8 The claims for payment for freight, like those for stores, are prepared in duplicate and are received in the first instance by the Director-General of Stores, who transmits them to the Accountant-General's Department with his certificate that stores of the weights and measurements specified in the claim have been shipped. The rates charged are compared in the Accountant-General's Department with the record of the freight tender or contract, and the calculations are examined, before payment. Four-fifths of the total amount of a freight claim is paid in this country (except that claims of less than 50*l* are paid in full), and the remaining one-fifth is paid in India, except when shipment is to a few outlying ports, when the one-fifth is paid in England on receipt of the out-turn certificate.

9 The duplicate of each store and freight claim, corrected if need be, is returned to the Director-General of Stores to form the basis of an invoice to be transmitted by him to India.

10 Statements are transmitted to India monthly by the Accountant-General reconciling the sums paid for stores and freight with the invoices despatched to India.

#### *Payments to Indian Railway Companies*

11 The Contracts under which payments are made to the several Indian Railway Companies have been approved by, and executed under the authority of, the Secretary of State in Council.

12 The examination of claims for Guaranteed Interest has been explained under the head of Interest on Debt. The claims for payment of the Annuities by means of which several of the Indian Railways have been purchased by the Secretary of State in Council, undergo a similar examination.

13 Indents for stores are received from India by the Boards of Railway Companies, and referred by them to their Consulting Engineers. Tenders for the supply of the stores are then invited by the Boards and considered by them at meetings, at which the Government Director is present. A list of the accepted tenders is entered on the Board Minutes, the approval of the Government Director being specially requested where the tender exceeds the Indian estimate. Tenders for freight are invited by the Boards when stores are ready for shipment, or at such time as may appear most advantageous to the various Companies, and the contracts are duly entered on the Minutes, which also contain sanction to the rates of marine insurance on such stores.

The Board Minutes are forwarded to this Office, and after they have been initialled by the Government Director and the Members of the Public Works Committee of the Council they are forwarded to the Accountant-General's Department where a register is kept of the contracts for stores, freight, &c

14 When the Contractors deliver the stores and present their claims, these claims, accompanied by the Consulting Engineer's certificates that the goods have been delivered in proper condition and quantities, are submitted to this Office for payment, and care is taken that the quantities and prices accord with the amounts sanctioned by the Board Minutes. Claims for freight and insurance are presented in a similar way, and by means of the bills of lading which accompany the freight claims it is ascertained that the stores supplied have been duly shipped. All bills for stores, freight, &c, contain full details, which are examined and checked.

15 In a subsequent examination of the Companies' books and accounts by officers of the Accountant-General's Department it is ascertained that the amounts issued by this Office to the Companies have been paid over to the Contractors and their receipts obtained. Out-turn certificates received from India are closely examined with a view to ascertaining that the stores purchased have duly reached their destination.

16 Claims for inspection of stores, and bills for stamps, stationery, and other requisites are periodically presented to this Office and paid after examination and submission to Council.

17 Furlough pay and sick pay of employees are issued to Railway Companies in accordance with the Board Minutes and Regulations approved from time to time by the Secretary of State in Council.

18 The salaries of directors and consulting engineers and the cost of office establishments are fixed by the Secretary of State in Council, and any alterations require his sanction.

19. Thus, all payments to the Railway Companies are made upon general or specific authorizations of the Secretary of State in Council, and the proceedings of the Companies are supervised at all stages so as to prevent irregularities. Any disputes upon questions of principle arising out of the terms of arrangement are submitted for the decision of the Secretary of State in Council.

*Periodical Payments to His Majesty's Treasury and other Public Departments.*

20 Payments such as the contribution to the cost of the Eastern Mail Service, and the contribution towards the expenses of His Majesty's Ships in the Indian Seas, are made in accordance with agreements entered into by the Secretary of State in Council.

*Payments to the War Office of Effective and Non-Effective Charges in respect of British Forces serving or having served in India*

21 At the commencement of each official year an agreement is arrived at between the Secretary of State in Council and the War Office as to the amounts of quarterly advances to be made on this account during the year, subject to adjustment on production of the final accounts. Quarterly payments are made accordingly and subsequently adjusted.

*Pay, Pensions, &c*

22 Furlough allowance, pay, pensions, and annuities to members and retired members of the Indian services are issued in accordance with the regulations applicable to the several services, which have all been approved by the Secretary of State in Council. An officer arriving in this country from India brings with him a Last Pay Certificate, which shows the rate of pay to which he is entitled and the date to which he has received payment in India. The details of the certificate are subject to careful scrutiny in the Accountant-General's Department, and, if they appear to be in accordance with the regulations, the certificate is accepted as authority for payment. Any payment of this description not in strict accordance with the regulations, or

any advance made in anticipation of the receipt of the proper documents from India, would require the special sanction of the Secretary of State in Council

23 Grant of pensions in accordance with the regulations is made as regards some classes of pensions by the Government of India or the Government of Madras or Bombay, and as regards other classes by the Secretary of State in Council. Satisfactory documentary evidence of the grant in each case is required in the Accountant-General's Department before payment is made

24 Widows and children entitled to pensions chargeable on Indian Revenues from one or other of the various Service Funds to which officers subscribe and of which the regulations have been approved by the Secretary of State in Council are admitted to pension by the Director of Funds at this Office

*Salaries of the India Office.*

25 The salaries of the India Office Establishment have been fixed by the Secretary of State in Council and approved and sanctioned by Orders of the King in Council in accordance with Section 15 of the Government of India Act, 1858

*Miscellaneous Payments*

26 When proposed expenditure is submitted for the sanction of the Secretary of State in Council, an estimate is generally furnished of the probable amount involved, and if that estimate of the specific grant made is exceeded, the matter is again brought before the Secretary of State in Council, and a further sanction applied for and obtained before payment of the excess. In cases in which expenditure has been sanctioned without a limit as to its amount, and claims made in respect of it are not governed by regulations prescribed by the Secretary of State in Council, each claim is submitted for the special approval of the Secretary of State in Council prior to payment.

*Purchase of Securities for the Gold Standard Reserve, and Paper Currency Reserve*

27 The Accountant-General advises the Financial Department of dividends available for investment or deposit, of short-dated securities maturing and requiring re-investment, &c. The matter is considered in Finance Committee and by the Secretary of State in Council. The Secretary of State's Broker is generally instructed to take such action as is decided upon, and payments are made to him for purchases approved, either upon the transfer of stock to the Stock Account of the Secretary of State in Council at the Bank of England, or upon the deposit at the Bank of England for account of the Secretary of State of bonds, bills, or debentures

*Family Remittances, &c*

28 Payments in this country to the relations and friends of soldiers and other employees serving in India are made under regulations prescribed by the Secretary of State in Council. Estates of deceased officers and others are remitted to this country under regulations so sanctioned

*Petty Disbursements, &c.*

29 The Under Secretaries of State have been authorised by the Secretary of State in Council to sanction petty disbursements up to a limit of 10*l*. And the Accountant-General and the Director-General of Stores have been so authorised to make disbursements up to a limit of 5*l*.

30 In cases of urgency the Under Secretaries of State occasionally sanction larger payments in anticipation of the payments receiving the approval of the Secretary of State in Council.

*Mode of Payments*

31 The Secretary of State for India has four accounts at the Bank of England, his "Cash Account," his "Drawing Account," his "Bill Account" and his "Bonds and Debentures paid off Account"

32 Receipts of every description are paid into the "Cash Account," which is drawn upon only by transfers to the other three accounts, signed either by the Accountant-General or by the Deputy Accountant-General or by the Assistant Accountant-General and countersigned by certain clerks in the Department specially authorised by the Secretary of State in Council, in accordance with 22 & 23 Vict c 41, s 3

33 The "Drawing Account" is supplied from time to time as necessary, generally twice a day, by transfers from the "Cash Account", and is drawn upon by the Cashier and his assistants, who are officers of the Accountant-General's Department. Each cheque or "write-off" requires two signatures, one of which must be that of a clerk of the Upper Division or a Staff clerk. The Cashier and his assistants never know what balance is at the credit of the "Drawing Account"

34 Bills of Exchange drawn on the Secretary of State, of which there are comparatively few, are accepted by either the Accountant-General or the Deputy Accountant-General or the Assistant Accountant-General, payable out of the Secretary of State's Bill Account, and are advised to the Bank of England by the Cashier. The "Bill Account" is supplied by transfers from the "Cash Account" just sufficient to meet bills falling due

35 The "Bonds and Debentures paid off" Account is also fed, when bonds or debentures mature, from the Cash Account by writes-off sufficient to cover the liability accrued

36 The Cashier has a balance of banknotes and cash in the office, generally amounting to 2,000*l*, which about once a month is, for a few days, increased to 3,000*l*, to meet a large number of small payments

37 The Cashier is also authorised to keep a stock of Postal Orders, for the purpose of making a large number of payments each week to families of soldiers in India. The maximum value of the Postal Orders to be held has been fixed at 2,000*l*

38 The Cashier's authorities for payments are the signatures of certain specified clerks in the branches of the department in which claims are examined, and salaries, pay, pensions, &c, are calculated

*Audit*

39. All payments made at this Office are subsequently audited in the department of the Auditor of the Indian Home Accounts, who is an officer appointed by Royal Warrant pursuant to Section 52 of the Act for the better Government of India (21 and 22 Vict, cap 106)

## APPENDIX XIII

NOTE ON RESTRICTIONS ON THE BUSINESS OF THE RESIDENCY BANKS,  
SUBMITTED BY MR L ABRAHAMS, C B, ASSISTANT UNDER  
SECRETARY OF STATE FOR INDIA (WITH REFERENCE TO QUESTION 182)

1 The business of the Presidency Banks of Bengal, Madras, and Bombay is governed by —

- 1 The Presidency Banks Act, passed by the Governor-General of India in Council, No XI of 1876, as amended by Act V of 1879, Act XX of 1890, and Act I of 1907, passed by the same legislative authority.
2. Bye-laws made under Section 63 of the Act of '76

## PRESIDENCY BANKS ACT

2 The provisions of the Acts that are, or might be regarded as being, restrictive are as follows —

Sections 24, 26, and 27 The number of directors must be not less than six or more than nine. The two senior directors must go out of office at the annual general meeting, but may be re-elected. The qualification of a director is the holding of unencumbered stock shares of the Bank to the nominal amount of at least Rs 10,000 (667) in his own right. The following persons are, or become, disqualified for office of director of any of the three Banks — Directors, promoters, agents, and managers of any other joint stock bank established, or having such or agency, or advertised as about to be established, or to have such or agency, in British India, salaried officers of Government especially authorised by the Government of India, holders of any other office of profit under the Bank, bankrupts, lunatics, directors who are absent from the Board for more than three months. Two persons who are partners in the same mercantile firm, or one of whom is the general agent of, or has a power of procuration from, the other, or from a mercantile firm in which the other is a partner, may not serve as directors at the same time.

Section 34 No secretary, inspector, manager, or assistant, and (without the previous sanction of the Board) no khazanchi or shroff in the service of a Presidency Bank may engage in any other banking or commercial business as principal or agent, or act as broker or agent for the sale or purchase of securities.

Section 36 The Banks are authorised to carry following kinds of business. —

- (a) The grant of advances, loans, and credits on security of (1) stocks, bonds, &c., issued by the British Government, the Secretary of State for India, the Government of India, the Government of India, the Indian Railway Companies, Municipal and Assisted bodies of various kinds in India, (2) bullion or other property deposited with or assigned to the Bank, or of which the title is deposited or assigned, (3) accepted promissory notes endorsed by the payee, joint and several promissory notes of two or more persons not connected with each other in general partnership. The Bank of Madras may also lend on Ceylon Government securities, but may not hold

such securities, whether as security for loans or as investments (see *d* below), in excess of the amount of the deposits at its Ceylon branch Advances and loans may be granted to the Government without specific security

- (b) The realising of securities mentioned in (a) when occasion arises
- (bb) Loans to Courts of Wards for a period of not more than six months on the security of estates under their charge
- (c) The drawing, discounting, buying, and selling of bills of exchange and other negotiable securities payable in India or Ceylon
- (d) Investing in any of the stocks, bonds, &c, mentioned in (a) and selling them when required But the Banks of Bengal and Bombay may not invest in securities of the Government of Ceylon
- (e) The issue of bank-post-bills and letters of credit payable in India or Ceylon, provided that they are not payable to the bearer on demand
- (f) The buying and selling of gold and silver
- (g) The receiving of money on deposit and current account
- (h) The custody of plate, jewels, title deeds, &c
- (i) The selling of property which may come to the bank in satisfaction of any of its claims
- (j) The transacting of pecuniary agency business on commission
- (k) Acting as agent on commission to buy and sell securities, to receive the principal and dividends, and to remit principal and dividends at the risk of the owner by bills of exchange payable either in India or elsewhere
- (l) Drawing bills of exchange and granting letters of credit payable out of India for the use of principals for the purpose of the remittances mentioned in (k)
- (m) Buying bills of exchange payable out of India at a usance not exceeding six months to meet such bills or letters of credit
- (mm) Borrowing money in India and giving security for such loans
- (n) Doing things incidental or subsidiary to the kinds of business mentioned above
- (o) Transacting business for the Government.

Section 37. A Presidency Bank may not grant loans or advances —

- (a) For more than six months
- (b) On the security of stock or shares of the bank
- (c) On the security of landed property, subject to the exception mentioned in 36 (bb) above.
- (d) It may not, except on the security of the stock and bonds, &c, mentioned under (1) in the summary of 36 (a) above, or of bullion or goods, discount bills for any individual or firm to an amount exceeding in the whole at any time the limit prescribed by the Bank's bye-laws, or lend or advance in any way to any individual or firm an amount exceeding in the whole at any one time the said limit.

- (e) It may not discount or buy or take as security for an advance, loan, or credit a negotiable instrument of any individual or firm payable in the town or at the place where it is presented for discount, which does not carry on it the several responsibilities of two persons or firms not connected in general partnership
- (f) It may not discount, or buy, or take as security for an advance, loan, or credit any negotiable security payable after a longer period than six months

A Presidency Bank may allow any of its customers to over-draw without security to the extent of such sum not exceeding Rs 10,000 as may be prescribed by the bye-laws

Section 42 A Presidency Bank may not establish new branches or agencies outside the Presidency in which it is situate, except with the previous consent of the Government of India. No agency of a Presidency Bank in a Presidency town may grant advances, loans, or credits, or open deposit or current accounts, or discount bills drawn payable in the Presidency in which it is established, or act as agent on commission, or transact any business except as agent of its principal Bank or any of its branches or agencies

Section 43 A Presidency Bank must submit to the Government of India any information regarding its affairs, and any of its documents that the Government of India may require, and must publish such statements of assets and liabilities as the Government of India may require

Section 63 A Presidency Bank must make bye-laws (1) as required for the various purposes mentioned in Section 37, (2) regarding the conditions under which advances may be made to directors or officers of the bank or their relatives and connections, (3) as to the particulars to be given in the half-yearly balance sheet. It may also make bye-laws regarding certain other matters, including the remuneration of directors. No bye-law, and no alteration or rescission of a bye-law, is valid unless it is consistent with the provisions of the Act, and has been approved in writing by the Government of India

#### BYE-LAWS

3 The bye-laws of the Presidency Banks were revised in 1907. The only restrictive ones are those made in pursuance of Section 37 of the Act. The limit specified for the purposes of Section 37, Sub-sections (d) and (e) is, in the case of the Banks of Bengal and Bombay, Rs 6,00,000 (40,000*l*), and in the case of the Bank of Madras, Rs 5,00,000 (33,000*l*). The limit of overdrafts to customers without security is fixed by all three Banks at the full amount mentioned in the Act, *i e*, Rs 10,000 (667*l*)

4 The byelaws also provide (in different language for the three Banks) against a director having any voice in dealing with applications for the grant of accomodation to himself, his partners, co-trustees, employees, and relatives

## APPENDIX XIV.

MEMORANDUM ON PROPOSALS FOR THE ESTABLISHMENT OF A STATE BANK  
FOR INDIA, SUBMITTED BY MR L. ABRAHAMS, C.B., ASSISTANT  
UNDER SECRETARY OF STATE FOR INDIA

## PREFATORY NOTE

1. This Memorandum has been prepared because I understand that the Commission desire to have before them some information and suggestions from me when considering the question of a State Bank for India

The Commission are aware, from correspondence already submitted, that a scheme of a somewhat similar nature, viz, for the establishment of a Central Bank of India, was discussed from 1899 to 1901 in correspondence between the Secretary of State and the Government of India. The result of the discussion is shown in the following extract from a Despatch from the Secretary of State to the Government of India, dated 26th July 1901 —

“ You have come reluctantly to the conclusion that the circumstances are unfavourable to the policy of pressing on the Centralisation Scheme at the present time. This opinion I consider myself bound to accept, but I agree with your Excellency that it will be distinctly advisable, as soon as may be practicable, to establish a Central Bank in India, for the reasons given in your Letter and in Sir Edward Law’s able minute, and I request that this object may be kept in view, and that the scheme may be revived whenever there is a possibility of its being successfully carried out ”

Since this was written the matter has not been further considered by the Secretary of State in Council or by the Government of India

The present Memorandum is therefore submitted as containing only the result of my own study of the subject, and does not carry any official authority

Lord Crewe has authorised me to present it because he is satisfied that further consideration at the present time of the question of a State Bank is very desirable, he welcomes the opportunity afforded by the appointment of the Royal Commission, and is anxious that any assistance that can be given by a member of the India Office shall be at the Commission’s disposal

## I.

## HISTORY OF PREVIOUS DISCUSSIONS

*Discussion of 1867*

2 In March 1867, when the old Bank of Bombay was known to have lost a large part of its capital, the Directors of the Bank of Bengal submitted to the Government of India a scheme, drawn up by their Secretary and Treasurer, Mr G. Dickson, for the amalgamation of the three Presidency Banks into a Central Bank for all India, with a paid-up capital of five crores of rupees and an unpaid capital of the same amount. Mr Dickson did not propose that the Bank should necessarily be allowed to transact other kinds of business than those previously done by the separate Presidency Banks, but he expressed the hope that the Government of India, which had recently introduced a Government note issue in place of the notes previously issued by the Banks, would return to “ sounder views ” on this subject. He summarised the advantages of the amalgamation as follows — “ With such a large capital actually provided, and liable to further calls in case of need, with an adequate reserve fund in the event of unforeseen losses arising either from the ordinary business or from political disturbances, I submit that the proposed united Bank would be equal at all times and under all circumstances not only to meet the legitimate requirements of commerce, but by unity of action and under the eye of the supreme Government [i.e., the Government of India], to control those recurring monetary crises which, although hitherto more felt in the Bombay Presidency, yet very closely and intimately affect the interests and position of all Government would have an absolute guarantee for the unvarying management of their treasuries under one controlling power, a certainty of greater economy in the use and distribution of their balances throughout India, uniform management of the

“ public debt under the same safeguards but with enlarged security, and a powerful agent in aiding them in all their financial measures, not only at the seat of Government but by combined action throughout the whole country ”

On the question of organisation his proposal was that “ Local Boards would be continued as at present in Bombay and Madras, but the supreme control and the rules and regulations for the conduct of the business must rest in, and be laid down by, the Board in Calcutta, *i e*, that the same rules and conditions under which business is carried on here [in Calcutta] must be strictly adhered to and be conformed to by Bombay and Madras, and that power to enforce their due observance be specially reserved ”

Mr Dickson's scheme was communicated to the Directors of the Bank of Bombay, by whom it was unanimously approved, and the attitude of the Government of India towards it was encouraging. On 4th June 1867, a resolution in favour of amalgamation was submitted to a special general meeting of the shareholders of the Bank of Bombay. It was opposed, partly on the grounds illustrated by the following extracts from the speech of the Hon G Foggo (a member of the firm of Messrs Forbes & Co, of Bombay) “ He considered the true course for the shareholders to pursue, “ having regard to their own interests, and saying nothing with regard

\* “ East India (Bombay Banks) ” ordered by the House of Commons to be printed 9th March 1868, page 127

† A passage on pp 234-5 of Mr J M Keynes' work on “ Indian Currency and Finance ” suggesting that the scheme of amalgamation was “ smothered ” by a “ magnificent and empty maxim of political wisdom ” uttered by the Secretary of State (Sir S H Northcote), appears to need modification, as the remark in question occurs in a Despatch dated 15th February 1868, *i e*, six months after the withdrawal of the scheme, and was inserted, not as a maxim of political wisdom, but with the purely practical object of conveying a warning that the special arrangements very reluctantly sanctioned in 1868 between the Government and the new Bank of Bombay, including the holding of shares by the Government and the appointment of a Government Inspector, drew their sole justification from the peculiar circumstances then existing in Bombay (which would have been left without a Bank if the Secretary of State had not waived his objections to these features in the arrangement), and that similar arrangements would probably not be allowed in any larger scheme that might be subsequently inaugurated in normal circumstances

“ to public interests which to them were of minor importance, was to throw away the amalgamation scheme at once, and lay their case before the Government of Bombay, the Supreme Government, and the Secretary of State, asking what assistance would be given the shareholders towards recovering the lost capital of the Bank, and helping them in the reconstruction of a new Bank of Bombay ” The resolution was carried by 137 to 134. A further meeting was summoned for 12th August 1867, and on 2nd August the Bank of Bombay telegraphed to the Bank of Bengal. “ Unless your Bank withdraw the scheme for amalgamation, the majority of my Directors feel bound to submit it to their shareholders on the 12th, but they cannot hold out any prospect of its being carried ” The Bank of Bengal replied (5th August), “ in the absence of any prospects of the incorporation of the Banks being carried, the Directors of this Bank withdraw from the negotiations ” †

#### *Discussion of 1899-1901*

3 Several of the witnesses before the Indian Currency Committee of 1898-99 gave evidence in favour of the establishment of a Central Bank of India. The fullest statement on the subject was made by Mr A de Rothschild in a note (*see* question 11,853) which may be summarised as follows —

Central Bank to be formed with capital of 14,000,000*l* (to be held partly in gold and partly in securities) and power to issue notes against the whole of it. If possible the Presidency Banks to be fused with the Central Bank. The latter to hold Government balances, to have the right to import silver for coinage free of duty, and to share in profits of coinage, to take no part in exchange business, but to confine itself to internal operations and to lending to the Government on deficiency bills, to take such precautions for protecting its gold as are taken by the Banks of France and Germany. In the event of the Central Bank's supply of gold running short, the Government to “ come to the rescue to the extent of 10,000,000*l*. sterling ”

In a note appended to the Report of the Indian Currency Committee of 1898-9, Mr Hambro called attention to the advantages which would, in his opinion, arise from the establishment of a strong central bank. His note is printed at the beginning of a collection of papers on banking which is being submitted to the Commission (*see* Appendix XV, page 357). It mentions two quite different services to be rendered by the Bank, viz —To assist in giving effect to any regulations having the convertibility of the rupee in view, and to expand the banking facilities of India in time of pressure and to curtail them in time of slackness.

It will be seen from the collection of papers that Mr Hambro's suggestions formed the subject of correspondence beginning with the Secretary of State's Despatch to the Government of India dated 25th July 1899 (page 357), and ending with his Despatch dated 26th July 1901 (page 438), that both the Secretary of State and the Government of India began the discussion with a favourable disposition towards the scheme, that the scheme was dropped as being one with which it was at the time inopportune to proceed, but that its revival at a more favourable time was contemplated. It is scarcely necessary to summarise the correspondence, but it may be convenient to note (a) the various classes of business with which it was contemplated, in the course of the discussion, that the Bank would be entrusted, (b) the special reasons which led to the temporary abandonment of the scheme.

(a) The following list appears to include all that was contemplated at various times with regard to the functions to be assumed by the Bank and the objects to be served by its existence —

Convertibility of the rupee -	Mr Hambro's note (page 357).
Expansion and contraction of supply of loanable capital	Mr Hambro's note (page 357)
Foreign Remittance business	Letter from Government of India dated 24th August 1899 (page 357)
Promoting circulation of gold	Letter from Government of India, dated 24th August 1899 (page 357)
Management of Paper Currency - - -	Letter from Government of India, dated 24th August 1899 (page 357)
Consolidation and concentration of banking facilities in India - - -	Mr Dawkins' speech on 1st Sept 1899 (pages 358-61)
Access to London - - -	Mr Dawkins' speech on 1st Sept 1899 (pages 358-61)
Increase of banking capital	Mr Dawkins' speech on 5th January 1900 (pages 394-9)
Sterling capital - - -	Letter from Government of India, dated 18th January 1900, paragraph 13 (page 405)

This enumeration is perhaps not exhaustive, and its items are not mutually exclusive, but it suffices to show generally the ideas in the minds of those who took part in the discussion. It is important to observe that there appears to have been no systematic consideration of the question of the interdependence of the various items, *i.e.*, how far the undertaking by a Central Bank of one particular kind of business involved the undertaking by it of any other kind or kinds.

(b) The reasons that led to the temporary abandonment of the scheme are to be found in the Letter from the Government of India No 199, dated 13th June 1901 (page 426). They were as follows.—

- (1) Expense, owing in part to the fact that additional capital could not be profitably employed throughout the year
- (2) "Provincial jealousies" and personal reasons

\* On this phrase, see paragraph 10 below (page 353)

*Recent Discussion*

4 There has been considerable discussion recently in the press and elsewhere regarding the scheme for a Central Bank, which is now more commonly referred to as a scheme for a State Bank. The following extracts from well known sources show the points of view from which the scheme is regarded by various writers and the advantages expected from it —

*Extracts from speech by Sir E H Holden, Bart., at Annual General Meeting of London City and Midland Bank, on 24th January 1913 —*

“ We are now experiencing the *inflow* of gold to India, but we have before us the more difficult problem of how the gold is to be made to *flow out* from India. Some believe that an outflow can never be brought about on economic lines unless money be made cheaper in India than at present. While money rules for a certain period of the year up to 8 per cent in India, we cannot expect the Bank Rate in London to be effective in attracting gold from India in the same way as from other countries. If a Bank, similar to the Bank of France, were established in India with numerous branches in different parts of the country, and followed up by a greater development of sound banking institutions, then credit would be created by means of loans, discounting and borrowing facilities would be increased, and 8 per cent bank rates would disappear. I hope the Secretary of State for India may be induced to seriously consider the question of appointing without delay a fresh Commission, not only in the interests of this country, but also in the interests of all those countries which are now unable to obtain gold to meet their increasing trade, increasing liabilities and increasing credit. There are serious dangers ahead, and it has become a pressing necessity to provide protection against them ”

*Extracts from an article on “ A State Bank for India ” in the “ Times ” of 14th March 1913 —*

“ The Presidency Banks remain inadequately capitalised and strictly compartmented and they are incapable of attaining that full development which would be possible if all parts of the country were open to them. They are also debarred by law from raising money in the English market, but obviously a central institution, with substantial capital, should be allowed under the supervision of the India Office to have an agency in London to transact ordinary business, especially business connected with the maintenance of the Gold Standard. There can be no question that a State Bank would have a most salutary effect in securing the confidence of the people with money to invest. India suffers from a vast amount of infructuous capital, which a State Bank would be likely to draw forth in the shape of shares or deposits. Hitherto, the investment of money by deposit in banks has been on a much smaller scale than it ought to be. Another great advantage would be a far better utilisation of the capital of the concern than is possible in the case of the three Presidency Banks with their existing limitations. The central institution would have branches in every part of India, and would be able to let the capital flow in the directions where it was most needed. The facilities it would have for financing trade would go far to eliminate the sharp seasonal divergences between discount rates in India, where they range in a course of a year from 3 per cent to 8 or 9 per cent and the adequate capital at disposal would tend materially to bring about a lower average level. Given a State Bank with large capital and plenty of resources, the Government could again keep its headquarters balances in bank custody without any apprehension of monetary disturbances in consequence of withdrawals, and, on the other hand, it would be able to depend on the Bank to advance money if the needs of the State momentarily required the assistance ”

Extract from article in "Times of India," 11th April 1913 (reprinted in "Indian Currency and Finance" (Bombay and London, 1913), pages 240-1) —

"The sole reason that will bear investigation for the promotion of a great State Bank is the necessity of relieving Government of the management of the Gold Standard policy. The opinions of the brothers Rothschild that the internal arrangements of the currency are always better conducted by a bank than by a Government may be said to have been proved in the case of India, for it is impossible to suppose that a bank would have muddled the management of the currency as the home authorities have done. If those who advocate the creation of a State Bank would face the situation squarely by concentrating attention on that aspect of the question, and by working in the direction of combining within the ambit of the proposed Bank the Paper Currency Department and the Gold Standard Reserves, as well as the Treasury Balances at home and in India, and the home remittances of Government, more practical results would be likely to ensue than by endeavours to bring about an amalgamation of the Presidency Banks on the plea that more capital is wanted to meet increasing demands for credit and on the problematical advantages of such an amalgamation set forth by *The Times* correspondent. If the cost to Government of the present arrangements plus a reasonable share in the future profits of the Paper Currency Department were offered for relieving them of the duties connected with the various financial activities referred to, it would go a long way towards securing the creation of the proposed Bank provided a very large capital was not insisted upon."

## II.

### SUGGESTIONS AS TO THE FORM THAT A SCHEME FOR A STATE BANK SHOULD TAKE.

#### *Duties to be entrusted to it*

5 It will be observed, from the historical retrospect, that there has been a remarkable diversity of views, and no little vagueness, as to the duties that should be entrusted to a State Bank, and the advantages to be expected from so entrusting them. In the absence of a clear statement on these points it is difficult for any individual or body to answer "Yes" or "No" to the question whether the establishment of such a bank is desirable. I therefore venture to submit the following suggestions which have, I think, the one merit of being definite. The suggestions are based on the assumption that a State Bank, if formed at all, will be formed by the amalgamation of the three existing Presidency Banks. Remarks on the advantages and disadvantages of the scheme, and the probability or otherwise of its adoption, are postponed to a later section.

#### *A.—To hold as Bankers Government Balances in India.*

It may be assumed that the primary object for which a State Bank would be established would be in order that the Government of India might deposit with it balances in excess of those that it now deposits with the Presidency Banks, and probably in excess of those that under revised arrangements it could prudently deposit with those banks as at present constituted. The chief result looked for from the increased deposits would be a reduction of the average rate of discount in India and of the range of seasonal variation in that rate.

#### *B.—Management of Paper Currency*

The next duty that would be naturally entrusted to a State Bank is one that would be entrusted on account of its close connection with the work of

acting as custodian of a large part of Government Balances. Under present practice the Treasury Balances of the Government of India and the Reserve of the Paper Currency Department are used to supplement one another, to the great advantage of the Government and the public. The working of the system may be illustrated by the following passage from a note by Sir J. Westland on the Management of the Government Balances, dated 20th November 1888, which has already been laid before the Commission: "Our normal currency

\* This figure is now obsolete

"reserve of coin we may put down at  
"six crores of rupees." This amount is,

"of course, by law sacred to the purpose of supporting the currency circulation, we cannot apply it to any treasury purpose. At the same time it is vastly more than in ordinary times is necessary for the purpose of actual encashment of notes. It is scattered over the various places from which we are by law authorised to issue notes. One perfectly legitimate operation of which we take great advantage is that we depend upon this Currency Reserve for facilities of rapid remittance. For example, we can make a remittance of, say, 20 lakhs, at a moment's notice, from Calcutta to Lahore by simply paying in 20 lakhs to Currency Office at Calcutta and obtaining at the Currency Office an order upon the Lahore Currency for 20 lakhs to be paid to treasury there. I think it is not too much to estimate this facility of remittance at a crore of rupees, that is to say, a balance of eight crores with this facility of remittance through currency, goes quite as far towards meeting our liabilities as a balance of nine crores would without this facility." Most of the figures used by Sir J. Westland in this note written 25 years ago need to be doubled in order to bring his statement up to date, and probably this is true of his estimate of the value of the assistance that the Government Treasury Balances derive from the Paper Currency Reserve under the system of joint management that he describes. If so, any considerable interference with the working of the system (such as would almost certainly result from the transfer of the greater part of the Government Treasury Balances to a State Bank unaccompanied by a transfer of the management of the Paper Currency Department) would be inconvenient to the public and to the Government, and seriously uneconomical. It may therefore be assumed that, if a State Bank held the greater part of the Treasury Balances, it would also be entrusted with the management of the Paper Currency.

*C—Participation in the sale of Drafts on India for meeting the Secretary of State's requirements.*

The form in which the Paper Currency Reserve from time to time stands, and consequently the work of managing the Paper Currency system as a whole, are considerably affected by the manner in which the sale of Bills of Exchange and Telegraphic Transfers on India needed to provide for India Office disbursements is conducted. *E.g.*, if such remittances were sold very sparingly, the importation to India of sovereigns (to be tendered to the Government in exchange for rupees and to be ultimately

\* This is the effect of the notifications printed at the end of Parliamentary Paper 495 of 1913 ("East India Mint for Gold Coinage")

located in the Paper Currency Reserve<sup>2</sup>)

would probably take place on so large a scale as to be embarrassing to the administration responsible for the management of the Paper Currency. Conversely, if remittances were sold with great freedom and at a comparatively low price, the importation of sovereigns to India might cease and the stock held in the Paper Currency Reserve might be exhausted. It may be taken for granted that the desirability of avoiding both these results is generally recognised, and, in order to avoid them, it would be natural and convenient that the authority responsible for the management of the Paper Currency should have a share in the work of selling the bills of exchange and telegraphic transfers on India needed to meet India Office disbursements. It may therefore be assumed that participation in this work would be one of the duties or privileges of any State Bank entrusted with the custody of a large part of the balances of the Government of India and with the management of the Paper Currency. The method of participation is discussed in paragraph 7 below.

*Duties and Privileges that would not be entrusted to it.*

6 The three duties mentioned in (A), (B), and (C) above appear to be those which a State Bank would naturally assume. Before considering in detail how (and especially in what relationship to the Government) it would discharge them, it may be well to mention some duties and privileges which it would appear undesirable that the Bank should assume or that the Government should wish to impose or grant.—(1) It may be said with confidence that no bank would accept the responsibility for “the convertibility of the rupee” in the sense of undertaking a definite obligation to provide sovereigns for the public in exchange for rupees without limit of amount. All that a bank could be expected to do is to issue sovereigns, when it has them, to the public in exchange for rupees at the rate of 1l = Rs 15, as the Government now does. (2) It may be said with equal confidence that no bank would accept an unlimited obligation (except so far as it acted as the agent of the Government) to sell bills on London at a fixed rate and without limit of amount in order to support exchange. (3) In view of what is said in (2), it appears natural that the responsibility for the management of the Gold Standard Reserve should remain with the Government, though as a matter of convenience the carrying out of particular transactions relating to it (including the sale as agent of the Government, of bills on London for the support of exchange) might be entrusted to a State Bank. (4) The question of allowing a State Bank to borrow in London on the security of its investments, in order to send money to India—on the lines of the similar proposals made

\* See “Papers relating to a proposal to establish a Central Bank in India (1899-1901), &c” (Appendix XV, page 355)

by the Presidency Banks in 1899-1905\*—raises certain difficulties of detail. It may be doubted whether such loans would be obtainable in large amounts with such ease as was contemplated by the Presidency Banks in 1899-1905. If they were effected, the natural method of placing the proceeds at the disposal of the Bank in India would be to pay the money in gold to the Paper Currency Reserve in India or England, and to transfer rupees thence to the banking resources of the State Bank. If the gold was shipped to India for this purpose, the transaction would be simple, but perhaps not profitable to the State Bank. If the gold was paid in to the Currency Chest in London, some arrangement would be necessary (in order to avoid unfair competition with the Exchange Banks) to prevent the State Bank from making the transfer to itself of rupees in India at a lower rate of exchange than that at which it was selling drafts on India to the Exchange Banks. It is doubtful whether, under these conditions, a State Bank would find it worth while to enter at all into transactions of a kind so different from its normal business. (5) The balance of considerations seems clearly against allowing a State Bank to receive deposits in London. If deposits in London were allowed, the object would be to enable the money to be remitted (presumably by one of the methods mentioned in (4)) to India to be placed by the Bank at the disposal of trade, but the liability to withdrawals by the London depositors, involving the automatic reduction of the amount at the disposal of the Bank and of trade in India, might be seriously inconvenient. (6) There appears to be no reason why the Bank should enjoy in relation to the coinage any special position such as was contemplated by Mr A de Rothschild (see paragraph 3 above). The Bank would, no doubt, regularly issue rupees to the public in exchange for sovereigns at the rate of Rs 15 = 1l, but it would replenish its stock of rupees when necessary by getting them from the Government under the procedure laid down in the Notifications of

1893 printed at the end of Parliamentary Paper 495 of 1913\*. In this respect it would be in exactly the same position as any other bank, or indeed any member of the general public: and in such a matter as coinage (which is an exercise of one of the rights of sovereignty), there is no reason why it should be in any other position.

*Methods of Business*

7. Assuming that the business of a State Bank would be.—  
To hold as Bankers a large part of the Government Balances;  
To manage the Paper Currency;

To take part in the sale of drafts on India for meeting the Secretary of State's requirements,

it is necessary to consider what would be Bank's methods of business and its relations with the Government. The most convenient course will be to consider the questions that arise under each of the three several branches of business.

*Holding of Government Balances*—On the first question that arises in connection with the holding of the Government Balances in India, viz., whether the whole or only a part, and if so what part, of those balances should be lodged with a State Bank, all that can be said at present is that, if the establishment of a State Bank is to be justified at all, the amount of Government Balances lodged with it must appreciably exceed the aggregate amount now lodged with the Presidency Banks. It would be useless in such a Memorandum as the present to say more, because it will be universally recognised that the matter is one in which the Government of India must have the preponderating voice.

The second question is as to the relationship with the Government required by the Bank's holding of a considerably increased portion of the Government Balances. The conditions to be satisfied are that the Bank must be conducted on generally sound principles, and that the Government must have all reasonable certainty of being able to withdraw without difficulty or delay whatever part of the amount at its credit it needs at any time for the purpose of meeting its disbursements. Two possible methods of satisfying these conditions might be advocated, viz.—(1) that the Bank should act under a code of rules sanctioned by the Government but that the Government or its representatives should take no part in the management, (2) that the Government should directly or through Government directors take part in the management of the Bank, a scheme which is equally compatible with the existence and the non-existence of a set of rules of business sanctioned by the Government. The second alternative seems clearly preferable. It is supported by the precedents of the Bank of France, the German Reichsbank, the Austro-Hungarian Bank, the Bank of Russia, and the Bank of Japan,\*

\* See Conant *History of Modern Banks of Issue* (New York and London, 1909), pages 69, 201, 233, 260, 557.

Balances of the Government of India, &c"† shows that a set of rules such as

† See also the correspondence and notes, relating to an incident in 1888, printed on pages 36-41 of the paper accompanying my Memorandum on 'Location and Management, &c' (Appendix II)

is embodied in the Presidency Banks Act has not always sufficed to prevent difficulty and delay in the withdrawal by the Government of money standing to its credit in those Banks. Any additional rules intended to safeguard the interests of the Government as chief depositor would presumably take the form of provisions such as were suggested by the Government of India in their letter to the Secretary of State, No 264, dated 21st July 1904, paragraphs 19-21,‡ requiring either

‡ This letter is included in the "Papers relating to a proposal to establish a Central Bank in India (1899-1901) &c" (Appendix XV, pages 441-2)

absolutely or subject to a penalty the maintenance by the Bank of a minimum proportion of cash to liabilities. Such provisions are likely to be worse than useless. They would not be directly operative, and might possibly have little restraining effect, so long as the cash was above the minimum proportion, when it had fallen to that level, the provisions would become operative either by absolutely immobilising the Bank's residuum of cash or by limiting its use by restrictions not necessarily having any appropriateness to the situation that would then have to be faced. In either case inconvenience would certainly follow and possibly panic. The alternative method of exercising Government control by the appointment of Government directors is free from all these disadvantages. If the directors are well chosen, their presence ought not to hinder the Bank in the efficient conduct of its business either in ordinary times or in emergencies, and would be a safeguard, such as would be required alike by the direct interest of the Government and by public opinion, against rash trading. Government directors could not, of course, prevent all possibility of financial crises due to such causes as war, imprudent trading by Indian merchants, or trouble in other countries, and

it may be argued that the Government, by its connection with a Bank, would be liable to a greater degree than now to be embarrassed by such crises. But the Government has not in the past stood aloof when such crises have occurred in India, and its control over a State Bank would presumably lessen the risk of their occurrence.

Subject to this official control, a State Bank would presumably do its banking business in India in much the same way as the Presidency Banks now do.

*Management of Paper Currency*—This work would presumably be done by a State Bank under precisely the same conditions under which the Paper Currency Department now does it. Its transfer to the Bank would increase the necessity for the appointment of Government directors, because no one would seriously propose that the 23,200,000*l* in sovereigns, 13,500,000*l* in rupees, and 9,300,000*l* in securities now (9th July 1913) held by the Government as the Paper Currency Reserve, should be handed over to a private enterprise Bank free from detailed Government control.

*Participation in sale of Bills and Telegraphic Transfers on India*—The reasons which appear to necessitate the participation by a State Bank in the sale of drafts on India have been given in paragraph 5 (C) above, and appear to be conclusive. They involve the establishment of a London office of the Bank. But it would be impossible to leave the management of the sales under the uncontrolled management of the London office of the Bank, if this were done, the Bank might so regulate the sales that, when it held large Government balances in India and opportunities occurred for remitting to London what the Secretary of State needed to meet his disbursements, the opportunities would not be taken, and the Secretary of State would be without the funds that he needed in London. This matter is one of such vital importance to the Secretary of State and the Government of India that the London Office of the Bank in selling drafts on India would have to act in close co-operation with, and (in case of need) under the control of, a representative or representatives of the Secretary of State. The position created by the presence at the London Office of a Government representative, ordinarily acting in co-operation with the representatives of the Bank, but with great powers of control in reserve, may at first appear anomalous, but it would be precisely similar to the position of the Government director in London of Guaranteed and other Indian Railway Companies who has, under the contracts between the various Indian railway companies and the Government, "power to exercise at his discretion an absolute veto in all proceedings whatever at the Board of Directors." The co-existence of this power with the comparatively independent discharge by the Boards of Directors of very important duties constitutes so unusual a system that, if its establishment were now proposed for the first time, it would probably be declared to be impracticable. But it has actually been in operation for many years, and has worked with remarkable smoothness.

#### *Relations with the India Office*

8 The part that would be taken by the Bank in the transfer of funds between India and London, the work of its London Office, and the relations between its London Office and the India Office, seem to need some further elucidation in detail than has been given above, and the following remarks will, it is hoped, supply what is needed—

(A) It has been tacitly assumed above that the Bank's work in connection with exchange business would be confined to the sale by its London Office of drafts on India under conditions as similar as possible to those under which Council Bills and Telegraphic Transfers are now sold by the India Office, and the sale, as agent for Government, of bills on London for the support of exchange. This is not the only method by which a State Bank could take part in exchange business, since it would obviously be possible, if desirable, to allow it in addition to buy mercantile bills in India and in London and to sell drafts on London on its own account. The reasons in favour of confining its exchange business within the limits suggested above are that—

- (1) The special qualifications of its directors in India would be their knowledge of trade conditions in India. They would not be in a favourable position for acquiring the expert knowledge of con-

ditions outside India that is required for the conduct of exchange business in the larger sense, and it might be impracticable, and would probably be undesirable, for the Bank to conduct such business in reliance on the possession of its London representatives of the necessary knowledge

- (2) The competition in general exchange business of a State Bank with the existing Exchange Banks would probably be very prejudicial to the latter, and Indian trade would no doubt be injured if deprived to any great extent of the advantage arising from their large capital, wide connections, and great knowledge and experience

(B) After the establishment of a State Bank, the Secretary of State would continue to obtain part of the funds required to meet his disbursements in England from the proceeds of loans and Miscellaneous Receipts from other Government departments, &c, and it would be necessary that money so obtained should, as now, be paid to the Secretary of State's

account at the Bank of England, as  
required by 21 & 22 Vict, c 106, s 43<sup>u</sup>

\* Printed on page 354

The natural procedure for the supply of the remainder (which would ordinarily be the larger part) of the money required by the Secretary of State would be as follows. He would inform the Bank at the beginning of each year of the amount and date of his estimated requirements during the year, and would at intervals revise the estimate. The London office of the Bank would endeavour, acting with the co-operation, and if necessary under the control, of the India Office representative, to sell drafts on India to an amount sufficient to meet the Secretary of State's requirements, and would sell in excess of this amount when this seemed advisable in order to satisfy trade demands or for other reasons (*e.g.*, when the total Government balances were high, and it seemed desirable to defray part of the capital expenditure of the current or a subsequent year from them rather than from loans issued in the United Kingdom). The proceeds of the sale of drafts would, in the first instance, be part of the general assets of the Bank held against its liabilities to the Government and other depositors, and would be used by it in such manner (*e.g.*, for the grant to approved borrowers of loans against security) as seemed best, the Bank acting under such Government control as might be exercised. When the Secretary of State desired to draw money from the Bank to meet his disbursements, he would give instructions for the transfer of the necessary sum to the account kept by him at the Bank of England under 21 & 22 Vict, c 106, s 43. The equivalent (at a rate of exchange calculated in accordance with rules that would have to be made as part of the initial arrangements between the Bank and the Government) would be written off the total of the Government deposits in the general account between the Bank and the Government of India.

At times when the total balances deposited in the Bank by the Government of India were large and when favourable trade, setting up a heavy demand for drafts on India, caused large amounts to be temporarily held by the Bank in London, the Bank's balance in London would probably be much in excess of the Secretary of State's balance, just as (according to common belief) the balance of the Bank of Japan in London is as a rule much larger than the Japanese Government's balance there.

At times of unfavourable trade conditions, the Bank would no doubt be occasionally unable to supply from its ordinary resources in England the full amount needed by the Secretary of State to meet his necessary disbursements in London. It would then be a matter for consideration which of the following methods should be used to keep the Secretary of State in funds —

Shipment of sovereigns from India either by the Government of India direct to the Secretary of State or by the Bank in India to its London office,

Withdrawal of money from the Gold Standard Reserve or Paper Currency Reserve in London against payment of the corresponding amount to those Reserves by the Government of India in India,

Issue of loans by the Secretary of State,

Borrowing by the Bank in London in order to place money at the Secretary of State's disposal.

*Capital, Division of Profits, Provision for revision or termination of relations between State Bank and Government*

The following points are important enough to need consideration at the present stage —

*Amount of Capital of State Bank* — In the discussion of 1892–1901 it was frequently assumed that an increase of the capital of the three Presidency Banks would be required as part of any scheme for their amalgamation into a Central Bank. Such an increase would be desirable in the event of their amalgamation into a State Bank; but it is possible that this condition might prove fatal to any scheme and might be waived without serious disadvantage. The chief facts bearing on these points are as follows —

On 31st March 1912\* the Capital and Reserves of the Presidency Banks were as follows —

	Bank of Bengal	Bank of Madras	Bank of Bombay	Total
Capital	£ 1,333,000	£ 400,000	£ 667,000	£ 2,400,000
Reserve	£ 1,200,000	£ 353,000	£ 707,000	£ 2,260,000
Total	£ 2,533,000	£ 753,000	£ 1,374,000	£ 4,660,000

The last weekly statements published by the Banks in March 1912, showed the Government balances held by them as follows —

Bank of Bengal	Bank of Madras	Bank of Bombay	Total
£ 1,278,000	£ 708,000	£ 1,142,000	£ 3,128,000

The money held by the Government in Reserve Treasuries on 31st March 1912 amounted to 3,506,000*l*. If this had been reduced to an Emergency Reserve of 1,000,000*l* by the transfer of 2,506,000*l* to the Presidency Banks, the total Government deposit in the Banks would have been approximately 5,634,000*l*,† or 121† per cent of their aggregate capital and reserves. If the Banks had held half of the additional 2,506,000*l* in coin or currency

notes, the total amount so held, which was actually 8,831,000*l* would have been raised to approximately 10,084,000*l*† of which the Government deposit of 5,634,000*l*† would have represented 55·8 per cent†. These percentages may be taken as representing very roughly the highest proportion that Government deposits would bear in normal times to the Capital and Reserves and to the Coin and Currency Notes of a State Bank (in its early days) formed by the amalgamation of the three Presidency Banks without an increase of their capital. They suggest that an increase of capital would be desirable, if practicable.

\* This date is given because the Government balance was then normal, whereas on 31st March 1913 it was abnormally high. By 31st March 1913 the Reserves of the three Presidency Banks had risen to the following amounts —

Bank of Bengal	Bank of Madras	Bank of Bombay	Total
£ 1,233,000	£ 473,000	£ 707,000	£ 2,413,000

But there are few points more prominent in the correspondence of 1899-1901 than the unwillingness of the Presidency Banks to increase their capital, owing to the difficulty anticipated in the way of finding profitable employment for the additional amount, taking the year as a whole,† and the difficulty would be greater under a scheme that included the deposit of larger Government balances with one amalgamated bank, since employment would have to be found for the additional Government deposits as well as for additional stockholders' capital. It might, therefore, prove to be impracticable to insist on an increase of the latter as one of the conditions of a scheme of amalgamation, and, if this were the case, it would perhaps be best that the Government should be content to rely on an increase of its own control, rather than on an increase of stockholders' capital, for the additional security required in respect of its larger deposits.

*Question of Sterling or Rupee Capital*—In the discussion of 1899-1901 the Secretary of State (Despatch of 24th August 1899, paragraph 12, page 357), and the Government of India (Letter of 18th January 1900, paragraph 13, page 405), contemplated that a Central Bank of India, if formed, would have a sterling capital. These opinions were no doubt due to the fact that, at the time of their expression, the memory of the fluctuations in the sterling value of the rupee was still fresh, so that a bank on a sterling basis seemed more likely to command confidence and to attract capital than one on a rupee basis. In present circumstances it seems more natural that the capital of an Indian State Bank should be expressed in rupee currency, which is the chief money of account in India.

*Government participation in Profits*—Under the scheme that has been sketched above, it would be obviously reasonable that the Government should share in the profits of the Bank, and its share would naturally be a proportion of the profits corresponding roughly to the proportion between (a) the excess of its average deposits in each year over a fixed sum representing its normal deposits with the three Presidency Banks under existing conditions, and (b) the capital and reserve of the Bank. It seems scarcely worth while at the present stage to elaborate detailed suggestions on this matter but it may be mentioned that such profit-sharing partnerships between the Government and companies are a familiar feature in Indian administration, since most of the important railway systems of India are worked under similar agreements, and the large experience of the India Office and the Government of India in drawing up such agreements should be of considerable value in connection with the establishment of a State Bank.

*Revision or Termination of Arrangements between Government of India and State Bank*—In view of the importance of the duties that would be entrusted by the Government to a State Bank, it would be clearly necessary to include in the agreement, charter, or other instrument by which it was constituted some provision, such as are included in the constitutions of the Bank of France,\* the Bank of Japan,† and the Reichsbank,‡ for enabling

\* Conant *History of Modern Banks of Issue*, p. 67

† *Ibid* p. 557

‡ See *German Imperial Banking Laws*, issued by the National Monetary Commission, Washington Government Printing Office 1910, p. 52

§ Under the German Bank Act of 1875 the Government had the right of discontinuing the Reichsbank and buying up its property on certain terms, (*German Imperial Banking Laws*, pp. 52-3) on 1st January 1891 and thereafter at the expiration of every ten-year period. It could have done so at a considerable profit in 1911 (See *Renewal of Reichsbank Charter* issued by National Monetary Commission 1910, p. 233), but the use that it made of the option was to reduce the share of profit distributable to the shareholders. (See *The Reichsbank*, issued as above, page 33.)

the relations between the Government and the Bank to be revised or terminated at stated times or on the occurrence of specified events. Such provision would no doubt be made in the form of a clause enabling either party to terminate its relations with the other, but, in any circumstances that are likely to occur, notice of termination would probably be given, if at all, only as a means of securing an alteration in the division of profits§ or in the rules or practice governing the conduct of business.

## III.

ADVANTAGES AND DISADVANTAGES OF THE SCHEME AND  
PROBABILITY OR OTHERWISE OF ITS ADOPTION

9 The object of Section II was to set forth suggestions as to the lines on which it appears that a State Bank can best be established, if one is to be established at all. In the present section the attempt is made to summarise the considerations for and against the establishment of the Bank and as to the probability or otherwise of its establishment.

*Advantages of a State Bank,*

(a) The chief advantage of a State Bank would be that the whole, or a

There can be little doubt that the additional amount that would have been held by the Bank in the first quarter of the calendar year, which is the period of greatest stringency in India, would have kept the discount rate below the maximum that was actually reached.

(b) If the practice of lending at certain times from the Paper Currency Reserve is to be introduced, the best agency for carrying it out would probably be a State Bank in charge of the Reserve and at the same time in touch with the commercial community.

(c) The existing system under which Council Bills and Telegraphic Transfers are sold by the Secretary of State involves the transaction by him and his staff of work outside the ordinary sphere of a Government Office. There would, therefore, perhaps be some advantage in the cessation of the Secretary of State's sales of Council Bills and the substitution of the sale, by the London Office of a State Bank, of drafts on its Indian offices.

(d) Similarly there would be an advantage in the reduction (*see* paragraph 8 (B) above) of the cash balance held by the India Office and consequently of the work and responsibility (of a nature not ordinarily falling on a Government office) undertaken by it in connection with the placing of money on loan or deposit

(e) The Government might occasionally find it advantageous to borrow temporarily from a State Bank (in India or England) instead of issuing a loan

(f) The Government would derive a pecuniary advantage from its share in the profits of a State Bank, representing in effect interest received on the part of its balance taken from Reserve Treasuries and other places where it now lies idle

It will be noticed that this list of advantages does not assume that the establishment of a State Bank would enable economies of any importance to be effected by the reduction of Government establishments, or that it would lead to any increase in the popularity of the Paper Currency or in the efficiency of its management. Neither of these results seems probable. As regards the latter, the growth of the note circulation and the additional facilities for encashment that have from time to time been provided under Government management seem to indicate that the efficiency attained under that system is probably as great as would be attained under management by a bank.

*Disadvantages of a State Bank, and arguments against its establishment*

(g) The Government of India and the Secretary of State, by surrendering the custody of Government money to a bank to a greater extent than now, might experience difficulty and delay in obtaining it when required

(h) The advantages mentioned in (a) and (b) above could be obtained to a considerable extent in the absence of a State Bank (but without the additional security to the Government provided by Government participation in management) by an extension of the present practice of placing part of the Treasury Balances on deposit with Presidency Banks and the introduction of a similar practice in connection with the Paper Currency Reserve

(i) The amalgamation of the three Presidency Banks into one State Bank, with its headquarters presumably at Calcutta, would involve a considerable change in the position of the Banks of Bombay and Madras. They are now independent and have an undivided responsibility, and in this position have probably acquired valuable and minute knowledge of trade conditions in their respective areas. The diminution of their independence and responsibility might have a lowering effect on their activity, knowledge, and efficiency. And they might be occasionally overruled from headquarters on matters on which it would be better that their judgment, based on local knowledge, should be followed.

(j) Some questions, not quite easy to settle, might arise as to the relations between the London Office and the Head Office in India regarding the sale of remittances in India, since the Secretary of State, acting through the Government representative at the London Office, might find occasion to use his power of ultimate control in a way that did not commend itself to the Head Office.

This list of disadvantages does not include any reference to the possibility of loss to the Government through the transfer of the management of the Paper Currency. It may be assumed that one of the conditions of the establishment of a State Bank, including the transfer to it of the management of the Paper Currency, would be the retention by the Government of the net profits of the Note issue.

Neither in the list of advantages nor in that of disadvantages is anything said about the effect of the establishment of a State Bank on the amount of

\* The view that the import of gold to, and its export from, India would be materially affected by the establishment of a State bank appears to rest on two assumptions, viz (1) That the establishment of a State bank would reduce the average level and the fluctuations of the rate of discount in India, (2) That that rate has an important influence on the flow of gold to and from India.

The first assumption is no doubt correct

There seems for the following reasons to be little substance in the second—(A) Experience shows that the flow of gold to India is influenced mainly by the magnitude of the trade balance due to India, the freedom or otherwise with which the Secretary of State sells Council Bills and Telegraphic Transfers, and the price (varying with the changes in the Australian and Egyptian exchanges) at which sovereigns can be obtained for shipment from Australia and Egypt to India. There is little or no evidence to show that it is materially affected by a rise in the rate of discount in India or that any effect due to that cause works in the direction of attracting gold to India. Indeed, a rise in the Indian rate of discount tends, in the first instance at least, to induce the exchange banks to buy telegraphic transfers from the Secretary of State in preference to making remittances by the slower method of shipping gold. (B) A reduction in the rate of discount in India would obviously not encourage the flow of gold from India unless exchange fell to gold exporting point. Such a fall is of very rare occurrence, † Page 90 and Statement D and the facts mentioned in my

Memorandum on the Gold Standard Reserve† show how little evidence there is to support the view that such a fall, when it occurs, tends to lead to the export of gold

in 1901 (as shown in the passage quoted in the Prefatory Note above) to the suggestions for establishing a Central Bank, and may therefore be inclined to consider favourably the scheme sketched in the present Memorandum, which is in effect a development in more definite form of those suggestions. The position of the Presidency Banks in considering a scheme for a State Bank must necessarily be one of some difficulty. Whatever advantages to the public and the Banks may be anticipated from the establishment of a State Bank must be accompanied, as shown in 9 (t) above, by some possibility of disadvantage to at least the two banks not situated at the place which would be the headquarters of a State Bank. The recognition of this—described

‡ Letter from Government of India to Secretary of State, dated 13th June 1901, paragraph 13, page 428

by the Government of India in 1901, with perhaps a tinge of unnecessary harshness, as "provincial and personal jealousies"‡—appears to have been one of the chief causes of the failure of the scheme discussed from 1899 to 1901. If the Royal Commission reports that a scheme for a State Bank deserves active consideration, the Directors and Shareholders of the Presidency Banks will be bound to give due weight to the danger of disadvantageous effects on their own status and efficiency, but it is at least possible that they may regard this danger as too remote to constitute a serious obstacle to a scheme which appears to hold out some prospect of advantage to the Indian commercial public as a whole.

gold imported to, exported from\*, or circulating in India, on the maintenance of the exchange value of the rupee, or on the stability and development of the existing currency system. There is no reason to suppose that the establishment of a State Bank would have any effect in any of these directions.

*Probability or otherwise of a State Bank being established*

10 The probability of a State Bank being established depends mainly on the views taken by the Secretary of State, the Government of India, and the Presidency Banks.

The first two authorities were well disposed

Extract paragraph 9 of Despatch from the Secretary of State for India to the Government of India, No 140 (Financial), dated 25th July 1899, dealing with the proposals of the Indian Currency Committee, 1898

I desire particularly to commend to your attention the important recommendation with regard to the improvement and concentration of banking facilities contained in the separate report of Mr Hambro

Mr E A Hambro's remarks referred to above.

Although I am aware that the question of the banking facilities of India was not referred to the Committee, I venture to call special attention to the first part of paragraph 22 where it is pointed out that they have not of late years kept pace with the increasing trade, and, further, to draw attention to the fact that it has been considered wise in Europe to entrust the carrying out of currency laws to banks established or strengthened for that purpose. In my opinion, a strong bank, properly constituted, would be a powerful assistant in giving effect to any regulation having the convertibility of the rupee in view, and that, working under proper currency regulations, such a bank would be likely to carry them out in a more effective way, and in a manner more in harmony with the trade wants of the country, than any Government Department, however well administered, could possibly do.

I venture to call attention to this point because I believe that the success of the recommendations of the Committee, if adopted, will very much depend on the banking wants of the country being assisted in times of pressure, and curtailed in times of slackness, and thus, in my opinion, could only be done by the establishment of some institution having ample facilities at its disposal, and framed on somewhat similar lines to those of either the Bank of England or the Bank of France

E A HAMBRO

Extract paragraph 12 of Letter from the Government of India to the Secretary of State for India, No 301, dated the 24th August 1899

12 It only remains for us to discuss Mr Hambro's proposal for the establishment of a strong Bank. There can, we think, be no question that, for the purpose of the effective maintenance of the gold standard, a Bank with a large sterling capital, and constituted on the model of the Bank of England or Bank of France, would be a very powerful support to the State. Such a Bank would be better able to measure and deal with the requirements of trade for foreign remittances than any Government, and it would have the capacity, which a Government Department cannot be expected to possess, of preventing unnecessary export of gold without hampering trade. An institution of the kind would also be most effective in promoting the circulation of gold. It would, again, be an effective agent for securing an increased circulation of fiduciary money; and we might find it possible to entrust it with the management of the Government Paper Currency. Apart altogether, however, from the question of the gold standard, we consider that the constitution of such a Bank is desirable. The three Presidency Banks do not command separately or together a capital adequate to the commercial requirements of the country or sufficient to prevent excessive fluctuations in the rates of discount at different seasons of the year, while the legislative restrictions under which they conduct their business and the sharp division of their respective spheres of influence, however necessary or expedient at a former period, now form an obstacle to business. The Presidency Banks, however, have in the past done good service and the Government owe them full consideration apart from any actual contract or legal obligations. We think, therefore, that in the first instance the attempt should be made to absorb the three existing banks in one strong establishment, constituted on a sterling basis, care being taken that the interests of holders of shares in the banks should be fully protected and secured. The whole question is one that will require careful consideration, and we propose to address Your Lordship again on the subject after ascertaining the views of the banks and of the mercantile community.

No 5123-A, dated 10th November 1899

From H HESELTINE, Esq, Assistant Secretary  
to the Government of India, Finance and Commerce Department,  
Bengal  
Bombay  
Madras  
to the CHAIRMAN Rangoon Chamber of Commerce  
Karachi  
Upper India

The Government of India have recently had under consideration the question of amending the Presidency Banks Act, 1876, with a view to relaxing the restrictions on the business of the banks which are imposed by Sections 36 and 37 of the Act. The circumstances under which this question has been raised and the attitude which the Government of India are at present inclined to adopt are explained in the speeches\* made by His Excellency the Viceroy and the Honourable Mr Dawkins at a meeting of the Legislative Council of the Governor General held on the 1st September. For the reasons there given, the examination of the question was postponed for a time, but it is probable that it will be taken in hand at an early date. In view of this possibility the Government of India would be glad to be favoured with the opinion of the Chamber on the proposal to relax the restrictions imposed by the Act and with suggestions as to the precise directions in which any relaxation should be made. I am to ask that the Chamber will consider the matter with special reference to the existing capital of the Banks

Copy forwarded to the Secretary and Treasurer, Bank of Bengal  
Bombay  
Madras

Extract from the proceedings of the Council of the Governor General of India assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892 (24 and 25 Vict, c 67, and 55 and 56 Vict, c 14), at its meeting on Friday, the 1st September 1899

## PRESIDENCY BANKS BILL

The Honourable Mr Dawkins moved that the Bill further to amend the Presidency Banks Act, 1876, be taken into consideration. He said.—

“Last Friday, when asking leave to introduce this Bill, I reminded Council that strict limitations were imposed by the legislature on the business in which the Presidency Banks are authorised to deal, and I added that these limitations, to some extent, appeared to have survived the times and conditions which had rendered them necessary. With the permission of Your Excellency, I would like to amplify the opinion which I then expressed incidentally. Upon its becoming known that we intended to introduce the purely formal amendment now before us, we were informed, through the Comptroller-General, that the Bank of Bengal desired us to reconsider, in connection with this amendment, the refusal of Lord Elgin's Government to add the securities of assisted branch lines to the securities of railways guaranteed by Government in which alone the Presidency Banks may deal. We also received a telegram from the Madras Chamber of Commerce, asking us to introduce further legislation to empower the Presidency Banks to deal in the securities issued by District Boards with the authority of Government. The Presidency Bank of Madras and the Madras Government support the proposal.

“We have come to the conclusion, a conclusion which, I think, must commend itself to every reasonable man, that we could not tack on, in a hurry, legislation involving questions of principle to a purely formal amendment. Nor could we defer passing this formal amendment and give time for the mature consideration of these larger issues, as this amendment is urgent, its object being to enable the Presidency Bank of Bombay to deal in the securities of the loan already issued by the Bombay Improvement Trust.

\* Copy enclosed.

"At the same time we do not wish to return a simple *non-possumus* to the requests of the Bengal Bank and of the Madras Chamber of Commerce, or what is perhaps more disheartening, to postpone their consideration indefinitely. In the opinion of Government the time has come for reviewing the question of these restrictions on the bank's operation, as there is ground for thinking that they may, to some extent, have survived the reasons for their imposition, and do unnecessarily hamper business and enterprise.

"The origin of these restrictions is, I think, generally known, but perhaps I may be allowed to refer to it. Formerly, as Honourable Members are aware, Government had a pecuniary interest in the Presidency Banks and was largely concerned in, and responsible for, their management. In 1872, after the failure of the old Bank of Bombay, it was decided that Government should divest itself of its interest in the banks, and withdraw from active participation in their management. Protracted discussion took place for several years, and I find among the proceedings that a proposal was made, but not pressed, to allow the Presidency Banks the freedom and discretion of ordinary banks in dealing in shares and stock. It was natural that the proposal was not pressed, for the failure, involving Government in considerable loss, of the old Bombay Bank, which for some reason had been freed from the restrictions imposed upon the other Presidency Banks, was primarily attributed by the Commission of Inquiry to speculative dealings encouraged by the absence of such restrictions. It was therefore felt that the business of the Presidency Banks must still be subjected to strict limitations in view of a variety of circumstances and principally, of course, with the object of securing the safety of the Government balances entrusted to the Presidency Banks by special arrangement. Much has happened since 1876. new banks have grown up, new forms of enterprise have been started—but the principal factor remains constant—the Presidency Banks are still the custodians of the Government balances—and I do not think that any bank in India, which receives custody of the Government balances, can expect to be without restrictions on the class of business in which it may engage these public balances. Two considerations must be borne in mind. The Presidency Banks depend to a quite exceptional degree for their cash balances on the Government account. As Sir J. Westland showed, in the busy season nearly 80 to 90 per cent of these balances are supplied from the Government account—a fact which, added to the fluctuations in the rate of discount, may make us ask seriously how far the Presidency Banks have sufficient capital to allow of the absorption of the resources they command in enterprises, the securities of which might not be easily realizable.

"Again the circumstances of India are peculiar. In England, if the Government were suddenly in need of money and the Bank of England had locked up the Government balances, it would not be of serious consequence. Money could be procured from a dozen other different quarters. In India, this would not be possible, and, indeed, we have a historic example in the embarrassment which the inability or reluctance of the banks to produce the money deposited with them brought upon Government when confronted with the sudden emergency of the Orissa Famine.

"I have thought it necessary to trouble Council with this retrospect and explanation, because we shall have to keep this central and vital consideration in view when we proceed to consider how far existing restrictions can be relaxed. But having uttered this word of caution, I may express my opinion that some relaxation is desirable and I may state that Government is prepared and has decided to examine the whole question exhaustively, and in no narrow spirit.

"There is, I think, no doubt that, as regards railways, the limitation of the banker's operations to the securities of guaranteed railways is a serious impediment to the promotion of those assisted railways which the Government has so often expressed a desire to encourage. I may say that this is the conviction of my Honourable Colleague Colonel Gardiner, whose great practical experience and knowledge lends much weight to his views, and I congratulate Council that my Honourable Colleague will be able to take part in the consideration of this question. He knows where the shoe pinches, and his familiarity with every branch of railway organisation and with railway finance will supply Government with valuable suggestions.

“To what precise extent we shall be able to authorise the Presidency Banks to deal in the securities of the various classes of assisted railways, I shall not of course be expected to indicate at this moment. But looking to the total capital of such branches and to the terms under which some of them are constructed, I do not think it will be impossible to devise such safeguards as would permit us to relax the prohibitions now placed upon the Presidency Banks in regard to dealing in some of their securities.

“I now pass to the question raised by Madras, that of authorising the Presidency Banks to deal in the securities issued by District Boards, although this question, I may say, is not unconnected with that of railway development, in so far as District Boards may, as in the case of the Tanjore Board, themselves guarantee railways, &c, &c.

“I think we may admit that this is a question presenting less difficulty. District Boards and Municipalities, in the securities of which latter the Presidency Banks may deal, are equally considered as local authorities under the Local Authorities Loans Act of 1879, and require the same sanction from the Local Governments for their loan operations. The Municipalities and Port Trusts of the three Presidency Towns and Bombay City Improvement Trust alone stand on a different footing, as in the case of their operations the sanction of the Government of India, in addition to that of the Local Government, is required. But we thought the whole question of enlarging the area of securities in which the Presidency Banks may deal, might well be considered before further legislation was undertaken. No prejudice to the District Boards is likely to arise from the delay. The request from Madras has not been previously pressed upon Government, and there is no urgency, for, as a matter of fact, the District Boards almost invariably prefer to borrow from Government to borrowing in the open market, as they can get better terms from Government. Up to the present moment only two District Boards have raised money in the open market.”

His Excellency the President said —

“I should like to add a few words upon the subject touched upon by the Honourable Mr Dawkins in the remarks to which we have just listened. The speech which he has made represents the views that are unanimously entertained by the Government of India. The question that has been raised by him is one, in my opinion, of great importance, and one upon which I should be grateful for the enlightenment and backing of public opinion. The Bill now before us, as he has told us, is one for a more or less formal amendment of the Presidency Banks Act of 1876, so as to admit to the list of securities, with which the banks are at present permitted to deal, a particular security which has only hitherto been excluded, because, when the Act was last re-enacted the Bombay City Improvement Trust had not yet been called into existence. The proposal, however, adumbrated by the Finance Member, contemplates still further extension of these securities in the future by including in them the scrip of subsidiary assisted railway companies.

“Now, under the existing law, the Presidency Banks are prohibited from dealing in them. We are disposed, as my Honourable Colleague has pointed out, to relax those restrictions, in the first place, in the interest of the banks so as to increase the scope of their operations, but, secondly, and still more, in the interest of the investing public, and of the general development of the country which we all have so much at heart. But here I must interpolate a word of caution. We are anxious to be generous, but we are bound to be prudent, and there is a certain point beyond which we cannot go.

“The Presidency Banks, as the Honourable Mr Dawkins has pointed out, are not like ordinary banks. No relaxation of restrictions, even if such were possible in an extreme degree, could make them so. They differ, because the bulk of their cash balances—or what I suppose I may call their loanable capital—is supplied by Government, and because, if we subtract this at any given moment they are not, as a rule, in possession of sufficient independent capital to enable them to conduct operations on a large scale. The Government, therefore, is under a peculiar responsibility for these banks, and we are bound to enforce special regulations for the protection and the security of the balances which we ourselves have provided. We cannot afford to jeopardise them in the interests of general philanthropy. Within these limits we desire to do all in our power to free the banks from artificial

bandages, and to give to them ample liberty of movement. But herein I should like to point out that a reciprocal obligation, in my judgment, is involved. We do not contemplate these steps merely in order to provide a new field for the employment of Government balances. What we want to do is to enlarge the opportunities available for the employment, in enterprises indigenous and beneficial to the country, of capital, both English and Native. It will be for the latter to profit by the occasion. The Government cannot do more than open the door. It will then be for the investing public to walk in.

"And here I am tempted to indulge in a further reflection. An examination of the existing system leads me to doubt whether the banking institutions of India are at all adequate to the growing needs of the country. This is a conviction that is gaining ground outside of India, and that I believe already exists in India itself. You will find substantial testimony to it in the speech delivered by the Secretary of State in the House of Commons in the Budget Debate three weeks ago, and you will notice that his sentiments on the subject were re-echoed by his predecessor, Sir Henry Fowler. Here we are at the end of the nineteenth century, with 22,500 miles of railway opened in this country, with the telegraph wires connecting all our important cities and centres, with business operations being conducted every year on a larger and increasing scale. Moreover, we are looking forward, if we can settle our currency difficulties, to a considerable expansion of financial and industrial enterprise. And yet, in respect of banking, it seems to me that we are behind the times. We are like some old-fashioned sailing ship, divided by solid wooden bulkheads into separate and cumbrous compartments. This is a state of affairs which it appears to me can hardly continue. I can well believe that local interests will require to be consulted, and we must be careful to see that no injustice is done. But I cannot think that any sectional prepossessions should be allowed to stand in the way of a consolidation and concentration of banking facilities which strike me as being required in the interests of the business accommodation and credit of the country. Should we succeed in effecting any such amalgamation—should we get any such central bank, established on a sterling basis, giving us access to the London market—then I think we might with safety dispense with many of the existing restrictions, because we should have, on the hypothesis of a common currency with England, a permanent and stable link between the Indian and English markets. This is a question worthy of serious examination, and which I submit, with these few introductory remarks, to the consideration of the financial and mercantile public."

The motion was put and agreed to.

The Honourable Mr Dawkins moved that the Bill be passed.

The motion was put and agreed to.

No 5124-A, dated 10th November 1899

From H HESELTINE, Esq, Assistant Secretary  
to the Government of India, Finance and Commerce Department,  
Madras  
Bombay  
Bengal  
to the SECRETARY to the Government of  
North-Western Provinces and Oudh.  
the Punjab  
Burma.

I am directed to forward a copy of a letter (and enclosures) addressed to the Chambers of Commerce, regarding a proposal to relax the restrictions on the business of the Presidency Banks which are imposed by Sections 36 and 37 of the Presidency Banks Act, 1876, and to request that, with the permission of His Excellency the Governor in Council, the Government of India may be favoured with the views of the Government of \_\_\_\_\_ on the question at an early date.

Dated 13th November 1899

From G D KER, Esq, Secretary and Treasurer, Bank of Madras,  
to the SECRETARY to the Government of India, Finance and Commerce  
Department

1 My Directors lately submitted, through the Government of Madras, a proposal for the consideration of the Government of India, to amend the Presidency Banks Act, so as to enable the banks to deal in securities issued by the District Boards with the authority of Government, and they observe that, while unable to take this matter into consideration with the formal amendment of the Act then before the Legislative Council, Government received this and other proposals not unfavourably, and 'is prepared and has decided to examine the whole question exhaustively and in no narrow "spirit"

My Directors desire to express their satisfaction at this intention of Government, for they have felt for some time that certain restrictions imposed by the Presidency Banks Act have, to use the words of the Finance Minister, "survived the reasons for their imposition, and do unnecessarily hamper business and enterprise"

My Directors desire now to draw the attention of Government to those provisions of the Act which they think require amendment at the present day, however necessary they may have been at the time the Act was framed and passed

2 Before detailing these proposals, I am desired to point out what seems to my Directors to be a misapprehension on the part of Government in regard to the amount of the Government balance with this bank relatively to other deposits and to the cash balance

In his speech at the Legislative Council on 1st September the Honourable Mr Dawkins said —

"The Presidency Banks depend to quite an exceptional degree for their cash balances on the Government Account As Sir James Westland showed, in the busy season nearly 80 to 90 per cent of these balances are supplied from the Government Account"

His Excellency the Viceroy subsequently remarked —

"The Presidency Banks are not like ordinary banks They differ, because the bulk of their cash balances—or what I suppose I may call their loanable capital—is supplied by Government, and because, if we subtract this at any given moment, they are not, as a rule, in possession of sufficient independent capital to enable them to conduct operations on a large scale"

3 These remarks, however appropriate to the time prior to the establishment of Reserve Treasuries, are, my Directors submit, inapplicable to this bank at the present day, for during the years which have passed since the establishment of Reserve Treasuries, the resources of the bank have largely increased, and the Government Account now forms only about 10 per cent of the working capital This will be readily seen from the following figures from the statement of affairs of the bank for week ending 30th September last which may be taken as a fair average —

	Rs	a	p
Government Balance, Head office - - -	27,47,316	7	6
Ditto Branches - - -	13,13,316	12	5
TOTAL - - -	40,60,632	3	11
Deposits other than Government - - -	2,58,34,119	7	3
Capital paid up - - -	60,00,000	0	0
Reserve Fund - - -	24,00,000	0	0
TOTAL - - -	3,82,94,752	11	2

4 It will be observed that the proportion of Government Deposits to the total working capital is 10.60 per cent, and it would be still less if we subtract that portion of the Government Balances which consists of uncurrent coin, copper, and Foreign Circle notes, which are not legal tender These amounted to over Rs. 4,00,000 on 30th September last

5 My Directors therefore submit that the Bank of Madras is not dependent upon the Government Balances for its loanable capital in an undue degree

6 I am now to submit, for the favourable consideration of Government, the following remarks with reference to the Presidency Banks Act, 1876, as amended by Act V of 1879

7 Section 36, Clause (M M) authorises "the borrowing of money in India for the purposes of the banks' business and the giving of security for money so borrowed by pledging assets or otherwise"

My Directors submit that the limitation of this power to India is a restriction which, however necessary when the Act was framed, is no longer so, and that the time has arrived when the power may safely be extended to borrowing in the United Kingdom

It will be admitted that the strongest banks require at times to pledge securities in order to raise funds to meet unusual requirements, and we have seen in recent years that even the Bank of England has had to do so. A bank whose powers are so restricted as to give it no elasticity in respect to its funds is placed at a very great disadvantage, especially in times of stringency or extraordinary trade demands. The Presidency Banks are in this position. When the financial position is such that a Presidency Bank requires to raise money, no other institution in India is likely to be in a position to lend, and, as Government will give no undertaking to do so, the power to borrow in India is practically of no avail, although the banks always hold ample first-class securities which they can offer as security for loans. Trade is thus often starved and hampered with a very high rate of interest when money could easily be obtained in the London market usually at 3 or 4 per cent had the banks the necessary power to borrow there

In making this suggestion my Directors do not lose sight of the fact that the restriction to borrow in India was imposed in view of the risk in exchange, which, at that time, authority to borrow in London would have entailed, but circumstances have changed, and, moreover, it is now an easy matter to avoid any exchange risk by the simple expedient of fixing the rate both ways at the time the transaction is entered into

My Directors would express the hope that the Government of India will give this suggestion their most favourable consideration, believing, as they do, that it is most necessary, both in the interests of the banks and of trade, that the former should be brought into touch with the London money market

\*Section 36, Clauses (3) and (4)—My Directors are of opinion that these clauses of the Act should be amended so as to enable the banks to deal in—

- (a) the securities of State-aided Railways,
- (b) securities issued by District Boards with the authority of Government

In making this suggestion my Directors do so not only in the banks' interests, but in the interests of the Railways and District Boards concerned as well as of the investing public, as permission to the Presidency Banks to deal in these securities would give them a value in the market, which they would not otherwise possess. But I am to add, that it is unlikely that this bank would be able to deal largely in such securities, unless the bank is itself placed in a position to raise money on its assets, as indicated in paragraph 7

9 If power to borrow in the United Kingdom were sanctioned, the bank would find employment for some of its funds during the slack season by investing in such securities as those mentioned in paragraph 8.

A reference to the accompanying statement (A) will show the marked difference in the earning power of the bank for the first half of the year as

\* This proposal was discussed at some length in the subsequent correspondence. The question was settled by the passing of Act I. of 1907 (An Act to amend the Presidency Banks Act) and is no longer of interest. Subsequent passages relating to it are therefore omitted from this collection of papers. The omissions are indicated by rows of asterisks.

compared with the second half. Owing to the course of trade in India, the bank finds full employment for its funds for about six months of the year, while for the remaining six months it has, as a rule, a large unemployed cash balance. This is not satisfactory, and my Directors would like to be in a position to maintain a larger holding of authorised investments throughout the year, but the inability to raise loans on these securities in the busy season is an obstacle to their doing so. If the bank had power to borrow in London, it would have no difficulty in raising funds on these securities, whenever required, at easy rates, and there would be no need to apply to Government for loans.

10 *Section 37 (a)* prohibits the bank from making any loan or advance for a longer period than three months. My Directors think that this might safely be extended to six months, as many transactions in the ordinary course of trade cannot be completed within the shorter period, and the necessity which at present exists of allowing renewals entails double stamp duty, &c.

This has been recognised already in the case of Ceylon, for by *Section 37 (f)* this bank is authorised to discount bills having four months to run, if payable in Ceylon.

11 *Section 37 (f)* My Directors would suggest that the limit for overdrafts without security be raised from Rs 2,000 to Rs 5,000.

The existing low limit prevents the bank from giving temporary accommodation in this form to any constituent, however good.

12 My Directors would also like to see Ceylon Government securities added to the list of those in which this bank is authorised to deal. As bankers to the Ceylon Government in Colombo, my Directors think that the Bank of Madras should be in a position to deal in, and advance money against, their securities. To avoid any possible misapprehension as to the diversion of this bank's capital to a field outside the Madras Presidency, I am here to state that the Colombo branch of the bank not only works entirely on its own resources with funds raised in Ceylon, but, in addition, supplies a considerable amount of capital for the use of the bank in this Presidency.

Dated 2nd December 1899

From W D CRUICKSHANK, Esq, Secretary and Treasurer, Bank of Bengal,  
to the SECRETARY to the Government of India, Finance and Commerce  
Department

I have the honour to acknowledge receipt from the Assistant Secretary to the Government of India of a copy of a letter addressed by him to the leading Chambers of Commerce in India, dated 10th ultimo, calling for an expression of opinion on proposals recently made to relax the restrictions on the business of the Presidency Banks imposed by Sections 36 and 37 of the Presidency Banks Act, 1876, and asking the Chambers to consider the matter with special reference to the existing capital of the banks. The letter is accompanied by copies of speeches made by His Excellency the Governor General in Council and the Honourable Financial Member, and I am desired by my Directors to express the satisfaction they experienced on learning that, in the opinion of these high authorities, the restrictions placed by Government on the operations of the banks have, to some extent, survived the reasons for their imposition, and that it has been decided to consider, in no narrow spirit, the claims of the banks for greater freedom of action. They also note that the Secretary of State for India and His Excellency are disposed to adopt the opinion expressed in influential quarters in London that the time has come to revive proposals made on various occasions for the consolidation of the central banking reserves of India by the amalgamation of the Presidency Banks.

My Directors are not at present in a position to discuss this very important question, as the views of the Directors of the other Presidency Banks have not yet been ascertained, but I am to submit, for the information of His Excellency the Governor General in Council, copy of a minute on the subject, dated 1st March 1867, by a former Secretary of the Bank, Mr George Dickson, and to add that my Directors are prepared to give respectful consideration to any proposals the Government of India may be disposed to make for the concentration in the hands of one institution of the powers now possessed by the three Presidency Banks.

In the meantime it is thought desirable that I should offer some observations on those subordinate questions to which the special attention of the Chambers of Commerce has been drawn, viz (1) the relaxation of the restrictions which prevent the Presidency Banks investing in, or advancing against, securities issued by "Assisted Railways" and District Boards with the authority of Government, and (2) the enlargement of the capital of the Presidency Banks.

\* \* \* \* \*

At the same time my Directors are ready to admit that the ordinary resources of the Presidency Banks are liable to be overstrained at periods when great activity of trade is accompanied by exceptional reductions of Government deposits, or when the import of capital is postponed by the prospect of a fall in sterling exchange, and for a long time past they have been anxious to obtain access to some reliable fund or funds to which resort might be had in times of pressure. They are pleased to see that the Government of India are of opinion that it is time that the central banking reserves were expanded, but they regret that the reference to the Chambers of Commerce directs attention only to the permanent capital of the banks, without making any mention of other resources that might be employed not only in strengthening the central banking reserves but in making them more elastic and readily adjustable to the wants of the country.

The resources of the Presidency Banks may be classified as follows—

- 1st—*Shareholders' capital* consisting of paid up capital and reserve funds
- 2nd—*Government Deposits*,
- 3rd.—*Other Deposits*,
- 4th—*Readily expandable resources*, which since 1861 have been confined to the borrowing powers of the banks

The annexed Abstract Statement of the working of the Bank of Bengal from 1856 will show that for many years past there has been a steady increase in capital, and a considerable, although varying, increase in other deposits, but that the Government deposits, instead of increasing with the improvement in the finances of the country, and the additions to the Government Account work devolving upon the bank, have been greatly curtailed since 1891. I have also to point out that the elastic resources of the bank have been rendered of little value owing to restrictions imposed by the State.

With regard to the relative proportions between the Government deposits and the bank's cash balance, to which reference is made in the speeches of His Excellency and the Financial Member above referred to, I am directed to invite attention to the percentages given in the above statement, from which it will be observed that the average proportion between these deposits and cash balances has decreased considerably of late years. The same return shows further that the proportion of the Government deposits to the Bank's other resources has also decreased in a very marked degree. According to the Weekly Statement published on 23rd November 1899 this proportion had then fallen to 11 3 per cent.

While anxious to see the resources of the Presidency Banks increased during periods of active trade, and especially at times of pressure, my Directors consider it doubtful whether any great increase in the permanent banking capital would not, under existing conditions and restrictions, be productive of greater evil than good. A few years ago the bank funds in India were, for a prolonged period, in excess of requirements, and as a plethora of banking capital is apt to encourage the holding back in first hands of produce, including food-grains and the great staple exports, for a rise in prices, and to cause unhealthy speculations in securities, it would appear prudent to ascertain how far the measures lately taken to steady sterling exchange are likely to bring fresh capital to the country before making any considerable addition to the permanent banking funds. In the opinion of my Directors all that the money markets of India want at present is a provision for expanding resources at times of pressure that will tend to adjust the supply of loanable money to the demand both during the busy and slack seasons. This is a pressing want and until it is satisfied the money markets of India will be liable to oscillate between periods of stringency and periods of plethora, and trade will be hampered by corresponding fluctuations in the rates of interest.

In all important commercial countries, with the exception of England, all extraordinary demands for money for local purposes (*i e*, for internal requirements as distinguished from a foreign drain) are met by the issue of additional fiduciary notes by the Central Bank or banks, and in England, it is the practice of the executive Government, at time of extreme pressure, to sanction such issues even though it becomes necessary to suspend the operations of the statute law. In Germany these issues are kept within safe limits, by imposing upon the Central Bank a 5 per cent interest charge for the assistance thus received, and in 1891 Mr Goschen proposed that similar issues should be legalised in England—a moderate charge to be made for a moderate amount, and a heavy charge for excess issues.

As an illustration of the way in which arrangements similar to those existing in Germany would work in this country, I am instructed to append to this letter an extract from the half-yearly Report of the bank, dated July 1860, from which it will be observed that the measures adopted by the German Parliament to mitigate the severity of monetary pressure, were anticipated by the Bank of Bengal, with the sanction of the Government of India, during the first half of that year. It will be seen that the charge

made for the excess issues of notes sanctioned in 1860 was the same as that adopted by the German Parliament in 1891, and that the action taken by the bank was entirely successful.

In India some facile method of expanding banking resources is all the more necessary, because, owing to the difference between the extent of business transacted during the dry and rainy seasons, and to the large temporary absorption of coin in the produce districts when the important crops are being brought to market, the variation in the demands on the central banking reserves is greater in India than in any other important commercial country.

Prior to 1st March 1862, the Presidency towns of India possessed a bank paper currency capable of being expanded when an increase in the demand for money arose. The Bank of Bengal had the power of issuing currency notes to the extent of two crores, subject only to the proviso that it should keep coin in its vaults to the amount of one-fourth of all claims outstanding payable on demand, and the Banks of Bombay and Madras could also expand the circulation in accordance with the wants of the moment on the same easy terms. But since the paper circulation was taken over by the Government of India on the above-mentioned date, the only means by which the Presidency Banks have been able to enlarge their resources at times of pressure has been by borrowing, and as they hold the central banking reserves in India, and are forbidden to borrow outside India, their powers of borrowing are very limited. The transfer of the Government balances and the management of the Public Debt Office to the banks in lieu of their note issues may have been considered an equivalent as far as the banks were concerned, but this change in the arrangements deprived the Indian markets of the privilege of a monetary circulation capable of facile expansion which all countries except England enjoy, and which, while little missed in a country like England, where the use of money is so largely superseded by bank cheques and transfers, is of supreme importance to a country such as India where, as already explained, the variations in the demands for money are sudden and excessive. When the Reserve Treasuries were formed in 1876, it was hoped that they would furnish a fund on which the Presidency Banks might rely in times of stress, on the conditions laid down in the Comptroller General's letter to the Bank, No 1361, dated 25th September 1878, a copy of which is appended, and the expansion of the central banking reserves at times of pressure from these funds and from the general treasury balances has been urged of late by witnesses before the Indian Currency Committee, and more recently by the Chairman of the Chartered Bank of India, and by the Indian Chambers of Commerce. This resource, however, while considered sufficient under ordinary circumstances, is liable to fail when advances are most wanted; viz, at times of famine, as, for instance, at the present time, and I am instructed to respectfully suggest that a more reliable resort for money at times of pressure is available in the coin reserve of the Paper Currency Department.

The suggestion which my Directors would make is that, when the bank rate rises to a height that indicates undue pressure, the Presidency Banks may be able to rely on procuring loans through the Comptroller General either from the Reserve Treasury, or, failing this, from the Paper Currency Reserve, at the current rates for demand loans on Government Paper, rising and falling therewith.

In submitting this suggestion my Directors desire me to state that it is made with the sole object of ensuring a steady supply of loanable capital at moderate rates. These loans would yield profit to Government, and benefit all who are interested in a steady money market, while the bank would undertake, without profit to itself, the risk and labour involved. My Directors would also submit that the Paper Currency Reserve is the most suitable fund to devote to this purpose, not only because it is large and steady, and, as experience has shown, would have been found ample from first to last to have relieved each monetary pressure from which India has suffered, but because it is to the Paper Currency that other nations look for assistance at times of monetary strain, and if effect is given to the proposal now made, the elasticity of the central banking resources, of which the Indian money

markets were deprived by the transfer of the Paper Currency to Government, will be restored

I am also directed to represent to His Excellency in Council that the power of the Presidency Banks to expand resources when required has been greatly crippled by Section 36, clause *m m*, of the Presidency Banks Act of 1876, which forbids them to borrow outside of India. The inconvenience of this restriction became early apparent, and, in September 1877, the three Presidency Banks joined in a memorial to Government praying that they might be empowered—

1st—To borrow either in England or India,

2nd—To make remittances to England in payment of the price of stock or other authorised investments, and also in repayment of loans arranged for there

A copy of the above memorial is submitted with this letter, and I am instructed to point out that the adoption of the gold standard has removed the only important reason for depriving the Presidency Banks of access to the great store of banking capital available in London. I am directed to press respectfully for reconsideration of the decision of the Government to prohibit borrowing in London, and to ask for power to enter upon all sterling operations incidental to borrowing in that market.

In making this request, my Directors would desire me to mention that in the speech of His Excellency the Governor General, to which the attention of the Chambers of Commerce is directed, it is suggested, as one of the reasons for its institution, that the Central Bank would have access to the London market. They are therefore encouraged to entertain the hope that the application of the Presidency Banks for permission to borrow in London will now be favourably received, as access to the London market is quite as essential, if not more so, for the Presidency Banks as for a large Central Bank.

If these three stores of money, viz., the Reserve Treasury Balances, the Paper Currency Reserve, and the London money market, are made available, it is unlikely that banking resources in India will be found deficient. Loans from the Reserve Treasury Balances have occasionally been withheld, my Directors understand, from the Presidency Banks on the ground that the money might be employed in enabling Exchange Banks to postpone purchases of council bills and lower rates, but rules could easily be framed that would guard against any such use of Government money, and if this is considered to be a good reason for withholding temporary accommodation from the Presidency Banks, there might be still greater objection, on the same grounds, to a permanent addition to their capital, such as that referred to in the letter to the Chambers of Commerce.

The paid up capital of the Bank of Bengal is rupees two crores and its Reserve Fund now amounts to rupees ninety-five lakhs—substantial additions having been made to it in recent years. Under Sections 10 and 13 of the Presidency Banks Act, 1876, the proprietors and shareholders have power, with the previous sanction of the Governor General in Council, to increase the capital by special resolution to the extent of one crore of rupees, and if the restrictions as to the class of business open to the Presidency Banks are relaxed and their powers of borrowing are enlarged, the Directors of the Bank of Bengal will watch carefully the effect of these changes on the supply and demand of loanable money, and be ready to submit to the shareholders proposals for obtaining the sanction of Government to enhancing the bank's capital whenever it may appear advisable. They are sanguine that it will be practicable to raise any such additional capital as may be considered necessary by the issue of shares at a considerable premium.

I am to add that, if in the future the Directors find that even this enhanced capital should prove to be insufficient, they will be prepared to approach Government with the object of obtaining larger powers to still further increase it.

In addition to this if it should be considered by the Government of India to be essential that the bank's capital should be placed on a sterling basis, my Directors will ask the shareholders for authority to make application to Government for the necessary powers. If, however, the measures taken

to fix sterling exchange prove effective, it will naturally follow that all Government currency in India will have a sterling basis

Enclosure No (1)

THE PROPOSED AMALGAMATION OF THE PRESIDENCY BANKS

Mr Dickson's report dated March 1, 1867, to the Directors of the Bank of Bengal regarding the amalgamation of the Presidency Banks, and which forms the basis of the negotiations pending between the Directors of the Banks of Bengal and Bombay —

Relative to letter of 27th ultimo from the Honourable David Cowie, with enclosure from Mr Rustomjee Jamsetjee Jejeebhoy, urging the establishment of a branch of this Bank in Bombay, I have now the honour, in conformity with your directions, to embody in this form the memorandum which I submitted as part of your yesterday's proceedings.

The extension of the Bank's operations to the Bombay Presidency, which is now urged for adoption, in consequence of the untoward position of the Bank of Bombay, must be viewed in two aspects —

1st—In the aspect of opening a branch in Bombay, and confining operations to the city alone, together with the probable effect of such action by the Bank of Bengal on the position of the Bank of Bombay and the interests of its shareholders

2nd—In the broader aspect of fusing the three Presidency Banks and creating one great bank for India, with active control in Calcutta, in the sense of its being the seat of the Supreme Government

Assuming, by reason of the embarrassed position of the Bank of Bombay, that it is not equal to meet the monetary requirements of that Presidency, and that you should resolve to occupy the field in consequence, the first question to be solved is whether, under the existing Charter, it is competent to do so

By the 36th section it is declared that it shall be lawful for the Directors, with the sanction of the Governor General in Council, from time to time to form business agencies and to establish Branch Banks "at such places as they may deem advantageous to the interests of the banks" [N B—Confirmed by Mr. Advocate General Cowie when case submitted regarding Bank of Bombay opening at Jubbulpore and Nagpore] It moreover provides for the conduct and transaction by such branches of the business of the local Government Treasuries, as well as for the management of the paper currency at present in abeyance

By Section 6 power is given to call up capital to the extent of three crores in all, or 80 lakhs in addition to the amount already paid.

Thus then it is apparent that the occupancy of Bombay is not only competent, but that, under the existing Chapter, you can provide the necessary capital.

I am, however, clearly of opinion that such action on the part of this bank would infallibly end in the total collapse of the Bank of Bombay Its connection with Government is limited to one year, and as public confidence is undeniably gone, I fear that there exists no probable hope of extrication from their present embarrassments, but almost the certainty of a tedious and costly wind up, should these relations be terminated on the expiry of the year. Meanwhile their ordinary business would be filtered away to the Bank's Agency or other Banking Institutions in Bombay. To the shareholders such a result would inevitably be disastrous. I say so with all the more confidence and freedom, because it is too well known that the value of their remaining capital depends, to a large extent, on the realisation of the assets of insolvent estates, while the liability for impending calls on the shares of joint-stock companies, held in the Bank's name or in the names of its accredited officers, is not yet, I believe, clearly defined, nor ascertained with exactitude

With such complications before you, I submit that it is more expedient to consider the question in its broader and more extended aspect, with the view of conciliating and conserving, not only existing interests, but of establishing one great Central Bank for all India by abolishing the distinctive names of the several banks, and so merging them all into one under a new Charter and a new name. Before, however, discussing this alternative measure, and seeing that immediate action has become necessary, I submit for consideration that the Bank of Bombay should be approached with a proposal to the effect that, pending the maturing of legislation in connection with a new Charter, a provisional agreement be entered into between the two banks, by which certain privileges should be conceded to the shareholders of the Bank of Bombay, immediately and prospectively, on the same footing as those to be enjoyed by the shareholders of the Banks of Bengal and Madras.

Should the proposal be entertained, and the field left open, in an amicable spirit, I submit that the Bank of Bengal should immediately call up the remaining portion of its capital and allot the whole, rateably, among its own shareholders at a premium of 25 per cent, *ie*, rating each share of Rs 1,000 at Rs 1,250, or the full share of Rs 4,000 at Rs 5,000, thus, according to the present market rate, giving a bonus or surplus on the single share of Rs 500 and Rs 2,000 on the full share. Thus effected, a whole crore is placed at your disposal for taking up the business of the Bank of Bombay in that city at least. Meanwhile the remnant branches [N B—Nine branches withdrawn], eleven in number, could be dealt with according to circumstances by being carried on, along with the addition of the Treasury business (never yet conceded to them by Government) should the disclosure of the position, progress, and future prospect of each warrant their prolonged existence.

The present premises in Bombay, at Kurrachee, and the other branches might be taken over, either on the valuation of parties mutually chosen or on lease. Sufficient accommodation would be reserved for affording every facility for the realisation of the outstanding assets by the Bank of Bombay.

On such realisation being effected, or at fixed and progressive dates, I would propose under the agreement to allot to the shareholders of the Bank of Bombay for the time being a crore [nearly their existing capital, which is given at 104 lakhs] of capital at the same rate as that charged to the proprietors of this bank on the call of 80 lakhs, *viz*, 25 per cent premium. That is to say, for 125 lakhs, they will receive at present prices 175 lakhs of marketable stock. Nor is it too much, I apprehend, to assume that the proposal now made, if carried out in its integrity, with the sanction of Government, will greatly enhance existing prices. I think a limit of Rs 2,000 for each single share may reasonably be calculated on. Thus then the two banks, when so united, would have a paid-up capital of four crores and a reserve fund of nearly sixty-five lakhs, a sum, in my judgment, by no means excessive, nor larger than what the bank so constituted ought to hold in relation to its paid-up capital, so as to provide for possible and unforeseen contingencies.

There remains, then, only the Bank of Madras to be dealt with. It is not necessary that any great pressure should be brought to bear upon them towards forming a junction with the United Bank. They might, however, have it in their option to do so on conditions of all but equality with the Bank of Bengal, seeing that the market value of their stock stands relatively to our own as 150 to 175. Provision has been made under their new Charter to extend their capital from 56 lakhs to one crore. Thus being so, and in contemplation of their business being extended to Ceylon, it is probable that the full amount permissible will ere long be called up. Assuming such to be the case, and bearing in mind that the capital of the United Bank otherwise is four crores, with a reserve of, say, 65 lakhs, the fair and rateable proportion which Madras ought to contribute to the Reserve Fund, along with transfer of guaranteed assets, may fairly be taken at 15 lakhs, thus bringing up the total capital to five crores, and the Reserve Fund to 80 lakhs. A moment's reflection will show that this proposal is both equitable and reasonable. If the additional capital of 44 lakhs is called up

and divided among shareholders of the Bank of Madras on the same terms as those on which the bank proposes to allot the 80 lakhs to our own proprietors, then they realise 11 lakhs, which, added to their existing reserve of, say, five lakhs, gives them 16 lakhs, or one lakh more than the rateable amount proposed to be contributed to the common Reserve Fund

Into details of management or minor conditions on which the business of the then United Bank should be carried on, it is not necessary to enter at present. One or two points may, however, be shortly noticed.

The nominal capital under the new Charter should be 10 crores, one-half being paid up.

Local Boards would be continued as at the present in Bombay and Madras, but the supreme control and the rules and regulations for the conduct of the business must rest in, and be laid down by, the Board in Calcutta, *i.e.*, that the same rules and conditions under which business is carried on here must be strictly adhered to and be conformed to by Bombay and Madras, and that power to enforce their due observance be specially reserved.

As already observed, Madras may possibly raise objections. I think it would be for the interest of the shareholders of that institution to fall in with the proposal. If, however, they should be of a different opinion, their refusal will in no way affect the carrying out of the proposal as regards Bengal and Bombay. In time Madras must follow.

There are only two points then in the proposed fusion of the banks on which for a moment I dwell, and to which I deem it necessary to call your special attention.

In dealing with the Bank of Bombay, I stipulate, as the radical and indispensable condition of union or absorption, that this bank takes over from them nothing but cash, towards payment of its quota of capital, at such periods as they themselves may elect. Their deposits and legitimate business will follow as a matter of course.

In carrying through negotiations with the Bank of Madras, on the other hand, I not only propose to take over capital, but also their entire existing business, exclusive of past due or irregular advances on simple guarantee of the bank itself.

Should Bombay decline these overtures, which I scarcely think they will do, then of course it remains with Government and yourselves to consider whether it is desirable or politic that the present chronic state of distrust and embarrassment should any longer be tolerated on the other side.

If Government and the Directors should in the last resort resolve to comply with the wishes of a friendly section of the Bombay community, I will be prepared to carry out your instructions, and on very short notice organise a competent staff to commence operations by opening a branch in Bombay.

Having thus dealt with the more practical portion of the question in both its aspects as set forth in the early portion of this minute, I deem it necessary in continuation to advert as shortly as possible to its consideration in a public point of view, and why it humbly appears to me that, in the interests of Government, the bank and the public, it is desirable to have one strong bank for India. First of all, however, it may be well to state that we have at home a class of political economists who hold the theory that, in currency and banking legislation, it is sounder policy so to frame the laws as to encourage the distribution of the banking reserves of a country among several banks, instead of holding them in a single bank. It is not improbable that some people, reasoning by analogy and holding in principle similar views, may propound them in India, while others, who care little about the principle, will, from interested and factious considerations, join again, as they have done before, in decrying the bank.

The question of rival establishments first assumed a practical shape in 1865, when a Commission was appointed by the French Government to inquire into the constitution of the Bank of France, and to report whether there should be another and great rival Bank of Issue to that institution.

The Bank of France, in a stricter sense than the Bank of England, has a monopoly of banking throughout the Empire, and of the paper circulation, which is unrestrained by legislative enactment, and which moreover the bank itself issues and is bound to protect

The Bank of England in like manner issues its own notes and protects their convertibility, but the law defines the proportion of securities and bullion which must be held against the paper circulation and separate the issue from the Banking Department. But the Bank of England in respect of the legal fetters imposed, and that it pays to Government a large proportion of the profits arising from the paper currency, may in a sense be looked on rather as the agents of Government for doing the retail work connected with the Paper Currency, than the pure issuer of its own notes. Both banks have not few exclusive privileges, some of those of the Bank of England are of an enduring nature, while as bankers to Government their agreement extends to 25 years certain. Both banks are the two great reservoirs in which the banking reserves of both nations are held.

The Commission of the French Government, after taking evidence from the ablest financiers and some of the more notable political economists in France and England, have reported against the proposed creation of another rival bank in that country, and I venture, it may be with great presumption, to doubt if the monied classes, including the representatives of the London and Provincial Banks, will, in 1867, gainsay the evidence which they gave in 1848 and 1865 in favour of the constitution of the Bank of England so far at least as the Banking Department is concerned.

The only countries, so far as I know, where there is a semblance of proof to support the theory are America and Canada. As regards the former, I have to remark that prior to 1861 banking and currency were entirely free, resulting, as we all know, in great public injury, bad faith, and bankrupt corporations. In 1861 Mr Chase, the then Secretary of State, succeeded in raising forty-four millions out of the one hundred and nine millions requisite for the financial wants of that year. Of the amount so raised, thirty-three millions, or 75 per cent, was taken by the Bank of the Federal States, but they were too poor to continue the process, because both their capital and deposits were perfectly inadequate to the demands of Government. The English market was tried without success, and American capitalists could afford no further assistance. In this dilemma the expedient was fallen upon of practically confiscating the note circulation of the whole of the banks, the legal tender, Greenbacks, were forced upon the country, and thus a new loan of a large amount was raised. Of the extraordinary depreciation in the value of the paper and the enhancement of gold measured in Greenbacks which followed I need not remind you, but it yet remains to be seen whether the compulsory measure resorted to in time of war, and which requires the fifty-nine banks to hold their reserves in notes, not convertible into gold but receivable for taxes, is likely to prove successful or beneficial to the country. The last return quoted by the *Economist* of 25th August last shows that only—

£  
1,700,818 in gold with  
16,168,102 legal tender notes of the State

or a total of £17,868,920 was held against upwards of forty millions of deposits and something over five millions of the note circulation of the banks, the residue of former issues.

Eschewing the doubtful policy adopted by America, the Government of Canada, although it abolished the privilege of issue enjoyed by the several banks and took the paper issues into his own hands, yet deemed it fair to afford liberal compensation to the several banks and entrusted the management of the Paper Currency to the largest bank in the provinces, viz, the Bank of Montreal, at an annual charge not exceeding one per cent on the average amount actually in circulation. [N B —Bank of Bengal commission only  $\frac{1}{4}$  per cent.]

Unlike the Governments of England, France, and Canada, but in some degree pursuing a policy akin to that of America, the Government of India,

has taken the right of issue as well as the management of the Paper Currency of India to itself

Assuming then that the theory under review is in itself sound and can be successfully carried into practice by the Government of India, I observe that the separation of currency from banking cannot be more complete in any country

All exclusive privileges have been taken from the Presidency Banks which are simply bankers to Government in the same way as they are bankers to the merchants and local banking institutions in the several Presidencies. There is, however, this important distinction, that under a terminable agreement and certain penalties Government covenants to keep a minimum floating balance at their credit with the several banks

Otherwise, and for services performed, the relations of Government with the banks are intimate, and, I add, are, or ought to be, valuable to both

In Calcutta—and I assume throughout the chief cities in India—the Presidency Banks are the holders of almost the entire reserves of those who keep a banker

Banking in India is entirely free, and has had of late years, as we all know, a very remarkable development. If, however, we go back a little and trace its rise, progress, and fall, it will be found that, without almost an exception, every European Bank started in this country soon lost its distinctive character of a bank proper and either become insolvent or found itself established in London as a Bank of Exchange. These banks have ramified connections with the seaports of India, the Straits, China, Australia, Japan, California, and elsewhere. Most of them have the privileges of a note circulation beyond the confines of India, and everywhere they more or less cultivate a local banking business

As a convenience, and on the obvious ground of economy, the Indian branches, however, choose to keep their cash reserves with the Presidency Banks, and in times of difficulty—I put the matter broadly—they calculate on receiving assistance from their bankers

Taking then matters as we now find them, the question is raised, “Are there in India the materials for enforcing, by legislation, uniformity in the rule under which each bank must keep its own reserves in Government notes, and is it desirable or expedient to encourage such legislation?”

To obtain uniformity, the law must over-ride the existing charters of those banks and compel the weekly publication of assets and liabilities, so that the proportion of silver or Government legal tender notes may be assimilated to the amount of advances outstanding. Even if the above difficulty can be got over, I apprehend that the opposition of the banks would be very formidable. They would be obliged under such a law to throw on the market that large portion of their reserves which they hold at present in the interest-bearing securities of Government and convert them into legal tender notes which do not bear interest. Neither Government nor the banks could possibly gain by such a measure. I question indeed if in reality it would not prove futile so long as the Banks can without let or hindrance, create on comparatively small capitals a very large superstructure of credit by valuing on each other according to their necessities either on demand or at long currencies

Is it then expedient to hold out sufficient inducements to new institutions to establish themselves in this country, keep their own reserves, and confine their operations exclusively to India in the same way that the Presidency Banks, the Banks of England and France, and in America, restrict their operations

I think not. All past experience, while banking *has been entirely free*, goes against the theory. Government might indeed sever the existing connection, create a rival establishment, and give to it the restricted use of their balances, but that would simply be a change of bankers and probably result in the serious weakening of one bank only to magnify another or rival establishment.

Purely local banks, with branches throughout the Presidencies, to be really useful and advantageous to the country, must be established and

conducted on sound principles. To such banks the prestige of Government is of the last importance.

You cannot, I submit, institute a fair analogy between England or France or America and India, nor, with safety or advantage, force upon India theoretical legislation in banking or currency.

The usages, customs, and habits of the people of this country, who are a nation of traffickers in money as well as in the inland exchanges, are opposed to the rapid growth of purely western customs and institutions. They must ever retain in their own hands, against all competitors, by far the largest portion of the purely banking operations in India, and legislation cannot possibly reach them. They have sufficient influence either by active combination or passive inaction, to defeat any movement of the kind, unless indeed they find that it observes their own interests.

The question appears, then, to be narrowed to this issue—Is it preferable with a view to the unholding of separate reserves, to continue the three banks in the respective Presidencies, or to fuse them into one?

The unfortunate position of the Bank of Bombay, apart from all other considerations, renders it, in my opinion, not only preferable, but necessary. The element of uncertainty regarding such a large portion of its assets, the impending liability for heavy calls, the impaired credit and crippled resources of the bank, and, beyond all, its inability to cope with recurring monetary crises, must, from time to time, bring its position prominently before the public and tend to unpleasant discussions with Government. The reserve of the bank, with numerous branches and a capital reduced by nearly one-half, cannot possibly be maintained at the same high range as that under the amalgamated bank, which provides so much additional capital specially for Bombay requirements. Nor can Government have perfect freedom in dealing with their balances at Bombay so long as public confidence is wanting in the stability of that bank as now constituted. The uniformity in administration which must follow on the fusion of the banks will certainly tend, more than divided action, to maintain public credit and to restore broken confidence by attracting deposits and thereby enlarging the reserves of the bank.

A multiplicity of banks beyond the Presidency towns, purely local in their character and in their business, who would be compelled by law to hold a certain amount of reserve proportioned to their advances, is, I repeat, in my opinion not attainable or possible here.

It is a delicate point to insist on, but I add that I do not believe that the Paper Currency can ever have a fair trial in India until the management of it is restored to the banks. Government began at the wrong end by prematurely appropriating to itself the supposed large profits of an *imperfect circulation*. Accepting it as an accomplished fact, I nevertheless, with much deference, adhere to my frequently recorded opinion that our currency legislation has been wrongly directed, and that it is only through the agency of the banks that a note circulation can ever have a thorough development throughout India.

Banking monopoly is not possible. No Government, so far as the mere banking connection is concerned, stands more loosely towards a State Bank than does the Government of India towards the Presidency Banks of India. If Government or the public are aggrieved, if terms more favourable can be obtained by Government at the termination of the short existing agreement, the connection may be at once ended as a matter of course.

To obtain and preserve that connection, the amalgamated bank must necessarily make sacrifices, which, under other circumstances, would be unnecessary. That the connection is now advantageous to Government, the bank, and the public is admitted, and that it will be much greater under a united bank is set forth herein.

Banks who have to consult only their own safety and profits, cannot afford to extend help to others in times of difficulty.

To recapitulate then with such a large capital actually provided and liable to further calls in case of need with an adequate reserve fund in the event of unforeseen losses arising either from the ordinary business or from

political disturbances, I submit that the proposed united bank would be equal at all times and under all circumstances, not only to meet the legitimate requirements of commerce, but by unity of action, and under the eye of the Supreme Government, to control those recurring monetary crises, which although hitherto more felt in the Bombay Presidency, yet very closely and intimately affect the interest and position of all

Government would have an absolute guarantee for the unvarying management of their treasuries under one controlling power, a certainty of greater economy in the use and distribution of their balances throughout India, uniform management of the Public Debt under the same safeguard, but with enlarged security and a powerful agent in aiding them in all their financial measures, not only at the seat of Government, but combined action throughout the whole country, nor do I despair of (what I venture to term) sounder views than those which at present prevail being ere long adopted by Government, and of the management of the Paper Currency being restored to the bank on terms somewhat similar to those which it formerly enjoyed or resembling in a modified degree the privileges of the Banks of England and Montreal

In too many banks, purely European, the wealthy natives and merchants have of late manifested unmistakeable distrust, and it is submitted, with confidence, that in legislating for India, respect must be paid to their usages, habits, and prejudices. They have never distrusted the Bank of Bengal. Its extension on a perfectly sound and wider basis, combined with a prolongation of the existing happy combination of official and mercantile experience in the Board of Directors, will, it is submitted, tend materially to the progress of India

ROYAL COMMISSION ON INDIAN FINANCE

Bank of Bengal, Calcutta,  
30th November 1899

E J BIRCH,  
Chief Accountant.  
Rate for Demand Loans 6 per cent  
Percentage 41.1

By order of the Directors,  
W D. CRUICKSHANK,  
Secretary and Treasurer.

## Enclosure No 6

Extract from the Report, dated 5th July 1860, by the Directors of the Bank of Bengal, for the half-year ending 30th June 1860,

\* \* \* \* \*

The Directors have the pleasure of laying before the Shareholders the result of the bank's operations for the half-year ending 30th June 1860

During this period the value of money has undergone marked fluctuations. Early in January the demand for accommodation showed a decided tendency to increase, so that the bank's circulation throughout the entire month did not fall much short of the limit allowed under the Charter. This fullness of circulation rendered it necessary at two successive periods to raise the rates of discount and interest from 6 and 7 per cent. to 8 and 9 per cent.

Consequent on the closing of the Government 5½ per cent Loan on the 13th February following, the demands on the bank became excessive, and the rates were further increased one per cent. all round. The pressure at this date was greatly aggravated by the sudden abstraction and the locking up of nearly 38 lakhs of capital in connection with one of the Government salt sales which took place on the 29th February. To meet this extraordinary demand on the resources of the bank, and with the view of affording the utmost facilities to the public, without adding further to the discount and interest rates, the Directors deemed it expedient to make an arrangement with Government, under which the right of issue was extended by seventy-five additional lakhs, on the bank agreeing to pay Government at the rate of 5 per cent. per annum on the excess of their authorised circulation. So great was the demand for accommodation at this period, that not less than 2 per cent. per mensem was paid in the bazar for short-dated loans. Towards the end of March the business of the Bank reverted to its ordinary channels, and successive falls in the rates of interest took place during the following month. Indeed so rapid was the reaction, that in April, May and June the amount of cash steadily increased from a minimum of Rs 1,11,13,561, to upwards of Rs 2,36,00,000. This repletion of coin in the coffers of the bank has been accompanied by an unusual dulness and stagnation in all the staple articles of trade. Money in consequence continues very abundant, and great difficulty is experienced in finding employment for it even at the bazar rates of 3¼ to 4 per cent. The Directors, however, hopefully look forward to an early mitigation of the unfavourable features which have characterised the position of mercantile affairs during the past three months.

## Enclosure No 7

No, 1561, dated 25th September 1878

From J. WESTLAND, Esq, Offg Comptroller-General to the SECRETARY and TREASURER, Bank of Bengal

I have the honour to communicate to you, for the information of your Directors, copy of the orders of Government, No 2430, dated 22nd August 1878, directing the reduction of the balance on the Bank of Bengal by transfer to the Reserve Treasury of any excess over about a crore of rupees. With reference to the last paragraph of the Government letter, I have received instructions that advances from the Reserve Treasury are at present intended to be made only to or through the Presidency Banks, from which no security for them will be taken.

2 With reference to the loan for which tenders were invited upon 12th August last, I have received the following telegram from the Government of India, which so far modifies the orders now communicated —

“The Government of India will not withdraw loan proceeds from the Bank of Bengal this time”

No 2430, dated 22nd August 1878

From R. B CHAPMAN, Esq, Secretary to the Government of India, Finance and Commerce Department, to the COMPTROLLER-GENERAL

By my letter No 3566, dated 2nd September 1875, the Government of India communicated to the Bank of Bengal a memorandum dated the 13th

September 1875, of the conditions upon which the Governor General in Council was prepared to make an agreement with the bank for the transactions of the public business. The same document was simultaneously communicated to the Banks of Madras and Bombay

Among the conditions contained in that memorandum was the following —  
 “it is to be understood that the Government will ordinarily not leave with the head-quarters of the banks, otherwise than temporarily, more than the following sums —

	Rs
Bank of Bengal - - -	1,00,00,000
Bank of Madras - - -	30,00,000
Bank of Bombay - - -	50,00,000

but this condition will not be inserted in the contracts, which will impose no obligation upon the Government to leave any balance whatever with the banks”

“It will be observed that the Government will not undertake to give to the banks the exclusive custody of all the public balances where the Government banks with the banks”

The Presidency Banks Act came into force on the 1st May 1876, and agreements were shortly afterwards concluded in accordance with that memorandum

The conditions thus recited were connected with the following instructions contained in a despatch from the Secretary of State, No 225, dated 6th May 1875, paragraph 15 “Your proposal that a minimum balance should be fixed, all deductions from which should carry interest against you, appears to me to be reasonable. Without such a protection, express or implied, it would be difficult for the banks to transact business with so large a customer. You would naturally take care to fix a minimum which should not impose any burden upon the State, beyond what is necessary for their fair remuneration. Any such arrangement should be supplemented by a corresponding provision that if the balances which you think fit to leave with the banks exceed a fixed maximum and the banks should desire to retain them, they should bear interest in your favour”

For some weeks past the public balances at the Bank of Bengal in Calcutta have largely exceeded one crore of rupees, at one time they reached the large sum of Rs 2,68,76,683. The public balances at the Bank of Madras at Madras, have also considerably exceeded the ordinary maximum of 30 lakhs of rupees. The abnormal excess in Calcutta is due to the loan of 2½ crores of rupees (exactly Rs 2,46,07,056) which was taken up on the 24th June, and it is understood that Mr Waterfield hesitated to transfer any part of the proceeds of the loan to the Reserve Treasury, because money has not hitherto been thus transferred directly from the bank to the reserve

The Governor General in Council is, however, unwilling that the condition which has been quoted from the memorandum of the 13th September 1875, should be allowed to become a dead letter, and I am accordingly to request that in future it may be borne in mind, and that the balances at the Head office of each of the three banks may not be allowed, for more than a short time, to exceed the maximum amount fixed in the memorandum. You should have no difficulty in arranging thus, especially in Calcutta where the Reserve Treasury is at hand, and, unless you have reason to think that the present balance in the Bank of Bengal there will speedily subside, a portion of it should be at once transferred to the Reserve Treasury

It will be convenient that it should be understood that in future, when a loan is raised, no more of the amount subscribed should remain with the banks than will raise the public balances, at most, to the maximum

In carrying out these instructions, however, you will be at liberty, to the extent to which you can conveniently do so, to accommodate the banks with temporary advances from the Reserve Treasury, provided they are willing to pay interest on such advances at current rates

## ENCLOSURE No 8

To His Excellency the Viceroy and Governor General of India in Council  
The Memorial of the Presidency Banks of  
Bengal, Madras and Bombay

SHEWETH—

1 That your memorialists, the Presidency Banks, have recently had to consider what, if any, powers of borrowing money are vested in them by the Presidency Banks Act (XI of 1876) having reference to the provisions of Sections 36 and 37 of such Act

2 That your memorialists, the Bank of Bengal, have recently taken the opinion of learned Counsel on the following points —

1st — Whether the bank is in any way prohibited by the Bank Act from raising money by borrowing in England at the Bank of England or elsewhere, on the security of the deposit of Indian Government Securities belonging to the bank

2nd — Whether in case money is raised as in the last question suggested, the Bank of Bengal is prohibited by the Bank Act from remitting by bills or otherwise the amount of such loans at due date thereof

3rd — As to the legality or otherwise of the bank's raising money at all, and borrowing either on deposit of securities or otherwise

4th — As to the validity of the bank's lien on property pledged to it by either of the other Presidency Banks

And the following is a copy of Counsels' opinion on the points submitted to them —

## OPINION

Under Act XI of 1876 the bank is, by Section 4, incorporated and possesses and enjoys all the "rights and powers incident by law to a Corporation aggregate subject nevertheless to the provisions of the Act"

The general law as to the position of a Corporation thus constituted has been recently considered by the Court of Exchequer Chamber and the House of Lords in the *Ashbury Carriage Co vs Ritchie*, L R, 9 Ex, 224-249, and L R, 7 E and T App, 653

The short result seems to be that though a Corporation by the Act of its creation is endowed *prima facie* with all the powers of a natural person *sui juris*, yet (as Lord Cairns says) if the Act "states affirmatively the ambit and extent of vitality and power which by law are given to the Corporation, and states negatively that nothing shall be done beyond that ambit, no attempt can be made to use the corporate life for any other purpose than that which is so specified"

In this case the "affirmative" is specified with great particularity and minuteness in Section 36, the "negative" broadly and generally in Section 37

We are of opinion that going into the English or other European markets as borrowers to raise money at rates lower than Indian rates, is a species of business beyond the scope of the bank's powers, and that in so doing, the Directors would run (to say the least) a very great risk of being held to have endeavoured to go beyond "the ambit of the bank's corporate vitality"

It is clear that they cannot as *principals* draw bills on England

The other questions involve greater difficulty

Section 36 gives power to advance money (*a*), power to invest and *convert* the investments *into money* (*d*), power to receive deposits and keep cash accounts on such terms as may be agreed on (*g*) and generally, the doing of all such matters and things as may be incidental or subsidiary to the transacting of the various kinds of business above specified (*n*)

Looking at the general nature of banking business and the sudden demands liable to be made on a bank, we cannot say that it may not sometimes be incidental and subsidiary to the business of a Corporation engaged in lending money and having a large reserve of Government Paper, occasionally to take a loan on its Government Paper pending its total conversion into money

If it were shown to be a case in which, from a temporary fall in the market, a prudent man would naturally take this course, it would be difficult to hold that such acts were not incidental and subsidiary to the business specified in Section 36.

But at the same time it must be observed that the powers are given with great particularity, and that there is not a word about pledging or giving security in Section 36, and no power of borrowing, save by way of "taking deposits" under clause *g*, and although receiving deposits is in the eye of the law "borrowing," still it is a peculiar kind of borrowing, and any attempt to extend it beyond its ordinary and accepted meaning might be looked on as an *evasion* of the Act

On the whole we are of opinion that it is not necessarily "*ultra vires*" for the bank to raise money on Government Paper, as an intermediate stage in its total conversion into money, when the exigencies of business demand it. The more so, because in some cases powers of sale have been held to include power to mortgage

But we are very decidedly of opinion that if the bank contemplates doing this on a large scale and habitually, it would be very desirable to have an express authorising clause inserted in the Act, and not to leave a question of such importance to be decided by inferences which might be drawn differently by different judges

These remarks show the view we take of the paper held in pledge from the other banks. We think they would be held to be good pledges, but that it would be more satisfactory if their authority to pledge were distinct

(Signed) G C PAUL  
" G H P EVAN

11th September 1877

3 That your memorialists submit it is an ordinary incident of banking business to obtain funds for temporary purposes by pledging assets. If banks are prohibited from raising money by pledge of assets when occasion arises, they may on a sudden requisition for cash be obliged to make forced sales of property at a disadvantage, and this applies, your memorialists submit, with great force to the Presidency Banks of India, whose action in forcing Government or other securities on the market might cause a public panic.

