, if exceptional circumstances did not occur, might be expected to be received from opium year by year with the diminishing export. That figure was put down ahead, I do not think the actual figures were published ahead, but the calculations were made ahead, and I think the Secretary of State agreed to them.

8132 Those figures appeared in the Budget?—Those figures have appeared in the Budget. There may have been a difference of a lakh or two one way or the other, as the figures were rounded off in the Budget.

8133 (*Chairman*) The figures given in the declared surpluses of India are not, are they, as large as the figures which you give in your memorandum?—I have looked at my Memorandum again (*Appendix XXIII*, page 577), it is liable, perhaps, to some misunderstanding. The figures which I give in my memorandum are not the actual surpluses, but they are the improvements in the surplus over the figures as originally estimated.

8134 I am not quite clear what you mean by "improvements" ?—If we estimate for a surplus of a million and we get a surplus of 4 millions, there will be an improvement of 3 millions, and the figures which I have given are the extent of the improvement.

8135 Can you explain to me the causes of those large lapses of capital expenditure? As I understand, they occurred both on the part of the central Government and on the part of the local Governments?—The lapses in capital expenditure on railways, do you mean?

\* See for example H.C. 155 of 1911 page 4

1 August 1913 ]

Mr H F HOWARD, C I E

[Continued

8136 One of the reasons that you give for the large balances is failure to spend?—The largest item for lapses is that of the railways. I am really not in a position to answer as to that, as a railway man would be, but, generally speaking, I think the lapses are due to the fact that orders were placed in England for material and by the end of the year the material had not been supplied. In one of the years under review, that was very largely aggravated by the railway strike at home, which meant that some millions worth of rolling stock and bridge material were not delivered.

8137 In that case the failure to spend arises from inability on the part of contractors to earn, and not from any change of policy?—Not from any change of policy.

8138 Nor from any hesitation in placing their contracts or in going forward with their work?—That is so. The railway companies have on occasion complained that they do not know long enough beforehand how much they will have to spend. When lapses of that kind occur in England there will probably be supplementary lapses in India in connection with rolling stock or the putting up of bridge work when it arrives, such lapses must cause a corresponding lapse there.

8139 Do you think that any alteration would enable the railway programme to go forward with greater regularity and certainty? Could you for instance, give the railway companies earlier knowledge of the amount that would be made available for them?—That is a question which in that form I find it rather difficult to answer. An attempt is always made, I think, to give the railway companies as early a knowledge as possible. The Railway Board I think I am correct in saying, generally know about the end of August or the beginning of September the provisional figure which the Government of India will give the railways, and they presumably by then have got their estimates of requirements from the various railways before them, and are, or should be, in a position to distribute at once. That gives them approximately 18 months from the time of placing their order to the conclusion of the financial year to which their order relates.

8140 It is done, then, in the August or September of the previous year?—Of the year before that in which the money will be spent. There is something else to be said with regard to this question. Something has lately been done, in the last year at any rate, inasmuch as the Railway Board, or rather their accounts department, have been allowed to do what is called overcertifying indentations, that is to say, if they have had a grant for 5 millions, their accounts officer is allowed to pass indentations to a certain amount in excess of this as against possible lapses. Personally, I have always thought that something more might be done in the way of ear-marking railway lapses.

8141 What happens to the lapsed money at present?—It goes to swell the Government balances.

8142 It is not definitely allocated to railway expenditure, then?—No, it is not, but it has frequently been urged that it might be.

8143 In the case of the grants to local Governments which you mentioned, and which you said had in some cases not been spent, were those for railway construction also?—No. The local Governments, I think, have nothing whatever to do with railway construction at present, except possibly in the case of one little railway in Assam, and I am not quite certain whether that is still under the local Government or not.

8144 What would those grants be for?—They are mainly grants of the nature to which I have already referred for the non-recurring expenditure on education and sanitation. A lump grant is given, and the lapse with regard to this may occur in two ways. The lump grant may be placed at the disposal of the local Government when the Budget statement is made, that is to say, only a month or so before the close of the financial year, when it obviously cannot be spent.

8145 Is the Budget statement made a month before the year to which it refers?—It will be presented about a month before the year to which it refers. Grants made out of the anticipated surplus then obviously cannot be spent within that period. Then when the

year comes to which the Budget itself relates, the local Government may not wish to spend all this money at once. It has been given to enable them to build schoolhouses or to carry out some sanitary project, and it is not for recurring expenditure, and they may not wish to spend all that money in that year. Again, I imagine there are cases in which local Governments have recurring grants placed at their disposal for education purposes, but they may not be able to spend all of that at once, and of course it would be wasteful for them to attempt to do so.

8146 Am I right in understanding that in that case the money remains in the balances, but it is, so to speak, earmarked to that particular expenditure in the future?—I think it would probably be somewhat misleading to put the matter in that way, because, though the liability against the Government of India remains, the principle with regard to the balances has always been that the Government of India are the bankers of the local Governments and they can use the money whilst it is there in such a way as may be convenient for them at the time.

8147 In their published statement of accounts, are these claims against the balances shown?—I am not quite sure.

8148 (Mr Gillan) Do they not appear as balances to the credit of the local Governments in the general accounts of the Government of India?—I think that is so. I know they show at the end of each year the amount by which the local Governments have overspent or underspent.

8149 (Chairman) There have been many causes, no doubt occurring more or less often but still temporary in their nature, which have helped to swell the balances, such as, in the first place, failure to expend on certain services?—Yes.

8150 In the second place, the uncertainty which attached to the opium revenue and the special caution which it was thought desirable to exercise under those circumstances?—Yes.

8151 Besides that there is always great difficulty, is there not, in India in forecasting what the revenue of the following year will be?—Yes, that must always be so.

8152 It is very largely dependent on the monsoon?—Yes.

8153 Do you know whether the Indian Government have considered whether it would be advantageous to alter the date of their financial year to the 1st October say, so that they might have knowledge at least of the main monsoon at the time they were framing their estimates?—I have heard the suggestion incidentally mentioned, but I do not know whether it has ever been officially considered.

8154 What is your own feeling about it? Do you think it would be advantageous?—I think that it might very possibly have considerable advantages, as the position certainly ought then to be clearer, but it would require very careful examination, and there might possibly be some drawback to it which one is not in a position to see at the moment.

8155 Do you happen to know whether it is the case that they have made similar changes in Ceylon for similar reasons?—No, I do not know that.

8156 In your memorandum I think you say that whatever causes the large balances were due to, there is good justification for them on other grounds (page 578)?—Yes.

8157 Have those grounds been in the minds of the Government of India, do you think, or is this rather an *ex post facto* justification?—As far as the opium surplus goes to which I have already referred, that has obviously been in the minds of the framers of the Budget. But I do not think I should be correct in saying that those grounds had been very prominently before the framers of the Budget. That is a point on which I am really hardly in a position to speak for them. I should say an endeavour has been made to draw up our Budgets as accurately as may be, having regard to the various risks to which we have been exposed both with regard to famines and with regard to our opium position.

1 August 1913 ]

Mr H F HOWARD, CIE

[Continued

8158. Do you think if the Government of India had made it a little plainer to the Secretary of State that these were rather specially cautious estimates, and that it would not be unreasonable to hope for better things, the Secretary of State might have been more ready to pay off some of the debt, or to pay off earlier, or, again, less ready to borrow?—I do not think that I should be correct in assuming that the Government of India at the time that these estimates were made, were over cautious, but, even if they may have proved to be so after the event, I should not like to say that it would have been wise to avoid borrowing the money that we have done as opportunity has arisen. We wanted it all.

8159 I thought you did indicate an opinion that the Secretary of State might have paid off debt a little more readily than he did?—I should explain that I was referring solely to the case of our temporary debt, which we had all along contemplated paying off out of our opium surplus.

8160 Is the Secretary of State—I am not now talking of private communications which I know pass between the Secretary of State and the Viceroy—kept officially informed of the fortunes of the year?—I think I am correct in saying that he receives a telegram every week from the Revenue and Agricultural Department about the condition of the crops.

8161 Would the Finance Department communicate as a matter of course with the Secretary of State in Council if there were prospects of the Budget estimates being largely exceeded?—I think that they are in constant telegraphic communication with him the whole time while the preparation of the Budget is going on, but it is some years since I was in the Department at the time when the final Budget preparation took place, and I am not able to say with certainty. I think there are very often two or three telegrams a day.

8162 I am not speaking of the moment of the final preparation of the Budget, but after the Budget has been passed and approved. Suppose that six months later the prospects had obviously improved, and a surplus could reasonably then be counted on largely in excess of the original Budget estimate, would the attention of the Secretary of State be officially called to that, or would he be left to gather it from such routine information as was sent home?—Are you referring to the position during the year to which the Budget relates?

8163 Yes. You finally settle your Budget in the month of February or March, and the financial year begins by the 1st April, suppose that by the 1st October there was reason to anticipate a surplus of 2 millions above the Budget estimate would that be brought directly to the notice of the Secretary of State?—I think it would be brought to the notice of the Secretary of State in this way, and obviously in other ways also. Before that time we should have been considering our railway programme and our programme for capital expenditure generally for the year after that, and in that connection we should be taking into consideration what our total balances would be at the end of the year under consideration. Any improvements, as they are technically called, in revenue of the kind to which you refer would, I think, then be directly brought to his notice in that connection.

8164 Suppose in the month of March it was decided, after communication between the Government of India and the Secretary of State in Council, that it would be necessary to renew bills for 2 millions in December, and suppose that by the month of October you saw that the prospects of the year were very much better than you had anticipated in March that might have a bearing upon whether it was desirable or right under the altered circumstances to renew those bills in December. Would considerations of that kind be officially brought to the notice of the Secretary of State by the Government of India?—I am not sure that the Secretary of State has ever consulted the Government of India in connection with the renewals of these bills, he may have done so, but I cannot say off hand whether he has done or has asked for information in that particular connection.

8165 You do not think he does?—I really do not know exactly what the position was with regard to those bills. I was not in the department at the time the question arose, and, though I have seen certain correspondence urging the Secretary of State to pay off the balance, I do not know exactly what information was supplied to him in connection with them.

8166 I gather you do not think that the caution exercised in its estimates by the Government of India misled in any way the Secretary of State as to the prospects of the year, or induced him to borrow more money than otherwise he would have done?—My impression is that it did not.

8167 Incidentally in your memorandum, paragraph 9, page 578, you defend the piling up of these balances on the ground that they have provided you with large amounts at the present time when the price of India 3½ per cent stock is low. That is a happy coincidence, is it not?—It is very largely a happy coincidence. I should defend them rather on the ground that they have enabled us to observe continuity in railway expenditure.

8168 And to that you attach great importance?—Yes, I attach great importance to that.

8169 As regards the possible loaning out of the funds in India, I believe the Government has offered to do that in the past on certain conditions, has it not?—That has been discussed on various occasions, I think as far back as 1899, and probably further back, there has been some discussion about it. On that occasion I think the Government of India were prepared to lend money to the banks, and the Secretary of State was willing to allow it, on the condition that they always retained sufficient funds to meet his drawings. I think I am correct in making that statement, but I do not think the correspondence is among the papers which have been shown to me. Subsequently when the question arose again, about 1905 or 1906, the Government of India were experiencing great difficulties in finding the rupees to meet the great demand for them that was going on at that time, and they represented to the Secretary of State then that there might be difficulties in making loans to banks, but I believe that when loans have been applied for on occasions of stringency they have been given. It is of course possible that they have not been applied for more, as the banks may generally have understood that any loans made would only be given at the bank rate.

8170 And on those terms there is no inducement to the banks to take the money?—There has not in recent years been any inducement, that is to say, money would probably have to be very tight before the Bank of Bengal would be willing to take money at 8 per cent or 9 per cent from the Government—at any rate, for anything but a very short period.

8171 Supposing the Government of India were willing to lend in the busy time have you yourself formed any opinion as to the amount which the banks would be likely to apply to them for?—I have tried to form some opinion, but without making enquiries I am afraid any opinion would only be guesswork. As a guess, I doubt whether the banks would be able to take more than, say, a million or 2 millions sterling at the outside, but of course I would not like that to be regarded as a definite opinion, as I have not been able to make enquiries.

8172 Would you think it wise for the Government of India to lend to anybody except the Presidency banks?—I think, if the exchange banks objected to loans being confined to the Presidency banks, it would be rather hard to meet their objections, as money has been lent to exchange banks and other people in England.

8173 Would you confine it to the exchange banks and the Presidency banks?—Yes, I think so.

8174 I presume you would expect them to deposit security?—Yes.

8175 The Presidency banks already have considerable Government balances free?—Yes.

8176 And you would not advise placing larger sums with them except against security?—Only as a *quid pro quo* for some service which the Government was going to get performed for them by the Presidency

1 August 1913]

Mr. H. F. HOWARD, C. I. E.

[Continued]

banks, such as the free management of their promissory notes or something of that kind

8177 In that case it would be payment for services and it would not really be free—it would be the absence of interest that would give the payment for the services?—Yes

8178 In paragraph 17 (page 581) of your memorandum you refer to the question of giving the Presidency banks power of borrowing in London, do you regard the absence of that power as a serious injury to India?—No, I do not regard it as a serious injury. I think it might prove useful to the banks to have the power, but I will not say that I consider that serious harm is being done by them not having it

8179 Is it your idea that if they had that power they would bring money out from England in the busy season?—I think that on occasion it is possible that they might be able to assist the process which the exchange banks at present perform in bringing out funds to India

8180 Do you think there is any reason to suppose that the exchange banks do not bring money out as freely as the circumstances warrant? I will put it in another way—do you think they would be backward in bringing out the money if they saw their way to making a profit?—I was quite prepared to answer your first question. I do not think that. The point that has occurred to me—I have not sufficient knowledge of the banking business of the exchange banks to know whether it is a good point or not—is that they might have seen their way to making a bigger profit elsewhere. Some of these banks have branches in Hong Kong, China, the Straits, and, I think, in Australia

8181 So that their interests have not been purely Indian interests?—That is so

8182 And they might find it to their advantage to use their funds elsewhere?—Yes

8183 Even though India wanted them?—Even though money was tight in India it might be tight in other places

8184 It is only for a small portion of the year that money is tight in India?—Yes, I should say a small portion of the year

8185 We have had evidence that there is great difficulty in employing money at all in the slack months of the year?—That is so, but it is generally believed, I think, that the busy season extends over a longer period than it used to, say, 15 years ago

8186 Supposing that the Government of India were willing to make advances, have you any views as to the source from which they can best be made, had they better be made from the treasures or from the currency reserve?—I do not see any objection to their making advances from either their treasury balances, if they are able to do so without inconveniencing themselves, or from the currency balances

8187 We have had it suggested to us that in some ways the currency reserve might be the most convenient source. At the present time the issue of notes is directly regulated by statute, I think?—Yes

8188 And the fiduciary portion is fixed at a rigid figure by statute?—Yes

8189 Do you think it would be safe to increase the fiduciary portion?—I think with the currency reserve growing as it has done, it would be possible to make continual increases from time to time in the fiduciary portion, and I think probably some increase might be made now. In connection with the possibility of temporary advances from the currency reserve, I intended of course that they should be limited by the same considerations that permanent investments of the reserve should be limited by

8190 That they should be part of the fiduciary issue?—Yes, and that they should take the position of a temporary investment

8191 To what limit do you think it would be safe to go in the fiduciary issue? Should you fix the limit by a percentage either of the gross issue or of the net issue of the notes?—I have endeavoured to consider whether one might fix it in some way of that kind, but I have found it very difficult to think of any percentage figure which would in all circumstances be satisfactory. I should prefer to consider the position

from time to time after looking to all the circumstances of the time. The reserve has grown up so rapidly in the last few years that I find it rather difficult to generalise in that way

8192 In any case you think it might be possible, within whatever limits were fixed for the fiduciary issue, to make available a part of that money, not for permanent investment, but for temporary investment?—Yes, I think so

8193 And to use money so set apart for temporary investment for the relief of stringency in the busy times?—Yes

8194 In paragraph 44 (page 590) you put in an opinion of the late Sir Clinton Dawkins on that subject, but I think you do not altogether agree with it?—No, I do not altogether agree with it. The point made by him was that the general taxpayer would be a loser

8195 The point made by him was this rather, was it not that if you could invest money at all you could invest it for 12 months, and that if you could afford to invest it for 12 months it would be earning less interest if you invest it for only three months or any short period?—Yes

8196 In the busy season I suppose, the active note circulation tends to rise?—I think I am correct in stating that it does

8197 So that just at that period of the year you have not much reason to fear that notes will be brought back for encashment, I mean on balance?—We have got such a large margin that there would be no risk involved in loans of a relatively moderate amount being given

8198 What I was going to suggest to you was that it is in the busy season of the year that people take out notes, and it is in the slack season of the year that they bring back notes, on balance, therefore, in the busy season of the year the call on your reserves for the encashment of notes would be less, and your power to lend would be greater, do you follow that?—I follow that, but I am not quite certain of my facts as to the extent to which the actual circulation of notes with the public extends in the busy season

8199 If I am right in my premise, I am right in my conclusion, am I not?—Yes

8200 Am I right in inferring from what you say in paragraph 19 (page 582) that you think the amount of rupee loans issued in India in recent years could have been considerably increased?—I speak there of "some what larger loans." I think it might be safe, for instance, to try to raise 4 crores as against 3 crores, but I do not think we could put a loan of 6 crores on the market and hope that we could get it taken up

8201 Are you entirely dependent on the banks taking up these loans, or do you get a direct response from the public?—We are mainly dependent on the banks, though there have been occasions on which other gentlemen, I believe, have taken considerable interest in the loans

8202 What is the policy of the Government of India in respect of loans? Is it their policy to place as much as they can in India?—Yes, it is our policy to place as much as we can in India. I imagine it might have been possible perhaps to have placed more in the last two or three years, and the reason that was not done was probably the fact that our balances were so high that it was not considered necessary to skim the market in that way. Generally speaking, the principle is correct

8203 I gather that in your opinion the fixing of the rupee at 1s 4d. has been beneficial to India?—Yes

8204 Do you think that is the general opinion in India?—I think so among unbiased people who have really thought about the question, but it is rather difficult to say what is the general opinion in India about anything

8205. The Committee of 1898 recommended that India should have a gold currency in active circulation, do you think that desirable?—I think it is desirable if gold is wanted by the public to let them have it, and it is desirable for the Government to be in a position to honour both their notes and their rupees by gold, if they are called upon to do so

1 August 1913]

Mr H F HOWARD, CIE

[Continued

8206 I quite understand the view that it is desirable that the Government should be in a position to give the public whatever it demands?—I can quite see that there is something in the argument which is generally used in support of a gold currency, that it will mean that the liabilities of Government for the redemption of rupees are less if gold is in circulation instead of rupees which would otherwise have been coined.

8207 On the other hand, would it not mean that the reserves which the Government have to meet those demands, are less also? I will take it by stages if you put rupees into circulation you increase the Gold Standard Reserve by the profits on the coinage, that is so, is it not?—Yes.

8208 And if you put notes into circulation you increase the currency reserve?—Yes, but the position is not the same. In the case of your currency reserve you have got a metallic backing for a considerable portion of it—in fact, for the main portion of it. With regard to your rupees in circulation, the profit on coinage amounts at most to about a third, and the higher the price you buy your silver at the less your silver is, and the smaller the proportion your reserve forms.

8209 The only way in which you can increase those two reserves is by increasing either the note circulation or the rupee circulation?—Yes.

8210 If, on the other hand, you put the gold into circulation those reserves cease to increase?—Yes.

8211 Which is more valuable for the maintenance of exchange—a million in your reserve, or a million in circulation in gold?—In my opinion the million in the reserve would be more valuable.

8212 Do you think that if gold were in circulation it would serve largely to support exchange in a time of crisis?—I am very doubtful about it, but that is a point on which I think it is impossible to form any final or definite opinion.

8213 As far as the experience of 1907, 1908, and 1909 goes, what is the inference you draw?—I think at that time, though a considerable amount of gold has been absorbed, there was very little actually in circulation.

8214 At that time the Government of India gave up, I think, something like 4½ millions of gold?—A great deal of gold was taken.

8215 Of that 4½ millions there was actually exported, I think, only a quarter of a million?—That is very probably so, but I am not sure of the exact figures.

8216 Possibly another portion of it may have gone to prevent the import of gold?—Yes.

8217 But it is only to that extent that that 4½ millions served to support the exchange at that crisis?—To the extent to which it prevented the import of gold.

8218 Either to the extent to which it was exported or to the extent to which it prevented the import of gold?—It seems to me that it would always be valuable for Government to hold gold for that special reason. There will always be a demand for gold, and if Government does not meet it it will have to be found elsewhere. By meeting that demand you help to keep up exchange to a certain extent. Whether it is as valuable a weapon as selling sterling bills on London or not I am not sure, but at any rate I think it is a valuable weapon.

8219 If such a crisis arose again, I infer from that that you think the Government of India ought not to hesitate to use its gold freely, both in London and in India?—Yes, that is my opinion.

8220 Would you be prepared to say that if you had your free choice as to whether the gold should be in circulation or in reserve, you regard the use of it in circulation as comparatively wasteful from this point of view?—I should regard it as only comparatively wasteful, because it may have its uses. So far as one can judge, gold would not come back from circulation for export but it might. It is rather difficult to answer that question, because we have tried to find out

what happens to gold in India when it is absorbed, and we know really not nearly as much as we should like to.

8221 Does the Government of India, as far as you know, act upon the principle that you suggested just now in one of your answers, that they should give the public whatever they ask for without trying to force one form of currency rather than another?—So far as I am aware, that principle is acted upon. I do not know whether in some sub-treasuries it is always possible to give the coin that is required, but I imagine it is.

8222 I ask the question because we had it in evidence yesterday that in certain places, Lahore was one of them, if a bank applied for a currency transfer from Calcutta to Lahore, they were favoured to the extent of ¼, if they took gold rather than rupees?—I am not able to say whether that is correct or not, I have not heard that.

8223 Speaking generally, what is your view about a gold currency? do you think it is a necessary concomitant of a gold standard?—I do not think it is necessary but I consider that it is most desirable that an endeavour should be made to meet any demand for gold that there might be on the part of the public. I can conceive of theoretical systems in which there is no gold currency, but I doubt whether it is practicable at the present time.

8224 If you had your own way to do exactly as you pleased, would you induce the people to take gold, or would you try to induce them to take notes and rupees?—I think I should have a certain sentimental desire to let them do as they like.

8225 That is not exactly an answer to my question, is it?—It is not that I do not want to answer any question put to me on the subject, but I feel that if you refuse to allow the public to have gold when they see that you have got it, there is always liable to be mistrust, and if there is a demand for it, I think we ought to let them have it.

8226 But apart from special circumstances with which you are not acquainted, you would not go so far as to put a premium on their taking gold?—No, I would not do that, but in cases in which gold is not immediately available there is always great public inconvenience. For instance, I believe, in France only a few months ago, if one was travelling on the Continent, it was very difficult indeed to get any gold, you got 5-franc pieces. That was only last Christmas.

8227 So that you rather infer from that that civilised countries get along with a comparatively small gold circulation?—Yes.

8228 If India has a circulation which is mainly a token currency, she is not peculiar in that?—No.

8229 Now as regards the question of the establishment of a gold mint in India, what is your view on that?—I should like to see the experiment tried. I put my answer in that form intentionally, as a great many people have said that they object to it being called an experiment.

8230 You consider that it would be an experiment, but one which you would like to see tried?—I would like to see it tried because we may get gold presented, or we may not, but I think that the probability is that in time gold will find its way to the mint, and if there is bullion, or if there are ornaments, that people wish to take to the mint, I think the mint ought to be there to deal with them.

8231 I suppose if they took those ornaments now they could get bullion value for them without difficulty?—From the bank or from a jeweller I suppose they probably could.

8232 Do you think they would have any difficulty in getting sovereigns in exchange for bullion in the form of ornaments?—I think the circumstances in which bullion might want to find its way to the mint would be those in which there would not be a large number of sovereigns available—that they would have been drained out for export, or that they would have disappeared. I am talking of the bullion and ornaments from the hoards, not of bullion which is imported by the banks, as I think your

\* See Appendix XXIX, page 633, in this connection.

1 August 1913]

Mr H F HOWARD, C I E

[Continued

question related to the bullion and ornaments coming out of hoards

8233 Yes What would be the circumstances in which that form of bullion would be likely to come out—would it be under something like the pressure of famine?—The circumstances are, of course, theoretical, but we are dealing very largely with a theoretical question I meant such circumstances as a famine

8234 Your idea is, then, that they might bring out gold bars, or gold ornaments, and if there was a mint open, take them there to be coined into sovereigns?—At any rate they would be bought up and the person who bought them would be able to convert them into coin

8235 What would he do with the coin when he had got it?—I do not know what he would do I do not know who the "he" would be If "he" was the bank, they might want to export it

8236 If he was wanting to export it, would not bullion be just as useful for him? Would not the gold bars be as useful to him for that purpose as the gold sovereigns?—I do not know that he would get any large gold bars held in hoards I am talking more of the small trinkets and ornaments which would come out of hoards, and might gradually find their way through the local mahájans, and so on to head-quarters, and there want some outlet

8237 Do I understand you to think that the opening of a mint would, under such circumstances, give a power to the peasant to realise the value of the gold that he has got which he cannot now exercise?—I do not think I could press the contention that the peasant could not sell his gold for money, and I do not think I meant to say that

8238 You do not think the advantage of it would get down to him in any way, then?—I suppose the peasant with hoards could get money for his ornaments, but it is more on theoretical grounds as regards the peasant I think the word "anomalous" which I used rather implies that it is a theoretical objection

8239 (Mr Keynes) Would it meet your point at all if the Government were to re introduce the notification which I think existed in 1906 by which rupees were issued against gold bullion?—Yes, it would to some extent

8240 In that case your peasant could bring his ornaments and get rupees for them?—And then leave it to the Government to export the gold bullion and re import sovereigns in its place?

8241 If it wished to do so?—I think it would meet my objection on one ground, but would it not be rather introducing a new function for Government as dealers in gold bullion?

8242 (Chairman) Am I right in concluding that your reasons for a mint are rather theoretical and sentimental than practical—that you approve it, rather because you find it difficult to argue against it in theory than because you believe any great practical advantage would accrue from it?—I think that practical advantages may conceivably accrue, but I think it is a duty which we owe to the public, if they present bullion when we have nominally a gold standard, that we should be prepared to convert that into coin It might be a practical inconvenience if it is on a larger scale than the small ornaments which I mentioned as a theoretical anomaly

8243 Would you propose to charge seigniorage on the coming of sovereigns?—No

8244 They do in Australia?—I believe in Australia the mints were introduced not in order to supply currency but as a convenience to the mining community mainly I believe that was the objection urged by the Royal Mint at home at the time when our proposal was first put forward with regard to the opening of an Indian mint

8245 On the other hand, South Africa, the country where the greatest amount of gold is now produced, has not thought it necessary to have a mint, so far at any rate?—That is, I believe, the case

8246 Does not that affect your argument? Are you still desirous of it?—Yes, I think we ought to

place the facility in the way of the public in case they desire to use it

8247 So far you have rather suggested that it would not be much used at any time, and that if it was used at all it would be used only in bad times?—It might only be used in bad times, on the other hand, the Indian mmes at present produce, I believe, about 2 millions pounds worth of gold a year, which is exported, and it might be convenient to them to pass their gold through the Indian mints

8248 Do you happen to know at all whether they are still under contract to send their gold to England?—I understand they used to be, but I do not know what the present position is

8249 Coming now to the Gold Standard Reserve, I think it is your view that a larger sum should be held in actual gold?—Yes

8250 Will you give me your reason for that?—If Government merely holds securities and sells them it may put them in funds to some extent, but it affords no relief to the market If they are actually in possession of ear marked gold, they are both in a position to utilise that, and to help to relieve to that extent a financial stringency which may exist Apart from that there must, of course, always be a considerable loss in a great crisis by the sale of securities

8251 Are you disposed to name any figure as the minimum amount of actual gold that ought to be held in reserve?—I would rather consider the question from time to time as time goes on, but I would like to see 10 millions, at any rate, held, and I would not mind seeing 15 millions

8252 Under the present circumstances?—It is to be 5 millions at present

8253 Would those figures you have mentioned be under present circumstances?—I would not sell our securities out in any hurry, but as the reserve is built up I would like to see those figures gradually got to

8254 I think you approve of the location of the major portion of the Gold Standard Reserve in London?—Yes, provided, of course, that we also hold sufficient gold in India in some way or other

8255 Do you approve of the existing Indian branch of the Gold Standard Reserve?—I should be quite willing to see that changed into a gold reserve and the rupees transferred to the Paper Currency Reserve, but I do not consider the matter of any great importance, one way or the other

8256 What is the reason for keeping rupees in the Gold Standard Reserve in India?—This reserve was originally formed, I think, in 1906, or thereabouts at a time when the Paper Currency Reserve was not nearly as large as it is now, and when there was a very great demand for rupee coinage It was found very difficult to hold a sufficient reserve of rupees in the Paper Currency Reserve in addition to the gold that was accumulating there After the Government of India had first tried the experiment of holding, I think, a silver mgot reserve within the Paper Currency Reserve, and had suffered very grave inconvenience in spite of this arrangement, they decided to constitute this extra reserve of rupees, and also to hold it as part of the Gold Standard Reserve

8257 To that extent it was a departure from the original purposes of the Gold Standard Reserve?—Yes

8258 It was, in fact, using the Gold Standard Reserve in order to give elasticity to the currency?—Yes

8259 But you think whatever practical reasons there were for it have passed away, and there would be no objection now to transferring that silver to the Currency Reserve, with a corresponding transfer of gold from the Currency Reserve to the Gold Standard Reserve?—Yes

8260 You observe, in your memorandum (page 537, paragraph 33), that you do not approve the action taken in 1907, when funds previously allocated to the Reserve were used for railway development in India?—Yes

8261 You add, that it had the great incidental disadvantage of causing the public to have grave misgivings as to the policy of Government in regard to the treatment of the fund, you would, I suppose,

1 August 1913]

Mr H F HOWARD, C I E

[Continued

agree that to secure the confidence of the public is of the utmost importance in this matter?—Yes

8262 Do you think that the public would have greater confidence if the management of the Gold Standard Reserve were subjected to some statutory conditions and safeguards?—I do not think it would make any great difference to them. I am not quite certain what kind of safeguards would be proposed.

8263 That is a question I was going to put to you if you had favoured a statutory regulation. All I meant to suggest at the moment was that it did seem, in your view, that some want of confidence had been caused, not by the insufficiency of the Reserve but by the handling of the subject by the Government?—Yes

8264 Possibly, if statutory lines were laid down which it was known that the Government must comply with, the public confidence in the maintenance of exchange and in the general policy on this subject of the Indian Government would be strengthened?—I do not think that would be necessary, provided a clear and definite statement was made by Government to the effect that they would hold a supply of gold and a total reserve which would command confidence.

8265 In regard to the possibility of a State bank, I gather that you have not formed a very strong opinion one way or the other?—That is so.

8266 And that your ultimate decision would be very much determined by the kind of scheme that might be proposed?—Yes. It is a matter which one would like to discuss with a great many people, for instance, bankers and so on.

8267 Is it a subject to which you have had occasion to give special study?—No. I have read the papers and various discussions about a State bank, two or three times, at various periods.

8268 Under the circumstances, therefore, would you desire to express to the Commission any opinion as to either the advantages or the disadvantages, or the conditions which should attach to such a bank, beyond those which you have printed in your memorandum?—I should prefer to say nothing about it, because it is a subject on which I have got no practical knowledge.

8269 (*Sir Robert Chalmers*) I will ask you one question, if I may, on the subject of the sale of Council Bills. The par of exchange being 1s 4d and there being specie points, one for export on one side and one for import on the other side, would you leave exchange to find its natural level within those two specie points and sell your Council Bills at the selling rate that was obtainable in the market, or would you be disposed never to sell under a certain figure, say, 1s 4d, irrespective of the specie points?—I should adopt the first course that you have suggested, subject, of course, to the fact that it would be desirable when exchange falls to cut down your offer of Councils, as is done at present.

8270 But on principle, subject to prudence and common business methods in dealing with the moment, you would follow that general scheme?—Yes.

8271 You would not be prepared to take the other line of saying, under no circumstances will I sell, say, under 1s 4d?—I should not. I think a great many of the criticisms in connection with the present practice leave out of sight the fact that, if you never sell under 1s 4d, you may find there is a large balance of trade against Australia, and then all the Australian sovereigns will come to India and swamp India. It is the gold export point from England that you have named, and it leaves out the fact that it may still be profitable to send sovereigns from Australia or from Egypt.

8272 Do you think that if the opposite policy, which you do not favour, were pursued of never selling under 1s 4d the Government of India could get the amount that it has at present to cover by Councils? I suggest that would depend upon the circumstances perhaps of the given year, but there is by no means a certainty that they could get it across?—I think I am right in saying that either last year or the year before was the first year, for many years at any rate, in which the Government did not sell at some period of the year under 1s 4d.

8273 Suppose the Government of India and the Secretary of State in Council decide to make a change in the financial year, taking the 1st October as the starting point, that would mean that you would have an odd six months to get right before you got on to the new financial year?—Yes.

8274 As a practical man, in dealing with such a position would you not be disposed to begin by taking a budget for six months?—You mean to cover the transition period—for six months, or for 18 months is the alternative course.

8275 I am anxious to get your opinion?—I should be inclined, I think, subject to further consideration, to make a rough budget for the six months.

8276 You would be, of course, in a easier position then, because you would have only one unknown instead of two unknowns to guess at as compared with budgetting for 18 months?—I do not think it would be practicable to make your six months' budget in the same detail that the yearly budget is made in. I should be content with a rough budget for those six months.

8277 You would do it for six months?—I think so, that is to say, subject to further consideration.

8278 (*Sir Ernest Cable*) There is one question that arises out of your answer to the Chairman about lapsed railway grants. It is rather difficult, is it not, for the Railway Department to spend the large sum of 10 to 12 millions at a year's notice, and lapses must occur under the present system, must they not?—I think there was very little lapse this last year when the grant was actually raised during the course of the year. I do not know exactly what the figures were.

8279 It was suggested to us by one of the witnesses that to employ these lapses, and to let the Railway Department know exactly what they have to spend, the Government of India should make out a 5-yearly programme for the railways, letting the Railway Department have 12 millions a year or whatever the sum might be, for five years, and letting them share in any surplus that might accrue. Would that be a practicable suggestion?—I do not think that that would be practicable, unless a separate railway fund was created, or some definite arrangement of that kind was made to secure continuity.

8280 Would you favour the plan, or would you not, of having a separate railway fund?—I do not think I would like to go quite so far as that, but while not being prepared to go quite to that extent, I should like to see our balances high, in view of the additional permanency which we would get for our capital expenditure. High balances such as we have got now, are an assurance that our railway expenditure will be more regular.

8281 Then you are not in favour of the close budgetting which has been talked about, and you rather like these heavy surpluses?—I think very close budgetting is impossible and dangerous in India.

8282 You would like to err on the side of caution?—Yes.

8283 I notice that in the part of your memorandum referring to the question of the amalgamation of the Gold Standard Reserve and the Currency Reserve, you do not object to the amalgamation on principle but merely because you think it might shake public confidence (page 587, paragraph 36)?—I think I do object to it on principle, and I think the fact that it might shake public confidence was only one reason for objecting to it. My own view is that they are intended to serve two different objects, and each Reserve must be managed in such a way as to ensure its securing its own object.

8284 But the one Reserve is frequently used to secure the object of the other Reserve?—If that advantage can be incidentally obtained there is no particular objection to it.

8285 (*Mr Keynes*) Why are the railways not allowed to carry over unspent balances from one year to another?—I find that a very hard question to answer because I have always thought myself that it might be possible to allow it. I have always thought personally—I am not expressing this as the opinion of Government but as my own—that it might be possible

1 August 1913]

Mr H F HOWARD, C I E

[Continued

to arrange for the railways to carry over unspent balances

8286 What are the reasons, good or bad, which influence the Government in adopting the opposite policy?—It has been held, I believe, that it would affect the general Government ways and means programme

8287 In paragraph 25 of your memorandum (page 585), with regard to the competition between notes and gold, you say that there is no "suggestion of" endeavouring to extend the circulation of gold to "any extent at the expense of notes" If you take a long view, is not the circulation of gold almost necessarily at the expense of notes?—It may be to some extent at the expense of rupees

8288 Is it credible that over a long period people will continue to use rupees for large payments? Is not their inconvenience so great that their use must be something which will disappear in the course of time?—That is theoretically so, but in India we find that things which are theoretically correct are not always practically so

8289 Is that not the actual experience? In Northern India, and some other parts, are they not getting into the habit of using gold instead of rupees, and in Bengal, and certain other parts, are they not getting into the habit of using notes instead of rupees? Is there not a general tendency to use some substitute for rupees in the case of large payments?—That is so to some extent There is also a very rapid concurrent increase in the rupee circulation

8290 I was not asking about that point I was asking about the use of a particular form of exchange for large payments and for remittance Would you maintain that there are some parts of India in which, taking a long view, it is incredible that paper should be used, and therefore that gold must necessarily be the substitute for rupees? Are there any parts of India of which you would say that was the case?—I should think it probable that there must be some competition between gold and notes

8291 My point is that it is useless to say that we should like gold to circulate, but we do not want it to be at the expense of notes, because *prima facie* there must always be a tendency for any gold which circulates to replace notes to some extent in the long run Would you agree to that?—I am not quite certain that I can answer your question by an exact Yes or No I do not think I have suggested that we should attempt to force gold into circulation at all I would be quite happy to see it there, but I do not think it is essential, as I rather think you imply is my opinion, that we should have a large gold circulation, and I do not think the Government ought to take any steps to force gold into circulation

8292 Do you think they would be right to take steps to popularise notes?—They have taken steps to popularise notes, and I think they have been perfectly right in doing so

8293 And would be right in taking further steps if such were available?—Generally speaking, yes, if such steps are legitimate I should like to know what steps it is proposed to take

8294 Such steps as opening additional currency offices?—I think so, and I think the Government are generally taking steps to do that I know one or two cases in which they have been improving the position of the currency offices

8295 Would it be wise or foolish to take similar steps in regard to gold?—The steps which have been taken with regard to notes are unnecessary with regard to gold, I mean gold is a universal legal tender, and always has been since our present currency system was adopted

8296 I was not asking about legal tender In popularising notes, one of the things you can do is to make them available in more places?—Yes

8297 You could also do that if you like in regard to gold?—I think notes are available at practically all our sub-Treasuries all over India

8298 I am not asking a question of fact, I am asking a question of policy You have agreed that it would be wise to make notes available at more places,

would it be wise to make gold available at more places?—I am not quite certain that my statement was that I agreed that it would be advisable to make notes available at more places I think we should take steps to supply notes where required, and if our present arrangements are inadequate, I think we should undoubtedly consider the question of improving them But I do not know that I have made any admission that they were inadequate

8299 You are not prepared to make any more precise statement on this question?—No I am all for popularising notes and taking any steps that may be useful in that direction, but I do not think it is necessary to force either notes or gold down the throats of people who do not want them If people prefer to take rupees, I should let them have that coin

8300 The drift of my examination is that it is not really possible to take a neutral attitude Whenever the Government opens a new currency office they are helping notes, and whenever they send large consignments of gold up country they are helping gold Unless both were available with complete facility in every centre in India, which is not the case, a perfectly neutral policy is not conceivable?—Apart from more currency offices I think I may say that in nearly every Treasury and sub-Treasury in India there is a supply of currency in three forms—gold, notes, and rupees, and they are generally available to the public I do not think that Government at present are favouring any one form as against the other

8301 But they are not available, if I may say so, both ways round, you cannot encash them freely everywhere?—I do not know exactly what conveniences in the form of encashment are provided

8302 In paragraph 27 (page 586) you say that you do not think the Government "should attempt" to husband the supply of gold by refusing to give it "out when available" Do you mean by that that at a time of crisis they should give out gold in India?—Yes, freely

8303 You do not think that they should keep their gold for the purpose of supporting exchange solely?—I consider that would tend to support exchange In answer to a question by the Chairman I think I expressed that view

8304 Do you think it supports exchange as completely as if it is used for export?—No I think I have already stated that I thought it would not have the same direct effect, but it would be a valuable weapon

8305 But not equally valuable?—I do not think it would be equally valuable

8306 In that case why are you in favour of supplying gold in such circumstances?—We do not want to see sovereigns in India go to a premium, as I think that is rather a confession of weakness For some years after the 1907 crisis I think sovereigns were at a premium of about 3*l* or 4*l*. Shield sovereigns, I think, are still at a premium, but that, of course, is a fancy price

8307 (*Chairman*) The shield sovereign is a question of ornament, is it not?—Yes, I think so

8308 (*Mr Keynes*) Do you think it would be wise to pursue that policy even at a time of crisis, bearing in mind the fact that the premium could be no more than the cost of importing sovereigns from England?—If adequate reserves are held I hope it will never come to that. That is one of my reasons for wishing to see our reserves rather stronger than they are at present

8309 (*Sir Shapurji Broacha*) According to paragraph 5 of your memorandum, page 577, in 1910-11 there was a lapse of 3 millions, and in that year the railway programme was 9½ millions?—Yes

8310 Was the 3 millions carried to that 9½ millions for railway works, or was it eliminated altogether?—You can say either that it was included in the 9½ millions or that it was eliminated altogether The 9½ millions was the total amount

8311 Therefore, if the previous year's figure was taken off, it would amount only to 6½ millions for that year?—I suppose it comes to that. But it is 6½ millions in addition to expenditure which had been

1 August 1913]

Mr H F HOWARD, C I B

[Continued

contemplated in the previous year, but had not been incurred

8312 If the lapsed amount was included in the 9½ millions, then you were not authorised to spend in 1911-12 12½ millions?—No, it was 9½ millions

8313 Would it not be an advantage that this lapsed grant should be carried forward in order to have a continuous programme to spend, say, 10 millions or 12 millions annually?—I have already expressed the view that if that could be arranged I should like to see it

8314 What is your opinion about these lapsed grants? Should they not be added to the next year's provision?—If it was practicable I should like to see arrangements made for carrying forward such lapsed grants. At present the arrangement has been adopted of over certifying railway indents, which should to some extent in future operate to prevent lapses on the same scale in which they have occurred before. I think that was adopted during the course of last year or slightly earlier

8315 The Chairman suggested the changing of the budget date to October, that of course would be an impediment to the Governor coming down to the plains. What is the nature of the climate in Delhi in October, is it getting cool?—I have not heard that towards the end of October the weather is getting worse

8316 Dealing now with the suggestion that the Presidency Banks should be given liberty to borrow in England, I do not think it would be an advantage to them to bring money out to India unless they can remit back in export bills, because otherwise the cost would be very great. If they brought it for six months, it would cost them 1½ per cent to get the money out to India and to take the money back for payment in England. It would therefore cost them 3 per cent more than the 3 per cent charge for the loan, because, of course, 1½ per cent for six months is 3 per cent per annum. Even if they were to borrow for 12 months they would have to add 1½ per cent for bringing it to India and taking it back to England. Therefore, if they were allowed to borrow, it would be no advantage to them unless they had the privilege of buying bills for export?—I understood that the Presidency Banks at one time were very anxious to get that liberty of borrowing in England

8317 They were, but I do not think they would take advantage of it, if it were given to them now?—I stated in answer to the Chairman, that I did not think the absence of the power to borrow was a serious defect at the present time

8318 If they were to buy export bills, then they would come into competition with the exchange banks?—Yes

8319 And the exchange banks, I suppose, would object, because the Presidency Banks are subsidised banks, and therefore the exchange banks would not have any play?—I presume the exchange banks might object

8320 I gather that you are in favour of a mint in India?—I am in favour of it

8321 Not for any practical advantage that might arise from it, but in order to satisfy the sentiment of the people?—And I can see that theoretically and possibly practically there might be certain advantages. I would like the experiment of a mint to be tried

8322 You do not mind spending a certain amount of money, and afterwards scrapping the machinery, for the sentiment of the people?—I am afraid we should have to undertake the necessary expenditure in that case

8323 Which coin do you prefer?—I should prefer the sovereign

8324 Not the 10 rupee piece?—No

8325 You say in your memorandum that you are in favour of exchange at 1s 4d?—Yes

8326 Let us take this instance. Australia, remits gold as merchandise because it has gold mines, and South Africa also remits gold as merchandise. The value of a sovereign in London is a sovereign and nothing more, and the remitters have to pay freight, insurance, interest and commission?—Yes, that is so

8327 So it would be an advantage, instead of sending the sovereigns here, to send the sovereigns at the same rates to India, because they would have 24 days less interest to pay, you could for instance, have sovereigns in India from Fremantle in 11 days whereas it would take 35 days to send them to London?—Sovereigns do come very largely from Australia to India

8328 Suppose the Secretary of State were not to sell bills up to September, and the banks satisfied their needs in India by Australian sovereigns, what would happen then?—The amount of the Australian sovereigns available varies very much from year to year

8329 I know that in six months two years ago they sent about 11 or 12 millions of sovereigns?—The figure was very large the year before last

8330 In that year the Secretary of State did not sell, say, until October under 1s 4d, and at the end of September the Secretary of State found the conditions of India were famine conditions. The Secretary of State had not taken advantage of the market rate, and he was short of funds to the amount of 17 millions. Is it a good policy if you stick to the 1s 4d?—I did not entirely understand your question (i.e., 8325). I assumed that when you asked me whether I approved of the fixing of exchange at 1s 4d, you meant whether I approved generally of the fixing of the rupee at 1s 4d?

8331 It is just the same. The Secretary of State must sell at exchange value, that is to say, at par value, to and fro, and not stick out for 1s 4d at any time?—I agree. I must apologise for having misunderstood your question. I thought you were asking me generally if I agreed with the policy of fixing the rupee under the gold standard system at 1s 4d, and I did not understand that you were referring to this other point

8332 You would agree that the Secretary of State must meet the market?—I quite agree with that

8333 Do you know that the Currency Department refused to give sovereigns from 1908 to 1911, and that they did not resume giving sovereigns till 1911?—It was either the end of 1910 or the beginning of 1911

8334 Did it create a mistrust of the currency because sovereigns were not given against rupees, do you know of any dissatisfaction in India about that?—"Dissatisfaction" is rather a difficult word to apply, I think, to the position. I think I have seen the weakness of the Government's position criticised in that they were not able to meet any demand for sovereigns

8335 I do not remember seeing anywhere in the newspapers the Government's position being criticised?—I cannot remember definitely at this date, but I think I am correct in stating that some of the banks addressed Government on the subject. Government at that time, when their reserves were not so full, limited the amount they gave out to parcels of 10,000 sovereigns

8336 The Exchange Banks did complain when the Government put the value down to 1s 3½d, and they petitioned the Secretary of State here but so soon as the par of exchange rose to 1s 3¼d, I think the complaint ceased, and that the stopping the giving of sovereigns was subsequent to that complaint?—I can not cite any particular newspaper at the present moment, but I have certainly been under the impression that the Government's position in having no sovereigns in India has been criticised as being a position of weakness

8337 Do you not remember a newspaper criticising the position which the Secretary of State and the Government of India created by breaking the par of exchange? I know that criticism was very serious and very severe but I do not remember between 1908 and the end of 1910, or the beginning of 1911, any criticism or complaint for refusing sovereigns against the tender of rupees, because Government had a statutory power to refuse?—I am under the impression that criticisms were made

8338 But the Government had statutory power to refuse to give sovereigns?—They have always retained that power

1 August 1913]

Mr H F HOWARD, C I E

[Continued

8339 If the Government were to commence to refuse giving sovereigns now, notwithstanding having them in the Currency Reserve, I think we may infer from that that there would be something like two years during which there would not be any complaint, and that the people would get accustomed to these large reserves, as being the intention of the Government?—I really do not know whether people would get accustomed to seeing these large reserves of gold or not. I am afraid that the action of the Government in holding large reserves of gold and failing to give it out when required, would meet with criticism.

8340 If the people became aware of the intention of the Government to make as large a gold reserve as possible for the benefit of exchange, I do not think there would be much complaint?—It is possible that the complaint might not be very —

8341 Serious?—Noisy, I would say.

8342 They are accustomed in France not to complain, but to take 5 franc pieces for all debts?—It is an inconvenience, though, that you can only claim 5 franc pieces when you are travelling on the Continent.

8343 Would not the people get accustomed, like the French people, to use silver?—I did not get accustomed to it.

8344 Would it not be better that the Government should keep the gold, when they know that it is not to the people's disadvantage, rather than that it should be the custom that the people should receive sovereigns, and then that should be stopped all of a sudden?—My position is that the Government reserves should be sufficiently strong, so that it would not be necessary for them to stop all of a sudden.

8345 (Sir James Begbie) You have told us that the standard of India is nominally a gold one?—Yes.

8346 In paragraph 26 of your Memorandum (page 586), you have discussed the question of the exchange standard, is it your suggestion that the currency of India is being conducted on the lines of an exchange standard?—It has been conducted largely on the lines of an exchange standard, I think, inasmuch as Government has now practically undertaken to maintain exchange by the sale of sterling bills on London, when exchange falls to 1s 3½d. My own view, as I think I have already stated, is that Government should also be prepared to meet demands on it for gold. That is not a necessary concomitant of an exchange standard.

8347 So far as I understand you, the present system is an exchange standard in its working?—The means adopted by Government to support exchange have been, and must, I think, necessarily continue to be, those which would be necessary to work an exchange standard.

8348 I want to see how far that applies to the Indian system. You explain this exchange standard to mean that the local currency is not necessarily redeemable in gold, but that it is kept near a fixed par with gold, by control by Government of the foreign exchanges. Do you mean that the control is exercised by the sale of bills?—Yes, that is what it comes to.

8349 When you say the scheme is to keep the local currency near a fixed par of gold, do you mean a fraction above or a fraction below par?—I mean within the gold point on one side or the other.

8350 The local currency you refer to would, I presume, include the note issue in India?—As a matter of practice I suppose that must be included. Though the exchange standard is concerned primarily with the rupee currency, the Government is, of course, equally committed in respect of the paper currency.

8351 You have already said that Government should have the option of redemption in either sovereigns or rupees?—Yes.

8352 Owing to the great increase in the note circulation, a considerable portion of the coin reserve is now held in sovereigns in the Paper Currency Department, is it not?—Yes.

8353 I think you have already told us also, that the gold held in the Paper Currency Department is the most satisfactory gold reserve held by Government from a currency point of view?—I do not know that I made that statement. What I intended to state

was that, provided Government holds a sufficient reserve of gold in India, I do not regard it as very material whether they hold a separate branch of the Gold Standard Reserve there, or whether they hold the whole amount which is necessary for their purposes in the Paper Currency Reserve.

8354 The point I wanted to bring out was that in the case of the Gold Standard Reserve there is only one-third of the currency saved in the form of gold reserves?—That is so.

8355 But in the case of the Paper Currency Reserve you get the whole of the gold saved?—Yes.

8356 Would you say that these gold reserves in the Paper Currency Department have been accumulated by the Government controlling the foreign exchanges?—They have accumulated as the result of the action of the Secretary of State in limiting his Council bills to a certain extent, but I do not know that it could be said that the Secretary of State's action in limiting his bills was a control of the foreign exchanges.

8357 For the time being he has ceased to control foreign exchanges?—That is a matter of definition, I think.

8358 At any rate, so far as this reserve is concerned, the gold which has come in must have been imported at gold import point?—If gold comes in from England it must come in at the gold import point, but gold may come in from Australia, I imagine, below that.

8359 But still at a gold point?—That is a gold point, but it is not what is commonly called the gold point. In India we generally mean, when we speak of the gold point, the gold point with reference to London.

8360 In the case of that portion of the Paper Currency Reserve held in London, that would not necessarily have been laid down at the gold import point, it might have been provided by the sale of bills at a lower rate?—Yes.

8361 Now I come to the local currency consisting of rupees. We have had evidence that additions have been made to the silver currency by sales of bills at rates below the inward specie point of exchange, do you approve of that procedure?—At rates below the specie point? For the purpose of clearness may I speak of the specie point with reference to London?

8362 You may take it so?—Then my answer is, Yes.

8363 Does it not mean that India is called upon to absorb more metallic currency before an addition to the currency is due?—I do not think that follows. The position appears to me to be that if those bills had not been sold, gold would have come in from Australia below what we call our specie point with reference to London, and would have been presented at the Treasuries in demand for rupees and would have run in the Government balances in India.

8364 In the case of the sales of bills below the lowest gold specie point, that would be adding to the currency before an addition to the currency was due, would it not?—I do not know that that necessarily follows. Do you mean if the Secretary of State sells bills below 1s 3½d?

8365 If he sells bills below the cheapest inward specie point. Supposing Australia can import specie into India at 1s 4½d, then if you sell bills on London below that point, does that not encourage an addition to the currency before it is due?—I do not think that it need necessarily do so. Certain remittances would have to be made by trade to India, and if it is not possible to make those remittances in the form of Council Bills, they will come out in some other form, and those remittances will require currency to enable the transactions to which they relate to be completed.

8366 Under the regulations now existing, is it not the case that the currency can be automatically increased only by the importation of sovereigns?—Automatically?

8367 That is, the only way by which you can have an automatic addition to the currency of India is by the importation of sovereigns, is that not so?—I find it rather difficult to answer that question, because again I have a difficulty of definition. I do not want to ask

1 August 1913 ]

Mr H F HOWARD, CIE

[Continued

you a question, but if you do not mind, may I ask this? Would you call it an automatic increase if a bank buys Councils from the Secretary of State and obtains rupees, and it is necessary, in order to supply the trade demand for rupees occurring in that way, to make purchases of fresh silver?

(Mr Keynes) Would you accept, instead of the word "automatic," "legally enforceable"?

8368 (Sir James Begbie) No, I want to get "automatic" in—If the purchase of bills necessitates the purchase of silver by Government—

8369 That would be an addition, would it not?—Would it be an automatic addition?

8370 It would not be automatic unless it were made at the gold specie point. The only way under the present regulations by which the currency of India can be added to, as I understand, is by someone importing sovereigns, I do not know of any other way in which the currency can be increased—I should have held that it could be increased—

8371 Automatically, I mean?—I can state another method by which it can be increased. I do not know whether I should call it automatic, or whether I should not call it automatic. It is to me rather a nice matter of definition.

8372 Let us turn to another aspect of the same question. Are you familiar with the circumstances under which the decision was come to last year to undertake fresh coinage of silver?—Yes, I am more or less familiar.

8373 The position then was, was it not, that there had been very large imports of sovereigns, and there were very large quantities of sovereigns held in reserve, but the silver reserve had fallen to a low point?—It had fallen to a very low point by the middle or end of April, I think.

8374 And the Government considered it necessary to re-enforce the silver reserve?—Yes.

8375 What was wanted at that time was a substitution of silver currency for the gold in the Reserve?—For a portion of it.

8376 I would ask you whether you are aware that the procedure followed was to sell Council Bills, and to lay down money to buy the silver?—I think that was the case, but I rather fancy that the money was originally taken from Treasury balances, and remittances adjusting the transaction were made. It was after I left India on leave, and I am not certain about that.

8377 Supposing that the money was laid down in London by the sale of Council Bills, would not the effect be an addition to the total currency in India?—The effect must necessarily be an addition to the total currency in India in that case.

8378 India had, in consequence, to carry more metallic currency than was really necessary at the time, that is, she was obliged to absorb more than was necessary at the time?—In case she had used the gold, that would have been equivalent to an addition to the metallic currency, if the gold had been taken from the Government reserves against the sales of Council Bills.

8379 I am taking it that the gold was not used to buy silver, but the silver was bought by the proceeds of Council Bills, and therefore the new currency was an addition to the currency of India. Do you follow what?—I do follow it, but I do not quite understand your conclusion. It appears to me that if the public, which I understand is your point, had been equally willing to take gold as to take silver in satisfaction of the Council Bills that were sold, the gold would have passed into circulation, and that would have been an addition to the currency. I do not understand why there should be an addition to the currency if rupees are passed into circulation, when there would be no addition to the currency if sovereigns are passed into circulation, against the sale of Council Bills. That is the point I am not quite clear about. Perhaps I have not quite understood your question.

8380 The question was simply this. If the Government had used gold from their reserves last year to buy silver for the purchase of coinage, would that have been an addition to the total currency of India?—When the silver passed into circulation?

8381 Apart from circulation, my question relates to the total currency of India, which includes both the currency in the reserves and the circulation. If you part with gold and buy silver, it means, does it not, that the total amount of the currency remains the same, except that you have got more silver and a little less gold? The point I wanted to get at was this. If Government is to control foreign exchanges, it is a very important point at what stage they should intervene with the foreign exchange, would you agree to that?—Yes.

8382 (Mr Gillan) I will first refer to the matter of the change of the budget date, about which the Chairman questioned you. I think your attitude there was that considerable advantages possibly could be gained, but the fact was that the question would have to be very carefully considered?—Yes.

8383 As far as you can see, do you anticipate any practical difficulties?—So far as I can see, I cannot think of any, except, of course, the additional labour of preparing an extra intermediate budget.

8384 The difficulty of the transition period, in fact?—Yes.

8385 In any case, would you agree that even if there are some difficulties to be overcome, the advantages of getting a date which would give more certainty to the estimates of the Government of India would be so large as to make it worth while to overtake those difficulties if any method of dealing with them were found possible?—Yes.

8386 I ask you that as an officer who has been practically concerned in dealing with the budget, and knows what difficulties we have at the present date which is fixed for the budget period?—Yes, there are difficulties now. I think that the exact date adopted would require very careful consideration, whether, say, the 1st October or the 1st September, or the 1st November. I think that point would have to be considered before coming to any decision. Generally speaking, it certainly seems to give us a better opportunity of more accurate budgeting than the present date does.

8387 In paragraph 25 of your memorandum on page 584, you say, "The sovereign is in fact, in my opinion, a suitable coin for India generally." I want to ask you for what particular purposes is it suitable? I suppose you would agree that the great number of payments that Indians have to make are of very small amounts with the great bulk of the population?—Yes.

8388 Have you any knowledge of the amounts that they have to pay, even in what one would consider a larger payment, that is to say, in the matter of rent?—Do you mean the total rent payable in India during a year?

8389 No, the ordinary rent payable by an individual. Would it amount ordinarily to 15 rupees for six months in the case of the small cultivator?—I think not, but it is so long since I have been in a district now that I would not like to make any definite statement.

8390 It has been suggested that except in certain parts of India, where the people are better off and have larger rents to pay, as in the Punjab, for instance, it is possible that the sovereign is not so useful for payments as it is for hoarding. Would that be your impression? If a man has both gold and silver in his possession and most of his payments are in small amounts, much less than a sovereign, and he has to consider which he is going to put in his savings and which he is going to use for his ordinary day-to-day payments, it has been suggested that he would use the silver and keep the gold?—I can best illustrate the kind of case in which a sovereign might be used by referring to the class of transactions that occur in the districts that I know, that is, in the jute districts. The payments made not only to the intermediate but to the cultivators, are, I should think, very large. The boat bringing jute down to the head quarters of the district can have 600 or 700 rupees worth of jute on board. That may be shared by two or three men, but still the payments to each of these men must be large. Though he may be financed by the mahajan, the ordinary cultivator at the end of the jute season is frequently able to incur a considerable

1 August 1913 ]

Mr H F HOWARD, C I E

[Continued

amount of expenditure, for instance, in buying corrugated iron roofing. Nearly all the houses in eastern Bengal are roofed with corrugated iron now since jute has done so much for them. I suppose a sovereign would come into transactions of that kind.

8391 These jute tenants are able to pay more than 15 rupees in rent; I am not sure that you are not considering rather a larger kind of man than I am thinking of?—The people in the districts with which I am acquainted with are probably among the better off cultivators.

8392 (Chairman) In a case of that kind has gold any advantage over notes?—No, I do not think it has.

8393 Would the notes, be acceptable to the cultivators who send in the jute?—It is a very curious fact that the cultivators in Eastern Bengal prefer silver rupees to anything else, and they do not care about gold or notes. The value of the jute crop, I think, was estimated a few years ago at something like 40 crores, which is 26 or 27 millions sterling. There is always an enormous outgoing of rupees at the time when the crop comes on the market, and it takes a very long time for those rupees to come back again. What happens to them I do not think anybody has ever yet found out.

8394 (Mr Gallan) The point I was going to put was that in those parts of India where you have payments on a very small scale, it is conceivable that a 10 rupee gold coin would be more useful than a sovereign, that is, if the ordinary payments are very small?—Certainly.

8395 In the same paragraph to which I have referred, paragraph 25, page 585, you suggest that "it is possible that a 10-rupee piece might compete with the "10-rupee note to a greater extent than the sovereign does." That result would follow only, would it not, if the 10 rupee coin were found to be more convenient than a 10 rupee coin?—I meant the 10 rupee pieces might be suitable for smaller transactions than the sovereign would.

8396 Unless a convenience were found in fact in the 10-rupee coin which the sovereign does not serve, it would not compete to any large extent with the note?—That is so.

8397 That leads up to the question of the gold mint. I do not know if you would say that the mint, if started, is likely to be scrapped within a few years?—I should not think there was any prospect of that at all. When using the word "experimental" I did not mean to say that it was to be put up and scrapped in a few years. I meant that the mint should be opened with the object of meeting any demand that might occur.

8398 At any rate, if it was said that a gold mint, if opened, will certainly be scrapped in a few years, you would perhaps agree that that involves a certain amount of assumption?—Yes.

8399 At the end of that paragraph to which I have just referred, you, in dealing with the gold mint, point out that gold "is now the standard metal of the "Indian currency" and that "gold bullion in India "can only be converted into legal tender currency in "India by being sent to England (or Australia) and "there coined into sovereigns" (page 585)?—That is so.

8400 You refer to that as an anomaly?—Yes, I do.

8401 That anomaly is, to a certain extent, is it not, a support to the sentiment to which you have referred in favour of a gold mint?—Yes.

8402 With regard to the Paper Currency Reserve, there is only one question I wish to ask you, and that is about paragraph 43 on page 590. You are there dealing with the form of the investment in the case of the paper currency, and you say that "when investments were "made in sterling securities the gold position of the "Government was very much weaker than it is now, "and it was desired to strengthen it. Circumstances "have now changed," and that side of the Government of India's defences "should be secure." Is that not rather regarding the Paper Currency Reserve from the point of view of the support of exchange purely?—Yes, it does seem to be.

8403. Would it not be better to say that the first, is in fact, we may almost say the only, point to be

considered in dealing with the Paper Currency Reserve is the question of convertibility, the securing of absolute security for the encashment of notes? Would you agree with that?—Yes, I should agree with that.

8404 From that point of view, it possibly will be better to mix your securities a little, and not to keep them all in one basket?—I think that is what I intended to say.

8405 That was not clear to me?—I intended to imply that as well, though I think that at the time the other aspect of the case, the exchange aspect of the case, did enter into consideration as far as I remember. My idea in making the suggestion was that we should not put all our eggs into one basket.

8406 Now I want to put a few questions about railway finance. The suggestion has been made that we should have in advance a railway programme for a certain number of years. The first point I would like to make clear in connection with your knowledge, is that this is a question which, as a matter of fact, has been very carefully considered from time to time by the Government of India and the Secretary of State?—It has been very carefully considered, and the Mackay Committee,\* I think, went over the question again. I think it has always been found to be impracticable.

8407 There was, as a matter of fact, at one time a three years' programme in force, was there not?—That was always subject to the qualification, I think, that in the event of any calamity such as famine or war, it might be necessary in the later years of the programme to reconsider the provisional allotments.

8408. I will come to that. There was a three years' programme which you describe as being more or less a nominal one?—Yes, or provisional.

8409 It was dropped, or rather, it was discontinued, because it was found to be of no great practical importance?—It was discontinued, I think, under the Secretary of State's instructions so far as I recollect.

8410 There are difficulties, are there not, when dealing with a programme so much in advance, that is to say, the Government of India, have found it difficult enough to anticipate what they are going to get in the Budget year immediately following?—That is so.

8411 This would involve their anticipating the general financial position for the next three or perhaps five years?—Yes. I think in reply to Sir Ernest Cable I expressed my opinion that it was not practicable.

8412 So that if Government undertook this responsibility of a three years or five years' programme, they would have to harden their hearts and say that they would find a certain sum of money whether there was famine or war or an unfavourable aspect of the London money market, or whatever happened?—That is so.

8413 Without some undertaking of that kind, the programme would be found ineffective?—I think that is the case; in fact, I meant to express that view when I said that in order to have any guarantee of maintaining the programme you would have to maintain some railway fund.

8414 About this question of the lapses, in the same way I should like first to make it clear, if you happen to know about it, that that again is a question which has been very carefully considered?—I think it has been considered several times, and views have been expressed on both sides very strongly.

8415 Do you happen to know, for instance, whether it was considered by the Mackay Committee?—I think it was.

8416 You do not remember what they said about it?—I do not remember the exact statement they made about it.

8417. I think you express yourself as being in favour of some re-allotment of the lapses?—Yes. I would like the question to be re-opened, at any rate.

8418. Suppose you have given the railways this year 12 millions and next Autumn when you come to a revision of your budget arrangements, the railways tell you that they will not be able to spend 12 millions, but they will spend 11 millions, you do not mean, do

\* Cf 4111, page 10, paragraph 7

† " " pp. 27-8, paragraph 34

1 August 1913 ]

Mr H F HOWARD, C I E

[Continued

you, that that million of a lapse should necessarily and automatically be re allotted to the railways for 1914-5? —I am not under the impression that the railways would be getting more money, which I believe a lot of people understand will be the case, or that this is implied by the re allotment of lapses. If it is found at the end of 1911-12 say, that a million is going to lapse, and that it is going to be re allotted, the railways will get a million less from some other source, but they will know that they have got that million and that that money is earmarked for the particular expenditure or liability for which it was originally granted. The great difficulty with many of the railway companies, I believe, is that at the end of the year—I am speaking of individual companies now and not of the railways as a whole—they have got large stores ordered, and they have got the money to pay for them, but they find that their stores are not delivered, and so then grant lapses. They have also got their programme made up for the next year and an allotment for that, and on the top of this they have got to pay then half million for the railway wagons ordered in the previous year, and so they have got to disturb all their provisional allotment which they have made for the forthcoming year.

8419 What appears to me is that if the lapse of the one million is foreseen, the Government of India cannot keep it in a separate pocket but it must go into their balances, and they must reconsider the division of the whole of their funds among the whole of their railways?—The position, as I take it, is that these lapses are not always foreseen. The railway lapses as estimated have, I believe, on more than one occasion been very much less than they have proved to be when the final estimates were made up.

8420 That is precisely the point I was trying to put. Will you distinguish between a foreseen lapse and an unforeseen lapse?—A foreseen lapse is taken into account.

8421 And must be necessarily?—And must necessarily be taken into account.

8422 When you say that you are in favour of the re allotment of lapses do you mean the foreseen lapses?—If it is put in that way I should, but I should much prefer, if it were possible, to make the railway programme more self contained. If I can make myself clear in the matter, I mean that Government should, in making their revision in March with regard to the foreseen lapses, say "We will not get this lapse, this is allocated to the railway company against their programme of the past year, so we have not got this money to play with for the year on which we are about to enter."

8423 (Chawman) You would, in fact, carry it into a suspense account?—Yes. The position would be the same as the one Mr Gillan is putting to me, but I should be inclined to think that if any arrangement of the kind was practicable, it should be put in a somewhat different way.

8424 Suppose that to a particular railway there had been allotted a certain sum of money in the year 1911-12, and that included half a million for rolling stock, but owing to a strike in this country or to other reasons, the contractor failed to deliver, what happens to that half million? Suppose that it had been planned further to give the company in 1912-13 one million, does the company then get a million and a half, or does it still only get one million?—The company has to make the best terms possible with the Railway Board to increase their grant if they can, I imagine, but very often they may have to cut down some of their other expenditure in order to provide for that half million.

8425 So it might happen that, having got a plan of railway construction for the coming year, the railway company has had at the last moment to halve that plan because a contractor has failed to deliver supplies, and so they could not be paid for within the previous year?—That is what I have understood from the railway?—That is what I have understood from the railway?—That is where the pinch really comes—it is in the lapse of the individual company.

8426 (Lord Faber) Would there be any difficulty, in your view, in a Railway Board, so to speak, being appointed for India, and that Board laying down a policy of borrowing five years ahead some millions every year in London, it does not matter how many millions, but we will say 5 millions, those 5 millions are paid over to the Board every year, and the Board then have to consider how that money should be allotted to the railways, then if a railway one year is not able to spend the exact amount allotted to it, it gets it the next year, or it might almost go in the other direction, although that is more difficult, and if they spend rather more in one year than is allocated to them, it would come off the next year. Would there be any difficulty in that if you get clear away from the Indian Budget, so to speak and have a separate compartment altogether?—That question generally was one of those that did come up before the Mackay Committee.\* They said,† We will borrow in London, I forget whether it was 7 millions or 8 millions, or what they said, but actually the first year it was 2 millions, then it was one and a third, I think, and the next year it was about a quarter of a million, and so the scheme broke down by its own weight—wholly on that account.

8427 Why did they change their policy?—I think India 3½ per cents, which are now at 86, were at 97 then.

8428 When you are getting good returns as you are getting on the Indian railways now—it is some thing over 5 per cent on the whole of the railways—is it the right policy, in your opinion, to disregard at the moment the price at which you issue the stock, looking to the ultimate needs of the whole railway system of India? Surely you would not postpone, would you, because you would have to repay a little more for the money than you are in the habit of paying?—I am not familiar enough with the London market to know what would be the best course in those circumstances. It might be possible, one would think, to borrow money repayable in instalments over 20 years or something of that sort, and in that way to get better terms. Apparently, conditions have been fairly stringent in the last year or so. I should personally have liked to be able to ensure some continuous system of borrowing, but apparently that has not been found practicable. As to keeping the railway finance in a separate compartment, I do not know that I find it possible to express any view about that. You have to consider what you would do in a bad year. It is only four years ago, I think, that the railways were not making both ends meet.

8429 Loose balances in the Indian budget are not desirable. It is better to take a railway balance out of the Indian budget and earmark it for the railways, is it not?—I am not quite certain that the Mackay Committee did not consider that point of the constitution of a separate railway fund,\* but I think I am correct in stating that they were rather doubtful whether it would be practicable. It would be possible to employ at once for capital expenditure all the money which at that time they could look forward to being able to raise, I think that was rather the conclusion that they come to.

8430 (Sir Robert Chalmers) May I ask you a question as regards the way in which on this hypothesis you could borrow. Would you borrow with reference to the amounts that you have found would actually come in course for payment and require an issue? Let me make it a little plainer to you, assuming that the idea is that 5 millions will be spent—that is the basis on which you start—then it is found as the time comes for borrowing, that as a matter of fact at that time only 4 millions would be actually needed as the first instalment, would you not restrict your borrowing to the 4 millions that were actually required as a matter of ways and means?—I cannot help returning rather an evasive answer to that question. I think that the position is one in which one would require a very intimate knowledge of the market.

8431 Is it not a very simple proposition that you borrow in order to issue, and you borrow only that amount which you need to issue at the time?—In our case it has been found so difficult to borrow all the

money that we want, that the Mackay Committee recommended that we should borrow in advance with reference to the position of the market at the time as well as with reference to our immediate requirements

The witness withdrew

At the India Office, Whitehall, S.W.

TWENTIETH DAY.

Wednesday, 6th August 1913.

PRESENT

THE RIGHT HON AUSTEN CHAMBERLAIN, M P (*Chairman*)

LOID FABER  
 Sir ROBERT CHALMERS, K C B  
 Sir ERNEST CABLE  
 Sir SHAPURJI BUBJORJI BROACHA  
 Sir JAMES BEECHIE

Mr ROBERT WOODBURN GILLAN, C S I  
 Mr HENRY NEVILLE GLADSTONE  
 Mr JOHN MAYNARD KEYNES  
 Mr BASIL P. BLACKETT (*Secretary*)

Mr THOMAS SMITH called and examined

8432 (*Chairman*) Will you kindly tell the Commission what your Indian experience has been?—I have set it out in an outline of my evidence which has probably been handed to the Commission

8433 Yes I propose to print the memorandum which you have submitted (*see* Appendix, No XXVII, page 612), so that we need not repeat the whole of it in your evidence, but I would just like to have on record with you evidence the brief account you have given of your Indian experience You have had 18 years' experience?—Yes, 18 years' experience in India, for 17 years of which I have been agent of the Allahabad Bank

8434 Mainly at Cawnpore and Calcutta?—Mainly at Cawnpore and Calcutta, yes

8435 How much of your time has been spent in Cawnpore?—Between 12 and 13 years, and 4 years in Calcutta

8436 You were formerly vice president of the Upper India Chamber of Commerce?—Yes

8437 Do you represent their views here to-day?—As a matter of fact, I asked for their views, and I was rather delayed in the preparation of this outline of evidence until I heard from them two mails ago They said they felt that it would be useless for them to send home instructions, and they preferred to leave it to a sub committee composed of Sir Alexander McRobert and myself, and Sir Alexander and I did meet and discuss the matter, and in so far as our evidence goes forward I suppose it may be taken as the evidence of the Upper India Chamber

8438 The memorandum which you have handed to us is the result of that conference?—It is the result of a conference between Sir Alexander and myself Of course, the Upper India Chamber may not agree *in toto*, but, in so far as they have left the matter to us, I think they must take the responsibility of what we say

8439 From that memorandum I gather that you make no serious criticism of the management of the balances in recent years?—Except in the years which I have mentioned, 1910, 1911 and 1912, making allowances for the difficulties under which these balances accrued

8440 And even in those years does your criticism go further than this, that the India bills which were paid off in December 1912, might well have been paid off earlier?—I think that is the principal point I do not know that I am prepared to raise any other point in connection with it.

O 19067

8441 You think that the Government is a little over-cautious?—Apparently so in underestimating

8442 I take it that that is the extent of your criticism?—Yes, that is the extent of it, and the underestimating is probably justified because of the extraordinary conditions which prevail in India

8443 I turn to the question of banking facilities You are, I understand, definitely opposed to the establishment of a Central Bank?—At present I seek here to raise some of the obstacles to a Central Bank

8444 May I take it that your opinion in the first instance is that there is no need for such an institution?—I do not think there is

8445 I understand from your memorandum that in so far as work which we might call general banking work is done by Government you think it is very well done?—Very well done

8446 And would not be better done by a Central Bank?—I do not think so

8447 On the other hand, I understand you to feel, and to feel strongly, that one central institution could not have sufficient detailed knowledge of the circumstances in different parts of India?—I think not

8448 Take the Presidency Banks they themselves cover a very large area, do they not?—Yes, they do

8449 The Bank of Bengal, for instance?—Yes, the Punjab, the United Provinces and Bengal

8450 Does Burma come within its sphere?—Yes

8451 Within their sphere, therefore, are there not circumstances as diverse and as widely distinguished as between Bengal itself and any other part of India?—Not to the same extent that you would find throughout the whole of India

8452 You think, therefore, that though it may be possible for one board efficiently to direct the Bank of Bengal, with that sphere of influence, it would be impossible for one board to direct a Central Bank for the whole of India?—I do not say it would be impossible, but I do not think the results would be so good

8453 You do not think the results would be as good as having the three separate institutions?—I think not.

8454 You state in your memorandum that "it is a hopeful sign to see money in the country flowing freely to the banks for investment" (paragraph 11, page 613) Does that refer to the growth in the deposits of which you speak?—Yes

8455 Do you think that the banks in recent years have tapped new sources of supply for their deposits?—I think more people are getting in touch with banking

Y 3

6 August 1913 ]

Mr THOMAS SMITH

[Continued

8456 Are new classes being induced to confide their savings to the banks?—You see a good many banks now are opening out what you might call sub agencies at small and unimportant places, and there is money coming in there

8457 Where those sub agencies are opened can you say from your own knowledge whether the business which they do is mostly to receive deposits or to lend money out?—There may be some branches which are receiving deposits, and others may be purely lending

8458 I think one banking witness who came before us said that in his experience, when you opened a branch the business that came was always a demand for loans, and not an offer of deposits?—That is very often why a bank opens a branch—to get its money invested and to get it put out

8459 You cannot say very definitely whether the banks are reaching new classes of depositors now?—I think that there are people who did not deposit before but who are coming now and making small deposits

8460 In this connection, you call our attention in your memorandum to the danger to banking in India of the growth of what I think you describe as mushroom banks, which have nothing of the bank about them except the name?—That is all

8461 You feel, I suppose, that it would be a great shock to all banks in India if those institutions under the name of banks came to grief?—Undoubtedly

8462 It would tend to put back the growing trust of the people in banks?—Yes, especially people who are not very well versed in these things. It would be sufficient for them to say that the bank had *bigar gaya* (failed)

8463 I think the attention of the Indian Government has been called to the matter?—Yes

8464 And you say that legislation is assured?—It is practically promised

8465 May I ask you whether you think that your view as to the absence of any necessity for a central bank is generally shared among commercial classes in India?—So far as we are concerned in the United Provinces, we are very well content with the present facilities, and I should doubt very much if Bengal would care for a central bank. At present their rate is often, generally speaking, one per cent less than the Bank of Bombay, which again is very often one per cent less than Madras, so that it would mean that the benefits which Bengal has now would have to be spread over the whole of India

8466 As far as you are aware, there is no general demand for the creation of such an institution?—I think not

8467 And you think there is no general dissatisfaction with the present banking facilities?—No, I think certainly not

8468 I think you observe in your memorandum that, though there is some stringency at the busy period of the year, you do not think that there is any good ground for complaint as to the rate at which money can be borrowed in India?—No, on the whole I think not, if you take the whole year round

8469 On the other hand, in dealing with the busy season do you favour the idea that Government should give some assistance to the money market at that time?—I set that out in my note (see page 614, paragraph 17)

8470 I would like to ask you in the first instance. Supposing it were agreed that Government might lend, to whom do you think they should make their loans?—To banks, I should confine it to banks

8471 Would you confine it to the Presidency Banks or would you go beyond them?—I would go beyond Presidency Banks. There are banks, such as my own, which are in a position to give very good security if required

8472 I understand that you would not propose to lend to any bank except on security?—No, except on security

8473. Would you lend on commercial paper at all?—No, I think it would be better to confine it to

Government securities and Corporation and Port Trust Bonds

8474 Would you go outside banks? Would you make loans to houses of high standing, or would you think it wiser for the Government to confine itself to banks?—The Government apparently are very much opposed to the idea. Suppose they made a start with banks they might find that it would go further, but I suggest in the first instance it should be given to banks

8475 Of course, the Presidency Banks occupy a position by themselves?—Yes

8476 The moment you go outside the Presidency Banks, might it not be very difficult for the Government to distinguish between those banks to whom it would be proper for them to lend and those to whom it would be undesirable that they should lend?—If they have got security and a good margin I do not see that the Government would stand very much risk. Their advances to the Presidency Banks and the Exchange Banks and the better class Joint Stock Banks would be perfectly safe. There might be an element of risk in the smaller Joint Stock Banks, but if they are adequately covered with a good margin—

8477 Of course, it is very important that the Government should have security for its loans, but it might be very inconvenient for them if they had to have recourse to their security?—It would, but with the banks which I have in mind, those which I have mentioned now, the Presidency, the Exchange, and better class Joint Stock Banks, I do not think they would go beyond their depth

8478 Where would you invite the Government to draw the line between those which you call the better Joint Stock Banks and those which are not of the better class?—I do not see any risk of the borrowers defaulting at all if the Government have a good margin of security, because the smaller Joint Stock Banks could certainly not want very large sums, but the Presidency and Exchange and Joint Stock Banks with offices in Calcutta would, I should think, be perfectly safe

8479 Suppose the Government of India decided, or the Commission recommended, if you like, that such assistance should be given by Government, but that in their opinion it would be well in the first instance not to go beyond the Presidency Banks, what would you say?—Then I think you would have the other Joint Stock Banks up in arms

8480 That is what I wanted to put to you as a banker. If the Government were recommended to go no further than the Presidency Banks, do you think that would be considered so invidious a distinction that it would be better for the Government not to touch the position at all?—No, I should certainly say let the Government touch it, because even if only the Presidency Banks get it it reacts upon the other banks that is to say, we would feel the benefit, the more the Presidency Banks have got to play with the easier would be the rate, so that certainly something would be gained by giving it even to Presidency Banks

8481 So that though you would strongly urge that the better class Joint Stock Banks should be included in the list of approved borrowers, you would prefer that money should be lent in the busy season to Presidency Banks alone rather than that it should not be lent at all?—Undoubtedly

8482 Let me ask you now what amount of money would the Government need to lend in order to affect the bank rate in the busy season?—It is very difficult indeed to hazard a figure

8483 The object of your proposal that they should lend is to keep down the bank rate?—Exactly, and the knowledge that it is there, and is available, would have that tendency

8484 But could you not give me any idea of what sum you think would probably be sufficient, in the early years at any rate?—I would not care to commit myself to that, because even in smaller estimates, for instance, when Government ask us in Cawnpore how much coin we should require, it is almost impossible to keep to that. You can never tell what India is going to do, and we may be absolutely wide of the mark

6 August 1913]

MR THOMAS SMITH

[Continued]

8485 Do you think it might be a considerable amount?—Yes, I think it would be a considerable amount

8486 Five crores or ten crores?—Ten crores would probably be nearer

8487 You anticipate in that way that the rate, instead of going to 8 per cent, would be kept at 6 per cent?—I think it would

8488 Supposing that were done, and the bank rate did not go above 6 per cent, how far would the effect of that percolate down?—So far as regards borrowers who are borrowing on the basis of bank rate, either a fraction above or, as I believe some of the Presidency Banks do, a fraction below, they would score tremendously

8489 They would be the big men?—They would be the big men, but as the other Joint Stock Banks also regulate their seasonal advances on the basis of the bank rate, it would also assist trade generally

8490 Would it get to the cultivator? I do not mean to say would he have his money at 6 per cent, but would he have a corresponding reduction in the rate which he pays?—I doubt it very much

8491 You do not think there is much connection between the rate he pays and the bank rate?—No, for the simple reason that he does not understand the sliding scale. The small man borrows on a fixed rate, and he is probably paying his 8 per cent or 9 per cent, and he would not understand a sliding scale, a fluctuating rate

8492 He might be borrowing at more than that, I suppose?—He might be, but from banks he is probably borrowing at 9 per cent, some banks may probably be charging 12 per cent, but that is at small places

8493 I understand one of the reasons suggested, or the main reason suggested, by those who desired the Government to give assistance in the busy season was that under present conditions, the rate being so high, the cultivators and the smaller people were obliged to sell their produce at once, regardless of the position of the market, and it was suggested that if they could borrow rather more cheaply against their produce they might hold it and get a better price?—To a great extent that is true, because if you are going to take bank rates of 8 or 9 per cent, then people who are borrowing at fixed rates, that is, the small borrowers, must expect, if the bank rate is still in the region of 9 per cent, to pay somewhere about that, and probably more, but if you can keep your bank rate down to 6 or 7 per cent, naturally rates will fall all round

8494 In recent years has the bank rate ever gone as high as 9 per cent?—I think not, speaking from memory I think 8 per cent is about the highest in the last two or three years

8495 Seven or 8 per cent are the normal figures?—They are the normal figures

8496 On balance, I understand, you do not think that very much advantage would reach the cultivator?—It all depends, of course. If there is competition in the place where the cultivator is borrowing, the advantage would reach him

8497 It will really be a question of supply and demand?—But he is in supreme ignorance of what is going on, and the only question would be that the bank would be very glad to lend it at 8 per cent where they formerly lent it at 9 per cent

8498 On the other hand, if he is in this unhappy state of ignorance he may be very well content to borrow at 9 per cent, even though the bank could afford to lend at 8 per cent?—Quite so

8499 I want to put to you one objection which has been suggested to us against the idea of the Government making loans of this kind. Supposing the Government had done it for four or five years out of surplus moneys that it had at its disposal—I may take it that you only suggest that they should do it when they have surplus money?—Yes, exactly

8500 Suppose that on those four or five years in which they had done it there followed a lean year in which they had no surplus money?—But I am not referring so much to the advances from the balances,

which are a very fluctuating item, I am thinking more of what they have in the Currency Reserve

8501 You think the loans should be made from the Currency Reserve?—I think so in the first place, because the balances are very fluctuating

8502 That brings me to the Currency Reserve. I think you say in your memorandum that you think the fiduciary issue might be increased (page 617, paragraph 32). Is it your view—I think it is—that instead of being a fixed sum it should be a proportion of the total?—Yes, that is my view

8503 What proportion do you suggest?—I suggest one third of the gross average circulation

8504 Will you tell me why you choose the figure of one-third?—It is a limit within which it seems perfectly reasonable and expedient that the Government could work

8505 You take it as a point well within the limit of safety?—Yes, I think so

8506 But do you infer that that point is a perfectly secure one from the course of the note issue in past years, or from experience of other countries, or in what way do you infer it?—It is based more on the Indian note issue

8507 Then your suggestion would be, as I understand, that the fiduciary proportion being increased a proportion of that increase should not be permanently invested but should be held available to be loaned out in the busy season?—That is so

8508 Returning to the banks for a moment, you do not advocate any change in the legal conditions under which they now work?—No

8509 You do not think it necessary that they should have access to the London Money Market?—No, I do not think there is any occasion for that now. As regards their present limitations, they can pretty well drive a carriage and pair through them now

8510 You say that some years ago they sought access to the London Money Market, but opinion generally was against them on that point?—Yes

8511 Do you think that public opinion remains the same to-day?—I think it would

8512 Following your memorandum I come to the section which deals with capital expenditure (page 615, paragraph 20). Would you think it an advantage to raise as much as possible of the capital required for Indian development in India?—As far as possible, yes

8513 Do you think that more could be raised than has been done?—I think so

8514 But I gather you think not much more?—Not much more. I have not exactly the figures beside me, but I fancy a very big loan would not go well in India if that loan were in addition to the ordinary annual loan of two to three crores which is made. I fancy if the Government asked for a very big loan of five to six million pounds it would not get all that

8515 What do you think they could safely do—take another one or two crores?—I suggest here four million, that is roughly six crores

8516 Four million pounds a year?—No, I say here "occasionally." I do not think the market could take it every year

8517 In that case it would be very little more than has been done of late, would it not?—No, you are borrowing about two million pounds annually

8518 Four million pounds occasionally would not come to much more than two million pounds annually, would it?—No, but that is in addition to the ordinary borrowing. If you are having the two million pounds annual loan, I think an occasional loan of four million pounds might be tried

8519 Can you, from your banking experience, tell me where these loans are held? I suppose they are taken mainly in the first instance by the banks?—Yes, the banks, business houses, and native states

8520 Are they beginning to be held by natives to any great extent?—Not as much as they might. Mr Gillan is probably aware of certain correspondence which we have had with the Government about difficulties in endorsement. The native mind cannot understand it all. They are very exact in Government offices where the funds are administered, the Bank of Bengal and elsewhere, as to the chain of endorsement,

6 August 1913]

M<sub>1</sub> THOMAS SMITH

[Continued

and that very often raises objections on the part of illiterate people. They often have difficulty in trying to get these endorsements put right.

8521 Will you explain to us exactly what you mean by that phrase 'the chain of endorsement'?—There are cages on the back of the paper. The paper might originally have been taken by the Bank of Bengal, and it is paid over to a lady, Mussamat Debi, and Mussamat Debi proceeds to sign here, and they say that the signature is not right—she is illiterate, or something of the sort. Even if she can sign there is probably something wrong, they want it letter for letter, or the paper has not been presented to the Public Debt Office for several years, and it has got to be

8522 I understand that the certificate passes from hand to hand?—It passes from hand to hand by delivery.

8523 And does not require to come back to the issuing bank or the managing bank at each transfer?—No.

8524 If these difficulties could be diminished do you think that there would be a much larger market among natives for Indian securities?—I think it would help considerably. Sir James Meston, when Financial Secretary, did a good deal to remove these difficulties, but they are really very perplexing difficulties, even as regards joint stock companies and railways, because Government notes are given to railways as securities for tenders, they may be paid to the Central India Railway and then the Central India Railway may hand that paper on to someone, and finally when it comes to the Public Debt Office for renewal they say "So and so's signature is not in order, the agent of the rail way is not authorised." It is the same way with banks and joint stock companies, not so much in the case of banks, but the Chamber which I represent took up several cases I know where Government disputed the right of an attorney to sign.

8525 I think you say there has been correspondence between your Chamber or Bank and the Government of India on the subject?—Yes, these were brought to the notice of Sir James Meston and he gave orders to have the things considered.

8526 As regards the exchange, I understand you to hold quite definitely the view that the fixing of the rupee at 1s 4d has been of benefit to India generally?—I think there can be no doubt about it.

8527 In your opinion the most important task in relation to this matter of the Government of India is to maintain the exchange at that figure?—That is so.

8528 You have been unable to form anything like exact views as to what has happened to the large quantity of gold which has gone into India in recent years?—Beyond that a good deal has been melted down and it has gone into ornaments.

8529 I think you suggest in your memorandum that a good deal of it is melted down for trade purposes?—For jewellers' purposes, yes. Mr Gillan suggests that, and I think I can bear him out from my experience.

8530 You say that the circulation is increasing, but the increase is more marked in the Punjab than elsewhere?—Yes.

8531 The increased circulation of gold is very local in India, is it not?—It is distinctly localised, I should say.

8532 There are particular districts where gold is desired and others where it is not needed or not required by the public?—That is so.

8533 What do you think is the business of Government in relation to the currency?—To give the people what they want.

8534 But in so far as they can favour one kind of currency rather than another, which kind would you prefer to see in circulation?—Of course, token coin is the cheaper from the Government point of view in circulation, but there is one thing to be remembered, that as regards such as is taken off for saving it is certainly much better that the poor man should save in gold than in silver.

8535 If he melts it down?—If he melts it down.

8536 Does that apply if he keeps it as coined rupees?—It is all the same if he has still got it in sovereigns, or has got it in the form of ornaments, so long as he has the gold.

8537 But have sovereigns any advantage over rupees, except that they are less bulky if the rupees were kept in the form of rupees?—I do not quite follow.

8538 I quite understand that if the poor man melts down rupees, which are a token coin, and then in time of stress brings back the bullion he would get a less sum than he had put away?—Exactly.

8539 But if he keeps it in the form of rupees he will get back the same sum?—Yes, he will get back the same sum if he keeps his savings in rupees, exactly.

8540 When he melts it down for jewellery, of course he loses if he melts rupees and does not lose if he melts gold?—Quite so.

8541 Now I go back to my question. Suppose you were an autocrat administering the Government of India and you saw that you could encourage the circulation of gold at the expense of rupees or notes, or the circulation of notes in preference to gold, what course would you take?—If I wanted to make money for the Government I should try to give them as many rupees as possible. If I wanted rightly to administer in the interests of the people of India I should try to give them as much gold as possible.

8542 It is the second supposition that I wanted to go on. Why in the interests of India would you give them as much gold as possible?—Because the man who has the gold there—the man who has saved the gold—has got it whenever he likes.

8543 Is not that true if he has got it in notes?—If he has got it in notes, yes, but I do not think he would keep it in notes.

8544 As long as the Government is solvent?—Exactly.

8545 Is it not true if he has got in rupees?—It is true if he has it in rupees, certainly.

8546 Is it not a fact that in that respect gold is only better than silver if the gold and the silver are both melted?—Yes, if the gold and the silver are both melted.

8547 Have you any other reason for thinking that it is in the general interests of the people of India to encourage the circulation of gold?—It is a much easier coin from the point of view of the small man. He can keep one sovereign much more easily than 15 rupees. If you take it for purposes of remittance it is more easily transported.

8548 In both those respects notes would be as advantageous as, or more advantageous than, gold?—They would be if you could get the people to keep notes.

8549 When you come to think it out, would there be any objection from the point of view of the people of India to encouraging the use of notes rather than gold?—I do not see that it is really the duty of the Government to force them one way or the other. If they can have notes or rupees or gold, let them take what they want.

8550 I quite see that if a person has a clear idea of what he wants it would be desirable that the Government should give it to him, but when he is indifferent ought the Government also to be indifferent, or ought it then to tender him one rather than the other?—I do not quite follow that.

8551 If the payee is indifferent as to whether he receives notes or gold ought the Government to be indifferent too, and ought the Government cashier to wait until he has made up his mind which he will have, or should the Government cashier, he being indifferent, give him the one or the other?—Give him the one or the other.

8552 But which?—Offer him notes or offer him silver. If you offer him notes he can immediately say "I want rupees for them" or "I want gold for them". It is only a question of reconverting it.

8553 If, therefore, you were in that position and the man were indifferent, you would give notes rather than gold?—I would give him notes rather than gold.

6 August 1913 ]

Mr THOMAS SMITH

[Continued

8554 Of the gold which is given out a certain part remains in circulation, or may come back into circulation, but a great deal disappears from the realm of currency altogether?—Yes

8555 You said just now that it was most important in your opinion that the fixity of exchange should be maintained. Do you think that gold which is put into circulation is of much use for maintaining exchange in a crisis?—I doubt it

8556 You do not think that it is probable that much of it would come out in a crisis to support exchange?—I should think not

8557 If that is so, is there not a real reason in the interests of the people of India, and not merely a money making reason, why the Government of India should discourage the circulation of gold, and increase the circulation of notes or rupees?—No, the Government can have their own reserves of gold, and centralise them reserves

8558 How do they get those reserves? Are not those reserves dependent on the amount of notes, and the amount of rupees which they put into circulation?—Yes, that is so

8559 If for notes or rupees you substitute gold in circulation, you automatically stop the accumulations of the reserve of gold?—The reserve of gold must suffer in consequence if you are forcing gold out but I am not as gung that

8560 I think you put it to me that the Government should remain neutral in this manner?—Yes

8561 I am suggesting to you that in the interests, not alone of the Government, but of the people of India, the maintenance of exchange being their first interest in your opinion, the Government should not be neutral, but that it should encourage the circulation of notes wherever it can, rather than the circulation of gold?—Yes

8562 You see, perhaps, the line of argument indicated in my questions?—Yes, I see it

8563 On the whole do you agree with me, or do you differ?—I should say that the balance lies in favour of developing the note circulation

8564 And keeping gold in reserve rather than putting it into circulation?—Exactly I am not urging that the Government should force gold, but that it should be optional, and if a man expresses a preference for gold the Government should endeavour to meet it

8565 In the light of those considerations, what is your reason for favouring the opening of a gold mint?—The reasons are very fully stated by the Government of India, and on the whole I think I agree with them

8566 Will you just give them to me?—The main thing was, of course, that there might be gold which is absorbed now, or is hidden now, but that might be converted. One never knows when that occasion might arise. It would be there for that purpose, and there are times when it might be more expedient to import bullion and have it coined in India

8567 What would those times be? What are the conditions which you contemplate as existing to make it more expedient for the Government of India to import bullion and coin it in their own Mint than to take sovereigns from London or Australia?—From Australia?

8568 From wherever they can get sovereigns cheapest?—I do not know that I could suggest the conditions at the moment, but they might arise

8569 Put the case of some crisis forcing gold—bullion—out of hoards or out of savings. I suppose what you have in your mind is a famine which brings pressure on the individual and forces him to bring out his savings to live upon?—Yes

8570 That would be a small man with a small amount of bullion, I suppose?—Yes

8571 The total might be large, but in each individual case it would be small?—Yes

8572 An individual could not go direct to the Mint to get his own little store coined, he would sell it as bullion?—Yes

8573 And it might pass perhaps through two or three hands before it reached the Mint?—Yes

8574 Do you think, under those circumstances, there would be any real advantage to anybody in being able to take that bullion to a Mint in Bombay, rather than in sending it home to be coined?—There probably would be a balance of advantage in getting it done there instead of sending it home to be coined

8575 Where would the sovereigns be wanted when they had been got? The individual who had brought out his little hoard would want rupees, would he not?—The sovereigns would remain with the Government

8576 When the bullion had been taken to the Mint and coined into sovereigns, what do you suppose the man who got the sovereigns would do with them, take them to the Government I think you said just now?—Yes

8577 They would get into the Government Treasuries?—Yes

8578 And from the Government Treasuries what would be the next step? Would they stop there until they were wanted for the support of exchange?—Yes, until they were wanted for the support of exchange

8579 And when they were wanted for the support of exchange where would they be wanted?—They would have to go to London

8580 Would it not be just as well if the bullion had gone there at once instead of passing through Bombay?—Yes

8581 Do you think there is any real advantage in the opening of a Mint to gold in Bombay?—I do not say that it is going to do everything, but there is an element in its favour

8582 Rather of sentiment, perhaps, than of very concrete advantage?—There is a good deal of sentiment in it, yes. I say that "on the whole" I favour it

8583 As regards the gold reserve, I think your view is that no limit should be put to its growth at present?—No

8584 You also hold that the amount of actual gold in it is insufficient at the present time?—Yes

8585 And the proportion is too low?—Yes

8586 You do not desire to fix any definite limit to the gold portion of it any more than to the whole, do you?—I suggest that the reserve should be held half in gold or rupees, the bulk to be held in London in gold only, while gold or rupees may be held in the Indian branch as circumstances warrant

8587 Excepting that the actual gold should be half of the whole you would not care to put any limit?—No

8588 I notice also that in connexion with the Paper Currency Reserve you say that in your opinion if the note issue were handed over to a Central Bank it would not command the same confidence as the present Government issue?—I do not think it would

8589 Does your experience of India lead you to think that the people attach great importance to the Government guarantee behind the notes?—Undoubtedly

8590 And no institution even of a semi-state character not absolutely under the control of the Government would, in your opinion, carry the same weight?—I do not think it would be as good as the direct connexion of the Government now

8591 In regard to the financial organisation and procedure of the India Office, you suggest that the practice of lending to certain approved banks has a tendency to single out and hall mark those banks, and you ask whether it would not be possible to widen the range of competition even if it led to rather less interest being received. Are you speaking there from personal knowledge of the institutions in London or are you rather influenced by your Indian experience?—Well, the same argument would apply in India. It is a case of 'a fair field and no favour'

8592 Do you think that the loans to certain banks in London have been of such consequence, having regard to the position of the banks, as to hall-mark them as you say?—No, I think the biggest deposit is under two millions, but I believe there are a good many banks in London who would like to get hold of those deposits, and some in the City feel very sore about it.

6 August 1913 ]

Mr THOMAS, SMITH

[Continued

8593. What exactly is your second suggestion as regards deposits and short loans?—If the money is available why should not the Secretary of State notify that he has so much to lend and receive tenders for it, just the same as he does when he is selling his bills, "I have so much to sell in India" That is all it is, because it seems to be a very costly arrangement at present

8594 You put it forward, not on the ground that the present system leads to the favouring of special firms, but rather that it would be much more economical if it were done in that way?—It would draw a bigger field of borrowers

8595 Are you aware that the emoluments of the Government broker have been revised since the days when such large sums were paid?—No I did not know that

8596 Of course, you are aware that the balances were very abnormal, and that led to abnormal fees?—Exactly

8597 (Lord Faber) I want to ask very few questions, and perhaps more on banking than anything else I gather from you that in your opinion if a bank fails in India the banking community generally is hurt by the want of confidence brought about by the failure?—I refer more to the effect it would have on depositors

8598 They would be timid?—They would

8599 They would not care to deposit with banks in the same way as they had done before the failure?—Quite so

8600 Therefore, you will most likely think that if we could prevent a failure it would be right to do so?—Yes

8601 What should you think of Government inspection of all banks?—I do not think any good bank has any reason to be afraid of that

8602 As regards the price of money, do you agree that in all comparatively new countries as regards banking and commerce higher rates are usually exacted?—Yes

8603 With regard to the endorsement of securities, do I understand that those endorsements refer to the endorsement of Government paper?—Yes

8604 Tell me exactly what Government paper is?—It is Government promissory notes The Government of India promises to pay So and so, and then there are cages on the back for endorsement

8605 Why is it so necessary to have the endorsement on the back? Is it so that they may have recourse against the holder in a case of failure? It cannot be that, because it is Government paper and, therefore, endorsement is no good as regards Government paper unless it is to point to a theft of the paper?—Yes, of course, it is payable to So and so or order, the paper is not bearer paper

8606 Just so, but when you have the first holder and he endorses it and does not endorse it on to the next holder, you only want the endorsement of the first holder of Government paper, do you not? We will say it is payable, if you please, to Mr Smith, who is the holder of Government paper to the extent of 1,000/ Mr Smith endorses it, and he then hands it to Mr Robinson. It is not necessary for Mr Robinson to endorse it unless it is endorsed over by Mr Smith to Mr Robinson?—Yes, but I think the practice is that it has got to be endorsed over

8607 Is it obligatory to endorse it over?—It is payable to "or order" in the first case

8608 I know?—I see The point is whether you can cut out the endorsement by Robinson

8609 Unless it is endorsed on, obviously, that is the English practice, as you know?—Yes

8610 Therefore, it seems to me that the endorsement need not cause any bother at all unless it is endorsed on to somebody else?—Of course, the only difficulty would be if the paper remained in my name

8611 And you have endorsed it, but not endorsed it on?—You mean I have not endorsed it on, I have simply signed my name and sold it to you, you would not endorse it

8612 No, I should not Why should I?—How are you going to get the interest unless I sign the interest warrant for you?

8613 I understand now, there are coupons upon it, are there?—No, there are little cages I was explaining that On the back of the paper one reads "interest for the half year ending" so and so, "interest for the half year ending" so and so, "interest for the half year ending" so and so, and the cages here are independent of these, these cages are for endorsement

8614 I understand now, which I did not before That is a kind of paper with which, of course, we are not familiar in this country I should say that there are coupons attached, the coupons are on the back, but it is the same thing, except that they must go with the original note in this case?—It is not a coupon

8615 You cannot cut off the coupon?—It is part of the paper, it is printed on it, but, of course, the Government now have been asking whether it would be possible to issue Government paper payable to bearer They have taken opinion in India now whether it would be possible to have it in the form of stock, the present notes, and paper payable to bearer

8616 It would be quite possible to do that, because there is plenty of it to be found in London—not on the Indian Government, but other loans?—I do not know that it has reached further than the stage of enquiry

8617 As regards the bank reserve, if you had to choose in what form your bank reserve should be, how should you take it, gold or rupees?—Are you referring to Indian banks?

8618 Yes, or any bank?—The cash reserves

8619 Yes?—I should keep them in any form

8620 You would as soon keep them in rupees as in gold?—No, I would sooner keep them in notes They are handier for us

8621 I suppose you would rather keep them in gold than in rupees?—Not necessarily We have to believe that the Government of India is all right

8622 Still I come back to the old question that the gold, from my point of view as a banker, is pleasanter to hold, because it is intrinsically worth more, as you have observed, than the rupee when melted down?—Quite so

8623 And gold is world's money?—Yes, exactly

8624 (Sir Ernest Cable) You speak in your memorandum only of the difficulties of a State Bank (see pp 613-5) Do any advantages occur to you?—I have read the memorandum prepared by Mr Abrahams, and I am afraid I do not see any advantages now unless there are other advantages which have not been disclosed there

8625 You were talking about the mushroom banks Can you tell me where those mushroom banks operate?—All over the country

8626 Do you not think that a State Bank might supply the place of, and tend to abolish, these mushroom banks?—No, I do not think so, for this reason, that if you had a big State Bank you would not get the deposits out in the same way There is money in the country to come to good banks, but what we want is the Government to see that those banks are kept in leading-strings for a good long time to come They will get money which the State Bank or the Presidency Banks would not get, because the Presidency Banks cannot afford to pay the rates, or they do not pay the rates, that the smaller Joint Stock Banks would pay

8627 You think the depositors throughout the country demand higher interest?—They want a bigger rate I am not aware what Sir James Begbie, or the Bank of Bombay, pays on deposits, but I believe it is about 3 per cent

8628 (Sir James Begbie) It is 3 per cent?—If you can get another Joint Stock Bank which is willing to pay 4½ per cent., and if that bank is properly regulated by Government, you will get money to come to that bank The bank has a certain duty to perform and at 3 per cent they are not just exactly inviting all the money in the country to come to them It is

6 August 1913 ]

Mr THOMAS SMITH

[Continued

the same way at home here, so much money has had to go elsewhere

8629 (*Sir Ernest Cable*) In reply to the Chairman you mentioned that it would be an advantage for the use of currency notes to be increased?—Yes

8630 Do you not think that could be better brought about by a State Bank than by Government?—If there is one thing that the Government have done well, they have managed their currency well.

8631 Nobody denies that, but the question is whether a State Bank would not be able to push it more successfully?—No, I do not think so

8632 (*Mr Gladstone*) Let me ask one or two questions as to the nature of the security to be deposited with Government against Government loans You have referred to the trouble and risks in regard to Government paper passing by endorsement?—Yes

8633 Do you not think that an issue of short term bearer bonds, known in this country as floaters, will get rid of this difficulty and form a very convenient security?—As a matter of fact, that is the view I took when the Government asked opinion upon that matter

8634 The creation of such securities by Government from time to time in moderate amounts might be done without inconvenience?—I think it could

8635 And if the amount repayable at any one time was strictly limited there could not be much objection from the Government point of view?—I do not quite follow the question.

8636 If the amount repayable by the Government at any one time on short term bonds—because they would have to be short term bonds?—Yes

8637 It would form a good banker's security, and it might attract money not now invested in Government loans?—Yes

8638 It would be a safe security for Government to hold against any loans they might make, reducing to a minimum any risk that they have to carry, or any adverse effect on Government loans in general should it ever prove necessary to realise such security?—I think that is quite true

8639 (*Mr Keynes*) You said in reply to a question that the bank rate sometimes differs in different Presidencies?—Yes

8640 I suppose that is because money does not flow very readily from one part of India to another?—No, that is so

8641 Do you hold that that is an advantage?—That it should not flow?

8642 Yes?—It is probably a disadvantage

8643 I think you called attention to these different rates as showing that there was no need for a Central Bank I suggest to you it rather shows the opposite?—No, I mentioned that as showing that the conditions in each of these Presidencies are entirely different, that the rates, among other things, are different I think if you read my note you will see I say that each has a distinctiveness of its own, and the rate in each is often different" (see page 613, paragraph 8)

8644 And the rate is different because money cannot readily flow from one to another?—That probably is so, yes

8645 If there were a Central Bank which directed the flow of currency to the different Presidencies according to how much was wanted in each, there would be less difference between the bank rates than there is now?—Yes, but I do not know that the Central Bank could achieve that.

8646 If it attempted at all to do that it would be an advantage?—It would be a very good thing, but you have the other thing there; if the Government are going to lend money, as I suggest in this note here, out of their surplus, it would do the same thing

8647 How do you mean? I do not follow?—If the Government are going to lend money out of their currency reserves and tide over the seasonal difficulties you will have brought the rate down.

8648 But does that affect the difference between the rates in the different places?—It would, because you would probably have Madras as the highest, and it would probably be borrowing more. If there is a difference, if it is 4, 5, and 6 in one place, and if

it is tighter in Madras than it is in Bengal, then Madras will be wanting more from the Government, which would bring it down to 4

8649 That is assuming that Madras would have as much security of the right kind as would be wanted for the loan?—Yes

8650 You say that there are local differences to which the banks have adapted themselves What are the local differences of which you are speaking?—The differences in trade and so on—financing different industries

8651 Do you mean differences as to what trades and what individuals ought in different parts of the country to have credit?—I do not quite follow that question

8652 The industries in the United Provinces are different from the industries in Burma?—Yes, quite so

8653 So are the people?—Yes

8654 But that you say does not cause any difficulty to the Bank of Bengal?—No

8655 What are the sort of differences of which you are thinking which would cause the difficulty?—The differences in the nature of the business?

8656 Yes?—Bombay has entirely different business from Calcutta, for instance

8657 But so has the United Provinces from Burma?—Yes

8658 What is the difference which is relevant in the one case and not relevant in the other?—There are differences in trades, and so on, and different industries and exports

8659 But the difference of industries is no interference as between Burma and the United Provinces, but is an interference as between Calcutta and Burma?—Yes, it might be

8660 Why is that?—You are only enlarging the scale, are you not, you are only enlarging the area

8661 Are not these differences of a kind which would inevitably be left wholly to a local board, and could not conceivably be the business of a central board?—It might be arranged to leave them to the local board

8662 Are there any differences which could not be left to the local boards?—No, probably not It would all depend on what latitude was given to the local board

8663 With regard to the mushroom banks, from what classes are they drawing their deposits, do you think?—From the artasan, the babu, the pleader and the cultivator

8664 Is that a class which, apart from mushroom banks, does not bank at all?—I do not think they bank at all Of course, the pleader, as an educated man, did bank previously, but they get better rates here, and they get a position of importance on the board, and so on.

8665 So to a certain extent you think the mushroom banks by their high rates attract money which previously was going to other banks?—No, not necessarily Yes, to a certain extent to other banks, and they have probably tapped new sources altogether

8666 How are these banks using their money?—I refer to them in the appendix to my memorandum (page 619, paragraph 6) as investing in all sorts of things, such as coach-building They will take a part of their money and erect a soap factory, or a coach-building business for repairing carriages, and so on, and, of course, they finance a great deal in trade.

8667 Do they on the whole put their money into permanent investments, or do they keep it for what I may call real banking purposes?—I should think they rather tie it up In fact, they become traders with the money which is given to them as bankers

8668 What sort of rate do they commonly pay on deposits?—Five per cent., and for two years probably six per cent. It is five per cent. for one year and probably six per cent. for two years, and so on like that at varying rates

8669 I think in answer to *Sir Ernest Cable* you said that the right solution was not to introduce a Central Bank but to have these banks under Government inspection?—To let them go on, and not to have them

6 August 1913 ]

Mr THOMAS SMITH

[Continued

under Government inspection but to legislate for them and to provide that they must do certain things they must comply with certain conditions before they are floated, and after they are floated they must have a certain percentage of cash to their deposits, and so on, and they must have a certain percentage of capital to their deposits

8670 If they were properly regulated could they afford, do you think, to pay these high rates of interest?—I see no reason why they should not. They are borrowing probably in districts which are not advanced, and if they borrow at 5 and lend at 9 per cent they are getting a profit margin of 4 per cent, and their expenses are very low, they have no European establishments

8671 If there were different branches of the central bank in these more remote places, would they not also be able to afford to pay more than the 3 per cent now paid by the branches of the Presidency Banks?—Then they would have to alter their present practice, because if the central bank is composed of the Presidency Banks a uniform rate obtains at all their branches, and they would only pay the same rate at all their branches

8672 Is that a good plan, do you think?—No, I expect it would be a very good thing to let other institutions than a big institution open banks

8673 Is it your opinion that a higher rate could well be paid in up country districts than what could be paid in Presidency towns?—Do you mean a higher rate paid by borrowers?

8674 A higher rate paid to depositors?—Yes, there is a higher rate paid up-country than there is in the Presidency towns

8675 And it might fairly be paid?—Yes

8676 So that if Presidency Banks are thinking mainly of their Presidency town trade in charging a uniform rate which is suitable to them, that tends rather to hinder their development up country?—If they borrowed at one rate at all their branches and lent at a uniform rate?

8677 No, that was not my question. If the Presidency Banks are thinking chiefly of their Presidency town customers and charge a rate suitable to them and then impose that rate on their branches also, you think that hinders the development of their branches?—I have not quite followed the question

8678 (Mr Gillen) What Mr Keynes means, I think, is that they offer no more for deposits up country than they offer in the Presidency towns?—Is that your point?

8679 (Mr Keynes) Yes?—No, they do not offer any more, because if they offered more in Cawnpore, for instance, than they offered in Calcutta, people in Calcutta would send up to Cawnpore to reap the higher rate

8680 But if the money could only be taken out at the branch at which it was deposited, would that be the case?—Quite. You could get currency notes and send them back again to Calcutta and you could get your money back there, or you could go to the Currency Offices and get a transfer for one-sixteenth

8681 Suppose that one of the more substantial of the joint stock banks were in difficulties, to whom would it look for assistance?—The Presidency Bank in the first place

8682 Is there any important reserve in cash outside the Presidency Banks?—Do you mean banking reserves?

8683 Yes, banking reserves?—Do you mean have the other banks got important reserves?

8684 Have they reserves in cash apart from their balances at the Presidency Banks?—You mean have these other banks balances in the Presidency Banks?

8685 No, have the other banks got reserves in cash apart from their balances at the Presidency Banks?—Yes

8686 Important reserves?—Yes, considerable

8687 I do not want anything precise, but when banks say that they have cash in hand and at the Presidency Bank amounting to so much, would you think they had as much cash in hand as they had at the Presidency Bank?—A great deal more. Take the case of my own bank. We bank our surplus money

with the Bank of Bengal, and that is a mere bagatelle compared with what we have in our own safes. We could not possibly leave all the money lying with them

8688 What is your published proposition?—It is, I think, shown only as "Cash in hand and at bankers"

8689 About how much is it—what proportion of the balance?—I could not tell you, I am not in the head office. Do you mean of the proportion of the bank's cash balance how much is kept at the Presidency Bank, and how much is in our safes?

8690 No, I did not mean to ask you that, I mean merely what proportion of the deposits, the cash in hand and the money at the Presidency Bank added together make?—I do not think I could tell you straight off just now

8691 Have you not any approximate figure?

8692 (Lord Faber) It is 20 to 25 per cent, is it not?—It varies in June and it varies in December. When the demand is greater the percentage is not so high. In June, of course, it is very large and the money is lying idle, but the figures have escaped my memory at the moment

8693 (Mr. Keynes) You suggested that perhaps a loan of ten crores would be wanted to keep the bank rate down?—I do not bind myself to that figure, you understand

8694 No, but if you take that figure, do you think the Indian banks could put up security with a good margin to that amount?—The whole of the Indian banks?

8695 Yes?—Probably

8696 Even if they were limited to Government Paper and a few other Port Trust securities, and so on?—Yes

8697 You think they could?—I have not the figures now, and it is rather difficult. I cannot remember just exactly how much the Presidency and other banks hold in these securities. It is difficult, it has been off my mind for some time now

8698 I do not quite understand the mechanism by which this money should be lent to banks. Are they to tender for it?—No, the probable course would be that they would write in and say to Government "Could the Government give them so much money?"

