CONTENTS OF VOLUME IV.

	Page.
The textile industry in Philadelphia	3033-3090
Tobias Hall, cloth and upholstery goods weaver.....	3035
John Breen, grievance officer Tapestry Carpet Workers of Philadelphia.....	3042, 3051
Arthur Spencer, managing director John & James Dodson (Inc.).....	3052
W. Park Moore, manager and treasurer Brown Knitting Co.....	3060
Arthur McDonnell, president Dyers and Mercerizers' Union.....	3064
Mitchell Stead, of Folwell, Bro. & Co.....	3073
William T. Ferris, president Hosiery Workers' Local 696.....	3078
Rufus W. Scott, director and plant manager Taubel Hosiery Mills.....	3080
Miss May Yearsley.....	3085
Exhibits	3086-3090
McDonnell exhibit.....	3086
Ferris exhibit.....	3088
Yearsley exhibit.....	3089
Stead exhibit.....	3090
The women's garment industry of Philadelphia	3091-3171
Morris Bernstein, manufacturer ladies' cloaks and suits.....	3093
William A. Kelly, secretary Women's Garment Manufacturers' Association of Philadelphia.....	3121, 3126
Max Amdur, business agent Cloak and Skirtmakers' Union of Philadelphia.....	3134
Miss Becky Stein, finisher, garment worker.....	3150
Exhibits	3158-3171
Amdur Exhibit No. 2.....	3158
Industrial conditions and relations in Chicago	3173-3457
Charles Piez, president Link Belt Co.....	3175
John H. Walker, president Illinois State Federation of Labor.....	3196-3202
Dudley Taylor, general counsel Employers' Association of Chicago.....	3224-3227
Miss Elizabeth Maloney, financial secretary and business agent Waitresses' Union.....	3244-3253
Edward T. Bent, member executive board, Illinois Coal Operators' Association.....	3259
Duncan McDonald, secretary-treasurer United Mine Workers of Illinois.....	3271
John Fitzpatrick, president Chicago Federation of Labor.....	3280
John M. Glenn, secretary Illinois Manufacturers' Association.....	3295
Samuel Insull, president Commonwealth Edison Co., Chicago.....	3307
Victor A. Olander, secretary Lake Seaman's Union.....	3319
Miss Mary E. McDowell, head resident, University of Chicago settlement.....	3328
F. S. Delbier, associate professor of economics, Northwestern University.....	3333
Charles W. Gindele, general building contractor.....	3335
Simon O'Donnell, chairman Chicago Building Trades Council.....	3347
E. M. Craig, secretary Building Construction and Employers' Association.....	3356
John A. Metz, president Carpenters' Union.....	3359
James Mullenbach, superintendent Oak Forest Institution.....	3361
George M. Reynolds, president Continental Commercial Bank, Chicago.....	3366
John G. Sheild, president Marshall Field & Co.....	3371
Miss Agnes Nestor, president Women's Trade Union League of Chicago.....	3377

	Page.
Industrial conditions and relations in Chicago—Continued.	
Miss Grace Abbott, director, Immigrants' Protective League.....	3391
John H. Hibbard, commissioner, National Metal Trades Association.....	3393, 3400
Dr. Theodore B. Sachs, president Chicago Tuberculosis Institute.....	3397
Charles W. Fry, business agent, machinists.....	3413
T. E. Donnelley, printing, publishing, binding, and engraving....	3418-3422
Edwin R. Wright, president Typographical Local Union No. 16.....	3433
Frank C. Caldwell, president H. W. Caldwell & Son Co., engineers, founders, and machinists.....	3437
George W. Perkins, president and secretary Cigar Makers' International Union.....	3440
Exhibits.....	3445-3457
Walker Exhibit.....	3445
Bent Exhibit No. 3.....	3446
Bent Exhibit No. 4.....	3447
Nestor Exhibit.....	3450
Abbott Exhibit.....	3453
Sachs Exhibit.....	3454
Donnelley Exhibit.....	3457
Life and labor conditions of Chicago stockyards employees.....	3459-3531
Prof. John C. Kennedy, secretary Socialist Party of Illinois.....	3461
J. Ogden Armour, president Armour & Co.....	3486
John E. O'Hern, general superintendent Armour plants.....	3498, 3513
Dennis Lane, general organizer Amalgamated Meat Cutters and Butcher Workers of North America.....	3516
Exhibits.....	3519-3531
Kennedy Exhibit No. 1.....	3519
O'Hern Exhibit.....	3525
Conditions of employment of waiters and cooks.....	3533
Fred Eberling, financial and business secretary Cooks' Union.....	3535
Industrial conditions and relations in the gold-mining operations at Lead and Black Hills, S. Dak.....	3537-3679
Thomas J. Grier, superintendent, Homestake Mining Co.....	3539, 3570, 3647
Thomas D. Murrin, manager, Hearst Mercantile Co.....	3578
Right Rev. Joseph F. Busch, Bishop of Lead, Rapid City.....	3588
Rev. D. C. Warren, local elder, Methodist Church, Lead City.....	3600
James Kirwan, member, Western Federation of Miners.....	3602
E. F. Irwin, in charge employment office, Homestake Mining Co.....	3608
Dr. F. E. Clough, first assistant surgeon, Homestake Mining Co. hospital.....	3614
Thomas Ryan, secretary, Miners' Union.....	3619
Warren E. Scoggan, member, Miners' Union.....	3621
H. L. Howard, mayor, Lead, S. Dak.....	3625
G. A. Northam, special agent, Homestake Mining Co.....	3630
Chambers Keller, attorney, Homestake Mining Co.....	3585, 3635
J. L. Neary, credit man, Homestake Mining Co.....	3641
S. R. Smith, mercantile business, Lead.....	3643
Victor A. Lusler, cashier, Miners & Merchants Savings Bank.....	3646
Exhibits.....	3659-3679
Grier Exhibit No. 3.....	3659
Grier Exhibit No. 4.....	3664
Irwin Exhibit.....	3668
Clough Exhibit.....	3669
Howard Exhibit No. 2.....	3671
Northam Exhibit No. 1.....	3674
Northam Exhibit No. 2.....	3674
Keller Exhibit No. 1.....	3674
Keller Exhibit No. 2.....	3677
Keller Exhibit No. 3.....	3677
Smith Exhibit No. 1.....	3679
Mining conditions and industrial relations at Butte, Mont.....	3681-4095
C. F. Kelley, vice president and managing director, Anaconda Copper Mining Co.....	3683, 3711, 3859
Clarence A. Smith, manager, Socialist Publishing Co., and president of Butte city council.....	3723
Dennis Murphy, miner, Anaconda Copper Mining Co.....	3736

THE TEXTILE INDUSTRY IN
PHILADELPHIA

(For exhibits under this subject, see pages 3086 to 3090)

COMMISSION ON INDUSTRIAL RELATIONS.

PHILADELPHIA, June 29, 1914.

Present: Commissioner Weinstock (acting chairman), Commissioner Lennon, Commissioner O'Connell, and also E. H. Busiek, special counsel.

Mr. BUSIEK. I will call Mr. Tobias Hall.

TESTIMONY OF MR. TOBIAS HALL.

Mr. BUSIEK. Please state your name.

Mr. HALL. Tobias Hall.

Mr. BUSIEK. What position do you hold?

Mr. HALL. None whatever.

Mr. BUSIEK. What is your craft?

Mr. HALL. Cloth weaver and upholstery goods weaver.

Mr. BUSIEK. Are you a member or an officer of any union?

Mr. HALL. I am a member of the upholster goods weavers' union.

Mr. BUSIEK. How long have you worked at that trade?

Mr. HALL. Since 1880.

Mr. BUSIEK. Are you an officer in the union?

Mr. HALL. No, sir; not what they term an officer; just a delegate to the central body of Philadelphia.

Mr. BUSIEK. About how many men are there in your craft in Philadelphia in the textile industry?

Mr. HALL. About 1,000 or 1,200.

Mr. BUSIEK. Upholstery weavers?

Mr. HALL. Yes, sir.

Mr. BUSIEK. And how many weavers are there on ordinary cloths?

Mr. HALL. Possibly 10,000.

Mr. BUSIEK. About 10,000?

Mr. HALL. Yes.

Mr. BUSIEK. What is the prevailing rate of wages for weavers in the upholstery industry?

Mr. HALL. Wages vary on the different grades of work. We are paid by the pick.

Mr. BUSIEK. Just explain briefly what the pick is.

Mr. HALL. Every time the shuttle goes across from one side of the cloth to the other, that is the pick, and we base our prices on the number of picks per inch, so that if there are 100 picks to the inch and the price is 2½ mills a pick that would be 25 cents per yard.

Mr. BUSIEK. How much can an average worker earn, running full time, at that price?

Mr. HALL. Running full time?

Mr. BUSIEK. Yes.

Mr. HALL. That is something which never occurs.

Mr. BUSIEK. How much can he earn a day when working?

Mr. HALL. When he works by the day?

Mr. BUSIEK. Yes.

Mr. HALL. From \$2.50 to \$3.75.

Mr. BUSIEK. About what proportion of the time are the men idle?

Mr. HALL. We have what we call two slack seasons and two busy seasons. In the busy season, when I say that they never know what time they are working. In the busiest season one is liable to wait for filling, cards, breakage, and machinery from one hour to one week.

Mr. BUSIEK. Is that taken out of the employees' time?

Mr. HALL. We work piecework; we don't get any pay for anything we don't produce.

Mr. BUSIEK. I see. Tell the commission something about the mechanical development of the looms as affecting your trade.

Mr. HALL. There has been practically no change in my experience in the upholstery-weaving end. In the clothing-weaving end also there has been very little change outside of the speeding up of the looms, and where we used to have one loom in, say, 1880, when I worked in the cloth business, prior to going into the upholstery trade, it has developed now into a two-loom system and where we used to get 2 mills per pick it is now 1 mill per pick on each loom. In other words, we get the same wages, but do double the amount of work on those machines.

Mr. BUSIEK. You talk about what is called speeding up. Is the extra speed put on by the machines reflected in the amount of work that the men have to do, or, what I am trying to get at, do the machines work more and the men less?

Mr. HALL. No; the machine works more, and the worker keeps up with the machine and gives that much extra energy.

Mr. BUSIEK. Then, as I understand it, in the cloth trade they have added another loom?

Mr. HALL. Oh, yes; another loom.

Mr. BUSIEK. Not the wages, so that a man can earn as much on two looms as he formerly did on one?

Mr. HALL. Yes.

Mr. BUSIEK. And they have speeded up the machines about how much faster?

Mr. HALL. Well, very little in the cloth, possibly 10 picks a minute.

Mr. BUSIEK. Have they speeded up considerably in the upholstery?

Mr. HALL. No; very little. I will tell you why. They found in speeding up, if they introduced any inferior material, the loom did a lot of stopping, and they did not get the production. It was a costly experiment, and it did not prove successful, and they did not carry it out to any great extent. That practically remained as it was. That is the speed of the loom 30 years ago and to-day.

Mr. BUSIEK. About what percentage of the men in your craft are organized?

Mr. HALL. In the upholstery trade, fully 50 per cent.

Mr. BUSIEK. And in the cloth trade?

Mr. HALL. The percentage is so low you very near have to get a magnifying glass to find it. That is why they are running two looms in that business.

Mr. BUSIEK. With a stronger organization, would it be the spirit of your organization to resist the two-loom system?

Mr. HALL. We fought against it continuously and successfully for the last 20 years in the upholstery end. The cloth weavers have fallen down lamentably, and the two-loom system is the prevailing system at the present time.

Mr. BUSIEK. What is the comparison of wages paid where you have contracts with employers, or what is termed closed shop and open shop?

Mr. HALL. In the upholstery trade the closed shops, or the union men, have set the price for the nonunionists. The price per yard is the same in all the shops. The nonunion employer, or the employer that has got only a small percentage of union men in his plant, is so much afraid of the strength of the union, the prestige of it, that he falls in line with the price adopted by the union employer.

Mr. BUSIEK. What is the situation in the cloth trade?

Mr. HALL. The cloth trade has no fixed price; some pay 1 mill a pick on each loom, where there is two looms; 2 mills a pick on one machine, and in some places they pay 5 per cent additional, and in others they do not. In some cloth shops they don't pay by the pick at all, in the hard cloth shops, where they pay by the piece, and if the employer thinks he needs a little more profit out of the employee, he increases the length of the piece; where it used to be 50 yards, he tacks on 5 yards more without any extra pay.

Mr. BUSIEK. That is, he just makes the scale for 55 yards instead of 50?

Mr. HALL. Just the same old piece, say, \$4.50 a piece; he tacks on a few more yards when he needs another automobile or something like that.

Mr. BUSIEK. As to the number of men in the business in Philadelphia, how is the labor market?

Mr. HALL. The labor market, generally speaking, in the cloth trade is overstocked, and in the upholstery trade in our busy season sometimes we have a shortage for a week or two or two weeks, and then an oversupply, by dumping them in the market.

Mr. BUSIEK. Is there any difference in skill between a cloth weaver and an upholstery weaver?

Mr. HALL. Well, quite a little. It is a different machine. The loom proper is the same loom, but in upholstery weaving they have a jacquard on it and it is up in the air, and you have to learn to be a rigger and a climber and that sort of thing, and that is why we are not troubled much in the upholstery trade by females. They get in an embarrassing position and leave the shop, because they can not face the men afterwards.

Mr. BUSIEK. There is a tendency in the trade—or what is the tendency of the trade toward the employment of women? Is the employment of women growing, to the exclusion of men, or not?

Mr. HALL. In the cloth trade, yes; but not in our trade. We are not troubled, as I have told you, with women, on account of them getting into embarrassing positions.

Acting Chairman WEINSTOCK. You say you are not troubled with women? Mr. HALL. Sir?

Acting Chairman WEINSTOCK. You say you are not troubled with women?

Mr. HALL. Yes; I will put it that way. I am a married man, though, Mr. Commissioner, and don't think I am a soured one, either; I have got a good wife.

Mr. BUSIEK. Do women draw the same wages as the men?

Mr. HALL. Per yard; yes, sir.

Mr. BUSIEK. Can women, in the main, weave as much cloth as men?

Mr. HALL. Women generally stick at it closer than men, in my experience, for fear of losing their jobs. They know they are in competition of men, and the man is the stronger, and they hang on when men weary of the sameness and stop.

Mr. BUSIEK. What is the disposition of the employers in Philadelphia at large to deal with organizations or crafts in the trade?

Mr. HALL. Positively decline to recognize unions; that is, officially, mind you. Unofficially, in our trade, we make them recognize us.

Mr. BUSIEK. What is their attitude toward men who have gone on a strike?

Mr. HALL. Taking our trade, it is in the vanguard in making the weaving conditions better. They assume a militant attitude in strikes or in the enforcement of sanitary and factory laws. Once they get out of a shop it's pretty nearly physically impossible to break in again. Myself, for example; they have not permitted me to go into a shop for seven years.

Mr. BUSIEK. Were you ever arrested for violence?

Mr. HALL. Never in connection with labor troubles; just for a difference between a man and myself; we had a little difference and got locked up; but I assume you want to get at the whole truth, I suppose.

Mr. BUSIEK. That is more of the truth than I want.

Mr. HALL. But I am a good citizen; I own property.

Mr. BUSIEK. Is there any—does your union notice any concerted action amongst the employers for the purpose of preventing the union from growing stronger or for breaking it down?

Mr. HALL. Yes; every time that we suggest a change for the betterment of the workmen the employers get very busy—are very busy men—the automobiles are flying around and breaking speed laws to get them all together.

Mr. BUSIEK. Is there any discrimination against union men in the shops—men who are not militant, as you say?

Mr. HALL. Well, the employer uses some discretion in that matter. If he thinks a union man would not disturb anything, he will let him stay; but if he knows there is any militancy about that union man, then, at the first opportunity, he removes him.

Mr. BUSIEK. What do you understand by the term "militancy" which you use?

Mr. HALL. Well, a disturber, from the employer's point of view, from peaceful and orderly conditions. Leaving things alone and not interfering with his business, as he terms it.

Mr. BUSIEK. What would you call a peaceful organizer?

Mr. HALL. There is no peaceful organizer—not from the employer's point of view.

Mr. BUSIEK. Well, take this; A man who out of shop hours, for instance, would go around to his friends in the shop and at their homes and attempt to organize them; do you call him a militant, or do you think he would be objectionable to the employer?

Mr. HALL. Yes.

Mr. BUSIEK. You would?

Mr. HALL. Yes, sir.

Mr. BUSIEK. What are the sanitary conditions in the mills in Philadelphia?

Mr. HALL. In the upholstery trade, fair. We have seen to that by hammering away at the factory-inspection department for the last 15 or 18 years.

Mr. BUSIEK. What is your experience with the factory-inspection department as to the action which it takes when a complaint is made?

Mr. HALL. At this time the factory-inspection department seems to be in a receptive mood; they are willing to listen to our complaints and try to better the conditions as we point them out as being bad.

There are some things, though, that I think it would be well for this commission to study, and possibly they can help. There is a part of the law—the factory law of Pennsylvania, which states that the employer shall provide suitable and proper drinking water. The water is warm now, and in some shops the employer does not provide ice to cool the drinking water. The department of factory inspection in Philadelphia—the chief—is in doubt whether he has authority to force the employer to provide the ice.

Mr. BUSIEK. Well, is there any doubt in his mind whether or not warm, tepid water is suitable drinking water or not?

Mr. HALL. Yes; he stated to me—I think it was either two weeks ago this morning, or three weeks, when I called his attention to the fact that there were some shops—and I specified them; gave him the names of them—where the employer was permitting money to be collected for ice to cool the drinking water—he stated he was in doubt, and that the department was in doubt, as to what the law meant—whether they had the power to force the employer to buy ice or not.

Mr. BUSIEK. What is the attitude of the employers in Philadelphia in regard to labor-saving devices and their installation? Is there compliance with the existing laws?

Mr. HALL. In my experience, I might state, I was a deputy factory inspector for 18 months in Philadelphia, and in my experience in that 18 months the employer did not either want to or did not believe in supplying labor-saving devices nor protective devices. He considered it a hardship and a punishment whenever the department got on a little spasm now and then and did move a little.

Mr. BUSIEK. Well, I was unfortunate in my question. I did not mean labor-saving devices; I meant protective devices.

Mr. HALL. Protective devices?

Mr. BUSIEK. Protective devices.

Mr. HALL. He did not seem to warm up to it; he seemed to think it was a hardship and a punishment and resented it.

Mr. BUSIEK. Well, is there substantial compliance with the existing laws?

Mr. HALL. The department at this time seems to be moving toward betterment all along that line. Take the upholstery trade, for instance. We took one shop, a shop that we had strength enough, we believed, to retain the men in that shop, at least, so that we would help with these protective devices, and we have the chief factory inspector in Philadelphia and his assistant and our committee and the manager of that shop get together and devise protective devices, and we have got that shop now as an example and the chief of the department is going to carry out that plan all through the upholstery departments, the upholstery weaving department. That is the understanding at this time with the chief of the department in Philadelphia, and I believe he is carrying it out.

Mr. BUSIEK. As to the wages, going back to that subject, what has been the trend of the wages in the last 10 or 20 years?

Mr. HALL. During the panic times of 1892, 1893, 1894, 1895, 1896, 1897, the tendency was downward. The upholstery weavers' organization at that time was on its back, through depression in times and lack of enthusiasm, but in 1899 we had a resurrection of spirits, and from 1899 to this time we have been on the upward movement, where we got a mill and a half a pick on some jobs, we get now 2½ for the same job, and so you can see the difference.

Mr. BUSIEK. Well, how does that compare with the wages you got before the depression of 1893?

Mr. HALL. Better; a shade above 1893, and prior to the cutting.

Mr. BUSIEK. About what percentage?

Mr. HALL. Well, possibly an average of about 10 per cent.

Mr. BUSIEK. About 10 per cent?

Mr. HALL. Well, some extra fine goods at that time, there was quite a lot of fine work which has practically extended to this time. There would be a big cut if we worked it under our present system, but when we get extra fine work, we then have a new scale adopted for it.

Mr. BUSIEK. This commission would also like to have your idea, if you have given the matter thought, as to the underlying conditions for industrial unrest, and what steps could be taken by Congress to minimize the evils as they exist, and remedy such defects in the law as they exist.

Mr. HALL. I believe a change in our entire economic system would be in order.

Mr. BUSIEK. But short of a complete revolution of the economic system, is there any immediate relief?

Mr. HALL. Yes; I believe in a minimum wage; the unrest, as I find it, is caused by a lack of having the necessary amount of money to provide the nourishment for the body and the pleasures for the brain.

Mr. BUSIEK. How about a maximum workday or working week?

Mr. HALL. Oh, yes; we are crazy for that.

Mr. BUSIEK. To get back to your own industry, what are the conditions of hours in Philadelphia?

Mr. HALL. Prior to 1899 the working week was 60 hours with overtime added, whether we liked it or not, without any extra compensation; since that time we went on strike in 1899 for increase in wages and a shortening of the work week to 55 hours. That was the beginning of the agitation for the law that is now a fact, the 54-hour law. The organization that I belong to were the pioneers in that movement. In 1903, through the agitation of our textile organization, we had a general strike in Philadelphia for a shorter working week, a 54-hour week. At that time it was an apparent failure, but what appear to be failures sometimes in industrial contests are successes.

The agitation that I have stated here has resulted now in a 54-hour week. That is for women we have this legislation, but women cut quite a figure in the textile industry. They supply the material that we weave with. After we have woven the material the women take out and mend up the defects, so that when the women are forced into the 54-hour week, naturally the men can not go along after that, and, of course, we have the 54-hour week with them. God bless the women for that.

Acting Chairman WEINSTECK. You say the employers of Philadelphia in the textile industry will not recognize or deal with organized labor except in your particular trade?

Mr. HALL. They don't officially recognize us.

Acting Chairman WEINSTECK. You represent the weavers?

Mr. HALL. The upholstery goods weavers and cloth weavers.

Acting Chairman WEINSTECK. Well, how many weavers are in your trade in this city?

Mr. HALL. About 1,000 now, in the upholstery; 1,000 to 1,200.

Acting Chairman WEINSTECK. How many of those are organized?

Mr. HALL. About 50 per cent.

Acting Chairman WEINSTECK. 50 per cent?

Mr. HALL. About; that is, round numbers.

Acting Chairman WEINSTECK. Well, is that number sufficiently large to compel recognition on the part of the employer?

Mr. HALL. Yes, sir; unofficial recognition.

Acting Chairman WEINSTECK. Well, I don't understand the distinction between unofficial recognition of the union and official recognition of the union. Will you please explain?

Mr. HALL. The official recognition would be the getting together and agreeing with all our feet under the table on a scale of wages, and signing it.

Acting Chairman WEINSTECK. Yes.

Mr. HALL. Unofficial recognition is the fact that after a contest with the employer and he having to come down from his original position, he then hands over a scale of wages to the employees, which is a compromise, generally, and he says, "This firm will pay that," and if the workers in the shop are then not strong enough to compel him, he evades paying all of them and living up to the conditions he has handed out.

Acting Chairman WEINSTECK. You mean—

Mr. HALL (interrupting). But where we have a sufficient number of union men, then we have a committee that demands recognition in the office.

Acting Chairman WEINSTOCK. You mean that whatever collective bargaining may be done in your particular trade, is done by the individual employer and the employees in his own shop?

Mr. HALL. No; I won't put it that way, Mr. Commissioner. He acts collectively with his fellow employees, and then tries to deal individually with his shops; respective shops.

Acting Chairman WEINSTOCK. You mean that the employers are a unity?

Mr. HALL. Yes, sir.

Acting Chairman WEINSTOCK. They agree among themselves what they are willing to pay?

Mr. HALL. Yes, sir.

Acting Chairman WEINSTOCK. And then each employer deals with the group in his own shop?

Mr. HALL. Yes.

Acting Chairman WEINSTOCK. Individually?

Mr. HALL. Yes.

Acting Chairman WEINSTOCK. Well, may not that result, then, in different rates prevailing in different shops?

Mr. HALL. No; not likely. I will tell you why. The weavers get together—

Acting Chairman WEINSTOCK. Yes.

Mr. HALL. And the nonunion weaver—this other 50 per cent—he has at some time invariably been a member of our organization, but through some cause he has dropped out, and he won't go in to work until the unions say so. His employer can not do business with him until the union agrees to let him go.

Acting Chairman WEINSTOCK. In other words, the nonunion worker lets the union set the pace for him?

Mr. HALL. That is the idea exactly.

Acting Chairman WEINSTOCK. Though he is not a member of the union?

Mr. HALL. That is all; takes all the benefits without paying any tribute.

Acting Chairman WEINSTOCK. Well, don't the employer at times dicker with the unions?

Mr. HALL. Not directly.

Acting Chairman WEINSTOCK. In other words, supposing the employers got together and fixed a certain wage list, call it 10, and then each employer separately submitted that to the workers in his shop, and the workers of the different shops come together and discuss this question as to whether 10 was satisfactory or unsatisfactory, and they decided that it was not satisfactory, and that they wanted 11 or 12.

Mr. HALL. Mr. Commissioner—

Acting Chairman WEINSTOCK (interrupting). And then each group would go back to its own employer and demand 11 or 12. Wouldn't there be more or less dickering going on before they could reach a conclusion?

Mr. HALL. We have never found that condition to exist that you just pictured. The manufacturer never comes together to do business with his employee until the employee demands something; never comes out and says, "We are going to raise your wages," or anything like that.

Acting Chairman WEINSTOCK. The initiative must come from the workers?

Mr. HALL. Undoubtedly.

Acting Chairman WEINSTOCK. Well, let's reverse the case, then, this hypothetical question.

The workers come together and say, "We are getting 10 and we want to get 12."

Mr. HALL. Yes.

Acting Chairman WEINSTOCK. And each makes a demand on his individual employer, or a committee makes a demand, and the employers get together and discuss it and reach the conclusion that 12 is too much, and they might be willing to pay 11, and they come back to the men and say, "We will give you 11."

Mr. HALL. That is what they do. I don't recall any of them attempting to agree until after we have had a contest. The employer believes he should not recognize the weaver, even to the extent of formulating a price list, until he has been in a contest lasting a number of weeks, and then he thinks it over in the manner you have suggested. He then gets in touch with his own weavers, and wants to know why they can not get down to some rate basis. "Now, you fellows are asking too much." That is about the tone of his talk. "I could suggest to my fellow manufacturers that if your folks would accept such a price it would about go through."

Acting Chairman WEINSTOCK. Then, there is more or less unofficial dickering? Mr. HALL. Yes; that is the idea; unofficial dickering.

Acting Chairman WEINSTOCK. Well, how often have you had industrial difficulties in your industry, say, in the last five years?

Mr. HALL. In the last five years?

Acting Chairman WEINSTOCK. Yes.

Mr. HALL. Well, last year we had the entire trade on strike for an increase of wages.

Acting Chairman WEINSTOCK. Here in Philadelphia?

Mr. HALL. Yes; it is all in Philadelphia—our business—practically speaking. We had the entire trade out; that is, we made a demand all along the line, and every shop came out but one, where the employer conceded the demand. That is a shop that we term a closed shop. We had the say so, whether our men shall stay there or not if they don't be good.

In that case, after a battle of 11 weeks, the employers conceded an advance of from 8 to 12 per cent instead of 15 to 25. Of course—

Acting Chairman WEINSTOCK (interrupting). A compromise settlement?

Mr. HALL. Yes. The shop that was already giving 15 to 25 per cent, of course, the manufacturer got the benefit of that, and they slipped back with the other.

Acting Chairman WEINSTOCK. Well, that strike occurred you say, last year?

Mr. HALL. Began April 1, 1913.

Acting Chairman WEINSTOCK. And took about 11 weeks?

Mr. HALL. Eleven weeks; yes, sir.

Acting Chairman WEINSTOCK. What was the preceding strike to that?

Mr. HALL. For wages.

Acting Chairman WEINSTOCK. How long an interval between the strikes?

Mr. HALL. Well, the strike prior to that one was about 12 or 13 weeks.

Acting Chairman WEINSTOCK. It happened when?

Mr. HALL. I can not just recall the year.

Acting Chairman WEINSTOCK. Approximately when?

Mr. HALL. Somewhere about 1904 or 1905—1904, I think; something like that.

Acting Chairman WEINSTOCK. Have the workers in your industry here, so far as you know, any grievances at this time?

Mr. HALL. In what way, general grievances?

Acting Chairman WEINSTOCK. Have they any general grievances, either as to hours, wages, or working conditions?

Mr. HALL. Yes; we want still shorter hours and more money. Never satisfied, Mr. Commissioner. We are after all we can get hold of.

Acting Chairman WEINSTOCK. Well, in that respect you seem to be made out of the same sort of common clay that the employer is made out of.

Mr. HALL. Yes.

Acting Chairman WEINSTOCK. He also is never satisfied.

Mr. HALL. Yes; we understand that it is just a question of who shall take the most of the toilers' property.

Acting Chairman WEINSTOCK. You don't, then, have what are known as trade agreements? When this issue arises about wages and you finally come to an understanding is that understanding purely verbal, or do you enter into a regular written agreement with the employer?

Mr. HALL. No; the employer, after he and his fellow employers agree on something and we agree to accept it, he then tacks it up on the wall and signs his name to it.

Acting Chairman WEINSTOCK. There is no such thing, then, as an actual agreement between the employer on one side and the workers on the other?

Mr. HALL. No; unofficial. You see, that was the unofficial part I stated a while ago.

Acting Chairman WEINSTOCK. Now, do you think it would be better for the workers and better for the employers—

Mr. HALL (interrupting). I am not thinking about the employer, Mr. Commissioner.

Acting Chairman WEINSTOCK. Well, you have an opinion you may be willing to express?

Mr. HALL. All right.

Acting Chairman WEINSTOCK. You want to remember, of course, that no one-sided arrangement can ever stand. It has got to be mutually satisfactory to become permanent. Do you think it would be better for both sides if the same

conditions could be established in your industry that prevails in the glass-blowers' industry and the pottery industry as you heard testified here?

Mr. HALL. I did not hear Mr. Hayes.

Acting Chairman WEINSTOCK. There is the glass-blowers' industry, and in the pottery industry it has been testified that both the employers and the workers have organization on both sides. Each side recognizes and deals with the other. Trade agreements are entered into which are mutually respected. Do you think the conditions that prevail there could be applied with equally good results in your industry?

Mr. HALL. Undoubtedly; undoubtedly. I believe better results would be obtained all along the line.

Acting Chairman WEINSTOCK. Better for both sides?

Mr. HALL. More peace of mind and more efficiency.

Acting Chairman WEINSTOCK. Wouldn't that tend to minimize industrial unrest in your industry?

Mr. HALL. I would think so.

Acting Chairman WEINSTOCK. Would that tend also to remove the causes for industrial unrest?

Mr. HALL. No; I don't think so. There will always be cause, I believe, for some unrest and dissatisfaction.

Acting Chairman WEINSTOCK. Well, you mean that there would always be disputes?

Mr. HALL. Yes.

Acting Chairman WEINSTOCK. There is a difference between a dispute—the unrest caused by a dispute and the unrest caused by a war. That is, I may have a dispute with you, and by our coming together and letting reason prevail we may adjust it and adjudicate it as nearly as we can to our mutual satisfaction.

Mr. HALL. And have more respect for each other.

Acting Chairman WEINSTOCK. And then there is another way of settling it, by brickbats and cobblestones?

Mr. HALL. Yes; but then that don't generally settle anything permanently.

Acting Chairman WEINSTOCK. No. Now, do you think that by adopting the system prevailing in other industries, adopting it in yours, you will minimize the cobblestones and brickbats?

Mr. HALL. Yes; if the employer would not always forget this one point: That the fellow who presents the employees' side should not be punished for his efficiency in representing their side. There must be some pressure put on that side to show him that he is creating a dangerous condition of society. If you, Mr. Commissioner, make my life a nightmare and won't permit me through some channel which you control to live, I will not be a law-abiding citizen very long. The animal will predominate then and I will fight back. That is a fact, isn't it?

Acting Chairman WEINSTOCK. That is all, Mr. Hall. Thank you, very much.

TESTIMONY OF MR. JOHN BREEN.

Mr. BUSIEK. Mr. Breen, please, for the purposes of the record, state your full name.

Mr. BREEN. John Breen.

Mr. BUSIEK. And you are in the carpet industry?

Mr. BREEN. In the tapestry carpet industry.

Mr. BUSIEK. Are you at present employed?

Mr. BREEN. Not at present employed.

Mr. BUSIEK. Are you an official of any labor union representing your industry?

Mr. BREEN. Tapestry Carpet Workers of Philadelphia.

Mr. BUSIEK. What is your position?

Mr. BREEN. We call it speaker. I believe it should really be grievance officer.

Mr. BUSIEK. How long have you been in the carpet-weaving industry in Philadelphia?

Mr. BREEN. Thirty-two years.

Mr. BUSIEK. How long have you been a member of this organization?

Mr. BREEN. Since its organization in 1902.

Mr. BUSIEK. About how many men are there in your industry in Philadelphia?

Mr. BREEN. About 2,000—no, no; about 1,400.

- Mr. BUSIEK. About what per cent of those are organized?
- Mr. BREEN. About 800 or 900.
- Mr. BUSIEK. About 60 or 65 per cent, would you say?
- Mr. BREEN. Sixty-five per cent.
- Mr. BUSIEK. Your organization is connected with the United Textile Workers, is it?
- Mr. BREEN. Yes.
- Mr. BUSIEK. Of the American Federation of Labor?
- Mr. BREEN. Yes, sir.
- Mr. BUSIEK. You say your organization was first undertaken here about 1902 or 1903?
- Mr. BREEN. 1902.
- Mr. BUSIEK. What is the average wage of the journeyman carpet weaver in Philadelphia?
- Mr. BREEN. On full time?
- Mr. BUSIEK. On full time.
- Mr. BREEN. The average wage is about \$12.
- Mr. BUSIEK. And what is his average earnings?
- Mr. BREEN. Average earning this last five years is about \$9.
- Mr. BUSIEK. Are there any women in that branch of the work?
- Mr. BREEN. No women; they have been eliminated. Women were in it about 20 years ago.
- Mr. BUSIEK. Is the work too heavy for women?
- Mr. BREEN. Too heavy.
- Mr. BUSIEK. Does it require a man—a physically strong man—to do that work?
- Mr. BREEN. Yes, sir; it does.
- Mr. BUSIEK. Any boys under 16 in that line of work?
- Mr. BREEN. No; not in the weaving.
- Mr. BUSIEK. Then I take it the men are all mature men, such as become heads of families and are—
- Mr. BREEN (interrupting). Well, I would say that 19 is the limit, I believe—about 19. He would need assistance if he was younger than that, unless he was physically exceptional.
- Mr. BUSIEK. What has been your experience in regard to disputes with employers—that is, the experience of your organization? How frequently do you have trouble with the employers for various causes?
- Mr. BREEN. In 1898, during the depression, or rather the framing of the Wilson tariff bill, there was a general reduction of wages throughout the country. At that time the manufacturers of Philadelphia placed notices throughout the various shops reducing the help, I believe, 17½ per cent. That was the figure in Dobson's mills, Falls of Schuylkill. At that time a meeting of the employees was called and that was held at Stinson's mills in the finishing room; and George Earnshaw, a man who was well acquainted with the trade throughout the world, acted temporarily as chairman; and after it had been stated that a wage reduction of from \$3.60 per hundred to \$2.97 per hundred was necessary he was asked the question if it was not a fact that in Kidderminster, in England, they were at that present time paying \$3.50 per hundred and he refused to answer the question—
- Mr. BUSIEK (interrupting). Well, what is your knowledge on that subject?
- Mr. BREEN. That it was a fact, that they were paying \$3.50 at Kidderminster at that time when the employers here reduced the wages to \$2.97 per hundred.
- Mr. BUSIEK. That means that the English workman was higher paid—
- Mr. BREEN (interrupting). Per unit of product. Now, in August, 1901, prior to the organization of this union, the tapestry employees went on a strike to force the manufacturer to agree to return some of that that they had taken off. After a period of three weeks they agreed to give us 10 per cent—Mr. Dobson did. At that time there was an attempt to bribe, on the part of some of the bosses. In fact, the foreman of the tapestry department came out and spent a lot of money; if any names are wanted I haven't any hesitancy to make mention of names. Also the assistant superintendent came out and spent money on that occasion.
- Mr. BUSIEK. The assistant superintendent of what mill?
- Mr. BREEN. Of the Dobson mill. The following February we organized the trade in Philadelphia, and on the 8th day of May of that year we went out on strike—

Mr. BUSIEK. (interrupting). Just a moment. Mr. Spencer, of the Dobson mills, asked me to request you to give the names; and in view of that fact—

Mr. BREEN (interrupting). Yes, sir; sure. Charles Meadowcroft was the man who came to me and offered to give me some inducements—rather to promote me in the mill, if I would encourage the men to go back to work.

Mr. BUSIEK. Was he in connection with the Dobson mills?

Mr. BREEN. He was in charge of the weaving department, the starching department, and partly in charge of the finishing room. He at half past 9 in the morning gathered large numbers of weavers together and brought them into the saloon of Peter Miller and stayed there until half past 8 or 9 o'clock spending money. The assistant superintendent, who was John Denton, came in about 2 o'clock, and I said to Mr. Meadowcroft this: "Boys, don't say a word. I will prove the statement that I have made to you to be true." And I said to Mr. Denton, the superintendent, "Now, Mr. Denton, I hear you are at the other end of the Falls blowing yourself." Mr. Denton said, "Oh, this is not strike money I was spending. It was political money." And I said to Mr. Meadowcroft, "Are you satisfied?" But nevertheless, we won that strike. That was 10 per cent of the 17½ per cent that was taken off. This was in August, 1901. In February of 1902 we finished an organization throughout Philadelphia. On the 8th day of May, 1902, we went on strike in Philadelphia for some more of that which was taken off, and after 13 weeks of that strike we won 10 more per cent, or 11.8 per cent, to be accurate. In the eleventh week of that strike the foreman of the fire department of the Falls of Schuylkill Mill, Mr. McGeehan, came up to me and said to me, "I have a proposition for you. Can I speak to you this morning on it?" I says, "I don't know. Of course, I will talk to you." "Well," he says, "I am only a messenger in this case and we have a job for you as long as you live and the salary will be twice the amount that you have ever received in your life, and a money offer will be given to you through a political friend of yours," which I afterwards discovered to be Mr. Delahunty, the monument man, who works opposite North Laurel Hill. "All the debts you have incurred during these last 11 weeks shall be paid. All that is necessary for you to do is to take this job; and the other men are getting work wherever they choose and can get it."

Mr. BUSIEK. Where did he want you to take a job?

Mr. BREEN. He did not say; but we are coming to that. I think the commissioners should know these things, because these are the things that are injuring the cause of the workingmen and therefore taking certain amounts of money out of circulation. I said to the foreman of the fire department, "Go back and tell the man or the set of men that sent you that all the money in the city of Philadelphia would not make John Breen betray his fellow men." I called together the executive committee of the city, being chairman of it, and I stated to them, "It is all over but the shouting, but you have got to get the pickets to do their duty." And 10 days after that the firms had to give way.

Now, in reference to the breach of contract on the part of Mr. Dobson: Six weeks after we returned to work—the firms, of course, having decided to pay the scale of wages, 10 per cent increase over what it had been—six weeks about after that Thomas Russell, then being boss over the weaving department of Dobson's mill, came down and placed a notice reducing a certain grade of work which there were only three looms doing at that time, from \$5.15 to \$4.68; or, in other words, 47 cents per hundred yards less, and 8 cents less than we were getting before we went out on the strike on the 8th of May. I was one of those workmen that was on that job. The purpose was ulterior. There is no question about this. And I refused naturally to continue on the work until I had seen Mr. Dobson. The next morning in going in to see Mr. Dobson I was handed my envelope. Now, Mr. Russell was the boss at that time. Afterwards he lost that job, and is now a member of our union, and without any hesitancy he makes the statement that before he was employed as the boss he was asked to see that I got discharged. Apparently they did not have the hardihood to do it themselves and had to get this man. Now, in that same year, or the early part of 1903, we had another strike over setting the standards for the three shots—that is, two shots at the top and one at the bottom; and two shots was put in between the wire, because there is a blade on one side of it that strengthens and holds the worsted together. That strike was nine weeks. That strike was also a victory for the workers.

In 1903, this same year, the 55-hour movement was taken up and we entered into that and our industry won that with the exception of Dobson's mill. After

14 weeks Mr. Dobson was successful, but I would like to state to the commissioners that on the fifth week of that strike James Dobson—his brother is dead now—did state to a committee of our union, "We will give you the 55 hours. You have taken our men out. Now, fetch them in again." But, unfortunately, an overenthusiastic member of our union, who also was a member of a band, got this band to go out parading; and at 8 o'clock that evening another turn was taken. Mr. John Dobson made the statement, I believe, that he would undo it all, with a certain remark he made. He got tifted about the matter and he undid the whole thing. I believe at that time, had Mr. John Dobson not have interfered, the 55 hours would have been in effect after that.

Now, in 1906 we had another short affair of six weeks with the firm of Rogers & Hirsh, and that was settled in our favor to a small degree.

In 1910 there was a 17 weeks' strike in the tapestry trade, and it ended in a general increase of all of the help of 5 per cent.

November 23, 1911, the tapestry-carpet manufacturers appealed to the unions to accept a reduction of 20 per cent. Some of the reasons are these: "That owing to the high prices you have to pay your employees you are unable to compete with the Alexander Smith firm, owing to their placing their goods from 75 cents to \$2.75 per rug less than former prices were; and owing to the fact that they pay less wages in Smith's you can not sell your goods at these prices and pay the wages you are paying now." This is our answer, or a part of our answer, to the request of the manufacturers. Now, this, you remember, is the 23d of November, 1911. Secondly, that there are all indications of reductions in tariff at coming session of Congress, and in the face of this, all probabilities that a Democratic President will be elected, which will mean industrial conditions—this was on November 23, 1911. One of the manufacturers, John Gay—I don't know whether he is present or not—made a statement to me that things would be bad because of the injection in politics of college professors. I asked Mr. Gay if he had any particular college professor in mind, but he said no.

Now, this appeal for a reduction of 20 per cent naturally was refused and the 20 per cent was still kept in circulation, because it was in the hands of our consumers, and that was adding to the trade rather than restraining it 20 per cent; and that apparently is what is bothering the people, particularly our legislators. Now, this work—

Mr. BUSIEK. (interrupting). Now, who is this firm of Alexander Smith?

Mr. BREEN. They are the largest carpet manufacturers in the world.

Mr. BUSIEK. Where are they located?

Mr. BREEN. Yonkers, N. Y. They have a different system of weaving—

Mr. BUSIEK. A patented machine?

Mr. BREEN. No. They have men running the backs, and women running some of the machinery; but they do nothing—the women—but simply fill shuttles. They don't do any meshing or putting in the warps. In fact, they don't know how to weave, only to fill shuttles. But here in Philadelphia we do the whole thing.

Mr. BUSIEK. Are the men in Alexander Smith's organized?

Mr. BREEN. No.

Mr. BUSIEK. Would you still object to working on that same plan—

Mr. BREEN. What is that?

Mr. BUSIEK. Are your unions opposed to working in the same way the Alexander Smith mills do—that is, have women helpers?

Mr. BREEN. Do you mean without organization?

Mr. BUSIEK. No; I mean couldn't the Alexander Smith weavers make as much money as your weavers make?

Mr. BREEN. No, no; they can not. They do not pay them the money. And so far as working without organization is concerned, if we do not have a labor organization we can not have the publicity that is absolutely necessary. In fact, I do not suppose there would be such a commission in Philadelphia here to-day if labor organizations did not give their grievances this publicity. This commission would not be in existence.

Mr. BUSIEK. Have there been any labor-saving devices introduced in machinery in the last few years in your craft?

Mr. BREEN. Labor saving?

Mr. BUSIEK. Yes.

Mr. BREEN. No, sir. There has been greater producing machinery. I will state that when I started 32 years ago the loom was going the maximum rate

of speed of 70 picks—that is 70 times a minute. Now they are running anywhere up to 120. That is the maximum. They can run that. The weaver has to work just that much harder. He has got to produce just that much more work; and any damage that occurs goes that much farther and he has to rip out the cloth just that much farther and has got to put in that many more warps. He has to print the chain and back, which is the stuff. They come out just so much oftener and he puts them in. Of course he gets paid, but it is only because of labor organizations, does he get paid for the work that he is doing. He gets paid for that, but still there is a loss.

Mr. BUSIEK. Has the two-loom system increased, or has that entered into the tapestry weaving?

Mr. BREEN. It has only been attempted by Charles Maslin at Amber and Westmoreland Streets and was attempted two years ago now this coming summer; but was a failure. That is, I mean to say, there was a strike. That was an open shop, but there was a strike on there and they changed the loom—had 20 looms changed; I believe 20 was the number.

Mr. BUSIEK. Do you suppose high-speed machines put any of the weavers out of work?

Mr. BREEN. Well, I don't think so; I don't think they have. I think they really need the work. Of course there would have been—they would have been put out of work if we had learned everybody that came along the line, but to protect ourselves naturally we, who had a right to say who we learned, refused to learn only when the trade needed it.

Mr. BUSIEK. So you held down the number of apprentices?

Mr. BREEN. Yes, sir.

Mr. BUSIEK. Until the trade absorbed those men who would have otherwise been idle?

Mr. BREEN. Yes, sir. Now, there is a strike on at the present moment. Two in fact. One at Fifty-sixth and Lancaster, the Overbrook Carpet Co., and the other is at Oxford and Hedge Street, in Frankfort. That strike is in progress now since the 16th of December, 1911. And this was a breach in contract on the part of the Overbrook Carpet Co., and also on the part of the Alva Carpet Co. Here is a sworn statement by nine members of our organization

Mr. BUSIEK. Just its general purport, and then file the statement.

Mr. BREEN. The Overbrook Carpet Co. agreed with our organization committee, officers of the tapestry carpet organization to pay the same wages as the other manufacturers who were agreeing with us collectively. This they refused to do after the other manufacturers had signed an agreement with us, taking advantage of the other manufacturers, and also of their employees.

Mr. BUSIEK. Let me get this. Did those manufacturers sign an agreement with the unions?

Mr. BREEN. Yes, sir.

Mr. BUSIEK. Or recognize the unions as such?

Mr. BREEN. Yes.

Mr. BUSIEK. And this concern you are now speaking about merely had a verbal agreement with some of their workers and agreed—

Mr. BREEN (interrupting). Not with their workers, but with the officials of our organization.

Mr. BUSIEK. And agreed to abide by such conditions as were imposed in union shops?

Mr. BREEN. Yes, sir; and after the signing of the contract on the 1st of December, and on the 16th called the strike with us.

Mr. BUSIEK. If you will file that with the stenographer, or have a copy of it prepared.

Mr. BREEN. This I will expect you to return.

Mr. BUSIEK. Very well. We will have the reporter copy that into the record, then.

(The contract referred to is as follows:)

In the Court of Common Pleas, No. 4. For the County of Philadelphia. In equity, March Term, 1912—No. 6012. Overbrook Carpet Co., v. John Breen, John Dyson, Stephen Wood, William Lawler, Edward McGlinchy, Grover Hess, Thomas Tully, Frank Tully, Walter Brooks, Frederick Schofield, Peter Rice, George Mason, Sidney Mason, Thomas Garrity, William Rlegie, Michael Zampetta, Chas. Gillespie, John Brieley, and Harry Marshall.

ANSWER ON BEHALF OF ALL DEFENDANTS EXCEPT FRANK TULLY.

To the honorable the judges of the said court:

John Breen, John Dyson, Stephen Wood, William Lawlor, Edward McGlinchy, Grover Hess, Thomas Tully, Walter Brooks, Frederick Schofield, Peter Rice, George Mason, Sidney Mason, Thomas Garrity, William Riegle, Michael Zampetta, Tony Zampetta, Chas. Gillespie, John Brieley, and Harry Marshall, saving and reserving to themselves all and all manner of exceptions to the manifold errors in said bill contained, for answer thereto, or to such part thereof as they are advised it is necessary and material for them to answer, say:

First. We admit the averments contained in the first paragraph of complainant's bill.

Second. We deny the averment contained in the second paragraph of complainant's bill, and aver that in addition to the respondents mentioned therein, Frank Tully, one of the respondents, and William Riegle were not, prior to the 1st day of December, 1911, workmen in the employ of the complainant.

Third. It is not true, as set forth in the third paragraph of complainant's bill, that the respondent John Breen has been engaged with the other respondents, and with other persons in the organization and direction of the actions described in complainant's bill; that such statement is absolutely false. It is true, as averred in said third paragraph, that Michael Zampetta and Tony Zampetta entered the employ of the complainant subsequent to the 3d day of January, 1912, but have since that time left the complainant's employ.

Fourth. That it is not true, as averred in the fourth paragraph of complainant's bill, that on or about November 29, 1911, the complainant discharged the defendants, other than John Breen, Michael Zampetta, and Tony Zampetta. That said respondents were not discharged, but were laid off, and the reason given by the complainant at the time was that they were without orders sufficient to continue the employment at that time.

Fifth. That it is not true, as set forth in the fifth paragraph of complainant's bill, that on or about the 8th day of December, 1911, certain of complainant's discharged employees claiming to be a committee representing all of said discharged employees called at the office of complainant and stated that they proposed to declare a strike against complainant. That it is not true, as set forth therein, that the employees were discharged. That it is true that a committee composed of the officers of the printers' and weavers' unions did call at the complainant's office. That at said meeting they requested that the complainant thereafter recognize said unions in the carrying on of said work with said employees. That it is not true, as set forth in the said fifth paragraph that the complainant offered to setters who were formerly in its employ daywork with wages at the rate of \$15 a week. That the only offer made was at the rate of \$12 per week, with the exception of an offer to a few women employees to complete certain work at the rate of \$15 per week. That it is not true, as set forth in the said fifth paragraph of complainant's bill, that the wages of \$16 per week for weavers is in excess of the regular rate for such work. That the setters mentioned in said fifth paragraph of complainant's bill usually work by piecework, at which they are able to earn at the regular rate for such work the sum of \$18 and \$20 and upward a week.

That it is true that setters and weavers declined to accept the work as alleged in said fifth paragraph.

Sixth. We admit that the complainant is unable to procure all of its former employees to return to work for it, in accordance with the terms offered them, as set forth in the sixth paragraph of complainant's bill, but we aver that all of the former employees who were procured by the complainant were one printer, two setters, and a loom fixer. We admit that the complainant has supplied some of the places of employees who declined to return to its employment with other employees. We deny, however, the averment in the said sixth paragraph of complainant's bill, that we are by means of practices therein recited unlawfully interfering with the complainant's business and endeavoring to prevent complainant from carrying on its business.

Seventh. We deny the averment in the seventh paragraph of complainant's bill, that any of the respondents congregate around in the neighborhood of complainant's mills for the purpose of intimidating employees and applicants for work from going to work or accepting work from your complainant.

Eighth. We deny that the respondents are picketing the complainant's works to interview and dissuade workmen from applying for or continuing employment with complainant. We admit, however, that certain of the respondents have interviewed workmen employed by the complainant and have in a peaceable and lawful way attempted to persuade the said workmen to become members of the respondents' unions, and have endeavored to show such employees that the wages they were receiving from complainant were lower than those paid for the same class of work by competitors of complainant in Philadelphia.

Ninth. We deny that the respondents, or any of them, are harassing and annoying the complainant's employees, and applicants for employment, as set forth in the ninth paragraph of complainant's bill. We admit that certain of the respondents and officers of their respective unions have interviewed said employees and applicants on the streets and at their homes and in a peaceable and lawful way have attempted to persuade them to become members of respondents' union. That it is not true, as averred in the said ninth paragraph, that the respondents have threatened the said employees or applicants with physical violence, or called them names, or by various other devices attempted to annoy, frighten, or influence them so that they would refuse to work for complainant. That, as above set forth, all that the respondents have done as far as the complainant's employees or applicants for employment are concerned is to attempt to peaceably persuade them to become members of respondents' unions by showing to them the advantages of such unions and by showing to them that the wages paid by complainant are not the fair and regular wages paid by other firms in the same line of manufacture, and that it is to their interest, and to the interest of all workmen, that the wages paid should be the fair and reasonable, and market prices for such work, and that it is to their interest, in order to secure the same, that they should become members of and participate in the workings of said unions.

Tenth. We deny the averments contained in the tenth paragraph of complainant's bill, that the respondents are, by violence and threats of physical violence, assaulting and intimidating complainant's employees and intending applicants for employment.

Eleventh. We deny the averments contained in the eleventh paragraph of complainant's bill.

Twelfth. We deny the averment contained in the twelfth paragraph of complainant's bill, that the general management and direction of the various acts of respondents thereinbefore set forth in complainant's bill has been in the hands of the respondent, John Breen. We deny the averments as to the various acts of respondents as set forth in said bill. We deny that the respondent, John Breen, has organized the attacks which have been made on your complainant's employees from time to time. We aver, on the contrary, that such allegation is absolutely false. We admit that the said John Breen has never been in the complainant's employ, but we deny that he has no business in the vicinity of complainant's mills. That the respondent John Breen is secretary of the organization committee of the Tapestry Carpet Weavers Union, No. 2, and as such has business in the vicinity of complainant's mills in the interest of the members of said union. We deny that the said John Breen has been directing in various ways any unlawful acts whatever.

Thirteenth. We deny the averment contained in the thirteenth paragraph of complainant's bill, that the respondents, or any of them, have joined in any unlawful practices set forth in complainant's bill. For further answer to the complainant's bill, respondents aver that the complainant has been in existence and carrying on business for a period of about three years. That immediately after beginning business complainant made an agreement with committees and representatives of the tapestry carpet weavers and workers' union and the tapestry carpet printers and fillers' union, by which the complainant agreed verbally, through its duly authorized officers, that it would recognize the said unions, to which the respondents belonged, and would pay the same rate of wages and grant the same conditions as were paid and granted by other manufacturers of the same goods in the city of Philadelphia. That complainant duly carried out its agreement until the latter part of November, 1911, when it notified its employees that it would have to close down, by reason of it being out of orders, for an indefinite time. That the purpose of complainant in pretending to close down its mills for, as it alleged, an indefinite time, was to secure a reduction of wages that had been theretofore paid, and in violation of its agreement made with said union. That prior to the latter part of November, 1911, the complainant had recognized the respondents'

unions, and had granted its employees the same wages and conditions as to work as were then being paid and granted by the other manufacturers of the same goods in the city of Philadelphia, as aforesaid. That after having sent its employees away in the latter part of November, 1911, as aforesaid, it sent for certain of its former employees and notified them that it had work, but at a reduction of wages running from 20 to 30 per cent, and which would make the wages paid by the complainant to its employees 20 to 30 per cent less than paid by other manufacturers of the same goods in the city of Philadelphia. That the complainant did this in violation of its agreement with the respondents' unions, that it would pay the same rate of wages as paid by the other manufacturers of the same goods in the city of Philadelphia, and in further violation of its agreement, that it would recognize such unions. In December of 1911 it gave notice that thereafter it would not in any way recognize respondents' unions. That by reason of the violation of the agreement on the part of the complainant made with the respondents' unions, its members have since refused to work for complainant, as the respondents and former employees of complainant feel that they should be paid the same wages and granted the same conditions as paid and granted by other manufacturers of the same goods in the city of Philadelphia for such work.

That it was pointed out to the complainant that the said unions had secured agreements from other manufacturers of the same goods in the city of Philadelphia, providing for a schedule of wages for a definite period. That it would be unfair to the other manufacturers to work for complainant for less wages and under more unfavorable conditions.

That the whole difficulty that has arisen between the complainant and its employees has arisen over the fact that complainant attempted to violate its agreements by reducing the wages below the fair and reasonable market prices in the city of Philadelphia for the same. That neither the respondents or other employees who were members of the respondents' unions have done anything in violation of complainant's rights, and have committed none of the unlawful acts mentioned in the complainant's bill.

Wherefore the respondents pray that the bill may be dismissed and they be allowed their proper costs.

HEPBURN, CARE & KRAUSS,
Solicitors for Defendants.

STATE OF PENNSYLVANIA,
County of Philadelphia, ss:

John Breen, John Dyson, Stephen Wood, William Lawlor, Edward McGiluchy, Grover Hess, Thomas Tully, Walter Brooks, Frederick Schofield, Peter Rice, George Mason, Sidney Mason, Thomas Garrity, William Riegler, Charles Gillespie, John Brieley, and Harry Marshall being duly sworn according to law, depose and say that the facts set forth in the foregoing answer are true and correct to the best of their knowledge, information, and belief.

Sworn to and subscribed before me this _____ day of June, A. D. 1912.

[SEAL.]

Notary Public.

Mr. BUSIEK. Mr. Breen, to what do you attribute the fact that you do not, since these people are enjoying the union benefits and more could be enjoyed perhaps by a stronger organization, that you do not unionize the trade more thoroughly in Philadelphia?

Mr. BREEN. Well, I will state one of the great reasons is the ambition on the part of some of the men to become bosses, even though they receive salaries much below that the position they fill would require. That is one of the reasons and I will state an instance—

Mr. BUSIEK. That reason will be sufficient without any illustration.

Mr. BREEN. If it be understood, all right; but we are not the ablest people in the world when it comes to education. I would like to illustrate, if that will make it plainer.

Mr. BUSIEK. Very well.

Mr. BREEN. In the Dobson's, a gentleman was boss of the weavers; there were seven loom fixers who were working piecework. Mr. Meadowcroft, and I believe this to be a fact, I am sure it was a fact, was receiving \$18 a week whilst the loom fixers who were working piecework were making from \$25, \$27, \$29, and \$30 a week, and a controversy arose. And that was the ultimate cause of the bringing of those loom fixers' wages down, because of a suggestion on the part of the boss that the men were making more money than he

was. In many instances, and I know of men who were willing to take positions for \$15 a week whilst the men working under them were receiving larger. That is one of the reasons.

Another reason why the workmen are not prone to belong to the labor organizations is simply because they believe it necessary to sacrifice the leader from time to time, and also they are afraid to abide by the ultimatum from the labor organizations. They are afraid to belong to them, afraid of being spotted, and they do not like to be selected as members of committees, do not like to be forced or requested by the organization, which means a demand of the organization if the organization is right, when requested to go to their employers they are afraid of the black list that ultimately comes.

Mr. BUSIEK. So there is a black list in Philadelphia, to your knowledge?

Mr. BREEN. Oh, yes; there has been a black list. I myself have been black-listed four times.

Mr. BUSIEK. That is, you have been refused employment at the shop where you formerly worked?

Mr. BREEN. Discharged absolutely.

Mr. BUSIEK. Does that black list extend to other manufacturers with whom you have never had dealings?

Mr. BREEN. Dobson told me, after I led him to make a statement, that he did speak of the matter of Mr. Maseland over the phone—I don't know; I guess he got hot.

Mr. BUSIEK. Who is Mr. Maseland?

Mr. BREEN. A member of the firm of Maseland Bros. on Westmoreland Street.

Mr. BUSIEK. It is stated that the American workmen receive less per unit, did receive less per unit in 1893 than the English workmen?

Mr. BREEN. Yes, sir.

Mr. BUSIEK. Do you know how those rates compare now?

Mr. BREEN. Yes, sir.

Mr. BUSIEK. At the present time?

Mr. BREEN. Yes, sir; I believe to-day the general average pay per unit in tapestry carpet is less in America than in England. It is not generally understood, but nevertheless it is a fact and I know it.

Mr. BUSIEK. Have you any figures on that?

Mr. BREEN. We can get them.

Mr. BUSIEK. I wish you would get them and submit them to the commission.

Mr. BREEN. Very well.

Mr. BUSIEK. Is there something further you wish to say?

Mr. BREEN. Yes; I would like to say to the commissioners that the commissioners should ask a little further the workmen as to their opinion of the cause of the great depression that exists in business generally. They should not pass them up simply because they have not got the education. They should ask us about the general condition with the employer. They should ask the employer about our business and get it all out. My opinion is, if this—the cause of the great depression in business is and has been, and it may be generally understood or not, but I am going to say what my opinion is so you will know it. My opinion is that there is only two channels whereby money will go out in circulation, only two, and that is the difference between the reasonable and the exorbitant price of the commodities and necessities of life generally and the difference between the reasonable and the unreasonable wage or incomes of the great rank and file of the people.

On the top the difference is because by the concentration of the efforts of a few, which is un-American—on the bottom—which causes restraint of trade, money taken out of circulation. On the bottom it is generally assumed that labor organizations are a trust, that it does restrain trade but it does not. Anything that adds to the volume that ought to be in circulation certainly does not restrain any trade.

I think these things should be noted. It has been admitted—Philadelphia—by some of the men who testified here, that the wages in Pennsylvania in various of the industries is one-third less in Philadelphia. That one-third less that is paid here in Philadelphia than in other places is just one-third less out of the pockets of the consumer, and if organized labor has raised the wages, the 3,000,000 organized laboring people of this country has raised the wages, what is the other 27,000,000 doing? Isn't it a fact that if those other 27,000,000 people was getting the same wages as the organized people, that all of that money would be added into circulation, and if all the consumers were spend-

ing that much more money wouldn't the producer or the producer of the material have that much more to be taken out of the earth? Wouldn't that again add to the volume of money and help?

It appears to me that the great point is that we want honest legislation at Washington, and honest workmen that are willing to offer sacrifices for the mistakes of their fathers; don't we know here that if we make mistakes of any kind that we are going to hand that mistake to posterity? Do you expect that posterity will ever expect to overcome our mistakes without a sacrifice?

Now, I think that, as I said before, labor organizations can not or must be at this time—they must protect themselves, and, as I said before, you never—this committee would never be in existence but for the publicity brought about by labor organizations.

That is all I wish to say on that. Is that true, Mr. Chairman?

Acting Chairman WEINSTOCK. Will you be here at 2 o'clock, Mr. Breen?

Mr. BREEN. Yes, sir.

(At 12.30 o'clock a recess was taken until 2 o'clock.)

AFTER RECESS—2 O'CLOCK P. M.

Acting Chairman WEINSTOCK. You may proceed, Mr. Busiek.

Mr. BUSIEK. Mr. Breen, will you please resume the stand?

TESTIMONY OF MR. JOHN BREEN—Continued.

Acting Chairman WEINSTOCK. The statement was made this morning, Mr. Breen, I think by yourself, if not by yourself, then by some other labor representative, that the average wage paid in Philadelphia is about one-third less than that paid in other cities?

Mr. BREEN. Why—

Acting Chairman WEINSTOCK (interrupting). Did I understand that correctly?

Mr. BREEN. No, sir; I stated that one of the witnesses before the commission last week made such a statement.

Acting Chairman WEINSTOCK. Oh, yes. In how far do you think that statement is correct?

Mr. BREEN. I find that to be correct in our own business.

Acting Chairman WEINSTOCK. In the tapestry business?

Mr. BREEN. Yes, sir.

Acting Chairman WEINSTOCK. That the wages paid here in Philadelphia in the tapestry business are one-third less than the wages paid in other tapestry centers?

Mr. BREEN. No, sir; the reverse; that is, the Philadelphia tapestry workers are organized.

Acting Chairman WEINSTOCK. I see. Do the wages in the tapestry industry here compare with the wages in other localities?

Mr. BREEN. In Thompsonville, Conn., where they are unorganized, there is the two-loom system; also in the Smith, of Yonkers, N. Y.; Amsterdam, in Orange County, N. Y.—I think it is Orange County; and also in Rifton Glen, N. Y.

Acting Chairman WEINSTOCK. Are the wages lower than they are here?

Mr. BREEN. They are lower than they are here.

Acting Chairman WEINSTOCK. Of your own knowledge, do you know of any industries where the wages are one-third less than they are elsewhere?

Mr. BREEN. To my knowledge?

Acting Chairman WEINSTOCK. Yes.

Mr. BREEN. No, sir; not in the textiles.

Acting Chairman WEINSTOCK. Do you know of any industry where the wages are one-third lower?

Mr. BREEN. Only from hearsay of people who come from different parts of the country; that is all, because I was never myself away.

Acting Chairman WEINSTOCK. Then all that you do know on that score is purely from hearsay?

Mr. BREEN. From the testimony as I heard here, and that, of course, I am supposed to believe.

Acting Chairman WEINSTOCK. Are you at all familiar with the cost of living in Philadelphia and the cost of living in other large cities? Do you know

of your own knowledge? Have you ever had an opportunity or the means of investigating and comparing notes that would enable you to say authoritatively whether the cost of living in Philadelphia is higher or lower than elsewhere?

Mr. BREEN. I don't think so; I think you could get men who are more fitted—more fitted witnesses than myself, because I have not been away very much; in fact, not at all.

Acting Chairman WEINSTOCK. Then you could simply express opinions based upon hearsay?

Mr. BREEN. Based upon knowledge that I derived from the public press.

Acting Chairman WEINSTOCK. That is all, Mr. Breen.

(Witness excused.)

TESTIMONY OF MR. ARTHUR SPENCER.

Mr. BUSIEK. What is your position, Mr. Spencer?

Mr. SPENCER. I am a director in the concern of John & James Dobson (Inc.).

Mr. BUSIEK. You are one of the directors?

Mr. SPENCER. Yes, sir; managing director.

Mr. BUSIEK. How long have you had that position, Mr. Spencer?

Mr. SPENCER. The director's position, only the last 18 months, when the concern was incorporated.

Mr. BUSIEK. Well, have you worked for the concern in a directory capacity for a longer period than that?

Mr. SPENCER. Been with the concern about five years.

Mr. BUSIEK. What does your concern manufacture?

Mr. SPENCER. Carpet-pile fabrics, worsted, woolens, worsted spinnings, yarn spinning.

Mr. BUSIEK. Any tapestry work?

Mr. SPENCER. Yes, sir.

Mr. BUSIEK. How many people do you employ out there?

Mr. SPENCER. Well, in the carpet and plush mill we employ about 1,800 at the present time.

Mr. BUSIEK. And how many when you are running increased capacity?

Mr. SPENCER. Full capacity, run about 2,200.

Mr. BUSIEK. Is there a depression in business now?

Mr. SPENCER. Quite so; yes.

Mr. BUSIEK. How many people have you working for you under the age of 16 years, approximately?

Mr. SPENCER. About 150.

Mr. BUSIEK. What are the wages paid these minors?

Mr. SPENCER. I paid—the lowest wage paid at the carpet mill is \$6; it runs from \$6 up; only a small proportion of them would get the \$6; another proportion would get \$7, and perhaps up to \$8.

Mr. BUSIEK. In what department do those children work?

Mr. SPENCER. Work in the worsted spinning as doffers and spinners and the silk winding, principally, or spooling.

Mr. BUSIEK. How many women do you employ, Mr. Spencer? Approximately?

Mr. SPENCER. I would not like to say exactly. I did not look that up. I should think we employed almost as many women as we do men—no, not as many; probably 40 per cent of them.

Mr. BUSIEK. What hours do you have in your plant?

Mr. SPENCER. Fifty-four hours a week.

Mr. BUSIEK. In all departments?

Mr. SPENCER. Yes.

Mr. BUSIEK. You pay by the piece rate, do you?

Mr. SPENCER. Some is piecework; the majority, I think, is daywork.

Mr. BUSIEK. What class of work is piecework?

Mr. SPENCER. Weaving is entirely piecework, except exceptional cases, where the work is bad, or something like that. Our burling is piecework, and one or two other departments not employing a great many people; but the majority of it is daywork, barring the weaving.

Mr. BUSIEK. What is the average wage of the weavers?

Mr. SPENCER. I think in our velvet department they will make about \$18 a week; they should make a little more in the plush department—averaging \$12 to \$13 there, too.

Mr. BUSIEK. You say that in the plush department they make more?

Mr. SPENCER. They should make more; yes, sir; there. I think, as a matter of fact, they are making at least \$12 a week, and some of them making \$18.

Mr. BUSIEK. Do any of what might be termed journeymen weavers, men who have learned their trades, make less than these amounts you have named?

Mr. SPENCER. Not unless they are exceptionally poor weavers.

Mr. BUSIEK. What is the highest that a good weaver makes?

Mr. SPENCER. Twenty or twenty-one dollars.

Mr. BUSIEK. Are you familiar with the trade in general, outside of Philadelphia—that is, as to hours of labor and wages paid?

Mr. SPENCER. I think fairly so.

Mr. BUSIEK. Well, state what you can as to how Philadelphia wages compare with competing mills, and also how hours compare with competing mills.

Mr. SPENCER. Well, certainly in the carpet trade wages paid here are much larger than are paid all throughout New York State; where our competition comes from. The hours I don't know about there.

Mr. BUSIEK. But you pay on a unit basis?

Mr. SPENCER. We pay so much per yard, depending on the grade of goods we are weaving.

Mr. BUSIEK. And your yard cost is higher than competing parts?

Mr. SPENCER. It certainly ought to be; has to be.

Mr. BUSIEK. I believe there is a strike on at your mill now, is there not?

Mr. SPENCER. Yes.

Mr. BUSIEK. Do you know the cause of this strike?

Mr. SPENCER. It appeared for some time that the experienced weavers on a finer grade of goods were not able to make more than \$12 a week, whereas the inexperienced weavers, or the weavers that were fortunate enough to have coarse work in their loom, were running up to \$17, \$18, and \$20 a week. That made a great discontent with the good weavers, and whenever a loom was changed from the coarser onto a finer grade of goods, the weaver would object to it, and it seemed hard that all our best weavers should be making the least amount of money, so a general readjustment was made in the wages paid, and it was put on a pick basis, with various increases, depending on the set, whether it was finer work or not.

Mr. BUSIEK. Did you decrease or increase the total wages paid in your shop?

Mr. SPENCER. I think the total would probably have gone up, the gradual tendency is toward finer work in that department, which would naturally mean an increase rather than a decrease.

Mr. BUSIEK. But the idea was to make the workers working on the poorer grades of stuff take care of the increase which you were going to give to the workers on the better grades of stuff?

Mr. SPENCER. Yes.

Mr. BUSIEK. Have you an employers' association, here in Philadelphia, of textile manufacturers?

Mr. SPENCER. What do you mean by that?

Mr. BUSIEK. An association of the textile manufacturers for any purpose whatsoever?

Mr. SPENCER. None that I know of.

Mr. BUSIEK. Your firm is not a member of any association?

Mr. SPENCER. Probably a member of some association, but I don't know. Well, probably an association of woolen manufacturers, or something, but I don't know anything about it.

Mr. BUSIEK. You don't know anything about the purposes of this association?

Mr. SPENCER. No, sir.

Mr. BUSIEK. Yours has always been what is known as an open shop?

Mr. SPENCER. I believe so.

Mr. BUSIEK. Do you refuse to deal with the unions as a body?

Mr. SPENCER. Yes, sir.

Mr. BUSIEK. What is your attitude toward membership in unions by your workers?

Mr. SPENCER. We pay no attention to that whatsoever. They probably, and I suppose the majority of our workers, do belong to unions. We have no objection to them belonging to it, but we want to deal with our people as our people, and not with outside—what we call outside—labor leaders.

Mr. BUSIEK. How many strikes have you had there since you have been there?

Mr. SPENCER. We have constant strikes.

Mr. BUSIEK. Constant strikes?

Mr. SPENCER. We have almost a strike every spring. Young boys go out in one department, and they will tie up the mill for a week or 10 days, and the parents will be thrown out of work, and then the parents tell the boys to come back, and they come back and the mill starts up.

Mr. BUSIEK. Do I gather from that that the union calls a strike?

Mr. SPENCER. No; I don't think so.

Mr. BUSIEK. Just a voluntary quitting on the part of the help?

Mr. SPENCER. One department think they can always tie up the whole mill if they go out, so when you get, say, 10 or 20 or 30 people who think they can get an increase of a dollar a week, and therefore they go out.

Mr. BUSIEK. How do you eliminate this condition? How do you break that strike, or how do you go about it. Do you hire different people to take their places, or do these people generally come back?

Mr. SPENCER. They generally come back, almost invariably.

Mr. BUSIEK. Do you take them back irrespective of their union affiliations?

Mr. SPENCER. Yes, sir; we don't know whether they belong to unions or not.

Mr. BUSIEK. The prices which you pay for your labor, I assume from your testimony, is dictated largely by the competition that you have to meet from other mills?

Mr. SPENCER. Dictated very largely by the prices paid by other mills in the same line of business in this city.

Mr. BUSIEK. In this city?

Mr. SPENCER. Yes.

Mr. BUSIEK. Is there any reasonable objection to a scheme whereby the employers might get together and all agree to pay higher wages, removing that competition which would prevent you from paying higher wages than are now being paid?

Mr. SPENCER. That would have to be all over the eastern coast of the United States, I imagine.

Mr. BUSIEK. But if there were a law universal in its application, that is, for this country, which would create a limited workday, and, to go a step farther, create a minimum wage, do you think there would be any objection to such a law on the part of manufacturers?

Mr. SPENCER. I don't see why any manufacturer should object if he is on the same basis of hours and wages as any other manufacturer; whether it is eight hours or six hours makes no difference, as long as they are all on the same basis.

Mr. BUSIEK. You heard Mr. Breen this morning in his testimony, did you not?

Mr. SPENCER. Yes.

Mr. BUSIEK. Is there any statement you wish to make in reply to the statements made by him concerning the Dobbins mill or any officer thereof?

Mr. SPENCER. Well, I would like—it is rather hard to say. The alleged acts took place before I was connected with the firm. I think the name mentioned was Mr. Mettercroft and Mr. Denton, who are supposed to have acted as mediaries between the office, and they are both dead—at least one of them, I am sure; and I can not imagine Mr. James Dobbins offering anybody twice as much as he ever made for the rest of his life. It seems incomprehensible to me.

Mr. BUSIEK. That is all.

Commissioner O'CONNELL. Are there many accidents in your line of industry?

Mr. SPENCER. I don't think many serious ones, sir.

Commissioner O'CONNELL. Take the year 1913, have you any idea how many accidents occurred in the mills during that year?

Mr. SPENCER. No, sir; I would not offer—I know the slightest cut or anything of that kind we immediately sent a man to the department, but I don't know whether they made a report of it. The report is on file, I suppose, at Harrisburg, but I would not say of my own knowledge how many.

Commissioner O'CONNELL. Have you any department or room set aside in the mill for the purpose of taking care of the accidents—first aid?

Mr. SPENCER. We have not a place arranged for that purpose at the present time. We have a room where we have a chemist in charge, where all accidents go, but we have no rest room or hospital space at the present time, if that is what you mean.

Commissioner O'CONNELL. You, of course, made a report to the State officials in accordance with the law of the number of accidents occurring during the last year?

Mr. SPENCER. Yes, sir.
 Commissioner O'CONNELL. Would you kindly furnish the commission with a copy of that report?

Mr. SPENCER. Certainly.

Commissioner O'CONNELL. Send it to us, please.

Mr. SPENCER. Yes, sir.

(Mr. Spencer subsequently sent in the following statement:)

Statement of accidents during year 1913.

Carpet and plush mills:

Nov. 19. Mrs. R. McNealls, head back of ear injured.

Nov. 28. David Hendrie, face scalded.

Dec. 20. Harry Ream, left arm broken.

Bradford mills:

Feb. 24. Marie Rosie, ribs injured.

Feb. 27. Edward Hogan, cut in back of head.

Feb. 27. Albert Culpain, slight cut on forehead.

Mar. 19. John Biddle, collar bone broken.

Mount Vernon worsted mills:

Jan. 7. Francis Kerscher, little finger caught in wheel.

Dec. 1. William Peters, caught under wheel guard.

Somerset mills:

Sept. 25. Edwin Lever, groin injured.

Commissioner O'CONNELL. How many employees did you say you operate in your mill?

Mr. SPENCER. I say, at the mill where I spend most of my time, about 1,800 at the present time—at the carpet and plush mill.

Commissioner O'CONNELL. You have some other mills besides that?

Mr. SPENCER. Yes, sir.

Commissioner O'CONNELL. How many other mills?

Mr. SPENCER. I suppose it runs to about 4,000, all told.

Commissioner O'CONNELL. Including the 1,800 men at the mill where you are?

Mr. SPENCER. Yes, sir.

Commissioner O'CONNELL. That is all I have.

Commissioner LENNON. I understood you to say that there were some contentions in the way of strikes almost continually in your place; at least, every year more or less of them?

Mr. SPENCER. We seem to invariably have a strike in the spring, sir, with some department.

Commissioner LENNON. Were you here this morning when Mr. Hayes and Mr. Yost, of the Bottle Blowers' Association, testified?

Mr. SPENCER. Yes, sir.

Commissioner LENNON. You heard their testimony, then?

Mr. SPENCER. Yes, sir.

Commissioner LENNON. Do you believe it would be possible to accomplish in the textile industry that you represent something of the same character that they have accomplished, whereby they have had no strikes in 25 years, by collective bargaining between the employers and the union?

Mr. SPENCER. I should doubt it, sir.

Commissioner LENNON. Well, why is it? Is the nature of the people different in this industry than they are in the other one?

Mr. SPENCER. No; but unless it would be a very magnanimous or very unusual labor leader I think it would be hard to have him look at the thing from anything but his own particular point of view.

Commissioner LENNON. As a representative, I think I am justified in saying that Mr. Hayes has no peer as a strong representative of the glass-bottle blowers. While he is a preeminently honorable gentleman, yet I am confident that when he is presenting the case of the bottle blowers there is no living man on this continent that can present his own side of the case much better, so there can not be any advantage in that trade because of the case of the working people not being well presented.

Mr. SPENCER. But it may be, sir, that the case of the working people in the union is well presented, but there may be those not in the union that their case is very badly presented, because the better you present the one the worse you present the other, as I see it.

Commissioner LENNON. The question I asked presupposed that there would be thorough organization on the part of the manufacturers in Philadelphia and thorough organization on the part of the employees, and that then industry would be represented by their respective committees.

Mr. SPENCER. I do not think the conditions are the same in any two places. There is only one other firm in Philadelphia that makes the same goods as we do in our velvet department. So it would simply be a case of where we are the biggest in that line; so, therefore, it would be with us alone.

Commissioner LENNON. So you do not believe, then, that collective bargaining in your trade on the same basis as the glass workers have it would be practicable?

Mr. SPENCER. I don't think so.

Commissioner LENNON. And yet the examples that have tried it are very successful. We have had a number of trades appear before us testifying to long periods of industrial peace through the policy of collective bargaining. I can not just appreciate how the intricacies of the trade would make it impossible in one instance more than in another.

Mr. SPENCER. That is something I would not like to try to explain. It would take a much greater brain than mine to do it.

Commissioner LENNON. That is all.

Acting Chairman WEINSTOCK. Of course you realize, Mr. Spencer, that the employers' associations may be divided into two distinct kinds of employers; One, the employer that follows the method of individual bargaining with his workers; two, the employer who follows the method of collective bargaining with his workers.

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. I take it, Mr. Spencer, that your institution follows the plan of individual bargaining.

Mr. SPENCER. By that you mean—

Acting Chairman WEINSTOCK. Or collective bargaining. Do I make myself clear when I use the terms "individual bargaining" and "collective bargaining"? Those terms are not always understood by every one alike.

Mr. SPENCER. I don't think I quite get your meaning.

Acting Chairman WEINSTOCK. By individual bargaining, that is where the employer makes a bargain with each separate worker.

Mr. SPENCER. No, sir; we do not do that.

Acting Chairman WEINSTOCK. And collective bargaining is where employers, either individually or collectively, make one bargain with the representatives of the workers that applies to all workers. You do collective bargaining, then, do you?

Mr. SPENCER. It is not clear to me. If a man comes to work and asks to weave, he is given a job on a loom, if there is a vacancy. The work is explained, and he either takes the job or leaves it.

Acting Chairman WEINSTOCK. How is the wage arranged or arrived at? Do you fix it as the employer, arbitrarily, or is that arranged by conference with the man?

Mr. SPENCER. With our own organization.

Acting Chairman WEINSTOCK. That is, the people in your mill are organized?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. And they elect representatives and deal with— you deal with those representatives?

Mr. SPENCER. No, sir.

Acting Chairman WEINSTOCK. And come to an agreement with them?

Mr. SPENCER. No, sir.

Acting Chairman WEINSTOCK. You do not?

Mr. SPENCER. No, sir.

Acting Chairman WEINSTOCK. Please explain just how the rate is arrived at.

Mr. SPENCER. There is a rate of so much a pick, or something of that kind. The rate has been established and is well known.

Acting Chairman WEINSTOCK. How was it established?

Mr. SPENCER. It was originally established, I suppose, when the grade was first made.

Acting Chairman WEINSTOCK. Did labor have any voice in fixing that?

Mr. SPENCER. Probably a great voice, because every time a new fabric is made the weavers, the foremen, and ourselves have a short consultation on that.

Acting Chairman WEINSTOCK. If there is a conference consisting of the foreman, a representative of your—

Mr. SPENCER. Office.

Acting Chairman WEINSTOCK (continuing). And a representative of the workers, one that is chosen by the workers?

