# CORRESPONDENCE WITH GOVERNMENT IN REGARD TO THE AGRICOLTORISTS' RELIEFACT. 

$\qquad$
Na. 16 of 1891.
Sarfajasle Sabia Roomb
Poona, 16th Jarvary 1891.
To
A. C. Looall Esquire.,

Ag. Under-8ecretary to Gorernment, Bombey.
$8 i{ }^{2}$
In jour letter to me No. 6613, dated 28th November 1890, you wrote that as the Report of the Special Officer appointed to enquire into the working of the Agricultarists Relief Act wiss then under the consideration of Government, Government could not comply with the request of the Poonm Sarrajanik Sabhe to be sapplied with a copy of the Report . The Sabbe now gathers from news-papers that the Ropart has been considercd both by the Local Government and the Goremment of India, and that with their remarks thereon it has now been forwardod to the Socretary of State. I have, therefore, again to repeat the request of the Sabba to be kindly lavoured with a copy of this Report, as the Sabhe is very axxious to sabmit a representation of its views in the matter, particularly with regard to canciliation and village Mansiffs belore final orders are passed thereon.

I have the bomour to be,
Your most obedient servant,
G. K. GOKHALE,
Honorarj Secretary, Pcons Sorrajnir Sabha.

From

> A. C: Logas Esquire., Ag. Undép-Secretary to Government.
To
The Honoraby Secretary, Poona Sarvajanik 'Sabha. Sir.

I am directod to acknowledge the receipt of your letter No. 16, dated the 16 th ultimo, zeiterating your request to be supplied with a copy of the Report of the Special Officer appointed to enquire into the working of the Dekkan Agriculturists Relief Act.
2. In reply I am to inform you that the Report is still under the consideration of the Government of India and that a copy cannot, therefore, be given.

> I have the honor to be, Sir, Your most obedient servant, A. C. LOGAN, Ag. Under-Secretary to Government.

No. 180 of 1891.
$\therefore$ Sarwajanik Sabha Rooms, Poona, 18th. March, 1891.
To
The Secietary to the Govirnment of India, Home Department, CALCUTTA.
Sir,
With reference to your letter dated 20 th October 1890, referring to the Bombay Government for copies of the Report of the Special Officer to enquire into the working of the Agricultural Relief Act and connected papers, I an to renew my request to the Government of India for the said copies as the Bombay Government has not yet faroured the Sabha rith'them, although the matter is purely judi-
cial and concerns the welfare of the indebted agricultarists in the Deccan. The Sabha trusts that no action will : be taken by the Supreme Government in the matter without allowing the Sabha an opportunity of oxpressing its views regarding the several provisions of the Act, particularly those relating to the Conciliation and Village Munsiff aystems which have worked for the last ten years so beneficially to the Deccan Ryots.

I have therefore to respectiully request the Government of India to be so good as to direct the Bombay Government to sapply the required copios to the Sabha at an early date.

> I have the bonor to be, Sit,

Your most obedient servant, G. K. GOKHALE, Honorary Secretary Poons. Sarvajanik Sabha,

No. 528.

## From

> P. G. Melitos Esquirc, Under-Secretary to the Government of India. To

Tiim Honobary Secretaky - Poona Sarrajanits Sabha, Poons,

I am directed to inform you that your letter No. 130, dated the 18th oltima, askiog to be fotnished rith copies of the Report of the Special Officer appointed to eqquire into the working of tho Dekkan. Agriculturista Relief Act and connected papers has been formanded to tha Government of Bombay for disposal.

> I have the hooanr to be, Sit,

Your most obodiont servent, \% P. G. HELITUS, Under-Secretary to the Govarawent of Indian .

I have the honot to be,
$\therefore \quad$ Sir,
Your Most Obedient Servant, G. K. GOKHALE, Secretary Poona Sarvajanik Sabha.

> SARvajaniE SABBA Roons, ${ }^{\text {Poona 17th March } 1891 .}$

To.

> The Bight Hohovrabie VISCOUNT CROSS, G. O. B.
> Her Majesty's Secretary of State in Conncil for India.
> The humble memoriat of the Secretary of the Puona Sarrajanik Sabha.

## Moat hombly showeti :

That the Managing, Committee of the Poons Sarrajanik Sabha, an Associstion established here twenty years ago for representing to Government the wanks and wishes of the people of the Deccan, have been given to understand that the Government of Bombey have sulo. mitted to your Lardship-in-Council the Report of the Special Office: appointed by them to report on the warking of the Decian Agrieui-
turista Relief Act with a recommendation that the Conciliation aystem should be abolished. Your Lordship's memorialist regreta to state that the report of the Special Officer and the recommeadation of the Bombay Government thereon have not been pablished, neither hare copies of the same been supplied to the Sabha, elthough application for the same was made several times both to the Bombay Government and the Government of Indis.

Your Lordship's memorialist therefore hambly requests that jonr Lordship will be so good as to direct the Bombay Government to favour the Sable with the oopies referred to.

In conclusion your Lordship's memorialist begs to stato that the Conciliation and Village Munsifi systems have proved an inoulculable blessing to the indebted agricultarista in the Deccan by belping to bring about an amicable settlement of the claims of their crediton in a convenient and economical way, and to request that the considaration of the recommendations of the Local Governmentin regard to them mas be postponed until the Sabha is given an opportunity of expressing its views in the matter.

No. 3270 of 1891.
Jodicial Department. Bombay Castle, 17th Jume 1891.

I ane directed by the Goversor-in-Coancil to acknowledge the recoigt of jour letter 8Va, 129, dated the 17th March 1891, forwanding
a memorial addressed by the Poons Sarrajanit Sabba to Her Majesty's Secretary of State that this Government may he directed to sapply the Sabla with a copy of Mr. Woodburn's Special Report on thie operations of the Deccan Agriculturists Relief Act; 1879, and of the recommendations of this Government thereon.
2. In reply I am, under instractions from the Government of India (to whom the memorial was forwarded for transmission to the Secretary of State), to forward to you herewith a cong of Mr. Woodburn's yeport and to inforin you thit to copy of the recommendations of this Government on the Report cannot be commanicated to the Sables at this stage, as it is contrary to asuge to furnish the pablio with copies of the confidential opinions of: a Local Goverament while they are under the consideration of the Government of Indis or of the Secretary of state.
3. I am to add that ae the Sabha's principal request has been complied with, the Government of India will not forward their memorial to the Secretary of State, bat that the Sabha is of ecurse at liberty to apply again.

> I have the honour to be, Sir,
> Your Most Obedient Sorvant, A. C. LOGAN, Acting Under-Secretary to Government.

## APPRE日ENDED DEFICIENGY OF RAINFALL..

No. 275 of 1801.

> Sarvajanui Sabia Rooss,
> Poona, 23rd suly 1891.

> THE SECRETARY to the Government of Bombay,

Sir,
I am directed by the Managing Committee of the Poona Sarvajanika Sabha to subpit for the favourable consideration of Govern. ment the following representation on the subject of the desirability of faraishing to the puble faller information in regard to the rainiall,
the condition of agricultural stock, the progress in agricaltaral operntions, and the rise in prices than is found in the summary of the seacon reports published every week in the Government Gazette.
2. Government are aware that this year's rainfall has been onusually scanty throughout the Presidency and in most parts of the country there has beea virtually no rain-fall. To all appearances, the conditions of 1876-77 are being to a certain extent repeated this year over an arem larger even than. that affected in that calamitoas jear. The public mind is naturally filled with evil forebodings and the Committee of the Babha feels, that. Government themselves cannot be free from the anxiety which is so universally felt. Under these circumstances the Sabhe feels it to be its duty to suggest that Government will be pleased to furnish in their season reports fuller particulars in regard to the matters specified above than what ane given at present.:
8. The present weekly btatement gives general information about the condition of oach district only. It is needless to say that this description cannot convey an sccurate ilies in regard to the state of things in the different Talukas in each district. Of course Government inust be teoeiving weekly returns from each Talaka and there can therefore le no difficulty in pablishing particoalre about each Taluka till all cause for anxiety is over.

4: The Sabha respestfully requeste that this additional informstion should be farnished uuder the following fuar heads as a oupplement to the,weekly summery :-
(11) The rain-fall during the week in each Tuluka.: :
(2) The total rain-toll up to date.
(3) The averige for the past 5 jeirs up to data.
(1) The prerailing prices of fodder and the chief food for staplo in each Taluta.

Such information will ensble the public to form a more eccurate forecast of the proposals, and lessen mach of the anxiety mom felt. It vill aiso help to allay panica which often cocounge the deelers in grain aad fodder to paice prices.
6. If the secesda proves to be as enfirourable as the present apperracoses indicate, Governmeat will no dopbt taks steps to organive ubir lamine raliof agracy and to start temponsery reliaf works,
6. Thare is get time to hope thet thinge may not cone to this
pass, but in the meanwhile, the fuller information, suggested above, will goa great way to allay public anxiety and, if possible, give confidence to the pablic mind.

- I have the honor to remain,

Your most obedient servant, G. K. GORHALE, Hon. Secretary P. S. Sabha

> INTERNATIONAL CONGRESS OF HYGIENE AND DEMOGRAPHY.
> London August 10th to 17th 1891.
: President--H. R. H. The Prince of Wales K. C. Offees-20, Hanover Square, London, W.

February 1891.

## Thb Secritiary to the <br> Poons Sarvajanik Sabhs.

Sir,
L beg to forward you a copy of papers relating to the International Congress of Hygiene and Demograpy, which will be held in London from August 10th to 17th next, under the Presidency of His Royal Highness the Prince of Wales, who will open the Congress in person.

As you will see from the enclosel papers, the Congress will be an important one in Sanitary Science, owing to the variety and range of subjects which have been proposed for discussion ; and as it will be the first International Congress of the kind which has met in London, His Royal H:ghness the Prince of Wales is desirous that the Congress shall be worthy of the great country in which it will assemble.

The organising Committee therefure venture to express the hope that your association will nominate Delegates to the Congress, and
will favour its interests in Poona, in such way as may seem to the Association adrisablo.

$$
\underset{\text { Sir }}{ } \mathbf{I}_{\text {am, }}
$$

Your obedient gervant,
G. V. POORE, Hon. Sec. Gen.
P. S.-The papers relating to the Congress will be forwarded by book poptr.

> Tey Sucrecaey oy Ytr Organizing Committee of the Jth International Congress of Hygipne and Demography,

Sir,
We have deen directed by the Managing Committee of the - Poona 8arvajanik Sabha to acknowledge with many thanks your in vitation to the Sabha to send delegates to the 7th International Congress of Hygiene and Demiography which it is propesed ir hold in Loodon in coming Angust. The Sabha duly appreciates the high honour done to it by the Organizing Committee and bas great pieasure in assuring you that it will do all that lies in its power to promote the objects of the Congress in India. Considerations of times, distance and expense, however, debar the Sablia from sending delegates Irom out of its own body to attend the Congrese, and thus, we regret to aay, the work of this Sabha in this matter will be mainly confined to moring the Looal Government to officially send delegates on behalf of the Presidency, and to spreading through the Sabha's machinery knowledge of the aimp, objects and nork of the Congress amourg the people of the Deccan. The Salban will also request Iudian gentlemen ot present reaiding in England, as also rotired AngloIndians who have taken iuterest in the sabha's work, and notably sir W. Wedderburn, to attead the Congress on its-belalf. Ihanking you once more for the honour done by you to the Sabla,

> We beg to remain,
> Sir,
> Your most:obedient servante,
> G. K. GOKHALE,
> K. P. GOUBOLE,
> Gecretaries Pocna Sarrajunit Seblen.

## THE HYGIENIC AND DEMOGRAPHIC ?CONDITION OF INDIA.

The Hygienic and Denaggraphic condition of the people of India may be briefly described under the following heads:-

Water oupply. Water Suppily in Indis is the most important factor in the cansation of disease. The water supply in this country is, on the whole, scanty and newholesome. The peoplo are mostly indifferent as to its parity and quantity. The supply is derived from wells, embanked rivers, atreame, rivers, ponds, tanks \&o. *The wells are built, with or withont steps. Some wells.are provided with protecting parapets, and some aro withont them, allowing sarface water to go in. Tho water from tho welle with steps to descend is often spoiled, as the people wash themselves and wash their clothes iq thom and take the same water for drinking and culinary parposes. This water is thns always - impure and contains ova of guineaworms and gives tise to fevers, diarrboea, dysentery and intestinal galinewworms. The water drawn from wells without eteps is zenerally pare. The situation of the wells is generally Cualty, especially in the towns and cities, where the privy and the well are oftex very close to one another so that percolations from the privy into the well aro not unfrequent. The water supply from river, streams and embanked rivers

[^0]is also contaminated and impure. People generally use the water without filtering it. Some indeed strain it through cloth when muddy, or they add a little alum to it in order to clear it. The fruit of Strychnos Potatorum is also used to purify the water when muddy. The use of these purifying agents is however an exception, and not the rule. In large towns and cities, which are very few in India, some attempt is made to filter the supply of water, but even here. the operation is marked by great carelessness. The water from the suidller rivers is generally unwholesome. It contains impurities of various : kinds due chiefly to the imparities of the surface. The supply from the larger rivers, which have sandy. beds or rocky banks, is pretty pure jn the fair weather; but streams and rivers', with maddy banks and beds, and those others which run through jungles and receive large quantities of decayed leafage, are often fraitful sources of all manner of disorders and diseases. Their water contains large quantities of suspended matier, chiefly. vegetable, hence the ase of this water for drinking and cooking purposes causes fevers, diarrhma, dysentery. skin, diseases, calculi \&c. Intestinail worms, guinea-worms \&c. result generally from the use of pond, tank and well water. The water of na. tural ponds and tanks is generally anhoalthy owing to the large quantities of vegetable and animal and other surface impurities which flow into them. The water from embanked rivers and streams is also impure from surface impurities; bat when it is carried a long way off in canals and exposed to the air and sun, it becomes comparatively purified owing to the deposition of the suspended matter by gravity and friction along its course. In India, many large towns, cities and villages are mostly situated along táe banks of rivers and rivulets. The sewage and other impurities from the habitations," asbes of cremated dead bodies, animal refuse and trade fose are allowed to flow into these
the poor resourees which are available, the entire extirpation of the evils due to bad selection of sites would be too Herculean a task to be attempted with success in a generation or two. The ground is and round abont towns and villages is always uneven, and rendered more so by the people by digging pits from where to take earth for building hosses. No caro is taken to fill these boles, and they become receptacles for foul water, filth, garbage and ordure, and the waste waters of the cook and bath rooms. These inequalities in the ground are generally resorted to by the people for natural púrposes.

Roads. All villages and towns have roads of some sort, but their shape and width are generally not in proportion to the requirements of the place. Very fow are open thoroughfares permitting free ventilation; such of the cities as are wallod for proleotion against inroads-and their number is not small, - : are often nothing better than hot-houses or enclosares of stagnant air by reason of blocked up roads and the pancity of approaches left for free circulation from withoat. The streets are generally not atraight and wide enongh to allow of froe ventilation. The Gbvernment have constructed good trank lines of roads, and the Local Boards and the Municipalities have of late been exerting themselves to make some good roads within the limits of their local jurisdiction; but sach attempts are generally directed more towards the metalling of roads than towards making them straight and sifficiently wide. The Goverament and the local anthorities have been encouraging the planting of trees along the road sides. Thej are andoubtedly a comfort to the way-farer intho bot season, bat it may. be doabted Whetber they are not positively barmfal in towns, oities andvillages, as they injure the road surface by droppings from their learen, and their shado keeps the roads from drying properly. This imperfeot drying promotes the decomposition of organio
matter, which is always found to a very large extent on thoroughfares, and the consequent exhalation of effinvia, Another great defect of Indian roads and streets is that they are constantly sending out clouds of dust in all directions to the great annoyance, and often affecting the health, of both housos: holders and way-farers in diverse ways. This great ovil is partially met by watering the streets in small places by private efforts, and on a large scale in many Municipal towns. Roadwatering, however; is not an unmixed good, as it promotes the decomposition of all organised matter, in which respect the warmth of the Indian atmosphere plays no unimportant part.

Diellings. Even in large Presidency towns and oities, rules for the proper construction of houses da not exist, and: wherever they do, they are seldom observed or enforced. The necessity of choosing a healthy site for building a honse, and of providing facilities for the free circulation of air; and effective drainage is very seldom recognized and attended to in house-building operations, They are generally built in blocks elose to one another so that the houses receive fresh air only. from one side. The width of streets and lanes is often so small as not to admit of free light and air into the dwellings. The only ventilating openings in these babitations are small-sized doors and:windows, which too often admit only stagnant air, loaded with all sorts of impurities, and never drive it out. In country places, houses have got jards boanded by a brick or mud wall, which keeps the inside air very foal. A large number of houses in these places are very old and ricketty. Over a large part of the country, there are no tiled and sloping-roofs, but- a flat layer of earth over-tops the house and presses it. down. Openings in the way of sky lights in the roof to allow. the fonl air and smoke to pass out are seldom seen. In the Kon. kan and near the Gbsats, in the front or back of the houses
there are generally to be found dense masses of vegetation, the delight of tha owner of the house. "There aro the cocoannt, the jock, the mande and other fruit trees, and creepers coming downto *nthin'five feel of hégrond, and displaying; within their meshes gourds of various kiods. Where open apaces exist round about a bouse, they are very often arrounded by a fonce of prickly-pear, $s$ wild case growirg in laxuriance and inviting or conooaling filth and rabbish of every kind. The plantrin toncruad Alu ( arum campanulatum) aro the great favoarites of the poople. In short, any thing thut cain bo rearod fop" food or fuel in cherished and stored within the compound. It need not be said that all this vegetation koeps the soil damp, and near the,
 manure, or dung-oakes fixed to the wall to dry for fuol pur posen. To crown the whole, cattle are kept, tied in verandas or in the inside of dwellings, and a privy, aodion with organic filth, is located either ia the veranda or some other part of the house. In many cilies, the privien are found near the entrance of the house, and are ranged on boti sides of the streete In many big towns in Gujerat and the Deccan, a latrine can very often be seen in front of houses with a cookroom by its side, and a bed-room-over it. The sanitary condition of the hata of the poor is even worse. They measure hardly fifteen by ten feot, are low, without plinth, deficient in light and ventilation, damp, closely, thatched, the walls and floors made of mod, with only one door for ventilation and ingress, dere the occeppant lives with his family of about half a dozen heads with also a fow heads of cattie and poultry: "Tho Zolitary enirance doar is al-- arjs closed at niglit, apd if there ss juckily any crevice if tha wall, it is carefully blocked üp in case of sicknessi Thero is turaje e place resarred eonewhere close t the but or the poor or the dwelling of the well-to-do, which serves as a pit in which all cattle :
dung, abhos and house rubbish is collected for one whole year to bè removed to the field for putposes of mañoring. "Thase ithat have no fields of their own derive a small income from this stufy n The waste water of the housestoaded wif inpurties Yrom washings of clothe, and water from cooking and urinaries, and ablation water from privies where any exist, is allowed to soak inta a pit close to the plinth, and thus Folnte the groand in and outride the dwelling. The question of tiforsinposal of this dirty water is one which does not admit of an easy odntion. Besides, the difficoilties created by the inveterate habits of the peopla; and their want of appreciation of the benefits of im-. proved sanitation, there is the difficalty caused by the extremes

The removal of excreta. By this is meant solid excrement. from bowels and liquid from kidneys. The people of this conntry, being great consumers of starchy articles of diet, pass every day a much larger quantity of solid fæens than the standard of two and a balf ounces mentioned by English writers on Hygiene. The present writer, when Health Oficer of Poona, found that for all ages and botu sexes, the average excret a per day of twentyfour hours was not less than ten onnces avoirdapois of semi- عolid. frecus. These investigations have been confirmed by Dr. Hewlett of Bombay and Dr. Faweett of the Alipur Jail. The removal of both solid and liquid human escrements is a questio vecata with those who hare to deal with the conserraney of Indian towns and villages. As stated above, holes and inequalitios in the ground round about dwellings are resortod to fof parposes of evacuation. River banks, 'rivulets, and water coarras are stmilarly ased for this purpose, Thase that have travellof in aidia conld not have $f^{\prime}$ failed to seé every morning a number of people tarn oat of a city or village forthis putppose with a small pot fall of water in their handi. The practice, insanitary and indecent as it is, is
good in one respect, viz, that it removes a large quantity of excreta outside the city or village, which would otherwise bave pollated the soil, water and air of the place. The local authorities shonld take care to provide outside large cities suicable latrines, or if funds do not parmit, dig sballow trenches, screened for decency's sake, and set them apart for men and women separately. These trenches moreover should be to the leeward of the place they are intended to serve, and closed, when they aro half full, with fresh earth, and now ones dag by the side of the old. This experiment has been repeatedly tried and found to answer well. The plot of groand so atilised shoald be ploaghed after six months, or, if water is not available, before the monsoons every year, and garden vegetables planted thereon. The crops thus reared are very abundant and grow vigoronsly and repay all trouble and expense. One or two sowings render the ground again fit for similar use. This arrangement, how. ever, does not remove all difficalties, Children will not go to these places which mast be located at some distance from inhabited areas and yards, and holes will be resorted to at night. Removal by hand mast therefore be had recourse to to prevent the soil, water, and air from getting contaminated. The arrangements of trenches will suit rural areas only; but the case of populous cities is quite different. In these places there are genecally privies attached to esch house. Of these the most objectionable one is the ' well privy;' which in many places still exists attached to the dwellings of even well-to-do people. It is nothing bat a pit sunk in the floor of the honse for receiving haman excrement, which is after long intervala or never removed. It need not be observed that these pits contaninate the vells in the city, and fill the atmosphere with their pestilential gases. There are other Linds of privies in which are placed receptacles which are general-

Iy bamboo baskets. These allow of a great deal of percolation, It has been ascertained with tolerable accuracy that nearly one half of the contents of the baskets sink into the soil anderneath before they are emptied. The emptying is a most filthy operation. The scavengers are generally in the service of the house owner, and are a most troublesone lot of people to deal with. Wherever Manicipalities exist, they are somewhat amenable to discipline, yet they are; as a class, most eareloss, and therefore the removal of filth in large Manicipal towns is always very indifferently done. They have been often detected emptying their loads in rat holes or in some rabbish heaps: The scavengers have a monopoly of their profession ; no other caste, however low, will descend to compete with the Bhangees, who are generally natives of Gujerat or the N. W. Provinces. In places where their number is very small, the people are ontirely at their mercy. The slightest attempt to exact york from them is answered by a strike which means stagnation of filth for days together. Notwithstanding these defects, the hand-removal system of honse to house service, when placed under the supervision of ennservaney Inspectors and their assistants, hats effected great improvements in the sanitary coindition of many large townswhere it has been introduced. The system is very costly, and therefore difficalt to be introduced in all places. It has been proposed to induce the Bhangees to come and settle in places where their services are required by making gifts to them of lands fer coltivation and building. The proposal, nodonbt, is a good one, and deserves a fair frial.

The dry earth system has been often suggested as the best solution of the difficalty. Howsoever successful it may be in asylums and jails where perfect control exists, it will not
do for all Indian towns. The quantity of dry earth required woald be enormons to take ap ten or twelve ounces of solid and forty ounces of liquid excreta, together wilh about a pint of wator used for ablation per head of popalation. The cost of collecting, dr, ing and distribating earth required to dry this large amount of solid and liquid filth, and of its ultimate removal and renewal, would be simply prohibitive. Another mothod suggested is the System Goux. This system will not, however, do for largo cities. The difficulties in the way of procuring sufficient absorbing and disinfecting material for a large quantity of liquid filth in Indian closets would, wilhout doubt, be very great, leaving aside the question of costs and the altimate disposal of the contents of the tabs.

In the case of the larger towns where sufficient money and an ample supply of water are available, the water carriage system of removing excreta is the best. The experience of that system in Calcotta and Bombay, thongh even in these times the sewers are incomplete, jastifies the conclasion that water elosets of simple constraction best sait the prejadices of the natives of this country. Natives have an aversion to the person of a scavenger and safer in consequence a good deal of filth to collect in and aboat their dwellings. The system of removing excreta by water floods in undergroind drains and semers is the cleanliest and the most economic system in the long ran. It pleases one to find that the foolish opposition that orice threatened to be formidable against the system of noder-ground drains is fast dying out. It had its origin in overdrawn descriptions of oatbreaks of Typboid from badly constructed sewers in England which now and then appear in newspapors. Some of the Native States, such as Baroda and Hyderabad ( Nizan !, and some Manicipalities have wisoly voted largo aums for the sewerage of their towns. The designs must
be made only by Saiitary Engingeers with the most reoent drainage experience. Sanitaty Engineers as such are almost conspicuous by their absence in India and it would be a wise step on the part of Goveriment to provide at least one consulting Sanitary Engineer of ability for each Presidency. The suceess of Mr. Baldwin Latham during the last two years ought to induce other specialists to visit India on their uwn account.

Water-supply. The chief sources of waler-sapply to Indian towns and villages are rivers, lakes, springs, wells and tanks. All these are natural reservoirs of the annoal monsoon rains. Besides the mineral and vegetable impurities, common more or less to many sources of water-stupply, the greatest source of contamination in India is baman and animal excreta, It is a common thing to find on the banks of a river or tank, which is the chief source of the water-sapply of a place, kathing washing of soiled clothes and cattlo, and the cleansing of cooking utensils, going on simaltaneously with the filling of . water vessels for domestic uise. The surface wells and rivalets are rarely free from the effects of goakage and overflows. Strict supervision must, therefore, be provided for detecting and remedying these evils wherever they may be found to exist. The scanty water-supply of many cities and villages in. India gives rise to many skin diseases and bowel disorders and consequent ill health amongst the people. The increase of the watersupply is a most difficalt question to solve in many places, but much is being done of late by sinking wells, and, where fands can be made available, by bringing water from great distances by canals and iron pipes. The conservancy- of wells and tanks requires greater attention than is at present given to it. The wells are almost always exposed to the rays of the sun which promote the development of vegetable matter and lose by evaporation. The other evils attendant upon open wells and
tanks are that the watar is never cool and pright and there are always chances of foreign substances such as dust, leaves of trees and decaying animal matter, getting into them,

Tanks, wells and cisterns get contaminated by the dipping of backets in them. One yery often sees a water-bearer scrubbing bis water vessels with dast, eattle dung or ashes, near a well or cistern, and cleaning the same by dipping themi in tha water which ho afterwards fills bis vessel! with to carry Lhome for culinary ase or driak. This foal practice can ba very easily and auccensfally pat a stop to, either by fixing pumps to pablic wells and cisterns or by providing dipping ressela. unspended with chains for drawing water. If the apace round about be flagged "or paved, and the waste water led out by proper drains and people prevented from bathing, washing or oleaning vessels near them, the water of wells and oisterns will always remain clear and sweet.

Food supply. The staple articles of diet in India are grains of kinds and are so simple that complex legislation is not required to maintain their parity except in very large commercial -towns. Graing are ground into flour in each homestead and therefore it is froe from adalteration. Rules are, however, jequired for ensaring the purity of mill and clarified butter (ghee), which are very often adalterated, the former with impare or tainted water and flour, and the latter with fats of different animals, starch do. Meat, which is more an article of laxury. than a principal sabstance in the dietary of the people of this country, requires strict sapervision. It is very inferior in quality and ofton mixed with flesh from carcasses of dieeased animals. Fish, which is a principal article of diet with .the non-Brahman population of the see-const, places is fonid yery often in different atages of patrifaction due to want of caro
on the part of fishormen and the very high price of salt required for coring, cansed by the great onhancement in the salt daty in India,

Disposal of the dead. The question of the disposal of the dead has, of late, been attracting the attention of sanitary authorities all over the world. The practice of cremation is no doabt a very good oie and has been largely followed in India from times beyond memory. Very often on account of carelessness or want of sufficient fuel, cremstion is imperfect ; and half-burnt limbs ahd imperfectly calcined bones are not infrequentls, seen on cremation grounds or thrown stealthily into rivers. It is a matter of regret that firstclass Municipalities, such as those of Caleotta, Bombay and Madras, have not yet succeeded in erecting suitable crematoria. There are no rules for the burial of the dead and intramural barial is very commen. Grave-yards are to be seen in the midst of populous centres within a few yards of dwellings on the banks of rivers and lakes and close to wells, For fear of wounding the feelings of the peopite, no attempt is made at .closing these pards. Even the rales for the barial of dead bodies are conspicaons by their absonce in a great majority of places, and where they do exist, they are generally a dead letter. The Parsees are allowed to expose their dead in Towars of Silence. Carcasses of dead animals are seldom buried except in large eities. They are generally exposed-to be devoured by vultares and wild animals. The practice of water barial can be seon on the banks of sacred rivers in this country. Old ascetics-sanyasees-are generally given a water burial. Their dead bodies"are immersed ,in deep rivers with a heary stone tied to them This practice ought to be pat a stop to, as very often on the third or fourth day the body, disfigured by patrifaction and rivar fishas, ean be seen foating
with a number of crows feasting upon it. The practice of the barial of still-born children in the rooms in which they are born has not as yet attracted sufficient attention even in large cities.

Objectionable trades. These add to tho imparitien of the atmosphere and ther:fore are deserving of notice. The pungent and irritatiug fames from brick pot and tile barning are famition - to many. The fuel used in this trade is generally stable litter and city rabbish. The trade is very often carried on in the beart or on the out-skirts of cities and villages and its surroandings are generally very filthy. Barning of lime stone for mortar is another objectionable trade, frequently seen carried on in the midst of crowded localities. The slanghter of animals is very often made close to busy centres of popalation and blood and offal is frequently thrown into the streets. Well-bailt slaughter houses are found in only a few of the larger Municipal cities. Small tanneries exist in many places and curing of small skins is done by almost all shoo-and-lea-ther-goods-makers of this conntry at their own places.

Other objectionable trades generally found in Indian cities are those of the milkmen who keep horned and milch cattle. Their stables, even when kept by private individaals, are wast filthy. The liquid dung and arine are allowed to soak freely into ive groond. The insanitary condition of these places is always a fraitfal soorce of rinder pesti and other catthe diseasos which destroy thousands of cattle every jear in this country.

Shoep-pens and pig-sties, kept by low casto people, though not as great nuisances at the procoeding, require serions conaderation from a sanitary point of view. These givo out a pecoliar penetrating odoar, whieh is vory sickening.

Horse and pony stables, kept for hackney purposes in large cities, are as bad as the cattle pens; no precantions being takep for the proper removal of dung and uriue, which is allowed to sink into the ground.

The bther objentionable trades are those of collecting and storing hones, horns and hoofs of animals, melting of tallow, dry fish and hide stores, bkinning of dead auimals \&c, The effluvia arising from these trades, which are now anu chen carried on in many cities and raral districts, are injarions to health and require most careful' vigilance op the part of sanitary antharities.

The erection of factories and other workshops within the last quarter of a centarg threaten to add one more evil to those that already exist. The smoke nuisance, which is so londly complained of in Bombay, Calcutta and- many other places, is an evil of considerable magnitade, and special legisla. tion is required to compel the owners of factories, who barn large quantities of fuel, to consume their own emoke.

Corclusion.-These rema:ks on the sanitary condition of Indian towns and villages wuald be incomplete withont a short account of the present state of Municipal and Local Boards finance, on which the whole question of sanitary reform obviously depends.

It is well known that Municipal and Local Boards, with a due misture of the popular and official elements, were established throughoat ' this conntry by that liberal-minded statesman and administrator, the Marquis of Ripon. It is very often said that Manicifal institutions are an exotic growth in this conntry and will not flourish. This view, however, is not correct and it involves a fallacy. Manna the oldest of Hindu Law-givers, has laid down what a townahip
should be. A descriplion of Manu's ideas in the matter is given in Elphinstone's Hisiory of India, from which it can be clearly perceived that Municipalities or Corporate bodies, self-elected, self-taxing and self-govering, are of very 'ancient origin in India:

The poople of India may be weak in their instincts when large interests are concerned, but they are keenly alive to the efficiency of their Municipal arrangements. It is true than is very great ignorance and apathy in the mass of the people, and there is, above all, the phenomenal poverty of the nation. These drawabacks are to be removed, and this mast take time and require a large exercise of patience. The poverty of the people makes them impatient of Municipal burdens, and no large work of reform can te undertaken withont considerable expenditure. Formerly Government advanced loars from public funds or extended its guaranté 的 Municipal loans. Government bas shown considerable unwillingness of late years to follow this policy. The Municipalities, left to themselves, cannot borrow money on cheap terms. People cannot bear additional taxation, and so, fiom year to year, large undertakings have to be put off, till the work of reform becomes, if possible, more argent and more expensive. Moreover in raral areas, Local cesses were introduced professedly for improving commanications and promoting education and effecting sanitary improvements. Out of erery one anna charged as cess on the Rapeo, levied as Land-revenue, 8 pies were to be devoted to Public-Works, including sanitary improvements, and 4 pies to education. Public Works, especially road-repairs, have gradeally absorbed the 8 pies of cess Revenue, and very littie is spent or can be epent in improving water-supply in small villages and towns. The Local Legislature passed last jear a Village Sanitation Bill, but as it failed to provide the
means, the law bas remained a dead letter. Unless sufficient funds are provided for, no real progress is possible in this connection. Boards and Committees are powerless in such matters, unless funds are provided to strengthen their hands. When the Local cess was introdiced, the one quna charged on land Revenue was also charged on Abkari Revenue. The Local Government has, however, refased, to recognize the claims of this cess on Abkari Revenue and has appropriated all the increase to itself. If a due share of the $\mathbf{8}$ pies, appropriated fis:. Local Boards, were set apart for sanitation, and if it were supplemented by a contribation out of the increased Ablari Revenue, the Sanitary Boards will have a standing fund of their own g and they will be in a position to make slow but sure progress each year.

In large towns, facilities must be provided by the Go-* vernment lending its gaarantee to Municipal loans and thas enabling Municipalities to borrow large sums on reasonable terms. The present constitution of the Boards, balf elective and half nominated, is all that can be desired. Bat without adequate fands, it is idle to expect that the Boards would -ever be able to effect substantial reforms. It is a subject worthy of the consideration of this Congress how far : it can bring the pressigue of pablic opinion to bear on the Indian Government to initiate a more liberal policy in this matter by taking ateps to increase the local resources of Sanitary Village and Talaka Boards.

Notwithstanding the many difficalties in the path of Local Self-Government, the admitted siscoess of the past few years promises for it a more usefal fatare. Let the Government for some time more continue to instruct and guide, : and refrain from undne interference or official pressure, and let it further liberally help, where help is necessary, and the results will satisfy all who feel an interest in the prosperity of the people of this eountry.

## RAJA SIR T. JEADHAV RAO z. C. s. t.

A great name has prassel into history. Raja, Sir T. Madhar Rao,-" the Torgnt ol India, "as the late Mr. Fawcett jusily styled hial,-bas departed, leaving on the sands of time foot-priats deeper and mure distinct than have been made lif any other Indian statesman of his generation. Oatshining his compeers in intelligence and cultare, and peering above bis contemporariea in administrative tact and political sagacity, Sir Madbar Rao was an inposing figure in the arona of Indian politica. Towards the close of his lifo be anfered in tht estimation of some of his countrymen and was attacked by, some as an enemy to reform and was set dowa by others as but a mediocre thinker. Two cincamstances combined to produce this erroneous view,-Sir Madhar Rao's contribntions nader the nom de plume of "A Native Tbinker," and his secession from the Madras Standing Committee of the Indian Nätional Congress. The reflections, wich Sir Madhar Rao published under the pseudonym mentioned above, were too carations, not to say commonjlace, fur the ardent social reformer; nor were they euch as to please, the enthusiastic political reGormar of the day in any greater degree.' To this cause for dissatisfaction was added Sir Madhar Rao's wilhdrawal from the Congress Com.nittee. Sir Madbir Reo, as is woll known, withdrem because he isarproved altogether of the radical election acleme for the refora of tho Legislative Conncils in Incia, which was Iroposed ly the Iftedras Committeo and adopted by the National Conigress assemulled at Bombay in 1889. Sir Mahdar Rao stood op for numination and oot for election, at any rate not for that mode of election which was suggested by
the Madras Committee and stamped by the Bombay Congress with its approval. - The position which he had taken in this respect brought on him attacks from many quarters Persons, who ought to have known better and thought better, misjudged him as an enemy of the Congrose movement, -misjudged the man, who only a couple of years before lad acclaimed the Indian National Congress as "the soundoet triumph of British Administration and a crown of glory to the geat British Nation." Later events proved that Sir Madhav Rao was right. in protesting against the Madras election scheme. However, let that pass. We do not intend to examine here Sir Madhav Rao's position in reference to lattar-day political movements in India, a We propose only to take a brief strvey of his, temark. able career, and to portray, as faithfully as is possible within the limits of an article, Raja Sir T. Madher Rao, the administrator, the politician and the statesman.

Madhar Rao was born at Cambakonum in 1828. Ho was a Mabratta Brahmin by caste and belonged to one of those adventarons families, which in the palmy: days of the Mahratta ascendency.in India followed the national flag to the sontheramost corner of chis Peninsula, settling at Tanjore and making that city the chief outpost of the Mahratta Empire in the south. Daring the troublons times of the latter part the last century, when the British Power was matrins. offorts to assert itself in, South India, Venkat Rac, whe uncle of Sir Madbav Rao, cast in his lot with the Brissh: Recommended by his official superior to the Residen of Travancore, Venkat Rao entered the service of that state. FBy his remarkable ability he soon rose there to the post of Dewane Venkat Rao's brother, Ranga Rao, later on won laurels in the Travancore service. Madhao Rao was the youngest of Ranga Raoo's sons,

With the advantages of these brilliant family traditions, young Madbar bad the rare good fortune tacombine the benefit of a careful training under the care of that eminent educationist, Mr. E. B.. Powell. The school career of Madhar Rao ex.tended over only half a dozen years, but during that short time he made remarkablé progress, and, according to Mr . Powell, showed sncla proficiency in Mathematics and. Physics an would have secured bim an honourable position even in the University of Cambridge. - Bat Mr. Powell paid him a slill higher compliment by getting lim appointed to aot for some ${ }^{\circ}$ time for himself as Protessor of Mathematics and Natoral Philonophy. Madhav Rao waa hardly nineteen when he received this substantial recognition of his merits at the hands of his teacher. To this tastimony might be added that of a former Resident of Travancore, who said " he had never mat with a native of Indie who had obtained so thorough a mastery over the Eog. lish language and so foll an appreciation of English viewa in rogard to politics and political economy." Thos equipped, Madhar Rao began life early in 1849 in the Accountant Generaly offico at Madras. There be romained for a little over two gears, whon an offer was made to him to take charge of the education of the Princee of Travancore. Madhar Rao. Jeft British service and acoepted the offor gladly enough, for tere irnspect of making his debut on the stage, where his ancle and father ind played so conspicnons a part, could not but be pleasing to $-1 / \mathrm{m}$. Well qualifed as he was for the part he had andertation, be acquitted himself most satisfactoriIy, and was four years later (in $\triangle$ aril 1853) appointerp by the Maharaja, with the bearty concurrenco of Genoral Cullen, the Resident, to a responsible post in the Rerenue line under the Daiman. Two jeari later the Maharaja recognized his services in the following terms: "The maffocted zeal with which
you undertook and satisfactorily sauceeded in improving my nephews by imparting to them ngofal and liberal education, the ardour, interest and integrity manifested by yon in the capacity of a poblic servant and the skill vith which you have been conducting the affairs immediately under your guidance to my full and entire satisfaction are soryices too valuable to pase unnoticed or unrewarded." And the Maharaja promptly rewarded Madhayrab's zervices by promoting him to no affioe of Dewan Peshkar or Naib Dewan, - pest next in importancer only to that of the Dewan. The work whioh Madhav Rao didijn his new capacity marked him out as a man possessing extraordinary administrative talents. The State of Travancore at this \{me was hopelessly rotten. Numerous petitions had been sent to the Madras Government by the subjects of the Raja and by Christian Missionaries; complaining of the misrulo which prep vailed in the State. The police forve, it was complained, was a tremendons engine of oppression: prisoners were confined for very long periods without investigation, and many were acquitted after terture and long imprisonment; the regulations of the State were systematically set aside; appeal to the Resident brought no relief, since the Dewan was the Resident's protegs; convioted criminals were suffered to be at large ; the Ryot's complaints were unheeded; the system of the forced labour was rampant ; incalcalable evils arose frair the pepper, salt and cardamom monopolies; the higher Oovernment officials were corrupt ; men of the wore ofaracter were in some cases appointed to responsible flices ; every appointment hadits price ; and, as a consoquence, official power was abused, bribes extorted, justice peryerted, the weak oppressed, the guilty shielded, and royal favourites amassed large private fortanea When this distressfal tale of anarchy and misxule reached the ears of Lord-Dalhousie, he almost made op
bis mind to annex the State ; bat a peoond thought suggested milder measareen, Throigh the Local Government he warned the Maharaja that the contingency of annexation was inevitable, unless averted by timely and jodicions reforms. It was on anch a soene and at suct, a time that Madhav Rao began his work of administrativ ietorm. The Peshkars at the time we speak of varied sá number from two to foar and were all stationed at the beadquarters. They did little responsible work and spent their time and energy in intriguing against the Dewan. Madhav Rao wns disgusted with this stato of things and auggested to the Maharaja thal each Peellinr should be given responsible charge of a separate District, or group of Districts, sabject, of course, to the general control of the Deman. The saggestion was adopted and Madhar liao was appointed to the Southern Division, comprising the very Districta "from which complaints to the Madras Government had been most ecrious and nuin eroas, And before oven a fozen months bad rolled by, the hand of a shilled administrator was seen at work in these Districts. The Political Offieer described Madiav Rao's work in these words: "Within the short apace of a year, Madhap Rao bns called forth order out of disorder; has distributed justice between man sod man, withont fear or favour; has expolled dacoita ; has reames the rovenues ; and his minntes and State papers show the liberalay, the soandness and the statemanship of hie viewe and priaciples. Ehe has reosived the thata of his sovereiga; Lp lae obtained the voluctary admiring testimony of some of die very Missionaries, who mumorialized to the excollonee of L.a administration." *Now, bere in E man, " remarked. Mr. Siverton, "raised uf, as it were, amid the anarchy and confusion wh his conntry to mre it from destraction. Annexation, loomiagin the net far distant fatura, woald to baniubed into the
shades of night, if such an administration as he has introduced into two of the Districts were given to the whole kingdom by his advancement to the post of Minister. He is indeed a splendid example of what education may do for the native" The bope, exprossed here by Mr. Norton, was soon realised. Dewan Krishna Rao died in 1857; and though Madhav Rao was then only twenty-nine yearsold and had a senior ampetitor in the field, the choice of the Maharaja fell of hime it was approved by the Resident and finally confirmed \% by the Madras Government towards the end of 1858. Thas Madhay Rao surpassed the traditions of his family by reaching the high position of his uncle and father at the early age of thirty.

## II.

In most cases thirty would cortainly be deemed too early an age for so high a trast as that of a Dewan. But Madhar: Raos extraordinary talents and intollectual attagnments more than made up for his immaturity of years. The task be bad undertaken was one of rare dificulty ;-it was that of rehabilitating a rotten.State, of reforming and re-modelling an entirely disorganised admipistration. The picture that has already been presented of the condition of the district, which Madhar Lao undertook is Dewan Peshkar to administer, did nct represent the state of misrule in only an isolated sputs it applied to the whole State of Trapancore, as it an at the time we are spenkiag of. With' the pablic Treasary nearly emptied; with paymenta and collection largely in arrears; wilh the public service made to, from top to bottom, of an army of voracipas place-seekers, with wham corruption was second nature ; "with speculation; forture, false accusations and compulsory berievolences on beallf of the Sirkar as matters of evory dey sccurrence; vilh the courts of justice turned into
they are born and very rarely get any clothing. They are generally half-atarved and they rarels bave a strong and healthy look. The bloom of bealth, which the coltivators $j n$ other countries have, is conspicuous by its absence in India.

Drainage. The draing ge of sorplus waters in billy and monntainons countries ${ }^{*}$ is naturally effected by rivers, brooks and deciricices of bills. It is generally good; bat in low-ljint ústricts, the drainajo of vilages, towns -ua cities, and of the plains caltivated with rice, is generally defective and injurions to the bealth of the people. Indian villages, lowns and cities are generally lailt- on the banks of rivers and streams with the object of securing a plentiful water-supply at haod; bence many of the villages and towns, with a very few exceptions, are built in low-lying districts, along the bañts of rivers, in vallegs and at the foot of the bills. The prevalence of malarious fevers among the generality of the population, such as ngues, remittent fevers, brow-agues \&c. is the nataral consecuence of this defective location. These malarions diseases prevail largely in rice-growing districts and in jungly tracts where copso wood abounds. The land is generally formed by the disintegration of trap and basait rocks and granite mised with vegetable debris, which accounta for the prevalence of main-iuus diseases. Even the gravelly and chalky lanls aro readered anix as eligible sites by'reasion of their heing mixel up wid vegetablo antuers. Wherever the nataral drainage of - district is defective, mularjous fovers to a large extent provail there. In the rice fields wicre water has to be dammed up by embaukments for the growth of the phats, there is no anderground drainage except whit may be provided by the porous or hard naipre of the soil, and malarions fevers are the consequedce. The villages, toman and cities, exocid a fen of the latter,

## 8 <br> The Hygienic and Demograptic Condition of India.

are very badly drained. Artificial drainage there is none in the country, and even the natural drainage in the shape of the soil and conformation of the ground is interrupted by irri-, gation canals and roads and bridge-works in many places.

Burial grounds. Most of the Hindus barn their dead to ashes, which are then thrown into tivers, streams and tanks. This is a most salutary practice. A few Rindus, however, bary their dead. The Musstimans, Christians and Joma also bury, their dead. In villages, the barial grounds ara generally at some distance from the inhabited areas. But in large cities the barial grounds are sitnated in the heart of the town. They act injuriously on the health of the population. They defile the air by eflavia arising from the crevices of the tombs or graves, and they contaminate by percolation the waters of the wells, situated in the neighbourhood of the barial grounds.

Thte prickly-pear. The prickly-pear round about villages and cities and towns, especially in the Deccan, has out-grown its proper limits. Though useful as a hedge-plant, when properly trimmed up, it has now grown to a most injarious extent in a great many places through the carelessness of the popala. tion. This exaberant and uncontrolled growth of this plant affects the health of the people injoriously.

Roads:-Since the advent of the English tho construction of cart roads, trunk roads, bridges, railwass, \&c., has done much to improve the ganitation and fende' of the country; yet want of common cart roadgin reral districts and out-of-the way places throughout the country is acting most injurionsly on the health of the population and of cattle.

Cattle-housing. -The practice of hoasing cattle, horses, assea and pigs in the dwelling houses privaila largely through-
out the country in raral districts. This practice facilitates the commanication of disease from man to beast and from boast to man.

## Demographic habita.

$\therefore$ Drinking habits, The people are generally sober, bat the vice of drinking, wich existed formerly in the country to a very limited oxient, is latterly making rapid progress and ruining-sany a family, poor and wealthy aliko. Contact rilh Western civilization bas given it a new and aggravated phase. The well-to-do people have commenced to profor, and are largely consuming foreign liquors. The vice of sunoking and chowing Tobacco is alvo widely prevalent in India. The use of Tobaco as snuff prevails mach. All these uses of Tobacco prove injurions to bealth.

Opium is largely caten and smoked in many parts of India, especially ia the Panjab, Rajpatana, Malva and Kathiawar. The habit is very injurions to bealth. It invarially produces a sort of mental depression. As a rule, mothers, give their children small doses of opium to loll them to sleop, though the babit is dying out on this side of India at least. When the chijdren grow up, the effects of the poison are not obliterated altugether.

- The use of Indian hemp or ganja or bhang among a large portion of the population is also very common, and has a very deleterions wfect on the physique and morals of the peoplo, Insapity in many wnes is due to this habit, The mental deterioration produced by the ase of ganja has turned many a person into an itinerant beggar.

The habit of masturbation has ita viotims amongst the peopie. This habit prodaceas seminal weakness, despondency and genoral detility, and renders it votary a curee to himoelf all his lifo.

## 10: The Hygienic and Demographic Condition of India.

Fornication bas victimized the urban population a good deal in India. The spread of gonorrhea and syphilis is on the increase in large towns and eities, and even the poor villagers are not wholly free from it.

Bathing and cleanliness of the blin, The people as a rule bathe daily, especially the Hindos, but the bathing is morely nominal and not thorough. Hence they suffer from skin diseasess:"

Bodily exercises, Walking, ranning, riding, emimming, wrestling, foncing and other gymnastic exercises, such as swinging, moving about clubs, playing with bat: and ball, and various other amusements are all popular forms of out-door and indoor exeroises? The out-door exercises are not systematically practised except by those who resort. to the gymnasiums called Talims. The higher classes are not equally well of in this respect. Want of exercise in those whose habits are sodentary, ench as shop-keepers, traders, clerks \&e., acts pernicionsly by producing sueh diseases as chronic dyspepsia, piles \&c.

Polyandrý, a barbarous and revolting practice, prevails on the Malabar coast amongst a caste called Nairs̀. Polygany also prevails tọ a alight exitent amongst the Hindus and the Musalmans. Both the practices are highly inimetous to the growth of a healthy progeny.

Early marriages and unequal onotriages, i. a marriages performed when the disparity of age between the man and the woman is great, e. pt the marriage of a bride of 10 years with a bridegroom 50 or more, have also a large inflaence in detoriorating the races by whom they are practised.

Quarrele. The mention of domestic, civil and public

## The Hygienic and Demographic Condition of India.

quarrels would appear ludicrous in this place; as they exist in India as well as. in. other countries on the surface of this globe and perlaps bave common causes; bat since they acquire a peculiar eharacter in India from the existence of caste systems and heterogeneous religious systems, one cannot belp mentioning them as twoy have a most baneful effect on the body, mind and conduct of the people."

Jatras and fairs. Pilgrimages to Beńares, Prayaga, Gaya, Dwaraka, Jaggannath, Haridwar, Rameshwar, Dakur, Pundharpur, Amrutsar and other places entail hardships on the pilgrims besides inflicting on them the misery incidental to travelling by slow stages on foot or in country carts. The water' is almost always dirty and filthy at these places. ' No mattor how filthy the water at the holy places may be, the pilgrim delights to bathe in it and drink it with the object of washing off his sins and attaining heaven. Many diseasea of an epidemic type, auch as cholera and malignant fevera \&c, break ouk at theso Jatras and are spread over the country througl infection by the returning tide of the pilgrims.