4 Your memorialists submit that it is from every point of view desirable that the Presidency Banks should have power to borrow money on pledge of property or otherwise, and as money can often be obtained on more favourable terms in England than in India, your memorialists submit that the power of the Presidency Banks should extend to borrowing in England, and should include the power to make remittances to England in repayment of loans, and in payment of the price of stock or other authorised investments of the banks from time to time which may be purchased or acquired in England

5 Your memorialists submit, moreover, that it is highly desirable that the powers of the Presidency Banks should be clearly defined, and should not be left as learned Counsel say "to be decided by inferences which may be drawn differently by different judges"

6 Your memorialists believe that it is the practice of the Bank of England to raise money at times on pledge of Consols, and to lend money on securities of the Government of India, which are known in London as "Rupee paper," and—

Your memorialists therefore humbly pray that the Presidency Banks Act (XI of 1876) may be amended, and that distinct and definite powers may, by the amended enactment, be given to such banks

1st—To borrow money either in India or England, by pledge of assets or otherwise, and on such terms as to repayment, interest, &c, as the said banks may from time to time arrange

2nd—To make remittances by Bills of Exchange or otherwise as may seem expedient, to England, in payment of the price of stock or other authorised investments from time to time purchased or acquired for the banks in England, and also in repayment of loans arranged for there

And your memorialists further pray that previous borrowings by such banks or either of them may be declared to have been valid transactions

And your memorialists as in duty bound shall ever pray.

No. 2516, dated 31st August 1878

RESOLUTION —By the Government of India, Finance and  
Commerce Department.

READ —The undermentioned papers relating to a Memorial addressed to the Government of India, by the three Presidency Banks, praying that the Presidency Banks Act, XI of 1876, may be amended, so that the banks may be empowered—

1st —To borrow money, either in India or England, by pledge of assets or otherwise, on such terms as to repayment, interest, &c ; as the said banks may, from time to time, arrange

2nd —To make remittances to England from time to time, by bills of exchange or otherwise, as may seem expedient, in payment of the price of stock, or other authorised investments, purchased or acquired for the banks in England, and also in repayment of loans arranged for there

and that previous borrowings by such banks, or any of them, may be declared to have been valid transactions —

Letter from the Secretary and Treasurer, Bank of Bengal, dated 22nd December 1877, and its enclosure, being the Memorial from the Presidency Banks

Endorsement to the Comptroller General, No 2828, dated 22nd December 1877

Letter from the Comptroller General, No. 5849, dated 27th December 1877

\*Despatch to the Secretary of State, No 41, dated 25th January 1878

\*Despatch from the Secretary of State, No 135, dated 2nd May 1878, and its enclosure

Letter to the Government Solicitor, No 1505, dated 6th July 1878

Letter from the Government Solicitor, No 684, dated 18th July 1878, and enclosure

RESOLUTION —The Secretary of State for India is unwilling that the Governor General in Council should comply with the Memorial, so far as it relates to borrowing in England, because, so long as the Government Balances are in the custody of the Presidency Banks, it is not considered expedient that the banks should engage in foreign exchanges, or have the power of creating a foreign Agency in England, which would be the result of their contemplated loan transactions in that country

2 The Secretary of State is prepared, however, to concede to the Presidency Banks the desired power of borrowing money *in India*

3 But, before taking any steps in this direction, His Excellency in Council desires to be informed whether the experience of the past two years has revealed any other defects in the Presidency Banks Act, XI of 1876. It has been represented to the Government of India as a defect, that, under Section 36 (a), the Presidency Banks are debarred from buying and advancing money on securities guaranteed by a Local Government, or on securities issued by a Municipality, or by a Port Trust constituted by Law

ORDERED —That this Resolution be communicated to the Comptroller General and the Accountants General, Madras and Bombay, and the Presidency Banks,† with a request for an early report whether any other amendments of the Presidency Banks Act are desired

Dated, Madras, 6th December 1899.

From H SCOTT, Esq, Vice-Chairman, Chamber of Commerce,  
Madras, to the SECRETARY to the GOVERNMENT of INDIA, Finance and  
Commerce Department.

I have the honour to acknowledge the receipt of your letter No. 5123-A. of the 10th ultimo, in which the Government of India invites the opinion of this Chamber on the proposal to relax the restrictions imposed by the

\* See also pp 515-7.

† Secretary and Treasurer, Bengal, Bombay, and Madras.

Presidency Banks Act, 1876, and asks for suggestions as to the precise directions in which any relaxation should be made. The Chamber is further asked to consider the matter with special reference to the existing capital of the banks.

Prior to the receipt of your letter the Chamber received from the Secretary and Treasurer, Bank of Madras, a copy of his letter to you of the 13th ultimo (copy enclosed) in which, on behalf of the Directors of the bank, he submitted, for the consideration of the Government of India, suggestions for modifying the Presidency Banks Act. This letter has received the careful consideration of the Chamber, which is unanimously of opinion that the removal of the restrictions mentioned therein is urgently called for.

Whilst fully agreeing with all the suggestions put forward in the bank's letter, the Chamber is specially impressed with the urgent need for legislation which will enable the Presidency Banks to expend their supply of loanable funds in times of pressure. The Chamber is convinced, so far as the Bank of Madras is concerned, that the capital of the bank is ample for present requirements. Indeed, it may be questioned whether a dividend could be earned, under existing conditions, on further capital, which would probably only be employed for a few months at the height of the busy season, while for the remainder of the year it would be idle in the bank's vaults.

It is the want of elasticity in regard to loanable funds, available for trade purposes, which causes periodical stringency at the height of the busy season. The remedy for this, in the opinion of the Chamber, is to amend the Presidency Banks Act so that the banks may be brought into touch with the London money market. If Government considers that the restrictions imposed by the Act in regard to borrowing out of India should not be removed, the Chamber submits that there is an obligation on the part of Government to devise some other means whereby the Presidency Banks may have the facility, which all other banks possess, of expanding their resources to meet unusual trade demands. The only alternative which the Chamber can see is that Government should lend to the banks, whenever they required funds, on definite and reasonable terms. It is absolutely necessary, however, that any arrangement of this kind should be *definite*, so that the banks could obtain funds when necessary at a moment's notice, as they could do were they permitted to raise the money themselves. The Chamber is further of opinion that, if Government decides on this course, the rate of interest charged should approximate that at which money could be borrowed by the banks in the London market.

While putting forward this alternative suggestion for the consideration of Government, the Chamber is strongly of opinion that the best solution of the difficulty is to permit the banks to borrow in London, in which case assistance from Government would not be required. If, as is assumed, the currency scheme is to be made effective with the rupee at 1s 4d, the Chamber can see no objection to the latter proposal, and has no hesitation in strongly supporting it.

In conclusion, the Chamber would observe that all the Presidency Banks have the power of adding largely to their present capital under the existing Act, and the Bank of Madras recently took advantage of this power to increase its capital by a small amount. It may, the Chamber thinks, be safely assumed that the banks will further avail themselves of this power as soon as they can see their way to profitably employ any further capital.

---

No 1507—99, dated 20th December 1899

From W PARSONS, Esq, Secretary, Bengal Chamber of  
Commerce, to the SECRETARY to the GOVERNMENT of INDIA, Finance and  
Commerce Department

I am directed by the Committee of the Bengal Chamber of Commerce to acknowledge receipt of your letter, No 5123-A, with its enclosures of 10th November, in reference to the question of amending the Presidency Banks Act, 1876, with the view of relaxing the restrictions on the business of the banks imposed by Sections 36 and 37 of the Act, and asking for the

opinion of the Chamber on the proposal, with suggestions as to the precise directions in which any relaxations should be made, the matter to be considered with special reference to the existing capital of the banks.

2 The Chamber are asked to give their opinion—

- (a) As to whether it is desirable that the Presidency Banks Act should be amended so as to permit of the Presidency Banks making advances on the stocks of Assisted Railways, &c, &c
- (b) As to whether the existing capital of the Presidency Banks is sufficient to admit of the banks being given extended powers to enable them to make advances on the securities named

\* \* \* \* \*

4 The Committee find some difficulty in giving a definite reply with regard to the second point put before them. It seems to them that the question raised should be considered rather with special reference to the general resources of the Presidency Banks and to the entire banking system of India, than to the existing capital of the Presidency Banks. It is held in some quarters that the scarcity of loanable capital and high rates of interest and discount frequently experienced in the busy season are due to the fact that Government collect a very large portion of the revenue after the harvests, and thus withdraw from active circulation a large sum in coin at the very season of the year when money is required to pay for and move the crops, and that these recurring periods of extreme stringency might be mitigated, were Government to take precautions to prevent their revenue collections from unduly affecting the money market.

5 The Chamber have more than once advocated a more liberal policy towards trade in connection with the treatment of the Government balances. While the Committee agree that this is desirable, they recognise that in a country like India, where either for war or famine purposes, or owing to some other unforeseen and altogether unexpected cause the Government are compelled to keep a portion of their resources locked up and available at a moment's notice, while it is also necessary to keep in funds hundreds of treasuries scattered over the empire, it is not altogether prudent for the Central Banking Institutions to rely wholly on assistance from the Government treasuries at a time of extreme stringency, and the Committee will welcome any arrangements that can be made for affording these institutions other means of expanding their resources readily at times of pressure.

6 It has been pointed out that for several months in the year it is impossible to lend out money in India except at a nominal rate of interest, and that it is consequently difficult for banks to work at a profit. This consideration makes it the more difficult for the Committee to answer the question put to them in regard to the adequacy, or otherwise, of the capital of the Presidency Banks. But they are convinced that in the busy season the banking facilities in India are not sufficient for the trade and the satisfactory development of the country, and at times of pressure the existing arrangements for giving relief seem to them to be quite inadequate.

7. As a measure of relief in this connection, suggestions have been made—

- (a) that in the Paper Currency Reserves the Government have an excellent machinery, with which at times of pressure and without in any way crippling their own resources they can, under some suitable arrangement with the Presidency Banks, come to the relief of commerce,
- (b) that if a large bank is formed by the combination of the Presidency Banks, its resources and capabilities for useful work would be greatly increased if it had the power of issuing legal tender notes. The Committee are inclined to think that the existing system—under which the country is divided into circles, and the notes issued at the Head Office of any one circle are legal tender only in that circle and not elsewhere—is open to the objection that it is opposed to the expansion of the note circulation. It is possible that, if the proposed bank were entrusted, like the Bank of

England and the banks of other European countries, with the management of the Paper Currency, subject, of course, to all the regulations considered essential for the protection of the public, the note issue would expand to the great convenience of commerce

8 These suggestions, however, and the others referred to in this letter, upon which, owing to the very complex nature of the subject, the Committee do not attempt to do more than touch, raise questions which they would like to see expertly and very fully discussed, and they would suggest that at an early date, a conference be held of bankers and others interested, at which the views of all parties would be invited, so that the subject may be thoroughly threshed out. The Committee would add that, in their opinion, the banking system in India will never be entirely satisfactory until the Central Banking Institutions are in close touch with London, the money market of the world

9 In conclusion, the Committee would acknowledge the indebtedness of the mercantile community to His Excellency the Viceroy and the Honourable Mr Dawkins, for the efforts they are making to improve banking facilities in India. They trust that these efforts will result in the Central Banking Institutions and the other banks in India being placed in a position to give important assistance to the promotion of railways and other works of public importance, and to finance at moderate rates and on terms as free as possible from heavy fluctuations, the operations of industrial and other trading concerns, thus placing the country in a more advantageous position in the future than in the past to compete with the great commercial nations of the world

Dated 20th December 1899

From the SECRETARY, Chamber of Commerce, Bombay, to the SECRETARY to the GOVERNMENT OF INDIA, Finance and Commerce Department

Under the instructions of the Committee of the Bombay Chamber of Commerce I have the honour to acknowledge the receipt of your letter No 5123-A, dated 10th November 1899, with copy of the speeches made by His Excellency the Viceroy and the Honourable Mr Dawkins on the 1st September last on the subject of amending the Presidency Banks Act of 1876

2 These speeches have had the best consideration of my Committee, and I am now directed to reply that the members approve of the proposal to relax the restrictions imposed upon the Presidency Banks by the Act, and would further recommend that these banks be permitted to borrow out of India. There is, in the opinion of the Committee, no reason to suppose that such relaxation and permission if conceded to the Presidency Banks as at present constituted would lead to rash borrowing or investment or to the tying up of capital for any excessive length of time. Nor has the Committee any doubt that the banks in question are fully capable of providing more working capital when required. Attention has been particularly drawn to the amount of Government deposits with the Presidency Banks and the proportion borne by such deposits to the bank's resources has been by implication very greatly exaggerated. The comparison instituted by the Honourable Mr Dawkins, between Government Account and the Bank's cash balances is calculated to mislead the public, for the Bank's Cash balances which it is, of course, the endeavour of the management to keep as low as possible, do not in any way represent the banks' available resources. In point of fact the ratio of Government Account to the banks' available resources is understood not to exceed 15 per cent, and the sum is generally least when trade demands are greatest. In the opinion of the Committee too much has perhaps been made of the recent periods of tightness as being due to a want of sufficient capital in the country, notably in the hands of the Presidency Banks. Stringencies in the money market have been not infrequently due to want of confidence in exchange, precariousness of credit and consequent withdrawal of native capital from circulation in the bazaar, and, as this Chamber has already had the honour of representing, to the practice of locking up enormous Treasury balances at the moment when money is most in demand.

3 It is understood, however, that Government at present entertains the project of giving such relaxation or expansion not so much to the Presidency

Banks as to a Central Bank for all India to be formed by amalgamation of the Presidency Banks. The Committee have had the advantage of hearing Mr. O'Connor, Director-General of Statistics, on the subject, but it appears to them that the proposals as to the precise constitution and functions of the said Central Bank are too indefinite for thorough consideration.

4 Such points as—

- (a) the amount of capital,
- (b) the conditions of note circulation,
- (c) the cost of managing it,
- (d) the possibility of dispensing with the system of note circles, and
- (e) the practical convertibility of the rupee, with its attendant problem of the control of the gold reserve, are all questions of great importance, and the Committee feel themselves in want of the necessary detail to appreciate their effect.

5 The most important of these points is that of the amount of capital to be controlled by the bank. The Committee understand that it is not to have more Government support than the present Presidency Banks, and, therefore, similar conditions of management must be followed and the capital must be kept down to what can be profitably employed. At the same time the bank is to have large currency duties to perform, *viz.*—

- (a) to establish the 1s 4d exchange, or in other words the gold standard,
- (b) to maintain a steady and a lower rate of discount throughout the country, and
- (c) to undertake convertibility.

To maintain any effective control on these three unknown quantities under probable and improbable circumstances would call for the holding of large and idle reserves, it, therefore, appears that there are two opposite factors to be considered with this question of capital, and without knowing the views of Government this essential point cannot be dealt with. The mere addition of three or four million pounds to the available banking funds could have but little effect on the development of a vast country like the Indian Empire, and any really large increase of capital under one control would be difficult of profitable employment, competing, as it would have to do, with the internal native banking concerns and the powerful banks of the capital towns.

6 The Committee are not satisfied that mere amalgamation of the banks would be likely to confer benefit in any general sense, on the contrary they look upon India and Burmah as too vast an area to be effectively served by one Central Bank. Whatever rules might be laid down for the autonomy of the various Presidency Offices and for the universal character of the general management, one or other of the Presidency Towns would inevitably and immediately become the real seat of such general management and reap the advantages of such domicile to the detriment of the other two. The Committee, therefore, consider that the interests of commerce will be better served by development of the separate fields than by their consolidation, for in the opinion of the members the fusion of the Presidency Banks—so far from increasing credits as is assumed—would have the opposite effect and restrict them.

7 A good deal has been said about the advantages the new bank would secure in the way of an even flow of capital throughout the country, but the Committee do not at present see how the conditions necessitating the so-called water-tight Treasury Compartments are to be altered so as to afford the public greater convenience without a corresponding strain on the bank. And they remain of opinion that no method has yet been indicated that would be likely in practice to cause a quicker and more effective distribution of money than that which is at present governed by the imperative calls of trade.

8 It has been stated that with India's currency difficulties settled a considerable expansion of financial and industrial enterprise would follow. Whilst not gainsaying that the inflow of British capital consequent upon a stable rupee might be considerable, the Committee would point out that here in Bombay the rapid and enormous growth of the mill industry points to the fact that where prospect offers the means are readily found for carrying out industrial schemes.

9 Coming to the note issue, it is not clear to the Committee that any substantial and immediate benefit would accrue to the bank from the proposed concession that it should only derive benefit on the increased issue of notes it could succeed in placing in circulation. Such an increase could only be looked for to take place gradually, and although the general interchangeability of the notes as compared with the present limited note circles should make the paper more popular, still it is a fact of to-day that in the interior coin and not notes is the medium of exchange.

10 On the question of convertibility the Committee incline to think that, although the undertaking is by no means absolute, it might, if liberally acted upon, serve to encourage the free inflow of sterling capital, they, however, doubt whether France, with its enormous gold reserve and without external debt, should be compared with a country so differently situated in these two respects as the India of the present day.

11 On the whole the Committee consider that the interest of the trading community would be best served by improving the means at hand and allowing further time to help towards the solution of a problem (the currency legislation) which has no exact counterpart in other parts of the world.

---

No. 25, dated 21st December 1899

From J. BEGGIE, Esq., Secretary and Treasurer, Bank of Bombay,  
to the SECRETARY to the GOVERNMENT of BOMBAY,  
Financial Department

I have the honour to acknowledge receipt of your letter No 5599, dated 23rd ultimo, asking that the Government of Bombay may be favoured with the views of the Board of Directors of the Bank on the proposals referred to by the Government of India in their letter No 5123-A, dated 10th idem, regarding the relaxation of the restrictions imposed by Sections 36 and 37 of the Presidency Banks Act, 1876, on the business of the Presidency Banks.

The letter from the Government of India was addressed to the Chambers of Commerce in Bombay and elsewhere, and forwarded a copy of the speeches made by his Excellency the Viceroy and the Honourable Mr Dawkins at a meeting of the Legislative Council of the Governor-General held on the 1st September last, explaining the circumstances under which the question of amending the Presidency Banks Act, 1876, had been raised, and the attitude which the Government of India are at present inclined to adopt. The letter asked for the opinions of the Chambers on the proposal to relax the restrictions imposed by the Act, and for suggestions as to the precise directions in which any relaxation should be made, and also that the matter should be considered with special reference to the existing capital of the banks.

In reply, my Directors instruct me to say that they welcome the conclusion arrived at by the Government of India that the limitations imposed by the Legislature on the business in which the Presidency Banks are authorised to deal have to some extent survived the times and conditions which rendered them necessary, and do unnecessarily hamper business and enterprise, and also the declaration that Government is prepared and has decided to examine the question exhaustively and in no narrow spirit.

\* \* \* \* \*

I am instructed to say, however, that still another amendment is necessary, namely, that the power the banks now possess of borrowing money in India for the purpose of the banks' business, and giving security for money so borrowed by pledging assets or otherwise, should be extended so as to enable them to borrow in England. With the sterling exchange comparatively steady in the neighbourhood of gold point, and with an increasing margin of gold in the Paper Currency Reserve, borrowing in England would not now be attended with undue risk, while it would give

the Banks that access to the London money market which His Excellency the Viceroy deemed necessary if an amalgamation of the Presidency Banks was affected, and is most necessary in the interests of the trade. Such risk as there is of loss by exchange can, if desired, be definitely ascertained and provided for at the initial stage of the transactions, by fixing the rate of exchange for the return remittances at the time the money is brought out to this country. This can almost invariably be done if the return remittance is to be made within a few months.

The additional borrowing powers now sought have been found by experience in recent years to be necessary to meet special times of pressure for money arising from active trade demands or from other causes. They are not sought merely to meet the further demand for accommodation which may arise by reason of the securities of assisted Railways and District Boards being included amongst the securities the banks may invest in or lend against. But I am instructed to draw attention to the expectation of a considerable expansion of financial and industrial enterprise in India, which is widely entertained, and was alluded to in the speech of His Excellency the Viceroy, and to say that if such an expansion takes place, the Presidency Banks should be in a position to obtain money on the cheapest terms possible, either in India or in England, to meet the additional demand for accommodation which will accompany the increase in trade.

The three Presidency Banks are unanimous in seeking for power to borrow out of India.

#### GOVERNMENT DOUBTS AS TO SUFFICIENCY OF BANKS' CAPITAL

The letter from the Government of India seems to indicate that the Government entertain doubts as to the sufficiency of the existing capital of the banks. My Directors are strongly of opinion that the working capital of this bank can be largely increased by deposits or borrowing before it will be necessary to have recourse to an increase of the shareholders' capital, although they will not hesitate to recommend an increase of the latter if circumstances should seem to them to require it in the future.

#### GOVERNMENT REASONS FOR THINKING CAPITAL INSUFFICIENT

The reasons given in the following passages from the speeches of His Excellency the Viceroy and the Honourable Mr. Dawkins for the Government, doubts as to the sufficiency of the banks' capital appear to my Directors to have been advanced under a misapprehension of the actual facts.

"The Presidency Banks depend to a quite exceptional degree for their cash balances on the Government account. As Sir James Westland showed, in the busy season, nearly 80 to 90 per cent of these balances are supplied from the Government Account—a fact which, added to the fluctuation in the rate of discount, may make us ask seriously how far the Presidency Banks have sufficient capital to allow of the absorption of the resources they command in enterprises, the securities of which might not be easily realisable.

"The bulk of their (the Presidency Banks) cash balances, or what I suppose I may call their loanable capital, is supplied by Government, and \* \* \* if we subtract this at any given moment, they are not, as a rule, in possession of sufficient independent capital to enable them to conduct operations on a large scale."

My Directors respectfully submit that the correct way to measure the extent to which the banks depend on the Government Account is to compare the amount of the Government deposits with the total working capital of the banks, consisting of the shareholders' capital and the Government and other deposits, and not with the amount of the cash balance on hand. Measured in this way, it will be found that the Government deposits form only a small proportion of the total working or loanable capital.

The whole of the Government balances deposited with this Bank are not kept in cash, as seems to be supposed. They form a part of the whole of the deposits withdrawable on demand, and it has never been suggested that they should be treated differently from other demand deposits. The cash balance is formed of a certain proportion of the whole of these deposits, and

not mainly of the Government balances. My Directors therefore think that the statement quoted from Sir James Westland that in the busy season nearly 80 to 90 per cent of the banks' cash balances are supplied from the Government Account, cannot be accepted as correct, and does not show that the bank depends to an exceptional degree on the Government Accounts, or that its capital is not sufficient.

I have further to point out that the reference made in the first of the two passages above quoted, to the fluctuations in the rate of discount, and the inference also drawn therefrom that the banks' capital is insufficient, also appears to my Directors to have been made under a misapprehension. There are other elements besides the capital of the banks which should be taken into account to ascertain the cause of the fluctuations in the rate of discount. There are the supplies of money to be considered on the one hand, and the demand for finance accommodation on the other. The supplies may be divided into three parts—the working capital employed by all the banks in India, the Government balances, and the native capital employed solely in the different bazaars throughout the country. Of these, only the first, consisting of the capital, deposits, &c., of the banks, is a fairly constant quantity. The Government revenue collections in the early part of each year lead to the withdrawal of large sums from the active circulation at a time when money is greatly needed by the trading community. And the usual Government disbursements are subject to great changes. In normal times large sums are distributed throughout the year in the Presidency towns in payment of Council Bills, &c., while in a time of famine or war such disbursements are liable to be largely reduced or even entirely stopped, the money being diverted elsewhere. The native capital employed in the bazaars is also liable to severe contraction, especially in a time of famine, or plague, or war, when much of it is withdrawn entirely from employment. That is the time when an exceptional demand for accommodation is experienced by the banks. The prices of many commodities rise, and more banking facilities are required than in ordinary times. The supplies of money in India are thus liable to large fluctuations while the demand for accommodation varies greatly and is very heavy when the supplies are diminished, leading to a sharp rise in discount rates. The movements in the banks' rate of discount being contributed to by causes and conditions over which the banks have no control, the capital of the banks can hardly, my Directors think, be said to be deficient merely because of the fluctuations alluded to.

#### PROPOSED AMALGAMATION OF THE PRESIDENCY BANKS

My Directors regret that they are unable to concur in the opinion expressed by His Excellency the Viceroy that a consolidation and a concentration of banking facilities are required in the interests of the business accommodation and credit of the country. So far as they are aware, there is no demand in India on the part of the mercantile and trading community for such concentration. If the banking facilities in the country were found to be inadequate, an increase in banking capital would be necessary, and would speedily be called for, but a mere amalgamation of the existing banks would not provide an increase of capital or of banking facilities. It would rather tend to curtail credit in many cases.

One of the objects the Government have in view in proposing the amalgamation of the three Presidency Banks is, my Directors are informed, to obtain an institution to which could be entrusted the duties of maintaining exchange with England within certain limits, and of managing the currency note issue, and certain high financial authorities in England have expressed their opinion in favour of these duties being entrusted to a bank. My Directors will be glad to consider fully and favourably any proposals which Government may make to them with this end in view. Such proposals will, no doubt, take into consideration the great risk which would devolve on any bank which undertook the maintenance of the exchange between India and England under present conditions, and will also include the offer of fair terms for such a guarantee.

I have to request that a copy of this letter may be forwarded to the Government of India on an early date.

Dated 27th December 1899

From W B WISHART, Esq, Secretary, Upper India Chamber  
of Commerce, to the ASSISTANT SECRETARY to the GOVERNMENT of INDIA,  
Finance and Commerce Department

PRESIDENCY BANKS ACT, 1876

Your letter No 5123-A, dated 10th ultimo, has been duly considered by the Committee of this Chamber. I am now directed to say that my Committee beg to thank the Government of India for the opportunity granted the Chamber to express an opinion *re* the proposal to relax the restrictions imposed, under Sections 36 and 37 of the Presidency Banks Act, 1876, on the business of these banks; as also to put forward suggestions as to the precise direction in which any relaxation should be made

The members of this Chamber are chiefly representatives of Companies engaged in manufacturing and industrial enterprise of firms dealing in country produce for shipment, and in the handling of imported goods. They are, therefore, from personal experience, in a position to appreciate fully the soundness of the sentiments expressed by the Governor General of India at the Meeting of Council held on the 1st September 1899, and in particular, the remarks made by His Excellency, *viz* —

\* \* \* \* \*

“ An examination of the existing system leads me to doubt whether the banking institutions of India are at all adequate to the growing needs of the country ”

\* \* \* \* \*

“ Here we are at the end of the nineteenth century, with 22,500 miles of railway opened in this country, with the telegraph wires connecting all our important cities and centres, with business operations being conducted every year on a larger and increasing scale. Moreover, we are looking forward, if we can settle our currency difficulties, to a considerable expansion of financial and industrial enterprise. And yet, in respect of banking, it seems to me that we are behind the times. We are like some old-fashioned sailing ship, divided by solid wooden bulkheads into separate and cumbrous compartments. This is a state of affairs which it appears to me can hardly continue ”

\* \* \* \* \*

The inability of the Presidency Banks to advance against immovable property, as collateral security, in connection with loans made on the security of stocks of raw and manufactured goods, has in the past hampered and retarded the progress of many assured undertakings in these Provinces, they having, in consequence, been forced on occasion to obtain money from uncertain or outside sources at high rates of interest, often coupled with terms preventing such concerns from borrowing money against movable property in the open market or from the Presidency Banks.

The Chamber does not recommend that sanction be granted to the Presidency Banks to make advances on immovable property generally, but hold that, subject to certain limits, some relaxation of the restrictions imposed by the Act should be allowed where industrial and manufacturing enterprises are concerned.

The amendment to the Act whereby the Bank of Bombay is enabled to deal in securities of the Bombay Improvement Trust Fund is not a matter which this Chamber is disposed to cavil at, and the application of the Bank of Bengal for the extension of its Charter so as to cover transactions in the securities of Assisted Railways is reasonable from the Bank's point of view as such securities give a better net rate of interest and are subject to less fluctuation than is Government Paper as a rule. But having regard to the fact that the Presidency Banks have the custody of Government balances, my Committee consider that the mercantile community are entitled to look to these banks to invest the bulk of the funds at their disposal primarily in the trade and commerce of the country.

The disastrous effect on the trade of the United Provinces, owing to an inadequate supply of cash at the season when the crops have to be handled,

whether brought about by the action of Government or of the Presidency Banks, was treated of in a letter addressed by this Chamber, under date 10th April 1890, to the Bengal Chamber, a copy of which is enclosed for favour of consideration

The subsequent decision of Government to make treasury balances available for mercantile purposes during the so-called busy season demonstrates the desire to assist trade, but the restrictions imposed, tending to limit such assistance to only a few months of the year, and the depletion of Government funds in the hands of the Presidency Banks has, combined with other factors, nullified to a great extent the good intentions of Government in the matter

The working of the Presidency Banks during the last four years and the large sums that they have been able to add to their "RESERVE" proves that funds have been fully employed and kept liquid to an extent that might well excite the envy of like Chartered Institutions in many other British Dependencies. But my Committee cannot accept, as applicable to existing circumstances, the statement made by Sir James Westland to the effect that in the busy season 80 to 90 per cent of the Presidency Banks' cash balances are supplied from the Government Account. At this season of the year, when all possible assistance to trade in general is needed, it is disconcerting to see how low the Government balances are

The statement of the affairs of the Bank of Bengal for the week ending 14th November 1899 *vide Government of India Gazette*, dated 18th November 1899, shows the Cash Balance to be Rs 2,50,00,000 against Government Deposits Rs 1,22,00,000, General Deposits Rs 5,80,00,000

From the above figures it would seem that the Bank of Bengal could, without serious danger to itself, hand over the whole of the Government deposits, and incidentally the present state of affairs might be held to indicate that the bank cannot with safety trade with funds from such an uncertain source of supply. It is understood that Government has time and again been urged to allow the Presidency Banks to accept money in England for investment in their business in this country and my Committee are of opinion that some relaxation of the provisions of the Act of 1876, or modification in the Charters of these banks, which would allow their drawing funds from home, is desirable, as calculated to render these institutions comparatively independent of Government balances and to place them in a position to finance the internal trade of the country, under normal conditions, all the year round, at a reasonable rate of interest

My Committee, if it be considered permissible to diverge a little from the question directly under consideration, would venture to suggest that endeavours might, with advantage, be made to induce the Presidency Banks to follow trade more closely, by the establishment of Branches or Sub-Agencies at centres which have been, or will be, opened up by the Government Railway Policy. To quote a single instance, the huge districts in Oudh, embracing Nawabgunge, Bahraich, and Gonda, rich in produce of all sorts, but with little or no banking facilities, are points where branch banks might be established with little trouble and probably considerable profit. To purchase grain, oil, seeds, &c, in these and many other important trade centres in the United Provinces, it is necessary to resort to the primitive and dangerous practice of transporting as luggage, with owner, cumbersome rupees by rail from Cawnpore, Benares, Agra, Allahabad, or Lucknow

As much as eight annas per cent discount for cashing Government Currency Notes is not unusual in the districts and during the first week of this month the Bank of Bengal, Cawnpore, has charged as much as four annas per cent on Allahabad Circle Notes

My Committee contend that Government Currency Notes should be legal tender at par throughout the circle of issue. The non-convertibility of such notes into cash or *vice versa*, except at a discount during many months of the year, hampers business in the Mofussil greatly, particularly in the case of low-priced commodities where the item of discount on notes, or transport of cash, often absorbs the largest share of the working margin. The foregoing proposition is, of course, not intended to apply to the case of Government Currency Notes of Circles other than that for which the notes in question were issued

In conclusion, I am to state that my Committee but claim to have attempted to treat the question under discussion from the point of view of the interests represented by this Chamber in the United Provinces and in the Punjab, unfortunately the desires of the Government of India, as also the mercantile interest of the various Presidency towns on occasion, particularly in the matter of railway extension and finance, of necessity, clash with those of the community engaged solely in the internal trade of the country

Dated 10th April 1890

From the SECRETARY, Upper India Chamber of Commerce, to the SECRETARY,  
Bengal Chamber of Commerce

I am directed to thank you for your letter No 235 of 21st ultimo, forwarding copy of Budget Statement. My Committee do not consider that there are any points in it involving the interests of the community which they represent that call for special comment, except in as far as the financial transactions and policy of Government affect the supply and price of money in Upper India.

2 Some two years ago Government changed its custom as regards the disposal of balances on hand, and has since held locked up at various points in the Mofussil, as reserves, the bulk of these funds. The district balances are not, as was previously the case, at the disposal of the banks for short-date advances, and they consequently cannot now do business on the basis of the actual cash in their vaults, further, it is understood that even when Government has no actual immediate need for money, large sums are frequently withdrawn and placed in the Reserve Treasury. Thus, a very considerable percentage of the bullion in the country has been rendered practically non-existent as far as trade is concerned, and the available currency reduced by the amount of these hoards.

3 The enclosed statement shows the highest point that the Bank of Bengal, Calcutta, minimum discount rate has reached in each month, November to April inclusive, for the past ten years. It will be seen that money has, since 1888, been at a very much higher level than was the normal state of affairs formerly, even including the time of the Russian war scare and other periods of political tension and disturbance. If in future during the produce season rates in the Mofussil are to continue to rule at from 12 to 15 per cent for first-class bills, the export and import trade of these Provinces will be, to all intents and purposes, paralysed. From November to April large sums are required to bring the cotton, oil-seed, wheat and grain crops into the market, and if money is not available on reasonable terms, the bazaar dealers and petty traders of small means, through whom the bulk of the business of the country is carried on, will be utterly unable to work, and this is practically the case to a notable extent at the present moment.

4 When bankers and merchants of approved standing have to pay abnormally high rates for accommodation, it means that the less well-to-do class cannot get funds for trade purposes, except at an exorbitant cost. As high as 20 per cent has been paid by dealers of fair commercial standing during the current year on short-term drafts. Be the reason what it may, in times of dear money Bombay and Calcutta appear always to be in the position to pay much higher rates of interest than up-country trade can stand, and therefore money is drained to these centres generally at the particular season of the year when it is most urgently needed in the Mofussil for produce. At these times the banks show a not unnatural disposition to do as little business as they can at their branches, so as to have the bulk of their funds available at the seaports above-named. It has been suggested that it might be feasible for Government to adopt some system that would allow of the Presidency Banks making advances against Government Paper from the Reserve Treasury balances, and that this, while reducing the indebtedness of the State to the public, would leave at the disposal of the banks for short-term loans on account of raw produce and piece-goods a large percentage of their funds, which are now swallowed up in advances made against Government Paper to speculators, the Exchange, and other banks.

5 My Committee, however, do not advance this as a remedy, they are not disposed to join in the discussion regarding the political or financial advisability of Government carrying heavy reserves of bullion, and not allowing its cash balances to be made available for trade purposes. They simply desire to direct attention to the disastrous effect of the present system on up-country business that it is hurting both cultivators and dealers, and if not modified, agriculture, as well as the trade in the Mofussil, and consequently that of the seaports, will be seriously crippled.

## STATEMENT OF BANK OF BENGAL, CALCUTTA, MINIMUM DISCOUNT RATES

Dated 14th April 1890

From the AGENT and CHIEF ENGINEER, Bengal and North-Western Railway Company, Limited, to the SECRETARY, Upper India Chamber of Commerce

In corroboration of the statement made in your letter of the 10th instant to the Secretary, Bengal Chamber of Commerce, regarding the effect of dear money on the export trade of these Provinces, I would beg to inform you that in the districts served by this railway there has been an excellent crop of linseed during the past season, but, owing to the dearness of money, the merchants say they have not the means of financing the crop, and the trade is practically paralysed.

Extract from the Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations under the provisions of the Indian Councils Acts, 1861 and 1892 (24 & 25 Vict, Cap 67, and 55 & 56 Vict Cap 14)

The Council met at Government House, Calcutta, on Friday the 5th January, 1900

## QUESTION AND ANSWER

The Honourable Mr Allen Arthur asked —

“In view of the great public importance of the questions discussed at the recent conference between the Finance Department, the Secretaries of the three Presidency Banks and representatives of certain Chambers of Commerce, viz, the possibility of relaxing certain restrictions placed on the business in which the Presidency Banks may engage, and the sufficiency or insufficiency of their capital for such an extension, of their operations, together with other questions consequent thereon, and in view of the close attention with which this discussion is being followed by the Banking and Mercantile communities throughout India, I desire to ask if any indication can be furnished of the results of the recent conference, and any intimation given of the policy which the Honourable the Financial Member is prepared to recommend to the Government of India in the matter

“I would also enquire, if the proposed new bank is formed, what restrictions will be placed on the bank as regards its operations in Exchange”

The Honourable Mr Dawkins replied —

“I am glad to have the opportunity given to me by the Honourable Member's question to offer some general explanation, and if my answer assumes the form of a statement of some length, the importance of the subject

and the desirability of taking the public into our confidence in the matter may, I hope, be regarded as a sufficient excuse. I must commence by a brief reference to the history of the subject touched on in the question. Several of the witnesses before the recent Currency Committee expressed apprehension whether the banking resources of India had kept pace with the growing requirements of the country, and a separate minute was appended to the report of that Committee by Mr Hambro, advocating the establishment of a strong Central Bank in India. The Secretary of State, in introducing the budget in Parliament, associated himself with Mr Hambro's recommendation, and expressed a decided opinion that the export trade of India was being financed on too narrow a basis. I may perhaps be permitted to quote his words: "Undoubtedly, banking in India has not kept pace with the growth of trade and commerce. The Presidency Banks do their work very well, but their capital is small, and, as regards their available cash balances, these are almost entirely supplied by one account, namely that of the Government. The Government account forms a very much larger proportion of the cash balances of the Presidency Banks in India than is the case here, for at times the Bank of England could almost dispense with the Government account and still carry on their business, and it must be remembered that the cash balances of the Presidency Banks in India form a far more important banking factor there than do the Bank of England cash balances here, and that the flow and movement of cash in India is very much slower than is the case in England. I have certainly come to the conclusion from my experience that we are endeavouring to finance the export, commerce and trade of India on too narrow a cash basis."

"The ex-Secretary of State and Chairman of the Currency Committee, Sir Henry Fowler, took the same line, and explained that he himself would have signed Mr Hambro's recommendation, had his position as Chairman not precluded him from so doing.

"It was obviously due to such high authorities that their views should be examined with the greatest attention in India. Moreover, the receipt of these views synchronized with a request from the Banks of Bengal and Madras for a relaxation of the restrictions placed on the class of business they may transact. They desired authority to extend their operations beyond the securities of Guaranteed Railways, to securities of Assisted Railways and District Boards, and, as regards railways, the request made by the banks found a powerful advocate in the Acting Public Works Member of Council, Colonel Gardiner, who held strongly that the existing restrictions have seriously hampered railway development.

"The Government of India therefore proceeded to consult the Chambers of Commerce and the Presidency Banks on these important questions, and answers have been received from the three Presidency Banks, the Presidency Chambers of Commerce, and the Upper India Chamber of Commerce, containing valuable information and suggestions. But anyone reading these papers would be struck by the fact that certain of the suggestions require further elucidation, and still more by the fact that several of the opinions expressed are conditional in their character. It was therefore arranged, with the authority of His Excellency, that an informal and free discussion should take place between the Finance Department and the Chambers and Banks, with the object of an interchange of views and explanations.

"My Honourable colleague, Mr Allen Arthur, representing the Bengal Chamber, the Secretaries of the Banks of Bengal and Bombay and Madras, the latter in the double capacity of representative of the Chamber and of the Bank of Madras, met Mr Finlay, Mr O'Connor and myself. The Bombay Chamber, I am sorry to say, was unable, owing to the shortness of the notice, to send a representative.

"I think my Honourable Colleague would bear me out if I say that the discussion was of great utility, and enabled those who took part in it to arrive at a better understanding of the questions involved and also at a very much greater degree of agreement than had previously seemed possible.

"With regard to the first question, that of relaxing existing restrictions in certain directions, the Chambers and banks are unanimous in considering that the extension of the Bank's operations to the securities of Assisted Railway and District Boards is desirable. But the Bank of Bengal accompanied their

expression of opinion with a note of caution. Their letter states, 'My Directors are of opinion that these restrictions might be withdrawn with safety and advantage without, in ordinary circumstances, overtaxing the resources of the banks.'

I may say that the Government of India have also regarded the question with caution. Personally, I am in entire sympathy with the demand for relaxation if that can be accomplished without risk, and I look at the demand much more from the point of view of the general development of the country than from the special standpoint of the banks. But—and on this point I may speak for the Government of India as a whole—however much existing restrictions may hamper development, no proposal could be entertained which might lead to locking up the resources of the banks in securities not easily realisable, unless those resources can be shown to be amply sufficient in both dull and busy seasons. The disadvantage of the existing restrictions, as matters now stand, would be less serious than the risk of creating difficulties for the existing volume of business.

To come to the second question. The letters received reveal, and the discussion accentuated, a general consensus that, though the banks find it difficult to employ their existing capital in the dead season, yet in times of pressure in the busy season it is often inadequate, and that some means of temporarily expanding resources—some final banking resort—is absolutely necessary if the stringencies of the last few years are not to recur, and if the extreme and violent variations in the rate of discount, the very worst enemy to sound and progressive business, are to be avoided. I may quote from the letters of the Madras Chamber of Commerce and Bengal Chamber of Commerce. In the Madras letter I find that 'the Chamber is specially impressed with the urgent need for legislation which will enable the Presidency Banks to expand their supply of loanable funds in time of pressure.' The Committee of the Bengal Chamber 'are convinced that in the busy season the banking facilities in India are not sufficient for the trade and the satisfactory development of the country, and at times of pressure the existing arrangements for giving relief seem to them quite inadequate.' But if the resources of the banks are often inadequate for existing business, if the ordinary requirements of trade and commerce can only be met on the average, where is the margin for financing railways, and municipal and district enterprises, to say nothing of new industrial enterprises proposed on all sides?

Three means of expanding resources in time of pressure were suggested.

The first was that the Government should definitely undertake to make advances to the banks in time of pressure. I lay stress upon the word 'definite,' and I may quote a passage from the letter of the Madras Chamber of Commerce. 'It is absolutely necessary,' writes the Chamber, 'that any arrangement of this kind should be definite so that the banks could obtain funds, when necessary, at a moment's notice.'

The Madras letter hits the nail on the head, but, and I need not labour the point which was unanimously recognised in our discussion last week, it is simply impossible for the Government to pledge themselves by any definite assurance, and to give the banks an open credit to operate upon. When pressure occurs in India, it is usually general and extends to the Government, and the Government might very well find itself absolutely unable to provide loans. The limits of Government action in this direction have, moreover, recently been laid down by the Secretary of State, and it is within these limits that Government assistance must necessarily be confined.

An alternative remedy has been proposed by the Bank of Bengal, that Government should undertake, when the bank rate rises to a certain height, to give loans from the coin reserve of the Paper Currency Reserve. The proposal is open, in my mind, to fatal objections. It is the duty of Government to keep a coin reserve sufficient to ensure the convertibility of its notes. If the proportion of coin to securities in its total reserve is large enough to allow of loans being made, then that proportion is unnecessarily large. In such a case securities should be substituted for superfluous coin, and the general taxpayer, not any particular section of the taxpayers like

the banks, should benefit thereby. The coin reserve should be exclusively devoted to ensuring convertibility, should be limited to what is necessary for that purpose, and should be held sacred. The answer was made last week in the course of our discussion that the German system—now so generally, and in my opinion, rightly, held up to admiration—of issuing uncovered notes on payment of a tax implied possible resort to the currency reserve for cashing such notes. This may be admitted. But the difference is that in Germany the notes circulate freely as currency, whereas it is very doubtful whether this would be the case in India, where the demand is for hard cash. The mere existence of this doubt, which was, I think, admitted by every one who took part in the discussion, makes an enormous difference, and, moreover, if Berlin or Paris want reinforcements of gold, they can procure it in a few hours from neighbouring centres. India is cut off and isolated, and must proceed with great caution. Her cash reserve must be regarded with the utmost jealousy.

“The third remedy proposed was that the banks should be given access to London—in other words should be allowed to pledge securities and raise money in London. It was argued that the permission to pledge and borrow in India, which had been extracted from the Secretary of State in 1878 after years of correspondence, had remained a dead letter owing to the peculiar circumstances of India. The objection taken by the Secretary of State to extending this permission to the London market, the risk that the banks might engage in exchange business into which, owing to the great uncertainty of exchange, a large element of speculation entered, may also, it was urged, and I certainly believe, be considered to have disappeared. But I was obliged to point out that the Secretary of State had founded his refusal not only on the question of exchange, but had no less strongly objected to the risk of the resources of the banks being locked up in London. Nothing had happened since 1878 to meet that particular objection. On the contrary, the trade and needs of India have largely increased and banking resources have scarcely increased *pari passu*. I was also compelled to draw attention once more to the relation of the Government deposit to the bank's cash balance in the busy season, and to cite Sir J. Westland's well-known criticism. That criticism has been a good deal disputed. It has been said that the cash balance is not derived principally from one account, but is made up from all accounts. I am perfectly certain that Sir J. Westland would be the first to admit this obvious truism. It has also been said that the Government would not deplete its balance with the banks of, say, 1½ crores, exclusively and primarily, but would draw upon its general balance of eight to ten crores, of which the balance with the banks only forms a part. This is an equally obvious truism, and it is absurd to suppose that my predecessor had not reckoned with it. But Sir James Westland's criticism is really unshaken, inasmuch as he insisted that a situation is unsound when one depositor—and that depositor a depositor peculiarly exposed to sudden calls and contingencies—is placed in a position in which he could and, indeed, might be obliged, very suddenly, to deplete the cash balance to a serious extent.

“Indeed, on looking closely into the figures, I find that there have been months in which the Government deposit exceeded the whole cash balance of the banks. Not long ago, at one bank the Government deposits exceeded the cash balance by 17 per cent.

“Nowhere is such a position so unsound as in India—where, as the Secretary of State has pointed out, the cash balance is so important a banking factor. The banks have excellent reserves, but could their securities be converted into liquid cash in India at a moment's notice? The Bank of England is far more fortunately situated, but the Bank of England nevertheless keeps the proportion of the exchequer balance to the cash balance within such limits that the sudden total withdrawal of the exchequer balance would hardly affect the bank.

“I am, therefore, compelled to the conclusion that it would be out of the question for the banks to press this proposal, greatly advantageous as its concession would be, unless they propose it under circumstances that may allow of its being entertained with safety, and couple it with the prospect of some increase in capital. That an increase of capital should be expected

to go straight away into a cash balance and reinforce it for any period is, of course, absurd. I only mention this, because the imputation has been made that misapprehension exists on this point. But an increase of shareholders' capital, which would obviously find employment in the busy season at any rate, would involve a corresponding increase in the cash balance, and would relegate the Government deposits to a position of less dangerous importance.

"Another objection to the proposal of the banks under existing circumstances would, I think, be the consideration that, though access to London might conceivably be granted to one strong Indian Bank connected with Government, the question would wear another aspect if three banks are to seek for access. The Government could follow and, if necessary, perhaps influence the operations of one bank. It would not be so easy to do this with three banks, and the possibility of three Presidency banks, each connected with Government, competitively pledging Indian securities against each other in London could scarcely be viewed with favour.

"It seems, therefore, that if access to London is of paramount importance, and it would appear to be so, as I am convinced of the absolute necessity of the banks having a last resort, the fusion of the banks and an increase of their capital are conditions that are inevitably precedent. I may say that, if those conditions were complied with, access to the London market for the purposes indicated by the banks would undoubtedly seem to be highly desirable and strongly to be recommended.

"Another point which was discussed at our meeting last week, that of the desirability or otherwise of transferring the note issue to the banks, immediately confronted us again with the question of their fusion and expansion. A transfer which might be advantageous and feasible if made to one Central Bank would probably be impracticable and attended rather with disadvantage than otherwise if three banks were concerned. The conditions of a transfer of the note issue that were discussed were that the existing note issue should be made over to a single bank, Government retaining the profit on the present currency investment, but indemnifying the bank for the cost thereof from the sum now allotted for that purpose. And, as regards any further issue of notes, the bank would be obliged to keep a reserve partly in coin and partly in securities and would gain the profit on this investment after defraying the cost of the additional notes. Whether a Central Bank should or should not undertake to cash its notes without discount at the three Presidency Capitals, is to my mind a matter for further examination. It would be much to the public advantage if this could be done, and possibly the expenditure involved in such a liability could be made up to the bank in one form or another.

"To recapitulate, I may now say that it seems to me most desirable in the interest of the general development of India, and of railway construction and municipal enterprise in particular, that the class of business in which the banks may engage should be extended. It is even more important that an ultimate banking resort should be afforded to the banks, and that access to London should be authorised. I am therefore prepared to press these questions earnestly upon the Government of India, provided that the conditions are forthcoming, which would justify and render practical such important changes, namely, that the Presidency Banks should amalgamate and should undertake some increase of their capital. It would also, I think, be to the general advantage to transfer the note issue to a bank, but this question is not so essential, although I should be ready to support such a measure. I may perhaps, before concluding, advert to some objections that have been made to any scheme of this kind. It has been stated that the banks would be sacrificed to some financial Moloch in London. As the existing shareholders, I imagine, would have some prior right to subscribing to new capital—as much of this capital, I hope, would be subscribed in India—it seems to me that this apprehension melts into thin air, so long as we deal with a scheme based upon amalgamation. Moreover, I take it that the interests of existing shareholders would assuredly not be prejudiced. It is to be surmised that they would receive new shares equivalent to the average market value of the old shares that would be cancelled, while at the

same time, they would participate in the prospects and advantages opened out to a larger institution

"It has also been objected that local requirements would receive less attention, and that union would mean subordination of one or two Presidencies to a third. I cannot conceive for a moment that the Government of India would tolerate any scheme of fusion involving the subordination of one Presidency to another, or the neglect of local requirements. I would, certainly, Your Excellency, never have the hardihood to bring a proposal of this nature before you. The amalgamated banks, in my view, would have the advantage of an expert direction in London particularly conversant with both the English and Indian money markets, elected by and responsible to the shareholders, who would be mainly in India. In India itself there would be a central management apportioning its time and energies between the various centres, and in close relation to local directorates at the Presidency towns. Nothing would be more unwise for such a bank, as I have ventured to foreshadow, than to deprive itself of the valuable local knowledge, skill and experience of the existing directorates and managements of the Presidency banks. Nothing would better safeguard local interests, wants and requirements than a continuance in a new form of existing local experience.

"In so roughly summing up the policy which may be recommended to the Government of India, a last objection appears to be entertained in some quarters outside the Presidency Banks themselves—and is specifically touched upon in my Honourable Colleague's question—the objection that a bank formed from the union of the three Presidency Banks would monopolize exchange business of all kinds. I would remind those who may be apprehensive on this point that, when the Presidency Banks in 1877 addressed the Government of India upon the question of borrowing in London, they themselves proposed restrictions which would confine them to raising money by pledge of assets and to making remittances in payment of stock or other authorized investments and in repayment of loans. I see no reason why these restrictions should not be maintained.

"I am painfully aware that in so rough a sketch and in so rapid a survey of a matter of this magnitude and importance, many details have been omitted, and many points passed over, which require explanation. But if the policy I have attempted to indicate should find favour, I believe that with the able co-operation of the Chambers of Commerce and of the Banks, these details could be filled in, and any outstanding differences could be adjusted. That co-operation, I, know, is always willingly given to the Government of India, and perhaps I may express the sincere hope that Your Excellency's Viceroyalty may see the establishment of the gold standard, followed by a comprehensive measure which will give India the full advantage, through access to London, of the new currency upon which she has embarked, and will remedy a situation which is on all hands admitted to be wholly unsatisfactory, to be daily becoming more unsatisfactory, and to be gravely prejudicial to the development of the country."

No 17, dated 18th January 1900

LETTER from the GOVERNMENT OF INDIA to the SECRETARY OF STATE  
FOR INDIA

In continuation of our despatch No 301 of the 24th August, we have the honour to address Your Lordship, on the subject of banking facilities in India. The necessity for dealing with the subject, which we explained in that despatch was emphasized by the circumstances attending the receipt shortly afterwards of an urgent request from the Government of Bombay to authorize the Presidency Bank to deal in the securities of the Bombay City Improvement Trust. As these securities stand in the category of securities of Companies and Railways guaranteed by the Government of India, we had no hesitation in acceding to the wishes of the Bombay Government, and we made the necessary addition to Section 36, subsection 3, of the Presidency Banks Act, which limits the Presidency Banks to dealing in the securities of

Railways or of other Companies, the interest whereon shall have been guaranteed by the Secretary of State in Council. But while this legislation was pending, we also received representations from the Madras Government and Presidency Bank of Bengal, asking respectively that the Banks should be empowered to deal in the securities of District Boards issued with the authority of Government and in the securities of Assisted Branch Lines. The request regarding the securities of Assisted Railways was not new, and had already been rejected by Lord Elgin's Government.

2 We determined that it was not possible to reverse this decision upon such short notice, and without full consideration of the question whether the circumstances of the Banks rendered the relaxation of the Act advisable, and that the same objections must be entertained to the proposal of the Madras Government. At the same time looking at the matter from the standpoint of railway development, we were impressed by the advantages of enabling Branch Lines to procure the readiest and most immediate financial support. The District Boards also have a claim to similar facilities. The discussion of these questions arose shortly after we had received the report of the Currency Committee, with the expression of Your Lordship's views thereon, in which our particular attention was invited to the separate recommendation made by Mr Hambro in favour of constituting a strong Central Bank in India. The importance given to this subject in the subsequent debate in the House of Commons on the Budget Statement and the numerous complaints made by witnesses before the Currency Committee of violent fluctuations in the rates of discount in India and of recurring periods of stringency in the money markets of Calcutta and Bombay confronted us with much wider questions than the particular issues raised by the banks. It was necessary to consider whether banking resources have kept pace with the growing trade of India, and whether the whole trade of India is not being financed on too narrow a basis, in short, whether a general revision of the banking arrangements in India is not desirable.

3 We decided, therefore, to elicit the views of the Local Governments, the Chambers of Commerce, and of the Presidency Banks on these important questions. Basing our action upon the request put forward by the Banks of Bengal and Madras, we sent round a circular letter, copy of which is enclosed. In it we invited an expression of opinion as to whether the Presidency Banks Act should be amended so as to allow of their dealing in the securities of Assisted Railways and District Boards, and whether the existing capital of the Presidency Banks was sufficient to admit of these larger powers being given them. Copies of the answers received from the Chambers of Commerce and from the Presidency Banks are enclosed, and any further answers that may reach us from the Local Governments shall be duly forwarded. A perusal of these letters, which contain much information and valuable suggestions, will, we think, leave upon Your Lordship's mind the impression that many of the opinions recorded required further elucidation and were peculiarly conditional in character. It was, therefore, arranged that our Honourable Colleague in charge of the Finance Department should meet the representatives of the Chambers of Commerce and Banks in a free and informal conference, with a view to an interchange of explanations. The result of that conference, as was stated in the answer given by our Honourable Colleague in the Legislative Council on the 5th instant, revealed a much greater degree of agreement between the Government and the various institutions concerned, and between the various institutions themselves, than appeared from the letters themselves. We do not wish to press this point unduly or to convey the idea that there are no outstanding differences of opinion. But having regard also to the change which has come over the attitude of the principal organs of the press towards these questions, we venture to think that there is, at any rate, sufficient agreement to render probable ultimate acquiescence in certain recommendations which we desire to make, and that we are not inviting Your Lordship's consideration to a matter which will have no practical issue.

\* \* \* \* \*

5. In dealing with the second point, whether the existing capital of the Banks is sufficient to admit of the wider powers advocated being granted to them, it will be observed that the Chambers of Commerce and the Banks preferred to pass at once to the larger question of the general banking resources of India. There is a remarkable unanimity of opinion that, though the Banks find it difficult to employ their capital profitably in the dead season, yet in the busy season their resources are inadequate. The Bengal Chamber, for instance, is 'convinced that in the busy season the banking facilities in India are not sufficient for the trade and satisfactory development of the country, and that at times of pressure the existing arrangements for giving relief to them are quite inadequate.' It would be impossible, looking at the history of recent years, to dispute the correctness of the statement. But if the resources of the Banks are not more than sufficient to meet the ordinary requirements of the present trade and development on the average, it may be asked where the margin is to be found for financing railways and municipal or district undertakings without prejudice to existing interests? The allegation, again, that the Presidency Banks cannot profitably employ their capital in the dead season must be regarded in the light of the employment which they find for their capital during the whole year, for though the dead season, which is becoming less marked, may still be more marked in India than elsewhere (and in all countries there must be relatively busy and relatively idle seasons), yet the large and steady profits of the Banks and the important sums put away to reserve sufficiently indicate profitable employment of their capital in any twelve months.

6. Your Lordship will further observe in the correspondence that the Banks draw a distinction between shareholders' capital and banking resources in general, with particular reference to facilities for temporarily expanding banking resources other than permanent capital. The word "capital" was advisedly used in our reference to the Chambers and Banks. It was not forgotten that permanent capital might be supplemented by other facilities such as the banks have indicated. But we felt that other facilities depended, to a great extent, upon an increase of capital, and were conditional upon it. Attention had been repeatedly drawn before the Currency Committee to the dangerous tendency of the Banks and of trade generally in India to look to the Government in any difficulty. That tendency cannot be corrected unless the Banks can look to some stable and permanent resources of their own. It was, moreover, within our recollection that when the Bank of Bengal advocated the amalgamation of the Presidency Banks in 1867, it was proposed, and the proposal apparently commanded assent, that the capital of the united Bank should be 5 crores. Yet the capital of the three Presidency Banks was then double the amount it had stood at six years previously, while there has been no increase since. We also bore in mind the undesirable proportion which the Government deposit often bears to the total cash balances of the Bank, the Government balances having on some occasions actually exceeded the total of the cash balance at individual Banks. Such a proportion cannot, we think, be rectified unless the banks attract more deposits and open more branches, which would be rendered possible by an increase of permanent capital. The number of branches has remained virtually stationary in late years, while several local Banks with very moderate capital have sprung up and attract very considerable deposits. But it cannot be said that these local Banks occupy the whole field, and we would invite Your Lordship's attention to the serious claim put forward by the Upper India Chamber of Commerce for the establishment of branches by the Banks which enjoy the advantages of the Government balances. Generally speaking, moreover, we reflected that the growth of trade and the development of India in recent years render necessary some increase of permanent banking capital, and if the local Banks to which we have referred above have to some extent met this want, it is probable that the withdrawal of capital by other Banks with head-quarters in England concurrently with the fall in exchange has more than counterbalanced this re-inforcement. These observations will, we venture to think, be borne out by an examination of the various measures suggested to provide for temporary expansion of banking resources.

7 It will not be necessary to deal at much length with the first measure suggested, namely, that the Government should undertake to make advances to the Banks in time of pressure. But to obviate any possible misunderstanding, we may explain that this is in nowise a question of the return by Government into the general circulation of money raised by taxation. Experience has proved in India—on two occasions at least prior to the establishment of the Government Reserve Treasuries the banks demurred to the Government drawing out its own deposits freely—that a certain sum must be kept apart under the absolute control of Government, while, in addition to the Reserve Treasuries, there are also treasuries at places where the banks have no branches. It is from these sources that the Banks desire to receive advances. But no undertaking of this kind on the part of Government would meet requirements unless it were unconditional, for, as the Madras Chamber of Commerce justly observes, “it is absolutely necessary that any arrangement of this kind should be definite, so that the Banks could obtain funds, when necessary, at a moment’s notice.” It would be manifestly impossible to give any such pledge. Monetary pressure in India is usually general, and the Government, not being exempt from sudden calls at such times, might very well find itself absolutely unable to advance funds when urgently called upon to do so. We recognize the desirability of affording relief to the public when practicable, but the limits within which this can be done have recently been laid down by Your Lordship, and beyond those limits it would not be possible to travel. Moreover, regarding the general danger involved in the financing of trade by Government we have before us the words of Lord Salisbury’s despatch of 6th May 1875: “Capital supplied by Government, and not representing the savings of the community, is a resource on whose permanence no reliance can be placed, and which therefore tends to lead traders into dangerous commitments.” The warning conveyed in those words still holds good.

8 An alternative measure suggested by the Bank of Bengal is that, when the Bank rate rises to a height that indicates undue pressure, loans should be made from the coin reserve of the Paper Currency Department. This is a suggestion which is open to fatal objections. Our duty, as we conceive it, is to maintain that proportion of coin in our total currency reserve which is necessary for ensuring convertibility. If the proportion were large enough to admit of loans being made therefrom, then it would be unnecessarily large, and the general taxpayer, not any particular section of the community like the banks, should benefit by the substitution of securities for superfluous coin. It has been urged in answer that the German system, which now finds so much favour, of allowing the issue of uncovered notes on payment of a tax implies possible resort to currency reserves for encashing such notes. And the difficulty of giving out coin from the Paper Currency Reserve might, it is contended, be obviated by the Government loans being made in the form, not of coin, but of uncovered notes, on payment of a sufficiently high rate of interest for this accommodation. We are not prepared to negate this modified suggestion absolutely. But we may point out that in Germany notes circulate freely as currency, and in India the principal demand in times of pressure is for hard money up-country. India, moreover, is peculiarly isolated and could not, like Germany, procure a reinforcement of gold from a neighbouring market. We propose, however, to return to this subject again.

9 The third measure proposed for securing an ultimate banking resort is that the Banks should be given access to the London market in other words, should be allowed to pledge securities and raise money in London. The permission given by the Presidency Banks Act of 1876 to deal in the securities of the United Kingdom has remained a dead letter, and the authorization conferred by the amending Act of 1879, to pledge and borrow, as long as it is confined to India, will also remain a dead letter, while, it is forcibly insisted, one objection then urged to extending the concession may be considered to have happily disappeared, namely, the risk of the Banks becoming engaged in exchange business into which, until recently, there entered a large element of speculation. The objections of Your Lordship’s

predecessor to extending the permission to England were not, however, limited to the question of exchange. He was no less strongly opposed to the proposal on the ground that no risk should be incurred of the resources of the Banks being locked up in London when they might be required in India. It does not seem to us that whatever force there was in that objection has been at all removed by the subsequent course of events. On the other hand, the position of the Presidency Banks in one important respect, which has been commented upon by Your Lordship, has certainly not improved. We refer again to the proportion of the Government balances to the total cash balance of the Banks in the busy season. There have been occasions in recent years in which the Government deposits have exceeded the total cash balance of an individual Bank by 10 to 17 per cent. The Presidency Banks have excellent reserves, it may readily be admitted. But these reserves could not, in the peculiar circumstances of India, be suddenly converted into cash, and it seems therefore eminently undesirable that the account of one depositor, and that depositor a Government exposed, as the Government of India is, in a most unusual degree to sudden calls and emergencies, should occupy a position of such dangerous importance. To look to no graver contingency, it is clear that a sudden call by Government for its money would influence discount rates in a manner which would seriously hamper trade. It would therefore be a doubtful experiment to allow to Banks, so situated as regards their cash balances and the possibility of realizing their investments, freedom in operations outside India, or to encourage the trade of India to look upon this remedy as sufficient in itself. Recourse to the London market might indeed not always even be practicable, and even if it were practicable, and were undertaken to increase temporary resources, the operations of the Banks, however beneficial in one direction, might involve questions of repayments and renewals of loans which would create a new element of uncertainty, and might interfere with the discretion of Government as regards its deposits. While we do not, therefore, dispute that it would be advantageous under altered circumstances to give the Banks a last resort in London, and while we fully admit the desirability of contributing to facilities for temporary expansion of resources, it is to an increase in their permanent capital which, finding employment in the busy season at any rate, would lead to larger balances, that the trade of India has a right to look primarily for adequate relief. The question of allowing access to London, again, wears a different aspect when examined in relation to three Banks from the complexion that it would assume in relation with one Central Bank. It would be more difficult to follow the operations of three banks than of a single institution, and we could not contemplate with equanimity the contingency of three Presidency Banks all connected with Government, competitively pledging Indian securities in the London market.

10 Another important point which arose in the course of the recent discussions with the Banks was the question of transferring the note issue to a single Bank. The transfer of the note issue to more than one Bank has not even been suggested, and indeed it is not necessary to mention it. The conditions of a possible transfer to one Central Bank that have been suggested are as follows. The existing note issue, with the custody of the reserve placed under Government supervision, should be made over to a Bank, Government retaining the profit on the present currency investment, and indemnifying the Bank for the cost of the note issue from the sum now allotted in our estimates for that purpose. As regards any further issue of notes, the Bank would keep a reserve under Government inspection of one moiety in coin and one moiety in approved securities, and would receive the net profit on these additional issues. This is a proportion which is generally favoured by modern authorities, and that was recently adopted, with the concurrence of Her Majesty's Treasury, when the new National Bank of Egypt was founded in 1898. In no case should the existing notes be suddenly withdrawn. They might be replaced as outstanding notes are withdrawn by new notes of the Bank if it were decided that the Bank should issue a new form of note. But as any change in the form of the note might involve temporary contraction in the paper circulation, as change in such matters is peculiarly undesirable in India and as the reserve would be under

the supervision and control of Government, we should have no objection to the notes continuing in their present form, with the possible addition of the name of the Bank and the counter signature of the officer employed to supervise the reserve. We are of opinion, though not forgetting the objections that have been previously raised to such a course in India, and indeed recently adverted upon by so high an authority as Lord Northbrook, that there is nothing in the peculiar circumstances of India to prevent the note issue being transferred to a Bank. We are, moreover, disposed to believe that it is through the agency of a Bank that the note issue may have a larger development in India. An ulterior advantage to which we would look in the transfer of the note issue would be the encashment without discount of the notes at the three Presidency towns at least. It is possible that this undertaking would in the beginning involve some outlay on the part of the Bank. We are not without expectation, however, that arrangements could be made for meeting this difficulty, and the abolition of our currency circles is a matter, apart from any question of transferring the note issue, that calls for attention.

11 But while we see advantages in the transfer of the note issue to a Central Bank, and should favourably regard any proposal in that direction, we do not regard the transfer as absolutely essential or as one of the remedies which the present situation imperatively demands. Moreover, we realize that the transfer must involve Government in some expense, and render necessary the increase of our cash balances by at least two crores, and possibly by a greater amount, owing to the assistance which our Comptroller General now derives from the currency chests in his resource operations. We refer to a system which has gradually grown up in India. The Comptroller General, for instance, on receipt of land revenue up-country, say at Umballa, directs a certain amount of this receipt to be passed into a currency chest at Umballa, and after telegraphic intimation that this has been done releases a corresponding amount of coin in the Calcutta Paper Currency Reserve to meet Your Lordship's Council Bills or other disbursements. The amount passed into the currency chest at Umballa is not sent down to Calcutta to fill up the void created—that void is filled up as rupees gradually accumulate in Calcutta, and eventually the rupees in the Umballa currency chests are passed over to the General Treasury at that place. Strictly speaking, no doubt, the coin reserve should be held at the place (Calcutta) where the notes can be presented for payment. But in an emergency the rupees could, there is little doubt, be sent down from up-country to Calcutta in time to meet demands, while the expense of actual remittances of coin is avoided, and the Comptroller General is enabled to work with lower balances. The system, however, has perhaps been unduly extended in recent years, and we propose rather to curtail it. One result of any transfer of the note issue to a bank would be to prevent our Comptroller General helping himself with the currency chests as at present. The increase in his balance which would, on this hypothesis, be rendered necessary might be met by substituting two crores of new securities for two crores of rupees in the currency reserve, and placing the two crores of coin in the general balances. We should view such a substitution without any alarm. It appears to us that the existing coin reserve, 17 crores of coin as against 10 crores of securities, is unnecessarily large. The use to which the coin reserve has been put under the system just described, and the readiness with which the banks and Chambers of Commerce indicated it as a source for loans, bear out our contention. We would prefer to advance gradually to a situation in which one-half of the Paper Currency Reserve should be in coin and one-half in securities. And, whether the note issue remains with the Government or is transferred to a bank, the profit on the increase of securities might with propriety be devoted to securing the abolition of the eight currency circles or the encashment of all notes at the Presidency towns.

12 We trust that the foregoing remarks will have made it clear to Your Lordship that it is desirable to relax in certain directions the restrictions now imposed on the class of business which the Presidency Banks may transact, but that it would be imprudent to relax those restrictions under existing

conditions. It will also be apparent that the general banking system is unsatisfactory, but no less apparent that the remedies proposed would be of doubtful efficacy in present circumstances, and that they could not be recommended unless the Presidency Banks unite their resources and improve their position. Objections, however, have been urged to the fusion of the Presidency Banks in spite of the general advantages derivable from amalgamation. But these objections are largely based on misapprehensions, and would, to a great extent, be removed if the principles on which amalgamation should be affected are explained. It is not the case that Indian interests would not be consulted. The existing shareholders of the Banks would justly claim a prior right to subscribing for new capital, and a very large proportion of that capital would, without doubt, be subscribed in India. At the same time the interest of the shareholders in their present property would be strictly conserved and safeguarded, while they would participate in the prospects and advantages opened out to a larger institution. No local requirements be sacrificed or one Presidency be unduly subordinated to another. Nothing would be more unwise than to discard the valuable local knowledge, skill, and experience of the existing directorates and managements of the Presidency Banks. Such local experience would no doubt be continued in the form of branch directorates related to a central management, apportioning its time and energies between the various provinces, and supervised by an expert direction in London. The assent has also been made that no increase of permanent capital is necessary. In this opinion we cannot agree, and we trust our arguments will have convinced Your Lordship that the Banks must strengthen their position in this respect. We will only add, though we strongly recommend that an amalgamated Bank should be given a last resort in London under proper conditions, that such a Bank will thereby become the last resort in India, and that both the Government and the trade of India have a right to look for ample strength in such an institution. The objection has proceeded in some measure from exaggerated ideas of the fresh capital which the amalgamated Bank would be expected to raise. We believe that an amount of three crores, equal to two million sterling, would be sufficient to ensure stability and would have every prospect of being fully utilized in a short time. There is no reason, in our opinion, to go beyond this limit, but we admit that the exact amount of fresh capital is a question which may be left for further discussion with the Banks and Chambers of Commerce, if they assent in principle to an increase. There still remains one objection in connection with allowing a Central Bank access to London, which has been pressed upon us by the Exchange Banks who apprehend that such a bank, enjoying the use of the Government balances and possibly entrusted with the note issue, would be placed in a position of unfair competition with themselves. We cannot see that the Exchange Banks make out a strong claim for protection, and a suggestion which has been made that a Central Bank should be bound to make any and all remittances through their agency is out of the question. But there is no desire to disturb existing business unnecessarily, and we think that the restrictions proposed by the Presidency Banks in 1877, namely, that they should be confined to raising money by pledge of assets and to making remittances in payment of stock or other authorized investments purchased or acquired for the Bank in England, and in repayment of loans arranged for them, might be maintained.

13 To a bank of this character constituted on a sterling basis we should have no objection to transfer our note issue on the conditions recited. The question would then arise to what extent the coin reserve should be held in gold or silver, both metals being unlimited legal tender in India. The experience which we shall shortly acquire of the facility or otherwise with which sovereigns will pass into the general circulation of the country may enable us to advise Your Lordship further on this important point. We would be inclined at this juncture to say that the Bank should not hold less than five millions in gold, this being the minimum gold reserve that we contemplate maintaining for the present, as explained in our despatch of the 14th December last. By minimum we mean a minimum amount except in so

lar as this might be temporarily reduced and replaced by silver through the action of Government. For the gold reserve, whatever its amount, should be so far at the disposal of Government that Government should have the right to take the whole or part of it over at any time on paying into the reserve the equivalent in rupees. As regards paying out gold, the Bank should occupy the same position as the Government of India occupies at this moment, or as the Bank of France holds, namely, that it should be under no legal obligation to pay out gold. Ultimately, perhaps, and in agreement with the Bank, certain classes of notes might be declared payable in gold at the option of the holder. But there is no present necessity for entering on this question.

14 We have also carefully considered, in connection with the establishment of a strong Central Bank, whether the German system of issuing uncovered notes on payment of a tax could not be introduced. In our opinion, if it were possible to adopt such a system at all, it would be greatly preferable to adopt it in connection with a bank, to which the note issue had been transferred. Theoretically we admit that the system might be grafted upon the present management of the paper currency by Government. But a bank would be able to measure the need and extent of accommodation much better than a Government could hope to do, and we believe that in all countries where it has been adopted, the agency of a bank has been chosen for working this system. Moreover, in India recourse in any form to a currency reserve in the hands of Government would encourage the dangerous tendency to look to and rely upon Government exclusively. From this point of view there would be particular objections to applying the system to the currency reserve while it remained under Government control. We have stated above that the demand in India being generally for hard cash it is probable that a very large proportion of any uncovered notes issued would be immediately passed into the bank for cash. But only experience could show what that proportion would be, and it may be found that the notes would return less rapidly than is anticipated, while the authorisation might prove a useful alternative last resort to the bank in the case of the London Market being temporarily unavailable. The Bank of Bengal, indeed, claims that in 1860 the Bank, which then possessed the right of note issue, did, under the sanction of Government, successfully avail itself of this expedient during a monetary crisis. But we think that there were circumstances on that occasion which do not allow the instance cited to be regarded as a complete precedent. We would, on the whole, recommend that a Bank, fulfilling all the other conditions we have enumerated, should be allowed to issue uncovered notes upon the payment of a tax of 10 per cent.

15 It must also be expected that a Bank of this standing will claim, with some reason, the suppression of the Reserve Treasuries, which are a necessary but undesirable contrivance, and the gradual transfer to itself of the whole Government balances at head-quarters. It would, however, be unwise and impossible to make any pledge on this point. The larger the Bank's resources are, and the more extensive the area covered by its branches, the easier will it be for Government to proceed in the direction here indicated.

16 In conclusion, we may perhaps be allowed to express the belief that, if Your Lordship finds it possible generally to accept the recommendations we have put forward, remedies may be found for a situation admitted on all hands to be unsatisfactory, and to be becoming more unsatisfactory every year. We should then look to a control being exercised over the money market which the Presidency Banks do not pretend to have gained, to greater efficiency and to unity in the management of banking resources, to a more rapid return into the general circulation of money raised by taxation, to an accelerated development of railway and other enterprises, and to a relative steadiness in the rates of discount which would be of vital importance to sound business in this country. It is only through some comprehensive measure of this character, which would increase the permanent banking resources of India while at the same time opening the door

to a last banking resort, that India may count upon reaping the full advantage, through access to London, of the currency policy upon which she has embarked

Letter from the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA,  
No 56, dated 22nd February 1900

MY LORD,

WE have the honour to forward, for your Lordship's information, a memorial addressed to his Excellency the Viceroy, in which the Exchange Banks of Calcutta protest against the suggestion that a new bank formed by the amalgamation of the three Presidency Banks should be allowed to borrow in London by pledge of assets or otherwise and make remittances to England by bills of exchange or otherwise in repayment of loans and also in payment of the price of stock or other authorised investments purchased or acquired for the bank. The Memorialists admit that they can have no objection "to the mere amalgamation of the Presidency Banks," and their specific prayer appears to be confined to the suggestion in the 21st paragraph that the sterling transactions of the proposed Bank of India "should be confined to the shipment and re-shipment of gold, and that the bank should be prohibited from selling or buying sterling bills or selling or buying telegraphic transfers save, of course, through existing channels, namely, the Exchange Banks."

2 As your Lordship will now have learned from our Despatch No 17, dated the 18th January 1900, the suggestion which has aroused the apprehensions of the Memorialists has been definitely adopted by our Government and submitted for your Lordship's approval. Our despatch contains a full statement of the grounds on which our proposals are based, and in particular includes a brief expression of our views on the claims now urged by the Exchange Banks. We should have been content to forward the present memorial without comment did we not think it due to the Memorialists and the important interests that they represent to show that we have not failed to give the fullest consideration to the objections and suggestions that they have put before us.

3 It is stated by the Exchange Banks in the first and second paragraphs of their memorial that for the last forty years they have "practically financed the whole export and import trade of the country," while the Presidency Banks have devoted themselves entirely to financing the internal commerce. We cannot for a moment admit the correctness of this assertion. Though the Presidency Banks have hitherto been prohibited from engaging in exchange operations their resources (and through them the resources of the Government also) have been freely placed at the disposal of all sections of the commercial community, including the Exchange Banks themselves who now imply that they have financed the whole foreign trade with their own capital exclusively. On this point we may let the Memorialists speak for themselves. In December last the associated Exchange Banks deputed two representatives (who are among the signatories of this memorial) to meet our honourable colleague in charge of the Finance Department and to urge upon the Government that any loans made by the Government should be made equally to the Exchange and to the Presidency Banks. When it was intimated that the Government would be unlikely to depart from their past practice of giving all loans *through* the Presidency Banks, the deputation asked that the Presidency Banks should not be permitted to pass on the Government money except to the Exchange Banks, or at any rate that the Exchange Banks should have the first call on it to the exclusion of local banks and merchants, European and Native. A few weeks later the Government were suddenly and urgently pressed by the managers of two of the Exchange Banks to advance Rs 30 lakhs to the Bank of Bombay. It was represented that unless the money was forthcoming, there was danger of a serious commercial crisis, and of an important failure. The Exchange Banks, it was explained, would not provide money for their customers, though money could be obtained in a few hours under Act II of 1898, because they objected to buying telegraphic transfers at the rate at which your Lordship was then selling. Sooner than

have recourse to this means of obtaining funds they frankly preferred to let the crisis come. Happily the crisis was averted, mainly, we believe, by the action of one of the Presidency Banks.

4 It would therefore seem that the impression conveyed by the opening paragraphs of the memorial requires some qualification. At least it is not clear that the foreign trade of India can invariably rely upon being financed by the Exchange Banks, who, very naturally and properly, employ their money wherever it can be employed to most advantage, nor is it certain that the Exchange Banks are free from the besetting tendency to look to the Government balances instead of to their own resources. The recommendation, therefore, that the proposed amalgamated bank should be allowed, under certain restrictions, to borrow in London is not ruled out of court *in limine* by the consideration that the foreign trade is already amply financed by institutions exclusively employing their own capital.

5 But the serious objections of the Memorialists are that the restrictions which it is proposed to place upon the operations of the projected bank are insufficient, and will expose them to dangerous competition. Moreover, they argue that the competition to which they fear to be exposed will not merely be the competition of a rival institution, but the competition of an institution "with all its contemplated resources and privileges and prestige as a State bank." We desire, as we stated in our previous despatch, to avoid any unnecessary disturbance of existing business, and we regret that the advocacy of powers to borrow in London has aroused such deep apprehension. But we cannot but consider that this apprehension is much exaggerated. We can see no reason why a bank of India should not make its own remittances, the restrictions which we have proposed and which are correctly<sup>\*</sup> stated in the fourth paragraph of the memorial, will prevent it from doing more. We could have wished that this contention of the banks, which appears to us to be untenable, had been supported by some clearer indication of the actual manner in which the competition they deprecate may be expected to prove unfair and injurious. The demand that the Presidency Banks should have power to borrow in London is supported by practically every merchant in India, and will be still more vigorously supported if your Lordship should negative the proposals which have been made in several quarters for the free use of the Currency Reserve for loans.

6 We are at some loss to understand the further allegation of the Exchange Banks that they will not only be exposed to competition but to the competition of a State institution, or to follow the argument that the proposed legislation "will tend to an absolute reversal of the policy of 1876 when the Government retired as much as possible from all connection with the affairs of the Presidency Banks, except so far as to keep a portion of their balances with such banks." The term State Bank can of course be used in several gradations of meaning, and seems to be so used in this memorial. The Memorialists, indeed, appear to argue that any bank, the custodian of the public balances, must necessarily be a State Bank. If this is their real meaning, it would be fair to conclude that they consider the Bank of England is a State Bank, which is notoriously not the case in the accepted meaning of ordinary language. But we imagine that they would not admit this conclusion, and we doubt whether they would deny that Government, without any question of constituting a State Bank, is entitled to use a bank, in a department separated from the Banking Department proper, as its agent for the management of its note issue. This is the relation between Her Majesty's Government and the Bank of England, and we propose to reproduce this arrangement in India with the modification that a link may be established between the proposed banking and issue departments, if your Lordship assents to the adoption in any form of the German system of authorising the issue of uncovered notes on payment of a tax. But this is a point not touched on by the Memorialists, and the arguments that they direct against State competition seem hardly germane to the discussion of a project in which State intervention is restricted within such well-defined and well-recognised limits.

<sup>\*</sup> Except for the use of the word "India" instead of "England" in the last line but one of the paragraph.

7 We notice, moreover, that the Memorialists have no objection on principle to our allowing resort to the currency reserve in times of financial stress, indeed they suggest this expedient as an alternative to the augmentation of banking capital. In our despatch of the 18th January we have explained our objections to this proposal, and we should not further discuss it here, but that the Memorialists have sought to justify it by a reference to the occurrences connected with the failure of the old Bank of Bombay in 1868. It will be well for us to recall the circumstances which render this precedent inapplicable. In June 1865 a severe commercial crisis occurred in Bombay, and there was a run on the bank, which was already crippled by reckless management. The Governor of Bombay telegraphed that unless he could give an assurance that the Government was prepared to advance the bank Rs 150 lakhs from the currency reserve there would be a great danger of the bank suspending payment, a result which he declared might involve "disaster, financial and political, more extensive than the mere stopping of the bank." The Government of the day authorised him to use his discretion the assurance was given, and the panic allayed, without, as it proved, any actual withdrawal from the currency reserve. The facts were reported by the Local Government to the Secretary of State, who strictly prohibited the use of the reserve for this purpose on future occasions (Despatch No 71, dated 8th September 1865). In February 1867 another panic occurred, and the Local Government gave notice that the Government were prepared "to support the bank with all their available resources." On this occasion the currency reserve was not mentioned, and was probably not intended. The reference in the memorial to these incidents would have been more apposite if they had been used to illustrate the evils of State connection with banking institutions. We, at any rate, can find in them no justification for any departure from the rule of maintaining the currency reserve for its proper function of guaranteeing the convertibility of the paper currency.

8 In the meantime we are informing the Exchange Banks that their memorial is being transmitted to your Lordship

We have the honour to be, &c,

To His Excellency the Right Honourable GEORGE NATHANIEL BARON CURZON  
 of Kedleston, G M S I, G M I E, in the County of Derby in the  
 Peerage of Ireland, Viceroy and Governor-General of India

The Humble Memorial of the Exchange Banks of Calcutta

That your Memorialists are bankers, and that most of them have for the last forty years and upwards been intimately associated with the trade and commerce of India, and have practically during that period financed the whole export and import trade of the country, and have thus enabled that trade (which is still being financed by your Memorialists) to meet the fluctuations of exchange and to develop it to the extent to which it has developed of recent years. Your Memorialists have, for that purpose, utilised their capital, which amounts to about six millions sterling or thereabouts.

2 That in doing this they have met a great want of the trade aforesaid, the Presidency Banks since 1876 having been prohibited from financing such trade and having in consequence devoted themselves entirely to financing the internal commerce of the country.

3. That your Memorialists have under these circumstances noticed with considerable apprehension the recent suggestion that the new bank proposed to be founded should be allowed to borrow in London, and enter into sterling

operations in connection therewith—a request which was refused to the existing Presidency Banks in the year 1878—and they have observed that the Financial Member in his speech in Council on 5th January 1900 expressed an opinion that he saw no reason why, subject to the restrictions suggested by the Presidency Banks themselves in 1877 (on the occasion of the above-mentioned request being preferred), such course should not be followed, and that he thought that the Exchange Banks need have no apprehension on that account, as these restrictions would sufficiently provide against the new bank interfering with them

4 That the restrictions so suggested by the letter of the Presidency Banks were that the banks should have power—

- (1) To borrow money, either in India or England, by pledge of assets or otherwise, on such terms as to repayment of interest, &c, as the said bank may from time to time arrange,
- (2) To make remittances to England from time to time by Bills of Exchange or otherwise as may seem expedient in payment of the price of stock or other authorised investments purchased or acquired for the banks in India, and also in repayment of loans arranged for there

5 That your Memorialists believe that these restrictions are not stringent enough to prevent the proposed Presidency Banks, or the new bank proposed to be constructed by their amalgamation, from entering the Exchange markets and competing with your Memorialists in the purchase of bills on London—a business which, as they have pointed out, has been carried on by them for forty years and upwards with great advantage to the commerce of India—and they trust that such competition will not receive either the approbation or the active assistance of the Government of India, as it will have in all probability the effect of seriously interfering with your Memorialists in their present sphere of operations, but while they recognise that it was not the intention of Government or the Financial Member that the proposed amalgamated bank should so compete or deal in exchange, they believe that this result will take place unless more stringent restrictions are imposed

6 That they would therefore venture respectfully to submit to your Excellency their views on the subject of the present scheme of amalgamation of the Presidency Banks and the proposal to afford access to the London market, and the restrictions they propose in the hope that they will receive at your Excellency's hands that sympathetic consideration which your Excellency has ever evinced for the interests and prosperity of British capital in India

7 That your Memorialists also believe that if the state of affairs provided for by Act II of 1898 had been allowed to continue and to fully develop, there would be no necessity for any large increase of the capital of the Presidency Banks, and that with a stable rupee all the money wanted for the normal requirements of Indian trade and development could and would be found by your Memorialists and sterling capitalists engaged or interested in the commerce of India, especially if (as indeed has been suggested by the Bank of Bengal itself as well as by the Chamber of Commerce) in addition to those resources resort could be had to the paper currency reserve as has been done in times of financial stress, such as the Bombay Bank crisis of 1868, and in this connection your Memorialists would in passing observe that the very recent stringency in the money market, which was so acutely felt at Bombay in the middle of January 1900, was not due to the inability or unwillingness of Exchange Banks to meet the trade requirements, but was directly attributable to the action of the Secretary of State in suddenly cancelling the then subsisting notification issued under Act II of 1898 providing for the payment of rupees in India by telegraph against the deposit of sovereigns in London at the stable rate of 1*s.* 4  $\frac{1}{2}$  *d.*, such action being wholly unexpected, having regard to the objects and reasons for the extension of Act II for two years by Act VIII of 1898, which are printed at page 279, Part V of the "Gazette of India," July 9th, 1898

8 That as regards the introduction of English capital into India, your Memorialists beg to draw your Excellency's attention to the observations

made in an article in the "Money Market Review" of 30th December 1899, with which as a whole they agree. A copy of this article is appended to this memorial.

9 That to the mere amalgamation of the Presidency Banks your Memorialists, of course, can have no objection but they would at the same time point out (1) that the proposed legislation in its entirety will tend to an absolute reversal of the policy of 1876, when the Government retired as much as possible from all connection with the affairs of the Presidency Banks, except so far as to keep portion of their balances with such banks, (2) that such legislation will invade the sound existing restriction, under section 37 (e) of the Presidency Banks Act, 1876, as amended by Act V of 1879, whereby such banks are prohibited in effect from advancing to or on the personal security or credit of firms or individuals not resident or represented in India, and (3) that the new bank will be to all intents and purposes a State Bank with privileges as to its note issue.

10 That, further, with regard to the proposal to allow the Presidency Bank or the new bank to borrow in London, and to enter upon all sterling operations incident thereto, your Memorialists would also beg to point out and to lay great stress on the fact that by the proposed new departure the connection between the Government and the Presidency Banks would be drawn closer, and that the Presidency Banks, or their amalgamated representative, having to all intents and purposes become a State Bank, all the well known objections to the State competing with its subjects in matters relating to private enterprise would in that case become applicable.

11 That the intervention of the State in matters of trade has always been deprecated in England and in countries subject to British influence. State interference in such matters (the limits of which are pretty well known) has been generally confined to the control of railway and other large monopolies, and to the acquisition of postal and telegraph communications, and such State intervention or interference is based generally on the principle of protecting the less moneyed and dependent class of the community, and all schemes, except with that end, has been looked on with great suspicion and circumscribed and restricted in every way. The case of State railways in India being a solitary exception to this policy, based merely on the reluctance of private enterprise to come forward in the particular matter.

12 That on the acquisition by the British Government of the telegraphs in 1867 the rights of the railways—the companies with whose rights the proposal of the Home Government conflicted—were recognised to the utmost, and their interests were also carefully protected by their representatives in Parliament—a course which is always open in England, where all interests are in some way represented in the Legislature, but which protection is not always open to interests in India when menaced by legislation.

13 That similar precautions were taken by the Government in 1886 on the starting of the parcel post to protect the carrying interests and to disarm opposition to that project, and there are numerous other instances of this nature, and in the matter of banking your Memorialists may point out that the extent of the operations of the British Postal Savings Bank is at the present moment causing considerable apprehension, and every effort is being made to prevent any suspicion of competition with the banking interests of that country, and such competition is deprecated and discountenanced in every possible way.

14 That your Memorialists humbly submit it is therefore incumbent on the Government of India to investigate this matter with more than ordinary care, considering the magnitude of the interests involved, and the results of such competition, when once entered into, and in this connection it is not overstating the case to say that if the new bank, with all its contemplated resources and privileges and prestige as a State Bank, were allowed to enter into active rivalry with the existing Exchange Banks, the latter would practically be swept out of the field and effaced, regard being also had to the magnitude of exchange operations in which the new bank would, under its proposed constitution and powers, be inevitably engaged, unless it were altogether debarred from any exchange operations.

15 That in the matter of State Banks your Memorialists quite admit that such banks are practically a necessary consequence where large amounts are raised by taxation, and that the Government must keep their balances somewhere, and that the custody of such balances must in the nature of things benefit one particular bank above others, but they believe that the tendency of modern times is gradually to withdraw as much as possible from such preference and influence, and they suggest that such facilities should in no cases be extended more than is absolutely necessary, and certainly not where they would lead to rivalry with old-established institutions

16 That in the case of India and elsewhere such privileged banks are able to employ the Government balances as mercantile loans greatly to the public benefit, but it is a remarkable feature of the present proposal that the Bank of Bengal, in their letter to the Government on 2nd December 1898 (para 17), suggest that if the Paper Currency Reserves were placed at their disposal, rules could easily be framed that would guard against use by the Exchange Banks of such reserves—a suggestion which, if pursued, would invidiously oust the Exchange Banks from privileges which would be open to the rest of the mercantile community

17 That with such proposals of the Bank of Bengal before them, the Exchange Banks feel the necessity for re-asserting “that the discrimination by the State between different classes of occupations and the favouring of one at the expense of the others, whether that one be farming or banking printing or railroading, is not” (to adopt the words of a great American publicist) “legitimate legislation, and is an invasion of the equality of right and privilege which is a maxim of State Government, their occupation is honourable, it is beneficial to the public, and it deserves encouragement. It is not the business of the State to make discriminations in favour of one class against another, or in favour of one employment against another. The State can have no favourites. Its business is to protect the industry of all and give all the benefits of equal laws”

18 These propositions have been in effect recognised by the Government of India in relation to railway matters. In 1871 the Indian Government enunciated the proposition that it was evident that “the laws of the land relating to railways should be the same to whomsoever those railways belonged, and the law which governed companies’ lines must also govern the railways of the State.” This was acted on recently in the year 1896 in the matter of the repeal of the 81st section of the Railways Act of 1890, and in other cases of competition between State and other railways or carriers

19 That your Memorialists feel that these principles are applicable to the situation created by the present proposals, and that your Excellency will hesitate to allow the competition of the State Bank in the exchange market after forty years interval, during which your Memorialists have utilised their capital in India and have built up their business, which after all (despite inevitable risks incurred) is not one in which large profits have or can be made, and that if your Excellency permits the concession asked for by the Presidency Banks, namely, access to the London market, your Excellency will not grant it except on such terms as will preclude what is practically State competition with existing enterprises

20 Your Memorialists beg also to draw your Excellency’s attention to a paragraph in the statement of Mr. A de Rothschild before the Currency Commission\* (at p 186 of the report), in which he proposes the establishment of a State Bank of India, and which paragraph is as follows

“The Bank should not conduct any exchange transactions, but should confine itself (like the existing Presidency Banks) exclusively to internal operations, and it would also, when necessary, make advances to the Indian Government against deficiency bills, which is frequently the case with the Bank of England”

21 That your Memorialists would on this point suggest that, as the amalgamated banks are, or the new bank is, to have a sterling capital, it

should be made a condition of such permission that all their sterling transactions should be confined to the shipment and re-shipment of gold, and that the Presidency Banks or new bank should be prohibited from selling or buying sterling bills or selling or buying telegraphic transfers save, of course, through existing channels, namely, the Exchange Banks

22 Your Memorialists have set out their views and apprehensions at some length on the matter which is of supreme importance as well to the country at large as to you Memorialists, but they quite appreciate that the Financial Member of your Excellency's Council evidently shares Mr A de Rothschild's view that the proposed bank should not deal in exchange in competition with you Memorialists, but what they fear is that unless the restrictions proposed by them, or some others equally stringent be imposed, the result of the access to the London market will incidentally but inevitably be an amount of dealing in exchange which will dislocate your Memorialists' operations and produce serious, if not overwhelming, competition without any benefit to the country, but the reverse, and that it will, as pointed out in the article in the "Money Market Review" hereto appended, check rather than stimulate the flow of loanable sterling capital from England to India

23 Your Memorialists appeal to your Excellency in this matter with confidence in your Excellency's anxiety to stimulate the introduction of sterling capital into India by private enterprise and to protect it when introduced, and they leave their case in your Excellency's hands in full confidence that it will at least be dealt with as considerately and fairly as if their interests were represented in your Excellency's Council

Your Memorialists pray that the foregoing representations may be taken into careful consideration before any legislation be initiated on the subject-matter of the proposals to amalgamate the existing Presidency Banks or to establish a new bank on a sterling basis, and that any Bill that may be framed and passed for the purpose of giving legislative effect to such proposals may contain effectively stringent provisions preventing the amalgamated banks or the new bank from competing with the Exchange Banks as and in manner indicated in this memorial

## APPENDIX A

## PROPOSED INDIAN STATE BANK

It was known at the time the Government of India were preparing to place the currency of our great Eastern dependency on a gold basis, that they entertained the idea of supplementing and fortifying that scheme by the establishment of a State Bank. A good deal of attention was devoted to this subject during the sittings of the Currency Committee, and more recently the Government were known to have been sounding Indian merchants and others for the purpose of ascertaining what degree of support a plan of the kind was likely to receive. A short time ago a communication on the subject was addressed to the Bengal Chamber of Commerce, and the latter indicated by their reply that they are wholly in favour of the founding of a State Bank. In their view, it is possible that if the proposed bank were entrusted, like the Bank of England and the banks of other European countries, with the management of the paper currency, subject, of course, to all the regulations which might be considered essential for the protection of the public, the note issue would expand to the great convenience of commerce. They are of opinion that the banking system in India will never be entirely satisfactory until the central banking institutions, in other words, the Presidency Banks, are in close touch with London, the money market of the world. Consequently, they trust that the efforts to improve the banking facilities in India will result in the central banking institution and other banks being placed in a position to give important assistance to the promotion of railways and other works of public importance and to finance at moderate rates, and on terms as free as possible from heavy fluctuations, operations of industrial and other trading concerns, thus placing the country in a more advantageous position in the future than in the past to compete with the great commercial nations of the world.

From all this the inference to be drawn is, firstly, that the existing banking system is regarded as inadequate, secondly, that if it were extended, more abundant and cheaper capital would be forthcoming, and, thirdly, that to accomplish this desirable purpose the intervention of a sort of State monopoly of at least one branch of banking is necessary. To all of these conclusions we are strongly inclined to demur. As regards the statement that the note issue would expand greatly to the convenience of the public, the Government have on all occasions since the closing of the mints replied to the opponents of that measure, when alleging that it led to a restriction of the currency, excessive rates of interest, and the disorganisation of trade, that there was no such restriction.

They have consistently maintained that there was sufficient currency for all purposes. Now, however, when it is a question of setting up a State Bank, the great argument in its favour is that the currency requires some new kind of machinery to facilitate its expansion. At the present time the Government alone issue notes through the Treasury, the total being between twenty-seven and thirty crores of rupees, against cash and Government securities. It is proposed to transfer this right to the new bank which is to be constituted by the amalgamation of the three Presidency Banks, which would, therefore, reap the profit, about twenty-five lakhs of rupees per annum, which the Treasury now obtains on its note issues. That, of course, would benefit the bank to the disadvantage of the Indian taxpayers. It is also proposed that the combined capitals of the Presidency Banks in their amalgamated shape should be increased by about eight millions sterling. It is not quite clear where this money is to come from, but we can quite appreciate the ardent desire to see it imported into the country in order to confer more solidity on the currency reform.

We wholly fail to see how this scheme will stimulate industrial, commercial, and railway enterprises, the development of which must be dependent on foreign capital. The suggestion that it will do so obviously assumes that such development has been checked for want of adequate banking facilities, but we doubt if any close and intelligent student of the economic and financial history of India during the last 30 years or so will

be able to accept such a view. What we do know, is that capital not only ceased to flow to India in late years, but was extensively withdrawn, not for want of such facilities, but owing to the depreciation of the currency and the violent fluctuations in the exchange. So long as the exchange remained stable money flowed into India freely enough, and we do not doubt that the same will occur again when people in this country become convinced that the era of such fluctuations has finally passed away. The sense of security imparted by such a conviction will not require to be supplemented and strengthened by the establishment of a State Bank which is to cheapen capital. Indeed by bringing about such cheapness, to an undue extent that is, one of the main forces for attracting capital to India will be greatly enfeebled. Money goes out to the East because it finds more remunerative employment there than it does at home, and if the flow is to be utilised, in co-operation with the State Bank, to force down the rates, it will quickly be arrested.

What has, for some years past, been wanted in India is, as already mentioned, a steady exchange, not a new bank run on Government lines, with all their peculiar pettifogging restrictions and redtapeism. There is no reason to believe that a State Bank formed out of the materials furnished by the Presidency Banks would be engaged in a different or less circumscribed class of business than that now carried on by them. The great mass of the Indian trade would still have to be financed by the Exchange and other banks which are in closer touch with it than the Presidency institutions ever have been or are likely to be. In his evidence before the Indian Currency Committee, Lord Rothschild, in referring to this subject, said that "a Government Bank would know that they were under the necessity of redeeming their notes in gold or silver, and they would keep the money market easy. In fact, the bank would never have allowed the stringency in the money market to arise, as it did the other day in India (the rate was then about 13 per cent) because they thought they could not cover their notes." In the then situation of affairs the bank would have had no sort of power to prevent the stringency. To suppose it could do so is to assume that it would be able to overcome the combined influence of famine, plague, reduced exports, diminished revenue payments into the Treasury, and the locking up of cash by the Government. So far as rates for money were concerned they afforded every inducement so send out capital from this side for employment on remunerative terms, whereby the stringency would have been relieved in a normal manner, but it did not go out freely, for the simple reason that there was a widespread distrust of the future movements in the exchange. Indeed, look at the subject in whatever way we may, we always come round to this point. It is bound to be the prime factor which will determine the ebb and flow of capital between India and the home market. A State Bank can do nothing to help it. State Banks never have done anything in this direction. The development of national enterprises is a matter dependent on private initiative, banking and other. If we had to wait for the Bank of England to help the building of our railways, the opening of our mines, and the setting up and running of our ironworks and cotton mills, &c., our industrial position would to-day be vastly different from what it is. The capital that may be wanted in India will find its way there, as it has done heretofore when the times and general conditions are regarded as propitious by the people who have it to lend. Their ambition to launch out will not be fired by the mere fact that the Presidency Banks are to become one, and their resources enlarged, the carrying on of their business subjected to Government control, and the sole right to issue notes transferred to them.

Dated 6th February 1900

From the Honourable MR G G ARBUTHNOT, Chairman, Chamber of Commerce, Madras, to the Secretary to the Government of India, Finance and Commerce Department

This Chamber has recently had under its consideration the proposal made by the Bank of Bengal that loans should be made available to the Presidency Banks from the Currency Reserve, in times of stringency, when the funds available in the Reserve Treasuries are insufficient to admit of loans being made from that source, and I have the honour to submit the following remarks thereon for the consideration of Government

The proposal is based upon the German system of issuing uncovered notes, but the conditions here appear to the Chamber to be somewhat different from those on the Continent of Europe for, whereas in Germany the notes themselves circulate freely, in India loans made from the Currency Reserve would have to be met for the most part in silver, and it would, therefore, be essential to maintain in the Currency Reserve a sufficiently large proportion of rupees

The Chamber observes from the published returns that on the 15th January 1900 the coin and bullion reserve was made up as follows —

		Rs
In Gold	- - - -	- 9,38,00,000
, Silver	- - - -	- 7,29,00,000
Total		- 16,67,00,000

and it seems doubtful whether Rupee loans could be made available from the Reserve under such circumstances

The Chamber thinks, however, that the question of coming fresh Rupees is a matter which urgently requires the consideration of Government. The recent action of the Secretary of State in curtailing the sale of Telegraphic Transfers on India against gold deposited in London, under Act II of 1898, can be understood only on the assumption that it was necessary owing to the insufficient supply of Rupees in the Reserves on this side, and there have been other indications during the past few months pointing to a deficiency in the supply

The Honourable Mr Dawkins, in his speech at the meeting of the Viceregal Legislative Council on the 5th ultimo, objected to the grant of loans to the Presidency Banks from the Currency Reserve, and expressed the opinion that if the proportion of coin to securities in the Reserve is large enough to allow of loans being made then that proportion is unnecessarily large, and securities should be substituted for superfluous coin, so that the general tax-payer, and not any particular section of the tax-payers, such as the banks, should benefit thereby

The Chamber thinks that such loans would be made more in the interests of the trade of the country generally (which, it submits, is identical with that of the tax-payer) than for the benefit of the Banks, who would pay interest at the market rate for any accommodation received in this way, and moreover, such interest would be applied for the benefit of the general tax-payer

The Chamber, therefore, is of opinion that this additional channel for relieving monetary pressure should be made available, but it is strengthened in its previously expressed conviction that the ultimate resort for monetary relief must be the London Money Market, and it takes this opportunity of again urging upon Government the necessity for an early amendment of the Presidency Banks Act to accomplish this much-needed reform

In conclusion, the Chamber would remark that, in its opinion, the question of giving the Presidency Banks access to London is one which should be considered on its own merits, apart from the larger scheme for amalgamation of the banks, which it understands is now receiving the

consideration of Government. It is of the utmost importance to the trade of India that it should be brought into touch with the London Money Market, and this can be accomplished as effectively by means of the existing Banks as through the medium of one united Bank.

---

No 769, dated 13th February 1900.

From The Honourable Mr J W P MUIR-MACKENZIE, ICS, Secretary to the Government of Bombay, Financial Department, to the SECRETARY to the Government of India, Finance and Commerce Department

I am directed to reply to Mr Assistant Secretary Heseltine's letter, No 5124-A, of the 10th November last, in which the Government of Bombay are requested to express their views regarding the proposed relaxation of certain restrictions upon the business of the Presidency Banks.

I am to say that this Government have consulted the Board of Directors of the Bank of Bombay, the Accountant-General at this Presidency and several other officers. The reply of the Board of Directors was forwarded to you with letter from this Government, No 432 of the 23rd ultimo, and I am now to forward also copy of the report of the Accountant-General.

2 The questions involved in the proposal under discussion are matters of grave difficulty and complexity, and have received from His Excellency the Governor in Council the earnest consideration which issues of such importance demand. As at present advised, His Excellency in Council finds himself to a great extent in agreement with the attitude adopted by the Honourable Mr Dawkins in his speech in the Meeting of the Council of the Governor General of India on the 5th ultimo (*see* page 394).

3 There are two points on which opinion is unanimous, namely, (1) that the severe fluctuations in the rate of discount to which the trade is subjected are due to an insufficiency of loanable capital in the busy season, and (2) that the deficiency can be most satisfactorily met by granting to some bank or banks access to the London market. These views are fully shared by the members of this Government, who, moreover, agree as at present advised in thinking that the most satisfactory method of providing such access would be through the agency of a Central Banking Institution constituted by amalgamation of the three Presidency Banks. On this question, however, His Excellency in Council has not been requested to express an opinion and in default of information on the various points enumerated in paragraph 4 of the letter dated December 20th, 1899, from the Chamber of Commerce of Bombay, is not in a position to form a definite judgment. The proposal is, however, undoubtedly attractive, and provided the confidence of the mercantile community can be secured, merits the most assiduous elaboration. If the head office of such a bank and its board were in London, and control were there exercised over the operations of what would then be the three Indian Branches, the fears now entertained that the interests of one Presidency might be sacrificed to those of another would probably be dispelled.

---

No. 2265-R, dated 16th December 1899.

From the ACCOUNTANT-GENERAL, Bombay, to the SECRETARY to the  
Government of Bombay, Financial Department

With reference to Government Resolution, Financial Department, No 5598, dated 23rd November 1899, forwarding for my opinion a reference from the Government of India, Financial Department, on the subject of relaxing certain restrictions upon the powers of the Presidency Banks with special reference to the existing capital of the banks, and explaining (in enclosures) the attitude which the Government of India are inclined to adopt, I have the honour to offer the following remarks

2 The question of relaxing the restrictions upon the powers of the banks is so intimately connected with that of enlarging their capital that the former question cannot, I think, be conveniently discussed independently of the latter. The extent to which the banks are in the busy seasons dependent upon the Government balances has been pointed out by the Honourable Mr Dawkins in his speech before the Viceroy's Council on the 1st September last, and His Excellency the Viceroy has indicated in his speech on the same occasion that it is not the intention to provide a field for the employment of Government balances by enlarging the sphere of the banks' operations

That little room exists for the extended employment of the present resources of the Presidency Banks at all events in the busy season seems to me sufficiently indicated by the high rates of discount which usually prevail in the cold weather months, and the prevailing rates of discount then and indeed for a large portion of the year are also in my opinion such as to raise doubts as to the sufficiency of the Banks' capitals to meet the existing requirements of trade. I am aware that it has been and is urged in some quarters that the abnormal stringency which characterised the busy season of certain recent years was chiefly a result of the currency policy of Government, and that a marked diminution of that stringency has followed the introduction of the reform enacted in the Indian Paper Currency Act, 1898, but however much it may be admitted that the stringency of the market may have been added to by the policy adopted by Government for fixing the value of the rupee it can hardly be denied that, quite apart from that policy and long before that policy had effect, the rates of discount prevailing in this country in the busy season have been over and over again unduly high and compared with the rates prevalent in the slack season have shown fluctuations which, I would suggest, could hardly occur in a thoroughly healthy market. I have only as an instance of this to refer to the beginning of 1889 when the Bank rate in Bombay stood at 11 per cent and the bank was refusing advances upon the security of Government paper. This is not an isolated instance, *e g*, the Bank rate varied in 1890 from 3 to 12 per cent and in 1894 from 3 to 10 per cent, nor have the Presidency Bank and the Chamber of Commerce of this city failed on various occasions to urge upon Government the policy of utilising its own balances by employing them in the assistance of trade. These circumstances recurring as they do from time to time seem to me to indicate a paucity of capital which an increase in the capital of the existing Presidency Banks would presumably go some way to supply, and were that capital judiciously increased to an extent commensurate with what I would call the evils which it would be desirable to remedy, one of the chief objections to withdrawing existing restrictions over the employment of their capital would, if it did not altogether disappear, be largely minimised. Perhaps even then some restrictions will be necessary, but I see no reason why the powers of the Banks in respect of business transactions should not be greatly enlarged and particularly in the direction of an extension of the classes of securities upon which loans and advances are admissible, but how far it would be possible to go in this direction, if existing arrangements are continued, is a question, upon which I do not feel competent at present to offer an opinion without further data regarding the securities which the banks would propose to deal with. In making the above remarks I have not lost sight of the fact that it may be argued that having, as the existing Banks do have, the power to increase their capital, the very fact that they do not

take that step is sufficient proof that an enlarged capital is not called for by the requirements of trade, but, without in any way reflecting on the devotion to the public interests of the Presidency Banks, which has, I believe, always been manifest, it is, I suggest, only fair to recall the fact that they are not constituted solely for the benefit of trade but are dividend earning institutions, and the interests of their shareholders must necessarily be carefully safeguarded. Looked at in another light I may further question whether other considerations do not appear to point to the same conclusion that the capital of the existing Central Institutions is capable of extension. The removal of the uncertainty regarding the value of the currency will, it is rightly regarded, result in an increased rush of capital to this country, increased facilities will thereby be given to trade, and it seems, I would suggest, a reasonable view that, to meet the requirement of that increased trade, the market should be able to look for increased resources to the Central Institutions.

Whether the increase in resources and consequent usefulness can best be met by an amalgamation of the existing banks into one Central Bank or by going still further and placing the latter bank upon a sterling basis, are questions of great difficulty upon which I express an opinion with great diffidence, but I incline to the view that one Central Institution for the whole of India with a sterling capital and having the management of the issue of Paper Currency would be in many respects exceedingly advantageous and a considerable improvement on existing arrangements, while, assuming that it proves under present conditions possible to establish such an institution, I am unable to see any weighty objections to its creation. The two arguments which, I conceive, may be urged against the adoption of such a proposal are (a) that it is unnecessary, and (b) that the difficulties in the way of its establishment are so great as to render it impracticable. With regard to (a), I have urged above the reasons which seem to point to the necessity of some change, and as to the advantage which a Bank on a sterling basis would afford, I would refer to the evidence given by Mr A de Rothschild before the Indian Currency Committee and state that, while I consider that there can be no real doubt as to the maintenance of the value of the rupee under the present system, and I doubt whether the introduction of a bank of this nature will add largely to the resources available for such a purpose (see also Lord Rothschild's remarks on this point before the Currency Committee No 7683), I think that in practice the bank would have a great advantage over Government in working for the effective maintenance of a gold currency through its more intimate knowledge of the immediate requirements of commerce, and especially through the confidence that its existence and operations would eventually engender in the mercantile world. A further advantage which such a bank would possess would be the possession of capital which could be utilised in England as well as in India. With regard to (b), the difficulties to be expected in the establishment of such a bank. These are, I am of opinion, great, perhaps much greater than has been apprehended. I will not say that I think they are insuperable, but at all events they can only be threshed out in detail in immediate conference with the banking and mercantile community, and I submit that the real point for discussion in the first place is the desirability of the changes suggested. If that be admitted, it will then be time to consider the possibility of overcoming initial difficulties. I would add, in conclusion, that I am aware that in answer to the arguments in the earlier portion of this letter it may be further urged that there has been no demand on the part of those who might be deemed the most nearly interested, namely, the mercantile public, for increased banking facilities, but I think that this is largely due to the apprehensions which any large change of this kind always arouses, the tendency being, I think, to accept an existing system in preference to a large and important change the benefits of which may not be very clearly apprehended. Mr de Rothschild has also alluded in his evidence referred to above to the opposition which such a scheme might arouse, and I need refer no further to that point except to express my concurrence with what he said.

No 146, dated 15th February 1900

From the CHIEF SECRETARY to the Government, Financial Department,  
Madras, to the SECRETARY to the Government of India, Finance  
and Commerce Department

I am directed to reply to your letter No 5124-A, dated the 10th November 1899, inviting the views of this Government on the proposal to relax the restrictions on the business of the Presidency Banks which are imposed by Sections 36 and 37 of the Presidency Banks Act, 1876

2 It is observed that the Government of India holds that the present restrictions imposed on the banks' operations are necessary, principally in order to secure the safety of the Government balances entrusted to the banks, that Presidency Banks depend to a quite exceptional degree for their cash balances on the Government account, nearly 80 to 90 *per cent* of these balances being in the busy season supplied from this source, and that this fact, added to the fluctuations in the rate of discount, leads to the question as to how far the Presidency Banks have sufficient capital to allow of the absorption of the resources they command in enterprises, the securities of which might not be easily realisable

3 In the letter addressed to the Government of India on the 13th November last by the Bank of Madras, which appears to have anticipated the present reference, it is contended that the views of the Government of India in regard to the amount of the Government balance with the bank relatively to other deposits and to the cash balance are founded on a misapprehension, and that, though these remarks might apply to the period prior to the establishment of Reserve Treasuries, they are inapplicable now; since with the largely increased resources of the Madras Bank the Government account now forms only about 10 *per cent* of the working capital. The bank accordingly contends that it is not dependent in an undue degree upon the Government balance for its loanable capital and adduces figures to support this contention. If the arguments of the bank are to be accepted, it would appear that the pecuniary interest of Government in the Presidency Banks no longer exists, at all events in Madras, to the same extent as formerly, and, if so, the chief obstacle to relaxing the restrictions originally imposed on the bank's operations has, in some measure, been removed. I am to observe that this aspect of the matter has been commented on by the Honourable Mr Dawkins at the meeting of the Legislative Council on the 6th January

9 The Bank of Madras in its letter to Government of India has made the following further suggestions —

- (1) that the Bank's power of borrowing should be extended by amending Section 36 (*mm*) of Act XI of 1876, so as to allow of borrowing in the United Kingdom,
- (2) that Ceylon Government securities should be added to the list of those in which the Bank is authorised to deal,
- (3) that Section 37 (*a*) of the Banks Act should be so amended as to extend from three to six months the period for which loans may be made,
- (4) that Section 37 (*f*) should be amended so that the limit for overdrafts without security may be raised from Rs 2,000 to Rs 5,000

10 With respect to the first of the suggestions, I am to say that it has been dealt with by the Honourable Mr Dawkins in his speech already referred to in which he stated that the fusion of the three Presidency Banks and an increase of their capital are conditions inevitably precedent to the grant of access to the London market. In the absence of expert banking opinion which is not here available, this Government, however, concurs with the Accountant-General—a copy of whose report is herewith forwarded—in questioning the advisability of proposals (2) and (4), and sees no reason for supporting suggestion (3), which would involve a loss of revenue

No Res -Conf 18, dated 7th December 1899.

From the ACCOUNTANT-GENERAL, Madras, to the CHIEF SECRETARY to the Government of Madras, Financial Department

I have the honour to acknowledge receipt of your endorsement No 3019, dated 21st ultimo, forwarding to me for remarks Government of India, Finance and Commerce Department, No 5124-A, dated 10th November 1899, regarding proposals to relax the restrictions on the business of the Presidency Banks which are imposed by Sections 36 and 37 of the Presidency Banks Act of 1876

2 In connection with this question the Government have received copies of a letter addressed by the Bank of Madras to the Government of India on the subject. The letter expresses the view of the Bank of Madras and brings to notice the changes the bank considers desirable in its own interest. It will be most appropriate therefore to discuss the points brought forward in it.

3 The Directors first advocate that the bank's power of borrowing should be extended to allow of their borrowing in the United Kingdom. When exchange was altogether uncertain, it was manifestly undesirable that such an element of speculation should be brought into any of the transactions with which the Presidency Banks had to deal, and the prohibition to borrow in England was essential. Now, however, that exchange is stable this objection no longer exists, and I see no reason why the banks should not be allowed to borrow in England. In fact, it seems to me most desirable that they should be allowed to do so. There can be no question that their business operations are very much restricted by the prohibition, and that a larger command of funds would be of great advantage to the trade and commerce of the country, and materially strengthen the position of the banks and enable them more to assume that position which some consider can only be taken up by a "Bank of India". Were the Presidency Banks allowed to borrow in England, the scarcity of monetary accommodation in the busy season and the consequent high rate of interest of which we have known so much the last few seasons would not occur.

It would also solve the question of the banks making use of the surplus funds of the Government during periods of stringency which must no doubt be allowed as things are at present, but which it would be much better should not be necessary.

\* \* \* \* \*

6 The suggestion of the bank that the period for which loans may be made should be raised from three to six months seems reasonable, but I do not think the limit of over-drafts without security should be raised.

7 I am not aware of the conditions on which the securities of the Ceylon Government are issued, but it does not seem desirable that a Presidency Bank in India should be allowed to deal in the securities of Governments beyond Indian limits.

Despatch from the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA, No 41, dated 22nd March 1900

My LORD,

With your Excellency's letter, dated the 22nd of February, No 56, you have transmitted for my consideration a memorial by the Exchange Banks of Calcutta, on the subject of the proposals connected with the suggested amalgamation of the three Presidency Banks into one Bank with certain special privileges

2 As I have, in my despatch dated this day, No 40, referred the question again to your Government, it is unnecessary for me at present to discuss the effect of the proposal on the Exchange Banks

3 I request, however, that they may be assured that their representations will receive due consideration before any decision is passed by Her Majesty's Government

I have, &c,  
(Signed) GEORGE HAMILTON

No 1782-F, dated 8th March, 1900

From E N BAKER, Esq, Secretary to the Government of Bengal, to the SECRETARY to the Government of India, Finance and Commerce Department

I am directed to acknowledge the receipt of your letter No 5124-A, dated the 10th November 1899, asking to be favoured with the views of the Government of Bengal on a proposal which has been made to relax the restrictions on the business of the Presidency Banks which are imposed by Sections 36 and 37 of the Presidency Banks Act of 1876

2 The questions dealt with in the papers which accompany your letter under reply relate to a branch of administration which has been highly specialised, and lie so far outside the ordinary sphere of the Local Government that the Lieutenant-Governor feels some diffidence in offering an opinion regarding them. Moreover, since the receipt of the reference from the Government of India, the matter has been carried a good deal further by the statement made in Council, on the 5th January 1900, by the Finance Minister in reply to a question put by the Honourable Mr Allan Arthur. For these reasons, the Lieutenant-Governor feels that no useful purpose would be served by attempting to enter on an exhaustive examination of the proposals set forth in the correspondence, and he desires merely to submit some observations on their simpler aspects based on such advice and information as were within his reach

6 The next question considered in the papers received with your letter of the 10th November relates to the proposed amalgamation of the three Presidency Banks, and the increase of their capital. This is a question of much greater difficulty than the first, and requires for its solution more familiarity with the practice of banking administration than the Lieutenant-Governor possesses. So far as amalgamation is concerned, the Lieutenant-Governor accepts the force of the arguments adduced in favour of it in the speeches of the Honourable Mr Dawkins and His Excellency the Viceroy on the 1st September 1899\*. But there are also considerations of no little weight in favour of the opposite view. In the first place, it is doubtful whether India is not too large for a single Central State Bank, the Directors, if drawn from or located in the three Presidency towns, would be too far apart from each other. Secondly, the interests of the various Presidencies are not always identical, and are sometimes at variance with each other. Thirdly, it is against the public interest to create and foster a huge monopoly. A single bank with large resources, and commanding the Government deposits, would have great power over the other banks. Fourthly, banks deal chiefly in credit, and credit is always a matter of local knowledge and experience.

\* See pp 358-61, *supra*

It is doubtful also whether the Central Bank would be in a position to do all that appears likely to be expected of it. The Government of India have of course seen an article in the *Economist* of the 13th January, entitled "The proposed Bank of India," in which it is pointed out that even the Bank of England does not undertake to pay at any branch its notes issued by other branches. Notes issued at one branch are cashed only at that branch and in London, and it is contended with much force that a liability, which the Bank of England cannot undertake and has strongly objected to, could not safely be imposed on the State Bank of India.

For these reasons the Lieutenant-Governor is disposed to doubt whether it is expedient or even safe to amalgamate the Presidency Banks, and there appears to be a growing opinion adverse to the proposal among the mercantile community.

These are not matters in which his own experiences enable him to form and offer any confident opinion, but at least he may say that it seems to him clear that the head-quarters and management of the amalgamated bank should be in India, and not in London.

If the management were located in London, it would necessarily be in less perfect touch with local requirements and less accessible to the representatives of local interests than if it were in India, and it might, moreover, be subjected to influences in which the interests of India were not the sole consideration.

7 As regards the suggestion that the capital of the amalgamated bank should be increased, the Lieutenant-Governor is *prima facie* disposed to doubt whether the necessity for this has been established. The capital of the three Presidency Banks is fixed by Section 10 of the Act. Their aggregate capital now stands at 360 lakhs of rupees, which is only 10 lakhs in excess of the minimum allowed by the law, and they have power under section 12 to raise it to an aggregate of 620 lakhs. The fact that notwithstanding recurring periods of stringency, the banks have never yet exercised this power except to an inconsiderable extent, and have preferred to retain their capital almost at the permissible minimum, raises a presumption that that minimum is not conspicuously inadequate to their needs. Until the maximum allowed by the present law has been worked up to, it seems difficult to believe that a still higher amount could be usefully employed. In any case, if it is thought desirable to provide for some increase, the power should be permissive, and not obligatory.

It should also be borne in mind that in proportion as fixity of sterling exchange is secured—and in this a large measure of success has been achieved—the narrower is the field left for the operations of the Exchange Banks, and it is reasonable to suppose that as time goes on, a larger and larger proportion of their capital will be set free for employment in legitimate banking.

