LETTER OF TRANSMITTAL

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., April 19, 1924.

SIR: I transmit herewith a decennial report on assessed valuations and tax levies in all States and the District of Columbia, which was prepared in connection with the decennial investigation on wealth, public debt, and taxation authorized by the permanent census act. The reports for 1922 are issued under five titles as follows: (1) Estimated national wealth, (2) Public debt, (3) Assessed valuation and tax levies, (4) Taxes collected, and (5) Digest of State laws relating to taxation and revenue.

The report was prepared under the direction of Starke M. Grogan, chief statistician in charge of wealth, public debt, and taxation, assisted by Lemuel A. Carruthers, expert chief of division. The text discussion was prepared by Morris J. Hole, expert special agent.

Respectfully,

W. M. STEUART,
Director of the Census.

Hon. HERBERT HOOVER,
Secretary of Commerce.

ASSESSED VALUATION AND TAX LEVIES

INTRODUCTION

Scope of this report.—This report presents, by geographic divisions and States, the total and per capita assessed valuations of all property and of real property and improvements, subject to general property taxes, the total and per capita levies, and the average tax rate per \$100 of assessed valuation, for the years 1922, 1912, 1902, 1880, and 1860; the total and per capita assessed valuation of all property subject to such taxes, by counties, for 1922 and 1912; the assessed valuations of such property, by principal classes, and the taxes levied thereon, by States, counties, and other civil divisions, in 1922; and the levies of taxes on such property for incorporated places, school districts, townships, drainage districts, irrigation districts, levee and flood control, and road districts, and all other districts, in 1922.

Per capita valuations and tax levies.—The per capita amounts shown in the tables of this report are based on exact totals. In some cases, therefore, they will differ slightly from calculations that may be made by using as bases the amounts shown in the table, which are only approximately exact because of adjustment to the nearest thousand.

The population figures used in calculating per capita amounts for States represent, for each State, the estimated population at the middle of the fiscal year which ended in the calendar year 1922, except in cases of 3 of the States—Vermont, Mississippi, and Nevada. They represent the estimated population of 21 States on January 1, 1 on March 1, 8 on April 1, 8 on June 1, and 7 on July 1, 1922. The Bureau of the Census has made no estimates of population for Vermont, Mississippi, and Nevada, the population of which decreased from 1910 to 1920; for each of these States the population used in computing per capita amounts was that shown by the census of January 1, 1920.

In computing the per capita amounts for counties, the bureau used the estimated population on July 1, 1922, except in case of decrease of population from 1910 to 1920 in which case the population on January 1, 1920, was used.

Property subject to the general property tax.—The general property tax, or general property taxes, as the term is used in this report, is the common designation of the direct taxes levied upon real property, and upon other property when they are apportioned and levied by substantially the same methods that are employed in apportioning and levying taxes upon privately owned real property.

Assessed valuations.—The valuations shown in this report are those placed upon property subject to general property taxes by the assessors, boards, and commissions charged with such duty. The valuations placed upon property by the local assessors are subject to review and revision by county and State boards of equalization, the purpose of such revision being to equalize, as far as possible the burdens of county and State taxes that are to be placed upon the local taxing districts.

Tax levies.—The tax levies shown in this report are the amounts proposed to be raised by taxation of property subject to general property taxes.

Tax rates.—The rates of levy are such amounts as express the ratio between the amounts to be raised by taxation and the assessed valuations upon which the levies are based. Of themselves, they supply no exact data as to the burden of taxation. This relative burden can be shown only by introducing such corrections as are necessary to allow for the great variations in the bases of assessment that prevail in the several States. These bases for real property as determined for each State in connection with estimating the national wealth, and statement of the method by which they were determined will be found in the report of the Bureau of the Census entitled "Estimated National Wealth: 1922."

Classification of property for assessment.—There is a general agreement in regard to the classification of the greater part of the property assessed for taxation. Certain classes of property are, however, treated differently in the different States. The operative property of railway, telegraph, telephone, express and private car companies, and of a few other corporations of kindred character are in some States classed as real property, in some as personal property, while in other States they are given a separate classification and are taxed either on an assessed valuation or on their gross receipts. The constitutional and statutory provisions governing the classification of property for purposes of assessment are set forth in detail for the several States in the report of the Bureau of the Census entitled "Digest of State Laws Relating to Taxation and Revenue: 1922."

Real property and improvements.—Under the heading "Real property and improvements" are tabulated the valuations of all lands and lots and the improvements thereon, except such as belong to public service corporations and are given a separate classification in accordance with constitutional or statutory provisions and except buildings and other improvements belonging to others than the owners of the lands or lots on which they are located and where such improvements are taxed by methods different from those employed in taxing the lands on which they stand, which in some States are classed as personal property.

Personal property.—Under the heading "Personal property" are tabulated the valuations of such tangible property as is not attached to real property and is not given a separate classification by the laws of the State, together with such intangible property as is classed as personal and made subject to the general property tax by the laws of the different States.

Other property.—Under the heading "Other property" are tabulated the valuations of properties that, by constitutional or statutory provisions, are given a status different from that accorded to the greater part of the real and personal property, but are subject to the general property tax. These properties, where given a separate classification, are those employed in the operation of public service corporations, such as are conducted by railway, telegraph, telephone, express, and private car companies, and kindred corporations.

DESCRIPTION OF GENERAL TABLES

Number and character of general tables.—Tables 1 to 9, inclusive, present statistics of the assessed valuations of property subject to general property taxes, and the levies of taxes thereon for the benefit of the States, counties, cities, towns, villages, school districts, townships, drainage districts, and all other civil divisions having power to levy general property taxes.

Civil divisions for which levies of the general property tax were reported.—The authority to levy taxes is conferred on counties, cities, and other civil divisions by legislative acts, and those acts vary widely in the several States. The following statement presents a list of the civil divisions which reported levies in 1922:

Alabama.—Counties and incorporated places.

Arizona.—Counties, incorporated places, school districts, drainage districts, irrigation districts, fire districts, electrical districts, and power district.

Arkansas.—Counties, incorporated places, and school districts.

California.—Counties, incorporated places, school districts, drainage districts, irrigation districts, levee districts, road districts, library districts, lighting districts, fire districts, forest fire districts, fire protection districts, fire and fire protection districts, mosquito abatement districts, sanitary districts, water districts, cemetery districts, junior college districts, sewer districts, and promotion districts.

Colorado.—Counties, incorporated places, school districts, drainage districts, and irrigation districts.

Connecticut.—Counties, incorporated places, school districts, towns, fire districts, sewer districts, lighting districts, fire and sewer districts, and association districts.

Delaware.—Counties and incorporated places.

District of Columbia.—Incorporated place.

Florida.—Counties, incorporated places, school districts, drainage districts, road districts, haulover district, canal district, bridge districts, boat-course district, and all other special districts.

Georgia.—Counties, incorporated places, school districts, and drainage districts.

Idaho.—Counties, incorporated places, school districts, road districts, and lighting districts.

Illinois.—Counties, incorporated places, school districts, townships, drainage districts, road districts, park districts, sanitary districts, sanitary and levee districts.

Indiana.—Counties, incorporated places, school districts, and townships.

Iowa.—Counties, incorporated places, school districts, and townships.

Kansas.—Counties, incorporated places, school districts, townships, and drainage districts.

Kentucky.—Counties, incorporated places, and school districts.

Louisiana.—Parishes, incorporated places, school districts, drainage districts, levee districts, road districts, navigation districts, criminal districts, and farm demonstration districts.

Maine.—Counties, incorporated places, towns, bridge districts, and pier-site district.

Maryland.—Counties, incorporate places, and sanitary districts.

Massachusetts.—Counties, incorporated places, fire and water districts, and village district.

Michigan.—Counties, incorporated places, school districts, and townships.

Minnesota.—Counties, incorporated places, school districts, and townships.

Mississippi.—Counties, incorporated places, school districts, levee districts, and road districts.

Missouri.—Counties, incorporated places, school districts, townships, drainage districts, and road districts.

Montana.—Counties, incorporated places, school districts, drainage districts, irrigation districts, road districts, and fire districts.

Nebraska.—Counties, incorporated places, school districts, townships, drainage districts, irrigation districts, road districts, metropolitan utility districts, sanitary districts, and miscellaneous districts.

Nevada.—Counties, incorporated places, school districts, drainage districts, and irrigation districts.

New Hampshire.—Counties, incorporated places, school districts, towns, and precincts.

New Jersey.—Counties, incorporated places, school districts, and townships.

New Mexico.—Counties, incorporated places, and school districts.

New York.—Counties, incorporated places, school districts, towns, and fire districts.

North Carolina.—Counties, incorporated places, school districts, drainage districts, road districts, hospital districts, and bridge districts.

North Dakota.—Counties, incorporated places, school districts, townships, park districts, and library districts.

Ohio.—Counties, incorporated places, school districts, and townships.

Oklahoma.—Counties, incorporated places, school districts, and townships.

Oregon.—Counties, incorporated places, school districts, road districts, port districts, and water districts.

Pennsylvania.—Counties, incorporated places, school districts, townships, and poor districts.

Rhode Island.—Incorporated places.

South Carolina.—Counties, incorporated places, school districts, and drainage districts.

South Dakota.—Counties, incorporated places, school districts, and townships.

Tennessee.—Counties, incorporated places, school districts, and drainage districts.

Texas.—Counties, incorporated places, school districts, drainage districts, irrigation districts, levee districts, road districts, navigation districts, and water improvement districts.

Utah.—Counties, incorporated places, school districts, drainage districts, irrigation districts, and conservation districts.

Vermont.—Counties, incorporated places, school districts, town, and fire districts.

Virginia.—Counties and incorporated places.

Washington.—Counties, incorporated places, school districts, townships, drainage districts, levee districts, road districts, port districts, park districts, water districts, waterway districts, and commercial waterways districts.

West Virginia.—Counties, incorporated places, and school districts.

Wisconsin.—Counties, incorporated places, school districts, and towns.

Wyoming.—Counties, incorporated places, and school districts.

TABLE 1

Assessed valuation of all property.—Table 1 shows, by geographic divisions and States, the total amounts on which general property taxes were levied in 1922, 1912, 1902, 1880, and 1860. These amounts include the values placed upon all real and personal property, except that exempt from taxation, and in some States upon the property of public service corporations which is given a separate classification, the amounts of which are shown for the year 1922 in the column headed "Other property" in Table 7. The figures of Table 1, although they represent the values listed as subject to the general property tax, do not show the relative wealth of the different States, because of the difference in the laws governing assessment and the practice under those laws, as briefly discussed in the text for Table 7.

The progress of the groups of States comprising the different geographic divisions, as represented by the amounts listed for general property taxes, is shown in the statement on page 5 of the per cent of increase in the total assessed valuations for the periods between the years for which data are given.

The figures of the following statement do not exactly represent the changes that occurred during the period covered, because of changes in legal bases of assessment, in thoroughness of compliance with legal requirements in assessing property, and in some cases because of a change of classification in accordance with statutes authorizing the collection of taxes on gross receipts from corporations

the operative property of which had formerly been classed as real or personal property, or part as real and part as personal.

GEOGRAPHIC DIVISION	PER CENT OF INCREASE IN TOTAL ASSESSED VALUATION			
	1912 to 1922	1902 to 1912	1880 to 1902	1860 to 1880

¹ Decrease.

TABLE 2

Assessed valuation of real property and improvements.—Table 2 presents, by geographic divisions and States, the valuation of real property and improvements as assessed for taxation. The amounts shown in this table are such parts of the total amounts shown in Table 1 as represent the assessed valuations of land and the improvements thereon for the census years 1922, 1912, 1902, 1880, and 1860. A comparison of the data contained in Tables 1 and 2 discloses the fact that the assessed valuations of real property, including improvements, form widely varying percentages of the total assessed valuations in the different States. These variations are due more largely to the different methods of assessing personal property and of classifying the operative property of public service corporations than to differences in practice in assessing real property. The percentages that assessed valuations of real property and improvements constituted of the total assessed valuations for the purposes of the general property tax in the census years shown in the table were as follows: 1922, 74.1; 1912, 74.4; 1902, 74.7; 1880, 76.0; and 1860, 57.7. The corresponding percentages for the individual States present many striking contrasts.

The assessed valuation of real property and improvements in the United States in 1922 was \$92,369,378,000, an increase of \$40,515,369,000, or 78.1 per cent, over that of 1912. The increase was 96.3 per cent during the period 1902 to 1912, 102.7 per cent from 1880 to 1902, and 87.1 per cent from 1860 to 1880. During the decade 1860 to 1870, as shown in the report issued by the Bureau of the Census for 1912, the increase was only 14.3 per cent, due largely to the devastation resulting from the Civil War and the depression that followed; but by 1880 values had so far recovered that the 20-year period 1860 to 1880 showed an average annual rate of increase in the assessed valuation of real property and improvements almost as great as that shown for the 22-year period 1880 to 1902. From 1880 to 1902 the increase may be regarded as a normal one, there having been no great disturbance in the economic balance during that time, and military operations having been confined principally to the suppression of Indian disturbances and prosecution of the Spanish-American War, the former occurring at intervals throughout the period and the latter being of short duration. The most notable feature of the period was the development of the Western and Northwestern States, although every section of the country showed a very material increase in wealth invested in its lands and buildings as measured by valuations placed upon them for purposes of taxation. The period 1902 to 1912 was one of unusual development in all parts of the country and in all

branches of industry, and, aside from the slight depression in 1907, was one of continued and uninterrupted growth. This growth, or increase in values, was more quickly reflected in the case of personal property; for the entire period the increase in the assessed valuation of personalty was 97.2 per cent, or only slightly in excess of that of realty.

The period 1912 to 1922 was one of unusual economic disturbances due to the World War in which the United States was a combatant nation from April 6, 1917, to November 11, 1918. From August, 1914, to April, 1917, the production of the United States was greatly accelerated, but largely for export. From the armistice in November, 1918, until the close of 1922 production, though continuing heavy until demobilization was well under way, slackened because of the necessity of readjustment from war conditions to those of peace, and again revived. Altogether, the period was one of marvelous accomplishment in industry, but of efforts largely directed to production of goods which were perishable, short lived, or subject to sudden obsolescence. The usual conversion of raw materials into objects of wealth more or less permanent, such as homes, office buildings, and railroad construction, with their equipment, was necessarily made subordinate to the manufacture of materials for the support of the armed forces of the United States and to a considerable extent of those nations with which we were associated in the war, to the support of our home population, and to the relief of distress abroad without regard to the military alliances of the nations to whom relief was extended. The per cent of increase in assessed valuations of real property and improvements, as shown above, was less for the period 1912 to 1922 than for any of the other periods for which the table shows the data required for computing such increase. In addition to this, the valuations of 1922 reflect to a greater or less extent the reduction in the purchasing power of the dollar in 1922 as compared with 1912. Although assessed valuations probably did not advance at the same rate as commodity prices, they doubtless were considerably affected thereby. Without this influence the properties assessed in 1922 would have been valued at a lower figure than they were and the rate of increase from 1912 to 1922 would have been considerably less than the 78.1 per cent stated above for that period. The elimination of the effect of high prices, if that were possible, would reveal more clearly than do the valuations as assessed the fact that to a greater extent than in former periods the production of the country for domestic uses from 1912 to 1922 was consumed in maintenance to the neglect of the construction of permanent properties.

TABLE 3

Per capita assessed valuations.—Table 3 presents, by geographic divisions and States, per capita averages of the assessed valuations shown in Tables 1 and 2. The significance of these averages is as limited as are that of the data shown in the two preceding tables, the limitations of which are pointed out in the text for Tables 1, 2, and 7. They furnish no adequate measure of the relative average wealth of individuals in the different States; but, when studied in connection with the data of Tables 1 and 2, they explain to a certain extent the great variation in the nominal tax rates shown in Table 5. The dates as of which were estimated or enumerated the population on which the per capita valuations were computed are stated on page 1.

TABLE 4

Levies of general property taxes.—Table 4 presents a summary, by geographic divisions and States, of the total amounts levied as general property taxes in each State for the use of States, counties, and other civil divisions, for the years 1922, 1912, 1902, 1880, and 1860. The tax levies of Table 4 furnish information much more definite than that supplied by the tables relating to assessed valuations.

These levies measure definitely the amounts which the people are called upon to contribute to the support of the State and local governments in the form of general property taxes. They do not, however, measure the relative contributions demanded of the people for the support of these governments at the different census years. Many changes have been made in classification of properties for taxation whereby certain corporations are taxed on their earnings instead of on the valuation of their tangible property. Such taxes, as a rule, rest finally upon those to whom the corporation supplies commodities or services, and constitute a tax burden as real as that imposed by the general property tax, although the amount resting upon an individual is not susceptible of exact calculation, and is usually paid without being recognized as a tax. Furthermore, there are special property taxes, business taxes, licenses, fees, and other classes of revenue, which have been substituted in varying degrees for the general property taxes, and which to a greater or less extent are finally borne by others than those from whom their payment is exacted.

The total amount of general property taxes levied in the United States in 1922 was \$3,503,725,000, an increase of \$2,153,884,000, or 159.6 per cent, over that of 1912. This is the largest per cent of increase in one decade that has been found at any census. The per cent of increase from 1902 to 1912 was 86.3, that from 1880 to 1902 was 130.9, and that from 1860 to 1880 was 233.3. The per cent of increase from 1860 to 1880 was larger than that from 1912 to 1922, but it covered a period of two decades during the first of which, 1860 to 1870, the increase was 140.1 per cent, considerably less than during the decade 1912 to 1922; from 1870 to 1880 the increase was only 38.8 per cent.

An inspection of Table 4 reveals the fact that in all of the geographic divisions in all of the States, except Massachusetts, Georgia, and Arkansas, and in the District of Columbia, the levies of general property taxes for State and local purposes were more than 100 per cent greater in 1922 than in 1912; and that in 10 States—Michigan, South Dakota, West Virginia, North Carolina, South Carolina, Florida, Mississippi, Texas, Wyoming, and Arizona—the increase was over 200 per cent, and in a number of other States it closely approached that figure.

An increase in the tax levies is at all times deemed to be essential where there has been a considerable increase in population. In 1922 as compared with 1912 an increase was inevitable because of the very considerable cessation of construction during the period of the World War and for some time after its close and because of the diminished purchasing power of the dollar in the later year. The higher prices of materials and supplies and the higher salaries and wages paid in 1922 as compared with 1912 were doubtless the principal factors calling for greater levies, though it is probable that a number of new undertakings were responsible for them to a very considerable extent.

TABLE 5

Per capita levies of general property taxes.—In Table 5 are shown, by geographic divisions and States, the per capita amounts of taxes levied on all general property for the years 1922, 1912, 1902, 1880, and 1860. The per capita amounts are based on the total amounts levied as shown in Table 4. The dates on which the populations were determined are stated on page 1.