Fasting. The habit of observing fasts several days in a month amongst the Hindus, and especially among their fair sex, in propitiation of some imaginary deities is very com. mon. Thay eat on fasting days ground nut, red potatoes, swoet. meats, fruits dr; and sutfer at times a good doal from Diarrhces, Dysentery, Dyspepsia \&c. This babit nodermines the health of the persons who observe these fasts.

Caste syotem has prevailed in India. from ancient times.' It has wrought evils of great magnitade among the popaiation. It prevents tife unification of the different races and sows the sed of hatred and enmity all throughoat the land. It restricts men in the choice of their profession and in
forming marriage alliances. It bas demoralized toe people and bas checked the intellectual growth of the population. -

The doctrine of fatalism prevails among the population to a most injurions extent. They beliqve that everything is decreed by fate and, no matter what precantion mas taker, things will not fail to happert as has beom prearranged by bis destiny. These doctrines prevent many peophe from adopting precautionars measures in eases of dangerous dia eases, or on the eve of great natural calamities. This fatalism has been acting injarionsly on the mental and bodily condition of the poople.

Idol Worship. : Hindus, properly so called, are idolworshippers. They worship idols, representing the socalled incarnations of Vishnu, suck as Rama, Krishina, and Parsha. ram and of heroos, such as Hanmant, and Kbandobs, and of holy saints, suoh as Takaram, Dynaneswar, Namder \&o. Thiey also worship trees, such as Tulshi; Pimpal, Ondumbar, and also animals such as cows ${ }_{2} \ddagger$ bullocks, monkeys, mice and serpents. This evil practice bas prevailed from times immemorial. It has perverted the minds of the people and has debased their intellect. It has checked the growth of civilization amongst them: It has retarded their progresg: in overy department of the haman life, Whataor flimsy pleas the old fashioned learned Hindas mos bring forward in support of idol worship, whether ormigions, philosophical or moral grounds, theré can bo no doubt that idol worship has not only demoralized the people to a fearfal extent but has acted injurionsly sn their mind and even on their physical well-being: The observance of this idol-worship with its concomitant evils, such as fasting and feasting, and bathing, and other dobasing practices hare proved most injurions to the mind and the body of the people.

## The Hyyienic and Demographic Concition of India.

Demon Woralip. This practice, demoralizing and vicions as it is, has led the prople to per lition and depravity. It is very commos in India, especially among the Hindus. The fear of the devil causing barm! and disease is a common bolief. Idols of parious imaginary dovila such as Mbasoba, Vethal, Ehoollanath, Asra \&ic are worshipped and sacrifices of goats, sheep, cocks, roctianats \&e are offered to appease the imaginary montiof these imaginary devils." A good deal of hno in is done to the people and large pecuniary losses are sustained by them by this belief. The fear of the devila, has the most pernicious effect npon the mind and body of the people and not a fevi fall a prey to this imaginary fear. The idol and demon worshipa are a bar to civilization.

Enforced Widowhood. This evil practice obtains among the upper classes of the Minda society. It has ontailed upon the poor widows a feartul amount of untold misery. It has produced demoralization, crime, misery and diseaso. The practice of observing fasts is $\mathbf{v e r y}$ common among the Hindu widows. Poor widows eat on the fasting days parclied grains, ground nat and fruits, and saffer at times terribly from the effects of this self-denial. The unwhole. sorae food . Leaerally produces Dyspepsia, Diarrbcaz and Djsentery. The poor widows are allowed to eat only owo meal a day. They are provented from wearing good and suffciont clothing. They are obliged to observe all the fasts prescribed by the Hindu religion. The probibition of widow-marriago amons the higher castes canses a large section of the female sex to be titasily nseless in the promotion of housebold happiness and the moltiplication of good progeny.

From this brief summary of the Hygienic and Demographic condition of the people of India, the necessary measnres for the removal of the defects in these two cunditions become

## 14

 The Hygienic and Demographio Condition of India, self evident. Governiment has done a great deal in improving the insanitary condition of the country by establishing Manicipalities in cifies, towns and large villages, which have done a great deal to improve the sanitary condition of the country. They have netted the conntry with Railwayg, made common roads, and tronler roads, and buititarge and small bridges. The Bombay Government has recently pased a Villago Sanitation Act, from which mach good is expected in ruratarione. They have besides introduced Sanitary Primers (in English ant the Vernacalars) in schools and Colleges. The epidemics of small-pox, which were very frequent and viralent before, have been brought-ander control by most elaborate a nd efficient Vaccinating Departments, kappt ap and maintained all over India by Government. Governmet are also trying to. diffuse a. Knowledge of the laws of sanitation in the conntry. The Missionarios also have done a great deal of good in this direction. They, are teaching the people, wherever they can, the simple rules of health-the necessary conditions of physical well-being. The great problem in. India besides having a sufficiency of pure water, good drainage in inhabited and cultivated areas, removal of oxcreta and other filth fromdwelling Lionses, good ventiation of houses and streets, good roads, good privy-arrangemente \&co. is to modity the climate. of the country which is so hot and inimical to health. Tham is only one way of doing it, viz, by planting aserng tall trees over the arid plains of Hindustan as can posibly. be done by public and private agencies.
## THE SANITARY CONDITIÓN OF THE TOWNNS and villages in the bombay pre- <br> SIDENCY AND THE MEANS FOR IMIPROVING THE SAME.*

The attention of the Government of India has been of late more and more drawn to the sanitary condition of Indian towns on account of the quarantine restrictions imposed by foreign powers on the commerce of the country. A great deal, no doubt, is being done for the improvement of the general sanitary condition of our large cities, bat the spathy und babits of the people are so inveterate in certain matters that the question of sanitary reform in India is nọt one whioh admits of an eass solution. In this paper an altempt will be made to show what these varied circumstances are, and to give a general oketch of the sanitary condition of our towns and villages, with a view that it may be fully realized by those members of the Congress, who miay never have visited India.

- Situation and soit. In India, as in almost all other countries, the sites of cities and towns seem to have been chosen ebiefly from oonsiderations of defence from inroads from without, and close proximity to fresh water.

In not a single instance has it happened that theso sites were selected on grounds of sanitary advantages or facilities,

[^1]hill sanitaria excepted. As a consequence of this negleet; the choice of the site is generally very anfortunate. The low-lying banks of rivers, or open plots at the foot of the hills or in the wide gorge of a valley, liable to flood-these are the situations where most of oir towns and villages have been bailt, As a matter of fact, many towns and villages often seen to have been erected on what were formerly swampe; river beds, or ruins of old cities. They have been so built as to shat out the breezes all the pear round instead of allowing them free access to sweep of miasmatio poisons: In many cases a wall is built all round the town or village, very uspfal once for protection, kat now positively harmiful. It is hardly necessary to enumerate the different diseases tbat go to swell the mortality returns and which are directly due to emanations from bad soils, The red soil, formed by the disintegration of gtanite, and made moŕe unhealthy by rank vegetation of the forests in the Konkan, the ". Cotton soil" of the Deccan, very absorbent of water, formed by disintegrated basalt and trap, and sapposed to be very retentive of, if not generating, the cholera poison, the alluvium brought down by the Tapti, Narbuda, Mahi, Sabarmati, Indus, Ganges, Godavari and Krishna and other rivers of this Peninsula, with a clayey laterite substratum exposed to heat and the winds and the. rains, the immense marshy tracts of the Runn of Cuteh < these ingredients of the soil have greatly favoured the insanitary. condition of our towns and villages. The process of decay and corraption has gone on unchecked for ages, so that large tracts have become the permanent home of malarions fevers and cholera and other bowel complaints generally. A great deal, no doubt; can be done by costly. works towards mitigating the evils arising from the conditions enumerated above, by scientific drainage of storm-floods and sullago and fecal matter; bit with.
rivers, and the people nse the same water for their domestic and other purposes. In some places, the towns and villages aro situated on the banks of tanks and ponded streams. This is especially the case in Central India and Malva. In these places, all manner of impurities from the inhabited areas are allowed to flow into these tanks. The animals are watered. therein, persons batbe in them, ciothing is washed there; and this water, so pulluted, is freely drunk by the people. Persons ober calls of nature in the immediate vicinity of these rivers and tanks.: In some böly places, such ${ }^{\circ}$ as' Benares, Pandhurpur, Alandi and others, the river water is rendered most filthy by a large concourse of people visiting these places at stated periods during the year, and large numbera of pilgrims fall an easy prey to cholera. All the fairs, called Jatras, which are periodically held in several haly places during each , year, "give rise to epidemics, from the fonling and: scarcity of the water supply. The water from the tanks, protected with parapet walls and without steps to descend, is generally pure. These remarks, it is hoped, will suffice to give the Congress some general idea of the impurities of the Iodian wator supply. Lately large cities such as Bombaỳ, Ka-" rachi, Poona, Ahmedabad, Allahabad, Agra, Calcutta, and Madras bave been sapplied with pare ani filtered water brougid from some distance, and delivered through pipes; bat such inotancos are again the exoeptions and not the role. There is thits e paramonat necessity for providing an ample and pure sapply us water all ovar Iadia.

Houses. The next sobject which demands"consideration relates to the booses of the people and the ventilation therein. Generally speaking, the people of India are bajly housed. The houses are buiit low; the walla are unade of mud, burnt or enburnt liricks, or stones
or bamboos, or carvee wattle covered with mod and cow. dong. The roofs are thatched with grase and straw. Some houses are tiled; some are roofed over with mud or brick and mortar, sapported by rafters or timber. The houses in the villages are generally built apart, bating some nominal compounds, built of stones or bricks, or of hedges of living plants or dead branches. The plinths are genemally low, bo much so that during the rains the lloor gets wèn and damp. These houses are provided with lowdoors, and the matows. are few end all In their place, 'imall holes are kept in the walla just to admit a little light; but these holes are generally closed or stuffed with rags daring the night to prevent air coming in. Houses in large towns and cities are better bait, bat the ventilating arrangements in thase houses are genorally lamentably defective. The food is cooked within the house; - detached cook-rooms are only found: in Bangalows.
$\therefore$ Privies. There are no privies in the villages ; the people go to obey the call of natare ont of the village or in the streets. In large villages and towns and cities, people generally have privès. The privies generally form part of the houses; detached privies are fow. A most unsanitary, injari-ons and filthy practice of having privy pits, exists in some parts of the conntry. Sarat, Belgantm, and Dharwar may be citat os instances. © These pita are never cleansed and the foul matter is allowed to ferment and rot in the soi y In former times, occasionally some common salt was ghown over the ordures from time to time as a disinfection put since salt became so dear as'at present, this beonme too expensive a process, and consequently it has fallen into disuse, $\quad \therefore$,

Ventilation, Light and air are purposely excluded from the houses in the majority of cases. The cultivators and other

## The IIygienic and Demographic Cendition of India. 5

working people enjoy the full benefit of fresh sir during the day, but in their bonses they have to breathe and rebreathe this foul air all through the night. This fouled air gives rise to coughs and consumptiod. When woipen are confined, they are shut up in rooms almost ": hermetically sealed;" they broatho and rebreathe the limited and confined air for months together ; the air io farther viciated by a lamp being kept up in the room burning day and night. Owing to thene Labits, many a woman falls prey to Pulmonary consumption wiṭhoat any bereditary taint. When a person is sick, be is generally confined in arom well closed up io as not to admit any nir in. Many cases of fever thas beoome aggravated and ond fatally. So the free ventilation of honsen and hats is very defective in India. Nor is the street veatiation any better. The streets and allesa are genorally narrow and crooked. The rows of houses are bailt without any ain to secare thoroagh ventilation, In large towns, the honses are mostly bailt close to ove another witboat any interapace for ventilation and light between them. The strest-ventilation is thas almost as bad as the inside house ventilation. The people of this conatry in their ignorance deprive thera-, selves of the "long food " so necessary to health and thas shorten their lives and lose mauy working days by illness.
rond. Iu de mattor of food alse, the people of India are very bad! 0 oz nwing to general poverty broaght on by various canses ; they have smaerally to pass their days on scanty fare. The frequent recarreuce of famine, dae mosily to scanty or irrfoular rain or no rain, hac broaett about a great deterioration in the physique of the poople, besiden cansing immonse murtality in the yeart when famine prevails. The people live chiefy, on grains and vegetables. Animal food is uad by some peoples bat spariagly, as they cannot afford to have
it daily. The staple food in some parts of the country, such as the North-West Provinees and Central India, is wheat; in the Deccan, it is Bajree and Jomrree ; and on the seă coast, rice. Milk and Gbee, which were abindant and cheap before and were largely consumad by the people, have now become dear and scarce owing te the desrneak of the fodder and. want of sufficiont grazing-lands for the attle The restrictions put of late on the grazing areas have had a very injuriahs. effect on the health of the cattle and bave still further stunted the supris of milk and ghee which once formed a principal part of the dietary of the people. The food supply of the people, hawever; is not $\mathbf{a}$ sabject which can be properly dealt with in the Congress, as it is beyond the reach of pablic measures of relief; except in times of famine. There seems to be no necessityr therefore, of enlarging on it in this paper.

Clothing. The poor poople continue generally in a* state of half nudity. Even the coltivating and labouring claşes are very scantily clothed. One blanket, a covering for the head and $a$ atrip of oloth aboat the loins constituta too often the only clothing of the male popplation while a long cloth, called saree, and a covering round the chrst, called cholee, constitute the dress of females." As for" bedding, "the blanket, which you generally see the caltivator carrying about him, is his all in all." He ases one half of it as his bed and the other half courts bim at night. He ases it as his hooded cloak duriggothe rains and as a covering against the biting winds in winter. When he goes to the market, he uses it as his corndag; and on great occasions and it a great man comes to tós bat, he spreads it on the floor in liea of a carpet. The female caltivator does not fare better than her busband. Her saree generally serves as ber only copering at night, if she happens to have no ragged blanket to use as a bed. The poof children go about as naked as when
bazars of corruption; with dacoits and maraaders scouring the country by hundreds, and with the socalled Police re quiring to be protected against instead of affording protection, the Travancore Stato was in a perifous phight indeed. When Madbar Rao was placed at the ham, he gaided the State bark with such wisdom thac it avoided the shoais of dangor and entered into tha haven of prosperity. How Madhav Rao did thim no shall presently describe. Fally as be had imbibed the $\oint_{\text {pirit of }}$ vestorn life and western lioogith, ind perfectly convinced as be was of the benevolent intertions of the British Indian Goverament towards the anbjecte of the Feodatory States, Madar Rao discorned instinctive? 5 what was best in the Dritish administrativemactinary, and assimilated it gradually and wisely into the State ander bis control. Ia hisJeltor to the Governor-General in Council, dated Mh Augast 1879, in connoction with the itransfer of Mysore to Native rule, Viscount Cranbrook observed that "the absolate encrity against internal rovolt, which in now enjojed by nitive culers, entails opon them obligations towards their sub. jocts which they canoot be allowad altogether to dibregard. It is in the gradual and jadiciops extension in the Native states of the general principles of Government which are applied in British territory that their raiers will find the sarest gromitee of their admingistrative independence; and the leat sefegnart anainst iotervention on the part of the faramonnt power." Vibur Ticoant Crániroul enanciaced. in 1879, Madhav Rao practionug onticipatod in 1853. Heasam thiat the conntrg bad eitered or was entering upon a new era, and that the uld ways of tionghtand lifor ihy old machinery of administration and tho old methods of got yrnuent wore ansuited to the changed circaustances and new requirements, of Natire Staies, Aad the very firt thing that he did or assaming the
reins of office showed what high ideal of Government he had set before himself. Travancore, like most other Native States, was given over to superstition and caste dominance. The Brahmins had dictated different modes of wearing clothes to ${ }^{\circ}$ ihe different castes, any, diniation from which was jealously watched and checked not bnly by the Bratrains bat by the different oastes themselves, whose servile obedience to their selfish dictators affords a pitiful illostration of the depths of Claviah degradation to which mon can sink and in which they can remain not only without a sigh, hat with pleasure and with pride. The Shanars or toddy-drawers of Travancore proved an ex. ception to the debasing gervility of the non-Brahmin classes to this spiritual tyranny, The women of these Shanars were, by custom and by Brahmin-made religious ordinances, prevented from covering the upper part ef their person. Whan the Queen's Proclamation of 1858 was declared, the Shanars, encouraged by the Protestant Missionaries residing in South Travancore, protested against the practice and openly" disregarded the degrading custom to which they had been subjected. The othe? superior castes pretended to read the great Proclanation ( in the same way in which it has been more recently misinterpreted) as tiveting anew the bonds of custom and spiritual tyranny. They thought the Proclamation garanteed British non-interference in matters yeliorbus under any and every circumstance, and thus gano them the right to do what they liked, prosided they day in the name of religign. Things took a serioustind and tarbulent affrays onsued. Madhav Rao wus now on his tris! as an administrator. His difficulties were jncreased by the fact that the Kesident and the Mabaraja did not favour . the canse of the Shanars. . But Madhar Rao rose superior to casto-prejndices. He saw that the Shanars were rights and that important
principlet were at stake in the struggle. At the same time, be savithe difficulty of quieting tie disturbed state of feelings. There was serions rioting and it wan a question bow to coaciliate the dispntants. Muihar IRao went to the scene of the disturbance bimself. A detachment of the Nair Brigade had preceded him to the apot. Siome of the leaders of both parlies were arresterf, and without having recourse to extremo meastrma, Nadhar Rao succeeded in restoring peace. The Sbanars were granted liberty to dress as they chose, and the Maharaja's consout to this change was secured, thongh not without presaure from the Madras Government. The Resident, for his want of judgment, was asked to resign, and Mr. Francis Maltby, a man of tulenta and great official experience, sueceeded him in the post." Aboat six months after this appointment, the Mabaraja died; and his aephew, Prince Rame Varma, was placed on the gadi on the 19th of October, 1860. With this young princo-papil as his mastor, and a Resident of high character and enlightoned riews as his supporter, Madbav Pao began the work of adumaistering the State with rigour and with skill. The mont sulinging feature of the firel few jears of his adminibuation was bis great fisual reforms, for which he wea ptaised by Mr. Fawcett as etho Targot of India." The financen of the State, as wo have already noted, mera in a bopeless oondition. The chaotic fiscal policy that was parsued ild apoa the peoplo very hearily. There were oppres. sive monopolken and veratious layes of various kinda. The mast oppresive of thene the peppor monopoly. Deducting the cost of colleotion which was nearly one baif of the gross income, this monopoly yielded anot ro vence of a litto crer a laih and a quarter of rupees. The proposal to do away with this revence, when the finances wero in a very critical state, was by no mean an oary thingo and
oven the boddest statesman might have hesitated before such a prospect. But Madbav Rac was equal to the task. The monopoly system was abolished and an export doty of 15 per cent. ad calorem was imposed to cover the loss in revenue. This duty was afterwards lovered tury per cont. and ultimateIf to 5 per cent The question of abolishing the tobacco monopoly was next taken up. As a source of revenue, ik was to the Travancore State what the opinm monopoly bas been to blitish India. "The monopoly system," said Madhav Hao in his report for $1863-64$, "was open to objection for the doable reason that the mode of deriving revence was in itself opposed to sound fiscal principles, and that the taxation of the commodity was carried too far in reference to the power of the Sirkar to connteract the operations of the smaggler." The evils of the system were patent, and its abolition was necessary ; nay, it became imperative when the monopoly of the same commodity in the adjoining Brilish districts was done away with." Sir T, Mo dhav Rao proceeded eantiously in the work of this great ruform. Instead of the Sirkar purchasing tobacco from contractors on its owa accoust-and selling it by retail to ita subjects, Madhav Rao first permitted all dealers to import tobaceo on - their own and not the Slate acconnt, previded they peid a certain import duty. The scale of daty was first - little high, and in consideration of its pressure, imponors were allowed by the Sirkar the privalege of kearng their goods in band,-a priviefge without which tho trade conld never have prospered. Some time after, the duty was lowered; and a still furthor reduction was made later, on. These light daties encouraged the growth of the import trade in tobacco to such an extent that at the end of 1868.69 , the import duty on a tittle over eight thonsand khandies of tubacco brought in a revenue of Rs, $8,36,684$; whereas in 1856-57.
the last year of the previous Dewan's administration, only about three thousand and a half of khandiea were sold on the State account and the net revenue realized was $8,48,978$ rupees. : Thus while an enormous amount of smaggling was stoppod and its demoralising effects were removed; the tobacco trade was freed from its fettera, and the loss to the State was represented by the paltry sum of a few thousand rupees. This achievement speaks volumes for Madhar Rao's financial gening. Having done away with these monopolies, Madkav Rao tarned his attention to reforming the system of general taration.". Upwards of hundred minor taxes wers abolished, which, while they yielded little to the State, were vexatious to the eabjects. The laye-tax in one district, which was fonnd to be excessively high, was reduced comsiderabis. This involved a loss of revenue to the extent of about fifteen thoosand raptes aonoally. In the middle of $18 C 3-64$, the export and import duties were reduotd all round. In the following ' year, the commercial treaty betwoen the Britisk Government and the Sirlare of Tra anacore and Cochin was concluded. By this treaty, State duties on grods imported from and through Bricish India or Cochin Sirkar territories were, with a few exceptions, remored. The rolief to trade an given was estimuitod at nearly a lakb and a quartct of rapoes. The daties, levied in British India and Coclin on Travancore goods, were also takec off. Trade was thas freet from the barden of oppressive taxes amounting to erany lakhs of rapees, and as a consequence, it progrossed rapidly. Whoreas in $1861-62$, the typurts were under three millions and a half of rupees in ralue, in $1808-09$ they rose to no loss than seven millions and * quartor, showing an incretis of more than cent. per cent., :

- These great Ciscal reforms in the administration of free trade brooght ia their iraic one great evil, nawely, the enhancemeat
of the price of salt, which is one of the necessaries of life in Ine. dia. The salt kax is really the most oppressive of imposts in the whole fiscal system of British India, and it is a pity that the Government of India, in its anxiety to promote the trade, makes light of this burden and imposes it freely even in independent States. Travancore, as a mattor of fact was lightly taxed in this respect before this agreement was made, and it was owing to the interference of the British Indian Govern ment that the people of that State were subjected to the hardship of enhanced salt daties. Madhar Rao certainly was not responsible for the imposition of this tax, thoogh it is bat fair to remark that it was his daty, as it was within his power, to protest emphatcally against this measure, despito, the small ohance he bad of making himself beard effectively on the point.

After uprooting oppressive monopolies and reforming the fiscal system, Madbar Rao turned his attention ta the improvementio the Public Service. : The Travancore Public Service, as we have stated above, was under-paid and, as a consequence, thoroughly corrupt. Madhav Rao removed the main canse of corruption by raising the salaries to a respectalle standard. The increase in the cost of the Police establishment was more than cent. per cent, and in the establishment charges of the Judicial Service, it was nearly as great. Next came - the organisation of the Pablic Works and Edacational Departments. Under the former bead, the expenditure trebled itself in the nine years, 1861-70, and the expenditure on education was doubled during the six years, 1864-70. Besides the legitimate expenditure of the State on its large departments, Madhar Rao had to provide for a very extravagant expenditare of public money (amounting on an average to something like three lakhs and three quarters per annura) especially on the State charities, for which Travancore bas always been renowned, for
feeding Brabmana gratis all the year round. Notwithstanding these heary demands on the Treasury, Madbav Rao managed to $\mathrm{p}^{3} y$ off the whoie of the public dett of Travalucore amounting to many lakhe of rupees within a fow years Daring the reign of the previcus Mabaraja, he Stato had been brought to the very brink of baukruptcy, and when Lord Dalhonsie warned him that if matters were not speedily mended, the Brit:sh-Government would be compelled to resurt to annesation as the only remedy, a sum of five labhe of ropees was borrowed from the Pagoda to meet the exigencies of the mo. ment. This sam, together with the interest which amounted to balf es much, was faid off by the end of 1868. Whis was no small financial achievement. When Madtav Ruo asscmed the administration, he started with an empty trescury, a beary debt, and a voracions system of Giscal poiicy, which ate inio the very vitale of the ryots. Ia a few years, the debt was liquidated ;oppressive monopolies were abolished; numerous wiuor taxes were removed; and the customs dutios were greatly reduood. All this involved a large sacrifice of public revgnue. And yet, except in the case of the entancement of the price of salt,fur which Macibar Lha, as we lave sciuted above, was ngt responsitle, uüt a farthing was added to public taxation. Sularies were largo Is jucrewsed to improve the tone of the Public Sorvice; large sums were devoted to works of pullic atility, and to the fartherance of oducation; a frigttful waste of pritic funds for the furfores of mistaken charity, which Madlar Rao nas nut free to stop, had to te reiuctant!y sanetioned; and yet, with all thic, State fuajees were so careflily munaged that hand. sunce surgluses were left to accomulate each $j$ ear in the Sulo coticrs. la $18 \%$, the Secretary of Stata for India expressel Linseaf gatisfied with the Enancial resu's of Madhap Reo's administration and congratobised him a his "enlightered
and able adiministration of the revenue department." Compa: risons are generally odions, but still one cannot always avoid. them, and we hope it will be thought excusable if a country*. man of Sir Madhar Rao remarks with pride that the greatMaratha statesman, in tho narrow figld in which he was called upon to work, did with ease and skill what has taxed to the utmost the resouroes and talents of British, Indian statesmanship, which, again, has achieved no better result thai barely to make the two ends meet and this with the puiblic debt and, public taxation doubled all round.

The success of the financial policy parsned by Sir T. Madhav Rao was not marred by any inattention to tho paramount claims of improving the efficiency of the Public Service generally. . The reorganisation of the Police Department was taken up by Sir T. Madhav Rao in the early yeara of his administration. The wants of the Department were: "FFirst, incressed pay; secondly, increased strgength; and thirdly, more mothed and diacipline. ". And all these defects were removed in the course of a feim yeara by a sleady and watchful attention to details. The administration of justice was placed on a sound basis, The Civil Procedure Code of British India, the Criminal Procedure Code, the Law of Limitation and the Registra tion : Act were introduced one after inother with such modifications as the conditions of the State demanded. An ex. porienced Judicial officer from the Madras Presidency was nominated to the Post of Chiof Justioe, Well qualified men were eppointed as Zillah Jadges; qualified; Vakils were admitted to plead in their coarts" and the number of Munsiffa was doubled, each Taluka peing provided with one Civil court. The jurisdiction of thene Mansiff, as also that of the Zilla Jadges, was defined and enlatged and placed ander check by a carefal aystem of appealo ; and lastly the Mansiff were investod with
powers to deside small causes finally. No less noteworthy was the reform in the administration of the haderevenue, The Travancore Sirkar does not claim to be the cole land-lord of, public land. More than balf of the collivated land bolongs to private owners and to Pagodas. Theoremaining State lands aro farmed to tenants, and were, previons to Madhav Rao's administration, sobjected to an árbitrary and a constantly increasing rack rent. It was not'ancommon for, one ryot to anspossess, another of bis land simply by offering to pay, more rent to the Stata. Tho feefing of insecurity, to which this gave rise, told beavily. on agrioulture, and greatly reduced the aleable valuo ot the: Sirkar lands. Madbar Rao fixed the assessment on timse Stute lands, and their bolders were recoguized as possessing beritalle, saleable and otherwise transferable property in their lands. The ryots were assured that they woald be allowed to onjoy their lands andisturbed so long as ibey prid the appointed assessment, which was to confinue analtered till circ̣umatances required a general revision. The land tax, it may be hero noted, was fixed very moderately, being in most cases below ono-furth of the net prodace. Side by side with this wise messure, regulations were made to facilitate the sale and reclamation of waste lands. The cultivation of coffee, which before Madhay Lao's adminiitration was alnost anknown, received great encouragement under the new regime. In 1869-70, nearly seventeen thousand tubs of coffee, valued at aboat three lacs and a half of ralpes, were erported, and the export daty on this article brought in something lite seventeen thousand ropees. Along with ouffoe, teacultivation also began to fourish. Exporiments in cincLona-gardening were ajso made ander Sirkar managenent. Thos, while a great impetos was ifforded to the estended cultivation of lands and the growth of new and remanerative crops, tasation was kept withia vory modorato bonads, and tho
secarity of possession and freedom of transfer were fally guaranteed to all the Ryot-holders of Sirkar lands. As a consequence, thę land revenue went on rising; year by year. In 1861-62, it brought in a litte over foarteen laths and a half of rupess to the Stato treasury; and in 1869-70, this amount rose to no less than seventeen lakhe of rapees, .

Since the regime of Venkat Rao, Madhav Rao's nncle, no public works of any importaice or manitude had been undertaken by the Travancore State, excepting one masonry bridge. Madhar Rao origanised a regular Public. Works. Deftrment in 1860 and be made large grants of State money for pushing on a forward P. W. policy. A trunk road from the Capital to the southern extremity of the State, extending over more than fifty miles, was thoronghly repaired. A net-work of branch roads, extending in all to between a handred and bundred and fifty miles, was laid in south Travancore. Two ghat-roads; together with a road crossing and connecting these latter: were also constructed at great expense. To these trunk roads, measuring several handreds of miles, were added many lines of village and town roads, A large scheme for the extension of watet communication was also pro jected. A splendid iron girder bridge was erected in South Travancore and smaller bridges of the same sort were put up by scores over many riters and streams in the State. A lighl-hooise was constructed at Aleppy. A commo: dious College building wàs commenced, and numerous public offices were built throughoat the State. . Altogether Madhar Reo undertook great and enduring works" during his ministry, and " estinably enhanced the material prosperity of the country."
"If the public works in Travancoro owe to Madhar Rao
to mach," remarks the writor of the article on Sir Madbar Rao in the Calculta Review, "education owes to him still more. There was bat one Englisin achool worth the vame in the whole of Travancoro, and aid for vernacular schools there wore none. Alive to the greal importanee of edocation, ms exemplified in his own case, he strove ceaselessly to extond its benefits to Trarancore." We have said in a previous part of this article that the State expenditure under thin head went on in creasing year after year. The old English echool was ro-organised gad a full-grown Arts' Collego was added to it. As feedera to this central institution, sixteen English achools were opened in the districte. : In 1865.66, an anncal oatlay of twenty thousand ropees was sanctipned for the furtherance of Vernacnlar education. In addition to this provision for the education of males, three girls scheole verd startod, All these additions donbled the Stato expenditufe on odocation in the courset of balf a dozen year's.

This brief review of the leading features of Madhay Raos administration of Travancore for fourteen years will givo an idea of the high ideal aimed at and the great success achioved by him daring this period of his life. In his own words, it was his cherished ain " to provide for every subject, within a couple of bours journey, the adrantages of a doctor, a school-mastor, a judge, a magistrato, a registoring officer and a post-master." Progressing stesdily townida this ideal, ho 4 banished anderaLion into the shades of night. * He found Travancore a den of misrale; -he left it "a model Native Siata, " The Madras Government ent on complimenting Midhar Rac os bis administrative sucoces from your to jear and the Eecreo tary of Slate ecoboed the praise in no faint voico. Is 1869, whee Madhar fieo visited Madras in company with thof Maharaja, he was arpointed a Fellow of the Madras University.

When he next visited Madras, following the Maharaj, who proceeded thither for his investiture with the Insignia of the "Star of India," he received his own Knighthood. Sir Madhav Rao resigned his office a few months after, and the Maharaja settled on him a pension of a thousand rapees per month. The retired Minister retired to Madras with a reputation al. "ready made.

The high ideal that. Sir Madhar Rao had placed bofore him, though not fully attained, was woll nigh roached. The State was set th order and it was for his successors, to perfect the administrative machinery he*had so shiftally adjusted. Cen'est que le premier pas qui coute, as the French proverb rightIy says, and the "frist step" taken by Sir T. Madbar Rao in the work of reforming and re-modelling the Travancore State was indeed a giant stride.

After his retirement, Sir Madhav Rao was offered a seat in the Viceregal Legisiative Council, bat for some reason or other he was compelled to declige the honour. He was only forty-five years at this time and that was hardly the age for him to retire from public lifo. He was not, therefore, to rò main inactive long. Maharaja*Tưkoji Rao Holkar offored him the Dewanship of his State Sir Madhar Rao accepted the offer and went to bis new feld of activity in 1873.

At Indore he had not mueb scope for his administrative. talents, hedged round as he, was in every department of administration by the all-powerful will of the Maharaja. Yet when he loft the State, every department of the State showed the work of his reforming hand. It was daring his administra$t_{\text {ion }}$ that he brought about the reconciliation of Tukoji Rao Holkar with Jayaji Rao Shindia, and thus put an ond to long-standing disagreements. While at Indore, Sir Madhav Rao was
iavited to go to Eagland to give evidence before the House of Commons Coimmittee on Indian finance, but he yas not able to nccept the invitation.
III.

Jast at this time, a storm was brewing in a Native State of considerable importance. Under Maharaja Malhar Rao, Baroda was realizing all the horrors of despotism. The cancer of corruption bad entered into the vitats of all departments in the State and oppression was rampath. Numerous petitions were sent by the Gaekwar's sabjecte to the Resident at Baroda, complaining bitterly of misrale. The Hon'ble Mr: Rojers thus described in his minoto the state of things at $\mathrm{Ea}_{\mathrm{a}}$ roda, as disclosed by the report of the special Commission of inquiry. "A people arbitrarily tazed at the pleasare of a selfish man, surrounded by courtiers a ware of the ancertain tenure of thoir position and oager to amass riches while they have the opportanity; the right' to levy the tuxes farmed out to whosoever pays the heaviest bribes (for the Nazaranas levied can be called by no other name) and who obtains not onily fiscal bat civil and criminal jurisdiotion also, bat in rotura is exposed to be deprived of his parchased right withont warning by another paying a heavier bribe; a eastom, excased by the Commission on the ground that it is a wellknown custom, of levying the revenue, not by any reasonable process of lam, bat by the bocily torture of the caltivators of the will ; jastice almost openly administersd by ignorant and corrapt tribunals by means of torture $($ the flogging case, in which one man died, leares no duribl of this in my mind , and capable, when. callod to account, of fulsiffing rocords and shameless perrersion of the troth ; old retainers of the State and reiatives and trasted ajrisers of formor ralers cast rathlosily
on the world without the means of gaining their livelihood, petty chiefs roused to desperation by new exactiona ; debts, due to bankers, to whom the State has been under great obligations, repadiated, and their 'private property .confiscated without a shadow of excase, they themseives and the members of their families being kept prisoners withoal any charge being brogght against them and without even the semblance of a trial; tradesmen offering jewels for sale simply swindled oat of their fair value; women, the wives and daaghters of respectable men, seized in open day in the Capital of the kingdom, ordered into domestic slavery in the Gaekwar's Palace by himsel personal. ly, sometimes dishononred by attendants and fearing to come formard to tell the story of theiz -shame before the world; " -sach was the tale of woe and horror diaclosed by the ingqiry which broygh on as a conseqtence its own retribation, Our readers know how it compelled Government to resort to a drastic remedy. When the bold step of deposing Malhar Rao Gaekwar was resolved apon, the next question which had to be considered related to the form of the administration to. be set ap. Annexation was out of the question as opposed to the most solemn pledges given by Government. Lord Northbrook wisely resolvel to conciliate poblio sentiment by discarding the asaal plan of-setting up a British officer to rule the State daring the joung chief's minority, and praceeded to try the noble experiment of entrosting the work to a native statesman who eajoged tho confilence of the Government and the good will of the peopla. Sir T, Madhao Raq was called upor accordingly to indertako the work being the best and perhaps the only man for the post.

Sir T. Hadhav Rao's work at Baroda did not differ in kind from the work he had to do at Travancore twenty years before, bat it much differed from the latter in dinensions.

Sir Madhay Rao, being the trusted nominee of the British Government, had the disadrantage of gcing to bis .work at Earoda with the people around bim full of auspicion and fear, for they looked apon him as the reprosentative' of an intruding authority. Besides, the tyraning and misrule, which be had to undo at Baroda; was much greater and mach more wide-spread than at Travancora; and the difficulty of atrengtbening the foundations of a good Goyernment were immensely more trying. There mere claimants to the Earods Gadi, who were tuasy in intrigues, fancying that the stars might favour them some time and that they woald bave their day of good lack. Those had to be quieted and nltimately defeated. Sir $\mathrm{M}_{3}$. dhava Rao dealt gently with those intriguers, Ho relieved thein of heary accumulated debts, made liberal provision for their maintenance, and treated them with congideration. NAhav Rao bad also to face the difficalt problem bf depriving a large number of the ex-Mabaraja'd dependants, who had lavish grants conferred on ther during the previous regime, of their anmerited allowances without at the eamo time provoking general diso content. This was done by means of cash grants snd by giving them in addition a moderate subsistence allowance on condition of good bebariour. Nest, thero were varions complicated poennianry claimg pending against some of the leading members of Mulhar Rao's adwinistration. These were got rid of by summary conpromises.' There vere, again, the complaints of Native bankers to be disposed of. Under the old order of things, rich bankirg firms were entrasted with the management of public funds on behalf of the State. The allowacees of coreral of these had been discontinaed by the late Mabaraja and lieir services dispensed with. These prajed for the restoration of their allowancts. Some of then also claimed the rostoration of their prisate property which had been conancated
during the past regime. The setlement of these complaints was really a difficult affair, bat Sir Madhay Rao did the work with consideration and tact. Equally difficult was the work of settling the claims of jewellers, who complained that their jewels, taken away for inspection, had been neither purchased nor retarned by the ex-Maharaja, but were needlessly detained. In deciding these applications, Sir Madhav Rao had to make his way through scattered and uncertain data, and, in many instances, where the circumstances would not brook delay, he had to lay down a roogh basis of settlement and order payments with reference thereto, pending, eloser gerating at leisure. The allowances of some of the near relatives of the late Maha. raja had also to be aatisfactorily settlel or readjasted. The clains of some of the members of Maharaja Khanderao's family, who had their allowancos' stopped by: Mullar Rao and were treated with unjast severity by him, had also to be considered and decided. Besides these complicated claims, there were cases in the nature of private suits, the main complaint in which was that the ex-Gaek war had misdecided the suit, or that he had unjastly abrogated a decision of his pre, decessor. The dispotes between the Sirdars snd their bankers were a further source of veration. These difficulties were all successfolly met by "Sir MadharaRaos and the British-officers, who watched events carefolly in the early years, were most favoutably impressed with the Minister' $\begin{gathered}\text { wonderfal tact. }\end{gathered}$

When these difficalties' were settled, Sir Madhav Rao undertook the formidable task of ferming a well-regalated systom of administration/ $\mathrm{He}_{\mathrm{e}}$ well knew that it would be nawise to hastily thrast a foreign administration apon the people of the State a and he therefore proceeded elowly but surely. "We -have resisted the temptation, " he wrote in his frist Administra -
tion Report, * to enter apon an ambitions course of legislation. It would be promature to make and promalgate regular and rigid laws. A simple population mast bo anable to understand and therefore unable to act up to minute, elaborato and intricate provisions. What they desire is sabstantial justice. What they dialike is,a system of technicalities, the object of which is not apparent to their rough intelligence and the action of which they conceive to be only the defeat or the delay of jastice." Eso that the programme of administration which Sir Madbav Rao marked out was mainly intended to maintain publio order and tranquility; to redress the ovila of the past mal-administration; to astablish a machinery for the proper administration of justice and create a Police commensurato with the extent of the country; to promote education; to provide suitable medical agencies, to reduce taxation and enforce economy. in oxpenditure; and permanently to keep the expenditure fairIf below the receipts, so that a surplas may become availatio at a provision for adverse seasons and available also for further administrative improrements.

The administration of jostioe under the old ralers occr pied a very sabordinato place in the list of pallic duties, Sir Waibar hao alloted $\omega$ it the position and importance to which it is entitied according to the encient Hinda and modern Eurcpean iideas. The Poblic Works Department was brought into being for the first time and adequate resoarces were placed at its disposal. The fidances of the State, which had fallen' isto ullardisorder, were placed on a sound footing, and all existing resources carefally buihanded; Pferioosly revenge farmers made enormoas gains and a venal and selfsh order of offcials fivorred them and eariched themselves at the cost of the Stato and in sobjects. Sir Yadhav Rao wroto a very te:"ing Iaragragh on this ani.ject in his frst Adminitration

Report. "It was an exchequer", he wrote in the words of Burke, " wherein extortion was the assessor, fraud the cashier, confusion the accountart, concealment the reporter, and oblivion the remembrancer." "Sir Madhay Rao faced this most difficult financial problem with confíenoe, rescred the fnances from all the old ombarrassments and confusion, introdacod höngsty" and integrity into the administration and assured the solvency of the State as thoroughly as he had done at Travancore. He placed the land revenue system npon a sound basis, substituting the ryot-wari for tite old farming system, thus making a clean sweep of all the vexations and estortionate incidents of the gatter system. The following was the triangle within which the lines of his financial policy were laid out : ( 1 ) to simplify and purify the taxation of the country and so to fix it that it may last unaltered for a good poriod of years; (2) to fx socales of éxpenditure for the several departmonts of the State so that the limits thas imposed may continue unchanged also for a considgrable term of years; (3) to insure in ordinary cases a fait surplos over expenditure; to that a surplus may accumulate and be available in bad' segsons to meet extraordinary demands.

It is bardly necossary here to go, further into the details of Sit Maday Raozz internal administration at Baroda, to tell how be evolved order ont of chaos, ittroduced honesty and efficiency, into the administration, improved the finances of the State, relieved the people from vexations taxes, carried out a vigorous Public Works policy; made provision for the protection and edacation of the people, afforded them medical relief free of charge, placed the administration of justice on a soond footing and assured continuous progress and prosperity all round. We shall content ourselves with ouly sletching, in Sir Madhav Rao's own words, the
broad outlines of the work he did during the five years ho was at Baroda. "It would ba false modesty;" be wrote in his last Administration Report, "to diaguise the fact that during these five years, our work has been exceedingly heary and trying, for the lact accounts for our visible delays and deficiencies. It is not simply that.we have had to carry on ordinary current business. We have had to investigate ahd decide a moltitude of mattera inherited by as, which in namber and complexity are probably unserpassed in any otber Native State. We have had to organise the machinery of Government. Wo bavo bad to carefully consider and carry oat vital reforma. Wo havo had to bring nnder control a vast exponditure in all its dark end ińtrioate ramifications. Wo have. had to rectify our relations with our numeroas and diversified neighbours. In this respect, graye and embarrassing aberrations from sound principles had, in course of time and negloct, aprang op, and their correction presentod peculiar difficalties. We have had to bring them to the notice of the anthoritios concorned, to explain, to discuss, to convince and sometimes to respectfully expostulata The extra strain thas cansed has, howerer, begun now sensibly to diminish, and it is therefore bopod that we shay be increasingly ensbled to devote our time. and energies to the derelopment of internal improvements. It must bo frankly admitted that thero is atill abondant scope for our exertions in this direction. All we chaine to have done is that we beve fulfilled the pripary obligations of a civilized Government. "

Such is tite lalo of Sir Madhav Reo's administrative work at Baroda, We would bave glacly' recorded in detail the strength and completeness of tho work be did there, bat wo most recist thit comptation is our space is bat limitod. There vis ono feetaro of his admivistration, bowovor, in regard to
which Sir Madhav Rao has been strongly attacked in some quarters, and it is necessary to dwell ppon this subject with more fulness of detail;

It is contended by some critics that Sir Madhav Rao failed to safeguard the interests of the Baroda State, when they clashed with those of the Imperial Government, that be sielded without a protest to the aggressive policy of the British Indian Government, that, in a word, the State was nothing to him if only he could wia a smile in bigh quarters. We thinls such a charge could only be made by those who are ignorant about the actual facts of the situation. Sir Madhar Rao was not at all responsible for whatever injuries the State might have suffered during his regime Wherever and whenever he thought that the interests of the State were in jeopardy, be protested against outside pressure in the strongest terms possible. Bejond this he was powerless to do anything. He had to yield, as any other politician in his situation would have had to do; when the Supreme Govern ment's ruling was peremptory and inexorable In most cases, however, his protests rosultg in a compromise,-a great achievment, when we remember how difficult it is to get the Government of India to budge an inch from their superior position in fheir dealings with Native States, So that what ignorant and irresponsible critics have blamed Sir Mádhav Rao for is precisely that which brings him out as a high-class politician.

- To exemplify our remarks, let us take the salt question. The British Government, besides prohibiting, the manufacture of salt in the Baroda State, claimed the right to work salt-pans within the Gaekwar territory; and demanded the exemption of salt 60 manufactured from the Baroda duties. Sir Madhay

Ruo protested that the right to levy these datie belonged exclusively to the State and that the British Government was not justified in denanding exemption. "Apart from the question of right,": he add3d, "it is olear that the opening by the British Government of salt works within the Gaekwar territory is undesirable, However affairs may have been managed in past years, wher neither the ruler nor the subjects bad any precise ideas of right and justice, in these days sach matters are better understood, and a steady progress (no doubt the reiult of the close contact with the British Government) has set in towards the definition of the rights of the State and of individuals., Such being the case, the opening of the salt works, which will render, necessary the presence of the servants" of the British Government within the territory of the State, end transactions of various kinds between them and - Gaekmar ryots, may lead to collisions and conflict of jurisdiction. It appears to me that there is every reason to deprecate such a source of probable trouble and unpleasantness. ". Again, when the question was raised, whether or not the Baroda Government was prepared to extradite to the Brtish local authofties certain persons found in Baroda berritories, and accused by those muthorities of havinf taken theroto a quantity of alt in contra* ation of British fiscal laws, Sir Madhap Rao strongly deprecated this demand of the Britiah Goverament, "It would," be respectfully submitted, " be a needless and injurious interference with the recognised inlogrity of Native States internal administration to permit Britiah officials and peons to enter Barode torritories, anywhere and at any tipe to seize persons and property, to search goods and packaces in transit \&c. anjer fiscal rule of their own and which havo no operation. in these territories. Such a course would probably lead to griat hardship to onp
sobjects in many ways, and to collisions of authorities and to unpleasantness in many respects between both Governmen $\xi^{\circ}$ while the policy aimed at is to simplify relations and to render them the most emooth and cordial." : Farther, when the officors of the Salt Department of the Brtash Government cited two or three instances in which extradition was granted by the provions Administeration, and therefore asked Sir Madhar Rao's ministry to do the same, he gave a characteristically emphatio reply, eaying that the transaction of business in former times was lax or inexact, that important and necessary considerations were oftein overlooked, that things were ofter -done to meet the exigencies of the passing moment withoat looking to the fature, and that, therefore, procoedings of the Bort in past times could not with justice be construed as procedenta and made binding for all the fatare. But what was the result of all this? © It is plain frong reports to be fond in this and previous correspondence," wrote the Ageat to the Governor-General, at Baroda under instractions from the: Government of India, "that the existing condition of thiags makes it very difficult for the Government of India to releaso the esercise, in this matter, of the rights which, as bas been. before obsorved, the Eritish Governuent has long possessed." Thas there was an end of the mattor. Bat with regard to the aggressive policy cleverly planned by the salt authorities, Sir Madhar Rao was able to secure a compromise. "The Government of India, "he Baroda ministry was informel, ${ }^{*}$ " is willing to agree that, if Barods will undertake the effeotivo prevention of illicit manufacture and collection of salt and of contraband traffic in the Baroda torritory, that Governmient will engage not to open ealt works in Barods withoat dae notice, the torms of notice to bo a matter for fature adjastment"

And under the circumetances, what else zould Sir Mradhav Ea have done than agrees to the compromise if

To talke another question,-the opiam revenue. The British Covernment desired to conserve the revence derivod from ofiom by themselits as well an the Baroda Government, and proposed on tbat account to forbid the caltivation of the poppy in the Gaokwar's territory. Sir Madber Rad protested that the object in view. did not require the radical measure of probibiting the cultivation of the poppy in Barroda territories, a caltivation which had been going on from very old times and which bad attained a oonside:able magnitade. "I feol juatified," he wrote, "in most strongly deprecating such a mearara, and indeed any measire which might have eren a tendency to that consummation., Any. measura, having for ita aim the immodiste or allorior surpreasion of the production of opiam here; cannot bat be an onfar and as, anwelcome to this Natire State as to any Native Susto of Malma. Vory largo restod intoresta have grown op in process of time, amd theos cannot, I sabmit; be summarily.ovept awas." "Aay measire " bo farther representod, "having tho effect of sconer or later destrofing the prodaction of opiom in Baroda torritoriea would not only prove rainoas to the agricaltural and come mercislindastries therowith connected, and to the revencea therafrom dorired by this State, chat would also, I sabmit, be prejadicial to British interests," for the Britioli Goveromeat forald ibereby bo losing an annual revence (in pacs daty.) of about twelve latha of rapees. Tarious other reasons were assigned by Sir Madhar Rao in acpport of his position. The outoowe of his protest was that the State was ahod to establish a monopoly of its owa in regard to opium. Sir Ma. dhar Roe next made out a atrung case against the establishmant of a mpoopoly, bat the reply of the Goverament
of- Ludia was peremptory and scopped any further discossion. "There is, no doubt, considerabie force in the objections stated by Sir Madhar Rao to an ahoolute State monopoly; but the aystem has been worked succeesfully in Bengal for a long series of years, and if rules analogous to those of Bengal are followed, there are fair grounds for believing that it will succeed in Baroda also." ; Thns the Bengal system of monopoly was forced on , the Baroda Government, and Sit Madiar Rao was compelled, as any other"man in bis position would have beon, to reldigtantly sabmit "'Though His Highness' Government," he, wrote, " still continue"of opinion that less drastia, measures than the one just mentioned are fairly available and ought to be tried, yet yielding to the pressure of the situation we accept what, for the sake of brevity, may here be designated the Bengal system." Thus the monopoly system was forced on the State notwithstanding Sir Madhay Rao's energetic, op position to ites introdaction. One good, however, came out of his protest. -An inportant concession was made to the Baroda Government. " It shonld be pointed ont to the Agant to the Guvernor-General; ", said the resolation of the Bombay Goverument dated the 6th April 1878, st that in accepting as gatisfactory the arrangements now proposed by the Minister; very material and important concession is made to the Gaekwar's Government. Under the Convention of 1820, the manafacture of opinm in the Baroda territory was strictly limited to the quantity required for home consumption, but under the scheme now proposed; permission would be granted to manulactare opiam not merely for home nse bat also for export. through British territory." Again we ask what more could Sir Madhav Rao bave, done in this affair to eafeguard the interests of the State?
$\therefore$ To take another instance,-the Giras question. The

Bombay Government were of opinion that the fact of a Mahal Girassia returning to bis kome in the Gaekwar's village did not forfeit his guarantee: Mahal Girassias were Girassias, who before the agreement of 1825 left their homes in the Gaekwar's villagos, wbere they had girae rights and went to resido in the villages of the Mehwasi Zemindars in the Rewa Kant.The view taken by the Bombay Government with regard to these Girassias,' Sir Madhav Rao protested, would change the express provisions of the Kalumbantio of 1855, wherein the guarantes to them was made conditional mpon he place of sesidence. He submitted that what was exprosisly a conditional guaranteo, and had always been so, should not be made absolute. There was a very good reason for giviug that. conditional guarantee. Certain Girassias, residing originally in Baroda territory proper, bad gone orer to live in the villages of the Rewa Kanta Zemindars. Under the, Kalumbandi of 1825, theoo Zomindars were responsible for the good behaviour of these emigrant Girassias, bat sinco the Zomindars conld not be jusily held responsible for the good conduct of the Girassias mhile the latter bad no eecurity for the regular receipt of their dues, st was arranged for the salie of the Zemindars that the rignts of Girassime under their control should be guaranteed. But when' any one of those Girassias returnod to Baroda lerritory proper, the responsibility of the Zemindar for his good conduct cossed, and there was no longer any reason for the continuance of the gaarantee. Thus it was that the gaarantee .was conditional apoit the place of residence of the Girassia; and "the making of a conditional guarantee ain absolate one, " Sir Medhar Rao proteated, "wouldbring ander guarantee many Girasias who are living in the territorios ander the direct administration of this Sirkar and in. whose case there is no reason whatevar for any guarantoonay moro than in the case
of the rest of the large body of Girassias." Bat what was. the outcome of this? "The Government of, India sided with the Bombay Government and raled "that the guarantee of a right to giras or voonta is not affected by the place of residence: of the holder of the guarantee." What have. Sir. Madbar Rao's critics to say to this ?:

Again in regard to the remission of tribute due from different Darbars to the Baroda Sirkar, The Political Agents altached to theseDarbars forwarded applications for remission to the Baroda Government whenever there was diminution in the revenue of the tribute paying Darbars, whose tribate the British Government had engaged to collect and pay into the Baroda exchequer. Sir Mahadar Rao representod that the mere fact of the decrease in revenue in any given year was not sufficient to establish a claim for retission. He advocated that when a tributo-payer realized a revenue gaceeding that standard. with reference to which the tribate was originally fised, the had no right to clatm any remission of tribute. The tribute was por: manently fixed at the time of Colonel Walkeria settlement in 1807 with a view to obviate flactaation of the amount, and consequent disputes, an arrangement by which the Gaokwar Government had sastained a heavy loss as the revenuen of tho tribute-paying States had since considerably increasod. «Heary as the sacrifice has thas been on the part of the State," be roprosented, "it is entitled to at least the benefit inadequate though it bo to that accrific, of not being called upon to entertain claims for remission whenever the tribute-paying States choose to advance them.n Ho further, claimed the right of the Beo roda State to refase, if it chose, the remissiop applied for. The Government of India wrote in reply "s that impoverished circumstances, by which term is meant such a falliog off in the
rovenas from casses not directly attributable to the misconduct of the Tribatary as to render payment of the tribato impossible with a due regard tothe proper maintenance of the Tributary, is always to bo considered a sufficient reason for a remission in the tribate," and that they were empowered and morally obliged to demand remissions from the tributo in overy cuso in which a necessity oxisted for granting the indulgence. And as for the right claimed by Sir Madber Rao, the Rosident at Baroda was instructod to say " that, the question of our right to domand remission should not le entertainod at all or any further ingoiry instituted, bat that we should at once maintaia that it bas always existed, and from its baving been so long in abegance, it is mach to be feared that it will now. be necessary to act upon it very extensivoly." Before this decision wis arrived at by tho British Gopornment, Sir Madhar Rao bed represented forcibly his views to the following effect :-《 I may mention bere that Travancore pays to the British Government the very' large sum of eight, lakhs por anisin.. A little before I took charge of that administration, the Sulte was on the point of total insolvency. It triod burd to get a remission from the British Government But the British Geverament wonld nof listen to the application On the contrary, the British Goveranient threw out a broad hint. that it would take clarge of the Stato and manago its administration, if the finances slould coatinue io bad as to mikike the payment of tio solusidy dificale Sinco that, the subsiity bas boen paid with Euerring panctanity.". Tho appeal, howerer, was made in veia, and Sir $\mathrm{I}_{\text {. Madhavrict had to gield at lait, }}$.