8 There remains only one point in respect of which the Lieutenant-Governor desires to offer any remarks. This relates to the suggestions that have been made for providing some means whereby the Banks' resources may be temporarily increased during periods of stringency. The Honourable Mr Dawkins in his statement in Council on the 5th January pointed out that the German system by which the banks are allowed to issue uncovered notes on payment of a sliding-scale tax would not afford a remedy in this country, where the demand is for hard cash and not for notes. The Lieutenant-Governor ventures to doubt whether too much may not be made of this objection. Whatever the system of note issue may be, whether by Government direct or through the agency of a bank, it must be assumed that at any given moment the note circulation has reached saturation point, *i. e.*, that as large an amount of notes has been absorbed as, in the circumstances of the issue system in force, the country will take up. This is true of Germany and of India alike. Nevertheless it is found in Germany that in seasons of stringency the bank is able to satisfy pressing demands by the issue of notes, which do circulate for a time, and are not immediately presented for encashment. It is difficult to understand why the same result

should not be expected to ensue in this country also though possibly to a less extent. The Lieutenant-Governor is disposed to believe that this course, if not a remedy, would be at least a palliative for monetary stringency

9 It is of course true that this system is scarcely to be distinguished in practice from the granting of loans from the Paper Currency reserve, the objections to which were forcibly set forth by the Finance Minister in the course of his statement

10 Another suggestion has presented itself, which seems to the Lieutenant-Governor to be quite deserving of consideration. It is that the Government should coin rupees up to an amount to be decided upon, and hold them in a special loan reserve, lending them to the banks for short terms on a sliding scale of interest, whose minimum should be fixed with reference to the current bank rate of discount. It does not seem that this arrangement would interfere with the sale of Council Bills or the deposit of gold, and it is probable that the sliding scale could be so adjusted that the interest received would more than cover the interest on the cost of the silver from which the rupees were coined. The precise amount at which the special loan reserve should be fixed and the scale of interest would be matters for consideration

11 To reduce the cost of locking up so many rupees in the special loan reserve, it might be desirable during the slack season to invest the whole or a portion of them in consols or any other first class securities, preferably in sterling. On the approach of the busy season, these should be sold for gold, the proceeds being paid into the Treasury Department of the India Office, and a corresponding number of rupees being transferred to the special loan reserve in India. It is possible that in course of time, if this system proved successful in steadying the bank rate, the special loan reserve might be amalgamated with the Reserve Treasury, the cash in which up to a fixed amount should be treated as reserve, while the excess should be available for special loan purposes in the manner described

It is possible that this arrangement may embody defects which would render it unacceptable, but none such have been brought to the Lieutenant-Governor's notice, and he, therefore, desires to submit it for the consideration of the Government of India

---

Dated 14th March 1900.

From A D WARREN, Esq, Secretary, Chamber of Commerce, Rangoon, to the SECRETARY to the Government of India, Finance and Commerce Department

I am directed to acknowledge receipt of your letter No 5123-A, dated 10th November 1899, with relative document, regarding the proposed amendment of the Presidency Banks Act, 1876

\* \* \* \* \*

Whether the addition to the resources of the banks should take the form of increased shareholders' capital, or otherwise, my Committee are not in a position to express an opinion.

A suggestion has been made that the Government balances should, in times of stringency, be placed more liberally at the disposal of the Presidency Banks

I am directed to say that if this could be done, it would meet with the approval of the Committee.

---

No 40-Finl, dated London, the 22nd March 1900.

From the SECRETARY OF STATE for India to the GOVERNMENT of India.

Your Excellency's letter, dated the 18th January, No 17, has been under my consideration in Council, and the proposals which it contains for placing the banking system in India on a better footing so as to enable the community to have the command, at a time of emergency, of a larger amount of loanable capital, will receive my most careful attention

I have already, in my despatch of the 25th of July 1899, No 140, expressed my sense of the great importance of this subject, and I fully appreciate the desirability of the objects which Your Excellency has in view. Your letter shows that the matter has received from your Government the special consideration which it deserves, and undoubtedly marks an important step towards such measures of reform as may hereafter be adopted

There are circumstances, however, at the present time, which prevent my coming to an early decision on the proposals now submitted to me, and in the meantime I should be glad to receive from your Government further observations on the following questions which occur to me as especially needing examination and discussion —

- (i) What probability is there that there will be throughout the year a field in India for the remunerative employment of the additional share capital which it is proposed to raise?
- (ii) If funds are temporarily borrowed in England, how would they be remitted to India in such a manner as to form an addition to the amount available in India under existing conditions?
- (iii) If they would have to be brought back again in the slack season, what would be the effect on the Secretary of State's remittances?
- (iv) Is it advisable to allow a bank which has the command of the Government balances to employ its deposits out of India, and to incur liabilities by borrowing abroad?
- (v) Is it likely that the possible conflict of interests between a bank of this description and other existing institutions might tend to discourage private enterprise and to prevent the development of the facilities which the public now enjoys?
- (vi) Is it prudent for the Government to pledge itself to place all its balances in the Presidency Towns in the hands of a bank?
- (vii) Is it desirable to entrust to a bank the management of the Paper Currency, due regard being had to the principles upon which it was established in 1862?

It will be understood that I express at present no opinion upon any of these points, but merely desire to have such observations on them as may occur to you

I regret the impossibility of arriving at a conclusion on this subject, in time to allow a statement of your intentions to be made during the discussion of the Financial Statement, on which occasion the banking and mercantile community might not unreasonably expect to be informed of the result of Your Excellency's inquiries and deliberations

---

No 199, dated Simla, the 13th June 1901

From the GOVERNMENT of India, Finance and Commerce Department, to the  
SECRETARY OF STATE for India

We have the honour to refer to your Lordship's despatch No 40-Financial, dated the 22nd March 1900, regarding our proposals for placing the banking system in India on a better footing by means of the establishment of a Central Bank. We delayed our reply to that despatch until the Honourable Sir Edward Law should have gained some experience of the working of the Indian banks and the commercial conditions of this country. Our Honourable Colleague has now had an opportunity of discussing the question with Directors and Managers of the three Presidency Banks, and also with representatives of the Exchange Banks and leading merchants, and under his advice we proceed to give the following categorical answers to the questions asked by Your Lordship

2 *Question I*—*What probability is there that there will be throughout the year a field in India for the remunerative employment of the additional share capital which it is proposed to raise?*

It would appear that there is no probability of remunerative employment being found *throughout the year* for any appreciable addition to the share capital held by the banks

3 *Question II*—*If funds are temporarily borrowed in England, how would they be remitted to India in such a manner as to form an addition to the amount available in India under existing conditions?*

If funds are temporarily borrowed in England, they would be remitted to India in one or other of the following ways—(1) by purchase of Council or Currency Bills, or Telegraphic Transfers, if such were available at profitable rates, (2) by exporting gold from London, which would be presented in India at the mints or treasuries for conversion into rupees, (3) possibly, to a limited extent, Exchange Banks might remit by means of London drafts payable in rupees in India, (4) to an equally limited extent, and under special circumstances only, Indian Government paper bought in England might be encashed for payment in India and there sold for rupees. The last method is an unlikely one, as when capital is required in India, there would be little or none available for investment

4 *Question III*—*If funds have to be brought back again in the slack season what would be the effect on the Secretary of State's remittances?*

It must be admitted that under all circumstances remittance back to England of funds borrowed there would have the effect of reducing the rates of Council Bills. This reduction would not be counterbalanced by the rise in rates caused by remittances of borrowed funds from England to India, because these remittances would take place in the busy season when Council Bills are already high and could not rise much further without touching specie point. The general effect of permitting the banks to borrow in England would probably be to lower the average demand for Council Bills for the year

5 *Question IV*—*Is it advisable to allow a bank which has the command of the Government balances to employ its deposits out of India, and to incur liabilities by borrowing abroad?*

We see no objection to allowing the Presidency Banks to employ their deposits in the slack season on temporary loans out of India and to incur liabilities within defined limits by borrowing abroad. The dangers which might arise from such borrowing are of two kinds.—

(1) The bank when repaying might be a loser by exchange. We think that this danger is hardly likely to arise to such an extent as to seriously affect the interests of Government.

- (2) The borrowing bank might be obliged to denude itself of resources for the purpose of meeting heavy payments at a fixed rate abroad. Any possible danger to Government could, however, be provided against by making it a condition of continuing the Government deposits with the bank, that the bank should undertake to hold a fixed minimum proportion of cash to liabilities.

Such a condition would also provide against the danger that the bank might, by lending abroad, lock up too much of its capital out of India.

6 *Question V*—*Is it likely that the possible conflict of interests between a bank of this description and other existing institutions might tend to discourage private enterprise, and to prevent the development of the facilities which the public now enjoys?*

We think it is evident that, if a Central Bank were obliged to hold more capital than it could profitably employ throughout the year in ordinary business, such a bank would be obliged to enter into prejudicial competition with private banks, and further, the existence of such surplus capital in India might check the outward flow of capital from private sources when occasion presented itself for its profitable employment.

7 *Question VI*—*Is it prudent for the Government to pledge itself to place all its balances in the Presidency towns in the hands of a bank?*

We do not consider that it would be prudent for Government to pledge itself to place all its Presidency balances in the hands of a Central Bank without considerable restrictions and some sort of control over the operations of the bank.

8 *Question VII*—*Is it desirable to entrust to a bank the management of the paper currency, due regard being had to the principles upon which it was established in 1862?*

Our Honourable Colleague Sir E. Law is of opinion that the management of the paper currency by a bank would be preferable to its management by Government, always provided that the bank to which this responsibility was entrusted was established on suitable lines, and that Government had some control over its operations. While feeling some doubt as to the desirability of transferring any of the banking functions at present exercised by Government, we are in accord with our Honourable Colleague in thinking that it would be unwise to entrust them to any institution that is not under the most disinterested management. The Bank of England offers an example of an establishment which is by reason of its constitution more interested in maintaining its prestige than in adding a temporary percentage to the dividends of its shareholders. But we fear that in India the voice of the shareholders would always make itself heard, and it would therefore be necessary, before making over to a bank any of the present operations of Government, to provide for some form of Government control.

9. It will thus be seen that we admit the force of some of the objections which have been raised against the scheme, the chief of which is the cost of providing the extra capital that would be required. Of the capital at present available for financing the trade of India it is difficult to form a precise estimate. The total capital of all the Joint Stock Banks amounts to Rs 25,39,09,500, but this includes the whole capital of the Exchange Banks, a large proportion of which is employed out of India. It is impossible to fix what this proportion may be, but there is reason to believe that considerably less than one-half of the capital of these banks could be made quickly available in India to meet special demands.

10. We think it may be accepted that the maintenance of a gold reserve for exchange purposes, the reason originally put forward at the Currency Commission for the suggestion of the establishment of a Central Bank, is at all events a much more serious motive for considering the question than the more doubtful requirements of loanable capital for trade purposes. Three millions sterling may be taken as the minimum addition which for practical purposes it would be worth while to consider as a gold reserve, though we should prefer to see a larger sum secured, affording a more effective

guarantee The cost of holding this capital evidently depends on the opportunities which the bank could find for its profitable employment The banks have consistently maintained that there is no opportunity for the constant profitable employment of any further capital than they already command, and, though his earlier impressions were different, a close study of the question has forced on our Honourable Financial Colleague the conviction that the contentions are in the main correct It may be added that as regards funds on which it is intended to rely as a sure resource for exchange purposes, their employment must necessarily be so restricted as to put special difficulties in the way of their profitable investment

11 The average dividend paid by the Bank of Bengal is 10 per cent and the bank's representatives have expressed the opinion that if they were to add appreciably to existing capital, they must, to maintain dividends, find from extraneous sources a return of 8 per cent on the additional sum It is impossible for us to pronounce on the fairness of this estimate, but we are inclined to consider it as a reducible maximum It might perhaps be found as the result of experience, that it should be reduced to 6 per cent It may be noted in this connection that the Presidency Banks are asking for the relaxation of some of the restrictions under which they now work, and we are inclined to think that in the event of amalgamation certain concessions might reasonably be admitted It is again impossible to estimate beforehand the value of such concessions, but they may perhaps be roughly estimated at 3 lakhs per annum, or  $\frac{2}{3}$  per cent on an additional capital of 3,000,000*l* Thus if we were to require the combined capital of the Presidency Banks to be increased to this extent, we must be prepared to accept as a fair demand for compensation or allowance, an annual sum equal to 5 per cent on the increase

12 As the Government of India can borrow money at much cheaper rates than 5 per cent, it would be unprofitable, as far as the maintenance of a gold reserve is concerned, to employ the agency of an amalgamated bank for holding it.

13 There are other practical difficulties in the way of amalgamation arising out of provincial and personal jealousies, and, as we have explained in paragraph 8 above, we fear it would be impossible to find for a Central Bank in India a body of Directors who would conduct their business under the same influences as those which guide the Directors of the Bank of England We do not think it necessary at present to dilate further upon these difficulties, which are not perhaps insurmountable, because we have decided, for the other reasons set forth above, to recommend to Your Lordship that the proposal to amalgamate the three Presidency Banks should not be persevered with for the present

14 We append a separate minute by the Honourable Sir Edward Law which explains the arguments on which the main conclusions set forth above have been arrived at We are aware that many of the questions involved are of a controversial nature, but we have accepted our Honourable Colleague's final deduction that sufficiently strong reasons have not been shown for carrying out the amalgamation scheme at the present time We are therefore regretfully compelled to advise that the scheme should be held in abeyance, although we desire at the same time to record our deliberate opinion that it would be distinctly advisable, if practicable, to establish a Central Bank in India, so as to relieve Government of its present heavy responsibilities and to secure the advantages arising from the control of the banking system of a country by a solid and powerful Central Institution

#### ESTABLISHMENT OF A CENTRAL BANK

*Minute by the Honourable Sir Edward Law, K C M G.*

Last winter I had the opportunity of discussing the question of the desirability of founding a Central Bank Institution, with Directors and Managers of the three Presidency Banks, and also with representatives of the Exchange Banks and some leading merchants, and I proceed to note

the impressions and opinions resulting from my conversations with these gentlemen

2 There are, I think, two main questions for consideration, (1) the desirability of establishing a Central Bank, (2) the cost to Government of establishing such a bank

3 There is necessarily a close connection between these two questions, the desirability of attaining an object being subject to consideration of the cost of attainment

4 I will assume for the moment, that the establishment of a central banking establishment in India is held to be desirable in principle. Its desirability was accepted by my predecessor, and I agree that it is desirable, if practicable and not too expensive or costly to Government, although my views on this question may in some respects differ from those set forth in the various notes and minutes by the Honourable Mr Dawkins

5 Admitting then the general desirability of a Central Bank, we should endeavour to estimate what would be the cost of maintaining such an establishment

6 The cost must, in the first instance, depend on the amount of capital required to be invested in the proposed bank and the use which can be made of that capital for dividend earning. This question is directly posed in paragraph 3, No 1 of the Secretary of State's despatch No 40 (Financial) of March 22, 1900.

7 For the purpose of estimating cost, we need only consider the minimum which might possibly suffice for the ends in view, but the fixing of this minimum is not an easy problem

8 The sum required, must, I think, depend, in the first instance, on whether the object chiefly considered is —

- (a) to form a reserve of gold available for exchange purposes, or
- (b) to add to the general capital resources in India, available for trade purposes in seasons of monetary stringency

The former was, I understand, the object in view when the proposal to found a Central Bank was first made at the sittings of the Currency Commission, the latter appears gradually to have taken its place

9 If the primary object is considered to be the augmentation of the reserve of gold available for exchange purposes, I think that as we have provisionally fixed 7,000,000*l* as the maximum sum to be held in the Currency Reserve, and as it will be long before our Gold Reserve Fund reaches an important amount, we may assume that 3,000,000*l* is the minimum sum which would prove a really useful addition to our gold resources

10. The next question, that of estimating the minimum sum that may be required as an addition to the capital already available for trade purposes is a particularly difficult one. It is generally assumed that trade demands for loanable capital are closely connected with the fluctuating requirements for cash for the movement of crops, and though many objections may be made to the assumption that the demands for loanable capital will vary in direct relation with the volume and value of exports of produce, at different seasons and periods, a study of the statistics of the export trade should afford useful indications to guide us in our inquiry

11 Comparing the value of exports in the year 1867-68 with the value of exports during the last twelve months, we find that the value of exports in the first period was 50 87 crores, and in the second period 105 7 crores, or an approximate increase of 100 per cent. Consequently, as far as this important factor in our consideration is concerned, it might be assumed that the demand for loanable capital is now double what it was in the year 1867.

12. But besides certain other factors manifestly affecting the situation such as progressive improvement of communications and increasing credit facilities, I must call attention to the curious results shown in the appended Table A.

TABLE A

Statement showing the value of merchandise exported from India during the years 1897, 1898, 1899 and 1900 with the Bengal Bank's maximum published rate of interest and the rate of Council Bills for the same period

(1) No bills were drawn in these months on account of the famine

\* Average rate

This table shows the value of exported merchandise, month by month, for the last four years, with the corresponding maximum rates of discount at the Bank of Bengal. In this connection, the private memorandum by Mr A M Landsay, reproduced below, may be considered

"A comparison of the rates of interest ruling in 1899 and 1900 with those in force during the preceding two years appears to indicate that the flow of capital to India anticipated by the Indian Currency Committee of 1898 has begun, and to judge by the comparative ease with which the exceptional strain caused by the famine of 1900 was met, there is reason to believe that should confidence in the stability of exchange be maintained, the existing facilities for the import of foreign capital will be ample to meet all legitimate demands on the short loan market in India. The years 1897 and 1900 were years of famine, and as usual at such times the demands on the money market were enhanced by the large internal trade in highly priced food-grains, while the local supply of money was curtailed by the reduction of the Government deposits with the Presidency Banks. In 1897 there was little confidence in exchange and therefore an inadequate import of capital, but so well did the Exchange banks perform their duty in 1900, that although the famine was more severe, the export trade slightly larger

and money dearer in London owing to the Transvaal War, the Bank of Bengal's published rate of interest averaged 5 3/4 per cent only, against 7 1/2 per cent in 1897, and 8 3/8 in other great famine year, 1877

"A comparison of the rates of 1898 and 1899, non-famine years, also certifies to the change in the resources of the Indian money markets caused by fixity of exchange. In January 1898 exchange reached 16d and the flow of capital from England to India was checked because there was a risk of loss and no prospect of gain on its return, but in 1899 there was a growth of confidence in exchange. Council remittances were overbought to the extent of 279 lakhs in excess of the balance of trade and Government Paper transfers, indicating that the anticipated flow of capital to India had commenced. Private deposits with the Bank of Bengal rose from an average of Rs 4,84,59,110 in 1898 to Rs 5,44,11,218 in 1899, while its published rate of interest fell from an average of 8 0/65 in the former year to 5 9/15 in the latter."

13 Referring to the figures of Table A, a close relation between the rate of discount and the value of exports might have been expected, but apparently there is very little. It will be observed that, whilst a 7 per cent rate existed concurrently with the comparatively small exports during October and November 1897,\* no higher rate was induced by the comparatively large exports in the first three months of 1899, and, that whilst a 10 per cent rate was maintained in April 1897, when the value of exports was below average, a 5 per cent rate sufficed for the large exports of October 1900.

14 These figures would seem to indicate that the rate of discount, and therefore the demand for loanable capital, has been more dependent on speculation and the nervous apprehensions of traders than on ordinary trade requirements. I will return to this question, but, meanwhile, for the purposes of the discussion of the minimum required addition to loanable capital in India, we may admit the generally accepted theory, and assume that during the last 33 years this requirement has increased in a proportion bearing some relation to the increase in the value of exports. The latter has doubled, and if we admit any connection between the two propositions, I think, we may say that the amount of available loanable capital ought to have increased by at least 75 per cent.

15 Objection has been taken to my assumption that the value of exports are an indication of the requirements of money for trade, and it has been specially suggested that the difference between the values of imports and exports would afford a better criterion, since a portion of the exports are paid for by imports.

16 I do not admit the correctness of the objection raised. First, because the values of imports, as compared with those of exports are relatively steady and they are not, apparently, affected to any appreciable extent by the period of the year, their influence is therefore a comparatively steady factor, which may be neglected as a contributing influence to the fluctuations we are considering. This is shown by the figures in the following table —

*Value of Imports (excluding Government Stores and Treasure) from 1896*

Month	1896	1897	1898	1899	1900	1901
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
January	6,23,32,900	5,48,46,769	6,76,92,948	7,05,23,868	6,52,20,624	7,63,83,354

November	6,88,53,531	6,55,61,746	6,43,61,912	6,29,41,451	6,96,23,765	—
December	6,10,34,263	6,26,32,639	5,83,51,586	6,01,26,354	6,91,42,899	—
Total	74,16,49,145	66,53,03,411	65,07,54,979	72,62,42,550	71,97,99,223	—

\* On this the Comptroller-General observes that famine expenditure had at the time so exhausted Government balances that the Secretary of State had to buy rupees in India instead of selling them.

17 Secondly, it is not for financing the export trade alone for which money is required. It is required in India, as in all other countries, rather for the general financial operations in connection with harvesting and movement of crops. Of these operations, the export of the surplus production above local needs, is the only one concerning which we can obtain reliable figures, and it is certain that the greater the production, the greater the surplus for exportation, and consequently I consider that the amount of exports is a very fair index of the amount of production, and therefore of the magnitude of the financial operations in direct relation therewith.

18 I have taken the year 1867 for comparison with 1900, because in the year 1867 an estimate of requirements was made by a very able man, Mr Dickson, then Secretary of the Bank of Bengal, who was at the time advocating the establishment of a Central Bank with an increase of capital and without any reference to possible requirements in connection with the exchange question. Mr Dickson proposed a Central Bank with a capital of 10 crores, of which 5 crores were to be paid up, as also a reserve of 80 lakhs, and it is evident that he fixed this amount with due regard to the requirements of trade, in 1867.

19 I have not been able to ascertain the amount of the combined capital of the banking establishments in India, other than the Presidency Banks, in 1867, but I have obtained figures for 1863, and in the accompanying Table B (see page 81) these figures will be found compared with the corresponding figures for 1900.

20 From Table B it will be seen that in 1863, the combined capital of the joint stock banks in India was Rs 7,42,16,600. This figure includes, however, over 6 crores, the capital of the Exchange Banks, and it is well-known that all these banks and particularly the Comptoir d'Escompte de Paris, have so large a proportion of their capital employed in other countries, that only a limited proportion is available for India. It is impossible to fix what this proportion may be, but, I think, it will be accepted that not more than one-half of the capital of the English Banks and not more than one-third of that of the foreign banks could be made quickly available in India to meet special demands.

21 I proceed, then, to correct the figures of 1863 in accordance with the above assumption, and they will then stand thus —

	Rs
Half capital of English Exchange Banks -	2,08,80,000
One-third capital of Foreign Exchange Banks -	64,46,667
India joint-stock Banks -	1,31,16,600
Total -	<u>4,04,43,267</u>

To the above amount we must add Mr Dickson's assumed figure of Rs 5,80,00,000 as the desirable capital for the amalgamated Presidency Banks, and we thus arrive at an estimated total of Rs 9,84,43,267. We should, however, admit some possible increase in the capital of the various banks, in the interval between the years 1863 and 1867, and we may, therefore, I think, fairly say that Mr Dickson's estimate of total requirements in the year 1867 was approximately 10½ crores.

22 If we had no other factors than the increase of trade between 1867 and 1900 to take into consideration, we might say that about 21 crores of loanable capital are required to satisfy present demands. But I have already pointed out that there are other factors such as improved communications and facilities for credit, which must influence the situation, and I think, therefore, that we should not be justified in adding more than 75 per cent to Mr Dickson's estimate for 1867. Adding then 75 per cent to 10½ crores we arrive at an estimate of 17 to 18 crores of loanable capital as necessary to meet present requirements.

23 Referring again to Table B we see that the total capital of the joint-stock banks is now Rs 19,86,09,500, and correcting this figure as above, to

24 Consequently, adopting the above figures and calculations, it would appear that an addition of about 3 crores is required to the amount of capital now available in India for the demands of trade

25 It has been suggested that the proportions of one-half and one-third which I have taken as the available capital of the English and Foreign Exchange Banks are much too high, but if these proportions be considerably reduced, and we take an average of one-quarter only, as available from the capital of both categories of banks, the results of the above calculation will not be materially affected. We shall then have—

Available capital in 1867 Rs 8,74,66,045 or, say, 9½ crores

Available capital in 1900 Rs 12,24,46,514 or, say, 12¼ crores

Difference approximately 3 crores

26 There are several considerable assumptions in the foregoing calculations but though it may be admitted that some are questionable, I think that on examination it will be found that the points of doubt are not of such a nature as to invalidate all conclusions

27 With the greatest respect for Mr Dickson's understanding of the commercial and banking situation, it cannot, however, be assumed that he was necessarily quite right in his estimates, but it may be pointed out that the addition of one crore and 80 lakhs to banking capital, which he proposed, was equivalent to an addition of over 22 per cent to existing available resources, and it would seem improbable that a proposal for so large an increase erred on the side of illiberality. On the contrary, it must be remembered that in August 1872 and April 1873, the Bank of Bengal addressed the Government of India requesting permission to reduce their capital. Arguments and figures were set forth to prove that the capital of the bank was too large for profitable employment, and finally the Government was convinced, and in 1876, consented to an important reduction. In this connection see the appended Table C which was given in the letter from the Bank of Bengal to the Government of India, dated April 30, 1873

TABLE C

*Accompanying letter, dated the 30th April 1873, from the Bank of Bengal to the Government of India*

YEAR	Average Amount of Deposits including Government Balances	Average Amount availed of from Deposits for Bank's Business	Average Percentage of Deposits Employed for Bank's Business	Average Amount of Government Balances Appropriated for Bank's Business	Average Percentage of Cash Balance and Government Securities to Liabilities
			Per cent		Per cent
1868	4,32,49,438	48,50,743	11	Nil	91
1869	4,16,97,066	6,61,233	1½	Nil	99
1870	5,16,34,668	29,79,057	5¾	Nil	91
1871	7,13,88,174	93,85,637	13	34,48,835	84
1872	7,15,17,077	83,94,409	11¾	21,37,330	86

28 Another assumption is that although trade has doubled, since 1867, the cash requirements for carrying it on have increased by 75 per cent. But in view of the very great concurrent increase of credit facilities, I should think that 75 per cent might reasonably be held to be a liberal estimate

29 Finally, there is a considerable assumption in taking the available proportion of the capital of the Exchange Banks, at one-half for English concerns and at one-third for the foreign establishments. I must leave the decision as to the correctness of this estimate to persons having an intimate acquaintance with the working of these establishments, only remarking that from what I have heard, I believe this estimate also to be sufficiently liberal, and that, as I have shown, if it be reduced, the results of my calculation will not be affected.

30 The general conclusion from the line of argument adopted must then be that, the estimate of three crores as an additional sum, which might be employed for trade requirements, may be taken as very amply sufficient, and personally I have no hesitation in accepting it as such, since it is confirmed by the figures in Table A, which, indeed, appear to indicate that, as far as trade is concerned, existing resources are sufficient, provided that the banking establishments are conducted with such circumspection as will insure their resources being reasonably free for the use of their trading clients in seasons of business activity

31 I proposed to endeavour to establish a "minimum" for the additional requirements of loanable capital—the course of argument adopted has involuntarily led me, in the first instance, to the establishment of a "maximum" That maximum works out at three crores of rupees, or two millions sterling. This, however, is a sum which, if really required, could I believe readily be found by the existing banking establishments outside the Presidency Banks, and without making any demands on the latter for reorganisation or the increase of their capital. If it is not so found, the reason to my mind is clear, namely, that it is not wanted

32 Till a comparatively recent date the banks were nervous about transmitting their gold resources to India, but such nervousness due to apprehensions concerning the course of exchange, has now disappeared and gold is frequently and constantly sent to India for investment. The only obstacle which hindered the supply of capital by private initiative has, therefore, disappeared

33 General rates of discount are sufficiently high in India, as compared with those at home, to attract all the capital required for sound banking business and we cannot desire that a plethora of capital should induce the banks to foster unsound business

34 The inevitable conclusion is that, as regards additional trade requirements for loanable capital, the "minimum" we sought to establish can only be fitly represented by zero

35 I return now to a point which was earlier mentioned incidentally, namely, that latterly, monetary difficulties in India have owed their origin to speculative finance, and the nervousness of traders, rather than to the normal absence of sufficient resources to meet the legitimate banking requirements of trade

36 Although the figures in Table A indicate pretty clearly that ordinary requirements can be properly met by present resources, they equally show that on several occasions, and notably during the first six months of 1898, there has been extreme and most prejudicial stringency in the money market. This condition of stringency could not arise without cause, and the only causes that can be suggested are the locking up of the resources of the banks in transactions with clients, outside ordinary transactions with purely commercial customers, and the nervousness of traders who noticing the low level of banks' resources at the commencement of an active business season, take fright and assist by their anxiety in abnormally, and perhaps unnecessarily, forcing up bank rates.

37 This is, I think, the only explanation which can be found for the remarkable figures shown in Table A, and its correctness has been strongly confirmed during the last few weeks

38. I have already pointed out the fact that the very large exports in October 1900 were financed at a 5 per cent rate of discount, followed by a 4 per cent rate in November, whilst in December there was a sudden jump up to 7 per cent. This for a couple of weeks produced something like a panic among the commercial community who were looking forward to a continued rise, resulting in disastrous rates just at the commencement of the ordinarily busiest season. I do not say that these apprehensions were entirely unfounded, but the situation was undoubtedly aggravated by the manner in which they were given way to.

39 On this last occasion, the origin of the monetary difficulty was distinctly traceable to causes having no relation with ordinary demands for money for legitimate trade purposes. It is well-known that the difficulty began in Bombay in connection with a heavy speculation in Government securities at the same time that some of the Exchange Banks counting on a continuance of the low rates of the autumn, had made advances on terms at very low rates of interest. This, combined with rising rates and stringency in London, resulted in calls on the Presidency Banks which made the crisis general.

40 The following statement shows the rapidity with which the pressure made itself felt, and the serious consequences which followed —

*Weekly Percentage of Cash to Liabilities in the Presidency Banks*

Week ending	Madras	Bombay	Bengal
December 8, 1900 - - -	41 40	38 16	—
" 11, " - - -	—	—	37 7
" 15, " - - -	36 76	26 19	—
" 21, " - - -	—	—	30 9
" 22 " - - -	—	19 65	—

And, meanwhile, the Bank of Bengal rate rose from 4 to 7 per cent and all this took place whilst trade movements, as indicated by the monthly values of exports, had declined from the high figures of October.

41 As a result of the foregoing considerations, I think that we may accept that the maintenance of a gold reserve for exchange purposes, the reason originally put forward at the Currency Commission for the suggestion of the establishment of a Central Bank, is at all events a much more serious motive for considering the question than the more than doubtful requirements of loanable capital for trade purposes.

42 I have suggested that for exchange purposes a sum of three millions sterling is the minimum addition which, for practical purposes, it would be worth while to consider, though I may say that I should prefer to secure a larger sum affording a more effective guarantee. However, we may proceed to consider the cost of an addition of 3,000,000*l.* to the existing capital of the Presidency Banks.

43 The cost of holding additional capital evidently depends on the opportunities which the bank could find for its profitable employment. The banks have consistently maintained that there is no opportunity for the profitable employment of any further capital than they already hold, and though my earlier impressions were different, a close study of the question has now forced on me the conviction that their contention is in the main correct. I may add that as regards any funds on which it was intended to rely as a sure resource for exchange purposes, their employment must necessarily be so restricted as to put special difficulties in the way of their profitable investment.

44 The average dividend paid by the Bank of Bengal is 10 per cent, and the Manager and Secretary whom I have consulted have expressed the opinion that if they were to add appreciably to existing capital, they must, to maintain dividends, find from extraneous sources a return of 8 per cent on the additional sum. It is impossible for any one not intimately acquainted with the working of the bank to pronounce on the accuracy of this estimate, but I should be inclined to accept it as a reducible maximum.

45 Among other points to be taken into consideration, is the fact that the Presidency Banks are asking for the relaxation of some of the restrictions under which they now work, and I gather that in the opinion of my predecessor, as in my own, certain concessions might reasonably be admitted. It is impossible to estimate beforehand the value of such concessions, but they would undoubtedly have a distinct money value to the banks, and I am inclined, as a guess, to put this value at a couple of lakhs per annum, or,

if for the sake of argument we admit that net profits might be increased by one per cent through the advantages of additional facilities for working, we may roughly take three lakhs per annum as the possible gain to the banks

46 Three lakhs represent  $\frac{3}{4}$  per cent on an additional capital of 3,000,000*l*, and I think we might perhaps estimate the cost of such an addition as susceptible of reduction to this extent, without involving any cost to Government. Further we may perhaps assume that the maximum cost, as estimated by the bank authorities might, as the result of experience, be reduced from 8 to 6 per cent, but when every allowance of this kind is made, I think we must still be prepared to accept as fair a demand for a compensation or allowance of 5 per cent on the additional capital

47 But the Government of India can borrow money at much cheaper rates than 5 per cent, and therefore as far as the maintenance of a gold reserve is concerned, it would be unprofitable to employ the agency of an amalgamated bank for holding it

48 The arguments and considerations set forth in the foregoing pages are necessarily in many respects inconclusive. Where there are so many doubtful elements and estimates, the correctness of which could only be established by experience, this is inevitable. I have endeavoured, however, to take throughout, within reasonable limits, such a view of the situation as might be favourable to the idea of the utility of the establishment of a Central Bank, and, nevertheless, the conclusions which have forced themselves on my mind are that there is under present conditions no real necessity for the foundation of such a bank in the interests of trade, and that although, in my opinion, the existence of a strong bank with abundant resources would be useful in connection with possible exchange difficulties, and I may add, would, from other points of view, be convenient to Government, the direct cost of its establishment would be greater than I venture to recommend for acceptance

49. I do not consider that it would be prudent for Government to pledge itself to place all its balances in the hands of a Central Bank without considerable restrictions and some sort of control over the operations of the bank

50 I think that the management of the paper currency by a bank would be preferable to its management by Government, always provided that the bank to which this responsibility was entrusted was established on suitable lines, and that Government had some control over its operations

51 In speaking of suitable lines, I am particularly referring to the constitution of the Bank of England. That establishment is by reason of its constitution more interested in maintaining its prestige than in adding a temporary additional percentage to the dividends of its shareholders, and I fear that it would be quite impossible to conduct a Central Bank in India on the same lines and under the same influences as those which guide the Directors of the Bank of England

52 I think I should here state that, whilst convinced that it is unnecessary to establish a Central Bank for the assistance of trade, and unprofitable, as regards provision of assistance in connection with possible exchange difficulties, I am still of opinion that if practical difficulties could be overcome, it would be distinctly advisable to establish such a bank so as to relieve Government of present heavy responsibilities and to secure the advantages arising from the control of the banking system of a country, by a solid, powerful, Central Institution

53 In India Government is to-day the chief banker. I do not think it well that Government should occupy such a position\*, and I am only deterred by what appear to me to be the very great practical difficulties of the situation, from making proposals to relieve Government of its banking functions and responsibilities. Among these difficulties I consider that of

\* I should mention that this view is not accepted by either Mr Finlay or Mr Cox.

securing a thoroughly suitable Board of Directors having the necessary leisure to devote to the business, as being one of the most serious

54 I have not, in these notes, dealt with the important practical question of the difficulties which the idea of the amalgamation of the Presidency Banks presents by reason of provincial and personal jealousies. If on the considerations I have adduced the idea of amalgamation be postponed, there is no need to discuss the subsidiary question as to how it could best be brought about. It is sufficient to remark that this question would in itself present very great difficulties, though perhaps with time, care, and tact, these difficulties would not prove insurmountable.

31st January 1901

E. F. G. LAW

No 131, dated 26th July 1901

From the SECRETARY OF STATE for India to the GOVERNMENT OF INDIA

Your Excellency's letter, dated the 13th June, No 199, together with the accompanying minute of Sir Edward Law, dated 31st of January, relating to the question of the establishment of a Central Bank of India, has been under my consideration in Council.

2 You will remember that the Currency Committee in their report referred to the need of improvement in the banking arrangements of India, and that in my despatch of the 25th July 1899 I specially recommended to your Excellency the consideration of Mr Hambro's suggestion for a Central Bank, on the model of the Bank of France or of the Bank of England.

3 Since then the subject has occupied the attention of your Government and you have come reluctantly to the conclusion that the circumstances are unfavourable to the policy of pressing on the centralisation scheme at the present time. This opinion I consider myself bound to accept, but I agree with your Excellency that it will be distinctly advisable, as soon as may be practicable, to establish a Central Bank in India, for the reasons given in your letter and in Sir Edward Law's able minute, and I request that this object may be kept in view and that the scheme may be revived, whenever there is a probability of its being successfully carried out.

### **Papers relating to changes and proposed changes in the Presidency Banks Act (1904-6).**

No 264, dated Simla, the 21st July 1904

From the GOVERNMENT OF INDIA, Finance and Commerce Department, to the SECRETARY OF STATE for India

WE have the honour to lay before you certain proposals, which have long been under our consideration, for removing some of the restrictions imposed by the Presidency Banks Act on the business of those Banks.

2 In the correspondence, which closed with Lord George Hamilton's Despatch No 131 (Financial), dated 26th July 1901, relating to the question of establishing a Central Bank of India, it was brought to notice that the limitations which at present curtail the operations of the Presidency Banks might reasonably be relaxed in certain directions. In particular we would invite a reference to the Despatch No 17, dated 18th January 1900 (see page 399), in which Lord Curzon's Government expressed the opinion that, if the position of the Banks was strengthened by amalgamation and by an increase in their resources, it would be both safe and desirable to allow them to extend their business beyond their present limits.

3 When it was decided in 1901 that the time was not ripe for establishing a central banking institution in India, the question arose whether any of the requests of the Banks for increased facilities might be acceded to, although

no material change was to be made in their constitution. In our Financial Department's letter No 474-A, dated 28th January 1901, the suggestions which had previously been put forward were tabulated and the Banks were invited to make further proposals. Their replies, copies of which are enclosed, raised a number of other questions, and it was eventually decided to postpone the consideration of them until our Honourable Financial Colleague should have an opportunity of discussing them verbally with the representatives of the Banks.

4 An informal conference was accordingly held at Calcutta in December 1902, between the Honourable Sir Edward Law and the Secretaries and Treasurers of the three Banks concerned, and Sir Edward Law's conclusions were then laid before the Directors of the Banks in our Financial Department letter No 2265-A, dated 28th April 1903. You will see from that letter that our Honourable Colleague adhered to the opinion expressed by his predecessor that the various concessions asked for could not be granted unless the Banks were prepared to accept conditions which would materially strengthen their position. The Directors at first demurred to these conditions, but they have since agreed to them in a modified form, and we are now therefore in a position to put forward our recommendations, which, as will appear from the foregoing account of the negotiations, have been the outcome of long and mature consideration.

5 The most important change which we desire to recommend is the admission of the Presidency Banks in certain circumstances to the London market. It was pointed out in the Despatch of the 18th of January 1900, cited above, that the permission given by the Presidency Banks Act (XI of 1876) to deal in securities of the United Kingdom has remained a dead letter because the operations of the Banks are confined to India. The extension of their operations to England was steadily resisted by the Secretary of State in 1862 and subsequent years on the ground that no Bank in India should be entrusted with the Government business unless it was absolutely debarred from dealing in foreign exchanges. The variations in exchange between India and the United Kingdom have now become so restricted that the objection taken on this ground appears to us to be no longer forcible. Moreover, the Banks have represented that all risks of fluctuations in exchange can be avoided by fixing the rates both ways at the time when the borrowing is conducted.

6 A further objection, adverted to in the same despatch, was that no risk should be incurred of the resources of the Banks being locked up in London when they might be required in India. The Banks have, however, pointed out that the concession of a power to borrow in London would lead to an increase, and not to a diminution or lock up, of their resources. It is possible that this objection, which was originally stated in the Secretary of State's Despatch No 135, of the 2nd of May 1878 (*see* page 516), was based on the idea that the admission of the Banks to London would result in their being drawn into general banking business there, including the receipt of deposits and investment in sterling securities. We are prepared to meet this objection, if necessary, by prohibiting the Banks from receiving deposits in London or from investing in British securities, but we doubt the necessity of curtailing the powers of investment which they at present enjoy under section 36, clause (a), sub-clause (1) of the Presidency Banks Act.

7 The only other objection, which it appears to be necessary to discuss, is the effect on exchange of the proposed borrowing by the Presidency Banks in London. In paragraph 4 of the Despatch from Lord Curzon's Government No 199, dated the 13th June 1901 (*see* page 426), it was stated that the general effect of the proposal would probably be to lower the average demand for Council Bills for the year. It is true that this effect will probably ensue if exchange is forced up to, or above, specie point in the busy season, but if the brisk demand for drafts on India in that season is freely met by the sale of Council Bills or Telegraphic Transfers at rates which will not drive gold to India, the rupees in the Currency Reserve being utilized, if necessary, for meeting the Bills or Transfers, the Secretary of State will be in a position to restrict his sales when the demand slackens, and to obtain funds for current expenditure

by transferring gold from Currency to Treasury account. We see no reason why it should not be possible to adjust the sale of Council Bills more closely to the needs of the market, so that the remittance of money by the Banks to India and back again to London will not have a prejudicial effect on the Government remittances.

8 The combined weight of the above objections does not appear to us to be great in comparison with the obvious advantages which would be secured to commerce and industry in India by the freer importation of funds in times of monetary stringency. We regard the provision of relief in such periods of temporary scarcity of capital as of far more importance to trade than the larger supply of permanent capital advocated by our predecessors four years ago. The periods of activity of many of the important industries of India are of short duration, and their demands for capital generally synchronize, it would appear to us to be unreasonable that the chief banks in India should be prevented from importing funds to meet those demands when they become acute.

9 We do not anticipate that the power to borrow in London would be frequently used, and we would in any case limit its exercise to occasions on which there is a real demand for money in India. Such a demand may be inferred to exist when the Bank rate is not lower than 6 per cent, and we would therefore propose that a Presidency Bank should only be allowed access to London when its rate for demand loans has risen to this figure. We further propose that, in order to prevent the borrowing operations of the Banks from interfering with the arrangements for Government remittances, they should be required to make their remittances to or from London in such form as may be approved by the Comptroller General in each case.

10 The power which we propose to give to the Banks of borrowing in London implies permission to remit the funds borrowed to India, and also to make remittances to England for the repayment of loans raised there, and we would therefore allow the Banks to deal in foreign bills to this extent. We would also accede to a moderate request which has been preferred by the Bank of Bengal that the Banks should be allowed to draw sterling drafts on London for the home remittances of their customers, subject to a limit of 200*l.* in each case.

11 Our next proposal is to allow the Banks to deal in securities issued by State-aided railways, such as branch lines constructed on rebate terms, or issued by District Boards, and to allow the Bank of Madras to deal in securities of the Government of Ceylon. The first two classes of these securities appear to us to be a perfectly safe and proper field of investment, and the possible objection that too much of the Banks' capital might be locked up in them will be obviated by the proposal set forth below to require the Banks to maintain a minimum proportion of cash to liabilities. With regard to the third class, Sir Henry Fowler in his Despatch No 232 (Financial), dated 30th December 1894, expressed the opinion that it was objectionable to permit the funds of a Presidency Bank to be invested in the securities of another Government (except that of the United Kingdom). The Bank of Madras has, however, represented that it wishes to be in a position to advance money to approved customers on the securities of the Government of Ceylon rather than to invest money in them on its own account, and the Directors are willing to accept a proviso that such advances should be limited to resources raised in the Island of Ceylon itself. Subject to this proviso, we do not consider the proposal to be objectionable or likely to lead to a drain of funds from India.

12 Under section 37 of the Presidency Banks Act, the Banks are prohibited from making any loan or advance for a longer period than three months. It has been represented that many trades which the Banks are authorised to finance, as for instance the coffee trade in Southern India, require advances for more than three months at a time, and that the necessity of renewing the transaction at the end of that period is an inconvenience both to the Banks and to their customers. We consider that the representation is reasonable, and we propose to allow loans and advances on other than personal security to be made for a period not exceeding six months.

13 The last sentence of section 37 of the Act permits any of the Banks to allow any person having an account with it to overdraw without security to the extent of not more than Rs 2,000 at any one time. Considering that by-laws framed in accordance with clause (d) of the same section permit advances to an individual or partnership firm amounting to several lakhs of rupees, we think it reasonable to extend the limit for overdraft to approved customers, and we propose to fix it at such sum not exceeding Rs 10,000 as may be prescribed by by-law.

14 Under the proviso to section 14 of the Act a maximum limit is set to the capital of each Bank. Since the sanction of the Governor General in Council is necessary, under section 13, to any increase of the Bank's capital, the effect of the proviso in question is to limit the powers of the Governor General in Council. We regard this limitation as unnecessary, and we propose to take the opportunity of repealing the proviso.

15 Under section 37 of Act IV of 1862, the Bank of Bengal had power to take over the capital, assets, and business of any other bank in British India, provided that, after the purchase, the business should be carried on with, and subject to, the several restrictions contained in the Act. It is not apparent why this provision was omitted in the Act of 1876 and the Bank of Bengal asks that it may be restored. We think that it might be an advantage in times of crisis to allow a Presidency Bank to take over the business of a small Bank which otherwise might be compelled to close its doors. We therefore propose to restore this provision of the Act of 1862, with an additional limitation that the sanction of the Governor General in Council shall be necessary in each case.

16 Under section 36, clause (a), sub-clause (b) of the Act of 1876 the Banks are allowed to advance money on accepted bills of exchange and promissory notes endorsed by the payees, *i.e.*, practically on the security of two names. The Bank of Bengal, citing the analogy of the Bank of Egypt, asks to be allowed to advance money on the joint and several promissory notes of two or more persons unconnected in business. We see no objection to this suggestion, and propose to amend the section accordingly.

17 The Bank of Bengal also asks that loans to the Court of Wards in respect of estates under management may be included in the list of the Bank's authorised business. Seeing that these estates are managed by responsible officers of Government, such loans appear to us to be a safe investment, though the objection has been taken that the capital lent on the security of wards' estates might be locked up indefinitely. We think that this objection can be met by requiring the previous sanction of the Local Government to such loans and by limiting them to periods of six months. We propose to grant the power asked for on these conditions.

18 We turn now to the further restrictions on the conduct of the Banks' business, which we consider it necessary to introduce, and to which the Directors have agreed on condition that the proposals set forth above are carried into effect. Section 47 of the Act provides that two auditors shall be elected at the annual general meeting of the shareholders of the Bank. We think it desirable that the Government should have the right to insist that the accounts shall be audited by satisfactory persons, and we therefore propose to take power for the Governor General in Council to annul any particular election of auditors made under the section above cited. It has been suggested to us that this should be supplemented by taking power to Government to appoint auditors itself, if on a second election an unsuitable selection should be made. It will be necessary to consult the Banks before effect could be given to this suggestion, and we think this may appropriately be done when the draft bill is circulated for opinion.

19 Prior to 1862, when the Banks' charters were revised, they were required to maintain a cash balance of not less than one-fourth of their outstanding liabilities, but this requirement was removed in that year with the withdrawal of the right to issue notes, and there is at present no legal provision to prevent the Banks from letting their cash balances run unduly low. We consider it unsatisfactory that Banks doing the Government

business should be free from all checks on the depletion of their resources, and we propose that, concurrently with the grant of the concessions suggested above, the Banks should enter into an arrangement with Government which will ensure the maintenance of an adequate cash balance. The standard which after prolonged discussion we have decided to recommend as the minimum compatible with safety, is 33 per cent of all liabilities (except Savings Bank deposits) payable at call or within one month. We accept the views of the Banks that other liabilities, being of a less pressing nature, need not be specially provided against.

20 We do not think it necessary to insert this provision in the Presidency Banks Act, since it has been represented to us that the imposition by law of a restriction of this kind might be regarded as indicating a want of confidence in the management of the Banks, and might therefore be injurious to their credit with the general public. For this reason we propose to embody this particular provision in a contract with each Bank as a condition on which it will continue to enjoy the use of the Government balances. The Directors of the three Banks have agreed to this course and they have further agreed to contract that, in the event of the cash balance of any Bank falling below the minimum standard stated above, the Bank will make good the deficiency, within such time as the Government may direct, either by—

- (i) taking a loan from the Government at 6 per cent or at Bank rate, whichever may be the higher, or
- (ii) depositing gold with the Bank of England in London, and, if so required by the Government, expending such gold in the purchase of Telegraphic Transfers from the Secretary of State.

21 We have explained to the Banks that we do not contemplate undertaking any obligation to advance money to them in the circumstances under consideration, but we desire to reserve the right to supply the deficiency in this way if it should be convenient to us to do so. With regard to the proposal to require gold to be deposited with the Bank of England, we apprehend that in some cases the mere knowledge that the Banks' resources have been strengthened in this way may be sufficient to restore confidence in this country, and that it will not therefore be necessary always to require the money to be actually transferred to India.

22 You will see from the enclosed correspondence that the above proposals have assumed their present shape only after long and careful consideration, and that the concurrence of the Banks has been secured by modification of the suggestions originally put to them. We regard the settlement now proposed as a satisfactory one, and we are of opinion that by the offer of moderate and carefully guarded concessions our Honourable Financial Colleague has succeeded in obtaining the assent of the Banks to an arrangement which will add materially to the safe conduct of their business and to the security of the public funds which are committed to their charge. We trust therefore that you will be able to accept these proposals in their entirety, and will accord your sanction to the legislation necessary to carry them into effect.

Enclosure No 1

No 474A, dated the 28th January 1901

From J F Finlay, Esq, C S I, Secretary to the Government of India, Finance and Commerce Department, to the Secretary and Treasurer, Bank of Bengal, to the Secretary and Treasurer, Bank of Bombay, to the Secretary and Treasurer, Bank of Madras

The Government of India have still under their consideration the question of the establishment of a Central Bank, on which question it is anticipated that the Government of India will shortly be able to make definite proposals to the Secretary of State.

2 At the same time the question of increasing the general banking facilities by extending the operations of the Presidency Banks, has also been considered. Various suggestions have from time to time been made with this object by the Directors of the Presidency Banks and by the Chambers

of Commerce, but the discussion has now reached a stage at which the Government of India think that the formulating of a definite programme by the Banks is desirable, so that Government may be prepared to make specific proposals to the Secretary of State. I am therefore directed to ask you to draw up a brief statement of the measures which your Directors recommend in the way of removing the restrictions imposed by the Presidency Banks Act on the operations of the Banks.

3 A statement is annexed to this letter, in the first column of which a summary is given of the requests that have already been preferred by the Banks. In the second column of Remarks an indication is given of some of the objections which it has been thought that it would be necessary to meet, and it is suggested that the Directors of the Presidency Banks might facilitate the decisions of Government by pointing out how such objections or others of like nature might, in their opinion, be satisfactorily met. For instance, the remarks against the first proposal in the annexed statement indicate some of the objections which have been suggested regarding borrowing in the United Kingdom by the Presidency Banks, and His Excellency wishes to receive the views of the Directors as to the precautions which they would recommend to obviate such objections.

4 If the Directors have any further proposals to make, I am to ask that they may now be brought forward and dealt with on similar lines.

Demands of Presidency Banks	Remarks
I—Permission to borrow in the United Kingdom	<p>One objection to this was that it would involve the Banks in dealings in foreign exchanges, a class of business which the Bank of England does not transact and which is not banking, but speculative commercial business. So far as this objection related to <i>large</i> fluctuations in the rate of exchange, it has now been removed by the fixing of exchange at 1s 4d, and the <i>element of speculation is much reduced</i>.</p> <p>A second objection was that the concession of a power of creating a foreign agency in England, such as would be the result of entering into loan transactions of the nature of those now contemplated, would admit of the Banks locking up a large portion of their capital at so great a distance as to render it practically unavailable in the case of any emergency arising in India. Possibly the Banks may be able to show that this result would not ensue.</p> <p>A third was that the position of the Banks should be strengthened by an increase of capital before they could safely be allowed resort to the London market.</p> <p>A fourth was that while access to London might be given to one amalgamated Bank, it could not be given conveniently to three separate Banks.</p> <p>Also precautions to be taken to prevent undesirable influences affecting the sale of Council Bills.</p>
II—Permission to deal in— (a) Securities of State-aided Railways. (b) Securities issued by District Boards with the authority of Government. (c) Ceylon Government securities (Bank of Madras)	<p>It might be desirable to fix a limit of proportion of assets to be so invested, and perhaps to limit to investment in debenture stock.</p>
III—Extension of the period for making advances to six months	<p>Class of advances on which extension might be admitted would require to be defined.</p>
IV—Increase of the limit for overdrafts without security from Rs 2,000 to Rs 5,000	<p style="text-align: center;">•</p>
V—Right to loans, either from the Reserve Treasury or from the Paper Currency Reserve, at the current rates for demand loans on Government paper	<p>Danger of depleting Government balances</p>

## Enclosure No 2

Dated 9th March 1901

From W D Cruickshank, Esq., Secretary and Treasurer, Bank of Bengal,  
to the Secretary to the Government of India, Finance and Commerce  
Department

I have the honour to acknowledge the receipt of your letter No 474A, dated 28th January, in which you inform me that the Government of India have still under their consideration the question of the establishment of a Central Bank, on which question it is anticipated that they will shortly be able to make definite proposals to the Secretary of State

You further inform me that, at the same time, the question of increasing the general banking facilities by extending the operations of the Presidency Banks has also been considered, and that the discussion of the various suggestions which have been put forward with this object from time to time has now reached a stage at which the Government of India think that the formulating of a definite programme by the Banks is desirable, so that the Government of India may be prepared to make specific proposals to the Secretary of State on the subject

In conclusion, you intimate that if the Directors have any further proposals to make you are to ask that they may now be brought forward

With regard to the question of the establishment of a Central Bank by the amalgamation of the three Presidency Banks, I am desired by my Directors to inform you that their attitude with regard to it has not undergone any change since I addressed you on the subject in my letter of 2nd December 1899 (*see* page 365) My Directors are still prepared to give respectful consideration to a scheme for amalgamation calculated to meet all reasonable requirements of Government and the Public, and to recommend it to the proprietors provided that sufficient inducements are offered, and that the general conditions are such as may be accepted with safety and with due regard to the Bank's interests

My Directors are glad to learn that the various suggestions that have been made from time to time with the view of increasing the general banking facilities by extending the operations of the Presidency Banks have also been considered, and that the Government of India desire to be prepared to make specific proposals to the Secretary of State regarding them Under their instructions I have prepared, and now forward herewith, a statement showing (1) the requests that have already been preferred by the Banks, (2) the objections which it is suggested they should meet, and (3) the replies of my Directors to such objections

I hope to be able to address you shortly regarding further proposals which the Directors have now under consideration

---

## BANK OF BENGAL, CALCUTTA, 9TH MARCH 1901

*Summary of the requests which have been preferred by the Presidency Banks with a view to the amendment of the Presidency Banks Act, the objections to be met, and the Bank of Bengal's replies to these objections*

Demands of Presidency Banks	Objections	Replies to Objections
1—Permission to borrow in the United Kingdom	<p>One objection to this was that it would involve the Banks in dealings in foreign exchanges, a class of business which the Bank of England does not transact, and which is not banking, but speculative commercial business. No far as this objection is related to large fluctuations in the rate of exchange, it has now been removed by the fixing of exchange at 1s 4d and the element of speculation is much reduced</p>	<p>I am instructed by my Directors to reply as follows —</p> <p>The restrictions imposed by law on the Bank of England, as far as the Directors are aware, are confined to the Note Issue Department, no legal restrictions being placed on its banking business. During the Baring crisis, it is believed, the Bank of England borrowed largely from the Bank of France, and had dealings in foreign exchanges in connection with that transaction</p>
The petition of the Presidency Banks was as follows —	-	<p>The Government of India recognise that, so far as this objection relates to large fluctuations in the rate of Indian exchange, it has now been removed by the fixing of exchange at 1s 4d, and that the element of speculation is much reduced. As regards small fluctuations, I am to point out that the maximum exchange risk on a loan operation would be the cost of importing sovereigns into India from London and the cost of returning them, assuming that they could be obtained in India at Rs 15 each as at present. At the present rate of freight by steamer this would amount to 1 3 per cent, or 5 27 per cent, per annum on a loan for three months in addition to the loss of interest while the sovereigns were in transit both ways—the interest charge in London would of course have to be added. But in ordinary circumstance more economical means of remittance would be found—outwards, in the shape of Secretary of State's Council Bills and Wire Transfers, against (1) the Treasury balances of the Government of India, and (2) the Paper Currency Reserve under Act VIII of 1900, and, homewards, in the shape of Telegraphic Transfers of the Exchange Banks. As the Directors of the Bank of Madras say "it is now an easy matter to avoid any exchange risk" by the simple expedient of fixing the rate both ways at the time the transaction is entered into. The risk, however, is a matter which mainly concerns the Banks themselves, and they may well be left to make the most economical arrangements that may be open to them</p>
Your memorialists therefore humbly pray that the Presidency Banks Act (XI of 1876) may be amended, and that distinct and definite powers may, by the amending enactment, be given to such Banks—		
1st—To borrow money, either in India or England, by pledge of assets or otherwise, and on such terms as to repayment, interest, &c, as the said Banks may from time to time arrange		
2nd—To make remittances by Bills of Exchange or otherwise, as may seem expedient, to England in payment of the price of stock or other authorised investments from time to time purchased or acquired for the Banks in England, and also in repayment of loans arranged for there.		

Demands of Presidency Banks	Objections	Replies to Objections
<p>I—Permission to borrow in the United Kingdom—<i>cont</i></p> <p>Of these, the 2nd may be subdivided thus—</p> <p>1st—Remittances in repayment of loans</p> <p>2nd—Remittances in payment of authorised investments purchased</p>	<p>A second objection was that the concession of a power of creating a foreign agency in England, such as would be the result of entering into loan transaction of the nature of those now contemplated, would admit of the Banks locking up a large portion of their capital at so great a distance as to render it practically unavailable in the case of any emergency arising in India. Possibly the Banks may be able to show that this result would not ensue</p> <p>A third objection was that the position of the Banks should be strengthened by an increase of capital before they could safely be allowed resort to the London market</p>	<p>In the memorial of the Presidency Banks a request is preferred that power may be given to them to make remittances to England for the two distinct purposes specified in the margin. These are dealt with separately</p> <p>(1) As to the power to make remittances to England in repayment of loans arranged for there—</p> <p>The concession of this power, it is respectfully submitted, would <i>not</i> involve a lock up of capital at so great a distance as to render it practically unavailable in the case of any emergency arising in India. All money borrowed by the Banks in London would be immediately remitted for employment in India, and would be returned when no longer required. The Directors of the Bank of Bengal have never contemplated creating any agency in England beyond that of the Bank's own Bankers—the Bank of England and Messrs Coutts &amp; Co</p> <p>(2) As to the power to make remittances in payment of the price of stock or other authorised investments from time to time purchased or acquired for the Banks in England—</p> <p>It was preferred with the object of correcting an inconsistency in the Presidency Banks Act. By section 36 (a) (1) the Banks are authorised to advance and lend money and open cash credits upon the security of "promissory notes, debentures, stock and other securities of the Government of India, or of the United Kingdom of the Great Britain and Ireland," and, by clause (d) of the same section, to invest the funds of the Banks in any of the securities specified in clause (a) (1). But by section 36, clauses (l) and (m), the power of the Banks (1) to draw Bills of Exchange, and (2) to buy Bills of Exchange payable out of India, is strictly limited to transactions entered into under the orders of and at the risk of principals in the agency departments of the Banks</p> <p>The power to invest in securities of the United Kingdom granted by clauses (a) (1) and (d) is thus apparently rendered inoperative, because clauses (l) and (m) do not authorise the operations necessary for an effective exercise of that power. The Directors of the Bank of Bengal are of opinion that this defect in the Presidency Banks Act should be remedied, and also that it should be made perfectly clear that the Presidency Banks are authorised to make remittances by Bills of Exchange or otherwise, as may seem expedient, in payment of the price of stock or other securities purchased by the Banks in England, through their agents on account of, and under orders from, principals in this country</p> <p>The Directors of the Presidency Banks have already represented to the Government of India that the capital of the Banks is sufficient for the present requirements of their business, that the resources of the Banks have largely increased, and can be further increased by the encouragement of fixed deposits, and that all that the Banks and the money markets of India now require is a final resort for money. The Banks are unanimous on this point, and so are the Chambers of Commerce who were consulted by the Government of India on this subject. The use of the word "safely" in the objection is not apparent, whatever risk, if any, there may be in a loan transaction lies with the lender, not with the borrower, and the Presidency Banks would not be subjected to any risk other than of that making proper arrangements for repayment at the time they borrow</p>

Demands of Presidency Banks.	Objections	Replies to Objections																																																																																																
I—Permission to borrow in the United Kingdom— <i>cont</i>		I am to add that the Capital and Reserve of the Presidency Banks are already larger in proportion to the liabilities of the Banks than the Capital and Reserves of the Bank of England and other leading Banks at home, as shown by the figures given below, and the directors apprehend that any considerable increase of capital by the Presidency Banks might possibly, in an easy money market, have a far greater adverse influence on the sale of Council Bills than any casual borrowing transactions in London would be likely to have —

	A fourth objection was that while access to London might be given to one amalgamated Bank, it could not be given conveniently to three separate Banks	This objection appears to be merely an argument in support of the proposal that the Presidency Banks should be amalgamated before access to the London market is allowed. It is not shown how or to whom inconvenience would be caused by giving access to three separate Banks, a simple amendment of the Presidency Banks Act being all that is necessary for the purpose. The Directors of the Bank of Bengal are of opinion that borrowing on the part of the Banks in London would not be of more frequent occurrence than borrowing from the Government of India has been in the past, and that it will still be possible for Government to regulate these borrowings so as to prevent interference with the sale of Council Bills. It has been urged that Government might influence the operations of one Bank, but not easily those of three Banks, the difficulty, it is submitted, would be overcome if the Banks undertook to report their London borrowings, and if that were done, the position would be that, by permitting such borrowings, the Government would avoid applications for loans from their balances at inconvenient times. It will, however, be the settled policy of the Bank of Bengal to avoid borrowing out of India. At the same time, a last resort for money is admitted on all sides, and by the Government of India themselves, to be desirable, if not absolutely necessary.																																																																																																

Demands of Presidency Banks	Objections	Replies to Objections.
I - Permission to borrow in the United Kingdom —cont	Also precautions to be taken to prevent undesirable influences affecting the sale of Council Bills	I am to point out that there are several ways of making remittances from England to India and <i>vice versa</i> , as shown in the replies to the first of these objections. They think this objection would be met by an undertaking on the part of the Banks to consult the convenience of the Government of India in every case, and make all their arrangements for such remittances subject to the approval of the Comptroller General
* * *	* * *	* * * * *
III — Extension of the period for making advances to six months	Class of advances on which extension might be admitted would require to be defined	The Directors are of opinion that if the extension is conceded, it should not be limited to any particular class of advances. They believe the concession would be beneficial as calculated to promote authorised transactions which necessarily contemplate a longer period than three months, but at present can only be arranged by renewals of loans for the shorter period.  This is another restriction which has not been deemed necessary in the case of the Bank of England, and it has already been relaxed in the case of the Bank of Madras in regard to Ceylon
IV — Increase of the limit for overdrafts without security from Rs 2,000 to Rs 5,000	-	This is a restriction which the Directors would like to see removed. It has been explained that the limitation was fixed to allow of an accidental overdraft. But when it is borne in mind that sums to the extent of six lakhs of rupees can be advanced on mere personal security, it does seem unnecessary to provide that the directors may not sanction a temporary overdraft to a constituent of undoubted wealth, holding in deposit with the Bank securities worth many times the amount of the overdraft.  Whether such securities constitute authorised investments at the Bank or not, the Bank's lien would attach to them, and it is submitted that the object of the restriction would be best secured by a bye-law giving the Directors a reasonable discretion in such cases
V - Right to loans, either from the Reserve Treasury or from the Paper Currency Reserve, at the current rates for demand loans on Government paper	Danger of depleting Government balances	My Directors desire me to say that, in the event of access to London being granted to the Bank, they will be satisfied with a general understanding that loans from the Reserve Treasury or Paper Currency Reserve may be granted only when convenient to Government. They will not ask for any definite assurance or for an open credit to operate on, but they submit that the Presidency Banks should not be denied short accommodation in this form at times when those reserves are sufficiently large to admit of the Secretary of State granting, at special rates, Wire Transfers on India instead of, or in addition to, the weekly sales of Council Bills

W D CRUICKSHANK,  
Secretary and Treasurer, Bank of Bengal

Enclosure No 3

Dated 22nd March 1901

From J Begbie, Esq., Secretary and Treasurer, Bank of Bombay, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 474-A, dated 28th January last, stating that the Government of India have still

under their consideration the question of the establishment of a Central Bank, on which question it is anticipated that Government will shortly be able to make definite proposals to the Secretary of State. The letter also states that, at the same time, the question of increasing the general banking facilities by extending the operations of the Presidency Banks has also been considered, and asks (1) that a brief statement may be drawn up of the measures which the Directors recommend in the way of removing the restrictions imposed by the Presidency Banks Act, (2) suggests that the Directors might facilitate the decisions of Government by pointing out how the objections raised to previous proposals, or other objections of a like nature, might, in their opinion, be satisfactorily met, adding that his Excellency wishes to receive the views of the Directors as to the precautions which they would recommend to obviate such objections, and (3) invites the Directors to bring forward any further proposals they have to make.

In reply I am instructed to say that the Directors, in their letter, dated 21st December 1899 (*see* page 388), to the Government of Bombay, intimated that they were prepared to consider fully and favourably any proposals which Government might make to them, with a view to the establishment of a Central Bank by the amalgamation of the Presidency Banks. They are still ready to give due and respectful consideration to any scheme which may be submitted to them.

With regard to the other contents of your letter, the Directors are greatly obliged for the opportunity now afforded them of replying to the objections brought forward in your letter to the proposals previously made.

The first proposal is that permission should be granted to the Banks to borrow in the United Kingdom, to which five objections are mentioned.—

The first is that borrowing in the United Kingdom "would involve the Banks in dealings in foreign exchanges, a class of business which the Bank of England does not transact, and which is not banking, but speculative commercial business." It is added that, "so far as this objection is related to *large* fluctuations in the rate of exchange, it has now been removed by the fixing of exchange at 1s 4d, and the element of speculation is much reduced." In reply I have to say that the Directors have been unable to ascertain that any restrictions are imposed by the Legislature on the general banking business of the Bank of England. The English Bank Act is an Act to regulate the issue of Bank notes, and has reference only to the note issue. The Directors are not aware that the Bank of England is not permitted to borrow out of the United Kingdom. On the contrary, it is well known that the Bank borrowed a large sum from the Bank of France at the time of what is known as the "Baring crisis." So far, therefore, as the example of the Bank of England is concerned, it supports the claim of the Presidency Banks for authority to borrow out of India. With respect to that part of the objection, which implies danger in dealing in foreign exchanges, the Directors beg to remark that ordinary operations in the exchange with England, such as the Banks would undertake if they borrowed in London, are based on the return which the transactions will yield, and cannot correctly be termed speculative business. The risk involved would be no greater than that which enters into ordinary banking transactions. There would be only the usual banking risk of the sufficiency of the companies or corporations dealt with to retire their bills or fulfil their contracts. The danger of loss by reason of the variations in the rate of exchange is greatly minimised now that the sterling exchange is fixed and the fluctuations in the rate confined within narrow limits. So long as exchange is fixed and gold obtainable for export, the maximum cost of borrowing and repayment operations could always be definitely ascertained before the transactions were entered into. There does not, therefore, appear to the Directors to be any necessity for taking any special precautions in connection with borrowing in London and the consequent transactions in the foreign exchanges. Further, the Directors desire to say, with all due respect, that no comparison can usefully be drawn between the Bank of England and the Presidency Banks. The former has charge of the note issue, while the latter have no power to issue currency notes. Again, the whole of the banking reserves in the United Kingdom are focussed in the reserve of the Bank of England, while in India a large

proportion of the monetary resources of the country do not form a part of the reserves of the Banks, and, further, a high Bank rate in India has not hitherto attracted foreign capital as a high Bank rate in England does.

The second objection is "that the concession of a power of creating a foreign agency in England, such as would be the result of entering into loan transactions of the nature of those now contemplated, would admit of the Banks locking up a large portion of their capital at so great a distance as to render it practically unavailable in the case of any emergency arising in India." In reply thereto the Directors desire to point out that the only way in which a Bank can lock up any part of its capital is by investing in securities which are not liquid or readily convertible into cash. Borrowing could not lock up the Banks' funds, and additional power to invest in English securities has not been applied for. The establishment of a foreign agency, therefore, would not admit, as supposed, of the Banks locking up capital so long as the powers of the Banks at the agency were not extended to include greater investing power in English securities than they now possess.

The third objection is "that the position of the Banks should be strengthened by an increase of capital before they could safely be allowed resort to the London market." The danger implied in this objection seems to the Directors to be non-existent. No reason is given for requiring an increase of capital before permitting the Banks to open in London as desired. The danger implied is not defined, and the Directors regret they are unable to discern wherein it lies. There seems to them to be no good reason for requiring additional capital before enabling them to borrow in London, seeing they already have the power of borrowing in India without supplying further capital. In order to borrow in London against security additional capital would not be necessary. The Banks could pledge Government of India or other authorised public securities. No danger to the Banks would attend an operation of that nature, and no further capital would be necessary. With regard to borrowing without the pledge of securities, that is, receiving deposits, the Directors consider that they should be able to collect a much larger sum than they have been able to gather hitherto without any addition to the Bank's existing capital, especially in view of the large Reserve Fund which they have accumulated and to which it is their intention to add as opportunity offers. The Reserve Fund, equally with the Bank's Capital, is the ultimate security offered by the Bank to depositors against loss. The percentage of the Capital and Reserve Funds of the three Banks to the total of their deposits compares favourably with the percentage which the paid-up Capital and Reserve Funds of the large English Banks bear to their deposits. No additional shareholders' capital, therefore, appears to be required. In the event of a large accession of deposits, it might become necessary to increase the capital to provide better security to the depositors, and the Directors would not hesitate to recommend that course if it proved to be really needed. But the usual and natural course is to increase the capital after it is required. The increase should follow and not precede, an augmentation of deposits.

The fourth objection is "that while access to London might be given to one amalgamated Bank, it could not be given conveniently to three separate Banks." The Directors regret they are unable to appreciate the weight of this objection. They do not believe that any inconvenience would be felt, and they consider that in any case a matter of convenience should not be permitted to stand in the way of an important and necessary addition to the resources of the money market. So far as borrowing against the pledge of securities is concerned, the amount could not be very large at one time. Borrowing against securities would not increase the amount of the Banks' investments. It would probably enable the Banks to hold larger permanent investments in Government securities. But it would not add to the total amount of money employed by them. On the other hand, power to borrow in London without the pledge of securities, that is, receiving deposits, would place more lendable capital in their hands and would enable them to add to their investments of all kinds. The Directors are unable to see in what way this would be inconvenient.

The precautions to be taken to prevent undesirable influences affecting the sale of Council Bills remain to be considered. Bringing to India the proceeds of loans raised in London and returning the money in payment of the loans would not affect the total sales of Council Bills. The operation of remitting the money to India would increase the demand for drafts on this country, while the reverse movement would lessen the demand for the bills to exactly the same extent as bringing the money to India increased the demand. In this connection the Directors desire to mention that other Banks and the public generally have means, at their disposal for obtaining loans in London and bringing the money to India. Large operations of this kind frequently occur without producing any appreciable effect on the sales of Council Bills. Loans to the Presidency Banks would not materially increase this class of business. On the contrary, they would probably take the place, to some extent, of other loans now arranged by the public direct. The Directors do not think that any danger exists of the business mentioned injuriously affecting the Government remittances.

I have to add that permission to borrow in London would require to be accompanied by authority to remit money to and from London by Bills of Exchange or otherwise, as might be expedient.

Before leaving this question of the grant of authority to raise funds in the United Kingdom, the Directors desire to impress on Government their strong conviction, that such authority is most necessary in the interests of the trade and credit of the country, as well as the Banks themselves. Under existing conditions in India there are at times no reliable means of converting even the best of investments into cash readily. The authority sought for would by no means be a perfect remedy for the dangers of the existing position. But every means of minimising those dangers should be placed within reach of the Banks, and the Directors, therefore, respectfully but firmly urge Government to amend and enlarge the Act as applied for

The third proposal is to extend the period for making advances to six months. The Directors think the period might be extended to twelve months in the case of advances against Government and other authorised public securities, and also against goods deposited with the Banks, but they think the limit of three months should be retained in the case of advances and discounts when the security is of a personal nature.

The Directors think that the proposal, that the limit for overdrafts without security should be increased from Rs. 2,000 to Rs. 5,000, might be adopted with safety.

The last proposal is the "right to loans, either from the Reserve Treasury or from the Paper Currency Reserve, at the current rates for "demand loans on Government paper" and its accompanying remark indicating the danger of depleting Government balances.

So far as loans from the Paper Currency Reserves are concerned, the Directors are of opinion that until currency notes are more widely acceptable to the public for currency purposes than they now are, it would not be altogether safe to rely upon them.

With regard to loans from the Reserve Treasury, while not claiming an actual right to them, the Directors respectfully maintain that in the interests of trade and of the monetary position generally, the Treasury surplus balances should be placed at the disposal of the Banks whenever possible. The Directors do not suggest that such loans should be given when inconvenience would be caused to Government, but they think that there are frequent occasions when the balances could be made available to trade without risk of undue depletion. In the event, however, of a serious emergency arising, and especially when the state of credit is bad and likely to lead to serious embarrassment, the Treasury balances should be used freely to restore confidence. With money in their vaults during a crisis, arising from loss of credit, Government could hardly, the Directors think, withhold assistance if it was wanted.

With respect to the question of the rate of interest to be charged for loans, the Directors think that, if the rate is to be settled in advance, it should be at a fixed percentage below the official Bank rate to enable the

Banks to compensate themselves to a small extent for the risks they would incur in lending the money. They prefer that the rate should be subject to arrangement at the time each loan is given or required. If loans are given because the money is available for temporary employment and to assist trade, the rate should be a fixed percentage under the official Bank rate.

Up to this point the Directors have dealt only with the situation placed before them in the letter under reply, which has reference only to the extension of the business in which the Banks may engage. They desire, however, to add that in their opinion the general monetary position in India should be taken into account in considering the means that should be adopted for the improvement of the banking facilities and money market in India. They humbly submit that, besides the extension of the operations of the Banks, which is under discussion, much assistance could be rendered with the monetary resources of Government. They would point to what they regret they must consider a wasteful policy in the entire withdrawal of more of the Government balances from the money market than is really necessary. The methods followed by Government in managing their Treasury balances and the reasons therefor are well known and need not be recapitulated here. But I am instructed to say that the reasons assigned for the creation of the system of Reserve Treasuries are not conclusive, and, in any event, the same result, so far as Government are concerned, could be obtained without adopting the policy referred to. The Directors suggest, for the earnest consideration of Government, the desirability of closing the Reserve Treasuries and reverting to the system of depositing the surplus Treasury balances with the Banks, imposing on the latter the condition that all the surplus balances thus deposited, that is, all Government funds in addition to those now placed with them, should not be employed in the Banks' ordinary business, but be held as cash in addition to the cash reserves which they now hold. The advantages of following this proposal would be that, while the Government could rely on their cash balances with as much confidence as they now do, and although it would not benefit the Banks or trade, it would have an important effect by bringing a large section of the monetary resources of the country into view in a more prominent way than is now the case, and would tend to attract foreign capital more powerfully when rates of interest are favourable. The Directors regard it as unfortunate that the whole of the monetary resources of India are not represented through the medium of the Banks established in the country, as is the case in England and elsewhere. Apart from the currency note reserves, the Government surplus cash balances, and most of the cash resources of the bazars, do not enter into the composition of the balance sheet of any Bank. Competent authorities point to the division of the bullion reserve in the Bank of England into two parts for a principal reason for the more numerous fluctuations in the rates of interest and discount in England than occurs in France or Germany, where the note reserves are not separated from the ordinary banking reserves. In England both reserves are held by one institution, and yet a serious disadvantage appears to be experienced. How much greater, therefore, must the disadvantage be in India where the different reserves of the country are scattered as they are, and to which must be added the additional disadvantage of an isolated and distant position from the great money markets of Europe! It is a slow process to get the monied classes in India outside of the large cities to become depositors with the Banks. But the Directors have no hesitation in recommending that the Government surplus balances should be dealt with in a way more in keeping with the practice in England by depositing them with the three Presidency Banks, even if it should be with the condition that all fresh deposits are not to be used in the Banks' ordinary business. Still another important result would be, if the proposal was properly carried out, to lessen the great fluctuations in the cash reserves of the Bank. As is well known, the cash balances of the Banks usually fall to their lowest point at the time the Government balances are rising, and *vice versa*. A combination of the two would, therefore, tend to prevent the severe fluctuations which take place under the existing conditions. Much of the criticism in England, which has been directed at the Presidency

Banks, seems to the Directors to have originated from mistaken ideas caused by omitting to take into account the monetary position in India outside the sphere of the Banks

The Directors are further of opinion that, in pursuance of the resolution of Government to place at the disposal of trade during a portion of the year a part of their surplus balances, when available, the money should be offered to the Banks. At present the market has no means of knowing whether any Government funds are available or not, with the result that there is unwillingness to apply for accommodation unless the pressure is extreme and cannot be met otherwise. The Directors, therefore, respectfully suggest that Government should intimate publicly or to the Banks that funds are available, giving particulars of the amount and the period for which it can be obtained.

Lastly, the Directors suggest that the method of effecting the Government remittances to England by the sale in London of Council Bills should be changed and the remittances be carried out from this side through the Presidency Banks. They consider that the evidence on the point given before the late Currency Committee strongly supports them in making this suggestion. Council Bill sales meet the requirements of the export trade chiefly, although in the opinion of the Directors it would be more effectively met if their recommendation was carried out. They are, however, more concerned with and interested in the internal trade, and experience shows that that trade is assisted by the release of Government funds through the sale of Council Bills only in a tardy and circuitous manner. If the remittances are initiated in India, the money would be released for the benefit of local trade far more expeditiously than under the existing system.

The points upon which the Directors lay most stress for effecting an improvement in the general monetary situation in India are —

- (a) The concession to the Banks of borrowing powers in the United Kingdom with the necessary authority to remit to and from India
- (b) The deposit with the Banks of the Government cash balances as far as possible, the surplus balances being merely held in custody as above explained, except when expressly made available for trade purposes by Government
- (c) The offer by Government of their surplus funds for the use of the market whenever available
- (d) The Government Home remittances to be effected through the Presidency Banks

Enclosure No 4.

Dated the 2nd April 1901

From G D Ker, Esq, Secretary and Treasurer, Bank of Madras,  
to the Secretary to the Government of India, Finance and Commerce  
Department

I have the honour to acknowledge receipt of your letter, No 474A, of 28th January 1901, intimating that the Government of India have still under their consideration the question of the establishment of a Central Bank, on which question it is anticipated that the Government of India will shortly be able to make definite proposals to the Secretary of State.

I am desirous by my directors to say that they will give respectful consideration to any proposals which may be submitted to them by Government in this connection.

2. Your letter further intimates that the question of increasing the general banking facilities by extending the operations of the Presidency Banks has also been considered, and that the Government of India thinks that the discussion has now reached a stage at which the formulating of a definite programme by the Banks is desirable.

A statement is annexed to your letter in which a summary is given of the requests that have already been preferred by the Banks, and of some of the objections which have been raised thereto, and it is suggested

that the Directors should point out how such objections (or others of like nature) might, in their opinion, be satisfactorily met. My Directors will therefore reply to these questions *seriatim*.

### 3. *Permission to borrow in the United Kingdom*

- (a) The first objection raised to this proposal is that it would involve the Banks in dealing in foreign exchanges, which is not banking, but speculative commercial business.

My Directors submit that this is an altogether fallacious view. The British sovereign is now legal tender in India, and it is not understood how borrowing in the legal tender coin of the country can possibly be interpreted as dealings in foreign exchanges, or as speculative commercial business.

The fluctuations in the rate of exchange between India and London are now fixed within well-defined limits, and, as has already been pointed out in this Bank's letter of 13th November 1899, it is now an easy matter to avoid any exchange risk by fixing the rate both ways at the time a transaction is entered into.

My Directors, therefore, submit that this objection has no force, and that the borrowing of money, as indicated, is a legitimate banking transaction.

- (b) The second objection raised is that the concession of creating a foreign agency in England, such as would be the result of entering into loan transactions of the nature of those now contemplated, would admit of the Banks locking up a large portion of their capital at so great a distance as to render it practically unavailable in the case of any emergency arising in India.

My Directors are at a loss to understand this objection, which they respectfully submit is entirely irrelevant.

The Banks have not asked for power to lend money in the United Kingdom, but to borrow money, and money borrowed so far from being a lock-up of capital in England would supply fresh capital for the requirements of trade in this country.

With regard to the creating of a foreign agency in England, my Directors desire to state that they have no intention of disturbing existing arrangements, whereby the Bank of England performs this Bank's agency business in that country.

- (c) The third objection raised is that the position of the Banks should be strengthened by an increase of capital before they can safely be allowed to resort to the London market.

In the absence of any reasons in support of this objection, my Directors can only say that the present Capital of the Bank of Madras is ample for present requirements, and that it would not be in the interests of the shareholders to further increase the Capital under existing conditions.

My Directors do not consider that there is any risk in giving the Banks power to borrow in London, and they cannot, therefore, see the force of the remark that an increase of Capital is necessary before the Banks can *safely* be allowed this concession.

- (d) Nor can my Directors understand the objection that while access to London might be given to one amalgamated Bank, it could not be given conveniently to three separate Banks.

If a final resort be necessary (and the necessity for this has been admitted on all sides), it seems to my Directors that the question should be dealt with on its merits, apart altogether from the question of amalgamation.

- (e) Precautions to be taken to prevent undesirable influences affecting the sale of Council Bills.

It is not clear to my Directors how permission to the Presidency Banks to borrow in London can prejudicially affect the sale of Council Bills. When money is borrowed, it would probably as a rule be remitted to India by means of Council Bills or Telegraph Transfers, and when repayment is made Bills of Exchange or Transfers would be purchased by the Banks on this side for a similar amount, so that on balance the total sales of Council Bills would be unaffected.

\* \* \* \* \*

5 *Extension of the period for making advances to six months.*

It is remarked that the class of advances on which extension might be admitted would require to be defined

This is hardly practicable, for each case would have to be considered on its merits, but as an instance in point, I am desired to say that advances made for the purchase of coffee, which has to undergo a process of curing, &c, before shipment, can often not be repaid within four or five months, and the Bank has accordingly to grant renewals of the three months' bills now discounted for this business. It is to obviate the necessity for such renewals that power is asked to discount bills up to a maximum of six months

6 *Increase of the limit for overdrafts without security from Rs. 2,000 to Rs 5,000*

My Directors submit that it is anomalous that, while the Bank has power to advance on two approved names up to a limit of Rs 5,00,000 (*vide* Byelaw No 1), it should not be permitted to advance, without security more than Rs 2,000 to a constituent, however wealthy he may be. This disability has hampered the Bank considerably and has led to the loss of much good business

My Directors would like to see this section eliminated from the Act altogether, and made the subject of a byelaw, as in the case of advances on two approved names

7. *Right to loans, either from the Reserve Treasury or from the Paper Currency Reserve, at the current rates for demand loans on Government paper*

*Objection raised*—Danger of depleting Government balances.

My Directors recognise that no definite undertaking can be given to the Banks, and would be satisfied with an assurance that assistance will be granted from either of these sources when convenient to Government, provided the final resort to the London market is open to the Banks.

As regards the rate of interest to be charged on such advances, my Directors respectfully submit that it should not be higher than 2 per cent below the Banks' minimum rate for the time being, which would be a considerably higher rate than that at which the Banks could borrow in the London market under ordinary circumstances, and would leave no more than a fair margin of profit to the Banks

Enclosure No 5

Dated the 18th April 1901

From W. D. Cruickshank, Esq., Secretary and Treasurer, Bank of Bengal,  
to the Secretary to the Government of India, Finance and Commerce  
Department

In continuation of my letter of 9th ultimo, I am desired by the Directors of the Bank to submit, for the consideration of the Government of India, the following suggestions for the amendment of the Presidency Banks Act —

CHAPTER III.

CAPITAL

Section 13 — "*The proprietors and shareholders of the Bank may from time to time by special resolution, and with the previous sanction of the Governor-General in Council, increase or reduce the capital of the Bank.*"

Section 14. — "*Provided that the capital shall not exceed, in the case of the Bank of Bengal, thirty millions of rupees*"

My Directors consider this proviso to be unnecessary, and suggest that it should be struck out. It is true that the previous Act, No. IV. of 1862, by section 6 placed a limit on the Bank's capital, but when, in 1876, the Government decided to withdraw from the direction of the Bank and to sell their shares, the relations between the Bank and Government were modified,

and as regards banking business, the responsibility of the Bank to the Government became the same as the ordinary one of a banker to his customer.

My Directors think that the shareholders ought to have power to increase the Bank's capital whenever and to whatever extent they may consider it desirable. They have no thought of reducing the capital.

*Power to take over Capital and Business of any other Bank*

The power of taking over the capital and business of any other Bank in India, which was expressly conferred on the Bank by section 37 of Act IV of 1862, should be restored. No explanation of the repeal of the section appears to have been placed on record. In extending the Bank's operations in fields where Banks already exist, it might be found advantageous to enter into arrangements which are not expressly sanctioned by the present Act.

Section 37 of Act IV of 1862 was as follows —

“It shall be lawful for the Directors of the said Bank, from time to time, to enter into negotiations for and to purchase and take over the capital, assets, and business of any other Bank within Her Majesty's Indian territories, of which the capital is divided into shares, and to grant and allot to the shareholders or proprietors in such Bank in full of their respective right, title, and interest in such capital, assets, and business, a sufficient number of shares in the capital stock of the said Bank of Bengal (which number shall be determined by the Directors), and for that purpose to increase the capital stock of the said Bank by the issue of such number of shares as may be so determined on. The shareholders or proprietors of the purchased Bank to whom such new shares shall be allotted shall be proprietors of the Bank of Bengal, and be in all respects in the same position as if they had respectively subscribed and paid for the shares so allotted to them. Provided always that the business so purchased shall, after the purchase be carried on by the said Bank of Bengal, with and subject to the several restrictions contained in this Act.”

## CHAPTER VIII

### BUSINESS.

#### Sections 36 (a) (6)

*Section 36 —The Bank is authorised to carry on and transact the several kinds of business hereinafter specified (that is to say) —*

- (a) “*The advancing and lending money, and opening cash credits, upon the security of*”—(6) “*accepted bills of exchange and promissory notes endorsed by the payees*”

Loans on accepted bills of exchange and promissory notes endorsed by the payees are alone authorised.

The intention apparently is to secure the liability of two persons on the same document as principal and surety, and yet it is not clear why the Bank should not advance on the joint and several promissory note of two persons unconnected in business and without recognising one as a surety for the other.

The National Bank of Egypt has been constituted within the last three years under the approval of the Egyptian Government. They are a Bank of Issue, and their Board of Administration and London Committee are subject to the approval of the Government. Their constitution has been carefully safeguarded so as to exclude operations in land or immoveable property, while they are authorised to undertake all commercial and financial operations in Egypt, and yet no restriction as to the form of promissory notes to be accepted as security for advance is enjoined, on the contrary,

the Bank are expressly authorised to open accounts current by way of overdraft for persons established in Egypt, whose credit is well known, provided the account be liquidated within six months

The Directors urge that similar powers may reasonably be conferred on the Presidency Banks

*Section 37 (d), Byelaw 1*

*Section 37 (d) —“ Nor shall they [except upon the security mentioned in section 36, paragraph (a), Nos (1) to (5), inclusive] discount bills for any individual or partnership firm for an amount exceeding in the whole at any one time such sum as may be prescribed by the byelaws for the time being in force, or lend or advance in any way to any individual or partnership firm an amount exceeding in the whole at any one time such sum as may be so prescribed ”*

*Byelaw 1 —“ Except upon the security mentioned in section 36, paragraph (a), Nos (1) to (5) inclusive, of the Presidency Banks Act, 1873, the Directors shall not—*

*“ discount bills for any individual or partnership firm for any amount exceeding in the whole at any one time the sum of Rs 6,00,000 ,*

*“ or lend or advance in any way to any individual or partnership firm an amount exceeding in the whole at any one time the sum of Rs 6,00,000 ”*

The right to advance up to six lakhs of rupees should, in the opinion of my Directors, be made clearly irrespective of the liabilities of the borrowers to the Bank through the transactions of third parties. For example, A, B being acceptors of bills discounted by C, D, E, F, and others, for six lakhs of rupees should not be ineligible for a loan or discount on his own account.

The Bank have been advised that this is so, but, having regard to the above section of the Act and byelaw, the right to make the advance in such cases might be placed beyond question.

*Loans to Native Princes.*

Loans to Native Princes are forbidden by the Statute 37, Geo III, Chapter 142, Section 23, unless made with the sanction of the Government of India. The undoubted object of the Statute was to prevent usury and extortion being practised upon Native Princes, and was never intended to affect *bonâ fide* transactions with a Bank, but the terms of the section are very wide and they are of a penal nature. In your letter No 5162-A, dated Simla, 12th October 1894, you informed the Bank that the Government of India had been advised that the provisions of the Statute do not apply to loans made by incorporated Banks, but as this advice is unsupported by any binding decision, the Act should either be repealed or declared inapplicable to transactions with the Presidency Banks.

*Loans to the Court of Wards*

Loans to the Court of Wards in respect of estates under their management might now be included in the list of authorised business. The management of such estates is now entirely under the control of responsible officers of Government of considerable experience, and all matters of importance are determined by the Commissioner or the Board of Revenue. Any application for a loan would have to be recommended by these high officials, and would only be entertained by the Bank on suitable conditions providing against an unreasonable lock-up of capital. That condition being fulfilled, the further condition of requiring the several responsibilities of two persons, as provided by section 37 (e) of the Presidency Banks Act, might be dispensed with in transactions of this description.

## Enclosure No 6

No 2265-A, dated the 28th April 1903

From R A Mant, Esq, Under Secretary to Government of India, Finance and Commerce Department, to the Secretary and Treasurer, (1) Bank of Bengal, (2) Bank of Bombay, (3) Bank of Madras

I am directed to refer to you <sup>(1) letters of the 9th March 1901 and 18th April 1901</sup> <sup>(2) letter of the 22nd March 1901</sup> <sup>(3) letter of the 2nd April 1901</sup>, in

which you submitted the views of the Directors of the Bank of India on the question of increasing the general banking facilities in India by extending the operations of the Presidency Banks. The various suggestions that have been put forward from time to time with this object were discussed informally in Calcutta in December last by a small committee on which the Bank of India was represented. The conclusions of the committee have now been considered by the Government of India, and a memorandum has been drawn up showing the proposals which the Government of India are disposed to recommend to the Secretary of State for the amendment of the Presidency Banks Act. A copy of this memorandum is enclosed.

2 The majority of these proposals are of long standing and have already been fully discussed, but some of them are new, notably the proposal to require the Banks to maintain a minimum proportion of cash to liabilities. Before addressing the Secretary of State, the Government of India will be glad to receive any further remarks which your Directors may desire to make on the subject.

*Proposals for the amendment of the Presidency Banks Act*

1 *Borrowing in London*—It is proposed to give the Banks the power to borrow in London when the bank rate in India rises above a certain point.

It is considered desirable to allow the Banks to have access to the London market at times when there is a real deficiency of loanable capital in India, and it is not intended to encourage resort to that market, as a speculative measure, in anticipation of such a deficiency. It is therefore proposed that borrowing in London should be allowed only when the Indian bank rate rises above a fixed limit. As at present advised, the Government of India consider that 7 or 8 per cent will be a suitable figure for this limit.

It is not considered desirable that the Banks should be drawn into general banking business in London. They will not therefore be allowed to receive deposits there, and their borrowing will be restricted to the amounts which they are able to bring out to India.

In order to prevent any possible clashing with the Government arrangements for remittances, it is proposed that the arrangements to be made by the Banks for the remittance of funds to or from London should be subject to the approval of the Comptroller General or of the Government of India.

II *Extension of the Banks' power to deal in securities*—It is proposed that the Banks should be allowed to deal in securities issued by State-aided railways or issued by District Boards with the sanction of the Government, and that the Bank of Madras should be allowed to deal in securities of the Government of Ceylon.

III *Extension of the period for making advances*—It is proposed that the period for which the Banks are authorised to make advances should be extended to six months, except in the case of advances against personal security.

IV *Increase of the limit for overdrafts*—It is proposed that the limit of Rs 2,000 set to overdrafts without security in section 37 of the Act should be raised to such sum not exceeding Rs 10,000 as may be fixed by byelaw.

V *Removal of the maximum limits of the Banks' Capital*—Section 13 of the Act provides that the capital of the Bank shall not be raised without the previous sanction of the Governor General in Council. It is considered unnecessary to limit the power of the Government in this respect, and it is therefore proposed to repeal the proviso to section 13, which fixes a maximum limit for the capital of each Bank.

VI. *Taking over the business of other Banks*—In times of crisis it might be an advantage to the public if the Presidency Banks were able to take over a small bank which might otherwise be compelled to close its doors. It is therefore proposed to empower the Banks to take over the business of any other bank with the previous sanction of the Government.

VII. *Advances on Joint Promissory Notes*—Under section 36, clause (a), sub-clause (6), the Banks are allowed to advance money on accepted bills of exchange or promissory notes endorsed by the payees, *i.e.*, practically on the security of two names. It is thought reasonable, therefore, that they should be allowed to make advances on the joint promissory note of two or more persons.

VIII. *Loans to Courts of Wards*—It is proposed to empower the Banks to grant such loans with the sanction of the Local Government for periods not exceeding six months.

IX. *Further control over the operations of the Banks*—Simultaneously with the grant of the facilities indicated above, it is thought necessary to impose certain restrictions on the general conduct of the Banks. Firstly, it is proposed to require their accounts to be audited by public accountants. It is not intended to revoke the power of selection possessed by the Banks under section 47 of the Act, but merely to limit the field of selection to public accountants.

Secondly, it is proposed to require the Banks to maintain their cash balances at a safe level, and to impose a penalty when the proportion which those balances bear to the Banks' liabilities falls below a fixed minimum percentage. The Government of India are inclined to think that the minimum should not be lower than 35 per cent. It may be found possible to draw a distinction between liabilities at call and less urgent liabilities, such as savings bank deposits, which are ordinarily of a permanent character, and fixed deposits which cannot be withdrawn without notice of three months or a longer period. Any suggestions which the Banks may desire to put forward for the modification of the minimum percentage in consideration of the fixity or permanent character of the deposits will be considered.

The form of penalty which commends itself to the Government of India is the payment of a fine to the Government at so much per cent. on the deficiency of the cash balances below the minimum percentage. It would be necessary to assess the fine on an ascending scale, as the deficiency increases in order to make it operative at times when money is in great demand. It has been suggested, therefore, that the penalty should be imposed at the following rates:—

- (a) When the ratio of cash to liabilities is below 35 per cent, but not below 30 per cent, at 1 per cent on the sum required to raise it to 35 per cent,
- (b) When the ratio is below 30 per cent., but not below 25 per cent, at 5 per cent on the sum required to raise it to 30 per cent and at 1 per cent on the further sum required to raise it to 35 per cent,
- (c) When the ratio is below 25 per cent, but not below 20 per cent, at 10 per cent on the sum required to raise it to 25 per cent, at 5 per cent on the sum required to raise it from 25 to 30 per cent, and at 1 per cent on the sum required to raise it further from 30 to 35 per cent, and so on.

The Government of India recognise that the depletion of the Banks' balances may occasionally be caused by the withdrawal of the Government deposits, over which the Banks have no control. The public deposits ordinarily exceed the minimum amount which the Government is required by agreement to leave with the Banks, and it is reasonable for the latter, in estimating their cash resources, to count on having the use of a larger sum of public money than they are entitled to under their agreements. The Government of India, therefore, propose to fix for each Bank a sum which the Bank may assume to be the normal minimum of the Government balances. If those balances fall below the sum so fixed, no penalty will be payable on the amount by which they are deficient, and the total sum on which the penalty is assessed will thus be reduced by the extent to which the deficiency in the Banks' cash balances is caused by the shrinkage of public deposits.

The following amounts have been suggested as the normal minima for the Government balances held by the Banks —

In the Bank of Bengal	-	150 lakhs	
„ „ Bombay	-	100 „	(including the Berar balances)
„ „ Madras	-	50 „	„ „ „ „

*Illustration.*—Suppose the liabilities of the Bank of Bengal to amount to 6 crores and the cash balances to 150 lakhs, the Government deposits being 130 lakhs. The amount required to raise the cash balances to 35 per cent of liabilities is 60 lakhs. Before assessing a penalty, 20 lakhs should be deducted on account of the shortage of the Government deposits. The deficiency to be penalized would thus be reduced to 40 lakhs, and the penalty would be assessed at 5 per cent on 10 lakhs plus 1 per cent on 30 lakhs.

---

Enclosure No 7

No. 151, dated 19th July 1903.

From J Begbie, Esq, Secretary and Treasurer, Bank of Bombay, to the Under Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 2265-A, dated 28th April last, forwarding a memorandum containing the proposals which the Government of India are disposed to recommend to the Secretary of State for the amendment of the Presidency Banks Act and inviting the Directors to offer any further remarks which they may desire to make on the subject

In reply I am instructed to address you as follows —

2 The Directors are pleased to learn that it is proposed to give the Banks power to borrow in London. They note that the power is not to include authority to receive deposits and that it will be operative only when the Indian Bank rate rises above a fixed limit which the Government of India consider should be 7 or 8 per cent, and also that the arrangements to be made by the Banks for the remittance of funds to or from London will be subject to the approval of the Comptroller-General or of the Government of India. The Directors have only to remark with respect to these limitations that in the interests of the trade of the country they think that the power should become operative as soon as the Bank rate rises to 6 per cent., also that the previous approval of the Comptroller General or the Government of India to the mode of remitting funds both ways will render the power to borrow cumbersome and uncertain, and that this sanction will not be obtainable with equal facility by the three Banks by reason of the distance of two of them from the sanctioning authority during the whole of the year. The Directors consequently consider that no such restrictions on the mode of remitting funds ought to be imposed. The term "Indian Bank rate" would, it is presumed, refer to the official rate of this Bank in the event of the Directors desiring to take advantage of the power to borrow in London.

3 The Directors have already expressed their opinion on proposals Nos II to IV of the memorandum and have no further remarks to offer thereon at present except that a doubt exists whether under Section 37 of the Presidency Banks Act the Bank can agree to allow an overdraft. The new section might therefore make it clear that the Bank may not only allow an overdraft but also agree to allow one. They have at present nothing to say regarding proposals No V to VIII inclusive.

4. With respect to the proposed further control over the operations of the Banks the Directors see considerable objections to the proposed requirement that the accounts should be audited by public accountants, because in India there is no recognised professional test of what is a Public Accountant, and so far as the Directors know there is only one firm in Bombay who could be properly so described.

5 With regard to the proposal to require the Banks to maintain their cash balances at a certain level and to impose a penalty when the proportion which those balances bear to the Bank's liabilities falls below a fixed minimum percentage, the Directors are advised that they have no authority on behalf of the shareholders in the Bank to assent to any such restriction being imposed on the Bank's present powers, and they entertain very strong objections to any such proposal. They would particularly object to the whole of their liabilities being treated alike in this matter and observe with pleasure that the Government of India recognises a distinction between liabilities at call and other liabilities of a permanent or fixed character.

6 The Directors beg to submit that it is the policy of this Bank to maintain a high percentage of cash to *call* liabilities and they consider that there is no necessity for imposing any minimum. Annexed hereto is a statement (A) showing the daily percentage of cash held against Government deposits and ordinary current deposit accounts since 1st January 1902. It will be seen therefrom that the reserve has rarely and only temporarily fallen below 40 per cent and that it is usually much higher, which, the Directors submit, is proof of careful and prudent working. In addition to the ordinary current deposits included in statement (A) the Bank has other demand liabilities to the public consisting of Savings Bank deposits. In statement (B), also annexed, the Bank's daily percentage of cash to Government deposits and all call liabilities to the public combined, also prepared since 1st January 1902, is shown. The Directors consider that from their nature the Savings Bank deposits may be safely employed to a far larger extent than other call liabilities, and bearing this in mind the Directors submit that here also the reserve held shows careful and prudent working. They rely on the figures given in statement (A), from which it is clear that the reserve is maintained at a high level in view of the character of the liabilities mentioned. Calls of any consequence on the cash balance can be made only from these liabilities, and it is against these alone that the percentage of cash held is important. The Directors are satisfied that, for all practical purposes, their reserve is much more than sufficient, and they desire to intimate that it is their intention to continue the mode of working indicated in statement (A), and, if need be, they are prepared to give any reasonable assurance to this effect. Thus they beg to offer in preference to the proposed legal limitation, and on the understanding that any arrangement of this kind is made applicable to each of the Presidency Banks.

7 There are also annexed statements (C) and (D) showing respectively the daily percentage since 1st January 1902 of the Bank's cash and investments in Government paper and other public securities held against (1) Government and other ordinary current deposits and (2) Government deposits and all call liabilities to the public, which show that these deposits are held in a highly liquid form to a very large extent.

8 The remaining liabilities of the Bank to the public consist of deposits *fixed* for various periods. Against these the Directors venture to maintain that it is not necessary to keep any cash reserve throughout their currency. All that is necessary is to be prepared to meet them at maturity. To show the arrangements usually made to meet these liabilities as they mature a statement (E) is enclosed showing the amount of such deposits falling due in each week from 4th May last to 25th instant, and against these the amounts of bills falling due and receivable each week. This statement is sent because it was the one in actual use at the time the letter under reply was received. For comparison a similar statement (F) from 6th instant to 31st October is annexed, being the statement in use at the date of this letter. It will be seen that if the deposits were not renewed or replaced by others, and it should therefore become necessary to pay the deposits in full as they matured from the Bank's resources, they could be met from the money due for bills receivable, and that usually there is a large margin of money receivable over money payable. The sums due on the bills would be collected and the money be paid to the depositors instead of being re-invested. If it were necessary, however, other investments could also be realised to meet the fixed deposits as they fall due. The Directors desire to explain that practically the only way in which this Bank can readily increase

its resources is by offering interest for deposits, and that during the past few years the Directors have made special efforts to collect deposits for fixed periods. By this means the Bank has been enabled to meet more fully the demands of the trading community for accommodation, and it may be fairly claimed that this action has contributed to the lower average rates of interest and discount which have ruled in recent years as compared with previous years. It would, however, be impossible to continue this policy of attracting fresh money on the one hand and lending to a larger extent on the other if it were necessary to maintain in cash 35 per cent of the deposits so attracted, or, indeed, any smaller percentage. When trade is active, high rates of interest have frequently to be paid for short fixed deposits. If these are invested in the purchase of trade bills (which is the usual practice) at a profit of one or two per cent per annum the Bank is satisfied, but if even a portion of this profit disappeared by reason of the Bank being required to hold a certain part of the deposits in cash, the business would become unprofitable, and on that account could not be entertained. In this connection the Directors deem it desirable to refer to the correspondence between the Government of India and the Bank ending with Government letter of 18th February last, and to explain that, in suggesting that deposits for two months should be excluded from the total liabilities in order to arrive at an accurate view of the Bank's position, the period of two months was taken, because that is the period for which the majority of short fixed deposits are offered in Bombay. The Directors have to explain further that they almost invariably invest such deposits in bills for two months, the majority of local or inland trade bills being also drawn at that currency. There is therefore in their opinion no need to retain any part of such deposits in cash. The principal additions to the resources of this Bank are likely to consist chiefly of Savings Bank deposits and deposits fixed for stated periods. A fixed percentage on all liabilities alike would therefore become more onerous as the deposits mentioned increased in proportion to all other deposits.

9 The Directors have endeavoured to show that it is necessary to keep a cash reserve against call liabilities only, and that as the Bank's reserve against call money is being maintained at a high level, the proposed limitation is not necessary. They desire further to point out, with all deference, that the proposal submitted will not add to the security of depositors, inasmuch as a minimum percentage will not be absolutely fixed. In their opinion the Bank's depositors are already amply protected by the limits put on the Bank's investments and by the frequent publication of the Bank's position, and in view of this and of the particulars given above as to the methods followed in connection with the maintenance of the cash reserve, they trust that Government will be pleased to withdraw the proposal.

---

A  
BANK OF BOMBAY

Statement showing the Daily Percentage of Cash to Liabilities consisting of Government and Current Deposits in 1902  
(\* S " signifies Sunday and " H " Holiday )

## Enclosure No 8

Dated 13th July 1903

From G D Ker, Esq., Secretary and Treasurer, Bank of Madras, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 2265-A, of 28th April 1903, enclosing a memorandum of the proposals which the Government of India are disposed to recommend to the Secretary of State for the amendment of the Presidency Banks Act, and stating that Government will be glad to receive any further remarks which my Directors may desire to make on the subject before addressing the Secretary of State

These proposals have received the careful consideration of my Directors, and I am desired to submit for the consideration of Government the following remarks thereon.

2 *Borrowing in London*—It is noted that Government propose to give the Banks power to borrow in London, when the Bank rate in India rises above a certain point (7 or 8 per cent), but that it is not intended to encourage resort to that market as a "speculative" measure, in anticipation of a deficiency of loanable capital on this side, and further that in order to prevent any possible clashing with the Government arrangements for remittances, the Bank's arrangements for remittance of funds to or from London should be subject to the approval of the Comptroller-General or of the Government of India

My Directors conceive that it is the desire of Government to deter the Presidency Banks from entering into exchange operations, and that it is therefore thought necessary to prohibit the Banks from borrowing in London until their resources on this side have run so low as to render such a course *immediately* necessary. I am to point out, however, that it is quite conceivable that early in the season circumstances may indicate that it is desirable for a Bank to strengthen its position, with a view to the near future, and my Directors submit that it is an unnecessary restriction to compel a Bank to wait until the matter becomes actually urgent, and when it will have to lay down its funds at a maximum cost

My Directors think it may be safely assumed that the Banks will not borrow and pay interest on such borrowed money unless there is need for so doing, and they submit that a Presidency Bank may be trusted to respect any restrictions on its operations which are laid down with regard to "speculative" importation of funds. Circumstances may, however, render it necessary (or desirable) to provide early in the season for the estimated requirements of the season. My Directors trust, therefore, that Government will see fit to modify its proposal in this sense

3 With regard to the possible clashing of the Bank's arrangements with Government arrangements for remittances, I am to say that my Directors cannot understand how any transactions which this Bank is likely to enter into can operate detrimentally to Government, but they are, of course, willing to abide by a *modus operandi* which has received the approval of the Comptroller-General or of the Government of India. It is most desirable, however, that some general rules approved by Government should be laid down and that a special reference on each occasion should not be necessary

4 With regard to the general question of borrowing in London, my Directors have not altered their views as to the importance of giving the Banks this power. They wish, however, to say that owing to the growing confidence in the fixity of exchange, money finds its way to India, when required, through so many other channels, and there is now in their opinion much less fear of a recurrence of a stringency in the Indian money market which was witnessed some years back. My Directors therefore anticipate that the occasions on which this Bank is likely to find it necessary to have recourse to the London market will not be frequent

5 II to IV.—My Directors have no further remarks to offer under these heads

6 V to VIII—My Directors approve of these proposals

7 IX—*Further control over the operations of the Banks*

It is observed that Government think it necessary to impose the following "restrictions on the general conduct of the Banks" —

(1) It is proposed "to require their accounts to be audited by Public Accountants

(2) It is proposed "to require the Banks to maintain their cash balances " at a safe level, and to impose a penalty when the proportion " which those balances bear to the Bank's liabilities falls below " a fixed minimum percentage "

8 With regard to No (1) my Directors have nothing to say

It is manifestly in the interests of the Bank to secure the best skill available in the auditing of the account

With regard to No (2) it is observed that the Government of India are inclined to think that the minimum should not be lower than 35 per cent, but that "it may be found possible to draw a distinction between liabilities " at call and less urgent liabilities, such as Savings Bank deposits which " are ordinarily of a permanent character, and fixed deposits which cannot " be withdrawn without notice of three months or a longer period," and the Banks are invited to put forward any suggestion for the modification of the minimum percentage in consideration of the fixity or permanent character of the deposits

10 Before dealing with these special points alluded to above, I am desired by my Directors to say that the question of what is a safe percentage of cash at any particular date is one which can only be satisfactorily decided by the management of a Bank, and my Directors respectfully deprecate any action on the part of Government which will interfere with the exercise of their discretion in so important a matter

11 It is of course the first and obvious duty of a Bank to maintain such a position of strength as will enable it to meet all reasonably possible calls, and so far as this Bank is concerned my Directors desire to state emphatically that there has never been any cause for anxiety as to its position

12 The position of a Bank is not to be gauged merely by the percentage of its cash balance to liabilities. There are many points to be considered, some of which can be known only to the management. At one time, for instance, with heavy balances belonging to Banks or other important accounts and a percentage of 40, the Bank might really be in a position no stronger than at another time when the percentage might be 30, but against deposits more largely of a stable nature

13 It would be exceedingly difficult, if not impossible without seriously affecting the earning power of this Bank, to maintain an arbitrary fixed minimum percentage, as is suggested, and any action on the part of Government enforcing such a condition would not only be harassing to the executive of the Bank, but would be detrimental to the interests of merchants and traders, inasmuch as it would undoubtedly have the effect of forcing up the rate of interest earlier, and perhaps higher, than would otherwise be necessary

14 My Directors will now refer to the question of Savings Bank and fixed deposits alluded to above and to Government deposits

With regard to Savings Banks deposits, the statement already furnished to Government shows that they are of a stable nature, and that the total has increased month by month since the Savings Bank was formed in 1898. At the same time these deposits are payable on demand, and thus being so, my Directors have always considered that a fair percentage of cash should be maintained against them.

15 Similarly Government deposits are payable on demand, and while my Directors think that they may reasonably expect to receive some short notice in the event of Government desiring to reduce the balance below the minimum set forth in the Bank's Agreement, they recognise that there is

no undertaking on the part of Government to give such notice, and the whole of the Government balance has always been treated as a demand deposit

16. Fixed deposits on the other hand are on a totally different basis. Payment cannot be demanded until the deposits mature, and there is therefore no necessity to hold cash against such deposits while they are running. It is of course necessary to finance so that the cash balance may be replenished from time to time in such a degree as to meet all fixed deposits as they mature.

17. Government are aware from the figures which have been furnished that a large proportion of the deposits of this Bank are fixed. In order to secure such deposits it is necessary to accept the great bulk of them for the whole year round, and when it is remembered that the busy season in this Presidency (when alone such deposits can be utilised) extends to a period of about 6 or 7 months only, it will be seen that the deposits are costly, and any obligation to maintain a percentage of cash against them would necessitate a reduction in the rate of interest allowed, with the inevitable results that the deposits would go elsewhere. The Exchange Banks are keen competitors for all local business and have the great advantage of being in the position to employ their funds elsewhere when not required in this Presidency. It is necessary to state this in order to demonstrate the serious consequences to this Bank of any action compelling it to treat fixed deposits in the same manner as demand deposits.

18. In its weekly Publication Statement the Bank of Madras shows the proportion of cash held against liabilities payable *on demand*, and my directors respectfully submit that this is the only fair way to indicate the position of a Bank whose deposits are largely fixed and which, therefore, cannot be presented for payment until known dates extending over 12 months or longer.

19. A reference to the attached Statement A will show that during the year 1902 the average percentage during the first half of the year was 40.55 and for the second half, 59.01. It will be observed that on only four occasions during the year did the percentage fall below 35 per cent and only once below 30 per cent (29.49), while the very large percentage maintained throughout the second half of the year demonstrates what has been pointed out in paragraph 17, viz., that owing to the course of business in the Madras Presidency this Bank is under the disability of having to pay interest all the year round on deposits which can be utilised for about six or seven months only.

During the half year ending 30th June 1903 it will be seen that the percentage has only twice fallen below 40, while the average for the half year has been 47.96. The nature of certain deposits has, in the opinion of my Directors, necessitated the holding of a larger percentage than was necessary during the first half of 1902 (*vide* paragraph 12).

20. My Directors also desire to invite the attention of Government to the attached Statement B, showing the percentage of cash in hand (and with the Bank of England) to liabilities of 19 leading British Banks in 1902. It will be seen from this statement that the cash held by these Banks is proportionally much less than that held by the Bank of Madras. I am to add that a reference to the Published Statements of these Banks and of the Bank of Madras will also show that the liquid assets of the latter compare favourably with similar assets held by the British Bank named.

21. In conclusion, I am to express the hope that the foregoing remarks will satisfy the Government of India that the Directors of this Bank clearly and fully recognise their responsibility in the matter of the Bank's cash balances, and that no action interfering with their discretion will be taken by Government which my Directors submit is not only unnecessary, but would be harassing to the management and may be attended with unfortunate results.

## Enclosure No 9

Dated 4th August 1903.

From G D Ker, Esq, Secretary and Treasurer, Bank of Madras,  
to the Secretary to the Government of India, Finance and Commerce  
Department

My Directors understand that the Bank of Bengal has submitted, for the consideration of Government, a proposal whereby the Presidency Banks should be permitted to draw on London for the family remittance of customers up to a maximum of 2000 a month for any one person

2 I am desired by my Directors to say that they concur with the Bank of Bengal in thinking that this concession would be useful, and a convenience to the customers of the Banks, and they venture to hope that it will receive the favourable consideration of Government

## Enclosure No 10.

Dated 19th August 1903.

From W D Cruickshank, Esq, Secretary and Treasurer, Bank of Bengal,  
to the Secretary to the Government of India, Finance and Commerce  
Department

In continuation of my letter of the 7th May, I have now the honour to reply to your letter No 2265-A of the 28th April last, enclosing copy of a memorandum specifying the proposals which the Government of India are disposed to recommend to the Secretary of State for the amendment of the Presidency Banks Act, and inviting the Directors of the Bank of Bengal to offer any remarks they desire to make on the subject

2 The proposals are intended to increase the banking facilities in India by removing some of the restrictions placed upon the operations of the Presidency Banks, and I am desired by the Directors to tender their thanks to the Government of India for the steps they are prepared to take in this direction, and to say that the remarks they have to offer will be confined to suggestions made with the object of enabling the Banks the better to fulfil the duties and responsibilities that are imposed on them as the Central Banks in the Indian money market and thus carry out the object which Government have in view

3. In discussing the measures devised for the purpose of enlarging the powers of the Banks, it is desirable to bear in mind the special difficulties and disabilities under which the Presidency Banks labour when compared with the Central Banks of other countries. In the letter, dated 2nd December 1899, the Directors said that since 1st March 1862, when the Presidency Banks were deprived of their note issue, their readily expandable resources had been confined to their borrowing powers, and these had been rendered of little value owing to restrictions imposed by the State. They pointed out that India is a country of seasonal trade, involving great variations in the demands for accommodation, and that in order to meet these variations properly, and at the same time to maintain a moderate and steady rate of interest, elastic banking resources are required. They said that the pressing want was a provision for expanding resources at times of pressure which would tend to adjust the supply of loanable capital to the demand both during the busy and slack seasons, and they added that until this defect is remedied, the money markets of India will be liable to oscillate between periods of stringency and periods of plethora, and trade will be hampered by corresponding fluctuation in the rates of interest

4 Unfortunately the opportunities open to the Presidency Banks of enlarging their funds in emergencies are exceptionally limited, and their

resources are probably the most inelastic on which any large commerce is based. A bank-note issue, such as exists in the Colonies or in France and Germany, imparts elasticity in a high degree to the working capital of the issuing banks, but the Presidency Banks are not allowed to issue notes. Facilities for the prompt import and export of foreign capital aid in the expansion and contraction of the Central Banking Fund, but the Presidency Banks have hitherto been prohibited from importing foreign capital. When the State cash balances are deposited entirely with the Central Banks, demand and supply in the money market in connection with taxation are immediately adjusted. At the Bank of England the "Other Deposits" decrease in March, because Government demands are heavy at that time, whilst in July "Other Deposits" increase, because Government disbursements are large, but the money market is little affected on either occasion, because as long as the State balances are deposited solely in the Banks which hold the spare funds of the community, State payments and receipts can be effected by transfers without disturbing the money market to any great extent. In India this compensatory action, this elasticity of supply relatively to demand, is wanting, because the Government of India aim at keeping their deposits with the Banks at a low approximate level all the year round. The result is that when the State balances in the Reserve and other Treasuries outside the Banks run up, the deposits at the Banks run down, causing undesirable variations in the Presidency Banks' balances and rates of interest. This defect will be discussed more fully later on, but I am desired to state that the Directors of the Bank of Bengal much regret that the proposed legislative measures deal definitely with matters of minor importance only, while the one measure proposed with the object of enabling the Banks to increase their resources at times of pressure is hampered by conditions which make the process tardy and expensive. The concession to be granted is power to borrow in London. It is understood that, subject to adequate provision being maintained for the disbursements of the Government of India and for Council drawings, loans may be granted to the Presidency Banks from the Reserve Treasuries for fixed periods at high rates of interest, but the Banks have not been encouraged to look upon that source of supply as a reliable one under all circumstances, as a final resort for money should be, and it rarely suits them to borrow for a prolonged period at a high rate.

#### *I—Borrowing in London*

5. The proposal is that borrowing in London shall only be allowed when the Indian Bank rate rises above a fixed limit, 7 or 8 per cent. being suggested, and I am instructed to point out that in a country, such as India, where demands on the money market arise suddenly, it appears imprudent to prevent the Central Banks borrowing until pressure has arisen, especially as the Central Banks, as custodians of the general banking funds, are in the best position to feel and foresee the approach of pressure, and should therefore in the general interest be empowered to take timely measures to provide fresh supplies of money. For the first time since the withdrawal of their note issue in 1862, it is proposed to confer upon the Presidency Banks power to operate directly for this purpose, but if borrowing operations are to be postponed in the manner suggested, the Banks will be seriously hampered in making use of the concession.

6. It may be said that the delay is of little consequence, as prompt relief can generally be obtained by the medium of Council telegraphic transfers; but this is an expensive form of remittance, and as at times of pressure sterling exchange is usually at its maximum, the Presidency Banks, if obliged to buy transfers, will be condemned not only to import funds at a high level, but in an expensive form. They will be doubly handicapped; and, if the pressure in India is short lived, the loss to the Presidency Banks will be heavy, as the interest earned would be small and the exchange loss on the return of the funds to London considerable. Under the existing Currency legislation there is only one really reliable method of transferring money

from London to India, viz, by importing sovereigns, and as such imports cannot be effected in less than a month, the Directors are of opinion that the legislation conferring power upon the Presidency Banks to import funds should be framed in accordance with the Currency legislation, and should allow the Banks to borrow in London at least one month before they anticipate pressure in India

7 As the import and export of capital will be conducted under the supervision of the Comptroller-General, the Directors can see no objection to the Banks being given a free hand, subject to this supervision, to time their borrowings in London as they think fit, and they submit that it is undesirable to prohibit the import of funds from London until the Indian Bank rate reaches a high level. They are ready to admit that it is desirable in the interests of India, as a whole, that foreign capital should not be imported as long as local capital is seeking employment at reasonable rates, but it is clearly to the advantage of the Presidency Banks to secure all capital of this kind before importing foreign capital, as the former, if left in the market, would compete with the latter. Or if it is employed for surplus State balances that is sought, all that is necessary is to prohibit the Presidency Banks from borrowing in London as long as Government are prepared to lend. It is said that it is not intended to encourage a resort to the London market as a speculative measure in anticipation of a deficiency of loanable capital, but the Directors maintain that owing to distance from London and the large and abrupt nature of the demands for accommodation in India, it is necessary to anticipate a deficiency in order to prevent one. Speculations in exchange for a rise or fall are a different class of operations. The Directors have no desire to engage in such operations, and they hold that the Presidency Banks will be unable to embark in them as long as they are prohibited from borrowing in London and from importing and returning the funds except with the approval of the Comptroller-General.

8 There is one aspect of this proposal which the Directors think it right to mention, not because there is any danger of any of the Banks neglecting their duties to the public, but because they consider it desirable that legislation should not be framed in a manner that might afford inducements to the Presidency Banks to depart from their ordinary lines of action. One of the special duties of the Presidency Banks is to regulate the Bank rate in accordance with the requirements of the market, but under the proposed rule the Banks might be induced to raise the rate prematurely, in order that they might import foreign capital by Council Bills and other cheap, but dilatory methods, and thus avoid the loss which would be incurred by buying wire transfers in London at the actual times of pressure. The Directors think it desirable that these cheaper forms of remittance should be open to the Presidency Banks without a premature rise in the Bank rate, and they would therefore urge that the Government proposal should be modified.

9 As an alternative to the Government proposal, my Directors would suggest either that the Presidency Banks be given a free hand to borrow in London whenever they deem it necessary, or whenever are able to satisfy the Comptroller-General that an import of capital is desirable.

#### *II—Extension of the Bank's Power to deal in Securities*

10 The Directors welcome the concession made in this direction, and think that the Presidency Banks might be allowed to buy or advance upon debentures issued by Native States, subject to the previous sanction of the Government of India to each transaction of the kind.

#### *III—Extension of the Period for making Advances*

11 The extension from three to six months is approved, and the Directors think it might be made in the case of advances against personal security, as well as against tangible security.