Mr. SPENCER. I presume so; I don't know how they choose him, or anything of that kind, but there is generally a committee of the weavers of that particular grade comes down.

Acting Chairman WEINSTOCK. How are they selected?

Mr. SPENCER. The weavers select them.

Acting Chairman WEINSTOCK. It is the representative of the committee?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. The three factors get together and discuss the matter and arrive at the price?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. In that case, the labor has a voice in fixing a rate?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. Supposing this group, this conference group that you tell us about, is unable to come to an understanding. What happens?

Mr. SPENCER. Then the office—what the office does will either remain the rate, or the weavers throw up their jobs.

Acting Chairman WEINSTOCK. I see; that is, if you have what may be termed a hung jury, if you can not agree, then the rate fixed by the office prevails?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. Unless the men go on a strike.

Mr. SPENCER. Well, it generally prevails when they do.

Acting Chairman WEINSTOCK. Even when they do go on a strike, experience has shown that it ultimately prevails?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. When the two can not agree, do you ever refer the matter to a third party, an arbitrator, in the hope of avoiding cessation?

Mr. SPENCER. We do not, as a rule, have trouble; the weavers generally want more, not always more, but generally more than the office fixes, then it is put on a trial. The weavers will be asked to try it for two weeks, and if they can not make wages, the rate will then be changed.

Acting Chairman WEINSTOCK. I see.

Mr. SPENCER. To a great extent, we find our people are quite fair and square with us in that way, and we will go on that basis.

Acting Chairman WEINSTOCK. How often does it happen, Mr. Spencer, that a new rate has to be established on a new fabric?

Mr. SPENCER. About four times a year.

Acting Chairman WEINSTOCK. About four times a year?

Mr. SPENCER. Yes, sir. Or, if we can not agree, the weaver will be put on daywork.

Acting Chairman WEINSTOCK. In your particular industry can you give us an idea of how many strikes you have had, say, in the last five years?

Mr. SPENCER. I would not like to say, because a strike might be where the people were out for one day or two days, I would hardly call it a strike. We have not had anything very serious there in the last several years, since I have been connected with it.

Acting Chairman WEINSTOCK. How long have you been connected with it?

Mr. SPENCER. Five years.

Acting Chairman WEINSTOCK. Have you had any strikes during that period, Mr. Spencer, that would be regarded as a serious strike, where the men have quit work for a week or more?

Mr. SPENCER. Yes, sir, we have had.

Acting Chairman WEINSTOCK. About how many would you say?

Mr. SPENCER. Three.

Acting Chairman WEINSTOCK. Three?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. Involving how many men?

Mr. SPENCER. Those strikes were generally started by, for instance, the cutters going out. When the cutters go out it stops the weavers and stops the dyehouses and all people related in the industry.

Acting Chairman WEINSTOCK. Sympathetic strikes?

Mr. SPENCER. No, sir; they had to stop because one could not go without the other.

Acting Chairman WEINSTOCK. What was the cause of those particular strikes? Was it where you were unable to agree upon the price and the men were unwilling to submit to the price you offered?

Mr. SPENCER. No, sir. In this case it would be that the cutters or loom fixers wanted a flat increase of 10 per cent. The office would not agree to it, therefore they would stop their work.

Acting Chairman WEINSTOCK. Exactly, because there was a difference as to the amount of wage to be paid?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. Well, when you dealt with the workers in those instances, I take it you dealt with the committees?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. The committees appointed by them?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. Then evidently you must have misunderstood Commissioner Lennon. I gathered from the answer that you made to Commissioner Lennon that you did not practice collective bargaining, and did not, perhaps, believe in collective bargaining, and yet, from the explanation you make, Mr. Spencer, it is quite plain that you do engage in collective bargaining, and that you do recognize organized labor, because you recognized that committee that was appointed by the weavers.

Mr. SPENCER. We recognize any committee from our own place; we do not recognize any committee that comes in from the outside. I misunderstood the commissioner's question.

Acting Chairman WEINSTOCK. You draw a distinction there between your own labor and representatives of labor coming from the outside?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. You will recognize organized labor within your own plants—

Mr. SPENCER (interrupting). Yes.

Acting Chairman WEINSTOCK (continuing). But you will not recognize representatives of organized labor from without your plant?

Mr. SPENCER. No.

Acting Chairman WEINSTOCK. How many employers are there, competing manufacturers with yourself, in the same industry in this territory?

Mr. SPENCER. Oh, in the carpet line, I suppose there are about a dozen.

Acting Chairman WEINSTOCK. Are they organized as an association?

Mr. SPENCER. I know of none.

Acting Chairman WEINSTOCK. Each man or concern is an independent concern?

Mr. SPENCER. At least our concern; I don't know about the other concerns. We paddle our own canoe.

Acting Chairman WEINSTOCK. Do you know whether the workers are federated, or whether their organization is confined simply to their own class?

Mr. SPENCER. I imagine they are federated.

Acting Chairman WEINSTOCK. Now, when Commissioner Lennon asked you the question as to whether you thought the same conditions as we were told this morning existed in the bottle-blowing industry, and as we are told on Saturday existed in the pottery industry, as to whether those conditions could be duplicated in your industry—that is, the mutual organization, collective bargaining, trade agreements—you gave it as your opinion, Mr. Spencer, that you did not think it could be done successfully in your industry.

Now, will you be good enough to tell us why you do not think it could be done in your industry as well as it seems it is being done in these others?

Mr. SPENCER. Well, that opens up a broad field and it simply calls for my personal opinion, which in my case is perhaps not worth a great deal. I have not found that our working people are at all fair in those matters. By that I mean—you try to find out or ask them point-blank what they can weave per day—a common day's work, and they will answer they can weave 10 yards, and you make one piecework based on that 10 yards, and you find they are weaving 13 yards. Now, those things tend to destroy your faith in common honesty.

Acting Chairman WEINSTOCK. Well, now, has that plan ever been tried in your industry? That is, the plan of the manufacturers, or the greater part of the employers, being organized on the one hand, and the workers being organized and federated on the other hand, and the two organizations, as organizations, come in together and discuss your problems, and coming to an understanding,

or in case of failing to come to an understanding, submitting to arbitration, and then entering into a trade agreement?

Mr. SPENCER. I think not.

Acting Chairman WEINSTOCK. That has not been tried?

Mr. SPENCER. I think not.

Acting Chairman WEINSTOCK. Well, then, when you say that you do not think the plan could be successfully duplicated in your industry, you, of course, then, give it merely as a matter of opinion and not because it has been tried out and failed?

Mr. SPENCER. That is what I said a moment ago.

Acting Chairman WEINSTOCK. Now, would it not, in your judgment, be well worth trying, with these other industries as object lessons before you, where it has been successfully carried out, and where both the employers and the workers tell us it has made for industrial peace and for the minimizing of industrial unrest, and where it has led, as they claim, to a more cordial and mutual feeling—would it not be well worth while to try it also in your industry?

Mr. SPENCER. That might be. I think in our particular plants the relations between the employers and the employees are very favorable and cordial. There are people there who have been working there for many, many years; and some of their children and grandchildren have worked there; and they are going on—promotions to foremanships generally come from the ranks and seldom from the outside—and I should think that there is an opportunity for anybody in that particular trade.

Acting Chairman WEINSTOCK. Among other things, Mr. Spencer, that this commission will be expected to report on and to make recommendations is as to whether or no, as the outcome of our investigations, we have found that mutual recognition, the entering into trade agreements, does or does not make for industrial peace. If we find that the preponderance of evidence is in favor of a trade agreement it will become our duty to recommend it. If on the other hand we find that the preponderance of evidence is against the trade agreement as making for the highest degree of industrial peace, we shall have to recommend against the trade agreement.

Now, could you not, at this time—suppose that you try to give us from your fund of information something that will help us more intelligently to come to a conclusion for or against trade agreements. If you can do so, that will be very much appreciated.

Mr. SPENCER. Well, there again, sir, it would be only my own personal opinion, which I do not think would be worth very much to you.

Acting Chairman WEINSTOCK. We should be glad to have that. You have had an opportunity of making observations; you are holding a very important position, and I take it you keep yourself informed not only on your own industry but kindred industries, and hence your judgment ought to be valuable.

Mr. SPENCER. I think the average manufacturer—at least, in our plant—wants to see the worker getting good wages. It is to our benefit to have them get good wages; and while I think they can make better terms by dealing with us than they can by belonging to a union and trying, perhaps, to force our hand, as I will put it—

Acting Chairman WEINSTOCK (interrupting). You mean that the individual worker can deal with you as an individual rather than dealing with you through his union.

Mr. SPENCER. No; dealing with us as a body within the mill, but not going outside.

Acting Chairman WEINSTOCK. Oh, yes; I see.

Mr. SPENCER. If all the workers could unite it would be all right; and if all the manufacturers, all the unions, could have such an idealistic condition, but I don't think it will come. I see no sign of it.

Acting Chairman WEINSTOCK. Does it mean, Mr. Spencer, that the workers in your plant, for example, can get better terms and better conditions by dealing with you direct, as a body—not as individuals, but as a body, I take it—than they could by attempting to deal with you indirectly through some outside medium?

Mr. SPENCER. I think, without a question.

Acting Chairman WEINSTOCK. But in dealing with your workers you deal with them collectively?

Mr. SPENCER. Yes, sir; or as individuals either. One man will come with a grievance, and he will be listened to as if they came four and five at a time.

Acting Chairman WEINSTOCK. Now, let me ask you, Mr. Spencer—let me put my question in a little different form.

Suppose some civic worker in whom you have confidence, whom you knew was acting in good faith and had no selfish ends in view, should come to you and say, "Mr. Spencer, we would like to see an experiment tried in your industry that has been worked out so successfully in other industries—the potteries and printing trades, and the women's garment trades in New York and Chicago, the clothing trades—and propose to make an effort to organize all your employers on one side, and to have the workers organized on another side, with a view to collective bargaining and trade agreements." What would be your attitude toward experimenting along those lines?

Mr. SPENCER. I would be perfectly open to be convinced, and am very willing to give anything a trial that would tend to make pleasanter relations.

Acting Chairman WEINSTOCK. How would it, taking the successful results in other industries as a base, you would think that the plan at least would be worthy of a trial in your industry?

Mr. SPENCER. If I could I would; I am not satisfied about the others, where it has worked out at the present time. I don't think it would work out, but I would be willing to try and be open to conviction.

Acting Chairman WEINSTOCK. I take it, Mr. Spencer, that your relations with your competitors are friendly?

Mr. SPENCER. I think so.

Acting Chairman WEINSTOCK. That is, you frequently come together and discuss matters in general? There is no hostility among the employers, is there?

Mr. SPENCER. I have never gotten together with them at all myself, I don't think.

Acting Chairman WEINSTOCK. Is there any feeling of hostility among the employers in your industry?

Mr. SPENCER. No; I don't know of any.

Acting Chairman WEINSTOCK. It would be no difficult matter whatever to bring them together for an open conference to discuss the matter, would it?

Mr. SPENCER. I think not.

Acting Chairman WEINSTOCK. And if some one came along and offered to do that, do you think there would be any objection on the part of any employer coming together for a nonofficial conference on the matter?

Mr. SPENCER. I should not see why there should be.

Acting Chairman WEINSTOCK. And if the consensus of opinion of these employers, after the matter had been discussed from that point of view, was that the plan was worthy of an effort, was worthy of a trial, it could be then carried on, could it not?

Mr. SPENCER. I suppose so, if the consensus of opinion was that way.

Acting Chairman WEINSTOCK. What is the attitude of the employers in your industry, Mr. Spencer, toward the enactment of a workmen's compensation act?

Mr. SPENCER. Personally, I have always thought very highly of it. I think it would be a great thing for the worker and also a very good thing for the manufacturer.

Acting Chairman WEINSTOCK. So that you would favor it?

Mr. SPENCER. Very much.

Acting Chairman WEINSTOCK. As being mutually advantageous?

Mr. SPENCER. Yes, sir.

Acting Chairman WEINSTOCK. That is all. Thank you very much, Mr. Spencer.

(Witness excused.)

TESTIMONY OF MR. W. PARK MOORE.

Mr. BUSIEK. Please give your name in full.

Mr. MOORE. W. P. Moore.

Mr. BUSIEK. And you are connected with the Brown Knitting Co.?

Mr. MOORE. Manager and treasurer.

Mr. BUSIEK. Manager and treasurer?

Mr. MOORE. Yes.

Mr. BUSIEK. That is a branch of the textile industry in which the commission is also interested?

Mr. MOORE. Yes, sir.

Mr. BUSIEK. How many people are employed in your plant, Mr. Moore?

Mr. MOORE. Eight hundred and ninety-six at present.

Mr. BUSIEK. At present. What is the top capacity?

- Mr. MOORE. The regular capacity?
- Mr. BUSIEK. Yes.
- Mr. MOORE. That is the full quota.
- Mr. BUSIEK. You are running full time?
- Mr. MOORE. Not at present; we are running full quantity of people, but not full hours.
- Mr. BUSIEK. I see
- Mr. MOORE. About 60 per cent at present.
- Mr. BUSIEK. What are the chief products of your mills?
- Mr. MOORE. Hosiery entirely.
- Mr. BUSIEK. Entirely?
- Mr. MOORE. Yes; full-fashioned hosiery.
- Mr. BUSIEK. That is the hosiery that is knit without a seam?
- Mr. MOORE. No; just the opposite.
- Mr. BUSIEK. Just the opposite?
- Mr. MOORE. Yes; full fashioned is shaped to fit the leg. Seamless hosiery, the other classification, is without a seam.
- Mr. BUSIEK. What per cent of your employees are women?
- Mr. MOORE. Our present quota is 377 males and 519 females.
- Mr. BUSIEK. Have you a classification of your employees there?
- Mr. MOORE. The minors, and so forth?
- Mr. BUSIEK. Yes.
- Mr. MOORE. Three hundred and seventy-seven males, 519 females.
- Mr. BUSIEK. Minors?
- Mr. MOORE. No; that is the total. Among them is 119 minors.
- Mr. BUSIEK. How are they divided?
- Mr. MOORE. Fifty-seven males and sixty-two females.
- Mr. BUSIEK. Those minors, are those under 21 or under 16?
- Mr. MOORE. Between 14 and 16.
- Mr. BUSIEK. And what work can those minors between 14 and 16 do about the mill, or what do they do?
- Mr. MOORE. Well, they do turning and help different ways, help on frames. They grow up to take the main positions later.
- Mr. BUSIEK. They come in at the bottom and work themselves up?
- Mr. MOORE. Yes, sir.
- Mr. BUSIEK. What wages are paid to minors?
- Mr. MOORE. Average about \$5.
- Mr. BUSIEK. What is the low?
- Mr. MOORE. They start about \$3.50.
- Mr. BUSIEK. And work up to an average of about \$5 before they are 17?
- Mr. MOORE. Yes.
- Mr. BUSIEK. Before they are 16?
- Mr. MOORE. They work up at different wages.
- Mr. BUSIEK. How many adult workers have you, do you know?
- Mr. MOORE. Well, adult, that means—
- Mr. BUSIEK (interrupting). I mean over 21?
- Mr. MOORE. Well, I suppose there are 70 per cent.
- Mr. BUSIEK. About 70 per cent.
- Mr. MOORE. Yes.
- Mr. BUSIEK. What is the average wage paid for an adult worker?
- Mr. MOORE. Well, I can give you our total wages; the last full pay was \$21,500, two weeks' pay; that is average total of about \$24 for two weeks' pay for the entire employees.
- Mr. BUSIEK. Thirty per cent of your employees, then, are minors, which would greatly reduce the average?
- Mr. MOORE. Well, I don't want to say 30 per cent, about; some of those are over 16, you know.
- Mr. BUSIEK. I see.
- Mr. MOORE. Between 14 and 16. There is only about 15 per cent between 14 and 16.
- Mr. BUSIEK. That is, then, the average wage, including all employees, is about \$12 a week?
- Mr. MOORE. The entire quota.
- Mr. BUSIEK. Now, were you working full time when that wage was made?
- Mr. MOORE. Yes; that is a full-time pay roll.
- Mr. BUSIEK. That is a full pay roll?
- Mr. MOORE. Yes.

- Mr. BUSIEK. Is your firm what is known as an open shop?
- Mr. MOORE. We consider it an open shop.
- Mr. BUSIEK. And you make no contracts with organized labor; that is, as affiliated with the international organization?
- Mr. MOORE. No; we pay what is considered union wages.
- Mr. BUSIEK. And you taking, in arriving at what are union wages, you take the union scale where there is a closed shop in Philadelphia and pay that wage?
- Mr. MOORE. Pay the regular set wages for fashioned hosiery weaving.
- Mr. BUSIEK. But you do that without any specific agreement with the unions?
- Mr. MOORE. Well, that is, our wages are generally established in all the fashioned mills; they practically all pay the same.
- Mr. BUSIEK. What objection, if any, have you to dealing with the officers of the international union in the fixing of this wage, since you pay the union scale?
- Mr. MOORE. Never saw any necessity for it; we deal with our own people.
- Mr. BUSIEK. Have you had any strikes which were engineered by the labor union?
- Mr. MOORE. No; we have had no strikes for a good many years. The last strike we had was in 1909, and that was a sympathetic strike with the trolley strike.
- Mr. BUSIEK. It was?
- Mr. MOORE. We had some small disputes, but ordinarily settled them ourselves among our own people.
- Mr. BUSIEK. When you strike a period of depression, instead of laying off people, you put everybody on part time or give them all a share of that work?
- Mr. MOORE. As near as we can.
- Mr. BUSIEK. What about the advance in protection of machinery in the last few years? Has there been a marked increase in protective devices for machinery as the result of legislation?
- Mr. MOORE. We have all dangerous parts of the machinery—elevators and like that—we have devices installed which are passed by the State factory inspectors.
- Mr. BUSIEK. Well, who sets the pace, the legislature or the mills, in the matter of protecting machinery?
- Mr. MOORE. Well, I think the legislature has done a good bit to bring that forward.
- Mr. BUSIEK. Now, is the factory inspection in Philadelphia rigid or otherwise?
- Mr. MOORE. Well, they make their usual visits. Any suggestions they make we try to carry out.
- Mr. BUSIEK. Do you work on piecework basis?
- Mr. MOORE. Nearly exclusively piecework; some few week workers, but very few.
- Mr. BUSIEK. Do you have a regular stunt that each employee must do to keep his position?
- Mr. MOORE. No.
- Mr. BUSIEK. There is no required minimum that must be done?
- Mr. MOORE. No; we have no bonus or premium system.
- Mr. BUSIEK. That is all.
- Acting Chairman WEINSTOCK. You heard the questions, Mr. Moore, that were put to Mr. Spencer and his answers?
- Mr. MOORE. Yes, sir.
- Acting Chairman WEINSTOCK. On the issue as to whether employers in his industry would at all consider under any circumstances the advisability of forming an employers' association with a view of dealing collectively with workers' associations and entering into trade agreements.
- If that question were put to you as relating to your industry, what answer would you make?
- Mr. MOORE. Well, we have never been very successful in having the hosiery manufacturers in this city hold together in any association.
- Acting Chairman WEINSTOCK. You never have been successful?
- Mr. MOORE. No, sir. We have a national association, but no city association.
- Mr. WEINSTOCK. Well, what have been the causes for your local association falling apart?

Mr. MOORE. They never have come to any agreement; and if they did come to an agreement, they did not abide by it.

Acting Chairman WEINSTOCK. How recently was the last effort made along those lines?

Mr. MOORE. Well, I guess, some three years ago now.

Acting Chairman WEINSTOCK. No effort has been made during those three years?

Mr. MOORE. No.

Acting Chairman WEINSTOCK. Why is it the workers can stick together and the employers can not? What secret have the workers that the employers have not yet discovered?

Mr. MOORE. Well, they seem to have something on the manufacturers, anyway, in sticking together.

Acting Chairman WEINSTOCK. Well, can it be because the workers—you say that when they have come together they have not stood by their understandings?

Mr. MOORE. It is not so much a matter of wages, it is other forms of agreement.

Acting Chairman WEINSTOCK. But they have not kept faith with each other? Mr. MOORE. No; they have not kept faith with each other.

Acting Chairman WEINSTOCK. Isn't that a sad reflection on the employers as compared with the workers—that the workers have faith in each other and do make good with each other and the employers do not?

Mr. MOORE. It would seem so, in our experience.

Acting Chairman WEINSTOCK. You think if another effort were made to organize your employers, with a view of collective bargaining, that it would meet with no better results? Have you lost all faith in employers?

Mr. MOORE. Well, I don't—I would not like to answer that question—I don't know, Mr. Commissioner.

Acting Chairman WEINSTOCK. Are strikes in your industry frequent?

Mr. MOORE. Well, they have been very infrequent with us.

Acting Chairman WEINSTOCK. How recently have you had a strike in your own plant, for example?

Mr. MOORE. Well, we have not had a strike for a long time.

Acting Chairman WEINSTOCK. How long?

Mr. MOORE. The sympathy strike was the last one; I mentioned that a little while ago; in 1909.

Acting Chairman WEINSTOCK. In 1909?

Mr. MOORE. In 1909; a sympathetic strike, in sympathy with the trolley motormen and conductors.

Acting Chairman WEINSTOCK. A sympathetic strike?

Mr. MOORE. Yes, sir; it was not forced by us at all.

Acting Chairman WEINSTOCK. I see.

Mr. MOORE. They remained out three weeks.

Acting Chairman WEINSTOCK. But when did you have a strike that developed within your own plant—how long back?

Mr. MOORE. Well, I can't just recall the date. It has been some long time.

Acting Chairman WEINSTOCK. Well, if this commission—

Mr. MOORE (interrupting). I think there was a strike in 1899 on the 55-hour-week problem.

Acting Chairman WEINSTOCK. I see. Well, if this commission were to ask your judgment and your opinion, Mr. Moore, as a man of experience, as to whether or no it should recommend trade agreements as one of the ways of bringing about better mutual understandings between workers and employers and making for a greater degree of industrial peace, what advice would you give the commission on that score?

Mr. MOORE. Well, I think it works out successfully in a great many lines.

Acting Chairman WEINSTOCK. Well, what would you say to the commission—should it or should it not advise and recommend trade agreements?

Mr. MOORE. I suppose you mean by trade agreements an agreement with a working scale of wages?

Acting Chairman WEINSTOCK. Yes. Were you here this morning, Mr. Moore, when a representative of the glass blowers' association testified?

Mr. MOORE. I heard part of that testimony.

Acting Chairman WEINSTOCK. You heard what Mr. Yost had to say, representing the employers, and what Mr. Hayes had to say?

Mr. MOORE. Yes; they said theirs worked out to their entire satisfaction, so far as I could hear him.

Acting Chairman WEINSTOCK. Well, now, if the commission were to ask for your opinion as to whether, from what you know of all the conditions, whether it should recommend to employers and workers the trade agreement, what would you advise the commission?

Mr. MOORE. Well, to cover the entire craft, I think it would be a good idea.

Acting Chairman WEINSTOCK. Do you know of any good reason why that, carried out in good faith between employers among themselves, and then between the employers on the one hand and the workers on the other, why it should not be worked out successfully?

Mr. MOORE. Not if carried out in good faith by both sides; I don't see why it should not be successful.

Acting Chairman WEINSTOCK. Its only point of failure is likely to come where one side or the other fails to act in good faith?

Mr. MOORE. Yes, sir.

Acting Chairman WEINSTOCK. Then the key to the whole situation is good faith and a square deal?

Mr. MOORE. Yes, sir.

Acting Chairman WEINSTOCK. That is all.

(Witness excused.)

TESTIMONY OF MR. ARTHUR McDONNELL.

Mr. BUSIEK. State your full name, please.

Mr. McDONNELL. Arthur McDonnell.

Mr. BUSIEK. And what is your occupation?

Mr. McDONNELL. I am the president of the dyers' union—skein dyers and mercerized, of Philadelphia.

Mr. BUSIEK. President of the dyers' union of Philadelphia?

Mr. McDONNELL. Yes.

Mr. BUSIEK. About how many dyers are there in Philadelphia?

Mr. McDONNELL. Well, I believe we have about 1,300 skein dyers, to be conservative.

Mr. BUSIEK. What percentage of them belong to the union?

Mr. McDONNELL. Eighty-five per cent.

Mr. BUSIEK. About 85 per cent?

Mr. McDONNELL. Yes.

Mr. BUSIEK. That is pretty highly organized in Philadelphia?

Mr. McDONNELL. Yes; we have a high organization.

Mr. BUSIEK. Are there any strictly union shops in Philadelphia?

Mr. McDONNELL. We have 48.

Mr. BUSIEK. Forty-eight strictly union shops?

Mr. McDONNELL. Yes, sir.

Mr. BUSIEK. And what is the scale in the union shops?

Mr. McDONNELL. Twenty-five cents per hour.

Mr. BUSIEK. What is the scale in the nonunion shops?

Mr. McDONNELL. They run from \$7 to \$12.

Mr. BUSIEK. Seven to twelve?

Mr. McDONNELL. Seven to twelve dollars per week.

Mr. BUSIEK. What is that per hour?

Mr. McDONNELL. Well, about anywhere from 15 cents up to 20 cents. The lowest, I guess—I could make a statement of one shop here in Fairmont, William Warding & Co., pays from \$7 to \$9.

Mr. BUSIEK. Nine dollars a week?

Mr. McDONNELL. Seven to nine dollars a week, yes.

Mr. BUSIEK. Well, is the work to be done in that shop as expert work and equally good?

Mr. McDONNELL. Well, there is handwork there, and he also has machines there, I might say.

Mr. BUSIEK. Well, does the machine cut down the amount of work to be done by the men?

Mr. McDONNELL. Oh, yes, considerably. I might say, though, that those employees are not English-speaking men. They are not conversant with the conditions, and they are very careful, too, that they haven't got many English-speaking people in that firm, in that department.

Mr. BUSIEK. Have you made any attempt to organize these non-English-speaking men?

Mr. McDONNELL. We have made attempts to organize that plant, but immediately they find out that there is any men there holding a union card, well, they are minus their positions.

Mr. BUSIEK. That discourages the rest, I suppose?

Mr. McDONNELL. That discourages the rest.

Mr. BUSIEK. Do any of your members work in shops that are not, strictly speaking, union shops, those that are not closed shops?

Mr. McDONNELL. Well, we don't bar them from working, but our men won't work for less than 25 cents an hour, as a general rule.

Mr. BUSIEK. You work a 10-hour day, is that it?

Mr. McDONNELL. Well, the manufacturers that have got to comply with the State law that protects women; they are working on a 54-hour basis; the buyers working the same; but the employers that can evade the State law, as the law don't protect men, they are all working on a 60-hour basis. I have got reference now to the jobbers, men that don't—

Mr. BUSIEK (interrupting). Weave the product themselves?

Mr. McDONNELL. Exactly.

Mr. BUSIEK. Who just dye for these other mills?

Mr. McDONNELL. Yes; they are still working on a 60-hour basis.

Mr. BUSIEK. How long have you been in Philadelphia in that business? Let me get that first.

Mr. McDONNELL. Since 1883.

Mr. BUSIEK. You are familiar, then, pretty generally with conditions in Philadelphia?

Mr. McDONNELL. I believe I am.

Mr. BUSIEK. What are the sanitary conditions of the dye shops in Philadelphia?

Mr. McDONNELL. Well, you will pardon me. I have got a brief here that I would like to read to the commissioners on that point.

Mr. BUSIEK. If you will file that brief, and tell us in brief about that, it will serve a double purpose, and we would be obliged to you.

(The brief referred to is printed as McDonnell exhibit.)

Mr. McDONNELL. Well, too much can not be said about the sanitary conditions of the dyers. There is none of the manufacturers, with the exception of two, that has ever tried to place any natural contrivances in the way of steam, gases, and any way of getting them out. You know that water boils at 212° F. Rows of kettles in the buildings, sometimes not much wider than this room, with rows on the other side, and no appliances there, no hoods or fans for the driving out of the steam, and that is the condition. Water boils at 212°, and all them kettles boiling.

Mr. BUSIEK. It is pretty hot in summer with those kettles?

Mr. McDONNELL. Why, the dyers parboil.

Mr. BUSIEK. Are there any devices which would obviate those, such as hoods and fans? Have you seen such devices in successful operation?

Mr. McDONNELL. I have; I saw them 30 years ago; and Thomas Dolan & Co., the man that just died here lately, he was the manufacturer. He had fans. He had what you call the upright fans, that went right up through the roof of the buildings, and in his sour side his kettles were hooded. He had hoods with fans at different parts of the dyehouse, driving out the steam that was collected under the hood.

Mr. BUSIEK. Has there been any marked increase in the wages paid dyers since the organization of your union?

Mr. McDONNELL. We organized this time in 1909. The wages was from \$9 to \$12 a week. Our manufacturers then had a system what they called the merit system, and it worked out so well that some of our dyers was short \$4 a week in their envelope. So we changed that kind of a system. The organization demanded a uniform rate.

Mr. BUSIEK. Per hour?

Mr. McDONNELL. Per hour.

Mr. BUSIEK. Did you get 25 cents at once?

Mr. McDONNELL. We have got the 25 cents in 48 shops. Well, we took a shop at a time. We had considerable difficulty, but we got over it in the end.

Mr. BUSIEK. Are there any women in that branch of the industry?

Mr. McDONNELL. No; no women; it takes rugged men in the dyehouse.

Mr. BUSIEK. Are there any boys?

Mr. McDONNELL. No boys, except there might be a small boy around the drying room, or something of that kind.

Mr. BUSIEK. Has machinery made any inroads?

Mr. McDONNELL. Yes; machinery has cut quite a figure. It has doubled the production with about 50 per cent less help.

Mr. BUSIEK. Has it put any men out of work?

Mr. McDONNELL. Well, there is not so many men in the dyehouse to-day as there was 20 years ago.

Mr. BUSIEK. Has this been a gradual evolution—this evolution of machinery?

Mr. McDONNELL. Yes; what you might call a gradual evolution. I might give you, for instance, one particular firm—the firm of James Holton—a company above Ruth, on Lehigh. He is what you might call a practical machine man. He has put 16 machines, small and large, and there is 17 men operate those 16 machines, and not to push the men, he can do in a day 6,000 or 7,000 pounds of yarn. This yarn is for the manufacturing of fine work. It goes into the manufacture of cloth. It has got to be dyed, not painted, and that work is turned out with about 9 men.

Mr. BUSIEK. Well, under the old manual methods, how much in poundage, how much could a man turn out?

Mr. McDONNELL. Well, it would be—a good day's work for two men would be 600 pounds, that would be a high average.

Mr. BUSIEK. That would be 300 pounds per man?

Mr. McDONNELL. Yes.

Mr. BUSIEK. And when these men, you say, that turn out from 6,000 to 7,000 pounds—

Mr. McDONNELL (interrupting). Nine men.

Mr. BUSIEK. That would be in excess of 300 pounds per man?

Mr. McDONNELL. Yes.

Mr. BUSIEK. Well, is the labor of the men increased any by these machines?

Mr. McDONNELL. Well, a great many of our men don't want to work on machines. They say the machines are harder. This Mr. Holton, he is quite a genius. He invented a plant where he could save the hot liquor, and he could save steam, by having his dyers, when the lot would be finished, to immediately stop the machine and take the yarn out hot.

Mr. BUSIEK. Well, did he invent a machine to do that?

Mr. McDONNELL. Oh, no. That is the clouder and Walden machine, and it has got to be unloaded in the machine, and there is other machines, what we call the cage machine, after the load is dyed, you might take a block and fall and lift the whole thing up and set it on a pair of jacks or trays after it is dyed, but this is the clouder and Walden machine, an open machine with an open front, that have the action just of a wheel, they work around slowly, and there is a spring on top that turns a stick, which stick turns with the touch of the spring, rolls around there, and then when it stops you have to step down and touch a spring here, undo the spring, and lift out your sticks loaded up with yarn.

Now, you can imagine, we will say, 52 sticks loaded up with 500 pounds of 2-30's yard, worsted yarn, that goes into the manufacture of men's wear. You can divide that 52 into 500, and yarn in the dyeing process will carry three times its own weight, and the dyer has to drag that out of a hot boiling liquor. And he was not only satisfied with binding that up for himself, but he was good hearted to some of his brother employers, and they have got the scheme, too.

Mr. BUSIEK. That is a device, then, which does increase the manual labor performed by the dyer?

Mr. McDONNELL. Oh, yes.

Mr. BUSIEK. You talked about saving steam. Was it merely pulled out cold?

Mr. McDONNELL. Well, other manufacturers that would be any way human at all, they would cool off the lot. This man, I guess, he wants to become rich.

Mr. BUSIEK. To what fact do you attribute the fact that you have not got your craft fully organized in this city. Is that due to those foreigners that you were speaking about?

Mr. McDONNELL. No, sir; we don't find much trouble with the foreigners at all. We have the majority of our trade organized, with the exception of a few shops on the outskirts. We did make a bold effort to organize the plant of Nathan Caldwell, at Third and Cambria.

I was going to make a statement to the commission. In my experience of about 32 years in the dyehouses of Philadelphia I never knew a manufacturer

who hired a dyer to come up gratuitously and ever offer an advance of wages, with the exception of that firm, and that firm, we must compliment them, here last winter they gave them an increase, but it was to checkmate our movement.

Mr. BUSIEK. Are they paying the union rate?

Mr. McDONNELL. They are not. They pay \$11.50, I believe, for 54 hours, and their dyers work from 6 o'clock in the morning till 6 o'clock at night, with a short interim of 15 or 20 minutes for dinner.

Mr. BUSIEK. That is all I have.

Commissioner O'CONNELL. Are there any diseases in particular in your trade, caused by the dyeing method—diseases peculiar to your trade?

Mr. McDONNELL. Yes, sir; we have pneumonia, influenza, and rheumatism. Commissioner O'CONNELL. Consumption?

Mr. McDONNELL. Yes; some of our men, but not many.

Commissioner O'CONNELL. Is it poisonous to the skin of the hand?

Mr. McDONNELL. Well, we had 10 deaths last year, and I believe that there were 6 death certificates came from the coroner.

Commissioner O'CONNELL. Six deaths out of how many people?

Mr. McDONNELL. Ten. We had 10 dead last year.

Commissioner O'CONNELL. Out of what number of people?

Mr. McDONNELL. We have 900 members in good standing on our books.

Commissioner O'CONNELL. Ten out of the 900?

Mr. McDONNELL. Yes, sir. Of course, there was an accident, I guess, with two of them.

Commissioner O'CONNELL. Do the firms treat with your unions—your committees?

Mr. McDONNELL. Yes, sir. We can not say anything in regards to our employers that way. They are pretty fair.

Commissioner O'CONNELL. They meet you every year?

Mr. McDONNELL. They recognize us and do business with us.

Commissioner O'CONNELL. How many firms do you say in the city do not treat with you by agreement?

Mr. McDONNELL. Well, there might be about eight firms.

Commissioner O'CONNELL. What number of people do they employ?

Mr. McDONNELL. In our end—in the skein end—we might say, to be conservative, about two or three hundred, I guess.

Commissioner O'CONNELL. And you represent about 900, you say?

Mr. McDONNELL. Nine hundred in good standing.

Commissioner O'CONNELL. You have no women?

Mr. McDONNELL. No.

Commissioner O'CONNELL. No children?

Mr. McDONNELL. No.

Commissioner O'CONNELL. The sanitary conditions, so far as you know—getting rid of the gases and steam and all that—are very bad, you say?

Mr. McDONNELL. Very bad.

Commissioner O'CONNELL. It does not seem that that would be very hard to arrange, to have the steam taken away.

Mr. McDONNELL. No, sir; it could be accomplished.

Commissioner O'CONNELL. It would simply be a matter of covering a pipe and carrying it through the ceiling or wall.

Mr. McDONNELL. I was speaking to Mr. Lightner, the superintendent, asking if he was doing anything in reference to the dyeing plants, and he said he was up at Harrisburg, and he said he told the chief that it should come in under the board of hygiene.

Commissioner O'CONNELL. Do you have many accidents in the trade?

Mr. McDONNELL. Not a great deal.

Commissioner O'CONNELL. Are they fully provided to prevent accidents? Can you get injured by them? Are they fool proof?

Mr. McDONNELL. I was injured myself.

Commissioner O'CONNELL. How?

Mr. McDONNELL. On a defective machine.

Commissioner O'CONNELL. How? Did you hurt your hand?

Mr. McDONNELL. It was what you called a piece extractor. It was a crude machine of their own make. It was simply what you might call an iron roller and fast-and-tight pulley. This machine was got up for the purpose of keeping the wrinkles off the cloth after the cloth was dyed.

Commissioner O'CONNELL. To keep the machine from running or make it run—

Mr. McDONNELL. When the belt was running on the slack pulley this shell constantly moved; with the friction from the slack pulley it heated up the tight pulley and this roller moved, and in the moving of this roller with the constant friction and the constant running of the machine, the longer you would run it the more friction the machine would get, and consequently she gave a wicked turn and my right arm went in between the cloth and the roller and broke this arm in two places.

Commissioner O'CONNELL. What did the company do in that instance?

Mr. McDONNELL. They took 10 cents off of me. I got this at half past 4—

Commissioner O'CONNELL. And they docked you for the balance of the day?

Mr. McDONNELL. And they paid me up to 4 o'clock.

Commissioner O'CONNELL. Did you make any attempt to collect it?

Mr. McDONNELL. I sued; took them into the courts of Philadelphia; and the trial judge was Judge Bridge. He allowed it to go to the jury. Notwithstanding their lawyer asked for a nonsuit, he said there was too much evidence here, and it went to the jury, and they gave me a verdict for \$2,000. But I didn't get it. They appealed the case. The case went before the trial judge and Judges Kinzie and McGill, and they reversed the decisions and findings in their own court, and it went to the supreme court and McDonnell won—lost out on contributory negligence and assumption of risk.

Commissioner O'CONNELL. That case was nonsuited?

Mr. McDONNELL. Yes, sir; on contributory negligence and assumption of risk.

Commissioner LENNON. Assumption of risk?

Mr. McDONNELL. Yes, sir.

Commissioner O'CONNELL. And the case was reversed and you have not gone any further with it?

Mr. McDONNELL. That was the last court, the Supreme Court of Pennsylvania.

Commissioner O'CONNELL. It was the supreme court?

Mr. McDONNELL. Yes, sir.

Commissioner O'CONNELL. And are you still working for that firm?

Mr. McDONNELL. No, sir; I haven't worked since. I was six months away to the hospital. I carried that arm on a guard for three months.

Commissioner O'CONNELL. Didn't they offer to make any sort of a settlement before you went to court?

Mr. McDONNELL. I got this on the 30th day of September, and I never seen a soul until the 2d of the following January.

Commissioner O'CONNELL. Didn't they send a physician to see you?

Mr. McDONNELL. No, sir.

Commissioner O'CONNELL. Didn't send a physician to see you?

Mr. McDONNELL. Never a soul.

Commissioner O'CONNELL. Did they take you home from the shop or take you to the hospital; and if so, how?

Mr. McDONNELL. I went home in the police patrol.

Commissioner O'CONNELL. Who called that for you?

Mr. McDONNELL. Why, one of the firm.

Commissioner O'CONNELL. And they made no search for you afterwards or called to find out—

Mr. McDONNELL. Never asked "How do you feel"?

Commissioner O'CONNELL. What is the name of that company?

Mr. McDONNELL. Orinoka.

Commissioner O'CONNELL. How do you spell it?

Mr. McDONNELL. O-r-i-n-o-k-a. It is an Indian word. It means a beautiful serpent.

Commissioner O'CONNELL. Just a moment, brother, before we get away from this. This is very interesting. It seems almost beyond the possibility of belief that a firm could be so inhuman as just what you say. Now, what did they charge you with doing, that they fought that case? Just state briefly. I don't want you to recite the whole case.

Mr. McDONNELL. In court the superintendent and the boss I worked under made a statement in court that I was one of the steadiest employees they had—

Commissioner O'CONNELL. Yes; I know; but they must have made some statement. What statement did they make to try to contradict you? Did they say that you ran your arm into the machine purposely, or what did they say?

Mr. McDONNELL. They said there never was anything wrong with the machine, and they never seen it or nobody drew it to their attention.

Commissioner O'CONNELL. How did they come to charge you with contributory negligence?

Mr. McDONNELL. Well, that is the law of Pennsylvania. I don't know. I thought I had a good case.

Commissioner O'CONNELL. Were there any other accidents in that mill while you were there?

Mr. McDONNELL. Yes, sir; there was another man got his arm broke, but that was on the other machine.

Commissioner O'CONNELL. What did they do in his case?

Mr. McDONNELL. Well, I think they paid him. I think he was paid, but he was told to keep it very quiet.

Commissioner O'CONNELL. Well, do you know now—you say you believe—did somebody tell you he was?

Mr. McDONNELL. Yes; I heard he was paid.

Commissioner O'CONNELL. What was he paid, then?

Mr. McDONNELL. There is a man here before the commission that says he told him he was paid.

Commissioner O'CONNELL. About how much?

Mr. McDONNELL. About \$9 a week, I guess.

Commissioner O'CONNELL. Oh, while he was off?

Mr. McDONNELL. Yes.

Commissioner O'CONNELL. Do you know anything about the accidents generally in the mills in Philadelphia in your line—are there many of them?

Mr. McDONNELL. Well, I hear of a few.

Commissioner O'CONNELL. Is there much sickness among the men—men off on account of being sick—colds, and so on?

Mr. McDONNELL. Oh, yes; plenty.

Commissioner O'CONNELL. Particularly in the wintertime?

Mr. McDONNELL. Yes, sir.

Commissioner O'CONNELL. Have you any arrangements for taking care of men when they are off sick, or has the firm any kind of organization?

Mr. McDONNELL. Oh, no; there is no hospital that I know of.

Commissioner O'CONNELL. I mean, have they any association, for instance, which would pay you \$5 a week, or anything, when you are off sick?

Mr. McDONNELL. No, sir.

Commissioner O'CONNELL. Any association among the men outside of your union?

Mr. McDONNELL. No, sir; except any man might belong to a fraternal organization.

Commissioner O'CONNELL. Oh, yes; but I mean any organization in the mill in which you pay 10 or 15 or 20 cents a week?

Mr. McDONNELL. Well, I believe Brownley's have an association—John Brownley, carpet manufacturer. But I am not very certain as to that. But as a general rule there is no benefits like that.

Commissioner O'CONNELL. Well, you consider the conditions in which you worked there, because of the fact that there is no effort made to take care of the men by having ventilation, and the steam and the heat, and all that sort of thing, very bad?

Mr. McDONNELL. It is very bad.

Commissioner O'CONNELL. You say 25 cents is the average wage per hour in that work?

Mr. McDONNELL. Twenty-five cents per hour.

Commissioner O'CONNELL. Working 10 hours a day?

Mr. McDONNELL. Working 9 hours in the manufacturing dyers' work, and they work 60 hours in the others. If you get the work up they send you home.

Commissioner O'CONNELL. Do you work overtime?

Mr. McDONNELL. Well, our organization takes a stand against overtime. We don't want overtime.

Commissioner O'CONNELL. Well, where they do work overtime?

Mr. McDONNELL (interrupting). Very seldom work overtime.

Commissioner O'CONNELL. If they do work overtime, what are they paid?

Mr. McDONNELL. Oh, just the time per hour.

Commissioner O'CONNELL. Just the same?

Mr. McDONNELL. Well, the Allen Dyeing & Bleaching Co., they pay time and a quarter.

Commissioner O'CONNELL. Do the nonunion concerns pay them about 25 cents an hour?

Mr. McDONNELL. No.

Commissioner O'CONNELL. What do they pay them?

Mr. McDONNELL. Pay from 14 cents up to 30 cents an hour.

Commissioner O'CONNELL. For grown men, 14 cents an hour?

Mr. McDONNELL. No; the men would have perhaps \$11 or \$12 a week.

Commissioner O'CONNELL. Who would be paid 14 cents an hour?

Mr. McDONNELL. Well, the learner. William Wood, he pays his learners, I think, \$7 a week, and when you become to be expert you get \$9. There are machine men working there for \$9.

Commissioner O'CONNELL. Do they have any difficulty in getting people—getting workmen?

Mr. McDONNELL. Yes; sometimes, if our trade is busy, we find the dyers sometimes scarce.

Commissioner O'CONNELL. I should think they would prefer to work for the street car company at 30 cents an hour, out in the open.

Mr. McDONNELL. Yes; it would be better. We have had instances where some of our men have had their feet frostbitten in the dyehouses in the wintertime, and that is in an inclosed building.

Commissioner O'CONNELL. The heat from the kilns goes up and the frost comes in from below?

Mr. McDONNELL. You have got the torrid zone on your face and the frigid zone on your feet. There has been no advance within the line for the dyers of Philadelphia in the way of provision for their comfort. It is a crying shame—the dyehouses of Philadelphia, their condition. It is a crying shame. Why, in the wintertime in an inclosed building it is nothing new for a dyer to go and draw off a bucket of hot water and thaw out the very yarn that he is going to do, where it has been frozen in balls upon the sticks in an inclosed building. That happened to me when I worked in the Firth & Foster's house, and that happened to me when I worked in the Allen Dyeing & Bleaching Co. I think that the dyehouses of Philadelphia are the worst sanitary buildings in the United States of America. I want to be strong on the sanitary conditions.

Commissioner LENNON. Do you believe the textile workers of Philadelphia, generally speaking, receive a living wage?

Mr. McDONNELL. I do not.

Commissioner LENNON. What rent is paid here for three rooms, say—

Mr. McDONNELL (interrupting). Three rooms?

Commissioner LENNON. With bath.

Mr. McDONNELL. You don't get a three-room house with bath.

Commissioner LENNON. Don't they have any baths in Philadelphia?

Mr. McDONNELL. You get a three-room house, it will generally be on the alley or some little bit of a street, what you call a double house, what you call where they build them with three rooms on the street up on the front. Well, that would be \$9 a month. There is no yard there. And you will have to go to the back—then in the back of the building there are three more rooms straight up and you have got to pay them for that \$8 and one yard will do for both; and you have got to be very neighborly to live there.

Commissioner LENNON. Well, now that is for three rooms \$8 and \$9 a month. How large a family will live in one of those houses in Philadelphia? Now, don't give us an extreme case.

Mr. McDONNELL. No; I will give you the straight of it. I will give you the truth, for I have had that experience myself and I have come up from the ground floor, and am the father of 12 children. We lived in a three-room house, because we had to, not because I liked it; and you would have to get along with about six in the family, my four children and my wife and myself, and then when you come to get your children up so as one of them at the age of 14—and if you could fool the inspector a little before, and get her to work, or if it was a boy get him to work, well you might move out and move to a four-room house; and you will pay \$12 for that.

Commissioner LENNON. And that is with a family of six.

Mr. McDONNELL. Yes.

Commissioner LENNON. Now, how are these houses situated as to the places where the men and the women have to work? Will they have to pay street car fare or can they walk?

Mr. McDONNELL. Well, that is just according to—

Commissioner O'CONNELL. Well, I mean the general run. I don't mean some particular one—

Mr. McDONNELL (interrupting). Well, you might say that one-third of the textile workers have got to pay car fare. For instance, I have two daughters that are both hosiery workers. They work at Frankfort, and I live in Kensington, and, of course, that is car fare each way. It costs them 20 cents a day.

Commissioner LENNON. What is the cost of meat here compared with what it was 20 years ago—beefsteak?

Mr. McDONNELL. Oh, my. When I was married my wife could go out and get 2 pounds of beefsteak for a quarter. Now she has to pay about 30 cents for it.

Acting Chairman WEINSTOCK. For 1 pound?

Mr. McDONNELL. I mean for 1 pound. If you buy good beefsteak you will pay 25 cents a pound for it now or a little more.

Commissioner LENNON. How about the other material things on which you have to live, potatoes and apples?

Mr. McDONNELL. I am just going to tell you. Sometimes I run errands when I am home. I don't mind going to the grocery store. Winter before last there was a very singular thing struck me, and it was butter. And that butter remained at the same fixed price for the whole winter. It was 40 cents a pound. And I said to the grocery man, I says, "How is that? Don't it fluctuate one way or the other? It remains fixed." I says, "You would think some one had that nailed down." "Oh, yes," he says, "you can bet they have." That is the Butter Trust, I suppose.

Commissioner LENNON. You don't know that three men meet in Elgin, Ill., every morning at 9 o'clock and fix the price of butter for the United States?

Mr. McDONNELL. No; but I know the bottom fell out of it here about two years ago, and the best of the prints was dumped in the market at 25 cents a pound. That is the only time that we got the best of the Butter Trust.

Commissioner O'CONNELL. I think they were only joking with you then at that time.

Mr. McDONNELL. Well, that may be.

Commissioner LENNON. I think you must be a Scotchman.

Mr. McDONNELL. No; I am an Irishman.

Commissioner LENNON. That is all, sir.

Acting Chairman WEINSTOCK. One moment. When did this accident occur, Mr. McDonnell, that you have told us about, to your arm?

Mr. McDONNELL. It occurred the 30th of September, 1908.

Acting Chairman WEINSTOCK. How long were you disabled? How long before you could go back to work?

Mr. McDONNELL. I have never worked at any manual work since. My right arm is an inch and three-quarters shorter than this other; and that is the natural position of the arm as it is in now [exhibiting his arm].

Acting Chairman WEINSTOCK. And it was the cause of permanent disability?

Mr. McDONNELL. Oh, yes.

Acting Chairman WEINSTOCK. Unfitting you for manual labor?

Mr. McDONNELL. Yes, sir.

Acting Chairman WEINSTOCK. How long a time intervened from the time of the accident until your case was decided in the supreme court?

Mr. McDONNELL. Almost four years. It was almost four years before it came into the lower court.

Acting Chairman WEINSTOCK. About four years were consumed from start to finish?

Mr. McDONNELL. Yes, sir.

Acting Chairman WEINSTOCK. What medical expenses were you subjected to during that period?

Mr. McDONNELL. Well, I had none, only I went to Dr. Dempsey. I attended the Episcopal Hospital for my arm, and Dr. Dempsey prescribed a little medicine to keep up my strength.

Acting Chairman WEINSTOCK. So you had comparatively little medical expense to meet?

Mr. McDONNELL. Not much expense.

Acting Chairman WEINSTOCK. What were your legal expenses?

Mr. McDONNELL. Legal expenses wasn't anything.

Acting Chairman WEINSTOCK. Didn't you employ a lawyer?

Mr. McDONNELL. Yes, sir.

Acting Chairman WEINSTOCK. On a contingency?

Mr. McDONNELL. Well, the only understanding I had with the lawyer was this: When I gave him the case and talked the matter all over he said that he would treat me like a brother. That was just the words he used.

Acting Chairman WEINSTOCK. Well, that is the usual treatment that lawyers give their clients.

Mr. McDONNELL. Now, I must have been a stepbrother in this case.

Acting Chairman WEINSTOCK. And, now, in the event that you had gotten the award that was given you by the jury, the sum of \$2,000, how much of that, under your understanding, would your attorney have gotten, according to your contract, and how much would you have retained for yourself?

Mr. McDONNELL. Well, I just couldn't rightfully answer that. Under that arrangement, I believe, if we had got the \$2,000, he would have kept \$1,000 for himself—if he would treat me like a brother.

Acting Chairman WEINSTOCK. Well, you say you had no understanding with your attorney as to what proportion of the award he was to get in the event of there being an award?

Mr. McDONNELL. No, sir; that is all. I trusted to his honesty.

Acting Chairman WEINSTOCK. But as it was, then, he really received nothing for his services?

Mr. McDONNELL. No, no; he didn't receive anything, because the case was lost in the supreme court.

Acting Chairman WEINSTOCK. I presume, Mr. McDonald, as the result of your experience you are a party supporter and advocate of a workman's compensation law?

Mr. McDONNELL. Indeed I am.

Acting Chairman WEINSTOCK. Is that the attitude of your fellow workers? Are they all in favor of workmen's compensation?

Mr. McDONNELL. Oh, yes.

Acting Chairman WEINSTOCK. Under workmen's compensation you would have received immediate medical treatment?

Mr. McDONNELL. Yes, sir.

Acting Chairman WEINSTOCK. You would have received certain compensation during your total disability and you would have received a certain compensation for the fact of your having met with a permanent disability. Now, how were you supported during all this period when you were unable to earn—

Mr. McDONNELL. Well, I will make a plain statement. I had about \$200 saved. I had three children working, and we put our heads together when I saw the attitude of the firm; that they never came near me; never sent anyone to ask "how do you feel." I made up my mind to sue. And I waited for six weeks and I entered suit. So we had a talk, me and my wife and the children, and we came to the conclusion that the children would keep me, which they did. Whatever little money I had I drew it out; and of course I will say for the Orinoka Shop Association, they were men. They offered to get up a benefit. I said, "No; if I am hard up I will come and let you know." And another organization I belonged to myself offered, but I said, "No; I am going to make this fight, and the children are going to keep me." That went along; then we organized the dyers in 1909. I am the man that organized the dyers of Philadelphia, and they began to pay me a little, but after I had worked almost a year. So I have a salary now from the dyers of Philadelphia. They pay me.

Acting Chairman WEINSTOCK. Well, now, for the time being, then, you became a burden upon your children?

Mr. McDONNELL. Oh, yes.

Acting Chairman WEINSTOCK. If you had had no children who were breadwinners—

Mr. McDONNELL. Well, I would have had to go to the almshouse.

Acting Chairman WEINSTOCK (continuing). You would have become an object of charity?

Mr. McDONNELL. I would have been a pauper.

Acting Chairman WEINSTOCK. And your children, how would they have lived if they had not been old enough to be breadwinners?

Mr. McDONNELL. Oh, yes; I often thought of what it would have been if it had happened to me 10 years previous to the time I got it. I think it was inhuman.

Acting Chairman WEINSTOCK. Now, you say you waited six weeks before you entered suit against your employers?

Mr. McDONNELL. Yes, sir.

Acting Chairman WEINSTOCK. Before entering suit against your employers did you approach them in any way?

Mr. McDONNELL. No; I never went near them. I will tell you why. I had a week's wages I drew, and I sent up the little girl and she got the week's wages, and it happened that I got hurt on a Wednesday and they had run into the new pay; and when I got my pay the second time I sent her up they sent me down the day's pay and the 10 cents short in the envelope; so I did not think I would have much show with a firm like that.

Acting Chairman WEINSTOCK. What effect did your case, so far as you know, Mr. McDonnell, and the treatment of your case have upon the minds of your fellow workers? What spirit did it create in their minds toward their employers?

Mr. McDONNELL. It created, of course, a very bad impression amongst the workers.

Acting Chairman WEINSTOCK. That is, it tended to destroy whatever good will—

Mr. McDONNELL. Any confidence that a worker would have in an employer. Now, I don't say that they are all like that. I will quote you another case where two of our men got killed.

Acting Chairman WEINSTOCK. Same employer?

Mr. McDONNELL. No; but the same sort of employment—in an upholstery mill. And there was two men got killed by a large tank falling down and one man got injured, and, in fact, it knocked the whole dyeing end out; and that firm—they kept their men at work every day; paid the man that was hurt; sent him off to Atlantic City for a little time; gave him a lump sum; and the two men that were killed, they settled for \$3,500 on the widows. That was the firm of Stead & Miller.

Acting Chairman WEINSTOCK. That is all, Mr. McDonnell. Thank you very much.

TESTIMONY OF MR. MITCHELL STEAD.

Mr. BUSIEK. You are connected with what concern?

Mr. STEAD. Folwell Brother & Co.

Mr. BUSIEK. What kind of products does your mill turn out, Mr. Stead?

Mr. STEAD. Ladies' dress goods.

Mr. BUSIEK. That is woolens?

Mr. STEAD. Not woolen—worsted.

Mr. BUSIEK. Dry goods?

Mr. STEAD. Yes, sir.

Mr. BUSIEK. About how many employees do you employ, Mr. Stead?

Mr. STEAD. Nine hundred.

Mr. BUSIEK. That is the capacity of your plant, is it?

Mr. STEAD. We have 900 employed now.

Mr. BUSIEK. Is that number fairly constant?

Mr. STEAD. Yes, sir.

Mr. BUSIEK. Mr. Stead, is there any organization of employees in your mill?

Mr. STEAD. Not that I know of.

Mr. BUSIEK. You don't treat or deal with any union?

Mr. STEAD. No, sir.

Mr. BUSIEK. Have you ever compared the wages paid by your mill with the wages paid by mills in competing cities or competing mills?

Mr. STEAD. Yes, sir.

Mr. BUSIEK. How are they, Mr. Stead?

Mr. STEAD. Why, I think the average textile wages paid in Philadelphia are a trifle higher than any city I know of.

Mr. BUSIEK. And to what do you attribute it—to the organization of the employees?

Mr. STEAD. I could not attribute it to anything but because Philadelphia has got an exceptionally high-grade class of workpeople.

Mr. BUSIEK. Is there any employers' association in Philadelphia or do you manufacturers have an organization of any kind?

Mr. STEAD. There was up to a few months ago, but I think it has been discontinued now.

Mr. BUSIEK. What are the hours of labor in your plant?

Mr. STEAD. Fifty-four hours.

Mr. BUSIEK. Do you pay by what is known as the piecework method or pay straight day's wages?

Mr. STEAD. No; only partially pieceworkers, but principally straight wages.

Mr. BUSIEK. And what do they amount to, straight wages?

Mr. STEAD. I couldn't tell you in the aggregate, but I can give you the rate of—

Mr. BUSIEK. Give us the rates of the various departments.

Mr. STEAD. Would you like to know first of all the proportion of males and females?

Mr. BUSIEK. Yes; if you please.

Mr. STEAD. Well, we have 900, and out of that 500 females and 400 males. The female minors 133 and the male minors 72. Now, when a child receives an employment certificate for leaving school to commence work and takes a position in our mill we start them with \$5 a week; and from then on why just as they are fitted for the kind of work they increase.

Mr. BUSIEK. How much did you start them out with?

Mr. STEAD. Five dollars.

Mr. BUSIEK. Five dollars?

Mr. STEAD. Yes; that is, a child of 14.

Mr. BUSIEK. And has every child an opportunity to work into a better-paying position?

Mr. STEAD. Absolutely.

Mr. BUSIEK. You recruit what might be termed the journeymen workers from the children employed in your mill?

Mr. STEAD. Yes, sir; and the leading men in our mill have all been brought up that way.

Mr. BUSIEK. A weaver is the highest position that they can attain as a workman, is it not?

Mr. STEAD. Oh, no.

Mr. BUSIEK. What is a better-paying position than weaver?

Mr. STEAD. Well, take for instance the loom fixers, the men who look after the looms.

Mr. BUSIEK. How much do they make?

Mr. STEAD. They make about \$22 to \$22.50.

Mr. BUSIEK. Do they get any percentage on the products besides?

Mr. STEAD. Yes, sir.

Mr. BUSIEK. Let's have that table now that you were going to read, Mr. Stead?

Mr. STEAD. Shall I give it to you?

Mr. BUSIEK. Now, just read us the various grades of employment and the wages paid?

Mr. STEAD. Well, you are conversant with these goods, are you?

Mr. BUSIEK. Well, slightly.

Mr. STEAD. Well, take for instance worsteds, cardage; that is, preparation of the wool. It is the first preparation. They range from boys at \$6 and \$7 and card minders that get \$10 and the second hands get \$13 and the chief carder \$25.

Combing hands, they commence at \$6.50, and the main leader, \$10; the washing-machine hands, \$13; second hands, \$20; and leaders, \$25 also.

In the drawing they commence at \$5 with these little apprentices, and they run on \$6, \$6.50, \$8, and \$17.50, also with the leaders at \$25.

The spinning is exactly the same.

The warping, such as the slashers' hands—they are men who prepare the warps for the weavers—they commence at \$5, then \$6.50, \$7, \$10, and \$16 and \$17. Their leader also gets very much higher salary.

In the finishing room they commence with the boys and young men and at \$10, \$12, \$14, and \$17. That applies all through the finishing.

In the making up of packages of the goods, they are done by boys and men combined, whose wages range from \$7 to \$16.

Mr. BUSIEK. Dyers, I notice, are \$11 to \$12?

Mr. STEAD. \$11.50 to \$12.

Mr. BUSIEK. \$11.50 to \$12.

Mr. STEAD. Yes, sir.

Mr. BUSIEK. And most of the other men, at least there is the possible attainment for them of something like \$25. Why this discrepancy in the matter of dyers?

Mr. STEAD. I didn't say we paid any dyers \$25.

- Mr. BUSIEK. I notice in the list you paid other men as high as \$25.
- Mr. STEAD. The chief dyer himself would get three times \$25.
- Mr. BUSIEK. The chief dyer would get three times \$25?
- Mr. STEAD. Yes, sir.
- Mr. BUSIEK. But his work in the dyehouse, is it of such a nature, such a simple character, that you can get men to do it for \$12 a week?
- Mr. STEAD. Well, there is no work simple, unfortunately. I think these wages are all largely a matter of custom.
- Now, in the machinist department, where we have laborers and machine hands and carpenters and things, the laborers get from \$10 to \$12, and the others from \$17 up.
- Mr. BUSIEK. Does that complete your list?
- Mr. STEAD. That completes my list, yes, sir.
- Mr. BUSIEK. Will you kindly furnish that to the reporter?
- Mr. STEAD. Yes, sir.
- (See Stead exhibit.)
- Mr. BUSIEK. Philadelphia is what is known as an open-shop town in the textile industry, is it not?
- Mr. STEAD. I can hardly answer that question, but I believe generally it is.
- Mr. BUSIEK. Have you ever had in your mill any trade agreement with any labor organization?
- Mr. STEAD. No, sir.
- Mr. BUSIEK. I take it you don't want to, or you would?
- Mr. STEAD. No, sir. I have never been asked to make any agreements. Our relations with our people are very amicable and I have never had any difficulty in settling whatever differences we might have had. We have had no strikes or no differences of any kind.
- Mr. BUSIEK. You say you have had no strikes?
- Mr. STEAD. No, sir; outside of strikes which have taken place outside of our own plant. Our general 55-hour strike and that sympathetic strike, trolley, which we couldn't control.
- Mr. BUSIEK. But otherwise you have had no strikes?
- Mr. STEAD. No, sir; none at all.
- Mr. BUSIEK. Are the wages paid in Philadelphia determined in any degree by the wages paid for similar work in competitive cities and plants?
- Mr. STEAD. Well, I could hardly answer that question. I could only say that by comparison they are high.
- Mr. BUSIEK. They are high?
- Mr. STEAD. Yes.
- Mr. BUSIEK. What has been your experience with the enforcement of sanitary laws by the State factory inspector? Is the inspection rigid and frequent?
- Mr. STEAD. Oh, yes. I can answer your question by saying that a self-respecting mill owner does not need to be schooled in that direction. He will do it himself.
- Mr. BUSIEK. He will set the pace before the legislature?
- Mr. STEAD. That is what he will.
- Mr. BUSIEK. I believe that is all.
- Acting Chairman WEINSTOCK. Have you any questions, Mr. O'Connell?
- Commissioner O'CONNELL. I believe not.
- Acting Chairman WEINSTOCK. Mr. Lennon?
- Commissioner LENNON. What object is there for the younger employees—have they any opportunity in your mill to add to their education? Is there any opportunity for them to attend continuation schools?
- Mr. STEAD. You mean a scholastic education?
- Commissioner LENNON. Yes.
- Mr. STEAD. No, sir. That is entirely voluntary. There is the usual night school and our trade schools in Philadelphia, all of which they can attend.
- Commissioner LENNON. Have you any idea of the grade of scholarship that young people, say, between 14 and 16, have when they enter your employ?
- Mr. STEAD. Yes, sir.
- Commissioner LENNON. About what grade?
- Mr. STEAD. They will go through the grammar grade.
- Commissioner LENNON. Will they go through the eighth grade?
- Mr. STEAD. Yes.
- Commissioner LENNON. I understood from some of the schoolmen here that they issue certificates as low as the second and third grades sometimes. Of course, that might not apply to anyone going into your employ?

Mr. STEAD. I don't think that applies. When my son chose mill life, he was then 14. I put it to him in that way: If you are going to learn mill life you ought to go just when the boys do, at the same age, to have the same chances, and he passed through the grammar grades.

Commissioner LENNON. You think most of them in your employ have done that?

Mr. STEAD. I think so.

Commissioner LENNON. That is all I have.

Acting Chairman WEINSTOCK. What is your attitude, Mr. Stead, as a manufacturing employer, toward the enactment of a workman's compensation act?

Mr. STEAD. Why, it has been our practice at all times to take care of everybody that is injured in our employ, regardless of contributory negligence or anything else, and we always take care of them; that is, provide them with medical attention if need be, always paid their full wages until they resumed their employment again. That would answer you?

Acting Chairman WEINSTOCK. No. Perhaps I did not make myself clear.

Supposing you had a vote on the question as to whether the State of Pennsylvania should or should not exact a workman's compensation? How would you vote?

Mr. STEAD. I think they ought.

Acting Chairman WEINSTOCK. How would you vote? You would vote for it?

Mr. STEAD. I would; yes, sir.

Acting Chairman WEINSTOCK. You think that, in the interest of both worker and employer, there should be such an act?

Mr. STEAD. Certainly.

Acting Chairman WEINSTOCK. You say that you do not deal with unions because you have never been called upon?

Mr. STEAD. No, sir; I have never been called upon to.

Acting Chairman WEINSTOCK. If this commission were to ask for your advice as a citizen, and as an observing manufacturer, whether it should or should not recommend to the employers of the nation the matter of entering into trade agreements, with a view of establishing a higher degree of industrial peace, what advice would you offer to the commission on that question?

Mr. STEAD. I think you ought not ask me that question.

Acting Chairman WEINSTOCK. You think not?

Mr. STEAD. No, sir.

Acting Chairman WEINSTOCK. You are not obliged to answer that question if you don't desire to.

Mr. STEAD. I think you ought not ask me.

Acting Chairman WEINSTOCK. We are seeking advice and counsel from men whose opinions are worth having, and that is a problem upon which this commission will have to pass, whether we shall or shall not recommend to the employers of America the adoption of trade agreements, and our judgment must necessarily be influenced more or less by the opinions of men worth listening to, and I regard your opinion as one worthy of respect.

Mr. STEAD. My relations with working people, and I have never been—I have been 54 years in service and have always had amicable relations in every way. I have never been called upon to meet any situation that we met hard feelings or hard feelings or anything, so my relations have been extremely pleasant.

Acting Chairman WEINSTOCK. I didn't put the question, Mr. Stead, in the hope of your answering it from the standpoint of your experience in your own mill, but in the hope that you would answer it from the standpoint of a man of experience, a citizen and an employer of labor.

Mr. STEAD. No, sir; I couldn't answer that question.

Acting Chairman WEINSTOCK. Are the workers in your industry organized?

Mr. STEAD. I don't believe so.

Acting Chairman WEINSTOCK. Are the employers in your industry organized?

Mr. STEAD. No, sir.

Acting Chairman WEINSTOCK. How many competitors have you in your territory here?

Mr. STEAD. Why, I don't know, but we have not a great many here in our territory. The foreign manufacturer is our greatest competitor just now.

Acting Chairman WEINSTOCK. Are there any competitors in your territory?

Mr. STEAD. Yes.

Acting Chairman WEINSTOCK. How many?

Mr. STEAD. I couldn't tell you how many; not many.

- Acting Chairman WEINSTOCK. Approximately?
- Mr. STEAD. Not many.
- Acting Chairman WEINSTOCK. A dozen?
- Mr. STEAD. No, sir. Making just exactly the same line of goods we make?
- Acting Chairman WEINSTOCK. Yes.
- Mr. STEAD. Not a dozen.
- Acting Chairman WEINSTOCK. A dozen?
- Mr. STEAD. Yes.
- Acting Chairman WEINSTOCK. You have no employers' association?
- Mr. STEAD. No. We did have some time ago a cloth manufacturers' association, but it died a natural death.
- Acting Chairman WEINSTOCK. Did it die a natural death, Mr. Stead, because there was nothing for that association to do, or because the members did not get along with each other?
- Mr. STEAD. There practically was nothing to do.
- Acting Chairman WEINSTOCK. It had no excuse for existence?
- Mr. STEAD. It had no excuse for existence.
- Acting Chairman WEINSTOCK. Have the workers in the industry ever come collectively with demands on the employers?
- Mr. STEAD. Have they what?
- Acting Chairman WEINSTOCK. Have the workers in your industry ever acted collectively and come to you and to other employers and made certain demands for better conditions, shorter hours, and higher wages?
- Mr. STEAD. You mean union representatives?
- Acting Chairman WEINSTOCK. Yes.
- Mr. STEAD. No, sir; not to me.
- Acting Chairman WEINSTOCK. They never have?
- Mr. STEAD. No, sir.
- Acting Chairman WEINSTOCK. The trade, then, is not organized?
- Mr. STEAD. I don't think so.
- Acting Chairman WEINSTOCK. If it is, you have seen no evidence of it?
- Mr. STEAD. No, sir; I have seen no evidence of it if it is. It may be, for anything I know. I don't want to go on record as saying that as a matter of knowledge, but I don't know.
- Acting Chairman WEINSTOCK. This commission, as you can readily see, would feel it very hard to comply with the duties that have been placed upon it by Congress, which are to find possible solutions for these labor problems—we would find it very hard to fulfill that duty by working out remedies from its own inner consciousness; the only way we can do so is by the way we are doing now, sitting at the feet of others and profiting by their suggestions and experiences.
- Mr. STEAD. I believe that if people would give up talking about it and let it alone it would die a natural death.
- Acting Chairman WEINSTOCK. What would die a natural death?
- Mr. STEAD. The unrest.
- Acting Chairman WEINSTOCK. Then, according to your judgment, Mr. Stead, you think that nothing ought to be done?
- Mr. STEAD. I must not say that either, but I say it certainly would help that anyhow if we didn't discuss it so much.
- Acting Chairman WEINSTOCK. Then I should judge, from your point of view, that this commission is a mistake, because it stirs the thing up. You see we have stirred it up here; we are getting information from all sides; we are throwing light where darkness has prevailed. I get it from your point of view that we are doing more harm in stirring things up than we are doing good?
- Mr. STEAD. I can only say that you are using the words, not I.
- Acting Chairman WEINSTOCK. Have you any suggestions that you feel you would care to make to this commission that is likely to prove helpful or of interest?
- Mr. STEAD. No, sir. If I knew anything at all that would help you in any way, shape, or form I would be glad to do it.
- Acting Chairman WEINSTOCK. If you were in our place, what would you do?
- Mr. STEAD. I don't know. You have a task.
- Acting Chairman WEINSTOCK. We have discovered that, Mr. Stead.
- Mr. STEAD. Yes, you have. I might say to you that if there is anything I can do to either help you or your representatives, I will place the whole of the Collingwood mill and its workings entirely at your service. You can either

come or send a representative, and if I can help you in any way, shape, or form I will be glad to.

Acting Chairman WEINSTOCK. We appreciate that, Mr. Stead, and if any suggestions come to your mind we would be very grateful if you would send them to us in writing.

Mr. STEAD. All right.

Acting Chairman WEINSTOCK. And they will receive our grateful consideration. That is all, thank you.

Mr. BUSIEK. I will call Mr. Ferris.

TESTIMONY OF MR. WILLIAM T. FERRIS.

Mr. BUSIEK. State your full name.

Mr. FERRIS. William T. Ferris.

Mr. BUSIEK. What is your occupation, Mr. Ferris?

Mr. FERRIS. Hosiery finisher.

Mr. BUSIEK. Are you connected with any labor organization of your craft?

Mr. FERRIS. Yes, sir.

Mr. BUSIEK. What is your position?

Mr. FERRIS. I am president local 696 of the hosiery workers.

Mr. BUSIEK. How long has that organization been in existence?

Mr. FERRIS. June 25, 1909.

Mr. BUSIEK. If you don't mind telling, about how many members have you?

Mr. FERRIS. Well, the trade I think covers about 1,000 hosiery workers. We have about 600 members in our union.

Mr. BUSIEK. Sixty per cent organization?

Mr. FERRIS. Yes, sir.

Mr. BUSIEK. Are there any closed shops—that is, shops that employ nothing but union help—with whom you have union contracts?

Mr. FERRIS. No, sir. We have no union contracts; but we have some pretty fair firms that have already given us conditions through the demands of the men for conditions; they have already conceded. You understand what I mean?

Mr. BUSIEK. Yes.

Mr. FERRIS. We have no signed contracts.

Mr. BUSIEK. Thus far, those shops, do they carry the rest of the trade with them? Or do they pay a better rate than the other shops?

Mr. FERRIS. Since our organization started they pay better rates than the others.

Mr. BUSIEK. Expressed in percentage, about how much have the wages increased since your organization came into existence?

Mr. FERRIS. I will have to explain: There are two kinds. We have what they call the full-fashioned hosiery and seamless work, and you can not expect the manufacturer working on seamless, manufacturing seamless, to pay the same as full-fashioned hose, because it is a higher grade stocking. And the result is that one class pays more than the other, and the fashioned work, they pay more, I think, than on the seamless.

Mr. BUSIEK. Well, in figuring it in the day's wages, do they amount to about the same or more?

Mr. FERRIS. Well, no. We have—our wages is from \$3 to \$3.50 a day. That is in different shops, you understand. But that has only existed since our organization came into existence and got into the harness and got the members together, and that is how it came to exist. Had it not been for that perhaps, before our organization we made only around \$2.25 to \$2.75 a day, and then had to do pretty near twice the amount of work we have to do to-day.

Mr. BUSIEK. So, since your organization you have cut down the amount of work which you do?

Mr. FERRIS. That is only on these certain grades. We had to do it because it was getting so bad on your health and so on that you had to do it—had to lower down your production a little bit in order to make a living out of it.

Mr. BUSIEK. And you increased your wages fully 50 per cent?

Mr. FERRIS. Not 50 per cent; about 30 per cent.

Mr. BUSIEK. From \$2.25 to—

Mr. FERRIS (interrupting). Well, that is taking grades all along the line.

Mr. BUSIEK. Well, as an officer of a union you are, I suppose, familiar with the wages paid in other cities doing the same kind of work, are you not?

Mr. FERRIS. Well, I can't say if we are in touch, because there isn't so many organizations outside of Philadelphia. There is one in Brooklyn and one in New Orleans, and we don't get together only once a year in convention where we get in touch with the prices.

Mr. BUSIEK. How do the prices in Philadelphia compare with other places where they are organized?

Mr. FERRIS. Pretty good. You must listen to this. It sounds pretty good to hear me say that we get \$3 to \$3.50 a day, but, as a hosiery boarder from experience, outside of a couple of shops working in Philadelphia to-day that is working steady, the other shops is working such bad conditions, from two to three days a week at this time, that it brings it down to such an extent it is not a living wage. Some of our men are getting \$6 a week and some \$8. But I will say there is a couple of shops that is working; three shops I think it was; they are Collingwood & Huntsiker working steady, and Brown's, and the Folwell Bros. & Co. I think they are three shops working steady, and they are the only men getting the benefit of this depression in the hosiery business at this time.

Mr. BUSIEK. Well, what is this depression due to? Is it too many workers or are there too many men for the job, or just a general business depression?

Mr. FERRIS. Well, it seems to me that is a hard matter to understand for ourselves. We are just ordinary workers working in the shop, but we feel in the State of Pennsylvania it is political.

Mr. BUSIEK. You think the condition is political here?

Mr. FERRIS. That is what we believe in the hosiery line trades to-day—is political.

Mr. BUSIEK. Now, how do you figure that out, or just what are your views on that?

Mr. FERRIS. Well, the general rule is that this administration, for instance. I had an interview with one manufacturer, and he claims there was eight jobbing houses combined together that is buying hosiery from Germany, and he received a letter where one of his friends had lost \$15,000 in a deal some way or other, and he says these here eight houses have joined together and are buying hosiery from Germany for \$1.44 here, paying duty and all on it, where they could not produce the same kind of a fashioned stocking this is under \$1.80 in the city here or in the country here. Now—

Mr. BUSIEK. (interrupting). Well, you can not lay that to the mill owners, can you?

Mr. FERRIS. No.

Mr. BUSIEK. Go ahead. You were going to say something.

Mr. FERRIS. Well, it seems in some of our factories they have posted a notice to the effect, on the walls, to the effect that if there is anything to be done by us to meet the conditions that these manufacturers on the other side put, as much as telling you they have got to have Penrose in the Senate.

Mr. BUSIEK. He is to put back a high tariff?

Mr. FERRIS. Yes.

Mr. BUSIEK. Could you furnish the commission with a copy of your constitution?

Mr. FERRIS. I have a copy, but I must say I forgot it. I thought I had it with me this morning, but I could send it to you. In fact, I am coming this way to-morrow morning on a little business to the Bets Building and will drop in with it.

Mr. BUSIEK. What are the sanitary conditions in the hosiery business?

Mr. FERRIS. Well, I must say this, that they are pretty fair to what they were before this State department of investigation got looking after sanitary conditions, or I think the manufacturers took a little pity on us fellows, for the simple reason they used to put our class of work in the worst place in the mill, lots of times in the cellar, where there would be no ventilation. I will give you an idea where you would have to work: Say here is a bench, two or three men on it, and a dry box there. Well, as you fill the 12 boards of stockings you have to walk to that box, and there is 250 degrees of heat with smoke pushing out at all times, and eventually it gets all through the room, and they haven't enough fans to draw it out. Even at that I have went in some places where they have had enough fans that you would think would take the smoke out and fans also running from the box out into the open to take the smoke out, but nevertheless the smoke lays in there and at the end of a day you are like a smoked herring when you come out. It seems the manufacturers

are not thinking of the boarders, except a couple of places where they let in more ventilation and air and more sunlight.

Mr. BUSIEK. Explain to the commission what the duties of a boarder are—what part of the work he does.

Mr. FERRIS. Why, after the stocking is made it goes to the dyehouse, gets dyed, and it comes to the boarder to be shaped. They have boards shaped to the leg and foot, and naturally when you board that it is damp; then you take it to this box to dry it, and when you take it from the board it leaves that shape there. You have to keep constantly going backward and forward, and all the work lies on your body at this time. But some genius is getting up a machine what we would not have to make no walk at all practically; the idea that we will stand in one place. The only thing is, we will have to have something over us to keep the heat off us. Now, where the water comes in a box they tell us it will make it a little better for us in the shop.

Mr. BUSIEK. That is all.

TESTIMONY OF MR. RUFUS W. SCOTT.

Mr. BUSIEK. State your full name.

Mr. SCOTT. Rufus W. Scott.

Mr. BUSIEK. You are the superintendent of the Taubel Hosiery Mills?

Mr. SCOTT. Not exactly; I am a director in the company and manager of some of its plants in Philadelphia.

Mr. BUSIEK. How many people do you employ?

Mr. SCOTT. Approximately 6,000.

Mr. BUSIEK. In the hosiery mills of Philadelphia, seamless stockings?

Mr. SCOTT. Not altogether in Philadelphia. We have mills in Shamokin and Tamaqua and Mount Carmel, and Riverside, N. J., and eight plants here in Philadelphia.

Mr. BUSIEK. How do the wages paid in Philadelphia compare with other competitive plants?

Mr. SCOTT. We have no direct way of knowing except on certain lines of goods. We have great difficulty in making them and marketing them under the prices we have to pay here; some of the cheaper things we can not make here.

Mr. BUSIEK. Who makes them? Are they made in this country?

Mr. SCOTT. Made in the South. The seamless stockings up to this time have not been made in Europe to any extent; they are just beginning to send the machines there. Now, the machine was made in this country and had its inception in this country, and up to this time we have had practically no competition on seamless stockings. In fact, the seamless stocking is the rag of the stocking business, so-called. We are not the aristocrats in the business. We cater to the angry mob, and make stuff every one can afford to wear.

Mr. BUSIEK. You say the seamless stockings are not the aristocrats?

Mr. SCOTT. No; they are for very ordinary folks.

Mr. BUSIEK. About how many women do you have employed out of that number, what percentage?

Mr. SCOTT. We have approximately 750 in the plants who are women.

Mr. BUSIEK. And what part of the work do those men do ordinarily?

Mr. SCOTT. They are machine fixers, superintendents, foremen; we will say, in some places run machines, rib frames, make the frames and the legs of children's stockings.

Mr. BUSIEK. What is the lowest wage that you pay in your mill?

Mr. SCOTT. That is all piecework.

Mr. BUSIEK. It is all piecework?

Mr. SCOTT. Except the mechanics, the machinists, the foremen, and forewomen.

Mr. BUSIEK. Do you have a daily stint, a minimum?

Mr. SCOTT. We have nothing that is compulsory; we have in some mills a fixed number of dozens, after making which an operator is allowed to go home if they so desire.

Mr. BUSIEK. Who fixes the number of dozens?

Mr. SCOTT. A fixed number of dozens from the machine, and after making that number of dozens a girl may go home if she so desires. A small percentage of them avail themselves of that privilege.

Mr. BUSIEK. How much would this minimum pay?

Mr. SCOTT. The minimum on a knitting machine will pay about \$2.30.

Mr. BUSIEK. A day or a week?