8699 You say in your memorandum "Any bank depositing sufficient Government securities to be accommodated, the loans not to exceed three months and to carry interest at a rate to be fixed by Government from time to time, but approximately five per cent" (page 614, paragraph 17)?—Yes

8700 Do you mean that the Government should notify that their rate at the moment is, say, 5 per cent and then lend to any extent which is asked of them at that rate?—No, I take it the procedure would be that the bank would probably want ten lakhs and would write to ask the Government if they could get the money and on what terms, and the Comptroller would say on what terms he was prepared to lend. If the money were going out quicker than the Comptroller cared for, of course, he would have to put up his rate, but it would move more or less in sympathy with the bank rate

8701 It would be within the discretion of some Government official to settle the rate as he saw the loans going in or coming out?—I think so. I think the Comptroller might fairly be trusted to do that

8702 Doing very much what a bank does?—Yes, practically

8703 You are proposing something which would be very far from rule of thumb and would involve some Government official's exercising a discretion of a kind usually exercised by banking officials?—Yes, but to what extent it would. If the Government said that they were going to lend at 5 per cent and found that the rate was going higher, I think the Comptroller would be quite justified in saying "we want 6 per cent now, you are getting a bigger profit margin and we want to share it." I do not see that there is any objection to the Comptroller doing that

8704 In the course of your memorandum you say that borrowers for all the year round would pay 6 per cent. We have had evidence that some borrowers

6 August 1913 ]

Mr THOMAS SMITH

[Continued

pay a good deal less than 6 per cent I suppose they have been an exceptional class of borrowers?—Yes, very good borrowers I know from my own experience as a matter of fact firms who do borrow at less than 6 per cent from the Presidency Banks

8705 But you say the ordinary man in a fair way of business would probably have to pay 6 per cent for all the year round loans?—Yes, if he is a good borrower

8706 What sort of security would he give against that?—He might have shares, or it might be stocks

8707 Something of the kind which the Presidency Banks would not take?—Oh dear me, no Presidency Banks advance on anything if they can get two names They can drive a carriage and pass through their limitations They can lend on landed property so long as they get two names and the deposit of the titles as security

8708 We are told in evidence that the rule which prevents Presidency Banks from lending upon stocks and shares is an inconvenient one?—It is about the one thing that they do not do, but if I wanted to borrow on stocks and shares all I have to do is to overdraw my account, and I have the stocks and shares and I come to you and say "Will you sign this promissory note for the Bank and sign along with me?", and you get a small commission for doing it, and I get the money all right and they get the shares

8709 They do actually take stocks and shares as collateral?—Yes

8710 If they get the two names?—If they have the two names They may put the shares in safe custody, I do not know, but I know cases where they have the shares

8711 You think, therefore, that these restrictions under which they work are of no practical importance?—No, I think they can make such very wide use of them, but I do not suppose the Central State Bank would be allowed to do things of this sort They could not possibly

8712 Do you think the restrictions are of a wise kind and ought to be maintained?—The present restrictions?

8713 Yes?—As I say, they can make a pretty wide use of them, but they have come to no harm so far

8714 Would it be a good thing or a bad thing if they were strictly enforced? You are suggesting that in the case of the Central Bank they would have to be strictly enforced?—It seems to me, according to the strict letter of the law, the Presidency Banks could make these advances so long as they got the two names

8715 If it were to be strengthened up in some way so that they could not make loans on stocks and shares would that be a good thing?—I would not say so Why should they be debarred from it if they have two names?

8716 Is there any reason why the Central Bank should be debarred from it?—The Central Bank, if it is going to be a Government Bank, I fancy would have to be kept much more tightly in hand

8717 Why?—Because under the present conditions it is possible to borrow on houses and lands and everything else So long as you get two names you can go to the Presidency Banks and get the loan

8718 My point is this, that if the method followed by the Presidency Banks is perfectly safe there is no reason—?—It is perfectly safe so far

8719 Do you think there is any element of danger?—There is always danger in banking, you are never free from it It does not matter what you touch It might be right to day and bad next year

8720 Indian banking has had a very prosperous time for ten years or more In what position do you think they will find themselves to meet the next severe banking crisis?—It depends when the next severe banking crisis comes, and in what form

8721 If there were to be some serious failures and at the same time a good deal of stringency?—Yes, a good many would come down

8722 Is it your opinion that the Presidency Banks are strong enough to support the whole fabric of Indian banking on an occasion of that kind?—I suppose I am

at liberty to say Am I to express opinions as to the solvency of Presidency Banks?

8723 I am not asking as to their solvency, I am asking as to their capacity to stand a strain in which they had to support not only their own liabilities but also a large part of other banking liabilities?—They might to a limited extent take on other banks and help other banks through, but of course we know that in one case they failed themselves, did they not?

8724 What is in my mind is this, that it may be the case that with the great growth of deposit banking during the past 10 or 12 years, and the growth of dependence on Presidency Banks, while they are very well able to look after themselves, they would not, perhaps, be able to support all the banking interests of the country?—But why the dependence on Presidency Banks? You said just now With the growth of joint stock banks and their dependence on Presidency Banks

8725 You told me earlier in your evidence that if they were to get into difficulties they would try to borrow from Presidency Banks?—Yes that is assuming difficulties They would naturally look first of all to the Presidency Banks

8726 Ten years ago there were no banks, or possibly about half a dozen, who were in a position to get into difficulties They did not exist?—Yes

8727 But that is no longer the case?—No, there are a great many now

8728 Does not that make the whole situation more complicated and serious?—It does, but the remedy is for the Government to lay down restrictions, and say, "You shall only conduct your business in this manner" If the Government will only do that, you will get a form of banking which is going to do a lot of good It will reach the places that Europeans do not go to, and you are going to get out the deposits We want the Government to come forward and say "You have to comply with certain restrictions," and I consider that these banks will fulfil a very useful rôle, provided they are put into leading strings

8729 But even if they conduct their business quite moderately and on cautious lines, the mere growth of smaller banks necessarily having small reserves, complicates the banking position, does it not?—Yes, to this extent, that it exposes you to greater liability to failures

8730 No one would expect a small bank to keep such a very large liquid reserve that they could get through a grave crisis unaided?—No

8731 Not in India?—No

8732 So that if these banks grow there will necessarily be a great growth of institutions which would be in need of some outside assistance at a grave crisis, and that is a new thing?—Yes, new to the extent that there are more of them, and of a less solid type than those which have gone before

8733 Do you think that if the reserves of the three Presidency Banks were amalgamated, and you had a stronger central institution, that might prove valuable at a time of crisis of this kind?—Why do you want to amalgamate them if they are there now? It makes no difference if you put the three into one

8734 Is it not your experience as a banker that three reserves in one are of more value than if they are separate?—It would be bigger

8735 Would it not be more valuable?—If you put three reserves together, there are always the corresponding three liabilities put together

8736 But is it not your experience that if three banks amalgamate, from the point of view of their reserves they are stronger than if you have the three banks separate?—Yes, that is so

8737 Would not that apply to the Presidency Banks?—If they were united.

8738 Yes?—Yes, but do you want to unite them for the sake of meeting this danger?

8739 It is one of the objects which I have in view Do you think there is anything in it?—The reserves would be stronger if they were administered by one, undoubtedly

8740 And that is an important and relevant consideration, because the banking position in India is

6 August 1913]

Mr THOMAS SMITH

[Continued

becoming more difficult than it used to be through the growth of smaller institutions?—Yes I take it, however, in the event of difficulty, banks would repair to the Presidency Bank in their own sphere, so to speak, if they were in Bombay they would go to the Presidency Bank in Bombay or in Bengal to Calcutta, and they would be tided over in that way.

8741 (Chairman) That is, provided that the Presidency Banks thought that the institution was one which ought to be helped?—Yes, undoubtedly.

8742 You would not assume, or wish other people to assume, that whenever one of these minor institutions got into distress the Presidency Bank would as a matter of course carry it over?—It could not do so in the case of the Bank of Burma the other day, the Bank of Bengal refused to step in and help because it was not a genuine case.

8743 (Mr Keynes) So that if there is a crisis in one Presidency at present, only the funds in that Presidency are freely available?—They can be transferred.

8744 But there is difficulty in that?—No.

8745 We have had evidence that when there was trouble in Madras not many years ago Madras had to depend to a very great extent upon its own resources?—That may, of course, have been due to the fact that the treasuries down there were more or less empty at that particular time.

8746 Would not that kind of difficulty be avoided by a central institution which had an eye to the whole country?—No, in the case which you have just mentioned, Madras was probably empty, and the only way you could get over that was by sending down hard coin, is not that so?

8747 Quite so?—Even if you had a big Central Bank, and even now that Government have simplified matters considerably by giving big transfers from treasuries to other treasuries, there is still an enormous amount of money carted about the country actually in hard cash.

8748 It would be to the interest of the central institution to send cash to any branch which was in trouble, or to any part of the country where at the moment it was wanted?—Yes, it could still be done now.

8749 It is nobody's business to do it now?—I am afraid I do not understand you. Nobody is going to offer money to a small bank in difficulties until it asks for it, or unless it deserves it.

8750 I am suggesting that it is not the business of the Government or of the Bank of Bengal to remit surplus funds to Madras because the Bank of Madras is rather short of funds?—No, quite so.

8751 If they were all one central institution it would be their business?—It would be the business of the central institution. It would find that it was getting better rates in Madras probably if there was a shortage there, and it would send money down there. If it sent money down there it would send the rate up in Bengal or Bombay probably.

8752 That would be an advantage, would it not?—I do not think Bengal would accord you thanks for it, or Bombay either. If you send money away to one place where there is a bigger demand, it would simply tend to put up rates all round elsewhere.

8753 But from the point of view of the country as a whole it would be plainly an advantage, would it not?—I do not see that there is any enormous advantage if the difference is only one per cent.

8754 I did not imagine that case, I imagined the case of a real temporary difficulty. If there were a central institution it would be rather easier than it is now to relieve that temporary difficulty?—I do not think there is very much to be made out of that. It seems to me if the money is not in the Treasury at Madras to assist in a case of that sort, it would have to go in hard coin, and whether it is sent by the Calcutta bank or by individuals or an ordinary joint stock bank, is immaterial so long as it gets there.

8755 But at present if it is in Calcutta it is only available in that Presidency, it is not available in Madras?—They may have a transfer of it.

8756 But in order to get that transfer the Bank of Madras has to raise funds in Calcutta?—Yes.

8757 Which is plainly more difficult for it to do at a time of crisis than if the authority of Calcutta is also the authority of Bengal and Madras?—But do you not suppose if the Bank of Madras were pushed they could not send up to Bengal or Bombay and offer to borrow there and get the money sent down in some way?

8758 There is no doubt whatever, they do that now. But I am assuming this case, that while that would be done to a certain extent there is some difficulty in it?—There might be, but at the same time it is perfectly open if rates are very high in Madras for Madras to send to Bombay or Bengal to get the money sent down. I do not think the Central Bank would make it any easier.

8759 I do not think that is my point, but I will not pursue it. I have only one other point. If the notes preserve the same form and the same appearance and have the same guarantee, would the fact that they were managed by a Central Bank militate against them?—These are things that are very difficult to express. You have got to be in India to realise these things. Every little change means such a great deal.

8760 I am not expressing an opinion, I am asking a question?—Exactly, but I am really giving you the answer in a different way. It would, I think. Any change of that sort would be bound to affect the note circulation for many years.

8761 If the notes preserved the same appearance, and if the Government did not withdraw their guarantee, you think the fact that they are issued by a Central Bank would make people distrust them?—I think it would, the same as when the Government tried to push sovereigns into circulation they went to a dis count. It was something new. When they tried to circulate sovereigns it was something new and people said "No, we will not have it."

8762 But there will be nothing new in the appearance of these notes or in the security. You think that the ordinary person who would be ignorant enough to be disturbed, would have knowledge enough about the existence of the central bank?—I think that the chance is that it would create a disturbance in circulation.

8763 You do seriously say that?—I think it would in so far as it would be novel. It is a thing that would be got over in time, there is no doubt. It was only a few years ago when the Government of India printed the Government promissory notes on different paper, and made it very dark blue, and there was all sorts of talk about that.

8764 You would not say that it was more than a temporary difficulty?—No, not more than a temporary difficulty, but there would be difficulty at first, I think. As I tell you, there was the same thing when the Government promissory notes were changed from white and red into mauve. The people wondered what it all meant.

8765 (Sir Shapurji Broacha) Do you think the Presidency Banks are doing their business very efficiently within their spheres of influence?—I think they are.

8766 Money, of course, is very cheap from June onwards?—Yes.

8767 Supposing the Government were to lend some money during the busy season, I think the rates of interest would not rise so high?—No.

8768 The State Bank could not do anything better?—No.

8769 When the Government commences to lend the money?—Quite so.

8770 A State Bank would require State Directors?—Yes.

8771 It would be only making things cumbersome? I think it would.

8772 Instead of the State having one Department of Accounts, it would have to have two Departments of Accounts?—Yes.

8773 I suppose you know that wherever the Government have taken responsibility, the Government Directors have failed to carry it out? Do you know of that in the Bank of Bengal, and in the Bank of Bombay? I will tell you the history of it. The

6 August 1913]

Mr THOMAS SMITH

[Continued

Government made a rule not to lend more than one lakh to any person, and they lent a firm 23 lakhs without the Government Directors informing the Government, and the result was, when the Government asked for an explanation, they said it was a serious case, and they were not bound to bring it to the notice of the Government?—A serious case of necessity to make the advance, I suppose?

8774 Yes So that the Government Directors on a State Bank are no assurance of the Bank going on according to the Statutes?—Apparently these Government Directors did not justify their position, but it does not follow that others would not

8775 I think India is a very large country for one bank?—Exactly

8776 For people sitting in Calcutta to regulate the credits of Bombay and other places?—Quite so

8777 I think there is better accommodation, and a better way of negotiating with a bank, within the sphere of your influence, than by somebody sitting at the end of India?—Yes, you would get into more intimate touch with your banker

8778 I suppose you know that all the exchange banks keep their balances free in the Presidency Banks at present?—In Bombay

8779 Yes, they keep their free balances in Presidency Banks without interest?—Yes

8780 I do not think they would do more with a state bank at present?—No

8781 They would keep it in the same way?—Yes

8782 The State Bank would be no advantage in the way of keeping balances over the way the Presidency Bank keeps them now?—Not any more than they are at present

8783 Now about the endorsement of Government paper Do you know that the Government have asked for opinions in what way to prepare paper, whether with coupons or whether they should do away with the endorsement or not? They have sent round a circular for the opinions of all Chambers of Commerce and all Stock Exchanges, and so on. Do you know that the Indian Government paper is more a banking security than Consols, even, in one respect, because the interest counts up to the day of sale, therefore you have to count in the interest in considering whether you are making a profit or loss, because interest goes up to the day of delivery?—Yes

8784 That is not so in Consols, which are like shares, interest is payable on certain dates of the year, and the endorsement is a sort of security, something like a bill endorsed by different people?—To preserve the chain

8785 And all the people are responsible for anything wrong with the endorsement with all their signatures above one another?—Yes

8786 So, of course, in India, where the people are illiterate, it is a great safety to widows and other people First let me ask you this In India the signature of a widow or a woman ought to be witnessed by two witnesses and a Justice of the Peace?—Yes

8787 That is the rule?—Yes

8788 And that is their safety at present Their husbands could not force their paper out of them, and their sons could not force their paper out of them, because the woman has to sign, or put her mark before two witnesses and one Justice of the Peace Therefore it would be a very difficult thing for the husband or the son to get it from the woman?—Yes

8789 I suppose you know that some of the Chambers of Commerce and other people have facilitated that by attaching coupons where the passing of the note must be by endorsement, and the Stock Exchange have given their opinion that the note ought to be prepared with the coupon for six months' interest attached, but passing the possession of the notes must be done by endorsement?—Yes

8790 That would facilitate interest-taking?—Yes

8791 You think that the currency office should give whatever is asked, gold or rupees or currency notes, against demand?—Yes, to the extent that they can give the gold.

8792 Then they stop giving gold?—If they have not got it The Government do not undertake to give them gold, of course

8793 Do you think it is necessary to undertake to give gold?—No, I do not think it is necessary

8794 Do you know that in France they do not give gold when asked?—They will not, no, they can keep it back

8795 Ought the Government to accustom the people to the refusal of payment in gold by currency offices? Otherwise when it is not given they will be alarmed?—I prefer the present arrangement from a banker's point of view When the Government can give us gold they should give us gold Of course, if they cannot we quite understand it

8796 You know that the banks are unable to reach the cultivators of India because they are such a small people, but when the rate of interest is reduced the sentiment for money is easier when the bank rate is eight or nine per cent the sentiment becomes rather alarmed, and the people are rather more afraid to lend than they would be at five per cent, is not that so?—Do you mean depositors?

8797 No, I mean when the bank rate is eight per cent the middlemen who are lending outside are generally more alarmed than when the rate is four per cent?—Yes

8798 When the rate is easier the middlemen would be better able to afford to lend money to the cultivator than when the rate is high?—Yes

8799 So the cultivator does benefit to that extent? He easily gets his money from the middleman?—Yes, I think there is a benefit in that respect

8800 (Sir James Begbie) I understood you to say that the bank rate of Bengal is usually 1 per cent less than the Bombay rate?—Not always I mentioned the case that it sometimes varied, but only sometimes

8801 I think the usual position is that in the late autumn the Bombay rate is below the Bengal rate, and then in the spring the Bengal rate falls below the Bombay rate, is not that the usual thing?—That probably is about it, yes

8802 With regard to the State Bank you say that the size of India is against the efficient working of a State Bank Do you place much importance on that objection?—Not a tremendous amount, but I do think it is an objection.

8803 There are several banks which have a chain of branches all round the globe, and they are to all appearance efficiently working, are they not?—You refer to exchange banks, and so on?

8804 Exchange banks and foreign banks?—Yes

8805 One question with regard to Council Bills You approve, I think, of the existing Council Bill system, including, I suppose, sales in excess of sales to meet the home charges, that is in Part IV of your memorandum?—Yes, I think that is what I stated (see page 615, paragraph 21)

8806 I understand from your note that you take the purely trade point of view that the bills provide money in India?—Yes

8807 Do you think that is the only consideration which should be taken into account?—In selling in excess of the requirements of the Secretary of State?

8808 Yes?—It is one consideration

8809 It is the only one you put, is it not?—I think it probably is

8810 You go on to say that these sales "are economical, inasmuch as they obviate the expense of the actual export of gold from London, and its subsequent re-export from India." Do you mean re-export from India for the purchase of silver?—Yes, or the replenishing of the Secretary of State's balances if he were not able to sell any more

8811 In the case of purchase of silver, against any saving effected as you describe, would you not put the cost of shipping the silver?—Yes

8812 (Mr Gillan) I want to ask you a few questions about this point of the Government lending money in India. I think you said you would require security for the loans?—Yes

6 August 1913]

Mr. THOMAS SMITH

[Continued

8813 And that you would take Government paper or Port Trust Stock, or things of that kind?—Yes

8814 But not commercial paper?—Do you mean bills

8815 Yes?—I do not think so

8816 That is what you said, I think?—I did not say bills

8817 No, you said you would not accept them?—I think not, no

8818 Paper of that kind might often be really very good security, might it not?—Yes

8819 The kind of security on which a bank would lend?—Yes

8820 What I wanted to ask you was, in excluding commercial paper do you do so because as a matter of fact it is Government which is running the business at present, or because you think the security in itself is not good?—There would be no great object in Government taking, and, in fact, it would be very burdensome and very cumbersome if Government were, say, to take hundis, in which the Presidency Banks hold very large sums, I think there is a difficulty in making advances, supposing these were to be discounted and held by Government or not exactly to be discounted, but made over to Government

8821 I take it that is a difficulty which arises out of the fact that Government is running the business?—Yes I mentioned these Government securities and debentures as I think they are clean and easily handled

8822 I am not quite clear how you would conduct the operation of putting the money on the market I think you said that you would not have a system of tender, but that Government would announce the rate and invite applications, or wait for applications?—I suggested that as far as the India Office were concerned

8823 And you suggested it for India too, did you not?—I did not suggest it for India

8824 (Mr. Keynes) I think you suggested that the Government should fix a rate, wait for offers, and then, if the offers were more than it could stand, raise the rate?—That is it

8825 (Mr. Gillan) That is what I understood The point I was coming to was this Supposing the Government has announced a particular rate, we will say 5 per cent, how is it to distribute this money between the different classes? Is it to be merely to the first comer? Suppose Calcutta is the first and puts in an application and asks for all the money the Government happens to have at the time, then is Calcutta to get it?—It would appear so

8826 In spite of the fact that possibly there may be a greater demand for money in Madras?—In Madras it might be I have not thought that out as to whether it would be expedient to advertise, and say that the Government were prepared to lend out so much in gradual amounts

8827 Is not that the difficulty?—It probably would be

8828 I think you contemplated that some Government official should have the power of varying the rate from time to time?—Yes

8829 There is another point of the same kind Suppose you go outside the Presidency Banks and lend to Joint Stock Banks, then some Government official would also from time to time have to determine the status of the applicants, to determine whether they were banks of a kind to whom he could properly make advances, is not that so?—Yes

8830 Would you give that power also to the Comptroller?—If he had the security—if the bank had the security to offer It seems to me that is all the Government requires They would not require to draw the line at all if they had the security

8831 It is the Comptroller General who is to do this business?—Yes, or any other official designated by Government

8832 Without reference to the Finance Department?—He would have to be in touch with the Finance Department

8833 But do you not get difficulties there? If he has to keep in touch, as he would have to keep in touch, with the commercial world on the one side, and the

Finance Department on the other, and this is business of a kind, I presume, that would have to be done immediately?—?—Would it not be possible for Government to say beforehand what they are going to have available, or what they could make available to finance trade in the course of the season? The Finance Department could do that

8834 Estimates of that kind must necessarily vary?—I quite agree They could be revised from time to time, but they could easily underestimate

8835 The drift of these questions is this I want to put to you in a general way that lending money is a difficult kind of business for Government to run I put it to you, and I ask you whether you agree with it, or do not agree with it?—I do not think the difficulty is very great when you are dealing with security You have got security It seems to me that Government officials are doing much more difficult things

8836 I think you said that if Government lent the money the advantage would go not only to Presidency Banks but it would work its way down to the Joint Stock Banks?—Yes

8837 But you doubted whether it would reach further? You doubted whether it would reach the cultivator in any case?—Yes, quite so, a modicum might reach him

8838 I take it, however, that your view is that a high rate of interest is a big drag on trade as a whole?—Yes

8839 I do not know if you would agree that possibly it would affect the cultivator in this way, that the man who is dealing in produce and is taking money is taking advances in order to enable him to do so, and if he has got to pay very high rates possibly he cannot give the cultivator such a good price for the produce?—Yes

8840 Is that possible? I am asking your views?—If the middleman is paying a big rate —

8841 Yes, then he is doing his trading under onerous conditions?—That is not such an important factor as if it is impossible or difficult for him to get the actual coin down I do not think a matter of 2 per cent, the difference between 7 per cent and 9 per cent, would much affect the price which the cultivator would get

8842 You do not think so?—No, I do not He takes interest as an incidental part of his business

8843 What are the classes generally from whom you would get your deposits? Can you give me any indication?—We get them roughly from everyone in India, with the exception of Government servants, who never seem to be able to save money

8844 What classes are included?—Indians of all sorts

8845 Professional men chiefly?—Pleaders—they make numerous deposits—barristers and doctors, &c

8846 Is there any other class you can mention apart from the professional classes?—Natives?

8847 Yes?—Yes, there are lots of natives who have deposits

8848 What are they?—It is difficult to say

8849 I mean quite generally?—Practically it is from all classes

8850 On the other hand, to whom do you make loans?—We make very large loans to Indians, and a good deal to Europeans, of course

8851 Traders?—Yes

8852 Apart from traders, do you lend to the lesser moneylenders, so to speak? Do the village moneylenders ever come to you for money?—No

8853 So you would say that there is no channel of communication at present?—No, he is on his own, so to speak

8854 Can you tell us about this system of cash credits to agriculturist societies? I understand your bank have been going in for that Have you done much of it?—I started that, as a matter of fact, in connexion with our branch at Cawnpore The matter was represented to me, and I had a talk with Sir John Hewett on the subject and we did go in for it, and we did make loans It is no breach of confidence, as it is stated in their reports, to say that the Unao Town Bank was our principal borrower, but they became so very wealthy that they do not

6 August 1913]

Mr THOMAS SMITH

[Continued

require any finance now They are on their own We have helped them through So far as the bank was concerned, I had some difficulty in persuading the management at my head office They took the view that these might be very serious competitors My view was that these co-operative banks reach a class of people which it is impossible for us to reach There are crops there to be financed, and you have only to take a journey through an agricultural tract to see the crops there These co-operative banks are a power in the land, and we have to recognise that they have come to stay I said If you want to help them now, you may as well lend money to them and get a fair rate, as let the money lie idle Most of them have become independent now, and do not require assistance

8855 Do you look forward to a development of this kind as making it possible that there may be a connexion, which is at present wanting, between the Central Bank facilities in India and these local rural facilities—getting the money down and up again?—Yes, in so far as even Joint Stock Banks can help them we are helping trade by lowering rates all round, and I know that now some of these banks have invested in Port Trust Debentures, and so on, and when they are pressed they say, "We will borrow on these" Previous to that I gave them temporary loans on their promissory notes, which are the joint and undivided responsibility of every member of the society I must say it was an experiment, but we came perfectly well through it

8856 You think it was good business for the bank?—I had a great deal of sympathy for these co-operative banks, and I induced my bank to go in for it I understand the Alliance Bank have taken to it also in the United Provinces

8857 You mentioned the difficulty in connexion with the system of Government paper The great bulk of the Government paper is held in this endorsed form, is it not?—Yes

8858 There is an alternative, that is to say, stock certificates?—Yes It is not very well known, I think

8859 It is not so popular?—It is not so well known, for one thing In my note to the Government on the subject I suggested that they should be more widely known, and that an alternative might be stock certificates, paper as it now is, or bearer bonds

8860 Do you think that bearer bonds would be popular with Indians?—No, I do not think so With business people it would be quite popular and would save a great deal of trouble

8861 Apparently, in spite of difficulties, they do prefer these endorsement papers?—Yes

8862 The Bank of Bengal, as agents of the Government of India, has to accept the responsibility for the accuracy of these endorsements, has it not?—Yes

8863 So that it is natural that it should satisfy itself, as far as possible, that the endorsements are correct?—Yes

The witness withdrew

Mr M R SUNDARA IYER called and examined

8876 (Chairman) You are, I think, Secretary of the Economic Association of Madras?—Yes

8877 You have been good enough to prepare a memorandum for us, and I propose, instead of asking questions on all that you have written, to print that memorandum as part of your evidence (see Appendix No. XXVIII, page 620), and only to supplement it by questions that I ask to-day I would like to turn at once to the questions which you have not dealt with in your memorandum Take, first, the question of capital expenditure, what have you to say to that?—All that I would say before this Commission is that it will be impossible to raise enough capital from England as we have been doing hitherto. There are various reasons for that. The first reason is that we cannot raise it so cheaply as we have been doing it hitherto, because  $4\frac{1}{2}$  per cent. 5 per cent. and  $5\frac{1}{2}$  per cent. seem to be the rates for some of the Colonial securities. The second

8864 Another difficulty which you mentioned was I think, that the endorsement by an agent of a railway company had not been accepted?—Yes

8865 If the agent had been legally entitled to sign for the company the bank would have had no option but to accept his endorsement, would they?—You mean at the Public Debt Office?

8866 It must be a legal point, must it not?—I do not quite follow you there

8867 As I understand, in certain cases, according to the constitution of the company, there are certain officials who can sign endorsements, but they are not legally entitled to bind the company?—I see

8868 It must be a legal point like that?—Yes They might have limited power

8869 I only want to make it plain that the bank could not act in a case of that kind without consideration and legal advice?—Yes, in that case that probably was so In the case of another mercantile concern, where they disputed the right of an attorney to sign the paper, it was said that under the Articles of Association it was not contemplated that the company should ever hold Government paper, and yet they could invest the money in everything else The Government said in effect No, it is not contemplated that you should ever handle Government paper, you are cotton merchants only

8870 (Lord Faber) May I just ask one or two questions more? If the Government has a certain amount of money to lend on specified securities would it do for them to ask for tenders from all banks?—I do not think there would be any objection if it were notified

8871 Then you would get away from the difficulty of favouring one bank as against the other in rate or anything else, would you not?—Yes

8872 Does the Indian Government lend its money out well now, in your opinion?—No, it is the biggest hoarder in India

8873 Another question, which is rather a banking question. If the commercial banks lend to these co-operative land banks in India do the commercial banks find they can get paper and security from the co-operative banks?—I think they are becoming that way now As I said, we did it first of all purely as a trial on these promissory notes which we had endorsed over to us, which the rural bank itself had got from the cultivators' society We took their endorsements over

8874 (Chairman) A witness the other day told us that if you went to the Currency Office in Calcutta and asked for transfers to certain places the Government would give you a transfer at a better rate if you agreed to accept payment in sovereigns than if you took payment in notes or rupees, have you any experience of that kind?—Absolutely none

8875 You have never known it happen in the case of a transfer between Calcutta and Cawnpore?—No, I have never known it happen in my experience that I can think of

reason is that we ought to be able to get the money at the time when we want it, because we are so much at the mercy of the seasons, and when there is an additional demand for it, it will be impossible to get enough at a reasonable rate and for a short period. The third reason I would assign is that sterling borrowing always inevitably leads to difficulties, whether they be currency difficulties or other kind of difficulties In the long run it is not desirable for any country to be permanently the debtor of another country, because the debtor country will always be dictated to.

8878. What is the inference you draw from those premises?—That it is not possible for us to raise as much capital as we want from England

8879 Do you, therefore, urge that more capital should be raised in India itself?—Yes I believe that capital can be raised in India itself I would suggest

6 August 1918 ]

Mr M R SUNDARA IYER

[Continued

a system of raising capital in India by means of what I may call something like the French rentes, that is by the issue of 5 rupee paper or 1-rupee paper. If loans are raised in that way, either through the post offices or through the co operative societies, or various other agencies, I think plenty of money will be forthcoming for the needs of the Government of India.

8880 Do you think much more can be raised in India than has been raised in recent years?—I think very much more can be raised.

8881 Do you anticipate that the same classes would be willing to invest larger sums, or that new classes of investors could be found?—I believe new classes of investors could be found, apart from the people who are now sending money to the savings banks, and the large class who invest their money in landed property and in other ways.

8882 If they put their money into savings banks, those are Government savings banks in India, are they not?—Yes.

8883 Government does have the use of that money, does it not?—Yes, to a certain extent.

8884 On the other hand, if it is put into jewellery it lies idle?—Yes, it does.

8885 What alterations do you think would tempt those who now put their money into jewellery or hoard it, to put it into Government securities instead?—Getting some interest, however low it may be.

8886 They might do that now?—No, there would be a difficulty in this respect. A deposit in the savings bank is a matter of some difficulty to the large class of illiterate people. There is the question of going to deposit the money in a savings bank, and then there is the question of the signature, which would be a great hindrance in many cases. People who are not able to write their signatures properly—and among the Indians there are so many illiterate people—would be able to understand taking their money to a Government office and getting a scrip of paper for it, and then, a few months afterwards being able to go to the office and hand in the paper and get their money back with the interest added.

8887 What you suggest is really the issue of bearer securities?—Yes, something like that, a kind of certificate really which may even be transferred or assigned.

8888 In very small denominations?—Yes. If you were to adopt some such system as that I am certain you would be able to get in each taluk from 10,000 to 20,000 rupees.

8889 Do you think there is scope for the issue of much larger amounts of rupee loans of the present character in India?—Yes. I think I have got some figures here showing how much we have taken back to India.

8890 It is the case, is it not that India has been re absorbing rupee paper in recent years?—Yes.

8891 What figure do you think the Government of India could safely count upon as being able to issue year by year?—I do not think I would be able to say that. I think it must first be tried.

8892 I think in recent years they have issued about 2 millions sterling in rupees, have they not?—That is so.

8893 In that case, would you go on increasing the amount experimentally?—Yes. The loans at present raised in India are not raised in a proper way. They are raised through the banks and syndicates, and therefore a large amount of the money that is available does not come in at all.

8894 Would you advise that class of loans being raised in any other way than they are now?—Yes, I would advise that they should be raised through the post offices, or through the co operative societies, or through the district boards, or through any other agency which is in touch with the classes from whom these loans can be raised.

8895 Let me turn now to another big question. Are you in favour of the establishment of a State bank?—No, I am not in favour of a State bank.

8896 Will you tell me your reasons?—First, there will be the disadvantage of having the notes issued through the State bank. Certainly, the note circula-

tion will decrease once it is handed over to a State bank, because the people will not have quite the same amount of confidence in a State bank note as they now have in the Government currency note, that will affect in its turn the circulation of the rupee, and that will complicate the question. Secondly, all of us believe that the Secretary of State for India and the Government of India are responsible to the Press and to public criticism, and I do not think that the Press and public criticism can in any way have any control over a State bank if it invests its money in the Argentine or in South Africa. Even if the system were introduced of having three Government directors as the old banks had in India, those three Government directors would always be in a minority as against the other directors. That is another reason which, I think, would be against the popularity of a State bank—that the Government would have no real control.

8897 You think the Government control would be insufficient?—It would be insufficient. There may be an objection among the people to entrusting their money to a State bank. I do not think the money would be any safer than where it is now, and the note issue could not be popular because, as I say, bank notes would not be accepted with the same amount of public confidence as the Government currency notes are. You want banks in every village, a greater decentralisation of the banks is what you want.

8898 You think India is too big as a whole for one State bank?—Yes, it is too big. You want money in every village, and I do not think the present banks finance Indian trade or Indian exigencies to the extent that they ought to.

8899 Therefore, you are in favour of more decentralisation, and you are not in favour of centralisation?—That is so. Even the banks as they are, I think, should have more branches in the districts and villages.

8900 Do you think that the Government could do any more than it has done to encourage the opening of new branches by the bank?—No. In India they are now very busy establishing co operative societies, I think if that work could be done properly, it would after some years prove to be the means of helping almost all classes in the country.

8901 Do I understand that you look rather to the spread of the system of co operative societies than to the spread of actual banking?—Yes.

8902 That is, if you have the kind of assistance that is needed from the Government?—Yes. I will explain it in this way. We had large deposits in banks until the recent failure of one bank at Madras, and since then people have been investing their money in landed property and in other ways.

8903 Have you studied the banking conditions of Northern India at all?—Only to a very small extent.

8904 Have you formed any opinion whether the Government of India ought to exercise greater control over all the institutions calling themselves banks?—I do consider that they should do so, not only with reference to the so called banks which are not, properly speaking, banks, but also with reference to money-lenders and all those who place money at the disposal of the public.

8905 You think they ought to exercise such control?—Yes, over either banks or money lenders.

8906 Now as regards the purchases of silver in London, what have you to say about that?—I think I have stated in my memorandum (paragraph 34, page 629) that I would stop the profits on the rupee coinage being added to the Gold Standard Reserve, and I would keep the profits in bullion so that they could be used for silver purchases.

8907 I do not follow your reasons for that recommendation?—There seems to be a good deal of misapprehension about having a silver branch in the Gold Standard Reserve. There is no necessity for having a silver branch in the Gold Standard Reserve if you have a fund for the purpose of purchasing silver. I think if one were able to point to such a fund as I suggest, that would put an end to all the misunderstanding which there has been of recent years about

6 August 1913]

Mr. M R SUNDARA IYER

[Continued

the silver branch. I think some such fund is absolutely necessary for coinage purposes

8908 At the present time the profits on the rupee coinage go to the Gold Standard Reserve?—That is so.

8909 The object of the Gold Standard Reserve is to maintain the exchange value of the rupee?—Yes

8910 I think you have expressed the opinion very clearly and definitely in your memorandum that the maintenance of the exchange value of the rupee is of the highest importance to India?—That is so

8911 In matters of currency and exchange that is the first consideration which the Secretary of State should have in his mind?—Yes

8912 If you put nothing from the profits of the rupee coinage into the Gold Standard Reserve, how are you to build up that Gold Standard Reserve?—I think the present amount would be sufficient for the maintenance of exchange

8913 Where would you wish that reserve to be held?—I would wish it to be held in London, mostly in gold, and in securities—a few millions of it in securities, say, because then it earns interest

8914 What sort of figure would you suggest for the actual gold?—I cannot suggest a figure, but I would say the major portion of it may be held in gold, and the rest of it in securities

8915 Would you say that 10 millions in gold would be sufficient, or would you prefer 15 millions?—I would consider 10 millions to be sufficient, ordinarily

8916 What leads you to think that 10 millions in gold would be sufficient?—It is simply this, that I would rather like the gold to be earning some interest instead of letting it lie idle. That is the only consideration which makes me say that. These securities can be easily realised in any time of stringency

8917 You would agree that the first thing to have in security, would you not?—Yes

8918 To be sure that your fund will be adequate for the purpose for which you have created it?—Yes

8919 And you would agree with me, would you not, that you must not jeopardise its success in your desire to earn interest?—No

8920 Since the Gold Standard Reserve has been established there has only been one serious crisis, namely, the one in 1907-8?—Yes

8921 The amount of gold that was required at that time was more than the 10 millions you have named, was it not?—Yes

8922 Yet the crisis was not a very severe one, was it?—It was a severe one, and there were some international complications also

8923 But the centre of international complications was New York and not London?—That is so

8924 A London witness said to us that the situation would have been much more serious had the storm centre been in London?—I think he would know better than I

8925 Take the Indian side, you have known much worse famines occur in India than occurred in that year, have you not?—Yes

8926 It might happen even that a period of war coincided with a period of famine?—Yes

8927 Bearing in mind that, as you have admitted to me, the first object is security, do you not think you are putting the figure for the reserve rather low?—No

8928 Having in view all those possible eventualities?—I would only say that I do not look upon the fund in the Gold Standard Reserve as the only means to tide over such a serious crisis

8929 To what else would you look?—I would look to the gold reserve in the Paper Currency Reserve, to getting gold from the cash balances, and then, if necessary, some loans could be raised

8930 Of course if the storm centre is in London that would not be propositions for raising loans?—No. I would gather the reserves for that then

8931 Under such conditions as I have suggested, the balances might be very low?—Yes, they might

8932 But you would still have the Paper Currency Reserve to draw upon?—I think we cannot go on storing up gold in the expectation of such a great crisis. No figure would be high enough to meet such

a serious crisis as would be caused by a war in India with famines and international complications all occurring at the same time. I do not think any figure would be sufficient to provide for such a crisis

8933 I do not think they would all arise together, but I do want to suggest to you that there are these various circumstances which, either in combination or separately, might produce a severer crisis than the experience of 1907-8?—That is so

8934 And that even in 1907-8 you required more than 10 millions of gold?—That was so

8935 Therefore, perhaps it would be wise before you begin to think about interest, to accumulate in the reserve more of the actual metal than you have suggested?—I do not fix the figure at 10 millions. It may be 10, 12, 13, or 15 millions, it all depends on the state of Indian exchange

8936 One or two witnesses who have come before us have thought that the strain upon the Gold Standard Reserve could be relieved if the circulation of gold in India could be increased, but I think from your memorandum that you are not in favour of increasing the gold circulation?—No, and I may say that I do not believe it could be increased in any way. I have pointed out in my memorandum some of the places where the gold would go if it were issued

8937 I think you hold that a very large proportion of the gold which has been taken by India in recent years has not gone into circulation at all?—That is so, it goes into the melting pot in the ways that I have mentioned in my memorandum (Appendix XXVIII, page 624 *et seq.*)

8938 You have pointed out to us in your memorandum that the laws of inheritance tend very strongly to increase the hoarding of gold in the form of jewellery?—Yes, very strongly

8939 Do you suppose that in a time of crisis much of that hoarded gold which is held in one shape or another would come out?—If it was a personal necessity it would come out

8940 That is to say, if the pressure of famine forced the people to sell it?—Yes

8941 Do you think it would come out of the hoards except under those conditions?—It would not come out except under those conditions, because no one parts with his jewels until the worst happens

8942 Do you regard the gold in circulation or in hoards as a material support for exchange?—No, I would not consider it to be a material support

8943 As far as exchange needs protection, you could only look—?—To London

8944 To gold in the control of the Government?—Yes

8945 In the course of your memorandum you say that recent experience shows that capital is not flowing freely from England to India?—That is the case (see page 620, paragraph 3)

8946 It was, I think, the hope of the Fowler Committee that with the establishment of a stable exchange the flow of capital from this country to India would be very much encouraged?—Yes, it was

8947 The stable exchange has been attained, has it not?—Yes

8948 Why do you think, then, that the hopes of the Fowler Committee have not been realised?—I do not know whether I can say much in explanation of it, except that the higher rate of interest elsewhere has been a temptation

8949 In other words, it is due to the superior attractions of other places?—Yes

8950 And it is not due to any fault or deficiency on the part of the Indian Government?—No, it is not the fault of the Government of India

8951 In your memorandum you give figures showing both the imports and the circulation of sovereigns in India, may I ask from what source those figures are derived?—From Mr Atkinson's published statistics. They are all taken from there

8952 Do you know at all how he arrives at the number of sovereigns in circulation?—No, I am taking it on trust

8953 In your opinion, I understand that the sovereign is not a coin which is required as a coin by

6 August 1913]

Mr M R SUNDARA IYER

[Continued]

the people of India?—No, it is too large for their ordinary daily transactions, and the larger payments are made in notes

8954 Would you say that is true of all the districts in India?—I can speak only as far as my knowledge is concerned

8955 There are considerable differences in the different localities, are there not?—There are differences. But one knows the money that is wanted for the ordinary transactions, and I should rather say that what I have stated would be the case in Bombay and Madras, except perhaps with a few traders in Bombay

8956 Would you agree that, as far as they can do so, the Government of India should meet the requirements of the public and give them whatever they ask for?—I will not say that the Government of India should be obliged to give them gold.

8957 But if they have gold to supply, and the public ask for it, they should give it?—Certainly, they may give it then

8958 You would give it?—I would

8959 In cases where the public is indifferent, what do you think is the wisest course for the Government to pursue?—To pay in silver or in notes

8960 But not in gold?—Not in gold

8961 I infer from the answers you have already given me that if they paid out in gold, you do not think that in a crisis that gold would materially support exchange?—It would not materially support exchange

8962 In regard to another question referred to us, have you any criticism to make of the management of the balances in recent years?—I have pointed out in my memorandum that it is only a temporary phenomenon, and that the balances are not usually heavy with the Government of India. It is all due to temporary causes, such as a series of good seasons and also to unexpended sterling loans

8963 So you think it is due to abnormal circumstances?—Yes, I do. You cannot expect to have heavy cash balances in the next year and the year after next I mean in successive years. The Government of India have to finance large transactions, and I would consider that even these cash balances are not a very heavy amount for them. I would leave the cash balances to the Government of India to be used for the necessities that will arise and I would not lend them to the banks, because that is not going to be useful to the Indian taxpayers, it may be useful to some of the banks, but it is not useful to the country at large if you do that

8964 Do you mean that when they have a surplus in India beyond their requirements, you would propose that they should leave it in their treasuries until they require it?—They might use it in the reduction of their capital expenditure. That is the only direction in which they can use it

8965 It is always the case, is it not, that just in the busy trade months of the year a good deal of Indian revenue is collected?—Yes

8966 And that therefore just at those months, when money is scarce in the money market, the treasuries are rather full?—Yes

8967 The money which fills the treasuries is money which will be, speaking generally, needed for the expenditure of the year, is it not?—Yes

8968 So that under those circumstances it cannot be paid out at once for capital expenditure?—It cannot be paid out at once for capital expenditure, but it is no use to lend it to the Presidency Banks, as that will not assist Indians at large. It will perhaps be helping the Presidency Banks to a large extent in their business, but the Presidency Banks do not finance Indian trade as they ought to, or as one would expect them to do. The money might be used in other ways

8969 Would you develop that a little? Suppose the Government of India did lend out money in the busy season when you have bank rates of 7 per cent of 8 per cent, and suppose the Government of India lent out enough money to bring the bank rate down to 6 per cent, do you think that the effect of that would not reach further than the white community?—It would reach further, but not so far as I have in view, where the rates prevailing are from 12 per cent to 20 per cent or even 24 per cent. I think that is

the rate at which the ordinary Indian business man borrows

8970 Then your view is that what I may call the cultivator's money market has really no connection with the bank rate?—That is so

8971 And that the relief of the bank rate would never get down to him?—It would not get down to the 70 or 80 per cent of the people who are agriculturists. If the money is going to be lent out to these co-operative societies, or to banks which are at the disposal of the people at large, then it would be useful, but I do not know whether the money could be returned back when the Government of India wants the money, if it were lent out to these institutions

8972 Might it not be filtered down to a considerable extent to those institutions through the Presidency Banks?—No, it does not do so, so far as my experience goes in Madras

8973 If it is convenient to the Government of India to lend from one source or another, and it can earn some interest by doing so, do you object to the Government lending to the Presidency Banks?—No, if it can be done without inconvenience

8974 But you do not think a great advantage would ensue to the commonalty?—No

8975 (Lord Faber) Suppose a bank is able to lend out 100l for only six months in the year, and during the other six months it is not able to lend that 100l out at all, should you think it too much to charge 6 per cent for the six months, bearing in mind that for the other six months the bank could not lend the money at all at any price?—No, I would not consider it so

8976 (Mr Keynes) When you said that the notes would be distrusted if they were taken over by a central bank, were you thinking of notes which were changed in form from the present form?—No, it is not a question of form. I think it would then be only a bank note, and that is how the people would consider it. I am speaking purely from the point of view of the ordinary man in the street, he would not consider it of the same value. A currency note he considers to be a Government note which can be offered at a Government office or treasury, where he knows the officials, and where he knows he can change the note for the 5 rupees, or the 10 rupees, that it is worth. On the other hand, if it is a bank note, it is a question of going to the bank and getting it cashed. That will affect what I spoke about as the popularity of the note, and therefore a bank note will not circulate so much as a currency note circulates at present

8977 If the guarantee of the Government is retained, and there is no change in the form of the note, and the note issue is governed by certain rules laid down by Act of Parliament, what would be the effect of the change, do you think?—I do not think the notes would circulate freely

8978 Even if the Government guarantee was maintained?—That guarantee is not of much use once this law is passed. People who hold currency notes know that they can hand them over and get payment, but I do not think any legislation will make the thing clearer to them, or do away with the feeling of distrust and the want of confidence. They will throw the bank notes on the market

8979 Do you think so, even if the guarantee of the Government were retained?—It is not a question of the guarantee. At present I do not think that everyone is conscious that all these notes bear the guarantee of the Government. It is not that that makes them use them. It is the feeling that these notes are money. These are cases in which currency notes have been hoarded to the amount altogether of 1 crore or 2 crores. A man looks upon them as money. A bank note will not have the same value in their eyes

8980 The currency offices of which you speak are very few in India, are they not?—There are a certain number of them

8981 The people cannot rely upon being able always to cash these notes, therefore?—That is so,

6 August 1913 ]

Mr M R SUNDARA IYER

[Continued

but the feeling is that at any moment a man can take it to the office and have it cashed

8982 By far the vast majority of the people of India have never seen a head currency office?—I think most of the people do see the offices, because they go to them to pay in the revenue

8983 The head offices are only eight in India?—I am talking of the district treasuries, where currency notes can be changed

8984 At those places they do not necessarily cash them?—They do cash them

8985 Not on all occasions?—On every occasion I know of

8986 How many of those offices are there?—I have no means of telling you how many there are in the districts I am talking of treasuries and sub-treasuries

8987 We have received evidence that there is no great freedom of exchange at these offices. Notes may be received in payment of taxes, but they are not easily or habitually changed in the sub-treasuries. We have received evidence that what you have been saying, that these notes are cashed at these sub-treasuries for the public, is not the case?—That may be so, but any note that is taken to a treasury is cashed, the money is paid over the counter

8988 (Mr Gillan) You cannot depend on that?—No

8989 It is merely if it happens to be convenient?—Yes

8990 If they have got rupees there you can get the rupees for your notes, but if they have not got the rupees you have got no claim against them?—That is so, but when they cash your note, nobody explains that it is only a special occasion, and that the next time you will not get it. It is looked upon as a place where you can change notes

8991 (Mr Keynes) I think we were told in evidence that at the sub-treasuries notes were never cashed for the public?—Notes are cashed, I have taken the notes there and got them cashed

8992 Sometimes?—Yes

8993 Are you only saying that it is an idea abroad that these notes are cashed at the treasuries, or do you mean that they can change a note at any moment they like?—The feeling that underlies the large circulation of these notes is that they are Government notes. Once the note circulation gets into the hands of the banks, the people will have no more confidence in it

8994 I think it is surprising that the people should have that feeling of confidence in the currency notes, when, as a matter of fact, they can only occasionally change them at the offices that you speak of?—As long as the Government issues the notes and circulates them, the people will take them for their value

8995 Do not those occasions—we have had evidence that they are frequent—on which they are unable to cash them rather shake their confidence in the notes?—It does not matter, as the man can go to a shroff and get a note cashed. He knows he can get it cashed anywhere, and that is why there is a feeling of confidence

8996 I am suggesting that this confidence does not really depend upon their being able to take it to the currency office, but on the general position which the notes have attained?—I think you attach too much importance to their being changed at the Indian currency offices, but I would say there is a feeling in the mind of every man who has got a note in his hand that he can immediately turn it into cash, as the Government is responsible for its payment immediately whenever he wants the money. That is the feeling which has brought about the large circulation of the currency notes, and Indians will not have the same confidence in a bank circulating its own notes. It may be curious and it may be surprising, but that is the feeling, which one cannot get rid of

8997 You understand that I am imagining a case in which the notes are managed, as one may say, by the bank, but the Government guarantee remains, and there are certain rules regulating the issue of the notes, which are not changed in form, which are encashable at more places than they are now, but which are managed by the bank instead of by the Government—

that is the whole amount of the change. I am not supposing a case in which the present currency notes are abolished and are replaced by what you call a bank note?—I quite understand that, and any other educated man can understand it, but I am talking from the standpoint of a large number of illiterate people in India. I do not know who would undertake to go to them and explain to them that the new note is the same as the old note, and that there is no difference in it

8998 But if there were no difference, would it not be easy?—It may be curious, but if it is a bank note and not a currency note of the Government, that is enough to spoil it and to lessen its circulation. That is how I will put it though it may be strange

8999 (Sir Shapurji Broacha) Do you not think hoarding is an instinct with us in India? For the reasons you have stated in your memorandum you know it is almost inherited?—I will not say it is inherited, but all these conditions and circumstances must tend to increase it

9000 Would you not agree with me that it is an instinct which we have inherited, owing to the unsatisfactory character of the Governments that we have had in India before?—I will not say that. Assuming education advances, and that many Indians hold very responsible appointments, and that most of them know exactly what and how necessary investments are, even under all those conditions I do not think hoarding will lessen, because of the reasons which I have mentioned

9001 Of course we are getting rid of the hoarding gradually and we are bringing out the money, as we know, still it is almost an inherited instinct which we are getting rid of by education?—No, excuse me, I will not say it is an instinct

9002 In 10 years we have imported 70 millions in bullion and 57 millions in sovereigns, that is 127 millions sterling, which is equal to 190 crores of gold, and the only visible sign of that are the 25 crores left in the currency. Would such a thing happen in any other country?—I cannot say what would happen in other countries. I can only say that we can imagine that it would not happen in any other country, but we know exactly what happens in India

9003 In other countries the sovereigns are either in the banks or they are preserved, as it were, for contingencies. For instance, if England had imported 10 millions sterling, certainly 7 millions would have been in the Bank of England, or even 8 or 9 millions, whereas out of the 190 crores which we have imported into India we only see visible signs in the possession of the Government of some 25 crores. As you know, more than any other country, we keep, either for ornaments or for hoarding, gold out of circulation, do you not admit that?—It is true

9004 If there were an alarm of war, or anything like that, instead of that gold coming out of the hoards the people would ask for more, they would deliver their rupees and currency notes and ask for gold, would they not?—Yes

9005 So that a gold circulation pushed by the Government under the idea that ultimately it would help the par of exchange is a mistaken notion?—It is mistaken, and that is what I said previously

9006 Now about currency notes, we have been accustomed to currency notes for the last 62 years, have we not?—Yes

9007 If we were to make any change of policy in respect of them through a State bank, or anything like that, even though we were to guarantee them, our people would be suspicious?—Yes, they would be suspicious

9008 And they would think that the State wanted to shirk its responsibility on to the bank?—Yes

9009 So, instead of increasing the note circulation, the note circulation would go back?—Yes

9010 Whatever may happen 50 years hence or 25 years hence, the first effect of a State bank circulating notes, in whatever form you like, would be to decrease the circulation of the notes, would it not?—Yes

9011 So a State bank would not help the circulation of the notes under any circumstances?—No, it would not

6 August 1913]

Mr M R SUNDARA IYER

[Continued

9012 On the contrary, it would put the circulation back?—Yes

9013 You told the Chairman that you think India is too large for a State bank?—Yes, I do think so

9014 Now about the wealth reaching the cultivators. We have some co operative banks, for instance, there is a large co operative bank in Bombay, and through them the money goes to the cultivators by means of the punchayats, or village communities, do you admit that?—Yes,

9015 The co operative bank in Bombay registers the assets of the village, and whatever loans are taken for the moving of the crops by the village, the amount is guaranteed by the whole syndicate of the village, that is a greater facility than any State bank would give, is it not?—Yes. I would have that, not only for agriculture but for the other classes. I would like to see co operative banks for weavers and for each class of the community in order to help that community in the particular way they want with loans and advances. They would be much more useful than any State bank could be.

9016 It would go farther down into the middle and the lower classes than the State bank would?—Yes, and they are the classes who really want the money and cannot get it cheap.

9017 If a State bank were formed with its manager and directors at Calcutta, you know that at present the directors of the Bank of Bengal are all Europeans, though the directors of the Bank of Bombay are half natives and half Europeans, with such a management for the State bank as they have in the Bank of Bengal, the State bank would be of very little service in your districts, or in any other part of India, as it would not reach the cultivating classes?—That is so.

9018 Nor the middlemen between the cultivating classes and the banks?—That is so. All that the middlemen do is they take the money at a lower rate of interest and they lend it at a high rate of interest.

9019 So that a State bank would be doing really less service than the three Presidency Banks are doing now?—Certainly. There has been a discussion in the papers, and in Parliament, in which very much has been said about the Indian view and Indian opinion. If by the word "Indian" is meant presidents of the Chambers of Commerce and the European managers of the banks, or an Indian who is a director of half a dozen banks, they would have used a very proper term, but if what is meant by the word "Indian" is the large class of agriculturists and artisans, then if it is said that the views which have been published are the views which Indians have, I think they are taking the name of the Indian in vain.

The witness withdrew.

## APPENDIX I.

MEMORANDUM AND SUPPLEMENTARY NOTES ON THE LOCATION AND MANAGEMENT OF THE GENERAL BALANCES OF THE GOVERNMENT OF INDIA AND THE SALE OF COUNCIL, BILLS AND TRANSFERS. Submitted by Mr L ABRAHAMS, C B, Assistant Under Secretary of State for India

### I.

#### *Distribution between England and India*

1 The disbursements by and on account of the Government of India are made partly in India and partly in London the respective amounts in 1912-13 being shown in Statement A of Appendix II (page 72) as follows:—

		£	
India	-	-	89,734,800
England	-	-	33,963,100
Total		-	123,697,900

2 It is therefore necessary to keep the balances partly in the one country and partly in the other. The distribution of the balances between the two countries on the 31st of March of each year from 1892-93 to 1913-14 (Budget Estimate) is shown in Statement B of Appendix II (pages 74-5). It will be seen that the Revised Estimate for 1912-13 (published on 20th March 1913) anticipated that the distribution on 31st March 1913 would be as follows:—

		£	
India	-	-	19,543,889
England	-	-	8,372,900

3 The actual balances on 31st March 1913 were:—

India (Statement C, page 76)	-	-	19,268,200
England	-	-	8,784,206

### II.

#### *Location of the Balances held in India*

4 It will be seen from Lord Salisbury's Despatch of 6th May 1875 and Lord George Hamilton's Despatch of 4th May 1899, printed in the collection of papers which I hand in to accompany this Memorandum (*see* Appendix II, pages 32 and 62), that the Government of India has always been entrusted by the Secretary of State with wide discretion in this matter.

5 The actual location of the Government balances in India at the end of each quarter in the years 1895-96, 1900-01, 1905-06, 1910-11, 1911-12, and 1912-13, is shown in Statement C of Appendix II (page 76).

6 The location on 31st March 1913 was as follows:—

		No	Amount
		£	
District Treasuries	-	271	6,607,400
Branches of Presidency Banks	-	35	2,156,700
Head Offices of Presidency Banks	-	3	1,595,400
Reserve Treasuries	-	3	8,908,700

II\* The figures are not actual gross disbursements. In Statement A, as in all the other published Statements, receipts under some heads are set off against gross disbursements and under other heads disbursements against gross receipts, the differences being shown net disbursements and net receipts respectively. But the figures in Statement A serve the purpose of representing fairly the relative importance of the transactions in India and England.

7 The money in District Treasuries is so held in order to provide for payments to be made in the Districts. The majority of the District Treasuries are in places where there is no branch of a Presidency Bank.

8 Where a branch of a Presidency Bank exists, part of the Government balance is deposited in it. Similarly a part of the Government balances held at Calcutta, Madras, and Bombay, is deposited at the head offices of the three Presidency Banks. The relations between the Government and the Presidency Banks in respect of the holding of balances are partly regulated by agreements with the three banks which were last revised in 1898. The agreements provide that the Banks are to transact general business for the Government at their head offices and certain branches, that they are to receive specified remuneration, that the Government is not bound to retain at the Banks any particular sum, but that if its balance at the Head Office of any of the three Banks falls on any day below a specified minimum, it is to pay to the Bank interest "at the lowest rate chargeable on such day by the said Bank to the public for loans recoverable on demand." The remuneration of the three Banks and the minimum balances that they are to hold for the Government at their Head Office without charging interest are as follows —

	Remuneration per annum	Amount of Balance below which interest becomes payable
	£	£
Bank of Bengal	2,900	233,300
Bank of Madras	800	120,000
Bank of Bombay	800	133,000

The revision of these agreements is now under the consideration of the Government of India.

9 In actual practice the Government of India is much more liberal to the Banks than is provided for in the agreements. They usually keep at the head offices of the three Banks the following amounts —

Bank of Bengal	467,000 <i>l</i> to 533,000 <i>l</i>
Bank of Madras	A little over 133,000 <i>l</i>
Bank of Bombay	267,000 <i>l</i> to 333,000 <i>l</i>

On the flotation of a loan, and in special cases, the amounts are increased.

10 At times of great stringency in the Money Market, the Government of India grant loans at interest to the Presidency Banks. Two such loans (40 lakhs and 20 lakhs) were granted to the Bank of Bengal in 1901, one (25 lakhs) to the Bank of Bombay in 1902, one (25 lakhs) to the Bank of Bengal in 1905, two (30 lakhs and 25 lakhs) to the Bank of Bengal in 1906. The rate, where I have been able to trace it, was the minimum rate charged by the borrowing Bank on advances. In fixing this rate the Government of India has presumably been guided by the following remark in Lord George Hamilton's Despatch of 4th May 1899 (printed in Appendix II, page 62) — "I see no objection to your lending money to the Presidency Banks on the security of Government paper at such rate of interest from time to time, and for such periods, as you think best. I am inclined to think that the rate should, as a rule, not be below Bank rate." The Government of India recently informed the Secretary of State that they have received no request for such loans for the past five or six years. This may be due to the rate of interest demanded. The Secretary of State recently received a letter in which the writer said "When I was Chairman of the Bank of Bombay Government were willing to lend money to the Bank, but only at its own published rate, and naturally such assistance was declined."

11 Another form of assistance occasionally given by the Government to the Presidency Banks is that, as an encouragement to the opening of new branches, a minimum balance at a branch is guaranteed for a number of years.

12. *Reserve Treasuries*—Reserve Treasuries were established at Calcutta in 1876, and at Madras and Bombay in 1879. The considerations in favour of this course were as follows.—In the decade between 1860 and 1870 the disadvantage of depositing an excessive amount of the Government balances in Presidency Banks had been illustrated by two cases—

- (a) On 9th December 1863 the Bank of Bengal held a Government balance of 2,968,000*l*, and its cash assets consisted only of 1,000,000*l* (a special coin reserve against Government deposits) and 998,000*l* available against the remainder of its liabilities to the Government and its liabilities to private depositors. The Government found difficulty in withdrawing money standing to its credit. “For about eight or ten weeks the anxiety was very serious.” (Sir C. Trevelyan)
- (b) The position of the Old Bank of Bombay was unsatisfactory from 1863 until its liquidation, with a loss of capital of about 1,900,000*l* in 1868. In 1865 and in 1867 there were large withdrawals by the public, and on each occasion the Government had to promise assistance to prevent, or check, panic.

Similarly in 1874, at a time when the Government had a balance of 1,000,000*l* at the Bank of Bombay, the Bank remonstrated against the proposed withdrawal of 350,000*l*, and the withdrawal was postponed. (See pages 30, 32, and 49 of Appendix II)

The immediate cause of the establishment of the Reserve Treasuries was the incident of 1874.

### III.

#### *Alternative methods of dealing with Government balances in India.*

13 The possible changes in the method of dealing with Government balances in India seem to be as follows—

- 1 To increase, either with or without interest, the amounts placed with Presidency Banks
- 2 To place money with other Banks
- 3 To lend on security to firms and institutions other than Banks

14 The considerations bearing on these alternative methods appear to be as follows—

#### *Presidency Banks.*

Between 1899 and 1905 there was considerable discussion in India regarding the position of the Presidency Banks, arising out of the proposal for the establishment of a Central Bank, and ending with certain enlargements of the powers of the Banks made in the Presidency Banks Act of 1907. In the course of the discussion the suggestion was made (but not supported by the Government of India) that the Government should do more than it was then in the habit of doing (and than was contemplated in Lord George Hamilton's Despatch quoted on page 2) to place money at the disposal of the banks in the busy season. So far as such action might lead to a reduction of the rate of discount, especially in the busy season when it seldom fails (see Statement I. of Appendix II, page 86) to reach 7 per cent at Calcutta and Bombay, its advantages are obvious.

15. But there are important considerations to be borne in mind on the other side—

- (1) Although the total Government balances from 1909 have been in excess of its immediate requirements, this has been due to exceptional causes which have almost passed away. Ordinarily the total balances do not exceed except perhaps for short periods, what the Government needs, as is shown by the figures in Statement B, pages 74-5. Assistance given to trade in the manner suggested would therefore be liable to be spasmodic, and the withdrawal of money when needed by the Government might cause general inconvenience and disorganisation. I believe that the Government of India have generally attached much importance to this consideration. In a letter to the Secretary of State (Lord George Hamilton), dated 18th January 1900, they said “Regarding the general danger involved in the financing of trade by the Government, we have before us the words of Lord Salisbury's Despatch of 6th May 1875, ‘Capital supplied by Government, and not representing the savings of the community, is a resource

“ on whose permanence no reliance can be placed, and which therefore tends  
 “ to lead trade into dangerous commitments’ The warning conveyed in  
 “ those words still holds good The Presidency Banks have  
 “ excellent reserves, it may readily be admitted But those reserves could  
 “ not, in the peculiar circumstances of India, be suddenly converted into  
 “ cash, and it seems therefore undesirable that the account of one depositor,  
 “ and that one a Government exposed, as the Government of India is, in a  
 “ most unusual degree, to sudden calls and emergencies, should occupy a  
 “ position of such dangerous importance To look to no graver contingency,  
 “ it is clear that a sudden call by Government for its money would influence  
 “ discount rates in a way that would seriously hamper trade” I gather that  
 the present opinion of the Government of India is not substantially different  
 from that which was held in 1900 On 18th September 1911 Sir G Fleetwood  
 Wilson, Member of the Governor-General’s Council in charge of the Finance  
 Department, was asked in the Legislative Council “ whether Government  
 “ will lend to the money markets in  
 “ India against the deposit of securities  
 “ of approved character when their  
 “ Treasury balances are high,” and  
 replied, “ The Government of India  
 “ leave considerable sums out of their  
 “ Indian cash balances on deposit with  
 “ the Presidency Banks They do not  
 “ consider it advisable to make a practice of lending to the money markets  
 “ in India in any other manner or to any larger extent”

\* It will be seen from column 2 of State-  
 ment C (showing Money held in the three  
 Reserve Treasuries), page 76, that if during  
 1912-13 the Government of India had  
 wished to place larger deposits from their  
 Treasury balances with the Presidency  
 Banks, they would not have been prevented  
 by lack of means at that time

The objection against largely increased deposits with the Presidency  
 Banks from so uncertain a source as the Treasury Balances seems to me  
 very strong, and as much so in the interest of trade as in that of the  
 Government, since it would be most undesirable that such deposits, being  
 made mainly to help trade (unlike the loans from India Office balances,  
 which are made merely to earn interest), should be liable to be suddenly  
 withdrawn whenever the Government was pressed for money

I should add, however, that this particular objection would have practically  
 no force against any scheme for depositing additional money with the Presi-  
 dency Banks (at interest and against security), from the Reserve of the Paper  
 Currency Department A proposal on these lines (except that nothing specific  
 was said about security), was placed before the Government of India by  
 the Bank of Bengal in a letter dated 2nd December 1899 † The following  
 passage is taken from the Bank’s letter “ The suggestion which my  
 “ Directors would make is that when the Bank rate rises to a height that  
 “ indicates undue pressure, the Presidency Banks may be able to rely on  
 “ procuring loans through the Comptroller-General either from the Reserve  
 “ Treasury, or failing this, from the Paper Currency Reserve, at the current  
 “ rates for demand loans on Government paper, rising and falling therewith  
 “ In submitting this suggestion my Directors desire me to state that it is  
 “ made with the sole object of ensuring a steady supply of loanable capital  
 “ at moderate rates These loans would yield profit to Government, and  
 “ benefit all who are interested in a steady money market, while the Bank  
 “ would undertake, without profit to itself, the risk and labour involved  
 “ My Directors would also submit that the Paper Currency Reserve is the  
 “ most suitable fund to devote to this purpose, not only because it is large  
 “ and steady, and, as experience has shown, would have been found ample  
 “ from first to last to have relieved each monetary pressure from  
 “ which India has suffered, but because it is to the Paper Currency  
 “ that other nations look for assistance at times of monetary strain, and  
 “ if effect is given to the proposal now made, the elasticity of the central  
 “ banking resources, of which the Indian money markets were deprived by  
 “ the transfer of the Paper Currency to Government will be restored”  
 The proposal of the Bank of Bengal was supported by the Bank of Madras ‡  
 but strongly opposed by Mr Dawkins, in a speech in the Legislative Council  
 on 5th January 1900 § and by the Government of India in a Despatch to the

† Printed on pages 365 to 369 of “ Papers relating to the Proposed Establishment of a  
 Central Bank in India (reprinted from the *Gazette of India and Supplement*, dated the 12th  
 October 1901),” Simla, 1901

‡ *Ibid* page 416

§ *Ibid* page 394

Secretary of State dated 18th January 1900, from which the following sentences\* are taken —“ An alternative measure suggested by the Bank of Bengal is that, when the Bank rate rises to a height that indicates undue pressure, loans should be made from the coin reserve of the Paper Currency Department. This is a suggestion which is open to fatal objections. Our duty, as we conceive it, is to maintain that proportion of coin in our total currency reserve which is necessary for ensuring convertibility. If the proportion were large enough to admit of loans being made therefrom, then it would be unnecessarily large, and the general taxpayer, not any particular section of the community like the Banks, should benefit by the substitution of securities for superfluous coin.” These objections seem to me very unconvincing. The coin in the Paper Currency Reserve has long been much in excess of what is needed to ensure convertibility, and quite large enough to enable loans to be granted to the Presidency Banks without inconvenience to the Government, if the strength of the Banks is held to be sufficient to justify such loans (a point dealt with below), the coin reserve can be maintained without difficulty at the level required to make them possible, and the loans besides being beneficial in a way in which an addition to the permanent securities held in the Reserve would not be, would probably yield interest to the same, or nearly the same, amount *per annum*.

(2) The Government deposits bear what might, perhaps, be regarded as a high proportion to the Capital and Reserve and the Cash of the Presidency Banks. Statement D (pages 78-80) summarises the position of the three Presidency Banks as shown in the last weekly statements published for each quarter in 1890, 1891, 1892, 1910, 1911, and 1912. The percentages of Government deposits (a) to Capital and Reserve and (b) to Cash at the dates mentioned in the last three years were as follows —

	Bank of Bengal		Bank of Madras		Bank of Bombay	
	Percentage of Government Deposits to—		Percentage of Government Deposits to—		Percentage of Government Deposits to—	
	Capital and Reserve	Cash	Capital and Reserve	Cash	Capital and Reserve	Cash
1910						
March - - -	51 9	37 9	54 3	44 6	91 6	56 3
June - - -	50 3	20 5	58 5	24 7	60 9	28
September - -	51 7	23 8	53 7	20	54 6	17 5
December - - -	47	34 5	67 6	39 5	74 2	34 8
1911						
March - - -	54 9	36 3	68 9	121 0	84 9	46 5
June - - -	54 4	26 1	71	33 9	64 9	28 8
September - -	51 2	28 6	57 1	33 1	61 1	18 5
December - - -	60 4	28 9	53 5	35 5	52 4	23 3
1912						
March - - -	50 5	29	93 8	57	83	35 8
June - - -	52 6	26 5	52 4	32 4	75 7	30 1
September - -	47 5	21 4	48 3	30 8	67 9	27 4
December - - -	51 7	29 1	52 4	38 6	51	31 3

In connection with these figures it is necessary to bear in mind that the Banks have not, like most of the great English Banks, uncalled capital. This is a point against a large increase in the amount of Government money deposited with the Banks. On the other hand it should be mentioned that the percentages shown above, high though they are, are generally lower (as will be seen from Statement D of Appendix II, pages 78-80) than those which prevailed in 1890, 1891, and 1892.

*Deposits or Loans with other Banks.*

16 The only other Banks in India which can be compared, in respect of resources and volume of business, with the Presidency Banks are certain

\* *Ibid* page 399.

Banks known as the Exchange Banks, which play the chief part in financing India's foreign trade. They are as follows—Chartered Bank of India Australia and China, Delhi and London Bank, Hong Kong and Shanghai Banking Corporation, National Bank of India, Mercantile Bank of India, Eastern Bank, Comptoir National d'Escompte de Paris, Yokohama Specie Bank, Deutsch-Asiatische Bank, International Banking Corporation, and Russo-Asiatic Bank. The "Statistics of British India" contain the following information regarding their position in 1910—

	£
Capital, Reserve and Rest	22,600,000
Deposits in India	16,200,000
Cash in India	2,860,000

17 The general strength of the Exchange Banks may not unreasonably be held to afford considerable support to the view that Government money might safely be entrusted to them. On the other hand—

- (1) They are all Banks with Head Offices out of India
- (2) The cash that they hold in India is, as shown above, of very limited amount and represents only a small fraction of their liabilities to private depositors in India
- (3) There is no reason to believe that the Exchange Banks desire an extension of the practice of placing Government money with Banks. The Government of India recently informed the Secretary of State of a discussion on the subject between the Calcutta representatives of certain Exchange Banks, and the Member of the Governor-General's Council in charge of the Finance Department. The impression formed by the latter was that the suggested change of practice, at any rate if introduced on a large scale, would not be welcomed by the Banks.

18 The other Banks about which statistics are available are nineteen joint stock banks regarding which information up to 1910 is given in the "Statistics of British India". The chief information for the year mentioned is as follows—

	£
Capital	1,837,000
Reserve and Rest	670,000
Deposits	17,100,000
Cash	1,868,000

One of the nineteen Banks has gone into liquidation since 1910.

It seems obvious that not much could be done by way of placing Government balances with these Banks and I am not aware that any proposal to this effect has been put forward by any responsible body.

#### *Loans to Firms and Institutions other than Banks*

19 It will be seen from Lord Salisbury's and Lord George Hamilton's Despatches referred to at the beginning of Section II that the grant of short term loans at interest and on security, otherwise than to Banks, has long been within the powers of the Government of India. So far as I am aware, such loans have never been granted. The only occasion on which I can trace that the matter has been considered by the Secretary of State and the Government of India, except in the Despatches mentioned, was when, as stated on page 4 of this Memorandum, a question on the subject was asked in the Legislative Council of India, on 18th September 1911.

20 It is obvious that, unless a general practice of granting loans is to be instituted, exceptional loans to particular firms would be open to serious objection. The difficulties in the way of establishing a general practice are briefly summarised as follows in the "Memorandum on India Office Balances" presented to Parliament in 1913 (Command Paper 6619)—“(1) The loans would probably be secured in most cases on rupee paper and if, through the default of borrowers, large quantities had to be sold in any year, the annual Government loan in India, which is effected by the issue

" of rupee paper, might be injured, (2) In the comparatively small and " sensitive Indian money markets, the rapid calling in of large loans to meet " an emergency might be difficult and dangerous ' The first difficulty would be lessened if loans were granted against Bills drawn and accepted by firms of high standing

#### IV.

##### *India Office Balances*

21 The management of the balances of the India Office is described in the following extract from the "Memorandum on India Office Balances" just referred to —

" A considerable part of the disbursements in each year consists of very large payments which are made within very short periods This is illustrated by the following figures showing the total payments in certain periods in 1911-12 —

" 1st to 5th April 1911, 3,624,304*l* (including 2,084,897*l* for annuities and interest, and 1,333,333*l* for Paper Currency Reserve investment), 1st to 5th July 1911, 3,815,710*l* (including 2,694,367*l* for annuities and interest, 437,757*l* for Gold Standard Reserve investment, and 301,800*l* for discharge of debt), 1st to 5th October, 2,462,000*l* (including 2,114,605*l* for annuities and interest), 1st to 5th January 1912, 3,100,857*l* (including 2,685,769*l* for annuities and interest, and 75,000*l* for discharge of debt)

" There are also other large payments, such as those for railway stores, which have to be made at very short notice, but at dates that cannot be exactly foreseen, since they depend on the punctuality or otherwise of contractors

" The money from which these payments are made is not received just at the moment at which it is needed The greater part of it is derived from the sales of Council bills and telegraphic transfers which, though in unfavourable years they are liable to cease for considerable periods, take place as a rule every week Sometimes, but in many years not more than once in the year, large sums are received in a short time as the proceeds of a loan or loans

" It is thus necessary, as a rule, in preparation for the periods of heavy payments, to accumulate the weekly receipts so as to have them in hand or at call for use when the money is required

" The whole of the working balance thus required might be allowed to remain at the credit of the Secretary of State at the Bank of England, in which case the revenues of India would receive no interest on it, but the practice followed since 1838 has been to keep a certain part of the balance at the Bank and to lend the remainder at interest

" The usual method is to lend to certain banks, discount houses, and stockbrokers of high standing, whose names are included in an approved list, now containing 62 names The list is revised periodically, and applications for admission are carefully considered with reference to the standing and resources of the applicants and the nature of their business. Loans to borrowers on the approved list are granted as a rule for periods from three to five weeks, occasionally for six weeks, so that the whole balance could, if needed, be called in within six weeks

" The Accountant-General informs the Secretary of State's broker daily of the amount of loans that may be renewed, the amount of new loans that may be placed, or the amount that must be called He also furnishes the dates for the maturity of the renewals and new loans, so that money may be available to meet requirements The broker is responsible for obtaining the best possible rate of interest The amount of a loan is not paid out from the Secretary of State's account at the Bank of England until the security has been lodged at the Bank. The securities which the broker is authorised to accept are as follows — Exchequer bills and bonds, Treasury bills, Parliamentary stocks and annuities of the United Kingdom, securities on which the interest is guaranteed by Parliament; India stock, debentures, bonds,

and bills, Rupee paper, Guaranteed debenture scrip (fully paid), or bonds of Indian railway companies, London County stock and bills, Metropolitan consolidated stock, Corporation of London debentures, Metropolitan Water Board bills, and "B" stock. The particulars of each loan transaction are submitted each week to the Finance Committee for approval, and each month to the Auditor of the Accounts of the Secretary of State in Council.\*†

"In 1909 it was found that the borrowers on the approved list could not take the full amount of the balances available for loan, and, in order to obtain employment for the funds, the broker was instructed, as a temporary measure, to deposit the excess amount from time to time with leading London banks, usually for periods of between one and three months. The procedure adopted was as follows—The Accountant-General informed the Secretary of State's broker of the amounts available, and the periods for which he desired to employ them. After consultation with the Chairman of the Finance Committee the broker negotiated with the various banks so as to obtain the best possible rates of interest, which were governed by the rates current in the discount market. He then reported to the Accountant-General, and the particulars of all deposits were submitted to the Finance Committee and the Auditor. In November 1911, it was decided that, so long as it should be found necessary to continue the practice of depositing with banks, the amount on deposit at any one bank should be limited as a general rule to 1,000,000*l.*, and the number of banks at which deposits were made was increased to seven. The balance has now been so much reduced that it is no longer necessary to deposit with banks.

"The rates obtainable on the India Office balances necessarily depend on those current in the London Money Market for short loans and deposits, and these are sometimes higher and sometimes lower than those at which permanent loans, bonds, or bills for a year can be issued. In 1909-10, 1910-11, and 1911-12 the rates paid by the India Office on issues of India stock, bonds, and bills have varied between 3*l.* 12*s.* 11*d.* and 2*l.* 3*s.* 11*d.* per cent. During 1911-12 the average rate of interest received by the India Office on loans to approved borrowers was 2.60 per cent and on deposits 2.43 per cent. Information to this effect was given in the Viceroy's Legislative Council on 22nd March 1912, and the difference between the rates received and paid respectively attracted the notice of Colonel Yate, M.P., Mr Stewart, M.P., and Mr Thorne, M.P., the latter of whom asked (6th November 1912) 'whether there is any truth in the statement that the India Office is in the habit of lending money at 2½ per cent and borrowing it 'back at 3½ per cent'. The explanation is, of course, that the India Office borrows only when it appears necessary to do so in order to meet capital expenditure or (very exceptionally) to make good, temporarily, a deficit due to famine or other causes of a similar exceptional nature, and pays the rate of interest necessitated by market conditions on the loans, mostly in the form of permanent stock, which it issues, whereas it lends for short periods to prevent its balance from lying idle and gets on such loans the best rate that is at the time possible in the condition of the money market, having regard to the fact that the security required is of a very high class and that loans are granted only to firms of very high standing. The alternative to lending for short periods at rates which are sometimes below those paid on the stocks and other securities that it is necessary to issue would be to discontinue entirely or occasionally the practice of lending, which brought in to Indian revenues 2,193,879*l.* in the last 20 years."

## V.

### *Amount of total balances (India and England combined)*

22 The amount of closing balance in each year considered by the Government of India to be necessary for safety in India is 12,500,000*l.* The amount required in England in ordinary circumstances is about

\* The list of securities has been slightly enlarged since the Memorandum was written. Mr Badock will give information on these points. (See Appendix XI, page 314.)

† The weekly lists are now submitted to the Secretary of State and the Council.

4,000,000*l.*, or somewhat more, as explained in Sections V and IX of the "Memorandum on India Office Balances"<sup>†</sup> The Budget of each year, which (except so far as concerns fixed charges and loan transactions in England) is based on estimates framed by the Government of India, is drawn up as a rule so as to provide for a closing balance not differing greatly from the total of these amounts, *viz.*, in round figures, 17,000,000*l.*

23 It will be seen from Statement B of Appendix II, (page 75), that there are two recent years in which the total balance provided for in the Budget has appreciably exceeded this amount, *viz.*, 1911-12 (21,221,446*l.*) and 1912-13 (19,589,871*l.*) The explanation of these amounts is as follows —

1911-12 As shown in footnote 5 to Statement B, the estimated balance on 31st March 1912 included 1,903,000*l.*, being part of the "opium surplus" of 1910-11 specially held towards providing for the discharge of temporary debt after 1911-12 This sum represents a portion of the exceptional receipts from opium in 1910-11 which, being in the nature of a windfall, it was decided to set aside for special purposes Two-thirds (amounting to 1,903,000*l.*) of the total exceptional receipts was allocated to the discharge

of temporary debt\* For the reasons stated in the Secretary of State's Despatch of 23rd December 1910, No 147, of which I hand in a copy (see page 65), it was decided to apply the allocated amount primarily to the discharge of the formidable obligations in the shape of bonds maturing at fixed dates which had to be dealt with after 31st March 1912 Failing this, there would have been a danger that an appreciable part of the limited amount that can be borrowed in each year would have had to be devoted to the discharge of bonds in 1912-13 and subsequent years, instead of being used for capital outlay on railways and irrigation works The importance of avoiding this will appear from what is said in Section VII below For reasons explained on page 10 of the "Memorandum on India Office Balances,"<sup>†</sup> the Budget for 1911-12 was prepared so as to provide for a somewhat high closing balance even apart from the 1,903,000*l.* mentioned

1912-13 The comparatively high closing balance provided for in the estimates for 1912-13 was due to the same cause as has been just explained

24 The actual closing balances at the end of 1908-09, 1909-10, 1910-11, 1911-12, and 1912-13 have considerably exceeded both the standard mentioned at the beginning of this section and the Budget estimates Part of the excess in 1908-09, 1909-10, 1910-11, and 1911-12 was due to temporary and exceptional causes, explained in the footnotes to Statement B, *viz.*, the presence in the balances of (a) the specially hypothecated portion of the "opium surplus" of 1910-11 and a similar receipt realised in 1911-12, and (b) receipts on account of loans for capital outlay issued, in view of market conditions, shortly before the commencement of the financial year in which the outlay was to be incurred Allowance is made for those causes in the final columns of Statement B, headed "Adjusted Actuals" (pages 74-5), from which it will be seen that, apart from the special causes, there was an excess over the Budget Estimate, or the normal standard, or both, in 1909-10, 1910-11, 1911-12, and 1912-13 The factors contributing to these excesses are shown in Statement A (dealing with the transactions of the Government of India as a whole), and Statement E (dealing with Revenue proper and Expenditure chargeable against Revenue) see Appendix II, pages 67-73 and page 81 From Statement E it will be observed that the Revenue surpluses (excluding Provincial Adjustments) exceeded the Budget Estimates in 1909-10, 1910-11, 1911-12, and 1912-13 by sums amounting to 20,967,184*l.* in the four years On the facts shown in Statements A and E the following general remarks may be made —

- (1) The Budget estimates of revenue represent the best forecast that the Government of India can frame in each March of the probable receipts and expenditure chargeable to revenue under the various heads during the coming financial year. Such forecasts must always be uncertain, since the rainfall from June to September is the deciding factor in the financial results of each year. A very good monsoon may swell the receipts from Railways, Customs, and

<sup>†</sup> Command Paper 6619.

Excise to a figure for which no prudent Government could estimate; while a bad monsoon may depress to a very low level the receipts from the sources mentioned and from Land Revenue, and may also necessitate very large expenditure on famine relief. The uncertainty of Indian estimates of revenue, due to the incalculability of the monsoon, which is perhaps sufficiently illustrated by Statement E, may be further illustrated by the experience of 1907-08 and 1908-09, in which years (see Statement A, pages 67-8), the net results of the Revenue transactions (excluding adjustments between the Government of India and Provincial Governments) were worse than the Budget Estimate by 1,046,600*l* and 4,451,400*l* respectively in consequence of unfavourable seasons. India came near to having a similar experience in 1911, in which year, as was said by Sir G. Fleetwood Wilson in his speech introducing the Financial Statement for 1912-13, "the half of India was on the verge of a drought for which we might have had to go back 34 years for a parallel." It was a striking lesson of how "narrow is the line in India between plenty and want" (H.C. 144 of 1912, page 1).

- (2) An additional element of uncertainty was brought into the Indian estimates for 1910-11, 1911-12, and 1912-13 by the position of the opium trade. In 1908 an agreement was made with the Chinese Government for the gradual reduction of the exports of Indian opium to China and their cessation in 1917. Owing, no doubt, to this agreement, a sensational rise in the price of opium took place at the end of 1909-10 and continued with variations until 1912. But its continuance, and indeed the continued existence of the trade with China, could never be counted on from one season to another. The agreement of 1908 was modified by an agreement of 1911 providing for the termination of the trade in certain eventualities before 1917. In 1912 strong representations in favour of the immediate stoppage of the sales of Indian opium for China were submitted to the Government of India by merchants engaged in the trade. In 1913 measures were taken which, for the time at least, have entirely stopped the trade with China. The financial history of India during the last three years has been coloured and almost dominated by the uncertainty regarding the opium revenue, of which the importance is shown by the following figures (taken from Statement E, page 81) of net opium receipts—

	Budget Estimate	Actual (or Revised Estimate)
	£	£
1910-11 -	3,550,100	6,271,531 (Actual)
1911-12 -	3,093,300	5,228,312 (Actual)
1912-13 -	2,930,700	4,503,500 (Revised Estimates March 1913)
1913-14 -	306,000	

- (3) The underspending in several years (as shown in Statement A under '9 Capital Outlay on Railways, Irrigation Works, and Delhi,' pages 67-73) of the amounts provided for capital outlay has occurred to a considerable extent in the expenditure by railway companies, over whose action in regard to the placing of contracts for stores the Secretary of State and the Government of India have only a limited control. Measures have been taken with the object of doing what is possible to enable railway companies to spend fully the amounts placed at their disposal in each year for capital purposes.

25 It is shown in Statement B (pages 74-5) that the excess of the closing balances over the normal was held in 1909-10, 1910-11, and 1911-12 mainly in England, and in 1912-13 partly in England but mainly in India. In order to see the causes which led to its being held in England in three of the years, it is necessary to consider the method by which Government balances are transferred from India to England.

## VI.

*Method of transferring Balances from India to England, and India Office Balances*

26 Practically the whole of the Revenue of India is received in India. Statement A (pages 67-73) shows that about 25 per cent of the disbursements of the Government of India are made in England. A comparatively small portion of the disbursements in England is met from the proceeds of loans raised in England. Practically the whole of the remainder, consisting mainly of expenditure chargeable against the Revenue of each year, is met by means of remittances from India.

27 These remittances are effected by one or other of the following methods —

- (1) The sale by the Secretary of State in London of Bills of Exchange (commonly known as Council Bills) and Telegraphic Transfers to be met by the Government of India in India. Details regarding the method of sale will be given by Mr Newmarch (*see* Appendix VII). It is perhaps enough to note here that since 1899 the minimum price of bills has been 1s 3½d, and since 1904 there has been in force an undertaking to sell bills without limit of amount at 1s 4½d. These two prices are rough and conventional equivalents of the "gold exporting point" and "gold importing point".

Information regarding the manner in which the amount of the sales is regulated is given below.

- (2) Occasionally, when it has seemed improbable that the Secretary of State would be able to obtain by the sale of Bills and Transfers the amount estimated to be required from that source, gold held by the Government of India in India has been consigned to London. As the metallic money held by the Government of India is mostly in the Paper Currency Reserve against notes held in the Government treasuries, the Government of India, when shipping gold to London to be used for the general purposes of the Secretary of State, must usually take the gold from the Paper Currency Reserve and cancel a corresponding amount of notes held in their general treasuries or must transfer from their treasuries a corresponding amount in rupees to the Currency Reserve.
- (3) The conditions in recent years have enabled transfers of gold from the Paper Currency Reserve, when required to supplement the proceeds of Bills and Transfers, to be effected in a more convenient and economical manner than in (2). Part of the Paper Currency Reserve is held in gold in London (Appendix II, page 82) (taken from the proceeds of the sale of Council Bills\*), and the Secretary of State can accordingly withdraw gold from it, when required, against either the cancellation of notes held in the Treasuries of the Government of India or the transfer of rupees from those Treasuries to the Paper Currency Reserve in India.

## VII.

*Method by which amount of Sales of Council Bills and Transfers is regulated*

28 The Indian Currency Committee of 1898-99, over which Sir Henry Fowler presided, said at the end of their Report (paragraph 70) "It is eminently desirable that, in order to assist towards the speedy establishment of an effective gold standard in India, the Government of India should restrict the growth of their gold obligations." The particular reason mentioned by the Committee in support of their recommendation has

much less force now, since a gold standard has been effectively established, than it had in 1899, and the extent to which the recommendation can be carried out is limited by the fact that the amount that can be obtained in India towards providing for the capital outlay on railways and irrigation works is in normal circumstances much less than the total outlay generally admitted to be desirable, so that considerable loans must be issued in London. But, having regard to the general advantage of restricting, as far as may be, the growth of a country's external debt and to the practical difficulties attending the issue of large annual loans in London on behalf of the Government of India, the Secretary of State endeavours to obtain from funds provided in India as large a proportion as practicable of the money required for each year for expenditure in England on account of India.

29 It is accordingly the practice to estimate in the Budget of each year for the remittance to England (to be used towards defraying the expenditure of the India Office both on revenue and capital account) of as large an amount as the Government of India estimate that they will be able to devote to meeting Council Bills and Transfers sold by the Secretary of State. The estimate depends, of course, on the resources held by the Government of India in India at the beginning of the year and their forecast of their receipts and their requirements during the year, the requirements being for expenditure on revenue and capital account, for loans to be granted to agriculturists and others, and for the maintenance of a working balance. All these estimates are necessarily framed by the Government of India.

30 The actual sales in a year often differ considerably from the Budget estimate, (see Statements A and F of Appendix II, pages 67-73 and page 82). In seven out of the twenty years from 1893-94 to 1912-13, the trade demand for bills and transfers has not been sufficient to enable the full estimated amount to be sold. In the remaining thirteen years the sales have exceeded the estimate because the practice is to sell freely in years of heavy trade demand, subject to the consideration, on which something will be said at the end of this Memorandum, that the sales shall not be on such a scale as to prevent the inflow of gold to India to the extent to which it seems likely that there will be a demand for it on the part of the public. The practice of selling freely is of long standing. The reasons in favour of it are the following, of which the fourth is, in my opinion, by far the most important —

- (1) The opportunity of purchasing bills and telegraphic transfers in India, as an alternative to consigning gold for the discharge of the trade balance due to India is a great convenience to trade, more especially in times of pressure. This is illustrated by the fact quoted on page 4 of the "Memorandum on India Office Balances (Cd 6619)," that in 16 days in January—February 1912, telegraphic transfers were sold for 3,500,000*l.*, with the result of transferring this amount immediately from Government treasuries to mercantile hands. I believe that the present practice is generally appreciated by the various mercantile communities in India.
- (2) If the sale of Council Bills were restricted more closely than at present, larger shipments of gold to India to an amount equivalent to the reduction of sales of Council Bills would presumably be made by banks and merchants for discharging the trade balance due to India, unless, as is possible, the balance of Indian trade were adversely affected by the change of system. The greater part of such gold would be tendered by importers to be exchanged by the Government, either direct for rupees or for notes which would be, in due course, cashed in rupees, and would thus find its way into the Paper Currency Reserve in which the greater part of the metallic money belonging to the Government of India is kept. In due course the proportion of rupees to gold in the Paper Currency Reserve would decrease, the stock of rupees would fall to, or below, the limit of safety, and purchases of silver for the coinage of new rupees would be required. Owing to the restriction of the sale of Council Bills, the Secretary of State

would probably not be able, as he usually (though not invariably\*) is, under existing conditions, to buy the silver with money received at the India Office in payment for such Bills, and he would be compelled instead to call on the Government of India to ship gold to him, a course obviously uneconomical since it involves the payment by the Government of freight and insurance on the exportation from India of gold on which bankers and merchants have paid similar charges at the time of importation.

Similarly, a close restriction of the sale of Council Bills would probably

\* 6,000,000*l* of gold was sent home by the Government of India between October 1900 and July 1901, 4,261,000*l* between July 1903 and February 1904, and 6,600,000*l* between August 1904 and July 1905, mainly to meet payments for silver and to the Gold Standard Reserve. On these and similar occasions India was sometimes exporting and importing gold simultaneously. Since the last mentioned date, the shipments by the Government of India have been —5,000,000*l* to establish the English portion of the Paper Currency Reserve, and 2,623,000*l* light gold coin sent at various dates in 1908-9 and 1912-13.

necessitate shipments of gold by the Government of India, usually but not invariably\* avoided under existing conditions, to provide for payments to the Gold Standard Reserve and investments on behalf of the Paper Currency Reserve in England.

For the reasons given in Section VIII C below I omit consideration of the possibility of further shipments of gold being required to assist the Secretary of State in meeting his disbursements for General Purposes.

3. The larger shipments of gold to India, consequent on a reduction of the sales of Council Bills as explained in (2), would sometimes be on a very considerable scale. In the Table on page 15, the reductions of the sale of Council Bills for General Purposes that would have occurred in the period 1909-10 to 1913-14 under three possible alternative methods of regulating the sales are given at 19,529,519*l*, 14,518,519*l*, 13,414,522*l* respectively. In addition there were sales of 8,690,000*l* of which the proceeds were appropriated to the Gold Standard Reserve and of 1,333,300*l* of which the proceeds were used to buy securities for the Paper Currency Reserve\* (see Statement F of Appendix II, page 82). If the sales for General Purposes had been reduced to the extent shown, and if the sales for the Gold Standard Reserve and Paper Currency Reserve had not taken place, the extra shipments of gold to India, to adjust the balance of trade would presumably have been, under the three alternative methods, 29,552,819*l*, 24,541,819*l*, and 23,437,822*l* respectively, on the assumption that the balance of trade would not have been affected by the change of practice. The shipments would presumably have been made in each year mainly in the busy months when the demand for trade remittance to India is strongest. There can be no reasonable doubt that the temporary or permanent withdrawal, effected at such times, of amounts of gold of this magnitude would injure Indian interests in two ways, viz —by hampering the Secretary of State's loan operations in London (*e.g.*, the issue of Indian securities and the renewal of maturing obligations such as the debenture bonds of guaranteed Indian Railway Companies) and by causing a rise in discount rates in London (and probably all over the world) which could not fail to injure India's trade, especially her foreign trade.
- (4) When remittances additional to those estimated for in the Budget are made by the Government of India to the Secretary of State, the proceeds are used, so far as not required for meeting requirements not provided for in the Budget, either towards reducing the amount to be borrowed in England for capital outlay or towards paying off debt. It should be mentioned that, since excess receipts from Bills and Transfers can never be counted on until late in the financial year, when the result of the monsoon and the trade and agricultural position are known, whereas the favourable opportunity

\* The further amounts appropriated to the Paper Currency Reserve, as shown in column 5 of Statement F (page 82), were set aside in gold, and thus had the same effect on the London money market as if they had been shipped to India. They are, therefore, omitted from consideration in the present context.

for carrying out loan transactions usually occurs, if at all, early in the financial year, it follows that the proceeds of excess sales of Bills and Transfers cannot ordinarily be used for the avoidance or repayment of debt until the year after that in which the excess sales have taken place. In this respect the practice of the India Office resembles that of the Treasury, which applies surpluses to the reduction of debt in the year after they have been realised.

The extent to which the proceeds of extra sales of Bills and Transfers were used in 1910-11, 1911-12, and 1912-13 to discharge debt and to restrict the amount of new debt created is shown in some figures on page 12 of the "Memorandum on India Office Balances" recently presented to Parliament [Cd 6619]. The effects in this respect of existing practice are more fully shown in the following summary compiled from Table A, pages 69-73 —

CAPITAL RECEIPTS AND DISBURSEMENTS, 1909-10 TO 1913-14.  
*Capital Receipts (Loans issued by Government, Capital paid to the Government by Railway Companies, and Unfunded Debt, i.e., Deposits of Savings Banks and Service Funds)*

	India	England	Total
	£	£	£
1909-10 (Raised in Advance in 1908-09)	—	4,475,000	4,475,000
" (Raised in 1909-10)	2,571,700	5,159,000	7,730,700
1910-11 (Raised in Advance in 1909-10)	—	6,370,000	6,370,000
" (Raised in 1910-11)	2,245,700	5,309,100	7,554,800
1911-12 (Raised in Advance in 1910-11)	—	2,210,000	2,210,000
" (Raised in 1911-12)	3,198,400	2,855,100	6,053,500
1912-13	3,791,400	3,495,000	7,286,400
1913-14 (Budget Estimate)	3,657,500	3,000,000	6,657,500
Total	15,464,700	32,873,200	48,337,900

*Capital Disbursements (Capital Outlay on Railways, Irrigation Works, and Delhi, and Discharge of Debt)*

1909-10	3,920,100	5,957,100	9,877,200
1910-11	3,712,900	9,255,900	12,968,800
1911-12	4,508,100	7,898,900	12,407,000
1912-13	4,674,200	13,554,900	18,229,100
1913-14 (Budget Estimate)	6,231,000	10,594,400	16,825,400
	23,046,300	47,261,200	70,307,500
Excess of Capital Payments over Capital Receipts	7,581,600	14,388,000	21,969,600

The significant figures in this summary are those in the last line. They serve, indeed, as an epitome of the financial policy consistently pursued by the India Office in the last three years, viz., to take advantage of a period of prosperity and windfalls in India in order (1) to pay off the portion of India's external debt of which the discharge was either obligatory or very desirable, (2) to overcome, as far as possible, the difficulties in the way of the improvement of the Indian railway and irrigation systems caused by the unfavourable position of the market in London for Indian loans.

(5) Money held in England as a working balance or pending use for the reduction of debt or defraying capital expenditure earns interest, the amount so earned from 1909-10 to 1912-13 having been 1,241,173<sup>s</sup>. The deposit of balances in India at interest is rare (see page 2), and, although there are arguments of no little force for placing Government money on deposit with the Presidency Banks at certain times of the year more freely than has been customary, such deposits should, I think, for the reasons given on pages 3

	£
* 1909-10	130,070
1910-11	362,880
1911-12	376,053
1912-13	372,170
Total	1,241,173

to, 5 above, be made from the Reserve of the Paper Currency Department. If this were done, the Treasury Balances in India would still earn no interest.

### VIII.

#### *Effect of Regulating Amount of Sales of Council Bills and Transfers otherwise than as under existing Practice*

31 It seems to me desirable that the Commission should realise fully how the recent and present position of the Secretary of State and the Government of India would have been affected if, during the last few years, there had been in force any method, other than the one described above, of regulating the amount of the sales of Council Bills and applying the proceeds of sales effected in excess of the Budget Estimate. In Supplementary Note I on "Alternative Methods of Regulating Amount of Sales of Council Bills

and Transfers," I compare, as closely as the conditions allow, the actual sales of Council Bills and Transfers for General Purposes from 1909-10 to 1912-13 and the estimated sales for 1913-14, with what they would have

been if regulated by any of what seem to be the only possible alternative methods. According to the calculations in that Note the primary effect of applying in 1909-10 to 1913-14 the various possible alternative methods of regulating the sales of Council Bills would have been as shown in the following statement

Method of regulating Sales.	Reduction that would have been caused in the Secretary of State's receipts from the sale of Bills and Transfers	Portion of reduction that would have been made good by withdrawal of Gold from Paper Currency Reserve in England to pay for Silver in 1912-13	Amount that would have had to be made good in other ways
1	2	3	4=2-3
	£	£	£
1 Limiting them to the amount of the "Home Charges," i.e. the net expenditure of the India Office chargeable against Revenue (Section II of Supplementary Note I)	19,529,519	7,060,000	12,469,519
2 Basing Budget estimate on forecast of what Secretary of State can sell and Government of India can meet, and limiting sales to amount of this Estimate (Section III)	14,518,519	7,060,000	7,458,519
3 Limiting them so as not to allow the India Office Balance on 31st March of any year to exceed 4,000,000 (Section IV).	13,414,522†	3,931,200	9,483,322†

† Subject to a possible moderate reduction for the reasons given in the last paragraph of Supplementary Note I, page 25.

32 Regarding the figures in column 3 of the Table above, it is perhaps unnecessary here to do more than explain that, as I shall be able to show when giving evidence regarding the Gold Standard Reserve, the gold in the Paper Currency Reserve has been in the past, and would be in the future, a most valuable resource in a period of bad trade towards enabling the Secretary of State to pay his way and support exchange. Its dissipation in a period of abounding prosperity would be extremely unfortunate.

33 The significance of the figures in column 4 of the Table is much more serious. It is obvious that the only methods by which in any circumstances the amounts shown in that column could have been made good are as follows—

- A Reduction of India Office Balance
- B Further withdrawals of gold from the portion of the Paper Currency Reserve held in England.

- C Remittances from India by means other than the sale of Council Bills  
 D Reduction of India Office disbursements  
 E Increase of loans issued by the India Office or by Guaranteed Railway Companies under the authority of the India Office  
 34 The facts regarding the practicability or otherwise of these methods are as follows —

A *Reduction of India Office Balance*—Taking the period 1909–10 to 1913–14 as a whole, no such reduction would have been possible, since, as shown in statements A, B, and G, the estimated balance at the close of the period is about 4,000,000*l*, which is approximately the minimum compatible with safety. The fact that for a considerable time within the period the balance was higher than was required, and the extent to which this was due to divergencies between estimates prepared by the Government of India and actual results, are discussed separately in Section IX.

B. *Further withdrawals of Gold from the portion of the Paper Currency Reserve held in England*—The amounts of gold so held during the period 1909–10 to 1913–14 have been as follows —

	£
April 1909 to February 1910	- - 1,500,000
March 1910 - - - - -	- - 2,500,000
April 1910 - - - - -	- - 3,375,000
May 1910 - - - - -	- - 4,165,000
June 1910 to January 1911 -	- - 4,245,000
February 1911 to January 1912	- - 5,045,000
February to October 1912 -	- - 5,700,000
November 1912 to February 1913	- - 7,300,000
March 1913 - - - - -	- - 6,100,000 (Reduction due to transfer of 1,200,000 <i>l</i> to Gold Standard Reserve)

It is assumed in column 3 of the Table on page 15, if any of the possible alternative methods of regulating sales had been in force, the following amounts would have been taken in gold from the portion of the Paper Currency Reserve held in England —

	£
Under first and second alternative methods	7,060,000
Under third alternative method	- - 3,931,000

It is obvious that, under the first and second methods, there would have been no possibility of taking any further appreciable amount from the same source towards making good the deficiency shown in column 4 of the Table. Under the third method, 3,369,000*l* could have been so taken between November 1912 and February 1913 or 2,169,000*l* in March 1913. For the reasons given in the remarks immediately after the Table, this step would have been exceedingly unfortunate.

C. *Remittances from India otherwise than by the sale of Council Bills*—The only practical alternative method of remittance would have been the shipment of gold to London by the Government of India for the General Purposes of the Secretary of State. As stated in Section VII (2), such shipments have been made in the past mainly for specific purposes such as payments for silver or for securities for the Gold Standard Reserve when it was impracticable to effect by the sale of Council Bills the remittances required for such payments. I believe that they would not have been made in the period from 1909–10 to 1913–14 for the General Purposes of the Secretary of State if in that period the sale of Council Bills had been deliberately restricted in the manner assumed in Supplementary Note I (page 22). My reasons are as follows—If the sale of Council Bills had been restricted, it would presumably have been done in accordance with the view that some specific limit should be imposed on the amount to be remitted by the Government of India to London in any given period. Unwise as such a policy would have been—since it would have involved locking up in Indian treasuries money that

under the existing practice has been and is being used in London to pay for railway material for India, to reduce India's foreign debt, and for similar purposes—it is just conceivable that it would have been adopted. But it is past belief that the Government that adopted it would have neutralised it by substituting for remittances by the convenient and economical method of selling Council Bills and Transfers, an equivalent amount of remittances by the shipment of gold, a method which, as explained in paragraphs (1) and (3) on pages 12 and 13 would have been adopted, if at all, as part of a system injurious to Indian trade and prejudicial to her interests as a borrower in London, and would also have involved loss (in the shape of payments for freight and insurance, loss of premium on Council Bills, and loss of in-

\* See Supplementary Note II (page 26) on "Cost of Reducing Sales of Council Bills and substituting Remittances by Shipments of Gold" interest on balances) which I have calculated at 618,800*l.*, 694,681*l.*, or 1,069,120*l.*, according to the method

adopted of restricting the sales of Council Bills. I have not overlooked the fact that—since Council Bills and Transfers, if sold at all, must be sold when the public wishes to buy them, whereas shipments of gold can be made at the time chosen by the Government—the change of method would have, to a considerable extent, enabled the large temporary increase in the India Office balance, dealt with in Section IX below, to be avoided. But I believe that, for the reasons given in Section IX, that increase has caused no disadvantage of any kind to India. And I am quite sure that (having regard to its very exceptional causes and the extreme improbability of their recurrence) it would have been unwise to make, for the purpose of avoiding it, a drastic change in financial practice involving serious immediate risk and loss to trade and to the Government and the possibility of similar risk and loss hereafter.

- D. *Reduction of India Office Disbursements*—The expenditure chargeable to revenue consists almost entirely of fixed charges (interest, pensions, leave allowances, War Office charges), and of payments for stores required by the Government of India. It could not be reduced. The capital outlay on railways and irrigation works (the latter of small amount), and the payments for discharge of debt, could have been reduced. The consequences are discussed below.
- E. *Increase of Loans*—It may be assumed that up to a certain point an increase would have been possible. The consequences are discussed below.

35 I believe that, if a shortage of the Secretary of State's receipts from Council Bills to the extent shown in column 4 of the Table above had occurred from 1909–10 to 1913–14 owing to the adoption of closer restrictions on the sales, the course taken to make both ends meet would have been mainly, if not entirely, (a) to reduce the Capital Outlay on Railways, (b) to reduce the expenditure on the discharge of temporary debt, (c) to increase, or to attempt to increase, to some extent the issue of permanent loans. There can be no doubt that each of these measures would have had serious effects, not merely or mainly of a financial nature in the narrower sense, on the position of India both immediately and in the future. Those effects may be briefly indicated as follows—

(a) The desirability of developing the Indian railway system as rapidly as (or more rapidly than) has been possible in the last few years has been recognised by the Secretary of State and the Government of India. Frequent representations have been made as to the inconvenience and loss caused to producers and merchants by the difficulty of coping with the traffic that offers. Moreover there are many districts, not now served by railways, to which railway communication would bring certainly an increase of prosperity and probably an increase of security against the worst consequences of drought. A reduction of the capital expenditure on railways would have meant at least the postponement of these advantages.

(b) A reduction in the amount of temporary debt discharged in the last few years would have reduced India's power of borrowing in London in

future years, and would therefore have involved in the future disadvantages of the same general nature as the reduction of capital outlay would have involved in the immediate present. It would also have involved one particular disadvantage of very great importance, viz —the retention of obstacles, which the course actually followed has removed, in the way of pursuing a liberal policy when famine next occurs. At such a time the issue of temporary loans in London is a most valuable resource for meeting the financial difficulties which must arise, and the extent to which it can be used on any particular occasion is largely governed by the amount of temporary debt then in existence.

(c) In view of the difficulties that attended the comparatively small issues (32,873,200*l*) in London of Indian Government and Guaranteed Securities in the period from 1909-10 to 1913-14, there can be no doubt that any appreciable increase of their amount would have altered the position of such securities materially for the worse. This would have increased the difficulties in the way of future issues, and would therefore have led in the future to disadvantages of the kinds described in (a) and (b).

36 The above remarks set forth what, in my opinion, would have been the consequences of adopting in the period from 1909-10 to 1913-14 a different practice regarding the sales of Council Bills from that which has actually been followed. Assuming the correctness of my view as to the way in which the deficiency in the Secretary of State's resources caused by a reduction of the sales would have been met, it is clear that the economic development of India and its protection against the worst consequences of any future famine would have been seriously prejudiced. At any time hereafter a similar period may occur again, though I hope that the differences between the estimates of the Government of India and actual results will be less than in the period mentioned, so as to avoid certain consequences mentioned in Section IX below. In the event supposed, I think that the best interests of India will demand that the present practice regarding Council Bills be followed, viz, that (subject to not interfering with a flow of gold to India to the amount likely to be used by the public) they should be sold freely up to the amount that the Government of India can meet after providing adequately for requirements in India. This does not postulate anything as to the desirability or otherwise of the Government of India undertaking to meet in India larger or other requirements than now, *e.g.*, the supply of temporary accommodation for the Indian money markets. I recognise that such action, though disadvantageous if and in so far as it might reduce the capacity of the Government of India for meeting Council Bills, is not to be rejected merely

\* My own view is (1) that accommodation would be more advantageously granted to the money market in India from the Paper Currency Reserve (Section III above), and (2) that, even if granted from the Treasury Balances, it would alter the time, but not reduce the amount, of the sales of Council Bills

on that account\*. But this recognition does not in any way conflict with the view that the available resources of the Government of India, whatever they may from time to time be after providing for requirements in India, should be used fully and freely, as under the present practice, for meeting Council Bills, since otherwise the result must be either that gold will be uselessly and wastefully shipped to and fro between India and the rest of the world or that money will lie idle in Government Treasuries in India while expenditure for Indian purposes in London, which is now always urgently needed and will be so for as long as can be foreseen, will either not be incurred or will be met, if at all, from loans which, under existing practice are avoided.

## IX

### *High India Office Balances from 1910 to 1913*

37 Up to this point I have dealt with the period from 1909-10 to 1913-14 as a whole, because this seems to me necessary for considering the effect of the present practice regarding the sale of Council Bills and of any change therein. But it is necessary to refer to a fact which is connected with, but not solely or mainly due to, that practice, viz, the high level at which the India Office balance stood for part of the period. Between February 1910 and September 1912 they stood above 10,000,000*l*. This fact and its connection with the sale of Council Bills have given rise to criticism of a kind illustrated

by the following extracts from an article published by the "Times" on 4th November 1912 from "an Indian Correspondent" —

"Let us see for a moment what this accumulation of Indian money means. It means that many millions sterling of Indian money have been improperly withdrawn from India. They represent sums extracted from the taxpayer in excess of the requirements of the State, capital withdrawn from India for use in London and there used, not in pursuit of Indian interests but for the convenience of joint stock banks trading on inadequate gold reserves.

There is therefore no justification for the sale of a single bill by the Secretary of State beyond the actual amount which he needs to discharge his obligations in London. But these excessive sales of bills are a convenience to the exchange banks which have to remit funds to India, and it is often cheaper for them to buy bills than move bullion. They also afford a means of obstructing the natural flow of gold to India, and in this way allay the terrors of those joint stock banks who realise the inadequacy of the London gold reserves, and are not averse to protecting them at the expense of the Indian taxpayer. These, of course, are reasons which cannot be avowed.

For, long the Chairman of the Finance Committee at Whitehall was Lord Inchcape. He at least had Indian experience, although it was altogether out of date, and large interests in India, though he was never regarded in India as in any sense of the word a representative of Indian interests. Lord Inchcape was succeeded as Chairman by Sir Felix Schuster, who is assisted by Mr Currie and a civilian who has no direct knowledge of Indian conditions. No one questions for a moment the integrity of these gentlemen, but it is quite obvious that the interests which they most directly represent, and the environment by which they are most likely to be influenced, are not Indian interests. The thought always uppermost in their minds must be the position of the great joint stock banks. Now the distinguishing feature of the English joint stock banks is that they do an enormous business on a ridiculously small cash reserve, and that although great financiers in succession have pointed out the dangers of the situation, the banks have refused to share any portion of the burden of strengthening it. It is very convenient to these banks, to have 40 millions of Indian money locked up in London, and to receive large loans from it, with or without security, at low interest. When the Finance Committee turn for advice, it is on the exchange banks that they lean. The interests of these banks are bound up with cheap remittances to India, it is nothing to them if Indian interests suffer, or if the Indian taxpayer pays. Small wonder is it if, ground between the joint stock and the exchange bank, Indian interests have been reduced to powder and she has been compelled to see her resources diverted to the bolstering up of depreciated securities, to financing the City, and frequently to arresting the natural flow of bullion to her shores."

38 This and similar statements seem to rest on the assumption that the Secretary of State has adopted a policy of retaining in London a balance greatly in excess of the amounts needed to meet his requirements. This assumption is incorrect. Its incorrectness is shown by what is said in Section VII, and by several of the Statements that I am submitting, but most conveniently and briefly in Statement G of Appendix II, headed "Summary of India Office Transactions 1909-10 to 1913-14" (page 83). That Statement exhibits the following facts —

A The Budget Estimates from 1909-10 to 1913-14 provided for the reduction of balances as follows —

	Estimated opening Balance	Estimated reduction.	Estimated closing Balance.
	£	£	£
1909-10 - - - -	7,697,989	4,369,300	3,328,689
1910-11 - - - -	12,739,297	7,473,400	5,265,897
1911-12 - - - -	16,055,518	7,317,300	8,738,218
1912-13 - - - -	18,320,649	11,598,800	6,721,849
1913-14 - - - -	8,372,900	4,280,500	4,092,400

B In 1909-10, 1910-11, and 1911-12 the balance was increased during the year, instead of being reduced, as estimated, and in 1912-13 the reduction was of less than the estimated amount

By far the most important cause of the difference between the Budget Estimate and actual results was the excess of the receipts from Council Bills over the estimate framed by the Government of India, at the beginning of each year, of the amount that they could meet. The excesses were as follows —

	£
1909-10 - - -	1,806,586
1910-11 - - -	8,138,303
1911-12 - - -	9,245,216
1912-13 - - -	10,160,000 (of this 7,060,000l may be regarded as drawings against silver coined during the year)

The causes to which they were due are shown in Statements A and E of Appendix II (pages 67-73 and 81)

C In 1910-11 a part of the increase in the receipts from Council Bills was used for the discharge of 1,000,000l debt not provided for in the Budget, and similarly in 1911-12 and 1912-13 the issues of loans were reduced by 1,639,897l, and 1,315,000l respectively below the Budget estimates

A fact that is not exhibited by Statement G (page 83), is that the reason for not using in a similar way a larger portion of the excess receipts from Council Bills in the year in which they occurred, is that the information that the Government of India were able to supply, as to the probability of their occurrence was on each occasion very incomplete until nearly the end of the year, when either the loan programme of the year was complete, or the time at which it was possible to discharge additional temporary debt had passed by, so that, to a great extent, as explained on page 13, the excess receipts had to be used for the discharge of debt or the reduction of new issues in the year after that in which they accrued. A considerable amount of detailed information on this point is given in the "Memorandum on India Office Balances," recently presented to Parliament (Cd 6619), which it is probably not necessary to repeat here but it may be useful to reproduce from the Memorandum (pp 11-12) the following sentences — "In 1910-11 and 1911-12 a large part of the increase of receipts occurred late in the year. If it had occurred earlier, the effect would have been that the Secretary of State would have been able to alter somewhat the time of discharge of temporary debt. The total amount discharged in the three years (1910-11 to 1912-13), would not have been greater, since by 31st March 1913 all the temporary debt maturing by that date will have been paid off, but the final instalment of India Bills would have been paid off in June 1912 instead of in December."