The average per capita levy in the United States in 1922 was \$32.23, as compared with \$13.91 in 1912, an increase of 131.7 per cent; from 1902 to 1912 the increase was 50.9 per cent, from 1880 to 1902, 47.9 per cent, and from 1860 to 1880, 108.7 per cent.

The per capita levies increased more than 100 per cent in all geographic divisions except the New England, and in all the States except Massachusetts, New

York, Georgia, Arkansas, and Montana; and in five States—South Dakota, West Virginia, North Carolina, Florida, and Mississippi—they increased more than 200 per cent. The variations in the relative amounts shown in Tables 4 and 5 for the different States are due to variations in the relative increase in the number of inhabitants from 1912 to 1922.

The highest per capita levies for the years shown in the table were as follows: 1922, \$65.47 in Nevada; 1912, \$26.83 in Montana; 1902, \$19.34 in Colorado; 1880, \$14.60 in California, and 1860, \$7.85 in California; while the lowest were: 1922, \$9.46 in Alabama; 1912, \$4.33 in North Carolina; 1902, \$2.04 in North Carolina; 1880, \$1.37 in both North Carolina and New Mexico; and 1860, \$0.32 in New Mexico. In 1922 the per capita levy exceeded \$20 in 39 States and the District of Columbia, while in 1912 that amount was exceeded in only 7 States, and in 1922 the highest per capita of any State in 1912—\$26.83 in Montana—was exceeded in 31 States and the District of Columbia.

Average tax rate.—The average tax rates given in Table 5 are the nominal rates, which represent the relation between the tax levies shown in Table 4 and the assessed valuations shown in Table 1. Their variations result largely from the differences in the classification of properties for purposes of taxation and the wide variations in the intensity of assessment or the degree of the approach to the legal basis of assessment, which in most States is 100 per cent of the true value, and in a few States to the fact that the legal basis is a fraction of the true value and even the legal requirement is not attained in practice.

Reductions in tax rates in 1922 as compared with 1912 are shown for the Mountain division, as a whole, and for 5 States of that division—Idaho, Colorado, New Mexico, Arizona, and Utah—also for 6 other States—Indiana, North Dakota, South Dakota, Nebraska, Kentucky, and Tennessee—and for the District of Columbia. In 2 States—South Carolina and Oregon—the average tax rate in 1922 was slightly more than 100 per cent greater than in 1912, and in a number of the other States the increase was close to 100 per cent. The average rates for 1912, as compared with those for 1902, show that in 17 States the rate was lowered during that period; from 1880 to 1902 it was lowered in 17 States, and from 1860 to 1880 it was lowered in Minnesota only. In 6 States—Ohio, Nebraska, Louisiana, Texas, Arizona, and Oregon—reductions were made in two of the periods covered by the table, and in the case of each of these States the second reduction was in the period immediately following the first one.

TABLE 6

Assessed valuation of property.—Table 6 presents, for the years 1922 and 1912, the total and per capita valuations of all property assessed for general property taxes in each of the counties of the several States. The State totals and per capita averages are the same as those presented in Tables 1 and 3, respectively, for those years. The county totals, just as the State totals, can be intelligently studied only in connection with the population, because of the difference in the relative importance of the States as measured by the number of inhabitants in each. The per capita averages, therefore, are the only comparable measures of the wealth represented by property subject to the general property tax; and the comparability of the per capita valuations, as assessed, is greatly diminished because of the difference in practice in assessment, the counties of a State varying in their approach to the legal requirements to almost as great an extent as do the weighted averages of the different States.

Levies of general property taxes.—This table, presents, also, for the years 1922 and 1912, the total and per capita levies of general property taxes in each of the counties of the several States. The State totals and per capita averages

are the same as those shown in Tables 4 and 5. As was stated in the preceding paragraph in regard to assessed valuations, the per capita amounts furnish the only comparable data. The relative burden resting upon the individual in the different counties of a State because of general property taxes is approximately measured by the per capita levies.

TABLE 7

Assessed valuation of property, by classes.—Table 7 shows, by geographic divisions and States, the amounts representing the assessed valuation of all property subject to the general property tax in 1922, and the parts of the total classified as (1) real property and improvements, (2) personal property, and (3) other property. The significance of these terms is set forth on page 2.

Real property and improvements.—The amounts shown as assessed valuations of real property and improvements do not indicate the relative wealth of the State in property of this class. Although most of the States provide by law for the assessment of real property at its full value, it has been found in connection with the investigation relative to the national wealth that in no State is this provision fully complied with, nor is there uniformity in the degree of compliance. In a few States the legal basis is less than 100 per cent of full value, but in none of these does the practice in assessment come up to the legal requirement. These observations relate to the assessed valuation of real property as a whole for each State, even though it may be shown that for certain individual properties, or possibly for an individual county, the assessed valuations in 1922 equaled or exceeded the full value, or estimated sale value.

The per cent of increase in assessed valuation of all property and of real property and improvements from 1912 to 1922 is shown for each State and geographic division in the table on page 10. The significance of these figures as indexes of increased values is limited because of changes in legal bases of assessment and practice thereunder.

Personal property.—The assessed valuation of personal property as shown in Table 7 for each of the States and geographic divisions represents the amount placed upon the tax rolls. The provisions of law and the practices thereunder differ widely both as to objects taxed under that head and the per cent of such objects actually taxed. Exemptions are allowed on certain classes of property up to specified amounts. In one State, for example, the exemptions allowed are as follows: Sheep to the value of \$100, swine to the value of \$50, poultry to the value of \$25, jewelry to the value of \$25, household furniture to the value of \$500, private libraries to the value of \$200, musical instruments to the value of \$25, farming tools to the value of \$200, tools of mechanics to the value of \$200, fishing apparatus to the value of \$200, and cash on deposit in a commercial bank the amount of \$500. It appears, therefore, that a taxpayer, if his personal property holdings included the classes of property specified and in amounts equal to or greater than those enumerated, would be exempt from taxation on a total value of \$2,025. Similar exemptions are allowed in all States, the classes of property and amounts exempted varying widely. In some States the tax blanks are prepared to show only the values in excess of exemptions; in others the blanks provide for showing the total, the exempt, and the net or taxable value. The tax commissioner of one of the States makes the following observation in his report to the general assembly: "The small statutory exemptions allowed on personal property lends encouragement to the taxpayer to list nothing for taxation purposes under the items in the property tax lists which have reference to such property. In practice, therefore, nearly all of the personal property to which such exemptions attach is untaxed." In the case of intangible personal property there is great diversity in both the laws providing for assessment and

the thoroughness of their application in the different States and at different periods in the same State. Because of these conditions, the increase shown for a State may not register the progress of the State as measured in property of the classes assessed for taxation, but may merely reflect the fact that property formerly escaping taxation has been placed on the tax rolls, because of new legislation or more thorough methods on the part of assessors.

¹ Not computed; real and personal property not reported separately in 1912.

Other property.—The column headed "Other property" includes the value of all property assessed for taxation under the general property tax, other than that which is classed as real and personal. The operative property of railway, telegraph, telephone, express, private car, and other transportation and transmission companies, which is not subject to other classification, constitutes the principal class of properties the valuations of which make up the amounts shown in this column. In the States for which no data appear in this column, the valuations such as are shown for certain of the States are included with real or personal property or are classified as part real and part personal. The legal provisions for taxing properties of these classes are set forth in the publication of the Bureau of the Census entitled: "Digest of State Laws relating to Taxation and Revenue, 1922."

Levies of general property taxes.—The taxes levied are shown in Table 7 under three heads: "State," "County," and "Other civil divisions," in accordance with division of government to be supported by the levy.

The total of all levies of general property taxes for 1922 for the use of States, counties, and other civil divisions was \$3,503,725,000, of which 10.1 per cent was for States, 20.8 per cent for counties, and 69.1 per cent for other civil divisions. For 1912 the total was \$1,349,841,000, of which 11.5 per cent was for States, 21.4 per cent for counties, and 66.3 per cent for other civil divisions, with an item of \$9,944,000 in the State of Massachusetts representing the tax on corporate excess not distributable among the States, counties, and other civil divisions amounting to 0.7 per cent for all States for all purposes in 1912.

Three of the States—Pennsylvania, California, and North Carolina—made no levies of the general property tax for the year 1922 for State purposes, the State revenues being derived from other forms of taxation, though each of them had levies for State purposes in 1912. In 1912 Connecticut and Delaware made no levies of the general property tax for State purposes.

The relation of levies for States, counties, and other civil divisions is shown graphically in the diagram on page 12.

The diagram brings out prominently the difference in functions of countries in the different States as reflected by the relation of the tax levies for the county, for the State, and for other civil divisions. Ohio and California are representative of a large number of States in which the counties exercise functions of large financial importance, while Massachusetts and Connecticut are examples of States in which the county activities are limited principally to judicial functions. Rhode Island levies no general property tax for county purposes, the counties being merely judicial districts of the State.

The levies for the District of Columbia for both 1922 and 1912 are shown as levies for other civil divisions, the government of the District of Columbia having all the functions of State, county, and other civil divisions, the larger part of which are municipal; all the usual powers of government, with the exception of legislation, being merged into one corporation for governmental purposes, and the legislative functions being performed by the Congress of the United States.

TABLE 8

Assessed valuation of property by classes.—The assessed valuations shown in Table 8 for States are the same as are presented in Table 7 for the year 1922. In Table 8 the data are shown for the counties of each State, under the same heads as in the preceding table. While the valuations purport to measure the relative wealth of the counties of each State as represented by properties which under the statutes are made subject to general property taxes, the wide divergence in practice in assessing such property in the different counties, as is pointed out in the text for Table 6, greatly limits the comparability of the figures. The assessed valuations for each county are shown under three heads: (1) "Real property and improvements," (2) "Personal property," and (3) "Other property." The significance of these terms is stated on page 2.

Levies of general property taxes.—The levies of Table 8 for States are those shown in Table 7 for the year 1922. In addition to the State totals, Table 8 shows the levies in 1922 for each of the counties under three heads: (1) "State," (2) "County," and (3) "Other civil divisions." Under the heading "Other civil divisions" are included all levies of the general property tax made by civil divisions listed on pages 3 and 4.

TAX LEVIES: 1922 AND 1912

Not distributed between State, county, and other civil divisions.

The levies for counties in certain States include levies for public schools which in other States are wholly or in part administered by school districts empowered to levy taxes; in still other States certain incorporated places administer the educational activities although they are administered in other parts of the State by independent school districts. Likewise functions in some States are performed by counties, which in other States are performed by municipal, township, or town governments. An understanding of the laws as set forth in the *Digest of State Laws Relating to Taxation and Revenue: 1922*, published by the Bureau of the Census, is essential to a thorough study of the economic features of the different classes of governments. The data of Table 9 show some of the characteristic features of local governments.

TABLE 9

Levies of general property taxes for all local governments other than States and counties.—The levies shown in Table 9 include all levies of the general property tax other than those for the States and counties. The districts for which levies were secured are listed on pages 3 and 4. It may be possible that in a few instances levies have been reported as for independent districts administering certain governmental functions, when, as a matter of fact, they should have been shown as special levies of the county or some other division of government, the revenues therefrom to be applied to securing services or improvements of certain kinds for all or a part of the major division. Such instances, however, are rare, if indeed there are any, and do not affect the accuracy of the figures which show the total burden on account of taxes levied.

The differences in organization and functions of the governments for which data are shown in Table 9, are only in part revealed by the figures. For 8 States no levies of general property taxes are reported for school districts, and for 28 States none are reported for townships; in those States, the public schools and usual township functions are administered either by counties or incorporated places, or by both. For the administration of certain functions, such as the construction and maintenance of public works for drainage, irrigation, levees, and highways, special districts have been created in a number of States. In other States such projects are in charge of the State, or of counties, incorporated places, or townships, being financed by the civil division in charge either entirely or with the aid of the National or State Government. Because of these facts the items of the table are of interest only in showing to some extent the variety of organization for the performance of ordinary local governmental functions, and the totals for the States, while of considerable importance, must be studied in connection with the levies for counties shown in Table 9 and the statements in the text relative thereto.

DIGEST OF STATE LAWS RELATING TO TAXATION AND REVENUE: 1922.

LETTER OF TRANSMITTAL

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., June 20, 1924.

SIR:

I transmit herewith a decennial report on the estimated national wealth in 1922, as measured by the value of tangible property in the United States at the close of that year. The tables of the report present the data under a number of principal heads, with comparative data taken from the census estimates for the years 1912, 1904, 1900, 1890, 1880, 1870, 1860, and 1850. The estimates for 1922 were made in connection with the decennial investigation of wealth, public debt, and taxation authorized by the permanent census act.

The reports for 1922 are issued under five titles, as follows: (1) Estimated national wealth, (2) Public debt, (3) Assessed valuation and tax levies, (4) Taxes collected, and (5) Digest of State laws relating to taxation and revenue.

The report was prepared under the direction of Starke M. Grogan, chief statistician in charge of wealth, public debt, and taxation. Acknowledgment is made of the services of Dr. Willford I. King, of the National Bureau of Economic Research (Inc.), who contributed the foreword and assisted in planning the methods of compilation of data and the form of presentation; and of Morris J. Hole, who had immediate charge of the preparation of the report.

Respectfully,

W. M. STEUART,
Director of the Census.

Hon. HERBERT HOOVER,
Secretary of Commerce.

FOREWORD

THE DIFFICULTIES OF WEALTH MEASUREMENT

When the statistician attempts to measure the wealth of a nation, he encounters two distinct difficulties: First, it is hard to define the term "wealth"; second, it is by no means easy to secure the needed data. Let us first consider the question of definition.

The term "wealth" is used to cover two widely divergent ideas—first, private wealth; second, social wealth. The term "private wealth" takes in a field almost coextensive with that of private property. Property, however, is the legal concept and refers to the title to the wealth. It is possible, then, for one to have wealth and yet to have no property. A burglar, for example, may possess stolen goods which constitute part of his wealth, but he might be wholly unable to establish legal title to the same, and if so, they would not constitute part of his private property. In modern society, however, wealth held merely by possession and not by legal title constitutes but a small fraction of the total. It is for this reason that, as we have stated, private property and private wealth, are, in a country like the United States, practically coextensive and nearly equal in value.

Private wealth, then, in the main consists of property rights based upon social wealth. These property rights are not necessarily located in the same place as the social wealth which they represent. Thus, wheat on a farm in North Dakota constitutes tangible social wealth located in that State, but it may be the property of a resident of Illinois with the legal title or property right subject to the jurisdiction of the latter State. This title may move from State to State without in any way affecting the location of the wheat. It is easy to see, then, that there may be little resemblance between the figures representing the total value of the private property of the citizens of a State and the total value of the social wealth located in the State.

Property rights are commonly evidenced by pieces of paper called stocks, bonds, notes, money, or the like. These papers certify that a certain person or organization owns the whole or some fractional part or some claim upon a collection of tangible physical objects. A silver certificate, for example, entitles its holder to call upon the Government of the United States for one silver dollar. A Government bond constitutes for its possessor a claim against the goods of the taxpayers of the country, and, similarly, a railroad bond gives its owner a lien upon all the railroad corporation's assets, consisting of such things as rails, locomotives, cars, roadbeds, bridges, stations, and other physical property. A share of stock in a railroad corporation does not give a lien, but an actual title to the physical possessions of the railroad except such part of their value as is required to cover the debts of the company. Yet the stockholder has no right to any particular rail or wheel or tie. He owns merely a fraction of the whole. His property right is distinct, then, from the physical wealth upon which it is based.

Most private property rights which people take the trouble to maintain have a market value. One might find the total value of the private property in a nation by adding together the net values of the private property rights held by

all the individuals. The *net* value of a man's property is, of course, obtained by subtracting the amount of his debts from the gross value of his property. The total obtained by summing the net values of the private property rights of all individuals has the distinct advantage of being specific, and also of being expressible in terms of dollars and cents.

There are certain peculiarities in the values which the market places upon the private property of the people of a nation that it is desirable to take into consideration at this point. Values commonly have the habit of fluctuating not only in response to variations in immediate supply and demand or because of changes in the quality of the objects dealt in but also in accordance with the prevailing belief as to the outlook for the future. For this reason, fluctuations in the total value of private property do not necessarily indicate that any changes have occurred either in the quantity or in the physical characteristics of the wealth upon which the private property is based. It is not improbable, in fact, that oscillations amounting to many billions of dollars occur in the total value of the private property in the nation at times when the changes in the physical wealth are negligible. That this may be the case will perhaps be more clear to the reader if he considers what happens to the prices of stocks and bonds. It is not unusual for the value of the securities of a company to increase or decline by 10 or 20 per cent within a few days' time. Rarely, indeed, however, are such oscillations due to changes in the physical wealth belonging to the concern. Land, buildings, machinery, and other equipment may remain intact at the same time that the value of the securities is sliding rapidly downhill. Security values rise or fall, not so much because of what is, but rather because of what one expects is going to happen. If prospective buyers and sellers of the securities are generally led to believe that future earnings will be less satisfactory than had previously been expected, the security values will at once shrink. If, on the next day, a rumor gains general credence that prosperity is ahead for the company, the prices of its stocks and bonds are likely to rise sharply. In brief, then, security values depend upon what people think is going to happen, upon optimism or pessimism concerning the future; in other words, they are largely psychological.

Since it is much easier to change the popular view of what is going to happen in the future than it is to manufacture physical wealth, it follows that property values tend to fluctuate much more freely than do the quantities of physical assets, if these quantities are measured in terms of length, area, volume, or weight.

Pessimism concerning the outlook for the future is not the only force that may cause property values to decline at times when the amount of physical property remains constant or is even growing larger. This happens when collective or public ownership is substituted for private ownership. Let us imagine, for example, that in the future, in all the factories of the country, the total income above operating expenses was to be distributed to the employees. Under such circumstances it would be wholly useless for anyone to own stocks or bonds, for they would bring in no income, and hence would have no value. Yet the factories might be able to turn out just as many goods as before, thus apparently serving the public as well as ever. Similarly, let us suppose that the railways of the country were transferred from private to public ownership without compensating either the stockholders or the creditors for their losses. Under such circumstances private property in railway lines would have no value whatsoever, but the railways might have more miles of track and more cars and locomotives than ever before. If we were to total the value of the private property of the Nation, however, we would find that this transfer of the railways from private to public ownership had caused a distinct fall in the aggregate.

In contradistinction to the idea of private property stands that of social wealth. Social wealth includes all objects having utility, that is, all things which people believe will minister to their wants either immediately or in the not too distant future. In this category are included not only those goods which are scarce or which cost money, but also those which are free, as, for example, water, air, the sun, beautiful scenery, and all those gifts of nature which gratify our desires. This is the kind of wealth to which we generally refer when we say that a nation is wealthy or opulent. It is the criterion that should be used if we wish to ascertain whether a nation is becoming richer or poorer. No other concept of wealth is more definite or more real, yet, from the standpoint of the statistician, this definition of wealth has one very serious drawback—no one has yet devised a satisfactory unit which can be applied practically in measuring the quantity of social wealth.