Mr. SCOTT. A week. The men—

Mr. BUSIEK. (interrupting). A day?

Mr. SCOTT. The amount that a girl can make and then go home.

Mr. BUSIEK. Well, let's call that the minimum; that would be about \$2.30 a day?

Mr. SCOTT. Well, don't misunderstand me; there are very many people who do not make that number of dozens, and who do not, for one reason or another, do not come up to that standard.

Mr. BUSIEK. Well, is there any point that you call, for instance, a point of efficiency?

Mr. SCOTT. Oh, yes; otherwise we would have very few, if we held every one to this maximum production, then, of course, we would have very few people.

Mr. BUSIEK. Well, is there any certain point an operator must turn out to keep his or her place at the mills? Is there any?

Mr. SCOTT. Oh, yes.

Mr. BUSIEK. You would not give a machine to an incompetent person?

Mr. SCOTT. Well, it works different. The operators work one, two, or three machines, and a girl who is not competent or proficient enough to run three machines has two machines, usually.

Mr. BUSIEK. Well, what I am trying to get at is the maximum and minimum wage for operators. What does it run to, if you have not got the exact figures—

Mr. SCOTT. (interrupting). I could only give averages.

Mr. BUSIEK. Well, give us averages, then.

Mr. SCOTT. Well, in knitting, our last full pay the girls made \$2.09 a day. That includes every one running a knitting machine.

Mr. BUSIEK. Now, there are—give us the other classes of employees; there are a number of operations?

Mr. SCOTT. Loopers made \$2.16. That is a girl who closes the toes of the stockings, a very difficult operation, and looked on as being one of the hardest operations in that craft.

Mr. BUSIEK. And give us the other.

Mr. SCOTT. The other highly paid operation is the winding of the silk or artificial silk. That averages approximately the same as knitting.

Mr. BUSIEK. How about the lower paid occupations?

Mr. SCOTT. Well, that would be the main operations, which I mentioned, are the making—the real making—of the stockings. The other operations would be preparatory operations, such as is done by young girls—the trimming-out of the double threads, and the double sole, and the separating of the tops, and work that is usually done by young girls.

Mr. BUSIEK. What do these younger girls make?

Mr. SCOTT. The average of the sole trimmers and the end pullers the last full pay was \$1.69.

Mr. BUSIEK. \$1.69?

Mr. SCOTT. Yes.

Mr. BUSIEK. A day?

Mr. SCOTT. Yes.

Mr. BUSIEK. Does your firm deal with its employees collectively or as a—will they deal with labor-organization representatives?

Mr. SCOTT. They will not.

Mr. BUSIEK. Have they ever dealt with them?

Mr. SCOTT. Not directly. We arbitrated some labor difficulty this year in which an organization entered into the dealings, but we do not recognize any organizations in our business.

Mr. BUSIEK. May I ask why?

Mr. SCOTT. Well, in the first place, the craft is not particularly organized. It has been very difficult to organize women, for the reason that the average woman enters this business with a totally different idea from what a man would. She looks on it more or less as a temporary proposition. They are coming and going all the time. It has never come to the point where we were asked to or not to recognize them.

Mr. BUSIEK. Well, you have a well-defined attitude in that matter, haven't you?

Mr. SCOTT. We certainly have.

Mr. BUSIEK. And that is that you won't deal with organizations as such?

Mr. SCOTT. No.

Mr. BUSIEK. And I asked of you, why, and you said that the chief or only reason was that they are not highly and efficiently organized.

Mr. SCOTT. Well, we deal successfully with the people that work for us, and never have had but one difficulty in the 80 years the business has been going.

Mr. BUSIEK. Do you think their interests as well as yours are best conserved by dealing as you do?

Mr. SCOTT. I think it is generally admitted in Philadelphia that our interests have been very well taken care of—by our competitors and by the people generally in the mills.

Mr. BUSIEK. You spoke about one strike of more or less magnitude. When was that?

Mr. SCOTT. This past—during the past few months—I think, in December or January.

Mr. BUSIEK. Is that strike still on?

Mr. SCOTT. No.

Mr. BUSIEK. What was your attitude toward the employees who went out on strike? Did you take them back?

Mr. SCOTT. Oh, yes; we have no way of knowing anything about their organization or whether they are members or not. I think the people that were the most rabid in the trouble are all of them still employed by us.

Mr. BUSIEK. Does your company have any organization of any kind, or is there any organization amongst the employees fostered by the company for taking care of employees in sickness?

Mr. SCOTT. Not that I know of.

Mr. BUSIEK. For disability?

Mr. SCOTT. We have in every instance endeavored to follow up every trouble; we have had very little in the way of accidents during the eight years I have been in the company.

Mr. BUSIEK. That is a voluntary attitude by the company?

Mr. SCOTT. We endeavor to follow up and see if there is any suffering, and always have, or in several places have, for four or five months, in the case of injury or sickness kept them on the pay roll, and things of that kind.

Mr. BUSIEK. Did you keep them on the pay roll?

Mr. SCOTT. It is not a universal rule, but we have done it under certain circumstances, usually governed entirely by the responsibility of the person and the conditions under which they are forced to live during that time.

Mr. BUSIEK. What do you mean by responsibility? Do you mean how much care they exercised at the time of the accident?

Mr. SCOTT. Well, according to what their responsibilities are. I mean just that; whether they have family responsibilities, or responsibilities at home; and it is our intention to follow up every case of that kind and do what is absolutely just and right.

Mr. BUSIEK. Irrespective of any legal liability you may be under?

Mr. SCOTT. We have no legal troubles of any kind. I don't think we have ever been sued for a case of that character since the business was started.

Mr. BUSIEK. As a large employer of labor, what is your attitude toward workmen's compensation?

Mr. SCOTT. We work in New Jersey under the compensation law, and think it is a very fair thing, and we are heartily in accord with it, and if the same law could be passed in Pennsylvania we would be in favor of it.

Acting Chairman WEINSTECK. You heard the questions, Mr. Scott, that I put to the gentleman who preceded you, Mr. Stead?

Mr. SCOTT. I did not hear them all distinctly, but in a general way, I guess.

Acting Chairman WEINSTECK. Well, one of the questions was this: "If this commission were to invite your opinion as to whether or not it should recommend to the employers of America the entering into of trade agreements with organized labor, what would you have to suggest to the commission along those lines?"

Mr. SCOTT. Well, we in Philadelphia have seen very little of that thing worked out, and I do not think I would be competent to make a recommendation of that kind one way or the other. I think it would be an ideal condition if such a thing could be arrived at.

Acting Chairman WEINSTECK. There appeared before this commission three different kinds of employers, one kind of employer who will deal only with their workers individually; another kind of employer who will deal with their workers collectively within their own plant; and a third class of employers who

enter into trade agreements with organized labor, recognizing and dealing with organized labor. To which of the three kind of employers do you belong?

Mr. Scott. Well, we say, of course, that we do business entirely with the individual, but human nature is so constituted that there are always leaders, and in doing it with our own organization, if we were to call into the office 50 girls there are usually about 4 girls who do the talking, and by whose judgment the thing is settled. So I suppose we do collective bargaining in that way.

Acting Chairman WEINSTOCK. Well, are the workers in your plant organized among themselves in any way?

Mr. Scott. That I don't know.

Acting Chairman WEINSTOCK. But whenever an issue arises you invite them on your own initiative?

Mr. Scott. We make every effort to settle the difficulties inside our own doors to the satisfaction of our workers under every possible condition.

Acting Chairman WEINSTOCK. You take cognizance of them, do you?

Mr. Scott. Absolutely.

Acting Chairman WEINSTOCK. Suppose there is a disagreement?

Mr. Scott. There has never been but one disagreement, and that was very disastrous for all of us.

Acting Chairman WEINSTOCK. Was that disagreement one as to wages?

Mr. Scott. It arose through our inability to sell certain lines of goods and get our money back because made in Philadelphia, and we made an offer to readjust the prices on a certain character of work and were not able to do so to the satisfaction of the operators, and the strike ensued, starting in a very small way and eventually reaching quite some proportion.

Acting Chairman WEINSTOCK. Continued how long?

Mr. Scott. About seven or eight weeks.

Acting Chairman WEINSTOCK. Your plant was entirely shut down?

Mr. Scott. No; none of our plant was entirely closed during that time, but we were operating under very serious disadvantages.

Acting Chairman WEINSTOCK. How was that matter finally adjusted?

Mr. Scott. It was arbitrated under the new Pennsylvania law.

Acting Chairman WEINSTOCK. Will you outline briefly just what that law is?

Mr. Scott. I am not familiar with the law technically, except that the department of labor and industry in Pennsylvania, I believe, are authorized to first endeavor to settle in an amicable way by conference any difficulty.

Acting Chairman WEINSTOCK. Yes.

Mr. Scott. And if that can not be done that way, they endeavor to get the parties in the trouble to arbitrate.

Acting Chairman WEINSTOCK. That is, they step in as mediators?

Mr. Scott. Yes; that is the first step, and if they are not successful they go further—

Acting Chairman WEINSTOCK (Interrupting). Then, as conciliators?

Mr. Scott. I understand that it is not compulsory, but we are very glad to avail ourselves of anything that would straighten the thing out, because it was really more misunderstanding than anything else.

Acting Chairman WEINSTOCK. When did that trouble arise? How long since?

Mr. Scott. Some time in December of this last year.

Acting Chairman WEINSTOCK. This last year?

Mr. Scott. About the time we began to experience difficulty in getting business to run our plant.

Acting Chairman WEINSTOCK. How many manufacturers are there in your line in this territory?

Mr. Scott. I would say there was 200. Not all strictly competitive, but in the manufacture of seamless hosiery, in the district that might be called the Pennsylvania district.

Acting Chairman WEINSTOCK. Are they organized as employers?

Mr. Scott. No; not to my knowledge, and I have never attended a meeting.

Acting Chairman WEINSTOCK. Has any effort been made to have them organized?

Mr. Scott. We have the organization that Mr. Moore spoke of, the national organization, which has been more of a legislative proposition, and there has never anything about labor been brought up.

Acting Chairman WEINSTOCK. What do you do as a manufacturer if legislation is presented that in your judgment is inimicable to your interest?

Mr. SCOTT. I don't think there has been anything done in an organized way except to maintain a bureau in Washington for the collecting of statistics and the giving out of information.

Acting Chairman WEINSTOCK. And dealing with national legislation?

Mr. SCOTT. Yes; particularly tariff legislation.

Acting Chairman WEINSTOCK. Now, do you do anything collectively to deal with such legislation?

Mr. SCOTT. Not that I know of.

Acting Chairman WEINSTOCK. Well, supposing at the next session of the legislature some measures should be introduced that would have a powerful backing, and that you and your fellow manufacturers thought would be likely to prove exceedingly harmful to your industry, what would you do?

Mr. SCOTT. Well, I don't think there is at this time any organized resistance to any such State legislation. I don't know what might be done if it should arise. I am not sufficiently acquainted with other people in the craft to speak for them.

Acting Chairman WEINSTOCK. Well, if your opinion should be invited, Mr. Scott, as to whether or not the employers in your industry should organize, how would you feel about it? Would you favor it, or would you oppose it?

Mr. SCOTT. Well, I think if an organization could be worked out which would deal fairly in every way, it certainly would be within our rights as fully as the laborers who organize, and I think it would be a good thing.

Acting Chairman WEINSTOCK. Were you present when the representative testified before the commission, telling of the conditions that prevailed in the glass blowers' industry and in the potters' industry?

Mr. SCOTT. No; unfortunately I was not here.

Acting Chairman WEINSTOCK. Well, the testimony that was elicited is to the effect that in these particular industries the employers are strongly organized, and the workers are strongly organized, recognizing each other, they deal with each other, and enter into trade agreements with each other, and according to the testimony of both sides it has worked out to their entire satisfaction, and that as a matter of choice they would not go back to the old unorganized conditions. Now, do you know of any good reason why the same conditions could not be made to work with equal success in your industry?

Mr. SCOTT. Well, I only know that that looks to be a long way off from where I sit. I would not make any recommendations on that. I think it would be, as I said before, an ideal condition if it could be brought about, but from where I am sitting I can not see it.

Acting Chairman WEINSTOCK. That is, you think it would be an ideal condition if it could be brought about?

Mr. SCOTT. Yes, sir.

Acting Chairman WEINSTOCK. Well, your ideas are, first, that it could not be brought about?

Mr. SCOTT. Yes.

Acting Chairman WEINSTOCK. Well, what is to hinder it being brought about?

Mr. SCOTT. Well, it is very easy for people to go into the hosiery business. The machine builders stand ready to make machines on two-year notes and the yarn merchant, when business is not good or just as it should be, takes an excessive chance, and that is perhaps the reason that we have in this country so many small struggling mills, and they are run by men who are making a desperate effort to be successful and whose ultimate success is very doubtful. And I don't think that it would be possible to organize the craft as it exists in a way that would give real stability to an organization.

Acting Chairman WEINSTOCK. Is that the only reason that occurs to you?

Mr. SCOTT. Yes, sir; as I said before, if it could be worked out, I think it would be a great thing, and that is the main reason why, it occurs to me at this time.

Acting Chairman WEINSTOCK. The fact that there are newer small irresponsible employers?

Mr. SCOTT. Yes, sir.

Acting Chairman WEINSTOCK. Well, supposing all of the large responsible employers could be brought together, then what?

Mr. SCOTT. Well, I have every confidence in their square dealing, and I think it possible something might be worked out if we could eliminate the small shop who really manufactures a large percentage of the total output.

Acting Chairman WEINSTOCK. Well, isn't it true, Mr. Scott, that that condition is not confined to your industry, that in every industry you will find fairly large employers who are responsible, and who come in together, and they also have a goodly percentage of small operators who are irresponsible?

Mr. SCOTT. I would think it would depend largely on the business. The equipment, the smallest—the equipment of some lines of business necessitates a great deal more money than the equipment of a small stocking mill, and we can not dodge the idea that credit is the basis of a lot of things, and in some lines of industry it would not be possible for what we might term an irresponsible man to get into the industry.

Acting Chairman WEINSTOCK. I gather, then, from the answers you have given to these questions, that you would look upon the trade-agreement situation as the ideal situation?

Mr. SCOTT. If we could be brought to have confidence in it, it would be an ideal thing; yes.

Acting Chairman WEINSTOCK. That is all for you. Thank you, very much.

The hearing stands adjourned until to-morrow morning at 10 o'clock.

(Whereupon, at 4.40 p. m., an adjournment was taken until Tuesday, June 30, 1914, at 10 a. m.)

PHILADELPHIA, June 30, 1914—10 a. m.

Present: Commissioners Weinstock (acting chairman), O'Connell, and Lennon. E. H. Busiek, special counsel.

Acting Chairman WEINSTOCK. The commission will be in order.

TESTIMONY OF MISS MAY YEARSLEY.

Miss MAY YEARSLEY. Mr. Chairman, may this paper be put in your records [presenting a paper]?

(The paper so presented was marked "Exhibit 1, Miss Yearsley," June 30, 1914.)

Mr. BUSIEK. We will take up the hearing on the garment industry.

The REPORTER. Is the hearing on the textile subject closed, Mr. Busiek?

Mr. BUSIEK. Yes.

DYERS' AND MERCERIZERS' UNION, No. 1, OF PHILADELPHIA AND VICINITY, AFFILIATED WITH UNITED TEXTILE WORKERS OF AMERICA, STATE FEDERATION OF LABOR, CENTRAL LABOR UNION OF PHILADELPHIA, DISTRICT COUNCIL OF TEXTILE WORKERS, AMERICAN FEDERATION OF LABOR.

DYEING INDUSTRY OF PHILADELPHIA.

Wages.—Dyeing of skein yarns and warps. In all shops that are organized the minimum price laid down by our union is 25 cents per hour. This price is paid in 48 shops; very few men are paid over this rate. A conservative statement would be our union controls about 85 per cent of the skein and warp dyers. In nonunion shops the wages are \$7 up to \$12 per week. For instance, Wm. Ward & Co., cloth manufacturers, Twenty-second and Spring Garden Streets, pays \$7 to \$9. These men are not conversant with conditions and none can scarcely speak the English language. I, myself, worked in this firm about 13 years ago and was paid \$12 per week for a working week of 60 hours. We have endeavored time and again to organize this place; when we got a few of the men as members they were minus their jobs in a short space of time. Nathan Folwell, cloth manufacturer, Third and Cambria, pays \$11.50 on a 54-hour base; his dyers work 12 hours per day—from 6 to 6; they do not stop for dinner, as the machines do not stop. Our State law guarding women and children affords our men no protection. All employers where women are employed and using dyers are working on a 54-hour base. All others are still taking the advantage and working on a 60-hour base.

Machines versus handwork.—James Hulton, Ruth, above Lehigh Avenue, dyer of fine skein yarns for the manufacture of men's wear, is a practical machine dyer. He has 14 machines. Seven men attend to these machines. An ordinary day's work would be from 5,000 to 6,000 pounds of yarn. On a hand kettle a fair day's work for two men would be 600 pounds. So expert is Mr. Hulton he adopted a system of unloading the machines in a boiling condition, so as to save steam and time on the part of the men. Very seldom do his dyers make a full week.

T. A. Harris & Co., of Mascher and Thompson, operates 7 machines, their output for a day around 6,000 pounds. Eight men are working on these machines. Hardwick & Magee, manufacturers of carpets, operate 24 machines; their capacity is 300 pounds and 500 pounds machines. Stead & Miller, upholstery goods, two men on machines will dye 2,000 pounds per day, two men on hand kettles 900. Quernes & Maslam, jobbers on carpet yarns, have 8 machines for the dyeing of wool yarn. Three men operate them; they will turn out 4,000 pounds of dyed yarn per day. Six men on hand kettles will turn out 4,000; this is cheap dyeing but hard on the men. This is the general condition throughout our industry. Our employers have more than doubled their output with the aid of machines with their forces reduced 50 per cent. The dyer has scarcely time to wash for the street at the end of his day's work. Some places would dock you for 15 minutes.

Sanitation.—Too much can not be said about our dyeing plants; very few employers consider for a moment the comfort of their dyers. With the exception of about six none of them have ever attempted to place any natural contrivances for the driving out of the vaporous gases and dense steam which are ever present, making the life of the dyer miserable. Take a damp day, it is impossible to see 6 inches ahead of you. In summer the dyer is actually parboiled, never for a second does a cold blast fan his brow. Imagine rows of

kettles boiling with space for two men to pass, and that with an effort, with little or no ventilation, no fans, no hoods, and the sun registering 120 degrees; horrible to think of it. Our employers, with few exceptions, are all in the same boat, all riding and occupying a seat in the car of avarice, neglecting though knowing the crying need of better sanitation. In winter men have had their feet frostbitten at work in dyehouses. You could not tell a dyehouse in winter from a cold storage. Nothing strange for a dyer to throw boiling water on a batch of yarn to separate the sticks, and this action takes place in an inclosed building. Mr. Lightner, superintendent of the department of labor and industry of this State, informed me regarding sanitation in our dyehouses; they come in under the board of hygiene.

Labor troubles.—Our employers do not antagonize us as union men; in our formation in 1909 we had opposition, especially where our union was weak. Wages were low before we organized—the general rule from \$9 to \$12 for a working week of 60 hours. In three years we have succeeded in raising wages from 10 to 30 per cent. In the old days the employers loved to talk on merit, and so well was this thing carried out graded prices were paid in some of our dyehouses making a difference to some of \$4 per week. Our union stopped that kind of merit. We do not force an employer to keep a man who is incompetent; pay him off and let him go. We have had five small strikes in five years. One at the Hughes Manufacturing Co., in Frankford; he refused to pay 25 cents per hour. The strike is still on nearly two years; he is paying the money to strike breakers. The Ontario Dyeing Co., Ontario and D Streets; we have a strike nearly two years, caused by a nonunion dyer or delinquent not paying his dues. The firm favored the delinquent. We picketed this shop for four months; the firm getting tired, haled us into court, and notwithstanding the testimony of the lieutenant, two sergeants, and policemen on the beat, who swore it was the quietest strike they ever witnessed, Judges Staake and Ralston handed down a decree enjoining 20 strikers and the president of the union from interfering in any way with the Ontario Dyeing Co. The Penn Worsted strike was caused through wages; it lasted eight months, the firm finally agreeing to pay our price. At present our trade is dull, especially in upholstery, but on the whole we find very little difference as far as steady employment goes. Some of our shops are busy, especially the fine trade.

Respectfully submitted.

ARTHUR McDONNELL,
2515 Potter Street, Philadelphia,
President Dyers and Mercerizers, No. 1, of Philadelphia.

THE PANIC OF 1907.

I, Arthur McDonnell, was working in the Orinoka Upholstery Mills. Everything was booming, the looms were all running, our skein dyers busy, the gigs were turning out roll upon roll of dyed cloth. In 24 hours two-thirds of the looms stopped and we were left with about 8 men out of the 30 in the dyehouse. Talk about slack times. It was a cyclone; this was remarkable, and not a Democrat in sight. In all my experience of 30 years we have a depression about twice a year, due, in my opinion, to a restricted market, the home market full, no more goods needed; off goes the looms until they are depleted and need to be refurbished. We are constantly working in doubt, and our greatest bugaboo is rent day—how to stave him off.

{SEAL}

ARTHUR McDONNELL.

PIECE DYEING AND FINISHING.

Wages for dyers, 20 cents per hour; very few exceed this rate. These workers are all machine hands; they work straight from starting time until night, with a short intermission for dinner. In busy seasons nothing new for these men to work 14 and 15 hours per day; there is no extra time allowed; all they receive is the hour rate. Firth & Foster, one of the largest piece dyeing plants, up to a year ago was 10 per cent below 20 cents per hour. It is an English firm; the hands are mostly men of that nationality; they stood without an organization until a few months ago. The firm is bitterly opposed to a labor union; they have a record for years of crushing out the least semblance

of an organization. I, working in the dyehouses since 1883 in Philadelphia, have never known or heard of a single employer of dyers to grant an advance to their hands gratuitously. I make one exception in the case of Nathan Folwell, he raised his dyers to checkmate our movement; we have time and again tried hard to organize his plant. The district council of textile workers have spent time and money, but all was of no avail. We did have a few dyers and finishers enrolled, but they soon were separated from their work. Sanitation is bad, as these piece kettles omit a great deal of steam, as many as 20 will be going on the one floor. In truth our lawmakers should take the matter of sanitation in their hands regarding all dyeing firms; there is plenty of food for thought. Slackness—well, when the Democrats are ruling its the tariff; they are always afraid. When the Republicans are in the spinners are so busy on others yarns they have not time to spin the kind I want, so there you are.

[SEAL.]

FERRIS EXHIBIT.

HOSIERY WORKERS LOCAL No. 696,
Philadelphia, Pa., June 29, 1914.

Members of Industrial Commission:

We hereby submit a report of conditions of the hosiery workers in part.

Wages.—Before our organization was started in 1909 the hosiery boarders made about \$2.25 to \$2.75 per day, or \$13.50 to \$15 per week, but taking into consideration the time the worker lost in waiting for work to come from dye-house and slackness in trade and sickness, as there is considerable in this trade on account of the constant movement of every part of the body and other conditions, making it a yearly wage of \$11 on the average. Since the formation of our union we have increased the wages from \$2 to \$3 per week. So much for organized labor in this instance. During the depression of trade lately some of our members are only working two or three days per week, which brings their wages down to \$6 or \$9 per week. At the present time there is only three organized shops that are working full time. In these shops about 125 of our membership of 600 men are employed. In a large majority of the mills they pay every two weeks, and sometimes this is a great hardship on the workers, as, for instance, a worker will get a job and the firm that he gets with will keep a week's wages in hand, which is the case in many of the mills; therefore he will have to work three weeks before he gets any wage, and, as the worker on an average has never much money ahead, so very often he has to turn to some money lender, who charges him a very large interest. We feel that if the workers got paid every week that he could get along much better.

Sanitary conditions.—The stocking boarder has to work under very insanitary conditions in some of the mills. The occupation is a very tiresome one, and the heat is very much above what the heat is under ordinary occupations. The men work at what is known as a dry box, which has a temperature of 250 degrees on this box. There are six men working. After boarding a set of boards they put them in the box and in doing this the heat is rushing out in the face of the worker, together with the smoke and smell of the stockings, which is not very healthy. After they take this set of boards to their bench they have these hot boards in front of their face, so you can see that they are constantly in a great deal of heat. Taking into consideration all of these conditions you naturally would think that we would have the best place for air and ventilation that could be obtained in the mills. Now, this is just the contrary; they generally put the stocking boarder where they can not put any other employee. These conditions are very bad for the health of the men, especially in the winter, when the men ought to have plenty of ventilation without being in a draft. The men leave the mills at noon and night wet with perspiration, which we think could be avoided.

Relations between employer and employee.—We find that a large majority of the manufacturers are friendly with our organization. Such firms have very little trouble with strikes, walkouts, etc. On the other hand, there are some manufacturers that have taken a decided stand against our union; such firms have to employ, as a rule, inferior help, as any man that has any manhood and wants to be treated as men should be treated refuse to work under the system and conditions of said firms. With the exception of one instance, we have had no trouble in our trade for over one year. In spite of the lack of

work our members and their employers have adjusted every grievance satisfactorily to both parties concerned. We feel that a majority of employers are willing to treat with organized labor of the right sort.

Docking system.—This system has been abolished in every place where we are strongly organized. There has been a case just presented to us in the firm of Wm. F. Taubel (Inc.), who is the largest manufacturer of seamless hosiery in the United States. The knitters of this firm are being docked 8 cents for each stocking that is not made right and have to replace another good one for the bad one. In another mill of Taubel they are docked 5 cents and have to replace a good one. With a majority of these cases the fault is not with the girls making the stocking, but with bad needles, poor yarn, and bad machines, but the firm makes no allowance for any of the bad conditions. If these girls make any protest, there is nothing left for them to do but quit or get fired. We feel that if these workers were strongly organized such conditions would not exist.

Discrimination.—This is another bad condition that is being abolished where we are strongly organized. We believe that this has done more to keep the worker down than any other system that the employer has ever practiced. The firm of William F. Taubel has been practicing this in numerous cases. There was a strike at this firm last winter which was brought on by reducing the wages of the winders. This strike lasted six weeks and was settled under the arbitration laws of Pennsylvania. While this finding of the board of arbitration was very unsatisfactory to the strikers, we were big enough to accept it, which is more than can be said about the employer. After resuming work under the finding of the board the firm started to get rid of the union help wherever it was possible to do so. At the mill at Second and Columbia Avenue there were 10 rib-frame hands and fixers laid off. When the men went to find the reason the foreman told them that they were only going to finish up what work they had laying around and that they could do that with the help they had, but promised to hire these men when they started up busy. This happened last February. Instead of hiring the men they took boys and old men and put them on these machines, and the majority of the men that were laid off are walking the streets unable to find work. Emerald and Westmoreland Streets, mender discharged; windows nailed; coming in late, etc.

Business, past and future.—Brown Knit has added one floor to plant and have put or are putting in 60 new machines, each costing from \$2,000 to \$3,000 in last year and half. Harry C. Aberle built new at rumored price of \$190,000; also large amount of new machines, costing from \$2,000 to \$3,000 each. William Brown, 24 new machines; Brownhill & Kramer, 160 new machines; John Blood & Co., 125 new machines. We believe that business will soon be good in a short time.

WILLIAM T. FERRIS,
President of Hosiery Workers' Local 696,
Philadelphia, Pa.

YEARSLEY EXHIBIT.

Is there any good reason why 26,000,000 citizens should continue to deprive their 15,000,000 or 20,000,000 fellow citizens of the power of participating in setting up your commission and directing such investigation? Yes or no. I think your commission answers no.

Will the commission then take into consideration an immediate recommendation to President Wilson and Congress to take the shortest constitutional way to construct the basis of justice and peace at the fountain of your honorable commission's authority?

As to open shop or closed shop, collective bargaining or individual bargaining, Government ownership or private ownership, workmen's compensation or other questions, I do not care to express an opinion at this time. How can we solve the problems of justice and peace without going to the highest point in the stream, without correcting injustice at the fountain of power? Probably no more excellent commissioners could be found in the land, but who can tell what would follow the votes of the excluded half of your fellow citizens in 38 States?

Votes for all adult citizens!

3090 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

STEAD EXHIBIT.

[Folwell, Bro. & Co. (Inc.), Third and Cambria Streets, Philadelphia.]

Number of hands employed -----	900
Females -----	500
Males -----	400
Minors:	
Females -----	133
Males -----	72

List of wages.

1. Worst carding:	
Second-hand -----	\$18. 00
Card minders -----	10. 00, 7. 00, 6. 00
2. Combing:	
Second-hand -----	20. 00
Washing-machine hands -----	13. 00
Laborers -----	10. 00
Comb and box minders -----	6. 50
3. Drawing:	
Second-hand -----	17. 00
Oilers and laborers -----	8. 00
Roving hands and box minders -----	6. 50
Helpers and learners -----	6. 00 and 5. 00
4. Spinning:	
Second-hand -----	17. 00
Twisters -----	6. 00
Spinners and spoolers -----	5. 50
Doffers -----	5. 00
5. Warping:	
Dressers and slasher hands -----	17. 00 and 16. 00
Helpers -----	10. 00
Warpers -----	7. 00
Assistants -----	5. 00-6. 50
-----	20. 00
6. Weaving: Loom fixers -----	20. 00
7. Dry finishing:	
Second-hand -----	17. 00
Paper pressers -----	12. 00 and 14. 00
Press and dryer hands -----	10. 00
8. Wet finishing:	
Second-hand -----	15. 00
Washer hands -----	10. 50
9. Bleaching: Bleaching hands -----	10. 50-12. 00
10. Dyeing:	
Color man -----	12. 50
Balance of hands -----	11. 50
11. Crabbing:	
Can dryer hands -----	11. 00 and 12. 00
Crabbing hands -----	10. 50
12. Making up:	
Perchers -----	12. 00-16. 00
Measurer -----	10. 00
Paperers -----	7. 00-10. 00
Makers-up -----	7. 00
13. Machinists:	
Vise and lathe hands -----	17. 00
Laborers -----	10. 00-12. 00

THE WOMEN'S GARMENT INDUSTRY
OF PHILADELPHIA

(For exhibits under this subject, see pages 3158 to 3171)

COMMISSION ON INDUSTRIAL RELATIONS.

PHILADELPHIA, June 30, 1914—10 a. m.

Present: Commissioners Weinstock (acting chairman), O'Connell, and Lennon; also E. H. Busiek, special counsel.

Mr. BUSIEK. We will take up the hearing on the garment industry.

Acting Chairman WEINSTOCK. Proceed, Mr. Busiek.

Mr. BUSIEK. I will call Mr. Morris Bernstein.

TESTIMONY OF MR. MORRIS BERNSTEIN.

Mr. BUSIEK. Please give us your name in full.

Mr. BERNSTEIN. Morris Bernstein.

Mr. BUSIEK. What is your occupation?

Mr. BERNSTEIN. Manufacturer.

Mr. BUSIEK. Manufacturer of what?

Mr. BERNSTEIN. Ladies' cloaks and suits.

Mr. BUSIEK. And your place of business is here in Philadelphia?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. Have you any plant outside of Philadelphia?

Mr. BERNSTEIN. No, sir.

Mr. BUSIEK. How long have you been a manufacturer of ladies' cloaks and suits?

Mr. BERNSTEIN. Going on 14 years.

Mr. BUSIEK. About how many people do you employ?

Mr. BERNSTEIN. Average?

Mr. BUSIEK. Yes; on an average—high and low?

Mr. BERNSTEIN. Well, I should judge about 90 maximum.

Mr. BUSIEK. How many minimum?

Mr. BERNSTEIN. That is very hard to say.

Mr. BUSIEK. That is, you employ that many in a shop. Have you a shop where this work is done?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Or do you send the work out? Now, in addition to those whom you employ in the shop do you let out any work by contract?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. How many people were employed on contract work?

Mr. BERNSTEIN. I should judge about 40, 50, or 60.

Mr. BUSIEK. Are you president of the Women's Garment Manufacturers' Association of Philadelphia?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. When was this organized, Mr. Bernstein?

Mr. BERNSTEIN. In 1907, I think—1906 or 1907.

Mr. BUSIEK. How many members did it have at its organization?

Mr. BERNSTEIN. That I can't tell you.

Mr. BUSIEK. About how many?

Mr. BERNSTEIN. I really don't know. I was not a member at that time.

Mr. BUSIEK. What time did you join the association?

Mr. BERNSTEIN. July of last year.

Mr. BUSIEK. Have you a copy of the constitution of your association?

Mr. BERNSTEIN. Not with me.

Mr. BUSIEK. Could you furnish the commission with a copy of the constitution and by-laws?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. How many members has this association now, Mr. Bernstein?

Mr. BERNSTEIN. Sixty-seven.

Mr. BUSIEK. How many manufacturers are there in Philadelphia in your line of work?

Mr. BERNSTEIN. I really couldn't say. I should judge about possibly a hundred.

Mr. BUSIEK. Possibly a hundred?

Mr. BERNSTEIN. Yes, sir. They grow up overnight sometimes.

Mr. BUSIEK. Have you any idea how many people are employed in the clothing trade in Philadelphia?

Mr. BERNSTEIN. I presume you mean the cloak trade, don't you?

Mr. BUSIEK. The cloak trade; yes, sir.

Mr. BERNSTEIN. I should judge about 5,000 or 4,000—say 4,500.

Mr. BUSIEK. Between 4,000 and 5,000?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Are the larger manufacturers affiliated with your association?

Mr. BERNSTEIN. Only the larger, you mean?

Mr. BUSIEK. No—what percentage of these employees have their employers represented in your association?

Mr. BERNSTEIN. I should judge about 75 per cent. I have no statistics on the matter, but I should judge—

Mr. BUSIEK (interrupting). That is your judgment and opinion?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. Are the officers of your association salaried?

Mr. BERNSTEIN. No, sir.

Mr. BUSIEK. What initiation fee and dues are required in your association?

Mr. BERNSTEIN. Fifty dollars per year.

Mr. BUSIEK. And is there any special assessment in times of activity?

Mr. BERNSTEIN. What do you mean by activity, please?

Mr. BUSIEK. For instance, if a strike should be on and there should be some occasion for meetings of the association, if that fact is true?

Mr. BERNSTEIN. Well, there would be no need of assessments for meetings.

Mr. BUSIEK. For the purposes for which the meetings are called?

Mr. BERNSTEIN. Neither so; but might be for other reasons.

Mr. BUSIEK. What reasons might demand a special assessment?

Mr. BERNSTEIN. Well, to meet the exigencies like we passed through last fall, last summer, about a year ago to-day.

Mr. BUSIEK. Just give the commission some idea of what those exigencies were that would require the expenditure of money?

Mr. BERNSTEIN. Well, I don't know how deep to go into those matters. I don't know how long you gentlemen want to stay in Philadelphia.

Mr. BUSIEK. Start out, and when we get tired listening we will break in.

Mr. BERNSTEIN. Well, it was necessary for us, after we noted that we could not by any satisfactory arrangement come to arbitration—the other side, so to say, issued their red, flaming circular, which meant strike—and naturally there were expenses here to protect our working people, not as regards the manufacturers, but the working people; and in manner we needed extra funds.

Mr. BUSIEK. That is, you say to protect the working people?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Was that to protect them against physical violence?

Mr. BERNSTEIN. Absolutely; physical violence.

Mr. BUSIEK. That necessitated, then, I suppose, the hiring of guards?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. Where did those guards come from, Mr. Bernstein?

Mr. BERNSTEIN. From the city.

Mr. BUSIEK. From the city?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. Were they supplied by any so-called detective agency or bureau?

Mr. BERNSTEIN. Well, I was not the employer of those parties.

Mr. BUSIEK. Who was?

Mr. BERNSTEIN. I had my hands full, nominally, of administration purposes of the association, and Mr. Kelly, the gentleman whom you have down, will tell you more fully about that, I think.

Mr. BUSIEK. Very well. What has been the attitude of your association toward organization of the employees of members' of the association?

Mr. BERNSTEIN. Is this one of your questions here? Are you reading the questions from the copy which I have?

Mr. BUSIEK. I am not, but if you prefer that I take these up categorically, I will do it.

Mr. BERNSTEIN. Not at all. What is the question?

Mr. BUSIEK. What is the attitude of your association toward the organization of the employees of your members?

Mr. BERNSTEIN. The organization of the employees of our members?

Mr. BUSIEK. Yes.

Mr. BERNSTEIN. We have none.

Mr. BUSIEK. You have no attitude, do you mean, or they have no organization, which?

Mr. BERNSTEIN. I presume they have an organization which they term the union, but we have no attitude against it or for it.

Mr. BUSIEK. Have you ever treated with this organization?

Mr. BERNSTEIN. Which, please?

Mr. BUSIEK. The union of the employees?

Mr. BERNSTEIN. If you may term it such; yes, sir.

Mr. BUSIEK. Did you get together in a conference with them for the purpose of attempting to arbitrate the difficulties?

Mr. BERNSTEIN. I can only answer your question as regards the last trouble.

Mr. BUSIEK. That is as far back as I care to go.

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. And your answer is yes?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Did you meet a committee appointed by the union which professed to represent the union at large?

Mr. BERNSTEIN. Well, they were a committee or self-designated, I can't say, but we met two. There were five of us, I believe; yes, five; met two of the representatives of the other side.

Mr. BUSIEK. Were formal demands made upon you for redress of the alleged grievance at that time?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. Did you attempt to come to an understanding with those people?

Mr. BERNSTEIN. We did.

Mr. BUSIEK. I take it it was unsuccessful?

Mr. BERNSTEIN. It was.

Mr. BUSIEK. Did you concede to any demands which they made?

Mr. BERNSTEIN. We did.

Mr. BUSIEK. What demands?

Mr. BERNSTEIN. Do you want to particularize them?

Mr. BUSIEK. Yes.

Mr. BERNSTEIN. Well, if I can recollect them, I will be very glad to give them to you. As regards the hours, I think their demand was 50 hours, and we were willing to grant 52. And there was one particular condition which they wished to impress upon the manufacturers, that no work shall be given to the employees to be made at home. That was one of the conditions in their general conditions. No employer, no manufacturer ever compelled his hands to take work at home, to his home. That was entirely on his part. We did not object to that. The manufacturer shall recognize a shop foreman. We would not accede to that demand. The complete abolition of all contracting and sub-contracting of the entire cloak and suit trade, both inside and outside the factory; that has been a modus operandi by which all cloak factories had been run, and we could not adjust our business conditions at that time to meet that demand. We told them further that might be acceded to later on.

Mr. BUSIEK. What is this? Just explain the working details of the contract system briefly.

Mr. BERNSTEIN. Well, it is not unlike conditions existing in any other industry in the manner that one contractor has working under him several hands, no particular number—some shops have probably 10, some probably have as high as 80 or 100—and the contractor would take the work out, and upon its return the contractor was paid, he in turn paying his hands. I believe that has been to a great degree done away with, not on account of these conditions, please, because if I might say that after conferring with these two so-called representatives of the other side and we could come to no agreement or arrangement of mediation or arbitration or conciliation, whatever term you wish to give it, we dropped these conditions absolutely and paid no more regard or respect to them.

Mr. BUSIEK. Well, the only concession that I remember your having made now is to cut the workday from 54 to 52 hours in the shop. Is there any other concession that you made?

Mr. BERNSTEIN. Well, we don't view it in the manner in which you put it. Industry of Philadelphia is one of the highest paying industries in the United States of America. If you wish to go into statistics on that I think you will be convinced very quickly.

Mr. BUSIEK. Well, just give us those.

Mr. BERNSTEIN. I did not prepare myself with any particular statistics as regards payment, but our books, as also any member of our association books, are open for your worthy commission to go over.

Mr. BUSIEK. Well, on what do you base that statement, now, Mr. Bernstein; on the weekly wage of a person working full time?

Mr. BERNSTEIN. No; you can not take it that way, because a majority of the cloak and suit makers or workers are on piecework, and it is up to them as regards their ability and efficiency and the hours which they wish to work how much they may be able to earn.

Mr. BUSIEK. I see. Of course, a person by driving themselves—

Mr. BERNSTEIN. Not necessarily, sir. We have workers who have in at 9 o'clock, half past 8, and some at 10.

Mr. BUSIEK. And work how long?

Mr. BERNSTEIN. Well, the work is there for them.

Mr. BUSIEK. Well, how much could a man make working, say, a 10-hour day, what you would call an efficient worker?

Mr. BERNSTEIN. An efficient worker?

Mr. BUSIEK. Yes.

Mr. BERNSTEIN. About \$70 a week—\$75 a week.

Mr. BUSIEK. How much work would there be for that kind of a man? Could such a man find steady employment?

Mr. BERNSTEIN. No, sir; because the seasons in the cloak and suit business vary.

Mr. BUSIEK. It is a seasonable occupation?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. And about how great a part of the time is a man idle?

Mr. BERNSTEIN. Well, that depends entirely if the particular house that he is with makes summer goods. By that I mean there are a great many houses who do not make any summer goods whatsoever, and under those conditions he is idle in the summer months, or, rather, preceding the summer months, for probably about four or five weeks.

Mr. BUSIEK. If a man is not fortunate enough to make summer goods, that is the longest period?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Of lack of employment?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. How is the labor market in Philadelphia? Are there plenty of hands, or is there any shortage of them?

Mr. BERNSTEIN. Plenty of hands here.

Mr. BUSIEK. And doesn't that reflect itself in the wages paid the people?

Mr. BERNSTEIN. In what way, please?

Mr. BUSIEK. Well, where there are plenty of hands and the market is well stocked with labor and there is no organization and no understanding with the employers, doesn't that make for a condition whereby the employer can get labor cheaper than he otherwise could, because of the anxiety of some people to get work?

Mr. BERNSTEIN. I would not really say there was a superfluity of hands here. I think what the market of Philadelphia requires is about here. There are constantly hands coming from New York. I should not be surprised—in fact, I think I can make a true statement—that daily there are no less than 10 or 15 to 20 hands coming from New York here.

Mr. BUSIEK. Do you get any work from New York; that is, do you get any work from the New York manufacturers?

Mr. BERNSTEIN. No.

Mr. BUSIEK. Do you get any work that used to go to New York; that is, are you getting in on the New York market any?

Mr. BERNSTEIN. We would like to.

Mr. BUSIEK. Well, do you?

Mr. BERNSTEIN. I am sorry to say, no.

Mr. BUSIEK. What is the purpose of your organization?

Mr. BERNSTEIN. Well, I might tell you that in a few words which I have here [reading]:

"It is really for the mutual benefit of manufacturers. Now, when we say that a manufacturer can not manufacture without labor, that is nominally, putting that in the word of hands. We need labor or we could not produce, and our purpose solely and only is to promote the best conditions of manufacturers of women's garments, maintain harmonious relations with employees, and unite with them in the adoption of such measures as will improve the conditions of the business and settle differences between its members—that is, as regards the association members, should there be any, and to promote a more enlarged and friendly intercourse between them and promote the general welfare of all interested in it."

I think that will encompass all remarks necessary to the question.

Mr. BUSIEK. I notice you have a business there to—I can not state it in the terms that you have read, but to the effect that one of the purposes is to get together with the employees and make agreements with them. Does that mean with the employees as a body?

Mr. BERNSTEIN. The employees? Make agreements with them?

Mr. BUSIEK. Yes.

Mr. BERNSTEIN. No, sir.

Mr. BUSIEK. What was that section you read there concerning employees?

Mr. BERNSTEIN. Harmonious relations with employees.

Mr. BUSIEK. Yes; to promote harmonious relations with employees?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Well, what do you mean by that?

Mr. BERNSTEIN. Well, we are friends of labor, and thereby there is no manufacturing shop can be conducted without harmony existing there, unless it is attempted to be interfered with by outside influences.

Mr. BUSIEK. Well, how have you ever gone about promoting harmony?

Mr. BERNSTEIN. How?

Mr. BUSIEK. Yes.

Mr. BERNSTEIN. Well, in so many ways that I really could hardly start.

Mr. BUSIEK. Some of them?

Mr. BERNSTEIN. Well, one of the best illustrations I can recall, during the trolley strike here, I forget how many years ago it was—

Mr. BUSIEK. (interrupting). In 1909, I believe.

Mr. BERNSTEIN. In 1909; yes. You heard a great deal of evidence here about it. There was to be a general strike called of all industries here in Philadelphia. It appears that some of the shops where they manufactured ladies' cloaks and suits felt in sympathy with those people, and through some of the hot-headed rabid ones at the top, they decided to go on a strike. Well, we attempted in every manner possible to show them where they were making a mistake. They had no grievance against us, none whatever. I remember distinctly that I went out in the shop for two days and attempted to show them how foolish they were. I even went so far as to convince them that if there were a cloak-and-suit strike that I promise them that not a single trolley car in Philadelphia would stop running for them. But they would not listen to it, and they went on strike. So we attempted thereby to show them where they were wrong. I might state it was a matter of mutual interest, as we were in our busy season, and they in the season when they could make money.

Mr. BUSIEK. Well, you gentlemen certainly find it advantageous to organize or you would not have an organization, I suppose that is true?

Mr. BERNSTEIN. Naturally.

Mr. BUSIEK. And you organized because you can better accomplish your business purposes with all working together and all working in the same way under certain rules and regulations and mutually imposed restrictions, is not that true?

Mr. BERNSTEIN. Mutually imposed restrictions?

Mr. BUSIEK. Yes.

Mr. BERNSTEIN. What do you mean by that?

Mr. BUSIEK. Such rules as you may adopt for the conduct of your members in your association.

Mr. BERNSTEIN. Oh, yes; that is right.

Mr. BUSIEK. Why do you think it would not be advantageous for the employees to form an association imposing the conditions and regulations upon themselves which would be binding, and form a body which could meet with

yours to the end that any contract made with your employees would be general with the employees throughout that trade? Or, in other words, if they unionized? What objection is there to such a state of affairs?

Mr. BERNSTEIN. We have absolutely no objection into forming themselves into any kind of an association they may choose; and, in fact, we would heartily accept such a condition if they had the competent people to control them. There could be nothing better in the United States than an association of that nature of the laboring class, if they had the proper people at the head of it.

Mr. BUSIEK. Then your only grievance is not with the organization idea, but it is with the people who control organizations, do I understand?

Mr. BERNSTEIN. I think in a majority of cases.

Mr. BUSIEK. Have you had any painful experiences with these organizations or the heads of the organizations?

Mr. BERNSTEIN. Well, what does your term "painful" infer, please?

Mr. BUSIEK. Well, any experience which would lead you to condemn all leaders as you have done.

Mr. BERNSTEIN. Oh, I have no condemnation for them; no; none whatever. You are asking me the question, sir, whether we had any objections and whether we did not think it would be feasible and better for the workmen to combine. We have no objection.

Mr. BUSIEK. And your answer was you had no objection to their combining if they would have different kind of men at the heads of their organizations?

Mr. BERNSTEIN. If they had competent people.

Mr. BUSIEK. If they had competent people?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Well, have you any experience that convinces you that the heads of these organizations are incompetents? That is what I want to get at.

Mr. BERNSTEIN. Well, I don't want to be personal. I would not want to leave that impression. But at the time this strike was to be called last year, if those who had charge of it had been reasonable, all that trouble could have been averted without any question.

Mr. BUSIEK. In what were they unreasonable?

Mr. BERNSTEIN. Well, in endeavoring to make us comply with demands which were beyond all reason.

Mr. BUSIEK. For instance?

Mr. BERNSTEIN. Well, the main point was the appointing of a shop chairman. I don't know whether you know what that means, do you?

Mr. BUSIEK. I have an idea.

Mr. BERNSTEIN. It nominally means that you may be permitted to enter your establishment in the mornings, or any time, open your mail and sign your checks; and besides that, allow them to run your business. No sane manufacturer would permit that, I don't think.

Mr. BUSIEK. Well, it corresponds to the grievance committee of an ordinary union, don't it?

Mr. BERNSTEIN. I presume so.

Mr. BUSIEK. Do you know, or have you ever heard that there are many kinds of crafts in highly skilled trades where they do have grievance committees, and they do get along amicably with their employers? Or is there some particular reason why you think it would not work in the cloak and suit trade?

Mr. BERNSTEIN. I am not aware of it. I don't know anything about other industrial relations or conditions of any other businesses; so really, I could not answer that question.

Mr. BUSIEK. Are you familiar with the garment industry in New York and the agreements that the employers have with their employees in New York?

Mr. BERNSTEIN. I have heard.

Mr. BUSIEK. That agreement has such a committee, has it not?

Mr. BERNSTEIN. I believe so.

Mr. BUSIEK. Have you ever heard that that worked out badly?

Mr. BERNSTEIN. Absolutely.

Mr. BUSIEK. That is your report and experience?

Mr. BERNSTEIN. Not experience, sir.

Mr. BUSIEK. That is the report which you heard?

Mr. BERNSTEIN. Daily.

Mr. BUSIEK. There was considerable testimony before this commission in New York that the clothing industry, whereas it is still far from ideal in New York, has been greatly benefited, and the protocol which is now in effect be-

tween the employees and employers, I think we have testimony on both sides to that effect. Your information is to the contrary, do I understand?

Mr. BERNSTEIN. I have received very direct information; in fact, I might say to you that I hear of it weekly; I was almost going to say daily.

Mr. BUSIEK. Do they seem to have more trouble in New York now than they had prior to this protocol?

Mr. BERNSTEIN. Well, I could not answer that definitely, but I really think so. I think that the trade conditions over there are worse than they previously were. Personal experience over there, I have not had any.

Mr. BUSIEK. During this last strike, I believe, or my information is, that there were some gentleman came here from Washington—came up here from Washington, rather, and Commissioner Jackson, or another gentleman, from Albany, who tendered their services as mediators. Do you remember those gentlemen?

Mr. BERNSTEIN. I presume you mean Commissioner Jackson, of Pennsylvania, and Commissioner Stewart, of Washington?

Mr. BUSIEK. That is it, I guess.

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Did your association treat with these gentlemen?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. And what was the result of their efforts?

Mr. BERNSTEIN. Well, they were nominally futile.

Mr. BUSIEK. Can you give the reason for that?

Mr. BERNSTEIN. Yes; I can. After we had had a three days' conference with the two parties representing the labor side and could arrive at no satisfactory arrangements, on July 4, 1913, there was a red circular issued calling on every employee in all the garment factories, at 10 o'clock on the day, out on strike. We had endeavored up to that time to see whether we could not avert that which we knew was going to be a long and serious matter; but it appeared that they were either going to force this with an iron hand—these conditions—or declare the strike. And for the benefit of ourselves—or rather for the protection of ourselves, I should have said—we accepted the inevitable and allowed them to go on strike. But I might say this, that 90 per cent of the garment workers, which includes all departments—pressers, cutters, trimmers, finishers, basters—did not want to go on strike, sir.

Mr. BUSIEK. On what do you base your opinion?

Mr. BERNSTEIN. Well, I can tell you that daily after this strike had been called—and I have heard it repeatedly—that the assurance had been given by the leaders that after two weeks all the manufacturers would become submissive and come begging for their hands and the strike would be won for the hands; but such was not the case.

Mr. BUSIEK. You talked about a red circular. Was that red in sentence or in color?

Mr. BERNSTEIN. Both.

Mr. BUSIEK. Did you then drop the mediation plan of Messrs. Stewart—

Mr. BERNSTEIN (interrupting). Well, they did not come until much later.

Mr. BUSIEK. Why did their efforts come to naught?

Mr. BERNSTEIN. Because the proposition or the so-called arrangement which they wished to bring forward would have been useless.

Mr. BUSIEK. What arrangement did they propose?

Mr. BERNSTEIN. I really can not recall to-day. I heard so many of them I have forgotten.

Mr. BUSIEK. Useless from whose standpoint?

Mr. BERNSTEIN. I think both.

Mr. BUSIEK. Were the employees willing to abide by their action?

Mr. BERNSTEIN. The employees, after two or three weeks, were willing to abide by anything, sir. They would all have returned to work, excepting some of the rabid, hot-headed ones, had they been permitted to.

Mr. BUSIEK. What kept them from coming back if 90 per cent were willing?

Mr. BERNSTEIN. Well, I really don't know how to start to tell you that; that is too varied. They were threatened with violence, and not only threatened, but violence was also placed upon them. No employee was safe on the streets; in fact, not in his own home. To my knowledge there were 455 assaults here, 2 murders, and about 5 or 6 near murders, and it was not safe for a working man to be on the streets.

Mr. BUSIEK. How many convictions?

Mr. BERNSTEIN. To my knowledge, only one.

Mr. BUSIEK. To what do you attribute the fact that, with all these wholesale assaults, two murders, and five or six near murders, the peace officials in the town were able to secure but one conviction, or a minor number?

Mr. BERNSTEIN. Well, I might say one word—politics, possibly. I really couldn't say.

Mr. BUSIEK. Did you encounter determined opposition in the courts when attempt was made to prosecute any of those men?

Mr. BERNSTEIN. I can not answer that question because I was never present, although I think the evidence on the face of it shows conclusively that a conviction was impossible. I think the only one conviction resulted about two or three months ago—within two months, I think.

Mr. BUSIEK. Was that for a murder or for an assault?

Mr. BERNSTEIN. An atrocious assault. This particular circumstance comes to my mind now. It was the determination upon the part of the union that, when we would not accede to their demands, and as the spring season was advancing, they thought that the only way to get the manufacturers was to prevent them producing their spring styles, and to produce spring styles it was necessary to have designers, so they put their designs on the designers, and in this particular case it was a man by the name of Rice, who, I think, lived at Thirty-third and Cumberland, which is in the extreme northwest part of the main part of the town.

Some of these thugs and educated and graduated workers, who had risen to the prominence of becoming thugs, attacked him one morning about 7.30, and on the street where they attacked him they were just laying new Belgian blocks, and not content with dropping him down, they dropped a Belgian on his face, and Judge Sulzberger was the only one whom I might say has had the nerve to bring a conviction in all the courts of Philadelphia.

Mr. BUSIEK. What was the sentence in that case?

Mr. BERNSTEIN. I think that was three years.

Mr. BUSIEK. Were those sluggers whom you were talking about recruited from the ranks of the union or were they outside men?

Mr. BERNSTEIN. I presume originally those who had graduated and some of the others who had become graduated and got into the graduating class or joined them.

Mr. BUSIEK. Have your members refused to take back any of the union men who went out on that strike?

Mr. BERNSTEIN. Not to my knowledge.

Mr. BUSIEK. Has the strike ever been declared off?

Mr. BERNSTEIN. I think so; I am really not sure; well, yes; I might answer that in the affirmative. There was finally a vote held and the strike was declared off.

Mr. BUSIEK. How many shops did this strike affect?

Mr. BERNSTEIN. Well, that is a very hard thing to answer, because, outside of our association, I really don't know. I believe there were some who remained independent, and the others who signed up for the time being—I should judge within 100, but I really can not say absolutely.

Mr. BUSIEK. It was a general strike?

Mr. BERNSTEIN. There was a general strike proclaimed.

Mr. BUSIEK. Not only against the members of your association but against others?

Mr. BERNSTEIN. Allow me to tell you that our association, of which I was not a member at that time—they were not active. They were an association, but not in activity.

Mr. BUSIEK. Was any assistance gotten from out of town to assist the manufacturers?

Mr. BERNSTEIN. In producing their garments?

Mr. BUSIEK. In combating or carrying on or resisting this strike, rather?

Mr. BERNSTEIN. In what manner, for instance?

Mr. BUSIEK. Financial aid.

Mr. BERNSTEIN. None whatever.

Mr. BUSIEK. I think the press at the time charged that Cleveland manufacturers were assisting the manufacturers.

Mr. BERNSTEIN. None whatever, sir.

Mr. BUSIEK. Were they assisting in an advisory capacity?

Mr. BERNSTEIN. Not particularly; no, sir.

Mr. BUSIEK. Was there a Mr. Black here, representing the Cleveland manufacturers, who advised?

Mr. BERNSTEIN. I presume Mr. Black came to see me, as I have had the pleasure of his acquaintance for some years, and also other gentlemen here.

Mr. BUSIEK. Were those just social calls that happened or did the strike inspire them?

Mr. BERNSTEIN. Well, they were here—

Mr. BUSIEK. (interrupting). Is that what brought them here?

Mr. BERNSTEIN. No, sir.

Mr. BUSIEK. Did they address the employers assembled at meetings?

Mr. BERNSTEIN. Yes.

Mr. BUSIEK. Give their ideas and views as to how to combat the strike?

Mr. BERNSTEIN. Well, I can not really say that he did give advice.

Mr. BUSIEK. Did he give inspiration?

Mr. BERNSTEIN. To be candid with you, I don't think we needed those.

Mr. BUSIEK. Was there any pledge exacted from the members of the association or the employers not members of the association, any employer making a pledge with another that he would not recognize the union or would not give in to them?

Mr. BERNSTEIN. You mean outside of the association?

Mr. BUSIEK. Yes; was there any general understanding among the employers, or any of them, that they would not surrender to the union?

Mr. BERNSTEIN. You mean within the association or without?

Mr. BUSIEK. Within or without?

Mr. BERNSTEIN. Within, absolutely not; without, we know nothing about it.

Mr. BUSIEK. You were not a member of the association at that time?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. Oh, you were?

Mr. BERNSTEIN. Yes, sir; at that time; starting then.

Mr. BUSIEK. I see. Was any bond exacted of any of the members to insure their compliance with this resolution?

Mr. BERNSTEIN. Well, there was a bond, but not in the sense that you put it, sir.

Mr. BUSIEK. What was it?

Mr. BERNSTEIN. We required, as we knew, we thought we would, extra moneys, for the protection solely and only of our employees. We had no other expenses but those, and this bond was put up in case the necessity arose that we would require extra funds that we could rely upon those, and fall back upon them, but there were assessments levied, and naturally we did not make any use of those bonds.

Mr. BUSIEK. Was this bond merely for the purpose of securing assessments up to a certain amount, as they might be levied?

Mr. BERNSTEIN. No, sir.

Mr. BUSIEK. What were the conditions of the bonds upon which they were to be forfeited?

Mr. BERNSTEIN. Well, just as I stated to you: In case the necessity arose that we would require more funds than what we had, those bonds to be called upon.

Mr. BUSIEK. Then they were merely pledges to contribute?

Mr. BERNSTEIN. Yes, sir; those bonds were all returned.

Mr. BUSIEK. They were not bonds in the sense that a certain amount of money was put up to be forfeited upon a certain contingency?

Mr. BERNSTEIN. They were not bonds; they were notes.

Mr. BUSIEK. Notes?

Mr. BERNSTEIN. Yes, sir.

Mr. BUSIEK. What is the attitude of your association now in regard to dealing with an organization of your employees? I believe you said before that you had no objection to their organization; you might consider dealing with them if they had other leadership.

Mr. BERNSTEIN. No, sir. I don't want you to interpret my remarks in that manner, sir. We have always dealt with our employees in a very fair and honorable way, and I am of the opinion that every other manufacturer here in the garment industry has done so. I can not say positively, as I am not always present. But if the employees have any grievances, I don't think there is a single concern here in the city of Philadelphia that would not be only too glad to listen to them.

Mr. BUSIEK. Well, can you conceive of a case where those employers might not be as honorable as you think they are, and the employees have a real, bona fide grievance; what would be their remedy then?

Mr. BERNSTEIN. If such were to arise—are you speaking of the people in our association, or generally, of all Philadelphia manufacturers?

Mr. BUSIEK. Well, take one in the association first.

Mr. BERNSTEIN. I don't ever expect such an occasion to arise with any member in the association, sir; because it has been—even during the time of the trouble, we held meetings daily; in fact, I might tell you that the executive board were in meeting all the time nominally; probably six or eight hours daily, and if such complaints were to arise, they would certainly come to the boards here and quick action would be taken. But each member of the association, I know, feels that they are there for the purpose of seeing that justice is given to all their employees.

Mr. BUSIEK. Well, your idea, then, is that the employees' interests can be properly conserved, because of the honorable and magnanimous attitude of the members of the association? They can be trusted to look out for the welfare of their employees, and it is unnecessary for the employees to organize and take any steps on their side; is that the idea?

Mr. BERNSTEIN. Well, you might regard this as too personal an answer for me, but I can really say yes.

Mr. BUSIEK. I believe that is all.

Commissioner O'CONNELL. Mr. Bernstein, the questions I shall ask you will either refer to your own shop or to your association, so that you will have no hesitancy in answering.

Mr. BERNSTEIN. Yes, sir; I am only too glad to help your commission in any way I can.

Commissioner O'CONNELL. Approximately, how many people are employed by the members of your association?

Mr. BERNSTEIN. I should judge about 70 to 75 per cent.

Commissioner O'CONNELL. What number of people is that, approximately?

Mr. BERNSTEIN. About 3,700, 3,800, 3,900. I judge there are probably 5,000 workers here.

Commissioner O'CONNELL. Have you any idea what the average earnings per week of your employees are?

Mr. BERNSTEIN. Our individual employees you mean, or the association employees also?

Commissioner O'CONNELL. Yours.

Mr. BERNSTEIN. No, sir; I have not.

Commissioner O'CONNELL. How are the piece prices set by you?

Mr. BERNSTEIN. By my partner.

Commissioner O'CONNELL. He sets the prices?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. In consultation with anybody?

Mr. BERNSTEIN. Possibly with me, as a rule, and his son, who is in charge of one part of the factory.

Commissioner O'CONNELL. But not in consultation with the workmen or working people in the shop?

Mr. BERNSTEIN. No, sir.

Commissioner O'CONNELL. The price, therefore, is arbitrarily set by your firm?

Mr. BERNSTEIN. No, sir; it is very agreeably accepted.

Commissioner O'CONNELL. As I understand, either yourself or your son or your partner, or some one of the firm in charge, sets the price?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. Your workman, of course, is supposed to accept that price; he may do it mutually or agreeably, but he accepts the price set by some one in your firm?

Mr. BERNSTEIN. Yes, sir. I want to state that that price which has always been set has been satisfactory; and in a few instances when it has not the matter has been spoken over, and there would possibly be on some garments an advance given and on some not.

Commissioner O'CONNELL. But, however, as a finality, the price designated by your company is the price paid?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. The workman must accept that?

Mr. BERNSTEIN. Unless an advance is agreed upon.

Commissioner O'CONNELL. Who would it be agreed upon with, then, the workman?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. If he said to you, "I don't think that is a fair price," the question then would be argued out?

Mr. BERNSTEIN. It never required very much arguing. If we saw that he was entitled to it, we certainly gave it to him.

Commissioner O'CONNELL. But you, then, would be the finality in the proposition, dicker it out, and if you agreed, or you would say that is what we will pay?

Mr. BERNSTEIN. Or "we will pay you what you ask."

Commissioner O'CONNELL. What is the average working time of your plant per year? Would the employees average eight months' employment in a year?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. That would be about; that is what they told us in New York.

Mr. BERNSTEIN. I should judge 8 to 8½ months; possibly 9. There was a time when we made summer goods, as I told this gentleman, when they were employed very near onto 11 months.

Commissioner O'CONNELL. Do you employ women or girls?

Mr. BERNSTEIN. Some few.

Commissioner O'CONNELL. Do they perform the same class of work as the males?

Mr. BERNSTEIN. No, sir.

Commissioner O'CONNELL. How do their wages run?

Mr. BERNSTEIN. Well, they are pieceworkers, excepting, in some instances, what we call button sewers. A pieceworker is able to earn, in a season, from \$18 to \$30 a week.

Commissioner O'CONNELL. Pieceworkers?

Mr. BERNSTEIN. Yes.

Commissioner O'CONNELL. Are there women in your plant that earn \$30 a week?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. In season?

Mr. BERNSTEIN. Yes, sir; our books are open for your inspection, if you would like to see them.

Commissioner O'CONNELL. How many women do you employ?

Mr. BERNSTEIN. Not many; I should judge 15 would cover it in season.

Commissioner O'CONNELL. How many of those in season would earn \$30 a week?

Mr. BERNSTEIN. Probably about three or four.

Commissioner O'CONNELL. What would the rest average? How low would they get?

Mr. BERNSTEIN. Well, if a finisher can not earn in season, when we are busy, fifteen, sixteen, eighteen, or twenty dollars she is no kind of a finisher.

Commissioner O'CONNELL. How young girls do you employ?

Mr. BERNSTEIN. None under the statute law.

Commissioner O'CONNELL. Fourteen?

Mr. BERNSTEIN. None as young as that.

Commissioner O'CONNELL. Sixteen?

Mr. BERNSTEIN. No; I should judge—I don't think we have got anybody under about 20; I should not judge so.

Commissioner O'CONNELL. What do they do?

Mr. BERNSTEIN. Some of them, some of the very young ones, are proficient finishers.

Commissioner O'CONNELL. About this home work, is the general plan in Philadelphia that work is gotten out—given out to be done in the homes by the members of your association?

Mr. BERNSTEIN. No, sir.

Commissioner O'CONNELL. What percentage of them do give out home work?

Mr. BERNSTEIN. I doubt very much if there are any to-day.

Commissioner O'CONNELL. Didn't I understand that you gave out home work, from your testimony this morning?

Mr. BERNSTEIN. No, sir. I was reading here one of the conditions that the union presented. Article No. 3 read that: "No work shall be given to the employees to be made at home."

There had been times previously when they came and nominally begged to take work home, to their homes. Well, we did not resist that at all. We were perfectly satisfied if they chose to work at home. I presume they did that on Sundays, or sometimes like that. A great many, well, I should say a small proportion of the Jewish tailors, finishers, etc., did work—did not work on Saturdays, and therefore they would take work home on Friday evenings, which they would do at home, I presume, on Sundays; but no manufacturer in this city ever compelled a hand to take work home. It was entirely upon their wishes to take work home to try to earn more.

Commissioner O'CONNELL. Do they take work home now?

Mr. BERNSTEIN. Not to my knowledge.

Commissioner O'CONNELL. Is work done in the homes in Philadelphia?

Mr. BERNSTEIN. I beg your pardon.

Commissioner O'CONNELL. Is work done in the homes in Philadelphia?

Mr. BERNSTEIN. Not to my knowledge.

Commissioner O'CONNELL. Then it has been practically abolished, the home-work system?

Mr. BERNSTEIN. Well, I can not say that absolutely, but I don't think there is any member of our association who gives home work for any of their hands to take the work home, but I presume if a hand were to ask for it, and say, "I expect to work home to-morrow," "I would like to have a few garments to make or finish," they might be given them, but entirely due only upon the asking by the employee. There is no compulsion on the part of the manufacturer for men to take work home.

I might supplement that remark. I remember distinctly in our factory about three years ago that if we did not have work for them to take home they were very much dissatisfied.

Commissioner O'CONNELL. Do you do subcontracting, letting work out by contract that is done in some other shop or some other place?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. In busy seasons?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. What percentage or proportion of your work is subcontracted?

Mr. BERNSTEIN. Oh, very small.

Commissioner O'CONNELL. Does the subcontractor have a shop?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. Do you know whether he has any home work done or whether he lets his work out again by subcontracting?

Mr. BERNSTEIN. No; I presume—I think really that the subcontractors live in their shops, or nominally have their shops with their dwellings.

Commissioner O'CONNELL. In their homes?

Mr. BERNSTEIN. Yes, sir.

Commissioner O'CONNELL. Are there any State investigations of the sanitary conditions prevailing in shops in Philadelphia?

Mr. BERNSTEIN. Yes.

Commissioner O'CONNELL. Inspectors who visit them regularly?

Mr. BERNSTEIN. Yes, sir; several of them.

Commissioner O'CONNELL. When last was your shop visited by a State official?

Mr. BERNSTEIN. I really couldn't tell you, sir. I am not always there.

Commissioner O'CONNELL. Do you make any sort of report to State officials as to conditions prevailing in the shop, which is made under requirements of law, as, for instance, fire escapes and elevator conditions and the methods of entrance into and egress from shops and everything of that kind?

Mr. BERNSTEIN. I don't think the latter part, no, sir; because we are in a very large building, and I presume as far as the fire escapes and the elevators are concerned, that is taken care of by the owner.

Acting Chairman WEINSTOCK. Mr. Lennon.

Commissioner LENNON. Mr. Bernstein, what do you pay your cutters?

Mr. BERNSTEIN. Cutters?

Commissioner LENNON. Yes.

Mr. BERNSTEIN. About \$18 or \$20. We have one cutter that we pay \$27.50.

Commissioner LENNON. Yes; but I speak of a man who is considered a cutter, but perhaps not your foreman cutter. I mean the regular cutters?

Mr. BERNSTEIN. About \$20.

Commissioner LENNON. Do you know about how that compares with the wages paid in the city of New York?

Mr. BERNSTEIN. I do not.

Commissioner LENNON. What hours do these cutters work?

Mr. BERNSTEIN. From 7.30 until 6, and until a quarter of one on Saturday.

Commissioner LENNON. Do you know the hours that they work in the city of New York?

Mr. BERNSTEIN. No, sir.

Commissioner LENNON. In New York it was testified regarding the matter of finishers—in fact, it was testified upon repeated occasions that the work of finishing was largely done in the homes for the reason that women could not be had in the shops to do this class of work. That, I understand from your testimony, is not now true, even if it has been in the past, in Philadelphia. You can now get shop finishers?

Mr. BERNSTEIN. Oh, we always could get them. The garments which I spoke about to those gentlemen were being taken at the time not for the purpose of finishing but being operated and the finisher in fact brought in the completed garment after taking the garment out in cut condition.

Commissioner LENNON. And do the finishers do that work by the week or by the piece?

Mr. BERNSTEIN. They work by the piece with us.

Commissioner LENNON. What can the finishers—but I believe you have testified what the finishers can make. Now, do the contractors pay their help the same as you pay in your shop?

Mr. BERNSTEIN. I could not say.

Commissioner LENNON. You do not know as to that?

Mr. BERNSTEIN. No, sir.

Commissioner LENNON. We had repeated testimony from a great many manufacturers in the city of New York and from outsiders who had interested themselves in the business and from members of the union, that the protocol had been highly advantageous in that city. Have you ever made any investigation of the working of that agreement up there?

Mr. BERNSTEIN. Well, the facts of the case have come to me without making any investigation, that they are extremely unsatisfactory.

Commissioner LENNON. Well, such men as Dr. Edelson, who represented the manufacturers a good part of the time, and some of the manufacturers—it is not proper to mention their names; at least I feel it would be a little out of the way—testified that the protocol had worked to the decided advantage of the trade in that it had completely or nearly completely done away with shop strikes, and that they considered a very great advantage to the trade.

Mr. BERNSTEIN. Well, I don't think you will find that to be the case, sir. I don't want to contradict anybody's testimony, but my partners are at present in New York and also many of my friends, and there are strikes called daily in the New York shops.

Commissioner O'CONNELL. Well, they are soon settled. The people soon have to go back to work or get out of the union, and do go back to work in most cases. Do you find or do you believe that the make-up of the cloak and skirt makers is materially different in this city from what it is in the city of New York?

Mr. BERNSTEIN. Yes, sir.

Commissioner LENNON. You think it is different?

Mr. BERNSTEIN. Yes.

Commissioner LENNON. Is it different because of racial differences or because of different philosophies and theories that—

Mr. BERNSTEIN (interrupting). There are no racial differences between the parties here and in New York, but I think those who are here regard their occupation here in more of a homelike manner, whereas there is rabble in New York. They land there as soon as they come over; they land there and they bring a great many foreign tendencies. They are inherent after they get there and, in fact, they grow in them.

Commissioner LENNON. Well, that would seemingly tend toward the greater difficulty in doing business with an organization there than it would here?

Mr. BERNSTEIN. Yes.

Commissioner LENNON. Are you doing business with the unions now?

Mr. BERNSTEIN. Are we?

Commissioner LENNON. Yes.

Mr. BERNSTEIN. Here?

Commissioner LENNON. Yes.

Mr. BERNSTEIN. No, sir.

Commissioner LENNON. In no way at all? Don't meet their committees or transact any business with them?

Mr. BERNSTEIN. No, sir.

Commissioner LENNON. Do you know whether your shop is an organized shop or not?

Mr. BERNSTEIN. I really could not say.

Commissioner LENNON. You don't interfere with it?

Mr. BERNSTEIN. None whatever; none whatever.

Commissioner LENNON. I think that is all. Mr. Weinstock.

Acting Chairman WEINSTOCK. This commission, Mr. Bernstein, does not hope to be able to do anything along the lines of wiping out all disputes—

Mr. BERNSTEIN (interrupting). No, sir.

Acting Chairman WEINSTOCK (continuing). Between workers and employers. It does hope, however, to be able to accomplish something along the lines of establishing a higher degree of industrial peace between workers and employers. The commission realizes that so long as there are changing conditions, conditions will always arise where there will be disputes. The purpose, however, is to be able to create some sort of machinery whereby these disputes can be settled by appealing to reason and in a peaceful manner rather than by resorting to cessation of work and to possible violence.

Now, while the members of this commission have had experience in various undertakings and in their various spheres of life, I do not think any of us have had sufficient experience—I do not think we have had sufficient experience collectively as publicists, employers, or workers—to be able to work out a satisfactory scheme, and our purpose in holding these public hearings is to profit by the judgment and the wisdom and the experience of employers and of workers, so as to enable us to reach intelligent conclusions that will stand the test of analysis.

Our purpose, therefore, in inviting you to come before us, Mr. Bernstein, is not in the spirit of criticism, but, as a good citizen, to ask you to help us to find the way. With your knowledge and commercial training and your contact with fellow employers and fellow workers, you certainly have had experience that no member of this association, perhaps, has had, and, therefore, we feel that you can be of service to us if you will give us the benefit of your experience and your judgment. I say all this in a preparatory way so that you will understand the purpose and spirit of my question.

Now, I gathered from—

Mr. BERNSTEIN (interrupting). Would you permit me to answer you just a minute, sir, before you ask a question?

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. I was present here at several of your hearings when Mr. Wanamaker and Mr. Blankenburg and Alba Johnson and the other gentlemen were present here, and it became very evident to me that your commission is simply here for the purpose of trying to do good. Now, if you would like me to answer you in a very short manner regarding what you stated to me, I can say the following: That the cloak and suit industry of Philadelphia was in a very healthy situation irrespective of what any conditions might have been shown from the other side. Now, I will make my statement a little more fully in this matter. It makes no difference what conditions of affairs, whether it is an industry or something to which I can not give an intelligible term, there is always something wrong somewhere to some little account. The Women's Garment Manufacturers' Association of Philadelphia is for one purpose only. It is for its own good. Now, that may appear selfish on the face of it, but its own good is the good of its employees, because if its employees are not working harmoniously there is no good can result to us in our production. And I might use a slang phrase, that everything was running along here beautifully and swimmingly, with possibly a small exception in one shop, which no one will ever be able to help unless we can single it out. We have people in our employ, some of them owning two or three houses free of debt, no incumbrances. I can call them over here as witnesses, if you would like to hear them. They send their children to the high schools, they give their children musical educations; in fact, I think some of them are attending colleges. Now, the entire class with those few exceptions, which I can not recount because I don't know them, were absolutely satisfied in every degree.

Then, in steps this so-called organization, disrupts those conditions here, I can only speak of the conditions in our class of manufacture. Regarding your other inquiries, I know nothing. If our people had been let alone, work-

ing under the conditions under which they were working, they would have been perfectly satisfied, because I can say this to you, in all frankness, that while the union had promised all the so-called striking employees they had to be striking employees or get their heads smashed and their eyes hammered in or something or other, or their wives insulted—their wives were afraid to go to the corner store to buy their milk and food, and the children were afraid to go to school on account of the thugs which were employed, with whom I don't know, and I don't care, but I am simply stating to you the condition in the cloak and suit industry before the peaceable workmen were interfered with.

Now, if people making the money that the people in the cloak and suit industry were making were let alone, organization or no organization here was not necessary. It depends entirely upon the efficiency of the man as to the amount of money he is able to make. I don't know what business you are in, but you know that is so, and that even if you are not in business; so, as regards the coming in of an organization or union, I assure you that no manufacturer in the city of Philadelphia objects to it, but we object to it in the manner only that they won't have their business run by them; and the employees are making a good living wage and more than that.

Acting Chairman WEINSTEIN. I gather, then, from what you say, Mr. Bernstein, that immediately prior to your last industrial trouble from your point of view the workers had no grievances and that the conditions were ideal?

Mr. BERNSTEIN. I should judge so; yes, sir.

Acting Chairman WEINSTEIN. And that the grievances were artificial and manufactured grievances; do I understand you correctly?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTEIN. How?

Mr. BERNSTEIN. Although there might be a single instance or two that I can not cover at all. I told you that at first.

Acting Chairman WEINSTEIN. Well, generally speaking?

Mr. BERNSTEIN. Generally speaking.

Acting Chairman WEINSTEIN. And that therefore this trouble was precipitated without real cause?

Mr. BERNSTEIN. Well, there was an expression current here at that time that we were due, that means the cloak and suit manufacturers of Philadelphia were due to have a strike.

Acting Chairman WEINSTEIN. You mean that it was your turn?

Mr. BERNSTEIN. We were due. We were due previously in 1904, our firm. We had a strike which lasted exactly one day, and the strike was over and after one day.

Acting Chairman WEINSTEIN. I understood you further in answering the questions of my fellow commissioners in your opinion the workers in your industry in Philadelphia were paid the highest wages in America?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTEIN. Well, of course, you know, Mr. Bernstein, in common with myself, that there is quite a distinction between wages and earnings, and I might get a wage of \$50 a day and only have about \$200 a year; that the real thing is the annual earnings?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTEIN. Now, granted that the wages of the Philadelphia operators are the highest in America, what are their annual earnings?

Mr. BERNSTEIN. Pardon me if I say—

Acting Chairman WEINSTEIN (interrupting). Take the man that could earn \$75 a week, which seems very liberal earning power, what are his annual earnings?

Mr. BERNSTEIN. Well, I believe that I have never taken this off with any purpose of statistics, but I am confident, I could go over our books and show where some of our best efficient tailors have got as high as \$2,500 in a year. I think I am placing that low.

Acting Chairman WEINSTEIN. How many months in a year is work available and how many months of idleness do the workers average a year?

Mr. BERNSTEIN. Well, I think since we have gone out of the summer-season business, producing any garments in a summer like now, or previously to now, rather, of summer wear exclusively, I presume about eight and one-half months.

Acting Chairman WEINSTEIN. There is three and a half months of idleness?

Mr. BERNSTEIN. Yes, sir—which was not the case with us previously.

Acting Chairman WEINSTOCK. So that the average number of weeks would be about 34 a year?

Mr. BERNSTEIN. Thirty-four or thirty-five.

Acting Chairman WEINSTOCK. Now, what would be a fair average, taking your own organization as a basis, to figure on, and you say you employ about 90 people?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. During the season what would be your weekly pay roll—your gross weekly pay roll?

Mr. BERNSTEIN. Well, allow me to tell you that these tailors are entirely pieceworkers.

Acting Chairman WEINSTOCK. Yes, but what would be your weekly pay roll, about, your 90 workers?

Mr. BERNSTEIN. Why, I really could not tell you offhand, sir.

Acting Chairman WEINSTOCK. Could you approximate it?

Mr. BERNSTEIN. The reason I answer your question in that manner is because we have two pay rolls, one on Wednesday and one on Saturday, and included in the Saturday pay rolls are some of the contractors.

Acting Chairman WEINSTOCK. Yes, sir.

Mr. BERNSTEIN. So I can not do it.

Acting Chairman WEINSTOCK. Well, undoubtedly as the result of this trouble you recently had you must have had occasion to look into your figures, and what did you find to be the average weekly earnings during the season, of your average workers?

Mr. BERNSTEIN. I have never taken it, sir.

Acting Chairman WEINSTOCK. You never have?

Mr. BERNSTEIN. No, sir; but you are at liberty to have it on our books.

Acting Chairman WEINSTOCK. Well, see if we can't approximate it anyway. Do they run more than on an average of \$10 a week?

Mr. BERNSTEIN. Oh, yes.

Acting Chairman WEINSTOCK. Do they earn \$15 a week?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Do they run \$20 a week on an average?

Mr. BERNSTEIN. Do you include the people in my shipping room and the office help?

Acting Chairman WEINSTOCK. No, just your operators or producers.

Mr. BERNSTEIN. Well, I can not answer you positively, but I should judge over that, yes, sir.

Acting Chairman WEINSTOCK. Over what?

Mr. BERNSTEIN. Over \$20—you mentioned, didn't you?

Acting Chairman WEINSTOCK. Yes; well, would it be \$25 a week?

Mr. BERNSTEIN. I would not like to really commit myself, because I have never gone over the figures, but I will be pleased to take it off for you.

Acting Chairman WEINSTOCK. You ought to be a pretty good guesser, with your long experience?

Mr. BERNSTEIN. I have never taken it off closely.

Acting Chairman WEINSTOCK. Well, can you have it taken off?

Mr. BERNSTEIN. Yes, sir, surely; with pleasure.

Acting Chairman WEINSTOCK. Will you be good enough to furnish us with a copy?