39 What has been said above is enough to show that the Secretary of State has not adopted a new policy of the kind assumed in the statement quoted at the beginning of this section, and that the high level at which the India Office balance stood in some recent years is due to following established practice in a period in which, for several years in succession, the resources accruing year by year to the Government of India differed by an exceptionally large amount from the Budget Estimate

40 The question arises whether the possibility of this result is a reason for altering the existing practice regarding the sale of Council Bills. On this question I venture to offer the following remarks — It is, I think, clear from what is said in Section VII that a change in the existing practice would be substantially injurious to important Indian interests. If so, it ought not to be changed unless the disadvantages of its continuance are serious. The disadvantages which, as far as I have observed, are imputed to the present practice, are as follows —

(1) The suspicion which is said to be aroused in India when the Secretary of State's balances rise as high as they have done in recent years. Regarding this, there are two points to be noticed. (A) The "Times" stated on 20th January 1913, with reference to the series of articles published by it in November 1912, from which the extracts quoted above

are taken, that "Generally, it may be said that careful examination of the "files of the principal Anglo-Indian newspapers for the last two or three months shows that, while the views of our Anglo-Indian correspondent have altogether failed to secure widespread support, our contention in connection with them that the whole problem of Indian financial management should be re-examined by an independent and representative commission is supported in influential quarters, and is not contested by any important organ of Anglo Indian opinion" My own reading of the Indian newspapers, including the reports of meetings of Chambers of Commerce, strongly confirms the impression that the views quoted from the "Times" early in this section are not widely held (B) The divergences between the estimates of the Government of India and the actual results of the various years from 1909-10, which have been the chief cause of the Secretary of State's high balances, have been due to a considerable extent (as shown in Section V) to one exceptional cause that is not likely to recur

(2.) It is alleged that the present practice regarding the sale of Council Bills prevents the Government of India from placing money at the disposal of trade by way of deposits with the Presidency Banks or loans. It will be seen from what is said on pages 4 and 5, that, if such action by the Government of India is desirable, it is quite practicable without any change regarding the sale of Council Bills

(3) It is also alleged that the present practice regarding Council Bills prevents gold from going to India in amounts sufficient to satisfy the public demand. With reference to this contention I submit the following figures extracted from Statement H (pages 84-5), relating to a period in which the sales of Council Bills were exceptionally heavy —

	Imports of Sovereigns	Absorption of Sovereigns by the public during the year	Sovereigns held at end of year in Government Treasuries and Reserves at disposal of public in exchange for Rupees
	(1)	(2)	(3)
1909-10 - - - -	9,241,000	2,874,000	6,425,000
1910-11 - - - -	8,540,000	8,103,000	6,484,000
1911-12 - - - -	18,342,000	8,884,000	15,828,000
1912-13 - - - -	17,795,000	11,101,000	19,963,000

It will be noticed that in each year the importation of sovereigns (Col 1) exceeded the absorption by the public (Col. 2) and that at the end of each year there has been a substantial amount held by the Government at the disposal of the public to be exchanged for rupees. The amount so held on 31st March 1913 was higher than at the corresponding date in any previous year, and was sufficient to supply the demands of the public for 2½ years at the average rate of annual absorption shown in column 2. It will also be observed from Statement H that the absorption of sovereigns during the twelve years to which the Statement refers amounted to 60,066,000. In view of these figures it seems scarcely necessary to discuss further the contention under consideration

## SUPPLEMENTARY NOTE I.

Alternative methods of Regulating amount of Sales of Council Bills  
and Transfers

41 In the foregoing Memorandum the existing method of regulating the amount of Council Bills and Transfers sold in each year is explained. I believe that this method is far more conducive to the interests of India than any that could be substituted. But it is obviously desirable to consider what are the possible alternative methods and what would be the effect of the adoption of each of them.

The objects of the present Supplementary Note are to set forth the alternative methods that appear either to be advocated by the critics of the existing methods whose views I have seen, or, whether so advocated or not, to be possible subjects of reasonable discussion, and to submit the results of calculations as to the effect that their adoption from 1909-10 would have had in reducing the amount available from the proceeds of Bills for the general purposes of the Secretary of State.

I have disregarded in the calculations on which this note is based the sales of Council Bills of which the proceeds have been used, not for General Purposes (including purchase of silver), but for additions to the Gold Standard Reserve and the Paper Currency Reserve in England, since the disadvantages of not selling these Bills, though very considerable, would have been of a different nature from those (described on pages 19 and 20 of the Memorandum) attending the reduction of the amount sold for General Purposes.

## I

*To fix Budget Estimate of Council Bills at Amount of Home Charges  
and Actual Sales at Amount of Budget Estimate*

42 I gather from the perusal of controversial writings that one alternative method of regulating the sale of Council Bills that is occasionally contemplated as possible, is that the Budget of each year should provide for the sale of bills and transfers of the estimated amount of the Home Charges, *i e*, the net expenditure of the India Office chargeable against revenue, and that the actual sales of each year should be of this amount.

43 This is an impossible scheme for the following reasons —

(a) A normal Indian Budget provides for revenue to be received, almost entirely in India, of an amount approximately equivalent to the expenditure in India and England chargeable against revenue, so that, if the Government of India had only revenue transactions to consider, it would be able in a normal year to provide for remittance to England the equivalent of the total net expenditure in England chargeable to revenue. As a matter of fact there are also very important capital transactions partly in England and partly in India, and in some years the estimate of capital outlay in India exceeds by a considerable amount the estimated resources that can be provided in India towards meeting it. In such years the estimated amounts that can be provided by the Government of India for meeting Council Bills may fall short considerably of the estimated net expenditure chargeable to revenue in England, so that provision must be made in the Budget for the deficiency in England to be made good from the proceeds of loans or by reduction of the India Office balance. This is illustrated by the following figures which compare

the estimated sales of Council Bills for General Purposes with the estimated Home Charges from 1909-10 to 1913-14 —

*Budget Estimates of Home Charges and Council Bills*

	1909-10	1910-11	1911-12	1912-13	1913-14
	£	£	£	£	£
Home Charges (net)	18,717,000	19,054,500	19,105,400	19,298,400	18,786,100
Receipts from Council Bills	16,200,000	15,500,000	15,925,000	15,500,000	21,650,000

(b) There are years in which owing to unfavourable trade conditions, reducing the trade demand for Council Bills, the Secretary of State cannot sell bills up to the amount of the Home Charges, even if he has budgetted to do so and if the Government of India have the funds that would be required to meet the bills if sold

II

*To limit actual Sales of Council Bills to amount of Home Charges*

44 A possible variant of this scheme, which is at any rate practicable, is that in each year the remittances from India, without being limited to the amount of the Budget estimate, should not be allowed to exceed the amount of the Home Charges.

If this had been in force from 1909-10 the Sales of Council Bills for General Purposes from that year to 1913-14 inclusive would have compared as follows with the actual amounts —

	(1) Actual Sales for General Purposes	(2) If limited to Home Charges	(3) Difference (Col 1—Col 2)
	£	£	£
1909-10	18,006,586	18,006,586	—
1910-11	23,638,303	18,606,000	5,032,303
1911-12	25,070,216	18,866,000	6,204,216
1912-13	25,660,000	19,438,000	6,222,000
1913-14 (Budget Estimate)	21,650,000	19,579,000	2,071,000
	114,025,105	94,495,586	19,529,519

These figures show that, if the suggested alternative had been in force during the period to which the figures refer, the Secretary of State's receipts for General Purposes would have fallen short by 19,529,519*l*, which would have had to be made good from some source other than Council Bills. But it may be assumed that, if the sales of Council Bills had been limited in the manner suggested, the 7,060,000*l* paid for silver in 1912-13, which was obtained from the sale of Bills, would have been made from the sterling portion of the Paper Currency Reserve. This reduces to 12,469,519*l* the deficiency to be made good from other sources.

III.

*To base Budget Estimate on forecast of what Secretary of State can sell, and Government of India can meet, and to limit sales to amount of this Estimate*

45 A third alternative is that the Budget estimate of Council Bills should be drawn up in each year so as to provide for the sale of as many Bills as the Government of India estimates to be able to meet and the Secretary of State estimates to be able to sell, and that this estimate should not be exceeded.

46 The following figures have been prepared to show the amount that the Government of India would have been able to estimate to meet in each year from 1909-10, on the assumption that the amount for each year would have consisted of what was actually estimated under the existing practice plus the extra sum that the Government of India would have had in hand at the beginning of the year owing to the reduction in the manner suggested of the bills drawn on them during the preceding year or years, subject, however, to the further assumption which can be made with complete confidence, viz, that both the Secretary of State and the Government of India would have thought it necessary to limit the Budget Estimate of the sales of bills in each year to the amount for which there is likely to be a demand in a prosperous year. To neglect such a precaution when framing the financial arrangements for the coming year would be to incur the risk of complete financial confusion owing to a shortage of the sale of bills as compared with the estimate, and this is a risk which could not have been run without the greatest imprudence. I have taken the limit in question at 22,000,000*l* which exceeds the highest Budget estimate of Council Bills ever adopted.

47 On the assumptions mentioned, the sales of Bills for General Purposes that would have taken place from 1909-10 to 1913-14 compare as follows with the actual sales in 1909-10 to 1912-13 and the Budget for 1913-14 —

	(1)	(2)	(3)
	Actual Sales for General Purposes	Sales that would have taken place on conditions and assumptions used in this section	Difference (Col 1 - Col 2)
	£	£	£
1909-10	18,006,586	16,200,000	1,806,586
1910-11	23,638,303	17,306,586	6,331,717
1911-12	25,070,216	22,000,000	3,070,216
1912-13	25,660,000	22,000,000	3,660,000
1913-14 (Budget estimate)	21,650,000	22,000,000	-350,000
	114,025,105	99,506,586	14,518,519

Thus the shortage to be made good from sources other than the sale of Council Bills would have been 14,518,519*l*, which would have been reduced to 7,458,519*l*, if the silver bought in 1912-13 had been paid for by the transfer of gold from the Paper Currency Reserve.

#### IV

*To regulate sales so as to prevent closing balance of India Office from exceeding 4,000,000*l**

48 The last of the possible alternative methods of regulating the sale of bills appears to be that the Secretary of State should so regulate his financial arrangements that the closing balance of each year should be a fixed sum, say, 4,000,000*l*. If this method were adopted there would obviously be no possibility of drawing sums from the balances in the course of the year to make good a deficiency in the receipts from Council Bills and loans, so that it would be necessary in each Budget (a) to avoid placing the estimate of Council Bills higher than the amount for which a demand can be expected in a fairly prosperous year; (b) to estimate for the issue of loans to the full amount of the excess of total disbursements over the estimated receipts from Council Bills and miscellaneous sources. Moreover, in view of the low level at which the cash balance would ordinarily stand, and of the danger of postponing the issue of loans estimated to be required for the service of the year beyond the favourable early months of the year, the prudent (and presumably the ordinary) practice would be to issue in the first half of the year the full estimated amount of loans. If late in the year it became apparent that expenditure would be below the estimate, the sales of Council Bills would be reduced below the Budget Estimate so as to

prevent the closing balance from exceeding 4,000,000l On this basis and the assumptions—

- (1) that the estimate of Council Bills would not in any year have been higher than 22,000,000l, and
- (2) that the silver bought in 1912-13, so far as it could not have been paid for from the proceeds of the sale of Bills or from the receipts, estimated for in the Budget under other heads, would have been paid for with gold withdrawn from the Paper Currency Reserve,

I have calculated—

(1) That the sales of Council Bills for General Purposes under the suggested system from 1909-10 to 1913-14 would have compared as follows with those actually made (or estimated to be made in 1913-14) under the existing system —

	(1) Actual Sales	(2) If regulated so as to prevent closing India Office balance from exceeding 4,000,000l	(3) Difference, (Col 1 - Col 2)
	£	£	£
1909-10	18,006,586	15,126,800	2,879,786
1910-11	23,638,303	17,228,786	6,409,517
1911-12	25,070,216	20,594,997	4,475,219
1912-13	25,660,000	25,660,000	—
1913-14 (Budget Estimate)	21,650,000	22,000,000	- 350,000
	114,025,105	100,610,583	13,414,522

(2) That, under the conditions supposed, 3,931,200l would have been withdrawn in gold from the Paper Currency Reserve in England towards paying for silver in 1912-13, and would thereby have served towards making good the shortage shown in the table just given

49 It is possible that the conditions mentioned at the beginning of this section would have been departed from to the extent that some of the loans that would have been included in the Budgets of the various years under this scheme would not have been issued, and that the equivalent of the receipts anticipated from them would have been obtained late in the year by additional sales of Council Bills, which might then have been effected without raising the closing balance of any year above 4,000,000l So far as this took place, it would have reduced the deficiency of the sales of Council Bills under the suggested system, as compared with those that have actually been made under the existing system below the amount given in the third column of the Table above But, having regard to the smallness of the balance that would ordinarily have been at the disposal of the India Office under the system now being discussed, and to the manifold uncertainties that have attended the financial position in the period from 1909-10, the abandonment or postponement of loans estimated to be necessary for the needs of each year would have involved great risk and would presumably not have occurred to any large extent. Any allowance for the possibility of such abandonment must clearly be conjectural, and any reasonable conjecture must place the figure low

## SUPPLEMENTARY NOTE II

---

Cost of reducing Sales of Council Bills and substituting remittances  
by Shipment of Gold

---

**A.**

50 The object of the present Note is to calculate as closely as conditions allow the loss to the Government that would have been incurred if, in place of the practice that has been, and is being, followed in respect of the sales of Council Bills and Transfers from 1909-10 to 1913-14, the following course had been adopted —

- 1 Reduction of the sales of Council Bills and Transfers to the extent shown in the various sections of Supplementary Note I
- 2 Making good the consequent deficiency in the Secretary of State's resources partly (to the extent mentioned in that Note) by the "unearmarking" of gold (*i.e.*, its transfer from the portion of the Paper Currency Reserve held in England), and partly by the shipment of gold by the Government of India to the Secretary of State when necessary to prevent his closing balance in any year from falling below (approximately) 4,000,000*l*

**B.**

51 It is necessary to consider—

- Loss directly due to the substitution of one method of remittance for another
- Loss of interest due to the location in India of part of the total balance that was actually held in England

**C.**

*Loss directly due to the substitution of one method of remittance  
for another.*

52 This arises under two heads —

(1) When sovereigns are sent to India to be exchanged for rupees, the rate at which the exchange is effected is 1*s* 4*d* per rupee. The average rate at which Council Bills and Transfers were sold from 1909-10 to 1912-13 was 1*s* 4 061*d* (approximately 1*s* 4 1 1/8*d*). Thus the substitution of the former method of remittance for the latter in respect of a portion of the total remittances would have caused in the first instance a loss to the Government of the premium of 061*d* per rupee (or 3.8125 per cent), unless the change had brought about a compensating increase in the premium on the remainder of the remittances, which would still have been effected by means of Council Bills. There is no sufficient reason for assuming that this would have been the case since, as shown in the Note which Mr. Newmarch is submitting,\* the rate of 1*s* 4 061*d* (1*s* 4 1 1/8*d*) is one at which remittances of gold compete effectively with remittances by Council Bills.

(2) The shipment of gold by the Government of India to the Secretary of State would have involved a loss of approximately 5 per cent for cost of freight and insurance.

---

\* See Appendix VII (page 220)

53. Applying these percentages to the amounts shown in the several sections of the Supplementary Note on "Alternative Methods, &c," the loss directly due to the substitution of one method of remittance for another may be calculated as follows —

Table I

	Loss of premium at 38125 per cent on Amount of Reduction of Sales		Freight, and Insurance, at 5 per cent on Shipments of Gold to make good Reduction of Sales less portion assumed in Supplementary Note I to be made good by "unseamarking" of Gold		Total Loss, Col 2 + Col 4.
	Amount of Reduction (1)	Loss (2)	Amount of Shipments (3)	Loss (4)	
Section II of Supplementary Note	£ 19,529,519	£ 74,456	£ 12,469,519	£ 62,347	£ 136,803
Section III " "	14,518,519	55,352	7,458,519	37,292	92,644
Section IV " "	13,414,522	51,142	9,483,322	47,416	98,558

## D.

*Loss of Interest in England due to the Location of part of the Balance in India*

54. The average India Office Balance (calculated from the monthly closing balances) in the years 1909-10, 1910-11, 1911-12, 1912-13, and 1913-14 (Budget estimate), the approximate rate of interest earned, and the total interest earned, are shown in the following Table. The figures in columns 1, 2, 3, and 5 for the first four years are actuals, the rate of interest (Col 5) for those years is obtained by distributing the total interest earned over the average balance shown in column 1, the average balance for 1913-14 is taken at the mean between the estimated opening and closing balances, the portion not earning interest in 1913-14 at the equivalent (approximately) of the corresponding figure for the preceding years, and the rate of interest in 1913-14 at the average rate of the preceding four years. —

Table II

	Average Balance		Total	Rate of Interest per Cent	Interest Earned
	Earning Interest * 1	Not Earning Interest * 2			
1909-10	£ 7,478,650	£ 1,103,690	£ 8,582,340	1.739	£ 130,070
1910-11	13,146,482	1,128,708	14,275,190	2.760	362,880
1911-12	15,638,357	1,095,618	16,733,975	2.405†	376,053
1912-13	10,952,913	1,033,877	11,986,790	3.398	372,170
1913-14 (Budget Estimate)	5,338,314	1,100,000	6,438,314	2.575	137,462
					1,378,635

\* The amounts in column 1 are somewhat greater, and those in column 2 correspondingly less, than they would be if the averages were based on the figures of each day instead of on those for the last day of each month. This is due to the fact that on the evening of the last day of some months, the balance held at the Bank of England, and therefore not earning interest, must be exceptionally high, to provide for large payments to be made on the following day.

† This rate differs slightly from the "average approximate" rates given on 22nd March 1913 in reply to a question in the Viceroy's Legislative Council on 22nd March 1913 (see page 13 of "Memorandum on India Office Balances"—Command Paper 6619 of 1913), viz —2.60 per cent on loans to approved borrowers and 2.43 per cent on deposits. These rates were given before the end of the financial year to which they refer.

55 The reduction of the Sales of Council Bills to the extent shown in the various sections of Supplementary Note 1 on "Alternative Methods, &c," would have reduced the closing balances in the various years, if no special measures had been taken to replenish them, such as transfer of gold from Paper Currency Reserve in England or shipment of gold from India to the following amounts —

Table III

	Section II of Supplementary Note 1 on "Alternative Methods, &c"	Section III	Section IV
1909-10	£ 12,799,091	£ 10,992,505	No figures can be given, as the conditions in Section IV imply that the closing balance of each year would have been kept at 4,000,000 <i>l</i> , if necessary, by loans
1910-11	11,664,687	8,558,688	
1911-12	7,153,494	7,181,494	
1912-13	-8,674,314*	-6,084,314*	
1913-14	-15,437,096	-10,426,096	

\* These figures are based on the actual closing balance of 1912-13 which differs by 411,305*l* from the Revised Estimate given in Statements A, B, and G of Appendix II (pages 67-75, and page 83)

56 If, in the years when replenishment would have been necessary, it had been effected by the "unearmarking" of gold (to the extent assumed in the various sections of the Supplementary Note on "Alternative Methods, &c"), and the shipment of gold from India, to the total amount shown in Table I above, and if, as assumed in Section A above, these operations had been timed so as to bring the closing balances in the years in which they were effected to (approximately) 4,000,000*l*, the closing balances of the various years would have been as follows —

Table IV

	Section II	Section III	Section IV
1909-10	£ 12,799,091	£ 10,992,515	£ 4,000,000
1910-11	11,664,687	8,558,688	4,000,000
1911-12	7,153,494	7,181,494	4,000,000
1912-13	4,000,000	4,000,000	4,000,000
1913-14	4,092,423	4,092,423	4,000,000

57 Taking the opening balance of 1909-10 at the figure at which it actually stood (7,983,898*l*) and assuming that the average balance of each year would have been the mean between the opening and closing balances, and that, as in Table II, approximately 1,100,000*l* would not have been earning interest, then the interest that would have been earned at the rates that were actually realised in the first four years, and at a rate for 1913-14 based on the average rate for the four preceding years, would have been as follows —

Table V

	Average Balance earning Interest			Rate of Interest earned	Amount of Interest earned.		
	Section II of Supplementary Note on "Alternative Methods, &c"	Section III	Section IV		Section II	Section III	Section IV
	£	£	£	p c	£	£	£
1909-10 -	9,291,500	8,388,250	4,891,950	1 739	161,579	145,872	85,071
1910-11 -	11,131,900	8,675,600	2,900,000	2 760	307,240	239,447	80,040
1911-12 -	8,809,100	6,770,050	2,900,000	2 405	199,834	162,820	69,745
1912-13 -	4,476,750	4,490,700	2,900,000	3 398	152,120	152,594	98,542
1913-14 -	2,946,200	2,946,200	2,900,000	2 575	75,835	75,565	74,675
			Total	-	896,638	776,598	408,073

58 Thus, in addition to the loss directly due to the substitution of one method of remittance for another, there would have been a loss of interest as follows . -

Section II	-	-	£ 1,378,635	-	£ 806,638	=	£ 481,997
„ III	-	-	£ 1,378,635	-	£ 776,598	=	£ 602,037
„ IV	-	-	£ 1,378,635	-	£ 408,073	=	£ 970,562

## E.

59 The gross loss due to the causes dealt with in C and D above would have been as follows -

Table VI

	Section II of Supplementary Note on "Alternative Methods, &c"	Section III	Section IV
	£	£	£
Loss due to substitution of one form of remittance for another	136,803	92,644	98,558
Loss of interest on Balance in England -	481,997	602,037	970,562
Total	618,800	694,681	1,069,120

## F.

60 It may perhaps be considered that the loss shown should be reduced by allowing for interest that would have been earned on loans that would have been granted from the portion of the general balance held in India. Apart from the fact that this policy has not been actually introduced, I think that no such allowance should be made because I am of opinion, for the reasons stated in my main Memorandum, that by far the best source for loans in India is not the general Treasury balance of the Government of India, but the Reserve of the Paper Currency Department in India and it is probable that any amount that could be advantageously lent in India could be provided from this source. In case, however, it be thought necessary to assume that loans would have been granted in India from the additional amounts that

would have been held in the Treasury balances in India under the conditions supposed in this note, I submit the following calculation regarding these amounts —

Table VII.

	Addition consequent on reduction of Payments to meet Council Bills			Deduct amount of Gold that would have been shipped or "unmarked" (the latter involving reduction of Indian Treasury Balances)			Net addition to Indian Treasury Balance		
	Section II	Section III	Section IV	Section II	Section III	Section IV	Section II	Section III	Section IV
31 Mar 1910	£ —	£ 1,806,586	£ 2,879,786	£ —	£ —	£ —	£ —	£ 1,806,586	£ 2,879,786
" 1911	5,032,303	8,138,303	9,250,303	—	—	—	5,032,303	8,138,303	9,250,303
" 1912	11,236,519	11,208,519	13,764,522	—	—	3,114,303	11,236,519	11,208,519	10,650,219
" 1913	17,458,519	14,868,519	13,764,522	12,674,314	10,084,314	7,264,522	4,784,205	4,784,205	6,500,000
" 1914	19,529,519	14,518,519	13,414,522	19,529,519	14,518,519	13,414,522	—	—	—

61 In calculating the interest that might have been earned in India on these additions to the Indian balances, it is necessary to bear in mind (1) that the amount which could be advantageously and safely lent in India is limited, and (2) that owing to the well-known seasonal character of Indian trade, the loans would probably have been sought during only a part of each year. The following figures show approximately the total interest that would have been earned in India if (subject to a maximum of 3,000,000 in any one year) the net additions to the Indian balance shown above had been lent, in the years in which they are supposed to have accrued, at 6 per cent per annum for six months —

	£
Scheme in Section II of Supplementary Note on "Alternative Methods, &c"	- 270,000
Scheme in Section III	- 324,000
Scheme in Section IV	- 356,000

## APPENDIX II

CORRESPONDENCE AND OTHER OFFICIAL PAPERS TO ACCOMPANY THE MEMORANDUM AND SUPPLEMENTARY NOTES ON THE LOCATION AND MANAGEMENT OF GENERAL BALANCES OF SECRETARY OF STATE, AND SALE OF COUNCIL BILLS AND TRANSFERS, HANDED IN BY MR L ABRAHAMS, C B, ASSISTANT UNDER SECRETARY OF STATE FOR INDIA

No 256, dated 30th June 1874

From—The Government of India  
To—H M's Secretary of State for India

We have postponed consideration of the Bill for the regulation of the Presidency Banks and of the agreements depending upon it, pending receipt of the decision of Your Lordship in Council on the question of the agency of the Bank of Bengal in Bombay, in regard to which we forwarded with our despatch of the 9th January, No 17, a letter from the Directors of the Bank of Bengal

2 The strain to which our finances were exposed early this year has given us the advantage of an experience which we had not when the terms of the new agreements were last under our consideration

3 We have been much impressed with the consideration that the effect of the existing agreements with the banks which compels us to place all the cash balances belonging to Government in their hands leads to consequences which may be very inconvenient, if not worse, both to Government and to trade

4 The only use of these balances to Government is that they may be made available the moment the public service requires them

5 We have had no difficulty in regard to the balances in the hands of the Banks of Bengal and Madras, the Bank of Bombay, however, protested against meeting drafts upon it, and on the urgent representations of the Governor of Bombay we were obliged, on the 29th January, to allow a month's time before drawing

6 The Bank of Bombay, accustomed to high Government balances, and relying on the maintenance of those balances had so employed them that they were practically locked up, for had we insisted on withdrawing them more suddenly we should have done so in the face of a warning that we should produce a commercial crisis, and therefore for a time the Government balances at Bombay were useless for the purposes of the Government

7 We think it doubtful, moreover, whether it is any real advantage to trade that large Government balances should be kept in the hands of the banks. It appears to us that an element of uncertainty is thereby introduced into the money market not unlikely to aggravate commercial difficulties at a time of tightness

8 An amount of capital which is large relatively to the whole capital engaged in trade at the Presidency towns is supplied by Government, but Government, for reasons quite unconnected with trade, may have to withdraw these balances suddenly

In this case a sudden demand ensues for capital to replace that which is thus removed, the rate of discount rises, not from any commercial reason, but from the accident of State necessities, and if this should occur at a time of commercial pressure it would precipitate a crisis which otherwise might not occur. If Government did not supply this capital to the trade it would be found by private individuals through banks or in some other way

9 Had the Government funds in the hands of the banks in January last been limited to a fair working balance, and had we had a reserve in our own hands, we think it may be assumed that the market rise in the rates of discount which has occurred would not have taken place, and our business would have been transacted without disturbing trade operations

10 The resources of a large money market are not open to us, and we do not think it would be safe to trust to being able to raise funds readily and immediately in India. The amount (350,000L) that we wanted in January out of our balance of about a million with the Bank of Bombay, and the demand for which brought down the remonstrance that we should place in jeopardy the trade of Bombay, cannot be considered as large. Calcutta may have larger resources, but we cannot suppose that even here the supplies immediately available are really considerable

11 We are of opinion that a Government subject to the contingencies to which the Government of India is exposed ought not to be without a reserve, and that this reserve should be in its own hands

12 This object might be attained by dissolving our connection with the banks and re-establishing our treasuries. We are unwilling to take this course unless forced to do so the banks are useful institutions, and the Bank of Bengal especially has upon several occasions been of great assistance to the Government

13 We should prefer, as an alternative plan, to make a change in the agreements with the banks, so that instead of giving them the right to hold all the Government balances the stipulation may be confined to engaging to pay them interest when our balances are reduced below certain amounts

If it be necessary to go further than this we might stipulate that the banks should have the use of our balances up to certain limits, after which we should be unfettered as to their employment. The exact sums to be fixed in connection with the proposed stipulations would be settled in communication with the banks

14 The amount to be kept in reserve need not, in our opinion, be very large, as the main difficulty is one only of time. The sense of security which we should derive from the possession of a reserve of two millions immediately available for any emergency would, in our judgment, amply repay the charge for interest on that amount

---

No 225, dated 6th May 1875

From—The Secretary of State for India (Lord Salisbury)  
To—The Government of India

I have considered in Council the following communications from your Government—

Financial letter dated 9th January 1874, No 17,  
Telegram dated 9th January 1874,  
" " 2nd February 1874,  
Financial letter dated 6th February 1874, No 41,  
" " 6th February 1874, No 42,  
" " 13th March 1874, No 77,  
, " 24th April 1874, No 142,  
, " 30th June 1874, No 256,

relative to proposed modifications of the agreements with the Presidency Banks for the conduct of the Government business, and the withdrawal of the Agency of the Bank of Bengal at Bombay

2 I have also had before me letters from Mr J B Norton, dated the 9th March 1874, and from Messrs. Marshman, CSI, and E H Lushington on behalf of the shareholders of the Bank of Bengal, dated the 17th of the same month, on the subject of the continuance of the Bank of Bengal's Agency at Bombay. Copies of those letters are forwarded herewith for your information

3 Your letters Nos 17, 41, 42, 77, and 142, as well as the telegrams of the 9th January and 7th February 1874, refer to the proceedings of the Agency of the Bank of Bengal at Bombay, and of the New Bank of Bombay

4 In your letter of the 30th June you state that you "have been much impressed with the consideration that the effect of the existing agreements with the Banks which compels us to place all the cash balances belonging to Government in their hands, leads to consequences which may be very inconvenient, if not worse, both to Government and to trade," and you are of opinion that, having regard to the contingencies to which the Government of India is exposed you ought not to be without a reserve of cash in your own hands. That object, you remark, might be attained by dissolving your connection with the Banks, and re-establishing Government Treasuries, but you "are unwilling to take this course unless forced to do so, the Banks are useful institutions, and the Bank of Bengal especially has, upon several occasions, been of great assistance to the Government"

5 Under the present agreements with the Presidency Banks, in each of which Government is a shareholder, and is now represented on the Boards of those of Bengal and Madras as it was formerly also on that of Bombay by Directors of its own choosing, Government undertakes, though without penalty for failure, to keep average balances as follows —

	£
In the Bank of Bengal - - - -	700,000
" " Madras - - - -	250,000
" " Bombay - - - -	400,000

And at the head-quarters of the Banks Government is bound to pay interest whenever its balances fall below the following minima —

	£
With the Bank of Bengal - - - -	450,000
" " Madras - - - -	200,000
" " Bombay - - - -	250,000

6 Direct payments are also made to the Banks, viz —			
	Bengal	Madras	Bombay
	Rs	Rs	Rs
1 For General Treasury duties at Head Office (annually)	43,606	12,000	12,240

2 For Savings Banks (all alike), three-eighths per cent on the aggregate balance of deposits at the close of the preceding year, and 8 annas a year upon each active account

3 Packing and despatching treasure (all alike)	-	-	Actual charges
	Rs	Rs	Rs

4 For public debt, for each crore on the register - 3,500 4,000 4,000  
Government, moreover, undertakes that the payments that would formerly have been made into the treasuries at Calcutta Madras, and Bombay, and local treasuries, shall be made into the Presidency Banks and the branches thereof, where established with the sanction of Government, and you\* state that "the entire public balances, however

\* Financial letter from the Government of India, dated the 8th June 1873, No 231 "large they may be, at the Branch Banks, are at the disposal of the Banks which receive no other remuneration for doing the Government business at the branches. The Government is not bound to keep up any minimum

“ balance at any branch, but it undertakes to instruct its officers not only not to overdraw their account at the branches, but always to provide a margin at their credit, and, also, that the balance at any Branch Bank is not to be reduced below what it would be necessary to keep in the Government Treasury at the same place, were there no agreement with the Bank ” On the other hand, the Banks are at present restricted both as to the nature and the field of their business

7 It has been decided that the Government shall cease to hold shares in these Banks, and shall have no part in the Direction. But you propose that the law shall still impose on the Banks certain special restrictions. They are still, as now, to be prohibited from certain hazardous branches of business, and their field of operations is, as at present, to be subject to the consent of the State. On the other hand, you would so far alter the present agreements, that “ instead of giving the Banks the right to hold all the Government balances, the stipulation may be confined to engaging to pay them interest whenever our balances are reduced below certain amounts ”

8 The connection which has thus existed between the State and the Banks has from time to time been the cause of very serious embarrassment. It has produced a general impression that the State is responsible both for the good conduct and prosperity of the Banks, and when any of them has been involved in difficulty or danger, there has been a disposition to claim, as of right, assistance, or even indemnity, from the Government of India.

9 The controversy which has arisen between the Bank of Bombay and the Bank of Bengal in a great degree arises out of this misconception. It has been thought wise so far to limit the natural competition between the two Banks as to prohibit either from setting up branches beyond the limits of its own Presidency. This policy whatever its merit, has been adopted on public grounds. The public balances have formed so large a part of their resources that these might, it was believed, have been endangered, if they had been made the instruments for maintaining an unrestricted competition. But no private rights to Government protection were created by this provision, and it affords no foundation for the claim that the Bank of Bengal shall be compelled, against its own strenuous remonstrances, to employ the Bank of Bombay exclusively as its agent at Bombay.

10 The expectations unfortunately engendered by the close connection existing between the State and the Presidency Banks were the cause of an inconvenience, almost amounting to a public danger, which was experienced by Your Excellency's Government in January of last year, and which is much dwelt upon in the despatches before me. The strain upon your finances arising out of the famine compelled you to draw at that time for 35 lakhs upon the Bank of Bombay. Accustomed to high Government balances, and relying on the maintenance of those balances, the Bank had so employed them that they were practically locked up. You were met by an urgent telegram from the Governor stating that, if you drew anything from the Bank at that time, you would cause a general commercial panic, and other remonstrances equally pressing were addressed to you from the Bank of Bombay. The result was, that you were compelled, at a moment of singular pressure, to abandon the proposed draft. Your Excellency has correctly stated that “ the Government of India has never undertaken to keep balances with the Presidency Banks for the use of persons engaged in trade and it would be highly inconvenient to admit that any responsibility attaches to the Government in this respect, or that the Government is called upon to regulate the amount that it will leave in the hands of any of its bankers with reference to any other considerations than the interests of the public service ” But from the tone of the appeals addressed to you, it is evident that this conception of Your Excellency's duties had in fact arisen in the public mind, and was doubtless due to the relation which had existed between the State and the Presidency Banks.

11. But the tendency to found extravagant expectations upon this connection is more remarkably exemplified in the claims which have been, and up to this day are still urged upon the Government by the shareholders of the former Bank of Bombay. In that Bank the Government held shares, and, as a shareholder, contributed three Directors to the Board of Management. The Bank was regulated by a legislative charter of incorporation, similar in kind to that which Your Excellency is preparing to grant to its successor. The Government Directors were not always capable, and the charter, whilst it imposed some restrictions, omitted others to which the other Banks had been subjected. These two considerations were sufficient, when the Bank in 1866 was ruined by mismanagement, to persuade the shareholders that they had a genuine claim against the Government for compensation. Further reflection has not diminished its value in their eyes, for up to the present year they have not ceased to urge it. That Government should, in consequence of its relations with the Banks, have become liable, in the eyes of an intelligent body of men, to such a demand, is a circumstance not to be overlooked in considering the form which those relations in the future are to assume.

12 It was inevitable from the nature of the connexion between the State and the Banks, that difficulties of this character should occur, and it is probable that under

existing arrangements they may occur not infrequently. The State possesses power greater than any individual, and it is liable to pressure from which individuals are free. A shareholder who can without absurdity, be asked to indemnify other shareholders for the errors into which the Directors who represent them all have fallen, a customer who contracts to deposit all his balances at the Bank, and who can be reproached as acting unreasonably if he desires to use them when money is scarce—is evidently more valuable to a Bank than ordinary shareholders and customers, and if pressure be necessary to enforce these requests it will probably be applied. In the same way, an external power which can be called upon to prohibit a competitor from encroaching on the markets enjoyed by his rival, possesses a jurisdiction which is too useful not to be frequently invoked. The Banks cannot in any degree be blamed for profiting by the relations into which the State has voluntarily entered. They press naturally for such concessions, and the Government cannot refuse them without incurring odium, or grant them without great embarrassment.

13 The time has come when Her Majesty's Government must consider how far these relations shall continue. Originally they were probably devised to provide banking facilities for the commerce of the country, which it would have been otherwise unable to procure. The development of trade has lessened the cogency of this reason, and I agree with Your Excellency in the doubts you express as to the real value of artificial facilities which arise from large Government balances with the Banks. Capital supplied by Government, and not representing the savings of the community, is a resource on whose permanence no reliance can be placed, and which therefore tends to lead traders into dangerous commitments. It gives ease for a time, and produces a prosperity which is at the mercy of an accident. A political exigency suddenly withdraws the adventitious resource, and the commerce which trusted to it finds itself pledged beyond what its own resources can make good.

14 In your despatch of the 30th June, Your Excellency has intimated a desire to keep a reserve of two millions in bullion in your hands, and you express the opinion that, the sense of security which you would derive from the possession of such a reserve immediately available for any emergency, would in your judgment amply "repay the charge for interest on that amount." I recognise the serious danger to which the want of such a reserve exposes you in emergencies. But the emergencies happen so rarely, that I should reluctantly consent to sacrifice interest to the extent of 80,000*l.* a year permanently to meet them.

15 The object you have in view will be sufficiently attained by freeing yourself from all exceptional liability to the Banks. Your proposal that a minimum balance should be fixed, all deduction from which should carry interest against you, appears to me to be reasonable. Without such a protection, express or implied, it would be difficult for the Banks to transact business with so large a customer. You would naturally take care to fix a minimum which should not impose any burden upon the State beyond what is necessary for their fair remuneration. Any such arrangement should be supplemented by a corresponding provision, that if the balances which you think fit to leave with the Bank exceed a fixed maximum, and the Bank should desire to retain them, they should bear interest in your favour. But these agreements would not give to your relation with the Banks any exceptional or even unusual character.

16 No further engagement on your side will be necessary. The understanding that all revenue is to pass through the Banks wherever branches exist will not be renewed. You will take care to make it clearly understood that the amount of your deposits is discretionary, and that if it is convenient to you at any time to retain in the Treasury the proceeds of the revenue, the Banks possess no right in respect to it that will entitle them to complain.

17 In ordinary times you will probably not wish to retain money in the Treasury. If any apprehension of difficulty is felt, or if the course taken by any Bank indisposes you to trust it with the custody of large deposits, it will be at your discretion to hold back the growing produce of the revenue in the Treasury, instead of paying it over to the Bank. At a very brief notice you will thus be able to accumulate, in your own coffers, the two millions which you judge to be necessary for your security in times of pressure, even if a large portion of it cannot be provided by drawing upon your balances. Any sum so reserved you will deal with according to the exigencies of the time. It will be competent for your Financial Department either to retain it in the Treasury or to lend it for short terms under suitable conditions as to interest and security.

18 The engagement which the Banks on their side should be asked to undertake will be only those to which they would probably by preference submit. If you incorporate them by special legislation, you may properly insert into the Act the restrictions which do not injure their commerce but increase the confidence they enjoy. They should be required to abstain from the hazardous business of foreign exchanges, and from lending on any but the most approved securities. A

weekly statement, such as that which is issued by the Bank of England, together with a weekly classification of the securities on which they have advanced, should be supplied by a responsible officer, who should be bound to a true statement under penalty. You will at the same time require such confidential returns as may be necessary to place Your Excellency in full possession of all the requisite information with respect to the distribution of the resources of the Banks and the character of their operations. If the information furnished by these returns is sufficiently detailed, it will not be necessary to reserve a power of inspection, which might impose upon you in the public view an undue responsibility for the management of the Banks, and would, in other respects, place the Government in a false position towards them.

19 These restrictions are no more than you may rightly exact as a condition of the position of advantage in which the Banks are placed by receiving Acts of Incorporation, and by their connection with your Government.

20 The charter of incorporation will, as heretofore, assign to each Bank the limits within which it may lawfully establish branches. This provision is earnestly valued by the smaller Banks, and is not resisted by the Bank of Bengal. It is open to many and serious objections upon general grounds, but it is agreeable to a practice which has long prevailed, and to abandon it would be to make a superfluous addition to the important changes which the exigency of the case makes it necessary at this juncture to adopt. For these reasons the condition may be reimposed.

21. The demand of the Directors of the Bank of Bombay, that the Bank of Bengal shall be compelled to employ them as agents, stands upon a different footing. The condition has not been imposed before, and it is strenuously resisted by the Bank of Bengal. The acquiescence of that Bank could not be obtained except at the price of some special privilege in fiscal matters, which in effect could only be provided at the cost of the Indian tax-payers. No public advantage could be shown in favour of such an arrangement, and the experience of last year furnishes a new argument against it of much cogency. I should, therefore, not approve of any provisions being inserted in the Bill to disturb the existing state of things in that respect.

**RESOLUTION—By the Government of India (Financial Department), No 317, dated  
19th January 1876**

**RESOLUTION**—The Governor-General in Council is about to conclude new contracts for the transaction of public business by the Presidency Banks of Bengal, Madras and Bombay, under which the Government will only maintain with the Banks such balances as may be considered convenient with reference to the requirements of the public service.

2 Arrangements will simultaneously be made for the constitution of a separate reserve treasury under the custody of the Comptroller-General, in which will be concentrated all funds not required for the immediate purposes of the Administration.

3 The Governor-General in Council reminds each Accountant-General, and Deputy Accountant-General in independent charge, that it is a principal part of his duty to devise all the means which his experience may suggest to reduce and economise the balances in the treasuries in account with him, without of course resorting to measures which must result in useless expense, as for instance bringing away from any treasury funds which must shortly be supplied to it again.

4 Each Accountant-General, and Deputy Accountant-General in independent charge, should make it his constant care to concentrate all the spare resources of the treasuries in account with him in some convenient receiving treasury or treasuries, and should keep the Comptroller-General always informed of the amount which is thus ready at his disposal for the general service of the Empire.

5 Enquiry has, heretofore, several times been made as to the lowest balances which will suffice for the conduct of the Administration in each province in each month of the year, but as circumstances change, it is not necessary to advert particularly to the results of these enquiries.

6 Each Accountant-General, and Deputy Accountant-General in independent charge, is now desired to report afresh the minimum aggregate amount, apart, in the case of Madras and Bombay, from the balances in the headquarter offices of the Presidency Banks, which he considers absolutely necessary to retain in all the treasuries in account with him at the beginning of each month in the year. He will compare the amounts thus reported with the actual minimum aggregate amounts held in these treasuries in each month during the last twelve years, and explain fully his reasons for estimating more than such actual aggregate minimum. The Government of India does not wish to interfere with the distribution of the provincial balances in District Treasuries.

7 In making his report, the Accountant-General, or Deputy Accountant-General in independent charge, will set forth any practice of the Administration, whether

Imperial or Provincial, which in his judgment makes a larger working balance necessary than would otherwise be necessary

8 The report should be submitted to the local Government, duplicate being sent to the Government of India, in the Financial Department. The local Government should address any remarks that it has to make on the report to the Government of India, in the Financial Department, as soon as possible

9 The Comptroller-General will make, direct to the Government of India, in this Department, a similar report in respect to all treasuries in direct account with him, excepting the Government balance at the head-quarter office of the Presidency Bank of Bengal

No 2088, dated 30th December 1879

From—R B Chapman, Esq, C S I, Secretary to the Govt of India, DEPARTMENT OF FINANCE  
To—The Comptroller-General.

In reply to your letter No 1775, dated the 6th December 1879, I am directed to state that the Governor-General in Council sanctions the establishment of Branch Reserve Treasuries at Madras and Bombay in connection with the Currency Offices, on the understanding that the arrangement will involve no extra expense to the State

These Branch Reserve Treasuries will be entirely at your disposal, and no payments will be made therefrom without your permission

The balances in these Branch Reserve Treasuries may be kept in currency notes of large denomination, and the amount of notes held in the Reserve Treasury and its branches may be distinguished from those in actual circulation in the manner proposed by you

The Security Bonds of the Treasurers of the Currency Offices should be revised, so as to include these Reserve Treasuries. The cost of revising the bonds will be paid by Government

RESOLUTION—By the Government of India, Department of Finance and Commerce,  
No 949, dated 21st February 1889 (Gazette of India, 23rd February 1889)

READ the undermentioned correspondence with the Bombay Chamber of Commerce regarding the policy of Government in dealing with its cash balances —

Letter from the Chamber of Commerce, dated 9th August 1888  
Letter to the Chamber of Commerce, No 4972, dated 8th September 1888  
Letter from the Chamber of Commerce, dated 4th October 1888  
Letter to the Chamber of Commerce, No 234, dated 12th January 1889, and enclosure

ORDER—Ordered, that this correspondence be published in the *Gazette of India* for general information

Dated 9th August 1888

From—The Secretary to the Chamber of Commerce, Bombay  
To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE

I am directed by the Committee of the Chamber to address you with regard to the recent heavy withdrawals of Government funds from the Bank of Bombay. Without, as the Committee understand, any preliminary notice the Government withdrew from the Bank the sum of about one-and-a-half crores of rupees during the week ending 28th ultimo, thereby creating an unexpected pressure in the money market and an advance in rates of discount of about two per cent per annum. My Committee believe that Government must have had good and sufficient grounds for their action in this matter, and they have no doubt, when the reasons are explained, that the withdrawals were necessitated by the exigencies of the public service. They are of opinion, however, that steps should be taken to avoid unexpected demands of this character, which might, under other circumstances, lead to serious results in business, and, possibly during the busy season, to financial complications. These withdrawals, moreover, attract attention to a subject which has more than once been under the consideration of this Chamber in the shape of the large unemployed balances in the Government Treasuries throughout the country. During the past year these balances have aggregated in round figures from 10½ to 13½ crores of rupees, and my Committee think it worthy of the most careful consideration of the Finance Minister whether this enormous amount of money could not be made available for the purposes of trade, and thereby indirectly for the benefit of the country at large

2 In England, by the mode of finance adopted by the Government, the balances at the disposal of the Treasury are made available for trade purposes through the

Bank of England, and it seems to my Committee that a considerable portion of this country's funds might equally be utilized if arrangements were made to that end. No doubt a large floating balance is required for public purposes, but if the managements of the three Presidency Banks were consulted they would probably be able to indicate some means by which the trade and commerce of the country could have the benefit, during a portion of the year at least, of the at present unemployed Treasury balances

No 4972, dated 8th September 1888

From—The Offg Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE

To—The Secretary to the Chamber of Commerce, Bombay

I am directed to acknowledge receipt of your letter of 9th August regarding the withdrawal of money in July from the Bank of Bombay to the Reserve Treasury

2 It is observed that your letter raises the general question of the extent to which the Government balances should be placed in deposit at the Presidency Banks. A definite policy in this matter was laid down at the time when the Presidency Banks Act of 1876 was under discussion, and nothing has since occurred to disturb the foundations on which it rests. The following extracts from documents of that date will explain it to the Chamber of Commerce

*Extract paragraphs 7, 8, and 9, from a Despatch from the Government of India (in the Financial Department), to Her Majesty's Secretary of State for India—No 256, dated 30th June 1874*

*Paragraph 7*—We think it doubtful, moreover, whether it is any real advantage to trade that large Government balances should be kept in the hands of the Banks. It appears to us that an element of uncertainty is thereby introduced into the money market not unlikely to aggravate commercial difficulties at a time of tightness

8 An amount of capital, which is large relatively to the whole capital engaged in trade at the Presidency towns, is supplied by Government, but Government for reasons quite unconnected with trade, may have to withdraw these balances suddenly

In this case a sudden demand ensues for capital to replace that which is thus removed, the rate of discount rises, not from any commercial reason, but from the accident of State necessities, and, if this should occur at a time of commercial pressure, it would precipitate a crisis which otherwise might not occur. If Government did not supply this capital to the trade, it would be found by private individuals through banks or in some other way.

9 Had the Government funds in the hands of the Banks in January last been limited to a fair working balance, and had we had a reserve in our own hands, we think it may be assumed that the market rise in the rates of discount which has occurred would not have taken place, and our business would have been transacted without disturbing trade operations

*Extract paragraph 13 from a Despatch from the Secretary of State for India, to the Government of India—No 225, dated 6th May 1875*

*Paragraph 13*—The time has come when her Majesty's Government must consider how far these relations shall continue. Originally they were probably devised to provide banking facilities for the commerce of the country, which it would have been otherwise unable to procure. The development of trade has lessened the cogency of this reason, and I agree with Your Excellency in the doubts you express as to the real value of artificial facilities which arise from large Government balances with the Banks. Capital supplied by Government, and not representing the savings of the community, is a resource on whose permanence no reliance can be placed, and which therefore tends to lead traders into dangerous commitments. It gives ease for a time, and produces a prosperity which is at the mercy of an accident. A political exigency suddenly withdraws the adventitious resource, and the commerce which trusted to it finds itself pledged beyond what its own resources can make good

*Extract from the HON'BLE SIR W. MUIE'S Speech in the Legislative Council, dated the 14th December 1875*

Further, it was urged that the necessity for connection with the State no longer existed. It might have been expedient, or even indispensable, in the poverty of mercantile resources at the beginning of the century, to support the credit of the Bank by Government capital and direction. But this had long ceased to be the case, and there were now abundant materials, altogether apart from the State, for banking upon a secure and independent basis

*Extract from the HON'BLE MR BULLEN SMITH'S Speech in the Legislative Council, dated the 14th December 1875*

Although he (Mr Bullen Smith) conceived there might be difference of opinion as to whether or not there did exist at the present time a real necessity for the severance of that connection which had so long and with such great advantage subsisted between the Government and these Banks, yet he was for his part somewhat careless to enquire as to the precise need for that severance. The Banks had derived great advantage from that connection in times past, but he thought the moral support which the Government lent to the Banks, besides its material support, was now no longer required. He thought these institutions were now in a position to go on alone, which they were not at the time of their original establishment, and that support which was in the early days almost necessary was now no longer required

3 The policy thus laid down the Government of India cannot consider to be open to discussion. The Government cannot in its own interests revert to the system

by which its use of its own balances was dependent upon the policy of the Directors of the Presidency Banks, based as it necessarily was upon commercial necessities, and not upon anticipations of State demand. Nor is it, in the opinion of the Governor-General in Council, advisable, in the interests of the commercial public, that the state of the money market should be subject to the violent fluctuations and the entire dependence upon Government operations, which would be the result of placing the entire Government balances at the disposal of the Presidency Banks.

4 The figures of your letter, I am, to remark, give a somewhat erroneous impression of the amount of money which could under any circumstances be placed at the disposal of trade. A reference to paragraph 156 of the last Financial statement will shew that the 10½ crores (the real figure was under 10,30 lakhs) afforded very little margin over the amount necessary to carry on the Treasury business of the country. In fact, at the

Head Offices and Branches		Rs
Bank of Bengal	- - -	1,72,54,000
„ Bombay	- - -	71,84,000
„ Madras	- - -	89,80,000
		<u>2,83,68,000</u>

time when that balance was recorded, the balance in the reserve treasuries amounted to 83 lakhs only, and this is therefore the only addition which, on the policy proposed by the Chamber, could at that time have been made, to the amounts, stated in the margin, which under existing arrangements were available for the purposes of trade.

5 The example of the Home Government, which is quoted in your letter, is for more than one reason entirely inapplicable to India. In the first place, the Government balances in England are not liable to the great fluctuations which arise in this country from the fact that the revenue is most unequally distributed over the year, and, in the second place, the Government balances in England are an item that disappears in the general account of available resources, while in India they amount to considerably more than half of the available cash of the Presidency Banks. When the Government in England obtains assistance from the money market, the transaction is a mere ripple on the surface of the commercial world, when the Government of India makes a similar appeal, the transaction is one which, as your letter shews, dominates the whole condition of the money market, notwithstanding the fact that six weeks' notice of the demand has been given.

6 With these observations on the question of general policy, I am now to refer to the transactions of last July. The arrangements of Government at the time of raising a loan are devised for the express purpose of enabling the demand to fall easily upon the money market. Ample notice is given, and the instalments are spread over two or three months. The interests of Government are the same as the interests of those who finance its loans, and the Government has always been careful that no pressure on its part shall affect the facility with which the money is raised. The Chamber are doubtless aware that there is a stipulated maximum fixed for the Government balances, which in the case of the Bank of Bombay is 50 lakhs, but the Government balances at the Banks are necessarily swollen by the loan operations, and the practice of Government has been to let the Banks retain as much in excess of the stipulated maximum as they desired, provided they paid interest upon it. The fairness of this condition is obvious, the money is wanted for advances on the new paper, which money the allottees in their turn pay into the Government account. The Banks cannot reasonably claim—neither have they on previous occasions claimed—that the Government should, while it is itself paying interests to the allottees, lend the Banks the same money without interest, in order that they may use it to make advances at interest to the allottees, and it is obvious that so long as the Government offers to advance its money at the Bank's minimum rate, it cannot be charged with any action tending to raise that minimum rate.

7. The Chamber of Commerce seem to have been wrongly informed as to the facts of the present case, for the Government on this, as on former occasions, have acted throughout in concert with the Presidency Bank. From July 6th to 10th the Government balances were increased by payments on account of the loans from 77 to 229 lakhs. Next day—that is, on 11th July—the Secretary of the Bank wrote to the Accountant-General with the object of retaining this balance for a time, as, according to ordinary practice, he expected to be called upon to reduce it. The Accountant-General replied by stating that he proposed to make considerable withdrawals, but that, if the Bank desired to retain an excess over 70 lakhs, it could do so by paying interest on the amount according to previous practice. Finally, at the desire of the Bank, which did not wish to hold money at interest, another arrangement was substituted, which provided for the withdrawal of the money during the three weeks from 14th July to 4th August. The Accountant-General accepted the proposal which the Bank put forward in this respect, making in it one modification only—namely, that he took on 14th July 140 lakhs instead of one crore, but as he at the same time placed 20 lakhs at the Bank's call at the Reserve Treasury, he practically withdrew only 20 lakhs more than the Bank offered.

8 It will, no doubt, be admitted that these transactions are somewhat inaccurately described in the Chamber's letter, which says that—

Without any preliminary notice, the Government withdrew from the Bank the sum of about 1½ crores of rupees during the week ending 28th ultimo, thereby creating an unexpected pressure, and an advance in the rate of discount of about 2 per cent

9 The circumstances were certainly very unusual under which over two crores of the loan was paid up in Bombay by the date of the first instalment, and it is not surprising that a temporary difficulty should have arisen from them. For these circumstances the Government is in no way responsible, but the task of getting out of the difficult position thus created fell upon the Accountant-General and the Bank of Bombay. With the action of the latter the Government is not at present concerned, but the mere facts that the Bank's minimum rate never stood in danger of being raised; that the Government balance from the 7th till the end of the month never went below 75 lakhs, though the fixed maximum is 50 only, and that the Bank did not find it necessary to borrow the money offered it by the Accountant-General, are evidence of the carefulness with which the Accountant-General resumed for the Government the control over its own balances. The fact that the Chamber assign to the withdrawal of the 1½ crores, a date which is a fortnight later than that of its actual occurrence would seem to show that it did not make itself manifest by any sudden stringency in the money market.

10 The reference in your letter to an advance of about 2 per cent in the rate of discount is not understood. The Bank's minimum rate has been steady at 4 per cent from the commencement of July till now. If the Chamber's letter implies that large advances were being made at 2 per cent, while the Directors of the Bank of Bombay maintained the official rate at 4 per cent, then there is ample reason to think that the withdrawal of the Government balances was demanded just as much in the interest of the steadiness of the market as in the interest of Government, and the Government would have been justly chargeable with fostering an incipient speculation if it had departed from its prescribed methods, and left in the Bank's coffers the large sums of money, which had been collected during the month of preparation, by those who intended to subscribe to its loan. The incident, in short, is an example of the danger pointed out in the above-quoted Despatch of the Secretary of State, and furnishes an additional proof of the wisdom of the policy which has been described in the opening paragraphs of this letter.

Dated 4th October 1888

From—The Secretary to the Chamber of Commerce, Bombay.

To—The Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE

I am directed by the Committee of the Chamber to acknowledge the receipt of your letter No 4972 of 8th ultimo, and in so doing to express their thanks for the detailed explanations therein given of the circumstances attending the withdrawals of the Government balances from the Bank of Bombay in July last.

2 Being dependent for their information regarding the fluctuations in the treasury balances on the weekly published statements of the Bank of Bombay, the Committee perceive that they were in error in putting the withdrawals at 150 lakhs instead of 140 lakhs, and, furthermore, that the action of the Accountant-General in making these withdrawals had not been adopted, as the outside mercantile community generally at the time believed, without some preliminary intimation to the responsible officials of the Bank. My Committee respectfully submit, however, that any misapprehension they may have inadvertently expressed on these points does not materially affect the main issue respecting which they took the liberty of addressing Government. The broad fact remains that by the withdrawals in question, and notwithstanding the precautions which Government were apparently desirous of exercising, the money market was suddenly and unexpectedly transformed from a position of exceptional quietude and ease to one of extreme stringency, and the market rate of discount was practically advanced in one day, without the preliminary indications which generally accompany such movements, from about 2 to 4 per cent per annum. Happily, as I have already had the honour to state, this unforeseen advance in the value of money was unattended as it might easily under other circumstances have been by any general disaster, but serious loss was occasioned to banking institutions and private individuals for which it is now manifest there was no occasion, and it will be in the interests of Government and tend to inspire confidence in investors if provision be made to avoid the recurrence of a similar state of affairs in connection with future loans.

3 The fact that the Bank of Bombay minimum rate remained unchanged throughout at 4 per cent is relied upon as showing that no such stringency as my Committee alleged really existed, but this view is based on the misconception—plainly stated in the tenth paragraph of your letter—that no money market exists apart from

the Bank, and to this misconception, very possibly, the conditions which led to the exceptional pressure may be entirely attributable.

4 Had Government been aware, as was the case, that money in the open market had only been worth from one-and-a-half to two per cent per annum for a month previous to the issue of the loan they would have perceived that the privilege of being allowed to pay up instalments to the loan in advance, and thereby secure 4 per cent interest, was bound to attract unusually rapid payment, and, in view of this contingency, would doubtless have instructed the Accountant-General to extend his withdrawals over a longer period.

5 The circumstances were no doubt unusual, but with a due appreciation of the true financial situation the ultimate results were certainly not improbable, and the Committee of the Chamber do not see that in making the concession which the Secretary of the Bank of Bombay at the time solicited, the Accountant-General would have been doing more than the occasion demanded. It is unquestionably to the interest of Government that subscriptions to their loans should be attended by as little risk as possible, and if by spreading the withdrawals of the unexpectedly large sum at his disposal over three weeks or a month, the Accountant-General had it in his power to obviate any adverse contingency it would have been sound policy to have conceded the arrangement. Government not having contemplated so rapid a payment of the loan could not have been in emergent want of the money, and any charge which the Bank might have been prepared to pay would have been so much profit, as it would not otherwise have been employed at interest. The transaction no doubt would, as indicated in your letter, have trespassed upon the strict letter of the prescribed relations between Government and the Presidency Bank, but the position was exceptional and might fairly, therefore, claim exceptional treatment. More my Committee would not have contended for in connection with the transaction now past, and they merely ask that similar conditions may meet with adequate consideration in the future.

6 As to the general question of the advisability or otherwise of utilising some portion of the unemployed treasury balances for trade purposes, the Committee regret that for reasons adduced the Government of India do not consider their present policy as open to discussion. I am directed to say, however, that they trust they may not be considered wanting in due respect for the decision of Her Majesty's Secretary of State for India if they point out that the financial conditions prevailing in 1874 when the basis of the Government relations with the Presidency Banks was laid down, are widely different from those at present existing, and that the opinions, expressed about the same period by the Honourable Sir W. Mun and the Honourable Mr. Bullen Smith, while sound and entitled to all consideration at the time, have now lost much of their force. Trade and industrial enterprises have undergone enormous expansion in the interval, necessitating and attracting banking facilities in proportion, so that while at certain seasons of the year there is an active demand for capital which would enable Government to obtain a remunerative return on their unemployed funds, their placing same at the disposal of a market so greatly developed in resources and extent would not be attended by the same risks as were rightly held to be involved thirteen or fourteen years ago. Nor in so doing need the existing arrangements with the Presidency Banks be materially disturbed. The Government treasury balances, the Committee understand, are as a rule at their maximum in March, April and May, which are precisely the three months in which the demands of our export trade call for the largest monetary facilities, and in consequence the highest rates of interest prevail. It seems to the Committee of the Chamber, therefore, that a considerable revenue might be earned at that period of the year by Government lending out such sums as they safely had available. Tenders might be invited from the Presidency Banks and from Exchange Banks on the security of Government paper for loans at thirty, sixty, or ninety days, in such amounts as might be convenient in the different financial cycles. The effect of making such advances would be all in favour of a steadier money market throughout the year, as on the one hand the result would be to keep the amount of the Government balances with the Presidency Banks—now an element of considerable uncertainty—at a more uniform level, while on the other, by limiting the rush of money into the country to meet the requirements of the export season, the after-collapse which usually ensues when these funds are set at liberty would be avoided.

7 Matters of detail would no doubt require to be carefully considered and worked out, but a wide-spread feeling prevails in commercial circles that some such system as that indicated would be of advantage to trade, and at the same time safe and profitable to Government, and the Committee of the Chamber respectfully suggest that the subject is of sufficient importance to warrant grave consideration.

No 234, dated 12th January 1889

From—The Offg Secretary to the Government of India, DEPARTMENT OF FINANCE AND COMMERCE

To—The Secretary, Bombay Chamber of Commerce

I am directed to acknowledge the receipt of your letter of the 4th October 1888 stating the views of the Chamber on the withdrawal of a portion of the Government balances last July from the Bank of Bombay, and on the policy of Government in dealing with its cash balances in the public treasury

2 As regards the withdrawals from the Bank, the Chamber will see from the letter addressed this day to the Bank (copy enclosed) that the Government of India approves the proceedings of the Accountant-General on that occasion, and does not consider it desirable to prolong the discussion of the circumstances which gave rise to the present correspondence

3 As regards the views expressed by the Chamber on the policy pursued by the Government in dealing with the Treasury balances and the proposal that the balances should be made available for purposes of trade, I am to invite the attention of the Chamber to the paper by Mr J Westland, of which a copy is annexed to this letter, in which he sets forth at length the sums actually maintained in the treasuries, the nature and extent of the claims upon them, and the method in which the transactions of the treasury are conducted. The Governor-General in Council hopes that the facts stated in this paper will convince the Chamber that the Government does not maintain balances in excess of actual requirements, and that the method of dealing with those balances is sound. His Excellency in Council is satisfied that no substantial change in either of these respects is called for, and that no such change could be adopted consistently with the pursuit of a prudent policy in meeting the requirements of the State

4 The Chamber will observe from the letter addressed to the Bank of Bombay that the Government of India does not see its way to comply with the desire expressed both by the Bank and the Chamber that the Treasury balances should be used, in a larger degree than at present, to facilitate trade. The Chamber's remarks contained in paragraphs 6 and 7 of the letter under reply have been carefully considered, but the Governor-General in Council finds himself unable to depart from the policy hitherto adopted. His Excellency in Council cannot agree with the Chamber that the arguments on which that policy was based in 1875 have lost their force at the present time. Trade has certainly expanded, but with its expansion banking facilities have proportionately increased, and it is less in need of State support now than in 1875. The volume of trade and the demand for money are steadier, and less liable to violent fluctuations throughout the year, than they were in past periods, and it is not necessary, therefore, to adopt special measures to prevent fluctuations which are rarer than was the case when the policy of Government was formulated

5 His Excellency in Council is, moreover, convinced that nothing but evil could result from the adoption of the suggestion that the Government should enter into competition, in making loans to the mercantile community, with the Presidency Bank. Trade should be left to depend upon its own financial resources. If advances were systematically made by Government during the busy season there would be a tendency to reduction of the working balances of the country to an unsafe minimum and the consequent risk of panic, to guard against which is an important object of the Reserve Treasuries. If advances were made at a lower rate than the published rate it would be difficult to confine the privilege of obtaining money at less than its value to the Presidency Banks, and these Banks would also be increasingly anxious to profit by such loans, and tempted to enter upon speculative operations with the resources placed at their disposal by the State, allowing their own reserves to fall below the limit of safety. The Government of India is not prepared to adopt a course which would tend to produce such results, and the deliberate conclusion of the Government, after giving the proposals of the Chamber the fullest consideration, is that any assistance in relief of the money market which may be afforded by means of the Treasury Reserve can only be made through the Bank, and at its published rate of discount, in relief of temporary stringency, and that no departure from the policy hitherto pursued can be allowed

6 I am in conclusion to invite the attention of the Chamber to paragraph 22 of Mr Westland's paper, and to say that the impression which appears to exist in some quarters that Government manipulates the Presidency Bank balances with the view of forcing a demand for Council Bills is entirely without foundation. Any such manipulation would, in the opinion of the Government of India, be unjustifiable, and would eventually, fail of its intended effect

---

*Note on the management of the Government Balances*

In passing through Bombay I had a conversation with Mr Forbes Adam on the subject of the recent correspondence about Government Cash Balances, between the Bombay Bank and the Bombay Chamber of Commerce (of both of which Institutions he is President) on the one side, and the Government of India upon the other; and adopting the suggestion which he made to me, I propose to put on record this general sketch of the manner in which the Government Balances are managed

2 The leading facts upon which the regulation of these balances depends are these —

- (1) That the months of August, September, October, and November produce far less than their proper share of revenue, and that the current expenditure during them has to be met to a considerable extent by a depletion of balances,
- (2) That the minimum balance with which the Government Treasury business can be worked, that is to say, with which we can undertake to have money ready, at every treasury, to meet the demands upon us, is at least eight crores of rupees

3 The main factor in the determination of this figure of eight crores is (as it must always in such cases be) actual experience. We find, as a matter of fact, that as our balances approach a minimum of eight crores, we have to multiply very greatly the amount and rapidity of the cash remittances by which we transfer money from the treasuries at which it is received to the treasuries at which it is wanted to meet actual payments. There is a point at which it becomes more costly to make such remittances than to increase the available cash. For example, I do not say it would be actually impossible to meet the demands on our treasuries with a minimum balance of seven crores, but it is certainly the case that any attempt to work the treasuries with that balance would be accompanied with an outlay in cost of remittances that would not fall far short of the four lakhs of interest which we would have to pay if we raised another crore, in order to raise from seven to eight crores the amount at our disposal. And, besides this, there would be very great risk of our having to declare ourselves— at some of our treasuries—unable, pending the arrival of remittances, to meet our current obligations. What this would mean, apart from the discredit of it, may for a moment be glanced at. We might be unable to pay the soldiers and create serious discontent in the army, we might be unable to meet the current expenditure of working or of constructing railways, we might be obliged to stop important Public Works—an extremely costly proceeding even if they are immediately resumed.

4 This figure of eight crores might, perhaps, at first sight, seem large, but I shall state some considerations bearing upon it which will shew it to be not unreasonable. The Bank of Bengal were good enough to furnish me some time ago with an estimate of the daily amount of actual cash paid in and cash paid out at their head office in Calcutta. It amounted to about 12 lakhs each way, and to keep their position safe they ordinarily keep over a crore of rupees in available cash, that is, an amount exceeding eight days transactions. Now, the daily cash receipts and disbursements at the Government Treasuries amount to about 50 lakhs each, so that if we have a balance of eight crores we have only sixteen days' payments and receipts in hand. If the Bank finds it necessary to keep eight days in hand, in the case where all the receipts and payments occur in a single office, it may fairly be said that sixteen days is a somewhat narrow limit for a case in which the transactions are spread over 200 treasuries and 800 sub-treasuries, and in which the circumstances are such that the receipts often come in at treasuries very far removed from those at which the expenditure has to be met.

5 The manner in which the balances are distributed is arranged with the object of working the treasuries with the smallest possible amount. They are distributed into nine groups, coterminous with the nine Provinces of account, and each group is under the regulation of its own Accountant-General. The Accountant-General, besides receiving details of his actual balances twice a month, obtains, at the beginning of each month from each Treasury, an estimate of its transactions during the current month and the two succeeding months, and thus sees in prospect what treasuries have more funds than they require and which of them require to be supplied with funds in order to meet the demands upon them. He orders remittances accordingly, and such funds as are not required by him upon the whole account, he gathers towards a few Central Treasuries chosen with reference to their accessibility, where the surplus funds lie at the disposal of the Comptroller-General. These operations are carried out under the immediate supervision of the Comptroller-General, who exercises his supervision in this way. He receives from each Accountant-General, in October, an estimate showing the minimum balance he requires for the

service of his province on the first of each month, this minimum is by this time pretty well ascertained by experience. Guiding himself by this and by the monthly estimates above alluded to, which are consolidated and sent to him, he sees what provinces, from time to time, have surplus funds available, and in what provinces these surplus funds are required for expenditure. Such provinces as the Punjab and Burma are continually demanding funds to meet their heavy military expenditure, and the Comptroller-General has also to lay down funds to meet the demands at the presidency towns on account of Council Bills, Interest, Railway payments, &c. The Comptroller-General is thus directly interested in keeping the Provincial Balances at as low a point as possible. He may not actually, at each moment, concentrate his available funds at Calcutta and Bombay. He may, for example, leave them at the Central Treasuries of the Accountants-General, because he may see that if he took them away he would shortly have to send them back, and he may not find, in any commercial demand, the means of moving them without actual specie remittance. But whether actually moved or not, they are part of his available resources, and are at places whence they can be sent at very short notice to any spot where they are required.

6 This, therefore, is the general system of the management of the balances, devised; it will be seen, for the express purpose of enabling the Comptroller-General to carry his available resources, as far as possible, towards meeting the demands on the treasuries. It remains to add, in further explanation of the carefulness of management required at the hands of the Comptroller-General by the limitation of the funds at his disposal, that each month he gathers together the estimates of the various Accountants-General (to which allusion has already been made), and after careful collation of them, prepares a review which is laid before the Government each month, and which sets forth in detail the various demands which the Comptroller-General has to meet during the current and two succeeding months, and forecasts the plans, so far as relates to movements of funds, by which he proposes to meet them. Movement of funds is in itself, I may remark, a business of some complication, because it includes not only movements of actual specie but also consideration of mercantile and banking business, a class of remittance which of course we substitute, as far as possible, for specie remittance, whenever it is available.

7 I have thought it advisable to mention all this detail of management in order to shew that it is with some confidence that we set down as our practicable minimum the balance of eight crores at which we find by experience that we begin to be doubtful as to the possibility of moving our available funds to the points where they are required to meet expenditure. I may allude, before I go further, to two devices by which we call in the aid of our currency reserves in order to make this eight crores go further than of itself it would. Our normal currency reserve of coin we may put down at six crores of rupees. This amount is, of course, by law, sacred to the purpose of supporting the currency circulation, we cannot apply it to any treasury purpose. At the same time, it is vastly more than in ordinary times is necessary for the purpose of actual encashment of notes. It is scattered over the various places from which we are by law authorized to issue notes. One perfectly legitimate operation of which we take great advantage is that we depend upon this currency reserve for facilities of rapid remittance. For example, we can make a remittance of, say, 20 lakhs, at a moment's notice, from Calcutta to Lahore, by simply paying in 20 lakhs to Currency Office at Calcutta, and obtaining at the Currency Office an order upon the Lahore Currency for 20 lakhs to be paid to treasury there. I think it is not too much to estimate this facility of remittance at a crore of rupees, that is to say, a balance of eight crores, with this facility of remittance through currency, goes quite as far towards meeting our liabilities, as a balance of nine crores would without this facility. I may further mention in this connection the utilization of the currency reserve at Rangoon for keeping, from one busy commercial season to another, the large supplies of silver which are required for the rice trade, and which used to a large extent to be sent down by the Banks by specie remittance from Calcutta before each rice season, and brought back after it. The other way in which the currency balance helps us is a comparatively unimportant one, but still it does give us some small assistance. One of the liabilities we undertake with our treasury balances—in addition to that of meeting our payments—is that of supplying both ourselves and the public generally with small coin and as we must always have a considerable stock of small coin in hand, the reserves of this stock are practically an inefficient balance. That is, part of our eight crores consists of this class of coin, and cannot be considered available for the general purposes of a cash balance. So far as copper coin is concerned this is a weight we must bear, but it is not an appreciable one. So far, however, as small silver is concerned, we can transfer the burden to the currency reserve. Silver bullion is a form in which it is quite lawful to hold currency reserve, and if we possess a reserve stock of ten lakhs, say, of small silver, we can keep it as part of our currency reserve, and thus have the full use

of our supposed cash balance of eight crores, instead of having ten lakhs of it locked up in the unavailable form of small silver coin

8 I think, therefore, I may legitimately contend that the fact that we require a minimum of eight crores for the purpose of conducting the treasury business arises from the actual necessities of the business, and not from any want of efficiency or attention in the conducting of it. And if the demands be measured, even in the roughest way, by the number of places where funds have to be provided, eight crores will seem a small sum to cover them all. For the three presidency towns alone the Government balances at the Banks require at least 125 to 150 lakhs, and it must be remembered that the minimum period of December is that at which trade is reviving, and the Secretary of State beginning to increase his drawings to 50 lakhs a week. Rangoon, Allahabad, and Lahore are all headquarters of provinces, where the Accountant-General must not be left without a fair reserve wherewith to support the 40 treasuries he has to supply, there are distant treasuries like Quetta and Aden, where expenditure is heavy, and which must be made independent of external aid. There are first class military stations like Peshawar, Lahore, Multan, Rawalpindi, Umballa, and Delhi (not to go beyond the limits of a single province), where the expenditure of the first few days of the month is measured by lakhs of rupees. There is Upper Burma, a country where the heavy expenditure of a military occupation has to be met, and where the means of communication are as yet so imperfect as to necessitate each treasury being made almost independent of its neighbours. Small amounts at each treasury, which come to a considerable amount on the whole, are required to give to the public, as far as possible, facilities for obtaining and exchanging small coin and currency notes, and it may be mentioned that, for the convenience of the public, we receive foreign-circle notes freely in payment of revenue, which necessarily to some extent locks up for the time a part of our funds. The working out of the detail of the distribution will thus be found to mount up very rapidly towards the allotted total.

9 Above all, there is the consideration that the treasury must, outside the Presidency towns, absolutely depend upon its own resources, and that there is no reserve of any kind upon which it may fall back, if it is itself depleted.

10 It must be understood that this eight crores, of which I have been writing, is a practically irreducible minimum, it is not the actual balance with which we can, as a matter of system, carry on the treasury work. On the contrary, it represents a state of strain which can be maintained for a time, but which implies a certain expenditure in remittance, and a certain incurring of risk. It is a condition of things which we can afford to stand for a month or so, when we know that mere efflux of time will bring a speedy recovery, but which would be intolerable, and probably somewhat expensive, if we were obliged to accept it from year's end to year's end as the normal condition of the management of business. To represent the permanently possible condition, we must first of all give ourselves a margin of 20 per cent beyond the eight crores, and put down about 960 lakhs of rupees as ordinarily absorbed in the actual meeting of demands upon the treasuries. Though it is possible occasionally to work down to 800 lakhs, it is unwise to attempt to do so, if we have 960 available, that is, out of our total treasury balance at any time 960 lakhs must necessarily be scattered over the various treasuries where payments have to be made. But even this is not enough during the months when the revenue is in active collection, for the revenue then collected necessarily largely increases the balances of the treasuries until such time as it can be carried away to the places—often at a considerable distance—where it is required for payments. A notable instance of this occurs at the end of March in Bengal. Bengal ordinarily can be easily worked with a balance of 120 lakhs at the outside (of which 10 to 15 are in the Bank of Bengal). But the Accountant-General has to lay down very heavy balances at the end of the month in the Behar treasuries in order to meet the large opium payments which then begin. He completes this operation, say about 20th or 25th of March, and as soon as he has done so, he receives at the treasuries in Lower Bengal the March instalments of land revenue. About a crore of rupees are paid in on 26th, 27th, and 28th of March. The consequence of these two operations—which it is not possible to fit into each other, as the money is required to be laid down in the western treasuries before it can be sent from the eastern—is that Bengal always ends the month of March with a balance considerably in excess of 200 lakhs.

11 On the whole, therefore, the really practicable working balance, except at the minimum period of the year when little revenue is coming in, may be put down at at least 1,000 lakhs, and it is only the excess over that amount that can be regarded as held by the Comptroller-General in reserve, mostly in the reserve treasuries, but partly also in those "central treasuries" where the Accountants-General may, as explained in paragraph 5 above, place their surplus funds to await the orders of the

Comptroller-General The following figures show, for the past 24 months, the whole Treasury balance, divided into—

- (1) the amount held in Reserve Treasuries,  
(2) the amount held in all other Treasuries

Last Day of	1886-87			1887-88		
	Reserve	Other	Total	Reserve	Other	Total
October - - -	1,31	9,41	10,72	1,51	8,87	10,38
November - - -	89	9,42	10,31	1,71	8,85	10,56
December - - -	58	10,09	10,67	83	9,47	10,30
January - - -	1,03	10,96	11,99	1,59	11,63	13,22
February - - -	77	11,24	12,01	1,43	11,79	13,22
March - - -	51	12,68*	13,19	72	13,16*	13,88
April - - -	69	10,38	11,07	1,42	10,70	12,12
May - - -	95	9,75	10,70	1,00	10,81	11,81
June - - -	1,25	10,78	12,03	1,05	12,45	13,50
July - - -	1,07	10,26	11,33	3,65	11,76	15,41
August - - -	2,09	9,74	11,83	2,80	10,48	13,28
September - - -	1,88	8,90	10,78	2,30	10,48	12,78

\* The explanation of the especially high figure of 31st March lies in the circumstances of Bengal just mentioned

12 I stop for a moment to note upon the apparent irregularity of these figures. They would seem at first sight to be subject to no particular law, but this circumstance arises out of two sets of transactions *only*, namely, the rate at which the Bills of the Secretary of State are paid, and the rate at which loan receipts are paid in. The following are, in lakhs, the transactions of each of the above 24 months, divided under three heads —

1886 and 1887	Council Bills	Loans	Other transactions	Council Bills	Loans	Other transactions
October - - -	- 38	+ 33	- 86	- 98	+ 43	+ 15
November - - -	- 1,14	+ 22	+ 51	- 82	+ 7	+ 93
December - - -	- 1,42	- 2	+ 1,80	- 1,88	-	+ 1,62
January - - -	- 2,57	-	+ 3,89	1,95	-	+ 4,87
February - - -	- 1,77	-	+ 1,79	- 2,05	-	+ 2,05
March - - -	- 2,27	-	+ 3,46	- 2,26	-	+ 2,93
April - - -	- 2,72	+ 32	+ 23	- 2,09	-	+ 32
May - - -	- 1,95	+ 51	+ 1,07	- 2,28	-	+ 1,98
June - - -	- 1,58	+ 52	+ 2,38	- 1,33	-	+ 3,02
July - - -	- 1,50	+ 67	+ 13	- 1,56	+ 2,88	+ 59
August - - -	- 1,66	+ 2,49	- 33	- 1,33	+ 12	- 92
September - - -	- 1,11	+ 49	- 43	- 1,03	-	+ 47

13 Now it will be seen that although there is considerable irregularity under the first two heads (Secretary of State's Bills and Loans), there is no very great diversity (considering the vastness of our transactions) under the last or residuary head. In other words, if our balances were not affected by variety in the amount paid out on account of Secretary of State's Bills, and of the amounts paid in on account of loans, they would show, year after year, very much the same details of variation. The minimum period is, as I have already stated, the month of December. The large Revenue receipts of the next few months cause the balance to increase considerably up till June, notwithstanding that this is the heavy period of the Secretary of State's drawings. After remaining stationary for a month or two, the balance runs down very rapidly in September, October, and November, in which months the amount of revenue received is very small. It is during, or about, these latter months that we usually arrange to receive the money we raise by debt, partly because they are the months in which the money market finds it easiest to supply our demand, and partly because it is the time when the money most conveniently reaches us with reference

to Treasury requirements, that is, it comes in, not in supplement of a large balance already held, but so as to prevent our balances falling too low for our necessities.

14 The amount of the loan is carefully calculated beforehand, upon a forecast of the monthly balances, so as to give in the amount necessary to tide over December with our minimum of eight crores or a little more. If we do not, as a matter of fact, get down to that figure, or nearly so, it is usually because the Secretary of State has not succeeded in placing his bills to the extent he hoped. The remittance of 15 millions sterling to England is a very large and important operation, in which it is necessary to allow a very considerable amount of latitude, and it would be grievous mismanagement if, when the Secretary of State was finding a market for his Bills, we were obliged to tell him that our balances were so weak that he must reduce his drawings. We must, therefore, be careful not to underestimate his demands, or in other words, we not unfrequently find that his drawings are a crore or two behind our estimates, and that in consequence we are, as a matter of fact, left in December with a balance of a crore or two in excess of the minimum down to which we can work.

15 Reverting now to the figures given in paragraph 11 above, I think it will be admitted that the Bombay Chamber of Commerce state the problem wrongly when they describe the Government balances in their letter of 9th August 1888 as 10½ to 13½ crores of "large unemployed balances," and enquire whether "this enormous amount of money could not be made available for the purposes of trade." I have shown that of this amount about 10 crores cannot in any sense be described as lying idle, but is actually required to support the treasury business of the country. I shall presently examine the question whether the amount can be ever described as "unavailable for the purposes of trade," but as the Chamber's reference was mainly to trade at the Presidency towns, it is sufficient to point out at present that the only amount that can be made available for such purposes is the amount lying in the reserve treasuries, which, except immediately after the receipt of loans, rarely exceeds 200 lakhs, and is ordinarily considerably less than that figure. The money in the "Central Treasuries" (paragraph 5) cannot be made available at Presidency Towns, as, if it is kept in the Central Treasuries, it is so kept on the ground that it is likely to be required up-country, and it would never be worth while to send it on a journey of some hundreds of miles only to be sent back again after a short time. Besides, as will presently be mentioned, many of these Central Treasuries are at branches of Presidency Banks, so that the Banks already have the employment of the money so long as it is not required for Treasury purposes.

16 The question raised by the Chamber is, therefore, narrowed to the question whether Government should lend out, for commercial purposes, the balances held in the Reserve Treasuries at the Presidency Towns. And if I rightly understand their letter of 4th October, this is the form to which their proposal is actually reduced, namely, that during the months of March, April, and May, the balances which are so held might be lent out for commercial use. I do not consider it necessary or desirable that I should in this place enter upon any discussion of this question, it will receive the full consideration due to a proposal emanating from such a body as the Bombay Chamber of Commerce. The object of my paper is merely to remove the misconceptions which seem to me to have hitherto surrounded the subject, to set forth in a clear light what is possible and what is not possible, and to define more accurately the issue which arises out of the present correspondence.

17 I come back now to the question of our 10 crores of actual working balance. Are the Chamber of Commerce right in describing this balance as "unemployed," and as "not available for the purposes of trade." I am afraid I must directly traverse this statement.

18 In the first place, a very considerable share of the 10 crores is placed directly at the disposal of trade through the system of Presidency Banks. The actual statistics show that during the last two years the amount of Public Deposits in the Presidency Banks and their branches has fluctuated between 262 lakhs and 390 lakhs, and this is almost entirely supplied out of our 10 crores of Cash Balances. At the three Head Offices the Government Balances have not, since December 1885, been below 130 lakhs, and they have often been much higher than 150.

19 Of the District Treasuries, the largest and most important are at the places where there are Bank Agencies, and at these places the whole of the Government Balances are made available for trade through the agency of the Banks. Nor is there any limit to the amount of balances which may be thus placed except that which is imposed by the action of the Banks themselves. That is, whenever any of the Presidency Banks finds it worth its while to establish an agency at any place where there is a District Treasury, the balance at the District Treasury would almost, as a matter of course, be made over to its custody. In other words, wherever there is trade sufficient to avail itself, under the Presidency Banks system, of the local Government Balance, there the local Government Balance is placed at the disposal of the trade.

20 Another method by which the Government Balances are made available for purposes of trade is, that they are by the officers of the Government made available

for purposes of remittance. Indeed, it is not too much to say that the whole of the system of inland trade remittance is supported by and carried on through the Government Balances. Of the extent to which this is done I believe few persons have any cognisance, and I therefore attach a report of my own written in 1883, in which the subject is generally reviewed. As I am writing mainly with reference to the representations of the Bombay Chamber of Commerce, I may take the opportunity of adding, by way of completing the subject, that a very important series of remittances—those connected with the financing of the Bombay cotton trade—is carried on through the Bear Treasuries, but is not noted in the enclosed paper, as these Treasuries lie outside the system of Government Treasuries proper.

21. I trust that the explanations I have given will cause the Chamber of Commerce to change its opinion about the 10 or 13 crores of money which they have hitherto considered to be lying idle, so far as the needs of trade are concerned. We may fairly claim that we do—perhaps not all we might do, but still—a very great deal towards making our balances available for the purposes of commerce. Their first purpose, it must be remembered, is that of supporting the actual treasury transactions of the Government, and we do our best consistently with the primary purpose, towards making them facilitate the commercial transactions of the country.

22. Before I conclude this paper I would make a few remarks upon an accusation which I have over and over again seen brought against us, of manipulating our Presidency Bank Balances with the view of forcing a demand for Council Bills. Having had the direct management of these matters for five years, I can say that, though the statement was repeatedly made during that time, it was in no instance true. In the first place, I do not believe that any such manipulation would, in the long run, succeed. We have it, indeed, in our power to tighten money by ordering large withdrawals to reserve, but as the money will have to go back sooner or later, we shall lose as much advantage when we return it, as we have gained by withdrawing it. In the second place, I have a great belief in the mischievousness of all artificial manipulations of the balances available for trade, that is, any variations which are not

\* On this ground I disagree in the Bank of Bombay's proposal that we should receive loan money only on the days fixed for the instalments. The duty of Government is to make the operation as elastic as possible, and to leave to ordinary trade channels the adjustment of the Government demand to the conditions of the market. I feel sure that the Bank's suggestion would not be acceptable to those who finance our loans. Nor is it in conformity with the usual practice in raising capital in London.

the direct outcome of trade action I believe to be directly dangerous. Why it should be imagined that a state of things which is dangerous or inconvenient to trade is profitable to Government I fail to perceive. My endeavour has therefore always been to keep the Government Balances at the Bank at as nearly one level as possible. The action of Government

is usually confined to feeding the Bank with money to meet the local demands on the Government account, and my action in the matter in question has usually been directed towards feeding it so as on the whole to preserve, at as steady a level as possible, the balance at the credit of the Government account.

23. The real explanation of the features which give rise to the accusation is almost amusing in the proof it affords of the way in which evidence may be twisted from its real bearing. Just before the Bank's statement has been published we have received, say, forty lakhs of opium revenue, for the financing of the opium trade in Calcutta, accumulated as it is towards one short part of each month, causes nearly every month a violent fluctuation of this kind in the Government Balance, and any attempt to level down the fluctuation thus caused would give a violent wrench to the market under the appearance of maintaining a uniform level. There is, however, an active demand for Bills, perhaps forty lakhs come out in one mail, and are paid by the Bank of Bengal, the obvious result is that unless other transactions compensate for this withdrawal the "Public Deposits" are reduced by forty lakhs. The next weekly account of the Bank appears, and it is immediately asserted that "Government has withdrawn forty lakhs," and Government is severely condemned for withdrawing so large a sum from a market hungry for money. The truth, however, it will be seen, is exactly the opposite. The forty lakhs which came in one way have now passed out in another way from the balance of the Government to feed the demands of the market, and the reduction in the Government Balance is a sign that the money market is being relieved by the regular course of transactions, and not that it is being tightened. I have once or twice given this simple explanation in the public press, but without much avail, for I find that Government is still occasionally charged with "withdrawing its balances," when all it has done is that it has been paying out money in satisfaction of the bills drawn by the Secretary of State in favour of merchants and bankers in India.

J WESTLAND.

20th November 1888.

E J SINKINSON,  
Offg Secretary to the Government of India

*Extract from Financial Statement of the Government of India, 1889-90*

105 The present year has seen a great scarcity of money in the Indian markets, which has kept the Bank rate at 12 per cent for a considerable period, and as usually happens in such cases in this country, the question has been raised whether Government might not in some way come to the assistance of trade

The scarcity is no doubt owing in part to an early cotton season in Bombay coinciding with a demand for rice in Burma, and other customary requirements at this season, but the root of the difficulty appears to be the doubtful position of silver. But for this it seems inexplicable that for week after week there should be a difference of 9 per cent in the rate of money in London and India, and yet that in some weeks the whole amount of bills and transfers offered by the Secretary of State should not be taken up

106 That so high a rate of interest is prejudicial to trade is obvious, and Government has not been unmindful of the fact. The best way in which Government can assist trade is by providing that the Secretary of State's drawings shall never be curtailed for lack of money to meet them, and in one week demands for bills and telegraph transfers exceeded 77 lakhs. Arrangements are also made to grant telegraph transfers freely at a small charge between the three Presidency towns, and Government, besides keeping up the normal current balances, has further been able to offer to the Presidency Banks at Calcutta and Bombay temporary loans at their own minimum rate of interest, if they cared to avail themselves of the offer

107 As the Treasury balances are nearly two crores below last year, and in fact lower than they have been for twenty years at this season, all this would scarcely have been possible without the assistance derived from what are called "currency transfers," a system which, while preserving the Reserve of the Paper Currency Department intact for the payment of the currency notes, yet gives the advantage of a large balance that can be made available without the delay of actual remittance, wherever it may be wanted. Thus in the present month the accruing revenue of the opium districts has been allowed to remain in those districts in the charge of a currency agency, an equivalent being immediately released to the Treasury in Calcutta, a fortnight hence this money will be wanted for payments to opium cultivators in the districts, but by that time the Land Revenue from Eastern Bengal will have been received, and, being in like manner made over to the Currency Department, will liberate the coin where it is wanted

108 The charge that Government does not do all it might to assist trade sometimes takes the form of an assertion that the currency balances should be lent out in a time of pressure. This is, of course, impossible, as the currency balances are pledged by law to secure the convertibility of the currency notes, and can no more be lent to the market than can the gold in the Issue Department of the Bank of England

109 Another contention is, that the cash balance of the Government of India is too high. Now the question whether the Government cash balance is too high or too low, is one that must be determined by the experience of those who actually deal with that balance, and are responsible for seeing that there is sufficient money in the Treasury to meet all the claims against Government

I do not think I exaggerate when I say that every person who has experience of the actual work of dealing with the balances in this country is in favour of rather a high cash balance. The question has been frequently considered both in India and in England, and though a cash balance of 10 to 13 crores may seem enormous, yet if we reflect on the special difficulties in the way of suddenly obtaining a large amount of cash in this country, on the sudden and large demands to which Government is exposed, and on the enormous extent of country over which the balance has to be spread, it will easily be recognised that the mere fact of the cash balance being large is no proof that it is larger than is required by the wants of the case

Some authorities hold that, if anything, the Indian cash balance has been kept somewhat too low in recent years. In that opinion I am inclined to concur. The cash balance of recent years has been low because the claims against the Government were heavy owing to expenditure of all kinds, and it was thought desirable to avoid borrowing more than was absolutely necessary

110 I have mentioned the allegations, (1) that Government ought to lend out the currency balance, and (2) that Government keeps too high a cash balance simply in order to clear the ground. There is no force in them, and they could only be made by persons ignorant of the facts of the case. I now come to what is the real question, namely, the expediency of the maintenance of the Reserve Treasuries in the Presidency towns. Should the Government keep the whole of its spare cash in the Presidency Banks, or should it aim at keeping balances of tolerably constant amounts in those banks, the surplus being kept in the Reserve Treasuries? This is a question which deserves consideration, and on which there may reasonably be a

difference of opinion, though I can hold out no hope of any change in the policy of Government in this respect

The justification for the existence of the Reserve Treasuries is to be found in the special conditions affecting the Indian money market. These special conditions are the liability of that market to extreme pressure at times, the difficulty in adding temporarily to the amount of cash by drawing on other markets, and the magnitude of the cash transactions of the Government as compared with those of the trade. Under the circumstances I have just stated, and looking to the fact that the Government in case of war, famine, or other unexpected cause, is exposed to the risk of having to meet sudden and large demands on it for cash, it was decided by Lord Northbrook's Government that it would be to the interest both of the commercial public and the Government of India that the surplus cash, for the time being, of the Government of India in excess of certain regulated balances in the Presidency Banks and the cash in Mofussil Treasuries, should be kept in Reserve Treasuries.

It was held that, if the whole of the surplus cash was kept in the Presidency Banks, trade would rely on the permanence of the resources thus supplied to it, and that, in case of a sudden demand for cash, the Government of India would either be forced to abandon its right to reduce its balance in the Presidency Banks, or risk producing a financial crisis by suddenly and largely reducing the resources of these Banks.

To show that this is not an imaginary fear, I will quote a telegram received in 1874 from the Government of Bombay

"Clear the line. You are placing the exchange banks and trade of Bombay in great danger. The eight Exchange Banks are indebted to the Bank of Bombay 68 lakhs of rupees, half payable on demand secured by Government paper, and remainder in February. Their balances for current purposes in the Bank of Bombay are under 20 lakhs of rupees, balance of other customers of Bank of Bombay exceedingly low. Bank of Bombay has to meet Council Bills for 25 lakhs of rupees arrived from England this morning, and similar Bills for 20 lakhs of rupees will shortly arrive. Bills on Calcutta absolutely unobtainable. If you draw more on Bank of Bombay, they must call in sums due from the Exchange Banks, and there will be a general panic and a serious danger of stoppages."

There was at that time a Government balance of about 100 lakhs in the Bank of Bombay, and the proposed withdrawal, which called forth this startling protest from the Governor of that Province, only came to 35 lakhs. I do not think a stronger argument could be produced to show the dangers that might arise if the Government of India reverted to the old system of keeping all its spare cash in the Presidency Banks. The arguments which weighed with the Government of India in introducing the system of Reserve Treasuries are contained in a Despatch to the Secretary of State, No 256, dated 30th June 1874\*, it has been printed in the Appendix to this Statement. It will show that the policy of the establishment of Reserve Treasuries was adopted deliberately, and in order to meet real difficulties.

111 It has been urged that Government could relieve the market by lending out the balance of the Reserve Treasuries on favourable terms to the Banks; but, if this course were followed, the same difficulties that arose when the Presidency Banks held the whole of the surplus balances would again occur. Trade would become accustomed to rely on the resources furnished by the Government, and at a time of pressure the withholding of the assistance usually given by Government might have a very serious effect.

Despatch from Government of India (Finance and Commerce Department), No 30,  
dated 2nd February 1899

To the Right Honourable Lord George Francis Hamilton, Her Majesty's Secretary  
of State for India.

My Lord,

We have the honour to submit, for your Lordship's consideration, the following papers relating to the use of the Government Balances in aid of banking resources in India —

- 1 Report by Finance Sub-Committee to the Committee of the Bengal Chamber of Commerce, on a proposal to make a representation to Government with the view of altering the present system of managing the Treasury Balances so as to allow of funds being placed more freely at the disposal of the public during the busy season of each year
- 2 Note by the Honourable Sir James Westland, K C S I., on the management of the Government Balances. (This is practically the same as the first part of the paper submitted to your Lordship with our Despatch No 332, dated 20th October last)

\* See page 30.

3 Proceedings of an interview on the 11th January 1899 between a deputation from the Committee of the Chamber and the Honourable Sir James Westland, K C S I, on the question of the management of Government Cash Balances

2 The whole question is sufficiently discussed in these papers and in the papers therein referred to as having been published in the *Gazette of India* of 23rd February 1889, and the proposal we would make to your Lordship is that during the months of January to May of each year, when large sums are withdrawn from the public in payment of Government revenue, it may be recognized as part of the ordinary business of management of the Treasury Balances to lend money to the Presidency Banks at one per cent less than the declared minimum rate of discount of the borrowing Bank. It is not our wish, and it might prove embarrassing in our own business, to give the Banks an open credit upon which they may operate or not as they please, but the kind of transaction admissible would be that the Banks might obtain, on the security of Government paper, loans, not less than ten lakhs of rupees on each occasion, repayable after a fixed period of one, two, or three months, but in no case later than 31st May, by which date we should again be in command of our own funds under ordinary conditions. We would not pledge ourselves to be always ready to lend, and it must be always remembered that, in the management of the public funds, the requirements of the public administration come before those of trade and commerce, but under ordinary circumstances we consider we could without difficulty spare 1½ crores of rupees during the months in question.

3 These arrangements would come within the meaning of the despatch No 225, dated 6th May 1875, of your Lordship's predecessor (see especially paragraph 17), but we consider it desirable to resubmit the case now, as it is mixed up with matters that are at present under the consideration of the Currency Commission.

4 It will be observed that the President of the Bengal Chamber of Commerce at the Conference of 11th January, expressed the opinion that advances of the kind would not be required until the Bank rate threatened to exceed 10 per cent. We would not consider it necessary to prescribe a condition of the kind, but we believe it is the case that it would not pay the Presidency Banks to take loans on the above terms unless the rate for money approached that figure and threatened to remain very high for some time.

5 We cannot say that the proposed facility for borrowing money in India would not in any way interfere with your Lordship's Council Bill operations. But as the proposed loans would be only temporary, and the money would have to be returned to the Reserve Treasury by an early date, the effect would not be a permanent one. Though it might operate to slightly diminish the demand in January and February, it would, in the same measure, increase it in April and May. On the other hand, it is to the advantage both of trade generally and through trade, of the demand for Council Bills, that the rates of discount should not be so high as they have been during the last two cold weathers, and we believe that, so far as Council Bill operations are concerned, we may count upon obtaining quite as much advantage in this way, as there may be disadvantage in meeting, in the manner proposed, part of the demand for money during the active season of foreign trade in India.

We have the honour to be,

MY LORD,

Your Lordship's most obedient, humble Servants,

CURZON OF KEDLESTON

Calcutta, 17th December 1898

## Memo for the Committee

## MANAGEMENT OF THE TREASURY BALANCES

I am directed by the Finance Sub-Committee to submit to the Committee of the Chamber their Report on the proposal to make a representation to Government, with the view of altering the present system of managing the Treasury Balances so as to allow of funds being placed more freely at the disposal of the public during the busy season—February to June of each year

The Finance Sub-Committee have carefully considered the file of papers sent down, and have also had before them reports of the proceedings of the Legislative Council of India in various years, from which they have been able to ascertain what action has previously been taken in regard to the matter by the representatives in the Council of the Mercantile Community. They have noted from these proceedings that Sir David Barbour at the meeting of the Council, held on the 27th March 1889, dealt at length with the whole question, and expressed himself in opposition to any change in the existing system. Mr Robert Steel and Sir Alexander Wilson, representatives of the Chamber on the Council, have also spoken on different occasions in support of the views expressed by Sir David Barbour.

The Finance Sub-Committee, notwithstanding, have reported in favour of a representation being made to Government, as they consider the position is now somewhat changed, and think it is most advisable that, as the season of the year when the Cash Balances are highest coincides with the exporting season when money is most scarce, Government should, during that period, lend sufficient cash to the Presidency Banks to enable those Banks always to be in a position to make advances on Government Securities. They consider that it is damaging to the credit of Government that Government paper should at any time cease to be a loanable security. They have been strengthened in this view by the fact that several witnesses before the Currency Committee, notably Sir Edgar Vincent and Mr A. M. Lindsay, were in favour of such a course being pursued by Government.

The Sub-Committee are of opinion that Government could, without danger, advance sufficient cash to relieve the stringency which generally exists from February to June in each year.

W. PARSONS,  
Secretary

The following is the Report of the Sub-Committee —

The Finance Sub-Committee recognise that in the conditions attaching to both Imperial and trade finance in India, the Government cannot place Treasury Balances at the disposal of trade with so free a hand as is done in England. The question before the Committee, however, appears to be not the wholesale surrender of Treasury Funds to the Presidency Banks, but the discretionary disposal of them in periods of stringency. If the action of the Government is such as to unnecessarily cause a money stringency at one season of the year, and a deceptive redundancy at another season, it follows that the manipulation of these funds is a potent disturbing influence in our money market.

It has been the impression for years that the Government have been sparing of their deposits with the Presidency Banks during the seasons of greatest pressure, with the object of stimulating exchange, and lavish with their deposits in the monsoon months when easy money has helped them to issue new loans.

In order to ascertain whether this impression has any justification in fact, the Finance Committee have had the following tabulated statements prepared. The point to be arrived at is this. The collection of revenue, especially the land revenue, withdraws from active circulation considerable sums of money at certain seasons, and it so happens that this withdrawal of money from private hands takes place just when funds are most needed for harvest requirements. By comparing the balances in the Civil Treasuries and Reserve Treasuries with the Treasury Balances in the Presidency Banks in March, July, and November of several years, a fair estimate may be formed of the relation between revenue funds held apart and those placed at the disposal of trade (see Statement I.) These months are selected because, generally, March is the month of acutest trade demand and largest accumulations of revenue, July the month of smallest trade demand, and November the month of smallest Government revenue.

## I

Statement showing Cash Balances in Government Treasuries, Reserve Treasuries, and Presidency Banks, in the months of March, July, and November from 1888 to 1898

TOTAL BALANCES IN GOVERNMENT TREASURIES				BALANCES IN RESERVE TREASURIES			BALANCES IN PRESIDENCY BANKS				
Year	Last day of March	Last day of July	Last day of November	Year	Last day of March	Last day of July	Last day of November	Year	Last day of March	Last day of July	Last day of November
1888	13,88,37,000	15,41,35,000	9,34,96,000	1888	71,87,000	3,64,51,000	79,04,000	1888	1,36,72,000	1,95,23,000	1,30,02,000
1889	13,30,51,000	12,70,22,000	9,00,61,000	1889	1,33,87,000	87,55,000	98,76,000	1889	1,42,84,000	1,71,94,000	1,64,04,000
1890	14,74,89,000	13,56,90,000	9,66,89,000	1890	1,41,66,000	2,39,37,000	1,35,86,000	1890	1,75,89,000	1,57,23,000	1,77,76,000
1891	17,87,61,000	14,96,65,000	10,01,07,000	1891	4,41,11,000	3,07,85,000	1,52,44,000	1891	1,44,61,000	1,53,54,000	1,58,94,000
1892	17,82,70,000	14,91,13,000	9,10,00,000	1892	3,60,90,000	3,40,19,000	1,44,20,000	1892	1,38,01,000	1,43,68,000	1,49,97,000
1893	15,27,18,000	14,06,80,000	15,23,81,000	1893	2,43,34,000	3,30,81,000	5,81,95,000	1893	1,68,03,000	1,69,10,000	1,57,28,000
1894	25,56,56,000	23,58,19,000	16,33,54,000	1894	10,12,59,000	8,72,50,000	5,00,85,000	1894	1,33,62,000	1,54,32,000	1,56,42,400
1895	22,52,96,000	19,14,02,000	10,76,68,000	1895	6,83,00,000	5,98,28,000	1,12,98,000	1895	1,58,29,000	1,45,46,000	1,56,99,000
1896	16,50,06,000	15,63,62,000	7,45,38,000	1896	2,17,51,000	3,76,92,000	1,05,37,000	1896	1,58,25,000	2,23,14,000	1,09,18,000
1897	13,87,38,000	9,25,30,000	8,07,84,000	1897	94,98,000	65,21,000	81,67,000	1897	1,68,03,000	1,34,62,000	1,65,72,000
1898	15,98,26,000	14,97,82,000	—	1898	3,15,52,000	2,93,06,000	—	1898	1,49,85,000	1,46,44,000	—

Statement II shows that the proportion of balances in Civil Treasuries to Reserve Treasuries, and to the balances deposited with the Presidency Banks, has been on the average as follows —

## II

Average Balances 1888-1897 (inclusive)

Months	Total Balances Government Treasuries	Reserve Treasuries	Presidency Banks
March - - -	17,13,82,200	3,38,09,200	1,52,43,000
July - - -	15,32,60,800	3,58,31,700	1,64,82,600
November - - -	10,50,05,800	1,99,31,200	1,52,13,200

These figures appear to support the generally received impression that the Government deposit a proportionately smaller amount with the Presidency Banks during the busy season than at other seasons. It will be seen that the proportion works out as under —

	Total Treasuries	Reserve Treasuries	Presidency Banks
March - - -	100	19 44	8 89
July - - -	100	23 38	10 75
November - - -	100	18 98	14 40

The Finance Sub-Committee are, therefore, of opinion that the present method of disposing of Government Balances does adversely affect the money market, and think that a representation might reasonably be made to Government to increase in proportion to their total funds, their deposits with the Presidency Banks during the busy season. They also think it would be fair to the Presidency Banks if the rate at which Government funds were lent against deposits in times of emergency should be one per cent below the published minimum rate of the Banks

W PARSONS,  
Secretary

*Note by the Honourable Sir James Westland, K C S I, on the Management  
of the Government Balances*

To facilitate discussion as to the extent to which Cash Balances of the Government may be made available for commercial uses, I put together in this paper some of the considerations which, from the point of view of the Government, bear upon the question

2 The great difference between the position in this respect of the Treasury in England and that in India may be seen from the following statement, which sets out first the figures relating to England (The figures are taken from the *Economist*, and though they do not precisely correspond as to date, they are good enough for the present purpose) —

(In thousands of £)	Exchequer Balance in the Bank of England	Cash Balance in the Bank of England
End of December 1897	- 3,785	19,885
January 1898 - - -	- 5,991	22,774
February 1898 - - -	- 11,907	23,606
March 1898 - - -	- 9,918 <sup>(a)</sup>	21,662
April 1898 - - -	- 5,286	22,720
May 1898 - - -	- 7,230	26,046
June 1898 - - -	- 4,800 <sup>(a)</sup>	27,071

<sup>(a)</sup> The actuals are not available, this figure is taken by deducting from the total Exchequer Balance one million assumed to be the balance in the Bank of Ireland

It will be seen from these figures that the Exchequer could at any time, if necessity arose, realise or spend the whole of the balance at its credit without causing the Bank of England to feel any but a temporary difficulty—a difficulty which possibly might not be great enough to cause any steps of sufficient magnitude to affect, or even to come to the knowledge of, the public

3 Now take the figures for India. They are made up in the annexed tables A and B for each week of the quarter, January to March 1898. It has to be remembered that, according to the contracts with the Presidency Banks, the head 'Public Deposits' in their weekly returns is practically synonymous with balance at credit of Treasury, the balances of the High Courts and their officers, and of Railway Companies, and some others, which form a not inconsiderable aggregate of public money, lie outside these amounts and are reckoned in the Bank statements as private accounts. The average of the 13 weekly returns is —

(Thousands of Rx.)	Balance at credit of Government	Cash Balance of the Bank
<i>Head Offices only—</i>		
Bank of Bengal - - -	- 739	791
Bank of Bombay - - -	- 527	636
<i>Head Offices and Branches—</i>		
Bank of Bengal - - -	- 1,576	2,019
Bank of Madras - - -	- 505	951
Bank of Bombay - - -	- 873	953

It will be seen that a demand by Government for the use of its balances would leave the Banks with an utterly insufficient amount of cash for their requirements—would in short deplete both the financial centres and the principal towns in the interior of nearly the whole of their current banking balances

4 In comparing England with India in this respect there are two features in the comparison which greatly aggravate the position as regards India. First, the balance in the Bank of England, large as it is, is after all only a portion of the available cash in London. The number of Banks in London is legion, and even though the bulk of their available balances may be represented by a deposit account with the Bank of England, yet a large amount on the whole remains in their own possession, and the diminution of the balance in the Bank of England by the whole amount it holds at the credit of the Exchequer would be a small tax upon the whole banking balance of the place. In India this is not the case, the Cash Balance of the Presidency Banks is a much more important factor in Calcutta or Bombay, for the Exchange Banks hold a comparatively small balance in their own coffers, and even that is it is understood, sometimes an advance from the Presidency Banks. Secondly, the nexus between the Bank of England and the general available cash of the country is infinitely closer than that which exists in the case of the Indian Presidency Banks. The withdrawal of, say, five millions of Exchequer Balance from the Bank of England for the purpose of meeting Government payments due throughout the country might deplete the available

cash of the Bank of England for a week or two, but the amount would speedily flow back again through a thousand different channels, and the cash position of the Bank would be as strong as ever. In India, on the other hand, payments of the kind do not flow back till after a considerable time, and partly do not come back at all. A war on the frontier, a famine in a province, or heavy expenditure upon railways will absorb large amounts of cash, part of which dribbles back slowly, and part of which for practical purposes never comes back at all.

5 These considerations introduce great difficulty into the management of the Government Balances in India. It is not merely that the Government are obliged to have close regard to the demands that are coming upon them in respect of the payments due on Government account during the next few months, but that they are obliged to have regard to future commercial demand also. Just as the Directors of the Bank of England or of the Bank of Bengal, when they anticipate a strong commercial demand, would create a position of great danger if they were merely to say "We have so many millions, or so many lakhs, in our Treasure chest, and there is therefore no use of our interfering with the demand, let us go on giving out money as long as we possess any," so the Government in India is bound to carefully guard its balances against depletion brought about either by the payments which it has in due course to meet, or by too sudden withdrawal and dispersal through the channels of commercial demand. The above-imagined policy on the part of the Bank Directors would inevitably bring about a crisis in a very short time, and carelessness of management of the same kind—a concession to immediate commercial demand, without having any regard to the future—would bring a crisis on the money market in India, much more severe and much more rapid by reason of the smallness, the almost non-existence, of any margin to fall back upon.

6 This position of responsibility is forced upon the Government in this country, not of its own will, but because it is accepted by the Banking and the Mercantile Community as the monetary system of India. The whole commerce of the country is made to depend upon the Government Balances, and the whole responsibility for the maintenance of an available Cash Reserve in India being thrown upon the Government it is taken for granted that if there is a monetary stringency, it is due to the deliberate action of the Government. When Bank Directors, to meet the occasion I have been describing, put up the rate of discount, they are said to do what is wise and proper, both in their own interests and in those of the Commercial Public, when the Government being in India in a similar position takes similar measures, it is considered to be deliberately causing an undue stringency of the money market.

7 It is not infrequently alleged in the public press and elsewhere that the Government of India, in their manipulation of Government Balances and of Council Bills, systematically pursue this policy of creating for their own purposes a stringency of the kind described. They have more than once had occasion to give this theory explicit denial. Some important papers on the subject were published in the *Gazette of India* of 23rd February 1889 (page 115, &c), which were intended to show that the one endeavour of the Government in managing their balances was to make things as smooth for the money market as it was possible for them to be, consistently with a system under which the Banks kept very little available money of their own, and depended for their immediately available resources almost entirely upon the margin of funds which the Government kept against possible administrative demands, and which are necessarily hypothecated to public necessities of the kind. For example, the weekly financial article in the *Pioneer*, referring to the transactions of the second half of September last, stated that "Government has been busy reducing its balances with the Bank of Bengal and the Bank of Bombay." The real fact, so far as Calcutta is concerned, was that Government during that fortnight paid 50 lakhs of Council Bills out of its balance in the Bank of Bengal (a matter which may be described as being within public knowledge) and the diminution of Government Balance which is the natural and inevitable consequence of the transfer of 50 lakhs from the Government Balance to that of the Exchange Banks was thus quoted as evidence that the Government was withdrawing its balances from commercial use. It will thus be seen that the criticism under reference contains exactly the mistake which was pointed out in paragraphs 22 and 23 on page 124 of the above quotation from the *Gazette of India*, and that the so-called artificial reduction of Government Balances at the Banks is nothing more or less than the issue of the amount to the public in the form of Council Bills. As a matter of fact, not a single rupee was withdrawn from the Bank to the Reserve Treasury during the latter half of the month of September.

8 It may be mentioned as regards the Government Balances at the Presidency Banks that for the express purpose of preventing any manipulation of them either in the direction of stringency or of the opposite, they are worked upon a purely mechanical system. A maximum and a minimum limit are fixed, both very much in

excess of the minimum stipulated in the contract with the Banks; and the rule is laid down that when the balance is above the maximum the responsible account officer withdraws a certain amount into the Reserve Treasury, when it falls to or below the minimum he passes money into it from the Reserve Treasury. This rule is departed from only (1) when the Government are raising a loan, and, in order to let it fall easily on the market, allow the Presidency Banks to retain a nominally excessive Treasury Balance it may be regarded as nominal, because the transaction is the result of a credit to Government on the Bank's books by debit to advances on Government Securities, and the Bank for the moment does not really possess any funds available in cash against it, (2) when the general balance is so severely depleted that for the time the Government cannot spare funds from the District Treasuries to maintain the usual standard of Cash Balance in the Presidency towns. There is, therefore, so far as the Bank balance is concerned, no manipulation for the purpose of creating stringency or of affecting the rate of exchange.

9 To proceed now to the question of Council Bills. It seems almost a truism to say it, yet it seems necessary to call it to mind that the amount of Council Bills that can be issued by the Secretary of State is strictly limited. The belief that the Government of India refuse to place their funds at the disposal of the Banks is certainly founded in some cases on the mere fact that the Secretary of State has not issued bills for the whole amount required for the payment of the balance of trade. The amount which it is possible to draw in a year may, for ordinary times, be reckoned thus

	Rx
Surplus of revenue in India over expenditure in India, including expenditure on Capital Account -	23,000,000
Money raised by loan in India for Capital Expenditure so far as it is not spent in India, a maximum of -	3,000,000
Total available - - -	26,000,000

These figures vary of course from year to year, but it must be clear that, whatever the figures are, they limit the amount for which the Secretary of State may draw

10 Now, as pointed out at length in the papers of 1889 which have been already quoted, the minimum balance with which it is possible to carry on the business of the Government in India is about eight crores, this eight crores including the balances at credit in the Presidency Banks and their branches. The balances went down to that figure and below it in the end of the year 1896, and again in the end of 1897, that is to say, in both of these years the Secretary of State drew, and the Government of India paid out, even more than was consistent with safety, the Secretary of State could not have drawn more for the simple reason that the Government of India had no funds wherewith to pay. So anxious were the Government to supply the money market with a full amount of Council Bills that in December 1896 special legislative measures were taken to add to the Cash Balances two crores of rupees out of Currency Reserve, and this enabled the Secretary of State to enhance his drawings by that amount. And again in January 1898 a special law was passed to enable the Secretary of State, if necessary, to draw Council Bills against the Currency Reserve. In the present year, 1898-99, the Council Bill programme was again based on the calculation that the Government should place at the Secretary of State's disposal, for drawings, everything they could spare subject to the condition of about eight crores remaining in the Cash Balances at the minimum period. The prospects as regards balances were much improved by better revenue, and this fact was communicated to the Secretary of State in July and again in September for the express purpose of enabling him to enhance his drawings up to the limit of the capacity of the Government to meet them, and he enhanced them accordingly. In this also there is ample evidence that the policy of the Government throughout is the very opposite of seeking to raise exchange by causing stringency. They have consistently done their best to place at the disposal of the market every surplus rupee they can spare.

11 The Government, in truth, cannot undertake to finance not only the administration of the country, but its trade and commerce also. Accordingly, when commerce finds a deficiency of available funds, the cause of the deficiency should be sought for in the scarcity of banking capital and not in some action of the Government, which is expected with resources that are often barely sufficient to meet the financial requirements of its own administration, to supply also all that is wanted for the movements of two hundred crores of imports and exports.

12 One difficulty in the regulation of Council Bill drawings lies in the fact that the revenue of Government does not come in equally during the year. This is, of course, a necessity in a country where so much of the revenue is land revenue, and has to be collected at the time when the revenue payers can most easily afford to pay it, viz., the time of harvesting and disposing of their crops.

The following is a rough estimate of the distribution, through the year, of the 26 crores which, as above mentioned, become available for drawings, the three crores of debt are taken as received half in July and half in August —

In thousands of Rs		In thousands of Rs

13 Now, if the Secretary of State could distribute his drawings after the above fashion (or rather take the figures a month later so as to allow the excesses of revenue to be brought down to the Presidency towns to meet his bills), the result would no doubt be that our excess Cash Balances (that is the surplus over what is required for treasuries that are not in charge of Banks) would be wholly, or nearly so, at the disposal of commerce. But this is more a theoretical possibility than a real one. As already explained, there are no funds for Government to fall back upon if it surrenders to commercial uses its own Cash Balances and then suddenly finds that it must alter its programme of revenue and expenditure. There have been two crises of that kind within the last two years. The first was in October 1896, when the rains failed and prospects of famine suddenly made their appearance in India. It was realized that the first and necessary step was to make large remissions of revenue at once, this came upon the Government just as the balances were descending to their minimum, and there was no remedy but to call upon the Secretary of State immediately to suspend his drawings, which were being as usual so regulated as to leave no margin in December. The second was in the outbreak of frontier warfare in August and September 1897, when again the Government were obliged to stop the Secretary of State's drawings in order that they might have money to expend on the necessary military operations.