*IV.—Increase of the Limit for Overdrafts*

12 The proposed increase from Rs 2,000 to Rs 10,000 is welcomed by the Directors.

*V.—Removal of the Maximum Limit of the Banks' Capital*

13 No exception is taken to the repeal of the proviso to section 14, which fixes a maximum limit for the capital of each Bank

*VI.—Taking over the Business of other Banks*

14 My Directors approve of the proposal to empower the Bank to take over the business of any other Bank with the previous sanction of Government, but they think that some provision should be made to give the Bank Directors liberty of action in an emergency, failing a prompt reply from Government, as in times of crises it is necessary to act promptly. They presume that the Directors of a Presidency Bank will be at liberty to take over at any time the business of another Bank, provided that such business is limited to that which is authorised by the Presidency Banks Act, and that the transfer can be arranged without increasing the capital of the Presidency Bank, e.g., by paying the shareholders of the absorbed Bank out of the Reserve Fund of the absorbing Bank. A provision to this effect might be inserted in the amended Act

*VII.—Advances on Joint Promissory Notes*

15 The Directors are glad to hear that their proposal has been accepted by Government

*VIII.—Loans to the Courts of Wards*

16 It is presumed that these advances may be made for any period up to six months on the demand promissory note of the officer in charge of the Wards Estate with pledge of the assets of the estates, and, if so, a clause to this effect should be inserted in the Act

*IX.—The Bank's Accounts to be audited by Public Accountants.*

17 It is already the practice of the Bank to employ Public Accountants for this purpose

*X.—The Banks to be bound to maintain a Minimum Proportion of Cash to Liabilities, or to pay Fines on a Sliding Scale varying inversely to the Percentage of Cash*

18 It is proposed to require the Banks to maintain their cash balances at a safe level, and to impose a penalty when the proportion which those balances bear to the Banks' liabilities falls below a fixed minimum percentage. The form of penalty suggested is the payment of a fine to the Government at so much per cent. on the deficiency of the cash balances below the minimum percentage. The following rates are suggested —

- (a) When the ratio of cash to liabilities is below 35 per cent, but not below 30 per cent, at 1 per cent on the sum required to raise it to 35 per cent,
- (b) When the ratio is below 30 per cent., but not below 25 per cent., at 5 per cent. on the sum required to raise it to 30 per cent, and at 1 per cent on the further sum required to raise it to 35 per cent. ;

- (c) When the ratio is below 25 per cent, but not below 20 per cent, at 10 per cent on the sum required to raise it to 25 per cent, at 5 per cent on the sum required to raise it from 25 to 30 per cent, and at 1 per cent on the sum required to raise it further from 30 to 35 per cent and so on

19 The chief objection to this proposal is that it will hamper the Banks in carrying out one of their most important duties as Central Banks, viz, to advance largely at times of severe monetary pressure. At such times a high rate of interest is desirable, but a prohibitive fine of 5 or 10 per cent would be most detrimental to the interest of the commercial community, as the Presidency Banks would be obliged to withhold or even withdraw accommodation at the very time it was urgently required. Under the German system, which is very generally approved, the Central Bank is charged 5 per cent when its reserves fall below a prescribed limit, but in return for the 5 per cent, funds in the shape of notes are placed at the Bank's disposal in order to enable it to advance freely to relieve the pressure for accommodation. The Bank is fined for failing to preserve an adequate reserve, but the fine is in the form of an interest allowance and the public do not suffer. Under the system proposed for India, the Banks will be fined up to 10 per cent or more, and no funds will be placed at their disposal in return. The fine will force them to press the public at the very time the public should have large accommodation placed at their disposal. The Directors would therefore with all deference desire to enter a protest against this proposed measure, as they believe it to be unprecedented, unsuitable and detrimental to the public interest.

20 As an alternative proposal the Directors would suggest that the Presidency Banks might be bound when funds are available in the Government treasuries to maintain the desired percentage by borrowing from Government at the Bank rate with a minimum of 6 per cent per annum. When no such funds are available, the Presidency Banks might be bound to buy Council transfers or transfers on the Currency Reserve under the Gold Note Act from the Secretary of State at a rate  $\frac{3}{4}$ ths over the rate at which Council Bills were sold on the preceding Wednesday. Taking the difference in the time of arrival of Council Bills and transfers to be 17 days, the  $\frac{3}{4}$ ths is equivalent to interest at the rate of  $6\frac{1}{4}$  per cent per annum. My Directors are confident that funds will always be available either in the Treasuries or in the Currency Reserve, but if both these reserves should fail at any time, they would urge in the interest of the public that the Banks be allowed to include in their percentages funds borrowed by them in London for despatch to India or on the way to India. Bank cash reserves are maintained in order that they may be available for use in emergencies, and a scarcity of funds in the Government reserves would appear to justify a temporary reduction in the Bank cash balances. By way of illustration it may be mentioned that the National Banks in New York are allowed 30 days to adjust any deficiency in their reserves below the prescribed minimum of 25 per cent, and the Indian Banks appear entitled to longer time for adjustment, as they are more distant from London.

21 It is also thought that the percentage at the beginning of the busy season should be greater than at its close. If the percentages in May and June are not allowed to fall below the figure that is deemed necessary in December, the Presidency Banks will be obliged to import unnecessary capital themselves or to fix rates which will induce other Banks to import surplus funds, and thus create a plethora of capital in the autumn, thereby saddling India with the double expense of importing and re-exporting funds which are not required.

22 I am further desirous to submit that a minimum of 35 per cent of cash to liabilities is too high for Banks, which work to a considerable extent with Savings Bank funds and deposits fixed for periods varying from 3 to 12 months. It is generally recognised that Savings Bank deposits require a comparatively small reserve, and no reserve is needed for the fixed deposits

until the approach of the date fixed for repayment. The interest charge payable on these deposits is comparatively heavy, seeing that only a very small proportion can be employed in the slack season, and no Bank can afford to work with them if it is forced to keep a large percentage of them unemployed in the busy season. I am accordingly to express the hope that, in the event of this proposal being carried into effect, such deposits may be excluded in calculating the percentages, or at all events that all such deposits may be excluded, except those falling due within a month.

23 It is understood that Government do not intend to publish the figure they fix upon as the approved minimum percentage, but the Directors are of opinion that all efforts to keep back this information will fail, and they consider there is every reason to fear that the proposed minimum, if unaccompanied by reliable provisions for enabling the Banks to expand their resources promptly will create apprehensions in the public mind whenever the minimum is approached, and if large and sudden demands on the money market are expected at the time, a monetary crisis may occur.

#### *Government Deposits*

24 My Directors are pleased to see that in fixing a percentage of cash to liabilities to be maintained by the Banks, Government recognise that an allowance should be made for deficiencies caused by the withdrawals of Government deposits, but they think that the figures selected as the normal minima for the Government deposits require further consideration. The suggestion is that the normal minima for the Government deposits be taken at the following figures —

In the Bank of Bengal	-	-	-	-	150 lakhs
Ditto Bombay	-	-	-	-	100 „
Ditto Madras	-	-	-	-	50 „

and that any shortage in the percentage shall be disregarded to the extent to which the deficiency in the Bank balance is caused by any drop in the Government deposits below those minima.

25 I am directed to point out that the Government balances were originally placed in the Presidency Banks in part compensation for the withdrawal of the Bank's note issues, the proportion of the minimum deposit assigned to each being based on the average note circulation, also that in their letter No 3,566, dated 22nd September 1875, the Government of India informed the Banks that they would ordinarily not leave with the headquarters of the Banks, otherwise than temporarily, more than the following sums, viz —

				Rs	
Bank of Bengal	-	-	-	-	1,00,00,000
Ditto Bombay	-	-	-	-	50,00,000
Ditto Madras	-	-	-	-	30,00,000

26 My Directors beg to submit that in fixing the minimum Government balances to be taken as the basis of the calculation of the shortage above referred to, it is essential to an equitable settlement of the amounts to be apportioned to each Bank that the following very important factors in the case should receive careful consideration —

- (1) The average note circulation of the Banks for the withdrawal of which the Government deposits were intended to be compensation in part,
- (2) The Capital of the Banks,
- (3) The number of Branches of each Bank at which the Government work is carried on,
- (4) The amount of work done by the Bank for Government at Head Office and Branches, as indicated by the annual summations of the Government Accounts.

27 The Government are already in possession of information on all these points; and if due consideration is given to the figures, my Directors are confident that it will be recognised that the Bank of Bengal is entitled to a larger minimum than 150 lakhs, and they desire me to say that in their opinion it should not be fixed at less than 200 lakhs

28, I am also desired to refer to the suggestion submitted demi-officially by Mr A M Lindsay, Deputy Secretary and Treasurer of the Bank, in May 1901, and to invite the Government to consider whether it would not be advisable to fix upon a higher level for the Government Deposits at the Head Offices of the Banks in the busy trade season, and a lower level for the slack season, instead of adopting one approximate level for all the year round. The latter system would answer if the cash balances of the Bank and the cash balances of the Government were fairly steady, but they are subject to great variations, and the important point is that the Treasury balances are at their highest during the busy trade season from January to June, when the Bank balances are at their lowest, and from July to December, when trade is slack and the Bank balances are heavy, the Treasury balances are in most need of replenishment. The proposal my Directors have to make is one of mutual accommodation to Government and the public. It is that the average deposits be raised 50 per cent during the months of January to June, and reduced 50 per cent during the months of July to December. The change will increase the resources of both Government and the Banks, because it will place additional sums in their possession at the time they each require them. It will reduce the Bank rate during the busy season and will tend to steady the rate all the year round.

#### *Home Remittances of Moderate Amounts for Customers*

29 In addition to the proposed alterations enumerated above, I am desired to bring to your notice that it would be a great convenience if sanction were accorded to the Presidency Banks to draw sterling drafts on London in the case of the Home remittances of their customers. The present inability to do so is often prejudicial to the Banks' current account business. In seeking permission to engage in such transactions, my Directors desire me to point out that they have no wish to embark in trade exchange operations, and that, if considered desirable, the concession they ask might be granted subject to a limit of say 200L, being imposed on remittances in any one month on behalf of any particular individual.

#### *Diagrams.*

30 In order to show clearly what is needed to improve the existing legislation regarding the Presidency Banks, I am instructed by the Directors to enclose two diagrams which exhibit at a glance the monthly fluctuations in the deposits, advances, investments and cash balances of the Presidency Banks since the beginning of 1896, also the fluctuations in the cash balances of the Government of India and of their deposits with the Presidency Banks during that period.

31 It is submitted that the large increase in the advances of the Presidency Banks each spring, accompanied frequently by a drop in their deposits, shows that additional borrowing power would be advantageous at that time, and that, looking to the abrupt nature of these demands, it appears undesirable to hamper the Presidency Banks in their efforts to make timely provision to adjust the supply of capital to demand at that period. It is also evident from the extent and abruptness of these demands that serious inconvenience might be caused by forcing the Banks to raise their percentage of cash to liabilities at times of pressure when they have no means of doing so otherwise than by curtailing advances or by incurring prohibitive expense. I have also to invite attention to the low level of the Government Deposits as compared with other deposits, as well as with the Treasury balances outside the Banks, and in particular I have to ask the Government

of India to note how their cash balances rise just as the Bank advances rise, and how easily their deposits with the Banks might be adjusted to the requirements of the money market instead of being kept at a uniform low level. It should also be noted that while the Presidency Banks, have strengthened their position of late by increased deposits and otherwise, it is clear from the wide divergence between deposits and advances in slack seasons, that the great defect in the Indian Central Banks system is the absence of elastic resources which will expand and contract in accordance with the demands for accommodation, and it is hoped that the contemplated reforms will include remedies for this defect.

Enclosure No 11.

No 205-A, dated the 11th January, 1904.

From R A Mant, Esq, I C S, Under-Secretary to the Government of India, Finance and Commerce Department, to the Secretary and Treasurer, Bank of Bengal, the Secretary and Treasurer, Bank of Bombay, the Secretary and Treasurer, Bank of Madras

I am directed to refer to the correspondence ending with your letter (No 151), dated the <sup>19 August 1903</sup><sub>9 July 1903</sub> regarding certain proposals, which are <sub>13 July 1903</sub> under the consideration of the Government of India, for amending the Presidency Banks Act with a view to extending the operations of the Presidency Banks.

2 The proposals, which the Government of India were disposed to recommend to the Secretary of State, were summarised in my letter No 2265-A, dated 28th April 1903. In consequence of the representations which have since been received from the Banks, the Government are now willing to modify those proposals to the extent indicated below before submitting the matter to the consideration of the Secretary of State.

3 *Appointment of Auditors*—The Government of India proposed, in my letter above cited, to require the accounts of the Banks to be audited by public accountants. It has been represented that in India there is no recognised test of what constitutes a public accountant. The Government of India therefore propose, in lieu of their original proposal, to take power to annul any particular election of auditors which may have been made under section 47 of the Act.

4 *Maintenance of a Minimum Proportion of Cash to Liabilities*—Having considered the representations made on this question by the representatives of the Banks, the Government of India now propose to require the Banks to hold cash amounting to not less than 40 per cent of their deposits at call (excluding Savings Bank deposits) and an additional sum amounting to not less than 25 per cent of the deposits which are payable, not at call, but within three months of the date on which the account is made up. It is not proposed to prescribe a minimum cash reserve against Savings Bank deposits or against deposits which are not payable within three months.

5. The Government of India further propose that, in the event of the cash balance of any of the Presidency Banks falling below the prescribed minimum, the Bank shall be required to make good the deficiency, within such time as the Government may direct, either—

- (1) by taking a loan from the Government at 8 per cent. or at bank rate, whichever may be the higher, or
- (2) by depositing gold with the Bank of England in London, and, if so required by the Government, expending such gold in the purchase of telegraphic transfers from the Secretary of State in London.

6 It must be distinctly understood with reference to the proposals in the foregoing paragraph, that the Government of India do not contemplate in any circumstances undertaking an obligation to advance money to the Banks, either at 8 per cent or at any other rate of interest. In the event, however, of Government refusing to make a loan in the circumstances indicated, the Banks will have the alternative of borrowing in London the amount required to enable them to fulfil the obligation which it is proposed that they should accept.

7 It is proposed that the measures indicated in paragraphs 4 and 5 of this letter should not at present be effected by legislation, but should be incorporated in a special contract to be concluded with each Presidency Bank. In this contract the Government of India would take power to order an examination into the affairs of any Presidency Bank which, having allowed its cash balances to fall below the prescribed minimum, fails to replenish them in the manner indicated in paragraph 5.

8 In connection with these proposals I am to enclose, for the information of your Directors, an extract from the law which regulates the administration of National Banking Associations in the United States of America, and which provides, in circumstances similar to those now under consideration, for the appointment of a receiver to wind up the business of the association. While not desiring to resort to such an extreme step in India, the Government of India feel it to be necessary to take some power to ensure compliance with whatever measures may be determined to be necessary for the proper regulation of the business of the Presidency Banks.

9 I am to request that any observations which the Directors of the Bank of <sup>Bengal</sup> <sup>Bombay</sup> <sup>Madras</sup> may wish to offer on this letter may be submitted at as early a date as may be convenient.

*Section 95 of the National Bank Act*

95 Reserve not maintained (Section 5191) Whenever the lawful money of any association in any of the cities named shall be below the amount of 25 per centum of its deposits, and whenever the lawful money of any other association shall be below 15 per centum of its deposits, such association shall not increase its liabilities by making any new loans or discounts otherwise than by discounting or purchasing bills of exchange payable at sight, nor make any dividend of its profits until the required proportion between the aggregate amount of its deposits and its lawful money of the United States has been restored. And the Comptroller of the Currency may notify any association, whose lawful money reserve shall be below the amount above required to be kept on hand, to make good such reserve, and if such association shall fail for 30 days thereafter so to make good its reserve of lawful money, the Comptroller may, with the concurrence of the Secretary of the Treasury, appoint a receiver to wind up the business of the association, as provided in section 5234.

Enclosure No 12

Dated the 29th February 1904

From the Secretary and Treasurer, Bank of Bengal, to the Under-Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 205-A, dated 11th instant, in which you refer to the correspondence regarding certain proposals now under consideration of the Government of India for amending the Presidency Banks Act with a view to extending the operations of the Presidency Banks, and intimate that in consequence of the representations which have been received from the Banks, the Government are willing to modify those proposals, to the extent which you indicate, before submitting the matter to the consideration of the Secretary of State.

Your letter has been considered by the Directors of the Bank, who have directed me to reply as follows —

#### APPOINTMENT OF AUDITORS

In the summary of proposals which accompanied your letter No 2265-A, dated 28th April 1903, the Government of India intimated that it was proposed to require the audit of the Bank's accounts by Public Accountants, at the same time explaining that it was not intended to revoke the power of selection possessed by the Banks under Section 47 of the Presidency Banks Act, but merely to limit the field of selection

The Directors readily agreed to this proposal, as it had been the Banks' practice for many years to employ Public Accountants as Auditors, and no difficulty had been experienced in finding candidates qualified in every respect for the appointment

You now inform the Bank that it has been represented that in India there is no recognised test of what constitutes a Public Accountant, and that the Government of India therefore proposed to take power to annul any particular election of Auditors which may have been made under Section 47 of the Act

The Directors are aware that in India the position and qualifications of Public Accountants are not defined as they are in Great Britain by the Rules of the institution under which they work, but they beg to point out that in Calcutta the number of practising Public Accountants who have passed the test of the Chartered Institute of Accountants in England and Wales, or the Society of Accountants in Edinburgh, Glasgow and Aberdeen, and who are members of one or other of those institutions, is sufficient to afford the shareholders of the Bank an adequate field for the selection of thoroughly capable and suitable Auditors I am to submit, therefore, that in taking power to annul any particular election of Auditors which may have been made under Section 47 of the Act, the intention of Government as explained in the proposals above quoted—not to revoke the power of selection possessed by the shareholders, but merely to limit the field of selection to Public Accountants—should be an integral part of the proposed amendment

#### VARIOUS SUGGESTIONS BY THE BANK

I am further desired to bring to your notice that, since the receipt of the proposals conveyed in the Government of India's letter No 2265-A, of the 28th April 1903, my Directors have made the following suggestions which, if accepted by Government, would require to be given effect by legislation, and I beg to submit them again for ready reference in the hope that they will receive favourable consideration They are set forth in the following extracts from my letter of 19th August last to the Financial Secretary to the Government of India —

#### EXTENSION OF THE PERIOD FOR MAKING ADVANCES

“The extension from three to six months is approved, and the Directors think it might be made in the case of advances against personal security, as well as against tangible security

#### TAKING OVER THE BUSINESS OF OTHER BANKS

“My Directors approve of the proposal to empower the Bank to take over the business of any other Bank with the previous sanction of Government, but they think that some provision should be made to give the Bank Directors liberty of action in an emergency, failing a prompt reply from Government, as in times of crises it is necessary to act promptly They presume that the Directors of a Presidency Bank will be at liberty to take over at any time the business of another Bank, provided that such business is limited to that which is authorised by the Presidency Banks Act, and that the transfer can be arranged without increasing the capital of the Presidency Bank

*e.g.*, by paying the shareholders of the absorbed Bank out of the Reserve Fund of the absorbing Bank. A proviso to this effect might be inserted in the amended Act.

#### HOME REMITTANCES OF MODERATE AMOUNTS FOR CUSTOMERS

‘In addition to the proposed alterations enumerated above, I am desired to bring to your notice that it would be a great convenience if sanction were accorded to the Presidency Banks to draw sterling drafts on London in the case of the Home remittances of their customers. The present inability to do so is often prejudicial to the Bank’s current account business. In seeking permission to engage in such transactions, my Directors desire me to point out that they have no wish to embark in trade exchange operations, and that, if considered desirable, the concession they ask might be granted subject to a limit of, say, 200*l.*, being imposed on remittances in any one month on behalf of any particular individual.’

#### MAINTENANCE OF A MINIMUM PROPORTION OF CASH TO LIABILITIES

In lieu of the second proposal made by the Government in Section 9 of the memorandum enclosed in your letter No 2265-A of 28th April 1903, the Government of India now propose to require the Banks to hold cash amounting to not less than 40 per cent of their deposits at call (excluding Savings Bank deposits) and an additional sum amounting to not less than 25 per cent of the deposits which are payable within three months.

I am directed to point out that there is no precedent for requiring such a high percentage, to respectfully represent that such percentage is excessive, and to suggest, as an alternative, an all-round minimum proportion of cash to liabilities of 33 per cent on liabilities payable at call and within one month of the date on which the accounts are made up, but excluding Savings Bank deposits and Fixed deposits which are not payable within one month.

The Government of India further propose that, in the event of the cash balance of any of the Presidency Banks falling below the prescribed minimum, the Bank shall be required to make good the deficiency within such time as the Government may direct, either—

- (1) by taking a loan from the Government at 8 per cent or at Bank rate, whichever may be the higher, or
- (2) by depositing gold with the Bank of England in London and, if so required by the Government, expending such gold in the purchase of telegraphic transfers from the Secretary of State in London.

My Directors assume that this proposal does not in any way affect proposal No 1 in the memorandum above referred to (received with your letter of 28th April 1903), which reads as follows —

- (1) *Borrowing in London*—It is proposed to give the Banks the power to borrow in London when the Bank rate in India rises above a certain point.

It is considered desirable to allow the Banks to have access to the London market at times when there is a real deficiency of loanable capital in India, and it is not intended to encourage resort to that market, as a speculative measure, in anticipation of such a deficiency. It is therefore proposed that borrowing in London should be allowed only when the Indian Bank rate rises above a fixed limit. As at present advised, the Government of India consider that 7 or 8 per cent will be a suitable figure for this limit.

Briefly stated, the effect of the two proposals is as follows —

- (1) *Proposal of 28th April 1903*—At times when there appears to be a deficiency of loanable capital in India, although the cash balance of any of the Presidency Banks has not fallen below the prescribed minimum, the Directors shall be allowed to borrow in London, provided the Bank rate has risen above a fixed limit of

7 or 8 per cent, which the Government of India consider a suitable figure

- (2) *Proposal of 11th January 1904* — At times when there is a deficiency of loanable capital in India, and the cash balance of any of the Presidency Banks has fallen below the prescribed minimum, the Presidency Bank concerned shall be required to make good the deficiency either by taking a loan from Government at 8 per cent or at Bank rate, whichever may be higher, or (in the event of a loan being refused) by depositing gold in the Bank of England in London and, if so required by Government, expending such gold in the purchase of telegraphic transfers from the Secretary of State

*Proviso* — The Government of India do not contemplate in any circumstances undertaking an obligation to advance money to the Banks at 8 per cent or any other rate of interest

Although not so stated, it is assumed that in proposal No 1, as in proposal No 2, it is not intended that the Banks shall be permitted to borrow in London until they have been unsuccessful in an application to the Government of India for a loan

The Directors desire me to point out that there is practically no difference between the conditions of optional borrowing when the cash balance exceeds the prescribed minimum, and those of compulsory borrowing when the cash balance has fallen below that minimum, and I am to respectfully submit, in the interests of the public as well as in the Bank's interest, that when the Directors foresee a scarcity of money and high rates of interest, they should be at liberty to take timely measures to meet the public demands. I am therefore to propose that the Directors should be free to act when the Bank rate has reached 6 per cent

In dealing with the several proposals of the Government of India the Directors have been actuated by a desire to acquiesce in them as far as possible, in the hope that an early settlement of the questions which have been the subject of correspondence for a number of years may be arrived at, and I am to express their hope that the suggestions now submitted will be accepted by Government.

---

Enclosure No 13

No 183, dated the 10th March 1904

From the Secretary and Treasurer, Bank of Bombay, to the Under-Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 205-A, dated 11th January last, which has received the most careful consideration of my Directors

Before stating their views on the modified proposals therein submitted to them, my Directors desire again to beg that the advisability of requiring them to maintain a specified proportion of the Bank's liabilities in cash may be reconsidered. As the Bank does not possess the right to issue notes the suggestion would appear to have been made for the purpose of protecting depositors. But, as formerly intimated, my Directors are of opinion that all depositors are already well protected against loss, and they regret they are unable to agree that any further protection is called for. By the Presidency Banks Act the employment of the Bank's funds, including all deposits, is restricted in a way and to an extent that is very unusual while the Bank's position is published in a Statement of Affairs issued weekly. Moreover large sums have been set aside from time to time for the purpose of accumulating a Reserve Fund which, in combination with the Bank's Capital, forms substantial and sufficient security against loss so far as depositors are concerned. My Directors are, therefore, of opinion that there is no occasion for the additional measure of protection for depositors which has been proposed.

It seems to my Directors that the shareholders' interests have not been sufficiently considered in connection with this suggested further restriction on the Bank's working. As above indicated, in addition to the protection afforded to depositors by the provisions of the Presidency Banks Act with respect to the manner in which the Bank's funds may be employed and by the Bank's Capital, a large Reserve Fund has been accumulated from profits which in compliance with the provisions of the Act has been invested in public securities yielding a comparatively small return in interest. The necessity for thus investing the Reserve Fund instead of permitting its investment in the other forms of employment authorised for the Bank's other resources, as is usual, operates to the disadvantage of the Bank and the shareholders amongst whom a strong and growing feeling exists that the restriction with respect to the investment of the Reserve Fund moneys should be removed. This feeling will be strengthened if the proposed further restriction is imposed. My Directors, therefore, desire to suggest that if Government press the proposal they will at the same time amend the section of the Act relating to the investment of the Reserve Fund in such a way as to leave the Directors discretion to use the money in any of the forms of investment permitted by the Act for the Bank's other resources.

Coming now to the modified proposals submitted for their consideration my Directors have nothing to say in the matter of the new proposal respecting the appointment of Auditors.

With regard to the suggested percentages of liabilities to be held in cash, my Directors regret they are unable to assent to the requirement that the Bank should hold 25 per cent of the deposits which are payable not at call but within three months of the date on which the account is made up. They are unable to admit for reasons formerly given that such a provision is at all necessary. They regard the proposal as unsound in principle, and in their opinion it would be found in practice to be too expensive to permit of long dated fixed deposits being regularly employed.

With regard to the suggested minimum of 40 per cent in cash against deposits at call (excluding Savings Bank deposits) combined with additional cash equal to 25 per cent of deposits payable not at call but within three months of the date on which the account is made up, my Directors are of opinion that if the minimum cash is to be fixed on the basis stated the percentage in both cases should be much lower. As already mentioned they look upon a reserve against fixed deposits as superfluous. They also look upon the fixed point of 40 per cent against the call money indicated as too high for a minimum. In their opinion, which they state with all deference but with firm conviction, it is impolitic to fix any minimum. The amount of such money which may safely be employed is a question which can be properly settled only with due regard to the nature of the deposits, which naturally changes from time to time. In the case of this Bank the Directors are satisfied that a much lower reserve than 40 per cent might safely be taken as a fixed minimum. They accordingly desire to represent that in their opinion if a minimum limit is to be fixed a percentage of 30 would be safe without the addition of any reserve against any deposits fixed up to particular dates and not due.

The Government of India further propose that in the event of the cash balance of any of the Presidency Banks falling below the prescribed minimum the Bank shall be required to make good the deficiency within such time as the Government may direct, either—

- (1) by taking a loan from the Government at 8 per cent or at Bank rate whichever may be the higher, or
  - (2) by depositing gold with the Bank of England in London, and, if so required by the Government, expending such gold in the purchase of telegraphic transfers from the Secretary of State in London,
- and it is explained that Government do not contemplate undertaking an obligation to advance money to the Banks either at 8 per cent or at any other rate of interest, but that in the event of Government refusing to make a loan in the circumstances indicated the Banks will have the alternative of borrowing in London the amount required to enable them to fulfil the obligation proposed.

My Directors are of opinion that the rate of 8 per cent or Bank rate, whichever may be higher, is too high as a minimum and they desire to represent that 6 per cent or Bank rate, whichever may be higher, would be sufficiently restrictive for all practical purposes

The Government of India further propose that the requirement as to a minimum percentage of liabilities to be held in cash and as to making good a deficiency should not at present be effected by legislation but should be incorporated in a special contract to be concluded with each Presidency Bank, and also that in this contract Government would take power to order an examination into the affairs of any Presidency Bank which having allowed its cash balances to fall below the prescribed minimum fails to replenish them in the manner indicated

My Directors will be glad to consider this contract when a copy is submitted to them

In connection with the Government proposals an extract from the National Bank Act of the United States of America is appended to your letter and in paragraph 8 attention is drawn to the fact that that Act provides in circumstances similar to those now under consideration for the appointment of a Receiver to wind up the business of the Association, and it is added that while not desiring to resort to such an extreme step in India, Government feels it to be necessary to take some power to ensure compliance with whatever measures may be determined to be necessary for the proper regulation of the business of the Presidency Banks. My Directors regret they are unable to agree that the National Bank Act of the United States can properly be evidenced as supporting any of the present Government proposals, because the circumstances under which the National Banks are organised and work in the United States differ materially from those affecting the Presidency Banks. The National Bank Act appears to have been passed to provide a national currency secured by a pledge of United States Bonds and to provide for the circulation and redemption thereof, and the regulations to which attention is now drawn would seem therefore to have been laid down because the Banks have the right to issue notes. Moreover the National Banks are very numerous. They numbered 4,226 on 30th September 1901 and many of them work with a capital of \$25,000, say 5,000*l* each, the average capital on the date mentioned being only about 30,000*l* for each Bank. Under these circumstances my Directors regret they are unable to discern any appropriate analogy between those National Banks and the Presidency Banks in this country, seeing the latter do not issue currency notes, while they each possess large Capital and Reserve Funds.

In conclusion, my Directors desire to take this opportunity to revert to the first proposal for the amendment of the Presidency Banks Act contained in the memorandum which accompanied your letter No 2265-A, dated 28th April 1903, and to say that in their opinion the proposal requires further consideration. It was proposed to allow the Presidency Banks power to borrow in London only when the Indian Bank rate was above 7 or 8 per cent. In the opinion of my Directors the power will be of real utility only if it can be exercised when interest is at a lower level than 7 or 8 per cent, and they think that they should be empowered to borrow in anticipation of a demand for accommodation instead of waiting until the demand is experienced and rates are forced to the level named.

---

Enclosure No 14.

No. 122-4 G P. L., dated the 30th March 1904.

From the Acting Secretary and Treasurer, Bank of Madras, to the Secretary to the Government of India, Finance and Commerce Department.

I have the honour to acknowledge receipt of your letter No 205-A., of the 11th January 1904, stating that, in consequence of the representations which have been received from the Banks, Government are willing to modify to the extent therein indicated the proposals which are now under their

consideration for amending the Presidency Banks Act with a view to extending the operations of the Presidency Banks

These modified proposals have received the careful consideration of my Directors, and I am desirous to submit for the consideration of Government the following remarks thereon

(2) *Appointment of Auditors*—My Directors have nothing further to say in regard to this proposal. It is manifestly in the interests of the Bank to secure the best skill available in the auditing of the accounts

(3) *Maintenance of a Minimum Proportion of Cash to Liabilities*—It is observed that Government now propose to require the Banks to hold cash amounting to not less than 40 per cent of their deposits at call (excluding Savings Bank deposits), and an additional sum amounting to not less than 25 per cent of the deposits which are payable, not at call, but within three months of the date on which the account is made up

My Directors entered fully into the question of maintaining a reserve against fixed deposits in their last letter, and they see no reason to modify the views they expressed on that occasion. They are of opinion that there is no necessity to hold cash against deposits which are fixed and not due, and that any action in this direction would seriously affect the earning powers of this Bank

As regards liabilities payable on demand, the position of a Bank is not to be gauged merely by the percentage of its cash balance to liabilities. There are many other points to be considered which can only be known to the Executive. My Directors would therefore respectfully deprecate any action on the part of Government in the shape of enforcing a fixed minimum which would be detrimental to the interests of trade, inasmuch as it would have the effect of forcing up the rate of interest sooner than would otherwise be necessary

In any case they consider the proposed minimum of 40 per cent too high, and they would submit that a cash reserve of 30 per cent against liabilities payable on demand excluding deposits which are fixed and not due, would provide a sufficient margin of safety

Government further propose that in the event of the cash balance falling below the prescribed minimum the Bank shall be required to make good the deficiency—

- (1) by taking a loan from Government at 8 per cent or Bank rate, whichever is higher, or,
- (2) by depositing gold with the Bank of England, and if so required by expending such gold in the purchase of telegraphic transfers from the Secretary of State,

and it is intimated that Government do not contemplate in any circumstances undertaking an obligation to advance money to the Banks either at 8 per cent or at any other rate of interest. In the event, however, of Government refusing to make a loan in the circumstances indicated, the Banks will have the alternative of borrowing in London the amount required

My Directors consider the rate of 8 per cent above quoted too high, and they would submit that a minimum of 6 per cent or Bank rate, whichever is higher, is sufficient under the circumstances

In this connection and with reference to paragraph I of the memorandum which accompanied your letter No 2265-A of the 28th April last, in which it was proposed to give the Banks power to borrow in London when the Bank rate in India rises above a certain point (7 or 8 per cent), I am to point out that in order that this power may be of real value it is essential that the Bank should be in a position to make the necessary arrangements for strengthening its position early in the season without waiting until the matter becomes urgent, when it will have to lay down funds at a maximum cost, and my Directors trust that Government will see fit to modify its proposals in this sense

In conclusion, while fully believing that Government are desirous of accomplishing the object of the negotiations and discussions which have taken place during the past three years, viz, to give the Presidency Banks facilities for extending their operations, my Directors desire to say that in

their opinion the proposals now submitted by Government will not only fail to attain the object in view, but will in all probability necessitate a curtailment of the Bank's operations

The proposed amendments to the Bank Act are desirable but not of supreme importance, and if these facilities can only be granted simultaneously with the imposition of restrictions which are onerous, and, my Directors submit, unnecessary, they would prefer to forego such facilities altogether, believing, as they do, that the Government proposals will not benefit either the Bank or the public

Enclosure No 15.

No. 2874-A, dated the 6th May 1904

From E. N. Baker, Esq., ICS, CSI, Secretary to the Government of India, Finance and Commerce Department, to the Secretary and Treasurer, Bank of

Bengal  
Bombay  
Madras

I am directed to refer to the correspondence ending with your letter dated the 29th February No 183, dated the 10th March 1904, on the subject of the amendment of the No 322-4-G P L, dated the 30th March Presidency Banks Act. You represented in that letter that the percentage of cash which, the Government of India proposed, should be maintained against liabilities was too high, and you suggested as an alternative that the minimum reserve of cash should be fixed at  $\frac{33 \text{ per cent of liabilities (excluding Savings Bank deposits) payable at call only}}{\dagger 40 \text{ per cent. of liabilities payable on demand only}}$

2 The Government of India are anxious to meet the wishes of the Banks as far as possible in this matter, and they are prepared to modify their former [proposal to the extent indicated in your letter] proposal† to the following extent, which has been suggested by the Bank of Bengal, viz, that the minimum proportion of cash to liabilities shall be 33 per cent of liabilities payable at call or within one month, but excluding Savings Bank deposits and fixed deposits not payable within one month of date of statement of liabilities. This is the lowest limit which the Government of India consider to be compatible with safety, and they hope that your Directors will now agree to it so that the Government of India may be in a position to forward all the proposals under consideration to the Secretary of State with the concurrence of the Banks

3 You further suggest that the lowest Bank rate at which the Banks may be permitted to resort to the London market or to borrow in London should be fixed at 6 per cent instead of 8 per cent as proposed by the Government of India. On this point also the Government of India are willing to defer to the wishes of the Banks, and I am now to enquire whether your Directors definitely accept the proposal put forward in paragraph 5 of my letter No 205-A, dated the 11th January 1904 modified to the extent of substituting 6 per cent. for 8 per cent. It is thought that the reduction now proposed will go a long way to meet the objection that the Banks should be allowed to borrow in London in anticipation of a period of stringency, instead of waiting until it has actually arisen

4 I am to request the favour of a very early reply to this letter in order that the proposals may be laid before the Secretary of State without further delay

\* To Bengal

† To Bombay and Madras.

## Enclosure No. 16.

No 189, dated the 14th May 1904

From the Secretary and Treasurer, Bank of Bombay, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge receipt of your letter No 2874-A, dated 6th instant, in which you inform me that the Government of India are anxious to meet the wishes of the Presidency Banks as far as possible in the matter of the minimum percentage of cash to be maintained against liabilities and that they are prepared to modify their former proposal to the following extent, viz, that the minimum proportion of cash to liabilities shall be 33 per cent of liabilities payable at call or within one month, but excluding Savings Bank deposits, and Fixed deposits not payable within one month of the date of the statement of liabilities, and adding that this is the lowest limit which the Government of India consider to be compatible with safety and that they hope that my Directors will now agree to it so that the Government of India may be in a position to forward all the proposals under consideration to the Secretary of State with the concurrence of the Banks

In reply I am instructed by my Directors to intimate that they are desirous of assisting Government in this matter and that they agree to the proposal now submitted

Your letter further states that the Government of India are willing to deter to the Banks by permitting them to resort to the London market or to borrow in London when the Bank rate reaches 6 per cent, instead of 8 per cent as proposed by the Government of India, and in reply to your enquiry I am desired by my Directors to say that they accept the proposal put forward in paragraph 5 of your letter No 205-A, dated the 11th January last modified to the extent of substituting 6 per cent for 8 per cent

## Enclosure No 17

Dated the 14th May 1904

From the Secretary and Treasurer, Bank of Bengal, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge the receipt of your letter No 2874-A, dated the 6th instant, relative to the amendment of the Presidency Banks Act

The Directors are glad to learn that the Government of India have decided to modify the proposals contained in paras 4 and 5 of their letter No 205-A, dated the 11th January 1904, to the extent of (a) fixing the minimum proportion of cash to liabilities, which the Banks would be required to maintain, at 33 per cent on liabilities payable at call only, but excluding Savings Bank deposits, and (b) substituting 6 per cent for 8 per cent as the lowest Bank rate at which the Bank may be permitted to resort to the London market or to borrow in London

I am desired to inform you in reply that the Directors definitely accept the proposals put forward in paragraph 5 of your letter No 205-A of the 11th January last, modified to the extent indicated above

## Enclosure No 18

No 122-9 G P L, dated 24th May 1904

From the Acting Secretary and Treasurer, Bank of Madras, to the Secretary to the Government of India, Finance and Commerce Department

I have the honour to acknowledge the receipt of your letter No 2874-A, dated 6th instant, on the subject of the amendment of the Presidency Banks Act, intimating that the Government of India are anxious to meet the wishes

of the Banks as far as possible, and that they are prepared to modify their former proposal in the matter of the percentage of cash against liabilities to the following extent, viz, that the minimum proportion of cash to liabilities shall be 33 per cent of liabilities payable at call or within one month, but excluding Savings Bank deposits and Fixed deposits not payable within one month

In reply I am desired by my Directors to say that they are prepared to accept the proposal as now modified

As regards the question of borrowing in London, my Directors accept the proposal put forward in paragraph 5 of your letter No 205-A, dated 11th January last, modified to the extent of substituting 6 per cent for 8 per cent

No 15, Financial, dated London, 3rd February 1905

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA

In your letter of the 21st July, No 264, you solicit my sanction to the introduction of legislation for the amendment of the Presidency Banks Act.

2 The most important of your proposals is for the admission of the Banks, under certain circumstances, to the London Money Market. By the existing law the Banks are prohibited from dealing in foreign exchanges except for the purpose of remitting from India the proceeds (whether principal, interest, or dividends) of securities or shares for, and at the risk of, their customers, and they are not allowed to borrow in England

3 A request for the removal of these restrictions was made by the Banks in 1877, in the Memorial forwarded with the letter from Lord Lytton's Government, of 25th January 1878, No 41, and was rejected in Mr Gathorne Hardy's Despatch of 2nd May 1878, No 135. Now that the proposal has been revived, I have carefully considered the matter with reference to the circumstances of recent years, and especially to the occasion which led to the correspondence which has been proceeding for the last five years on the position of the Presidency Banks

4 The question of the sufficiency of the banking resources of India was raised by the Indian Currency Committee of 1898-99. The attention of the Committee having been directed to the stringency which prevailed in the Indian Money Market in 1897-98, they observed, in their Report (paragraph 22), that "it may be questioned whether banking arrangements in India might not with advantage be strengthened and adjusted to the growing requirements of Indian trade." One member of the Committee recommended that, in order to assist in the maintenance of the exchange value of the rupee and for other purposes, it would be desirable to establish one strong Bank in India. The Government of India were favourably impressed by this suggestion, and proceeded to consider the possibility of absorbing the existing Presidency Banks into one strong establishment. The subject was fully discussed in this country and in India, but in their letter of 13th June 1901 the Government of India recommended that the proposal should not be persevered with at that time, and Lord George Hamilton accepted this recommendation.

5 In the course of the discussions on the proposal for the establishment of a central bank in India, the Presidency Banks took the opportunity of asking for further consideration of the proposal that had been rejected in 1878.

6 There has been considerable divergence of opinion among authorities in India in regard to the questions involved in this proposal. On the one hand, Mr. Dawkins expressed the view\* that the fusion of the Presidency Banks, and an increase of their capital must be conditions precedent to the grant to the Banks of the concessions for which they asked. Sir Edward

\* Proceedings of the Governor-General's Legislative Council, 5th January 1900, page 398 *supra*.

Law, in his Minute of 31st January 1901, did not share the opinion that a reorganisation of the Presidency Banks or an increase of their capital is required. He thought that any additional banking resources required in India could be readily found by the existing banking establishments outside the Presidency Banks. In opposition to the view that stringency is caused in India by the inadequacy of banking arrangements to trade requirements, he quoted a note by Mr Lindsay of the Bank of Bengal, arguing that, if confidence in the stability of exchange is maintained, the existing facilities for the import of foreign capital will be ample to meet all legitimate demands on the short loan market in India. Mr Lindsay urged that the exceptional stringency of 1897 was mainly due to uncertainty regarding the future exchange value of the rupee, and drew attention to the fact that, although the conditions regulating the demand for, and supply of, loanable capital were similar in 1900 to those in 1897, nevertheless money market conditions in India were much more favourable in the later year because (owing to the condition of exchange) the Exchange Banks were able to import capital to a sufficient amount to meet the requirements of the country, a condition which had not existed in 1897. The view held by Sir Edward Law and Mr Lindsay in 1901, that it is not necessary to enlarge the powers and resources of the Presidency Banks in order to secure the introduction of fresh capital into India in times of active trade, is shared by the four Exchange Banks with whom I communicated in November last while considering your present proposals. A copy of the letters received from the Exchange Banks on the subject is herewith forwarded, I request that you will consider them carefully, and will let me know your views.

7 I am disposed to think that, owing to the large funds at their command and to the important part which they take in banking and remittance transactions connected with India, the Exchange Banks are in a position to supply the additional capital temporarily required in the busy season in India so long as the conditions of exchange are satisfactory. It is true that, if at any time difficulty should be experienced or anticipated in maintaining the exchange value of the rupee, the Exchange Banks would probably be less willing to send capital to India, and stringency might result, but in such circumstances the Presidency Banks would presumably, be equally unwilling to borrow money in London for remittance to India with the risk of loss when remitting to London later for the purpose of repayment.

8 In these circumstances it would seem that no considerable advantage to Indian trade is likely to result from the adoption of your proposals, and that it is therefore undesirable to admit the Presidency Banks to a class of business from which they have hitherto been excluded, and in which (even if the maintenance of the special conditions that you suggest were found practicable) they would necessarily compete with the Exchange Banks. The Exchange Banks have for many years rendered useful service in connection with Indian trade, and, though they have no claim to be protected from the competition of other banks working under similar conditions, it would seem that they might have some legitimate cause for complaint (and, indeed, that their usefulness might be diminished) if they were now, for the first time, exposed in their remittance transactions to the competition of the Presidency Banks, which, as custodians of the Government balances, are in receipt of valuable aid from the State.

9 Your other proposals for removing existing restrictions on the business of the Banks are to allow them—

- (a) to deal in securities issued by State-aided railways, such as branch lines constructed on rebate terms, and in securities issued by district boards,
- (b) to make loans and advances on other than personal security for a period not exceeding six months,
- (c) to grant overdrafts up to Rs 10,000 (or any lower limit that may be prescribed by byelaw),
- (d) to take over (subject to the sanction of the Governor-General in Council in each case) the capital, assets, and business of any other

bank in British India, provided that after the purchase the business shall be carried on in accordance with the provisions of the Presidency Banks Act,

- (e) to advance money on the joint and several promissory note of two or more persons unconnected in business,
- (f) to lend money (subject to the previous sanction of the Local Government, and for a period not exceeding six months) to the Court of Wards in respect of estates under management

You also propose—

- (g) to allow the Bank of Madras to lend, on Ceylon Government securities, resources raised in Ceylon,
- (h) to remove the existing limitation (expressed in Section 14 of the Presidency Banks Act) on the capital of each bank

You consider that it would be necessary, if all your proposals were approved, that the following changes should be made in the position of the Banks, viz,—

- (i) that power should be given by law to the Government of India to annul any particular election of auditors,
- (j) that the Banks should undertake to keep a minimum balance equal to 33 per cent of all their liabilities (other than Savings Bank balances) payable at call or within one month, and that they should further undertake (in the event of the balance of any Bank falling below that minimum) to make good the deficiency, within such time as the Government may direct, either by taking a loan from Government at 6 per cent, or at Bank rate, whichever may be higher, or by depositing gold with the Bank of England in London, and, if so required by the Government, expending such gold in the purchase of telegraphic transfers from the Secretary of State

10 I am willing that the alterations lettered (a) to (h) should be made in the existing law. In view of the postponement of a decision on the question of admitting the Presidency Banks to the privileges now enjoyed by the Exchange Banks, it is possible that they may now object to the condition lettered (i), and, if this should be the case, I do not think that the matter should be further pressed. It will be necessary to modify condition (j), for, in view of the postponement just mentioned, it would be useless for the present to mention the deposit of gold in London and the purchase of telegraphic transfers by the Presidency Banks, and the only practical resource that can be specified is for the Banks to borrow from the Government balances. I think that it would be inadvisable that an arrangement should be made between your Government and the Banks depending for its effectiveness on your willingness to place money at their disposal when their own cash resources fall below a certain limit. It would, in my opinion, be preferable that you should ascertain whether the Banks are willing to undertake to keep the minimum balance that you suggest, but that you should propose no stipulation regarding the method of making good any deficiency. If the Banks object to the condition, in this simple form, I am willing that it should be dropped.

Enclosure No 1.

F 8216.

Dated the 30th November 1904.

From L Abrahams, Esq., Financial Secretary, India Office, to the Chairman, National Bank of India, Bishopsgate Street Within, E.C., Chartered Bank of India, Australia, and China, Threadneedle Street, E.C., Hong Kong and Shanghai Banking Corporation, 31, Lombard Street, E.C., Mercantile Bank of India, 40, Threadneedle Street, E.C.

(Private)

I am directed by Mr Brodrick to inform you that he is in correspondence with the Government of India regarding certain suggestions that have been made for the alteration of the Presidency Banks Act.

You are, no doubt, aware that several of the witnesses who appeared before the Indian Currency Committee of 1898-99 drew attention to the periods of stringency which had recently prevailed in Calcutta and Bombay, and that the Committee observed in its report that "it may be questioned whether banking arrangements in India might not with advantage be strengthened and adjusted to the growing requirements of Indian trade"

Some of the suggestions now under consideration relate to this question. It has been proposed (1) That the Presidency Banks should be allowed, when the Bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India, (2) that the Banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the borrowed money to or from India, but that they should be required to make their remittances in such form as may be approved by the Government authorities in each case.

It has also been suggested that the Banks should be allowed to draw sterling drafts on London for the home remittances of their customers, subject to a limit of 200*l* in each case.

Before arriving at a decision on the proposals, Mr Brodrick would be glad to be informed whether you have any observations to make on that portion of them which is summarised above.

Enclosure No 2

Dated 8th December 1904

From Sir T Jackson, Chairman, Hong Kong and Shanghai Banking Corporation, to L Abrahams, Esq, Financial Secretary, India Office

I beg to acknowledge your letter of the 30th ultimo, advising me that correspondence has been opened with the Government of India regarding certain suggestions that have been made for the alteration of the Presidency Banks Act.

You call attention to the evidence given before the Indian Currency Committee of 1898-99, which, alluding to the money stringency recently experienced, says "it may be questioned whether banking arrangements in India might not with advantage be strengthened and adjusted to the growing requirements of Indian trade," and it is suggested that the Presidency Banks should be allowed, when the Bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India, and that the Banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the borrowed money to or from India.

If the query expressed above was justified at that time, I have no hesitation in saying that India now enjoys all the banking facilities necessary for the carrying on of her great commerce on the most favourable conditions.

Up to the date of the Currency Committee's Report, the Indian money market was subject to periods of great stringency, and it frequently happened that the Presidency Banks were unable to render assistance on any terms, even by loans on Government securities, while 12 per cent was quite a common rate at certain times of the year.

Since the date of the Report the official rate in Bombay has touched 9 per cent once for a short time in 1900, and again for a couple of weeks in 1901, but in Calcutta the Bank rate never exceeded 8 per cent. The average for the four years was 5 18 per cent in Bombay and 5 14 per cent in Calcutta.

When the Currency Committee was sitting, 6 per cent. was looked upon as a normal rate in India. The improved conditions shown above have been brought about by the firm establishment of the Indian Government currency reform, and especially by the enlightened policy of the Indian Council in meeting freely the demand for remittances to India. So long as that policy is adhered to, there is no danger of any severe stringency in the Indian money market, and it is a policy profitable to the Government as

well as beneficial to India, as increased demand means a proportionately better price

With that facility, and the option of getting rupees in exchange for gold shipments, the Exchange Banks have been able to finance the large foreign trade of India, without strain and on very favourable terms to the mercantile community. Consequently I maintain that the existing machinery is quite adequate, and that there is no occasion to make any change.

If the Presidency Banks find their resources are not sufficient to deal adequately with the internal trade of the country, the proper remedy would appear to be to increase their capital, rather than by borrowing from time to time in London. If the required capital could not be found in India, I see no objection to their placing shares in London and remitting the funds to India, as that would involve only one or two transactions. On the other hand, if the Presidency Banks were authorised to borrow on this side, the operations would be apt to have a disturbing effect on our money market, and might even clash with the issue of Indian Government loans and Treasury bills.

Money so borrowed would have to be remitted in gold or Council bills, as, in all probability, it would be through the latter channel, it would be depriving the Exchange Banks by so much of the means upon which they mainly rely for financing the export trade. When the loans came to be repaid, the Presidency Banks would be keen competitors for bills in India, with the inevitable result of depressing exchange, and so preventing the Indian Council from getting so favourable a rate for their bills as otherwise they would have reason to expect.

I therefore think it is clear that there are strong objections to the Presidency Banks borrowing money, temporarily, in London to supply the wants of India, and I think I have shown that there is now no occasion for such measures, and that, if adopted, they would be likely to do more harm than good.

It also seems to me that there would be no advantage to the public if the Presidency Banks were allowed to sell bills on London, even for small amounts, whilst it would be inflicting an injury on the Exchange Banks.

--- --  
Enclosure No 3

From Sir A. Wilson, Chairman Mercantile Bank of India, Limited, to  
L. Abrahams, Esq., Financial Secretary, India Office

8th December 1904

I have to acknowledge your letter of 30th November addressed to me by direction of Mr Brodrick.

You mention in this letter that Mr Brodrick is in correspondence with the Government of India regarding certain suggestions that have been made for the alteration of the Presidency Banks Act. Some of these suggestions deal with the possibility of strengthening the banking arrangements of India by affording increased facilities to the Presidency Banks for conducting exchange operations between India and England. These facilities, I understand, would include the power to contract loans in London for the purpose of remittance to India whenever the bank rate in India was 6 per cent or higher, and permission to deal in foreign bills of exchange so far as may be necessary to remit such borrowed money to and from India. There is also the suggestion that the Presidency Banks should have somewhat more extended powers in connection with the privilege they already possess of providing drafts on London for constituents' family remittances.

The supposed necessity for such alteration and extension in the power and authority of the Presidency Banks appears to be advocated on public grounds founded, so far as I can see, solely on some evidence tendered before the Indian Currency Committee of 1898-99, in which attention was drawn to periods of stringency which had recently prevailed in Calcutta

and Bombay. This evidence pointed, in the view of that Committee, to a "possible necessity of adjusting banking arrangements to the growing requirements of Indian trade." I have not before me the report of this Committee, but I am perfectly certain that there is nothing in it pointing to a condition of things which could have been in the slightest degree remedied or mitigated by the extension of powers of the Presidency Banks mentioned above.

To explain what I mean it is necessary to go back to the period of the closing of the mints in 1893. In that year the mints were closed to the public and the free coinage of silver stopped. In substitution thereof the Government notified that the Indian mints were authorised to receive gold and sovereigns in exchange for rupees on the basis of 1s 4d per rupee, and it retained for the future in its own hands the power to coin and issue on that basis whatever additional silver currency might from time to time be required.

But these currency measures were by no means an immediate success. Throughout the years 1893, 1894, 1895, 1896, 1897, 1898 not a single sovereign was tendered to the Government to be exchanged for 15 rupees, and for the greater portion of that period exchange ruled far below the point at which such an operation became possible, viz, 1s 4d. Gradually, however, the total cessation of fresh coinage began to tell, and towards the end of 1896 the severe famine of that period helped the upward movement of exchange by creating an abnormal demand for money in India.

It was under these circumstances that, in 1897 and 1898, the period of severe monetary pressure referred to in your letter occurred. In 1899 confidence in the success of the new currency measures began to increase, and since that year stability of exchange on a gold basis has been maintained. The provisions established by the Currency Act of 1899 making the sovereign a legal tender, and providing for all necessary extension of silver currency, have been in constant operation and are working smoothly and satisfactorily, and a condition of things now exists which makes any repetition of the severe monetary pressure of 1897-98 very unlikely and in fact impossible in the future.

In support of this I here give you the average rate of discount of the principal State Bank of India, the Bank of Bengal, for the period under review. It is as follows—

1896 average rate -	-	-	-	-	-	5 674
1897 "	-	-	-	-	-	7 912
1898 "	-	-	-	-	-	8 049
1899 "	-	-	-	-	-	5 910
1900 "	-	-	-	-	-	5 334
1901 "	-	-	-	-	-	5 477
1902 "	-	-	-	-	-	4 855
1903 "	-	-	-	-	-	4 866
1904 "	-	-	-	-	-	4 782

These figures show clearly the contrast between the monetary conditions during the period of pressure in 1897 and 1898 referred to, and those which have ruled subsequent to the passing of the Currency Act of 1899.

These facts are, no doubt, well known to Mr Brodrick and yourself, but I recapitulate them because it is necessary to show the complete fallacy of the suggestion which has been evidently conveyed to you that the abnormal pressure of 1897 and 1898 arose from causes which would have been prevented or cured or mitigated in the slightest degree by giving power to the Presidency Banks to borrow money in London and engage in exchange operations connected with the handling of such loans. It was not the absence of banks or banking capital for dealing with the foreign exchange business of India which led up to the stringency of 1897-98. It was the abnormal demand for money in India itself consequent on famine requirements occurring at a time when two of the chief extraneous methods of relieving that stringency were stopped, viz, the importation and coinage of silver into rupees, which has been stopped as already explained, and the Secretary of State's weekly drawings of Council Bills. During 1897-98

the latter were much curtailed and even temporarily suspended in consequence of the heavy famine expenditure of that period

The Presidency Banks, like other banking institutions, could certainly at that time, had their powers permitted, have raised sterling loans in London, but that would not have relieved the stringency in India or helped the position there in the slightest degree, because it would not have increased by one rupee the then existing facilities for converting and transmitting the proceeds of such loans into Indian currency. The remedy lay in the successful completion of the currency policy initiated in 1893, and which has been in smooth practical working since 1899. Under these conditions the position of 1897-98 can never recur.

The question of granting to the Presidency Banks power to borrow money in London for transmission to and employment in India, and of engaging in operations of exchange in connection with the transmission and employment of such money, is not brought forward for the first time. On several occasions these powers have been applied for, and on each occasion the application has been refused as incompatible with the principles and conditions under which State-aided Banks should exist. I have shown clearly, I think, that no public advantage would be gained and no public interest served by granting them. It would be an anomaly in State banking to find the Presidency Banks of India, which depend for their prestige and resources so largely on their State connection, turning their attention and their resources from the object of their existence—the facilitating the internal trade and requirements of India (a sufficiently wide field one would imagine), to embark in operations of foreign exchange. It would, further, be a serious matter for the existing Exchange Banks, and very unfair to them if these State Banks, backed by their State support and the large amounts of public funds placed at their disposal by the State free of interest, should be authorised to compete keenly, and with all the power that their privileged position gives them, with those institutions which have hitherto conducted that business to the satisfaction of the mercantile community.

Enclosure No 4.

From R. Campbell, Esq., Chairman National Bank of India, to the Secretary of State for India.

8th December 1904

I have the honour to acknowledge receipt of Mr. Abrahams' letter of the 30th ultimo, and to thank you for communicating to me the suggestions which have been made for enlarging the powers of the Presidency Banks so as to permit them to deal in sterling exchange.

The proposal that these banks should be allowed to engage in sterling exchange business is not a new one. It has been put forward time after time during the last 50 years, and with a small exception, allowing them, within certain restrictions (which we maintain should be adhered to) to make customers' remittances to England, it has been steadily vetoed by the Government of India.

There appears to be no reason at the present time why this well-considered veto should be withdrawn. On the contrary, existing conditions appear to make the present a peculiarly inopportune time for again putting forward the suggestion. The strongest plea in its favour, a plea which is alluded to in your letter, has always been that with the London market thrown open to them for raising money, and with liberty to operate in sterling exchange, the Presidency Banks would be enabled to prevent or alleviate the periods of monetary stringency which formerly affected Indian trade during certain months of almost every year.

Happily the successful working of the Indian Currency Act of 1899 has removed this grievance. By establishing a gold standard with the resulting stability of sterling exchange it has facilitated the free interchange of gold between England and India, enabling the exchange Banks to keep Indian

trade promptly supplied with all the currency required, and thus preventing the periodical stringency which had formerly to be reckoned with.

In proof of this it is only necessary to point to the rates of interest ruling in India for the four years previous to, and the four years since the passing of the Act, of which a diagram is appended. These figures show not only a remarkable contrast in the interest rates during the busy season of these two periods, but an increasing tendency towards a steadier and easier money market due to the continued influence of that measure. For the last four or five years there has been no real monetary stringency in India, any trade demand for additional currency during the busy season having been promptly met by imports of sovereigns. The Exchange Banks with their large sterling resources in the shape of capital and deposits, amounting to probably not less than twenty millions sterling, have shown themselves ready and able to meet and even anticipate all India's requirements with the result that, for some years past, Indian trade has been conducted with ease and comfort, and without the drawbacks incident to monetary stringency and oppressive interest charges.

Deprived, as it now is, of the only reason which could be urged in its favour, it is difficult to see why this proposal should again be brought forward. If, before the Currency Act came into operation, no sufficient reason could be urged to outweigh the objections to the Presidency Banks operating in sterling exchange, why should permission be accorded now, when the only strong argument in its favour has ceased to exist? It cannot be alleged that the Exchange Banks, whose business it has been for the past 50 years to finance the external trade of India, are incompetent to do so, and no complaint is heard of inefficiency or oppressive charges. We can only conclude therefore that, with less reason than ever, this is only another renewal of the attempt to get for the Presidency Banks the permission they have so long desired to operate in sterling exchange. The Exchange Banks have felt it their duty to oppose this demand on every occasion, their latest protest being addressed to the Government of India so recently as January 1900.

We maintain that the legitimate function of the Presidency Banks is to finance the internal trade of the country, for which they enjoy special privileges in the shape of large amounts of public money without any interest charge. We see no reason to believe that the resources at their command are insufficient for the purpose, and we respectfully, but earnestly, protest against their being permitted to go outside of their legitimate sphere, and engage in sterling exchange operations on the plea of gaining access to the London Money Market. The Exchange Banks do not deprecate ordinary competition by competitors on the same level as themselves. What we do strongly object to, and protest against, is State-aided competition, competition on the part of the Presidency Banks enjoying the prestige of the Government bankers, and with immense sums of public money at their disposal free of charge, while we are handicapped by having to pay interest on the whole of our deposits. We repeat that the Presidency Banks should confine themselves to their legitimate business, leaving the negotiation of sterling bills to the Exchange Banks, whose business it is, and who, by reason of their organisation and their London establishments, are best able to appreciate the risks attaching thereto.

We do not gather from your letter whether any and what limit is to be placed on the extent to which the proposed operations may be carried, or to the frequency with which they may be repeated. So far as we know, they might not only be of great magnitude but of constant repetition. By bringing in money from London, covering by sterling bills as soon as possible, repeating the operation and again covering, and so on, the Banks might for anything we know be constant huge operators in sterling exchange so long as the rate of interest, which they themselves fix, is at or over 6 per cent. We can hardly suppose that such a course would be within the spirit of the desired permission, but we mention it to show how easily the liberty might be abused and how the introduction of the thin end of the wedge would surely lead to further encroachments.

Should the Government by allowing the Presidency Banks to go outside their proper sphere and operate in sterling exchange now depart from the principle to which, as I shall presently show, they have hitherto adhered, that the Government business should not be entrusted to a bank which deals in foreign exchange, if this principle is now to be abandoned and if exchange banking is no longer to be regarded as a disqualification for Government business, it seems not an unreasonable suggestion that in that case the Exchange Banks should be allowed to compete for a share of the Government business, and the Government balances on such terms as the Government might consider satisfactory

The attitude of the Government of India on this question has always been perfectly consistent. On one of the occasions when it was raised, more than 40 years ago, the then Secretary of State, Sir Charles Wood (afterwards Lord Halifax), expressed himself very strongly in regard to it. In a Despatch to the Government of India of 16th September 1862, he said —

“The question of giving a power to deal in foreign exchanges to the Bank of Bengal, which is now proposed, was formerly and on different occasions considered, and that power was always withheld” “Any Bank to which the balances and Treasury business of the Government are to be entrusted must be restricted to legitimate banking operations such as those transacted by the Bank of England or by the Bank of Bengal as heretofore constituted”

And in their reply the Government of India remarked.—

“We entirely concur with your opinion as to the concession to the three Banks of any general power to deal in foreign exchanges”

Again on the 10th June 1863 Sir Charles Wood wrote —

“I cannot, however, give up the condition on which alone any bank can be entrusted with the Government business and that is that it should be debarred from dealing at all in foreign exchanges”

And on 4th January 1864, on the arrangements between the Government and the Bank of Bengal —

“V The Bank to give up dealing in foreign exchanges”

We cannot burden this letter with further quotations from these Despatches, but their full text will be found in a Parliamentary Paper, No 109, published on 7th March 1864

These extracts clearly show the decided attitude of the Government of India on this question up to the present time, and now that less reason than ever, in fact no valid reason at all, can be urged in favour of the proposed new departure, we trust that the Government will continue to adhere to their well-considered policy. Any concession of principle now would be sure to lead to larger demands for wider scope later on

---

Enclosure No 5

From J H Gwyther, Esq, Chairman Chartered Bank of India, Australia and China, to L. Abrahams, Esq, Financial Secretary, India Office

9th December 1904

I have to acknowledge receipt of your personal letter of 30th November regarding certain suggestions that have been made for an alteration in the Presidency Banks Act.

The Exchange Banks, in common with the Government of India and the Presidency Banks, have every desire to foster the commercial and agricultural interests of India, and therefore the following remarks must be considered subordinate thereto.

The Exchange Banks have practically financed the whole export and import trade of India for many years, and would naturally view with apprehension any legislation which would have the effect of placing the Presidency Banks in a position to compete with them for exchange business which may reasonably be regarded as the particular province of the Eastern Exchange Banks

Since the new currency laws, these Banks have been more disposed to send money to India for local purposes, and the recent policy of the India Council in regulating the sale of their bills according to the requirements of trade has very much lessened the probability of extreme rates of interest for money, for more than short periods

I assume that the proposal to increase the lending powers of the Presidency Banks, by authorising them to borrow in England, has reference to the alleged necessity for additional resources to finance the internal trade of India, as the Exchange Banks, I believe, are fully sufficient to handle the external trade of the country. The discussion is therefore narrowed down to the question of what is the best method of creating the funds said to be required by the Presidency Banks. If the deficiency is actual and frequent, there are three ways of supplying the deficiency —

1st Additional capital

2nd An increase in local deposits, to be attracted by offering favourable rates of interest

3rd An increase by the Government of India of their deposits with the Presidency Banks to a reasonable extent, and beyond a fixed maximum with approved security

As regards the proposal to borrow in this country, I of course assume that the Presidency Banks would not be allowed to remit to London their holdings of Government Securities, as such a divorcement between liabilities and assets would be most unbusinesslike and fraught with danger in times of financial difficulty. It follows, therefore, that the only method of raising funds in this country would be by advertising for sterling fixed deposits, as is the practice of the Exchange Banks, who allow, at the present time, interest at the rate of 4 per cent per annum for money placed with them for 12 months fixed. With shipping charges to and from India, this would mean a cost of over 5 per cent per annum.

Even assuming that the Presidency Banks could borrow for six months at  $3\frac{1}{2}$  per cent per annum, this would be equal to a cost of  $5\frac{1}{2}$  per cent per annum taking shipping charges into account.

In considering the question of possible profit, it must be borne in mind that the action of the Banks, in attracting this money to India for the busy export season, would naturally militate against their being able to secure a profitable return on the money invested.

With reference to the method of remitting to India the funds raised in this country, I am of opinion that the Presidency Banks should be restricted to purchases of Council Bills, and returns should be confined to shipments of sovereigns, thereby preventing the Presidency Banks from entering into competition with the Exchange Banks in India.

With reference to the further question of allowing the Presidency Banks to sell drafts on London for the requirements of their customers, I feel that the concession, although, as at present restricted, it is of no great importance, would be liable to gradual enlargement, and so would create in the minds of the Exchange Banks suspicion and friction.

P S—You may perhaps be interested in perusing the references which I have made from time to time, in my speeches as Chairman of this Bank, to the subjects referred to above, and I enclose four of these herewith, together with copy of a memorial addressed to Lord Curzon by the Exchange Banks of Calcutta, dated 27th January 1900

Presidency Banks relative to borrowing in England and Exchange  
transactions

## No 351, dated Simla, the 19th October, 1905

From the GOVERNMENT OF INDIA, Finance Department, to the SECRETARY OF  
STATE FOR INDIA

WE have the honour again to address you regarding our proposals  
for the relaxation of existing restrictions on the business of the Presidency  
Banks

2 In your Despatch No 13, dated 3rd February 1905, you sanctioned  
our less important recommendations on this subject but took exception to  
our main proposal to confer upon the banks a limited power of borrowing  
in sterling and to the conditions regarding audit and the maintenance of a  
minimum balance which it was proposed to attach to that concession. You  
also forwarded representations from the Exchange Banks whom you had  
thought it desirable to consult. Availing ourselves of the permission  
accorded in your telegram of the 17th March, we communicated these letters  
and the decisions announced in your despatch to the Directors of the  
Presidency Banks, and we now forward the correspondence for your infor-  
mation. We consider that it contains an effective reply to the claims put  
forward by the Exchange Banks, and if the question at issue were merely  
that of adjusting the conflicting demands of competing private institutions  
we should be content to rest the case of the Presidency Banks upon their  
own statement of it. But the question of access to London is so intimately  
connected with our own policy and engagements in matters of commercial  
finance and affects such wide monetary interests that we feel it incumbent on  
us to submit an independent justification of our proposals.

3 One of the main objects of currency reform was the attraction of  
British capital to India, and we have always recognised that if this advan-  
tage was to be fully secured the establishment of a gold standard must be  
followed by supplementary action. We believe that the creation of a special  
Department of Commerce and Industry, and the attitude towards commer-  
cial questions of which that measure is typical, will ultimately do much to  
attract the capital required for permanent investment in industrial under-  
takings. But the machinery of the banking system still remains ill-adapted  
to the fluctuating needs of the Indian money markets, in which the supply  
of cheap money is of the most vital importance. The embarrassments  
arising from an inadequate supply of loanable capital form the burden of  
the whole of the commercial evidence recorded by the Currency Committee  
of 1898, and it was this want which Lord George Hamilton undertook to  
meet when looking forward to a development of banking facilities which  
would "give to India the fullest benefit, both monetary and commercial, of  
" her direct connection with the cheapest, the largest and the most fructi-  
" fying money market in the world ".\* This requirement was pressed upon us

\* Speech in House of Commons on 8th August 1899

by the Bengal Chamber of Commerce in almost identical terms, and the same attitude was adopted by the Chambers at Bombay and Madras. We have as yet done nothing to meet their unanimous demand beyond initiating a debate which has now extended over five years. In this interval we have tested public opinion and gained experience of the new conditions which was necessarily wanting at the outset. The result has been to reduce our proposed reforms to a minimum which in 1900 would have been considered inadequate. If our matured and moderate proposals are now rejected, our work will remain manifestly incomplete and legitimate expectations will be disappointed.

4 Regarding the removal of all needless and artificial restrictions which impede the natural flow of capital as an evident and accepted obligation, we cannot rest satisfied with an improvement in money market conditions which is mainly noteworthy by comparison with the abnormal situation produced by the closing of the mints. It was obvious that the difficulties of the transitional period would be appreciably relieved, without further intervention on our part, from the moment fixity of exchange was established. But it is also clear that the full amount of relief cannot be obtained if the privilege of importing British capital is to be limited to the representatives of a particular section of the trading community, as the Exchange Banks claim to be. Indeed, so far as this point is concerned, it makes little difference whether the foreign banks confine themselves strictly to their special field, or engage also in general business. The exclusion of the leading local banks must in either case tend to raise the price of money above its natural level.

5 This presumption finds support in the maximum bank rates of 7 and 8 per cent which recur in every busy season. The difference between these rates and those obtaining in London is more than can be explained by the cost of remittance between England and India. The normal range of fluctuation (5 per cent) is also excessive, the more so as the Indian markets are not exposed to foreign demands. The average bank rate since 1899 is not lower than rates which have frequently ruled in earlier years. In other great trading countries the average rate has rapidly fallen. The possibility of further improvement is also suggested by the remarkably small re-export of gold which, convenient as it may have been to us in the tentative stages of our currency policy, points nevertheless to a reluctance on the part of existing agencies for the import of capital to bring it out for the short periods when it is most required. It is this deficiency which the Presidency Banks are prepared to supply, not indeed with any expectation of materially increasing their dividends, but in virtue of their acknowledged responsibility as banks of last resort.

6 Even if no further reduction in bank rates were to be expected, we should still hesitate to base our permanent arrangements on the experience of a few specially fortunate years. The Bank of Bombay has pointed out that recent additions to the supply of money are probably connected with the great excess of exports over imports, the large payments due to India being intercepted in the trading centres. Between 1898 and 1903, the private deposits of the Presidency and other Indian banks, together with the Indian deposits of the Exchange Banks, increased from Rs 27 crores to Rs 44½ crores, that is, by 64 per cent. In the previous quinquennium the increase was less than Rs 3 crores. We cannot confidently rely on the maintenance of this rapid growth of loanable capital. Nor can we assume that the Indian markets will never again have to pass through those times of stringency and crisis which are of periodical recurrence elsewhere.

7 For the reasons set forth in the foregoing paragraphs we hold that the grant of sterling borrowing powers to the Presidency Banks is essential to the further reduction and equalization of market rates, that recent conditions, while in some respects abnormally favourable, are susceptible of improvement, and that in any case provision should be made for exceptional emergencies. This last point is closely connected with the aspect of the question to which we now pass on—the effect of the refusal of access to London on the status of the Presidency Banks.

8 For a century past the Government of India have actively assisted in building up a strong and centralized banking system. In pursuance of

this policy—of which many other illustrations could be given—they have acknowledged from first to last the predominant position of the Presidency Banks as the banks of ultimate resort in this country. up to 1862 by the exclusive recognition accorded to their note issues, these being on a fiduciary basis, from that year till 1876 by placing with them practically the whole of the unemployed Government balances. After the establishment of the Reserve Treasuries (in 1876 and 1879) the Presidency Banks were still alone able to obtain loans from the Government, and, though the unrestricted grant of such loans became impossible after 1893, it was settled that in the event of their being granted on occasions of severe stringency, Government funds could only be placed at the disposal of the public through the medium of the Presidency Banks.

In the changed conditions introduced by the present currency system—at any rate for so long as we retain its machinery in our own hands—the system of loans and advances naturally disappears under ordinary circumstances. Our surplus rupee balances must necessarily be held in reserve to meet the possible demands of importers of gold. The consequence is that while rival institutions by borrowing or transferring capital from London can command the Government's whole resources, the Presidency Banks alone, who formerly had the first claim, are now deprived of the means of providing for the exceptional demands which it is their special function to meet.

9 The older method by which the commercial community were taught to look to the Government for an appreciable part of the additional funds required in the busy season, and to call for State intervention on occasions of emergency, was inadequate and in some respects dangerous, and we shall be glad to replace it by an automatic system of dependence upon the sterling markets. But if we close the source of supply upon which the Presidency Banks formerly relied and continue to exclude them from the other, their position cannot but be seriously affected, and especially so, if the Exchange Banks should at any time make a systematic use of the advantages which they will then possess. We should view with grave apprehension any decision which thus tended to substitute in banking matters an irresponsible for a responsible agency. The Exchange Banks are not exclusively attached to India, they receive no special privileges from the Indian Government, and we cannot expect them to acknowledge any obligations either to ourselves or to the Indian public. In this connection we may refer to the evidence given before the Currency Committee of 1898\* regarding the transfer of their capital to England during the currency difficulties of 1893-99, and to our despatch No. 56, dated 22nd February 1900, which describes their action in 1899 when a serious commercial crisis was threatened in Bombay. The incident here referred to is specially relevant as an example of the possible results of hampering the responsible local banks and relying upon the Exchange Banks to fill their place. This exclusive regard for their private interests is equally noticeable in their memorial on the Central Bank question in 1900 and in the present correspondence. We consider such an attitude to be perfectly legitimate, though it appears to us to assume an extravagant form in the objections to the reasonable proposal that the Presidency Banks should be allowed to remit small sums on behalf of their customers and in the argument that the occasional borrowings of the Presidency Banks might disturb the London market. But it justifies our reluctance to rely upon the Exchange Banks, under all circumstances, to discharge the functions which naturally belong to a Central Bank.

10 On these broad grounds we resubmit our proposal to admit the Presidency Banks under suitable restrictions to the London market. We hold strongly that the question is one to be decided solely on considerations of the public interest. But in deference to your wishes we have again examined it with special reference to the representations now before us, and are satisfied that additional limitations would reduce it to a nullity, that it involves no unfair or indeed appreciable competition, and that in whatever serious competition already exists it is the Exchange Banks who are the aggressors.

11 On the first of these three points we have merely to note that if the Presidency Banks are given a free hand (subject to the Comptroller General's

\* C 9037, Questions 1811-5, 1958-62

control) in the management of their remittances, it is probable that they will ordinarily make use of the agency of the Exchange Banks themselves. But if we confine them to that agency or to remittance by shipment of gold we retain in a modified form the very restriction which it is our object to remove. The margin of profit on the Banks' sterling operations must in any case be narrow, and we ought not in the absence of proved necessity to create opportunities for combination which might further reduce it.

12 As regards the question of competition it is obvious that under the conditions which we propose the borrowing operations of the Presidency Banks will be so intermittent as to make it impossible for them to obtain a permanent hold upon the clientèle of the Exchange Banks, while the powers of control which are to be entrusted to the Comptroller General will effectually prohibit those purely speculative transactions which have been fancifully suggested as the ulterior object which the Presidency Banks have in view. There will of course be slightly increased competition for bills in both directions, but not more than if the Exchange Banks had brought out the additional funds themselves. In making this a grievance the latter practically abandon their position that they are themselves prepared to keep the market fully supplied.

13 On the other hand we have to recognise the fact that the Presidency Banks are already exposed to competition in what is supposed to be their exclusive sphere of influence. As the Bank of Bombay points out, "all the Exchange Banks consulted compete more or less keenly in the internal trade and this competition has been steadily growing and extending." This statement is confirmed by the letters of the Banks of Bengal and Madras, and by the expressed readiness of one of the Exchange Banks to send out funds "for local purposes." It is within our own knowledge that one of them has been able to open branches in the Mofassal at places where the Presidency Banks are unable to work at a profit under the statutory restrictions imposed upon them, and we believe that this tendency to encroachment is in accordance with experience elsewhere. These considerations give point to the apprehensions expressed in an earlier paragraph, and should at any rate be regarded as estopping the Exchange Banks from pleading for artificial methods of protection.

14 If you are satisfied, as we trust you may be, that the opposition to our main proposal cannot be sustained, it will remain to consider whether that proposal should be accompanied by the provisions relating to the maintenance of a minimum balance which we originally submitted to you. We are aware of the objections to rigid limitations of this kind, and in particular we realise the difficulty, to which you have called attention, of devising a practicable penalty for default, and as we are not prepared to assert that the suggested precaution is essential, we are willing to waive it if you consider it inexpedient. The true safeguards on the exercise by the Banks of larger powers are stability of exchange and the imposition of such restrictions as will limit their sterling transactions to the operations directly connected with borrowing and the remittance of the borrowed funds. Fixity of exchange is now securely established, and it will hardly be seriously contended that the arguments by which the concession was opposed in earlier days are relevant to the present discussion. The only other objection which can claim attention is the possible risk of the Banks' resources being locked up in London when required in India. It would be necessary of course to allow them to hold securities in London, and such securities would be more readily convertible than if held in India. But they would not be permitted to receive deposits or engage in general banking business, or to borrow for an indefinite term. We did not propose any definite period for the repayment of loans raised in England in our previous despatch, but we would now suggest that such repayment should take place within six months. Under these conditions, which are ignored in the correspondence forwarded with your Despatch, the Banks will be exposed to no unanticipated demands in London and will be in a stronger position in the event of pressure in India.

15 We have to add that until the receipt of your further orders we propose to defer action on the minor concessions which you have sanctioned, and also that we have ascertained from the Directors of the Banks that they

will not object to the communication of their recent letters to the Exchange Banks whom you previously consulted, if you should think further consultation necessary

Enclosure No 1

No 2035-A, dated the 18th April 1905

From W S MEYER, Esq, SECRETARY to GOVERNMENT of INDIA, Finance Department, to (1) the SECRETARY and TREASURER, Bank of BENGAL, (2) the SECRETARY and TREASURER, Bank of BOMBAY, (3) the SECRETARY and TREASURER, Bank of MADRAS

With reference to the correspondence ending with your letters\* on the subject of the amendment of the Presidency Banks Act, I am directed to say that representatives of certain of the Exchange Banks were consulted by the India Office in November last with regard to the following proposals —

- (1) That the Presidency Banks should be allowed, when the bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India,
- (2) That the Banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the borrowed money to or from India, but that they should be required to make their remittances in such form as may be approved by the Government authorities in each case, and
- (3) That the Banks should be allowed to draw sterling drafts on London for the home remittances of their customers, subject to a limit of 200l in each case

2 I am to enclose a copy of the criticisms passed by the Exchange Banks on these proposals, and to enquire whether the Directors of the Bank of wish to make any further observations on the subject

3 I am further to say that it has been ascertained that His Majesty's Secretary of State for India is prepared to assent to legislation conferring the following powers on the Presidency Banks, namely —

- (a) To deal in securities issued by State-aided railways such as branch lines constructed on rebate terms, and in securities issued by district boards.
- (b) To make loans and advances on other than personal security for a period not exceeding six months
- (c) To grant overdrafts up to Rs 10,000 (or any lower limit that may be prescribed by byelaw)
- (d) To take over (subject to the sanction of the Governor General in Council in each case) the capital, assets, and business of any other bank in British India, provided that after the purchase the business shall be carried on in accordance with the provisions of the Presidency Banks Act
- (e) To advance money on the joint, and several promissory note of two or more persons unconnected in business
- (f) To lend money (subject to the previous sanction of the Local Government, and for a period not exceeding six months) to the Court of Wards in respect of estates under management

4 The Secretary of State is also willing to agree to the removal of the existing limitation (expressed in the proviso to Section 14 of the Presidency Banks Act) on the capital of each bank [† and to allow the Bank of Madras to lend on Ceylon Government securities, resources raised in Ceylon]

5 The Government of India suggested that, in the event of all the above proposals being adopted, the following changes should be made in the position of the Banks, viz —

- (g) That power should be given by law to the Government to annul any particular election of auditors
- (h) That the Banks should undertake to keep a minimum balance equal to 33 per cent of all their liabilities (other than Savings Bank

\* (1) Dated 14th May 1904, (2) No. 189, dated 14th May 1904, (3) No G.P.L 122-7 dated 24th May 1904 (see pp. 488-9)

† To (3) only

balances) payable at call or within one month, and that they should further undertake (in the event of the balance of any Bank falling below that minimum) to make good the deficiency, within such time as the Government may direct, either by taking a loan from Government at 6 per cent, or at Bank rate, whichever may be higher, or by depositing gold with the Bank of England in London, and, if so required by the Government, expending such gold in the purchase of telegraphic transfers from the Secretary of State

6 These changes had been agreed to by the Banks on condition that all the above concessions are granted, but the Directors may be unwilling to acquiesce in them if the proposed concessions are curtailed, and it is evident that, if the Banks are not allowed to borrow in London, proposal (h) will require modification. I am therefore to enquire, whether in the event of the proposals numbered (1) to (3) in the first paragraph of this letter being finally rejected and those enumerated in paragraphs 3 and 4 being adopted, the Directors of the Bank of (i) will still be willing to accept the proposed amendment in the law regarding the election of auditors, and (ii) will be prepared in place of proposal (h) to give an undertaking to keep the minimum balance specified in that proposal. If the Directors will give such an undertaking, the Government of India will not press for a stipulation regarding the precise method of making good any deficiency

-----

Enclosure No 2

From W D CRUICKSHANK, Esq, Secretary and Treasurer, Bank  
of Bengal, to the SECRETARY to the GOVERNMENT of INDIA,  
Finance Department, Simla

18th May 1905

I have the honour to acknowledge receipt of your letter No 2035-A of the 18th ultimo, with enclosures, relating to the proposed amendment of the Presidency Banks Act

You say that representatives of certain of the Exchange Banks were consulted by the India Office in November last with regard to the three proposals which are reproduced in the margin [see footnote], and in forwarding a copy of their criticisms you enquire whether the Directors of the Bank of Bengal wish to make any further observations on the subject. You also enquire whether, if three proposals were finally rejected, the Directors would still accept the proposed amendment allowing Government to annul elections of Auditors and would undertake to keep a minimum cash balance equal to 33 per cent of all liabilities of the Bank (other than Savings Bank balances) payable at call or within one month

In previous correspondence ending with your letter No 2874-A of 6th May 1904 and my reply thereto, the Government of India were most careful to explain their reasons for assenting to a resort to the London market. They accepted the contention that the Presidency Banks should be allowed a last resort in periods of stringency, but they determined that the exercise of the powers should be safeguarded by the conditions calculated to meet all possible objections. Access to the London market was therefore to be permitted only at times when there was a *real deficiency* of loanable capital in India. The Presidency Banks were to understand that it was not intended to encourage resort to that market as a speculative measure in anticipation of such a deficiency, consequently their borrowing in London could only take place when the Bank rates rose above a fixed limit, and when

\* (1) That the Presidency Banks should be allowed, when the bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India.

(2) That the Banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the borrowed money to or from India, but that they should be required to make these remittances in such form as may be approved by the Government authorities in each case, and

(3) That the Banks should be allowed to draw sterling drafts on London for the home remittances of their customers subject to a limit of 2000 in each case.

loans from the Reserve Treasury were not available. The Government would also claim to control the mode of repayment of any sterling loan

This explanation of the intention of Government must have been considered by the Exchange Banks, but their criticisms do not attempt to deal with the injustice or undesirability of withholding from any Banking Institution the right to a last resort for the purpose of obtaining funds necessary for its business in times of stringency. The objections urged are apparently based mainly on two grounds—*first*, that periods of stringency are not now likely to arise having regard to the successful working of the new Currency laws and the resulting stability of sterling exchange, and, *secondly*, that remittances to London, whether in repayment of amounts borrowed or to the limited extent required for the Bank's private customers, would interfere with the operations of the Exchange Banks

Each of these objections is open to an obvious answer—*first*, if periods of stringency for which alone it is sought to provide will not occur, the necessity for resort to the London market will not arise, and the apprehension entertained must prove groundless, *second*, if the repayment of permitted sterling loans is to be controlled by Government, it will always be possible to arrange for the legitimate and natural business of the Exchange Banks not being interfered with. It appears to be conceded that remittances on behalf of customers to the limited extent proposed is not open to serious objection, but it is suggested that hereafter the limits may be exceeded and suspicion and fiction engendered

The Exchange Banks lay great stress on their ability to keep India amply supplied with funds, and are at some pains to define what they term the legitimate functions of themselves and the Presidency Banks respectively—those of the former being, they say, to finance the import and export trade, and of the latter to finance the internal trade of the country. The National Bank, which has already opened a number of branches in the interior, submits that the Exchange Banks with their large sterling resources have shown themselves ready and able to meet and even anticipate all India's requirements, while the Chartered Bank says "Since the new currency laws these (Exchange) Banks have been more disposed to send money to India for local purposes, and the recent policy of the Indian Council in regulating the sale of their bills according to the requirements of trade has very much lessened the probability of extreme rates of interest for more than 'short periods'." These Banks do not propose to confine their business within the limits they for the present define as legitimate, but they apparently consider that they should be free to finance internal as well external trade, while the operations of the Presidency Banks are to be so hampered in the field of local trade as to invite competition on favourable terms

The Directors do not question the ability of the Exchange Banks to keep India supplied with funds, seeing that they have the resources of the London market to rely on, indeed experience has shown that these Banks are in a position to flood the Indian money markets with a superabundance of money or to curtail supplies at their pleasure. There is reason, however, to doubt the willingness of the Exchange Banks to import funds when the Secretary of State's terms for bills and wire transfers are not to their liking, or when a rise in the rates of interest in the Indian money markets would suit them. On such occasions they undoubtedly look upon the Presidency Banks as their legitimate local resort, while the Government of India are at the same time concerned, and not unreasonably, lest the accommodation claimed by the Exchange Banks should interfere with the sale of Council bills. In such circumstances conditions of stringency become pronounced, the money market becomes strained, and it would undoubtedly be to the advantage of Government and the public if the Presidency Banks were permitted to relieve the strain by the prompt importation of funds from England

In the criticisms of the Exchange Banks reference is made to the Presidency Banks as "State Banks," to the large amounts of public money they enjoy free of interest, and to the prestige they gain by their connection with Government; but the disabilities which the Presidency Banks accept in order to retain these advantages, and the restrictions placed on their investments and mode of business are altogether ignored. The Exchange

Banks are probably also not aware of the expense and risk which the Government work entails

In offering these observations the Directors do not consider they are invited to deal specifically with the objections of each of the Banks consulted. It becomes undesirable to do so if the Directors are correct in their view that the imitations under which the right claimed was proposed to be conceded have been entirely overlooked. It is for instance beside the question to urge, as has been done by one of the Exchange Banks, that 40 years ago the Secretary of State and the Government of India were alike opposed to the concession of a *general power* to deal in foreign exchange, and that consistency requires that this view should now be adhered to on the ground that it is applicable to the strictly limited powers which the Presidency Banks seek to obtain.

I am therefore to urge respectfully that the grounds on which Government were prepared to meet the representations of the Presidency Banks still exist, and that no valid reason for denying the resort contemplated has been shown. I am also to say that the Directors trust that His Majesty's Secretary of State for India will not allow weight to suggestions of possible suspicion and friction, but that he will consent to release the Presidency Banks from the unreasonable position of being the only Banking Institutions in the British Empire which are debarred by legislation from drawing petty drafts on London for the convenience of their own customers.

The Directors see no objection to Government being empowered by law to annul any particular election of Auditors, provided the power is only exercised when a selection is not made from Public Accountants, and in order to meet the wishes of Government the Directors would be willing to undertake to keep the minimum cash balance suggested.

I am to add that the Directors note with satisfaction the Secretary of State's willingness to assent to legislation conferring the powers described in clauses 3 and 4 of your letter under acknowledgment. They have only to suggest that the words "general partnership" (as in the present Act) should be substituted for the word "business" at the end of clause 3 (e).

---

Enclosure No 3

No 234, dated Bombay, the 8th June 1905

FROM J BEGGIE, Esq., Secretary and Treasurer, Bank of Bombay, to the  
SECRETARY TO THE GOVERNMENT OF INDIA, Finance Department, Simla

I have the honour to acknowledge receipt of your letter No 2035-A, dated 18th April last, on the subject of the proposed amendment of the Presidency Banks Act.

The first part of the letter states that representatives of certain of the Exchange Banks had been consulted by the India Office in November last with regard to the following proposals —

- (1) That the Presidency Banks should be allowed, when the Bank rate in India is '6 per cent or higher, to borrow in London for the purpose of remitting funds to India,
- (2) That the Banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the borrowed money to or from India, but that they should be required to make their remittances in such form as may be approved by the Government authorities in each case, and
- (3) That the Banks should be allowed to draw sterling drafts on London for the home remittances of their customers, subject to a limit of 200*l* in each case.

And you enclose a copy of the criticisms passed by the Exchange Banks on those proposals, and inquire whether the Directors wish to make any further observations on the subject.

In reply, I am instructed to tender the thanks of the Directors to the Government of India for communicating to them those criticisms, and for the opportunity afforded to them of replying thereto, and to say that in their opinion it is desirable that the objections raised should be considered

from the point of view of the Presidency Banks as well as from the point of view of the Exchange Banks I am accordingly instructed to address you as follows --

Taking, first, proposals (1) and (2), it seems perfectly clear that the main intention was that power should be given to the Presidency Banks to borrow in London under certain conditions and for a certain purpose, and that the power to deal in foreign bills was auxiliary and subsidiary to that intention and purpose, and was to be accompanied by a stated restriction. Only one specific objection has been raised to the proposal to confer power to borrow, and that objection has been brought forward by only one of the Exchange Banks. The objection is that borrowing by the Presidency Banks in London would be apt to have a disturbing effect on the London money market, and might even clash with the issue of Indian Government Loans and Treasury Bills. Now it is almost impossible to imagine that the extent of the borrowing operations of the Presidency Banks under the relative conditions to be imposed, could be of such an extent as to disturb the London money market, and there is no reason to suppose that the Presidency Banks would act in a way to affect the market against themselves. It may be safely said that their operations would never amount to more than a small sum in comparison with the assistance more or less regularly required by, and given to, the Exchange Banks by the London Market, for, as is well known, those Banks operate very largely themselves in that market, and appended to their published balance sheets will be found notes from which some idea may be gathered of the extent to which they rediscount their bills there. And not only do they themselves raise large sums in London, but some of them at least, as is also well known, work very closely and lend freely in the short loan market, leading at times to disturbance of the money market. This was exemplified quite recently. On the 16th of March last the City article of the *Standard* stated, "The scarcity of cash was increased by the interruption of the cable service with Bombay which occasioned some of the Eastern Banks to lend less freely to the market." It seems somewhat anomalous that one of the Exchange Banks which, themselves, make such large use of the London market, should endeavour to prevent the Presidency Banks from borrowing there on the ground that it would lead to disturbance of the market. Their own transactions must, in the nature of things, have a far more disturbing effect than those of the Presidency Banks could have, while the restrictions associated with the proposal, which the objection ignores, are such as to preclude all likelihood of the borrowing contemplated endangering the success of any Government operations.

The objections of the Exchange Banks are directed, with the above exception, against the subordinate but necessary proposal to give the Presidency Banks power to deal in foreign bills so far as is necessary to enable them to remit borrowed money to and from India. Two of the letters indeed, directly allege that the main object is for the Presidency Banks to obtain power to deal in sterling exchange, and the proposals could hardly have been more vigorously contested if the intention had been to confer unlimited and unfettered power to do so. The limitations attached to the proposals are almost entirely ignored, and the compass and aim of the suggestions have thus been misapprehended.

The letters are unanimous in pointing to the improved conditions in the money market as a reason against the proposals, and they are also more or less in agreement that the improvement is likely to be maintained. Holding such opinions, it seems somewhat unreasonable on the part of the Exchange Banks to object to the proposals, seeing these would become operative only when the Bank rate was 6 per cent or over. One letter, no doubt, objects that the Bank rate is fixed by the Presidency Banks themselves, and the inference seems clear that they might raise the rate to the required level at will. Still, the same letter mentions that the periods of monetary stringency, which formerly affected Indian trade during certain months of almost every year, have happily been removed, and asserts an increasing tendency towards a steadier and easier money market. It has nothing to say against the rates as fixed by the Presidency Banks in recent years, but rather quotes them with approval, and it expresses the opinion

that the future will find rates still easier, but apparently it considers there is a danger that the rates will cease to accord with market conditions if the present proposals are sanctioned. This objection takes no notice of the accompanying restriction which would, no doubt, become most stringent if there were signs that the Bank rate was raised to 6 per cent against market conditions merely for the purpose of bringing the initial condition attached into operation.

The reasons assigned for the lower interest rates experienced of recent years are variously attributed to the new Currency Laws, to the policy of the Indian Council in the matter of the sale of Council Bills, and to the operations of the Exchange Banks. Now it seems to the Directors that the only correct explanation is to be found in the fact that the export trade has exceeded so largely the import trade, in value, leading to very large additions to the supplies of money in circulation. The Exchange Banks make no allusion to this, and it seems remarkable that they should ascribe a virtue to the Currency Act, the Indian Council, and themselves, which they do not intrinsically possess. These merely constitute the channels through which the trade balance has been working. It was the highly favourable nature of that balance that alone was the potential cause of the inward flow of money and the easier monetary conditions. With regard to the future the Exchange Banks do not appear to take into account the influence that will be exerted by the course of the external trade, and, in so far as this factor is omitted, their reasons for anticipating a continuance of the easy conditions lately experienced in the money market, and even still easier conditions, seem defective. Should the balance of trade continue on the same favourable lines as during recent years the conditions in the money market will no doubt remain easy. But if that balance is less favourable the money market conditions will probably be less easy.

The Exchange Banks also deprecate competition by the Presidency Banks in exchange business, and unanimously point to the fact that for many years they have financed the export and import trade. They also particularly define the limits and scope of the business of the Presidency Banks. It has already been pointed out that the Exchange Banks have misconceived the nature of the proposals, and there seems to be no doubt that they have also formed an exaggerated opinion as to the extent to which the proposals, if sanctioned, will enable the Presidency Banks to enter into competition with them in exchange transactions. Remembering that the main object is not to obtain permission to operate in exchange but to have power to borrow in London when necessity arises, and that the restrictions to be imposed are a Bank rate in India of 6 per cent or higher, and Government approval of the form of the remittances in each case, it seems impossible to regard the proposals as conferring serious competitive power on the Presidency Banks. The remittance to and from India of the proceeds of loans cannot under any circumstances amount to more than a minute percentage of the total import and export trade. And the prospect presented by one of the Exchange Banks of the Presidency Banks bringing in money from London covering by sterling bills as soon as possible, repeating the operation and again covering, and so on, is opposed to both the spirit and letter of the proposals. There is, however, another side to this objection. While the Exchange Banks carefully allocate to themselves the exclusive privilege of financing the external trade, and to the Presidency Banks that of dealing with the internal trade, and strongly protest against the Presidency Banks being allowed to encroach on their province as defined by themselves, they do not hesitate to compete with the Presidency Banks in the local and internal trade. The Exchange Banks do not mention this aspect of the case, except that one of them remarks that "since the new Currency Laws these Banks have been more disposed to send money to India for local purposes," but the fact is that all the Exchange Banks consulted compete, more or less keenly, in the internal trade, and this competition has been steadily growing and extending. The Directors maintain that in view of that competition the Exchange Banks are not entitled to plead competition with them in exchange business as a reason against the proposals.

Another objection brought forward is that the proposals have been made before and refused, and references are given showing the Government attitude

towards them in the past. On this occasion, however, the Presidency Banks have been able to satisfy Government as to the safety and desirability of giving the power asked for. The opposition of the Exchange Banks, it may be again remarked is directed against the subordinate proposal to provide a means of remitting money borrowed from and to London, whereas Government and the Presidency Banks were chiefly interested in giving and obtaining the power to borrow. This objection may conveniently be connected with another which asks why permission should be accorded now when the only strong argument in favour of the proposals has ceased to exist, that argument being that with the London market thrown open to them for raising money, and with liberty to operate in sterling exchange, the Presidency Banks would be enabled to prevent or alleviate periods of monetary stringency. That is neither the only nor the strongest argument in their favour. The strongest argument is one that has only recently come into force, viz., the establishment of the gold standard, and, it may be added, the existence of a large gold reserve, which ensure safety from serious loss in the event of the Presidency Banks borrowing in London.

Another point deserving notice is the view presented of the Presidency Banks owing their prestige and resources largely to their State connection. So far as the Government deposits with the Banks are concerned, the Exchange Banks have apparently failed to observe that these now form a much smaller proportion of the total resources of the Banks than formerly. I am directed to mention this, as it is desirable that such matters should be accurately stated in a discussion such as the present. Stress is further laid on the fact that the Government deposits carry no interest. But, apart from other considerations, the Exchange Banks cannot be unaware that the restrictions placed on the Banks' business by reason of the State connection constitute a far heavier charge than any ordinary interest charge on the State deposits would amount to. A claim is also made that if exchange banking is no longer to be regarded as a disqualification for Government business, the Exchange Banks should be allowed to compete for a share of the Government business, and the Government balances, on such terms as Government might consider satisfactory. Those terms would no doubt comprise restrictions similar to those imposed on the Presidency Banks including the publication of a weekly statement of affairs and very limited power to operate in exchange, and it need not be considered whether any of the Exchange Banks would find such terms suitable.

It is also objected that no public advantage would be gained and no public interest served by granting the new powers, also that there is less reason now than ever, in fact no valid reason at all can be urged, in favour of the proposals. The Directors and, they believe, the Government of India are satisfied that it would be to the advantage of the Government and the public as well as the Banks themselves to have access to the London market for the purpose of borrowing, and that the proposals are therefore justified.

With regard to proposal 3, while it is admitted to be of no great importance, the objections are raised that it would be liable to gradual enlargement, and so would create in the minds of the Exchange Banks suspicion and friction, that there would be no advantage to the public, and that it would inflict an injury on the Exchange Banks. In reply to these objections I have to point out (1) that there appears to be no grounds for the fear expressed as to a possible extension. No such extension could take place without fresh legislation. (2) The proposal was not brought forward on the ground that it would be advantageous to the general public but, as indicated in the proposal itself, because it would enable the Presidency Banks to afford facilities to customers which are commonly sought for by many private individuals from their bankers. And (3) the injury to the business of the Exchange Banks that would result can only be regarded as infinitesimal. The Exchange Banks appear to be most apprehensive where any competition with them, however trifling, in exchange is concerned, but appear to reserve the right to enter into competition with the Presidency Banks in local banking business whenever it suits them to do so. The Directors submit that no substantial reason has been given for denying to the Presidency Banks the small concession involved in this proposal.

The Directors are of opinion that the Exchange Banks have not made out a strong case against the proposals under reference and they feel themselves called upon to protest respectfully against the abandonment of the proposals which appears to be contemplated in your letter, and to beg that before any decision is come to their reply, as above, to the points raised by the Exchange Banks may receive due consideration along with the representations previously made on this subject by all the Presidency Banks

With reference to the enquiry contained in the last paragraph of your letter, the Directors regard the suggested amendment of the Presidency Banks Act so as to empower them to borrow in London as by far the most important of all the amendments proposed, and they venture accordingly to beg that Government will leave the question in abeyance until it is decided whether the power to borrow is to be included in or excluded from the contemplated legislation

The other contents of your letter do not appear to call for remarks at present.

---

Enclosure No 4

No. G. P. L. 124-8, dated Madras, the 20th June 1905

From J. KERR GREIG, Esq., Secretary and Treasurer, Bank of Madras,  
to the SECRETARY TO THE GOVERNMENT OF INDIA, Finance Department, Simla

I have the honour to acknowledge receipt of your letter No. 2035-A, dated 18th April last, on the subject of the "Amendment of the Presidency Banks Act" in which you inform me that in November last representatives of certain of the Exchange Banks were consulted by the India Office with regard to the following proposals —

- (1) That the Presidency Banks should be allowed, when the Bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India,
- (2) That the Banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the borrowed money to or from India, but that they should be required to make their remittances in such form as may be approved by the Government authorities in each case, and
- (3) That the Banks should be allowed to draw sterling drafts on London for the home remittances of their customers, subject to a limit of 200l in each case

You also enclose a copy of the criticisms passed by the Exchange Banks on these proposals, and you enquire whether my Directors wish to make any further observations on the subject

Your letter further states that it has been ascertained that His Majesty's Secretary of State is prepared to assent to legislation conferring certain powers on the Presidency Banks under certain conditions which have been agreed to by the Banks provided all the concessions were granted, and you ask whether in the event of certain concessions, including that of borrowing in London, being finally rejected, my Directors will still be willing to fulfil their undertaking

My Directors have carefully reconsidered the whole question of the amendment of the Presidency Banks Act in the light of the above-mentioned correspondence, and I am to say that in their opinion the whole matter hinges on the power of access to the London market on the part of the Presidency Banks, in times of stringency, to meet the requirements of the internal trade of this country

The Exchange Banks in their replies agree that the legitimate function of the Presidency Banks is the financing of India's internal trade, while they express themselves as ready and able to finance the large foreign trade of the country, although at the same time they do not apparently propose to confine themselves to this particular branch, seeing that in one instance at least they are already in competition with the Presidency Banks for a share of the internal trade. It is not clear therefore to my Directors where their objection comes in. In any case it is somewhat one-sided

If, as they say, owing to the success which has followed the policy of the Government of India in regard to their currency legislation, such stringency as has been experienced in past years is not likely to recur, the Presidency Banks will not in that case require to utilise the powers for which they ask, but my Directors submit that they should be in a position to do so if necessary, and they consider it absurd to suppose that the comparatively small requirements of the three Presidency Banks would be apt to have a disturbing effect on a money market such as that of London, and might even clash with the issue of Indian Government Loan and Treasury Bills

The suggestions that power to borrow in London is merely the thin end of the wedge and that the Presidency Banks might in time become huge operators in sterling exchange may be dismissed without comment, as it is manifestly within the power of the Government of India to place such restrictions by legislation on the Presidency Banks borrowing as would obviate any attempt of this nature

The Government of India have already taken steps in this direction by limiting their proposals to the extent that the Presidency Banks should only be allowed to borrow when the Bank rate in India is 6 per cent or higher, and that they should be required to make their remittances to or from India *in such form as may be approved by the Government authorities in each case*

As regards the alternative to borrowing which has been put forward, viz, that of increasing the Capital, my Directors would submit that it can scarcely be considered sound Banking policy to incur a permanent liability in order to meet a possible contingency which may or may not arise, or, if it does, only for a short period at the height of the busy season, while accepting sterling fixed deposits in London is open to a similar objection

The Banks are not likely to resort to the expedient of borrowing until it is absolutely necessary for them to do so. The power therefore, to be of any practical use, must be of such a nature that it can be exercised without any delay, that is, by pledging their securities and remitting the proceeds by Council Bills or Telegraphic Transfers, and in this connection my Directors are unable to follow the remark to the effect that such a course would constitute a divorcement between liabilities and assets. It appears to them to be merely a temporary conversion of securities into cash for the purpose of investment in another direction

In conclusion my Directors submit that the Exchange Banks have shown no valid reason why the power of access to London should be withheld from the Presidency Banks

My Directors note with satisfaction that the Secretary of State is prepared to assent to legislation on the lines indicated, and they hope that the Government of India will now see their way to amend the Act in the manner and on the conditions already agreed to by the Presidency Banks

At the same time I am to say that the proposed concessions, apart from that of borrowing in London, although desirable, are not of supreme importance, and my Directors would rather forego these facilities altogether than accept them with the suggested modifications

---

No. 34

No 27, Financial, dated London, the 16th March 1906

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA

I have considered in Council the letter of your Predecessor's Government of the 19th of October 1905, No 351, in which they ask for a reconsideration of my Predecessor's refusal to allow the Presidency Banks to borrow in London, and to deal in foreign bills of exchange for the purpose of remitting money to and from India. I have carefully studied the reasons which have been urged in favour of these proposals and those which led my Predecessor to withhold his sanction, and I am of opinion that the previous decision must be maintained. I now proceed to state the grounds on which this conclusion is based

2 My Predecessor objected to the proposed enlargement of the powers of the Presidency Banks for various reasons, of which the most important

related to its effect on the position of the Exchange Banks. He considered that the alteration of the law as suggested would expose those banks to competition in which they must necessarily be at a disadvantage as compared with the Presidency Banks, because the latter enjoy, through their connection with the Government, important advantages which the Exchange Banks do not share. He drew attention to the possibility that competition of this kind might lessen the usefulness of the Exchange Banks to the State and to Indian commercial interests.

3 The Government of India have considered this matter, and state in their letter under reply that they are satisfied that the proposals involve no unfair or indeed appreciable competition, but I regret that I am unable to agree with this opinion.

4 The desire is that the Presidency Banks may be empowered to deal in foreign bills of exchange subject only to the following restrictions —

- (1) That they shall buy bills on India only from the proceeds of loans contracted in England, and that they shall contract such loans only when the Indian Bank rate exceeds 6 per cent, and shall repay them after an interval of not more than six months.
- (2) That they shall buy bills on England only for the purpose of repaying their English loans.

Under these conditions, the Banks would clearly be within their rights if, having borrowed money in England and bought bills on India, they immediately afterwards bought in India bills on England and used the proceeds to discharge their English loans. This cycle of operations could be constantly repeated so long as the Bank rate remained above 6 per cent, and it is to be presumed that it would be repeated if it were found profitable. Nor is it easy to see on what ground your Government could intervene to prevent the Banks from exercising within the prescribed legal limitations powers that had been deliberately conferred upon them. I am, therefore, of opinion that these proposals would involve competition in exchange business between the Presidency Banks and the Exchange Banks.

5 Any claim on the part of the Exchange Banks to be guarded against competition in this branch of their business must rest, of course, entirely on the grounds stated by my Predecessor and referred to above, viz, that the advantages accruing to the Presidency Banks from their connection with the State are such as to make it impossible to regard their competition with the Exchange Banks as being on a basis of equality. I observe that the Presidency Banks in their letters now forwarded are at some pains to minimise these advantages, but, since they include the use without interest of Government balances seldom falling below three crores of rupees, I think that they must be regarded as substantial enough to justify, as a matter of fairness, and even to require (so long at least as there is not some very strong consideration of public interest to the contrary), the maintenance of the restriction now in question on the business of the Presidency Banks, a restriction which has been in force since these Banks and the Exchange Banks came into existence, and without which it is possible that some of the Exchange Banks might not have been established.

6 I may add that any injury caused to the Exchange Banks by the competition of State-aided rivals would, in my opinion, be detrimental to other interests besides those of the institutions immediately affected. The four Exchange Banks whose representations were forwarded by my Predecessor possess large capital and other resources. I find that they purchased 24½ out of 36½ crores of bills and telegraphic transfers sold by the Secretary of State in Council in 1904-05. It is beyond doubt that, owing to their high standing, it is advantageous to the Secretary of State (and it may reasonably be presumed that it is advantageous to merchants engaged in trade between India and other countries) to be able to carry on remittance transactions through their agency, and to make use of the other facilities which they offer.

7 It remains to be considered what alternative measures, if any, could be adopted for attaining the object which you have in view. The special conditions, for the removal or modification of which the proposals are intended, are described in the eighth paragraph of the letter of your

Predecessor's Government. It is stated that, under the operation of the present Currency System, the former practice of granting loans and advances to the Presidency Banks can no longer be maintained in ordinary circumstances. Your surplus balances must necessarily be held in reserve to meet the demands of importers of gold, and "the consequence is that while rival institutions, by borrowing or transferring capital from London, can command the Government's whole resources," the Presidency Banks are debarred from receiving Government assistance towards meeting exceptional demands. I have not had submitted to me figures showing the diminution that has taken place in the amount of Government money held by the Presidency Banks, but I have no doubt that during the busy season of recent years it has been found difficult to grant them special assistance from your balances. It is not stated whether, in these circumstances, the Presidency Banks adopted the course which in similar circumstances would be regarded as the natural one in this country, namely, to offer additional inducements to depositors in the hope of increasing the amount of private deposits left with them. Assuming that all measures in this direction which present any reasonable prospect of success have been taken, and that the Banks do not contemplate making any addition to their share capital, it appears that the only additional resource to which they can look is an increase in your cash balances which might enable you to lend to them with greater freedom. It is, of course, not to be contemplated that the Government of India should, in the interest of the Presidency Banks, maintain its total balances at a higher level than its own requirements demand, but you might possibly find it advantageous in your own interest to endeavour to keep somewhat higher balances than you have had in some recent years, and any steps that might be taken in this direction would probably benefit the Presidency Banks to some extent. I gather from Lord Amphill's letter No 222, of 23rd June 1904, that the Government of India have for some time had under their consideration the question of the adequacy of their cash balances, and, should you desire to pursue the matter, any proposals that you may make will receive my careful consideration.

---

No 35

Telegram from the VICEROY to the SECRETARY OF STATE FOR INDIA,  
dated 15th September 1906

Amendment of the Presidency Banks Act. Please see paragraph 10 of our Financial Despatch No 264, dated 21st July 1901. While amending the Act in accordance with paragraph 9, Clauses (a) to (h) of your Financial Despatch No 15, dated 3rd February 1905, we propose to insert the following clause after Section 36, Clause (m) of existing Act: "The drawing of sterling Bills of Exchange on London for the purpose of the remittances of their customers subject to a limit of 200l in any one month on behalf of any particular customer." We trust that you will accept this minor proposal. We propose to introduce Bill on 29th September.

### APPENDIX I

Extract from Despatch No 158, Financial, dated London, 16th September 1862

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA

49 I must now advert to a material point in connection with the privileges conceded to the Banks of Bengal and Madras, and, I suppose, of Bombay, viz, the power of dealing in foreign exchanges

50 It appears to Her Majesty's Government to be very objectionable to allow banks so intimately connected with the Government as these banks, and which are entrusted with the custody of the Government balances, to deal in foreign exchanges. The Bank of England does not transact business of that description, which is, in fact, not banking, but speculative commercial business

51 By Clause 5 of Act XXVII of 1855 the Bank of Bengal was authorised, according to the instructions, and at the risk, of their constituents, to remit the principal, interest, or dividends of Government securities by public or private bills, whether payable in India or not, and to do all acts necessary or proper for the purpose of making such remittances. But the power to deal in foreign exchanges was not necessary for that purpose

52 The question of giving a power to deal in foreign exchanges to the Bank of Bengal, which is now proposed, was formerly and on different occasions considered, and that power was always withheld. It is still more objectionable to give it when, as proposed by you, the business of issue is, in a greater or less degree, connected with the business of the bank

53 Any banks to which the balances and treasury business of the Government are to be entrusted must be restricted to legitimate banking operations, such as those transacted by the Bank of England or by the Bank of Bengal as heretofore constituted

54 This precaution is indispensable, for it cannot be conceived that a failure, on the part of the bank entrusted with the business of Government, to cash a Government note or bill or to pay any legal demand on the Government, would be held by the Native community to affect only the credit of the bank. Her Majesty's Government consider that any such occurrence would inevitably be regarded as a failure on the part of the Government itself, and the utmost care must be taken to guard against the possibility of such a contingency

55 I must desire, therefore, that you will not conclude the arrangement which you were about to make with the Bank of Agra, which deals in foreign exchanges, and Her Majesty's Government cannot sanction the concession which you have made to the Bank of Bengal of allowing it to deal in those exchanges. I have not, however, advised Her Majesty to disallow the Act IV of 1862, which gives effect to your intention in this respect, in order to give you an opportunity of making provision for the other objects of the Act

No 127, Financial, dated London, the 4th June 1866

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA

I have considered in Council your Financial letter dated the 21st February 1866, No 46, forwarding a letter from the Secretary of the Bank of Bengal in which he represents the inconvenience that has attended the withdrawal of the privilege, which was enjoyed by the bank under Section 28 of Act 4 of 1862, of drawing bills of exchange and letters of credit payable out of India for the use of their constituents in the Agency Department, and of buying bills of exchange payable out of India for the purpose of remitting funds to meet such bills or letters of credit, and requests to be allowed to revert to their former privilege, subject to such restrictions as might be prescribed for their guidance

2 The arguments contained in the letter in question have not satisfied me that there is any sufficient ground for departing from the views taken in Sir C Wood's Financial Despatches of the 16th September 1862, No 158, and the 4th January 1864, No 1, and I must, therefore, adhere to the decision therein conveyed

3 It seems to me that notwithstanding the modifications of the arrangement with the bank, made in compliance with the instructions referred to, the accommodation desired by that institution for the benefit of constituents in the Agency Department may be afforded by the issue by the bank of post bills payable in India, which will find always a ready sale in this country, or by permitting constituents to draw upon the amount at their credit in the bank by cheques or bills payable to order

No 289, Financial, dated London, 15th December 1866

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA.

Para 1 I have considered in Council your Financial Letter, dated the 6th October 1866, No 220, forwarding a renewed application from the Bank of Bengal to be allowed to revert to the privilege which they formerly enjoyed, of maintaining drawing accounts with the Bank of England and Messrs Coutts & Co, in order to enable them to make remittances by their own bills or letters of credit to their constituents in England, in respect of securities deposited with them in the Agency Department

2 Of the inexpediency, as a rule, of allowing a bank which holds the Government balances to deal in foreign exchanges, you appear to be satisfied. But, with the restriction which you propose as to the bills to be purchased by the Bank, you consider that the rigorous application of the rule may be safely relaxed

3 The soundness of the general principle under which the bank has been precluded from dealing in foreign exchanges can hardly be questioned. But, as you have strongly urged that if the bank be allowed to place the necessary funds in the custody of the banks specified, in the manner proposed by you, the convenience of the holders of Indian Government securities resident in Europe will be promoted without any undue risk being incurred by Government, I shall not object to accede to that arrangement, subject to the conditions which you have suggested, and on the distinct understanding that no bills are to be drawn on this country by the Bank of Bengal, except for the remittance of interest and dividends on Government securities or bank shares in their custody, and that, in the event of its appearing hereafter that any risk or inconvenience, not at present foreseen, will be incurred, the concession will be withdrawn

Extract from No 225, Financial, dated London, 6th May 1875

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA

18 The engagements which the banks on their side should be asked to undertake will be only those to which they would probably by preference submit. If you incorporate them by special legislation, you may properly insert into the Act the restrictions which do not injure their commerce but increase the confidence they enjoy. They should be required to abstain from the hazardous business of foreign exchanges, and from lending on any but the most approved securities. A weekly statement, such as that which is issued by the Bank of England, together with a weekly classification of the securities on which they have advanced, should be supplied by a responsible officer, who should be bound to a true statement under penalty. You will at the same time require such confidential returns as may be necessary to place Your Excellency in full possession of all the requisite information with respect to the distribution of the resources of the banks and the character of their operations. If the information furnished by these returns is sufficiently detailed, it will not be necessary to reserve a power of inspection, which might impose upon you in the public view an undue responsibility for the management of the banks, and would in other respects place the Government in a false position towards them.

19 These restrictions are no more than you may rightly exact as a condition of the position of advantage in which the banks are placed by receiving Acts of Incorporation, and by their connection with your Government

No 41, dated Fort Wilham, the 25th January 1878

From the GOVERNMENT OF INDIA, Financial Department, to the  
SECRETARY OF STATE FOR INDIA

We have the honour to forward for your Lordship's consideration a Memorial\* addressed to us by the three Presidency Banks, in which they pray that the Presidency Banks Act (XI of 1876) may be amended, and that distinct and definite powers may, by the amending enactment, be given to the Presidency Banks—

- 1st To borrow money, either in India or in England, by pledge of assets or otherwise, or on such terms as to repayment, interest, &c, as the said banks may from time to time arrange,
  - 2nd To make remittances by bills of exchange or otherwise, as may seem expedient, to England, in payment of the price of stock or other authorised investments from time to time purchased or acquired for the banks in England, and also in repayment of loans arranged for there,
- and that previous borrowings by such banks or either of them may be declared to have been valid transactions.

\* This Memorial will be found on page 409.

2 We do not think that there is any objection to the Presidency Banks being allowed to borrow in India in the manner described in their memorial, on the contrary it seems right and necessary that they should have this power

3 It rests rather with Her Majesty's Government to decide whether they shall be allowed further to borrow in England. The principal objection which occurs to us is, that if this power is conceded it must lead to some extension of the dealings of the banks in foreign exchanges which Lord Halifax viewed with such disfavour in 1862 (see paragraphs 49-54 of his despatch No 158\*, dated 16th September 1862). At present these banks may only buy and sell bills payable out of India in order to remit, at the risk of their constituents, the proceeds, whether principal, interest or dividend, of any securities or shares which they may buy or which may be in their charge as agents (see *Presidency Banks Act, section 36, clauses (K), (L) and (M)*). Even this liberty was only conceded by your Lordship with some reluctance (See *Earl de Grey and Ripon's despatch No 127†, dated 4th June 1866, and your Lordship's despatch No 289‡, dated 15th December 1866* )

4 But under the present circumstances of the connection between the Government and the Presidency Banks, we do not ourselves object to the concession to them of the full powers which they desire. If your Lordship should concur in this view and authorise us to undertake the necessary legislation, we should take care to require such returns as would show that the banks bought and sold bills payable out of India only for the purposes of the transactions so authorised and for which such purchases and sale are already permitted

---

No 135, Financial, dated London, 2nd May 1878

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA

Para 1 I have considered in Council your Financial Letter, dated the 25th January last, No 41, forwarding for my consideration, a memorial addressed to your Government by the three Presidency Banks, praying that the Presidency Banks Act XI of 1876 may be amended so that they may be empowered,—

“1st To borrow money, either in India or England, by pledge of assets or otherwise, or on such terms as to repayments, interest, &c, as the said banks may from time to time arrange,

“2nd To make remittances by bills of exchange or otherwise, as may seem expedient, to England, in payment of the price of stock or other authorised investments from time to time purchased or acquired for the banks in England, and also in repayment of loans arranged for there,

“and that previous borrowings by such banks, or either of them, may be declared to have been valid transactions”

2 In forwarding these memorials, you state that you “do not think that there is any objection to the Presidency Banks being allowed to borrow in India in the manner described in their memorial, on the contrary, it seems right and necessary that they should have this power,” and that “it rests rather with Her Majesty's Government to decide whether they shall be allowed further to borrow in England”

3 The principal objection which occurs to you is, that if this power be conceded it must lead to some extension of the dealings of the banks in foreign exchanges, which Lord Halifax viewed with such disfavour in 1862, § as, at present, the “banks may only buy and sell bills payable out of India, in order to remit, at the risk of their constituents, the proceeds, whether principal, interest, or dividend, of any securities or shares which they may buy, or which may be in their hands as agents”

4 You also state, that “under the present circumstances of the connection between the Government and the Presidency Banks,” you do not “object to the concession to them of the full powers which they desire, and if your Lordship should concur in this view, and authorise us to undertake the necessary legislation, we should take care to require such returns as would show that the banks bought and sold bills payable out of India only for the purposes of the transactions so authorised, and for which such purchases and sale are already permitted”

5 Although you refer to the opinion of the Home Government in regard to the question of dealing in foreign exchanges contained in the despatches ¶ quoted by you,

\* See page 514

† See page 514

‡ See page 515

§ Paras 49, 54, of India Financial Despatch, dated 16th September 1862, No. 158 (p 514).

¶ India Financial Despatches, No 158 of 1862 and Nos. 127 and 289 of 1866 (pp 514-5)

you do not allude to and may possibly have overlooked, the Financial Despatch, dated the 6th May 1875, No 225, regarding the proposed modifications of the agreements with the Presidency Banks for the conduct of the Government business

6 In para 18 of that Despatch, the first, among other conditions, on which it was stated that the Secretary of State was willing that fresh agreements should be entered into with the banks was, that "they should be required to abstain from the hazardous business of foreign exchanges"

7 I could not sanction the continuance of large Government balances in the custody of any banks which had the power of dealing in foreign exchanges, which is in reality speculative commercial business, not legitimate banking, but, apart from that consideration, I am decidedly of opinion that the concession of a power of creating a foreign agency in England, such as would be the result of entering into loan transactions of the nature of those now contemplated, would admit of the banks locking up a large portion of their capital at so great a distance as to render it practically unavailable in the case of any emergency arising in India

8 I must therefore decline to comply with the memorial of the banks, so far as it relates to borrowing in England

9 As regards borrowing in India, in the manner suggested in the memorial, I request that you will obtain the opinion of your law officers as to the necessity for amending the Banks Act, as, although I am not unwilling to concede that power to the banks, I do not think it desirable to modify the existing Act or agreements with them, without some strong and clearly defined reason

10 A copy of a report by the legal adviser to this Office, dated 7th March 1878, is forwarded herewith for the information of your Government.

---

Enclosure

REPORT by the LEGAL ADVISER, India Office, dated 7th March 1878

The printed memorial of the Presidency Banks correctly states that it is an ordinary incident of banking business to obtain funds for temporary purposes by pledging assets, and it is indisputable that the Directors possess power to borrow unless such power is excluded by the legal instruments from which their authority is derived. See *Bank of Australasia v Breillat*, 6 Moore P C 152, and Mr Justice Lindley's "Treatise on Partnership," 3rd edition, page 283

It appears to me that power to borrow in India, the country where the business is carried on, is not excluded by any part of the Presidency Banks Act, if indeed such power is not conferred on the banks by Section 36 of the Act, which enables them generally to do all such matters and things as may be incidental or subsidiary to the transacting of the various kinds of business there specified, and therefore the Presidency Banks are not now precluded by law from borrowing in India in the manner described in their memorial. I should express this opinion with more confidence, but for the fact that Mr Paul, the Advocate-General, and another gentleman of eminence at the Calcutta Bar have advised that if the bank contemplates raising money on a large scale, and habitually, by pledge of Government paper as an intermediate stage in its total conversion into money, it would be desirable to have an express authorising clause inserted in the Act

---

## APPENDIX XVI

## NOTE OF EVIDENCE submitted by SIR DANIEL M HAMILTON

1 Increased trade can best be secured by increased production, therefore, questions connected with currency and finance should be settled with a view to encouraging the Producer to produce more

2 According to the Royal Warrant, one of the main objects in view in appointing the Commission on Indian Finance and Currency is, to inquire whether the existing practice with regard to the Gold Standard and Paper Currency Reserves is conducive to the interests of India. The term "interests of India" I take to mean the interests of the people of India, and as four-fifths of these are agriculturists, I understand that the various questions at issue have to be decided with a view to the well-being of the great majority of the people, rather than in the interest of the small minority, and it is on this understanding I have penned the following remarks, believing that the interests of Trade will best be served by studying the interests of the great industry upon which the welfare of India rests

*The Sale of Council Bills and Transfers*

3 Trade would not purchase these if it did not find them a convenience. Government ought, therefore, to sell as many as Trade will take

*The Large Cash Balances held in London*

4 The writer of the attack in the "Times" says —

"These large balances mean that many millions of London money have been improperly withdrawn from India. They represent sums extracted from the taxpayer in excess of the requirements of the State, capital withdrawn from India for use in London, and there used, not in pursuit of Indian interests, but for the convenience of joint-stock banks trading on inadequate gold reserves"

5 The words quoted convey the impression that Government has bodily lifted the cash which it had lying in India, and dumped it down in London for the sole purpose of financing London bankers, but this is far from being the whole truth. What has really happened is this. Government has made over to the people of India, from the money it had lying there, a portion of what is due to them in settlement of the balance of trade, and has recovered the gold equivalent from the importers in England. For every sovereign so collected in London 15 rupees have been laid out in India, so that it is not correct to suggest that India has altogether lost the use of this money. It is rather when Government does *not* collect the gold in London, but leaves it to find its own way back to India, that India runs the risk of losing, as I shall show further on. Whether the gold collected in London against the currency so paid out in India is invested to the best advantage I shall discuss later.