Is ail these çees, did not Sir Madhar Rao fight otordily in the interosts of the State of A naubier of other instacoes might be citad, ricich woold male it olear boyond the abadov
of a doubt that Sir Madhav Rso endeavoured energotically to safe-guard tha interests of the State. In the face of this teatimony, it is idle to say that he jielded without a protest to the aggressive demands of the British Indian Government Ho strongly protested whenever he thought the rights and welfare of the State were in danger, When he found that there was little chance of his views being accepted as a whole, he tried a give-and-take policy and agreed to a compromiso." In some cases he succeeded, but at times it availed nothing, and he had. to yield, howaver unwillingly.

Another point on whica Sir Madhay Ruo has beon roundly found fanlt with wast the fact of his having sent for the sanction and approval of Lord Ripon's Government a drafb constitution proposed to be enforced in the Baroda State on the installation of the young Gaekwar to the Baroda Gadi. It was contended that Sit Madhay Rao's cone stitution would hapo reduced the Baroda State to a mere Zemindari, We have no space to discuss that constitution here and show the hollowness and unwisdom of this criticism. It is but fair to note the contontion of the adverse critics that enough time. had not been given for constitution to grow trom within, and that it was premature to enforce a cut and dry systom of alien ideas of Government. on an ignorant people. Side by side-with this, it is equally fair to remark that Sir Madhav, Rao's constitation was entirely the same in spirit and nearly the samre in detail as the one promalgated in Mysore when those territories were restored to Native Rule, and we all know how beneficially that constitution has worked there in the best interests of the State.

[^2]of retimement at Mylapore, whore he diod at the age of sixtythree on the eth of April last.

## IV.

We bopo"\%o have givon a auficiently olear presentment of Raja Sir T, Madhav Kao, the adminiatrator, tha polfitician and the statemman. Eirolving oider out of chaos in $\mathbf{t w o}$, if not thres, important Native Staten, and akilfully sowing the aeede of an adranced aystem of Government-this wal the work of Raja Sir T. Madhay Rao, the admanistrator. Deatroying ailentls: the elements of distarbanoe and discontent by laying the malcontenta ander obiggations to the State, and secoring lor; the State under hil control the utmost possible good under the. utmont possibio pressare of the Simla Foreiga Office without produoing friotion, was the work of Raja Sir T. Madhar RaO, the politioiin, Aad perosiving beforeband the riations which would come to cubaiat botwoen the British Government and thair Fendatory Statat, and adjasting socordingly hia aystem of administratios es that it may suit the changed oiroumstences undor which Native Statat had begun or were eoon to livo,' and forestalling, throngh the force of bis extroordiang talenta, sided by the bigh educetion ho bad rocoivod and zoquired, suoil rolorma it the States, placod under his charge, an lime weuld aconer or latar have made imperative, as alno fore-talling the relatione which inateased odication in Native Statos moald bring about betwoon the Maharajes and thoir subjeots, apd propasing iocordingly a oonstitution which, while prewrring what whe giod in the old ordor of things would so fachion the State introdacing it ar to make it capablo of moring with the morements of the ago and rising with the riaing cupirations of its enbjook. poopla,-that was what constitrital Reje Sir Y. Mewhar Rao's tillo to statesmanship -:

Sir Madhar Rao, in our opinion, was a greator man than. eithor Sir Salar Jung or Sir Dinkar Rao. . These lettor did; not possess that familiarity with the English tongue and heqioe with Earopean thought on politios and political matters, which was Sir Madhav Rao's forte. Sir Madhav Rao'é acquaintanco. with literature bearing oṇ Native States and policy pursued tori: wards them from time to time by the British Indian Governe: ment, as also his knowledge of Earopean viems: on economios. and finance, was, it will be clear to those who stady his official writings, simply porfect, and that circumstance gave him a great advantage over the two other native stategmen of his time. He could appreciate better than they coild an that was best in the British administrative systom. And having the capacity to appretiate that, he conld inaugurato, with lese difficulty and more confidence, an ora of reform and progress in the States which were entrusted to his care, In a way, Sir Salar Jung laboured under greater difficullios than Sir Madhar Rao. His lot was cast amid less enlightened and less pasco. ful population ; so that he conld not effeot reforms as smoothly as Sir Madhar Rao sncceeded in doing. Yet wa are not under-rating the great politician of Hyderabad, when we ropeat that be was; on the whole, a maller man than Sir Mradhap Reo,-mmaller in intolleotaal attainements and perhaps in talents:, Sir Dinkar Rao represents the old achool of native politicians, which becomes extinct with him. Sir Madhay Ras was a perfeet politician of the now school Sir Salar Jung plied boo tween the two $\mathrm{t}, \mathrm{y}, \mathrm{t}$

Before closing this sketch, il is portinent to inquire, what does the life of Sir Madhar Rao teach us ? It teacher as bejond any other thing that there is a, very berioas drawback in the British asstom of administration. It is a sad reflection og British rulo in India that Sir Madhay Rao found bis carcor.
not in Britigh Indis, but in Nacive States, It the red line in the map of India had not been here and there interruptod, wonld young Mrdbar, serving in the Accountant-General's office at Magrat in 18̣47, have died Raja-Sir T. Madhav Rao, the administrator, the politician, and the statesman ? Wonld be not have beon one of those many fowere that are ' born to blush nnseen' ? And yet, 'Annox Native States' is the cry of Civiians of the imporialist sechool. It is a pity that the losios and fishes of office in the British Government are monopolized by mon-natives. There is no chance for an Iadian of Sir T. Madhair Reo's taients to develop zidd display his powers and be unefud alite to the raiers and to the raied. The life of Sir T. Madhav RaO, wo repeat, is a sad commentary on the British Indian Administration.

To odocated nativeq Sir Miadhap Rao's life is a rich mino of knowledge ind exporience. Those who stady his State papars will not fail to be impressed with the rast store of information and the keen obserration of men and things which bobrought to bear on his ministerial work. His life will also toenob them to be, especialily in politics, more practical than theoretic, moro acearato than wordy, more moderate than enthasintic, more cations than procipitato.

Shall India, we ask in cunclasicr, not cherish the memory of this great man in a fiting way? In theye dayd of cheap memorisls, is it not aid to contemplate that nota word is said Aboat rasing omomorial to the greei Mahratia Statosman? Or many it be that in the whole array of bronze and marbie menamoante, his is to remain conspicions by its absence?

## PROCEEDINGS OF THE SABEA.

Representation regarding Special Off rer's report on * the working of Agrioulturists' Re!lef Aot, Oon-

- cillation, and Village Munsiff system.

No. 817 of 1891.
Sarvajamié binea Roome. Pnona, 30th September 1892.

To
THE SECRERABT TO GOVERNMENT,
Jadicial Department,

Bombey.
Bia,
Weare directed by the Managitig Committoo of the Poons Sarrajainit Babua to submit for the furourable consideration of Goveructent tise following representation in regard to Mr. Woodbarn's seport on the working il the Deccan Agriculturists' Rolief Acit, a oopy of which Gorernment mat pleased to supfly to the Sa bha in July lest.
2. When Givern:nent first eppointed Mr. Woodbara as Bpocial Offictr the the parpose of inquiring ints the resalts of ths working of the Aot in the foar Districta as rompared with the condition of five otbor Districta where the $A$ ct ans not in furce, the Comuitiee of the Subha aglortsiesd doulta es to how far inquiry by a siagile offioar roould prore astisfactory. At the Provincial Coniereaces heid in 1888 add 1859, undor the anspiets of the Sablut the question mas discoused
 to oatrost the inquiry to a mixed Commission (eopies of throce Beto latiose are ceot berevith). The report of sact a Cormisaion would atanily bave carrial more veight and to 20 me extent prersented the
difforences of views which on such a sobject it is almost imposible tc sroid between the District Extecutivg Officers who, as Mr. Wood - barn's report ahows, are in lavour of extending the Act to other Distriots, and the Distriot Judicial2offigers who are generally less im. pressed witt the benefitio of the Act by reason of their being less in tonch with the people, axoept in conneotion with the litigation which comen bafore them. Notwithatanding thil difference of vierse the Committee of the Sabha are glad to notice that in the Spocial Offioer's opiaion the 'Deccan Agrioulturista' Relief Aot has, ond the wholen proved beneficial to the agricalturistr in the four Districts whore ft if at preseat in operationi ned thay join with hime in hit recommapdation that, the Act might with sdrantage be oxtended to othar classea than agricalturista and to other diatricts. The Special Offlcer't raport' gives esbaustive utatements abeat the economical effects of the Act in improving the condition of the agriculturiats and in roducing their debis. His report is not; however, equally full in regard to the judicial working of the more important provisioni of the Act. ; hat the Committee notica with satisfaction that the Spaciel Officer approvers of the policy which suggested the neosersity of giving power to the Coarts to roduce exhorbitant rates of interest to reasonable ratee, to ga behind the bond to examine tho parties in all' casee and ine that na trand or andhe iufuenoe has been exarcised; to allowi instalmenti, and to remove andne presare apon ngricultariste by exompting immorable property from lisbility to salo for mones decreas.
a The Committoe, howerere, ontirety differ from the Special Officer in regard to his viepmabont tha working of the Conciliation Bystem.: The Special Officar admittedily does not appoart to hava norefylly stadied the : Rorking oi this, portion of the Act, nad his gug. gestion that tha Conciliation Systom misht be aboliabod ia not antitled to any weight The Committee ane fully peryusded that mach of the good which the Aat hac, on the whole, done is due to the asytem of concilition prorided by it, This eystem in popular act being to some estente, mavival of an bld and time-honored Indian institation vif, the village Panchifata and it it racogaized as sach by the peoplo ia the four Districter mhere the Act in in aperstion. The people of this coan-

Then all oiker means lail. The general praotice in to requact respect cblo gratlemen to settle a dispote in the firat instanco, and it is only Then these are amble to arrive at o settlomont eatisfictory to all the pirties conceerned that the matter is takea to a regular lan Coart, Under the Native rele settlement bj arbitratiod iwat the rule, and the regular Courts took ap only such easees as conld sot be se eotiled. Fo one, the Committee think, mould diapate the fuct that ponciliation "when fairl's and encenafully erriod out in a blosing sull : cound,? Apart from the maring in money to the parties conoerned-s very important conaideration in this poor conutry -thero is the moral and educative inflaenos of the syatem which is noarcoly less ralunble. Under a acocessfal byatom of concilistion Thore the dispating paities harif to place their lacte before men of looal influence and straightforward eommon sense who are not hampered in thair work by any mere-legal technicalities, the peoplo beve, to qume extent, the whantagear of Jary triel in civil matters by porsons who know both the parties. The system is also free frma all thoee denoralising effects which charnctorize litigetion in Lew-Coarts vis, the tendencies and inducomonts to hebriasto eridence and pervart fects, and to take unfair adrantage of meve tochnicalities. Aa amicable sottioment of a dispate provents, nuch bad feeling, and tonohes people to reeptoct one another's rights. Eminent atatesmea here ofton avowed that the poliey of the British Government in India is to gradually educate the people of this earntry in the art of seliGovernmant, and the Committoe think that a further extansion of the aystem of conciliation to all classes and suits will exercise most beneficial influence in this dilection:
4. It might perinape be objected that the legal truiniag end general aducation of the porcons the are armilable for doing the work of eosoilistors, are not genarally bigh and that it.is therwione menefe toratrast then with the powen shich the Aet confers on thein. Bat the Committe wouid apbmit that the functions of oonciliitors are int the mase as thoen of Jodget or even of arbitemors wno have to. minutely sift oridoaco and decido iatricate questions of fect or lew. Coccilistors do sot jadge mutore in diapute bet maraig. help the
 chility, disintanstednes and bacoty of parpene are all the
qualities that they need possess and the experience eof the past ten years justiles the Committes in maintaining that Government would never find it difficult to becuse such peruons for discharging the duties of conciliators and there would be no risk in conferring powors of mediation on theme It might be added that the Conciliation System is in force in many if the European countries and in the United Statea and the powers conferred apon the conciliators there are more extensive than those accorded to them by our Jegislatare.
5. The Committee are not sware that-Government has ever expressed dissatisfaction with the work done genetally by conciliatorst On the contrary, it has from year to year agknowledged the value of the work done by these gentlemen and conveged its thanks to those who have shown zeal and ability in the discharge of their duties. The only objection, within the knowledge of the Comamitree, taken to the Fork of ennciliators is that sometimes new transactinns sre embodied in the agreements effected by them. Now in the first place, slthough - few conciliators might, owing to inexperiance, commit such irregula. : rities, the Sabordinate Jadges can easily rectify them by seting aside anch agreements ; a course which, so far as the Committee ard aware, is generally a lopted. Thef there is the Special Jalge with his Assistants to anpervise the work of the Subordinate Judges and no oned the Committee think, woald serionsly enntend that this is not a sufficien! gafeguard against any possible irrezalarities. Agair even if the new transactions embodied by conciliators in their agreements escaped undetected by the supervising machinery no harm would reasit. therefrom beyond the paltry has of a few rypees to Governnyent in the shape of stamp-fees, Bnt this lose is a consideration too trivial and too insignificant to jastify the sbolition of asstem pqur reaching' in ita beneficial effects.
6. The fommittee further beg to observe that the village Mansiff System Las also become popalar. This system has obtained Lpr nearly 75 years in all districts in the Madras Presidency viere the: village Patel is ex-officio Village Mansiff and is investeJ with larga powers, and the Committee leam that the Governinent of North. Wettera Provinces is thinking of introducing it in those provinoos.

The costs of litigation in the shape of Conrt-fees, process-fees, pleaderfrees \&oo. in Civil Courts, and the delayg and harassment are so great that some relazation in farour of poor suitors, zuch as that afforded by the Village Mansiff System, is very desirable.

- 7. With regard to the Village Registration Byetem, Governmen must have noted that it has almost entirely checked the complainta about the fabricution of bonds. It cannot be denied that so long $=8$ the vant masas of the agriculturiste are anable to read and write, such a check on the fibrication of bonds is necessary. The report of the Deccan Riote Oummission shows that the Commissioners laid great etress on the neooesity of appointing public Notaries, and wenl so far as to prepare a draft.law on the subject long before the Ralief Act was thought of.

8. Tbe last point that the Committee of the Sabha would beg loave to relar to is that it is not only desirable but necessary, to hare - Special Officat with sufficient leisure to supervise the work of these voluntary agencies and to Lelp them in a friendly and aympatbetic manoer and generally to supervise the working of the Act and gire effect to the riown of Govenment in a auiform manner which adrantage will be lost it the work was split up among a number of overwrked officers with varijipg opinions. Whilo doing. this work, he oan; if necessary, reliere the District Judges of a portion of their appeal work. The Committee are of opiuion that much of the good, Which the Actis intended to echieve and has, in some mensure, aiready securcd, will disappear if there is ua Special. Officer to supervise the working of the Act, gnd to enggest remedies whenerer iny, delects come to his notica.
9. 2. For the several reasona noted above, the Committoe pray that if the report of the Speciol Oficer has failod to satisfy Gorernment sbout the tuccossful working of thi Act, the questions at issue might be rolerred to a Special Commission. Under any cirean stin es, the equib-, able provisions of the Relief Aci should be retained with a view to modify the rigour of the ordinary procedure and that the serrices of the valuntary agencies of village Manciffs aud Concilistors should be ontinind. The committoc also pras that Government will be pleased

We have the hooot to remain,

Your most ebedient terrants,
VIBHNO MORESHWAR BHIDR

Secretarien S. B. Pooná

## THE REORGANIZATION OFP REAL CREDIT IN INDIA.

No fact in the economic condition of this country arrests attention mote forcibly than the contrast presented by the hoardu of unased capital, stored up in the vanlts of the Presidency and other Exchange Banks, and the high premium Government Securitien command on one side, and on the olker the atter paralygis of Industry in raral India due to the povorty of the resoarces of the classes engaged in the production of wealth. It would appear as if some impenetrable barrier infercepted the overlgw of wealth, and barred the channela of oommanication between the repervoirs of capital and the parched fields of Industry dried ap for want of the wealth-bearing, and fertilising moisture. This is not a fancy pioture. It in a stern reality which bas to be faced by all who fool ap interest in the well-being and progress of the country. : The Presidency Bank of Bombiy glone has at this moment more than five crord of deposit receipts which it does not know how to ase, and which drives it in deepair to refase Manicipal and otber private deposits axcepit as garrent accounts which bear no intorest. Nearly two erorea of rapees are locked up in the Post Office Savinga Banks in thia Presidency alone, and as many as five crores are similarly locked up all oper Indin, wich the Government cannot turn to account except by boying its own Paper, and maintaining from the interest proceeds its Paper.Carrecey Department,

[^3]Government 4 per cent, Paper sells for 107 or 108 Rs, and 5 por cent: Munioipal loans fetch 111-112 Rs, por nominal value of 100 Rs. The average for ten years of gold imports has been 4 coofes, and of silyar 7 crores, the latlor chiefly coined into rupees, the former chiefly absorbed in grinaments. Meanwhile the caltivating and artizan classes can get no loans except at rates of interest ranging from 12 per cent. to 24 per cent. In four districts, with, a popalation of 35 lacks, for whice information is available, the amonnt of annual borrowings on the mortgage of land exceeds forty lacks, and of omple loans 16 lacks, the interest rate on morigage loans being generally 12 per cent. and on nimple bonds 24 p. c. The slightest irregularity or delay.in the annual rain-fall deprives the whole population of food, and, what is sar worse, leaves them without work, and Govetnment finds it necessary to strain all its resources to arrest not only the) food famine, but the work famine as well. Less than 3 per cont of the land in the Presidency proper is protected by Irrigation. This is the actual situation, and is is clear that it is alarming enough. If there were no capital in the country seeking darestment there would be reason for despair, Bat as thing stand, the situation is not bopeless $\therefore$ There is capital readdy to hand awaiting secure investment, Thera is the broad dreary. expanse of Indastry which is thirsting ${ }^{\text {T }}$ for capital, and offering the most secure investmerit for its fruitful employmentWhat is wanting is the necessaryskill and patiente which. will adjust the capacity of the one to the wants of the other, and make both work in a spirito of harmony and coroporation.

In this connection it is very unfortanate that the economic conditions of England are so widely divergent from those of India that the rulers of the country, brought ap in the tradi-
tions of their native land, find themselven more or less unpreparod te grapple with the difficallies created by this novel situation, With its land owned chiefly by a few landlords, and ite peasantry representing a very small proportion of the wagoearning clases, with its largo acoumulations of capital, and the vast developmont of its manuficturing and commercial activities, Graat, Britain is most fec̣aliarly qircamstanced, and its oconomic history farnishes no guide for dealing with the diffionltien of the aituation in India, where, except in a fow provioges, the State claims to be the sole landlord, and agricultural classes form 80 p . c. of the total popolation, and there is no accumalation of capital, and manofactures and commeroe aro in their radimentary. stage, and in that atage aleo quietly monopolized by strangern. On the Continent of Europe, however, Indian problems are Cairly reprojuced with. Jodian conditions of life and property, and the lessons to be derived from the study of Continental economy have a more practioal bearing than the maxims containod in the nstal textbooka of Euglish Politioal Economy. The task of roorganizing crodit, both real and personal, on a sound ind progressive basis bas beea undertaken by Contipental statesmen and thinkers dar: ing the last finty years, and they bave ancceeded in bridging the gulf whicia separaten the asving few from the prodacing meny in as which commanda attention. If this takk were andertwkon in the same spiril by those wha feel ite importance bere in - The promotion of na titasl vell-being, and a modue operandi established by which people seeking secure investment can to brought faco to face with those who ned their belp and are prey ared to offer that security, the ngition would soon alart opoin pew race of life with jts powers invigorated; and its energies a wakened in - way no otber single agency can accomplish. This Conference Fill nout have met in vaid, if it succeeds in drẹing public alteq.
tion to the anbject as one of paramonat importance, and if, it attempta to suggest ways and means for practical adoption, based on principles which will, in coarse of times fiat their farther development in far-reaching beneficial consequences. With this view it is proposed to give a brief hiskory of the growth of the organization of real credit in the eountries of Hungary, and Austria, France and Italy, Belgium and Switzorland, during the past fifty yeare.

To take ap the history of the marement in Hangary, it is noticeable that twa important developments in the condition of the agricallural classes forced this subject upon the attention of the ruling classes in Hangary. As these develop. ments find their counterpart in India, they deserve special notioe. In the first place, after the Revolution of 1848, the Hongarian peasants found themselves in tha possession of a freedom, born, in a enseg of individual right which they had only imperfectit' possessed before. They were serfa before, and thangh partially emancipated under. Maria Theresa; their completo emancipation toot place in 1848 and the sobsequent years. The old serfa wore made proprietors of the lands they beld under their landlords, who were bagagh of to "give their consent by spitable; compensation, Compalgory Jabour was abolished ; rents, taxes, and tithes wers consolidated together, and the nobles wore taxed like any other classea, and had to pay wages to their old serfs when they employed them on their diminished farms, Copy-bold, and serf hold property became frehold, As many as five dacks af families were thas restored to freedom, and, on an average, their boldings were abbut 15 acrós each. This, it may be notod, fairly corresponde with the change which bag been brought bout over the greater part of India by the survey settlements, oxcept that the State in Indis has stepped into the position of the private landiord, and

## Tho Reorganization of Peall Credit in India.

clame to be orner of all coltivable and caltivatod land. The noxt change which took place in Hungary me aiforeproduced in the bistory of our own conntry. Owing to incroased facilities of commonicasion, new markets were opened, and the export trade was developed to a large axtent. Old mothods of cultivation, which did well enoagh under old conditions, were foll to ${ }^{\circ}$ be inadequate, and . it was found necessary to abdadoa the old aystem. Owing to the poverty of good waste land, the paltivation hed to become intonsive in place of the old syatem of extensive coultivation.

Unde the doable infuence of these two causes, the problem of reorganising real credit, i. e. of secaring loans on easy terms on the eccarity of real property, first presentod itself for practical solation, and real capedit Institations, worked on divergent "principles, were startod, other in the interest of the borrowers who clubbed their resonrees together, and founded sach institutions as thp; Boden Credit Instituts, or in the interest of the lenders who opened departments for real advancos in the great National Banks, soch as the Austro-Hangarian Bank or the Provincial Savings Benks. The Girst Eoden C̣redit Institute was startod in 1863 by 209 land-owners vho. sabioribed among themsques a largo amoant of capital-about $1 \frac{1}{3}$ crares of Ropees-of which $\frac{1}{16}$ th was paid ap in cash, and tho remaining fin thas represepted by bonde passed by the founders is favor of the Bzat, which were gradaally withdrawn as the Reserve Fand incrasend, Every borrower had to bocome a member, and gnaranteed with othors, whe joined vith him, the solvency of the concern to all who bad doulings with the Bank as bondhadiers or depositors. The ordinary ratio of intorest on mortgage bens mi mach bigber, bat the Institato
made its advances at a fixed rale of interest, $6 \frac{1}{2} p_{0}$ e. which was gradually. reduced to $4 \frac{1}{2}$ p. 0. . The advances made ware limited to $\frac{1}{2}$ of the sssessed value of the property mortgaged . No proporty wai mortgaged which did not yield a fixed and cortaiz income, and no loan was mador except by way of a first and sole chargo. The: rates of interest stipulated included initerest proper, and one p. of for the sinking fund or for the, amortization chargo, and, 25 to 50 per cent, for expensen and the reserve fund. The repayment of principal and interest was secured by spreading the payment over a period of 34 ;to 41 years. The Bank issued its bonda of 100 or 1000 or 10000 floring at 4.85 per cent and thee bonds were made payablo to bearer, and being negotiable freely changed hands, ind: a portion of them was withdrawn by lot as each debt was paid off in part. The Bank was required by law to keep its bonds strictiy within the amount of the value of the mortgaged property: Besides this guarantoo, the creditors had arst charge on the 10 per cent. paid up capital of the founders, and on the Reserve Fand, and the mutnal guarantee Fund, and the sabsidy pxid by Government to belp the Reserve Fand. It is very important to note the concessions granted to this Bankby the Hingarian Government. The Government granted a subsidy to the Reserve Fund of 5 lacks of fiorins. It exempts the Bank's profite from the income-tax, and its operations from ail atamp daties. It lends it the help of its officers for assassing the value of the property mortgaged. It orders inspeotion of acconnts? with i viem to necure obedience to the rales, and, finally, it permits the Bank to foreclose or sell the mortgaged and also unmortgaged "property of its debtor on defanlt being committed in paymont rithoul requiring it to go to larip and take its chance of justice nith all jts delays and costs.

The borrower is required to pay, aix-monthly intorest in advance, and the Bank alsu pays the coupons on ite bonds to the bolders theroof aftor every six month. In consequence of these exooptional privileges, fow defaults were committed, and it has been estimated that out, of somd 14 millions advanced by the Bank to 11060 borrowers, the Bank had to suffer loss to the extent of $£ 25000$ only. The borrower is allowed froodom to pay off his debis in articipation, and a considerable minotity take advaniago of this privilego. The Institgte has thus fully realized the leading ideas of its promoters. It acts an intermediary between the borrower and the lender; while procaring for the borrower oasier torma, and teaching him self-roliance and freedon, it favours the lender by offaring . its own gaaranteo for the money be advances to the borrower through its agency. "Theso facilities havo greatly belp. od the prosperity of all classes in the coantry, and lowered the rato of interest all round.

The Boden Credit Institate also deais ajith Communes and Monicipaliiies, and advances loans on special torms favourable to theso Corporations and to the Eank This Bank is the best type of institutions worked in the interests of the borrowers, as the founders are content with' 5 P. c. interost on paid up capital, and ile directors receive no pasments. Thero are other institutions worted on the sanine principles in, tha interest of tho lenders, and in their ease dividends aro deciared as in ordinary Banks, varying acoording to the conditions of each year's oferationa. The prisciple of all those Bank ibich mako adrances on real propenty is to intorpose the Bank between the borrower and the lender, to grarantee the lender against all riskg and theroby eocare a ro. duction of the rate of intorest so an to help the borrower with
loats at as alightly enhanced rate of intorest, and provide for a resefre fund, and for the expenses of management, and by spreading the payment over a long number of years, generally 40 jears, provide for a gradual but certain satisfaction of both principal and interest.: The Austro-Hangarian Bank is the ebiof of these Banks which carry on business in the interests of lenders. Besides doing tho regular work of a National Bank, it has a real credit' branch managed by a sepatate committee. In consideration of the special privileges of speedy exectiogn of its claims, and exemptions frem stamp duties conferred on it, the Government has a hand in the saparvision of the management of this Branch. A Government commissary is appointod to this duty... The Bank issues bonds at 4 per cent and charges $4 \frac{1}{2}$ to $5 \frac{4}{4}$ por cont according as the poriod of amortization is long or short.

There are other Banks such as the Hypotheken Bank br the Credit Foncier, the Commercial Bank of Buda Pesth, and tho Savings Banks, which'do not enjoy any special privileges, but do a large amount of work.

A smaller Boden Credit Institute wat founded in 1879 to help poor land-holders: The Government granted a subsidy of 500,000 florins to its Reserve Fund, and its ofther rales and privileges, and the powers of Government sontrol are very mach the same as those described above in regard to the bigger Institation. It has helped land holdors with loans amounting in all to one crora of rapoes, secired on e total value of $2 \frac{1}{2}$ crores, and has, tn course of time, reduced the rate of interest from $7 \frac{1}{2}$ per cent, to $4 \frac{1}{2}$ for cent.

All these Banks in Austro-Hungary have latety been empowered to advance loans for improvement parposes, and such loans are adranced at $d^{3}$ per cent. including the sinking fand,
and the period for extinction of liability ranges ap to 50 years These adrances are exempted from stamp duties and other charges, anil the technical execution of their works which involvo expenditưre overr a " oertain amount is entrusted to the State Engineers as a portion of their charge. Defanlt or difficulty of collection rarely oocurs as advances are by rule limited to balf the value of the assets. In Austria, the Provincial Boden Credit Austallen receive subsidies from the Provincial Governmenta; and in return the Governments exercise control and supervision throngh their commissaries.

To comenext, to the conatries of the Latin Union, France Italy and Belgium, it is to be nuted that the establishment of a Crodit Foacier, or mortgige bank for lending money on the secarity of lands, forced itself upon the attention of the Freach people aboat the time of the Revclation of 1848 . Inquiries made at the time elicited the fact that the ustal rate of interest on mortgage losas was 9 to 10 per cent., and the idea of the promoters was- to remove the difficalities in the way of finding capital on the credit of land felt by the peasant pros pridore craated by the French Bevolution.

In 1852 , ibree great institutions were founded in Paris and in two other places, bat they were scon amalgamatod into a Central Institation with ${ }^{\text {its }}$ head-quarters at Paris, and with an exclasive right to operato throaghoat France. The object of anch Institations was laid dowa to be the adrace of lowas to amall luadownory at modorato interast, and provide for the rupaymont of the principal and interest of the same in a long period of 40 or 50 years. The capital of this contral Bant was raised to 60 millions of Franes, ons half of which was paid up. It consideration of the exclasive privilejes conferred on the body as the sole National Bapk of rsal property

## 10 The Reorganization of Real Credit in India.

in France, Government has insisted upon retaining in its hands considerable powers of control and supervision. The Governor and twe sab-Governors are. appointed by the President of the Repablic out of the larger shareholders, and there is a Council of share-holders. In 1860, the Credit Foncier was authorized to lend mroney to Commanes and Departments, aecured on Manicipal and Local fands. The Credit Foncier eannọt issue its bond* over and above the value of the mortgaged property, and it mast keep a reserve of 20 p . c. of the total of the sum adranced. The capital of the, Credit Foncier has been gradually raised from 60 mfllions to 180 millions.

The amount of its mortgage advances rose from 852 millions in 1852 to 2004 millions in 1888 , and its loans to Com. manes rose similarly from 478 to 953 millions. The net profits realized wore $7 \frac{1}{3}$ million Francs in 1878 , and $22 \frac{2}{3}$ million Francs in 1889. No loan is advanced unless the property mortgaged yields a cortain and durable retarn. It is not : ad. vanced beyond one half of the value of the property as assessed by the Bank's experts. The expenses of negotiating the loan and satisfying the Bank about the title doeds come to abont 3 p. c.s and are borne by the borrower. The 活terest charged is 4.85 p. e., and the period fixed for repayment may be either a short or 8 long term, The debtor may pay off the loans in anticipation, Is all, 3400 millions of Francs have been advanced as loans sínce 1852, and default was committed only in zospect of debts amounting to 18 milliong, in regard to which the Bank found it necessary to bita the property itself. As a consequence $^{\text {a }}$ of this improved organization of credit, the rate of interest has fallen throughout Frańce from 9 or 10 p. c. to 5 p. o. The Govornment guarante日s the Credit Foncier against competition and lends it the assistance of its officers.

France is pre-eminently a country of peasant proprietore with amall boldings like those of India, and its agricultaral interost is of considerable importance. Of course the French poople are differentiated from our countrymen by their romarkablo thrift, isdustry, and forethought, and their powers of organization and mutaal help. These babits are; bowever, 'essentially the creation of the change that took place in the early part of the centary, when the estates of the nobles and the bishops and monasteried were escheated to the State and parcelled out among the peasant farmers.

The accounts of the Fretich peasantry in timea which procoded this great change do not show that there was then any auch edvantage enjoyed by them over oar people. The Freach peasant is besides the proprietor of his holdings, and. han no land-tax to pay. Barring these difforences of history and character, the conditions in France are like those of Western India, The French peasant is heavily in debt, more than bhalf the land being mortgaged, but his debte sit lightly on him, beoause they represent improvements mada in the land, which cainot be eaid with equal truth of the debts doe by our peae. sants. The reorganized aystom of land credit which bas worked these wonders in France, and Austria, and Hangary, may therefore be safely expected to achieve equal successi in India.

In regerd to Italy, these oliservations apply with still greater relerancy. In 1861 it was ascortainod that the average rate of intoreat on mortyage loans vas 8 to $10 \mathrm{f}, \mathrm{c}$., and Weamount of the debts charged on the land in Italy, excloding Venicp and Rome, wis 269 grores, while the net income was 40 crores, and the Governmont charge oa the lend was $11 \frac{1}{2}$ crores. Deduoting Covernment and other charges ( 12 crores), and the intorest mount (it crores); the
ownors had only 14 crores of revenue at their disposal. With the increase in Government taxes and in the interest charges, the balance left in the hands of the landowners grem less each jear, and this drew the attontion of the Italian statesmen to the necessity of taking early action on the lines Pollowed with suoh brilliant success in France:
*. In 1862 it was accordingly proposed to start a central Credit Foncier for the whole kingdom with a capital of fonr millions of fs. and invested with exclusipe privileges, and helped by a Government subsidy of $£ 400,000$. It was not found possible to float the soheme in its hage proportions, and in 1866 a compromise was adopted by which the agency of seven existing Banks was ntilized, and powers were conferred on them to operate osclusively within their defined zones, and deal in mortgage business, The rules of business were the same as those of the . kindred institation in worsing order in France. Loans wore to be adyanced ap to half of the value: of the property mortgagel, apd gradual liquidation of principal and interest was to be provided for. The interest rate was to be a uniform one, 5 per cent., and the Banks were to issae negotiable bonds, and withdraw them gradually as instalments wera paid or satisfied. Between 1866 apd 1885, 16 millions fss، were lent to 8355 borrowers, After 1885 the zone system, was done a way with, and any Bank or Association with a capital of. fi,00,000. was permitted to transact mortgage business nuder. the conditions mentioned above. The rigidity of a unifarp rate of interest was also done ayway with, and discretion was allowed to charge $4,4 \frac{1}{2}$ or 5 p.c. interest according as the period was long or short, the rule of limiting edvances to half the value was also relaxed, and loans were permitted up to $\frac{3}{5}$ th of the ralue . Under this new law, the national Bank of Italy
and meven other Banks carry on mortgago dealings in addition to their other business at Naples, Rome, ${ }^{-}$Sienna, Lombards. Dologna, and two other towns. The Manicipal anthorities of Sienna were the first to work the eelebrated. Monte Pia syatem : of loans on pledges nearly $300^{\circ}$ years 2go. The Italian law. allows to .theso Danke great facilities for tho epeedy and cheap resovery of inortgage debts, and the Government does not, as in France, exercise any active control in the management of the Bankg' affairs., The Banks which issue theso bonds undertake to sell them on commission; the bonds are made payable to bearer, and the holder bas no claim against any private mortgagor, but only agsinst the Bank, all the eight Banks cash oach other's conpons.

In Belgiam, the first institation of the kind we are now considering, caHed Le Caissa Hypotbecain, was astablished in 18.55 with a view to offer facilities to capitalists for investing their monies safely, and to borrowers for borrowing" money at low ratel, and enabling them to clear off the principal and interest mmonnts ty instalments spread over a long feriod.The powers of the Bank were onlarged in $1886_{2}$ and it lias since taken the name of Credit.Foucier de Belgique. There are other institations nhich do the same business. . The Beigian authorities had under contemplation the creation of a central Institution which was to have power to adrance money on bouses, foresta and woods up to $\frac{1}{1}$ their assessed value, and on lands upto $\frac{1}{2}$. The borrowers were to pay $\$$ p. o., interest, which rato was to inclade the siuking fand and expenses of management and registration, and the period fixed for repayment was to be 41 jears. The Bank was to issue \& p . c. bonds fully covered by the ralue of the property mortgaged, and the Belgian Goverament agreod to andertulo we work of collecting the
instalments due by the Bank's debtors thoongh its Treasary agent, and in case of arrears special facilities were to bo al. lowed for realizing the monies due, the Bank's debts being allowed a priority over all other debts, and the transactions of the Bank were to be exempt from all taxes and duties. The: Bill was passed by the Lower House, but before it received tyo assent of the Senate, a political crisis occarred, and no futher action was taken in the matter a The concessionis proposed and accepted by the House of Represeatatives deserve; however, to be specially borne in mind, as they indicate, the extont of support which Continental Governments are prepared to give in the work of reorganizing eredit:

The Federal Stater of Switzerland farnish equally interesting examples of this same (iberay policy. In theSe States, private capitalists seldom lend mofiey on their owne accoant. The mortgage and-savings Bank virtually monopalize the businoss, These mortgage Banks are either parely State institutiong, or of a mixad character, The mortgage Bank of the Canton of Berne is a State Institution, and is the most important institation of its kind in Switzerland, These State Institutiong are more successful than private or mixed Banks. Of corree the State Banks do not satisfy all demandg, and there is thut foll scope for private onterprize The State Institations have this adrantage over private Banke that they Jo notcorew up the raten of interest, white their ample means enable them virtually to regulate the rate of interst all over the conntry. The Berne Benk bas redueed its rate of interest within tha past 15 years from 5 to $4 \mathrm{p}, \mathrm{c}$., and hai thereby doubled. and trebled the volume of its bunsiness, . The deposits have incroased from $1,119,629$ fs. to $3,032,389$ fs, and the loans froim. $1,600,000$ to $3,200,000$ fs. Most of the Swisg

Cantons have each their sefarate morigage Bank, aud thongh Sarings Banks which deal in personal credit are generally private, yet in many parts of the country tho Commanes assist even ti eso Banks by taling a certain number of stares. . Swiss mort $\dot{g}^{\text {a }} \mathrm{e}^{\text {e }}$ Banks lend by way of first charges only, and compel borrowers to discharge all previcus claims. The amortization arrangements enable the indebted agriculterists to pary off their debts, and free their lands from incumbrances with certianty and ease. Under the direct system'of lending, creditors exercies a moral tatelage or dominion' over the debtors who sink in dignity. The relations between a privato debtor and croditor havo a tendency in course of time to derolop mutaal misonderstanding and bitterness. The emadipation of the popalation fron hlis source of moral degradution by the iuterposi. tion of the Eanhe has proved of the highest value as as ageacy for the calucation of tho peopla in the leat virtues of citizenship. The Banl's relaions to its deltors are of tho simplest claracter and iuvolve no wieless expense. The men who have money, sad want wo invest it sufely, find that they Lave not to haut after their ciltors, inquire into tireir soivency, and go to law to test the result. The man who tas saved meney which be wans to lend goes to the Rank, paysudown his money es a depositur, or buys the londg of the Carh, and when the sis-mutibly iu: iniment fulls doe, Be signs the eoupun, aud cashes it An immense waste of powur, tine, aad tioney is thas saved to bio and w. the delt tor. The lusinessfecones specialized like any. otber tosiness all rishs are a ooided, and all the tenefics of a secure invesmen and cheap hana aro secured to the monied and noody clasise These Swiss mortiage Baths faraish perthips the best elamol of $\varepsilon$ ruice conperative effort, that is socu in any fart of th
world. Farmers club together for the purchase, in a joint Way, of agricultural cattle, of seeds, of manure, pasture lands, cheese dairies, or for draining marsh lands and constructing country roads, and the Banks help them to do so on very easy terms.

This principle of cooperation for common purpose was first worked out in Germany on lines formulated by. Raiffeisen, but they have been developed most widely, and benefictally in Switzerland. Each member contributes a fixed sum per month or year, and the Association also receives deposits. Out of the collections and deposits, loans are made to those who need them for buying cattle or seeds or manure. The Association has a charge on the cattle \&c, so bought, and the Swiss Lawprovides that if any one of the members brealis his engagement to the Association, and sells the cattle, the act is not only a civil kut a criminal offence, of which a magistrate takes instant cognizance. The engagement has in this case to be execcted before the magistrate so as to avoid all future complications. These small Associations receive help from the "State Governments, and in return their accounts are open to inspection by State officials. *

This completes the summary I proposed to give of the most recent history of the reorganization of credit in some of the principal Continental countries of Europe. The present circamstances of this country demand that the efforts made by the statesmen of so many countries, and which have been attended with such success, should be carefully studied by us with a view to practical action. There can bo little doubt that if similar attempts had been made in England, the rulers of India would not have failed to take up on their shoulders the
work of reorganizing credit on these lines in India long ago. The circumstances of England are bowever peculiar. The vast mass of her population consists mostly of wage-eazders. and possesess neither lands nor houses nor appliances to their own. The rich Capitalists, and Landlords own the lands, and honses, and machinery, and factories, and being inteb ligent and well.organized, need no special belp. It is these peculiar eircumstances which havo made it strpererogatory for the statesmen of England to devote their attention to these matters. They are naturally disposed to take care of their wage earning classes, to feed, clothe, and house them properly, to provide for smaller bours of work, to arrange for the compulsory safeguarding of the comforts and conveniences of factory bands. These traditions impel tbemalso to turn their philantlurophic attention to factory legishation here, which, though reasonable in its wasy, affect, but a drop in the occan of homanity in India. ()ar agricultural and artizan popalation are not wage-earners. They own their lands and houses, and implements of trade, and their small shop, ind factories, and their cattle and carts. They inostly work on their own account, and if they have no store or savings of their own, es they genaralif have not, they must borrow money, and repay it as they best can. The nceessity of reorginizing credit transactions is thus not confined to agribttiturist classem. It is a general necessity created in this conntry by its circumstances and habits, and measures which tend to rescue this business from its present cluana, and restore certainty and bonesty in it, are sure to pat now life and energy in the body politic. The question of credit, al observed above, does not concera agricalturists alono. It equally concerns spinners and weavers, carpenters; smiths, dyers, potters, brass and copper, silk and embroidery workers, sboploepers, carriers, and all the trades and profes-ions that
are now practised in this conntry. It will baye been seen from the summary given above that the statesmen of Europe have realized their daties in this matter of affording facilities for the reorganization of credit, and given it practical effect in various ways; (1) either by lending the help of its officials for control or management or inspection work, (2) or by subsidies. or (3) by undertaking collections, or (生) by giving a monopoly of business, or (5) by facilitating the work of racovery, (6) or by'exempting their business from all stamp duties and incque tax and other charges. The circomstances of India furnish strong grounds why the Government bere should help this work of re-organizing credit in all these ways according a local difficulties or aptitudes may suggest: or justify. An effort was made in this part of the country to start an, Agris caltural Bank on the lines'laid down above. The scheme was well supported by the Local Government, and by the Government of India also, acting under the advice of Sir E. Baring. It was, however, shipwrecked when seat to the India Office. No blame neet be laid at the door of any body for this untoward result. The Engligh rulers in India are brought face. to face with the spacialties of Indian life, and realize their responsibilities. In England the authorities bave'not this touch' with actnal life, and their Eaglish traditions: naturally predispose them to regard that the Sinte, as such, has no functions or responsibilities in this connection. The promoters of the Agricultaral Bank desired that Government should sanction the experiment in one Taluka by undertaking an inquiry into the previons debts of the agricaltarists,: which, when ascertained, were to be paid off by the Goverament, the Bank uadertaking to mako goad the sum so paid on conditions of its being allowed a frit charge on the mortgaged estates of tha Ryots so benefited The Bank undertook
to charge very low rates of interest, and to recover them in. instalmente fixed with the approval of Government officers. To prevent all disputes, it agreed to leave this work of collection of instalments due in the hands of the sillage suthorities, who were to realize the instalments ss they now realize the assesement of Government or its Tagai advances. Lastly, the Bank prajed that assessments within the arce.so dealt with should not be raised so as to distorb the arrangements they might enter into, and that their transactions should be exempted from all taxes and charges Is consideration of their undertaking to finauce and work the concern, and clargo lov rates of interest, the Government was to help them to obtain speedy and cheap execution. It will be seen that none of the special privileges and concessions asked for wore without their precedent in the Credit Fonciers and land mortgage Banks aubsidized and belped and controiled Dy the European states. The scheme, however, fell through then, for reasons which it is needless now to relate. The difficult ties of Indian life are however too serions and peremptory to the catisfactorly disposed of in any other way, and the question is eare to force itself soon upon pablic attention. Already we hear that the Madras Gorernment bas appointed a special officer to inquire into the subject, and the time, therefore seems opportone to press the matter once more upon the attention of Government State help is needed fur the very cogent reason that state contro 'and supervision are necessary to inspire confidence. No olher organization in the conntry has such a diversified, intelligent and widely diffused agency at its disposal. The interests of the shate also are materially involved in the matter of the wellbeing of the most aumerous and least be!pfal ciasse of the taxpaying popalation.

The State need not expendits fands, The fonds will to
forthcoming to any amount if it only promises to organize the agency, and set it at work. The Post office and savings Banks deposits are ready to hand. All that Government has to do is to organize district or city Committees of Indian capitalists, to empower them to receive deposits at fixed rates and lend them at slightly higher rates to the borrowers on the security of lands, or houses \&c., the excess rate providing for a gradual amortization of the debt in a definite period, as also, insurance charges and working expenses. The loans of these district committees shonld be allowed priority overall other debts, and exempted from all daties, and certain and speedy execution should be permitted to them. The experience of the working of similar bodies in Europe, and it may be noted $n$ Egypt also, justifies the hope that the losses will be very trifing, and the benefits incalculable. What bolds true of agriculture holds equally good in this country about every other trade and industry. The recuperative powers of naturs and art are limited, and cannot stand the doad weight of prohibitive rates of interest, made necessary by disorganized credit, and the uncertainties and delays and expenses. of civil proceedings. Remove these difficulties and hindrances, and, credit returns to its natural and healthy level. . The glories of peace are far nobler than those of war and policy.- The whole country is lookiug up with wistful eyes for a statesman who will gaide its destinips in this great struggle, and belp it to win the rach of life, and revived bealth; aed national wellboing.