How can we go about it, for example, to add the utility of California sunshine, of the grandeur of the Rockies, of the oil wells of Texas, of the orange groves of Florida, of the steel works of Pennsylvania, and of the skyscrapers of New York City, in order to arrive at one harmonious total of social wealth? How many units of utility does any one of these items contain? Since no one has yet been able to give a satisfactory answer to this question, the Bureau of the Census has not been able to measure the changes that have occurred in the social wealth of the United States.

For comparative purposes, it is essential that the figures for the different censuses stand for the same ideas. It is difficult to attain this end unless the same definitions are used and the same methods are followed at every census. It is also essential that wealth be measured in tangible units. The problem confronting the Bureau of the Census, when it started to ascertain the wealth of the United States on December 31, 1922, was how it could maintain comparability with previous censuses while at the same time defining all units so precisely and devising methods so logical that there would be no room for just criticism. Experience showed that it was impossible to reach this ideal goal. The best that could be done was to approach it as closely as possible.

One of the first questions which it was necessary to decide was what kind of units would give the total most serviceable to the people of the country? Since it seemed impracticable to measure directly the aggregate social wealth of the Nation, was there any other method which would yield reasonably satisfactory results?

The first impulse naturally was to estimate the Nation's wealth on the basis of a summation of the value of the private property rights of the people of the country. There are, however, certain serious objections to the adoption of this procedure by the Bureau of the Census. The chief ones are as follows: First, the concept is not the one that has been used by the Bureau of the Census in the past, and hence the figures thus arrived at would not be comparable with those secured for earlier censuses. This would be especially true in the apportionment of the wealth among the different States, for the geographical distribution of private property rights is probably radically different from that of physical wealth. For example, the mines of Arizona and Montana may, to a large extent, be the property of citizens of New York. It is presumed that a census of private property would show much greater concentration in the larger cities than would a census of the physical wealth of the Nation. Second, owing to the fact that the total value of the private wealth reflects the prevailing optimism or pessimism of the period, the aggregate figure for December 31, 1922, might well be either distinctly above or decidedly below normal, its position depending upon the general psychology prevailing at that particular date. Third, a trend toward public or collective ownership would cause the estimates of the wealth

of the Nation, as computed in this manner, gradually to diminish in amount, and such figures would presumably lead the public to believe that the physical wealth of the country was diminishing even though it might be steadily growing in terms of area, volume, or weight.

In view of the difficulties involved, the Director of the Census, after consulting with the advisory board, decided that it would be the wisest policy to adhere rather closely to the methods previously used by the census in the computation of the wealth of the country.

In the past the Bureau of the Census had taken very much the point of view of the business man in making up his inventory, namely, that of recording items more commonly at cost prices than at what they would sell for at current prices. There are serious objections to the use of such cost figures as representatives of present value; in fact, it is doubtful whether one can ever refer legitimately to cost as "value." Many things that cost a great deal of money may now be worth little on the market. The merchant who keeps seasonable goods until they go out of style has this fact forcefully called to his attention. Many articles wear out as they grow older and others become obsolescent even though their physical form remains unchanged. A few objects, such as rare paintings, are likely to increase in value as time passes even though they may be deteriorating physically, this increase being due to the fact that they are irreplaceable and are gaining added prestige as the years pass.

Another serious objection to using cost figures as a basis of wealth measurement lies in the fact that gifts of nature have no social cost. An attempt is frequently made to obviate this difficulty by considering the cost of these objects as what the present owners paid for them at the time of purchase. This course is, however, not highly logical. For example, there is no reason to value one piece of land at \$200 an acre because the owner paid that much for it last year and an adjoining piece of equally good land at only \$10 an acre because the owner bought it 50 years ago before land values had risen.

Even if one decides to assign to property a value equal to its cost or expense to the present owner, it is still necessary to decide how to treat some troublesome details. Is it desirable to use as a figure representing the present value—

1. The original purchase price?
2. The original purchase price less some arbitrary depreciation charge?
3. The expense of reproducing the article new?
4. The expense of reproduction in existing condition—that is to say, the expense new less an arbitrary allowance for depreciation?

Of these four concepts the last named seems to be the most logical, but it is by no means easy to apply in practice. How can the census secure satisfactory data? What rates of depreciation shall be allowed on the various items and why?

It is often easier to ascertain the original cost of an article to its present owner than to find the cost of reproducing it at the present time. During the last decade, however, the purchasing power of money has changed so radically as to render figures of original cost almost valueless unless one knows the date at which the article was purchased and the extent of the change that has occurred in its price since that time. The above-mentioned difficulty arising from the fact that land and other natural resources have been growing scarcer and increasing in value is even more serious when original cost figures are used than when calculations are based upon the cost of reproduction under existing conditions.

The chief merit of the method actually followed by the census of 1922 in evaluating the wealth of the people of the United States is its continuity with the methods used in earlier censuses. The total for the country is a composite of the values of the separate categories arrived at in several different ways. The details are described specifically in the text which follows this foreword and will

be but touched upon here. The valuation placed on private real estate is based upon assessment rolls. No effort has been spared to determine and utilize the correct multiplying factors—factors which, when applied, will bring the assessor's figures up to the true values for December 31, 1922. These adjustment ratios are, however, based largely upon information furnished by local and State tax departments. Tax officials are usually conservative and assessments are not made every year. It seems probable, therefore, that, despite the corrective factors applied, the calculated figures often represent the market values current at dates preceding the census by a considerable interval.

The value of real property and improvements exempt from taxation—property which is, in the main, devoted to governmental, public, or charitable purposes—is, presumably, rated at cost, and it is probable that, in the case of Government holdings, little or nothing has been added for land, inasmuch as much of it has belonged to the Government for a long time, and hence the cash paid for it was trivial in amount. Livestock and the products of factories, farms, and mines have, on the other hand, been valued at approximately what they would sell for at the close of 1922. The values placed upon farm implements, motor cars, and consumption goods presumably represent, in the main, original cost less depreciation charges, and much the same may be said concerning the basis of evaluation used for machinery, tools, and implements in the factories of the United States, and for the railways and public utilities as a whole.

Do the values as arrived at approximate what the wealth of the country was worth on the market on December 31, 1922? It may be worth while to consider seriatim a few of the major items. Taxed real estate constitutes nearly one-half of the total, and thus dominates everything else. Is the valuation of this item presumably too high or too low? We know that the price of farm land fell sharply during the period 1920–1922. If, therefore, for the reasons previously mentioned, the assessed valuation tended to lag behind, the result would be to make the census estimates somewhat higher than the situation at the close of 1922 would justify. On the other hand, of course, it is probably true that some assessments were too far behind even to take cognizance of the rise in the value of farm land occurring between 1916 and 1920. In such cases, the assessed values in 1922 might actually not be high enough, but such instances are probably the exception rather than the rule. It is likely, however, that the 1918–1920 boom was too short to have its effects registered fully in the tax records. On the whole, therefore, the census figures for farm lands are presumably not far from the current market figures for the close of 1922, but with a tendency to be too high rather than too low. There is every reason to believe that city real estate has increased in value rather steadily since 1916; hence, in so far as the assessment rolls, with adjustments, failed to keep pace with the actual movement of real estate prices, the census estimates are too low. Although the value of agricultural real estate constitutes roughly but one-third of that of all realty in the United States, the sharpness of its decline between 1920 and 1922, in comparison to the slower rise in the value of urban real estate during the same period, was perhaps sufficient to make the total decline in the agricultural field roughly equivalent to the total increase in the cities. Under such circumstances, since any errors present in the figures for these different fields presumably tend in opposite directions, they may well cancel each other. If this assumption is correct, the figure of 156 billions reported as the value of taxed real estate on December 31, 1922, may approach rather closely to the actual market value of the land and buildings of the country not exempt from taxation at that date.

While, then, there is no reason to believe that the census estimate of the value of taxable real estate is either materially higher or materially lower than the market value at the end of 1922, there is, nevertheless, a probability that the

reported values for real estate exempt from taxation are lower than the market values at the specified date. The reason for believing that this is the case is that the records are largely taken from governmental or institutional reports of the cost of the property, and, since the land was, for the most part, bought many years ago, and the buildings, on the average, were constructed before the sharp rise in the price level began, it necessarily follows that these cost figures would be, on the whole, much lower than the cost of reproducing the property new at the present date. On the other hand, some buildings have deteriorated greatly since they were built, but as most of them are of very durable construction, it is by no means certain that the depreciation in value due to such deterioration would be sufficient to offset the enhanced value of real estate arising both from the increase in land values and from the sharp rise in the price level since 1914. However, since the errors are compensating, the net result may not be far below the truth.

The status of the railways and some of the public utilities is peculiar. The figures shown in the census record represent original costs after depreciation allowances have been made. The railways have been building for a long period; hence these cost figures are taken from records of many different years. To reconstruct the railways at the present time would call for a much larger dollar outlay than their cost when they were built. Hence, on the cost of reproduction basis, the census figure distinctly undervalues the railways and public utilities of the country. On the other hand, owing to the fact that rates have been regulated and have not been allowed to rise as rapidly as the increase in the general price level, the value of the railways and the public utilities to their owners has, in general, tended to decline very sharply. As a result, the census estimates of the value of these types of property are far higher than the total current market value of all the securities to their owners.

Since, then, some of the items in the census total of wealth have been estimated at values higher than the market prices prevailing in 1922 and others at lower values than those prevailing at that date, it may well be true that the aggregate of \$320,803,862,000 is not far from what the total mass of goods in the United States would have cost if bought piecemeal on December 31, 1922. The figure, therefore, has no little merit for comparative purposes, even though the value definitions used for the separate items making up the total differ from each other materially.

The census figures show that the wealth of the country increased from \$186,299,664,000 at the close of 1912 to \$320,803,862,000 at the close of 1922, a rise of 72.2 per cent. Now, everyone knows that the value of the dollar diminished greatly during this decade, and hence that these dollar values must not be interpreted to mean that during the 10 years, the physical possessions of the people of the United States increased in quantity by more than two-thirds. Certain students of the subject have contended that there was no increase whatever during this period. Are they right in their views?

If we had an accurate index of the prices of each of the various kinds of wealth it would be easy to divide the dollar figures by these index numbers, and thus arrive at a fair comparison between the two years. Unfortunately, however, index numbers suitable for measuring the changes in the prices of the items composing the country's wealth are not available. The best that we can do is to compare the changes in such index numbers as we have with the 72.2 per cent rise indicated by the census estimates of wealth. The United States Bureau of Labor Statistics index number of wholesale prices of all commodities rose during this period by 56 per cent. The Federal Reserve Board index of the prices of producers' goods indicates an increase of about 35 per cent, while their index of the prices of consumers' goods shows a rise of 57 per cent, and their index

of the prices of raw materials a rise of 67 per cent. The National Bureau of Economic Research estimates that the prices of goods used by families spending for consumption purposes around \$5,000 per annum increased by 60 per cent, while the prices of goods consumed by those having a \$25,000 scale of living rose by 63 per cent. Articles consumed by farmers were 49 per cent higher at the close of 1922 than at the end of 1912, while agricultural laborers paid only 39 per cent more for the same amount of commodities of the type that they purchased. Urban employees, on the other hand, according to the United States Bureau of Labor Statistics, had to pay 71 per cent more for the same articles at the close of 1922 than they did at the end of 1912. According to the Department of Agriculture, the value of plowland per acre rose 45 per cent during the same period. Urban residence rent is shown by the United States Bureau of Labor Statistics to have climbed in price 65 per cent. It is hard to say just what weighting of these index numbers would best represent the increase in the index number of all wealth in the United States. Perhaps a simple arithmetic average of all those listed would be as close to the truth as one computed by much more complex methods. The average increase in all of these index numbers is slightly over 55 per cent. If, then, wealth increased 72 per cent, while the index of prices increased only 55 per cent, we would conclude that the actual increase in the physical wealth of the United States was in the ratio of 172 to 155, which would indicate a growth of about 11 per cent during the decade. This increase seems modest in comparison to the large increase shown in the figures when expressed in terms of money value. Owing to the roughness of the data, the actual growth may have been considerably more or less than 11 per cent, but the evidence seems to indicate that the change was not startling, and, presumably, wealth increase during the decade showed little tendency to outrun population growth. When we consider that during 2 of these 10 years a large part of the productive activities of the Nation were devoted to the production of materials destroyed in war, we need not consider an increase of even 11 per cent at all discreditable. On the other hand, we are not justified in assuming that the figures indicate that the decade 1912-1922 was marked by any considerable increase in the wealth of the average inhabitant of the Nation.

WILLFORD I. KING.

ESTIMATED NATIONAL WEALTH

INTRODUCTION

Scope of this report.—Since 1850 Congress in authorizing decennial censuses has directed that statistics of the aggregate wealth of the Nation be compiled and published as a part of the census report. In authorizing this compilation Congress has sought to secure for the Nation an approximation to what the business man prepares for his guidance when he takes an inventory of the values represented by his possessions. The data here presented necessarily rest largely upon estimates. The methods employed in arriving at the estimated values are briefly described in the pages that follow.

The estimates contained in this report cover the material wealth or value of tangible property located within the limits of continental United States, including, however, all the vessels of the United States Navy and merchant marine, whether in home ports, on the high seas, or in foreign waters. These properties approximately represent the accumulations or savings of the American people, the products of industry that have not been consumed in maintenance nor destroyed. Upon these values rest much of the so-called intangible wealth represented by stocks, bonds, notes, and mortgages, which measure the degree of the holder's participation or equity in the property and the income derived from it. These evidences of participation in the value of a property have not been taken into account in estimating the wealth of the country. Their inclusion as bases for estimation would result in a distribution of wealth among individuals or groups of individuals, a task not contemplated in this inquiry. The values given in the report were computed without reference to ownership, and in that way the total holdings of all owners, whether in definite amount or residuary, have been included.

The value of properties within the United States do not constitute an exact measure of the wealth of the American people. In the estimates of wealth there are included the holdings or interests of the citizens of foreign governments in properties in this country. At former censuses the value of these interests was greater than that of American interests abroad, and for that reason the estimated national wealth was somewhat greater than the wealth of the American people. In 1922, however, the situation was reversed, as careful writers have shown that during the World War the United States ceased to be a debtor nation and became a creditor nation, so that the estimates for 1922 somewhat understate the wealth of the American people in that year. Likewise, the estimate for a given State measures, to such a degree of exactness as could be attained, the value of properties within the State. The per capita amount based on this valuation should not be regarded as measuring the average participation by the individual citizen of a State in the wealth of the State. If the interests of citizens of the State in property in other States or abroad were exactly balanced by the interests of nonresidents in properties within the State, the per capita average as shown could be accepted as a fairly accurate measure of the average wealth of the individual citizen. This condition may be approximated in some States, but in most States the variations are so great as to considerably exaggerate or diminish the individual wealth as calculated on the basis of the population.

In certain of the Western States there are large values in the forest reserves and the public domain which belong to the people of the United States as a whole and in which the people of the State have only a participatory interest. In such cases the per capita figures very materially exaggerate the individual wealth. In some of these States, also, as in some other States, there is doubtless a preponderance of nonresident ownership over ownership of residents in properties outside the State, and this introduces an additional factor leading to error in the same direction. The Bureau of the Census has not the facilities for ascertaining the degree of error in the per capita averages as presented, but is satisfied that they should be used only with a full understanding that while some of them may approximately measure the individual wealth, many of them, for reasons just given, are far from accurate in that particular.

Increase in estimated national wealth.—From 1912 to 1922 the national wealth, as shown by the estimates, increased 72.2 per cent. It should be borne in mind, however, that the increase in money value is to a large extent due to the rise in prices that has taken place in recent years, and so far as that is the case the increase as shown does not represent a corresponding increase in the quantity of wealth.

Index numbers showing the purchasing power of the dollar of 1913 as expressed in commodities in subsequent years have been prepared by the Bureau of Labor Statistics, Federal Reserve Board, and other agencies. The index numbers, if applied to the estimated total wealth of the United States or any State, would not produce results which would accurately convert the values of 1912 to those of 1922, inasmuch as they are not equally applicable to all the categories of wealth. The values assigned to railroads and other public service enterprises, as stated elsewhere, are book values, and may vary considerably from the market values or from reconstruction costs. Market values of these properties are governed by many influences, some related and others not related in any direct way to the properties or their operation; reconstruction costs could be determined only through a careful survey of the properties and of the costs, of materials and labor required to construct them in 1922 with allowance for depreciation, an engineering problem which would involve expenditures not contemplated in the act in accordance with which the estimates were made. Livestock values per head in 1922 had receded from levels of war prices to about those of 1912 on some classes of animals and to very much lower levels on other classes, so that the domestic animals of the principal classes on farms in 1922 were worth considerably less at the 1922 prices than they would have been at the 1912 prices.

In addition to the categories mentioned, there are others the values of which did not fully respond to the influence of the unstable purchasing power of the dollar. It is not likely that the reproduction costs of buildings, except possibly in the case of those recently constructed, are included in the estimated value of real property, which represents the value of land and the improvements thereon. It is true, of course, that during a period in which new construction introduces numerous innovations in style and equipment, the depreciation due to obsolescence is very rapid. This depreciation, as well as that due to the removal of business to locations regarded as more favorable or the changing fortunes of residence sections, can not be accurately measured. As these conditions affect the income on properties they are presumably taken into account by tax officials in charge of assessment for purposes of taxation. To the extent that depreciation and appreciation were accurately measured in the assessments and that the estimates relative to the basis in practice represent actual conditions, and to that extent only, do the estimates properly measure the commercial value of real property in 1922 as compared with that of 1912. An attempt to write up real

property values of 1912 on the basis of increase in prices of commodities with corrections for depreciation would probably lead to erroneous results.

Date to which statistics relate.—The statistics presented in this report are for the year 1922, with total amounts for 1912, 1904, 1900, 1890, 1880, 1870, 1860, and 1850, and certain details for the later of those years.

CLASSIFICATION OF PROPERTY

Primary classification.—For the purposes of this report objects of value are classified under 22 different heads, as shown in Table 1 for the years 1922, 1912, 1904, and 1900. For purposes of comparison with the data of former reports, as shown in Table 7, the classification of all property under two heads, "Taxable" and "Exempt," is retained. Under the heading "Taxable" are included the total value of all taxed real property; and of all other tangible property, a considerable part of which is taxed while the remainder is not taxed (1) because the laws, in some States, do not require that it be listed for taxation, (2) because it is specifically exempted by statute, in stipulated amounts per person or per family, or (3) because of faulty assessment whereby property subject to taxation escapes listing through oversight, the purpose of the owner to evade taxation, or lack of thoroughness on the part of the assessor. Under the heading "Exempt" are included the value of real properties exempted by statute from assessment for the purpose of taxation.