Mr. BERNSTEIN. Yes, sir, with pleasure.

Acting Chairman WEINSTOCK. Thank you very much.

Mr. BERNSTEIN. You mean for what term, please; three months or six months or a year?

Acting Chairman WEINSTOCK. I think if you took a year it would be of more interest to us.

Mr. BERNSTEIN. Well, that would have to go back to 1912, because we did not virtually work of any consequence in 1913.

Acting Chairman WEINSTOCK. Very well, if you will give us that.

Mr. BERNSTEIN. Very glad to give it to you.

Acting Chairman WEINSTOCK. Then, could you do the same thing for 1914 for the purposes of comparison between 1912 and 1914?

Mr. BERNSTEIN. Well, I might say this to you in regard to 1914: The spring season of the cloak and suit business is the smallest season, the fall season being the main season, and the employment of more hands, and, in fact, at that time people in the fall season, of the styles get settled, if you gentlemen tell us about the styles, we will have it all pat.

Commissioner LENNON. We will tell you about the styles.

Acting Chairman WEINSTOCK. Mr. Lennon, that is his strong point, telling us about styles. You might do this, then, for the purpose of comparison: Give us the earning power, dividing up 1912 into two distinct seasons, the spring and fall seasons.

Mr. BERNSTEIN. Yes; with pleasure.

Acting Chairman WEINSTOCK. Then give us the average for the spring of 1912 and the average for the spring of 1914.

Mr. BERNSTEIN. In the spring of 1914?

Acting Chairman WEINSTOCK. Yes, sir.

Mr. BERNSTEIN. Business was not as good this spring, so it won't be as large.

Acting Chairman WEINSTOCK. Now, your statement, as I recall, is that prior to the strike, from your point of view, the employees had no grievance on the wage question, they had no real grievance on the question of working hours, they had no real grievance on the question of working conditions?

Mr. BERNSTEIN. Do you want me to answer that?

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. As regards to working hours, as regards to the wages, or earnings, rather, they had absolutely none. I can speak now of the members of our association. The outside shops I know nothing about, because I was in daily conference with all these people, and I heard their reports right along. As regards working hours, if we would not finally close our shop they would never go home. Some of them would bring their herring and bread down there and stay there.

Acting Chairman WEINSTOCK. You mean that they were so ambitious to earn money they would exploit themselves physically?

Mr. BERNSTEIN. Yes, sir; in a great many instances. Now, for instance, at times we would work on, if I remember rightly, Mondays, Tuesdays, and Thursdays, not compulsory, but any man who wants to sit at his machine is welcome there. Those were all pieceworkers. They do not report at 7 or 7.30 o'clock. They come to their machines when they choose.

Acting Chairman WEINSTOCK. You haven't any discipline as to the hours a man can come and go in your place?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. Well, then, how can you control results?

Mr. BERNSTEIN. Well, they desire to earn, and they are always there without imposing any conditions of time on them.

Acting Chairman WEINSTOCK. I see.

Mr. BERNSTEIN. Now, in my experience I remember distinctly that my partner came from the factory and told me, "They want to work to-night." Well, I was always a firm believer that the man who worked at night could not do much work the next day, but if we had any particular lots to go out, I would say, "All right; let them work," and they would work until half past 8 o'clock or 9 o'clock, but some of them were not content with that and would have stayed longer if we had not closed down. The conditions in the cloak and suit industry in New York and Philadelphia are entirely opposites.

Acting Chairman WEINSTOCK. What were the working conditions about the shop, the sanitary conditions, so far as you know?

Mr. BERNSTEIN. Well, I have been in the shops of every one of our members in the association. I made it a point to go there, because I was not busy last fall; and in some instances I told them—I gave them suggestions what I should do, and I feel confident that every suggestion was acted upon. Mr. Tapping, who is sitting to my right, was also with me, as he was vice president of the association, and we made this point to go around, because I am a firm believer of what I have repeatedly said, that no manufacturer can manufacture without labor; the producing power must be there, and you must keep the producing power in good order and afford a good place for it.

Acting Chairman WEINSTOCK. Well, in view of the fact, then, that from your point of view there were no real grievances, that the earning power was fair, that the working hours were within their own control, and that the working conditions were good, what were the demands made on the part of the workmen?

Mr. BERNSTEIN. On the part of the working people?

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. I can comfortably state to you none.

Acting Chairman WEINSTOCK. They made no demands on you at all?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. How was it possible to have a strike if they made no demands?

Mr. BERNSTEIN. Those things are made up; those things can be manufactured.

Acting Chairman WEINSTOCK. Well, what were the manufactured demands, then?

Mr. BERNSTEIN. Did you ever read them off, sir?

Acting Chairman WEINSTOCK. I did not.

Mr. BERNSTEIN. Would you like to?

Acting Chairman WEINSTOCK. I haven't the time to just now, but if you will brief them out to me it will answer the purpose.

Mr. BERNSTEIN. I read to you two or three of the conditions, I believe. I will just leave this here, if you would like to read it over.

Acting Chairman WEINSTOCK. Can you briefly tell us what they asked?

Mr. BERNSTEIN. Well, the main point was the recognizing of the shop chairman, as I told you before.

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. Fifty hours shall constitute a week's work; which we were agreeable afterwards to give them.

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. They then summarized nine hours for the first five days and five hours on Saturday. There should be no more than six hours' overtime work in any week and no more than two hours in any one day. No work shall be given to the employees to be made at home, which was entirely optional on the part of the employees.

No. 4 was that the manufacturers shall recognize the shop chairman. The employer shall maintain sanitary shops, standards to be agreed upon by the representatives of the union and the firm. Pay to be in cash and on a designated day. That certainly was a joke, because we don't pay in anything but cash. The work to be equally distributed amongst the employees during the dull season. No charge shall be made for electric power, belts, needles, cotton, or any part of the machine. The complete abolition of all contracting and subcontracting in the entire cloak and suit trade, both inside and outside the factory. There should be no time contract between the firm and individual employees except in the case of foreman, designer, and cotton cutter. No. 11. No security deposit shall be demanded by the firm from any employee, and such deposits as have already been made by the working people shall be returned to them. No overtime shopwork between November 28 and January 15 and May 15 and August 1, except on making of samples. And there was some remark here about pieceworkers and week workers and cutters and sample makers and finishers and pressers.

Acting Chairman WEINSTOCK. Which of these demands did you object to? Which did you think were unreasonable and unwarranted?

Mr. BERNSTEIN. No. 4 particularly.

Acting Chairman WEINSTOCK. Will you read it, please?

Mr. BERNSTEIN. The manufacturer shall recognize the shop chairman.

Acting Chairman WEINSTOCK. What others did you find?

Mr. BERNSTEIN. And No. 9, the complete abolition of all contract and subcontract work in the entire cloak and suit trade, both inside and outside the factory.

Acting Chairman WEINSTOCK. On all the other points you could have come to an understanding with the workers, but those two points, as I gather it, you locked horns?

Mr. BERNSTEIN. These were in the general condition.

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. Now, there were conditions of pieceworkers and week workers and cutters and sample makers on which we did not agree to an extent.

Acting Chairman WEINSTOCK. Were your people organized before this trouble arose?

Mr. BERNSTEIN. Nominally, no. The association had been formed in 1906 or 1907, but it was entirely inactive.

Acting Chairman WEINSTOCK. What?

Mr. BERNSTEIN. I was not a member of it at that time.

Acting Chairman WEINSTOCK. I am not speaking of the manufacturers. I mean the workers. Were the workers organized?

Mr. BERNSTEIN. Oh, without question.

Acting Chairman WEINSTOCK. Before this trouble arose?

Mr. BERNSTEIN. Oh, yes.

Acting Chairman WEINSTOCK. Did you recognize their association in any way—their union—up to that time?

Mr. BERNSTEIN. Well, there was no necessity; there were no questions came up in these days, or any conditions arose that required any meetings of any nature.

Acting Chairman WEINSTOCK. Then one day some committee, I take it, came to you with this document and asked that you give it your consideration?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. How did you treat the matter?

Mr. BERNSTEIN. Well, I think all of us—shall I answer for all of us?

Acting Chairman WEINSTOCK. Please.

Mr. BERNSTEIN. Because this has been debated so long that I can really answer you in the plural. It was the view of everyone to avert, if possible, this strike, because we were confident in one thing, that these people who were helping us to manufacture—I mean laboring people now, working people—were not going to benefit by this strike, although they thought they would under what they were told by the leaders. I knew that we would not benefit, and they certainly were not going to declare a strike in the dull season; so they waited until our men were on the road and had sent in their orders, and on July 14 the bomb burst. We had several meetings of our executive committee, and also, I think, three meetings with them.

Acting Chairman WEINSTOCK. What, three meetings with the representatives of the workers?

Mr. BERNSTEIN. Yes.

Acting Chairman WEINSTOCK. Joint meetings?

Mr. BERNSTEIN. Yes; about four or five of us, with two of them, I believe. Yes; there were two. We were pointed out one particular phrase of the letter which went with these conditions. I don't know that I can just put my eyes on it. It read: "Yet at the same time the unions have determined at all hazards to employ all legitimate means"—that word was spelled wrongly; it had an "ll" left off at the front—"for the purpose of effecting those proposed changes." The gentlemen representing the other side were very insistent upon calling our attention to this particular phrase—that they were "determined at all hazards." And I answered the men that "We will endeavor on our part to accede to the wishes which you state are the workers' wishes, but which are not the workers' wishes, to see whether we can not get together with you." And he says, "If you don't, what are you going to do?" and I said, "I am going to fight you to a finish." Well, he said, "That is what it will be." I said, "Now, you are going to be the sufferers; your hands are going to be the sufferers; the manufacturer is going to be the sufferer." I said, "Absolutely not a soul in the city of Philadelphia or from any drawing places we have in the United States is going to benefit by this."

Acting Chairman WEINSTOCK. Well, then, up to that point, Mr. Bernstein, it was a case of one organization through its representatives dealing with the other organization through its representatives.

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. There was mutual recognition there; that is, you recognized the unions and they recognized your association?

Mr. BERNSTEIN. Well, we recognized them in so far only that we could avert this for our poor hands; our friends we call them, even though the workmen do not think so.

Acting Chairman WEINSTOCK. Well, regardless of what the motives may have been, the fact is they recognized your association and you recognized their association?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. And whatever agreement might have been arrived at would have been for collective observance?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Now, I gather from that, having come together, you were unable to agree?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Was there any attempt made or any suggestion made on either side to submit the disputed points to arbitration?

Mr. BERNSTEIN. Not at that time, sir.

Acting Chairman WEINSTOCK. You did not suggest it, representing your association, nor the workers did not suggest it, representing their association?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. It was simply a case of a hung jury?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Then what followed?

Mr. BERNSTEIN. Then the strike was declared.

Acting Chairman WEINSTOCK. By the workers themselves?

Mr. BERNSTEIN. Yes, sir; by the unions.

Acting Chairman WEINSTOCK. By the unions?

Mr. BERNSTEIN. Yes; not the workers.

Acting Chairman WEINSTOCK. What was the ultimate—what was the result of it?

Mr. BERNSTEIN. The result of it was that they went out on strike and remained out on strike for exactly six months.

Acting Chairman WEINSTOCK. Then, how was it finally terminated?

Mr. BERNSTEIN. Well, by them giving up the fight.

Acting Chairman WEINSTOCK. Well, I have found, Mr. Bernstein, in my experience in dealing with labor disputes that it is very rarely that a dispute of that kind arises and culminates into a strike, which frequently leads to violence, that when a careful analysis is made of all the circumstances it is found that the trouble was due either to a misunderstanding or through mistake made on one side or on the other side, or by both sides. Now, what we want to get at as a commission—we are not interested in any particular strike and we are not interested in knowing whether Jones or Smith or Brown is at fault. What we are interested in is to get at the underlying causes for these troubles. Now, you think, Mr. Bernstein—and you ought to be the best critic under the circumstances—that you could hold the situation at arm's length and review it and put your finger on the point of failure; point out just where the mistake was made by one side or the other, if any mistake was made, so we may get the benefit of your criticism of the whole case? I know that you are manly enough, Mr. Bernstein, that if you made any mistakes to acknowledge them thoroughly.

Mr. BERNSTEIN. I certainly would acknowledge it. I should not hesitate for a moment. I would tell you if the policy which we pursued, upon reviewing it now after six months, whether we found ourselves in any manner wrong, because I am one of those fellows who will never be always in the right; but I believe that if such matters are to be conducted properly—and when I make this remark I do not mean for the manufacturer, I mean for the benefit of the workingman—if the workingman could only look into these matters and realize and recognize that he is the one that is being trampled on only, that the manufacturers of to-day—I could not say these gentlemen, but I mean to say in our association—are only too willing to accede to any demands. Certainly there is another side of the question.

Acting Chairman WEINSTOCK. Well, do you think the workers in that case—did the employees in that case make any mistake; and if so, what was their mistake?

Mr. BERNSTEIN. Well, the imposition. That was a direct intent, you know. You must not forget the little remark which I made to you, which may sound wrong. We were "due." There has got to be a strike somewhere—no strike, no pay—but if the poor working fellow strikes, no pay.

Acting Chairman WEINSTOCK. You mean, then, that the workers were led like so many sheep by their leaders to a slaughter?

Mr. BERNSTEIN. Absolutely; yes, sir.

Acting Chairman WEINSTOCK. That the rank and file were opposed to the strike, but, having leaders who were not sincere, they tried to exploit the workers for their own selfish benefit?

Mr. BERNSTEIN. Allow me to answer you in this manner, please. Daily members of our association—Mr. Kelly, whom I think you have on the stand after me, and my partner, and these gentlemen, and many others of us here—received no less than 10, 15, 20, 30, or 40 telephone calls a day from our own working people saying, "For God's sake, bring this thing to a close; accept their conditions and get us back, and after we are back we will keep right on the way we were going; but, for God's sake, stop this strike." Now, I will leave these gentlemen testify. I don't know whether my figures are right—sometimes there were more, sometimes less. So you can see the position of the workman was to get back to work.

Acting Chairman WEINSTOCK. So far as you know, Mr. Bernstein, did the leaders in the unions have the power on their own volition to declare the strike, or did they take a secret ballot as to whether there should be a strike?

Mr. BERNSTEIN. I could not tell you that, sir.

Acting Chairman WEINSTOCK. You don't know?

Mr. BERNSTEIN. No.

Acting Chairman WEINSTOCK. You think, then, that the mistake on the part of the workers was in having been ill-advised or having leaders that deliberately forced them into a strike against their wishes and against their best interests?

Mr. BERNSTEIN. I should view it that way; yes, sir.

Acting Chairman WEINSTOCK. What mistakes, if any, did the employers make? If you had the thing to do all over again and you wanted to avert the strike in every legitimate way, what would you do that you did not do in this case?

Mr. BERNSTEIN. Well, the very same question that you are asking me, I have asked our board immediately following the settling of the strike, or, in fact, during the strike, and while we do not want to hold admiration meetings over ourselves in any manner, we all came to one conclusion; in fact, I might say, I went further than the executive board, we took in some of our members and asked the very same question, and we all concluded that if we had the thing to do over again that we would do it in the very same manner if the other side refused to listen to arbitration in the manner which we suggested that was best.

Acting Chairman WEINSTOCK. But a little while ago I put the question to you, Did you or the workers suggest arbitration? and you said no.

Mr. BERNSTEIN. No; I answered this gentlemen in the early part, we attempted arbitration with them.

Acting Chairman WEINSTOCK. You did suggest arbitration?

Mr. BERNSTEIN. Not suggest; no, sir.

Acting Chairman WEINSTOCK. What did you do?

Mr. BERNSTEIN. Preceding the strike—you mean during the strike?

Acting Chairman WEINSTOCK. No; at any period?

Mr. BERNSTEIN. Preceding the strike, not during the strike.

Acting Chairman WEINSTOCK. I see.

Mr. BERNSTEIN. We were approached by several gentlemen who endeavored to bring forward arbitration. We listened to some of them. They gave us the assurance that the other side was quite willing. We even went so far as to tell them we would give quite some consideration, in going one, two, or possibly three steps further than what we had gone the day when the suggestion was made before the strike, but we found that those who approached us came there in the guise of friends, but they were nobody and we dropped them.

Chairman WEINSTOCK. Well, now, there have been instances that have come under my notice, where in cases of trouble similar to the case we are discussing now, third parties would come to the employers and suggest arbitration, and the representatives of the employers would say there is nothing to arbitrate. Was that attitude taken by your association at any time?

Mr. BERNSTEIN. Not until the latter part of it, sir.

Acting Chairman WEINSTOCK. Not until after cessation of work?

Mr. BERNSTEIN. Oh, considerably after that.

Acting Chairman WEINSTOCK. Up to that time you were quite ready to submit the disputes to arbitration?

Mr. BERNSTEIN. Absolutely.

Acting Chairman WEINSTOCK. The other side refused to submit to arbitration then?

Mr. BERNSTEIN. Not until—do you mean before the strike?

Acting Chairman WEINSTOCK. Well, at that time you were willing to submit the matter to arbitration was the other side also willing to submit to arbitration?

Mr. BERNSTEIN. They said they were; yes, sir; preceding the strike.

Acting Chairman WEINSTOCK. Well, then, if both sides were willing to submit the matter to arbitration, why was not the matter arbitrated?

Mr. BERNSTEIN. Because they insisted upon the appointing in each and every shop of a shop chairman.

Acting Chairman WEINSTOCK. Wasn't that the thing to be arbitrated?

Mr. BERNSTEIN. It could not be.

Acting Chairman WEINSTOCK. Why not?

Mr. BERNSTEIN. Absolutely impossible.

Acting Chairman WEINSTOCK. You mean they refused to arbitrate that particular point?

Mr. BERNSTEIN. Absolutely. That was the main hinging point.

Chairman WEINSTOCK. Were you willing to arbitrate that particular point?

Mr. BERNSTEIN. No; that was one point we would not arbitrate.

Acting Chairman WEINSTOCK. Then you struck a point where neither side would arbitrate?

Mr. BERNSTEIN. Where we hedged. That is, we were both up against the wall on that. There were other points we were perfectly willing to accede to them, and they were in a small manner.

Acting Chairman WEINSTOCK. Well, then, is that so, then? Wise men profit by experience, especially if it is costly experience, and I take it that this must have been rather a costly experience?

Mr. BERNSTEIN. It was.

Acting Chairman WEINSTOCK. Might I ask incidentally what it cost the manufacturers—the strike?

Mr. BERNSTEIN. Now, that is a very hard question, sir. You mean, I take it, as regards our strike expenses?

Acting Chairman WEINSTOCK. Well, the collective loss of the manufacturers. How much poorer were they than they would have been?

Mr. BERNSTEIN. I can't say.

Acting Chairman WEINSTOCK. You can't tell?

Mr. BERNSTEIN. No.

Acting Chairman WEINSTOCK. Were there no estimates made as to the loss sustained by the manufacturers and the wage earners? That is usually done in the event of any large strike; they figure up the cost pro and con.

Mr. BERNSTEIN. I don't see, really, how it could have been done, because a man would not know what volume of business he might have done, you know. The strike occurred on the 14th of July, which is really the beginning of the garment season.

Acting Chairman WEINSTOCK. Are we to understand, Mr. Bernstein, that if the same circumstances were duplicated to-morrow, knowing what you know to-day, that you would take exactly the same position as you did before, or would you profit by your previous experience and do something you did not do to avert the strike?

Mr. BERNSTEIN. That is a question?

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. I think that we really had reached the end of the rope in going into the experience as far as we did. I know it is the absolute determination of every manufacturer in this town that never in his existence, as long as he is in the cloak and suit business, will he permit a shop chairman in his shop. Now, I might answer you.

Acting Chairman WEINSTOCK. Will you tell us, Mr. Bernstein—we are laymen in the commission—

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. What is meant by shop chairman? What are his functions? What are his powers and responsibilities?

Mr. BERNSTEIN. Will you let me just finish the other answer?

Acting Chairman WEINSTOCK. Surely.

Mr. BERNSTEIN. I will present to you what I heard expressed so thoroughly in our association rooms, that never would they permit a shop chairman in their establishment. When I tell you that you can infer just exactly what would happen if another strike were to come about. That is the main issue, and none of them—I am not speaking through myself for them, but I am speaking for them of them as they spoke to me and to all of us—so if it is the union's purpose at any time to appoint a shop chairman—

Acting Chairman WEINSTOCK (interrupting). It will be war to the knife?

Mr. BERNSTEIN. How?

Acting Chairman WEINSTOCK. It will be war to the knife?

Mr. BERNSTEIN. Well, something like that, although it was before the same thing.

Acting Chairman WEINSTOCK. Now, will you be good enough to tell us about the shop chairman; just what he does, and what his limits are?

Mr. BERNSTEIN. I will try to. I told you before that we had a strike of one day in 1904. The union had in a measure entered our stock, and in the pressing room there came forward an instance that we had a man in charge there, with probably 10, 12, or 14 pressers, and after a garment is pressed it passes to the

examining table again, from which place it goes to the men or girls who sew on the buttons and the garment is completed. This particular man in charge of the pressing room brings this garment over to my partner—this particular garment—and shows it to him, and this was the first day that the union were in our shop. This morning, in fact, I think it was about 10 or 11 o'clock, to be precise, he said: "I told this man this garment is not right, and I told him I would not accept it and that he should press it over again," and he said "That garment is all right, and I won't press it over," and I said to my partner, "Will you pass that garment?" and he said "Absolutely no," and with that my partner goes into the pressing room and says, "Who is the man who pressed this garment?" and he said, "This is the man." So he acted toward him nicely, and said, "That garment is not pressed correctly; it will never pass." And with that this so-called shop chairman, although this name has only been delegated to them in the past few years; but preceding that time he was the common "delegate," he said, "That garment is pressed correctly and is not going to be pressed again," whereupon my partner said, "You get down that elevator and take the man who pressed the garment with you." So he did. In about an hour word comes around the shop we are on strike, and they went out on strike, and we left them alone and did not say anything to them. I think it was about a Tuesday morning and everybody walked back to his machine as happy as a lark and started working. So that is all the experience I have ever had with a shop chairman, but from all reports I have had from all the people, and particularly from New York City, it is something that we would never permit nor entertain for an instant.

Acting Chairman WEINSTEIN. Your point is that the shop chairman represents the worker and that he is supreme, and that in the recognition of the shop chairman you give up all control of your shop?

Mr. BERNSTEIN. Absolutely.

Acting Chairman WEINSTEIN. He becomes the supreme judge?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTEIN. And that, in your opinion, to do that would be to take away your rights and your privileges and your authority without due process of law?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTEIN. Well, now, we were discussing the question of the protocol in the earlier part of the investigation, Mr. Bernstein, and, as has been brought out by some of the previous examiners, testimony has been submitted to this commission which might lead the commission to believe that, while the protocol as operated in New York is not the best conceivable condition; that, while it has its weaknesses and shortcomings and fallings, on the whole, it has worked out fairly successfully; and, even admitting that it is an evil in certain directions, the consensus of opinion is that it is the lesser evil; that the conditions prevailing under the protocol are far better for the worker and employer than they were before the protocol; that it makes for industrial peace; that it provides machinery where all disputes can be adjudicated without cessation of work.

Now, from the testimony that you have submitted, Mr. Bernstein, your opinion, seemingly, is that it is a failure; and if so, will you be good enough to tell the commission why and what are its points of failure—wherein it has fallen down?

Mr. BERNSTEIN. I don't know that I can delve very closely into the conditions and acting of the protocol in New York. I have read them and forgotten them. But I can tell you gentlemen that I do not know what testimony or from whom you got testimony during your investigation in New York City, but I can tell you this, that there is hardly a week goes by that I do not meet gentlemen here from New York who tell me of the raw state of affairs existing there; possibly I have no right to talk about this, but as long as you asked this question I am going to give you the opinions which I hear.

There are strikes in New York in a small manner, so to say, there are cessations daily, not in one but probably 3, 5, 10, or 20 instances in different shops. If I could recall one, just at this moment, which I heard of two weeks ago, it would be very interesting. I can not really recall it at the moment. But the people went down and they were visited by the New York union representatives and also a representative of the New York association, and there seems to be a kind of cahoot over there between those two fellows of some manner—I don't know what it is; it is not here; and this man was obliged to wait three days before his machines were resumed to be working.

Now, the protocol, from what little I can recall, is anything but good to the workingman; and if you gentlemen hear my remarks generally here, you may assume that I am not for the workmen as much as I am; but I am, because I was a young working fellow once, and I appreciate their duties.

Now, the protocol, as far as I can understand it, is absolutely no good. It is against the workingman.

Acting Chairman WEINSTOCK. How?

Mr. BERNSTEIN. I can not tell you the particulars; it may be Mr. Kelly knows more about it than I do, or Mr. Tapping, but I have heard it and read it and forgotten it.

Acting Chairman WEINSTOCK. Well, of course, we value your opinion, Mr. Bernstein, but what would be more helpful to us would be the fact.

Mr. BERNSTEIN. I think I have a copy of it, and would be very pleased—

Acting Chairman WEINSTOCK (interrupting). We have that, have a copy of the protocol. But what we do not know at present is its points of failure, which perhaps you can point out to us.

Mr. BERNSTEIN. I haven't any in mind at present; I haven't them in mind.

Acting Chairman WEINSTOCK. I gather, then, that you believe that, from the standpoint of the worker, it is harmful to him?

Mr. BERNSTEIN. From what I have heard.

Acting Chairman WEINSTOCK. Rather than helpful to him.

Mr. BERNSTEIN. From what I have heard; yes, sir. I think they are misdirected by it.

Acting Chairman WEINSTOCK. And how about from the standpoint of the employer? Is it harmful or helpful to him?

Mr. BERNSTEIN. Well, I don't think it is a question either of benefit or otherwise, hardly.

Acting Chairman WEINSTOCK. You mean, that so far as the employer is concerned it neither helps nor hurts him.

Mr. BERNSTEIN. As far as I remember it; I have not investigated it closely at all, any more.

Acting Chairman WEINSTOCK. Well, then, if that is true, if that is against the interests of the worker, but does not affect the welfare of the employer, so long as the worker should be satisfied to enter into the protocol, what objection could there be to the employer to do it, if he would not be affected by it?

Mr. BERNSTEIN. I regret that I can not answer you. I really do not recall the particulars. I have not read it up for a long time.

Acting Chairman WEINSTOCK. Suppose there was an effort made to establish the protocol in Philadelphia, what would be the attitude of your members, as nearly as you can state, of your associates?

Mr. BERNSTEIN. Well, as nearly and as vaguely as I remember the conditions of the protocol, I should oppose them, although I am not entirely certain of the points contained therein.

Acting Chairman WEINSTOCK. Were you present, Mr. Bernstein, in the last day or two, when representatives of both sides testified before this commission on the pottery industry?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. And on—

Mr. BERNSTEIN (interrupting). The metal trades?

Acting Chairman WEINSTOCK. No; the glass blowers' industry?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. Well, for your information, then, let me explain that in both of those industries this is the condition that prevails: The workers are strongly organized; the employers are strongly organized; they recognize each other and they deal with each other. They enter into trade agreements, written agreements; and these agreements, if I mistake not, provide that in the event of a dispute arising, that dispute, without cessation of work, must be submitted to arbitration, and the findings of the arbitrators must be accepted by both sides. Those things do tend to industrial peace. Now, do you know why that plan should not work out as well in the garment industry of Philadelphia as it does in the pottery industry or the glass blowers' industry?

Mr. BERNSTEIN. Well, may I ask you, is there a shop chairman on the premises?

Acting Chairman WEINSTOCK. I don't know; my friend, Mr. O'Connell, says there is a grievance committee. They gave it a different name there, they call it a grievance committee.

Mr. BERNSTEIN. It is not a committee, it is a gentleman, an individual, single.

Acting Chairman WEINSTOCK. He is never married?

Mr. BERNSTEIN. A single one, individual. If it arrives at a question that a manufacturer who, after hard dint and labor, has brought his plant up to a point where he must be subjected to a yes or no, or a turndown, or a this or that of a single ignorant man, and his job, to get into his shop; then if those people can enter into that agreement in the glass blowers', or whatever the other association was, it is beyond me.

Commissioner O'CONNELL. One of those trades indicated have not had a strike for 18 years, and the other one has not had a strike for 24 years.

Mr. BERNSTEIN. I don't want you gentlemen to think that where strikes occur that we like strikes, because we do not, and it was our effort to avert them in any manner possible.

I don't know, but as I understand this gentleman, from the very early part of it, we certainly have no objection to people organizing themselves. We do not control them. We simply pay them for the labor which they deliver us, it is a matter up to them whether they see it for their benefit, but they certainly do not derive any benefits in any degree, did not in the slightest from the strike, and there was nobody more sorry for them than I was.

Acting Chairman WEINSTOCK. What would be the attitude of your association, Mr. Bernstein, to put my question in a somewhat different form—I don't think I made it as clear as I meant to make it—if parties were to come to your association and suggest the advisability of duplicating the conditions that prevail in the pottery industry to your industry?

Mr. BERNSTEIN. Oh, they are not applicable.

Acting Chairman WEINSTOCK. They are not applicable?

Mr. BERNSTEIN. Absolutely not.

Acting Chairman WEINSTOCK. Where would they prove a misfit?

Mr. BERNSTEIN. In a great many degrees. As regards wages, which they might contend would be only just and fair. There would be no comparing of the two industries whatever.

Acting Chairman WEINSTOCK. Well, we know, of course, that the wages are different, but then the matter of wages is not the principle involved in the matter—the principle involved is very largely the same.

Mr. BERNSTEIN. Very largely.

Acting Chairman WEINSTOCK. The amounts may differ, but the principle is the same. If the potters and employers can get together and determine their wages, why can't the employers and the workers in the garment industry get together and determine the wages?

Mr. BERNSTEIN. They have been.

Acting Chairman WEINSTOCK. That has all been done?

Mr. BERNSTEIN. That had been, previous to the strike.

Acting Chairman WEINSTOCK. They had been adjudicated by both sides?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Then there would be no room for an issue there?

Mr. BERNSTEIN. Not collectively. Individually in all instances.

Acting Chairman WEINSTOCK. That is, you made a bargain with each separate worker?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. You did not deal with them as a body?

Mr. BERNSTEIN. No.

Acting Chairman WEINSTOCK. As a group?

Mr. BERNSTEIN. No, sir; not collective bargaining.

Acting Chairman WEINSTOCK. Not even those in your own shop?

Mr. BERNSTEIN. No, sir. I might say that different garments pay different prices, and different tailors make different garments.

Acting Chairman WEINSTOCK. I see.

Mr. BERNSTEIN. So one particular tailor might be able to make a garment of higher class and one of lower class. Possibly the man who makes the lower class is able to produce that many more, or vice versa; depends upon his efficiency entirely. The man who makes the better garment might be more efficient in producing a better garment quicker than a man who makes the lower garment, and a better price.

Acting Chairman WEINSTOCK. In order to get that clear in my mind, tell me what the system is to-day. Your designer brings you a new design of a costume?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Who fixes the price for the different operators for the different parts of that costume?

Mr. BERNSTEIN. Well, the cloak and suit business has gone along for a long while; there might be changes; there is some relative nearness to garments that have been produced previously from which you could determine the price.

Acting Chairman WEINSTOCK. Who is the price maker?

Mr. BERNSTEIN. Well, the man in charge, usually.

Acting Chairman WEINSTOCK. The employer?

Mr. BERNSTEIN. Yes.

Acting Chairman WEINSTOCK. Does the worker have any voice whatsoever in the fixing of that price?

Mr. BERNSTEIN. I should say yes.

Acting Chairman WEINSTOCK. At what stage of the game does his voice enter?

Mr. BERNSTEIN. Well, a garment is produced in the following manner—I don't know whether you know anything about it—

Acting Chairman WEINSTOCK. Not practically; no, sir.

Mr. BERNSTEIN. The garment is produced, and the designer gets his design and cuts his model and gives it to what we call a sample maker. This sample maker is a tailor, but in this particular time he is then on week work, as a rule. The garment is then finished, and, if it is suitable and meets the eyes of those for whom it was produced, it is duplicated, so that the other men on the road or the New York office also has a sample. In the producing of the duplicate samples, the price is determined. The manner in which we do this is as follows:

In the making of samples we pay a certain price for all samples; makes no difference what they are.

Acting Chairman WEINSTOCK. For the garment complete?

Mr. BERNSTEIN. No, sir. A coat is one tailor and a skirt is another tailor.

Acting Chairman WEINSTOCK. Yes.

Mr. BERNSTEIN. Particularly of a coat, or a suit as a jacket; we speak of them in that manner. A coat implies a single garment, and a jacket a suit. After we work two or three weeks and have some garments to produce, whatever this garment is worth more than the nominal sum of \$2 or \$2.50, which we give to the tailor, we give him credit for that.

Acting Chairman WEINSTOCK. Who determines whether it is worth more than \$2?

Mr. BERNSTEIN. The man in charge of the establishment.

Acting Chairman WEINSTOCK. The employer?

Mr. BERNSTEIN. Yes, sir; sometimes, not always, the employer; sometimes the designer.

Acting Chairman WEINSTOCK. He would represent the employer, of course?

Mr. BERNSTEIN. Yes.

Acting Chairman WEINSTOCK. Supposing I was the operator, and here was a new garment brought out, and it was turned over to me to do, and I was informed that the price of that garment was \$2.50, and I objected and held that \$2.50 was not enough, that it was worth \$3; what would happen?

Mr. BERNSTEIN. Well, if we did not think it was worth \$3, I would either not give you the garment, but somebody else would get it, but if you talked to me and showed me where it was worth more than \$2.50, the price would be advanced.

Acting Chairman WEINSTOCK. But if you couldn't advance it, if I couldn't convince you it was worth more and you couldn't convince me it should be done for \$2.50, then we could not agree?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. Then, I would have no voice except to suggest to you that it ought to bring more.

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. Aside from that my powers would end as a worker.

Mr. BERNSTEIN. On that particular garment, but there are others.

Acting Chairman WEINSTOCK. You would have the last word?

Mr. BERNSTEIN. Not exactly.

Acting Chairman WEINSTOCK. Then who would have the last word?

Mr. BERNSTEIN. If you were a good tailor I would give you another garment to make.

Acting Chairman WEINSTOCK. Who would have the last word on that particular garment?

Mr. BERNSTEIN. There would be other garments; if my idea is that that garment is well paid for at \$2.50, there are many others who would make it for \$2.50.

Acting Chairman WEINSTOCK. What I want to get at is this: Under collective bargaining, take it in the pottery industry, the two sides come together on the question of determining wages or prices, if it is piecework, and if they can not come to an understanding it is submitted so that a price is arrived at that both must accept.

Mr. BERNSTEIN. To whom?

Acting Chairman WEINSTOCK. Somebody that they both agree upon, I presume.

Mr. BERNSTEIN. I mean, outside of the pottery business?

Acting Chairman WEINSTOCK. I am not familiar with the details. They have both committees that thrash the matter over, and the worker has an even voice with the employer. That is, the employer has not arbitrary power, on the theory that the worker has his work to sell and, having it to sell, he feels he is entitled to a voice in determining the value of that work. He is not supreme, he can not dictate, and the employer is not supreme and he can not dictate; they get together ultimately, by mutual concessions, until an agreement is arrived at which is satisfactory to both sides.

Mr. BERNSTEIN (interrupting). Mr. Weinstock—

Acting Chairman WEINSTOCK (continuing). But I take it in this case, from the explanations made, that the employer is supreme in the fixing of the price; that the worker can suggest, can recommend, but he has no power. I take it it is the difference between individual bargaining, where the employer is absolutely supreme, and collective bargaining, where the worker has a voice to protect himself in that way against the unfair employer. You know, of course, as I do, Mr. Bernstein, that among the workers there are fair workers and there are unfair workers, is not that true?

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. There are some workers who give you a fair day's work for a fair day's pay?

Mr. BERNSTEIN. Yes.

Acting Chairman WEINSTOCK. There are some workers who give you an unfair day's work for an unfair pay, isn't that true?

Mr. BERNSTEIN. I presume so, in anything.

Acting Chairman WEINSTOCK. That is not a one-sided condition. I think you will agree with me that, among employers, there are fair employers and unfair employers?

Mr. BERNSTEIN. I will grant you that also.

Acting Chairman WEINSTOCK. And there are fair employers who are willing to give a fair day's pay for a fair day's work, and there are unfair employers who are not willing to give a fair day's pay for a fair day's work.

Mr. BERNSTEIN. Yes, sir.

Acting Chairman WEINSTOCK. The purpose of collective bargaining, as I understand it, is to protect the worker not against the fair employer, but against the unfair employer, and the only way that has yet been conceived, from all that I have been able to determine as the results of my investigation that the worker can be protected against the unfair employer, is by this system of collective bargaining, where he is given a voice?

Mr. BERNSTEIN. Permit me to answer you in one or two words. I don't think that any conditions which have resulted in trouble here—there is only one word to put there, strike—has ever been brought about through any question of prices solely. Now, I might say that my partner, who is a manufacturer—I must speak of our own place, because that is the most I know of—we have been in business 14 years and we have made hundreds of thousands of garments in that time, how many I don't know; there have times come up when the prices which we would set on garments, in instances, were not entirely satisfactory; they were always adjusted without any trouble; no trouble whatsoever. There might be a little bit of a hitch in the matter of saying this garment is worth so much more, and I would say I don't think it is worth so much more, and "now, show me the difference between this garment and one produced last season."

I must say, in all earnestness, that in the majority of instances they found that we would pay them what was right. The moment I would say, "That garment is no different from the garment we had last summer" or compare it with another garment of the same line of the present season—sometimes I was

wrong—raise the price a little bit, and everything went along hunky-dory. Those troubles—the strikes—are not from the price question. There might be in some little bit of a shop, and neither you nor I can go and change that, but when you come to speak of a majority, taking it as a whole, strikes do not result from prices.

It is not a question of that matter.

Acting Chairman WEINSTOCK. Well, are you in favor, then, Mr. Bernstein, of any system that would lead to trade agreements?

Mr. BERNSTEIN. Not from past experience; I am not.

Acting Chairman WEINSTOCK. Not from past experience?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. If we were to invite your advice, then, to the commission as to whether we would recommend to the employers of the Nation that, as a means of establishing a higher degree of industrial peace, they should enter into trade agreements, you would not be in sympathy with that recommendation?

Mr. BERNSTEIN. The term which you imply there is so indefinite that I would hardly, under any conditions, give my assent, because the arbitrator or mediator or conciliator, whatever you might wish to have come in, in a great many instances is appointed under compulsion, on either one side or the other, to have a party who absolutely has no knowledge of the business.

Acting Chairman WEINSTOCK. Not in the making of a trade agreement, Mr. Bernstein.

Mr. BERNSTEIN. Very possible.

Acting Chairman WEINSTOCK. You are the employer and I am the worker; you represent the employers and I represent the workers.

Mr. BERNSTEIN. Pardon me just a moment. I can give you an instance of that right in the men in our own business. I assure you if I were called to-day as an arbitrator on some classes of our own merchandise in the very cheapest lines—we make the better line only—I would be a very poor arbitrator, because I would see that garment only with my own eyes in looking at a well-finished garment and I would not be able to determine what the proper price would be in a cheaper garment. I have had instances of it, and I did not feel competent.

Acting Chairman WEINSTOCK. I did not make myself clear. What I wanted to convey to your mind was this: That, so far as making trade agreements are concerned, the arbitrator, as a rule, is not called in. The time when the arbitrator is called in is when it comes to the interpretation of that trade agreement. You and I may enter into an agreement to-day and to-morrow you would put one interpretation upon it and I would put an entirely different interpretation upon it. To settle what is the correct interpretation of it, we would probably decide to put in a third party. There is the arbitrator who steps in. But I asked you, are you in favor of the trade agreements? Are you in favor of the employees and the employers, through their respective representatives, coming together and fixing the conditions which shall prevail for a number of years?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. You are not in favor of it?

Mr. BERNSTEIN. No, sir.

Acting Chairman WEINSTOCK. You don't think it would work out satisfactorily to employer or worker?

Mr. BERNSTEIN. No, sir; I am looking on the side of the worker as much as I am on the side of the manufacturer.

Acting Chairman WEINSTOCK. How do you explain the fact that there are so many industries which have trade agreements where both sides pronounce them as being satisfactory?

Take it in the railroad industry, one of the largest industries in the world, employing hundreds of thousands of men, and they operate satisfactorily under trade agreements; strikes are extremely rare, because many of them have provisions in their agreements that when a dispute arises it shall be submitted to arbitration, and that there shall be no cessation of work, and the decision of the arbitrator shall be binding on both sides.

How do you explain the fact that they are eminently satisfied in the printing business, another large industry? Trade agreements have worked very satisfactorily in the pottery industry, and in the glass blowing industry. Those trade agreements have been going on for untold decades; and from your point of view they should have all ended in wretched, miserable failure, but they have not.

Mr. BERNSTEIN. No; don't take my point of view as being general for all industries, if you please. I do not set myself up on a pedestal in that manner. You are speaking of our industry.

I explained to you before that the conditions existing before this strike was called couldn't have been better. Only those who were lazy and did not want to work were not making a living. There was plenty of work here. Everybody was satisfied.

Acting Chairman WEINSTOCK. Then, your judgment is, Mr. Bernstein, that the best conceivable condition for worker and employer in your industry is no organization, individual bargaining?

Mr. BERNSTEIN. Individual bargaining; our whole woman's garment manufacturers' association amounts to nothing more to-day, nominally, than an association that we have joined, as a club, with no set rules. We are trying to determine at the present moment how long or how short a garment is to be. That is all we are discussing. We have little meetings for the purpose of saying "How do you do" to each other, and we remain in that tranquil condition until we are aroused again.

Acting Chairman WEINSTOCK. Thank you very much, Mr. Bernstein.

Mr. BUSIEK. I will call Mr. Kelly.

TESTIMONY OF MR. WILLIAM A. KELLY.

Mr. BUSIEK. State your full name, please.

Mr. KELLY. William A. Kelly.

Mr. BUSIEK. You are secretary of the Women's Garment Manufacturers' Association of Philadelphia?

Mr. KELLY. I am.

Mr. BUSIEK. How long have you held that position?

Mr. KELLY. Since about September.

Mr. BUSIEK. Since last September?

Mr. KELLY. Yes, sir.

Mr. BUSIEK. Are you also a manufacturer of women's garments?

Mr. KELLY. Manufacturer of women's garments, in the metropolitan streets, Fifteenth and Wallace Streets.

Mr. BUSIEK. How many employees have you?

Mr. KELLY. At the present less than two dozen.

Mr. BUSIEK. At high tide, in your business?

Mr. KELLY. Sixty to seventy people, perhaps a little more.

Mr. BUSIEK. In addition to that, do you put out any work on contract?

Mr. KELLY. All work manufactured on the premises.

Mr. BUSIEK. All work is manufactured on the premises?

Mr. KELLY. Yes.

Mr. BUSIEK. Is that a recent condition, or has that always been the practice?

Mr. KELLY. Always.

Mr. BUSIEK. Are there any contractors in the shop, in your shop?

Mr. KELLY. Skirt; two men take charge of the skirt end of it.

Mr. BUSIEK. And then they become contractors?

Mr. KELLY. They employ their help on the skirts.

Mr. BUSIEK. How about pressers?

Mr. KELLY. Two pressers take charge of the pressing end.

Mr. BUSIEK. They employ their assistants?

Mr. KELLY. They employ their pressers and underpressers.

Mr. BUSIEK. Do the tailors employ any assistants?

Mr. KELLY. Pieceworkers, no. Week worker, one week worker with an assistant.

Mr. BUSIEK. Who pays the assistant?

Mr. KELLY. We do, the firm.

Mr. BUSIEK. In these figures that Mr. Bernstein was giving I neglected to ask him about one thing, but you can probably tell. Do those workers have to pay any assistants out of those wages?

Mr. KELLY. None whatever. The finishers are entirely separate; paid by the firm.

Mr. BUSIEK. Do you confirm Mr. Bernstein's figures of the number of garment workers employed in Philadelphia, are they approximately correct?

Mr. KELLY. Yes, sir.

Mr. BUSIEK. The members of your organization employ about 75 per cent?

Mr. KELLY. Seventy-five to eighty per cent of the total help in the city. This matter of cloaks and suits, remember, does not apply to all needle trades; that our waist and dressmakers are entirely separate; they would come under the head of the needle industry. This is only the cloak-and-suit industry.

Mr. BUSIEK. That is all we are interested in now.

Mr. KELLY. Yes.

Mr. BUSIEK. Does your association maintain any data on the employees of the members at large? Do you have any exchange of information as to employees, or references of any kind? Supposing Mr. Bernstein hires a man and the man says that he formerly worked for you, is there any data preserved at the central office?

Mr. KELLY. None.

Mr. BUSIEK. Which would enable Mr. Bernstein to look that man up?

Mr. KELLY. No, sir; he would have to inquire from me.

Mr. BUSIEK. He would have to inquire?

Mr. KELLY. If the man worked.

Mr. BUSIEK. I suppose that is not at all uncommon, is it, that one employer inquires as to the record of an employee?

Mr. KELLY. Very seldom applies, because in this business they take the help on just as needed, and while it would be much more profitable if they would inquire as to a man's ability, most of them fail to do it.

Mr. BUSIEK. I suppose that you concur with Mr. Bernstein on the proposition that a shop chairman was a rock that would be bound to split on, you would be bound to split on?

Mr. KELLY. I have had a little bit different experience from Mr. Bernstein; I have had a union shop.

Mr. BUSIEK. How do you find it works in your shop?

Mr. KELLY. I closed my shop in August, 1913, as a union shop, and notified the employees that the employees of the shop ceased to be a union shop; that the shop had ceased to be a union shop that day, but it would be, on Monday, or any time thereafter, absolutely an open shop.

Mr. BUSIEK. What inspired that determination?

Mr. KELLY. The matter of adjusting prices; the price committee and the attitude of the employees after the strike had been declared was entirely different. For two years and a half conditions were very agreeable, but when the flaming circular went out, and they went on strike, they took them out of my shop as well as out of others; then when they came back the attitude of the employers was entirely different, because they felt they had a firmer hold and stronger stand with the union back of them, and on strike they assumed an entirely different attitude.

Mr. BUSIEK. In regard to what?

Mr. KELLY. As regards the making of prices.

Mr. BUSIEK. Did they insist on higher prices for their piece goods?

Mr. KELLY. My arrangements with them was that they stick to their former prices as arranged; always made a price list out and had it posted in the shop. They were satisfied with this, but when the new samples were made, under the new régime, after they had gone out on strike in the other shops, in one week—it took one week for me to get them back, and then the prices adjusted on the agreement were from 20 to 25 per cent higher than the same agreements were before the strike. They were bound by their agreement. They said they would stick to the price list as arranged previous to the strike, because I went right along under the same conditions we had always worked, but on the new prices they advanced their proposition absolutely, and made it such that it was impossible for me to work under the prices which they wished to make, and compete with the New York market.

Mr. BUSIEK. Did you have at that time any agreement with the union as to prices which their demands violated?

Mr. KELLY. Any agreement with the union?

Mr. BUSIEK. Yes. You say you ran a union shop?

Mr. KELLY. No agreement whatever. We have—we had the price committee and everything ran along swimmingly for two and a half to three years.

Mr. BUSIEK. How did this price committee work?

Mr. KELLY. Excepting in one instance, where the price committee worked such detriment. If a man would be appointed on the price committee, and I rather think it was a year or six months previous to the strike where a price committee was appointed, they were to come in on a Saturday afternoon or Sun-

day morning, whichever they could—Saturday afternoon was the first arrangement—to make their price with the designer; go over the prices that had been submitted and make their prices. Two of them came in and stated that they were unable to make prices; that the union would not allow them—I am only taking their testimony or their word to me for it—that the union would not allow them to make prices until the garments were completely finished, with the buttons and everything on them; they were only to make prices on the operating part of it.

They went out; they said they would be fined if it was discovered that they were in the place.

The third member of it, who at that time was the shop chairman, came in later and wanted to know where the others were. We did not know. He said he had stopped at one of their houses coming up, and that the wife said he had gone to work or had gone into the shop. Later on in the week we told them there was no use; we would go ahead and make prices without them. Then on Monday or Tuesday night following this the same members of the price committee waited for my designer, who left the factory, and on the way home, down Thirteenth Street, proposed to him that if he would pay them a premium of 10 or 20 per cent more for making the prices, pay to them over the prices which they made, that they would fix up the prices, which admitted of a blackmailing proposition. We were then a union shop. We immediately sent for the representatives of the union and got our hands in the shop, removed the tables from the shoproom, and held a caucus there, and got the business agent of the union in this city to be there at a certain time; and these men were all there and made him go through it, and compelled those people to testify, and that knowledge before him. Then he made the proposition for them to be paid more for the work that they made than the other working people.

Mr. BUSIEK. What happened to those men?

Mr. KELLY. The union took them out of my shop and sent them down to the union headquarters. What happened to them I don't know; they worked in other shops afterwards.

Mr. BUSIEK. Are they still union men?

Mr. KELLY. I don't know. They were, and were going in other shops afterwards.

Mr. BUSIEK. Mr. Kelly, has your association any affiliation with any other national organization?

Mr. KELLY. None whatever.

Mr. BUSIEK. Have you ever received any financial assistance during strikes from any other organizations?

Mr. KELLY. None whatever.

Mr. BUSIEK. Where did you hire the guards or where did the guards come from?

Mr. KELLY. Wherever we could get them; men from licensed detective agencies, or wherever it was necessary that we could get them. Some men went out and hired them themselves.

Mr. BUSIEK. I suppose there was a dearth of licensed agencies to whom you could go?

Mr. KELLY. I don't know how many. Plenty of them.

Mr. BUSIEK. Have you any correspondence on the subject of these agencies furnishing this service?

Mr. KELLY. Never retained them. There was so much.

Mr. BUSIEK. You found that as soon as trouble brewed—

Mr. KELLY (interrupting). They would flock to you.

Mr. BUSIEK. They came to you; you could always get all you wanted?

Mr. KELLY. Yes, sir.

Mr. BUSIEK. What would they offer to do, Mr. Kelly?

Mr. KELLY. Furnish guards to escort the men to and from their work.

Mr. BUSIEK. Did they also offer to furnish men to attend union meetings and find out what was going on?

Mr. KELLY. None whatever.

Mr. BUSIEK. That offer was not made?

Mr. KELLY. Never made and never sought for.

Mr. BUSIEK. I don't—

Mr. KELLY (interrupting). I realize it is not personal.

Mr. BUSIEK. Did your association finance the prosecution of any men who were arrested for violence during the strike? Did you employ any special counsel to assist the prosecution?

Mr. KELLY. Not to assist the prosecution. We had an attorney to represent the association in any hearings or things that would come up.

Mr. BUSIEK. Have you any data as to how many arrests were made for violence?

Mr. KELLY. Not accurate. In the neighborhood of about 450 assaults; for violence, the most of them.

Mr. BUSIEK. And there was one conviction, so far as your record shows—I believe that is Mr. Bernstein's testimony?

Mr. KELLY. I believe—the testimony—we abandoned the idea of it, because the testimony, both at the time of the assault, and later on, when apparently surroundings or influences prevailed, were so flexible, we had no desire to go further.

A BYSTANDER. Mr. Kelly, permit me to correct you. There were two convicted on one trial.

Mr. BUSIEK. Mr. Kelly, you were speaking about the shop chairman a moment ago. Have you had any difficulty with the shop chairman, such as Mr. Bernstein seems to have in mind—that is, that they are arrogant or overbearing or attempt to run the employer's business?

Mr. KELLY. After the strike was declared off, and my employees came back, the attitude of the shop chairman, more at the behest of those working under him, was entirely different from previous to the strike. Another thing, we were not able to procure the help which we wanted. We had to send to the union for any help we wanted, and they were the judges of the ability of that help. We had the privilege of paying them.

Mr. BUSIEK. Didn't they send a number of employees from among whom you could select?

Mr. KELLY. They would send you a man or two at a time, and if you objected to them, they wanted to know all the reasons or objections that were made. We were first hampered in the pressing end of it. In this business all individuals can not be counted alike, for there are people who are more adaptable to the handling of the work and can handle it much more dextrously and can handle it much better; and that is the trouble with the shop committee. There are many times when one employee can make that garment, and make much better time on it, than another. One man can take a garment and get a dollar or a dollar and a half for operating, and make four or five a day; and another man might have trouble making two.

Mr. BUSIEK. Well, so long as you pay by piecework, what do you care?

Mr. KELLY. The more work that is turned out per machine, the less ratio of cost. The more work that is turned out in a given space the cheaper for you. Your power runs the same for one man as the other.

Mr. BUSIEK. Mr. Kelly, do you know anything about a system whereby some manufacturers demand of their pressers that they put up a certain amount of money as security?

Mr. KELLY. I don't know of any such system in existence to-day. I had heard of it previous to the strike, that such a thing was done; but I never knew it or never practiced it.

Mr. BUSIEK. Amongst whom was that system practiced?

Mr. KELLY. I don't know; I only heard of it in some vague sort of manner; I don't know to whom to attribute it.

Mr. BUSIEK. Do you know of any of that going on now?

Mr. KELLY. None that I know of.

Mr. BUSIEK. Do you agree with Mr. Bernstein that the members of your association would, under no circumstances now, deal with the employees as an organization?

Mr. KELLY. As an organization?

Mr. BUSIEK. Yes.

Mr. KELLY. From our experience and the caliber of those at the head of it and their actions in fomenting so much ill will toward the manufacturers, during the past struggle, it would not be advisable to deal with them under any consideration, as it would simply be intolerable under the present leadership, because the spirit of animosity was engendered very strongly during this strike and no attempt made to bring it along peaceably or bring any good feeling toward the manufacturer.

Mr. BUSIEK. What is your personal attitude? Will you hire union people now?

Mr. KELLY. Never ask the question as to whether they are union or non-union.

Mr. BUSIEK. I suppose that men whom you consider as agitators, you would not hire in your shop?

Mr. KELLY. Men that had committed infractions of the law—that I knew—I would not—that is, that I knew personally.

Mr. BUSIEK. There were some 455 men who committed infractions of the law?

Mr. KELLY. Well, those are trifles. I mean men that committed serious infractions of the law; because there were a lot of men working in the business, who were not inclined to be unruly or in any way dangerous at all and circumstances and inducements made them such. That was force of circumstances with them, and not of their own volition.

Mr. BUSIEK. Is there any list kept of the violators of the law?

Mr. KELLY. No.

Mr. BUSIEK. And do I take it, then, that the only way you would know who was a violator of the law is if you would happen to have had some experience—

Mr. KELLY (interposing). As I would know them personally.

Mr. BUSIEK. I believe that is all, Mr. Chairman. But first, Mr. Kelly, how do the wages paid the garment workers here compare with those paid in other cities?

Mr. KELLY. That I am unable to answer; but I can answer you this, that I myself went over a list of my employees in the fall of 1912. This I did of my own accord just in order to satisfy my own mind. And my operators from July, 1912, until the end of November, 1912—that was the fall previous to the strike—and I found that my operators on coats averaged—those that made eight coats or more per week—of course, men come in for a short time and will be here for a part of the time, and they make four or five garments; but that is no criterion for a week's earnings. In that list I found that the coat operators had averaged twenty-six dollars and some odd cents per week, and the skirt operators averaged twenty-five dollars and some odd cents per week. That was for July, August, September, October, and to the end of November.

Mr. BUSIEK. Well, these men that made only four or five coats a week, could they have gotten more skirts or coats to work on?

Mr. KELLY. Possibly, because in the piecework system we keep no daily record of the hands that come in. If a machine is idle we notice it is idle. If it is idle two days in succession we want to know whether that man is laid up sick or not. Many times employees in a shop may take an opportunity of working in one shop and if they feel that they can do better than that in another shop they will go out and put in a day's work in another shop to see how they like it and then they may come back the next day and finish up the work here before they start in in the new shop. You have no way of controlling or of finding out whether they have done that.

Mr. BUSIEK. What is the idle period for garment workers?

Mr. KELLY. The total you mean, or months per year?

Mr. BUSIEK. Well, no; I mean the total length of time they can not work even if they want to work.

Mr. KELLY. Well, there is a percentage of them that can not. There is a period of at least 35 or 40 weeks that there is work for a large percentage. While a proportion may be reduced, I would say that, with a fair proportion of idle months, they would have 35, 38, or perhaps 38 weeks in the year.

Mr. BUSIEK. What proportion of them would be idle that length of time?

Mr. KELLY. Well, now, I can only give you the ratio of my own shop. I would run down possibly from 60 to 12 or 14. Some shops might run heavier than that. That would be in the ratio of about 20 per cent that would be employed during those periods.

Mr. BUSIEK. And 80 per cent idle?

Mr. KELLY. And 80 per cent idle. That is in my shop. I can not speak for others.

Mr. BUSIEK. I suppose those conditions prevail pretty generally?

Mr. KELLY. No; there are some shops where the seasons run longer.

Mr. BUSIEK. Any that run shorter?

Mr. KELLY. Hardly; because I make no summer goods, and that is a long season from the time the spring season ends until you start in on your fall goods.

Acting Chairman WEINSTOCK. Will you report back at 2 o'clock, Mr. Kelly?

Mr. KELLY. Yes, sir.

Acting Chairman WEINSTOCK. The hearing stands adjourned until 2 o'clock. (Thereupon an adjournment was taken until 2 o'clock p. m.)

AFTER RECESS—2 O'CLOCK P. M.

Mr. BUSIEK. Will Mr. Kelly please resume the stand?

TESTIMONY OF MR. WILLIAM A. KELLY—Continued.

Acting Chairman WEINSTOCK. Had you finished with Mr. Kelly?

Mr. BUSIEK. I had, Mr. Chairman.

Acting Chairman WEINSTOCK. Any questions, Mr. O'Connell?

Commissioner O'CONNELL. Mr. Kelly, I understood you to say that some of the work in your factory was let by contracts to certain persons in the factory?

Mr. KELLY. The skirt making and the pressing are done by two men in charge whom I term as contractors.

Commissioner O'CONNELL. Now, do they employ the people who work for them?

Mr. KELLY. They do.

Commissioner O'CONNELL. They do not come in your office seeking employment?

Mr. KELLY. No.

Commissioner O'CONNELL. But are employed directly by the contractors?

Mr. KELLY. Are employed directly by the contractors.

Commissioner O'CONNELL. They pay them?

Mr. KELLY. They pay them.

Commissioner O'CONNELL. And they make the rates—

Mr. KELLY (interrupting). We supervise the rates.

Commissioner O'CONNELL. You supervise the rates paid?

Mr. KELLY. Yes, sir.

Commissioner O'CONNELL. The rate, then, is arranged between you and the contractor that he should pay the employee?

Mr. KELLY. A fair proportion for making the garments. We pay the contractor a certain price and we see that he pays the operators that work for him a fair price for making them.

Commissioner O'CONNELL. How many people do you employ at your factory, Mr. Kelly?

Mr. KELLY. I have employed as high as 80 to 90; but ordinarily I would say 60 to 65.

Commissioner O'CONNELL. How many are you employing now?

Mr. KELLY. Less than two dozen. Business is very dull now.

Commissioner O'CONNELL. Approximately, what is the earnings of the men in your service—in your factory?

Mr. KELLY. As I stated before, I took from the records of men that had made eight coats per week or more—there is no record kept of the time in which they work, there is no clock for them to punch—and we consider that men who work under that do not work a full week, or only work a portion of their time. But of the men that made eight garments or more—nine or more—their average earnings from July, 1912, to November, 1912, averaged over \$26 a week for the coat operators and twenty-five dollars and odd cents for the skirt operators. That was a period straight through from July until the end of November.

Commissioner O'CONNELL. Well, that is a very short period, isn't it?

Mr. KELLY. That is five months, because the fall season would be over at that time, and you would be working part of your help making the spring samples.

Commissioner O'CONNELL. Now, in the slack season of course, the number of workers is largely reduced; but do those who are employed make about that same earning?

Mr. KELLY. Oh, no. Their slack season really starts in around November. They would average—in a slack season it would depend on the number that came in for work; that is, the number—there are a number of them who take positions in other houses where they are busy. There may be other houses that are working longer or working on the increased work or that have other orders, and the consequence is they may migrate from one shop to another, and those that come in, we give them a share of the work, so that it is very indefinite the amount that they will average. It may be that one man only puts in one day in the week at a shop, yet if he has been an operator during the season you would give him a share of the work then and there.

Commissioner O'CONNELL. Doesn't the slack season affect all employees alike? Aren't their periods of business the same during the year?

Mr. KELLY. No; there are some men making some classes of work that may work until the latter part of December. I have known them to be working on fall goods clear up until February and March, where others, say, are starting in on the spring suits. December and January ordinarily would be somewhat slack.

Commissioner O'CONNELL. Can you give us any idea as to what the annual earnings of a journeyman coat maker, for instance, would be during the year?

Mr. KELLY. That would be problematical, absolutely; it would be guesswork.

Commissioner O'CONNELL. Well, a guess; what would it be?

Mr. KELLY. I would say that the average mechanic working by the year will average between \$850 and \$1,000 a year, at the least. Eight hundred and fifty dollars is a minimum. Now, I am giving you the experience of the help that I have had, regardless of the attitude of the audience here.

Commissioner O'CONNELL. Well, the audience would not sway the opinion of this commission.

Mr. KELLY. Not a particle; no influence whatever.

Commissioner O'CONNELL. Well, do you employ female help?

Mr. KELLY. A percentage of them; possibly 14—12 or 14 at times, maybe 18.

Commissioner O'CONNELL. What would you approximate the earnings annually for a first-class lady employee?

Mr. KELLY. You can't hold them permanently. What I mean to say, they go from one shop to another one, quite a few, and any of those I have had permanently, they have been working for me three, four, or five years with me, I would say a finisher, they come under the head of finishers, there are no female operators, and a finisher would average from \$8 to \$9.50 and \$10.

Commissioner O'CONNELL. Are there many instances of accidents in the clothing trades?

Mr. KELLY. None whatever that I know of. I never had but one myself.

Commissioner O'CONNELL. What was that, for instance?

Mr. KELLY. Then a man who could not talk English insisted upon getting under his machine to adjust a strap there when I have a man to attend to all adjustments of machines, and he got his shirt torn off his back. That is some years ago. But he had no business adjusting the belt at all. He had no business getting under the machine.

Commissioner O'CONNELL. Was he injured physically?

Mr. KELLY. No. Scratched on the back. That is the only accident I have knowledge of. There are minor accidents, such as a man at a machine may possibly get his finger under the needle, or something of that kind; but they are trivial accidents; they seldom occasion loss of time.

Commissioner O'CONNELL. How many nationalities are there among your employees?

Mr. KELLY. Principally two.

Commissioner O'CONNELL. What are they?

Mr. KELLY. Russian, and some few Italians.

Commissioner O'CONNELL. That is the Russian Jew, is it?

Mr. KELLY. Yes, sir.

Commissioner O'CONNELL. And the Italians?

Mr. KELLY. Yes, sir.

Commissioner O'CONNELL. Are the Italians very largely coming into the clothing trade here?

Mr. KELLY. Not to any extent.

Commissioner O'CONNELL. Do they speak English, as a rule?

Mr. KELLY. As a rule; yes.

Commissioner O'CONNELL. If they don't speak English, what then?

Mr. KELLY. I haven't met that class of people in my line.

Commissioner O'CONNELL. I am going to leave to Mr. Chairman Weinstock the question about the grievances, and so on, and the protocol. That has had some attention in other cases. Now, as to associations. Do you keep anything in your association files like an index card record of the employees in the various factories in the city?

Mr. KELLY. No, sir.

Commissioner O'CONNELL. Do the employers report to your office the names of men who are considered exceptionally active in unionism?

Mr. KELLY. They do not.

Commissioner O'CONNELL. Have you a record on file of the various cases of assault, and all that sort of thing, tried during this recent strike?

Mr. KELLY. We have not. There is one of the attorneys has a list of the cases.

Acting Chairman WEINSTOCK. You were telling us, Mr. Kelly, that when your shop was unionized you had what was called a price committee?

Mr. KELLY. A price committee; yes, sir.

Acting Chairman WEINSTOCK. Will you please explain just why that price committee was organized, and what its limitations were?

Mr. KELLY. That price committee was selected from among the hands that after—

Acting Chairman WEINSTOCK (interrupting). By whom?

Mr. KELLY. From among the hands in the shop, the operators; after the samples were made some of the price committee worked on samples and others did not; and they would select the committee of four or five for to go over the samples, garment for garment, and put a price for operating on that garment.

Acting Chairman WEINSTOCK. Well, the price committee, then, was composed of how many representatives of the workers?

Mr. KELLY. Possibly five, and as low as three. It was up to those who selected them.

Acting Chairman WEINSTOCK. They themselves selected them?

Mr. KELLY. Yes; we have nothing to do with it.

Acting Chairman WEINSTOCK. Now, what voice did you have in the making of the price—the employer?

Mr. KELLY. They would suggest the price. It was simply up to them to make it; and, if we felt it was too high, it was a matter of argument to try and adjust it on the basis of other garments we were making.

Acting Chairman WEINSTOCK. Supposing you could not agree, what happened?

Mr. KELLY. We simply had to agree.

Acting Chairman WEINSTOCK. There was no third party to whom you could submit the matter?

Mr. KELLY. We had to agree, for my people were all a unit in that matter; they were all members of a union. At that particular time the union had made no progress; they were not elated with any prospective power they were going to get. We never had any agreement, but we knew they were union members, and we knew, furthermore, that if a man came into the shop and our foreman took him on, if he was not a union member they would notify us he could not work there; that he would have to join the union. He had one week's time in which to either join the union or he would have to get out.

Acting Chairman WEINSTOCK. You never entered into a formal written agreement with your employees at that time?

Mr. KELLY. Never until after the strike was declared. Never signed a paper; never even was asked to sign it.

Acting Chairman WEINSTOCK. What grievance, if any, Mr. Kelly, did the workers have at the time of the strike?

Mr. KELLY. It was not a case of grievance as much as it was instigated by out-of-town officers and agitators of unions from New York, by Mr. Rosenberg and Mr. Polokof, and Mr. Deutsch, who represented the New York association, who came over here. I think they started in in the month of February, informing the people here that they were not working under sanitary conditions; that they were not getting paid enough for the work; and they were virtually human slaves.

Acting Chairman WEINSTOCK. You say that, in your opinion, it was not grievances so much as it was outside agitation?

Mr. KELLY. Outside influence brought to bear.

Acting Chairman WEINSTOCK. Were there any grievances, so far as you know?

Mr. KELLY. Not that I know of. I had none. I had even my price list signed up for the season, so far as my samples had gone.

Acting Chairman WEINSTOCK. So that, to the best of your knowledge and belief, the strikers at the time of the strike had no real grievance?

Mr. KELLY. Not to my knowledge.

Acting Chairman WEINSTOCK. Then, from your point of view, they struck without cause?

Mr. KELLY. They struck because the proposition was put up to them in such a way that this would be finished; that they would be backed up by the New

York organization. I only know this from my own people, because for four weeks they worked after the strike had been declared, when they said they were guaranteed that after two weeks that every man on strike would be paid \$15 per week, and they thought that was a pretty good inducement to get more easy money and be guaranteed that much for doing nothing.

Acting Chairman WEINSTOCK. Again, I take it, you feel that they had no grievance; there was some inducement offered by somebody to strike?

Mr. KELLY. No, sir. The local industry was very much satisfied.

Acting Chairman WEINSTOCK. And if they claimed to have a grievance, in your opinion, those were not real grievances, but manufactured grievances?

Mr. KELLY. Yes, sir.

Acting Chairman WEINSTOCK. Artificial grievances?

Mr. KELLY. Possibly.

Acting Chairman WEINSTOCK. Will you tell us something more, Mr. Kelly, about this violence in the strike? Who was guilty of it and what led to it, and so forth?

Mr. KELLY. At the beginning of this strike there was a man by the name of Abe Mitchell—I don't know whether he is in this room or not—he was vice president of the federation of labor in New York, who was brought over here to manage the strike, as I understood it. The local representative of it was Max Amdur, who is sitting back of me; and when the strike was started there were different halls selected in which the different shops were to congregate each day and receive what information they could and be assigned for picket duty, and so on, from those shops. This man Mitchell made his headquarters, if I am right as regards to the location, at 424 Pine Street. The main hall wherein Max Amdur seemed to hold forth most of the time was at 1024 Lombard Street. People who wanted to go to work or that went to work were solicited to come to those halls, and they would talk it over with them and persuade them not to go to work; stay out with the others; not to take the bread out of their mouths. There were in the hall at 1024 Lombard Street innumerable assaults that were committed on men taken down there that refused to stop work. They were assaulted there; some of them even had to jump out of the windows over into an outbuilding standing there and escape through the cemetery, a lot that was attached to it. Lots of those men still wore marks long after the strike was started of the assaults committed on them in those rooms. They were held there waiting for those in authority to come and talk to them, and if they still remained obdurate they would be assaulted by people, but by such numbers that they didn't know to whom to attribute the assault. Any number of them were assaulted leaving their homes in the morning and going back at night. Those that wanted to work had to be escorted to and from the factories. A number of the manufacturers were compelled, in order to make work and to accede to the wishes of their hands, if they would only start a factory out of town they were willing to work for them; they were not in sympathy with it. Factories were started in different parts of this State and in different parts of New Jersey, and work done in innumerable places in New York. They had factories running at Vineland, Bluefield, I think at Ridgerton, Red Bank, Newark, Lansdale, Pa., Reading, Pleasantville, and in Brooklyn.

Acting Chairman WEINSTOCK. Tell me, Mr. Kelly—

Mr. KELLY (interrupting). With the hands that were on strike going into those factories to work.

Acting Chairman WEINSTOCK. How many strikers were there in all?

Mr. KELLY. We only had the numbers which they claimed in the newspapers—in the neighborhood of 5,000 people.

Acting Chairman WEINSTOCK. Five thousand strikers, about?

Mr. KELLY. Some of the papers claimed that.

Acting Chairman WEINSTOCK. How many of the workers continued at work and refused to go on strike?

Mr. KELLY. Not 100 in Philadelphia, for fear of bodily harm.

Acting Chairman WEINSTOCK. So that the plants were practically shut down during that period?

Mr. KELLY. Some of them; yes, sir; for the time being. Some tried to start up afterwards, and had to have guards to take the people to and from work, some living in factories, some living there, and some did not leave the factories for over four weeks.

Acting Chairman WEINSTOCK. If there were only 100 remained at work out there—

Mr. KELLY (interrupting). At the start; later on it increased.

Acting Chairman WEINSTOCK. There was a statement that there were 400 assaults. Would that mean that every worker, on an average, was assaulted four times?

Mr. KELLY. No, sir; I said they were 4,000. Those assaults were all during the strike of six months.

Acting Chairman WEINSTOCK. I see.

Mr. KELLY. And if any man expressed an intention of going back to work that man was either assaulted on the highway or otherwise. As Mr. Bernstein stated on the stand, about them starting at one time on the designers, there was a large manufacturer whose business was on Third Street, and he returned from Pittsburgh, and was coming home, and lived in the location near one of the designers of the manufacturers; that man was waylaid in the neighborhood of Thirty-second and Montgomery Avenue and slugged and left lying in the street.

Acting Chairman WEINSTOCK. To the best of your knowledge and belief, by whom were those assaults committed, by the strikers themselves?

Mr. KELLY. At the start of the strike there was very little violence from the workers. There were some apparently sluggers that had committed violence on people that were at work, and among the others one of them that was arrested in one of the assaults committed downtown was this man Dopey Benny, or Benny Fein, who, with others, committed an assault on workers who had been to work, and was arrested for it, and that man is now serving an indeterminate sentence from three and a half to five years for violence committed on a policeman lately.

Acting Chairman WEINSTOCK. Was he on a strike?

Mr. KELLY. In no way connected with it. An East Side gangster.

Acting Chairman WEINSTOCK. In conversation, not a great while ago, Mr. Kelly, with Mr. Robert Hunter, who is the author of a book called "Violence in Labor Troubles," he made this statement, and I want to see how far it is correct from your experience—he made the statement that, in his opinion, the chief cause for violence in labor troubles was the employment on the part of the employers of the detective agencies. His statement was to the effect that these detective agencies, in order to make business for themselves, followed substantially this program: They would go to an employer who was about to have a strike, or who did have an incipient strike, and they would persuade him to employ two or three of their men. At the same time they would get two or three of their men into the union as alleged workers. That these detectives who would become union members would then incite the unionists to violence, and having incited them to violence they would go to the employer and point out to him that, as a matter of self-protection, he must employ more men, and in that wise create more business for themselves, and that it was in their interest to keep up as much turmoil and as much violence as possible. Now, would that statement apply in any way to the conditions prevailing in your troubles?

Mr. KELLY. Absolutely not.

Acting Chairman WEINSTOCK. Absolutely not.

Mr. KELLY. We refused to employ any detective agency or any person of any kind to bolster them up to enter the union for information. We positively refused to employ anyone to agitate or foment trouble. What we did with them was to have them escort people to and from their places of work when they wanted to work.

Acting Chairman WEINSTOCK. I see.

Mr. KELLY. And for no other purpose.

Acting Chairman WEINSTOCK. If, then, the violence that was committed, Mr. Kelly, if it was committed it was initiated entirely on the other side?

Mr. KELLY. There was people assaulted who wanted to work for a living. I have here to submit to you—there is a photograph of a man who, after being 14 weeks on strike, declared that his three children were starving and he was going back to work. That man, the day he made that remark, at 11.30 a. m., was assaulted in broad daylight, at the corner of Eleventh and Cherry, and within—the man was brought to me, and that is the condition that man was in [exhibiting photograph].

(The photograph was marked "Kelly Exhibit 1, June 30, 1914.")

Acting Chairman WEINSTOCK. Did he know by whom he was assaulted?

Mr. KELLY. He did not. He was walking down the street with another man.

Acting Chairman WEINSTOCK. And I take it, Mr. Kelly—

Mr. KELLY (interrupting). And numbers of them bear marks from black-jacks and bricks wrapped up in paper.

Acting Chairman WEINSTOCK. I take it you keep yourself pretty well informed on industrial matters generally and economic matters, and do not narrow yourself down to your particular business and restrict yourself to that, but are familiar with the fact that there is a very considerable industrial unrest throughout the country. Now, for the information of the commission, Mr. Kelly, will you tell us from your point of view, what, in your judgment, are the causes for the industrial unrest, and what, in your opinion, are the remedies?

Mr. KELLY. Well, to my mind, a lot of it is caused by business depression throughout the country. That is accountable for a lot of it. There are a lot of laws being enacted and a lot of laws brought up to be passed simply as a sop to labor. Politics to-day is catering too strongly to the labor proposition. They are not doing justice to labor by doing it; they are only mitigating the offenses for the time being. It is only a partial help. There is nothing permanent to it, and any help that is only temporary will never prove profitable to labor, as it is an acknowledged fact that all these laws passed only influences labor, and labor don't look beyond the surface, and they are satisfied with the surface of it and they are not digging deep enough into it.

Acting Chairman WEINSTOCK. I see. Now, Mr. Kelly, you mean that in order to throw a sop to labor for political purposes is the purpose of a good deal of the labor legislation enacted, and not from any real interest in labor?

Mr. KELLY. And no practical help for our injuries.

Acting Chairman WEINSTOCK. Now, will you be kind enough to point out some of this sort of legislation that you have in mind? Will you specify?

Mr. KELLY. It would be hard for me to do it.

Acting Chairman WEINSTOCK. Well, if there is a lot of it there ought to be no difficulty in instancing some of it?

Mr. KELLY. Well, there was one law, I think, introduced by Representative Rooney, in the State legislature here, in regards to labor and influencing their troubles, settling their troubles in regard to the State labor laws, for a commission to be appointed to adjust the differences. Yet he as well as others knew at the time that that law was advanced that there was nothing compulsory to make either side submit to it, and consequently the law was purely a plum thrown to labor without being possible to derive any benefit from it.

Acting Chairman WEINSTOCK. You say the law was passed?

Mr. KELLY. Yes. Well, this commission comes, and it is their duty to tender their services to mediate or arbitrate; but their duty ends there, and there is no further power. That law is entirely of no use to labor.

Acting Chairman WEINSTOCK. I see; that law has been enacted and is now on the statute books.

Mr. KELLY. That is where Mr. Jackson and the others attempted to come here and interfere—

Acting Chairman WEINSTOCK (interrupting). They did offer their services, but they were not availed of.

Mr. KELLY. Nothing came of it. The law of the State is that they shall tender their good services.

Acting Chairman WEINSTOCK. Now, do you think that law was passed in the aid of industrial peace, in the hope that it might lead to industrial peace, or do you think it was just done as a sop to labor?

Mr. KELLY. Passed as a law for the benefit of labor to show what they are doing for labor, when they have done nothing.

Acting Chairman WEINSTOCK. Well, did labor, during this recent trouble—was labor prepared to avail itself of the services of that board?

Mr. KELLY. Yes; because it was an incomplete service.

Acting Chairman WEINSTOCK. Then I am to understand, Mr. Kelly, from your point of view that the powers of that commission—I suppose it is a labor commission?

Mr. KELLY. State labor commission.

Acting Chairman WEINSTOCK. That that commission should have compulsory power?

Mr. KELLY. No; I did not say that.

Acting Chairman WEINSTOCK. Well, what power would you give them, then?

Mr. KELLY. Until you get labor on a better foundation, where they have a financial and moral standing, there can be no legislation compulsory unless both sides would be compelled. To-day your labor is not financially responsible.

The acts that were committed in the last strike—there was mention made some time during this hearing in regard to injunctions against labor strikes, as we were situated in Philadelphia, you could spend your time and money and go into court and get an injunction, and that strike committee could resign, and they were out of the reach of the courts, and another committee could be appointed in their place.

Acting Chairman WEINSTOCK. Well, I am a little bit confused on this point, Mr. Kelly. Let me see if I can straighten myself out mentally on the matter. First, I understood you to say that this legislation that was passed was not passed in sincerity?

Mr. KELLY. I say there was no completion. The powers were limited. There was nothing final.

Acting Chairman WEINSTOCK. Because of the fact that it was done as a sop to labor?

Mr. KELLY. It appeared so.

Acting Chairman WEINSTOCK. Therefore you criticized it?

Mr. KELLY. Because there is nothing complete to it.

Acting Chairman WEINSTOCK. Very well. Now, since that commission has no power beyond merely to tender its services—

Mr. KELLY (interrupting). Merely offering their services.

Acting Chairman WEINSTOCK (continuing)—and since you believe that that is of no value, and since you further believe that under existing conditions a committee with compulsory powers would not be available or desirable, what would you suggest?

Mr. KELLY. Well, compulsory arbitration is never satisfactory.

Acting Chairman WEINSTOCK. Well, if voluntary arbitration does not do any good and compulsory arbitration is not satisfactory, then what—

Mr. KELLY (interrupting). No matter how just the arbitration might be, under this State law neither side could be compelled to accept its dictates.

Acting Chairman WEINSTOCK. Very well. Then we will throw out of the game the voluntary proposition and we will throw out of the game the compulsory proposition. Then what have you to offer? What function, if any, should the State perform in industrial disputes?

Mr. KELLY. That is a question I can not answer offhand; but whatever commission has got good in it, it has got to be a commission on the order of your own honorable commission, where it is devoid of politics, where politics don't cut any figure.

Acting Chairman WEINSTOCK. You mean that politics has been too much involved here in the State?

Mr. KELLY. I mean here in the city there was local—politics was the means of carrying that strike on. When people were arrested for the strike one man in this town left the book open for security for bail to be used up to the sum of, I think, \$50,000; no matter what charge they were brought in on, his bail bond was acceptable. Nothing but a political game, because he was one of the local politicians.

Acting Chairman WEINSTOCK. You think he did that simply as a bid for the labor vote?

Mr. KELLY. He lived in that section. His constituents were there.

Acting Chairman WEINSTOCK. Well, then, what is your remedy, Mr. Kelly, for industrial troubles? How would you bring about a higher degree of industrial peace and more cordial relationship between the employer on the one side and the worker on the other?

Mr. KELLY. Well, in the first place you have got to realize that in this trade we have an absolutely different element from what you have in any other, and while a lot of them are not familiar with English, or not well versed in English, they can be welded for good or bad, and it is up to those that have them in charge whether those people's minds can be turned to good or bad. And with the leadership as expressed in the last strike and the manner in which they were encouraged and taken care of in the assaults committed—and I will say without hesitation that the bulk of the people in the trade are of Jewish extraction—and when a man so far forgets himself that they will turn out and go to the synagogues, which they did last year, on the two main holidays of the Jewish year, when there is no holiday as sacred as the day of atonement, Yom Kippur, and Rosh Hashonah—I say such leadership that make those people forget their entire manhood altogether as to go there and assault men at these synagogues, because there is no days as sacred to the Hebrew as the day of atonement and the new year. And we had seven syna-

gogues where there were assaults committed on the day of atonement and Rosh Hashonah.

Acting Chairman WEINSTOCK. You say that these strikers then, instead of being led, were being misled?