## THE ANTI CPIUM ALLIANCE MOVEHENT.

The Anti-Opiam Alliance mavement Leaded by bif Lordship the Bishop of Bowbay, and suppurted by the Christian missionaries of all deuominations throaghout India, reprosents a great principle, and as such it ought to command the approval of all who have faith in the altimate triumph of righteousnes and the moral government of this world. The poet mays

The mills of God grind siowly.
But they grind exceedingly small.
And no better illustration of this great truth can be foraished than by the progress of Englisbrand Indian pablio opi-nion on this opium question doring tue pest fow yeara, $\operatorname{As}$ long as the English abolitionists confined their agitation to the Chinese nepect of thio question, peopie in Indis very natorally felt they were not greatly concerned in the issue. They felt that the Chinese wore the best judges in regard to their own iniar-. ests, and if they sam no evil in the existing condition of the ppinu trade, it was not incumbent on the Government of thia' conntry to sacrifice the large rerenue it ottained from China, and which was to some extent a make weight against foe bardens of the tribute India bad to pay to England on acconnt of Home charges. The leaders of the abolitionist party clearly men the weakoess of their position. Tiey found that, notwithstanding the signal succent they obtained in the House of Commons on loub $\Delta$ pril lest, whea 160 aembers voted that the opiam trade wish Ching, af af preseat conducted, wes mersily indefosibil, The Anti Opium Alliance modementent.
thoir prospect of practical victory was as far off as ever, booeanse the Chinese Government during the past ten or twenty joars, since it began to grow its own opium, has ceased "to be very anxions to stop the trade in opium. The key of the situation was in India, and the plan of the campaign was accordingly changed, and instead of wasting their onergiee in a practically lopeless conflict with China, they resolved to fight the battie nearer home on ground of their own choice where the position was less delensible, and the chances of succoss more certain. : The respoisibility of the Government of India in rospect of the domestic consumption of opium is no less direct than its responsibility for the China trade, and the principle at issue in both these aspectu of the question is the same. As a question of strategy, there was an evident advantage in dealing with the smaller evtl before grappling with the bigger iniquity. Mr. Samuel Smith has made no sacret of this change. of front. In a speech he delivered at the Anti- Opiam Convention beld in London in March 1891, he oberred :-
"I did not come hero to day to address this meeting, but rather to opmpathize with you in the great work which you are carrying on, and to "got my own eympathy warmed and atimulated so as to bo oncouraged to go on fighting this extremely arduons battlo I have morked at this-subject now for abont twenty years, and like many others, the more I have aladied it the more I have been impressed as to tho exiraordinary difficalty of the contest in which we are engaged This is not exactly the place to go ioto thoso difficulities, beganse we are not met here to discourage one another, bat rather to encourage one another i and I quite stiare the feel jngs, which have been expressed by many rpeakera that nothing In too bard for God, and that these tremendous difficulfies
which wo have to lace are no reason why we should relax oar offorts to do away with what is a very great national sin and arime.

One point which has weakened our hands very much $\mathbf{L}$ may just mention to this meeting, as we are met to gethor for practioal instraction an well as for atimulating each othor's feolingis on the tanbject. That difficulty is the abmence of any response on the part of the Chinese Government to our notion in the Hoase of Commons. One of the atrongent weapons which wo bad at one time to assail this traffio was our ability to state that wo had forced this trafio on China againat ith consent, which is perfeotly true. But, unbappily the Chinese Government for momo" reason or anothor-1 am afraid partly because it bas become atterly hopeless of grappling with the question, and partly because the Chisese people have become so thoroughly addicted to the nse of this drug, and, perhapi, even more, because they have become acoomplices in the revenue derived from the drug, - have oessed to give te any belp or comfort in our agitation.
$\because$ That Government fill not now,take the position which it once did of stating that it was still desirons of sapprossing the trade. That meets as at the very threshold of our agitation in Parliament We are told that if we deprive Indis of this large revenue it would be of no advantege to China, becausio the woald simply fill up the void by growing. a little more herself. WVell, that in not an argument which will weigh with such persons as are gathered here to-day, but it is one of the things which in Parliament we have to face; and it has been impressed opon mo of late yeari that anothor line of attack masy be taken by us more edrantageonsly, namoly, that we pat attack most vigoroady the action of the Indian. Go-
verament in spteading thls rice in India and in Burma. There the whole responsibility resta upon ourselves; or upon the Govarnment which we bave delegated to act in our name is Indin
q. The Under-Secretary for India admitted in a question which I put to him a day er two aga in the Honse of Commons, that we have licensed 10,400 opiam. shops in India. There it atands in black and white, And I have further asked him whether, meeing that in thil country tife sale of opium is limited to draggist and ohemists registered under an Act of Parliament, requiring them to label opiam al poison, he would aot epply tioe same law to India. The answer $I$ got was "No." - Now, here; I think, we have olear logical ground on which we can stand. The Government of this country proteot the people of this eountry against the ase of a poisonons drug called opinm, but the Goverpment of India, who are our agents acting for us in India, are selling this drug wholeanle all over the country, and I am afraid are gradually and steadily increasing its consumption simply for the purpose of revenne. : There is no donbt that in Burma they have widely apread the consumption of late years's and I'm "Very muoh: afraid that they are doing the same in India.

UNow, I think that we herestand upon very sotid ground; becanee no one oan dotibt that the people and the Parliamentof this country ere, in the last resort, responsible for the Government of India and of Burma. Our futare efforta should bo to convide pur Government in India of the great sin and orime of spreading this horrible vice amongst the anbjects of the Crown ; and I think that ovidence is rapidly accumnlating as to the enormons injary done in India:.. A great doal hat remohed me in the last twe or three years, Amongek the
rest there is the evidence of our friend Mr. Caine, who bas trarelled in India. He has bronght a great amount of evidence to bear both apon the question of the consandption of opiam and upon the question of the drink traffic. I believo that in India enormous evil io done from both cansen.
" $\Delta i$ most of gou know, we carried a resolation through the Honse of Commons two years ago, oondemning the actions of the Iadiar Goverament in fortering the mele of atrong drink. The renalt of that resolation was that ia one district of India, the Madras Presideacy, 7,000 liquor licenses bave already been cancolled. Three chousand more are to be cancelled this year -ton thoueand in two jeara. And in Bengal initractions havo gone forth to put an end to what is called the "O out-atill aym. tam" ; and there is no doubt that a very considerablo eheck las been given to this deadly branch of the apas tree.
" Now, this ought to encourage us in dealing with the opiana trado. If, in-the same manner, wa coald carry a simi: lar resolation throngh Pariiament, condemniag the action of the Indian Government in sowing temptations thronghont the conntry in the direction of the consamption of opium, we might seo the amme resulh I think that we ought, at all oventa, to concentrato oir efforts at present apon this branch of the subject or, in fact, make it a very large part of the quostion, instead of colely denling wiib the queation of China. Unhappily that of Chine las become an intensely difficolt one frone the canse thes I have named : Irst of all that the Chinese Giorornment expresses itoolf perfectiy willing to bo in accomflice in this alameful trado ; seeondly, that China ngw grown; probably three or four times as maci Lome opiam as it imports from Iodia ; and, thirdly, that the opiam revenne is atill - Lurge bruach of ise Indian revence. For these reasons we
aro confronted with tremendons difficulies in dealing with the Chinese branch of the question. I do nat mean for one moment that we, as Christian people, can acquiesce. in the Chinese branch any more than the Indian branch. They are both, I think, utterly indefensible, and our duty is to attack this question root and brinch at evary point ' But just Tooking at it meroly as a question of atrategy, and considering what is most likely to bucceed, I think "that upon the whole, we perhaps stand ipon frmer groned in attacking the action of our Government in ${ }^{3}$ desling with our fellowsabjects, where, ondoobtedly, the quastion is wholly under our own control. It is, undonbtedly, in the power of the Indian Government, if it choose, to caneel every opium license in India and in Burma. It would do so with the consent of nine-tenths of the people of those countries. If we were to consult the wishes of the people of India and Barma, I believe that nine-tenths-perbaps ninety-nine-handredths-would vote to-morrow for the entire extinction of the trade.".

We have here the wble sittuation laid bare, and there can be no doubt that as far as the people of India aro concerned, this change in the plan, of the abolitionist campaign should commend itelf to public opinion Gerg. The Christian missionaries who have now thrown themselves heart and soul into this new phase of the struggle deserve well of this eonatry, and tho large and enthusiastio meetings which have been held in varions parts of the coüntry, where tha' appeal has, been made by the leaders of the Anti-Opiam alliance movement, show satisfactorily that the appeal has not been mado a day too soon.

It is very necessary at the ontset to state exaotly the proportions of the oril agniast which. the Anti-Opinan Alfiance
committee bave raised their protest. In the absence of detailed information,' poople are apt from indifference to think that aftor all there is no great reason to stir themselves ap, as the babits of opium eating and smoking are confined to but a very small part of the population of this country. Speaking roughly, about 5000 chests or 680250 lbs . represents the consumption of opinm in India. This quantity is no doubt very insignificant by the side of the 86000 chests exported to Cbina in 1889-90. Bat in itself the quantity in very considerable, seeing that the legitimate use of opium for medicinal parposes is satisfied by the quantity represented by ceven chests, which, it may be noted, are separately - prepared. The drag which is intended to satisfy the debarched cravings of. those addicted to the vioe bere or in China has to be specially adapted to the tastes of the unfortunate consumers It bas been estimated that a dose of 4 grains of opidm is a poison dose, and killa the person who is not addicted to the ase of opiam. The quanlity represented by, 5000 chests, each chest being equiralent to about 136 ibs, or 5440 Toles, or nearly 21 lacs doses of 4 grains each, is thns enongh to kill out-right Gire tirpes the whole populution of India.

It will not be fair to blame the Government for the exislence of this craving for opiom. The responsilility of Government hinges upon the activa it tukes either to check or stimulate the evil. The Christiun missionaries of the Alliadee bave collected a conaiderable aniount of information on this pubject, and they have formolated the charge that the action of Government, so far from checking the spread of the oril, has tonded to encourage it cverymbere thruaghout India. It has been antboriativaly stuted thent there wore 8913 licensed opinm deasin ladia in 1887, and thia armber robe to 10400 in 1890
ench license often times covering many shops, and one shop alone in Burmah paid $1 \frac{1}{2}$ lacs as license fee.
To descend to detailo, and taking op our own Prosidency to begin with the following table contrasts the annual average Por 3 years onding in $1885-86$ with actuals for $1889-90$.

> Weight of ppium sold in sixteen districts only
of the Bombay Presidency:

[^4]The increase has been 30 per cent, in 16 Districts. Seeing that a single lb . can poison to death 1634 lives with grain doses, this increase of 30,000 lbs in 5 jears represents certainly a very heary bill, not of mortality, but pt vice, which ultimately leads to poverty, omaciation, and death. The increase of population is less than one per cent. per. year in the best of sensons, and the 30 per cent. increase is thus jnadequately accounted for by the 5 per cent. increase of population. . Wheq we bear in mind that in Great Britaia and Lreland, under the Pharmacy Act of 1868, sale of opinm is striclly prubibite hy law under heavy penalties except by qualified medical men, chemists aud drugnists, and even these are required to use a label marked with the word poison, the diberty illojed in this cunntry cannot be defended on anj pational or moral grounds.

In Benial ike revenue from opiaun suld for domestic consumption has risen fiom 13 lacs in 1875 to naty 21 leca in 1889, heing an increase of 50 pef cont. in 15 jears. In Ma- . dras the increase in upium excise revenae in one aingle year was 24 per cent. In Lucknow there were 12 shops in 1883-8t. These shope were reduced in number to 6 ia 1885 ; and to 3 in 1887. The consumption of opium lowever rose from 36,000 Tolas in 1883 to 41,000 Tulas in 1885 , and 64,050 Tolas in 1887. Notwithstanding the redaction, Rev. Mr. Evans has stated that he could coum 10,000 opium deng in the United Provincen.

As reparis Lower Burmah, Sir Charles ditcheson roproeented the eviis of opium emoking, and in his time some stepe were takell to stop the sala of apiam to the Barmase popala: tion, Eir Charles Aitchenon mes mored to this course by the atrong protert made ly the preople of Alijal, who offered to pay iacrased land rerecies to compensate Gorerament for the lons
of any income it might incur by the total stoppage of opiam sales. The average consumption of opium bad risen from 88 grains per head por year to 135 grnins in Arakn, froma 88 to $2 \rho 0$ grains in Pegu, and, 200 grains to 169 in Tennasorim. Streat by this state of things; the Goternment of India oridered ic reduction of shopa fromes 67 to 37 , and this led to adimination at consomption from 46,000 to $37,000 \mathrm{lbs}$. On the pertireneash of Sir C. Aitcheson, the atrictness of Governivent action wis roliped. In Upper, Bormah there were no licensed opium or. driak shops before 1886, the conntry being nider native rabAfter the conquest, this restriction was removed. The mirsionaries however protested, and in deforence to their protect, it was ordered that the licensees, qhould eth opiam to Chiswmen only, and not to Barmans. Tho Secrotary of Stato apppars not to have approved of this restriction, and the provisions. of the law hare been since ovaded with impunity by the Barmans both men and women.

- It might indeed be argod that mero statistics of increase cannot jastify the aerions charge which the missionary leaders of the Anti-Opinm Alliance have brought against the Abkar policy of the Government in the matter of its excise revenue from opium. A variety of circumatances may acconnt for the increase in consumption. . A larger population, or increase of prospozity, may lead to largor totats yithoul tho: department being any way responsible for the increase of revenue. Tho case however against Government is not confined to mere statistics of increase. It has been authoritativo1y stated on bebilf of the Alliance that the Corernment of 'India actually brooght pressaro' to bear apon the Bombay $\mathrm{Go}_{0}$ vernment to introduce the coltiration of the drig in Sind. The Goveroment of Bombays it is reported; indignastly seplied:-
: W The Government considers that there are very strong objections to the introdaction of an indastry so demoralising in ita tondency as opiam caltivation and manafactore, into a province where, at present, it is unknown, and, so far as Ilis Exgelloncy in Conneil is arrare, not asked for by the peoplo. If opiam cultivation were aliowed in Sind, it could not, with oondistency, bo prolibitod in the reat of the Presidency. It has alreedy been trisd at Gojerat, and tho - result was ridoupread oorraption and demoralisation. . On the groand of publio moraility, thertfore, His Exoellency the Gorernor in Connail woald atrongly deprocate the grinating of permissica to colltivato the poppy in Sind or any other part of the Presidemy."

It is well knoin that before the Parliamentary Comemitteo of Indian Finance, Sir C. Beadon, as' representing the Government of Indis openly avowed that moral considerations had no weight, with the Gorernment, which only regarded opiam es a megne of obtaining revenue, and that the sale of opium ia Iodia, as in China wha adjusted to obtain the atmost revenue possible. Being definitoty, asted whether it has beon the wish of the Government not to encourage the conoumption of opiam among its own sabjecta, Sir C. Beadon pepliod that " bo did not think that connideration had. mach weight with the Government". In the debate in Parliament, Eir R. Temple, at the adrocale of the Gorornment policy, is reported to bave atatod that the opiam aystem of the Governceat of India mes morally dofensible Sir J. Strachey, - good reprasentative of the same school, deliioerately proposed thet mot enorgetio meearrea aboold bo taken with the object of oxtending the caltivatiane in the N.-W. Prosinces in which canal irrigation io araitbble. Thoogh the Bontay Govaramant
nobly protested againat the extension of opium onltivation to the Province of Sind, it is to be potod that tio tho adoption of the farming system with the tinimum garantea clanse, it hace belied its own protesta Its license, provides that many ahops may be opené ander one license. Seotion 12 of the license empoónera and almost requires the: licangee to open and maintain yew shops inmediately on receipt of the Gollector's order, Above all, the licensee nnder: takes not to sell less than the minimum gaaranteed quantity, and in case of defanli, be has ta paya fine at the rate of Rs, 5 per 1 lb of deficient asleg, which sum is remittod if tha doficiency is made good next month,

In the face of these admiaistrative measures and offoial confessions, it is not open to the deêders of the Abkari policy of Goverament to arge that the increased consimption is iot due to any action on the part of their officials. It has indeed been urged that after alf opiam eating is not so deleterions ais intoxicating drinks and that it is nota little provoking that the missionaries should wage war against opium when the drink trafic is spreading all over the country in gigantic utrides, We admit the force of this argament. To our minds the Anti-Opiam Alliance should make common qaase with *the Temperante movement, Their, hands will, be greatly: strengthened, and their appeal will meet with a more reads response from the people of this country. The Christian misnionaries themselves are not unaware of this meaknoss of thoit position. They console themselves with the reflection that the vice of drankenness is on inveterate' English viot, and there is but little chance of any arccess in their efforts if thay distart the vested intersts concerned in the manufactare and eafe of drink, This argument has some force then appoal hai to to
made to English constituencies, tut bere in India, both theno forms of intemperance are now, and at jot they have not atrack doep root, and the compaign against vice might well be wade general.

Sie J. Peaso observed in this connection:-

- I have often had the argument brought up before me, "Why ahould you deal wilh opium, whea "you canoot wash jour hande of the drink atain at bome !" I haje never'seen the furco of that argument.c I am as muck oppored to the driak stain at bomo as I am to the opium abroad. They aro tro monstrons evila,".

This should be the motto of the Aliance. Of conrse there in nome forco in the consideration arged by Dr. Maxivelt at the Loodon convention men the was called on to expleis why the agitation wan directed against opium more energetically than against drink. As a medical missionarf, Dr. Maxwe! diectasead the relative strength of the two poisons: for mischief.

- Dr, Maxwell asid :-The "question is a very propor cre. Perhaps it will tako longer to answor than friends might expeck . Opiam has not the effect of bringing about inmediatoly, rapid degeneration. It beging ite worl, batit carries it on alowly : and jf peoplo aro in a condition of plantric so that they cian have abandance of food, and can driul stimalants, the fact of thair teing opiam-sters or opium-smokers is not co gaickly perceived an if they, were working men. With the working man, it is perceirod eomparativois quickly; and, as be cerre oniy perbapes two haodred cash a day, amoanting : to aboet eight pences, bo spende, portapts a ball, sor, in the Grat Hhstanso a third of thel ium apoa ofium. Tho moment that be is pat into eay atraits, he canaot give np his opinus, atd
on the other hand, his wages are diminished, and at once, he is in difficaltios. These difficulties show themselves, first, partly: on his family and partly on himself. Hंo goon down mach more quickly jast because of these litle difficultios, and in a short time, you recogiaise in the case of a working man that he is a prononnced opinm-smoker. Fou see it on Lis faoe by its emaciation, and by the colour of it, and by the other mark whioh are always recognised in an opicim-smoker. Bat even. a working mañ may go on for years and yeara as an opiam. amoker: On the other bain you have to remember this-that we are gaided, as missionaries, very largely by the Chinese themselves."
"The Chinese say that the moral character of a Chinaman who begins to take opiam is brokent We are gaided by the Chingse in this -that we ean admit no opiam-smokers into the Charch, because our Chinese brethren win not allow it. They bay "You are doing wrong if jou admit an opiumemoker into the Church. He has talen upon hínself a habit. which Inevitably blinds his moral parception now Noth by itself; is about the strongest thing concerning opium that can be said. Wo should not dare to say that with regard to alcohols, Some of us bold very strong views with regard to the effect of alcohol, but we should not like to goa the length of agying that in the forms in which. it. is taken in this country, it necessarily blinds the moral and spiritual perceptions of men. ${ }^{\text {r }}$

Dr. Pringle, another authority, bes thos delineatied the ovil oonsequences which this babit of opiam eating has prodnood in the rain of some of the finest races of India, $\therefore$.. AAter the very practical observations we baie had, I folt that what wo wanted was some words from one whe had seen the effect of this torrible opiam in the caqnotry wbery
it is med. Bat there in one way fn which we can all book it it, aid most solemnly and cerionsly: and, if we riew it in the light of comparison, it will come bome to every bearts We can compare what opium bas done in China vith what alcohoblays done for portions of India and for our own abelored land. Who in the world would dare to stand if if and any that our reveng, from alcohol hat been a bleming? Look. at the revenoe from opium in India in the same light, and I have not the loast beaitation in anying that it has beet an abeolate curse to the country, jast like Achan's redge of gold.".

1. went to Iodia in the year 1854. I have lived to 200 - terrible change in India $A$ torrible change came over that conntry, and I have no besitation in mying that that change hats come over it becanse God is withholding His blessing. Ho mast do it Think of the sums of monoy, that bave been spent there in mission work, and then think of how . little retarn has been made. Think of bow God, notwithotanding our unfaithfulpees and vickedries, is opeaing op Iedia by womeng through the wo. men; and yot bere wo aro standing quielly by, when a rovenue is being collectod from the country, which is not only degrading to rest populations of the conntry itself, bat to the poople of anotber country: Tho iwo comptries, Chine and In. dis, cannot be taken op on :the same lines at all, and I ans ghad that they are now distinctiy separato. As regarde India, we are absolately, cach one of as, individually and pore cooally reopoisible. That is aot the case vilh Chine in the mame neaso. It is quite posaiblo for sach a power to be bronght upon tho-Goverament as to pat a stop to the cultivation of opiam, axoept as, necocesty for modicinal purposes; and if that wro dong, I coasider that thete wooid act be the leant
enose for anxiety with reference to the people themedres, I know that country as well as most peoplo, and I am perfectly - prepared to prove on any professioxal platform that to auppose that opimm in necessary ia any single, solitary condition of. buman existonce, even in that country, is as false jn phyiology as it is in my experience. You go and see the vietims of Opiam. Look at the Gne Rajpoots that we baye heard about. Who cannot tell the opium-eating Rajpoots ? Look at the Sikbso Who cannot tell the opitimeating Sikhs ? Wha cannot tell the opium eating Mahometaí in Tedia? The man betray it inmediately. What is it $?$ It is that there is gradual vitiation going on in the whole of the man's system until, at last, he is a perfect wreck. When they are strack dowi with fever of the most fearful, fatal type, whaf is it that thesenpoor creatures ask for? Some would make you Elieve that opinu is a febrifuge. I have never seen it and known it act in that way in the very least. As 2 medicine, "combined with other drags, it is one of the most powerfal remedies you can bse for reliey. jng the system by means of the skin and perspiration: That 1 Sully admit and allow. But I never Leard of any native atating that be waited a little opium, and I have lived and I havo laboured in the districts where opitm is made. The smallest quantity of quinine is better than the biggest ball of opium."

We hope wo have quoted enough. There can be little doubt that the only way to deal with the evil is to stop poppy caltivation altogether, and treat opium as a poison to be sold onh by qualifed persons for medical purposes, No mere enhancement of dulies will ever check the consumption of an article so easy to smaggle. This is the plain duty of Government, and we make no doabt, when by the efforts of the Alliance, it is made to realipe ita responsibility in this connection, the probibition
naggested above will be atrictly enforced. In the memanhile the Alliance has its wort' cut oat, and the people of India have reason to bless the band of missionaries who are leading this noble struggle. Stoady perseverance nider Proridence must ensure success, In the words of Sir J. Peaso-e.
"Whe is this uncircumcised Philistine that he should defy the armies of the living God ?" David's God was a liviog God. He was a God who nervod David's arm, and gave him the skill to aelect the pebbles out of the brook, and the strongth to aling thom. $H_{e}$ is the same God now, and He will nerve ourarm, and will direct our choice of the potblen that we throw; and give un forch to aling them home into the. head of the giant oril which we think is a diagrace to our Christianity, our morality, and our politics." *

## PROCEEDINGS OF THE SABHA

CORRESPONDENCE WITH THE BONBAY GOVERNXENT IREGARDING THE PERSONNEL OF THE LAND. INDEBTEDNESS COMMISSION. No. 338 of 1891.

Sarvajenit Sabhe Rooms, Pouna, 2tth Norember 1891.

To, ${ }^{*}$

- The Secbitary fo Gorzrmuzit, - Judicial Depertment, . Bombay.

Sir,-in Mrrther continaation of our letter Na 317, dated 30th September 1891. we have been dirocted by tha Managing Committee of the Poons Sarvajanik $S_{a}$ line to sabait for the frrourable consideration of Govemment the following saggestions in regard to the Commission, which the Covernment of Indis bas been pleased to constitate for the purpoce of enquiring into the general question of Land Indeltedaess and the Decian. Agricultariste Relief Act. As the Managing Committee of the Sabha are of npinion that some of their angyections and observations might, with adrantage, be brought ander the notice of the Supreme Gorelameat,' we shall deem it a favour if the Bounbey Goverament formard this representation to the Goremneut of Iadia for the latter'a lavourable cousidention.
2. The Managing Committee of tho Sabla lave as jet seocived nn official reply to their previous representationa, but they are gled to find lrom dewsiaper reports that the proyer contained in pars 9 of
their former letter has been to some extert, inticipated by the Gorernment of India which has resolved to reier the question of the economical resalts of the vorking of the Relief Act and the larger question of Land Indebtedness to a Special Commission of experienced officers chosen from the different provinces.
3. The questions, which the Commission has to consider, do not cancern one province or relate to one interest only. The committee of the Sabha gather from the aewspaper accounts that while the local Government has moved the Government of India to secaire modifcation of the Relief Act, the Governments of the Punjab and the Central Provipces have been pressing for a relief measure based upon the ch:ef provisions of Act 17 of 1879 and the Government of the N. West Provinces has also been contemplating the creation of Honorary Civil Judges for the disposal of petty cases on the model of those appointed nnder chapters 5 and 6 of Act 17 of 1879 in foun districts. of this Presidency. The Commissioner of Sind is also reported to have recommended the zemindars of that peorince to apply to Goyprnment for special legislation on the lines of the Relief Act. Under these circtamstances, this question assumes a very complex character. which demands that the best possible guaranteés should be provided for to make the enquiry as complete and sanisfactory as the nature of the circnmstances pernits. No merely official enquiry will furnish these guarantees to the satisfaction of the varied and oftentimes conflating interests involved. ; Under these circumstances the Commitle. of the Sabhe would respectfully urge upon the attention of both ;the Iccal Government and the Government of India the great desirnbility of the Commission being of a mixed character, composed of official and non-official representatives from the several provinces; in which the question of the indebtedness of the agricaltural clasees lias forced itself apon the atfention of Govemment. : Daring the past tweive years the Government of India end the Local Government have appointed Commissions of enquiry on various suljects and as a rule these Cominisions have been of a mixed character, comprising at lenst a minority of non-official gentlemen associated, with qfficial experts. It is not necessary to refer in detail to the constitution of theso Commis: sions, bat we only stafe here the fact that the Famine Commission, of 1879, the Education Commission of 1882, the Finance Commitlee of
of 1886, the Factory Commission of 1890, all appointed by the Government of Indis, contained both official and non-officisl representatives. In our own province the Deecan Biote Commission, the Forest Commission, the Abkari and Boiler Commissions were all similarty constituted. The Committee of the Sabha have therefore to confers to a leeling of "disappointment," that the Supreme Government has not been pleased to recognize and give effect in the present caso to this practicully estallished principle in the nomination of, members reprosenting the Central Provinces, the Punjab and the North- West Provinces: The choioe of appointing two members to represent the Bombay Presidency has, hówever, been leit by the Görernment of Iudin with the local Gorernment, and the Committee of the Salha trugt Rath his Exoelloney the Governor-in-Council will be pleased to to make this choice as to gire the Commission the mixed character that it would otherwise lack, and that is su essential for decpring the confidence of the general pablic.
4. Thire should be on the Commission at least two non-official gentlemen, one to represent the interests of the sowkar or money lending clase an ithe other, of the ryots or mones borrowing class. A mixed Comission of this sort -rill ensure a full depliberation and a fair henring for all the conalicting iuterests inrolved. Withont buch assistauce, e purely official Commission will almays find considerabla dificalty in viewing the matters under enquiry in the light in which they atrike the non-official classeg, and to that extent their euquiries, however laborious, will fail to gite setisfaction. The Government of India having alresdy nominated members for the other prorincer, it reste ealirely with the Bombay Goverument now to escare to the Commission twe benefits of non ofticial representation pointod - out above. There is no reason to suppose that thero will be difficaly in finding out suitable native gentlemen to work ia association with the official representatives in this matier. As far as the anquiry relates to the working of the Relief Act in this Presidency, the nemes of the Hua'ble Rao Bahidoor Kriodnaji Laruman Nulkar, the Hoa'ble Javerilal Uminshanker Yajuik; Mr, Dinsha Edalji Wacha, and Reo Bahadoor Vishnoo Mureshwar Ehide will, no doabt, enggeat themselpes to the Gorernurat at those of parsons from among whom .
suitable choice oan be made. Tha Deccian Agricultarists Relief Act has now been in operation in this Presideney for the last twelve jears, and much valuable information will be supplied to the Commission by native experts in regard to its character and its resalts. . Such in. formation proceeding from non-official experts, founded at it will be, on direct and personal knowledge of the Cortinoous variations in the stetus of both the sowkars and ryots of this presideacy, will enable the Commission to grasp the question in more practical manner than would otheryise be the case. It might be added that the association of nop-official representatives vith official members wiil not sensibly sdd to the cost of the enquiry.
5. Under these circamstances the Committee of the Sabha request that their prayer that the two members who would reppesent Bombay on the Commission, should be nou-official native gentiemen, will meet with the approval of the local Government. Thejaterests involved - in the gettlement of the question proposed to be enquired into are so vast and varied that thẹ Sabha trast that there will be nothing wanting to make the enquiry exhaustive and final and to clothe it with en authogity which, will leave no ground lor complaint,

> We hare the honour to be, Your most obdient servants, G. K. GOKALALE, K. P. GODBOLE, Secretaries ${ }^{\text {Sarrajanik Sabha Moona }}$

> A. C. Loaay Esquiar, Acting Uuder-Secrotary to Government, Bombay. To

The Secretarieg,

- Sarrajanils Sabha,

## Poona.

## Gratlemen,

I aui directed to acknowledge the receipt of your letter No. 338, dated the 24 th ultimo, submitting for the consideration of Govern-. meat, e guggestion of the Managing Conamittee of the Sabla, for the appoiutnient oltw non-official members on the Deccan Agricalturists Relief Act Comuission and requesting that the Saibla's represeniation masy be formarded to the Government of India.
2. In reply I am directed to intimato to jou, for the information of the Sabla, that the persunnel of the Commission had been practically selthed befure the Sabla's lotter rescied Goverpment, and that as their wishes had been partially anticipated by the nomination of the Hoa'ble Mr. Nulker as a Member of the Commission, the Governor in Council presumes that the Sabha will not desine their letter to be formarded to the Gorerument of India.

I hare the honour to be,
Sip, $\cdot$
Tour most obedient servint,
A. C. LOGAN,

Acting Cader-Secretary no Government.

## CORRESPONDENCE WITH THE BOMBAY GOVERYMENT

 regarding tee impending famine.$$
\text { TYo. } 852 \text { of } 1891 .
$$

Sarvajanis Sabea Rooms, Poona, 18th December 1891.

# TaE Secbetary to tha Govermigyt of! 

BOMBAY
Sir,
With feierence to your letter No. 5484, dated 12th Augast 1891, informing the Sabba in reply to its previons letter No. 275, 8ated 23rd Joly 1891, that Government, arthen adrised, am no cause for anxiety regarding the etate of the crops and did not dean it necese sary to publish any forther details concerning the condirion of the crops than were already supplied in the weekly sammary, we have lieen directed by the Managing Committee of the Sabbarito subrit this fresh representation on the sabject of the argent necessity under exist. ing circamstances of keeping the pablic well-inforped in regard to the several districts that are at present begond doubt threatened by scarcity, and we request that Government will be pleased to take such further steps as they may deem necessary to allay public anxiety. The summaries for the past few reeks leave no room for doubt that so faŕr at least as the Districts of Nasih, Belganm, Nagar, Dharwar, Poong, Bijapoor, and Satara are concerned, the people are con!ronted by a serions crisis, and there is little hope of ang improvement taking place. In all, these districts the Kharip crop has been more or less a failure and the expectations about the Rabij crop have been, cruelly disappointad. The Inst suntmary published in the Gazette shows that prices are rising, everywhere, that the supply of fodder is growing scapeer in most paris of these districts, that water supply also is greatly deficient in many of them, that cattle are being removed elaewhere, and that in some places even the migration of the taboaring classes has already commenced. - As obseryed in our lettor of 23 rd July, the * conditions of $\mathbf{1 8 7 6 . 7 7}$ are thas being repeated over an area larger
than that affected in that enlamitous period. The Rabi crops are withering ererywhere for want of moistare and in parts of Eijapor eree the officinl reports admit that they are. entire's. roined. And. now that there if nut the faintent prospect of any late mina coming to the belp of the agricniltural clasets) the Comuittee of the Sable would respectfolly submit lant the time has come when Government should adngt practical measures to face the impending fumine which, it is feared wrill taxtill the avaiabie resoarces of the country to enable the people to tive over the crisis.
2. In riew of the critical condition of the season, the Committeo of the Sabha desire to state that they have organizod an agency of their own on obtsin reliable faformation about the condition of the distressed Talakas in these seven districts and hope to be able to sabmit periodical aummories of the accounts recoired from their agenta and correspondents for the information of Government on the plan followed by them during thie last great Inmine. Soch prirate infore. mation will necessarily be defective in several respects. It will nut naturally be, in many points, as accurate and foll as the agencierarailable to Government can gailier. At tho sande timo the official summaries will naturally reflect the opinions of the District officen, who, from a laudable anxiety to avoid janic, almost invariably take a more hapeiul view of the sitaation then circumstances jastify. Wben the infurmation oltained irom prirate and official soonces is collated topether and pablished every week in detail, not for the district as a -hole, bat for each Taluka separytely, it nag be relied on as a rafo basis for the viensorea that will have to be miopted for coping with the cisia. Atdit if wihh this riew that we repeat onr request that the wectly sammary fublished by Government should be sarplemented with additional information on the foilowing lines. Fart if the informotion gsked belpw has to be given onity ance, while the rest will hare to be supplied wiok after weet ia the summary.

1st. It is desiratie to lare detqied fgares ngarding the reinfall in each Thlaka doring the preseat season and
?. tho deficieney of the min-fall as compered with the a yerage of the past 5 yfars. :
2ud. Tibe extent of the lead in earb Taluka orer which
the erops have failed should bo stated, as aleo how far this failore is partial or total.
3rd. - The different proportions of the estimated yeild of the tharip-crope, which by this time have all beein reaped and harvested, abould be pablished for general information.
4th. The extent of protecled area by renson of the land being under the command of Irrigation wotks or tanks or private wells should be specified, :?
5th. Statements about the imperts and exports of grain from and into each Taloka by Railmay or by ordinary roads should find a place in the weekly saminary. The Traffic retarns of the Railwass ond the retufus Irom T'oll and Octroi stations will sopply this information which will be yery important towenable Gpvernment to 'judge how farthe activity of prirate trade may be dopended upon in this crisis to afford adeguate relief.
6th. Variations in the prices of the staple articles of tood, as also of fodder for cattle should be published every week.
7th. The condition of the available water, supply for men and cattle, which mast necessarily diminish erery day, should be noted in the summary. This information should be given an detail seperately, so as to enable Goyernment to judge of the wants of the severul Talukagt as they become more pressing from week to
 will also enrble the Local District Committees to angfend expenditure on other works temporatily and devote their spare funds to the improrement of water supply. -
8th. The offical summary slows thut cattle are being ra-' moved from celtain districts, . From private suarops the Committee of the Saliha are given to anderstand that large nombers of cattle are being brought for sale
to the great market-town and are being solil fot nominal prices and boaght by butchers. Detaiiod particu'are from week to werk regording the Talukas from which eutle are being remored, as elso those to wheh they are boing removed, and fall information ahout thees ealee will be rery raluabie to Government at a cime like the present.
Th' Similar ioformation aboat the migration of the laboaring classes is also aecessery, althoogh this will be mort diffeult to obtain. Bat as such migraion is ineritabie under the presont circumstances, it will be aecorsary to mecore this information regarding each Taiaka as the eceson alrances, to enable Gorernment to choose the places where the relief-rorks will have to be started so as to br, at far as pessible, within reath of the distresg--I classes.

10th Information about cattile disengeg and epidemics and the general health of each Taiuke should also be obtained and pubuished.
11th Similaris information eboat property-offencee, such as tbefte, robberies with violenco, decoities \&c. shouid be published from time to time. These offences are gencrally an important teet of the scuteneas of the criais and would be of use do the Government to jadge of the distress prevailing in the different parte of the Prorince.
8. The Committee of the Sabhe are anxioes that the mistakes cilortanately committea in 1376-i゙i should not be repeated by reacon of alwence of information on the rointa notieed abure. Weekly balletine of this detaided information regardirg each Taluke mill enable Corerament to deal with the crisio ies sach e way an to minimise all chasoes of panic, and give a sort of arifodence to tht pablio mind Ite Sal ha ferl asavsed that Gorerament is faily alime to the grority of the sitastion and that it is anciacsij concerting the mecesiary weasures for afording rrisel to dis:cesstd peryle. The frat meneetity.
howeser, in such a crisis is for Government ta take the public into its confdence and it is with this view that the Committee of the Sabha. have ventured to submit the suggestions made above.
$\therefore$ : 4. Besides the inlormation on the points, specified above, Go vernment will have to consider the neeessity of postponing the collection of its lund revenue at least in part in the distressed Talakas. The eeason for collection in the Kharip Talukag has already commen ced and in the Rabi districts the instalments become due in March and April next. The Salla learn that even in the Kharip districts. the crops in many places have proved a partial failure and that the Rabi-crops vill prove a total tailure over a large aren The Government of India has alre ty fitmed rules for the surpension of the land revenue and it nill be desiralle' to vire effect to them in all Talukas or parts of Talukas, where such relief is bady wanted. In quiries riil have to be institgted with this viepe without delay. The Committee of the sablia need not add that stingency in collection at such a time wiil add to the difficulties of the distr-ssed people, and aggrarate them to an extent. Which no subsequent liberality will remedy.
5. The Irrigation Department may also be required at such a "time as this to reduce its rates wherever the water-supply can be depended upon, so, is tr encrorage a larger resort to this. help than is. now possible. The Salha learn with regret that considerable difficult ties are plaeed in the way of thes t who would otherwise apply for water by reason of the existingerules othe Irrigation Department and Government will therefore see that it is necessury to rulax thiop stringency of these rules at the presenitime.
6. The Furest Departnent, the Coupmittee think, onght to be able to render consideralle assistance at such a crisis as this. llestrico tions in reyard to closgd and unclosed areas, useful in ordingry ini wrill become not only inconsen ent but oppressire under existing circomstano s. It is therefore nuatter for the consileation of that departmont, loo far it can proride free gr zing for rillages close enough to protected ind re-erved tracts: The ealanced fees charged fur non-agricaltural antle anil for inuricultural cattla from other Talokas under recent rales should not certain'y be insisted tpon at
present, especially is this cannot involve any serions loss to Government rerenue.
7. The Public Works Department is, we understand, resdy with schemes of works, propoeed to be taken np during famine yeers. In respect of these works the Committee of the Sabhe thiuk that in proference to road-making, works likely to increase the supply of water should be undertaken. The worke under-takep daring the last famine have proved of great benefit and the attention of the Department should therefore be directed to give preference to this class of works. The Famine Insurance sund which has not lieen much drawn apon in this Presidency cannot be turned to better account than in the way suggested ebove. The large Local Fund balanees in the hands of Government, which, the Sabhe understand, are largor than the strict rules require, may be at once piaced at the disposal of the District and Local Committees, so that wherever relief worts are necessary, no delay may be caused in beginning them at once.
8. The Comnittee of the Seblis feel sure that manj of these suggestions must pave been anlicifiated by Gorernment in the various: dopartments concernod. The Sabha homever thiuk that much cannot be done to cope with the situation 4 dequately, unless - Special Famine Relief Departinent is organized ind a qualified officer plaoed in chargo of it on the plan followed in '1876-77. In ${ }^{\text {a }}$ this connection, we ire directed to observe that the sewices rendered by General Keanedy during that crieis were invaluable and the same concentrated control will be found to le absolutely necessary to make all the various departmenta work in consort and aroid unnecessary delapy and conficte of authorities.

Hoping that the above suggestions will meet with favourable consideration at the hande of Goreramants

- Wi beg to remain, Sir, :
Your most obedient serrents,
(Sd.) G. K. GOKHALE, (Sd) E.P. GODBOLE, Secretaries, Sarrajanik Sabla, Poasa.

> Proceedings of the Sabha,

IYo. 103 of 1892.
Revenue Department.
Bombay Castie, 7th January 1892.
To

> The Honorary Secretaries,

Poona Sarvajaniz Babhn.

## Gentlemen,

I and directed to acknowledge the receipt of your letter No. 352, dated the 18th Cultimo, and to atato that the representation therein made will receive the consideration of Government.

I bave the honour to be, Sir,
Your most obedient serrant. Uader Secretary to Government

No. 293.
Revenue Department.
Bombay Castle, 14th Jannary 1892.
From :
T. D. Macingzis Esquxie C.S.

Chief S6cretary to the
Governmest ef Bombey.
To
The Hoyozart Sicas tabibs, . Sarvajanik Sabha,. Poona:

## Gemplimbr,

In continaation of my letter No. 103, dated 7h instant, I amdesired to inform you that your letter No. 352, dated 18th December

1891, has been laid before His Excellency the Gevernor-in-Council by whose directions I am to olserve that the Sabha will, as regards much of the Statistical information saggested, no doubt recegnize that its collection, even where possible, would entail enormous additional labour on Government officials, who have already plenty to do in making preparations to meet the demand for employment, which is likely to present itself on the return of the popalation from harrest operations elsewhere.
2. I am also to point out that in several mays Government have anticipated the recommendations of the Sabha. The prices of grain at rarious market-towns will be publishod weekly in the Bombay nemspapers ; forests have been thromn oyen for grazing ; extra estatlishuienta in the Revenue and Pablic Works Departments have been eupplied; and enquiries hare been set on foot as to the possibility of introducing pressed fudder into the offected districts. As regards expenditure on relief works from pablic funds, the Government of India has adranced for takari all that has been represented as requiaite at this season ; and thus Government is. prepared to engage all who need employwent on the public works which bave been opened in the affected area.

- 3. I am to add that the Governor ia.Cogncil acknowledges the spirit which prompts the address of the Sabba, and will be glad to receive such information as thry may supply.

> I have the honour to be Gentlemen
> Ycur most obedint servant
> T. D. NACKENZIE, Chief Secretary to Government.

## COMPULSORY VACCINATION IN THE BOMBAY PRESIDENCY.

The question of compulsory vaccination has come up for discnesion before the local Legislature, and as the principles involved in the extension of this coercive measure bejond the limits of the town and Island of Bombary and the city of Karachi, where the system is now in force, to all parts of the Presidency at the discretion of the execntive Government, have a larger scope and a more permanent value in the seltioment of similarly circumbtanced social and economical problems, we think that it will not le out of place to consider them in some detailat this juncture and belp the public to julgo for themseives how far the proviuce of private liberty san be encroached upon in the legitimato protection or advancemeat of aliding public interests of healu und eanitary *eli-being. The principle of social liberty has in modern tines found noclearer exponent and defender than the hio Joha Siuart Mill who laid down that'mankird or suciety at darge, including therein tho state organizaticn, "are warranted in intarforing individually or collectively wits the liberty of action of any one of their number only wien the end is self. protection. Tho only porpose for which power can be right. fully exercised iy one over another against his will is to prerent barm to others, His own good, either physical: or moral, is not a sufficient warraut. He cannot rightfaity bo compelled to do or to forbear becacse it will bie better for lim to do 00 , becacse it will make him bappier, begauso in tho

## 2.- Compulsory Vaccination in the Bombay Presidency.

opinion of others to do sa wonld be wise or even right. These are good reasons for remonstrating with him ar reasoning with hip or persuading him or entreating him, but not for compelling him or visifing him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter hina, must be calculated to produce evil to others. :The only part of the conduct of any one for which be is amenable to society is that which concorns others. In the part which merely concerns himself, bis independence is of right absolute. Over bimself, his body and mind, the individuat is sovereig4." This line of argament has been worked out systematically to its logioal consequences in Mr. Mill's great work on Libesty, and zothing can surpass the statement given above fa clearness and precision. When the great social coptroversy raged high some time ago, this oracular de. claration of this A postle of Liberty wal alwass relied on by some as a final reply to the argument on the other side that the functions of the State might under conceivable conditions be legitimately exercised in a gentle repression of some overgrown abuses of the social system in this country. Perbaps the same cry might be raised in defence of Voluntaryism and laissez faire in matters of publio vaccination and sanitation. In reading works, like those of Mill or Spencer, or Leckeys Bentham, Amos and their school, Indian readers are apt to forget that these writers-have always in view the conditions of modern Earope oven when they propound general maxims; apd that they are not prepared to connsel, the application of their rales to conntrien oatside the pale of Earopean civilization. In Mr, Mill's case, he has expressly laid down that "despotism is a legitimate mode of Government in dealing with barbarians, pra-

Conpuloory Facciration in the Dombay Presidency, 3
vided the end be their improvement, and the means justifed by actual: effecting tho end. Liberiy, as a principle, bas no application to ang state of tiinigs anterior to the times when mankind bare becone carable of being improved by free and equal discussion. Cntil then there is nothing for there bat implicit obedience to an Albbar or Clariemagne if they are so fortonate as to find one." The feeling expressed in these plain words by Mr. Mill underliés all Earopean speculation of the advanced tspe on moral, poilical and social subjects, We do not of ecurso accept it as a correct stalement of the assamed difference between Luropean and Asiatio popalations. Wo are rather disposed to question the correctnese of the principles themselves when they are accompanied by such a qualification. There is lardly a country in the world where equal and freediscassion exercises sach an important inflaence upon the formation of opinions as to dispense with other extraneons helps. We aro rather inclined to the riew that both in Earope and Asia, both porsoasion and compaleiop bavo their legitimate and well-marked-out spteres, enbject tganearly the same conditions and gearantees.

What apo these oonditions and goarantees which mark off one sphere of individual and coilective action where persaasion alost has play frcm the other sphere whére compuision of sonve sort or other-it may be social, religions or political, may bo rosorted to kegitimately, is a question of great importince which cannot bo disposed of off-hand withoot a full view of local circamstances ofo time, place, urgency, and derelopments. "It nasy, bowever, be safoly kid dorn that these circomstanose of time and place dic, baing postalated, the disciaction lotween the apherea of

## 4. Compulsory Vaccination in the Bombay Presidency.

persuasion and compulsion does not rest on the self-regarding or nltruistic character of the action contemplated. There is no social, religions, political or tanitary problem which can be regarded as strictly self-regarding in its character. May in society influences his neighbours and his neighbours inflaence him in a varietry of wars Taking the question of vaccination, it will at once be conceded that the negligence of parents in their duty to their children concerns not the parents so much as the child to be protected; and it is not the parents or the child alone who are concerned in the consequences of the act or omission. If a disease is of an epidemic character as small-pox is known to be, neghigence of one may affect the well-being of other families in the locality, be it large or small. Even according to Mt. Mill's own maxime, therefore, the question has to be considered from a general point of view and the act or forbearance cannot ba regarded as entirely self-regarding.

Even if it were otherwise, it may fairly be contended that no man has a right to commit suicide, which, in one sense, is, however, a typical self-regarding. action. The law punishes suicide as an"offence, becanse no one individual in a society has a cight to make away wilh bis own hife at his own sweet will: It is bardly necessary to mention that his relations and duties to his family, his wife and children in respect of their marriage, education and support fall under the same category. The provipce of persuasion is distingaished from that of coercion on grounds other than those of the socalled self-regarding or altruistic character of ourr. actions. One concerns the inward feelings, the other regulates outward actions. Whenever the question relates to an outward act which affects others, and the end aimed at is decided good,
and when the means, by which it is songht to accomplish it, are definite and effective for the parpose aimed at; and the good can be achieved witbout an inconveniently excessive sacrifice or connterbalancing disadrantages, they who prize the end and have the power and means, are bound to bring gentlo pressure by persaasion and in argeut or hopeless cases by coercion to attain tho end. These limitations are all imporis ant. Wherever atate or social action tbreatens to be meddlesome and invades the sanctity of the bigler relations of life or is based on imperfect knowledge of facts or ono-sided information or the end aimed at is very much Ligher than what the moral consc:ousness of the people eanctions, where the prolatilities of definite success are outweighed by the rifks of nttor failure, or the trial of experiments threatens to prodice worise evils in othar directions, persuasion is the onls method which should le resorted to, and coercion by State or caste or profession ought to bare no place. These limitations hare thesir co-gency under all circumstances of time and place, and are not limited to any pyrticular stato of civilization. It is thete tests which we should apply whenerer any proposal of crgauized reform comes np for discassion. Jndged by these tests there can be no doult that in the case of vaccination, the end aimed at is decidedly good, the means sooght to be osed bave 2 definito and proved capacity to attain that end, the prorosed action is not met llesome or vexations and does not encractb afon the privacy or the sanctities of life, and the adrantages prefonderate overwhelmingly over the risks ran. If wo can mako out a case on ail these lines, we think pablic feeling, bas no cause to be slarmed at the mention of compalion in a ephere of collectire action which is decidediy not eetif-regarding in its effoctis.
. 6 Compuleory Vactination in the Bombay Presidency:
Vaccipation as discovered by the researches of Dr . Jenner is hardly 2 centary old; in 1780 Dr . Jonner's thoughts were tarned to this subject, and in 1798, he pobliabed the results of his enquiry into the canses and effects of the variole vaccince. Within five years from that time, the matter came up before Parliament, and the Royal Jennerian Institution was founded in 1803, and overcoming much opposilion and religious controversy and professional pedantry in 1807, the Royal College of Pbysicians deemed it to be their daty to recommend strongly the practice of Vaccination. It was ascertained by a carefol inquiry into the death statistics of Austria, Prossia and the rest of Germany; Italy, Sweden and Denmark that whereas in the pre-vaccination period ranging in different provinces from 25 to 50 years, the deaths from smallpox had been some 650G9, in the raccination. period 1810-1850, these deaths had dwindled down to lese than 7000 over the same areas. - The saving of life had thas been nearly 90 per cent. In London the bills of small-pox morality had been 3000 to 5000 in the 18:h centory. In the seven years 1847-55, these deaths had shronk to. 340 per jear. This proportion had a tendercy to further reduction with the more general use of vaccination- In course of time it was discovered that when owing to the nse of bad lymph or othor canses, the present operation had not been, vory succeessfal and there were eraptions of vaccinal small-pox, thesf eruptions took a very mild formand that in such cases revaccination was $\dot{a}$ very effective proventive. It ras found that in one place out of 3000 persons protected by vaccination, 2,000 bad small-pox in a very malignant .epidemtc. yeari bot only 20 suffered therefrom ; while ont of $\$ 000$ unprotected persons, 4000 had the attack and 1,000 succumbed to it. Ont of

Comprleory Vaceination in the Eombay Preeidency. '7
some 96,000 cuses observed in different European conntries, it was found that while the death rate in an epidenaic - sear of voprotected fersons ranged from 15 to 60 fer cent, the deaths in the eage of raccinated patients ranged from 2 to 12 per eent. only. The higher death. ratea were directly traced to the balness or insofficiency of vaccination. From auch an extensive surver of these statistics, it was determined that while the mortality from small-pox in unprolected ceves is as bigh as 350 per thousand, its fatality in protected cares is not higber than 70 per thousand, and that according an the vacsination is bidiy or properly performed, the rate ranges from 150 to 5 per thousand. Feriodical re-vaccinztion further lessens this rato and gives almost a perfect secarity. These results bave thas been summed up by i great medical expert examined before the Par'iamentary Committee on Kaccination in 1887:
(1) That fatality of small-por has been diminisbed to a very emall fraction of 4 or 5 per cent. of what it used to be prior to the general use of Vaccination.
(2) That this emall yroportion of failares is dos chiefIf to had manipolation.
(3) That infant vacoination gives the best prolection against sataral emall-pox through lifo to most persons.
(4) That a very small proportion of raccinated per": con recover their ausceptibility to the poisois as they appronch adolis age.
(5) "That this teodeacy can be checked by sornocination.