The classes of property included in each of the 22 categories of wealth, as shown in Table 1, and the processes by which the estimates for 1922 were made are briefly stated in the paragraphs which follow.

Real property and improvements.—For the purposes of this report the term "Real property and improvements" is used as descriptive of lands and the structures and fixed improvements thereon, exclusive of those used for the purposes of steam railroads, electric railways, telegraph and telephone systems, and privately owned street railways, central electric light and power enterprises, and waterworks, the operative properties of enterprises of these classes being classified under the respective heads as separate categories of wealth.

Taxed real property and improvements.—The estimates for taxed real property and improvements are based on the valuations as assessed for taxation under the statutes of the several States and the District of Columbia relating to general property taxes. As the units for which estimates were made are the States and the District of Columbia, it was necessary to use assessed valuations common to the entire State. The county assessments were therefore used. In certain cities the city corporation, through a board of assessors independent of the county board, makes a separate assessment on which municipal taxes are levied. These valuations could not be used in connection with the estimates without leading to State totals varying somewhat from those on which State and county taxes were levied. Their use would, however, have resulted in the same amount of estimated true value, provided the bases of assessments were accurately established for property within the city and for property in the county but outside the city. The method followed in this report in this particular is the same as that used in making the former census estimates of national wealth.

The basis in practice, or the percentage of the true value represented by the assessed valuation of real property, was reported as 100 per cent for nearly half of the States, as shown on schedules prepared by agents of the bureau in the field. The acceptance of the 100 per cent basis of assessment would have resulted in showing a great decrease since 1912 in the estimated true value of real property and improvements in a number of States. Such a conclusion was in every case

contrary to the generally accepted belief that real property in the State had increased in market value during the period from 1912 to 1922. In view of the difficulties known to be encountered by assessing officials in their efforts to assess property at its full value, where required by law to do so, and the likelihood of error through underassessment in attempting to avoid overassessment, the Bureau of the Census was unwilling to accept the preliminary reports without careful verification.

Correspondence with State and local tax officials proved to be very helpful in establishing the bases of assessments as finally adopted for the purposes of these estimates. Apparently the returns relative to the basis in practice, as recorded on many of the schedules, were statements of the legal basis rather than a measure of the extent to which the practice approached the legal requirements. An assessed valuation is necessarily an estimate on the part of the assessor. A sale price of yesterday may vary considerably from the consideration that a purchaser may pay to-day or to-morrow. The average ratio between the assessed and sale value of properties was an essential element in the computation of the true value of real property, and the bureau requested the State and county officials to supply this information, based on sales made in 1922. In a few of the States the officials had already made comparisons of assessed and sale values of properties that had been sold; in other States these comparisons were made to a limited extent and the results were communicated to the bureau. Many of the officials merely stated their general belief as to the relation of assessed to sale values. Not all of the officials supplied the information requested of them, but such data as were secured were utilized in arriving at the basis of assessment as used in making the estimates. As was to be expected in a matter of this kind, the testimony was variable and in some instances conflicting. Lack of adherence to a fairly uniform basis results from a number of causes, one of the principal of which is the assessment of real property only at stated intervals. In a State where full valuation is required and the assessment is made only every second year or every fourth year, with annual corrections for new construction and for losses by fire or on account of the razing of buildings, the valuations remain adequate throughout the period only where property values remain at the same price level, a condition that did not prevail during the last few years prior to 1922. In certain States a recession in assessed valuations was found to have occurred from 1920 to 1922. In particular counties it was claimed that the drop in sale values had been so rapid that they were considerably below the assessed valuation. During a period of rising prices of real property the proportion of assessed to true value becomes smaller from year to year until corrected by reassessment, and on a declining market the proportion increases until similarly corrected.

A sound policy of assessment would not be expected to follow all the fluctuations of the market as shown by the sale prices of real property. Assessed valuations can only approximately represent the market values and in the nature of the case they will lag behind in case of a continued movement of the market whether prices increase or decrease. In a period of extraordinary price fluctuations such as took place during the years immediately preceding 1922, a full compliance with legal requirements relative to assessments is practically impossible, and even if accuracy were attained at the time of assessment the valuations would be found to vary considerably from sale values by the time any adequate test could be made.

From such facts and probabilities as were discoverable in this field abounding in uncertainties and even in confusion of thought on the part of officials most intimately concerned with assessment, the Bureau of the Census was charged with the task of determining an exact figure to represent the average proportion of the true or free sale value that was represented by the assessed valuations of

ESTIMATED NATIONAL WEALTH

1922 upon which taxes were extended. The statement which follows presents the proportions determined upon and used in arriving at the estimated value of taxed real property.

¹ Revised basis; in the report for 1912 the basis used was 25 per cent.

The estimated value of taxed real property and improvements in Oklahoma in 1922 is based on an assessment of 62.3 per cent of the true value, as computed from data received from tax officials in Oklahoma. In making the estimates for 1912 it was assumed that property was assessed at 25 per cent of its true value and the resulting estimate of the true value for that year was \$2,878,815,000. On that basis the figures for 1922 would show a loss of 40.7 per cent of the estimated value in 1912. It is apparent that the basis used in 1912 was too low. The estimate for that year is now revised, putting the assessment on the basis of 50 per cent of the true value, with the resulting estimated true value of \$1,439,407,000. On this basis the estimated value of taxed real property and improvements increased 18.6 per cent from 1912 to 1922.

Exempt real property and improvements.—Real property exempt from general property taxes consists of (1) the lands, buildings, and other structures and public works of the National, State, and local Governments, including cemeteries, waterworks, and other municipal enterprises; (2) the lands and improvements belonging to religious, charitable, educational, and fraternal organizations, when used for the purposes of the organizations, that by the laws of the several States are declared to be exempt from taxation; and (3) properties of comparatively trifling value owned by clergymen, soldiers, and other individuals, which, because of their character or the source of the purchase money, the laws of a number of States exempt from taxation.

A number of writers on public wealth have contended that the value of exempt properties should not be included in an inventory such as is presented in this report, because such properties were acquired through the expenditure of moneys derived from the communities and their values are reflected in the higher

market value of taxable real property. It has been urged that the acquisition by the public of an interest in these forms of public or community possessions is an important factor in causing the advance in the value of privately owned real property. This contention loses a part of its force, however, because of the fact that the proximity to certain classes of exempt property, such as refuse-disposal plants, and charitable and correctional institutions, and at times even to school buildings and playgrounds, results in depreciated values of privately owned real property. Municipal authorities have frequently been hampered in their efforts to determine the proper location for such an institution because of the protests of owners of property in the vicinity of the proposed location and of civic organizations particularly interested in the section of the city where the officials have contemplated the erection of such an institution. It must be conceded, however, that the improvement of taxed real property is frequently accompanied by a rise in the market value of adjoining property, and that provisions for transportation have an effect upon land prices far out of proportion to the cost of installing the services. The census has at no time attempted to determine values other than those based on market prices or construction costs, nor to measure the unearned increment of value in any of the categories of wealth. Accordingly, in this report, as in all census reports on the estimated national wealth since 1880, the estimated value of exempt real property is added to that of taxable property, the resulting total representing approximately, at least, the value of the national wealth.

The values of such public improvements as street pavements and sewer systems are omitted from the tables for the reason that such properties, as a rule, have value in use only and not in exchange, and because of the fact that in most cities a part or all of the cost of such improvements is assessed against property presumably benefited by the improvement, such presumption doubtless being taken into account by officials in determining assessed valuations for purposes of taxation.

The estimates for exempt real property are based on information received from Federal, State, and local reports and officials. The census schedule on which the agents of the bureau reported the data relative to taxation in counties contained one inquiry on the subject of exempt property: "Value of real property and improvements exempt from taxation, \$———." Under this inquiry was the instruction: "Include all publicly owned property, and privately owned educational, charitable, and religious institutions, etc., exempt from taxation." The inquiry proved to be adequate in only a few States, where exempt properties were carefully listed and their values were determined by tax officials by practically the same methods that were employed in determining the value of assessed real property. In most of the States no such records were available, and the amounts reported, where data were secured, represented estimates made from hastily assembled information that was necessarily inadequate as a basis for an accurate presentation of the true value of exempt real property within the county. For a number of years the Bureau of the Census in the preparation of its annual reports on the financial statistics of States and cities has compiled valuations of State and municipal properties most of which are exempt from taxation; at 10-year intervals the bureau has issued reports on religious bodies, including the values placed on churches and parsonages, and on various classes of charitable institutions, including the values placed upon the buildings and the lands upon which they are located. The valuations shown in these reports were very helpful and were freely used for States that have not on their own account compiled the values of real property and improvements of the classes that are exempt from taxation. Free use was made of valuations of public schools, colleges, and universities, shown in the reports of the Bureau of Educa-

tion, and these valuations were used, also, as a basis for estimates of the value of private schools that do not report to the Bureau of Education. The values of properties belonging to the National Government were secured from the various departments, bureaus, and independent services having charge of the properties. All of these sources of information were drawn upon in making the estimates of exempt property, the State being the unit for which the estimates were made. In comparatively few instances the agent of the bureau, in preparing the county schedule above referred to, was able to secure and express in a note an itemized statement of the value of the different classes of exempt property, such as Federal, State, county, municipal, churches, hospitals, etc., but in most cases it was impossible to determine from the schedule what classes of property had been included or how authentic were the sources from which data were secured. To secure information on this point from some places and on all classes of exempt property from other places, more than 6,000 letters were addressed to county and municipal officials. The replies which were received were very helpful, but after this source of information had been exhausted it was necessary to make many estimates for counties based on per capita averages of other counties of similar situation and characteristics, a method conceded to be far from satisfactory but the only one available. The data shown in the report for exempt real property represent the results of the research undertaken in that field, drawn from the sources which have just been enumerated. No accurate estimate of the value of such properties can be made until the State and local officials undertake to assemble the data with the same care that they undertake the assessment of property for taxation. Exempt properties in a way represent community holdings, and it would seem that the communities, large and small, should be supplied with an inventory setting forth in detail the values of the several properties classified by ownership and by purpose to which devoted.

Livestock.—The values of animals of the principal classes on farms were secured from the report of the Bureau of Agricultural Economics of the Department of Agriculture. The values of animals of those classes not on farms and of other classes of livestock were estimated by the Bureau of the Census.

The classes of animals covered by the estimates of the Bureau of Agricultural Economics for each of the States were horses, mules, milk cows, other cattle, sheep, and swine; and the values, compiled from data received during the latter part of 1922, were announced as of January 1, 1923. The estimated values of animals of these classes not on farms were computed by assuming that their numbers were the same in 1922 as in 1920, when they were enumerated at the decennial census, and that their values per head were the same as was estimated by the Bureau of Agricultural Economics for animals of the several classes on farms. These assumptions are probably in error to a slight extent, but the errors are doubtless in different directions and may be not far from counterbalancing. It is probable that animals of some of the classes not on farms were fewer in number in 1922 than in 1920, and also that the average value per head was greater for animals not on farms than for those on farms. While these elements of error are recognized, this method was adopted as the only feasible one, and it is believed that in this way a fair degree of accuracy was secured.

The classes of livestock for which the estimates were made entirely by the Bureau of the Census were asses and burros, goats, poultry, and bees.

To the census value in 1920 of asses and burros and goats on farms was added an amount computed upon the basis of the number of animals not on farms and the average value of those on farms. This total value in 1920 was then reduced in the same proportion as the total value of horses, mules, cattle, sheep, and swine was shown to have declined from the census of 1920 to the estimates of the Bureau of Agricultural Economics in 1922.

The estimated value of poultry was based on the census of 1920 and data compiled by the Bureau of Agricultural Economics relative to the number of chickens on January 1, 1923, and the prices per pound in different years. It was found that from 1920 to 1922 the number increased 19 per cent and the price per pound decreased 24.3 per cent. It was then assumed, as no enumeration had at any time been made, that the value of chickens not on farms was 5 per cent of the value of chickens on farms, an assumption employed in some of the estimates of wealth in former years. The resultant of the several influences, 94.6 per cent, was then applied to the value of all poultry on farms in the several States as reported to the census in 1920, there being no available data on which to base separate estimates of the value of poultry of classes other than chickens.

The estimated value of all bees was secured from the Bureau of Entomology of the Department of Agriculture and distributed to the States in proportion to the values of bees on farms as reported to the census in 1920.

The computations above described resulted in values being assigned to the different classes of livestock in 1922, as follows:

CLASSES OF LIVESTOCK	Estimated value	CLASSES OF LIVESTOCK	Estimated value
Total.....	\$5, 807, 104, 000	Sheep.....	\$22, 162, 000
Horses.....	1, 455, 644, 000	Swine.....	716, 601, 000
Mules.....	507, 693, 000	Asses and burros.....	6, 053, 000
Milk cows.....	1, 298, 727, 000	Goats.....	10, 859, 000
Other cattle.....	1, 096, 133, 000	Poultry.....	353, 232, 000
		Bees.....	40, 000, 000

Farm implements and machinery.—The estimated value of farm implements is based on the values reported to the census on January 1, 1920, less the estimated value of motor vehicles, with additions for domestic sales in 1920, 1921, and 1922, and deductions for depreciation and corrections for price levels.

The amount deducted from the value of farm implements and machinery, as reported to the census of 1920, on account of automobiles and trucks was calculated by assuming an average value of \$460. The census of 1920 reported that there were on farms 2,146,362 automobiles and 139,169 trucks, a total of 2,285,531 machines. At an average value of \$460, these machines were estimated to be worth \$1,051,344,000. The value of farm implements and machinery, including these machines, was reported as \$3,594,773,000; deducting the estimated value of these machines left \$2,543,429,000 as the census value of farm implements and machinery other than automobiles and trucks.

After consultation with officials of the Division of Farm Management of the Department of Agriculture and inspection of the results of surveys made by them relative to depreciation of farm implements and machinery, a depreciation rate of 10 per cent per annum was adopted for use in making these estimates. It was recognized that the rate is greater in some States and less in others, but it was not practicable, with the limited data at hand, to establish a specific rate for each State. The uniform rate of 10 per cent was, therefore, used for all States; depreciation being placed at 30 per cent on values reported to the census in 1920 and on domestic sales in 1920, at 20 per cent on domestic sales in 1921, and at 10 per cent on domestic sales in 1922, the equipment purchased in 1920, 1921, and 1922 having been in use practically three seasons, two seasons, and one season, respectively, prior to the close of 1922.

Domestic sales are reported to the census by manufacturers, but to secure the value of the equipment on the farms it was necessary to discover, as nearly as possible, the ratio between the manufacturers' sale prices and the retail price. This ratio, as determined from prices of the principal classes of agricultural

implements, was applied to the total amounts reported as domestic sales, resulting in an addition of 34.8 per cent to the 1920 sales, 51.3 per cent to those of 1921, and 46.5 per cent to those of 1922.

Average price levels for the different years were determined from retail quotations on the principal classes of farm implements and machinery. To reduce the values to the price level of 1922, the following per cents were applied to the amounts determined by the processes above described for the years prior to 1922: To the value reported to the 1920 census, 92 per cent; to the domestic sales of 1920, 87 per cent; and to the domestic sales of 1921, 99 per cent.

The bases, processes, and results of the computations above described are shown in the statement which follows:

ESTIMATED VALUE OF FARM IMPLEMENTS AND MACHINERY: 1922

BASIS		CORRECTING FACTOR FOR—			Estimated value, 1922
Item	Amount	Retail price	Depreciation	Price level	
Census valuation of 1920, less value of motor vehicles.....	\$2,543,429,000		0.70	0.92	\$1,637,968,000
Domestic sales in 1920.....	471,442,000	1.348	0.70	0.87	287,021,000
Domestic sales in 1921.....	247,252,000	1.513	0.80	0.99	294,261,000
Domestic sales in 1922.....	214,917,000	1.465	0.90		283,368,000
Total.....					2,604,638,000

The total estimated value shown in the statement, \$2,604,638,000, exceeds by 2.4066 per cent the value of farm implements and machinery reported to the census in 1920. This rate of increase has been applied to the amounts for the individual States as reported in 1920, to secure a distribution of the value as estimated for 1922.

Manufacturing machinery, tools, and implements.—The value of manufacturing machinery, tools, and implements has not been separately reported by the census since 1905, and the total capital has not been separately reported since 1919. It was necessary, therefore, to project the figures for total capital to represent values as of the close of 1922, and to ascertain the percentage of such value that would fairly represent the value of machinery, tools, and implements at that time.

Values of land, buildings, and machinery for the years 1919, 1920, and 1921 were obtained for 60 selected corporations from their financial statements as shown in Poor's and Moody's Manual for 1922. These companies were assumed to be fairly representative of all manufacturing enterprises. In order to obtain the percentage of increase from 1912 to 1922 for these companies, it was necessary to estimate a figure for 1922. This was accomplished by increasing the 1921 value by 1.98 per cent, the rate of increase from 1920 to 1921. This estimated figure for the 60 corporations as of December 31, 1922, was 18.05 per cent greater than the total obtained from the balance sheets as of December 31, 1919. The total capital reported by the Bureau of the Census for the year 1919 was \$44,566,593,771. Increasing this by 18.05 per cent gives a total of \$52,610,863,947 as the estimated value in 1922.

Census reports for 1890, 1900, and 1905 show that the value of manufacturing machinery, tools, and implements constituted 24.3 per cent, 25.9 per cent, and 27.5 per cent, respectively, of the total capital of manufacturing corporations. These figures presumably measure the accelerated progress in mechanical equipment during the period from 1890 to 1905. It is probable that this tendency

continued from 1905 to 1922, though allowance should be made for equipment that at the close of 1922 was obsolete, or nearly so, because of the passing of the war, on account of which it was installed. In view of these conditions the bureau determined on 30 per cent as the ratio to be used in these estimates. Applying this ratio to the total capital as estimated for all manufacturing industries, the value of machinery, tools, and implements was estimated to be \$15,783,-260,000. This estimated value was distributed to the States in proportion to the total capital invested in manufacturing plants, as reported by the Bureau of the Census for the year 1919.

Railroads and their equipment.—The estimates for railroads and their equipment cover the value of steam railroads, and switching and terminal properties, and are based on the reports of the carriers to the Interstate Commerce Commission, and, in the case of private roads, information received from their officials and that secured from reports of State tax commissions and Moody's Manual.