Mr. KELLY. Absolutely misled.

Acting Chairman WEINSTOCK. And you hold the leaders absolutely responsible for results?

Mr. KELLY. Absolutely responsible for misleading and misguiding them.

Acting Chairman WEINSTOCK. You were here this morning and heard Mr. Bernstein when he was on the stand?

Mr. KELLY. Yes, sir.

Acting Chairman WEINSTOCK. And heard the discussion about the protocol in New York?

Mr. KELLY. Yes, sir.

Acting Chairman WEINSTOCK. You probably have studied it?

Mr. KELLY. I have not studied it.

Acting Chairman WEINSTOCK. You are familiar more or less with its general provisions?

Mr. KELLY. Somewhat.

Acting Chairman WEINSTOCK. In your opinion how would that protocol fit into Philadelphia conditions?

Mr. KELLY. Not at all.

Acting Chairman WEINSTOCK. Where would it fail?

Mr. KELLY. In the first place the manufacturing of women's garments in New York is on an entirely different basis from Philadelphia. In the first place in Philadelphia we use the tailors at the machines mostly. The finisher is of secondary consideration. They fell in the linings and baste in the sleeves. In New York the finisher is the main one and the tailor is of secondary consideration. It is the tailor they employ does the basting and stitching of the garments and all, and he gets his finisher.

Acting Chairman WEINSTOCK. He is a sort of special contractor?

Mr. KELLY. To that extent. He is part of that constructive team. And while the protocol has worked to a fair advantage to many of the larger manufacturers, the smaller and the intermediate manufacturers are the ones that have been working to a disadvantage under it. And another thing to consider, in New York they have a large number of what they term to-day subway contractors—men who start up shops and manufacture for the larger cloak and suit houses. They will furnish them with the merchandise at a price and lining at a price and give them a pattern to make up sample suits, and they will tell them the price of that merchandise and the price of the linings, and say: "Now, submit us a price for making that suit." They have shops scattered all over in different sections. They submit a price and if it is agreeable it is given to them to cut, make, and return the complete suits. There are any number of those in New York City. There are none that I know of working under those conditions in Philadelphia. In Philadelphia it is a different proposition. He makes the work that is already cut and trimmed.

Acting Chairman WEINSTOCK. Well, could not the principles involved in the protocol be modified to suit the Philadelphia conditions?

Mr. KELLY. Not that I could say offhand. They are having trouble over there constantly. In fact now the I. W. W. have injected themselves into labor conditions in New York now, and they are furnishing help to manufacturers there that have any trouble with the Federation of Labor; and between the two of them it is rather deplorable as to what may happen.

Acting Chairman WEINSTOCK. Was this strike that you have been telling us about declared off at any time?

Mr. KELLY. It was voted off at the Arch Street Theater.

Acting Chairman WEINSTOCK. How long ago?

Mr. KELLY. On the 29th of December they voted to return to work.

Acting Chairman WEINSTOCK. Six months then?

Mr. KELLY. Six months after.

Acting Chairman WEINSTOCK. Have you had industrial peace in the industry since then?

Mr. KELLY. No trouble whatever.

Acting Chairman WEINSTOCK. Is there any unrest among the workers, so far as you know?

Mr. KELLY. No; only that there is not enough work for them.

Acting Chairman WEINSTOCK. Have they any grievances so far as you know?

Mr. KELLY. Not at all; never hear of any. Perfectly satisfied. Their grievances are that they can't review the past better.

Acting Chairman WEINSTOCK. Now, have you any suggestions, Mr. Kelly, as an employer and citizen having at heart the welfare of the country as a whole; have you any suggestions to make to this commission that would be likely to be to it helpful in its endeavor to solve the problems that have been placed on our shoulders?

Mr. KELLY. I don't know that I can enlighten you much on that, except that I feel, as I say, we have had to take our labor union from the standpoint we come in contact with it. Put your labor unions in better hands—more honorable hands—with better standards, where, instead of them paying people who were formerly good, quiet workmen to go out and do bodily harm to people and then remunerate them, they will have a better class of men, where if they attempt to do any wrong they can be held responsible. To-day after this trouble there is no other way. And it is simply impossible to get any man to come out in the open and declare himself for fear what might happen to him. They are afraid of violence from others.

Acting Chairman WEINSTOCK. In other words, your message to the workers substantially is this: Select honest, capable, law-abiding leaders, and refrain from violence. Is that correct?

Mr. KELLY. It is first get their institution on a solid basis, where it has some legal standing, then get honorable men at the head of it. Too many business agents and too many emissaries on paid salaries are more detrimental to labor to-day than any other cause, because the more strife that they can generate the more employment it gives them, and the consequence is the safer it makes their position. Remove these emoluments, remove these paid positions, and you will have much less trouble with labor.

Acting Chairman WEINSTOCK. Thank you, very much, Mr. Kelly.

TESTIMONY OF MR. MAX AMDUR.

Mr. BUSIEK. Your name in full, please.

Mr. AMDUR. Max Amdur.

Mr. BUSIEK. And your occupation?

Mr. AMDUR. I am the business agent of the cloak and skirtmakers' union of Philadelphia.

Mr. BUSIEK. How long have you been such business agent?

Mr. AMDUR. Six years.

Mr. BUSIEK. Were you employed in the industry here in Philadelphia prior to that time?

Mr. AMDUR. Yes.

Mr. BUSIEK. For what length of time?

Mr. AMDUR. Five years.

Mr. BUSIEK. How long has there been such an organization in Philadelphia?

Mr. AMDUR. Eight years.

Mr. BUSIEK. How many members have you now, approximately?

Mr. AMDUR. Approximately about 3,000.

Mr. BUSIEK. Approximately 3,000?

Mr. AMDUR. About 3,000.

Mr. BUSIEK. How many men are there in your craft in Philadelphia?

Mr. AMDUR. We had 6,500 on our books during the time of the strike.

Mr. BUSIEK. Six thousand five hundred during the strike?

Mr. AMDUR. Yes.

Mr. BUSIEK. Was that practically all the garment workers in Philadelphia?

Mr. AMDUR. Yes; all in Philadelphia.

Mr. BUSIEK. About how many of those are women?

Mr. AMDUR. About 1,400 or 1,500.

Mr. BUSIEK. What is your board of control of this union?

Mr. AMDUR. Executive committee of each local and a joint executive board composed of all locals.

Mr. BUSIEK. Of whom is the joint executive board composed?

Mr. AMDUR. Out of members of each local. We have three local unions.

Mr. BUSIEK. Name the locals.

Mr. AMDUR. Local No. 2, Local No. 53, and Local No. 69.

Mr. BUSIEK. Well, is the craft divided into pressers, cutters, and finishers?

Mr. AMDUR. No; it is divided into finishers, cutters, and pressers; operators have one union; and tailors have one local—that is Local No. 2.

Mr. BUSIEK. There are three locals?

Mr. AMDUR. Three local unions.

Mr. BUSIEK. There is a joint board composed of delegates out of those three locals?

Mr. AMDUR. Yes.

Mr. BUSIEK. What is the average wage of a cutter in Philadelphia?

Mr. AMDUR. Average wage?

Mr. BUSIEK. Yes.

Mr. AMDUR. Well, I may say not more than \$9 or \$10 per week.

Mr. BUSIEK. What is the average wage of a tailor?

Mr. AMDUR. Something like \$10—from \$10 to \$12.

Mr. BUSIEK. What is the average wage of a finisher?

Mr. AMDUR. Not more than \$6 to \$7.

Mr. BUSIEK. How many salaried officers has your union?

Mr. AMDUR. Two—myself and a secretary.

Mr. BUSIEK. Are you affiliated with the American Federation of Labor?

Mr. AMDUR. Yes.

Mr. BUSIEK. What is the name of the parent body?

Mr. AMDUR. International Ladies' Garment Workers' Union.

Commissioner O'CONNELL. From the officers of the manufacturers' association here, that appeared here, you heard their evidence this morning and afternoon?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. The principal accusation expressed as to the agreement presented by your organization in connection with the strike was the matter of the shop chairman?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. Now, will you, for the benefit of the commission, tell just what your shop chairman is supposed to be or do, or what powers he has?

Mr. AMDUR. The shop chairman has no powers whatsoever, the only exception being that he is to bring the workers in the shop to the manufacturer and the employer and adjust the grievance if possible; and if not—if he can not adjust it—bring it over to the union.

Commissioner O'CONNELL. Well, is the committee in the shop composed of one, just the shop chairman, or is there a grievance committee composed of three, four, or five?

Mr. AMDUR. No; there is only one.

Commissioner O'CONNELL. Just one in each shop?

Mr. AMDUR. Yes. In a few other shops we had a shop committee, what we called. They were composed of three. There was a shop chairman and two assistants.

Commissioner O'CONNELL. Well, in a shop employing, say, half a dozen different departments, like pressers, cutters, and all that, is there a shop chairman in each of those departments?

Mr. AMDUR. No; there is only one.

Commissioner O'CONNELL. One chairman in the whole plant?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. And if an employee feels that he is not getting the proper price for his work, he has the shop chairman take it up with his employer for him?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. In other words, he is the attorney for the worker?

Mr. AMDUR. For the employees in the shop.

Commissioner O'CONNELL. Does he get any salary other than that which he makes in the shop?

Mr. AMDUR. No.

Commissioner O'CONNELL. And he is not one of the high-priced employees of the union?

Mr. AMDUR. No.

Commissioner O'CONNELL. What is your salary?

Mr. AMDUR. \$25 a week.

Commissioner O'CONNELL. You look after the entire business of the organization in Philadelphia?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. At \$25 a week?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. What did you make when you were in the shop?

Mr. AMDUR. I made something like \$22, \$25 in the season; of course, in slack time I made a little less.

Commissioner O'CONNELL. And financially your position has not been very materially improved?

Mr. AMDUR. Not at all; in fact, it is a little worse for me now, being a paid officer of the union, than when I was a workingman in the shop, on account I have more expenses, and so on.

Commissioner O'CONNELL. And you have more bosses?

Mr. AMDUR. And I have more bosses; that is natural.

Commissioner O'CONNELL. Now, as a practical man, having worked in the shop and at the trade, you are what?

Mr. AMDUR. I am a skirt maker by trade.

Commissioner O'CONNELL. Skirt maker?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. That is, ladies' skirts?

Mr. AMDUR. Ladies' skirts.

Commissioner O'CONNELL. How were the prices set, for instance, when you worked at the trade for making skirts?

Mr. AMDUR. Between a committee of the employees with the employer.

Commissioner O'CONNELL. That was in what would be called a union shop, was it?

Mr. AMDUR. Yes, sir; it was not a union shop which we may say we have union agreements with, but it was—

Commissioner O'CONNELL. The employers recognized the men?

Mr. AMDUR. The employers recognized the men; yes, sir; as union men.

Commissioner O'CONNELL. And dealt with them collectively?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. In that case the price was made between the employer and the men?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. Mutually agreed upon?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. A shop in which to-day they do not deal collectively with a man, how is the price made?

Mr. AMDUR. By the designer or by the employer.

Commissioner O'CONNELL. They set the prices?

Mr. AMDUR. Set the price.

Commissioner O'CONNELL. What does the employee have to say about the price?

Mr. AMDUR. The employer?

Commissioner O'CONNELL. The employee, the workman?

Mr. AMDUR. Nothing at all.

Commissioner O'CONNELL. Simply takes it?

Mr. AMDUR. Takes it, or if he doesn't like it, he can get some other job.

Commissioner O'CONNELL. And the job is given to some other workman?

Mr. AMDUR. Given to some other workman.

Commissioner O'CONNELL. If a workman continually objects to the price, and he is found to be what might be considered an objector, is he in employment usually?

Mr. AMDUR. Well, usually not, because, as a rule, since after the strike, if a manufacturer takes out an employee, he goes and first he is asking him where he is working before that strike, and he is telling him where. Of course, he calls up the manufacturer on the telephone right away, and is asking him about his record, and if the manufacturer by whom he was employed before says he was a kicker or asked for better prices, and so on, he can not get a position.

Commissioner O'CONNELL. You think the employers, then, furnish each other with the records of the employees?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. As to their unionism?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. And their positiveness in demanding a better rate for their work?

Mr. AMDUR. Yes, sir. We have the figures to prove it.

Commissioner O'CONNELL. Do you think the manufacturers' association keeps any sort of record of the employees of the various firms?

Mr. AMDUR. I am not quite sure about having record of all employees, but they do keep a record of some of them, those who were more active and better union men, and so on.

Commissioner O'CONNELL. How was this strike brought about? How did you go about to try to bring about peace with employers, or an adjustment of your trouble? How were your grievances first presented?

Mr. AMDUR. Here is our agreement.

Commissioner O'CONNELL. Is that the same as Mr.—I forget his name—read this morning?

Mr. AMDUR. I guess so.

Commissioner O'CONNELL. The same agreement. How did you proceed to present that? Did you present it to each shop foreman, or how?

Mr. AMDUR. No, sir; in about the month of May our executive committee have made out this agreement with the demands. A meeting of all the members was called, and this was presented to them, whether they accept or they reject these demands, of if they have some to be amended, and this agreement was accepted at that meeting.

Commissioner O'CONNELL. Adopted by that meeting?

Mr. AMDUR. Adopted by that meeting; after that we called another meeting, and we have explained to our people that after they have adopted these demands we will have to vote whether they are willing to stand by these demands or not. In other words, if we will send out these demands to the manufacturers and they will not grant the demands, whether they will be willing to go out on strike to get these demands.

Commissioner O'CONNELL. Were the agreements mailed to the employers?

Mr. AMDUR. I will come to this.

Commissioner O'CONNELL. All right.

Mr. AMDUR. After this meeting we have announced a secret ballot, which all the members should vote, whether they are determined to get these demands or not; and 3,658 of our members have participated in that vote.

Commissioner O'CONNELL. Three thousand six hundred and fifty-eight?

Mr. AMDUR. Yes, sir; 3,000—something like over 3,000 have voted for a strike—that is, if the demands will not be granted.

Commissioner O'CONNELL. For the enforcement of the demand?

Mr. AMDUR. Yes, sir; something like 400 have voted against. Naturally, of course, we sent out this demand to the manufacturers after they struck. We have also sent out these demands—yes, after this vote has been taken we had another meeting, and have announced the result of the vote, and after the announcement of the result we have sent out a copy of this agreement with a circular letter to each and every manufacturer. If you want me to read that letter, I will read it for you.

Commissioner O'CONNELL. Is it a long one?

Mr. AMDUR. Not very.

Commissioner O'CONNELL. Well, just the substance of it.

Mr. AMDUR. The substance of it is that—

"Inclosed please find a circular letter containing the working conditions which the above union intends to carry into effect in the cloak and skirt industry in the city of Philadelphia and hope the same will form the basis of understanding between the cloak and skirt manufacturers and the union of this city for the coming fall season.

"It is needless to say that the unions are anxious to effect these changes with as little friction as possible and without loss or injury to the employers or employees or any dislocation in trade, yet at the same time the unions are determined at all hazards to employ all legitimate means for the purpose of effecting those proposed changes.

"In consideration of the concessions which we expect from you the union will assume the responsibility for the orderliness and good conduct of the members working in your shop and relieve you from any anxiety or apprehension or any stoppage of work in your factory after an understanding has been arrived at. This understanding will enable you to go quietly about your business without having the fear of any arbitrary action on the part of employees.

"In New York City, where the unions and—

Commissioner O'CONNELL (interrupting). Turn the letter over to the stenographer. We have got the drift of it.

Mr. AMDUR. "We are sending you this here agreement, and we are giving you about a few days' notice to consider it and reply to the union, whether you are willing to accept these demands or not."

(The document was marked "Amdur Exhibit 1, June 30, 1914.")
(Amdur Exhibit No. 1, copies of the "Working conditions" and agreement, etc., was submitted in printed form.)

Commissioner O'CONNELL. How many replies did you receive from them, favorable or unfavorable?

Mr. AMDUR. Favorable, about 75 replies.

Commissioner O'CONNELL. Unfavorable?

Mr. AMDUR. We have not received any. Those we have received replies from were favorable to settle with the unions.

Commissioner O'CONNELL. How many of the firms did you settle with?

Mr. AMDUR. We have settled with about 85.

Commissioner O'CONNELL. Out of approximately how many?

Mr. AMDUR. Approximately, we have on our list 155 firms.

Commissioner O'CONNELL. Those are the firms that are both inside and outside of the manufacturers' association?

Mr. AMDUR. Yes, sir; those are inside and outside of the association.

Commissioner O'CONNELL. Did you settle with any firms inside the manufacturers' association?

Mr. AMDUR. Yes, sir; one. With the vice president of the association, Mr. Bernstein.

Commissioner O'CONNELL. How many workmen does he employ?

Mr. AMDUR. About 75.

Commissioner O'CONNELL. About the average-sized employer?

Mr. AMDUR. One of the middle class of employers.

Commissioner O'CONNELL. As I understand it, this agreement was mailed to the various employers?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. And the committee mailed it, but it was not mailed to all?

Mr. AMDUR. On the 4th of July.

Commissioner O'CONNELL. Did you ask for any general conference or have any conference with the employers as a whole before the strike took place?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. Explain what that was.

Mr. AMDUR. We have had a conference, if I am not mistaken, on the 8th of July. We had a conference with five manufacturers present at that conference, and with a Mr. Rosenberg, president of the International Garment Makers' Union, who was also present. On the manufacturers' side was Mr. Bernstein, Mr. Krevis, his partner, Mr. Harris J. Cohen, Mr. Dittman, and Mr. Sacks, and Mr. M. Kremer, I think, about six. Mr. Harris J. Cohen was the chairman of that conference, and while the conference were opened, I have asked Mr. Harris J. Cohen whether those manufacturers are representing an association of manufacturers, or any other body, or whether they represent only themselves. The answer was that they do not represent anyone besides themselves. Those six come together and they want to go over with the representatives of the union whether they could—or, rather, to say they come together and want to go over with the representatives of the unions those demands that we have sent to them, and if the demands will be satisfactory to them, there may be a few others who will follow their action, but they do not represent anyone. This was the answer.

After conferring with them for about an hour we could not come together. About the home work, which the partner of Mr. Bernstein, Mr. Krevis, say that must go. Work home to the employees, they must give up work; we couldn't come together about the contracting system to be abolished; could not come together about the shop foremen, as Mr. Bernstein has said. But the main object is, we couldn't come together where there is one clause in regard to us, which reads that prices should be adjusted by a committee of the employees, together with the employers. On this particular point, which Mr. Bernstein, the president of the association have forgot to mention that, this was the main object of the workmen which they wanted; in other words, the collective bargaining, and we couldn't come together on that. Those were the principal demands.

Commissioner O'CONNELL. Prior to that meeting, was there an invitation sent out to the employers to attend that conference?

Mr. AMDUR. No, sir.

Commissioner O'CONNELL. How was the conference brought about?

Mr. AMDUR. I don't know how it was brought about. We have sent to each and every individual this contract, and we have invited him and told him in this circular—I did not read it to you—we told him that if he wishes to meet a representative of the union in order to come to an understanding about these demands, we will be too glad to send you up one and adjust this matter; but at that time there was no association of manufacturers, and in a certain morning I had a phone call from the designer of Mr. Sacks Bros., by the name of Martin, who told me that a conference will take place in Mr. Kelly's office.

When I came over there it was about 12 o'clock, and we have tried to talk over the matter and we found it was absolutely impossible to talk over matters there in the office, and they have decided to call another meeting for the coming Thursday, and on that Thursday, the official conference, as you may call it, took place.

Commissioner O'CONNELL. Were there any means looking toward arbitration of your trouble, or conciliation, which prior to the time of the strike occurred?

Mr. AMDUR. Well, no arbitration—no, sir; we did not propose no arbitration to the manufacturers prior to the strike, only we told them we were ready to confer with them and try to settle it as soon as possible.

Commissioner O'CONNELL. I think it was Mr. Kelly who said, anyhow it was one of the gentlemen before us, that there had been a complete lockout, because neither would concede to submit the question of the shop chairman to arbitration. Was that the position of your union?

Mr. AMDUR. Was what?

Commissioner O'CONNELL. Both of you refused to submit the question of the shop chairman, both standing and maintaining that you would not submit that question to arbitration?

Mr. AMDUR. No, sir; it was never mentioned, anything, neither from the manufacturers nor from us as to arbitration prior to the strike.

Commissioner O'CONNELL. Did you ever refuse to submit the question of whether you should have a shop foreman or not to arbitration?

Mr. AMDUR. Yes, sir; we have submitted the entire matter after the strike was called, and Commissioner Jackson came over here from Harrisburg, and he proposed, first, mediation, and we have accepted, but the manufacturers refused.

Commissioner O'CONNELL. Did you say to Commissioner Jackson, for instance, "We will submit everything in this agreement to arbitration except the question of shop foremen"?

Mr. AMDUR. No, sir.

Commissioner O'CONNELL. Cut that out?

Mr. AMDUR. No, sir; the manufacturers refused mediation. Then he proposed arbitration, which we have accepted, and the manufacturers flatly refused.

Commissioner O'CONNELL. What are the wages the people earned, generally, in the trade?

Mr. AMDUR. Well, I have a list here of our figures, which was taken during the time of the strike. We have here about 300 names from about 10 or 12 different shops, and if the commission wants, I may offer them these lists.

Commissioner O'CONNELL. You can file that with us, if you will.

Mr. AMDUR. Yes, sir.

(The document was marked "Amdur Exhibit No. 2."

See Amdur Exhibit No. 2 under "Exhibits.")

Commissioner O'CONNELL. But if you will take half a dozen of each, like the cutters and pressers, pick them out haphazard?

Mr. AMDUR. Here I have Gerald & Kelly's shop. He has stated that his people are making \$26 a week. Here we have it:

Harry Kravitz, nine years in the business, two years working for Mr. Kelly. The highest wages he ever made was \$35 a week; the lowest wages he received was \$1 a week; the average for the year makes \$14. His business was an operator.

Here is Dave Deveris, 11 years in the business; went to work for Mr. Kelly; the highest wages he ever made was \$27 per week; lowest, \$1; average, \$10 per week.

Commissioner O'CONNELL. What was he?

Mr. AMDUR. Man of five children.

Commissioner O'CONNELL. What was he, a presser?

Mr. AMDUR. Also an operator, tailor.

Here is Louis Soloff; six years in the business; five and a half years working for Mr. Kelly; the highest wages he ever made was \$35 per week; the lowest, 90 cents; average, per year, \$11.

Commissioner O'CONNELL. Was that for the year 1913 or 1912?

Mr. AMDUR. 1913.

Commissioner O'CONNELL. 1913?

Mr. AMDUR. Yes, sir.

Here is a man by the name of Herman Applebaum, seven years in the business; worked four years for Kelly; the highest wages he ever made was \$18, for two weeks; lowest wages, 70 cents; the average is \$5 per week.

Commissioner O'CONNELL. Go back to those men who made \$35 a week. How many weeks in the year did he make that?

Mr. AMDUR. How years in a week?

Commissioner O'CONNELL. No; weeks in a year did he make \$35?

Mr. AMDUR. It does not state how many weeks in a year he made \$35, but we took his book and counted up how much money he made during this year, and just how much was the highest wages, and what it was the lowest, and we come to this, and we find this here \$10 per week.

Commissioner O'CONNELL. Have you got any family—female labor in that list?

Mr. AMDUR. Yes, sir; no, sir; we haven't any female in that list, but we have in some other.

Here is Katie Keller, 2½ years in the business; 9 months worked for Mr. Kelly; highest wages she has ever made was \$12 per week; lowest, \$1.50; average, \$6.

Commissioner O'CONNELL. Six dollars?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. In nine months?

Mr. AMDUR. Yes, sir. No; for the year.

Commissioner O'CONNELL. For the year?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. Just turn that list over to the stenographer, please.

What is the average working time of the entire year? We know you have seasonal employment.

Mr. AMDUR. Yes.

Commissioner O'CONNELL. How many months in the year will your workmen really have work?

Mr. AMDUR. I would say seven months during the year.

Commissioner O'CONNELL. Seven months?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. What were you when at the trade; presser, did you say?

Mr. AMDUR. Skirt maker.

Commissioner O'CONNELL. Yes; now, seven and a half months, we will say eight months at the business in a year; how much money would you earn in a year? What would your annual earnings be? Did you ever figure it or keep track of it?

Mr. AMDUR. That is, my own?

Commissioner O'CONNELL. Yes; speaking of yourself.

Mr. AMDUR. Of course, that was something like seven or eight years ago when I worked at a machine. At that time—

Commissioner O'CONNELL. Were wages lower then than now?

Mr. AMDUR. Wages were higher then than now.

Commissioner O'CONNELL. Higher then than now?

Mr. AMDUR. Much higher. At that time, as I stated before, I made from \$22 to \$25 per week during a season, and when, that is, made \$15 per week during the dull season, because I used to work on samples, and it averaged me about \$19 or \$20 per week.

Commissioner O'CONNELL. If yours is not a fair case of the general average—

Mr. AMDUR. No, sir.

Commissioner O'CONNELL. Take a man of the general average; what would be the general average earnings?

Mr. AMDUR. I would say \$10 to \$12 per week, the highest.

Commissioner O'CONNELL. Average for the year?

Mr. AMDUR. Average the year.
Commissioner O'CONNELL. Well, would you say the woman in the trade—what would you say she would average?

Mr. AMDUR. She would make \$6 or \$7, the highest.

Commissioner O'CONNELL. Are there any children at all employed around 14 or 15?

Mr. AMDUR. Yes, sir; there are.

Commissioner O'CONNELL. Girls or boys?

Mr. AMDUR. Girls; mostly girls 14, 15, 16.

Commissioner O'CONNELL. What do they earn?

Mr. AMDUR. They earn all kinds of wages—\$2, \$3, \$5, and so on.

Commissioner O'CONNELL. You spoke of home work. Is there home work being done in Philadelphia?

Mr. AMDUR. Well, as for instance, with the firm of Mr. Bernstein's people, during a time of the season they are working from about, as he stated himself—God knows from what time in the morning, because the place is always open. They may come in at 5 o'clock, 6 o'clock.

Commissioner O'CONNELL. I don't mean in the shop. I mean do they take work home to do?

Mr. AMDUR. They work till about 9 o'clock in the evening and then take some work to be done at home. Saturday they work till 6, and in the evening, and then they work at home on Sunday; it means they are working from 5 and 6 in the evening, and then Saturday and Sunday the whole day.

Commissioner O'CONNELL. It is the general custom that they do take some work home Saturday for Sunday?

Mr. AMDUR. Yes, sir; with Mr. Bernstein's shop especially.

Commissioner O'CONNELL. Mr. Bernstein's?

Mr. AMDUR. Yes; the president of the association.

Commissioner O'CONNELL. Is there ever any investigation made as to the condition under which this clothing is made in the homes, as to the conditions of the homes, whether there is disease there contagious in character, whether they are living in large numbers in a very small space, in a few rooms, and as to the sanitary conditions?

Mr. AMDUR. There was not any official investigation made by the State, but, as far as we know, we have investigated it.

Commissioner O'CONNELL. What did you find?

Mr. AMDUR. We found that our tailors, operators, and finishers, they are living mostly in two or three rooms.

Commissioner O'CONNELL. And in what numbers?

Mr. AMDUR. In numbers of 6, 8, and sometimes 10 people in those rooms.

Commissioner O'CONNELL. In two or three rooms?

Mr. AMDUR. Two or three rooms; this is the average. Of course, in a few exceptions, it may be they live in little houses for themselves, but in the majority of the cases they live in two or three rooms, and in most of the cases also they had a lodger—what we call a boarder.

Commissioner O'CONNELL. A what?

Mr. AMDUR. A boarder.

Commissioner O'CONNELL. In addition to that 10 or 11 children?

Mr. AMDUR. To their 10 or 11 family, and, of course, if they have one, so that one room is a bedroom, one room is a kitchen, and also the working shop, where they are doing the work.

Commissioner O'CONNELL. Where do those 8 or 10 or 11 or 12 people sleep? Or do they take turns in sleeping?

Mr. AMDUR. Some on the floor, some in the bed; in many instances I have seen the door—came in the door and seen the door standing by the wall, and I have asked them why is that, and they told me at night they are putting a door on two chairs and they are making a bed on it; they are sleeping on it.

Commissioner O'CONNELL. Is there a possibility of their taking the clothing they take home to sew upon for bedding?

Mr. AMDUR. Probably they do.

Commissioner O'CONNELL. Or part of it?

Mr. AMDUR. Probably they do.

Commissioner O'CONNELL. Is there any statutory regulation as to the hours the factories are open or closed—start in the morning, say, at 8 o'clock and quit at 5 or 6?

Mr. ANDREW. Yes, sir; during the dull season.

Commissioner O'CONNELL. During the dull season?

Mr. AMDUR. From half past 7 and 6.

Commissioner O'CONNELL. How about the busy season?

Mr. AMDUR. There is no time limit.

Commissioner O'CONNELL. They go early and leave late?

Mr. AMDUR. Go in whenever they want to. Some factories at night, after 6 o'clock, as it happened in the case of Sacks Bros., the doors were locked; the people wanted to go home; it was the last day of the week. Of course, the manufacturer locked the door and they were not allowed to go out, and the one who made a fight to go out would naturally be discharged.

Commissioner O'CONNELL. Mr. Kelly told us about some conditions of contracting in the shop in which the contractors hired the employees who worked under him.

Mr. AMDUR. Yes.

Commissioner O'CONNELL. What is there in connection with that condition? What is the condition surrounding that?

Mr. AMDUR. The conditions about this contract system is this: Mr. Kelly, as a manufacturer, hasn't got much time—

Commissioner O'CONNELL (interrupting). We are not criticizing Mr. Kelly per se here.

Mr. AMDUR. You mentioned Mr. Kelly, and I don't mean exactly Mr. Kelly. Commissioner O'CONNELL. Yes.

Mr. AMDUR. But a manufacturer has more business to look after and can not look after the working people. He has something else to do. He can not get the cheapest labor on account that he can not devote all his time to it, so he gets a contractor, which he has only one business, and this is to make the work; and this man has enough time to get the cheapest labor it is possible to get in the city. He is not too lazy sometimes to go over to the immigration bureau and see whether tailors are coming over, and he gets them, and sometimes he gets a few dollars by them yet in order to take them into the shop.

Now, this is the idea of the contractor inside the factory. He is getting the cheapest labor where a manufacturer would not be able and possibly couldn't get it on account he can not devote his time as much as this contractor can do it, and naturally, of course, the contractor makes him to work also cheaper, as he would have to pay to an experienced tailor, etc.

Commissioner O'CONNELL. What does the contractor pay his help, then, if he hires it under those conditions—goes to the immigration bureau and brings some tailors up who have to be turned into your method?

Mr. AMDUR. Yes, sir. In many cases he gets \$10 as a premium paid for learning him the trade. Of course, with the tailors, if he is a good tailor from the old country, he is not paying to the contractor anything, but he gets \$1, \$2, or \$3 a week, but as to the presser—

Commissioner O'CONNELL (interrupting). As a sort of a learner, until he becomes familiar?

Mr. AMDUR. Yes, sir.

Commissioner LENNON. Then how long does he have to work at the business before he earns \$10 or \$12 or \$14 a week?

Mr. AMDUR. Depends upon how soon he becomes a little more or less Americanized, and he understands that he is not getting paid what he ought to; sometimes starvation or hunger compels him to leave this place and go and look for something else, and he finds something better.

Commissioner O'CONNELL. Do you know something of the protocol conditions of the trade in New York?

Mr. AMDUR. Yes, sir.

Commissioner O'CONNELL. You understand the protocol provides that there shall be a shop committee of the men and a representative of the employers, and that the adjustment of grievances shall be passed to them and up to a higher authority, and so on. Such board there has the final say in the matter.

Mr. AMDUR. Board of arbitration.

Commissioner O'CONNELL. Yes; the protocol provides for what is called the preferential shop.

Mr. AMDUR. Preferential union shop, yes, sir.

Commissioner O'CONNELL. In other words, that means that the union men are given the preference?

Mr. AMDUR. Preference.

Commissioner O'CONNELL. But that when times are hard and the laying-off of men comes, the nonunion men are laid off first, and that in the employment of people the union people shall be first employed, etc.?

- Mr. AMDUR. Yes.
- Commissioner O'CONNELL. They get the preference?
- Mr. AMDUR. Yes.
- Commissioner O'CONNELL. Would your organization in Philadelphia look favorably upon the protocol conditions being put into effect in Philadelphia?
- Mr. AMDUR. They certainly do.
- Commissioner O'CONNELL. The international organization to which you are attached of course approves of that?
- Mr. AMDUR. Yes.
- Commissioner O'CONNELL. Because they are associated with it in New York?
- Mr. AMDUR. Yes.
- Commissioner O'CONNELL. Have the conditions since your strike here improved, or become worse than they were before the strike?
- Mr. AMDUR. Worse by 50 per cent.
- Commissioner O'CONNELL. By 50 per cent worse?
- Mr. AMDUR. Yes, sir.
- Commissioner O'CONNELL. They must have been severely bad prior to the strike if what you say is true, and I have no reason for doubting your sincerity. You mean 50 per cent worse than what it was?
- Mr. AMDUR. Yes, sir.
- Commissioner O'CONNELL. In what direction?
- Mr. AMDUR. As far as the prices.
- Commissioner O'CONNELL. Wages?
- Mr. AMDUR. Wages, and as far as the treatment in taking up and hiring help.
- Commissioner O'CONNELL. Have the prices been reduced since the strike occurred?
- Mr. AMDUR. Fifty per cent.
- Commissioner O'CONNELL. Will you cite some cases; for instance, if a man was earning \$20 a week prior to the strike could he earn only \$10 now?
- Mr. AMDUR. Here is a case which I may show you. A man by the name of B. CIPHER, a finisher, working for Sporken & Sons, lives at 931 Fairmont Avenue, is a man with four children. He didn't work since the strike more than six weeks, until now. For the six weeks he worked, he made one week \$3.75; one week, \$4.70; one week, \$4.65; one week, \$5; one week \$2.25.
- Commissioner O'CONNELL. Well, just now is it the dull season, or some exceptional reason for that? Is the season normal now; it is not normal, is it?
- Mr. AMDUR. The season is not normal now; but this is his earnings.
- Commissioner O'CONNELL. Well, that earnings—do you know that he worked all the time for that or only part of the time?
- Mr. AMDUR. He worked all of the time.
- Commissioner O'CONNELL. How long, do you imagine—10 or 12 hours a day?
- Mr. AMDUR. I mentioned that he did not work for the \$2.25, but I am quite sure that he worked for the \$5 a week. Well, now, it happened at last, a few days ago, a manufacturer came over to that man and told him that, being that he got a big order and now he is getting 20 cents for finishing per garment, he wants to take off a nickel off that garment.
- Commissioner O'CONNELL. Has there been a nickel's worth of change in it required?
- Mr. AMDUR. No change at all.
- Commissioner O'CONNELL. The garments change very rapidly, don't they?
- Mr. AMDUR. The garments were not changed—the very same garments—but he wants to take off a nickel. That man naturally refused to take the work, and he went home. The rest of the employees—all the finishers—also refused, and they have stopped for a couple of days, and, being hungry, they came back to the shop, and they have sat down to the work for a nickel less. This here man also came to the shop and wanted to take the work, and sat down to work; but the boss has told him he can not work in this place any more; and Saturday, when he came for his pay—here is his pay envelope and there is his book for the last week, where he made \$2.25 in the book, where it is only \$2.05 on the pay envelope.
- He said, "Why do you give me 20 cents less?" As the manufacturer has told him that a couple of weeks ago he has damaged a piece of lining, "and therefore I am taking off 20 cents from your envelope."
- Here is the envelope and the book.
- (Marked "Amdur Exhibits 3 and 4 of June 30, 1914.")

The envelope and book referred to were submitted in printed form.)

Mr. AMDUR. This is only one case out of hundreds and hundreds.

Commissioner O'CONNELL. Well, do these cases happen very frequently now?

Mr. AMDUR. Oh, yes; very frequently.

Commissioner O'CONNELL. That men are only making from \$2 to \$5 a week?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. With families?

Mr. AMDUR. Yes; and they are all glad to get it.

Commissioner O'CONNELL. Families of four and five children?

Mr. AMDUR. With families of four and five children.

Commissioner O'CONNELL. Well, how are they living?

Mr. AMDUR. Well, the majority of them have the furniture in storage.

Commissioner O'CONNELL. In storage?

Mr. AMDUR. In storage house, on account that they can not keep on renting the rooms, as I said before—two or three rooms—they can not do it now. We have hundreds and hundreds of cases where our people have their furniture in storage, and they also bind it there. They take a couple of dollars on it in order to have a few dollars to live on. They break up, in other words, their homes, and so on. There are only a few instances in this trade out of the 6,500 people which are working and making a living. I don't think you will find 10 per cent are. Ninety per cent are living on starvation wages.

Commissioner O'CONNELL. Well, now, as the business agent and a man who is around among these people every day, knowing their working conditions, and knowing their home lives, what would you say a worker in the ladies' garment trades in Philadelphia, say, in the earnings per week, the average of them would be?

Mr. AMDUR. Now?

Commissioner O'CONNELL. Yes.

Mr. AMDUR. I can not say because I can not make out any figure. There isn't such a thing.

Commissioner O'CONNELL. Well, you say there are large numbers of them that are earning money like this you have just stated to us, from \$2 to \$5 per week?

Mr. AMDUR. Yes.

Commissioner O'CONNELL. Would you say the average clothing worker in your line of industry in Philadelphia was earning \$6 a week, or \$7 a week, or \$8 a week?

Mr. AMDUR. After the strike?

Commissioner O'CONNELL. Right now.

Mr. AMDUR. Right now they are not averaging \$3 per week.

Commissioner O'CONNELL. The entire trade?

Mr. AMDUR. The entire trade.

Commissioner O'CONNELL. Is the industry fairly normal now, or exceptionally slack?

Mr. AMDUR. No; exceptionally slack.

Commissioner O'CONNELL. Do these people go into other lines of industry; do they go and work at something else during the slack times?

Mr. AMDUR. Very few.

Commissioner O'CONNELL. They don't work at anything else at all?

Mr. AMDUR. No.

Acting Chairman WEINSTOCK. When do your seasons here begin and end?

Mr. AMDUR. The season begins in the month of August and ends in the month of November.

Acting Chairman WEINSTOCK. August?

Mr. AMDUR. That is the fall season.

Acting Chairman WEINSTOCK. August to November?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. And then the spring season?

Mr. AMDUR. The spring season begins in the month of February and ends in the month of April.

Acting Chairman WEINSTOCK. I see. Then this particular period is between the seasons?

Mr. AMDUR. This is between the seasons, yes.

Acting Chairman WEINSTOCK. When the work is at a minimum?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. And it has always been that way, I take it. This is not an exceptional season?

Mr. AMDUR. Well, it has always been that way. Sometimes the season is a little longer, and sometimes a little shorter, but this is about the same thing.

Acting Chairman WEINSTOCK. Well, now, in conversation with business men generally, they tell me that this spring season has been a very disappointing season; the worst they have had in years. Does that in any way account for the fact that this dull period is leaner than the dull periods of the past?

Mr. AMDUR. No, sir; I don't think so, to my mind.

Acting Chairman WEINSTOCK. You don't think this dull season was any duller than preceding dull seasons?

Mr. AMDUR. Not to my mind, it is not.

Acting Chairman WEINSTOCK. You think it is a normally dull season?

Mr. AMDUR. It is a normally dull season.

Acting Chairman WEINSTOCK. What are the average earnings of the workers during the dull seasons of the year?

Mr. AMDUR. The dull seasons?

Acting Chairman WEINSTOCK. The average earnings?

Mr. AMDUR. Yes. Well, three to four dollars per week is the highest.

Acting Chairman WEINSTOCK. Then this is not an exceptional situation?

Mr. AMDUR. Not an exceptional situation.

Acting Chairman WEINSTOCK. Then it would not be fair to take the earnings as you have just shown there for the present time and let that make, in our mind, a criterion for the year's earnings?

Mr. AMDUR. No; it would not be fair, because I did not take it in here to show the wages; I took it for a typical case on account the manufacturer, after a man made \$2 per week, he took off 20 cents for damaging a lining, in this case, he said.

Acting Chairman WEINSTOCK. I see. You heard the testimony of Mr. Kelly, did you not?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. You heard him testify that, in his opinion, the workers before the strike had no grievances, and that the strike was due, not to any grievance on the part of the workers, but due to outside agitators who came here and stirred things up. What is your answer to that statement?

Mr. AMDUR. It was absolutely not so. There was no outsiders here in Philadelphia prior to the strike, just with the exception that sometimes, you know, the general president or the general secretary have business and comes over here for a few hours, and not more; they have never been even for a day to Philadelphia to see how things are running, and go back and never sees even a majority of the people, only the officers, and so on.

Acting Chairman WEINSTOCK. Well, then, your statement then would lead one to believe that Mr. Kelly was in error when he made that statement?

Mr. AMDUR. Yes; absolutely.

Acting Chairman WEINSTOCK. Possibly Mr. Kelly may have meant that there were people in Philadelphia who were not in the trade active or played the part of agitators.

Mr. AMDUR. There isn't anyone; there wasn't anyone during the time before the strike had part in that strike who was not a member of our union.

Acting Chairman WEINSTOCK. Are we to understand, then, Mr. Amdur, that the initiative that led to the strike came from within the ranks of the workers?

Mr. AMDUR. Yes, sir.

Acting Chairman WEINSTOCK. And not from without?

Mr. AMDUR. Not from without.

Acting Chairman WEINSTOCK. You also probably heard both Mr. Kelly and Mr. Bernstein testify that, in their opinion, the men were misled?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. They had bad leaders who, for selfish purposes, encouraged the men to strike?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. Since their jobs as officials depended on turmoil instead of upon peace; depended upon war rather than peace. What is your answer to that?

Mr. AMDUR. That is not so; it is untrue.

Acting Chairman WEINSTOCK. What are the facts, as you saw them?

Mr. AMDUR. The facts, as I see them, that the leader, and I may say I was the only one, at least a paid officer of the union, we have done—I have done all in my power to avert a strike before it was called, and I have done more than it

was in my power to settle it, either by arbitration or by any legitimate way, at the time the strike was declared.

Acting Chairman WEINSTOCK. Then you would say, Mr. Amdur, that Mr. Bernstein and Mr. Kelly were mistaken in making that statement?

Mr. AMDUR. I would rather say that they have absolutely tried to throw a bad light upon the officers of the union purposely.

Acting Chairman WEINSTOCK. You also heard those gentlemen make the statement that in their opinion the workers before the strike had no grievances. What is your answer to that?

Mr. AMDUR. Well, the answer to this is that I understand the man who has no grievance will never vote to go on strike, and the fact of the matter is that maybe there were a few hundred people which were better treated, were favorites in the shop, and they did vote against the strike, but the majority voted for the strike. And this is enough proof that there were some grievances which the people wanted to be adjusted.

And another thing, to my mind, a man who has no grievance will not stay out 26 weeks in a strike and live in starvation. There isn't such a thing, such a powerful man, to compel him to stay on strike, and starve with his wife and children.

Acting Chairman WEINSTOCK. I wish you would explain for the information of the commission, Mr. Amdur, what your union stands for. First, does it stand for a square deal?

Mr. AMDUR. Absolutely; on both sides.

Acting Chairman WEINSTOCK. It believes in giving the employer a square deal?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. Does it stand for honesty of its officials?

Mr. AMDUR. Absolutely. I will bring you an instance.

Acting Chairman WEINSTOCK. What would your union do if it found it had a dishonest official?

Mr. AMDUR. Why, positively drive him out of the organization.

Acting Chairman WEINSTOCK. Does it stand for peace?

Mr. AMDUR. Always.

Acting Chairman WEINSTOCK. Does it stand for law and order?

Mr. AMDUR. Always; those was our orders to the strikers during the time of the strike, always.

Acting Chairman WEINSTOCK. Is it opposed to violence?

Mr. AMDUR. Absolutely.

Acting Chairman WEINSTOCK. You heard the testimony given this morning that during the strike there were two murders committed, and there were four near murders committed, and there were 455 assaults committed?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. Is that correct, substantially?

Mr. AMDUR. It is not correct.

Acting Chairman WEINSTOCK. What was the facts?

Mr. AMDUR. There was one murder committed, and this was done by a strike breaker who had shot and killed instantly on the spot one of our strikers, a man by the name of Abe Kopper. This was the one murder. Assaults, there were assaults, but they came from the side of the manufacturers, and naturally, of course, our people had defended themselves. For instance, it happened one day that the manufacturers had sent a gang over, about 10 or 12 hired thugs, to the hall where the strikers were, and they came over there and made a riot, and naturally there was a couple of hundred men, these halls were filled up to the roof, and some of our strikers were arrested because these fellows were beaten up.

Acting Chairman WEINSTOCK. Are we to understand that there wasn't one single case where a member of the union took an offensive part and committed violence?

Mr. AMDUR. I will not say that; there were.

Acting Chairman WEINSTOCK. There were such cases?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. Where the members of the union of their own volition did that?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. What did the union do with those men?

Mr. AMDUR. Well, as a rule, they have always been after they were out of our jurisdiction. For instance, at the time they were in the halls and at the

time they were on picket duty they were under our care, and there was no violence committed at that time. After they went to their homes, maybe they have met a strike breaker there and maybe it came up an argument, and came about an assault, but the union were not responsible for those, and can never be responsible.

Acting Chairman WEINSTOCK. If it is true, Mr. Amdur, that the union stands for law and order and is opposed to violence in strikes, and is sincere in that statement—

Mr. AMDUR (interrupting). Absolutely.

Acting Chairman WEINSTOCK (continuing). Is it not the duty of the union to expel its members who commit violence and to aid the authorities in bringing them to justice? How else can they prove their sincerity in that statement?

Mr. AMDUR. Why, in many instances we have expelled our members for violence, and for not giving the square deal to the manufacturer or for not being honest enough in dealings with the manufacturers.

Acting Chairman WEINSTOCK. Can you give this commission the names and dates and places?

Mr. AMDUR. Oh, yes. For instance, in the same place where Mr. Kelly has mentioned the fact that two of his workmen, members of his union, have tried to make a deal with him, and the men were called out the same evening before the executive committee and were fined \$25 each, which they had to pay immediately, and they have refused to pay, and they were expelled from the organization. The names are Mr. Singer and—I have forgotten the other man's name—Evens, I think.

Acting Chairman WEINSTOCK. That was for attempted bribery?

Mr. AMDUR. Yes, sir; absolutely.

Acting Chairman WEINSTOCK. Can you give the commission names and dates and places where men were expelled from the union for doing acts of violence?

Mr. AMDUR. No, sir; because there wasn't proven such a thing yet. We were waiting—that if a man commits violence he should be punished by the court, and if he will be punished by the court, then we will see what we can do with him—but it was not proven such a thing yet; out of 688 arrests that we have had during the time of the strike, and out of between 300 and 400 court cases there was only one man convicted.

Acting Chairman WEINSTOCK. Was he a union man?

Mr. AMDUR. Yes; two men.

Acting Chairman WEINSTOCK. Two union men were convicted?

Mr. AMDUR. Yes, sir.

Acting Chairman WEINSTOCK. What did the union do about it?

Mr. AMDUR. Why, we have not done anything, because we believed that the judge was a little too partial in his charges to the jury, and we believed we would appeal that case and, of course, if they will be found guilty again, then, of course, they will naturally be expelled from the union. That is the only case we have.

Acting Chairman WEINSTOCK. This statement has come to me, Mr. Amdur, from unionists. I would like to know in how far your union sympathizes in this statement that was made to me by a union man, not here, but in another place.

In speaking of the question of violence in labor troubles, the question came up about the unions making good their claim that they are opposed to violence, that they stand for law and order, and being questioned why the unions, under those circumstances, did not expel members who had committed violence, the answer was: They committed violence in the interests of labor, and therefore, right or wrong, we feel we must stand by them.

Is that the way your union feels about it?

Mr. AMDUR. Not at all; we claim that violence can not be committed by any interest, not for labor and not for capital, of course.

Acting Chairman WEINSTOCK. You have been a student of these labor problems, I take it?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. Are you familiar with the prevailing conditions, industrial conditions, in the country as a student?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. What, in your judgment, is the best way to minimize industrial war and to bring about a higher degree of industrial peace? What is your solution for it?

Mr. AMDUR. My solution is, as I would say, the fear of a strike; not the strike, but the fear of a strike, would bring about more peace in the relationship between capital and labor; and in order to obtain the fear of a strike you must have better labor laws; we must see that the interference of the police should not be so much in favor of the manufacturers, because the police guards the manufacturers always and the members of the unions always have to fear the police, and this encourages the manufacturers to go out on strike with people.

Acting Chairman WEINSTOCK. Right on that point, before you go any further, what have you or I to fear from the police so long as we obey the laws?

Mr. AMDUR. Oh, yes; you may be a good, law-abiding citizen, and have a split head for being a striker.

Acting Chairman WEINSTOCK. Yes; but if a police should go beyond his limits and use violence against inoffensive, law-abiding citizens, his whole position is in jeopardy.

Mr. AMDUR. That is not always the case. Sometimes he may get a reprimand for it, yes.

Acting Chairman WEINSTOCK. Proceed with your statement.

Mr. AMDUR. This one thing, that so many injuries should not be given to the organized labor unions, which they give cause to the manufacturer to strike, and the main thing I would suggest, that an agreement made between the employer with a group of employees, or with an organization of employees, it should become a law that they should not be able to break this agreement just as much as they can not break any other agreement, and, to my mind, this would avoid a whole lot of trouble and strikes.

Acting Chairman WEINSTOCK. In other words, you mean organization on both sides, and trade agreements?

Mr. AMDUR. When you come to an agreement and reach a certain agreement, this shall become law, that no party can break this agreement.

Acting Chairman WEINSTOCK. Do you know of any instances, Mr. Amdur, where the employers have broken agreements in Philadelphia?

Mr. AMDUR. Oh, yes; here I have an agreement signed by Mr. Kelly, and after four weeks he has signed this agreement he has broken it and declared an open shop and sent all the people out. And, let me tell you the reason why, Mr. Commissioner. It is not because he could not agree at that time with his people. I know why. I know it for a fact. I have the facts with me. I have met, a week later I have met Mr. Greenwood, he is a partner in the firm of Kelly, he is the designer, and he is also a partner in the business, and I asked Mr. Greenwood: "How is it you have locked your people out? Why, I and you know that we have always got along peacefully and nicely with your people. We have the best set of people a manufacturer can have, and can ever get, and you were the first man to settle our strike. We never had any grievances against the union." And Mr. Greenwood has answered me: "Why, I can not talk, Max; I must be quiet, but we were compelled to do it. And understand what that means." This is the very same words.

Acting Chairman WEINSTOCK. Well, do you know of any other instance where employers broke their agreements?

Mr. AMDUR. Oh, yes.

Acting Chairman WEINSTOCK. Can you name them?

Mr. AMDUR. I will give you their names: Progress Cloak & Suit Co., Mr. Kepner, Mr. Frank, and Mr. Yeggerman, and Boostein, Mr. Feidhelm, and Leiberwitz, and a few others.

Acting Chairman WEINSTOCK. Did those concerns have written agreements with the union?

Mr. AMDUR. They had written agreements with the union.

Acting Chairman WEINSTOCK. And your statement is that they deliberately violated them?

Mr. AMDUR. They deliberately violated them, on account, of course, they were compelled. I know they were compelled. The manufacturers themselves were on strike. They compelled them to do it, because they have stopped their orders and they have stopped their credit, and they have—it meant that they either had to give up their business and get ruined or to keep on the trade agreements with the union.

Acting Chairman WEINSTOCK. Do you know of any instance where the workers broke their agreement?

Mr. AMDUR. No, not so far as I know, at least, not in my trade, because I have absolutely stuck to what I have agreed to.

THE WOMEN'S GARMENT INDUSTRY OF PHILADELPHIA. 3149

Acting Chairman WEINSTOCK. Then, from your statement, the contract breakers were altogether on the employers' side?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. And the workers have observed faithfully their agreements?

Mr. AMDUR. Well, I would not say that, as a rule, for the entire—

Acting Chairman WEINSTOCK (interrupting). Speaking only in your own territory.

Mr. AMDUR. For our own territory, yes.

Acting Chairman WEINSTOCK. You just said a minute ago that among the remedies that you would put into operation to tend toward a greater degree of industrial peace you would have the police keep their hands off in labor troubles and you would wipe out labor injunctions?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. Well, then, what restraining influence would you have on the unions? How would you protect the employer against your breaking agreements?

Mr. AMDUR. Well, I will say that law-breaking unions—the State or the Government should take occasion—

Acting Chairman WEINSTOCK (interrupting). But you say the police should keep their hands off?

Mr. AMDUR. I don't mean that the policemen should not look into the business of the union at all. What I mean is, for instance, there were, at the time of the strike, there were hundreds of men going around with revolvers in their pockets, working in the shops, strike breakers—guards were going around with guns in their pockets and never anyone was arrested. And this is what I say—the police have protected them; and in many instances we went to the police and explained and told them, "Here is a man working in a shop and he has got a gun in his pocket," and I am quite sure if that would be the case with a striker he would get right a hold of him and search his pockets and take him over to custody, where they have absolutely refused to do it in the case of a strike breaker. I don't mean the absolute uninterference with the police, but I mean the partial interference.

Acting Chairman WEINSTOCK. The partial interference?

Mr. AMDUR. Yes; the partial interference, not impartial.

Acting Chairman WEINSTOCK. One-sided interference?

Mr. AMDUR. Yes; one-sided interference.

Acting Chairman WEINSTOCK. Summing up, then, I take it that your remedy for industrial war is mutual organization on both sides and mutual recognition on both sides; trade agreements with an arbitration provision, I presume?

Mr. AMDUR. Yes.

Acting Chairman WEINSTOCK. So that any disputes might be settled without cessation of work?

Mr. AMDUR. If it could be settled by mediation, all right; conciliation, all right; if not, it should go to arbitration.

Acting Chairman WEINSTOCK. Do you know any reason why that will not work out in your industry here?

Mr. AMDUR. I do not.

Acting Chairman WEINSTOCK. If carried out in good faith by both sides?

Mr. AMDUR. I do not see any reason why it should not.

Acting Chairman WEINSTOCK. Have you anything further to offer?

Mr. AMDUR. Well, I might say a few more words, and that is this, as to illustrate that whatever I have stated here is correct. Mr. Bernstein has said, or Mr. Kelly, that everything is peaceful and quiet and harmonious, and no grievances on the part of the workers, and everything is nice and smooth, and that shows that the people are treated nice and good, and so on. I might say to this commission that I could show that within a time of 24 hours, on one notice on the part of the union, the 6,000 people in this trade would go out on a general strike again, and strike more seriously and more bitterly than they did in the strike that they had before.

Acting Chairman WEINSTOCK. Order in the room.

Mr. AMDUR. And that shows, if they can have a strike for 26 weeks, and the men are ready to go out on strike again, on strike, that shows how the conditions are.

Acting Chairman WEINSTOCK. You mean that the paper is here, and the shavings are here, and the fuel is here, and all it is necessary to do is to touch the match, is that it?

Mr. AMDUR. That is it, all because of the bad conditions there is in the trade.

Acting Chairman WEINSTOCK. Thank you very much.

Mr. BUSIEK. Will Miss Stein take the stand?

TESTIMONY OF MISS BECKY STEIN.

Mr. BUSIEK. State your name in full, please.

Miss STEIN. Becky Stein.

Mr. BUSIEK. What is your occupation?

Miss STEIN. Finisher; garment worker.

Mr. BUSIEK. How long have you worked at that trade?

Miss STEIN. Seven years.

Mr. BUSIEK. Here in Philadelphia?

Miss STEIN. In Philadelphia.

Mr. BUSIEK. Is that a position which is filled by ladies, generally?

Miss STEIN. No; we have men; very few.

Mr. BUSIEK. Very few men?

Miss STEIN. Yes; but the majority are ladies.

Mr. BUSIEK. About how many of them are working at that in Philadelphia?

Miss STEIN. About fourteen or fifteen hundred.

Mr. BUSIEK. About fourteen or fifteen hundred?

Miss STEIN. Yes.

Mr. BUSIEK. Ladies?

Miss STEIN. No; that would be altogether.

Mr. BUSIEK. Well, how many of those workers are women workers?

Miss STEIN. Women, about, it would be about 1,300.

Mr. BUSIEK. About 1,300?

Miss STEIN. Yes.

Mr. BUSIEK. What are the hours of the finishers? Do they work on piece-work?

Miss STEIN. Piecework is the majority.

Mr. BUSIEK. And what are the shop hours of these finishers' work?

Miss STEIN. No limit in the season; no limit to them.

Mr. BUSIEK. No limit to them during the season?

Miss STEIN. No.

Mr. BUSIEK. Do you ever take work home?

Miss STEIN. I personally did not, but a good many do.

Mr. BUSIEK. Is that all handwork or is it machine work?

Miss STEIN. Handwork.

Mr. BUSIEK. Handwork?

Miss STEIN. Yes.

Mr. BUSIEK. You have been working for eight years, you say?

Miss STEIN. Seven.

Mr. BUSIEK. You were familiar with the prices paid for this class of work eight years ago and are familiar with the prices paid now?

Miss STEIN. Yes.

Mr. BUSIEK. From your personal experience what comparison can you draw between those prices?

Miss STEIN. Very low now.

Mr. BUSIEK. Can you tell about what proportion—by one-half or one-third or one-fourth or one-fifth or one-sixth lower?

Miss STEIN. I would not have to go back seven years, only about two years, about a year before the strike. The garment that used to pay 50 cents pays now 25 and 30 cents at the highest.

Mr. BUSIEK. Is that a condition in all the shops?

Miss STEIN. The majority of the shops with a few exceptions.

Mr. BUSIEK. Do the manufacturers generally cut the price on garments in slack seasons?

Miss STEIN. Yes; that was a rule.

Mr. BUSIEK. They cut the prices in slack seasons as a rule?

Miss STEIN. Yes.

Mr. BUSIEK. Well, then, is this rule any different in regard to cutting than any other slack season has been in regard to cutting?

Miss STEIN. Well, it is different.

Mr. BUSIEK. How much money can you earn by working steadily?

Miss STEIN. Steadily?

Mr. BUSICK. Now.

Miss STEIN. Well, there isn't such a thing in the women's garment industry as working steadily.

Mr. BUSICK. Well, suppose you had a whole week's work, how much could you make?

Miss STEIN. Well, to compare with myself, as I should say that there are very few like I am. I am exceptionally good and a very good worker and a fine worker, and I should work without overtime in the season, in the busy season, I have never been able to make more than \$17 or \$18, and an excellent worker and the people who know me will state the same.

Mr. BUSICK. Now, you are an expert worker and in busy seasons you can make \$17 or \$18 at the prevailing rate?

Miss STEIN. No.

Mr. BUSICK. Now, give me that statement, then, again. Now, you are an expert worker?

Miss STEIN. Yes, sir.

Mr. BUSICK. How much can you make in the busy season?

Miss STEIN. In regular hours?

Mr. BUSICK. Yes.

Miss STEIN. Make sometimes \$16 or \$17.

Mr. BUSICK. What do you call regular hours?

Miss STEIN. From 8 to 6.

Mr. BUSICK. That is 10 hours?

Miss STEIN. And Saturday until 1.

Mr. BUSICK. That is about a 9 $\frac{1}{2}$ -hour day. How long is the busy season?

Miss STEIN. As it was stated here it starts in August—that is, the fall season—and ends in November.

Mr. BUSICK. And what is the spring season?

Miss STEIN. The spring season starts in February and ends in April—beginning of April.

Mr. BUSICK. So that makes about seven months' work a year, or eight months, according to your—

Miss STEIN (interrupting). Seven. Even during that time you can not call it a regular season—all that seven or eight months. After the first orders we have a few weeks until the second orders come—some kind of a vacation; you can't call it slack, and it is not called busy.

Mr. BUSICK. Do you ever know from one week to the next whether or not you are going to have work the next week, or from one month to the next, whether you are going to have work the next?

Miss STEIN. Oh, no; we know as a general rule that the season is sometimes a week more and sometimes a week less, but sometimes, if it is a busy season, if they get more orders, we have more work; and if not, then we are to take it as it comes. We can never tell. We can never be assured that the next week we will have the same pay. Never be assured of that.

Mr. BUSICK. And you are one of the highest-priced finishers?

Miss STEIN. Yes, sir.

Mr. BUSICK. Now, Miss Stein, let's take a year—the year preceding the strike. Have you ever figured out how much money you made for that entire year?

Miss STEIN. Well, I did not. We finishers work under a different system entirely, which I would like the commission to know that.

Mr. BUSICK. Just explain that.

Miss STEIN. The finishers used to work, prior to the strike—that is, before the strike, from the tailors—from the operators. We were never entitled to the price committee's rates, they said, with the exception in the union shop.

Mr. BUSICK. Now, let me get this. The tailors would hire the finishers?

Miss STEIN. Yes, sir.

Mr. BUSICK. And give them whatever amount they wanted to give them?

Miss STEIN. Well, if it was in a union shop the tailors would give them a reasonable price.

Mr. BUSICK. But in a nonunion shop?

Miss STEIN. They would give a reasonable price that they would get from the foreman.

Mr. BUSICK. The firm would fix the price that the tailor had to pay the finisher?

Miss STEIN. Yes.

Mr. BUSICK. Now, is that system still in effect?

- Miss STEIN. No; just a few after the strike.
- Mr. BUSIEK. Now, the finishers are independent workers?
- Miss STEIN. By the employers.
- Mr. BUSIEK. And contract directly with the employers?
- Miss STEIN. All of them with the employers. They give us that, but they take the advantage from it.
- Mr. BUSIEK. Is this change due to the strike, Miss Stein?
- Miss STEIN. Yes, that is our main point, for the finisher.
- Mr. BUSIEK. That was the finishers' chief grievance?
- Miss STEIN. Yes.
- Mr. BUSIEK. They did not want to come under the contract system?
- Miss STEIN. It is an awful system, and the finisher would never know if she is employed. For instance, if a tailor would know a finisher and take her on, if the foreman would have anything against that finisher, he would compel the tailor to discharge her, whether he wanted to or not. He was compelled to do it by telling him, "If you won't discharge her, you can't get no work." And the condition was that if a finisher would be suitable to the foreman and not suitable to the tailor, he was compelled to keep her. He was compelled to do what the foreman told him.
- Mr. BUSIEK. Miss Stein, conditions now are better, then, in so far as the change of the system is concerned?
- Miss STEIN. In so far as the change of the system is concerned.
- Mr. BUSIEK. But the wages are lower?
- Miss STEIN. As I told you, they give us that, but they take the advantage for it by them cutting the prices in half.
- Mr. BUSIEK. They cut the prices lower than what the tailors formerly gave you?
- Miss STEIN. Much lower.
- Mr. BUSIEK. How much could you make per week at the prices paid now if you had constant employment, working a nine and one-half hour day?
- Miss STEIN. Well, I could make as much—if I had enough work in the season, I could make as high as \$14 or \$13 or something like that.
- Mr. BUSIEK. What are the low wages due to—to the cutting of the prices or the lack of work?
- Miss STEIN. It is more work to it and lower prices.
- Mr. BUSIEK. You mean to say more work now than formerly?
- Miss STEIN. Well, different styles. The styles now are more work than before, and the prices are much lower.
- Mr. BUSIEK. But if there were a constant supply of work in spite of the fact of the changing styles and lower prices, you could make about \$14?
- Miss STEIN. Something—about \$13 or \$14 the highest.
- Mr. BUSIEK. Expert workers?
- Miss STEIN. Expert workers.
- Mr. BUSIEK. And can men do any quicker work than women?
- Miss STEIN. No; no man in the finishing department can do as much as a girl.
- Mr. BUSIEK. He can't do as much as a girl?
- Miss STEIN. No; he can't.
- Mr. BUSIEK. Were there men of families doing work as finishers?
- Miss STEIN. Yes, sir; most of them. No single men, hardly.
- Mr. BUSIEK. How about girls and boys; are they ever put in as finishers?
- Miss STEIN. No boys.
- Mr. BUSIEK. Do girls—
- Miss STEIN (interrupting). Girls.
- Mr. BUSIEK. They are put on piecework, too?
- Miss STEIN. Piecework.
- Mr. BUSIEK. There are not any young girls?
- Miss STEIN. Yes, sir; we have girls 17, 18, and 19 years.
- Mr. BUSIEK. You are an expert worker. What does the average worker make, working full time under the prevailing prices?
- Miss STEIN. What do you call full time—just regular hours?
- Mr. BUSIEK. I mean when I talk of full time—well, let's call it a full week of nine and one-half hours.
- Miss STEIN. That is never done in the garment industry during the season.
- Mr. BUSIEK. That is not true during the season?
- Miss STEIN. No, sir.

Mr. BUSIEK. Have you ever given the matter any thought, or have the members of your organization ever decided why that is, whether it is because there are too many employees for the work—

Miss STEIN (interrupting). No.

Mr. BUSIEK. Or whether or not it is because of the seasonal nature of the work?

Miss STEIN. It is seasonal; but I should say that, in my opinion, the manufacturers could start the season earlier than that, and that would prevent night work, especially for girls; but when the season comes in a rush—I would like to state here that the statement Mr. Bernstein made that they have to work night work I say it is not so; but the workers are compelled to work, whether they want it or not.

Mr. BUSIEK. Then, your idea is that if the manufacturers would rearrange the season—stretch it out—have shorter hours—

Miss STEIN (interrupting). Shorter hours.

Mr. BUSIEK. (continuing). And have a longer season—

Miss STEIN (interrupting). A longer season, and have them do day work and not night work. It would be better. I know that is the experience where I work.

Mr. BUSIEK. Now, we will get back to the other question. You are an experienced operator?

Miss STEIN. Finisher.

Mr. BUSIEK. How does the average finisher compare to you in point of earning power?

Miss STEIN. Well, in the busy season, with overtime and all, the average will be from 9 to 12 hours.

Mr. BUSIEK. When did you go back to work after the strike?

Miss STEIN. About seven weeks afterwards.

Mr. BUSIEK. And how long ago is that?

Miss STEIN. Well, that was some time in the latter part of February.

Mr. BUSIEK. You figured out, have you, just how much money you have made since? Have you worked steadily since that time?

Miss STEIN. No, sir.

Mr. BUSIEK. You have not?

Miss STEIN. Till April.

Mr. BUSIEK. Who gets the preference when hands are put back on, the expert or the average worker?

Miss STEIN. When workers are being put on when the season begins?

Mr. BUSIEK. Yes.

Miss STEIN. Well, the average.

Mr. BUSIEK. The average worker gets put on in preference to the expert? What I am trying to get at now, if you and another finisher were to go to a shop where your abilities were both known, who would get the job?

Miss STEIN. Oh, the expert.

Mr. BUSIEK. The expert would get the job?

Miss STEIN. Yes, sir.

Mr. BUSIEK. So, consequently, the less expert workers are out of employment more than the experts?

Miss STEIN. Yes, sir.

Mr. BUSIEK. How much of the time have you been out of employment?

Miss STEIN. Since April—well, with me it is an exception. As a rule, Mr. Kelly and Mr. Bernstein stated that they have no discrimination whatever, and I would like to enlighten you that I could not get a job by Mr. Bernstein's, and neither Mr. Kelly's.

Mr. BUSIEK. Are you one of those dangerous people?

Miss STEIN. Yes, sir; as they call me. And therefore they stated to their opinion, the way they stated here, there was no discrimination at all; and I would like to state where I worked before the strike there were 70 or 80 people, and only 17 were taken back.

Mr. BUSIEK. Was any remark made to the union people when they were put back on?

Miss STEIN. No; they will send for them by mail; and I never was sent for yet.

Commissioner O'CONNELL. You spoke about overtime?

Miss STEIN. Yes, sir.

Commissioner O'CONNELL. As a very common occurrence?

Miss STEIN. Yes, sir.

Commissioner O'CONNELL. In the busy season?

Miss STEIN. Until 9 o'clock.

Commissioner O'CONNELL. Every night?

Miss STEIN. Every night.

Commissioner O'CONNELL. You work every night during the busy season until 9 o'clock?

Miss STEIN. Yes, sir.

Commissioner O'CONNELL. Makes a day of about 12 or 13 hours?

Miss STEIN. Yes, sir.

Mr. BUSIEK. Well, for how long a season would you work that way?

Miss STEIN. As long as the season lasts.

Commissioner O'CONNELL. Two or three months?

Miss STEIN. Yes.

Commissioner O'CONNELL. Working 13 hours a day for two or three months right along?

Miss STEIN. Yes, sir. And if you don't feel like working one night, and you come the next morning, then you have got your work to fix, and they bother you. I know the fact as to our place, and it was a union place before the strike. And the foreman would go home, and tell the girls to work until 9 o'clock, and he would go home and leave the girls with a girl over them to take charge of the girls and tell her whoever dared to go away before, an hour or half an hour, the next day he would bother her with the work—that her work was not good, and so on.

Commissioner O'CONNELL. That is, he would not pass her work?

Miss STEIN. Yes, sir; and I am stating that as Mr. Bernstein especially stated that you can not get rid of the workers from the shop, and that he has to keep the shop open on account that the workers would not go home. And therefore I make the statement, and this is in most of the shops—as I said, I am an expert worker, and I have been working for the tailors yet, and when you are working for the tailors you have certain men—you have two tailors or so that you attend to; and I felt that I can attend to that and work a little overtime, but not until 9 o'clock, and he would compel me to do so; and if I would go home and went home even if he was not in the place, and the girl would report me, then I would have trouble the next morning, even being an expert worker.

Commissioner O'CONNELL. And your complaint is that instead of having difficulty to break into the shop you were having to make an effort to get out of there?

Miss STEIN. Yes, sir; I think it was one night—the foreman says you must stay; you girls must all stay until 9 o'clock; that he knows some of the girls would go home.

Commissioner O'CONNELL. Did you ever take work home in addition?

Miss STEIN. No; but I say, well, it is impossible, a whole week working and not one evening to have off. "Well," he says, "I will lock the place and you will be compelled to stay." "No," I says, "I don't think it would be right for you to do that." And he stopped some to excuse himself, and I says, "How dare you lock the girls in the place until some 9 o'clock? If I want to go home at 8 o'clock, wouldn't you allow it?" Then he walked away; did not answer. And that was Saturday; he would compel me to come in Sunday.

Commissioner O'CONNELL. You had to work Sunday?

Miss STEIN. To come in Sunday for half a day.

Commissioner O'CONNELL. Have many of them been compelled to come in Sunday?

Miss STEIN. Yes, indeed; and I said no. And if I said no he knew I said no, that I won't come in. I was independent a little.

Commissioner O'CONNELL. Now, Miss Stein, I just want to ask you a few questions, and if you will make your answers short, because our time is limited—

Miss STEIN (interrupting). Just let me bring out this point, why I was compelled to work on Sunday. And so with the rest of the girls, and he walked over to the tailors that I worked for and he says, "If you don't make her come in Sunday to work, then you will not get work the rest of the week—the whole week." And they were family men, and they came to me with tears in their eyes, and they begged me to come in Sunday, which I did for them. I came in Sunday and others working for the tailors on the same work, as I worked for the tailors, they knew if the tailors would not have enough work

we would not have enough. If they would not have anything, it would be that in the busiest seasons I could go home if my foremen would not give my tailors no more work.

Commissioner O'CONNELL. What was that you said about family men?

Miss STEIN. The tailors were family men, and they knew the foreman would not give them the following week work if I would not come in Sunday, and they knew it was true, and they begged me to come in and I did; and that is how I was compelled.

Commissioner O'CONNELL. Now, do you know of cases where they worked men or worked women or compelled them to put up security in the shape of money for spoiled work, or other money?

Miss STEIN. The only sum that was put up was by the pressers, as I know of.

Commissioner O'CONNELL. The pressers?

Miss STEIN. Yes, sir.

Commissioner O'CONNELL. What do they put up as security—or why do they put up?

Miss STEIN. Well, I could not bring that out very good as for the girls, because I—

Commissioner O'CONNELL. Are any of the girls ever asked to put up a forfeit of any kind in the way of money?

Miss STEIN. No.

Commissioner O'CONNELL. Are there many married women employed in the trade—women who are married?

Miss STEIN. Yes; there is women—

Commissioner O'CONNELL (interrupting). You don't need to answer this if you don't want to, but are you married?

Miss STEIN. No, sir; I am single.

Commissioner O'CONNELL. Women are employed who have small children at home?

Miss STEIN. Yes, sir.

Commissioner O'CONNELL. How are the children taken care of while they are working in the shop during the day?

Miss STEIN. Well, some of them have mothers.

Commissioner O'CONNELL. They do not take the children in the shop?

Miss STEIN. No, no.

Acting Chairman WEINSTOCK. Let me understand, Miss Stein, under the old conditions you were able to earn as much as \$17 a week?

Miss STEIN. In the busy season.

Acting Chairman WEINSTOCK. And that under the new conditions you have not been able to earn more than \$14 a week?

Miss STEIN. No.

Acting Chairman WEINSTOCK. Well, I can not quite reconcile that, Miss Stein, with your statement that the prices have been cut in half. If the price had been cut in half the most you could earn would have been \$8.50 a week as against the \$17. Now, tell us what you mean by that.

Miss STEIN. Well, as I said, where I worked the prices were a little more than other places; but still they were cut down 10 and 15 cents to what they were before the strike. And there are some places that are cut in half. And if I have to work there in those shops I could not earn more than \$10 or \$9 a week.

Acting Chairman WEINSTOCK. As against your former or past earnings of \$17?

Miss STEIN. Yes, sir.

Acting Chairman WEINSTOCK. So your own experience has been that you have dropped about 18 per cent—from \$17 to \$14, which would be about 18 per cent; but the instances where the prices have been cut in half have applied to girls other than yourself?

Miss STEIN. Yes.

Acting Chairman WEINSTOCK. I see. What grievances have the workers now, to-day?

Miss STEIN. Well, as to prices and treatment in the shop. The most of the shops, as I know, if a worker would say something, they would tell you you can go to Mr. Amdur, your leader, that led you to strike.

Acting Chairman WEINSTOCK. Have you kept a record, Miss Stein, of your earnings by the week, from week to week, or from month to month, or year to year?

Miss STEIN. I did not, but I could just about tell my earnings.

Acting Chairman WEINSTOCK. Can you tell the commission what your average earnings were for 1913?

Miss STEIN. Oh, I can't tell.

Acting Chairman WEINSTOCK. Could you give me anywhere near it?

Miss STEIN. I could not.

Acting Chairman WEINSTOCK. Was it \$1,000?

Miss STEIN. Oh, no.

Acting Chairman WEINSTOCK. Was it \$100?

Miss STEIN. It was more than \$100.

Acting Chairman WEINSTOCK. Was it \$500?

Miss STEIN. No; nothing like it.

Acting Chairman WEINSTOCK. Nothing like \$500?

Miss STEIN. No.

Acting Chairman WEINSTOCK. Could you approximate your earnings for 1912?

Miss STEIN. I could not. I never kept an account of it.

Acting Chairman WEINSTOCK. Never kept any record?

Miss STEIN. No. I couldn't, as I never saw a pay envelope until after the strike; as I used to get my money, hand to hand, from the tailor to me; and that was another grievance. That was very good for the girls to get pay from the tailors that the tailors would get their envelopes from the office. When the girls would have to count their pay with the tailors. The girls could not get their pay on the street then—that was very nice of it, too, because the foreman would want to go home. His time was up and he would holler, "You people, it is time to get out, and I want to go home." He did not listen, he did not care whether the finisher got paid or not.

Acting Chairman WEINSTOCK. I am interested, Miss Stein, in knowing what is the spirit of the women workers in your work, and to get at that let me recite a circumstance that came under my notice in my own city of San Francisco. I attended a public discussion that was called by one of the women's clubs in San Francisco in order to afford the employers and the workers in the city industry who were on a strike an opportunity to present their grievances to the public. One of the leading employers, while addressing the audience, made the statement that his people had no grievances; that the strike was due to a spirit of revenge on the part of a young woman who was formerly in his employ and who was now the secretary of the union. And he went on to recite that she had been the forewoman in the shop, but that she was not satisfactory and therefore he had reduced her to the ranks. That then she willfully, knowingly, intentionally, and deliberately wasted her time and proved very unfaithful and that he discharged her for being unfaithful. That she then swore revenge and, being a very clever woman with powers of public speaking, she created this agitation among the workers and it ended in a strike. That employer was followed on the platform by this very young woman, who publicly made this statement. She said: "You heard my employer say that I was discharged for being unfaithful. I admit it. I was unfaithful. And what is more I propose to continue to be unfaithful to my employers; and I advise every one of my fellow workers likewise to be unfaithful to their employers." Now, does that spirit prevail among your workers here, a spirit of unfaithfulness to their employers?

Miss STEIN. Well, I—you mean the conditions and girls—

Acting Chairman WEINSTOCK (interrupting). Give the employer just as little as possible for his money?

Miss STEIN. Oh, no.

Acting Chairman WEINSTOCK. That does not prevail here?

Miss STEIN. No. They get a square deal here.

Acting Chairman WEINSTOCK. The girls here are faithful to their employers?

Miss STEIN. Yes; but the employers are not faithful to the girls.

Acting Chairman WEINSTOCK. The employers are not faithful to the girls?

Miss STEIN. No, sir.

Acting Chairman WEINSTOCK. Where do they fall down?

Miss STEIN. Well, in this cloak industry the foreman or the designer uses very bad language to the girls, especially, and as far as the conditions in the shop, which you call sanitary conditions, is very far from it in the city of Philadelphia, in the cloak industry.

Acting Chairman WEINSTOCK. Is there not a factory inspector employed by the city or the State to look after conditions in the factory?

THE WOMEN'S GARMENT INDUSTRY OF PHILADELPHIA. 3157

Miss STEIN. Maybe it is, but it was not looked up, to my opinion, very good. As it is here, the cloak factories—it is very small shops—and the girls would sit together—right close to the men—you will excuse me—the toilet is right in front, and the shops—the toilets for men and women one.

Commissioner O'CONNELL. Here in the city they have such an arrangement where there is no separation of the toilets?

Miss STEIN. Yes, sir.

Commissioner O'CONNELL. Have you worked in those places?

Miss STEIN. No, sir.

Commissioner O'CONNELL. Have you seen those places yourself?

Miss STEIN. Yes, sir; I have seen a place, not as this, but I know the facts. I know the girls working there at this time you want.

Acting Chairman WEINSTOCK. Is there a city factory inspector, so far as you know?

Miss STEIN. Well, I haven't seen any.

Acting Chairman WEINSTOCK. Is there a State factory inspector?

Miss STEIN. I don't know; not as I know of.

Acting Chairman WEINSTOCK. Well, if there is, the gentleman behind you shakes his head affirmatively.

Mr. GRAY. Mr. Leightner, of the department, is sitting here now. He is one of the State factory inspectors.

Acting Chairman WEINSTOCK. Will you throw some light on that?

Mr. LEIGHTNER. On what date is the lady giving her testimony about? Is it now or was it previous to the strike?

Miss STEIN. Well, it is previous. As I heard, it is now going on at that same place; I can name the man.

Acting Chairman WEINSTOCK. Will you please name the place?

Miss STEIN. Greengross, on Market Place, and he has one toilet for men and women—212 Market.

Mr. LEIGHTNER. I have 18 inspectors. Personally, I very seldom get around, but I will say for the benefit of the commission that to date we have put in 612 toilets in this city and we have not been here a year yet.

Miss STEIN. That may be so.

Commissioner O'CONNELL. Will you see that that particular shop is looked into?

Mr. LEIGHTNER. What is the name?

Miss STEIN. Greengross, 212 Market Place.

Mr. GRAY. Mr. Leightner took this matter up with us some time ago, but this condition she described existed in 6 out of 10 shops in the city of Philadelphia before this was taken up. Mr. Leightner has taken it up, and he is helping wonderfully.

Acting Chairman WEINSTOCK. That is all, Miss Stein. Thank you very much. Before adjourning, on the part of the commission I want to express its appreciation for the very kind and fair and generous treatment it has received at the hands of the press of the city of Philadelphia. I know of no city where we have conducted hearings where we have received a squarer deal from the press and where the press has aided it more generously than it has right here, in spreading the information that has been gathered in this room; and we feel it is due to the press of Philadelphia to make this statement to show that we are not altogether unmindful of the treatment received at their hands.

Dr. MOSES STEARN. Gentlemen, I have been living downtown 35 years, and I want to show how the landlords treat the people, how the toilets are 16 inches apart, four are now where two used to be—

Acting Chairman WEINSTOCK. The matter is in the hands of the inspector and you better go to him.

Dr. STEARN. I would like to give it to him publicly.

Acting Chairman WEINSTOCK. That is hardly necessary.

Dr. STEARN. I would like to speak on three things.

Acting Chairman WEINSTOCK. We are sorry, but Commissioner O'Connell takes the train in 15 minutes, and we can not prolong the hearing.

Dr. STEARN. We can spare him.