- (6) That oiras whea there is me re-vaccination, the attack in of a very mild forms, and the rate of fataity fith of oix pretacted persona.

## 8 Compraloory Vaceination an the Bombay Precidency:

(7). That if vaccination were made aniversal, deth by. small-pox would disappear.

So mach for the resalts of the experience of Enropean countries. Te tirn to eur' own Presidency:Those who are sufficiently advaneed ja yeara to remèmber What the ravages of the small-po scourge, even whei not epidemic, have been in the past, and who know how the scourge has beon by judicious, and timely aotion almost deprived of its sting, need no figured statistics to cotvince them of the immense benefits, notiso mach in the docrease of deaths by epidemic small-pox only, but in the prevention of the blindaess, disfigurenent and lifelong debility of many thousands of valuable. lives each year, directly due to the precantions taken in the stape of timely vaccination. It will however be of interest to note a few figures by way of illustration: The Sanitary Dopartmentra Reports for several years past have established the fact that on an sverage the registered deaths, abont 450000 an an average of eleven years, due to all canses.in this Presidency, verge npon 28 per 1000, and the birth rate, at least of the registered births, about 650000 on an average of several yeari, is close upos 38 per 1000. The last census enumeration confirms these figures, for it shows an increase in a ten years tarm of tolerably good years of about 15 p . c. of the population which means that the births exceed the deaths by about 1.5 p.c. each year. Of conrse, as might be expected, the births prepondenete in rural over urban areas, bsing about 28 per thousand in. urban as against 40 per 1000 in rural areas, and the deaths pro ponderate in urban as against rural areas, being about 30 against 28 per thousand. Of the childrea born each year, as many as $21 \mathrm{p}, \mathrm{a}$ or about a lack, dio before they reach the first year,

# Compulsory Vaccination is the Bombay Presitency. 

and another lack or 21 p. c. die between 1 and 5 years after their birth. This is the penalty we have to pay for the laxuries of barly consummation and bad sanitation and unscientific midvifory treatment. The actual number of deaths by small-pox for some years past does not present a very heary total, ranging as it has done for several years between 2 to ${ }^{\circ} 5$ per 100 os the total deaths. There are however epidemic yeara when the ecourgo is very violent in its rage. The numbere of death front amall-pox since 1877 will be gathered from the following etatement. It may be noted that compulsory vaccination wae first introdaced id Bombay in 1877-78. .

| 1877 | - | 27369 | 1883 | -**-.....- | 13404 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1878 | -0.0.0.** | 4475 | 1884 | - | 14438 |
| 1879 | -0.0.0.** | 1156 | 1885 | --0.0..... | . 2046 |
| 1880 | -* | 940 | 1880 | -6...000* | 876 |
| 1881 | -00-0.0.0 | 539 | 1887 | -6.....00 | 3753 |
| 1882 | -00.0.0.* | 1630 | 1888 | .......... | 3117 |
|  |  |  | . 1889 | -0.0.* | 7066 |
|  |  | - | 1890 | -...... | 2977 |

This gives an average of 6000 deaths, being abont I p. C. epon the total deaths as due to this canse in a eycle of good and bad years. The violence of the epidemic is sensibly diminishing year after jear. Every seventh year, the epidomic appears to be periodical bat the loss of life has drindled dowa from 23000 to 14000 and again to $7 C 00$ ia 21 jears. Ont of the total number of. deaths from emall-pox, abont 25 p. c. take place before the first - jear is reached; 50 p. o. take place betweon 1 and 12 years and lose than $25^{\circ} \mathrm{p}$. c. after the lith jear. The disoase is generully at it maximum in the first quartor of the year and at ite lowest in the aotomn months Daring che pact 11 years, the nomber of primary veccination opera
tions performed has been rising steadily and . sensibly as will be gathered from the following statement :-

$$
\begin{array}{rll}
1879-586501 & 1885-854387 \\
1880-642505 & \ddots & 1886-855992 \\
1881-729323 & & 1887-879755 \\
1882-792206 & & 1888-896394 \\
1883-826965 \\
1884-802207 & & 1889-900232 \\
1890-885260
\end{array}
$$

On an average of years, 95 p . c. of these operations are successful. Add to this the number of re-vaccinations which has averaged over 50000 during the past 3 years; and about 62 p . c. of these operations are successful.

We have a grand total of about $9 \frac{1}{2}$ lacks of vaccination operations registered by the Sanitary Department officers last year. The chief point of interest in regard to these figures relates to the inquiry about the proportfon of new births and primary vaccinations of children below the age of one year. The following statement gives these proportions for the past three years.

## Compulbory Faccination in the Eombay Presidency. <br> 11

Theso figures show that aloat 75 p . C. of tho chiidren are protectad by vaccination under the present optional syatem. In other words three out of four parents recognise their daty in this connection and exercise their liberty without any sort of constraint. The adrantages attendant npon vacioation cannot be regarded as imaginary when the present permissive syatem produces sach a resall If the reacilitrant 25 por ceat. parents neglect their duty from indifference or ignorance, it cannot certainly be regarded as an encroachmert on their liberty, if the public representod by the 75 p. o. majority insist in their own inflerests as also in those of the minority that this protection shall be aniversal. The proportiong are reaily mach more valanble than theso figures represent. The Facciantion Lieports for $\mathbf{t} 889$ and 1890 show that out of pearly nine lacke of primary raccinations, in as many as $6 \frac{1}{4}$ lacks of cases, the childree raccinatod were under one year ; ia about $2 \frac{1}{2}$ lecke casea, tho childrean were betwoen 1 and 5 years, and it was only in lest than $2 P$. a. cases that the children mare. abore 5 years olụ.

It might tbes be said without heing open to the charge of exaggoration that nearly all parente and guandiana are disposed to allow their chillreg to be nocinated and the minority which requires coercion is really a very insignificani mioority. -

It might indeod to urged with some force that if the voluntary system bes worked so well, there is no special occasion for introdacing a compalsory. haw in its pisces. The statistics of Earopein conntries farnish the best reply to this objection that cia be given. They show for instanco that whibe under the oplional system deathe of chisdren, ander 5 were 1617 betreen 1847-53, tbis anamber fell to 81:

## 12. Compultory Vaecination in the Eonboy Presidency.

between 1854-71 when the system was obligatory bot not properly puforced, and it went down to 242 between 1872-1887 when the compulsion was general and effectively enforced. There is, however, a considerable body of experience which shows that in the town and illand of Bombay, as also in Karach, the change han done great good. The report on Vaccination for 1889-90 gives information about the working of "the compulsory system in "Bombay for 12 years after $\Delta \mathrm{ct} \mathrm{L}$ of 1877 was brongbt into operation. The outbreaks of small-pox in Bombay bofors 1877 Lad been specially virulent, "s many as 1854 childrẹn háving succumbed to it in 1872 and 2717 children dying in 1876 from, the epidemic in 4 months. Sinee the introduction of the Act, the ratio per handred of the excess of births over deaths of children "uder 1 year scccessfully raccinated bas risen from 87 p. c. to 162 p. c. Over the ontire number of children ayailable at the rato of 31 , per 1000 of the "population, the ratio of protected children has risen from 33 p . o. to 53 p. c. in 12 years. Similarly in Karachi daring the layt 10 years, this latter proportion has risen from 90 to 133 p.e of the available children at 31 per mille. Taking all these figures into consideration, no reasonable doubt can be lefi thát the system of compulion has ample jastification in the volantary acceptance of it by an overwhelmingly large proportion of the pablic and in the decided improvemeat which has attegudel the change boti in Bombay' and Karachi. The end is good, the means intended to bo employed to attain that end have proved amply effective as measured by resilts and popular approval The only question which prastical man need, therefore, consider in this connection is whether there are any attendant eribs which would be toa great a price to pay

Compulfory Faceination in the Boubey Presidang. 13
for the benefits thas secured. It has beea indeed arged in certain quartert that the general ase of nacination bas raised the general proporion of the death rato from all canses or at least transplaced the beavier death sate fromx children to adalus. The registered experience of Earopean contitries, bowerer, farnishes no.fou wiation for acch a charge. The general death rato ia London has fallen from 3:in per 1,600 in tha last centary to 250 por 1000 in the present enatary: In Donmart it hes fallen from 890 to 330 , in Sreden, frum eisy to eub. Twero las also bean no tranglacement of the hearier death rate from one period to another. It was aloo feared that dealks from fever sol serofalions or tabereaisi diseased wero maitiplied is reason of general raccination. The statistices of the loadon horpitsis farnisb, boverer, to groand far soch a conclusion. White the desth rate from smail-pos has diministed in these hoefiizis from 304 to 30 per 100,050 people, desths from ferer bavo fä.en from 53 J to 585 and from $f$ fitisis andafneamonia have diministed from $14 i 8$ to 1210 . The same cheerricion boldygoed of sjphieitic poison. It has been provel by these resarches thas suscepuilitity to tas smail-por paison bears no discoverable relation to the other disomers. Nay, TIOre! it has breen shown that reccination iodirectly prevente Cabercuiar as aiso mon-tabereciar scrofula; When tio raceinsLion operation is properly performed, soc og ity is the system prutectid agsinsismail-pox, bat it in ant renilered mare suscep. ticle to otlare disorders. When the operation is laily perforstod. it may beal to catmocoas eraptiona and giandaiar anolirgu and ti:s circomstanse sugesto tLe deessaity of greas care in the choire of tymph asd proper aiagtation of tise of ermLion to tie coolition of the patient. .

ง We hope thus to have shown that ai the protection given by raccination has been proved to be an undoubted blessing, and as the means adopted sare well calculated to meet- that end, and do yrot involve any other risk which need be considered as of any material importance, the duty of Government is olear and there is ample justification for the compulsory provisions of the Act. It is true, even under the existing system nearly 75 p.c. of the population are protected, but the remaining 25 p. o. who are naprotected constitate $s$ standing menace to the health of the resty form small-pox epidemics are admittedly infections and the universal adoption of vaccination is the only sure method of minimizing this risk. - While therefor we approve the present proposal to empower Goverament to extend compalsion generally; there are one or two minor considerations of detail which do not appear to us to have been sufficiently considered by the authorities who have moved in this matter. The Bill, as now framed, commits Government to a threefold compulsion. There is first the general compulsion to vaccinate children, about which there is, as we have shown above, no room for a difference of opinion. ? The two other compulsions, however, sought to be legalized stand on a different footing. If the Bill is passed in its present form, it will involve compulsory taxation of local bodies withont their consent ; and it will also involve the compulsion of arm to arm paccination in those cases where animal lymph cannot be procured without unreasonable delay. As regards the compulsoryotazation, it deserves notice that at present the cost of the Department comes to nearly $3^{\circ}$ lacks, out of which Government contributes out of Provincial Reyenues about 107000 Rs, The Local and Municipal Boards contribate 1:5000 and the Native States about 62000 Rss $_{9}$. Leave:

- Compulsory Vaccination in the Dombay Presidency. 13 ing these States aside we have the Provincial and Local Boards contributing to the cost in the proportion of 40 to 60 Re . per 100 Ra . The average cost for each vaccinated child is at present 5 annas. In the town and Island of Botis :rhere compnlsion has been in force for more than 12 years, the average cost is Re, 11 anna or nearly 8 times ars moch as in the Diofussib. At the lowest estimate; therefore, the present coft will be trebled, i.e. the Local and Municipal Boards will be required to put neare Iy 5 jaols of Rupess in place of $1 \frac{1}{4}$ lacks now paid by them. This will be a grievous barden to impose on their resources and it if bat fair that Governpont should not put the heavy expendiare on these bodies wifhout thair previous consent. This nierse was adopted both in Bombay and Karachi. The Mobfipal executive bodies in both these places wer persuaded to pay larger contributions before the compulsory mea. sure wis introduced in these localities. And it.is bat proper that. the same consideration shouk "bo shown in the introduciop of the present measure. This caution :volres at breach of the principle of. the law. It would only - Equire at tho hand of Government that they should not "orercisp the rifyer thich will be.rested in them before obtaining the "an- fent of the Local and Manicipal Boards to the increased ecpenditure. A slight change in the procedure by which Government wond, only be anthorized to move ia the matter on the applicarifi:or with the consent of the local bodies will practically reicove all inownvenience. As regards the other compulsion of requiring vaccinated children to bo brought $1 g^{\text {ain to the racuatior to alluw him to remore the lymph for }}$ O purfose of reneviag bis stock, the Bombay and Karachi
? may bo noted, permit no such diseretion in any renter gaardian can alraya require that his child.

16 Compulsory Vaccination in the Bombay Presidency.
shall only bo operated apon by animal lymph. Animal lymph is aotually in use in many of the larger towns even at present, notably mom, Nactr, Belganom and other places, The relative advany y nong over human ymph as a protecting agent has bsen univer cly admittéd by medical experts. The human lymph has a tendency to deteriorate in quality when it is taken from arin to arm. There is the risk, remoie thongh it be, of diseased chil 10 o propagating their disease to other children. Above all pophar prejudice on this toint is very strong and deserves oonsideration. Tt, annoyarye of taking children twiee to the office is a real grievanchit Go vernment should, therefore, remofe all rise for ent pibl by following the older Acts in this matter and leaving doon discretion to its Departmental Officers. With these uilarations the proposed measure will be found in actugl work to be a great blessing and people will soon reconcile themsplves to this necessity as one imposed upon them in their bestifderests.

2 Coton Mranufactures in the Bombay Pyesidency.
the art of weaving was carried from India to Egypt and Assyria, Ptolemy montions seven places neat Thana which carried on the foreign trade of India with Egypt, and good were carried ${ }^{*}$ from the top of the Sahyadri eastward in wagons across the Deccan to Pailh an and from Paitban ten days further east to Sagar-the greategst mart of Southern India. Goods from ports on the coast of Madras, and the coast of Bengal also eollected at Sagar. ${ }^{\circ}$ Ptolemyalso mentions Massolia, which cart be no other than the modern Masalipatam, near the mouth of the Kristina as a place where the gness muslins were made. The trade in oloth between Masalipatam. and Thana was kept ap till modern times. It was not until the tbirteenth centary that the cottog plant was introduced into sonthern Europe where its wool was first used to make paper. $t$ tis manufacture into eloth ju imitation of the fabrics of Egypt and India was first attempted by the Italian States in the thirteenth centary.

From the States of Italy, the art was carried to the low conatries and thence it passed over to England in the seventeenth century. Abont the middle of the seventeenth centary, it appears that clintzes and other cloths from Masalipatam passed throngh Golkonda by Cbandor, Nasik, and the Thal pass ta the Thana ports. About the time, Masalipatam is described as a very populous city where the trade of Europe and China met, and whero there was a great concourse of merchants from Cambay, Surat, Gop, and other places on the West Coast. What is at present toown as J. Mandari tarbans: made of dark spotied cloth, and now worn by Bombay Prabpus,

[^5]Masalmans and Parrees, is Nassli Bondari cloth, which maj probably adopted by these classes from the old Hindu Thana traders. Thie estabishmeat of the East Iodia Comb pany and the Company's exports of cotton eloth into England resolted in the sopply of a large quantity of Indian coiton goods for the ase of the higher and middlo clagses of Engiishmen. In 1641, atcompto were maje to tora oot ' Mrachester cottions' mado of wool in imitation of Iodian cotons. Bat Mranchester did not ancceed in attempting to compete soccessfaily with the printed caicos of India oa freetrato principles. Gradoaliy the wearing of Isdian chinizer lecame so general in England that it dreer the atiention of the mooilien and faxen manafactarors. . DeFoe, is a number of the Trekly Reriver, Jananery 1008 , expresied the common opinion of the time in bitterly inmenting the harge. importations of Indian goods into Great Eritain, exact! afier the manner in which the imports of Manchester and Eaglish manafactures of all hiods bave berea viaured in India. ${ }^{\circ}$

The famoss looms of Daces bave prodoeed and still prodice that exquisite fextore abich even Engiish machinery of the nimetceath centary has not been ablit to rival. Mastins are chiety of three qualiciet, rarging according to the degree of Sopsess. $\ddagger$ They are known as Halmat Khas or King's Meslias,

[^6]Their asual price is $£ 1$ per yard. $*$ Dacca, however, is not the only place for fine maslins, thungh its position in the moist elimate of the Sunderbuns places it at an ad mantage. Chandranugar is another place for fine manufactures. There Lhe work of wearing is all done in under-groqnd shops for the sale of moisture, Some persons do not beliere in the influence of climate and ascribe the soperiority of Dacca maslins to skill, bat skill withoat climate will not do mach. : In the dry air of the Deccan, the jarn is spun in closed cellars, of which tho floors are continualiy watered.

For a long time the idea lad taken bold of Native capitalists in Pombay and other cities ia Gnjarat that cotton- spinning in India by the aid of machinery imported from Eng. 1 land mast turn ont profitable. Raw cotton in pressed bales exported from Bombay was made into Larny and cloth in Lancabíre and re-exported in manofactured goods to India. In spite of all charges for freight; insurance, commission on raw and manufacturet goods shipped to and from England, the price at which Manchester goods sold in India left a sufficieut margin to corer all cefarges., If this could be done,
that in the time nf Nawab aliarardy Khani. a weaver was turned out of Dacer fur his fiegiect in not preventing his com from eating ap a piece of this mos'in. Which be hat rarelessly Jett apori grass. The third quaity. is thenel the 'Erening Den' and when aproad ucon the grass can scarcely be distingui:hed from the dew. See Mrs. Manning, Vol. II, Frge 300 .

- The Hinda "considre the Jimá or loom-figared to be their Chef-d'auve in masl ns. $£ 31$ is said to hnve been the price of thatmanafnctared for Aurangzeb: whie in 17 ilf $_{6}$ tiese masine rached the extravagant price of $£ 55$ per piere. Comparing these fabrica rith these manofuetnred in Great Britain,"Dr. Watsnn finds the yarn finer thanany yet proiluced in Enrope, while the twisting given to it by the Hinda hand mskes it more durable than anyi maclino, wede fabric., Mra, Manaing'i Indie, Vol, II, page 300. . .
they argoed, white the raw material was carried across sevea thouspad miles, to and lack from England, why shouki not the manofectrie of cotton in India pay? Cotton ras at the Indiaa mill-ownys door ; labour, thoogh leen: shiifol, is cheap. The eaving in the convejance of raw coulon to Eogland ©íd its re-convegince to India in the slape of inist and pieer goods was a decided adrantage. But thoogh. the adrantages in favoor of cotton spinning ia India greatiy preponderated, yot no sorious atiempt was made intil stoot the jear 1845, when an enterprising Hindu geajeman, Hir. (now Rao Eabadur) Ranchorelal Chotalal, C. I. Ex, the present saccosfal mill-owner of Alumedabad, conceived the idea of polling up a mall colton apinning factory at Abmedabac. Bat Yr. Ranchorelal had no information before him on which to proceed. He knew, howeror, of one geatleman who took ititerest in ail matiers of indostrial enterprize. This was Major Fuljames, Commendank of the Grjerit Irregular Hurse. Of his own "accord, Major Falljames oltained a dotailed estimate of the first cast as voll as of the outtion and morking charges of a modorately cized mill throagh his brother. In a lettere be inoto to Mesoris.

[^7]Bryan Donkin and Co, of London, Major Falljames described who the promoters of the concern were, and on what terms the machinery was to be ordered out and the mill completed. Major Fulljames was for many $\because$ years
Bombay, or any other respectable Firm in India until the machinery has been erected and put to work and has turned out the quanity of work stipulated for in a given time. They would agree to pay for the loss of interest of money solong as held in deposit and to allow you to select auch European Suprintendents as suay be necessary for the erection of machinery as well as for working it after completion. The Company will undertake to erect a suitable building for the machinery to any plan you may send but it should be borne in mind that land is very cheap in India so that there is no necessity to have other than ground floor buildings.- Upper stories àre very unadrisable and expensive in India. The Company are in possession of estimates you furnished my brother, Mr. Thomas Fulljames, on the 28th July 1847;For a Company at Surat, who after much discassion abandoned the scheme. The present parties are anxions to know the excet amount for which; with the prices therein, you will agree to sapply the best machinery and the quantity of work such maclinery will tarn out under a gaarantee as above detailed.: The machinery they expect :will combine the latest patents and best improvements ard that the Europeans selected should be industrious, well-tehared and sober mon who have been well instracted in weaving and spinining \&c.; for the success of the sobeme will depend on their skill and grod conuct. The indentares these machiniste should subscribe to ought to be very concise and I wonld saggest that their salary should increase annually op to certain sum-the average not exceeding what you formerly mentioned, bat should there be any dificulty on this point, your former terms may be fixed. The parties should be requested to . Rerve not under three years. The Company is only answerable for their wages while in India in the Company's service. In the event of continued sickness, and the parties: unable to perform their duties, or groas misconduct, the parties should be liable to diacharge from the Company'a service. On the order being sent you for the machinery, one half the enst will be deposited in Bombay in the hands of the firm selected and the other half on the-bills of lading being received in India that the machinery has been despatched; from which date the Company will egree to pay interest, or, if preferred, a certain fixed sum in addition to the prime cost of machinery. It is proposed to ereet the machinery near the banks of the Narbndua river and in the immediate neighbourhood of extensive cottin growing districts. Wood fuel will be used for gejerating the steam, conl, at present being rery expensive in India and tobe had with dificulty.

Commandant of the Gujaral Bheel Corps, :'called by the natives, "Bheel Paltan.' From this post be rose to the position of Commandant of the Gojarat Irregular Horse. When joung he was emplosed by Gorernment to examine the geological strata of 'Gojarat. He lad a torn for practical science, and was especially fond of practical mechanics. By Natires be was called 'Sardi Saheb' from bis frequert, handling of Sardi or boring machines. His practical sagacity. was evinced in his constraction of the slaice gates in the Khari river near Mehemoodabad in the Kaira district of Gujaral and utilizing the river water in irrigating rice fields in the Jayatalpur subdivision of the Doshkroi paraganas. He also induced certain native gentlemen in Abemdabad to constrect a tramway from.Dbollern to the Khoon Bunder. He got up a Joint Slock Company for the parpose and becamo its Secretary till. be went to Barods to assums the office of Political Agent, Feva Kantha. Whist at Baroda he induced the Gaikwar authorities to construct slaice-gates in the Vishwamitri .river. This enabled the people to enjoy the benefit of the river water all throgighout the year. In bis tours throogh the Rewa. Kantha territory, be twok notes of ail he observed of the geological features of the country, and submitted vaituable reporta to Government, embodring the results of his geoiogical researches. His surrey of the district Jed him to discorer the existence of iron ore ib three places in the Reva Kantha dise tricts:-(1) in Leemodra in the Inajreepla'State, ( 2 ) in the Narniote paragaua, and (3) in Shivrajpar near Pavagland. He aleo rointed out localisies containing coal cetosits.

It was proposed to erect the Dill on the banks of the Norbada at Broach in the heart of one of tie best cottoa growing districts af Gujarat, E'cisrs. Ergan Doakin and Co. stifulated that if
the inquiry did not resalt in an order for machinery, they would charge for their tronble. And se it tarned out that Major Fulljames had to pay Messrs. Bryan Donkin and Co. from his own pocket. The estimato they sent showed that cotton spinning and weaving would, if well managed, pay. In 1849, Mr. Runchorelal sent from Baroda a Gajarati version of the above estimate to be published in a vernacular weellỳ at Ahrmedabad-the Vartaman Patra, and roquested Mr. Bhogilal Pranvallabbdas, Head Master of the English School at Ahmedabad, to explain the matter to the rich capitalists and traders of the cits. Mr Bhogilal mado some efforts, which, lowever, proved unsuccessiul. He at last; wrote to Mr. Runchorelal to say that the Shetias of Ahmedabad feared to embark, their capital in an untried industry, remarking that if cotion-mili was a paying industry, it was not likey to noffer for want of patronage., but - was sure to obtain all the necessary capital from tiae shrewd and business-like people: of Bombay. $\dot{N}$ ofarther attempt in the direction of startiog a cotton mill was made until the end of 1851 , when Mr. Ranchorelal Chotalal had an opportunity of bringing the subject to the notice of Mr . James Landen-an-American gentleman who had established a Steam, Coton Ginning Factory at Broach. Mr. Runchorelal was introduced to Mr Landon by Rao Babador Jagjirandas Khushaldas, the tate pensioned Deputy Collector of Surat, and Rao Babadur Unedram Ranchoredas, until lately, District Depaty Collector of Surat, Mr. Rqnchorelal sent to Mr. Landon the estimate obtinined by Major Folljames and asked his opinion on the subject. In reply; Mr. Landon eaid hé was, not personally acquainted with eotton spinuing but
would refer the matter to friends in England for their opinion afler the ginning season was ofer. This Mir, Landun did.

After a fow monthe Mr. Landon got a reply from England. He wrote to Mr. Runchorelal to say that he was satisfied the project was a promising one, and that if Mr. Runchorelal coald get half the capital required, be would arrange for the other balf. Ho said he would also ondertake the contract to erect the building and start the machinery for a specific anm, and wonld also manage the mill on certain terms. He concladed by alaying that he would give a good secarity for the doe performance of his undertaking. On reeeipt of this proposal, Mr. Punchorelal tried and succeeded in getting the consent of certain respectablo persons to abscrite balf the capital. Among the gentlemea who promisod to help the formation of the company were the well-known firms of Gopalrao Mairal and Samal Bechar of Baroda, the Raja of Rajpoepla, and the late Mr. Gowrishanlar Odayasbanker, C. S. L., of Bhavnagar.

Aris test of his faith in the concera, Mr. Ranchorelal induced bie father to take sbares in it. Thas the requisite capital was sabscribod on the faith of Mr. Landon endertaking the oontract for bailding the mill and potting op the machinery for a specific sam, and apon his arranging with a respectable firm in Bombay to stand as secority for the dae performance of the contract. Mr. Landon offered to got Massrı Leckie and Co. of Eonilay to gaaratee himi. Accordingly - Memerandum and Articies of Association were drawn op. Tie eapital of the company was to be $\mathrm{R} .500,006$, divided into shares of Rs. $50 j^{\circ} 0$ each. On the exection of the guarantee by Mossrs. Lackio and Co., the money wai to be paid to Cotton Ifaseffactures in the Bombay Previdency.

Mr. Landon or Messrs. Leckie \& Co., and Mr. Landon was to go to England to purchase the machinery for the Mill. Thas all was ready and the shareholders consented to siga the doed of partnership provided the giarantee stipolated for by them was forthcoming. Mr Runchorelal, accompanied by the Innim or Agent of the Firm of Samul Bechar of Baroda, went to Brasch and ingdired for the security or guarantee of Messrs Leckie and Co. All, however, that Mr. Landon was prepared to produce was a lettor from Messra Leckie and Co,s informing the shareholders that the money paid by them would be handed over to Mr. Landon in London for the purchase of machinery, but if the money was not required by Mr. Iandon, it would be returned to the shareholders. This letter did not look like security for the due performance of The contraet. Mr. Landon indeed arged that Mr. Ronchorelal and the Baroda shareholders "can certainly have no reasonaole oxcuse for forther delay, as Messrs. Leckie \& Co. have expressed their entire willingness to guarantee the performance of $m y$ contract, if they were not prohibited from doing so by the terms of their own doed of parinership. This is in effect the same as if they had so guaranteed it, as my. own transactions with the House have been from first to last to nearly five times the mount of the whole of the stock of this Company and therefore from their knowledge of me, what they say would be equivalent with any reasonable persons to any guaranteothat would be given. Under no circumstance will it be conptatent with my own character to offer any farther assurance, and-I'may add that it is only' the Baroda shareholders that have required even thie from ma. "The Baroda

[^8]
## Coilon Manufactures in the Bombay Precilency.

sharobolders, however, stack fast and insisted npon a proper guarantee being given for the safety of their money.

Mr. Landon once more arged upoa Mr. Ranchorelal * to get the Baroda sbirebolders to pay ap their money, bat these sharebolders held that they would be risking the funds until they bad a clear guarauteo from Mossrs. Leckio and Co. as to the anfety of the mones. Major Falljames too did not consider it desirable for the sharebulders to leare the fands entirely in the hands of Mfr. Landon withoat a foll assurance as to their safoty. There was also another clause in the deed of partnership of the Company which required modification. It related to the

[^9] Codton Manufactures in the Bombay Presidency.
sale of shares in the Company.* The clause provided that no sale of a share or shares could be effected without the sanction, of the Manager. This could aot be allowed to pass into agree ment. The Manager, so thoúght the Baroda sioareholders. should have no power of this sort, Ha shonid be considered the servant of the Company and should, as such, bave no power to prevent ang one selling his share, if he thought fit to do so. -Ha was in fact, as the deod of agreement put it, the shareholders' master. This was sure to give rise to -mis. understanding. The result was that Mr. Landon had to give up the Native proprietary and look for belp as regards capital. from other quarters. But Mr. Landon persevered and at last established a Cotton Mill at Broạeh;

The Broach Mills started with 17000 spindles bit no looms. In 1863, the Mills were registored under the Limited Liability. Act with a capital of Ro: 400,000 divided into ' 800 : shares of Rs, 500, each paid up. But while Broach was this provided with a cotlon mill, Bombay did not long remain without one, An enterprising gentleman, Mr. Cowasji Nanabhoy Davar, started the first cotton. mill in Bombay on the joint atock pribciple. It was called the Bombay Spinning. and Wearing Compang. The capital of the Company was Rh 500,000 divided into 1000 shares of F3. 500 each. Mr. Cowasji Nanabhoy Davar, as the original promqter of the conoern, was the first Manager of the Mill, He received a commission of 5 per cent. on the procoede of yern sold. The Millbegan to work in Febracry 1856. Abpat 500 persons were emplojed upon it pnder the direction of three Europeans. The mills began worl with 29,000 spindles bat no looms. The capital consisted of 100 share of Rs 5,000 each fally paid up. At this timo Indian operativen were ontire-

If new to the work and it was not antil many monthe after that the hand got trained to the various processes in the scutching, blowing, carding and apinning roons. Hence it was nearly two years after that that the shareholders ware alla to get a first dividend of Ro, 600 por share. The second dividend was for Rs, 400 for the half year (January to Jone) of 1859, the dividend for the remaining balf of the year being for Rs, 600, making up a total of Is. $1000^{\prime}$ or half the amount pald up of esch share retaroed to the shareholders in one yoar.

This was onough to tempt onpitalista to launch into fresh conoerne of the kind. Accordingly the Oriental Kpinning and Weaving Company was formed in 1856 with a capital of In. $20,00,000$ divided into 800 slares of Rs, 2590 each. Tho yoar 1860. witnensed the starting of two other mille, the Lombay Rogal Spinning and Wearing Company and the Coorla Mills.

In 1861 came out the Ahmedabad Spinning and Woaving Mills, in 1862 the Bombay United S. and W. Company ; in 1864 the Maneckji Petit Mills, the Alliance Spinning and Wearing Company ind the great Eastorn Milla ; tad in 1865 the Albert Mills.
Initial difficulties.

Though it was generally felt by capitalists that ip vestmeits, in cottga mills woald gield a feir retara on capital, the task of etarting and working a mill was by no meane so eresy in 1856 acit appeara to to in 1898. Tho frat dificul!y was in respect of raising ibe recessary capitul, To capitalisto the feld of indostry wes wholly new, Urdinary uen of besipess could roarcely toe indaced to tate chares in as Cotton Manufaclures in the Bonday Presideney.
mill concern, for it was at first doubtial when the investor would get a retari in the shape of a dividend. Wealthy capitalists alone conld afford to wait till the period when the mill began to earn profits. When, however, the difficalty in regard to the raising of capital was got over by the wealthy promoteraof a mill coming forward? the hope of commission to con. tribute largely to the capital of the concern, the next question arose as to the bailang of the mill and otdering ont the neces. sary machinery from England. . Mill architectare was little anderstood in Bombay thirty years ago. Working plane by professional draughtsmen conld indeed be got ready, but the wort of building a mill conld not be procoeded with nutil the detalled plans for the engine and boiler boases and for the blow, card, male, and throstiet rooms, and for the loomshed were approved of by the pachion-makers itic England. And sipce commonication with England in those days by the Cape route took 60 days, defay in the building of a mill was in many respects onavoidable. It was considered fortunate if the vessel logded with milf machinery passed-the Cape of Good Hape and arrived safely in Bombay; to otherwise the loss of the ship often added to the delay:- In coAtain coses, mishaps of the kind did oconr, and though the goods were insared, the delays from such accidents proved intolergble and the tale of misfortune to impatient sharebolders at annual meetings was a sore dias ppointment to therm. When at last the machinery did arrive, the serious work of fitting op théo mill began. Care ©as, no doubt, taken to sendoont from England the requiste thaff of ftters and mechanics to $\%$ op the macbinery but they needed the help of trained hands. This' aid coold net be giren and the resall was loss of time so mach to that it took in az averago-sised mill of, say, 15000 spindfes and 200 loomi
from two to three months or treble the time it does at pro vent in Bombay.

Want of skill in the mill-hands was the most serions drawback a mill-owner had to contend against in those days. Tbe hands needed training and that training was only to bo got by constant work in the mill. This took time and as long as the requisite skill and dexterity fin bandling the machinery was not attained, fall prodoctio could not be secared. Thas oven if the mill begain work, it was not until after several months that it reached the point of foll work with the full number of spindles. And where the entire number of spingles was in fall work, it wat not until the hands had acquired the requisits ekill and dexterity that the normil production of 4 ounces per upiadle por day of the atandard No. 201 jarn wan reached.

## Draybacks.

So far for initial difficulties ; bat the drawbeck to the Indian mill-owner, which aro mory or less of a constant or recarring vature, are deserving of notice, as they countierbalance more or lesy the advantages of cheap laboar and tell beavily on the cost of prodaction The first and foremost among these drawbacks is the one in regard to coal, which has to be supplied to Bombay millis all the way from England. In this respect the Lavcashire Mills have a decided advantage and since coal is an item of recorring charges, the rise and fall in price of cosl tells sensibly on the cost of manufactares torned oat by Indial mills. Another equally important dranlack is as regards machinery. Io replace breakages and prevent the mill from stopping, mill-owners are driven to the secosoity of keeping on hand double or triple sets of machiners. Accidents to the mills, allbough not of frequent occurrence, are

## 16 Cotion Man ufactures in the Boimbay Presidency:

sometimes pery serions, and, where the spare machinery is not in stock, a mill must stop work until the necessary piece of maohinery atrives from England. Of late, however, Iron-founderies and workshops have come into existence in Bombay to meet the. growing tants of the mills for renewals and repairs, and Messrs Richardson Cruddas, Messrs, Fraser and Miller, Messrs Sorabji Shapurji of Kbetwadi and others are doing fair and remunerative business in the iron trade; but yet it is a fact that the repairs or renewals of the heavy gortions of mill machinery cannot be dono in Indis,
$\therefore$ Bat while the initial and other difficultieg at this period Were so great in Bombay, the drawbacks in the case of upcountry mills may be more easily imagined than dessribed. Speaking of the Ahmedabad Cotton S, and W. Company, MrRunchorelal Chotalal, one of the earliest pioneers of cotton mill industry in this Presidency, remarks:-"The fonndation of our Mill was laid down in 1859 and the quantity of machinery ordered was only 2500 Throstle Spindles. Our Agent in England was Mr. Dadabhai Naoroji, to whom I was introduced by my lamented friend, Mr. Merwanji Nassarwanji Bhownagri. At the time we established our Mill at Ahmodabad, there was no railway communication and we had to bring all our machinery, engines and boilers to Cambay by boats, whence we brought the whole stuff by country bullock caris. The people in Abmedabad did frot knon at the time what a steam engine or a cotton machine was and wo had to teach and train up every body, At that time there was no ekilled labour available at Bombay and so we had to struggle with our local resources the best way we could. We had the first consignment of our machinery from Eagland lost in the sea, and the first Earopean Manager wo broaght from England
was carried away by cholera. Notwithstanding all theee dificuities, we were abie to commence cotton spianing in 1851 and through the faroar of Providence, I think, we have succeeded boyond our sanguino expectations. "s

In spite of these add other initial drawback, cotton industry made a steady progress. Mr. Wernon Smith, the Indian Secretary of State, in his Budget statement bofore Parliamont, called the attection of the Hoase to a 'cirious' experimont. He apoke of improvements in the ginning of cottof at Eroach effected by Mr. Landon, and of the eubiiishment by the eame geotleman of a Cotion Factory at Broach, as baving been ettended with 'signal' euccess, * the jarns mude there from the exciosively ahort siaple Broach fetching 10 por cent. more than Manchestor yara of the same description; and orders being received sufficient to keep the factory in continuons work for monthe. Mr. Vernon-Smith expressed a wish that Mr. Bright was pregent to hear the ineronsed attention paid to entor cultivation in India in Which ho : Mr. Bright) had tation so much interest Peopio in Eogland at that time bardly drearit of

## PROCEEDINGS OF THE SABHA,

## the district vaccination bill.

$\star$

## No. 40 of 1892.

Sadvajayik Sabia Roomb. Poona, $16 i 4$ Februery, 1802.
To
Tan Becaetart to ter Gurinineyi os
Bomber. Legislativa Department,
BOMBAY.

Sib,
Whe hare been diracted by the Managing Committee of the Pouna Sarrajanit Sal ha to oubrit this "representation for the Cavourathe consideration of His Exoeliency the Guvernor and other membeis of the Legislatire Coancil in regard to the Bill No. 5 of 1891, Wrich proposes to iuake raceinatisa" compulsory in the wholo Presideary at two d'screcion of Government and about which the Seloct Comuitces, arpointed by the Conncil on the 29nd ultimo, has recently sobmitted its reprors.
2. The Conmittee of the Saibe are g!ed io obserre that they are in entire socord vith Government in regard to the general primiple of the Bill. The fact that, though vaceipation is not at present compulsong outride the limito of the town and is!nd of Eoaluy and the City of Esmechif ite protection is sougat by so leas thane 75 per cont of the papulation in un Presidency, is a conclosive profof that its beocfial charucter is properly arpreciatsd by an orer-wheluingly bege majority of the peorde. This being the Goren ment has ancioubiodig tie right to insist that the misurity of the remaining 25 pee cont. man not by their meftigence op indiferenst is prejalion en-
danger the health of the general pablic, small-pox being an admittedly: infections disease,
9. But though the Committee of the Sabba thas approve of the general principle of the Bill, they cannot regard withous apprehension the provision that requires armoto-arm vaccination. The succesi that has attended compalsory vaccination in the town and ivland of Bombay and the City, of Karachi is, in the opinion of the Committee, in a large measare due'to the fact that, the Bombay and Karachi Acts require the ose of animal lymph alone in vaccination, nind, as printed out by the Hon'ble Mr. Javerilat Umigashankar Yajnix io his minute of dissent, appended ta the Select Committee's report, if the present measure is to work amoothly and successfally, it must be modelled on the lines of those older Acts. The Committee believe that the best medical opinion of the present day regards arm-to-arm raccination as decidedly inferior to vaocination by animal lymph. Bat this is neither the only nor the main objection which the Committee would respectfully desire to arge, Arm-to-arm vaccination, as can indeed be easily seen, is attended with very considerable risk, inasmuch if the lymph happen to be taten from the arm of a child, saffering from some disease, there is the danger of the disease being widely propagated. The Committee of the Sabha ary aware that the Solect Cammittee appointed by the Conncil has tried to partially meet this objection by suggesting to provide, "t that Iymph shall not be taken from any child who does not appear to be in good hesltu and free from taint of a disease transmissible by vaccination." Bat this provision will not, it is to be feared, he found of mach ase in practical operation. The qualifications required in a vaccinator cannot natar:ally be of a nature to ensure a correct judgment from him whether a child ia "in good health and free from all taint of a disease transmissible by vaccination." A child might, for instance, have inherited from its parent the germs of syphilis or such other disease, and these germs. might be lying in an ondeveloped state. It is likely that such a child imight at the time of raccinatinn presenv the appearance of one who is $u$ in good health and free frmm taint of i disease transmissible by yaccination." Bot it is clenrly not safe to use fir vaccination purposes the lymph extracted from the arm of such a child: The provision, therefore, auggosted by the Sulect Commitiee, in quite inadequate as a safoe.
gasrl against propagating disense by raccination. The prejodices o: the reopl-are also strong and de-p-rooted in this matar, and deserve to be takea into consideration by Governmeat. The extriction of lymph frua a ctijld's arm is regarded by many as highly objectionabie and raccination if meane of lymik taken from a child of a diferent caste or creed is regarded by them au littie short of poliation. The Committee of the Satha, therefore, pray that the Conncil will be pleased not to enaction artu-horm raccination, which, besidea.being admittelly inferis to raceination by animal lyuph, is, at has born showa alora attended with very considerable jisk aod Opposed to the iustiucte aud projodices of the people. The resourcas of Government are large, and the Cumaitiee think that if proper cire be taken in the matter, the contingancy of animal lymph being " not procarable in any reocination areí withoat dongeroos delay" ought nerer to arise.
4. When the precent Bill passed through the first reading stage His Excelleacy the Governor was plesaad to assare the public that the qu-ation of tho inorease ! expenditare on vaocinating, which would be sec-asisted by chis Bil pasaing into law, thonah a mattor of execatira nowil rouid r-oeire the attentinn of the Select Committue. The Commincee of the Sabhe regres that frum the Select Commiteee's report, it does ad appear that the question was oonsilered by it Ko are direored to point oat that if the Bill be passed in its present Eorm, it wid rirtoally hy a heary badoen the L eal bolies mithoct their consen:- The out of the Vaccination Departiment is at present neerly 3 lakhs of ruperg, out of which $1,07,000$ is contribatal frous the Proviboial Rorouges, and $1,25,000$ is brat by Local anal Manicipal Buards, the remainder coming from the Satiec Stated. Whether this some propivtion of expenditure is to to kapt ap, whee chic Bill passes int, Iarr, is a serious gastion, and is the opinios of the Committoen it sboald axt be left to be deided by Goromareat in its execentive cepa. city, bat should be ornsidered siad daposed of ing the Legislatare itaelt. The arefage cont for eech roceinated child in pleces, where vaciontion is ant at gremat eompubory, appoert to be aboat 5 anoag, white the same is the tora ood isload of B.mbar, where racciantion is esmpalcory, is erer oru:enanl loar aning per chiil At the lowest esifmocta, userefore, if the proseat porparion be kept tut the Local and Hanicipal Buarde wid hare to-incrowse their expeuditure to $\&$ timea

What it is at present, i. e. they will bo required to expend about 5 lacks of rapees where they at present expend 14 lacks. The Committee of the Sabha submit that these bodies might legitimately ask to be consulted before such a heavy burden is imposed upon than. The Committee would point out that such a procedure was adopted in the case of the town and island of Bombay' and the city of Karachi, and they would therefore respectfully arge that a provision to make it incumbent apon Government to obtain the consent of Local and Mranicipal Bodies in regard to increased expenditure, before vaccination is made compulsory within their areas, should be included in the present measure.
5. Section 23 provides that "if is Superintendent of vaccination shall give information in writing to is Magistrate that he has reason to lelieve that any child within s vaccination area, under the age of it years, is an opprotected child and inat he has given notice to the purent or guardian of such child to procure its being vaccinated and that the said notice lias been disregarded, such Magistrate may sumpon anch parent or guardian to appear with the child before him," "l'ke Committee of the Sabha would saggest a slight eddition bere, wiz, that the notice to be given by the Superintendent to the parent or guardian should allow the latter a period of at least twio minthy from the date of the eerving of the notice for getting the child vaccinated.

- 6. The Committee of the Sabha believe that if the Bill be modified on the lines suggested above, its operation will be attended with the same measure of success as in the case of the town and island of Boin-. bay and the city of Karachi, and they therefore earnestly hipe that their suggestiuns will be favourably considered by the Council.

We have the honour to be,
Sir,
Your most obedient servant
G. K. GOKHALE,
S. H. SATHE,

Hon. Socretaries, Poons SarrajaniE Sabha,

## tee famine in the deccan.

Sabtajahtia Sabia Rooms,
Poona, 24ih February 1832.
To
The Smcretary to the Governmeik of Bombay,
BOMBAY.
Bir, - With roference to your letter No, 293, datel 14th January, 1892, we have been directed by the Managing Committee of the Poons Sarrajanik Sabla torrequest you to convey to his Excellency the Goveraor in Conacil the respactful thanks of the Sabha for his assurance that he appreciates the opirit which prompted the last reprecentetion of the Salum in rugard to famino mattors, and that lie wruld bo glad to meceive anch information the sablu may from time to time eupply.
2. When the Chnmittoe of the Eabha made suggestions for additional statistioal information, they mere criare that it was not adpisable to add materially to the labours of the distriot officiela at such a tiveas the prosent. At the game time they wore and still are of op sion that these laboure of the district officers cannot be properly directed aud ecis nomised ualess their attontion is drawn by Gorernment to the points notod in our previous lettor, and that the superior authoritive, whe will hare to guide theig operatione, will not be ine pucition to judg. errect! of the condition of the sereral districse affected, unless they socare periodical reparts from the diatriot olifers concerned in regard to she principal indicie of the pressure of famine, as it increases fion month to mouth. Tbo publication uf such information from tiwe to time is also a menno of giving the publio afairly correct ides of tive real atate of things, an 1 it will, the Coramittee think, be roedily admittod that the beet way to minimize the chances and riski of panies is to keep the peopie well infurmed.
3. With reference to the 2ad pare of goar letter, the Comanittoo of the Eabha acknowlange with gratitode that oa this ocession Govera-
 tive and do all is ite power to allerinte the hard hips of the popastion in the afestel diuictr. H. E. the Governar's toar in the morat affected parts bas iaspired confideace in the rablio mind in regard to
the attitude of Government. The Committee of the Sabha learn from their correspondents that forests have been thrown open fir grnzing, Where, in the opinion of the anthorities, this could conveniently be done. Large Tagai grants have been sanerioned and orders for starting relief-works, where necessary, hava been issued, an 1 carrent prices of staple grains and folder are now pablished in the neekly Gazette. In all these matter3, the Committee of the Satho are glad to find that the acionn of Gorernennt has been in entire accord with the suggestions of the Sabha.
4. The notifieation issaed by Guverament ia the last Government Gazette, recognizing officitlly the prevalence of famine in the whole of the Bijapar District an i' parts of Bolganm and Dharnar, is also emphatically a step in the right direction, and Govarnment is entitled to the thanks of the pablic for thiz hinh and conrageous resnlve to face the situation as it is, without triing to undaly underestimate its magoitude. The Committee are also glad that,' as suggested by them in their previnas representation, a separate Drparment to deal with famine matters has been opened at the Secretariat, aud a special officer placed in oharge of it.
5. There are, however, ong or two points in connecion with these recent orders of Government, about which the Committee of the Ssbba deem it necessary to sabmit - few further suggestions. In regard to the Tagai grants it will be very desirable if the orders issa. ed by Government in this unatter could be noblistied mare widely than throagh the official chanuels. In the recent inquiries male bs the Land Indebteduess Comnission in the Bhimthadi Pnlukn, it wns elicited that the pose ryots, who are inxiont to obtaiu the adrantages for digying deeper existing wells or for constricting new ones, were quite ignorant as to the intentions of Goverament in this macter. If the particular grants sanctioned for each taluks were made more widely known than seems to be the cise at present, thia difficalty would be, to a larga extent, removed. One additional adrantage, which is likely to be secare 1 by libarality in the matter of Tagai alrances in the prosentcrisis, is that the people in the affectel distric:s rill fiad work near their homas, and on their own responsibility, and this wort will agrin be of a charaeter to be a permaneat protection agaiast the pressure of famine bereafter.

These adrantagee danot evidently be ensured by opening ordinary re-lief-worke in the shape of repairt or constraction of publio roods. Another pbint in connection with these. Tagai grants is that though the sumes now senctoned ere very liberal, judged by the ordinary expenditure on thie bead, jet tha ranta of the people is this matter are ouch that any money that Government ean met apart for this parpoes will almnys prove inadequatio. The Committee of the Sabba are, bowever, in a pusition to orace that large capitalists in * Ponna and Sholspur and other places are prepared to anpplement the Tagai granta of Gorernment mith their own private adrances to any amount that Gorernmenc may deem reanona wle, and they will be, moreover, prepared 'to undertake the work of distribu:ion and ensare Governmeal against any duss of its own money admanod through them, in return for : their beng, pernitte to have che help of the revence agency is the work if realizacion. as at present mannged, the mork of adrancing Tagai is left entirely to the cofficials who are not easily accoessible and ere eleo not in a position to jodge mell of the solvency or boneety of the prosons who reok the Tagai maney. In consoquence of thisuncortainty and distanoe necessarily existing betweon the district offi-- cials and the "ryots, the Tagai agency fails to sench the elasses sought to be benefited. The officers if Government natarally hesitate to make alvances to porsoas whose crestit is not of the vary best kind. This diffidence on the part of the ifficials, howevar nutaral ender the chermanances, interfores with the asefulness of this agency. The difficalice ex ceriencel will be removed by the employment of respecto able sonkars, singly or joined together an syndicaten for this purpose. The Committoe of the Bubhe are persuaded chat if enenoraged in this way, privite effurt would bo forthooming to hely Governmens on this octaion.