14 It is not possible for the Government therefore, dependent as they are upon their own resources, to carry on the administration with their balance continually hovering about eight crores. They can afford the risk of letting it run down to eight crores in November and December, when it is known that they will be amply in funds again when the revenue comes in in January. But if they had to keep to one figure all the year round, they would not be safe under a minimum of eleven crores (that is to say a continual margin, against possible sudden claims, of three crores). Thus the proper way of describing the policy under which the margin of money might be placed at the disposal of commerce would be "Reckon Rs 11,000,000 as your minimum current balance, but inasmuch as you can stand the risk of letting it run down for a month or two, but not longer, to Rs 8,000,000 give commerce the advantage for that month or two of the Rs 3,000,000 you can thus spare."

15 This is really not very far different from the course actually followed, at all events, the argument shows that the money withheld from possible utilisation by commerce is only the excess which is held over Rs 11,000,000, and that it is not possible, from a practical point of view, for the Government to accept as a rule of working "Eight crores is your necessary minimum, and all that you hold in excess of that should be regarded as available for commercial use." In short, eight crores is not a working minimum, it is a point of danger which can be tolerated if it is to last only for a month or two, but which might at any time land the Government in disaster, if they tried to work with it for a longer period.

16 The distribution of Council Bills over the twelve months remains entirely in the hands of the Secretary of State, the Government, in India, give him from time to time their recommendations, and especially advice as to the amount they can make available for his drawings, but as the primary object of the Council Bills is to place him in funds for the expenditure which he has to undertake, they leave it to him to consider when drawings may be eased off for want of commercial demand, or increased to meet commercial demand. At the same time the Government are quite aware that the policy of the Secretary of State in the matter is the same as their own, that is, to draw during the twelve months as much as they can meet. The considerations herein set out will show that the utmost the Secretary of State could do, if he were to neglect in regulating his drawings every consideration but that of momentary commercial convenience, would be that he might occasionally be a crore or two ahead of his

drawings as he regulates them on the present system, at the risk of having to pull up after a month or two in order to allow the resources available in India to come up to his demands upon them. The Government pronounce no opinion as to whether it is convenient for commerce to have a crore a week placed at its disposal in February to April, and then have it cut down to 12 or 15 lakhs a week in May. Of course nothing that the Secretary of State can do will increase the total of his drawings over the twelve months.

17 Having thus placed in the hands of the Secretary of State the regulation of the drawings of Council Bills, the Government naturally consider themselves precluded from interfering with his operations by advancing money, even on interest, to the Presidency or other Banks in India. Occasionally, but very rarely, short loans of the kind are made, but it is only for the relief of temporary difficulties. The last occasion on which a proposal of the kind was made was as follows. In April last the Bank of Bombay, whose rate at the time was 13 per cent, asked the Government to advance 25 lakhs to it, for a short time, at 6 per cent. This the Government either formally declined, or were on the point of declining, when the proposal was altered into one to borrow at Bank rate. Within three or four days, however, the stringency of money was relieved, the Bank rate gave way, and it was considered that the necessity for any extraordinary measure had ceased.

J WESTLAND

January 1899.

Bengal Chamber of Commerce,  
Royal Exchange Building, Calcutta,  
11th January 1899

A deputation, nominated by the Committee of the Chamber, waited upon the Hon'ble Sir James Westland, K C S I, the Finance Member of His Excellency the Governor-General's Council, at the office of the Legislative Department of the Government of India, this day, to confer with him upon the question of the management of the Government Cash Balances

The deputation consisted of the following gentlemen —

The Hon'ble Mr M C Turner (President of the Chamber)  
The Hon'ble Mr Allan Arthur  
Mr Reg Murray  
Mr W Parsons, Secretary

Mr A Rawlinson, who had also been nominated as a member, was unable to attend

The deputation was received by the Hon'ble Sir James Westland and Mr H H Risley, C I E, Officiating Secretary to the Government of India in the Finance and Commerce Department, at 3 o'clock p m

Sir James Westland in opening the discussion said —

Gentlemen,—Before I ask you to say anything with respect to the memo I have prepared, I would ask your permission to make one or two remarks with regard to the papers the Committee of the Chamber have sent to me. The object of the Sub-Committee of the Chamber have in compiling the figures they give is to show, as they state at the end, that "the figures appear to support the generally received impression that the Government deposit a proportionately smaller amount with the Presidency Banks during the busy season than at other seasons"

That statement is based upon the figures set out in the Report showing that on the average at the end of March 152 lakhs of rupees have been placed with the Presidency

Banks; at the end of July 164 lakhs, and at the end of November 152 lakhs. These figures, of course, are quite correct, but there is one thing to be borne in mind with respect to them. I pointed out in my memo that when loan money was being raised by the Government it was necessary for certain reasons to leave very large nominal balances with the Banks. Such balances are regarded as nominal, because the transaction is the result of a credit to Government on the Bank's books by debit to advances on Government Securities and not of an actual receipt of cash by the Banks. At that time we always make arrangements with the Banks that money shall be left with them, and that we shall not call upon them, except gradually, to pay up the money which they showed to be at our credit on the accounts. The figures for July, if you refer to them, include two very large figures—one in 1888—195 lakhs, and the other in 1896—223 lakhs. You will see that these figures are very much in excess of the amounts that were with the Banks at any other time. Now I have made enquiry with reference to these figures, and I find that taking the two Banks, the Bank of Bengal at Calcutta, and the Bank of Bombay at Bombay, in the month of July 1888, the two Banks received between them 268 lakhs. In 1896 the amount they received was 247 lakhs. On these two occasions these very large sums were left to their credit and they were not normal balances at all. They are the balances which were left in their hands with reference to that special arrangement which it is always necessary to make. I find that if these two large figures are left out of the balances in the Presidency Banks as stated for July, the second statement of the Sub-Committee would show 152 lakhs for March, 138 lakhs for July, and 152 lakhs for November, so that the conclusion would be exactly opposite to that drawn by the Sub-Committee, as the Balances in July would be less than is customary in March and November. But I think if you take all the figures, without taking averages, you will see that they bear out what I say in my Note that practically the balances which we hold at the Presidency Banks are steady. We aim at maintaining them at a particular figure. We are not bound to do so, but it is a sort of understanding between ourselves and the Banks. They do not vary greatly.

Mr Murray All the year round?

Sir James Westland Yes. I think if our monthly statement which is sent to the Chamber is looked at, it will be seen that the balances are a fairly steady amount. It varies somewhat, but is rarely as low as 140 laks, or as high as 190 lakhs, but as I say our policy is to maintain a pretty considerable and a fairly steady balance with the Banks. One of the figures shown in the Statement is the balance of November 1896. It went down as low as 109 lakhs. I do not know if you remember the circumstances of 1896. I do very well. At that time our total Cash Balances were down to something like 7½ crores. I know I was very anxious at that time, because I had made arrangements, in coming down from Simla to Calcutta, to go to Bombay and to one or two other places, but I was obliged to come straight down to Calcutta on account of my anxiety connected with the lowness of the balances. But with the exception of that extremely low figure, which was entirely due to the depletion of our General Balances at the time, I think the statement drawn up by the Sub-Committee of the Chamber shows that we maintain a steady balance with the Banks. Although we are not obliged to maintain this steady balance, we wish to maintain it in the absence of any special circumstances. There is one other point I wish to mention. By the last mail I obtained from home a copy of the evidence given by Lord Northbrook before the Committee of Enquiry now sitting in London. It would be rather a long business for me to read out the answer he gave to the Committee when he was asked about this very question of the Government balances, but here is part of what he said —

“In a crisis in India you want rupees, you want the actual money for payments up country. I can give the Committee an instance of what happened to me in connection with this particular subject. In the year 1874 there was a famine in Bengal, and in order to feed the people we had to buy rice in Burma and send it to Bengal. In order to get the rice we had to pay hard coin, rupees, for it. The banks then had the full use of the Government Balances, and the Bank of Bombay had at that time more than a million rupees—a million and a half, I believe—of the Government balances. In order to pay for the rice, we wanted some of this money. When we asked the Bank for it, we had the greatest difficulty in getting it. The Government of Bombay objected, and it was only after considerable correspondence, and by insisting upon getting our money that we got at last about half a million of the million and a half that they had of our balances.”

This subject was also mentioned in the Budget Debate in 1889. Sir David Barbour then quoted the remonstrance which the Government of Bombay sent in, which was to the effect that if the Government withdrew their balance from the Bank of Bombay the Bank would have to call in the sums due from the Exchange Banks, and there would be a general panic and serious danger of stoppages.

Lord Northbrook quotes from the despatch He says —

“It was so serious a condition of things for the Government of India not to be able to get their money when they wanted it, that we addressed the Secretary of State on the subject, and the correspondence is given in the evidence published in the first Report of a Commission now sitting on Indian expenditure at at Question 8258 We said — ‘We have been much impressed with the consideration that the effect of the existing agreements with the Banks which compels us to place all the Cash Balances belonging to Government in their hands, leads to consequences which may be very inconvenient, if not worse, both to Government and to trade The only use of these balances to Government is that they may be made available the moment the public service requires them We have had no difficulty in regard to the balances in the hands of the Banks of Bengal and Madras, the Bank of Bombay, however, protested against meeting drafts upon it, and on the urgent representations of the Governor of Bombay, we were obliged, on the 29th January, to allow a month’s time before drawing The Bank of Bombay, accustomed to high Government balances, and relying on the maintenance of these balances, had so employed them that they were practically locked up, for had we insisted on withdrawing them more suddenly, we should have done so in the face of a warning that we should produce a commercial crisis, and therefore, for a time, the Government balances at Bombay were useless for the purposes of the Government’ The upshot of it all was that an alteration was made, and at our recommendation the Government now hold about two crores in the Reserve Treasury They are not bound now to keep the whole of their balances in the Banks, and they keep two crores actually in their own hands, which they can use on an emergency I do not think it is safe for the Government of India not to have the absolute command of two crores of rupees”

To a subsequent question Lord Northbrook answers —

“8451 At each Bank do you mean?—No, two crores altogether I do not think it is at all an unreasonable amount, and it is not safe to have less The Government of India are in quite a different position to the Government of England The Government of India, if they want money, could not get it in India to any considerable extent, and if they tried to get it and failed, it would bring them into great discredit Therefore, I do not think the Government should be bound to keep the whole of their balances in the Banks It is not, in my opinion, the business of the Government of India to finance Indian Trade, it is the business of commerce to finance Indian Trade At the same time I do not see why the Government of India should not to any reasonable extent assist trade by allowing the use of their balances by the Presidency Banks with proper precautions, but I want to point out that it is not safe to put the whole of the balances in the hands of the Banks, judging by the experience that I myself have had”

Well, Lord Northbrook gives the figures of our requirements at two crores of rupees My Note, which was written before I knew Lord Northbrook’s opinion, puts it down at three crores But it must be remembered that Lord Northbrook’s experience is based on 1874, and since then the area of our operations has very much increased Then there is another thing Lord Northbrook only had a single contingency in contemplation In 1897 we had two contingencies We had a famine, and on the top of that came the Frontier War, so that we had two calamities to meet at the same time, and two heavy demands Then, I want to point out with reference to this remark of Lord Northbrook, viz —

“The Government of India are bound to see that they have the command of a certain sum of money without putting it in the power of the banks to tie it up even for a limited time I am speaking about those two crores which are kept in the Reserve Treasury With regard to the rest of the balances beyond what is required to work the Finance of India, I do not see why the greater portion should not be in the hands of the Presidency Banks”

The practical difficulty in my mind is this that as long as we have a considerable balance in the Reserve Treasury, the fluctuations of balances which are caused by very large demands for the Secretary of State’s Bills, or for payments to meet famine requirements, or a sudden outbreak of war, will be met from the Reserve Treasury The Banks know perfectly well that, so long as we have got a balance in the Reserve Treasury, we shall not come down on them for the balances we have left with them. But if we make it a rule to hand over to them the balances in excess of a given amount—either two or three crores—it is obvious that any sudden demand will fall upon the Banks and not upon the Reserve Treasury

Mr Murray said that upon that point the Bengal Chamber had always been in agreement with the views expressed by Sir James Westland The speeches made by

Mr Robert Steel, and Sir Alexander Wilson, in the Imperial Legislative Council, were in favour of those views, and he did not think the opinion of the Chamber in that respect had changed. It was only in regard to the proportion of the funds that they thought some alteration might possibly be made. The point the Committee of the Chamber laid stress upon was that during the months, December to March, when the Government was taking most money from the public, it so happened that the public required most money for harvest operations. The money was collected by the Government at precisely the time when it was most urgently wanted. The idea was that during that time the amount of the balances with the Presidency Banks should be temporarily increased. It was the collection of the Government revenue during those few months that really caused the stringency.

Mr Turner said that they only wished to ask Government to come to the assistance of trade at times of great stringency in the money market. It appeared to the Committee of the Chamber that more assistance might be given to trade by the Government at the busy season of the year. He thought the contingency of people being unable to raise money upon Government paper should be avoided, if possible, as it was damaging to the credit of the Government. It was probable that such assistance would only be required so long as exchange remained in its present position. When exchange became fixed the Exchange Banks would probably bring out money.

Sir James Westland enquired what sum, in the opinion of the deputation, would be required to relieve the stringency.

Mr Murray replied that it would not be a large sum, probably an extra crore, or one and a half, or even two crores.

Mr Arthur said that he understood the fixed maximum and minimum for Government deposits with the Presidency Banks were the same all the year round, and enquired why the same figures should be fixed for the slack business season when Government balances are low as for the busy season when Government balances are large. He thought that Government might so arrange that their balances with the Presidency Banks should be increased during the busy season, seeing that not only do trade demands for accommodation increase at that time, but the supply of money, as pointed out by Mr Murray, was decreased at that period by large withdrawals of currency from circulation by Government.

Sir James Westland said that, as he understood the suggestion, it was that the Government should, at the beginning of the busy season lend to the Presidency Banks a certain sum of money which would be recalled at the end of the busy season. The Government could not consent to an open credit on which the Banks might operate at their convenience, and any loans of the kind would have to be made under conditions regarding repayment upon fixed dates. He himself doubted whether, if he were to go to the Bank of Bengal in January and offer them say, 40 lakhs to be returned in April, they would accept the money and pay interest on it for the whole period. He thought the interest demanded in such a case should be at the rate of one per cent below the minimum published Bank rate, as suggested by the Sub-Committee.

Mr Turner thought the Presidency Banks would take the money for fixed periods of say three months. Loans were made for one month, or two months, or three months, and he could not see why the Presidency Banks should have any objection to the Government stipulating that the money must be returned within three months. His idea was that the money was not really required until the Bank rate had reached 10 per cent.

Mr Arthur said that by the Government lending, say, 40 lakhs to the Presidency Banks, the loanable capital of the country would be increased by that amount. The loanable capital of the country was not increased by the sale of Council Bills.

Sir James Westland agreed that the sale of Council Bills did not increase the capital of the country, because merchants only got out the Bills for the purpose of meeting immediate demands upon them. The money obtained was at once distributed all over the Mofussil.

Mr Arthur observed that the treatment of the Treasury Balances was, in his opinion, a minor matter, as compared with the question of Government coming to the assistance of commerce in a time of crisis. With reference to the statement in Sir James Westland's Memorandum, paragraph 14, from which it appeared that eleven crores were necessary as a minimum, i.e., there should be a "continual margin against a possible sudden claim of 3 crores," the Government of India had declined to advance to the Bank of Bombay last April 25 lakhs against Government paper. Mr Arthur read an extract from Mr Merwanjee Dalal's evidence before the Currency Committee, describing the extreme stringency in Bombay at that time, and stated that on the 1st of April the Treasury Balances amounted to Rs 15,96,95,000, on 30th April they were Rs 13,69,73,000, and they did not fall below Rs 12,80,00,000 until the end of October. He was of opinion that, under the circumstances, the small accommodation asked for, viz, a quarter of a crore, might have been granted.

Sir James Westland replied that the substance of the correspondence with the Bank of Bombay had been set out in his memorandum placed in the hands of the

Chamber of Commerce The negotiation had practically dropped, because the Bank rate fell and money became easier, a few days after the proposal was made to borrow the money He could not undertake to say whether if this had not been the case, the loan would have been granted or refused by the Government \* He said that, as a matter of fact, he had on one or two occasions made loans to the Presidency Banks—usually on the deposit of Government Paper

Mr Arthur observed that at a time of crisis in England it was open to the Government to suspend the Bank Act, but in India there appeared to be no safeguard in a crisis In India where the Currency was inconvertible and therefore inelastic, the necessity of some method of assisting commerce at a time of excessive need was all the greater

Sir James Westland said that there had never been a crisis sufficiently acute in India to necessitate such a step as the suspension of the Bank Act being taken The issuing of Notes in the Currency without receiving an equal amount of coin into the Reserve would be equivalent to the suspension of the Bank Act in England

Mr Murray observed that the Exchange Banks were short of money at the busy season of the year by reason of all their resources being locked up in produce afloat They had not withdrawn money from the foreign trade of India All they had done was to put that money into sterling form The money was used for exactly the same purposes as before

Sir James Westland said that formerly the Exchange Banks used to send out considerable quantities of money to India where it was held in the shape of rupees, but that this was not done now, as the Exchange Banks only got out Council Bills, as they actually wanted them to pay for export bills

Mr Murray pointed out in reply to this that the foreign trade had increased so considerably that the Exchange Banks had to devote their resources almost exclusively to it, and this was evidenced by the fact that Local Banks were now rising to finance the local business which the Exchange Banks had been forced to abandon

After some further discussion, chiefly with reference to the course of action followed by the Exchange Banks, Sir James Westland said that the Deputation would of course understand that it was impossible for him to give a final answer upon the representations laid before him They involved a question of policy which had been the subject of instructions by the Home Government, and were at the present moment under consideration by the Currency Commission, and any representations which had been made on the subject, would require to be laid before the Secretary of State He had little doubt that the Government of India would be willing to make a representation to the Secretary of State in the sense indicated by Mr Arthur, and propose for consideration that a definite amount might be considered available for loans to the Presidency Banks during the months of January, February, and March, when money was being withdrawn from the market by heavy collections of revenue and the Government Treasuries were full He would lay the matter before the Government of India with this object in view

Mr Murray said that the principle on which the Presidency Banks in India regulated their Cash Balances was much the same as that observed by the Bank of England With the exception of the last two or three years when the Bank of England cash has been abnormally large, the proportion of their cash to liabilities has, on the average, been similar to that of the Presidency Banks in India

Mr Turner having thanked Sir James Westland for affording the representatives of the Chamber an opportunity of discussing the question with him, the Deputation withdrew

W PARSONS,  
Secretary

Despatch to Government of India, No 87 (Financial), dated India Office, London,  
4th May 1899

To His Excellency the Right Honourable the Governor-General of India in Council

My Lord,

I have considered in Council your Excellency's letter dated the 2nd of February, No 30, on the subject of the use of the Government balances in aid of banking resources in India

2 The question was raised by the report of the Finance Sub-Committee of the Bengal Chamber of Commerce, in which it was stated to have 'been the impression "for years that the Government have been sparing of their deposits with the Presidency Banks during the seasons of greatest pressure, with the object of stimulating "exchange, and lavish with their deposits in the monsoon months, when easy money "has helped them to issue new loans"

\* I find on reference to the papers that the Government was on the point of sanctioning the loan, when the Bank rate in Calcutta was reduced from 12 to 11 per cent (20th April), the price of Government Paper rose and Exchange fell The Comptroller General was, accordingly, instructed that in view of these indications that the stringency in the money market had been materially relaxed, it was considered that a loan to the Bank of Bombay was not at present necessary.—J W,

3 In the note which Sir James Westland wrote in reply, he observed that the Government had more than once had occasion explicitly to deny that they had systematically pursued a policy to create stringency, and he said that there had been no manipulation of the balances to affect the rate of exchange. In order to test how far there was any ground for such a belief, I have caused the cash balances to be examined from the time when the Reserve Treasury was instituted, and the following is the result —

Average Government Balances with the Presidency Banks or in the District Treasuries, but excluding the Reserve Treasury (in lakhs), on the last day of each month

Years	Busy Season, January to May			Slack Season, June to December		
	Maximum	Minimum	Mean	Maximum	Minimum	Mean
5 years, 1878-82	1,242	1,055	1,144	1,224	874	1,038
„ 1883-87	1,220	1,020	1,100	1,128	835	952

It will be observed that the amount in the hands of the Presidency Banks (including that in the district treasuries which is not shown separately), during the busy season is now usually much larger than formerly, and although the amount during the slack season has slightly increased, this may be fully explained by the failure to sell bills on India in some of the recent years. In the recently published report by the Comptroller-General on the state of the Cash Balances during 1897-98, it is pointed out that at the time of the greatest pressure the amounts in the hands of the Presidency Banks were kept at a fairly high level, the reduction being as far as possible effected at the Government treasuries. As to the supposed manipulation of the balances to facilitate the raising of loans, the figures are as follows —

	Maximum	Minimum	Mean
Average of 14 years in which Loans were raised	1,276	854	1,069
Average of 7 years in which Loans were not raised	1,372	859	1,120

4 At the Conference which was held between Sir James Westland and a deputation from the Committee of the Bengal Chamber of Commerce it was admitted that, as had been pointed out by Mr Robert Steel in 1889, and Sir Alexander Wilson in 1890, when the subject of the management of the Government balances had been discussed in the Legislative Council, any sudden demand for money to meet the exigencies of the Government would fall more heavily on the Banks, if all the balances beyond a limited amount were placed in their hands, but it was suggested that the proportion of the funds at their disposal, and of those retained in the Reserve Treasury might with advantage be altered.

5 In order to meet the wishes of the Committee of the Chamber as far as possible, Your Excellency proposes that, during the months of January to May in each year, when large sums are withdrawn from the public in payment of Government revenue, it may be recognised as part of the ordinary business of management of the Treasury balances, to lend money to the Presidency Banks, in sums not less than 10 lakhs of rupees, at one per cent below the declared minimum rate of discount of the borrowing bank, which would be required to deposit Government paper as security, and to repay the money at a definite date, in no case later than the 31st May. For such purposes you consider that ordinarily you could spare a crore and a half of rupees without difficulty.

6 I am not sure that I understand the reasons why your Government solicit my sanction to such an arrangement. The management of the cash balances in India is entirely within your discretion. When it was proposed to institute a Reserve Treasury in order to guard against the risk of public inconvenience on the occurrence of an emergency, the Marquis of Salisbury, in his Despatch of the 6th of May 1875, No 225, though not approving precisely of the suggestions laid before him, left the matter in the hands of the Government of India, observing that it would be competent for the Financial Department either to retain the money so reserved in the Treasury, "or to lend it for short terms under suitable conditions as to interest and security."

7 This expression seems so exactly to cover your proposal, that I have to look further for the grounds on which it is made, and I presume that these are contained in the last paragraph of your letter, in which you observe, "We cannot say that the proposed facility for borrowing money in India would not in any way interfere with your Lordship's Council Bill operations." You think, however, that the transfer of part of the demand from the busy to the slack season of foreign trade would not operate disadvantageously, while it would tend to prevent the rate of discount in India from rising so high as in 1897 and 1898.

8 From this point of view it appears to me that the suggested course is open to considerable objection. The remittance to England, at a favourable rate of exchange, of the amount necessary for the discharge of your sterling obligations, is one of the principal points to be aimed at in the management of the balances, and it is therefore desirable to take the utmost advantage of the season when there is the greatest demand for bills on India. The postponement of a portion of the Government remittances might stimulate imports on private account, and it might very likely be found that, when the time arrived for calling in the money due to you, the balance of trade had been to some extent adjusted, and that there was no such necessity for remittances from India during the early summer as you had expected.

9 I think, further, that any general understanding of the nature proposed would have the effect of inducing the commercial community to rely even more than at present on the assistance of the Government, instead of taking steps to enlarge the amount of loanable capital in the country, the scarcity of which seems to have been the chief cause of the high rates of discount in the year 1897-98.

10 In these circumstances I am unable to approve of the proposal that you have laid before me. It is impossible to prescribe any specific amount which must be retained in the Reserve Treasury or be otherwise at the command of the Comptroller-General on short notice, in order to meet not merely the disbursements of your Government in India but also the probable amount of remittances to England, and it is essential that an adequate provision should be made for these purposes. Subject to this being maintained, I see no objection to your lending money to the Presidency Banks on the security of Government paper, at such rate of interest from time to time, and for such periods, as you think best. I am inclined to think that the rate should, as a rule, be not below Bank rate.

I have, &c,  
(Sd) GEORGE HAMILTON

Despatch from Secretary of State for India to Government of India,  
No. 147 (Financial), dated 23rd December 1910

To His Excellency the Right Honourable the Governor General  
of India in Council

MY LORD,

Under the decision conveyed in my telegram dated 13th December 1910, the exceptional receipts in 1910-11 due to the high price of opium are to be applied, after allowing for grants to Provincial Governments, to the discharge of temporary debt, but I stated in my telegram of the 19th instant that the discharge will not begin until 1912-13. The explanation of the latter decision is as follows —

The temporary sterling debt on 1st April next will be as shown in the following statement —

Year of Maturity	Maturing Annually	To be discharged at Specified Dates		
	India Bills	India Bonds	Debenture Bonds (issued by Madras and Indian Midland Railway Companies, direct liability assumed by Secretary of State in Council on termination of Contracts with Companies)	Total
1911-12	£ 500,000	£ 500,000	£ 1,776,200	£ 2,276,200
1912-13	500,000	500,000	1,477,600	1,977,600
1913-14	500,000	500,000	1,281,200	1,781,200
1914-15	5,000,000	500,000	—	500,000
1915-16		500,000	407,500	907,500
1916-17		500,000	—	500,000
1917-18		500,000	—	500,000
1918-19		500,000	—	500,000
Total	5,000,000	4,000,000	4,942,500	8,942,500

2 On each occasion when any of the India bills shown in the list above become due, the Secretary of State in Council can either discharge them finally or, in accordance with the practice that has been more usual in recent years, can make an issue of bills in replacement. But, when India bonds or debentures mature, there would be strong objections to issuing similar securities in replacement. Provision for the discharge of bonds and debentures is thus required even more urgently than for the discharge of India bills.

3 An amount almost sufficient for repaying the 1,776,200*l.* debentures maturing in 1911-12 has already been raised, the issue of India bonds in October 1910 having been fixed at 4,000,000*l.* for this purpose, and, as you are aware, it is intended to apply to the discharge of the India bonds maturing in the same year part of the proceeds of the permanent loans of the year. But no arrangements have been made to meet the liability for the repayment of debentures and bonds maturing after 1911-12. In these circumstances it will be prudent to hold in reserve—to be used, if necessary, for meeting that liability—the receipts mentioned at the beginning of this Despatch. But the desirability of reducing the amount of

India bills in existence, to which attention was drawn in Lord Morley's Despatch No 40 (Railway), dated 13th May 1910, will not be overlooked, and, if it is found possible to discharge bonds and debentures maturing after 1911-12 from sources (such as the proceeds of permanent loans) other than the exceptional receipts from opium and to apply those receipts to the discharge of India bills without replacement, this will be done.

I am, &c,  
(Signed) CREWE

---

Telegram from the VICEROY to the SECRETARY OF STATE,  
dated 22nd January, 1913

Your telegram of 6th instant Use in India of Indian balances and restrictions of Council bills First, in connexion with possible revision of our agreement with Presidency Banks, a matter which we are still considering, the question has been raised of the balances to be kept with them, whether at the Head Offices or at branches As the Banks urge that, having regard to increased amount of work performed for Government, they are now entitled to more favourable terms, the question in this connexion should be looked upon as one of remuneration Also, the Indian Specie Bank, at the same time as they applied to you, sounded us recently regarding a loan from balances in India With this exception, excluding the representations you mention in your telegram, we have, during the last 10 years, received no formal representations in favour of (1) depositing larger balances with the Presidency Banks, (2) an extension of the practice of special loans to them, or (3) loans to other banks or firms generally At a recent interview with Sir G. Fleetwood Wilson, the Calcutta Exchange Banks seemed to regard with disfavour the practice of lending on a large scale In addition, we would remark that, while we are ready, when money is required owing to quite exceptional market stringency, to make advances to Presidency Banks, we have for five or six years past, received no requests for loans of the kind, and this fact has a bearing on the agitation for reserving Indian money for use in India Secondly, our practice is to keep at the Head Offices of the Presidency Banks the following balances —

- (1) Bank of Bengal, Rs 70,00,000 or Rs 80,00,000
- (2) Bank of Bombay, Rs 40,00,000 to Rs 50,00,000
- (3) Bank of Madras, a little over Rs 20,00,000

As a rule we do not allow the balances to exceed, in the case of (1), a crore, and, in the case of (2), half a crore, and the Banks are liable for interest on excesses over these sums if they object to their withdrawal On the flotation of a loan, however, in order to allow it to fall easily on the market, the rule is relaxed and caution is observed in withdrawing money, while in special cases, such as the Arbuthnot failure, very high balances are maintained so that a crisis may be avoided In ordinary cases no amounts are fixed for the balances to be held at the branches of the Presidency Banks, but sometimes, as an encouragement to open new branches, a minimum balance is guaranteed for a certain number of years With regard to the restriction of Council bills, it has always been urged by Mr Webb that they should be limited to the amount required to meet your Home charges, and he made representations in September and October 1912 against the increased weekly allotments then being made, on the ground that they prevented the rise of exchange to specie point and interfered with the importation of gold coin and bullion So far as we can trace, no other representations on this subject have been made

On the points put to us, we think that, although improvements may be from time to time suggested by experience, the practice now obtaining is generally sound, and, having regard to the absence of complaints over a long series of years, that responsible opinion in this country is in agreement with us

---

## APPENDIX III

MEMORANDUM AND STATEMENTS ON THE GOLD STANDARD RESERVE, submitted by Mr L ABRAHAMS, C B, Assistant Under Secretary of State for India

## I.

*General.*

1 The Gold Standard Reserve was established in accordance with the following recommendation of the Indian Currency Committee of 1898-99 —

“We also recommend that any profit on the coinage of Rupees should not be credited to the revenue or held as a portion of the ordinary balance of the Government of India, but should be kept in gold as a special reserve, entirely apart from the Paper Currency Reserve and the ordinary Treasury balances”

The form, location and amount of the reserve from 31st March 1901 to 31st March 1913 are shown in Statement A (page 97), and further particulars regarding the constitution of the portion held in England on the 31st March 1913, and the net profit realised on investments up to that date, are given in Statement B (page 98)

The chief questions for consideration regarding the Reserve appear to be those relating to —

- (1) The purposes for which it should be used
- (2) The form in which it should be held
- (3) Its location, that is, whether it should be held in England or India
- (4) Its amount, that is, whether it should be allowed to accumulate indefinitely and, if not, what limit should be placed on its accumulation

## II.

*Purposes for which the Reserve should be used*

2 The Report of the Committee of 1898-99 affords a general indication of their views as to the purpose for which they considered, or would have considered if they had specially dealt with the point, that the Reserve should be used. In paragraph 59 they say —

“We regard it as the principal use of a Gold Reserve that it should be freely available for foreign remittances whenever the exchange falls below specie point [that is, presumably, gold exporting point], and the Government of India should make its gold available for this purpose when necessary, under such conditions as the circumstances of the time may render desirable. For example, the Government of India might, if the exchange showed a tendency to fall below specie point, remit to England a portion of the gold which it may hold, a corresponding reduction being made in the drawings of the Secretary of State”

3 This remark indicates in very general terms the Committee's view of the purposes to be served by any reserve held for the support of exchange. But it was not made with special reference to the Gold Standard Reserve, and I can say from direct personal knowledge that the Committee did not consider what would be the best procedure for enabling the Gold Standard Reserve to serve the purpose indicated in general terms in the passage quoted. If any opinion had been expressed on that point in 1899, it would possibly have been of little value in 1913.

4 As a matter of fact there is, I believe, now a general consensus of opinion that the Reserve, so far as held to provide against a fall in

Exchange, should be used for two purposes, namely, to supplement temporarily the resources in London of the Secretary of State at times when he is unable to sell Council Bills except below specie exporting point, and to serve as a fund for enabling an adverse balance of trade to be liquidated without a fall in exchange. The only occasion on which it has been necessary to use the Reserve for these purposes was in 1907-08, when it was used to the extent of 933,749*l* for the former purpose and 8,058,000*l* for the latter, the procedure in the latter case being that Bills drawn by the Government of India on the Secretary of State and payable in London were offered for sale by the Government of India in each week from 26th March to 10th September 1908, at the fixed rate of 1*s* 3 $\frac{2}{3}$ *d* per rupee. Particulars of the sales will be found in Statement D (page 103).

5 A portion of the Reserve, known as the Indian Branch, is held in India, usually in rupees (*see* Statement A, page 97) and serves a different purpose from the portion held for the support of Exchange. The history of the Indian Branch and the reason for its existence are discussed in Section VI below.

### III.

#### *The form in which the Reserve should be held*

6 It is clear that so far as the Reserve is used to provide against a fall in Exchange, it must be held in a sterling form, that is, either in gold, in securities that may easily be sold for sterling, in money lent at short notice and repayable in sterling, or in bank deposits repayable in sterling. From time to time all these methods have been used. At present, as will be seen from Statement A (page 97), the portion of the Reserve held in England for the support of exchange is partly in securities, partly in money placed at short notice, and partly in gold. I believe that it is wise to hold the Reserve in these forms, though I think that some changes in detail might advantageously be made in the distribution. The advantage of holding a portion of the Reserve in securities and on loan is that, even allowing for the depreciation of securities, the profit is very large. It will be seen from Statement B (page 98) that up to the 31st March 1913 the total interest receipts amounted to 3,421,894*l*, and the loss on the sale of securities and on the depreciation of those still held was 1,121,269*l*, so that the net profit was 2,300,625*l*. It will, of course, be generally agreed that the profit would be bought too dear if the securities could not be readily realised when required. Statement B shows that the danger in this respect is not serious. Of the 15,945,669*l*, shown as the market value of the securities held on the 31st March 1913, 10,989,504*l* was in the form of securities due for early redemption at a fixed date, while 4,956,165*l* consisted of securities which the borrowing Government is either not under obligation to repay or is to repay only at a comparatively distant date and which, therefore, could be realised only by sale in the market or to some other Government department such as the Commissioners for the Reduction of the National Debt. I am of opinion that the amount of securities of this latter class should be reduced as occasion offers, though in view of the large amount of the other resources at the disposal of the Secretary of State for the support of exchange, I think that this change

\* Since 31st March 1913 2666,045 (nominal) Consols have been sold, at an average price slightly exceeding 75 $\frac{1}{2}$ , for 500,000*l*, and the proceeds have been invested in short dated securities.

25th May 1909, 500,000*l* Consols were bought (*see* page 100).

7 The existing orders relating to the form in which the portion of the Gold Standard Reserve held in London is to be kept, are contained in the Secretary of State's Despatch to the Government of India No 76 (Financial), dated the 28th June 1912, which is printed in the collection of papers that I am handing in (*see* page 201). It will be seen that, from the date of that Despatch, profits on coinage and interest on investments which become available for the English portion of the Reserve are to be held in gold until the amount so held reaches 5,000,000*l*. I am of opinion that if, when this amount has been reached, it is possible to find suitable short-dated securities, such as Treasury

Bills and Exchequer bonds, in which to invest future receipts (including the proceeds of any permanent securities that may be realised), it will be an excess of caution to hold in gold more than 5,000,000*l.*, more especially if, as I hope will be the case, the present practice of holding a portion of the Paper Currency Reserve in gold in England is continued. If, as is possible, the supply of short-dated securities is so reduced that they cannot be obtained in sufficient amount for the purposes of the Reserve, then I think that it will be better to increase the holding of gold and of loans against security than the holding of Consols or other permanent stocks.

#### IV.

##### *Location of the Reserve*

8 It is stated in Section II above that the two purposes for which the Reserve, so far as held for the support of exchange, should be used are the payment of a portion of the Secretary of State's disbursements, and the liquidation of the trade balances due by India to other countries. Payments of the former class must obviously be made in London, and payments of the latter class are regularly made in, or through, London. It would, therefore, seem that there is *prima facie* an overwhelming balance of advantage in holding in London the part of the reserve now under consideration. This course has been followed since the reserve was established.\*

9 It should be mentioned, however, that a Resolution proposed by Sir V. D. Thackersey in the Legislative Council in Calcutta on 22nd March 1912, in favour of holding a substantial part of the Reserve in gold in India, received considerable support. It seems desirable to mention some of the considerations against this change.

A It is obvious that such portion of the Reserve as might be held in a sterling form in India, could scarcely be held either in securities or in loans or deposits repayable in sterling. It would therefore be held in gold. Since India is to a very small extent a gold producing country, the greater part, if not the whole, of any gold held in India in the Reserve would be imported, and would, in all probability, reach India either from England or from Australia. There would obviously be some disadvantage in an arrangement necessitating the expense of sending from England to India gold which is intended *ex hypothesi* to be used only for the purpose of being re-exported from India to England. The same consideration would apply to gold imported from Australia, because the cost of freight and insurance on gold from Australia to India is, I believe, precisely the same as from Australia to England and from India to England, so that, if gold intended for the Reserve were sent in the first instance from Australia to India, retained in India for a time, and then sent to England, the freight and insurance charges would be paid twice instead of once.

B The holding in gold in India of any considerable part of what is now held in securities in England would obviously cause a serious loss of interest.

C When the moment arrived for using in London gold held in India, a delay of about three weeks would occur while it was being shipped to London. In critical times this might be a considerable disadvantage.

D Far more important than the considerations mentioned, is the uncertainty as to the extent to which gold held in the Reserve in India would really be used for the support of exchange. Presumably such gold, so far as not shipped to the Secretary of State to be used towards meeting the general disbursements of the India Office, would be issued to the public in exchange for rupees in the hope that it would be exported to liquidate the balance of trade indebtedness. It may be said with confidence that, in the absence of special regulations (a matter on which something is said on the next page), much of the amount issued would certainly be used for quite other purposes. The evidence in support of this statement is partly of a general nature, and partly derived from the actual course of events in 1907-08,

\* The amounts shown in Column 6 of Statement A on page 97 represent profits on coinage temporarily held in gold in India pending remittance to England for investment.

the one period since the establishment of the reserve when special measures for the support of exchange has been necessary\*.

(a) The evidence of a general nature is as follows. Since the practice of issuing gold to the public in exchange for Rupees was instituted, the rate at which issues have been made has been 1l = Rs 15, or 1s 4d per Rupee, and it is clear for reasons which I can give, if necessary, that, if sovereigns are to be issued at a time of an unfavourable trade balance for the purpose of preventing exchange from falling below gold exporting point, the rate at which they are to be issued must not be more unfavourable to the recipient than this established rate. At such a time the price in India of sovereigns other than those issued from Government reserves would be appreciably in excess of Rs 15 each, the price corresponding to an exchange rate of 1s 3½d per Rupee being Rs 15, annas 1½, per sovereign. It would, therefore, be profitable to anyone in India who desired sovereigns for use in India, to get them from Government treasuries rather than from any other source, and it may be taken as certain that, in the absence of special restrictive regulations, the whole internal demand would be met by drawing on Government treasuries and reserves, so that, up to the limit of that demand, sovereigns issued from the Gold Standard Reserve would pass into use in India for circulation, melting, or hoarding, instead of being exported to pay foreign obligations.

(b) The evidence derived from the course of events in 1907-08 will be found in Statement D in the columns headed "Diminution of Government Stock of Gold in India" and "Exports of Sovereigns and other British Gold Coins from India on private account" (page 103). It will be seen that the sovereigns held in Government treasuries and reserves in India decreased between September 1907 and December 1908 by 4,394,000l of which 215,000l represented light coin sent by the Government of India to the Secretary of State, and the remainder (4,179,000l) issues to the public in India. The export on private account during the same period amounted to 249,942l that is to say, 6 per cent of the total amount issued by the Government to the public in India during this adverse period was exported and so served the primary purpose for which, in the opinion of the Fowler Committee, reserves should be held, while 94 per cent was used for other purposes.

10 It might perhaps be possible, if the sterling part of the Gold Standard Reserve were held in gold in India, to introduce restrictive regulations for the purpose of securing that any sovereigns issued therefrom at a time of weak exchange should be exported for the purpose of meeting trade indebtedness and for no other purpose. The framing and enforcing of such regulations would possibly be a matter of considerable difficulty. There would always be a risk of evasion, and I think that such a risk should not be undertaken in view of the enormous sacrifices that India has made, and is making, in order to build up its reserve for the maintenance of exchange. I believe that the extent of these sacrifices is sometimes very imperfectly realised, and it seems worth while to give the following brief particulars to illustrate their magnitude. Under existing orders, as shown below, the sterling part of the Gold Standard Reserve is to accumulate to not less than 25,000,000l. This represents money which, if not put by for the maintenance of exchange, would presumably be used for capital expenditure on railways or irrigation works. What could be done for such a sum is shown by the fact that 25,000,000l represents approximately the total cost up to the 31st March 1912 of the Bengal-Nagpur Railway, which produced a net revenue in 1911-12 of 1,164,000l, is about 2,600 miles long, and has been, I believe, of incalculable value in increasing the prosperity and the security against famine of the vast area that it serves. Expressed in terms of irrigation works, 25,000,000l represents 70 per cent of the capital cost of the whole of the Major Irrigation Works in India up to the 31st March 1912, which produced a revenue in 1911-12 of more than 2,500,000l, and of the economic and productive value of which it is scarcely necessary to say anything. The appropriation for the maintenance of exchange, of a sum representing so vast a potentiality of financial, economic, and protective

\* I omit as insignificant the sale in September 1909 of Bills on London for 156,000l under the conditions mentioned at the end of Section II.

advantage to India is probably not excessive, but it is clear that, when so great a fund is being set aside in order to secure a particular result, it would be unwise to incur the risk of any substantial portion of its being used for other purposes, such as to enable hoarders or makers of gold ornaments to buy gold at a few pence less per ounce than they would have to pay if they could not get it from the Gold Standard Reserve

## V.

### *Amount of the Reserve*

11 The question of the amount up to which the London Branch of the Reserve should be allowed to accumulate has been discussed at various times in the last nine years. Some of the opinions expressed by responsible authorities are mentioned in Lord Morley's Financial Despatch No. 82 of 2nd July 1909, which is included in the collection of papers that I am handing in (*see* page 175). The present position is, that the whole profits on coinage and interest on investments have been added to the London Branch of the Reserve with the exception of

- (1) about 1,000,000*l* used for capital expenditure on railways in 1907-08, in accordance with the recommendation made in that year by a Committee on railway administration and finance, whose interim report is included in the collection of papers that I hand in, and
- (2) the amount held in rupees in India under the arrangement described in Section VI below

12 In his Despatch No 76 of 28th June 1912 (page 201), the Secretary of State decided that future profits on coinage and interest on investments becoming available for addition to the London Branch of the Reserve shall be added thereto in full, and no part used for any other purpose, such as capital expenditure on railways, until the London Branch shall have reached 25,000,000*l*

13 It would be possible to collect arguments from various sources regarding the sufficiency of the figure mentioned, but I think that the best guidance can be obtained from the experience of 1907-08. The exceptional severity of the adverse conditions of that period is set forth in Lord Morley's Despatch No 82 of 2nd July 1909 and its enclosure (page 201), which summarises the figures relating to the foreign trade of India from 1st November to 31st October in each year from 1896-97 to 1907-08, and shows that, although the period included two severe famines, the only year in which there was an adverse balance of trade was 1907-08. The statistics of this period thus illustrate the effects of as severe a period of adversity as it is reasonable to anticipate, and the best method of deciding the amount up to which the sterling part of the Gold Standard Reserve should be allowed to accumulate before a portion of future receipts from profits of coinage is used for other purposes, such as capital expenditure on railways and irrigation works, seems to be—

- (1) To calculate the exceptional demands made in 1907-08 on the resources available for the support of exchange
- (2) To base the decision as to the further accumulation of the Reserve on the view that it, together with the other resources available for the support of exchange, should exceed by a liberal margin the amount of the exceptional demands calculated under (1)

In making a calculation of the kind suggested in (1) it will be convenient to deal separately with transactions in England and India respectively.

14 As regards transactions in England I submit in Statement E (page 104) particulars of all cash receipts and disbursements of the India Office for each month from 1st September 1907 (which is certainly the earliest date at which the adverse period can be said to have begun, since in the previous month Council Bills had been sold for a large amount and the stock of gold held by the Government of India had been increasing) to the 31st December 1908, which may be taken as the end of the adverse period, since from that time Council Bills were again sold steadily, and no further measures were taken for the support of exchange.

15 The significance of the rather copious particulars in Statement E is brought out in the following summary —

INDIA OFFICE CASH TRANSACTIONS, 1st September 1907 to 31st December 1908  
(Summary of Statement E, page 104)

GOLD STANDARD RESERVE

		£			£
Opening Cash balance (apart from securities)	-	38,406	Invested	-	2,823,563
Cash Receipts	-		Payments to meet bills drawn by the Government of India on Secretary of State, and sold to bankers, merchants, &c, in India	-	8,058,000
Dividends and remittances from India	-	954,855	Temporarily transferred to general India Office balance for meeting Secretary of State's requirements (See "Other Transactions" below)	-	933,749
Securities sold or repaid on maturity	-	10,822,051	Closing Cash balance [The market value of the sterling securities at this date was 5,104,078½]	-	—
		11,776,906			
Total	-	11,815,312	Total	-	11,815,312

OTHER TRANSACTIONS

		£			£
Opening balance	-	5,146,111	Railways Payments on Capital Account, including discharge of railway loans	-	12,396,194
Railways Proceeds of railway loans	-	13,595,597	Purchase of silver	-	1,523,501
General purposes	-		General Purposes Payments (less 933,749½ met by temporary transfer from Gold Standard Reserve, as shown above)	-	23,656,241
Receipts from sale of Council Bills and Transfers and Miscellaneous	-	15,026,532	Closing balance	-	5,222,304
Gold withdrawn from Paper Currency Reserve	-	4,530,000			
Proceeds of India Bills issued for general purposes	-	4,500,000			
		24,056,532			
Total	-	42,798,240	Total	-	42,798,240

16 The upper part of the summary shows that the Gold Standard Reserve was drawn upon to the extent of 8,050,000*l* to meet bills sold in India towards enabling the unfavourable trade balance to be liquidated, and 933,749*l* towards meeting the Secretary of State's requirements or 8,991,749*l* in all

17. Regarding the exact amount of the exceptional demands included in the transactions shown in the lower part of the summary ("Other Transactions,") there is room for difference of opinion, but not to any very important extent. The correct figure appears to me to be 8,629,709*l*, being the excess of the expenditure of 23,656,241*l* for General Purposes over the receipts of 15,026,532*l* received for such purposes from normal sources, and it will be noticed that the abnormal receipts from which this excess was met, namely 4,530,000*l* withdrawn in gold from the Paper Currency Reserve, and 4,500,000*l* received through the issue of India Bills, corresponds fairly closely to this amount, the difference being due to the fact that the amounts provided from these two sources proved to be slightly in excess of requirements as indicated by the comparatively large amount of the closing balance. I exclude from my calculations of "exceptional demands" the following sums shown in the summary —

A 1,199,403*l*, representing the excess of the proceeds of railway loans over payments for railways on capital account. The reason for this exclusion is that, as explained in my Memorandum on "The General Balances of the Government of India on the Sale of Council Bills and Transfers" the raising in England of railway loans in excess of the capital expenditure in England on railways in years in which there are no large balances to draw

upon, is necessitated by the fact that the loans raised in India and other resources in India specially allocated for capital expenditure, ordinarily fall short of the capital outlay in India.

B 1,523,501*l* paid for silver bought before the prospect of an adverse trade balance showed itself. If I give evidence as to the way in which the purchase of silver is regulated, I shall be able to show that the purchases which involved this payment were in excess of requirements, would not have been made if the system now in force of regulating purchases in accordance with the India Office Memorandum (page 188) enclosed in Lord Morley's Despatch No 25 of 18th February 1910 had been in force in 1907, and would not be made on any future occasion on which the conditions existing in 1907 were reproduced.

18 I therefore calculate that the exceptional demands that had to be met in the sixteen months from September 1907 to December 1908 in consequence of the unfavourable state of exchange were as follows —

	£
From Gold Standard Reserve (to meet Bills and to strengthen Treasury Balances) - -	8,991,749
Excess of payments for general purposes over normal receipts available for such purposes (as shown under "Other Transactions") - -	8,629,709
Total -	17,621,458

19 Assuming that the strain experienced in the period mentioned is as great, or nearly as great, as it is reasonable to provide for, it would appear that even if the London Branch of the Gold Standard Reserve were the only resource at the disposal of the Secretary of State in England for meeting a fall in exchange, the present regulations which provide that it shall accumulate up to 25,000,000*l*, and which contemplate that thereafter a portion of the profits of future coinage may be diverted to other purposes (leaving a portion to be added to the Reserve, together with the accruing interest, to provide for the growth of possible requirements), do not err on the side of rashness. As a matter of fact there appears to be no reason, unless a change of policy is made with regard to the Paper Currency Reserve, for not assuming that there will also be available at the commencement of any future period of adverse exchange, several millions in gold in the Paper Currency Reserve in England ready to be used, like the 4,530,000*l* mentioned in the summary on the preceding page as having been so used in 1907-08, to supplement the Gold Standard Reserve.

20 Up to this point I have dealt only with the extent to which the exceptional demands for the support of exchange between September 1907 and December 1908 arose and were met in England. It might be held that the diminution during this period of the stock of gold held by the Government of India in India, as shown in Statement D (page 103) represents exceptional demands for the same purpose that arose and were met in India. For the reasons given in paragraph 4 (b) above, I think that this view is substantially incorrect. It seems clear from the figures referred to in that paragraph and given in detail in the penultimate column of Statement D that in 1907-08 the gold held in India was of little, if any, immediate use for the support of exchange and that practically the whole of the exceptional demands for the support of exchange were met in England and were represented by the figure of 17,621,458*l* given above. Any difference of opinion on this point does not appear to affect materially the argument regarding the amount required for the Gold Standard Reserve in England. There is no reason to doubt that at the commencement of any future exchange crisis, a certain stock of gold will be held by the Government of India in the Paper Currency Reserve in India, as was the case in 1907-8, and will serve to the same extent (if any) as the gold then held to meet demands arising in India for the support of exchange. If this is so, the calculation in support of the argument that 25,000,000*l* is enough to meet demands for the same purpose arising in England is unaffected.

21 Even if the Commission does not accept the particular calculation above as to the amount to which the London Branch of the Gold Standard Reserve should be allowed to accumulate before profits on further coinage are used for capital expenditure, they may perhaps accept the view that some limit should be fixed, and that when that limit has been reached a portion of future profits should be used for the purpose mentioned. Failing this, there will be a danger that money urgently required for the development of India and for its security against famine, will be uneconomically employed by being added unnecessarily to the Gold Standard Reserve.

## VI.

### *Indian Branch of the Reserve*

22 Statement A (page 97) shows that since 1906 a portion of the Gold Standard Reserve (now known as the Indian Branch of the Reserve) has been held in India in silver. The recognised normal amount to be so held is six crores of rupees (4,000,000), though for special reasons this figure has often been departed from. For the first few months the amount so held was in partially coined rupees. Lord Morley's Despatch of 16th November 1906, No 135, page 146, sanctioned a proposal of the Government of India that it should be held in rupees. Under an arrangement proposed in paragraph 8 of the Letter from the Government of India, No. 48, of 29th February 1912, page 195, and accepted by the Secretary of State in his Despatch, No 76 (Financial), of 28th June 1912, page 201, a portion of the Indian branch of the Reserve will occasionally be held for a few months in the year in gold in India. The reason for the establishment of the Indian Branch was that in 1906 the Government of India (*see their Letter of 26th April 1906, Appendix V, page 137,*) wished to increase their holding of rupees and of silver ready for coinage, and thought that the cost could be met advantageously, and without prejudice to the future maintenance of exchange, from money that would otherwise have gone to the sterling branch of the Gold Standard Reserve. Their proposal to this effect was approved by the Secretary of State. The advantage of what was done in 1906 arose from the fact that, if the additional silver then required had not been bought from the resources of the Gold Standard Reserve, only a small part of its cost could have been met from the balances of the Secretary of State and the Government of India, and it would therefore have been necessary to pay a considerable portion from the gold held in the Paper Currency Reserve. This was thought undesirable at the time, because the stock of gold in the Paper Currency Reserve was comparatively low, and it seemed more advantageous to avoid reducing it than to secure a corresponding increase in the securities of the Gold Standard Reserve. The force of this consideration has now passed away, owing to the great increase in the circulation of currency notes and in the amount of gold that can be, and is, held in the Paper Currency Reserve, and, if there were no other consideration affecting the matter, there would be much to be said for the view that the right course would now be to transfer to the Paper Currency Reserve all the rupees held in the Gold Standard Reserve against a corresponding transfer of sovereigns in the other direction.

23 There are, however, two other points to be borne in mind —

(A) In a Letter of the 29th February 1912, page 195, Appendix V, the Government of India make the following remarks — "Our Gold Standard Reserve silver is a bulwark against hasty coming. It supplements our general stock of rupees when the latter is running low, it gives us time to buy silver at discretion, or if the stringency is temporary, it enables us to carry through without fresh coming until the return of rupees from circulation recommences." I think that the effect of these remarks is mainly that, if the standard of the amount of rupees to be held in the Paper Currency Reserve is rather too low, the presence of rupees in the Indian branch of the Gold Standard Reserve supplements the deficiency. But it would seem that the deficiency could be removed with greater directness and simplicity and less liability to misunderstanding by

raising the standard of rupees to be held in the Paper Currency Reserve. On this view, this particular justification for the existence of the Indian branch of the Gold Standard Reserve would not have very great force.

(B) There is a wholly different justification, which seems to have great force. I fear that its explanation must be a little intricate. From time to time there is a trade demand for Council Bills and Transfers considerably in excess of what the Government of India can meet from their Treasury balances. The usual method of dealing with such a demand is as follows—

- (1) The Secretary of State responds to it by selling Bills and Transfers, as indeed he is bound to do, under the Notification issued by Mr Brodrick in 1904, when the demand is for Bills at 1s 4½d the rupee.
- (2) Except in circumstances such as are described immediately below, he transfers the proceeds of his sales in sovereigns to the portion of the Paper Currency Reserve held in England (or, in money market language, "earmarks" sovereigns), and thus enables the Government of India to place themselves in funds for meeting the Bills and Transfers either by the issue of additional notes against the "earmarked" gold or by the withdrawal of a corresponding amount in rupees from the portion of the Paper Currency Reserve held in India.

24. Indian interests would be liable to be injured if this procedure were followed, either at a time when the Secretary of State has in hand an operation (such as the issue of a loan or the renewal of a large block of debenture bonds) of which the success might be prejudiced by sudden stringency in the London money market or at a time when stringency already exists and an increase of it is likely to react on trade generally, including Indian trade. And this liability to injury would not be avoided, as might at first seem possible, if the Secretary of State had recourse to the simple expedient of refusing to sell Bills and Transfers, since such action would probably lead to large shipments of gold by the Exchange Banks from England to India, with an effect on the money market similar to that produced by "earmarking."

25. In circumstances such as these, Bills and Transfers sold by the Secretary of State are met by the Government of India from the rupees<sup>\*</sup> in the Indian Branch of the Gold Standard Reserve, the sale proceeds are temporarily added by the Secretary of State to the London Branch, and disturbance of the London money market is avoided. This seems to be an extremely useful purpose served by the Indian Branch, so useful, indeed, as to justify the continued maintenance of the Indian Branch, unless an alternative method of securing the same object is introduced.

26. The one alternative method that has been suggested is to amend the Indian Paper Currency Act so as to allow the Secretary of State to make temporary additions to the London portion of the Paper Currency Reserve by other means than the "earmarking" of gold, *e.g.*, by adding sterling securities or by allocating to the Reserve deposits at the Bank of England or loans granted under suitable conditions to first-class borrowers against British or Indian Government securities. This scheme has some obvious advantages; its disadvantages are that—

The purchase at short notice of large quantities of securities suitable to be held for a few weeks or months and then sold would seldom be easy and might at times be impracticable.

The temporary holding, as part of the Reserve, of Bank of England deposits or loans on security, while open to no substantial objection—since scarcely any safer form of reserve can be found—might be regarded on account of its novelty with suspicion as a form of "juggling with the Reserve." This objection would certainly be diminished, perhaps removed, if the scheme were recommended by so authoritative a body as the present Royal Commission.

\* Hitherto rupees have been taken from the Indian Branch as a loan, but the improved procedure described in the text has now been agreed to by the Secretary of State and the Government of India (See Lord Crewe's Despatch, No 13 (Financial), dated 24th January 1913, page 206.)

27 As it is possible that the Commission may recommend, and His Majesty's Government may approve, the abolition of the Indian Branch of the Gold Standard Reserve, it may be well to say something of the steps by which this measure could be carried out

28 The first step would naturally be to transfer simultaneously (1) all the rupees now in the Gold Standard Reserve to the Paper Currency Reserve, and (2) an equivalent amount in sovereigns from the Paper Currency Reserve to the Gold Standard Reserve. It would be necessary to decide at the same time what was to be done with the sovereigns. One alternative would be to hold them in India, to be shipped to the Secretary of State on the next occasion of a serious fall in exchange. Another alternative would be to hold them in India to be issued to the public in exchange for rupees on any such occasion, under such regulations as might seem best calculated to ensure that, when so issued, they would be used for export in liquidation of an adverse trade balance. If the first of these alternatives were adopted, the Indian branch of the Reserve would serve the same purpose as the London branch, viz, to support exchange during unfavourable trade conditions. This would also be the case under the second alternative, provided that the regulations suggested were really effective, a point of which the importance is sufficiently illustrated by what is said on page 90. A third alternative would be to send the sovereigns to England as soon as they were transferred from the Paper Currency Reserve, and either to hold them at the Bank of England, apart from the Bank's general reserve, or to buy with them short dated securities.

---

## Statement A.

\* The Gazette of India, 9th December 1905, gives the amount of gold held in India as 370,000l. and the amount of Treasury Bills held in England as 1,200,000l. A transfer of 300,000l. to Gold Standard Reserve in England was, however, actually made on 28th September, and the sum was invested in Treasury Bills, raising the amount of the latter to 1,500,000l.

† Including 2,533,333l. temporary loan to the Government of India at 3½ per cent. interest.

‡ Including 1,000,000l. temporary loan to the Government of India at 3½ per cent. interest.

§ Including 2,000,000l. temporary loan to the Government of India.

A 1916

## APPENDIX IV

## SUPPLEMENTARY STATEMENTS TO ACCOMPANY MEMORANDUM ON GOLD STANDARD RESERVE, SUBMITTED BY MR L ABRAHAMS, C B, ASSISTANT UNDER SECRETARY OF STATE FOR INDIA

In connection with the question of the amount up to which the London branch of the Gold Standard Reserve should be allowed to accumulate, I submit three additional statements

Statement 1—The summary on page 92 of my Memorandum on the Gold Standard Reserve gave information about the cash transactions of the India Office from 1st September 1907 to 31st December 1908, that period being chosen because it included all the special measures taken in 1907 and 1908 for supporting exchange, or arising out of the necessity for so doing, the last of such measures having been the issue of 2,500,000*l.* India Bills in December 1908. Statement 1 below gives corresponding information for the period from 1st September 1907 to 31st August 1908, the latter month being the one in which the exchange crisis may be considered from some points of view to have ended since no application was received after 13th August for the bills on London offered by the Government of India, and substantial sales of Council Bills were made by the Secretary of State in September 1908. As there is room for difference of opinion as to the period over which the difficulties of 1907 and 1908 should be regarded as having extended, and consequently as to the extent of the exceptional demands that had to be met, the Royal Commission may be glad of the alternative calculation now submitted.

Statement 2 gives the balance of trade on private account for each financial year from 1871-72 to 1912-13, and shows that the two years 1907-08 and 1908-09, in which the exchange crisis of 1907 and 1908 occurred were within a very small amount of being the worst two successive years in the period of 42 years.

Statement 3 gives for the period from November to October in each year from 1892-93 to 1911-12 information, similar to that contained in the enclosure to Lord Morley's Despatch, No 82, dated 2nd July 1909 (*See* page 175 of the Correspondence accompanying my Memorandum on the Gold Standard Reserve). It shows in a much more striking manner than do the figures for financial years the very exceptional nature of the conditions that prevailed in 1907 and 1908.

## STATEMENT 1

INDIA OFFICE CASH TRANSACTIONS, 1st September 1907 to 31st August 1908  
(Summary of figures for those months given in Statement E, page 104)

## GOLD STANDARD RESERVE

		£			£
Opening Cash balance (apart from securities)	-	38,406	Invested	-	2,823,563
Cash Receipts)			Payments to meet bills drawn by the Government of India on Secretary of State and sold to bankers, merchants, &c, in India, 8,038,000/ less 375,785/ met temporarily from Treasury Balances	-	7,662,215
Dividends and remittances from India	-	901,008	Closing Cash balance [The market value of the sterling securities at this date was 6,415,931/]	-	-
Securities sold or repaid on maturity	-	9,546,364			
		10,447,372			
Total	-	<u>10,485,778</u>	Total	-	<u>10,485,778</u>

## OTHER TRANSACTIONS

		£			£
Opening balance	-	5,146,111	Railways Payments on Capital Account, including discharge of railway loans	-	9,416,078
Railways Proceeds of railway loans	-	12,263,323	Purchase of silver	-	1,523,501
General purposes			General Purposes Payments including 375,785/ temporarily used to meet Bills on London (shown under Gold Standard Reserve)	-	19,453,772
Receipts from sale of Council Bills and Transfers and Miscellaneous	-	8,872,946	Closing balance	-	2,214,029
Gold withdrawn from Paper Currency Reserve	-	4,325,000			
Proceeds of India Bills issued for general purposes	-	2,000,000			
		15,197,946			
Total	-	<u>32,607,380</u>	Total	-	<u>32,607,380</u>

The exceptional demands on India Office resources, arising from the unfavourable position of exchange in 1907 and 1908, are shown in the Summary above to have been, during the period from 1st September 1907 to 31st August 1908, as follows —

		£
Shown under "Gold Standard Reserve" Payments to meet bills, &c	-	7,662,215
Shown under "Other Transactions" Excess of Payments for General Purposes (19,453,772/ ) over Receipts from Sale of Council Bills and Miscellaneous (8,872,946/ )	-	10,580,826
Total	-	<u>18,243,041</u>

STATEMENT 2

Net Exports of Merchandise and Treasure from India on Private Account from 1st April to 31st March in each year from 1871-72 to 1912-13 (from yearly Trade Tables)

## APPENDIX V

CORRESPONDENCE TO ACCOMPANY MEMORANDUM AND STATEMENTS ON GOLD  
STANDARD RESERVE, HANDED IN BY MR L ABRAHAMS, C B, ASSISTANT  
UNDER SECRETARY OF STATE FOR INDIA

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE,  
No 302, dated 6th September 1900

MY LORD,

In our Despatch No 301 of 24th August 1899, we wrote, with reference to paragraph 60 of the Report of the Indian Currency Committee, 1898 "The proposal made by the Committee that any profit made on rupee coinage should be held in gold as a special reserve has not escaped our attention, but the need for the coinage of additional rupees is not likely to occur for some time, and a decision on this point may conveniently be deferred."

In our Despatch No 421 of 14th December 1899, in view of the large influx of gold which had then begun, we discussed the question of the amount or proportion of gold which we can conveniently hold in the Paper Currency Reserve, bearing in mind that presenters of notes may, for some time to come, prefer rupees to sovereigns, and that it is expedient to meet their wishes as far as possible. We then estimated that it was desirable to hold in rupees 9½ crores, with which amount we believed that there would be practically no fear of our having to exercise our option of paying currency notes in sovereigns against the wishes of the presenter. The note circulation being then about 27 crores, the deduction of the investment of 10 crores and the silver holding of 9½ crores left about 7½ crores or 5,000,000l to be held in gold. And the immediate measure proposed was that when the stock of gold reached 5,000,000l the Currency Offices should be instructed to offer sovereigns to presenters of notes, but to give rupees to anyone who might object to receive sovereigns and who might ask for rupees. We said that it was not possible at that time to propose a more definite policy than that of paying out some gold when the limit suggested had been passed, that we would watch with close attention what befell the gold paid out and the attitude of the public, that we hoped, proceeding in this tentative fashion, to be able in the course of the summer of 1900 to give a more confident answer to the important question discussed, "and perhaps also to form an opinion as to when it may be desirable for the Government to make some addition to the rupee coinage."

2. As will be seen from the table in paragraph 3 of our Honourable Colleague Sir E Law's Minute of 28th June, appended to this Despatch, the receipts of gold continued and increased after December last. For more than eight months the gold in the Currency Reserve has exceeded, and the silver has been less than, the limits suggested in the Despatch of that month. By the middle of January the stock of gold in the Currency Reserve in India reached 5,000,000l. The proposal made in that Despatch was at once brought into operation, later on we sent supplies of sovereigns to the larger District Treasuries, with instructions that they should be issued to anyone who desired to receive them in payments due or in exchange for rupees, and in March we directed the Post Office to make in sovereigns all payments of Money Orders in the Presidency Towns and Rangoon, and we requested the Presidency Banks to make in the Presidency Towns and Rangoon payments on Government account as far as possible in sovereigns. These measures were taken, not so much in the expectation that they would in the early future relieve us of any large part of our surplus gold, but in the

hope that they would accustom the people to gold, would hasten the time when it will pass into general circulation in considerable quantities, and by so doing would mitigate in future years the difficulties that we were experiencing from the magnitude of our stock of gold and the depletion of our stock of rupees

3 In order to meet those difficulties and to secure, if possible, that we should have enough rupees for payment to presenters of currency notes and tenderers of gold, we began to coin additional rupees. In January and February we purchased in India sufficient silver to coin about a crore of rupees; and, at the same time, we re-coined into rupees between 30 and 40 lakhs of old rupees which had been withdrawn from circulation. Subsequently we requested your Lordship to make the following purchases of silver for coinage —

In March 500,000*l* worth,  
In April 500,000*l* worth;  
In May 500,000*l* worth, and  
In June 400,000*l* worth

These requests were complied with and the coinage is still proceeding. In May we also obtained from the Maharaja of Gwalior a loan in the shape of Gwalior coins, worth about 45 lakhs, which we have coined into about 69 lakhs of new rupees. The total new coinage that we have undertaken accordingly amounts to about 6½ crores.

4 In order further to relieve our difficulties we, in May, ceased receiving gold bullion below standard fineness, other than the produce of the Indian mines, and also directed that sixty days should be fixed as the period for the payment of certificates in respect of gold tendered under the Notification No. 2662 of 26th June 1893.

5 From the above short summary of events which have occurred in the present calendar year, it will be evident that the time has now come when it is desirable to arrive at an early decision on both the questions described in paragraph 1 of this Despatch. Our Honourable Colleague Sir E. Law has discussed the subject in all its bearings, and stated the measures which he recommends for adoption, in a comprehensive Minute, dated 28th June, which forms an enclosure to this Despatch. We also append a Minute, dated 8th July, by His Excellency the Viceroy, making observations and inquiries regarding Sir E. Law's proposals, and two Minutes by Sir E. Law, dated 21st July, and 23rd August, explaining and, in one or two points, modifying his proposals.

6 Our Honourable Colleague's proposals may be summarised as follows —

- (1) To adopt the recommendation in paragraph 60 of the Report of the Indian Currency Committee, that the profits on the coinage of rupees should not be credited to the Revenue or held as a portion of the ordinary balance of the Government of India, but should be kept in gold as a special reserve entirely apart from the Paper Currency Reserve and the ordinary Treasury Balances.
- (2) To add to the special reserve in gold, formed primarily by the profits on coinage, the annual interest on the investment of the Paper Currency Reserve.
- (3) To use in future for the purchase of silver for coinage into rupees any excess over 7,000,000*l* in the stock of gold in the Paper Currency Reserve.
- (4) To transfer very gradually the existing investment of 10 crores from Government of India Rupee Securities to Government of India Sterling Securities.
- (5) (a) To gradually increase the amount of the Paper Currency Investment, at present 10 crores, to a sum approximating to 50 per cent of the circulation of Currency Notes, the increase being 5 crores if the circulation remains at its present level of about 30 crores.

- (b) To make the additional investment in British Consols
- (c) To take the funds for the additional investment from the stock of 7,000,000<sup>l</sup> of gold remaining in the Currency Reserve under proposal (3), thus reducing that stock to about £3½ millions, the investment to be made gradually

7 We unanimously support (1), (2), and (3) of the above proposals and strongly recommend them to your Lordship for sanction. We submit the following explanations of the reasons in favour of these three proposals and of the manner in which they would be worked in practice

8 With regard to proposal (1), the fact that it was unanimously recommended by the Indian Currency Committee invests it with great authority and enables us to refrain from entering into any lengthy justification. The only objection to it of any importance is that in a country like India, which borrows every year for the construction of railways and canals, it may be said to be generally inexpedient to withdraw any portion of the receipts from the general balances to be employed specially, since that course involves an increase of the annual loans by the amount so withdrawn, and consequently an increased interest charge. But there are objects of sufficient importance to justify such a proceeding, and we think the maintenance of a stock of gold, adequate to ensure the success of our currency policy, to be emphatically such an object. As will appear from our remarks regarding proposal (3), we have found by experience that we cannot maintain in the Paper Currency Reserve a stock of gold of the magnitude which may be required in possible circumstances. We therefore consider it desirable that a reserve of gold should be formed outside the Currency Reserve, which will supplement the stock in that Reserve for the present, and will in time take the place of that stock and relieve us of the necessity for keeping anything more than a small amount of gold in the Currency Reserve, this would be in accordance with the view of Lord Elgin's Government that the Reserve should not be used for the general purposes of our exchange policy. We consider the formation of a Special Gold Reserve to be an object of sufficient importance to justify the ear-marking of the receipts from profit on coinage as proposed

- 9 The steps required to carry out this measure will be the following —
- (a) To direct that the profits on coinage shall cease to be credited to a Revenue Head and shall be taken to a special Debt Head of receipt.
- (b) To direct that the amount of the profits shall be paid in rupees into the Paper Currency Reserve, releasing therefrom an equivalent amount of gold
- (c) To direct that the gold so released shall be held as a "Special Gold Reserve" apart from the ordinary Treasury Balances
- (d) The current gold transactions, receipts and issues, will continue for the present to be passed through the Currency Reserve. When the amount of gold in that Reserve falls below the amount required for these current transactions, there will be paid from the "Special Gold Reserve" into the Currency Reserve the sum required to make up that amount, releasing rupees
- (e) The rupees so released will be held in the "Special Gold Reserve" to be available for return to the Currency Reserve in the event of the current of trade requirements turning, at not too great an interval of time, in the contrary direction and creating again a demand for rupees. If the demand continued for a long time to be for sovereigns, and if it exhausted our gold stock, we should contemplate meeting the demand in the first instance by selling the sterling investments of the Currency Department.

We do not consider it necessary at present to contemplate having recourse to the last resort of melting down rupees and selling the bullion for gold.

10 It remains to consider the extent to which we can give early effect to this proposal. In regard to future coinage we apprehend no difficulty. To

\* Paragraph 7 of Despatch No. 131 of 2nd June 1896 (not printed).

replace, say, 500,000l, only 75 lakhs of rupees are required, the silver purchased with that sum of gold will, however, be coined into over 100 lakhs, the difference being the profits on the coinage. The coinage will thus itself create the funds for the payments to the Currency Reserve under (b) of the preceding paragraph, and we shall be in the same position in respect of general resource operations as if no coinage had been found necessary.

11. In regard to the profits on the coinage which has been already undertaken, as detailed in paragraph 3 above, there is a difficulty. The enormous demands on our balances caused by the famine, in the way of direct expenditure on famine relief, indirect expenditure, agricultural advances, and loans to Native States, have compelled us to use the profits on the past coinage in aid of our general balances, in order to keep our borrowing this year within the amount which there was a hope of raising on reasonable terms. It will therefore be impossible for us to pay into the Currency Reserve immediately the number of rupees representing these past profits. For these we shall immediately take only step (a) of paragraph 9, and the amount of the profit on the coinage detailed in paragraph 3 both this year and last will remain as a book credit of the Debt Head until we are in a position to make the payments into the Currency Reserve. Thus we expect to be able to do gradually as the famine loans and advances to Native States are repaid to us. The necessity for using the profits on coinage in aid of our general balances this year may be held to have arisen because of our decision to make those loans, and it will be appropriate to consider them as in a general way hypothecated for the desired payments into the Currency Reserve.

12. Proposal (2) of paragraph 6 is an extension of the recommendation of the Indian Currency Committee, and the same general observations apply. We think it desirable that the formation of the "Special Gold Reserve" should be hastened by any convenient addition, and we consider the annual interest on the Currency Investment an appropriate item to devote to this purpose. The interest on the present investment is Rs 34,70,000.

13. Proposal (3) of paragraph 6 is one that has been forced upon us by our embarrassing experience since the month of January. Soon after the large gold receipts had reduced the stock of rupees in the Currency Reserve below the limit of 9½ crores, mentioned in our Despatch of December 1899, the Comptroller-General in February last proposed that we should adopt such a rule as is now proposed and convert into rupees any gold in the Reserve in excess of a certain amount. He was led to make this suggestion by the very great practical difficulties that he was then encountering in administering the Treasuries and the Currency Department, and in meeting the demands made upon him for rupees in exchange for notes and for gold. We were not at that time convinced that so large a coinage as the proposal involved would be necessary. We hoped that the difficulties in meeting the demand for rupees would come to an end with the termination of the Burma rice season, before undertaking further coinage we desired to await the experience of the season of slack trade, and to see whether any large portion of the rupees which had been passed into general circulation in the preceding sixteen months would return to the trade centres after the cessation of our heavy famine expenditure. All that we thought it necessary then to do in the direction of further coinage was to ask your Lordship to purchase 500,000l worth of silver, a step which we took on 5th March. The difficulties however, did not disappear, but increased in intensity. On 11th April the Calcutta Currency Office was obliged to refuse to give rupees in the encashment of a small amount of currency notes presented on that day, and for some weeks thereafter we were in daily fear that there might be a recurrence of that incident. To prevent such a risk, we made the successive additions to the coinage set forth in paragraph 3. Pending the experience which we awaited and the consideration of the general question which we have now given to it, we have been specially careful to limit these additions to the lowest amount which, on the best calculations possible, seemed likely to enable us to meet the demand for rupees during the present rute season, or up to October next. We are not without some anxiety lest events should prove that, in our desire to avoid unnecessary coinage, we have limited the amount too much, the

Comptroller-General has already sounded some notes of warning, but we trust that we shall not be forced to telegraph a request for further purchases of silver in anticipation of the arrival of this Despatch. Although we may, with difficulty, meet the demands up to October with the rupee balance so much lower than the limit of complete safety, the experience of the last six or eight months has convinced us that we shall not be justified in attempting to face the coming busy cold season and the demands of the Burma rice trade with the rupee balance in the Currency Reserve lower than results from a maximum balance of gold of 7,000,000*l*. That maximum will leave a rupee balance of about 9½ crores if the circulation remains at its present level of about 30 crores. We do not, of course, propose to be bound in any way to adhere to that maximum, we propose it for the present only, unforeseen circumstances, such as a variation in the note circulation or more rapid progress in the use of sovereigns as money, may at any time in the future render it expedient to suggest a change in the amount.

14 We may mention that we have closely watched the result of the measures described in paragraph 2. The issues of gold have been considerable, but much has come back to us through the Currency Department and the Presidency Banks. The Comptroller-General estimated the amount remaining in circulation at the end of June at over a million and a quarter out of nearly two millions issued up to that time, but there are many uncertain data in the calculation. We are not yet able to say that gold has passed into use as money to any appreciable extent.

15 It is very desirable that we should feel assured of being able to meet the public demand for rupees, as indicated by the presentation of currency notes and gold. We therefore strongly press on your Lordship the expediency of sanctioning the above proposal for further coinage. If this sanction is accorded, we request that the purchases may be begun as soon as convenient after the receipt of this Despatch, being made in such instalments as may be thought best. Before the purchases are completed, we shall be gaining the experience that we desire, but cannot safely await, of the period after the cessation of the famine. If rupees do come back to the trade centres after the famine, and are presented for gold or for notes, it may be unnecessary to proceed with further purchases beyond a first instalment. On the other hand, if our stock of gold continues to increase, the purchases will have to be increased beyond the amount which now appears necessary.

16 The stock of gold in the Currency Reserve on 15th August consisted of 500,000*l* in London and nearly 8,500,000*l* in India. The London gold was released on 29th August, as intimated by telegram. The purchases required to make our proposed reduction will, therefore, on the present figures, be about 1,500,000*l*, and the additional coinage will be about 3½ crores of rupees. This with the coinage already undertaken will constitute a very large addition in the current year. But it is one which is made in response to a clear public demand, and, as Mr Dawkins stated in paragraph 30 of the Budget Statement of last March, additions to the coinage will be as nearly automatic as is possible in the circumstances if we make them in close accordance with the demands of trade. Moreover, the possible evil effects of what may in the future turn out to be excessive additions to the coinage will, we think, be mitigated by the proposal we have made—see clause (e) of paragraph 9 above—for the retention in the "Special Gold Reserve" of rupees found to be in excess of public requirements, and presented to be exchanged for sovereigns.

17. But we do not wish our proposal to be considered as dependent on such arguments as those just stated. We make it primarily on the practical ground that we consider it necessary in order to enable us to fulfil an obligation which, though we are not, and do not propose to be, legally committed thereto, we think it desirable to undertake so long as we can do so without excessive inconvenience, namely, to pay rupees to all tenderers of gold and to give rupees in encashment of currency notes to all who prefer rupees to sovereigns.

18 Proposal (4) of paragraph 6 is for the conversion of the present Government Rupee Paper Investment of 10 crores into Sterling Securities of the Government of India. Our Honourable Colleague proposes to make this change very gradually, in order to avoid causing a material depreciation in the market value of rupee paper, and a consequent injurious effect on future rupee loans. Section 20 of the Paper Currency Act requires the Reserve to be invested "in Securities of the Government of India." If, as appears to be the case, this expression includes sterling as well as rupee securities of the Government of India, and the change can be made without fresh legislation, we recommend this proposal also for sanction.

19 With regard to proposal (5) of paragraph 6, the following doubts are entertained in some quarters —

Firstly, doubt is felt as to the desirability of reducing, even gradually, by so large an amount as is proposed, the existing gold stock in the Paper Currency Reserve, until the stock in the new Special Gold Reserve has attained some magnitude.

Secondly, it is doubted whether an increase of the Paper Currency Investment by so large an amount as from 10 to 15 crores will be generally approved. If your Lordship directs us to proceed with the proposal, the first step would be to consult the Chambers of Commerce, setting before them the facts of the note circulation up to the present time, as was done in the enclosures of the Despatch No 131 of 2nd June 1896, when the last increase of the investment, from 8 to 10 crores, was proposed.

Thirdly, to give effect to the proposal, legislation will be required both in respect of the increase of the investment and in respect of the power to make the investment in British Consols. And doubts are felt as to the expediency of introducing, at the present time, fresh legislation to ensure the stability of a currency policy which, though it has so far been attended with gratifying success, is still not entirely beyond the experimental stage, such legislation might possibly excite apprehensions both as to the confidence entertained by the Government of India in their own policy, and as to the success of the policy itself. These doubts are, however, not shared by our Honourable Colleague in the Finance Department.

20 Doubtless your Lordship will be able to estimate the value that is to be attached to these doubts and to advise us as to the steps that it may be desirable to take in pursuance of the object which we are all agreed in commending to your Lordship's favourable attention.

We have, &c,  
(Signed) CURZON OF KEDLESTON,  
&c, &c

Enclosures of Letter from the Government of India to the Secretary of State, No 302, of 6th September 1900

I—FIRST MINUTE BY THE HONOURABLE SIR EDWARD LAW

*Gold Exchange Fund*

Circumstances seem to render advisable an early decision on the question of the proper manner of dealing with profits derived from the coinage of rupees.

This question is not only important in itself, but it also involves important subsidiary considerations.

2 I think it is necessary before recording an opinion on the question of the manner in which it is desirable to deal with the profits on coinage, to consider the actual situation as regards the Currency Reserve and the accumulation of gold which it now includes and which has become an unexpected embarrassment.

3 The following table shows the steady increase of gold in the Currency Reserve and the corresponding decrease in silver —

	Silver Coin	Gold	Gold held in England under Act II of 1898
	Rs	Rs.	Rs.
On 15th April 1899 -	14,62,20,568	3,24,97,251	—
" 15th May 1899 -	14,30,68,556	3,42,77,538	—
" 15th June 1899 -	14,71,00,255	3,44,44,964	—
" 15th July 1899 -	15,59,26,213	3,54,21,676	—
" 15th August 1899 -	15,55,93,533	3,83,50,786	—
" 15th September 1899 -	13,68,50,748	3,83,50,786	—
" 15th October 1899 -	12,35,18,157	4,17,17,612	—
" 15th November 1899 -	10,84,49,860	5,56,46,119	97,50,000
" 15th December 1899 -	9,03,66,872	6,33,25,197	1,12,50,000
" 15th January 1900 -	6,99,10,036	7,58,68,068	1,80,00,000

" 15th August 1900† -	6,33,61,648	12,69,36,741	75,00,000
" 22nd August 1900† -	5,79,71,935	12,72,03,794	75,00,000

\* The 18th instead of the 15th June is taken so as to include the transfer of 500,000† of the gold held in London which took place on the 16th June

† These later figures were added after this minute was written

4 It is important to enquire into the causes which have led to this unexpectedly rapid accumulation of gold in the Currency Reserve. Increase of population, economic development, and wastage of coins are all causes which must produce a steady demand for additions to the coin circulation, and though my impression is that, under ordinary circumstances, India requires relatively only a very limited circulation, I am inclined to think that, even without abnormal influences, the amount of coin in circulation had latterly become insufficient to meet ordinary requirements.

5 But, besides the ordinary factors inducing demands for an increase of currency, abnormal influences have recently very seriously affected the situation. The great bulk of the population is purely agricultural. The agriculturist, in ordinary times, has little requirement for money in the shape of silver coin, he is himself the producer of a large proportion of the food he consumes and his other wants which must be satisfied by purchase are trifling. In seasons of famine, however, the situation is changed. The food consumed by the suffering agriculturist must be purchased and paid for with coin, and as credit dries up in times of distress, all his other requirements must equally be paid for in cash.

6 I think that we have only to consider the vast numbers who, under ordinary circumstances, produce their own food and enjoy credit for their small purchases and whose wants can now only be supplied by cash purchases, to realise the enormous increase in the circulating medium required to meet this unusual situation. I conclude, therefore, that the chief cause of the continual tenders of gold which has passed into the Currency Reserve is the large and unusual demand for rupees induced by the famine, and that the general supply of rupees being limited and proving insufficient to meet these extraordinary requirements, a drain was caused on the Currency Reserve,

where, alone, a certain number of rupees could be immediately procured by tendering gold for exchange, further, I may point out that, if my supposition as to the cause of the drain be correct, there is nothing to check it as long as famine continues to cause an unusual and increasing demand for silver coin.

7 The demand for rupees, which rapidly developed in the spring months, has been very great, and the impossibility of immediately satisfying it led to serious and unpleasant consequences in April last. On 11th April the officials of the Currency Department in Calcutta, who, early in the day, had been obliged to refuse to cash currency notes for three lakhs of rupees presented by an important firm in the ordinary course of business, were finally obliged to close the office before the proper time, having no further rupees in hand to meet the current requirements of the general public. This failure in Calcutta was accompanied by the failure of the Treasuries in Cawnpore and elsewhere in the North-Western Provinces to cash notes, which, though not bound by the law to do (elsewhere than at the offices of the respective issue circles), they had been in the habit of doing. In Calcutta much inconvenience was caused to the mercantile and manufacturing community whilst in the provinces, not only were traders and manufacturers inconvenienced, but currency notes immediately became subject to a serious discount reaching to  $\frac{7}{8}$  per cent even in an important commercial centre like Cawnpore, and thus showing that the confidence of the general public in the fiduciary note currency has been unpleasantly shaken.

Such a state of affairs, if not promptly remedied, would inevitably have led to further increasing demands, impossible to satisfy, for encashment of notes at all the Treasuries throughout India.

8 The Government promptly took the only possible measures to meet the situation and made considerable purchases of silver for coinage. The total amount of silver so purchased since the beginning of the financial year will, with the 500,000*l* worth bought in March, result in a total addition of above  $4\frac{1}{2}$ \* crores of rupees to the circulating silver currency. The purchase, transport from Europe, and coinage of silver unfortunately, however, take considerable time, and it was evident that if the demand for rupees, in exchange for tendered gold, continued unabated, requirements would continue to exceed the supply, pending the coinage of the new rupees, it was, therefore, reluctantly determined to temporarily check the importation and tender of gold, by deferring payments for gold bullion tendered at the mints, for 60 days after acceptance. By these measures and by the energy of Mr Cox, the Comptroller-General, in arranging for the rapid transfer of balances from one Treasury to another, the crisis was passed without more serious results than I have mentioned, but it is imperative to take steps to prevent the recurrence of such a situation, and it must be admitted that all the measures enumerated as recently taken were more or less open to objection.

9 The rapid increase of the rupee coinage, without some definite guiding principle regulating the limits of increase, is to be deprecated as likely to induce whatever dangers are to be feared from a subsequent redundancy of rupees. The checking of the importation of gold, even though temporary, when suddenly decided on, must prejudice the legitimate operations of private importers, and, in any case, measures tending to impede the free importation of gold are directly opposed to the wise general policy encouraging such importation. Even abnormal transfers of Treasury balances are objectionable as involving considerable expense and upsetting the carefully considered plans for the manipulation of these balances.

10 It is evident that had the Currency Reserve not been overweighted by the accumulation of gold, the sudden demand for a large number of rupees could have been sufficiently met to give time for further coinage,

\* This includes the outturn (about 351 lakhs) from 1,500,000*l* worth of silver purchased in England in quantities of half a million's worth at a time, and also the outturn (about 69 lakhs) from the Native State coin and silver bullion borrowed from Gwalior and to be repaid next year at its value as bullion. It does not include the outturn from the last purchase (of 400,000*l* worth) in England, or from the purchases in India in 1899-1900.

without incurring all the difficulties which have been experienced during the last few months, and it would therefore seem necessary to take measures for reducing the proportion of gold now held in the Reserve. The question of the advisability of taking such measures involves, however, other important considerations.

11. The recorded opinion of the Currency Commission is unanimous as regards the necessity of a certain gold reserve being held for exchange purposes. No very definite decisions appear, however, to have been arrived at as to the manner of obtaining the gold to form the desired reserve, the conditions under which the reserve fund should be held, or the amount of gold which it is desirable to hold in such a fund. Circumstances, which I have already described in these notes, had, however, already led to a commencement of accumulation of gold in the Currency Reserve at the date when the report of the Currency Commission was published, and this accumulation has, under the influence of extraordinary famine requirements for rupees, since rapidly increased, until on 15th May last we had in the Currency Reserve 9½ millions sterling of gold, equal to a proportion of exactly 4ths of the total stock of bullion and coin held as security for the note issue. By the 18th June the situation had been improved by the release of one million of the gold held in London, and the gold then held in the Currency Reserve was 8,877,622l, or over two-thirds of the whole coin and bullion reserve. The stock of gold we now hold may thus be taken at nine millions sterling.

12. The question of the amount of gold which it may be safe to hold in the Currency Reserve was discussed last November, when the Comptroller-General pointed out very clearly the dangers which might ensue from the accumulation of too large a proportion. At that date the Comptroller-General expressed the opinion that more than 5,000,000l. could not be held in the reserve in safety, and the Honourable Mr. Dawkins, in a note dated 1st December 1899, indicated seven to eight millions as an amount which might be admitted under favourable circumstances. Any decision was, however, reserved until experience should have thrown more light on the subject, but I venture to submit that it has now become necessary to take a decision on this point, in conjunction with that of the proper manner of dealing with coinage profits.

13. And first, I would call attention to certain circumstances and conditions in connection with the accumulation of the existing stock of gold in the Currency Reserve. The sole object for which the Currency Reserve was originally constituted was to provide the necessary security for the encashment of notes, on presentation, and there was certainly no idea of utilising the funds so held for exchange or any other purpose not directly connected with security for the note issue. The connection which has now arisen between the Currency Reserve and the maintenance of exchange appears to me to have come about in a somewhat fortuitous manner. It is of course evident that it is unnecessary to hold the whole of the funds constituting the security for a paper currency in the coin in which the notes issued are payable on demand, and it has, therefore, been admitted that a certain proportion of such funds may be invested in some readily convertible security. The amount thus invested by the Government of India has been varied from time to time, in proportion to the amount of paper currency circulating in the hands of the public, and now stands at 10 crores. The decision fixing the limit of 10 crores was taken after considerable discussion in 1896, and even if it be admitted that this was the maximum prudent limit of safety at that date, circumstances have since shown that it is a limit which can now be safely exceeded. It has been exceeded by the amount of the stock of gold now existing in the Currency Reserve.

14. The fact is that, whereas it is essential that the Currency Reserve shall provide a sufficiency of the class of coin which the public have the right to demand in exchange for notes which they may present for encashment, the existence of gold in the reserve, although it has been declared legal tender, cannot satisfy the legitimate requirements of the public as regards such demands. Owing to the smallness of the sums representing an enormous

proportion of commercial transactions, and the very conservative habits of the people no one at present requires gold as a circulating medium in India, and consequently the existing stock, as far as currency purposes are concerned, is of no immediate practical value in case of sudden demands for the encashment of notes. The only way in which it represents suitable security for the paper currency is that it is convertible by sale into silver bullion, from which bullion rupees may be coined. Hence under existing conditions the gold in the Currency Reserve can only be considered as an investment subject to the same conditions as the 10 crores held in Government securities, and in permitting the present large gold investment the limit of safety for the conversion of notes into the circulating medium required by the people has been passed, and serious difficulties have been encountered, whilst we are far from having acquired the stock of gold requisite for exchange purposes.

15 As a result of these considerations it must, I think, be admitted that the amount of gold which can safely be held in the Currency Reserve must for the present be regulated by the same rules as would guide the consideration of the amount by which the proportion invested in Government securities could be safely increased. Pending an increase in the note circulation (which is, I think, to be desired, and which can, I believe, be attained) or some other change in existing conditions, I am of opinion that a maximum sum of approximately 7,000,000*l* in gold may now be safely held in the Currency Reserve. I should not, however, wish to be bound absolutely to this figure, which is necessarily an arbitrary one, and particularly I should not wish any public announcement to be made which might seem to tie the hands of the Government in the event of circumstances, at present unforeseen, rendering its reduction hereafter desirable.

16 If it be accepted that 7,000,000*l* is the maximum sum which, under existing conditions, can be held in gold in the Currency Reserve, in addition to the 10 crores already invested, it is evident that such assistance as can be obtained from manipulating the reserve will fail to provide the sum in gold which it is considered advisable to hold in connection with the maintenance of a steady exchange. So far no authority has ventured to name a definite sum which should suffice for this purpose, but there is a general consensus of opinion, in which I fully concur, that a very considerable sum is required. The most ready way of obtaining such a large sum is by gold borrowings, but the opinion of the Currency Commission was strongly hostile to such a course, and the question, therefore, remains unanswered. How is the necessary stock of gold to be obtained?

17 I do not presume to offer any cut and dry solution of this difficult problem, but I venture to offer certain suggestions which, if adopted, would, I believe, go a considerable way towards meeting the difficulty. I propose to create a special "Gold Exchange Fund" independent of, but in case of *extraordinary* requirements for exchange purposes to be used in conjunction with, the gold resources of the Currency Reserve. The foundation of this fund would be the profit to be realised by converting into rupees the excess above 7,000,000*l* now held in gold in the Currency Reserve. The total sum in gold held in this reserve being to-day about nine millions sterling, the profit on the proposed operation would be about 700,000*l*.

18 To the 700,000*l* thus provided should be added the profits on coinage since the commencement of the financial year, amounting to 1,000,000*l*. The money representing these profits has, for the moment, been employed to meet demands in connection with the famine, and particularly to enable Government to make large loans and advances to Native States, which include a loan of two crores to the Nizam, but, though profits on coinage form part of our general resources, I am in full accord with the Currency Commission in considering that they should not be treated as revenue, but should be set aside for currency and exchange requirements, and the 1,000,000*l*, which has now been temporarily employed to meet pressing demands should be paid into the "Gold Exchange Fund" as reimbursements of the loans are effected.

I would thus open my new reserve fund with a combined cash and creditor balance amounting to nearly 1½ millions sterling, whilst 7,000,000*l*. would still be held in gold in the Currency Reserve.

19. But this initial reserve is evidently too small, and measures should be taken to strengthen it. In the first place the fund should be steadily increased by the addition of profits on future coinage. It is impossible to say what annual additions to the rupee currency may be required to meet the demands induced by economic development (in which I expect that railway development will take a large part, if we are able, as I hope we may be, to give some impetus to railway development), and by wastage, but from such data as I have been able to obtain, I think it quite likely that the demands on these accounts will reach two crores of rupees per annum, on which the profits to be passed to the Gold Coinage Reserve would be approximately 475,000l per annum.

20. I now pass to the consideration of further measures which may, and should, I think, be taken to provide for additional automatic increase of the stock of gold to be held in the Gold Exchange Reserve. I have already pointed out that the accumulation of gold in the Currency Reserve was due to fortuitous circumstances, and that although up to a certain point it served a most useful purpose, it has nevertheless been proved that the stock of gold which can be held in the reserve can never become adequate to meet the contingencies of exchange requirements, while it may be productive under certain circumstances of considerable difficulties, and I have shown that there is no practical difference under existing conditions between investments in gold or in interest bearing securities, as regards the objects for which the Currency Reserve was created by law.

21. The fact is that when the funds in the Currency Reserve were diverted from their original purpose and taken as providing security for the maintenance of a steady exchange, a radical and perhaps un contemplated change was introduced, and at the risk of being considered somewhat conservative I would venture to suggest that it would be more prudent to revert, as far as possible, to original conditions as regards the treatment of these funds. The original conditions are that all funds in the Currency Reserve must primarily be held with the object and for the purpose of securing the prompt conversion of notes into such coin as the public may legitimately require. The reduction of the stock of gold in the Currency Reserve by the conversion into rupees of the excess above 7,000,000l will, I hope, restore the condition that the reserve should suffice to meet all legitimate requirements for the encashment of notes, but I think that we should go a step further in the same direction, and, as far as possible, follow the old rule of investing such portion of the Reserve as is not required to be held in coin for the conversion of notes. I would propose then to invest at least 5,000,000l of the 7,000,000l, which I consider might now be held in gold independently of the necessity of providing for the immediate exchange of notes into rupee coins. The investment should, of course, be made gradually, though at as early a date as may be permitted by practical considerations in connection with all classes of investment and proper care to avoid undue depletion of our stock of gold metal.

22. I should like to see the total invested securities increased to the equivalent of 12,000,000l, and I think that there would be no objection and even a certain advantage in retaining in gold the uninvested surplus of the 7,000,000l, which we think may continue to be held otherwise than in rupees, without affecting our capability to give rupees for notes when required.

23. The next question is the form in which the proposed investment may best be made. I would propose to invest the sum taken from the 7,000,000l, now in gold, in British Government Funds. I would further propose to gradually convert the present investments in rupee paper into Indian Government gold securities, and when these operations were completed we should have about 12,000,000l in readily saleable gold securities bearing interest at an average rate of about 3 per cent.

24. The interest on 12,000,000l at 3 per cent. would yield annually 360,000l, and I have no hesitation in saying that, as long as funds are required for currency and exchange purposes, this annual sum should be devoted to increasing the stock of gold in the Gold Exchange Fund. In five years, allowing for compound interest, we could add from this source about 1,960,000l to our stock of gold, and in 10 years about 4,250,000l.

25 The net result of my various proposals would be that including gold to be immediately placed in the Gold Exchange Fund, gold to be paid into that fund on the reimbursement of famine loans, gold now existing and to be maintained in the Currency Reserve, profits from future coinage, and accumulation of interest on gold investments belonging to the Currency Reserve, we should, five years hence, hold a stock of gold of about 8,500,000*l*, and in another five years we should have added nearly 4,500,000*l* more. Further, in case of necessity, we should be able to replenish this stock by the profit on the sale and conversion into rupees of our readily saleable gold investments, amounting to 12,000,000*l*, whilst our resources for giving rupees for notes from the Currency Reserve would remain intact.

26 I do not lose sight of the fact that, however readily saleable our gold investments, they are not quite the same thing as actual gold, but holding such a sum as I contemplate in the actual metal, there would, under all conceivable circumstances, be plenty of time to effect gradual sales of the securities for the replenishment of the stock of gold, should the necessity arise.

27 In my calculations of the stock of gold which it may be possible to accumulate within a given period, I have taken no account of the possibility of a continued influx of gold resulting from such heavy demands for rupees as we have recently experienced, but I have traced the causes of these demands and stated my reasons for considering them as abnormal, and once the amount of circulation is brought up to the level of normal requirements and the pressure caused by famine requirements is relieved, I believe that a steady annual addition to our rupee circulation (which I have tentatively estimated at two crores) will prevent the recurrence of undesirable pressure and the resulting spasmodic importation of gold.

28 There remains for consideration the question of proper manipulation of the funds which may be accumulated for the purpose of meeting currency requirements and regulating exchange.

29 As regards currency requirements, I do not think that there is any difficulty in arriving at a decision. The resources of the Currency Reserve must in the first place be kept equal to providing for the encashment of notes on presentation, in rupees, and I have proposed for this purpose to hold in silver coin any excess in that reserve above the combined amount of the 10 crores now invested, together with the 7,000,000*l* which I propose to hold in gold and gold securities. Any excess of gold above the sum indicated should be immediately converted into rupees by the purchase and coinage of silver bullion. This general rule will apply as long as the demand is for rupees, but the converse case may arise, it may happen that for the legitimate purposes of trade there may be demands for gold for which rupees may be offered, and that unless this demand for gold is promptly met within reasonable limits, an undesirable fall in exchange would result. Such demands may temporarily be heavy, though I do not think that they are likely to be prolonged. To meet them it will be necessary to give gold out of the Currency Reserve and replace it by the nominal equivalent in rupees, but the amount of gold in the Currency Reserve will be very limited and may easily prove insufficient to meet legitimate requirements, and it will then be necessary to fall back on the stock in the Gold Exchange Fund.

30 Should this necessity arise, I would, in the first instance, retain in the Gold Exchange Fund the rupees which I had been obliged to accept in exchange for gold, in the hope that the demand for gold might prove temporary, and that I might, at not too great an interval of time, be able to once more exchange these rupees for gold to meet demands caused by a contrary current of trade requirements. I would defer as long as possible the expedient, which I look upon as a last resource, of melting down rupees and selling the bullion for gold. Before being driven to such extremities as the adoption of this measure would indicate, we should fall back upon the resources offered by the gold securities held in the Currency Reserve. These securities could, as occasion might arise, be transferred to the Gold Exchange Fund, their place in the Currency Reserve being taken by rupees drawn from the former fund, and when thus transferred they might gradually

be sold to meet requirements. I should point out that under the circumstances referred to, the transfer of rupees to the Currency Reserve, in replacement of investments withdrawn from that fund, could not cause any practical difference in the constitution of this reserve, for although the rupees transferred to the Currency Reserve would not afford any provision for the encashment of notes in the form of currency at the time in demand, the presence of the gold investments belonging to the Currency Reserve would equally fail to provide for the same demand.

31 It may be objected to my proposals that the result of their adoption would be, at the outset, to diminish the stock of gold we now hold, and that it would take some time before the various measures I have suggested would make good that loss.

I think the practical answer to that objection is that practical necessity has already obliged us, without any theorising, to diminish the stock of gold by drawing on it for the purchase of silver to be coined into rupees, and that no definite proposals have hitherto been made for providing for its automatic increase without renewing the difficulties we have experienced through an inconvenient accumulation in the Currency Reserve. The system I have proposed will not reduce by one sovereign the amount of gold which, whilst depending, as we do now, solely on the resources of the Currency Reserve for its retention, we can hold with safety. It does provide for the future automatic increase of our stock of gold, though I admit at a slower rate than is desirable, but half a loaf is better than no bread, and if we adhere to the resolution of declining to borrow to increase our gold stock, I fear that it is impossible to devise any system by which we could attain our desired ends more rapidly.

32 I now conclude, and in so doing I venture to repeat that it has been generally admitted that we should hold a considerable stock of gold for exchange purposes—that no proposal has been authoritatively put forward for providing this stock of gold without sterling borrowing—that the expedient of accumulation of gold in the Currency Reserve has passed the limits of safety and has brought us into difficulties—that it is imperative to prevent the recurrence of such difficulties—and at the same time it is necessary to decide on the means to be adopted for acquiring the stock of gold required to ensure the success of our general currency policy.

(Signed) E. FG LAW.

28th June 1900.

## II

### MINUTE BY HIS EXCELLENCY THE VICEROY.

The main proposal of Sir E. Law is the creation of a new Gold Exchange Fund, the objects of which are clearly described, and the methods of constituting which appear to be the following—

- (1) It is proposed to set aside the recent and all future profits derived from the coinage of silver, to be kept in gold as the nucleus of this fund—to be available for the withdrawal of rupees from circulation and to prevent redundancy of coin, should this be found necessary at a later date. There are some who decline to believe that such a redundancy is at all likely to occur, and who say that however fast we may coin our rupees, we shall find a use for them. I understand Sir E. Law, however, not to share this confidence. The initial objection may be raised that by whatever sum is thus withdrawn from our general balances, we shall increase the amount of our annual loan (which cannot, I imagine, be denied), and it may be said that this is doubtful policy, seeing that we always have to pay more for our investments than we receive from our borrowings. Notwithstanding this objection, the scheme now put forward, which was first suggested by the Currency Committee (paragraph 60), may be justified if its object be to maintain our stock of gold, and thereby to ensure the success of the currency policy upon which we have embarked. Sir E. Law proposes to make a start with the one

- million sterling of profits which has already accrued from our very heavy coinage in the present year. He speaks of this million as having already been employed, and this I understand to be the case. But if this be so, and if we have to pay the equivalent into the new Gold Exchange Fund, will it not mean an addition to the amount that we shall have to raise by loan at our next borrowing?
- (2) From paragraphs 24 and 25 of Sir E. Law's minute I gather that a further source of supply will be "the accumulation of interest on gold investments belonging to the Currency Reserve." Presumably this also involves a subtraction from our ordinary resources and an addition to the amount of our annual loan—a sacrifice which, as in the former case, may be held to be justified by the ulterior objects in view.
  - (3) The third constituent of the new fund is to be the profit derived by taking and converting into rupees any excess that there may be over a maximum of 7,000,000*l.* in the gold stock maintained in our Currency Reserve. The excess is at present 2,000,000*l.*, and the profit would be about 700,000*l.*

All these are proposals that strike me as adaptations, adjustments, or developments of our existing currency policy, which are intended to invest it with greater strength, and which may fairly be submitted to the Secretary of State.

2. But there are two more proposals which Honourable Member advances for the still further replenishment of his fund—

- (4) The first of these is to take 5,000,000*l.* out of the maximum of 7,000,000*l.* to which we shall, as above described, have reduced the stock of gold in the Currency Reserve, and to invest it by gradual degrees in British Government Funds, *i.e.*, in Consols. I confess that I do not quite understand this proposal, which seems to me to take away with one hand what has been conferred with the other. If we have just decided that 7,000,000*l.* ought to be kept in gold in the Currency Reserve, why propose to reduce it simultaneously to 2,000,000*l.*? Honourable Member foresees this objection, for he says in paragraph 31 that the result of his proposals will be at the start to diminish the stock of gold which we now hold, and that it will be some time before that loss is made up. But this result and this risk seem to me to be inconsistent with what I understand to be the main object of his policy, namely, the accumulation of a strong gold reserve. By the proposals which I have marked (1), (2), and (3) he has been steadily accumulating this stock of gold, by (4) it seems to me that he proposes to reduce it.

3. Now the 5,000,000*l.* that is thus subtracted from the Currency Reserve is, I understand, to be added to our general currency investment, which would thereby be raised from 10 crores to 17½ crores (7½ crores = 5,000,000*l.*). I would ask, can we do this without legislation? Does Honourable Member contemplate legislation? Has he considered whether the Secretary of State will sanction such legislation and what public opinion will say about it in this country? Moreover, shall we be wise in raising our currency investment to so high a figure in relation to our existing circulation of currency notes? In our Despatch of 18th January 1900 we contemplated "advancing gradually to a situation in which (instead of having 17 crores of coin as against 10 crores of securities) one-half of the Paper Currency Reserve should be in coin and one-half in securities." But the new proposal would appear to invert the proportions and to involve a complete change of policy.

Again I would ask, if it is now considered desirable to increase the currency investment by 5,000,000*l.*, is it necessary to take this sum from that particular source? Honourable Member admits that the process is intended to be gradual. But why should he not trust to his other gradual processes, already enumerated, *e.g.*, profit on coinage, &c.? Will they not in time give him the sum that he desires?

4—(5) Finally, Sir E Law proposes (paragraph 23) “to gradually convert the present investments in rupee paper into Indian Government “Gold Securities” He does not give any other reason for this than the desire to increase the sum total of his saleable gold securities.

But are not our investments in rupee paper very useful, and very easily convertible into rupees in times when, as lately, we have had a great demand for the encashment of currency notes?

I hazard these doubts about (4) and (5) not because I presume to set up my financial authority against that of Honourable Member, but for two reasons firstly, I am not convinced that they are necessary for the success of his own scheme, secondly, I have a natural suspicion of anything that may tend, in the present early stage of our currency policy to cause alarm. Most things that the Government of India do in the region of finance are misrepresented, many are misunderstood. We are constantly accused of having no confidence in our policy and of not pursuing it with consistency.

I think that we should be very careful about taking any steps that may seem to give ground for these charges. Events seem on the whole (in spite of the peculiarly unpropitious circumstances arising out of famine and the enormous demand for rupees that we have lately experienced) to be justifying as well as favouring our big currency venture of last year. I think that our motto should be *Festina lente*

8th July 1900

(Signed) CURZON OF KEDLESTON

### III

#### SECOND MINUTE BY THE HONOURABLE SIR EDWARD LAW

It has been suggested that it might prove a convenience if I were to endeavour to give the explanations asked for in His Excellency's minute dated 8th July 1900. I am very happy to accept this suggestion.

2 In His Excellency's minute, paragraph 1 (1), the view that we pay more for our investments than we receive from our borrowings appears to be fully accepted as exact. I think, however, that with regard to this statement, which may be in the main correct, an important qualification must be borne in mind. The general truth of the proposition, as far as my proposals are concerned, depends on the assumption that the price of future investments made in connection with the proposed Gold Exchange Fund will always be higher than the price which at about the same time we shall be obliged to pay for our loans. I should hope that this assumption will by no means always prove correct, and further, even when the assumed loss is suffered, the difference at approximately corresponding dates, between the prices of investments and new loans should surely be so trifling that it need not be considered as a serious objection.

3 His Excellency in concluding paragraph 1 (1) asks if it will not be necessary to borrow the million which I speak of as forming part of the initial capital in the proposed Gold Exchange Fund. It was not my intention to propose borrowing for this purpose. In paragraph 18 of my former minute I spoke of the new gold fund as to be opened with a combined cash and creditor balance of 1½ millions sterling, my idea being that we might await the gradual reimbursement of the famine loans and advances to Native States to change the creditor portion of the balance into much to be desired cash.

4 In paragraph 1 (2) the presumption that the accumulation of interest on gold investments, forming part of the Currency Reserve, would involve a subtraction from our ordinary resources, is correct.

5 In paragraph 2 His Excellency asks “if we have just decided that “7,000,000l ought to be kept in gold in the Currency Reserve, why propose “to reduce it simultaneously to 2,000,000l.?”

6 I have apparently failed to make myself sufficiently clear on this point. I do not hold we ought to keep 7,000,000l in the Currency Reserve, I have indicated 7,000,000l. as the maximum sum which the general purposes of

the Reserve would permit us to hold with safety. Further in paragraph 20 of my minute of 28th June, I have pointed out that gold securities may for practical purposes be considered as the equivalent of actual gold, since we have only to sell the securities, by telegraph if necessary, to realise the equivalent in actual metal.

7 In paragraph 3 His Excellency asks if our currency investment can be increased without legislation?

It cannot, but I am prepared to recommend legislation for this purpose, and independently of the particular question we are now treating, I hold that the experience of this year has proved that we can lock up a proportion of our Currency Reserve equal to the sum of the present investment of 10 crores together with 7,000,000*l* in gold. We are at the present moment holding considerably more than this combined sum in a form which does not permit of its immediate conversion into rupees.

8 His Excellency in paragraph 3 recalls that in the despatch of 18th January 1900, it was contemplated to advance gradually to a situation in which one-half of the Paper Currency Reserve should be in coin and one-half in securities. It is true that I proposed to go beyond this proportion, but not so very much. The recent average circulation of notes has been approximately 30 crores (I have elsewhere stated that I have considerable hopes of materially increasing this figure) and the half of this sum for investment would be 15 crores. I propose to invest 17½ crores, but I have given what I believe to be sufficient reasons for considering this addition justified by recent experience, and, in any case, I propose to make the investment gradually.

9 In the same paragraph his Excellency asks if gradual processes will not in time give the desired sum in investments.

Undoubtedly they would, if no mishap occurred during the slow process of increase, but the quicker we can secure our accumulation of gold and gold securities the quicker will our position be assured, and I have already given my reasons for apprehending no danger from the acceleration of the process by the measures I have proposed.

10 In paragraph 4 His Excellency observes that I have given no reason for the proposal to gradually convert the present investments in rupee paper into Indian Government gold securities.

I regret the omission, to make things clear, the reason should have been given in my minute under discussion, but I intended to return to the subject when dealing (elsewhere) with the general questions connected with the circulation of notes, because I consider my proposal to be one of considerable importance as regards the general purposes of the Currency Reserve, and I am anxious to press it from that point of view and independently of any proposals connected with our exchange policy.

11 When the system of investing a certain portion of the Currency Reserve was inaugurated, exchange difficulties had not made themselves appreciably felt, and since the investment was intended to be convertible into rupees, in case of necessity, it was natural that it should be made in rupee paper. To-day the situation is different, the market value and ready convertibility of rupee paper has been prejudicially influenced by exchange difficulties, there is practically no market out of India for rupee paper, and in India the market is so small and so easily depressed that were we suddenly called upon to realise our existing investments, we should, I fear, most seriously depress their value and create something like a panic.

12 I may point out that investments in gold securities cannot be prejudicially influenced by exchange fluctuations. When it is desired to realise gold securities they can, in the large market which they command, be immediately sold for gold, which can be used if that metal is required, and if rupees should be required the gold realised can purchase silver bullion to be coined with profit into rupees.

13 For these reasons, which I am confident would be perfectly accepted by the financial world, I strongly desire, as a measure of safety, to see our rupee investments converted into gold securities as rapidly as the exercise

of most necessary caution not to unduly disturb the market for rupee paper, may permit. This proposal I should wish to put forward on its own merits and quite independently of any indirect connection with the exchange question.

14 I trust that the consideration of these explanations will make it clear that I am not proposing any new departure, but solely seeking to consolidate our position on the lines of policy already adopted, and to accelerate the accumulation of the stock of gold on which the assured success of that policy mainly depends.

15 It is not sufficient to adopt a policy in theory. The practical working of the adopted policy must be carefully watched, and whilst holding fast to the general principles we have accepted, we must be ever ready to adopt such minor measures or modifications in detail of practice as experience may show to be necessary to assure the success of the policy we have accepted.

27th July 1900.

(Signed) E. F. G. LAW

#### IV

##### THIRD MINUTE BY THE HONOURABLE SIR EDWARD LAW.

It has been suggested that I should endeavour to summarise, with such explanations as may seem necessary, the conclusions arrived at on the questions treated in this file as a result of their discussion in the Executive Council.

In the first place, the question was discussed as to what should be understood and accepted as regards the proposals in paragraphs 21, 22 and 23 of my notes for the gradual investment in gold securities of sums belonging to the Currency Reserve and now held in rupee paper or in gold.

As regards the conversion into Indian Government Sterling Bonds of the 10 crores now held in rupee paper, I have pointed out, and it was accepted, that this conversion must be very gradual and would take a long time to effect. It is evident that if the issue of a loan of three crores in rupee paper causes, as was shown by the experience of the recent loan, a strain on the resources of the limited market for this class of security, the said market would be easily glutted by the attempted sale of any large quantity of these securities and the result would be highly prejudicial to our general financial interests, both as regards the depreciation of our stock and as regards compromising the success of further issues of similar securities. If general conditions were to remain as at present, I do not think that it would be possible, with due regard to these interests, to sell more than one crore of rupee paper in a year, so that it might take 10 years to complete the proposed conversion, but we may fairly hope that it will not be long before the general popularity of this class of security may, by judicious measures, be sufficiently improved to offer a stronger market, and consequent increased facility in advantageously disposing of stock.

On this question I may perhaps point out that the greater the recognised difficulty in realising our present investment, the less suitable must it be recognised to be for the particular purpose for which it is held, namely, the guaranteeing of our issue of notes.

As regards the investment of a portion of the gold now held in the Currency Reserve, in British Government Funds, the process of investment must also be comparatively slow, or the investment would be made under disadvantageous conditions, in consequence of the rapid rise in price which would result from the hurried purchase of large blocks of stock.

On the further question of the total proportion of the Currency Reserve Funds which might be prudently invested, the result of discussion showed a general consensus of opinion that it would not be advisable to propose, for the present, the investment of a larger proportion than 50 per cent for though we have been struggling without accident, since the end of April, with a proportion of rupees in our Currency Reserve varying from Rs. 3,66,18,000 or 12.9 per cent minimum to Rs. 7,04,28,000 or 23.0 per cent maximum, the formal decision to limit our cash holdings to even one-third of our liabilities might appear disquieting to the commercial community.

I may here mention that on the last occasion when the mercantile and banking community was consulted as to the increase of the investment of Currency Reserve Funds, Lord Elgin's Government, in their despatch of 2nd June 1896, summed up the opinions received as follows "We consulted the Presidency Banks and the Chambers of Commerce in this country on the subject. The replies show that none of these bodies calls in question the proposal to make this increase in the investment on the ground that it would diminish the security for the convertibility of the currency note, the mercantile and banking opinion is practically unanimous that in increasing the investment by two crores there is no risk whatever so far as the convertibility of the note is concerned."

The despatch continued with further observations which, I think, I should also quote as being very pertinent to the present proposals and as perfectly expressing my own views on an important side of the general question. The Government of India wrote "We believe that strong objection would be taken to our manipulating the currency reserve with the intention of producing any effect upon the exchange value of the rupee. For the same reason we are inclined to doubt whether, when a measure affecting the currency reserve is proposed from the point of view of paper currency reserve, pure and simple, we ought to allow ourselves to be influenced by the possible effect which a measure, desirable from a Currency Reserve point of view, may have upon the exchange value of the rupee."