*The Treasury Balances*

6 The Treasury balances remaining in India should be freely lent out in India to first-class banks, thus keeping the bank rate steady. As regards the statement that the Treasury balances represent money which has been extracted from the taxpayers in excess of the requirements of the State, this may be so in a technical sense, but when it is remembered that all money taken from the people is returned to the people in other ways, it will be seen that there is really nothing in the charge. Personally I should like to see more taken from the people in the same way, for, if the Government does

not take it, the people's creditors will. When Government takes it, the money is spent for the benefit of the people. When Government does not take it, the people lose it. The people of India are not yet able to look after themselves. They and their finances require shepherding, and their only shepherd is the Government.

*The Gold Standard and Paper Currency Reserves*

7 The Treasury balances may be looked upon as the accumulated profit on Revenue Account. Besides the Treasury balances there are the balances belonging to the Gold Standard and Paper Currency Reserves, which now amount to something like 60 millions sterling held partly in India and partly in London. As regards the location of these balances, the Gold Standard Reserve, if ever it is wanted at all, will be wanted in London to ensure the payment in England, at 1s 4d per rupee, of remittances from India. It ought therefore to be held in London and not in India, where it can never be wanted. I see no objection to investing the greater portion of the Gold Standard Reserve in easily realisable gold securities, not putting too much into one basket. The loss to India by not investing, at a time like the present when she is losing her opium revenue, and requires so much more than formerly for education, sanitation, Army expenditure, &c, would be serious. The interest on the investment of the Gold Standard Reserve might meantime be allowed to accumulate in gold coin.

8 With regard to the Currency Reserves, as much silver coin as is likely to be required to encash currency notes presented to Government for payment, should be kept in India, with a safe margin for emergencies, using it to supplement the Treasury balances as required by trade, the interest on the money so lent to the Treasury being credited to the Paper Currency Reserve. The remainder should, as far as possible, be paid out to the people in silver and paper currency in settlement of the balance of trade due to them, the gold equivalent being recovered in London by means of Council drafts and transfers, and the greater portion of same invested. As regards its investment, I would remark as follows —

9 It is quite legitimate business for Government to lend out India's gold balances to first-class London banks or first-class financial firms on first-class security, or to invest them in first-class securities provided no more is placed in one basket than can easily be realised without loss when wanted, but it would, in my opinion, be better still if the gold balances were utilised in providing a regular orderly programme of capital expenditure in Indian railway construction, the provision of rolling stock for which there is such a constant outcry, irrigation works, &c

10 The existing financial system upon which depends the development of India is that known as the "Gamble in rain," so christened by Sir Guy Fleetwood Wilson, late Finance Minister for India. There is no method in it. If the rainfall is short, development stops or is curtailed, whereas it ought to proceed all the faster, so that the people might be better able to stand against the short rainfalls which are sure to recur. Some years ago Government, with a strong hand, suppressed rain gambling in Calcutta. Why is the evil allowed to live on in Simla and Whitehall? Government fails to discriminate between productive and non-productive debt. It looks upon all debt as an evil, whereas productive debt is a blessing and not a curse. This indiscriminate worship of the "Gamble in rain," otherwise the "Avoidance and reduction of debt," is the worship of evil. It is unsound finance not to borrow when, by means of the borrowing, India would gain more than its cost. To save the interest, Government loses the principal of the people. 100l of development lost for the sake of 4l of interest. Here is something better than ninepence for fourpence, but Government has not the vision to see it. The Provincial Governments, however, see it, and in proof of this I would refer the Commission to the speech of Sir William Duke, member of the Executive Council of the Government of Bengal, in the course of the provincial budget debate on 5th March last. In returning thanks to the Government of India for the unusually large amount which

had been allotted to Bengal from last year's "gamble," Sir William remarked —

"I think this Council will be little disposed to look a gift horse in the mouth, and that it will share with me the hope that as the disposal of this great accession to our resources will be spread over a considerable period, we shall escape those of the evils unusually attendant on a policy of doles which arise from ill-considered schemes and hasty, and therefore extravagant expenditure. At the same time, I may be permitted the pious hope that as the Government of India become more assured as to the certainty of expansion in their revenue, as they recognise, for instance, that the steady annual expenditure of 10 or 12 or more millions on railways, whatever the ups and downs from year to year, must in the end produce a corresponding average increase in receipts. As they acquire more certainty of this they may be willing to assign us an increasing share of expanding revenue, for it is only so that we can develop a regular and progressive policy of provincial finances, that the Local Government can feel that it really possesses and can exercise the responsibility for internal development which should rest upon it, and that this Council can exercise the influence on provincial finance which is contemplated by its constitution, and which the Government desires to accord to it."

Gambling and beggary go hand in hand, and no stronger condemnation of the financial system known as the "gamble in rain" can be found than in these remarks of Sir William Duke

11 I would therefore suggest, for the consideration of the Commission, that instead of lending out India's gold to London banks and financial houses which use it largely for the development of foreign countries, it be utilised directly for the development of India, for, to whatever extent foreign countries are developed by India's gold, to that extent is India's power of development curtailed. If, for example, it is desirable that a railway and irrigation programme involving a capital expenditure of 50 millions sterling spread over five years be gone on with, 10 millions sterling should be found and spent every year till the programme is completed. In a good year the Government balances would be large, and therefore the borrowing would be small, in a bad year the borrowings would be larger and the balances smaller, but whether the year were good or bad 10 millions of balances or borrowings would be spent, and the arrested development from which the country now suffers under the spasmodic "Rain gamble" finance would disappear. The gold balances would be the regulator which would regulate the amount to be borrowed, and would ensure the regular development of the country. Whatever money might be wanted for famine relief in a bad year should be found by temporary borrowing and not come off the development programme, or the million sterling which is taken out of the revenue every year for famine relief might be kept for that purpose and lent out in London or Calcutta at short call instead of being juggled away as it is, in the reduction and avoidance of debt. The Gold Standard Reserve need not be encroached upon, though I personally see no objection to it also being used in the same way as the Currency Reserve.

12 In this way India's balance of trade would construct her railways and irrigation works. It would be a living thing, and instead of developing foreign countries or lying dead and buried in Government vaults in India, where it is not wanted, or in the hoards of the people, it would be spent in developing India. Government ought, therefore, to do all in its power to secure as large a share as possible of the gold balance of trade, by getting possession of every sovereign it can before it leaves England, or by inducing the gold which does go out to India, to flow into the Government treasuries, to be used in the way suggested.

13 That a live railway or irrigation canal would form a stronger currency reserve than dead coinage is proved by the fact that it grows in value whereas the dead coinage does not. Ten millions sunk in railways and irrigation works yielding 5 per cent would grow into

twenty millions in fourteen years. The currency would therefore be doubly secured by being invested, and if gold should by any possibility be wanted at any time the security of the railway or canal would provide whatever is wanted. Besides the interest yielded, the crops resulting from the irrigation would probably be worth a further fifty millions sterling for the railways to carry, the advantage of investing, therefore, rather than keeping the reserves lying idle, is apparent.

14 The Government Blue Book shows that whereas 50 per cent of the Currency Reserve was invested fifty years ago, the invested portion has dwindled down to 22 per cent at the present time. The difference of, say, 30 per cent is equivalent to a capital sum of thirteen millions sterling which is lying idle as compared with the former practice, and when gold cannot be claimed by the people of India in exchange for either currency notes or silver I do not see why even a larger share than before should not be invested. The loss on the 30 per cent alone amounts to 600,000*l* yearly, in addition to the loss of development, which is still more serious.

15 I should also like to enquire if the gold portion of the currency reserves stand in the Government books at fifteen rupees per sovereign? If so, the valuation is not correct, for if there are at the present moment 26 million sovereigns or gold securities in the currency reserve these can be converted into 57 crores of rupees as against the 40 crores shown by the Government figures. There is therefore an additional currency reserve here available of 17 crores of rupees.

16 It might be well, for the sake of clear accounting, if some form of Government bond were created which would be handed to the Treasury Balance department or Paper Currency and Gold Standard departments in exchange for any money lent by these departments to the Railway or Irrigation departments. Should gold be wanted for gold standard or other purposes these bonds would be given to the public in exchange for gold, and recalled when the gold was no longer wanted.

#### *The Financing of Trade.*

17 With regard to the criticism that it is not the business of Government to finance trade as it does by selling Council bills and transfers, I would again point out that in so doing Government secures possession of the gold balance of trade and holds it for the people (for the Government and the people are one), and the equivalent in rupee currency being paid out in India goes to fertilise the country. When Government stands aside and allows the gold to flow past it, to bury itself in the desert, its fertilising power is lost, and with it is lost the many millions sterling worth of produce which India has thus given away without receiving produce in exchange, for whatever portion of the gold received in exchange is hoarded is lost to India and to the world. The loss is therefore a double one—India is depleted of many millions sterling worth of produce, plus the fertilising power of many millions sterling of currency. Even if the fifteen million sovereigns which India imported last year were to remain in circulation, she never recovers the fifteen millions worth of produce exported in exchange. Is it surprising that almost every district of India has its turn of being converted into a work-house? If the producers, who form the vast majority of the people in India, received the gold in exchange for their produce, and chose to bury it, it might be said they had a right to do what they pleased with their own, but owing to the want of a banking system for the people, to which I shall refer later, the producer does not get his own—another man gets it with the result I have mentioned.

18 The loss which India would suffer if Government declined to finance trade by refusing to sell Council bills and transfers can be shown in another way. Take, for example, last year's trade. In his last budget speech Sir Guy Fleetwood Wilson gave the nine months' balance—April to December—as 61½ crores of rupees, or about 40 millions sterling, equal to 53 millions, or, say, 50 millions for twelve months. If Government, by the

sale of Council bills and transfers, secures this, the people receive payment in the currency of the country to the same extent	-	-	£50,000,000
In addition to this, Government have the gold in hand for investment in railways and rolling stock, irrigation works, &c	-	-	£50,000,000
Less what Government has to pay out for the home charges	-	-	18,000,000
			<u>32,000,000</u>

Also deduct the amount required for the purchase of silver for coinage (average for the last ten years, 6,117,516l) say	-	-	8,000,000
			<u>24,000,000</u>

Total Capital gain to India by the sale of Council drafts and transfers	-	-	-	-	-	£74,000,000
---	---	---	---	---	---	-------------

Whereas if Government did not finance trade by the sale of Council drafts and transfers, but allowed the gold to flow back to India to circulate as gold currency, the currency would be increased by	-	-	-	-	-	£50,000,000
Leaving a net Capital loss to India if trade were not financed by the sale of Council bills and transfers of (which loss is really a loss of produce)	-	-	-	-	-	<u>£24,000,000</u>

in addition to the loss of development which is still more serious

An additional loss of produce which India would suffer if Government did not finance trade but allowed the gold to flow to India may be illustrated in this way —For the year 1911-12, after paying the home charges and the cost of silver, &c, the balance of India's exports over her imports fetched 34l millions sterling in the European markets	-	-	-	-	-	£34,000,000
In payment of this the people who raised the produce received 51 crores of rupees, having a silver intrinsic value of	-	-	-	-	-	<u>23,000,000</u>

Leaving a loss of produce to the people of (which loss is also a loss of Capital)	-	-	-	-	-	<u>£11,000,000</u>
---	---	---	---	---	---	--------------------

Whereas if the people leave Government to collect the money for them in Europe by selling Council drafts and transfers, Government converts every sovereign into twenty-two rupees. Thus, while the people with their fifteen rupees can purchase only that amount of produce, Government can purchase for them twenty-two rupees worth of produce, the seven rupees difference on each sovereign representing a gain to the people of eleven millions sterling on the 23l millions of silver purchased to make the 51 crores of rupees

	-	-	-	-	-	£11,000,000
--	---	---	---	---	---	-------------

19 It is therefore not only a convenience to trade but a gain to India when Government sells Council bills and transfers over and above the amount required for the home charges. The more it sells the greater is India's gain. Every sovereign which goes into circulation instead of into the Government Treasuries is a loss of seven rupees worth of possible railways and irrigation canals or any other reproductive investment, plus a loss of fifteen rupees worth of produce.

#### India's Loss of Produce

20 The loss may be briefly stated in this way. Besides paying for the home charges, India last year exported over 30l millions sterling worth of produce. In exchange for this she received 30l millions of gold. This gold represents a title to draw from Europe thirty millions sterling worth of produce, but while the gold is hoarded either in the Government vaults or in the homes of the people, or if it is circulating in India as currency, the titles have never been presented in Europe for payment, and therefore India has parted with her produce for nothing. To whatever extent gold is in the

hands of Government, produce can be claimed from Europe to the same extent. The gold absorbed by the people, whether it is in circulation or in hoards, remains uncashed. I understand that during the last ten or twelve years India has absorbed 108½ millions of sovereigns and bullion, therefore she has not yet received from Europe the 108½ millions worth of produce to which she is entitled. During last year the loss amounted to 18½ millions sterling.

*The Fowler Committee and the proposed Gold Currency*

21 The Committee recommended the introduction, sooner or later, of a gold currency, in the belief that the hoarding of gold in preference to silver would not materially increase. I quote their words —

“As regards the hoarding difficulty in India we are not satisfied that the danger therefrom is so great as has been suggested. While we must look to the continuance of the habit of hoarding, we may also feel satisfied that until gold has penetrated into general circulation, so far as the relatively small transactions of India permit, there will be no more materially increased temptation to the natives of India to hoard gold instead of silver. Moreover, the introduction of a gold currency into India would not be an untried experiment. As has been shown above, gold coins were in common circulation in India generally within living memory, and expressly stated in 1806 to form the principal currency and money of account of Madras” (para 50 of Report, C 9390)

22 Events having falsified the view that the hoarding of gold would not be materially increased, the recommendation based thereon falls to the ground. The Fowler Committee would also seem to have overlooked the important fact that when gold and silver were in common circulation they had a fixed value in relation to each other, and were both saleable at their nominal value in the markets of the world, but the case is now entirely different, and we see before our eyes Gresham's law in active operation driving the gold out of sight.

23 As for there being no materially-increased temptation to the people of India to hoard gold rather than silver, what greater temptation could a man have than to be offered twenty shillingworth of gold for thirteen shillingworth of silver?

24 The Fowler Committee were opposed to Government being compelled to pay out gold in exchange for rupees, and their recommendation in this respect should be rigidly adhered to. It would be the height of folly for Government to give twenty shillingworth of gold for thirteen shillingworth of silver, or for a currency note of no intrinsic value whatever. Having obtained possession of the gold, Government should hold on to it for the benefit of the people at large, and not run the risk, when gold is becoming more valuable day by day, of its getting into the hands of the few who may bury it.

25 But apart from these considerations it would, in my opinion, be unwise to rest the trade of India on a gold currency, for in the event of a world panic arising, with its consequent scramble for gold, the people would give much more than fifteen rupees for a sovereign, and then where would exchange be, and where would Government look for the five millions sterling extra taxation required for its home remittances? With the trade of the country resting on a legal tender currency of silver and paper, and a big powerful gold reserve in London to ensure stability of exchange, the trade of India would pursue the even tenor of its way, while countries with a gold currency collapsed, as America did five years ago.

*The Fowler Committee and a State Bank for India*

26. In paragraph 22 of their report the Fowler Committee expressed doubt as to whether the banking facilities of India were keeping pace with its requirements, and in an appendix to the report Mr. Hambro, a member of the Committee, with a view to improving the banking facilities of the

country, made a definite proposal that a strong bank should be established somewhat on the lines of the Bank of England or the Bank of France, the management of the currency, &c, being entrusted to the proposed bank. The proposal has lately been revived in the "Times". That there is great room for a great banking business, whatever form it may take, anyone familiar with the district life of India is only too painfully aware.

27 The great want, or what I may call the fatal defect, in Indian banking is that it makes absolutely no provision for the financing of the great industry of the country—agriculture. Two hundred and fifty millions of the people of India are directly dependent upon agriculture, and yet this gigantic industry has hitherto been left to the tender mercy of the small money-lending capitalist. There are Presidency and Exchange Banks and other financial conveniences for the trader, but the most important man in the country, the man upon whom all India depends, the man without whom neither the trader nor the banker nor Government could exist, is left outside the reach of cheap money. The producer, when he wants to borrow, as he always does, has no security but his labour and his ungrown crops to offer, and as he is already practically insolvent, and may die before his crops are reaped, he has to pay for his finance whatever price the man with the money chooses to ask. Trade cannot increase unless produce increases, and produce will increase in exact ratio to the inducement offered to the producer. If the producer has to pay anything from 25 to 100 per cent for his finance the inducement to produce is wanting, for it means that all he makes over and above his bare living goes to his creditors. The secret of successful industry is to buy your finance cheap and sell your produce dear. The Indian buys his finance dear and sells his produce cheap. His creditor generally fixes the price of both. The ryot feeds the financier in the fat years and the Government feeds the ryot in the lean. Trade flourishes on the labour of a bankrupt people, for three-fourths of the people of India are unable to pay their debts. The country is run by a system of forced labour, the force being that of the money-lender. Ought Government to look on in the good years and watch a large portion of the surplus gold being buried by the small minority, or ought it to intercept all the gold it can for the benefit of the people?

28 We see in British India to-day 250 millions of people living off 250 million acres of land. All the wealth the people can ever hope to have is what each can get out of his little one-acre patch, and the patch grows smaller as the years go on, for the population increases, but the land does not. If the people of India have only this to look forward to, is it not absolutely essential that they, and not their creditors, should reap the harvest which they sow, but they never will reap it while the present financial conditions last. Government is now making great efforts, and rightly, to improve the agriculture of the country, but unless the people themselves are to get the increase resulting from their labour the efforts of Government will be very largely in vain. Improved agriculture and improved finance must go together. It is the organisation of its capital that India wants more than its increase. There is plenty of capital in the country, but it is mainly in the wrong hands—the hands of the non-producers. The greatest economic problem before India to-day is how to shift the control of capital from the hands of the non-producers to those of the producers of the country's wealth, and until that problem is solved we shall look in vain for much progress.

29 This is the great problem to which a State Bank should address itself. That the industry of 250 millions of people has to pay anything from 25 to 100 per cent for its finance is sufficient evidence that there is vast room for a great banking business. Whether the business should be done by a State Bank formed by a combination of the Presidency Banks, with branches all over the country, or by the Presidency Banks being given enlarged powers, and acting independently, is immaterial, but in one way or another a bridge must be built by which the producer can reach the cheap money market. The State Bank or the Presidency Bank could not be in touch with the individual cultivator, but by means of the Co-operative

Credit movement, for which there is so great a demand, that direct touch would be attained through the Village Co-operative Credit Unions which are now being developed, the Unions paying into or drawing out money as required from the enlarged Presidency Bank. As a matter of fact the Village Co-operative Societies after a time find locally most of the money they require. Perhaps the district treasuries could be made the connecting links with the district Co-operative Unions.

30 Having thus got into direct touch with the money market, the Indian producer would lead the world, for his wants being so few his balance would be large, and, working as he would do for himself and not for his creditors, India would advance by leaps and bounds, the people would have plenty to tide them over the bad years, the famine problem and the many other problems, such as education, police, sanitation, which turn on finance, would be solved. I see the "Times" calling for an increased Army expenditure in India, this too, as well as the lost opium revenue, must come from the ryot, for it is upon the ryot, perhaps more than on the sword, that India rests. The ryot pays the land revenue, which pays the Army, the ryot's produce runs the railways and fills the steamers, the ryot grows the cotton and the jute for the mills, and the food for the men who work therein. The ryot buys the Manchester piece goods, and the better off he is the more he will buy. It is the ryot who does all these things, but until Lord Curzon passed his Co-operative Credit Societies Act there was no man who cared for his financial soul. The movement is, however, starving for want of men to develop it. Only one civilian can be spared from each province to develop Co-operative Credit. In Bengal that one man, with an Indian assistant or two, has to preach to 50 or 60 millions of people in 137,000 villages. Not one thousand villages have yet been entered. Government is calling out all over India for honorary workers to push Co-operative Credit, but the response is small. The very success of the movement threatens to stop its development, for the time of the men set apart for the work is now so taken up in the supervision of the existing societies that they have little or no time for further propaganda. What I would therefore suggest is, that when the gold standard has been rendered quite secure, if it is not so already, the profit on the coinage of silver, or on the increased investment of the currency reserve, be partly devoted towards the payment of whatever staff, European or Indian, may be necessary for the development of the Co-operative Credit movement. The movement has already proved itself to be the most powerful uplifting movement of the time in India, not only financially but socially, and needs no further proving, as the Government blue books show. All it wants is men to develop it, and the money to provide these should be found even if other things have to starve. Money spent in directly increasing the production of the country will repay itself a thousandfold.

31 It has been suggested that the turning loose of a large amount of currency in India without an outlet may cause redundancy and lead to a rise in prices which will tell hardly on the poor with fixed incomes. It is certainly no advantage to a country to increase its currency unless the increase in currency leads to an increase of produce. The development of a sound banking system for the people, combined with railway and irrigation development, will, by increasing production, obviate any danger on this score, and for this reason, among others, I would strongly advocate the development of the Co-operative Credit movement. When 100 villagers club together and stand security for each other, their individual security is increased a hundredfold. Their credit is increased to the same extent. Credit and faith are one. From time immemorial the Indian producer has been calling for credit, so that the money markets would have sufficient faith in him to lend him cheap money. The way has been found in the Co-operative Credit movement, linked up with the Presidency Banks. "Strong banks," says the well-known Indian financial writer, "Rex," "are centres of credit. They uphold it, as it were, on a cantilever system. If well conducted they become the measure of credit which, when properly regulated, has more influence as a factor of wealth and prosperity

' than all the mines of all the world " In proportion as the credit of the ryot increases his production will increase, and more currency will be wanted to move it. The increase in production, resulting from improved banking and increased railways and irrigation, will thus keep pace with and absorb the increased currency, and tend to keep prices at a level which will not tell hardly on the poor with fixed incomes. India wants an extension of credit, but we must be careful to see that the right men, the 250 million producers, get it, otherwise they may be even worse off than they are now.

32. Within the last few years a number of new banks have come into existence, but they have not the resources at their command to finance the agriculture of India, even if they were to cater for that business. It is not lacs of rupees that a business of this magnitude requires, but hundreds of millions sterling, for, large though the external trade is, the internal is greater still. The financing of 250 millions of Indian agriculturalists who are now out of the reach of cheap money is a big problem, and wants something big in the way of banking.

33. We must be very careful not to encourage the growth of a mushroom banking business for the people, and this for political as well as economic reasons, for it is the Government which is blamed when anything goes wrong. The Bank of Burma sounds a warning. Even a Government auditor could not possibly go into the details of a banking business sufficiently to guarantee that everything was in order, whereas the linking up of the Presidency Banks (either separately or together as a State Bank) with the great industry of the country by means of the Co-operative Credit movement, would give a powerful stimulus to sound banking, and inspire in the people that confidence without which a reliable banking business cannot be developed. If the powers and capital of the Presidency Banks were enlarged (or a State Bank formed), the Exchange Banks might take a capital interest in them, with a seat on the Board of Directors, for the linking up of the great agricultural industry directly with the money market, and the consequent exclusion of the usurer with his sterilising rate of interest, would have an enormous effect in stimulating production and increasing the export and import trades by which the Exchange Banks live.

#### *The Financial Organisation of the India Office*

34. Although there is absolutely no reason for thinking that the Finance Committee of the India Office have ever deliberately made the interests of India subservient to the interests of the London banks and financial houses, I think it would be better, in the fierce light which beats upon the throne, if London bankers did not have the ruling voice in the management of India's finances and cash balances. The Finance Committee might be composed as follows.—An Indian civilian or non-civilian who has held the post of Finance Minister or Financial Secretary to the Government of India, a Presidency Bank manager, an Exchange banker, a London banker, a European mercantile man with Indian experience, an Indian mercantile man, or an Indian member of the Indian Civil Service.

#### *Summary of Sir Daniel M. Hamilton's Evidence*

1. That as trade would not purchase Council bills and transfers if it did not find them a convenience, Government ought to sell as many as trade will take.

2. That in the interests of India, apart from trade, Government should secure as large a share as possible of the gold balance of trade, by the sale of Council bills and transfers, and by inducing the gold which does go to India, to flow into the Government coffers there.

3. That to use, for currency purposes only, the gold balance of trade, would be to destroy half its value.

4. That the gold secured by Government be made to serve the double purpose of currency and capital expenditure—paper currency or silver being

given to the people in payment of their produce, and Government interest bearing bonds being given to the reserve treasuries in exchange for the gold drawn from these treasuries for capital expenditure

5 That to whatever extent gold is hoarded, or is in circulation, India loses the equivalent in produce

6 That this loss now amounts to many millions sterling yearly.

7. That to save India from this loss of produce it is necessary that Government secure the gold which pays for the produce.

8 That the gold secured by Government be utilised, as far as possible, for the development of India, rather than lent to London banks and financial houses for the development of foreign countries, or even of England

9 That the regular and orderly development of India requires a regular and orderly system of constructive finance, and not a spasmodic system such as that known as "the gamble in rain"

10 That a regular system of constructive finance, and an orderly development programme can be provided by means of the Government reserves and balances, combined with borrowing

11 That in the event of a world panic arising, with its consequent scramble for gold, a silver and paper currency, backed by a powerful gold standard reserve, will save the trade of India as well as the finances of Government

12 That to give twenty shillings worth of gold for thirteen shillings worth of silver, or for a piece of paper, is not sound finance

13 That to lose fivepence of silver *plus 1l* worth of produce in order to save one-eighth of a penny is not sound finance

14 That raising the rate of exchange above *1s 4d* curtails exports, and weakens the gold standard reserve

15 That Government should reserve the right to refuse to give gold in exchange for silver or paper currency

16 That the gold standard reserve be held in the place where it is most likely to be wanted, viz, London, and the greater portion invested, the interest, meantime, being allowed to accumulate in gold coin

17 That India is losing heavily by having a much smaller percentage of her currency reserves invested than was formerly the case

18 That the currency reserves be held partly in London and partly in India, and invested in the development of India as suggested (the capital expenditure department paying to the currency reserve interest on the money invested) keeping in hand a sufficiency of silver currency for the encashment of currency notes presented to Government for payment. The Treasury department should be able to say from past experience how much is likely to be required for this purpose

19 That the silver so kept for the encashment of currency notes, when not required for that purpose, be lent out at interest to the Treasury balance department when required by trade

20 That the Treasury balances be lent out freely at interest to first-class banks, when required to finance trade.

21 That the great defect in Indian banking is that it makes no provision for the financing of the great industry of the country, agriculture, by which 250 millions of the people directly live

22 That as trade can increase only as produce increases, the first thing to be done is to encourage the 250 millions of producers to raise more produce

23 That so long as the usurer takes all the profit, it is not worth the producers' while raising more produce

24 That to make it worth the producers' while to increase production, he must be relieved from the usurer and brought within reach of the cheap money market

25 That this can best be done by linking up the producer with the Presidency Banks (either jointly or separately) by means of the Co-operative Credit system of finance

26 That more men ought to be provided for the development of Co-operative Credit, their salaries being provided from the profit on the currency after the gold standard has been made secure, or from the profit resulting from the proposed increased investment of the currency reserve, or from whatever other source may be thought best

27 That with the great increase in the export and import trades, which would result from the financing of the producer, the Exchange Banks would greatly benefit. They might, therefore, take a capital interest in the enlarged Presidency Banks, with a seat on the board of directors, Government also being represented on the board

28 That the Finance Committee of the India Council be so arranged that London banks shall not have the deciding voice in financial questions. The Committee might consist of—One who has held the appointment of Financial Member of the Government of India, or been Secretary to the Government of India in the Finance Department, a Presidency Bank Manager, an Exchange Bank Manager, a European mercantile man with Indian experience, an Indian mercantile man, an Indian member of the Indian Civil Service

29 The only way to save India's gold balance is for the Government to secure and use it. The larger the balance is, the better for India. The only sound method of increasing the balance is to encourage the producer to increase production, and the only proved method of accomplishing this is the Co-operative Credit method. I trust, therefore, that from the enormous sums which I believe to be available both now and in the future, the little required to provide the additional men wanted to develop the Co-operative Credit movement will not be refused

#### SUPPLEMENTARY NOTE A

*Scheme for the utilisation of the Currency Reserves in such a way that the following results will be obtained*

- A—A regular reproductive development programme
- B—The abolition of the "Gamble in rain" programme
- C—The abolition of the gamble in silver
- D—The setting free immediately of 12½ millions sterling for reproductive purposes, &c
- E—The setting free of a further 13½ millions sterling when required
- F—The holding of silver or securities sufficient to pay off the entire paper currency in circulation
- G—The strengthening of the gold standard reserve
- H—The keeping of the Indian bank rate at the London level
- I—The improvement of the credit of Government
- J—Relief to the money markets of the world
- K—Increase of employment in India
- L—Relief of unemployment in England
- M—Help to secure the peace of the world

1 The gold and gold securities in the currency reserves amount to 27½ millions sterling. This is valued in the Government books at fifteen rupees to the sovereign, or 40 crores of rupees, but it can purchase silver

sufficient to coin 57 crores of rupees. As the currency notes out against this 27½ millions sterling amount to only 40 crores of rupees, there are 17 crores of rupees available in excess of what are required to encash every currency note in circulation if presented for payment to-morrow. This money (nearly 12½ millions sterling) can therefore be freed immediately and still leave sufficient silver or securities in hand to encash every note out.

2 Part of this surplus might be used for strengthening the gold standard reserve, and the balance for reproductive purposes such as railways and irrigation.

3 As regards the remaining currency reserves which would be sufficient to encash every note in circulation, fifty years ago or less it was customary to invest 50 per cent of the reserves. Now, the invested portion amounts to only 22 per cent. The difference is equivalent to a capital of 13½ millions sterling, which might also with perfect safety be set free for reproductive purposes.

4 If, however, Government desire to have this 13½ millions sterling in coin, it is still possible to have it so and at the same time proceed with the development programme, thus —As the construction of the railway or irrigation canal proceeds the cost of same to be replaced in the currency reserve either by paying in from the Government surplus in a good year or by borrowing in a bad year on the security of the extent of railway or irrigation canal constructed, or partly from the profit on coinage when available. In this way the currency reserve is kept in metal, and India is the richer by a railway or irrigation canal, and if Government secures the gold balance of trade, borrowing will be reduced to a minimum or entirely abolished.

5 Find the average silver purchases over a period of years, good and bad, and every year coin the average and a little more. This will kill the gamble connected with the existing spasmodic method of purchase and protect Government from being cornered.

6 The coined silver lying in the currency reserves to be lent at short call to the Treasury department when required by trade, the currency reserve department receiving interest thereon.

7 The Treasury balances so fortified from the currency reserves to be lent out to first-class banks at 1 per cent under the London bank rate, with a minimum of 4 per cent, on the condition that the banks relend the money to trade at 1 per cent profit. I understand that now, if the local bank rate is 8 per cent, Government expects the same, and, therefore, as the banks make no profit on the loan, they borrow as little as possible, with the result that both Government and trade suffer, the former by having its money lying idle, and trade by having to pay a high bank rate.

8 By using the gold balance of trade in the way suggested Government will have less to borrow, and its credit will improve accordingly.

9 The spending of millions sterling in railway and other material will increase employment in England.

10 The laying of the railways and the construction of canals will increase employment in India.

11 The return to Europe of the gold spent in railway material will ease the world's money markets.

12 The gold reserves will increase with the growth of the export trade, and so provide the Empire with its most powerful weapon.

D. M. HAMILTON

## SUPPLEMENTARY NOTE B

Co-OPERATION IN INDIA By S H FREMANTLE, Esq, ICS,  
Collector, Allahabad

1 Three-and-a-half years have elapsed since I read before this Association a paper on "The Progress of Co-operative Credit Societies in Northern India and Burma," and the object of my present paper is to show what further progress has been made in the interval and to discuss recent developments of the co-operative system. But before speaking about what co-operation has already effected for India and what results may be expected in the immediate future, I wish to say something about co-operation in the wider sense and to indicate from European experience what vast potentialities it has for raising not only the economic standard of the people, but their social and moral standards as well. All are aware of the extraordinary economic results which have followed the organization of co-operation in some parts of the continent of Europe. Germany, for instance, has in its agricultural districts some 24,000 societies, one for every 2,543 inhabitants. In that country and in parts of France and Northern Germany rural economy is completely organized on co-operative lines. What this means is that the peasantry combine for all purposes connected with agriculture—namely, for the provision of credit, for the supply of fodder, seeds, manure, and other agricultural necessaries, for the joint ownership of machinery, for the sale of produce and live stock, for the working up of their raw material in creameries, sugar-beet factories, distilleries, bacon-curing establishments, &c, for the mutual insurance of cattle from accident and disease, and of crops from hail, for the improvement of land by drainage and irrigation, for the maintenance of stallions, bulls and rams for breeding purposes, and for the supply of water, and even electricity and telephones. There are also cow-testing societies which employ men to go round the farms and record the milk given by individual cows, and others, known as control societies, whose employees keep the farmers' records of the money returns from each kind of crop and advise as to rotation and seeds.

2 Thus rural economy is organized on a co-operative basis, and not only rural economy, but rural social life also. For the co-operative societies from their profits and resources support many kinds of social institutions, such as village halls and libraries, village nurses, and sick and provident funds. In Sir H Plunkett's words, co-operation means for the peasant, better farming, better business, better living, better farming, because more capital will be applied to the land, better seeds, manures, implements and live stock will be obtained, and expert advice will be available, better business, because the small man by combining with others gains all the advantages of a wholesale dealer, better living, because economic prosperity and combination for business purposes bring in their train a well-ordered social and intellectual life. The people learn to think for themselves. Education and sanitation are encouraged, and a stimulus is given to the reform of social customs. The society induces the growth of a corporate life, and the mere fact that in any village a committee exists representative of all classes of the agricultural community is of great potential value to any Government and to any country.

3 Now, to turn to India, it is obvious that these manifold activities imply a wide and far-reaching organization. First, there is the small credit society in the village, easy and simple to manage, then other more complex societies, such as those for mutual insurance and purchase of agricultural necessaries, which still, however, work in the area of the village. Then there is the federation into unions and central banks and central societies for purchase and sale. And, lastly, there are the wholesale operations of these central institutions by which they bring the co-operative movement into

touch with the outside world. The control of an organization of this nature is obviously not an easy matter, and the question arises whether there is any prospect that sufficient managing ability will be available in agricultural districts in India, peasants of independent and reliable character to manage their own business in the villages, men of public spirit and education at local centres to supervise the village societies and manage the affairs of a federation, and men of large business capacity and political insight at headquarters to direct the movement as a whole and to control its relations with the outside world. Now the village is the unit of rural society. It is generally well defined, and to a considerable extent self-contained. The village headman already has duties and responsibilities, and undertakes unpaid work for his community in consideration of the prestige and privileges which this position affords him, and we find very few villages where, if the advantages of the system of Co-operative Credit are properly explained beforehand, and sufficient trouble is taken to find the best men, a reliable and influential *panchayat* cannot be obtained. These leading men may not all be educated from a narrow literary point of view, but it cannot be said that their minds are uncultivated. They have a deep knowledge of things agricultural, they are used to the conduct of business and to the exercise of authority in their own villages, and they know how to comfort themselves with independence, dignity, and self-control. As Sir F. Nicholson says, "they compare well in these respects with the peasantry of any European country." And experience has already shown us that even where education has made the least advance, suitable men after proper instruction and under proper supervision can be found to manage the affairs of their own village. But village societies need training in business methods, and their *panchayats* frequently require outside support and sometimes outside control. And they must, to get the full benefit of co-operation, combine into unions, federations and other central institutions.

4 It is in this wider sphere that our chief difficulties arise. Cultivators are, as I have said, keenly interested in the affairs of their own village, and are generally competent to manage them, but they are not qualified to control institutions operating over a large area. Here we must have recourse to another section of the people. Can we then in our small towns and country districts find men of education, leisure, and public spirit to supervise the village societies, and administer the larger institutions? Here salaried officials are no doubt necessary to inspect on the spot, and to train the village societies, and for the current work of administration, but supervision and control by men of the class to which I have referred are needed, and unless such men can be found there is little chance of that complete organization of rural life and industry on a co-operative basis which is the ideal I have set before you. A number of such men have, indeed, put their hands to the work. Sometimes they are busy professional men who devote their scanty leisure to the common good, sometimes retired officials who are accustomed to administration, and are, therefore, particularly efficient as helpers, sometimes, too, enlightened landowners, whose local influence and practical acquaintance with agriculture are of great assistance to the cause. All honour to them! But, in some districts where central institutions have been formed, very little interest is shown by the landholding and professional classes, and the only real control exercised over the salaried officials is that of the registrar and his staff. The drawbacks of this system are evident. First, the movement will become too official and too stereotyped, and, secondly, its development will be hampered because of the inability of the registrar to supervise efficiently more than a certain number of societies. For its healthy growth the co-operation of men of all classes is required, and especially that of the educated community, who by this means can show themselves to be real leaders of the people. As Smiles says in his "Self-Help" "The highest patriotism and philanthropy consist not so much in altering laws and modifying institutions as in helping and stimulating men to devote and improve themselves by their own free and independent individual action." Now this is an excellent description of the aims of co-operation, and one can imagine what an enthusiastic supporter of the movement Smiles would have been, had it been known in his day. For self-

help is the very key-note of co-operation, and, as Mr Roosevelt said "The only true way of helping a man is to help him to help himself"

5 I now turn to the second portion of my subject, and wish to tell you something of our co-operative record up to date, and of its future prospects

6 As you are no doubt aware, for each province of British India, except the North West Frontier and Baluchistan, a registrar of Co-operative Credit Societies has been appointed, and, except in Ajmere-Merwata, he is a full-time officer. He is generally a covenanted civilian, and has an assistant belonging to the provincial service. He has also a staff of inspectors or auditors for organisation, inspection, and audit. The combined statements published by the Government of India show that at the end of the year 1910-11 there were in existence 5,432 societies, of which 4,957 were rural societies. There were 304,101 members, and the working capital was 206½ lakhs. Considering that the movement is still only eight years old, these are very remarkable figures. Taking the average number of members of a household at five, they indicate that 1,500,000 of the population of India are assisted by one or other form of co-operation. And the movement is growing fast, for the provincial reports of the present year, some of which I have had the advantage of seeing, indicate that the increase for the year will be nearly 50 per cent. And this rate of increase is likely to be maintained for some time, since the institution of new centres of organisation and control is rapidly spreading the knowledge of the system over wider and wider areas, and facilitating the formation of new co-operative societies.

7 With a movement already so large and so rapidly growing and fraught with such far-reaching possibilities for the economic, moral, and social elevation of agricultural India, it is obviously of the first importance that development should be on the soundest lines. Co-operation has become a science, and, besides the experience which we have acquired in India, we have that of many European countries in different stages of development to guide us. There are some principles inherent in all true co-operative systems which are of universal application, and cannot, in spite of well-known differences in economic conditions, be safely ignored. I wish, therefore, to call attention to those principles, and to the dangers to which neglect of them is likely to lead.

8 The first principle is that the movement should be self-supporting and self-reliant, and should not depend unduly on Government or any central institution not built up by itself, whether subsidised by Government or not. The danger of officialism I have already mentioned. There is also, of course, the opposite danger. *In India's present stage of development the movement cannot progress without official assistance and encouragement, and some measure of official control. These, however, should be provided by the registrars and their trained staff,* and it is only in exceptional cases and in the more backward parts of the country that local officials, busy men with no special training for the work, should be encouraged to take active steps in the organisation and inspection of societies, though at the head of non-official institutions for controlling and financing the societies the assistance of district officers is most useful. Hence registrars, though themselves officials, make every effort to guide and control the movement through the agency of non-officials, whose interests lie in the locality where the work is being carried on, and they ask for as little financial assistance as possible from Government. The proportion of funds provided by the State is only 4 per cent of the whole, and shows a decided tendency to decrease. In fact, it has been found in India, as elsewhere, that a movement sound in itself, has no difficulty in attracting capital, and, except in two provinces, Government loans have practically stopped. But Bombay and Eastern Bengal still rely greatly on State aid, and this fact, indicating as it does that the societies have not as yet succeeded in gaining the confidence of investors, points to the necessity for a cautious policy of advance. In Bombay, too, a large capitalist bank has been formed by the assistance of State guarantees to loan money to the societies. The loans are made on the advice of the registrar, and already amount to over 20 lakhs of rupees. It would have been more in accordance with co-operative principles if central banks had been built up

by the local co-operative societies themselves, with the assistance of local capitalists, as has been done in other provinces. Such central banks would have first-hand knowledge of the requirements of local societies, and could arrange to supervise them as well as finance them. The facilities given in obtaining funds from outside the movement tend to obscure the need for combination and federation among the societies themselves, and so interfere with the complete development of a co-operative organisation. Such facilities also serve to obviate the necessity which would otherwise exist of attracting local capital to the movement. But the habit of investing savings needs to be encouraged, and the sense of responsibility which the engagement of local capital entails, is the best guarantee for sound business management.

9 A second principle is that a real demand should exist for a society before it is actually formed. By the existence of a real demand I mean that the people in whose interests a society is organised appreciate the advantages it will bring and the conditions which alone will make it a success. These conditions are punctuality of repayment, an understanding, faithfully carried out, to declare existing debts and to borrow in future from no outside source, and the employment of loans solely for the purpose for which they are granted. If these conditions are impressed on the people beforehand, so that they are fully understood and accepted, success will be practically certain. On the other hand, experience shows that, if loans have once been given out without prior instruction in and acceptance of these conditions, it is almost impossible to get them attended to later, and failure is the result. It follows that every one in sympathy with the movement is not qualified to organise a society. The organiser should be a man acquainted with the principles and practice of co-operative banking, and with the practical difficulties which arise in organisation. The rate of advance thus depends on the available supply of trained organisers, and to meet this demand a large number of non-officials sent by central banks and co-operative unions, by courts of wards, and by zemindars, anxious for the welfare of their tenantry, have been trained by the registrars.

10 A third principle which I should like to mention is this, that in a co-operative institution, capital should be the servant and not the master. It should be entitled only to a fixed return, not to extra claims of any kind, whether they are called dividends or profits or bonuses. All extra profits should go to the users of the society. Thus, in a credit society, after due provision has been made for reserve, profits should go to reduction of interest to the borrowers. In a distributive society, such as a co-operative store, they should go to the customers, and in a productive society, such as a creamery, to the suppliers of the raw material. In each case capital is entitled only to a fixed return, which will, of course, vary in different countries according to the rates of interest current therein. Experience shows that speculative businesses are unsuitable for organisation on co-operative lines. All such should be left to private enterprise. An ample field will still remain for co-operative institutions, and, as the capital engaged in them incurs no risk, it is obviously entitled only to a fair and fixed return. On these terms, as experience again shows, funds are always available from banks and private depositors who are in search of safe investments. There is no need to attract capital which looks for large returns, and we want to hear no more of dividends of 15, 18 and even 20 per cent, such as have been recently paid in Eastern Bengal. This means the introduction of a dividend-hunting element, and leads to a conflict of interests between the shareholders and the users of a society, whereas it is the latter's interests alone which should receive consideration.

11 I have not left myself very much time in which to discuss recent developments of the co-operative movement. It has not yet reached its teens, and the efforts of the registrars are, in a great part, directed to the co-operative education of the institutions under their charge. For it is very important that the true aims and ideals of co-operation should receive early chance of development on the soundest possible lines.

12 On the first introduction of co operation to every country difficulties have arisen in connection with finance, and India has been no exception to the rule. The question has been settled in Bombay by the establishment of Sir V Thackersey's bank to which I have already alluded. Madras has also a large capitalist bank, formed, however, without any guarantee from Government. In the Central Provinces the difficulty has been solved by the organisation, during the present year, of a Provincial Co-operative Bank. The required capital, 5 lakhs, was at once subscribed by the leading gentlemen of the province, and the Allahabad Bank has agreed to provide further funds at 6 per cent on condition that the provincial bank does not take deposits. This provincial bank will lend money to the central banks out in the district at 7 per cent, and will also entertain an inspecting agency to control the latter. It is not quite clear whether the provincial bank is organised on co-operative lines, so that the central banks financed by it are encouraged to become shareholders, and that the interests of borrowing banks are safeguarded against those of capitalists. If so, there can be little fault to find with an organisation consisting of a provincial bank which finances and controls the central banks, and of central banks which, in their turn, finance and control the rural societies. The only danger to be guarded against is that the central banks will find it so easy to get money from the provincial bank that they will make no great effort to attract deposits, and so make use of local savings for local development.

13 In the Punjab, United Provinces and Bengal no attempt has yet been made to form a Provincial Central Bank. In the Punjab, indeed, the yeoman farmers, from which class most of the members are drawn, are so prosperous that they themselves supply two thirds of the capital used by the societies, and the central banks and unions which provide the remainder have no difficulty in raising what they require from local capitalists or from the joint-stock banks. In the United Provinces the district banks, which provide the largest proportion of the funds of rural societies, are supplied chiefly by the deposits of local capitalists, but they nearly all have cash credit accounts with one or other of the joint-stock banks. In Western Bengal the capital is found chiefly by large zemindars and other capitalists, and is furnished to the rural societies either direct or through unions formed for this purpose. In Eastern Bengal urban societies supply a large portion of the required funds.

14 Rural societies in Bengal and Behar, in Bombay and the Central Provinces, are usually organised on pure Raiffeisen lines. In the Punjab, United Provinces and Burma a new type of society has sprung up which, though it retains the main principles of the Raiffeisen system—*i.e.*, the unlimited liability, the restriction of area, the issue of loans for a definite time and for a definite purpose, and the unpaid services of officers to their societies—yet requires each member to subscribe a share of a substantial amount. Each member must take up one share, and may take up more. The share is paid by half-yearly instalments spread over 10 or 12 years, and varies in amount from Rs 10 to Rs 200, according to the circumstances of the society. Thus on each share a six-monthly instalment has to be paid, varying from 8 annas to Rs 10. Shares are not entitled to dividend till the 10 or 12 years have elapsed, and they are fully paid up. In the Punjab and Burma the share capital is withdrawable at the end of this period, but the profit, after provision has been made for reserve, is to be divided among the members in proportion to their shares, and credited to them as non-withdrawable shares on which dividend will be paid. In the United Provinces the shares are not withdrawable at all, and the dividend is by the bye-laws limited to 10 per cent. It is necessary in this type of society to keep the amount of the half-yearly payment down to such a sum as any person otherwise eligible can afford to pay, and if this is done the type seems to me to be better suited to Indian conditions than the pure Raiffeisen type, which has no or merely nominal shares. It certainly has the following advantages. First, the mere fact that members are required to make some small sacrifice in order to join the society is a

good guarantee that they have some appreciation of the advantages to be derived from it, and that they will therefore adhere to the conditions necessary to make it a success. Secondly, the possession by each member of a stake in the society proportionate to his status gives him a substantial and positive interest in it, in addition to the somewhat shadowy and negative interest which his unlimited liability for its debts implies. Thirdly, the practice of saving, enforced over a period of years, should go far to encourage the habit of investment, and teach the uses of capital.

15 Perhaps I may, finally, be allowed to call attention to the small societies of craftsmen, artisans, and small tradesmen which have been formed in considerable numbers in my own province, the United Provinces. They have, so far as I know, no prototype, though in some towns in Italy some societies are composed only of persons following the same trade or occupation. But those are on a larger scale. Our societies are small associations of men of the same or a similar trade, and the members are all residents of the same village or quarter of the town. Among those who have formed societies are weavers of cotton, silk and wool, fruit and vegetable sellers, carpenters, boatmen, ekka-drivers, and many others. These societies have unlimited liability, and are generally of the same type as the agricultural societies mentioned above, though in non-seasonal trades the share is paid up by monthly instead of six-monthly instalments. In many weavers' societies the amount of the instalment is only one anna monthly, and the value of a share Rs 9—an amount which it will take 12 years to pay up in full. The conditions of hand-loom weaving have for years past received much attention, and it is now generally held that there are at least some branches of the industry which—if they can escape from the economic bondage under which they suffer from the buyers of finished goods and the suppliers of raw material, and if they can be induced to adopt improved methods, such as the use of the fly-shuttle and of special appliances for setting up the work—have every chance of competing successfully with power looms. It is, therefore, the object of the co-operative organisation not only to provide the required capital, and to organize the supply of yarn and the marketing of finished goods, but also to encourage the adoption of the improved methods mentioned above. Already considerable success has been attained. We have found the weavers somewhat slow to make the first move, but ready enough to follow the example of their neighbours, and they are remarkably punctual in meeting their engagements. In one small town alone (Tanda, in the Fyzabad District) there are 20 societies, with 541 weaver members, and a central bank for finance and organisation, while another small town (Sandila, in the Hardoi District) has combined with its weavers' credit society a yarn store, which sold last year yarn to the value of Rs 46,000, and paid a bonus of two pies in the rupee on purchases.

16 Such are some of the developments of which I wish to speak, and they may, I think, be regarded as symbolical of the great future which lies before the movement. India is indeed for co-operation a land of promise. I saw recently in the *Irish Homestead*, a weekly paper full of illuminating ideas and inspiring ideals, a striking analogy between irrigation and co-operation, those two forces on which the prosperity of rural India so largely depends, and I will close my paper by quoting from it —

“Co-operation may be called industrial irrigation, the opening of channels, tunnels, pipes and viaducts leading from the rich centres of capital and industry to the economic wastes and deserts. If we examine any modern country we will find in some places a superabundance of capital, and elsewhere whole dreary districts where industry languishes because of the lack of the fertilising influence of cheap money. The banks are overloaded with deposits on which they give a very small return to the depositor. The cities are filled with factories which might be more productive if the countryside could find a way of utilising the labours of mechanical engineers and inventors. The country is thirsty for lack of gold. It is backward because the city is

the repository of science of knowledge as well as of wealth. On the one side we have a superfluity of capital, science and mechanical skill. On the other side, an economic desert where, because these things are sparse, there is little life or progress. Agricultural organisation does for the economic desert what the adventurous engineer does for the dry desert in America or Africa. It creates the viaducts along which flow capital, science and mechanical skill to the country districts."

S H FREMANTLE

[N B—This paper was read before a meeting of the East Indian Association, London.]

## APPENDIX XVII

---

### STATEMENT OF EVIDENCE submitted by MESSRS TOOMEY AND FRASER, representatives of the Exchange Banks

1 With reference to the invitation we have received to give evidence before the Royal Commission on Indian Finance and Currency, we now beg to put the following short statement before you as to the nature of the evidence we shall be prepared to give

2 The location and management of the general balances of the Government of India—We see no objection to the methods hitherto adopted by the Government of India

3 The sale in London of Council Bills and transfers—We would deprecate any change being made in the sale of Council Bills. The present system is admirably adapted to the requirements of trade, the amount put up weekly for tender being well regulated by probable requirements, while additional amounts can be obtained at a small premium. We consider that the sale of Council Bills is well handled, the system adopted being the outcome of many years' experience

4 The measures taken with regard to the location, disposition, and employment of the Gold Standard and Paper Currency Reserves—As regards the Gold Standard Reserve we consider that the whole amount should be kept in this country in gold and gold securities, and that the latter as far as may be practicable should consist of short term securities. We further consider that a much larger proportion of the reserve should be retained in actual gold than has been the custom in the past. All profits on the coinage of rupees should be credited to the reserve, as we are strongly of opinion that the time has not yet arrived when it is safe to place a limit on the amount of the reserve. We do not approve of any portion of the reserve being held in silver.

5 As regards the Paper Currency Reserves, we hold that a proportion of these should be kept in this country in gold, and so could be made immediately available for purchases of silver, or released in case of need against the deposit of rupees in India. When gold is available in India, the Currency Note Department should, in normal times, be prepared to readily pay out sovereigns against notes and/or rupees

6 We are given to understand that among other points which may come up for discussion are —

- (1) The enlargement of the powers of the Presidency Banks
- (2) The establishment of a State Bank for India
- (3) A mint for the free coinage of gold

7 The question of the enlargement of the powers of the Presidency Banks so as to permit them to deal in sterling exchange is one which has been brought forward from time to time during the last 50 years, and has been steadily vetoed by the Government of India and successive Secretaries of State. The last time that this question was raised was in 1904 when it was proposed —

- (1) That the Presidency Banks should be allowed, when the bank rate in India is 6 per cent or higher, to borrow in London for the purpose of remitting funds to India
- (2) That the banks should be permitted to deal in foreign bills so far as is necessary to enable them to remit the money borrowed to or from India

The Government of India, with the approval of the Secretary of State, declined to grant the powers sought by the Presidency Banks, and the reasons for this decision were fully explained by the then Finance Minister, in his speech reported in the "Gazette of India" of 16th February 1907, of which we attach a copy

8 The Exchange Banks at that time felt it incumbent on them to strongly oppose the proposals of the Presidency Banks, and we should do so again on the same grounds, *i e.*, that while we do not depreciate ordinary competition by competitors on the same level as ourselves, we strongly object to State-aided competition

9 The Presidency Banks enjoy the prestige of being the Government bankers with immense sums of public money free of charge, whilst we are handicapped by having to pay interest on the whole of our deposits

10 The Exchange Banks have financed the external trade of India for over 50 years without any charge of inefficiency or unreasonable charges, and with the large resources at their command they are fully competent to deal with all the exchange business of the country

11 We maintain that the legitimate function of the Presidency Banks is to finance the internal trade of the country for which they enjoy special privileges in having large amounts of money without charge. If, however, these banks require further funds for their business it is open to them to raise additional capital in the same way as many of the Exchange Banks have done

12 It is contended in some quarters that the Government of India should lend some of its surplus balances for the benefit of trade during the busy seasons, and we see no reason why this should not be done in the same way as the Secretary of State lends money in this city, on first-class securities. Our view is that money should be lent to the Presidency Banks for short periods on Government paper, Post Office Bonds, and the like—the money being lent at somewhat less than the ruling bank rate

13 We attach the same objections as the foregoing to the establishment of a State Bank

14 Banking in India is already well represented in all its branches by the Presidency Banks, Exchange Banks, and numerous local banks. No State Bank could, in our opinion, cater for the requirements of the many millions of cultivators who are at present dependent for finance on money-lenders. Their needs could be best supplied by encouraging and developing the system of co-operative credit which under the sympathetic support of the Government has made great progress during the last few years

15 The Presidency Banks fulfil the functions of a State Bank in their respective spheres, they have their capital and resources available for the benefit of their own particular province, and to absorb these into a central institution would, in our view, militate against efficiency. The Presidency

Banks as they exist are in reality three "State Banks," and, with their head offices in Calcutta, Bombay, and Madras, are better equipped for studying the wants of their respective provinces than one central bank could possibly be, and we are unable to see how such a bank could foster the development of trade as well as it is being done by the existing machinery. Further, a State bank with the control of the Government money, the paper currency, and access to the London market would virtually mean the establishment, so far as exchange is concerned, of a banking monopoly which we feel is not desirable or advisable in the best interests of India and its trade.

16 We consider that the existing Currency Department with the assistance of hundreds of Government treasuries and sub-treasuries penetrating into remote districts, to which it would not pay a bank to go, is much better fitted to manage and develop the Paper Currency than a State bank would be. The remarkable growth of the Currency Note issue, particularly in recent years, testifies in some measure to the efficiency of the existing system, and it is scarcely likely that a State bank could foster the extension of the note issue so well as these Government Treasuries.

17 In our opinion existing conditions in India do not call for the establishment of a mint for the free coinage of gold, seeing that the country obtains all the sovereigns it requires free of minting charges. If, however, it should at any future date be deemed advisable to open such a mint, we advocate the coinage thereof of the sovereign.

#### SUPPLEMENTARY NOTE TO APPENDIX XVII

---

Extract from "The Gazette of India," dated February 16th 1907

##### PRESIDENCY BANKS (AMENDMENT) BILL

The Honourable Mr E N Baker, C S I, moved that the report of the Select Committee on the Bill further to amend the Presidency Banks Act, 1876, be taken into consideration. He said "I will take the opportunity of offering some observations on one point which is not referred to in the Report—I mean the question of allowing the Presidency Banks to borrow in London."

"Disappointment has been expressed by the Chambers of Commerce that this proposal, which had been under consideration for some time, should have been abandoned, and some of them have asked for a statement of the reasons which have led to this result. The request is reasonable, and I shall endeavour to comply with it.

"At the outset I may observe that the question is one on which there is a good deal to be said on both sides. The financial advisers of the Government of India at different times have held different views regarding it, and when we find such high authorities as Mr Barclay Chapman and Sir John Strachey holding one opinion, while Sir James Westland held a contrary one, and Sir Chnton Dawkins only assented to the proposal on conditions which were quite unacceptable to the banks, a cautious person would probably be disposed to regard it with prudent reserve. But there is one authority which, since the proposal was first originated over forty years ago, has never wavered in his views on the subject, and that is the Secretary of State. Now I would remind the Council that the Secretary of State has access to the highest expert banking advice in London, *i e*, probably in the world, and it is a well known fact that, acting on that advice, each successive Secretary of State to whom the proposal has been submitted has refused to entertain it. This fact, I think, possesses no small significance.

"The reasons for not adopting the proposal are these. Firstly it is not clear that to give the Presidency Banks access to London would really increase the net aggregate facilities for importing capital into India. The Exchange Banks with their large capital and resources collected from many parts of the world, and free from the special restrictions which necessarily attach to the Presidency Banks, possess ample facilities for supplying all the capital that Indian trade requires. To admit the Presidency Banks into this class of business would add a new channel of import, but would in no way increase the supply of capital offering. If it is the case that the total funds imported to India in the busy season would not be increased by the means in question, it is preferable in the public interest that the business should be left to the Exchange Banks, rather than that the Presidency Banks should be enabled to embark upon it. This I shall now endeavour to show.

"I am not now referring to the risks which were formerly held to attach to engaging in foreign exchange business. That objection was a powerful one in former days, but with a stable exchange it has lost almost all its force. The objections to which I allude are of a different character.

"It is of course well understood that the Presidency Banks could not legitimately be allowed to receive deposits or engage in ordinary banking business in London. If, therefore, they were allowed access to London it would mean merely that they would be permitted to borrow in that market (subject to certain restrictions), to remit the funds thus borrowed to India, and, after the term of the loan had expired, to return the money to London for repayment. In other words, all sums thus brought out to India by the Presidency Banks would have to be remitted back to London, after a comparatively short interval. Now with the Exchange Banks that is not wholly the case. Part of what they import, no doubt, goes back again, but part of it at least remains in this country, even during the slack season. This has been shown, among other things, by the comparatively small reflux of gold which has taken place each year at the end of the busy season. The capital, which thus remains in India, and is not re-exported, is available for investment in our rupee loans, which are always floated in the summer months, and improves the rate which we obtain for them.

"If, therefore, we allow the Presidency Banks to attract to themselves part of the business of importing capital which is now done by the Exchange Banks, one result would be that the issue price of Government loans would be likely to suffer.

"Another result of analogous character would be that the average rate obtained for the Secretary of State's Council drawings would probably be lowered. The necessity for returning the money to London when the busy season was over would depress exchange during the slack months. And this would not be counterbalanced by a rise during the busy months, for during the latter exchange is always high, and could not be raised appreciably higher without touching specie point. The net result for the whole twelve months would thus be a fall.

"A third objection is that a Presidency Bank which had taken a sterling loan for a fixed term might be forced to denude itself of resources in a time of stringency in order to repay it when due. This danger may be regarded as theoretical rather than practical, but it is a contingency which cannot be wholly overlooked in a general review of the position.

"Lastly we have to consider the effect on the Exchange Banks themselves of permitting the Presidency Banks to embark upon even a limited competition with them in financing the foreign trade of the country. The Exchange Banks play a most important part in providing for the requirements of this trade, and hitherto they have, I believe, discharged their functions to the general satisfaction of the commercial public. They have, of course, no claim to be protected against competition in their business, but the competition must be on equal terms and they might fairly complain if they were required to enter the lists against a State-aided competitor. It has sometimes been affirmed that the use of the Government balances free of interest, and the general prestige which attaches to the position of State bankers are of comparatively little value, and are counterbalanced by the restrictions which are imposed by the law and the contracts

made thereunder. I do not think that rivals in the same field can be expected to regard the matter in the same light. The Government balances are usually about 3 crores of rupees, say five-sixths of the aggregate paid in capital of the three Presidency Banks taken together. It cannot reasonably be disputed that the free use of this very large sum must be of the greatest value to the banks, and I may mention that occasions have occurred, not so very long ago, when the Government balances at one or other of the banks actually exceeded its whole cash resources. If the Exchange Banks are apprehensive of having to encounter such powerfully aided competitors, one cannot regard their apprehension as altogether unreasonable.

"These, my Lord, are the reasons which have led to the decision not to pursue the proposal to give the Presidency Banks power to borrow in London. We all sympathise with the desire of the Chambers of Commerce to afford facilities for the easy provision of cheap capital, but it is open to doubt whether this particular measure would really increase existing facilities, while it is likely to be attended by drawbacks and disadvantages of its own.

"I do not think I need offer any remarks on any other provisions of the Bill."

The motion was put and agreed to.

The Honorable Mr. Baker moved that the Bill as amended be passed.

The motion was put and agreed to.

The Council adjourned to Friday the 1st March 1907.

Calcutta,  
The 15th February 1907

J. M. MACPHERSON,  
Secretary to the Government of India,  
Legislative Department

ROYAL COMMISSION ON INDIAN FINANCE

## APPENDIX XIX

STATEMENT OF EVIDENCE SUBMITTED BY MR HARRY MARSHALL ROSS, RETIRED  
CALCUTTA EXPORT MERCHANT, LATE HONORARY SECRETARY, CENTRAL  
COMMITTEE, INDIAN CURRENCY ASSOCIATION*Cash Balances.*

1 I am of opinion that the charge made against the Secretary of State in Council, of having withdrawn funds from India for the benefit of London, is based upon a confusion of currency with capital. That the fault if any, lay in the original under-estimates of revenue and not in the release of the currency accumulated as the result of these under-estimates. That Budget estimates have, of late years, been unduly pessimistic. That, while the Secretary of State was right in releasing surpluses as speedily as possible by sales of bills and transfers thereagainst, the necessity for retention of excessive balances in London has not been proved, the explanation of the India Office [Cd 6619] being more an excuse and an apology than an adequate defence, and that surpluses of revenue in India should, as in England, go to a sinking fund for the reduction of debt.

2. The collection of revenue used, in my time in India, to adversely affect the money market and was the cause of stringency during the busy season. Having left India over nine years ago, I am unable to say from actual experience where the same inconvenience is now felt, but should this be so, measures might, perhaps, be taken to make such collections available for use, not only as now by sales of bills and transfers, but also by way of loan to banks in India, on security, and in excess of the balances kept with the Presidency Banks.

*Gold Standard or Gold Currency.*

3 The remarkable expansion of trade which has taken place since the closure of the mints shows that the present system of a gold standard unsupported by a gold currency has worked, on the whole, satisfactorily and well. The total sea-borne trade of India, treasure included, was —

	Crores			
	—			
In 1874-75	-	-	-	- 102
„ 1893-94	-	-	-	- 206
„ 1912-13	-	-	-	- 485

The progress under closed mints has been vastly greater than under open mints. I have included treasure in these figures as it is, in India, so largely an article of merchandise and transactions in it require the employment of currency. The finance of the great trade shown above will have required the large additions to the currency which have excited alarm in some quarters. The progress which the country has made in wealth and the rise in prices which has been world-wide, will also have called for the employment of more currency, and I do not, therefore, think that the coinage of rupees since the closure of the mints has been particularly abnormal.

4. A notable witness to the benefits conferred on India by the present currency system is Mr M de P. Webb. In 1898 he described the poverty of the country as follows:—

“The poverty of the great mass of the people renders a gold coin or gold in any form entirely beyond their means. . . . The native money-lenders would continue to receive 12 per cent to 75 per cent per annum for ordinary temporary accommodation, and they would not and could not use and demand that gold capital, the assumed advantages of which are one of the main foundations of the present proposals to abandon India's silver standard. . . . The gold standard, with or without a gold currency, could not, for the reasons already given, prove otherwise than injurious to the commerce of India, to the revenues of the Government and to the well-being of the great mass of the population” (Memorandum on the Indian Currency, p. 15)

5 In 1912 Mr Webb wrote "Probably more individuals in India are in a position to use gold coins than in the United Kingdom!" ("Britain's Dilemma," p 147)

6. I am as strongly opposed to forcing a gold currency upon India, which would seem to be the intention of some critics of the existing system, as I am to arbitrary interference with India's undoubted right to take gold if she is ready and willing to pay for it. I would respectfully submit that what is wanted is a code of clear regulations on the subjects now engaging the consideration of the Royal Commission, and measures for ensuring that those regulations shall be faithfully and unvaryingly adhered to. In the past we have never known where we really stood, what were the Government's intentions, nor what new surprise might not suddenly be sprung upon us. However, I think there is evidence to show that the Government was often as perplexed as the public. That, despite such hindrances, the Currency Scheme has, on the whole worked well, is ample justification for the general line of policy pursued since the mint closure.

#### *Sale of Council Bills*

7 Objections have been raised to the present practice of liquidating the Government of India's home liabilities, and alternative methods have been suggested. I do not find that the alternatives proposed are themselves free from objection. These alternatives are—

- (1) that the Indian Government should pay its home charges through the medium of certain Indian banks

*Objection*—Jealousy would be aroused by the selection of these banks, and by the allocation of their respective proportions of the business. Such selection and allocation would not improbably give rise to the suspicions and inuendoes which have attended the distribution, in loans, of the India Office balances. Again, if the remittances were made at the best rates obtainable, without regard to the amounts remitted through the respective banks, this alternative would merely be equivalent to transferring the auction from London to India.

- (2) That Council Bill should be sold only at 1s 4d, or "not below the rate at which rupees can be procured from other sources"

*Objection*—(a) The holding of Councils for a fixed minimum has not been a success in the past, (b) the minimum of the Secretary of State is the maximum of the market, so that, when the rate is approached, the Indian exporter would refuse to sell, *i e*, would withhold his bills, while the importer would hasten to buy wire in excess of his requirements. The former could not do worse, the latter could not do better, by waiting. These manoeuvres would always tend to check the rise to the minimum, and although the Secretary of State might, ultimately, sell his bills he would always be the last to be served.

8 Whether Councils should be sold without limit, or only to the extent of the Budget requirements, should depend chiefly upon the nature of the trade demand for currency. If that demand is for rupees, while gold rests or accumulates in the Treasuries and Paper Currency Department, every reasonable facility should be afforded towards the satisfaction of the demand, since the Government is the ultimate and sole provider of silver currency. Sales of Council Bills and Transfers should not, however, in my opinion, be made against rupees in the Indian branch of the gold standard reserve, nor against new coinage, except at specie point.

#### *A Central or State Bank*

9 The establishment of a Central or State Bank, would, I think, be very advantageous to the country, if it could be done under due restrictions, which would prevent (1) unfair competition with the Exchange banks, (2) unfair competition with solvent and well-managed Indian banks.

10 Such a bank would augment the banking resources of India, would be a support to, rather than a competitor of, the other banks, would take over the management and extend the use of the paper currency, and would

be of assistance to the Government in the matter of finance, rather than dependent on its balances. Further, it would have a prestige superior to the Presidency Banks which it absorbed, its enlarged capital resources would be of greater service to trade than the separate and smaller resources of the existing three banks, and, lastly, it would, by opening branches all over the country, provide that absolute security for the native depositor and trader which has not, in the past, been peculiarly conspicuous as a feature of Indian banking. If the native of India is to be weaned from his habit of hoarding it can only be by inspiring him with absolute confidence in banks. But the history of Indian banking is full of disasters, which must have seriously checked the growth of such confidence. Numerous banks are springing up, of which the capital and resources are often ridiculously inadequate, and it is to be feared that, in a period of financial stress, they might not illustrate the safety of banking.

11 When we come to look at the proposed bank as a "paying proposition" I find many grave difficulties in the way. The project, as originally submitted to the Fowler Committee by Mr Alfred de Rothschild, presumed a capital of 14,000,000*l*. Could so large a capital be profitably employed in the manner suggested? To pay a dividend of 5 per cent would require net earnings of 700,000*l*.

12 The three Presidency Banks have together a capital and reserves of about 7½ crores, or 5,000,000*l*, and pay annual dividends totalling about 340,000*l*. It is difficult to see how this could be doubled, short of a heavy Government subsidy in the shape of the profits of the Paper Currency Department. Would a heavy subsidy be just?

13 Assuming that the capital of the State Bank be limited to 10,000,000*l*, requiring 500,000*l* net profit to pay 5 per cent, the absorption of the existing banks would, likewise, absorb nearly the whole of this capital. Shareholders in the existing banks would, presumably, have the option of exchanging their holdings into shares of the State Bank, or of being bought out. The market value of these holdings is now about 8½ millions sterling. With the usual "inducement" to amicable arrangement, probably 9,000,000*l* would be required to bring about the amalgamation. The actual addition to working capital would be a solitary million sterling!

14 For many years to come the extension of the branches would probably be a losing business. Ultimately, they would pay, no doubt, as there is a vast unworked field for banking in India. This was the experience of the Bank of France, on the lines of which, it is urged, the Indian State Bank should work. The Bank of France, I believe, makes advances down to 250 francs, and discounts bills as small as 5 francs. It would require a large, experienced, and probably an expensive staff, to undertake such business on a large scale with safety, in India. The Bank of France has, I think, more than ten times the number of branches that are possessed by the three Presidency Banks.

Theoretically, the suggestion of a State Bank is an inviting one, practically, it is not yet apparent that it would be a "paying proposition."

#### *Measures taken to maintain the value of the Rupee*

15 The measures taken by the Government of India and the Secretary of State in Council to maintain the exchange value of the rupee since the Report of the Fowler Committee may well be described as "supplementary to" rather than as "in pursuance of" the recommendations of that Committee. They have not been such as to inspire the public with confidence, as a rule. The mints have not been opened to the coinage of gold, the profit on coinage has not been kept in gold in India, but in securities in England, that profit was partly misappropriated for the construction of railways, and the gold reserve was not at once made available for foreign remittance when exchange fell below specie point. Lastly, after proclaiming the superiority of investments to gold for years, the Indian Government has admitted its error, or has weakly yielded to popular clamour, by arranging to hold a portion of the reserve in gold.

16 In the Budget statement of 1908, Mr E N Baker, when defending his refusal to issue gold freely in the crisis of the previous year, made use of some remarkable words concerning the Gold Standard Reserve. He said "The time and method of the employment of the Gold Standard Reserve must be at the discretion of the Secretary of State, by whom the Reserve is controlled." This is a most dangerous dictum. The Reserve should be held under regulations which would bring it into use automatically, and the public should know clearly what the regulations are. Its transfer to the care of a bank or to a special department created by legislative act, with strictly defined powers, would be greatly preferable to leaving its use dependent upon the will or whim of the Secretary of State for the time being or of his financial advisers.

17 The question of the mint is, I think, of much less importance. If the coining of gold can be undertaken comparatively inexpensively, as the Government of India believed, there would be a certain prestige, and perhaps some convenience attaching to it. But there are objections to issuing a gold 10-rupee piece. There would be the usual Oriental prejudice and suspicion towards an innovation to be overcome in the first place, then it would compete with the 10-rupee note, and possibly check its circulation, and, finally, it might become popular as a new ornament, and disappear from circulation.

*Location, Disposition, and Employment of Gold Standard Reserve.*

18 The Gold Standard Reserve should preferably be kept in London. Its purpose is to maintain the exchange value of the rupee, not to supply gold for local use. While the reserve is kept out of India, the demands upon it are limited to those of remitters.

19 *Size of the Reserve.*—If we may judge by the extent of the drain upon it in 1907–08, the reserve is at present ample, taking into account the very large amount of gold in the Paper Currency Reserve. I attach more importance to the resolution and confidence with which the Currency Scheme is backed than to the mere size of the reserve. A comparatively small reserve, backed by a resolute policy, would give the public more confidence, and do more to prevent or allay panic than a larger reserve with a continuance of the irresolution and vacillation which have often been apparent in the past.

20 I do not think that the reserve should be unlimited. Its size should be fixed on some reasonable basis, not merely arbitrarily. Its fixture arbitrarily is merely guess-work. It might be fixed on a basis of experience, or of analogy and comparison. In the former case we could go upon the actual loss of gold in the crisis of 1907–08, say, from all sources, about 17,000,000*l* (the actual export or transfer of gold out of India was only about 13,000,000*l*) plus the Council Bill shortage. To this a reasonable margin for "apprehension" should be added. If we start on a basis of analogy and comparison, we may liken the liabilities of the Government under the scheme to those of a banker. It will be necessary to estimate those liabilities. The estimate of the rupees in circulation at the time of the Fowler inquiry was 120 crores. The Committee did not vouch for these figures, and I think that a serious attempt should be made to estimate the circulation, even roughly, now. An estimate of 200 crores would give about Rs 7 per head of population. Now, the English joint stock banks keep about 23 per cent. of their liabilities in cash, at Bank of England, at call and at short notice. A like proportion gives 46 crores, or say about 30,000,000*l*, as the size of the reserve against rupee liabilities. Of this 23 per cent., the English banks hold about half in actual cash or at the Bank of England, which is the same thing. This might serve as the basis for estimating what proportion of the reserve should be kept in actual gold. It must not be overlooked that the English banks' figures are "window-dressing" figures, and that the working percentages are probably smaller.

21 With a properly constituted Gold Standard Reserve, held in this country, there should be no need for holding any portion of the metallic reserve of the Paper Currency Department here also. The proper place for this reserve would appear to be India, since it exists to insure the convertibility of the notes, not the maintenance of the exchange value of the rupee.

22 *Use of the Gold Standard Reserve*—Hitherto it has been the practice, when exchange threatened to fall below specie point, to offer fixed amounts of sterling drafts on London upon a given day each week. With a properly constituted reserve in London, it should be possible to sell wire transfers upon any day of the week up to a reasonable limit. Assume a grave financial crisis in London, with the Exchange Banks and merchants anxious to strengthen the resources of their head offices in England. Actual gold could be released in London, to the advantage of all concerned. In the Baring crisis the Bank of England rate was 6 per cent, and it was necessary to go "cap in hand" to a foreign country for gold. At that time the aggregate balances of the Presidency Banks were about 13 crores of rupees, and they were not able to lend much at 3 per cent. At that time, too, a large Calcutta mercantile firm, desirous of strengthening the funds at the disposal of its London house, was unable to remit by wire for that purpose except through a French bank. The English banks refused to sell wire presumably from fear of weakening the resources of their head offices at that critical moment.

 APPENDIX XX.
 

---

## MEMORANDUM OF EVIDENCE SUBMITTED BY SIR ALEXANDER McROBERT

1. Has been in India 29 years—most of the time in Cawnpore, but for the past 23 years also closely connected with an important textile industry in Gurdaspur District, Punjab. Was President of the Upper India Chamber of Commerce for nine years and member of the Legislative Council of the United Provinces for eight years. A woollen manufacturer.

2 *Balances*—It is hardly denied that the cash balances in London have been kept at an unnecessarily high level for the past three years. There would not have been much risk in keeping them down by paying off India bills and by refraining from raising loans until the surplus was absorbed. The other alternative would have been to directly reduce taxation, a course not advisable under the circumstances. Besides, by reducing the debt the sum to be raised by taxation would have been automatically reduced. Since the balances existed it was right to put them out at interest.

The balances in India might be lent to the banks in times of pressure when Government consider it would be safe to do so.

3 *Banking*—Not in favour of the establishment of a Central Bank in India as the functions of such an institution are at present adequately performed by—

- (a) The Government of India and the India Office,
- (b) The Presidency Banks, and
- (c) The Exchange Banks.

4 A State bank implies effective State control, so that by interposing a State bank the Government would not be relieved in actual practice of any of its existing responsibilities in connection with paper currency and exchange. Government could not withdraw from control of the currency.

5 Currency notes have at present the direct, unqualified backing of the Government of India. If issued by a State bank they would not for a long time at any rate inspire the confidence the existing "Sirkar's" issue enjoys, and the volume of the circulation would be checked.

6 Each of the three Presidency Banks has evolved a practice adapted to its own environment, and their absorption by a State bank would in a large measure involve the sacrifice of the advantages to trade which this specialisation secures.

7 The conditions of the money market are not uniform throughout India. The bank rate is rarely the same in Bengal, Bombay and Madras, being influenced by very different considerations in the three presidencies.

8 India is too large an area to be efficiently worked by one central State bank. A central bank would need to be in a central position such as Cawnpore, and that would satisfy neither Calcutta nor Bombay. It is not

conceivable that one central board of directors would be as useful and satisfactory as three separate boards with local knowledge. No one would suggest that the Bank of England should usurp the functions of the Scotch and Irish banks, nor would anyone be found rash enough to claim that the financial control of Spain, Sweden, and Greece should be centred in one bank.

9 I am of opinion that the existing banking facilities are capable of adequate expansion on the present lines. They are gradually becoming more elastic, and the trade of the country is usually financed without difficulty. Although the extension of currency based on credit must be slow I look for a gradual increase in the circulation of cheques.

10 I do not advocate any material change in the conditions now prescribed for the Presidency Banks except that I think they should be permitted to lend on any form of marketable security. If they were given access to London they would merely be competing with the existing exchange banks, institutions that are not open to the charge of being reluctant or hesitating in meeting trade requirements. They, as well as the Presidency Banks, are prosperous concerns that have been tried in adversity and emerged triumphant. A central State bank could not cater for the small man any more than the Presidency Banks do now. The small man must be left to the rapidly growing system of co-operative credit banks. The measure of their success indicates a promising attack on the habit of hoarding.

11 *Capital Expenditure*—I have little criticism to offer on the present methods of meeting capital expenditure. I think in the future it will be found practicable to resort more and more to borrowing in India. I am in favour of sterling loans only as a *dernier resort*. It seems scarcely correct to explain that any capital expenditure has been met out of surplus revenue. As I understand it what has really happened is that a certain amount of floating and non-productive debt has been paid off.

12 *Sale of Council Bills*—Broadly speaking, I favour the existing practice in selling council bills and transfers, because it works so smoothly, and yields the most favourable rate of exchange. I do not see that it would be an advantage to transfer the business of exchange to a State bank.

13 I would suggest that all sales should be put through at 1s 4d, and all accounts kept on the basis of 1s 4d. When sales are made at over 1s 4d the difference to be carried to a special exchange reserve kept in sovereigns and used for making up the difference when sales have to be made at under 1s 4d.

14 *Exchange Value of the Rupee*—The fixing of the rupee at 1s 4d has certainly benefited India for general purposes of trade and has not permanently injured purely internal interests. It has, of course, lowered the rupee price of produce exported, but it has also to the same extent lowered the rupee price of goods imported. I am not in favour of a return to the free coinage of silver.

15 I know of no evidence that conclusively proves that gold is being exclusively hoarded in India unless the annual absorption of gold be regarded as such evidence. I do know that the native in those parts of India with which I am familiar has now taken to gold, and that sovereigns have in some cases replaced rupees in the hoard of the ordinary workman.

16 I am of opinion that the sale of council bills at 1s 4½d must tend to keep gold from circulating in India—as I presume is the object. But gold can only flow to India when there is a large excess of exports over imports.

17 I consider that the sovereign is a suitable gold coin for India generally. A ten rupee gold piece would be of more general use in circulation because wages payments for example so often fall between 10 and 15 rupees, but the country now knows the sovereign, which is an international coin, and a new coin would start with a prejudice against it. Moreover, there would be some inconvenience in having the sovereign and a ten rupee gold coin circulating side by side. In currency matters custom plays a most

important part, and before all things it is desirable to avoid as far as possible the intrusion of novelties.

18 I am inclined to believe that the advantages of opening a mint for the free coinage of sovereigns would justify the cost. There is the question of prestige as well as convenience. I would point out that the Indian mints as now run make a profit of over 100,000*l* annually even when they are slack and coining no new rupees from purchased silver.

19 *Gold Standard Reserve*—I do concur in the belief that a special gold standard reserve is a necessity, and I would not advocate the use of the profits on coinage for ordinary or capital expenditure until the total reserve has been brought to 25,000,000*l* or even 30,000,000*l*. When that point has been reached I would favour the plan of using the interest and further profits in extinguishing (1) floating and (2) unproductive debts. The book value of railways and other productive works should be the actual cost without any deduction.

20 I am of opinion that the gold standard reserve should be held partly in gold and rupees and partly in sterling securities. I would not in advance fix a limit of amount (short of 30,000,000*l*) up to which this reserve should be accumulated. But I would urge that the metallic portion be gradually brought up to at least 10,000,000*l*—approximately half in sovereigns and half in rupees. The rupee portion to be held in India and made available (if circumstances do not forbid), for advances to the banks on appropriate security, when the bank rate goes over 6 per cent. The rate of interest to be charged to the banks I would put at 6 per cent.

21 The whole of the gold and the sterling securities should be held in London—the gold being earmarked at the Bank of England. Until the gold and rupees together amount to 10,000,000*l* I would largely favour short loans on treasury bills, exchequer bonds, and such like, for the difference between 10,000,000*l* and the actual amount of metallic reserve. But I would never hesitate to buy Consols at 73.

22 I thoroughly approve of the system of earmarking gold for the gold standard reserve at the Bank of England. The first object of the reserve is to ensure the stability of exchange, and no considerations of frugality should be allowed to interfere with that object. The earning of interest is a purely secondary consideration, and it must be subordinate to the main object.

23 I would limit the securities in which the reserve is invested to such as have the Imperial guarantee. At any rate I would not go outside the list already adopted.

24 I do not approve the action taken in 1901 when over 1,000,000*l* was taken from the reserve for railway development. I would even ask that the sum be replaced.

25 *Paper Currency Reserve*—The existing practice has shown no points of weakness. The proportion of the note issue covered by securities is not excessive and as the amount of notes in circulation is steadily growing it ought to be practicable to raise the amount invested above the 14 crores now prescribed. The large accumulation of gold in the paper currency reserve need not be condemned since it lessens the burden on the gold standard reserve in supporting exchange. So long as the Government of India undertakes to give 15 rupees for a sovereign a certain accumulation of gold in the reserves cannot be prevented. If they go the next step and accept the responsibility of paying out a sovereign for 15 rupees a gold currency as well as a gold standard will have become effective and still more gold will have to be held in reserve. Concurrently there would be less demand for rupees and the profits on coinage would fall.

26. *Purchase of Silver*.—I believe it would prove economical in the end to make regular purchases of silver, say up to 2,000,000*l* worth a year. Judging by the results of recent years the annual average demand would appear to be about 3,000,000*l*.

## APPENDIX XXI

MEMORANDUM OF EVIDENCE SUBMITTED BY Mr M de P. WEBB, C I E,  
Chairman of the Karachi Chamber of Commerce

The following are the terms of reference —

“ To inquire into the location and management of the general balances of the Government of India, the sale in London of Council Bills and Transfers, the measures taken by the Indian Government and the Secretary of State for India in Council to maintain the exchange value of the rupee in pursuance of or supplementary to the recommendations of the Indian Currency Committee of 1898, more particularly with regard to the location, disposition, and employment of the gold standard and paper currency reserves, and whether the existing practice in these matters is conducive to the interests of India, also to report as to the suitability of the financial organisation and procedure of the India Office, and to make recommendations ”

PART I—“ The location and management of the general balances of  
the Government of India ”

(1) Since 1907 the general cash balances of the Government of India (in India and in London, and excluding the balances of the gold standard and paper currency reserves) have grown as under —

£
15,633,744 on the 31st March, 1907
17,458,679 on the 31st March, 1908
18,219,381 on the 31st March, 1909
25,074,522 on the 31st March, 1910
30,263,912 on the 31st March, 1911
30,669,702 on the 31st March, 1912
27,916,800 on the 31st March, 1913

It will be observed that the cash balance held on 31st March, 1912, was almost double that which was adequate seven years previously

(2) As far as I am aware no British Government in any part of the world finds it necessary to maintain such colossal cash balances as those recently held by the Government of India. In Great Britain, the Chancellor of the Exchequer, with annual liabilities far exceeding those of the Government of India, manages to carry on the financial business of Government with a very much smaller balance of cash in the till than that employed in the case of India

(3) I am convinced that the accumulation of these vast sums of money in the Government treasuries is wholly unnecessary. They mean that India has for some years been unnecessarily heavily taxed, and that the Budget Estimates have not been framed to correct this over-taxation. In support of this view, I would point out that during the last four years Government have collected revenue in excess of their actual expenditure as under —

£
1,500,677 excess in the year ending 31st March, 1910
5,897,489 excess in the year ending 31st March, 1911
4,909,489 excess in the year ending 31st March, 1912
7,500,000 excess in the year ending 31st March, 1913

that is to say, nearly 20,000,000*l* more than was actually necessary, in four years !

(4) This unnecessary withdrawal of nearly 30 crores of rupees in cash from the earnings and savings and available capital of the people cannot have aided or stimulated India's economic development. On the contrary, in a country that is notoriously handicapped for want of ample supplies of cheap capital, and where the rates of interest and discount rise to heights unknown in any other part of the Empire, this vast transfer of cash to the Government Treasuries can only have left the people correspondingly

weakened It has been, in fact, a serious drain on the resources of the country

(5) Assuming, however, that the uncertainty of the rainfall over a large part of the continent of India makes it impossible to estimate revenue and expenditure with any degree of accuracy—a fact that is sometimes lost sight of—and that a cash balance of, say, 5,000,000*l* in excess of what is actually required, has been accidentally and unintentionally accumulated, it is, I submit, one of the first duties of Government—especially in such a case as India—to return this money to the public as expeditiously as possible This can be done in three ways—directly by (a) reducing taxation, and (b) budgetting for large deficits, and indirectly by (c) suspending all borrowing and investing the millions in hand in reproductive works such as railways and canals In the meantime the spare accumulation of cash in the treasuries can be freely placed at the service of the public through the agency of India's leading banks and financiers

(6) Unfortunately, none of these courses has been followed Instead, an irregular and noxious manipulation of the treasury balances has been carried out that has given the main benefits of India's accumulated cash to London bankers and London financiers, rather than to Indian bankers and Indian trade Substantial portions of the Government of India's cash balance have been transferred from India to London, and, there being no legitimate need for the money in London, 15,000,000*l* of it have been lent out in London to private borrowers on terms that, compared to those current and enforced in India, can only be regarded as a sacrifice of India's interests, and grossly unfair to India.

(7) The following figures give an idea of the extent to which Indian money, raised in excess of current requirements in India, has been transferred to, and utilised in, London. The first table shows the cash balances lying in London to the credit of the Government of India on the dates named (N B—These figures are exclusive of the gold standard and paper currency reserves in London, which themselves run up to a total of over 20,000,000*l*)

	£
On 31st March 1908 - - - -	4,607,266
On 31st March 1909 - - - -	7,983,898
On 31st March 1910 - - - -	12,779,094
On 31st March 1911 - - - -	16,693,990
On 31st March 1912 - - - -	18,390,013

The next table gives particulars of the private firms to whom the India Office in 1912 lent some of the Government of India's spare cash—

Sums of over 1,000,000 <i>l</i> lent to private firms —	£
Samuel Montagu & Co - - - -	1,050,000
National Discount Company - - - -	1,100,000
Union Discount Company of London - - - -	1,150,000
Sums of 500,000 <i>l</i> and over lent to private firms —	
Sheppards & Co. - - - -	500,000
Hobler & Co - - - -	500,000
Chartered Bank of India, Australia, and China - - - -	500,000
Brightwen & Co - - - -	500,000
Alexanders & Co - - - -	650,000
Reeves, Whitburn & Co. - - - -	700,000
Wedd, Jefferson & Co - - - -	750,000
Other loans to private firms —	
Allen, Harvey and Ross - - - -	100,000
Anglo-Egyptian Bank - - - -	200,000
Baker, Duncombe & Co - - - -	200,000
Biedermann & Co - - - -	100,000
Blydenstein & Co. - - - -	150,000
Booth and Partridge - - - -	150,000
Bristowe and Head - - - -	200,000
Roger Cunliffe, Sons & Co - - - -	450,000
The Eastern Bank - - - -	100,000
J. Ellis and Sons - - - -	200,000

	£
Gillet Bros & Co - - - -	150,000
Haarbleicher and Schumann - - - -	150,000
King and Foa - - - -	200,000
Laurie, Milbank & Co - - - -	100,000
Lazard Bros & Co - - - -	250,000
Lyon and Tucker - - - -	100,000
Matthey, Harrison & Co - - - -	100,000
Mercantile Bank of India - - - -	250,000
L. Messel & Co - - - -	100,000
National Bank of New Zealand - - - -	150,000
Ryder, Mills & Co - - - -	250,000
Henry Sherwood & Co - - - -	50,000
Smith, St Aubyn & Co - - - -	250,000
Steer, Lawford & Co - - - -	150,000
Tomkinson, Brunton & Co - - - -	150,000

To secure the loan of State money from the India Office, most private borrowers are obliged to lodge first-class securities, such as Indian Railway Stock, Indian Sterling Bills, British Treasury Bills, Bonds and Stocks, and such like. The available supply of these securities, however, being limited, private borrowers were unable to relieve the India Office of all the millions sterling that it had to spare, and in 1909 recourse was had to the seven leading London Bankers, whose names are also on the India Office's list of approved borrowers. The following statement gives the names of those bankers with whom deposits of Indian State money were made in 1912 without security —

	£
London County and Westminster Bank - - - -	1,800,000
Glyn, Mills, Currie & Co - - - -	1,550,000
London Joint Stock Bank - - - -	1,500,000
National Provincial Bank of England - - - -	1,300,000
Union of London and Smith's Bank - - - -	1,250,000

The rates of interest secured for the loan of, in all, over 15 millions sterling (15,000,000*l.*) of Indian State money have often been only 2½ to 2 per cent and even less, barely one-half of the rate of interest which many of the securities lodged at the India Office against the loans of public money, were yielding.

(8) It has been explained, on behalf of the India Office, that the loans are usually made for periods of three to five or six weeks only, and that the apparently low rates of interest earned are, in fact, the rates of interest current in London for short period loans. In reply, it is necessary to point out that to onlookers in India it is by no means clear why, with a floating cash balance of at least 10,000,000*l.* in excess of what was likely to be required, the India Office continued for years to lend out this spare cash for such short periods as three to five or six weeks. The following table gives the total cash transactions (new loans and repayments, figures approximate) since 1908 of 10 only of the principal private borrowers —

	per annum since 1908
Alexanders & Co borrowed and repaid about 1,000,000 <i>l.</i>	
Brightwen & Co " " "	1,300,000 <i>l.</i> "
Bristowe and Head " " "	900,000 <i>l.</i> "
Cunliffe, R., Sons & Co " " "	1,000,000 <i>l.</i> "
Hobler & Co " " "	1,200,000 <i>l.</i> "
Hopkins and Giles " " "	1,300,000 <i>l.</i> "
Reeves, Whitburn & Co " " "	1,400,000 <i>l.</i> "
Samuel Montagu & Co " " "	2,000,000 <i>l.</i> "
Sheppards & Co " " "	1,000,000 <i>l.</i> "
Wedd, Jefferson & Co " " "	1,500,000 <i>l.</i> "

The above borrowers appear to have been the recipients of what amounts practically to standing loans, totalling in all several millions sterling, for a period of over five years. If this money has been lent out in short period loans of three to six weeks, and the loans regularly and continuously renewed—as appears to have been the case—then the practical upshot has simply been to give to the borrowers what amounts to permanent loans at rates

ordinarily payable for short-term loans. Borrowers have apparently pocketed the difference between the rates yielded by the securities lodged by them and the rates at which they could obtain loans of public money from the India Office. In the meantime the Indian taxpayer has lost the benefits that were clearly his due.

(9) Concurrently with the holding of a cash balance many millions sterling in excess of legitimate requirements, and the regular disposal of most of this balance by short period loans that, by constant renewals, became to all intents and purposes permanent loans on the easiest imaginable terms for the borrowers, the India Office has not only omitted to pay off as much floating debt as it could, but it has in effect borrowed back some of the money which it has been lending out so freely. Thus, with the huge cash balances in hand quoted below, and large sums of money (portions of these same balances) lent out on short-term loan rates to private firms in London, the India Office has apparently borrowed temporarily the following sums in the London money market —

CASH BALANCE IN HAND		YET BORROWED AS UNDER	
	£		£
1910		April	- 1,000,000
1st April	- 12,779,094	June	- 2,500,000
		December	- 1,500,000
1911		April	- 1,000,000
1st April	- 16,696,990	June	- 2,000,000
		December	- 1,500,000
1912		April	-
1st April	- 18,390,013	June	-
		December	-

So fixed have the India Office habits of lending and borrowing now become that the Financial Department of the Office appears to lend out money and borrow back money almost simultaneously!

(10) With such colossal sums of the India taxpayers' money lying uselessly in London and only earning comparatively trifling rates of interest, it might be thought that substantial portions of this money could have been applied to the construction of reproductive capital works in India, thus avoiding the necessity of paying further sterling interest charges, as recommended by the India Currency Committee of 1898. Yet this policy does not appear to have been actively developed. On the contrary, the same old customary sterling borrowing for capital works has been indulged in, as though the huge cash balances in London did not exist. Last year, notwithstanding the vast sums of public money at the India Office's disposal, and in spite of the fact that the London money market was faced with more demands for capital than it was able conveniently to meet, an effort was made to borrow 3,000,000*l.* in London on behalf of the Government of India. The money, it is true, was produced—by the underwriters—and at a great expense to the Indian taxpayer. It would be interesting to know if any of this last India Stock was at once lodged at the India Office as security against short periods loans of Indian money. The point is an interesting one, as the public in India have noticed that a portion of the security lodged last year against the 1,050,000*l.* borrowed by Messrs Samuel Montagu and Co consisted of India Sterling Bills.

(11) I am strongly of opinion that where the proceeds of taxation in India yield more than the estimated requirements of the year, the surplus should be utilised in India for the benefit of India, and not transmitted to London, there to be lent out on easy terms to cosmopolitan private borrowers, who have little or no direct interest in matters Indian.

(12) Remembering that the Indian paper currency and paper currency reserve are under State control, and therefore easily available to Government in times of grave national emergency, I am of opinion that the Government of India's floating cash balance ought, in the interests of economy, to be kept down to a maximum of 10,000,000*l.* of which 3,000,000*l.* might be kept in the Treasury in London, leaving the balance of 7,000,000*l.* (i.e., ten and a

half crores of rupees) to be held in the Treasuries and Presidency Banks in India.

(13) As far as I am able to see, 3,000,000*l* should be ample for the India Office's requirements in London. Should, however, the funds in London unexpectedly run low, then it would be far more economical for the Secretary of State to borrow a little, temporarily, rather than overtax India, and place the proceeds at the India Office's disposal in case of emergencies.\*

(14) With regard to the ten and a half crores cash balance in India, as much of this as possible should be placed at the service of the Indian money market, just as is done by Government in England. The balances kept with the Presidency Banks (which balances were originally in the nature of compensation to the banks for the loss of their note circulation after the introduction by Government of a State paper currency), should be considerably increased. With the abolition of the gigantic banking business in London, which has by degrees converted the India Office into one of the chief money-lending concerns in the world, the problem of easing the Indian money market by short loans to approved borrowers in India, might be considered. It is common knowledge that the withdrawal and retention in the Government treasuries of vast sums of cash arising out of the customary collection of the Indian revenues, contributes materially to that severe seasonal tightness of the Indian money market which so handicaps Indian merchants in their ordinary business dealings. Indeed, Indian sellers are sometimes forced to part with their produce owing to their inability to pay the very heavy rates of interest current in the cold weather. It should be Government's business to manage its general balances so as to avoid as far as possible consequences of this kind.

(15) To summarise, I am of opinion (a) that the cash balances recently held by the Government of India have been far too large, (b) that the location of 12,000,000*l* to 15,000,000*l* of the general balance in London since 1911 has been altogether unnecessary, and has involved a serious drain on India, and (c) that the management of the balances by the India Office has been wasteful and unbusinesslike in the extreme, with the result that India has lost heavily. The remedies that I would now propose are —

- (a) That the maximum cash balance of the Government of India should henceforth be restricted to 10,000,000*l*
- (b) That not more than 3,000,000*l* of this balance should be held in London by the India Office, and
- (c) That all Treasury balances in India that can be spared should be placed at the service of the public through the agency of the Indian money market

#### PART II — "The sale in London of Council Bills and "Transfers"

(1) With the closing of the Indian mints to the free coinage of silver in 1893, the necessity for selling rupees by auction largely disappeared. The old procedure was, however, maintained, and weekly auctions in London of Council Drafts on India were held as before. In 1899 the Indian Currency Committee having recommended a *pukka* gold standard for India with a gold currency (sovereigns to be legal tender for Rs 15), and open mints for the free coinage of gold, and the Secretary of State and the Government of India having both accepted these recommendations as being the best possible development of the Indian currency system, the old practice of auctioning weekly the rupees accumulated in the Indian treasuries became entirely obsolete. But the India Office still carried on the system, and the weekly sales of Council Drafts continue till this day. Moreover, in recent years the auctions have been conducted with such an entire disregard of everything that has gone before that they have become one of the main obstacles in the way of the successful carrying out of some of the most important recommendations of the Indian Currency Committee. Indeed, so erratic and unintelligible have the proceedings now become that many of the public in

\* "The expense (of borrowing in London) even if the Secretary of State had to pay a rate of interest appropriate to Turkey or China, would be much less than the expense of maintaining a very great reserve against unlikely emergency." *Vide Professor J. M. Keynes' "Indian Currency and Finance,"* page 156

India have been forced to the conclusion that the India Office's chief concern in conducting the weekly auctions of Council Drafts is to manage the sales in such a way as (a) to remove as much Indian State money as possible from India to London for the use of the London money market, and, at the same time, (b) to delay for as long a period as possible the establishment of the gold currency in India recommended by the Indian Currency Committee of 1898. The business of providing the Secretary of State with the means of meeting the home charges on the best possible terms for India seems to have been relegated to quite a secondary position.

(2) And yet the first and only object of the weekly sales of Council Drafts was, and should remain, the provision in London out of the revenues collected in India of the sums necessary to enable the Secretary of State to meet India's home charges on the best possible terms for India. With the Indian mints open to the free coinage of silver, and the sterling value of the rupee depending entirely on the sterling price of silver in London and New York, no better means of paying India's sterling debts could possibly have been devised than weekly auctions in London of a portion of the stocks of rupees accumulated in the treasuries in India in the course of the collection of the revenues by Government. The competition of the public at these weekly auctions enabled Government to secure the best possible sterling prices for such rupees as were auctioned, and the system was therefore admirable in every way.

(3) With the closing of the Indian mints to the public in 1893, the position completely changed. The public were no longer able to obtain supplies of rupees in India in exchange for silver. The only source of supply was the Government treasuries. The Secretary of State was in the position of monopolist with an article for sale for which there was a large demand. He could ask and obtain any price in reason that he pleased for his wares. Buyers were plentiful, sellers there were none, except himself. Who in such circumstances would dream of putting his goods up for auction, except with the object of securing his own price with the least possible delay? The Secretary of State's price was 1s 4d, and, with a little firmness and courage, he could easily have obtained 1s 4d. Yet he sacrificed his business reputation (and also India's interest) by accepting for years almost any price that the public cared to offer him. Not until the public themselves voluntarily increased the prices that they offered, did the India Office secure the 1s 4d that they wanted from the first. From 1893 to 1898 was a period of continuously bad management so far as the sales of Council Drafts were concerned—"a long series of economic errors," to use the words of Professor Dunning MacLeod.

(4) The Indian Currency Committee of 1898 accepted Professor Dunning MacLeod's advice for the improvement of India's currency system almost in its entirety, and their recommendations for the re-establishment of a gold currency in India with open free mints for the coinage of gold were, as far as they went, exactly as suggested by the learned professor—the sovereign to be unlimited legal tender at the rate of one sovereign for fifteen rupees, the Indian mints to be made branches of the Royal Mint in London, as the Australian mints are, for the free coinage of gold (sovereigns and half-sovereigns, Professor MacLeod suggested), and the silver token coinage to be increased or restricted only as might be found necessary in the people's interests. Professor MacLeod considered a gold standard without a gold currency unthinkable, and he made various suggestions to encourage the inflow and use of gold as currency in India. The Indian Currency Committee also looked forward to a gold currency as an essential part of the scheme for improving India's monetary system. Government accepted the Indian Currency Committee's recommendations, and the Government of India at once attempted to carry them out.

(5) In face of the above facts, the principles that ought to have guided the Secretary of State in Council with regard to the sales of Council Drafts are perfectly clear. After Government's acceptance of the Indian Currency Committee's Report—

- 1 (a) No Council Drafts should have been sold at less than 1s 4½d per rupee, it being the India Office's clear duty to obtain the best possible price for all the rupees sold.

- (b) As soon as a sum equivalent to the total of the home charges had been realised, not another rupee should have been put up for auction until the proportion of sovereigns in the Indian currency had exceeded public requirements, and there was a demand for more token currency
- (c) When it became necessary to provide money in London for the purchase of silver for the manufacture of token currency, further sales of Council Drafts should have been made for this special purpose, but not at a lower rate than specie point for gold imports—then about 1s 4 5-32d
- (d) With the exception of sales of Council Drafts to provide the means in London wherewith to pay (1) the home charges and (2) the cost of silver for token coinage, not a rupee should have been put up for auction in London

The observance of these principles is essential, I submit, if Government's acceptance of the Indian Currency Committee's Report of 1899 is to be loyally acted upon and carried out by all Government Departments. As a matter of fact, the India Office has not acted upon a single one of these principles. On the contrary, in its sales of Council Drafts since 1899 the India Office has violated every one of them in that it has—

- 11 (a) Sold Council Drafts at less than 1s 4½d (sometimes at less even than 1s 4d), thus gratuitously accepting lower prices than it need have done for its drafts, and to this extent needlessly sacrificing India's interests
- (b) Accumulated huge sums of Indian State money in London greatly in excess of the home charges. There being no legitimate need whatever in London for this money, India has been wrongly deprived of substantial portions of its balances and reserves, to the loss and danger of Indian interests
- (c) Sold Council Drafts for the provision of money for the purchase of silver in London for token coinage at rates below gold import point, thus depriving the gold standard reserve of its full share of profit on the coinage of new rupees
- (d) Checked the flow of gold to India and actively encouraged the increased use of the depreciating silver token currency by selling Council Drafts at rates well below gold import point\*

The sales of Council Drafts by the India Office since 1899 have thus been most unbusiness-like and unsatisfactory, from the point of view of Indian interests

(6) In the course of his evidence before the Indian Currency Committee of 1898, and in answer to an inquiry as to the length of time that might be requested for the establishment of a gold monetary standard with a gold currency in India, Professor Dunning MacLeod replied that "if Government are really in earnest and put their hearts into it, and especially get the banks to assist them, I do not see why it should not all be done in two years." Over 14 years have passed since that opinion was given, and yet India is only now using sovereigns freely as currency. One of the chief causes of the delay has been the active obstruction of the Finance Department of the India Office in its grossly excessive sales of Council Drafts at rates that have directly encouraged the further use of silver tokens and so checked the inflow and use of sovereigns as currency.

(7) I am strongly of opinion that these abuses of the Council Draft system should be terminated forthwith. The sales of Council Drafts should be strictly limited to the sum required to meet the home charges, and no allotments should in any circumstances be made below, say, 1s 4½d to 1s 4 3-32d—i.e., about the present equivalent of specie point for gold imports into India. The sum required in London for the home charges having been realised, no further sales of Council Drafts should be made except for the express purpose—duly notified to the public—of purchasing metal for the manufacture of further token coinage. Such special sales of

\* "This was done on a large scale in 1905-6 and 1906-7" . *Vide* Professor Keynes' "Indian Currency and Finance," page 116

Council Drafts should not be made at anything below specie point for gold imports. Only by thus regulating the sales of Council Drafts can the India Office's noxious interference with (1) the foreign exchanges, (2) imports of gold, (3) local discounts, and (4) general price levels be checked.

(8) Further, I am of opinion that when selling Council Drafts on India for the home charges and for the purchase of the metal required for supplementing the token coinage, the practice of confining such drafts to the treasuries at Calcutta, Bombay, and Madras needs extension. The time has now come for increasing the facilities enjoyed by the public in this connection, and I would urge that Council Drafts on the treasuries at Delhi and Karachi be made available henceforth. A system that has remained unchanged for over half-a-century may now well undergo revision and extension.

PART III —“The measures taken by the Indian Government and the Secretary of State for India in Council to maintain the exchange value of the rupee in pursuance of or supplementary to the recommendations of the Indian Currency Committee of 1898 ”

(1) The most important, because vital, portion of the Indian Currency Committee's recommendations is contained, in my opinion, in section 54 of the Report. “We consider that the Indian mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the three Australian branches of the Royal Mint. The result would be that under identical conditions the sovereign would be coined, and would circulate both at Home and India.”

(2) The India Office and the Government of India at once endeavoured to give effect to this recommendation, but the Deputy Master of the Mint in London, by a report that was in one respect historically imperfect, and in another economically unsound, appears to have misled both the Treasury and the India Office, with the result that the Government of India after two years of correspondence with the Home authorities (during which every departmental detail asked for by the London Mint Master was conceded), at length—25th December 1902—decided to postpone the scheme until a more favourable opportunity should arise. The consequences of that unfortunate step have been the complete subjection of India's currency and finances to official “management” from London, and the chaotic condition of affairs that has led to the present investigation.

(3) Last year the Government of India again represented to the Secretary of State the paramount necessity of re-opening India's Mint to the public. The free coinage of gold in India was again urged, but owing, apparently, to some difference of opinion between the Government of India and the India Office regarding the value of the gold coin to be struck and the authority under whose instructions the new Indian Gold Mint should work, the matter is again in abeyance, and India still continues to lack the central feature of a modern currency system, namely, an open, free, gold mint.

(4) I am strongly of opinion that the Bombay Mint should be opened forthwith to the free coinage of gold, as specifically recommended by the Indian Currency Committee 14 years ago. Further, in view of the facts that sovereigns already—

- (a) are legal tender in India,
- (b) are being regularly imported into India,
- (c) are now in circulation to the extent of over 40,000,000*l.* in India, and
- (d) are daily growing in popularity in India.

I am of opinion that the sovereign is the best gold coin for use as currency in India. If, however, the departmental difficulties of coining sovereigns in Bombay be absolutely insuperable by Government, then an Indian sovereign of exactly the same size, weight, and fineness as the British sovereign is, in my opinion, far preferable to a new Indian gold coin of the value of 10 rupees.

(5) The recommendations of the Indian Currency Committee, which I consider next in importance, are contained in sections 54, 59, and 60 of the Report. Section 54 recommends that the British sovereign be made legal tender and current coin in India. Section 60 recommends that "Fresh rupees should not be coined until the proportion of gold in the currency is found to exceed the requirements of the public", whilst section 59 suggests that "When Government has accumulated a sufficient gold reserve, and so long as gold is available in its Treasury, it might discharge its obligations in gold instead of rupees". These recommendations clearly lay down an active policy for Government with the object of promoting the use of gold as currency, and, if carried out, would go far to place India's token currency on the most satisfactory and stable basis.

(6) The recommendation to make the British sovereign a legal tender in India was at once carried out, but the other recommendations, where not wholly ignored, have been but indifferently observed. The action of the India Office in selling rupees at prices below the equivalent of gold import point, for example, was, as I have already pointed out, a direct incentive to India to use silver token currency in preference to British sovereigns. Nor was this active opposition to the establishment of a gold currency in India counteracted in any way by the Government of India. In reply to an inquiry in May 1912, by the Karachi Chamber of Commerce as to what steps were being taken by Government to give effect to the recommendations of the Indian Currency Committee for popularising sovereigns in India, the Government of India replied (17th June 1912) that "the policy of Government has been, and is, while refraining from taking any steps to force gold on the people, to discharge their obligations in sovereigns wherever payees so desire".

In other words, the policy of Government has been, in effect, to ignore the recommendation of the Indian Currency Committee to "discharge its obligations in gold," and to do nothing in this direction unless the Indian public demanded sovereigns. This "wait-and-see" attitude has, in my opinion, greatly delayed the carrying out of the recommendations of the Indian Currency Committee, and is much to be deplored.

(7) I am of opinion that the period of inactivity in these matters should now be brought to a close, and that the Indian Currency Committee's Report having been accepted by Government, the recommendations contained in that Report should now be acted upon without further delay. The attitude of the Government of India in this connection, namely, to carry out the recommendations if the Indian public so desire, seems to me weak and unbusinesslike. I therefore urge—

- (a) That the Bombay Mint be opened at once to the free coinage of sovereigns, the Mint being equipped with an up-to-date refinery capable of dealing promptly and efficiently with the products of the Indian gold mines,
- (b) That the Government of India now discharge its obligations in sovereigns as far as possible,
- (c) That no more token coinage, except for replenishing wear and tear and loss by export, be manufactured unless and until it be proved that the proportion of gold in the currency exceeds the requirements of the public (And, in this connection, the statistics of bygone years and conditions are not, of course, safe guides.)

(8) If Government "put their hearts" into this business, to use Professor MacLeod's expression, India will very soon have a gold currency in active circulation—at the banks and in the Government Treasuries—somewhere approaching 100,000,000. With such a currency in use, the exchange value of the rupee will be as permanently secured as the exchange value of the English shilling, or the French five-franc piece, or the silver dollar of the United States of America. And that, too, without the necessity of maintaining any gold standard reserve, or other wasteful, and, possibly delusive substitute of that kind.

(9) In this connection it is desirable to recall the words of the late Sir Samuel Montagu in 1899, When giving evidence before the Indian

Currency Committee, he drew the Committee's attention to the fact that the world's production of gold was then "unequalled." Whilst strongly advocating a gold currency for India, he added "You would do a service, I think, to Europe if you were gradually to utilise this extraordinary surplus of gold." Asked, if he thought that the establishment of a gold standard and currency would have an "appreciably injurious effect on the gold market of the world," Sir Samuel Montagu replied, "I think not." Since this opinion was given, the world's output of gold has almost doubled, and is now on the verge of 100,000,000*l* per annum. Notwithstanding the enormous sums of gold withdrawn from the world's use by the United States of America, by the great military Powers of the Continent of Europe, and by the growing South American Republics, the value of gold is everywhere diminishing—prices are universally rising. There is ample gold, therefore, to satisfy the world's requirements, including the requirements of India. Moreover, the utilisation of some of this gold by India, would tend to arrest the present unhealthy rise in prices, which is by no means wholly advantageous to a creditor nation consisting largely of small, fixed-wage earners—such as Great Britain.

PART IV—"The location, disposition, and employment of the Gold Standard Reserve"

(1) The recommendations of the Indian Currency Committee with regard to the formation of a gold reserve are given in Sections 59 and 60 of their Report, and are quite clear and explicit. "We recommend that any profit on the coinage of rupees should not be credited to revenue, or held as a portion of the ordinary balance of the Government of India, but should be kept in gold as a special reserve, entirely apart from the paper currency reserve and ordinary Treasury Balances (Section 60). We regard it as the principal use of a gold reserve that it should be freely available for foreign remittances whenever the exchange falls below specie point, and the Government of India should make its gold available for this purpose when necessary, under such conditions as the circumstances of the time may render desirable" (Section 59).

(2) The above recommendations are, in my opinion, thoroughly sound and complete, and, had they been acted upon without modification after modification, would have provided that security for the sterling exchange value of the rupee, which is at present lacking in one most important respect so far as the gold standard reserve is concerned.

(3) The most serious and objectionable departures that have been made from the Indian Currency Committee's recommendations are as under—

- (a) Instead of all the profits on the coinage of new rupees being kept in the gold reserve, over a million sterling of these profits has been diverted elsewhere.
- (b) Instead of such profits as have been credited to the gold reserve being held in gold, they have been—
  - (1) invested in sterling securities,
  - (2) converted into and held in silver,
  - (3) lent out to private borrowers in London.
 Out of 22,657,776*l*, only 1,730,000*l* was held in gold on the 30th April, 1913.
- (c) Instead of the gold reserve being kept entirely apart from the paper currency reserve and the ordinary Treasury Balances, the three are constantly being intermingled at the option of the India Office, so that nobody knows from month to month the exact nature of the reserves. Most of the metallic currency in the paper currency reserve at present consists of gold (the paper currency being redeemable in silver), while most of the metallic currency in the gold standard reserve is at present composed of silver (the object of the reserve being to supply the public with gold). Currency management of this kind has been described as, and, in truth, is "sheer muddling."

In addition to these specific departures from the recommendations of the Indian Currency Committee, the India Office has repeatedly failed to secure

all the profit it should have done for the gold standard reserve in that it has replenished the token coinage by sales of rupees at absurdly low rates, *i.e.*, at rates well below specie point for gold imports. This matter has been referred to before in paragraph 5, Part II of this Note. It is now only necessary to repeat that by these sales an altogether unnecessary loss has been incurred at the expense of the gold standard reserve.

(4) Various explanations have been given from time to time for this wholesale ignoring of the Indian Currency Committee's recommendations and of the protests of the Chambers of Commerce and of the Press in India. I have carefully considered these explanations—excuses I should prefer to call them—from time to time, and I have no hesitation in describing them all as unsound and unacceptable. Moreover, the constant chopping and changing of the composition of the gold standard reserve has not only deprived the public of confidence in the administration of this reserve, but it has, in my opinion, exposed India to grave danger.

(5) In connection with the general policy of holding the bulk of the gold standard reserve in London, I submit that Government have gone entirely beyond their province in undertaking to provide not only gold for export, but gold ready delivered at a financial centre on the other side of the globe. The business of Government, so far as the maintenance of the sterling value of the rupee is concerned, is to provide gold in India for export, if required, and not to endeavour to anticipate the requirements of the public by laying down 20,000,000*l.* of India's money in London (or elsewhere) in advance. No doubt London is in all probability the centre where the gold, in an economic, financial, or political crisis involving a change in the balance of trade against India, would be required. But Government's duty ends when it provides that gold in India. To deposit the bulk of the gold in a centre where the banking community are already, on their own initiative, considering how they can strengthen their own admittedly slender and inadequate gold reserves, is to expose India to risks and dangers from which she had every right to expect complete protection.

(6) I am strongly of opinion that India's gold standard reserve should be restored to its original name, composition, and location. Let it be called the gold reserve, and let it be in the main, at any rate, what its name implies, a reserve of gold. (No other nation in the world, that I am aware of, holds its gold reserves in securities, silver, and short loans to private borrowers outside its own country.) For these reasons I urge that the bulk of the securities, in which nearly 17 millions sterling of the gold reserve is at present invested, be realised (by degrees, so that severe loss may be avoided), and the proceeds gradually remitted to India, for retention in the Indian Treasuries, in gold. That monstrosity, the "silver branch" of the gold reserve should be at once abolished, and the 4 crores 83 lakhs of rupees at present held therein be transferred to the paper currency reserve in exchange for the equivalent in sovereigns. If 7,000,000*l.* be left in London invested in securities it will probably be as much as could be liquidated in a hurry (without heavy loss and inconvenience to the London money market), to meet a sudden demand for drafts on the India Office arising out of a failure of the monsoon rains and a consequent change in the balance of trade. Were 7,000,000*l.* insufficient, then gold could be shipped from India to London, and London would no doubt be very relieved to see the metal coming. This sum of 7,000,000*l.* invested in London in securities should be an absolute maximum, and there would be no spare gold reserve cash, therefore, in London to be lent out (as at present) to private borrowers.

(7) My reasons for advocating that the bulk of the gold reserve be held in gold, in India, are these. Great Britain's gold reserves have been for some years notoriously slender almost to the verge of danger. Practically every man of business, banker, Chamber of Commerce, journalist, economist, politician, and statesman of knowledge and repute has been long agreed on this point. In these circumstances the placing of 15 to 20,000,000*l.* of India's gold reserve in London is a gratuitous "tempting of Providence." Quite apart from the inconvenience that would be caused to London by a sudden withdrawal of this 15 to 20,000,000*l.* owing to economic or political complications in India, there are two sets of complications conceivable in

England that would make it an impossibility for India to withdraw her gold reserve from London, no matter how badly India might require it, and those are (1) a panic in England arising out of an economic crisis, and (2) a financial crisis arising out of Great Britain being involved in war with a first-class power. In either of these circumstances the sale of India's 17,000,000*l* worth of gold standard securities would be an impossibility. Even were the whole sum earmarked in gold at the Bank of England, there is no doubt that at a moment of grave national danger, Government would at once appropriate India's gold in London, and India would be left in the lurch for the time being. Were the sterling value of the rupee to collapse at such a moment, the difficulties of an already critical situation would be greatly accentuated.

(8) Which being so, I urge that it is far better, both in India and England's interest, to retain the bulk of the gold standard reserve in gold in India. The existence of a 20,000,000*l* reserve of gold in India (in addition to the 7,000,000*l* in securities at home), would not only guarantee the exchange value of the rupee, but it would, in time of grave national peril, be a source of strength to the whole Empire.

(9) In concluding this plea for the immediate observance of the recommendations of the Indian Currency Committee in connection with the gold standard reserve, I desire to draw attention to the India Office's Explanatory Memorandum of the East India Accounts and Estimates, 1911-12, issued for the information of Parliament in July 1911, wherein the following statement appears (on page 9) —

“Gold Standard Reserve —In accordance with a recommendation made by the Indian Currency Committee of 1898-99, it was decided that, with effect from April 1st, 1900, the reserve should be held mainly in sterling securities.”

No such recommendation was ever made by the Indian Currency Committee. On the contrary, the Indian Currency Committee recommended that the reserve should be held in “in gold.” This misrepresentation of fact (which makes it appear that the India Office has been acting in accordance with authority instead of in opposition to authority), should, I think, be specifically corrected in the next Explanatory Memorandum of the East India Accounts prepared for the information of Parliament.

#### PART V —“The Paper Currency Reserve”

(1) In one respect India's currency system is in advance of that of the United Kingdom in so far as it includes a State paper currency, very well managed by the Comptroller General and Head Commissioner of Paper Currency, Calcutta. Nearly 10,000,000*l* of this paper currency is supported by interest-bearing securities, the earnings from which flow into the State coffers—a marked improvement on the private bank note system of Great Britain. The total amount of Indian currency notes in circulation is now nearly 70 crores of rupees (*i.e.*, nearly 44,000,000*l*). There is no limit to the amount of issue, but the law provides that the total issue must be supported by a reserve consisting of metal and securities. The maximum limit for the securities stands for the present at 14 crores (9,333,333*l*). The paper currency is issued in the form of promises to pay bearer on demand so many rupees. These paper promises or currency notes are legal tender in India, and are very popular in the larger cities and towns, and among all the best informed classes of the community.

(2) Although the Indian paper currency is purely an Indian concern, and is only issuable and encashable in India, a practice has been initiated in recent years of holding a part of the reserve against the Indian note issue in London. Such a practice—the practice of holding a country's paper currency reserve in some other country on the other side of the world—is, I believe, unprecedented in the history of any nation. Nor have any of the reasons advanced on behalf of Government in the case of the Indian paper currency reserve convinced me that the holding of 7/10,000,000*l* of the reserve in London, instead of in India, is other than a wasteful and thoroughly bad policy from the point of view of India.

(3) The principal official arguments used in favour of holding a large proportion of the Indian paper currency reserve in London rather than India have been as under —

- (a) So long as gold is not in active circulation in India, what the presenter of currency notes in India requires is not sovereigns, but rupees. By keeping gold ready in London (over 6,000,000*l* is "ready" at present at the Bank of England) the India Office can quickly buy silver to coin into rupees to be handed to the presenter of currency notes in India (*Vide* the late Sir Edward Baker's speech on the Budget of 1906)
- (b) The India Office can easily appropriate and interchange the money with the general Treasury balances and with the gold standard reserve as may be found convenient from time to time (Sir Edward Baker)
- (c) Investments in sterling securities in London are better for India than investment in Government of India rupee paper, because such securities are not necessarily influenced by the causes which might shake public confidence in the Indian paper currency (*Vide* Mr Baker's reply to Mr Gwynne in the House of Commons in December 1912)
- (d) The money "would be readily available to support exchange in case of a diminished demand for rupee currency" (*Vide* Mr Montagu's reply to Mr. Touche in the House of Commons in August 1912)
- (e) The money (i.e., 6,000,000*l* to 7,000,000*l*) "is not required in India for the payment of notes, since a sufficient metallic reserve is held in India for that purpose" (*Vide* Mr Montagu's reply to Mr Touche in the House of Commons in August 1912)

(4) These arguments have only to be stated in juxtaposition to each other to stand self condemned. Apart from the fact that they are in a large measure mutually destructive, no one of them will bear examination. Thus, the idea of holding permanently 6,000,000*l* to 10,000,000*l*. in London in case the India Office might at any moment suddenly and unexpectedly want to enlarge the Indian token currency by this amount, is preposterous. The silver coinage ought to be replenished regularly and continuously in small sums (so as not to inflate unduly the token currency or force up the silver market against Government), and the money for this purpose ought to be specially provided in London through special sales of Council Drafts. As a matter of fact, the paper currency reserve lying in London was not utilised for the recent large purchases of silver, although there was nearly 7,000,000*l* lying in London for this special purpose (according to Sir Edward Baker's ideas). These recent silver purchases were financed through the agency of Council Drafts wastefully sold at below specie (gold import) point.