The value of each road reporting financial data to the Interstate Commerce Commission was arrived at by adding to its investment in its own road and equipment the amount representing the cost of its improvements on leased railway property, and deducting from this total the accrued depreciation on road and equipment. The value thus determined was distributed to the States traversed by the road in proportion to the miles of line in each. It is recognized that the number of miles of line in a State traversed by a road as compared with the total miles of line does not represent the exact proportion of value within that State, but no better basis of distribution was found. The reports of the carriers show the number of miles of track operated in each State, but not the number owned. Because of the almost universal practice of leasing roads and operating trains under joint trackage agreements, the number of miles operated could not be used as a basis of distribution. The method of distribution employed in making the estimates for 1922 differs somewhat from that employed in distributing the values to the States in the estimates for 1912, when the total value of the roads in all of the States appears to have been distributed approximately in proportion to the total number of miles of road in each State, which resulted in allocating too little value to States having a large proportion of miles with two or more tracks and heavy equipment, and too much value to States with a large proportion of single trackage and light equipment. The method employed in making the estimates for 1922 results in the elimination of a part, but not all, of the error due to the method of 1912. In view of the evident error in the distribution of railroad values to the States in the estimates for 1912, the distribution shown in the report for that year has been revised for purposes of comparison upon the basis of mileage in 1922. This revision, though resulting in data only approximately correct, was thought to yield data of greater accuracy than was reported for the individual States for 1912. A distribution as exact as that made for the year 1922 would have required the same search for data in the carriers' reports to the Interstate Commerce Commission for 1912 as was made in the reports for 1922 in the preparation of the estimates for that year.

In the case of private roads and switching and terminal properties listed with the Interstate Commerce Commission but not engaged in interstate commerce, and from which no financial report is required by the commission, the Bureau of the Census made inquiry through correspondence with the officials of such as were incorporated to ascertain the value of their properties. Through this correspondence and with the aid of Moody's Manual of Corporations and reports of State tax commissions data were secured for about three-fourths of the properties, the value being \$150,422,000.

The estimated value of railroads does not include the value of supplies and materials on hand, as these values are presumably included in the estimated

value of stocks of goods which are shown under separate heads. In comparing the census estimates with the valuations on which the railroads are entitled to earn income as determined by the Interstate Commerce Commission, it should be remembered that the commission includes with the value of road and equipment an allowance for supplies and materials and for cash in quantities sufficient to insure continuous operation, these being as essential to operation as the permanent equipment of the road.

Motor vehicles.—The estimated value of motor vehicles is here included for the first time as a separate category in the bureau's estimates of the national wealth. Because of the importance of the automobile in its various forms, as shown by data of production and cost and by the rapidly increasing service it renders in the transportation of passengers and freight, it was thought that the value of equipment of this character should be shown as a separate item in the estimates for 1922.

The estimated value of motor vehicles is based on the reported production during a period of years covering the average life of automobiles, trucks, and motor cycles, and statistics of registration prepared by the Bureau of Public Roads and other agencies, with allowances for depreciation, and valuation in accordance with prices prevailing in 1922.

After conferring with officials of organizations representative of the industry, the average life in use of the passenger cars was assumed to be seven years and that of trucks was assumed to be six years. On this basis cars that went into service in 1916 and trucks that went into service in 1917 were regarded as out of use at the close of 1922, the former having lost one-seventh and the latter one-sixth of their value each year. Applying these proportions to the number of cars going into service in the United States each year, it was found that the numbers available for use on December 31, 1922, were equivalent to 5,070,974 new cars and 556,698 new trucks.

From such information as could be secured relative to retail prices of new cars in 1922, an average price of \$770 was adopted for passenger cars and \$1,050 for trucks. Cars manufactured in 1915 and trucks manufactured in 1916 were given a junk value of \$25 and \$50, respectively. As computed in accordance with the above method, the value of passenger cars was estimated at \$3,942,026,000, and the value of trucks was estimated at \$592,317,000. By similar methods the values of trailers and motor cycles were estimated at \$8,945,000 and \$24,119,000, respectively, completing the total estimate of \$4,567,407,000 for motor vehicles, as shown in the table. The estimated value of each class of motor vehicles was distributed to the States in proportion to the number registered in 1922 as reported by the Bureau of Roads.

Street railways, shipping, waterworks, etc.—In the tenth column of Table 4 is given the aggregate of the estimated value of street railways, telegraph and telephone systems, Pullman and other cars not owned by railroads, pipe lines, shipping and canals, privately owned waterworks, and privately owned electric light and power systems. The values of these enterprises are separately shown in Table 5. The value of irrigation enterprises to which a column was accorded in the estimates for 1912 is not separately shown in this report, the value of these enterprises being included in the value of real property, being classified as taxed or exempt according to their character in this particular.

Street railways.—The estimated value of street railways, including inter-urban electric roads, is based on reports made to the Bureau of the Census by the corporations, as shown in the bureau's published report on electric railways for the year 1922. The value represents the investment in road and equipment, less depreciation reserves. The depreciation reserves appear not to have been deducted in making the estimates for 1912.

Telegraph systems.—The estimated value of telegraph systems, including wireless systems, is based on the bureau's published report on telegraphs for the year 1922, the data having been secured from financial reports of the telegraph companies to the Interstate Commerce Commission and through correspondence with the companies and interviews with their officials. The value of the plant and equipment, less depreciation reserves, of each company was distributed to the States in proportion to the number of miles of wire in each. The depreciation reserves appear not to have been deducted in making the estimates for 1912. The value of telegraph equipment owned by railroads is not included here, as it is included in the estimated value shown for railroads.

Telephone systems.—The estimated value of telephone systems is based on the bureau's published report on telephones for the year 1922, the data for which were secured by the bureau through correspondence and from financial reports made by telephone companies to the Interstate Commerce Commission. The value of the plant and equipment, less depreciation reserves, of each company was distributed to the States on a composite basis in which the number of miles of wire, the number of telephones, and the number of central stations were given equal weight. The depreciation reserves appear not to have been deducted in making the estimates for 1912. In the estimates for that year, however, there were included only the values of telephone systems with a gross income of \$5,000, or more, while in the estimates for 1922 there are included the values of all telephone systems, regardless of their income.

Pullman and other cars not owned by railroads.—The estimated values of cars belonging to the Pullman Co. and express companies are based on reports made by the companies to the Interstate Commerce Commission. The investment in express cars, less reserves for depreciation thereon, was distributed to the States in proportion to the car mileage reported for each. The value of Pullman cars, less depreciation reserves, was distributed to the States in proportion to the estimated value of steam railroads in each. The estimated value of privately owned cars other than Pullman and express cars is based on the number of such cars as shown in the Equipment Register of January, 1923, and the average value of such cars as estimated from such information as could be secured. The estimated value of these cars, as in the case of Pullman cars, was distributed to the States in proportion to the estimated value of steam railroads in each. The estimated values of the three classes of cars are combined into a single item in this report.

Pipe lines.—The bureau was unable to secure entirely satisfactory data on which to base an estimate of the value of pipe lines. The amount shown, \$500,000,000, was furnished by the Bureau of Mines as an estimate made by an official of that bureau for a general purpose, with the statement that it should not be regarded as an official figure put out by the bureau. A search for a more authentic figure failed to discover data for a more exact estimate, and that estimate is therefore used in this report. Complete data on which to base the distribution of this value to the States were not found, but the Geological Survey furnished figures, admittedly incomplete and not up to date, showing the number of miles of pipe line in 20 States. On the basis of these mileage figures the amount was distributed.

Shipping and canals.—The estimated value of shipping, other than vessels of the Navy, is based on the tonnage reported by the Bureau of Navigation of the Department of Commerce, and information as to the value per gross ton of vessels of the different classes and age groups secured through consultation with officials of the Shipping Board; the value of the floating equipment of the United States Navy was secured from the Navy Department; and the values

of canals and investments in canalized rivers were taken from a report of the Bureau of the Census for 1916.

Privately owned waterworks.—After search for data relative to the value of privately owned waterworks and failure to find even a list of such enterprises or the cities in which they are located, it was determined to base their estimated value on a report of the Bureau of Internal Revenue, which placed the fair taxable value of privately owned waterworks in the United States in 1922 at \$198,486,715. By comparison of the values assigned by that bureau to privately owned gas works with the value assigned to those properties by the Bureau of the Census in 1919, it was found that the former constituted 55 per cent of the latter. On this basis the value of the waterworks would be \$360,885,000 and this amount was adopted as the estimated value.

Since 1900 the bureau has included in its successive estimates a value for waterworks based on the estimated value for that year. In making the estimate for 1904 the estimate of 1900, "plus a small increase" was adopted as the value of privately owned waterworks; and the estimate for 1912 was made by adding to that of 1904 an increase computed at the rate used in computing the estimated value in 1904. The continuation of this method would result in an increasing exaggeration of any error in the addition made in 1904, even if the actual increase in value were at a uniform rate. If this method had been used in making the estimate for 1922 the amount would have been \$317,500,000. The amount given in the table exceeds this by only 13.7 per cent, a very small increase in view of the appreciation of values from 1912 to 1922, which indicates that the rate of increase adopted in former estimates since 1900 has not been maintained. The acquisition of privately owned waterworks by municipalities and the tendency to initiate such services as public enterprises tend to offset to a considerable degree the increase in the wealth represented by privately owned waterworks, and to render inadequate any assumed increase based on the additional demand for such service. A distribution, by States, of the value on which the estimate was based could not be secured.

Privately owned central electric light and power stations.—The estimated value of privately owned central electric light and power stations is based on data contained in a report of the Bureau of the Census for the year 1922 relative to electric-light plants. The figures represent the investment in plant and equipment, no deduction being made for depreciation reserves as the amount of such reserves was not separately shown.

Stocks of goods, etc.—In the last column of Table 4, under the heading "All other," are included the value of stocks of agricultural, manufactured, and mining products; imported merchandise; clothing, personal adornments, furniture, horse-drawn vehicles, and kindred property; and gold and silver coin and bullion. The sources of information relative to these objects of value and the methods used in computing their value are briefly set forth in the paragraphs which follow. Table 6 shows the distribution, by States, of the values of the several classes of property, with the exception of that of gold and silver coin and bullion.

Agricultural products.—The estimated value of agricultural products in the United States at the close of the year 1922 is based partly on official reports and partly on an assumed proportion of the year's production as in stock at that time.

The values of corn, wheat, oats, barley, rye, rice, potatoes, sweet potatoes, and hay on hand on December 31, 1922, were computed on the basis of information secured from the Department of Agriculture; and the values of cotton, cottonseed, and tobacco were computed on the basis of information published periodically by the Bureau of the Census. The value of these crops constituted nearly 75 per cent of the total value of all crops raised in 1922. The remaining value

was that of crops which are principally of a seasonable or perishable nature. It was thought that 40 per cent of the value of the year's production of these crops was a fair percentage to assign as the value of stocks of this class on hand at the close of the year. To the values of crops on hand there was added the values of stocks of animal products classed as wool and hides and skins, which were based on published reports of the Bureau of the Census, and of eggs, based on reports of the Department of Agriculture. The estimated values assigned to stocks of these classes of products at the close of 1922 are as follows:

CROPS	
Corn.....	\$1, 458, 470, 000
Wheat.....	419, 193, 000
Oats.....	290, 768, 000
Barley.....	39, 834, 000
Rye.....	27, 123, 000
Rice.....	11, 754, 000
Potatoes.....	91, 914, 000
Sweet potatoes.....	16, 898, 000
Hay.....	535, 737, 000
Cotton and cottonseed.....	1, 042, 356, 000
Tobacco.....	489, 885, 000
All other (seasonable, etc.).....	864, 021, 000
Total.....	\$5, 287, 953, 000
ANIMAL PRODUCTS	
Wool.....	85, 077, 000
Hides and skins.....	54, 455, 000
Eggs.....	38, 311, 000
Total.....	177, 843, 000
Total crops and animal products.....	5, 465, 796, 000

The method outlined above differs somewhat from that employed in making the estimates for 1912, when the computation was based on the assumption that 90 per cent of all agricultural products of the year was on hand at its close. The crop values listed above constitute only about 60 per cent of the total value of crops produced in 1922.

In distributing these values to the States, the value of cotton and cottonseed was distributed as nearly as possible in accordance with the amounts actually held by mills and public warehouses, as reported to the Bureau of the Census; and the value of tobacco was assigned to the States in proportion to the production, as shown in the *Agricultural Yearbook, 1922*. The values of the other selected crops and of the seasonable crops were assigned to the States in proportion to the total values produced as reported by the Department of Agriculture.

Manufactured products.—The estimated value of manufactured products in stock at the close of 1922 is based on the Census Report on Manufactures for the year 1919. That report shows the value of manufactured products under 14 general heads. The value of products of railroad repair shops was omitted from consideration in connection with the estimate of the value of manufactures, because practically all their products are included in the value of railroads, which constitute one of the categories of wealth separately set up in this report.

The first process in the computation of the value of stocks on hand at the close of 1922 was the determination of the production of that year. No complete

data were available. The Survey of Current Business, issued by the Department of Commerce, reported for certain products the unit production in 1922 and former years, together with index numbers showing the relative production in units of the product and the relative price per unit. For each of the 13 general classes of manufacture, calculations were made by applying the production and price index numbers in deriving values of 1922 from those of 1919. This was done in the case of all products for which index numbers were found, which covered from 50 to 80 per cent of the total value of products listed under each of the general classes. The value of the products of 1919 for which index numbers were not found were reduced to estimated values of 1922 by applying the average correction applied in the case of those products for which index numbers were found.

Having arrived at the total value of each of the 13 general classes of products in 1922, it was assumed that 25 per cent of the year's production of foodstuffs and kindred products and two-thirds of other products were in stocks at the close of the year. The total estimated value of the stocks on hand was distributed to the States in proportion to the amount manufactured in each.

Imported merchandise.—The estimated value of imported merchandise in bonded warehouses and in the hands of traders on December 31, 1922, was assumed to be one-half of the value of goods imported in 1922, this being the basis on which the estimate for 1912 was made. The value of the goods held in bonded warehouses was assigned to the States in which the warehouses were located in the proportions in which they were received, and the remainder was distributed to the States in proportion to the other forms of wealth reported for them.

Mining products.—The estimated value of mineral products in stock on December 31, 1922, is based on reports of the Bureau of the Census, the Bureau of Mines, and the Geological Survey. In making the estimates for 1912 it was assumed that a year's supply of coal was in stock. The interruption of production in 1922 resulted in reduced stocks at the end of the year, and it was evident that the method of 1912 should not be followed in making the estimates for 1922. The principal data on stocks of coal were secured from the report of January 1, 1923, setting forth the results of an inquiry as to commercial stocks, undertaken by the Bureau of the Census and the Geological Survey under authority of the Federal fuel distributor. Officials of the Bureau of Mines were consulted relative to coal prices. The values of the mineral products other than coal, in 1922, were taken from the report of the Geological Survey for that year, and in conformity with the method employed in 1912 it was assumed that 10 per cent of the year's production was on hand at the close of the year.

The distribution by States of the value of bituminous coal was made in proportion to the quantities consumed as shown in the report of the Geological Survey for 1918, and that for anthracite in proportion to quantities sold as shown in the survey's report of 1917, these being the latest reports covering this subject. In the distribution of the value of other mineral products the bureau used the percentages shown in the report of the Bureau of the Census relative to smelting and refining in 1921.

Clothing, personal adornments, furniture, horse-drawn vehicles, and kindred property.—The estimated value of clothing, jewelry, furniture, and household equipment of all kinds is based on replies to questionnaires sent to individuals in all of the States, both directly and through employers. An effort was made to secure returns from those engaged in agriculture and other industries and occupations that might represent a fair cross section of the American people. Separate estimates were made for horse-drawn vehicles and books in public libraries. The sampling method, by means of a questionnaire, can yield results

only approximating those sought, and the figures are presented with full knowledge of the inadequacy of the basis on which the estimates rest.

In making the estimates of former years attention was given to statistics of production, exports, and imports, with assumed periods of usefulness and rates of depreciation, and values were distributed to the States on a composite basis in which values of other classes of property and population were given equal weight. The method adopted in making the estimates for 1922 is, therefore, a departure from that employed in making the estimates for 1912 and former years. It was urged that greater accuracy could be secured by using the sampling process than by the use of the former method, which necessarily requires a number of assumptions relative to both the quantity of goods in use and their distribution among the States. The questionnaire sent out by the bureau asked for the total fair value of household equipment and wearing apparel, including furniture, books, pictures, musical instruments, silver plate, dishes, kitchen and bedroom furnishings, trunks, clothing, watches, jewelry, etc., and the number of persons in the family participating in their use. About 37,000 replies were received in response to more than 100,000 questionnaires sent out relative to the value of clothing and household equipment. The returns were tabulated by States, and the estimate for each State was based on the per capita amounts thus secured. Estimates of the value of horse-drawn vehicles were based on and distributed to the States in proportion to the number of horses and mules; and estimates for books in public libraries were based on the number of volumes so held in the several States.

Gold and silver coin and bullion.—The value assigned to gold and silver coin and bullion on December 31, 1922, is based on the report of the Treasury Department of January 1, 1923. To the value of the gold coin and bullion there was added the market value of the silver bullion, silver dollars, and subsidiary silver coins. In computing the value of the silver, the bureau reduced the coinage value as given in the report to the market value by determining the number of ounces of silver contained in the coins and bullion and applying the market value per ounce as shown in the quotations of the New York market for silver not subject to the Pittman Act. That act provided for the purchase by the United States Treasury of domestic silver at \$1 per ounce in such amount as was necessary to replace the bullion sold to Great Britain for her eastern coinage. Inasmuch as this arrangement was special in its character and had only about six months longer to run, it was thought best to hold to the world price of silver as shown on the New York market.

In the estimates for 1912 the total value was apportioned among the States, the process being described as follows: "To each State was assigned an amount equal to the value of the coin and gold and silver certificates in the possession of the banks of that State, as shown by the report of the Comptroller of the Currency. The remainder, including the free coin and bullion in the United States Treasury and the amounts estimated by the Director of the Mint as being in the hands of the people, was apportioned among the several States according to population." In preparing the estimates for 1922 it was thought any distribution must be arbitrary as no really satisfactory reason for this or any other method could be developed. For this reason no distribution was attempted for 1922.

NATIONAL WEALTH: 1850 TO 1922

Estimated wealth in 1922, by classes of property.—The estimated value of tangible property in 1922 is set forth under the nine separate heads of Table 4, the data of the last two columns being analyzed in Tables 5 and 6. The signifi-

cance of each of the column titles in the three tables is set forth in the preceding pages.

Bases used in estimating national wealth.—Table 7 presents the estimates of the aggregate wealth of the Nation, as prepared by the United States censuses from 1850 to 1922, inclusive, and the per capita averages of the same are shown in Table 8. These estimates have been prepared upon two different bases and by a number of different methods. The estimates for 1850, 1860, and 1870 were confined to taxable real property and the personal property of private individuals, firms, and corporations. They did not include any estimates of the value of the public domain nor of other exempt realty, nor of the value of the furniture or equipment of public buildings of governments nor of charitable, religious, or educational institutions, all of which were included in the estimates for 1880, 1890, 1900, 1904, 1912, and 1922.