The general question of the advisability of legislation affecting our exchange policy was discussed in Council, and the view was, I think, unanimously accepted that such legislation should, if possible, be avoided. I venture, however, to point out that though legislation would be necessary for increasing our Currency Reserve Investments, such legislation might, and I think should, be undertaken quite independently of any question which we may have to consider in connection with our exchange policy.

I hold very strongly to the view expressed in the passages which I have quoted above, and though I must accept that, as a last resource, we must, in case of exchange difficulties, make the fullest use of whatever gold or gold securities we may hold in the Currency Reserve, this is a last resource, and, when the Gold Exchange Fund which I have proposed is established, it is on the resources of that fund that we must primarily and publicly rely to meet ordinary requirements for exchange purposes.

(Signed) E FG LAW

23rd August 1900

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 232, dated 13th December 1900

MY LORD,

I HAVE considered in Council your Excellency's letter dated the 6th September, No 302, on the subject of the formation of a special Gold Reserve, on a basis sufficient to ensure the success of the policy adopted by the Government of India, with the view of placing its currency system on the gold standard.

2 I must begin by expressing my high appreciation of the ability with which Sir Edward Law has treated this important subject, and of the care shown in dealing with various questions of detail connected with it.

3 Of the advantage of maintaining a special Gold Reserve I am fully convinced, and, in order to mark the primary object of its formation, it appears to me that the title to be assigned to it should be the Gold Standard Reserve.

4 The first proposal made by Sir Edward Law, for the purpose of constituting such a Reserve, which receives the unanimous support of your Government, is that the profits on the coinage of rupees should not be credited to the Revenue, or held as a portion of the ordinary balance of the Government of India, but should be kept in gold (an expression in which he appears to include securities saleable for gold) as a special reserve entirely apart from the Paper Currency Reserve and the ordinary Treasury Balances.

5 This proposal is in harmony with the 60th paragraph of the Report of the Indian Currency Committee, and I fully concur in the principle which it enunciates. As a matter of account, however, it appears to me that it will be desirable that the profit made by the coinage of rupees should, as in the case of all similar operations, continue to be shown as Revenue under the head of Mint, while on the side of Expenditure will be exhibited the charges in connection with the coinage, and also the payment of the net profit to the Gold Standard Reserve. The latter sum will thus be credited below the line under the head of Deposits or Remittances, and, when the remittance to England is effected, it will be debited under the corresponding head. In a subsidiary account will be shown the complete transactions in connection with that Reserve.

6 In order to ensure the due application of the gain made through the coinage, it is advisable that your Government should once in three months make up an account of the receipts and charges, and should forthwith remit the net profit to be held by the Secretary of State in this country.

7 It does not appear necessary to specify precisely in what gold securities the reserve shall be invested, whether in Consols or India Stock, or in any other manner. This will be at the discretion of the Secretary of State in Council from time to time, and the result will be periodically reported to the Government of India, and published in its Gazette.

8 While, however, I am in favour of the institution of the Gold Standard Reserve, with effect from the beginning of the current year, I do not overlook the difficulty mentioned in the 11th paragraph of your letter, arising from the circumstance that the receipts from the coinage of rupees in 1900-01, having come into your balances, have already been applied in the relief of famine, or in loans to Native States, and that they could not be at once invested for the Gold Standard Reserve without resort to further borrowing. I therefore authorise you to remit the net profit which you have made this year as you may be able to provide the money out of surplus receipts in this and subsequent years. This remittance may be effected either in the shape of gold, or, when there is a sufficient demand for bills on India, by agreeing to meet them in excess of the amount required for the other Home disbursements.

9 I trust, however, that this special arrangement will not be needed for future years, and that from the 1st April 1901 the regular appropriation of the funds applicable to the Gold Standard Reserve will be rigidly maintained.

10 The second proposal, in which also your Government concurs, is to add to the special reserve the annual interest on the investment of the Paper Currency Reserve, amounting at present to Rs 34,70,000. I must point out, however, that the two reserves will be quite distinct, with different objects, and there appears to me to be no special reason why the interest on the securities of the one reserve should be assigned to the transactions of the other. I am of opinion, therefore, that, for the present, it will be better to adhere to the existing system.

11 In the third recommendation, namely, to use in future for the purchase of silver for coinage into rupees any excess over 7,000,000*l* in the stock of gold in the Paper Currency Department, you also fully concur. The circumstances of the past year have, however, been exceptional in various ways, and it does not appear practicable to base on them any final decision as to the amount of gold which it is prudent to hold in the Currency Reserve, but I agree that that amount may for the present be taken as the maximum which it is desirable to retain, though no pledge should be given to the public on this point. Any excess over 7,000,000*l* would, in ordinary course, be spent in the purchase of silver for coinage into rupees, and it would probably be desirable that, even if there were no such excess, the Secretary of State should hold in London a portion of the gold, in order that it may be used in the purchase of silver, when the latter can be obtained at a moderate price.

12 The other proposals made by Sir Edward Law refer to the investment of the Reserves No 4, suggesting the gradual transfer of the Rupee Securities of the Paper Currency Department into India Sterling Securities,

is recommended by your Government if it can be effected without fresh legislation, but I am advised that this is not the case. No 5, to increase the amount of the Paper Currency Investment, to make the additional investment in British Consols, and to obtain the funds by reducing the stock of gold in the Currency Reserve, is, as you observe, open to the objection that fresh legislation could not be avoided. Even, however, apart from this consideration, I feel that there are serious reasons against the adoption of the measures proposed, and I am unable to sanction them.

13 In the 15th paragraph of your letter you pressed on me the necessity for a further purchase of silver, and you have by telegraph added other demands.

The following is a statement of the amount bought during this calendar year.—

	Amount	Average Price per oz including all Charges
	£	d
1st instalment, 6th to 24th March	500,000	27 99
2nd instalment, 23rd April to 4th May	500,000	27 77
3rd instalment, 14th to 28th May	500,000	27 84
4th instalment, 12th to 22nd June	400,000	28 02
5th instalment, 5th to 17th September	500,000	29 19
6th instalment, 27th September to 8th October	500,000	29 77
7th instalment, 19th to 26th October	500,000	
8th instalment, 29th November to	500,000	
	3,900,000	

This is in addition to the amount obtained by your Government in India so that altogether the number of rupees by which the circulation will have been increased must considerably exceed nine crores. I have in each instance acted on your application, feeling assured that your Excellency would not desire to enhance the volume of rupees in circulation beyond what seemed absolutely necessary.

I have, &c,  
(Signed) GEORGE HAMILTON.

Telegram from VICEROY, dated 26th March 1901

In view of present low price of Consols, we suggest your consideration of advisability of investing, on behalf of Gold Reserve Fund, say half a million sterling. If you make the investment we can ship another half a million sterling at once.

SECRETARY OF STATE to VICEROY, dated 29th March 1901

Your telegram 26th. Send gold as proposed. Mode of investment under consideration.

Telegram from VICEROY, dated 10th April 1901

Your telegram of 29th March. Japanese yens, weighing 131,379 ounces, actual value 502,224l, will be shipped by "Borneo," leaving Calcutta 16th April.

Telegram from VICEROY, dated 10th January 1902

We have now nearly two and a half millions gold in Gold Reserve Fund. We propose embarkation of half a million for investment immediately. We hope that you will be able to arrange for remittance of remaining two millions by free sale of Consols in next three months, and so save cost of specie remittance.

Telegram from VICEROY, dated 9th July 1903.

Propose sending home 260,000l sterling, partly bazar gold, balance sovereigns, for investment on account of gold reserve, unless we hear to the contrary in a week or ten days. We beg to recommend investment in sterling security other than Consols.

Letter from the GOVERNMENT of INDIA to the SECRETARY OF STATE,  
No 229, dated 30th July 1903

MY LORD,

In the Viceroy's telegram, No 4147 A of the 9th instant, in which we proposed sending home 260,000*l* in gold for investment on account of the Gold Reserve Fund, we recommended that the investment should be made in some sterling security other than Consols. We have now the honour to explain our reasons for this recommendation.

2 We observe from paragraph 7 of your Despatch No 232 (Financial), dated 13th December 1900, that your Lordship did not think it necessary to specify precisely in what gold securities the reserve should be invested, and that you left it to the discretion of the Secretary of State to vary the investment from time to time. We understand, therefore, that there is no strong objection to our proposal, and we consider that it would be advantageous in several ways.

3 In the first place the investment of a part of the fund in securities, such as those of the London County Council or our own sterling stock, carrying a higher rate of interest than Consols, would add materially to the receipts of the fund, and accelerate its growth. The sum at present standing at the credit of the fund is not in our opinion sufficient to meet all possible contingencies, and we should be glad to take any legitimate means of raising it to a higher figure. We regard investment in 3 per cent securities of good standing as a proper means to this end.

4 There are many local securities in the United Kingdom, as well as our own stock, which appear to be desirable investments, and it would, we think, be an advantage to possess some of these instead of keeping all our reserve in one class of security. In the event of our having to realise a portion of the fund, we should probably get better prices if we had a choice of stock to put on the market, and the simultaneous sale of securities of different classes would not have the same prejudicial effect in depreciating the value of our investments as if they were all of one class.

5 Should your Lordship think it advisable to purchase India stock on account of the fund, the investment would have the further advantage of relieving the market for this stock, and might have the effect of strengthening our credit in London. An objection might possibly be raised to the effect that, in the event of our being obliged to draw on the Gold Reserve Fund to meet a fall in exchange, the value of Indian securities would be depreciated so that it would be inadvisable to put them on the market. We do not, however, regard it as at all certain that the latter result would follow. Our credit in the London market is now more dependent on the supply of capital loanable at low rates of interest in that market than on the exchange relations between India and the United Kingdom, and a temporary contraction of our exports to a point affecting exchange would not necessarily reflect on our credit as a borrower. We do not, therefore, apprehend that the investment of a portion of the Gold Reserve Fund in our own securities would be unsafe or likely to lead to serious loss on realisation.

6 The above are the grounds on which our recent recommendation was based. We shall be glad if your Lordship will take them into consideration when making future investments on account of the Gold Reserve Fund.

We have, &c,  
(Signed) CURZON  
KITCHENER  
T. RALEIGH  
E. F. G. LAW.  
E. R. ELLES.  
A. T. ARUNDEL.  
DENZIL IBBETSON,

---

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 159, dated 11th September 1903

MY LORD,

I HAVE considered in Council your Excellency's Financial Letter, No. 229, dated 30th July 1903, in which you explain your reasons for recommending in your telegram of 9th July that the sum of 260,000*l* which was recently sent by you to this country for investment on account of the Gold Reserve Fund should be invested in some sterling security other than Consols

2 That recommendation, as you have been informed in my telegram of the 16th July, has been approved by me, and sums of 175,000*l* and 81,988*l* have been invested in National War Loan Stock, at prices of 97½ and 97¾ respectively

3 You now submit for my consideration the further question whether India sterling stock should be included among the securities in which investments may properly be made on account of the Gold Reserve Fund

4 You recommend an extension of the field of investment on the grounds that (1) it is inexpedient to keep the whole of the reserve in one class of security, and (2) that by investing the Fund in securities carrying a higher rate of interest than Consols its growth may be accelerated, an object which it is desirable to attain by any legitimate means I assent to both these propositions In favour of purchasing India stock in particular, you urge that such an investment would have the further advantage of relieving the market for this stock, and might have the effect of strengthening your credit in London It may be the case, as you proceed to argue, though this a controvertible point, that a fall of exchange such as would necessitate drawing upon the Gold Reserve Fund would not have a direct effect in depressing the price of India stock, at the very time when the occasion arose for selling it, but it is at least possible that such a fall of exchange would indirectly have this effect, by giving rise in the market to anticipations, perhaps unwarranted or exaggerated ones, of probable sales of India stock held on account of the Gold Reserve Such a result would hardly be beneficial to Indian credit It should, moreover, not be forgotten that if some political complication occurred which simultaneously depreciated the credit of the Government of India, and the exchange value of the rupee, the sale of India stock could under such circumstances be only effected at a loss both of credit and price

5 A Reserve Fund such as that now created should, if possible, be of such a character as to permit of its realisation, without substantial loss or detriment to Indian credit, in any emergency, either monetary or political

6 The balance of advantage undoubtedly seems to lie in favour of confining investments on account of the Gold Reserve Fund to securities more unquestionably dissociated from the influences of fluctuations in exchange than India stocks can be said to be

7 For the present I have given directions for the dividends on the Gold Reserve Fund to be invested, as they are received, in the National War Loan, which yields, at its current price, allowing for redemption at par in 1910, a return scarcely less than that obtainable from India 3 per Cent Stock Whenever it becomes desirable, from any cause, to select another security for investment on account of the Fund, due regard will be had to the considerations set forth in paragraphs 3 and 4 of your letter

I have, &c,  
(Signed) GEORGE HAMILTON

Letter from GOVERNMENT OF INDIA to the SECRETARY OF STATE, No 121,  
dated 28th April 1904

SIR,

WE have for some time past been considering the best means of guarding ourselves against a sudden depletion in the rupee portion of our Currency Reserve, such as occurred in the year 1900-1, and as appeared

possible, though not probable, in November last. The suddenness and the extent of the demands which may be made upon the rupee reserve will be evident from the statement which is appended to this letter, showing for each month the gain or loss in the stock of rupees held in the Currency Reserve during the last four years, such gain or loss being calculated without reference to the additions which have from time to time been made by new coinage.

2 Experience has shown that we cannot obtain silver in India in sufficient quantities to meet sudden demands for coinage, and the process of sending home gold for the purchase of silver and importing the latter for coinage entails a delay of several weeks before coining operations can be begun. Such delay might be of serious consequence in the event of a sudden and strong demand on our rupee reserves, and we feel it incumbent on us to take every precaution against the risk of being unable to fulfil our rupee obligations, and the dislocation of the export trade of India which would follow from a shortage of silver coin.

3 We therefore propose to accumulate gradually a reserve of silver bullion to be held in the mints as a portion of the Currency Reserve, which will enable us to begin coining as soon as the demand for rupees makes itself felt. A stock of silver, melted, alligated, assayed, and rolled, ready for immediate coinage will form a valuable reserve in times of sudden pressure, and its existence will inspire confidence in the mercantile community in India, who have in the last few months shown themselves peculiarly sensitive to the apprehension lest our rupee reserves should not always be maintained at a safe level. If the four processes mentioned above, which are those occupying the longest time in the operation of coining, are then completed in advance, it will be possible for the mints to begin paying over newly coined rupees to the Treasury within four days of receiving the order to start work.

4 The amount of bullion which we contemplate holding permanently is three crores' worth, but we do not think it necessary to purchase this amount at once, we would leave it to you to obtain it gradually and cheaply as the state of the market permits. We think that it would be well, however, to buy £1,000,000 worth of silver as soon as the market offers favourable conditions. Part of this amount may be required for coinage, and it is possible that we may shortly have to ask you by telegram to make a further purchase for this purpose. In any case we shall feel safer when this stock is obtained and we have a nucleus for our proposed reserve.

5 It is our intention that this stock shall be kept quite apart from the ordinary silver bullion in the mints and in separate vaults, and that it shall not be made available for ordinary requirements, for coinage, but only in case of emergency. Instructions will be issued that no part of it shall ever be withdrawn for purposes of coinage without the previous express orders of Government communicated through the Comptroller-General.

6 We may add that we have not overlooked the legal aspect of the proposal. Section 13 of the Indian Paper Currency Act, 1882 (XX of 1882, as amended by VIII of 1900), requires us to give directions for the coinage of silver purchased from the funds of the Currency Reserve *as soon as convenient*, but the words in italics are sufficiently wide to cover the course which we contemplate. We hope, however, to make the point clear in a general revision and consolidation of the Act, which will shortly be taken up.

We have, &c,

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 41 Financial, dated 7th April 1905

My LORD,

In my telegram dated 9th March last, while accepting your proposal that the remittance of two crores of rupees to this country which will be required for the investment on account of the Paper Currency Reserve shall be made by means of Council drawings, I added that I should address you further on the subject of remittances of gold

2 The question of the amount of gold that can be conveniently held in the Paper Currency Reserve in India was discussed by your Excellency in your letters of 14th December 1899 (No 421) and 6th September 1900 (No 302) In the latter communication it was suggested that 7,000,000*l* should be regarded as the maximum, and this proposal was provisionally accepted in Lord George Hamilton's Despatch No 232, of 13th December 1900 The question was again considered by you last year in connection with your proposal to increase the amount invested on behalf of the Paper Currency Reserve; and in your letter of 18th August last, No 295, you stated that in your opinion a stock of gold of the value of 9½ crores (6,167,000*l*) in the reserve would be ample and that a larger proportion is not at present required in India You also stated that you have found by experience that at the beginning of the busy season the proportion of silver coin in the currency reserve should be approximately one-third of the total note circulation As the gold held in the reserve has not fallen below 9,000,000*l* during the last two years, and has during the whole period since March 1904 exceeded 10,000,000*l*, I assumed, when agreeing that the invested portion of the reserve shall be increased by the substitution of sterling securities for two crores of the metallic portion, that it was your intention to remit gold to England for the purchase of the securities In deference to the representations made in your telegram of 8th March 1905, I have agreed that the remittance shall be made by means of Council Bills But I should be glad if you would consider whether the amount of gold held in India should not nevertheless be reduced

3 According to the statement for the 9th March 1905, which is the latest before me, the composition of the Currency Reserve on that date was as follows —

	Crores
Securities - - -	10
Silver coin - - -	9 07
Silver bullion - - -	1 88
Gold - - -	16 47
Total - - -	37 42

The amount of silver coin was considerably below the proportion of one-third mentioned above, and when an investment of two crores is made in England, and the metallic reserve in India is reduced, the reduction will presumably be effected wholly or in part by the transfer of rupees to the ordinary treasuries

4 In view of these figures it appears to me that there would be some advantage in remitting gold to England early in the present financial year

Having regard to the state of your balances as described in your telegram of 8th March, it would perhaps be the more convenient course that gold so remitted should in the first instance be held as a part of the Paper Currency Reserve at the Bank of England. It could be used, if a favourable opportunity occurs in the near future, for the purchase of silver in anticipation of future requirements, or, if you are unwilling at present to anticipate requirements, it could be held at the Bank so as to be immediately available for the purchase of silver whenever the need for additional coinage may arise. It is also to be remembered that the possession of a stock of gold in England, held as a portion of the Paper Currency Reserve, but capable of being transferred to the ordinary balances of the Secretary of State in Council, against a corresponding transfer of rupees from your balances to the Currency Reserve in India, affords a method (which might in certain circumstances be very useful) of speedily replenishing the balances of the Secretary of State in Council

5. I shall be glad to receive an expression of your views on the points discussed in this Despatch

I have, &c,  
(Signed) Sr JOHN BRODRICK

Letter from the GOVERNMENT of INDIA to the SECRETARY OF STATE,  
No 236, dated 29th June 1905.

SIR,

We have the honour to refer to your Financial Despatch No 41, dated the 7th April 1905, on the subject of the amount of gold held in the Paper Currency Reserve. You cite various opinions which the Government of India have expressed at different times as to the amounts of gold and silver respectively which should be held in the Reserve, and you ask us to consider whether in view of the large stock of gold now held in India, a portion of it should not be remitted to England. You also suggest that it might be convenient to hold the gold so remitted in the first instance as a part of the Paper Currency Reserve at the Bank of England, and you point out certain advantages which would attach to the possession of such a stock of gold in England.

2 In the previous discussions to which you refer concerning the amount of gold that can conveniently be held in the Reserve, our views were influenced by the sudden demands which had arisen for the provision of rupees in India, and by anxiety lest the presence of a large stock of gold should hamper us in meeting those demands. Our position in this respect has been greatly strengthened by the large increase that has taken place in

the note circulation in the last few years, and by the formation of a special ingot reserve of three crores of tolas of silver, as proposed in our Despatch No 121, dated 28th April 1904. The position will, we think, be made still more secure if you accept the proposal put forward in our Despatch No 143 of the 27th of April last, for the annual purchase of silver in anticipation of actual requirements.

3 The object of this proposal was to secure a sufficient supply of rupees to meet all urgent demands, and so long as this object is effected we see no cause for anxiety in the accumulation of a large stock of gold. On the contrary we consider that the balance of the uninvested portion of the Reserve which is not likely to be required for circulation as money ought to be held in gold rather than in silver, and that the possession of a large stock of the yellow metal will strengthen our credit and contribute to the stability of exchange. Subject, therefore, to the provision of sufficient rupees and reserves of silver, we would allow our stock of gold to grow indefinitely with the expansion of the note circulation until such time as it may be deemed expedient to make a further addition to the invested portion of the Reserve.

4 We do not, however, consider it in any way necessary that the whole of the gold should be held in India. As pointed out in the second paragraph of your Despatch under reply we expressed the opinion in August last that a stock of 9½ crores in the Reserve furnishes, under present circumstances an ample maximum for Indian purposes, and one of the objects of the recent revision of the Paper Currency Act was to facilitate the transfer of the gold portion of the Reserve between India and England. We would in this connection invite attention to the remarks made by our Honourable Financial Colleague when moving on the 11th of March last that the Report of the Select Committee on the amending Bill should be taken into consideration. The Honourable Mr Baker then observed that "so far as gold is concerned, the coin held in London is actually one stage nearer the point at which it becomes effective for securing the encashment of notes than when it is in India."

5 We are accordingly disposed to welcome your suggestion that a portion of our stock of gold should be remitted to London and held as a part of the Paper Currency Reserve at the Bank of England. To the advantages which you have enumerated as attending this measure we would add that it will enable you to make purchases of silver quietly without giving the forewarning to the market which is entailed by the present system of making separate remittances for each purchase.

6 We therefore propose to send 5,000,000*l* (five million pounds) in gold to London to be held by you as a part of the Currency Reserve. When you draw on this fund for the purpose of purchasing silver, we would ask you to replenish it from time to time by the sale of Council Bills, at your convenience, and to inform us on each occasion of any intended operation on the fund, so that we can adapt our arrangements accordingly. In the event of the demand for Council Bills being slack at any time, you would be able after warning us to replenish the Reserve in India, to utilise your stock of currency gold for Treasury payments. If this proposal meets with your approval we should be glad to be informed as soon as possible in order that early arrangements may be made for shipping the gold.

7 With reference to the remarks in paragraph 3 of your Despatch regarding the amount of silver coin held in the Paper Currency Reserve in March last, we would point out that the standard of one-third of the total note circulation referred to in our Despatch of the 18th of August 1904 was suggested as sufficient at the opening of the busy season, and that that season was drawing to its close on the 9th of March. We take this opportunity of explaining that the standard which we suggested last year on Sir Edward Law's advice was a rough estimate only, and that we do not at present consider that we have sufficient data or experience for laying down any arithmetical criterion. We attach more importance to the proposals stated in our Despatch of the 27th of April last for anticipating requirements than to the maintenance of any fixed proportion of rupees to the note circulation, and in any

event, we do not consider that the gross circulation, which includes notes held in the Reserve Treasuries, could in any circumstances be treated as the basis of such a criterion

We have, &c

---

Despatch from SECRETARY OF STATE to GOVERNMENT OF INDIA, No. 91,  
Financial, dated 11th August 1905.

MY LORD,

In your letter of the 29th of June, No 236, you accept the suggestion made in my Despatch of 7th April, No 41, that a portion of your stock of gold should be sent to this country to be held as a part of the Paper Currency Reserve, and you propose to make early arrangements for the shipment of 5,000,000*l*. I understand that you desire that the 1,000,000*l* shipped on the 8th of July, as reported in your telegram of 6th July, may be regarded as a portion of this 5,000,000*l*

2 I approve the proposal that a further 4,000,000*l* shall be sent. It should be consigned in instalments of not more than 1,000,000*l*, and you should inform me by telegraph when each consignment is about to be made

3 When the gold held in England is drawn upon for the purchase of silver it is possible that in some cases the most convenient arrangement for keeping the total Currency Reserve up to the required amount will be that contemplated in sections 17 and 19 of Act III of 1905, viz, to treat the silver purchased as a portion of the reserve. The stock of gold in England can subsequently be replenished, as you propose, from the proceeds of Council Bills (if the state of the Home Treasury balances admits of this) so as to release rupees from the Currency Reserve in India. This procedure would obviate the necessity for making transfers in India from the Treasury to the Paper Currency Department at the time of the purchase of the silver, which I understand to be the course suggested in the sixth paragraph of your letter

4 For the present, however, the silver that is being purchased in accordance with the requests contained in your telegram of the 5th April, your letter of the 27th April, and your telegram of 30th June, is being paid for from the balances of the Home Treasury, so that the whole 5,000,000*l* of gold will be held from the time of its arrival as a part of the Paper Currency Reserve

5. I forward a copy of a letter to the Bank of England requesting them to take the necessary measures

6 I also forward a copy of a note by the Deputy Accountant-General at this Office, from which it will be seen that it is desirable that you should announce (in the manner that appears to you most convenient) that the shipments are to be made on behalf of the Paper Currency Reserve, and not for the purpose of replenishing the balances of the Secretary of State for India in Council

I have, &c.,  
(Signed) ST JOHN BRODRICK.

---

## Enclosure No. 1.

INDIA OFFICE TO BANK OF ENGLAND.

F. 5156  
GENTLEMEN,India Office,  
28th July 1905

I AM directed to inform you that the Government of India intend to consign to this country during the present year 4,000,000*l* in gold in addition to the 1,000,000*l*. referred to in the correspondence ending with Mr Nairne's letter of the 7th July

The whole 5,000,000*l* will for the present be treated under the arrangements contemplated in the Indian Paper Currency Act, 1905 (of which a copy is enclosed for your information) as being a part of the reserve to secure the payment of currency notes issued in India

I am to inquire whether you will be so good as to hold the gold on behalf of the Secretary of State in Council on a separate account distinct from his cash and drawing accounts

Portions of the amount so held may from time to time be used for the purchase of silver or for other purposes, and in this event a transfer to the Secretary of State's cash account will be required, and the necessary instructions will be given by this Office

The Governor and Company of the  
Bank of England

I have, &c  
A GODLEY

## Enclosure No 2

Note by the DEPUTY ACCOUNTANT-GENERAL, India Office, dated  
22nd July 1905

I have to suggest, for consideration, that in view of the magnitude of the operation it might be desirable to take some steps to acquaint the market that the gold to be shipped will not be available for the purposes of loans from the Secretary of State's balances. The Broker has recently mentioned to me on several occasions that the publication by the newspapers of the intended shipment of gold, which is usually announced by the news agencies directly the freight is arranged in India, has a distinct effect on the rates he is able to obtain for our loans. The firms on the borrowing list occasionally quote the information to him, and either decline to renew in the expectation of cheaper money and supply themselves instead from other sources with weekly or other short term loans, or else make the news the pretext for offering a lower rate of interest than would otherwise be obtained. In this case the shipments of gold will be large, and will perhaps spread over some time. I see from to-day's "Times" that a rumour as to a further shipment is already afloat

H W BADOCK

Telegram from VICEROY, dated 15th December 1905

Your telegram of 14th instant transfers to Currency Reserve. We regard it as advisable to transfer to our Treasury Balances a further sum of Rs 75,00,000, and shall be glad, therefore, if 500,000*l* may be transferred to the Currency Reserve (Gold) on the 16th instant. Please also expedite as far as you can the shipment of silver that has been ordered

Telegram from SECRETARY OF STATE TO VICEROY, Financial Department,  
dated 16th December 1905

Transfer of gold to Currency Reserve. I am willing to make the transfer as requested in your telegram of yesterday at once, if this is the only possible course. But as it is undesirable just now to withdraw gold from the Bank of England Reserves, it would be better to postpone or, if possible, to avoid such transfer. Accordingly I would ask you to consider whether by treating

the gold in your Treasury Balances and the balance of the silver bullion received by you, or in transit to India, as belonging to the Currency Reserve, we might not avoid the necessity of immediately transferring gold to the Currency Reserve in England, or at any rate make the amount to be transferred smaller

---

Telegram from VICEROY, dated 19th December 1905

Currency transfer Your telegram 16th December We must, in spite of the possibility of inconvenience to the Bank of England, earnestly press our request that you will transfer to your Currency Balance half-a-million of gold from your Treasury If this is not done, your large drawings of telegraphic transfers will cause us serious embarrassment We are coming as fast as possible the entire special ingot reserve, we have already earmarked for Currency most of the silver bullion en route; we have made as much use as possible of our Treasury gold, and have arranged for temporary loan of 70 lakhs from Gwalior

---

Telegram from SECRETARY OF STATE to VICEROY, Financial Department, dated 19th December 1905

Currency transfer Your telegram of to-day To-morrow I will set aside half-a-million In order to guide me at allotment to-morrow, please inform me of the amount of transfers you can, without my setting aside further gold, meet this week When you reply, please keep in mind my announcement in my telegram of yesterday as to shipments of silver for this week and next week

---

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE, No 144, dated 26th April 1906

Sir,

In your telegram of the 11th January 1906 you authorised us to raise the silver ingot reserve from 300 to 600 lakhs of tolas No steps, however, have yet been taken to give effect to this decision The extraordinary demand for rupees during the busy season which is now expiring completely exhausted our original reserve of 300 lakhs by the 15th January last, and we have only with difficulty been able, though employing the Mints at their full capacity, to maintain a supply of coin sufficient for immediate requirements Now that this pressure has been relaxed we desire to explain the manner in which we propose to build up an enlarged reserve, and to suggest other measures for strengthening our position

2. As regards gold, the position already attained is undeniably strong We have accumulated by a natural process a stock of over £12 millions in the Gold Reserve Fund, besides over £11 millions in the Currency Reserve, and in addition the paper currency investment now includes £1½ millions' worth of sterling securities During seven years we have never been threatened with serious attack from this side We are far from affirming that the point has been reached, or is in sight, when further accumulations of gold should cease Even a relatively small depletion of our total stock of gold might excite public apprehension, and this is the more important now that it has been decided to divide our stock by holding five millions or more in your currency chest in London At the present time we hold less than four millions of gold in India and we are assured that no material reduction in this figure would be consistent with public confidence We are, however, satisfied that further direct additions to the Gold Reserve Fund can with advantage be temporarily suspended if such a measure would enable us to strengthen our position on a weaker side

3. The case of silver is wholly different. From first to last our only practical difficulty has been the timely provision of rupees, and notwithstanding various improvements of method, that difficulty still remains, and as recent experience has again shown, it constitutes a real danger When

making our forecast for the busy season of 1905-6 we found ourselves, on the 1st October last, with a balance of 13 crores of coined rupees in the Currency Reserve, in addition to the ingot reserve of 300 lakhs of tolas, and bullion already ordered or purchased sufficient to produce nearly 280 lakhs more. Assuming a demand equal to that of the corresponding months of 1904-5, we might have expected, without further purchases of silver and without drawing on the ingot reserve, to be able to maintain a minimum rupee balance of more than 11 crores up to the end of January. But to be on the safe side we indented for 750,000<sup>l</sup> worth of additional silver by that date. In the actual event we had to ask you to increase your purchases of bullion during the period mentioned to £2<sup>3</sup>/<sub>4</sub>\* millions' worth, and we also converted into coin the whole of the ingot reserve. The fresh coinage amounted to 777 lakhs, or five crores more than had originally appeared to be required for the maintenance of a balance of 11 crores. Notwithstanding this enormous outturn our rupee balance has fallen by the end of January to 7<sup>1</sup>/<sub>2</sub> crores. On the 6th January we had to send you a further request for the purchase of £2<sup>1</sup>/<sub>2</sub> millions' worth of silver†, and we had to supplement our resources by obtaining a temporary loan of 70 lakhs from the Maharaja Scindia, and by purchasing Rs. 30 lakhs' worth of silver from the Russo-Chinese Bank. The depletion of our balances in India also embarrassed the Secretary of State in England, as, for example, when‡ we had to ask Mr Brodick to increase his purchases of silver, notwithstanding the risk of disturbing the silver market, and later, when§ we had to press you to transfer gold from Treasury to Currency, though advised that the withdrawal of gold from the reserves of the Bank of England would be inopportune. During this period our Mints have been working at the highest possible pressure, and the total net addition to the rupee coinage in 1905-6 has been about 16<sup>1</sup>/<sub>2</sub> crores of rupees, against 7<sup>1</sup>/<sub>2</sub> crores in 1904-5, and 13<sup>1</sup>/<sub>2</sub> crores in 1900-1 which till now marked the highest outturn recorded since the closure of the Mints. Nevertheless, while at the end of March 1905 we had 11,36 lakhs of coined rupees and 2,59 lakhs of tolas in ingot form in our Currency Reserve, the return of 22nd March 1906 showed only 11,65 lakhs of coined rupees with no ingot reserve at all.

4 It would have been futile to seek refuge from these difficulties in the curtailment of your drawings. If the sale of Council Bills is restricted, gold will be shipped and tendered for conversion into rupees after only a slightly longer interval, and that gold must ultimately be returned to England, at our cost, for the purchase of silver. The stoppage of telegraphic transfers disorganises trade and only defers the eventual demand. The adoption of such expedients can therefore only be justified by extreme and passing emergency. On the other hand it is obviously impossible that the rupee resources from which your drafts are honoured should be obtained from the actual gold on the deposit of which they were issued. The demand must always fall in the first instance on the stocks of rupees and bullion then in hand. It follows that for permanent safety these stocks must be materially strengthened, that their maintenance at a high figure must be recognised as a fundamental obligation of currency administration, and that we must accept any modifications of system which these conditions may necessitate.

5 To give effect to these conclusions we propose—

- (i) to form a silver reserve of 600 instead of 300 lakhs of tolas,
- (ii) to hold this bullion outside the Currency Reserve, and
- (iii) to accept and act upon the principle of advance coinage by coining rupees at the rate of 150 lakhs a month throughout the coming slack season (April to September)

6 The first of these measures has already received your approval, and the only observation which the fuller explanations now given are likely to suggest is that it is not by itself sufficient to afford us the protection we require. This criticism we hope to meet by our remaining recommendations.

\* The supplementary indents were half a million to be delivered by the 31st January, and £1<sup>1</sup>/<sub>2</sub> millions to be delivered by the 15th February.

† The further orders for £1 million of silver in each case, telegraphed to you on 8th February and 8th March, represent requirements subsequent to those of 1905-6.

‡ Telegram to Secretary of State, dated 19th November 1905.

§ Telegram to Secretary of State, dated 19th December 1905.

7 Our next proposal is to build up the enlarged bullion reserve entirely from profits on coinage, and to hold it as part of the Gold Reserve Fund. This method was not considered in 1904, when the amount of the Gold Reserve Fund was considerably below its present figure. The exhaustion of the original ingot reserve offers a convenient opportunity for reconsidering our procedure. In our judgment it is undesirable in principle to hold in the form of bullion any substantial portion of the metallic reserve which secures the encashment of our currency notes. The value of the metallic reserve is limited by the volume of the note circulation and the amount of the paper currency investment, and all bullion held within it must displace legal tender coin of equal value, and to that extent renders the metallic reserve less efficient. This objection could be waived when only a small amount of bullion was required, but it becomes more pressing in view of the decision to increase the ingot reserve to 600 lakhs of tolas.

8 It would of course be possible, while maintaining within the Currency Reserve an ingot reserve of 600 lakhs of tolas (representing roughly 4 crores of rupees) to raise the balance of coined rupees to any desired figure, but this could be effected only by unduly depleting our stock of gold. Thus, taking the note circulation at 42 crores, and estimating 18 crores as a suitable rupee balance with which to open the busy season, the Currency Reserve would be constituted as follows—in estimate, 12 crores, ingot reserve, 4 crores, coined rupees, 18 crores, gold, 8 crores or £5½ millions. It is obvious that we could not supply you with the £5 millions which you require for your currency chest, and meet even the present demand for gold as a circulating medium from the remaining 333,000*l*. Moreover, nothing at all would be left in India for contingent requirements, and in the event of an incipient drain of gold we should be driven back at once upon your currency chest and the Gold Reserve Fund. We have also to remember that the expansion of your drawings and the recent decision to grant telegraphic transfers against sovereigns in transit from Australia will check importation of gold into India in the future. On every ground, and even though a somewhat lower estimate be taken of the rupee balance required, and allowance made for a gradual expansion of the note circulation, it is clear that there is no longer room within the Currency Reserve for the large stock of bullion which we are now compelled to keep.

By holding the ingot reserve elsewhere we should, however, be able, on the data given above, to keep three millions of gold in our Currency Reserve in India. We do not think it advisable to go below this figure.

9 The natural method of maintaining a reserve of bullion for coinage purposes would be to purchase the amount required from revenue, and to replenish it from the same source as required from time to time. This would, however, involve either the reduction of our balances by about £2½ million sterling, which is quite impossible, or the raising of an equivalent amount by borrowing, with its attendant charge for interest. We are of opinion that this charge may fairly be thrown upon the Gold Reserve Fund, and that there is nothing inconsistent with the purposes of that Fund in the measure which we propose. At present, when silver is purchased for coinage, (1) we first replace by coined rupees the gold withdrawn to pay for the bullion, (2) the surplus bullion is then coined into rupees, (3) the latter are then again converted into gold, and (4) the latter is remitted to England for investment into interest-yielding securities. What we now propose is to suspend this process in the course of the second stage, *i.e.*, the surplus bullion instead of being coined, converted into gold, and invested, should be retained in a partially coined state until required for actual use. The profits on coinage which it represents will still be held apart as a part of the Gold Reserve Fund, and will eventually be converted into gold and invested, but this process will be deferred until the demand for rupees requires it. The effect no doubt is that the amount so held will not be earning interest in the meantime, but having regard to the rapid progress of our accumulation of gold in the Gold Reserve Fund in the past five years, we consider that the question of its further accretion by interest is now of less importance than the formation and maintenance of a sufficient reserve of silver bullion. Our currency system is unavoidably artificial, and the profits

arising therefrom should be primarily utilised, not in breeding interest, but in protecting it against the risks to which an artificial system is liable. At the outset the main risk apprehended was an inadequate stock of gold, hence the creation of the Gold Reserve Fund. Now the pressing danger is a temporary deficiency in our stock of rupees, which equally justifies the expansion of that Reserve Fund so as to include a silver bullion branch. Moreover, as will be observed from the next paragraph, there will be no prolonged or complete retardation of the growth of the gold reserve.

10. We propose, then, to convert our existing Gold Reserve Fund into a Gold and Silver Reserve Fund, into the silver branch of which we shall deposit in the form of silver bullion, prepared for coinage, all profits on future coinage until the full reserve of 600 lakhs of tolas has been accumulated. The precise method of working will be obvious from the following example. Taking silver at 30*d* per ounce we can purchase with £1 million of gold about 215 lakhs of tolas of standard silver. Out of this amount 150 lakhs of tolas will be converted into the same number of rupees and these rupees will replace the gold taken from the Currency Reserve. About three lakhs will represent the Mint charge for seigniorage, and about one lakh of tolas will disappear in wastage. There will remain about 61 lakhs of tolas of bullion which will be deposited in the silver branch of the Gold and Silver Reserve Fund as the profit on coining one and a half crores of rupees. With silver at 28*d* per ounce, the net profit on the same coinage would amount to about 76 lakhs of tolas of bullion. Thus the coinage programme of one and a half crores of rupees a month, which we are about to lay before you, will provide us with a minimum silver reserve of 3½ crores of tolas before the next busy season begins, and meanwhile the rupee balance in the Currency Reserve will have been strengthened by the addition of 9 crores. We shall of course go on to build up the full reserve of six crores of tolas as soon as further coinage produces the required profits.

11. To utilise this bullion reserve, if circumstances should require it to be drawn upon, we should coin into rupees and transfer to the Currency Reserve the amount required at the moment (say 150 lakhs), and credit the Gold and Silver Reserve Fund with the equivalent in gold (£1 million). Of this gold a sum worth about 61 lakhs of tolas of bullion (284,000*l*), at present silver prices, would be transferred to the Gold Branch of the fund as the profit on coining 150 lakhs, and the remainder would suffice for the re-purchase of the amount of silver which had been withdrawn (150 lakhs of tolas), besides meeting the seigniorage charge and the loss by wastage. The silver reserve would thus be automatically restored to its full amount.

It will thus be seen that whenever the bullion reserve is drawn upon, and of course after it has been finally formed, all subsequent profits will be credited directly in gold as heretofore, while the accrual of interest on the existing investments will continue unchecked. Thus the only effect on the stock of gold is that a sum of about £2½ millions (the amount required to purchase 600 lakhs of tolas) will be held in suspense in the form of silver, and will not earn interest.

12. We pass on to our third recommendation. The principle of coinage in advance of actual requirements was formulated in the despatch from Lord Curzon's Government, No 143, dated 27th April 1905. We are of opinion that more complete effect should now be given to the conclusions there stated. We would note, in the first place, that the proper function of the bullion reserve is to provide for unforeseen demands. The normal coinage of the year should be evenly distributed, instead of being concentrated into the busy season when the bullion reserve itself may require to be converted into coin. By following a different practice in the past we have incurred a grave risk. In the last few months the Mints, as already stated, have been working at extreme pressure, and the occurrence of labour troubles such as actually took place in the Government Press at Calcutta would have led to the most serious results. In the coming year certain structural alterations have to be carried out at the Bombay Mint, and the possibility that they may interfere with the work of the busy season is an additional reason for making ample preparation beforehand. Secondly, we would point out that the limit of reliance upon a reserve of bullion is reached when the reserve becomes

so large that the time taken to coin it exceeds the time required to replace withdrawals by fresh purchases in England. Any further strengthening of our stocks can then be most advantageously effected by working up to a higher balance of coined rupees at the beginning of the busy season. Thirdly, we have to bear in mind that our bullion reserve in the Gold and Silver Reserve Fund will for some time to come be below its full intended amount, and though we could, of course, for the present, hold the balance of the six crores of tolas in the Currency Reserve, it will cause less complication and yield the same result if we raise the number of coined rupees to a higher amount than would otherwise be necessary. Advance coinage has also the advantage of spreading the demands on the silver market more evenly. And, generally, we recommend it as an obvious measure of precaution, unattended by counterbalancing risks. Experience shows that a temporary surplus of rupees will inevitably be soon absorbed, and in the meantime the excess coin remains locked up in our balances and reserves, and cannot affect prices and the course of exchange. We trust that in view of these considerations you will be prepared to accept the programme of coinage which we now lay before you, and to make purchases of silver in accordance with it.

13 The facts already stated suggest that 18 crores is by no means an excessive estimate of the number of coined rupees which we ought to have available in our Currency Reserve on the 1st October, when the busy season is about to open. The absorption of the five months October to February inclusive has averaged about Rs 7½ crores during the last six years, while in 1905-6 it amounted to no less than 14½ crores. It is clear, therefore, that in a year in which your Council drafts are heavy our stock of rupees, though standing at 18 crores on the 1st October, will still require to be supplemented by the continuous coinage in the cold weather months, while if they prove relatively light, we can reduce or stop the outturn of the Mints. For 1906-7 we estimate that we shall have to coin 9 crores at the rate of 1½ crores a month between the 1st April and the 30th September next to attain the 18 crore standard, while, as above pointed out, the ingot reserve will then be still below its full amount.

14 As we have already explained, during the period when profits on coinage are being credited in silver, the coinage of each 150 lakhs of rupees involves the purchase of £1 million's worth of silver. An outturn of 9 crores of coined rupees will accordingly require the supply of six millions sterling worth of bullion. Excluding the indent of the 8th March we shall have in hand or already ordered, on the 1st April, a little over 2½ millions' worth, the coinage of which, at the rate of 150 lakhs a month, will occupy the Mints to the end of May. Accordingly for the coinage operations of June to September we require £1 million's worth of bullion a month, timed to arrive on or before the middle of each month from May to August. We have already in pursuance of this programme requested you in our telegram of 8th March last to purchase and ship £1 million's worth in full by the 15th May and on the 7th April we asked you to send out a like amount not later than 15th June. We desire to follow this up by similar orders of £1 million each in May and June for full delivery by the 15th July and the 15th August respectively. Such further demands as we may have to make for the cold weather months will then be regulated by the actual position towards the close of the slack season, and by the progress of your Council drawings.

We have, &c,

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 57, dated 25th May 1906

MY LORD,

I HAVE considered in Council your letter No 144, dated 26th April, recommending that a portion of the Gold Reserve Fund shall be held in silver

2 I am of opinion that there is no objection in principle to the change in the character of the fund which this proposal involves. The general object for which the fund was established was to provide, in the spirit of the recommendation made by the Indian Currency Committee of 1898, that the profit on the coinage of rupees shall not be treated as a part of the revenues of India, but shall be separately held and used for a special and well defined purpose. In 1900, when a scheme for establishing and dealing with the fund was approved by Lord George Hamilton, it was considered that the most useful purpose to which it could be devoted was to provide against the contingency of a fall in the exchange value of the rupee, and it was accordingly decided to hold it in gold or in sterling securities so that the sale of bills and telegraphic transfers on India might be reduced or suspended when the demand was inactive, a portion of the gold or securities being temporarily used, if necessary, towards meeting disbursements in this country. This object is one which must always be borne in mind, but it is equally necessary to provide that, at times when the trade demand for remittances is active, it shall be met promptly and freely, and it is equally legitimate to use the fund for this purpose, provided that it is not treated as a part of the revenues of India. Under your scheme a portion of the profits of rupee coinage would be held on behalf of the fund in silver to be used in meeting a demand for remittances in excess of the amount that could be met from your other resources, the proceeds of such excess remittances being devoted to the purchase partly of additional sterling securities for the fund and partly of silver to make good the amount withdrawn. The total of the fund would remain intact and would be increased as now by the profit on additional coinage and the whole amount would be kept separate from your Treasury balances and the Paper Currency Reserve. I accordingly approve your proposal.

3 In the latter part of your letter you inform me that you desire to coin enough rupees during the six months from 1st April to 30th September 1906 to secure that at the latter date you may have 18 crores in your Paper Currency Reserve, you estimate that this programme will require the coinage of nine crores during the period mentioned and you ask that silver to the value of 2,000,000*l* may be ordered, in addition to the amounts requested in your telegrams up to and including that of 7th April. I find that on the 3rd of May you had in the Currency Reserve 1,379 lakhs of rupees, and bullion to the value of 237 lakhs, including the amount in transit. The value ordered but not yet supplied was 1,130,000*l* (169 lakhs). Taking the price of silver at 30*d* an ounce, the total amount of bullion in your possession, in transit, and still to be purchased on account of orders up to and including that which was given on receipt of your telegram of 7th April, was about 650 lakhs of tolas and the disposal of this amount, according to the figures given in paragraph 10 of your letter, would be as follows —

Rupees added to Currency Reserve	-	-	453 lakhs.
Seigniorage and wastage	-	-	12 „
Bullion transferred to Gold Reserve Fund	-	-	
(lakhs of tolas)	-	-	185 „

Thus, if no allowance is made for absorption of rupees through the presentation of notes for encashment up to the end of September, the rupees in the Paper Currency Reserve at that time would, apart from further purchases, exceed 18 crores, while the bullion held in the Gold Reserve Fund would amount to 185 lakhs of tolas. The figures for past years show that during the period from April to September there is sometimes an absorption of rupees and sometimes an automatic addition of rupee reserve. It is thus possible that the purchase of 2,000,000*l* silver in addition to the

amount already ordered may be in excess of what is required in order that you may have 18 crores of coined rupees in the Paper Currency Reserve by the 30th September, and may also have in your possession 3,50,00,000 tolas of bullion, the amount mentioned in paragraph 10 of your letter. You will be in a position to judge in the course of June whether the full 2,000,000*l* is required. Meanwhile, in accordance with the request contained in your telegram of 8th May, I have ordered silver to the value of 1,000,000*l*, and have given instructions that delivery shall, if possible, be completed in India by 15th July. Even if this should not be practicable, the bullion that you now have, together with the weekly shipments, will be enough to enable you to proceed with coinage at the rate of 150 lakhs a month for some time beyond that date.

4 It remains to consider in what manner the funds shall be provided for purchasing this additional 1,000,000*l* of bullion, together with the further amount suggested by you in paragraph 14 of your letter. The usual practice is to make payments of this nature in the first instance from the balances of the Home Treasury, and to replenish those balances, as far as the convenience of your Government permits, by the transfer of gold from the amount held in this country as part of the Paper Currency Reserve. It will, no doubt, be possible to arrange in the course of June and July for the transfer of considerable sums from the Paper Currency Reserve in addition to the 1,650,000*l* mentioned in your telegrams of 10th and 18th April and 2nd May, but it occurs to me that, if the use of this procedure appears likely to involve an excessive depletion of the gold held in the currency reserve, the balance in this country can in case of need be replenished by realising a portion of the securities held on behalf of the Gold Reserve Fund. If this is done the simplest course will be to arrange that a portion of the Treasury bills shall be paid off as they mature instead of being renewed. Thereupon a transfer of a corresponding amount in rupees or silver bullion can be made to the Gold Reserve Fund in India, the net result being that an addition to the total stock of silver in your possession will have been made without affecting the stock of gold or the balances in this country or in India. It is possible, of course, that the condition of the Treasury balances during the next few months may be such as to render it unnecessary to have recourse to this method of providing for the purchase of silver, but I shall be glad to be informed by telegram whether you are in favour of its adoption if occasion arises. If you agree to the suggestion I shall inform you by telegram when a realisation of the securities is contemplated, in order that you may arrange at your convenience for the necessary transfer of silver. In any event I propose to continue as now the investment of dividends on securities held on behalf of the fund.

5 I observe that in various passages of your letter you refer to the fund as the Gold and Silver Reserve Fund, and I gather that you desire that this shall be its designation in the future. It appears to me that it would be better to adopt a name which describes either its origin or the purpose for which it is maintained, and I suggest that it should be known in future as the Gold Standard Reserve, the name suggested in Lord George Hamilton's Despatch of 13th December 1900, No 232.

I have, &c,  
(Signed) JOHN MORLEY.

---

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 85 Financial, dated 20th July 1906

MY LORD,

In the telegraphic correspondence\* noted in the margin you discuss the question raised in the fourth paragraph of my Despatch of

\* From Viceroy, dated 20th June 1906 To ditto, dated 28th June 1906. From ditto, dated 4th July 1906. (Not printed)

25th May last, No 57, whether, in order to avoid excessive withdrawals from the gold held in this country on behalf of the Paper Currency Department, it is advisable to arrange for the discharge of a portion of the Treasury Bills held on behalf of the Gold Standard Reserve, the money thus received being added to the balances of this Office to make good the depletion caused by the large purchases of silver recently made at your request, and the Gold Standard Reserve being restored to its present amount by the transfer to it of silver bullion or rupees in India of a value equal to the Treasury bills paid off

2 You state in your telegram of 4th July that the gold belonging to the Currency Department in this country serves the primary purpose of providing funds for the purchase of silver, and that, so long as it is applied to this purpose, you see no objection to its being almost or entirely depleted. This is a view which I cannot share. The possession of a large amount of gold by the Secretary of State in Council or the Government of India as part of the Paper Currency Reserve or in the Treasury balances is of considerable advantage to India as helping to maintain confidence in the permanence of the gold standard and in the stability of the exchange value of the rupee. Since February last, the gold held by your Government and myself has decreased by 5,000,000*l*, and the total holding now stands at little more than 7,000,000*l*. I gather from your telegram of 4th July that you would have no objection to a further reduction, bringing the total down to about 3,500,000*l*, and that you would prefer a reduction to that figure rather than the realisation of a portion of the Treasury Bills held on account of the Gold Standard Reserve.

3 As at present advised, I think that a reduction of the total stock of gold to the figure that you have mentioned would be disadvantageous to Indian interests, and if towards the end of September it seems probable that the use of the gold in the Paper Currency Reserve as the sole source (other than the sale of Council Bills) for replenishing the balances of the Home Treasury will result in reducing the total holding of gold by the Government below 6,000,000*l*, I contemplate presenting for payment a portion or the whole of the 800,000*l* Treasury Bills maturing on 28th September. Though I have mentioned 6,000,000*l* as a minimum for the present purpose, I think it desirable that the amount of gold held by the Government of India and the Secretary of State in Council should, as a rule, be considerably in excess of this figure.

4 It is, of course, to be understood that Treasury Bills will not be realised unless the condition of the Home Treasury balances renders it necessary.

I have, &c,  
(Signed) JOHN MORLEY

---

Letter from J S MESTON, Esq I C S, to L ABRAHAMS, Esq,  
Financial Secretary, dated 18th October 1906.

FINANCE DEPARTMENT. Simla, 1906

DEAR MR ABRAHAMS,

OUR coinage programme, which was explained in Financial Despatch No 144, dated the 26th April last, has now been completed as far as it referred to the first half of the current year. We proposed, and the Secretary of State sanctioned the proposal, to coin 9 crores of rupees from purchased silver between April and September, with the object of securing a balance of 18 crores in our Currency Reserve on the 1st October. We anticipated that the profits on the operation would be represented by at least 3½ crores of totals of silver bullion, lodged in the newly formed silver branch of the Gold Standard Reserve.

2 During the six months, our Mints have coined approximately  $9\frac{1}{2}$  crores of new rupees. Close on  $3\frac{1}{2}$  crores of tolas of silver have been placed in the Gold Standard Reserve, and some further payments which are necessary to bring up the full ratio of Mint profits are now being made. Finally the Currency Reserve on 1st instant held over  $19\frac{1}{4}$  crores of coined rupees, so that our programme has been fully worked up to

3 It has also been fully justified by the heavy demand for rupees. Although the net absorption of rupees for the six months was only about  $3\frac{3}{4}$  crores, and the Currency Reserve on the 1st instant was considerably stronger than was estimated in March, yet the issue of rupees since the busy trade season set in has been phenomenally heavy. In August and September 625 lakhs were withdrawn against 365 lakhs in 1904-5, which was the highest figure of absorption for those two months during the last six years. The jute crop has been an excellent one, and the prices have risen beyond all expectation, they were all but double those of last year at the same season.

4 There is reason to believe that the drain on the Reserve will continue. The cotton harvest promises well, and it would not be safe to anticipate a smaller trade demand for rupees during the winter months than we had to face last year. In November-February of 1905-6 the absorption was almost  $12\frac{3}{4}$  crores, and it is quite possible that our issues this winter may exceed even that figure. With this prospect before us, we shall have to keep the Mints fully engaged up to Christmas, and hence our continued indents upon you for silver, as well as our purchase of about 700,000*l* worth from the Russo-Chinese Bank in this country.

5. The great activity of trade, and the suddenness and magnitude of the demand for rupees which it forces on us, have led us to consider carefully where to turn for assistance in case of need. Something has on two recent occasions been obtained by means of temporary loans from a Native State, but this resource is uncertain and does not carry us very far. The most promising resource is the Gold Standard Reserve. The silver branch of this now amounts to over  $3\frac{1}{2}$  crores of tolas, stamped into blanks, ready for coinage into standard rupees within a period of four days. By the end of November we anticipate that it will have reached the neighbourhood of four crores, and with expanding coinage it should continue to increase. It now stands outside the Currency Reserve, and (of course) is quite distinct from our ordinary cash balances. It forms a most convenient and readily available resource, and we think that it would be quite legitimate to draw upon it temporarily whenever our other cash reserves were for the time being exhausted. When it was so drawn upon, the amount appropriated should be treated as a temporary loan, bearing interest at the ordinary rate of  $3\frac{1}{2}$  per cent, and should be replaced as soon as the state of our balances permitted.

6. To enable us to resort to this expedient in case of need, we think that the balance of silver in the Gold Standard Reserve should be coined into rupees as speedily as convenient, and that in future all balances should be held in that form, and not in the form of blanks. In paragraph 61 of the Financial Statement for 1905-6 a contrary view was expressed. But at that time the Ingot Reserve, as it was then called, was held as part of the Currency Reserve, and it was considered important to hold it in a form naturally different from that of the ordinary currency. Now that the silver branch of the Gold Standard Reserve (which has taken the place of the former Ingot Reserve) stands quite apart both from currency and also from our cash balances, the reasons for maintaining it in a different form have ceased to exist. We could no doubt draw upon it immediately by transferring it to currency in exchange for rupees and this would be done in case of necessity, and it could be coined into rupees (provided that the Mints were free) at the cost of a delay of about four days from the start. But if the amount required were considerable, as is likely, the aggregate delay in coinage might be much greater, and we should be reluctant to accept the risk involved in an exchange for rupees in currency, the stock of which, though at the moment ample, is very far from stable.

7 We therefore desire the sanction of the Secretary of State—

- (1) to the coinage, as convenience permits, of the silver in the Gold Standard Reserve into rupees, which will be kept entirely separate from our ordinary balances and from the Currency Reserve exactly as at present, and
- (2) to our drawing upon the stock thus made available, when circumstances may require, in the form of temporary loans bearing interest at  $3\frac{1}{2}$  per cent. All such transactions will be reported to you by wire as they occur

Yours, &c,  
(Signed) JAS. MESTON.

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 135, dated 16th November 1906

MY LORD,

I UNDERSTAND from your Financial Secretary's letter No 5,851 A, dated 18th October 1906, that you desire to hold in the form of rupees, instead of uncoined blanks, the silver portion of the Gold Standard Reserve, and to be permitted to take temporary loans from the Reserve at  $3\frac{1}{2}$  per cent interest when the necessity arises for strengthening your Treasury balances at short notice

2 I approve the former proposal. I also agree that the silver in the Reserve may properly be used for strengthening your Treasury balances in an emergency, even when you are not able to pay into the Reserve the equivalent in gold of the amount withdrawn, and a suggestion to that effect was made in my telegram of 30th October. If at such a time the state of the Home Treasury balances does not permit of my investing on account of the Reserve a sum equivalent to the amount withdrawn in India, the best course will be to treat as a loan, in the manner proposed by you, the amount withdrawn. In that event the total assets of the Reserve will be shown in the published statements as consisting partly of securities, partly of money due from your Government, and partly, perhaps, of silver. To include a large debt from your Government as one of the assets of the Reserve is a course not free from disadvantage. I should agree to it in such circumstances as I have described above, but I am of opinion that ordinarily an investment in securities on behalf of the Reserve should be made, if the state of the Home Treasury balances admits, in order to make good amounts withdrawn in India. When investments of this nature are made in England, Treasury bills can be bought so that if, at the time of their maturity, you are prepared to restore the silver in the Gold Standard Reserve to its former amount, the Home Treasury balances can at once be replenished without the risk of loss of capital value. You should, therefore, inform me in good time whenever you contemplate a transfer of silver from the Reserve to your Treasury balances, in order that I may consider on each occasion whether to make an investment in this country in respect of the whole or a part of the withdrawal.

I have, &c,  
(Signed) JOHN MORLEY

Telegram from SECRETARY OF STATE to VICEROY, Financial Department,  
dated 30th November 1906

I am selling telegraphic transfers at the price of  $1/4\frac{5}{32}$ . Do you see any objection to my selling freely?

Telegram from VICEROY, dated 4th December 1906

Your telegram dated 30th November. You may sell telegraphic transfers aggregating Rs 1,00,00,000 on 5th and 12th instant, on the understanding that you do not sell in each week bills and transfers amounting together to

more than Rs 1,20,00,000 We shall be glad to have a further telegram in case you propose making heavy sales of transfers after the 12th December, as it may not be in our power to meet them

---

Telegram from SECRETARY OF STATE to VICEROY, Financial Department,  
dated 5th December 1906

Telegraphic Transfers Your telegram of yesterday In spite of sale of 50 lakhs to-day the demand seems likely to be strong It seems desirable that I should sell freely, even beyond the limit which you mentioned, if necessary, in order to avoid inconvenience to trade by restricting sales, and that you should follow the course approved in my Despatch No 135 of 16th November, and borrow from the silver portion of Gold Standard Reserve to supplement your balances Please reply on Thursday, and, if you agree, state how much I may sell each week in Transfers up to the end of 1906, and how much in Bills

---

Telegram from VICEROY, dated 6th December 1906.

Telegraphic Transfers Yours 5th December Unless serious emergency arises in India, we are very unwilling to borrow from silver branch of Gold Standard Reserve Present demand should, in our opinion, be met by sale in London of Telegraphic Transfers against Currency, the proceeds being placed in your Currency Chest

Until our November balances are compiled on the 10th instant, we cannot supply you with the weekly estimates desired We will telegraph on the 10th or 11th, and in the meantime we agree to your offering for sale at once the 50 lakhs of Telegraphic Transfers which we agreed might be sold on the 12th instant.

---

Telegram from VICEROY, dated 7th December 1906.

Telegraphic Transfers As extreme stringency exists in the money market here, with possibility of serious panic, we should like to make an announcement on 8th instant that the Secretary of State will, during the next three weeks, be prepared to sell transfers freely without restriction up to the amount advertised, and beyond it to such extra amount as you think will be possible We must, if this action is taken, transfer silver from Gold Standard Reserve unless you can come to our assistance by selling against Currency Please reply to-day whether you agree

---

Telegram to VICEROY, dated 7th December 1906.

Telegraphic Transfers Your telegrams of 6th and 7th instant Announcement may be made in India that Secretary of State is prepared to sell transfers freely at rates not exceeding 1s 4 $\frac{3}{16}$ d —the present rate for specials. You should strengthen your balances in case of need by borrowing from the silver portion of the Gold Standard Reserve and let me know the amount of such loans For various reasons I wish to avoid addition of gold to Currency Reserve in London This would, for example, entail diminution of reserve of Bank of England and, by its effect on discount rates in London, would probably interfere with arrangements for renewing debentures of Guaranteed Railways maturing in December

---

Telegram from VICEROY, dated 8th December 1906

Telegraphic Transfers Announcement in the terms of your message dated 7th December has been made; but it is necessary to state clearly that we shall not be able to meet your drawings without limit That is to say, we cannot meet them to an extent of more than 4 crores in December besides paying all the transfers and bills already drawn by you, even if we completely

use up the silver in the Gold Standard Reserve. Payments on this scale, which would, we are convinced, exhaust our only available reserve, are most strongly to be deprecated. We may possibly also be obliged to grant a loan to the Bank of Bengal. We therefore venture again to press you to draw against Currency. If, as is unavoidable, your total drawings must be restricted, it can make no difference to the Bank of England whether you adopt our suggestion or not, as in the latter case the Exchange Banks will be compelled to take gold from the Bank for shipment to India, involving delay and expense to trade.

---

Telegram from VICEROY, dated 10th December 1906

Telegraphic Transfers. My telegram of 8th December. A loan of Rs 25,00,000 is being taken by the Bank of Bengal, and they will probably apply shortly for a further loan of the same amount. Money stringency continues in an acute form, and the four principal Exchange Banks at this Presidency have to-day approached us for assistance. Their request is that we should for the next three weeks advance to them Rs 60,00,000 a week on their conjoint security, and on their promising to repay us by purchasing telegraphic transfers when their bills are discounted in London.

We are not prepared to assist the Exchange Banks by making direct advances to them, but in the very exceptional circumstances which exist we are willing to help the Presidency Banks to finance them, and this we propose to do by making advances of Rs 40,00,000 a week for three consecutive weeks to the Bank of Bengal, requiring repayment of such advances three weeks after the dates when they are made.

Please inform us at the earliest possible date whether you agree to this proposal. It will have the effect of diminishing from 4 crores to 280 lakhs the amount of your drawings which we can meet without obliging you to draw against currency.

---

Telegram from SECRETARY OF STATE to VICEROY, Financial Department, dated 11th December 1906

Telegraphic Transfers. Your telegrams 8th and 10th instant. We should, if possible, avoid transfer of currency to gold in London, at any rate until early in January. By then the holders of the debentures to which I referred in my telegram 7th December will have decided about renewing. If gold were transferred, the probability of refusals would be increased, and thus an inconvenient drain on my Treasury balances might be caused. The suggestion made in your telegram of 8th instant that gold might be shipped from London by Exchange Banks is very unlikely to be realised. Therefore, before I resort to drawing against Currency, loans from Gold Standard Reserve should be taken to a considerable extent. At the same time I recognise that it may ultimately be necessary for me to draw against currency. With reference to the question of helping the Exchange Banks by loans, the head offices tell me that they are prepared to supply their requirements in India by buying transfers and bills in the usual way, and that they have no knowledge of the application made by their Calcutta branches to you. This being so, it seems unnecessary for you to make special advances to the Bank of Bengal as suggested. Please keep me informed of the situation, and answer the following questions: (1) Do you wish me to buy more silver? (2) May I now assume that, if drawings against currency are not made, 400 lakhs is the limit of drawings that you can meet up to 31st December? (3) Is it the case, as I presume, that this limit covers only the bills sold on 12th December and transfers sold between 10th and 31st December, and that bills sold after 12th December, which will not be paid until January, are outside the limit?

---

Telegram from VICEROY, dated 15th December 1906.

Telegraphic transfers Yours, 11th December We have dropped the scheme of special advances to the Bank of Bengal for assistance of Exchange Banks, having heard nothing further from them At present we do not require more silver On 13th instant, we borrowed from Gold Standard Reserve Rs 90,00,000 worth of silver, and are coming up the blanks now Probably we shall need to borrow the whole amount, which now stands at about 345 lakhs of tolas Rs 4,00,00,000 should be regarded as the limit of your drawings up to 31st December, and the figure should be taken to include bills sold on 12th December, and transfers sold between 10th and 31st In order, however, to keep down the number of bills which will have to be met here in early January, when our balances will be low, we should prefer that the greater portion of transfers drawn by you within the 400 lakhs limit should consist of regular sales.

Telegram to VICEROY, dated 18th December 1906.

Your telegram, 15th December Before receiving it I had already given an order for silver to the value of half a million 135,000*l* of this has been purchased The remainder of the order can be cancelled if you wish it, but I think it would be preferable to complete it, thus beginning to make provision for repaying amount borrowed from the Gold Standard Reserve Please telegraph at earliest convenience what are your views

Telegram from VICEROY, dated 18th December 1906.

My telegram, 15th December A further loan of Rs 1,69,00,000 in rupees and blanks is being made from Gold Standard Reserve Are you making corresponding investments in London against these loans? Please telegraph reply.

Telegram from SECRETARY OF STATE to VICEROY, Finance Department,  
dated 20th December 1906

Your telegram of the 18th instant I am not making investments on behalf of the Gold Standard Reserve It is proposed to treat your withdrawals entirely as loans from the reserve, to be repaid by you in India

Telegram from SECRETARY OF STATE to VICEROY, Finance Department,  
dated 20th December 1906

Purchase of silver. My telegram of 18th December. I have decided to complete the purchase of the 500,000*l*. As the silver is bought it will be added to the Currency Reserve, and I shall thus be able to sell transfers against it over and above the limit of 4 crores What amount of transfers can you still meet from cash balances and Gold Standard Reserve independently of the 500,000*l* silver which I am purchasing as above mentioned, (a) between now and 28th December, (b) between 28th December and 4th January? Please telegraph reply It would be most desirable, if possible, not to transfer gold to Currency Reserve here before the 4th January

Telegram from VICEROY, dated 20th December 1906.

Silver Your telegram of 18th instant We agree that you should finish purchase of half-million sterling, but we do not anticipate that we shall want any more for the present, and we request that you will communicate with us before making any further purchase. We shall be glad if you will, so far as convenient, now invest gold in England (as proposed in your Despatch No. 135 of 16th November 1906), against the silver (1,800,000) which has been borrowed in India from the Gold Standard Reserve, letting us know from time to time how much has been invested

Telegram from VICEROY, dated 22nd December 1906

Telegraphic transfers. Your telegram of 20th December. It is not possible for us to meet more than 25 lakhs up to 4th January, as already intimated. It makes no difference whether this amount is drawn before 28th December or after that date.

It will almost certainly be necessary for us, owing to your drawings of 120 lakhs on the 26th December, to ask you to assist us before 11th January through your Currency Chest, but details will be telegraphed to you later on.

Telegram from SECRETARY OF STATE to VICEROY, dated 24th December 1906

Your telegram dated 20th December. When the order for half a million pounds worth of silver has been completed, I will refer to you before making any further purchases.

As regards loan from the Gold Standard Reserve, I recognise that, owing to my heavy drawings having reduced your balances, the necessity may eventually arise for investment in this country in order to make good the reserve, but, as indicated in my telegram of the 20th December, I prefer at present to consider your withdrawals purely as loans.

Please notify me of your further borrowings from the Gold Standard Reserve.

Telegram from VICEROY, dated 24th December 1906

Gold Standard Reserve. We have made a further transfer from it to Treasury of Rs 1,10,25,000 in rupees and silver bullion, in addition to the transfers already reported to you.

Telegram from SECRETARY OF STATE to VICEROY, Financial Department, dated 27th December 1906

Telegraphic transfers. As sales to-day amounted to over 90 lakhs, and as further sales will probably take place very shortly, I shall transfer 500,000*l* to Currency Reserve on the 28th instant. (See your telegram of 22nd instant.)

Telegram from SECRETARY OF STATE to VICEROY, Financial Department, dated 1st January 1907

In continuation of my telegram, 27th ultimo. To-morrow evening I shall transfer to Paper Currency Reserve an additional half-million sterling. Until Thursday next this information should be regarded as confidential.

Telegram from SECRETARY OF STATE to VICEROY, Finance Department, dated 9th January 1907

Telegraphic transfers. I have to-day sold about 84 lakhs in ordinary sales of transfers, followed by 4 lakhs of specials. Let me know as early as possible to-morrow whether you wish me to transfer more gold to Currency Reserve. Will you further consider by what date a portion of the gold transferred to Currency can be released?

" " " "

" " " "

Telegram from VICEROY, dated 10th January 1907

Your telegram of yesterday. At present we shall not need transfer of more gold to Currency Reserve. As regards the release of gold from Currency Reserve we shall in a day or two telegraph our views.

Telegram from SECRETARY OF STATE to VICEROY, Finance Department,  
dated 14th February 1907

Refer to your telegram 24th ultimo\* and Comptroller-General's 9th instant † If you find that my drawings up to the end of 1906-7 are too large for you to meet from your Treasury balances besides repaying to the Gold Standard Reserve 380 lakhs of rupees, I think a postponement of that repayment would be preferable to a transfer of gold to Currency Reserve in England. My balances are at present earning interest at 4½ per cent, and the transfer would involve their reduction.

Telegram from VICEROY, dated 16th February 1907

With reference to your telegram 14th February Despatch now under issue, and also letter from our Financial Secretary which went on 14th instant, express our views on the repayment of loans from Gold Standard Reserve. Since the present position is that supply of rupees in India is sufficient, while our and your balances combined are adequate for purposes of treasury, a continuance of the loan of silver from Gold Standard Reserve is not justifiable, nor, in our opinion, can comparatively small gain in interest secured to you thereby compensate for using the Reserve in a manner foreign to its avowed object. We trust that you will, before the 31st March, give us the help necessary to restore the Reserve as early as possible, a matter to which we attach great importance.

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE,  
No 66, dated 21st February 1907

Sir,

We have had under consideration your Despatches No 85 (Financial), dated the 20th July 1906, and No 135 (Financial), dated the 16th November 1906, as well as the telegrams, † recently interchanged on the subject of your drawings upon us during December 1906. In the course of the correspondence you have been unable to accept our recommendations upon two questions which have an intimate bearing upon our currency policy. We are confident that you attach the same high importance as we do to maintaining the closest continuity in that policy, and it may be well that we should fully explain to you our views upon those points where we are apprehensive of innovation.

2. The first matter to which we invite your consideration is our recent loan from the Gold Standard Reserve, from which we have had to transfer the whole of its silver branch to our treasury in order to meet your large issues of Telegraphic Transfers since the first of last month. The importance of the Gold Standard Reserve as one of the main guarantees for the stability of our currency system is now fully recognised by the commercial public. Its published accounts are subjected to scrutiny and criticism, and it is clearly incumbent on us to avoid any treatment of the reserve which might impair public confidence in its efficiency. We consider it therefore most essential to treat the reserve as a fund which may be drawn upon for the specific

\* Telegram from VICEROY, 24th January 1907

With reference to your telegrams 15th and 18th January. We agree to your proposal to draw 42,000,000/ Further, if you find it convenient to draw another 1,000,000/ in Council Bills in two years to recoup the sums transferred to your Currency chest from your Treasury on 28th December and 2nd January, we should have no objection.

Our present forecast admits of our meeting from our Treasury balances your drawings up to a maximum of 26,500,000/ during 1906-07. This forecast excludes any further drawings on account of the purchase of silver from your Treasury. But if during the current year you transfer gold to your Treasury from your Currency chest, you should reduce by an equal amount your drawings in 1906-07 against our Treasury balances. If during 1906-07 you draw more than 26,500,000/, it may be necessary to ask you to help us through Currency, in order to strengthen our balances.

† Telegram from COMPTROLLER GENERAL, 9th February 1907

Cash balances in Indian Treasuries at close of last month, Rs. 12,95,00,000. Estimated balances 28th February next, Rs. 13,75,00,000, 31st March next, Rs. 13,00,00,000. Estimate of Council Bills payable, including telegraphic transfers against gold in transit to England, February, 500,000/, March, 300,000/. Estimate assumes repayment India 380,000/ Gold Standard Reserve, and purchase 1,000,000/ silver February, March, from Home Treasury branch.

‡ Beginning with your telegram dated 30th November 1906, and ending with your telegram dated 1st January 1907.

purposes for which it was established, and for no others. It would be in full accord with the declared objects of the reserve that you should draw on its gold branch to support your treasury in the event of any material fall in exchange, or that we should draw on its silver branch when threatened by a shortage in our stock of rupees in India. In the former event we should recoup the reserve by paying silver into it in India, pending a suitable opportunity for an equivalent remittance of gold to England. The procedure to be observed in the latter contingency was explained in our Despatch No 144, dated the 26th April 1906, and we desire to adhere in their entirety to the principles there laid down. To employ the reserve, however, for any other purpose than those indicated above is, in our opinion, to be deprecated as a variation from our currency policy which may seriously weaken it and would certainly be liable to general misconstruction.

We have not overlooked the fact that, in October last, we asked your consent to borrow from the Gold Standard Reserve in case of emergency. We consider that, under certain conditions, it would be permissible to take a loan from the reserve, just as we might do from a Native State. But we entirely accept your views of the disadvantages of such action. Moreover, we see equally strong objections to taking a loan, as you have suggested, against an investment on behalf of the reserve in England, for an arrangement of this nature would imply that you held spare funds in your home treasury, with which you could assist us either directly, or by a remittance through Currency, or by the purchase of silver for shipment to us. When a sterling investment is made in the Gold Standard Reserve against a corresponding withdrawal from its silver branch, the fact indicates that circumstances have arisen which justify us, not in taking a temporary loan from the silver branch, but in using it outright, leaving it to be built up again in the usual way from the profits of new coinage.

3 Holding these views, we cannot but regret the necessity for utilising the whole of the silver in the Gold Standard Reserve during last December. The occasion was not one for calling up the reserve in defence of our currency stock of silver. We were suffering at the time from no shortage of rupees, as our currency reserve had close on 17 crores at the beginning of December and would not have fallen below  $13\frac{1}{2}$  crores, even if it had received no assistance from the Gold Standard Reserve, by the end of the month. We had thus an ample supply to meet all requirements for trade remittances, and no occasion for using the silver outright had therefore arisen. Nor was it an occasion for borrowing from the reserve. In our judgment, that course is, as a rule, only justifiable when we are confronted with a shortage of rupees, which is of a strictly temporary character, likely to be made good within a moderate time without resorting to new coinage. These conditions did not obtain on the present occasion. It is true that our treasury balances were low, but our resources as a whole were well over the margin of safety, and the position contained no element of crisis such as would ordinarily have forced us to seek for a loan. The compulsion arose from the tightness of money in the London market, and from your apprehension of difficulty in renewing the guaranteed railway debentures which matured during the month. These considerations apart, it would apparently have been within your power to assist our treasury balances by transferring gold to your currency chest,† or to relieve the pressure upon them by drawing upon our Currency Reserve. We recognise the difficulties of the position, which were aggravated by an abnormally keen competition for money in India happening to coincide with great stringency in the London market. But, on the other hand, we would urge the grave disadvantages of any action which would interfere with the development or shake the credit of our currency system.

4 The second question which we would ask you to reconsider concerns the proper use and functions of the gold which you hold in London on behalf of our Paper Currency Department. In your Despatch of the 20th July 1906, you demurred to our view that your currency chest might be depleted without scruple, so long as its contents were employed in the purchase of silver. You considered that a substantial holding of gold in the treasury balances and

\* Despatch No 135 (Financial), dated the 16th November 1906, page 146

† Under section 13 of the Indian Paper Currency Act, 1905.

currency reserve helps to maintain confidence in the Gold Standard and the stability of exchange. And you were prepared, rather than allow our total stock of liquid gold to fall below 6,000,000*l.*, to refrain from renewing some of the short term investments of the Gold Standard Reserve, and to place their proceeds in your treasury. The necessity for such a step fortunately did not arise, and the conditions of the money market subsequently disposed you to diminish, if possible, rather than increase, our stock of ear-marked gold in England.

5 The purpose for which a currency chest was opened in London was described in Mr Brodrick's Despatch No 41 (Financial), dated 7th April 1905. The gold was to be held at the Bank of England "so as to be immediately available for the purchase of silver whenever the need for additional "coinage may arise". Your predecessor added that another advantage of storing the gold in England would be the possibility of using it to replenish the balances of the Home treasury against an equivalent transfer in India of rupees from our Treasury to the Currency Reserve. The latter function of the ear-marked gold was clearly meant to be subsidiary to its use, when required, for the prompt purchase of silver. Experience has justified this view, you have not yet been compelled to supplement your balances by currency gold whereas we have had to send you constant and urgent indentments for silver to meet the heavy demand for rupees in India. The emergency for which the currency chest was created continues to recur. The great activity in trade, and the hoarding of rupees which always accompanies general prosperity in this country, make it imperative that we should be able to effect large purchases of silver at short notice. The currency chest in London, which can be replenished as the State of the Treasury balances permits, would enable us to carry out those purchases without any delay or difficulty in providing the gold to pay for them. But if, at times when exchange is firm, we are debarred from using it for this purpose, it ceases, in our opinion, to perform the chief function for which it was established.

6 We readily accept your view that a large stock of gold in London has a valuable influence in steadying exchange. It is precisely with this object that the funds of the Gold Standard Reserve are invested in England in the most easily convertible forms of gold securities. We have frequently been pressed to hold a portion of the reserve in liquid gold, and this is an arrangement which may ultimately be feasible, though we are not convinced of the necessity for it under ordinary conditions, and we prefer, while the reserve is being built up, to let it earn all the interest it can. But, whether it is held in gold securities or in a liquid form, the Gold Standard Reserve is our first line of defence against a fall in exchange. So long as it is adequately maintained, the exact amount of gold in your currency chest has always seemed to us to be a matter of relatively minor importance. The public know that the currency gold in London is ear-marked for a particular purpose, that it is part of a fund reserved by law to ensure the convertibility of our note issues, and consequently that it is liable to considerable fluctuations. The Gold Standard Reserve, on the other hand, exists solely for the purpose of maintaining exchange, and is universally identified with that part of our currency policy. We should especially regret any decision to realise the securities of the Gold Standard Reserve in order to recoup your Treasury balances for the purchase of silver. In our opinion, a withdrawal of gold from the Gold Standard Reserve for this purpose would have a far worse effect on the public mind than a reduction in your stock of currency gold. The purchase of silver is a legitimate function of your currency chest, but it is entirely foreign to the objects of the Gold Standard Reserve.

7. On all these grounds, therefore, we trust that you will be able to agree with us that the currency gold in London may be freely drawn upon for the purchase of silver when we require it, being recouped, whenever convenient from the proceeds of extra Council Bills. We shall probably need considerable supplies of silver between now and next September. But we need not remind you of the strength of our gold position. You hold 6 millions for us in your currency chest. We have nearly 5 millions in gold in India, and though this amount will now diminish through your interception of gold in transit to us, it will rapidly grow again when you cease your purchases from Australia. Finally, the investments of the Gold Standard Reserve in

England have risen to about 12½ millions Their growth has been temporarily arrested by the building up of the silver branch of the reserve, but we expect that branch to reach its limit of 6 crores by the end of the current financial year, after which all further profits on our rupee coinage will go to increase the volume of the gold investments,

We have, &c,

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
 No 62, dated 26th April 1907

MY LORD,

I HAVE considered in Council your letter of 21st February 1907, No 66, explaining your views on certain matters relating to the Gold Standard Reserve and the Paper Currency Reserve

2 You express your regret at the decision conveyed in my telegrams of 5th and 7th December 1906, that a part of the additional funds required by you in the course of the last busy season, to enable you to meet bills and telegraphic transfers, should be provided by a temporary loan from the silver portion of the Gold Standard Reserve You would have preferred that I should provide for the necessary addition to your Treasury balances by transferring gold in London to the Currency Reserve, thus enabling rupees to be taken from the Indian portion of that reserve

3 Before dealing in detail with your objections to the course actually pursued, I wish to remind you of the circumstances in which it was decided to adopt it in December last The London money market was at that time suffering from severe stringency, and it was a matter of direct and immediate importance to India that this should not be increased, since guaranteed debenture bonds amounting to 1,795,100l were to fall due between 31st December 1906 and 18th February 1907, of which it was very desirable that 1,374,600l should be renewed The chance of the renewals being effected on favourable terms depended on the state of the money market, and would have been prejudiced if the market had been disturbed by a transfer of gold from the reserve of the Bank of England to the Paper Currency Reserve The advantage of avoiding such a transfer was therefore considerable, and it appeared to me that the only counterbalancing disadvantage was that mentioned in my Despatch No 135, of 16th November 1906, viz, that in the published accounts of the Reserve its assets would for a time be shown as consisting partly of a debt due from your Government Neither your resources nor the conditions affecting Indian trade could in any way be unfavourably affected After careful consideration, I came to the conclusion that the advantage of taking a loan was far more important than the one disadvantage

4 You now submit that the course pursued was open to objection on various grounds other than the one which I have mentioned

5 One ground of objection is that to take a loan was at variance with the objects for which the Gold Standard Reserve was established, and involved a departure from the procedure mentioned in your Letter of 26th April 1906, No 144 These statements are, of course, correct, but they take no account of the fact that, since the establishment of the Reserve in 1901, it has been decided, in the light of experience, to make important modifications in the purposes for which it is to be used and (as a necessary consequence) in the procedure to be followed The original object of the Reserve was to provide for a reduction, temporary or permanent, of the amount of rupee currency in circulation when this should be required to prevent a fall in exchange The first change was made when it was decided last year, on the recommendation of the Government of India and with my complete concurrence, as expressed in my Despatch No 57 of 25th May 1906, to hold a portion of the fund in

silver, to be used for an entirely different purpose, viz, for rapidly increasing the rupee circulation at times of trade activity. It was then intended that the Reserve, whenever a withdrawal took place from the silver portion, should be simultaneously replenished by the transfer of gold from the Paper Currency Reserve, and the procedure that was contemplated (as described in your Letter of 26th April 1906) was in accordance with this intention. A second change was made when it was decided in my Despatch of 16th November 1906, No 135, in accordance with a recommendation made by you, that in case of need a loan should be taken from the silver portion. This necessarily involved a modification of the procedure mentioned in your Letter of 26th April 1906. I fully recognised this fact at the time, and I assumed that it was also recognised by Your Excellency's Government. These successive alterations were made after the most careful consideration, and, in my opinion, were very valuable improvements. It seems to me that no valid objection to taking advantage of them can be founded on the fact that this cannot be done without a departure from what was contemplated before their introduction.

6 The second ground of objection to the course which I decided to adopt is that it is a variation from your currency policy "which may seriously weaken it, and would certainly be liable to general misconstruction." I should regret doing anything likely to create apprehensions in the public mind regarding the stability of the currency system, but it appears to me that, if they exist in the present instance, they are without justification. I could indeed understand that the decision arrived at in May 1906 to hold a portion of the Gold Standard Reserve in silver might be represented as affecting the stability of the currency system, since one result of it was the temporary suspension of the accumulation of the sterling fund which is kept up for the support of exchange. But that decision having once been arrived at and carried into effect, I am unable, after the most careful consideration, to understand how the stability of the currency can be regarded as having been threatened by the further decision to use the silver portion of the reserve, at a time of great demand for rupees, in a manner which left absolutely unaffected the existing safeguards against a fall in exchange.

7 I understand that your practical recommendation for the future is that loans shall not be taken from the Gold Standard Reserve except at a time when the Home Treasury balances are so low that it is impossible for me to transfer gold to the Currency Reserve in this country. I shall, of course, bear your wishes in mind on any occasion when the method of replenishing your balances has to be decided, but I am unable to accept the suggested restriction as one which should invariably be observed. I am of opinion that the choice between "earmarking" gold and borrowing from the Gold Standard Reserve must in each case depend on the circumstances of the time.

8 On the other matters dealt with in your letter I am substantially in agreement with you.

9. In paragraph 2 you express your objection to a suggestion made in my Despatch No 135 of 16th November 1906, viz, that, when silver is borrowed from the Gold Standard Reserve, sterling securities should ordinarily be purchased in its place. Your objection is largely based on your views as to the circumstances in which a loan from the Reserve is justifiable, but, in spite of my inability to accept those views, I am willing to agree that, in the event contemplated, no investment shall be made, and the transaction shall be treated as a loan pure and simple, to be repaid from your balances when they have been replenished by the purchase of silver or otherwise.

10 In paragraph 7 you urge that the gold held in the Currency Reserve in this country may be freely used for the purchase of silver when required. I accept this view, subject to the qualification that it is ordinarily desirable that the combined stock of gold held in England and India (and in this connection the distinction between the two portions is of small importance) shall not be allowed to fall unduly low. The remarks on this subject in my Despatch No 85, of 20th July 1906, were made in reply to your suggestion that the total, which had fallen in five months from about 12,000,000*l.* to about 7,000,000*l.*, could without disadvantage be allowed to fall as low as

3,500,000*l* Holding the opinion, which you evidently share, that it is necessary to have regard to the effect on the public mind of your currency transactions, I thought that it was desirable to avoid so large a decrease in a comparatively short period, and that the realisation of a portion of the securities of the Gold Standard Reserve would be the less of two evils. There must always be room for difference of opinion when a choice has to be made between alternatives of this kind, and it is satisfactory that the building up of the silver portion of the Gold Standard Reserve has considerably reduced the probability of the recurrence of a situation necessitating such a choice.

I have, &c,  
(Signed) JOHN MORLEY

INTERIM REPORT of the COMMITTEE on INDIAN RAILWAY FINANCE, &c  
(Submitted in June 1907)

The Committee have considered the letter from the Government of India, No 28 (Railway), dated 25th April 1907, proposing the formation of a central reserve of wagons for use on railways in India, which has been referred to them by the Secretary of State for India. In view of the urgency attached to the matter by the Government of India, the Committee have judged it advisable to deal with the letter without delay, and they accordingly submit the following recommendations.

The proposal of the Government of India, briefly stated, is that, in addition to the expenditure provided for in the Railway Programme, a sum of 3,000,000*l* should be spent within the next two or three years in the purchase by the State of 12,000 wagons, to be held as a reserve from which the loan of vehicles to any railway requiring additional stock could be made. The reasons given for this proposal are that it has been demonstrated that the Indian railways are at present unable to carry traffic which is offered, that it will be some time before each railway can be fully equipped to meet normal demands, and that it is moreover desirable to provide against extraordinary demands for wagons, which may always be expected to arise at different seasons.

Enquiries already made by the Committee confirm the conclusion of the Government of India that the existing equipment of Indian railways is inadequate, and they consider it essential that efforts should be made to improve the position as rapidly as possible. But the following reasons prevent them from recommending the adoption of the particular method proposed by the Government of India: (1) A central reserve of wagons would be a new departure, and it is therefore probable that before it could be established and fully utilised, delay would occur owing to the necessity for settling important questions requiring mature deliberation, (2) the Committee have reason to believe that the Railway Companies would prefer that any extra funds which can be made available for railway purposes this year should be allotted to the railway administrations in accordance with their requirements. The Committee are of opinion that the latter course is the more advantageous and recommend its adoption.

With regard to the method by which it may be possible to obtain additional funds beyond those already arranged for under the Railway Programme, it is evident, from figures which have been placed at the disposal of the Committee by the Financial Department of the India Office, that it will not be safe to anticipate that the sum which can be borrowed by the Secretary of State for India in this country during the present year is capable of being increased beyond the amount entered in the Budget estimate, viz., 7,675,000*l* (leaving out of account the liability in respect of debentures for 2,500,000*l* maturing during the year). But they have had under consideration the question of the advisability of using a portion of the current year's profit on the coinage of silver for capital expenditure on Indian railways instead of investing it in British Government securities.

The object of the Gold Standard Reserve, to which the profit on coinage is credited, is to enable the Government of India and the Secretary of State to meet their sterling obligations in the event of a falling off in the demand for Council Bills. This Reserve at the present time consists of sterling

securities of the market value of 12,310,629*l*, together with a sum of six crores of rupees (equivalent to 4,000,000*l*) which is held in silver in India to meet any sudden demand for coinage. In addition to the Gold Standard Reserve, there is a large amount of gold (11,066,000*l*, of which 7,705,000*l* is held in London and 3,361,000*l* in India), in the Paper Currency Reserve, which could be applied to the same object. Apart, therefore, from the six crores of rupees in silver, there is at the present moment a fund of upwards of 23,000,000*l* in sterling securities and gold bullion which could be drawn upon in case of necessity.

The interest received on investments on account of the Gold Standard Reserve between the present time and the 5th January 1908 will, it is estimated, be about 270,000*l*, while the profit on the coinage of silver up to the 31st December next is provisionally estimated at 1,850,000*l*. The addition to the Reserve by the beginning of next year would, therefore, in ordinary course amount to considerably over 2,000,000*l*, bringing up the total amount of gold and sterling securities held in the Gold Standard Reserve and the Paper Currency Reserve to more than 25,000,000*l*.

Having regard to the satisfactory position which the gold reserves have now attained, as shown by the foregoing figures, the Committee are of opinion that it could not be regarded as imprudent to invest 1,000,000*l* of the profit on coinage for the present financial year in Indian railways, and they therefore recommend this course to the Secretary of State.

It is a matter of urgency that any additional funds which are available should be immediately placed at the disposal of the railways, and the Committee would therefore suggest that a telegram be sent to the Government of India, in reply to their letter of the 25th April last, informing them that the consideration of the question of the creation of a wagon reserve is postponed for the present, but that a further sum of 1,000,000*l* may be at once allotted to the several railways in such proportions as the Government may deem desirable, either for the provision of additional rolling stock or for the improvement of open lines to enable them to deal with traffic more expeditiously, thus bringing the total allotment for 1907-8 up to 10,000,000*l* sterling. If this is done, the Government of India should be informed that the additional million which it is decided to allot will be supplied from the profit on coinage during the current year, and will be treated in account as an investment for the Gold Standard Reserve.

L. ABRAHAMS

6th June 1907

Telegram from SECRETARY OF STATE to VICEROY, Commerce and Industry Department, dated 11th June 1907

Your Railway letter No 28, of 25th April 1907. I referred your proposals to the Railway Committee mentioned in my Despatch No 57, Railway, of 24th May last. They recommend that the sanctioned capital outlay for 1907-08 be increased by an additional 1,000,000*l* to be spent on rolling stock and open line improvements, subject to the following conditions —

- (1) That this extra grant is not used to form a reserve of wagons, but allotted to railway administrations, as this course will enable stock to be brought more expeditiously into use, and will be more acceptable to companies.
- (2) That the money is provided from the profit on coinage in 1907-08, the amount being shown among other balances of the Gold Standard Reserve in Account No 91A of the Finance and Revenue Accounts.

The reasons for the second condition are, firstly, that the amount still to be borrowed in 1907-08 for expenditure already sanctioned exceeds 4,000,000*l*, and it must be regarded as impracticable to borrow more, and, secondly, that no risk to the position of exchange is involved by the proposal.

in view of the present amount of the Gold Standard Reserve, and of the additions estimated to be made to it this year, see your telegram of 18th May last, and of the large sum held in gold in the Paper Currency Reserve

If you agree generally with these recommendations, which I am in favour of accepting, you may at once proceed with the allotment of the money to the Railway Administrations

Telegram from VICEROY, dated 24th June 1907

Please refer to your telegram dated the 11th June 1907, regarding rolling-stock. Respecting the Committee's first condition, we greatly prefer the formation of a central reserve of wagons to the distribution among railway administrations of an extra grant. Reference is invited to remarks on rolling-stock in Financial Statement, 1906-07, Appendix 3, in addition to reasons explained in our Despatch, dated 25th April, paragraph 6. To meet seasonal demands for rolling-stock lasting a short time, the creation of a wagon reserve will be more efficacious. Seasonal shortages will not be permanently provided against by the distribution of additional rolling-stock, whereas a permanent solution will be found in a central reserve worked, as we intended, not as a part of current requirements, but as a reserve. Reconsideration of this first condition is very strongly urged, but if you still adhere to it, we will agree.

Great importance is attached by us to the supply during the current year of extra rolling-stock to the amount of 1,000,000*l*. Should distribution be decided upon, please consider whether the more expeditious method would not be to carry out Indent No 14, Railway, enclosed with Railway letter of 25th April, No 95, and to distribute to railways on completion, rather than to allot grant to administrations and leave them to arrange by "repeat" orders and otherwise for the supply of rolling-stock required. We wish you to follow the course you consider quickest in this respect. On receipt of your reply, distribution of extra grant among railway administrations will, if necessary, be telegraphed.

Regarding the second condition, we expect to address you soon proposing that the Gold Standard Reserve investment from profits on coinage shall be discontinued on these investments reaching 20,000,000*l*. We are of opinion that even if we could agree to your proposal, it will be necessary, having regard to the public criticism on formation of silver branch of the Gold Standard Reserve, to inform the public of the decision and to give the reasons for it. We are, however, wholly opposed, until the 20,000,000*l* figure is reached, to any diversion of the profits on coinage from their essential object, namely, the building up of the Gold Standard Reserve until it is sufficiently large to be a reasonably certain protection against the danger of a fall in exchange. Security of our currency policy is, in our emphatic opinion, of paramount consideration and should on no account be sacrificed even to the present necessity of the railway programme. Increase of sterling borrowings is, you say, impracticable beyond the four millions which you still require this year. We would, however, observe that if an issue of another million in India Bills or Stock were made, and the price of issue thereby lowered by three points, the total loss would only amount to 30,000*l*, and that this amount would be exceeded on a total Home remittance of 20,000,000*l* if rate of exchange fell by  $\frac{1}{16}$ *d*. In the event of the balance of trade becoming endangered and an ample margin in the Gold Standard Reserve not available to fall back upon, the rate of exchange might easily fall by much more than  $\frac{1}{16}$ *d*.

Telegram from SECRETARY OF STATE to VICEROY, 2nd July 1907

Please refer to your telegram regarding rolling-stock dated the 24th of June. I have decided, after considering the matter most carefully (1) regarding the distribution of rolling-stock, to adhere to the first condition as contained in my telegram to you dated 11th June, and (2) that unless funds are provided from the Gold Standard Reserve, no extra expenditure can be incurred. It is impracticable to continue further borrowing, not in view of an increased rate of interest or discount, which may be disregarded as of no

importance, but for the reasons which I give below. Investors who purchased India Stock in May last would be injured by a second issue in the current financial year, and such issue would prejudice our opportunity of borrowing sufficient for our needs in 1908-09 and in the following years. In view of the condition of the London investment market and its consequence in compelling His Majesty's Government to postpone certain loans which they had in contemplation, it is practically certain, as regards India Bills, that a considerable amount of these will have to be issued in order to make up the deficiency which has arisen in consequence of the impossibility of issuing Railway bonds or debenture stocks to the amount which had been arranged for in the Budget. To increase the amount of these bills that will have to be issued would be imprudent in the highest degree.

In regard to the limit of borrowing in London, I must ask you to accept my views, just as I accept yours regarding the amount of borrowing to be undertaken in India. Unless further capital, as to the urgency for which I agree with Your Excellency, can be provided from the Gold Standard Reserve, additional expenditure must be abandoned.

The danger, which you allege, of a fall in the rate of exchange I regard as illusory, having regard to the present conditions of trade, the amount of securities in the Gold Standard Reserve, and of gold in the Currency Reserve. Strength will be afforded to the exchange position by the increased facilities for the carriage of productions. The maintenance of the value of the rupee is secured by the ample provision already existing, but, until the amount of 20,000,000*l* in sterling securities is reached I am quite willing to continue adding one-half of the profits on coinage, together with all the interest on the investments now existing, to the Gold Standard Reserve.

Having regard to the considerations given above, I shall take the necessary steps to comply with the indent of the 25th April 1907, No. 14, Railway, and shall distribute in accordance with your recommendations.

Early steps will be taken to announce this decision /

---

QUESTION IN PARLIAMENT, 9th July 1907.

Sir EDWARD SASSOON (Hythe) I beg to ask the Secretary of State for India what is the present position of the Gold Standard Reserve, and whether he intends to continue indefinitely the practice of adding to it the whole of the profit on coinage.

Mr MORLEY Up to 31st March 1907, 12,518,513*l* derived from the profits on coinage and from interest had been invested in British Government securities on behalf of the Gold Standard Reserve and 4,000,000*l* was held in rupees in India. The profit to be realised in 1907-08 will, it is anticipated, be considerable, though the exact sum cannot of course be stated at present. In view of the amount of the reserve and of the large stock of gold (about 10,500,000*l*) held by the Government of India and the Secretary of State in Council in the Paper Currency Department and elsewhere, I have decided that the present practice of adding to the Reserve the whole of the profit on coinage and of the interest on securities already purchased may be modified. From the present year and until the Reserve reaches 20,000,000*l* one-half of the profit on coinage together with the interest on securities will be added to the Reserve, and the other half of the profit will be used to supplement the funds available for capital expenditure on Indian railways. This decision, which is based on a recommendation made by the Departmental Committee on Indian Railways, has enabled me to sanction an addition of 1,000,000*l* to the programme of capital expenditure for the present year. The additional expenditure will be devoted to improving the equipment of open lines.

Sir EDWARD SASSOON What amount will be available for increased railway expenditure?

Mr MORLEY. I cannot say off-hand.

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE,  
No 296, dated 8th August 1907.

SIR,

We have the honour to refer to the telegraphic correspondence\* ending with your telegram of the 2nd July on the subject of the purchase of additional rolling-stock, and also to your announcement in the House of Commons on the 9th July regarding the employment of part of our coinage profits for expenditure on Railways

2 As intimated in our telegram of the 24th June, we intended to address you, reviewing the present position of the Gold Standard Reserve and the attitude of the commercial public in regard to it and submitting for your consideration the following definite proposals —

- (1) That the investments of the Gold Standard Reserve should continue as at present until they reach a total of 20,000,000*l*,
- (2) That, when that figure is reached, the investment of profits on new coinage should cease, but the investment of the interest on the securities previously purchased should continue until the total investment reaches 27,000,000*l*,
- (3) That, when that figure is reached, the question of further accumulation should be specially considered,
- (4) That the funds made available by stopping the investment of the profits as above, should be used in reduction of our borrowings for railway and irrigation expenditure

3 From the report of your announcement in Parliament, we understand that on the advice of the Committee which was recently appointed to consider the question of Railway finance, you have decided on a different course. We do not therefore propose to trouble you with the reasons which led us to the conclusions outlined above. We accept your decision, although some of us entertain doubts as to its expediency, and although we should all have preferred if it had been possible to give the commercial community in India an opportunity of stating their opinion regarding the diversion of coinage profits before final orders were issued.

4 We forward for your information a copy of a letter which we have received from the Chamber of Commerce, Bombay, regarding the policy on which you have determined, and of the reply which we have sent to that body

We have &c,  
(Signed) MINTO.  
KITCHENER.

Enclosure No 1

No 587, dated 11th July 1907.

From J B Leslie-Rogers, Esq, Secretary, Bombay Chamber of Commerce,  
to the Secretary to the Government of India, Finance Department

I am instructed by my Committee to address you with reference to information that has been published that the Railway Board is to receive another million sterling this year for the purchase of Rolling Stock, and that this amount will be taken from the profits on coinage accruing this year which otherwise would have gone to swell the investments in the Gold Standard Reserve

2 Although a further increase of Rolling Stock is most necessary, my Committee cannot but view with very grave apprehension the decision just arrived at that, as stated on the 9th instant in the House of Commons by the

\* Your telegram dated the 11th June 1907. Our telegram dated the 24th June 1907. Your telegram dated the 2nd July 1907 (pages 157-8)

Right Honourable the Secretary of State for India, the funds for this purpose are to be provided from the profits on coinage. These, it has always been understood, as recommended by the Indian Currency Commission of 1898, were not to be diverted to any channel other than that of the Gold Standard Reserve, which was formed to guarantee our silver rupees on the basis of an exchange of 1s 4d, and although a fairly large sum has been accumulated and invested for this purpose, my Committee do not consider that a point has yet been reached which guarantees absolute safety as regards the currency, or which would warrant even a temporary cessation of payments to the fund from the only source from which it can be augmented.

The question of diverting payments from the Gold Standard Reserve is not one, it appears to my Committee, that should be considered merely from the point of view of the position at the moment being satisfactory and of there being no likelihood for the present of the fund already invested being brought into use. It is, they hold, a fund which guarantees the determination of the Indian Government to maintain the gold value of the Rupee, and thus being so it seems to my Committee as only too likely that any deviation from this purpose, and the uncertainty that will always afterwards exist even after the Reserve has reached 25,000,000*l* that a further large sum may be allocated at any time, and locked up in investments which are not liquid, will cause the public, not only in this country but in England also, to regard the currency policy of Government as on too unstable a basis, and if this should be so, confidence in the future may be shaken and the loss of credit to the country would become a very serious matter. My Committee do not propose at this juncture to deal with the possibility of further allocations from this fund after a total of 25,000,000*l* has been reached for any object which may appear to Government of an urgent nature. They merely desire to point out that the Gold Standard Reserve Fund was formed for a definite object, and that until the invested portion of this Reserve has reached a very much larger figure there should in their opinion be no attempt on the part of Government to divert funds for other purposes, however urgent such purposes may be.

Enclosure No 2

No 4927-A, dated 8th August 1907

From J. S. Meston, Esq., ICS, Secretary to the Government of India, in the Finance Department, to the Secretary to the Bombay Chamber of Commerce.

I am directed by the Governor-General in Council to reply to your letter of 11th July, in which the Committee of the Bombay Chamber of Commerce criticise the decision of the Government to take from the profits on coinage accruing this year the additional million sterling which it is proposed to spend on the purchase of rolling stock. The exact decision was that, from the beginning of the current financial year and until the sterling investments of the Gold Standard Reserve reach a total of 20,000,000*l*, the profits on coinage, which have hitherto all been invested in sterling securities, shall be so invested in the future to the extent of one-half only, the other half being appropriated for railway capital expenditure, and that the whole of the interest on the investments will continue to be invested in sterling securities as hitherto.

2. The Gold Standard Reserve was constituted in order to provide a fund to be used in time of need to prevent exchange from falling below 1s 4d, per rupee. Before its formation other measures having the same object, such as the accumulation of a stock of gold, had been adopted, and the establishment of the Gold Standard Reserve was in addition to these previous measures, and not in substitution for any of them. It was decided that all the profits on coinage should be invested in sterling securities, to be sold out in the event of it being necessary to combat a tendency towards a fall in exchange. Hitherto no specific limit has been fixed for the amounts of the sterling investments; but it has for some time past been recognised that the investments ought not to continue indefinitely, and that they should cease

when the amount shall be considered, in combination with the effect of the other measures adopted for the support of exchange, to be sufficient to secure with all reasonable safety the object for which the fund was created

3 The Government of India gather from your letter that the Committee of the Chamber of Commerce accept as correct the description of the nature and scope of the fund given in the preceding paragraph. The only point of difference between the Chamber and the Government is on the question whether or not the limit mentioned has been reached. Your Committee state that they "do not consider that a point has yet been reached which guarantees absolute safety as regards the currency." The Government of India entirely agree with the Chamber that the question should not be considered merely from the point of view of the position at the moment being satisfactory and of there being no likelihood of the fund being at present brought into use, and they accept your description of the fund as one "which guarantees the determination of the Indian Government to maintain the gold value of the rupee." The mention of the sum of 25,000,000*l* in your letter is not explained, but it is surmised that the Chamber consider that to be the point beyond which investments need not be continued, if that is so, the Government of India find difficulty in understanding the references made in your letter to uncertainty connected with further allocations from the fund after that total is reached.

4 I am directed to invite the attention of the Chamber to the references to the subject made in the Budget Debate by the Hon'ble Mr Gokhale, the Hon'ble Mr Finlay and the Hon'ble Mr Baker. Mr Baker in his speech said that "the time is approaching when it will be necessary to consider whether any, and if so, what limit should be put on the amount of the invested portion, and this question we shall take up without delay. Until that has been done, it will be premature and possibly embarrassing to make any public declaration of policy." Since this statement was made, the question has been under consideration by the Government of India and the Secretary of State, and it was referred by Mr Morley for the opinion of the Committee recently appointed to deal with Railway finance, of which Sir D Barbour is a member. The conclusions arrived at were, that ample provision for maintaining the value of the rupee already exists, that, in view of present trade conditions, of the amount of the sterling securities held in the Gold Standard Reserve, and of the amount of gold in the Currency and in the Treasuries, any danger of a fall in exchange is illusory, but that, as the question is one which cannot be determined with mathematical precision and as there is room for difference of opinion, one-half of the future profits on coinage shall continue to be invested in sterling securities until the total of the investments amounts to 20 millions sterling.

5 In explanation of these conclusions I am to invite the attention of the Chamber to the fact that the investments of the Gold Standard Reserve are not the only provision which the Government of India have made for use in the event of it being necessary to check a tendency to a fall in exchange. The Government also hold in the Currency Reserve and in the Treasuries a large stock of sovereigns. These amount now to over 10,000,000*l*, and that stock of gold is equally available for the purpose of preventing a fall in exchange, notwithstanding that it might be brought into operation in a different manner from the Gold Standard Reserve itself. The amount of the sterling investments of the Gold Standard Reserve is nearly 13,000,000*l*. The Government have therefore available for the purpose of combating a fall of exchange a sum of about 23,000,000*l*. It has been held by good authorities that the sum of 20,000,000*l* is enough to give a reasonable guarantee of safety against the risk of a fall in exchange. The provision already made exceeds this amount by about three millions. In view, however, of the fact that there is room for difference of opinion as to the exact amount of the limit, and as it is better in so important a matter to err on the side of caution, the Government decided to continue the investments to the extent of half the future profits on coinage until the amount in the Gold Standard Reserve alone reaches 20,000,000*l*. When that limit is reached the total provision against the risk under consideration will amount to about 30,000,000*l*, if the stock of sovereigns remains at its present level.

6 In conclusion I am directed to say that in ordinary circumstances the Government of India would not have adopted the decision above described without first publishing their proposals and inviting the comments of Chambers of Commerce and other public bodies. To have adopted this course on the present occasion, however, would have involved consequences which, it is believed, could not have commended themselves to the commercial public. The urgent demands for additional rolling stock had led the Government of India to recommend to the Secretary of State that a large expenditure should be incurred in the next few years on the purchase of wagons, in addition to the amounts provided in the railway programme published with the Financial Statement. The Secretary of State accepted the Government of India's view as to the urgency of this expenditure, and sanctioned an extra allotment of one million for this purpose in the current year. The state of the London money market, however, rendered it inexpedient to raise that amount by sterling borrowing. It was, therefore, necessary either to postpone the increased expenditure on wagons or to dispense with the consultation of public opinion in India on the question of the use of the Gold Standard Reserve, because of the delay which would have been involved. The decision was to accept the latter as the lesser of the two evils.

7 I am directed to express a hope that the Bombay Chamber of Commerce, in view of the explanations given in this letter, will come to the conclusion that the decision which they criticise will not involve the evil results which they fear.

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 131, dated 20th September 1907

MY LORD,

I HAVE considered in Council your Excellency's letter in the Finance Department, No 296, of the 8th August 1907, regarding the limit to be assigned to the accumulation of the Gold Standard Reserve and the purposes to which, after a certain limit has been reached the profits on the coinage of silver, or a part of them, should be applied.

2 I am glad to note that up to a certain point your Government and myself are in substantial agreement on this question. We are agreed that, after the value of the sterling investments of the reserve has reached a certain limit, their further accumulation may be restricted, and that the funds thus made available may properly be applied to the reduction of borrowings for railway expenditure. We are further agreed that until the value of the sterling investments has reached 20,000,000*l.* the whole of the interest on them shall continue to be invested in the same manner. I note that you accept my decision that half the profits of coinage shall henceforth be used for capital expenditure on railways, though, I regret to observe, it is opposed to the views of some of the members of your Government, who would not have recommended that any part of those profits should be so employed until the 20 million limit has been reached.

3 The profits from the coinage of silver have averaged in the last three years about 3,000,000*l.* per annum. Should they continue at approximately the same rate, and should the values of the existing investments of the Reserve be not materially altered, the effect of my decision will be to postpone by somewhat less than two years the date by which the limit of 20,000,000*l.* will be reached.

4 With reference to paragraph 2 (2) of your letter, I propose that the course to be followed, after the above total has been reached, should be reserved for further consideration when the value of the investments nearly approaches that limit.

5 I take this opportunity of forwarding for the information of your Government, a copy of the interim Report\* of the Committee on Indian Railway Finance.

I have, &c.,  
(Signed) JOHN MORLEY

\* See p 15a.

Telegram from VICEROY, dated 20th November 1907

Financial Department We have been requested by the Exchange Banks to issue telegraphic transfers on you at the rate of 15 rupees to the sovereign. In reply we have informed them that before giving any answer we must refer the matter to you. The request, in the present state of Treasury balances, could only be met by drawing on Currency gold in London. This would, we consider, be contrary to the purposes for which the gold is maintained, and therefore open to strong objection, especially as it would weaken our capacity to remit to you for Treasury purposes in the event of exchange continuing weak. Our advice therefore is that we may be authorised to refuse the application.

Telegram from SECRETARY OF STATE to VICEROY, dated 20th November 1907

Telegraphic transfers Your telegram of the 20th instant. You have my authority to inform exchange banks that you are unable to accede to their application.

Telegram from SECRETARY OF STATE to VICEROY, dated 21st November 1907

Please inform me if it is the case, as reported here, that you have informed the Exchange Banks that you will not give gold for export, while you continue to give it for internal purposes. In my opinion it might be well to ascertain from the banks how much gold they desire to take, and, if the amount is not excessive, to let them have it. As a result, the rupee currency would be contracted by the withdrawal of gold, and the renewal of a demand for Council Bills would thereby be hastened. The amount of gold to be withdrawn from currency here would thus be reduced, and Government stock of gold would, as ultimate result, remain unaltered. I am aware that gold bought from you at 1s 4d the rupee may be remitted to Egypt or London and drawn again at lower rate, and that Banks would make this profit. But the amount of gold shipped will probably not be large, and confidence in the exchange position might tend to be restored by what I have suggested. I shall be glad if you will send me your reply as early as you can.

Telegram from VICEROY, dated 27th November 1907

Your Financial telegram of 21st instant. Gold

(1) Gold for export has not been refused, but the issue of gold in one day to any individual has been restricted by us to 10,000*l*. Up to this daily limit, banks in Bombay are taking gold steadily, over 100,000*l* having been drawn last week, and another 100,000*l* yesterday and to-day. British Postal Orders for 10,000*l* and other large sums have also been bought by certain banks, and the question whether a limit should not be imposed on the issue of such orders is now under consideration.

(2) In accordance with your directions the banks have been asked to state what amount of gold they would take, if we agreed to make it freely available. In the opinion of the Calcutta banks the outside limit of banking requirements for whole of India would be 1,000,000*l*. They advise that if Government's intention to give this amount were declared, only a relatively small quantity would actually be taken. Views similar to those suggested in your telegram are held by the Bombay banks, they decline to furnish any estimate of the requirements, but think any large bullion export is improbable, since the export season is beginning. Their argument is that confidence would be restored by the immediate issue of Government gold at 15 rupees, and urge that, for the purpose of steadying exchange, it is the duty of Government to use its reserves freely.

(3) Although the banks formerly asked us for telegraphic transfers, they are now agreed that they would prefer local issues of gold. The general public, particularly natives, would find the latter course more intelligible, and large internal withdrawals of gold for hoarding would be prevented.

(4) A considerable part of our gold balance in India, which is now under 3,500,000*l*, is scattered in Currency offices up country, and for internal needs we must maintain a substantial margin. Up to 1,000,000*l*, however, we could arrange to issue freely, but in giving more we should find great difficulty. We feel very strongly, while prepared to meet your wishes to this extent, that the position will be serious if further demands are made, and we are forced to discontinue issues. The only resort would then be the issue of transfers on you, and how far that method could be continued to meet trade demands depends upon your own requirements and the prospect that Council drawings will be resumed at an early date.

(5) Improvement in exchange to-day has resulted from your release of currency gold yesterday.

---

Telegram from SECRETARY OF STATE to VICEROY, dated 28th November 1907

Your Financial telegram of 27th instant. After discussing the situation with the Exchange Banks I offer the following suggestion for your consideration, viz, that, in addition to the relief that you are giving by issues of gold, you should also, in order to give confidence and steady exchange, at once issue a notice inviting tenders for telegraphic transfers of 250,000*l* on London, at early date, at rates not exceeding 1*s* 3 $\frac{3}{4}$ *d* the rupee. 10,000*l* should be minimum amount of each tender. I shall, if you agree, meet any transfers that may be sold by withdrawing gold from Currency. You might also intimate that you will from time to time, until further notice, call for similar tenders. The demand for gold should tend to be diminished by this measure. Kindly let me know by telegraph if these proposals meet with your concurrence.

---

Telegram from VICEROY, dated 3rd December 1907

Your Finance telegram of the 28th November. Sale of transfers on London and issue of gold. Steady improvement in exchange is in progress and telegraphic transfers are being sold to-day by Calcutta banks at 1*s* 3 $\frac{3}{4}$ *d*. A large part of the gold taken for export at Bombay is returning to us. Adoption of the course suggested by you, therefore, appears to us to be unnecessary at present, and though it is approved by the banks consulted by us here, it is apparently rather as a precedent than as a necessity in the present situation that it would be welcomed by them. With a view, however, to possible future fall in exchange we should be glad to keep proposed notice in reserve, with power (unless you should prefer, if the necessity arises, to offer telegraphic transfers at a fixed rate of 1*s* 3 $\frac{3}{4}$ *d*) to issue it on the first appearance of serious weakness. The public would find a fixed rate more intelligible than the invitation of tenders and tenders at a lower rate would not in any case be expected or welcomed by us. We should, of course, consult you before drawing on you in excess of whatever limit you may decide to be convenient, but we are inclined to think that it would be better not to specify any particular amount for sale.

---

Telegram from VICEROY, dated 5th December 1907

Sale of transfers on London. Please let us know whether we shall receive orders on our telegram of the 20th November, or whether we may take it that the proposals therein made are accepted. If you concur in the proposals, it would, we consider, be well for us to inform the banks privately of our power to notify telegraphic transfers, and of our intention to use that power if exchange shows any signs of serious weakness. Since our last telegram there has been a steady improvement in the position, and there is now no need for present action.