Acting Chairman WEINSTOCK. The commission stands adjourned.

(Thereupon, at 4.20 p. m., Tuesday, June 30, 1914, the hearing adjourned.)

EXHIBITS.

THE WOMEN'S GARMENT INDUSTRY OF PHILADELPHIA. 3171

INDUSTRIAL CONDITIONS AND
RELATIONS IN CHICAGO

(For exhibits under this subject, see pages 3445 to 3457)

COMMISSION ON INDUSTRIAL RELATIONS.

CHICAGO, ILL., Tuesday, July 21, 1914—10 a. m.

Present: Chairman Walsh, Commissioners Commons, Delano, Weinstock, Ballard, Lennon, O'Connell, and Garretson; also William O. Thompson, counsel.

Chairman WALSH. The commission will please be in order. You may proceed now, Mr. Thompson.

Mr. THOMPSON. Mr. Chairman, the second witness on the list for to-day has to leave very soon. I have agreed to put him on first in place of Mr. Walker.

Chairman WALSH. What is that? I could not hear you.

Mr. THOMPSON. The second witness has to leave very early, and I will substitute him in place of the first witness.

Chairman WALSH. Who is that?

Mr. THOMPSON. Mr. Piez.

TESTIMONY OF MR. CHARLES PIEZ.

Mr. THOMPSON. Will you give your name and your address and occupation?

Mr. PIEZ. Charles Piez. Do you want my business address?

Mr. THOMPSON. Your business address.

Mr. PIEZ. Thirty-ninth and Stewart Avenue. I am president of the Link Belt Co.

Mr. THOMPSON. What business is the Link Belt Co. engaged in?

Mr. PIEZ. It is engaged in the manufacture of sprocket chains; the manufacture of conveying and riveting machinery.

Mr. THOMPSON. How large a plant has your company in Chicago?

Mr. PIEZ. A plant employing 800 men.

Mr. THOMPSON. Has the company a plant elsewhere in this country?

Mr. PIEZ. A plant in Philadelphia, employing about 600 men; two plants in Indianapolis, employing about 800 men. We employ about 2,200 men when we are busy.

Mr. THOMPSON. What class of help do you have? I mean, how would they be denominated—machinists, or what?

Mr. PIEZ. We employ the usual crafts that are covered under the name of machinists, metal workers, and pattern makers.

Mr. THOMPSON. How long has your company been in business in Chicago and in the other cities?

Mr. PIEZ. I think we were organized about 40 years ago. The plant in Chicago was built about 34 years ago.

Mr. THOMPSON. How long have you been president of the company, and how long also have you been connected with it?

Mr. PIEZ. I have just finished my twenty-fifth year in the employ of the company; I have been president for eight years—eight and one-half years.

Mr. THOMPSON. During the existence of your company, while you have been president, have you made a study of the labor problems, so far as they relate to your company?

Mr. PIEZ. I have naturally had to do that.

Mr. THOMPSON. During that time have you had any dealings with the organizations of labor commonly styled the unions?

Mr. PIEZ. Yes.

Mr. THOMPSON. Has your firm now got, either in Chicago or in the other cities, any negotiations, any dealings or agreements with organized labor?

Mr. PIEZ. Yes.

Mr. THOMPSON. In what branches of the industry have you these agreements?

Mr. PIEZ. We have understandings rather than agreements; we operate with them. In our erection work we probably have union men in our employ, very

large numbers in Philadelphia and in Indianapolis. We have never been asked to sign any agreements there. We have never had any demand made on us, so we have never inquired whether we had union or nonunion men. We never ask that question when we employ men.

Mr. THOMPSON. That is to say, your shops as now operated are operated under the system commonly called the open shop?

Mr. PRZ. Open-shop rule.

Mr. THOMPSON. But in no instance do you now have agreements with any trade organization?

Mr. PRZ. Not with the shop crafts; no.

Mr. THOMPSON. Not with the shop crafts?

Mr. PRZ. No.

Mr. THOMPSON. Did you at any time have specific agreement with any of the crafts?

Mr. PRZ. Yes.

Mr. THOMPSON. As such?

Mr. PRZ. Yes.

Mr. THOMPSON. With whom were they and how long did they exist?

Mr. PRZ. The first agreement we entered into was with the structural-iron workers' union in New York. At that time Sam Parks was business agent. The agreement then was to the effect that we would employ structural-iron workers in the erection of our structural work, we being permitted to use our own skilled mechanics in the erection of our machinery. Soon after that agreement went into effect we operated or started the erection of a large installation in Brooklyn—the Third Avenue power house. We employed, in accordance with our agreement, structural-iron workers. We also put in our own men to erect machinery. Very soon complaints came from our men that they were being abused, hot rivets were being dropped on them, monkey wrenches and other like articles were being dropped from above—all claiming to be accidental. But when they were remonstrated with a fight ensued and 12 or 13 of our men were hurt and sent to the hospital. I remonstrated with Parks. After that and for a term of years we were absolutely in his grip. We were so tied up with various contracts in New York that we could not declare any degree of independence. It was well known he was a crook, but kept at the head of that institution, and we had to deal with him in accordance with the methods that he outlined, not in accordance with the methods we cared to follow. I got a surfeit of that sort of an agreement, that sort of a one-sided agreement, in my dealings with him. And very shortly after, when we were in shape to do it, we ran several jobs in that territory absolutely nonunion, simply to indicate to him that he could not control us. About the same time or perhaps a little after we entered into a similar agreement with the structural-iron workers in Philadelphia. Mr. McIlvain was at that time the business agent of the union. The same thing happened there. They agreed to permit us to employ our own men, and then insisted afterwards, through various devices, on putting in their men to erect machinery, making it necessary for us to keep skilled men on the job to train their men as to how to set machinery. Some of those men, who were at that time paid 50 or 55 cents an hour—I have forgotten the rate now—could not set up a ratchet drill; many of them had no notion whatever as to the sort of function that sort of device was to be used for. Of course, that sort of an arrangement could not be long endured. We told McIlvain that if that was the way he regarded his agreements we did not care to do business with him any further, and when we made a contract with the Reading Railroad at Norristown we erected it with nonunion men. Mr. McIlvain was foolish enough to take a crowd of his men to Norristown and try to persuade our men, by use of baseball bats, to stop their operations. The result was that some 14 or 16 were put into the hospital. Mr. McIlvain was recognized, and we prosecuted him and sent him to prison.

Commissioner O'CONNELL. When was that?

Mr. PRZ. This covered a period between 1904 and 1905.

Chairman WALSH. Where was Mr. McIlvain convicted?

Mr. PRZ. At Norristown.

Chairman WALSH. What was the sentence?

Mr. PRZ. Six months.

Chairman WALSH. What was the charge?

Mr. PRZ. Assault and battery.

Chairman WALSH. Proceed.

Mr. PIEZ. In the East no question, either at Philadelphia or Indianapolis, had ever been raised by our shop employees as to any agreement. I have been in active control as chief engineer and superintendent of the company since 1892 and, of course, I came in direct contact with all our employees. The concern was very much smaller at that time than it is now, but at no time then or since then has any demand been made for recognition of the union in Philadelphia or Indianapolis institutions, but such demand was made in our Chicago shop. I have forgotten the exact date.

Mr. THOMPSON. What trades or crafts?

Mr. PIEZ. I think the first demand was made by the machinists. I was not then in charge. It was about in 1900, I think, that the machinists' union became aggressive in Chicago and our men were organized, and I believe we signed an agreement. That agreement in accordance with the statement of our operatives was not lived up to. Men were called out on some of the flimsiest pretexts, about half going out and the other half remaining. Our superintendent, who was conveying some of our men home, was set upon by a riotous mob, some of whom were our former employees.

Mr. THOMPSON. When was that?

Mr. PIEZ. Along in 1901 and 1902. Our superintendent, Mr. McClain, was so badly injured about the face that he carries the scars yet. After that we carried a closed shop and had several strikes—

Mr. THOMPSON. What crafts?

Mr. PIEZ. Twice the machinists and twice the molders.

Mr. THOMPSON. Did you have an agreement with the molders?

Mr. PIEZ. Yes, sir.

Mr. THOMPSON. What time did it begin, and when did it terminate?

Mr. PIEZ. I can't give that now. I can supply it.

Mr. THOMPSON. At least a considerable period—one or two years?

Mr. PIEZ. Yes; a considerable period of time. The first strike of the molders was called by the local and did not have the sanction of the international council or national council, and therefore that was of relatively short duration. The final strike was projected here in 1906 in connection with some general strike that the molders instituted all over the country. There were strikes in Cincinnati and Philadelphia and here. We were one of the victims. But all through that period there had been a steady and insidious reduction in output. I can only give you the very salient facts.

Mr. THOMPSON. In all crafts, or the molders?

Mr. PIEZ. In the machinists and molders. In one particular case it was most flagrant. In the case of the 6-inch rollers, the molding output had been between 90 and 100 of those rollers. The shop steward arbitrarily ordered the production cut down to 60. Our operating officers remonstrated with him and told him 60 was altogether too small an output, and in order to make a demonstration they put in a man who had never been in there, drawn from one of the machine shops. In the first day he put up 90, but in spite of that the 60 remained. Men who were paid full wages turned out productions that, according to the nature of a day's output, represented about one-third of the general day's work in output they ought to roll, varying from 60 to 180.

Commissioner O'CONNELL. Made under similar conditions?

Mr. PIEZ. Exactly the same conditions and same equipment. In the machine shop the statement was made, backed by figures in the East, that the output in the last year of closed-shop operation had been reduced 35 per cent. There wasn't any measure at that time. There wasn't any piece rate. It was very difficult for any foreman in a shop like ours, with many thousands of different operations—it was very difficult for any foreman to tell when he had a reduction of output. We are conscious of this when the cost goes up and the profits go down, and you fall behind in deliveries, and then an investigation reveals there was a reduction of 35 per cent. There had been an agreement signed and it was not lived up to, and we felt, being in a highly competitive business, we could not continue an agreement with an organization which followed monopolistic methods.

Mr. THOMPSON. How long since had it been since these agreements expired, in a general way?

Mr. PIEZ. They didn't expire; they were terminated by the strike.

Mr. THOMPSON. In 1906?

Mr. PIEZ. In 1906. Since then we have been operating under open-shop rules in Chicago.

Mr. THOMPSON. What other, if any, objections have you to the organization of workmen in your shop?

Mr. PIEZ. Absolutely none. We have maintained relations for 16 years with the carpenters and millwrights, of which John Metz is the head. We have had never a word of difference with them.

Mr. THOMPSON. So far as your experience goes, your objections as a manufacturer to the organization in the shop is limited to the fact that the unions restrict output. Are there any others? If so, I would like to have the objections you have as a business man to the existence of unions in your shop.

Mr. PIEZ. The objection is a little broader than that, because your question would indicate—the answer would simply indicate that what we were concerned about was our own profits and that the reduction of output simply reduced our profits. But it goes a good deal further than that. For instance, in our erection work in Chicago, in this district the unions have gotten practically the supreme control of erection conditions. All competitors that come in have to submit to the same rules and regulations we have to. As far as conditions are concerned in Chicago it presents equal opportunities to all of us. But when it comes to inside work we compete with competitors in 12 different cities, mostly smaller ones, where wages are lower and taxes lower and investments in real estate less. We are hampered with all those advantages which they have and we have not because we are in a larger community. Our wages are higher. The only advantage we have is we have a broader labor market and, I think, a more intelligent labor market to draw on. If those men arbitrarily reduced the output and show no sympathy with the problems we have and don't offer to cooperate with us in securing an outlet for our work, then we have to say, "You are not the men we can represent, because we are virtually your agents in dealing with our customers. We are trying to find some opportunity to sell your labor. If you are unwilling to offer the same thing to this man in Birmingham that the man in Columbus offers he is going to take the Columbus man, and we can not do anything to help you. We feel that the employer is really the agent of the employee in dealing with the consumer, the man who buys the products of the employees."

Mr. THOMPSON. Take the question that you spoke of—that you are unable to compete in outside cities with the firms in those cities where they have less rent and less wages to pay and where the living conditions are cheaper than in large cities like Chicago; the inference from your statement, then, would be that the workers in Chicago should work either at reduced pay or increased amount of output, either way you want to put it, in order to enable your firm to compete with these outside firms who have cheaper conditions; is that what you want the commission to understand?

Mr. PIEZ. No; there is another alternative; if they work with greater effectiveness and with a better spirit of cooperation we will more than overcome all the disadvantages we are under. But if they arbitrarily set their measure of what a day's task will be, then the position is hopeless for us.

Mr. THOMPSON. Assuming that your workmen should have the same output that men in smaller cities would have, say, in Davenport or any other town you want to take, how would you equalize the wages in that case in order to permit you to compete with them?

Mr. PIEZ. We have to equalize it by greater effectiveness on the part of the management itself, by better means of exploitation, by producing in larger amounts and getting the benefit of the economy through such increased production.

Mr. THOMPSON. That, then, is your idea of the way in which you can meet the competition of these small towns, by the reducing of the expenses and by better brains in the business?

Mr. PIEZ. And the cooperation of all of our skilled workers; we have to have a loyal spirit on the part of all of our men, and I would sooner be elected president by the men under me than by the board of directors of the company.

Mr. THOMPSON. How would the cooperation of the men working under you affect your business except by giving you a larger output?

Mr. PIEZ. I wish you would please repeat the question.

Mr. THOMPSON. You spoke of the need of cooperation from the workingmen, so far as competing with outside cities is concerned; how would this cooperation show itself other than by producing a greater output of goods per man?

Mr. PIEZ. In the process of making goods, we can not take advantage of this unless we have the hearty cooperation of the men in our employ. If there is a feeling of antagonism against us we can not count on that kind of cooperation, and it is through that sort of thing and principally through the analysis of con-

ditions and problems that exist that we can maintain ourselves against our competitors in the cheaper field.

Mr. THOMPSON. Referring to this proposition of cooperation, in what other respects, if any, do you find that dealing with organizations of labor prevent it?

Mr. PREZ. I wish you would repeat that, please.

Mr. THOMPSON. Do the organizations prevent cooperation between the firm and your men other than in the question of the restriction of output?

Mr. PREZ. Well, I think the general spirit of union men is loyalty to the union above anything else.

Mr. THOMPSON. How would that affect the men in dealing with your firm?

Mr. PREZ. How do you suppose it would affect the effectiveness of an army to have the men composing the army disloyal to the man at the head, or the men in any organization to be disloyal to the man at the head? The men at the head of the various labor organizations insist on loyalty to them, and I have the same right to insist on loyalty to me. I can not get the best work out of the men unless I have their cooperation.

Mr. THOMPSON. I will give you an illustration that may help bring out the thought I have. A man is loyal to his country; a man is loyal to his church. Now, why should there not be, perhaps, the same spirit of loyalty to the firm and of loyalty to the organization? If there can not be, I would like your views on that.

Mr. PREZ. There can be if there were the right sort of leadership in these crafts. Now, I am talking about the crafts I know about, but there are some crafts that are different; there are some vocations in which the degrees of output do not come up. Take the street-car lines, for instance, and there is a certain possible speed in miles per hour; a trip is a certain number of miles, and there can be in a certain number of hours only a certain number of trips made. There is never any question in that craft as to whether there could be a reduced output. There may be a question as to whether the men should work nine or ten hours a day or as to what they should receive per hour. And in coal mining the questions I have referred to do not apply. There is no question in those crafts as to what constitutes proper measures or standards of work, but in the metal trades, where the tasks vary very much and where we have perhaps seven or eight thousand different instruction cards in our machine shop indicating various processes, that will give you some idea of conditions and variety of work that exist there; and it is absolutely impossible to apply any fixed standard to any such heterogeneous product as that, and there comes in the question of whether an atmosphere of antagonism to the employer on the part of the men does not result in serious hardship to the employer, and it is difficult to say at first whether there is a reduced output because of the attitude of the men, but as they get older and more experienced we see that something is happening to bring about this result, and we have to set about to repair the loss.

Mr. THOMPSON. In the organization you have dealt with, did the union attempt to limit the freedom of the firm in doing its business in other matters?

Mr. PREZ. Not that I am aware of.

Mr. THOMPSON. They do not undertake to absorb the power of management as far as you know?

Mr. PREZ. That practically relieves you of all control over the discipline of the shop.

Mr. THOMPSON. Then, to state your position so we have it clear, so far as you have dealt with the organization of labor, you have found three objections. First, they limit the output; second, they create a spirit of antagonism in the shop between those who own and run the shop and the men; and, third, they limit the freedom of the firm in handling its business.

Mr. PREZ. I should say that your second statement was a corollary of the first. Naturally, if people set about to reduce the output, there must be a spirit of antagonism engendered in consequence.

Mr. THOMPSON. Taking up the first proposition, what is your opinion of the reason that the union limits the output, or do you believe there is any reason back of their attitude in that respect?

Mr. PREZ. I believe there is a very good reason back of it from their standpoint. I believe that these gentlemen feel that only by applying the methods of monopoly can they do good to their members. I think it is a wrong viewpoint that they have. I think it is improper leadership. I would be tickled to death if Mr. Fry of the machinists' union would come to me and say: "Mr. Prez, that thing which you are producing for \$1 we can show you how to

produce it for 75 cents; what part of the saving can you give us?" But I have never heard any of the gentlemen in the crafts I have had to do with talk of efficiency; that never enters their heads. The question is, "What can we get out of it?"

Mr. THOMPSON. What would you say should be the relations, and how could the people that run the factory deal, with the men that work in it?

Mr. PIEZ. That depends on the individual. I have been very close to our men, and I have never had, except in outside cases where there had been a breach of contract, and I have been in the management of the shop about 25 years, had a strike occur under me. I think my men are absolutely loyal to me, to such an extent that they would elect me to-morrow the business agent of their union, and I feel that that is the way to handle our situation.

Mr. THOMPSON. Perhaps we will all agree with you.

Mr. PIEZ. I have to indulge in these flattering remarks.

Commissioner O'CONNELL. What have you done to avoid this situation?

Mr. PIEZ. I think we have always given them every opportunity; we have reduced their hours from 10 to 9 and have raised their wages whenever conditions made it possible.

Commissioner O'CONNELL. What are you paying them now? What are your skilled mechanics making now?

Mr. PIEZ. That varies with the degree of skill.

Commissioner O'CONNELL. Are they making \$5 a day?

Mr. PIEZ. No.

Commissioner O'CONNELL. Are they making \$3 a day?

Mr. PIEZ. Our Mr. Dodge submitted to you a list in Philadelphia covering those matters, and I did not understand that I was to furnish this information and did not supply myself with any of those details, and I do not carry the pay of 2,000 men in my head.

Commissioner O'CONNELL. Have you some general idea in your head?

Mr. PIEZ. We pay our day labor more than the prevailing wage. I think we pay all our labor better than the prevailing wage.

Commissioner O'CONNELL. You have some idea as to what the machinists' wages ought to be in Chicago and what they are receiving, don't you?

Mr. PIEZ. I do not feel that there ought to be a uniform wage for machinists.

Commissioner O'CONNELL. What is your high and low rate?

Mr. PIEZ. Our low rate is probably 32 or 33 cents an hour and the high rate 47½ to 50 cents. These operations require all kinds of skill and grades of precision, and we do not pay a uniform rate, and could not.

Commissioner O'CONNELL. That is all.

Mr. THOMPSON. Mr. Piez, going back to the question of the relationship that should exist in the shop between the men who own the factories and run them from the standpoint of the management side and the capital side, what scheme of relationship do you think should exist in the shops throughout the country between those who work and those who manage the business?

Mr. PIEZ. I suppose there can not be any better scheme of relationship than the organization, properly conducted.

Mr. THOMPSON. In other words, that under the proper management the organization—you believe in what we call collective bodies?

Mr. PIEZ. Yes.

Mr. THOMPSON. Now, what is your view of the defect in this scheme of collective bargaining that runs to-day? What is it attributable to? You say, for instance, improper management? Why does that improper management come about in this great organization of labor, from your standpoint?

Mr. PIEZ. I don't want you to so generalize my remarks as to make them apply to other crafts outside of those with which I have come in contact.

Mr. THOMPSON. I will limit them to your experience.

Mr. PIEZ. I know nothing, absolutely, about the condition of the miners. I know absolutely nothing about the condition of the railroad men, except such knowledge as I acquired while sitting on the board of arbitration. But I want my remarks to be applied particularly to the crafts with which I am familiar.

Now, then, repeat your question and I will try to answer, with that limitation.

Mr. THOMPSON. While you in your own shop and in your own business feel from your experience with the unions you have dealt with that it is better not to have organization in your own shops than to have the open rule in the shops, yet you feel and believe the organization is the proper method?

Mr. PIEZ. I say it is.

Mr. THOMPSON. So far as you deal with that in your practical experience, where has the organization fallen down, and give the reason for it.

Mr. PIEK. What I mean to say is it is better to fight improper methods until they are corrected than to submit to them. I could lead a very much more comfortable existence as a manufacturer if I subscribed to all of the demands that these gentlemen will make; but it is a question whether I would be justified in passing unfair and unjust demands onto our customers. If we were an absolute monopoly, I could do that. We do that in the city of Chicago. We pay the wages that the unions demand. We demand of our customers pay that those wages justify. We do not concern ourselves whether we are looking after the public welfare. But in the competitive field we have got to bear in mind the interest of the consumer, because his interest is ours. We have got to prosper through his favor. And therefore we must resist demands that are unfair and unequal, larger than they should be, larger than they are in comparison with other communities.

Mr. THOMPSON. Mr. Piek, looking at organized labor from the standpoint of democracy, assuming that the unions are democratic institutions composed of men who have the same intelligence and the same instinct that our general voters have, is it not true that such organizations are apt to have the same failures that are evidenced in other democratic conditions?

Mr. PIEK. Absolutely. I do not oppose them on that account any more than I would argue that we ought to go back to the autocratic form of government because our municipal State and Federal Government is open to criticism. I could and I am perfectly willing to deal with these gentlemen. I am very willing to oppose them when they are wrong, and I am willing to commend them for the good things they have done.

Mr. THOMPSON. Your objection to the organization is purely on what we might say is personal and sporadic grounds. You are not objecting against organizations so managed that to you they have not seemed fair—that you would have been pleased to deal with them if they had been fair?

Mr. PIEK. They have been absolutely unfair. It was impossible for me to deal with them in these particular cases that I have cited.

Mr. THOMPSON. In the particular cases you have mentioned you draw the line at, but it is only with the union which you otherwise believe in?

Mr. PIEK. They have never given me an opportunity to do otherwise.

Mr. THOMPSON. Have you any views as to the relative value of piecework and day wage?

Mr. PIEK. Very decided, naturally. I have very decided views.

Mr. THOMPSON. What are they?

Mr. PIEK. I think Mr. Dodge, of our company, who is chairman of our board, gave considerable testimony on that point. I do not know whether you want me to repeat it.

Mr. THOMPSON. If your testimony is the same as his was, you need not repeat it.

Mr. PIEK. I would corroborate what Mr. Dodge has said.

Mr. THOMPSON. It would apply to the premium and bonus system?

Mr. PIEK. We employ them all. I think each has its place.

Commissioner O'CONNELL. Mr. Thompson, bring that out.

Mr. THOMPSON. Mr. Piek, then your evidence in that respect would be the same as his?

Mr. PIEK. Absolutely the same.

Commissioner O'CONNELL. Would that be along the line of the Taylor system, the efficiency system laid down by Mr. Taylor?

Mr. THOMPSON. Does your shop here in Chicago operate on the system that Mr. Dodge spoke of in Washington?

Mr. PIEK. Yes; along the same general lines, with, of course, modifications to suit conditions. We try to determine scientifically what can be done before we attempt to do it.

Commissioner O'CONNELL. Just bring out how you scientifically determine that.

Mr. THOMPSON. Could you tell briefly, Mr. Piek, how you operate your factory on piecework system, and how your efficiency plans are put into effect?

Mr. PIEK. That is a very comprehensive question, Mr. Thompson.

Mr. THOMPSON. Do you make time studies of operations?

Mr. PIEK. Yes.

Mr. THOMPSON. Under experts?

Mr. PIEK. Yes.

Mr. THOMPSON. Well, are tasks such as the result of these time studies?

Mr. PIEZ. Yes. In the first place—

Mr. THOMPSON. When the time is set, do you set or establish a bonus or premium system by which the men may earn more than a certain amount?

Mr. PIEZ. That is the equivalent of that. We pay a piece rate that enables them to make considerable more than the day rate, if they follow the lines laid out. First of all we improve the general conditions in the shop. We improve the routing so that the material will travel through the shortest distance. We establish the very shortest and most unobstructed line from the order department to the shipping room. We endeavor to make a continuous flow through that short and unobstructed.

Mr. THOMPSON. That is the managerial side of the business?

Mr. PIEZ. That is the managerial side of the business. It is necessary. The Taylor system, that is the same of any systematic conduct of business.

Mr. THOMPSON. Referring to the workman side, or the human element in the shop when time studies are made, does the expert employed by the firm make the study, determine the amount of time that would be taken or should be taken in the performance of the task?

Mr. PIEZ. Usually one of our own men who has developed into that position, one of our own workmen.

Mr. THOMPSON. In the shop do you have any methods by which the men themselves may express their opinion in an authoritative manner whether that time set is too short?

Mr. PIEZ. They express them very forcibly to the rate setter.

Mr. THOMPSON. They do?

Mr. PIEZ. And to the foremen.

Mr. THOMPSON. Is it individually, or as committees, or how?

Mr. PIEZ. Individually.

Mr. THOMPSON. And not as committees?

Mr. PIEZ. I do not believe I have ever heard of any committee complaint. We make it a business to heed any complaint, whether individually or by committee, and we feel when we have a set rate concerning which there is any question that the burden of proving the rate is fair is on us. We do not force the man to accept it.

Mr. THOMPSON. If you can tell offhand, I would like you to do so, what percentage of your men earn premiums under the present system.

Mr. PIEZ. Well, Mr. Thompson, I am not quite able to say that, except approximately.

Mr. THOMPSON. You may approximate it.

Mr. PIEZ. On our Philadelphia job, where the work is more repetitive than it is here, the piece rate is very much larger. Here in Chicago we do considerable work that might be described as job work. We do a job once and then do it again. We never on such jobs as that go to the expense of preparing for a regular team of repetitive production. Therefore we have here a great deal of work; I should say fully 50 per cent of our work in Chicago was on the straight daywork scale.

Mr. THOMPSON. Have you any basis established for measuring whether or not a workman does his day's work?

Mr. PIEZ. Only by putting in an efficient construction foreman.

Mr. THOMPSON. That is all?

Mr. PIEZ. That is all.

Mr. THOMPSON. You mean you have no rate for this piecework?

Mr. PIEZ. We can not, because the daywork applies only to the new work, and there we can not predetermine a rate. We can estimate, and we try to come within our estimate, but sometimes our judgment is wrong.

Mr. THOMPSON. Do you believe that unions should be held responsible for the breach of agreement?

Mr. PIEZ. Absolutely.

Mr. THOMPSON. Do you think that such a responsibility is essential to collective bargaining?

Mr. PIEZ. I think it is.

Mr. THOMPSON. Have you any idea as to what form such responsibility should take?

Mr. PIEZ. I do not know of any form that would be more efficacious than the incorporation of the unions.

Mr. THOMPSON. That is your opinion?

Mr. PIEZ. That is my opinion.

Mr. THOMPSON. By which they would have a financial responsibility?

Mr. PIEZ. Financial responsibility for any breach of contract; yes.

Mr. THOMPSON. Have you ever followed out the practicability of such a scheme as to whether it could be put into operation or not?

Mr. PIEZ. Not very far.

Mr. THOMPSON. In other words, that comes from the feeling that the unions should be responsible for their actions like other people?

Mr. PIEZ. It comes from the feeling that no body of men who are irresponsible should be permitted to do damage or injury to others.

Mr. THOMPSON. Have your prices to consumers on your products increased or decreased under the open shop?

Mr. PIEZ. They have decreased fully 20 per cent in the last 10 years.

Mr. THOMPSON. Would that be due, in your opinion, to the open-shop policy of your firm?

Mr. PIEZ. We never lower prices unless we have to. It is due to competitive conditions, to open shop. We are able to produce cheaper to-day, and we are forced to pass on whatever we save in production to our consumers. That is the only way we continue to get business.

Mr. THOMPSON. You make an effort in your firm, do you not, to produce efficiently?

Mr. PIEZ. Yes; we make that our business as manufacturers. That is our business as manufacturers.

Mr. THOMPSON. Are your workmen satisfied? Are you willing that inquiry should be made of them on this point?

Mr. PIEZ. Absolutely. I think Prof. Commons and Mrs. Harriman visited our works in Philadelphia, and we extend the same invitation to the commission here to visit our Chicago and our Indianapolis works. I would like to know very much whether there is any discontent in our works, because we would take steps to remedy it.

Mr. THOMPSON. Does the bonus system which is in operation in your shop, in your opinion, have any effect on the quality of the output?

Mr. PIEZ. Are you talking of the bonus system now purely as a bonus? There is a scheme of payment which is known as the "bonus system," in which a definite task is set and a bonus paid for the accomplishment of that task. That is somewhat different from the piece-rate or premium system.

Mr. THOMPSON. Fifty per cent of your men are on daywork?

Mr. PIEZ. Yes.

Mr. THOMPSON. The other 50 are on piecework?

Mr. PIEZ. Yes.

Mr. THOMPSON. Do these men have a premium attached to their piecework or bonus?

Mr. PIEZ. The rate is usually so much per piece. The rate is set sufficiently high so that working a certain number of days they can earn a bonus of 20, 30, or 40 per cent, as the case may be, on their day wage.

Mr. THOMPSON. Does this bonus, in your opinion, have any effect on the quality of the output?

Mr. PIEZ. Yes. To begin with, in the early stages of piecework a man is ambitious to turn out as many pieces as he can, and you have got to inspect it very much more closely. That drops, however, very quickly with proper inspection. So far as errors are concerned, I don't think that the percentage of error in piecework is any higher than it is in daywork.

Mr. THOMPSON. Have you any opinion, Mr. Piez, on welfare work, so called; workmen's compensation laws, bonus systems, accident insurance, and sickness insurance?

Mr. PIEZ. Yes. I was chairman of the Illinois Compensation Commission. I had something to do with the present Illinois act. I was also a member of the commission that framed our factory act. I think in both respects Illinois has taken a very advanced position. All through my connection with those two commissions I did all I could to bring the attitude of the manufacturer toward the favorable consideration of those problems. I am very strongly, as I said before, in favor of following the work with unions for the betterment of conditions. And I have, as some of these gentlemen on the other side know, been quite instrumental in bringing about better conditions in the State of Illinois.

In the act of the compensation commission and the factory act there, principally because of my connection with the Illinois Manufacturers' Association. In both cases the act was drafted by commissions representing both sides, and

so complete was the understanding reached finally that there was absolutely no opposition by either side before the legislature.

Mr. THOMPSON. Then it goes without saying you are in favor of such a proposition?

Mr. PIEZ. Absolutely in favor. I do not know how far I can subscribe to some of these fraternalistic schemes that are mentioned in this catalogue that you have submitted here.

Mr. THOMPSON. For instance, take the sickness insurance.

Mr. PIEZ. Take the sickness insurance—take our sickness insurance at the works—the men contribute 10 cents per week and they get \$7 per week sick benefits, of which the concern contributes \$2. We supply a physician if they ask for it.

Mr. THOMPSON. The very fact you established that voluntarily would rather indicate that if it be put in effect by the proper kind of a law by the State you would probably be in favor of it, would you not?

Mr. PIEZ. Yes. Sometimes I feel that I ought to be permitted to do some nice things myself, without being forced into it by an act of the legislature.

Mr. THOMPSON. Well, what would be your opinion as to unemployment insurance? That has not been asked of you, but have you any opinion on that? Such a law has been passed, you know, in England.

Mr. PIEZ. Yes; I know it. What I have been wondering is, in connection with some of these schemes that I outlined here, is just how far they should go to shatter the fiber of the man himself. Is it proper that a man should be relieved of all sense of responsibility for his future? Is it proper that the State should step in and relieve him of that responsibility? Just what effect is it going to have on the character of the man? That must be taken care of. There is no question about that. In our own work we have tried, in periods like this, to very largely increase our stocks, or staple goods; we build up very large supplies of them and try to make as nearly as we can the employment uniform to tide the men through a period of depression. That is not always possible. But I shrink a little from the State going too far in some of these ventures.

Mr. THOMPSON. Of course, in Germany they have gone pretty far along these lines, and to-day Germany has perhaps increased its productivity; isn't that true?

Mr. PIEZ. Germany has no unemployed insurance any more than sickness insurance. That is perfectly safe, because the insurance is compulsory. In Germany it is not State insurance, it is compulsory insurance, under which the men and the employers themselves contribute. That is perfectly proper.

Mr. THOMPSON. That is what I had in mind when I spoke to you.

Mr. PIEZ. I do not like to go so far as to absolutely subscribe to Mr. Lloyd George's scheme of unemployment insurance in connection with sickness insurance.

Mr. THOMPSON. Even where the people themselves—working people—are compelled to contribute?

Mr. PIEZ. Well, I haven't any real definite opinion on that, except the feeling that the State ought not to go so far as to take away from a man all sense of responsibility for his own future. I do not think it is good for the man.

Mr. THOMPSON. Would that apply to the question of sickness insurance?

Mr. PIEZ. No.

Mr. THOMPSON. Which is the one asked of you?

Mr. PIEZ. No; it would not.

Mr. THOMPSON. What views have you got—you say you are a member of the Illinois Manufacturers' Association—of the need of strong organization of employers, and what field of activity do they have, what methods do they employ?

Mr. PIEZ. I think they have a very proper field. In the first place they help to crystallize among the manufacturers themselves opinions on these very vital questions in which all manufacturers are concerned. I think they ought to cooperate very strongly, and cooperation is proper, with the members of the other side to improve legislation. I think they ought to band together to resist any improper demands that the other side make. There is to-day absolutely no check on the rapidly increasing power which these gentlemen on the other side are exerting—absolutely no check, except the check which employers' associations or manufacturers' associations constitute. And I feel most strongly, if you are going to permit unions to grow stronger, if you are going to extend their privileges by legalizing picketing and boycotting and the other measures to

which they resort, that you have got to either counteract that influence with very strong manufacturers' associations, or you have got to force them to incorporate or else subject them to Federal supervision.

Mr. THOMPSON. How far in the activities of such association would you go? What would be its functions so far as these labor problems are concerned?

Mr. PIEZ. The functions are to argue them out before the legislature, develop arguments against those which they advance; that has been our attitude right straight along.

Mr. THOMPSON. Would they cooperate with one another in cases of labor strikes?

Mr. PIEZ. Our association, the Illinois Manufacturers' Association, is not a defensive association, never dealing with questions of strikes or things of that sort.

Mr. THOMPSON. Did it deal with it in the sense of publicity?

Mr. PIEZ. That is, it might.

Mr. THOMPSON. To create, in the case of an employer, an influence to improperly attack on certain lines—would it seek to create public opinion that would be favorable to the employer?

Mr. PIEZ. I think it would. I think it would be perfectly proper. After all, these questions have got to be settled before the forum of public opinion.

Mr. THOMPSON. That would be perfectly proper?

Mr. PIEZ. That would be perfectly proper as one of its functions.

Mr. THOMPSON. What other necessity would you feel should go into this problem of the relation of labor and capital?

Mr. PIEZ. That is a very wide field. In the one you have outlined I think that about covers the activity of the association.

Mr. THOMPSON. Are you an officer of the Illinois Manufacturers' Association?

Mr. PIEZ. I was president for several years. I am honorably retired at the present time.

Mr. THOMPSON. Does your association, the Illinois association, keep any record of the employees of the different firms? I take it it does not.

Mr. PIEZ. It does not.

Mr. THOMPSON. You do feel that is a proper form of activity for employers' associations?

Mr. PIEZ. Under certain circumstances, yes.

Mr. THOMPSON. What would you consider in the light of that—you consider such a list, should it be kept—what purpose would it serve to the employer?

Mr. PIEZ. It is perfectly proper. Organized labor and unorganized labor both should have their labor exchanges, and that the employers should have some means of drawing on both. You can go to a union any time, to the business representative of a union, and get more men. You can't go in the open market and get unorganized labor unless you keep a list of those, unless you keep in touch with the men.

Mr. THOMPSON. You believe, then, in keeping that list for the purpose of keeping track of the character of employees, whether good or efficient, or whether they are peaceful or whether they are disturbers?

Mr. PIEZ. Yes.

Mr. THOMPSON. You would?

Mr. PIEZ. Yes.

Mr. THOMPSON. Of course, that of necessity would bring you right up to the question of organization?

Mr. PIEZ. Yes; for determining their efficiency.

Mr. THOMPSON. That would bring it to the question of keeping track whether they are members of unions or not?

Mr. PIEZ. It might.

Mr. THOMPSON. That would be a perfectly consistent matter, in your opinion?

Mr. PIEZ. Perfectly, if you want to arrive at that question.

Commissioner O'CONNELL. Would it be the purpose to furnish some other organization with that information?

Mr. THOMPSON. In the doing of that, of course, in the records of an association, they would be subject to inspection by the members of the association?

Mr. PIEZ. I presume so; yes.

Mr. THOMPSON. Either by perusal or by written request or otherwise?

Mr. PIEZ. I presume so.

Mr. THOMPSON. Of course, that would come very close to the proposition of the black list, so called?

Mr. PREZ. I think there is a wide difference, Mr. Thompson, between the two. If you have found it impossible to work in conjunction with a certain organization, and that organization sets about, without your knowledge, to reorganize your works, should you be compelled to submit to that sort of thing, or should you be free to select anywhere labor that is not so affiliated?

Mr. THOMPSON. Perhaps the use of that word was unfortunate in this case. I am not trying to characterize the action, because that is not our purpose to do that.

Mr. PREZ. We have got some men who deal with us in business whom we put on a blacklist; men who have made misrepresentations. We have got a list of customers with whom we do not care to deal.

Mr. THOMPSON. What I mean is this, wouldn't that be what the union organization would call a blacklist?

Mr. PREZ. I presume it would be.

Mr. THOMPSON. And a similar action on your—on their part, toward you, would probably be called a boycott?

Mr. PREZ. Probably.

Chairman WALSH. Does your organization, of which you have knowledge, exchange that information?

Mr. PREZ. No.

Chairman WALSH. That is, as to the undesirability of customers?

Mr. PREZ. There are certain credit organizations, Mr. Walsh, of course, that have that information.

Chairman WALSH. Is there any affiliated manufacturers' association that exchanges such information?

Mr. PREZ. In certain lines; yes.

Chairman WALSH. Are there any unaffiliated manufacturers' associations that exchange information in respect to the desirability or undesirability of employees?

Mr. PREZ. I do not know that they go so far as that.

Chairman WALSH. That is all.

Mr. PREZ. The Illinois Manufacturers' Association is engaged in neither of those operations.

Mr. THOMPSON. Have you any knowledge of the creation or existence of what is called "strike squads" taking the place of striking workmen in the lines of industry you are engaged in?

Mr. PREZ. We never employ them. I do not know anything about them by direct experience.

Mr. THOMPSON. You have no opinion in reference thereto?

Mr. PREZ. None that I care to express, because I have not given it very deep thought.

Mr. THOMPSON. Have you any information with respect to the relation of the courts to these labor problems as to their attitude, whether the court's machinery and the present law are able to handle the proposition?

Mr. PREZ. I have heard some of these gentlemen inveigh very strongly against the court at the hearing of the compensation commission, but I have had a similar cause of complaint in the conduct of our suits, so that I do not feel they have been particularly at a disadvantage in that respect.

Mr. THOMPSON. You feel sort of a mutual complaint?

Mr. PREZ. I feel a deep sympathy with them in some of their complaints; yes, sir. We have got a suit that has been pending two and one-half years. We have got \$20,000 worth of machinery working, and we have never got it. The suit is still pending. We have not been able to do anything with that, and I feel somewhat aggrieved myself sometimes.

Mr. THOMPSON. Just take into consideration now the relation of the law to the labor problem. Have you ever given any consideration as to whether or not the law as it has grown up out of the past industrial conditions is able to meet completely the present state of society or organization of industry?

Mr. PREZ. The old law was not, in my opinion; but with the additions that have been made in the State in the last three or four years, I think a great many causes of complaint have been wiped out. Some have been left.

Mr. THOMPSON. What are those conditions?

Mr. PREZ. In the first place, the factory act, looking after the safety of the men and women employed in factories; the compensation act; the child-employment act; occupational-diseases act; all those have helped in bettering conditions and removing a great many complaints justly made against employment and employers.

Mr. THOMPSON. Narrowing it down for the present moment to the field of controversy where conflict exists between the union and your firm, is the law in its present condition able to take care of that?

Mr. PRZ. I don't see it helps it very much.

Mr. THOMPSON. Have you given any thought to whether any machinery might be established by law in which these conflicts might be reviewed and justice given to both sides?

Mr. PRZ. I was a member of the Illinois Arbitration Board during one conflict, and my experience prompts me to say that a board of that kind does not fully cover the needs of the situation. I believe the act could be expanded so that investigations could be made of conditions and publicity given those conditions so that public opinion would itself force a settlement. It is not always safe when labor makes a demand to assume that the demand is just, nor is it always to be understood that the employer has right on his side. But I don't feel any power ought to be given to the union to coerce the employer or any power given to the employer to coerce the union unless right is on his side.

Mr. THOMPSON. How do you feel in regard to the issuance of injunctions? That the present courts or a new court might be established to have the power to issue injunctions if necessary and the power to review the industrial cause?

Mr. PRZ. I think they ought to have the power. Discontent usually acts first and thinks afterwards. When it gets started you ought to be able either to enjoin violence and to insist on law or you have to give the manufacturer or employer an opportunity to protect himself from the effect of such violence, and I think the latter is a very bad alternative.

Mr. THOMPSON. Of course you know at the present time, when an employer goes into court and asks an injunction, the whole matter is decided irrespective of the industrial dispute and the rights or wrongs that may exist.

Mr. PRZ. Is that always so? I don't agree with you on that proposition.

Mr. THOMPSON. I would say yes, of course. What I mean to say is that as a matter of law the court deals only with legal rights—legal rights don't include settlement of industrial disputes. I understood from you that you have no objection to giving a court further rights, not only to decide the legal right, but to decide the right or wrong of the industrial question.

Mr. PRZ. To give them some rights.

Mr. THOMPSON. You use the words "they should have the alternative right of protecting themselves."

Mr. PRZ. Employ their own men in the defense of their property. That is what I mean—employ deputies.

Mr. THOMPSON. And private detectives?

Mr. PRZ. If such are necessary.

Mr. THOMPSON. In protection of their own property in case of trouble?

Mr. PRZ. We don't get very much support from the police as a rule.

Mr. THOMPSON. What, in your opinion, is the reason for that?

Mr. PRZ. That is a deeper question than I care to discuss.

Mr. THOMPSON. Do you see any danger in the use of private detectives and what is known sometimes as gun squads?

Mr. PRZ. I think it is a very pernicious thing to do, and I don't think the opportunity ought to be afforded to do it, but the cause ought also to be removed. There should not be an opportunity on the other side to do violence until the question of right and wrong in the case has been settled.

Mr. THOMPSON. Do you think such an institution as an industrial court would help?

Mr. PRZ. I think that would help. I think it would help very materially. Perhaps both sides would be willing enough and sane enough to await the decision of such court before taking action.

Mr. THOMPSON. You spoke of the board of arbitration you served on. Have you any views as to the kind and method of arbitration which will succeed the best in the settlement of disputes?

Mr. PRZ. Arbitration is a difficult thing. I have found it absolutely impossible to satisfy both sides. Usually both sides are dissatisfied after you get through. But the mere fact that both sides have the opportunity of stating their case before a board helps to lead to a better understanding.

Mr. THOMPSON. When you were on the State board of arbitration you were called on by people to settle individual cases?

Mr. PRZ. The trouble with the State board is it is always charged with having a political flavor. It may or may not have, and that is a bad thing to inject into any controversy.

Mr. THOMPSON. Have you given any consideration to the establishment of arbitration boards in industries, where they serve permanently as on the State board and come in close contact with the working conditions and people?

Mr. PRZ. I haven't given that much thought; but it should be reasonable.

Mr. THOMPSON. Do you consider it a defect of the law that a union can make this agreement and do wrongful damage without any civil liability in many States?

Mr. PRZ. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Weinstock would like to ask you some additional questions.

Commissioner WEINSTOCK. You were telling us of the experience you had in New York some years ago with Sam Parks in the saddle, and how, despite the fact that he was a crook and bribe taker, he was knowingly kept in the saddle by the unions, so that you found it impossible to do business under those circumstances.

Mr. PRZ. He was convicted, as you remember, Mr. Weinstock. That is the reason I said he was a crook—because he was a convicted one.

Commissioner WEINSTOCK. Could he have been a bribe taker if there had been no bribe giver?

Mr. PRZ. You can't have one without the other; but if a man puts a gun up against your head, what are you going to do?

Commissioner WEINSTOCK. I suppose I would cough up if there was nothing else possible.

Mr. PRZ. That is exactly what you would do, and that is what any employer would do. I have got just that kind of spirit.

Commissioner WEINSTOCK. I am not thoroughly familiar with the history of Sam Parks; I simply have an imperfect recollection of the circumstances, but as near as I can recollect, he was in the saddle for quite a while.

Mr. PRZ. Quite a long time.

Commissioner WEINSTOCK. Can you tell us about how long?

Mr. PRZ. I would not venture. Perhaps six or seven years. I am not real certain. He had succeeded in getting a considerable wage increase for the men. That is one thing, of course, that helped him maintain himself in the saddle, and I presume the men felt whatever else he could get was simply a perquisite of the job.

Commissioner WEINSTOCK. I presume it is safe to say that practically all of the time he was there he was a crook?

Mr. PRZ. He may not have started as one. Perhaps opportunity made him one.

Commissioner WEINSTOCK. If it is a fact he was a crook for a good deal of that time, did not the manufacturers who were held up as stated here have the amplest possible time to bring him to justice?

Mr. PRZ. Very likely.

Commissioner WEINSTOCK. Then, were not the employers to blame for not having brought him to justice?

Mr. PRZ. Taking it from a theoretical, highly moral point of view, yes, sir; from a practical point of view, I am not so certain. The consequence of engaging with a man like Parks, if you are in the construction business in a market like New York—a man who holds absolutely in his power the entire labor situation in the field you are engaged in, I think would make a man think twice before he would proceed against him.

Commissioner WEINSTOCK. As I recollect the circumstance, Parks was bribed by certain employers to declare strikes against other certain employers.

Mr. PRZ. That was the rumor at the time.

Commissioner WEINSTOCK. That was proven at the time?

Mr. PRZ. I understand that was the rumor at the time. I don't know what the proof was.

Commissioner WEINSTOCK. If that is the fact, were not those employers who bribed Parks to declare a strike as much to blame as Parks?

Mr. PRZ. Just as criminal, and ought to have gone to the penitentiary with him.

Commissioner WEINSTOCK. Did they?

Mr. PRZ. I didn't hear of any of them going.

Commissioner WEINSTOCK. So that it was a sort of one-sided punishment?

Mr. PRZ. Punishment usually is.

Commissioner WEINSTOCK. What steps do employers take to drive out of their ranks dishonest employers?

Mr. PIER. They are taking more and more. All of this question has been much better generalized in the last 10 years or more. I don't know whether you are an employer or manufacturer or not, but I think the standard of morals is higher to-day in every line of business than it ever was before, and I think the associations have a very large field doing just that sort of thing. We are, of course, small fry, and Parks, of course, held up the little fellows as well as the big. We had no interest in declaring strikes on the other fellow; we were simply the victims. He made it impossible to do anything except bow to his wishes.

Commissioner WEINSTECK. You called attention also to the fact that collective bargaining had proven in your experience very unsatisfactory. What is the weak spot? Why did collective bargaining prove unsatisfactory?

Mr. PIER. The weak spot in all cases is the great difficulty in determining any standard by which to judge what is a fair day's work. There is so much variety in the metal trades, of course that it is impossible to use any yardstick by which to measure a fair day's work, and there is an opportunity for a very wide difference of opinion. The unscrupulous, conscienceless employer may demand more than he is entitled to. At the same time the unwilling employee may be very unwilling to do as much as he ought to. There is always that difference.

Commissioner WEINSTECK. If that is the weak spot under collective bargaining, isn't it likely also to be the weak spot under individual bargaining? Wouldn't that apply to both conditions?

Mr. PIER. No, sir; because individuals are engaged in a certain general line of work, and quite frequently while you have no direct standard you have an indirect standard of measurement. If you have ever seen a lathe operate, you know it has a capacity for a certain depth of cut and a certain speed. It may travel an inch or 2 inches in a certain specified time. It is comparatively easy to compute mathematically just how long that machine will take to remove a certain amount of metal, but you can only do it mathematically. It is not in the foreman's head or the workman's head. It is a matter of mathematical calculation. It is a complex problem depending on the character of the tool and the amount of power you put into it. So that in each case you have certain factory peculiarities which may make it a very difficult problem. I am talking more particularly of our own work, where there is very little repetition.

Commissioner WEINSTECK. In your work you have the efficiency system?

Mr. PIER. As far as it can be properly and economically applied.

Commissioner WEINSTECK. Under the efficiency system there is an incentive offered a man for higher efficiency?

Mr. PIER. Yes, sir.

Commissioner WEINSTECK. And your system of scientific management applies in instances where men are worth above the standard. If they prove themselves as being worth above the standard they are rewarded accordingly?

Mr. PIER. Yes, sir.

Commissioner WEINSTECK. Each man gets all he can make himself worth?

Mr. PIER. Yes, sir.

Commissioner WEINSTECK. But he starts with a standard wage, I take it?

Mr. PIER. Yes, sir.

Commissioner WEINSTECK. A standard or guaranteed sum?

Mr. PIER. Yes; he only earns so much.

Commissioner WEINSTECK. But with increased effort he can earn still more?

Mr. PIER. Yes, sir.

Commissioner WEINSTECK. It would seem to me under your scientific system the opportunity for collective bargaining would be better than where there is no scientific system, because there would be room, it would seem, for collective bargaining in determining the standard wage—the minimum wage and working conditions. The employer would be protected by a system of getting out of a man his best. Why can not collective bargaining go hand in hand with scientific management?

Mr. PIER. It can; but it has to be approached at a very radically different angle than it is approached to-day. Where a demand is made for a certain horizontal wage.

Commissioner WEINSTECK. That would be a minimum wage?

Mr. PIER. That may be a minimum, but it is impossible as a minimum, because it takes no cognizance of the condition itself.

Commissioner WEINSTECK. Couldn't that be adjusted by arbitration on both sides?

Mr. PIER. It certainly could.

Commissioner WEINSTOCK. The employers' organizations in Chicago—take the metal trades, are they organized?

Mr. PRIZ. We have a branch of the metal trade here.

Commissioner WEINSTOCK. There may be some good reason that I, as a layman, do not know anything about, but will you point out why could not the metal trades, with the iron association, come together and adjust these differences, assuming there are unreasonable points on both sides—why could not they be adjusted by reasonable discussion and submission to some third party, where they could not be agreed upon?

Mr. PRIZ. Because few of the shops work under the same conditions. A great many of them haven't reached their high degree of efficiency. Many of them use old tools.

Commissioner WEINSTOCK. You were going on to explain that the conditions in different shops were so different it would be hard to standardize them.

Mr. PRIZ. Yes; I think it will probably eventually do that. It is most probably a very proper field for this commission to investigate.

Commissioner WEINSTOCK. How can the day be brought nearer when that will be the prevailing condition?

Mr. PRIZ. I am afraid that is a more proper question to you gentlemen than to me.

Commissioner WEINSTOCK. But we want help, and from just such men as you.

Mr. PRIZ. I would be glad to give you help, but I haven't given that particular phase study enough to give an opinion that would be worth while.

Commissioner WEINSTOCK. You also spoke about some system whereby there could be hearings on both sides with a view of settling any difficulties—any differences that might develop between employers and workers—some Canadian board. Do you have such hearings before or after cessation of work?

Mr. PRIZ. Preferably before, and I would enjoin both sides from taking any steps during such hearing.

Commissioner WEINSTOCK. You would prevent the employer from locking out the workers?

Mr. PRIZ. Yes, sir.

Commissioner WEINSTOCK. And prevent the workmen from resorting to strikes?

Mr. PRIZ. Yes; picketing and such things.

Commissioner WEINSTOCK. Substantially you would favor the Canadian system?

Mr. PRIZ. Substantially. I very strongly favor the Canadian system of arbitration.

Commissioner WEINSTOCK. Whereby there can be no strikes or lockouts in public utilities until after the State has intervened and endeavored to bring about an understanding?

Mr. PRIZ. Yes; and ventilated both sides.

Commissioner WEINSTOCK. You would favor that?

Mr. PRIZ. I favor that very strongly.

Commissioner WEINSTOCK. That would tend to minimize strikes?

Mr. PRIZ. Yes, sir.

Commissioner WEINSTOCK. And bring about more cordial relations between employer and workers?

Mr. PRIZ. It would give time to bring about reflection, and I think they would be more reasonable than after they have mauled each other.

Commissioner WEINSTOCK. In your judgment that would be one way to minimize labor troubles and bring about better labor conditions?

Mr. PRIZ. I should think that would be one of the recommendations that the commissions should submit.

Commissioner WEINSTOCK. That is all.

Chairman WALSE. Mr. Garretson would like to ask you a question or two.

Commissioner GARRETSON. Speaking of the Canadian act, you are familiar with its workings?

Mr. PRIZ. I have heard it described.

Commissioner GARRETSON. You have had no personal contact with it?

Mr. PRIZ. I have had no personal contact with it.

Commissioner GARRETSON. Are you aware of the fact it is admitted on that side of the line, even by the officers who have administered it, that it has been invariably utilized by employers to fortify themselves in the period in which no action could take place?

Mr. PRIZ. I did not know any such charge as that rested against the act.

Commissioner GARRETSON. You have had no opportunity to read the testimony that has been given on that subject here?

Mr. PRIZ. No, sir.

Commissioner GARRETSON. A little investigation I think will convince you as to whether or not it has been so utilized.

Mr. PRIZ. How would that weigh against the act?

Commissioner GARRETSON. How would that weigh against the act?

Mr. PRIZ. Yes; why should that be counted against the act? Does that destroy the effectiveness of the act? Can't you remove that effect urged against the act and make it a good workable act?

Commissioner GARRETSON. Yes; take that feature out.

Mr. PRIZ. That is what I mean.

Commissioner GARRETSON. Let's go back to Sam Parks.

Mr. PRIZ. That is ancient history.

Commissioner GARRETSON. I know it is. I just want one more touch of it. Take it from a basis of pure ethics.

Mr. PRIZ. Pure ethics?

Commissioner GARRETSON. Pure ethics for a moment. Is a briber or a man who sells himself worse?

Mr. PRIZ. There is only one answer to that question. I think that both—

Commissioner GARRETSON. I will go this far along the road. I say to you I believe the man who sells himself is a criminal and ought to be convicted.

Mr. PRIZ. I will say to you a man who buys him ought also to be convicted.

Commissioner GARRETSON. In your experience in dealing with men of the Parks style—

Mr. PRIZ. I did not say I bought Mr. Parks.

Commissioner GARRETSON. I know it.

Mr. PRIZ. I want that clear.

Commissioner GARRETSON. I did not say I was bought, either. In dealing with representatives of labor and dealing with the employers of labor, in your own personal experience, have you found more men in labor circles ready to be bought than you found purchasers on the other side?

Mr. PRIZ. Parks was my only experience, and that wasn't a direct one. All the other fellows I have met in labor circles have been very straight fellows. I have differed with them on many subjects. I have never had the opportunity to buy them.

Commissioner GARRETSON. Have you found anybody you believed was ready to purchase on the other side?

Mr. PRIZ. I presume where men are willing to sell some men are willing to buy, where they can profit by it.

Commissioner GARRETSON. Do you presume one purchaser would have given Parks the reputation he had?

Mr. PRIZ. He would have to be a pretty big purchaser.

Commissioner GARRETSON. He would have to wholesale?

Mr. PRIZ. Yes, sir.

Commissioner GARRETSON. You spoke that when you were dealing with the men in matters of wages and conditions you were the agent of the consumer; that when you were dealing with the consumer you were the sales agent for the men. Assuming that that is correct, a man in that position, placing himself in that attitude, if he desires to take advantage of the two opportunities, it would be an ideal condition for abuse, would it not?

Mr. PRIZ. It certainly would be; yes, sir.

Commissioner GARRETSON. You say that under the system that has grown up you have been able to sell in the last 10 years 20 per cent cheaper to the consumer?

Mr. PRIZ. We have been forced to sell.

Commissioner GARRETSON. At any rate, that includes being able, if you survive?

Mr. PRIZ. That is it.

Commissioner GARRETSON. How much increase has there been in the wages of your men during the period that 20 per cent has been taken off the selling price?

Mr. PRIZ. I should say probably a general advance during that period of about 30 per cent, I presume; perhaps more.

Commissioner GARRETSON. What has been the increase in the cost of living?

Mr. PRIZ. According to the tables, perhaps the same.

Commissioner GARRETSON. What tables?

Mr. PIEZ. General. I am taking them all through.

Commissioner GARRETSON. Is there a table in existence that wouldn't put it 19 per cent higher than 40 in that period? Does not the Government table show about 59 per cent?

Mr. PIEZ. That only covers a part of it, don't they? They simply cover the food end of it.

Commissioner GARRETSON. Is there any nonpartisan table that shows less?

Mr. PIEZ. That you will have to answer for yourself. You evidently know more about that than I do.

Commissioner GARRETSON. I have been putting them in evidence lately.

Mr. PIEZ. Probably.

Commissioner GARRETSON. Sworn tables from all sources.

Mr. PIEZ. I want to correct one impression. I said our men advanced about 30 per cent. They may have gone up 40 or 50 per cent. I am talking entirely from memory, and if you want that I would be glad to give them to you.

Commissioner GARRETSON. I don't want to know what the difference in wages is, but the difference in earnings. I am using those in distinction.

Mr. PIEZ. I don't think wages have gone up faster than the cost of living.

Commissioner GARRETSON. Do you know, as a general proposition, where wages have advanced faster than the cost of living?

Mr. PIEZ. I think during the Parks period they advanced very materially in certain trades for a time.

Commissioner GARRETSON. Was that Sam alone, or others?

Mr. PIEZ. Sam and others.

Commissioner GARRETSON. When men are confronted with a condition—that is, in commercial pursuits—where it is necessary to pay tribute if they are to continue in a certain field of trade, have you any opinion as to whether the moral sense or profit comes out winner ordinarily?

Mr. PIEZ. That depends altogether on the man.

Commissioner GARRETSON. It won't apply to a class?

Mr. PIEZ. It won't apply to what?

Commissioner GARRETSON. A class.

Mr. PIEZ. Well, I think it might be broad enough to include a class.

Commissioner GARRETSON. What is the common rule? Will the profits take precedence over moral scruples?

Mr. PIEZ. I don't think it is a matter of scruples so much as it is a matter of moral courage.

Commissioner GARRETSON. He can preserve his scruples if he has the courage?

Mr. PIEZ. That is hardly a fair statement of it, is it?

Commissioner GARRETSON. I don't know.

Mr. PIEZ. I am asking you.

Commissioner GARRETSON. I was asking you.

Mr. PIEZ. I would like to have a little reciprocity on that. I would like to be able to ask you occasionally.

Commissioner GARRETSON. You refer to the fact you could not run a business without discipline. I am not fully agreed with that, but as long as you have been in the service you ought to be reasonably familiar with what old conditions furnish the foundation for the demand of the average union in regard to discipline. Do you know what they were?

Mr. PIEZ. Some of them.

Commissioner GARRETSON. From your standpoint upon what was it based?

Mr. PIEZ. Probably excessive demands made upon the men by some employers.

Commissioner GARRETSON. Isn't it true that the ordinary phase of discipline—bearing in mind I am much more familiar with discipline in some lines than I am others—

Mr. PIEZ. I don't refer to discipline as military discipline, but a sort of co-operative spirit that must exist.

Commissioner GARRETSON. I am referring to the discipline that means loss of their rights, that means loss of a hearing, either discharge or a mark, as the case may be. Isn't it largely founded on conditions that existed prior to the existence of the union, of favoritism, making of places for incompetent relatives, and other performances of that character?

Mr. PIEZ. I don't know of any business in which the methods you have just referred to would lead to success.

Commissioner GARRETSON. It is a secondary question sometimes to taking care of relatives.

Mr. PEEK. If you take care of too many I think the business would probably break its back.

Commissioner GARRETSON. I know railroad companies that haven't a relative, and I know others that run a foundling asylum.

Mr. PEEK. I am sorry for the stockholders.

Commissioner GARRETSON. So am I. I have expressed myself sorry on many occasions. You spoke of welfare work, that you had a feeling you ought to be permitted to do certain things without being compelled to.

Mr. PEEK. I think it gives a person better satisfaction.

Commissioner GARRETSON. A better taste in the mouth?

Mr. PEEK. Yes, sir.

Commissioner GARRETSON. Unless it was compelled, what proportion of employers in general, as far as your experience goes, would do those things? How many employers do you know of—what has your experience shown you in regard to sickness insurance? How many put it in?

Mr. PEEK. My experience with the employers is evidently much more favorable, and I have a much higher opinion of them than you seem to have.

Commissioner GARRETSON. Is your experience wider with them than mine?

Mr. PEEK. With manufacturers, I believe.

Commissioner GARRETSON. I said with the employers.

Mr. PEEK. I am talking about manufacturers.

Commissioner GARRETSON. How many out of every one hundred have accident insurance?

Mr. PEEK. I am not going into your field. Probably you are an expert on that. I wouldn't venture an opinion in your field, but I do know my own. I know the men I have associated with in these associations, and I say a great many of them do nice things and do them without force or constraint.

Commissioner GARRETSON. And how many do it?

Mr. PEEK. There are some who do not.

Commissioner GARRETSON. How many within your knowledge have a sick insurance plan?

Mr. PEEK. Most of the larger institutions have it. The smaller employers can hardly afford to have it.

Commissioner GARRETSON. The most of the large institutions have sick insurance?

Mr. PEEK. Some to my knowledge have some beneficial insurance scheme.

Commissioner GARRETSON. Beneficial and sickness insurance are two different things.

Mr. PEEK. Hardly that. Why does not one cover the other?

Commissioner GARRETSON. But as sickness insurance, pure and simple, is it very common?

Mr. PEEK. Yes; it is quite common among employers.

Commissioner GARRETSON. Take the Illinois Manufacturers' Association, what proportion of them have it?

Mr. PEEK. You are asking a very broad question that would require some analysis to answer, but I think a great many large manufacturers have it.

Commissioner GARRETSON. Can you furnish the number of those?

Mr. PEEK. I will try to.

Commissioner GARRETSON. I would be glad to have it.

Mr. PEEK. Yes; I think it will probably improve your opinion when you get it.

Commissioner GARRETSON. I want to know if the manufacturers are better people than the railroads of Illinois.

Mr. PEEK. They are probably average people with the same frailties and virtues.

Commissioner GARRETSON. If they have the same average of sickness insurance that the railroad companies have, you are playing a mighty lone hand. That is all.

Chairman WALSH. Mr. Ballard would like to ask you a few questions.

Commissioner BALLARD. You spoke of the cost of wages and the cost of living. Do you think the standard of living has been increased or not in the last 10 or 15 years on the part of workmen and the public generally?

Mr. PEEK. I think so.

Commissioner BALLARD. You think it is not so much the cost of living as it is the cost of high living that has increased?

Mr. PRIZ. There is a great demand that people generally make for things that used to be considered luxuries.

Commissioner BALLARD. You haven't found flour advanced?

Mr. PRIZ. No, sir.

Commissioner BALLARD. That is cheaper than it was before.

Mr. PRIZ. So is sugar.

Commissioner BALLARD. You spoke of the metal trades and the molders' association being unions you could not treat with, but you did treat with some of the woodworkers' unions.

Mr. PRIZ. We deal with the carpenters and millwrights.

Commissioner BALLARD. You are willing to treat with unions that are fair?

Mr. PRIZ. It depends on the leadership of the unions.

Commissioner BALLARD. That is all.

Chairman WALSH. Mr. Lennon would like to ask a question or two.

Commissioner LENNON. I would like to ask you a question and have you reply by communication, if you will. The substantial thing—

Mr. PRIZ. Will you have that question sent to me, or shall I take it down now; I am not a shorthand operator.

Commissioner LENNON. The substantial thing for which this commission is created is to ascertain the underlying causes of industrial unrest, and report to Congress such remedies as the commission believes might help cure or eliminate this unrest which, in part, may be considered dangerous to our civilization. I would like to ask you a great lot of questions to bring that out, but there is not time. The weather is nice, and on your way to New York you can study it.

Mr. PRIZ. All right. You want me to answer that.

Chairman WALSH. He said you could think that out and give us your best constructive suggestion after thought and send it to the secretary of the commission. Prof. Commons would like to ask a question.

Commissioner COMMONS. You stated you were on the Illinois State Board of Arbitration awhile.

Mr. PRIZ. For just a short period.

Commissioner COMMONS. And your experience showed the reason that board was not effective was because it was either actively or supposed to be political?

Mr. PRIZ. The general feeling was it was political. Of course, it was an appointed board.

Commissioner COMMONS. Appointed by the governor?

Mr. PRIZ. Appointed by the governor. The members of the board at that time—there were three of us. I have never had any connection with politics, so that I could hardly be considered political, and as far as I know the others were not political. I think the board did actually try to fill the function of the act, but the general feeling both among employers and the laboring classes was it did have a political flavor and therefore it didn't resort to it and did not have confidence in it.

Commissioner COMMONS. Did your experience suggest any way by which such board could be constituted that would not have this reputation or not have this bias of politics?

Mr. PRIZ. Well, it did. I always felt a larger board, in the first place, was a better board, because in some of the larger controversies it is a pretty heavy burden to put on three men, and I believe that a board that has perhaps one member appointed by the State and two members appointed by each of the two sides might be more effective.

Commissioner COMMONS. By the two sides, applying to Illinois, what would be the organization?

Mr. PRIZ. Say, in the case of a manufacturer's controversy with his men, I would consider the union involved as one side and the manufacturers' association as the other side.

Commissioner COMMONS. That would mean a temporary board.

Mr. PRIZ. A temporary board for each controversy. You don't get, of course, continuity of decisions in that case.

Commissioner COMMONS. Was the board you were on permanent?

Mr. PRIZ. A permanent board. We have an act in Illinois that covers a permanent State board of arbitration.

Commissioner COMMONS. I understand that act has been ineffective.

Mr. PRIZ. It has been very ineffective.

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3195

Commissioner COMMONS. I was trying to get at your idea how to improve that. Take the permanent board. How would you get rid of that political bias?

Mr. PIEZ. I would give the employer and the working people an opportunity to suggest names from which a selection should be made.

Commissioner COMMONS. Is that not done at the present time? Were you not nominated by the Illinois Manufacturers' Association?

Mr. PIEZ. No, sir.

Commissioner COMMONS. The governor just picked you out?

Mr. PIEZ. Just picked me out, I think. I don't know how the honor came to me. It was very unsought for. I tried to dodge it, but I could not.

Commissioner COMMONS. You would have the manufacturers submit a certain number to be selected from?

Mr. PIEZ. Yes, sir.

Commissioner COMMONS. And the unions to submit a certain number?

Mr. PIEZ. Yes, sir.

Commissioner COMMONS. Now, would you have them receive salaries?

Mr. PIEZ. While in service, yes.

Commissioner COMMONS. A per diem salary?

Mr. PIEZ. Yes; a per diem salary.

Commissioner COMMONS. Would you have it a so-called public representative in any way?

Mr. PIEZ. Yes.

Commissioner COMMONS. How would you have them nominated?

Mr. PIEZ. I am afraid to suggest the member of the court; he might be a good presiding officer.

Commissioner COMMONS. An ex officio judge of the court?

Mr. PIEZ. Yes; I think he might represent the public.

Commissioner COMMONS. He could not serve—devote his whole time to the work?

Mr. PIEZ. No; but I don't think it would take his whole time.

Commissioner COMMONS. You think they should have a staff?

Mr. PIEZ. Yes; to take up the smaller controversies.

Commissioner COMMONS. How would you select that staff?

Mr. PIEZ. I would leave that with the board.

Commissioner COMMONS. Would you have them under civil service?

Mr. PIEZ. Yes.

Commissioner COMMONS. Subject to examination?

Mr. PIEZ. Yes.

Commissioner COMMONS. Would they be mediators?

Mr. PIEZ. They ought to be selected for that purpose.

Commissioner COMMONS. Do you think a civil-service examination would bring that out?

Mr. PIEZ. It does not always.

Commissioner COMMONS. Do you think constituting a civil-service commission—six selected by the employers and six by the union—should be a joint civil-service commission?

Mr. PIEZ. I think that would probably be the best way to arrange it.

Commissioner COMMONS. Does it occur to you that that would eliminate the politics?

Mr. PIEZ. It ought to.

Commissioner COMMONS. Why?

Mr. PIEZ. Because the interests of the two are so vital that they ought to see to it that they get the proper men.

Commissioner COMMONS. Do you think it would be sufficiently important for this commission to recommend some system as that, that would eliminate politics from the State boards of mediation?

Mr. PIEZ. I would like to look into that further and write you about it.

Commissioner COMMONS. Do you consider that a plan like this would be something that could be considered?

Mr. PIEZ. Yes; I do.

Commissioner COMMONS. Now, the members, you think, need not give their whole time, but they might employ subordinates?

Mr. PIEZ. Yes.

Commissioner COMMONS. Now, that board thus constituted, which would be a large board, would be a civil-service commission to appoint mediators?

Mr. PIEZ. Yes.

Commissioner COMMONS. And they should have powers—what kind of powers would you give them?

Mr. PIEZ. You would have to give them summary powers, I presume.

Commissioner COMMONS. Would you give them power to make investigations on their own initiative?

Mr. PIEZ. Yes; whenever they heard of a threatened strike.

Commissioner COMMONS. And would give them power to subpoena witnesses?

Mr. PIEZ. Yes, sir.

Commissioner COMMONS. And subpoena them to bring in books?

Mr. PIEZ. Yes.

Commissioner COMMONS. And they would try to bring about settlement?

Mr. PIEZ. Yes.

Commissioner COMMONS. And if they could not do so, what?

Mr. PIEZ. Refer it to the board.

Commissioner COMMONS. And that would be final?

Mr. PIEZ. Yes.

Commissioner COMMONS. Have you considered how you could extend that to the State, as well as Federal Government?

Mr. PIEZ. I have not.

Commissioner COMMONS. Offhand, does there seem to be any reason why it should not be extended to the Federal Government?

Mr. PIEZ. I can not see any reason—none that I can think of just now.

Commissioner COMMONS. During your incumbency in this board were any strikes you had to deal with interstate in character?

Mr. PIEZ. We dealt with one switchmen's strike here.

Commissioner COMMONS. Did that involve other States?

Mr. PIEZ. Yes; it threatened to involve others.

Commissioner COMMONS. Did your power extend to any other trade?

Mr. PIEZ. I think Mr. Whitney, who represented the trainmen's union, practically accepted the findings of this committee to extend to several points—Omaha, Kansas City, and St. Louis; this was some five or six years ago, one strike in question.

Chairman WALSH. I promised this witness protection as to his train.

Mr. PIEZ. I have to be in Philadelphia to-morrow.

Commissioner WEINSTOCK. The professor here has offered certain suggestions, and your remarks are invited to this question: Imagine the link manufacturers nominating 12 men and the labor organizations nominating 12 men, and imagine those 24 men appointed by the commission, and that condition arising in your own industry, and you selecting 3 employers out of the panel of 12 and the workers selecting 3 workers out of the panel of 12, and these 6 sitting as a board of conciliation; do you know of any reason why that plan should not work out as a board of mediation and conciliation?

Mr. PIEZ. It might, because, after all, both sides have got to get together.

Chairman WALSH. We are going to excuse Mr. Piez now.

Commissioner WEINSTOCK. If you can see any weak spots in that, I wish you would let us know.

Mr. PIEZ. I will give that my best thought.

Chairman WALSH. Call your next witness.

TESTIMONY OF MR. JOHN H. WALKER.

Mr. THOMPSON. You may state your name, please.

Mr. WALKER. John H. Walker.

Mr. THOMPSON. Where do you live?

Mr. WALKER. At Danville, Ill.

Mr. THOMPSON. What position do you hold with any labor organization?

Mr. WALKER. President of the Illinois State Federation of Labor.

Mr. THOMPSON. How long have you been president of that organization?

Mr. WALKER. About 10 months.

Mr. THOMPSON. What position did you occupy prior to that time?

Mr. WALKER. President of the Illinois Miners' Union.

Mr. THOMPSON. Is that connected with the United Mine Workers?

Mr. WALKER. That is the largest district in it.

Mr. THOMPSON. How long were you in that position?

Mr. WALKER. Between seven and eight years.

Mr. THOMPSON. What were you doing before that, as far as the union was concerned?

Mr. WALKER. I acted as a member of the executive board of that, and as the district president and international organizer and district organizer.

Mr. THOMPSON. For how many years has your activity in official positions continued?

Mr. WALKER. Fifteen years the 18th of last June.

Mr. THOMPSON. What is the purpose of the organization of the Illinois State Federation of Labor?

Mr. WALKER. To insist in seeing that those who work for a living get as full justice as possible.

Mr. THOMPSON. How is the jurisdiction of that order differentiated from that of the Chicago Federation of Labor in Chicago or the local craft? How is it supposed to operate and the system of its operation?

Mr. WALKER. The Illinois State Federation of Labor has not got any positive authority in dealing with the affairs of the other organizations that make it up, except as delegated by those organizations. The Illinois State Federation of Labor, as I understand it, is supposed to perform the same duties and exercise the same powers and assume the same responsibility for the trade-unions in the State as the Chicago Federation of Labor has in this city or the American Federation of Labor has in the country.

Mr. THOMPSON. Is there any possibility of difficulty between the Chicago Federation of Labor in Chicago and the Illinois State Federation of Labor?

Mr. WALKER. There is likely to arise differences of opinion in the matter of policy.

Mr. THOMPSON. Your body is affiliated with the American Federation of Labor?

Mr. WALKER. Yes.

Mr. THOMPSON. And holds a charter from them?

Mr. WALKER. Yes.

Mr. THOMPSON. And the Chicago Federation of Labor does the same thing?

Mr. WALKER. Yes.

Mr. THOMPSON. I take it that the constitution and by-laws of the American Federation of Labor would show the jurisdiction and authority of your body, would it not?

Mr. WALKER. Yes; I think it clearly sets forth the authority of the State union.

Mr. THOMPSON. Are all the organizations affiliated with the American Federation of Labor, and by that means affiliated with your organization?

Mr. WALKER. No.

Mr. THOMPSON. And it is optional with the unions in this State as to whether they want to affiliate with you?

Mr. WALKER. The by-laws of the American Federation of Labor makes it incumbent for the unions in this State to affiliate with the Illinois State Federation of Labor, but no penalty is inflicted if they do not, and some are not affiliated.

Mr. THOMPSON. And if they are not affiliated they do not contribute to the maintenance of your organization?

Mr. WALKER. They do not contribute financially; no.

Mr. THOMPSON. What is the attitude of your organization in regard to industrial unions, where a body in this State is a member of the American Federation of Labor, but is not affiliated with your body?

Mr. WALKER. We render them every assistance we can, just the same as though they were affiliated with us, but we do not feel under the same obligations to them as though they were.

Mr. THOMPSON. Your attitude to them in that respect would be the same as to any organized labor?

Mr. WALKER. I believe I can say yes to that question.

Mr. THOMPSON. Have you a printed constitution or by-laws of the Illinois State Federation of Labor?

Mr. WALKER. I have some at home.

Mr. THOMPSON. Will you furnish a copy?

Mr. WALKER. Yes.

Mr. THOMPSON. Generally speaking, what have been the activities of the Illinois State Federation of Labor since you have been president of it?

Mr. WALKER. Well, we have looked into the matter of the laws as they exist in the State, as they affect the workers, with a view of making matters adjust

themselves; and we have looked into the records of some of the men who have made those laws, so as to determine their attitude against labor. And where workers have been unorganized and their wages and hours of labor, and the conditions of labor have been unfair, or absolutely unjust, we have done what we could to remedy that, and have done what we could to organize them. And where they have been organized we have rendered assistance to get improvement in wages and in the hours of labor.

Mr. THOMPSON. What control has your organization over unions affiliated with it, and how would that control, if any, be evidenced?

Mr. WALKER. We have no positive control at all.

Mr. THOMPSON. Have you a right to expel an affiliated member, perhaps?

Mr. WALKER. We have not a right to expel affiliated members that comply with the law.

Mr. THOMPSON. You hold conventions in the State?

Mr. WALKER. Yes; every year.

Mr. THOMPSON. And the convention is the supreme lawmaking power?

Mr. WALKER. Yes; just as in the A. F. L.

Mr. THOMPSON. Assuming your body should pass a law which did not conflict with any law of the A. F. L., and then assume that some member of some organization you are affiliated with broke that law, could you expel him?

Mr. WALKER. That matter would have to be taken up in the State convention, and the penalty for failure to perform those duties is fixed in the State federation so as to enable us to expel them.

Mr. THOMPSON. If the convention should decide to expel them, would they have the power?

Mr. WALKER. If they were acting within the laws of the American Federation of Labor.

Mr. THOMPSON. Assuming there was no conflict, would they have the right?

Mr. WALKER. We would not have the right to expel any member of an organization unless under the laws of the American Federation of Labor we were given that authority.

Mr. THOMPSON. Will the by-laws of the American Federation of Labor show under what conditions you may expel affiliated bodies?

Mr. WALKER. About the only way we can expel them is where they secede from the American Federation of Labor or from the international union that they should belong to that is affiliated with the American Federation of Labor.

Mr. THOMPSON. Then, your control over the affiliated bodies is merely nominal and purely moral?

Mr. WALKER. It depends upon the make-up of the different local unions. There are some men that will observe a moral obligation more rigidly than they will any other kind of obligation.

Mr. THOMPSON. What control has the American Federation of Labor over the Illinois State Federation of Labor?

Mr. WALKER. Supreme power.

Mr. THOMPSON. In what does that consist?

Mr. WALKER. In so far as laying down the rules under which they must operate.

Mr. THOMPSON. Assuming that the Illinois State Federation of Labor decides not to follow the rules laid down by the American Federation of Labor, then what power would the latter have to enforce its rules?

Mr. WALKER. They would simply revoke the charter of the Illinois State Federation of Labor and have every international union affiliated with the American Federation of Labor withdraw their membership—simply eliminate them.

Mr. THOMPSON. In case a dispute arose between your organization and, say, the Chicago Federation of Labor, or any other federated union, where would the power of deciding rest?

Mr. WALKER. Well, as far as past disputes are concerned, it has rested with each organization; sometimes the disputes have not been settled by their agreeing at all.

Mr. THOMPSON. Would the American Federation of Labor be an appellate body that could determine such disputes?

Mr. WALKER. No; there are some disputes that they have not got the power to decide definitely or positively, but they are willing and have in the past, and I expect will in the future, exercise their good offices as mediators in trying to make clear what the situation really is and to get the two organizations together.

Mr. THOMPSON. In the building trades we find here what are called jurisdictional disputes between international unions, and it is well recognized that the American Federation of Labor in that field has no power of compulsion, but in the case of your federation and, say, the Chicago Federation of Labor, in the case of a dispute between them, would the American Federation of Labor have the power to decide?

Mr. WALKER. Yes; as between the jurisdiction of the Illinois State Federation of Labor and the Chicago Federation of Labor.

Mr. THOMPSON. But your organization, like the Chicago Federation of Labor, has no power of coercion in the international union?

Mr. WALKER. No.

Mr. THOMPSON. As a leader of labor in this city, Mr. Walker, have you given any consideration to the question of industrial unrest?

Mr. WALKER. Well, I have not had time to give it much consideration in the past here, but it is being taken up practically every moment that I have to spare.

Mr. THOMPSON. Have you taken part in any recent strikes?

Mr. WALKER. Yes.

Mr. THOMPSON. What strikes recently of large consequence have you been interested in?

Mr. WALKER. I have not been involved in a large struggle recently at all; it has been about four years since I was involved in a rather large struggle involving about 75,000 members in the State. Now, there is a strike on in Mount Vernon of about 600 men, and about six months ago there was a strike in Hillsboro of about 300 men, and in Chicago among the leather workers on horse goods there was a strike. We have been able to adjust the two of those strikes and the other one is in progress at the present time.

Mr. THOMPSON. Has the United Mine Workers, your parent union, any agreement with the Western Federation of Miners?

Mr. WALKER. We have a close-working cooperative agreement with each other.

Mr. THOMPSON. Would you agree to state in general what that agreement is?