In order to present the totals and per capita averages for the several years in a form which approximates comparability, Tables 7 and 8 give separately the total and per capita values of taxable and exempt property as estimated for 1922, 1912, 1904, 1900, and 1890. The columns headed "Exempt" include, however, only the exempt real property; all personal property—including the furniture and equipment mentioned in the preceding paragraph, which by law are exempt from taxation—is included in the columns headed "Taxable." No separation into these two classes is given for 1880, since the only information with respect to exempt property given in the Tenth Census report is the statement that the aggregate reported for that year included an estimate of \$2,000,000,000 for exempt real property. This amount was not distributed by States in the report for 1880, and can not be separated at this time save by a more or less arbitrary method; hence no separate statement of the taxable and exempt property is made for that year.

For 1870 two values are given, one on a currency basis and the other on a gold basis; the former is the one returned by the census of that period and the latter is 80 per cent thereof. To make the figures comparable with those of earlier and later censuses, the currency values reported at the time are reduced by one-fifth, the average value of gold in 1870 being approximately 125 per cent of the value of currency. It should be noted, however, that this arbitrary reduction of the values of 1870 will not fully eliminate from the statistics of the series of years the effect of the currency inflation of 1862 to 1878, because the influence of that inflation period, so far as prices and values are concerned, continued until after 1880, and therefore necessarily affected the figures for that year, so that a comparison of the value reported for 1880 with that obtained for 1870 by reducing to a gold basis does not furnish an exact measure of the additions to our national wealth resulting from human labor during the intervening period.

In making comparisons between the several censuses the 1870 figures, computed on a gold basis, should be compared with the totals for each of the earlier years, and with the column "Taxable" for 1890, 1900, 1904, 1912, and 1922. In comparing the value of 1880 with those for the earlier years an allowance of about 5 per cent should be made for the \$2,000,000,000 of exempt real property in the estimate for 1880. Comparisons of the values for 1880 with those for later years can be made only by the use of the totals for those years. For the years 1890, 1900, 1904, 1912, and 1922 a threefold comparison can be made—for all property, for taxable property, and for exempt property.

Estimates for 1922, 1912, 1904, and 1900.—Table 1, which follows, affords a ready means of comparing the total values of the several classes of wealth in 1922 with those of 1912, 1904, and 1900; it shows, also, the relation of each item to the total and the rate of increase in the different periods. The classification followed in this table is more detailed than that of Tables 2 and 3, but by certain simple

combinations of the figures of Table 1 the comparison may be extended to cover the values of 1890 and 1880. The amounts given in the first column of Table 1 are the values of property as given in Table 4, with additional details of the total values shown in the columns of that table headed "Street railways, shipping, waterworks, etc." and "All other." The amounts given in the three remaining columns of Table 1 were taken from preceding reports of this bureau.

TABLE I.—ESTIMATED WEALTH, BY CLASSES OF PROPERTY: 1922, 1912, 1904, AND 1900

FORM OF WEALTH	TOTAL [Expressed in thousands]			
	1922	1912	1904	1900

¹ Differs from estimate as published in 1912 because of revision of estimate for taxed real property in Oklahoma.

² Includes \$1,445,992,000 value of ships belonging to the United States Navy.

³ Includes \$402,352,000 value of ships belonging to the United States Navy.

⁴ Decrease.

Estimates for 1890 and 1880.—The census reports for 1890 and 1880 estimated the value of the various forms of national wealth as shown in the tables which follow.

TABLE 2.—ESTIMATED WEALTH, BY CLASSES OF PROPERTY: 1890

[Expressed in thousands]

FORM OF WEALTH	1890	FORM OF WEALTH	1890
Total.....	\$65,037,091	Mines and quarries, including product on hand.....	\$1,291,292
Real property and improvements taxed.....	35,711,209	Gold and silver coin and bullion.....	1,158,775
Real property and improvements exempt.....	3,833,335	Railroads and equipment.....	8,296,050
Livestock on farms, and farm implements and machinery.....	2,703,015	Street railways.....	389,357
Machinery of mills, and product on hand, raw and manufactured.....	3,058,593	Telegraphs, telephones, shipping, canals, and equipment.....	701,756
		Miscellaneous.....	7,893,709

TABLE 3.—ESTIMATED WEALTH, BY CLASSES OF PROPERTY: 1880

[Expressed in thousands]

FORM OF WEALTH	1880	FORM OF WEALTH	1880
Total.....	\$43,642,000	Specie.....	\$612,000
Real property and improvements taxed:		Railroads and equipment.....	5,536,000
Farms.....	10,197,000	Telegraphs, shipping, and canals.....	419,000
Residence and business real estate, including water power.....	9,881,000	Three-quarters of the annual product of agriculture and manufactures and of the annual importation of foreign goods, assumed to be the average supply in the hands of producers or dealers.....	6,160,000
Real property and improvements exempt.....	2,000,000	Household furniture, paintings, books, clothing, jewelry, and household supplies of food, fuel, etc.....	5,000,000
Livestock, whether on or off farms, and farming tools and machinery....	2,406,000	Miscellaneous items, including tools of mechanics.....	650,000
Mines (including petroleum wells) and quarries together with one-half the annual product reckoned as the average supply in the hands of pro- ducers or dealers.....	781,000		

Estimates for 1850, 1860, and 1870.—No details of the estimates for the years 1850, 1860, and 1870 were reported, and it would be impossible at the present time to exhibit even approximately the distribution of the values for those years among the several forms of wealth shown above for 1880, 1890, 1900, 1904, 1912, and 1922. The estimates for 1850 and 1860 included the value of the slaves in the Southern States in those years.

Comparative data for classes of property for specified years.—Tables 7 and 8 show, by States, the total and per capita wealth in 1922, 1912, 1904, 1900, 1890, 1880, 1870, 1860, and 1850.

Tables 10, 11, 12, and 13 present, by States, for the years 1922, 1912, 1904, and 1900 the estimated values, as determined for those years, of (1) livestock; (2) farm implements and machinery; (3) manufacturing machinery, tools, and implements; and (4) railroads and their equipment.

† Includes \$1,445,992,000, value of ships belonging to the United States Navy, \$360,885,000, value of privately owned water-supply systems, and \$4,278,155,000, value of gold and silver coin and bullion, not distributed by States.

‡ Differs from estimate as published in 1912 because of revision of estimate for taxed real property in Oklahoma. Includes \$402,352,000, value of ships belonging to the United States Navy, and \$290,000,000, value of privately owned water-supply systems, not distributed by States. Items for geographic divisions and States differ from estimate as published in 1912 because of redistribution of railroad values in accordance with the principle of distribution adopted for 1922.

§ Differs from estimate published in 1912 because of revision of estimates for taxed real property.

¹ Differs from estimate as published in 1912 because of revision of estimate for taxed real property in Oklahoma. Items for geographic divisions and States differ from estimate as published in 1912 because of redistribution of railroad values in accordance with the principle of distribution adopted for 1922.

LETTER OF TRANSMITTAL

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., May 2, 1924.

SIR:

I transmit herewith a decennial report on public debt in all States and the District of Columbia, which was prepared in connection with the decennial investigation on wealth, public debt, and taxation authorized by the permanent census act. The reports for 1922 are issued under five titles, as follows: (1) Estimated national wealth, (2) Public debt, (3) Assessed valuation and tax levies, (4) Taxes collected, and (5) Digest of State laws relating to taxation and revenue.

The report was prepared under the direction of Starke M. Grogan, chief statistician in charge of wealth, public debt, and taxation, assisted by Lemuel A. Caruthers, expert chief of division. The text discussion was prepared by Morris J. Hole, expert special agent.

Respectfully,

W. M. STEUART,
Director of the Census.

Hon. HERBERT HOOVER,
Secretary of Commerce.

PUBLIC DEBT

INTRODUCTION

Scope of this report.—The statistics in this report relate to the gross and net debt of the National Government, the 48 States and the District of Columbia, counties, cities, towns, villages, school districts, townships, drainage districts, and all other civil divisions having power to incur debt.

Fiscal year.—The statistics for the National Government are for the year which ended June 30, 1923, and those for the governments of the States, counties, cities, and all other civil divisions having power to incur debt, are for the fiscal year which ended in the calendar year 1922.

Terms employed.—In order that the statistics contained in the tables of this report may be properly interpreted, the classification employed in their compilation and the significance of the terms used in the tabulation of the data are pointed out in the paragraphs which follow.

Gross debt.—The gross debt is the total debt of every character which a civil division is under obligation to pay, and includes, (1) funded or fixed debt, (2) special assessment loans, and (3) revenue loans, outstanding warrants, and other current debt.

Net debt.—The net debt is the gross debt described above, less the assets held in sinking funds for the retirement of such debt.

Funded or fixed debt.—Among the most important classes of debt to be reported as funded or fixed are those locally known as general bonds, serial bonds, corporation stock, certificates, serial notes, and mortgages. Under this head are included, also, indebtedness to public trust funds not evidenced by formal bonds or certificates of indebtedness and certain other forms of debt not considered current debt.

Special assessment loans.—Under this head are included bonds, certificates, and other long-term or short-term obligations outstanding which have been issued or incurred with the distinct understanding that they are to be paid wholly or in part from the proceeds of special assessments apportioned according to the assumed benefits to the property affected by the improvements thereby secured.

All other debt.—Included under the term "All other debt" are (1) all interest-bearing short-term obligations other than the so-called serial bonds, among which are those popularly known as revenue bonds, revenue loans, anticipation tax loans and tax warrants, temporary loans, and similar obligations; (2) outstanding warrants, orders, and audits; and (3) all other current debt outstanding at the close of the year.

Total and per capita public indebtedness.—Table I, which follows, presents a summary of the total and per capita debt of the National Government less cash in the Treasury; and the total and per capita debt less sinking fund assets of the governments of the 48 States, and of counties, incorporated places, and all other civil divisions for 1922, 1912, 1902, and 1890. The debt of the District of Columbia, which is coterminous with the city of Washington, is included in that of "Incorporated places."

The totals of this table show the aggregate of all indebtedness resting upon the people of continental United States on account of all the governments exercising jurisdiction within that area.

The per capita amounts shown in the tables of this report are based on exact totals. In some cases, therefore, they will differ slightly from calculations that may be made by using as bases the amounts shown in the table, which are only approximately exact because of adjustment to the nearest thousand.

The population figures used in calculating per capita amounts for States represent, for each State, the estimated population at the middle of the fiscal year which ended in the calendar year 1922, except in cases of 3 of the States—Vermont, Mississippi, and Nevada. They represent the estimated population of 21 States on January 1, 1922, 1 on March 1, 8 on April 1, 8 on June 1, and 7 on July 1. The Bureau of the Census has made no estimates of population for Vermont, Mississippi, and Nevada, the population of which decreased from 1910 to 1920; for each of these States the population used in computing per capita amounts was that shown by the census of January 1, 1920.

In computing the per capita amounts for incorporated places and for counties, the dates as of which the estimates were made were as follows: (1) For incorporated places having a population of over 30,000, the estimated population at the middle of the fiscal year, except in case of decrease of population from 1910 to 1920 in which case the population on January 1, 1920, was used; (2) for incorporated places having a population from 8,000 to 30,000 and for counties the estimated population on July 1, 1922, except in case of decrease of population from 1910 to 1920 in which case the population on January 1, 1920, was used; and (3) for incorporated places having a population of less than 8,000 the population as enumerated on January 1, 1920, was used.

The data relative to the indebtedness of the States and other civil divisions are presented in considerable detail in the general tables of this report, and are briefly discussed in the text for those tables. The national debt is shown only in Table I.

DIVISION OF GOVERNMENT	Totals (expressed in thousands)								Per capita							
	1922				1912				1902				1890			
	1922	1912	1902	1890	1922	1912	1902	1890								
Total.....	\$30,845,626	\$4,850,460	\$2,834,492	\$1,989,113	\$283.70	\$49.97	\$35.93	\$31.76								
Nation.....	22,155,886	1,028,564	969,457	1,851,913	203.78	10.69	12.22	13.60								
State.....	935,544	345,942	234,965	211,210	8.64	3.57	2.99	2.37								
All other civil divisions	7,754,196	3,475,954	1,630,070	925,990	71.22	35.81	20.74	14.79								

¹ The total national debt for the years shown in this table, 1922, 1912, 1902, and 1890, is the gross debt less cash in the Treasury at the end of the fiscal year, June 30, 1923, 1913, 1903, and 1891.

² Indebtedness of 1891; that of 1890 not available.

The relative amounts of indebtedness of the National Government in 1923 and 1913 are shown graphically in Diagram 1.

Diagram 1.—TOTAL DEBT OF THE NATIONAL GOVERNMENT LESS CASH IN TREASURY: 1923 AND 1913

The relative amounts of indebtedness of States, counties, cities, and all other civil divisions in 1922 and 1912 are shown graphically in Diagram 2.

PUBLIC DEBT

Diagram 2.—TOTAL DEBT LESS SINKING FUND ASSETS OF STATES, COUNTIES, CITIES, AND ALL OTHER CIVIL DIVISIONS HAVING POWER TO INCUR DEBT: 1922 AND 1912

Net debt of the National Government.—The very great increase in the net indebtedness of the National Government from 1913 to 1923 is only in part comparable to the increases shown for the States and for other civil divisions, the major portion having been incurred on account of war purposes. In one particular, however, the National Government and the State and local governments were under a common necessity, in that war prices affected all of them. Many of the local governments, even when curtailing their regular services and improvements, as measured in units of service and of improvement, were nevertheless compelled to increase abnormally their indebtedness as measured in dollars having a diminished purchasing power as compared with those of 1912 and the former years during which the debts reported for 1912 were contracted.

The obligations of foreign countries to the United States constitute a very important offset to the national debt, as the acts authorizing them provide that receipts on their account shall be used in payment of bonds of the United States. The amount of the claims of the United States against foreign countries on account of loans to them during the World War was placed at \$11,800,010,245 on November 15, 1923; and of this total Great Britain owed \$4,600,000,000, as agreed upon by the two Governments. At such time as all the foreign loans of this character shall be reduced to exact amounts and payments shall begin under agreements negotiated relative thereto which provide for the ultimate extinction of the debts, it may be proper to construe these offsets as in the nature of sinking fund assets in the computation of the net debt of the National Government.

Per capita net debt of the National Government.—The per capita indebtedness of the Nation as shown in the table is based upon the population of the 48 States and the District of Columbia, as is usual in expressing an average participation of individuals in features of the Federal finances. It should be remembered, however, that the outlying possessions of the United States contribute, though in widely varying ways and degrees, to the revenues of the Federal Government, and thus contribute to the funds provided for the payment of debt. If the populations of those possessions could be properly weighted as to their degree of contribution as compared with that of the population of continental United States, it would be possible to compute per capita for the Nation slightly less than those shown in the table.

Increase in net indebtedness.—The total debt less the sinking fund assets of the National Government, State governments, and all other civil divisions in continental United States in 1922 amounted to \$30,845,626,000. This is an increase of \$25,995,166,000, or 535.9 per cent, over the amount reported for 1912. During the period from 1902 to 1912 the net debt increased \$2,015,968,000, or 71.1 per cent; from 1890 to 1902 it increased \$845,379,000, or 42.5 per cent.

The net debt of the National Government increased \$21,127,322,000, or 2,054.1 per cent, from June 30, 1913 to June 30, 1923; \$59,107,000, or 6.1 per cent, from June 30, 1902 to June 30, 1913; and \$117,544,000, or 13.8 per cent, from June 30, 1891 to June 30, 1902.

The net debt of States, counties, incorporated places, and all other civil divisions is presented in Table II, by States, together with the increase for 1912 to 1922, 1902 to 1912, and 1890 to 1902, the per capita net debt for 1922, 1912, 1902, and 1890, and the per cents of the total net debt represented by the net debts of the States, counties, and all other civil divisions, 1922.

Some of the very considerable increases in the debts of States during the 10-year period were because of bonds issued to finance the States' payments on account of the soldiers' bonus, as an extraordinary payment in large amount could not be immediately financed through the usual processes of taxation.

DESCRIPTION OF GENERAL TABLES

Number and character of general tables.—Tables 1 to 8, inclusive, present statistics of the indebtedness of the governments of the States, counties, cities, towns, villages, school districts, townships, drainage districts, and all other civil divisions having power to incur debt.

Civil divisions for which debt was reported.—The authority to incur debt is conferred on counties, cities, and other civil divisions by legislative acts, and those acts vary widely in the several States. The following statement presents a list of the civil divisions which reported indebtedness.

Alabama.—Counties, incorporated places, and towns.

Arizona.—Counties, incorporated places, towns, school districts, drainage districts, irrigation districts, fire districts, and power districts.

Arkansas.—Counties, incorporated places, towns, school districts, drainage districts, levee districts, and road districts.

California.—Counties, incorporated places, towns, school districts, drainage districts, irrigation districts, levee districts, sanitary districts, reclamation districts, water districts, lighting districts, cemetery districts, road districts, junior college district, light district, and other debt-incurring districts.

Colorado.—Counties, incorporated places, towns, school districts, drainage districts, and irrigation districts.

Connecticut.—Counties, incorporated places, towns, school districts, fire and sewer districts, and sewer districts.

Delaware.—Counties and incorporated places.

District of Columbia.—Incorporated place.

Florida.—Counties, incorporated places, school districts, drainage districts, and road districts.

Georgia.—Counties, incorporated places, school districts, and drainage districts.

Idaho.—Counties, incorporated places, school districts, drainage districts, irrigation districts, road districts, and highway districts.

Illinois.—Counties, incorporated places, townships, school districts, drainage districts, park districts, road districts, sanitary districts, and other districts.

Indiana.—Counties, incorporated places, townships, and school districts.

Iowa.—Counties, townships, school districts, and drainage districts.

Kansas.—Counties, incorporated places, townships, school districts, and drainage districts.

Kentucky.—Counties, incorporated places, and school districts.

Louisiana.—Counties, incorporated places, school districts, drainage districts, road districts, and navigation districts.

Maine.—Counties, incorporated places, water districts, bridge districts, and pier-site district.

Maryland.—Counties, incorporated places, and sanitary districts.

Massachusetts.—Counties, incorporated places, fire and water districts, and other districts.

Michigan.—Counties, incorporated places, townships, and school districts.

Minnesota.—Counties, incorporated places, townships, and school districts.

Mississippi.—Counties, incorporated places, school districts, drainage districts, road districts, and levee districts.

Missouri.—Counties, incorporated places, townships, school districts, drainage districts, road districts, and levee districts.

Montana.—Counties, incorporated places, school districts, drainage districts, irrigation districts, road districts, and special fire districts.

Nebraska.—Counties, incorporated places, townships, school districts, drainage districts, irrigation districts, road districts, sanitary districts, and miscellaneous districts.

Nevada.—Counties, drainage districts, and irrigation districts.

New Hampshire.—Counties, incorporated places, towns, school districts, and precincts.

New Jersey.—Counties, townships, and school districts.