(5) The facility-for-chopping-and-changing argument is perhaps the worst that could be employed in connection with a paper currency reserve. The Indian paper currency reserve has been created for a special object, namely, to encash the Indian paper currency in India, and nothing is more likely to shake confidence in this currency than the knowledge that the specie necessary for its encashment is liable to be removed to the other side of the world and invested in securities that, in an economic crisis or great war in Europe, might prove absolutely unsaleable.

(6) In this connection, I venture to submit that the investment of any of the Indian paper currency reserve in British securities in London is a mistake involving loss and possible danger to India. The Indian paper currency is, as I have said before, purely a local concern, the benefits of which should be confined entirely to India and not shared with London financiers anxious to unload depreciating sterling securities. (I do not mean to imply that this was the Government of India's intention when investing in London, but this is the practical effect of their so doing.) As far as I can make out, India stands to lose about a quarter of a million sterling through a portion of its paper currency reserve being invested in London in sterling securities, and this loss is, in my opinion, likely to increase. Investment of the Indian

APPENDIX XXI.

paper currency reserve up to the statutory limit should, I urge, be made in Indian securities. In this connection the list of securities acceptable for the paper currency reserve might very well be enlarged.

(7) The argument employed by the Under Secretary of State for India that if the gold standard reserve proved inadequate for satisfying an adverse balance of trade, the portion of the Indian paper currency that is held in London might be appropriated to support exchange, is particularly vicious in that, not only is it radically unsound, but it casts a suspicion on the efficacy of the gold standard reserve. Apart from the extreme improbability of the gold standard reserve breaking down (except in consequence of the inability of the India Office to realise its 16,000,000*l* worth of securities in a time of crisis), the fact that a portion of the paper currency reserve was held in London instead of India would have no bearing on the situation at all. And for this reason. If the paper currency reserve consisted very largely of sovereigns, the sovereigns would be just as effective in supporting exchange in a grave emergency whether they were made available from the Treasuries in India or from the vaults of the Bank of England. Indeed, did the crisis happen to be a Western crisis rather than an Indian crisis, the gold would be far more valuable to India (and possibly to Great Britain), were it held in India rather than in the United Kingdom. The argument is, therefore, both worthless and misleading.

(8) Nor can any weight be attached to Mr. Montagu's other argument, or, rather, *ipse dixit*, that a sufficient metallic reserve is already maintained in India against the paper currency in circulation, and that 7,000,000*l*. or so of the reserve can therefore be removed with safety from India to London. The removal of this substantial portion of the reserve from India merely on the arbitrary decision of the India Office that the money is not wanted in India, will not satisfy Indian critics. Not until the matter has been thoroughly weighed by all the leading banking and commercial interests in India can it be agreed that the proportion of the metallic reserve to the total issue is unnecessarily high, and that a sum of 7,000,000*l* may be invested. Even if this turn out to be the case the investment should, in India's interests, be made in India and not in London.

(9) I am strongly of opinion that as the paper currency is only issuable, legal tender, and encashable in India, the whole of the paper currency reserve should be held in India. The administration of the paper currency and the reserve there-against should be left entirely in the hands of the Government of India, because it is purely a local development in which London financial interests have no legitimate concern. I think that the Paper Currency Act should be so amended as to—

- (a) confine the holding of the reserve to the Government Treasuries in India,
- (b) restrict the investment of the reserve to Indian securities, not necessarily Government paper only, and
- (c) permit the investment of a certain portion of the reserve (or of the gold standard reserve) temporarily—during the busy season in India—to relieve the seasonal pressure in the Indian money market.

PART VI—"Whether the existing practice in these matters is conducive to the interests of India"

(1) It is everywhere recognised that for the speedy economic development of India one thing in particular is everywhere needed—abundant supplies of cheap capital. This want can be supplied in part from within, and very largely from abroad. The Indian Currency Committee in recommending open gold mints and a gold currency and standard for India (Section 54), freely recognised that . . . "with the growth of confidence in a stable exchange, capital will be encouraged to flow freely into India for the further development of her great natural resources" . . . (*vide*

Section 70) The India Office in recent years by its lax management and perverse policy of—

- (a) encouraging the further use of rupees,
- (b) checking the inflow of gold into India,
- (c) weakening the gold standard reserve,

has hindered the establishment of a gold currency in India, and delayed the growth of confidence, with the result that the inflow of large supplies of cheap capital from outside has been very slow in coming

(2) By withdrawing substantial portions of India's Treasury balances and gold standard and paper currency reserves, the India Office has further destroyed public confidence in the official management of India's currency and finances. These withdrawals have amounted to the huge total of 40,000,000*l*. Of this immense sum, nearly one-half might have been employed in India to the great advantage of the country. Thus, if the 3,000,000*l*. of the paper currency reserve, and the 17,000,000*l*. of the Treasury balances which were invested and lent out in London had been invested and lent out in India, as they might very well have been, then Indian interests would have benefited materially.

(3) By disposing of Council Drafts in unlimited quantities at rates well below specie (gold import) point, the India Office has failed to secure the best possible prices for the rupees that it has auctioned on India's behalf, and to the extent of the difference between the prices accepted and the prices obtainable, India has suffered a direct monetary loss.

(4) Moreover, the strange obsession under which the India Office appears to be labouring, namely, that sales of Council Drafts are, to quote Mr Montagu's words in the House of Commons on the 30th July, 1912—

- “ an indispensable factor of British Indian trade, and it would be
- “ difficult to imagine how British Indian trade could be carried on
- “ without them                    trade would be brought practically to a
- “ standstill if these Bills were not issued ”—

this amazing exposition of what the Under Secretary of State for India described as

“ a well-known economic and financial practice,”

seems to indicate that Mr Montagu and the Office of which he is the spokesman, are both unfamiliar with some of the elementary features of international finance. Needless to say, British Indian trade would continue to develop as rapidly as hitherto were Council Drafts abolished to-morrow and never heard of again. But that such ridiculous statements should be put forward officially in the House of Commons, and that the India Office should conduct its sales of Council Drafts as though it believed them to embody some profound economic truth are the severest condemnation of India Office finance that has yet been made public.

(5) There can be little doubt that, quite apart from the material losses that India has suffered by the unsatisfactory management of her finances and currency in London in recent years, the wholly unnecessary removal of substantial portions of her treasury balances and monetary reserves has seriously affected British prestige and influence in India (and possibly elsewhere) by giving grounds among the educated classes for the belief that, in financial matters, Indian interests are liable to be subordinated, if not sacrificed, at the suggestion or recommendation of powerful monetary interests in London. It is of the utmost importance that this impression should be removed.

#### PART VII —“ The suitability of the financial organisation and procedure of the India Office ”

(1) The financial organisation and procedure of the India Office in matters relating to Indian currency and finance appear to me to be in need of radical changes. The organisation is defective, and the procedure obsolete and unsatisfactory.

(2) In the preceding parts of this Note various defects of procedure have been indicated. These may be summarised as under—

- (a) Grossly swollen cash balances have been held in London, amounting on one occasion to close upon 18,000,000*l*. A floating balance of 3,000,000*l* should be sufficient for all legitimate purposes.
- (b) The weekly auction of token coins, the supply of which rests wholly and solely in the hands of Government, belongs to the days of open silver mints, and is clearly obsolete. As well might the Royal Mint in London hold weekly auctions of sixpences, shillings, half-crowns, &c. Token currency should be issued at one fixed rate in relation to the principal standard coin—the sovereign.
- (c) The procedure which has transformed the Finance Department of the India Office into the principal Eastern Exchange Bank in London is unquestionably an unhealthy growth that should be cut away forthwith. It is no part of the Secretary of State's duties to play exchange banker for the benefit of either European buyers who desire to lay down funds economically in India for the easy purchase of Indian products, or certain sections of the export trading community in India who want to sell their bills to the local exchange banks at the lowest and most favourable rates for themselves. Council Drafts should be rigidly confined to the sum required for the Home charges, and should be allotted to applicants *pro rata*, at a fixed rate of exchange—in India's interest, the highest possible.
- (d) So, too, the procedure which has transformed the Secretary of State for India into one of the chief moneylenders in the world, should, in my opinion, be at once brought to an end. It is no part of the Secretary of State's functions to withdraw colossal sums of State money (of which he has not the slightest legitimate need), from India to London, only to find himself lending the money out to private borrowers in London in such profusion that—to quote Lord Swaythling's words in the House of Lords on the 14th November, 1912—"It was well known that so large were the amounts lent at one time this year by the India Council that there was a scarcity of the securities (which the India Office demanded against loans) among the approved borrowers, and the India Council therefore lent large sums to clearing banks at lower rates than they could have lent them to the approved borrowers" supposing that there had been more securities available." The whole of this business lends itself to the severest condemnation.
- (e) The removal of a substantial portion of the paper currency reserve and the bulk of the gold standard reserve from India to London is a wholly wrong procedure, in my opinion. The investment of 18,000,000*l* of these Indian Reserves in London in British securities is a further step in the wrong direction, in my belief, and one calculated to cause very grave embarrassment to London as well as to India in the event of war, or of a serious financial or economic crisis.

(3) The suitability of the financial organisation of the India Office to the work it is called upon to perform may be gauged to some extent by the way in which that work has been carried out. The public have no opportunity of surveying that work as a whole, but certain portions of it have recently come to light, and have caused amazement in many quarters. Thus—

- (x) *The Silver Purchasing Business*—The delay in making the recent purchases of silver for replenishing the token coinage (everybody measured up the situation more accurately than the India Office, apparently), the unbusinesslike seven year's silver contract with the Bank of England, the grave breach of that contract at the instigation of Messrs Samuel Montague and Co, the great loss of prestige and of Indian money involved in the whole transaction, these things have greatly shaken public confidence in the India Office's business capacity, and have created a very bad impression in India.
- (y) *The Money-lending Business*—This business appears to have been conducted on extraordinarily unbusiness-like lines. The India Office's loans to approved borrowers have been usually made for periods of three to five weeks, and this in spite of the fact that the India Office has frequently held £5/10,000,000 (sometimes more) in excess of all possible requirements. Instead of three to five weeks, many of the loans might have been made for three to five years without any likelihood of the money being required. (Indeed, some of the regular borrowers of India Office balances have been receiving loans almost continuously for over five years!) The only effect of giving the same borrowers the same money over and over again on loans for periods of three to five weeks appears to have been to have lost for India the higher rates of interest which loans for longer periods would have commanded, and to have made a present to the borrowers of long-period loans on short-period rates of interests. It is not surprising that in the scramble for the 14,000,000*l* of Indian money which the India Office at one time lent out to private borrowers, the supply of suitable securities in England ran short, and the India Office decided therefore to give several millions to the leading London bankers on no security at all! Borrowing 10,000,000*l* from the India Office at 2½ per cent. and depositing securities there again—(that yielded 4½ per cent. would yield the lucky borrowers about 200,000*l* per annum—probably the most easily earned 200,000*l* per annum in the United Kingdom or anywhere else).
- (z) *The Money Borrowing Business*.—This appears to have been conducted on even stranger lines than the money-lending transactions. The larger the unrequired cash

balance in London, the greater the difficulty in hiding borrowers in London to take all the spare millions sterling off the India Office's hands, the more determined the India Office seems to have been to preserve unbroken its regular habits of borrowing money in London, both temporarily and permanently, on behalf of the Government of India. Thus in 1910, with a cash balance some millions in excess of actual requirements, 5,000,000*l* was borrowed temporarily. In 1911, with an opening balance of 16,696,990*l* no less than 4,500,000*l* was borrowed temporarily, the closing balance for the year being raised to 18,390,130*l*. In addition to the above temporary borrowings, large quantities of permanent debt were also incurred. It does not appear to have occurred to the India Office (or if the idea was considered, it must have been rejected), that some portion of the surplus accumulations of revenue of which the India Office held substantial balances in London, should be used for capital works in India, thus saving India the expenses of a new sterling loan. The possession of enormous sums of ready cash in the till in London, for which no legitimate employment existed in the immediate or distant future, seems to have afforded no reason to the India Office for desisting from its customary procedure of borrowing, temporarily or permanently, and so practically simultaneous lending and borrowing has been carried on with no benefit to India that I have been able to discover, or to anybody else, except the borrowers and lenders themselves.

(4) Mr J. M. Keynes, formerly of the India Office, now Professor of Economics, Cambridge, and a Member of this Commission, has just published a book—"Indian Currency and Finance"—dealing with some of the matters now under consideration. The book was written before the appointment of this Commission, and is therefore a valuable expression of opinion by a well-informed and unbiassed exponent of economic theory who, in the nature of things, would hardly likely to be extravagant in his criticisms of India Office doings. Professor Keynes unfortunately does not tell us what he thinks of a Government Department who holds a floating cash balance 10,000,000*l* to 15,000,000*l* in excess of its requirements, nor does he, when dealing with India's reserves and cash balances, weigh the possible consequences to India of a crisis in London arising from (a) panic or (b) war involving Great Britain. For these reasons, his treatment of some portions of his subject appears to me defective. In many other matters, however, I find that Professor Keynes' views correspond exactly with mine, as may be seen from the following twenty brief expressions of opinion extracted from his book—

- (1) "At first the Government of India did not fully understand the nature of the new system several minor mistakes were made" (Page 1)
- (2) "The Government of India have drifted into a system and have never set it forth plainly" (Page 4)
- (3) "Prices have been rising much faster than is healthy" (Page 100)
- (4) "The methods of Government are exceedingly complicated" (Page 124)
- (5) "The Government of India's present system has no logical basis" (Page 172)
- (6) "The absence of appropriate arrangements constitutes a serious gap in the country's financial system" (Page 180)
- (7) "Part of the (paper currency) reserve should be lent out in India. Suitable security for this purpose would be Government of India securities (which would have indirectly the effect of increasing the market for rupee paper) and bills of exchange of the highest class" (Page 60)
- (8) "This slight scare was more than sufficient to make Government lose their heads" (Page 133)
- (9) "Having once started on a career of furious coinage they continued to do so with little regard to considerations of ordinary prudence" (Page 133)
- (10) "This time (1907-8) they (i.e., Government) got what they deserved" (Page 133)
- (11) "They (Government) framed the policy as though a community consumed currency with the same steady appetite with which some communities consume beer" (Page 134)
- (12) "Exchange could not have fallen so low (25th November 1907) if the Government had made gold freely available in India" (Page 136)
- (13) "So far from assisting the market, the Government were busy increasing the stringency by taking off the market, week by week, rupees which for the moment they did not in the least want" (Page 257)
- (14) "There are no high officials (in India) whose business it is to make finance the chief study of their life. The Financial Secretaryship is an incident in the career of a successful civilian" (Page 237)
- (15) "The statement made in answer to a question on this subject (Sale of Council Bills) in the House of Commons (30th April 1912) by the Parliamentary Under-Secretary was not quite correct" (Page 114)
- (16) "I do not think it has ever been thought out quite clearly (by the India Office) for what precise purposes these (sterling) reserves are held" (Page 147)

- (17) "By the end of 1912 they (the cash balances in London) had sunk again to a more normal level" (Page 129)
- (18) "Further accumulations (of Treasury balances) in the hands of Government ought to be put at the disposal of the Indian money market and not converted into sterling" (Page 179)
- (19) "It is slightly shocking to discover that the Government broker, who is not even a whole-time officer, and has a separate business of his own besides his official duties, is the highest paid official of Government with the sole exception of the Viceroy" (Page 192)
- (20) "They (the India Office) renewed India bills when they could have very well afforded to discharge them" (Page 191)

Professor Keynes throws the bulk of the blame on the Government of India, it will be noticed, rather than on the India Office. I cannot concur with this view. The India Office has—wrongfully, in my opinion—taken the management of many of the details of the working of India's currency and finance into its own hands, and must therefore be held responsible for blunders in matters of detail as well as in matters of general policy.

(5) That I am not alone in India in holding views of the India Office's financial activities the reverse of flattering to the department immediately concerned (the Bengal and Madras Chambers of Commerce are, I know, both satisfied that the management of India's finance and currency leaves nothing to be desired) may be gathered from a perusal of the files of the "The Times of India" since 1910. That well-known newspaper, it is everywhere recognised, deals with all matters with great sobriety and restraint, whilst on the subjects of Indian finance and currency it is far better informed than any other newspaper in India. The publishers of "The Times of India" have just issued in book form under the style of "Indian Currency and Finance" a reprint of a series of editorial articles dealing with many phases of Indian currency and financial questions. The articles are most valuable and should, I urge, receive the careful attention of this Commission. The conclusions to which the "Times of India" has come may be gathered from the following twenty comments which I have picked out here and there from the book—

- (1) "A species of dementia seems to have overtaken the administration of Indian financial affairs in London" (*Vide* page 51)
- (2) "Altogether indefensible" (Page 49)
- (3) "A reproach to England." (Page 39)
- (4) "The Council are unfit to discharge the important trust committed to their care" (Page 54)
- (5) "No such blundering and fateful incapacity has yet been disclosed as that now revealed" (Page 61)
- (6) "The greatest financial fiasco of modern times" (Page 64)
- (7) "A downright abuse of the system of effecting Government's Home remittances" (Page 86)
- (8) "A misuse of the credit of India." (Page 95)
- (9) "An intolerable and unfair burden on the public" (Page 69)
- (10) "A colossal blunder" (Page 97)
- (11) "It is impossible to conceive a more perverse system of currency finance" (Page 106)
- (12) "Government have gone out of their legitimate province" (Page 120)
- (13) "Great ineptitude has been shown" (Page 148)
- (14) "A gross injustice to the taxpayer." (Page 166)
- (15) "Finance gone crazy" (Page 54)
- (16) "Many irregularities and abuses are associated with the present system" (Page 209)
- (17) "A most unbusiness-like system and, in our judgment, indefensible" (Page 213)
- (18) "Impossible to imagine a more unbusinesslike procedure" (Page 224)
- (19) "The system as lately conducted is wasteful and expensive in many ways" (Page 150)
- (20) "A thorough revision of the system is called for" (Page 86.)

Comments of this character from the "Times of India"—one of the leading newspapers in the East—clearly indicates something "rotten in the state of Denmark"

(6) An organisation that produces results such as those described in the preceding paragraphs obviously needs remodelling—lock, stock, and barrel.

The Financial Department of the India Office and the Financial Committee of the Secretary of State for India's Council are both out of touch with modern economic thought and the current requirements of, and obligations to, modern India. The system which places the office management of matters financial and monetary relating to India in the almost arbitrary control of permanent officials of no great seniority who have never seen India, and whose sympathies are therefore mainly with their own immediate environment, calls for early reform. The more so as, in recent years, there has been an increasing tendency to over-rule and ignore the "man on the spot". Thus, the presence of two leading London bankers (with no personal knowledge of India) on the Finance Committee of the Secretary of State's Council, one of them being Chairman of the Committee, and the absence on that Committee of a single Indian or Anglo-Indian banker or experienced European official of the Government of India has resulted, as might perhaps have been expected, in the currency and finances of India being managed in accordance with practices acceptable to London joint stock bankers, and mainly, if not wholly, for the benefit of the London money market. The result has been a serious jeopardising of the reputation of British rule on its financial side, and a corresponding loss of prestige and influence for good which must now be recovered with the least possible delay.

(7) The equity of debiting the cost of the upkeep of the India Office to Indian revenues has been defended on the grounds that—

"[the India Office] is mainly concerned with all sorts of  
" banking and commercial activities, the management of debt, the sale  
" of bills of exchange " &c "

It is essential, therefore, that if no further questions are to be raised regarding this debit to Indian revenues, that all the banking and commercial business, &c, undertaken by the India Office shall be conducted solely in Indian interests, and not mainly for the benefit of a section of the London money market.

#### PART VIII — "Recommendations"

(1) The recommendations of the Indian Currency Committee made fourteen years ago and accepted by the Secretary of State and the Government of India in 1899, should now, I consider, be carried out in their entirety. I urge that—

- (a) The right of free coinage should be restored to India, and an open gold mint established at Bombay forthwith.
- (b) British sovereigns should be coined at the Bombay gold mint. If this be absolutely impossible, Indian sovereigns of exactly the same size, weight, and fineness as British sovereigns should be issued.
- (c) The Government of India should actively encourage the use of gold as currency, instructing their officers throughout the continent accordingly, and discharging all obligations possible in gold.
- (d) Beyond a small regular coinage to replace wear and tear and export out of India, no fresh rupees should be coined until the proportion of gold in the currency is found to exceed the requirements of the public.
- (e) Profits on the coinage of silver and other token coins to be kept quite apart in gold and carried to a special gold reserve. The gold reserve to be retained mostly in India, and only a minor portion to be invested—in Indian securities.
- (f) Sterling borrowing to be avoided as far as possible.

(2) In order that a *pucca* gold currency system of the British type (which Professor Dunning MacLeod before the Indian Currency Committee of 1893

\* *Vide* page 108 of Professor Leonard Alston's "Indian Revenue and Taxation," published by Macmillan, 1910.

declared to be the best in the world), may be established in India with as little delay and as effectively as possible, I further urge that—

- (g) Council Drafts be strictly restricted to the sums required to meet the Home charges, and additions to the token coinage
- (h) Council Drafts be drawn at one uniform rate. They are simply sales in London of sovereigns or rupees delivered in India, and the cost to the public should be only a shade below the actual expense of shipping sovereigns to India—in other words, a trifle below specie point. For the India Office to accept any lower rate is an altogether needless sacrifice of Indian revenue
- (i) The treasuries at Delhi and Karachi be included with those of Calcutta, Bombay, and Madras as treasuries on which Council Drafts can be drawn

(3) The above recommendations, if carried out in their entirety (and all but one are essential), will ensure the establishment in India of a first-class gold monetary system, and tend to raise India's financial status in the eyes of the world, and so facilitate the creation and inflow of cheap capital so necessary for the country's advancement. As soon as sovereigns are everywhere in circulation, and 30,000,000*l* in gold is held in the paper currency reserve, the gold currency reserve might be abolished and the money therein employed on reproductive works

(4) With regard to the location and management of the general cash balances and reserves, I urge that—

- (j) An effort be made to keep the Government of India's floating balances down to 10,000,000*l*, of which about 3,000,000*l* might be kept in London
- (k) As much of the floating balances as can be spared be placed at the service of the Indian public through the agency of the Presidency Banks and the Indian money market
- (l) The gold standard reserve ought to be held entirely in India. As the realisation of 16,000,000*l* worth of securities would no doubt somewhat inconvenience the London money market, I suggest that only 9,000,000*l* be disposed of, gradually, and the proceeds shipped to India in gold, the remaining 7,000,000*l* now lying in securities being retained, in securities, in London
- (m) The paper currency reserve, which is purely an Indian concern, should be kept entirely in India, and so far as the reserve, be invested in securities, such investments should be made in Indian securities

(5) The above recommendations, if carried out in full, will add greatly to India's financial strength, increasing confidence in the sterling value of the rupee, giving scope for the investment of Indian savings in Government securities, and affording cheap capital for temporary use of the Indian money market in financing the crops, &c.\*

(6) With the object of adapting the financial organisation of the India Office more closely to present-day requirements, I would suggest that the Finance Committee of the Secretary of State for India's Council should always include one senior civilian officer of at least 20 years' service in India and some experience of Indian financial matters, one Anglo-Indian banker of Calcutta or Bombay experience, and one (and only one) leading London banker. With the work of the Finance Committee confined to its proper dimensions and scope (as indicated in paragraphs 1, 2, and 4 above), a finance committee of three should be sufficient to keep the permanent officials of the Finance Department of the India Office on the proper lines.

(7) In concluding this Note, I desire to point out that most of the developments at the India Office to which objections have been taken in India and in Parliament have arisen during the last six or seven years—

\* See also my "Britain's Dilemma," published by Messrs. P. S. King and Son, Westminster, London, S.W.

since the policy of reducing the Indian civilian element in the India Office and on the Finance Committee of the Secretary of State's Council has been put into operation. Autocracy in India no doubt has its defects, but over 20 years' experience of India has convinced me that autocracy practised by men on the spot, closely familiar with the problems which confront them, exhibits advantages over autocracy ruling at the India Office and guided by men but few of whom have any personal knowledge of India and its peoples. In the case of the Finance Department, the absence of a senior experienced Anglo-India official from the Finance Committee of the Secretary of State for India's Council has synchronised with a period of currency and financial management that, from the point of view of India, can only be described as unsatisfactory in the extreme. India's monetary reserves and Treasury balances have been raided in a way, and to an extent, unheard of during the whole history of Britain's connection with her great Eastern Dependency. The consequences have been a blow to Britain's reputation for fairplay in matters financial, the effects of which it will take some time and care to remove. Whether these mishaps would have been avoided had the Finance Committee included an experienced Anglo-Indian civilian and a Bombay or Calcutta banker it is impossible to say. Certainly the currency and financial management could hardly have been more unsatisfactory.

(8) The conclusion to which I am forced, therefore, is that in reorganising the financial machinery of the India Office, the policy of removing or excluding the influence of the experienced Indian official should be seriously reconsidered. With no axe of any kind to grind, and accustomed by the duties of a lifetime to hold the scales evenly between many conflicting interests, the senior Indian civilian can bring an experience and influence to bear invaluable to those in England responsible for the upright and progressive administration of India. And if, with the experienced Anglo-Indian administrator, be associated a leading London banker, and a senior banker from Bombay or Calcutta possessing an intimate knowledge of the customs and requirements of the most advanced and go-ahead sections of the Indian commercial and financial communities, a finance committee of three can be formed who will be able to give to the Secretary of State for India the best possible advice on all matters relating to the management of India's currency and finances.

(9) Lastly, I would urge that the Government of India be allowed much greater freedom of action in matters of purely local concern than has recently been the case in connection with the management of India's finances and the development of India's currency. The Secretary of State for India in Council having laid down the general lines of policy that should guide the Government of India, the Governor-General in Council should, I submit, be allowed the fullest discretion in the actual carrying out of that policy. The subversion of this principle and the uncalled for and unnecessary exercise of authority by the India Office, appear to me largely to explain the circumstances that have led up to the present inquiry. Only by giving the Governor-General in Council the utmost authority and power, consistent with a due observance of the broad principles of government laid down by Parliament through the Secretary of State, can we hope successfully to administer and carry forward the further development of the Continent of India.

M DE P. WEBB.

---

## APPENDIX XXII

## MEMORANDUM OF EVIDENCE SUBMITTED BY MR MARSHALL F REID, C I E

(A)—*Government Balances and Council Bills*

1 My 25 years' experience in India has been chiefly in connection with the import and export trades, and also the finance and management of cotton mills. Most of my time has been spent in Bombay, but I have been in Calcutta for three years, Madras for two years and a half, and Delhi for 18 months.

2 The average rate of interest in the commercial centres of India has not been immoderately high, especially in recent years when the country has been accumulating much wealth.

3 Presidency Bank rates average a little over 5 per cent, but they are not always effective, especially in the off season—95 is about a normal price for  $3\frac{1}{2}$  per cent Government Paper—Good Municipal and Port Trust 4 per cent bonds are usually above "par," and prosperous Industrials can get public deposits for 12 months at 5 per cent, and sometimes  $4\frac{1}{2}$  per cent.

4 But year after year we have to deal with a very stringent money market during two or three months, and the effect of this stringency is to restrict the movement of trade and to create a false level of prices.

5 There must, of course, be a considerable variation in the value of money owing to the busy and slack seasons being so clearly defined, but it should be possible to minimise the extreme stringency which prevails at certain times of the year by utilising existing resources to better advantage.

6 I do not think it will be disputed that a bank rate of 8 per cent., with Bazaar rates considerably higher, must be very injurious to the trade and industry of India, and these high rates come at a time when interior transport facilities are at their best.

7 Now it is noteworthy that Government balances have a habit of steadily increasing during the busiest months.

The balances during the last three years were —			
	1911.	1912	1913
1st January	Rs 13 17 crores	14 61	21 98
1st February	Rs 14.99 "	15 17	24 76
1st March	Rs. 17.16 "	15 78	26 06
1st April	Rs 22 35 "	18 44	28.93

It will thus be seen that, while the money market was going through an anxious time in the early months of 1913, and trade was being seriously hampered, Government were taking an increasing amount of money out of the market, and locking it up in the treasuries.

8 These balances were, it is true, available to the market through Council Drafts, but those who had access to the London market and therefore to Council Bills, were restricting their drawings on London, in view of the state of the London market. (It should be noted that during the twelve months ending with March, 1913 Council Drafts were sold to the extent of over 25,000,000l, whereas the Budget estimate was just over 15,000,000l, yet notwithstanding the free sale of drafts, the Government cash balances were unusually high.)

9 As Government apparently had no power to release these balances, excepting through Council Drafts, they created an artificial money market which had most injurious effects on trade and industries.

10 I say Government apparently had no power to release these balances, because, in point of fact, they did not make any attempt to do so, and I am told they declined a request for a loan of 50 or 100 lacs of rupees on the security of Government paper.

11 If it is admitted, as I think it must be, that it is against the interests of India and Indian trade for Government to lock up increasingly large sums of the country's money (which for one reason or another they are unable to release) just at the time when these funds are most required for moving the trade of the country, it will be well to consider what existing conditions and practices cause this undesirable situation, and what steps should be taken to remedy matters

12 It is remarkable, and I think it must be quite unsound, that the balances and currency of India should be under the control of authorities in India and London, who may be said to be almost isolated from the money markets and the chief commercial centres of India

13 To a business man there would seem to be only one place from which to control and direct any market, viz, the market itself—and if, as I think, this must apply with special force to the money market, then the control and management of the available finances of India—and I venture to suggest of the currency of India—should be located in the chief money markets and commercial centres in India

14 And it naturally follows that such management and control should be placed in the hands of those who have been trained in the market, and in the atmosphere in which they are called upon to operate. It can hardly be suggested that those who have been accustomed to control finance and currency in India have had much opportunity of qualifying themselves in this respect

15 I should like here to say that I have the very greatest admiration for the ability, integrity and versatility of the officers of the Indian Civil Service, and I have had many opportunities of seeing these qualities used to the great benefit of the country they are serving

16 Therefore what I may say in seeming disparagement of work now done by the Finance Department is in no way aimed at the officers in that Department, but at the system under which they are called upon to work

17 I suppose the primary duties of the Financial Department of a country are the collection and expenditure of revenue, and the training which Indian officers have during their service in the districts and in the revenue departments eminently qualifies them for these duties

18 But their training in connection with banking and currency can very rarely begin before they hold some important post in the Finance Department

19 And even when they get into this Department it is noticeable that they are rarely called upon or permitted to settle down in it, and make it their career, as the more senior men may be asked to fill up a Lieutenant-Governorship, or other high executive post, and the less senior ones may see their way to quicker promotion in other departments

20 I do not complain of this, as it is only natural that every man should try to direct his career on to the lines which promise most usefulness and most distinction, but I complain of the system which calls upon the officers of a department to perform duties for which they have not had opportunity to qualify themselves

21 Anyone acquainted with the inner workings of large banking and commercial concerns must know that the strength of these concerns lies largely in continuity of management, and in the traditions which that continuity has established. Each officer as he advances from grade to grade has increasing opportunities of benefiting from the experiences of his predecessors, and on the top of these experiences and traditions he erects his own original work

22 I have little doubt that Lord Rothschild and Mr Hambro had these considerations in their minds when, in 1898, they expressed their opinions to the effect "That the currency of a country can be better managed by a bank than by a government." If the finance and currency of India are to be dealt with in the best interests of India, it seems to me that the control and management should be entrusted to an organisation which has the

advantages of continuity of traditions, and of special training for the purposes for which it is constituted, and it should be located in the commercial centres

23 I do not propose to attempt to construct this organisation. If it were a Government department it would have to be a separate and independent one, and would have to possess that intimate touch of local conditions on which bankers and merchants rely, and for want of which Government departments must so frequently arm themselves with suspicion, and distrust, and delay

24 But whether it be a Government department, or a separate bank working in conjunction with the Presidency Banks, or an Imperial Bank absorbing the Presidency Banks, it should be constructed with a view to building up continuity and traditions, and giving its officers full scope for their abilities

(B)—*Gold Standard Reserve.*

1 Among the measures recommended by the Commission of 1898 were the coinage and circulation of sovereigns and the creation of a special reserve in gold in which the profits on the coinage of silver should be accumulated. In referring to them, I desire not to go beyond my own experience, and the conclusions I have been able to draw therefrom

2 In actual practice the recommendation of the 1898 Commission to create a special reserve from the profits on silver coinage has been made a prominent feature, and a separate gold reserve is generally regarded in India as a thoroughly sound measure. It is realised that like all insurance operations it must involve some loss of revenue, and the opinion I have generally heard expressed, and with which I agree, is that security and confidence are not dearly bought at some considerable loss of interest on the accumulated reserves

3 I presume the authorities, in disregarding this recommendation, have relied upon the fact that all Government's resources were behind them, and upon the belief, no doubt so far justified, that if a crisis occurred these resources would pull them through

4 Speaking as one of the mercantile community who is deeply interested in the exchange value of the rupee, I consider it of paramount importance that the authorities should gain the confidence of the public in the policy they are pursuing, and in the measures they are ready and able to take to minimise the effects of a crisis. But experience proves that the existing methods have not gained the public confidence in their ability and willingness to combat a crisis.

5 The fall of T T Exchange to  $1/3\frac{1}{8}$  in 1907—the anxious time the country went through in 1908—the uncertainty as to whether the authorities would take the steps they eventually did to maintain the exchange level at that time—the suspicion which undoubtedly exists that the maintenance of exchange is at times subordinated to other interest in the handling of Council Drafts—all these tend to breed want of confidence in existing methods, and though the conclusions which the public have arrived at may not be fully justified, this lack of confidence is very real, and those who are engaged in exchange operations are on the look out to secure themselves, even at some sacrifice, upon the least sign of uneasiness in financial conditions affecting India

6. It must, I think, be very desirable that the authorities should gain the public confidence that their policy is sound, and if they do not intend to carry out the whole policy recommended by the 1898 Commission, they should formulate and declare their alternative policy

7 Until this policy is formulated and established any talk of diverting the profit on rupee coinage to other purposes should be avoided. We have heard various amounts up to 20,000,000*l* mentioned as limits, and now I hear 25,000,000*l* spoken of. But it seems to me dangerous to forecast what the requirements in this respect may be in connection with a country like India which has doubled its trade in 15 years.

(C).—*Gold Coinage and Circulation.*

1 Whereas the recommendation of the 1898 Commission to maintain a gold standard reserve appeals to me, I do not find myself so enthusiastic about the Commission's recommendations as to gold currency and a gold mint. But the two are on rather a different footing, the gold standard reserve was recommended to insure security, whereas gold currency was recommended in anticipation of a demand for gold coins, and the gold mint was recommended to assist in meeting that demand.

2 If experience showed that gold currency was the best and most economical, and if the country showed a desire for this form of currency, these measures would be the natural ones to adopt.

3 I am aware that sovereigns are reported to be used in several districts to a considerable extent, but my opinion must naturally be largely influenced by my own experience, which is, that though sovereigns have been available in large quantities for some years, they are tendered to a very small extent in payments to my firm at the different ports, my enquiries lead me to believe that this is the experience of most other firms in the Presidency towns.

4 Seeing that the traders in the Presidency towns may be taken to be the most enlightened, we may fairly assume that they do not use the gold coinage which is available to them, because they do not consider it is the best and more convenient form of currency.

5 There must always be in India a vast number of transactions for which rupee currency is necessary. But for the larger transactions the people have the option of silver or gold coins, currency notes, and, to some extent, cheques.

6 Of these the most convenient and economical form of payment is, of course, the last named, and a distinct increase in cheque payments has been noticeable in the Presidency towns with the opening of numerous local banks.

7 Payments by currency notes come next in these respects, and by far the greater proportion of the balance of payments is made in this form. We may take it that the enlightened people of the towns know what they are about, and it is obvious that they are satisfied as to Government's ability to meet its obligations in connection with the note issue.

8 The increase of cheque and note transactions must have effected considerable economy in the country's currency, and the Presidency towns, consciously or unconsciously, have been adapting themselves to more scientific and less wasteful methods than formerly prevailed.

9 If this change is sound and economical, I do not think it can be wise to give gold coinage and circulation such a prominent place as they have lately been assigned in several quarters. In so far as gold coins are replacing token rupees in the currency, they must be making for security, but I find it difficult to see any advantage in replacing currency notes by gold coins, and I see a real evil in the encouragement of hoarding. To aim at stimulating the steadily increasing demand for currency notes must surely be a more ideal policy.

10 The proper place for gold seems to be the reserves. Extended use of notes would facilitate the growth of the note reserve in gold, and if the authorities would aim at satisfying the people that ample reserves would be created and maintained in India's interests, I do not think the people would be slow to respond.

11. In my experience the people of India are willing learners, especially where their own interests are concerned, and if they were satisfied that their savings were as secure in the form of investments in Government and other securities, or in currency notes, as in the more tangible form of gold and silver coins, they would gradually adapt themselves to better methods.

12. It should be borne in mind that it has been nobody's special business in the past to educate the people in these matters, but this would be one of the duties of a special organisation controlling the currency and finance of India.

(D.)—*Hoards*

1 The Commission of 1898 accepted the fact of the vast hoards in India and, of course, they are wasteful both from an economic and a currency point of view

2 I should like to suggest to this Commission that some serious attempt should be made to attract this mass of unproductive wealth from its hiding places and convert it to more useful purposes, and I do so with more confidence, as the continued prosperity of India must in ordinary course tend to aggravate the situation, owing to the increasingly large quantities of the precious metals which are finding their way into India

3 It is true that India has herself provided sufficient capital for all the developments which have recently taken place, for we find that out of 210,000,000*l* sterling which the United Kingdom provided for public investment at home and abroad during 1912, less than 3,750,000*l* went to India

4 But it is equally true that the provision which Government have found themselves in a position to make for the all important item of railway development has proved lamentably inadequate, and it cannot be gainsaid that India is far behind what she might be in industrial progress

5 It is admitted that much larger provision for railway development must be made in the near future in order to make up for past deficiencies in this respect, and it is generally conceded that the demands of the railways will continue on an increasing scale. Irrigation will also continue to make large demands on the resources of the country, and it is only to be expected that with increasing civilisation and enlightenment will come steady progress in industries

6 So much for the needs of the country. On the other side we have the question of financial provision to meet those needs, and it will be remembered that it was argued in 1898 that a fixed exchange would cause a flow of foreign capital to India

7 This capital may be available, but even though it were, it must clearly be to India's best interests that she should use her own vast unproductive wealth rather than go to the expense of borrowing other people's money and that this wealth is increasing may be gathered from the fact that during the three years 1910 to 1912 she claimed payment in gold from her trade debtors to the extent of over 60,000,000*l* sterling, after satisfying her appetite for her usual imported commodities

8 Signs are not wanting that some of the country's profits are either coming out of hoards or not going into them, and we are told that the co-operative banks are attracting some of the money of people up-country, while the local banks get the credit of obtaining some of their deposits from hoards. Feeder railways have also proved another means of attracting Indian money into new channels, but we have yet to learn what would be the effect of a systematic campaign against the time-honoured habit of hoarding.

9. Distrustful as the people of India no doubt are, by nature and by tradition, of any security short of possession, they are just as anxious to make money as the people of any other country, and there is every reason to suppose that, if investments—of which the security was undoubted—could be brought to their doors in convenient forms, they would gradually realise the uselessness of hoarding

10 As it has not in the past been anyone's particular business to educate India as to the best form of currency to use, so it has been nobody's special duty to teach her the best use to make of her wealth. But this education would be a natural part of the work of an organisation whose sole responsibilities were in connection with the banking and currency of the country

11. Among investments regarding which it ought not to be difficult to assure the public would be government paper and port trust and municipal bonds, indeed, the amount of such investments held by the up-country public is very considerable, and is steadily increasing. Raising the amount of the maximum deposit in savings banks (as has recently been proposed in France to attract "hoards") and the extension of the savings bank system

throughout the country are other possible methods, and I cannot imagine an investment which would appeal more to the Indian people than railway bonds, of which the security is so evident

12 The practice which has recently been resorted to of providing for railway capital expenditure from revenue—or from accumulated cash balances which is really the same thing—on a very large scale, seems to me to be an economic evil. In so far as the money so appropriated represents ordinary budget surpluses, the practice is perhaps not open to objection, but when surpluses run into very abnormal figures as in recent years only to be accumulated in the Treasury balances, and then to be made use of for capital expenditure, the system seems to require revision.

13. Such surpluses indicate an excess of revenue for Government's ordinary expenditure, and if India can bear the cost of providing this excess revenue to such an extent, it looks as if she ought to be able to borrow for capital purposes to a very large extent.

14 Surely a system of raising loans for railway capital requirements and paying interest thereon would be a wiser policy than leaving urgent railway developments to the chance of large surpluses being available, and curtailing these developments, however urgent, when adequate surpluses do not exist.

### APPENDIX XXIII

NOTE OF EVIDENCE SUBMITTED BY MR H F HOWARD, CIE, ICS,  
COLLECTOR OF CUSTOMS, CALCUTTA

#### I.—Location and Management of the General Balances of the Government of India

1 The facts regarding these balances and the causes which have been responsible for their growth during the last four years are stated in considerable detail in the memorandum on India Office balances which was recently presented to Parliament\* and in the papers which have been prepared for the Commission by Mr Abrahams †

2 Briefly the main points for consideration are —

- (a) Have the balances been unduly high?
- (b) Should the portion of the balances not required for the more immediate needs of Government be held in England or India?
- (c) Have the Secretary of State's balances been used in the most profitable manner?

3 With regard to (a) it is obviously necessary to consider the amount of the balances as a whole, whether held in England or India, and it is not clear that this point has not been overlooked in some of the recent criticisms regarding the large balances held in England and the manner in which these have been utilized. The following figures for the balances as a whole are taken from statement B of Mr Abrahams' memorandum (Appendix II, pages 74-5)

Total closing balance in £1,000s for the year ending 31st March —

	Budget	Actuals.	Adjusted Actuals.
1909 - - -	15,959	18,219	13,744
1910 - - -	15,591	25,074	18,725
1911 - - -	17,735	30,264	26,151
1912 - - -	21,221	30,670	27,526
1913 - - -	19,590	27,917	—
1914 - - -	16,639	(revised)	—

\* Cd 6619,

† See Appendices I and II

The figures for adjusted actuals exclude :—

	Received from loan issued towards Capital requirements in the following year	Portion of Opium surplus specially held towards discharge of temporary debt
1908-09 - - -	4,475	—
1909-10 - - -	6,370	—
1910-11 - - -	2,210	1903
1911-12 - - -	—	(1,903 + 1,241 =) 3,144

4 In the light of subsequent events it is clear that it would have been possible either to reduce the amounts borrowed or to discharge the outstanding temporary debt at an earlier date. As, however, has been explained by Mr Abrahams, excess receipts from bills and transfers can never be counted on until late in the financial year when the result of the monsoon and the trade and agricultural position are known, whereas the favourable opportunity for carrying out loan transactions usually occurs, if at all, early in the financial year, it follows that the proceeds of excess sales of bills and transfers cannot ordinarily be used for the avoidance or repayment of debt until the year after that in which the excess sales have taken place. The possibility of the excess sales to which Mr Abrahams refers is of course directly contingent on an improvement of budget anticipations in the financial position of the Government of India. It is usually impossible to gauge this with any reasonable approach to certainty whether it occurs in the form of increased revenue receipts or of lapses in capital expenditure or otherwise until late in the year or even towards its close. At the same time while it may be admitted that the postponement in the discharge of the temporary debt proved to be unnecessary, the anticipatory borrowing by which the balances have been swelled can be justified on more general grounds to which I refer below.

5 It will doubtless be urged that even after the exclusion of these items the accumulation is very largely in excess of the intention when the budgets were framed. The main heads under which the improvement occurred have been —

	1909-10	1910-11	1911-12
Revenue surplus - - - - -	£ 1,470	£ 6,143	£ 5,742
Lapses in capital expenditure on railways - - -	1,617	3,419	1,688

The more important fluctuations leading to increases in the case of the revenue heads have been those occurring under —

	£	£	£
Opium -	+1,119 (1909-10)	+2,871 (1910-11)	+1,680 (1911-12)
Railways net receipts -	-689	„ +1,251	„ +1,896

6 In 1912-13, out of a total revenue improvement of 7½ million pounds anticipated in March last, opium was expected to contribute nearly 1½ million pounds, and the railways 3½ million pounds. In the case of opium the principle has been accepted of budgeting only for receipts based on a certain normal standard and of treating the realised revenue in excess of this amount as "special" to be utilised for certain specified purposes. Under railways the experiences of recent years indicate that Government must always be prepared for large variations. Thus, while the railways paid 5.89 per cent in 1912-13, the return in the three preceding years was 4.99 per cent, 4.67 per cent, and 4.48 per cent, while in 1908-09 the railway system was actually worked at a net loss to the State after taking into account the interest payable by Government on the railway debt.

7 It has been thought in some quarters that too large a margin has on occasion been left on the side of safety in the estimate under this and other heads. This is a matter on which divergent opinions may be held but on

which it is necessarily most difficult to adduce any convincing proof on one side or the other

As I have not been personally associated with the preparation of a budget in recent years I do not propose to attempt any detailed analysis of the improvements in the estimate under individual heads. Moreover, I do not consider that such analysis would serve any useful purpose, as in my opinion the holding of balances larger than those required for the transaction of current business can be amply justified on more general grounds.

8 It is of course necessary in the first place to keep in hand a sufficiency of money for the ordinary transactions of Government, and experience has shown that certain minima are required for the purpose. In India the figure is about 12 or 12½ million pounds, at home it is taken at 4 million pounds or somewhat more (*vide* section V of Mr Abrahams' memorandum (pages 8-10 of Appendix I) and sections V and IV of the memorandum on India Office balances (Cd 6619)). The budget must therefore provide in any case for a minimum closing balance of approximately the total of these amounts.

9 There is, however, a further aspect of the question. The ways and means programme of the Government of India is liable to be disorganised at very short notice by the occurrence of a famine, and this may result in large variations in the railway programme which must necessarily be a very serious matter as involving loss of efficiency and disregard of economy. It would therefore appear to be entirely legitimate in certain circumstances to budget for a closing balance in excess of the minimum figure, and to retain something in hand in a good year as a margin to enable us to avoid the uneconomical retrenchment on capital expenditure, &c, that would otherwise be necessary in an unfavourable year. In fact this course would be entirely consistent with the recommendations of the Mackay Committee<sup>1</sup> which considered that our borrowings should not be determined so much with reference to the needs of the moment as to the state of the market. We ought, in other words, to take advantage of times when money is cheap and to put it away till it is required. And this is for all practical purposes what has actually been done, as the following figures show:—

	Price of Sterling 3½ per cents.		Net Amount of Borrowings	Provision for Railway Programme
	April	September		
			Million £	Million £
1909-10 - - -	98½	98½	13	10
1910-11 - - -	95½	94½	6½	10½
1911-12 - - -	96½	94½	1½	9½
1912-13 - - -	94½	93	3	9+1½

10 It appears that in spite of an increase in the price which the Government of India has had to pay for their loans, and a great diminution in their actual borrowings, the amount provided for railways has been kept fairly steady, though at a level considerably lower than many of those interested in the efficiency of the railway administration consider sufficient. It is generally recognised (even by purists in such matters, who hold that it is not legitimate to budget for revenue surpluses in order to provide funds for capital expenditure) that the Government balances, whether built up by realised surpluses, or loan funds or of such items as Post Office Savings Bank deposits, may quite legitimately be drawn upon for such purposes. I would say then that such excess balances may be properly employed, firstly towards the reduction or avoidance of debt, and secondly as a security against the results of famine with its consequences of a reduction in councils and fall in exchange. It is hardly possible to place these objects in the order of relative importance which may constantly vary. At any time the second may of course become supreme. In normal times, however, the excess may suitably be employed in the reduction or avoidance of debt. In view of the growing demands for funds to finance railway development, the employment of the balances to extinguish existing debt (other than temporary debt) would merely involve the uneconomical course of borrowing with one hand while

paying off debt with the other, and it would thus seem, if these opinions are accepted, that the excess balances should be used for the avoidance of new debt, or in other words for capital expenditure. This is no doubt what the Bengal Chamber of Commerce have in view in a letter recently addressed by them to the Secretary to the Commission\*. While entirely dissociating themselves from the various charges which have been made against the treatment of the large balances of recent years, they suggest that "a partial solution might be found if transfers from revenue to capital expenditure were governed by principles somewhat less rigid than those that are understood to prevail in the Finance department". From what I have said it will, I think, appear that the views held by the Finance department are more in accord with the suggestion made by the Bengal Chamber of Commerce than the latter have realised, and it appears to me that the point about which a difference of opinion really exists is whether it would have been better to use the money at once or to spread the expenditure over a series of years. Here again it might be possible to suggest that the estimates on which the earlier programmes were based were somewhat overcautious and that larger sums might well have been allocated. On the whole, in view of the difficulty which has been experienced recently in borrowing any large sums, the course adopted does not appear to be open to any very serious criticism. It has been necessary to depend a good deal on the balances, and if a much larger programme had been framed in the first year or two it would have been necessary in subsequent years to drop to a much lower figure.

11 The next question for consideration is the best location for excess balances pending their ultimate employment for the avoidance of debt. Until the money is wanted the question is obviously one of investment. The view urged by certain critics is that being Indian money any excess should be employed in India in the interests of Indian trade. It is necessary in the first instance to challenge the principle on which this criticism is based. The money is held on behalf of the general taxpayer. If it is possible incidentally to use it to assist Indian trade, so much the better, but any assistance which involved the Government of India in loss would be an indirect subsidy at the expense of the general taxpayer and would not be legitimate. The first consideration is therefore how to make the most profitable use of the money. Subject to this condition, there is so far as I can ascertain nothing to prevent the Government of India from lending money through the Presidency Banks in India should funds be available and should there be a demand for accommodation. In the past the Presidency Banks have occasionally asked for loans and have been given them. For some years there have been no applications.

12 It has been said that, against  $2\frac{1}{2}$  per cent which is apparently roughly what has been received as interest in England, 3 or 4 per cent could be made in India. The correctness of this statement is doubtful. Many of the larger banks which formerly readily gave 4 per cent. on fixed deposits for a year are now unwilling to do so. The Bank of Bengal are said to be turning away deposits, and the Bank of Bombay, I believe, stated only last year in a public report that they had more money than they could well use. There is admittedly no demand except during the busy season and even for this I am very doubtful whether any but small amounts could be satisfactorily placed.

In support of my opinion I may quote that of the Bengal Chamber stated in their letter to which I have already referred, that they seriously question whether it would be possible to lend large sums in India. They add that the difficulty in India is the provision of the necessary security, for, except in the case of the Presidency Banks, security of the class offered in the London market is not forthcoming to any great extent.

13. It is not, however, possible to give a definite opinion as to the amounts which might be utilised, and, I think, that enquiries might very well be made from the banks in India as to the terms on which they would be prepared to take moderate amounts. In view of the close connection between Government and the Presidency Banks, I think that these would be the most convenient channel for placing the surplus funds of Government at the disposal of the market. But I cannot see any inherent objection to making similar advances to the Exchange Banks. I see that in section III

\* Printed as annex to Appendix XXVI., pages 601-7

of Mr Abruham's memorandum (Appendix I, pages 3-7), certain objections are stated to the suggestion that money should be placed with the Exchange Banks in India. These reasons do not appear to me to be conclusive, and, in fact, I notice from an answer given to Mr Gwynne in Parliament on the 6th November 1912, that loans have been made in England to certain Exchange Banks from the Secretary of State's balances, viz, the Chartered Bank of India, the Eastern Bank, the Mercantile Bank of India, and the National Bank of India. I should not, however, be in favour of granting loans to firms and institutions other than banks for the reasons stated in the same memorandum.

14 There is a further point which it is necessary to consider in connection with the location of the balances. The question is not one which can be decided merely on a comparison of Indian and English rates of interest. The whole of the surplus of income over expenditure accrues in India, in the home Treasury there is a heavy deficit. The main use of any excess balance would, therefore, be to supplement the Secretary of State's resources when required. If it was retained in India as it accumulated in good years, it would have to be remitted to England when a bad year came. Government would thus be liable to lose heavily on exchange apart from the fact that the operation of remittance, unless this took the form of shipment of gold which has been lying idle in India, would, of itself, tend to cause a slump in exchange, if, indeed, such remittance by the ordinary means of the Secretary of State's drawings was not at such a juncture absolutely impossible.

15 It necessarily follows from what I have stated that I believe that it would have been a serious error in policy to have departed from the existing practice of selling council bills in excess of the budget estimates. From the Government point of view it affords a convenient and economical method of the transfer of funds, while, on the other hand, it is an obvious advantage to commerce and industry as enabling the free importation of funds especially in times of monetary stringency. Until recently the utility of the practice has never even been questioned, and I have seen no justification put forward in support of the criticisms that have been made during the course of the last few months. These appear for the most part to be based on the belief that the Secretary of State has used this method of remittance to transfer to England money that the Government of India would not require to spend in that country. This is not the case. This view is strongly supported by the Bengal Chamber, who have written —

“ The practice of selling council bills and transfers in excess of the budget estimate of the Secretary of State's requirements has been followed for many years, with the consent and approval of the commercial community of India. So far as the committee of the Chamber are aware it has never been suggested until recently that the practice is antagonistic to the best interests of India. On the contrary, mercantile opinion has always favoured the sales as being a convenience to trade. Nor can the committee understand how it can be said that the proceeds of the sales have been improperly withdrawn from this country, for the equivalent number of rupees have been liberated from the Indian treasuries, and have passed into circulation. The purchasers of the council bills and transfers do not want gold, but rupees and notes, in India, and if they were forced to ship gold they would change it on arrival for rupees and notes. The only result of discontinuing the sale of council bills and transfers would thus be that Government would be forced to receive in India a large quantity of gold, part of which they would have to re-export to England later on to purchase silver for the coinage of new rupees, such an extravagant procedure as this would be does not commend itself to the Chamber ” (pages 603-4)

16 With regard to the third point, to which I referred at the commencement, viz “ Have the Secretary of State's balances been utilised in the most profitable manner? ” I feel that I am not sufficiently intimate with the

conditions of the English money market to enable me to offer any useful opinion

17 Perhaps the next point that needs consideration is the proposal to establish a central bank, which was discussed at length some years ago. The reason originally put forward in support of this proposal seems to have been the maintenance of a gold reserve for exchange purposes, while it appears to have been thought that, incidentally, such a bank might be of value in ensuring a more plentiful and constant supply of loanable capital for trade purposes. Doubts were, however, expressed at the time whether any capital which the bank could be expected to put up would go very far towards supplying an effective gold reserve, and the possible capital for such a bank would certainly now be considered entirely inadequate for the purpose. Moreover, there is a further doubt whether the Presidency Banks could find opportunity for constant profitable employment of any substantial addition to their existing capital.

It is possible that certain other advantages might be obtained by the creation of a central bank. The whole question is, however, a very intricate one, and I should hesitate to express any definite opinion about its possibilities, until an endeavour has been made to formulate some definite scheme, and until this has been fully examined by the various interests affected. For example, there will, obviously, be serious difficulties in settling the question of the headquarters of such a bank to the satisfaction of all concerned, apart from that of the personnel of the directorate, and the place or places of their regular meetings. A further question is, whether one of the advantages anticipated from the constitution of a central bank could not be as well attained by allowing the Presidency Banks to borrow in London. On the one hand, it may well be argued, as suggested by the Government of India in 1904, that it is far more important to trade to ensure the provision of relief in periods of temporary scarcity of capital, than to endeavour to secure by the agency of a central bank the larger supply of permanent capital which it was at one time anticipated would be forthcoming in this way. Even if the exchange banks have done a great deal in this direction, they are not purely Indian banks, and it might on occasions suit them better to transfer funds from India at a time when a purely Indian bank would bring money out there. On the other hand, there are indications that the supply of capital in India has increased substantially in recent years. Thus, to take the figures for the growth of bank deposits (for convenience, I give those prepared by Mr. Reginald Murray, for a paper read by him before the Indian Section of the Royal Society of Arts, in January 1911, these deduct one-third from the figures of the Presidency Banks, as representing deposits of other banks) —

In crores of Rupees

1870	-	-	-	8 9
1890	-	-	-	15 4
1910	-	-	-	63 6

Mr. Murray estimated that, in addition, the capital and reserves of local banks have increased by over 6½ crores during the last 20 years.

18 I also give certain clearing house figures for the last six years, (I have not been able to get them for a longer period) —

In Lakhs of Rupees.

In Lakhs of Rupees.							
				Calcutta.	Bombay	Bangoon	Madras
1907	-	-	-	22,444	12,791	5,626	1,532
1908	-	-	-	21,281	12,524	4,719	1,706
1909	-	-	-	19,776	14,375	4,430	1,987
1910	-	-	-	22,236	16,651	4,765	2,115
1911	-	-	-	25,763	17,605	5,399	2,099
1912	-	-	-	28,831	20,556	6,043	2,137

Another straw which shows which way the wind is blowing is the appreciation which has taken place in the securities of the large port

trusts, &c Three years ago the price was in the neighbourhood of 95 (for their 4 per cent debentures with a 30-years term) It is now about 102 It is not certain whether the result is direct or incidental only I believe, for instance, as I have already mentioned, that several of the larger banks which formerly readily gave 4 per cent on fixed deposits for a year, will no longer do so, except possibly for very small amounts as a personal favour to regular customers And I have heard it suggested that the rise in the above class of debentures is partly due to the fact that a considerable quantity of money seeking a safe 4 per cent, which had formerly been content to lie in the banks on fixed deposit in this way was thus diverted But even so, the reduction in the deposit rate points to a more plentiful supply of money

19 For similar reasons, I am inclined to think that the Government might be able to raise somewhat larger loans in India than they have done in recent years But I doubt, at the same time, whether they can count on getting an appreciably larger sum over a period of years as the Indian money market is necessarily very limited as compared with London, and present indications point to their having to endeavour to raise as much as they can get on reasonable terms both in India and London in order to satisfy their growing capital requirements I do not think that too much attention can be devoted to the extension of the export trade of India and the building of railways for this end

#### II—*The Adoption of the Gold Standard*

20 Some of the criticisms which have been made in connection with the adoption of the gold standard and the fixing of the rupee at 1s 4d, indicate that the critical conditions which led the Government of India to take these steps are occasionally lost sight of In the first place, the depreciation of the rupee threw very heavy additional charges on the Government of India, and it is estimated that in 1894-95 taxation to the amount of over 8,000,000*l* sterling had to be levied in India over and above what would have been necessary if the change in the relation of the currency to gold had not taken place A no less serious feature of the situation was, as the Currency Committee of 1893 pointed out, that the Government were compelled to contemplate a further fall, the effect of which could not be forecast The progressive fall in the gold value of the rupee not only occasioned unexpected deficits, and obliged the Government to retain and sometimes to increase taxation, which it was anxious to remit, but also to stunt expenditure of the most necessary kind, to restrict public works, and to refrain from undertaking much required improvement with borrowed capital, both on account of apprehensions of the money market and the risk of contracting fresh gold obligations Again, apart from the direct loss to the Indian Government, and consequently to the Indian people, as it was on the general taxpayer that the added burden fell, the uncertainty attaching to the value of the rupee was a direct handicap to trade, and necessarily discouraged the investment of much needed private capital in India

21 It is, in my opinion, beyond dispute that the reform of the currency initiated in 1893 has not only greatly ameliorated the financial position of Indian Government, but has also coincided with great commercial prosperity and industrial growth, notwithstanding the retarding influence of serious crop failures during the period From 1896 onwards the revenues have mounted up year by year and large surpluses have been secured, in spite of substantial reductions of taxation, and considerable additions to the public expenditure for education, police and other urgent administrative requirements During the same period the external and internal trade of India has increased beyond precedent Again with the removal of the uncertainty attaching to the value of the rupee, British capital has flowed into the country and has made possible the general advance which has taken place From this source large additions have been provided to railway communications, irrigation works and industrial plant, the result being that India has been placed in a position to create capital on her own account, a position of which she is taking a steadily increasing advantage I have not been able to lay my hands readily on figures to cover the exact period that has elapsed since the gold standard became effective, but I may note that between 1900-01 and

1909-10 the number of cotton mills in British India increased from 177 to 210, the number of looms from 37,000 to 75,000, the number of spindles from  $4\frac{3}{4}$  to  $5\frac{1}{2}$  millions, and the persons employed from 145,000 to 215,000. The production of yarn during the decade rose from 343 to 593 million lbs., and of woven goods from 95 to 215 million lbs. Jute mills increased in number from 36 to 60, the looms from 15,000 to 31,000, the spindles from 317,000 to 646,000, and the persons employed from 110,000 to 204,000. Again, as Sir Theodore Morison<sup>1</sup> recently showed in some figures which he prepared for the purpose, the percentage of the manufactured goods imported into India as compared with the total imports has been steadily falling, while the percentage of manufactured goods among the exports has been simultaneously rising —

	Percentage of manu- factured goods imported to total Imports	Percentage of manu- factured goods exported to total Exports
1879 - - -	65	8
1882 - - -	57	16
1907-08 - - -	53	22

22 The growth of India's industries can only be regarded with satisfaction. It tends both to obviate the distress resulting from famines by the provision of a diversity of occupations, so that the employment of the labouring classes is not so exclusively dependent upon agriculture, and also to increase the wealth of the country as a whole by stimulating production of the raw materials required by the industries. But this industrial development is only one feature of India's general economic progress. Agriculture has always been and will doubtless continue to be the main industry of the country. Here we find that the net area estimated to be under crops rose from 180 million acres in 1899-1900 to 223 million acres in 1909-10. Of this area more than 16 million acres were irrigated by the State canals for which capital accounts are kept. These canals which consist of about 13,000 miles of main canals and 31,000 miles of distributories, were constructed at a cost to the State of  $37\frac{3}{4}$  millions up to the end of 1909-10. This substantial increase in the cultivated area is necessarily largely in response to the increased facilities which have been provided by the steady improvement of communications for the cultivators to market their goods. Thus the railway mileage stood at 32,400 on March 31st, 1911, as compared with 24,400 miles in 1900. In 1910 more than 65 million tons of goods were carried over an average distance of 184 miles at an average cost of rather less than  $\frac{1}{2}d$  per ton per mile, as against 43 million tons in 1900. The corresponding figures for the passenger traffic were 372 million persons in 1910, as against 176 million persons in 1900, carried an average distance of 36 miles at a cost of about one-fifth of a penny per mile. Incidentally the figures would seem to point also to an increase in the general prosperity of the people, of which further indications may be found in the increased use made of the postal and telegraph departments. Thus the estimated number of letters, postcards, &c., sent through the inland post rose from 469 millions in 1900-01 to 332 millions in 1910-11, the number of private telegrams despatched from  $4\frac{3}{4}$  to  $10\frac{1}{4}$  millions, the number of inland money orders from 13 to  $24\frac{1}{4}$  millions, and their value from  $17\frac{1}{2}$  to 28 million pounds. If there is any question that a distinct improvement in the standard of living has taken place in many parts of India, evidence of this can be found in the increase in the imports of petty luxuries. Thus to take a period of five years only between 1905-07 and 1910-11 imports of iron lampware rose from 157,000*l*. to 227,000*l*. in value, glass lampware from 46,000*l*. to 82,000*l*., sewing machines from 79,000*l*. to 159,000*l*., patent medicines from 119,000*l*. to 155,000*l*., boots and shoes from 194,000*l*. to 305,000*l*., the number of pairs increasing from  $1\frac{1}{4}$  to more than  $1\frac{3}{4}$  millions, haberdashery from 361,000*l*. to 418,000*l*., clocks and watches from 123,000*l*. to 134,000*l*. in value, and in number from 465,000 to 647,000, glass beads and false pearls from 160,000*l*. to 187,000*l*., matches from 421,000*l*. to 559,000*l*., and toys and requisites for games from 191,000*l*. to 258,000*l*.

23 It cannot of course be pretended that the adoption of the gold standard is the sole cause of these and other remarkable results which have

coincided with its introduction. I have ventured, however, to cite these in answer to critics who have alleged that the change would have or has had an injurious effect on India

### III—Gold Currency and Gold Coinage

24 In considering the measures necessary to ensure the convertibility of the rupee, the Fowler Committee recognised that the principal use of a gold reserve was that it should be freely available for foreign remittances whenever the exchange falls below specie point, and there is a more or less general agreement that a gold reserve can be most effectively and economically employed when utilised in this direct manner. At the same time the Committee expressed the opinion that India should be allowed to possess the normal accompaniment of a gold standard, namely, a gold currency, that the Indian mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the Australian branches of the Royal Mint, and further, that when the Government of India had accumulated a sufficient gold reserve, and so long as gold is available in its treasury, it might discharge its obligations in gold instead of in rupees. The advantages generally claimed on behalf of an effective gold currency for India are that its existence would imply that the trade demand for currency could be met to a larger extent by gold instead of by rupees, and that the liability of Government for the redemption of rupees put into circulation would thereby be *pro tanto* diminished, and further, that in time of adverse trade conditions the gold in circulation would, to some extent, find its way back to the commercial centres and be available for the purposes of export. Entirely apart from these considerations it is, in my opinion, most desirable, in the case of a State managed system of the kind in force in India, that Government should aim at being in a position to supply the form of currency that may be at the time in demand.

25 The chief difficulty which the Committee apprehended would stand in the way of attaining an effective gold currency was the habit of hoarding. As to the extent to which the hoarding or melting down of sovereigns is now carried on, it has been most difficult, or I may even say impossible, to obtain any exact or accurate information. Such facts as are available regarding the circulation and hoarding of gold are set out in the last two reports of the operations of the Indian Currency Department, *vide, e.g.* pages 14 to 22 of Mr Gauntlett's report\* for 1911-12, and the accompanying statements at pages 41, *et seq.* The total absorption of sovereigns by the public during the 14 years ending with 1912-13 was 64,815,000*l.* (*vide* the statement on page 216 of Mr Abrahams' note on the proposals for the coinage of gold in India—Appendix VI.) There can be no doubt that a very large proportion of these sovereigns have been melted down or hoarded, but in connection with the latter practice I am doubtful whether any very sharp distinction can properly be drawn between the sovereigns hoarded and those in active circulation. So-called hoards may be used as money more often than the term is usually held to imply. In fact, the temporary hoarding of coins merely means a diminution in the rapidity of their circulation. It is not possible to give any definite estimate of the proportion of sovereigns actively in circulation. Mr Gauntlett has summed up the position by saying "In conclusion the facts of the year (1911-12) seem to substantiate the view that in Northern India, Bombay, and part of Madras, the use of the sovereign as currency is steadily increasing. In other parts of India its main use is still for conversion into ornaments or jewellery. If the sovereign could be used in the jute and rice trades as it is already used for wheat and cotton, its circulation would be increased enormously. Its use in the rice trade in Burma would displace notes mainly, but silver is still the form of currency used in the jute trade. As a good jute crop always leads to a large absorption of rupees, it is evident that the cultivators are wealthy, so that the sovereign ought to be a suitable coin for them." The sovereign is in fact, in my opinion, a suitable coin for India generally. The Punjab wheat crop is already largely financed by its use, it circulates freely in Bombay, and has, as Mr Gauntlett's report shows, penetrated up country to a considerable extent. Apart from this it has, as the Government of India pointed out in their despatch, obvious advantages over a distinctively Indian coin for use in the international exchange.

\* Not printed, published in the Gazette of the Government of India for 21st December 1912.

I may also mention that I do not think that the sale of Council bills at 1s 4½d per rupee can be said to tend to keep gold from circulation in India at the present time. Though Councils have been sold in excess of the amounts budgeted for, they have not been sufficient to meet the whole trade balance, and have not, therefore, prevented sovereigns from flowing into India in enormous quantities. These are, as Mr Abrahams has stated, for the most part tendered to Government in exchange for rupees and notes at the rate of Rs 15 to the £. Sovereigns so received are made freely available to the public against the tender of rupees or in encashment of notes at this rate. In spite of this the sovereigns lying in the paper currency reserve in India on the 31st March 1913 amounted to nearly 20,000,000. The following figures show the absorption of sovereigns by the public during the last three years, and the amount in the paper currency reserve in India on the closing day of each year —

	Net Absorption			Balance in Paper Currency Reserve in India.
	After passing through Government Reserves and Treasuries	Direct Absorption	Total	
1910-11 -	7,177,000	914,000	8,091,000	6,186,000
1911-12 -	7,592,000	1,289,000	8,881,000	15,554,000
1912-13 -	Not available		11,005,000	19,583,000

From certain points of view it must be admitted that a paper currency with gold in reserve is more economical than a gold currency. I do not think, however, that there is any suggestion of endeavouring to extend the circulation of gold to any extent at the expense of notes. The Government of India have done much to increase the popularity of their note issues in recent years by the universalisation of the notes up to and including 100-rupee notes. The position which I would have Government aim at is, as I have already said, that of being able to supply the form of currency that may be at the time in demand, and consequently of giving gold when required in exchange for notes. If there is a demand for gold for currency, confidence can only be secured by its supply. Though the increased use of sovereigns may have some slight effect on the note circulation, it does not appear to have been very great. Mr Gauntlett writes: "It is a possible inference that " in the year under review the increased use of sovereigns has resulted in " less use being made of 10-rupee notes than would otherwise have been " made. It must be admitted, however, that the figures in previous years " have not justified a similar inference, and it is not possible to come to a " final conclusion on the matter." The position appears to be that though the use of gold and notes may overlap to some extent, there is a sphere for both of them. It is possible that a 10-rupee piece might compete with the 10-rupee note to a greater extent than the sovereign does, if so, this would be an additional reason for preferring the sovereign to a special 10-rupee coin or a gold coin for India. I am in favour of opening a mint in India for the free coinage of gold, and for the reasons which I have indicated above I should prefer the sovereign to a special Indian coin, such as a 10-rupee piece. I do not think that any seignorage should be charged on the coinage of sovereigns. The result of the imposition of such a charge, unless it were purely nominal, would apparently be to stultify the action taken in opening the mint. With regard to the advantages to be attained by the opening of a mint, I cannot add to what has been said in the Government of India's despatch of last year on the subject, and in paragraphs 50-52 of the last Indian Financial Statement\*. It may be that the opening of a mint would not directly or immediately operate to increase the circulation of gold. It appears to me, however, to be anomalous that though gold is now the standard metal of the Indian currency, gold bullion in India can only be converted into legal tender currency in India by being sent to England (or Australia) and there coined into sovereigns. It would at present not even be possible, should circumstances draw gold ornaments or bullion out of hoards, to reconvert these into standard coin otherwise than by this roundabout process.

\* H C 130 of 1913.

IV.—*The Exchange Standard*

26 The essence of the exchange standard is that the local currency is not necessarily redeemable in gold, but is kept near a fixed par with gold by control by Government (or a central bank) of the foreign exchanges. The Government or the bank make arrangements for the provision of foreign remittances in gold at a fixed maximum rate in terms of the local currency. It is thus necessarily dependent on other monetary centres.

27 Though under the system now in existence, Government does not undertake to redeem the currency in gold, it is in my opinion desirable that Government should aim at always being in a position to redeem, and I do not think that they should attempt to husband the supply of gold by refusing to give it out when available.

The extended use of gold in India may, as has occasionally been suggested, by taking off a portion of the world's supply of gold which would otherwise tend to cause a further rise in world's prices, have certain possible advantages from this point of view. I would not, however, attempt to justify it on this ground and I am not sure that it would be legitimate to do so.

28 I have indicated elsewhere that the primary object of the gold reserves of the Government of India is to maintain exchange. And this result can probably be most directly and economically obtained if the main portion of the reserve is held in London. It is essential, therefore, that an adequate reserve should be so held. Beyond this, however, Government should endeavour to meet internal demands on it for gold in India, and to hold gold in that country also sufficient to ensure this. The free issue of gold in India at the time of a crisis may form a valuable supplementary measure to the sale of sterling bills on London.

29 I may add in this connection that I should not attach any importance to such a criticism as that (in the particular case with which we are concerned, viz., that of England and India) the "guardian country" relies on the earmarked gold as a possible resource for itself in a crisis. While I consider that a substantial portion of the reserve in the guardian country should be held in a liquid form, I do not see any objection to the investment of the balance, in fact, I consider that it would be uneconomical not to invest it.

30 I do not myself share the theoretical objections urged by some persons to "State-managed systems" as such. I understand that, outside the United Kingdom, no system can be said to be free from management. Whether such management should be exercised by Government or by a bank brings one directly to the question of a State or central bank. An American writer, Mr. Conant, has gone so far as to say that "constant intervention by the Government is a part of the existence of any system, even where free and "gratuitous coinage on private account is authorised by law."

31 I do not think that there have been any undesirable complications as between the paper currency and the gold standard reserves, or that the use to which these have been put has afforded any legitimate ground for misunderstanding or suspicion on the part of those using the currency. It is possible that some features in these reserves which have grown up in the course of the development of the Indian currency system might now be simplified so as to make the arrangements somewhat more intelligible to the layman, but I do not consider that any question of principle is affected.

V.—*Gold Standard Reserve*

32 I think that the existence of a special gold standard reserve is essential, and that it should be held partly in liquid gold and partly in securities. As to

the latter I agree with the view expressed in section III of Mr Abrahams' memorandum (Appendix III, page 88), that the holding should as far as possible be in the form of securities due for early redemption at a fixed date. For reasons which I have already explained I think that the main portion of the reserve should be held in London, and that the 25,000,000<sup>l</sup> up to which it has been decided that this branch of the reserve should be allowed to accumulate should be regarded as a minimum figure, and that its adequacy should again be considered when this figure has been reached, in the light of the circumstances of the time. Mr Abrahams, in estimating the amount required for safety, bases his calculations on the experience of 1907-08. I think that in coming to a decision, it is necessary to bear in mind the fact that the annual expenditure in England, now chargeable to the revenues of India, is estimated at over 20,000,000<sup>l</sup>. I entirely agree with the system of earmarking gold for the reserve at the Bank of England and consider that here again 5,000,000<sup>l</sup> should be regarded as a minimum figure. This may perhaps be sufficient, provided that the bulk of the balance of the reserve is held in securities maturing at a short date, or if it is decided to continue the practice of holding a substantial portion of the paper currency reserve gold in London. It must, however, be remembered that in 1907-08 the centre of the financial crisis was in the United States. It is not inconceivable that a crisis in London might be even more serious, and I should prefer to hold 10,000,000<sup>l</sup> to 15,000,000<sup>l</sup> in liquid gold in the London branch of the reserve, and to see the total holding in the gold standard reserve there standing at 30,000,000<sup>l</sup> than at 25,000,000<sup>l</sup>. It is so essential that the reserve should be entirely adequate that I do not consider that it is possible to err on the side of caution, in spite of the expense which a large gold reserve must admittedly entail.

33 I do not approve of the action taken in 1907 when funds previously allocated to the reserve were used for railway development in India. I consider that this was, to say the least of it, premature. And it had the great incidental disadvantage of causing the public to have grave misgivings as to the future policy of Government in regard to the treatment of the fund.

34 I should be inclined to continue to hold some portion of the reserve in India. I do not, however, regard this as essential, provided that Government arrange to hold in the paper currency reserve stocks of (a) rupees, and (b) sovereigns sufficient to meet the demand for either coin that may arise in India. If it be decided to retain the Indian branch of the gold standard reserve, this could not very well be held in securities, the question whether it should be held entirely in gold, or partly in gold and partly in silver, and its amount, must be dependent to some extent on the decision as to the future relations in certain respects between the paper currency and the gold standard reserves, to which I refer below.

35 I do not think it is necessary, for the present at any rate, to put the gold standard reserve on a statutory basis.

#### VI.—Paper Currency Reserve

36. I am not in favour of amalgamating the gold standard and paper currency reserves. These reserves are designed to secure two entirely different objects. To mix up the two reserves would probably give rise to distrust and suspicion. The object of the gold standard reserve is to secure the parity of the rupee with gold. That of the paper currency reserve is to secure the convertibility of the note circulation. For the latter purpose the first necessity is to provide a sufficient store of rupees to ensure against risk of shortage. With regard to the silver portion of the reserve, I agree with the view expressed by Mr Newmarch that the policy sketched in paragraph 37 of his memorandum (Appendix VIII, pages 245-6), is generally suitable as a guide for action at the present time, though it may require modification and need not and should not be laid down as an absolute hard and fast rule. For similar reasons I do not think that the holding of gold in the reserve in London is open to the objections urged against it. It can be justified by the fact that when held in London the gold is one stage nearer the point at which it becomes practically effective for its

primary purpose of securing the encashment of currency notes by rupees, for the coinage of which the silver bullion can ordinarily only be procured in Europe and not in India. Certain other incidental advantages attach to the location of a portion of the currency gold in England which I need not enumerate.

37. With regard to the holding of gold in India it is true that the notes may be said to be issued mainly against silver, but this does not state the position completely. The rupee itself is now a fiduciary coin and it would seem to be most desirable that Government should be in a position to honour their notes by a direct payment of gold, should there be a demand for this. To refuse to do so merely involves the circuitous course of paying rupees for the notes and subsequently redeeming the rupees with sovereigns.

38. I do not see why the utilisation of the paper currency reserve as a line of defence against a fall in exchange need lead to complications. Provided that the primary object of the reserve is properly secured, there can hardly be any valid objection to its gold being utilised in the manner suggested.

39. I should, however, prefer not to call the paper currency reserve the first line of defence against a fall in exchange. It may not unreasonably be suggested that this rôle more properly attaches to the gold standard reserve, which can readily be so used if a portion of it be held in a liquid form. I think that the Secretary of State and the Government of India should be guided by the circumstances of the time in deciding exactly which of their gold reserves should be employed to this end, either at the initial or at any subsequent stages of a crisis.

40. The next point to consider is the future relation between the paper currency reserve and the Indian branch of the gold standard reserve. The latter at present consists, in its normal condition, of 6 crores of rupees, which will be replaced by gold transferred from the paper currency reserve, when the demand for rupees to replenish the latter necessitates this. The position has arisen from certain circumstances in the recent history of the Indian monetary system, but, while it can be justified on grounds of history and convenience in the past, it must be admitted that it is somewhat anomalous, I am not sure that the objects in view cannot equally well be attained in another way, and that some slight modification of the existing arrangements cannot now conveniently be made. I would suggest that the rupees so held should now be transferred to the paper currency reserve against a similar transfer in sovereigns to the Indian branch of the gold standard reserve, and that the latter should in future normally be held in sovereigns. Mr Abrahams, in section vi of his memorandum on the gold standard reserve (Appendix III, page 95), has pointed out a possible drawback to this alteration, viz, that it may at times be convenient to sell Councils against the Indian branch of the gold standard reserve, crediting the English branch of that reserve with the proceeds of the sales. When the necessity for such a transaction arises, it would, I think, still be possible to transfer from the paper currency reserve to the Indian branch of the gold standard reserve a sufficient number of rupees to meet the drawings of the Secretary of State on the latter, against an equivalent transfer of gold to the paper currency reserve in India. The gold received by the Secretary of State as the proceeds from the sale of the Council Bills, could then be credited temporarily, just as it would be under existing arrangements, to the gold standard reserve in England, and the net result of these transactions as regards the location of funds, would thus merely be a temporary transfer of a portion of the Indian branch to England. Such transactions will not, presumably, be very frequent, and they seem to be quite legitimate as affording additional elasticity, without in any way impairing the effectiveness of either reserve for its primary purpose.

41. It remains to consider the constitution of the paper currency reserve, and its distribution as between England and India.

*Gold in England*—I would suggest 5,000,000*l* as a suitable figure, for the normal holding.

*Gold in India*—The net absorption of sovereigns by India during the last three years has been —

		£
1910-11	- - - -	8,091,000
1911-12	- - - -	8,881,000
1912-13	- - - -	11,005,000
		27,977,000
Average	- - - -	9,326,000

The rate of absorption has grown rapidly. It may continue to grow steadily, or it may be the case that saturation point will be gradually reached and that the rate of absorption will increase more slowly in future, or even show some decline. But I would take these figures as a rough guide, and endeavour to hold in India enough gold to provide for 18 months to two years' internal absorption, say, 15,000,000*l* to 20,000,000*l* in round figures, between the Indian branch of the gold standard reserve and the paper currency reserve. On the assumption that the gold standard reserve holding will, in future be in gold, and that this will remain at its present figure of 4,000,000*l*, we are left with 11,000,000*l* to 16,000,000*l* (equivalent to 16½ to 24 crores) as the paper currency holding. Adding this to the rupee holding we have —

	Beginning of Busy Season	End of Busy Season
	Crores	Crores
Silver - - - - -	24	17½
Gold - - - - -	16½	24
	40½	41½

These figures are necessarily somewhat arbitrary and I would suggest a total coin holding in India of 40 crores in round figures, in addition to the 5,000,000*l* to be held in England, or 47½ crores in all. (This is also in addition to the Indian branch of the Gold Standard Reserve. If it is decided to abolish this I would make a corresponding increase in the coin holding of the Paper Currency Reserve in India.)

42 The total note circulation has increased very rapidly in recent years. For convenience of reference I give the figures from 1909 onwards —

March 31st	Total Circulation	Notes in Active Circulation among Public
1909 - - - -	45,48,79,505	34,95,08,965
1910 - - - -	54,40,84,250	39,98,06,520
1911 - - - -	54,99,05,815	40,17,22,230
1912 - - - -	61,36,25,095	44,61,25,095
1913 - - - -	68,97,78,240	Unavailable

The figures for the last year are doubtless swollen by the large holdings in the reserve treasuries as a result of the high general balances held in India. But in view of the great increase in the popularity of the notes which appears to have resulted from the universalisation of the notes of denomination up to and including Rs 100, it is improbable that any substantial set-back will occur, and I do not believe that there is any likelihood of the total circulation falling again below the figure of 61½ crores, at which the reserve stood at the close of 1911-12. This would allow for the existing investment without in any way trenching on the normal figure of 47½ crores which I have suggested for the total metallic portion of the reserve in India and England together. But I believe that it would be possible with perfect safety to go further than this. If the level of March 1913 be approximately maintained this would comfortably allow for an increase in the investment by another 6 crores,

bringing it to 20 crores. The gross circulation should not, however, be the only or even the chief guide, and in order to determine the limit of safety for the purpose of calculating the portion which may be invested it is necessary to look to the permanent circulation of notes among the public. As an idea of this it is usual to take the net circulation (after excluding the amounts held in the reserve treasuries of Government and the head offices of the Presidency Banks). For the three years ending with 1911-12 the figure were (in lakhs) —

	Average	Maximum	Minimum
1909-10	38,88	42,66	36,07
1910-11	40,82	43,37	38,52
1911-12 <sup>1</sup>	44,24	47,54	40,73
Average	41,31	44,52	38,44

Were it possible for me to include the figures for 1912-13 in place of those for 1909-10 there is no doubt that average figures would be substantially higher, but even on the above averages I consider that an increase of two crores in the investment could with perfect safety be immediately made, an investment of 16 crores represents a percentage of only about 38.7 on the average net circulation and of 41.6 on the minimum net circulation figures, which I regard as very well within the margin of safety. And I think that, unless entirely unexpected circumstances occur to arrest the growth of the reserve, it will be found that a further increase to the 20 crores already mentioned will be justifiable in the very near future.

43 With regard to the form which the investment should take, I should be inclined to make further investments in Government of India 3½ per cent rupee paper until the rupee investment reaches a figure of Rs 15 crores, equivalent to 10,000,000. In the case of subsequent investments the position could be reconsidered later on if necessary. At the time when investments were made in sterling securities the gold position of the Government of India was very much weaker than it is now and it was desired to strengthen it. Circumstances have now changed. With a substantial quantity of liquid gold both in the paper currency and the gold standard reserves that side of their defences should be secure. Moreover, in view of the large holding of sterling securities in the gold standard reserve I should prefer to see the investment now under consideration made in rupee paper. In the event of an investment being so made the simplest and most economical course would probably be for Government to make the issue direct to the paper currency department, instead of buying up existing loans from the market. This course has, I believe, been adopted on some previous occasions.

44 I should prefer not to express any opinion on the question of handing over the paper currency to a central bank, until the general advantages and disadvantages of such a bank have been further considered, and the proposals for its constitution have assumed a more definite form. I think that in any case the Government of India might be asked to consider the possibility of making the system more elastic, and that in this connection the suggestion that has been thrown out from time to time, viz., that at times of stringency loans should be given from the paper currency coin reserve, merits further examination. With regard to this proposal the late Sir Clinton Dawkins held that it is open to fatal objections. He said "It is the duty of Government to keep a coin reserve sufficient to ensure the convertibility of its notes. If the proportion of coin to securities in the total reserve is large enough to allow of loans being made, then that proportion is unnecessarily large. In such a case securities should be substituted for superfluous coin, and the general taxpayer, not any particular section of the taxpayers, like the banks, should benefit thereby." It might well be argued on the other hand that loans to banks are of the nature of a temporary investment, and that it may be convenient to Government on occasion to place out money in this way instead of making a permanent investment. The general taxpayer would not be prejudiced inasmuch as a suitable rate of interest would of course be charged on such loans.

VII—*Purchases of Silver, &c.*

45 I do not consider that the coinage of rupees, since 1899 has been excessive. Coinage has only been undertaken to meet the demands of the trade, and the issue of rupees when coined has been automatically limited by the extent of the demand. When the demand temporarily ceased in 1907, the coinage of new rupees was discontinued by the Government, and the sale of sterling drafts on London operated to redeem such rupees as were in excess of the reduced public requirements. These rupees were then held by Government in the Indian branch of the gold standard reserve. Both these and the further quantities which flowed back into the paper currency reserve were for all practical purposes withdrawn from circulation, until the revival of the demand for Councils indicated that the rupees were again required for trade purposes. Had it been possible for Government to force into circulation, or had they retained in the circulation, rupees in excess of the requirements of the time, a depreciation of the currency as compared with gold must necessarily have followed. This, however, was not the case, and the measures taken were sufficient to secure the convertibility of the rupee and thereby to maintain its exchange value.

46 With regard to the question whether purchases of silver should be regular instead of intermittent, I agree generally with what is said in paragraphs 39-43 of Mr Newmaich's note on the paper currency reserve (Appendix VIII, pages 246-7)

47 I do not think that there is any likelihood in the near future of such a change of conditions as would warrant the limiting of the legal tender of the rupee on the one hand, or the refusal to give rupees for sovereigns on the other.

## APPENDIX XXIV

STATEMENT OF EVIDENCE SUBMITTED BY MR. W B HUNTER, SECRETARY  
AND TREASURER OF THE BANK OF MADRAS AND CHAIRMAN  
OF THE MADRAS CHAMBER OF COMMERCEI—*The Sale in London of Council Bills and Transfers, and the Measures  
taken to maintain the Exchange Value of the Rupee*

1 With the great growth of Indian foreign trade, the original object of the sale of Council bills and transfers, viz, the provision of funds for the Secretary of State's requirements, has sunk into secondary importance.

2. If no Council bills were offered for tender, the Government of India would have no difficulty in remitting in normal years through other channels the full amount required by the Secretary of State, and in abnormal years the difficulty of obtaining such remittances would be no greater than the difficulty of selling Councils.

3 The chief reason for continuing the system is that under the existing conditions it meets the requirements of trade in the most economical manner by reducing the movement of gold coin from Europe to India, and *vice versa*, to a minimum, and *pro tanto* guards against unnecessarily disturbing the London money market.

4 Until, therefore, it can be shown conclusively that India requires a large quantity of gold in active circulation, a condition of affairs that does not now exist, it is desirable that Councils and transfers should be sold to an unlimited extent at a rate under gold point.

5 As a corollary to the above, when exchange weakens, that is when Telegraphic Transfers and Councils cannot find buyers at 1s. 4½d. and 1s. 4d. respectively, they should cease to be offered and the reverse operation immediately put into force, viz, the sale of sterling bills in India, at, say, 1s. 3½d.

6 Sterling bills on London drawn in India should be met first from the gold accumulation in the London portion of the currency reserve, and then from temporary investments, and thereafter from the permanent investments of the Gold Standard Reserve. The release of gold from the currency reserve as a first step is important, as the operation would ease the money market preparatory to realisation of securities.

7 The unlimited sale of Councils and Telegraphic Transfers on India can be provided for in the following manner —

- 1 By Treasury balances
- 2 By Indian branch of Gold Standard Reserve
- 3 By currency reserve
- 4 When necessary by new coinage of silver purchased by proceeds of bills

8. The source from which bills are to be met should be regulated according to the conditions ruling in the money markets in London and India at the time of sale, but, broadly speaking, the ruling principles should be When rates in London are stiff, gold must not be withdrawn either for export or earmarking for currency reserve, and all available balances in London should be lent freely. But equally with the above, when money is tight in India, currency must not be withdrawn in anticipation of bills being drawn, and funds in the general balances and reserves should be made available for Indian trade. With tight money in both markets the balance must be held evenly between them.

#### II—*The Location and Management of the General Balances of the Government of India*

9 The location of the general balances of the Government of India is so dependent on the demand for Council bills and condition of the money market, that no hard and fast rule can be drawn as to a maximum and minimum balance either in London or India

10. So far as possible as shown in my note regarding Council bills, the general balances of the Government of India should be put at the disposal of the market in most need of relief, transfers to and fro between London and India being a simple operation through the Currency Reserve as now constituted. The chief alteration in the location and management of the general balances of the Government of India required is that an end be put to the practice of locking up vast sums in Government treasuries and reserve treasuries. The withdrawal from active circulation of Rs 20 crores as at the 31st January 1913, with an 8 per cent rate ruling in all three presidencies, is undefensible.

#### III—*The Location, Disposition and Employment of the Gold Standard and Paper Currency Reserves*

11 The location of the Gold Standard Reserve, and its disposition and employment, depend largely on the exigencies of exchange and requirements of the markets. The silver portion can only be held in India, and the gold should be held in England, where alone it will be required to meet the object for which the reserve exists. It is not desirable that the sterling portion should be held in coin. The whole may safely be invested when the Currency Reserve is strong in gold.

12 The large holding of securities, which under certain circumstances may have to be realized, is not really a menace to London. The securities and bills held by continental nations are much more dangerous, for in the case of the latter securities may be sold and bills discounted with the object of obtaining gold for export, whereas with the securities of the Gold Standard Reserve such could never be the case. They can be sold only when the exchange has gone against India, that is when India has to pay for imports, the bulk of which come from Great Britain. If before sale of securities gold is released from the Currency Reserve no possible trouble could ensue. The gold so released would more than cover the possible demand from other countries in payment of Indian imports.

13 Taking the figures as at present—

In the Indian Currency Reserve and Gold Standard Reserve there are 25½ million pounds

The sterling investments in the Gold Standard Reserve amount to 17 million pounds

14 Therefore, for every 100*l* worth of securities sold or loans called in 150*l* in gold could first be released

15 With regard to the Currency Reserve, the silver portion should of course be held in India, but practically all the gold should be in London

Any portion held in India should be very carefully conserved. When exchange shows signs of weakening no gold should be given out but sterling bills should at once be made available. In 1908, when exchange fell, about 3,000,000*l* in gold was withdrawn from the Currency Reserve in India, but it was not exported in payment of foreign liabilities, and thus did nothing to support exchange.

16 The invested portion of the reserve lacks elasticity and in this respect the Paper Currency Act requires amending.

IV—*The Proposed Opening of the Indian Mint for the Coinage of Gold and the Forcing of Gold into Active Circulation*

17 In theory the advocates of the opening of the mints to gold coinage may have some right on their side, but in practice I believe the mints would be silent. If they were sufficiently active to justify their existence the result would inevitably be to force exchange against India.

18 Gold bars, which will always be required in India as a commodity, and which in the past have come principally from London, will no doubt continue to come from there, but banks requiring currency immediately will never import bars so long as sovereigns are legal tender, as they would have to wait for their money for the time between the delivery of the bars and the receipt of the gold coin in exchange.

19 Indian foreign trade being practically entirely financed through London, the amount required to balance India's excess of exports over imports will be arranged through London. A portion of the required amount will be met by sovereigns from Egypt and Australia, but there is no probability of gold for coinage coming in unless it can be attracted from Africa.

20 The exports from India to Africa are negligible, and gold attracted from Africa will have to be paid for in London.

21 Assuming that gold can be attracted profitably from Africa to pay the balance due to India from London, that is to say, that freight, insurance, and time in transit from African mines to Bombay compare favourably with charges and time in transit from mines to London, and that in exchange for the raw gold, currency can be obtained as quickly and economically as in London—there is no doubt the balance of trade in India's favour may be paid by gold attracted from Africa. But if this operation is possible to put through profitably it follows that all gold from Africa will follow the same course, Council bills will be unsaleable, gold will accumulate, and the exchange will be driven against India until a point is reached when it will be more profitable to ship the gold direct to London from Africa. To meet all objections arrangements might be made to receive gold at the mint and to issue rupees in exchange therefor without legislating for the minting of gold coins. Such an arrangement would meet a possible need in time of scarcity—enabling those with gold in any form to turn it into coin of the realm. If it were found that gold came in too freely, the arrangement could be rescinded more easily than the closing of the mints to coinage could be.

22. Under existing arrangements sovereigns are obtainable if required at the currency offices. Although they are now used as currency to a considerable extent in some places, the receipts are larger than the demand, and it is only by selling Councils below gold point that accumulation can be kept within reasonable limits. Receipts then being larger than the actual demand, it remains to consider whether it would be to the interest of India to force gold into active circulation. The disadvantage of so doing is the strain that would be imposed in London just at the time when gold is being withdrawn for Egypt. Stringency would ensue which would react on the Indian export trade.

23 There is no advantage in forcing gold when silver is acceptable. The demand is growing naturally and the danger is that the pace will grow too fast. The amount of silver in active circulation being so large there is no hope of saturating the currency for many years to such an extent that gold will come back from circulation when required to keep up exchange. Any gold which India can attract without upsetting the markets in gold-using

countries should be carefully conserved in the reserves. Gold is preferable to silver as currency only because it is more portable, but 'notes' are more portable than gold, and it is to the more extensive use of notes as currency that all energy should be directed. The larger the note-issue the larger will be the gold reserve that the Currency Department can carry, and such gold will be at hand when required to meet foreign obligations, whereas if forced out into circulation it will not come back in any large volume when required.

24. In the Madras Presidency disbursements of gold to the public have been considerable, and in addition native bankers import a constant stream of gold from Bombay, yet with the exception of the Native States of Cochin and Travancore, to which places the Bank of Madras alone has sent over 1,500,000*l.*, the amount of gold in active circulation is negligible.

25. Proof is not possible, but the inference is strong that so far the gold put out goes into hoards and jewellery.

26. The native of India is no less desirous of making his capital fructify than peoples of other countries, and the reasons for his propensity to hoard gold must be looked for in other directions than the love of his women for fine ornaments.

27. Among these reasons I would put in the front rank the desire to provide for wife and daughter, a provision a Hindu cannot make under existing law of succession except in the form of ornaments and coin. The Mahomedan law of succession is different, but owing to the purdah custom a form of provision that can be under the immediate control of the person to be provided for is preferred. In this Presidency those following the Murumukattayan law of inheritance make provision for their sons in gold, and this in part may account for the absorption of gold by Cochin and Travancore. Gold is also the only means available for making a settlement which will provide for the family in case of failure in business or loss of capital through other calamities. As Western ideas gain favour, therefore, the greater will be the propensity to hoard until a state is reached when the law of succession and the purdah custom break down.

28. The reason for hoarding being so strong it is apparent that the forcing of gold into circulation and thereby making its acquisition simple is fraught with danger.

#### V.—The Formation of a Central Bank

29. Since the last inquiry on Indian Currency and Finance in 1898 the Presidency Banks have made great progress —

	March 1898		May 1913	
	Capital and Reserve.	Private Deposits	Capital and Reserve.	Private Deposits.
	Rs		Rs	
Bank of Bengal -	283½ lacs	439 lacs	385 lacs	1,608 lacs
Bombay - -	165 "	238 "	206 "	978 "
Madras - -	70 "	210 "	146 "	861 "
	518½ "	887 "	737 "	3,447 "

An increase of 42 per cent in capital and reserve, and of 283 per cent in private deposits, the deposits in the Bank of Madras, the smallest of the three, being now only Rs 26 lacs less than the total deposits of the three Presidency Banks 15 years ago.

30. In spite of this great development there is the annual recurrence of an 8 per cent bank-rate, followed later for some months by a 3 per cent rate, showing that banking facilities are imperfect.

31. The chief cause of the great fluctuation is the inelasticity of the currency, accentuated by the withdrawal from active currency by Government of vast sums just at the season of the year when the movement of crops demands an increase. This season, with an 8 per cent bank-rate ruling in the three Presidencies, no less than Rs 20 crores (13,300,000*l.*) were so withheld from the market.

32 The remedy for many of the financial ills from which India suffers is the formation of a Central Bank, a bank that would command the full confidence of the Government of India, formed with private capital, the present Presidency Banks being the nucleus. It would have a London office with local boards in London, Bombay, and Madras, with its head office and central board in Calcutta.

33 All Government balances in India and London should be deposited with it. Branches should be opened at all places where there is a head quarters treasury, and cash, therefore, which had been withdrawn from circulation for payment of Government revenue, would immediately be available again for trade purposes.

34 With a chain of branches all over the country the bank could finance without movement of coin a very much larger proportion of the trade than can be financed under existing conditions, and thus reduce the amount of active currency required.

35 The paper currency should be transferred to the bank, and under such control the circulation could be largely increased with a corresponding reduction of the amount of coin in active circulation. Against the increased circulation gold (or sterling bills) would be held in the reserve, where they would be available when required to keep the exchange steady, instead of as at present being lost in hoards, from whence they will never be forthcoming when exchange falls. The bank should also have powers to increase the fiduciary issue within limits, the power to include the issue of notes against sterling bills. This would enable the bank to ease the market either in London or India. With unfavourable conditions in London Council bills would not be sold, but sterling bills would be rediscounted for the Exchange Banks in India. If tight money in India followed, notes would be issued against these bills, the revenue coming in all the time being made available for trade through the bank. With such conditions it would be immaterial whether the Secretary of State's balance in London or the Government of India's balance in India were the larger, as being with the same bank they would be available where most required. Gold would not be unnecessarily withdrawn from London, but all Indian balances would first be devoted to finance India's trade and public loans.

36 The capital for such bank need not be more than Rs. 15 crores (10,000,000*l*) with power to increase.

The following comparative statement may be of interest —

	Capital and Reserve 1	Liabilities to Public. 2	Per-centage of 1 to 2 3	Specie Reserve 4	Per-centage of 4 to 2 5
	£	£		£	
Bank of England - - -	17,700,000	95,000,000	18.6	31,500,000	33.1
Bank of France - - -	9,000,000	258,000,000	3.5	156,000,000	60.5
Imperial Bank of Germany -	12,600,000	163,000,000	7.7	52,000,000	31.9
Suggested Central Bank of India.	10,000,000	68,830,000	14.5	36,500,000	53.0

(The figures of the banks are taken from statements of December last)

37 The liabilities to public as shown against the suggested Central Bank include all liabilities of the three Presidency Banks and added thereto the active note circulation and estimated additional deposits by the Government of India. The Specie Reserve is the estimated specie with the Presidency Banks and specie held against the note issue.

## APPENDIX XXV.

NOTE SUBMITTED BY MR L G DUNBAR, SECRETARY AND TREASURER,  
BANK OF BENGAL, CALCUTTA

1 I have had the privilege of studying the memoranda prepared by Mr Lionel Abrahams, C B, on—

- (1) The Location and Management of the General Balances of the Government of India, and Sale of Council Bills and Transfers
- (2) The proposals for the establishment of a State Bank for India

2 All requisite information has, I think, been placed before the Commission fully and fairly by Mr Abrahams, and it seems unnecessary for me to say here more than that if the pronouncement of the Commission be in favour of the principle of a State Bank for India, the Bank of Bengal will be prepared to formulate a scheme for the establishment of a State Bank to undertake—

- (1) The duties of bankers to the Government of India and the charge of the Government Balances
- (2) The management of the Public Debt of India
- (3) The management of the Paper Currency
- (4) The management of the Gold Standard Reserve Fund
- (5) The establishment of a London office of the Bank to conduct the sale of drafts and transfers on India to meet the requirements of the Secretary of State, the purchase and sale of securities, the lending out at interest of surplus balances, and generally to undertake banking business of the highest class

3 In my opinion the capital of a State Bank for India should not exceed 5,000,000*l*, *i e*, Rs 7½ crores paid up, and the Bank should be formed if possible by an amalgamation of the existing Presidency Banks

## SUPPLEMENTARY NOTE

Bank of Bengal, Calcutta,  
10th June 1913

TO THE SECRETARY TO THE ROYAL COMMISSION ON INDIAN FINANCE  
AND CURRENCY

SIR,

I HAVE the honour to inform you that, in nominating Mr L G Dunbar, Secretary and Treasurer, Bank of Bengal, to give evidence before the Royal Commission on Indian Finance and Currency, the Directors of the Bank of Bengal desire to place Mr Dunbar's expert knowledge and experience of banking and finance in India at the disposal of the Royal Commission. But they wish it to be clearly understood that any opinions expressed by Mr Dunbar are his own personal views, and cannot in any way be binding either upon the Board of Directors or upon the shareholders of the Bank of Bengal.

The Directors, however, do authorise Mr Dunbar to say that they agree with the broad principles enumerated in the letter of 28th May 1913, addressed by the Bengal Chamber of Commerce to the Royal Commission,\* and if the pronouncement of the Royal Commission be in favour of the principle of a State Bank for India formed by the absorption of the three Presidency Banks under a reconstructed Bank, the Directors will, in consultation with the Government of India, at once take steps to formulate a scheme and lay the same before the shareholders of the Bank of Bengal for their consideration and approval.

Mr Dunbar has arranged to start for England on the 26th current and is due to arrive in London about 12th proximo.

I have the honour, &c,  
(Signed) C E SHORROCK,  
President, Board of Directors, Bank of Bengal

\* See Appendix XXVI, page 601

## APPENDIX XXVI

STATEMENT OF EVIDENCE SUBMITTED BY CHARLES CAMPBELL MCLEOD,  
ON BEHALF OF THE BENGAL CHAMBER OF COMMERCE, AND AS CHAIRMAN OF THE  
EAST INDIA SECTION OF THE LONDON CHAMBER OF COMMERCE

1 I desire to say that I am in accord with the despatch No. 997—1913, dated Calcutta, 28th May 1913, addressed to the Secretary to the Royal Commission on Indian Finance and Currency by the Bengal Chamber of Commerce, a copy of which is attached hereto (*see* Note A, page 601)

2 Briefly summarised, they state that they are of opinion that the existing Currency System is working satisfactorily, and that they are opposed to any changes which do not clearly demonstrate in a practical way that it could be strengthened and improved by any such change

3 They also recommend —

- (a) That the Gold Standard Reserve should be held in London, that no maximum limit should be fixed in respect of it, that a portion of it should be invested in gold securities, or placed on short loan, as at present, and that at least 5,000,000*l.* should be held in gold,
- (b) That the existing system whereby the Secretary of State sells Council bills and transfers in excess of his needs, in order to meet the convenience of trade, should be continued,
- (c) That the practice of loaning some portion of the Government balances to bankers, at interest, is reasonable and should be continued,
- (d) That no steps should be taken at present in the way of coining gold—either the sovereign or any other gold piece—in India, but
- (e) That, should it be decided for reasons of sentiment to coin gold, a branch of the Royal Mint should be established in India for the coinage of British sovereigns, and that no attempt should be made to introduce any other gold coin into India,

and they give clear evidence in support of such contention. To these I would add my support, and in addition I would like to make the following remarks

*Central State Bank*

4 I do not think that an institution of this kind is necessary at present. To begin with, I am of opinion that it would be quite impossible to efficiently control such an institution from one centre, and especially in a vast country like India, where different races have different forms and different ideas of banking. Moreover, with the present Paper Currency in the hands of the Government, there does not appear to me to be any reason for establishing a State Bank. The three Presidency Banks, with the Exchange Banks and the Indian Joint Stock Banks have, up to now, fully met the demands of Indian trade, and are capable of considerable expansion. The premium on the shares of the three Presidency Banks clearly indicates that they are capable of extension, and that capital for a very large increase would be readily subscribed in India. The same would no doubt apply to the Indian Banks, while the Exchange Banks have shown that they have increased their capital and reserves to meet the demands of trade as it increases. It would also, in my opinion, be inadvisable to give an institution of this kind a monopoly of Indian banking.

5 What I think of greater importance is that the attention of Government should be directed to the encouragement of co-operative societies, in order to help the agriculturist and to relieve him of the burden of the usurious *bumia* and money-lender. A system of this nature would greatly benefit Indian trade, and help to develop more fully the natural resources of the country.

*Capital Expenditure.*

6 I refer to this under the heading of Railway Finance. The policy of "extra caution" is carried too far, and sufficient attention is not given to the consideration of well-considered schemes for irrigation, and capital expenditure on railways. Looking to the relative position of the market price of India  $3\frac{1}{2}$  per cent paper, which stands at 96 per cent in Calcutta, as against 87 in London, it would appear that there are periods when capital borrowing in India is more advantageous.

*Sale of Council Bills and Transfers*

7 The existing practice has worked well, and has, I consider, been well handled. So long as Government secure gold value for the sale of these bills and transfers, I do not see why there should be any restriction to the full extent of trade demand.

*Gold Standard Reserve*

8 The amount to be held in actual gold should not I think be laid down rigidly. At present a minimum of 5 million would appear to be sufficient, but this might quite reasonably be increased to 10 million in future, as the volume of trade increases. The present system of utilising balances by investing a portion in easily realisable securities, and advancing funds on approved first-class securities, is in my opinion sound and prudent.

*Gold Currency and Coinage*

9 The advance made in the circulation of gold coins in India has not been very rapid, and is confined to the Northern and Western Circle. If gold currency is to become general in India it must necessarily be a slow process in a country accustomed to silver, and at present I do not see that any advantage would be gained by pushing it too rapidly. I am not in favour of coining gold in India. It is not required at present, and the process would be an expensive one; but if coining in India is decided upon, it should be in the most convenient form, and that is the sovereign. A departure to a 10-rupee gold coin would not in my opinion be a sound move, as it would not be of any use for export, while it would tend to destroy the standing of the sovereign, which has now become an international coin, moreover it would undoubtedly encourage "hoarding." There are millions among the Indian classes who could not afford to hoard sovereigns, but who might be tempted to hoard gold coin of lesser value, and there are many millions who would make use of the 10-rupee gold coin as ornaments who would not similarly use the more valuable sovereign.

*Purchase of Silver*

10 From recent experience it seems highly desirable that purchases of silver should be more regular than intermittent.

*Financial Organisation and Procedure of the India Office*

11 Without offering any criticism, I would like to suggest that the Financial Committee of the India Office should be composed of the following,

viz —

- (1) An ex-Civilian who has held the position of Financial Minister in India
- (2) An Indian Presidency Bank Manager
- (3) A London Joint Stock Bank Manager
- (4) A retired Exchange Bank Manager
- (5) A Mercantile Man with considerable Indian experience.

*Indian Railway Finance*

12. The question of Indian railway finance is one that deserves the closest attention at the hands of the Royal Commissioners, seeing that Indian railways have become perhaps the most valuable and remunerative

asset the State possesses. It is an asset which would become still more valuable if satisfactory arrangements were made for providing the capital necessary for its development. It is a factor which is not only in itself remunerative, but renders possible the development of other businesses in India. In this connection, it may be convenient to refer back to March 1907, when Lord Morley received two deputations from the Indian railway companies, and from East India merchants respectively, on the subject of the alleged inadequacy of the existing arrangements for railway traffic and railway finance in India. I had the honour to appear as one of the deputation of East India Merchants. Lord Morley was so impressed with the representations made to him that he appointed a Committee with Sir James Mackay (now Lord Inchcape) as chairman, before which Committee I gave evidence.

13 The Committee's report, dated 5th March 1908, was an exhaustive one, and dealt with every phase of Indian railway administration and finance.

14 Several witnesses before that Committee gave their opinion that the 30,000 miles then open would be, in the near future, increased to 100,000 miles, and the Committee, from the evidence before them, stated —

“ We believe that even their estimate of mileage is short of what will ultimately be found to be necessary in India, and we are convinced that there will be fruitful fields for large reproductive expenditure on railways in the country for years to come ”

The mileage open at present is 33,484 miles.

15 The average annual expenditure that could then be advantageously and profitably incurred was estimated by several expert witnesses to be from 10,000,000*l* to 21,000,000*l* annually, and the Committee finally recommended an expenditure of 12,500,000*l* annually for eight years. If the recommendation had been acted upon, Indian railways would have been in a very different condition to that in which they are now, as I pointed out to the Secretary of State on 10th June 1912, and 3rd June 1913, when he received a deputation from the East Indian Section of the London Chamber of Commerce on the subject of the congestion on Indian railways, due to want of adequate financial arrangements. I annex copies of what I said on both of these occasions.

16 The amounts actually expended for the last five years have been as follows —

	£	
1908-9	10,045,071	} Including lines under construction and rolling stock
1909-10	8,384,694	
1910-11	7,445,928	
1911-12	7,865,206	
1912-13 (revised)	10,214,100	

The average annual expenditure has been 8,790,999*l*.

17 During some years the expenditure has been less than the grant given by Government. The reason of such “lapses” is that the amount of the grant has not been known soon enough to enable the railway authorities to make satisfactory arrangements for the economical expenditure of the sums granted.

18 The whole Indian railway system is so dependent on well-considered financial arrangements that it is, in my opinion, necessary to recommend that a very much more liberal and comprehensive policy should be adopted. As a financial asset showing a rapidly increasing enhancement, there is no other enterprise connected with the Government of India which can compare with railways. The returns for 1912 show that after meeting all interest charges on capital outlay, annuity payments, &c., there was a net surplus of 5½ millions sterling. Omitting the item of annuity payments in redemption of capital which is not properly a revenue charge, the true result for the year is a net gain of 6½ millions, with a net addition of 645 miles to the open lines. The significance of such a rapid and substantial increase is surely sufficient to call for a more liberal and far-seeing policy.

19 The diagram accompanying the Administration Report<sup>1</sup> of railways in India for 1912 clearly shows how the gross earnings of Indian Railways are rising much more rapidly than the capital expenditure, and how remunerative increased capital expenditure has proved. The percentage of net earnings to capital expenditure has been most satisfactory over a long period of years.

20 Sir Guy Fleetwood Wilson, the late Financial Minister to the Government of India, in his last Budget speech, acknowledged the "immense significance" of our railways "as an instrument of general progress, then "necessity for development of trade, their growing, and indeed their momentous importance to the finance of India." He also adds "our responsibility "is all the greater now that they have attained a position of supreme "importance in our financial system."

21 It is a matter of regret that he deprecated, on the same occasion, "any departure from a policy of the utmost caution in railway finance," while at the same time he was dealing with a record surplus return from these railways.

22 I have no hesitation in stating that if the recommendation of the Committee appointed by Lord Morley in 1907 had been carried out, the figures would have by this time shown a very much larger return, and the benefit to the trade of India, as a whole, would have been immense.

23 The railway finance policy has for many years past been very far behind the times. Traffic has overtaken the railways and left them behind it. The demands on Indian railways have quite outgrown the provision made for their betterment and extension, and, it appears to me that if a very drastic change is not made in the arrangement for the regular provision of funds for railway expenditure, India will suffer and her rapidly increasing industries be throttled.

24 The latest reports of Indian railways show a remarkable series of increases in traffic. During the period (nine months) which the several reports cover, the Bombay Baroda traffic increased 200,000 tons, the Great Indian Peninsular 482,100 tons, and the East Indian 1,128,500 tons.

25 In the report issued by the Great Indian Peninsular the following statement appears —

"In the nine months under review Rs 59,99,377 have been spent in quadrupling the line at the Bombay end, in doubling the remaining sections of the Nagpur branch, and in adding to the capacity of station yards, and the same activity must continue until the line is in a position to carry what is offered to it."

26 If the Government finds itself unable to supply the financial wants of the railway system, it is open to them to transfer a part of their interest in Indian railways to companies working the railways, who could supply their own capital in such a way that their action would not interfere or compete with Government issues.

27. Mr Robertson, after full inquiry into the system of management of railways in India, came to the conclusion that it would be to the benefit of India that Government should lease all the State railways to companies for them to work, and a similar conclusion was arrived at by the Committee on Indian Railway Finance and Administration, which sat in 1908 under the presidency of Sir James Mackay (now Lord Inchcape), and the adoption of this policy would, by freeing them from the cares of management of the State railways, probably enable the Railway Board more efficiently to develop the Indian railway system as a whole to meet the rapidly growing needs of India.

28 The "annual programme," carrying with it an annual allotment, has many objections. It does not allow for a sufficiently broad view to be taken of what is required by the railways. To enable the railways to arrange a comprehensive and economical programme of development, it is necessary that they should have an annual allotment fixed over three or five years of the minimum amount they would have, with such additional amounts given each year, as Government may find possible. This

\* Published at Simla by the Government Central Branch Press

would enable each railway to work economically in carrying out the more important works. The leading companies are most anxious to improve the efficiency of their railways, and only lack the necessary funds for doing so.

29. In this connection I am strongly of opinion that a connecting link between the Railway Board in India and the Financial Department would be of material advantage.

30. It is argued that the difficulties of arranging finance for a period of three or five years is inconvenient, but I would point out that it has never been attempted, nor can I see where any serious difficulty presents itself with such a valuable asset to work upon, and a security that can be pledged, if necessary, outside of the ordinary circle of Indian loans.

31. With the expansion of irrigation schemes, and the natural progress of the trade of India, the call for transport will become more urgent and insistent, and if a policy of foresight is now pursued it will be possible for railways to keep pace with the increase, while on the other hand an over-cautious policy of railway finance will only lead to an aggravation of the difficulties now experienced, and the ultimate cost of setting matters right will be enormously increased.

32. In dealing with railway finance it should be borne in mind that it is equally necessary to help the financial position of the principal ports, which have lately been quite unable to cope with the increased traffic.

33. Finally, I would respectfully urge that the Royal Commission should invite the following gentlemen to give evidence on this most important question of railway finance —

The Right Hon. Lord Inchcape, G C M G , K C S I , K C I E

Col. Sir William Bisset, K C I E , R E

Sir Frederick Upcott, K C V O , C S I (East Indian Railway)

Mr John Manson (Bengal Nagpur Railway)

Mr Robert Miller

Mr A Breiton, C S I (Government Director of Guaranteed Railways)

C C McLEOD

APPENDIX A.

*Bengal Chamber of Commerce.*

Royal Exchange Building,

No 997—1913

Calcutta, 28th May 1913

FROM THE SECRETARY, BENGAL CHAMBER OF COMMERCE, TO THE SECRETARY  
TO THE ROYAL COMMISSION ON INDIAN FINANCE AND CURRENCY

SIR,

I AM directed by the Committee of the Bengal Chamber of Commerce to address you with reference to certain of the subjects which will be investigated by the Royal Commission.

2. When addressing the Indian Currency Committee of 1898\* the Chamber took strong exception to the proposals which the Government of India had made in March of that year. The object of these proposals was to force the rate of exchange more rapidly to 1s 4d. for the rupee. Stated very briefly, they were that a gold reserve should be formed by borrowing; and that, if necessary, the redundancy of the currency should be reduced by melting down silver rupees. They were not accepted by the Currency Committee, who recommended that the British sovereign should be made legal tender in India, that the permanent rate of exchange should be 1s 4d. for the rupee, that the Indian mints should be opened to the unrestricted coinage of sovereigns, that the exclusive right to coin new rupees should be

\* Letter No. 793 dated 16th June 1898, from the Bengal Chamber of Commerce, to the Secretary, Indian Currency Committee. (C 9376, pp 17-18)

vested in the Government of India, and that the profit on the coinage of new rupees should be kept in gold as a special reserve, apart from the Paper Currency Reserve and the Treasury balances. The recommendation that the sovereign should be made legal tender in India was put into operation as from the 15th September 1899. The rupee and the half-rupee, although still remaining unlimited legal tender, thereupon became practically token coins with a value of one-fifteenth and one-thirtieth of a sovereign respectively. The Gold Standard Reserve Fund, to which the profits on the coinage of new rupees were credited, was established as from the 1st April 1900. But the proposal that the Indian mints should be opened to the unrestricted coinage of gold has not yet been acted upon.

3 The Chamber of Commerce, in the letter that I have quoted, fully recognised that the attainment of fixity of exchange was an object of primary importance. And it subsequently acquiesced in the adoption of the measures recommended by the Fowler Committee, as being calculated to attain this end without the disadvantages attaching to the proposals of the Government of India. There is no need to trace in detail the steps that have since been taken to strengthen, and to improve, the system which was thus inaugurated. But, as representing mercantile interests, the Committee cannot fail to be struck with the enormous growth of trade which has accompanied stability of exchange. They do not suggest that the Gold Standard has been the cause of this unexampled development. But it may be, they think, safely assumed that the commercial community, however much they may have been divided in opinion prior to 1898, are now in no way antagonistic to the main principles of a currency system which has brought about fixity of exchange, and under which such marked prosperity has been possible.

4 Although time has thus justified the establishment of the Gold Standard, and falsified the fears of its opponents, the Chamber has recognised for a number of years past that there are numerous questions connected with it which require further examination and elucidation. A consideration of these questions led the Committee nearly six years ago to recommend the Government of India to move for the appointment of an expert Commission of inquiry. They took exception to the formation, in 1906, of what, until within the last few weeks, has been known as the Silver Branch of the Gold Standard Reserve. Similarly they objected to the diversion to railway capital expenditure of a moiety of the coinage profits. It also seemed to them that the Government were pursuing a hesitating and vacillating policy in the matter of the limit at which the Reserve should be fixed. And they considered that an expression of expert opinion upon the important question of the form in which the Reserve should be held would be of great service both to the Government and to the public.

5 It is, the Committee feel, a matter for regret that their recommendation was not accepted, as much of the controversy which has since arisen might have been thereby avoided. For although at the time they had specially in mind matters relating to the Gold Standard Reserve, the currency question as a whole would doubtless have been examined by the proposed Commission. The matters to which they referred are included within the scope of the present investigation, and they therefore take this opportunity of communicating the views of the Chamber upon the more important of them. It has been urged in some quarters, since the establishment of the Gold Standard Reserve Fund in 1900, that the Reserve should be kept in gold in India. With this view the Committee are not in sympathy. In their opinion the Reserve must be held in London, and, as they pointed out in 1907, it would not be a business proposition to hold a sum of upwards of 20,000,000 in gold coin, or bullion.

6 They maintain that the Reserve must be held in London, because London is the place where it will be required in time of crisis. At such a time imports will be in excess of, or will balance, exports, and Council bills and transfers will be unsaleable. Exchange will fall, and the Reserve will

\* Letter No 1457, dated 6th September 1907, from the Bengal Chamber of Commerce to the Government of India, Finance Department (Appendix V, pp 172-4)

be brought into active operation. In the crisis of 1908 sterling bills were sold by the Government of India, on the Reserve, to the extent of 8,058,000*l.*, and the rupee currency was contracted by Rs 1,200 lakhs. If the Reserve had been held in India the gold would have had to be exported by the Government, for there is no substantial private export of gold from India when the silver exchange begins to fall. If it is held in London the gold becomes available at once to support exchange. Moreover, the effect which is produced on exchange by selling bills is precisely the same as if gold were exported. Commercial opinion in Calcutta is therefore clearly and strongly in favour of the location of the Reserve in London.

7 With reference to the form of the Reserve the Committee do not, as I have indicated, support the view that it ought to be held entirely in liquid gold. The investment of a portion of it in gold securities is economical, and they do not advocate that the interest should be sacrificed. They are fully alive to the argument that in a crisis gold securities may possibly be difficult of realisation. But it is not necessary to assume that there must be a heavy depreciation of sterling securities at precisely the time when the Indian exchange calls for support. The existing system came successfully through the crisis of 1907-08, the interest derived from the securities considerably exceeding the loss on their sale. The Secretary of State has recently decided to raise the sterling assets of the Reserve in London to 25,000,000*l.*, and to hold 5,000,000*l.* of this amount in gold\*. For the present a sum of 25,000,000*l.* is probably sufficient, but the Committee would object to it being regarded as the maximum. They take the view that no maximum limit should be fixed, and that the coinage profits should continue to be added to the Reserve. They would also like to see a larger sum than 5,000,000*l.* held in gold.

8 The general cash balance of the Government of India, like the Gold Standard Reserve and the Currency Reserve, has a rupee branch and a sterling branch. The latter is held in London, and the former in India. The enormous growth of the sterling balances during the last four years has furnished matter for much recent criticism. The causes of this great development will be, it is understood, investigated by the Commission, and the Committee of the Chamber desire, therefore, to express their views on the subject. They have given much consideration during the past twelve months to the charges which have been brought against the management of the India Office balances. The charges apparently amount to this—That many millions sterling of Indian money have been improperly withdrawn from India, that these sums have been extracted from the taxpayer in excess of the requirements of the State, that they have been withdrawn from India for use in London, not in pursuit of Indian interests, but for the convenience of English Joint Stock Banks, and that they have been loaned to these banks at an average rate of interest of little more than 2½ per cent per annum, while the average rate of interest in the Indian Presidency towns has been above 5 per cent.