---

Telegram from SECRETARY OF STATE to VICEROY, Finance Department,  
dated 5th December 1907

Exchange I concur in view expressed in your telegram of 3rd instant that it is not necessary now to offer transfers on London. I am of opinion that, if in future there should be a serious drop in exchange, it would be preferable to adopt procedure similar to that proposed in my telegram of 28th November, rather than to offer to sell at fixed price without specifying amount. Adoption of latter method might entail inconvenient choice between excessive drain on my resources at very short notice and a sudden suspension of the offer. I will reply, as soon as possible, to your telegram of to-day regarding private communication to Banks.

Telegram from SECRETARY OF STATE to VICEROY, Finance Department,  
dated 6th December 1907

Your telegram of yesterday. Exchange Banks may be informed that, in event of serious weakness in exchange, Government contemplates offering for tender, in India, sterling exchange on London. The procedure to be adopted would follow that indicated in my telegram of 28th ultimo. Banks should be told that this communication is made because you recognise advantage of letting them know your views and intentions, but that it does not convey a definite pledge, and that Government reserves discretion to act as it thinks best in any future case on consideration of all circumstances then existing.

Telegram from VICEROY, dated 7th December 1907

Exchange Your telegram of the 5th December. There has again been a slight fall, and we shall offer telegraphic transfers, to a maximum limit of quarter of a million pounds sterling, if the rate falls below  $1s\ 3\frac{3}{4}d$ . Details of all transfers granted will be telegraphed to you by the Comptroller-General. As regards the method of allotting the transfers, we request reconsideration of your decision. There appears to be no advantage in asking for tenders. If, as would be probably be the case, all the tenders were at the highest rate, it would be useless, and if lower rates were offered by the tenderers in competition with each other it would be mischievous. Our aim is to encourage the tenderers to offer the highest rate which we are willing to accept, and this end could be best obtained, and confidence inspired, by offering the transfers at a fixed rate of  $1s\ 3\frac{3}{4}d$ . The transfers would be allotted in order of application.

Telegram from SECRETARY OF STATE to VICEROY, Finance Department,  
dated 9th December 1907

Telegraphic transfers on London. I approve of your proposals in your telegram of the 7th December. Subject to the minimum of 10,000*l.*, transfers should be in multiples of 1,000*l.* In order that I may arrange to meet transfers, I shall be glad to know, as soon as possible, when offer will be made.

Telegram from VICEROY, dated 13th December 1907

Please refer to your telegram of the 9th December. We are unable at present to say when an offer of telegraphic transfers on London will be made, as the rate of exchange remains steady at  $1s\ 3\frac{3}{4}d$ , and, until it drops below that figure, no action is proposed. When it is actually necessary to make the offer you will be at once informed. We shall, when making the offer, announce that the transfers will be available in Bombay, Calcutta, and Madras, and advices of their grant may therefore be expected not only from the Comptroller-General, but also from the Accountants-General at Madras and Bombay.

## Telegram to VICEROY, dated 25th February 1908

Rate of Exchange Your telegram of 13th December Having consulted with Exchange Banks, I have come to the conclusion that it will be better for you to sell bills on London at  $1s\ 3\frac{2}{3}d$ , if the rate of exchange falls again, rather than telegraphic transfers The Exchange Banks state that bills will do equally well for them The amount to be sold will necessarily depend on circumstances, and cannot be decided in advance, a bill must not be sold for a smaller amount than 10,000*l* Please communicate the above information to the Exchange Banks The lowest rate which can be fixed for the bills is  $1s\ 3\frac{2}{3}d$  as, if it were lower, Banks would prefer shipping sovereigns If at any time you are satisfied that a sale would be useful for strengthening exchange, you may sell 250,000*l* worth of bills without previously consulting me Of course, when you sell them you will telegraph to me When you have informed the Exchange Banks in India as above, please let me know by telegraph, in order that the Head Offices in London may be informed

## Telegram from VICEROY, dated 3rd March 1908

Your telegram 25th February and previous correspondence Exchange remains low in spite of this being the normally busy season, and the telegraphic rates cannot rise over  $15\frac{2}{3}d$  Also it seems highly possible that after March, when exports diminish, there will be weakness Meanwhile, it seems from your curtailment of Council Drawings that you may shortly have to transfer a considerable quantity of gold from Currency to your Treasury Thus, if there is a falling Exchange in the slack season, we may have to draw bills on you which you will only be able to meet by withdrawals of gold from the Gold Standard Reserve Accordingly we suggest that you should consider the expediency of refraining from further investments on account of the Gold Standard Reserve and of not renewing Treasury Bills, &c, as they mature, in order to increase the stock of liquid gold in the Reserve Despatch follows shortly

## Telegram from VICEROY, dated 4th March 1908

Your telegram of 25th February Rate of Exchange The Exchange Banks have been informed that instead of arrangement previously communicated we shall be prepared, if the demand rate falls below  $15\frac{2}{3}d$ , to sell sterling bills at  $15\frac{2}{3}d$ , up to a maximum of 250,000*l* at a time No bill of smaller denomination than 10,000*l* to be sold, and precise amount offered to be fixed according to circumstances We should be glad to receive your instructions on the following difficulty in procedure which the above arrangement involves We propose, when the necessity occurs, to advertise bills for allotment at noon on the following Thursday, as the English mail leaves Calcutta Thursday evening If tenders are much greater than the maximum limit up to which we are authorised to sell, the wholesale rejection of tenders might depress exchange for the week following, unless special bills can be sold to supplement the regular sale These would be available (for issue at Bombay only) up to Friday afternoon Accordingly we should be glad to be granted authority, in the case for a rush for bills to sell additional bills up to a further 250,000*l* as a maximum in any one week, between Thursday noon and Friday 4 p m There would not be time to get your previous consent for each sale, but we should of course at once telegraph to you the amount of such bills sold

## Telegram from SECRETARY OF STATE to VICEROY, dated 4th March 1908.

Exchanges. Points mentioned in your telegram of yesterday have not escaped my notice With reference to your telegram of to-day, there does not seem to me to be any object in selling 500,000*l* by two instalments in the week, but I authorise you to advertise the sale of that amount without consulting me on any Thursday for the present.

Telegram from COMPTROLLER-GENERAL, dated 26th March 1908

My telegram of to-day. Tenders received, bills on Secretary of State for India 70,000*l* only from the National Bank of India. Tenders accepted in full

---

Telegram from SECRETARY OF STATE to VICEROY, Financial Department, dated 2nd April 1908

In order to be in a better position to meet the bills which you draw upon London, I have sold Consols, and now hold in my balances about 1,100,000*l* belonging to the Gold Reserve Fund, including the 318,000*l* which you mention in your telegram of 23rd March. This sum will, like the rest of my balances be lent on security on short temporary loans, and the Gold Standard Reserve will be credited with the interest received thereon. In the accounts of the Fund, the amount thus temporarily lent should be described as temporarily forming part of my balances

---

Telegram from VICEROY, dated 11th September 1908

No sterling bills have been sold for four weeks, and exchange being steady above 1*s* 3½*d* per rupee, and Council bills being freely sold, we are announcing to-day discontinuance of offer of bills

---

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE, No 89, dated 1st April 1909

MY LORD,

We have the honour to address you regarding certain aspects of the present position of currency and exchange. So long as prospects were uncertain and exchange persistently low, we refrained from raising questions which might be regarded, in the circumstances, as mainly of academic interest. Now, however, that the outlook is more reassuring, we think it advisable to sum up the lessons of the recent operations in support of exchange

2. In 1908, the Gold Standard Reserve was, for the first time, employed in fulfilment of the object for which it was established. Owing to the entire reversal of the balance of trade, exchange fell below "specie point" in March 1908, and we prevented a further drop, which would otherwise have been inevitable, by selling Bills on London until the return of more normal conditions restored the market rate to 1/3½ in August. In the process, Government remitted to London 8,058,000*l* for the public, and withdrew 121 millions of rupees from circulation in India. Intervention on this scale with the natural course of international exchange was clearly an event of the highest importance in our currency history. It has committed us in the eyes of the public, to a line of action which though essential to the success of our policy, has not been always clearly foreseen. The accumulation of a gold reserve in England has frequently been spoken of as if its only purpose were to enable the Secretary of State on occasion to meet his Home charges without being compelled to draw upon India for funds in an unfavourable market. But the further development which places our gold reserve at the disposal of the private remitter is a definite pledge of our active support of the Gold Standard. Any failure to fulfil that pledge, either through the exhaustion of the reserve or for other cause, would shake public confidence in our currency policy to a degree which it would be difficult to estimate

3. The test of our capacity to maintain our policy is unquestionably the strength of the Gold Standard Reserve. The gold which Your Lordship holds in your currency chest, and which has sometimes been described as our first line of defence, as well as the gold which we hold in India whether in our

treasuries or in the currency reserve, disappear into relative unimportance when the balance of trade sets against us for any prolonged period. Our stock of gold in India ceases to be replenished through the ordinary channels, and melts away. The currency gold in London has to be taken by you for our Home charges, when exchange prohibits you from financing them by Council drawings. We have thus to fall back upon the Gold Standard Reserve at a comparatively early stage of a bad cycle. It is the recognized fulcrum of our whole currency system, and its strength is of vital importance both to Government and to the merchants, capitalists and investors who are associated with us in the development of India.

4 In the light of last year's experience, it seems to us impossible to maintain that our Gold Standard Reserve has ever yet approached the position which it ought to occupy. The ideal strength of the Reserve has been the subject of much discussion, and figures have been quoted, ranging from 10,000,000*l* to an amount which would enable the Secretary of State to curtail his drawings by one-half during a period of three successive years. But we may now dispense with *à priori* calculations. During the period from November 1907, when exchange first fell substantially below 1*s* 4*d*, until the end of January last, we lost 15 millions of our gold, thus

	November 1907	February 1909
Gold Standard Reserve - -	14 2	7 9
Currency gold in England - -	6 2	1 5
Government gold held in India - -	4 2	1
	<hr/> 24 6	<hr/> 9 5

This is the result of a little more than a single year of adverse conditions and of a famine which was more restricted in its area than is frequently the case with similar calamities. There is unhappily no assurance that our next period of adversity may not be more prolonged, and it would be no excess of caution if we were armed against two consecutive years such as the one through which we have just passed. We have no wish to speak dogmatically, but we are strongly disposed to regard 25 millions as the minimum of safety in the Gold Standard Reserve, apart from the gold which we may be able to hold in our currency reserve and our treasuries.

5 This brings us to the first definite proposal which we wish to submit for your Lordship's consideration. In July 1907 you decided that 1,000,000*l* out of our profits on coinage might safely be diverted from the Reserve to be utilised on railway capital expenditure. We deprecated the decision at the time, but accepted it and have defended it against an outburst of public criticism in India. You subsequently determined that half the profits on the coinage of rupees should be consistently diverted in the same manner, and this course has accordingly been followed so long as any profits accrued. We would now ask you, however, to reconsider your decision, and to allow the future profits on coinage to pass into the Gold Standard Reserve without deduction, until the Reserve stands at a much higher figure than it has yet attained. We do not yield to you, Lordship, in our desire to press forward railway development in India, but we are convinced that the stability of our currency is a far more vital factor in the welfare of the country than the pace at which our railway facilities are extended. It is highly significant that this view is so widely shared by the mercantile community, in spite of the strong personal interest which attaches large sections of them to an active railway policy. We have already forwarded to you the expression of opinion by the Bombay Chamber of Commerce on the subject<sup>a</sup>, and we now submit, for your information, copies of similar protests which we received from the Chambers at Calcutta, Madras, and Karachi. The position has again been dealt with, in a similar strain and with much conviction, by the Chairman of the Bombay Chamber, whose remarks on the subject at the

<sup>a</sup> Enclosure to Government of India's Despatch No. 296, dated the 8th August 1907, page 160  
A 1906S P

Chamber's annual meeting on the 31d instant have met with the general approval of the business public in India. We find ourselves in entire accord with these views, and we would earnestly press upon your Lordship the impolicy of retarding the growth of the Reserve when circumstances again permit us to renew the coinage of rupees.

6. Another aspect of the Gold Standard Reserve which attracts much criticism in India is the form in which it is held. When the Reserve was first established, it was the desire of Lord Curzon's Government that it should be kept in liquid gold in India. Your predecessor decided to the contrary, and it was invested in gold securities, which have lost appreciably in value. We are not prepared to revive the proposal that the gold should be held in India, though it is our duty to refer to the very strong feeling in favour of such a course which prevails in this country. The feeling is partly sentimental, there is an idea that the gold belongs to India and should be held there. But there is also a belief that its presence in India would be a tangible sign of our Gold Standard, and that its issue in India, when necessary, would be equally effective with the present arrangements to stem a fall in exchange, besides tending to increase the popularity of a gold currency. We do not lay stress on these arguments at present. When exchange is weak, it seems hardly material whether we strengthen it by issuing gold in England or in India. The former is probably the more convenient, and the ideal would be to employ both remedies simultaneously, if we were in a position to do so.

7. But, while we do not press for any change in the location of the Gold Standard Reserve, we attach very great importance to our second proposal, that a substantial part of the Reserve should be held in a liquid form. This seems to us to be necessitated both by expediency and on broader grounds of policy. We do not lay stress on the loss that has occurred in selling the Reserve securities during 1908, those losses have been more than covered by the accrued interest. What we fear is a combination of events which would demand the employment of the Reserve at a time when large sales of British Government securities in London would be contrary to Imperial interests. Such a combination is by no means inconceivable, and even in less serious situations the free employment of the Reserve might be gravely hampered by the form in which it is now held. The point is one on which informed public opinion in India is singularly unanimous. We are frequently asked why we strain after interest on the Reserve which is the basis of our currency system, and consequently one of the chief pillars of the credit of India, and it is pointed out that other countries are careful to retain the ultimate foundation of their credit in bullion. We think these views deserve every consideration, and we are satisfied that it would have an excellent effect if Your Lordship decides to refrain from further investment of the Reserve gold. That such a course is right on general grounds we consider to be beyond question. Our strength in combating a low exchange depends, broadly speaking, on our ability to reduce the supply of rupees and to augment the supply of gold. If we can do both simultaneously, our intervention is the sooner effective. At present, we can only reduce the supply of rupees, for our gold has already been put on the market, and all that is meant by realising it is the transfer of certain securities from Government to another holder. Moreover, we conceive that the position of the Government of India in the markets of the world would be much stronger as the possessor of a large store of liquid gold than as the possessor of a corresponding capital in Consols or similar securities. In the former case, the Indian Government might in emergency be powerful to help the market; in the latter there would always be the potential danger of their wishing to realise at an inconvenient season. We would therefore urge on Your Lordship the propriety of building up a substantial share of the Reserve in liquid gold, to be held under as nearly as possible the same conditions as the currency gold in London.

8. We have intentionally avoided any general review of our currency policy. Our object for the moment is to place before you the views which are held in India regarding the Gold Standard Reserve, and the convictions

that have been forced upon us by the experience of the last year. The two modifications in procedure which we recommend are in entire harmony with the declared policy of supporting the Gold Standard, and they will go far to secure public confidence in our intentions.

We have, &c.,

## Enclosure No. 1

Dated 16th August 1907

From The Honourable Mr V G LYNN, Chairman, Chamber of Commerce, Madras, to the Secretary to the Government of India, Finance Department

I have the honour to address you with reference to the Secretary of State's reply in the House of Commons, on the 9th July 1907, to Sir Edward Sassoon's question regarding the Gold Standard Reserve Fund and the policy of adding to it the whole profit on coinage

When it became known that profits on coinage were to be diverted to a Silver Branch of the Reserve Fund the mercantile community, through its representative Chambers of Commerce, expressed dissent, and in reply was informed that the Silver Branch was expected to reach the limit of Rs 6 crores required by March of this year, and that thereafter the profit on coinage would be credited to the reserve in gold as before, and in the discussion of the Financial Statement for 1906-07, in reply to the Honourable Mr Finlay's suggestion that the time might shortly come when the profits on coinage could be utilised for the development of railways, the Finance Minister stated that assistance would not become available from this source until the invested portion of the Reserve Fund is considerably larger than it is now

This Chamber therefore cannot but view with very grave apprehension the decision that has now been arrived at, to appropriate half the profit on coinage towards railway development. The Honourable Mr Finlay admitted that the question was one which must be decided without reference to the need of the railways, but with reference solely to the sufficiency of the Gold Standard Reserve Fund for the purpose for which it is formed, and the Chamber submits that there has been no change in the position to justify the alteration of policy, and that as stability of exchange is mainly dependent on public confidence in the ability of Government to combat adverse influences, a vacillating policy such as at present obtains is fraught with very grave dangers

In recent years the Gold Standard Reserve Fund has accumulated very rapidly, the coinage of rupees having been abnormally high in consonance with the export trade, but the Chamber submits that this prosperity cannot be expected to continue indefinitely without interruption. Reactions may be expected from time to time, to meet which it is essential that the Gold Standard Reserve be in liquid form, large enough to meet any calls upon it without danger of depletion. In the opinion of the Chamber, the reserve required is not yet in sight, and the Chamber respectfully begs to urge the necessity of allocating to the Fund the whole of the profit on coinage as it accrues, there being no guarantee as to how long this profit will be available

It seems to the Chamber unlikely that the active circulation in this country will be able to absorb an average of fifteen crores of new rupees annually, and in the absence of a large demand for coined rupees from foreign countries, coining must again be suspended or the country will suffer from an inflated currency. That a large foreign demand exists is known, and this, the Chamber submits, creates an element of danger which should not be lost sight of. Although the day when countries now using Indian

rupees will establish their own coinage and send back to India all the rupees circulating in their respective territory may be remote, it is nevertheless a contingency which has to be provided for, and the more remote the day, the greater will be the liability. Before this happens, conditions unfavourable to exchange may temporarily arise, and should Government find it necessary to indent on the Gold Standard Reserve Fund, the position would be closely watched in countries using Indian rupees, and in the event of the Fund showing signs of depletion they would quickly be returned from abroad, and so aggravate the situation. In addition to the coined rupees held by foreign countries there is the Rupee Paper held in London, amounting to Rs 16 crores, which not improbably might also be returned, to the further aggravation of the position.

When the London Money Market is strained, as at present, it might be found well nigh impossible to realise any appreciable amount of the invested portion of the Fund, and in the event of unfavourable conditions arising, the actual gold in the Reserve Fund being infinitesimal, the only gold available for the Government of India to fall back upon is that in the Currency Reserve, which does not amount to much more than six months' Home Charges, a sum which this Chamber considers quite inadequate to ensure the stability of exchange. For this reason the Chamber would advocate that future additions to the Fund be maintained in gold coin or bullion.

Another factor that appeals to the Chamber worthy of consideration is the growing demand for gold as a medium of circulation. As this demand increases, in equal proportion will the demand for rupees and profit on coinage decrease.

In conclusion, the Chamber desires to say that in its opinion the Gold Standard Reserve Fund is still inadequate for the purpose for which it is formed, and, for the reasons set forth above, it respectfully deprecates any further deflections from it of the profit on coinage.

#### Enclosure No 2

No 1457, dated 6th September 1907

From the Secretary, Bengal Chamber of Commerce, to the Secretary to the Government of India, Finance Department

I am directed by the Committee of the Bengal Chamber of Commerce to address you with reference to the recent decision of the Secretary of State for India to divert a moiety of the profits on coinage to Railway Capital expenditure.

2 The Committee have not so far offered any opinion upon this decision. Their position in regard to it is, that for a number of years they have strongly and consistently advocated the need for increased Capital expenditure on railway equipment\*. They did not hesitate to express publicly their dissatisfaction when it was announced that the railway grant for the current year was to be reduced, and they urged that steps should be promptly taken to raise the grant to the limit originally fixed. The Secretary of State has evidently also come to this conclusion, although he has not been able to adopt the means proposed by the Committee. The method which he has followed has called forth much adverse criticism, and the Committee are not, they regret to say, themselves able to give it their unqualified support, greatly as they appreciate the object in view. For the maintenance of the gold value of the rupee is a matter of even greater consequence than the improvement of the Indian railway system. It rests upon the confidence of the public in the Currency policy of the Government of India, and clearly, therefore, that policy must be such as is calculated to inspire and to promote confidence rather than to give rise to doubt or hesitation. The present is admittedly a period of remarkable trade development in India, and the Committee acknowledge that, so long as existing conditions continue, no adverse effect of the decision can be apparent. But it is only one of several

\* Letter No 826/07, dated 11th May 1907, from the Chamber, to the Government of India, Department of Commerce and Industry (not printed).

changes which have been made recently, and which are leading the public to believe that the Currency policy of the Government is by no means so clear and definite a character as was at one time anticipated

3 To illustrate what they mean, the Committee would refer, in the first place, to the various figures which have been named from time to time as the limit for the Gold Standard Reserve. In the course of the Budget Debate on the 30th March 1904, Lord Curzon said that 10,000,000 would give "a permanent guarantee for stability of exchange". Twelve months later, the Honourable the Finance Minister said he would like to see the Reserve raised to "something between 20 and 30 millions sterling".\* In the following year Mr Baker appeared to have come to the conclusion that "there can be no limit to the Gold Reserve Fund". "So long" he said, "as India has a Gold Standard combined with a Currency which consists mainly of rupees, I consider that we are bound to set apart the whole of the profits on additions to the coinage"† And after stating his reasons for this important expression of opinion, he added "We must, therefore, resist all temptation to use these profits for ordinary current expenditure"‡ Mr Baker again referred to the subject in the last Budget Debate, and you now quote his speech on that occasion in support of the decision to supplement the ordinary revenue of the country by a diversion of part of the coinage profits. The Committee wish it to be understood that they cite these passages simply in order to show that, so far as the public can judge, the opinion of the Government of India in regard to the limit of the Gold Standard Reserve is indefinite, it seems to be changing from year to year. It may be, of course, that these changes are more apparent than real, but the public can only arrive at conclusions upon the information which is placed at its disposal. Then again, last year what the Government defined as a "Silver Branch" of the Gold Standard Reserve, was formed. But no previous intimation was given that any such step was contemplated, and the subsequent protests of the commercial community were disregarded, although they were supported by Sir Edward Law, the late Finance Minister. Furthermore, what was described as "a temporary loan" was taken in December 1906 from this Silver Branch of the Reserve "in order to assist the Government in meeting the very heavy issues of Telegraphic Transfers by the Secretary of State"§. But the Indian Chambers of Commerce were not asked how they would view such a diversion of the Fund, and, in fact, nothing was known of the matter until the receipt of your letter from which I have just quoted.

4 At the moment, the Committee are not so much concerned with the merits of either of these two new departures. The point is that, taken in conjunction with the further most important change which has just been made, and with the unsettled state of opinion as to the limit of the reserve, they will have, or may have, the ultimate effect of seriously disturbing public confidence. No doubt it will be argued that in an undertaking of such magnitude an absolutely rigid and inflexible policy is an impossibility, that experience of the working of the delicate machinery by which the stability of exchange is secured is certain to suggest changes from time to time, and that such prompt action is sometimes necessary as to prevent consultation with the representatives of mercantile interests. The Committee do not deny that there may be force in this contention. But they are convinced that sudden changes must ultimately have an unsettling influence, and that no effort should be therefore spared to reduce them to an absolute minimum. The Committee do not pretend to be able to suggest a course of action by which the Government could have avoided what has been done. It is, however, their considered opinion that a more definite policy is imperative if confidence is to be permanently maintained; and they believe that the leading features of such a policy cannot be defined without a further

\* Budget Debate, 29th March 1905 (H C 167 of 1905, page 206)

† Budget Debate, 28th March 1906. (H C 162 of 1906, page 212)

‡ Letter dated 19th August 1907, from the Government of India, Finance Department, to the Bombay Chamber of Commerce (not printed)

§ Letter No. 561 A, dated 26th January 1907, from the Government of India, Finance Department, to the Bengal Chamber of Commerce (not printed)

exhaustive inquiry In fact, they are persuaded that the time has come when the Indian Currency question ought to be once more thoroughly examined by a commission of experts

5 It will be 10 years in April next since the appointment of the last Currency Commission The success of the policy which was based upon its recommendations has been perhaps greater, and certainly more immediate than was anticipated The trade and commerce of the country have increased at an unexampled pace, and the resulting expansion of the Silver Currency has raised the Gold Reserve to a strong position within a comparatively brief period But prosperity has brought with it new problems for solution, and one of the greatest of these is the limit at which the Reserve ought to be fixed That there is a diversity of opinion upon this vital point, need not be further insisted upon, and a ruling from an expert Commission, as to what would be a safe limit for the next 10 years, could not fail to inspire confidence An almost equally important question is as regards the form in which the Reserve should be held To maintain a sum approximately to 20 millions sterling, or perhaps more, in gold coin or bullion, might not, the Committee fear, commend itself to commercial men as a business proposition But at the same time, there is a very strong feeling that the actual gold in the Reserve is insufficient, and it cannot be overlooked that the Fowler Commission recommended that the Reserve "should be kept in gold" A new Commission would examine this question attentively, and their opinion would be generally accepted as authoritative The present position of what are known as gilt-edged securities opens up a further question for the consideration of the Commission For, if investment is to be continued, the public will desire to have some assurance that a wise discrimination will be exercised in the choice of stock There does not seem to be a general agreement that all the investments which have hitherto been made are in every respect the best possible

6 The foregoing appear to the Committee of the Chamber to be some of the principal points which a Commission would investigate But in connection with so complex and difficult a problem there are, of course, many other matters which would likewise come under review When all of these had been considered, the Commission would be almost certainly in a position to define and to limit the policy of the Government for a further period of, say, 10 years It may be reasonably expected that such a definition and limitation would have a marked beneficial effect For it would obviate to the greatest extent possible the occurrence of such changes as those which have given rise to the present discussion, and it would dispel the idea, which now seems to be abroad, that a hesitating and vacillating policy is being pursued A Commission would also afford an opportunity to all interested in the Currency question of placing their views on record, and the experience which has been gained during the past 10 years would be thus made available for the guidance of those who will be responsible in the future for the direction and management of Indian Currency affairs

Enclosure No 3

No 507, dated 1st October 1907

From A THOLE, Esq, Vice-Chairman, Karachi Chamber of Commerce,  
to The Secretary to the Government of India, Finance Department

The Committee of this Chamber have been favoured by the Bengal Chamber of Commerce with a copy of their letter to you, No 1457—1907, dated 6th September, on the subject of the decision of the Secretary of State for India to divert a moiety on the profits on coinage to Railway Capital Expenditure

While on the one hand my Committee acknowledge that the need for augmenting the carrying capacity of the principal Indian Railways is very urgent, and that under the present conditions of remarkable trade development

in India no immediate adverse effect of the decision can be apparent, on the other hand they entirely concur with the views expressed by the Bengal Chamber that the decision is one which may affect the confidence in the Currency policy of the Government of India, upon which the success of that policy greatly depends

I am therefore desired by my Committee to express to you that they strongly support the views expressed by the Bengal Chamber in their letter above quoted, more especially with regard to the advisability of a new Currency Commission examining the whole question and making proposals for defining the policy to be followed in the management of Indian Currency affairs

---

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 82, dated 2nd July 1909

MY LORD,

In your Letter No 87, dated 1st April 1909, you discuss the administration of the Gold Standard Reserve, and suggest certain changes. The subject is one of great importance, and I therefore welcome the opportunity of considering it, in the light of recent events, in consultation with your Excellency's Government

2 The proposals to which you invite my assent are as follows —

- (1) That the decision communicated to you in my telegram of 2nd July 1907, to use for capital expenditure on railways half the future profits on coinage shall be held in abeyance, and that the whole of the profits shall be paid to the Gold Standard Reserve until that Reserve stands at a much higher figure than it has yet attained
- (2) That a substantial part of the Reserve shall be held in gold

3 The first of these proposals is based on the view that the amount at which the Reserve now stands is below the "minimum of safety," i.e., is less than the amount which it is prudent to hold in the Reserve as a fund from which, until its exhaustion, the Secretary of State in Council may supply his own requirements (and, if necessary, meet bills of exchange sold in India) during the prevalence of conditions adverse to the maintenance of the rate of exchange at or about 1s 4d the rupee

The question of the amount which the Reserve should be allowed to reach before any part of the profits of coinage is used for other objects has been discussed during the past five years by Lord Curzon, the late Sir Edward Law, Sir E. N. Baker, and the Committee on Railway Administration and Finance. There has been, as is natural, a striking divergence of views as to the amount that can be reasonably regarded as affording sufficient safeguards for the maintenance of exchange. In 1904 Lord Curzon observed "Before many years have passed I anticipate that this Reserve will have reached the figure of 10 millions sterling, which will be sufficient for our purpose, and will give us a permanent guarantee for stability of exchange." In 1905 the late Sir Edward Law expressed the opinion that a reserve of 20 millions would be an ample provision for the most unfavourable circumstances for which it would be reasonable to provide. Sir E. N. Baker, in 1905, said, "I should like to see (the Gold Standard Reserve) raised to something between 20 and 30 millions sterling." The Committee on Railway Finance and Administration estimated, in June 1907, that at the end of the year then current the sterling portion of the Gold Standard Reserve would amount to about 14,500,000*l.*, and, as the stock of gold held by the Government outside the Reserve exceeded 11,000,000*l.*,

bringing the total sterling resources available for the support of exchange to about 25,500,000*l.*, they considered that it would not be imprudent to use for capital expenditure on railways 1,000,000*l.* of the profits expected from coinage in 1907-08

It is not surprising that these estimates show a very wide range of variation, since even the last of them was made before conditions involving a strait on the Reserve had arisen or their imminence could be foreseen. Such conditions prevailed with great severity during a considerable portion of the financial years 1907-08 and 1908-09, and you suggest that the experience then gained enables *a priori* calculations such as those mentioned above to be put aside. You quote certain figures which show that during the period from November 1907 to February 1909 the sterling assets of all kinds available for use by the Government for strengthening exchange were reduced by 15,100,000*l.*, and you comment on these figures as follows —

“ This (reduction) is the result of little more than a single year of adverse conditions, and of a famine which was more restricted in its area than is frequently the case with similar calamities. There is unhappily no assurance that our next period of adversity may not be more prolonged, and it would be no excess of caution if we were aimed against two consecutive years such as the one through which we have just passed. We have no wish to speak dogmatically, but we are strongly disposed to regard 25 millions as the minimum of safety in the Gold Standard Reserve, apart from the gold which we may be able to hold in our currency reserve and in our treasuries ”

4 I am inclined to think that the remarks quoted at the end of the preceding paragraph overstate what is required in order to provide suitable safeguards against a fall in exchange. My reasons are as follows —

- (A) It is true that the famine of 1907 was restricted both in area and duration, but it is also true that it occurred at a time when general conditions were exceptionally adverse to the maintenance of exchange. The effect of the famine in reducing India's power of exporting certain articles was felt at a time when the foreign demand for the articles that India was able to export was seriously restricted by commercial depression throughout a large part of the world, intensified, if not largely brought about, by the financial crisis in the United States of America. At the same time the Imports into India of merchandise and silver were on a very extensive scale, the large imports of merchandise being perhaps a consequence of the favourable trade conditions that India had enjoyed for several years previously, while the purchases of silver were without doubt encouraged by the low price. The result of these various causes was that during the period from 1st November 1907 to 31st October 1908 the foreign trade of India on Private Account showed a balance of net imports of 1,190,000*l.*, whereas, as will be seen from the enclosed statement, there was in each year from 1896 to 1907 (which period included two severe famines) a substantial balance of net exports in the corresponding months.
- (B) The gold in the Paper Currency Department cannot, in my opinion, be left out of account in any calculation of the amount of sterling resources which should be held as a safeguard for exchange. The reasons which have commended to you the opposite conclusion are summarised in the following passage in paragraph 3 of your letter — “ The gold which your Lordship holds in your currency chest, and which has sometimes been described as our first line of defence, as well as the gold which we hold in India whether in our treasuries or in the currency reserve, disappear into relative unimportance when the balance of trade sets against us for any prolonged period. Our stock of gold in India

" ceases to be replenished through the ordinary channels and " melts away. The currency gold in London has to be taken " by you for our home charges, when exchange prohibits you " from financing them by Council drawings. We have thus to " fall back on the Gold Standard Reserve at a comparatively " early stage of a bad cycle. It is the recognised fulcrum for our " whole currency system." It appears to me that in these sentences the importance of the following considerations is not fully recognised —

(1) According to the figures given in paragraph 4 of your Letter (which, however, do not show the full reduction in the sterling resources of the Government at the time of their greatest depression) the measures taken in 1907 and 1908 for the maintenance of exchange involved a reduction of 15,100,000*l*. in the sterling resources held by the Government for this purpose, of which only 6,300,000*l*. was provided from the Gold Standard Reserve, the remaining 8,800,000*l*. having been taken from the gold held in England and India (4,700,000*l*. from the Currency Reserve in England and 4,100,000*l*. from the Currency Reserve and Treasuries in India).

(2) The Gold Standard Reserve can scarcely be said to have been used at a comparatively early stage of the recent depression in exchange. It was not touched until 13th April 1908, five and a half months after the fall of exchange below " specie point," during which period 2,500,000*l*. was taken in gold from the Paper Currency Reserve in England, and 1,413,000*l*. in India. The whole of the gold withdrawn in England and (as appears from your telegram of 27th November 1907) at least a considerable portion of that withdrawn in India was used for the support of exchange.

(3) In addition to these facts, it would appear to be clear on general grounds that any given sum of sterling money which is (a) used instead of the proceeds of Council bills towards meeting Home Charges, or (b) used to meet bills drawn by the Government of India on the Secretary of State in Council, or (c) issued in India to exporters in exchange for rupees, has exactly the same efficacy for supporting exchange whether it is drawn from the Gold Standard Reserve or from the Paper Currency Department.

5. While, for the reasons given above, I am unable to accord entire assent to your views on all the points that you have discussed in connection with your first proposal, I am entirely in agreement with you as to the paramount importance of maintaining such a reserve of sterling resources as may fairly be regarded as sufficient to maintain exchange in times of prolonged difficulty. In forming a conclusion as to the amount which should be regarded as sufficient for this purpose, it is necessary to bear in mind that it would be wasteful to accumulate a sum largely in excess of what is required to meet all difficulties against which it is reasonable to provide, since an excessive accumulation involves the locking up of funds which might be used for the industrial development of India. As at present advised, I am inclined to think that the prudent and economical course would be to regard 25,000,000*l*. as the minimum amount which should be accumulated in the form of sterling assets of the Gold Standard Reserve and gold held in the Paper Currency Department, and I am willing that, so long as the total of the resources just mentioned stands below that figure, the whole of the future profits on coinage shall be added to the Gold Standard Reserve.

6. It may apparently be possible to accumulate this amount, or even more, before the resumption of the coinage of rupees, if it is decided not to resume coinage until the stock of rupees in the Paper Currency Department falls to 15 crores, and the stock in the silver branch of the Gold Standard

Reserve to 3 crores, amounts which appear to constitute a sufficient minimum. The calculation on which this anticipation is based is as follows —

	£
It is estimated that the Gold Standard Reserve will amount on 31st March 1910 to - - - - -	18,733,000
From this must be deducted the amount to be held in rupees - - - - -	2,000,000
Leaving as the amount which can be held in sterling -	16,733,000
The gold held in the Paper Currency Reserve in England is - - - - -	1,500,000
The rupees in the Paper Currency Reserve amount to 3,362 lakhs. The substitution of gold for 1,862 lakhs would produce - - - - -	12,413,300
Thus, if gold could be substituted for rupees in the Paper Currency Reserve to the full extent contemplated, the sterling resources in that Reserve and in the Gold Standard Reserve would amount to - - - - -	30,646,300

Some allowance must be made for the possibility that (owing to a diminution of the gross circulation of notes) a reduction of the stock of rupees in the Paper Currency Reserve may take place without a corresponding increase of the stock of gold, but any estimate of the amount of such reduction would be of a very conjectural nature.

7 The considerations set forth above lead me to the conclusion that it is not necessary in the interests of exchange to modify, except to the extent mentioned in the last sentence of paragraph 5 above, the decision announced in 1907 to use half the profits on coinage for capital expenditure on railways. That decision was arrived at in view of the urgent necessity for supplying additional resources for railway development—a matter which has been pressed upon the Secretary of State in Council on many occasions by the Government of India—and on the difficulty and the danger to Indian credit involved in any increase of the present rate of borrowing. To retard the improvement and extension of the railway system in order to accumulate, beyond the limit which prudence requires, funds for the support of exchange would involve many disadvantages. At the same time I recognise that before the coinage of rupees is resumed—which may perhaps not occur for some years—new conditions may arise requiring special consideration. Your estimate of the capital expenditure which should be incurred on railways may be modified, loans may be obtained more easily, new experience may have been obtained of the fluctuations to which Indian trade and exchange are liable. I have no desire to forecast now the result of any discussion which may be carried on, in the light of such new conditions, at some uncertain time hereafter between the Secretary of State in Council and the Government of India as then constituted.

8 Your second proposal is that a substantial portion of the Reserve shall be held in gold.

9 The object of this proposal is to ensure that the Reserve shall be readily available whenever required, even though the necessity should arise at a time of general financial difficulty in London. There can, of course, be no possible doubt as to the importance of this object, but I am not satisfied that the adoption of your proposal, in substitution for the present method of dealing with the Reserve, is required for its attainment. As a matter of fact, I have carefully and constantly kept the same object in view whenever I

have had to decide as to the disposal of profits on coinage or of sums accruing to the Reserve by way of interest. The plan which I have followed has been as follows —

- (1) To hold a considerable portion of the Reserve in the form of high class securities with a near date of redemption, because cash can always be obtained at the shortest notice, by sale or loan, for such securities in the event of their realisation before maturity becoming necessary
- (2) To hold in addition such an amount of stocks yielding a higher rate of interest (*e.g.* Consols) as I can count on being able to sell in time to meet all requirements that should be met from the Reserve

I have, of course, borne in mind that the realisation of the securities mentioned in (2) can be effected somewhat gradually, while the proceeds of the securities mentioned in (1) which can be turned into money practically at once, are being used, if necessary, for immediate requirements

As my object has been precisely the same as that to which your proposal is directed, the chief practical question that can be raised (apart from those to be dealt with in paragraph 10 below) is whether I have succeeded in attaining it. I venture to think that the experience of 1908 shows that the answer to this question is in the affirmative. For, although the conditions in London in the year mentioned were very far from favourable to large sales of stock, there was no serious difficulty in providing from the Reserve the 8,058,000*l.*, which was required to meet the London bills drawn by your Excellency's Government, and the further sum of 934,000*l.*, which was temporarily applied from the same source towards defraying the Home charges, and I had also made arrangements for realising, if necessary, a considerable additional amount. In view of these facts I am unable to attach importance to the apprehension that "the free employment of the Reserve" might be seriously hampered by the form in which it is now held. I recognise, of course, that in times of prolonged depression of Indian trade, especially if accompanied by other adverse conditions, the realisation of securities to the amount required to support exchange would require care, but the operation ought not to be beyond the capacity of the Secretary of State in Council and his advisers, and I accept the responsibility for carrying it out on occasion arising.

In this connection it is not inappropriate to remind you that the weekly sales by you during several months in 1908 of sterling bills on London, which were the chief cause necessitating the realisation of securities, were undertaken at my suggestion (*see* my telegrams of 28th November 1907 and 25th February 1908), and that I did not on any occasion propose a reduction of the weekly amount, though I more than once proposed an increase.

10 The consideration dealt with in the preceding paragraph is the most important of those mentioned by you in favour of your proposal, but there are certain others which should be noticed.

One is that it was the desire of Lord Curzon's Government that the Reserve "should be held in liquid gold in India," and that Lord George Hamilton overruled their recommendation to this effect, and decided to hold the Reserve in securities. I find, on referring to the correspondence which took place when the Reserve was established, that Lord George Hamilton understood the Government of India to desire that the Reserve should be held either in gold or in securities saleable for gold, or partly in one form and partly in the other. Whether his understanding of their wishes was correct or not, it is clear that it would not now be reasonable to attach more importance to suggestions regarding the management of the Reserve which were made before its establishment than to the results of the experience, extending over more than eight years, which has since been gained.

A second argument, to which you refer with approval, is that "other countries are careful to retain the ultimate foundation of their credit in

"bullion" I understand that these words are meant to convey that Governments which issue notes encashable in gold or silver on demand are in the habit of holding gold or silver in order to provide for the encashment. This remark is accurate, except so far as it needs to be qualified by a reference to the large fiduciary issues of most Governments, but it has little, if any, bearing on the question of the most suitable form for the Gold Standard Reserve. That Reserve will presumably be used in future, so far as it is used at all, for defraying the Home Charges when Council bills cannot be sold at or above the gold point, or for meeting London bills drawn by the Government of India. For either purpose easily realisable securities or bank balances are as useful as gold, and there is therefore no advantage in holding the latter.

A third argument used by you is that it is desirable that the Government of India, when combating a low exchange, shall be in a position not only to contract the circulation of rupees in India, which is done under the existing system, but also to expand the circulation of gold elsewhere simultaneously (the object of the expansion of the circulation of gold being presumably to stimulate trade throughout the world and thus to increase the demand for Indian produce), and that the latter operation is not within your power unless the Gold Standard Reserve is held in gold. I am not disposed to think that the release of such gold as might be held in the Gold Standard Reserve would have an important or speedy effect in creating a favourable balance of Indian trade, but, if it is to be held that this result would follow, it must equally be held that the previous accumulation of gold in the Gold Standard Reserve would, so long as it was proceeding, have an unfavourable effect on the Indian trade balance, and it would certainly injure India's power of borrowing in the London market.

11 In the two preceding paragraphs I have considered the objections urged against the present practice of holding the Reserve in securities. I have now to draw your attention to the financial gain which has resulted from this practice. The amount received up to date in this country from interest on securities and discount on Treasury Bills, less the loss consequent on the discounting of Treasury Bills before maturity, is 1,778,906*l*. The loss incurred through the sale of securities has been 146,852*l*. The net depreciation at present prices, as compared with the average cost price, of the securities now held is 260,991*l*. Thus in eight years there has been a net gain to the Gold Standard Reserve of 1,371,063*l*.

12 My conclusion regarding your second proposal is as follows.—In view of the pecuniary disadvantage of holding a part of the Gold Standard Reserve in gold, I do not see my way to adopting this proposal. But I am willing to meet your wishes to the extent of leaving 1,000,000*l* of the Reserve uninvested. The part so treated will be either lent from time to time for short periods on approved security to approved institutions and firms or deposited at interest with Banks of high standing, the interest earned being credited to the Reserve. The remainder of the English portion of the Reserve will be dealt with as explained in paragraph 9 above. The transactions necessary to give effect to the decision regarding the 1,000,000*l* that is not to be invested will be carried out gradually and you will be informed of them in due course.

I have, &c,  
(Signed) MORLEY OF BLACKBURN

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 91, dated 13th August 1909

MY LORD,

My attention has been called to the desirability of arranging for earlier and more frequent publication of information regarding the position of the Gold Standard Reserve. Under present arrangements two statements showing the position of the Reserve at the end of each quarter appear in the Gazette of India between two and three months after the end of the quarter. I suggest that, in addition, a statement in the same form as the second of those published in the Gazette of India for 19th June 1909 shall in future, be issued in England and in India in the second week of each month showing the position of the Reserve at the end of the preceding month. I shall be glad to learn by telegram if you agree to this proposal. If you do, the first monthly publication might take place in September; and, in order that there may be no discrepancy between the information published in the two countries, I shall telegraph to the Comptroller-General at the beginning of that month a summary of the transactions that have taken place in

England in August It will then be for the Comptroller-General to telegraph to me as soon as possible the following figures relating to the Reserve :—

- (1) Opening balance 1st August \*
- (2) Particulars of transactions, if any, in India during August \*
- (3) Closing balance 31st August
- (4) Form in which Indian portion of Reserve is held on 31st August.

At the end of each subsequent month I shall telegraph to the Comptroller-General a summary of the transactions in England during the month, and the Comptroller-General should telegraph to me the particulars of additions made to the Reserve in India during the month and of any change in the form in which the Indian portion of the Reserve is held

2 If the proposal made above is carried out, a copy of each monthly statement issued in England will be posted to the Comptroller-General immediately after publication, and a copy of each one issued in India should be similarly sent to this Office, in order that any accidental discrepancy may be discovered as soon as possible

3 I take the opportunity of pointing out that the sum of 469,818*l*, which forms item 3 of the second statement published in the Gazette of India for 19th June 1909, was not held in gold and should not have been so described Any portion of the Reserve which may in future be left uninvested in accordance with the arrangements made in paragraph 12 of my Despatch of 2nd July 1909, No 82 (Financial), will be described in the statements to be issued in this country as "Cash placed by the Secretary of State for India in Council at short notice"

I have, &c  
(Signed) MORLEY OF BLACKBURN

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE,  
No. 236, dated 30th September 1909

MY LORD,

We have the honour to reply to your Despatch No 82, Financial, dated the 2nd July 1909, in which you dealt with our proposals for the future administration of the Gold Standard Reserve

2 In our despatch of the 1st April 1909, No 37, we reviewed the experience of the preceding eighteen months and attempted to sum up the lessons to be learnt from the course of our operations in support of exchange We showed that the main fact which had been brought into prominence by recent events was the inadequacy of our existing gold resources to meet a prolonged crisis As a partial remedy for this state of affairs, and as a precaution against the occurrence of a more serious emergency in the future, we proposed for your Lordship's consideration two specific measures We urged, firstly, that the practice, to which we have always objected, of expending on railways half the profits on coinage should be definitely abandoned, and that all such profits should in future be credited to the Gold Standard Reserve, until that Reserve should stand at a much higher figure than it has yet attained We further pressed the desirability of holding a substantial part of the Reserve in gold In our advocacy of both these measures, we had, as we pointed out in our despatch, the practically unanimous support of the mercantile and banking communities of India

3 In reply to these representations, your Lordship has consented to suspend the diversion of coinage profits to railway construction until such time as the stock of gold in the Gold Standard Reserve and the Paper Currency Department combined shall reach the figure of 25,000,000*l*, thereafter the question will be liable to reconsideration in the light of existing circumstances Though this decision does not go by any means so far as we wished, we welcome it as a step in the direction which we have advocated

\* Information under (1) and (2) is required not for publication, but to enable the figures prepared for publication to be verified

4 On the second point your Lordship has not seen your way to accept our proposals. Holding that, for the purpose of maintaining exchange, securities capable of easy realisation are as efficient as liquid gold, while they are at the same time producing interest to the credit of the Gold Standard Reserve, you have declined to do more than keep a sum of 1,000,000*l*. of this Reserve uninvested, such amount being either lent from time to time for short periods, on approved security, to approved institutions and firms, or deposited at interest with banks of high standing. We accept this decision with regret. While we admit the force of your argument in normal circumstances, and recognise that existing arrangements adequately met the requirements of the late crisis, we would once more emphasise our conviction that it is necessary to provide, and to assure the public that we do provide, against a situation in which the securities of the Gold Standard Reserve would not be easily realisable or realisable only at heavy loss.

5. Accepting however, as we must, your decisions, we now desire to discuss the methods to be adopted, under present conditions, in meeting exchange difficulties in the future. Your Lordship has recognised the advisability of holding at least 25,000,000*l*. in gold and gold securities, and has represented the possibility, under the arrangements indicated in paragraph 6 of your despatch, of increasing this amount to, as much as 30,000,000*l*., exclusive of the gold securities held by the Paper Currency Department. The attainment of this figure involves, however, the reduction of the stock of rupees in the Paper Currency Reserve and the silver branch of the Gold Standard Reserve to fifteen and three crores respectively. You consider these amounts to constitute a sufficient minimum, but we must respectfully differ as to their adequacy.

6 We could not view without grave concern any diminution of the silver branch of the Gold Standard Reserve. Our currency position resembles that of an army exposed to sudden attack on either flank, and we have to provide for a drain upon our silver no less than upon our gold. Unlikely as it at present appears that there will be early need for an extensive coinage of rupees, the future developments of commerce are always uncertain, and we should be extremely loth to expose ourselves to any risk of a recurrence of the difficulties which in 1906 rendered the establishment of the silver branch a necessity. With the extension of the sovereign as a circulating medium, this risk will no doubt tend to diminish, but though, as we note below, there are promising signs of development in this direction, we can only expect very gradual progress, and a very large growth of such circulation would be necessary before the silver branch of the Gold Standard Reserve can safely be diminished. For the present, therefore, we desire to maintain this at the existing figure of six crores.

7 For similar reasons we are equally reluctant to substitute gold for the silver in the Paper Currency Reserve to the full extent that you propose. We consider that at present we cannot with safety hold less than one-half of our liquid currency balances in rupees, and, as we pointed out in paragraph 8 of our despatch No 144, dated 26th April 1906, we ought to have a minimum of eighteen crores of rupees at the beginning of the busy season. As, however, the note circulation has recently expanded, this would, on present figures, give a total gold stock not much less than that assumed by your Lordship, the figures calculated with reference to the position on the 15th September last standing as follows —

	£
Gold Standard Reserve on 15th September 1909 (approximate) - - - - -	18,635,900
Deduct rupee holding - - - - -	4,000,000
(a) Possible Sterling holding in Gold Standard Reserve - - - - -	14,635,900
(b) Currency Gold in England - - - - -	1,500,000
(c) Further possible Currency gold, viz, half of currency balances on 15th September minus (b)	11,441,200
Total possible gold holding (exclusive of gold securities held by Paper Currency Department)	<u>27,577,100</u>

These figures thus admit of a total Currency holding of about 13,000,000*l* in liquid gold

8 We now desire to impress upon your Lordship our firm conviction that the greater part of this sum should be held in India. It is true that in their despatch, No 295, dated the 18th August 1904, Lord Amphill's Government contemplated as sufficient a gold holding of between about 4,000,000*l* and 6,000,000*l* in India, but recent experience has compelled a modification of our views on this point. It is unnecessary to repeat here the arguments in favour of the establishment of an effective gold currency in this country. They were fully set forth in the report of the Fowler Currency Committee, to which our Gold Standard owes its existence, and their cogency has since that day been fully recognised. It is a truism that real stability of exchange can never be assured until gold attains an active and extensive circulation in India: the difficulty has hitherto lain in inducing a conservative people to adopt this form of currency. Shortly before the recent crisis, however, there were signs of encouraging progress in this direction. Though gold was still far from having obtained that popularity which the interests of exchange render desirable, there were indications of a greatly extended use of the sovereign in commercial transactions. It was estimated, for instance, by our Comptroller General that it might shortly be possible to finance in gold no less than 20 per cent of the up-country cotton trade of Bombay. This promising development has naturally received a severe check as a result of recent events. To ensure a free use of sovereigns it is essential that we should be in a position to pass gold liberally out of Currency and Treasury in exchange for notes and silver, and in present circumstances this is impossible, for our operations in support of exchange have left us with an absolutely insignificant gold balance. We have information that sovereigns now change hands at a premium even in the chief commercial centres of the country, while for ordinary purposes they are practically unobtainable. We therefore judge it to be eminently desirable to increase the local gold holding in our Paper Currency Reserve. We could face another exchange crisis with far greater equanimity could we be assured both of an active circulation of sovereigns in the country and of a strong reserve in our Currency chest. The former would enable the ready export of superfluous currency, while the strength of our own reserve would enable us at once to assist this process and, by free issues of gold, to bring about that restoration of public confidence which is of vital importance in the early stages of a panic.

9 For these reasons we wish most emphatically to urge the desirability of holding a large amount of gold in the Currency Reserve *in India*. Of the total sum of about 13,000,000*l*, which according to the figures given in paragraph 7, can be held in liquid gold against notes in circulation, we think that at least two-thirds should be available in this country. We should indeed prefer to hold more, but we recognise the necessity of leaving with you a liquid balance, to provide for any possible purchases of silver that may be required, and for use in the early stages of a struggle with exchange. With the sum of 1,000,000*l* from the Gold Standard Reserve which you intend to keep readily available, you will thus have in London somewhat over 5,000,000*l* in liquid form, and, in view of your opinion on the subject of the realisation of Gold Reserve securities, you will, we trust, consider this sufficient.

10 It is obviously desirable, in the light of the circumstances we have quoted, to lose no time in building up the gold resources of this country, and we have now to set forth the steps which should, in our opinion, be taken to effect this object. Up to the present, you have been able, by excess sales of Council Bills, to replace by gold rupees in the Gold Standard Reserve to the value of 2,800,000*l*, as well as to draw against Treasury balances nearly 2,000,000*l* more than the proportionate budget allotment of the current year (the figures are up to 31st August). Should the prospects of Indian trade continue favourable, there is reason to hope that it will prove possible, in spite of the present weakness of Exchange which has, lately, once more necessitated our offering Bills on London

to a small extent, but which will, we hope, prove to be of a purely temporary character, to draw off before very long the further sum of 3,800,000*l* by which the Gold Standard silver exceeds the necessary minimum. When that position has been reached, we are of opinion that you should stay further drawings other than those required for ways and means purposes, for if further trade demand for money be genuine, the result must then be that gold will come out to us in India. This process should continue until the gold in our Currency Reserve in India has accumulated up to the amount we consider desirable to hold there, viz, two-thirds of one-half the total currency cash holdings, or in present circumstances about 8,600,000*l*. When that position has been attained, your Lordship would, if trade conditions seemed to require this, issue extra Council Bills against Currency until you too were in possession of your full portion of the gold which we desire to hold in the Currency Reserve. The drawing of Council Bills against fresh rupee coinage should not be considered until the full gold requirements of the Currency Reserve both in India and England have been satisfied.

11 The course which we propose to adopt in the event of the occurrence of future exchange difficulties of a serious character will thus be sufficiently obvious. In addition to the necessary step of selling sterling bills on London, we desire, if we have in the meantime succeeded in acquiring a sufficient store of gold, to issue sovereigns in exchange for silver. We shall thus work upon the depressed silver market with double effect. The sale of your Council Bills would of course, have to be practically suspended for the time, and you would find such funds as are absolutely necessary for ways and means purposes in England by drawing first on your Currency gold and then on the Gold Standard Reserve. We trust that this plan of action will commend itself to your Lordship, though we must admit that our feeling of security would be considerably greater could we have the assurance that we possessed in the Gold Standard Reserve a sufficient stock of liquid gold to ensure the successful conduct of such operations over a prolonged period of depression.

12 In conclusion, we desire to emphasise the extreme desirability, in the interests of a stable exchange, of inspiring the public with confidence in the Currency policy of the Government. Such confidence can only be acquired by placing them in possession of the methods we propose to use in order to face difficulties, and we accordingly ask permission to publish our correspondence with you on the subject.

We have, &c

H. H. RISLEY

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 25, dated 18th February 1910

MY LORD,

I have considered in Council your letter of 30th September 1909, No 236, containing an expression of your views regarding—

- (1) The amount of rupees that should be held in the Gold Standard Reserve and the Paper Currency Reserve,
- (2) The location of such gold as may from time to time be held in the Paper Currency Reserve,
- (3) The procedure to be followed for building up sterling resources for the support of exchange

2 Your observations on the first of these questions are contained in paragraphs 6 and 7 of your Letter under reply. I thought it desirable that the whole matter should be examined somewhat more fully than is done there or has been done on any previous occasion, and the enclosed Memorandum has accordingly been prepared. I shall be glad if you will give to it your careful consideration, and furnish me with an expression of your opinion as to the suggestions contained therein.

3 On the second question your recommendations are —

- (1) That the stock of gold in the Paper Currency Reserve in India should, as soon as possible, be raised to, and if practicable maintained at, an amount equal to two-thirds of the total that can be held in gold in the Reserve. The estimate which you adopt of the total holding of gold that is at present possible is, approximately, 13,000,000*l.*, so that the level to which you recommend that the stock in India should be raised is 8,666,000*l.* (These figures might be increased if the suggestions in the Memorandum mentioned in the preceding paragraph were adopted.)
- (2) That until the gold in the Paper Currency Reserve in India reaches the level that you recommend, no increase should be made in the amount of gold held in the Paper Currency Reserve in England.

These recommendations evidently rest on the view that it is much more advantageous to increase the stock of gold held by the Government in India than to increase that which is held in the Paper Currency Reserve in England. It is, however, a matter of no small difficulty to compare the advantages of the two courses.

Gold held by the Government in India may be issued for export, or to be used as currency, or to be hoarded, or to be converted into ornaments. So far as it is issued for export, it may be regarded as fully effective for the support of exchange. So far as it is used as currency, it may be regarded as available wholly or in part for supporting exchange when the rate of exchange falls as low as gold export point, since it is probable that in such conditions a part at least of the amount in circulation would be exported, but when the rate falls, not as low as to gold export point, but to a figure at which it is desirable to suspend the sale of Council Bills, the gold in circulation is likely to be of little or no use for supporting exchange, at any rate immediately, since it would probably not be exported, and would obviously not be available towards defraying the Home Charges of the Secretary of State. Gold that is hoarded or converted into ornaments can scarcely be regarded as available at all for the support of exchange.

On the other hand gold held in England is available for supporting exchange not only when the rate falls to gold export point (when it can be used for meeting bills on London sold in India), but also at the earlier stage when the rate has fallen only to the point at which the suspension of Council Bills is desirable (when it can be used towards defraying the Home Charges). The stock is not liable to be depleted by any cause corresponding to the disappearance into hoards of gold in India. When the demand for remittances is strong, gold in England is available for any purchase of silver that may become necessary.

Thus the stocks of gold held in the two countries serve somewhat different purposes, and the practical conclusion that I draw is that it is desirable to hold, if possible, a substantial amount in each country. I am, therefore, unwilling to commit myself to a postponement of any increase of the stock in England for the comparatively long period that may be required for raising the stock in India to two-thirds of the possible total holding in the Paper Currency Reserve. As the stock of gold held by you now exceeds 5,000,000*l.*, I propose to revive shortly the arrangements which were in force in 1905, 1906, and 1907 for the purchase of gold in transit to England.

4 In paragraph 10 of your Letter you describe the method which should, in your opinion, be adopted with a view to building up the sterling resources of the Secretary of State and the Government of India. If I understand

your proposals correctly, you suggest that in the first place the silver in the Gold Standard Reserve in excess of six crores should, as opportunity presents itself, be replaced by sterling, that when this has been done the drawings of the Secretary of State should be limited to the amount required for ways and means purposes, that when these requirements have been met, the drawings should be suspended until the gold in the Paper Currency Reserve in India is raised to the sum decided upon, and that, when the stock of gold in the Paper Currency Reserve in India has been raised to the desired level, the sale of Council Bills should be resumed, but only against the transfer of gold to the Paper Currency Reserve in this country. You recommend also that the drawing of Council Bills against fresh rupee coinage should not be considered until the rupees in the Gold Standard Reserve have been reduced to six crores and the gold in the Paper Currency Department in India and England has been raised to the full amount that is desired.

I presume that you recognise that, if the procedure that you recommend were approved, its adoption would, or might, extend over a series of years, since, if the drawing off of surplus rupees from the silver branch of the Gold Standard Reserve and the raising of the gold in the Paper Currency Reserve to the desired level were not completed at the end of the financial year in which these processes were begun, the resumption of the sale of Council Bills in the ordinary manner would be necessary at the beginning of the next financial year in order to provide for the requirements of the Home Treasury in that year, and the special procedure which you recommend could only be revived late in the year when these requirements had been met. Thus the Secretary of State might continue for a number of years to sell Council Bills and Transfers in the ordinary manner during the earlier months of each year, sales in the latter months being either suspended altogether (if the stock of gold in India was below the desired level) or (if that level had been reached and was being maintained) effected only against the "ear-marking" of gold in London.

I am unable, after the most careful consideration, to accept the view that it is desirable to regulate the sale of Council Bills and Transfers in the manner that you propose.

In the first place, experience shows that the rigid procedure that you recommend is unnecessary for the building up of the sterling branch of the Gold Standard Reserve and the stock of gold in the Paper Currency Department, since without it the sterling branch of the Gold Standard Reserve has in the past been raised to the full amount of the Reserve (less the portion held, for reasons of policy, in rupees), while the stock of gold in the Paper Currency Reserve has from time to time risen not only to a sufficient, but even to an excessive, height.

Secondly, I am of opinion that to carry out your recommendations consistently might at times involve very serious consequences. To refuse at certain times of the year to issue rupees for trade purposes except against gold presented in India or "ear-marked" in London, might cause the periodical recurrence of stringency in the London money market, by which the Secretary of State for India in Council—owing to the frequency and magnitude of his operations in issuing and renewing loans (either direct or through guaranteed railway companies) is peculiarly liable to be injured, and by which it is also probable that the trade of India with other countries would be seriously affected.

5. It seems to me to be clear that in a year of great demand for remittances to India the right course to be pursued in selling and meeting Council Bills and Telegraphic Transfers is as follows—

- (a) The sales to be regulated in such manner as appears likely to stimulate the transmission of gold to India when such transmission is desirable, which is, of course, ordinarily not the case in any year until the sums required by the Secretary of State for the purposes of the Home Treasury and for converting into sterling the excess, if any, of the Gold Standard Reserve, over six crores have been received or practically assured, but the sales not to be suspended at any particular time for the purpose of forcing gold into the Paper Currency Reserve.

- (b) Bills and Transfers, if any, which are sold beyond the requirements of the Secretary of State (for the purposes mentioned in (a)) to be met in one or more of the following methods, viz —  
 From the Treasury balances of the Government of India, or from the silver portion of the Paper Currency Reserve (against the "ear-marking" of gold in London), or from the silver branch of the Gold Standard Reserve (the use of rupees from this Reserve being treated either as a loan to be repaid in India, or as a reduction to be made good by an increase in the sterling branch of the Reserve)
- (c) The choice between the methods mentioned in (b) to be made according to the circumstances of the time

I may add that I am entirely of the opinion, which evidently underlies the last sentence of paragraph 10 of your Letter, that the coining of new rupees should be limited as closely as possible

6 I am unable to accept the suggestion made in paragraph 11 of your Letter that your correspondence with me on the subjects discussed above (by which I understand you to mean your Letter of 1st April 1909, No 87, my Despatch of 2nd July 1909, No 82, your Letter under reply, and the present Despatch) shall be published, but I have no objection to your making public, should you think it desirable, the substance of the following decisions contained in the correspondence, viz, those communicated to you in the last sentence of paragraph 5 of my Despatch No 82 of 2nd July 1909, and in the second sentence of paragraph 12 of that Despatch. You will, of course, understand that no public announcement should be made regarding the question of the purchase of silver, which is discussed in the Memorandum appended to this Despatch

I have, &c,  
 (Signed) MORLEY OF BLACKBURN

Enclosure

MEMORANDUM of the amount to be held in RUPEES in the PAPER CURRENCY RESERVE and the GOLD STANDARD RESERVE

1 The question of the amount that should be held in rupees in the Paper Currency Reserve and in the silver branch of the Gold Standard Reserve is not one on which a decision is now called for by any practical need of the moment. A telegram from the Government of India, dated 12th February 1910, shows that in addition to the rupees in the Treasury balances, the Government holds 2,850 lakhs of rupees and about 12 lakhs of tolas of silver bullion in the Paper Currency Department and 718 lakhs of rupees in the Gold Standard Reserve. During the busy season of 1909-10 and of 1910-11 (if the monsoon of 1910 is favourable) these amounts will no doubt be reduced, partly by the substitution of gold for rupees in the Paper Currency Reserve, and partly by the substitution of sterling investments for a portion of the silver branch of the Gold Standard Reserve, but it is unlikely that either the Secretary of State or the Government of India will propose before 1911 at earliest to buy silver for the purpose of replenishing either reserve by means of additional coining. Whenever such a proposal is made, the question at the beginning of this note will become one of great and immediate practical importance, for the answer to it will necessarily govern the decision as to the time at which, and the scale on which, the purchase of silver shall be undertaken.

The question is far from easy, and, whatever estimate may be formed and used at any time as the basis of a practical decision regarding the level at which the stock of rupees in the two Reserves shall be kept, there must always be the possibility that subsequent events will so shape themselves as to show that a different decision would have been more beneficial. If a liberal view of the requirements of the two Reserves is taken and large amounts of silver are bought and coined, trade may immediately fall off and exchange decline, rupees in the Reserves may for a long period be practically useless, and the temporary loss of the sterling resources with which they

were purchased may be a serious misfortune. If, on the other hand, the more restrictive view is acted on, and the stock of rupees kept low, a sudden outburst of great trade activity may expose the Government of India to embarrassment in its attempt to cope with the demand for currency. This difficulty is one which can never be avoided. But it is obviously better to consider at leisure the important question involved than to leave it until a practical decision is urgently required. It is therefore proposed to examine now the views expressed by the Government of India in paragraphs 5 to 7 of their Letter, No 236 (Finance), dated 30th September 1909.

2 The Government of India are of opinion--

That the silver branch of the Gold Standard Reserve should not be allowed to fall below six crores, and

That they cannot at present safely hold (presumably at any period during the year) less than half of the metallic portion of the Paper Currency Reserve in rupees, and that they should have a minimum of 18 crores at the beginning of the busy season.

If the practical effect of these suggestions is examined in the light of the fact that the normal volume of the Paper Currency circulation will in all probability soon be about 50 crores, with a metallic reserve of 38 crores, it will be found (a) that the suggestions do not really discriminate, though they do so in appearance, between the requirements of different periods of the year, and (b), that, if they were carried out, the stock of rupees in the Paper Currency Department, and the percentage to the Paper Currency circulation, would (unless the total circulation is materially reduced or the fiduciary portion increased) be much higher during a part of the year than has been found necessary in recent years. These points will be dealt with separately.

- (a) In any estimate of the amount that should be held in rupees in the various reserves it appears to be absolutely necessary to discriminate between the requirements of the various periods of the year. There is, in normal years, a net absorption of rupees into the circulation for which the Government must provide in some way or other, but the absorption proceeds at different rates of speed at different seasons, and there is often during certain months a return of rupees from circulation. The period of most rapid absorption is usually from October to December, when the Government cannot rely on the outturn of the mints to keep pace with the demand for rupees. The return of rupees from circulation is most frequent in the quarter from April to June. It is therefore evident that, if the safe minimum holding of rupees on 1st October is represented by a particular figure, the possession of a smaller amount on 1st April will ordinarily suffice. The appropriate amount of the difference between the two figures will be discussed later. Meanwhile, it is important to observe that, if the suggestion of the Government of India were carried out, the reserve of rupees held against the Paper Currency would, if the note circulation stands at 50 crores and the fiduciary issue at 12, be not less than 19 crores all the year round, and the additional condition purporting to require a minimum of 18 crores at the beginning of the busy season would be unnecessary.
- (b) The effect of keeping in rupees all the year round at least half the metallic portion of the Paper Currency Reserve, and also 6 crores belonging to the Gold Standard Reserve would be, assuming a gross circulation of 50 crores and a fiduciary issue of 12 crores, that the amount of rupees (19 crores) to be kept in the Paper Currency Reserve would be 38 per cent of the gross circulation, and that 25 crores in all would be held in rupees outside the Treasury balances. Whether so large a holding is at any time necessary is open to question, but it seems quite certain that it is in excess of what is required at the end of the busy season, say, on the 31st of March of each year, as is shown by the following statement relating to the rupees and silver bullion that were held

in the Paper Currency Reserve and in the Gold Standard Reserve  
on 31st March of each year from 1900 to 1909 —

1	2	3	4	5	6	7	8

Proposals of Government of India (taking gross circulation at 50 crores and fiduciary issue at 12 crores)	50,00	19,00	38 0	—	6,00	25,00	50 0

\* The Paper Currency Reports show the cost price of silver bullion held in the Reserve, and it has been assumed for the purpose of the present Statement that each hundred rupees' worth of silver bullion represents 150 tolas from which 150 rupees can be coined.

In dealing with these figures the particulars relating to 31st March 1907, 1908, and 1909, may be left out of consideration as belonging to a period at which the stock of rupees was admittedly excessive. At the other seven dates the total amount of silver held in the Paper Currency and Gold Standard Reserves, the proportion of coin in the former reserve to the note circulation, and the proportion of the silver in both reserves to the note circulation were all considerably lower than would probably result from the adoption of the present proposals of the Government of India, and yet there is no reason to believe that, except at the first date, the available stock of rupees or of rupees and bullion combined was found to be inconveniently low. Such inconvenience as has from time to time arisen since 1900 owing to a deficiency of rupees has been felt during the busy season, and (as is shown at the end of paragraph 3) in consequence of the stock of coined and uncoined silver at the beginning of that season having been allowed to fall too low. It is most important to guard against its recurrence, but it is not necessary or desirable for that purpose to maintain an excessive stock of rupees at a different period of the year when entirely different conditions prevail.

3 It is evident that the problem under consideration must be approached in a somewhat different manner from that which has been adopted by the Government of India, so that proper allowance may be made for the varying conditions of different periods of the year, and the best procedure appears to be to attempt to estimate—

- (a) The amount of rupees that should be held in the two reserves on the 31st March of each year, which may be regarded as (approximately) the end of the period of most rapid absorption, and the beginning of the period during which a return of rupees from circulation is least unlikely.
- (b) The additional amount that should be held on 1st October of each year in order to provide in advance for the demands of the period of most rapid absorption.

Any agreement that might be reached on these two points would be of very great value for regulating the purchase and coinage of silver throughout the year. The following suggestions are accordingly submitted —

(a) *Rupees to be held on 31st March of each year*—The figures in the table above appear to indicate that a stock of rupees in the two reserves equal to 35 per cent of the gross currency note circulation (i.e., 17½ crores when the gross circulation is 50 crores) is as much as prudence requires. It may be assumed that no large stock of silver bullion will be held otherwise than temporarily, so that silver bullion in the Paper Currency Reserve may be treated as the equivalent of rupees at the rate of 1 tola = 1 rupee. The distribution of the stock of rupees between the two reserves and the use to be made of the holding in the silver branch of the Gold Standard Reserve, are considered in paragraphs 4, 5, and 6 below.

(b) *Additional amount to be held on 1st October of each year*—In fixing this amount, the factors that have to be borne in mind are (1) the amount of possible absorption of rupees into the circulation during the busy season, (2) the extent to which it may be reasonably estimated that the mints will be able to coin new rupees during the busy season towards meeting the absorption.

(1) *Amount of possible absorption during busy season*—The best data for valuing the first factor appear to be the figures which are given in the annual Reports of the Paper Currency Department of the net absorption of rupees into the circulation (or return of rupees from the circulation) in each quarter of each year. The figures for the period 1898–99 to 1908–09 are collected in the following table —

Net absorption of rupees into circulation (+) or return of rupees from circulation (—)

Year	April to June	July to September	October to December	January to March	Whole year
	Lakhs	Lakhs	Lakhs	Lakhs	Lakhs
1898–99	— 21	— 48	+ 1,62	— 2,54	— 1,61
1899–1900	— 64	+ 4,46	+ 7,84	+ 2,27	+ 13,93
1900–01	+ 1,00	+ 5,06	+ 4,13	— 1,57	+ 8,62
1901–02	— 63	+ 41	+ 1,74	— 2,20	— 68
1902–03	— 3,26	— 72	+ 3,13	+ 87	+ 2
1903–04	+ 1,84	+ 2,54	+ 6,10	+ 99	+ 10,97
1904–05	+ 37	+ 3,31	+ 3,92	— 17	+ 7,43
1905–06	— 1,16	+ 3,39	+ 11,39	+ 88	+ 14,50
1906–07	— 24	+ 6,00	+ 10,68	+ 1,66	+ 18,00
1907–08	+ 1,82	+ 1,45	+ 7,35	— 6,70	+ 3,92
1908–09	— 7,98	— 7,18	+ 3,39	— 3,11	— 14,88

These figures suggest that the following estimates fairly represent the maximum absorption during the busy season that need be allowed for, viz —

	Lakhs
October to December	— 11,50 ✓
January to March	— 2,50

(2) *Coinage during the busy season*—The portion of this absorption that it is reasonable to expect to be able to meet by new coinage during the busy season may be estimated as follows —It is understood that the Calcutta and Bombay mints together can coin the following amounts of rupees per month (in addition to small silver and copper coin), viz —

With overtime	— 4½ crores
Without overtime	— 2½ crores.

It would thus be possible, if a sufficient supply of bullion were available, to coin in each quarter of the busy season enough new rupees to provide for absorption to the full extent

shown above. But allowance must be made for the probability that new coinage in the busy season would not be taken in hand until some time after the season had begun, and it is therefore perhaps not safe to estimate at more than 5 crores the coinage that would take place, even in a very busy year, during the October to December quarter. It may be assumed that in the quarter from January to March it would be possible to coin enough rupees to keep pace with the absorption during that quarter.

Thus the depletion in the busy season for which provision should be made in advance may be estimated as follows —

	October to December	January to March
	Crores	Crores
Absorption - - - -	11½	2½
Deduct new coinage - -	5	2½
	<hr style="width: 50%; margin: 0 auto;"/>	<hr style="width: 50%; margin: 0 auto;"/>
Depletion - - - -	6½	Nil

On this basis the additional amount to be held on 1st October would be 6½ crores and the total amount would be 17½ + 6½ = 24 crores. Past experience seems to show that this amount is likely to be sufficient, for difficulty is not known to have arisen in meeting the public demand for rupees except in 1900-01, 1903-4 (see Letter from Government of India, No 121, dated 28th April 1904) and 1905-06 (see Letter from Government of India, No 144, dated 26th April 1906), in which years the silver branch of the Gold Standard Reserve did not exist, and the only stock of rupees and silver bullion outside the Treasury balances was that which was held in the Paper Currency Reserve, amounting at the commencement of the busy season in the years mentioned to the following sums —

	Silver Coin	Silver Bullion	Total
	Lakhs of Rupees	Lakhs of Tolas	Lakhs
30th September 1900 - -	5,33	—	5,33
30th September 1903 - -	10,69	—	10,69
30th September 1905 - -	13,07	280 (approximately)	15,87

There is no reason to believe that difficulties would have arisen if a stock of rupees, or of rupees and silver bullion combined, calculated in the manner now proposed, had been held at the beginning of the busy season in the years mentioned.

4 If it is provisionally assumed that (in the absence of any material increase in the gross circulation of currency notes) adequate provision will be made for satisfying the demand for rupees in India by preventing the stock of rupees in the Paper Currency Reserve and in the silver branch of the Gold Standard Reserve from falling below 24 crores on the 1st of October of any year, or 17½ crores on the 31st of March, the next point to be considered is the distribution of these totals as between the two reserves. In his Despatch of 2nd July, 1909, No 82 (Financial), the Secretary of State suggested that the holding of rupees in the silver branch of the Gold Standard Reserve should be reduced from six to three crores, but the Government of India, in their Letter of 30th September 1909, No 236, state that they could not view the proposed diminution "without grave concern". It must be admitted that, when once an agreement has been reached as to the total to be held in the two Reserves, the retention of a comparatively large portion in the silver branch of the Gold Standard Reserve will be advantageous for the following reason — Rupees cannot be taken from the Paper Currency Reserve except against the payment of gold to it (in England or India), or against the cancellation of notes, all of which courses may, at

certain times, present great difficulty. On the other hand, rupees can be taken from the silver branch of the Gold Standard Reserve, either by way of temporary loan, or against an addition of cash or securities to the portion of the Gold Standard Reserve held in England. For this reason circumstances may arise in the future, and, indeed, they have not been unknown in the past, in which it is very useful to have the option of drawing on the Gold Standard Reserve rather than on the Paper Currency Reserve for the purpose of meeting a demand for rupees. It therefore appears to be wise to accept the preference of the Government of India for continuing to regard six crores as the normal holding of rupees to be retained in the silver branch of the Gold Standard Reserve.

5 But, if this is to be done, it is most desirable to come to an understanding regarding the methods of repaying any loan that may be taken from the silver branch of the Gold Standard Reserve, and for this purpose it will be well to reconsider a decision that was reached in 1907. In 1906-07 a large loan of the kind in question was taken, it was not convenient to repay it from the Treasury balances of the Government of India or by a transfer of rupees from the Paper Currency Reserve against the "ear-marking" of gold in England, the idea of repaying it (temporarily at least) by means of the addition of securities to the English portion of the Gold Standard Reserve was mentioned in correspondence between the Secretary of State and the Government of India but was not adopted, it was decided instead to purchase and coin silver in order that the repayment might be effected in India, and very large purchases of silver were made early in 1907 for this purpose. One consequence was that the rupees and bullion held in India rose on 31st March 1907 to a level far beyond the requirements of the Government of India. It is easy to see in the light of subsequent events that the better course would have been to allow the rupee portion of the Gold Standard Reserve to remain, for a time at least, below 600 lakhs (so long as it was not practicable to replenish it by transfers of rupees from the Paper Currency Department against the "ear-marking" of gold in England) and to add (temporarily if necessary) to the sterling portion of the Reserve, in the form either of cash or of securities, the money that was actually spent on buying silver for the rupee portion. The purchases of silver in 1907 would thus have been smaller, and the Secretary of State would have been in a stronger position for dealing with the exchange troubles of 1907 and 1908. The Government of India were at one time (*see* their telegram of 20th December 1906) in favour of this course, but in the latter part of paragraph 2 of their Letter of 21st February 1907, No 66, they expressed strong objections to its adoption on any future occasion, and the Secretary of State yielded to their objections, though (as will be seen from paragraph 9 of his Despatch of 26th April 1907, No 62, Financial), he did not regard their arguments as convincing. It may be hoped that they will now agree that on any occasion on which a loan is to be repaid to the silver branch of the Gold Standard Reserve at a time when the combined stock of rupees in that Reserve and the Paper Currency Reserve is as high as is required according to the calculations above (or any other calculations that may be adopted in their stead)

- (1) The repayment ought not to be made by means of the purchase and coinage of additional silver, and
- (2) That, if there are serious difficulties in the way of making the repayment from the Treasury balances of the Government of India or by a transfer of rupees from the Paper Currency Reserve against the "ear-marking" of gold in England, there is no objection to having recourse instead to a temporary addition to the cash or securities of the sterling branch of the Gold Standard Reserve.

6 If the views set forth above are accepted by the Government of India the considerations by which the purchase of silver for coinage will be regulated, subject to such modifications as further experience may suggest or a material change in the volume of the Currency Note circulation may require, may be summarised as follows —

- (1) Not less than 24 crores of rupees will be held in India on the 1st of October in each year in the Paper Currency Reserve and in the silver branch of the Gold Standard Reserve, six being held, if

possible, in the silver branch of the Gold Standard Reserve, and 18 in the Paper Currency Reserve. Silver bullion in the Paper Currency Reserve will be regarded as the equivalent of rupees at the rate of one tola = 1 rupee.

- (2) During the six months from October to March silver will be bought and coined to the extent estimated to be sufficient to prevent the stock of rupees in the two Reserves from falling below  $17\frac{1}{2}$  crores on 31st March.
- (3) During the six months from April to September silver will be bought and coined as far as appears necessary in order that the reserve of 24 crores mentioned in (1) above may be attained by 1st October, but the purchase of silver will proceed gradually so that it may be discontinued if, during the six months, rupees return from circulation to such an extent as to render it probable that the level prescribed for the 1st October will be obtained without further coinage.
- (4) If it appears likely that the stock of rupees in the Paper Currency Reserve will, owing to the return of rupees from circulation, exceed 18 crores on 1st October or  $11\frac{1}{2}$  crores on 31st March, but that the stock in the silver branch of the Gold Standard Reserve will be less than 6 crores, silver will not be purchased beyond what appears necessary in order to provide the combined reserve of 24 crores on the former date or  $17\frac{1}{2}$  on the latter, and any deficiency in the silver branch of the Gold Standard Reserve will be made good in due course either (a) by a transfer of rupees from the Paper Currency Reserve against either the cancellation of notes in the Treasury balances or the "ear-marking" of gold in England, or (b) by an addition to the sterling branch of the Gold Standard Reserve in England.

7 It will be noticed that all the calculations in this Memorandum are based on the figures relating to the silver portion of the Paper Currency and Gold Standard Reserves, the stock of rupees in the Treasuries being left out of account. This procedure is in accordance with the practice of the Government of India, and is probably the most convenient. If the Government of India wish to take account of the Treasury rupees in any calculations made for the purpose of regulating the purchases of silver, the figures above, and perhaps the general scheme of the calculations, must be modified.

---

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE, No. 163, dated 6th July 1911.

MY LORD MARQUIS,

We have the honour to forward for your Lordship's information extracts from an address recently presented to His Excellency the Viceroy by the Karachi Chamber of Commerce and His Excellency's reply to the Chamber.

2 The Chamber made three suggestions: (1) that a substantial portion of the Gold Standard Reserve should be held in liquid gold, (2) that this gold should be kept in India, and (3) that the nature, objects, and management of the Gold Standard Reserve should be defined by statute.

3 His Excellency the Viceroy undertook to convey these suggestions to your Lordship, and we now submit them for your consideration. The question of the constitution of the Gold Standard Reserve was recently the subject of correspondence between the Government of India and the Secretary of State, and the latest orders on the subject are contained in Lord Morley's Despatch No. 82, Financial, dated the 2nd July 1909. We have considered the subject again in connection with this address but, though our

views are substantially in agreement with those of the Chamber, we consider it inexpedient to ask at present for any modification of the latest decision, and we are therefore unable to support the Chamber's proposals

We have, &c.

(Signed) HARDINGE OF PENSURST.

Enclosure No 1

Extract from an ADDRESS presented to HIS EXCELLENCY THE VICEROY by the KARACHI CHAMBER OF COMMERCE

On the subject of India's Gold Standard Reserve, the Chamber are strongly of opinion that the interests of this Dependency would best be served by the retention of a substantial portion of the Reserve, in gold, in India. The Chamber think that this end could best be accomplished by defining the nature, objects, and management of the Gold Standard Reserve by Statute. We respectfully beg, therefore, that Your Excellency's Government will give this most important question their early consideration

---

Enclosure No 2.

Extract from HIS EXCELLENCY THE VICEROY'S reply to the ADDRESS from the KARACHI CHAMBER OF COMMERCE

You have referred to the question of the retention of a substantial portion of the Gold Standard Reserve in gold in India. It is a complicated matter of great importance, and I have to thank you for bringing the subject to my notice. I find that it has been under the most anxious consideration, more than once, between the Government of India and the Secretary of State, without whose concurrence it would be obviously impossible to make any change in the existing arrangements, but I shall be glad to convey the opinion to which you have just given expression to Lord Morley

---

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE, No 48, dated 29th February 1912

MY LORD MARQUIS,

In Lord Morley's despatch No 25, Financial, dated the 18th February 1910, the views of the Secretary of State in Council were communicated upon certain questions connected with—

- (a) the procedure to be followed in building up the sterling reserves of the Indian Government;
- (b) The amount of gold that may appropriately be held in the Paper Currency Reserve, and
- (c) the distribution of this gold between the Currency chest in England and in India.

His Lordship at the same time forwarded to us, and invited an expression of our views upon, a "memorandum on the amount to be held in rupees in the Paper Currency Reserve and the Gold Standard Reserve" These questions were, in the main, incidents of the larger issue of the adequacy of our gold reserves, which had been discussed in an earlier letter\* from the Government of India. As the subject is one on which all fresh experience is of value, and as Lord Morley's despatch did not seem to call for an immediate reply, we deferred a further statement of our views until we had time to study the direction and the effect of certain new developments in our currency system. The situation has become clearer and more instructive since this interchange of views began in 1909.

2 It will make our present position simpler if we arrive at it by a brief review of the discussion that has taken place, avoiding reference to unessential issues as well as to mistakes which have been made and rectified. When we wrote in April 1909, the hard fact which dominated the situation, apart from all theory or speculation, was the grave loss which our gold reserve had suffered in 1908. The economic sequels of a famine in India—a famine by no means so widespread or protracted as many of its predecessors—coupled with a depression in international trade, had resulted in reducing our reserves of gold and gold securities from 24½ millions to 9½ millions in little over a year. Fortunately, the tide then turned, but the lessons which we had learnt were that our reserves were perilously weak, and that the form in which they are held was open to considerable danger. Those views were shared by the mercantile and banking community in India, and the momentous issue involved justified us in pressing them with all earnestness on the Secretary of State.

3 It was thus in no academic or controversial spirit that we urged on Lord Morley the high importance of aiming at a stronger reserve than we had previously possessed, and the desirability of keeping a larger portion of the reserve liquid, uninvested and ready for immediate use in support of a weakening exchange. Our specific proposals were (1) that the Gold Standard Reserve should be built up from accruing interest and the profits on rupee coinage, without any diversion whatsoever to other purposes, until it reached a total of 25,000,000*l.* and (2) that a substantial part of the reserve should be kept in sovereigns, to be held under as nearly as possible the same conditions as the Paper Currency gold which is "earmarked" in the Bank of England. We took the opportunity of inviting attention to the strong feeling that exists in favour of locating the reserve or a part of it in this country. Lord Morley's reply adopted a somewhat different view of the position and of the lessons to be drawn from it. He considered 25,000,000*l.* to be an exaggerated estimate of the "limit of safety" if applied to the Gold Standard Reserve alone, and he alluded to the disadvantages of locking up funds which might be profitably employed for the industrial development of India. He refused to see any danger in the cautious investment of the reserve, and he rejected several of our subsidiary arguments for keeping any large portion of the reserve in specie. His decision was (1) that our accumulation of gold need not exceed 25,000,000*l.* as an aggregate total for the sterling assets of the Gold Standard Reserve combined with the gold in the Paper Currency Reserve, and (2) that only 1,000,000*l.* of the Gold Standard Reserve need be kept uninvested, though even this amount would be available for short loans in the London market.

4 In a subsequent letter† Lord Minto's Government accepted these orders with regret and suggested means for working them in such a manner as to strengthen the supply of gold in our Paper Currency Department in India. The discussion then branched off into the advantages of holding gold in India for internal use, and proposals were made that the sale of Council Bills should be so regulated as to promote a freer flow of sovereigns into this country. In the letter now under reply, Lord Morley rejoined by

\* Despatch from the Government of India, No. 89, dated the 1st April 1909, page 168.

† Despatch from the Government of India, No. 236, dated the 30th September 1909, page 182.

discriminating between the uses of Government holdings of gold in England and in India. His conclusion was that we may with advantage hold a substantial—but apparently a strictly limited—supply against the Paper Currency in this country. He refused, however, to manipulate the sales of Council Bills for this purpose, and laid down certain general principles to be observed in selling and meeting Council Bills in a year of active trade remittances.

5 Before we examine the various points which emerge from this review of the correspondence, and which we have stated with all possible brevity, it will be convenient to touch upon the Memorandum which accompanied your predecessor's despatch of the 18th February 1910. The Memorandum embodies a calculation of the amount of rupees which safety demands that we should hold in the Paper Currency Reserve and in the silver branch of the Gold Standard Reserve combined, at different seasons of the year. We may note at the outset one slight correction which the Memorandum requires. In paragraph 7 it is stated that the calculations throughout ignore the stock of rupees in our treasuries, whereas we find that the table of "net absorption" near the top of the fourth page takes the treasury figures into account. We should also wish to see the Memorandum amended on a point of history. Paragraph 5 suggests that our objections in 1906-07 to the depletion of the silver branch of the Gold Standard Reserve led to unnecessary purchases of silver. We must altogether demur to this statement of the case. The facts are that in the busy season of 1906-07 there was an exceptionally heavy rush for remittances, the Bank of Bengal rate stood for several months at 9 per cent, and we were quite unable to meet the Secretary of State's drawings from our Treasury balances. At the same time we had a sufficiency of rupees and bullion in the Paper Currency Department, and we begged the Secretary of State to help us by "ear-marking" part of the gold that he obtained from the sale of his bills so as to let us release currency silver. In place of receiving such assistance we were compelled, in our opinion inadvisedly, to borrow the whole of the silver in the Gold Standard Reserve in December 1906\*, and what we did was to urge our strong objections to this course, and to press that the loan should be treated as a purely temporary one, we most certainly did not wish the Secretary of State† to send us silver which we could not use. The Secretary of State, however, finally refused to earmark the necessary quantity of gold for the reason, among others, that he was obtaining 4½ per cent interest on his balances‡, and to enable us to repay our forced loan from the Gold Standard Reserve he bought 4,000,000l worth of silver in March 1907. Our silver requirements for the year had been carefully calculated by us before that, and what we had asked§ the Secretary of State to do was to buy 650,000l worth monthly from the 15th of March, so as to let us pull up whenever we saw any danger of our supply becoming exhausted. The reversal of this arrangement and the unwillingness of the Secretary of State to lock up gold which was bringing in high interest,—these are the causes that led to the heavy accumulation of silver in 1907, and we are unable to assent to any other description of the position.

6 Apart from these corrections we are in general accord with the conclusions of the Memorandum. They present convenient formulæ for discussing the theory of the purchase of silver. But, as the writer admits, a practical decision at any given point of time must vary with the circumstances of the moment, and it is our regular procedure to take a practical decision on this important question once a quarter. We review the stocks of silver and gold in our reserves, we examine the absorption of rupees at the corresponding periods of previous years, we estimate, on the basis of prices and outturn, the requirements of the particular crops—jute, rice, cotton or wheat—which are on the eve of coming into the market, and we endeavour, with the advice of local expert knowledge, to forecast in this way the probable demands for

\* Viceroy's telegram, dated the 16th February 1907, page 151

§ Viceroy's telegram, dated the 17th January 1907 (not printed)

currency during the ensuing quarter. It is on these considerations of the actual trade conditions of the moment that we determine whether the purchase of silver will or will not be necessary during the coming three months. The Comptroller General watches and reports on the position to us every week, and we are thus enabled to check and correct if necessary our original estimate. While therefore we are, as we have said, in general agreement with the Memorandum that we ought at present to aim at a stock of 24 crores and  $17\frac{1}{2}$  crores of rupees at the beginning and end respectively of each busy season, we should prefer not to bind ourselves by a rigid arithmetical formula. The position is changing rapidly. Since the Memorandum was written, our gross circulation of notes has risen to 60 crores, which would alone suggest higher minimum stocks than those quoted above. There is also a growing demand for sovereigns as a currency medium, and there is some evidence that gold is taking the place of rupees in hoards. On the other hand, a heavy excess of exports is apt to develop at short notice and to continue for protracted periods. All these factors teach the need for elasticity, and we propose to continue our practice of quarterly forecasts and to regulate indents for silver accordingly.

7 We welcome the acceptance in the Memorandum of our view that our stock of rupees should ordinarily include 6 crores in the silver branch of the Gold Standard Reserve. We also agree that if the Gold Standard Reserve silver falls below 6 crores, it should not be made the occasion for fresh coinage, provided our aggregate stock of rupees does not seem likely to be less than  $17\frac{1}{2}$  crores on the next 31st of March or 24 crores on the next 1st of October. We would point out however that, if your Lordship accepts 6 crores as the normal strength of this portion of our reserve, there can be no reason in ordinary circumstances for any lengthy delay in recouping a temporary withdrawal. At the present moment the stock of rupees in the Gold Standard Reserve is only 2 90 crores, and it has been well below 6 crores since the end of March 1910. The Paper Currency Reserve in the interval has been unquestionably strong enough to allow of the requisite transfer, provided the Secretary of State made an equivalent transfer of gold from the Gold Standard Reserve to his Paper Currency chest in London. We have not hitherto raised the question, for the reason that we saw no early prospect of a shortage of rupees, but we cannot readily reconcile the views accepted in the Memorandum with the prolonged abstention from restoring our Gold Standard Reserve silver to the figure which has been determined to be appropriate.

8. In order to put this important question upon a satisfactory footing, we suggest that the following procedure should be observed in future. We conceive that there is no doubt as to the true and primary function of the silver branch of the Gold Standard Reserve. You have employed it at times in a manner to which we were compelled to take exception, but we understand that you overruled us on considerations of temporary expediency, and that you are at one with us in principle. As we regard it, our Gold Standard Reserve silver is a bulwark against hasty coming. It supplements our general stock of rupees when the latter is running low, it gives us time to buy silver at discretion or, if the stringency is temporary, it enables us to carry through without fresh coming until the return of rupees from circulation recommences. This being the part which the Gold Standard Reserve rupees play in our currency arrangements, we should like to see their employment regulated on a definite plan. We think that at the beginning of the busy season we ought to have 6 crores of rupees in the Gold Standard Reserve and at least 18 crores in the Paper Currency Department. We should then make the best possible forecast for the season as a whole, reviewing the position thereafter from month to month, and arranging our coinage programme accordingly if any coinage seems necessary. Our employment of the Gold Standard Reserve silver, however, would be regulated differently according to the progress of the season. In the October to December quarter, when there is always a large absorption of rupees, we should aim at keeping the Currency Reserve of silver up to 18 crores, and the Gold Standard Reserve silver would be treated strictly as a reserve, to be drawn upon only in the event of some abnormal demand falsifying our estimate.

From January, however, as our revenue begins to come in and the position grows clearer, our caution could be relaxed. We should be justified in drawing freely on the Gold Standard Reserve silver, so far as it might be necessary and effective to keep the Currency Reserve of silver up to 15 crores as a minimum, and provided always that our total stock of rupees in the two reserves did not fall below 17½ crores on the 31st of March. All the rupees thus drawn from the Gold Standard Reserve would be transferred to the Currency Reserve in exchange for gold which we should remove from the Currency Reserve in India and deposit in the Gold Standard Reserve in India. When the busy season closed, we should reverse the process, transfer gold from the Gold Standard Reserve in India to the Paper Currency Department, take rupees from the latter in exchange, and with them build up the Silver branch of the Gold Standard Reserve to its accepted figure of 6 crores. In this way we should ensure the correct use of the silver branch and its restoration each year to its proper strength. There would be the minimum of interference with the gold market in London. We should avoid, on the one hand, the artifice of borrowing from the Gold Standard Reserve for Treasury purposes in India and paying interest on the loan, and on the other hand, the anomalous position in which the silver branch has been placed during the last two years. We trust that your Lordship will allow this procedure to be recognised as our regular line of action in the future.

9 We return from this digression to the question of the strength of our gold reserves,—a question of paramount importance to the success of our currency policy, to the stability of our sterling exchange, and thus to the steady progress of the trade and industries of this country. In all these interests we are most anxious to eliminate differences of opinion between Your Lordship and ourselves on minor or unessential issues, and to find ourselves in a position to defend with conviction the whole range of our currency policy against the attacks and criticisms which we frequently have to answer in our Legislative Council and elsewhere. To this end we accept Lord Morley's estimate of the comparative utility of our holdings of gold in England and in India respectively. We should have been glad to meet the widely expressed sentiment in favour of having at least a part of our Gold Standard Reserve in India, but we recognise that, for the purpose of supporting exchange, the issue of our gold is equally, and certainly more quickly, effective in London than it would be in this country. We should also be glad to keep an ample supply of gold in our Indian Currency chests, in the hope of stimulating the genuine circulation of sovereigns. With this desire we understand that Your Lordship is in sympathy, and we gather that you will not interfere with the import of sovereigns into India on private account, so long as the interests of India in the London market are not thereby prejudiced, and so long as funds are assured for your Home payments. Further, we entirely accept the principles enunciated in paragraph 5 of the despatch of the 18th February 1910 for the regulation of the sale and payment of your drafts upon us. There thus remain only the two main issues with which this discussion began, namely, the standard figure for the sterling assets of the Gold Standard Reserve and the form in which those assets are held. On the latter point we adhere to the view that a large holding of liquid gold, strictly reserved for use in emergencies, would do more to strengthen exchange than an equivalent holding of securities which it will not be easy to realise in a crisis. We pressed this view on Lord Morley in April 1909, and failed to convince him. But His Lordship undertook, on behalf of the Secretary of State and his advisers, the full responsibility for realising the Gold Standard Reserve securities to whatever extent may be necessary to support exchange, even in times of prolonged depression in Indian trade and of adverse conditions elsewhere. We feel that we cannot ask for more than this. We should have preferred to see the reserve more independent of the money market, and consequently a more prompt and powerful agency in international trade, but Lord Morley has guaranteed that it will be available whenever required, and with this practical assurance we must be content.

10 On the other main issue we earnestly ask you to reconsider the existing orders. When we advised that the strength of the Gold Standard

Reserve in sterling should be gradually raised to 25,000,000*l*, we had in view a figure which would be generally accepted as conclusive proof of the determination and ability of the Government of India to maintain a stable exchange. Lord Morley's decision that 25,000,000*l* should be our standard for the gold in the Gold Standard Reserve and the Paper Currency Department combined, falls far short of what we believe to be desirable, and it has been regarded by the public with suspicion and dissatisfaction. We do not contest the view, elaborated in your predecessor's despatch of the 2nd July 1909, that the gold in the Paper Currency Department forms a part of our sterling resources, and is equally effective with any other gold, so long as it lasts, in support of exchange. But this particular holding of gold fluctuates for reasons over which we have little control. It is liable to flow out for the demands of ordinary circulation, it is liable to disappear into hoards, and it is liable to be rapidly spent in the purchase of silver. There is no calculation or stability about it, and it fails to impart the confidence in our position which is secured by adequate strength in the separate reserve that has been established solely for maintaining our Gold Standard and is incapable of being used for any other purpose. Our currency gold has been most useful in the past, and will always be available as a subsidiary line of defence against a falling exchange, but our ultimate reserve should be independent of it and its fluctuations. What the public want, and what in our opinion they have every reason to ask for, is a figure up to which the Gold Standard Reserve will be raised before the profits on coinage are diverted elsewhere. We believe that it is a mistake to complicate the issue by any appeal to our other resources. To declare a definite figure for the Gold Standard Reserve alone will clear the air and inspire confidence. What that figure ought to be, is a matter of opinion, but after the experiences of 1907-08 we believe that 25,000,000*l* is advisable, as well as moderate and practicable. The reserve now holds over 17,500,000*l*, and it fructifies at the rate of 500,000*l* a year even if it gains only the slow accretion of its own interest. Should fresh coinage become necessary, the profits thereon would probably bring the reserve easily and rapidly to the figure which we advise. Nor can we share Lord Morley's apprehension that the building up of the reserve to 25,000,000*l* will either divert funds from the industrial development of India or have an unfavourable effect on the Indian trade balance. The profits on coinage and the interest accruing on sums already invested will be used in your hands either in loans to the London market or in the purchase of securities from that market. In either case the total amount of gold on the market is in no way diminished, our particular gold cannot be described as locked up, and we do not understand how either the capital requirements of our industries or the current requirements of our trade can be prejudiced. Even, however, if this argument contains more truth than we conceive, we would urge that the accumulation of an effective balance in support of our gold standard is worthy of some temporary sacrifices. We believe, as we have said, that our proposal is moderate. We cannot see that it would cause any inconvenience to India, and we are convinced that its acceptance would meet with universal approval. The existing orders in our opinion do not provide for reasonable safety, and it is our clear duty to urge on Your Lordship the high importance of revising them, and allowing us to declare that the Gold Standard Reserve will be raised to 25,000,000*l* before the income which now accrues to it is diverted to other purposes.

We have, &c

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 76, dated 28th June 1912

MY LORD,

I have considered in Council your Letter No 48, dated 29th February 1912, discussing various questions relating to currency. I recognise with pleasure that, as you state, you have shown a strong desire to eliminate differences of opinion between the Government of India and the Secretary of State in Council on minor and unessential issues, so that the Government of India may be in a position to defend with conviction the whole range of currency policy against attack in the Legislative Council and elsewhere. It is in a similar spirit that I have considered the questions raised by you.

2. I am in general agreement with what is said in paragraph 6 of your Letter regarding the manner in which the purchase of silver for coinage should be regulated.

3. I recognise the advantage of the working rule, proposed in paragraph 8, regarding the silver branch of the Gold Standard Reserve. In this connection, however, there are two points to be noted —

- (a) The proposal in your telegram of 3rd May 1912 to add to the silver branch of the Gold Standard Reserve only the profit on any silver coinage that may be undertaken this year will in all probability prevent the standard figure of six crores from being attained before October next. If you desire to reconsider that proposal you will doubtless communicate with me.
- (b) The proposed procedure of transferring rupees from the Gold Standard Reserve to the Paper Currency Reserve against a transfer of gold in the other direction is, in my opinion, one from which occasional departures may be necessary, since if rigidly applied it would deprive you of the means of utilising the former reserve for another purpose for which it may sometimes in exceptional circumstances be convenient to use it, viz, that of reinforcing your Treasury balances. Occasions may arise when those balances are insufficient to enable you to meet the Secretary of State's drawings and when they cannot be immediately supplemented by the ear-marking of gold in London without injury to Indian interests in other directions. In such circumstances it may be necessary to withdraw rupees direct from the silver branch of the Gold Standard Reserve, either against a temporary increase of the sterling branch or by way of loan. I fully recognise the objections to the latter alternative. The Government of India stated objections to the former in paragraph 2 of their Letter No 66, dated 21st February 1907, and Lord Morley acquiesced (See paragraph 9 of his Despatch No 62, Financial, of 26th April 1907). As the matter is one of importance, and as I am doubtful whether the decision reached in the correspondence just quoted should be regarded as final,\* I shall be glad to learn your present views on the subject.

4. In paragraph 9 of your letter you mention arguments in favour of holding in gold a portion of the sterling branch of the Gold Standard Reserve. Having regard to the limited supply of suitable securities with a fixed and near date of repayment and to the undesirability of adding to the amount invested on account of the Reserve in Consols and other permanent securities, I have arrived at the conclusion that a portion of the Reserve may now be held in gold. I have therefore decided to set aside, from time to time, but at least once every six months, and to hold at the Bank of England, an amount equivalent to the interest on investments and profits on coinage hereafter received, except profits retained in India for building up the silver branch of the Reserve, until the amount so held reaches 5,000,000*l*.

\* See paragraph 5 of Memorandum forwarded with Lord Morley's Despatch No 25 (Financial), dated 18th February 1910, page 193.

5 In paragraph 10 of your Letter you earnestly ask that a figure be fixed up to which the sterling branch of the Gold Standard Reserve shall be raised before any part of the profits of coinage is used for capital expenditure on railways, and you suggest that 25,000,000*l* is a suitable figure. The adoption of such a limit, to be applied irrespectively of the amount of the gold in the Paper Currency Reserve, involves the possibility that the total resources held available for the support of exchange may be considerably in excess of any requirements that will ever arise, and any such excess is wasteful, as representing money needlessly withdrawn from employment on the avoidance of debt or expenditure on productive purposes. It is clear that this consideration influenced my predecessor in giving the decision conveyed in his Despatch No 82, dated 2nd July 1909, and it is one of great weight. On the other hand, I recognise the importance of a policy of caution in currency matters, and I desire to pursue a course which may be expected not only to strengthen general confidence but also to secure unanimity among the authorities responsible for the currency system as a whole. I have therefore decided that future profits on coinage shall be added to the Gold Standard Reserve until the sterling branch reaches 25,000,000*l*.

6 The fixing of the limit just mentioned adds to the importance of calculating the amount of the sterling branch of the Reserve in a manner to which no reasonable objection can be taken. At present securities are valued at cost price in the monthly and other returns, and it will be seen from the enclosed statement that this had the result of showing on 13th April 1912 a total exceeding by 717,802*l* the selling value of the securities according to market quotations. I propose, therefore, subject to any observations that you may have to offer, to insert market value as ascertained half-yearly, viz, on 1st April and 1st October, instead of cost price, in the monthly published statements of the Reserve. I shall be glad to learn whether you have any objection to this change and from what date you think that it can be most conveniently introduced. You should also state what information, if any, you will require from this country in order to enable you to introduce the change in the various statements regarding the Gold Standard Reserve which you publish in India.

I have, &c  
(Signed) CREWE.

Accountant-General.

APPENDIX V

203

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE,  
No 338, dated 29th November 1912

MY LORD MARQUIS,

WE have the honour to refer to your Lordship's despatch No 76 (Financial), dated the 28th June 1912, communicating the decision of your Lordship in Council on certain questions connected with our Currency policy and the Gold Standard Reserve

2 We welcome the decisions to allow the sterling assets of the Gold Standard Reserve to accumulate to a figure of 25,000,000*l* before the profits from coinage are diverted to outlay on railway construction and to hold a portion of the assets, fixed by your Lordship at a maximum of 5,000,000*l*, as an "earmarked" deposit in the Bank of England

3. In paragraph 3 of the despatch your Lordship has brought to our notice two points in connection with the silver branch of the Reserve. The first of these refers to the proposal made in our telegram of the 13th May last in connection with silver purchases in the current year, that the silver branch should be built up from profits on coinage. The profits now accruing are being paid in rupees into the silver portion of the Reserve, and it is probable that it will be restored to the standard figure of six crores before the close of the current financial year. We should have been glad to see the silver holding in the Gold Standard Reserve restored to the standard figure some time earlier, but this has not been possible since the commencement of the last busy season, as the stock of rupees in the Currency Reserve did not permit of the transfer, and it was obviously undesirable to purchase silver for this purpose only. We have considered in this connection whether any portion of the profits now accruing should be remitted to England for deposit in liquid gold with the Bank of England before the silver branch is brought up to six crores of rupees. In view of the comparatively strong position of our Gold reserves at the present time, and the importance we attach to restoring the silver branch to its normal strength, we are of opinion that this course is not necessary and that the profits should be applied first to the building up of the silver branch

4. The other point has reference to the proposals made in paragraph 8 of our despatch of 29th February 1912 in regard to the normal procedure for utilising the silver branch of the Reserve. You point out that in exceptional circumstances, that is, when a reinforcement of treasury balances in India is necessary and cannot be effected against the earmarking of gold in London, it may be convenient to withdraw rupees from the silver branch of the Gold Standard Reserve, not, as we proposed, against a transfer to the Reserve of gold in India, but either against a temporary increase of the sterling branch or by way of loan, and as the matter is important you desire with reference to previous correspondence to be informed of our present views on the subject

5. To enable us to answer your Lordship's inquiry on this point it is desirable to consider the use of the rupees in the Gold Standard Reserve from two standpoints, though these are closely inter-connected, as a question, that is to say, in the first place of currency, and secondly as a question of funds. In paragraph 8 of our despatch of the 29th February last we were considering the first aspect of the case, and we stated accordingly, having regard to the circumstances which led to the constitution of the silver branch of the Reserve, that in our view the proper function of the Reserve is to act as a reservoir for *currency* purposes, and that it should be used to support the Currency, which is the main Reserve by exchanges between the two reserves of rupees and sovereigns according to the seasonal variations of demand for currency in different forms

6 For the purpose of the discussion just mentioned we assumed in fact a state of equilibrium, with regard both to the aggregate of each kind of balance, whether treasury, Currency, or Gold Standard Reserve, and to the

distribution of these balances between England and India. We have now to consider a disturbance of this equilibrium, and this amounts to a movement of funds. The first case of this kind mentioned by your Lordship is that in which an actual loan is taken from the Gold Standard Reserve in aid of treasury balances, this, we agree, must be a very exceptional case, and could be justified only when there is an insufficiency in the aggregate treasury balances held in India and in England. The ordinary case is that of transfer of Government funds from India to London, and generally of course this is effected through treasury. The question is what course should be adopted if the treasury balance in India is exhausted and the drawing of further Council bills is necessary. This question, we may observe, though we have described it as one of funds, is connected also with currency, for the bulk of our payments in India has to be made in rupees. For this reason we hold that to have immediate recourse to the Gold Standard Reserve would be inconsistent with the policy of treating the stock of rupees it contains as a real reserve, and in the case stated we think that the requisite drawings should be made through currency. It is only in the last resort that the Gold Standard Reserve should be utilised for this purpose, but we recognise that in certain conditions, of the home market the earmarking of gold involved in drawing through currency might be undesirable and prejudicial to Indian interests, and if such an exceptional emergency were to arise we do not, so far as we can judge at present, see much objection to a temporary investment in England on behalf of the Gold Standard Reserve in easily realisable securities against a withdrawal of rupees in India in aid of treasury balances.

7 It will be observed that in the course of the present correspondence the conception of what is now known as the silver branch of the Gold Standard Reserve has been considerably modified. In the first place, under the proposals made in our despatch of the 29th February, it may now, according to the season of the year, consist indifferently of gold or silver, and in view of this development it might now more appropriately be designated the Indian branch of the Gold Standard Reserve. Secondly, its relation to the Currency Reserve has been clearly set out, and as the manner in which it will be used to supplement and support the Currency Reserve will in future make it more of a real reserve, we think it very important that it should be maintained at what has been accepted as the normal amount of six crores. This point has already been mentioned in our earlier despatch, but its importance is enhanced by our present recommendations regarding the possible use of the Gold Standard Reserve in reinforcing our treasury balances. Should the Indian branch at any time be depleted when the treasury balance in this country was low, then, whatever might be the state of the market at home, there would be no option if further Council Bills were required, but to draw through Currency. The argument based on considerations of currency therefore in favour of maintaining the Indian branch of the Gold Standard Reserve at full strength is reinforced by the desirability of keeping in reserve an alternative method of effecting a transfer of funds.

8 We cordially agree with the suggestion in the concluding paragraph of your despatch that the periodical publications of the balance of the Gold Standard Reserve should show the current market price of investments in securities instead of the original purchase price. This procedure will be followed in the monthly publications in India, commencing with that for the 31st December next, and in the quarterly publications commencing with that for the quarter ending on the same date. The only statements regarding the position of the Gold Standard Reserve which we publish annually are those contained in the Finance and Revenue Accounts—*vide* Accounts No 88 and 88A for 1910-11 and in the Comptroller-General's annual report on the operations of the Currency Department. The latter will show market price in future. As regards the former, the substitution of market price for purchase price would result in showing as an actual debit what is only a difference in valuation and we do not think such a procedure is either contemplated or necessary. We will accordingly make

no change in the method of preparing these statements, but the market price will be stated in a footnote to Account No 88A

9 We agree also that the publications referred to in the preceding paragraph should show the market value as ascertained half-yearly on 1st April and 1st October. The result of this procedure will be that purchase price instead of market value will be shown in the case of investments made since the last half-yearly valuation, and if your Lordship sees no objection, it will be convenient to split up item 3 in the monthly publication as follows —

- “ 3 British and Colonial Securities, &c,  
held on  
(market price on . . . )  
4 British and Colonial Securities since purchased  
(cost price) ”

10 In order to give effect to these proposals, it will be sufficient if the figure for “market price” is substituted for “cost price” in your monthly telegram to the Comptroller-General which will be sent in the beginning of January next, the increase or decrease as compared with the preceding report being also given as a check figure. The result of the half-yearly valuations may also be reported either separately or through the monthly returns regarding the transactions of the Gold Standard Reserve furnished to the Comptroller-General.

We have, &c

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 13 F, dated 24th January 1913

MY LORD,

I HAVE considered in Council your letter in the Finance Department, No 338, dated the 29th November 1912, regarding certain subsidiary questions connected with the Currency and Gold Standard Reserve

2 We are in agreement in holding that when, in order to meet the pressing requirements of trade, I am compelled to sell Bills and Telegraphic Transfers beyond the extent to which you are able to meet them from your Treasury balances, the ordinary and most desirable course to be followed is that you should withdraw funds from your Currency Reserve to meet my drawings, an equivalent sum being transferred by me in gold to the Paper Currency Reserve held at the Bank of England. But we are also agreed that circumstances may arise in which this cannot be done, at any rate on a large scale, without injury to Indian interests, and that in such cases it may be necessary for you to supplement your resources for meeting my Bills by drawing upon the portion of the Gold Standard Reserve held in India, and I note with gratification that you now accept the view expressed in paragraph 2 of Lord Morley's Despatch of 16th November 1906, No 135, in paragraph 9 of his Despatch of 26th April 1907, No 62, and in paragraph 5 of the memorandum forwarded with his Despatch of 18th February 1910, No 25, that in such an event the preferable course, wherever practicable, is that the sum remitted to England from the Gold Standard Reserve should be temporarily added to the portion of the Reserve held in England rather than treated as a loan from the Reserve to the Treasury balances

3 In paragraph 7 of your letter you observe that under the arrangements proposed in your previous letter of 29th February 1912, and approved in my Despatch of 28th June, the silver held in the Gold Standard Reserve

in India may be partly replaced by gold during a portion of the year, and that thus the designation "Silver Branch of the Gold Standard Reserve" will become inappropriate, and you propose to re-name the portion of the Reserve held in India the "Indian Branch of the Gold Standard Reserve" I approve this recommendation

4 I also accept the suggestions made in paragraphs 8-10 of your letter in regard to the future publication of statements showing the composition of the Gold Standard Reserve. Valuations of the Reserve will henceforth be made on the 31st March and 30th September, and their results will be communicated to your Comptroller-General with the detailed accounts sent to him early in April and October

5 As the Indian branch of the Reserve may in the future sometimes contain a considerable amount of gold, it may be well to place on record that the intention of paragraph 5 of my Despatch of 28th June 1912, No 76, was that the minimum of 25,000,000<sup>l</sup> there mentioned was to be exclusive of any gold held in the Reserve in India. To avoid misunderstanding on this point it will be convenient to designate the portion of the Reserve held in this country as the "London branch" of the Reserve

I have, &c  
(Signed) CREWE.

Despatch from the SECRETARY OF STATE to the GOVERNMENT OF INDIA,  
No 76, dated 23rd May 1913

MY LORD,

I FORWARD herewith a Memorandum and Statement giving fuller information regarding the matter discussed in the latter part of paragraph 5 of your Letter No 48, dated 29th February 1912

I have, &c,  
(Signed) CREWE

#### Enclosure No 1

#### Purchases of Silver in 1907

In the series of Despatches noted in the margin\* many important questions relating to the Gold Standard Reserve were, for the time being, settled between the Secretary of State and the Government of India. There is one question on which the discussion was left incomplete, viz, the causes of the large accumulations of silver in the Reserves of the Government of India in 1907

The course of events is discussed, but not quite fully stated, in the passages mentioned in the margin †. It may be briefly summarised as follows. In the winter of 1906-07 sales of Council Bills and Telegraphic Transfers were made in excess of the amount that the Government of India could meet from Treasury balances. The Government of India desired that the excess should be provided for by "earmarking" gold in London, i.e., by the addition of gold to the portion of the Paper Currency Reserve held in London so as to enable a corresponding amount to be taken in rupees from the Paper Currency Reserve in India. The Secretary of State (mainly for

\* Secretary of State to Government of India, dated 18th February 1910, page 185  
Government of India to Secretary of State, dated 29th February 1912, page 195  
Secretary of State to Government of India, dated 23th June 1912, page 201  
Government of India to Secretary of State, dated 29th November 1912, page 204  
Secretary of State to Government of India, dated 24th January 1913, page 206  
† Paragraph 5 of Memorandum forwarded with Secretary of State's Despatch of 18th February 1910, page 193  
Paragraph 5 of Despatch from Government of India, dated 29th February 1912, page 197

the reasons given in paragraph 3 of his Despatch of 26th April 1907, No 62, Financial) did not fully meet the wishes of the Government of India in this matter, though he increased the "earmarked" gold in England from 4,250,000*l* to 8,100,000*l* between November 1906 and April 1907. The excess Council Bills and Telegraphic Transfers, so far as not met in this way, were met by taking loans from the Indian branch of the Gold Standard Reserve, and it was decided to buy silver in order to provide for the repayment of the loans and the restoration of the Indian branch to its normal amount of six crores (4,000,000*l*) by 31st March 1907. This was duly done, and on the date mentioned the Paper Currency Reserve and the Indian Branch of the Gold Standard Reserve included silver as follows (*see* Statement attached) —

		Lakhs
Paper Currency Reserve	Rupees - -	13,70
Paper Currency Reserve	Bullion (in tolas)	
approximately	- - -	6,81
Indian Branch of Gold Standard Reserve		
Rupees - - -	- - -	6,00
		<hr/> 26,51

This was considerably in excess of the amount (17,50 lakhs) required on 31st March according to the standard suggested in the Memorandum forwarded to the Government of India with the Secretary of State's Despatch of 18th February 1910, No 25 (Financial), and accepted, with certain reservations, in paragraph 6 of the Despatch from the Government of India dated 29th February 1912. But, as the absorption of rupees by the public from April to September 1907 from the two Reserves was 2,12 lakhs, the amount held on 1st October 1907, if no purchases had been made after 31st March 1907, would have been 26,51 - 2,12 = 24,39 lakhs, or a little more than the 24 crores suggested and accepted in the correspondence just mentioned.