New Mexico.—Counties, incorporated places, school districts, drainage districts, and irrigation districts.

New York.—Counties, towns, school districts, and water districts.

North Carolina.—Counties, incorporated places, school districts, road districts, drainage districts, bridge districts, and hospital districts.

North Dakota.—Counties, incorporated places, townships, school districts, and park districts.

Ohio.—Counties, incorporated places, townships, school districts, and conservancy districts.

Oklahoma.—Counties, incorporated places, townships, school districts, and drainage districts.

Oregon.—Counties, incorporated places, school districts, drainage districts, port districts, and fire-patrol districts.

Pennsylvania.—Counties, incorporated places, townships, school districts, and poor districts.

Rhode Island.—Incorporated places.

South Carolina.—Counties, incorporated places, school districts, and drainage districts.

South Dakota.—Counties, incorporated places, townships, school districts, and drainage districts.

Tennessee.—Counties, incorporated places, school districts, and drainage districts.

Texas.—Counties, school districts, drainage districts, levee districts, road districts, irrigation districts, navigation districts, and water-improvement districts.

Utah.—Counties, incorporated places, school districts, drainage districts, irrigation districts, and conservation districts.

Vermont.—Counties, incorporated places, towns, school districts, and fire districts.

Virginia.—Counties and drainage districts.

Washington.—Counties, incorporated places, townships, school districts, drainage districts, diking and drainage districts, diking, drainage, and irrigation districts, ditch districts, ditch and drainage districts, levee districts, waterway districts, drainage and irrigation districts, independent highway districts, irrigation districts, park districts, port districts, and water districts.

West Virginia.—Counties, incorporated places, school districts, road districts, and railroad districts.

Wisconsin.—Counties, incorporated places, towns, school districts, and drainage districts.

Wyoming.—Counties, incorporated places, and school districts.

TABLE 1

Public indebtedness other than Federal.—Table 1 shows the net indebtedness of the States, counties, and all other civil divisions and the aggregate of such debts. The data here presented include the total burden of public indebtedness other than that on account of the obligations of the Federal Government. They show that the larger amounts of indebtedness have been assumed by the smaller geographical units, such as cities and school districts; the units of government which supply to the local communities the larger share of the services requisite to the protection of person and property, guarding against conditions deleterious to health, and furnishing educational and recreational facilities. Of the aggregate of the indebtedness in 1922, as shown in the table, 10.8 per cent rested upon the States, 14.6 per cent upon the counties, and 74.6 per cent upon the other civil divisions, which are listed on pages 5 and 6 of this report, the cities, towns, villages, and school districts being the principal units.

Per capita public indebtedness other than Federal.—The last two columns of Table 1 show for 1922 and 1912, by States, the per capita of the aggregate net indebtedness on account of States, counties, and all other civil divisions. The total of such indebtedness increased 127.4 per cent during the period from 1912 to 1922. Oregon had the largest per capita, \$170.69, and Kentucky the smallest, \$20.68. Each of the 48 States is shown to have increased the per capita of the aggregate net indebtedness resting upon its population; the only decrease being shown for the District of Columbia, the territory of which coincides with the city of Washington, and which is here classed as a municipality. The data, both total and per capita, for counties and all other civil divisions, shown in Table 1 by States, are shown in Table 3 by counties.

TABLE 2

State indebtedness.—The data shown in Table 2 represent the net debt, or gross debt less sinking fund assets, of the State governments. All States reported such debt in 1922; while in 1912 two States—Pennsylvania and West Virginia—had no such debt, the former at that time having sinking fund assets in excess of its gross debt, and the latter having no debt contracted by it, though subject to an adjustment of its share of the debt of Virginia outstanding at the time of the organization of the State of West Virginia from territory formerly constituting a part of Virginia, which adjustment was made in 1919.

States which reduced their net debt.—It is worthy of note that from 1912 to 1922 eight States reduced their net debt—Massachusetts, Connecticut, Wisconsin, Kansas, Virginia, Georgia, Oklahoma, and Arizona—although the net debt of the 48 States, as a whole, increased 170.4 per cent during that period. The largest decrease, \$2,555,000, was made by the State of Massachusetts, which had in 1912 the second largest debt of any State and in 1922 the third largest, New York having a larger debt in both years, and California in 1922.

TABLE 3

Gross debt less sinking fund assets of counties.—Table 3 presents, by States, for each of the counties of the 47 States in which the counties are empowered to incur debt, the amounts due at the close of their fiscal years in 1922 and 1912, with the per capita amounts in those years. The totals for the States are the same as shown in Table 1. The total for the several counties vary widely because of difference in population, but the per capita amounts serve as fair indexes of the relative debt burdens resting upon the individual. The per capita indebtedness of counties measures only in a very general way the methods followed in financing the counties' affairs, a small amount indicating that the county is living within its income to a greater extent than the county with a large per capita debt. This may be due to generous tax levies and economy in administration, or to the habit of careful determination of what the county can and can not afford in the way of construction costs for such improvements as are usually financed by bond issues.

TABLE 4

Gross debt, and funded or fixed debt less sinking fund assets.—Table 4 presents the gross debt of States, counties, incorporated places, and specified civil divisions under three heads—"Funded or fixed," "Special assessment loans," and "All other." The significance of these terms as here used is stated on page 1 of this report. The debt, total and per capita, as shown in the last two columns of the table is a more accurate measure of indebtedness than is shown in Table 1 under the heading "Gross debt less sinking fund assets," for the reason that special assessment loans are provided for by levies of special assessments to be collected from property owners in advance of the maturity of the loans, and the amounts tabulated as "All other" are to a large extent, if not entirely, offset by taxes levied but not collected and by cash in the general fund of the treasury. The assets of sinking funds accumulated to meet obligations known as special assessment loans, where they could be identified as such, were excluded from the calculation.

The funded or fixed debt of States, counties, incorporated places, and specified civil divisions constituted 86 per cent of their total indebtedness; the special assessment loans, 7.4 per cent, and all other debts 6.6 per cent. Distributed according to classes of government, 11.3 per cent of the gross debt was that of the States, 13.5 per cent that of counties, 56.9 per cent that of incorporated

places, and 18.3 per cent that of specified civil divisions. The corresponding per cents for funded and fixed debt less sinking fund assets were, for States, 12.1, counties, 14.8, incorporated places, 54.4, and specified civil divisions, 18.7, showing that the incorporated places held sinking funds in larger amounts in proportion to their funded or fixed debt than were held by States, counties, or the specified civil divisions.

No indebtedness was reported for the counties of Rhode Island, nor for specified civil divisions in Alabama, Delaware, and Rhode Island, as these are merely geographic divisions without taxing powers. The small amounts of indebtedness reported by the counties of Connecticut, New Hampshire, and Vermont are in a general way proportionate to the functions of counties in those States as compared with the more extensive functions of counties in most of the States. In 4 of the States—Indiana, Montana, Nevada, and West Virginia—the per capita debt of the counties was greater than that of the State or its incorporated places; while in the remaining 44 States the per capita debt of incorporated places exceeded that of the State and of the counties.

Two States—Kansas and Nebraska—reported no funded or fixed debt; and 1 State—Arizona—while reporting indebtedness of this character, at the same time reported sinking fund assets in excess of such debt. No special assessment loans were reported for any of the States, but the table shows that the counties of 12 States had outstanding obligations of that character to the amount of \$97,121,000. Such obligations were reported by the incorporated places of all States except Arkansas, Delaware, Maine, New Hampshire, Rhode Island, and Vermont; and by the specified civil divisions in 23 of the 48 States. Delaware, Maine, New Hampshire, Rhode Island, and Vermont reported no special assessment loans outstanding against any of the divisions of government.

The highest and lowest per capita indebtedness as reported were as follows: For States, Oregon \$48.12 and Iowa \$0.08; for counties, Arizona \$53.46 and Vermont \$0.38; and for incorporated places, New York \$137.23 and Arkansas \$4.35.

TABLE 5

Gross debt, and funded or fixed debt less sinking fund assets of States.—The amounts of indebtedness shown in Table 5 are the same as are shown for States in Table 4. As none of the States reported special assessment loans, no column is provided in Table 5 for obligations of that character. Funded or fixed debt constituted 95.1 per cent of the total debt of States. A part of the funded or fixed debt is made up of the State's indebtedness to its permanent funds, such as the State school fund derived from the sale of school lands set apart for the support of public education. In a number of States these funds have been used by the State for purposes other than schools, the State paying interest to the fund at an established rate in lieu of income that would have been derived from the assets of the fund if kept intact and invested in income-producing properties or securities. In many instances the funds hold no formal bond or note of the State, but the obligations are none the less binding and are, therefore, included as a part of the State's indebtedness.

TABLE 6

Gross debt, and funded or fixed debt less sinking fund assets of counties.—The amounts of indebtedness shown on the lines for States in Table 6 are the same as those shown on the lines for the counties of each State in Table 4, except that special assessment loans, which were reported by only 12 States, have been combined with the indebtedness classed as "All other." Because of the ranging functions of counties in the different States, comparison of their

per capita indebtedness does not lead to accurate information as to their relative methods of employing county credit in financing public undertakings for which the county is responsible. Comparisons of such per capita amounts of counties within a given State yield such information in a general way, but in the absence of data as to purposes for which the debts were incurred, the years in which the borrowings were made, the interest rates, and the year of maturity of the bonds and other obligations, no clear conclusions can be drawn as to the relative efficiency of the counties of a State in the supervision of such public functions as are required of them under the State's constitution and laws. One really vital matter to be considered in this connection, the effect of the indebtedness upon tax levies, can be studied by calculating the annual charge on account of interest at an assumed average rate, and on account of sinking fund accumulations or payments of serial bonds on an assumed average life of the obligations. The assessed valuations of counties, necessary for this study, are shown in the bureau's report entitled "Assessed valuations and tax levies" issued as a component part of the reports on wealth, public debt, and taxation.

TABLE 7

Gross debt, and funded or fixed debt less sinking fund assets of incorporated places.—The amounts shown in Table 7 as aggregates of the indebtedness of the incorporated places in each State are the same as are shown in Table 4. The presentation of the data by population groups within each State, as here shown, is desirable because of the fact that the larger cities as a rule report indebtedness in larger per capita amounts than do the smaller cities. The arrangement of Table 7 is designed to measure this tendency in the aggregate. As compared with the average per capita indebtedness of all incorporated places \$59.65, as shown in the last column of the table, the indebtedness of places of over 30,000 inhabitants was 36.2 per cent greater, that of places of from 8,000 to 30,000 inhabitants was 43.3 per cent less, that of places of from 2,500 to 8,000 inhabitants was 48.6 per cent less, and that of places less than 2,500 inhabitants was 61.3 per cent less. Similar computations for the several States would yield widely varying results.

TABLE 8

Gross debt, and funded or fixed debt less sinking fund assets of specified civil divisions.—Table 8 presents, by States, the indebtedness of the divisions of government other than States, counties, and incorporated places. The divisions reporting indebtedness in each of the States are listed on pages 5 and 6. In Table 8 the indebtedness is shown separately for six classes of local governments, school districts, townships, drainage districts, irrigation districts, levee districts, and road districts, and the total indebtedness of districts of other classes is shown in a single item after the title "All other districts."

It is possible that in some instances the special districts here set up as having power to incur debt should have been reported as geographic divisions in the administration of functions of the county or some other civil division, in which case the indebtedness would have been reported as that of the county or other civil division. It is believed, however, that such instances are rare, if indeed there are any, and in any event the error of classification would not affect the figures which represent the total debt resting upon the people of the county.

TABLE II.—TOTAL AND PER CAPITA NET DEBT OF STATES, COUNTIES, INCORPORATED PLACES, AND OTHER CIVIL DIVISIONS, AND INCREASE AND PER CENT OF INCREASE IN 1912-1922, 1902-1912, AND 1890-1902; AND PER CENT OF TOTAL OF CIVIL DIVISIONS, BY STATES, IN 1922

[Totals expressed in thousands]

¹ Decrease.

² Per capita not computed.

³ Includes debt of towns having a population of less than 2,500, which in 1922 is included with that of "Incorporated places."

TABLE II.—TOTAL AND PER CAPITA NET DEBT OF STATES, COUNTIES, INCORPORATED PLACES, AND OTHER CIVIL DIVISIONS, AND INCREASE AND PER CENT OF INCREASE IN 1912-1922, 1902-1912, AND 1890-1902; AND PER CENT OF TOTAL OF CIVIL DIVISIONS, BY STATES, IN 1922—Continued

* [Totals expressed in thousands]

† Decreases.

* Per capita not computed.

† No net debt in 1902.

† Sinking fund assets exceed total debt.

* No net debt in 1912.

† Indebtedness of towns having a population of less than 2,500, which in 1922 is included with that of "Incorporated places."

TABLE II.—TOTAL AND PER CAPITA NET DEBT OF STATES, COUNTIES, INCORPORATED PLACES, AND OTHER CIVIL DIVISIONS, AND INCREASE AND PER CENT OF INCREASE IN 1912-1922, 1902-1912, AND 1890-1902; AND PER CENT OF TOTAL OF CIVIL DIVISIONS, BY STATES, IN 1922—Continued

LETTER OF TRANSMITTAL

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., April 29, 1924.

SIR:

I transmit herewith a decennial report on the amounts of taxes received from general property taxes, special taxes, poll taxes, licenses and permits, and special assessments, by States, the District of Columbia, counties, incorporated places, and specified civil divisions in 1922. This report was prepared in connection with the decennial investigation of wealth, public debt, and taxation authorized by the permanent census act. The reports for 1922 are issued under five titles, as follows: (1) Estimated national wealth, (2) Public debt, (3) Assessed valuation and tax levies, (4) Taxes collected, and (5) Digest of State laws relating to taxation and revenue.

The report was prepared under the direction of Starke M. Grogan, chief statistician in charge of wealth, public debt, and taxation, assisted by Lemuel A. Carruthers, expert chief of division. The text discussion was prepared by Morris J. Hole, expert special agent.

Respectfully,

W. M. STEUART,
Director of the Census.

Hon. HERBERT HOOVER,
Secretary of Commerce.

TAXES COLLECTED

INTRODUCTION

Scope of this report.—The statistics of this report relate to the taxes collected for the National Government, the 48 States and the District of Columbia, counties, cities, towns, villages, school districts, townships, drainage districts, and all other civil divisions having power to levy or collect taxes.

Fiscal year.—The statistics for the National Government are for the year which ended June 30, 1923, and those for the governments of the States, counties, cities, and all other civil divisions having power to levy and collect taxes, are for the fiscal year which ended in the calendar year 1922.

Terms employed.—In order that the statistics contained in the tables of this report may be properly interpreted, the classification employed in their compilation and the significance of the terms used in the tabulation of the data are pointed out in the paragraphs which follow.

Taxes.—Taxes are enforced proportional contributions of wealth levied and collected in the general interest of a community from individuals and corporations by virtue of the sovereignty of the Nation or State for the support of governments and for the defraying of costs growing out of the public needs.

General property taxes.—The general property tax is the common designation of the direct tax upon real property and upon other property when it is apportioned and levied by substantially the same methods employed in apportioning and levying taxes upon privately owned real property.

Special taxes.—Special taxes are direct taxes which are assessed, levied, and collected by methods that are not generally applied in the case of privately owned real property. As such taxes, are included taxes upon the property of corporations levied upon the basis of the amount of corporate stock, corporate indebtedness, or on any other basis than the valuation of all the property of the corporation; taxes upon savings banks and kindred corporations, which are levied in proportion to a certain specified portion of deposits, as their excess above the value of specified investments; and taxes upon life insurance corporations assessed upon the valuations of their policies. Special taxes also include all taxes levied upon mortgages at the time of their execution or entry of public record; inheritance taxes and taxes on individual incomes; taxes on investments, choses in action, bonds and notes for specified periods of time, and on corporation bonds held by residents; and all specific taxes upon property, as taxes upon land at a specified amount per acre, taxes upon horses, mules, and other animals at a specified amount per head, taxes on vessels at a specified amount per registered ton, and taxes upon grain at a specified amount per bushel.

Poll taxes.—Under the term "poll taxes" are included all per capita taxes, uniform or graded, whether such taxes are levied as specific amounts against the persons subject thereto or as ad valorem taxes based upon an arbitrary valuation of polls or occupations.

Licenses and permits.—Under this designation are included taxes upon business activities exacted, with or without the issue of licenses, from persons natural and corporate (1) in proportion to the volume of business, (2) by reason of the business in which they are engaged, or (3) by reason of some activity which constitutes a part of their business; and taxes that are exacted primarily for purposes of regulation, and are collected in connection with the issue of so-called licenses or permits. The latter include (1) license taxes on dogs; (2) general license

taxes, such as licenses to use automobiles, motor cycles, carriages, and bicycles, where the license is not required because of any specific business in which they are to be used; and receipts from departmental permits, such as marriage licenses, building permits, and permits to make sewer connections and to dig in the streets.

Special assessments.—Special assessments are compulsory contributions levied to defray the costs of specific public improvements or public services undertaken primarily in the interest of the public. They differ from the general property tax in that they are apportioned according to the assumed benefits to the property affected by the improvements, or the assumed benefits to individuals or corporations by reason of the services performed.

Per capita receipts from taxes.—The per capita amounts shown in the tables of this report are based on exact totals. In some cases, therefore, they will differ slightly from calculations that may be made by using as bases the amounts shown in the table, which are only approximately exact because of adjustment to the nearest thousand.

The population figures used in calculating per capita amounts for States represent, for each State, the estimated population at the middle of the fiscal year which ended in the calendar year 1922, except in cases of 3 of the States—Vermont, Mississippi, and Nevada. They represent the estimated population of 21 States on January 1, 1922, 1 on March 1, 8 on April 1, 8 on June 1, and 7 on July 1. The Bureau of the Census has made no estimates of population for Vermont, Mississippi, and Nevada, the population of which decreased from 1910 to 1920; for each of these States the population used in computing per capita amounts was that shown by the census on January 1, 1920.

In computing the per capita amounts for incorporated places and for counties, the dates as of which the estimates were made were as follows: (1) For incorporated places having a population of over 30,000 the estimated population at the middle of the fiscal year, except in case of decrease of population from 1910 to 1920 in which case the population on January 1, 1920, was used; (2) for incorporated places having a population from 8,000 to 30,000 and for counties the estimated population on July 1, 1922, except in case of decrease of population from 1910 to 1920 in which case the population on January 1, 1920, was used; and (3) for incorporated places having a population of less than 8,000 the population as enumerated on January 1, 1920.