9 The Committee of the Chamber have no hesitation in saying that they cannot associate themselves with these charges. In so far as the general cash balance of the Government of India represents the excess of revenue over expenditure it may be said that the money has been extracted from the taxpayer, and, generally speaking, excessive cash balances may be of course regarded as evidence of over-taxation. But the India Office balances are derived almost entirely from (a) the proceeds of the sale of Council bills and transfers on India, and (b) the proceeds of loans issued in London for providing capital expenditure for the Indian railways. The practice of selling Council bills and transfers in excess of the Budget estimate of the Secretary of State's requirements has been followed for many years, with the consent and approval of the commercial community in India. So far as the Committee of the Chamber are aware, it has never been suggested until recently that the practice is antagonistic to the interests of India. On the contrary, mercantile opinion has always favoured the sales as being a convenience to trade. Nor can the Committee understand how it can be said that the proceeds of the sales have been improperly

\* Financial Statement, 1913-14, para. 48. (H C 130 of 1913, page 16.)

withdrawn from this country, for the equivalent number of rupees have been liberated from the Indian treasuries and have passed into circulation. The purchasers of the Council bills and transfers do not want gold, but rupees and notes, in India, and if they were forced to ship gold they would exchange it on its arrival for rupees and notes. The only result of discontinuing the sale of Council bills and transfers would thus be that the Government would be forced to receive in India a large quantity of gold, part of which they would have to re-export to England later on to purchase silver for the coinage of new rupees. Such an extravagant procedure as this would be does not commend itself to the Chamber.

10 The practice of loaning the balances to London bankers has occasioned a great deal of adverse comment, but the Committee of the Chamber do not think that exception can be reasonably taken to it in principle. They would certainly object to any proposal for allowing the balances to lie idle in London, and they seriously question if it would be possible to lend large sums in this country. The difficulty in India is the provision of the necessary security, for, except in the case of the Presidency Banks, security of the class offered in the London money market is not forthcoming here to any great extent. That branch of the general cash balance which is held in India is also, like the India Office balances, greatly inflated at present. To suggest a satisfactory method of dealing with it is not easy, but the Committee incline to the view that a partial solution might be found if transfers from revenue to capital expenditure were governed by principles somewhat less rigid than those that are understood to prevail in the Finance Department.

11 The question of coining gold in India has been very carefully examined by the Committee of the Chamber for some time past. It was, as I have already mentioned, one of the recommendations of the Indian Currency Committee of 1898 that not only should the British sovereign be made legal tender in India, but that the Indian mints should be opened to the unrestricted coinage of sovereigns. The Government of India at that time desired to act upon this recommendation, and in 1899 they put forward definite proposals for the establishment of a branch of the Royal Mint at Bombay. These proposals were not, however, proceeded with. Administrative difficulties arose in connection with the proposed branch, and in the meantime the Indian gold-mining companies had made arrangements for the regular sale of their gold outside the country. The question was not again brought prominently forward until it was raised in the Imperial Legislative Council in March 1912, when a resolution in favour of the opening of the Indian mints to "the free coinage of gold in coins of suitable denominations" was moved. The resolution was withdrawn, but in the following May the Government of India asked the Secretary of State to permit them to open one of the Indian mints, preferably that at Bombay, to the free coinage of British sovereigns.\*

12 Unfortunately the Government of India did not consider it to be necessary to consult commercial opinion before renewing this particular recommendation of the Fowler Committee. The Indian Chambers of Commerce did not therefore have an opportunity of expressing their views upon it until the publication, at a later date, of the official correspondence. The Secretary of State did not apparently regard it with much favour. He pointed out that the difficulties with reference to the Royal Mint still existed, and in the result he suggested that it might be desirable to produce at one of the Indian mints a separate Indian coin of the denomination of, say, Rs 10. This course would be, his Lordship said, inexpensive, it would avoid the intervention in Indian coinage operations of the British authorities, and there was reason to expect that the coin would "satisfy such currency requirements as are not met by the present facilities for obtaining sovereigns, rupees, and notes."

13 The foregoing seems to the Committee of the Chamber to define the position of the question at the moment. So far as they are concerned they do not consider that it is necessary to coin either the sovereign, or any

\* Despatch No 110, dated 16th May 1912, from the Government of India to the Secretary of State for India (H C 490 of 1913, page 57)

other gold piece, in India at the present time, and they believe that they are supported in this view by commercial opinion generally on this side of India. Judging from the despatch dated 16th May 1912, the Government of India recognise that gold flows freely into India for the adjustment of trade balances, and that its local coinage would not accelerate the flow. They believe, however, that the sovereign would tend to become more popular if it were coined locally, and that the opening of a local mint would be likely to attract the bullion which is now hoarded in the country, as well as some part of the bullion which is annually imported. They point out also that, although gold coin may be readily converted into bullion in India, there are no facilities for reversing the process. By the adoption of their proposal a free movement would be established, they say, between coin and bullion in both directions. And the effect would be, in their opinion, to swell the volume of sovereigns in the hands of the people, and to increase their active circulation. Such an increase in the circulation would diminish the pressure on the Government of India for the coinage of silver, it would reduce their responsibility for the convertibility of the rupee, and would thus simplify exchange problems.

14 The Committee of the Chamber confess that they are not greatly impressed by these arguments. They think that the Secretary of State took a sounder view of the position when he said, in reply to the Government of India, that "having regard first to the ease with which holders of gold bullion in India can as a rule exchange it for currency whether sovereigns, notes, or rupees, if they wish to do so, and secondly to the probability that the gold imported into India is so imported because it is preferred in that form rather than in that of coin, the adoption of your proposal would not be likely to have any considerable effect of the kind that you anticipate." There is no doubt in the mind of the Committee of the Chamber that the effect of the proposal which the Government of India have made would be negligible so far as regards the objects they have in view. It is of course an admitted fact that the intention in 1893 was that the Gold Standard should be supported by a gold currency, and the first step in this direction was taken when the sovereign was declared to be legal tender. It was doubtless desirable at that time that the Government should signify their intention of coming sovereigns, as a proof that they meant to adhere to the Gold Standard. But after 1893 the position changed with great rapidity. The Gold Standard was soon firmly established, and sovereigns were readily attracted to India. They have continued—except for the break in 1907-08—to flow in until at the present time there is as the Government of India themselves admit, a very large accumulation in the Currency Reserve.

15 The sovereign is undoubtedly being more extensively used as currency in Northern India, in Bombay, and in part of Madras. But the Committee cannot accept the view that it has yet established itself as a part of the currency, nor do they believe that its coinage locally would tend appreciably in that direction. The receipts of sovereigns\* at post offices and railway stations are a fair indication of the extent to which the coin enters into the daily transactions of the people. But these figures seem only to suggest that when India is prosperous, and can afford to import gold, the people use it to liquidate some of their transactions. It is also evident that, without the aid of a local mint, they can command a larger quantity of gold than they require, for the accumulation in the Currency Reserves proves conclusively that the supply is more than sufficient to meet the

\* Receipts of sovereigns at Post Offices and Railway Stations

Years	Post Offices.	Railways.
	£	£
1907-08 - - -	1,358,000	1,045,000
1908-09 - - -	1,001,000	710,000
1909-10 - - -	265,000	134,000
1910-11 - - -	638,000	597,000
1911-12 - - -	1,363,000	1,222,000

demand. On the other hand there seems to be no reliable estimate of the quantity of gold which would be available for coinage. India is of course a producer of gold to a limited extent, but it is understood that her supplies are not available for the Indian mints. And even if she were a considerable producer a mint would not be apparently a necessity, seeing that South Africa—the largest producer in the world—has no mint.

16 As I have already explained, the Committee do not consider that the coining of any gold piece should be at present undertaken in India. To compel the Indian taxpayer to meet the cost of producing sovereigns when the number of these coins already in the country is in excess of requirements appears to them to be an ill-advised policy. To coin a distinctively Indian gold piece, smaller than a sovereign, would be also in their opinion a mistake. The objections to such a coin were clearly defined in the Government of India despatch dated 16th May 1912 (*see* H. C. 495 of 1913, page 57), and they are, the Committee think, conclusive. The mere fact that for a long time to come an Indian coin would have to be treated as bullion when exporting is of itself a convincing argument against the proposal. If the coining of gold is to be undertaken at all, the Chamber would strongly urge that the recommendation of the Currency Committee of 1898 be followed, and that the British sovereign be coined at a branch of the Royal Mint to be established in India.

17 The Committee have not thought it to be necessary for them to deal with a proposal which has been made recently in the course of the public discussion of the currency question. This is that gold should be the principal currency of India, and that silver should be restricted in amount as legal tender. The Government of India definitely stated, in the despatch quoted in the last paragraph, that the coining of gold would not involve any "disturbance of the ordinary course of our recognised and established currency procedure." And although it may be that eventually silver will be restricted as legal tender, that eventuality seems to the Committee to be so far distant that there is no need for the matter to be considered at present.

18 Finally, I am to notice briefly the proposal for the establishment of a central State Bank in India. Those who support this proposal claim that a State Bank would extend the circulation of paper money, that it would make the Government cash balances in India more readily available for the financing of Indian trade, and that it would have other material advantages over the Presidency Banks. It is not the intention of the Committee to discuss these points at present. Nor do they wish to offer an opinion on the project, as at this stage they prefer to keep an open mind. But the questions which will arise in connection with it are of considerable intricacy, and the Committee suggest that, if an authoritative pronouncement is to be made upon it, the Royal Commission will require to take evidence, not in London only, but in the Presidency towns of India also. It is admitted that advantages would result if a great State Bank could be formed by the amalgamation of the Presidency Banks. There are, however, two outstanding difficulties that will obviously require examination. The first is that a central Bank would be unwieldy. In discussing Indian financial questions it must not be forgotten that India is more than a country. It is a continent with many races and communities, who differ widely from each other in their commercial interests and banking customs. And it has been found in actual practice that, from a purely money-lending point of view, the spheres of influence into which the Presidency Banks have grouped themselves leave little to be desired. The second objection is as to the location of the central control. To the Committee of the Chamber it is obvious that the control of such an institution as a State Bank could only be satisfactorily and remuneratively exercised from either Calcutta or Bombay. This side of India would naturally insist upon Calcutta, and Western India would presumably urge the claims of Bombay. The arguments in favour of Calcutta are identical, it may be noted, with those which have weighed with the Government of India in deciding to retain the office of the Head Commissioner of Paper Currency in this city.

19 It will be evident from what has been written that the Committee of Chamber are of opinion that the existing currency system is working satisfactorily, and this being their view they are disposed to deprecate changes which may or may not be calculated to strengthen and to improve it. Their recommendations, briefly summarised, are as follows —

- (a) That the Gold Standard Reserve should be held in London, that no maximum limit should be fixed in respect of it, that a portion of it should be invested in gold securities, or placed on short loan, as at present, and that at least 5,000,000*l* should be held in gold,
- (b) That the existing system whereby the Secretary of State sells Council bills and transfers in excess of his needs, in order to meet the convenience of trade, should be continued,
- (c) That the practice of loaning some portion of the Government balances to bankers, at interest, is reasonable and should be continued,
- (d) That no steps should be taken at present in the way of coining gold—either the sovereign or any other gold piece—in India, but
- (e) That, should it be decided for reasons of sentiment to coin gold, a branch of the Royal Mint should be established in India for the coining of British sovereigns, and that no attempt should be made to introduce any other gold coin into India.

I have, &c,  
H. M. HAYWOOD,  
Secretary.

#### APPENDIX B

*Extract of remarks made by C C McLeod, Chairman East Indian Section, London Chamber of Commerce, who waited upon the Secretary of State with a Deputation on 10th June 1912*

1 My Lord, I must in the first place ask you to accept our grateful thanks for consenting to receive this small deputation from the Indian Section of the London Chamber of Commerce, when we well know how valuable your time is. The deputation is a small one at your request, but is no criterion of the great interest taken in the question. I venture to hope, however, that when we have put our case before you, you will recognise that the question is one of great importance and pressing necessity.

2 The shortage of wagons and rolling stock on Indian railways is not a new phase—it has been more or less acute for the last fifteen or twenty years. It has been the subject of several enquiries, and a very strong case was put before your eminent predecessor, Lord Morley, in March 1907, by a deputation of Chairmen and Directors of Indian Railway Companies, accompanied by a deputation of East Indian merchants from the London Chamber of Commerce. Lord Morley appointed a Committee to enquire into the causes, and increased the allotment to a considerable extent, but the effect was short-lived as we find ourselves in a very much worse position to-day than we were at that time—now fully five years ago.

3 It is very difficult to describe the effects of the present congestion, and the losses incurred all round. In Calcutta the shortage of coal-wagons has been most acutely felt. Many of the jute mills during the last two or three months have had only a few days' stock of coal in hand, whilst steamers often took from seven to twenty days before they were properly loaded with coal. The evidence of Colonel Gracey (who recently visited India, and who is Chairman of the Bengal and North-Western Railway) in a recent speech, is to the effect that he found all the stations choked with goods owing to the want of rolling stock. Such evidence, coming from one possessing his expert knowledge and mature experience, is reliable and conclusive. He considers the railways are losing money, because they are not properly equipped with sufficient wagons and rolling stock. Lord Curzon, during

his term of office as Viceroy of India, was so struck with the force of the arguments put forward by the Bengal Chamber of Commerce, that he deliberately curtailed railway extensions in order to provide more funds for increasing rolling stock and doubling lines

4 The letter of the 21st May last, forwarded by Messrs Ralli Brothers, and signed by a number of important East Indian merchants, acknowledged by you on the 28th ultimo, points out very clearly that the Indian railways are quite unable to cope with the traffic, and that conditions obtaining at present are as bad, if not worse, than they ever were, owing to the scarcity of wagons and rolling stock, and also to other causes which require investigation. We have also evidence by recent advices that consignments of seeds and grain are being refused at stations on the Bengal and North-Western Railway, where their line is already blocked with stocks of grain piled up on the stations, and quite unprotected. A joint telegram was received from the Chambers of Commerce of Bengal, Bombay, and Karachi on the 28th May, a copy of which was forwarded the following day to you. It read as follows —

“Bengal, Bombay, Karachi Chambers earnestly request Indian Section protest energetically to Secretary of State regarding inability of Indian railways to handle traffic. Congestion in every direction and present position deplorable owing to insufficient funds for equipment having been allotted for some years. Largely increased grants for several years indispensable. Consider present method financing railways unsuitable, merchants and trade generally seriously inconvenienced. No immediate relief apparently possible. Question must be dealt with promptly or Indian trade and agriculture will seriously suffer in future. Trade requirements now far ahead of railway facilities.”

Also the following from the Indian Mining Association, Calcutta, on the 14th May 1912 —

“Indian Mining Association heartily endorses your action. Wagon shortage position growing worse, remedial measures urgent, no action yet taken by Government.”

And on the 6th instant from the Bombay Chamber of Commerce —

“Regarding your interview with Lord Crewe, June 10th, reference Administration Indian State Railways. This Chamber strongly emphasises present difficulty as due to insufficient funds having been allotted for equipment, doubling of lines, efficient water supply, larger stations and marshalling yards and increased facilities generally for moving traffic. Abnormal increase number of wagons to be deprecated until railways are equipped efficiently to deal with them. Important question is that lines should be thoroughly equipped for working traffic, and for this largely increased funds necessary over series of years to complete comprehensive programmes. Present supply wagons can do much more work if this is done. Higher interest might be offered for loans for this special purpose.”

5 This is surely conclusive proof, coming from these three great centres of commerce and sent with the full sense of the importance of such a communication, that some strong and prompt measures are urgently necessary. From the point of view of the railways themselves, I would venture to point out that the advantage would be very great, and if I may be permitted to quote the following figures, they will, I think, explain themselves.

6. The average gross earnings for the four years ending with 1896 was about 2½ crores, and loss to the Government was 204 lakhs of rupees. In 1910 the gross earnings reached nearly 5 crores, on the other hand the loss to Government ceased with the year 1901, and since then the gain has steadily risen, and for the last eight years shows, I believe, an average of about 200 lakhs, thus proving conclusively that a generous policy in connection with the equipment of Indian railways would be well repaid.

7 The trade and commerce of India has shown a continuous increase for many years, and there is ample evidence that the facilities for handling it by the railways are now, and have always been, inadequate. I need

hardly point out that this state of things is calculated to throttle growing industries in that vast country, and prevent the natural expansion which is so essential to its prosperity.

8 I may add, my Lord, that opinion is somewhat divided as to whether a large increase in rolling stock would meet the difficulty if it were not accompanied by better facilities for handling the same. I make this qualification as it is well known and understood that "congestion" on railways does not necessarily mean an actual scarcity of wagons, but rather an accumulation of wagons at changing stations and terminal points, which prevents them being made use of up and down the line. The principal causes which lead to this cannot be put down solely to insufficiency of rolling stock, but may be easily accounted for by want of forethought and unpreparedness, by insufficient capacity in the line itself, due to want of sidings to permit of expeditious crossing of trains, or to inefficient watering arrangements, which increases the stoppage of trains at roadside stations, or it may be due to insufficient facilities at terminal points. It is most important, however, to have this point settled definitely. To do this efficiently, it would be necessary in my opinion to appoint experienced special officers to go into the whole question on the spot, and to report fully on this very important point, and I find this view is one that commends itself very strongly to those who are interested. It would be desirable that the reference should be specially directed to ascertaining the methods by which the existing rolling stock may be more quickly handled, as well as the carrying capacity of existing open lines, and to endeavour if possible to form a definite opinion as to the adequacy or otherwise of the rolling stock and present facilities, both for existing traffic or increased traffic that is likely to be handled in the near future.

9 The question of speeding up freight trains would also require looking into, as evidence adduced in Calcutta at a recent discussion showed that the average speed of coal trains was only about 6 miles per hour, and the "Sind Gazette" of the 15th May states that the average speed at which goods trains are now travelling between the Punjab and Karachi is only about 3 or 4 miles an hour. In the meantime we would strongly urge that the number of wagons under orders should be augmented by an "urgent" addition of at least 3,000 wagons.

10 To summarise our requests, they come to this—

- To appoint two or more officers experienced in railway traffic handling to investigate and report as to whether the congestion all over India is due to actual shortage of wagons, or inefficient handling
- To provide an "urgent" supply of wagons as indicated
- To consider the question of reserve wagons
- To consider the advisability of discontinuing extensions of new lines, consolidating available funds towards increasing the efficiency of existing lines
- To consider the proposal by the Bengal Chamber of Commerce as to the quadrupling of the line between Asansol and Bandel
- To consider the quadrupling of the Great Indian Peninsula line from the "Ghats" to Bombay, and providing additional sidings and crossings to facilitate transport into Bombay

This, my Lord, closes my case, and after my colleagues have spoken we will look forward with hopeful anticipation to receiving an assurance from you that we have not approached you in vain.

## APPENDIX C

*Extract of Remarks made by C C McLeod (Chairman, East Indian Section, London Chamber of Commerce), who waited upon the Secretary of State with a Deputation on 2nd June 1913*

1 My Lord, I have again to express to you our great satisfaction for the interest you have shown in this important question of the congestion on Indian railways by consenting to receive a small deputation to-day

2 In order to arrive at the very grave importance of this question, I trust you will permit me to refer to our interview on the 10th June last year on the wider question of congestion all over India, as akin to the smaller, yet no less important, subject to which I shall venture to call your attention to-day in connection with the Bengal coal-mining industry

3 In replying to the deputation on 10th June 1912, your Lordship expressed sympathy with the case as we then put it before you, and we gratefully acknowledge the efforts that have been made in the interval in meeting our reasonable demands. The appointment of Sir Henry Burt as an expert to inquire into the causes of congestion at various centres has given lively satisfaction, and the statement which, with the permission of the India Office, I telegraphed to India last January, that 12 millions would be provided for the 1912-13 programme, also caused general satisfaction, if only as an indication that the important question was being seriously considered and dealt with.

4 But, my Lord, you will pardon me if I state with all sense of responsibility, and based on inquiries recently made by me personally in India itself in February and March last, this annual sum of 12 millions is quite inadequate. Such a sum might have been sufficient had it been available annually from 1907 till now. It is, however, quite insufficient to overtake the arrears in provision of equipment and betterment of open lines and to develop fresh areas. The traffic has increased, and is likely to further increase, to such an extent that provision will have to be made for much larger grants, not less than 15 millions a year should be provided for the next five years if the prosperity of India is not to be seriously hampered and her growing industries throttled. Moreover, my Lord, the manner in which the grants are made tends to minimise their utility so much that the effect of spending large sums within a specified period is partially lost. I refer to the practice of an annual Budget for expenditure within the financial year, and the "lapses" which must frequently occur when the period between the sanctioning of estimates and the conclusion of the financial year is sufficient to enable all the money to be economically spent. I am aware that your Lordship has sanctioned some relief in permitting a portion of the orders for English material and stores to be placed prior to the commencement of the financial year. If, however, this arrangement could be extended, and a programme over a period of three years considered and funds allotted, I feel confident that the Railway Board in India and the Boards of the various Indian railway companies in London would be able to utilise the funds in a much more effectual way, as they would be in a position to arrange in advance for a continuously constructive and expansive policy, which the present system of allotting funds precludes them from doing.

5 The mercantile community in India is alarmed and uneasy as to the result of the statement made by the Financial Member of the Governor-General's Council in reference to the railway programme in his last Budget speech, urging caution in regard to railway expansion and expenditure. In view of the effect such a statement may have on the Home Government, it is my duty to point out that trade expansion in India during the past four years has shown beyond doubt that any such fears are groundless, and it may not be out of place to point out here that if the expansion of Indian exports continues on the average of the past 10 years the trade may easily double itself in about 12 to 15 years, a possibility that requires not only a bold railway policy, but also a bold and far-seeing policy of port expansion to meet it.

6 An instance of this procedure is shown by the announcement made by the East India Railway alone, consequent on the issue of the Coal Conference Report, when the agents of that company authorised their agent in Calcutta to submit to the Government, for early sanction, a revised capital programme covering the financial years 1913-14, 1914-15, and 1915-16, to include the following special additional works and rolling stocks —

10,000 wagons with corresponding number of engines and brake-vans.

The remodelling of the Howrah goods yard, at present at Howrah, to another site lower down the river

The construction of a direct double line from Burdwan to Howrah, having necessary connection with the proposed new coal yard

The doubling of the existing line from Dhanbaid to Katrasgarh

The addition of a third rail, making two down lines from Burdwan to Bandel

They also propose the construction of a large marshalling yard at Bandel and certain other minor works, the whole programme involving an outlay roughly estimated at Rs 7½ crores, or, say, five million pounds sterling

They considered this important programme necessary and if such a programme is sanctioned, and provision made for the necessary funds, an important move in the right direction will have been accomplished. If, on the other hand, the programme has to be cut down for want of funds, the position will become more serious than ever. I have no doubt the same would apply to the Bengal, Nagpur, and other important railways

7 I now come, my Lord, to discuss the question of the memorial, dated 4th November 1912, from the Indian Mining Association in Calcutta. It sets out its own case so clearly that comment from me would only be taking up your valuable time to no purpose, but I would like to emphasise the statements therein contained by adding that they were carefully considered by the leading business men in Calcutta, with a sense of the importance of such a communication, and if your Lordship has had time to peruse the printed minutes of the meeting attached to the memorial, you will, I venture to think, arrive at the conclusion that the demands of the Bengal coal trade are not unreasonable, as the result of the Conference held in October clearly and definitely shows. That Conference was presided over by the President of the Railway Board, with the senior Government Inspector of Railways, the Railway Board Mining Engineer, the Vice-Chairman of the Port Trust, representatives of the largest Indian railways, the President of the Bengal Chamber of Commerce, and two members of the Mining Association. Their report covers 90 pages of printed matter, and embodies no less than 50 recommendations, covering the points of complaints. These recommendations involve large sums of money, and I would especially plead that your Lordship should consider the very great importance which the carrying out of these improvements means to the coal industry, and not only to this industry alone, but to many others which are dependent for their existence on regular supplies of fuel. The memorial has behind it the support of every Chamber of Commerce in India, who recognise that this great industry is being throttled, for want of transport facilities, to which they consider they are entitled. It may interest you to know that the largest railway system in India, the East Indian Railway, derives over 40 per cent of its large earnings from coal traffic

8 There are several further points that require consideration in connection with what I have said. The manganese ore merchants, owing to want of facilities for transport to Bombay, requested a levelling of the transport charge to Calcutta to enable them to utilise that port if opportunity offered, but I understand that the point was not conceded, owing to some opposition from the Bombay side. It is not my province to urge the claims of Calcutta against Bombay, or *vice versa*, but on broad lines it is my duty to mention any points which might tend to relieve the tension on railway congestion. Owing to the cheaper freights from Bombay to Europe, Bombay must always have this trade on equal rail charges, but

I consider it desirable that manganese ore merchants should be allowed to have access at the same charge to an alternative port when the railway leading to the other port is congested

9 Another point that presents itself is the report openly stated that railways on the western side of India have contracted for coal supplies from South Africa, due, it is asserted, to the uncertainty of direct supplies from Indian collieries, and this, your Lordship will admit, is a serious matter to these collieries, more especially as their inability to supply coal is directly due to want of transport facilities

10 I will leave my colleague, Sir Ralph Ashton, to deal with the more technical part of the memorial, as he was Chairman of the Indian Mining Association for many years, and a special member on the Viceroy's Imperial Council when the Mining Act was under consideration

11 It may not be out of place to mention, my Lord, that there is a growing feeling that if some or all of the State-owned railways were made over to companies, who could make their own financial arrangements for increased capital, irrespective of the effect it would have on Government securities, the position might be relieved without material loss of revenue to the Government, a revenue which is annually increasing and assuming very large proportions

12 This was recommended by Mr Robertson, after a full inquiry into the system of railway management in India, and again emphasised by the Committee appointed in 1908, under the presidency of Sir James Mackay (now Lord Inchcape)

13 We are fully aware of the difficulties Government have in arranging finances on the considerable scale that the very necessary reforms on Indian railways require, but we hope and trust that a special effort will be made to meet these demands liberally, in order to avert the danger that is now threatening the many growing industries in India generally, and the coal trade in particular, which is so acutely dependent on railway transport

14 I would like to add that I received the following telegram from Calcutta on Saturday —

“Since presentation of memorial there has been no substantial improvement in wagon supply. Consequently stocks of coal at collieries are heavy. Railway Board meantime purchasing foreign coal largely for this and next year. It is rumoured that scheme for development of railway-owned collieries is to proceed.”

---

## APPENDIX XXVII.

---

STATEMENT OF EVIDENCE SUBMITTED BY MR THOMAS SMITH, CAWNPORE  
INDIAN EXPERIENCE EIGHTEEN YEARS, FOR SEVENTEEN OF WHICH HE WAS AGENT  
OF THE ALLAHABAD BANK, LTD., AT CAWNPORE AND CALCUTTA  
A FORMER VICE-PRESIDENT OF THE UPPER INDIA CHAMBER OF COMMERCE,  
CAWNPORE

### I—Balances

1 During the years 1910, 1911, and 1912 the balances in London were abnormally high. That they were deliberately accumulated, as has been wildly suggested, for the convenience of the London Money Market or a certain interested section, and to the hurt of India, no reasonable person will allow

2 These balances accrue under conditions difficult to gauge, and, in the case of loans raised, may represent a large temporary addition. Keeping in

view the complexity of regulating them, the only criticism of importance that I would offer is that the India bills paid off in December 1912 might well have been paid earlier

3 When the balances were at their highest, in June 1911 and June 1912, India can scarcely be said to have suffered any hardship, for none of the money was wanted there, and could not have been employed in the dull season, while in London a rate can always be obtained

4 It is possible, however, that in the busier months in India a portion could have been employed to better advantage than in London and for the future such investment is worth trying I deal with this later under the subject of Banking

5 Between the very low balances of a little over a million following the crisis of 1907-08, and the very high balance of 19,000,000*l.* in June 1911 and 1912, there would seem to be a happy medium which it should be the aim of the India Office to achieve

6 So far as the balances in India are concerned, they appear to have been more or less normal save in 1913, when they were exceptionally high

## II—Banking

7 I do not favour the creation of a Central Bank in India The size of India is against the efficient working of such a bank As Sir T W Holderness observes India is a continent, not a country, and a continent of infinite variety It is not one country as we know countries in Europe, but many countries It is larger than Europe without Russia

8 Three of these "countries" may be said to be Bengal, Bombay, and Madras, where the Presidency Banks have located themselves, and it may truly be said that the nature and the business of each is of "infinite variety" Each has a distinctiveness of its own, the rate in each is often different, *e.g.*, on 2nd July the rates were 4 per cent, 5 per cent, and 6 per cent respectively † Each aims at the needs of its particular sphere, and all three banks have prospered In their separate working they have developed along their own lines, with an intimacy born of a specialised study of their own sphere, they have adapted themselves to new opportunities, and all for the best The prosperity of each has been an incentive to the other This healthy rivalry would be lost in a Central Bank, nor would the control of a Central Board, even with sub-boards in each Presidency, be as efficient as at present Initiative and the sense of responsibility are more likely to be prominent in a separate and independent board

9 In 1867 the need for a State Bank was advanced We have got on very well without it and so have the banks themselves Since then their capital and reserves have more than doubled, while their deposits are six times what they then were

10 In 1898 the proposal was again revived, when it was urged that such a bank was necessary for "the success of the recommendations of the Currency Committee" As the carrying out of these recommendations has been handled with ability by the officers of Government under difficult circumstances, and is being adequately performed under present arrangements, the case for a State Bank has not been made out

11 I consider the existing banking facilities capable of adequate expansion on present lines The growth of banking deposits in the Presidency, Exchange, and Joint Stock Banks in the ten years ending 1910 from 23,646,000*l.* to 51,875,000*l.*, or at the rate of 132 per cent, is evidence of expansive power It is a hopeful sign to see money in the country flowing freely to the banks for investment The increase, too, has been achieved in spite of a reduced rate of interest allowed by the banks, varying from  $\frac{1}{2}$  to 1 per cent. in the case of the Presidency, Exchange, and the larger Joint Stock Banks Banking in India is yet in its infancy, and with the great industrial awakening greater developments must be looked for. But there is one dark spot: mushroom

\* Pages 13-15 of "Peoples and Problems of India," by Sir T. W. Holderness, K.C.S.I., published by Williams and Norgate in the Home University Library

† Since reduced to 3, 4, and 5 per cent.

institutions calling themselves "banks," with excessive nominal share capital but little paid up, have been springing up with amazing rapidity. Writing to the Upper India Chamber of Commerce in 1910 urging legislation, I said of them—"They are 'banks' only in name, and are trading on the confidence of the depositor who is little versed in money matters but is attracted by the name 'bank' and wishes to earn some interest on his small store. They constitute a real danger, because if one fails others will follow, and the timid depositor, unable to discriminate between the sound and the unsound concerns, will make haste to get back his money from whatever bank it is in, and his confidence in banking institutions, thus rudely checked, will take years to win back."

12 Addressing the Sixth Industrial Conference at Cawnpore last year, I spoke at greater length of these "banks" and the need for banking legislation. A copy of the address, taken from the "Pioneer," is appended for reference (see page 618).

13 Legislation seems assured and it will not come a moment too soon. With it we may look for a more healthy development of joint stock banking in India, and, if I mistake not, a continuous growth in the banking capital available for the development of the country's industries.

14 The Exchange and the better Joint Stock Banks may very naturally view with suspicion the establishment of a Central Bank. They are fulfilling an important rôle in financing the trade of the country, and the interposition of a Central Bank would conceivably arrest their progress.

15 Below are the deposits and rate of increase for the decade ending 1910—

	1901	1910	Rate of Increase
	Lakhs of Rs	Lakhs of Rs	Per cent
Presidency Banks - - - -	1,463	3,234	121
Exchange Banks - - - -	1,183	2,431	105
Joint Stock Banks having more than 5 lakhs capital and reserves	900	2,566	185
Rs	3,546	8,231	

16 In consequence of the high bank rate in India at certain seasons of the year, it is sometimes urged that banking facilities are insufficient. But it is too often forgotten that for as many months in the year money is a drug on the market, and bankers' swollen balances are a nightmare to them. Temporary borrowers must expect to pay for their finance in the busy season, for they only make use of it for the short time that it suits them, and then throw it back on the banks. A steady borrower all the year round can get his requirements in the vicinity of 6 per cent, which does not compare at all unfavourably with the same borrower from the home banks. In well banked Scotland, the average rate for overdrafts during the last three years has been 5½ per cent. The average rate of the Bank of Bengal is usually about 6 per cent. At present the rate is 3 per cent as against the Bank of England rate of 4½ per cent, while in Scotland the rate for cash accounts has been 6 per cent since 17th April last. Rates for steady advances in India have fallen 1½ to 2 per cent in my experience of 18 years, while the interest allowed on deposits has fallen, generally speaking, 1 per cent.

17 Relief to the money market in the busy season would be afforded by loans to the banks from the Government reserves and balances, but a Central Bank is not needed for this. It might be convenient to fix a limit of Rs 5 lakhs as the minimum amount to be loaned, any bank depositing sufficient Government securities to be accommodated, the loans not to exceed three months, and to carry interest at a rate to be fixed by Government from time to time, but approximately 5 per cent.

18 In a measure the sale of Council bills in excess of the Secretary of State's requirements gives relief in this respect, but at the same time it should be possible to borrow direct in India. Government have expressed

the view that such loans are not advisable, as (1) borrowers might default and the sale of securities might injure the annual Government loans, and (2) the calling in of large loans might be difficult and dangerous. These seem to be mistaken fears, with the class of borrowers contemplated, there would be little possibility of default, or of Government loans being jeopardised, and as the advances would be time advances the banks would regulate their arrangements accordingly.

19 I see no necessity for any change in the conditions now prescribed for the Presidency Banks. They can make a fairly wide use of their present limitations. Some years ago they sought access to the London money market, but general opinion was against this.

### III—*Capital Expenditure*

20 I think more loans might with advantage be raised in India. Roughly, only half of the rupee debt is held by Indians, politically it would be good if they had the opportunity of holding more, and the raising of more loans in India might have this tendency. But I do not consider that India could provide more than an occasional loan of, say, 4,000,000*l.*, in addition to the annual loan of roughly two to three crores, while for larger borrowings at any time London must be looked to. Unfortunately during the last 10 years India Stock has shown a rapid decline, 3½ per cent. Stock having fallen from 109 in 1903 to 87 in 1913. Much of this must have been in sympathy with the fall in Consols and other gilt-edged securities, some of it may have been due to "unrest", or it may be that we have been asking London for too much. I have not the latest figures available, but am under the impression that in the last 10 years, say, borrowings in Stock have increased at twice the percentage of rupee borrowings. If that be so, further issues of moderate amount might be tried in India.

### IV—*Sale of Council Bills and Transfers*

21 I approve of the existing practice in regard to the sale of Council bills and transfers. These sales work smoothly, they satisfy the requirements of trade, in that rupees and notes which are required in India are released there against gold paid in London, and they are economical, inasmuch as they obviate the expense of the actual export of gold from London, and its subsequent re-export from India.

I do not favour the transfer of the business of exchange to a Central Bank.

### V—*Exchange Value of the Rupee.*

#### (a) *General*

22 The fixing of the rupee at 1*s* 4*d* has been of benefit to the trade of India, and the enormous increase in trade must in large measure be attributed to the fixity of exchange. The ruin which it was thought by some in 1898 would overtake tea, cotton and opium, has not yet come about. The tea industry has prospered, cotton mills have increased 40 per cent in number and capital, while opium is dying by other means than exchange. Fixity of exchange has justified itself. I do not favour a return to the free coinage of silver.

23 The large sums of gold annually absorbed by the Indian public may be regarded as proof that much of this is passing into hoards. In the last 10 years about 70,000,000*l.* in bullion and 57,000,000*l.* in sovereigns seem to have passed into the hands of the public. How many of the sovereigns remain in circulation it is difficult to say. Circulation is increasing, but the increase is more marked in the Punjab, I think, than elsewhere. In the busy season my experience is that remittances from Cawnpore to Delhi are in sovereigns only. In Cawnpore they pass freely. I remember in 1899 or 1900 when they were generally at a discount of two to four annas, but the Cawnpore bazaar in the main takes rupees. I have noticed, however, that sovereigns sent to a cotton district in the United Provinces do not return. Presumably, after payment of revenue, &c., the cultivator retains the balance,

being his profit, and hoards them as was suggested by Mr. Gillan in one of his reports. Ram Bux is probably beginning to realise that his savings are better held in sovereigns than in silver rupees, and I think there is little doubt, as Mr. Gillan further suggests, that many sovereigns go into the melting pot. They can be more readily got than gold bars and in smaller quantities than bars, and their weight and value are known. Indians have told me that they like sovereigns for these reasons and because the alloy in them gives the ornaments a durability exceeding pure gold.

24 The sale of Council bills at 1s 4½d per rupee must tend to keep gold from coming to India. In so far as this diminishes the supply of gold in India available for the public demand, and in so far as that demand is for circulation and cannot be met, the action may be said to keep gold from circulating in India.

25 On the whole I favour the opening of a mint in India for the free coinage of gold. I believe it to be one step further in the development of our currency system. I am in agreement with the views of the Government of India on the subject. I do not approve of a 10-rupee gold coin, it would be little bigger than a half-sovereign, and this coin does not find favour in India. The coin to be minted should be a sovereign identical with the British sovereign.

(b) *Gold Standard Reserve*

26 I concur in the necessity for a special Gold Standard Reserve. On no account would I favour, at present, the use of the profits on coinage for ordinary or capital expenditure. The prudent course is to utilise these profits in strengthening the Reserve, and no diversion of these profits to any other purpose should meantime be countenanced. Anything that strengthens the Reserve conduces to the stability of exchange—the supreme object to be kept in view. The stronger the Reserve, the less need would there be of recourse to a special loan. Such a loan would indeed go badly in a crisis like that of 1907-08 and India would suffer.

27 I would place no limit at present up to which the Reserve should be accumulated. Ten years hence or so Indian currency affairs will most probably again come under review, and it will then be time to take stock of the position and say whether the Gold Standard Reserve is sufficiently high. Till then, I would let it go on being steadily added to. If there be error in the treatment of the Reserve let it be on the side of safety.

28 I do not approve of the diversion in 1907 of over 1,000,000l from the Reserve towards railway development. For the reasons stated above I think it was wrong. It was contrary to the explicit recommendations of the Fowler Committee. That it was retrograde is shown by the fact that such a diversion has not been repeated. The mistake should be wiped out by a re-transfer to the Reserve. The Reserve should be held partly in gold and rupees and partly in securities. The balance on 31st May last was over 22,500,000l, of this, under 1,750,000l was held in gold, and 1,000,000l at short notice. In my opinion these amounts are too small. About 16,000,000l was invested in British and Colonial Government Securities and Corporation of London Bonds. I consider this too large, and in proportion to the total fund it is excessive. Circumstances might necessitate the sale of a considerable portion at a most awkward time, with resultant loss. Probably the desire to earn a larger interest on the Reserve has actuated these investments, but interest is of secondary importance.

29. I would suggest that the Reserve be held as follows —

Half in gold or rupees, the bulk to be held in London in gold only, while gold or rupees may be held in the Indian Branch, as circumstances warrant.

Half to be invested in securities, short loans, &c, in London, but, preferably, in short loans.

30 The silver branch of the Reserve has, I think, been justified, and in normal times it can be kept at a moderate limit, but the bulk of the fund should be held in London. It is there that it is wanted, for the maintenance

of exchange, and it is there that it will be required in a time of stress. The Secretary of State has it at hand for his requirements when exchange is against him, and, on the other hand, it is available for Calcutta drawings on him, thus obviating the necessity for the actual export of gold from India, if the bulk of the Reserve was located there.

31 The gold held in London should be ear-marked at the Bank of England.

(c) *Paper Currency Reserve*

32 With the growth in the Note issue—the circulation having doubled in the last 12 years—I consider the invested portion might with advantage be increased beyond the 14 crores now prescribed. Instead of increasing periodically by stated amounts, as has been done in the past, I think it might be provided that one-third of the total note issue may be held in securities. On present figures this would mean an increase of the invested portion by 50 per cent. This extra investment to be in sterling securities, and, preferably, in loans in India to banks in the busy season.

33 I do not think it would be expedient to attempt to fix the relative proportion of gold and silver in the metallic portion of the Reserve. Sir Edward Law, in his Memorandum of 1904, gave it as his opinion that, roughly, one third of the Reserve should be held in rupees, but in the years 1908-10 this proportion was exceeded, and rose to two-thirds and over. Accumulation of gold must take place at times when silver is in demand, since Government undertakes to give Rs 15 for a sovereign. The location of part of the Reserve in gold in London is justified by the advantages it possesses.

34 I do not favour handing over the Paper currency to a Central Bank. For banking purposes I consider that such a bank is not at present required. Still less is it needed for the control of the currency, which has been efficiently managed by Government. If it is the intention that such a bank should issue the notes, I venture to think that these would not for many years carry the confidence which the existing "Sirkar's" notes do, and the recent marked development in note circulation might be seriously checked.

(d) *Purchases of Silver*

35 It would probably be beneficial in the long run to make regular purchases of silver throughout the year to meet normal demands.

36 Coinage would appear to have been excessive during 1906 and 1907. The heavy demand for rupees in 1905 in some measure justified the large coinage of 1906, but the same justification does not appear to exist for the activities of 1907.

VI—*Financial Organisation and Procedure of India Office.*

37—(1) The practice of placing deposits with certain "approved Banks" has a tendency to single out and "hall-mark" these banks. Would it not be possible to widen the range of competition and put all on an equal footing by requiring security for the deposits? The rate received would probably be less, but this might be negligible by reason of the wider competition.

(2) Could deposits and short loans not be made direct by the India Office on some such principle as the sale of Council bills? When the Secretary of State has money to lend he could notify it and receive applications. The rich emoluments of the Government broker—14,723l. in 1910-11 and 8,615l. in 1911-12—who is not even a whole-time official, must make many a hard-worked civilian sigh for such a paradise.

(Sd) T. SMITH.

## NOTE TO THE EVIDENCE OF MR THOMAS SMITH

Extract from "The Pioneer" of 12th April 1912

## THE SIXTH UNITED PROVINCES INDUSTRIAL CONFERENCE, CAWNPORE

*Banking*

A notable paper was read at the Cawnpore Industrial Conference on the 8th instant by Mr T Smith of the Allahabad Bank, who strongly urged the necessity of legislation as a check upon the mischiefs brewing in the multiplication of mushroom banks. He said—

2 As many of you know, the decision to include a discussion on banking in to-day's proceedings was only arrived at a few days ago. My remarks, therefore, must necessarily be in keeping with the briefness of the notice I received. There is perhaps no subject more closely identified with industrial development than the subject of banking. It is to the banks and bankers that industries must mainly look for their finance, and accordingly as money flows freely to the banks so will industries profit thereby. It is surely of high importance that our banks, who are the money gatherers and distributors, should command the highest confidence, that by pure and sound management they should offer the best security to their depositors and shareholders alike; and that implies lending on the best security to borrowers. It is in its two-fold duty to shareholders and depositors that a bank differs from a trading concern. The latter asks the confidence of the shareholders only, and the law now recognises that something more must be done to protect him. The Company's Act is now being revised and it is hoped that when passed into law "fools and their money" will be less easily parted. Special legislation has also been undertaken for insurance and provident societies, and most will agree that it has come not a moment too soon.

3 But what of the banking depositor? The insurer pays only his small monthly or yearly premium, and, if things go wrong, he can "cut his loss" and run. But the banking depositor may be staking his all—his savings of a lifetime. I am not speaking of the big, wealthy man, for he has generally other interests and can find other avenues of investment. I am thinking of the comparatively poor and uneducated man who looks round for an outlet for his savings and for a little interest on his store. He is attracted by the name "bank," and probably tempted by the high interest offered, and puts his all into something calling itself a "bank," but which in reality is only so in name. He is the man who deserves our pity. But why not give our protection first? It is to be regretted that the Government has not seen fit to deal specially with banking legislation. They admit the need but confess the difficulty. Signs are not wanting that the need is becoming more clamant, and the days before us will give volume to the cry.

4 We can see that the difficulty of legislating is great, but can also—and more clearly—see that the danger of not legislating is infinitely greater. If we turn to the figures, we find that the banking deposits in the Presidency Banks, the Exchange Banks and the Joint Stock Banks having over 5 lakhs of capital and deposits have increased in the last decade from 21,000,000*l* to 49,000,000*l* or by 133 per cent, while the capital and reserves combined have increased by 2½ million and stand at 7,000,000*l*. This is very gratifying and we trust is only a very modest earnest of the increase in the next ten years. But what does it amount to? These figures for the whole of India are eclipsed by individual banks in England. To take one only—Lloyd's Bank—they have a capital and reserve of about 7,000,000*l* and deposits of 84,000,000*l*, while the figures for the whole of India are only 7,000,000*l* and 49,000,000*l* respectively.

5 India, therefore, follows afar off, but she need not despair. Our banks have made and are making good progress. Some are well on the way and passing their milestones quickly. There are sturdy followers coming along and increasing their pace, but I fear there are many weaklings also who will not go far, and indeed, should never have started. It is these maimed and

decrepit ones who are blocking the way and must impede the pace. Many of them may be classed as cases of bad livelihood and handed over to the police. Unfortunately their numbers are growing, and we would like to see legislation which would render their existence impossible. They prey upon the innocent and are a snare to the unwary, and in a country like this, where so many are in ignorance of banking and commercial matters, there is all the more need for safeguarding the interests of the depositor. He needs it more than the shareholder, who generally speaking is a better informed man, and can generally be trusted to look after himself. The fear is that when disaster overtakes these so-called banks, the timid depositor, unable to discriminate between sound and unsound concerns, will make haste to get his money back from whatever bank it is in, and be chary of ever trusting his money to banking institutions again, and so the flow of deposit capital available for financing the country's industries may be seriously retarded.

6 The provisions of the new Act will help in certain matters, but we would like to see, as I have urged elsewhere, separate banking legislation defining what a bank really is, or at least making clear that an institution has no right to the name of "bank," and should not be registered as such which undertakes coach-building, thala and ekka repairs, medical attendance, the manufacture of soap and oil, and "certain things," from machinery, or engages in trade or manufacture of any sort, even though it be, as I saw it stated with great comprehensiveness in one prospectus, "the leasing or hiring or purchasing of all commodities and substances which can form the subject of purchase or sale."

7 The principle of a compulsory deposit has been accepted in regard to insurance companies. How much more necessary is it in the case of banks!

8 There should also be a compulsory provision for reserves, which would strengthen the security of both shareholders and depositors, restrictions as to investments, also, restricted transfer of shares for two or three years after starting, which would be an earnest of the faith and confidence of the promoters in the soundness of their scheme.

9 I have been brief, as I promised one word more, and I have done

Legislation may accomplish much, but much also may be done by you, gentlemen, towards the sound development of joint stock enterprise. As men of light and leading, you exercise great influence in your respective communities. You have achieved distinction in your own professions. Your names carry weight. See to it that you do not lend them idly to schemes and concerns that you know nothing about. Your name on the directorate may lure others to put their money in. Too much of this is evident at the present time. A concern is started, and there is much rejoicing at its birth. Everyone wants to proclaim himself the father of it, but, in a few months, the paternal interest wanes, and the poor weakling sickens from inattention, and dies. With difficulty the fond parents can be got together to give him decent burial and report his demise to the registrar, according to law. Too often it is forgotten, or not realised, that directors have responsibilities. Let me, gentlemen, as a humble toiler and well-wisher of the joint stock movement, say, it is not sufficient to give your name, though that, as I have pointed out, means a lot and may involve others in disaster. You must give more. You must give the best of your energies and judgment; you must count the cost, and see that you have the capital to meet it, you must get the best management, and not sacrifice the shareholders' interests by putting in a figurehead, merely because he is a friend of your own; you must never forget your trusteeship, and the duty it entails.

10 These, if you will allow me to say so, are some of the main defects observable to-day. They are telling their own tale, and are checking the progress of joint stock enterprise in the healthy development of the country's industries, which we have all so much at heart.

Surely it is time to profit by past failures and to rise to better things!

(Signed) T SMITH.

## APPENDIX XXVIII

MEMORANDUM OF EVIDENCE SUBMITTED BY MR M R SUNDARA IYER,  
SECRETARY TO THE MADRAS ECONOMIC ASSOCIATIONA -- *Indian Currency System.*

1 The suggestions made for the reform of the Indian currency system can be grouped under three heads —

I — Indian mints to be thrown open to the free coinage of silver as it existed before 1893 and India to revert back to silver monometallism

II — Indian mints to be thrown open to the free coinage of gold by the establishment of mints in India and silver to be reduced to the position of subsidiary currency. It is expected that this measure will lead to a large circulation of gold currency, resulting in a currency system similar to that which prevails in England and other advanced countries of Europe

III — The present system to continue with certain modifications

2 It is unnecessary to discuss here at length the first of these proposals. It has been fully discussed by the Fowler Currency Committee\* and the Committee concurred with the Government of India in the opinion that it would be unwise to re-open the mints to silver coinage.

3 There are two considerations (they are mentioned by the Committee) which make it impossible for India to go back to a silver standard —

Firstly the fact that four-fifths of the foreign trade of India is with gold standard countries, and so it is desirable that India should have the same measure of value as these countries.

Since that was written, the foreign trade of India has increased and some countries that had a silver standard then have now adopted a gold standard, and it is all the more necessary that India should not have a different standard from the other countries.

Secondly the report states that the establishment of a gold standard is the simplest and the most effective means of attracting capital. India stands more in need of British capital than it did 15 years ago. Recent figures of the London Money Market show that British capital is not flowing freely into India owing to causes which are too numerous to mention here. With the growth of the means of communication, the wide diffusion of commerce and the higher rate of interest offered by several of the Colonial Governments, capital is becoming more cosmopolitan and large sums are being invested in countries like South Africa, Argentine, &c. It is with the greatest difficulty India is able to raise in the London market all the money which she needs. Under such circumstances no one will seriously suggest the alteration of the standard into silver which will effectively prevent any money coming into India.

4 The second proposal, that the Indian mints should be thrown open to the free coinage of gold, has been very much discussed of late. The results claimed for this measure are so many that it is no wonder that many think that the free coinage of gold is the only solution of all the currency and financial difficulties of the Government of India. It is predicted that the following benefits will accrue once the mints are thrown open to the coinage of gold.

(1) There will be a large circulation of gold currency in the country.  
(2) India will have the same system of currency as prevails in England and other advanced countries of Europe and India will no longer be "a backward country with a primitive currency system."

(3) This measure will put an end to the State-managed currency system and Indian currency will be free from governmental control.

"India," says the mover of the resolution before the Viceregal Council, "is the only great country in the world, barring China, the

\* C 9390, page 5, para 17 et seq

“ management of whose currency is completely in the hands of  
 “ Government. However well managed it can never be as good  
 “ as an automatic currency which adjusts itself to public demands  
 “ After the mints are opened all the State will have to do is to  
 “ pay rupees in exchange for gold coin ”\*.

5 This resolution was seconded and supported by many other speakers in the Council and many seem to believe in the statement that the opening of the mints in India to the coinage of gold will lead to an automatic self-regulating currency system as it prevails in England with gold as the principal circulating medium and silver as a subsidiary currency.

6 Somehow or other neither the mover of the resolution, nor the Hon. Mr. Webb, who has been agitating for the same measure, explain how this measure will lead to the results which they anticipate.

A currency system with a large amount of gold currency in circulation without much governmental control as it prevails in England is one to be desired, though Mr. Fisher thinks that such a standard is not stable and that the recent rise of prices in England and other troubles are due to the gold standard.

If we have to begin a currency system *de novo*, gold monometallism may be the most convenient of all systems.

But how can a currency system which has a circulation of 180 crores of rupees and 60 crores of notes be converted into gold monometallism as it prevails in England? For a very long time to come, at least for a half-century, silver will have a larger circulation and gold currency will occupy only a very small proportion in comparison with the silver currency. If any gold is forced into circulation it will be immediately exchanged for silver.

7 Such a system can certainly not be automatic as the 180 millions of token rupee coinage will certainly require State management. So long as the token rupee and the notes are in circulation, so long the State must regulate the currency, and the rupee coinage and the notes will be necessary for a very long time to come.

In India for a long time to come gold can never occupy the position which it occupies in England. The multitude of transactions that must be settled with money of smaller denominations are so many that silver coins, rupees and its fractions, will always be convenient and will always be used in India. The gold coins will bear only a small proportion to the total mass of silver currency. All transactions will practically be in silver and the simple expedient of throwing open the mints will never ensure a large circulation of gold currency.

Secondly, in almost all the European countries where the legislature declared gold coins to be legal tender and standard of value, these countries had a very large stock of gold coins and very little of silver. Gold was principally the standard, and what the Governments did was to legalise gold payments by declaring gold legal tender and restricting silver coinage. In India the conditions are exactly the reverse.

8 Whatever period of its currency history one may examine, the silver imports and silver coinage were more highly excessive than the gold. Though the imports of gold were very high, the percentage of coinage was very little even during the periods when the mints were open to gold coinage. Of the total imports of silver a very small percentage was coined and of the coinage very little remained in active circulation. The following figures will explain my arguments.—

9—(a) In England gold currency was made the legal tender and sole standard of value in 1816. The coinage of silver was restricted in 1798 (38 Geo. III c. 59). The gold and silver coinage before 1816 stood thus—

Years.	Gold Coinage	Silver
1790-1815	£ 22,642,561	£ 1,640,000

In 1792, six years before there was any restriction of silver coinage, Lord Liverpool estimated the gold currency at 30 millions sterling and the silver currency at 3,960,000.

\* See Gazette of the Government of India for April 6th, 1912, Part VI., page 569.

The currency reform was very simple and the Government had simply to give legal sanction to the existing conditions

(b) The gold and silver coinage of France, some twelve years before the suspension of silver coinage, stood thus —

Years	(Millions of Francs)	
	Gold	Silver
1853-1864 - -	4784	137 ( 900 fine) 7 ( 835 fine)

Mr James Wilson in his minute on a gold currency for India, dated 25th December 1889, stated that since 1850 a sum equal to 130 millions sterling of gold has been coined at the French Mint and a corresponding amount of silver exported. At the time when the coinage of silver was suspended, on April 25th 1876, the Bank of France held in Paris 55 millions in gold and 21½ millions in silver and the coinage stood thus —

Gold	-	-	-	200 millions
Silver	-	-	-	80 millions
Notes	-	-	-	106 millions.

*Bullion in the Bank of France.*

	000,000 omitted	Gold	Silver
1863	-	119	72
1865	-	238	208
1870	-	429	60
1875	-	1168	504
1876	-	1379	546

It is unnecessary to discuss the currency history of other countries, but in almost all the countries, the stocks of gold bullion and of gold coins were very large as compared with silver

10 In India on the other hand, ever since the currency of the country was put on an uniform basis, the currency has been silver and the gold coinage absurdly small in proportion to the silver coinage. Silver and silver alone has been in demand for currency purposes and in spite of successive measures gold could not be got into circulation permanently. The figures from 1801 till recent years (which I have given below) will prove my statement. The result of such conditions is that India has been left with a very large mass of rupees in circulation. The silver circulation has reached as high a figure as gold in the European countries and what was easy in England or France is not possible in India and the minting of gold coins in India will certainly not bring about the desired result. In India till 1835 both silver and gold coins were legal tender and gold coins were received in the treasuries till 1853.

The figures for the silver and gold coinage stood as follows —

Years.	Gold Coinage	Silver Coinage
1801-1835 - -	₹ 11,060,148	₹ 63,631,833

These figures show the active circulation of gold during a period when gold was coined freely, a period which has often been referred to, to show the popularity of gold coinage.

In 1864 a notification was issued that sovereigns and half sovereigns will be received as equivalent to 10 Rs and 5 Rs at the public treasury and on the 28th October 1868 the rate for the receipt of sovereigns and half sovereigns was raised to 10½ Rs and 5½ Rs.

11 The following figures show the imports of silver and gold into India and their coinage in India after the notification of 1864 —

Year	Net Imports into India		Coined in India	
	Gold	Silver	Gold	Silver
1865-66 - -	5,724,476	18,669,174	17,665	14,501,049
1866-67 - -	4,188,195	7,936,693	27,725	6,118,857
1867-68 - -	4,607,329	6,157,989	21,534	4,313,285
1868-69 - -	5,159,352	8,601,022	25,156	4,207,031
1869-70 - -	5,592,117	7,320,337	78,570	7,455,281
1870-71 - -	2,282,122	941,337	3,994	1,606,751
1871-72 - -	3,565,344	6,532,376	15,412	1,735,288
1872-73 - -	2,543,363	715,413	31,795	3,930,751

In 1893, by notification, dated 26th June, sovereigns and half sovereigns were declared receivable at Government treasuries at the rate of 15 Rs and 7½ Rs and by Act XXII of 1899, passed on the 15th September 1899, sovereigns and half sovereigns were declared legal tender

While the circulation of rupees rose from 149 to 166 crores between 1893 and 1899, the circulation of sovereigns was nil, though the imports of sovereigns were very large —

Year	(In Rupees 000 omitted)	
	Imports of Sovereigns	Circulation of Sovereigns
1894-95 - - -	68,96	—
1895-96 - - -	1,71,83	—
1896-97 - - -	1,79,56	—
1897-98 - - -	2,61,95	—
1898-99 - - -	4,53,44	—

In 1899 the sovereigns were declared legal tender and though the imports of sovereigns were as heavy, the circulation of sovereigns was nil for four years

Year	(In Rupees 000 omitted)	
	Imports	Circulation
1899-00 - - -	7,98,56	—
1900-01 - - -	6,96,63	—
1901-02 - - -	7,15,07	—
1902-03 - - -	8,71,88	1,38,67

Let me contrast with this the rupee circulation for a period of 20 years before the closing of the mints when silver began to fall in value. —

Years	Rupee circulation	Crores of rupees.
1873-74 - - -	- - -	101
1878-79 - - -	- - -	118
1883-84 - - -	- - -	119
1888-89 - - -	- - -	133
1889-90 - - -	- - -	135
1890-91 - - -	- - -	139
1891-92 - - -	- - -	141
1892-93 - - -	- - -	149

12. The rupee circulation just before the closing of the mints stood at 149 crores and the average annual addition was 7 crores.

The mints were closed in 1893, and various agencies were employed to contract the circulation. But in spite of all these the rupee circulation could

not be restricted. The average annual addition to the currency when the mints were open was about 7 crores. It was hoped that the stoppage of an annual addition of this magnitude to the rupee currency and the gradual contraction of the currency which always, under the operation of ordinary causes occurs, such as the withdrawal of coins reduced below the current weight by wear and tear and the loss or disappearance from circulation of coins, would, in the presence of the increasing demands of a continually expanding trade, suffice to remove the increase of coinage.

The Secretary of State suspended his drawings and withdrew 10 to 11 crores.

In spite of all these efforts the circulation of rupees increased.

By 1895 the circulation increased to 150 crores, in 1897 to 153 crores and 1899-1900 166 crores, 171 crores in 1902, 188 crores in 1903, 200 crores in 1904 and 242 crores in 1908.

This fact alone is enough to show that it was the silver currency that is wanted for circulation, and could not be restricted whatever stringent steps may be taken. It is impossible to do more than what was done in 1893, and certainly the rupee coinage cannot be displaced by the minting of sovereigns.

13 The result of it is that India has got a large amount of rupee circulation while the proportion of gold circulation is very very small. The conditions are exactly the reverse of that which prevailed in European countries while gold was being made the sole currency and standard of these countries. Under such diametrically opposite conditions it is not possible by opening the mints to gold coinage, to have a gold currency.

14 *Absorption of Sovereigns*—It has often been asked what happens to the very large amount of sovereigns imported into India. It has often been stated that they go into hoards. Every European economist who has bestowed any attention to Indian economic questions has found this a convenient explanation for every phenomenon that is unaccountable. Every Finance Minister thinks that if the hoards are unlocked, India's economic prosperity is assured.

In the first place it is extremely doubtful whether there is any hoarding or at least there was any hoarding to the extent generally supposed to exist. No one would hoard the token coinage (rupees) and I do not think in the treasure troves that have been found any rupees have been discovered or even sovereigns. The absorption of sovereigns is in a different direction. Last year, I visited a number of the Mofussil branches of some of the Presidency Banks and also examined the day-books of many of the native Shroffs. Mr Hunter, the Secretary of the Bank of Madras, might have told this commission that every week he sends a very large amount of sovereigns but none of them come back into the course of circulation. I set out briefly the social and economic conditions which bring about the absorption of the sovereigns. These conditions will exist for a very long time to come, and will continue for many more years, and so long as these conditions last, sovereigns will be absorbed in increasing quantities, and the amount that will be absorbed is unlimited. Western civilisation and increased material prosperity tend to increase this absorption of sovereigns rather than diminish it as many people seem to expect.

15 † A Hindu according to the law at present administered in India cannot alienate, either by will or by gift *inter vivos*, any portion of his property immovable or movable to provide for his wife daughters or sisters or the female members of the family. The son as soon as he is born gets an interest in the property and he can impeach such alienation. In many cases alienations have been impeached 20 or 30 years after they have been made. This rule applies even to Government promissory notes, bank certificates, insurance policies, &c.

Hitherto the women used to be left to the tender mercies of the joint family and the wife of the head of the family who was in enjoyment of every possible luxury which the head of the family could afford could claim after

\* There was also an exportation of Rupees 2 crores.

† This rule applies to ancestral property, but the distinction between ancestral and self-acquired is very slender.

his death only 7½ to 15Rs for maintenance a month (half to one sovereign for a month). But the daughter and the sisters of the late head of the family were not entitled even to that pittance. The only way the strictness of the law is evaded at present, is by presenting the ladies with jewels which become their personal property which the other male members of the family cannot claim as family assets. In the case of the daughters of the family from their birth to their death presents are made on various occasions, presents of sovereigns or jewels. By the time of the marriage of the girl, which happens in the 12th or 13th year at the latest, the girl in an ordinary middle class family would have absorbed about 50 to 100 sovereigns in the least. This is strictly a provision, as these jewels could not be attached even for the husbands or the family debts. I have given a very low figure, and nowadays at the time of marriages even gold vessels are presented.

16 Western civilisation and western methods of thought and the spread of female education have brought with them the consciousness that some provision should be made for the female members of the household instead of leaving them to the mercies of the joint family and that they should have a decent competence. The result is that the sovereigns are being absorbed increasingly in tremendous quantities for the purpose of being melted for ornaments. The melting may take place immediately or after the girl is able to make a collection of sovereigns. Is it possible to satisfy this demand over a population of, say, at least 200 millions? People are wondering as to where all the gold goes. There is nothing surprising in its disappearance as sovereigns they are absorbed in fifties and hundreds in every household. There is no limit for the absorption. The jewels can be worn by Hindu women only so long as their husbands are alive and the Hindu women do not remarry. So, as soon as the husband dies, the jewels could not be worn and they are converted into purposes for which they are intended, viz they are sold and realised in money and then invested to bring in a decent interest for the women to live upon.

17 Personal credit is almost unknown in India. The banks do not lend money without any security. The Chetties and Marwaries who lend money to officials (European and Indian) charge a rate of interest that may appear to many as incredible. For a loan of 100 Rs the calculation is made thus: Interest at 3 per cent a month for 20 months comes to 60 Rs. The sum of 60 Rs is deducted and 40 Rs. is paid into the hands of the debtor and the amount in the bond is 100 Rs which should be paid in monthly instalments of Rs 5. This is an ordinary transaction taking place every day. Nothing less than 20 months is accepted. I know a number of Europeans, civil service men, men in the financial service and various departments, who have and are taking loans at these rates. For an Indian who has no Government post or who wants to avoid these men, the easiest way to raise money is by the pledging of his wife's or family's jewels.

18 Secondly, nearly 70 per cent of the population in India is mainly agricultural. The first instalment of the land tax, and in some parts two instalments are to be paid before the harvest begins, i.e. before the grain is ready for sale. Apart from the land tax there are various other demands arising out of the present conditions.

In almost all these cases raising a loan by the mortgage of immovable property is always avoided. The Presidency Banks and its branches do not lend money on the security of immovable property. The landholder does not like the publicity that attends the transaction in raising money in his own village. Even granting that he risks all these things there is delay—immoderate delay—arising out of the inspection of title deeds, registration of documents and getting the attestation of all the adult members of the family who may be in different parts of the country, and without such attestation the transaction will not be complete. Lastly the mortgagee will insist that the term should be at least for a period of three years. The money therefore cannot be paid back as soon as he has sold his grain. The only convenient, the popular and the cheapest, way of raising loans is by the pledging of jewels. The jewels may be taken to a different town, and the money is raised in half-an-hour without any registration or witnesses and the jewels may be redeemed at any time with a month's interest. The transaction may

be completed even by women without the presence of the adult members. The interest is cheap, there is the utmost secrecy in the transaction, and the money is raised immediately. The result of this is, whenever the agriculturist or the landowners gets a surplus, little or more, he invests it in jewels. It gives a status to his wife, proclaims her as a rich woman, there is peace and happiness at home, and lastly he is sure he can raise as much money as he wants at any moment. If his savings are not enough then he purchases as many sovereigns as possible and presents them to his wife and they are kept till they come up to the required number.

19 This tendency is seen not only in the above cases but also in others. Two of the biggest traders, one a leather merchant and another iron merchant, became insolvent recently. Every article belonging to the concern went into the hands of the Official Receiver. But the assets of the trader which could not go into the hands of the Receiver as exempt from attachment and the processes of the court were the jewels of his wife and daughters. In one case, 6 months after the insolvency the jewels of the wife of the Insolvent were valued at Rs 1,000,000.

Every trader, small or large, with purely honest motives, puts by at least a portion of his savings in the form of jewels. It may help him to raise money as easily as possible or if his business fails his family is well provided for. It is unnecessary to mention that some may consider it the best way of cheating a creditor.

These are the various forces that are in operation to-day and every sovereign which a family can get hold of goes into the melting pot or waits its turn to go to the melting pot.

20 The Honourable Mr Webb and a very large number of critics have not explained how the gold currency is to displace the silver and note circulation, even granting for a moment that every sovereign will strictly be used for currency purposes.

During the last 7 years the increase in circulation of rupees was 47 84 crores. As regards the notes the total circulation of notes in 1910-11 was 54½ crores, i.e. 469 lakhs in advance of the previous year and during the 7 years, a period during which sovereigns were legal tender, the increase in notes is calculated at 22 18 crores. Without doubling the circulation, how are the new coins to get into circulation? The gold will certainly not displace notes. In the banks and among individuals the payments are in notes, then in silver and in gold lastly if they are asked. The series of figures which I have with me as to the daily transactions of some of the banks show that 75 per cent of the payments are in notes and 20 per cent in silver and very little in gold. The gold payments are mostly to the Shroffs who sell sovereigns outside for bullion purposes.

The sovereigns may be used conveniently for payments of Rs 50 or Rs 100, but the following figures show that the notes are preferred even for these payments.

21 The following figures will show the very high increase of notes of larger denominations especially after 1899 when the sovereigns were made legal tender —

					Rs 50
1889-90 - - - - -					181,819
1899-00 - - - - -					233,159
1910-11 - - - - -					526,488

  

Years	100 Rs	500 Rs	1,000 Rs
1889-90 - - -	386,222	364,318	40,527
1899-00 - - -	748,793	53,285	62,039
1909-10 - - -	1,436,406	62,021	88,350

The increase in circulation in the case of Rs 50 and Rs 100 notes is about three times what it was 20 years back. If the sovereigns have to displace the notes it will be seen more in the circulation of Rs 50 and Rs 100 notes. But as yet there seems to be no trace of it.

22 The preference given to the currency notes by the large mass of population is very marked especially in the Mofussil. Just when the villager starts to a town on business, he changes the rupees into one note or two or three notes of Rs 100, keeping a very small amount of change in silver for his expenses. There is the secrecy in taking his money with him. There is no jingling of the coins, no suspicious knot in the dhoti, which may lead anyone to think that he is carrying any money. If the payment is to be made to anyone, the notes are handed over, and the change, if any, is received in small notes. The large grain merchants who receive payments in rupees, usually, before they go home, convert the mass of rupees into notes by paying a discount, and take the notes home. Apart from the question of convenience, the notes are preferred for safety. The numbers of the notes are usually noted inside the cover and a large class of the people know that they can easily trace the notes, and the money will not be lost.

It is this feeling—that money carried in notes can never be lost—that makes a very large number of people convert the silver into notes, whether they keep them at home or carry them with them.

Thirdly, notes are still used very largely for remittance purposes through post offices.

23 Fourthly, in the Madras Presidency when anyone hands a note of Rs 50 or above, to another for payment, he is asked to endorse his name on the back of it. Like a cheque, every currency note bears a number of endorsements, showing the successive holders of the note. In courts of law when payments are disputed, the number of the note and the endorsements offer a very successful defence of payment which it would be impossible to offer in other cases.

These, and various other reasons, will always make the notes more popular than silver or gold. It would be impossible for gold to displace notes, nor would it be sane economic procedure for any State to displace its paper by gold.

24 The next question to be considered is whether gold will displace the rupee coinage. A few years ago the Government tried to force sovereigns into circulation and the salaries of officials, clerks, &c, and postal money orders were partly paid in sovereigns. The measures had to be stopped for the simple reason that very few wanted the sovereigns. If they took sovereigns it was simply to change them the next moment. One Accountant-General who was in charge of a very large office told me that most of the officials refuse gold, and wanted their pay in silver and notes. However, this expedient could not be tried even for three months. As almost all the transactions have to be carried on with money of very small denominations rupees and fractions of a rupee are wanted.

Secondly, in the case of the rupee and sovereign in circulation, while the intrinsic and nominal values of the sovereign are the same, the nominal value of the rupee is nearly 30 per cent higher than its intrinsic value. It is almost an elementary proposition that in such case the rupees will be in circulation, while the sovereigns will disappear.

25 Thirdly, let us suppose on the other hand that 100,000,000*l* of silver are withdrawn from circulation and melted. Apart from the great loss that would result from such a transaction, the Government would be depriving the people of the only kind of currency that is suited to the needs and requirements of 70 per cent of the people. Silver coins will be at a very high premium, people will be willing to take 13 and 14 rupees for a sovereign, and certainly the rate of exchange can never be maintained at 15. Rupees will have to be coined again and the sovereigns will be exported or disappear.

Unfortunately, those who have suggested the opening of the mints and the introduction of a gold currency have not presented any working scheme as to how to get gold into circulation, and—a more difficult feat than that—how to retain it in circulation.

It has been stated that a sovereign is a coin of very large denomination, and as such, if a Rs 10 coin is minted, it will rapidly get into circulation. But it is forgotten that there is a much smaller coin than Rs. 10—I mean

the half-sovereign, which is legal tender, worth only Rs 7½, but of which there are very few coins in circulation. There is absolutely no demand for them, banks do not import them for that reason. If small coins would induce gold circulation, the half-sovereigns should be largely circulated. The fact is the demand for sovereigns being merely for use as bullion, the purchaser wants as big a coin as he can get, instead of half-sovereigns.

26 For the reasons above set out, I would advise a gold standard with a gold reserve. It is unnecessary to quote any authority, as, under the present conditions, it is the only system that would both be economical and would lead to very little disturbance in the exchange or in the prices under the present system. The term exchange standard has been wrongly used, and I would label the present system as a gold standard with a gold reserve. The only objection against it seems to be that it is not recognised as a system in any of the orthodox text-books. But new currency systems are bound to evolve according to the conditions and needs of a country, and there is no reason why there should not be progress in monetary science as there is in other branches of human knowledge. The reference to a large number of witnesses before the two previous Committees, who stated that there cannot be a gold standard without a gold currency, is of no value as the system was not understood or worked out in practice 15 years ago. Such opinions will be of as little value as the opinions of some of the greatest experts who stated that ironclad steamers could not float before steamers began to run, because it is against the laws of nature for iron to float.

27 Before concluding this part of the memorandum I may point out that many critics, including Mr Webb, have fallen into error in stating that the Currency Committee of 1898 recommended the re-opening of the mints immediately, and that the Government of India never followed the recommendations. This statement is being repeated very frequently by many who do not even seem to care to look into the report of the Currency Committee.

The report concludes with the statement that it will rest with the Government of India to decide when successive steps should be taken for the introduction of a gold standard. The measure must be one under which gold will flow freely to India generally as trade and currency requirements dictated, even if it took several years to introduce into the circulation sufficiently to make the standard fully effective would carry with it a confidence which could never be inspired by the sight of gold forced in by artificial means. It is a question on which there may be a very wide difference of opinion as to whether the time which the members of that Currency Committee anticipated has come, and whether the measures now proposed will not merely be forcing gold by artificial means. The Government of India seems to think that the gold coins have not established themselves in the currency, but are used towards a profitable employment as bullion.

Under such circumstances who can say that the recommendations of the previous Currency Committee have not been carried out?

28 It is also curious to note that at the budget meeting of the Viceregal Council, the Honourable Mr Gokhale (who is often quoted as one of the leading Indian publicists) states —

- (a) That a gold currency for India has never been authoritatively proposed as a definite object to be attained. A stable exchange at a reasonable rate is all that successive authorities have sought to ensure.
- (b) That it is wrong to pile up a huge gold reserve in pursuit of an object never proposed or defined, or even regarded as attainable within a measurable distance of time.
- (c) That it is looking too far ahead into the future to anticipate the introduction of a gold currency into India.†

The above statements will show how the recommendation of the Currency Committee was considered by one of the leading Indian publicists. Yet we are being told by Englishmen in India and in England that all the Indians are clamouring for a gold currency and the carrying out of the recommendation of the Currency Committee.

\* C 9390, page 21, para 70

† Financial Statement of the Government of India 1907-08, page 204 (H C 140 of 1907)

The fact is (to quote Professor Marshall) that India being governed by England, has necessarily had its affairs discussed largely by Englishmen who are apt to take their opinions of what goes on in India very much at second hand\*

29 *Paper Currency Reserve*—Under the present conditions it is unnecessary to have a reserve equal to the value of notes in circulation. It is wasteful and unnecessary. A certain ratio may be fixed between the amount of the reserve and that of the notes issued. The ratio to be fixed can be settled by banking practice. I would fix a ratio which is not more than half or less than one-third, the reserve to be metallic and consisting solely of sovereigns, half-sovereigns, rupees and bullion. The whole reserve is to be kept in India—there is absolutely no justification for keeping the reserve in England. I am of opinion that it would be better to have two-thirds of the reserve in silver, rupees and bullion.

The figures for 1911 are as follows—

Notes in circulation	Reserve
Value in Rupees	
54,99,05,815	9,27,97,267 gold in England
	7,56,75,000 gold in India
	2,00,00,000 gold securities
	26,14,33,602 silver
	9,99,99,946 silver securities
	<u>54,99,05,815</u>

30 Under the arrangements that I have proposed there is no discussion about keeping the reserve in England, or investing it in English securities, for the obvious reason there will not be large reserves. The whole metallic reserve will consist only of Rs 26,14,33,602, which is the amount kept as silver under the present conditions. The proposal I have made releases gold of nearly 20 crores of rupees in value which is locked up unnecessarily.

31 *The Gold Standard Reserve*—The management of the Gold Standard Reserve has been very severely criticised. The criticism is to a large extent due to a misapprehension as to the objects of the reserve. The Government of India ought to have defined its position by stating that the reserve is simply for maintaining exchange, and not for the purpose of ensuring the conversion of rupee token coinage into gold.

The Gold Standard Reserve has reached the high figure of 22,657,776<sup>l</sup>, and it is unnecessary to pile up the reserve more. Even the crisis of 1908, about which one has heard so much, which was international, was tided over by a very small amount. There is no necessity to keep a reserve over 20 millions. A portion of the reserve may be invested in sterling securities, as it may earn interest. The figures show that there has been a net profit on investments to the extent of 2 millions.

32 I have stated it as my opinion that the currency system best suited to India is a Gold Standard with a Gold Reserve. For the success of the Gold Standard the most important thing is the proper maintenance of the reserve. As I have defined the principal use of the reserve to be to steady exchange the reserve ought to be kept where it is wanted, *i e*, in London. Gold kept in India can never be effectively useful if it is urgently wanted in London. Apart from the expenses for freight, insurance, &c, the risk of loss or delay will prove fatal. There is nothing strange in this procedure while the gold reserves of Japan are kept in London.

33. The question of the location of the reserve is not new and it was discussed as early as 1898, and Mr A M Landsay in his evidence before the Currency Committee gave a number of reasons for locating it in London †

34 The profits of rupee coinage that may accrue hereafter may be utilised for getting silver for coinage. The scheme announced by Sir Edward Baker in his Budget speech (of 1907-8) of arresting at the third stage the rupees which form the profit in coinage and retaining them intact

\* Q.A. 11,770 Indian Currency Committee Report. C. 9222.

† Q.A. 4056. Indian Currency Committee Report. C. 9037.

until required for actual use may be useful.\* I would suggest that silver as bullion which is left as coinage profits may be retained in India for rupee coinage. This may be separated from the Gold Standard fund to avoid confusion and criticism, and kept separate for use. In course of time sufficient bullion will get accumulated for coinage.

*Diversion of the Gold Reserve Fund to Railways*

35 Sir James Mackay's Committee† was constituted in 1907 as there was a very strong and persistent agitation both in England and India that the existing arrangements for railway traffic was very inadequate. The President of the Bombay Chamber of Commerce speaking in 1907 said "At the present moment there is one bitter cry going up from all over India for waggons to carry the produce of the country. Now we hear of stations filled with cotton and no waggons to take it away, thousands of tons of manganese lying at the stations in the Central Provinces waiting for waggons which do not come. Indeed it is not necessary to refer to any particular trade as all are suffering alike"‡ It is difficult to estimate the loss this inability on the part of our railways to supply waggons means to firms and merchants. The Honourable Mr Apcar in his speech at the Viceregal Council (1907-8)‡ pointed out that the trading community looked with every confidence to means being devised to prevent for the future the retardation of railway progress, and stated that such retardation was not permitted either in England or in the United States or in our own colony of Canada, and in neither of these countries is the return of the capital so high.

36 The Government of India had to find money and the non-official members of the Viceregal Council who represented the Indian public opinion stated that the annual revenue surpluses should not be expended on railway construction. The Honourable Mr Gokhale suggested that the profits on rupee coinage may be devoted to purposes of railway construction. The Committee on Railway Finance (1907) in their Interim Report submitted in June 1907§ suggested that as there was then nearly 25,000,000*l.* sterling with the Government to be used for any emergency that may arise, that half of the profits of the rupee coinage to the extent of 1,000,000*l.* of one financial year may be expended on railways, as the matter was urgent. As I have stated above, this proposal had the support of the non-official members of the Viceregal Council, I may say the support of the Indian public opinion, and the Railway Committee also suggested it, and the amount spent was 1,000,000*l.* while there was 25,000,000*l.* sterling for all necessary purposes. The statement of the financial correspondent of the "London Times" that a committee sitting in London, light-heartedly suggested the misappropriation of Gold Standard fund was not correct.

37 One cannot understand whether the Government of India would have been well-advised to sit quiet and watch the general derangement of trade and the resulting catastrophe to Indian trade, both foreign and domestic, keeping 25,000,000*l.* sterling locked up in its coffers. Those who are shocked at an 8 per cent bank rate in India while there has been a large surplus in the hands of the Secretary of State, seem to have forgotten that the derangement of railway traffic was a much more serious injury to the whole of India than an 8 per cent bank rate.

38 There was no fund available for immediate expenditure as the revenue surpluses were not allowed to be touched and borrowing could not be resorted to every year.

39 Those who have objected to the diversion of the Gold Standard Reserve have suggested borrowing in London. But the amount that it can borrow is limited in various ways.

Firstly, in a railway crisis like that which happened in 1907, money could not be raised immediately in the London market.

Secondly, Indian loans are not very popular and it is not possible to raise large sums. The fact that the loans are raised and guaranteed by the State

\* See Financial Statement of the Government of India, pages 24-5 (H C 140 of 1907).

† See Report Cd 4111.

‡ See Financial Statement of the Government of India, pages 196-7 (H C 140 of 1907).

§ See Appendix V, pages 156-7.

no longer affords any inducement to invest in Government securities. The increase in the official class of foreign investments during the 20 years was only from 14,990,105*l* to 20,880,837*l* while in the non-official class the amount arose from 16,649,374*l* to 36,421,087*l*. In the former case the investments increased by only one-half, while in the non-official class the amount rose from 16,449,374*l* to 36,421,087*l*. In the former instance the increase was one-half, in the latter case double.

Under such circumstances it would have been impossible to borrow whenever there was any urgent need for capital requirements for railways.

Thirdly, the increase of sterling borrowing is against the recommendations of the Fowler Currency Committee. The Committee stated that for a speedy attainment of gold currency the restriction of gold obligations was necessary. Will not such a step be suicidal and make it impossible to attain a gold currency which the critics say is the only solution of all currency difficulties?

Lastly, as long as the money required for railway purposes has to be provided for by or through the credit of the Government of India, the supply of money depends on the Government's general financial situation at the time. The Government must regard its obligations as a whole, and in determining to what extent it allows its credit to be pledged in order to raise capital for railways, it must take account of its present and future requirements for other purposes, and the probable effect of the increase in its liabilities or its power to meet these requirements.

For these reasons, I am of opinion that the diversion of the fund in 1907 was absolutely necessary, and that it was a sound procedure.

#### *Cash Balances.*

40 Heavy cash balances in London are a phenomenon of recent years.

#### *Cash Balances in London*

	£
1906-07 - - - - -	5,606,812
1907-08 - - - - -	5,738,489
1908-09 - - - - -	8,453,715
1909-10 - - - - -	15,809,618
1910-11 - - - - -	18,174,349

Firstly, it is to be remembered that to a country whose annual revenue is about 86,985,300*l*, and whose expenditure comes to nearly 80,000,000*l*, a cash balance of 18,174,349*l*, where it is wanted for a variety of purposes is not very much. In a continent like India, the revenue purely depends upon climatic conditions. Not only the land revenue suffers by a bad season, but also the revenues under stamps, railways, &c. To a country dependent on climatic conditions for its revenue, with a population of 300,000,000 who look up to Government for relief when rains fail, whose export trade may be estimated at 180,000,000*l*, and import trade at 102,000,000*l*, with a sterling debt contracted in England of nearly 180,000,000*l*, on which the annual interest which India has to pay comes up to 6,000,000*l*, a cash balance of merely 18,000,000*l* is really a small sum, and I would say a dangerously small sum. Considering the large volume of trade and the magnitude of its transactions a sum of 18,000,000*l*. in England does not seem to be a very high figure. But even these high figures are due to a variety of causes which are temporary and abnormal, and they are as follows —

- (1) A series of good seasons with good harvests and with enough rainfall,
- (2) The opium windfall;
- (3) Large loans raised for railways still unexpended, temporarily in the hands of the Secretary of State,
- (4) The deposits of railway companies.

These have gone to swell the cash balances, and especially those in the hands of the Secretary of State. None of these conditions are permanent, and a series of bad seasons, and the extinction of opium revenue will leave Indian finance under a heavy deficit. The Government of India itself seems to have forgotten this fact when it is spending such large sums in education, sanitation, and other items.

41 These sums have not been extracted in excess of its requirements as can be seen from the following figures

42 In 1909-10, the total revenue of India was (excluding the opium receipts) 69,100,000*l*, and the expenditure, 73,100 000*l*. The growth of normal revenue in the four years 1909-13 has been 6,600,000*l*, and of expenditure, 6,200,000*l*, leaving a margin of 400,000*l*. This was the margin in a series of years when there had been bumper harvests, and increased taxation in 1910-11, which was estimated to yield 170 lakhs of rupees for the year. These figures will show how close the estimates are. The finance member in framing the budgets has got various uncertain factors to reckon with. He must count on the rains being timely, harvests fruitful, steady progress of industry and trade, the money market to be steady, and that famine, plague, and war, will not occur.

43 Among the causes for the recent large cash balances, the most important item is the windfall in the opium revenue about which no forecast or estimate can accurately be made. In February and March 1910, in response to the excitement in China markets, the Bengal opium sold for prices which was unprecedented for half a century. The prices rose higher, reaching the figure of Rs 3,827 a chest. The Chinese connoisseurs were ready to pay fanciful prices. The net result of these striking fluctuations were that the Government of India had to estimate for the average rate of Rs 2,925 compared with the Budget figure of Rs 1,750 a chest. In October 1911, the China drug rose to the phenomenal price of Rs 6,000 a chest, and the Government of India sold 15,440 Bengal chests, and exported 15,567½ chests with certificates for China, and 14,000 Bengal chests were sold for other markets.

44 The opium sale (2nd sale of the year and the 11th of the current official year) realised higher prices

January 1913	-	-	-	-	Rs 20,19,050
December 1912	-	-	-	-	Rs 17,39,350

This "restless and baffling" head of revenue so wholly exceptional in character, has led to the phenomenal cash balances, and, with the disappearance of opium revenue, there will be no heavy cash balances.

45 Another item which has also led to the swelling of these balances, is the large increase of sterling loans incurred for capital expenditure during recent years. These loans have been raised not on the occasions when they are wanted, but long before they are utilised to suit the conditions of London markets. The result is that these loans have to be in the hands of the Secretary of State, waiting their time to be utilised. Apart from these loans, large deposits are left by the railway companies.

If all these temporary balances are removed, there will be very little balances left in the hands of the Secretary of State available for the very large transactions which have to be carried on in London. It is a sound economic procedure if these sums can be made to earn interest while they are waiting to be utilised. No one can expect for sums that are lent out at one or two weeks' call, 4 or 5 per cent. It is absurd to say that money is being borrowed at 3½ to 5 per cent unnecessarily, to be lent out again at 2½ per cent.

46 There is, after all, not much money with the Government of India, to lend out to the Presidency Banks. The cash balances serve a number of purposes. They are the reservoirs from which all the capital expenditure is incurred, and all the advances to local authorities are made out of them. The deposits are all paid back from these funds, and the discharge of permanent, temporary, or unfunded debt is met from them. Lastly, the Council Bills which are sold so heavily, are drawn against these funds. When one considers the number of purposes to which the cash balances are put, and how largely the Provincial Governments also depended on these, I think that there is no figure which may be considered too high. It is also not possible to have these heavy cash balances always for the reasons I have given above.

- BARROW, O T, CSI** - - - - - 3039-3343
- BALANCES**
- in England, high balances estimated for in 1911-12 and 1912-13 - - - - - 3043-5
- in India
- Amount, question as to suitable amount 3233-48
- High, causes - - - - - 3041-5
- Increase from 8½ to 11 crores was fully considered - - - - - 3172-4
- Lower, not desirable - - - - - 3051
- EXCHANGE**
- Crisis of 1907-8, should not be taken as example of severest strain probable - - - - 3274

BARROW, O T, CSI—*continued*EXCHANGE—*continued*

- Gold in circulation not of much importance for maintenance of - - - 3074, 3271-3  
Gold in hoards would not give support in crisis - - - 3075

## GOLD

- excessive Import into India should be checked - - - 3077  
Issues in exchange for silver, people desire to receive gold in England - - - 3289-95

## GOLD CURRENCY

- Encouragement not desirable - 3072-3, 3092-7  
Impossibility of estimating how much would go into currency and how much as ornaments or into hoards - - - 3094  
10 Rupee piece, question as to whether demand for gold would be increased - - - 3279-88

## GOLD MINT

- for Coinage of sovereigns unnecessary and impracticability as regards supply of bullion 3091  
Might be tried if special coin introduced, but introduction not advocated - - - 3091-3

## GOLD STANDARD RESERVE

- Amalgamation with Paper Currency reserve not advocated - - - 3151-3, 3158-66  
Form  
Gold in England, actual gold ideally preferable to securities, and, in any case, short-dated securities preferred - - - 3102-8  
Silver, need for - - - 2078-9  
Investment, distinction between investment of paper currency reserve and - - - 3080-1  
Location in London of greater portion, approved and reasons - - - 3098-100, 3115-20  
Subsidiary Branch in India (silver)  
Approved - - - 3101-2  
might be Done away with, with power to make temporary investments of paper currency reserve - - - 3080, 3196-7  
Exchange of, for gold in paper currency reserve, difficulty - - - 3078-9, 3087-90  
Lending from, not desirable - 3053-4, 3253  
India from certain point of view as debtor country 3096-7, 3109-14

## LENDING BY GOVERNMENT IN INDIA

- Objection to, that amount of balances available would be uncertain, but advantages might possibly outweigh 3047, 3254-6, 3267, 3313-24  
Practicable to small extent, but not advocated from balances and reasons - 3046-7, 3051-2, 3257-67  
Rates obtained for Council bills might be reduced 3048-50, 3266

## NOTES

- Circle system, largely abolished in effect, but abolition not advocated for very high notes - - - 3201-13  
Encouragement important - - - 3214-8  
Increasing use of - - - 3069  
Obligation to pay notes in rupees, or gold if washed by Government, but demand likely to be for rupees - - - 3082-6  
Places at which notes encashable might be extended, and question of - 3068-72, 3215-22, 3249-52, 3328-43

## PAPER CURRENCY RESERVE

- Advances from, to Presidency Banks on temporary security, as part of investment, scheme 3055-65, 3080, 3124-50, 3154-7, 3179-92, 3196-200, 3268-70, 3325-7  
Amalgamation with gold standard reserve not advocated and reasons - 3151-3, 3158-66  
Composition approved on the whole - - - 3077  
Gold  
Accumulation, impossibility of preventing 3077  
Exchange of, for silver in gold standard reserve, difficulty - - - 3078-9, 3087-90  
Keeping of certain amount in England desirable 3066, 3162  
Investment  
Distinction between investment of gold standard reserve and - - - 3080-1

BARROW, O T, CSI—*continued*PAPER CURRENCY RESERVE—*continued*Investment—*continued*

- Power to invest certain percentage of circulation instead of fixed sum advocated 3055-7, 3139  
Temporary investments in London, scheme, 3080, 3179-86, 3198-201  
Location, approved - - - 3076  
Run on, might occur - - - 3164-6

## PRESIDENCY BANKS, NEW BRANCHES

- Dropped in a few cases as not paying - 3300  
Opened wherever possible, and minimum balances given in certain cases by Government, and question of extending system 3175-8, 3301-9  
Trade, balance in favour of India - - 3111-3  
Transfers between Presidency towns and up country, business would be better run by bank officials than by Government officers - - - 3310-2

## TREASURIES, SUB-

- Extension of banking facilities in place of, desirable if practicable - - - 3296-9  
Principles on which amount of coin at, regulated 3223-32  
Probably necessary - - - 3168-74

<b>BUDGET ESTIMATES</b>	
Based on normal harvest - - - - -	4426, 4443
Preparation, procedure - - - - -	4410-20, 4481-96
Shortening of time taken, impossibility - - - - -	4469-70
<b>BUDGET YEAR</b>	
October to September, question of, and possible advantages - - - - -	4459-68, 4474-5, 4530-43
November to October, estimating would be somewhat easier - - - - -	4427-30
Central or State Bank, to relieve Government of responsibilities as regards currency and banking would be possible - - - - -	4738
<b>COUNCIL BILLS AND TRANSFERS</b>	
Purchase by Government of India against gold standard reserve, question of - - - - -	4860-6
<b>Sale</b>	
Estimate, no earmarking in advance for capital payments in England - - - - -	4554-6
in Excess of requirements, practice of, and benefit to Government and trade from - - - - -	4526
Maximum indicated by Government of India, up to which Secretary of State acts on own initiative - - - - -	4339-40, 4552-8
Secretary of State must sell from April to December to provide for requirements and consequent impossibility of sticking out for 1s 4d - - - - -	4603-13
Currency Chest, object of - - - - -	4832-3
Exchange Banks, Government approached by local branches, 1907, for loans, but Council bills preferred by head offices - - - - -	4586
<b>EXCHANGE</b>	
Gold issued in India in times of difficulty supports - - - - -	4659-63, 4765-81
Risk of large amount of rupees in circulation at time of crisis and advantages of increased gold currency instead - - - - -	4679-87
Famine Insurance Fund, correspondence between Government of India and Secretary of State, 1901-4, referred to - - - - -	4311
<b>GOLD</b>	
Effort made by Government, 1900 to 1907, to push gold into circulation - - - - -	4762-4
Import continues even in time of crisis - - - - -	4849-51
Issue	
in Crisis, no distinction should be made between issue for circulation and for remittances - - - - -	4844-52
1907-8, discussion in Government of India re, and policy - - - - -	4834-42
1908, largely at Presidency towns and some up country - - - - -	4819-21
to Public at time of crisis, desirable - - - - -	4822-5
of Sums over 10,000 <i>l</i> reported to Comptroller General - - - - -	4843
Supply of, extra-legal facilities - - - - -	4750-1, 4754-5
<b>GOLD CURRENCY</b>	
Encouragement desirable - - - - -	4672-7, 4776-81
Encouragement by Government, steps taken - - - - -	4754-5
<b>GOLD MINT IN INDIA</b>	
Advocated, and reasons - - - - -	4664-6
Charge for refining would have to be made, but not seignorage - - - - -	4669-70
Coining of sovereigns advocated - - - - -	4714-6
Gold would probably come from hoards in future in times of stringency - - - - -	4671
Local gold would be obtained for coining - - - - -	4666-8, 4786-8
a Necessity almost - - - - -	4782-5
Supply of gold to, would depend on price - - - - -	4717-9
<b>GOLD STANDARD RESERVE</b>	
Amalgamation with Paper Currency Reserve, objections to - - - - -	4692-6
Amount	
Experience of crisis of 1907-8 not adequate - - - - -	4702-8
Not less than 25 millions advocated - - - - -	4698
Drawing against, by Secretary of State, 1910 and 1911, circumstances - - - - -	4810-8
Functions	
Supply of gold to India - - - - -	4659

- BHUPENDRA NATH MITRA, C I E—continued**  
**GOLD STANDARD RESERVE—continued**  
**Functions—continued**  
to Support exchange and (through silver branch)  
to supply rupees in exchange for gold when  
abnormal demand for rupees - 4639-51  
Gold in London, 5 millions hardly sufficient  
4697-700  
Main branch in London, reason for location,  
considered in interests of India - 4652-8,  
4858-9, 4867  
Statutory regulations not advocated at present  
4709  
Subsidiary branch in India, object of, to supply  
rupees in exchange for gold when abnormal  
demand for rupees - 4639-51, 4691  
Hoards, gold gradually displacing silver in - 4672  
**LENDING BY GOVERNMENT IN INDIA**  
Amount available for, question of - 4508-19  
Demand, question as to extent of - 4372  
**LOANS ISSUED BY GOVERNMENT IN ENGLAND**  
Consultation between Government of India and  
Secretary of State *re*, before opening of financial  
year, and more frequent communications might  
be desirable - 4386-89, 4476-80, 4594-6, 4616-28  
Monthly returns of revenue by Comptroller-General  
supplied to India Office - 4391, 4476-8  
**LOANS ISSUED BY GOVERNMENT IN INDIA**  
Class taking shares in, in India - 4440  
Extension of, not possible in expert opinion without  
reducing market price of rupee paper - 4400-3  
to fullest possible extent - 4855  
Increase of, in course of year, inconvenience of  
4597-602  
Objection of Secretary of State to - 4614-5  
Policy of Indian Government to raise as much as  
possible in India, and reason - 4404-6, 4441-2  
Securities, question of - 4455-8  
Temporary debts, objection to raising money on -  
4456-8  
Total amount of rupee loans outstanding held in  
India and in London respectively - 4438-9  
**NOTES**  
Encashment, extra legal facilities and question as  
to possibility of extending to sub-treasuries  
4741-9  
the Ideal currency - 4674-8  
Issued in large parcels through banks, &c - 4721-3  
**PAPER CURRENCY RESERVE**  
Assistance of trade from, preferable to loans from  
Treasury balances - 4354-7, 4583-5  
Fiduciary issues  
Assistance of trade from, preferable to loans to  
banks - 4636-8, 4830-1  
Increase would be possible without inconvenience  
4631-5  
Gold in India, main function of, to supply gold to  
public - 4690  
Kept separate from cash balances - 4827-9  
Transfer of balances between treasuries and - 4321,  
4329-30, 4446-50  
**PRESIDENCY BANKS**  
Branches  
Balances, Government surplus transferred to  
reserve treasury when above certain amount  
4360-4  
Currency chest usually taken over by Bank of  
Bengal, but not by Bank of Bombay - 4726-31  
Difficulty of starting, without Government assist-  
ance, but no assistance to sub-agencies  
4559-62  
Guaranteed minimum Government balance,  
working of 4335-6, 4451-4, 4316-25, 4489-504  
Multiplication of, would not enable working with  
lower balances - 4334  
Transfer between currency chest and, system  
4732-40  
Government Balances  
In Excess of fixed minimum - 4358-9  
Retention of, above certain sum on payment  
of interest possible, but no case of charging  
interest known - 4538-93  
Withdrawal, question as to possibility of difficulty  
4366-7, 4587
- BHUPENDRA NATH MITRA, C I E—continued**

possible Effect on sale of Council bills - 4341-5,  
4376-7, 4568-78  
Experiment considered worth trying - 4344  
Experiment should be confined to, at present  
4347, 4374  
Money may be locked up for which sudden and  
unforeseen demand may arise - 4341, 4568-7  
Needed between January and April - 4346  
Possibility of, at present, but no demand for  
last 5 or 6 years - 4348-9  
Securities should be taken and question as to  
nature of - 4348, 4351-2  
Undue dependence of trade on Government  
money would result - 4341, 4353-4  
Provincial Governments, sums allocated and placed  
at disposal of, included in statements of balances,  
and question of altering form of statement - 4431-7  
Railways, under expenditure and reasons - 4380-4  
**RESERVE TREASURIES**  
Abolition and transfer of balances to Presidency  
banks not possible - 4373  
Bank rate probably higher in busy season owing  
to locking up of money in, but system justified  
4369-71  
Establishment, reasons - 4365-8  
**RUPEES**  
Difficulty owing to trade not getting required  
amount of, known - 4651  
Issue of gold for, legal undertaking not necessary  
at present - 4688, 4806-9  
Supply of, extra legal facilities - 4752-3  
**SILVER, PURCHASE OF, FOR COINAGE**  
1912, payment by sale of Council bills, suggestion  
made by Secretary of State - 4826  
Regulation, method - 4544-7  
Taxation, change, sanction of Secretary of State  
required, and all proposals submitted to, but does  
not generally take official initiative in proposing  
4548-51, 4629-30  
Trade, assistance from paper currency reserve, pre-  
ferable to loans from Treasury balances - 4354-7,  
4583-5  
**TREASURIES, DISTRICT**  
Currency chests at all surplus treasuries, and most  
deficit treasuries - 4724  
Encashment of notes possible at, if coin sufficient,  
but not possible at sub treasuries, and question  
of - 4741-9  
no Official reports showing actual transactions  
4444  
Sub  
no Currency chests as a rule - 4725  
Little money left in, as a rule, as sums with-  
drawn to district treasuries when large - 4761  
Transfers between - 4521-5  
Transfer of balances between paper currency re-  
serve and - 4321, 4329-32, 4446-50  
**Bombay, Bank of**

 Difficulty owing to, *Abrahams* 528, *Toomey*, 2624, *Cole*, 3383, 3426, 3526-42, *McLeod*, 7038-44, 7120-6, 7211-7, p 597, (Bengal Chamber of Commerce), p 606, *Sundara Iyer* 8897-8 9019, *Smith*, 8447-53, 8639-62, 8661-2, 8775-7, 8802-4, p 613  
 no Difficulty anticipated, *Reid*, 7537-40, *Dunbar*, 7952-5  
 Distinction in interests between different parts of India would not be a serious difficulty, *Ross* 3777  
 not an Insurmountable difficulty, *Hunter* - 6565-7, 6757-63

Central or State Bank—*continued*

Argument for, as means of lowering bank rate, not considered important, *Toomey and Fraser* 2847-57, 2922-3

Attitude of Bank of Bengal *re*, *Dunbar* 8023-5, 8062

## ATTRACTING OF MONEY FROM HOARDS

not likely, *McLeod* - - - - - 7095  
Possibility of, *Hunter*, 1579-87, *Reid*, 7390, 7490-4

Question of, *Graham*, 4885-8, *Webb*, 5287-8

Balance sheet, financial strength of India would be more apparent from, *Hunter* 6850-2

Bank of Bengal prepared to formulate scheme, *Dunbar* - - - - - p 596

Banks would be inclined to carry more investments in balance sheets if there were central institutions where they could borrow on investments, *Hunter* 6973

## BRANCHES

Loss possible at first in some parts, *Reid* 7581-2 should be opened at places with head quarters treasury, *Hunter* - - - - - p 595

Branch banks all over the country, opening of, contingent on establishment of, *Reid* - 7492-4, 7575-82

## CAPITAL

Bringing of relation between capital and revenue of the three Presidency banks to same ratio, and offering shares to existing shareholders *pro rata*, 20 per cent only of new capital to be called up, proposal not objected to, *Hunter* - 6571-8

Dividends, question of rate, *Hunter* - 6959-61 5 million pounds, paid up, should be maximum, *Dunbar* - - - - - 7930-1, p 596

Increase would be necessary, to 10 millions suggested, and possibility of employing, *Hunter* 6499, 6946-58, 6962-3, p 595

Increase would be desirable on amalgamation of Presidency banks, but unwillingness of banks to increase capital, *Abrahams* p 349-50

Present capital in reserves of Presidency banks sufficient, *Reid* - - - - - 7325-6, 7339

Question of, *Ross* - - - - - 3690-1, p 545  
Safer if much larger than respective capital of Presidency banks but willingness of banks to increase capital doubtful, *Abrahams* 99-100

## Shares

Taking up of, by Government, through silver branch of Gold Standard Reserve, suggestion, *Hunter* - - - - - 6500-2, 6775-7, 6948-53

Uncalled liability deprecated, *Hunter* 6516-8, 6990-1

Sterling preferred by Government of India, 1899-1901, but rupee considered now to be preferable, *Abrahams* - - - - - p 350

## CENTRAL BOARD

Constitution and functions, &c., *Reid* 7462-71, 7476, 7583-8

possible Difficulties *re*, *Howard* - - - - - p 581

no Difficulty anticipated *re* directors, *Dunbar* 8039-49

## Location

Calcutta advocated and approved, *Abrahams*, 529-9a, *McRobert*, 4867, *McLeod*, 7116-9, *Reid*, 7309-13, *Dunbar*, 7936-41, 7959, 8054-60

Commercial centre, essential, *Reid* - 7447-9

Difficulty (Bengal Chamber of Commerce), *McLeod* - - - - - p 606

Local jealousies should not be viewed with concern having regard to benefit to be conferred on all India by establishment of, *Reid* 7452-4

in London, not favoured, *Hunter* - 6688-98

Question, *Reid* - - - - - 7534-6

Question of possibility of moving about, *Reid* 7452-3, 7472-6

Members, question as to possibility of obtaining, *Le Marchant* - - - - - 7798-807

Necessary, *Reid* - - - - - 7323-31

Power of veto over local boards would be necessary, *Hunter* - - - - - 6740-51

must be Representative of whole country as far as possible, *Reid* - - - - - 7324-31

A 1007

Central or State Bank—*continued*

Consideration advocated, *Graham* - - - - - 4872

Correspondence between Secretary of State and Government of India, *Abrahams* p 425, p 438

Correspondence between Government of India and Presidency Banks, Jan 1901, and replies, *Abrahams* - - - - - p 442

no general Demand for, known of, *Ross*, 3684, 3892, *Webb*, 5204, *Smith*, 8465-7

Deposits, prestige of Government might attract deposits, *McLeod* - - - - - 7209-10

Difficulties, and reasons against, *McRobert* 3960-2, 3966-9, 4213-6, 4274-5, p 547-8

Difficulties and disadvantages, *Abrahams*, p 352-3, *McRobert*, 4274-5, *Le Marchant*, 7667, 7695-705, *Smith*, 8770-2

## DIRECTORS

Government should be strongly represented on board, *Dunbar* - - - - - 7934, 7968-9

Government should be represented, but majority would be representatives of shareholders, *Graham* 4879-80

Strong directorate would be necessary, and question as to possibility of obtaining, *Le Marchant* - - - - - 7791-7

no Enthusiasm about, in India, *Dunbar* - 8026

## ESTABLISHMENT

Correspondence between Secretary of State and Government of India *re*, 1899-1901, *Abrahams* p 357-8

Memorandum on proposals for, *Abrahams* p 339-54

 Purchasers of Council bills prefer dealing with Government through Bank of England, *Le Marchant* - - - - 7715  
 Question of, *Newmarch*, 1694-6, *Le Marchant* 7667  
 Question as to advantage of, in case of banking crisis, *Toomey and Fraser* - 2872-912  
 Question of, from point of view of larger sums being placed with for lending purposes *Toomey* 2832-46  
 Rates of interest in India would be decreased, *Dunbar* 7932  
 original Reason for, to assist Government in support of exchange policy, no longer of importance, *Le Marchant* - - - - 7781-9  
 Reduction of expenditure in Government of India's Department as result of, question, *Hunter* 6766-9  
 Relations with India Office, scheme, *Abrahams*, p 347-8  
 Relations of exchange banks with, question of, *Fraser* 2916-20  
 to Believe Government of responsibilities as regards currency and banking would be possible, *Bhupendra Nath Mitra* 4738  
 Report from Accountant General, Bombay to Government of Bombay, December 1899, *Abrahams* - - - - p 419  
 certain Restrictions would be necessary to prevent unfair competition with exchange banks *Ross* 3683, p 544  
 Risk of bank becoming another Government Department, *Le Marchant* - 7668, 7707  
 Secretary of State and Government of India would not be entirely relieved of responsibility *Le Marchant* - - - - 7668, 7709-12  
 State would have no real control, *Sundara Iyer* 8896-7  
 some Treasuries would still have to be maintained, *Dunbar* - - - - 7947-8  
 Chambers of Commerce letters from Government of India 1895 and 1904 re proposed increase of invested portion of paper currency reserve, and replies *Newmarch* p 258-9, p 261-7, p 270, p 277-83

- Chartered Bank of India, Australia and China, correspondence, 1904, with Government of India re relaxing restrictions on Presidency Banks, *Abrahams* p 491-2, p 497-8
- Cheques**  
not an Important factor in Indian currency, *Newmarch* - 1770-1  
Increased use of, *Reid* - p 574  
Increased use anticipated, *McRobert* 4071-2, p 548  
Use of, might be extended, *Ross* - 3675  
Use of, in business, particulars, *McRobert* 4106-11  
Use will be confined to Presidency towns, and little fear of note issue being curtailed by, *Ross* 3881-3  
China, trade with, statistics, *Newmarch* 1437, p 289, p 291  
Coin, total holding in India, 40 crores suggested, *Howard* p 589  
Coinage, token, greater proportion of gold currency to, would be desirable, *Abrahams* - 881-2
- COLE, ALFRED CLAYTON** - 3344-3376  
Bank of England, relations with India Office friendly apart from recent incidents - 3374, 3512-8
- CENTRAL OR STATE BANK**  
might be Advisable, but no definite knowledge possessed as to practicability - 3382-5, 3426  
possible Difficulty of working owing to area 3383, 3426, 3536-52  
Issue of debentures, question of 3457-61  
Nucleus of, in Presidency Banks 3456-7  
Opinions of directors of Bank of England re 3379-81
- Currency business, very well done by Indian Government - 3394  
Deposits with London banks, security should be taken - 3424-5
- EXCHANGE**  
Business very well done by Indian Government 3384  
Crisis, India should be prepared to carry its own burden in time of - 3406, 3416  
Gold in circulation of value for support of 3396-402, 3479-86
- GOLD MINT**  
Amount of gold in circulation would not be affected by - 3392  
would Coin local gold and possibly gold from South Africa, gold would not be sent from London if coinage charge exceeded cost of freight, &c., of coined gold - 3389-91, 3437  
special Indian coin would not effect question of exchange as gold taken by weight - 8567-9  
not Objected to, but unnecessary as long as sovereigns used - 3388  
Sovereigns should be coined if mint were set up 3393, 3565-6
- GOLD STANDARD RESERVE**  
Accounts, wording of "cash at short notice," objection to - 3412, 3499-506
- Gold**  
Amount, opinion re, and five millions not considered sufficient - 3405-6, 3570-6  
Holding of reserve only in, would be advantageous in case of exchange crisis, but in that case profit on investment would be lost 3519-35  
Portion accumulated for support of exchange should be held in England, not India 3403-5, 3481-5, 3554-8  
not Taken into account in market calculations in London - 3411-2
- Securities**  
not Objected to, with sufficient amount of gold 3405-9  
Short dated securities preferred, but others should not be definitely excluded - 3410  
not as Useful as gold in crisis - 3413  
Indian money market, but indirect relations between London market and but indirect relations 3347
- LENDING BY GOVERNMENT IN ENGLAND**  
Advantages and disadvantages - 3450-4  
below Bank rate - 3420-1  
Indian credit not damaged by - 3360
- COLE, ALFRED CLAYTON—continued**  
**LENDING BY GOVERNMENT IN ENGLAND—continued**  
Interest, too low sometimes from point of view of maintaining discount rate in London 3348-9  
Objection to system, control of Bank of England over money market may be weakened by, and market rate lowered 3348-59, 3372-3, 3427-30, 3463-78
- Securities**  
Colonial securities, inclusion of, considered to be against interests of British Government 3365  
Difficulty owing to large amount of money to be lent - 3423  
Other than those registered at Bank of England, question from point of view of Bank, 3507-9  
Taking of Indian at par value and British at market value considered bad business 3361-5  
Temporary abstention from, might help rate 3421-2
- LOANS, ISSUE BY GOVERNMENT IN ENGLAND**  
Credit of India not declined relatively to that of other borrowers - 3371  
Loans, &c., too much under Government control, money would be more readily obtained if bigger facilities given for private enterprise in India 3552  
if Money required on large scale, loan would have to be issued with fixed date for redemption 3368-71, 3553  
Quotations for, kept down by knowledge that Government will continue to borrow annually 3368
- NOTES**  
Increasing circulation of - 3418  
Investment of, in trade bills, or advances to banks would not be considered in the case of the English paper currency system - 3438-40
- PAPER CURRENCY RESERVE**  
Advances to banks for short terms, proposal not favoured - 3445-9  
Increase of fiduciary issue would be approved if recognised that issue should be reduced if note issue decreases as it might if cheques largely introduced - 3418-9, 3487-96
- SILVER, PURCHASE OF, FOR COINAGE**  
Payment with gold in paper currency reserve instead of from balances, 1912, question as to effect on London market - 3559-64  
Question as to possibility of buying regularly 3376-8  
Sovereigns, loss from wear and tear should fall on India - 3388  
Collection of revenue, civil service and famine relief, and insurance expenditure, 1909-10 to 1913-4, *Abrahams* - p 81  
Commercial undertakings, net revenue, 1909-10 to 1913-14, *Abrahams* - p 81
- Co-operative Credit System**  
Assistance of societies by Bank of Madras and Bank of Bengal, *Hunter*, 6588, 6926-7, 6974, *Dunbar*, 7965  
Assistance of societies by joint stock banks, *Smith* 8854-6, 8873  
'Co operation in India,' by S H Fremantle, *Hamilton* - p 530-6  
Encouragement desirable, and suggestions *Hamilton*, 2483-5, p 524-8, *Twomey and Fraser*, 2621, p 537, *McLeod*, 7045-9, 7096-7, p 597  
Extension of system and Government assistance desirable, *Sundara Iyer* - 8900-3, 9014-6  
Growing, *McRobert* - p 548  
Money might be attracted out of hoards, *Fraser* 2974  
Need for men to develop and scheme, *Hamilton* 2484, p 525 p 528  
Tendency to attract money from hoards, *McRobert*, 4082, *McLeod*, 7047, *Reid*, p 575.
- Council Bills and Telegraphic Transfers**  
Advantage of system (Bengal Chamber of Commerce), *McLeod* - p 603-4  
Amounts drawn on India from 1862-3 to 1912-3 with average rate of exchange, *Newmarch* - p 227

## DUNBAR, L G, Secretary and Treasurer, Bank of Bengal

7854-8121, p 596

Balances, policy approved 7856-7

## BANK RATE IN INDIA

9 per cent only in 1906 and 1908 for a few weeks 7874  
 Number of borrowers, broadly speaking, dependent on trade not on 7892-8, 9003-4

Banking, tendency towards concentration in sea-ports 7849, 8053

## BENGAL, BANK OF

Assistance of co-operative societies - 7965

Branches, no difficulty in dealing with people of different interests over wide areas, &amp;c 7952-4

Deposits

More money obtained than can be used 8087-91, 8111-2

Rate of interest, and reduction as too much obtained - 7950-1, 7984-90

Discounting of bills at branches - 8050-1

Issue of Government paper by - 7966-7

## CENTRAL OR STATE BANK

Advantages to be derived - 7945-6, 8027-32, 8113-6

Amalgamation of Presidency Banks advocated 7960, 8117, p 596

Area no difficulty anticipated - 7952-5

Attitude of Bank of Bengal re - 8023-5 8062

Bank of Bengal prepared to formulate scheme p 596

Capital, 5 million pounds, paid up, should be maximum - 7930-1, p 596

## Central Board

no Difficulty anticipated re directors 8033-49

Location, Calcutta, a *sine qua non* 7936-41, 7959, 8054-60

no Enthusiasm about, in India - 8026

## Functions

Advocated

Bankers to Government and all Government balances should be handed over to - 7925

7932-3, 7961-2, 8115

Management of note issue - 7926, 8115

Management of public debt - 8115

Purchase of sterling bills to certain extent but not general exchange business 7928-9

Issue of Government paper, question of 7966-7

Government should be strongly represented on board of directors - 7934, 7968-9

DUNBAR, L G—*continued*CENTRAL OR STATE BANK—*continued*

Government balances, weekly statement would be issued - 8066-9

Government control and responsibility, question as to extent - 7942-4, 8070-2

some Government Treasuries would still have to be maintained - 7947-8

Local boards, necessary - 7935

London office should be established - 7927, 8115

Notes could be better pushed by, than by Government - 8006-8

Rates of Interest in India would be decreased 7932

Currency, import would be unnecessary if funds not locked up by Government - 8107-8

Currency Offices, people prefer to deal with bank 7906-7

Exchange, gold in circulation and hoards would not support, in time of crisis - 7920-1

## EXCHANGE BANKS

Business of - 8094-3

Engaging in local business 7957-8

Head offices should be in India - 8104-6

Gold, large amount not in circulation, but in form of ornaments - 7896-7

## GOLD CURRENCY

no Demand for, known - 7917

Encouragement by Government at Lahore, Agra and Delhi 7908-16, 8019-22

not Required' and considered a wasteful and expensive luxury - 7895, 7918-9

## GOLD STANDARD RESERVE,

Form

Gold, about 5 millions advocated 7878-86, 7891

Securities, desirable, so as not to have money lying idle - 7887-96

Location, in London, advocated - 7876

Subsidiary branch in India (silver) no objection to 7892-4

## LENDING BY GOVERNMENT IN INDIA

to Approved banks - 7861-4

Advocated - 7865-6, 7869-71, 7970-4

Security, suggestion, 7865-6, 7869-71, 7970-4

Distribution, question - 8080-2

at 4 per cent advocated, and Bank rate would never rise above 6 per cent 7887-8, 7871, 7984-6, 7999-8002, 8005, 8083-6

1 per cent below bank rate, Bank of Bengal would refuse, as unremunerative 7872-3, 8016

Loans, issue of, in India, issue of local Treasury bills would be possible - 7963-4

## NOTES

no Currency office at Dacca, and notes consequently little used in Eastern Bengal - 8009-15

Encashment, difficulty - 7900

Encouragement by Government advocated 7918

Government could encourage, by opening more offices - 7905, 8012-4

Increased use desired, and steps taken by Bank of Bengal to encourage - 7903-4

Increased use of, and reason - 7901-2

## PRESIDENCY BANKS

Access to London market, unnecessary 8109-10, 8121

Borrowing, no resort outside India, according to strict letter of charter, but possible 8094, 8103

Government work, expense of, and loss on 7922-4

Loans by, nature of securities - 7973-8

Paper currency and balances could perhaps be made over to, separately, but would be difficult 8118-20

Relations between, friendly - 8117

## RESERVE TREASURIES

Amount in, should be made available for loans to Presidency banks or selected bankers - 7861

Sums in, considered in India to be unduly large 7858-60

Sovereigns, buyer of grain prefers, but seller prefers rupees - 7898-9

Treasuries, up country economically worked 7979-83

Egypt, purchase of sovereigns in transit from, against transfers, see under Council Bills and Telegraphic Transfers

<b>Exchange</b>	<b>Exchange—continued</b>
not affected actually by amount of silver token coin in circulation, <i>Abrahams</i> - 1274-7	<b>GOLD IN CIRCULATION AS SUPPORT OF—continued.</b>

 Government should export to London or take steps to secure export, if large sum in hand in case of exchange crisis, *Abrahams* - 1095  
 Held in reserves and treasures, 1901-2 to 1912-3, *Abrahams* - - - - p 85  
 Hoarded or in circulation, loss of products to India from, *Hamilton* 2295, 2318-25, 2403-5, 2409-10, 2444, 2473, 2476-9, 2488-92, p 521, p 522-3, p 527  
 Hoards, *see that title*  
 Holding of, by Government to interests of India, *Hamilton* - - - - p 526-7  
 Holding of, in India, correspondence between Government of India and Secretary of State re, *Abrahams* p 170, p 194, p 196-7, p 199  
 Holding of, 1908, 1909, 1910, *Abrahams* 1249-53  
 Import continues even in time of crisis, *Bhupendra Nath Mitra* - - - - 4849-51
- IMPORTS INTO INDIA**  
 1865-6 to 1872-3, *Sundara Iyer* - - - p 622  
 Effect of sale of Council bills on, *see under Sale under Council Bills and Telegraphic Transfers*  
 Excessive importation into India should be checked, *Barrow* - - - - 3077  
 on Large scale in last few years, *Newmarch* 1392  
 Large amount melted down for ornaments, *Smith* 8528-9  
 Question as to possibility of preventing, *Hamilton* 2529-36  
 Sale of Council bills not interfered with, and interference not anticipated with free sale, *Ross* 3888-9  
 in India in case of crisis, Government should reserve right to refuse to issue, except for export *Ross* 3768-72, 3805  
 in India, decrease in Government gold between September 1907 and December 1908, *Abrahams* p 90  
 from Indian mints, annual amount, *Abrahams* p 214
- ISSUE**  
 in Crisis, no distinction should be made between issues for circulation and for remittances *Bhupendra Nath Mitra* - 4844-52  
 in Exchange for silver or paper, *see under Sovereigns*  
 Large amount not in circulation, but in form of ornaments, *Dunbar* - - - - 7896-7  
 Large amount goes into India, but passes out of immediate currency, *Le Marchant* - 7640-1
- IN LONDON**  
 Use of, not lost to people in India, *Hamilton* p 518  
 Value of, for maintaining exchange, and comparison with value of gold in India, *Newmarch* p 242, 1379 1381-3  
 Obligations recommendation of Fowler Committee re restricting *Abrahams* 488-92, p 11-2  
 in Paper currency revenue and Government Treasuries receipts and issues, 1899-1900 to 1912-13 *Newmarch* - - - - p 251-3  
 Production, great increase in world, *Abrahams* 724  
 Receipt of bullion formerly by Government of India in exchange for rupees, but abandonment of, *Abrahams* - - - - 1324  
 in Reserves, *see under Gold Currency Reserve and Paper Currency Reserve*  
 Shipments to England, practice re, *Abrahams* p 12-3, p 16
- SUPPLY OF, FOR EXPORT, IN EXCHANGE CRISIS, 1907-8**  
 Explanation of proceedings *Abrahams* 838-42  
 Telegrams between Secretary of State and Viceroy *Abrahams* - - - - p 164-5

**Gold—continued**

Support of Exchange by, *see under* Exchange  
 Transfer of five to eight millions to London with  
 view to Government undertaking to maintain  
 exchange, question of, *Abrahams* 1092-4  
 should be Used for development of India rather  
 than for lending to London banks and financial  
 houses, and scheme, *Hamilton* - p 520-1, p 527

**Gold Currency**

*see also* Sovereigns  
 Advantages of gold standard possessed at present,  
*Abrahams* - - - - - 1144-6  
 some Advantage in that liabilities of Government  
 for redemption of rupees would decrease, *Howard*  
 8206  
 Advantages of, in opinion of Indian Government,  
*Abrahams* - - - - - 1127-34  
 Advantages of paper currency over, *Hunter* 6486-9  
 Attitude of Fowler Committee *re, Abrahams* 1026-  
 8, *Hamilton*, p 523  
 Attitude of Government *re, Webb*, p 557, p 563-4,  
*Abrahams*, 1114-22  
 Changing of gold coin should be always possible,  
*Graham* - - - - - 4928  
 if Circulating freely people will not be reluctant to  
 part with, *Webb* - - - - - 6257-65  
 Conditions necessary to, *Abrahams* 1029-32, 1212  
 no Demand for, known of, *Dunbar* - - - - - 7917  
 Desirable and liking of people for gold money,  
*Abrahams* - - - - - 619, 625  
 Desirable and reasons, *Webb* 5727-31, 5841-52,  
 5880-2, 6001-3, 6307-10  
 Difficulties of getting gold into, and retaining it in,  
 circulation, *Sundara Iyer* - - - - - p 626-8  
 Disadvantage of forcing gold into circulation, *Hunter*  
 p 593-4  
 Effective in Punjab, Northern India, and Bombay,  
*Le Marchant* - - - - - 7644