Mr. WALKER. Except that you transfer cards from each other, part of what we call the mine department of the American Federation of Labor, so that in addition to the general affiliation with the American Federation of Labor we have a special affiliation in the department; the miners from both organizations migrate from coal to the metal industries, and vice versa, and we have a considerable number of them, which bring about a closer relation than exists between us and any other organization; and we consult each other where disputes arise that originate in the same community and try to work that together.

Mr. THOMPSON. The mine workers confine themselves to the mining of coal and the others to the mining of metal?

Mr. WALKER. Yes.

Mr. THOMPSON. And between those two the membership fluctuates?

Mr. WALKER. Yes.

Mr. THOMPSON. And there is a close alliance?

Mr. WALKER. Yes.

Mr. THOMPSON. In pursuance of the relationship existing between the two organizations, did you at any time ever investigate the strikes in the metal mines?

Mr. WALKER. I was up in the Michigan copper country—I don't just recollect the exact time; I was there two or three months.

Mr. THOMPSON. Now, taking your experience, Mr. Walker, as leader or head of the Illinois State Federation of Labor and leader of the United Mine Workers, what would you say as to whether or not a state of industrial unrest exists in the country to-day?

Mr. WALKER. Well, there is no question but what there is a state of unrest existing to-day.

Mr. THOMPSON. From the standpoint of a practical man in the field, what do you consider to be the causes of this unrest?

Mr. WALKER. I think the main cause that largely makes for the unrest is the double standard that is in existence that is commonly accepted by most people as being right.

Mr. THOMPSON. What do you mean by double standard?

Mr. WALKER. A workman is not supposed to ask anything more than a fair day's wage for a fair day's work; he is supposed to work until he is pretty

fairly tucked out—say eight hours—and when he does a fair day's work he is not supposed to ask for any more wages than enough to support his family, while with the business man the amount of labor furnishes no criterion for the amount they receive; people accept it as all right if they do not do any work at all, and accept it as all right that they get as much money as they can; in fact, they are given credit for getting the greatest amount of money with the least amount of work; and those things that are being accepted by the other side as the things that govern in everyday life and as being right, have brought about this condition, this being in my judgment absolutely unfair; that is, on the merits of the proposition in dealing with the workers.

The workers feel this, some unconsciously and some consciously, but all of them feel it and it makes for unrest, in my judgment, and there can be no peace while that condition obtains.

Mr. THOMPSON. Then, in view of this underlying unrest in the industrial field, it does not depend on the existence of specific or definite grievances, but is rather a view the workers take with reference to the distribution of the product of labor?

Mr. WALKER. It is a feeling of absolute injustice as far as they are concerned as to the manner they are being dealt with, which is responsible for the unrest. The average worker feels that under existing circumstances he is simply a non-entity, except so far as he can be used as a tool by those who own the industries to which he has to have access before he can make a living for himself and family; that he is not given any consideration, but is a plaything to be used at the whim or caprice of the other side, and is absolutely subject to their will in getting an opportunity to work at all.

Mr. THOMPSON. Supposing a worker belongs to an organization and works where they have these so-called unions or closed shops, and his wages, as compared with other workers, are high, that his hours of labor are short, and that the working conditions are good, if you can imagine that kind of a situation; in your opinion, as I take it, there would still be unrest on his part because he would be a wage earner?

Mr. WALKER. Not because he is a wage earner, but because he believes that he is not getting what he is actually entitled to.

Mr. THOMPSON. That is, not compared with the wages of the other workers, but compared to the earnings of the employers?

Mr. WALKER. On the general principle of what is the right.

Mr. THOMPSON. Do you think that the general feeling that the worker has, as you say, that he is not getting an equal deal, or that he has not an equal voice, is the cause of the outbreaks you hear of in the different trades and industries in the different parts of the country, or is the cause something more specific than that?

Mr. WALKER. There are specific causes in addition to the general feeling and it depends upon the degree of knowledge on the part of the individuals as to how they see things. If a man gets to expect the better standard for themselves and family, and can not get them, they see clearly the injustice of it. As they get to realize what treatment they should receive and the wages and hours, they can see clearly the injustice that prevails when they can not get those things.

Mr. THOMPSON. Take the cases where strikes occur and conflicts arise; do you know of any case in your experience as a labor man that a strike or conflict has arisen out of this particular feeling that you have spoken of, where the worker has not a fair share in the production, or have they not arisen, as a matter of fact, out of specific grievances, such as working too long or for too low wages or where conditions are bad?

Mr. WALKER. There are different kinds of strikes, but I do not know of any specific strike where there was no specific reason for the strike, although in my judgment it has agumented the feeling that had to do with the strike; there is more and more of that every year.

Commissioner O'CONNELL. For instance, a strike among unorganized people, such as the Westinghouse Co.—the idea of a strike occurring without any head or tail—take that case.

Mr. WALKER. At Mount Vernon the strike occurred without any head.

Chairman WALSH. Briefly sketch the conditions at that place and what the men actually engaged in the industry said about it; how they presented their case.

Mr. WALKER. The average wages that the men were getting down there, as far as the records show, was \$1.47 for 10 hours making railroad cars. I might give you an idea to what extent—

Chairman WALSH. First, approximately, how many workers are there in the industry?

Mr. WALKER. Something like 2,000 there and a number of different departments, and it is not in all of the departments that the strike has taken place, although there is a mixture; a few from each department. In the ones that have taken place practically all of the men involved have quit. A number there are colored men, among whom the standard of intelligence is rather low; they do not know what they are getting; they did not know until pay day what they were going to get, and then had to take what the boss decided to give them. The man who is the owner of the plant is an official in one of the churches; I don't know what particular one. But there was a minister in the city who announced that as a result of the unrest in industrial conditions there, he was going to deliver a labor sermon on a certain Sunday, and the next day every employee working in the plant was notified that if he appeared at the church during the sermon that he would be discharged; only two appeared and they were discharged.

In one instance a contractor came in there and got a paving job. He said he expected to pay from 30 to 35 cents an hour for labor, but when he found conditions absolutely in his own hands he paid only 25 cents an hour. Representatives of the company came to him and told him that if he raised the wages 15 cents an hour he would cause trouble to the company and they would make it hard for him to get another job in that town.

Chairman WALSH. How many men went out in that strike?

Mr. WALKER. About 600.

Mr. THOMPSON. Now, getting back again to the question of unrest, Mr. Walker, we feel from your answer that you have an idea that there is a general unrest among all people who work. Are there cases where this unrest appears to be less strong than in other places? In other words, where there is no specific aggravating point, and what are those feelings, if any, and what are the reasons for the difference?

Mr. WALKER. In the more thoroughly organized industries my experience has been and judgment is that where the men have had hours and wages and treatment more humane than otherwise, and they have had an opportunity to educate themselves, there is less of that feeling of continual blind opposition to existing conditions, and where disputes arise they arise in more orderly manner, and if disagreements are reached and it is impossible to go on, you find those contests conducted on a higher plane and with a better feeling, and it is more easy to reach a settlement, and when settlements are reached there is less bitterness.

Chairman WALSH. The commission will now stand adjourned until 2 o'clock this afternoon, to meet at the same place. Kindly resume the stand at 2 o'clock this afternoon, Mr. Walker.

(At 12.30 p. m. of this Tuesday, July 21, 1914, a recess was taken until 2 o'clock this afternoon.)

AFTERNOON SESSION.

The commission met pursuant to adjournment.

Chairman WALSH. The commission will please come to order. Mr. Edwin Krauthoff, president of the Commercial Law League of America, will now say a few words before this body.

Mr. KRAUTHOFF. May it please the commission. There is in session in this hotel a body of commercial lawyers comprising some 700 delegates, the organization comprising some 3,700 members dealing peculiarly with problems of commerce, realizing that industry is the basis of commerce and that without industry there can be no commerce, the league thought it fit that the league, through its president, present its compliments to the commission and to give it encouragement in its work.

It will be gratifying to the league if the engagements of the commission will permit the commission to visit the sessions of our league; to be received with the courtesies of the league. We meet to-day, Wednesday, and Thursday, at 10 o'clock in the morning and half past 3 o'clock in the afternoon. If the commission, at its convenience, will advise us of the time it will be convenient for the commission to call, we shall be very glad to receive you.

At 7 o'clock this evening the annual dinner of the league will be given, which we will be very gratified if the engagements of the commission will permit to have you for our guests upon that occasion. We certainly are desirous that your chairman will be with us and address us upon that occasion.

Chairman WALSH. On behalf of the commission I return its most sincere thanks, but I am sorry to say that we have an engagement, made some time ago, for this evening in a body, but I am sure that the commission will take occasion at some time during your sitting to call upon you.

Mr. KRAUTHOFF. You will advise us so you may be properly received?

Chairman WALSH. We will advise you. I thank you, Mr. Krauthoff, very much.

Mr. Thompson, you may proceed.

TESTIMONY OF MR. JOHN H. WALKER—Continued.

Mr. THOMPSON. Mr. Walker, referring to the question of industrial unrest which we spoke of this morning and which you divided into two classes, the fundamental unrest and the superficial unrest, as I would call it, the latter of which causes strikes and outbreaks, what is your opinion or view as to what this commission could do, sitting as a governmental body, hearing evidence, making reports and recommendations, to correct, with reference to one or both of these conditions of which you have spoken?

Mr. WALKER. That question involves, the way I figure it, almost an answer if it satisfactorily works out to reach the conclusion of the present industrial unrest. I do not know that I can go into detail in the matter, but I have my views on it, and I am willing to give them to you. I believe that every worker, no matter in what industry engaged, should be organized; should be required by law to organize. I believe every employer, no matter in what industry engaged, should be required also by law to organize. I believe that a thorough knowledge of both sides of every phase of the industry will mean elimination of the unnecessary—of the strikes that can be avoided, disturbances that can be avoided. Through those organizations with their joint relations that must necessarily follow will come education that will enable one to understand the other's point of view and just how each condition in the industry affects the different sides. I believe that in so far as they can adjust their disputes on the basis of the absolute facts that they should be allowed to do it. But I think each side should get whatever help can be given by people disinterested in the particular problems in the industry, which affect the principals in each side and who do not really represent the rest of the people in the United States who are affected indirectly by a disturbance.

That element of our people should be represented in the conferences on both sides while existing conditions continue, and they should have at their disposal and should have prepared beforehand complete detailed knowledge of the actual conditions affecting that industry, so that neither side could take advantage of the other because of ignorance on these matters. That before a final disagreement had been reached they should have the benefit of the information on both sides so that if either side was wrong they would know they could not escape the responsibility for their act, and in addition the good offices as mediators trying to bring about settlement could have been given in the most effective manner to both sides before such a disagreement would be reached. I believe if that is done that it will work out and have the result of both sides not only thoroughly coming to an understanding of their particular position in the industry but the point of view of each other and how it affects them, that they will get to understand the facts in the case and that the whole education and thorough knowledge of these things not only from their own point of view that affects them in their own industries but as it affects the whole people will result in the practical elimination of these contests. As I stated to you before, the double standard, in my judgment, unconsciously and in most instances is responsible for what we believe are wrong, assuming positions that are wrong in morals and equity absolutely.

I think these laws should provide that there is a maximum rate of interest or profit that an employer should have. I think personally that an employer should not have a penny more than what the services or his services are actually worth in the industry; and ultimately that provision should be made for seeing that that is all he got; but while present conditions obtain I believe there should be a maximum set, and beyond which he could not go, that would

be in the judgment of the majority of the people in the Nation who believe the present system is correct—would be as far as they could go; that there should be a minimum wage established which would enable the workers in the Nation to protect themselves physically, see that they got an education, protect the citizen of the future race and our own Nation; and I think that there should be a maximum number of hours in which any person could work. I think the Government has authority to do this as a police regulation in the interests of the standard of citizenship, protection of the weak. I believe those things should be done, and a minimization of the amount of profits that could be taken out of any industry. I believe that should be provided by law; if that is done, in my judgment, while immediately it may not result in the entire elimination of industrial disputes, I feel that it will minimize them, and more and more as we come to thoroughly understand the situation will minimize them, and ultimately, I believe, it will result in the kind of education that will establish absolutely one standard of living founded on justice and fair dealing, and then we will practically have industrial disputes, as we know them now, eliminated.

Mr. THOMPSON. Referring to the first part of your statement, Mr. Walker, in which you said that you believed some method could be devised by which both sides could get at the facts—the absolute truth—beforehand, and in that way would eliminate a lot of disagreements; have you thought of any machinery, legal machinery, of any kind or character which would carry out your idea in that respect?

Mr. WALKER. The main thing, of course, will be to have absolutely honest and impartial men who are thoroughly competent to do that work, if it is possible to find those men, and give them legally the right to penalize any attempt to prevent their getting access to the books or of having evidence in connection with the entire business, from dealing with the raw material, and that will enable the Government to get the information that is needed to enable both sides to thoroughly understand each other's position.

Mr. THOMPSON. Do you think that a commission, a national commission, having the same powers in the industrial world that the Interstate Commerce Commission does in the railroad world, would be your idea of the kind of a commission?

Mr. WALKER. Well, my experience with appointive commissions from political sources has left me with but very little confidence in them, and I believe that the kind of commission that should serve in that capacity would be men selected by workers on one side and the employers on the other side, and the workers and the employers themselves should agree on the disinterested parties that should serve in that capacity. My experience in Illinois on legal matters in regard to the mining industry has satisfied me we will get the best results from that kind of a commission.

Mr. THOMPSON. Assuming a commission was so constituted as you state, then you believe the commission should have the power as broad as the railroad commission?

Mr. WALKER. I don't know what power they have.

Mr. THOMPSON. They have the power to order a system of bookkeeping and the like of that, all down the line. In other words, you believe a commission should be constituted or instituted that would have full power of investigation?

Mr. WALKER. Yes, sir.

Mr. THOMPSON. To whatever extent the commission considered necessary?

Mr. WALKER. Yes; and I believe if it can be done legally, provision should be made for a most thorough kind of investigation and the getting of the facts and leaving as little as possible to the commission.

Mr. THOMPSON. You believe a commission or council—call it an industrial council—would be a step in advance?

Mr. WALKER. If selected in the manner as suggested. I don't believe it would if selected by another method, because I think everybody on both sides would always look with suspicion on it.

Mr. THOMPSON. I am assuming it constituted as you state.

Mr. WALKER. Yes, sir.

Mr. THOMPSON. State briefly your experience on the mining board of Illinois which has given you that point of view.

Mr. WALKER. Well, I have had, as I have said, about 15 years' experience in some capacity acting for the miners' organizations. There was a great many things we thought we could reach through legislative enactments or that it was not the best avenue of reaching through economic organizations. The mine

workers used to go up to the legislature with what, in their judgment, was the amendments and new laws that should be enacted affecting the mining industry. The coal operators used to have their men go there with the same sort of laws, and, of course, on both sides the instructions to fight the kind of laws that was being introduced on the other side that they thought should not be enacted.

We would go in there and have open meetings before the committees and before the sessions of the legislature, and the average layman don't understand mining conditions, and the gentlemen on both sides at times unconsciously, and, in my judgment, sometimes possibly figuring they might get an advantage through it, made colored statements with reference to what legislation they wanted and the legislation they were opposed to, and at times they would be in direct conflict, and the legislator wouldn't know anything about it and would throw up his hands. If they did anything, it was guesswork rather than knowledge of facts to base their action on, and they were loath to do anything for either side. At least the honest, unbiased ones who were not there with strings on them were loath. They wanted to do what was right. They told us if we could get together and agree on the kind of legislation we wanted they would be glad to enact any kind we wanted. It would eliminate the trouble they were put up against by that method we were then using on both sides. And it resulted generally in extreme legislation—the old method—being enacted one way or the other.

We decided we would try to work out a method on the basis of their request, and introduced a bill which provided for what is known as the mining investigation commission, composed of nine members, three representing the miners and three the operators and three to be disinterested so far as their direct material connection with the industry was concerned, and among whom there had to be at least one technical mining expert. The law, of course, provided that the governor would appoint those commissioners. The governor understood the situation, understood what we wanted on both sides, and knew unless he had the good will of both sides with reference to the commission the commission's work would really amount to nothing. And I don't know whether I am relating confidences or not, but he said he would like to have the mine workers select the three men they wanted on their side of the commission and he would like to have the coal operators select the three men they wanted and he would like to have the coal operators and miners agree, if they can, on the three disinterested parties that will serve in that capacity. We agreed, and while I don't suppose it has been generally satisfactory completely to either side, my own judgment is we have made greater progress in enacting humane accident-preventing legislation in the mining industry than for any similar period in the history of the mining industry in Illinois, and we have agreed generally on the legislation we have presented.

We went in with instructions from both sides—I take it the other side got instructions the same as us—but these gentlemen who were disinterested parties, after hearing all argument, gave us the disinterested point of view, and we know they were friends of the industry or we would not have selected them. Besides showing us at times the extreme position we were taking that were hardly fair and hardly warranted by the circumstances, and then when a dispute arises that would involve a cessation of work and a cessation of labor that would be unfair, they exerted those influences on both sides that would bring us together. While, as I repeat, it has not been always satisfactory, still we have made greater progress, and there has not been, to my knowledge, since that commission was created any serious controversy in the legislature over mining legislation.

Mr. THOMPSON. Then, in your opinion, so far as the institution, say, of a Federal industrial council, selected in that method, and having full power of investigation, would be a step in advance?

Mr. WALKER. I would believe it would be in disputes as well as legislative matters.

Mr. THOMPSON. Referring to organization, I take it as being a citizen of this country—

Mr. WALKER. Just a moment before you ask that question. I want to make clear that the decision of the arbitrator wasn't binding on either side in matters of legislation. In the matter of industrial disputes, I believe the same condition should prevail. I don't believe they should have the arbitrary right to settle them except both parties agree they should do it.

Mr. THOMPSON. If they should make a decision, would you say the decision should be binding or would it be left to the voluntary action of either side to carry it out or not?

Mr. WALKER. The organic law creating the commission said that either side could disagree with the report of the commission and retain the right to make their own report.

Mr. THOMPSON. Do you think that should be in the law creating the commission we speak of?

Mr. WALKER. In order to protect each side and maintain the principles of each side they would not be done injustice I feel that it is absolutely necessary that that condition should obtain.

Mr. THOMPSON. If I understand you correctly and if I understand Mr. Carter, the head of the locomotive engineers and firemen, he took the position with reference to the present national act relating to the railroads that they don't wish to arbitrate, because the railroads refuse to carry out the award of the commission or board. Apparently his idea is when an award is made by such a board—that is, a board formed, as you probably know, under the Newlands Act—he is apparently of a view that such award should be binding on both sides. If that is his view, you disagree with it; is that right?

Mr. WALKER. I certainly do.

Mr. THOMPSON. You are a citizen of this country?

Mr. WALKER. I am a citizen of this country.

Mr. THOMPSON. You believe in the democratic institutions, I take it?

Mr. WALKER. Yes, sir.

Mr. THOMPSON. Labor unions are democratic institutions, are they not?

Mr. WALKER. I know the ones I have been connected with are.

Mr. THOMPSON. That is the theory of all unions, is it not?

Mr. WALKER. Yes, sir.

Mr. THOMPSON. Each member has an equal voice with every other member in carrying out the organization?

Mr. WALKER. Yes, sir.

Mr. THOMPSON. And in the selection of the officers?

Mr. WALKER. Yes, sir.

Mr. THOMPSON. Of course, you know in our Government as such, we have had a great deal of difficulty as a people in protecting the expression of the democratic will. Various laws have been passed in this State, for instance, and in other States, registration laws and others, to protect the expression of the will of the voter when he comes up to the polling place. Generally, do you believe in laws that have that effect, that are calculated to safeguard the ballot in government generally?

Mr. WALKER. I certainly do.

Mr. THOMPSON. Do you believe that the same effort, if needed, should be made to safeguard the ballot in the union?

Mr. WALKER. I do.

Mr. THOMPSON. In other words, if the primary law operates good in general democratic institutions of the State, if such a law were needed in the management and organization and elections of the union, then you would be in favor of such a law? I mean if it were necessary to protect the ballot?

Mr. WALKER. I would be in favor of that law being the minimum means of getting a democratic expression from the membership in the conduct of an organization, but I would not want that law to be the maximum or stand in the way of an organization who had possibly gone farther in the understanding of these matters, providing even better provisions for seeing that the organization was handled democratically absolutely and kept in the hands of a majority all the time.

Mr. THOMPSON. What do you mean by better? Who finally would be the ones to determine whether or not the laws of the union were better, say, than the State laws passed like a primary law protecting the ballot?

Mr. WALKER. I can give you a concrete illustration. You can have a primary ballot and it don't mean that the man with the majority of votes is the candidate. It don't mean that the man who is a candidate gets a majority of votes to elect him to the position. If an organization has got to a place where they can arrange to see its will take an absolutely free expression of a majority of its members to decide who its officers will be and what its policy will be, I don't want the law to stand in the way of having the right to do that.

Mr. THOMPSON. Where would you want to leave the power to determine that?

Mr. WALKER. In the hands of the membership of the organization itself.

Mr. THOMPSON. If such a law were in existence and if you thought such a law were wise, you think that whether it should apply or not should be left as a matter of local option to the different organizations to make it a part of their business or not?

Mr. WALKER. Well, in the case where there was despotism established in an organization of workers outside I don't know whether I would favor legal provision for having that condition changed or not, because you can't tell what will happen if you give them that power. If I was sure it would only be used to put the organization in the hands of the members, I would be willing to have it provided by law; but under the present circumstances I doubt very much whether it would be used disinterestedly to do that.

Mr. THOMPSON. But if a law could be framed that would be disinterested, that could not be used by any faction of the public for the purpose of controlling the other faction, then you would not see any objection to it?

Mr. WALKER. I could not see any objection, except I would rather do it myself than have some outside force do it for me.

Mr. THOMPSON. In practically all States of this Union we have found it necessary to pass laws to protect the purity of the ballot.

Mr. WALKER. Yes, and most of the States insist on having certain regulations—Federal, which they can't go beyond—having the right to pass their own laws to protect the ballot.

Mr. THOMPSON. Do you know of any instance, politically, where primary laws or registration laws or other laws passed for the protection of the ballot have been used by one class against the other? Have not they generally been used as a restraining influence on politicians as such; instead of giving him more power, haven't they taken power away from him?

Mr. WALKER. Generally I think that is true. I think there have been enough exceptions to prove the rule.

Mr. THOMPSON. I agree with you on that. With reference to the trade movement, which is essentially a democratic movement, complaint has been made more or less that the expression of the will of the membership is throttled. Have you anything yourself to say with reference to whether that is so in any particular instance, and what you would prescribe, if anything?

Mr. WALKER. I have heard men in the organization make that statement, but my own knowledge of the circumstances convinces me it was because they could not get their will imposed upon the majority that they were making that statement. I have had personal experience of that sort of statement coming from people outside of the organization. Take our strike four years ago with the mine workers in Illinois. Some of my friends are in the hall; I don't know whether they had anything to do with it or not; but I know almost every train that left Chicago had a man at the end of the train throwing out bills making the claim that the officers throttled the expression of the membership with reference to whether or not they would accept the agreement the operators were proposing, and the facts in the case were absolutely to the contrary, and I found most of the expressions of that kind, made either from within or without, have been actuated by some personal interest of their own rather than a desire to protect the interest of the majority. I believe, though, that there have been some complaints made that were really well founded at times on the part of men that they did not have that kind of expression—made by honest, competent men; and if there was some authority and some means of saying that they could get the expression I believe that it would be a good thing. I would not be a bit surprised if you will enact laws that will compel every worker to get in the union and give the Government credit for going that far that they might be willing to have that and adopt regulations to see that the majority has a right to rule and give expression to the will of the majority.

Mr. THOMPSON. It has been stated, Mr. Walker, on the stand before this commission in Washington, that that section of the Canadian act which restrains the workers from striking until investigation, or at least 80 days have elapsed, for the purpose of giving investigation to the government body, is more or less in the nature of slavery and as a matter of fact could not be enforced. I think both Mr. Gompers and MacKenzie King of Canada made that statement. Now, how would you enforce a law to compel the people to join the union? What power would the Government have to do that even if it should be passed? Suppose 50,000 men in the city of Chicago decide they won't join the union, how would you force them to join?

Mr. WALKER. If you haul them up and put them in jail, I think it would have a good effect on them.

Mr. THOMPSON. It would take a very large jail. Mr. MacKenzie gave this instance of a strike of 6,000 coal miners in the western part of Canada, you have that field of work and he said it simply means the putting of 6,000 men in jail and he didn't believe in doing foolish things like that.

Mr. WALKER. It was not because they refused to join the union that he was going to put them in jail; that was not the reason.

Mr. THOMPSON. He said you couldn't put them into jail for whatever reason it might be, but that is the fact.

Commissioner O'CONNELL. They were out in violation of the Canadian act?

Mr. THOMPSON. Yes, sir.

Commissioner O'CONNELL. He did not enforce the act.

Mr. THOMPSON. Does the act in all respects meet your approval? He said no, and the question was asked why, and he said he didn't believe in doing a foolish thing like that.

What in the act would constitute the foolish thing? This position you could not imprison?

Mr. WALKER. There would be this difference in the case cited: If these men went to work for 80 days, they were required to work, the operators would have been able to put away enough stuff and coal to supply their customers for 80 days before the strike would affect them at all, and the men were opposed to doing that thing. In the other matter—

Mr. THOMPSON. I brought that up because you stated previously in your statement that is the reason, and I wished to see how you would carry out such a law even though they haven't found it well in Canada. With reference to the question of violence, the subject of violence has been talked about more or less in connection with organized labor; what is your opinion on that subject, if you have one?

Mr. WALKER. Well, to begin with the labor movement is absolutely in opposition to using other than legal, peaceable means. Generally their own power and influence is used to prevent any. In my own experience it has been where the other side by other means did not interfere and make it impossible for the workers to avoid it, there has not been any violence, I think. In the struggle we had four years ago there were over 70,000 men involved. It lasted four months and a half, and my recollection is that there was not a single man arrested even under a justice warrant for breach of peace during that entire time. The operators did not attempt to resort to violence themselves to accomplish their purpose. And neither did they import men to take those men's places. I do not know, if they had imported men to take their places, I would not guarantee that there would have been some men who persuaded some of those fellows who came to take their places, not to take them; but what there might have been enough excitement generated to actually warrant a justice warrant having been issued.

Mr. THOMPSON. So, Mr. Walker, is it not the public opinion generally that where there is a strike of any magnitude, where there has been the importation of others to carry on the work, that violence even to a greater or less degree has ensued, is that not the common public opinion?

Mr. WALKER. There is either to a greater or lesser extent; sometimes very little.

Mr. THOMPSON. Sometimes very little?

Mr. WALKER. There is.

Mr. THOMPSON. How do you account for that fact because the parties, so far as the law goes, would be within the law except in a case of violence?

Mr. WALKER. Well, I have been taught since childhood that the highest law affecting the human race was self-preservation, and the first law, and if a man is in a community, has got his family there and he is striking against intolerable conditions, he has not got money to move out, his family suffering from privation, some one takes his place, it means starvation, giving up everything they have in the world, having to go out of there, that possibly starvation to the extent of death, because that thing has happened right here in our own State, that the men like any other kind, under those circumstances they might do things that they would not do ordinarily under any circumstances if they had, however, a chance to be treated half-way fairly at all; and particularly when the other side endeavor to import those men to take their places, the imported men, hired spotters to be among them and excite them to acts of violence, insult them, abuse them, I don't see where any sane person could expect any person but something to happen, and my own convictions

are that if you could take the same number of people who are outside of the unions, from any walk in life at all, I do not care what kind, men even better educated among them, and putting them under the same stress and strain and in the same circumstances, that there would be even more violence than what happened with the union men.

Mr. THOMPSON. Then, in your opinion, the violence is not due to the fact that unions exist, but due to our ordinary human nature; is that it?

Mr. WALKER. Yes; ordinary human nature and a desire to live and get what is right.

Mr. THOMPSON. Which is part of human nature.

Mr. WALKER. Yes.

Mr. THOMPSON. In what respect would that attitude of men who happened to be in an organization differ from the attitude of governments as they exist in this world to-day?

Mr. WALKER. Well, from what little knowledge I have gleaned out of reading history in books and in newspapers, my own convictions are that governments, not excepting our own one, would not begin to go half as far as a union will to avoid trouble and to maintain peace. What has occurred in Mexico is pretty good evidence. Only something with reference to a flag there; it was not bread and butter or their women and children involved in the matter at all in a concrete way; maybe in an indirect way it was. But it resulted in a number of our men—in the Government sending a trained army down to compel the other side to go through that performance with the flag that they expected them to go through. That resulted in the loss of, I think, over 20 lives of our own men and two or three hundred of the others. I know if the union was to go into that kind of trouble on matters that affected them as little materially, and their families, there would be much more violence than there has been in the past.

Mr. THOMPSON. Coming back, Mr. Walker, to the question of the organization of unions and the power of the officials as they exist and as you know them, in your opinion do the officials have too much or too little power, particularly with reference to the right to call strikes?

Mr. WALKER. Well, that is a pretty difficult question to answer. I can answer it in a general way, because some officials have no power to call strikes and other officials have power to do almost anything they want to. I believe that, taking the organization I am most familiar with—that is, the Illinois Mine Workers' Union—that their powers in that respect are about as nearly ideal as you can figure them. I do not think you could give them much more power without endangering—that is, under the law—without endangering its being used unwisely. I do not think you could take but very little of the power from them that they have without making it impossible for their being able to use that power in order to get anything like reasonable treatment from the other side.

Mr. THOMPSON. Briefly stated, Mr. Walker, what power has the official in your organization?

Mr. WALKER. Well, Mr. Thompson—

Mr. THOMPSON. To call strikes?

Mr. WALKER. The only authority in the State of Illinois in the miners' union to call strikes is what they call the district executive board. That is, I think, at the present time the nine district executive boards and the members, president, vice president, secretary, and treasurer. They represent specified districts; they are the same as congressional districts, only within the State. If an individual has a dispute with a mine manager under our contracts and under our laws his duty is to try and adjust it with the mine manager first. The mine manager or the assistant is the lowest subordinate official of the operator in the operation of the mines. They are supposed to try and adjust these matters between themselves. In the event that he fails, then he calls in the mine committee—not more than three of them, each mine—and they take the matter up again with the mine manager. In the event they fail, they call in the miners' local president, along with the committee. They take it up with the mine manager again. In the event they fail, then they call in the subdistrict president—I think there are 10 subdistricts in the State organization—who takes the matter up with the superintendent and tries to adjust it. If they fail, then the State board or executive board for that district takes the matter up with the operators' commissioners. The operators have commissioners selected to handle disputes in different districts. They haven't got as many as we have, because our district executive boards have got to settle disputes within the organization as well as between the organization and the operators. If

they fail to adjust it, then it goes to what they call the board, which means four or five officials representing the miners' union. The board is composed of the resident officers—president, vice president, secretary, treasurer—with the board members from that district for all of the operators' associations. So that it gets past where the individual directly involved is attempting to handle it. Then, if they fail to settle it, a strike can be declared. If it is declared legally, it is declared by the State executive boards with all the miners' unions of the entire State. That removes the personal element in the handling of these disputes the last time they are handled and before a strike can be called.

Mr. THOMPSON. Take, Mr. Walker, a case which may exist in other lines of industry or craft, where an immediate strike would be necessary to prevent an injustice being done, at least in the minds of the union people. What means could there be to safeguard the interests both of the union and of the employer that such a strike should not be called illegally and for improper purposes? How could that be done?

Mr. WALKER. Well, it is pretty difficult to do that. In the first place you will have to try to get a majority element in control on both sides who are honest; and that can only be done by an organization of the employers as well as the employees. I believe that ordinarily a majority of the workers want to do the right thing. They have got nothing to gain by doing the work in a wrong manner, doing the wrong thing. If you have an association of employers, I believe the majority would want to do the right thing. And if some means along the same lines that the mine workers have operated between them and the coal operators could be adopted that would prevent the calling of illegal strikes for improper purposes, although there is a difference of opinion at times. Sometimes operators do not agree—that is, even when we have gone through that gamut and the executive board calls a strike—and I might say the question of opinion as to the injustice of the opinion of the other is not confined to the operators at all. Sometimes we are equally positive that they do things that are absolutely unfair and wrong. Now, in an industry where there is one employer alone and there is a local union, that one employer can act at a moment's notice any time on his side of the question. If you were to operate legally and the other side had a long gamut to go through before they could act, it would be unfair. Not only that, but where there is one employer alone that fellow can do as he pleases and there is no future consequences if he can get away with it, as he is strictly involved, and sometimes it results in his doing something that is not right by a long way.

Mr. THOMPSON. Take a case, Mr. Walker, which is easily thinkable, where there are many employers, many organizations, but where a question may arise of work being done contrary to union rules, we will say, whatever it may be, and if it is delayed for a week the work will be finished, for instance, where you can't go through a long gamut, what would you suggest in such cases to protect the union, to protect the public and the employer against either the indiscreet or wrongful actions of a leader in calling a strike?

Mr. WALKER. If it was an employer that was attempting to do something unfair that unless a strike was called immediately he would be able to get away with it; then, I suppose we would have to take chances with the officials under those circumstances. But if it was an association doing business with the general organization of the workers and in the particular industry while our arrangement is not perfect by a long way, we have got an arrangement there that does provide in a degree for a condition of that kind. If an employer discharges one of our people unfairly, or if he tries to get a piece of work done under conditions that are in violation of the contract, in the case of the discharge or throwing idle of our members, if we can prove that he did it wrongfully, they are compelled to pay the penalty or at least to pay those men their wages for the length of time they were off; if they attempted to create a condition other than provided for in the contract, deliberately, and we could prove it, there is a penalty they would have to pay for that specific act. And in cases of that kind it is common sense to believe that the officials of an organization will use the machinery as rapidly as possible to get that situation to the attention of the higher authority of the employer's side and get it in their own hands so that if they don't get recognition they can take intelligent action.

Mr. THOMPSON. I take it, Mr. Walker, from what you say, that you would agree with the testimony of Mr. Peabody, at Washington, and Eidlitz, president of the employers' association in New York, in the building trades, the stronger organization of the employers' side is helpful in eradicating such instances as that spoken of?

3210 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. WALKER. When it is used in that way.

Mr. THOMPSON. Do you believe, generally, in the organization of the employers?

Mr. WALKER. What is that?

Mr. THOMPSON. Do you believe, generally, in the organization of the employers into an association?

Mr. WALKER. I believe in the organization of the employers when you provide at the same time for the organization of the employees.

Mr. THOMPSON. Suppose it is purely a voluntary matter with both sides, workers and employers; do you believe in the organization of the employers?

Mr. WALKER. Well it is dog eat dog doing business when it gets into that shape; it isn't then a question of right or wrong generally that enters into the matter. It is a question of what you can do will be for the best interests when it gets into that shape.

Mr. THOMPSON. Mr. Eldlitz used this statement, that the stronger the organization on both sides the better it would be.

Mr. WALKER. Yes; if they don't try to get together.

Mr. THOMPSON. Would you think that would operate—does that operate that way?

Mr. WALKER. It does. You can have the stronger if you have the organization on both sides.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Do you want to ask any questions, Mr. Garretson?

Commissioner GARRETSON. Yes. Mr. Walker, going back to the original statement with regard to the causes underlying industrial unrest, have you ever met with a labor man who did not feel, in a greater or lesser degree, although he may not be able to describe it in set terms, but who felt that his labor was not getting enough in proportion to the profit of the employer?

Mr. WALKER. I never met one who did not feel that. I do not think he thought it was.

Commissioner GARRETSON. Since that feeling exists, then, since the man believes that he is not getting a reasonable portion of the fruit of his labor, will not industrial unrest continue?

Mr. WALKER. I believe that industrial unrest will continue until he feels that he is getting all that he is entitled to for his labor.

Commissioner GARRETSON. What would be your remedy, or would you have one to propose, for the present inequalities that laboring men believe exist in that direction?

Mr. WALKER. Well, I believe that if it can be done at all by legal enactment that fictitious values, watered stock, inflated values should be absolutely eliminated, and then in the degree that the moral conception of the public became clarified as to absolute justice that the amount of exploitation that the employer could do with the employees should be reduced.

Commissioner GARRETSON. Do you believe that there should be a limitation placed by any means upon the amount of private fortune that should be accumulated?

Mr. WALKER. Well, I do not so much believe in the restriction of the amount of the private fortune that can be accumulated, but I do believe in restricting the methods by which people can accumulate private fortunes.

Commissioner GARRETSON. Would not the results be the same, then, whether applied one way or the other, if it acted for the abolition of the fortune—wouldn't the result be the same whether it was one method or the other, or would it?

Mr. WALKER. Well, generally speaking, that would be true, but they might accomplish the same results they are accomplishing now by—instead of using different names of corporations they do business under, the same people, they would divide their fortune among different members of the family.

Commissioner GARRETSON. Would an inheritance or income tax, or both, if that was prohibitable, would that have a certain amount of influence on that question?

Mr. WALKER. Well, I believe when you add the income tax to old John D.'s fortune, he simply adds it to the price of oil and on the other things that he has control of.

Commissioner GARRETSON. In another direction. You spoke in regard to your belief of the voluntary action in the industrial council, whatever name it might be that Mr. Thompson asked a question in regard to, I gathered that you were in favor of voluntary action on both the part of the men as well as the part of

the employer AL CONDRITTON, himself to a council of that character for the settlement of industrial disputes.

Mr. WALKER. Yes, but I misunderstood you or thought I misunderstood your reply to my question: If in the course of that settlement both sides agree to submit to arbitration—voluntarily agree to submit to arbitration and draw up stipulations under which arbitration is had—then you absolutely believe in a religious adherence to the verdict handed down?

Mr. WALKER. Absolutely.

Commissioner GARRETSON. Then you are in accord, instead of being in disagreement—you are really in accord with Carter's (?) position that if you arbitrate you should abide by the verdict?

Mr. WALKER. Yes.

Commissioner GARRETSON. His attitude is that he refuses to arbitrate on account of the failure to carry out those terms after the verdict was handed. Would you be in accord with that idea?

Mr. WALKER. If the gentleman fooled me once he would have a hard time doing it the next time.

Commissioner GARRETSON. Anybody could get you once?

Mr. WALKER. Yes.

Commissioner GARRETSON. Some more of us are that way. Do you believe any form of legislation can protect the apathetic majority from themselves—from their inaction? To illustrate: If there is a precinct voting district in which there are 100,000 voters, if 60,000 of those voters would not vote, would legislation protect them from what the 40,000 who do vote do?

Mr. WALKER. Well, I don't think you could make them vote right. If you put enough penalty on them for not voting, I think you could make them vote.

Commissioner GARRETSON. But if he would not vote you can not protect him against his own inaction?

Mr. WALKER. If you put enough penalty on for not voting I think he will vote.

Commissioner GARRETSON. But assuming he don't vote?

Mr. WALKER. If he don't vote—

Commissioner GARRETSON. He will be the victim of his own inaction, will he not?

Mr. WALKER. Yes; he will; but I wouldn't care if he was the only victim.

Commissioner GARRETSON. How is that?

Mr. WALKER. It would not be so bad if he was the only victim.

Chairman WALSH. Did you have some questions, Mr. Ballard?

Commissioner BALLARD. Yes. I would just like to ask one question: You spoke about Mount Vernon and making cars and the wages they paid in that town. Does it cost more to live—the living cost—in a town like that than in a town like Chicago?

Mr. WALKER. Well, that depends on the kind of living you get. I expect if a person wanted to live the way there that they do up here it would cost them at least as much, if not more.

Commissioner BALLARD. Could they live the same way—have they the same fine hotels and big apartment houses?

Mr. WALKER. The average worker don't live in hotels; the average worker in Chicago don't live in hotels, either.

Commissioner BALLARD. You, then, think they can live the same in a small town as they live in the city of Chicago?

Mr. WALKER. My experience has been that the sort of town don't cut much figure. It is the kind of commercial men's association that is established in the town who control the selling prices and the buying prices.

Commissioner BALLARD. That was not the testimony given in New York. They claimed in New York that they had to have different wages there because it cost them more to live in New York than in other places; therefore they had to have higher prices. You do not agree with that?

Mr. WALKER. I do not just get your question clearly.

Commissioner BALLARD. I mean to ask, Does it cost the average workingman as much to live in a small town as it does in a large city?

Mr. WALKER. Some of them it does cost more and some it costs less.

Commissioner BALLARD. That is all.

Commissioner LENNON. Mr. Walker, have you ever observed or made any investigation of violations of the law to keep the peace in times of industrial strikes and in times of peace to see how they compare? For instance, where

there are some miners arrested for violating the community during the strike, were there as many miners arrested in the community as there was no strike?

Mr. WALKER. I think during the last—there were more arrests in Illinois in the mining community during the time of the strike than there was during normal times when there was no strike on.

Commissioner LENNON. I know the position you have held a long time. In your position have you ever known of an authorization by miners, by a miners' union or by a miners' executive board or by a single official of a miners' organization, authorizing the men to be guilty of violence?

Mr. WALKER. I do not know of any direct knowledge, except when hired gunmen, some of them with known records as criminals, were invading their homes, that men were advised to protect themselves.

Commissioner LENNON. At their homes?

Mr. WALKER. Yes. Outside of that, I have no knowledge of any in the movements to advise the employment of violence or violation of law.

Commissioner LENNON. Take the situation of miners you had in Illinois 20 years ago—you have been in Illinois 20 years, haven't you?

Mr. WALKER. Yes; easily that.

Commissioner LENNON. Take the situation of the miners 20 years ago and now. Has their material condition improved; that is to say, do they make better wages and work under better conditions now than they did 20 years ago?

Mr. WALKER. I take it as a whole that their wages have increased almost 100 per cent and that their working conditions have been made better 1,000 per cent.

Commissioner LENNON. Well, now, what effect has that had as to the elimination of social discontent among the miners? Has the social discontent increased or decreased during that 20 years?

Mr. WALKER. That discontent has very generally, in my judgment, adopted a different form. There is not the individual blind prejudice that has existed in the past on the part of the miners, who have had the benefit of this change, who have had the benefit of the opportunity to live in the mining industries in Illinois during that time. Now, suppose the men on the other side, which say there can be so much difference in the feeling, forget that there is possibly two-thirds of the miners that are in the mines in Illinois, now in the mining communities in Illinois, who have been imported into our country in recent years, who have brought with them all of the old prejudices and superstitions and customs and the illiteracy that coming from southern Europe means, without any reflection on the men from that country. I find people pretty much alike everywhere, if you will only give them a chance. But with the men that have been in the mines for 20 years there is just as intense desire on their part to make whatever improvements they believe they are entitled to as there was in the old days; but there are different methods adopted by them in trying to make those improvements. They do it in an intelligent, rational, systematic manner.

Commissioner LENNON. Do you believe the increase of general intelligence among the workmen has tended to increase the discontent?

Mr. WALKER. Not the blind prejudice and the discontent that means so much to the detriment of industry and the people generally. I do not think it has lessened the desire on the part of those men to make what improvements they really feel they are entitled to, but it has lessened the efforts on their part blindly as individuals or as localities indiscriminately and sporadically by force to make those improvements, and has resulted in the taking, in the mining communities, the average miner that has been in the organization since it was first started, if he has a condition, a working condition, that he is opposed to, that he thinks ought to be improved on, he first finds out whether under the contract he can improve it; and if he can't, then he makes up his mind to wait until the end of the contract to take the matter up in the making of the new agreement and try to have the matter adjusted then.

Commissioner LENNON. Wouldn't, in your opinion, the effort of education among the working people give them a better understanding of what their rights as miners are in the community, and what their social rights are, and cause them to stand more strongly for the righting of those things which are wrong than they did 20 years ago, collectively to act together?

Mr. WALKER. Yes; the more intelligently, I think, possibly, and more intensively make a more sustained effort to get them.

Commissioner LENNON. That is all.

Chairman WALSH. Mr. Commons would like to ask some questions.

Commissioner COMMONS. Mr. Walker, has there been improved safety in the mines in the last 10 or 12 years?

Mr. WALKER. Very much.

Commissioner COMMONS. Does that come about by this joint legislative scheme that you speak of?

Mr. WALKER. Some of it; some of it came about by the old method.

Commissioner COMMONS. And the old method was—

Mr. WALKER. Each side going on as you please in the legislature and getting what they could.

Commissioner COMMONS. What is the State inspection of mines in this State? Is there a force of State officers or State mine inspectors?

Mr. WALKER. Yes; a force of State mine inspectors, and there are county mine inspectors.

Commissioner COMMONS. How are they selected?

Mr. WALKER. The State mine inspectors are selected at the present time by civil service, I think; the county mine inspectors are selected by the board of supervisors in each county.

Commissioner COMMONS. They have been an important part in improving the condition of the mines?

Mr. WALKER. Yes and no. Up until the present time they have been appointed in most instances because of political pressure they could bring to bear rather than because of their qualifications to discharge the duties that were supposed to go with that office.

Commissioner COMMONS. You are speaking now of the State inspectors, or county?

Mr. WALKER. I am speaking of both of them.

Commissioner COMMONS. You said they were selected by civil service?

Mr. WALKER. Recently; in recent years I understand the State mine inspectors have been selected by civil service.

Commissioner COMMONS. And has that brought about an improvement in their qualifications?

Mr. WALKER. I do not think it has.

Commissioner COMMONS. It ought to. Why not?

Mr. WALKER. The civil service as an institution could be used if it was put in; it is just like getting good arbiters; you may get thoroughly competent men to act, and a civil-service bureau that will aid the appointment of the right men would be all right. It should make for the highest efficiency in those positions, but at the same time, if one has had anything to do with the workings of the civil-service bureau, instead of making for higher efficiency, in my judgment, it makes for greater safety on the part of the politicians that do the appointing; a greater range or leeway in selecting their political friends for the job.

Commissioner COMMONS. Are these county inspectors appointed by civil service?

Mr. WALKER. No; they are appointed by the board of supervisors. They are more nearly appointed from among the men who are of the same political faith as the majority of the board of supervisors. That is the first qualification. The next is their efficiency and their ability and their good standing with their party. But being so close to the people, because the supervisors are elected directly by the people in that county, I believe they are more responsive.

Commissioner COMMONS. What salaries do these people get, these inspectors?

Mr. WALKER. Well, I think, while I am not sure, it is \$1,800 a year.

Commissioner COMMONS. Do you think that is a high enough salary to get well qualified inspectors?

Mr. WALKER. I do not believe it is a high enough salary to get good, competent, efficient men to do that work.

Commissioner COMMONS. What qualifications should they have more than being an expert miner?

Mr. WALKER. Are you asking with reference to the ones on the job now?

Commissioner COMMONS. If you are trying to get the best kind of inspector, what would your idea be, to select an expert miner?

Mr. WALKER. I thought he ought to be an expert practical miner and then pass a technical examination as well to prove that he not only thoroughly understands the practical workings of mines in their operation and also the technical details of their operation.

Commissioner COMMONS. Have you considered any better method than this civil-service method of selecting these inspectors?

Mr. WALKER. Well, we have considered the question of the miners electing the inspectors. We believe we would get more efficient inspectors by that method. The coal operators feel they would not get a square deal if they were selected by that method. I believe the inspectors selected by a board would at least be more nearly selected for their qualifications to discharge their duties than they are under the present arrangement.

Commissioner COMMONS. That is, if they be elected by this legislative board?

Mr. WALKER. By a board selected part by the miners and part by the operators, and they agree on some one; we would not trust each other very much in these matters. There are some we can trust on each side that do trust each other, but there are a great many that we come in contact with that we can not agree on as being broad-minded, honest men that are well informed on the subject and would make good men for that kind of work, and generally each side would try to bring competent men, and those men, the chances are, would be a factor in a case of that kind, and they would be trying to maintain their standard with both sides and do the fair thing, and out of that kind of an appointive concern we might get good, competent, conscientious men.

Commissioner COMMONS. Has your organization ever had anything to do with the State board of mediation and arbitration?

Mr. WALKER. No.

Commissioner COMMONS. Does that board take part—

Mr. WALKER. We had once, in 1897, I think, at the inception of the organization, I think the State board of mediation, or one member of it at that time, acted in settling a dispute in Williamson County. Of course that has never been settled until here recently, and it is not quite settled yet.

Commissioner COMMONS. In recent years the State board has not intervened in these strikes that you have had?

Mr. WALKER. I do not believe that they have been requested to by either side.

Commissioner COMMONS. What is the reason for that?

Mr. WALKER. Oh, I think it is, from my knowledge of the operators and my own feelings in the matter, and the knowledge I have of the views of my own associates, we feel that it is almost impossible to get an impartial disinterested body of men to decide in cases of arbitration. Unless we can get that kind of men we do not like to agree to arbitration unless we do agree to a decision before the arbitrator is selected; and we have always felt that an arbitration board selected from political sources mostly, men who did not understand the mining industry, the details of the mining industry, if they were honest, could not be obtained from the fact that they were selected from a political source was evidence to us that we had to be careful in taking it for granted they were honest until they demonstrated it.

Commissioner COMMONS. Do you think this scheme you outlined of having an arbitration board selected in the way you propose—do you think that could have avoided certain strikes like this one we had 10 years ago?

Mr. WALKER. I do not know. I would not say positively, because there was such a wide disparity between the positions taken by both sides that I doubt that a board of mediators could have brought them together. I do not know of any other dispute hardly that has come up in all of our experience but what that board might have been successful in avoiding the trouble.

Commissioner COMMONS. You have these miners' strikes going on occasionally, I suppose?

Mr. WALKER. Yes.

Commissioner COMMONS. Illegal strikes?

Mr. WALKER. I am glad you made the statement, because the statement was made this morning, and I would like to have the impression corrected, I want to get it right on that matter. There is, it is true, under existing circumstances, illegal strikes precipitated by our members—there is not any question about that. But I venture the assertion, if you will take the records proportionate to the number of men that are responsible for these things happening and considering the qualifications on both sides as between them and the representatives of the companies, that there is a greater proportion of illegal acts committed by the representatives of the other side than there is by the members of our side of that kind.

Commissioner COMMONS. Has that matter ever been passed upon by the joint board?

Mr. WALKER. Why, every time we go to make a contract an operator has a complete detailed list of every case where we have violated the contract, in his judgment, and done it wrongfully. Then, on the other hand, we generally bring

In another list where we believe he has dealt unfairly with us; where we can not confess to the wrongful acts on each side, we disagree.

Commissioner COMMONS. What do you do in case of an illegal act; that is, what did you do while president of the organization?

Mr. WALKER. We have got a provision in there for paying a \$10 fine on the part of each member of our organization where they precipitate an illegal strike. I have fined a considerable number of them, of those men, \$10 apiece. In my home town I fined 175. I went into a local union one night and fined \$60 of them in their local meeting. This has taken place all over the State. In dealing with industrial disputes to-day you have got to take into consideration the ultimate phase of the situation; where there is extenuating circumstances the operators have waived their right to fine, and in many instances when we have been entitled to a fine, when we thought we were getting value received we have waived as to the right to the fine, but in extreme cases where there was practically no extenuating circumstances we have fined each other on both sides, and they agreed to it.

Commissioner COMMONS. I think you said if the men were having any strike and men to take places of strikers were brought in, that you would advise, or your organization had advised, that they be resisted, violently if necessary.

Mr. WALKER. No.

Commissioner COMMONS. Did you say that?

Mr. WALKER. I did not say that.

Commissioner COMMONS. What was your statement?

Mr. WALKER. What I said was that where men were invading men's homes, insulting and abusing them and beating them up, that they should protect themselves.

Commissioner COMMONS. Suppose it is simply protecting the property and protecting strike breakers that come to take the places of the men; what is your official recommendation? What have been your recommendations under those circumstances?

Mr. WALKER. Well, if they were only men coming in to take those places and going to work peacefully, I would advise our people to let them alone and go about their business, except to take it up with them personally and try to persuade them not to take their places. I believe they have got a right to do that. I would advise them to proceed to the limit within their rights, to try and persuade those men to not take those places. Outside of that I would not advise them to go any further than that. My experience has been that they never did import strike breakers, except a bunch of disreputable, irresponsible men, whose moral and other record is absolutely wrong, who take advantage of the little power they get to insult and abuse and beat up people, and sometimes kill them; under those circumstances human nature is likely to be weak enough to result in reprisals.

Commissioner COMMONS. You are speaking now of what has happened in Illinois?

Mr. WALKER. In Illinois and elsewhere.

Commissioner COMMONS. Take Illinois. How long since anything of that kind happened?

Mr. WALKER. Not since 1897.

Commissioner COMMONS. The employers haven't resorted since that time to any strike breakers or gunmen?

Mr. WALKER. No, sir. The governor of the State sent the militia down with instructions to the operators not to import men of that kind to take the places of citizens of Illinois, and if they did he would blow them across the State line with the militia.

Commissioner COMMONS. That is all.

Chairman WALSH. Mr. Delano would like to ask a question or two.

Commissioner DELANO. I will ask you in relation to conditions existing between the coal operators and the miners in the State of Illinois, have they been pretty satisfactory?

Mr. WALKER. They have been fairly satisfactory, I think; reasonably so.

Commissioner DELANO. Why is it there has been a cessation of mining every two years? I believe you don't call it a strike, but there is a cessation lasting anywhere from five or six weeks up to two or three months. If you are able to get along, why can't you avoid that cessation, which falls rather heavily on the general public and on the consumers?

Mr. WALKER. In the operators' ranks there are a number of men who have used those periods in which the contract has expired to speculate in coal, and

previous to the expiration of the contract they have bought large amounts of coal and stored them, and then as they would have been at a dead loss and not made any money unless there was a strike, some of those gentlemen have gone themselves and had their agents deliberately and assiduously working to prevent agreements between the coal operators and the miners.

Commissioner DELANO. I have suspected that. I never heard the statement made as clearly before. Much obliged to you. That is all.

Chairman WALSH. Mr. O'Connell would like to ask some questions of you.

Commissioner O'CONNELL. You have been connected with organized labor quite a number of years, I understand?

Mr. WALKER. About 30 years or a little over.

Commissioner O'CONNELL. Not only in Illinois but throughout the miners' organizations covering North America?

Mr. WALKER. Yes, sir.

Commissioner O'CONNELL. You have been abroad?

Mr. WALKER. Yes, sir.

Commissioner O'CONNELL. Studying the industrial questions and economic questions?

Mr. WALKER. Yes, sir.

Commissioner O'CONNELL. You know the industrial conditions?

Mr. WALKER. In a limited way.

Commissioner O'CONNELL. What in your mind is the greatest force in our time for the common uplift, the building up of our higher citizenship and our higher standard of manhood and womanhood? What force, what organization, what association, what combination of people in our time has been the greatest force in that direction?

Mr. WALKER. My judgment is it has been the trades-union movement.

Commissioner O'CONNELL. Now, if you can concisely, why do you think it has been the trades-union movement?

Mr. WALKER. Well, in the first place, the matters that affect the everyday life of every worker who is a member of a trade-union, as well as those who are not members of a trade-union, that they can learn of is considered and discussed not only at the meetings but in their papers and pamphlets and by their speakers, by every means that they have of communication and education, and their every effort has been to protect the weaker one more so that the stronger movement, and to help make for the better opportunity for education and better living and little pleasures and the creation of a feeling of—a human feeling toward each other—kindliness and helpfulness, and through the power of organization and through the influence of their argument and their educational working making for the general raising of the standard of wages, shortening of hours, making more healthful, safe places, and conditions of labor; making for better education, better home life, and a higher standard of citizenship, both in men and women at all times.

Commissioner O'CONNELL. You believe that condition would not be possible at least to such a great extent without there were organizations of workmen?

Mr. WALKER. Well, it might be possible, but I doubt very much if it would obtain if it was not for the organization of workmen.

Commissioner O'CONNELL. Do you believe that the employers in our time are made up of that humane desire for the common uplift that without the force of organization they would have brought the workmen up to this high standard you speak of?

Mr. WALKER. Well, I wouldn't like to generally condemn all employers in considering that matter, but I do know this, that unless we had given them all the assistance we could, put into practice the things that meant better things for the worker and in the family, my honest convictions are we would not have gotten them.

Commissioner O'CONNELL. We hear something of the right of free American citizens to work under what is commonly called the open and closed shop and under what conditions and what wages and what hours. Do you believe if these conditions were to go absolutely without question you could expect a continuation of our standard of citizenship and of living even to continue as it is now or to go still further better?

Mr. WALKER. The fallacy of that position is so apparent I don't think any intelligent person takes it seriously. I think the person who advocates that sort of a proposition has got the ostrich, that hides its head in the sand, bent 40 ways. There is no question but what the average man that has to work for a living has to find work or he can't live. There is no question but what the

average employer will employ labor necessary in his plant or industry that he can get the cheapest, so that he can get the largest return for it.

Commissioner O'CONNELL. Do you believe it is possible for an individual to reduce his hours of labor as an individual?

Mr. WALKER. Absolutely not. The men putting into effect the policy of letting every man freely—so-called freely, because it is not at all—if you would let every man be free to select the kind of conditions and hours that he would work under, we would have better conditions than we have now, but it is an absolutely misleading misnomer for the proposition. The actual result is that all workers by that sort of proposition are forced to the level of the one who is the weakest and whose need and extremity forced them to accept the lowest wage and work under the most unfavorable conditions. That is what it means; and instead of meaning freedom for anybody it simply means putting the people who work for a living on the basis of the one whose intelligence, whose needs, whose strength, and whose want compel them to accept the meanest kind of living and to do the meanest kind of work under the meanest kind of conditions for the lowest kind of wage. That is what it means.

Commissioner O'CONNELL. You saw a sign of this kind, and I saw it myself, over a large factory door, "We don't employ union labor in this factory; we only employ free American citizens." What would be your interpretation of a man seeking employment under a sign of that kind?

Mr. WALKER. Well, if it happened to be an American citizen who wanted to belong to a union, I guess I wouldn't consider him to be a free American citizen. And Americans, that class of American citizens, would not have a right to work there. My judgment is I would not find very many American citizens who were well informed working in that plant through those gates.

Commissioner O'CONNELL. You are a firm believer in contractual relations between employer and employee?

Mr. WALKER. Yes, sir.

Commissioner O'CONNELL. In a system of bargaining for things, sitting down at the round table and fighting out by argument and conciliation the things that come between them—that condition is only possible in an organized state of affairs?

Mr. WALKER. That is the only place it is possible at all.

Commissioner O'CONNELL. It is not possible under the conditions as explained to us this morning by the gentleman who was on the stand before you, where in his factory he don't employ union people as such?

Mr. WALKER. No, sir. My experience is they won't agree; the shoe would be on the other foot. They say they only want to do what is fair, and they decide what is fair. We say we only want to do what is fair, and we decide what is fair, but they won't accept what we say is fair. They won't accept it for a minute—least of all those who take that position.

Commissioner O'CONNELL. That is all.

Chairman WALSH. Mr. Weinstein wishes to ask you a few questions.

Commissioner WEINSTEIN. Some years ago I was appointed special labor commissioner by the governor of California to investigate the labor laws of foreign countries, and one of the conditions that forced themselves upon my judgment was this, that in Great Britain and Australasia the labor leaders and labor representatives commanded the respect and confidence of the employers generally, despite the fact that the employers very frequently had to fight them bitterly. The statement made to me personally by a great employer in England and Australia was that so far as the integrity of the labor leaders and representatives was concerned they were above reproach, and he had every confidence in them, in spite of the fact that he could not agree with them. Such a case as Sam Parks in England or Australia would be impossible. Such a case as Mayor Schindler, of San Francisco, who was nominated and elected largely by the labor vote after it was a known fact he was a crook and scoundrel, would be impossible practically in a British labor union. A British labor union will not tolerate grafters to represent them, and the moment it becomes known a leader is a grafter he is ostracized and made an outcast. You have been abroad, I understand, from the testimony you have given. Can you give us the difference between the attitude of the British union against graft and the attitude of the American union toward graft? For example, the other day I met a labor leader on the street and discussed the charge of graft that is going on now against labor-union leaders, and this is the statement he made: "So long as the labor representatives don't graft on the fellow worker I, for one, am utterly indifferent as to how much he can get out of the employers." Can you explain

to us for the information of the commission this difference in the attitude between the rank and file of the labor union in this country and Great Britain?

Mr. WALKER. I can give you my own view of the matter. I don't want to mention any names, because I haven't got specific instances or positive proofs that I could direct with reference to men on the union side of the question who took graft; but there is one difference between our country and Great Britain that seems to emphasize itself to me and, in my judgment, has a good deal to do with the situation. The one is in Great Britain if a case is taken into court—in 99 per cent of the cases, at least—and I think it is agreed to by everybody everywhere that has studied that situation that the evidence and the law will determine absolutely what the decision will be, and that there is no escape, and, on the other hand, from the information I can get and from what I have observed and from what I have seen and gotten through personal experience, the courts in our country are not the automatic justice-dealing institutions as what they are over there.

Commissioner WEINSTOCK. What about the case of this Sam Parks, who was convicted and served his term in jail, and after coming out of jail he was elected the grand president of a Labor Day parade, and hats were thrown in the air and he was received with hosannas?

Mr. WALKER. Well, I don't know; don't be too sure. I don't know just what the details are in the Sam Parks case, because I am not acquainted with the local situation in regard to it; but if Sam Parks had the protection of the court in enabling him to get control of the local unions and had hired sluggers and was given the protection of the courts through the influence of the contractors and was able to make it clear to any decent union man that he stood in his way, he would get his head beaten or get a bed in a hospital or be killed. If Sam Parks was over in Great Britain and was able to do that, and convince them he could do that, he might be elected to some such position in Great Britain after he could get out of jail.

Commissioner WEINSTOCK. You think the courts had much to do with the situation?

Mr. WALKER. I think the courts had a great deal to do with the situation, and I think the contractors are the primary cause of that condition being created in America.

Commissioner WEINSTOCK. I think, Mr. Walker, as an intelligent labor representative, you probably realize, with a great many others, that one thing that organized labor has greatly to fear in this country is graft in its own ranks. What steps has organized labor taken to eliminate graft from within its own ranks?

Mr. WALKER. I am satisfied that wherever a trade-union is able to uncover graft that the grafter will not get any more consideration than any other criminal.

Commissioner WEINSTOCK. Can you recall any instance where labor representatives or leaders were expelled from unions for grafting?

Mr. WALKER. Well, we had an international secretary-treasurer of ours who was grafting in his own organization, and he was expelled.

Commissioner WEINSTOCK. I mean receiving graft from outsiders—from employers?

Mr. WALKER. I can not recall a specific instance; but all you have to do is to convince the mine workers that a man has been grafting, whether there is proof of it or not, he will be put out, and he had better keep away from the community. I know of one instance where the president of one of the mine workers' unions, in 1897—a position I held myself for eight years—they had a strike, and during that struggle it transpired that he was bribed by the operators to sell out that strike, and he was expelled from that organization and went out into the western country, and the coal operators out there gave him a position.

Commissioner WEINSTOCK. In your testimony this morning touching upon the matter of violence, you made the statement that organized labor stands for law and order and as opposed to violence.

Mr. WALKER. Yes, sir.

Commissioner WEINSTOCK. Of course, you know, as all the rest of us know, that there has been a great deal of violence in labor disputes and labor troubles; what has organized labor done to make good its statement that it is opposed to violence and labor troubles? What instances can be shown where organized labor has expelled members for acts of violence or where organized labor has aided the authorities in bringing wrongdoers within the range of justice?

Mr. WALKER. I can not give you a specific instance, and that is a rather big question, and a man would have to consider it from different angles in order to do justice in the premises, but the fact that there were 70,000 men from every nation, from the top of the earth, coming from the humblest walks of life, went through a four and one-half months' strike without one being arrested for even a breach of peace is some evidence that there is something making for peace on the part of the trade-unions.

Commissioner WEINSTOCK. What would have happened if they had tried to replace the strikers with strike breakers?

Mr. WALKER. If they had tried to replace the strikers with strike breakers who peaceably went on to work and did not attempt to intimidate or beat up the strikers, I do not think there would have been any violence. You can not always blame the strikers, where often when they attempt to take the matter up peaceably, one word will lead to another, and they will forget themselves, and there is trouble; but ordinarily I will venture to say that the employers in this country, when they seek to get the men to take the places of men that leave their jobs, and in the event of overt acts on the part of the strikers—if they would seek relief in the courts rather than hire murderers and criminals to beat men up and murder them—if they would pursue peaceable means according to law, I venture to say that inside of 10 years you would practically have violence eliminated.

Commissioner WEINSTOCK. Now, Mr. Walker, I understood you to say a few moments ago that you had no confidence in our courts as compared with those of England?

Mr. WALKER. In view of the fact that they don't see that the other side adopts peaceable, law-abiding methods in handling their side of these industrial disputes. Could you expect me to have confidence in a court that will countenance coal operators hiring armored trains or copper-mine owners from importing men with records as murderers, and clothe them with authority of the law in violation of the law and allow those men to go out on the streets, insulting, abusing, and beating up people when an overt act has been committed on the other side?

Commissioner WEINSTOCK. And then, as you pointed out, if Sam Parks can intimidate the courts from the labor point of view, what help will the employers have?

Mr. WALKER. It is wrong for the courts to protect men like Sam Parks.

Commissioner WEINSTOCK. You think that in the case of Sam Parks it is the employer that controls the court instead of the workers?

Mr. WALKER. I am honestly convinced that is the fact.

Commissioner WEINSTOCK. And they were using Sam Parks unjustly to destroy their competitors?

Mr. WALKER. Yes, sir.

Commissioner WEINSTOCK. You also stated that in your opinion the worker would not be satisfied, whatever his condition might be, until he received the fullest share of his product; are we to understand from that, Mr. Walker, that you are a Socialist?

Mr. WALKER. Yes, sir.

Commissioner WEINSTOCK. Then you believe in collective ownership?

Mr. WALKER. Yes; Government ownership; the people to own and control the things they use in common, and to own and control individually what they use individually.

Commissioner WEINSTOCK. You further believe that workers ought to be, if necessary, compelled to organize; that is, if they organize voluntarily, well and good; but if not, that they should be compelled to organize; you would put the legal machinery in operation to compel them to organize?

Mr. WALKER. Yes; and after they got to understand it, they would stay in the organization whether they were compelled to by law or not.

Commissioner WEINSTOCK. Then you would favor employers likewise?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. You are, of course, familiar with the Australian system, where the State itself does not compel the workers to organize or the employers to organize, but makes it attractive to them to organize, and thus 75 per cent of the Australian workers are organized, which is the largest percentage of organized labor in the world. If we should follow the same method in this country, and this commission should recommend some such system as obtains in Australia or some of the States should adopt it, you further believe,

as I gather from your testimony, that you would have labor disputes settled peaceably without cessation of work, if possible?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. How could that be done? Tell us, if you can, what machinery you would provide that would make it possible to settle all labor disputes without cessation of work?

Mr. WALKER. I do not believe you would settle all labor disputes without cessation of work unless you adopted a policy of compulsory arbitration.

Commissioner WEINSTOCK. Would you be in favor of that?

Mr. WALKER. I would not.

Commissioner WEINSTOCK. Then, eliminating compulsory arbitration, what would be the next possible solution?

Mr. WALKER. As I said, I believe there ought to be representatives of the Government sitting in every joint conference between employers and employees, where the question of making contracts is up for adjustment, and they ought to have all of the information about the matter so that there can be no misunderstanding.

Commissioner WEINSTOCK. Granting that all that was done, and still the dual parties could not agree, and neither party was willing to accept the recommendations of the officials, then what?

Mr. WALKER. I believe by that process that the process of education would go on to a point where there would be practically no possibility of a strike, except that it was on some fundamental right of either side, and I believe that a cessation, a short cessation of work, in a case of that kind, where the mediators would use their best offices, would qualify the situation so that there would be no serious disturbance.

Commissioner WEINSTOCK. In any event, the system you suggest would minimize that?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. What is your opinion, if you care to express it, on the Canadian law?

Mr. WALKER. I have read it over once or twice and have had it quoted to me.

Commissioner WEINSTOCK. Briefly, I can give it to you in a few words. The Canadian law provides in connection with public utilities only that when the union votes to strike, or when the employer proposes a lockout, and inquiry must be had in the hope of adjusting the difficulties, and the recommendation of the State board can be accepted or rejected. If rejected, then a strike can legally take place or a lockout take place. If, pending the investigation, a strike or a lockout takes place, either or both sides are liable to punishment. Do you favor that system?

Mr. WALKER. No.

Commissioner WEINSTOCK. What is the weak spot in it?

Mr. WALKER. In the first place, just to speak from knowledge of this last trouble in which our people were put under the ban of the law because we did not comply with the law. Take, for illustration, in Illinois you have had testimony that there is at least capacity to meet the demands for a supply of coal. My judgment is that they could produce three times as much coal as needed to supply the demand, and that is three times the cost to the people that have to buy it. Now, after declaring by vote that they were going on a strike, had they continued to work for 30 days, and the coal operators worked to full capacity, then our folks could have stayed at home 60 days without any work at all, and before the strike began to have any effect upon the coal operators; that is one feature of it that I do not like. On top of that, I believe the best way to settle a strike, if it can be settled at all, is to use your good offices before the strike either takes place or is ordered, and have the effort made before the strike vote is taken, and I think that would have more influence. On top of that I am satisfied that the workers have not got confidence in the men selected by the method that those representing the government in Canada are selected. I am a Socialist and the other man may be a Republican and another a Progressive (a Bull Moose); and in the political battle we naturally look with suspicion on the fellow who stands for something different than we do, and on the part of the workers, they naturally look with suspicion on anyone that has been selected through the machinery of the party that is controlled by the employing interests.

Commissioner WEINSTOCK. On the whole I take it you would be opposed to any system that had anything of coercion in it?

Mr. WALKER. Anything of coercion except absolutely showing up that in the event of a strike they took the wrong position.

Commissioner WEINSTOCK. You were present when Mr. Plez testified this morning?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. Do you remember one of the reasons he gave for not dealing with organized labor generally was the fact that the unionist felt he owed his first allegiance to the union and not to the employer?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. Is that true?

Mr. WALKER. It seems to be reasonable; he knows the union is trying to increase his wages and the employer is trying to reduce them, and it stands to reason that he would feel more friendly to the institution that was trying to improve his condition than to the other.

Commissioner WEINSTOCK. So, that if a controversy should arise between the employer and the union, the attitude of the rank and file would be to stay with the union rather than the employer?

Mr. WALKER. If that would not be true there would be no need of unions; if I had more confidence in the employer I would stay with him.

Commissioner WEINSTOCK. So you do not deny Mr. Plez's statement?

Mr. WALKER. I think it is absolutely unreasonable to expect anything else.

Commissioner WEINSTOCK. And if any transactions occurred between the union and the State, with whom would the members of the union stand?

Mr. WALKER. I suppose that would be like the forefathers of our Nation, we would figure out what was right and stand by it.

Commissioner WEINSTOCK. What does the union teach on that score? Does the union object to its members joining the National Guard?

Mr. WALKER. Some do and some do not. I do not think, though, that there is any union that would object to its members joining the National Guard if the National Guard was used for the purposes that it is supposed to be used for.

Commissioner WEINSTOCK. But take the conditions as they exist in Illinois to-day. What is the attitude of organized labor toward its members joining the National Guard? Does it penalize them in any way for joining the National Guard? Is there anything in its by-laws that prohibits its members from joining the National Guard?

Mr. WALKER. Nothing that I know of, except their self-respect and the knowledge of what has happened, and for what purposes the National Guard has been used and the possibility of what it might be used for.

Commissioner WEINSTOCK. And if a member of the union did join the National Guard, what would be the attitude of the fellow unionists toward him?

Mr. WALKER. I do not think there would be any particular ill feeling toward him. I know many men that have served as Regulars in the Army of our Nation.

Commissioner WEINSTOCK. I do not mean Regulars.

Mr. WALKER. I am making it, if anything, stronger. I know of men whose forefathers have served in the Revolution and in the Civil War who have advised their sons that if they joined the Army, used as it is now, they would drive them out of their homes.

Commissioner WEINSTOCK. So, at least those unionists you have in mind now, which you have just described, if it came to an issue between the union and the State, would stand for the union and against the State?

Mr. WALKER. If the State would stand for the things which our Nation is supposed to stand for, they would be opposed to the unions if it took a wrong position; but my idea is that the unions would be with the State if it was right. If the rights of our people in the Nation were involved to-morrow and a condition was created that meant war, I do not think any body of men in the Nation would contribute as many soldiers as the unions.

Commissioner WEINSTOCK. Just one more point: You pointed out that where a man goes on a strike and his job is at stake and he has a little home and he has a wife and babies and he sees another man coming in to take his job, that it is only natural for him to do everything possible within the law if possible, and perhaps beyond the law, if necessary, to protect his little home and his wife and his babies, to hold on to that job. Now, how about the man who has got the job, who either may be a unionist or a nonunionist, as pressure is brought to bear on him by unionists to quit his job, and he does not want to quit his job by reason of the fact that his wife and little babies will suffer if he does? Has he not as much right to hold on to the job as the other man has to get back the job he lost?

Mr. WALKER. He has in a degree; if the question only affected those two as individuals, and if it was a job that only affected the families of those immediately concerned, he would be absolutely right, but the man that stands in the way of reasonable progress on the part of all the people in the Nation, would not, in my judgment, be entitled to the same consideration as the man who is standing for something that is reasonable progress in the citizenship of the Nation. Legally one is entitled to as much protection as the other, but that is not the way we generally find it. You go down to Knab's restaurant, and you find a big brass-buttoned policeman, who never did a day's work in his life, and refuses to work and who is getting \$5 a day—you find him keeping women from working for \$7 a week on 10-hour shifts, and that makes a man scratch his head; I tell you it is not right morally whatever it might be legally.

Commissioner WEINSTOCK. In answer to a question of Prof. Commons you explained that one of the reasons why the State board of mediation was not used by either side was because neither side had confidence in such a board, due to the fact that it was looked upon as a political board. When you said "political board" did you have in mind union politics?

Mr. WALKER. No; I meant selected by the political party that happened to come into power at the last election.

Commissioner WEINSTOCK. That is, your theory would be that the government would select men of its own political faith?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. And that these men would be likely to be biased?

Mr. WALKER. Yes.

Commissioner WEINSTOCK. And therefore could not act fair?

Mr. WALKER. Yes; and would be influenced.

Commissioner WEINSTOCK. And therefore you do not think that any political board of mediation would be likely to be a success?

Mr. WALKER. No. Those positions are generally filled to pay political debts, and such small positions as those would be gotten by the smaller fry who did political work.

Commissioner WEINSTOCK. Now, another suggestion that comes to this board as likely to better conditions is to recommend to Congress a permanent industrial board that shall have substantially the powers that the board of mediation has in dealing with railroads, and such a board would doubtless be appointed by the President. Do you think the same objections you have pointed out against a State board would hold against such a board?

Mr. WALKER. I honestly believe they would; that, while the President might appoint men that were clean and conscientious and absolutely honest, still if the men involved in the different sides of a dispute did not have confidence in them they would not be likely to utilize that board.

Commissioner WEINSTOCK. Then, in your opinion, such a proposed permanent industrial board would not be any relief?

Mr. WALKER. Well, that board, if the President was to act on that general proposition in the same way that Gov. Deneen acted on this other proposition, it might have the same result as our mine investigation.

Commissioner WEINSTOCK. What was that result?

Mr. WALKER. The law provided for the mine investigating commission and gave authority to the governor to appoint it, but he took it up with the miners' organization to have them recommend three men they wanted, and the operators to recommend three men they wanted, and for them to agree on the three they wanted. Now, if the President appointed three members of that commission and then asked the labor unions and the employers to agree on the impartial members, then the labor unions would have confidence in it because their men would look after their interests, and the employers would have confidence in it because they would be represented.

Commissioner WEINSTOCK. Then, your criticism to the proposed plan is not so much to the plan as to the manner in which the board is chosen. Assuming that the board is chosen wisely, what then?

Mr. WALKER. I believe if it can be done that will result in adjusting industrial disputes and heading them off.

Commissioner O'CONNELL. Mr. Weinstock asked you about the Sam Parks case in New York and his organization and the other organizations expelling members for graft. Have you ever heard of a manufacturers' association, in your experience, either city, State, or National, or any association of employers of any character, city, State, or National, ever expelling one of its members—

either suspending or fining them—for the payment of money to labor leaders or labor men of any kind in connection with what is generally called "graft"?

Mr. WALKER. Never a single one. An instance occurred in our organization recently where it is charged the coal operators paid \$20,000 to two men, and that they did not get anything in return for it, and I do not believe they paid it or got any return if they did paid it to those two men. And then the operators wanted the men removed for graft, and the coal operators that gave the money, no charge has been preferred against them, except as our officers have said they would not do business with them.

Commissioner O'CONNELL. They are still in the coal operators' association?

Mr. WALKER. Yes, sir; and one is president of the Coal Operators' Association of the Southwest.

Mr. THOMPSON. Is it not your idea that one of the benefits of the unions is that they have tended to put employers on equality and, by eliminating competition in wage scales, made it possible to increase wages without suffering business destruction.

Mr. WALKER. In the coal industry our agreement is based on the expressed principle that it be made so that each operator, as far as possible, considering conditions of transportation, etc., gets into the market with a fair chance of selling his share of coal in that market.

Mr. THOMPSON. Then that question is correct.

Mr. WALKER. Yes.

Mr. THOMPSON. Do you believe that the unions should not stop manufacturers from working by sympathetic strikes when the disputes are among the unions, say, arising from jurisdictional disputes, for instance?

Mr. WALKER. I believe that jurisdictional disputes should not arise at all; I believe that is a weakness on the part of the labor unions that they do arise. I think ultimately they will be able to eliminate jurisdictional disputes.

Take it in the mining industry, where they have at least 92 classes of labor that work in and around the mines, and such a thing as a jurisdictional dispute is unheard of. If you brought up the question of a jurisdictional dispute, they would not know what you are talking about.

Mr. THOMPSON. Is it not a fact that your union is more what is commonly called an industrial union?

Mr. WALKER. It is an organization of employees in the coal-mining industry.

Mr. THOMPSON. And what is true of your industry, because of the formation of the organization, is true of the Needle Trust?

Mr. WALKER. In some portions of it. Whenever organizations are established, I do not think any jurisdictional questions are raised at all.

Mr. THOMPSON. With reference to the part of your statement about earnings, would you guarantee by law a minimum return to the employer?

Mr. WALKER. No; I would be willing to guarantee to the employer, before he invested his money, expert information from the Government as to just what he could expect, and then if he puts in his money with positive knowledge that it would be a failure, he would have to take the consequences of his own foolishness.

Chairman WALSH. Then there is no means you can suggest by which such a guaranty could be made?

Mr. WALKER. I would be willing to agree, if all things were fairly represented to a man when he invested his money in the business, with the O. K. of the Government, that he would be guaranteed a minimum.

Chairman WALSH. Then, you would be in favor of such laws as would guarantee an employer a minimum return of his investment?

Mr. WALKER. Ultimately I would not be, as I said, but while this condition of affairs existed I would be in favor of it as a part of progress.

Mr. THOMPSON. In this connection, it has been suggested you stated there should be a limitation to the maximum.

Mr. WALKER. Yes, sir.

Mr. THOMPSON. How would you provide for a minimum profit? How they should get it in case the business didn't earn it? From what kind of fund would that be paid?

Mr. WALKER. I suppose it would have to come out of the profits of the general fund.

Mr. THOMPSON. An insurance tax on the profits?

Mr. WALKER. You could take it out of the tax from that particular industry.

Mr. THOMPSON. Would you compel employers to employ at the minimum wage unemployed?

Mr. WALKER. Well, if there was no other employment for those workers on the employers' own industry that the workers could get a living out of, I believe they ought to be compelled to employ them or give them what we considered to be the minimum to enable them to keep their families decently.

Mr. THOMPSON. In that latter case, would you take it out of the general taxation?

Mr. WALKER. I would take it out of that industry. I suppose it would have to be made general.

Commissioner COMMONS. Suppose you guaranteed the employer profits; then you would require him to hire all the laborers?

Mr. WALKER. I told you under the present arrangement if you tried to make a perfect institution out of it it is a good deal worse than trying to patch that old pair of pants that was patches. I am willing to do anything to help, but that is beyond me.

Commissioner COMMONS. Do you talk your views of socialism to the workers?

Mr. WALKER. Yes, sir; at times when invited to or given sufficient provocation.

Commissioner COMMONS. Do you think the high wage in strong closed-shop trades has anything to do with either the lower scale of wages for other laborers or with the increased cost of living.

Mr. WALKER. Well, it may possibly. But if the workers didn't get as large a share of the results of their labor where they have a thorough organization, it is possible that the employer might be satisfied with the profit he is now making and give it to the general public in the way of reduced living, but my own judgment is they would have to be watched mighty close. It is just like Mr. Piez has told you; he wouldn't reduce it unless he had to, and he would put it up as high as he possibly could. I don't think it would cut any figure.

Mr. THOMPSON. Would your organization be willing to file a copy of the agreement between it and the Western Federation of Miners, provided it is in writing?

Mr. WALKER. Our organizations are all public. Anybody can get a copy of the contract and by-laws and a verbatim report of the conventions and conferences.