One thore po:nt in this enamertion that the Committes would reaperfoulty arge is che great desimbility of emating Tagaigranto for the purcorese of fodiec. The S.bhe anderstands that this puint was promed opos the athention or Gorernment by the Collecter of Satara, but that Gove nemeat mas sot plemed to smartion the recommeodation. Tur Comuinc.en, bowever, would sobmit then thoogh the anse of fortdee might aor be covernd 'y the etrict letreer of the oristing ralen, get Whore con be so duabt thet their spinit succioas betp in so mefful a

- direction It is, therefore, hoped that Government will be pleased to recobsider their decision on this point.

6. In addition te the points slrpedy angested; the Conamittee from their experience of the past famiae, are led to think that wieetly statenents shouts bechtained of the namber and value of amail. silver oramants bronght to the banks: or to the mint for meting. This fealure of the shrinkage of private resoutces was as very marked oné in the wnist period of, 1876-78. And though for some time a large portion of gacie ornamente will not find their way to banks or the mint $x_{2}^{\prime}$ but vill'be melted by goldsmisha on private account, still when the pressare, iacreases, this ressares will be found to tail. The suggeetion, if acted upon, wit eable Government to fairly mart the deepening shadows of the sitation.;
7. With refarenoe to the recent notification issued by Government declaring Bijapor and parts of Belgaum and Dharwar to be famine areas, it appoars to the Sablia that the reasons which have Ied Goverament to issue that notification hold equally good in the case of Sangola and Malsiras in the Sholapar district, Man and Khamapar in the satara district, and Bhimthadi and Sirar in the Poona dise. trict. The Conmittee of the Sabha, therafore, request that Governmeat will be plesaed to officially recognize, is in the case of Bijapur ind parts of Belganm and Dharwar, the prevalence of famine in Sairgole, Malsiras, Man, Khanapar, Bhimthadi and Sirure.
8. In a previous letter the Conmittee of the Saban promised to fornish Government from tirio to time with summaris of accoants reogived from their correspondents in the affected districts, And accordingty we beg to aubmit this brief acconnt of the present situatipn of the affected districts, in the hope that it will receive proper attention at the hands of the district officers concerned. While reading this sommary, it will, the Committe request, be remembered that wo are aor only os the threskold of tie danger, that when people are thrown out of emplorment by the end of the wiater season a month beace, the pressure will great'y increase, and that Government will then have to meet a situatioti of ac ordinary grevity.
 $\therefore$ Frome the Poona Dis rict, the Eabha has received accounts from - hrge namber of carresponients from selected villages in all the

Talakas. It appears from these that grain prices lave not been very erionsly, affected in'this district, the resalt being obvionsily due to the increased facilities of railwnty commanication. The price of fodder, however, is not governed by this circomstanoe, and it therefore ranges from 3 to 9 rupoes perhundred sheaven, socording as the failure of crope bas been total or more or lese partial. In the southern part of Purandar on the Necing side ${ }^{2}$ the Sailare of crops wae complete and the prices of fodder are in some rillagen as high as 8 to 10 rupees. The same observation holds good of the Deeli villeges in the Kbed Talaka. Junner and Iodapur fare better this jear. The ides of Goo yernment ta introduce pressed foider will, therefore, have to be largoIf given effect to here, to aroid the threatened loss of an enormous number of cattle. As regards the supply of water, it appeant that oue village, Kouthe, in the Siror Taluka has been alroedy a seriona enffers trom want of drinting water which has to be brought from the river Ghodnodi, from a distance of four miles, in carts. This mat is more or less felt also at Valle in the Parandar Taluka, and the Sabha's correspondent from that place suggests that the existing wello should be dog deeper, and the dried op dams, which are 29 in number in that village, shoold be repaired. The deeper digging of wells is slso suggested in the Khed Taluka. The same difficulty is feit in the Deehi portion of the Jannar Taluke and the same remedy Euggest. ed. In the Bhimthadi Tuluka 57 villages are protected in thia respect by the three rivera, Neers, Ebima, and Karbs. But 73 riilages, not so protected, suffer more or less on this accounti. A tank at Dealgaum is auggested as a convenient work which might be undertaken with adrantage. In the Bhimfladi and Indapar Talakne, the viliages along canal sides are protected, tut in other pisces the digging of rells on grivate account bas siresis commeaced, and the Local Board authorities are hers showing ennsidenabie actirity ia this nerpect. Next to the suppiy of fodder, tho improvement of the sapply af drink. ing tater fur cive men and catile is litely to caose the grealest diftreen, if hot louked alter in tive. From ail she talukee the postponement of the second instajroent of the invd-revenue calloctions has been acgested an an aboolut necessity and presture on this coore at ouch a time is likely to aggrarate the cisis The recent orders if Gorernment eboat free grazing do nat seem to hero been givee cixat
to in parts of Purandar and Khed Talukas, and in the Bhimthadi TaIfka cattle pre being sold for pominal prices and parchased for the. Bombay market. Generally spenking, the condition of the Poona Distries pp to the present is not as lad as it was daring the past fmine, and.except in \& portion of Sirur and Bhipthadi; jo is not apprehended that there will be anj occasiog for atarting relief-rorks sad even in these, relief-works will not be wanted till the commence-. ment of the hot geason.

Smolapor ntatrict.
From the Shalapur District also the Sabhs has receised reports from a considerable number of iidlages in all the talukas. Unlike the Ppons, District, the Sholepur District seems. to be, oping to the diffculty of railwey commanication, guffering in certain places, especially on the Sangola and Malirias side, from an insufficient grain-sapply, in addition to the scarcity of fodder and water. The Sabha's correspon-: dept in Sangola feports that alreads poor people are roaming about in search $q$ work wnd food, and he say that though the insufficiency of grain-supply may not be felt very seriously just at present, very shortIr it rill canse-mpech misery and soffering. As regards the supply of ratar in this district, the cry is almost universal that it is yery detciept, the towns rof Sholapur and Pandharpar aloñe reporting that they tre vell off in this respect. Almost every place seems to have its Fells, and g few bave tanks, but they have very nearly dried np, and nnless steps are taken to deepen the rells, it is difficalt to see bon the exittipg water-sqpply can be improved. The Karmala cor:respondent says that- the wellis and tijulets there cannot be clepended upon much longer and he strongly arges that Governnent relieiworks should take the shape suggested by the Sabha in a previous letier, i.fog they should tend to permanently improve the existing mater-sapply. The Sanand correspondent reports that the present rater-supply hat almost tailed, but he assores the Sabha that if the relief works are directed tomards its fmprovemente the deficiency may yithont much dificulty be repmoved. Asin the cree of water-auplf, \$0, mith xegard to fodder for cettla, the wail ofdistress comes from all pararters. Its price bas already doubled, and in tome places even trebled, whilo in Myalsiras and Sangola no foddet can be had almost Lor sap price Tho condition of Sholapur appears, Ifom the accounts
reveived by the Sabba, to be at this time less threstening timn what it was during the famine of $1876-78$ in respect of graiefupply. The water and fidder distress is, howevet, more serevely felt, and Governmont should direct ite efforts to inprove every avaiabie source of sepply. In the Eanguis and Moisirns Taiakef, present relict moet be given by the remi ssion of the jand revenue and by starting reliel-rorks in the worst eflected districts.

Eijapea disteict.
From the E:japor District, information Las keen receired from correepondents in the Indi, Badami, Blagemadi, Dijapur, anI Bagaitote Talukae. From eil acconata, both official end non-sficial, t:. dietress in this distriat is of.s more acute character than in the rest of the Presijency. And in the opinion of old peopla, who remeniler the jest fanine," notwithstanding the faciities of milmy eommoniontion, the distress this jear is likely to be coon more sererely teit than urs the case 15 yeari ago. Ia the district itself, jodgel by the trat of the dearth of fodder, whicts is in most reeppects a more reliabie test of famine. pressare than any other, the worst distress obnws itre't in the norlherre Lulakes. The fodder which ased to soil for Rs. 2 cannot now be had for lese than Rs. 10 or Re. 12, quantity for qnontiry. Fums ti, rise in price in the northern talukes is aboat five hoindred per cent. In Bagalkote, the on st sosthera taluke, the rise has not been eo considerable, being onig double the old mies. If the suggestion of Gorerament about introdacing pressed hay oun practicilly be carried out, this form of retiof mill be most weloome in this dietrict As regards mitersarply in the thiukse of Bademi and Bagemedi, thepo is great dissress. The canks hove failod, anj drinking water ceanant be bed for men,
 oat, the mod frum wello and tasks. In seronal villager in Badami, pour womeg bave to watctrand mait for hoors togerther by the side of welis to unke their tura, sod hare ofere to go a distance of four or fire milet for letehing water. Ia the Bagemadi Talake eight or the viliagre oc the hanks of the Krishas hare goai sapply, bot the northern and western grions of this talaka are less faroarsbiy nitasel. In the Indi Ta'uis there is at proseat ne serioas difealty falh on this acounat, but apprelensions are entertaiaed ab uot deficieacy obea the but seasou gets in. Ia the Begalkote Taiake ibe vïngen waiemd
by the Ghatprabha and the Krishna are tolerably well off, but the tsnks have failed.everywhere. Altogether next to the sapply of fodder, the convenience of drinsing water mast be chiefly attended to, And the genetal opinion of the district seems to be that sumall relief.works intended to improve tanks and wells already in existence should in all respecta be preferred to road-making or road repairng. As aconsequence of the deficiency of lodder and water sapply, the distressed condition of the ryots' catule is intensified to such an extent that cattle $\mathrm{l}_{\mathrm{y}}$ hundreds are being removed or sold for nominal prices, chief $\mathrm{f}_{9}$ ts baichers. Unlike the other districts, where the postponement of the cullection of the land revenue will be confined to select areas, not exceeding three or four tnlukas at the most. in cachedistrict, the postponement, if not actaul remis ion, will. become necessary óver the Whole area of this district, " Government has already eanctioned hrge amonnts for Tagai advances hore, but even these large amounts will be fuand inadequate to meet the necessities of the popolation, and: it seems neeessary to glopt some nethod of supplenenting them, as guggestel in para. 5 of this representation. Goverument has also, the Committee learn, sanotioned relief-works in the : shape af tro newd roads, but owing to the low rates of wages offered, people refrain from going to the relief-works. Till the pressure becomes intense, it will he, in the opinion of the Committee, desirabie to keep the nen near their homos by'ondertuking smali works for the increase of the mater-suppls.

A better ides oi the state of the distriet will be fermed from the information supplied by a special agent sent by the Sabha to that dia-trict.' This agent risted 22 viliages in the Badami 'Taluke, 13 vilhges in the Indi Taluka, 8 in Bagalkot, and 17 in Bijapoor. The 22 villages in the Badanii Taluka had a papulation of about $15,000 \mathrm{im}$ habitants, nid the number of cattle owned by thein fan about 11,000 . The kharif and rabi crops were in some placesizil, while in tie rest of the calaka they were, on az avarage, less than an anna in the rupee. About 600 people had already left their himes, oni sboat 3,000 heads of cattle had boen eitier dead or romoved and sold outt of tine talaka. The price of grain ras 23 lbs . per rapee, treing aboat tro hundred por cent. higher thas the usual rate of 56 to 64 lbg . at the barrest time. The rainfall, which was na an a rerage for the past three years abont 33
inches, was only 17 inches last gear. The 13 villages of the Indi Talake had a population of about 17,000 inhabitants, owning nearly 15,000 healis of cattlo. The tharif crops were almost nit, while the mbic crops were, on an average, four annss in the rupee. Between two and three hundred people had left their homes, and aboatt 3,200 hand of cattio had been either swept array by death or remored and noid for nominal prices. The ageat reports that in some villages, such is Anjutgi, Cbeekbenaur, Jear, Burdol, Kunchnal, and one or two others, the sapply of food-graine was very deficient at the time of bis visit, while the scarcity of fodider was such as to canse the greatest anxiety and distresa. The 17 villages in the Bijapur Taluta had a population of over $\mathbf{2 3 , 0 0 0}$ persons, owning abnat $\mathbf{1 2 , 0 0 0}$ hoeds of ceatif. The kharil crops had been absolutely nil, while the rabi erups werd on an average half an anna in the rapee.' Abnat 700 pereons had left their homee and shout 9,000 heads of cattle had disoppeared. The aupply of water was generally deficient, one villago named Sarwad be: ing sbsolutely helpless in the matter. The eight villages of the Bagalkote Taluka had a popalation of nearly 18,000 persons, the heais of cattle being aboat 10,000 . Both the Ehar fani rabi erpps had been on an average about an enas in the rupee. The water-supply was on the whole defivent, but no nien had, till the time of our agent's risit, pe!t their homes. Twenty-fire bundred herds of cattle had, however, dissppeared. The price of food-grins fiad risen over tro handred per cenh, whi'e folder wat extremely scare. The inhabitants of a village mame! Samikeri in this taluke infornied our agent that they had some time previously made over to the Lscal Bard Rs 1,100 , rised by private subscriptions for the parpose of constructing a lerge good well. The Board, however, had not prosiled for' tie work in the earrent jear's budget, an I thas the sam wat practically locked up. Gorernment will ses that it is only on act of justice and faimess to the people concerned that the money shoult twe epent at this eritical lime in the wity desired by them. Our gig-nt'd generai impression abont this district in thath 6 far as loadgrive are concernol, there are to all app ournaces harge stocks stored up from the harreits of provious gears. The "uiriship, however, suffered owing to the scascity of fo?ler and matar is extremely great. The proner classat abo saffer from want of work, and very shortig the evil will besome mech greater.

People do not resort to the relief-works by reason of the wages being insufficient for sabsistence purposes for the labourers and their families.

## AHMEDNUQGER DISTRICT.

Froin the Abmedaugger District, the Sabha las received accounts from select riliages in the Nagar, Parner, Sheoganm, Kopergaum, Akola, Sangamner and Rshuri' Talukas, from' which it appears that, as in other districts, so kere, tho ugh less. seriously for the present, people are suffering principally from the scarcity of fodder and water. The price oi fodder in the villages of the Nagar and Kopergatm Talukas has rizen a hondred per cent. A Parner correspondent suggests that if the existing wells be dug deeper and new ones constructed in some places, the cause of anxiety might partiqly be remured. A corre:pondent from Pathardi in the Sheoganm Taluka suggests the great desirability of haring a tanul there in which water mag collect itself from the valleys on the sonthern wide. The account from Rahuri is that wells having alnost everywhera failed, inbabitants of villages $d$-pendent solely upon wells are consequently' suffering great distress in the matter. Alt the correspondents from Nagar express the fear that throgghout the taluka the existing supply of water will fail in the hot seasons and urge the advisability of relief-worls taking the shape of works for water-supply. Correspondents from Parner, Shengaun, Kopergaum, Atsola and, Sangamner ask, the Subhe to press upon the attention of Government the great necessity of throwing open to cattle the reserve blocks of Government forests. Kopergaum and Rahuri also pray for the postponement, if not parial remission, of the land revenue.

## SATARA DISTRICT.

Fom the Satara District, the Sabha has received communications from rillages in the Satara, Khatar, Man," Khanapur, Wai, Tasgaum, Kariad, Koregaum and Pitan talukas. It anpe irs from the accounts that in the eatern talakas the scarcity of forder is very great ; the arerage price has risen by over three hundred pir cent., and in one village, called Sheogaum, in the Khanapar laluka, t'e rise is as high as six hundred per cent. The mater difficulty is also in this disurict as great as in any -other. A cirrespondent from the town of Satara writes that if water-works bo opened in convenient places, the eupply
of waier will considerably be improved. One-hall of the Khatar Taluki appears to be well off in this respect, owing to the tanks, conorycted at the time of the last famino, but the remaining half is seriously suffering. A correspondent from a village near Mayani says that people are leaving their homes owing to the impossibility of pro. curing water. The prayer from Sheogaum is that a well shonld be constructed out of the Local-Funds, as the water-apply of the place has altogether failed. © Karhad and Koregaum, bowever, appear to lave a sufficient supply, and the correspondent from those taluket expresses no anxiety on this soore. The general opinion of the district seems to be that relief-works projectel by Goverament should be directed towarda improving the fupply of water. Only from one taluka, viz., Tsegaum, the prager has eope for the postponement of the kecond instalment of the land rerenue, whils the siate of things ia Vitest and Man is reported to be"so serinins that the necessity of total reurission will lave to do considered in their case without delny.
fus memaining districts.
The information which the Sabha has up to the present reveived from the remaining districts is not of a character to anable the Com. mittee to submit any statement about thens. In is short time, how--ver, we hope to recoive fuller accounts, s' summary of which will then be duly sent to Goverament, -We have, \&c.

Proceedings of the Sabla.
No. 3,692 of 1892.
Revenue. Departmbnt, Bombay Castle, 27 April 1893:
To

> The Honarary Sacemtarizy, Poona Sarvajanik Sablaa.

Gepilemen,
In continuation of my letter No. 1,541, dated the 2nd ulimo, I am directed by His Excellepty the Governor in Copancil to inform you with reference to the statement in your letter No. 45, dated 25th February 1892, that the inhabilants po a village named Sanikeri in the Bagalkole Taluta of the Bijapoor District informed the Agent of the Sabha that they had some cime previously made over to the Talaka Local Board a sum of Rs. 1,100 raised by private subseriptions for the parpose of constructing a large, good well but that the Board had not provided for the work in the ludget for the year 1891-92, that the Collector of Bajapoor to whom the stutement wail sent for enquiry reports as tollows:-

Previous to 1871 the villagers contributed eome money for the repairs of the village well and in 1871-72 the whole of the money supplemented by contribution from public funds was expended, and the well in question repaired. In 1887-88 the Taluks Lotal Board of Bagalkote entered a sam of lupees 1800 in the budget to repair the well which is a step one and to turn it into a draw. well. The villagers objected to the conversion and auggested tiast the step well should remain as it was and that; an additional draw-well should be builto. The Baard refused to comply with this request as it thought that the people were certain ta use the step well in preierence to the draw. well as long as the former remsined, and the Boird therefore reappropriated the money to other works, No contribation was at that time given by the Sanikeri villagers or has been given since the subscription previous to 1871 , which was then oxpended."

> I have the honour to lo,
> Gentlemen, Your most obedient servant, W. DODERET, Special Under-Secretary to Government.

## fGgNa's farewell to mr. A. O. heme.

In response to repeated requests of the Poona Earvajanik Sabha, Mr. A. O. Hume, General Secretary of the Indian National Congress, paid a flying visit to Poona on the 2001march last. Great preparations pere made by the Sabla for his reception and the greatost enthanianm was to be witnessed everywhere in the city on that day. Mr. Hume arited at the Poona station by the $5-30 \mathrm{P}$. м. train and was recoived on the platform by over two hundred prominent gentlemen of the city and the Cautonment, including Sirdar Bahadur Gopalrao Hari Deshmukh, President-elect of the poblic meeting convened to do huor 'to Mr. Hume, Shrimant Sirdar Bala Suheb Raste, Shrimant Sirdar Aba Saheb Puravdare, Rao Bahadur V. M. Bhide, Chairman of the Poona Sarvajanik Sabha, Rao Bahadur Kupoo Swami Moodliar, Rad Bahadoor Narayen Bhai Dandekar, Sbrimant Bhaoo Saheb Natu, Surimant Aba Saheb Nata, Ruo Suheb B. B. Thadnke, R. B. G. G. Gokhale, \&c. There were, also present on the platiorm delegates from Satara, Sholapur, Nasik and other districts of the Decenn, who had come specially to Poons for bidding finewell to Mr. Huma. From the station Mr. Hume wee taken direct to the Llirabag, the place of the putlic reeeting. The recoption wan a most cordial, enthusiastic, aud loving nature. At the FeayMarkot alout 2,000 perocus wore amailing the arrival of Mr. Hume's carriage and directly it came. up, they walked in front of it In procession frow the Markat to the Hirpbag. The public meeting was retaded by over 5,004 persona, all the promineut citizens of Pouns being there ot thay occesion. No written address coald be presentod to. Mr. Wume, for he had agread to come to Fcona on the distinct and express condition that ho would not be askod to recuive any written adirees. After sume students of the Fergusson College and of the Gayan Exmaja had chanted oies of weloome, Rao B. V. M. Et ide proposed ind Bidar Abseabeb geconded that Sirdar Baheduor Gupalrao Iisri Desitulu'l shoald take the cheir, Mr. Deshmakh brictly expresed the thanks of the people of Poose to Mr. Hame fue the troutie to had taken in complying with their wishes and then allind opon Mr. G. K. Gohbele, Hon. Secretary of the Sarraignik Sallise, to iddress Mr. Hawe on telail of all assenbied.

Mr. Gokhaje began by mijig that it was a bigh privibogis

䊀
to be asked to offor wolcome töso eminent beneffactor of India as Mr. Hume, and the welcome that the offered was oflered not only on bohalf of the people of Ponna bet in the name of the entire Deccan. ceprementatives from the natious Districts of . which had thought it their duty to he presant on that occacion. It was impossible for him to adeguately express how deeply grateful they all felt to Mr. Hnme Lar the immense sacrifice of prional comfort and convenience at which he had snatched, in his iodifferent state of health and after acry Eatiguing journoy, a fee hours to gratify their dearly cherished wishes and honour thair city vith that pisit. The speaker, however, wanted to say that no one was aurprised at the tronble Mr. Hume had taken; becarse his conduct in that matter wes only in keeping with that. absolute disregard of solf which had all along been the gaiding pripci-: plo of his life. Mr. Gokhale was a ware that nothing was more ropugoant to Mr. Hume than any demonstration or even an expression of the feelings by which he was regarded by the people of the country ; but he wauld ask him to remomber that when the gratituds of the heart was deep and strong, it gave ai irresistitle impulse to the toagat to speak. And if, thernfore, in what little he intencied to say, he appeared not to sct quite in accordanee vith Mr. Hump's wiehes; he trustad Mr. Hume would excese him on the ground that what he waptod ta say catie straight from the heart and there was no astebout ith Any one, who eqmpsed the Indin' of to-dey fith -hat ghe was sévan or eight yeurs aga, weuld at once reslize the enormous natuve of the oprvices readered by Mr. Hame to the country. All thaf the Indian Nationili Congregs had dono daring the teven yeare of its oxistance was principally Mr, Humo's vork What it was exsectly that tie Congress had achioved it' was unnecesmary for the speaker to state at length, firotly because that question: had been repeatedly deelt with in an infinitely abler and more cloquent manner than any hi conld ever hope to attempt by sacceseive Presidents of past Congresses, and secondly, to spent of that in the prosence of the father of the National Congress - wa something like. holding up a candlo-Jight to the face of the eternal and glorious nource of al light Mr: Gokbale, however, wantel briefy to refer, to four resulta which were principally due to the Congress. Firetly, the Cougreas had welded together all the influencers in the country which Were struggling restered to cremici throughous indin a mase of
common nationality. The infuences bad not been created by the Congress. They lat oume into existence along with British rule in this country and they had been tenderly narsed by the wise and largebearted policy of successive generations of statermen, and notably that of the Marquis of Ripon. But although the influences were already in existence, it was reserved for the Congress to onite them together and prodice a result owing to which the heart of Bombay throbbed to-day in unison with that of Bengal or Madras in matters of national welifare. The Congress had also made pablic opinioo in Indie more enlightened and more influential. The movement had spread far and wide in the land a considerable koowledge of the main political questions, and the result was that public opirion was better informed now than before. It also carried more weight with Gorernment and no more eloquent testimony on the point was required than the fact that Lord Lansginwne himself bad recognized in the Congress the Liberal party of Indie. Then oring to tha Congress movement, the main political questions of the onuntry were edvancing, eome slowly, some papidly, but all of them adrancing towarde a state oi satisfaciory solution. And lastly, the Congrese supplied a remdy machinery to those English politiciane who roalized their vast responsibilities in conneetion with India and. who were anxious to do their duty by the peopte of this country. One peouliarly glorinas circamestance cosnected rith Briish rule, aceording to Mr. Gokhalo, was that thio coantry hid never lacked distinguished, disinterested adrocater of her canse in England. The apeaker montioned the services readered by Edonnd Barke to this conntry a contury ago, and said tirat it was for such eervices that ilis names of Bright and Fawcett and, last but not loast, Bradiangh had become honsebold worde with the people. The four results meationed by the epeaker were the work af the Congreee and as soch they wore principally the wort of Mr. Hame's hands ; and sureig it was aot given to a single individual ta achiere more. Mr. Haine's path, again, hed aot been emooth. He had to work emidst the ropeatod mianderstand ngs of well-meaning frieade and she unserapalones attecks of dotermined enemiok. But as thoogh those dificialties had not been sufficiont, it had pleared Providonce to send bise mewe trying orjesia Ia the apace of the pest two yeare odocsentio sefliction, and aud beary at ell times, bat poeculiariy sad and heary in old age whan the mind of man is rathore eonserrative in its attere.
ments, had rendered his home desolate and his bearth cheerless white lis public life was embittered by the sad and untimely loss of . his best and most eminent co-worker in England and his most belored and trasted collaborator in India Tho difficulties and misfortanes mentioned by the opeaker were, more than sufficient to break the spirit of most men; but Mr. Hume continued, in spite of them all, to walk firmly and unshaken, in the path of duty, chosen by himself. When the people of Indis contemplated all that, naturally their hearts overflowed with feelings of gratitude and admiration and veneration and lovis. For Mr. Hume had enabled India, for the first time in - her history, to breathe and feel like one nation by bringing trgether men of enlightenment and patriotism from the varions parts of the country to work in a common canse. He had tried ta steady their faltering foot-steps and turn their weak accents into firm speech. He had toiled for them in the midst of calumny and contuinely of everj kind, amidst the icked attacks yof arowed enemies and the more wiokod stabs of false friends. For their sake he had donied himself the comforts whioh old age demanded and to their serrice he had devoted his time, his energy, his talente, liis purse, "his all. Above all, he had set them high and glorions exampie as to how they. should labour for the regeneration of their motherland. Such had been Mr. Hume's. iservicen and they were above any memorial or reward.: Rathor their own reward they were, and in themselyes, they gonstituted a memorial pore lasting than brass and more enduring than marble. In oonctnsion, Mr. Gokhale expressed the great regret of all assembled there that Mr. Hume ras not coming out for the next Congress, The melancholy circumstance of Papdit Ajudhyarath's death rendered, it, in the speaker's, opinion, necespary that the next Congress should hare the guidance of Mr. Hume's handHowever, as Mr: Hume's decision had been already finally made in the matter, they hade to bow to it es ment for the best. Mr. Gokhale was also very sorry thatimr. Hume's itay in Poona should hare been so extremty ahort that they had to blend their relcoue and their farewell to osther. Bupt as even in that matter Mr. Hume had already made final arrangements, nothing remained for him. but to wish Mr. Hame and die deughter ic happy voyage and a very happy time in England and to bid him farewell in the words which be
$\rightarrow$ himself had used in the cise of Lord Ripon:-

- Procedings of the Sabla. ..... 31

Faremell, farewell, a nation'u love
A natioa's prayers watch o'er thee :
\$or space nor tine ceap part thee e'er
From hearts, that here adore thee.
Mr. Hume, who was most enthusiastionlly recoived, expressed his gralifation at the very cordial manber in which be mas rooeired and thanked Mr. Gokhale for the very kind manaer in which that geatieman had boen plessed to spoak of him. $\because$ Ho $_{0}$ had listened with great plasure and thankfulmest to Mr, Gokhale'a speeah becance, though the eulogy mas really very extravagant, it was evident that everytbing the had ssid had proceeded from the kindness and affection of his hrart for him (Mr. Hume). Mr. Hume loved Indisa and lored her
 ony assistaioe to them, ho had not spared himself, But he bad not done all that be wat enid to have dono. He who had been at the helm knew how chberfully and well the crew had worked. Ho had traty captains, jieitenants, and sailors aroond bim and it roold be a shame if he allowed themeno give him credit fot the work of others. It was not possibie for him to lave done all the work; the people of the country themselves had done it; he hed menely given theas the initiativo. They should therefore take the . credit to themeelves and persevero. Their falt as's natied man that they were very enthusiastic to-day but forgot ererything on the morron. He arked all present to remember that if they woold thow any grotitude to him, they should atick to their owa cause. He mid that it weo not to save Limaelf any troobie that he wes not ocosing to the next meoting of the Congross, bat the simple, roason why be had made up his mind not to come was, thie. Those "ho were opposed to them seid that the Congroes ons all Mr. Hume, and thact if Mr. Hume mat nut hero, there would be no Congresis," Aftor seren ' Congreseet bo thanght it wat now time that they should show their oppossata and enemies that eren if he (Mr. Hume ) were not hera, there roold bo a Congress all the same. He Led therefori quite made up his mind not to ottend the next Congrese. Ho would beere them to " broe the ahos" themene:vos, and be koew that they rould be able to " boon it" wall soough by thomodion. Ho the isked them all to atrive to be. come betlerefaitimane daj.by day, to beocme more thoroaghly arakto to
the duty they owed to themselves aad to their countrymen. : That was the lesson he would beg every man; to rriet in his heart; they should try to live mere altruistio livels; He would also ask them to try to put aside that feeling of timidity of authority which seemed to him to dominate thair whole conduct. There was no ppe, he said, whom an Englishman despised more than one who bowed down to him* There was no one an Englishman respected more than tho man who was able to stand op to bine and fight him, They should not be afraid to express their own yiews but in doing so they shonld be respectful and courteons. If they told the Governiment "we are very sorty to have to diffat from you but we think these mrrangements of yours are rotter," 'no one could be offonded. They ghould not abuse individuals, but, might legitimatoly attack principles and aystems. Independence of character was, it appeared to him, very much wanting in this coontry, His. Bengali friends were. not able to draw the line between impodence and independance Ho would ask his hearers to distinguish betweer the two. They might. be independent without being aggressite or, offensives. They should carofully consider and then make op their minds as to what they thought was right, Having done that they should atick to that, no matter who liked it or who disliked ito. That was an attitude' which every ruler. would pespect. Sóme people in pther parts had come to him and told bim one thing hod then told quite different story, to , the authoritios. Mr Hume wanted thiem to be honest and true in all thoir dealings. . The Government was notia as bad as many supposed it was , the Government was bed because it was ignorant, and it was the tanle of the people that their Government was so ignorant; fece the people did not honestly epesk out their vierib. How conid the Government hopa to jet at the trith if the peopie did not hooestiy: elate their noeds and their views? Ag for the Indian papera, Mc, Heme thought that "with the exception of "The Tripune "at Latiore. nd. The Hindu" at Madnas, none of the othar uative papors were safficiently well cendacted to oerry much woight with the Corernment They should state, in aspectfol but frm manner; all their grievances to these whon Proridence had placed over them. By no doing they woold be giving fair play to themselves and to the Gevarnment. In conclasion Mr. Hame referred to she difficulty Whick had been experienced in collocting Poona's contribation to-
marde the Congrese wort. . He hoped the people of the Deccen would now be atirred up to mofe activity. He was aware the faylt was not that of the Daccan in general but of those few among them whose duty it mis to collect sabscriplions, and be was afraid most of thoss present there were not even perhaps aware of theis lisbilities. There was such a large crowd prosent there that erauing that it each one gave bat four annas, wore than the whole suar required conid be made np., He then bade them all good-bye and thanked them for their great kindness io receiving him as they did on that occasion.

Mr. K. G. Nata thea proposed a vote of thanks to Mr. Hume ; this was reconded by Mr. Karantikar (from Salrara) and supported by Mr. Bhate (from Belgaum), a Mabomedan pracher from Junnar, and Mr. Nagparkar from Sholapqr. Mr.'Ilume was thea garianded and quites shower of white ecented llowen was throwa upos him. The meetitig terminated with the singing of the National Aachem and with three enthusiastic cheers for Mr. Horme.

The meeting over, Mr. Hame was entertained at an "Eivecing Party" in the Town Hall itself. The building and its spacious cruods were brightly iliominated for the occasion. Froite of rarious kind and gaxoupari were distribucod among the gresta. Mr. Hume was again gariended, and whea he left the building at the clowe of the ontertain geat, be was loadly and onthasiastical:y checrad ; a native band playing " Auid Lang Syne."

- Mr. Humo left for Bombay by the 10 r. M, triain the same cight.

## THE NEW MHOWRA BILL.

If reare niw to gotidmorya, we nay neat goto dry dates and sniar juice ani inch orher arricies. It seema to me as if the Ablazi De: artment, having exhasted its fills, wash, us num to swallow the
 Mandlit on the Mhoura Bill of 188 ?.

- I cannot Imelp, thecef re, viewing with disinvour any repeessire enactment such aselus Eill embodies, which monid fince in the hasods of ith-paid or inferior instraments a porer of harassiag the poor damb ignorunt pr pulation inhabiting the forest tract, of tho country-s poo ulation, who, as inquiry has shown, are drpendent on tho mhow ra for absistence for thaniscirs and their calle, and on its barler for the means of su filging the ocoumonest luman niells. I cannot imrgine that uny inerense of the Abkari fercune vanili condreneate ior the injury thit would be i.gficted on the tery puorest classes by difyriving them of an article of sale or barter, which has bein prozidul for them Ly the bonaty of nature aid which they hate frcely coliectal jroin immemorid time. - Mr. S. D: Siss mon un the eans.

The iujury ehich the measure nor proposed is calcuiatel to

 the Dowibly Ga:ette, 18S?.

There is now no douid tiat the Alkariauloctat, whose natue das for a long tiue been associated ing the problic mind with much of the hamehip and suffering inflicted br the Abdari Depmetment on the peofie is determined this time to
 he has set Lis heart tiess ten geara. Sir Charles Prithard is admittelly a man of great abiiity ; but more rematable perLa!s than his ability aro his encire uefizace of fubitic ofinion
and his inordinate love for the fancied interests of a Depart; ment "which lie justly and natarally regards as specially his own. Every one knowe that Sir Charles was the real parent, of that ill-starred bantling of 1882 , to which Lord Ripon declined to stand as/sponsor, and which lad to close its ejes even before it bad opened theme. The fate of the Mhowra, Bill of 1882, though a matter of great joy and relief to the people in general, must naturally bave greatly grieved iand bumiliated Sir Charles; and it seems he has carefully nursed those feelings. Evidently Sir Charles was! 'biding his time.? Lord Ripon had made it plain to hin' that as long as. $h e$ "was the Viceroy of India, na Mhowra - Bill could have any chance of receiving his assent. The departare of that nobleman might have been a signal for Sir Cbarles to renew his efforte ${ }^{3}$, but fortunately for the people, the retirement of Lord Ripon was almost simultaneous, with a change in the personnel of the Bombay Government, Sir James Fergusson being succeeded in the Governorship by Lord Reay. Lord Reag; though not free from blame in the matter of his Ablari adininistration, was an exceptionally eqlightened and bigb-minded Governor ; and he certainly never regarded it a virtue to carefulty shat himsolf from all noo-oficial light. A Bill, therefore, which was twice discredited by the Government of India, which bore on its very face the priat of oppression and which required for its justification to be looked at solely through the spectacles prepared by the Abkari Department; could have no cbance. with him. With Lord Harris now at the hend of the Administration, the case is different. His Lordship has the reputation of being a straightformard gentleman. But oue seriois mistake that he has made sinze bey took eharge of his bigh office has been tuis ; that be has, by lis couduct and occasion-
aily ty his words, stadionsly deprecated ail non-official assistasce in the matter of a right understanding of the varions administrative problems of the Presidency and that le bes ail plong been attaching too much weight to the viens of Lis Secrepries and o! the 'Departments.' No wonder then that his Lardship, misleí ferhaps by the statements and representations bor Sir Charles Pritchard, declared the other day in the Legisfative Conacil that the evil of the iniicit distillation of Mhowra flowers lad grown to be an intolerable one and that it was abfolute'y necessary to resort to the strong arm of legislation to put it doan! Bat it is not in the Governor anl the Viceror alone that Sir Charles is fortanate. The additional non-oficial members of tue Legisiative Conacil appear also, with one exception, to te meu just after his own beart. That a sal contras: between these sueepish gentlemen and tiose wio majo such a pomerial stand against the Moorira Eal of 1ssz? Aitoge:her the siances are encirely in farour of Sir Charies Prit. clard's maravere fasoing into law and the people of Thana and Kulaba must prepare themseires the best way they can for thia impeaing misfortano:

It wouid te well, before examining the merits of the prestat measore and the groonds on which iss introdaction is sooglt to lo justified, to give bere a brief resume of the trerions effurts of. the Bomlay Gurernmont in this matter. It was stated ir Mr. Ashburner on the occasion of moving the first reading of ile Mbowra Bill of $18 \delta z$ that wien the Alhari Act of $18: 8$ was introduced, it had been representei ty certain officers tiat it mou'l be necessary, for the effectire prerention of illicit uistillation, to regniate and control the transit aqdiraie of Xhowra flumers, from which sfivits were cistilel, a':hoggly ach asep woull renjer pecessary some
interference witt the pheels and other wild tribes who songh a living by collecting tha flowerfo. Dut, as stated by the lated lamented Rao Sahib Mandlik, no papers, containing any suck representations, were placed before ths Legislative Council, when the Abliari-Act of 1878 was phder discussion. We may, therefore, well take it ligt at the time of passing Act No 5 of 1878, it was not contemplated by Government to attempt at some' futare date the " regulation and control of the traftic in Mhowra flowers by legislation.: The first Administration Report of the Ablari Department, as constituted by the Act of is $88, i_{4} e$. the one for the revenue year $1879,-80$, submitted on ״ॅすth March 18S1, also dud not contain one uord about thé illicit distiltation of Mhowra flowere. It should be remembered that this was the only Report of the Department under the new system before the public when the Bill of 1882 was introduced in the Iegishative Courcil, the Reports for $1884-\$ 1$ and 1881-82 not having been written tift the 10th of Juty 1882 and the 24 th of Angust 1883 - respiectively, and the first reading of the Bill of 1852 having taken place on the 21 st; June of that rear: Mr. . Pratt; who wrote the Report for 1879-80, so far from uttering the least complaint aboat any illicit distilation, nctually seems satisfied with the state of things as it then existed. Speating of Thana, Jo says:-u Thanks to the energies of Messrs, Jervoise und Mulock, who hare successively acted as Collector of the district during the last thre jears and by means of whose untiriag efforts and determined wiil, all obstaclet have leen surmouned. Government have had the satisfaction to see the Abkuri syetem of Thana placed on a sound and permanent footing.". (The italics are ours) Again the Report quotes the following extract frou a note by Mr. Mullock, the Collector of Thana, on the umeal
ethet of the opcration, of the Athari Departinent :-"" And - ne ieaving oas one side the [ecuniary part of the question, I - Whet uncntion the inentits rexiting to the people onder the new
 Assistants, Mramiatdars, Patels, Talatis dc. are unaninous in fotheir praises of it, a od having been soine time in the sea coast Talukas, I can corroborate thei: cfinions in every respect One no longer sees the general drunkenvess of former daya and the reason is very clear, it now requites four anoas to get dronk, while three rears ago, it ouly required conema. Eren tha ragats themse!ves, while grumbliug at its being hard on them that they canoot get the cheap liquor they formerly got, wil admit that they are happier wihout it and that the ' ror,' as they call the iofluence of the lignor-venior, is now gone, and so more land is unorgaged to thim in liyuidation of his lills." Of course, Mr. Mullock speaks in the foregoing extract of the coast talukas especiady, but the absence of ull uafacouiable relerence to the inland talukas is remarkible and justifes the nsoumption that weither in the opiuion of the Ablari Commiosioner nor in that of the Coilector of Thata wero things so lad in 1881 in the iumand talukas as to call for special repressire legislation. One more prasiage from the Netort for 1579-80 deserves to be quoted. Spraiing of ,tie general results of the new srstem all orer the Prisilency. Mr. Pratt sags:-"The revegue, on the who'e, has iacreased lair!y in profortion to the incrense in tie ; eneral prositcts co sie country, and in those instances in which it has not inereased, it is beliered that the duereace is due to dess consumption of lizuor, party owing to she bad stusuas ihat have teen of frequeut occurreace, the inereased price of ide lignor and the less encouragewent give to driuking uder the new system. It is diliertd
that the smuggling and consumption of cheaper and untaxed liquor has not acted, at any rate to any appreciable extent, in affecting injuriously the Government revenue." (The italics are ours.) And yet within eight or ten months after the aboves flad been penned, the Mhowra Bill of $1 \& 82$ was sprung upon the public by the Bombay Goverument or rather by its Abkari Department on the ground that the illicit distillation of Mhowra flowers was rife, especially in Thana and Kolaba! It is true that the Reports for 1880-81 and 18S1-82 make mention of the illicit distillation of Mhowra flowers, but their value is discounted by the fact that both of them were written after the passing, through the local Legislatare, of the Bill of 1382, which they expressly and eagerly support and welcome as a proper solution of the problem.