**ENCOURAGEMENT**

Advocated, *Newmarch* 1421, 1701-31, *McRobert*,  
 3978-82, 4006, 4226-36, *Bhupendra Nath Mista*,  
 4672-7, 4776-81, *Webb*, 5744-8, 5757-8, 5776-86,  
 6004-11, p 568, *Le Marchant*, 7644, 7821  
 Attempt by Government to encourage by paying  
 salaries and postal money orders partly in, but  
 failure, *Sundara Iyer* - - - - - p 627  
 Desirable in interests of people, *Smith* 8533-53  
 not Desirable, *Barrow* 3072-3, 3092-7  
 by Government, question of and comparison with  
 encouragement of notes, *Abrahams* 1261-7,  
 1290-8  
 Hoarding would result, *Reid* p 574  
 at Lahore, Agra, and Delhi *Dunbar* 7908-16,  
 8019-22  
 Measures *re* increasing circulation (letter of Govern-  
 ment of India, 1900) - - - - - p 109 113  
 no Special steps advocated *Howard* 8224-6, 8291  
 Question of, *Abrahams* - - - - - 1201-8  
 Steps taken, *Bhupendra Nath Mista* - - - - - 4754-3  
 Encouragement of notes preferable but people should  
 be given gold when desired, *Smith* 8553-64  
 Essential to proper currency system, *Webb* 5708  
 with Establishment of, gold standard reserve will  
 be unnecessary, *Webb* 5305, 5752-6, 5802-10,  
 5835-8, 5874, 6039, 6127-40  
 in Existence practically, *Abrahams* - 933-4, 1032  
 Government interests with regard to *Abrahams*  
 626, 799-802  
 Government should discourage use of, *Hamilton*  
 2318, 2486-90  
 Impossibility of estimating how much would go into  
 currency and how much as ornaments or into  
 hoards, *Barrow* - - - - - 3094

**INCREASE**

possible Advantage in preventing rise in world's  
 prices, *Howard* - - - - - p 586  
 not Advocated, and not considered practicable  
*Sundara Iyer* - - - - - p 621-4, 8936-7  
 and Decrease in notes and silver would result in  
 decrease of gold in paper currency reserve,  
*Webb* - - - - - 6204-22 6296-8  
 Desirable if desired by people, *Abrahams* 1139-42,  
 1147-9

**Gold Currency—continued****INCREASE—continued**

at Expense of gold standard reserve would make  
 exchange less stable, *Abrahams* - - - - - 1209-17  
 Increase of gold in circulation and in paper currency  
 reserve anticipated, *Webb* - - - - - 6300-1  
 Increase of reserves preferred, *Abrahams* 1303-4  
 Question whether Government or Central Bank  
 more favourable agency, *Newmarch* 1827-30  
 Question whether note circulation need be in-  
 terfered with, *Howard* - - - - - 8287-91, p 585  
 Reserves would cease to increase, *Howard* 8207-10  
 Rupees not likely to be replaced by, *Sundara Iyer*  
 p 627  
 Rupees would be supplanted to certain extent,  
*Webb*, 5788-801, 6299, 6304, *Howard*, 8287  
 Rupees not likely to fall to a discount, and no  
 steps should be taken by Government to prevent,  
*Webb* 5821-2, 5839-40  
 Involving obligation to give gold for rupees not  
 intended, *Webb* - - - - - 5979-86, 5993  
 Limit on amount of rupees that are legal tender  
 will be possible in future, *Webb* - - - - - 5997-6000  
 Mohurs, dies prepared for, 1835 *Graham* 4922  
 not a Necessary concomitant of gold standard, but  
 endeavours should be made to meet any demands  
 for gold, *Howard* - - - - - 8223-6  
 Notes will not be displaced by, *Sundara Iyer*  
 p 626-7  
 no Object in forcing upon people, and no such desire  
 on part of Secretary of State or Government of  
 India, *Newmarch* - - - - - 1800-1  
 Objections to, *Hamilton* 2443, p 523  
 Objection to forcing, on India, and Government  
 should not encourage use of, but should not  
 interfere if people desire, *Ross* 3624-9, 3806-16  
 p 544  
 Other forms considered preferable, *Ross* - - - - - 3628  
 Paper currency with gold in reserve more economical,  
 but extension of gold at expense of notes not  
 suggested, *Howard* - - - - - p 585  
 Position of India as regards, similar to that of many  
 other countries, *Abrahams* 1016-25  
 Question as to existence of, in other countries, *Webb*  
 5972-8  
 Reason for change of opinion regarding desirability  
 of, during last 15 or 20 years, *Webb* 6306, 63110  
 Recommendations of Indian Currency Committee *re*  
 and carrying out of, advocated, *Webb* 5316-22  
 5970-1, p 555, p 556, p 557-9 II  
 Recommendations of Prof Dunning MacLeod, *Webb*  
 5970-1, p 555, p 556  
 Replacement of notes by, not desired, *Reid* - p 574  
 not Required and considered a wasteful and expen-  
 sive luxury, *Dunbar* - - - - - 7895, 7918-9  
 Return to centres anticipated, *Le Marchant* 7847-51  
 Smaller coin not advocated to start with, but might  
 be struck if found desirable by experience, *Webb*  
 5937-92  
 Suitability of, for India, *Abrahams* - - - - - 1268

**TEN RUPEE PIECE**

would not be Available for export on favourable  
 terms *Le Marchant* - - - - - 7847  
 not Advocated and reasons, *McRobert* 4008-9  
 p 548-9  
 Cheaper to coin than sovereigns *Abrahams* 1245-8  
 might Compete with 10 rupee note *Le Marchant*  
 7844, *Howard*, 8395-6 p 585  
 Correspondence between Secretary of State and  
 Government of India, *Abrahams* 1143  
 Hoarding and use for ornaments would be  
 encouraged, *McLeod* 7171, 7193, p 598  
 Objections to, *Ross* - - - - - 3817-26, 3854-62, p 546  
 Question as to popularity, *Abrahams*, 1178-80,  
 1238-45, 1269, *Barrow*, 9092, 3094, *Sundara*  
*Iyer*, p 627-8  
 Question as to whether demand for gold would be  
 increased, *Barrow* - - - - - 3279-88  
 Sovereigns preferred to, *McRobert* 4007-8, p 548  
 would be Useless for export except as bullion,  
 and would tend to destroy standing of sovereign  
*McLeod* - - - - - 7162-76 7192-6 p 543  
 Ten rupee and five rupee pieces attempted introduc-  
 tion, 1870, *Graham* - - - - - 4922 3

- Gold Currency—continued**  
 possible Tendency to hoard in case of crisis, *Webb* 5812-26  
 Use of, marks superior stage in civilisation to use of silver, *Webb* 6307-8  
 Wasteful compared with other methods and not as useful for support of exchange as gold in reserve, *Beid* 7386-8  
 Gold Currency (Standard) Reserve, abolition when sovereigns everywhere in circulation, and 30,000,000 in gold held in paper currency reserve, advocated, *Webb* p 569
- Gold exchange system**  
 Ideal, *Abrahams* 623  
 Nature of, *Abrahams* 623-4
- Gold Mint**  
 Advantage claimed for, that gold currency would largely increase, doubted, *Sundara Iyer* p 620-4  
 Advantages slight as sovereigns can be and are imported to great extent, *Abrahams* 1124  
 Advantages in theory, *Hunter* 6470  
 might be Advisable if inexpensive, *Ross* p 546  
 Advocated and advantages to be derived, *McRobert*, 4014-6, *Bhupendra Nath Mitra*, 4664-6, *Graham*, 4919-26, 4930, *Webb*, 5706-31, *Howard*, 8242, p 585, *Smith*, 8565-82, p 616  
 not Advocated at present, but if established sovereigns should be coined, *McLeod* 7032, 7153-5, 7157-61, p 597, p 598, (Bengal Chamber of Commerce), p 604-5, p 606, 607  
 Attitude of Mysore gold mines to, *Abrahams* 1174-6
- BULLION FOR COINAGE**  
 probable Difficulty of obtaining, *Hunter*, 6471-3, 6861-71, 6975-7, p 593, *McLeod*, 7033-4, (Bengal Chamber of Commerce), p 606  
 from Hoards, question of obtaining, *Abrahams* 214, 1135-8, *Toomey*, 2614-8, 3010-4, *Bhupendra Nath Mitra*, 4671, *Webb*, 5750-1, *Howard* 8230-4  
 Imported from abroad would not go for coinage in normal times, import of sovereigns cheaper, *Toomey* 2699-709  
 Local supply, from mines, question of, *Toomey*, 3008-9, *Bhupendra Nath Mitra*, 4666-8, 4786-8, *Webb*, 5694-9, *Howard*, 8247-8  
 Question as to source, and difficulty as regards import owing to cost, *Abrahams* 1220-37, 1233-4 1309-20  
 Supply, would depend on price, *Bhupendra Nath Mitra* 4717-9  
 Taking of bullion to mint for coinage would not be cheaper than import of sovereign as general rule, *Toomey* 2998-3018  
 Charge for refining would have to be made, but not seigniorage, *Bhupendra Nath Mitra* 4669-70  
 would Coin local gold and possibly gold from South Africa, gold would not be sent from London if coinage charge exceeded cost of freight, &c of coined gold, *Cole* 3389-91, 3437  
 for Coinage of sovereigns unnecessary, and impracticability as regards supply of bullion, *Barrow* 3091
- COST**  
 Question of, and statement of establishment charges of mints in Sydney, Melbourne, and Perth, *Abrahams* p 214  
 Small if special Indian coin adopted, *Abrahams* 1321-3  
 Experiment should be tried, *Howard* 8239-30, 8397-8  
 for Free coinage of sovereigns would justify cost, *McRobert* p 549  
 Gold in circulation, question of effect on, *Abrahams*, 618, *Cole*, 3392  
 History of discussions and proceedings re, *Abrahams*, 614-6, p 212-3, *Webb*, p 557  
 not very much Importance attached to, *Le Marchant* 7666
- SPECIAL INDIAN COIN**  
 see also Ten Rupee piece under Gold currency  
 would not Affect question of exchange as gold taken by weight, *Cole* 3567-8  
 might Conflict with sovereign, *Le Marchant* 7666  
 Fineness should be same as sovereign to enable exchange by weight, *Abrahams* 1163
- Gold Mint—continued**  
**SPECIAL INDIAN COIN—continued**  
 Objections to (Bengal Chamber of Commerce), *McLeod* p 606  
 Public opinion, question of, *Abrahams* 1166  
 Treasury would have no jurisdiction, *Abrahams* 617  
 Indian feeling would be gratified by, and feeling of having been hampered without, *Abrahams* 1125-6, 1249  
 no Justification for, in absence of public demand, *Abrahams* 1167  
 not Necessary at present, but if opened in future, sovereigns should be coined, *Toomey and Fraser* 2602-3, p 538  
 a Necessity almost, *Bhupendra Nath Mitra* 4782-5  
 Notes on proposals for, *Abrahams* p 212-5  
 Objected to, *Hamilton* 2466-7  
 not Objected to, but unnecessary as long as sovereigns used, *Cole* 3388  
 Opening of Bombay Mint to free coinage of gold, advocated, *Webb* 5690-8, 5702-3, p 557, p 558, p 568  
 Opening of, immediately, was never recommended by Currency Committee of 1898, *Sundara Iyer* p 628  
 Opinion of Su Guy Fleetwood Wilson referred to, *Abrahams* 1299-302  
 Passage of bullion from hoards through, question of, *Smith* 8569-80  
 Public feeling re, question of, and of importance to be attached to, *Abrahams* 1306-7  
 Reason for Fowler Committee recommending, *Le Marchant* 7659-62  
 Receipt of gold and issue of rupees in exchange without legislating for minting of gold coins, suggestion, *Hunter* 1474-7, p 593  
 Recommendation by Fowler Committee, and change in circumstances since, *Abrahams* 1168-9, p 212
- SEIGNIORAGE**  
 Charge should not be made, *Howard*, 8243-6, p 585, *Webb*, 5703-5  
 Question, and question whether better terms should be given than given in England, *Abrahams* 1154-62, 1176, 1181-95  
 Sovereigns, or coins identical with, in size, weight, and fineness, should be coined, *Graham*, 4920-1, 4924, *Webb*, p 557, p 568  
 Sovereigns should be coined, *Cole*, 3393, 3565-6, *Bhupendra Nath Mitra*, 4714-6, *Howard*, 8320-1, 8399-401, p 585, *Smith*, p 616  
 Supply of sovereigns in India would not be greatly increased, *Newmarch* 1750  
 might be Tried if special coin introduced, but introduction not advocated, *Barrow* 3091-3
- Gold reserve**  
 in India, 15 to 20 million advocated, *Howard* p 589  
 Sufficient already to allow of Government discharging its obligations in gold without taking from gold needed to maintain exchange, *Webb* 5740-3
- Gold Standard**  
 Advantage of, and progress of trade since introduction, *Ross* 3617-23  
 with Gold reserve advocated, *Sundara Iyer* p 628
- Gold Standard Reserve**  
 Accounts, working of "cash at short notice," objection to *Cole* 3412, 3499-506  
 Addition to, of annual interest on investment of Paper Currency Reserve, proposal by Government of India, and opinion re p 119, p 122, p 127
- AMALGAMATION WITH PAPER CURRENCY RESERVE**  
 possible Advantages, but difficulties, *Le Marchant* 7626  
 not Advocated, and reasons, *Barrow*, 3151-3 3158-66, *Howard*, 8283-4, p 587  
 possible Danger, *Abrahams* 721  
 not Desirable and no benefit seen, *Hunter* 6454-6  
 Indian public opinion might be shaken, *Abrahams* 721  
 no Objection to, *McRobert* 4085-6  
 Objection to, *Bhupendra Nath Mitra* 4692-6  
 Possible eventually, but uses in separate systems, *Le Marchant* 7741-3  
 not Possible, *Newmarch* 1405-6  
 Question of, *Abrahams* 704-12  
 Question as to possibility, *Webb* 6104-7, 6125-6

## Gold Standard Reserve—continued

Amount, and advisability of reducing, letter from Government of India, 26th April 1906, *Abrahams* p 137

## AMOUNT

Automatic increase, methods (*Law*) - p 119  
 Balance of trade considered the proper measure of possible liabilities, not quantum of currency, *Abrahams* - 776-9  
 Inadequate in opinion of Madras Chamber of Commerce 1907 p 172  
 Increase  
 Desirable as trade increases and methods of *Abrahams* - 647-9  
 above 25 millions, desirable and question of from profits on coinage or from interest, *Abrahams* 780-3  
 not Less than 25 millions advocated, *Bhupendra Nath Mitra* - 4696  
 no Limit should be fixed, *Reid* 7509, 7571-2, p 573 *McLeod* 5971, *Smith*, 8533, 1587, p 616  
 Number of rupees coined should not be measure of, *Abrahams* - 1074-6  
 Present, sufficient *Sundara Iyer* 8912 p 629  
 Regulation of with view to amount of gold in paper currency reserve would be advantageous *Abrahams* - 1057  
 Suitable, opinion re *Abrahams* 774-5, p 93  
 10 millions in gold and 20 millions in securities, advocated *McRobert* 4020-2, 4068  
 20 to 25 millions desirable, *Webb* 6039-40, 6155-6, 6249-52  
 30 millions advocated, *McRobert* 4019, 4083-4  
 Use of profits on coinage for ordinary or capital expenditure not approved, until reserve 25 or 30 million sterling, interest and profits should then be used to pay off floating and unproductive debts, *McRobert* - p 549  
 Amount composition and location of, 1901 to 1913 *Abrahams* - p 97  
 Approach towards unanimity between Secretary of State and Government of India on questions regarding, *Abrahams* - 605  
 Conferences between India Office and members of commercial community re, would be useful, *Abrahams* - 720  
 Credit of profits on coinage to see under Profits under Coinage under Rupees  
 Criticism of system as wasteful, *Webb* 5827-38, p 558  
 Departures from recommendations of Indian Currency Committee, *Webb* - p 559-60  
 Diversion of funds allocated to, to railway development, 1907, see Use of, for railway purposes under Profits under Coinage under Rupees  
 Drawing against, by Secretary of State, 1910 and 1911, circumstances, *Bhupendra Nath Mitra* 4810-8  
 Establishment of, correspondence between Government of India, and Secretary of State re, 1900, *Abrahams* - p 109-14, p 126-8

## EXISTENCE OF

Approved in India *Reid* - - - - p. 573  
 Desirable, *Hunter* - - - - - 6431

## FORM

Bullion, unnecessary *Hamilton* 2387, 2414  
 Criticism, *Webb* - - - - 6170-7  
 Gold

## Actual gold

## Amount

2 millions insufficient, *Reid* - 7509, 7570  
 5 millions at least, advocated, *McLeod*, p 597, (Bengal Chamber of Commerce), 7137-9, p 603  
 about 5 millions advocated, *Dunbar* 7878-86, 7891  
 5 millions not considered sufficient, *Cole*, 3405-6, 3570-6, *Bhupendra Nath Mitra*, 4687-700  
 5 millions as minimum sufficient at present, but might increase to 10 as trade increases, *McLeod* 7007-26, 7072-80, 7140, 7220-8, p 598  
 10 millions advocated, *McRobert* - 4020-2, 4068

## Gold Standard Reserve—continued

## FORM—continued

## Gold—continued

## Actual gold—continued

## Amount—continued

10 millions might be sufficient, but sum should not be fixed, as should depend on state of finance *Sundara Iyer* 8915-35  
 Fixing of limit not suggested at present, *Toomey* 2956-7  
 Question of *Toomey and Fraser* 2711-2  
 2783-96 2986-96  
 Correspondence between Government of India and Secretary of State, *Abrahams* - 863-4, p 170-1, p 178-80 p 183 p 194-6 p 199, p 201  
 Holding of all reserve in, not objected to if really desired, but would be too expensive and waste of interest, *Toomey* - 2716-43  
 Idea predominated in minds of Fowler Committee *Le Marchant* - 7617  
 ideally Preferable to securities, and in any case short-dated securities preferred *Barrow* 3102-8

## Amount

Ample, taking into account gold in paper currency department *Ross* 3648, 3795-b p 546  
 Correspondence between Government of India and Secretary of State *Abrahams* p 168-9, p 175-8, p 196, p 199-200, p 202, p 204  
 Experience of 1907-8 crisis as guide not Adequate, *Howard*, p 587, *Toomey*, 2587-90, 3027-35, *Bhupendra Nath Mitra*, 4702-3  
 Satisfactory, *Abrahams*, 597-604, 681-3, 955-70, *Ross*, 3649-52, 3748  
 should be fixed on basis of number of rupees in circulation and suggestions re *Ross* 3648-62, 3740-66 3908-11 p 546  
 Inadequate in opinion of Madras Chamber of Commerce, 1907 - - - - p 172  
 Increase advocated, and reason, *Toomey and Fraser*, 2584-94, p 536, *Howard* 8249-51  
 Increase gradually to 10 and 15 millions desirable, *Howard* - 8251-3, p 587  
 Insufficient, and proportion too low, should be half of whole, *Smith* 8583-4, 8587 p 618  
 no Limit should be fixed and coinage profits should continue to be added to *McLeod* (Bengal Chamber of Commerce) - p 603  
 Question of, *Le Marchant* - - 7637-8  
 Question of, and of connection of amount of, general balances with *Abrahams* 764-73, p 88-9  
 too Small and whole amount preferred, in gold, *Webb* - - - - 6041-5 6289-94  
 not Sufficient if no gold in paper currency reserve or easily available in London, *Le Marchant* - - - - 7620, 7622-5  
 Sufficiency of, arguments in favour of, *Abrahams* - - - - p 91-4  
 25 millions should be regarded as minimum, and adequacy considered when sum reached, *Howard* - - - - - p 587  
 30 millions preferred, *Howard* - - - - p 587  
 Whole amount in gold the ideal, *Reid* 7509  
 Bulk of reserve should be in gold in India, *Webb* p 560-1, p 568, p 569  
 Holding of reserve only in, would be advantageous in case of exchange crisis, but in that case profit on investment would be lost, *Cole* - - - - - 3519-35  
 Investment of whole amount approved when reserve strong in gold, *Hunter* 6440-3, p 592  
 Liquid gold, see Actual gold above  
 Objects of, *Graham* - - - - 4934-41  
 for Portion of, desirable owing to probable difficulty in future of finding sufficient short-dated securities, *Abrahams* - 639-40  
 Portion accumulated for support of exchange should be held in England, not India, *Cole* 3403-6, 3431-5, 3554-8

Natives gradually investing more in securities, *Fraser* - 2948-9

Question of, *McRobert* - 3975, p 548

Reasons for, and laws of succession and inheritance a cause, *Hunter*, p 594, 6490-1, *Sundara Iyer* 8938

Reasons for, and decrease not anticipated, even with advance of education, &c, *Sundara Iyer* 8999-9003

Removal of tax on silver bullion might possibly stimulate hoarding of silver instead of gold, *Newmarch* - 1422-3

Sovereign of certain dates specially popular, *Abrahams* - 674

Strong inference that gold put out goes into, *Hunter* p 594

Temptation not increased by excess of rupees in circulation relatively to gold coins, *McLeod* 7173

10 rupee piece would encourage hoarding, *McLeod* 7171, 7193, p 598

possible Tendency to hoard gold currency in case of crisis, *Webb* - 5812-26

Holden, Sir E H, Bart, quoted re advantages of State bank, *Abrahams* - - - p 342

Home charges Definition, *Newmarch* - - - 1465-8

Suggested payment of, through medium of certain Indian banks, objection to, *Ross* - 3614, p 544

Hong Kong and Shanghai Banking Corporation, objection to relaxing restrictions on Presidency banks, 1904 and London, *Abrahams* p 491-3

HOWARD H F, C I E, I C S, Collector of Customs Calcutta 8122-8431, p 576-591

Agriculture, statistics, 1899-1900, 1909-10 p 583

BALANCES Close budgeting impossible and dangerous in India 8281-2

High Causes - - - 8123-52, p 576-8

Justification for 8156-9, 8176-8, 8280, p 578-9

Location in London, justification for p 579-80

Reduction of amounts borrowed, or discharge of temporary debt, might have been possible earlier 8126, 8158-9, p 577

Use of, for paying off debt (other than temporary), objection to - - - p 578-9

BUDGET Preparation, communication between Finance Department and Secretary of State - 8161

Secretary of State not misled by, or induced to borrow excessively - 8166

HOWARD, H F, CIE, ICS—*continued*

BUDGET YEAR, CHANGE TO AN OCTOBER TO SEPTEMBER YEAR  
 possible Advantage but careful consideration necessary - 8153-5, 8382, 8386  
 no Insurperable difficulties that would outweigh advantages - 8382-6  
 Question of impediment to Governor coming down to plains - 8315  
 Rough budget for six months suggested for transition stage - 8273-7

## CENTRAL OR STATE BANK

Head office, possible difficulties *re* - p 581  
 Opinion would depend on scheme - 8265-8  
 Permission to Presidency banks to borrow in London might answer purpose - p 581  
 Con, total holding in India, 40 crores suggested p 589

## COUNCIL BILLS AND TELEGRAPHIC TRANSFERS, SALE

in Excess of requirements, advantages to Government and trade - p 580  
 Fixed price of 1s 4d. irrespective of specie points, not advocated - 8269-72, 8325-32  
 below Inward specie point, additions to silver currency by, procedure approved - 8361-3  
 below 1s 4d reply to criticism - 8271-2  
 at 1s 4d, gold not kept from circulation in India by p 585

## CURRENCY

Government should aim at being in position to supply form in demand - -8205 p 584  
 Increase, methods - - 8366-81  
 Principle of giving the public what they desire, believed to be acted on - - 8321  
 Standard nominally a gold one, and currency conducted largely on lines of exchange standard 8345-50, p 586

## EXCHANGE

Crisis, free issue of gold in India during, valuable as supplement to sale of sterling bills on London 8218-9, 8302, p 586  
 Gold in reserve more valuable than gold in circulation - 8211-7  
 Exchange banks, interests not confined to India 8180-3

Export trade, extension desirable - - p 582

## GOLD

Issue in exchange for silver, Government should aim at always being in position to redeem p 586  
 Question whether gold would come back from circulation for export in crisis - - 8220

## GOLD CURRENCY

some Advantage in, that liabilities of Government for redemption of rupees would decrease 8206  
 Encouragement, no special steps advocated 8224-6, 8291

## Increase

possible Advantage in preventing rise in world's prices - - p 586  
 Reserves would cease to increase - 8207-10  
 not a Necessary concomitant of gold standard, but endeavour should be made to meet any demands - - 8223-6

Paper currency with gold in reserve more economical, but extension of gold at expense of notes not suggested - - p 585

Question whether note circulation need be interfered with by increase in - - 8287-91, p 585  
 Rupees may be interfered with to some extent 8287

10-rupee piece might compete with 10 rupee note more than sovereign does - 8395-6, p. 585

## GOLD MINT

Advocated for coinage of sovereigns - 8320-2, 8323-4, 8399-401, p 585

Bullion, question of local supply from mines 8247-8

Bullion and ornaments might be attracted from hoards - - 8230-41

Experiment should be tried - 8329-30, 8397-8

Reasons for advocating - 8243, p. 585

Seigniorage should not be charged 8243-6, p. 585

E 19070

HOWARD, H F, CIE, ICS—*continued*

Gold reserves in India, 15 to 20 millions, advocated p 589

## GOLD STANDARD RESERVE

Amalgamation with paper currency reserve, not advocated, objects of, entirely different, and distrust and suspicion would be roused 8283-4, p 587

Amount, experience of 1907-8 crisis not adequate standard - - - p 587

Diversion of funds allocated to, to railway development, 1907, not approved - 8260, p 587

Form

Gold, amount

Increase advocated, and reason - 8249-51

Increase gradually to 10 and 15 millions desirable - 8251-3, p 587

Securities

Approved - - - - p 586

Securities due for early redemption at fixed date desirable - - - - p 587

Location

in India of portion approved, but not essential if sufficient rupees and sovereigns held in paper currency reserve - - - p 587

in London

Amount, 30 millions preferred - - p 587

Consideration of, as possible resource for England, no importance attached to suggestion - - - - p 586

of Main portion, approved - 8254, p 586

25 millions should be regarded as minimum, and adequacy considered when sum reached p 587

Management, want of confidence in, by public, caused by action of Government diverting funds in 1907 - - - - 8261-3 p 587

Statutory regulations not necessary at present 8262-4, p 587

Subsidiary branch in India (silver)

Approved - - - - p 587

Form, securities not approved - - p 587

Reason for - - - - 8256-8

Transfer to paper currency reserve in exchange for gold, no objection to - 8255, 8259, p 588

System approved, but simplification suggested p 586

Hoarding of gold, question of extent - - p 584

Indian Banks, clearing house figures, 1907-12 p 581

Indian debentures, appreciation in securities of large port trusts, &c - - - - p 581-2

Irrigation, statistics - - - - p 583

Jute cultivators, Eastern Bengal, silver preferred by, to gold or notes - - - - 8393

LENDING BY GOVERNMENT IN INDIA

should be Confined to Presidency and (if desired) to Exchange banks - - - - 8173-4

Demand would probably be very small - p 579

previous Discussions *re* - - - - 8169

to Exchange banks, no objection to - p 579-80

to Firms and institutions other than banks, not advocated - - - - p 580

from Treasury balances, not objected to - 8186

LOANS, ISSUE BY GOVERNMENT IN INDIA

Increase possible to certain extent, but Indian market limited as compared to London 8200-2, p 582

Policy to place as much as possible in India 8202

Taken up mainly by banks - - - - 8200

LOANS, ISSUE OF, IN LONDON

Net amount of, 1909-10 to 1912-13, and provision for railway programme - - - - p 578

Renewal of bills, question whether Government of India consulted - - - - 8164-5

NOTES

Encashment, if present arrangements inadequate improvement should be considered - - 8298

Encouragement of, steps taken approved - 8292

Increase in circulation, 1906-13 - - p 588

Net circulation, 1909-10, 1910-11, 1911-12 p 590

Opening of additional currency offices, approved 8294

Opium revenue, deliberate under-estimating 8128-34, p. 577

Absorption by public, 1910-11, 1911-12, and 1912-13 - - - - -	p 589
Absorption by public and balance in paper currency reserve in India, 1910-11, 1911-12, 1912-13 - - - - -	p 585
Extent of use - - - - -	p 584
Refusal of Currency Department to issue, from 1908 to 1910 or 1911, position has been criticised as one of weakness - - - - -	8333-8
Refusal of Government to issue, in order to build up their reserve, question as to whether people would complain - - - - -	8339-44
Suitability of, for India - - - - -	8387-96, p 584
Supply from Australia - - - - -	8326-9
Standard of living, improvement - - - - -	p 583
Trade, manufactured goods, decrease in imports and increase in exports, 1879, 1882, and 1907-8 - - - - -	p 583
Hundis, discounting of, by Bank of Bengal, <i>McRobert</i> - - - - -	407-36
<b>HUNTER, WILLIAM BERNARD 6312-6991 p 591-5</b>	
Agriculture, high rates of interest paid by small cultivators, owing to being in hands of native moneylenders - - - - -	6920-4
<b>BALANCES</b>	
High, due to unusual circumstances, and no complaint made - - - - -	6364
in London, no objection to, as plenty of money left in India - - - - -	6336
should be Put at disposal of market (English or Indian) most in need of relief - - - - -	p 592
Bank rate in England, importance as regards Indian trade - - - - -	6615-21, 6967-9
<b>BANK RATE IN INDIA</b>	
Fluctuations caused by inelasticity of currency accentuated by withdrawal of sums by Government - - - - -	p 594
High, causes - - - - -	6624-32
<b>CENTRAL OR STATE BANK</b>	
Advocated, and reasons - 6492-5, 6538-44, 6364, 6656-75, p 595	
Amalgamation of Presidency banks	
Advocated and advantage in case of crisis 6498, 6669-75, 6723	
no Movement towards, known of 6530-4, 6562-3	
certain Amount might be attracted from boards - - - - -	6579-87
Area not an insuperable difficulty 6565-7, 6757-63	
Balance sheet, financial strength of India would be more apparent from - - - - -	6850-2
Banks would be inclined to carry more investments in balance sheets if there was central institution where they could borrow on investments - - - - -	6973
central Board, power of veto over local boards would be necessary - - - - -	6740-51
Boards, question of constitution - - - - -	6725-56
Branches should be opened at places with head quarters treasury - - - - -	p 595
Capital	
Bringing of relation between capital and reserve of the three Presidency banks to same ratio, and offering shares to existing shareholders <i>pro rata</i> , 20 per cent only of new capital to be called up, proposal not objected to - - - - -	6571-8
Dividends, question of rate - - - - -	6959-61
Increase to 10 millions suggested, and possibility of employing - 6499, 6946-58, 6962-3, p 595	

HUNTER, WILLIAM BERNARD—*continued*  
CENTRAL OF STATE BANK—*continued*

Capital—*continued*

Shares, uncalled liability, not advocated 6596-8,  
6990-1

Taking up of shares by Government through  
silver branch of gold standard reserve, sug-  
gestion - 6500-2, 6775-7, 6948-53

Estimated capital and reserve, liabilities and  
specie reserve, and comparison with Bank of  
of England, Bank of France, and Imperial  
Bank of Germany - 6513, p 595

Functions

Advocated

Assistance of agriculturists, suggestions  
6799-804

Control of paper currency - p 595

Exchange business for Exchange banks 6522,  
6523, 6789

Lending to co operative credit societies  
within certain limits - 6588

Sale of bills and lending out of balances  
6508-9

Support of exchange as agent of Government,  
any profit to belong to Government  
6318-23, 6496-7, 6510-2

Paper currency, Government would have to  
receive certain remuneration - 6764

all Government balances in India and London  
(excluding gold standard reserve) should be  
deposited with - 6505, 6513-5, 6845-8, p 595

Government audit, suggestion - 6717, 6736

Government representation on, suggested, but  
not essential, and responsibility would be largely  
left with Government - 6522, 6508-5, 6521,  
6535-7, 6718-22, 6769-70

Government should be guided largely by advice  
of, as to when necessary to coin fresh rupees  
6526

Local boards in London, Bombay, and Madras  
with head office and central board in Calcutta  
advocated, head office in London not favoured  
6503, 6519-21, 6568-70, 6683-98, p 595

London Branch

Control question - 6796-8

would be essential - 6778-9, 6825

Lending and borrowing by, suggestions, &c *re*,  
and question as to interference with exchange  
banks - 6778-95

Power to borrow in London advocated, and  
exchange banks not likely to object with proper  
safeguards - 6523-4

Reasons for advocating - 6825

Reduction of expenditure in Government of  
India's Department as result of, question of  
6766-9

COUNCIL BILLS AND TRANSFERS

Object of

to Provide funds for Secretary of State's re-  
quirements now of secondary importance  
6314, p 591

to Settle balance of trade and reduce movement  
of gold coin from Europe to India 6314-5,  
6819-24, 6826-40, 6872-8, p 591

Sale

on Abolition or restriction to actual require-  
ments of India Office, amount of gold shipped  
to India would increase, and subsequent re-  
mittance home - 6324-31

Effect on amount of money available in India  
6387, 6676-9, 6964-6

Prices

1s 4d should be absolute minimum 6332-7,  
6589-610, 6833-9

at 1s 4½d (transfers) and 1s 4d (bills),  
when impossible, sterling bills should be  
sold in India or London, at 1s 3½d instead  
6338-47, 6546-58, 6589-610, p 591

Stoppage of, at present moment (July 1913)  
advocated - 6883-4

Unlimited, how provision should be made for  
6348-53, p. 592

to Unlimited extent at rate under gold point,  
desirable at present - 6975-82, p 591-2

HUNTER, WILLIAM BERNARD—*continued*

EXCHANGE

Continuous support of, by Government at fixed  
point of 1s 4d desired - 6338-43

Crisis

Gold in circulation not available for support in  
6450-3, 6970-2

Gold should first be released from paper  
currency reserve and then securities in gold  
standard reserve realised - 6443-9

Issue of gold in India should be stopped  
6443-9, 6452

Exchange banks, rates for sterling bills based on  
London rates - 6615-21

Gold bars, imported into India, nature of  
6856-60, 6862

GOLD CURRENCY

Advantages of paper currency over - 6486-9

Disadvantages of forcing gold into circulation  
p 593-4

Extent of use of, in Madras - 6497-83

GOLD MINT

Advantages in theory - 6470

Bullion for coinage, probable difficulty of obtaining  
6471-3, 6861-71, 6975-7, p 593

Receipt of gold and issue of rupees in exchange  
without legislating for minting of gold coin,  
suggested - 6474-7, p 593

GOLD STANDARD RESERVE

Allocation of whole profits on coinage to, should  
be continued indefinitely - 6437-9

Amalgamation with paper currency reserve not  
desirable, and no benefit seen - 6454-6

Existence of reserve desirable - 6431

Form

Gold

Holding of, in London necessary 6435-6,  
p 592

Investment of whole amount approved when  
reserve strong in gold - 6440-3, p 592

Securities, no danger from 6443-9, 6451-2,  
p 592

Silver

Holding of, in India necessary 6433-4, p 592

Investment in shares of Central Bank, sugges-  
tion - 6500-2, 6775-7, 6948-53

Location, approved - 6432

HOARDING OF GOLD

Reasons for, and Mahomedan law of succession  
a direct cause - 6490-1, p 594

Strong inference that gold put out goes into hoards  
p 594

Replacement of rupees in hoards by - 6480

Indian money market, question of connection with  
London market, and reason for little interchange  
of capital - 6912-9

LENDING BY GOVERNMENT IN INDIA

Bank rate on deposits might be reduced 6896-8

Demand, question as to extent and growing demand  
anticipated - 6401-8, 6611-4, 6623

to Other than Presidency banks without securities  
advocated, within reasonable limits, but not to  
private firms - 6394-400

Proposal not contingent in establishment of Central  
Bank - 6662-8

Question as to risk from trade depending on  
6409-16

LOANS ISSUED BY GOVERNMENT IN INDIA

Class of people taking shares - 6358-60

little Demand on part of small people at present,  
but might increase if certain difficulties were  
minimised - 6361-3

Desirable, if terms equally favourable and even if  
terms higher if money could be extracted from  
hoards - 6354-5

for Development of India, approved as long as  
market can take up securities without deprecia-  
ting - 6353

Extent to which possible, question of 6308-18

Holding of, in London, extent - 6814-6

HUNTER, WILLIAM BERNARD—*continued*LOANS ISSUED BY GOVERNMENT IN INDIA—*continued*

Increase might be possible if better terms offered, but securities would be depreciated 6561, 6818  
 Increase not possible to any material extent on present terms and conditions - 6356, 6559-60  
 Loans issued by Government in London, attracting of money from hoards by, not anticipated - 6357

## MADRAS, BANK OF

Assistance to co-operative credit societies - 6588  
 6926-7, 6974  
 Board, constitution, furlough, &c 6743-9, 6771-3  
 Cash balance, minimum - - - 6935-42  
 Directors, method of appointment, remuneration, &c - - - - - 6983-9  
 Government deposits, percentage to capital and reserve - - - - - 6943-5

Mints, reopening to free coinage of silver, not recommended, but recommendation has been heard 6879-86

## NOTES

Encashment, opening of numerous agencies for, without undertaking legal obligation, suggested 6465-7, 6640-3  
 Encouragement of, desirable - 6702, p 594  
 Encouragement easier by Central Bank than by Government - - - - 6656, 6805-7  
 Steps taken to encourage use of, and reasons 6485-6  
 Universalisation of higher denominations, no objection to - - - - 6468-9

## PAPER CURRENCY RESERVE

Efiduciary portion  
 Increase to 40 per cent of total circulation suggested - - - - 6457-64  
 Lending from  
 would be Advantageous, but would not have same effect as State bank - 6364, 6541-4  
 Advocated, on securities, trade bills to be included - 6461-4, 6637-9, 6657-61  
 Loans would be most required by trade when reserve most able to give - - 6417-30  
 Gold  
 if Exchange weakens sterling bills on London should be made available, instead of gold being given out - - - - - p 593  
 Holding of practically all, in London, advocated p 592-3  
 Invested portion, elasticity lacking and amendment of Act needed - - - - - p 593

## PRESIDENCY BANKS

Borrowing in London should be permitted, but not dealing in exchange - - - 6527-9, 6680  
 Branches  
 Closing of reserve treasuries and transfer of balances to, would be advantageous - 6377  
 Government guarantee, no inducement except for first five years, and then unremunerative 6378-86  
 Holding of currency chests, system - 6644-55  
 Capital and reserve and private deposits, 1898 and 1913 - - - - - 6840-4, p 594  
 Deposits, rates paid on - - - - 6891-5  
 Lending by, in India, relaxation of restriction, advocated - - - - - 6681-2  
 Loans to  
 Advocated without security or interest 6368-76  
 in busy seasons at rate offered by banks for short term fixed deposits would be advantageous - - - - - 6391-3  
 Power to borrow in London, suggestion 6415-6, 6928-34  
 Relations of exchange banks with - 6633-4

## RESERVE TREASURIES

Abolition of system advocated - - - p 592  
 Closing of, and transfer of balances to Presidency banks would be advantageous 6377  
 Rupees, difference between price of silver for coinage and circulating price of rupees should be held in trust for public and invested - - - 6437

## SOVEREIGNS

Issued in Madras in 10,000 at a time only, but no real difficulty in obtaining - - - 6478

HUNTER, WILLIAM BERNARD—*continued*SOVEREIGNS—*continued*

Melting down and manufacture of, into imitation coin - - - - - 6862  
 Receipts at currency offices larger than demand p 593

Sterling bills on London, scheme - 6316-7, 6338-47, 6546-53, 6589-610

Trade, methods of assisting, in time of stringency 6899-911

Income-tax, as applied to natives, objection to, *Ross* 3719-20

India bills, surplus balances might have been used to pay off, *McRobert* - - - - 3916-24

India, from certain point of view, as debtor country, *Barrow* - - - - - 3096-7, 3109-14

## India Office

Balances, *see* in London under Balances

## BROKER

Appointment, mode and period, *Badock* 1881-2  
 Appointment, joining of firm approved by Secretary of State made a condition of, *Scott* - 2071  
 Commission paid to, 1893-4 to 1912-3, *Badock* 1887, p 318, p 330

 Nature of representation in London 7697-9  
 Risk of interfering with existing institutions 7695-7  
 Directors, strong directorate would be necessary, and question as to possibility of obtaining 7791-7  
 Disadvantages - - - - 7667  
 Position, difference from that of State banks in other countries - - - - 7756-61  
 Purchasers of Council bills prefer dealing with Government through Bank of England - 7715  
 Question of - - - - 7667  
 original Reason for, to assist Government in support of exchange policy, no longer of importance 7781-9  
 Risk of bank becoming another Government Department - - - - 7668, 7707  
 Secretary of State and Government of India would not be entirely relieved of responsibility - 7668  
 7709-12
- COUNCIL BILLS AND TELEGRAPHIC TRANSFERS, SALE**  
 below or above 1s 4d according to supply and demand approved - - - - 7716-24  
 at 1s 4d only, objection to - - - - 7720-4  
 Currency, increase by coining of additional rupees would be preferred under present circumstances to putting additional sovereigns in circulation 7820  
 Deposits with banks in London, without security, approved, and equally good terms would not have been obtained otherwise - - - - 7839-46
- EXCHANGE**  
 Crisis of 1907-8  
 Issue of gold not successful in supporting exchange - - - - 7633-5

## LE MARCHANT, F C—continued

<b>EXCHANGE—continued</b>	
Crisis of 1907-8—continued	
Use of reserves immediately in form of sterling drafts on London at earlier date would have created a better feeling	7725-6
Gold in circulation of less value in supporting, than gold in banks, &c	7646, 7652-5, 7664-5
Gold, large amount goes into India, but passes out of immediate currency	7640-1
Gold bars, import formerly when any degree of un-settlement in India	7664-5
<b>GOLD CURRENCY</b>	
Effectiveness in Punjab, Northern India, and Bombay	7644
Fluctuations in extent of use of	7645
Pressing of, by Government not advocated	7644, 7821
Return to centres anticipated	7847-51
<b>GOLD MINT</b>	
special Indian coin might conflict with sovereign	7666
little importance attached to	7666
Reason for Fowler Committee recommending	7659-62
10 rupee piece	
would not be available for export on favourable terms	7843
would compete with 10 rupee currency note	7844
<b>GOLD STANDARD RESERVE</b>	
Amalgamation with paper currency reserve	
possible Advantages, but difficulties	7626
Possible eventually, but uses in separate systems	7741-3
<b>Form</b>	
Gold	
Actual gold, idea predominated in minds of Fowler Committee	7617
Amount	
Question of	7637-8
not sufficient if no gold in paper currency reserve or easily available in London	7620, 7622-5
Securities	
a Departure from intentions of Fowler Committee to certain extent	7727-34
future investment, stocks with maturities wiser than securities with no date of redemption fixed	7621
Question of result of sale of, in time of crisis	7735-40
Gold, location in London, necessity for	7632-6
Statutory regulations, not advocated till wider experience gained	7627-8
Subsidiary branch in India (silver), transfer to paper currency reserve in exchange for gold, question of	7629-31
Hoards, question of circumstances likely to attract gold from	7642-3
<b>INDIA OFFICE</b>	
<b>Finance Committee</b>	
Appointment on, of finance minister on resigning from India, advisability doubted	7754-5
Indian interests not sacrificed to London interests	7684-8
London experience required for Home affairs, Indian experience for Indian affairs, representation of Indian views desirable	7679-83, 7772-80
Means of obtaining Indian opinion sufficient	7815-6
<b>Finance Department</b>	
Checks and controls adequate in present system	7814
Means exist for dealing promptly with urgent matters	7813
Machinery, results satisfactory owing to capacity of the men working it	7808-9
Store Department, mechanism adequate	7811-2
Lending by Government in India, to Presidency banks exclusively, advocated	7671
Lending by Government in London, difficulty of securities	7838

## LE MARCHANT, F C—continued

<b>NOTES</b>	
Encouragement of, preferable	7657-8
Increased use of	7656
<b>PAPER CURRENCY RESERVE, FIDUCIARY PORTION</b>	
Loans to Presidency Banks, suggested	7673
Proportion of minimum circulation suggested	7674-8
<b>PRESIDENCY BANKS, LOANS TO, DURING BUSY SEASON</b>	
Advocated	7669-71
Amount, question of	7673
Banks could take bills of merchants, and those bills with their endorsement would be reasonable security	7672
from Fiduciary portion of paper currency reserve, suggested	7673
<b>RUPES</b>	
Demand for gold in exchange for, question of dependence on balance of trade or amount of coin in circulation	7762-8
Growth of circulation, no risk seen at present, but risk dependent on circumstances	7648-51
no Redundancy	7744-50
Government giving gold for, limit to, on approach of crisis, principle cannot be laid down	7751-3
Russia, exchange system, and extent of analogy with Indian system	7689-94
<b>SILVER, PURCHASE OF, FOR COINAGE</b>	
Question whether Secretary of State has waited too long before purchasing	7823-7
Regular purchases, difficulty	7822
<b>SOVEREIGNS</b>	
a Convenient coin for considerable number of com-munity, but cannot be for large portion	7842
Supply when desired by people advocated, except when demand evidently only in place of bullion	7645
<b>Lending by Government in England</b>	
Advantages and disadvantages, Cole	3450-4
Agreement for, copy, <i>Badock</i>	p 314-5
Amount, <i>Badock</i>	1854-7, 1922, 1934-7, p 309
Amounts, system, and question as to deciding minimum amount for loan (at present 50,000 and multiples), <i>Scott</i>	2118-25
Approved, <i>Ross</i>	3595
Approved only if money could not be better used in India, <i>Hamilton</i>	2281-2
<b>APPROVED BORROWERS' LIST</b>	
Enlargement, so as to include some foreign banks, suggestion, <i>Fraser</i>	2800-1
Firms on, list of, <i>Badock</i>	p 315-6
Method of choosing, <i>Abrahams</i>	533
One withdrawal in consequence of publicity given by discussion in Parliament, <i>Scott</i>	2096
System and procedure, <i>Scott</i>	2091-5, 2115-7
System, &c, <i>Badock</i>	1839-43, 1851-3, 1956-7, 2036-9, p 209
Audit, <i>Badock</i>	1903-4, p 311
below Bank rate, <i>Cole</i>	3420
Borrowers practically given permanent loans at rates payable for short term loans, <i>Webb</i>	5447-51, p 552-3
Borrowings and repayments since 1908, <i>Webb</i>	p 552
Cases of failure to pay on due date, <i>Badock</i>	1912-3, 1998-2000, 2006-7, p 312
Criticism of system, <i>Webb</i>	p 551-3
Indian credit not damaged by, <i>Cole</i>	3360
Instructions to broker, <i>Badock</i>	p 310-1
<b>INTEREST</b>	
Average rate of, on, in each month in 1910, 1911, 1912, 1913 (to 31st May), and bank rate during corresponding periods, <i>Badock</i>	p 328
Close rate believed to be obtained, <i>Badock</i>	1965-6
Low rate of, <i>Webb</i>	4985-7, p 552
too Low sometimes from point of view of main-taining discount rate in London, <i>Cole</i>	3348-9
Protection against broker accepting wrong rate, <i>Badock</i>	1931, 1964
Rate of, and question of increasing, <i>Abrahams</i>	171-6
Responsibility rests with broker, <i>Badock</i>	1879-80, p 311

Lending by Government in England—*continued*

- INTEREST—*continued*  
 Same rate obtained from all borrowers on one day, and procedure *re*, *Badock*, 2030-2, *Scott*, 2158-74, 2186-200

- Statement showing transactions for each day in 1912-13, *Badock* - - - - - p 319-27
- Temporary abstention from, might help rate, *Cole* 3421-2
- Timing of, to prevent public criticism of borrowing money to meet payments at higher rate than that received from loans, question of, *Badock* 2013-24
- Lending by Government in India
- Advocated, *McRobert*, p. 547, *Webb*, 4992-5001, 5008-10, 5053-7, 5371-80, 6093, p 554, p 569
- Amount available for, question of, *Bhupendra Nath Mitra* 4508-19
- Amount would be limited as difficulty of security, *Toomey* - - - - - 2632-4
- Balances not available for, as in London, but no reason against, *McRobert* - - - - - 3930-1

Lending by Government in India—*continued*

- from Balances or paper currency reserve immaterial, *Hamilton* - - - - - 2454-6
- from Balances, practicable to small extent but not advocated, and reasons, *Barrow* - 3046-7, 3051-2, 3257-67
- Bank rate on deposits might be reduced, *Hunter* 6896-8
- Bank rate would be kept down by, say, a 10 crore loan to 6 per cent, *Smith* - - - - - 8487
- TO BANKS
- Advocated, *Dunbar* - - - - - 7861-4
- at 1 per cent under London bank rate, scheme, *Hamilton* 2367-81, 2403-6, p 527, p 529
- on Security
- Advocated at 6 per cent when bank rate above 6 per cent, *McRobert* 3933-56, 4048-57, 4094-5, 4186-204, 4211-4, 4217-24, 4265-6
- Advocated, below bank rate, but system of tender might be preferable, *Ross* 3603-12, 3700-7, 3725-7, 3886, p 543
- Suggestion, *Dunbar* - 7865-6, 7869-71, 7970-4
- Central banking institution desirable, and suggestions *re*, *Reid* - - - - - 7274-9
- Class who would benefit, and question as to how far cultivators would benefit, *Smith* 8438-93, 8836-42
- should be Confined to banks at first, but not only Presidency banks, but to Presidency banks only would be better than not at all, *Smith*, 8470-1, 8474-81
- should be Confined to Presidency banks, *Toomey* and *Fraser*, 2797-8, 2943-7, 2991, *Bhupendra Nath Mitra*, 4347, 4374, *Le Marchant*, 7671
- should be Confined to Presidency and (if desired) to exchange banks, *Howard* 8172-4
- Correspondence between Bombay Chamber of Commerce and Government of India *re*, 1888-9, *Abrahams* - - - - - p 36-41
- Criticism, *Webb* - - - - - p 565
- no general Demand for, telegram from Viceroy to Secretary of State, 22nd January 1913, *Abrahams* p 66
- Demand might arise when Government less able to lend, *Reid* - - - - - 7301-3
- Demand, question as to extent, *Bhupendra Nath Mitra*, 2845-6, 2991, *Webb*, 4372, 5014-6, 5057, 5389-90, *Howard*, p 579, *Hunter*, 6401-8, 6611-4, 6623, *Reid*, 7269-71, *Smith*, 8482-6
- DEPENDENCE OF TRADE ON
- Anticipated to undue extent, *Bhupendra Nath Mitra* 4341, 4353-4
- Objection from point of view of, not agreed with, *Webb* - - - - - 5017
- Question of, *Hunter*, 6409-16, *Reid*, 7297-300
- not Desirable in opinion of commercial men, &c., *Abrahams* - - - - - 97
- Difficulty in case of Government having to withdraw money at unexpected times, *Abrahams* - - - - - 261
- no Difficulty anticipated, and money available would be limited if balances reduced, *Webb* 5289-96, 5199
- Disadvantages, *Abrahams* - - - - - p 6-7
- previous Discussions *re*, *Howard* - - - - - 8169
- Distribution question, *Dunbar* - - - - - 8080-2
- of Excess in January, February and March, no objection to, but possible difficulty, *Abrahams* 353-60
- to Exchange Banks, *see under* Exchange Banks
- Extract from Financial Statement, 1889-90, *Abrahams* - - - - - p 48
- Extract from proceedings of Legislative Council, January 1900, *Abrahams* - - - - - p 396-7
- Facilities not comparable to those in London, *Newman* - - - - - 1432-3
- to Firms and institutions other than banks not advocated, *Howard* - - - - - p 580
- to Firms, should be possible, *Webb* - - - - - 5281-3
- First three months of 1913 would have been suitable, *Abrahams* - - - - - 280
- not very much Importance attached to, *Toomey* 2392
- Issue of short-term bearer bonds would be useful in connection with, *Webb* - - - - - 5292-4
- to Large extent, on security, question of possibility and value of securities, *Abrahams* 141-4, 146-7
- Letter from Government of India January 1901, to Presidency Banks and replies, *Abrahams* p. 442-57

Lending by Government in India—*continued*

- Letter from Government of India to Secretary of State, January 1900, *Abrahams* - p 402  
 no Limit suggested as to amount, *Hamilton* - 2445  
 Loans to Presidency Banks preferable, *Abrahams*, 453-63, *Graham*, 4906-9  
 Objection to, that amount of balances available would be uncertain, but advantages might possibly outweigh, *Barrow* 3047, 3254-6, 3267, 3313-24  
 to Other than Presidency Banks without securities advocated within reasonable limits, but not to private firms, *Hunter* - - - 6394-400  
 should be from Paper Currency Reserve, as balances a fluctuating item, *Smith* - 8499-501  
 from Paper Currency Reserve, see under Paper Currency Reserve  
 Power possessed, but never exercised, *Abrahams* - - - p 6, 452  
 to Presidency Banks, see under Presidency Banks  
 Proposals of Chambers of Commerce *re*, 1899 p 384, p 385  
 Procedure, suggestion, *Smith* 8698-703, 8825-35  
 Proposal not contingent on establishment of Central Bank, *Hunter* - - - - - 6662-8  
 Purposes, *Webb* - - - - - 5284-5  
 for Purposes of trade during short period of the year, would be advantageous, but *Mc Bryce's* opinion against, quoted, *Newmarch* - - - 1364-6  
 Question of, *Abrahams* - - - 96, 218-9, 450-1  
 Question of effect on Indian bank rate, *Toomey and Fraser* - - - - - 2847-53
- RATE OF INTEREST  
 1 per cent below bank rate  
 Bank of Bengal would refuse, as unremunerative, *Dunbar* - - - - - 7872-3, 8018  
 Scheme, *Hamilton* 2367-81, 2493-6, p 527, p 529  
 4 per cent advocated, and Bank rate would never rise above 6 per cent, *Dunbar* 7867-8, 7877, 7984-b, 7999-8002, 8005, 8083-6  
 6 per cent advocated, when bank rate above 6 per cent, *McRobert* - 3933-56, 4048-57, 4094-5, 4186-204, 4211-4, 4217-24, 4265-6  
 below Bank rate advocated, but system of tender might be preferable, *Ross* - 3603-12, 3700-7, 3725-7, 3886, p 543  
 Rates obtained for Council bills might be reduced, *Barrow* - - - - - 3048-50, 3266  
 Refusal of request for loan of 50 or 100 lakhs of rupees on security of Government papers, *Reid* - - - - - 7553-4, p 571  
 little Risk need be involved, *Smith* - - - p 614-5
- SECURITIES  
 not Considered important, *Hamilton* - 2447-8  
 Difficulty not contemplated *re*, *McRobert*, 4044-7, *Smith* - - - - - 8693-7  
 Nature of, suggestions, *Webb* - 5011-3, 5292-4  
 Possibility of banks providing, question as to extent, *Hamilton* - - - - - 2497-503  
 Question, *McRobert* - - - - - 4087-93  
 should be Required from private borrowers, from banks should be dependent on circumstances, *Webb* - - - - - 5302-7  
 should be Required and question as to nature of, *Smith* - - - - - 8472-3, 8812-21  
 on Short loans desirable as matter of business, but not necessary for safety, *Hamilton* - 2449-53  
 State bank would be no better, *Smith* - 8766-9  
 Suggestions *re*, minimum amount, rate, &c, *Smith* 8825, p 614
- BY TENDER  
 Approved, *Webb* - - - - - 5200  
 no Objection seen, *Smith* - - - - - 8870-1  
 in Times of pressure, advocated, *McRobert* - p 547  
 from Treasury balances not objected to, *Howard* 8186  
 Loans to help trade, and to earn interest, difference between, *Abrahams* - - - - - 430-5
- Loans, issue of, by Government  
 Explanation of system and policy *re*, *Abrahams* 13-4  
 More could have been raised by, if better price offered, *Webb* - - - - - 6165-9  
 Question of effect on exchange, *Hamilton* 2423-9  
 Reduction of balances by suspending, advocated, *Webb* - - - - - 4969-76, 5048-52, p 551  
 Scheme, *Hamilton*, 2292-305, 2394-401, 2436-7, 2352-3, 2468-75, 2508-28, p 519-20

## Loans, issue of, by Government in England

- should be Avoided as far as possible, *Webb* - p 568  
 Borrowing 3,000,000 in London, 1912, criticism of, *Webb* - - - - - 5381-8, p 553  
 Consultation between Government of India and Secretary of State *re*, before opening of financial year, and more frequent communications might be desirable, *Bhupendra Nath Mitra* - 4594-6, 4618-28, 4398-99, 4476-80  
 Credit of India not declined relatively to that of other borrowers, *Cole* - - - - - 5371  
 Criticisms, *Webb* - - - - - p 565-6  
 Impossibility of raising sufficient capital by, *Sundara Iyer* - - - - - 8877-8, p 630  
 Increase of issue, anticipated disadvantages, *Abrahams* p 13  
 Increasing difficulty, and question as to reason, *Abrahams* - - - - - 15, 121-3, 202-7, 523  
 Interest, gradual increase, but charges will decrease in about 30 years, *Abrahams* - - - 24-5  
 Loans &c too much under Government control, money would be more readily obtained if bigger facilities given for private enterprise in India, *Cole* 3552  
 if Money required on a large scale, loan would have to be issued with fixed date for redemption, *Cole* 3363-76  
 Monthly returns of revenue of Comptroller General supplied to India Office, *Bhupendra Nath Mitra* 4391, 4476-8  
 Necessity of, but decrease hoped for in future, *Newmarch* - - - - - 1337  
 Net amount of, 1909-10 to 1912-13, and provision for railway programme, *Howard* - p 578  
 1907-09 to 1913-14, *Abrahams* p 67-73  
 Quotations for, kept down by knowledge that Government will continue to borrow annually, *Cole* 3368  
 Renewal of bills, question whether Government of India consulted, *Howard* - - - - - 8164-5  
 Statistics, 1910-12, and comparison with balances in hand, and criticism of policy, *Webb* 5023-40, p 553  
 Terminable bonds, possible difficulties, *Abrahams* 726
- Loans, issue of, by Government in India  
 more Advantageous than borrowing in London some times, *McLeod* - - - - - 7054-5, p 598  
 Advocated, even if interest slightly higher than in London, *McRobert* - - - - - 3991-4  
 Advocated as far as possible, *Graham* - - - 4910  
 Appreciation recently in securities of large port trusts, &c indicate possibilities of, *Howard* p 581-2  
 Attracting of money from hoards by, see under Hoards  
 Class of people taking shares in, *Bhupendra Nath Mitra*, 4440, *Hunter*, 6358-60, *Howard*, 8200, *Smith*, 8519  
 little Demand on part of small people at present, but might increase if certain difficulties were removed, *Hunter* - - - - - 6361-3  
 smaller Denominations of Government paper would be useful, *Reid* - - - - - 7438-9  
 Desirable, if terms equally favourable and even if terms higher if money could be extracted from hoards, *Hunter* - - - - - 6354-5  
 for Development of India approved as long as market can take up securities without depreciating, *Hunter* 635  
 Encouragement of private enterprise in India desirable, *Ross* - - - - - 3890, 3899-903  
 Endorsement of Government paper, system and difficulties from point of view of natives, and removal of difficulties would be advantageous, *Smith* - 8520-5, 8602-14, 8783-90, 8857-69  
 Extension of, not possible in expert opinion without reducing market price of rupee paper, *Bhupendra Nath Mitra* - - - - - 4400-3  
 Extent, *McRobert* - - - - - 4205-16  
 Extent, already done to fullest possible, *Bhupendra Nath Mitra* - - - - - 4855  
 Extent to which possible, question of, *Hunter* 6808-18

- Loans, issue of, by Government in India—continued**  
 Extent to which possible and question to rate of amount raised, *Newmarch* - 1402, 1409-13, 1461-4  
 Holding of, in London, extent, *Hunter* - 6814-6
- INCREASE OF**  
 in Course of year, inconvenience of, *Bhupendra Nath Mitra* - 4597-602  
 Desirable, *Fraser* - 2952-4  
 Difficulty, *Newmarch* - 1338-40, 1407  
 Possible, to certain extent, but Indian market limited as compared to London, *Howard* 8200-2, p 582  
 Possible to some extent, and suggestion as to amount, *McLeod*, 7052-8, *Reid*, 7405-16, *Smith*, 8513-8, p 615, *Sundara Iyer*, 8879-80  
 not Possible to any material extent on present terms and conditions, *Hunter* 6356, 6559-60  
 might be Possible if better terms offered, but securities would be depreciated, *Hunter* - 6561, 6818  
 Possibility of, *Webb* - 5275-80, 6161-9  
 Issue of 5-rupee paper and 1-rupee paper through post offices, co operative societies, &c, suggestion, *Sundara Iyer* - 8879-94  
 Issue of local Treasury bills would be possible, *Dunbar* - 7963-4
- ISSUE OF SHORT TERM BONDS BY GOVERNMENT**  
 no Objection to, *McLeod* - 7109-12  
 Question of, *Bhupendra Nath Mitra* - 4455-6  
 Issue of short-term bearer bonds would be useful, and under consideration, *Smith* 8615-6, 8633-8  
 Market more open than formerly, *McRobert* 4279, p 548  
 Money would be attracted from hoards if people educated, *Reid* - 7435-7  
 New form of security such as railway securities with guaranteed interest and share of profits, would not be extra inducement, *McRobert* - 4137-8  
 Objection of Secretary of State to as interfering with his exchange operations, *Bhupendra Nath Mitra* - 4614-5  
 Offering of better terms than in England, would be advisable provided there was certainty that money was raised in India, *McRobert* - 4098-9  
 Particulars of rupee debt, 1893-1904 - p 270  
 Policy of Indian Government to raise as much as possible in India, and reason, *Bhupendra Nath Mitra*, 4404-6, 4441-2, *Howard*, 8202  
 Possibility of attracting money from hoards, *Sundara Iyer* - 8884-6  
 would be Preferable to London, *Ross* - 3887, 3898  
 Preferred if rate nearly equal to London, *McRobert* 4061-3  
 Proportion held by Europeans and Natives, 1893 to 1903, of registered debt of India - p 269  
 Railway debenture bonds, people would probably take up largely, *Reid* - 7407-16, 7423-4, p 575  
 Raising of capital for Indian development by, advocated as far as possible, *Smith* - 8512  
 Stock certificates or bearer bonds suggested, *Smith* 8853-66  
 Suggestion re *Reid* - 7405-16  
 Temporary debts, objection to raising money on, *Bhupendra Nath Mitra* - 4456-8  
 Tendency towards prices being better than those of sterling loans, *Newmarch* - 1403-4, p 219  
 Total amount of rupee loans outstanding held in India and in London respectively, *Bhupendra Nath Mitra* - 4438-9
- London Money Market**  
 Affairs of India Office and Indian empire not conducted in interests of, *Abrahams* - 853  
 Condition, importance of, to India, *Hamilton* 2309-12  
 Question of connection of, with Indian market, see under Indian Money Market  
 Question of connection with Indian trade, *Toomey* 2744-9  
 Mackay Committee, references - 8426

 Advantages of system (Bengal Chamber of Commerce) - p 603-4  
 Sale in excess of requirements  
 Approved and not antagonistic to interests of India (Bengal Chamber of Commerce) p 603  
 Continuance advocated - p 597  
 not Objected to, to extent of full trade demand 7179-85, p 598
- Currency, extended use of other forms than silver, such as gold, notes, and cheques possible 7149-52  
 Deposits with bankers in London, not objected to and continuance advocated, p 597, (Bengal Chamber of Commerce), p 604 607
- EXCHANGE**  
 Fixing of  
 Beneficial to trade, and no reversal of policy advocated - 6996-7  
 Prosperity of trade since (Bengal Chamber of Commerce) - p 602  
 Gold in circulation less valuable for support of, than gold in reserve 7027-9  
 Gold Bars, great demand for, in India, and question as to use of - 7174-77, 7237-43
- GOLD MINT**  
 not Advocated at present, but if established sovereigns should be coined, 7032, 7053-5, 7151-61, p 597, p 598, (Bengal Chamber of Commerce) - p 604-5, p 606, p 607  
 Bullion for coinage, difficulty anticipated, 7033-4, (Bengal Chamber of Commerce), p 606  
 special Indian coin, objections to (Bengal Chamber of Commerce) - p 606
- 10 Rupee piece  
 Hoarding and use for ornaments would be encouraged 7171, 7193, p 598  
 would be Useless for export except as bullion and would tend to destroy standing of sovereign - 7162-70, 7192-6, p 598
- GOLD STANDARD RESERVE**  
 Amount no maximum limit should be fixed p 579  
 Diversion of money from, to railway purposes, approved of under circumstances, if money replaced - 7004-6
- Form**  
 Gold amount  
 5,000,000 at least advocated, p 597, (Bengal Chamber of Commerce) 7137-9, p 603  
 no Limits should be fixed and coinage profits should continue to be added to (Bengal Chamber of Commerce) - p 603, p 607  
 Minimum of 5 millions sufficient at present, but might increase to 10 as trade increases 7007-26, 7072-80 7220-8, 7140, p 589  
 Gold securities or short loans, approved - p 597  
 Securities  
 Approved, p. 598, (Bengal Chamber of Commerce) - p. 603, p. 607  
 F

McLEOD, CHARLES CAMPBELL—*continued*  
GOLD STANDARD RESERVE—*continued*

Form— <i>continued</i>	
Securities— <i>continued</i>	
Realisation of 10 millions of gilt-edged securities would be difficult at present moment	7141-3
Location, in London advocated and reasons, p 597, 7000-2, 7137-9, (Bengal Chamber of Commerce)	p 602-3
Subsidiary branch in India, not objected to, but holding of silver in paper currency reserve would be preferred	7244-6
HOARDING OF GOLD	
Gold more likely to be attracted from hoards by extension of banking facilities, than by establishment of gold mint	7033-5
Temptation not increased by excess of rupees in circulation relatively to gold coins	7173
Tendency of co operative societies to attract money from hoards	7047-9
India Office, Finance Committee, suggested reconstitution	7069-70, 7099, 7127-35, 7214-6, p 598
Indian Money Market, stringency not due to withdrawal of sums by Government	7091-4
LOANS, ISSUE OF, IN INDIA	
more Advantageous than borrowing in London sometimes	7054-5, p 598
Increase possible and question of extent	7052-8, 7259-61
Issue of short term bonds by Government, no objection	7109-12
NOTES	
Encouragement desired	7030, 7081
well Managed by Government at present	7037, 7204-8, p 507
Presidency Banks, loans to during busy seasons, at 1 per cent under bank rate desirable	7250-5
RAILWAYS	
Branch-line terms given to companies with rupee capital should be extended to sterling capital	7114
Congestion and need for expenditure on rolling stock, remarks made at deputations to Secretary of State, 10th June 1912, and 2nd June 1913	p 607-12
Expenditure on and inadequacy of, and need of increased capital expenditure	7050-1, 7247-9, p 598-604
Finance, importance of question, and criticism of present policy	p 598-606
Government should state definitely that they would give certain minimum sum for fixed period irrespective of amount allotted out of balances	7256-8
Increase in traffic	p 599-600
Investors not discouraged by Government treatment of shareholders in the past	7261-3
Private enterprise should be encouraged	7100
Rupees, profits on coinage, use of, for reproductive works when safe limit of gold in standard reserve attained, would be approved if due regard had to caution	7089-90
Silver, purchase of, regular purchases advocated	7059-68, 7186-91 7232-6, p 598
SOVEREIGNS	
Increased use	7083-6
Increased use not very rapid and chiefly in northern and western circles	7149, p 598
Question as to use of, for payment purposes	7197-201
Receipts at post offices and railway stations 1907-8 to 1911-12	p 605
Use increasing in Northern India, Bombay and part of Madras (Bengal Chamber of Commerce)	p 605
Stores, purchase of, in India, no objection seen	7101-8
MacLeod, Professor Dunning, suggestion re gold currency, Webb	p 555, p 556
McROBERT, SIR ALEXANDER 3912-4306, p 547-9	
Balances in London, might have been kept down by paying off India bills and not raising loans until surplus absorbed	p 547
Bank rate in India, should not go beyond 7 per cent at the worst	4118-9

McROBERT, SIR ALEXANDER—*continued*

Banks, danger of multiplication of so called banks, that are only pawnshops, and restriction desirable	4125, 4304-6
Budget estimates, difficulty of estimating	3926-8
CHEQUES	
Increased use anticipated	4071-2 p 548
Use of, in business, particulars	4106-11
Co-operative Credit system, growing	p 548
COUNCIL BILLS AND TELEGRAPHIC TRANSFERS, SALES	
Often more than once a week suggested	3997-9, 4225
Over 1s 4d, profit should be put into special reserve fund of sovereigns, and when sale less than 1s 4d fund should be drawn from 4000-3, p 548 at 1s 4½d tends to prevent circulation of gold in India	p 548
System approved	p 548
EXCHANGE	
Fixing of, at 1s 4d, beneficial to trade	4004-5, p 548
Value of gold in circulation as support to 4009-13	
Exchange Banks, no restrictions on	4262-3
GOLD CURRENCY	
Advantages and encouragement desirable	3978-82, 4006, 4226-36
10-rupee piece, not advocated and reasons	4008-9, p 548-9
GOLD MINT	
Advocated from point of view of prestige and sentiment	4014-6
for Free coinage of sovereigns would justify cost	p 549
GOLD STANDARD RESERVE	
Amalgamation with Paper Currency reserve, no objection to	4085-6
Amount, 30 millions advocated	4019, 4083-4
Form	
10 millions in gold and 20 millions in securities, advocated	4020-2, 4068
Gold, rupees, and sterling securities approved and opinion re amounts	p 549
Gold and sterling securities should be held in London, gold being earmarked at Bank of England	p 549
Securities	
Question as possibility of realising, in crisis	4069-70
Short dated securities not necessary	4023-5
Suggestion re	p 549
Location of bulk in London, silver portion only in India, advocated	4017-8, 4021
Subsidiary branch in India (Silver)	4026-32
not Objected to	
Rupees should be held in India and made available for advances to banks at 6 per cent on securities when bank rate over 6 per cent	p 549
Taking of sum from, for railway development, 1907, disapproved, and sum should be replaced	4298-308, 4033, p 549
Use of profits on coinage for ordinary or capital expenditure not approved until reserve 25 or 30 millions sterling, interest and profits should then be used to pay off floating and unproductive debts	p 549
HOARDING	
Co operative credit system will tend to diminish	4082, p 548
of Gold, question of	3975, p 548
Issue of loans in India would not attract money from hoards	4080-1
Hunds, discounting of, by Bank of Bengal	4073-6
India bills, surplus balances might have been used to pay off	3916-24
Indian money market, money dear from November to March	4195-9
Lending by Government in England, no objection to	3929
LENDING BY GOVERNMENT IN INDIA	
Balances not available for, as in London but no reason against	3970-1
to Banks	
on Security advocated at 6 per cent when bank rate above 6 per cent	3933-56, 4048-57
	4094-5, 4186-204, 4211-4, 4217-24, 4265-6

McROBERT, SIR ALEXANDER—*continued*

LENDING BY GOVERNMENT IN INDIA— <i>continued</i>	
to Banks— <i>continued</i>	
in Times of pressure advocated	p 547
Securities	
Difficulty not anticipated <i>re</i>	4044-7
Question of amount available	4087-93
LOANS, ISSUE OF, IN INDIA	
Advocated, even if interest slightly higher than in London	3991-4
Extent	4205-16
Market more open than formerly	4279, p 548
New form of security, such as railway securities with guaranteed interest and share of profits, would not be extra inducement	4137-8
Offering of better terms than in England, would be advisable provided there was certainty that money was raised in India	4096-9
Preferred if rate nearly equal to London	4061-3
Mints, profits	4139-40, p 549
NOTES	
no Difficulty in getting, when wanted	3986
Fiduciary portion, might be increased, and maximum should be fixed	3988-90
Increasing use of	3983
Universalisation of, Government would finance all remittances	3984-5
PAPER CURRENCY RESERVE	
Gold accumulation not objected to and cannot be prevented as long as 15 rupees given for a sovereign	4248, p 549
System approved	p 549
PRESIDENCY BANKS	
Access to London, objection to	3996, p 548
new Branches, question of, in place of reserve treasures	4102-5
Drafts on London sold by	4260-1
Drafts on London sold to, by exchange banks, rates usually as good as those got from exchange banks direct, and preference would be given to Presidency Banks	4255-9
Equal to relieving all probable difficulties in crisis, with loans from Government, and State Bank would not be in stronger position	4125-32
Power to lend on any form of marketable security advocated	3995-6, 4112-7, p 548
Punjab, notes less used than in United Provinces, but gold more	3973-4
Reserve Treasuries system approved	3957-9
REVENUE, SURPLUS	
Applied to paying off floating and non productive debt	p 548
Explanation that capital expenditure has been met out of, not correct	4294-7, p 548
RUPEES	
Coinage, Government believed to have deliberately refrained from, 1908-10, and people induced to take sovereigns	4148-53, 4157-8, 4291-3
Giving of sovereign for 15, undertaking not advocated at present but practice satisfactory	4035-8
Silver, regular purchases every year, advocated	4039-43, 4141-61, 4242-3, p 549
SOVEREIGNS	
Cases of at discount of 4 annas formerly	4245-7
Payment of wages in	3976-7
Suitable for India and preferred to 10 rupee piece	4007-8, p 548
STATE BANK	
Difficulties, and reasons against	3960-2, 3966-9
	4213-6, 4274-5, p 547-8
Functions	
not Advocated	
Control of currency	p 547
Exchange business	3964, 4376-8, p 548
Management of paper currency	3963, 3970-2, p 547
Note issue	p 547
without Change in form of note, no objection to	4133-6
Question of	4268-73
Headquarters, Cawnpore would be approved	4336-7
would not be in a Stronger position to meet crisis than Presidency banks	4131-2
Taxation, reduction would not have been advisable	4175-6 p 547
Trade, no great difficulty in financing	4267

 1909-10, 1910-11, and 1911-12, *Howard* - p 590  
 Effect of gold currency on, *see under* Gold currency Increase, *Newmarch*, 1425-6 1697-9 p 247, *Toomey and Fraser* 2621, 2779, 2966, p 539, *Howard* p 589, *Barrow*, 3069 *Cole*, 3418, *Ross*, 3820, *McRoberts*, 3983, *Smith*, p 617, *Reid*, 7555-6 p 574, *Le Marchant* 7656 *Dunbar* 7901-2, *Sundara Iyer* p 626  
 Size of, *Newmarch* - - - - 1694  
 Control by Central Bank, *see under* Functions under Central or State Bank  
 no Currency office at Dacca and notes consequently little used in Eastern Bengal, *Dunbar* 8009-15  
 Denominations, *Newmarch* - - - - p 240  
 no Difficulty in getting, when wanted, *McRobert* 3986

## ENCASHMENT

- if present Arrangements inadequate, improvement should be considered *Howard* 8248  
 Difficulty, *Dunbar* - - - - 7900

## Notes—continued

## ENCASHMENT—continued

- at District treasuries possible if coin sufficient, but not at sub treasuries, and question of, *Bhupendra Nath Mitra* - 4741-9
- Extra legal facilities and question as to possibility of extending to sub-treasuries, *Bhupendra Nath Mitra* - 4741-9
- Facilities, *Newmarch*, 1700, 1821-3, *Sundara Iyer*, 8980-96
- Increase of facilities desirable, *Newmarch*, 1823-6, *Barrow*, 3066-72, 3215-22, 3249-52, 3328-43, *Ross*, 3729-32, *Dunbar*, 7905, 8012-4
- Opening of additional currency offices, approved, *Howard* - 8294
- Opening of numerous agencies for, without undertaking legal obligation, suggested, *Hunter* 6465-7, 6640-3
- Possible at sub treasuries even, *Sundara Iyer* 8987-93

## ENCOURAGEMENT

- Advocated, *Hamilton*, 2313-5, *Toomey and Fraser*, 2963-9, *Barrow*, 3214-8, *Hunter*, 6702, p 594, *McLeod*, 7030, 7081, *Reid*, 7566-7, p 574, *Le Marchant*, 7657-8, *Dunbar*, 7918, *Smith* 8553-63
- Easier by Central Bank than by Government, *Hunter* - 6656, 6805-7 8292
- Steps taken approved, *Howard* 6485-9
- Steps taken, and reason, *Hunter* 6485-9
- Gold not a rival to, generally, *Webb* 5855-60
- Increased use desired, and steps taken by Bank of Bengal to encourage, *Dunbar* 7903-4
- the Ideal currency, *Abrahams*, 1149-51, 1201, 1208, *Bhupendra Nath Mitra*, 4674-8
- Investment of, in trade bills or advances to bankers would not be considered, *Cole* - 3438-49

## ISSUE

- Against temporary security, absence of, may partly account for high rate of discount at busy season, and possibly advantage of issuing, *Newmarch* - 1757-81
- in Large parcels through banks, Mahajans, &c., *Bhupendra Nath Mitra* 4721-3
- Might be made to considerable extent in times of national emergency without any security but credit of Government, *Webb* 5064-71, 5205-16, 5389-92
- Modification of system, question of, *Newmarch* 1757-81
- by Presidency banks up to 1862, *Newmarch* 1638, p 239
- ISSUE OF GOLD FOR
- Government should reserve right to refuse, *Hamilton* - p 523, p 527
- in Normal times and when gold available, advocated, but no obligation advocated, *Toomey and Fraser* - 2600-1, 2675-7, p 536
- as Legal tender, history, *Newmarch* p 239, p 240
- Letter of Bombay Chamber of Commerce advocating making all notes legal tender in Presidency towns, *Newmarch* - p 279-80
- well Managed by Government at present, *McLeod* 7007, 7204-8, p 597
- no Objection to, *Graham* - 4929
- Obligation to pay notes in rupees, or gold if wished by Government, but demand likely to be for rupees, *Barrow* - 3082-6
- Payable in rupees or sovereigns at option of Government, *Abrahams* - 695-7
- Payment in rupees or gold, letter of Government of India, 1900, re policy, *Abrahams* - p 109-10
- Preferred, *Toomey* - 2603-4
- Preference given to, by population, very marked especially in Mofussil *Sundara Iyer* - p 627
- Preferred, *Ross* - 3628, 3728
- of Small value, extended use of, proposals of Bank of Bombay re, December 1908, *Newmarch* p 278-9
- System, *Webb* - p 561
- System approved, *Webb* - 6074-5

## Notes—continued

## UNIVERSALISATION

- Government would finance all remittances, *McRobert* 3984-5
- of Higher denominations, no objection to, *Hunter* 6468-9
- Mr James Wilson's speech, 3rd March 1860, *Newmarch* - 1639-44, p 294-309

## Opium revenue

- 1909-10 to 1913-14, *Abrahams* p 81
- Deliberate underestimating, *Howard* 8128-34, p 577
- Excess put aside as matter of policy 303
- Fluctuations, *Sundara Iyer* p 632
- High balances due to unexpected surpluses, *Abrahams* 71-6, 303, p 9
- Position of opium trade, element of uncertainty in Indian estimates owing to, *Abrahams* p 10

## Paper currency, see Notes

## Paper Currency Reserve

- Amalgamation with gold standard reserve, see under Gold Standard Reserve

## AMOUNT

- 1899-1900 to 1902-3 - p 267
- Equal to value of notes in circulation, unnecessary, *Sundara Iyer* p 629
- Increase of gold and decrease of silver, 15th April 1899-22nd August 1900 (*Law*), *Abrahams* p 115, p 117
- Opinion of Sir E Law *re* - p 117-8, p 120, p 123-4
- Relative, of gold and silver should not be fixed, *Smith* - p 617
- Coined silver, lending of, to Treasury department when required by trade, suggestion, *Hamilton* p 529

## COMPOSITION

- December 1863, *Newmarch* p 239
- 1894-1890, *Newmarch* p 243
- March 1905 - p 284
- 1911, *Sundara Iyer* - p 629
- Approved on the whole, *Barrow* - 3077
- Composition and location, statistics 1862-1913, *Newmarch* - p 248-9
- Conversion of Government rupee paper investment into sterling securities, proposal of Government of India, 1900, *Abrahams* - p 110, 114
- Demands on, uncertainty of, *Newmarch* 1692-3
- Elasticity, and advantage to be derived from arrangements for issue of additional notes, *Abrahams* 1047-52, p 95

## FIDUCIARY PORTION

## Amount

## Increase

- would be Approved if recognised that issue should be reduced if note issue decreases, as it might if cheques largely introduced, *Cole* - 3418-9, 3487-96
- Desirable, *Howard* - 8189
- to 40 per cent of total circulation suggested, *Hunter* - 6457-64
- no Limit suggested, circumstances of the time should be considered, *Howard* - 8191-2
- would be Possible without inconvenience, *Bhupendra Nath Mitra* - 4631-5
- Preferable to loans to banks from paper currency reserve, or from balances, *Bhupendra Nath Mitra* - 4354-7, 4583-5, 4636-8, 4830-1
- Suggested, and maximum should be fixed, *McRobert* - 3988-90
- Proportion of minimum circulation suggested, *Le Marchant* - 7674-8
- Proportion of one-third of gross average circulation suggested, *Smith* - 8503
- Proportion of total, advocated instead of fixed sum, and suggestion, *Webb*, 6085-91, *Smith* 8502-6, p 617
- Proportion, *Newmarch* - 1645-9, p 248-9
- Lending from, see *that title* below
- Regulations desirable, and suggestion, *Ross* 3669-82
- Securities, should be invested in rupee securities, not sterling, *Webb* - 6235-41

## Paper Currency Reserve—continued

## GOLD PORTION

## Accumulation

- Impossibility of preventing, *Barrow* - 3077  
 not Objected to, and cannot be prevented as long  
 as 15 rupees given for a sovereign, *McRobert*  
 4248, p 549  
 as Result of limiting Council bills to certain  
 extent, *Howard* - 8356-7

## Amount

- 1901-2 to 1912-3, *Abrahams* p 85  
 Correspondence between Secretary of State and  
 Government of India, 1904 and 1905, *Abrahams*  
 p 132-5 p 257, p 284-6  
 in Excess of amount needed to encash notes,  
 and use of, in strengthening gold standard  
 reserve and reproductive purposes advocated,  
*Hamilton* - 2306-12, p 528-9  
 Increase anticipated with gold currency increased,  
*Webb* - 6300-1  
 Policy re, *Newmarch* - 1377, 1679, p 247  
 Regulation of, with view to amount in gold  
 standard reserve would be advantageous,  
*Abrahams* - 1057  
 12 millions in hand being difference between  
 gold written at 15 and at 22 rupees to the  
 sovereign, *Hamilton* 2306-8 2331-6, 2429-30,  
 p 521

Despatch from Secretary of State, 20th July 1906,  
 re decrease of gold in England suggested by  
 Government of India, *Abrahams* - p 143-4

no Distinction in use of, and of gold standard  
 reserve in London with reference to support of  
 exchange, *Abrahams* - 762-3

source of Elasticity, *Newmarch* 1587, p 223, p 224

Excess over 7,000,000l, use of, for purchase of  
 silver proposed by Government of India, *Abra-*  
*hams* - 1900, p 110, p 112

if Exchange weakens, sterling bills should be made  
 available, instead of gold being given out,  
*Hunter* - 593

History of, *Newmarch* - 1651-2, p 240

Holding of, in India and London, no established  
 proportion, *Newmarch* - 1679

## in India

Amount, 11 to 16 millions suggested, *Howard*  
 p 589

Correspondence between Government of India  
 and Secretary of State re, 1909-10, *Abrahams*  
 p 184-5, p 186

Desirable, *Howard* - p 588

Main function of, to supply gold to public  
*Bhupendra Nath Mitra* - 4690

## in London

## Amount

5 millions suggested, *Howard* - p 588

Whole amount, practically, advocated, *Hunter*  
 p 592-3

Approved, *Toomey and Fraser*, 2600, 2668-74  
 p 536, *Barrow*, 3066, *Smith*, p 617

Consideration of, by people in London as source  
 of relief in case of crisis reply to suggestion  
*Newmarch* - 1685

Correspondence between Secretary of State and  
 Government of India, 1905, *Abrahams*, p 132-5,  
*Newmarch*, p 284-8

Earmarking of, at Bank of England, explanation  
 of process, and charge, *Newmarch* 1680-4

History of, *Newmarch* - 1653-72, p 241-2

Justification, *Howard* - p 587-8

Letter from India to Bank of England Office,  
 28th July 1905, *Abrahams* - p 136

Note by Deputy Accountant General of India  
 Office re advisability of announcing that ship-  
 ments will not be available for loans p 136  
 p 288

Objection to, *Webb* - 6076-84, 6094-5

Policy re, letter from Government of India  
 21st February 1907, *Abrahams* - p 152-4

only Reason for asking for holding of in India  
 instead, would be want of confidence, *New-*  
*march* - 1784-96

## Paper Currency Reserve—continued

## GOLD PORTION—continued

## in London—continued

would be Unnecessary with properly constituted  
 gold standard reserve, and holding in India  
 would be preferable, *Ross* 3663-8 3699, 3797,  
 3799-804, 3843-53, p 546

Use of, as supplementary to gold standard  
 reserve for support of exchange *Newmarch*  
 1668-72

Value of, for purchase of silver &c to support  
 exchange, *Newmarch* - p 223-4

Purpose of, different from that of gold standard  
 reserve, *Abrahams* - 951

Release of two crores from, for investment, sug-  
 gested by Upper India Chamber of Commerce  
 May 1904 - p 265

Transfers from, as possible supplement to proceeds  
 from council bills and transfers, method,  
*Abrahams* - p 11

Transfer to, from Bank of England, telegrams  
 between Secretary of State and Viceroy, 1905,  
*Abrahams* - p 136-7

would be Treated as subsidiary reserve to gold  
 standard reserve, *Newmarch* - 1384-91

Use of, for development of railways and irrigation,  
 scheme, *Hamilton* 2306-12, 2326-66, p 529

Use of, for purchase of silver, see under Silver  
 purchase of, for coinage

Governed by statute, *Abrahams* - 700

History, *Newmarch* - 1638-44, p 239

in India, history of, *Newmarch* - p 244

India Office balances not affected by, *Abrahams* 109

Ingot reserve, history of, *Newmarch* 1686-7, p 244

Intermingling of, with gold standard reserve at  
 option of India Office complained of, *Webb* p 559

Kept separate from cash balances *Bhupendra Nath*  
*Mitra* - 4827-9

## LENDING FROM

would be Advantageous, but would not have same  
 effect as State bank *Hunter* 6364, 6541-4

possible Advantage, *Howard* - p 590

Advocated and approved, *Webb*, 6092-3, 6141-54,  
 6242-8, 6286-7, *Le Marchant*, 7673, *Smith*,  
 8499-501, 8507

Approved, on security and question as to nature  
 of securities, *Ross* 3669, 3672-3, 3773-6,  
*Hunter*, 6461-4, 6637-9, 6657-61

Loans would be, most required by trade when  
 reserve most able to give, *Hunter* - 6417-30

Objection of Sir Clinton Dawkins to, *Howard*  
 8194-5, p 590

Objections of Government of India re, *Abrahams*  
 p

Proposal of Bank of Bengal re, *Abrahams* - p 4

Proposal not favoured, *Cole* - 3445-9

Question whether demand for, would coincide or  
 not with period of greatest demand for encash-  
 ment of notes, *Howard* - 8196-9

Risk of depleting coin reserves remote *Abrahams*  
 444-7

Suggested, *Abrahams* 88, 159, 214-6, 361-2, 436-48  
 p 14-5 p 18

as Temporary investment schemes, *Barrow*  
 3055-65, 3080, 3124-50, 3154-7, 3179-92, 3196  
 -200, 3268-70, 3325-7, *Howard*, 8187-93

## LOCATION

Approved, *Barrow* - 3076

in India, advocated and reasons *Webb*, 6096-103,  
 p 563, p 569, *Sundara Iyer*, p 629

Partly in London and partly in India, approved  
*Hamilton* - p 527

of Portion in London

Desirable, *Ross* - 3798

Desirable as resource against fall in exchange  
*Newmarch* 1361

Objection to, and criticism of arguments in  
 favour of, *Webb* - p 561-3

Objects of, *Abrahams* - 698-9

Paper Currency Act not in theory applicable to  
 portion, *Abrahams* - 904-5

## Paper Currency Reserve—continued.

## Revenue—continued

## SURPLUS—continued

Use of, for development works	
Advocated <i>Graham</i> , 4901-4, <i>Webb</i> , 5061-3,	
p 553	
Objection to <i>Ross</i>	3831-6
Use as sinking fund for reduction of debt	
advocated, <i>Ross</i>	3588-94, 3827, p 543
should be Used for reduction of capital expenditure,	
not left to Banks, <i>Sundara Iyer</i>	8963-75
net Revenue and expenditure of Government of India,	
1909-10 to 1913-14, <i>Abrahams</i>	p 18

ROSS, HARRY MARSHALL - 3577-3911, p 543-7

## BALANCES

Charge against Secretary of State of having with	
drawn funds from India for benefit of London	
based on confusion of currency with capital	
p 543	
High, causes	3582-5, 3708-9, 3737-8
Reduction recently	3840-2
Retention of excessive balances in London, necessa-	
rity for, not proved-	3581, 3829-30, p 543
Banks in India, loans to mercantile firms, rate	3701-2
Budget estimates, unnecessarily pessimistic of recent	
years	3583-4, 3709-20, p 543

## CENTRAL OR STATE BANK

certain Advantages of, but proposal not favoured,	
simple amalgamation of Presidency Banks	
preferred	3683-5, 3778-9, 3863-77, p 544-5
Amalgamation of Presidency Banks, preferable	
p 544	
Capital, question of	3690-1, p 545
no popular Demand for	3684, 3891-2
Distinction in interests between different parts of	
India would not be a serious difficulty	3777
Existing interests must be safeguarded	3890
p 544	
Management of paper currency by, advocated	
p 544	
as Paying proposition, doubt re	3688-91, p 545
certain Restrictions would be necessary to prevent	
unfair competition with exchange banks	
p 544	
3683,	
Sale of Council bills by not advocated	3692-3,
	3794, 3878-80

## CHEQUES

Issue of, might be extended	3675
Use will be confined to Presidency towns and	
little fear of note issue being curtailed by	3881-3

## COUNCIL BILLS AND TELEGRAPHIC TRANSFERS

Effect of, to restore to circulation currency	
abstracted	3721-4

## Sale

on Any day of the week should be possible with	
properly constituted reserve	3637, 3699, p 547
in Excess of requirements, should depend chiefly	
on nature of trade demand for currency	p 544
Freely and up to total demands of trade ap-	
proved as far as balances in India permit, but	
objection to selling more	3586-7, 3615-8
at 1s 4d only or not below rate at which rupees	
can be procured from other sources, objection	
p 544	
3780-2,	
against Silver coinage, by auction, question of	3784-8
below Specie point, against new coinage, objec-	
tion to	3616, 3783-93
Currency system, success of	3617-23, p 543-4

## GOLD

in England more useful for support of exchange	
than gold in India	3767
Exports to India, sale of Council bills not inter-	
fered with, and interference not anticipated with	
free sale	3888-9
in India in case of crisis, Government should	
reserve right to refuse to issue except for	
export	3768-72, 3805

## ROSS, HARRY MARSHALL—continued

## GOLD CURRENCY

Objection to forcing, on India, and Government	
should not encourage use of, but should not	
interfere if people desire	3624-9, 3806-16, p 544
Other forms considered preferable	3628

## GOLD MINT

Might be Advisable if inexpensive	p 546
10 rupee piece, objections to	3817-26, 3854-62
	p 546
Gold Standard, advantages of, and progress of trade	
since introduction	3617-23

## GOLD STANDARD RESERVE

## Form of

Gold, amount	
Ample taking into account gold in paper	
currency department	3648, 3795-6, p 546
Crisis of 1907-8 a good test	3649-52, 3748
should be Fixed on basis of number of rupees	
in circulation, and suggestions re	3648-62,
3740-66, 3908-11, p 546	
Securities, not intended by Fowler Committee,	
3896	
Location in London advocated	p 546
Statutory regulations desirable	3631-40, 3733-9,
3904-7, p 544, p 546	
Subsidiary branch in India (silver), advantage of	
(and considered as practically part of currency	
reserve)	3641-4
Use of, should be restricted exclusively to main-	
taining exchange	3640
Home charges, suggested payment of, through	
medium of certain Indian banks, objection to	
p 544	
3614,	
Income tax, as applied to natives, objection to	3719-20
Lending by Government in London, approved	3595
Lending by Government in India, to banks on	
security, advocated below bank rate, but system	
of tender might be preferable	3603-12, 3700-7,
3725-7, 3886, p 543	

## LOANS, ISSUE OF, BY GOVERNMENT

Encouragement of private enterprise in India	
desirable	3890, 3899-903
in India would be preferable to London	3867, 3898
Mints, closure of, progress of trade since, and success	
of system	3617-23, p 543

## NOTES

Extension of places at which encashable desirable	
	3729-32
Increasing circulation and reason	3620
Preferred	3628, 3728

## PAPER CURRENCY RESERVE

Fiduciary portion, regulations desirable and sug-	
gestion	3669-82
Gold, holding of, in London would be unnecessary	
with properly constituted gold standard reserve,	
and holding in India would be preferable	
3663-8, 3799-804, 3843-53 3699, 3797, p 546	
Loans to Presidency Banks from, approved on	
good security and question as to nature of	
securities	3669, 3672-3, 3773-6

## REVENUE

Collection, tends to create stringency on money	
market	3596-602, p 543
Surplus	
Use as sinking fund for reduction of debt advo-	
cated	3588-94, 3827-42, p 543
Use of, for public works, objections to	3881-6

## RUPEES

Issue of gold for, at 1s 3½d advocated for export	
	3635, 3734-9
Measures taken to maintain exchange value of	
	p 545-6
Taxation, objection to non reduction of, with high	
balances	3714-9 3834-5
Trade, sea borne, total	1874-5, 1893-4, 1912-13
	p 543

Rothschild, A de, statement before Indian Currency Committee re Central Bank *Abrahams* - p 340

Rupee loans, see Loans, issue by Government in India

## Rupees

Absorption by public, 1899-1900 to 1912-3, compared with absorption of sovereigns, *Abrahams* 1032-4

## CIRCULATION

1801-35, *Sundara Iyer* - - - p 622

1873-4 to 1892-3, *Sundara Iyer* - - - p 623

Effect on, of gold currency, *see under* Gold currency

Government have no means of forcing rupees into circulation if not desired by public, *Abrahams* 1014-5

Growth of, no risk seen at present, but risk dependent on circumstances, *Le Marchant* 7648-51

Increase from 1893 to 1899, *Sundara Iyer* - p 623

Large, compared with gold, and reasons, *Sundara Iyer* - - - p 621-4

## COINAGE

in Advance of requirements, proposals of Government of India, 26th April 1906, *Abrahams* p 138, p 140-1

Amounts, 1894-5 to 1912-3, *Newmarch* - p 254

of Average number required and little more every year, advocated, *Hamilton* - 2555-61, p 529

Cessation of, in 1907, policy approved, *Howard* p 591

Difference between price of silver for coinage and circulating price of rupees should be held in trust for public, and invested, *Hunter* - - 6437

Effect of redundancy of currency on prices, *Webb* 5429-46, 5883-90

since 1899, not excessive, *Howard* - - - p 591

Excessive, 1906-7, *Smith* - - - p 617

Government believed to have deliberately reframed from, 1908-10, and induced people to take sovereigns, *McRobert* 4148-53, 4157-8, 4291-8

no Fresh rupees should be coined beyond those required to replace wear and tear till gold in circulation in excess of requirement of public, *Webb* - - - 5732-45, p 568

no Loss would be involved in converting coinage profits into gold, as rupees would be held in suspense if exchange unfavourable, *Abrahams* 677-8

1912, and distribution of, *Newmarch* p 243-4

Proceedings 1900 and 1905-6, p 110, p 138, p 144-6

Profits

Coinage of, into rupees, explanation, *Abrahams*, 887-900, *Newmarch*, 1577-86

Credit of, to gold standard reserve

Correspondence between Government of India and Secretary of State *re*, 1900, *Abrahams* - - - p 109-14, p 126-8

should be Continued indefinitely, *Hunter* - 6437-9

Letter from Madras Chamber of Commerce, 16th August 1907, *Abrahams* - - - p 171-2

Minute by the Hon Sir E Law, 1900, *Abrahams* - - - p 114-21

Minutes by Lord Curzon, 1900, *Abrahams* - - - p 121-2

should be Stopped, and profits kept in bullion for use for silver purchases, *Sundara Iyer* 8906-12, p 629-30

of Whole profit, advocated, *Toomey and Fraser*, 2534, p 536, *Roid*, 7384, *Smith*, p 616

should be Kept apart in gold and carried to special gold reserve, *Webb* - - - p 568

Number of rupees coined should not be measure of amount required in gold standard reserve *Abrahams* - - - 1074-6

Temptation to issue token coinage excessively with view to, must be avoided, *Webb* - 6180

Use of in aid of general balances, 1900 (proposal of Government of India), *Abrahams* - p 112

Use of, for public works, opinion of Government of India *re*, *Abrahams* - - - 865-7

Use of, for railway purposes

Adequate amount was left in gold standard reserve, *Abrahams* - - - 1077-8

not Approved *Webb* 559, *Smith*, p 606, *Howard*, 8260, p 587

## Rupees—continued

## COINAGE—continued

## Profits—continued

Use of, for railway purposes—continued

Approved under circumstances, if money replaced, *McLeod* - - - 7004-6

Attitude of Government of India, *Abrahams*, 596-8, 598-6

Correspondence between Bombay Chamber of Commerce and Government of India *re*, 1907, *Abrahams* - - - p 160-3

Correspondence between Government of India and Secretary of State *re*, 1907 and 1909, *Abrahams* p 159, p 160, p 163, 168-71, p 175-8, p 182

Disapproved, and sum should be replaced, *McRobert* 4298-308, 4073, p 549

Explanation of proceedings, *Abrahams* 584-5, 589-92

Full amount due to gold standard reserve received, with exception of amount received in connection with bills on London, *Abrahams* 898-9

Justification, *Sundara Iyer* - - - p 630-1

Letters of Madras, Bengal, and Karachi Chamber of Commerce *re*, 1907, *Abrahams* p 171-5

Report of Indian Railway Finance Committee *re*, *Abrahams* p 156-7

no Risk of over-coinage with view to, *Abrahams* - - - 971-2

Telegrams between Secretary of State and Viceroy, 1907, *Abrahams* p 157-9

Use of, for reproductive works when safe limit of gold in standard reserve attained, would be approved, if due regard had to caution, *McLeod* 7089-96

Use of, for ordinary or capital expenditure not approved till reserve 25 or 30 millions standing, *McRobert* - - - p 549

Proposals for further coinage (letter of Government of India, 1900) - - - p 110-3

Purchase of silver for, *see* Silver, purchase of

Question whether Committee of 1898 anticipated, to extent that has taken place, *Abrahams* 890

Regulation, method, *Abrahams*, 606-8, 885-6, 893, 1008-15, *Newmarch* 1624-34

Re-opening of mints to free coinage, *see under* Mints

Statistics, 1865-6 to 1872-3, *Sundara Iyer* p 623

## CONVERSION INTO GOLD

Demand for gold, question of dependence on balance of trade and amount of coin in circulation, *Le Marchant* - - - 7762-8

Government giving gold for, limit to an approach of crisis, principle cannot be laid down 7751-3

Government should aim at being always in position to redeem, *Howard* - - - p 586

Government should reserve right to refuse *Hamilton* - - - p 523, p 527

no Legal obligation, *Abrahams* 656-7, 663-73, 1112, 1113

Limit to, on approach of crisis, principle cannot be laid down, *Le Marchant* - - - 7751-3

in Normal times and when gold available advocated, but no obligation advocated, *Toomey and Fraser* - - - 2600-1 2675-7, p 536

at 1s 3<sup>1</sup>/<sub>2</sub>d. advocated, for export, *Boss* 3635, 3734-9

Policy *re*, *Abrahams* - - - - 948-50

Supply of gold not sufficient to change all rupees *Newmarch* - - - - 1802-6

Supply of gold insufficient to replace all rupees, but no obligation on Government, *Abrahams* 868-76 889-4

Undertaking not advocated, *McRobert* 4035-8, *Bhupendra Nath Mitra*, 4688, 4806-9, *Smith*, 8793-4

Decrease of reserve, 1913, and steps taken, and reasons for not buying silver out of increased gold in paper currency reserves, *Abrahams* 934-92

## DEMAND FOR

Difficulty of meeting, at certain times *Abrahams*, p 113-3, p 116, *Newmarch*, 1688-91

## Rupees—continued

DEMAND FOR—continued	
Large and unusual demand, and steps taken (Law), <i>Abrahams</i> - - -	p 115-7
Variations in, <i>Abrahams</i> - - -	608

- SMITH, THOMAS - 8432-8975, p 612
- BALANCES**  
 Government over cautious in under estimating, but under estimating probably justified, 8441-2 in India, normal except in 1913 - p 613 in London, abnormally high in 1910, 1911, 1912, but not deliberately accumulated for convenience of London money market, &c - p 612  
 Management, no serious criticism of, except in 1910, 1911, and 1912 - 8439  
 1912, India bills paid off in, might have been paid off earlier - 8440, p 612-3
- BANK RATE IN INDIA**  
 Complaint, no ground for, taking whole year round - 8468  
 Decrease of differences, if achieved by Central Bank would be an advantage - 8645  
 Differs in different Presidencies sometimes - 8639-44, 8800-1, p 613  
 Lending by Government would bring rate down - 8646-9  
 6 per cent for steady borrowers all the year round - p 614  
 7 or 8 per cent the normal figures - 8494-5
- BANKS**  
 Deposits  
 Higher rate on, up country, question of 8673-80  
 People prefer smaller joint stock banks as rates better - 8626-8  
 Failure, bad effect on depositors - 8597-600  
 Government inspection, no good bank would be afraid of - 8601  
 "Mushroom" banks  
 Continuance, under legislative supervision, advocated - 8669, 8728-32, p 614  
 Deposits  
 New sources tapped by - 8665  
 Rate on - 8668  
 Depositors, classes - 8663-4  
 Growth of, and danger from - 8460-4, p 613-4  
 Memorandum re 8th April 1912 - p 618-9  
 Operate all over the country - 8625  
 State Bank would not supply place of - 8626  
 Use of money - 8666-7  
 Reserves, form in which kept - 8617-23
- CENTRAL OR STATE BANK**  
 no Advantages seen - 8624  
 Amalgamation of Presidency Banks, question as to whether position would be stronger than at present - 8733-58  
 Area, difficulty 8447-53, 8639-62, 8661-2, 8775-7, 8802-4, p 613  
 no general Demand for, known of - 8465-7  
 Functions  
 Exchange business not advocated - p 615  
 Note issue  
 Circulation would be affected at first even if Government guarantee continued - 8759-64  
 would not Command same confidence as present Government issue - 8588-90, p 617  
 not Necessary - 8444-6, 8765-9, 8778-82, p 613-4, p 617  
 Note currency would not be better managed by - 8630-1  
 Objected to - 8443  
 Co-operative Societies assistance of, by joint stock banks - 8854-6, 8873
- COUNCIL BILLS AND TELEGRAPHIC TRANSFERS**  
**SALE**  
 at 1s 4½d, tends to keep gold from going to India - p 616  
 in Excess of requirements, approved and reasons - 8805-11  
 System approved - p 615
- DEPOSITS WITH BANKS IN LONDON**  
 Making of, by India Office on some such principle as the sale of Council Bills, suggestion - p 617  
 Range of competition might be widened - 8591-2, p 617
- EXCHANGE**  
 Fixing of, at 1s 4½d, benefit to India - 8526 p 615  
 Value of gold in circulation in support of, doubted - 8555-6
- SMITH, THOMAS—continued
- EXCHANGE BANKS**  
 Deposits, 1901, 1910 - p 614  
 Free balances kept in Presidency Banks without interest, and State Bank would be no improvement - 8778-82
- GOLD**  
 Government should give, when possible - 8791-5  
 Imported into India, large amount melted down for ornaments - 8528-9  
 Issue in exchange for rupees, undertaking not advocated - 8792-4
- GOLD CURRENCY**  
 Circulation increasing, especially in the Punjab - 8530, p 615  
 Encouragement desirable in interests of people - 8533-53  
 Encouragement of notes preferable, but people should be given gold when desired - 8553-64  
 Increased circulation very localised - 8531-2
- GOLD MINT**  
 Course of bullion from hoards through, question of - 8569-80  
 Reasons for advocating - 8565-82, p 616  
 Sovereigns should be coined - p 616
- GOLD STANDARD RESERVE**  
 Amount, no limit should be fixed - 8583, 8587, p 616  
 Diversion from, 1907, towards railway development, objection to - p 616
- Gold**  
 Amount  
 should be Half of whole - 8587  
 Insufficient and proportion too low - 8583-4, p 616  
 in London, should be earmarked at Bank of England - p 617  
 should be Held half in gold or rupees, bulk in London in gold - 8586, p 616-7  
 all Profits on coinage should be allocated to p 616  
 Subsidiary branch in India, gold or rupees may be held as circumstances warrant - p 616  
 Hoarding of gold, extent of - p 615-6  
 Interest, rates, higher in all comparatively new countries - 8602
- JOINT STOCK BANKS**  
 Borrowers, classes - 8850-3  
 Depositors, classes - 8843-9  
 Deposits  
 1901, 1910 - p 614  
 Growth of, and more people getting in touch with banking - 8454-9  
 considerable Reserves and question of proportion of amount at Presidency Banks to total - 8681-92
- LENDING BY GOVERNMENT IN INDIA**  
 Bank rate would be kept down by, say, a 10 crore loan, to 6 per cent. - 8487  
 Class who would benefit and question as to how far cultivators would benefit - 8488-98, 8836-42  
 should be Confined to banks at first but not only Presidency banks, but to Presidency banks only would be better than not at all - 8470-1, 8474-81  
 Demand would be considerable, but impossibility of estimating - 8482-6  
 Invitation of tenders no objection seen - 8870-1  
 should be from Paper Currency Reserve as balances a fluctuating item - 8499-501  
 Procedure, suggestion - 8698-703, 8825-35  
 little Risk need be involved - p 614-5
- Securities**  
 no Difficulty anticipated - 8693-7  
 should be Required and question as to nature of, - 8472-3, 8812-21  
 State bank would be no better - 8766-9  
 Suggestions re minimum amount, rate &c., - 8825, p 614
- Lending by Government in London, making of loans direct by India Office, on some such principle as sale of Council bills, suggestion - 8593-4, 8822-4, p 617

SMITH, THOMAS—*continued*

LOANS, ISSUE BY GOVERNMENT IN INDIA	
Endorsement of Government paper, system and difficulties from point of view of natives and removal of difficulties would be advantageous	8520-5, 8602-14, 8783-90, 8857-69
Holders	8519
Increase, possible to some extent and suggestion as to amount	8513-8, p 615
Issue of short term bearer bonds would be useful, and under consideration	8615-6 8633-8
Raising of capital for Indian development by, advocated as far as possible	8512
Stock certificates or bearer bonds suggested	8858-66
Mints, re opening of, to free coinage of silver not advocated	p 615
NOTES	
Circulation, increase	p 617
Encouragement of, preferable to encouragement of gold	8553-63
PAPER CURRENCY RESERVE	
Amount, relative, of gold and silver should not be fixed	p 617
Fiduciary portion	
Loans from, in busy seasons advocated	8507
Proportion of total, advocated instead of fixed sum, and one third of gross average circulation suggested	8502-6, p 617
Location of gold in London, approved	p 617
PRESIDENCY BANKS	
Access to London money market, not necessary, and public opinion would be against	8509-11
Business efficiently done	8765
no Change in legal conditions of working advocated,	8508, p 615
Deposits	
1901, 1910	p 614
Same rate given at up country branches	8671-80
Loans by, any security taken if two names obtained	8707-10, 8714-9
Position of, in case of crisis, question of, and question of advantage of amalgamation	8720-58
Restrictions, of no practical importance at present	8509, 8711-3
Rupees, coinage, excessive, 1906 and 1907	p 617
Silver, regular purchases advocated	p 617
SOVEREIGNS	
Encouragement by Government by giving better rate for payment in, not known of	8874-5
Large number melted down	p 616
Sovereigns	
<i>see also</i> Gold Currency

1899-1900 to 1912-3 compared with absorption of rupees, <i>Abrahams</i>	1032-4
1910-11 1911-12, and 1912-13, <i>Howard</i>	p 589
and Balance in paper currency reserve in India, 1910-11, 1911-12, 1912-13, <i>Howard</i>	p 585
small Amount wanted in Presidency towns and large percentage wanted at up country places, <i>Toomey</i>	2766, 2771
Buyer of grain prefers but seller prefers rupees	
<i>Dunbar</i>	7898-9
CIRCULATION	
Amount in, 1801-35, <i>Sundara Iyer</i>	p 622
Effect of sale of Council Bills on, <i>see under</i> Council Bills and Telegraphic Transfers	
Increase of, especially in the Punjab, <i>Smith</i>	8530, p 615
Increasing but increase very localised <i>Newmarch</i> ,	1380, <i>Smith</i> , 8531-2
a Convenient coin for considerable number of community but cannot be for large portion, <i>Le Marchant</i>	7842
Demand for, by public increasing, <i>Abrahams</i>	1142
Difficulty of obtaining rupees for, from Controller-General, cases of, <i>Toomey and Fraser</i> 2808-12, 2809	
no Difficulty in obtaining, at present, but obligation to supply by Government not advisable, <i>Fraser</i>	2803

Sovereigns—*continued*

Difficulty in getting exchanged, less than that of notes, <i>Abrahams</i>	1265-6
cases of, at Discount of 4 annas formerly, <i>McRoberts</i>	4245-7
Effort made by Government from 1900 to 1907 to push, into circulation, <i>Bhupendra Nath Mitra</i>	4762-4
Encouragement by Government by giving better rate for payments in, not known of, <i>Smith</i>	8874-5
no Evidence as to amounts going into hoards and into circulation, <i>Newmarch</i>	1380
Export to England by exchange banks, <i>Fraser and Toomey</i>	2706-8, 3036-7
Exports from India on private account, September 1907 to December 1908, <i>Abrahams</i>	p 103
Extent of use, and number in circulation, <i>Abrahams</i> , p 214, <i>Hamilton</i> , 2407-8, 2542, <i>Webb</i> , 5769-75, <i>Hunter</i> , 6479-83, <i>McLeod</i> , 7083-6, 7197-201, <i>Reid</i> , p 574, <i>Howard</i> , p 584	
Fluctuations in extent of use of, <i>Le Marchant</i>	7645
Held in Government securities and reserves in India	
diminution, September 1907 to December 1908	
<i>Abrahams</i>	p 103
HALF SOVEREIGNS	
Import	
Consideration of, by Government, formerly, and reasons deciding against large imports	
<i>Abrahams</i>	1285-6
by Exchange banks, but coins not popular	
<i>Abrahams</i>	1286-9
not Popular, <i>Abrahams</i> , 1177-80, 1278-82, <i>Sundara Iyer</i> , p 628	
Hoards, <i>see</i> that title	
Imports of, on private account for each month	
1911-2 and 1912-3, <i>Newmarch</i>	p 238
Imports, absorption by public and number held at end of year, 1909-10 to 1912-13, <i>Abrahams</i>	p 21
Imports, exports and absorption, 1901-2 to 1912-13, <i>Abrahams</i>	p 84, p 213
Imports, 1894-95 to 1901-3, circulation nil till 1902-3, <i>Sundara Iyer</i>	p 623
Imports and circulation, <i>Sundara Iyer</i>	8951-2
Increased use not very rapid, and chiefly in northern and western circles, <i>McLeod</i> , 7149, p 598, (Bengal Chamber of Commerce), p 605	
ISSUE OF	
Advocated, if desired by people, but not other wise, <i>Sundara Iyer</i>	8956-66
Advocated when desired by people, except when demand evidently only in place of bullion, <i>Le Marchant</i>	7645
Advocated, when possible, <i>Smith</i>	8791-5
in Exchange for silver, <i>see</i> Conversion into gold under Rupees	
Extra-legal facilities, <i>Bhupendra Nath Mitra</i>	4750-1 4754-5
to Maintain exchange, at time of unfavourable trade balance, must be at rate of 15 to 1	
<i>Abrahams</i>	952
1907-8	
Discussion in Government of India <i>re</i> , and policy, <i>Bhupendra Nath Mitra</i>	4834-42
Quantity must have gone into hoards <i>Newmarch</i>	1819-20
in 1908, largely at Presidency towns and some up country, <i>Bhupendra Nath Mitra</i>	4819-21
to Public at time of crisis desirable <i>Bhupendra Nath Mitra</i>	4822-5
of Sums over 10,000 <i>l</i> reported to Comptroller General, <i>Bhupendra Nath Mitra</i>	4843
Issued in Madras in 10,000 <i>l</i> at a time only, but no real difficulty in obtaining, <i>Hunter</i>	6478
Large number melted down, <i>Smith</i>	p 616
too Large for ordinary daily transactions and larger payments made in notes, <i>Sundara Iyer</i>	8953-5
Loss from wear and tear should fall on India, <i>Cole</i>	5388
as Legal tender, <i>Abrahams</i> , 556, p 212, <i>Newmarch</i>	p 241
Measures taken to make current coin, <i>Abrahams</i>	1260
Melting down, <i>see</i> Hoards

- Composition, statistics, 1911 - - - - - p. 629
- Location, in India, of whole amount advocated p. 629
- Two-thirds in silver rupees and bulion suggested p. 629
- PRESIDENCY BANKS. LOANS TO.**
- Banks would be assisted, but not Indians at large 8963-75
- not Much money available - - - - - p. 632
- Revenue, surplus, should be used for reduction of capital expenditure, not lent to banks 8963-75
- RUPEES**
- Circulation, increase from 1893 to 1899 - p. 623

## SUNDARA IYER, M R—continued

## RUPEES—continued

## Coinage

Profits, allocation to gold standard reserve should be stopped and profits kept in billion for use for silver purchases 8906-12, p 629-30  
 Statistics, 1865-66 to 1872-73 p 623  
 Large proportion in circulation compared with gold and reasons p 621-4  
 Silver standard, impossibility of returning to p 620

## SOVEREIGNS

Half sovereigns, not popular p 628  
 Imports and circulation 8951-2  
 too large for ordinary daily transactions and larger payments made in notes 8953-5

## Taxation

Additional, imposed 1885-95 to meet burdens owing to fall in exchange *Newmarch* p 225, p 226  
 Change, sanction of Secretary of State required, and all proposals submitted to, but does not generally take official initiative in proposing, *Bhupendra Nath Mitra* 4548-51, 4629-30  
 fresh imposition, 1910-11, *Newmarch* p 226  
 Increase desirable for good of the people, *Hamilton* 2382-3, p 518-9  
 India heavily taxed from point of view of individual incomes, but lightly taxed from point of view of size of country, *Webb* 5330-46  
 Net revenue, 1909-10 to 1913-14, *Abrahams* p 81  
 Objection to non reduction of, with high balances, *Ross* 3714-9, 3884-5  
 Reduction would not have been advisable, *McRobert* 4175-8, p 547  
 Reduction of balances by reducing, advocated, *Webb* 4969-76, 5048-52, p 551  
 Remission, 1909-7 *Newmarch* p 226  
 "The Times of India," extracts from "Indian Currency and Finance" published by *Webb* p 567

## TOOMEY, J A, and T FRASER 2562-3038, p 536-42

Agriculture, state bank would not cater for cultivators now dependent on money lenders, and encouragement of co operative credit system advocated 2621, p 537  
 Approved borrowers' list, enlargement so as to include some foreign banks, suggestion 2800-1  
 Balances, location and management, no objection to methods 2565, p 536  
 Bank rate in India, few complaints 2854-7  
 Banks in India, deposits, increase, and question in case of banking crisis 2872-912

## CENTRAL OR STATE BANK

Amalgamation of presidency banks, difficulties 2621-2, 2623-7  
 Area, difficulty 2624  
 Argument for, as means of lowering bank rate not considered important 2847-57, 2922-3  
 Discounting of hundis by, would be risky 2969  
 Exchange business, impracticability and objection to, would drive existing exchange banks off the field 2621-2, 2680-7  
 Management of currency by, impracticability 2621-2, 2628-31, 2688-9  
 Objections to, and banking monopoly would result 2621, 2623, 2679-89, 2809-31 2921, p 537-8  
 Questions as to advantage of, in case of banking crisis 2872-912  
 Question of, from point of view of larger sums being placed with for lending purposes 2832-46  
 Relations of exchange banks with, question of 2916-20

## CO-OPERATIVE CREDIT SYSTEM

Encouragement advocated 2621, p 537  
 might have some result in getting money out of hoards 2974

## COUNCIL BILLS AND TRANSFERS

Market rate for, not undercut by Secretary of State 2826-7

TOOMEY, J A, and T FRASER—continued  
 COUNCIL BILLS AND TRANSFERS—continued

## Sale

below 1s 4d desirable sometimes 2958  
 Sufficient gold goes to India 2582-3  
 System approved and no change desired 2566, 2659-67, p 536  
 Currency, statistics showing extent of use of different forms of, in various branches of the National Bank of India 2760-82, 2993-7

## EXCHANGE

Crisis of 1907-8, criticism of Government's delay in using reserves 2940  
 Gold would probably not help in supporting 2619-20  
 Rate, question as to connection of demand for Council bills with price offered 2628-47  
 Undertaking by Secretary of State to protect, advocated, but Secretary of State practically bound now 2759, 2936-42

## EXCHANGE BANKS

in Case of banking crisis in India would take telegraphic transfers or ship sovereigns to India 2883-90  
 Competition with Presidency Banks to certain extent 2654-8, 2970-2  
 Deputation to Government of India by Indian officers of, December 1899, repudiation of connection with 2648-53  
 Export of gold from India 2706-8, 3036-7  
 Exports of uncoined gold to India 2697-8  
 Indian deposits, increase 2860-7  
 Presidency Banks borrowed from only to small extent in recent years 2914-5  
 Publication of accounts  
 Distinguishing Indian deposits and cash from outside Indian, no objection to if all other banks agreed 2924-7  
 Distinguishing between fixed deposits and deposits on current account, no objection to, if all other banks agreed 2928-33  
 Publication of average balance sheets of Indian business, question of 2934-5  
 Sums kept on deposit with Presidency Banks 2875-7, 2913

## GOLD

small Amount wanted in Presidency towns and large percentage wanted at up country places 2766, 2771  
 Capacity of India for absorbing, remarkable 2721  
 no Difficulty in obtaining at present, but obligation to supply by Government not advisable 2803  
 Gold bars, sale of, by dealers to people for ornaments 3011-2

## GOLD MINT IN INDIA

Gold imported from abroad would not go to, for coinage in normal times, import of sovereigns cheaper 2699-709  
 Gold would not be attracted from hoards 2614-8, 3010-4  
 Local gold from mines would be only source in ordinary way 3008-9  
 not Necessary at present, but if opened in future, sovereigns should be coined 2602-3, p 538  
 Taking of bullion to, for coinage would not be cheaper than import of sovereigns as general rule 2993-3014, 3038

## GOLD STANDARD RESERVE

## Form

## Gold

Amount, experience of 1907-8 not sufficient as measure of possible liabilities 2587-90, 3027-35  
 Fixing of limit not suggested at present 2956-7  
 Holding of all reserve in, not objected to, if real desire for, but would be too expensive and waste of interest 2716-43  
 Larger proportion should be kept in 2584-94, p 536  
 Question of amount 2711-2, 2763-96, 2986-96  
 Gold or gold securities advocated 2584, p 536

TOOMEY, J A, and T FRASER—*continued*GOLD STANDARD RESERVE—*continued*Form—*continued*

Securities, short term advocated as far as possible - 2584, p 536  
Silver, objection to 2584, 2595, 2599, 3015-26, p 536

## Location in London

Advantages - 2979-85  
Criticism of, as in interests of London money market, entirely wrong - 2985  
of Whole amount advocated 2584, 2598-8, 2755-8, p 536  
all Profits on coinage should be credited to 2584, p 536

## HOARDING

by Agricultural classes - 2949-50  
Difference between rupees and sovereigns not realised by some of poorer type - 2950  
of Gold, increasing - 2615-8, 2950  
Natives gradually investing more in securities 2948-9  
no Suggestion as to means of getting money out of hoards, but co operative credit system might have some effect - 2973-5  
Indian money market, question of connection with London money market - 2959-62

## JOINT STOCK BANKS IN INDIA

Deposits, increase and question as to adequacy of cash balances - 2868-71  
no Sums on deposit with Presidency banks, to any important extent - 2872-4

## LENDING BY GOVERNMENT IN INDIA

Amount would be limited, and difficulty of security, 2932-4  
Demand would not be great - 2845-6, 2991  
to Exchange banks, not desired - 2944-7  
not very much Importance attached to 2992  
to Presidency Banks  
Banks could provide sufficient security to meet all they would require to borrow - 2843-5  
Only, advocated - 2797-9, 2943-7, 2991  
Short periods in busy season for purposes of trade, and at lower than bank rate, advocated, demand would not be great - 2567-81, 2621, 2950-4, p 537

Question of effect on Indian bank rate - 2847-53  
London money market, question of connection with Indian trade - 2744-9

National Bank of India, Ltd, receipts and disbursements, statistics - 2760-9, 2993-7, p 541-2

## NOTES

Encouragement, advocated, and Government more efficient than State Bank - 2963-9  
Increasing issue - 2621, 2779, 2966, p 538  
Preferred - 2603-4  
Paper currency reserve, location of proportion in London in gold advocated - 2600, 2668-74, p 536

## PRESIDENCY BANKS, ENLARGEMENT OF POWERS

History of discussion, &c, re 2621, 2678, p 537  
to Permit dealing in sterling exchange, opposition to - 2621, 2623, p 537  
Refusal of permission to, to borrow in London, speech of Mr E N Baker, C S I, re, in 1907 - p 538-40

Relations of Joint Stock and exchange banks with, and question as to strength of position as banker's banks - 2872-82, 2891, 2913-6

## RAILWAYS

Offer of loan to, by exchange banks and refusal - 2954  
Private enterprise, encouragement by Government advocated - 2952-4  
Rupees, trade often short of - 2772-5

## SOVEREIGNS

Difficulty of obtaining rupees for, from Comptroller General, cases of - 2608-12, 2802  
should be Given for notes or rupees in normal times and when gold available but no obligation advocated - 2600-1, 2675-7, p 563  
People can obtain freely when wanted 2603, 2605-7  
Taken freely in certain up-country districts and not considered an inconvenience - 2608  
Trade, balance generally in favour of India - 2805-8

## Trade