The amount actually held in rupees and silver on 30th September was (*see* Statement attached) as follows —

		Lakhs
Paper Currency Reserve	Rupees - -	22,79
Paper Currency Reserve	Bullion (in tolas)	
approximately	- - -	3,52
Indian Branch of Gold Standard Reserve		
Rupees - - -	- - -	6,00
		<hr/> 32,31

An insignificant part of the excess of this total over the 24,39 lakhs quoted above was due to the addition to the Reserves after 31st March 1907, of 100,000*l* worth of silver in completion of orders given before that date. The greater part was due to the following purchases of silver made (*see* Statement attached) between 31st March and 30th September 1907 —

By the Secretary of State, in accordance with requests made by the Government of India in telegrams of 16th May, 10th June, 1st July, and 20th August 1907	£	
		2,529,000
By the Secretary of State in addition to the above		9,800
By the Government of India in India		1,528,000
		<hr/> 4,066,800
Total		<hr/> 4,066,800

The out-turn in rupees from this silver was approximately 7,97 lakhs

It may be assumed that the purchases would not have been made if the understanding embodied in the Memorandum forwarded with Lord Morley's Despatch of 18th February 1910, and in paragraph 6 of the Letter from the Government of India, dated 29th February 1912, No 48, had been in force in 1907

## APPENDIX VI

NOTE ON PROPOSALS FOR THE COINAGE OF GOLD IN INDIA, SUBMITTED BY  
MR L ABRAHAMS, C.B., ASSISTANT UNDER SECRETARY OF STATE FOR  
INDIA

1 The Indian Currency Committee of 1898-99 said in paragraph 54 of their Report — "We are in favour of making the British sovereign a legal tender and a current coin in India. We also consider that at the same time the Indian Mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the three Australian branches of the Royal Mint. The result would be that, under identical conditions, the sovereign would be coined and would circulate both at home and in India. Looking forward as we do to the effective establishment in India of a gold standard and currency based on the principles of the free inflow and outflow of gold, we recommend these measures for adoption."

2 The recommendation that gold coin should be a legal tender was carried out by the passing of Act XXII of 1899, which provided that "gold coins, whether coined at Her Majesty's Royal Mint in England, or at any Mint established in pursuance of a Proclamation of Her Majesty as a branch of Her Majesty's Royal Mint, shall be a legal tender in payment or on account at the rate of fifteen rupees for one sovereign."

3 The proposal for the coinage of gold in India was discussed by the Secretary of State with other authorities in this country and with the Government of India between 1899 and 1903, and again in 1912. The correspondence on the subject has been published in Parliamentary Paper 495 of 1913. The chief points in the discussion may be summarised from the Parliamentary Paper as follows —

- i From 1899 to 1902 the correspondence between the Secretary of State and the Government of India proceeded on the assumption that the early establishment at Bombay of a branch of the Royal Mint for the coinage of sovereigns was desirable.
- ii A legal difficulty arose (page 14) as to the possibility of dispensing with a charge for coinage. This was in due course disposed of (page 27).
- iii Similarly, questions regarding the suitability of the buildings, appliances, and staff at Bombay were raised, but these were practically disposed of by May 1901, when a plan agreed to by the Deputy Master of the Royal Mint and an officer of the Government of India was approved by the Treasury (page 55).
- iv The question whether the coinage of gold in India was really necessary and desirable was raised by the Treasury during the discussion of the legal and technical difficulties. As against the Secretary of State's view that it would maintain confidence in the Gold Standard as being "the clearest outward sign that can be given of the consummation of the new currency system" (page 54), the Treasury said "Indian currency needs are, in fact, provided for from other sources [*i.e.*, the importation of sovereigns], and there is no real demand for the local coinage of sovereigns. My Lords cannot believe that the position of the gold standard in India will be strengthened, or public confidence in the intentions of the Government confirmed, by providing machinery for obtaining gold coins which is neither demanded nor required by the mercantile community, while on the other hand, the failure or only partial success of a gold mint would undoubtedly be pointed to by the opponents of the gold standard policy, although without justification, as evidence of the breakdown

“ of that policy The large measure of confidence already established is sufficiently indicated by the course of exchange since the Committee’s Report, and still more by the readiness with which gold has been shipped to India This confidence is, in the opinion of this Board, much more likely to be put in jeopardy by such a result, of which the danger is by no means remote, than by the frank abandonment of one of the details of the policy recommended by the Indian Currency Committee, which experience has shown to be unnecessary ” (Page 55)

- v. Discussion on the points raised by the Treasury came to a natural end when in December 1902 the Government of India wrote to the Secretary of State as follows “ We have now ascertained that the chief mining companies have made arrangements, with which they are at present satisfied, for the regular sale of their gold in London, and we are doubtful whether any terms that we could offer with a due regard to our own interests would induce them at an early date to alter those arrangements and to bring their gold to the mint in Bombay In the absence, therefore, of an assurance that a steady and permanent supply of gold of local production would be available for coinage in this country, we prefer to drop the scheme for the present, leaving its revival to the existence or revival of conditions which cannot at present be foreseen ” (Page 56) The Secretary of State agreed with the Government of India that the proposal for a Bombay branch of the Royal Mint should not be proceeded with for the present (Despatch of 6th February 1903)

4 The discussion which ceased in 1903 was revived in 1911 when Sir V. D. Thackersey spoke in the Viceroy’s Legislative Council in support of the issue of an Indian gold coin from one of the Indian mints In 1912 he moved a Resolution “ that this Council recommends to the Governor-General in Council that the Indian mints be now thrown open to the free coinage of gold “ in coins of suitable denominations ” He expressed a preference for a ten rupee gold piece The Resolution was withdrawn on the receipt of an assurance by the Financial Member of Council that the matter would be laid before the Secretary of State The communication to the Secretary of State took the form of the Despatch dated 16th May 1912 (pages 57 to 63 of Parliamentary Paper) recommending that arrangements should be made, on a small scale at first, for the coinage of sovereigns at the Bombay Mint The proposal rested to a considerable extent on the belief that holders of gold bullion and ornaments would be induced to convert part of them into coin if a mint were established. The Secretary of State found on consulting the Treasury that any mint in India for coining sovereigns would have to be under the control of the Imperial authorities, and that, therefore, the only alternatives were to set up a separate gold mint under such control, or to transfer to the Imperial authorities the whole of the operations of the Bombay Mint including the coinage of rupees as well as sovereigns. To avoid both of these alternatives, he suggested the coinage at Bombay of a ten rupee gold piece, as advocated by Sir V. D. Thackersey (pages 65 and 66) The Government of India have indicated a preference for this over both the alternatives proposed by the Treasury, but the whole matter is left open, pending the recommendations of the present Royal Commission

5 The following information may perhaps be of use to the Commission in considering the question —

\* Down to 1905-06 the Government exports represented (1) gold sent by the Government of India to the Secretary of State to pay for silver, for securities bought for the Gold Standard Reserve, and to meet other disbursements, (2) 5,000,000<sup>l</sup> sent in 1905-06 to establish the English branch of the Paper Currency Reserve The Government exports since 1905-06 have consisted of light coin sent to England because it would have been inconvenient to retain it in India.

6. The attached Statement shows that from 1901-02 to 1912-13 the gross imports of British gold coin into India amounted to 97,473,000<sup>l</sup>, the exports (mainly on Government

account<sup>\*)</sup> to 23,665,000<sup>l</sup>, and the net imports to 73,808,000<sup>l</sup>.

7 When sovereigns are imported into India they are, as a rule, tendered to the Government in order that rupees or notes may be issued in exchange for them at the rate of Rs 15 = 1<sup>l</sup> The proportion of the total imports

tendered by the importers to the Government from 1905-06 to 1912-13 is shown in Statement H accompanying my Memorandum on the "Location and Management of General Balances of the Government of India and Sale of Council Bills and Transfers"

8 Sovereigns received by the Government are made freely available to the public against the tender of rupees, or in encashment of notes, at the rate mentioned above. The Receipts and Issues of British gold coin into and from Government Treasuries and Reserves under this system were approximately as follows in 1909-10, 1910-11, 1911-12, and 1912-13 —

	1909-10	1910-11	1911-12	1912-13
	£	£	£	£
Receipts by Government from Importers	7,139,000	7,626,000	17,053,000	16,939,000
Other Receipts (i.e., Receipts from general public)	894,000	3,727,000	6,869,000	11,393,000
Total Receipts	8,033,000	11,353,000	23,922,000	28,332,000
Issued to public	1,689,000	11,073,000	14,617,000	21,815,000
Light coins exported	—	—	—	2,383,000
Total Issues	1,689,000	11,073,000	14,617,000	24,198,000
Net Receipts*	6,344,000	280,000	9,305,000	4,134,000

9 The absorption of sovereigns in India by the public from 1899-1900 to 1912-13, (i.e., the amount that has passed into the possession of the public either direct from importers or from Government Reserves and Treasuries), is shown in the Statement appended to this Note. The total is 64,815,000.

10 The latest investigations into the extent to which the sovereigns absorbed by the public are used as currency will be found in Mr Gillan's Report on the Paper Currency Department for 1910-11 and Mr Gauntlett's Report for 1911-12. Both writers seem to be of opinion that the use of the sovereign as currency is on the increase in Bombay, Northern India, and Madras, but that elsewhere it is largely used for melting or hoarding or both, which would appear to militate to some extent against the probability of the establishment of a gold mint in India leading to any great extent to the conversion into coin of gold now held in the form of bullion and ornaments.

11 The gold extracted from Indian mines amounts to a little more than 2,000,000 a year. The amount has shown very little variation during the last ten years.

12 No estimate has been framed of the cost of establishing an Indian mint for the coinage of sovereigns. An approximate statement of the staff

\* The net receipts and issues in this Table differ somewhat from those shown in Statement H (2) accompanying my Memorandum on the "Location and Management of General Balances of the Government of India and Sale of Council Bills," (page 85) and from the corresponding ones that could be deduced from the figures in the Statement appended to this note. The comparison is as follows —

	1909-10	1910-11	1911-12	1912-13
	£	£	£	£
Shown in Statement H	6,339,000	59,000	9,344,000	4,135,000
Shown in Table above	6,344,000	280,000	9,305,000	4,134,000

The differences are due to the fact that the figures in Statement H are based, as to the first three years, on the information given in the Reports of the Paper Currency Department, and, as to 1912-13, on information specially furnished by the Comptroller-General and Head Commissioner of Paper Currency, whereas those in the Table above are compiled from the telegrams (four in each month) sent by the Comptroller-General to the Secretary of State. The figures in those telegrams are in thousands of pounds (which would explain such slight divergences as are shown in 1909-10 and 1912-13) but the telegrams sent in 1910-11 and 1911-12 presumably contained errors that were tacitly corrected in the annual statements.

required for a mint capable of coining 2,000,000l a year was drawn up in 1900, and will be found on pages 40 to 42 of the Parliamentary Paper. It will be seen that it includes a superior controlling staff of seven Europeans and five Indians, and a subordinate working staff of 43. The establishment charges (including contingencies and pensions) of other branch mints of similar capacity were in 1911 as follows —

—	Coinage	Charges	—
	£	£	
Sydney - - -	2,645,000	15,157	(Page 127 of Report of Deputy Master of Royal Mint)
Melbourne - - -	2,851,000	15,721	(Page 137)
Perth (excluding pensions) -	4,438,000	20,178	(Page 151)

The Australian Branch mints recover a substantial portion of their expenditure by the levy of Charges for the Coinage of Gold as allowed by Section 11 (8) of the Coinage Act of 1870. The view that has always been taken in discussions regarding a Branch Mint for the coinage of gold in India has been that there should be no corresponding charge in any such Mint (see pages 19, 27, and 60 of the Parliamentary Paper)

STATEMENT of Imports and Exports of British Gold Coin to or from India, Amount of such Coin held by the Government of India, and Absorption by Public

ROYAL COMMISSION ON INDIAN FINANCE

## APPENDIX VII.

MEMORANDUM ON THE SALE OF COUNCIL BILLS AND TELEGRAPHIC TRANSFERS  
SUBMITTED BY MR F W NEWMARCH, FINANCIAL SECRETARY

The method of drawing funds from India to meet the Home charges, first of the East India Company, and later of the Secretary of State for India in Council, by means of Bills of Exchange on India, dates back from the early part of the last century. It was mooted in correspondence between the Court of Directors and the Government of India in 1813, it appears to have been practised, though somewhat intermittently, from 1834 down to the time of the Indian Mutiny, and, after an almost entire suspension in the years 1857-62, it was resumed in the latter year, and has been almost continuous ever since.

2 Sales of the Secretary of State's Bills were at first made (1862) monthly, and at a fixed rate of exchange. By a series of changes, fortnightly and then weekly sales were substituted for monthly ones, allotments to the highest bidder took the place of sales at a fixed price, tenders were invited (1876) for telegraphic transfers as well as for bills, on India, reductions were made in the minimum fraction\* of a penny per rupee in the price at which tenders would be received, and applications were invited and received for bills and telegraphic transfers on dates intermediate between the regular fortnightly or weekly sales. Bills and transfers so sold are described as "Intermediates" or "Specials."

3 The present procedure is as follows—On each Wednesday a notice is exhibited at the Bank of England inviting tenders, to be submitted on the following Wednesday, for Bills of Exchange and Telegraphic Transfers on the Government of India, the Government of Madras, and the Government of Bombay. The notice states a limit which the aggregate allotments will not exceed. The tenders are opened at the Bank of England at one o'clock on the day of submission in the presence of the Governor or Deputy Governor, or both, of the Bank, with one or two of the permanent staff of the Bank, generally two members, or at least one, of the Council of the Secretary of State for India, and the Financial Secretary or the Assistant Financial Secretary of the India Office.

4 The Secretary of State does not bind himself to allot the whole amount mentioned in the notice. As a matter of practice, he does not accept any applications at prices lower than 1s 3 $\frac{3}{8}$  $\frac{3}{4}$ d for Bills and 1s 3 $\frac{1}{8}$  $\frac{1}{2}$ d for Telegraphic Transfers. As to a maximum price, see paras 22-27.

5 The price charged for Telegraphic Transfers is ordinarily higher by  $\frac{3}{8}$ d per rupee ( $\frac{1}{8}$ d when either the Calcutta or the Bombay Bank rate exceeds 8 $\frac{1}{2}$  per cent) than that charged for bills. Thus tenders for Telegraphic Transfers at 1s 4 $\frac{3}{8}$  $\frac{3}{4}$ d (or at 1s 4 $\frac{1}{8}$  $\frac{3}{4}$ d with Bank rate 9 per cent or upwards) rank for allotment with tenders for bills at 1s 4d and so on.

6 Subject to this differentiation and to the conditions mentioned in para 4, allotment is made to the highest bidders, and when the total amount tendered for exceeds the amount offered, allotment is made *pro rata*.

7 When the tenders received on a Wednesday have been dealt with, the amount to be offered for tender on the following Wednesday is decided upon. This involves considerations of the average amount required to be drawn weekly up to the end of the financial year so as to work up to the estimate—Budget or Revised—for the year (but see paras. 15 and 16), of the strength or weakness of the market, crop and trade conditions, and so on.

8 The amount is also decided up to which applications for Intermediate Bills or Transfers will be accepted up to the following Wednesday, at prices higher by  $\frac{3}{8}$ d per rupee for Bills and Transfers than those at which allotments have just been made (see, however, para. 27).

\* At first (January 1862) a farthing, reduced to  $\frac{1}{8}$ th in March 1862, to  $\frac{1}{4}$ th in January 1875, and to  $\frac{3}{8}$ th in 1882.

† See note to paragraph 26.

9 When, as frequently happens, those allotments have been made at more than one price for Bills and for Telegraphic Transfers respectively, the prices fixed for "Intermediates" may be  $\frac{1}{2}d$  above the higher ones, or above the lower ones, at which those allotments have been made, but they must be  $\frac{1}{2}d$  higher than the lowest prices at which allotments have been made.

10 The allotments made each Wednesday, the amount announced to be tendered for on the following Wednesday, and the arrangements made for the sale of "Intermediates," are laid before the next meeting of the Finance Committee (usually on the same day), and subsequently before the Council of the Secretary of State, for approval, together with particulars of the amount sold since the beginning of the financial year, the amount remaining to be sold so as to work up to the estimate of the financial year, and any other information having an important bearing upon future sales.

11 Since 1905 Telegraphic Transfers on India have sometimes been issued in payment for sovereigns which the Secretary of State has purchased in transit from Australia or from Egypt to India. This practice has been resorted to as a means of checking an excessive accumulation of sovereigns in the Paper Currency Reserve in India and obviating the expense entailed in relieving the accumulation by shipping them to London (*cf* para 23 of the Note on the Paper Currency Reserve, page 242).

Table No 1 (page 227) gives the amounts of drawings and the average rate of exchange at which they were effected for each year from 1862-3 to the present time. The published regulations governing the sale of Bills and Transfers and the conditions under which sovereigns are sometimes purchased in transit to India against Telegraphic Transfers will be found printed in their present form as Appendix A (pages 228-9).

12 The method of transferring funds from the treasuries of the Government of India to that of the Secretary of State on a large scale by the sale of Council drafts on India is rendered possible by the fact that India has ordinarily a very large trade balance in her favour. Except in years of very deficient crops and unfavourable trade this balance is so large as to be only partly met by the remittances which banks and commercial houses are enabled to make to India by purchasing the Secretary of State's drafts, a considerable portion of the world's debt to India remains to be discharged by other means. Before the closing of the Indian Mints to the free coinage of silver in 1893 this supplemental remittance was effected by shipments of silver to India to be coined into rupees, since the closing of the Mints it has taken the form of shipments of sovereigns which are received at the Indian Mints and Treasuries in exchange for rupees at the rate of 15 rupees to 11.

13 So long as the amount which the Secretary of State requires to draw from India by means of his Council drafts is well within the amount owing to India in settlement of the balance of trade in her favour, and so long as the Secretary of State sells his drafts at rates at which they are not a more expensive mode of remittance (see paragraph 20 below) than shipments of sovereigns to India, he can have no difficulty in drawing the funds he requires and maintaining exchange at the rate of 1s 4d to the rupee. These conditions have been fulfilled from 1899 down to the present time\* with the exception of the period covered by the closing months of 1907 and a part of 1908. The crisis was made unusually severe by the effects of a very deficient monsoon in 1907, followed by an extraordinarily acute depression of trade over the whole world, towards the end of the same year.

14 The present system of regulating the amount of the drawings of each year, which has been in force for many years, is as follows.—The Government of India, in preparing their Budget for a coming year, frame their estimate of the amount which, after meeting the various other anticipated demands upon their treasury balances and providing for the retention of sufficient balances at the close of the year, they anticipate that they will be able to remit to the Secretary of State during the year through the medium of his sales of Council Bills, towards defraying the expenditure

\* See appended Table IV, pages 234-6.

of the India Office on revenue and capital account. In this estimate account is necessarily taken of the amount which can advantageously be raised by borrowing in India towards providing for capital expenditure. (It may be remarked, incidentally, that whereas until recently the sterling loans of the Secretary of State could be issued in London more cheaply than the Rupee loans of the Government of India in that country, of late years the tendency has been in the opposite direction. Thus, in 1912 the 3½ per cent loan of the Government of India for 3 crores of rupees was issued at an average price of 96½, whereas the India sterling loan for 3,000,000L, underwritten, was issued at 93.)

15 The Budget estimate of drawings for the year having been arrived at as described in the last paragraph, their actual distribution over the twelve months is regulated as follows.—The Indian year, as is well known is divided broadly into two seasons, the busy season, extending roughly from the 1st October to the end of March, and the dull season extending from about the beginning of April to about the end of September. Thus the financial year begins with the dull season, during which the demand for the Secretary of State's Bills as a means of remittance of funds by the public from London to India is less strong than during the autumn and winter. The difference between the two seasons in this respect is illustrated by the attached Table No III (page 233)

16 In a year of favourable seasons and great trade activity it might be possible (if those favourable conditions could be foreseen) for the Secretary of State to restrict his drawings during the first half of the financial year *ie*, the dull season, to an almost insignificant amount, and to meet almost the whole of his requirements during the second half, *ie*, the busy season, when he might sell his drafts at a higher rate than they would command in the dull season. But in carrying out this apparently profitable policy he is limited by the following considerations—(1) he requires funds of considerable amount to meet current outgoings during the first as well as the second half of the financial year, (2) the funds which he draws from India in the early part of the financial year, if not immediately required, earn interest in this country, whereas in India no profitable use would be found for them under other than exceptional conditions, so that the profit derived from lending out these funds, though sometimes at a low rate of interest, must be counted as a set off to the somewhat higher rate of exchange at which they can be remitted home in the later months of the financial year as compared with the earlier ones, (3) a good market for Council Bills in the winter months cannot be counted upon until the monsoon has declared itself, the experience of 1907-8 (see Table III, page 233) illustrates this, and (4) the market is full of surprises, one must always be prepared for the unexpected. This is illustrated by a comparison of the years 1911-12 and 1912-13. In both years the monsoon was good, in 1912-13 if anything more satisfactory than in 1911-12, and giving prospect of at least as active a winter business as that of 1911-12. But after a short spell of very keen bidding for the Secretary of State's drafts in December 1912 the demand fell off in a remarkable manner, as indicated by Table V, page 237, and chart attached thereto. (5) If the drawings for the year exceed the estimate, the excess proceeds can be used for the reduction or avoidance of debt, either in the year in which they are received or in the next year (*see para 19*)

17 It is possible, after the event, to attribute a reduced demand such as occurred in 1912-13 to a combination of causes, such as reduced exports of opium, smaller demand for rice from China, deficient rains in the north of India in January-February, the near eastern situation, stringency in the London Money Market, and so on, but the cumulative effects of these causes could not be gauged at the beginning of December 1912, still less could they be foreseen at the earlier date when, after a good monsoon was assured, the prospect of an active winter business seemed tolerably certain. The inference to be drawn from cases of this kind seems to be that in the regulation of the sales of the Secretary of State's drafts the safe course is to take advantage of a moderately good demand for remittance, when it shows itself, during the first half of the financial year, or dull season, rather than to rely too much on selling the great bulk of the

drafts of the year at a higher rate of exchange during the last few months of it

18 Some of the critics of the India Office seem to think that the Secretary of State should limit his drawings in two ways, viz., (1) he should not draw more than the amount that he has budgeted for in any year, and (2) he should not sell his drafts materially below gold point, meaning the rate of exchange at which sovereigns are liable to be taken from the Bank of England for shipment to India in competition with his drafts. The rate of exchange at which this is liable to happen is assumed to be  $1s\ 4\frac{3}{4}d$  per rupee for Telegraphic Transfers and  $1s\ 4\frac{1}{2}d$  for Council Bills.

19 Both these propositions are open to objections. The first takes no account of the cases where, owing to a good monsoon and general prosperity, the Government of India find themselves in a position towards the end of a financial year to remit home funds far in excess of what they could expect to remit when the estimates of the year were framed. Such excess funds are properly applicable to the reduction of the amount which the Secretary of State would be otherwise obliged to borrow to meet capital expenditure. In the interval before being so used their possession by the Secretary of State secures him *pro tanto* against the consequences of a possible fall in exchange.

20 The second proposition is open to the objection that sovereigns flow into India freely at certain seasons and under certain conditions from Australia and from Egypt when the rates of exchange which the Secretary of State's Bills and Transfers will command are materially below those regarded as "gold point." This may be seen from Table VI (page 238) which shows that during the five months May to September 1912 there was a net import of £7,662,535 in sovereigns into India, while the Secretary of State's drafts were sold almost entirely at rates of  $1s\ 4\frac{1}{2}d$  and  $1s\ 4\frac{1}{8}d$  for Bills and Transfers respectively. There is excellent authority for saying that sovereigns are sometimes shipped from Australia and from Egypt to India at a price which represents only the equivalent of Secretary of State's Bills at slightly less than  $1s\ 4\frac{1}{2}d$ . Experience indeed shows that even from London sovereigns are liable to be shipped to India in competition with Council Bills at  $1s\ 4\frac{3}{4}d$ , if not lower.

Thus if the Secretary of State were to hold out for prices of  $1s\ 4\frac{1}{2}d$  and  $1s\ 4\frac{3}{4}d$  for his Bills and Transfers respectively he would even in a very busy season run the risk of losing his market for remittance, he would cause the Paper Currency Reserve in India to become overloaded with sovereigns, and then, whether for the purpose of relieving its depletion or of meeting his own Treasury requirements, he would be obliged to bring sovereigns home from India at the cost of freight, insurance, &c. It is clearly more advantageous to draw the funds which he requires to draw from India, and to avoid excessive accumulations of sovereigns there, by selling his drafts at a slightly lower rate, though it is right that the rate should be pitched as high as is consistent with the attainment of those two objects.

21 Sometimes, especially in seasons of active trade, the demand for the Secretary of State's drafts on India far exceeds the amount that he can draw from the treasuries of the Government of India without reducing their balances below a safe limit. The question then arises whether he should restrict his drafts to the amount that can conveniently be drawn from the Treasury balances in India, and allow the balance of the trade demand to satisfy itself by shipments of sovereigns to India, or whether by the use of other resources to be referred to below (see paragraph 22), he should continue to sell drafts beyond his actual immediate needs to meet the requirements of trade. The inconvenience of causing sovereigns to accumulate beyond a certain point in the Paper Currency Reserve in India has already been referred to. The injurious effects on Indian trade of a cessation of the Secretary of State's sales of Bills and Telegraphic Transfers may be explained as follows. The situation contemplated is naturally most likely to arise towards the close of the financial year, i.e., in January, February or early in March. At that season the demand for remittance to India is usually strongest. It may become acute very suddenly. The Secretary of State's Telegraphic Transfers afford the means, which no other mode of remittance does,

of relieving in a very short space of time a money stringency which otherwise might become serious, even disastrous to Indian trade. Thus (Command Paper 6619 of 1913, page 4) in 16 days in January–February 1912, Telegraphic Transfers on India were sold for over £3,500,000, enabling that sum (5½ crores of rupees) to be liberated from Government treasuries and passed into the hands of the public. But had the shipment of sovereigns from London been the only method of remittance available, not a single sovereign's worth of rupees could have been released in India by that method during the same period, and consignments from Egypt and Australia were, at the time, very small.

22 This question of the propriety of selling Council drafts for the convenience of trade and apart from the actual immediate requirements for India Office disbursements, engaged attention so long ago as the end of 1897. To get over the inability of the Government of India to meet from their Treasury balances drafts on India of sufficient amount to satisfy the trade demand and relieve the stringency of the Indian money markets (the Calcutta and Bombay Bank rates being at the time 11 and 12 per cent respectively) an Act of the Indian Legislature was passed (Act II of 1898)\* authorising the issue in India of Paper Currency notes against gold held by the Secretary of State in Council as part of the Paper Currency Reserve in London. At the same time the Secretary of State issued a notice (21st January 1898) that he was prepared to sell until further notice Telegraphic Transfers on India at a price not exceeding 1s 4½d per rupee. From the point of view of the public the effect of this was to enable banks and merchants in India to obtain rupees from the hands of Government at a price about equivalent (during the prevalence of the rates of interest mentioned) to that at which (allowing for interest on money besides shipping and insurance charges) they would have been able to obtain them in exchange for sovereigns shipped from London, but while this mode of remittance was not at the time appreciably cheaper, if at all, than that of shipping sovereigns, (and would now be dearer at any time when the rate of interest in India is 8 per cent or less) it had the advantage, of the very greatest importance at a time of extreme monetary stringency, of being much the more expeditious.

23 From the point of view of Government the effect of the transaction was, that the Secretary of State by depositing in gold at the Bank in England a given sum from the proceeds of his sales of Telegraphic Transfers as part of the Paper Currency Reserve enabled the Government of India to issue notes of corresponding amount against such gold, wherewith to meet the Telegraphic Transfers drawn against them.

24 The convenience to trade interests resulting from this arrangement was very great, and when in January 1900 the Secretary of State felt obliged, owing to apprehensions of a dangerous reduction of the quantity of rupees held by the Government of India (Financial Despatch to India, No 29 of 1900)†, to withdraw the notice of 21st January 1898 (sale of Telegraphic Transfers at 1s 4½d until further notice) the announcement was received with consternation in commercial and banking circles in India. The Associated Exchange Banks, Bombay, telegraphed to the Government of India (16th January 1900)‡ that “acute financial stringency prevails, caused by sudden withdrawal without previous notice of facility granted 21st January 1898. Banks respectfully protest against the sudden withdrawal and beg immediate steps be taken to relieve critical situation and avert panic.” Protests were also received from the Bombay and Bengal Chambers of Commerce, with applications for temporary loans to the Presidency banks, but these the Government of India were unable to grant.

25 Although the Secretary of State withdrew his offer to sell Telegraphic Transfers at 1s 4½d, he continued to sell at higher prices, indeed as high as 1s. 4¾d. To this action the Government of India objected, they desired

\* The duration of this Act was only six months. Its provisions were extended for a further period of two years by Act VIII of 1898, and for a further two years by Act VIII of 1900, which also gave the Secretary of State power to expend the gold held by him as part of the Paper Currency Reserve in the purchase of silver for coinage. The provisions of this Act were made permanent by Act IX. of 1902.

† Not printed.

‡ 1906s.

"to see exchange remain steady *within* the gold point," and added that "this has universally been understood to be the settled intention of Government" The demand for remittance to India satisfied itself for the time being, though at the cost of severe monetary stringency in the Indian markets, and the evils attendant thereon, by imports of gold into India, and the question of again selling drafts on India without limit at a maximum price did not recur until January 1904, when exchange again reached "gold point"

26 The Secretary of State then notified his readiness to sell "intermediate" Bills until further notice at a rate not exceeding 1s 4½d per rupee, and as the price of Telegraphic Transfers was at that time fixed at ¼th\* of a penny above that of Bills, the price at which applications for Telegraphic Transfers were accepted without limit became 1s 4⅞d instead of 1s 4¾d, the rate announced in 1898

27 The practice since 1904 has been as follows —(1) invariably to sell Bills without limit when the price is as high as 1s 4½d, (2) to sell Transfers without limit at 1s 4¾d if the Indian bank rates do not exceed a certain rate (6 per cent prior to January 1906, 8 per cent subsequently (see footnote), and at 1s 4⅞d if they exceed that rate These rates (see para 20 above) are by no means prohibitive to the export of sovereigns from London to India, still less to their export thither from Australia or Egypt On the contrary they are so high as almost to place the Secretary of State's drafts out of competition with the remittance of sovereigns, except at times of great monetary stringency in India, when rapid transmission of funds to that quarter is the consideration of supreme importance The question whether by restricting sales of Council drafts to allow exchange to reach so-called "gold point," or to sell freely, a course which by no means prevents the concurrent importation of sovereigns into India, is one which must be decided month by month and week by week, according to the trade demand for telegraphic transfers and the urgency of the need for drawing funds from the treasuries of the Government of India to that of the Secretary of State

28 The governing considerations, stated in order of importance, seem to be the following —

- (1) To draw from the treasuries of the Government of India during the financial year the amount that has been laid down in the Budget as necessary to carry out the Ways and Means programme of the year
- (2) To draw, if practicable, such further amount as may be required to pay for any purchases of silver that may be made for coinage during the year, not having been provided for in the Budget (Such purchases may in the alternative be paid for from gold held in the currency reserve in London, as provided for by India Act VIII of 1900, when the amount of gold so held is sufficient, but if the market for the Secretary of State's Bills is strong enough to enable him to pay for his purchases of silver by additional sales of Bills, there is an advantage in doing so and keeping the reserve of gold intact, to support exchange in a crisis like that of 1907-08, see paragraph 13)
- (3) To draw such further amount from the treasury balances of the Government of India as an unexpectedly prosperous season may enable them to spare, to be used towards the reduction or avoidance of debt, and as the state of the market for the Secretary of State's drafts may allow to be drawn at a reasonably high rate of exchange

\* The difference is calculated to represent the approximate cost of interest on a rupee in India for the period intervening between the date when a Telegraphic Transfer is payable there, and that when a Bill issued on the same date is payable At the date in question (1904) it was the practice to make a difference of ½d between the prices of Bills and Transfers when the Indian bank rates did not exceed 6 per cent, and a difference of ¼d when the bank rates were higher In 1906, in view of the reduction which had taken place in the time occupied by the mails from this country in reaching India, and in the freight on gold, it became the practice only to make a difference of ¼d between the prices of Bills and Transfers when the Indian bank rates reached 9 per cent

- (4) To allow a sufficient amount of sovereigns to flow into India to supply the demands of the public
- (5) To sell bills and transfers, if necessary, beyond the amount required under (1), (2), and (3), to meet the convenience of trade, *i e*, to avert an injurious stringency of money in the markets of India.

29. The relative importance of considerations Nos 4 and 5 must be largely dependent on the conditions existing at any given time. When the stock of gold held in the Paper Currency Reserve in India, which the Government are prepared to release freely in exchange for notes or silver, is very large, the need for restricting sales of Council drafts so far as to allow of a considerable influx of gold into the country is clearly less important than when the stock so held is low. Similarly the question whether to pay for purchases of silver from the proceeds of sales of bills, sold for the purpose, or from gold in the Paper Currency Reserve, must depend, to some extent, on the quantity so held.

30. The importance of selling drafts to meet the convenience of trade has been referred to above (paragraph 21) and the consternation caused in commercial circles by the Secretary of State's withdrawal in January 1900 of his offer to sell Telegraphic Transfers at a price not exceeding  $1s. 4\frac{5}{8}d$  has been described (paragraph 24). The practice is sometimes misrepresented as being adopted in the interests of the City of London, not those of India. But the events of 1900 afford an answer to this charge. Further, the practice is referred to regularly in the Financial Statements of the Government of India as part of the settled financial policy of Government (see Command Paper, No 6,619, 1913, IV) and meets with little or no criticism in the Legislative Council. There is abundant evidence that its advantages are appreciated by the great majority of the business community in India, and questioned only by a few.

Its advantages may be summed up as follows —

- (1) It serves to avert or relieve extreme stringency in the money markets of India, which would be detrimental to the commercial prosperity of the country.
- (2) It serves to check excessive accumulations of gold in the Paper Currency Reserve in India which might otherwise have to be lightened by expensive methods (see above, paragraph 20).
- (3) It serves, sometimes, to avert extreme stringency in the London Money Market which would be created if the Secretary of State, by refusing to sell drafts for the convenience of trade, forced large quantities of sovereigns to be taken from London for India. This consideration may not be valued by some of the critics of the policy of selling drafts freely, because their attitude implies an underlying assumption that what is beneficial to the interests of London cannot be good for India, but those who approach the question with an open mind will probably recognise that any serious disturbance to the greatest money market of the world cannot but be injurious to the trade of India, and to her interests as a frequent borrower in the London market, so that free sales of Council drafts for the purpose of averting such a disturbance may, at times, be fully justified, and indeed urgently required, in the interests of India.

31. It has been shown above (paragraph 22) how the Indian Paper Currency Act, by empowering the Secretary of State to hold a portion of the Indian Paper Currency Reserve in the shape of gold in London, enables him to meet a demand for Council drafts on India at times when it might not be convenient or possible for the Government of India to meet them from its treasuries. This power introduces a valuable element of elasticity into the Indian currency system. It would not, of course, be desirable that more than a moderate portion of the total metallic reserve should be held in London, in gold, but, subject to that proviso, the system is useful in connection, not only with the sale of Council drafts, but also with the purchase of silver and as a support of exchange. The latter advantage arises in this way. At a time when the state of exchange, as in the crisis of

1908-9, does not permit of the Secretary of State drawing funds from India to meet his Treasury requirements by the sale of Council Bills, he may release funds for the purpose from the portion of the Paper Currency Reserve held in London, the Government of India making simultaneously a corresponding transfer of rupees or gold from the Treasury balances to Paper Currency Reserve, so that the metallic portion of the latter be kept intact, or cancelling a portion of the notes held in the Treasury balances. The larger the amount of gold accumulated in the Paper Currency Reserve in London the greater the extent to which the Secretary of State will be able to supplement from this quarter the resources towards meeting an exchange crisis afforded by the Gold Standard Reserve. It is hardly necessary to add that accumulated balances in his Treasury will serve towards the same end.

32 A further purpose served by the sale of Council Bills when the demand for these is sufficiently strong is the remittance to this country of the profits on the coinage of rupees, on account of the Gold Standard Reserve 9,271,813*l*, were so drawn in the years 1901-2 to 1907-8. During the exchange crisis of 1907-9 bills on London were sold by the Government of India and met by the Secretary of State in Council from Gold Standard Reserve, to the amount of 8,058,000*l*, the Government of India setting aside an equivalent sum from the proceeds of their sales of bills in rupees. Thus the effect of the transaction was to transfer Gold Standard Reserve funds amounting to 8,058,000*l* from London to India. When exchange recovered after the crisis of 1907-9, the sales of Council drafts were again utilised, after meeting the Treasury requirements of the Secretary of State, to re-transfer Gold Standard Reserve funds from India to London, and the amount re-transferred, and transferred in addition,\* in the years 1908-9-1910-11 was 10,181,487*l*. During the year 1912-13 there has been a remittance of 1,200,000*l*, profits on coinage, from India to England, this has been effected not by sales of Council Bills but by transfers between Gold Standard Reserve and Currency Reserve, *i.e.*, 1,200,000*l* has been transferred, in gold, from Paper Currency Reserve to Gold Standard Reserve in London, and a corresponding sum has been transferred from Gold Standard Reserve to Paper Currency Reserve in India. This affords a further illustration of the elasticity introduced into the currency system by the holding of a part of the Paper Currency Reserve in London.

33 The portion of the Gold Standard Reserve held in rupees in India has been utilised on one or two occasions in the past as a resource from which the Government of India might borrow, paying interest on the loan, in order to meet the Secretary of State's drawings when it has not been convenient to meet them from Treasury balances or through currency (*i.e.*, by the Secretary of State setting aside gold from the proceeds of his sales, as an addition to the Paper Currency Reserve, and the Government of India taking out notes against the gold set aside). But it has been recognised and put on record in a Despatch of the Secretary of State to the Government of India that such utilisation of the Gold Standard Reserve funds in their hands must be treated as entirely exceptional and only to be resorted to in cases of extreme emergency.

34 It may be useful to conclude this note with some general remarks on the working of the system of drawing funds from India by means of Council drafts since 1899, when the sovereign was made legal tender in India, as compared with its working before that date.

35 Down to 1872-3 the rate of exchange at which the Secretary of State was able to sell his drafts did not fall materially below 2*s* the rupee. In that year the average rate was 1*s* 10 815*d*. From thence onwards the decline in exchange was a continuous source of anxiety and disturbance to those responsible for the finances of India. In 16 out of 27 years ending with 1898-9, the Secretary of State was unable to realise by the sale of Bills and Transfers the amount that he had budgeted to receive (*see* Table II, page 232), and on several occasions he was compelled to suspend the sales altogether.

\* Prior to the crisis of 1907-8 a portion of the reserve amounting to 4,000,000*l* had been held in rupees (6 crores) in India. This portion was reduced in 1910-11 to 290 lakhs of rupees = 1,933,333*l*.

36 The worst effect of the decline in exchange was felt in the increased amount which had to be drawn from the revenues of India to meet the Home charges. Thus, in the year 1895-6, the sum realised by the sale of Council drafts was 17,664,492*l.*, representing Rs 31,08,54,373, at an average rate of 1*s* 1*6*38*d* per rupee. Had the same sterling sum been remitted at the average rate obtaining in 1872-3, the sum in rupees representing the remittance would have been Rs 18,63,17,925 instead of Rs 31,08,54,373, a difference of Rs 12,45,36,448. Moreover the Government of India was confronted with the prospect of a still further fall in exchange\* and, a further increase in the burden of the Home charges.

Other burdens imposed upon the revenues of India by the fall in exchange were (1) the cost of granting exchange compensation allowance, (2) enhanced charge for the pay of British troops in India, consequent on the fall in exchange, (3) the concession of "privileged" rates of exchange for the conversion of (a) pensions expressed in rupees, when paid in countries where the rupee is not legal tender (1*s* 9*d*) and (b) furlough allowances to civil officers taking leave to Europe (at 1*s* 6*d* per rupee).

The additional charge under heads (1) and (2) was a very uncertain amount, varying according to the rate of exchange, in 1893-94 these items were estimated at 63 and 83 lakhs of rupees respectively, the cost of concessions 3 (a) and 3 (b) was also variable, the former costing about 14,000*l.* in the year in which it was imposed (1890-1), and the latter (1893-4) about 27,000*l.*

37 Indirectly also the fall in exchange has imposed further burdens on the exchequer by contributing to an extent which it would be impossible to calculate in conjunction with other causes such as the increased cost of living in India, to force upon Government the necessity of increasing salaries of various appointments and branches of the Service.

To meet these burdens additional taxation had to be imposed in the period 1885-1895, estimated to yield in the aggregate about 530 lakhs of revenue (equivalent at the *present* rate of exchange to about 3,533,000*l.*), as follows —

- 1886-87, an Income Tax, estimated to yield 102 lakhs of rupees per annum
- 1888-89, increased salt duties, estimated to yield 172½ lakhs of rupees per annum.
- 1888-89, import duty on petroleum and minor measures affecting Burma, 20 lakhs of rupees per annum
- 1894-95, enhanced and widened Customs duties, 135 lakhs of rupees per annum
- 1895-96, cotton import and Excise duties, 145½ lakhs of rupees per annum

A total estimated increase of revenue by 575 lakhs of rupees, against which, however, has to be set off a net reduction in cotton duties estimated at about 45 lakhs, effected in January 1896.

38 The steps by which exchange was fixed at a stable rate of 1*s* 4*d* per rupee had the effect of placing a limit to burdens on the exchequer which otherwise seemed to possess indefinite and incalculable possibilities of expansion.

39. Since exchange was placed on its present basis one of the most serious uncertainties in Indian budgeting has been removed. In only three years out of 14, since 1898-9, has the Secretary of State been unable to realise by the sale of Bills the amount for which he budgeted (*see* Table II, page 232).

40 There is abundant expert testimony to the effect that Indian trade generally has benefited by stability of exchange. Exports do not appear (*see* Table IV, pages 234-6) to have been injuriously affected, as some critics of the

\* As a matter of fact the price of silver has fallen in the interval since the introduction of the present currency system as low as 21½*d*. per oz., a price at which the out-turn cost of a rupee was a little over 8*d*.; while at the highest price of silver reached in the same period, 33½*d*. per oz. the cost of the rupee would be less than 1*s* 1*d*.

present currency policy predicted that they would be, by the establishment of a rate of exchange much above the intrinsic silver value of the rupee Revenue has shown a steady expansion, enabling successive reductions of taxation to be effected, viz —

	£
(1) 18 March 1903. Reduction of salt tax, estimated sacrifice of revenue	1,095,000
(2) 1903-4 Exemption from Income Tax of private incomes below Rs 1,000 per annum	240,000
(3) 1905 Reduction of salt tax	1,220,000
(4) 1905 Abolition of famine cesses, postal reductions	200,000
(5) 1906 Abolition of certain land cesses	548,000
(6) 1907 Reduction of salt tax	1,267,000
(7) 1907 Postal concessions	146,000
Total	<u>£4,716,000</u>

41 The one addition to taxation to be set against these repeated remissions of imposts made since the introduction of the present currency system, is the enhancement of certain customs, excise and stamp duties effected in 1910

42 This was estimated to yield additional revenue amounting to 1,126,000*l* and was resorted to in view of the approaching reduction and gradual extinction of the opium revenue

43 The net results are that, in the period dating from the full introduction of the present currency system (1899); there has been a net reduction of taxation estimated at about 3½ millions sterling, coincident with a loss of revenue from opium amounting to nearly 2,000,000*l*\*, and the Government of India are able, on the basis of this reduction of revenue, to budget for a surplus of 1,326,300*l* in 1913-4

\* Difference in rupees between net revenue 1898-9, and Budget estimate, 1913-4, converted at 1*s* 4*d* per rupee, as follows —

	£
1898-9	2,230,308
Budget 1913-4	309,600
	<u>£1,920,708</u>

The loss of revenue is much greater in comparison with the figures of more recent years, e.g., in comparison with the net revenue of 1910-11 it is nearly 6,000,000*l*

**Table I.**

## Appendix A

### I.

#### SALE OF BILLS AND TELEGRAPHIC TRANSFERS ON INDIA

In supersession of previous notifications, the Secretary of State for India in Council publishes the following particulars as to the method of selling Bills and Telegraphic Transfers on India —

##### *Sale of Bills*

1 The Secretary of State for India in Council is prepared to allot on Wednesday in each week Bills of Exchange on the Government of India, the Government of Madras, or the Government of Bombay, of an aggregate amount not exceeding that announced in a notice which will be previously exhibited at the Bank of England

2 Tenders for such Bills will be opened at the Bank of England on each Wednesday at 1 o'clock

3 Tenders must be made on forms which can be obtained on application at the Chief Cashier's Office at the Bank of England. They must be delivered, under cover, at the said office

4 Any tender may be for the whole amount shown in the announcement or for any portion thereof not being less than Rs 10,000. The amount of the tender or tenders submitted by or on behalf of any one person, firm, or company must not in the aggregate exceed the amount shown in the announcement. Tenders which appear to the Secretary of State in Council to be submitted in direct or indirect infringement of this rule will be rejected

5 Each tender must state the rate of exchange at which the applicant is prepared to purchase a Bill or Bills of the amount for which he tenders or any less amount that may be allotted to him. The rate of exchange must be expressed in pence or in pence and a fraction of a penny per rupee, any fraction that is used must be either one thirty-second of a penny or a multiple of one thirty-second of a penny.

6 In the event of two or more tenders being made at the same rate, and the amount to be allotted being less than the amount of both or all, a *pro rata* allotment will ordinarily be made, subject to the condition that no Bill will be granted for a less amount than Rs 5,000

7 As soon as practicable after the opening of the tenders the result will be made known at the Bank, and the *maximum* amount to be allotted on the following Wednesday will ordinarily be announced at the same time

8 On Wednesday afternoon persons who have tendered will, on application at the Chief Cashier's Office, be informed whether any allotment has been made to them

9 Payment for Bills allotted on a Wednesday must be made on or before the following Tuesday

10 Those applicants to whom an allotment of Bills has been made will be furnished with a form to be filled up with the particulars of the Bills desired, which must be left at the Chief Cashier's Office before 12 o'clock on the day preceding that on which the Bills are required, the Bills will be delivered next day on payment in cash not later than 2 o'clock

11 In addition to the tenders mentioned above for Bills to be allotted on Wednesdays at 1 o'clock, applications may be made on any Wednesday after

the result of the allotment has been announced (but not later than 3 o'clock), on Saturday between 11 and 12 30, and on any other day between 11 and 3, at the Chief Cashier's Office of the Bank of England for intermediate Bills drawn on the Government of India, the Government of Madras, or the Government of Bombay. No pledge can be given that such applications will be complied with, but, if intermediate Bills are granted, the following condition will be observed, viz, that if, at the preceding allotment, Bills have been allotted to the full amount previously announced, intermediate Bills will only be granted at rates ~~exceeding by~~ at least one thirty-second of a penny per rupee the minimum price at which an allotment was made. If, however, the minimum price has exceeded 1s 4 $\frac{3}{4}$ d the rupee this condition will not be enforced, as the Secretary of State in Council is prepared to sell until further notice intermediate Bills at 1s 4 $\frac{1}{4}$ d the rupee.

12 If an intermediate Bill is granted on a Tuesday, payment must be made on the same day, if a Bill is granted on any day other than Tuesday, payment must be made not later than the following Tuesday.

#### *Sale of Telegraphic Transfers*

13 Applications for Telegraphic Transfers on the Government of India, the Government of Madras, and the Government of Bombay, will be received on behalf of the Secretary of State for India in Council at the Chief Cashier's Office at any time between 11 and 3, except on Saturdays, when the hours are from 11 to 12 30. Those which are received on Wednesday before 1 o'clock will be opened at the same time as the tenders for the weekly allotment of Bills, and, if transfers are then granted, the fact will be announced at the same time and in the same manner as the allotment of Bills. Transfers will be granted only in thousands of rupees, and in no case for less than one lakh, except that an applicant to whom a transfer has been granted at the time of the weekly allotment of bills may be allowed an additional transfer of an amount (in thousands of rupees) less than one lakh, provided that such additional transfer is paid for (at the price fixed for the time being by the Secretary of State in Council) on the same day as the transfer originally granted. Applicants tendering on Wednesday before 1 o'clock both for bills and transfers, may, if they wish it, insert in their tender for transfers a request that, if that tender be not sufficiently large to secure an allotment of one lakh of rupees, it may be increased to the necessary extent by reduction of their tender for Bills.

14 If a transfer is granted on a Tuesday, payment must be made on the same day, if a transfer is granted on any day other than a Tuesday, payment must be made not later than the following Tuesday.

15 The necessary telegram to enable the amount of a transfer to be issued to the recipient in India will be despatched on the day on which payment for the transfer is made at the Bank of England.

#### *General*

16 The sales of Bills and Telegraphic Transfers, and the rates at which they have been made, will be from time to time announced at the Bank of England, and the total amount sold up to date since the 1st of April, with the sterling realised, will be similarly announced on each Wednesday morning at 11 o'clock.

17 The Secretary of State in Council, while making the foregoing announcement as regards the practice to be ordinarily pursued, reserves to himself the right of rejecting the whole or any part of any tender and of departing in any respect without previous notice from the terms of this announcement, should circumstances render it expedient.

India Office,  
25th August 1909

## II.

CONDITIONS on which the Secretary of State for India in Council is willing until further notice to purchase Sovereigns in Transit from Australia or Egypt by granting Telegraphic Transfers on Calcutta, Madras, and Bombay

1 A list is kept at the India Office of banks and firms from whom the Secretary of State is prepared until further notice to purchase sovereigns under these rules for delivery in London

2 Purchases will not be made from institutions whose head offices are not in the British Empire unless the offer of sale is accompanied by the guarantee of an approved English bank.

3 The sovereigns are to be consigned to the Secretary of State for India in Council, London, and the bills of lading made out in his favour, or, if the sovereigns are not so consigned, the bills of lading are to be endorsed in his favour. In every case the bills of lading must be posted to the Under Secretary of State, India Office, and a letter addressed to him by the seller in the form annexed

4 Sovereigns consigned to the Secretary of State from Egypt must be shipped in a vessel of a regular line approved by the India Office.

5 The date of issue of the telegraphic transfers and the rate of exchange are subject to the following conditions —

*A — In the case of Gold consigned from Australia*

At the option of the institution tendering the sovereigns, transfers will be granted either—

- (1) Ten days after the departure from Fremantle of the vessel in which the sovereigns are shipped, at the rate of 1s 4d the rupee, or
- (2) On the day following the departure of the vessel from Fremantle, at the rate of 1s 4½d the rupee

*B — In the case of Gold consigned from Egypt*

At the option of the institution tendering the sovereigns, transfers will be granted either—

- (1) On the advertised date of arrival at Bombay of the next Peninsular and Oriental vessel leaving Port Said after the date of shipment of the sovereigns to London, at 1s 4d. the rupee, or
- (2) On the date of shipment from Egypt to London, at 1s 4½d per rupee

August 1910

[Form of Application opposite]

To the Under Secretary of State,  
India Office, S W.

Sir,

With reference to the attached statement of the conditions under which the Secretary of State for India in Council is willing to purchase for delivery in London sovereigns in transit from Australia or Egypt by issuing telegraphic transfers to an equivalent amount, we have to inform you that £ \_\_\_\_\_ in sovereigns has been shipped by us from [*Port of Shipment*] \_\_\_\_\_ by the S.S. \_\_\_\_\_ which leaves Fremantle \_\_\_\_\_ on [*Date*] \_\_\_\_\_

The Bills of Lading have been <sup>made out</sup> <sub>endorsed</sub> in favour of the Secretary of State for India in Council, and have been posted to the Under Secretary of State, India Office, London

We have to request that, in payment for these sovereigns, telegraphic transfers to the amounts specified below may be granted on the \_\_\_\_\_ 191 \_\_\_\_\_, in favour of [*Name*] \_\_\_\_\_ viz —

	Rs	Rate	Amount in Sterling
On Calcutta - -			£
On Madras - - -			
On Bombay - - -			
Total - - -			

We hold the Secretary of State in Council covered by the insurance policies noted below which are open to your inspection.

We are, Sir,  
Yours faithfully,

PARTICULARS OF INSURANCE POLICIES.

## APPENDIX VIII

MEMORANDUM ON THE PAPER CURRENCY RESERVE SUBMITTED BY  
MR F W NEWMARCH, FINANCIAL SECRETARY

Under Acts of the Governor-General Nos VI of 1839, III of 1840 and IX of 1843 the Presidency Banks of Bengal, Bombay and Madras were authorised to issue notes payable on demand, but the issue of the notes was practically confined to the three cities of Calcutta, Bombay and Madras. These notes were not legal tender. The issues were limited to maxima of two crores of rupees in the cases of the Banks of Bengal and Bombay, and of one crore in that of the Bank of Madras. These Acts were repealed by Act XIX of 1861, providing for the issue of a Paper Currency through a Government Department by means of notes of the Government of India payable to bearer on demand. These notes were made legal tender within the circles of issue. Since the 1st March 1862, when this Act took effect, no banks have been allowed to issue notes in India.

General  
historical  
sketch

2 Under this Act notes of such denominations not being less than ten rupees as might be from time to time prescribed were issuable against current silver coin of the Government of India or standard silver bullion or foreign silver coin at the rate of Rs 979 per 1,000 tolas\* of standard silver

\* The tola, which is the weight of the rupee, is equal to 180 grains or three-eighths of an ounce, Troy. The rupee contains 165 grains of fine silver. fit for coinage. Provision was also made for the issue, under notification of the Government of India, of notes against gold coin of the Government of India or against foreign gold coin or gold bullion.

3 It was provided that bullion and coin should be retained as a Reserve to pay the notes issued, with the exception of such an amount not exceeding four crores of rupees as the Governor-General in Council with the consent of the Secretary of State for India might from time to time fix. This amount was to be invested in "Government Securities".

The invested  
portion of  
the Reserve

In December 1863 the composition of the Reserve against an issue of notes for Rs 5,11,00,000 was as follows —

	Rs
Silver Coin Reserve - - -	1,93,22,868
Silver Bullion Reserve - - -	1,17,00,000
Government Securities - - -	2,00,77,132
	5,11,00,000

The invested portion of the Reserve, it will be seen was about two-fifths of the whole

4 The maximum portion of the Reserve which might be held in "securities of the Government of India" was increased by Act III of 1871 to 60 millions of rupees, it was subsequently raised to 80 millions by Act XV of 1890 and to 100 millions by Act XXI of 1896.

5 A later Act, No III. of 1905, while raising the limit of the invested portion of the Reserve to 120 millions of rupees (value at the price at which they are purchased), introduced a change in the description of the securities in which investments might be made by substituting for "securities of the Government of India," "securities of the United Kingdom of Great Britain and Ireland or of the Government of India, or securities issued by the Secretary of State for India in Council under the authority of Act of Parliament and charged on the revenues of India." It also provided that the value of such securities as were not securities of the Government of India should not exceed 20 millions of rupees. A subsequent Act (No. VII. of 1911) raised the limit of the invested portion of the Reserve to 140 millions of rupees, and it provided that the amount of securities other than those of the Government of India should not exceed 40 millions of rupees.

6 The invested portion of the Reserve is now 140 millions, or 14 crores of rupees, of which 10 crores are represented by securities of the Government of India, and 4 crores by securities of the British Government (*see also* paragraphs 45 and 46) The correspondence that passed in 1904 and 1911 between the Secretary of State and the Government of India regarding the additions made in those years is attached (Note II, pages 255-83)

7 A Table (No 1, page 248) appended to this Note shows the total note circulation and the composition of the Reserve held against it in (1) silver (2) gold (when any portion of the Reserve was so held) and (3) securities, as these stood at 31st March in each year from 1862 to 1913, with the percentages borne by silver, gold, and securities to the total amount of the Reserve

Denominations of notes

8 The Act of 1861 did not provide for the issue of notes of lower denominations than 10 rupees A 5 rupee note was introduced by Act III of 1871

9 The following Table shows the numbers of the several denominations of currency notes in circulation on the last day of each of the years 1872-73, 1882-83, 1892-93, 1902-03, and 1911-12 —

Year	5	10	20	50	100	500	1,000	10,000
1872-73	310,001	970,517	441,871	157,965	214,110	27,957	57,635	576
1882-83	475,457	1,955,081	264,819	173,132	301,585	28,513	38,158	2,661
1892-93	495,456	3,917,336	330,083	232,482	568,068	50,648	67,981	5,403
1902-03	872,414	5,960,226	462,952	263,866	898,724	56,348	65,653	8,712
1911-12	2,599,877	15,090,740	65,633	379,255	1,652,209	56,102	92,971	14,320

10 By Act III of 1905 the 5 rupee note issued from any town not in Burma was made legal tender in any place in British India except Burma and was payable at any office of issue not in Burma By Act II of 1909 the exception as to Burma was removed, and the 5 rupee note was made "universal" By Act II of 1910 the 10 rupee and 50 rupee notes were also made "universal," and by a notification issued under that Act the 100 rupee note was also made universal from 1st April 1911 The issue of 20 rupee notes was discontinued under another notification, issued under the same Act, from 18th February 1910

11 There has been a great increase in the popularity of paper money in recent years, which is partly, but not wholly, attributable to the universalisation of various denominations of notes

Composition and location of the Reserve

12 As stated above, the Act of 1861 made provision for the issue, under notification of the Government of India, of notes against gold coin or bullion But this power was not exercised for some time

Gold appears for the first time in the Paper Currency Reserve in 1865, when 20 15 lakhs were held in that form, the quantity had fallen to Rs 72,520 in 1871, and gold disappeared from the Reserve after 1875

Changes introduced consequent on the recommendations of the Herschell Committee and the Fowler Commission Closing of Indian Mints

13 No further change in the composition of the Paper Currency Reserve (other than an increase of the invested portion) was made until 1893 when, in pursuance of the recommendations of Lord Herschell's Committee, an Act was passed (No VIII of 1893) providing for the closing of the Indian Mints to the free coinage of silver This Act took effect from 26th June 1893 On the same date the following notifications were issued —

- (1) Providing for the receipt at the Calcutta and Bombay Mints of gold coin and gold bullion in exchange for rupees, at the rate of 7 53344 grains troy of fine gold for one rupee
- (2) Providing for the receipt of sovereigns and half-sovereigns of current weight at Indian Treasuries as the equivalent of 15 rupees and 7 rupees 8 annas respectively

- (3) Providing for the issue of notes against gold coin and gold bullion at the rate of one rupee to 7 53344 grains troy of fine gold Sovereigns and half-sovereigns of current weight were to be taken as the equivalent of 15 rupees and 7 rupees 8 annas respectively

(A subsequent notification of 1906 modified the first of these notifications so as to provide that only sovereigns and half-sovereigns should be received at the Indian Mints in exchange for rupees)

14 These were the first steps towards the establishment of a Gold Standard They were supplemented six years later by the Act No XXII. of 1899 making British gold coins legal tender

Sovereigns  
made legal  
tender

15. In 1898 an Act had also been passed (II of 1898) enabling notes to be issued against gold held by the Secretary of State in London This Act was intended as a temporary measure to meet exceptional conditions

The Gold  
Note Act

The balances of the Government of India were at a low level There was a difficulty in meeting from them the Secretary of State's drafts, for which there was a strong market demand, money being exceptionally dear in India, with Calcutta and Bombay bank rates 11 and 12 per cent respectively, and exchange having risen to gold point (selling rate of telegraphic transfers on India 1s 4<sup>3</sup>/<sub>4</sub>d per rupee) In order to meet this crisis the Act above referred to was passed Under it the proceeds of the Secretary of State's sales of Council Bills could be set aside at the Bank of England in gold as part of the Indian Paper Currency Reserve The Government of India could issue notes against the gold so set aside, and with them could meet *pro tanto* the Secretary of State's drafts, without reducing their Treasury balances

16 The Act authorising this procedure was, as stated above, intended to be a temporary measure It provided that gold set apart under it by the Secretary of State should be held by him "until he shall transmit the same, or what he shall determine to be equivalent to the same, in gold coin or gold bullion to India, or until the Government of India shall appropriate and set apart in India as a part of the Currency Reserve \* \* \* an amount of coin of the Government of India equal in value to such notes"

17 The utility of the Act as something more than an emergency measure was, however, soon recognised, it was extended for 2½ years by Act VIII of 1898 and for a further period of two years by an Act No VIII of 1900, which empowered the Secretary of State to expend the gold held by him on the purchase of silver bullion and to transmit such bullion to India for currency purposes This Act also enabled the silver bullion purchased under it to be held as security for currency notes until rupees were coined from it It also provided that on receiving silver bullion the Government of India should coin it into rupees, and add to the Currency Reserve a number of rupees equal in value at 15 rupees = 1l to the price of the silver bullion bought and transmitted to them By Act IX of 1902 the main provisions of the Act of 1900 were made permanent

18 Thus the Secretary of State might either (1) hold gold in this country as part of the reserve against the note issue in India, or (2) he might transmit the gold to India to serve the same purpose there, or (3) he might expend it on the purchase of silver, also to form part of the reserve Gold or silver in transit to India, from its location as part of the reserve in England, or *vice versa*, remains part of the reserve while in transit (Act VIII of 1900, Section 2; Act III of 1905, Section 26, and Act X of 1910, Section 21)

19 In practice, only Nos. 1 and 3 of the three alternative courses mentioned in the last paragraph are adopted Ordinarily the balance of trade in favour of India admits of the importation of sovereigns on private account to an extent sufficient to meet the demands of the public, so that the shipment of sovereigns by the Secretary of State from England to India is unnecessary and would involve a needless waste of money on freight, &c.

20 When exceptionally the stock of gold available for issue to the public in India is not sufficiently maintained by imports of sovereigns from abroad, as in the crisis of 1908-09, the gold held in London can clearly be better utilised for the support of exchange if kept there than if shipped to India. It can, in such a crisis, be transferred from Paper Currency Reserve to Treasury balances, against an equivalent transfer in the reverse direction in India. Such a double transfer is equivalent to a remittance of Treasury balances from India to London, and may be used to obviate the necessity for making a remittance by means of the sale of Council drafts, at a time when such a remittance is either impracticable or only practicable at the cost of seriously depressing exchange.

Holding of a portion of the Paper Currency Reserve in London

21 Thus the holding of a portion of the Paper Currency Reserve in London serves a double purpose (1), it may be used in payment for purchases of silver, and (2) it may serve as a support to exchange at times when the balance of trade is unfavourable to India.

22 Some portion of the Reserve has accordingly been so held continuously since 1905. The amount then held in India had risen to 11,000,000*l.*, and appeared to form a disproportionately large component of the Reserve, while the silver portion was somewhat low (less than one-third of the whole), 5,000,000*l.* were accordingly shipped to this country, and it was subsequently decided to aim at holding not less than that amount normally, in London. (See correspondence attached, Note III, pages 284-8) The amount held there reached 8,100,000*l.* in April 1907, in the exchange crisis of 1907-09 it was reduced to 1,500,000*l.* The amount now deposited at the Bank of England is 6,100,000*l.*

23 The transfer of a portion of the Paper Currency Reserve from India to London by the shipment of sovereigns is, however, an unnecessarily expensive process, involving as it does the cost of freight, insurance, &c. Additions to the stock of gold held in the Paper Currency Reserve in London are made (1) by earmarking gold from the money at the Secretary of State's credit at the Bank of England, *i.e.*, transferring to the Paper Currency Reserve, so as to allow the Government of India to issue additional notes or to withdraw rupees from the Reserve in India, or (2) by purchasing sovereigns in transit to India,<sup>2</sup> and diverting them to London, against telegraphic transfers on India.

\* See paragraph 11 of Note on the sale of Council Bills and Telegraphic Transfers, page 218

24 Of the gold coin which flows into India in the ordinary course of adjustment of trade balance only a small portion passes direct into the hands of the public, far the greater part is tendered to Government and passes into the Paper Currency Reserve, to be exchanged for notes or rupees. There is also a steady efflux of gold from Paper Currency Reserve, in exchange for notes or rupees, which does not, however, prevent the gold portion of the Reserve from becoming sometimes unduly large in proportion to the silver portion, as shown in paragraph 22 above. Note I, Table No III, pages 251-3, shows the influx and efflux month by month from 1st April 1899 to 31st March 1911, and week by week from that date onwards.

Quantities of (1) silver (2) gold to be held in the Paper Currency Reserve

25 In any year of normal seasons there is during the winter months a large efflux of silver coin from Currency Reserve, which is counteracted, but only to a partial extent, by a return of rupees from circulation during the summer months or dull season. The net result is that in the absence of new coinage the silver portion of the Reserve tends steadily to contract.

26 In periods of bad seasons and trade depression, as in the years 1908 and 1909, this process may be temporarily reversed. Thus in the period 1st April 1908 to 31st March 1909 the amount of coined silver in the Reserves† increased, with a new coinage of only 24 51 lakhs, from 3,126 lakhs to 4,708 lakhs, so that there was a net return of 1,557 5 lakhs from circulation in the year. This, however, was

† Paper Currency and Gold Standard combined, see paragraph 30, *et seq.*, page 244

altogether exceptional. In the period 1894-95 to 1912-13 the average rate of net efflux from Currency Reserve was 617 21 lakhs per annum.

The figures are as follows —

	Lakhs
1st April 1894 to 31st March 1900, average net annual efflux	320 11
1st April 1900 to 31st March 1908, average net annual efflux	912 3
1st April 1908 to 31st March 1910, average net annual return from circulation	77
1st April 1910 to 31st March 1913, average net annual efflux	886
Average net annual efflux, 1894-5 to 1912-13	617 21

27 After the closing of the Indian mints to the free coinage of silver in 1893, the course adopted was to allow the stock of rupees in Currency Reserve to run down by this automatic process of depletion until it should reach as low a point as was consistent with safety. From 1898 onwards sovereigns flowed into the country in adjustment of the balance of trade in favour of India<sup>1</sup> and passed in considerable quantities into the Currency Reserve, so that at 31st March 1900, the composition of the Reserve, as compared with 31st March 1894, was as follows —

	1894		1900	
	Amount	Percentage of Total	Amount	Percentage of Total
	Lakhs		Lakhs	
Gold - - -	Nil	—	1,350†	47
Silver - - -	2,241	73 7	523	15 1
Securities - - -	800	26 3	1,000	34 9
Total - - -	3,041	100	2,873	100

† Of this 1,125 lakhs (7,500,000†) were held in India and 225 lakhs (1,600,000†) in England

28 Before this date, however, it had become apparent that the rupee reserve was approaching a dangerously low level, and the coinage of new rupees was begun about the end of January 1900. The silver in Currency Reserve fell below 5 crores in February. About 1½ crores of rupees were added to the coinage in the last months of 1899-1900, and some addition to it was made in each year down to 1907-08, the amounts coined in the years 1905-06, 1906-07, and 1907-08 being very large indeed (see Note I, Table IV, page 254). The Silver Reserve was never again allowed to fall to so low a figure as that reached in February 1900, but in January 1904, under pressure of very heavy demands due to the activity of trade, it fell to 750½ lakhs of rupees, or about 28 per cent of the total Reserve.

29 There was practically no new coinage in 1908-9, 1909-10, 1910-11, or 1911-12. Early in 1912, however, the stock in Paper Currency was being rapidly depleted. It fell to 1,157 lakhs at 7th May, in addition to which there was a further stock of 290 lakhs in Gold Standard Reserve (see paragraph below), making a total of 1,447 lakhs, and allowing for a certain return of silver from circulation during the summer months, it appeared clear that the stock held at the commencement of the busy season would be below the required amount (see paragraph 37, page 245). Coinage to the extent of about 1,575 lakhs of rupees was therefore carried out in 1912-13.

Of this amount 310 lakhs passed into what was until recently known as the Silver Branch (see next paragraph)—now the Indian Branch—of the Gold

\* See paragraph 19 above, page 241

Standard Reserve, the remainder passing into the Paper Currency Reserve. The amount held in the two Reserves at 31st March 1913 was 2,245 lakhs, as against 1,830 at 31st March 1912.

The "Ingot Reserve" and the Silver Branch of the Gold Standard Reserve

30 Reference has been made in the last paragraph to the Silver Branch, or as it is now called, the Indian Branch of the Gold Standard Reserve. This had its beginning in 1906. Before that date, *i.e.*, since the autumn of 1904, the Government of India, with the approval of the Secretary of State, had held a portion of their Paper Currency Reserve in the shape of silver ingots, so far prepared for coinage by having passed through the processes of melting, alligating, assaying, &c, as to be capable of being issued in the form of new rupees within five days from the date of an order to coin being given. Credit for these rupees was taken in the Paper Currency Reserve at their bullion value, and the amount of the Reserve so held was at first 300 lakhs of rupees, *i.e.*, silver purchased at a cost of 2,000,000*l.* This silver would of course produce much more than 300 lakhs of rupees, but the excess over 300 lakhs would be a credit to Gold Standard Reserve, not Paper Currency Reserve.

31 This reserve was intended to be treated as an emergency reserve, only to be drawn upon to meet sudden demands, and when drawn upon to be restored to its authorised figure at the earliest possible opportunity. The banking and commercial public had been alarmed at the rapid withdrawal of rupees from Currency Reserve at seasons of exceptionally active trade, as in the winter of 1903-04, when the efflux amounted to more than 4 crores of rupees in the one month of December 1903. Apprehensions had been expressed of a possible failure of the supply of rupees, and the Government of India thought that the holding of an emergency reserve, although held within the Paper Currency Reserve, would strengthen confidence in their position.

32 The next step was a proposal of the Government of India, which was approved by the Secretary of State in January 1906, to increase the "Ingot Reserve" from 300 to 600 lakhs of rupees. Before this was put into effect, however, the original Reserve had been exhausted under the pressure of a great demand for new rupees, and the Government of India submitted in April 1906, a proposal to hold the increased ingot Reserve not as a part of the Paper Currency Reserve, but as a branch of what had, up to that time, been called the "Gold Reserve Fund," but which, in view of its altered composition it was decided to denominate in future the Gold Standard Reserve.

33 The silver composing this fund represented, of course, the profits of other coinage, thus reducing *pro tanto* the amount for the time available for investment in gold securities. The Government of India

\* Financial Despatch to the Secretary of State, No 144, dated 26th April 1906 (See Appendix V, page 137)

did not regard this as an evil. They wrote "as regards gold, the position already attained is undeniably strong. We have accumulated by a natural process a stock of over 12,000,000*l.* in the Gold Reserve Fund, besides over 11,000,000*l.* in the Currency Reserve, and in addition the paper currency investment now includes 1½ millions worth of sterling securities. During seven years we have never been threatened with serious attack from this side. We are far from affirming that the point has been reached or is in sight, when further accumulations of gold should cease. Even a relatively small depletion of our total stock of gold might excite public apprehension and this is the more important now that it has been decided to divide our stock by holding five millions or more in your currency chest in London. At the present time we hold less than four millions of gold in India, and we are assured that no material reduction in this figure would be consistent with public confidence."

Then follows this important statement "We are however satisfied that further direct additions to the Gold Reserve Fund can with advantage be temporarily suspended if such a measure would enable us to strengthen

“ our position on a weaker side The case of silver is wholly different  
 “ *From first to last our only practical difficulty has been the timely provision*  
 “ *of rupees*, and notwithstanding various improvements of method that  
 “ difficulty still remains, and as recent experience has again shown it  
 “ constitutes a real danger ”

34 The practice of holding a portion of the Gold Standard Reserve in silver has met with much criticism, and is discussed in Mr Abrahams' note on the Gold Standard Reserve (see Appendix III, pages 94-6)

It may be mentioned here that the course adopted in 1906 had the effect of increasing the rupee reserves by six crores without increasing at all (as an addition of six crores to the silver held *within* the Paper Currency Reserve would have done) the volume of the notes liable to be presented for encashment\*

\* The silver branch of the Gold Standard Reserve also formed the nucleus to which the large sums (exceeding 8,000,000) received by the Government of India in payment for Bills on London were added, in rupees, during the crisis of 1907-09

The same result could have been obtained by taking from the gold in the Paper Currency Reserve an amount sufficient to buy silver to produce six crores of rupees, and the Government of India considered this alternative method, but dismissed it on the ground that it would unduly deplete their stock of gold Taking as the basis of their calculations a note issue of 42 crores, against which the invested portion of the Reserve was 12, they argued that they could not hold within the Reserve 18 crores of rupees (which they regarded as a suitable stock wherewith to begin the busy season), as well as an ingot reserve of 4 crores (at bullion value, capable of being coined into about 600 lakhs of rupees),

Invested portion	-	12	without reducing the gold portion of the
Rupees	-	18	Reserve to a too low figure, viz, 8
Ingot Reserve	-	4	crores = 5,333,333/ By the method
Gold	-	8	which they adopted they were able to
		42	hold a total silver reserve of 24 crores,
			bearing a proportion of slightly more

Quantities of silver, gold, and investments to be held in Paper Currency Reserve — contd

than 57 per cent to the note circulation, whereas, if they had added 6 crores of rupees to the Paper Currency Reserve, and therefore to the note issue, the silver held would have only borne a proportion of 50 per cent to the larger note issue

35 The proportion which the silver reserves should bear to the total Paper Currency Reserve has not, however, been laid down in terms of a percentage to the rapidly increasing amount of the latter As has been shown above (see paragraph 27, page 243), the percentage has been as low as 18 1/2 in 1900, but when, later on, it fell again as low as 28 per cent, the situation was regarded as dangerous (paragraph 28, page 243)

Silver

36 Conditions are however, changing, and the efflux of rupees from the Reserve in the busy season and the net withdrawal in the whole year have hardly been on so large a scale in the recent years of active trade, 1909-10, 1910-11, 1911-12 and 1912-13, as in earlier years of trade activity, viz, 1903-04 to 1906-07 (see paragraph 28) This appears to have been due partly to an increasing popularity of the note circulation (see paragraphs 10 and 11 above, page 240), and partly to an increasing circulation of gold coin On the other hand the total volume of the Reserve has increased enormously — from 39 crores of rupees at 31st March 1905 to 69 crores at the same date in 1913 Thus if the requisite reserve of silver were calculated on the basis of a percentage to the total note circulation, that reserve would have to be 75 per cent larger\* now than eight years ago Such a method of regulating the stock of rupees to be held in the Reserve, or Reserves, would thus be clearly mistaken

37. The formula accepted for present guidance is that the amount held in Paper Currency and Gold Standard Reserve combined should be at

\* If account were taken only of the “active” circulation, i.e., the total circulation less notes held in Government Treasuries and Presidency Banks, the increase would be less, because owing to the Government balances having been unusually high at the end of the period in question, the difference between total and active note circulation at that date must have been much above the average The exact figures of total and active note circulation at 31st March 1913 are, however, not available.

least 24 crores of rupees at the commencement of the "busy" season (1st October) and not less than 17½ crores towards the end of that season, during which there is normally a large withdrawal of rupees from the Reserve. During the October—December quarter, the accepted policy is to keep the stock in Paper Currency Reserve up to 18 crores, coining silver for the purpose as may be necessary, and to hold the 6 crores in Gold Standard Reserve intact, but after 31st December to draw upon the silver in the Gold Standard Reserve, if necessary, so as to maintain a minimum of 15 crores in Paper Currency Reserve, provided that the total stock of rupees in the two Reserves does not fall below 17½ crores at 31st March. Rupees thus transferred from Gold Standard Reserve to Currency Reserve are to be replaced by gold transferred from the latter to the former Reserve. After the busy season closes and when the return of rupees from circulation into Currency Reserve has set in, gold is to be transferred back from Gold Standard to Currency Reserve, in exchange for silver transferred from the latter to the former. This arrangement gives a degree of elasticity to the system and enables the Paper Currency to be worked safely with perhaps a minimum stock of silver.

38 A formula of this kind must, however, be expected to need revision from time to time. No one expects it to serve as a hard and fast standard for all time, but for the present it seems sufficient to retain it a guide for action, while carefully watching its applicability to the changing conditions.

39 It appears from Note I, Table No IV, page 254, that on the average of the past 19 years an annual purchase of about 23,427,000 ounces of silver, producing about 617 lakhs of new rupees, will serve to keep up a certain stock of rupees. It is sometimes said, I believe, that on the basis of a calculation of this sort, the Secretary of State should buy regularly, year by year, or month by month, a certain number of thousands of ounces of silver. The practice of other countries, such as France and the United States, is cited as an example to be followed by him. It is urged that if he did so the fluctuations in the price of silver would be restricted, and trade between India and countries having a purely silver standard, such as China, would be put upon a sounder basis.

40 But the conditions with which those who are responsible for the regulation of the Indian currency have to deal are different from those existent in any other country in the world. The influence which dominates all others is that of the seasonal monsoon. In good seasons, as stated above, paragraphs 25 and 26, pages 242-3, there is a steady absorption of rupees which, if a tolerably constant succession of good seasons could be relied upon, would justify a regular and constant purchase of silver for new coinage.

41 During the six years, 1902-3 to 1907-08, new coinage proceeded at an average rate of 1,302.72 lakhs a year, with the result that at the end of the period the stocks of silver in Paper Currency and Gold Standard Reserves had increased by 2,005 lakhs. Thus new coinage at the rate of 968.56 lakhs per annum would have maintained the Reserves at the figure at which they stood at 31st March 1902. With hardly any coinage of new rupees the quantity held in Paper Currency Reserve and Gold Standard Reserve

combined was increased between 1st April 1908 and 1st April 1910 from 3,126 to 3,316 lakhs\*. Had the experience of the six years prior to 1st April 1908 been relied upon as a guide for the future, and had new coinage proceeded at the rate of 968.56 lakhs a year, the stock held in the two Reserves combined at the latter date would have been 5,063 lakhs and, with a continuance of bad seasons and purchases of silver for coinage, the accumulation of silver coin might have progressed indefinitely.

42 Purchases of silver, it is to be remembered, must be paid for either with gold taken from the Paper Currency Reserve or by additional sales of Council Bills. But after any lengthened exchange crisis the quantity of gold held in the Currency Reserve must necessarily have fallen low. It had

fallen to 1,500,000*l* at the close of the crisis of 1907-09. At such a time it needs to be replenished, not depleted. Its utilisation for the purchase of silver would directly deplete it; increased sales of Bills to pay for silver would retard its replenishment.

43 The policy of Government, therefore, for this reason if for no other, must be not to buy silver for new coinage when there is already an excessive accumulation of silver coin in the Currency Reserve, and indeed not to buy until the prospect of the stock falling to an unduly low level, measured according to the best estimates that can be framed (*see* paragraph 37, page 245), seems to be in sight.

44 As regards gold, the accepted policy is to allow the stock held to increase with the influx which takes place in times of active trade, that is when the sales of Council Bills fall far short of meeting the demand for remittance to India, until the amount of gold held in the Reserve becomes large out of proportion to the amount of silver. It is impossible to fix a point at which this takes place. Some years ago (1905), when the total Currency Reserve was only about four-sevenths of its present size, a holding of 10,000,000*l* in sovereigns was looked upon as excessive. In the last few months the amount has been allowed to reach nearly 27,000,000*l*, while silver has not been at a dangerously low level. If sovereigns continue to form an increasing part of the circulation, and if rupees continue to be withdrawn on a diminishing scale from the Currency Reserve, the portion of that Reserve held in gold may be allowed to grow. The gold portion of the Reserve need only be reduced if and when it is required to use a portion of it for the purchase of silver. Gold

45 The ratio borne by the invested portion of the Reserve to the whole, as will be seen from Note I, Table I, pages 248-9, has varied greatly. Down to 1879 it was frequently more than 50 per cent of the whole. Since the closing of the Indian Mints it has often exceeded 40 per cent. At 31st March 1913 it was only a little over 20 per cent of the whole. The fiduciary portion of the Reserve held by the Bank of England against its note issue, it may be observed, is seldom less than 31 per cent. The invested portion of the Reserve

46 The growth of the Indian note circulation, as observed above (paragraph 36, page 245), has been extraordinarily rapid of late years. If it continues a further increase of the invested portion of the Reserve will, no doubt, soon become practicable.

NOTE 1—TABLES  
Table No. I.  
PAPER CURRENCY RESERVE

Year (Last day in March)	Total Note Circulation	Composition and Location of the Reserve							Percentage of Silver to total Reserve	Percentage of Gold to Total Reserve	Percentage of Securities to Total Reserve

1910-11	29,28	3,80	33,08	26,06	2,90	28,96	- 4,12	19 94	
1911-12	26,06	2,90	28,96	15,40	2,90	18,30	- 10,66	—	
1912-13	15,40	2,90	18,30	16,45	6,00	22,45	+ 4,15	15,75 00	
							Total	117,26 93 4	Difference between stocks held 1st April 1894 and 1st April 1913
								117,22 93 617 21	

The stock of rupees in Paper Currency Reserve at 1st April 1894 was 2,241 lakhs The stock in Paper Currency Reserve and Gold Standard Reserve combined at 31st March 1913 was 2,245 lakhs Thus the average annual addition from new coinage required (see col 5) to keep up a stock of 2,241 lakhs appears to be 617 21 lakhs  $\left(\frac{117,22\ 93}{19}\right)$

## NOTE II

(See paragraph 6 of Memorandum, p 240)

Increases in invested portion of Paper Currency Reserve sanctioned in  
1904 and 1911 Correspondence between Government of India  
and Secretary of State

Letter from the Government of India, No 295, dated 18th August 1904, to  
the Secretary of State for India

Simla,  
18th August 1904

Sir,

We have the honour to submit, for your favourable consideration, a proposal to amend Section 19 of the Indian Paper Currency Act, 1882 (XX of 1882), so as to raise from ten to twelve crores of rupees, the amount of the Paper Currency Reserve which may be invested, and to permit of the additional two crores being held by the Secretary of State in London in gold securities of the Government of India or of the United Kingdom

2 The maximum limit of the invested portion of the Reserve was raised in 1896 from eight to ten crores, and, acting on the sanction accorded in Lord George Hamilton's telegram of the 17th of December 1896, Lord Elgin's Government increased the investment in that month to the full amount permissible by law

3 Since that time there has been a large increase in the circulation of currency notes, as the following figures show The average, minimum, and maximum of the total circulation for the years 1896-97 to 1903-04 have been (in lakhs of rupees) —

	1896 97	1897-98	1898 99	1899-1900	1900 01	1901-02	1902 03	1903 04.
Average	25,98	24,24	25,63	27,96	28,88	30,03	33,74	36,41
Minimum	23,58	22,86	23,25	26,26	27,90	27,68	31,25	33,94
Maximum	29,59	24,76	28,20	29,27	30,78	31,86	35,72	38,21

Excluding the notes held in the Government Reserve Treasuries and at the head offices of the Presidency Banks, these figures become modified as follows —

	1896 97	1897 98	1898 99	1899-1900	1900-01	1901 02	1902-03	1903 04.
Average	21,40	20,35	20,79	23,09	23,86	23,16	25,74	28,70
Minimum	20,57	19,44	19,43	21,94	22,85	22,39	23,93	27,44
Maximum	22,38	21,20	22,49	24,41	25,02	24,40	27,35	30,30

4. It will be seen that the average net circulation has risen in these seven years from 21 4 to 28 7 crores, or by 34 per cent, and that an increase of two crores in the invested portion of the Reserve would raise the latter to less than 42 per cent of the average net circulation of the past year We do not think it safe to assume that the high level of that year will invariably be

maintained, but in view of the fact that the minimum net circulation has not fallen below 22,39 lakhs in the last four years, we are of opinion that the proposed increase of the investment is fully justified

5 We have consulted the Presidency Banks and the Chambers of Commerce on the subject, and we enclose a copy of their replies. It will be seen that, with the solitary exception of the Bank of Bombay, they are unanimously of opinion that the investment can safely be increased to the extent proposed. We do not think it necessary to dwell on the objections raised by the Bank of Bombay, which are based on the theory that the rupees in India are, or are in danger of becoming, redundant. We have provided as far as possible against this danger by crediting the profits of coinage to the Gold Reserve Fund, and the steady growth of that fund affords, in our opinion, the best guarantee against the depreciation of the rupee. The argument of the Bombay Bank that gold should be held in India instead of being invested appears to be aimed against the investment of the Gold Reserve Fund rather than against the proposal now under discussion, and, since the principle of investment has been accepted in the case of that fund, (to the extent of a substantial portion thereof, though not necessarily to the whole) it seems to us to be unprofitable to discuss it in connection with the minor question of the investment of the Currency Reserve.

6 We turn therefore to the question of making the investment in gold securities. Different opinions have been expressed on this point, and some of the bodies consulted appear to have been influenced by considerations other than the security of the Reserve and the convertibility of the note issue. We hold strongly that these are the chief points to be considered, and that it would not be proper to admit into the discussion such considerations as the relief of holders of our 3 per cent rupee loan or the improvement of our credit as borrowers in India or in London.

7 The securities selected for investment should, we think, be such as would be readily realizable if it should become necessary to convert them into coin. Such a necessity is only likely to arise in the event of a serious financial or political crisis occurring in India, and in that case our rupee securities would inevitably be depreciated and difficult to sell, while it is probable that sterling securities would not be so seriously affected, owing to the greater capacity and solidity of the London market.

8 The possession of sterling securities would carry the further advantage that the proceeds would be receivable in London, *ie*, in the market in which, if more rupees were required, we should have to buy silver, and in which also, if gold were required for strengthening exchange, the demand would make itself felt.

9 Lastly, in the event of our being compelled to sell any of the securities held in the Currency Reserve, it would be convenient to have two or more classes of stock to choose from, and this power of selection would probably reduce the loss on the transaction.

10 For these three reasons we consider that the investment in sterling instead of rupee securities would be distinctly advantageous.

11 In the Despatch\* recommending the last increase in the investment of the Currency Reserve Lord Elgin's Government expressed a doubt whether, in considering a proposal put forward solely from the point of view of the Currency Reserve, it was right to be influenced by the possible effect which the measure might have upon the exchange value of the rupee. We are emphatically of opinion that the primary and essential function of the Currency Reserve is to secure the convertibility of notes into current coin, and that nothing whatever should be allowed to interfere with the arrangements best suited for that purpose. But so long as this condition is scrupulously satisfied, we see no reason why, in the management of the

\* No 131, dated the 2nd June 1896

Reserve, we should not have regard to any incidental advantage which may arise therefrom. In the years which have elapsed since Lord Elgin's despatch was written it has been found that the Currency Reserve forms an important, if not an essential, part of the machinery by which the par of exchange between the sovereign and the rupee is maintained. The maintenance of a stock of both coins in the Reserve enables us to exchange them freely in India, and if a demand for gold for export should arise, owing to a temporary weakening of exchange, we should be able to meet it to a not inconsiderable extent from the Currency Reserve without depressing the sterling value of the rupee and without drawing upon the Gold Reserve Fund. Conversely the stock of rupees in the Reserve enables us to absorb redundant sovereigns and to retard the undue appreciation of the rupee until silver can be obtained from England for coinage.

12 In determining, therefore, the amount of coin which it is advisable to retain in the Currency Reserve, we are of opinion that it is not improper to take into account this secondary function which the Reserve performs in providing a margin against temporary fluctuations of exchange, and we have considered the question from this point of view. It will be observed that the Banks of Bengal and Bombay have been influenced by similar considerations. The approval of the former to the increase of the investment is subject to the proviso that the proportion of the gold held in the Reserve should be limited and not allowed to rise unduly to the prejudice of the silver reserve, while the view of the latter Bank is, as observed above, that the possession of a large sum of gold in the Reserve will strengthen the position as regards stability of exchange.

13 The proportion of silver in the Reserve which we have found by experience to be sufficient at the opening of the busy season, when the demand for rupees sets in, is approximately one-third of the total note circulation, and we have recently laid before you a suggestion to supplement the coined rupees by a special reserve of three crores worth of silver. The average gross note circulation in the past year was 36 41 crores, and if a silver reserve were held against this, consisting of one-third (12 14 crores) in rupees plus 3 crores uncoined, an investment of 12 crores would leave a margin of 9½ crores to be held in gold. If the average circulation of the past four years be taken, the margin available for gold would still be 6½ crores. We consider that the margin thus indicated is ample, and that a larger proportion of gold is not at present required in this country.

14 On the above grounds we ask your permission to introduce a Bill during the next Calcutta session to give effect to the proposal stated in the first paragraph of this despatch. We propose to take up the necessary legislation in Calcutta, firstly, because it is desirable to allow the measure to be fully discussed by the representatives of commercial interests; and, secondly, because we have in hand the preparation of a Bill for the simplification and consolidation of the Paper Currency Act, which will probably have to be referred for your orders and will in that case not be ripe for introduction until the Calcutta session. We hope to be able to deal with all pending matters relating to the Currency Reserve in one Bill, but, in view of the importance of the present proposal, we have thought it advisable to refer it to you separately.

We have, &c,

(Signed)

AMPTHILL

## Enclosure No. 1

Letter to the Chambers of Commerce and the Presidency Banks, No 2632A,  
dated the 29th April 1904, and enclosures

SIR, Simla,  
29th April 1904

I am directed to request that the Chamber of Commerce will favour the Government of India with an expression of <sup>its</sup> <sub>their</sub> opinion on a proposal, which is under the consideration of the Governor-General in Council, to take power by legislation to increase the invested portion of the Paper Currency Reserve from ten to twelve crores of rupees

2 The history of the invested Reserve, and the considerations which have from time to time moved the Government of India to increase it, are set forth in Mr Finlay's letters No 6468, dated 23rd December 1889, and No 5318A, dated 7th November 1895, of which copies are enclosed for reference. It has throughout been the policy of the Government of India to fix the limit for investment well within the amount of notes which has been found by experience to be necessary for the monetary transactions of the country and which may therefore confidently be expected to be always outstanding. The Governor-General in Council has approached the present proposal with the same guiding principle in view.

3 Tables are appended to this letter showing month by month from the year 1887-88 the gross circulation of currency notes in India, and also, from the year 1889-90, the net circulation, excluding the amounts held in the Reserve Treasuries of the Government and at the head offices of the Presidency Banks. It is to the latter figures that the Government of India chiefly look in estimating the permanent circulation among the public. From the following analysis of these figures the proposed increase of the investment to 12 crores would appear to be fully justified.

4 Prior to the last increase of the investment, which was made in December 1896, the average and minimum net circulation had been as follows—

	Average (Lakhs)	Minimum (Lakhs)
1893-94 - - -	19,23	18,24
1894-95 - - -	20,21	18,64
1895-96 - - -	22,11	20,83
1896 (8 months)* - - -	21,71	21,37
Average - - -	20,73	19,77

\* April to November

The corresponding statistics for the last four years are given below—

	Average (Lakhs)	Minimum (Lakhs)
1900-01 - - -	23,86	22,85
1901-02 - - -	23,16	22,39
1902-03 - - -	25,74	23,93
1903-04 - - -	28,70	27,44
Average - - -	25,36	24,15

5 The sum of 10 crores of rupees to which the investment was raised in 1896 amounted to 48·24 per cent on the previous average net circulation as worked out above, and to 50·58 per cent on the average minimum of such circulation. A further increase now to 12 crores would bring the investment up to 47·32 per cent on the more recent average of the net circulation and to

49.69 per cent on the average minimum. The present circumstances correspond therefore very closely to those which prevailed in 1896, and the reasons which were put forward for an increase of the investment in that year, and which were subsequently justified by results, appear to the Government of India to be equally operative now, and fully to justify a further increase. The case for a further investment of two crores is even stronger at the present time than it was in 1896 because the net circulation has lately shown a very rapid tendency to increase, and this increase may be taken as an index of a growth of the monetary transactions of the country and consequently of the minimum amount of notes which will be necessary for such transactions.

6 Moreover, in 1896 some doubts were expressed as to the effect on the stability of exchange of a measure which would result in increasing the rupee circulation by two crores. At the present time the stock of gold in the Currency Reserve is so high that the Government of India could view with equanimity such an addition to the silver currency.

7 In this connection I am to point out that the gold held in the Reserve affords a means of effecting the proposed investment without altering the volume of the rupee currency, and I am to say that it has been suggested to the Government of India that it would be desirable for some reasons to make the investment, not in rupee securities, but in sterling securities, either of the British Government or of the Government of India. The Government of India would be glad to learn whether <sup>the Chamber has</sup> Your Directors have any observations to offer on this suggestion.

8 As on former occasions, if it should be decided that an increase in the amount of the investment may safely be made, care would be taken to exercise the power only on some convenient opportunity when it would be possible to carry out the operation without prejudicing the market in Government securities.

I have &c,  
R A MANT,  
Deputy Secretary to the Government of India

Letter No 6468, dated 23rd December 1889, from J F Finlay, Esq.,  
 Officiating Secretary to the Government of India, Finance and Commerce  
 Department, to the Secretary to the Chamber of Commerce, Calcutta  
Madras  
Bombay

I am directed by His Excellency the Governor General in Council to request that the Chamber of Commerce, Calcutta, Madras, Bombay, will be good enough to favour the Government of India with an expression of its opinion upon a proposal to increase the portion of the Paper Currency Reserve which is invested in Government securities

2 When the issue of a Government Paper Currency was first considered by the Government of India in 1860, it was proposed to fix the limit of the portion of the Reserve which might be invested in Government securities at a fixed proportion, two-thirds, of the value of notes in circulation. But it was decided that the safer and sounder principle was to prescribe a fixed sum as the limit, that sum being somewhat less than the smallest aggregate amount of notes which experience had proved to be necessary for the monetary transactions of the country. It was considered that notes to this amount at least would always be outstanding, and that consequently it would not be necessary to keep coin in reserve for the purpose of cashing them. When this principle was adopted it was contemplated that it would be necessary to vary the limit in accordance with the circumstances of the times, and that the maximum sum that might be invested in Government securities would be fixed from time to time by legislation. In the Paper Currency Act of 1861, the sum to be so invested was fixed at four crores of rupees. In 1870 in view of the facts that the note circulation had increased considerably since that limit was fixed, and that the investment in Government securities bore a much smaller proportion to the total reserve than when the Act of 1861 was first brought into operation the limit was raised to six crores. The minimum circulation of each year from 1862 to 1870 will be found in the statement appended. The maximum limit of investment in Government securities is still six crores of rupees.

3 Since 1870 the note circulation has greatly increased, as will be seen from the Statement attached. In that year the minimum circulation was about  $8\frac{3}{4}$  crores of rupees, but since 1880-81 the minimum circulation has never fallen as low as 12 crores, for the last five years the minimum has exceeded 13 crores, and in the present year it approaches 16 crores. There is no reason to doubt that the minimum circulation in the future will continue to be at least 50 per cent in excess of the minimum of 1870. With a minimum circulation in the present year of, say,  $15\frac{3}{4}$  crores, the investment of the Reserve remaining at six crores, the sum held in coin and bullion amounts to about  $9\frac{3}{4}$  crores.

4 The primary consideration in dealing with this question must be the necessity of securing the immediate convertibility of the note under all circumstances to which we can reasonably look forward. His Excellency in Council has no doubt that the reserve held in coin and bullion at the present time is more than sufficient to secure convertibility under all ordinary conditions, and the question to be decided is whether or not it is necessary to maintain the present high rate of reserve with a view to possible difficulties of the future which may never arise. In connection with this aspect of the case, I am to call the attention of the Chamber to Section 21 (1) of the Paper Currency Act, 1882, under which the general credit of Government is pledged for the convertibility of the note. The Currency Reserve would, therefore, be supplied in case of need by the cash balance at the disposal of the Government of India, and the note would not cease to be convertible, even if the Currency Reserve was exhausted, so long as the Government of India could spare funds from the general cash balance at its disposal. The proposal

which has been under the consideration of the Government of India is to take power from the Legislature to increase the amount of the invested reserve to eight crores of rupees, but it is not intended for the present to increase the investment by more than one crore, any further increase up to the limit of eight crores being made only if and when circumstances are favourable, and it is possible that even the increase of one crore might not be made for some time

5 I am to say that His Excellency in Council will be glad to be favoured with the views of the Chamber as early as may be convenient

\* From 1865 to February 1876

Letter No 5318A, dated 7th November 1895, from J F Finlay, Esq, Secretary to the Government of India, Finance and Commerce Department, to the Secretary, Chamber of Commerce, <sup>Calcutta</sup> ~~Madras~~ <sup>Bombay</sup>

I am directed by His Excellency the Governor-General in Council to request that the Chamber of Commerce will be good enough to favour the Government of India with an expression of their opinion upon a proposal to take power from the Legislature to raise the limit of the Paper Currency Reserve which is held in Government securities, from eight to ten crores of rupees

2 The maximum limit of the invested Reserve was raised on the last occasion in 1890 from six to eight crores by Act XV of 1890, and in accordance with the requirements of the Currency Act the increases to the investment from time to time were separately notified, the limit of the investment having been raised to seven crores by the Notification in this Department, No 5900, dated 19th December 1890, and to eight crores by the Notification No 4861, dated 3rd December 1891

3 The considerations involved in the question of an increase in the currency investment were fully discussed in 1890, and the history of the subject was brought down to 1889 in my letter to the Chambers of Commerce No 6468, dated 23rd December 1889, a copy of which is enclosed. The following table gives the figures of the circulation of Paper Currency for all India from 1887-88 (*in lakhs of Rupees*) —

Month	1887-88	1888-89	1889-90	1890-91	1891-92	1892-93	1893-94	1894-95	1895-96

Minimum - -	13.90	14.83	15.47	17.42	22.62	23.96	24.22	29.50	—

The above figures indicate that the total circulation of currency notes has steadily increased since the year 1887-88, and has now reached a figure about double that of the year 1889-90. But the Government of India are of opinion that these figures of total circulation show the increase as larger than can be considered to be the normal increase which may, with due regard to the caution desirable in the discussion of the question now under consideration, be counted on as certain to continue. In the first place, the Government balances during the past two years have been unusually high, and a great portion of the excess balances, held in the Government Reserve Treasuries in currency notes is included in the circulation. Secondly, the figures include the notes held by the Presidency Banks at their head offices, but the demands for encashment of notes so held are occasionally so large that a considerable portion of them cannot be treated as permanently in circulation.

4. On the grounds above explained, it is considered that for the present purpose it is desirable, in order to prevent all risk of over estimating the

permanent circulation, to exclude the balances of currency notes in the head offices of the Presidency Banks and in the Reserve Treasuries from the total circulation. After such exclusion the figures for 1889-90 and subsequent years in the Table in paragraph 3 will stand as follows—(In lakhs of Rupees)

Month	1889-90	1890-91	1891-92	1892-93	1893-94	1894-95	1895-96
April - - -	13,20	13,71	17,28	18,72	20,84	18,64	21,81
May - - -	13,39	13,96	17,41	19,47	19,99	19,00	21,34
June - - -	13,40	13,66	17,90	19,97	19,49	19,09	20,83
July - - -	13,44	13,73	17,37	20,59	19,19	19,10	21,49
August - - -	12,95	14,48	17,61	20,49	18,96	19,49	21,58
September - - -	13,20	15,13	17,69	21,66	19,09	19,55	—
October - - -	13,51	15,88	19,17	22,12	18,83	20,12	—
November - - -	13,31	15,67	19,01	22,30	18,84	20,65	—
December - - -	13,69	16,59	19,39	22,40	19,66	21,82	—
January - - -	13,62	16,92	18,21	21,76	19,19	22,15	—
February - - -	13,33	17,51	18,44	21,33	18,24	21,65	—
March - - -	13,50	17,62	18,45	21,68	18,49	21,31	—
Average - - -	13,38	15,40	18,16	21,04	19,23	20,21	—
Maximum - - -	13,69	17,62	19,39	22,40	20,84	22,15	—
Minimum - - -	12,95	13,66	17,28	18,72	18,24	18,64	—

From this Table it is observed that when the last increase to the investment was discussed towards the end of 1889, the circulation (excluding balances in the Reserve Treasuries and head offices of the Presidency Banks) amounted to only about 13 to 13½ crores, while during the three years ending 1894-95 the minimum circulation has been well above 18 crores

5 On a consideration of the figures given above, it appears to the Government of India that the circulation of Currency notes has now attained a level about 50 per cent higher than in the year 1889-90, and that it will be quite safe now to raise the limit of the investment to ten crores. The figures might indeed justify an even greater increase in the investment, but the Government of India do not desire to go to the full limit of safety. An investment of the Reserve to the extent of ten crores would represent only about 50 per cent of the average circulation as given in paragraph 4. The proposed increase would therefore appear to leave a fully sufficient margin to secure the immediate convertibility of the note even during a commercial crisis. As previously explained in paragraph 4 of my letter of 23rd

December 1889, over and above the reserve of coin and securities, the general credit of Government is pledged for the convertibility of the note under section 21 (1) of the Paper Currency Act.

6 The proposal which His Excellency the Governor-General in Council is disposed to make now is to take power from the Legislature to increase the limit of the investment from eight to ten crores, and for the reasons above explained, he considers, subject to the opinions he may receive from the Presidency Banks and the Chambers of Commerce, that this power may be used with safety on some convenient occasion when it may be possible to carry out the operation without affecting the public market.

7 I am to say that His Excellency in Council will be glad to be favoured with the views of the Chamber as early as may be convenient.

## Enclosure No 2

No G P L 122-6, dated Madras, the 17th May 1904

From J Kerr Greig, Esq, Acting Secretary and Treasurer, Bank of Madras,  
to the Secretary to the Government of India, Finance and Commerce  
Department

I have the honour to acknowledge receipt of your letter No 2632A, dated the 29th ultimo, on the subject of a proposal, which is under the consideration of the Governor-General in Council, to take power by legislation to increase the invested portion of the Paper Currency Reserve from 10 to 12 crores of rupees, and in reply I am desired to say that, in view of the recent increase in the permanent circulation, my Directors are of opinion that the proposed increase of two crores of rupees in the invested portion of the Reserve may be made with safety

2 My Directors are also of opinion that the investment should be made in rupee securities of the Government of India as giving the best return, and it appears to them that advantage might be taken of the issue of the new loan as a convenient opportunity to carry out the operation without prejudice to the market

## Enclosure No 3

Dated Cawnpore, the 23rd May 1904

From A. Shakespear, Esq, Assistant Secretary, Upper India Chamber of  
Commerce, to the Secretary to the Government of India, Finance and  
Commerce Department

I am directed to acknowledge receipt of your letter No 2632A, dated 29th ultimo, inviting the views of this Chamber on a proposal to augment the invested portion of the Paper Currency Reserve by a transfer of two crores of rupees from the metallic Reserve

2 My Committee have carefully studied the correspondence dealing with the past history of the Currency Reserve, which served as an accompaniment to your communication, and in their opinion the present position fully justifies the proposal now put forward, which is deserving of the undivided support of the commercial community.

The question involved in paragraph 7 of your letter is perhaps a difficult one to express an opinion on without a fuller knowledge of the principles which are to regulate the Government of India's policy with regard to future borrowings, but looking to the fact that it would result in a reduction in the amount of interest payable in sterling, my Committee are disposed to recommend that Indian sterling loans should be selected for investment of the Currency Reserve, and the present ratio of gold and silver composing the metallic Reserve would seem to indicate the expediency of releasing two crores from the gold portion of the Reserve

## Enclosure No 4

Dated Bombay, the 26th May 1904.

From C. H. Armstrong, Esq, Chairman, Bombay Chamber of Commerce, to  
the Secretary to the Government of India, Finance and Commerce  
Department.

Under the instructions of the Committee of the Bombay Chamber of Commerce, I have the honour to acknowledge the receipt of your letter No 2632A, of the 29th April 1904 (with accompaniments), in which the opinion of the Chamber is invited relative to a proposal, which is under the

consideration of the Governor-General in Council, to take power by legislation to increase the invested portion of the Paper Currency Reserve from ten to twelve crores of rupees

2 The matter has received very careful consideration, and I am now instructed to say—

- (1) The Committee are in favour of the invested portion of the Paper Currency Reserve being raised from 10 to 12 crores as the position at present seems to warrant such an increase
- (2) With reference to the enquiry in paragraph 7 of the Government of India's letter as to whether this Chamber has any observations to offer on the suggestion that the investment might be made in sterling securities, my Committee desire to remark that as a depletion of the moderate supply of coined rupees now held in the silver Reserve seems to them undesirable, they favour the proposed investment being made in sterling securities, the stock of gold which at the present time is not much needed for the purposes of circulation being sufficient for such a purpose

Should the Government of India decide, however, on investing in silver securities, my Committee would suggest that consideration be shown to the holders of the 3 per cent Loan and that the investment should be largely made in this paper

---

Enclosure No 5

Dated Rangoon, the 20th May 1904

From The Honourable C H Wilson, C.I.E., Chairman, Rangoon Chamber of Commerce, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge the receipt of your letter No 2632A, dated 29th April 1904, with enclosures, inviting the opinion of this Chamber on (1) a proposal to increase the invested portion of the Paper Currency Reserve from 10 to 12 crores of rupees, and (2) on the suggestion that the additional investment should not be in rupee securities but in sterling securities either of the British Government or of the Government of India

2 In reply I have the honour to say that, the proposed increase of the invested portion of the Currency Reserve from ten to twelve crores appears to be in accordance with precedent, and the conservative policy hitherto pursued by the Indian Government in this connection, and in the opinion of the Committee, is amply justified by the facts and figures laid before them

3. With regard to the suggestion that the additional two crores should be invested in sterling securities either of the British Government or of the Government of India, the Committee venture to draw attention to the disparity still observable between the market values of these and the rupee securities of the Indian Government, a disparity which can only be due to the scepticism still prevalent in some quarters as to the stability of Indian exchange

4 The Committee believe that any investment of the nature suggested, would tend still further to accentuate this divergence to the obvious detriment alike of the Indian Government and the Indian investor, while a converse effect should be produced by an investment of the two crores in rupee securities, for which reason the Committee are strongly in favour of the latter course.

---

## Enclosure No 6

Dated Calcutta, the 25th May 1904

From W D Cruickshank, Esq, Secretary and Treasurer, Bank of Bengal,  
to the Secretary to the Government of India, Finance and Commerce  
Department

I have the honour to acknowledge receipt of your letter No 2632A, dated 29th ultimo, asking for the opinion of the Directors of the Bank on a proposal, which is under the consideration of the Governor-General in Council, to take power by legislation to increase the invested portion of the Paper Currency Reserve from 10 to 12 crores of rupees. Your letter encloses for reference copies of Mr Finlay's letters of 23rd December 1889 and 7th November 1895, giving the history of the invested reserve and the considerations which have from time to time moved the Government of India to increase it.

The Directors have considered these letters, with the statements that accompanied them, and also the reports and statistics published by the Head Commissioner of Paper Currency.

2 The Directors observe that soon after the increase in the invested portion of the Currency Reserve in 1896 a considerable contraction of the gross note circulation took place, and that it continued for upwards of two years without showing any marked sign of recovery. The figures are as follows (*In lakhs of Rupees*) —

Years	Gross Note Circulation	Reserves			Investments	Proportion of Uninvested Reserve to Circulation.
		Silver	Gold.	Total		
1894-95 - -	31,11	23,11	—	23,11	8 00	74.28
1895-96 - -	29,28	21,28	—	21,28	8 00	72.67
1896-97 - -	25,98	17,31	—	17,31	10 00	66.62
1897-98 - -	24,24	14,22	—	14,22	10 00	58.66
1898-99 - -	25,63	14,93	70	15,63	10 00	60.98

In the years 1894-95 to 1897-98 the whole of the uninvested portion of the Currency Reserve consisted of silver only and it is understood that throughout the whole period even when the gross note circulation was at its lowest point, the coined rupees in hand were amply sufficient to meet all demands. The increase in the invested portion of the Currency Reserve effected in 1896 was therefore fully justified by results.

3 The expansion of the gross note circulation from the lowest point touched in 1897-98 has been continuous and important, but the uninvested effective reserve in silver has not increased in proportion, as gold has taken the place of silver to a very large extent. The following figures, which are taken chiefly from the Head Commissioner's Report, dated 31st July 1903, show the progress of the gross note circulation and Reserves for the last four years (*In lakhs of rupees*) —

Years	Gross Note Circulation	Reserves				Proportion of Uninvested Coin to Note Circulation.		
		Silver	Gold	Total	Investments	Silver	Gold.	Total.
1899-1900 -	27,96	11,43	6,54	17,96	10,00	40.84	23.39	64.23
1900-01 -	28,88	6,68	12,19	18,87	10,00	23.13	42.20	65.33
1901-02 -	30,03	12,42	7,62	20,04	10,00	41.35	25.37	66.72
1902-03 -	33,74	13,50	10,24	23,74	10,00	40.01	30.35	70.35

4 As already stated, the uninvested silver reserve from 1894-95 to 1898-99 appears to have been amply sufficient to meet all demands upon it,

but the same cannot be said of it throughout the years 1899-1900 to 1902-03. For the greater part of the calendar year 1900 the uninvested silver reserve in the Currency Department was inadequate, and the scarcity of silver coin caused great inconvenience to the public generally, and to traders some actual loss as well.

5 It was thought at the time that the Government of India delayed the coinage of silver because of an undue apprehension of a redundancy in the circulation, and a desire to increase the gold reserve to a high figure.

6. By means of coinage and large additions to the silver reserve the inconvenience was in time removed, and there has been no recurrence, but the experience is a recent one, and the recollection of it is apt to give rise to apprehension whenever the silver reserve shows a tendency to run down, or when large demands for silver coin appear to be probable, as was recently the case.

7 The amount of the invested Currency Reserve is fixed from time to time by legislation. The Directors do not at present go so far as to suggest that the amount of gold to be held in the uninvested Reserve should be similarly fixed, but they think it is desirable that provision be made departmentally for the replenishment of the silver reserve automatically whenever it may fall or show signs of falling to a certain point, and that this point should be fixed well above the amount which experience shows to be a safe provision for all probable demands.

8 Subject to the proportion of gold in the uninvested portion of the Currency Reserve being limited and not allowed to rise unduly to the prejudice of a safe silver reserve, I am to inform you that the Directors are of opinion that the proposal to increase the investments from 10 crores to 12 crores is warranted by the position and prospects of the note circulation of the country.

9 With regard to the suggestion that it would be desirable for some reasons to make the investment not in rupee securities but in sterling securities, either of the British Government or of the Government of India, I am to inform you that the Directors think that there is something to be said in favour of such a step, although it is a departure from ordinary practice. In the first place, the invested portion of a Currency Reserve, to be really effective in case of need, should be readily saleable, and there can be no doubt that sterling securities either of the British Government or of the Government of India would be more readily saleable in London than rupee securities either in this country or in London. Besides, as the sterling securities would doubtless be held in London, the proceeds of sales would be immediately available on the spot for the purchase of silver or gold, as required, at the chief source of supply. Again, the investment of the Currency Reserves in sterling securities would leave the issues of rupee paper free to investors in this country. In this connection I am instructed to attach hereto an extract from a letter addressed by the Bank to the Bengal Chamber of Commerce, on 15th November 1902, relative to the large increase that has taken place in previous years in the amount of rupee paper held by Native investors, and to the desirability of encouraging such investments. The statements referred to in that letter have been made up to date, and show a further marked increase in the amount of Native holdings, while there is corresponding decrease in the amount of rupee paper held in London.

---

Extract from a Letter from the Secretary and Treasurer, Bank of Bengal, to the Secretary, Bengal Chamber of Commerce, Calcutta, dated 15th November 1902

\* \* \* \* \*

I beg to enclose herewith statements showing the amounts of enfaced and unenfaced rupee paper outstanding at the end of March each year since 1893, together with the amounts of all new issues and repayments, and, with reference thereto, to state that the Bank of Bengal attached great importance to the Government Rupee Loans being taken up and held in India, more especially by Native investors, and take every opportunity of encouraging this form of investment. You will observe that India has not only taken up and retained all Rupee Loans issued in the course of the last 10 years, but has also absorbed in the same period about 6½ crores worth of paper re-enfaced from London. The Bank hope that future Rupee Loans may issue on a scale and under conditions likely to maintain in the Indian money markets a supply of paper sufficient to meet investment demands, and that prices will be such as to induce Native investors to increase their holdings rather than tempt them to reduce them for the sake of a casual profit

## Enclosure No 7

Dated Madras, 6th June 1904

From the Hon Sir George Arbuthnot, Chairman, Madras Chamber of Commerce, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter of the 29th April, asking for an expression of the views of the Chamber with reference to a proposal which is under the consideration of the Governor-General in Council to take power by legislation to increase the invested portion of the Paper Currency Reserve from Rs 10 to Rs 12 crores

I have the honour to state that your letter has received the careful consideration of the Chamber, which is of opinion that it would be both safe and expedient in the interests of the tax-payers generally to make the proposed increase in the invested portion of the Paper Currency Reserve

With regard to the question as to whether the investment should be in rupee or sterling securities, this Chamber is decidedly of opinion that it should be in the rupee securities of the Government of India. To make the investment in the sterling securities of the British Government would seem to imply a doubt on the part of the Government of India of their own credit, and to make it in Indian Government sterling securities would be taken to imply an equally objectionable doubt of the permanency of their own exchange policy and the stability of Indian exchange. It will, this Chamber is of opinion, be in the interests alike of the Indian tax-payer, the Indian investor in rupee paper, and the Government that the investments should be made in the rupee securities of the Government of India

## Enclosure No 8

No 189, dated Karachi, the 8th June 1904

From F S Couper, Esq, Secretary, Karachi Chamber of Commerce, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 2632A, dated the 29th April last, requesting an expression of opinion on a proposal under consideration of the Governor-General in Council, to increase the invested portion of the Paper Currency Reserve from 10 to 12 crores of rupees,

I am directed by my Committee to express their approval of the proposed legislation by Government, as, in their opinion, the position as set forth in the Tables you attach, fully justifies such action

My Committee are also completely in accord with the suggestions (a) that the investment should be made from the *Gold* in the Reserve, and (b) in sterling securities rather than in rupee securities

---

Enclosure No 9

No 931, dated Calcutta, the 9th June 1904

From W Parsons, Esq, Secretary, Bengal Chamber of Commerce, to the Secretary to the Government of India, Finance and Commerce Department

I am directed by the Committee of the Bengal Chamber of Commerce to acknowledge receipt of your letter No 2632A, dated Simla, 29th April 1904, asking for an expression of opinion on the proposal now under the consideration of the Governor-General in Council to take power by legislation to increase the invested portion of the Paper Currency Reserve from 10 to 12 crores of rupees

2 In paragraph 7 of your letter you ask for a further opinion on a proposal, also before the Government of India, to make the investment not in rupee securities but in sterling securities either of the British Government or of the Government of India

3 The Committee have given their very close and careful attention to both the points raised in your letter, and I am instructed to say with reference to the first that they are unanimously of opinion that the invested portion of the Paper Currency Reserve can be safely increased from ten to twelve crores of rupees

4 As to the second point on which an opinion is asked, viz, the advisability of making the new investment in sterling securities, the Committee are in favour of this proposal, notwithstanding that it involves a departure from long established precedent. Although the Committee would not suggest any alteration of this kind being made in connection with the ten crores already invested, they consider it would be advisable to invest the additional two crores now under consideration, in sterling securities either of the British Government or the Government of India. It appears to them that in case of need such securities would be more readily and quickly realised in London, where they would no doubt be held, than would be possible with rupee securities either in India or in England, and occasions might arise for the speedy purchase of silver, for which this investment would be available on the spot, and the time required for the transmission of gold from India would be saved

---

Enclosure No 10.