As has been, already observed, the first reading of the Mhowra Bill of 1882 thook place on the 21 st of June 1882. The statement of Objects and Reasons was published on the 25th of May and was of a very meagre character. Honestly enough, however, it pat the revenue consideration in the forefront. "Owing to the prevalence," the public was told, "of the practice of illicit distillation of spirits in portions of the Thana and Kolaba and other Collectorates, causing material loss of Abkari revenue to Government and encouraging lawless conduct on the part of the villagers, and the facilities afforded to suca illicit manafacture by the absence of any provision in the Bombay Abkari Act restricting the collection, import, export, transport, sale and possession of Mhowra flowers which are openly sold and ased for the parpose of illicit distillation, it has been found desirable to amend the said Act by introduoing a section after section 14 of the Act which will compower Goverament to make necessary rules for regulating
and probibiting the trafic in Mhowra flowers and thereby check the illicit distillation of spirits." Bat meagre as this statement was, the speech of Mr. Ashbnrner in moving the first reading was more meagre still. Eircin the 'report of the proceadings publisted in the Bombny Gorernnoric Gazette, it would seem that the bon'ble gentleman did not speak even for five minutes and all that he cared to las before the Legislative Cunncil during that short time was extremely superficial, vague and vosatisfactory. "When the Abkari Act of 1878 was introduced,' Mr. Ashbaruer said at the outsot, "some officers represented that it would be necessiry to regalate and control the transit and tradd of Mhowra Howers from which spirits are distilled, but this wonld render. neceseary some interference with the Bbeels and other wild tribes whose business it was to collect this substance. I-among olhers objected, becanse these people are so ignoraut and rude itat it is very dillicult to make any ruies applicabie to them which are nul liaule to abuse, and it wis hoped, therefore; that we night work the Alkuri Act withunt making uny rales with reference to Mhowra. At any rate, it was determined to give the Act a trial, and it has been tried now fur three gears, but the hope that we could dispense with such rules has not bean realized." Tbis necessary recantacion was followed by the statement, (which, by tile way, the hon'ble gentleman did not care to support by any facts or figures ) that smuggling was widely prevaleat and that abe Police were constantly in oillision with the smagilers. Mr. Asiburner mentioned an affray which bad occurred some time before in Thana and which had resulted in loss of life. The speaker then went on to anticipate the objections, which, in bis opinion were litely to be urged against the Bill. The most important objection, Le thought, would be that Mhowra was an important article of food.. He,
however, wonld meet that objection by siaing that it was n an important article of food. It was no more an article of fod than were black-berries in England or Karinda and otber jngat fraits in this country: "A Bhoel," Mr. Ashburner, went'on tid say, "may eat a bandful of Mhowra, but as to its being da article of food, it is nothing of the kind and if it were so, as ive are permitted to regalnte the trade in spirits which are far more important than the raw material, it wonld be our duty to face the difficulty and take care that ope rules are so frame 1 as not to interfere necessarily with an articla of so mach in portance." It wonld be seen from this sentence that allhongi the hon'ble gentleman had asserted as positively as le conly that Miowra was not an article of fool, he himself donhté, his own statement, and feeling perhaps that the contention o the people might be right, thonght it necessary to give thu assurance that if Mbowra was "an article of so much ime portance," as it was alleged it was, the rules of Governm: would be so framed that thero would ba no interference t its use as food. Mr. Ashburnor concluded witha brief refer, ence to the other amendments of the Abkari Act which he bad proposed, but which had no connection whatever with the Mhowra question. Mr. Ashburner's speech was followed by a discussion in which all the non-official members, nemely Raot Sahib Mandlik, Sir Jamshatji Jijihai, Mr. W. M. Macaulay, Mr. S. D. Sassoon and Rao Bahadur G. H. Deshunki, tsalzo if the President (Sir James Fergusson) tool part: is is indeed. refreshing to read the speeches of the non-oficial members on tuat occasion. With remarbable nnaniugity, they phainis gave Sir James Fergasson and Mr. Asbbnraer to understand that if in the passing of tiat oppressive measure, they in any way expected to hare tho snpport of tue non-aficial element in the Coun
cil, they were donmed to grievous disappointment. The opposition was led abiy and vigorously by the late Rao Sahib Mendit, who went the length of onposing even the first reading of thie Bill. "I regret," said he, "I must oppose the first rasoing of the Bill. It is based entirely on, a wrong principle. Tiue Elphinstone Cole left pare rodily untonched. The last Altri Act orred exceedingly in melecting for taxation an innocent article of food which.joes not inebriate people, and which in its nnfermented atate should never havo bees taxed. We are pow asked to add to that orror. For as regards the Mhowra flowers, I may mention that it is not the Bheels and otaer wild tribes alone that use them, but they are veed as common vegetable food by ochars and chiefly by poorer classes. They are also osed as focider for cattle." The Rao Suhib knew that liqnor was distilled from Whowra, but so was it distilled from the date fruit, from the juice of the engareane. or any other plant, and if the Mbowre fluwer wes to be placed arder the penal law, Gorernment might, the Rao Sahib coninded, with rqual irniriets deal in the sane mannor with . any other arsic'es of foot. Referring to Mr. Ashbaraer's statement that anne could be said to live on karima, Mr. Madlit. wished he could agree with Lim, but anfortonate? it was not possible, hecun-e be actially knew a grent many poor people in Eunkan using lirimede as at important article of food. Mr. A,hburnor, in tie apeech. bad alladol to effraga. Ths Ruo Subib was of opinion that it was the Abkari Act of 1878 and the manaer of morking it that were responsible for the Afraga. After referring briefly to the sery, bourg anhaseosent in the tas on toddy and other trees and to the grievons larishipicficad by it on the people, Mr. Mandlla thos coa-cinded:-" Tae tendecey of the uodoe severity of the Athari lans is to incromet do cuarmption of opiritnose ligoors sed
decrease the consumption of those that ere comparatively harmless. The Government of India have laid down in a despatch to the Secrotary of State for India that when special or heavier assessment is laid on a plantation or lands growing valuable produce-snch as cocoannt and other trees - no oxtra taxation should, as far as possible, be levied on the froite of those trees. Whilst the excise laps mast always be maintained with proper severity, it ought still, 1 think, to be the object of tho Legislature, as far as possible, not to deal severely with ordinary articles of food, and also to restrict the nee of spirithous liquors. If we are now to go to Mhowra, we may dext go to dry dates and sugar juice and such other articles. . It seems to me as if the Abkari Department, haring exhausted its pills, wants us now to swallow the box and for my part I decline to do so. "I shall therefore vote against the first reading." Mr. Mandjik was followed by Sir Jamshetji Jijibiai, who at that early stage of the Bill only wanted to observe that, in his opinion, the principle of the Bill was seme-what opon tot objection and that unless a case of urger necessity was made out, a measure calculated to interfere with ${ }^{\text { }}$ the freedom of trade ought not to be resorted to. The Hon'ble Baronot was sure that Mr. Ashbarner himself was as alive to the importance of preserving the freedom of trade as any one olse: bat he desired to be satisfied of the extrome necossity of the proposed measure before he could see his way to rote in its favour. The speaker was prepared to allow that if a ciear case was made out of flagrant and wide-sprosd violation of the Abkari laws, necessitating absolutely the restriction of the trade of Mhowra flowers, there was to resource but to submit to the necessity. "At the same time,' Sir Jamshetji went on to day, "it is useful for the execative anthorities to consider why the practice of illicit distillation
shoald become so prevalent and rampant; why a bitherto lawuliding people should become lawless, nolwithstanding all the preventive measures and all the Inspectorial establishments instituted by Government, and all the watchfulness of the Alkari farmers themselves, and more than all, the legal and penal sanctions and magisterial terrors of the law that are being daily enforced. There is great reason to fear that the manofacture and sale of spirits is exceedingly over-taxed and that this over-taxation has, moreover, been introduced all too suddenly. The lawlessness and loss of revenue complained of in the Statement of Objects and Reasons are due, I fear, to this inordinate laxation. If any relief from this excessive taxation were afforded to the people, ihere would acarcely be any occasion for the resort to such an extremely coersivo measure and one destructive of free trade, as bas now been brought forward before the Council." The Hon ble Baronet also expressed the opinion that any restriction placed on Mhowra flowers might become the means of esercising much oppression on the ryots. Ho further protested against the vesting of large and general powers in the Execative Government as the Bill proposed and concluded by once more telling Government that unless a clear case of indispensable neces. rity Fus made out, be would not be prepared to interfere with the liberties of the people in the matter. Mr. W. M. Macaulay, who followed with a vigorous speech, also expressed his inability to surport the Bill. "It is no doubt vary desirable," swid be, " that iilicit traffic should be stopped, but I consider De Alhari Act of 1878 is sufficient for that parpose. The confession that the gractice of illicit distiliation is prevalent does nut of isseif prove that the existiog law requires amendment; it rather anggests inefficiency in carrying out the Act." Referring
to a proposal in the Bill of 1882 to make the mere tapping of a toddy-producing tree penal, Mr. Macaulay earnestly asked the Council not to agree to the proposal tecause it was manileetly nafair an 1 was calculated to entail great hardsbip. "The proposal," the Hon'ble gentleman said with much feeling, "does not affect Earopeans nor does it affect the wealthy native; it is the very poor alone who will be sufferers. Fresh roddy is largely consamed by the poor agricultarists $x$ who are not represented here : and it is on their behalf 1 appeal to jou not to carry this amendment." Then turning to tho generol Abkari policy of the Bombay Government, Mr. Macaulay observed :-" Instead of makinio more stringent laws, a relaxation of the laws now in forco is loudly called for: These is no donbt they' are vexatious and oppressive and it mast not be thonght, because the people endare them quietly that they are not oppressive. It seems to me the Abkari Act of 1878 and the Bill now before ns bave been framed with the one object of increasing revenie. It is possible to be over zenlons in that direction and the desire to make a dejartment pay shoold not justify fresh legislation. If the Act be passed in its present form, and the result should be to bring some extrs rupees into the treasury, they will be dearly purchased if they are exiracted from the pockets of the poor royts who are too ignofant to understand the necessity for new regulations snch as the Act contemplates." The speaker gave full credit to Government for good intentions but they had, he submitted, to depend npon their sabordinatea for information, whose reports might be reliable enough, but minht also be biassed, and might only look at the questions concerned from a departmental point of view. He therefore asked Go: vernment to cange an pliaustive inquiry to be made into the whole matier, not from the officials meroly but from:
independent Native gentlemen in the Presidency also, and then, be felt sure, the results of the inquiry would bear out Lis statement that the Abhari laws were ofpressive ond required to te modifed, Mr. Macaulay thus conciuded:-"As regards the application of the Act to Mhowra flowers, all I need say is that such a proposal is un-cailed for. At times, especially in seasons of ecarcity, Mhowra routs are eaten in Guzerath. I should say that it would be quite enongh if the illicit distilling of liqnor from Nhowra flowers were probibited." Mr. S. D. Sassonn, who spoke after Mr. Macaniay, desired at that early stage of the Bill to remain neotral, but be eought iuformation from the mover of the Bill on tie four following points:-First, whather it was not a fact that the Mhowra tree grew extensively in many districts of Guzerath and in the Konkan and that the predatory tribes inhabiting those districts used the Mhowra fluwers and berries as food, and whether they had not actually obtained subsistence from thein during periods of scarcity; secondly, whether the Hon'ble meaber in charge of thie Bill could furnish any statistical information showing to what extent illicit distiiistion had caused lawless conduct on the part of villagers and in what districts that sort of conduct bad prevaiied; thirdly, whether the Act could be eafely exteaded and applied to districts in which, owing to their aildness, very little Earopeansupervieion cuud be esercied; and lastly, whether the ciase of ollicers employed in carrying out the previsions of she Alkari lawa couid be safely entrusted with the powers Which the EIll wruld vest in them without that degree of European supervision which the Puice Administration enpplied. Mr. Sasooun was followed ty Rao Bahadur Gopairao Mari Deshmulb, wo undo a characteristically deat lithe ypeech agairst the Blll abich deserres to bo quoted in estenoo.
"The principal object of the Bill", said the Rao Bahadur, "is to place restriction on the trade in Mbowra flowers, but I am of opinion that the restrictions contemplated will presi very hard on the poor * and wild tribes who are generally engaged in the collection of Mhowra: flowers. These flowers are used as food for men and fodder for cattle and alsa as medicine. Wild tribesBheels, Kolis, Katkaris, Warlis, Dublays, Thakars, \&c.risë at midnight and go to their fields to collect the flowers which fall on the ground; These they sell to Banias for grain or money, keeping a share for themselves. The Banias sell them to those merchants who deal in Mhowra flowers on a large scale, or convey to distilleries and other places. There aro many other materials from which liquor is made, such as dates, gool. rice \&c. If there is no pro vision against the sale of these, I do not see why Mhowra flowers alone should be subjected to restrictions. If illicit manafacture of liquor escapes the vigilance of the Polico and Abkari officers the collection of, flowers also may. The Ablari Act; as it is, presses very hard on the people and no more restrictions shoold, I think, "be placed on the flowers.. I therefore concur with the Hon'ble Rao Sabib Mandlik, " Mr. Ashbarner, replying on the debate, observed that Mr. Mandlik was mistaken in regard to the oxtent to which Mhowra was used as food for either men or cattle. If might ba occasionally eaten as blackberries and bilberries were in England, by the lower classe日, but it was not en 'extensive article of food. ' The Hon'blo gentleman allowed that it might be food for, cattle, but that did not mean that it was food for men; and in regard to cattee too it was very unwholesome for them, ayd was said to produce hlindness. With charactesistic boldness, Mr. Ashburner claimed that the pro. posed Lill was calculated to encourage the use of toddy, be-
cause it would discourage the use of Mhowra ! Referring to the contention that if Government interfered with the free traficio in Mhowra, they nigbt with equal propriety interfere with dates and such other things also, because liquor could be illicitly distilled from the latter too. The Hon'ble gentlemna said that spirits distilled from dates and other substances were already dealt with under the Act of 1878, but that if ever the trade in the raw material was exposed to the same abnse as Mhowra, Government wonld certainly iuterfero with and regulate that also, In regard to the demand for statistics made by Mr. Sassoon, Mr. Ashburner confessed his inatility to produce any statistical information at that meeting, but prom. mised to be prepared with it at the nest meeting of tise Council. Mr. Ashburner was followed by Lis Excellency the President, who spoke in a feeble and rambling manner, and whose epeech concluded the debate on the first reading. His Excellency wanted to point ont at the outset that it was a very excertional course to take a division on the frit reading of a Bill. Bille were read a first time in order that they shoold be circulated and it was very seldom indeed that any Legislative Assembly negatived the introduction of a Bill. Of coarse, His Excellency did not mean thereby that the remarks which the non-official members had thought it their duig to make were without any value, for the Hon'ble members bad stated their grounds of objections very clearly, maturally regarding themselves as representing the public against the undoe exactions - Lieb, in their opinion, would be the result of the proposed legislation. After some difcursise remarks about sound prineiplea of taxation, Sir James Fergosson expressed the opinion that within the elort time be bad been in Iodia, he could eee a decided diminutica is the consumption of spirits, while at the sane tipuean enhanced revenue was raised from the taxation of epirituous liquors, Referring to the reatrictions to be fluced
on the possession of Mhowra flowers, His Excellency observed: - There was certainly entertained by Government, it their prelininary consideration of this measure, an objection that the food of the people and the food of cattle might be diminished; but the best advice Government eould obtain showed there was no renson for such fear. The eattle may browse on the Mhowra fluwers and the people may wes them, if they plecust, for food. But what this Bill will prevent is the colloetion and use of the filwers for illegal pxrposes." After roading these sentences from His Excellency's speech, Sir Charles (then plain. Mr.) Pritchard must certainis have wished that Sir James bad not spoken. For they contain not merely an impossible promise but also en indirect admission that Mhowra flowers are nsed by the people as food for themselves and for cattle 1 And yet our readers will see how within only the sliort time of a week, Sir James, bettor coached up by Sir Charies Prichard's department; shifted ground and changed hiṣ view of the matter entirely. :The President concluded his speech on the first reading with a strange statement, for which he was promptly and deservedly taken to fask by the Goveroment of India. Sir James told the Conncil that the Bill had been submitted to tha Government of India who had examined fis merits with their usual watchfulness and had come To the conclusion that objections such as those nrged by the non-official members were groundless. How this remarkable statement was regarded by the Government of India will be soen later on. $\qquad$
The Bill came up for second reading on the 28th Jupe 1882. and it was clear from the beginning that the Aovernment had made up its mind to force the Bill throngh all its stages. at that one sitting ! Indeed the condact of Government on that occasion was of a very extraordinary nature from Grst to laste At the very beginning; the President tout the unusual poarpe
of taking the Bill out of the charge of Dr. Astburnar and proposing the second reading himself! Sir Jamee began ly admitting that the statement of Objects and Reasons airoady published was not aufficiently precise and that a very preciso statement on the part of the Government was called for in regard to the introduction of the Bill. 'He also admittal that the proposed Bill "altempted io interfere vory closely with the interests of a large number of the yoorer c'asses," but be claimed for Government that Government had not keen gailty of any 'hasty' or ' foolish' action in the matter and that it bad not acted " without having duly considered the measure and without having the fullest warrant for that which they proposed." After making these two admissions, Eir Jamea hastened to disburden himself of an undeserved and ancalledfor attack on Mr. Mandlik. Speating of the opposition offored by the non-official membere at the first reading of the Bill, His Excellency tried to separato from the group and cajole Sir Jamshotji Jijibhai, Mr. Diacaulay and Mr. Sassoon at the expense of the remainiog two members. Sir Jawobetji and Messirs, Macaulay and Sassoon had only bebaved with their 'usual fairness' and had only made a frofor and legitimato demanil, riz., that a full statement of the reasons which had indoced Government to introduce the Bill should to sup: flied to the Council. But Messrs. Mandlik and Deshmulih lad exlibited at the very introduction of the Eill "a Lostility which did not wait to hear folly described tho reasons for intrulacing the measare," and they had attendod the firet reading mecting " prepared to discredit it (the Bill) witbout really being in possession of any statement." Sir James toll the Conncil that mben so mach was said aboat " the bardship to the poomer claces and the interference with their bonest iddustry," be felt sure that there wes ancthe?
side to the picture, and that a large part of the ofposition to the proposed measure proceeded, not from the poorer classes, but from "the owners of property," whose receipts had clearly diminished owing to the great increase of taxation on the tapping of tress! After this unworthy fing ;at Mr. Mandlik, His Excellency proceeded to make 'a very precise statement ' of the reasons for the introduction of the Bill and spoke at great length and, it must be admitted, with considerable cleverness. But Sir James was too heavily handicapped in his cause and his lengthy and 'precise' state. ment therefore did not succeed in bringing over even one non-official member to the Government side, notwithstanding his complimenting Sir Jamshetji and others on their ' usual fairness. ${ }^{2}$ " There is no idea," His Excellency said speaking. of the intentions of Government," of prohibiting the gathering and use of Mhowra flowers; what is proposed is that Government shall have power to regulate, if necessary, the collection and importation of the articles. Nor is it intended that these rules ahould be of general application; it is proposed to apply them within a very limited area; in the first place only within particular districts where the collection of these Mhowra fiowers bas been used entirely for purposes of distillation." After endorsing Mr. Asbbarner's statement that ${ }^{\prime}$ when the Abkari Act of 1878 was under consideration, some officers had suggested the placing of restrictions on the traffie in Mhowra flowers, the President went on to say that there was a great deal of misapprebension as to the extent to which Mhowra. was used as an article of food. "Mhowra is not nsed,". said $\mathrm{he}_{\mathrm{y}}$ : "in any way as an article of food in the districts of Thana and Koluba, in which we propose this Act should be immediately applied. I believe they have a super stition thore that it canses bliadness. But it is certainly the
fact that it is not so used in that district. Among the Bheels in Khandesh, it is occasionally extensively used as an article of food, and I am told that a Bheel would never think of eating Mhowra with flour except when Mhowra is scarce. Tben the Whowra is prepared in a particnlar way with flour and is used. The proft the obtuins from it is not in the slape of bread but in its exchange for other articles by which Le iives, He and his family gather these flowers and exchange them with the Banias for other things wiich be and his family want, and be makes as good a bargain as be can." In support of bis riew, the Governor quotad the following testimony of Major Probsn:--" The chief value of the Mbowra ficwer to the Eheels is its collection, free of furest tax, and its sale or barter to the Danias. The Mhowra flower can hardly be loohed upon as an article of food of daily consumption. The Dheels may be said to use Mhowra as an articie of food only when tbey are hard pressed and then they eat all kinds of roots and uther jungle produce as wcll. So long as a Bbeel can procure flour of any kind, he will only occasionally partate of the Mhowra flower. The flower is dried on a towa, then reduced to flour, made into cakes, and eaten with a little goor or mixed with rico. " Sir James then pointed out what stepe Government bad taken fur controlling and thereby 'developing ' the hirda nut collection indastry and how boneficial, in the eres of Government, were the consequences cf those steps; and he asked the Council to allow the Government to do the same in regard to Mhowre flowers. Ho promised on belaff of Government to use the powers which the froposed lefislation would confer upon it 'with consideration fur the preoplo.' The olject Government Lad in view was to make the possession of Blhomra fluwers, without a license, an ofence in tiae tracts in which clandestine distillation preraiied
and to so regulate the collection that the whole surpfus crop should bex exported outside the districts when the season was orer, the people collecting the flowers under Government permits being paid by Government at a certain rate, Tarning next to the Thana and Kolaba Districts, His Excellency complained that the unrestricted collection and possession of Mhowra flowerrs bad encouraged illicit distillation to a large extent, thereby cauging serious loss of revenue to Government. Sir James then examined. the figures of the Abkari revenne for the caast talakas and the inland talukas of Thana as also the figares of offences against the Abkari Act in the two groups. and endearoured to prove that the revenne in the six inland talukas showed a tendency to fall off because Mhowra flowers were abuadant there, while the revenue in the coast talokes was rising with remarkable rapidity, because there Mhowra Clowers were scarce:- His Excellency then proceeded to claim for the Abkari department the credit of baving weaned away the peoplo of the coast talakas from habits of drunkenness, The two extracts from a report of Mr, Mulock, which bave done duty during the last ten years on at least a dozen occasions, were faithfully quoted and it was triumphantly asked if the Absari Department, which had effected all that, deserved that severe criticism which was always prononnced against it by non-official critics. Sir Jumes nest; briefly mentioned the circunstanees of a cese in which a bead oonstable had been ti!!ed while trying to effect the arrest of soune persons who were engaged in illicit distillation and then briefly dwelling on the steps Government had taken during the last few years to check the spread of drankenness in Thana and Kolaba, His Excellency concladed with the hope that he had sufficiently shown that the measure bad not been introluced by Government withoot jost canse and that the true interests of the reople

Lad nol letn disregarded. Rao Sahib V. N. IT indlil, whe epoleafter Sir Jamos, stated at the outset that the extraordinary course adopted by Government, viz. the Presideat moving the second reading himself, compelled bian to explain at greater lcogth than he should otherwise huve done, bis reasoas for oppusing the measure. He reiterated his conviction that unless the barassing restrictions on rav toddy were relaxed, it was impossible for Goverament to deal efectirely with the evil of illicit distillation. The bistory of Great Britain awd other conntrien elowed, be paid, that if a tax was unnecesearily severe, thero would necesearily be attempta at smaggling. Speaking next of the proposed restrictions on Mhowra, the speaker contended that whatever tho cfficers of Government might say, his own information was that tie flowern and berries of Nhowra furuied no unimportant fart of the food of the poorer classes owing to their deep poverty am! Le quoted in his surfort extracts from E!phinstono's Bistury ef India, Mr. Harrington Bucileg's letter to the Saperinterdent of Rerenue Survey, Guzerath, a letter from the Collecior of Kaira, dated BLet January 1855, to the Revenue Commissiober, N. D. and the Report of the Ialian Famine Commission. Turuing atif to the question of drankenness, Mr. Mandlik quoted the following testimong of the Hon'ble M. Efphinstone, who in a Report to the Gurernor-Generat, dated October 18:9, thas mrote :--6' Draukendesa, the pecoliar viee of the lower orders, is almost onknown in the Maratha cond. try which has thence a decided superiority in mocrals over the old providces. Inarizs from the dircouragement to the saie of spirituons :iquorsund as the rerenne from that sonrce is inrignifinat. We shoaid frubally do weil to probibit it altoge Lher." Mr. Mandail then made a dignified protest against the mander in alich potiva bad been ascrited to bim ly the

Governor in the matier of bis opposition to the Bill. "Speak-" ing for myself," he said, "I feel it to be a most anrious duty" that I have to discharge at this Council ; and I should not descend to make a statement I was not prepared to prove: We have to eail here between the Scylla of Departmental adrocacy and the Charybdis of outside public criticism. And there are occasions when your Exceilency will admit we are entitled to consideration for the difficalties by which. we are surrounded. I do not propose to discuss any newspaper remarks here; but if a great deal of the information now placed before the Council had been placed before it at an earlier date as to the extent and scope of the Bill, the way in which it is to be worked $\xi$ c., there might bave been saved, not, all the remarks which bave fallen from me but a good many of these remarks. His Excellency will perhapa bear with me when 1 say that in the absence of any data, we may take the Statement of Objects and Reasons itself to be the justification of the measure. But I should not like to see the work of discussion rendered idle; for my own part I would sooder have no ciscession at all, if I could not join in an intelligent criticism and examination of every thing that comes befcre us." The Rao Sibeb concluded by once more earnestly appealing to Government to make raw toddy cheaper, so that the poor should not be driven to the evil of the illicit distillation. "In the case of the poorer classes," he observed, "it often means a few annas a month, which, if saved, turn the scale. The richer classes can bear. their own burdens and can make themselves heard: it is the class that cannot, whose case we are now considering." Mr. Ashbarner spoke after Mr. Mandik, but with the exception of one or two etatements, there was notling remarkable in the Hंon'ble gentleman's speech which was for the ' most part a brief repetition of the elaborate statement of $\mathbf{H}$

Excellency the President. To the surprise of many Mr. Ashburner began by taking ' great reproach' to himseif for the meagreness of the published Statement of Objects and Reasons, and for bis neglect to make his remarks on the occation of the first reading of the Bill as full as they ought to here been. Aftor donging that the restrictions on todly bad anything to do with distillation, the Hon'ble gentleman, wilh amazing andacity, contended that the shocking state of demoralization and drankenness, described by Mr. Mandik, was really the resalt of the consumption of the ' so -called barmless ' drink, toddy ! In regard to this statement, all wo, would say bere is that its autrutbfulness has been clearly demonstrated by the Abliari Commission of 1885 , appointed by Lord Reay to enquire into the Absari grierances of the people of the town and -island of Bombay. Mr. Ashburner next proceeded to sonsider whether Mhowra was an article of fooj. $\mathrm{H}_{0}$ was of opinion that it was so in some places, but not so in others. . "Admitting, however," Lie said, " for the sake bf argument, it is a food, are wo to permit such shocking mischiel, and such demoralising resalts as tbose so graplically described by every writer on the sabject, to go on without regulation ! When the resalts ane so disastrons to the peace and morality of the conntry, it is impossifie not to interfere with it, even if it is adimitted to be a food." With regard to the objection that the Bill would interfere with the freedom of trade, tho Hoa'ble genleman contended that when such freedom cassed the demoralization of the people, it was necessary Hat Gurernmest should interfere. Mr. Ashburner conclad. ed by sayigig thut the bill provided for a very mild interference with the raw material of Dilowra, becease it was im. passible aberwise to check drunkennest and at the some timo prorent a serinas loss of revenue from illicit distillation. $\mathbf{M r}_{r_{0}}$

Ashburner was followed by Sir Jamshetji Jijibhai, who, notwithstanding the cajoling remarks of the President, put the case against the Bill so clearly and with such point and force that we cannot resist the temptation of quoting here almost the whole of the Hon'ble Baronet's speecl. After complaining that the statistics placed before the Condeil by the President were incomplete and insufficient, Sir Jamstetji said:-

- We must tear in mind that the Abari Act itelli is aireedy extremely stringent in its provisions. It gives large powere, in the first place, to Abtari officers ind Inspectors and then makes the Magisterial authority the cat'g-paw of those officers and Inspectors. We lave no means of juiging whether this Act with all its stringency, and this army of officers sind Inspectors is wholly in inflicient and bas failed of its purpose. I I can scarcely believe that wholesale and lantess digtillation can be going on so. Fidely as to becomion eril. It is hardy concairable that bold and definnt violation of the law is etalking through the land in broad daylight so as to call for a. special check on free.trade I fear, Goremment have not heen occurately informed with reapect to the extent of the practice. Iam persadad that it is the wail of the farmer of the Abkari revenue that is resounding in this Conacil at the rresent momeat. Ho engages to pay the Government a large sum of money and to work - Sudder Distillery for is whole district. His interest it is to make tho best of the largain he has entered into. He makes loud and incessant complaints to the Collector. The Coilector knows the furmer has bid a large amoont and he is arged by the - Abkari Departiment to support and assist him to the utmost, for he is the backbone of the Abkari reverge. The former keeps ap a body of Abkari preventives and doteotives of his own and is pecasionally assisted, when there is need, with - pose of Police by the Collector. These men ecoor turough the villages, and backed as they are by the strong arm of Gorerament, sre quite well able to prevent or bring to punishmeat any practioes of illicit distillation they meet rith.' These practices, from the very na. ture of the case, are so dangeroas and so fraloasily watcoed both by Goverament offieers and the Ablari darmer's mymmidone slatt they
cannot be going on extensively with ang degree of impunity, or if they are, there must be evidence, statisties of caseg, punishments, failures to convict for special reagma.' None, however, are produced. Fagne elatements and assertions, by whatever high authority, cannot justify a wersure like this in the absence of Birect evidence' and your Excellency must aduit that the messure cannot be justified by a litlie evidence or by iegolated cases, but requires a mass of the best and mast conviacing proofs. Llicit distillation and the like are aell known to the villagers to be offences punishable by law, and rendering property saired liable to confiacation. Those practices. therefore, must decesanrily be carriel on wilh great caution and secrucr, ad muat, as a natural conseqnence, be fur from a frequent nccurrence. Fint, in the eye of the farmer, even a single insianoe of such practice beroturs praguified into the procursor of his ruin; and so he makics unceasing complain's sud his appeals for protection are constantig dinued into the enre of the Collector nud the Abknii ufticers. These complaints and thrse arpeals are in duo course communiented to Government. Thus it io that the information which reaches Gorernment is tainted by exaggeration at the verg source. There is no falling. off, I beliove, ia the sums rendieg at the annual auctions. That is the only way in - hich loss to the rerenue could occur or show itself. The farmer, howover, feare a liss or lat fears that he mey not make su nuych as be hoped to do, and therofore nasitumins hia cry, as farmers will a!ways do, thast lie ia going to be ruined, that the all-powerful sarkar storuld come to bis help, and it is to his rescue that this Councii is asked to rua.
 free trade: by taking array foom the mouths of a poor and famished rave of peopie on article that serres then and their cottle for casual if not regular food; sull ly arniag the Abkai offivers, aiready too powerful, with atill more power mhich wall hurd the direct effect of 'ppressing and harassing every man, woman and cliid of the vary furast dases of the people. I regret rery much indeed that I cannot see auy justicication olaterer fur this manare."

Mr. Macaular, who spoke next, thongit that in spite of the athempt made by His Excellency to eulighten the Couscil, no suncient case had beva mado out fur the proposed legisbutiva. IJo Bill inerfered twa wasijerable extect with trade
and its effect nust necessarily be injurious when the large quantitites that were exported to France had to be collected under the supervision of Government officers. The trade was a new one but it was a growiag one. After quoting statistics of export in support of his statement, Mr. Macanlay said :-" Now most of that money has found its may, no doubt, into the hands of the people who collected the flowers, and the lons which they will feel will be severe one, as they are a class of people who have very small incomes, in some cases not exceeding an anna or an anna and a half day. The poople to whom the Act will apply ere very igoorant, the most ignorant probably of the whole popalation of the country: It is therefore all the more necessary that restrictive jegislation of this sort should not be carried out. They do not understand the cause of the new laws introduced and it will only drive them to commit breaches of the laws they do not understand." In regard to illicit distillation, Mr. Macaulay agreed with Rao Saheb Mandlik that that was to be accounted for, to some oxtent at least, by the increase in the cost of intoxicating drink, The increase in the duty on toddy bad beep something like 30 or 40 fold, and that of itself had put the duty-paid spirit beyond the rach of a great- many-who had formerly indulged in it and regarded it as one of their regalar articles of food. In conclusion, Mr. Macaulay agreed with Sir Jansbetji that the introduction of the Bill had been due, to some extent at jeast, to the cry of the Abkari farmers, and that being so, he asked the Conncil to be very cioary in passing the mensure. Mr. Macaulay was followed by Rao Bahadar Gopal Rao Hari Deshmnkh, who agreed with Sir Jamshetiji that the existing arrangements were sufficient to prevent whaterer there was of illiait distillation. The liquor-farmers, bo argued, invariably employed a large number of detectioss to find out illicit manu-
pacture of liquor and they had behind thera the oupport of the Police and the Magistrates. That ought to prerent, the rpeakor said, the nectesily of imposing restrictions on the freadom of a flourishing trade which wat rery largely enrrial on between
 per handred-weight, or 9 annas per manad, and the traje was - growing one, and it wan unwise, Mr. Deshmukb thought, in interfere with it. According to Hinda Law, the iree nse of all forent produce was a right of the poople from times immemo: rial and the Rao Buhadur asked Governmeat to be very cantioss in their Interference with such a right. Nr. Rarenseroit, whe spole next, put the side of Government briely and cleare ly before the Council, certinily more clearig tima bad bera dose oilbar by the Prenident or by Mr. Ashbrrner. Ine Hon'lle gentl-mac copteojed that it lad been shown- very: clearig by the Governor in his statesient that there was no reason for any one to fear that the proposed Act wouid, in any wiy, bo ased to oppress the foople. In Gazorath, whore peopitate Mhowra flowers in the hot sonnon, the regulations wore aut required and would not be pressed. In Kbandest, where ale the fowore were eaton, the regslations for their collection and selo which would to ordered, so far from proving injarions to the Bbeela and eultivators, woold confer on them a benelt. And it was ooly in Thana and Koisba, where. drankenness was rory rife and where illicit discitation was carried pa $w a$ very largo extont that Government iatonded to put in fories stringeat reguintions. Mr. Ravenserofts in canclaciva, asted Inonorable membert to remetaber that they wore bound to gire Goverameat eredit for endenouring to frame roles in anch a way that not ouly would the lay not be violated, but the beetitit of the general pullio woald also be secared. Mr, Saseopan begaa ty sesaring the Gorernor that it wat with
no light heart that he felt constrained to oppose a measure proposed to the Council by the Execntive after due consideration. The tendency of all modern legislation was to remove all restrictions on trade and to interfere as little as possible with that free agency which was brought into play by the daily striggles of life; and he conld not, therefore, help viewing with "disfavour a repressive enactntent: like the one proposed, which would place in the hands of ill-paid or inforior instruments; a power of harassing the poor domb ignorant population inhabiting the forest tracts of the country, a popalation, who, in Mr'. Sassoon's opinion, were dependent on the Mhowra for subsistence for themselves and their cattle and on its barter for the means of supplfing the commonest human needs. "I canhot imagine, " Mr. Sassoon went on to say, " that any increase of the Abkari revenue would compensate for the injary that wonld be inflicted on the very poorest classes* by depriving them of an articie of sale or barter which has been proviled for shem by the bounty of nature and which they have froely collected from immemorial time. I say tuat any such increase of revenice would be as a drop in the ocean of Inctian finance and on purely fiscal gronnds, the cost of collecting it would not be "worth the candle.!" The President, in replying on the debate, made a short and yery peerish speech which showed that His Excellency was clearly out of temper, He began by accusing Sir Jamphetji of coning to the Conncil with a mind already made up to oppose the Bill, and therefore it was, Sir James said, that the Hon'ble Baronot had complained of the insufficieney of slatistical information. His Excellency regretted that the non-officinl members were ؛with one consent ${ }^{x}$ opposing a Bill, the need for which bad heon proved in an ealmost - nananwerahlo; manner,- Sir

James then repeated his opinion that the proposed measure, of far from doing any harm to trade, would actually encourage and devolop it; he also repeated that the oxistiug provisions - of the law and the powers whici they conferred on the Exeontive were iaadequate to eope with the evil of illicit distillaLion. After resenting the suggestion that the cry of the ligoor-farmers was at the botlom of the proposed legissation as an ' unworthy imputation,' His Excellency thus concinded:"Although I have quoted facts and figures so extonsively, I ann told by Hon'ble members that no reasons bave been given. Well, 1 anppose we bave wasted our breath and I must asy it is most disappointing to me that after the points, upon which doubt was thrown by the opponents of the Bill, have boon established, wo are challengod with boing in want of facts." The division on the second reading then. took place with the resalt that the seren official members,_riz, the Governor, the Commander-id-Chief, Mr. Ashburner, Mr. Ravenscroft, the ecting Adrocato-Geaeral, General.Merriman and Mr. Gonne, voted in favour of the motion and the five non-official membera, viz, Sir Jamshetji Jijilhai, Mr. S. D. Sassoon, Rao Sahadar G. H. Deshmukh, Hao Subeb V. N. Mandilk and Mr. Macanlay voted against it. The Bill being thas read a second time, a fer minor amendments were considered, after which His Exceilency the Presideat suid :-"It is no use fighting the battle over again and I therefore propose to surpend the slanding orders that the Bill may be road a third times" The atanding ardere boing thus ouspended, the Bill wase read a third time and passed at the oame aitting!

Bat thoagh the Bill was thas rasked through the local Legisiatare ia a manoer, enasually bigh-handed, it coul! not become her vaien it had receired the asent of the Fieeroy,
and in this mattor the Goverament of Bombay soon found that they, had been conating withont the host. Sir James Fergasson and his colleagnes must bave expect. ed that the Viceroy would give lis assent as a matter of course, but there they were doomed to the bittorest disappointment and bumiliation. : Mean while the agitation against the Bill did not cease with the measure passing throngh the local Legishature. The Poona Sarvajanika Sabla sabmitted a lengthy representation to the Government of India, critieizing severoly the condue t of the Bombay Government, who with their official majority had rashad the Bill through the local Legislatura in the face of the apited protest of the non-official members, and praying. that the Viegroy shond bo pleasid to withhold his assent from a mensure so oppressive in its ature and passed in the teeth of so much opposition, As this letter of the Sablin has not been before published, wo give it here in extenso, hoping that our readers will find it interesting reading, especially as it, shows what was then thonght of the conduct of the Bombay Government by a boily like the Poona Sarrajanika Sabha :-

## D, FITZPATRICK ESQUIRE,

Secretary to the Government of Indin. - Legislative Departmeat, Biaman
sir,
Wo have bsen directed by the Mansging Committee of the Poons Surrajanir Sebla to submit the fillomiag represeniation on the sabject of Bid No. 8 ol $188 z^{\prime}$ to amend thi Abkari Act $\bar{F}$ of 187* whict was preved hat :motia io the Local Logiblature by the
rotes of an official majority against the ananimous protest of the nonneficial Europernand Native representatives in Council and by the suspeasion of standing orders which leit no opportanity to the pestle ouncerned to matie their riews knowa to Government Aa the Bill now awaits the eanction of II. E. The Viceroy and GovemotGanerai, we request that for the reaspus atated below, H. E. will be pleased to withholl his asaction and reto the Bill in its present Inm, and singest a further inquiry into the entire working of the Abtari luws in this Presidency cliefly in mopeor of their effects on the noural condition of the people brifore fresh legislation is attempted in this direction.
2. Our irst objectiou to the measura lins reference to the question of procedure. The draft of the B ll nas publirhed firct on 8'th May accoupanied by astat urent of oljects and ronsons, which,
 was rery mengreand $n$ it to the puint. This circumstance necessitntod the oubstitution of new Statement of Otjecte and Reasous. materidif differing from the origiasl, which was published on the 23 rd June after the first reading was over, and on the ere of the secoad resding. when the conduct oi the mensure was nex: pectedily taken up by the President ia his own hand. This e'ep was so anusual that it a ru'd aqt but liare influenocd the official rotes, and it certsinly interfered rith the nearral attitude of arbiter botwean the
 in bound ta preserrs. This racillation of purpose suggesta that the Executive authorities were ant quite clear in their owa minds in re-pect of the recessity of logisiation On comparing the two Staments of Objeces and Rewons, it will be seen, hat while the first made no. mantiun of Gujarath and the districts abore the Ghats (Khauleeh), but referred onig to the Knakan, this extension to the nom-Koniau territorics found a prominent piace in the be draft. In a einilar mannet no nferince was made in the first draft to the demoralization of the prenile crusequent on the practice of ilicitit distillation, while the greatest prowiaence was giren to this feature in the eecund draft. The Hon'ble morer in his apening speech denid the fact that Blucmra was neel as a fiod for men and catt'e by the widd Bhis and Kulees \& . The President at thensecond realing sduitted this poritiva for Khandish aud Gazerath. Nio ronder that when the Ir,
ocutive members of Council were not quite clear in their own minds in respect of these salient points, the non-official representatives who hnd nothing before trem but the rejected Statement of Objects and Reasons, were placed upon a wrong scent altogether, and were not prepared to meet the official justification arged at the second reading. The euggestions thronn out ashing for more mecurate information were negatived summarily no further deliberation was made impossible by the haste with which, potwithstanding the change of front adoptell by the official supporters of the measure, the second and third readings were both finished at.the same sitting. a No argent necessity beyond a mere impatience to fight the hattle over again in debate was shown for dispensing with the usuil gaaran'ess of deliberation. In this way, a Bill which in its actual operation affects the food and comfort of one million of aboriginal tibes and races was paseed into law in less than a fortnight, though the non-official members, European and native, opposed it nnanimously and public opinion outside was equally pronounced. Lastly, the Bill mas passed as a measure applicable to the whole Presidency, though by the admission of the President himself there was no justification for its extengivn to Khandesh and Guzerath, and the word of Government wns pledged that no immediate measures would be takea to apply it to thone districts. Una linited discretion in resard to time and placa has been vested in Goo vernment which has the power of making rules and all attempis by the non-official members to limit the operation of these rules in the act itself were denounced as showing want of confidence in the good' intentions of Government.
3. Fur all thesa ressoas, ive submit that; quite apart from the nherent merits or faults of the new lav, thie procedure followed in its enactment fras vitiated in most material points, and wns so opposed to the spirit which should guile legisiative deliberations, that we trust H. E. will not fail by his ve:o to emphagise his oondemnativn of such sumbary and ill-regulated proipitancy is matters of such grave importance.
4. With regard to the merits of the measure, it is alleged in the Statement of Objects and Reasons of the Bill that Mhowra flowers are - openly sold and ased for the parpose of illicit distillation ithereby canging lamlessuess and demoralization among the peopla and loss of
revenue to Government, a state of thing agninat which ander the preo sent lew Gorernment are unable to prorido a remedy. The B:ll, therefure, (among other amendments with which this representation does not deal) pmposes (1) to inclaje Mhowra fowers in the list of intoxicating drugs, the posession and trafic in which is probibited, oxecht ander lioense, by the Alkari law ; (2) to give power to the Local Government to make rules to reguiate or prohibit the coilection, import, export, lransport, sale and pessossion of Mhown flowers within any defined local ares or place; and ( $(5)$ to punish any breach of the rales so mado with a fine not erceeding rupees 500 or rith imprisomment which may extead to three monthe, or with boids.
5. The five nonoofficial members of the Coancil, who were present, objected to this part of the Bill on the gronnde that besides being ased for distillation of liy uor (1) Mhowr fiowars form an important artide of the fond of the poorer. classes of the people as well as of catlle; (?) that these Clowers are largoly nsed as medicine in the Districts where they gmw. by astive women daring their convalescence alkr delivery ; (3) tiat oil is prossed from tho Nhowra berry for durestie use by the said poor people; (4) and that the prorisions of the Bill are calcuiteted to incorfere with the freedom and development of the remaneratire export trade which has recently aprung up in dried Mhowra flowers, nearly foar lecs of rupees worth baring been exportes to fomign parta during the last yoar. They therolone deprecated any interference on the part of Goverament with the free collection, use and sale of these fowers which the bounty of nature provides for the poorer portion of the popolation and pointed out that the Abkari in w which was alrealy very serere and atringent, ought, id affcient', worked. to enabie the Execrotive officers of Gioverraneut to dotect and put a stop to any illicit disTination froct these flowers. Two of these members saggested in quiry througb independout agancy, and called for procise information or obstistias as to the extart of the allegod ill.cit distillation frome Shown 1 wrert and of the lawlese condact complaised of.
6. The oficial expianation ateted that in the inland part of the Thane District, 678 ofosces agniait the Abkarilaw wers hopght to trind daring une your (though the aumber of convictiong whe mod

tective polices will quodef: © bight decreses in the Abtari rovenuo in the esid inkand part of Tanhe ras also showa, thongh this deciearet thest thore than imade ap by hat enormood increase in the remain. ing parts of the inme district:
7. This orplanation was extromely meagre and unsatisfictory to jastify the grant of the enormoas general powera whicb the Looal Gow vernment wished to take in erder to suppress the illicit diatillation alleged to be earried on in $a$ amall and isolated part of one of the eighteen districts of the Presidency. This was pointed ont by the non-official metabers, who contended that thero wera no facte belore the Cooncil sofficiently clear and etrong to show any necossity of frosh powers to suppress the alleged ilicieit distillation, that tuch powtrs, if grantod, would directly interfere with a's. Jeprive the poot popalation such sí Bhills, Kolis, Katkaviea, Thakurs and otheris, nuabering pearly a million bf one of the cheapest articlet of their food *hich the tree collection of the Mhowre flowets at pretent sapplied them in the districtes where those flowen grow in wild profacion buch at Khandesh, the Panch-Matalis, Kaing, Bromel, Surat, Tanna and Kolaba. And it wis further contended that it large number of detec. tive police which the formers sod $\Delta b l a r i$ Oficers at present eminfoy, and which are epread over the conntry wit kind of networt, ought to be andas a matter of lact tliready are, thble to detect and bring to punishment cisess of breaches of the lat. It was however phinii from the attitude of Government members that the meiaure was a foregone eonclasion ; and it was passed hithont due consideration of the ofjecetions raised, in atated kbove in pari 2.

The foregoing sammary of the discussion pro and con which took place in the Local Legisative Conncil will show that Government thought it proper to assume powers io place an embargo and take virtual postession of the entire proance of the Mhovis llowers of the whole Preidenct, although ili if an article of food and comfort and medicine of nearly a million of the poor classes of the population who have enjoged the right of its free coliection from time immemorisi, and an this dond on the plea that illicit ditillitiono from the said Mhown fluwers previib in it aman partion of onf one of the eightera districte yielding about 1.36 th pair of the tuitive Abhari revence of the Presidency. The Comimitet
secordingly beg to urge uron the notice of the Ficeroy and GovernorGeaeral to creal signaficance of the fresh legislation. Powera to make rules 4 to regulate aud prohibit the collection, import, export, inasponst, wio and possession of Mhuria llowers," mean practically power: givea to the Ablari Department to monopolise tive entire produce of the Mhowre firwern growing in all parto of this Presidency. Indeed the pablicane not keff morely to infer thia from the norking of the Bill. The President of the Conacil cited the cane of Hirds or Myrabullane which grow wild in the foreate and which, since their collectinn ta. begun to be regulated by the forest officers, have beeome the abserlute priperty of and a new souroe of revence to Goverameat. The poor ciasses of people who formerly collected and sold this Hirde for its full work in the market being sow left to eollect is for the Forest Department only, and be content with a pittance acaroci.g covering ordinary wagee of bebour. The Bill now awating the Vicerog's assent, il eanctioned, will nut only similoraly deprive the poor people of is rigit which they lave enjoyed from time immenorial of ouliecting and appropriating the Mhowra. Glueare free of any rexes or licenbe fees, hat will at the came tiwe deprive nearly a millium of therr of a cheap supply of lood during a part of the year whea they are poculiar'y hand pressed for it. It is trae that the Prosiednt of the Cunucilatated that no tex is iutended to be levied on the Mbown flowers, eifd the Sabbe do not quesian the verbal corroctness of the state. ment ; bat what is objected to is that under the asaal prueest of the powern to "regulato" and "pruhibit" the collection and poenession of that artiole, the greet bulk of wie aillion of pour popaiation residing in the Mionme producing Distncts of Kbandesh, Guzerath and parts of N. Koaken will be gradually deprived of the right of free coilection and appropriation of an article of their diet Ehich the bounty of natare hase atplird them at their doons. and the lion's ehare of the proftes of those poor peoplo sill be effectunily ewept into the Government tresory, nomially an rart of Abkari rerenue, but in reality as the fraits of a moot unjantifable and erael monopoly. This would indeed is exant socordsace with the polieg pursoed by Gorernment -ficera be ia the frreat Dipartment, who in some pleces bave mosopolized evea Lie recial trate in fre-moot and charcone.

Tbe afficial jasification of this messare of whoiesele orprofrie-
tion of the Mhowrs flowers is that one of the ases made of them is illicit distillation of intoxicating liquor, which is alleged to have been detected in a small portion of pone of the eighteen districts of the Presidency resulting in a small diminution of Abkari revenne and demoralization of the people from over-drinking within that area. Granting that these allegations are well founded, the magnitude of the evil with which the new mensure is fraught is so great compared with the insignificanee of the expected gain to Abkari revenue in an isolated locality that the "Objects and Reasons," given on behalf of the Abkari Department carry their condemnation along with them. But the Sabbs take tie liberty to question the atsolute correctness, of what is brought formard as "facts. Seeing that the Abkari zevenue is farmed out to a single contractor for the whole district, it is not practicahle to find out correctly what portion of anchrevenue is due to particuiar parts of, the ${ }^{\circ}$ District ; bat even if the Abkari officers havea way of finding this. out, it might be more correct to attribate the fall to the reduction of the number of retail liquor shops in this same district, for which in the same breath the Abkari Department has claimed eredit. If a people accustomed to drink cheap toddy or beer find themselves auddenly deprived of it, breaches of the peace may be reasonably expected to occur, bot one case of outrage and bloodshed cited as having taten place in a remote comer of the Presidency is hardly a sufficient justification to infict a severe punishment apon a whole population.
$\therefore$.. The alleged significance of the facts and figares quoted by the Abkari : Department, mengre and nasatisfactory as they were; was called in question, and some of the non-official members asked for apecial inquiry through independent agencr. to obtain correct statistica of the extent of illicit distilistion and lawlessness complained of. But this most reasonable and constitational demand wae met by recriminations sucinss want of confidence in the Execntive and opposition frocn interested motives of property holders. Nothing can be more, unjust than such a reprosch. There was no time allowed for independent representations from the ontside public.. Of the nonofficial members, who opposed the Bill, one was a Europena and another a Jew Merohart, two were Bralmins who could have no poasible interest in opposing a measure intended to cleck drunkenness, and the fifth was is larsi Baronek, who with rare ccarage etateld that

Ube measure wras forced on Govornment by the interested adrocsecy of: Ablar farmers, who are, it inust be remembered, chiefly Parsees.: Prisate owners of Mhowre trees are really sot likely to be the suffer-. . orn. It is the poor Bhils, Folis and Katkaris who foed themcolven and their oattle on the Mbowra flowers foar montha in the year when other resourcen fail, whose interests were adrocnted by the non-official upposition. So far from deriving any reranue from licit or illicit nse of Mhowra flowers, examples could be 'quoted: of private landlorde foregoing suoh income or profit and seneroanly? granting the applicationg of their poor ryote to be left andistarbed in; the enjoyment of their immemorial right of freely colleating and ap- : propriating these flowers, an example of generosity on the part of privale landlordism whioh Government might rell imitate instoad of ' denying ita existence.

Lastly, it must be borne in mind that the wholo question tornis upon the decision of this ningle view whether ana fact there is room for much illicit distillation against which the Abkari officers cari.": pot protect themselves by the provisions of Act V of 1878.' The offioisl apology does not touch this point. It is notorious that:Mhowre flowers cannot be distilled withous filling the whole neighbourhood with a most offensive swell. Secret illicit distillation therolore is not poasiblo with sueh an army of Inspectors and spies as the: Government aud the farmers have at their comuand. The most: ordinary use of Mhowre is not for distillation bat as an article of trade, and ul food for men and cattle and for oil and modicinal purposes, All these neses represent a vast iaterest which doservee orary oare which Goverament onn bestow apon its proserration from in. terference for the jacreafe of revenue. Abkari rerennes froct Mhown flowent hare increced verg largely under the oporation of Act $\mathbf{\nabla}$ of 1878, and this fact of iteelf contraticte the assumption on which fresu legislation is juatified:

As regenls the moral sepecte of the question, Government took great erodit for an alleged inersese of sobriety in the Thana _ Districi: The Comanitues beg to observe that the general impressioa is opposed to chis beiwt. The une of uddy, which is its aneot state is harmiome. hat indeed been diminished but it hat only made room for mose moxions drinks. The inarease of druukrinese in Pocic mise idmittal
by the Honorahele Mhi, Adiburnar, The number of petail liquor hhopa han of lute yeara increased and every erening that neighbourhood of thess ahapa prosegts $\%$ scepp, the reverse of creditablif ta the Depart mant of publicedministration ander whose patronago they claim to continqe aqd fourish,

The Sabha, thenofora, takes tha opportunity of asking for a apacin Dommission of inquiry inta the moral effecta of the working of the Abtari Departmeat of this Presidency, campased of members an. connected vith the Reyenne Department gsgigted by non-official palive gentlepea. The Sabba feela confident that inch an inquiry Fill estobliah the fact that the Abkari Department is chiefly anararable for the increased drunkenness and dempralization of the lower classen gad that the ipcreased yerpane is purchased at toq great a sacrifice of athen and more important interests. . The Sabha, thereforg, parpestly hopes that H. E, the Wigepoy and Gorernor-General wilt
(1) Withhald his assent from thp Bombay Abkari Act Amende mant bill puou pefore him ; and.
(If) Qrdor special Commission of Inqury to investigate the nesensity of fresh legislation and the general working of the Bombar Abtani Department vith epecial relerenoa to ite monal effectia pa the candition of the peaple, esmposed of peqbari ynonpueated with the Renende Department, half of them being pative gontieqen of experiepee. and independent character.

8. H, SATGE,
S, H. CBIPLONKAR,
Secretaries, P. S. Sabba4;

It was the blessed regime of Lord Ripon, and the Goverpmont pf India brought to the consideration of the ques • tion a mind, froe from all projadice and ynfottered by officis traditions or by moy faleg regard 'for the ' prestige' of Provincial Governmenta, The result was that. Lord Ripop added oun mare olain so the many he already possensed on the gratitude of the people of this Presidency: In a letter, dated 23rd : Ootober 1882 i the Fiçoroy gavo the Bombay Govern-
ment to understand that ho coold not belp withbolding sit nssent from the Bill and he olated bit groands at coosiderablo length and with great force. As this leller in not now within eany rouch of the publia, we reproduce it bere fot the benotst OR our tonders.

No. 1265.
From-The Szeretany to the Govermisif of Irein,
Legislative Department,
TomTho Secartant to the Goremment of Boxatr, Legislativa Departhneat

Bin,
The Governor Genenal han had betore him the Bif notol in the margia, ${ }^{9}$ which wat passed by the Bom. bay Legioiatore on the 28 in Jate hant, and which wast forrakised for bio mament in Sotur from the Botmbay Legishativt

- Bill No. III. of 1882, - Bill to mend Boabtay Lot V. of 1878. Doportriment of tit July last.

2. Hio Excellenoy desires mes to stata, too the inTormation of ibe Governor in Council, that he has given long and earelul conssidertica to this masare, and has rith muob felactanco come to the concurioit that be. .ould not be jastified in according to it his assoat. .
3. Befrre, howerer, procediag ti sigaity hir masoni for thia docimion, at required by Seotion $x 0$ of the Indian Comoils ack bo thinkt it desinble to remore o mismpprobensica into which tin En
 dt the Governmeat of ladia torarist the Biat. Speaking io the Legio-
 mode tive following romarts : - 'This Bill hen beon metruimed to the - Geverament of ladia, who ant almagi reg mectifal indood agriast 'any mosacte prosing andely on the prople and iocreseing the - berden of taxation. They, after fall conaidention, entertain zo ioch
 taly implo that the Gorenement oil la fie bed at hant thoitly approved

December last the Bill was forwarded to the Governmont of India but only with refereace to one particular feature of $i t$, riz., the penal clauses, which, according ta established rule, required the previous "pproval" of the Goverument of Indis before they could be inserted in the Bill. They alone were considered by the Government of Iodia at that time, and the letter of 16ṭh Febroary 1882 to your Governs ment was confined to 2 direction for the reduction of the proposed penalties, and to suggestions for some trifing improvements in the drafting of one of the clauses, no allasion being made to the general policy of the measure. And this, I am to remark, was only in accordance with what His Excellenoy conceives to be the recognied practice in regard to measures submitted ander the rale requiring the previons: aanction of the Government of Indis to the penal clauses of Bils introduced into local Legislatures. On sach occasions the conpijeration of the Government of India is not given. to the general polioy of a measure, ani any action thay may take at that stage must not be interpreted as, implying either that the Governor General in Council bas in any yay signified approval of the general policy of the Bill, or that the diseretion which the Governor General is called apon to exereise at a later stage is in any way compromised. His Excollency has thnoght it desirable to say this mach, becanse, from the remarks quoted abore, he fearel that His Exoellency the Governor might regard his pressat action as inconsistent with the action proviously taken by the Government of India.
1.4: Proceediug now to His Excellency's raasons for withholding his assent. I am to observe that the measure proposes to make several minor modifications in the existing law, upon which the Governor General does not desire to make any observation, as in considering the question of giving, or -withholding, his asseut to the Bill, His Excetreacy has been gaided only by considerations connocted with the main issue of the policy which it involves. .
$\because:-$ This centres in Sections 4 and 8, which provide as follows :-
$\because$ Section 4 provides that the following words shall be inserted in Aet $\bar{V}$ of $1878:-$
$\therefore$. The Governor of Bombay in Council may from time to time -by Notifieariod published in the Bombay Governmont Gazette-: . , ,

- (a) make rules regalating or prohibiting the collection, male, - and possension of Mhowrs fiowers within any defined local area or - place, or the import, export or transport thereof into or oat of or - orer any such area or place, aud such rules may be different for differ'ent areas or places, and (b) cancel, modify, or reimpose any ach 'notification.'

Section 8 provides lor the following addition being made to Section 13 of Act $V$ of 1878 :-

- Whnerer, in contravention of this Act, or of any rele or order - made ander this Act, or of any license, permit or pam obtsined ander ' Lhis Act, gathors, colleots, imports, exports, tranaports, eelle or per-- sesest Mhowre flowerr, shall be punished for auch such offenoe with - fine which may extend to five bundred rupees, or with imprisenment - for a term thich uas extend to three months, or with both.'