Summary of receipts from taxes.—The revenues received by the National, State, and local Governments amounted in the aggregate to \$7,425,045,000, or an average of \$68.29 for each person. Of this total, \$3,204,133,000 represents revenues of the National Government for the fiscal year which closed on June 30, 1923, as follows: Customs, \$562,189,000; internal revenue from income and profit taxes, \$1,691,090,000, and miscellaneous taxes, \$935,699,000; tax on circulation of national banks, \$4,304,000; and the Federal reserve franchise tax, \$10,851,000. The receipts of the National Government from revenues of these classes for the fiscal year which ended on June 30, 1922, amounted to \$3,630,215,000, or \$426,082,000 more than similar taxes collected for the year which closed on June 30, 1923.

The total revenues received from taxes of the States, counties, cities, townships, and all other local political units amounted to \$4,220,912,000, or \$38.82 for each person. Of this total, \$3,321,484,000, or 78.7 per cent, was derived from general property taxes. Special taxes, including taxes on inheritances, incomes, etc., amounted to \$256,724,000; poll taxes, \$29,140,000; licenses and permits, \$408,271,000; and special assessments, \$205,293,000.

TAXES COLLECTED

5

The data here given form a part of the census of wealth, public debt, and taxation for the year 1922. A similar census taken for the year 1912 included the revenues of the National Government and of all States and counties, but only such incorporated places as had at that time a population over 2,500. Accurate comparisons can be made, therefore, for only the revenues of the National Government, the State governments, and the counties. The comparison, however, can be extended to incorporated places having a population of over 2,500, if allowance is made for the fact that the revenues for places not having that population in 1910, but having it in 1920, are included in the amount reported as received in 1922, but not in the revenues reported for 1912. This difference affects only slightly the comparability of the totals. The following table shows the amounts for the two census years and the increase during the 10-year period.

DESCRIPTION OF GENERAL TABLES

Number and character of general tables.—The statistics of this report relating to the specified revenues described in the foregoing text are presented in seven general tables which are described in the paragraphs which follow.

For 15 cities—Chicago, Ill., Detroit, Mich., Cleveland and Cincinnati, Ohio, Los Angeles, Calif., Pittsburgh, Pa., Buffalo and Rochester, N. Y., Milwaukee, Wis., Newark and Jersey City, N. J., Minneapolis, Minn., Kansas City, Mo., Indianapolis, Ind., and Seattle, Wash.—the data shown in the tables of this report differ from those shown for these cities in the report of this bureau entitled "Financial Statistics of Cities Having a Population of Over 30,000: 1922." These differences are due to the inclusion in the report mentioned of a part of the data for the counties in which these cities are located, for the purpose of making their statistics more nearly comparable with those for the remaining cities having over 300,000 inhabitants; such cities being so organized that they have both city and county functions.

Tax receipts in the New England States.—The data for towns in Connecticut, Maine, New Hampshire, and Vermont are tabulated with reference to population, those for towns having a population of 2,500 or over being included with tax receipts of incorporated places, and those for towns having less than 2,500 inhabitants being included with the tax receipts of specified civil divisions. This method of presentation was used in the census of 1912 and has been followed here to secure comparability with the data of the report for that year.

For Massachusetts and Rhode Island the tax receipts of towns, all of which are incorporated, are included with those of incorporated places; in the report for 1912, the tax receipts of towns having a population of 2,500 and over were tabulated with those of incorporated places, but such receipts of towns of less than 2,500 inhabitants were tabulated with those of specified civil divisions.

Civil division for which tax receipts were reported.—The authority to organize civil divisions having governmental powers is conferred by legislative act, and those acts vary widely in the several States. The following statement presents a list of the civil divisions which reported receipts from taxes in 1922:

Alabama.—Counties and incorporated places.

Arizona.—Counties, incorporated places, school districts, drainage districts, irrigation districts, fire districts, and electrical districts.

Arkansas.—Counties, incorporated places, school districts, drainage districts, levee districts, road districts, and water districts.

California.—Counties, incorporated places, school districts, drainage districts, irrigation districts, levee districts, road districts, library districts, lighting districts, fire districts, mosquito abatement districts, sanitary districts, water districts, cemetery districts, sewer districts, junior college districts, promotion districts, and reclamation districts.

Colorado.—Counties, incorporated places, school districts, drainage districts, and irrigation districts.

Connecticut.—Counties, incorporated places, school districts, towns, fire districts, sewer districts, lighting districts, fire and sewer districts, and association districts.

Delaware.—Counties and incorporated places.

District of Columbia.—Incorporated place.

Florida.—Counties, incorporated places, school districts, drainage districts, road districts, haulover district, bridge district, boat-course district, and other special districts.

Georgia.—Counties, incorporated places, school districts, and drainage districts.

Idaho.—Counties, incorporated places, school districts, road districts, lighting districts, irrigation districts, and drainage districts.

Illinois.—Counties, incorporated places, school districts, townships, drainage districts, road districts, park districts, sanitary districts, sanitary and levee districts, and drainage and levee districts.

Indiana.—Counties, incorporated places, school districts, and townships.

Iowa.—Counties, incorporated places, school districts, townships, and drainage districts.

Kansas.—Counties, incorporated places, school districts, townships, and drainage districts.

Kentucky.—Counties, incorporated places, and school districts.

Louisiana.—Parishes, incorporated places, school districts, drainage districts, levee districts, road districts, navigation districts, criminal districts, and farm demonstration districts.

Maine.—Counties, incorporated places, towns, bridge districts, and pier site district.

Maryland.—Counties, incorporated places, and sanitary districts.

Massachusetts.—Counties, incorporated places, fire and water districts, and village district.

Michigan.—Counties, incorporated places, school districts, and townships.

Minnesota.—Counties, incorporated places, school districts, and townships.

Mississippi.—Counties, incorporated places, school districts, levee districts, road districts, and drainage districts.

Missouri.—Counties, incorporated places, school districts, townships, drainage districts, and road districts.

Montana.—Counties, incorporated places, school districts, drainage districts, irrigation districts, road districts, and fire districts.

Nebraska.—Counties, incorporated places, school districts, townships, drainage districts, irrigation districts, road districts, metropolitan utilities districts, sanitary districts, and miscellaneous districts.

Nevada.—Counties, incorporated places, school districts, drainage districts, and irrigation districts.

New Hampshire.—Counties, incorporated places, school districts, towns, and precincts.

New Jersey.—Counties, incorporated places, school districts, and townships.

New Mexico.—Counties, incorporated places, school districts, irrigation districts, and drainage districts.

New York.—Counties, incorporated places, school districts, towns, and fire districts.

North Carolina.—Counties, incorporated places, school districts, drainage districts, road districts, hospital districts, and bridge districts.

North Dakota.—Counties, incorporated places, school districts, townships, park districts, and library districts.

Ohio.—Counties, incorporated places, school districts, townships, and conservancy districts.

Oklahoma.—Counties, incorporated places, school districts, townships, and drainage districts.

Oregon.—Counties, incorporated places, school districts, road districts, port districts, water districts, irrigation districts, and drainage districts.

Pennsylvania.—Counties, incorporated places, school districts, townships, and poor districts.

Rhode Island.—Incorporated places.

South Carolina.—Counties, incorporated places, school districts, and drainage districts.

South Dakota.—Counties, incorporated places, school districts, townships, and drainage districts.

Tennessee.—Counties, incorporated places, school districts, and drainage districts.

Texas.—Counties, incorporated places, school districts, drainage districts, irrigation districts, levee districts, road districts, navigation districts, and water-improvement districts.

Utah.—Counties, incorporated places, school districts, drainage districts, irrigation districts, and conservation districts.

Vermont.—Counties, incorporated places, school districts, towns, and fire districts.

Virginia.—Counties, incorporated places, and drainage districts.

Washington.—Counties, incorporated places, school districts, townships, drainage districts, levee districts, road districts, port districts, park districts, water districts, irrigation districts, and commercial waterways districts.

West Virginia.—Counties, incorporated places, and school districts.

Wisconsin.—Counties, incorporated places, school districts, towns, and drainage districts.

Wyoming.—Counties, incorporated places, and school districts.

TABLE 1

Taxes, licenses and permits, and special assessments of States, counties, incorporated places, and specified civil divisions.—In Table 1 is presented a summary of receipts, total and per capita, from specified sources, by States, counties, incorporated places, and all minor civil divisions having power to levy and collect taxes. The total amount of receipts from sources specified in the table for the use of all taxing divisions was \$4,220,912,000, or an average of \$38.82 per person. Of this amount, 78.7 per cent was derived from the general property tax, 6.1 per cent from special taxes, 0.7 per cent from poll taxes, 9.7 per cent from licenses and permits, and 4.9 per cent from special assessments.

The States were the chief beneficiaries of the receipts from special taxes and from licenses and permits; and the incorporated places, from the general property tax and special assessments. In only 9 of the 48 States do the counties share in the receipts from special taxes. The nature of these taxes and the amounts are shown in detail in Table 6.

Participation of the different governments in receipts from taxes.—The relative extent to which the different classes of civil divisions participate in the administration of government, so far as is indicated by their receipts from taxes, is brought out by data in the total column of Table 1. In the aggregate, the States received 20.6 per cent of all taxes, the counties 17.7 per cent, the incorporated places 38.5 per cent, and other civil divisions 23.2 per cent. This distribution represents a cross section of the extent of the participation of the governmental units of these classes in the administration of public affairs, as represented by taxes levied and collected primarily for them. In Rhode Island all taxes collected were revenues of the State and incorporated places; in Connecticut the counties, which in most States have important functions, received only 1.8 per cent of all taxes collected; in Alabama and Delaware all of the functions of government were performed by the State, counties, and incorporated places; in Massachusetts and Virginia the specified civil divisions received very small proportions of the taxes collected in the State; while in 18 States—Arkansas, Colo-

TAXES COLLECTED

4

rado, Illinois, Indiana, Iowa, Kansas, Mississippi, Missouri, Montana, Nebraska, North Dakota, Ohio, Oklahoma, Pennsylvania, South Dakota, Vermont, Washington, and West Virginia—the specified civil divisions received in taxes larger amounts than were assigned to the States, counties, or incorporated places. The amounts of taxes received on account of levies for the different classes of divisions do not, however, measure the relative participation of the divisions in the administration of government. In most States a large percentage of the taxes collected on levies for the States and for counties are for the support of public instruction and are turned over as subventions to the local communities for application to the support of schools and libraries, the local communities administering these functions through the governments of school districts or incorporated places. Likewise taxes received by States and counties from which subventions are made for independent road districts are shown in this report as State and county taxes, and the same condition prevails in regard to a number of other classes of independent taxing districts.

Education has long been recognized as necessary to the stability of the State, in the larger meaning of that word. It has been fostered for many years by all States of the United States, for a number of years by the National Government through the statistical and advisory services of the Bureau of Education, and more recently by subventions from the Federal Treasury in support of educational activities administered by the States. The purpose of this report is to show the amount of taxes collected from the people, and to a limited extent the organization of government for taxing purposes. The report, as stated above, does not show even approximately the amounts of taxes expended for the specified functions of government as indicated by the titles of the civil divisions shown under the several groups. This would require the allocation of taxes and income from permanent funds to the civil divisions that finally administer their expenditure, and a full statement of the properties acquired and services secured in any given year would require also the details relative to the borrowings of the several units. Nearly one-fifth of the expenses, or costs of administration and upkeep, of schools and libraries in cities of over 30,000 inhabitants are met from subventions from States and counties, as is shown by the reports of the Census Bureau on the finances of those cities and the school activities therein, the educational functions being administered in some cities by the city governments and in others by independent school districts.

Diagram 1 shows graphically the relative extent of governmental participation of the classes of governments in taxes as represented by taxes collected on levies made specifically for their benefit, being based on data found in the total column of Table 1.

DIAGRAM I.—TOTAL TAXES, LICENSES AND PERMITS, AND SPECIAL ASSESSMENTS OF STATES, COUNTIES, INCORPORATED PLACES, AND SPECIFIED CIVIL DIVISIONS, BY STATES: 1922

TABLE 2

Taxes, licenses and permits, and special assessments of States.—Table 2 presents by geographic divisions the amount of specified revenues, total and per capita, collected for the use of the State governments. The States as a whole derived 40.1 per cent of their revenues as specified from the general property tax, 22.6 per cent from special taxes, 1 per cent from poll taxes, 35.2 per cent from licenses and permits, and 1.1 per cent from special assessments. For the States as a whole the average collection per person of general property taxes was \$3.22. The two States showing the highest average from this source were Arizona and Nevada with \$15.74 and \$16.73, respectively. Those with the lowest average were North Carolina, \$0.48, and Oklahoma \$0.54. Comparatively few States share in the receipts from poll taxes or from special assessments. Next to general property taxes, the largest receipts were from licenses and permits. The States of Pennsylvania and California do not share in the general property tax, the amount shown for California representing delinquent taxes. Beginning with 1922 North Carolina discontinued the levy of the general property tax for the use of the State government.

TABLE 3

Taxes, licenses and permits, and special assessments of counties.—Table 3 presents, by States, for each of the counties of the 47 States whose counties are taxing divisions, the amounts of specified revenues collected for county purposes. By far the greater portion of county revenues is derived from the general property tax, 92.3 per cent of the revenues reported being derived from that source. Of the remaining revenue, 0.5 per cent was derived from special taxes; 1.2 per cent, from poll taxes; 3.4 per cent, from licenses and permits; and 2.6 per cent, from special assessments.

Receipts from special taxes are reported for the counties of 9 States; special assessments, for those of 15 States; poll taxes, for those of 26 States; and licenses and permits, for those of 43 States.

TABLE 4

Taxes, licenses and permits, and special assessments of incorporated places.—Table 4 presents, by States and by population groups, the total and per capita amounts of specified revenues collected for the use of cities, towns, villages, and boroughs. These incorporated places depend upon the general property tax for about two-thirds of their revenue. Of the \$1,627,535,000 collected from the specified taxes shown in Table 4 for all incorporated places, 82.6 per cent was derived from the general property tax, 3.2 per cent from special taxes, 0.4 per cent from poll taxes, 4.5 per cent from licenses and permits, and 9.2 per cent from special assessments.

It will be observed that the per capita contributions of revenues of these classes increase with the size of the cities. This is principally due, of course, to the more extended and intricate organization of functional activities in the larger cities. This general tendency is illustrated by Diagram 2 which follows.

DIAGRAM 2.—PER CAPITA TAXES COLLECTED, BY INCORPORATED PLACES, BY POPULATION GROUPS: 1922

TABLE 5

Taxes, licenses and permits, and special assessments of specified civil divisions, by States.—In Table 5 are shown, by States, the total receipts from specified sources of revenue levied for the use of civil divisions other than States, counties, and incorporated places having power to levy and collect taxes. For the three States omitted from this table—Alabama, Delaware, and Rhode Island—certain independent taxing districts are authorized by law, but no collections for them were reported. For the four States in which school districts are not listed—Maine, Maryland, Massachusetts, and Virginia—the schools are under the administration of some other governmental unit, as the county in Maryland, the town in Maine and Massachusetts, and county and cities in Virginia.

In certain other States the schools are administered partly independently and partly under the administration of some other governmental unit, the amount of taxes shown for schools, therefore, is not in those cases a complete statement of the amount of taxes collected for school purposes. The same condition prevails, also, in respect to certain other districts.

These specified districts as a whole, like other taxing units, derive the greater part of the revenues reported from the general property tax, 96 per cent being from that source.

TABLE 6

Inheritance, income, and other special taxes.—Table 6 presents, by States, the total and per capita amounts of inheritance, income, and other special taxes collected for the use of States and minor civil divisions. In 28 of the States the counties, incorporated places, and specified civil divisions do not participate in inheritance taxes, income taxes, nor any of the other special taxes, the State receiving the entire amount collected. In such cases only one line of the table is devoted to the State. Data for the District of Columbia, in which there are no subordinate governmental units, are likewise shown on a single line. For States in which governmental units other than the State received a part of any of these special taxes, a line is used for each class of units participating, and the total is shown opposite the name of the State.

Inheritance taxes.—Inheritance taxes are collected in all the States except Alabama and Florida; there is no provision for such taxes in the District of Columbia. In 37 States all receipts from the inheritance tax are turned into the State treasury; and in Nebraska all such receipts are revenues of the county. The State shares the tax with the counties in 5 States—Kansas, Minnesota, North Dakota, South Dakota, and Wisconsin—with the specified civil divisions in Montana, with incorporated places and specified civil divisions in Ohio, and with incorporated places in Virginia.

Income taxes.—Income taxes are collected in only 11 States. Receipts from this source are exclusively for State purposes in 8 States—Delaware, Mississippi, Missouri, North Carolina, North Dakota, Oklahoma, South Carolina, and Virginia; in Massachusetts and New York the State shares them with incorporated places and specified civil divisions; and in Wisconsin, with the counties, incorporated places, and specified civil divisions.

All other special taxes.—The amounts included in the column "All other" include such receipts as those from taxes on stock of banks and other corporations, on the valuation of life insurance policies, on mortgages at the time of their registry, on vessels at a specified amount per registered tonnage, and on grain at a specified amount per bushel. The State of Washington collects no such taxes. In 34 States all special taxes other than those on inheritance and incomes

accrue to the benefit of the State treasury. The State shares such taxes with incorporated places and specified civil divisions in Connecticut, Maine, New Hampshire, and New York; with incorporated places in Delaware, Massachusetts, Missouri, and Wisconsin; with counties and incorporated places in Maryland, Michigan, and Minnesota; with specified civil divisions in Mississippi; and with counties, incorporated places, and specified civil divisions in New Jersey.

TABLE 7

Taxes, licenses and permits, and special assessments of States, counties, and incorporated places having a population of over 2,500, by States: 1922 and 1912.—Table 7 presents, by States, for the years 1922 and 1912 the total and per capita amounts of specified revenues collected for the use of States, counties, and incorporated places of over 2,500 population. It is not possible to make a comparative statement for all incorporated places for the reason that in the preparation of the report for 1912 the inquiry was not extended to incorporated places having a population of less than 2,500.

Diagram 3.—TAXES, LICENSES AND PERMITS, AND SPECIAL ASSESSMENTS OF STATES, COUNTIES, AND INCORPORATED PLACES HAVING A POPULATION OF OVER 2,500: 1922 AND 1912

The grand total of specified receipts for the year 1922 shows an increase over that for 1912 of \$1,680,623,000, or 114.8 per cent. The increase in the general property tax was 112.8 per cent; in special taxes, 198.4 per cent; in poll taxes, 89.1 per cent; in licenses and permits, 132.6 per cent; and in special assessments, 47.3 per cent.

As a whole, the States show an increase in specified revenues of 183 per cent; the counties, of 142 per cent; and incorporated places of over 2,500 population, 80.3 per cent. The greatest increase shown is that of special taxes in counties, being 397.8 per cent. Next in importance is the increase in receipts from licenses and permits for States, 240.5 per cent. This is followed closely by the increase in special taxes for incorporated places of 225.4 per cent.

Diagram 3 shows graphically the relative amounts of tax received from the specified kinds of taxes by States, by counties, and by incorporated places in the years 1922 and 1912.