No 192, dated Bombay, 9th June 1904.

From J Begbie, Esq, Secretary and Treasurer, Bank of Bombay, to the Secretary to the Government of India, Finance and Commerce Department.

I have the honour to acknowledge receipt of your letter No. 2632A, dated 29th April last, in which you request that the Directors of this Bank will favour the Government of India with an expression of their opinion on a proposal which is under the consideration of the Governor-General in Council to take power by legislation to increase the invested portion of the Paper Currency Reserve from ten to twelve crores of rupees.

In reply I am instructed to address you as follows --

2 You append to your letter statements for the purpose of showing that an increase would be justified in view of the enlarged net circulation of notes in the hands of the public, and also of the fact that the invested portion of the Reserve would then bear nearly the same percentages to the average minimum and net circulation as it did when the last investment was made. The statements include the figures for the years 1902-03 and 1903-04, which show a very exceptional inflation, and my Directors are not disposed to agree with the opinion expressed in your letter that this recent and very rapid increase may be taken as an index of a growth of the monetary transactions of the country and consequently of the minimum amount of notes which will be necessary for such transactions. So far as the figures for the past two years are concerned, my Directors think it is unsafe to place much reliance on them as indicating a permanent larger use of notes as currency. They consider that a large portion of the recent increased holding of both notes and rupees by the public is likely to be only temporary. The increased holding probably represents to a large extent unusual profits on agricultural operations and trading, money, in fact, received in exchange for produce, &c, sold, and my Directors think it is very desirable to wait and see whether it will remain in circulation as currency in the hands of the public, before acting on the conclusion that the minimum note circulation has been permanently raised. And although, apart from the statistics for those two years, the increased minimum net circulation would appear to justify the proposed investment, my Directors are of opinion that the question under consideration should not be decided on the statistical position alone.

3 In paragraph 6 of your letter you state that in 1896 some doubts were expressed as to the effect on the stability of exchange of a measure which would result in increasing the rupee circulation by two crores, and you add that at the present time the stock of gold in the currency reserve is so high that the Government of India could view with equanimity such an addition to the silver currency. My Directors regret they are unable to share the confidence thus expressed by Government. In their opinion an addition, by itself, of two crores to the silver currency would probably have no ill effect on the stability of exchange, but there is considerable risk to that stability in large frequent additions to the token circulation, and my Directors think that the present proposal should be considered in the light of the policy pursued by Government in connection with all extensions of the currency. That policy has led during recent years to a very large increase of the token coinage, and to the adoption of permanent measures to enable a rapid addition to be made to the stock of silver coin without the risk of delay in importing silver bullion for coinage (as announced in the last Budget Statement), and the leading feature of the policy seems to be that all increases of the currency must be in the form of token coins. This system differs from that followed in the more important gold standard countries, the general practice being to strictly limit the quantity of subsidiary or token coins. The result has been that far more rupees have been issued than are really wanted for actual circulation. Supplies of money have for a considerable time past been in large excess of needs. This fact was clearly displayed during the past six months by the comparatively low rates of interest and the difficulty experienced in obtaining full employment for money, while, at the same time, the trade of the country was very large and of high value. This seems to show that rupees have been over abundant, seeing that the great bulk of money in use in India consists of rupees, and that it cannot be really necessary that most of the money in use should be in the form of subsidiary coins. With the gold standard the aim should be to restrict the quantity of such coins to as low a minimum as possible. My Directors regret they cannot regard this result of the policy of Government with approval. It seems to them to be contrary to sound currency principles to continue to expand the circulation, practically without limit, only in the form of token coins. Government no doubt, have endeavoured to meet this objection, and at the same time to protect themselves, by the establishment of a Gold Reserve Fund into which the profits of coining new rupees are

paid, and the amount accumulated has been invested in sterling securities. The Fund is intended as a guarantee for the conversion into gold, if required, of the rupee token coinage. This expedient is an unusual one, and my Directors are unable to regard it with favour, especially in view of the very large quantities of rupees that have been issued and of the apparent readiness of Government to continue further coinage notwithstanding that the rupee currency is already superabundant. It seems to my Directors that the system must lead to excessive issues of rupees, and that rupees in excess of requirements will have to be withdrawn from circulation sooner or later. Such an operation as the reconversion of rupees into gold as contemplated would almost certainly be carried out under disadvantageous circumstances and a considerable loss, and the credit of the Government gold currency policy might also be endangered. The contingency of having to reconvert rupees into gold is one which should be avoided as far as possible, and, in the opinion of my Directors, it would be far better to inaugurate at once a gold currency and so limit the coinage of rupees, rather than take the risk of having to melt rupees into bullion for sale at almost certain, and probably heavy, loss, and the further risk of the Indian currency being impaired. A gold currency is the natural and usual concomitant of a gold standard, and there appears to be no good reason why the Indian gold standard should not be associated with a gold currency, which as in other countries might be extended without limitation and without risk, and which would be automatic and self-regulating. Sovereigns no doubt are legal tender and have come into the country in large quantities, but they do not circulate to any large extent as currency. My Directors believe sovereigns are of unsuitable value for the wants of the public, but they are convinced that gold coins of smaller value issued by the Indian Mints would be extensively welcome. Recent imports of sovereigns have come in in exchange for Indian produce, and my Directors are unable to approve of the system which converts such imports into rupees whether money in that medium is required or not, and practically compels the country to be content with a non-automatic currency consisting largely of overvalued silver coins.

4 In the case under reference Government could view with equanimity an addition of two crores to the silver currency because of the stock of gold held in the Currency Reserve. That stock of gold is no doubt a most important factor in the situation. But it has to be remembered that that gold is required as a guarantee for the maintenance of the gold standard, and that in other large gold standard countries where token coins in circulation are in large quantity much larger stocks of gold are held (in addition to gold coins in the circulation), than the amount now held in India, and those countries also refrain from adding to the strain on the standard by increasing the quantity of token coins in use. In India the additions to the circulation have increased the burden thrown on the stock of gold of maintaining the standard, and, although no adverse effect on the stability of exchange has so far manifested itself from the late additions, my Directors are of opinion that this result has arisen not so much from the possession of the gold, on which Government place so much reliance, as from the favourable trade balances. With a continuance of favourable balances it is probable no bad effect will appear because of the swollen state of the rupee currency. But there can be no certainty that those balances will always be favourable, and my Directors consider it would be wise to await developments before acting on the conclusion that the gold held is strong enough to maintain stability of exchange, especially as the inflation of the circulation is an event of comparatively recent occurrence. The adverse action of an inflated token currency need not be immediate. It may exert its force at any time. Besides maintaining the standard, the stock of gold in the Currency Department is practically the only store available in the event of gold being wanted to adjust the balance of trade should it unfortunately turn against India, and calls on it for that purpose should be kept in view however remote they may appear at the present time.

5 My Directors' view of the present state of the rupee circulation being as above indicated, they regret they are unable to approve of the release of

two crores of rupees from the Currency Reserve which would be the result of the proposed investment if made from the silver reserve

6 With respect to the alternative of investing from the gold reserve, I have to say that, while my Directors would, under existing circumstances, prefer a gold investment rather than one from the rupee reserve, they are of opinion that in this case also no action should be taken for the present. They consider that this is not the time to invest either from the silver or the gold reserve, and that it would be better to wait and watch the results which may ensue from the large additions to the rupee circulation. A reduction in the gold metal reserve by two crores might perhaps be regarded without much concern, seeing that the balance of trade is very favourable and that gold is still being imported. My Directors think, however, that the position would be far stronger by possession of the metal itself rather than of gold securities. The metal is the best and most satisfactory basis for the currency. The Gold Reserve Fund has, unfortunately, in the opinion of my Directors, been already invested. They would much prefer to see the gold itself retained in the country. And, in any case, the money can be invested at any time if further experience shows that it can be spared. A comparatively small loss in the way of interest is the only disadvantage.

---

✓Despatch from the Secretary of State to Government of India, No 141 (Financial), dated 14th October 1904

My Lord,

I have considered in Council Your Excellency's letter in the Finance and Commerce Department, No 295, dated 18th August 1904, submitting for my approval proposals that (1) the invested portion of the Paper Currency Reserve may be increased from 10 to 12 crores of rupees, and (2) that the additional amount thus to be invested may be held in London in gold securities of the Government of India or of the United Kingdom

2 I agree with your Government that the expansion of the note circulation which has taken place since 1896, when the present limit was fixed to the invested portion of the Paper Currency Reserve, has been sufficient to warrant the raising of that limit from 10 to 12 crores, and it also appears to me that the policy of investing in gold securities the sum which you propose to add to the invested portion of the Reserve is a sound one

3 I therefore authorise you to undertake the legislation necessary to give effect to your proposals

I have, &c  
(Signed) ST JOHN BRODRICK

---

Letter from Government of India No 6, dated 12th January 1911, to the Secretary of State for India

My Lord,

We have the honour to submit, for your favourable consideration, a proposal to amend Section 22 of the Indian Paper Currency Act, 1910 (II of 1910), so as to raise from one hundred and twenty to one hundred and forty millions of rupees, the amount of the Paper Currency Reserve which may be invested in securities and to raise from twenty to forty millions of rupees, the maximum which can be invested otherwise than in securities of the Government of India

2 The maximum limit of the invested reserve was raised in 1905 from 10 to 12 crores. Since that time the net circulation of currency notes in India (excluding the amounts held in the Reserve Treasuries of Government and at the head offices of Presidency Banks), which is taken as an index to the permanent circulation among the public, has largely increased. The statements appended to this despatch give the statistics of gross and net circulation for the six years ending 1909-10. The average and minimum net circulation in the past three years compare as follows with the corresponding figures in the three years preceding the last increase of the invested reserve in 1905 (*lakhs of Rupees*) —

Three years ending 1904-05			Three years ending 1909-10		
	Average	Minimum		Average	Minimum
1902-03	25,74	23,93	1907-08	36,47	34,91
1903-04	28,70	27,44	1908-09	34,84	32,88
1904-05	30,69	29,63	1909-10	38,88	36,07
Average	28,38	27,00	Average	36,73	34,62

3 It will be seen that, while the sum of 12 crores to which the investment was raised in 1905 amounted to 42.28 per cent of the previous three years' average circulation and to 44.44 per cent of the average minimum circulation, a further increase to 14 crores now would put the investment at 38.11 per cent of the average circulation of 1907-10 and at 40.44 per cent of the average minimum circulation. The latter triennium, as your Lordship is aware, included one year (1908-09) which was marked by serious trade depression. We regard it as extremely unlikely that the minimum circulation will ever fall, at least for any prolonged period, below 30 crores, and if against this we hold 16 crores in actual coin, the danger of inconvertibility will be very small. We are confident therefore that the proposed increase to the investment is within the margin of safety.

4 The proposal which we now submit first came under consideration in 1908, when we consulted the Presidency Banks and the Chambers of Commerce on the subject. We enclose a copy of their replies. It will be seen that, while they were unanimously of opinion that the investment could safely be increased to the extent proposed, there was a considerable feeling that it would be preferable to postpone the investment in favour of taking steps to promote the circulation of small value notes. We were then on the point of recommending an extension of the system of universal currency notes, and it was apprehended that the experiment would require the retention of a somewhat larger coin reserve than might otherwise be necessary. Another consideration which affected the proposal in 1908 was the weakness of exchange, which would have rendered inopportune any action tending towards further ease in the money market by the release of a large quantity of rupees from the Currency Reserve. We, therefore, came to the conclusion that it was inadvisable to proceed with the proposal at the time.

5 Since then the position has altered. The weakness of exchange has passed, while the circulation of currency notes during 1909-10 was the highest on record. Our currency notes up to Rs 50 have been "universalized," and we have had no experience of the inconveniences which it was feared might result. It is true that prudence may require us to hold a stronger coin reserve at a number of distant points than was necessary under the old rigid "circle" system. But, on the other hand, the greater convertibility tends to raise the aggregate circulation and to reduce the violent fluctuations at different times of the year. In our opinion the extension of the universal note system need no longer be considered a reason for deferring the increase in our investment if such a measure is otherwise desirable. An objection sometimes urged against increasing the investment is that, in order to supplement the Gold Standard Reserve, it is desirable to keep as large a quantity of gold in the Paper Currency Reserve as possible, and that every investment, by reducing the capacity of the Reserve for holding gold, reduces at the same time our resources for the maintenance of exchange in unfavourable seasons. This argument might be pushed so far as to preclude

the possibility of any investment at all, and it is deprived of much of its force if the investment is made in securities which are readily convertible into gold

6 This leads us to consider the form which the investment should take. When the invested reserve was last increased by two crores in 1905, the additional investment was made in sterling securities in England. The three Presidency Banks and the Chambers of Commerce, Bombay, Madras and Karachi, now advise investment in rupee paper, while the Rangoon, Bengal, and Upper India Chambers of Commerce are in favour of sterling securities. In our opinion the arguments in favour of the investment in sterling securities set forth in paragraphs 7, 8, and 9 of Lord Amphill's despatch No 295, dated the 18th August 1904, still hold good. We already have a sufficiently large holding in rupee paper, and there is an advantage in keeping a substantial part of the Reserve in a form of security which will not necessarily be influenced by the causes which might shake public confidence in our currency notes.

7 We therefore solicit your Lordship's permission (by telegram, if possible) to introduce a Bill during the present Calcutta session to give effect to the proposals stated in the first paragraph of this despatch, on the understanding that, if the Bill becomes law, the additional investment will be made, under your orders, in gold securities.

We have the honour to be,

My Lord,

Your Lordship's most obedient, humble Servants,

(Signed) HARDINGE OF PENSURSI  
O'M CREACH.

## Enclosure No 3

Dated 26th November 1908

From Mr L G Dunbar, Officiating Secretary and Treasurer, Bank of Bengal, to the Secretary to the Government of India, Finance Department

I have the honour to acknowledge receipt of your letter, No 6404A, dated the 11th instant, asking for an expression of the opinion of the Directors of the Bank of Bengal whether it is expedient that the Government of India should take power to increase the invested portion of the Paper Currency Reserve from twelve crores to fourteen crores of rupees

2 In reply, I am instructed to say that, as the stock of coined rupees appears to be ample to meet all probable requirements, my Directors are of opinion that the proposed increase in the Currency investment may be undertaken with safety and to the advantage of the State

3. As regards the form of the new investment, my Directors consider the sum of Rs 2 crores, at present invested in sterling securities, sufficient for the purpose for which it is intended, and that the further investment, now under consideration, should be in the rupee paper of the Government of India

## Enclosure No 4

No 338, dated 4th December 1908

From Mr J Begbie, Secretary and Treasurer, Bank of Bombay, to the Secretary to the Government of India, Finance Department

I have the honour to acknowledge receipt of your letter No. 6404A, dated 11th ultimo, in which you request that the Directors of the Bank will favour the Government of India with an expression of their opinion whether it is expedient that the Government of India should take power by legislation to increase the invested portion of the Paper Currency Reserve from twelve to fourteen crores.

2 In reply the Directors instruct me to say that the statistics of the net circulation of notes which accompanied your letter show a large and rapid decline during the twelve months ending 31st March last, and that it would appear to be advisable to see whether this decline continued during subsequent months, and if so, how far the decline was carried, before concluding that the average minimum circulation had permanently reached the level shown as the average for the three years ending March last. Subject to this note of caution the Directors consider that the statistics warrant the addition to the invested portion of the reserve now suggested.

3 With regard to the question whether the investment should be made in rupee or sterling securities, the Directors are of opinion that in the existing position of sterling exchange the investment should be made in securities of the Government of India.

4 While agreeing that the statistical position shown in your letter would justify the further investment of the Reserve now proposed, the Directors venture to suggest for the consideration of the Government of India the desirability of postponing the investment and taking instead further steps in the direction of promoting an extended use of notes of small value as currency.

5 They have specially in view at present the desirability of encouraging the extended use of Rs 10 notes. It is through notes of low value that the greatest employment for notes as currency can be found amongst the population, and it is also through such notes that the greatest stability to the permanent circulation can be obtained. It appears to the Directors that Government should endeavour to promote their circulation by relaxing as many of the restrictions now placed upon them as may be found possible.

6 In every Currency Circle Rs 10 notes have proved to be the most popular of all the denominations issued, showing that the value of Rs 10 is most suitable for the requirements of the population, and this popularity has been attained without any special inducement being held out to encourage their employment. But while the notes are in greater favour throughout India than any other note, it can be said only of the notes of the Calcutta and Bombay Circles that they have thoroughly established themselves as currency, because it is only in these two centres that their permanent circulation is of large dimensions.

7 It would not be feasible to make all Rs 10 notes legal tender and encashable throughout India, but where they have come into continuous use in large quantities as in Calcutta and Bombay, it should be possible to encourage still further development.

8 The suggestion the Directors desire to make is that Rs 10 notes of the Calcutta and Bombay Circles should be made legal tender and encashable at the pleasure of holders in either city. Were this done the greater usefulness of the notes as a circulating medium would naturally lead to a permanent increase in their circulation.

9 But if the notes are made legal tender they should also be encashable at will. With regard to this point I have to say that the Directors believe the variation in the total circulation of Rs 10 notes in Calcutta and Bombay throughout the year is very small and that a comparatively minute cash reserve is sufficient to meet all demands for payment in coin. Also, it may safely be assumed that very few of the existing Rs 10 notes outstanding at Calcutta would be presented for encashment in Bombay and *vice versa*, because they are in use in the locality of the circle of issue. For all practical purposes it would only be from any additional notes issued, that a new liability would be created on the cash reserves in each city, against which it would be advisable, to begin with, for the Currency Office at each place to be prepared for demands for encashment of notes of the other circle. The

Directors understand however that the chief flow of money from Bombay to Calcutta takes place from about August until January and that the current is reversed after January. The additional liability that would be thrown on each Currency Office would therefore be confined to well defined seasons of the year. The Directors further understand that Government already provide for the cash requirements of Calcutta by remittance of coin in anticipation of the autumn demands and similarly provide for Bombay's coin requirements when the demand arises here. But the total of such coin requirements at each place would not be increased by reason of Rs 10 notes being made encashable in either city. The total amount of remittances from Bombay to Calcutta and *vice versa* would not thereby be enhanced. A larger part of the money transferred might perhaps be made in the form of Rs 10 notes than is now the case, but the total demands for coin arising out of transfers of money from one city to the other would remain unaffected. It would however be safer, to start with, to hold rather larger cash balances until experience was acquired of the working of the scheme. On the other hand, in view of the popularity of the notes at each centre the probability is that they would gradually cease to be presented for cash and be increasingly absorbed as currency in circulation. The knowledge that they were legal tender and also exchangeable for coin at the pleasure of the holder in either city would bring about the usual result of making the notes still more popular and making them do duty where coin is now required.

10 The Directors consider it would be sound policy to sacrifice the income from an immediate investment to secure the use of notes of small value as currency to a greater extent than is now the case. When that is secured the amount of the Reserve that can safely be invested will be so much the greater.

---

Enclosure No 5

No. 1306, dated 9th December 1908

From the Chairman, Chamber of Commerce, Bombay, to the Secretary to the Government of India, Finance Department

I am directed to acknowledge receipt of your Circular letter, No 6404A, dated Simla, 11th November 1908, requesting the Chamber to favour the Government of India with an expression of its opinion as to whether the Supreme Government should take power by legislation to increase the invested portion of the Paper Currency Reserve from twelve to fourteen crores.

2 In reply I am to state that in the opinion of the Committee this forms part of a far larger question and my Committee beg to lay the following remarks before you for the consideration of the Government of India.

3 As far back as 1868 the question of making notes of all Circles legal tender throughout India was brought forward, but at that time this Chamber, when asked its opinion by Bombay Government, advocated a Presidency Note in lieu of a universal note for all India, its reasons being that while the latter would be most acceptable, the time had not then come for adopting it.

4 In 1900 this Chamber, in response to questions asked by the Government of India, stated *inter alia* that if Government could undertake to cash the notes of any Circle at Calcutta, Madras, or Bombay, it would afford considerable facility to trade and would tend to popularise the use of notes.

5 This matter has now again been brought to the notice of my Committee and it has been pointed out that the fact of one Circle's notes not being legal tender in another Circle constitutes considerable hardship to trade. In Bombay, for instance, many traders come down to make purchases and bring for that purpose notes of another Circle. The result of this is that native

dealers present these notes to European firms, but, as they cannot be cashed in Bombay except at a discount, the firms are unable to accept them, and this constitutes constant friction between themselves and their dealers. My Committee are therefore of opinion that if notes of all Circles could be made legal tender at the three Presidency towns, Calcutta, Madras, and Bombay, it would considerably facilitate trade between the Presidencies, and take away the difficulty referred to above. They quite realise that by so doing Government would probably lose a certain profit which they now make by transfers from one Centre to another, as, provided the notes were made legal tender for the three Presidency towns, the actual transfer of bullion which might be required to meet trade requirements would be made at the expense of Government and not at that of the merchants. But they consider that Government would be fully repaid indirectly by the increase in trade consequent on such facilities being granted and the increased confidence in and consequent use of currency notes instead of bullion.

6 My Committee understand that at present considerable balances are retained in up-country treasuries, which balances might safely be reduced and increased amounts retained in the three Presidency Towns, which would probably be sufficient to meet the increased demands which might be made upon them if my Committee's proposal regarding all notes being made legal tender in the said chief towns should be carried into effect.

7 It will be understood therefore that, holding these views, my Committee are not in favour of an increase in the invested portion of the Paper Currency Reserve, but would prefer to see increased facilities given to the public by making all notes legal tender in the three Presidency Towns. If this is done they consider it will be inadvisable to reduce the available balances by increasing the investment as suggested. Should, however, Government be unable to see their way to adopt the above suggestion, I am directed to state that my Committee agree that the invested portion of the Paper Currency Reserve might safely be increased as suggested, and as regards the nature of the investment to be selected they are of opinion that it is not desirable to make further investments in sterling securities but to invest the same in Rupee  $3\frac{1}{2}$  per cent Paper

---

Enclosure No 6

Dated 8th December 1908

From the Chairman, Burma Chamber of Commerce, Rangoon, to the Secretary to the Government of India, Finance Department

I have the honour to acknowledge receipt of your letter, No 6404A, dated 11th November 1908, regarding the expediency of the Government of India taking the power by legislation to increase the invested portion of the Paper Currency from twelve to fourteen crores

2 I have the honour to inform you that while my Committee are of the opinion that not more than one-third of the reserve held against the currency note circulation should be invested in Government securities they do not see much objection to the small increase in the percentage which it is proposed to make, but hope it will not be further augmented in the future

3 If the proposed increase is determined upon, my Committee recommend that the further investment should be made in British Government securities, they being more readily realizable, in case of need, for purchases of silver

---

## Enclosure No. 7.

No G P L 131, dated 15th December 1908

From the Secretary and Treasurer, Bank of Madras, to the Secretary to the Government of India, Finance Department

I have the honour to acknowledge receipt of your letter, No 6404 A, dated the 11th November, requesting my Directors to express their opinion as to whether it is expedient that the Government of India should take power to increase the invested portion of the Paper Currency Reserve from twelve to fourteen crores, and in reply I am directed to say that my Directors are of opinion that, in view of the large increase in the circulation of currency notes, the proposed increase in the invested portion of the Reserve may be made with safety

2 I am further desired to say that my Directors consider that, in order to avoid frequent amendments of the Indian Paper Currency Act, Government might take powers by legislation to invest a fixed proportion of the value of notes in circulation. In his letter No 6468, dated 23rd December 1889, Mr Finlay stated that in 1860 it was proposed to invest two-thirds, but that it was decided that the safer and sounder principle was to prescribe a fixed sum as the limit. What the reasons were for arriving at this decision are not stated, and though the investment of two-thirds of the Reserve might involve considerable risk, my Directors submit that, under present conditions, 35 per cent might safely be invested. They think also that, should some such proportion be decided upon, it would be necessary, while leaving the permissive power to sell securities untouched, to add a sub-clause to Section 22 of the Act making it obligatory to sell should at any time the metallic reserve fall below a certain percentage of the notes in circulation—say 50 per cent

3 In your letter under reply my Directors are also asked whether they have any suggestions to make, if a further investment is determined upon, as to what form it should take, and in this connection I am desired to say, that unless the operation be postponed for a very considerable time, it would not appear to be possible to invest in securities of the United Kingdom without interfering with the building up of the Gold Standard Reserve Fund to its former level, and that therefore the present investment may be made in Government of India rupee paper

## Enclosure No 8

No 885, dated 16th December 1908

From the Secretary, Chamber of Commerce, Karachi, to the Secretary to the Government of India, Finance Department

I beg to acknowledge your letter No 6404A, of 11th November, regarding the proposal to increase the Paper Currency Reserve from twelve to fourteen crores of rupees. I am directed by the Committee of this Chamber to inform you that they are of opinion that the Reserve might be increased as suggested providing that the same is made in securities of the Government of India

## Enclosure No 9

No 1977, dated 23rd December 1908

From the Secretary, Bengal Chamber of Commerce, to the Secretary to the Government of India, Finance Department

I am directed to acknowledge the receipt of your letter, No 6404A, dated 11th November 1908, in which you request an expression of opinion

by the Bengal Chamber of Commerce as to whether it is expedient to increase the invested portion of the Paper Currency Reserve from twelve to fourteen crores of rupees

2 In reply I am to say that the Committee of the Chamber have attentively examined this proposal. They have read the past correspondence dealing with the increases which have been made since the limit of the invested portion of the Reserve was fixed, by the Paper Currency Act of 1861, at four crores of rupees. And they endorse the principle upon which the investments have been made, namely, that the sum invested shall be well within the amount of notes which has been found by experience to be necessary for the monetary transactions of the country. When the limit was raised in 1905, the sum of twelve crores of rupees amounted to 42.28 per cent on the average net circulation (*i.e.*, the gross circulation less the amount held in the Government Reserve Treasuries and at the head offices of the Presidency Banks), and to 44.40 per cent on the average minimum circulation. The Committee of the Chamber were then of opinion that this was a sufficient

*Letter No 931, dated 9th June 1904, from the Bengal Chamber of Commerce, to the Government of India, Finance and Commerce Department*

margin of safety, and they consequently supported the suggested increase. They similarly favour the present proposal, which if adopted will, they understand, bring the investment up to 39.92 per cent on the average of the net circulation for the last three years, and to 42.40 per cent on the average minimum.

3 In reply to your enquiry as to the form which the investment should take, I am likewise to refer to the views expressed by the Chamber when the last increase was under discussion. The Committee then recommended that the investment should be made in sterling securities because such would be, they considered, more readily realised in London than rupee securities would be either in India or in England. They are still of this opinion, and they venture therefore again to suggest that sterling securities should be purchased. At the same time they are aware that the stock of gold coin and bullion in the Currency Reserve has now been so far depleted as not to

*\* Gazette of India, 19th December 1908, Part II, page 1848*

exceed two\* and a quarter crores of rupees in England, and about Rs 15½ lakhs in India. This being the case, immediate investment in sterling securities may not be feasible, but nevertheless the Committee think that the principle should not be departed from. They presume that, as on previous occasions, the intention is to invest gradually, and even though their recommendation may mean delay, they do not hesitate to put it forward. For the investment in rupee securities should not be, they think, enlarged at present beyond the ten crores of rupees at which it stands, and which is a full amount in comparison with the two crores invested in sterling securities.

---

Enclosure No. 10

Dated 30th December 1908

From the Chairman, Chamber of Commerce, Madras, to the Secretary to the Government of India, Finance Department

I have the honour to inform you in reply to your letter, No 6404A, dated the 11th November 1908, that the Chamber considers that, in view of the large increase in the circulation of Currency notes since 1905, the Government of India might safely increase the invested portion of the Paper Currency Reserve from Rs 12 to 14 crores, when a suitable opportunity presents itself, and the investment should, at present at all events, be in Government of India rupee paper.

2 In this connection the Chamber would suggest for consideration the desirability of the Government of India taking power by legislation to invest

a fixed proportion of the Currency notes in circulation in order to obviate the necessity of frequent revisions of the Paper Currency Act. The Chamber would suggest 35 per cent as a reasonable and safe proportion to invest, provided that, while the power to sell securities is not interfered with, Section 22 of the Act is amended by the addition of a sub-clause rendering a sale obligatory if and when the metallic reserve touches a point below, say, 50 per cent of the notes in circulation.

---

Enclosure No 11

Dated 15th March 1909

From A Shakespear, Esq, Secretary, Upper India Chamber of Commerce,  
to the Secretary to the Government of India, Finance Department

I am directed to acknowledge receipt of your letter No 6401A, of the 11th November last, in which you invite the views of this Chamber upon a proposal to increase the invested portion of the Paper Currency Reserve from 12 crores to 14 crores

2 My Committee have studied the history of the Paper Currency Reserve, and they are of opinion that the proportion held in the form of securities might with safety be increased to 14 crores, having regard to the expansion which has taken place since 1905 in the amount of Currency notes actually in use by the public

3 Concerning the question of the form in which investments should be made, my Committee have come to the conclusion that sterling securities should be selected, on the ground that generally speaking they are more realisable than rupee securities. In making this recommendation they have not overlooked the benefit to the market value of rupee securities which might reasonably be expected to follow further investments by Government. At the same time they are conscious of the depressing effect which would result from Government being obliged in times of emergency to realise on its holdings

## NOTE III

(See paragraph 22 of Memorandum, page 242)

Remittance of 5,000,000*l* in gold from India to be held in England as part of the Paper Currency Reserve Correspondence in 1905 between Secretary of State and Government of India

Despatch to Government of India, No 41 (Financial), dated 7th April 1905

My Lord,

In my telegram dated 9th March last, while accepting your proposal that the remittance of two crores of rupees to this country which will be required for the investment on account of the Paper Currency Reserve shall be made by means of Council drawings, I added that I should address you further on the subject of remittances of gold

2 The question of the amount of gold that can be conveniently held in the Paper Currency Reserve in India was discussed by Your Excellency in your letters of 14th December 1899 (No 421), and 6th September 1900 (No 302) In the latter communication it was suggested that 7,000,000*l* should be regarded as the maximum, and this proposal was provisionally accepted in Lord George Hamilton's Despatch No 232, of 13th December 1900 The question was again considered by you last year in connection with your proposal to increase the amount invested on behalf of the Paper Currency Reserve, and in your letter of 18th August last, No 295, you stated that in your opinion a stock of gold of the value of 9½ crores (6,167,000*l*) in the reserve would be ample and that a larger proportion is not at present required in India You also stated that you have found by experience that at the beginning of the busy season the proportion of silver coin in the Currency Reserve should be approximately one-third of the total note circulation As the gold held in the reserve has not fallen below 9,000,000*l* during the last two years, and has during the whole period since March 1904 exceeded 10,000,000*l*, I assumed, when agreeing that the invested portion of the reserve shall be increased by the substitution of sterling securities for two crores of the metallic portion, that it was your intention to remit gold to England for the purchase of the securities In deference to the representations made in your telegram of 8th March 1905, I have agreed that the remittance shall be made by means of Council Bills But I should be glad if you would consider whether the amount of gold held in India should not nevertheless be reduced

3 According to the statement for the 9th of March 1905, which is the latest before me, the composition of the Currency Reserve on that date was as follows —

	Crores
Securities	10
Silver coin	9 07
Silver bullion	1 88
Gold	16 47
Total	<u>37 42</u>

The amount of silver coin was considerably below the proportion of one-third mentioned above, and when an investment of two crores is made in England, and the metallic reserve in India is reduced, the reduction will presumably be effected wholly or in part by the transfer of rupees to the ordinary treasuries

4 In view of these figures it appears to me that there would be some advantage in remitting gold to England early in the present financial year

Having regard to the state of your balances as described in your telegram of 8th March, it would perhaps be the more convenient course that gold so remitted should in the first instance be held as a part of the Paper Currency Reserve at the Bank of England. It could be used, if a favourable opportunity occurs in the near future, for the purchase of silver in anticipation of future requirements, or, if you are unwilling at present to anticipate requirements, it could be held at the Bank so as to be immediately available for the purchase of silver whenever the need for additional coinage may arise. It is also to be remembered that the possession of a stock of gold in England, held as a portion of the Paper Currency Reserve, but capable of being transferred to the ordinary balances of the Secretary of State in Council, against a corresponding transfer of rupees from your balances to the Currency Reserve in India, affords a method (which might in certain circumstances be very useful), of speedily replenishing the balances of the Secretary of State in Council

5 I shall be glad to receive an expression of your views on the points discussed in this Despatch

I have the honour to be,  
My Lord,  
Your Lordship's most obedient humble Servant,  
(Signed) ST JOHN BRODRICK

---

Letter from Government of India, No 236 of 1905 (Finance Department), dated 29th June 1905, to the Right Honourable St John Brodrick, His Majesty's Secretary of State for India

Sir,

We have the honour to refer to your Financial Despatch No 41, dated the 7th April 1905, on the subject of the amount of gold held in the Paper Currency Reserve. You cite various opinions which the Government of India have expressed at different times as to the amounts of gold and silver respectively which should be held in the Reserve, and you ask us to consider whether in view of the large stock of gold now held in India, a portion of it should not be remitted to England. You also suggest that it might be convenient to hold the gold so remitted in the first instance as a part of the Paper Currency Reserve at the Bank of England, and you point out certain advantages which would attach to the possession of such a stock of gold in England

2 In the previous discussions to which you refer concerning the amount of gold that can conveniently be held in the Reserve, our views were influenced by the sudden demands which had arisen for the provision of rupees in India, and by anxiety lest the presence of a large stock of gold should hamper us in meeting those demands. Our position in this respect has been greatly strengthened by the large increase that has taken place in the note circulation in the last few years, and by the formation of a special ingot reserve of three crores of tolas of silver, as proposed in our Despatch

No 121, dated 28th April 1904 The position will, we think, be made still more secure if you accept the proposal put forward in our Despatch No 143 of the 27th of April last, for the annual purchase of silver in anticipation of actual requirements

3 The object of this proposal was to secure a sufficient supply of rupees to meet all urgent demands, and so long as this object is effected we see no cause for anxiety in the accumulation of a large stock of gold On the contrary we consider that the balance of the uninvested portion of the Reserve which is not likely to be required for circulation as money ought to be held in gold rather than in silver, and that the possession of a large stock of the yellow metal will strengthen our credit and contribute to the stability of exchange Subject, therefore, to the provision of sufficient rupees and reserves of silver, we would allow our stock of gold to grow indefinitely with the expansion of the note circulation until such time as it may be deemed expedient to make a further addition to the invested portion of the Reserve.

4 We do not, however, consider it in any way necessary that the whole of the gold should be held in India As pointed out in the second paragraph of your Despatch under reply we expressed the opinion in August last that a stock of 9½ crores in the Reserve furnishes, under present circumstances, an ample maximum for Indian purposes, and one of the objects of the recent revision of the Paper Currency Act was to facilitate the transfer of the gold portion of the Reserve between India and England We would in this connection invite attention to the remarks made by our Honourable Financial Colleague when moving on the 11th of March last that the Report of the Select Committee on the amending Bill should be taken into consideration The Honourable Mr Baker then observed that "so far as gold is concerned, the coin held in London is actually one stage nearer the point at which it becomes effective for securing the encashment of notes than when it is in India."

5 We are accordingly disposed to welcome your suggestion that a portion of our stock of gold should be remitted to London and held as a part of the Paper Currency Reserve at the Bank of England To the advantages which you have enumerated as attending this measure we would add that it will enable you to make purchases of silver quietly without giving the forewarning to the market which is entailed by the present system of making separate remittances for each purchase

6 We therefore propose to send 5,000,000L (five million pounds) in gold to London to be held by you as a part of the Currency Reserve When you draw on this fund for the purpose of purchasing of silver, we would ask you to replenish it from time to time by the sale of Council Bills, at your convenience, and to inform us on each occasion of any intended operation on the fund, so that we can adapt our arrangements accordingly In the event of the demand for Council Bills being slack at any time, you would be able after warning us to replenish the Reserve in India, to utilise your stock of currency gold for Treasury payments If this proposal meets with your approval we should be glad to be informed as soon as possible in order that early arrangements may be made for shipping the gold

7 With reference to the remarks in paragraph 3 of your Despatch regarding the amount of silver coin held in the Paper Currency Reserve in March last, we would point out that the standard of one-third of the total note circulation referred to in our Despatch of the 18th of August 1904 was suggested as sufficient at the opening of the busy season, and that that season was drawing to its close on the 9th of March We take this opportunity of explaining that the standard which we suggested last year on Sir Edward Law's advice was a rough estimate only, and that we do not at present consider that we have sufficient data or experience for laying down any arithmetical criterion We attach more importance to the proposals stated in our Despatch of the 27th of April last for anticipating requirements than to the maintenance of any fixed proportion of rupees to

the note circulation; and in any event, we do not consider that the gross circulation, which includes notes held in the Reserve Treasuries, could in any circumstances be treated as the basis of such a criterion

We have the honour to be,

Sir,

Your most obedient, humble Servants,

(Signed) CURZON.  
 " KITCHENER

 " E. N. BAKER  
 " C. L. TUPPER.

Despatch to Government of India, No 91 (Financial), dated  
 11th August 1905

My Lord,

In your letter of the 29th of June, No 236, you accept the suggestion made in my Despatch of 7th April, No 41, that a portion of your stock of gold should be sent to this country to be held as a part of the Paper Currency Reserve, and you propose to make early arrangements for the shipment of 5,000,000*l*. I understand that you desire that the 1,000,000*l* shipped on the 8th of July, as reported in your telegram of the 6th July, may be regarded as a portion of this 5,000,000*l*.

2 I approve the proposal that a further 4,000,000*l* shall be sent. It should be consigned in instalments of not more than 1,000,000*l*, and you should inform me by telegraph when each consignment is about to be made.

3 When the gold held in England is drawn upon for the purchase of silver it is possible that in some cases the most convenient arrangement for keeping the total Currency Reserve up to the required amount will be that contemplated in Sections 17 and 19 of Act III of 1905, viz, to treat the silver purchased as a portion of the reserve. The stock of gold in England can subsequently be replenished, as you propose, from the proceeds of Council Bills (if the state of the Home Treasury balances admits of this) so as to release rupees from the Currency Reserve in India. This procedure would obviate the necessity for making transfers in India from the Treasury to the Paper Currency Department at the time of the purchase of the silver, which I understand to be the course suggested in the sixth paragraph of your letter.

4. For the present, however, the silver that is being purchased in accordance with the requests contained in your telegram of the 5th April, your letter of the 27th April, and your telegram of the 30th June, is being paid for from the balances of the Home Treasury, so that the whole 5,000,000*l* of gold will be held from the time of its arrival as a part of the Paper Currency Reserve.

5 I forward a copy of a letter to the Bank of England requesting them to take the necessary measures.

6 I also forward a copy of a note by the Deputy Accountant-General at this Office, from which it will be seen that it is desirable that you should announce (in the manner that appears to you most convenient) that the shipments are to be made on behalf of the Paper Currency Reserve, and not for the purpose of replenishing the balances of the Secretary of State for India in Council.

I have the honour to be,

My Lord,

Your Lordship's most obedient humble Servant,

(Signed) St. JOHN BRODRICK.

## Enclosure No 1

India Office to Bank of England

F 5156  
Gentlemen,India Office,  
28th July 1905

I am directed to inform you that the Government of India intend to consign to this country during the present year 4,000,000*l* in gold in addition to the 1,000,000*l* referred to in the correspondence ending with Mr Nairne's letter of the 7th July

The whole 5,000,000*l* will for the present be treated under the arrangements contemplated in the Indian Paper Currency Act, 1905, (of which a copy is enclosed for your information) as being a part of the reserve to secure the payment of currency notes issued in India

I am to enquire whether you will be so good as to hold the gold on behalf of the Secretary of State in Council on a separate account distinct from his cash and drawing accounts

Portions of the amount so held may from time to time be used for the purchase of silver or for other purposes, and in this event a transfer to the Secretary of State's cash account will be required, and the necessary instructions will be given by this Office

The Governor and Company of the  
Bank of England

I have, &c,  
(Sd) A GODLEY

## Enclosure No 2

Note by the Deputy Accountant-General, India Office, dated  
22nd July 1905

I have to suggest, for consideration, that in view of the magnitude of the operation it might be desirable to take some steps to acquaint the market that the gold to be shipped will not be available for the purposes of loans from the Secretary of State's balances. The Broker has recently mentioned to me on several occasions that the publication by the newspapers of the intended shipment of gold, which is usually announced by the news agencies directly the freight is arranged in India, has a distinct effect on the rates he is able to obtain for our loans. The firms on the borrowing list occasionally quote the information to him, and either decline to renew in the expectation of cheaper money and supply themselves instead from other sources with weekly or other short term loans, or else make the news the pretext for offering a lower rate of interest than would otherwise be obtained. In this case the shipments of gold will be large, and will perhaps spread over some time. I see from to-day's "Times" that a rumour as to a further shipment is already afloat

(Sd) H W BADOCK

## APPENDIX X

SPEECH OF FINANCE MEMBER OF THE GOVERNMENT OF INDIA, INTRODUCING  
 A BILL FOR THE ESTABLISHMENT OF A PAPER CURRENCY IN INDIA,  
 3RD MARCH 1860 Handed in by Mr F W NEWMARCH, Financial Secretary  
 at the India Office (with reference to Question 1640)

Mr Wilson rose and said —

Mr President,—Sir, when I had the honour, a fortnight ago, to lay before the Council an exposition of the Financial policy of Her Majesty's Government of India, and to propose that the people of India should be subjected to some new imposts in order to relieve the necessities of the State, I then gave an assurance, on behalf of Government and myself, that we were deeply imbued with the necessity of taking stringent and bold measures for securing to India at the same time such administrative reforms as were urgently required, not only in order to secure the greatest possible economy, but the greatest efficiency in the public service. In pursuance of the notice which I gave last week, I now rise to propose our first measure in redemption of the pledge I then gave. Sir, I believe there is but one opinion throughout India, and I will add at home, that the currency of this great dependency of the British Empire is in a most unsatisfactory state, there may be, and no doubt there are, many different opinions as to the mode in which its glaring defects can be best amended, but at least all are agreed that amendment is loudly called for. And I think Honorable Members will agree with the Government in regarding this as one of the most important reforms in administration, and as one calling for the earliest attention of the Government and the action of this Council. Sir, I must say that I know no question of greater importance to the commerce, the industry, and the material well-being of a country, than that of the laws which regulate its currency. If your monetary condition be unsound, the country will be exposed, in an aggravated form, to all those vicissitudes which overtake trade, for a time paralyze industry, and impoverish the people—if, on the other hand, it be based on sound and solid principles, we may rest contented that we have at least taken every precaution within our power, if not for altogether preventing those vicissitudes, yet for alleviating their consequences and shortening their duration.

Sir, I approach this subject not without considerable anxiety—an anxiety in no degree arising from any doubt or mistrust which we have in the principles I shall have to avow on behalf of the Government, or of the soundness and adequacy of the measure I have to propose. No—my anxiety arises from a doubt in my own powers to expound those principles, and that measure sufficiently clearly to carry your views along with me, for not only is the subject of itself extremely intricate, but it has been rendered still more so by the great variety of views which have been discussed, and the great diversity of systems and proposals to which those discussions have given rise. But, Sir, it is essential for the success of our measure that we should carry public opinion with us in the soundness of our plans. My only aim, therefore, in now addressing you, will be to lay down those principles, and to explain our measure in a manner to make myself as intelligible as I possibly can to all, and if in so doing, I shall detain you somewhat longer than you could wish, I trust to the great importance of the subject as my excuse.

Sir, we wish to deal with this question in a broad and comprehensive manner, befitting the interests of a great country—in a manner which shall be applicable alike to all parts of India—in a manner which being sound in principle, we may safely leave to a development as wide as the wants of India can ever require, however great they may be. Sir, we feel it to be a

great principle in Government to base our measures with regard to all matters of trade or finance on so sound a footing, that we may safely leave them to their own self-development, according to the unrestrained requirements of the public from time to time, without the constant interference which unsound principles demand from the State to bolster them up. And we feel that, in applying such principles to India, we have at least this advantage, that we have almost what I may term a *tabula rasa* upon which to act. No doubt one of the great difficulties which other Governments have had to deal with in reforming their currency legislation has arisen from a net-work of unsound practices and of existing interests which stood in their way. Fortunately, we can hardly be said to labour under such a difficulty. At the same time, the subject is so novel in India, and I may add the relation of the Government to the people is so peculiar, that I cannot but feel, in order to make our course clear and the benefits to be derived from our measure intelligible, it will be necessary for us to consider the question from its foundation, and I hope I shall not be thought pedantic if I venture to lay down some of the first axioms as to the nature and character of currency, in order that we may the better judge of the soundness of the superstructure which we shall raise in the shape of a measure proposed for your adoption.

In the first place, then, we shall, I think, be all agreed, that the only legitimate object of currency, in whatever form it exists, is to act as a medium for circulating commodities in a manner infinitely more convenient than any system of barter could effect that object, and that this is best attained by the adoption of one of the precious metals, gold or silver, as the least fluctuating standard to which the values of all other commodities can be referred and by which they can be defined. At the same time, it must be plain that, in thus setting aside a large amount of the precious metals for this purpose, we are really abstracting from the common stock of the country so much capital, and devoting it to a purpose which yields no profit or interest, but which nevertheless gives to the remaining common stock of capital so great an increased value, by the additional facilities which are given to exchanges, as fully to compensate for the abstraction of so much capital. Well, then, applying this principle to things as they actually exist in India—how do we stand? The standard which we have adopted is that of silver. Whether it is the best or not, we will consider hereafter. But at least, I must ask you to bear in mind, and never to lose sight of the fact, that from time immemorial the standard of value in India has been one of silver,—that every obligation, public and private, has been contracted in a currency of silver,—and that all such obligations to pay any given number of rupees at any date however remote, is really nothing more or less than an obligation to deliver so much silver.

Then let me ask, how much capital has there been abstracted from the common stock in India for this purpose? How much continues abstracted, performing the function I have described, though I fear in a most inconvenient form—indeed, in a form, as I shall show, which leads to further great sacrifices independent of the loss of so much re-productive capital? It may be difficult to form any precise estimate of the amount. But at least we know enough to come to the conclusion that the amount is very large. Since 1835, I find that the coinage in the three Indian Mints has exceeded a sum of one hundred crores of rupees, equal to one hundred millions of pounds sterling. But, Sir, this would give but an inadequate idea of the rate at which silver coin is being now absorbed. One hundred millions in twenty-five years give only a general average of four crores of rupees, or four millions sterling in each year. But what is the magnitude of our transactions now? In the last four years the quantity of silver coined at our Mints, and absorbed in the country, amounts to no less than forty-seven crores of rupees, or 47,000,000*l.*, being at the rate of nearly 12,000,000*l.* in each year. Sir, could we have a stronger proof of the rapid increase of the activity of our trade, and I will add of the wealth necessary to minister to it? Now, I am not unmindful of the fact that all this coin does not remain in circulation—that much of it is, unfortunately for the country and for its owners, hoarded, and that some of it is again melted down for jewellery. But making all due allowance for these abstractions, there must be in actual circulation

as coin a sum of money exceeding one hundred millions sterling, or one hundred crores of rupees, more than the equivalent of the whole debt of India, and it is an important fact that this amount is annually increasing, and must increase, as trade becomes more active, thus abstracting more and more from the re-productive capital of the country.

But, Sir, I have hinted at other ways in which the public in India, and I may add the Government, are exposed to loss through our present monetary system. Our currency consists exclusively, or nearly so, of silver coins, forming a great bulk and weight in proportion to its value. Can any one form a just estimate of the whole cost to which the public are put in transmitting this bulky coin from place to place? Can any one even judge of the expense the Government alone has incurred on this account? I have seen many estimates on this head. If I mistake not, I have seen an estimate made by Sir Charles Napier, that the protection of Government Treasure, in escort and in other ways, gave employment to something like thirty thousand native troops. But be that as it may, be it exaggerated or not, there is no question that the public of India are put to an enormous annual cost for the mere risk attending the transmission of coin from place to place.

Now, Sir, let us enquire what are the means which the application of Economical Science and experience have pointed out in far advanced and highly civilised communities, by which this great abstraction of capital from re-productive purposes can be reduced, by which the cost and risk of removing coin in bulk can be obviated, and by which a great and general economy to the State and the public can be effected? No doubt, between nation and nation, this is chiefly done by the well understood and valuable contrivance of Bills of Exchange—in the domestic transactions of a country, this economy is to some extent effected by Banking operations and transfers, to some extent by Bills of Exchange but to a much greater extent, and in a far more convenient form, by the use of Bank Notes of uniform amount, and for such sums as suit the ordinary transactions of life, but so regulated as to represent in reality the coin for which they are used. But before I proceed further, I am desirous of here noticing some proposals that have been made from time to time in India for the purpose of remedying the defects of our monetary system by the introduction of gold coins. Now, Sir, I must say that, having given all the proposals which have been made for this purpose, or that are capable of being made, our most careful consideration, I am unable to recognise in any one of them a reasonable or unobjectionable mode of accomplishing the object. Shall we adopt a double standard of gold and silver? Sir, few will be found to advocate such a plan. No doubt, gold and silver vary in their intrinsic value in relation to each other, much less than perhaps any other two articles that could be named, but, nevertheless, they do vary, and that not inconsiderably, as the experience of the last few years has shown. In relation to silver, gold is certainly at least five per cent cheaper than it was ten years ago, and when we come to treat of national obligations, that may represent a large sum. What effect then would the adoption of a double standard have? Why, clearly to enable the debtor to discharge his obligation in whichever might at the time be the cheapest metal. This, Sir, would destroy the whole object, and the great utility of a standard at all, and would simply enable the debtor to pay in one material what he had contracted to pay in another. Sir, we are not prepared to adopt a measure admittedly so defective and so unsound. But, then, it has been proposed that gold coins should be circulated, and should pass only at their intrinsic value, fluctuating from day to day according to the fluctuations of the price of gold. But, Sir, it would be a mere misnomer to call such coins money. Could the transactions of a country be carried on with coins which to-day might represent 10 rupees and 8 annas, to-morrow 10 rupees, and the next day 9 rupees and 8 annas, and so on? Think of the inconvenience which would arise from such a system and the altercations which would ensue between buyer and seller as to what the real intrinsic value was from day to day, or even from hour to hour. Again, think of the dissatisfaction which would naturally be felt by any one who, having received a coin of the Government at one rate to-day, found, when he required to use it to-morrow, that it had fallen in value by 4 or 8 annas.

Sir, if there is one duty more than another which the Government owes to the public in respect to its monetary arrangements, it is that the coins, which it circulates with its authority, shall be of one common and unvarying value. But another proposal has been made with a view of obviating the evil of a fluctuating value. It has been proposed that gold coins shall be issued representing 10 rupees of a certain weight and fineness, and that their value should be fixed by law as a legal tender for a given period of time, say six months or a year, when the exact value should be re-adjusted according to the market value of gold for another period of time. But what would be the practical effect of such a plan? If, after the value was fixed, gold were to rise in price, then there can be no doubt all the gold would disappear from circulation—if, on the other hand, gold were to fall in price, it would become profitable to send gold to the Mint to get it coined, and with it to purchase silver coin at a profit. In such case no doubt a considerable quantity of gold would be forced into circulation. But the day of reckoning would soon come—the time when a re-adjustment of the legal tender value of the coin would take place. A large quantity of coins which had passed as legal tender for 10 rupees for a certain time would on re-adjustment pass for 9 rupees 8 annas. Who is to bear the loss? The unfortunate holders at the time the re-adjustment took place. Would this be a satisfactory arrangement? My own belief is that in practice all these schemes to make two metals, which are always less or more varying in price towards each other, circulate in strict uniformity, would entirely fail. It has been tried in Europe under the most favourable circumstances, and has failed there. I have here a monetary convention, which was entered into in 1856, between the Austrian Government and all the other German States, with a view to have one uniform current coin. Everyone who has travelled through Germany is aware of the great inconvenience which resulted from the various coins which were in circulation throughout those States. The standard of value in Germany and the current coin are of silver, as is the case in India. But some of the parties to the Treaty, and especially the Government of Austria, were anxious to supplement their silver currency with gold coins, as has been desired in India. The plan for this purpose provided for by the Treaty is similar to that upon which I have just commented—it was provided that gold coins should be issued at a fixed valuation which should remain a legal tender, and current for six months, and should then again be subject to re-adjustment in their current value according to the market price of gold, and so on, a new re-adjustment taking place every six months. The words of the Treaty are —

*Extract from the German Monetary Convention, dated January 24th 1857*

Article XXI para a.—That each State is at liberty to allow their gold coins (Article XVIII) to be taken at their treasuries in lieu of silver, at a rate of exchange to be beforehand decided upon, and this at all treasuries, and for all payments or only partially, as shall be thought proper. Such pre-decided rate of exchange shall last at the utmost for six months, and at the close of the last month is to be each time re-considered for the next similar period.

Well, Sir, when I saw that propositions of a similar character had been made here, I wrote to Lord Wodehouse, the Under-Secretary of State for Foreign Affairs, and begged that he would ascertain from the Austrian Ministry what had been the practical effect of that provision in the Treaty. I have just received His Lordship's reply. He encloses a communication from Lord Augustus Loftus, our Minister at Vienna, of which the following are extracts.—

*Extract from Despatch of Lord A. Loftus, No 92, dated November 8th 1859*

The provisions of the convention between Austria and the Zollverein States, affording the faculty of supplementing their legal currency by the addition of gold coinage, have virtually been a dead letter as regards Austria.

\* \* \* \* \*

Under these circumstances, the provisions in the monetary convention in question, as far as regards gold, have never been acted on, and very little gold comparatively has been coined in Austria, that metal for some years past being little current, and principally confined to the hands of money-dealers and merchants, for the purpose of making payments in foreign parts, it cannot therefore be reckoned an active or operative portion of the specie currency of the Empire.

Sir, the experience of Germany is not encouraging for India to rely upon impracticable schemes of this nature for the improvement of our currency.

But then another and more extensive change has been suggested, and that from a quarter deserving of every consideration. It has been said—why not change our standard of value?—why not, as in England, adopt a gold standard, supplemented by silver tokens of limited tender as subordinate coins? Sir, if we had now to begin *de novo*, no one would doubt that that would be a much preferable plan to that which we now find in use. But we have to deal with a system already established—a system under which an enormous amount of obligations, both public and private, has been incurred. As I have already said, those obligations in reality are to pay a given quantity of silver. And if we were now to change our standard of value, and to adopt gold in place of silver, because the former is becoming cheaper in relation to the latter, I think no one can doubt that we should by law be enabling every debtor—the State amongst others—to commit a breach of faith upon his creditor. Let us bear in mind that a reduction in the price of gold of only 5 per cent would, under such circumstances, in effect reduce the claim of the holders of the public debt of India by no less a sum than five millions sterling. Sir, we are bent upon reform and economy in every legitimate shape that lies within our reach, but we believe that the credit of the Government will be best sustained by the most rigid observance of good faith in all its transactions.

Then, Sir, however free we are to admit the great inconvenience of the existing system, we are unable to look in the direction of a gold currency for a cure of its defects. But we think we can propose one in every respect more effective for all the objects we have in view, and one which will strictly maintain the integrity of our present standard, and which will not expose us to the suspicion of tampering with the obligations of the State. We have no doubt that all the objects at which both we and the public aim, will be far better and more perfectly accomplished by having recourse to a sound, well-regulated, Paper currency of general application to the whole of India, and at all times easily and readily convertible into the coin which it represents—a Paper currency so well secured that it can safely be made a legal tender in all transactions throughout India. Sir, on all hands, and by all our most accredited authorities on Political Economy, the adoption of a paper circulation so well guarded as always to maintain the full value of the coin it represents, is regarded as one of the highest and most beneficial efforts of political science and civilisation. It enables us to use as an instrument of circulation, in place of the unwieldy and costly coins which we do at present, a representation of them which costs little or nothing, but which in every way is infinitely more convenient. In this way it effects a great economy of capital by releasing the precious metals which are much more imperfectly performing the same purposes. Some writers have compared the adoption of a Paper currency to the discovery in the country of new mines, because you do really add to the effective wealth of the country, to whatever extent paper replaces the coin in circulation. Adam Smith, I think, it is who compares the economy thus effected to a discovery by which all your locomotion could be conducted without roads, and by which you were enabled therefore to add the existing roads to the portion of the land under reproductive cultivation. The road is an abstraction from the fruitful portion of the soil, but the sacrifice is abundantly compensated for by the additional value which it gives to the rest, so the precious metals used as a circulating medium, yielding as it does no interest, and being, as I have said, an abstraction from the reproductive capital of the country, the loss of which, however, like the land used for roads, is compensated for by the greater value given to the remainder. But, Sir, if we can to a great extent, by the use of paper, effect the same object, then we release that unproductive capital for other purposes, while we confer a greater convenience upon the public. The inconvenience of the present money in use is sufficiently familiar to every one in private life—the inconvenience to those engaged in large transactions, especially out of the Presidency Towns, and where there are no bank notes, is still greater. In one of the large Trading Towns in the North-West I found a remarkable example of this inconvenience. I found that recourse had been had for a circulating medium, in order to save the labour and time of counting large sums in rupees, to the use of 'mysterious sealed bags, said to contain' a thousand

rupees each. These bags circulate freely in wholesale transactions, upon the faith the merchants have in each other, with a "chit" or letter of indorsement, without always any precise knowledge of what the real contents are. Sir, when recourse is had to expedients of this kind, we have ample proof that some reform in our existing system is loudly called for. But, Sir, independent of the great economy of capital which is thus effected by a Paper currency, there will be a further economy in three other important ways—first, we shall find a great reduction in the cost of the Mint; next, we shall save the wear and tear to which the coin in circulation is exposed, and the great loss which the public incur from light coins; and, lastly, we shall, both as a Government and as a community, save not only great expense but also great risk in the transmission of money from place to place—we shall be able to adopt the improved plans of civilised nations in place of adhering, as we do to this day, to a practice which had its origin long before the Christian era.

But, Sir, a Paper currency, in order securely to carry out all these advantages, and to be a perfect representation of coin, must be based upon certain well-known and defined principles. In order that the paper shall be identical in value with the coin, it must not only be made convertible in theory and by regulation, but sufficient security must be taken to provide for that convertibility at all times. By this means the quantity of paper in circulation will always be identical in quantity with what it would be were it to continue wholly a metallic circulation. The notes issued would not be an addition to, but a mere substitution of, the silver coins which they displaced. It is, Sir, a Paper currency upon this sound principle which we seek to establish in India—a principle which has stood the test of experience in other countries, where it has been found equal to the magnitude of the largest trading transactions. But in order that a Paper currency shall fulfil all the purposes of coin it is necessary that it should be a legal tender everywhere, except at the place of its issue, where it is convertible into coin, and it should moreover be received by the Government in payment of revenue and for all other purposes.

Assuming then, Sir, that I have been fortunate enough to carry the Council thus far with me, it will now become my duty to state in what manner the Government is of opinion a Paper currency, combining all these advantages, can best be carried into effect. And here I propose, for the sake of clearness, to divide our plans into five distinct heads—first, as to the agency through which such notes can best be issued, second, as to the manner in which the necessary securities can best be taken for the conditions which I have laid down as essential to a well regulated Paper currency; third, as to the functions to be entrusted to the issuing body; fourth, as to the denomination of the notes to be issued; and, fifth, as to the securities to be taken against forgery.

In the first place then, Sir, we are to consider what will be the best agency to use for the purpose of circulating a Paper currency. Now, let us bear in mind that the proposal is, and we think that essential, that the notes to be issued are to be a legal tender in all transactions between man and man, that they are to be received at every Government Treasury for all demands of the Government for revenue or other purposes, and that the system is to be general, and to extend over the whole of India. It is essential that we should bear these conditions in mind. Well, in point of practice, the issue of paper money has hitherto been usually confined to banks or to Governments. I may say most usually to banks, and there is no doubt that in old countries, where the system has long been combined with the institutions of trade, and where the machinery of banks upon a sound basis exists and is spread all over the country, they possess considerable facilities for exercising this function. But let me here remark that the issue of notes does not necessarily constitute any part of the business of a banker, who is more properly a dealer in capital; a borrower from one man and a lender to another upon higher terms, which forms his profit, in short, a most useful and beneficial medium, through which the spare capital of one portion of the community is rendered profitable in the hands of another. We can have no better proof of this than the facts that, notwithstanding the great number of private and joint stock banks in

London, none of them (the Bank of England only excepted) do or ever did issue notes in Manchester, one of the largest emporiums of trade in the world, not one of the Banks (the branch of the Bank of England excepted) issues notes, and by the laws of 1844 and 1845 all Banking Companies established after those years within the United Kingdom are distinctly interdicted from issuing notes. We require no further proof that the issue of notes is no necessary part of a banker's business. But, Sir, there are peculiarities in our position in India, and in the system which, on the part of the Government, I am about to propose, which would render it even more difficult than usual to employ the agency of Banks in India. In the first place the system is to be universal. How many years should we have to wait before we could expect that any Banks, however extensive their capital, could establish branches throughout the whole country for this purpose? But, again, even though that difficulty were got over, we have still another which I regard as insurmountable. Our notes are to be a legal tender, they are to be received by every private person, as well as by the Government, in discharge of all ordinary claims. To attach this condition to our notes, we must provide absolute and undoubted security for their payment, not only for their ultimate payment but for their convertibility into coin when required. Well, Sir, if we employed the agency of a Bank, we should require not only a deposit of securities which would ensure the ultimate payment of the notes, but also of a proper reserve of bullion, to secure their prompt and immediate payment. We could not make them a legal tender on any other conditions. Well, but the business of a Bank established upon such a scale could not be, and it would not be desirable that it should be, confined to the issue of notes. It would extend to all other banking business. It would hold deposits, it would issue bills of exchange, it would discount and negotiate mercantile paper in short, it would have a great variety of creditors other than those who held its notes. Would it then be practicable, would it be fair towards the great body of its creditors, if so large a share of its assets, as I have said, should be set aside as security for its notes in favour of one class of its creditors, to the possible injury of all other classes? Would it be fair to protect the note-holders at the possible risk of the depositors? Sir, with one exception, to which I will shortly refer, I know of no Bank whose issue of notes are a legal tender. The Banks in Scotland all issue notes, but they are not a legal tender, the notes of the English and Irish local Banks are not a legal tender, the notes of none of the American Banks are a legal tender, the notes even of the Bank of France are not a legal tender, the notes of the Bank of England only, and this is the exception to which I referred, are a legal tender, and this exception is defended upon the ground that the Legislature has entirely separated the department for the issue of notes from the department for general banking business, and that it has provided that, in the issue department, there shall at all times be retained public securities and bullion to the full amount of the notes which, from time to time, it issues. Now there may be, and no doubt there is, a question how far this separation of accounts is real or nominal, as it affects the interests of the different classes of creditors, but practically, considering the large capital of the Bank of England, upwards of seventeen millions sterling, including the Rest, and considering the publicity given to all its transactions and its accounts, the question would never arise. But with a new establishment in India it could not but be otherwise. On every ground, then, while we wish to see banking establishments extended, we have come to the conclusion that we cannot avail ourselves of the agency of Banks for a general Indian paper currency.

But, Sir, if there are special reasons why Banks in India cannot be used for this purpose, there are others as special and peculiar to India which point to the remarkable facilities possessed by the Government for the issue and management of a paper circulation. Throughout India, in every part, however remote, the Government has an organised body of public officers, of receipt of revenue on the one hand and of expenditure on the other. Indeed, it is not too much to say that the great recipients and disbursers of money throughout the whole of India are the revenue and other officers of the Government. The Government Treasuries may be said practically to

represent the great bulk of monetary transactions in most districts. Practically the transactions of these Treasuries, and the money that is accepted at them, must regulate the transactions of India. Well, but Sir, we have to use every possible precaution against abuse of the power which the Government would have, if it had an uncontrolled authority to issue notes. If we are to make the notes a legal tender, we must take absolute security not less than that I have described for the safety of those notes. We must take care that, under no circumstance can the Government abuse the privilege of making paper money, and by over issues for purposes of expenditure endanger their convertibility, and thus run the risk of their depreciation. We do not then propose that the Government itself, in any of its existing departments, shall be empowered to issue notes, but that, by the Bill which I shall ask leave to introduce before I sit down, a Commission shall be formed, whose duties shall be strictly defined by law, over whom the Government shall have no power except within the limits of the Act, and who shall be bound upon oath to obey the provisions of the Act. Sir, in this we aim at no novelty. In this and all our measures we are not ambitious of being regarded as ingenious inventors, we are content to accept the more humble, but by far the safer function of applying, in the most approved manner to the circumstances of India, those great principles of sound science and its practice which long years of discussion and experience have proved in advanced countries to be compatible with public interests and public security. Sir, as nearly as possible, we take the issue department of the Bank of England as our model, but we take it under most favourable circumstances, being stripped of its only objectionable feature, its connection with the banking department.

This, then, brings me to the second point. The manner in which security shall be taken for the performance of the conditions which we regard as essential to a paper circulation, which is a legal tender, and, together with this, we may, to save time, consider also the third head, that is, the functions of those who will be entrusted with the issuing of the notes. Sir, for this purpose we propose to divide the three Presidencies into convenient districts, to be called *Currency Circles*. Our object will be so to arrange these circles that the chief station of one of the existing districts for revenue purposes will be near to its centre. In connection with the Mint at Calcutta will be the head establishment, where the notes for the whole of India will be made, under the direct superintendence of the Head Commissioner. In connection with the Mints at Madras and Bombay, there will also be established Commissioners, in whose charge the circulation of those Presidencies will be placed, and who will be supplied with notes from Calcutta. But for the sake of clearness I will confine my observations now to this Presidency. The local circles having been determined and fixed, the chief station within it, where we should find the principal Treasury of the district, which would also be a Military Station, and at which a considerable European population would be found, such a place for example as Benares, or Allahabad, or Lahore, would be fixed upon as the station for the Branch Department of Issue, under the control of a Deputy Currency Commissioner. The functions of the Commissioner in Calcutta and of the Deputy Commissioner at the local branches, so far as regards the issue of notes, would be precisely those of the Issue Department of the Bank of England. They would receive coin and silver in exchange for notes, and they would always be prepared to pay coin in redemption of the notes of their district. The notes, like those of the Bank of England, would be of similar appearance for all India, but the notes of every Branch would bear upon its face the name of the Branch at which it is issued. All Branch notes will be payable in silver at the Branches from which they are issued, and also in the Presidency Towns to which the Branch belongs, whether Calcutta, Bombay or Madras. The notes will be received into every Treasury in the circle in which they are issued in payment of revenue and of all other claims of Government. But there would be no more connection between the Government Treasuries and the Issue departments than with private Banks. In the first instance, the Government Treasuries would exchange such part of their silver as they desired for notes. The Issue department would receive

the coin and the Treasuries the notes representing it, for circulation. Bankers and others requiring notes for the purpose of trade would obtain them in exchange for silver, and in the seaports, merchants importing silver would carry it to the Issue department, and at a fixed rate would at once receive notes for the full amount in place of waiting, as they do at present, till it is coined, thus giving them the same advantage that the importer of bullion has in London in carrying his bullion to the Bank of England, and of receiving its own notes in exchange, which are convertible into coin, and can at once be used for all trade purposes. Now, according to this plan, it will be plain that the Issue departments, neither in Calcutta, nor in the districts, can ever have in circulation a larger amount of notes than they possess coin to represent, but inasmuch as a larger proportion of the notes thus circulated will remain out, and at any time only a small proportion can ever be presented for payment, each Branch and each chief department of issue will be permitted to invest a portion, in no case exceeding two-thirds, in Government paper, which will be held by the Issue department, specifically appropriated to the payment of the notes, and the remainder, not less than one-third, will be held in bullion, ready to meet the claims of those who wish to exchange their notes for coin. The necessary balance of coin at all the branches will be kept up, if needful, by supplies from the head departments in the Presidency Towns. The circulation of the Bank of England is usually about twenty-one millions, which is represented by fourteen millions of public securities, and the remainder in bullion. By these means, Sir, we should give to the country all the convenience to be derived from a Paper currency. We should effectually provide at all times for its absolute security and for its instant convertibility. The Issue department would always be possessed of bullion and public securities together to the full extent of the notes issued. Be the amount ever so great, the principle would be so sound that no other limit need be placed upon the action of the department. The legitimate demands of trade alone would determine the amount of the circulation, without any interference on the part of the Government to attempt to regulate it. Such a mixed currency of paper and coin would exactly correspond with that which, under present circumstances, would exist, if we continued to circulate coin only, and that, Sir, is on all hands admitted to be the true test of a sound currency. These, Sir, are the functions which the Issue departments will perform, and these the securities which we propose to take for the performance of the conditions which I have described as being essential to a sound Paper currency, and we have no doubt they will be considered as ample for the purpose. And, Sir, it will be obvious that by this means a large profit will accrue to the Government. The Commissioners of the Issue department will receive the dividends due upon the stock which they hold, which they will pay into the public Treasury as the profits of the note circulation, but the Government will be benefited in another form, it is impossible that so large an amount of public securities can be taken out of the market without raising their price, and proportionately in a most legitimate way improving the credit of the State. The practical effect of these measures will indeed be the redemption of so much of the public debt as shall be thus held by the Commissioners of the Issue department of the Government.

Then, Sir, we have next to consider what ought to be the denomination of the notes so issued? This is a subject upon which much difference exists both in opinion and in practice, and it will be obvious that it can only be properly determined by a reference to the character of the transactions of a nation, whether as a rule they represent very small and minute sums, or whether they represent generally larger sums. In England the lowest denomination of notes is 5*l*, in Scotland and in Ireland it is 1*l*, in France it is 100 francs, in the United States it is one dollar or about 4*s* 2*d*, in some of the North American Colonies one dollar notes freely circulate, throughout Germany the thaler note, of value little more than 3*s*, is the most common circulation, in Mauritius the circulation consists of notes of 5 rupees or 10*s* and upwards, in Ceylon the notes are of 10*s* and upwards, formerly they were of 5*s*, and by a report on the subject which I recently

received from the able and accomplished Governor of that Colony, Sir Henry Ward, it appears that the suppression of notes of that denomination had been attended with inconvenience to the planters and others, of which complaint had been made. But from what I have already said, it will be apparent that, as a matter of security, it is much more important that the circulation should be based upon a really sound principle, than in any way unduly restricted in the denomination of the notes. It must be plain that a principle which makes notes of a large denomination safe and secure must equally extend to those of a lower denomination. And, Sir, there will be a peculiar source of absolute security in respect to the paper circulation of India, which attaches to perhaps no other Bank of Issue in the world. In all other cases with which I am acquainted, notes are issued to the public in the shape of loans, in discount of bills, and as advances in various forms. Now it may be said, and truly, that even if issued for those purposes, they could not remain out in excess of the public requirements so long as they are convertible at the pleasure of the holder into coin. This is a point upon which the great majority of practical authorities may be said to be now agreed. To believe that convertible notes can continue in circulation in excess, is to contend that a note that can be easily and instantly exchanged for coin can be depreciated, because the only proof that I know of an excess of circulation is depreciation of the notes in relation to the coin it represents. Now no one I think will contend that any man having a note in his possession which did not command the same exchangeable value as the coin it represents, and having it in his power to exchange that note for the coin, would fail to correct the anomaly by that means. But there have been those who have thought differently, and even to those I would say that the issue of notes upon the principle we propose cannot possibly be attended with any such risk. Sir, our notes will be purely bullion notes, they will be issued only in exchange for bullion—there will be no issues as credit advances in any shape whatever. That is the legitimate business of Banks. It is ours to furnish a circulating medium—it is theirs to use it in all the variety of forms which credit transactions assume. In our case we are absolutely restricted, and by force of a great and obvious principle we maintain intact the full intrinsic value of the currency—in theirs, they are governed by the ordinary principles which govern all commercial transactions. Well, Sir, these are not unimportant considerations, when we are determining the denomination of the notes to be issued. But the main consideration, after we have determined upon a sound self-acting principle, is the character of the transactions of the country and the denominations of the coin in use. It is the imperative duty, it is the interest of a Government, to furnish a circulating medium for exchanges determined in amount by the wants of the community. Well, the great characteristic of Indian transactions is their number and their multiplicity. And, then, if we bear in mind that the highest denomination of coin in circulation is one of only a single rupee or two shillings, while in England the common coin is one of twenty shillings, it would appear that we should be justified in adopting the old practice in Ceylon and the present practice in many countries, and adopt notes of a denomination as low as two or two and a half rupees. But, Sir, we do not propose to go so low—we propose to begin with five rupees or ten shillings, adopting the limit at this time actually in practice in Ceylon and Mauritius, and beginning with that denomination, to have others of *ten, twenty, fifty, one hundred, five hundred, and one thousand* Rupees, which latter I hope will take the place of the mysterious sealed bags which circulate at Murzapore.

Sir, we think it is essential to the plan to have notes of a small denomination, in order to furnish change for the notes of larger amount, which will be extensively used as an easy mode of remittance from one part of a district to another. As I have said before, these notes will be payable in coin at the central offices of the district from whence they are issued, and they will be all payable as well in Calcutta, Bombay, or Madras, as the case may be. They will be receivable in every Government Treasury within the circle in payment of revenue or any other claims of the Government whatever. And I cannot help believing that such a system of currency will

prove of an immense convenience, compared with the present cumbrous system of conducting all our transactions, however large, in two-shilling silver pieces.

Well, then, Sir, the fifth and last head is, what precautions we are prepared to take against forgery? and I think we shall be able to satisfy you that we have not only not been unmindful of that important point, but that we have already taken measures, and that successfully, which will give us every security that it is possible to attain on this head. But here I would remark upon a point which I think has been too much overlooked in connexion with the relative risk which exists between a currency of coin and one of paper. We must bear in mind that coin can be counterfeited while notes can be forged. Two years ago, I moved for a return in Parliament of the number of prosecutions which had taken place in England, Scotland, and Ireland, during the ten preceding years, in connexion with the making and uttering of base coin, and in connexion with the forging and uttering of forged notes. I hold that return in my hand. The result is that in England and Wales, during the ten years, the cases of prosecution in relation to coins numbered no fewer than 6,291, while the number of prosecutions in connexion with forged notes were only 1,866. Again, in Scotland, and here let it be borne in mind that the denomination of the notes in circulation is as low as *one pound*, and where the circulation consists almost exclusively of paper, the number of cases of prosecution in connexion with base coin was 570, while the number in connexion with forged notes was only 4. Again, in Ireland, where the lower denomination of notes also prevail, the number of cases of prosecution in connexion with coinage was 338, while in connexion with forged notes they were only 41. In the whole of the United Kingdom, the prosecutions in relation to base coins were 7,199 for the ten years, while those in connexion with forged notes were only 1,911. I think these returns conclusively show that the risk of counterfeit which attends any system of currency is by no means confined to Bank Notes. I believe I am right in saying that the attempts at counterfeiting coins in India are very rare and that prosecutions in relation to such crimes are not of frequent occurrence. No doubt the complicated machinery required for coining, and the great cost and skill necessary to make it, and the rareness of skilled artificers to work it, may be said to be one of the reasons why this class of crimes does not prevail in India—for we must bear in mind that it requires a large outlay of capital, and a large employment of the most ingenious skill (which so much abounds in England), to manufacture even counterfeit coins. But, Sir, if this difficulty has hitherto shielded the Indian public from the dangers of a base coinage, I think I shall be able to show that the steps we have taken will be even more perfect for shielding it from the evils of forged notes. Sir, we know well how expert some of the people in the East are in imitating hand-writing. I have heard of a case in which one of your predecessors, Sir—a former Chief Justice of Calcutta—was deceived on the Bench by the production of a document purporting to bear his own signature, and which turned out to be forged. We all know, too, the number of forged documents which are used in our Courts of law—an evil so common, that the Honorable Member for Madras has submitted to us a Bill, the avowed object of which is to check these proceedings. But be it observed that all these attempts are made in connexion with the hand-writing. I have not heard of a case where an attempt has been made to forge the stamp to a document. Sir, our precautions will consist altogether of those of a mechanical character embracing the use of machinery and scientific operations of the most refined character, but at the same time plain and palpable to the eye of the commonest observer. Sir, as soon as I had accepted Her Majesty's gracious appointment to the responsible office I now fill, my attention was at once turned to this most obvious reform in our Indian administration. I immediately put myself in communication with the Governor and Deputy Governor of the Bank of England, and the able and intelligent mechanical officers who have the sole management of the manufacture of the notes. And, Sir, on the part of the Government of India, I must here tender to those distinguished functionaries, and to their accomplished officers, our best thanks for the very effective aid which, as I shall immediately show you, they already have, and

are prepared still further to extend to us in this very important matter. Sir, it is no slight advantage in starting a new career in a matter of this important kind, to have behind us the aid and support of an experience in the most civilised country in the world of nearly two centuries. If there is one thing more than another with regard to which the British Parliament has, at all times, been ungrudging, it has been in extending to trade all the legitimate protection against fraud within its power, and to the Bank of England, as being the chief issuer of paper money, it has extended every possible security against forgery. It has, by law, given to that corporation the sole right to use paper manufactured in a particular way, and to use printing of a particular kind. But it is not so much on legal restrictions of this kind that the Bank of England relies. It is not upon the writing or printing of notes, for after the experience of many years, it has become a settled principle in the Bank of England, that the plainest and simplest form of notes is the one in which forgery is most easily detected, and that elaborate notes are most easily imitated. What the Bank of England chiefly relies upon for its protection is the paper which it uses, and the water-marks with which the paper is made. The paper is only made by one house, which is bound to supply the Bank of England alone, and admit no stranger to enter the premises. Well, Sir, whatever advantages the Bank of England enjoys under Acts of Parliament, or in the exclusive manufacture of paper, or in the monopoly of those water-marks, the Directors have generously consented to extend to the Government of India. They have gone further, and pending our preparations in India, they have consented to make notes for us. Sir, I hold in my hand a specimen note for ten rupees, which I received from the Governor of the Bank by a recent Mail. The paper of which contains water-marks similar to the notes of the Bank of England, with the variation only of the words. This specimen has in the water-mark the words "Government of India" along the top of the paper. The word "Ten" in the centre, and the word "Rupees" below. Sir, that which the mechanical skill of England has proved unable successfully to imitate, we may rest satisfied will be secured from counterfeit in India, and the great advantage here is that the water-mark, as a test of a genuine note, is plain and visible to the eye of the most unlettered person. As a proof of the great perfection which the system has reached in the Bank of England, I may mention a very striking fact. It will have been observed that each Bank of England note has inscribed a number with two capital letters attached. If that number, with the two letters, were cut out of a note and all the rest of it destroyed, so perfect is the system, that on presenting that small remnant of the note, the Bank would be able to say whether the note has been paid or not, what the amount of the note was, and the date and place of its issue—and upon this relict alone they would be content to pay the note, of course taking security that the remainder would not be presented. Sir, it is with all the advantages of a system so perfected, and with the hearty aid and co-operation of the Directors of the Bank of England, that we shall introduce the system of a Paper currency into India. I may here add that the denomination of each note will appear on the face of it, not only in English, but also in the two languages most in use by different classes in the districts where they will circulate. In addition to these securities, the Bill which I now ask to introduce will contain provisions similar to those of the English law, for the punishment of those who may attempt fraudulent imitations.

Sir, I have now, I fear at much too great a length, but it was needful that I should make myself clear upon a subject with respect to which any misapprehension might prove very prejudicial, explained the broad outlines of our measure. We propose to have a paper note circulation of denominations, varying from five rupees up to one thousand rupees, to be issued at the Presidency Towns and at the centres of circles or districts mapped out for this purpose; that they shall be payable in coin at the centre where they are issued and in the Presidency Towns to which the circle belongs, that they shall be receivable by the Government for all claims of whatever kind, that they shall be a legal tender between man and man in the settlement of every claim, that they shall be issued only in exchange for coin or bullion, that a certain fixed proportion of bullion and coin shall always be

kept in hand to secure the convertibility of the notes, and that public securities shall be held in the Issue department for the full amount of the difference

But, Sir, there is one very important point to which I must now refer. We have at the present time three Banking Corporations in India, in each of which the Government may be said to be a partner. The Government hold shares in each, and is fully represented in the Direction. Those corporations issue notes, but they are not a legal tender, nor do they circulate much beyond the Presidency Towns, nor are they received without limit into the Government Treasuries. Now, Sir, even if it were desirable, it must be plain that such notes could not circulate along with the Government notes, which I have described as a legal tender. The Charter under which these respectable Banks exist are subject to revision at any time on twelve months' notice being given. It must be plain that such a system as I have very inadequately attempted to describe should be general and universal over India to secure all the advantages which it is calculated to confer. Sir, then we have decided to give the necessary notice to enable us to modify those Charters. But I must here say that the Government feel that those Banks have conferred a great benefit upon India, and that they will deserve every consideration consistent with the public interest at our hands, and I trust that we may fall upon some plan which, without involving any sacrifice on the part of the public may compensate, at least in some degree, those Banks for the privilege which they have so long enjoyed, and which I have never heard them accused of abusing. Sir, I think we shall find when we come to look at those Charters that they unnecessarily restrict their operations, and that we may also find that we may confer upon them new functions equally for the benefit of themselves and the State. In conferring advantages upon the public it is our desire to deal as tenderly with private interest as is consistent with the great objects we have in view.

Sir, in the early part of my observations I referred to the fact that the precious metals, to whatever extent they are employed for the mere purpose of coin in circulation, are really an abstraction to that extent from the real reproductive capital of the country, and I wish now to show in what way the measure which we propose will operate in restoring this capital to reproductive channels. Independent of all the advantages which will accrue to the country by the adoption of a sound Paper currency, that which I am about to describe is most important, if not the most important of all, however less apparent it may be at first sight. I have already shown you by what process the Government would become possessed of a large share of the securities representing the debt of the State, by employing a portion of this coin, withdrawn from circulation and replaced by notes, in the purchase of such securities. But, Sir, it will be plain that to whatever extent the Currency Commissioners become purchasers of public stock there must be sellers to the same extent, to whom the surplus coin would be paid. Those persons would not permit their capital so relieved from one investment to remain idle, but would naturally seek other profitable modes of using it. To this extent capital would be more abundant, competition for its employment would be greater, and the tendency would be, to use a familiar phrase, for money to become cheaper. No doubt the first tendency would also be for silver to fall in price as it became released from the circulation, the first effect of which would be to lead to its exportation to any country where the merchant found it would yield a profit, and by this operation the equilibrium of value would be instantly restored. In short, to abstract so much coin from the mere mechanical purpose of the circulation, supplying its place with convertible paper, would be exactly the same in effect, as if suddenly, in the centre of the Midan, a rich silver mine had been discovered, and which produced silver at little or no cost. The first operation would be to lead to an export of that silver in exchange for articles of various descriptions which were really in demand, and by which means to the full extent the real wealth of the country and the aggregate amount of its reproductive capital would be increased. Mr Ricardo, in his able pamphlet upon "The High Price of Bullion," published in 1811, has so admirably illustrated this point, that I trust you will permit me to read an extract from it.—

*Extract from the works of D Ricardo, Esq, "The High Price of Bullion"\**

If a mine of gold were discovered in either of these countries, the currency of that country would be lowered in value, in consequence of the increased quantity of the precious metals brought into circulation, and would therefore no longer be of the same value as that of other countries. Gold and silver, whether in coin or in bullion, obeying the law which regulates all other commodities, would immediately become articles of exportation, they would leave the country where they were cheap for those countries where they were dear, and would continue to do so as long as the mine should prove productive, and till the proportion existing between capital and money in each country before the discovery of the mine were again established, and gold and silver restored everywhere to one value. In return for the gold exported, commodities would be imported, and though what is usually termed the balance of trade would be against the country exporting money or bullion, it would be evident that she was carrying on a most advantageous trade, exporting that which was in no way useful to her, for commodities which might be employed in the extension of her manufactures and the increase of her wealth.

If, instead of a mine being discovered in any country, a Bank were established, such as the Bank of England, with the power of issuing its notes for a circulating medium, after a large amount had been issued either by way of loans to merchants or by advances to Government, thereby adding considerably to the sum of the currency. The same effect would follow as in the case of the mine. The circulating medium would be lowered in value, and goods would experience a proportionate rise. The equilibrium between that and other nations would only be restored by the exportation of part of the coin.

The establishment of the Bank, and the consequent issue of its notes, as well as the discovery of the mine, operate as an inducement to the exportation either of bullion or of coin, and are beneficial only in as far as that object may be accomplished. The Bank substitutes a currency of no value for one most costly, and enables us to turn the precious metals (which, though a very necessary part of our capital, yield no revenue) into a capital which will yield one. Dr A. Smith compares the advantages attending the establishment of a Bank to those which would be obtained by converting our highways into pastures and cornfields, and procuring a road through the air. The highways, like the coin, are highly useful, but neither yield any revenue. Some people might be alarmed at the specie leaving the country, and might consider that as a disadvantageous trade which required us to part with it, indeed, the law so considers it by its enactments against the exportation of specie, but a very little reflection will convince us that it is our choice and not our necessity that sends it abroad, and that it is highly beneficial to us to exchange that commodity which is superfluous for others which may be made productive. The exportation of the specie may at all times be safely left to the discretion of individuals, it will not be exported more than any other commodity unless its exportation should be advantageous to the country. If it be advantageous to export it, no laws can effectually prevent its exportation. Happily in this case, as well as in most others in commerce where there is free competition, the interests of the individual and that of the community are never at variance.

Sir, it is by this process that the capital, which is now unprofitably employed in this country to a great, and I will add so rapidly an increasing extent, will be by the most legitimate means released and restored to the channel of reproductive uses. I may be asked to what extent we expect by this means to economise capital? Sir, that is a point upon which I am not prepared to hazard a speculation, but if we take into account the fact that in the last twenty-four years silver, to the extent of one hundred crores of rupees, or one hundred millions of pounds sterling, has been coined, and that the demand for coin has increased so rapidly, that in the last four years silver, at the rate of nearly twelve crores of rupees, or twelve millions of pounds sterling, has annually been coined, we must arrive at the conclusion that ultimately the amount will be very large. No doubt the introduction of the system must be slow and gradual at first—the time required to establish the necessary machinery and appliances will lead to this—but I regard this limit upon our efforts rather as an advantage than otherwise, because it will afford time for people to become familiar with the system before it assumes large dimensions. Our attention will be first directed to the Presidency towns, from which the system will be gradually extended into the Mofussil until it has permeated over the whole of India.

Before I conclude there are three subjects of a somewhat kindred character to which I would wish shortly to refer. The first has reference to a question which has been much discussed by capitalists in England as well as in India. I refer to the proposals which have been made for the purpose of establishing upon a large scale, and with an adequate capital, a national Banking establishment capable of gradually embracing the great Banking operations in India, and of extending its Branches to the interior trading cities as opportunity might offer. That there is a growing want for such an institution and a rapidly increasing field for its operations no one can doubt. The Government is, therefore, desirous to be understood that

\* Pages 4-6 of the Fourth Edition, published by Mr. John Murray, 1811

the plan which has been adopted for the introduction of a legal tender paper currency is not intended in any way to discourage or to interfere with such a project, the operations of which would be those of legitimate Banking transactions in India and exchange operations abroad. The second is the subject of economising our cash balances and the great cost to which we are now put by retaining all our cash in our own Treasuries, and disbursing every payment in hard coin. This system has been abolished in England for more than half a century, and the far more convenient and economical form of a Bank account has been resorted to. Sir, this subject engages the earnest attention of the Government. The third and last point to which I wish to allude is the extremely defective condition of our copper coinage. During my journey up the country there was no complaint which was so common amongst the lower classes than the sacrifice they had to submit in the native bazars in getting copper change, absolutely needful for their scale of expenditure. It is not too much to say that the poorest of the people have been taxed as much as five, and in some cases ten per cent upon their little incomes from this cause. Sir, I hope we shall take care, in future, to provide against this evil. A large importation of copper coin, to the extent of ten lakhs of rupees, has been ordered from England, a new mint for copper coin alone may shortly be expected at this place, and another is ordered for Bombay, and we trust that the well-founded complaints on this head will soon cease to exist.

Sir, I have now laid before you the plan which the Government has devised as the best adapted for India for conferring upon it the great advantages of a perfect system of currency. As I said before, we have aimed at no novelty, our effort has been to adapt to our own circumstances principles which the wisdom of great men has defined and laid down with philosophical accuracy and practice, which the experience of the most enlightened commercial countries has approved. Sir, these are subjects which have engaged the attention of intellects of the highest order in modern times. Newton and Locke and Adam Smith applied their most profound researches to these subjects. In this present century they have, perhaps, more than any other branch of political science, absorbed the attention of able and acute minds—eminent men like Horner, Huskisson, Lord Liverpool, Ricardo, Tooke, Sir Robert Peel, Lord Overstone, and Norman have brought to this important subject the greatest power of mind and the largest experience. Then we have had Parliamentary Committees almost without number, we had the Bullion Committee in 1811, the Committee on the Resumption of Cash payments in 1819, presided over by Sir Robert Peel, then we had the Committee on the Bank Charter in 1831, next the Committee on Banks of Issue in 1840 and 1841, presided over in a most able manner by the present Secretary of State for India, Sir Charles Wood, then we had the Commercial Distress Committee of 1848, then the Bank Charter Committee of 1857, and, lastly, the Committee of 1858—of the last three of which I had the advantage of being a member. Well, Sir, it is upon accumulated evidence such as this that we feel that we may, with confidence, proceed, it is to such accumulated and high authority, as I have recounted, that we feel we may safely defer. And in doing so, there is this great advantage, that, however diversified the authorities I have quoted may be, however much some of them may have differed upon minor points, yet upon that which I have laid down as the great cardinal rule to be observed, all are agreed. Among all there is but one opinion, that, in order to constitute a sound currency of mixed coin and paper, there are three great essential conditions—*First*, that you should have one single standard of value, whether it be gold or silver, *second*, that the paper shall be at all times convertible into the coin it represents, and, *thirdly*, that a sufficient reserve of bullion shall be maintained in order to provide for that convertibility. Sir, all are agreed in regarding these three conditions as the sheet anchor of a sound currency; and it is upon these conditions that the measure I am about to introduce has been carefully framed. We know, Sir, that nothing that lies in our power can altogether prevent the recurrence of vicissitudes in trade, but we believe that sound and wise laws will, at least, moderate the severity of otherwise unavoidable misfortunes, while bad laws would infallibly aggravate them. Sir, we have done our best in adapting

these great principles to the peculiar circumstances of this country, and now it will become our first duty to give practical effect to the measures which we propose, by the gradual extension to the whole of India of the system I have described, in the confident belief that it will confer advantages of no slight description and will tend to promote the happiness of India by adding to its material property and wealth.

Mr Wilson concluded by moving the first reading of a Bill for the introduction of a system of Paper Currency.

Sir Bartle Frere seconded the Motion, which was then put and carried, and the Bill read a first time.

---

## APPENDIX XI.

---

### MEMORANDUM, STATEMENTS, AND SUPPLEMENTARY STATEMENTS ON THE PLACING OF CASH BALANCES ON LOAN OR DEPOSIT, SUBMITTED BY MR. WALTER BADOCK, C.S.I., ACCOUNTANT-GENERAL AT THE INDIA OFFICE

1 The system of placing surplus cash balances on temporary loan was inherited from the East India Company, having been apparently initiated by a minute of the (Secret) Finance and Home Committee, dated 6th December 1838. The practice has been followed from that time until now. The present procedure follows various orders approved by the Secretary of State in Council in minutes and letters to the Bank of England and to the Broker, for the time being, to the Secretary of State. Copies of the last three letters to the Bank and the Broker are appended (*see* pages 312-4).

#### *The approved Borrowing List*

2. Loans on security are made to certain bankers, discount houses, stock-brokers, &c., of high standing, whose names appear on an approved borrowing list (pages 315-6). Admission to that list is obtained by application addressed to the Broker, who communicates the application to the Accountant-General. The necessary enquiries are made by the Chairman of the Finance Committee, this part of the work being regarded as particularly his province in view of the special City knowledge possessed by him. Until recently, if the enquiries have proved satisfactory, the name of the applicant firm has been temporarily accepted by him, and he has also intimated to the Accountant-General any limit to be imposed on the amount to be advanced to the firm. The full Borrowing List showing the limits imposed has been submitted quarterly to the Finance Committee. The present practice, however, is to lay the applications, with such information as can be obtained, before the Finance Committee and the Secretary of State in Council, whose approval is signified before any loan is made. The full Borrowing List is submitted quarterly to the Secretary of State in Council as before.

#### *Amount and Period of Loans*

3 Loans are made in sums of 50,000*l.* or in multiples of 50,000*l.* The usual periods are from three to five weeks, or occasionally six weeks, according to the Accountant-General's calculations as to the term within those limits for which the money can conveniently be spared.

4 In fixing the period, the Accountant-General is guided by the fact that the weekly sales of Council Bills, which are the main source of the money in charge of the India Office, may at any time be reduced to a small figure if the exchange shows a tendency to fall away, or may even cease altogether, as has happened more than once, also that payment for the Bills sold on or after a

Wednesday may be postponed at the option of the purchaser to any day up to the following Tuesday. Similarly, receipts in respect of issues of Government Stock, or of new railway capital which may have been estimated in the Budget, and which form the second important head of receipts, cannot be relied upon as certainly available on any specific date until the issue has actually taken place, and such issues are dependent on market conditions, of which a forecast cannot be made with certainty. On the other hand, the Government of India have very large commitments for interest, annuities in purchase of railways, pay, pensions, &c., in this country, which have to be met on specific dates, and have also very large payments to make for stores for India, advances to railway companies, and other miscellaneous services, the dates for payment of which cannot be accurately foreseen. To provide for payments in the immediate future, therefore, dependence is placed on a sufficiency of loans, arranged to mature on each business day of the year. It is not the practice to lend for as long as six weeks, even if a higher rate of interest might be obtained by so doing, until all probable requirements in the interval have been fully provided for. Under this system, therefore, the whole balance, except the deposits referred to hereafter, can be made available in not more than six weeks.

*Securities authorised for Acceptance*

5 India Debentures, India Bonds, and Guaranteed Debentures of the several Indian Railway Companies, are taken at their par value.

Treasury Bills, Exchequer Bills, Exchequer Bonds, India Sterling Bills, Metropolitan Water Board Bills, and London County Bills are accepted at their market value, instead of their nominal amount.

The following securities are accepted at their minimum market value, with a cover of 5 per cent, the cover being replaced if the value of the security falls during the currency of the loan.—

Any of the Parliamentary Stocks or Annuities of the United Kingdom  
India  $3\frac{1}{2}$  per cent, 3 per cent or  $2\frac{1}{2}$  per cent Stock, and Stock  
Certificates

India Enfaced Rupee Paper

Fully-paid Debenture Scrip of the Indian Guaranteed Railway Companies

Any securities, the interest on which is, or shall be, guaranteed by Parliament

Metropolitan Consolidated Stocks and Stock Certificates.

Metropolitan Police 3 per cent Debenture Stock

Metropolitan Water Board "B" Stock, and Stock Certificates

London County Consolidated Stocks, Stock Certificates and Scrip

Corporation of London Debentures

Bonds or Bills of Colonial Governments that have observed the conditions prescribed in the Colonial Stock Act 1900, 63 & 64 Vict c 62, and of British Municipalities with a population of 500,000 or upwards (at present Birmingham, Liverpool, Manchester, and Glasgow), provided that in each case there is an obligation to repay the principal of the bond or bill within a period not exceeding five years from the date on which the loan is granted (See letters dated 15th April 1913 on page 314)

Statement No 1 is appended classifying the securities held in respect of loans on 31st March, 30th June, 30th September, and 31st December 1912, and on 31st March 1913

*Instructions to Broker*

6 The Accountant-General informs the Broker daily of the amount of loans that may be renewed on fresh terms, of the amount of new loans that may be made, or of the amount of loans that must be called. He also furnishes the dates for the maturity of the renewals, and new loans. The Broker is responsible for obtaining the best possible rate of interest under the conditions assigned to him, viz —

(1) That he is limited to certain dates

(2) That his range of clients is limited to firms on the approved Borrowing List

(3) That he should only accept certain specified securities of a very high class, already enumerated,

7 In any case of difficulty as to interest, the Broker obtains the advice of the Chairman of the Finance Committee. The Broker's remuneration for this work has, since 1888, been a percentage on interest earned in each financial year. Until 1st July 1911 a commission of 5 per cent on interest earned on loans on security was paid, and one per cent on interest on deposits with banks. But the terms were then reconsidered by the Secretary of State in Council, and a new arrangement was made by which  $2\frac{1}{2}$  per cent on interest earned on loans on security is paid up to a maximum of 5,000*l.* in any financial year, and  $1\frac{1}{4}$  per cent thereafter, one per cent on interest on deposits with banks being payable as heretofore. The Broker has thus every inducement to obtain the best possible terms for India Office loans.

8 I append Statement No 2 showing for the past 20 years the gross interest earned on short loans of Treasury and Gold Standard Reserve Balances, the Broker's commission and the net interest.

#### *Method of Payment of Loans.*

9 The cheque, termed a "write-off," which authorises the transfer of the amount of each loan to the account of Mr Horace H Scott, the Broker, at the Bank of England, and which is signed and countersigned in accordance with the provisions of 22 and 23 Vict, c 41, s 3, is worded as follows —

"Credit Mr Horace H Scott, either upon the recognised Securities being transferred to the Stock Account of the Secretary of State in Council of India, or upon the receipt of such Securities to be held by the Bank for account of the Secretary of State in Council of India."

10 Consequently the Bank of England does not place the amount of the loan to the account of Mr Scott until it is in possession of the requisite securities on behalf of the Secretary of State, which are examined by the Bank in accordance with standing instructions received from this Office. (See letters on pages 312-14.) As evidence of the transfer of stock to the Stock Account of the Secretary of State in Council of India (constituted under 21 and 22 Vict, c 106, s 45), Mr. Scott transmits to the Accountant-General, together with the agreement for the loan, signed by the borrower, stock receipts for the amount of stock specified in the agreement. The Form of Agreement in use was originally drawn up by the Legal Adviser to this Office, and has, with minor alterations approved by him, been in the same form since 1861. A copy is appended (see pages 314-15).

11 Securities transferable by delivery are entered by the Bank of England in the Secretary of State's Security Pass Book, which is obtained from the Bank on the morning following each loan, and is examined in the Accountant-General's Department.

12 When a loan is paid off, the stock that has been transferred to the Secretary of State's account as security is re-transferred "into such names and in such amounts as Mr Horace H Scott, the Broker, may direct" (i.e., on account of the borrowers), under the General Letter of Attorney granted to the Bank under the provisions of 21 and 22 Vict, c 106, s 47. The Bank acts under the Power of Attorney upon a direction prepared by the Accountant-General and signed by two Members of Council, and countersigned by the Under Secretary or Assistant Under Secretary of State.

#### *Audit.*

13 On the last day of each month, the Bank of England transmits to the Auditor of the Home Accounts a statement showing the amount of Stock of each description standing in the Secretary of State's account, and the amount of bearer securities held by the Bank on behalf of the Secretary of State. Every agreement with a borrower is shown to the Auditor, and the accuracy of all transactions arising out of it is tested in his Department.

*Deposits.*

14 It is found that the Broker is usually unable to lend on security to approved borrowers on the existing borrowing list a larger sum than from 10,000,000*l.* to 11,000,000*l.*, and in 1909, 1910, 1911, and portion of 1912, the surplus balance available in excess of that amount was placed on deposit with certain London banks by the Broker, after consultation in each case with the Chairman of the Finance Committee. In such cases, the deposit was usually for a period not exceeding two months, but sums lent in this way on account of the Gold Standard Reserve were sometimes placed for three months, if it seemed advantageous to do so, for it was not considered probable that they would be required before the expiration of that period. The balances were, however, so largely reduced in the summer and autumn of 1912 by the purchases of silver and the discharge of temporary debt that deposits as they matured were all called in, the last having been called on 21st December.

*Reliability of System*

15 It may be mentioned that, whereas in the last twenty years the interest earned on short loans and deposits has amounted to 2,637,015*l.* (see Statement No 2), and in recent years the number of transactions has averaged 1,500 a year, excluding exchanges of stock, the sums lent have always been available, with the interest, on the dates specified in the agreement, with two exceptions only, these were cases of firms holding loans of 50,000*l.* each. In one case the whole of the principal money, and the interest due, were recovered, in the other, a small loss of principal was counterbalanced by the high rate of interest on securities held until realisation.

---

LAST THREE INSTRUCTIONS TO BANK OF ENGLAND  
AND TO THE BROKER

---

India Office, Whitehall, S W,  
16th June 1893

Gentlemen,

The attention of the Secretary of State for India in Council has been drawn to the circumstance that the list, furnished to you in the letter from this Office dated the 25th February 1881, of the securities which may be accepted in respect of loans made on his behalf by Mr Scott, the broker to this Office, requires modification.

I am accordingly directed to acquaint you that Exchequer Bills, Exchequer Bonds, Treasury Bills, India Debentures, and Guaranteed Debentures of the several Indian Railway Companies, may be accepted at their par value, and the following securities at their minimum market value with a cover of five per cent viz —

Any of the Parliamentary Stocks or Annuities of the United Kingdom

India 3½ or 3 per cent Stock

India Enfacéd Rupee Paper

Any Securities the Interest of which is or shall be guaranteed by Parliament

Consolidated Stock created by the Metropolitan Board of Works, or by the London County Council, or Debenture Stock created by the Receiver for the Metropolitan Police District

I am,

Gentlemen,

Your obedient Servant,  
A. GODLEY.

The Governor and Company of the  
Bank of England, E C

---

India Office, Whitehall, S W ,  
16th June 1893.

Sir,

I am directed by the Secretary of State for India to transmit to you a copy of a letter which has this day been sent to the Governor and Company of the Bank of England, regarding the securities which may be accepted in respect of loans made on behalf of this Office

You will observe that in that letter it is stated that Treasury Bills may be accepted at their par value, but I have to point out that this is not intended to interfere with the practice of recent years, according to which you have accepted them at their market value only, instead of their nominal amount, when their unexpired period has seemed to you to call for it

I am,  
Sir,  
Your obedient Servant,  
A GODLEY

Wille A W Scott, Esq.,  
57, Old Broad Street, E C

India Office,  
26th February 1913

Gentlemen,

The attention of the Secretary of State for India in Council has been drawn to the circumstance that the list furnished to you in the letter from this Office dated the 16th June 1893, of the securities which may be accepted in respect of loans made on his behalf by the broker to this Office, requires modification

I am accordingly directed to acquaint you that India Bonds, India Debentures (when any are existent), and Guaranteed Debentures of the several Indian Railway Companies may be accepted at their par value Treasury Bills, Exchequer Bills, India Sterling Bills, Metropolitan Water Board Bills, Exchequer Bonds, and London County Bills may be accepted at their market value

The following Securities may be accepted at their minimum market value, with a cover of 5 per cent, viz —

Any of the Parliamentary Stocks or Annuities of the United Kingdom  
India 3½, 3, or 2½ per cent Stock and Certificates  
India Enfacéd Rupee Paper  
Guaranteed Debenture Scrip (fully paid) of Indian Railway Companies  
Any Securities the interest of which is or shall be guaranteed by Parliament  
Metropolitan Consolidated Stocks and Certificates  
Metropolitan Water Board " B " Stock and Certificates  
Metropolitan Police 3 per cent Debenture Stock  
London County Consolidated Stocks Certificates, and Scrip  
Corporation of London Debentures

I am, Gentlemen,  
Your obedient Servant,  
T W HOLDERNESS

The Governor and Company of  
the Bank of England.

India Office,  
26th February 1913

Sir I am directed by the Secretary of State for India in Council to transmit to you for your guidance a copy of a letter which has this day been sent to the Governor and Company of the Bank of England regarding the securities which may be accepted in respect of loans made on behalf of this Office

I am, Sir,  
Your obedient Servant,  
T. W. HOLDERNESS.

Horace H Scott, Esq

India Office,  
15th April 1913

Gentlemen,  
In continuation of the letter from this office dated 26th February 1913 A G, I am directed to inform you that the Secretary of State for India in Council has added the following securities to the list of those which may be accepted against loans granted on his behalf by the broker to this office, bonds or bills of Colonial Governments that have observed the conditions prescribed in the Colonial Stock Act, 1900, 63 and 64 Vict c 62, and of British Municipalities with a population of 500,000 or upwards, provided that in each case there is an obligation to repay the principal of the bond or bill within a period not exceeding five years from the date on which the loan is granted. A margin of 5 per cent over the market value should be required in the case of the above classes of security.

\* At present Birmingham, Liverpool, Manchester, Glasgow

I am, Gentlemen,  
Your obedient Servant,  
LIONEL ABRAHAMS

The Governor and Company of  
the Bank of England

India Office,  
15th April 1913

Sir, I am directed to acknowledge the receipt of your letter of the 26th February 1913, on the subject of enlarging the classes of securities which may be accepted as securities for loans, and in reply to enclose for your guidance a copy of a letter which has this day been addressed to the Governor and Company of the Bank of England

I am, Sir,  
Your obedient Servant,  
LIONEL ABRAHAMS

Horace H Scott, Esq

Sixpenny  
Embossed  
Stamp

COPY OF FORM OF AGREEMENT FOR LOAN

LONDON,

191

To the Right Honourable

The Secretary of State in Council of India

\_\_\_\_\_ request that you will advance to \_\_\_\_\_ the sum of \_\_\_\_\_ pounds on the under-mentioned Securities or any other Securities which by consent may be substituted therefor, which Advance \_\_\_\_\_ engage to repay on the \_\_\_\_\_ together with Interest at the rate of \_\_\_\_\_

£ \_\_\_\_\_ per Cent per Annum In case the said Securities should not be redeemed on the said \_\_\_\_\_ hereby authorize you to sell the same, and, so far as the proceeds of sale will allow, to repay your Advance thereon with Interest, and \_\_\_\_\_ further engage that in the event of any of the said Securities upon which a cover of 5 per Cent has been or may be given falling in value before the repayment of this Loan to an extent which shall render their value less than 5 per Cent above the amount advanced against them \_\_\_\_\_ will forthwith, on application on your part, add to the Securities so as to maintain the stipulated cover of 5 per Cent, and in default of \_\_\_\_\_ so doing \_\_\_\_\_ hereby authorize you to sell immediately all the Securities accepted in respect of this Advance, and to repay the Advance with all Interest then due, so far as the proceeds of sale will allow, and \_\_\_\_\_ hereby undertake to repay any deficiency which the proceeds of sale may fail to discharge

The Securities above referred to are

---

*N B*—In consequence of the decision of the Judicial Committee of the Privy Council in the matter of Sir Stuart Samuel's seat in Parliament the following note is now printed on forms of agreement for loans —

The attention of firms applying for advances is drawn to the following extract from 22 George III, Chapter 45, Section 10 "In every such contract, agreement or commission [that is, in every contract, agreement or commission, for or on account of, the public service] to be made, entered into or accepted as aforesaid, there shall be inserted an express condition that no Member of the House of Commons be admitted to any share or part of such contract, agreement or commission or to any benefit to arise therefrom." The Statute does not apply to contracts, &c, entered into by incorporated trading companies in their corporate capacity (*see* Section 3)

STATEMENT No 3 showing the Balance and Cash transactions of the India Office for each day in 1912-13

EXPLANATORY NOTE

A.

During part of 1912-13 the India Office balance was held in three divisions, viz —

- 1 Money at Bank of England
- 2 Money lent on security to approved borrowers
- 3 Money deposited at interest with Banks other than the Bank of England

During the remainder of the year the balance was held in only two divisions, viz, money at Bank of England and money lent on security to approved borrowers. The change was due to a reduction of the total balance which made it possible to place with the approved borrowers the whole sum available for being lent at interest.

The following statement summarises the daily changes in the amount and form of the balance and the causes to which they were due.

It will be noticed that while the closing balance of each day (column 3) includes money on loan and deposit, the receipts and payments in columns 1 and 2, which account for the difference of the amount of each day's closing balance from that of the preceding day, do not include receipts due to the repayment of loans and deposits or payments due to their grant. The explanation is that the repayment or grant of a loan or deposit affects only the form but not the amount of the closing balance, since it involves merely a transfer from or to the second or third of the divisions shown above to or from the first division (money at Bank of England). The repayments and grants of loans and deposits are therefore shown separately in columns 7 to 10.

B.

With reference to column 4 it should be explained that an understanding exists with the Bank of England, believed to date from 1859, that (in order to remunerate the Bank for services for which no direct charge is made, such as the work done in connection with the sale of Council Bills and Telegraphic Transfers) the closing balance of each day shall be not less than 500,000*l*. The fact that the balance at the Bank usually exceeds 500,000*l*, as it did on each day in 1912-13, is due to the following causes.—

(1) The Bank requires that exceptionally heavy payments to be made on any day shall be provided for in the balance of the previous evening.

(2) Council Bills and Telegraphic Transfers sold on any day except Tuesday (when payment is required on the day of purchase) may be made at the option of the purchaser up to 4 o'clock on any day not later than the following Tuesday. The money is usually received at the Bank of England too late to be lent until the following morning. Similarly, the receipt at the Bank of England of money from other Government Departments is usually not known at the India Office until it appears in the Pass Book received there the next morning.

(3) The practice of granting all loans and deposits in sums of 50,000*l* or multiples thereof, sometimes causes the balance at the Bank of England to be higher than it would be if sums of less than 50,000*l* were lent.

(4) Some reserve in excess of 500,000*l* must be maintained to meet outstanding warrants, the date of presentation of which cannot accurately be foreseen.

STATEMENT No 3

Showing the Balance and Cash transactions of the India Office for each day in 1912-13  
(Including transactions of the Gold Standard Reserve, but excluding sums in the hands of Sub-Accountants)

\* Six months' Treasury Bills for 1,000,000<sup>l</sup> were bought at a cost of 986,726<sup>l</sup> from Home Treasury Balances on 21st August as it was then known that the 1,000,000<sup>l</sup> Bills maturing 9th September held on account of the Gold Standard Reserve would not be replaced by His Majesty's Exchequer. The money received on the 9th September for the maturing Bills reimbursed the Home Treasury.

Short dated bearer securities maturing within one year or less, ½ per cent

Ditto in from two to three years, ¼ per cent

Ditto in more than three years, ¼ per cent

It should be noted that, from 1st July 1911, the total commission to be paid to the Broker on the purchases and sales of securities in any financial year is not to exceed 1,500

W B

## APPENDIX XII

MEMORANDUM ON THE AUTHORITY REQUIRED FOR PAYMENTS MADE AT THE  
INDIA OFFICE, AND THE SYSTEM OF CONTROL EXERCISED IN RESPECT  
OF THEM, SUBMITTED BY MR WALTER BADOCK, C.S.I.,  
ACCOUNTANT-GENERAL AT THE INDIA OFFICE.

1 For all payments the approval of the Secretary of State in Council is required in some form

*Interest on Debt, and Interest guaranteed to the several  
Indian Railway Companies*

2 Every Capital Issue by Government and by guaranteed companies, whether in the form of stocks, bonds, or debentures, is effected on terms and conditions authorised by the Secretary of State in Council, and these include the payment of interest at the rate or rates and on the dates prescribed. The claim of the Bank of England or Bank of Ireland, or of the Railway Company, as the case may be, for the payment of interest is closely examined in respect of the amount of principal on which interest is claimed, the rate of interest, the period for which it is payable, and the calculation involved

*Payments for Issue and Management of Debt*

3 The annual rates of charge made by the Banks of England and Ireland for the issue and management of the Indian Debt have been approved by the Secretary of State in Council

They are as follows —

Bank of England—

India Stocks, Issue Charge By Tender, 625*l* per million, at Fixed price, 1,250*l* per million Management Charge While the total Debt is over 125,000,000*l*, 300*l* per million per annum, if below 125,000,000*l*, 360*l* per million per annum on first 100,000,000*l*, and 60*l* per million per annum on remainder  
India Bonds, Issue Charge 1,250*l* per million, Management Charge, 100*l* per million per annum  
India Bills, Issue Charge, 200*l* per million  
Indian Railway Debenture Stocks, the liability for which has been assumed by the Secretary of State, Management Charge, 300*l* per million per annum  
Indian Railway Debentures, the liability for which has been assumed by the Secretary of State, Management Charge, Nil  
Rupce Debt, Management Charge, 400*l* per crore per annum with a minimum payment of 8,000*l* per annum

Bank of Ireland—India Stocks, Management Charge, 360*l* per million per annum

The above arrangements regarding Management Charges were entered into in December 1905 and expire on 31st December 1915. The issue charges were fixed in December 1904.

*Payments for Stores procured for India*

4. Stores for India are procured on requisitions received from the several Governments in India, the indents for which are submitted by the Director-General of Stores for the sanction of the Secretary of State in Council. This sanction constitutes the authority for the requisite payments in respect of them.

5 Tenders for the supply of the stores and for freight thereon are obtained by the Director-General of Stores, and accepted by him or by some other authorized officer, in accordance with the rules laid down by the Secretary of State in Council. All tenders are accepted on behalf of the Secretary of State in Council to whom a weekly list of contracts so made is submitted. A copy of each contract certified by the Director-General of Stores or a responsible officer of his department, is furnished to the Accountant-General for his guidance.

6 The claims of the contractors for payment are prepared in duplicate and received in the first instance by the Director-General of Stores, who transmits them to the Accountant-General with his certificate on the claim that the stores therein enumerated have been inspected by the officers of his department, that the quantities are correct, that they are in every respect fit for the service of the Indian Government, and either that they have been taken into his charge preparatory to being shipped or have been shipped per vessel named to a port in India specified. In the Accountant-General's Department the rates and calculations are examined, and the quantities and the sums charged are recorded on the copy of the Contract, care being taken that the aggregate of the claims passed for payment in respect of a contract correspond therewith.

7 Some stores are manufactured by the War Department specially in compliance with Indian orders, others are procured from the War Department stock, and others are obtained by means of contracts entered into by the War Department on behalf of this Office. Similarly, some stores are obtained from the Admiralty. But in all cases the indents from India have received the sanction of the Secretary of State in Council, and the claims for payment are closely examined in every respect possible.