6. The grounde on which these provisions have been enseted are that illicit distillation from Mhowre flowers it rifo in certaio districts of the Preeidency, notably in Thína and Kolaba, and that from ouch illicit distillation result (1) an increase of drankenaes demoralioing to the population, (2) loss to the public revenue fromenecise, and (3) frequent breaches of the posee between the Abkari Police and illicit distillers or anugglers. Incidently it is claimed for the proposed lan that it. nill bave the adrantage of onabling Government to stimalate and develop a legitimate trade in the Mhowre fower, ia a way aimilar to that in which it is stated that, ander the Forest Act, a trade in mirobolans or pirds nuts has boea fostered and regalated.
7. On the othor hand the opponeate of the measure assert that the ovidouce which has been brought forwand in its surport in aot sufficient to establish the raslity of the evila which are alleged to arist, or to prove that, it those evils do exist, the preenat lav is inedequaio to meet them ; and, furthor, they maintain-and this is their principal ground of objection-that the proposed lan will infict severe hardchip apoa the poorer alase of calcirators by deprising them of the free ase of an articie which they consume largely as food for themselves or for their cattle.
8. Daeling first with the allegation that the Mherre flower in ased at an articte of foud, the Governor General duee ant find thet the orpanents of the measom tare argwhers quentioned Hie Eroethenes

## 42

the Governor's statement that it is not so nsed in Thane snd Koliba, the only districts to which, in the first instance, it is proposed to apply the low. On the other hand; the evidence beiore him proves conclosively that Mhowra is extensively used as an article of food in some other districts of the Bombay Presidency, in parts of Bengal, notably Chota Nagpore, in a very large part of the Central Provinces, in the North-Eastern Districts of Madris, and in the States of Central India bordering upon Khándèsh. Were provisions like those of the Bill to be enforced in any of these regions, His Excellency cannot persuade himself that it would not entail serious bardship upon the poores classes, more especially in times of searcity or famme. Further, as regards the regions bordering on Khàndesh, which are inhahited by Bhils, Naiks, and other wild tribes, he has received from the Political Officers of Central Indis reports wbich convince him that any attempt to enforce the provisions of the Bill, everin amongst the neighbours of those tribes, would be attended with serions danger to the peace of that part of the country. : The boandary between Khàndesh and the States of Central India is for a considerable distance very ill-defined, the tribes on each side of the border are intimately connected by intermarriage and intertribal lav, and what injuriously affects one portion of these tribes is felt by sll. He is therefore assured that en extension to Kbàdesh of the restrictions tbat it is proposed to introdace into Thàoa and Kolaba, or even an attempt to place the trade in Mhowra flowers under officisl control, which the Bombery Goverument does in fact contemplate, would have a most disquieting effect apoa the whole of the Bbil country; and thateghould the first promalgation of auch regoletions coincide " with a season of acanty rainfal:, - an event that oceurs every foar or fire years in those parts, - - there would be grave risk of an ontbresk. He is therefare of opinion that, except in the districts of Thana and Kolaba, the ase of the Mhowne flower as food is sofficient to constitate astrong objection to the policy of the proposed law. His Exceliency the Governor in Council has suggested that eny inconvenience arising from the restrictions upon the collection ind sale of the flower would, in the case of honest persons, bo mora than counterbalanced by the advantages that would - eccrus from the regulation of the trade liy Government. ; But in this argu-
ment the Governor General is unable to agree with His Excellency. The proposal to regalate the trade and to pay the people for colleetiug the flower at 'a cortain rate fixed by Government's seems to luitu open to very strong objections. It is opposed to the general policy of the Government of India, which denires to interfere as little as possible with trade; and as I hiave stated above, he has reason to bolieve that any interference of the kind might produce serions politial complications in those districts which are inhabited by Bhil tribes. He therefore cannot but regard the saggestion as an argumont against, mather than in favor of, the Bill.
8. Turning now to the question of illicit distillation and the evilis resulting from it, he finde that the districts of Thina and Koliba again stand by thermselves as somewhat exoeptional, sod he conenrs with the Goverament of Bombay in thiaking tant the eridence proves that illicit distillntivn from the Mhowrs fower takes place to a considerable extent in the cis iulnad Talukse of the Thaiue district, and also (though ou this the oridence is loss conclasire) in the Kolisha district. Furthor be thinks it is satisfactorily esta: blished that tho work of checking illicit distillution is one of conaiderebie dificulty, anl that some eerions breaches of the pence have occured betreea the dbkári Police and the inhabitants. Bat he fiude little of.no evilence that a similar state of things previis in other districts of the Bombay Presideney, and he is not satiefied that aither illicit distillation, or the erils which it canses, are of such as amonat, or eo aidespreai, as to joutily the very large and stringeat pomers Which it ia prupored in the Bill to confer apos the Goverament. It can scaroeis be deniod that thuse powers, it misased, might be prodactire of great baron, both in the way of checking the freedom of trude, and of interferiag with the colleccion; sule and posseesion of an artide ahich is largly coasumed by the poorer classet in eartain parts of the Presidency an food for themselres or their cettle; and though it appears that it is only intonded to exercise those powens in districts -here the objecrion on the seore of interfirence rith a fool of the people doen a،d at present appareatly appi!, and thongh the Gaveraoe Goncral ben every enfilones that the Bocmhey Goverament would ad. . ministor the Aot with cousideration fas the people, be canzoot fool sctivfied that theoe arguments are sufficient so outreith. the laadamental obection, which ecom to him to exist, to conterring apan the

Executive Gerernmenta power which admittedly go far bejond the actual necensities of the chese, and which might at some future time be misapplied. The ma"in objects which the Bomanay Government bay in view, viz., to cheek the denoralisation consequent on exoessive drinking of illicit apirit in the districte of Thana and Kolaba, and to proteel the Abkari revenue in these districts might, as is appars to His Excellency, have been perifectiy well attained by passing a law of much mored restricted scope than the Bill which has now boos sabmitted for his assent ; and he has carefully considerod whether he could not accord bis assent, subject to an understanding that the law should not be pat in force beyond the linith of those digetricts, and that the rules to be made ander it should be confined to the single purpose of remedying the evilg arising from illicit distillatioh, But the very wide scope of the Bill maken euch a coarse andesirable, for the Act would create powers which'appear to be neither necessary nor expedient ; and though these might be left dormant for a time, there could be no permanent gaarante that nnder other counsels they might not be called into activity.
9. Moreover, it may be doubted whether stringent measures of repression "are the only or the best meanis of remedying the evils of which the Bombay Government compleins. The Governor General observes that soune of the non-official members of the Coqncil sacribed those ovils to the neverity of the present Abkari Laws, and to the bigh tax now placed apon toddy trees, He has not before him suffi. cient information to enable him to judge what amount of force there mas be in this contention, bot the explanation is at least a possible one, and he does aot find that it has been oxsmined in such owny as to deprive it $\mathcal{\alpha}$ all weighte. He is therelore of opiuion that further en. quiry shonld be made as to whether the high rate of duty charged on licit epirit in the districta of Thank and Kolaba has not encerraged smaggling, and the opportunity might at tht same time be taken to investigase somewhat more elosely the quastion as to whether the Mhowre flower is ever usid as food in those districts. If after these inquiries had been made, it was found that the fower was not insed as as artiele of food, and if it were clearly proved that no remedy for the axising atate of thinga in those districts conld be found in a relaxation of the prosent Abkari lowe, it might then be considered whelher legis-

Jation ohculd not be undertaken for the parpose of placing eome reatriction apoa the collection, sule, and possession of Mhowra flowers in those tro district! alone. But, as the case stands now, His Excelleacy cannot consider that the facts clearly establish the necessity for legislation, even of a much more limited senpe than that of the Bill now before him, and that being an, he regrets that he sees not other course open to him than to withhold his assent.

I have the honour, \& c.,
(Signed) D. Fitzpataick,

Secretary to the Goverpment of India.
It is not difficult to imagine with what foelings of chagrin and bumiliation, this lettor of the Government of India mast have bean received by the Bombay Goverament and the all-: powerful Ablsari Commissioner. But the drowning man catcheth at a straw, and the Bombay Government thought that tha last paragraph of the Goverament of India's letter gave them just a chance. With a view, therefore, to institate a 'further inquiry," "as to whether the high rate of daty charged on licit spirit ia the districts of Thana and Kolaba has not enoouraged smaggling" and to take the opportnnity "to investigate somewhat nore closely the quostion as to whether the Mhowrs flower is over ased as fuod in those districts," the Bombay Government appointed a Committee, consisting of Mr. Shepherd, then Commissioner N. D., Mr. Malock, then Collector of Thana and Mr. Campbell, then acting Collector of Customs, with Mir. Shepherd as President. Tbis exclasively offeial Committoe, after taking sach evidence as it pleased, relating again ouly to Thana, recorded the four following con-ciusiobe:-

1. That swageling and illicit distillation of apirit are rirtaally dra-tyistent in the Talakas ( Dabanu, Mabim, Bussia,
and portions of Panvel and Salsette) where toddy spirit is the liquor consamed.
2. That smaggling and illicit distillation of spirit are generally prevalent in all the Talukas (Vada, Shahapur, Karjat, Marbad, Kalyan, Bhimandi, and parts of Panvel and Salsette) where Mhowra spirit is drank.
3. That the provalence of illicit distillation is only rendered possible by the unrestricted collection, sale and use of Mhowra flowers.
, $\because$ 4. That the Mhowra flower, as distinct from the Mhowra berries and seeds, is nowhere used as a staple article of food, and is only eaten in small quantities and as a relish or addition to their ordinary diet for a brief period of the year by some of the wild tribes.

It was a foregoze conclusion that the Commitlee would record these views, seeing that it was composed entirely of officials who were eware of the painful snob which their Government had received from the Government of India and who knew what it was that Sir James Fergasson and bis colleagaes wanted. In reviewigg the report of this Committee, the Bombay Government thus wrote in regard to the prevalence of illicit distillation in Thana :-
$\because$ Every disinterested person competent to form an opinion : on the point has stated that illicit distillation is rife. Mamlatdars, Inspectors, private individuals, Government persioners, liquor-farmers, all agree on this subject. The fact is partially denied by a few of the percons, whose statemente have been recorded, and by certain anonymous writers in th. columns of the local eernacular papers, but their alatements aro pear from internal evidence and from the consensus of opinion
on the part of eradible witnesses to be undeserving of weight." (The italics pre ours.) Having thus summarily disposed of those whose evidence did not arpport the conclasions which Government wanted to establish, Government proceeded to write as follows in regard to whether Mhowra was nsed, daring any pariod of the gear, as food either for men or cattle:-" As regard the foorth poiut, the evidence proves the following facts $:-1 \mathrm{st}$. That only a linitod namber of persons belonging to the wilder tribes, the aborigines, such as Warlis, one branch of Thakurs, Kathodis, and Dablas eat Mhowra flowers, and that even they do not eat them as a substitate for other food, bat an an addition mixing occasionally small quantities of the flowers like raisins in thoir bread. 2nd. That tho bigher castes do not eat the flowers. 3rd. That even the Kathodis, Warlis do. consume the flowers in very amall quantities, finding it more profitable and economioal to barter or sell the flowers they collect than to eat them. 4th. That Mhowra flowers are occasionally, as alleged, ased for medioinal parposes, but that the amount consumed for this object is exceedingly small. 5th. That Mhowra fowers are sometimes given as a part of their food to cattio. Owing, bowever, to the costliness of the flowers, it would be a very oxpoasive measare to feed caltio to any appreciablo exient on them and the flowers are generaily only given in any quantity to catlio after the spirit has been distilled from them." It will be seen that the foregcing passage contains rery important adniseions, thoogh, of coarse, they are mado with that gradg. iog opirit which officials almays display when thes aro forced to alter or modify their views and opinions confidently and dogmatically expressed. It was contended by Sir Charies (then Mr.) Pritclard in his Ablari Feporta for 1880-81, and 1881.82 that the sole $u$ ne to which Nhowre fiowers
were put in Thana and Eolaba was illicit distiltation, and the contention was repeated in the Legisative Council by Sir James Fergusscn. We will, however, deal with this point later on. It kas already been observed that Mr. Shepherd's Committee took evidence and reccrded conclasions only for Thana. The Bombay Government therefore, appointed a second Committee, composed of two officials,-Mr. Campbell and Mr. King, then collector of Kolaba,-to mako a similar inquiry and perbapssabmit an identical report for Kolaba. The report of this Committes is not available to the. public, but Sir Charles Pritchard quoted on the 5th April last in the Legisiative Council a lengthy extract from a Government resolntion reriowing the Report and this extract contains the following important admission." "The increase," sajs this Government review, "in the cost to the consumer-of licit opirit vould not appear in Kolaba to have stimulated the illicit production of lignor. The native officials whoee replies have been seceired to the exhaustive sat of questions propounded by the Committes are almost unanimous in the opinion that formerly there. was little illicit distillation in Kolaba, and that now elandestine manufacture is, if earried in at all, condueted but rarely and on an allogether innignijicant scala') (The italice are oars.) Bat thongh in regard to illiait distillation Goverament admitted that there was practically no illicis distillation in Kolaba,-an admission, refating in the most complete manner imaginable the assertion of Sir James Fergusson apd Mr. Ashburner that the Bill of 1882 was necensitated by the wide prevalence of illicit distillation in Thana and Kolabain regard to the use of Mowra flowers, Government reCorded that the consumption of those flowers for lawful purposes was nit in the Kolabn district, and that "no
interesta which deserved any respect are likely to be injared if Mhowra flowers were placed under restrictions.' Armed with the Reports of these two Committees, the Bombay Government again approached the Government of India with a view to obtain the latter's consent in regard to the restriction of the traffic in Mhowra, so far as Thana and Kolaba at least were concerned. It should here be remembered that the Bombay $G o^{-}$ vernment now wanted to restrict the use of Mhowra in Kolaba, even after the most distinct admission that ever could be made that there war practioally no illicit distillation of 1 Showra in that district ! It is no matter of anrprise, therefore, that the beniga Government of Lord Ripon atill refased to bave anything to do with the Bill, "deprecating," as Sir Charles Pritchard observed the other day in the Legislative Conncil, "resort to legislation except on the clearest evidence that an intolerable ovil existed and that there are no other means of meeting it." For the time, thas, all hopes of Sir Charles Pritchard wors dashed to the ground. Lord Ripon was succeeded in the Viceroyalty by Lord Dufferin, but, at the same time, fortonatoIy for the people of Thana and Kolaba, Sir James Fergasson resigned the reins of the administration of this Presidency to Lord Reay. And the Alkari Department had to devise other ways to cope with the fancied evil!

Sucb, in briof, bas been the listory of the past efforts of the Bombay Government in the matter of restricting and controlling by legislation the freo traffic in Mbowra flowers; and no one could have reasonably expected that after all this, the locel Government voald once more make an attempt to rerive this twice-discredited measare. But the tenacity of parpose or $r_{\text {ather }}$ the obstinacy of Sir Ctarles Pritchard is wonderfal and be aoems detormined to make this parting gift to Thana and

Kolaba before he retires from the Bombay Council-a gift that would fitingly crown a series of measures which bave made toddy so dear and so scarce and which have forced opon a toddy-consuming people the deleterions drink of Mbowra spirit. But although we thus think the new Mhowra Bill will, in all probability, be passed into law-at least will bo passed by the local Legislature, we feel it to be our duty to examine bere the grounds on which the justification of the present measure is based, as also the merits of the mesarare and its probable consequences. The Statement of Objects and Reasons poblighed by Sir Charles Pritchard says that the present Bill has become nocessary because "recently there has been a very serions increase of illicit distillation from Mhowra flowers in the Thana and Kalabs districts and the conclasion is forced upon Government that this cannot be effectively checked withont bringing the collection, sale and possession of Mhowra flowers under control. ". The statement gives the following assurance with a view to inspire, if possible, confidence in the pablic mind in regard to the working of the proposed measure:-"No interference with legitimate trade or the ase of Mhowra flowers as medicine or condiment is contemplated. 1 is is intendod that licenses, pormits and passes should be granted withont payment of fees.. It would be well, in order to znderstand the real nature and scope of the proposed Bill, to quote here also the central clanse of the Bill, which runs as follows :-" The Governor-in-Council may, from time to time, by notification in the Bombay Government Gazetté (a) make rules regulating or prohibitiog the import into, the export from, and the collection, transport, carriage, transfer, sale and possession of Mhowra flowers within, the Districts of Thana and Kolaba, and the issue, with or mithout conditions, and the recall or cancellation of licenees, permita and passes in
respect there of, and (b) vary or rescind ony rule oo made: Provided that no rule uuder this section shall . ronder any persun liable to any punishment under this $\Delta$ ct, in respect of any Mhowra fowera growing oa any tree or lying on the groond under any tree from which they bave fallea." It is provided that whoever is oonvicied of an offence ander this Act sball be punished with fine which may oxtend $\omega$ Rs. 500 or with imprisonment for a term which may extend to tbree months or with both.

Let as now first cousider the alleged jaslification for the proposed Bill. It is alleged by Sir Charlos Pritchard itast recently there has been a very serious increase in the illicit distillation of liquor from Mhowra flowers. For obrions reasons, it is a matter of great dificulty to prove or dipprove a statement of this kind, which, to a large astent, must remiin a matter of individual observation and individual opinion. Yet it will bo readily admitted eroa by. Sir Charles Pritshard Linself that When such a atatement is advanced with a view to cartail the privileges which people bave eujoged from time immenorial, ad to deprive a considerable portion of the very $p$ stest classes of the froe uise of a valuable article, the public bas a right to expect that something more than a mare assertion or beliof is relied on by Government in jastification of the contemplated regresive legislation. And judgel from this point of viem, the openiag staternent of Sir Churles, mats on the 5ith of April, matt bo proaonaced to be very disappoiatiog, for bejond a reference to the complation of papers haid by tim on the tubio of the Ifraisiative Council, the Hon'ble gentieman adjuced absolute'y no prosf is sapport of his statemeat. Now wo have this ouspilation before us and really we aro astonisbed tiat oo clever a masa as Sir Clartes Pritchard thinka be bes mede
out a case for his repressive proposals when he has laid these papers on the table of the Legislative Council 1 About a third part of this : oompilation is taken up by oorrespondence and figures relating to the state of things prior to 1882 and this portion might well have been left out, because it has nothing whatever to do with the present Bill $t$ Then follow fignres relating to the offences of illicit distillation daring the past ten years, the cost of preventive establishments, the conflicts between the offenders and the Abkari Police, the consumption of lioit liquor and the revenae realizations in the several districts of, the Presidency. All these figares are, no doabt, very valuable, but they are so, not because they in any way make put a case for the proposed repressive legislation, but because they do the very reverse, viz, they shove onclusivel, that whatever justification Government might have had three years ago for proposing a measure like the present Bill, they have no such justification nou, as we shall show later on. At the end of the compilation, there is a note drawn ip by Mr. Lee-Warner on Criminal Statisfics in the Thana and Kolaba Districts, which has very little to do with the pratical question now before the Legislataro. In our opinion, therefore; there is noth. ing in this compilation to justify the conifident expectation of Sir Charles Pritchard that its percsal will make converts of those who are opposed to his Mhowra : Bill. Te' mako our. meaning clear; we proceed to an examination of the figures on which Sir Charles seems toreply an making out a case of necessity for his proposals.

The question that we have to consider here is twofold. First, whether recently there has been an increase in the illicit distillation of liquor from Mhowra flowers, and secondly, whethor this increase has been very serious. Sir James Fergasson, in 1882, laid down two tests to ascertain the extent of
illicit distillation in aiven area, -the number of Abkari offences connected with illicit distiliation detected and the fail-off in revenue realizations. These are very fair teste and to them we would add a third, viz, the quantity of liquor illicitly consumed. Judged by these three testa, the double contention of Sir Charles, vis. that there has recently been a rery ecrious increase in the illicit distillation from Nhowra flowers in Thana and Kolaba will be found to be quite untenabla. It should be stated here that whatever controversy there is in regard to the prevalence of illicit distillation concerna Tbana alone and it is only the perversity of Sir Charles Pritchard that has coupled poor and anoffonding Kolebs with it. There has never been much illicit distillation in Koluba end there is not much to-day. In 1889, both Sir James Forguason and Mr. Ashbarnor loodly complained thap illioit distillation wat rifo in Kolaba and jet, as wo have alroady stated, the Kolaba Committoe, appointed by Government in 1883, could not bat report as follows :-" The inerease in the cost to the consumer of licit spirit would not appeser in Solabs To hare stimulated the illicit prodectioa of liquor. The native officiale whose repliea have been recoived to the exhanative set of questions propounded by the Committee are almoet snani. mose in the opinion that formerly there was littlo illicit diptillation is Kolabe and that now clandestine manufacture is, if earried on at all, condricted bat rarely and on as altogether insignificuat. ocale." LaN yoar there mave only 5 acces of illigit distillation detected in the whole diatrict of Koleba, and Mr. Loch, the ecting Abkari Commiscionor, expresses eaticfaction at this atete of thioga. It is tree that in 1888-89 and 1889-90, 化e mambere vere ebnormally bigh, being 93 and 98 respeotivaly, againat an average of aboat 16 in the provioas jeare: but, as Lan been adraitted by Eir Charlen Pritchard
himself; this was solely due to the system experimentally tried by the Bombay Government during a part of $1887+88$ and the whole of 1888-89, owing to which, while the restrictions on toddy were to some extent relaxed, the duty on distilled spirit was suddenly raised from Rs. 3 : es. 8. to Rs. 4 as. 8, thus practically making its price prohibitive to many of those who were accustomed to its use. "It must be admitted, "said Sir Charles the other day in the Legislative Conncil, "that the exciting cause of that access of illicit distillation (of Mhowra and to some extent, of toddy) lay in changes made by the Government of the day in the aystem of excise management in the districts of Thana and Kolaba, which resalted in a large and sudden increase in the prices at which liquor was placed on sale in the licensed shops in those districts." The experimental system having now been abandoned, the district has, to use Mr. Loch's words, " recovered from the effects ' of the experiment tried in 1888-89, ", and no more, we think, ought to bo. said, especially by Government, abouk the abnormal figures of offences in those two years. It was impossible for Sir Charles Pritchard to ignore these facts entirely and he therefore felt it to be his duty to admit, on the occasion of the first reading, that " the apparent ease for legislation is not as strong as regards the district of Kolaba as it is with respect to the district of Thana. 1 Indeed the papers laid by Sjr Charles Pritchard on the table show that so far at least as the number of offences connected with illicit distillation, is concerned, Nasik and Surat are great deal worse than Kolaba, there being respectively, 36 and 24 offences in those two districts against the 5 of Kolaba last year. And yet Government neither complains that illicit distillation is rifo in Nasik and Sarat, nor dose it propose to deal with the evil by fresh legislation !. All talk, therefore, of any wide
provalence of illicit distillation in Kolaba is obviously absurd and it is a matter of painful astonishment that Sir Charles Pritchard should propose for this district a piece of legislation as uncalled for us it will prove oppressive, with a light heart, and this in spite of the snub twice administered to biun by the Government of India!

To turn now to Thana, which requires a mach more dotailed consideration, we have the following figares of Absari cffences connected with illicit distillation detected during the last elopen jears :-

$$
\begin{aligned}
& \text { 1880-81 ............... } 012 \\
& \text { 1881-82 ............... } 767 \\
& \text { 1882-83 ............... } 190 \\
& \left.\begin{array}{l}

& \text { 1890-91 ................ } 109
\end{aligned}
$$

It will be seen from these Ggures that the largest number of offences was detected in 1881-82 add the next largest in 1880.81 and $y$ et, with these figures lefore it, the Government of India twice deprecated legislation of the kind now proposed. It is also intoresting to note that when the Bombay Government became hoppless about getting the Vicerog's sanction to the frot Lhowra Pill, they adopted other measures which reducad the number of offences to moderate dimensions and which thos proved fairly efective, in spite of the statement repeatedig nade in 1882 and 8 s 84 that there was no cther Wis of coping with the eril than legislation! The Depart-
ment does not give statistics for the three years following 1882-83 and wo may well assume that the numberi of offences in those gears were not very serious, as, if, they had been eo, the Department would assuredly tot have failed to make a great deal of noise about them. The figares continue to be moderate till the end of $1887-88$ and then there is a sudden increase in the next year of over 60 per cent. This is no doubt is very verious in. crease and we think Sir Charles Pritohard must specially have had this year in his mind when he spoke of a very serious increase recently taking place; but if so, it is very unfair on the part of the Hon'ble gentleman to thus take advantage of the exceptional circumstances of that year-circumstances, agaia, which: were entirely of Goverument's own making. In degling with Kolaba, we have already quoted the very important admission made by Sir Charles Pritchard in the Legislative Council on this point. But the quotation may well bear a repetition. "It most be admitted," said Sir Charles, "that the exciting cause of that access of illicit distillation lay in cbanges made by the Government of the day in the system of Excise -management in the districts of Thana and Kolaba, which resultod in a largo and sudden increase in the prices'at which liquor was placed on sale in the licensed shops in those districts." The changes experimentally introdaced in that year were twofold. Prices of licit liquor were so far forced up that they became prohi. bitive to many who wero before used to its ase ; and secondly the restrictions on toddy were to some extent relaxed. So that while the "first offered the temptation to distill liquor illicilly, the eecond supplied, to some extent, the facilities. That this was so has been admitted by the Government of Bombay themselices. In the report of the experiment, supplied by
then to the Governmest of Intia, and pablisted by the latter as an uppendix to itg des;atch of th Febraary 1890 to the Secretary of Slate on the Excise Administration of India, they write :-" The inciting cause of the sericus outbreak of illicit distillation that has now to be dealt witb, lay in the departare made in 1857-88 from priciples of Ablari management previously recognized aud acted on. The retail prices of spirit were forced unto rates that consnmers could not afford to pay by the competition for the farms which were sold under the new syalom,* introluced on the let of Jannary 1888 , to the fersous who voluntecred to pay the highest rates of still-head duty, while the restrictions that compelied farmers to setail within Gased maximun prices were flaced in alegance. At the caine time, the rates of tree tax in sereral of the principal todif.producing talukas were lowerel, and the restrictions that confined tree-taping exclusively to persons who bad provid-: ed thenselves will a fixed and certain market for the licit diepoeal of the toddy they drew were relastd. Beiore these changes wero made, tapping licenses were issurd only ou the application of persons to whom licenses either to eell or to distil tody had ben granted and for the cupply of specined shofs or of specifiodurtilleries. Ia 1888 , thesa limitations on the graal of tapp. ing licenses were rearoved, und tappig: liceusos were payde. issuable, without any limit as to number of trees, to all arpli. cants and the only obligation with respect to the disposa: of the toddy drawn placed on the tappers wis one that hocud Lem to sell it to anne licerns-d she heeper or to some liceased distilier, wilhin tie limios of the Ta ink or Mahal concorned.

[^11]Tapping licenses were also made issuable to approved applicants, who were privileged to sell toddy to the public at the troo-foot and to the toddy diatillers ; and fartber tapping licenses for a limited number of trees in each case wers mado issuable to tree-owners with the privilege of using the toddy they drew for domestic consumption, and of selling it to licensed shop-keepers or licensed distillers, The provisions expressed in the tree-foot and domestic consomption licenses, as to the disposal of toddy to licensed shop-keepers and distillers allowed such disposal of surphus toddy only; but as a surplas quantiiy is an indelerminate quantity, this provision in practice was altogether ineffective, and it was open to the tree-foot booth and domestic license tappers to sell as much or as little of their toddy os they pleased for the supply of licensed shops or licensed distilleries, and gave them an opening for selling toddy to persons who pat it to illicit use." The Ablari Commissioner, in bis special report on the experimental arrangements, thus writes:" The temptation to nse surplas toddy for illicit distillation mast be very strong and it is the more dangerous for the reason tbat the process leaves no refuse and is so simple that it can be: carried on in the distiller's honse - with bis domestic ntensils and all traces of it can bo cloared away in a fow minutos while the oxcise officers are kept waiting ontside. It is thus most difficult to detect and suppress and most likely, to spread where the practice once takes root." At the end of this report to the Government of India, the Bombay Goverament write as follows :- The situation that bas now to be faced is much more serious than that which oxistod in 1881-83. Hlicit distillation was then confined to the inland talakas of the Thana District and Panvel and to Mhowra spirito Now it lias extended oper the whole of the Thana Dise
trict and part of Kolaba and the illicit distillation of toddy as well as of Mhowra spirit is rife. ". We have thas on Covernment's own showing two things:- First, the responiibility for the increase that took place in illicit distillation in 1888-89 liet entirely, on the shouldert of Government, and tecondly, much of the illicit distillation of that year was toddy distillation. When these two facts are borne in mind, the figare for 1888-89, beavy, as it is, ceases to bave anything serions about it and cannot serve in any way as a jastitication for the proposed legislation. Farther, it is unduly atrining language to describe the increase indicated by the figare as recent, because the figures for the next two years are arailable and show a steady dimination and an unmistakable tendency to return to the moderate dimensions of previons yoars. The exporimental arrangements being abolished at the ond of 1888-95, the number of offonces at once fell from 606 to 499 , a decrease of aboat 20 per cent. There mast have been considerable illicit distillation from toddy in $1889-90$ also, for, as observed by the Government themselves, people were found in that jear to bold large stocks of toddy from the provions year. In 189u-91, thera was a further fall in the nomber of offences detected, the Ggure standing st 403 agaiast 492 of the provions jear, - s decline of over 17 par cent. In fact, there was a very near arproach in 1890-91 to the statoof things that preveiied before the introduction of the experimental changes ia 1888, the figores teing 408 for 1890-51 and 373 for 1887-88. It is inposasible for Sir Clarien Prichard not to admit all this, especially as the Atkari Commis sioner bimseif bas expressed this view in his latest Report of the work of bis departmest. In his Report for 1890-91, datal sih Decomber 1891, Mr. Loch thas writes:-" In Thama, vigorona efforts hure teen unde for the hast three jears to keep down illicit
distillation and the number of cases of smaggling, illicit distilation and possession has been much greater than in any other district, 675 in $1888-89,578$ in $1889-90$ and 458 in the year under report. I do not think that there is any reason to doubt that the efforts maile have been successful and that there is muck less illicit distillation than there iras. (The italics are ours.) Mr. Locharrives at the same conclusion from an exa. mination of the figures of licit consumption. In another part of his Report, he thus writes about both Thana and Kolaba :-" When the increase of dnty is taken into consideration, it may, I think, be assumed from the figures of consumption that illicil distillation has been kept" fairly in check and that the districts: Rare recovered fron the effects of the experiment tried in 188S-89.. (The italios are ours.) Coming from the head of the Abkari department itself, these admissions are of the bighest importance and in our opinion they completely destroy the case which Sir Charles Pritchard is labooting to make out. : Thus a careful examination of the figares relating to offences of illicit.distillation during the past eleren years leads as to the following conclasions:-
$\because$ 1. That coupared with the figures for 1850-81 and 198182, the figures for 'recent?' years show not merely no 'very serious" sise, but a very substantial fall-off, and that if a Bill based on the heary figures of those two yeary was vetoed ly the Government of India, a fortiori mast that Government veto a measure based on the moch lower figures of ' recent' years, even if the local Legislatire were to puss it,
2. 2. That the fact that when assent to the Bill of 1882 was withbeld by the Guvernment of India, the Bombay Government were able by, other incans to materially reduce the heary figures of offences detected in 1880-81 and 1881-82 in
rabequent years, and keep them within moderate bounds, shows that legislation of the kind now proposed is not required for coping with the evil of illicit distillation, which egain is now smaller in magnitude than what it was prior to $\mathbf{i 8 8 z}$.
3. That the sodden increase that hok place in the number of offences in 1893 wes entirely dee to the action of Government and that it is therefore unfaif oc the part of Government to lake adrantage of it to pass a piece of repressive legislation.
4. That the figure for 188-8S9, considemaly bigher as it is than that for 1887.88, does not represent Nhowra dist:llation exclusively, bat covers much illicit distiliaition of toddy alfo, and therefore it cannot be said that there was in that year a very serious increase in the illicit diatillation of liquor jrom Mhowera fowere.
5. That it is nufair to describe the incerease that thot place in $18 \% 3$ an recont, because statistics for later yeara are arailable and they show a material diminution in the namber of offences.
6. That since the abolition of the esperimental arrangements of 1958 , the number of ofences has beet. steadidy and rafidiy diminibting, eliciting expressions of satisfaction fram the head of the Abkari drpartment itseff, and that in the coorse of a jear or two, a return to tie state of things which provailed prior to 1888 might bo legitimately looked for.

So far, therefore, as the number of ufienots are concerned, we may weld say that Sir Charles Pritchard has do case. We sinil now piply to the queation the recond of the two tets laid downi.y Sir Janes Fergerson in 18 年, riz, the amount of revenuo realizations. Tho confilation of papers mid by Sir Clariat Pricichard on the the of the Legislative

Council gives the figures of revenue realizations only for the last six years ; and as it is unnecessary to go farther back, we confine ourselves bere to a consideration of these only. The following are the figures of revenue realizations for Thana from 1885-86 onwards:-

| 1885-86 | $8,14,756$ |
| :---: | :---: |
| 1886-87 | 8,38,051. |
| 1887-88 | 7,39,114. |
| 1888-89 | 6,86,673 |
| I889-90 | 8,28,337 |
| 1890-91 | 8,86,624 |

It should be remembered that in 1879-80, the Abkari revenue of Thana was only a little more than 6 lacs, and that: in the course of seven years, it grew by leaps 'and bounds to over $8 \frac{1}{3}$ lacs. The growth was arrested in 1887-89 and there was a fall in that year of about a lao of rapees. In 1888-89 there was furtber drop of about Rs. 50,000. In 1889-90, there was again an upward leap and the realizations were very nearly the same as those in 1886-87. . Last year, there was a further impribement and a. substantial improvement too, the figure being higher than that . for the provions yoar by about Rs, 60,000 . So far, therefore, as the recent revenue realizations of Thada go, the Bombay Government have no reason whatever to be dissatigfied. $1 t$ is true that there was a fall-off- in 1487-88 and 1888-89, but that was entirely doe to the experiment tried by Government diring five months of the former year and the whole of the latter year: Mr. Trevor has described the period during Which the experimental arrangemeuts were tried as financially "disastrons." With the abolition of the arrangemente, the rotomes sot-meroly regaided its otd level-bat aloo resumed its:
capacity to espand. No better proof of this coold be requirod than the fact that the Gigure for 1890-91 is considerably ligter than that for any of be grevions years. So far, therefore, as revence realizations go, no support is lent to the conteation of Sir Charles Pritchard that recently there tas been a very serious increase in the illicit distillation from Mhowra,

A consideration of the figures of licit consamption leads us to the same conclasion. The following are the figures of conntry liguor licitly conanmed in Thana from 1885-86 onwards, convorted to $25^{\circ}$ w. f. ;-

| Year. | Gallona, |
| :---: | :---: |
| $1885-86$ | $3,23,992$ |
| $1886-87$ | $3,27,708$ |
| $1887-88$ | $2,69,260$ |
| $1888-89$ | $1,40,446$ |
| $1889-90$ | $4,33,493$ |
| $1890-91$ | $4,07,681$ |

In oxumining these figures, it should be borne in mind that the Abkari Department has alooays tried to interpert a rise in licit consumption as an indes of the diminution of illicit distillations and regaried in this light, the Egures justify a conclusion diametrioally opposed to the contention of Sir Charien Pritchard. As bas already beon observed, during part of $1887-88$ and the. Whole of $1888-89$ prices of licit liquor were so far forced op by the experiment tried by Government that a large dumber of people found themselves anable to parchase it. With the atolition of the exporimedtal arrangemente, there was a 'rush' to the liquorshopa and the figure of consumption went up at one bornd from $1,40,446 \mathrm{galloan}$ to $4,33,493$ galions, and daring the lwat jtar, it rory pasty maintived itwif at that atrarmally bigh
level. Thus ifthere is any complaint to be made abont any "recent" and "serious" increase, it should be in regard to the quantity of liquor licitly consumed and not about that illicitly distilled !

Thus whichever test we apply, whether it be the number of offences, or the amonat of revenue realizations or the quantity of liquor licitly consumed, we come to only one conclusion, viz, that whatever justification might have existed for the complaint aboub 'a very serious increase' taking place in illicit distillation three or four years ago, when Government were trying experimental changes in their Abkari golicy, no such justification now exists and the Bill at present before the local Legislature is absolutely uncalled for $\mathrm{A}_{\text {, }}$ It mast not bo noderstood from this that we deny the very existence of jlicit distillation itself. Undoubtedly the orii exists in Thana to some extent, but it is the mbsurdly exaggerated version of it that we repudiate Already the Abkari Act of 1878 is extremely stringent in its provisions. Besides additional powers Lave been put into the bands of the Alkari Department by certain rules framed uader Section 41 of the Forest Act, as amended in 1890. It bas been admitted by Mr. Spopce, Acting Abkari Cominissioner in I890, that "a good deal will be ablo to bo effected under the Forest roles," and that they will enabls the Abkari Department to effectively control the transit of Mhowra flowers. The Dopartment, again, maintains in Thana large and costly preventive establishments, whose efforts are supplemented by those of the private establishments maintained by liquor farmers at their own cost for the detection of illicit distillation. Wo think these are sufficient safeguards against any appreciable prevalence of illicit distillation. Distilling liquor clandestinely from Mhowra flowers, without
rouning great risk of detection, is, again, no casy thing. In the first place, the prople know the thing to be an offpnce and bowsoever they may be given to it, they would instinctively try to avoid it as far as possible. Tiven the prosess of diatillation is such that a reasonabla degree of vigilance on the part of the Abkari Police ought to detoct it without much difficalty. It is notorious that before liquor can be extracted from Mbowra flowers, they bave to go through a process which makes them emit a stench "powerfal enough," to use the words of the Times of India, "to awaken alumbering Abkari peon a milo away and thes set in motion the existing law." . Then, again, the private fends and. jeniousies of viliagers among themselves minimise the obances of successful illicit distillation Finally, the very beary fines which Courts inflict on those who are convicted of illicit distillation and which bave, in. some cases, brought ruin on whole families bave already produoed a deterrent effect and thero is no reason to doabt that under normal circumstances illicit distillation will diminish day by day. Sir Cbarles Pritchard makea so mach in bia speech of the resistance offered to the Abkari Police in the discharge of thoir daty by the people. His own compilation, Lowevor, shows that even in this respect, the evil is not seriona, The following table gives the number of cases in which violence was offered is Thana to the Alkari Pulice sinee 1885:-

| Year. | No. of cases. | Convicted. | Discharged. |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| 1885 | 8 | 1 | 1 |
| 1886 | 1 | 3 | 1 |
| 1887 | 1 | 1 | . |
| 1888 | 3 | 2 | 1 |
| 1889 | 4 | 3 | 1 |
| 1930 | 1 | 1 | . |
| 1891 | 1 | 1 | . |

If theso figares show anything, they show that the ovil complained of wes nevor very great and that evee that in at present on the decline. For one or two cases of resietanco to Abkari authority in a year in a district, which clains a population of more than 800,000 persoas, cannot sareig be aaid to constitute a grait or serioas evil Altogether then we contend that the extent of illicit distillation in Thana is absardly magnified and that the existing law is quite sufficient to cope with the ovil as it is.".

We will now proceed to a consideration of the oonsoquences that will result from the prosent measure passing into law. As has been already pointed out, the Bill empowers the Goverdor-ia-Conncil to make, from time to time rales ${ }^{4}$ regulating or probibiting the import into, the export from and the collection, transport, carriage, transfer, sale and poosession of Mhwore flowere within, the districts of Thana end Kolabe and the issae, with or without conditions, and the recall or cancollation of licenses, permits and passes in reppeot thereof," and to vary or rescind any rale so made. It will clearIf be within the rower of the Execative under this moction ta mate it penal ta possesp oven-a bandfal of Mhowrs flowern. It is trie that Sic Charles Pritchard promices-in his opening slatement, on behalf of Government, to allow people to possess or transport withoat a pormit any quantity of Mhowra Rowors not exceeding foor geors of $8 Q$ tolas eachin weight and the Stato-- ment of Objecta and Roasons also gives the undertaking that " no interference with legitimate traie or the use of Mhowra flowers as a medicine or condiment is contemplated, " which meens that "some small quantity will, in ail probability, be allowed ta' be beld or transported withoat a Ecenso. 'Bat if lbo bill pasge into law in it an right
of Gorernient to make the pospession of even a handfol of flowers penal, will to legally, though perbaps not morally, beyond dispate. It is clear that this will be a dargorous porer in the bands of the Execative and may infict great bardslip and misery oa poor peoplio. A man, for ingtance, in a remote viliage, may sadieniy require a fow fowers for nues medicinal parpose, If the Execativo is dieposed to esereise its full right, it will be impossible for the man to get LLem unlese be takes the trouble of Gnding out the Mambatiar of his Talaka or eome Abkari Inspector, which may mean harasing dolayt and worry and expenditare. Mere verta plodges, bowsoevor honestly given, are not to be reliied on, bo cavee those obto give them might find themsoires ansble to folst them and their sucoessors might refuso to be bound by then. It in well-known that at the time of passing the Forest Act, Sir T. Hope promised in the most distinct manner poes:ble that po iaterference mith the prinate rights or priviloges or convenitaces of the peopte was eostemplated and yet the pidige has been oo compiletely vioisted that no one woold balievo ioday it over was given For the porposes of our premat diecassion, therefore, wo most reject all promisea which fied se glace is the Bill iteelf, and mach confine orretrat to the foue corvert of the propooed eonctment. Is our opinica, the Legisalaure fails to diacherge its fanction properly when it confert a wide and iadoEnite power, which oould be serionsly abased, on the Executire, and thon expecte the peopio to roly os the discretion of Governmest !
$\stackrel{1}{6}$
Asoiber and a far mooro oerions otjection is that the Bial interferes with vat in over a considerable area a subvidiory articlo of food ba:b for mea asd eattle. The inquiries, primately iastitatad by the Poona Sarrajanik Sabba in this
matter, have elicited replies which leave no doubt in our mind on the point. Dealing with this question, the Eombay Gazette thas observes in its issae of the 7th April:-" In his. Statistical Atlas of the Rombay Presidency, which was brought out five years after the Committee (of 1883 ) reported, Mr . Ozanne, while observing that the ripe and unripe friit of the Mhowra are eaten, goes on to say that the most important product is the flower, which is eaten in all seasons, either raw or cooked, along with parched grain. Dr. Lisbon, to whom Mr. Ozanne refers, is more explicit in the same sense. From two handred to four hundred pounds of these flowers; he says in the Botanical, Volame of the Bombay Gazetter, are sometimes collected from a single tree. The flowers are gathered early in the morning, dried in the sun and then sold as an article of food, being consumed either raw or cooked along with parched grain. ${ }^{\text {Dr }}$, Lisbon adds that däring the famine of 1873-74 in Behar, they are said to have lept thonsands of people from atarvation." it is freely admitted by Government that Moowra flowers are used as an article of food in the Guzerath, Kbandesh and other parts of the country and yet it is persistently asserted that in Thana and Kolaba alone, they are not so nsed. What prevents the people of these two districts frone nsing these flowers as the people in other. parts of the country use them, Government does not troable itself about. But even the gradging admissions of the Thana Committee of 1883 on the poinf are important. "Only a limited number of persons," the Committee recorded, "ber longing to the wilder tribes, the aborigines, such as TYarlis, one branch of Thakars, Kathodis, and Dablas eat' Mhowra flowers and that even they do not ase them as a eabstitute for other food, but aj an addition, mixing occasionally small quantities like raisias in their bread," The Coimmittee took care to add that
the highor castes did not eat those fowers, but no one had over cootended that they did. The Committee also added that oven the Eathodis, Warlis d.c., consumed the flowers in very amall quantities findiug it more profitatle to sed them than to eat them. But the relerancy of this remark might be questioned, for in what way the poor people find it most proftalio to dispose of the flowers is a question which need not trouble na, after the adminsion is once made that they are ased, to some extent at least, as food. We mast not forget to menLion that the Cummitteo was constrained to admit that "Dhowre flowers are sometimes given as a part of their food to cattio,' alibongh Mr. Shepherd and his colleagues tried to minimise the importance of this admission by adding that the flowers were so costly that it was a very expensive thing to foed cattle on them ! Altogether, thero is very fair evidence to show that the fowers are osed as a subsidiary article of food by many poor people, and are also given to cattio ; and thas in pusing the presoat. Bill into law, Government will to inflicting very serions injory on a class of subjects who aro always on the trink of sterration and whose life is one continouns strugote to koep body and soal together! Already the resorreces of subs.stence for these poor people are wofally few, and it is litile short of beartless to cal a way even one of them!

The Statement of Otjects and Reasons says that no fees will be charged for licenese or permits, tat it does not bind Goverament to grant licenses to all who may apply for them. Iadeed with the object which Government profess to here in viem, it is impossible that it should be otherwise. Fur a -holesale granting of licenses woold defeat the rery object for which Gorernmert wapts to creato the permit systom rit., to Ex withoat any troablo or diffenity the responsibility for
illicit distillation. The proposal, therefore, to charge no fees for licenses, permits or passes is devoid of any value, for an exceedingly emall number of persons alone will be able to profit by it, if indeed they will. For even if no sum may have to be paid directly as fees; it is to be foared the applicants will practically have to incur considerable expenditure in gratifying the underlings of the Department, as owing to the oxtremoly limited number of licenses to be granted, the competition for them will be exceedingly keen. Ant the largo mase of poor people will find it impossible to secure the licensea, per-1 -mits or passes they may require, and we fail to understand how Gopernment can, with any show of reason, contend that this mould entail no hardship on the people.

Lastly, the power which the Bill confers upon the Erecu: tive to control the export and possession of thése flowers will make the traffic in them practically a monopoly under the control 'of Government. For since Goverdment can, nnder this Bill, place any restrictions they pleaso in regard to these matters' they will have the right not merely to name the persoh or persons to whom alone private owners shonld sell their flowers, bat also indirectly to fix and control the price of the Hlowers. For the owners will have either to accept whateier price is offered them or to destroy their flowers entirely as their possession will render them liable to panishment. The natural adjustment of the price by the ratio between sapply, and demand will thus be interfered, with and private owners pat to a serious loss, , It is an admitted faot that the ralue of Mhowra flowers as an article of export is doily rining and the trade in them promises, in the course of time, to be a flouriahing onc. Private owners have, therefore, a right to complaia of this interforence with Mhowra, as the propesed,
metsure wial bare the effect of unjustly confscating a considerable partion of private property, the fioners Loing presented rom fuding their legitimato and natoral mar'st.

We trast wo have now succeeded in sbowing bow the s!!eged jastification for Sir Clarles Pritcbard's Biil does not exist, and how the measure will prove oppressive in its opera tion. It is singularly fortunate that in this mattar we have the fowerfal ampport of both the Auglo-Indian dailies of Buorbay and surely this circumstance should get give the Boublay Government pause. It is easy enorgh for Gorernmeat deprartments to ignore the opiuions of the native press bat the roice of journals like the Tines of India and the Bombay Gasette is far too poteat to be similarly treated. We are very sorry ihat at this juactore, Mr. Javerilal Umiga Shanbar Yajnik is not in the Legislatire Council. The poblio will sore'y miss on this orcasion bis atrewduess, his indastry and his tonacity of furpose in the deliberations of that body. Host of the noncficial mextors bave alroady disappoictod as grat'y, aed it remains to be seen if these geatlemen acquit themselves beter on the ociasion of the secoul reading. The Bill, we rapeat, is absolotoly unjustíable in principle and rill prove barassing amd oipressive in its working. It is not wise statermanship to Funish for the sins of a fow intividanls antire classes of feuple, and yul this ia exact!y what the Government are at presed freprosing to cio. Lecanse a fow iadiriduals disbonectly distillignor from dinowra duwers, therafore Government froposio to shat ort all peopiemand ibese doegly sank in porarty trosa all degitiaiato ases of them! At this rate, wa should ost be surprised if Guverament an eome fatere aicaion prupose to iuterfurg widu the acrestricted ose cf rice aod dry dutes, arf ocjurcide juice and such othor sticles or the groand int
from thase sabstauces too, liquor can be illicitly distilled ! It is impossible that Govornment car be ignorant of the true cause of illicit distillation. Mr. Mandlik, Sir Janshotji, Mr. Mácanlay and others told Sir James Fergosson and his colleagnes in 188: that it was the Abkari Department itself that was driving people to illicit distillation. Disinterested critios like Mr. Dantra and Mr. Wacha have repeated the statement on numerous occasions and have fairly demonstrated the correctness of their contention. Raw toddy, perfectly innocuous drink and one which was genefally ased by the people in former days, has been made dear and scarce. And licit liquor is so heavily over-taxed that the temptation to satisfy the cravings of nature in an illicit manner is indeed great The principle that should regolate Abkari taxation bas been thins enanciated by the Government of India : " Liquor should be taxed and cousumption restricted, as far as it is possible to do so, without imposing positive hardships upon the people and driving then to illicit manufacture." (The italics are ours.) The very: complaint of the Bombay Government about the prevalence of illicit distillation in Thana and Kolaba thas proves that licit liquor in those districts is greatly over-tuxed. The proper. remedy, therefore, against illioit distillation is not an oppressive restriction of the free use of nseful articles bat a redaction of this high taration. We earnestly bope Lord Harris will consider this espect of the question Beriously and withont anybias.. Sir Charles Pritchard thinks, or at any rate professes to think, that the passing. of the present measure will easble Government to reduce the cost of preventive establishments. But a little reflection will show that this is en idle bope, $f_{\text {or }}$ the "machinery. that is now required for the detection of ilicit distiliation will after wards be required for the detection of the illicit possession; import, transport te. of the fowers.

We apreal to the Govornment of Bombay in general and to Lord Harris personaily to drop this Bill. It affecis the interesta of euch of oar bretbren as are far too ignorant to adersiand its nature and scope and too poor to make theif voice heard and fot whom lifo bat few conforts and fewer hopes. That the measure is iutotasely unpopular ie now begond all doubt. Tbe éstire nativé prese has expressed its disapproval of it; the two Bombery dailiee bavodecounced it in vigoroas terma; and orea the Goiverament of Iadia kas in the pest twice taiken the nuasal course of openly deprecating it. False notione of bumiiiation may prevent the Bombay Governceent from dropping the Bill now; but wise statesmanstip and a. geavine rejard for the true intereate of the people alike dictate the course which we have earnestly and respectfcily askel. Gorerament to take.