Mr. THOMPSON. That is all.

Commissioner LENNON. I would like to ask you to furnish us as far as under your control a copy of those agreements and laws.

Mr. WALKER. All right.

(See Walker exhibit.)

Commissioner GARRETSON. Your organization holds jurisdiction over the Crow and Esquimo territory, do they not?

Mr. WALKER. Yes, sir.

Commissioner GARRETSON. And the local organizations in the P. E. I. country—Prince Edward Islands?

Mr. WALKER. I don't know what you mean by P. I. country. We have jurisdiction over the coal-mining industry of the United States and Canada.

Commissioner GARRETSON. In the enactment of the Canadian industrial act is it not a fact that all of the miners thought it would be a beneficial act and favor to pass it?

Mr. WALKER. Not all of them.

Commissioner GARRETSON. The bulk of them?

Mr. WALKER. There might have been some of them.

Commissioner GARRETSON. Didn't they find out the first time an involved investigation was held that the employers utilized it to put enough supply of coal on the ground to last during the entire period that industrial strike might take place?

Mr. WALKER. That was my information.

Commissioner GARRETSON. And from that time haven't they repudiated the act and been opposed to it?

Mr. WALKER. Yes, sir.

Commissioner GARRETSON. That is all.

Chairman WALSH. Call your next witness.

TESTIMONY OF MR. DUDLEY TAYLOR.

Mr. THOMPSON. Will you give us your name? .

Mr. TAYLOR. Dudley Taylor.

Mr. THOMPSON. And your address and business?

- Mr. TAYLOR. 1818 City Hall Square Building, Chicago.
- Mr. THOMPSON. And your profession, Mr. Taylor?
- Mr. TAYLOR. Lawyer.
- Mr. THOMPSON. With whom are you engaged in a professional way?
- Mr. TAYLOR. I presume you refer to my—
- Mr. THOMPSON. Are you in general practice?
- Mr. TAYLOR. I am general counsel for the Employers' Association of Chicago.
- Mr. THOMPSON. For how long have you been such counsel?
- Mr. TAYLOR. I have acted in that capacity for the past 10 years.
- Mr. THOMPSON. How old an organization is the Employers' Association of Chicago?
- Mr. TAYLOR. I think it was organized 11 or 12 years ago.
- Mr. THOMPSON. And have you been counsel almost from the beginning?
- Mr. TAYLOR. Nearly so.
- Mr. THOMPSON. What membership has your association? Among what classes of employers, and about how many?
- Mr. TAYLOR. Well, it has associations of employers affiliated with it. It is also comprised of individual firms, principally in the manufacturing business in this city.
- Mr. THOMPSON. What other associations of employers are affiliated with your association?
- Mr. TAYLOR. Well, there are various associations. Not being the secretary, it is not quite within my knowledge.
- Mr. THOMPSON. I would like to have such information and knowledge as you have.
- Mr. TAYLOR. Well, I could say offhand that the Furniture Manufacturers' Association is a member. Some of the retail organizations—I think the State Street retail stores are members. Whether or not the metal trade is affiliated now I don't know; it has been. Various other associations. I don't know, but I think the number principally is made up of individual firms.
- Mr. THOMPSON. Located in and around Chicago?
- Mr. TAYLOR. I think all in the city.
- Mr. THOMPSON. Have you a copy of these questions?
- Mr. TAYLOR. I have; yes, sir.
- Mr. THOMPSON. The first one relates to your organization and your membership. Would you have any objection to supplying the commission with a copy, stating the membership of the different associations, and of your by-laws and constitution, if you have one?
- Mr. TAYLOR. You are welcome to the by-laws. As far as the membership is concerned I am not in a position to speak, not being secretary of the association, and it is a matter that possibly would have to be referred to our executive committee.
- Mr. THOMPSON. Who is the secretary of your organization?
- Mr. TAYLOR. William M. Webster.
- Mr. THOMPSON. Did you take up with him these questions that were submitted to you?
- Mr. TAYLOR. No, sir.
- Chairman WALSH. Can't you, as president of—you are just counsel?
- Mr. TAYLOR. Only counsel.
- Chairman WALSH. What other organization is yours affiliated with—I mean larger body?
- Mr. TAYLOR. No other organization so far as I know.
- Mr. THOMPSON. Did you hear the testimony of Mr. Walker on the stand to-day?
- Mr. TAYLOR. No, sir; I did not.
- Mr. THOMPSON. What relation, if any, does your organization sustain to the National Association of Manufacturers, for instance?
- Mr. TAYLOR. None whatever.
- Mr. THOMPSON. Any friendly relationship?
- Mr. TAYLOR. I suppose we exchange printed matter.
- Mr. THOMPSON. In other words, you have no agreement or understanding, or any definite or indefinite arrangement?
- Mr. TAYLOR. None whatever.
- Mr. THOMPSON. Whatever may exist between the two organizations is purely a matter of comity?
- Mr. TAYLOR. Precisely.
- Mr. THOMPSON. And incidental friendship?
- Mr. TAYLOR. Mutual interests, possibly.

Mr. THOMPSON. You may give, if you will please, as briefly as you can, a statement of the activities of your association so far as it touches on the labor proposition, industrial matters, since you have been counsel.

Mr. TAYLOR. I should say that the employers' association was formed for purely defensive purposes, feeling a need on the part of the employers to organize to meet demands which were considered more or less unjust. Since that time it has been conducted almost entirely if not entirely as a defensive organization. We are interested in the subject of strikes and boycotts affecting our members. We are sometimes interested in a general way in strikes and boycotts which do not affect our members, but in which we feel we are indirectly concerned. We furnish legal services in the matter of prosecution for violence and for intimidation, and in obtaining convictions and proceedings for contempt under injunctions. We advise to some extent in relation to the factory laws and matters of that sort.

Mr. THOMPSON. To what extent, if any, does your association advise with reference to the methods of conducting the industrial disputes such as strikes on behalf of one of your members?

Mr. TAYLOR. Well, it differs according to circumstances. The employer who is a member of our association may not require any services from us—perhaps some large concern which maintains its own legal department and is able to handle the thing itself. Others call on us for more or less limited services. Others ask us to take entire charge of the legal phase of things and to furnish guards to them, for instance, to accompany their men back and forth to the place of business.

Mr. THOMPSON. Then the services you render are not entirely limited to the defense and prosecution of suits, but also includes the question of furnishing guards.

Mr. TAYLOR. Yes, sir.

Mr. THOMPSON. Do you ever give advice generally as to the methods of conducting strikes, or warfare, rather?

Mr. TAYLOR. Yes, sir; very often an employer finds himself in a position where he feels he is entitled to some relief and requires advice, and it is given to him. He does not understand the situation himself, perhaps, from the various angles, and he thinks we do, and is glad to avail himself of our advice.

Mr. THOMPSON. In other words, as you stated at the beginning, your association is an employers' defensive association?

Mr. TAYLOR. I think so.

Mr. THOMPSON. And as such would furnish such aid and advice and assistance as in your judgment and the judgment of the member who is in trouble should be given?

Mr. TAYLOR. Generally speaking, that is true.

Mr. THOMPSON. Of course, I am assuming legal methods.

Mr. TAYLOR. Yes, sir.

Mr. THOMPSON. And that there is no limit other than what is legal to the help you may give to a member in case of industrial trouble?

Mr. TAYLOR. Well, I don't know what all that implies.

Mr. THOMPSON. I am leaving out—of course, assuming you would not do anything illegal and leaving out all questions of financial aid as such.

Mr. TAYLOR. Yes, sir.

Mr. THOMPSON. Now, in the carrying on of the work during times of peace what aid or help does your association give to its membership?

Mr. TAYLOR. It gives such advice then as to matters which come to our attention in relation to factory laws and decisions or something of that sort. Might possibly advise them as to the organization and work of this commission for instance. General information about things which we think are of general interest.

Mr. THOMPSON. And would you be apt to advise employers as to the means to prevent industrial trouble?

Mr. TAYLOR. Yes, sir; oh, yes.

Mr. THOMPSON. That would come within your work of counseling?

Mr. TAYLOR. Yes, sir.

Mr. THOMPSON. And would have a fairly broad scope, would it not?

Mr. TAYLOR. I should say so; yes, sir.

Mr. THOMPSON. Now, in respect to this work, would you be apt, if called upon, to give advice as to the organization of any particular employer's shop?

Mr. TAYLOR. No, sir.

Mr. THOMPSON. In regard to the carrying on of strikes and with reference to conditions existing in times of peace in the shop of a member of your association do you have any so-called squads of men who may go around and work in these various shops and find out the conditions which exist?

Mr. TAYLOR. No, sir; nothing of that sort.

Mr. THOMPSON. That is carried out in some associations; I presume you know that.

Mr. TAYLOR. I understand there are some national associations which have workmen who are sent from place to place to help out during labor troubles.

Mr. THOMPSON. Or even without labor troubles existing?

Mr. TAYLOR. Not that I know of.

Mr. THOMPSON. Well, for instance, if there are associations that provide men to go around—

Mr. TAYLOR. You are inquiring about something of which I have no knowledge.

Mr. THOMPSON. I just wanted to find out whether your association did any of that work or not.

Mr. TAYLOR. No, sir.

Mr. THOMPSON. What is the attitude, if any, of your association toward the organization of workers; of your membership toward trade-unions?

Mr. TAYLOR. Generally speaking, it has seemed to me that the members of our association are inclined to liberal, fair views and to appreciate the justice of organization. From my talk with them I am satisfied that they would prefer to do business with organizations of labor provided they were reasonably safeguarded so that they could do business under safe conditions and not have their business disrupted by some unjust demands, some whim or caprice. If they could only feel there was stability enough that the union organization was conservatively directed and managed, I think there would be no complaint, as the employer is looking, above all things, for stability. He must know that his business can go ahead. I don't think he has any quarrel with organizations as such.

Chairman WALSH. At this point we will stand adjourned until to-morrow morning at 10 o'clock, to meet in this same room. Kindly resume the stand at 10 o'clock to-morrow morning, Mr. Taylor.

(At 4.30 p. m. of this Tuesday, July 21, 1914, an adjournment was taken until Wednesday, July 22, 1914, at 10 o'clock a. m.)

CHICAGO, ILL., *Wednesday, July 22, 1914—10 a. m.*

Present: Chairman Walsh; Commissioners Commons, Delano, Weinstock, Ballard, Lennon, O'Connell, and Garretson; also William O. Thompson, counsel.
Chairman WALSH. The commission will please be in order. You may proceed now.

Mr. THOMPSON. Mr. Taylor, will you take the stand?

TESTIMONY OF MR. DUDLEY TAYLOR—Continued.

Mr. THOMPSON. Mr. Taylor, in your 10 years of counselship with the Employers' Association of Chicago, during that time have you acquired any views or opinions with reference to trade-unions?

Mr. TAYLOR. Yes.

Mr. THOMPSON. As constituted at the present time?

Mr. TAYLOR. Yes.

Mr. THOMPSON. You have?

Mr. TAYLOR. Yes.

Mr. THOMPSON. Will you give to us, as briefly as you can, your opinion in regard to them?

Mr. TAYLOR. Mr. Thompson, may I make a suggestion that I be allowed to cite a specific case and draw some conclusions from it?

Mr. THOMPSON. You may do that, and be as brief as you can.

Mr. TAYLOR. I notice in a morning's paper a statement made by Mr. Walker, the last witness heard yesterday, to the effect that the waitresses are endeavoring to obtain \$7 a week and obtain one day's rest out of seven. And I want to refer briefly to that and indicate to you the way in which matters come into our office, the consideration which influences us, something about how we proceed and what we think ought to be done, and if I can give this commission anything at all it will probably come out in discussing this matter a little bit.

In November or December of 1913 the waitresses' unions, cooks' union, and the waiters' union started out on a campaign to unionize those occupations in the city of Chicago in the hotels, restaurants, and the lunch rooms. That stands admitted as a matter of court record. They sought to get the restaurant keepers and food-exchange members operating lunch rooms to sign a closed-shop agreement, which also provided for a scale of wages, the wages of the waitresses to be \$8 a week, and also for one day's rest in seven.

The first attack was made upon the Henrici restaurant over at 79, I think, West Randolph Street. There were a considerable number of pickets there, I think some six on the average, for quite awhile. There was a great deal of publicity attending it and great crowds gathering. And finally there was an injunction proceeding, and in that injunction proceeding the courts after hearing the case upon its merits held that all boycotting which was not enforced by violence or intimidation was legal, and all picketing which was not enforced by violence or intimidation was legal; but took the position that because this picketing occurred in a crowded district of the city it necessarily resulted in disorder and must stop, and although its injunction order did not read that way and in fact did not prohibit picketing, as they were doing, nevertheless that was the intimation of the court, and it stopped.

They then attacked Mr. Knab, and Mr. Knab has a string of seven or eight restaurants in the city, and I think all of them within the Loop. Mr. Knab for 10 years or more had never discriminated against union labor, employing union and nonunion labor; when he was requested to sign a closed-shop agreement last fall he signed a closed-shop agreement. He operated under it for four months, and he claimed that he could not get the help from the union which he needed and must have, and his business suffered in consequence; that he had to employ others outside; and, not to make it a long story, it did not work; consequently he refused to renew the agreement; but his wages were the union wages or better; his hours were the union hours or less; his days of the week were those of the union; and there was absolutely no point of difference between Knab and the waitresses, the waitresses and the cooks, other than the closed-shop provision of the contract under which he must let the unions send him all of his help provided the union was able to do it, and if it was not able to do it, then he might employ as he pleased. But his new employees must join the union within three days. He had found by experience that he could not enforce that proposition—that is, he was in continual trouble and he would not undertake to continue under such an arrangement. Knab has been subjected to picketing and boycotting ever since May 1. It is now some 85 days. This picketing consists, undoubtedly under the advice of counsel, of two women generally, and sometimes one, who pass back and forth slowly in front of each restaurant and bear signs. The signs are changed from time to time. The present one reads: "With your assistance we will win our strike against Knab." As I say, this has been going on for 80 or 85 days. There has been no attempt on the part of these pickets to interview employees as might be expected in the ordinary trouble, absolutely no attempt. It has all been directed to inducing or influencing the patronage, influencing people not to patronize the place. It is a direct attack upon the patronage to destroy it. It has been from its inception May 1.

Mr. Efting and Mr. Powers, who also own a string of restaurants in this city—one owns five and I think the other owns six—were interested in the Powers Baking Co. with Mr. Knab, a separate corporation. As near as we can get at it from all we have learned, they coupled Efting and Powers's name with Knab's and extended this boycott against those restaurants. Technically there is no strike and practically no strike against either of those persons; none of their employees went out; all of them were well satisfied and stayed in their positions, and there is no attempt on the part of the union to get them out; but it is simply an attempt to destroy the patronage of those two men.

This has continued now, except for a brief interval of several days, I should say, approximately two weeks. In front of these restaurants of Efting & Powers they did wear signs, and I think they still are, which state that Efting & Powers are in a combine to keep the waitresses from getting one day's rest in seven. That is the sole information conveyed to the public by the pickets in front of those restaurants.

As a matter of fact, Powers has never employed waitresses, but nevertheless his place is picketed by waitresses. Efting employs no waitresses and only a very few waiters, and his place is picketed that way. As a matter of fact, for a considerable time past they have not employed people seven days a week, but have granted one day's rest in seven, and that is not the issue.

They pay the union wages or more and work union hours or less, and there is absolutely no issue with either of those two men except a closed-shop agreement, of which I spoke.

Now, this matter comes into our office. Here are men who have been taught ever since they understood anything that they had certain legal rights. They come into our office seeking advice; they have not had any such trouble before and do not know what to do, and they inquire from us and we advise them. Now, Henriel got his injunction. Knab's attorney, who has never handled a matter of this kind before, applied for a similar injunction and got exactly what he applied for but found that it was not sufficient to stop the boycotting and the picketing. He later tried to have the injunction enlarged but did not get it, and I went in for Efting & Powers and applied for an injunction and got it. A little later they moved to dissolve it, and it was dissolved in this particular—by the way, in passing let me say that, so far as getting an injunction is concerned, in my experience of 10 years we are about always immediately put to the test of whether we are entitled to it. We may possibly get it without notice, but the courts are also keen to hear a motion to dissolve within a day or two; and when I got this injunction the court of its own motion wrote on the order that he would hear a motion to dissolve the injunction within 24 hours, showing his willingness to take the matter up and have it argued at the earliest possible moment.

Chairman WALSH. Do they grant ex parte restraining orders?

Mr. TAYLOR. Yes.

Chairman WALSH. They grant them on the face of petition in the first instance?

Mr. TAYLOR. And on the recommendation of the master in chancery; then within a few days we were in court on a motion to dissolve the injunction.

Chairman WALSH. In the first instance do you apply for the temporary restraining order and he refer it to a master in chancery?

Mr. TAYLOR. That depends on circumstances. As a general thing I give notice that I will apply for the injunction; but in a case like this, where this continual loss was going on and it was important to get immediate action, I applied for an injunction without notice.

Chairman WALSH. To a judge of the court?

Mr. TAYLOR. Yes.

Chairman WALSH. And did he refer it to a master in chancery before he granted the restraining order?

Mr. TAYLOR. Yes.

Chairman WALSH. Was either side notified?

Mr. TAYLOR. No; the master in chancery took it home over Sunday.

Mr. THOMPSON. What you say of injunctions here is true of all kinds of injunctions?

Mr. TAYLOR. Yes.

Mr. THOMPSON. And wherever an ex parte injunction is issued without notice it is understood that the other side shall have the right of way over all other court business to come in and have a hearing on the injunction?

Mr. TAYLOR. That is true. An injunction is never in force more than a few days without a motion to dissolve being heard if the other side wants to make an argument.

Chairman WALSH. In this case the defendants' first appearance was on motion to dissolve the restraining order?

Mr. TAYLOR. No, sir.

Chairman WALSH. What was the first appearance in court of the defendants?

Mr. TAYLOR. The judge, when he was satisfied of the bill, required me to give notice, and notice was given, and they came in, and the court gave them this option: He says, "I have read this bill and I think it presents a case for the—"

Chairman WALSH. Had there been any action taken by the court with reference to issuing a restraining order before this moment you are speaking of now?

Mr. TAYLOR. No, sir.

Chairman WALSH. That is all I wanted.

Mr. TAYLOR. He required us to give notice, and they came in, and he said to the other side, "I will either grant the injunction and allow you to come in within 24 hours on a motion to dissolve and I will hear you on it, or I will not issue the injunction and you stop your picketing and boycotting until this court can pass on it, one or the other," and they chose to let the injunction issue.

Now, proceeding with my story, and I will draw to a close pretty briefly here.

Chairman WALSH. Go ahead.

Mr. TAYLOR. On the motion to dissolve the injunction it was argued at length, at least on my part, and while the court dissolved it so far as it referred to picketing our name was concerned, he left a perfectly good injunction against boycotting and against this scheme of exhibiting matters in front of these restaurants, as the injunction read, for the purpose or with the effect of injuring the patronage. These pickets did not cease picketing and boycotting; they did not even pause or hesitate; they continued it. We went in promptly on a motion for a writ to have them cited for contempt, stating we did not do it in a vindictive spirit at all, but simply for the purpose of having it stopped. It was further argued, and after reading of affidavits the court took the position he would not consider the causes underlying this trouble or the injury which was resulting to the complainants, but would test this thing solely by the question of violence or intimidation, and if their acts did not involve violence or intimidation he would not interfere, and with a perfectly good injunction in terms we, for all purposes, are out of court and get no relief. Now, these gentlemen say—

Chairman WALSH. Is your case still pending?

Mr. TAYLOR. Still pending.

Chairman WALSH. Will it come up for hearing on permanent injunction later?

Mr. TAYLOR. How soon we can get to the hearing I don't know. We are now in court vacation. Whether we can get to the hearing on the merits at all in vacation is very doubtful, and if we can't, then not until next fall; and if the court should stand by its decision, then we would have to go to the appellate court on the chance of reversing it, which would perhaps take a year or more and, of course, in the meantime there is no protection there. Now, these gentlemen feel that they have got real rights. They may be wrong, but that is their opinion. That is my opinion. It is my opinion that these waitresses have no right to walk up and down the street solely for the purpose of smashing the patronage, for the sole purpose of compelling them to enter into the closed-shop agreement. I take the position that if a union was so constituted, so directed, so managed that it would be a good thing for employers, the employers would seek to do business with the union because it would stand for stability, it would stand for the things which they need in their business; but here is a man who tried the thing for four months and it didn't work his way, and the others are judging by his experience and don't want to introduce it. They will not introduce it unless they are forced to do so. The unions on their part are doing all they can to force them to introduce it, as I have said, to the extent of smashing their business. These men are not in any pica-yune business; their places of business have cost from \$5,000 to \$10,000 to equip. It represents a large investment to them. It represents a business built up through many years of good, fair dealing, at least that is what they claim, and they come to this question of where is their relief. Now, assuming for the purpose of the argument that the unions are not always right, that they may sometimes be wrong, that there is a case sometimes for some tribunal to come in and investigate the matter, hear it upon its merits, and see that justice is done, where can we get it? That has been my experience during the time that I have been counsel for this association, that there is not a real adequate remedy.

On the other hand, I find a great powerful organization daily becoming more powerful—that is, the labor organization. It has a power to enforce not its requests but its demands. A single employer can't stand against it. Generally a few employers can't stand against it. It is a serious question if all the employers in the same line of industry in a city can stand against it. It is a question of standing the gaff, or standing the loss not only of profits, but standing the deficit in the conduct of the business perhaps for weeks or months. I say, assuming for the purpose of the argument, that the employer happens to be right, where is his remedy against that powerful organization? I want to call your attention to the fact that these people, forming that sort of labor organization, are irresponsible financially, they can move about the city, be lost to sight; move to another city, be lost to sight. You talk about damage suits, you can't get a damage suit to a hearing for possibly one or two years. You get a judgment; it is worth nothing; it is not any remedy. On the other hand, the loss is continuing during all of that time. Now, I find that when banks, as

responsible institutions, seek to do business in a community, they are required to give some token of their responsibility and satisfy the State auditor; that is right, I believe. They have to show their funds; their funds are under State control. The same thing is true of insurance companies; but here, we will say for the purpose of the same argument, is a powerful organization using its funds for the purpose of smashing another man's business, we will say, unjustly, and those funds are not subject to any control. You can't in this State sue at law a labor union, because there is no statute which renders a labor union liable in a suit against it. You have got to sue its members as partners; you can't get anywhere on that. You can't get their funds into the court's control, the funds which are being used against you all of this time. Now, that is the sort of thing, Mr. Thompson, we, in the vernacular, are up against all the time in this city.

Mr. THOMPSON. I am rather sorry your case, Mr. Taylor, was a recent matter. Of course, it may necessitate our going into it, which we did not intend to do at this hearing, but my question to you was what view you had, from your 10 years' experience as counsel of the Employers' Association, with reference to labor unions, and you said you would give a case which would illustrate your opinion. I will ask you if the waitresses' case, which you have testified about, represents, in your opinion, a typical union proposition?

Mr. TAYLOR. It is typical in a sense that most of our troubles are due to the closed-shop proposition and do not involve wages and hours. You ask for my opinion further on this thing. If it is of any value, it is this: That the first thing to do, as it seems to me, is to make labor unions responsible, and that has got to be the first thing to be done. Then you have got some measure of responsibility, some way of controlling it, controlling their funds, having their associations, I don't care whether of employers, employees, or laboring men, ipso facto corporations considered as corporations, but under laws which give some tribunal the control over those affairs. You take this case—harking back a minute to the waitresses; what does the public know about it? The public does not investigate this matter and form its own opinion and act according to its convictions; not at all. We have demonstrated that clearly. They simply avoid those restaurants, at least a considerable part of it does, because there is trouble there. It is easy to go to some other restaurant across the street or in the next block. Then you should have a tribunal which should look into the merits of these controversies, if you please, and make a finding by which the public can be guided; the public would be guided if it had confidence in the tribunal. The tribunal ought to have such real power as to enforce justice in the case.

That brings up another consideration. Your tribunal as constituted these days in our States has not real independence, in my judgment and in the judgment of those who are familiar with these matters. A judge is elected for six years. It may be we get into his court and he is up for reelection the next year. It may be he is up for reelection in two years. But be that as it may, we are satisfied that the judges fear to antagonize a large powerful class represented by labor unions and hedging so to speak, and we do not get relief. Now, you should have a tribunal, I think, which is appointed and under such circumstances as to insure its real independence. They are like the United States Judges; they ought to be appointed for life, depending, of course, upon good behavior in office and all that, or some other thing like that, to insure their real independence.

Another thing, it ought not to be a tribunal composed of a laborer on one side, an employer on the other side, and a so-called member of the public for the third and deciding factor. That, so far as I have seen, in my observation, does not work out. It is a so-called species of arbitration which does not work.

Mr. THOMPSON. Referring to your question of financial responsibility of the unions, on the part of the unions, you spoke about corporations. Corporations generally are associations of men with capital for the purpose of limiting their financial responsibility; is that not true?

Mr. TAYLOR. Yes.

Mr. THOMPSON. Legally?

Mr. TAYLOR. Yes.

Mr. THOMPSON. In the new union you would want them incorporated for the purpose of extending their financial responsibility?

Mr. TAYLOR. I should say so.

Mr. THOMPSON. Now, to what extent and in what degree would you extend the financial responsibility of the unions by means of corporations, whereas the men of capital use corporations to limit their financial responsibility?

Mr. TAYLOR. I think if we could make the start, Mr. Thompson, it would be a matter of evolution much the same as the Interstate Commerce Commission, as I understand it, who have built up its practice and its procedure and its power. I think if we could start along right lines with the idea of control of the funds of all associations and with an independent tribunal it would, like our municipal court could, make a recommendation; give them power they have not got, or, having power, they do things—they can not enforce this control.

Mr. THOMPSON. Do you have an idea of having the common-law rules of damage, etc., applied to this responsibility?

Mr. TAYLOR. My personal idea, and, of course, all of this, Mr. Thompson, must be understood as my own personal idea and not any—

Mr. THOMPSON. Yes; I understand.

Mr. TAYLOR. Principles promulgated by our association at all. My own idea would be that the commission ought to have power, not in accordance with power which courts usually have, but a power to go into the merits of the dispute and adjust in accordance with justice, subject, only, to some reasonable control by appeal. I am not in favor of anything where there is no appeal whatever.

Mr. THOMPSON. Well, generally with reference to ordinary corporations, stockholders as such have no responsibility financially; is that not true?

Mr. TAYLOR. Except in banks, that is true.

Mr. THOMPSON. They simply stand the chance of the loss of the investment such as they have in the corporation?

Mr. TAYLOR. That is true.

Mr. THOMPSON. And people who deal with corporations are advised of that limited liability, are they not?

Mr. TAYLOR. Yes.

Mr. THOMPSON. In corporations, of course, stockholders have no authority to act as such?

Mr. TAYLOR. Yes.

Mr. THOMPSON. In your opinion is the union a democratic institution, I mean theoretically?

Mr. TAYLOR. Under practice, no.

Mr. THOMPSON. I mean theoretically?

Mr. TAYLOR. I regard it as un-American and unpatriotic.

Mr. THOMPSON. We will get to that later. At the present time, theoretically at least, they are democratic, are they not?

Mr. TAYLOR. Well, I am loath to admit it, because I have seen so much of the other.

Mr. THOMPSON. In other words, you do not pay much attention to the theory of labor?

Mr. TAYLOR. I can not let theory blind me to practice, Mr. Thompson.

Mr. THOMPSON. Well, taking your responsibility that would attach to a union, and assuming a union has 50,000 members scattered throughout the United States; that a contract was made by a local branch of an organization with some manufacturer; that 50 of these men should go out on a strike, we will say, violating this local contract which you assess your damages on. Do you think that the whole organization should stand a financial loss, irrespective of whether they concurred in that action or not? Assuming the international organization would refuse to sanction the strike and would order the men back to work and the men should not go. How would you assess your financial responsibility in that case?

Mr. TAYLOR. I should say, assuming that in reality the union is not back of it and discountenances it, that I would not favor that; but in practice I have rarely, if ever, found any such condition.

My experience, Mr. Thompson, leads me to believe absolutely that by the control of funds of an association, and, as I say, I do not care whether it is of employers or employees, you have got control of the association itself, and you can determine, or ought to be able to determine, whether or not those funds are used.

Mr. THOMPSON. Then it would require, to carry out this policy, that rules should be laid down and in what respect the various labor organizations should conduct their business as to whether in case a local union went out on a strike that should fix their financial responsibility, and in order to fix the responsibility of that character the strike should have the sanction of the international organization?

Mr. TAYLOR. I suppose there would have to be some general principles.

Mr. THOMPSON. Well, as a lawyer how do you conceive, under our present constitution, you could make such refined laws dealing with the running of organizations and running of labor organizations, separating them from other fraternal organizations such as Masons and the various churches in our land and the Knights of Pythias, and so on?

Mr. TAYLOR. Well, our Constitution is interpreted differently as time passes. The time was when the right of contract, the freedom of contract, was always upheld, as you know. Now, that has given way to the general proposition of what is for the common welfare, and so on. And it is anybody's last guess in the court of last resort as to what is something for the common welfare and what is not. And that points back that the Constitution is changed—the interpretation of it, at least, changes, and conditions have to be met. I am not so sure that under our Constitution there would be any difficulty in having a tribunal—I do not like that word "commission," as applied to these things—but a real tribunal, exercising such power as is necessary to determine wherein the justice lies, enforce justice. Now, on broad lines, I think a tribunal could be constituted in each State, and a Federal tribunal to cover the Federal matter, which would have those broad powers and would find it within their power to enforce it.

Mr. THOMPSON. Then you believe in the establishment of an industrial court, perhaps?

Mr. TAYLOR. I do.

Mr. THOMPSON. If that could be done.

Mr. TAYLOR. I think it has got to come. I do not see any other way out of it. It must have the control; it must have the confidence of the employers and the people generally.

Mr. THOMPSON. Would you have that court carry out the common law as it has come down to us in industrial matters? Would you have it make new laws to meet our industrial conditions?

Mr. TAYLOR. I would be satisfied to have the courts start in and pass upon questions like, for instance, this closed-shop feature which I have cited to-day, as an instance. Let them go to a supreme court for its O. K. or reversal.

Mr. THOMPSON. Well, would you have this supreme court in determining that question, apply the old law or a newer industrial law to be built up?

Mr. TAYLOR. That is a matter which would have to rest with the supreme court to determine, what the law is. It is continually deciding.

Mr. THOMPSON. No. But would you have established some basis by which anybody determining questions of that character should have the right, the authority, to develop a new law to apply to our newer conditions, or would you have, on the other hand, if you did not want to do that, you say the question must be decided according to the law as it now exists.

Mr. TAYLOR. I hesitate to say, Mr. Thompson, in my opinion, that we ought to take the common law just as it is and apply it, although that is, of course, interpreted from time to time. I think it is a question of growth. You take, for instance, this closed-shop proposition. As you are aware, it has been passed upon by, I think, some five States—Massachusetts Supreme Court, New York Supreme Court, the Connecticut Supreme Court, and our supreme court—have held that the closed-shop proposition, when it is intended to cover an entire community, is a monopoly, and the attempt to enforce it is an attempt to create a monopoly, and that it is against public policy. There is an interpretation, a building up of the law.

Mr. THOMPSON. Is it your interpretation in building up the law in accordance with the old common law that has existed for centuries past?

Mr. TAYLOR. I think it is.

Mr. THOMPSON. Now, you then think, your idea of such a court would be that it should take the decisions of the courts of these five States you have named, and use those as a standard, we will say, in that closed-shop proposition?

Mr. TAYLOR. Yes; until some good reason to the contrary appears, or until some statute, possibly, is passed which will obviate it.

Mr. THOMPSON. I will put the question to you in another form, another question, a little broader. Do you believe that the law, as it has come down to us and as we have it to-day from the old industrial conditions of the past, is competent to meet the newer conditions, the newer situation?

Mr. TAYLOR. Oh, no. I think that statutory enactments are necessary from time to time. We have a very interesting case here in Illinois. In 1845 our statute on extortion was passed and enacted. At that time they knew nothing about a so-called labor-union extortion. Now, in the year 1913, so I am in-

formed by the plate-glass insurance companies, from \$25,000 to \$30,000 worth of plate glass was broken in this city by representatives of labor unions. And it is claimed that the glazers' and the painters' and the decorators', and possibly one or two others, the electricians', unions are involved in that matter.

The act of 1845 upon extortion does not cover that situation at all; we ought to have a new act; the changing conditions require a new act.

Mr. THOMPSON. Let me put it to you another way: What do you think of the fact that perhaps under the newer industrial conditions the worker may have a claim, in equity at least, to a right to work in a certain factory, whereas under the old common law, if strictly interpreted, he has no such right.

Mr. TAYLOR. Generally speaking, I would say, from my interviews and dealings with employees, I think they would all be perfectly willing to have a matter like that, or any other matter submitted to some tribunal such as I suggested in which they felt they could have confidence and felt that the tribunal was really trying to enforce justice and let that pass upon that, and if that is to be the holding and in effect the law of the land, they will abide by it and have to.

Mr. THOMPSON. Have you any other views with reference to labor unions which you can give the commission to-day?

Mr. TAYLOR. I am, of course, familiar with picketing and violence and those questions, but I judge that nothing new can be brought before the commission on that.

Chairman WALSH. Briefly give your experience with violence and picketing—anything that you think is an abuse.

Mr. TAYLOR. I have talked with hundreds of workmen in this city who have been assaulted or threatened; I have had them come into my office pretty badly beaten up, and I know their views as to the picketing and how it comes about, and how violence results or how it has resulted in past years. I know what they think about picketing, and it is idle to tell those men who are subjected to that sort of thing that because in the picketing out in front of the plant or within a short distance from it there is no violence or intimidation that, therefore, that picketing is peaceful. I have known of cases in this city of strikes where picketing around the plant might be considered peaceful because there was no violence right in that locality, but men were followed to their homes and a week or two after being followed were beaten up when their homes were perhaps 5 miles from the plant.

Those men put two and two together and make four out of it, and to their minds that resulted absolutely from the spying—peaceful spying, if you please—around the plant, by which they get their addresses, and the men are beaten up miles from the plant. You can not tell those men that that picketing is peaceful, and it is in that view that the courts have held that picketing is necessarily intimidating.

Another thing, you can not get those men to go to and from the factory while there is picketing, even so-called peaceful picketing; you must send guards with them or they won't work, thus showing you how they fear the pickets; you have got to guard those men wherever there is picketing.

Chairman WALSH. Have you got records of the alleged assaults that have been made in industrial disputes in Chicago in the last few years?

Mr. TAYLOR. Only in this way; it would entail a tremendous amount of work to go over all my records and pick it out; I gave that up years ago.

Chairman WALSH. There is no record in the city of Chicago, as I understand it, except what might appear in the courts?

Mr. TAYLOR. I expect that you could get some sort of record.

Chairman WALSH. Will you get up the best and most authenticated record you can and give it to our investigators who will call on you?

Mr. TAYLOR. I will do the best I can, but I would have to go through all of my papers.

Chairman WALSH. If you were attempting to get it for any purpose, where would you go?

Mr. TAYLOR. I keep a record from day to day of practically all I do; I would have to take it from that.

Chairman WALSH. Our investigators could gather information from that, could they not, which would be valuable in getting at the extent of such a practice?

Mr. TAYLOR. It would give that sort of thing.

Mr. THOMPSON. Is not the corporation liable for any damages wrongfully inflicted?

Mr. TAYLOR. Yes.

Mr. THOMPSON. Do you know of any limitation of the liability of the corporation in that respect?

Chairman WALSH. That is, an ordinary corporation.

Mr. TAYLOR. No; none occurs to me at this moment.

Mr. THOMPSON. Can you collect from any corporation more than it is capitalized for or the property it actually has, no matter what it is capitalized for?

Mr. TAYLOR. No.

Mr. THOMPSON. If unions were legally liable, would there be any objection to limiting the liability of the union members?

Mr. TAYLOR. I do not see, offhand, any objection to that; it is a question, in my mind, principally of controlling the union funds. I think it is traceable to that.

Mr. THOMPSON. Would you put that on the same basis as the corporations?

Mr. TAYLOR. Yes.

Chairman WALSH. Is that all, Mr. Thompson?

Mr. THOMPSON. That is all at present.

Chairman WALSH. Mr. O'Connell would like to ask you some questions.

Commissioner O'CONNELL. How many members did I understand there were in your association?

Mr. TAYLOR. I have a memorandum, Mr. O'Connell, of the names of the executive committee of our association which I can give to you—the names of the officers and all, but I do not know the members of our association or how many there are. That is not a matter within my knowledge.

Commissioner O'CONNELL. Do you know the number of associations of employers that are affiliated with you?

Mr. TAYLOR. I don't even know the number.

Commissioner O'CONNELL. Have you any of them in mind that are affiliated with you that you come in touch with?

Mr. TAYLOR. Right offhand, the Chicago Brass Manufacturers' Association.

Commissioner O'CONNELL. The restaurant owners—have they an association?

Mr. TAYLOR. The restaurant owners, I think, have very recently come into our association and affiliated with us.

Commissioner O'CONNELL. They are members of your association as an organization of restaurant owners or employers?

Mr. TAYLOR. I think they are now. I think they came in very, very recently.

Commissioner O'CONNELL. Have you any idea of the number of restaurant owners that are members of the Restaurant Owners' Association?

Mr. TAYLOR. No, sir; I haven't. Mr. Wells Cook is secretary of it.

Commissioner O'CONNELL. Have you any idea as to the number of restaurants in Chicago?

Mr. TAYLOR. No, sir.

Commissioner O'CONNELL. What are the hours of labor of the restaurant employees?

Mr. TAYLOR. I don't know, generally speaking, except in these instances which I have cited here where I know they are not to exceed the union hours. By the way, I have a copy of their agreement, where it specifies the hours, if you would care to have it—have it made a matter of record—showing the closed-shop agreement and the scale of wages.

Commissioner O'CONNELL. I would be glad to have you file it.

(Taylor Exhibit No. 1, "Agreement between the Hotel and Restaurant Employees' International Alliance," etc., was submitted in printed form.)

Commissioner O'CONNELL. What were the hours of labor in these restaurants that are now having the strike, prior to the strike?

Mr. TAYLOR. All I can say is that they do not exceed the union hours set forth in the agreement.

Commissioner O'CONNELL. Well, don't you know whether they are 8 or 10 or 15 hours?

Mr. TAYLOR. I have before me the agreement here, which, speaking of waitresses, says, steady waitresses, six days, 60 hours, \$8 a week. Lunch and summer waitresses, seven days, 42 hours or less, \$6.50, and so on. A list of them, giving the hours. Our hours are not to exceed those, and in many instances, I am informed, are less.

Commissioner O'CONNELL. Now, the Knab restaurant, which you speak of—that is the one that is having the strike?

Mr. TAYLOR. Yes, sir.

Commissioner O'CONNELL. Were the waitresses having one day of rest in seven prior to the strike?

Mr. TAYLOR. Yes, sir.

Commissioner O'CONNELL. How was that arranged that they got that day? What day was it of the week?

Mr. TAYLOR. I don't know what the day was, how they arranged it. My understanding is that they have a shift of employees, which might be called an extra shift, so that the regular employees get their time off each day. I understand that the Henrici restaurant, that there are girls there—waitresses—who work some part of the seven days in the week, but it is not true at the Knab restaurant or Efting & Powers restaurants.

Commissioner O'CONNELL. What were the wages at the restaurant? What were the earnings per week at the Knab restaurants?

Mr. TAYLOR. I am unable to tell you, other than to say they are not less than the union scale, and I am informed in many instances they are more.

Commissioner O'CONNELL. You say "less" and "more." What is the high and the low? Don't you know what the wages were there at all?

Mr. TAYLOR. That has not come under my knowledge.

Commissioner O'CONNELL. You don't know whether it is six or seven or eight or ten dollars a week, more or less?

Mr. TAYLOR. No, sir; I can't tell you. I only know those questions are not in issue in this case of this strike—the question of wages or hours. In other words, if that contract was signed up to-day by Knab or Powers or Efting, it would make absolutely no difference in the working conditions, the hours, or wages in any of those three restaurants. It would simply be a question of the closed shop.

Commissioner O'CONNELL. There is a system prevailing in restaurants where, in cities like Chicago, during the lunch hour there are extra help employed for two or three hours in midday?

Mr. TAYLOR. I assume there is. I understand there is; but you are asking me about details of which I have no knowledge. I am not in the restaurant business.

Commissioner O'CONNELL. The reason I am asking you is in the explanation of the strike as a cited case you took a position that would be rather positive as to the right or wrong of it. Is your association now giving its assistance to the Knab restaurant, furnishing waitresses or by other means attempting to assist them to defeat the strike, as it were?

Mr. TAYLOR. No; we don't furnish any waitresses. They get their own waitresses. They have had the benefit of whatever advice I could give them, or assistance.

Commissioner O'CONNELL. In the other associations or organizations that are affiliated with your association, if they had strikes with their employees, would they come to your association for services in those cases, and would you furnish them in that direction to the extent, if necessary, of furnishing people for employment?

Mr. TAYLOR. No, sir. Years ago, Mr. O'Connell, we had an employment bureau.

Commissioner O'CONNELL. That is what I was getting to.

Mr. TAYLOR. Yes, sir; but that was discontinued several years ago. There was not enough demand to keep it alive.

Commissioner O'CONNELL. That is what I was leading up to. I knew you had an employment bureau.

Mr. TAYLOR. We used to have one.

Commissioner O'CONNELL. That was discontinued?

Mr. TAYLOR. That was discontinued several years ago.

Commissioner O'CONNELL. Are any of the associations connected with your association running employment bureaus by themselves as associations?

Mr. TAYLOR. Yes; I know some of them secure help. I think the local branch of the metal trades does. I think the Chicago Brass does. I think the laundrymen do. I don't think the furniture people do—possibly they do; I don't know.

Commissioner O'CONNELL. Your association as such is not now operating an employment agency?

Mr. TAYLOR. No, sir; not at all.

Commissioner O'CONNELL. We could get this information from the representatives of the metal trades or other associations?

Mr. TAYLOR. Yes, sir.

Commissioner O'CONNELL. I understood you, speaking of this board—the general board of adjustment we have had considerable information on or opinion

about—that its selection or its success would depend on its method of selection very largely?

Mr. TAYLOR. Yes, sir.

Commissioner O'CONNELL. I understood also you were not favorable toward the election of judges by the people?

Mr. TAYLOR. No, sir; I am not.

Commissioner O'CONNELL. You believe they should be elected or selected or appointed for life?

Mr. TAYLOR. Yes, sir; I would rather have them elected by the people for life than to have them elected for 4 or 6 or 10 years.

Commissioner O'CONNELL. Then I would gather from your opinion as to your experience with the judges in Chicago—the fact that they had been elected for only a few years, the fear of not securing reelection, or of courting the displeasure of some element of their community—that their judgment is warped, at least?

Mr. TAYLOR. I am sorry to say I have seen many signs of timidity.

Commissioner O'CONNELL. Then, I take it, the impression expressed by some that the organizations of labor are not so favorable toward the courts—there is not so much difference between your opinion and the alleged opinion of labor?

Mr. TAYLOR. My experience, Mr. O'Connell, is that labor has in these matters far more the better of it in the courts. The courts, as nearly as I can judge, are anxious, almost overanxious, to remove any suspicion or feeling that the courts are in the least antagonistic to labor unions. I think they go out of their way in attempting to avoid any such misapprehension on the part of labor unions.

Commissioner O'CONNELL. Now, Mr. Taylor, I take it you have given considerable thought to the question of how the wageworkers ought to be organized. I take it you are not opposed to wageworkers organizing.

Mr. TAYLOR. Not at all.

Commissioner O'CONNELL. What would you consider to be a proper method and proper organization of labor?

Mr. TAYLOR. Of course, that is hard to say, but I do feel this, that a labor organization ought to be in a position to merit the confidence of the public and of employers, for that matter, and ought not to rely upon coercion. But what do we see? We see members of labor unions who do not dare to go to the meetings of their union and raise their voice in protest. We continually read in the newspapers of this city how some man has been assaulted and possibly kicked downstairs for presuming to say something in a labor-union meeting. I have talked with the members of labor unions regarding violence and graft—good, decent, respectable fellows—and I have said, "Why don't you have a house cleaning; why don't you go down there and why don't you take some of your people down there and open up these things and find out and be decent?" You simply get a smile from those fellows if they have one in their system. They don't dare do it. They are coerced into the union; they are coerced to do as the union directs, and we see the evidence of it every day. Some trouble is experienced somewhere in this city; a man goes around and perhaps whistles, blows a tin whistle, or snaps his fingers and the men go on a strike. Why? The chances are they don't know anything about it; the chances are they are opposed to it, because for the time being it takes their living from them or a considerable part of their living, but they have no choice or option but to obey. If those men were not coerced; if they were not in fear of violence that would not be the case.

I say that the labor unions as organized to-day, generally speaking, are thriving on coercion. It should not be so, it should be voluntary. This matter of the closed-shop proposition ought to be a voluntary proposition. The employer ought to be able to look at the contract and look over the union—the officers of the union—judging something of the past history, and say, I will be a lot better off doing business with your union; I want it in my business, and enter into the closed-shop agreement voluntarily, if he wishes to do so, and not to be compelled and coerced to do it and have the members coerced and compelled to go into the union and stay in the union and do as the union officers say. That is, in my judgment, un-American and wrong.

Commissioner O'CONNELL. What construction do you put on open shops? What is an open shop?

Mr. TAYLOR. An open shop, I take it, is a shop in which a man can be employed irrespective of his affiliation with any labor union.

Commissioner O'CONNELL. You think that is so?

Mr. TAYLOR. I think it is so. There may be instances possibly where it is not so, but that is as good a theory, at least, as some of those which we have here.

Commissioner O'CONNELL. You think that is so in the United States Steel Co.'s plant?

Mr. TAYLOR. I have no knowledge about the United States Steel Co.'s plant.

Commissioner O'CONNELL. Do you think that is so in any of the large industrial plants?

Mr. TAYLOR. I do know many, Mr. O'Connell, where the open shop has been in operation for years without any discrimination at all.

Commissioner O'CONNELL. And they are still open shops?

Mr. TAYLOR. They are still open shops.

Commissioner O'CONNELL. In reality or in name; which is it?

Mr. TAYLOR. How is that?

Commissioner O'CONNELL. In reality or in name, which is it?

Mr. TAYLOR. In reality, and I know I think what you have in your mind, and I am perfectly frank in answering you, if I am right, and that is this: That an employer who has been conducting an open-shop proposition gets into some trouble; he is up against a pretty hard proposition; perhaps he has learned a lesson or thinks he has learned a lesson; from that time on perhaps he maintains what he calls an open shop, and, as a matter of fact, it is closed to the union. That is what you have in mind, isn't it? In other words, he won't have a union member if he knows it?

Commissioner O'CONNELL. I believe that exists.

Mr. TAYLOR. That condition arises and exists.

Commissioner O'CONNELL. But on the other hand, what I am trying to get at is whether it is not true that there are a great many of the shops so-called open shops that are not open shops.

Mr. TAYLOR. I can only presume there are many shops which are so-called open shops and which, as a matter of fact, are closed to union men; I don't know, but I assume that is so.

Commissioner O'CONNELL. And many of these shops which are composed of all union men are called open shops?

Mr. TAYLOR. I venture to say that probably in shops in which there has been some trouble and the employer felt he could not do business with the labor unions under present conditions—

Commissioner O'CONNELL. For instance, the railroad industry.

Mr. TAYLOR. That is something I don't know anything about. They don't call on us.

Commissioner O'CONNELL. You don't know about that?

Mr. TAYLOR. Not a thing.

Commissioner O'CONNELL. I don't think there is a closed-shop agreement. I have made hundreds of them, but I do know that every one of these shops are union absolutely, and I suppose that applies in other industries and probably in shops of your members in Chicago.

Mr. TAYLOR. In my experience I have seen men who came out of college with a humanitarian altruistic idea and possibly thought the old man, their father, who had conducted the business before them, didn't know what he was doing and called the union officers in and made a closed shop agreement and said to them, "I want to work with you hand in hand," and attempt to carry that thing out, only in the course of time to be put in a position, whether by restriction of output, limitation of apprentices, or one thing and another of that sort, where he has had to fight for his business life to get out from under that sort of agreement.

Commissioner O'CONNELL. Now, in conclusion, I don't wish to take any more time. Has your association a provision for the expulsion or suspension or fining of members of your association for infraction of the rules and regulations of your organization?

Mr. TAYLOR. So far as I know it has not. There has never been any such arise, and it is a loose organization at best.

Commissioner O'CONNELL. If a member of your association was found guilty of bribing or attempting to bribe a representative of labor or a representative of the people at your State legislature or a representative of the people at Washington, would your association expel, suspend, or fine him for such act?

Mr. TAYLOR. There has never been any such case, and I have never heard of anything of that sort or any intimation. I assume that these gentlemen who

are at the head of our association, some of whom are national figures, like Mr. John B. Farwell, would be very much disinclined to be associated with that sort of a crook.

Commissioner O'CONNELL. That is all.

Chairman WALSH. Mr. Weinstock would like to ask you some questions.

Commissioner WEINSTOCK. In your testimony, Mr. Taylor, among other things, you said that the employer could not have much confidence in the courts as they are constituted to-day, because in labor disputes the tendency on the part of the court was to toady to labor. Did I catch it correctly, Mr. Taylor?

Mr. TAYLOR. I don't quite like to put it that way.

Commissioner WEINSTOCK. Just correct me, then, and put me straight.

Mr. TAYLOR. I wouldn't quite say "toady to labor," but I can't quite help but have the feeling that the tide has for years been running very strongly against employer, and that the employer is almost wholly on the defensive, and has been so for years. The labor unions have no trouble in getting their causes heard and getting everything they are entitled to, and I think considerably more, as in this case I cited here. On the other hand, I feel when we go into court on injunction matters or labor disputes we are not as welcome as we might be in other matters; that there is a disinclination, a very real disinclination, on the part of the court to get out from under in order to avoid passing on those cases and, as they sometimes say, "to pass the buck." I am talking a little bit plainly about it. I have known judges who are independent, strong men, and you can expect them to do justice. On the other hand, I know too many of the other sort who are certainly very timid.

Commissioner WEINSTOCK. May I put the matter in this way: I presume, in speaking as you do, you are voicing the sentiments of the members of your association?

Mr. TAYLOR. No, sir; I can't say I am. This is the sum total of my observation and experience, and they are my personal views only.

Commissioner WEINSTOCK. You do not know, then, whether you are expressing the consensus of opinion of the employers connected with your association?

Mr. TAYLOR. Those who have come under my observation I should say I am, and from some particular remarks that I can recall I know that many agree with me.

Commissioner WEINSTOCK. Many do agree with you?

Mr. TAYLOR. Yes, sir.

Commissioner WEINSTOCK. The spirit, then, is, if I interpret it correctly, that those employers with whom you have discussed the matter, whose opinion you know, is that they can not look for what you might call a square deal?

Mr. TAYLOR. That is correct.

Commissioner WEINSTOCK. In the courts when it comes to labor issues?

Mr. TAYLOR. That is true.

Commissioner WEINSTOCK. You were not here yesterday afternoon, were you?

Mr. TAYLOR. I was in and out a couple of times.

Commissioner WEINSTOCK. Let me read to you the viewpoint of the last representative on that side of the issue. Mr. Walker, president of the State federation, in his testimony, said this: "There is one difference between our courts and the courts of Great Britain that seems manifest to me. That, in my judgment, has a good deal to do with the situation. The one is in Great Britain if a case is taken into court, in 99 per cent of the cases at least, and I think it is agreed to by everybody everywhere who has studied that situation, that the evidence and the law will determine absolutely what the decision will be, and there is no escape. On the other hand, from the information I can gather and from what I have observed and what I have seen and gotten through personal experience, the courts in our country are not the automatic justice-dealing institutions with what they are over there."

Continuing, he said at another time: "You would not expect me to have confidence in a court that will countenance coal operators hiring armored trains or copper-mine owners importing men with records as murderers and clothing them with the authority of the law in violation of the law and allow those men to go out on the streets and assault and abuse and beat up people when no overt act had been committed on the other side."

If Mr. Walker represents the consensus of opinion of the workers and you would care to at least represent the consensus of opinions of employers, it would indicate, from the testimony of both sides, that neither have overly much confidence in the justice they can find, in connection with the labor disputes, in our

courts. Is it for that reason, Mr. Taylor, that you would advocate some independent tribunal that would establish a higher degree of confidence of both sides in the treatment of labor disputes?

Mr. TAYLOR. That particularly, and also because I believe that you can take any well-intentioned man who is in a position to act according to his judgment, and is independent to that extent, and while that man may be unfamiliar with these things in controversy at first he will soon become familiar, and his knowledge will be cumulative, as it ought to be, and by reason of his familiarity with all angles of the matter he soon ought to be in a position to render valuable service and carry out justice.

Commissioner WEINSTOCK. You threw out a suggestion along this line that evidently is not crystallized in your mind. Let me therefore invite your criticism on the system in Australia. Under the Australian system the prime minister appoints—

Mr. TAYLOR. I am familiar with that plan there.

Commissioner WEINSTOCK. This prime minister appoints an industrial judge from the supreme bench, and this man confines himself to labor issues; he sits with two assessors, one appointed from each side. Do you think a corresponding system would operate in this country?

Mr. TAYLOR. Not quite. I have no confidence in a tribunal in which there is a representative of the employers on one side and a representative of the employees on the other side and a third man who is the deciding factor.

Commissioner WEINSTOCK. For your information let me explain that these assessors have no voice; they simply sit there to guide and aid by suggestions or furnish information, and the power is vested solely in the judge himself.

Mr. TAYLOR. Yes; if that judge is able to pass upon the matters. If the system is such that he can hear the matters in reasonable time and dispose of them, I think it is along the right line. I want to say, however, that two or three years ago we had correspondence with a large number of employers in Australia, New Zealand, and Tasmania upon this subject, and their chief complaint was that the labor-union end of it was not responsible, and while the decree of the courts could be enforced against the employer, because the employer had property or must necessarily proceed with business, it could not be enforced against the union.

Commissioner WEINSTOCK. You are misinformed. I have made an exhaustive investigation into this, and I know that the judgments have been enforced against the workers, their wages have been libeled, and they have been compelled to pay the penalties or go to prison.

Mr. TAYLOR. This is pointed out in some of the correspondence, as I recall it, that where it was held that their strike or proposed strike (they must submit it there) was for some reason or other unjust and would not be countenanced, that nevertheless they quit work, and many of them shifted about there in large cities and went from one district to another, and as a matter of fact they did strike and disrupt their employers' business, although it was not a strike in name.

Commissioner WEINSTOCK. The records show that the judgments are enforced.

Mr. TAYLOR. I am glad of that.

Commissioner WEINSTOCK. Just one more question, Mr. Taylor: In answer to one of Mr. Thompson's questions, you explained that your association did not have any employment bureau in connection with it.

Mr. TAYLOR. Not now.

Commissioner WEINSTOCK. You also made the statement that your association furnished guards in labor troubles.

Mr. TAYLOR. Yes, sir.

Commissioner WEINSTOCK. Have you read Robert Hunter's work on labor troubles?

Mr. TAYLOR. No.

Commissioner WEINSTOCK. He holds employers responsible for violence in labor troubles on the ground that they employ detectives and gunmen, and these detectives go into the labor unions as spotters and incite violence, and compel the employer to increase his force of guards, and that increases business for the detective agencies, and that if the employers would cease to employ guards it would wipe out violence in labor troubles; what is your view as to that?

Mr. TAYLOR. He certainly greatly overstates or overexaggerates. Our system is to have the addresses of a number of guards who are available when necessity arises. We send one guard or two guards, or possibly three or four, depending on the number of employees and their routes in going to and from their homes. We send them to the plant, and one guard probably takes a half dozen men under his charge and escorts them from the plant to the street car or the elevated, and some of them to their homes. I can recall only one case in the last 10 years of my association with this employers' association where it is claimed or charged that a guard had been guilty of any violence or wrongdoing. My whole experience has been that the guards do not foment any trouble; they are not allowed to do anything of the sort; there has never been anything of that sort. Now, it might be that in mining districts there has been something of that kind; I don't know, but I am speaking of the city of Chicago. You will find that in the strikes here where guards have been sent out, one, two, or three guards as the case may be, that the workmen would not go to and from the plant without the guards, and that the guards do not make trouble, and there is no trouble so far as they are concerned. There is only one case of trouble being made by a guard that I remember.

Commissioner WEINSTEIN. So far as your own observation and experience go, then, within your own association, you do not agree with Mr. Hunter in his statement?

Mr. TAYLOR. Absolutely not.

Chairman WALSH. Do you wish to ask a question, Mr. Delano?

Commissioner DELANO. Yes; I just want to ask one or two questions. You stated that you thought that some form of tribunal would have to be created in the States and as to the Federal Government to deal with these matters between labor and capital. You told us how such a tribunal ought not to be formed, but you did not tell us how it should be formed or what should be the number constituting the court or anything about it. Give us your views on that.

Mr. TAYLOR. I said that such a tribunal should be composed of lawyers for one thing. I suppose that—I see it creates a smile—my reason for that is this: The average man knows nothing about legal procedure. And you can travel far afield in trying to arrive at a given point. The average business man, put him on a so-called arbitration committee, does not understand how to handle those matters. Furthermore, the lawyers, by reason of their legal experience, what ought to be perhaps their judicial temperament, they ought also to be independent. They have not any axes to grind. They are neither employees nor employers. It seems to me that they, above any other class, are the ones from whom the members should be drawn and that give the best service. That for one thing. Now, I would be, as I say, content to have three men or four, as the case might be, elected, or appointed, to take chances with any of them as long as they have a tenure of office which makes them independent. But when you have got a man in a position and his livelihood depends upon it, and it depends upon to some extent, or he thinks it depends upon his not antagonizing a large, powerful class, he is not independent.

Commissioner DELANO. That is all.

Chairman WALSH. Did you want to ask some questions, Mr. Garretson?

Commissioner GARRETSON. Yes.

Chairman WALSH. Mr. Garretson has some questions he wants to ask.

Commissioner GARRETSON. The last answer suggests one: Would not the existence of a tribunal of this character depend on common confidence?

Mr. TAYLOR. I should say so.

Commissioner GARRETSON. Do you believe that to make that up of lawyers would contribute to confidence?

Mr. TAYLOR. Some of the finest men I know, Mr. Garretson, are lawyers.

Commissioner GARRETSON. So I would agree with you, but I know some others.

Mr. TAYLOR. Yes. But let us give the finest men.

Commissioner GARRETSON. Are you aware that there are labor organizations that would not use a lawyer as an arbitrator?

Mr. TAYLOR. Yes; I suppose that is true.

Commissioner GARRETSON. Although they have a high regard for individual lawyers.

Mr. TAYLOR. I am also aware that they have called in lawyers as arbitrators, and judges also.

Commissioner GARRETSON. Oh, surely they have.

Mr. TAYLOR. For instance, they searched the State here in connection with the city railways dispute, two or three years ago, and finally they selected Judge Carter, of the supreme court.

Commissioner GARRETSON. I have been guilty of it myself, but I am speaking of the general attitude.

Mr. TAYLOR. Yes.

Commissioner GARRETSON. You say that you have no detailed knowledge of the hours of service, the rates of pay, the conditions that obtain with these waitresses?

Mr. TAYLOR. No; I have not.

Commissioner GARRETSON. You represent an organization of people that probably employ people in twenty or more lines.

Mr. TAYLOR. Many more than that.

Commissioner GARRETSON. Yes; I judged more than that, but I put it at that to show the diversity. What of those lines have you intimate knowledge of the wages, conditions, and hours of the employees?

Mr. TAYLOR. I can not answer as to those things.

Commissioner GARRETSON. You do not know any of them?

Mr. TAYLOR. It would only be a specific case; when a specific case arises in which I would inquire and find out about that.

Commissioner GARRETSON. That is, you have not that detailed knowledge of the conditions under which these men serve the employers that you represent, and if you know nothing of their wages or the hours that they serve, on what do you base the very decided opinions that you have expressed in regard to the justice or injustice of the claims of these men—secondhand information?

Mr. TAYLOR. No. I think in the specific case which I cited there is no question about that, Mr. Garretson, because that has been admitted.

Commissioner GARRETSON. What has been admitted?

Mr. TAYLOR. The statement which I made as to wages and hours, the question of wages and the question of hours were not involved. So far as my general opinions, if they have any value at all, are concerned, they are mostly based upon the proposition that we ought to have somewhere, some place and some tribunal to which we can go and feel that the justice of the thing will be determined upon the merits and the remedy applied.

Commissioner GARRETSON. Justice is a wide term. Some men believe justice is an opinion handed down in accord with what they desire. Do you partake of anything of that idea of justice?

Mr. TAYLOR. Most decidedly not, of course. We have got to take things as our experience shows. The main things are determined somehow or other. We have got our notions of justice and right. There must be a dividing line somewhere—there must be somebody to determine.

Commissioner GARRETSON. You made the statement a moment ago—

Mr. TAYLOR. Otherwise you will have it in persons' power, or combinations of power, to put it there.

Commissioner GARRETSON. You made the statement a moment ago in regard to Knab and his two associates.

Mr. TAYLOR. Yes.

Commissioner GARRETSON. That they were not engaged in a picayune business, that they had some \$5,000 or \$8,000 invested.

Mr. TAYLOR. \$5,000 to \$18,000.

Commissioner GARRETSON. \$5,000 to \$18,000?

Mr. TAYLOR. In each place.

Commissioner GARRETSON. Is a man who has \$5,000 to \$18,000 invested entitled to more consideration before the law than a man who washes dishes for him?

Mr. TAYLOR. I should say not.

Commissioner GARRETSON. Well, one of the reasons why they ought to have had standing in court is because they are not in a picayune business; it would seem that that idea entered into it?

Mr. TAYLOR. No; I mean merely to convey the impression that it was a serious matter. That was all.

Commissioner GARRETSON. Oh, then it would not be a serious matter from the standpoint of the number of men that were in it, but from the number of dollars in it?

Mr. TAYLOR. No; I do not mean to be so understood, Mr. Garretson. I think it might be serious either way.

Commissioner GARRETSON. A human is worth as much, then, before the law as a dollar?

Mr. TAYLOR. I should say he is worth far more.

Commissioner GARRETTSON. You spoke of the fact, in response to a question, that your association comprises national figures, and that therefore they would not desire to be associated with the criminal who would pay a bribe.

Mr. TAYLOR. I should not think that they would.

Commissioner GARRETTSON. Is the fact that a man is a national figure a guaranty of his personal honor?

Mr. TAYLOR. Not necessarily.

Commissioner GARRETTSON. I did not know. That is all, Mr. Taylor.

Chairman WALSH. Mr. Lennon would like to ask a question or two.

Commissioner LENNON. Mr. Taylor, do you believe that the well-being of society requires that industry should pay to its workers a living wage?

Mr. TAYLOR. Generally speaking, yes.

Commissioner LENNON. Well, do you believe that—

Mr. TAYLOR (interrupting). I think there are other things which enter into it; there are certain things which might possibly prove an exception, Mr. Lennon.

Commissioner LENNON. To that general question?

Mr. TAYLOR. Possibly.

Commissioner LENNON. That is to say, that there might be cases where an industry or social well-being might permit less than a living wage to be paid?

Mr. TAYLOR. May I explain what I have in mind? It is simply this. We have that subject under discussion now in this State in connection with the minimum-wage proposition.

Commissioner LENNON. I live here.

Mr. TAYLOR. Yes. The minimum-wage laws which were submitted to the legislature at its last session—and I presume they will be there again—did not take into consideration the worker's age, skill, education, previous experience, or other qualifications. Now, Mr. Lennon, a father is supposed to support a child in infancy. He supports a child, we will say, up to the time that the girl is 18 years old. During all of that time she has been in school, she gets out at the age of 16, she has no knowledge of business conditions, she has no knowledge which renders her particularly valuable to an employer, and, to say that that girl can immediately transfer from school, or even within a matter of a few months, and be useful to the employer, necessarily because of her living, I think is doubtful.

Commissioner LENNON. That is all. I want to ask a question that is usually asked witnesses. The law creating this commission says that our duties shall be to inquire into the underlying causes of industrial unrest and offer such recommendations as the judgment of the commission may warrant at the end of its investigation. Would you be willing to submit to the commission in writing any suggestions along that line that may come into your mind, at some future time?

Mr. TAYLOR. If the commission thinks and desires it I would be glad to.

Commissioner LENNON. We ask it of you.

Chairman WALSH. That is all, Mr. Taylor.

Mr. THOMPSON. There have been some questions handed me to read.

Chairman WALSH. Read them to the witness. I did not know you had them.

Mr. THOMPSON. Do you think there is any real bargaining, collective or otherwise, when there are not two voluntary contracting parties?

Chairman WALSH. There is no legal contract of that kind, is there?

Mr. TAYLOR. Any contract which was under duress, of course, ought not to be legal—is not legal.

Chairman WALSH. The answer is no to that, then?

Mr. TAYLOR. Yes.

Chairman WALSH. Read the next question.

Mr. THOMPSON. These questions are from Mr. Drew. Do unions in your city tie up work of employers by sympathetic strikes when the dispute is entirely among the unions themselves?

Mr. TAYLOR. Yes; very frequently.

Mr. THOMPSON. Do you consider that fair?

Mr. TAYLOR. No.

Mr. THOMPSON. Has personal violence, slugging, and even murder, resulted in this city from such wars among the unions?

Mr. TAYLOR. Yes.

Mr. THOMPSON. Is the whole interest of the employer against the fomenting of trouble by guards or otherwise?

Mr. TAYLOR. I didn't understand you.
Mr. THOMPSON. Is the whole interest of the employer against the fomenting of trouble by guards or otherwise?

Mr. TAYLOR. I think it is, absolutely.

Commissioner O'CONNELL. That is simply an opinion, is that all?

Mr. THOMPSON. That is all it calls for, of course.

Chairman WALSH. Any others?

Mr. THOMPSON. That is all.

Chairman WALSH. That is all. Call your next witness.

Mr. TAYLOR. Do you desire to have this agreement?

Chairman WALSH. Yes; you may hand it in.

(The paper so presented was marked "Exhibit No. 1, Witness Dudley Taylor, July 22, 1914.")

The agreement referred to was submitted in printed form.)

Mr. THOMPSON. Is Mr. Fitzpatrick here?

Sergeant at Arms EAGAN. Not present.

Mr. THOMPSON. Mr. Chairman, Miss Maloney, while she is not down for today's hearing, would like to be heard.

Chairman WALSH. You may call her.

Mr. THOMPSON. I would like to call her now.

Chairman WALSH. All right.

TESTIMONY OF MISS ELIZABETH MALONEY.

Mr. THOMPSON. Give us your name.

Miss MALONEY. Elizabeth Maloney.

Mr. THOMPSON. Speak up strong, so we can all hear you. This is a noisy room.

Miss MALONEY. Elizabeth Maloney.

Mr. THOMPSON. What is your business address?

Miss MALONEY. 35 South Dearborn.

Mr. THOMPSON. What position do you occupy?

Miss MALONEY. I am the financial secretary and business agent of the waitresses' union.

Mr. THOMPSON. In Chicago?

Miss MALONEY. In Chicago.

Mr. THOMPSON. How long have you been that agent?

Miss MALONEY. About 10 years.

Mr. THOMPSON. About 10 years?

Miss MALONEY. Yes.

Mr. THOMPSON. Are you familiar with the conditions which exist between your organization and Knab's restaurants?

Miss MALONEY. Yes, sir.

Mr. THOMPSON. You have heard the testimony of Mr. Taylor?

Miss MALONEY. Yes.

Mr. THOMPSON. Will you briefly state anything that you have to say in that regard?

Miss MALONEY. Yes.

Mr. THOMPSON. Make it as brief as you can.

Miss MALONEY. Mr. Knab has been conducting a restaurant—general restaurant—in the city of Chicago for about 11 years, running an open shop until the 5th day of January of this year, when he signed a closed-shop agreement with our organization, which terminated on May 1. So the union conditions spoken of in Mr. Taylor's testimony have only been in operation in Knab's restaurant about four months. Prior to that time they worked seven days a week, and have worked 12 to 14 hours a day, until the 10-hour law went into operation. The law is what gave the girls protection, but not until the law was amended four years ago to include hotels and restaurants. They worked more than 10 hours a day up to that time. They have never had union conditions until the 1st day of January, and they concluded there on the 1st day of May, when our girls went on strike. He had a closed-shop agreement for about four months. The court records will show in the Henrici case that in the month of February of this year he applied for admission into the restaurant keepers' association, and his application was not accepted because he had a closed-shop contract with our organization. So on May 1 he decided he would not have a closed-shop contract with our organization. So the contract and the union conditions that pre-

valled there have only been in operation that short time. The restaurant keepers' association do not allow their members to make contracts, closed-shop or otherwise, as individuals, with organizations. Hence, I suppose that that is one of the causes for Mr. Knab's refusal to renew our agreement. He is a member of the Food Exchange. I have here the by-laws, and would be very glad to read them. Do you want them read on the subject?

Mr. THOMPSON. If you can, hand them in to the commission.

Chairman WALSH. How long are they?

Miss MALONEY. These paragraphs are very short. If there is no objection, I will read them [reading]:

"Sec. 4. No person, firm, or corporation now having signed agreements with any labor organization shall be admitted to membership in this association, except on condition that such agreements shall be fully carried out in letter and in spirit, and such person, firm, or corporation so admitted shall not be entitled to any benefits accruing to the members of this association under agreements of said association and others which are inconsistent with the faithful performance of such individual agreements; and this limitation shall apply not only to agreements now in force between this association and the several labor organizations, but to any which shall be hereafter made during the life of the individual agreement now in force."

Then it goes on to say [reading]:

"It shall be the duty of the members of this association, when any demand is made upon him, her, or it, by any labor organization, to notify the secretary of this association. The secretary shall at once lay the same before the president, and if compliance with their demands, in their judgment, would be inconsistent with the principles and laws of this association or of good business, such members must refuse to negotiate any settlement and refer the party or parties making the same to this association."

"Any member who shall settle a strike or demand of any labor organization whatever affecting the general welfare of the members of this association shall be suspended and not reinstated until he shall have complied with the conditions which this association may impose."

Mr. THOMPSON. Does Mr. Taylor have any connection with the association, do you know?

Miss MALONEY. He is attorney for Mr. Knab in this controversy, and I suppose by reason of his being counsel for the employers' association. The girls went on a strike on the 1st of May for their closed-shop agreement. You will readily see that they only had their one day off in four months, and being anxious to hang on to that one day off in four months, and feeling that they could only maintain it by their closed-shop agreement, they went on strike when he refused to sign it. Before going on strike the members employed in the Knab houses held meetings, took a secret strike vote on it—no coercion by the officers whatever—and they voted to strike. Conferences were held prior to their coming out both by our organization and the other organizations there who had agreements, and with the Chicago Federation of Labor. But he refused to sign any agreement at all with us, and so we went on strike; and we have been on strike ever since.

Mr. THOMPSON. Are the girls now working in these restaurants members of your organization?

Miss MALONEY. No, sir.

Mr. THOMPSON. Then the girls that did work there and worked under this contract which lasted for four months left the restaurant?

Miss MALONEY. Yes.

Mr. THOMPSON. And you have a strike on there now, is that correct?

Miss MALONEY. Yes.

Mr. THOMPSON. And do you know now whether or not the restaurant is paying the union scale of wages and giving union hours?

Miss MALONEY. I do not know, but I imagine it would be a good policy for them to pay it, when they are having a fight it would not be a good policy to reduce wages now while it is going on.

Mr. THOMPSON. They are having the strike?

Miss MALONEY. The cooks and waitresses in those establishments. And the real connection that the Efting-Powers have with this strike is this: That those three concerns operate a bakeshop, and that bakeshop is owned by those three persons and I think two other stockholders. They supply all the bread and cakes for the entire system of 20 restaurants. Knab owns 8, Powers 6, and Efting 6. Union conditions did not prevail in either Powers or Efting houses,

and if they are operating on this six-day-a-week plan, they have done it since May 1, but prior to that time they did not do it; although Mr. Powers promised to sign our agreement, yet he did not, and entered into the combination to fight us. Therefore we are picketing his houses and the bakeshop because we feel that every dollar that is taken in in those places will be used to fight us and to prevent us from getting our agreement. They made the broad statement that they would wipe the waitresses' union off the boards, and they have been attempting to do that now since February 1, first in the Henricl strike and now in the Knab strike.

Mr. THOMPSON. Have you been acquainted with the litigation pending in reference to the Powers restaurant and the other ones?

Miss MALONEY. What do you mean?

Mr. THOMPSON. Bills for injunction that have been filed.

Miss MALONEY. Yes.

Mr. THOMPSON. Did you hear what Mr. Taylor said in regard to them?

Miss MALONEY. Yes, sir.

Mr. THOMPSON. Have you anything to say or add to what he said?

Miss MALONEY. Well, I might say when they got the Knab injunction it was gotten without notice. They got just the injunction they sought for. But it did not prohibit peaceful picketing. So we continued to picket. They then went to Judge Baldwin with an amendment to try and have peaceful and silent picketing restrained. That motion was denied. We have been picketing there right along. Then Powers and Efting jointly got an injunction which prohibited picketing, which prohibited talking to any of the employees or the patrons, or from distributing any literature; it prohibiting us placing them on the unfair list, and it was a very sweeping injunction. It was not issued until they gave us notice. The notice in that instance was a very ridiculous thing. At half past 11 we were notified that they were going before Judge Baldwin and have an injunction. At 2 o'clock we went in there, and they were in there and had the injunction. However, the judge did say that he would listen to a motion to dissolve—24 hours' notice. So we immediately got ready to give notice for that. When the case came up before Judge Windes that portion of the injunction was dissolved. We are still picketing. I might add that there has not been any violence in this strike. The pickets do not talk to the patrons. They first wore a sign saying, "Help us win our strike." They now wear a sign which says, "With your assistance we will win our strike at Knab's." And the picketing has been so peaceful and so silent that it has not been enjoined. In a few instances, I want to relate, they have resorted to picketing themselves, and they place pickets on the street. I wish to say that at 52 Washington Street they placed colored pickets on the street, colored women, who wore signs like this: "Gee, I ain't mad at nobody and nobody ain't mad at Knab." Another one saying that they would travel up and down just as long as the pickets do. They have now withdrawn the colored pickets, and they have other nonunion girls picketing, who wear signs, "I am one of Knab's waitresses and I am satisfied." The signs were changed yesterday to read something about a nannie goat, and they carried nannie goats in their hands, and they would make them squeak under the noses of the girls. Of course we understand that was done to incite violence or coercion, and that an argument of any kind with our girls would be what was desired; but, being girls who have been in the courts and understand the position since February 5, they know what the intention was, and so far they have not been successful. We have no objection to them displaying by cabaret performances at all. In fact we think it is a good thing to do, so we haven't any objection.

Mr. THOMPSON. Has there been any interference of any kind with your pickets?

Miss MALONEY. Yes; I wish to say that this new performance, signs in the Knab windows, they are more or less of a ridiculous nature and attract crowds, and our girls are being arrested three or four times during each meal. I wish to say that we have been discriminated against. That when the policeman calls a wagon the nonunion pickets are tipped off, and they go inside the restaurant, and when the wagon comes they simply take the union pickets, who have not been responsible for the crowd, and who have done nothing but walk up and down. Yesterday there were 21 arrests, and the day before 16.

Mr. THOMPSON. Have any of those cases come to trial?

Miss MALONEY. There have only been two cases come to trial. Those were girls who were arrested on last Thursday evening, and they were found not guilty.

Commissioner O'CONNELL. Were any scab pickets arrested at all?

Commissioner LENNON. Were the negroes taken, arrested?

Miss MALONEY. No; negroes were not taken. They have been warned time and again to take out those ridiculous signs, because they were attracting the public, and they only put the signs up when the pickets are out. There was this same thing during the Henricl fight; we were treated very brutally by the police, and the same system is starting in again. In taking the girls into the wagon they always take them away in such a way as to have them treated very badly, and they have always gone with the officers. They are compelled to put up large bonds. We have got \$400 in each instance that we are charged with loitering. In the Henricl case we have over 139 cases in court which never came to trial. Over \$200,000 in bonds up. So they are undertaking to play the same game.

Mr. THOMPSON. Did the giving of these bonds cause any inconvenience to your organization or membership?

Miss MALONEY. It compelled us to get people on short notice—take people from their work—people who were willing to go our bonds, or else the girls have to stay in jail; and I wish to take the case of one girl who was arrested for walking up and down, she was taken over there at 25 minutes of 8, and the desk sergeant had her to stay there until after 10 o'clock, and she would have had to stay there all night if representatives of the cooks' organization had not come to her aid. They simply want to break the spirit of the girls, and even the police say that they will drive us off of the street.

These arrests are all unlawful, because the judges have decided on the character of the picketing and the character of the signs, and the girls are doing nothing more than they are legalized to do by the judges.

Mr. THOMPSON. What is your opinion as to the reason for the police acting the way they are acting?

Miss MALONEY. Mr. Knab has always been very good to the policemen. Last Christmas he gave every policeman a turkey free; almost every uniformed officer went there and got one. They eat there free, and have always eaten free there, and naturally they have a very kindly feeling for anyone who gives them free meals.

Mr. THOMPSON. Is there anything more, Miss Maloney, in regard to the strike Mr. Taylor has spoken of?

Miss MALONEY. I believe that we are justified in our strike. The closed shop is the only guaranty we have of maintaining the conditions we fought for and every improvement that has ever been made in our trade has been made through the closed-shop agreement. Before then the members of our organization were paid as low as \$3 a week, seven days in the week and 10 hours a day; they furnished their own linen then, and now the employers do.

Mr. THOMPSON. I would like you to tell us the difference between the union and the nonunion shops in Chicago.

Commissioner O'CONNELL. Say in the Knab shop and the nonunion shop.

Miss MALONEY. Henricl pays \$7 for seven days of 10 hours, but 10 years ago he paid three and one-half and four and five dollars a week, and when the union came into existence and put up a battle something similar to what they are doing now he then raised their wages to \$7. Since that time he has made no change at all except the one which the law compelled him, and that was the limitation to a 10-hour day. The conditions have remained about the same. The girls in that house pay for their own linen; that is, they rent it for so much a day. They do all sorts of porter work, or did at the time of the controversy, and I do not know that the conditions have changed. They worked seven days and furnished their own laundry and paid for the laundering of it and paid a system of fines for every breakage. The system of fines is like this: That if a man orders a steak and is in a hurry and for some reason the orders get mixed and are delayed and the man leaves before eating the steak the girl has to pay for the steak, but she can not eat it.

Commissioner O'CONNELL. Is it resold?

Miss MALONEY. I believe it is; she does not get it. And that sort of fines they call discipline and it is enforced in those houses. Yet they stated when we were in court that they had a profitable business and that every month's receipts in the year showed at least 20 or 30 and in some cases 50 per cent more than for the year previous, showing that they were running a paying

business, yet they did not feel justified to give us this one day a week and pay \$7 a week to the girls. They justified themselves by saying that they were very good to their employees and that they had given their girls a present at Christmas of \$5, and I tried to demonstrate that they had given a girl \$5 on account of salary and they still owed her \$25 by reason of contributions that she had paid out of her weekly wages. They were running a profitable business, but they did not seem to think they should give a day off or give the girls a dollar more.

They made the excuse that the only way they would favor us was if a legislative act was enforced by which they were compelled to give one day off in seven. We answered that by saying that the employers' association and restaurant keepers' association, when that legislation was introduced at the legislature through Mr. Taylor, bitterly opposed the one day off; they opposed it in legislative form and in the organization form.

Mr. THOMPSON. Referring to the employers' association, or whatever you call it—the restaurant or food exchange—has the employer the liberty to belong or not belong?

Miss MALONEY. I don't understand.

Mr. THOMPSON. Has Mr. Knab or any other employer the right to belong to the employers' exchange or not as he pleases?

Miss MALONEY. Certainly.

Mr. THOMPSON. The only issue now is the closed shop, is it not?

Miss MALONEY. At the present time; yes.

Mr. THOMPSON. That arises out of the agreement you had?

Miss MALONEY. Yes; that arises out of the agreement. That agreement was in force for four months, and you understand it is not in force now, but the reason we wanted the closed shop was to maintain the agreement we had.

Mr. THOMPSON. Do you think you have the right to destroy a patronage solely to enforce the closed-shop agreement?

Miss MALONEY. I think the courts have clearly defined our right in that respect; they stated it all depended upon the intent; if you are doing it to better the condition of your fellow workmen you have a right to do it.

Mr. THOMPSON. Is there anything further that you want to say in the matter?

Miss MALONEY. I don't know of anything further.

Mr. THOMPSON. Your answer to this question is what, Miss Maloney? I will ask you to look at this paper [showing witness paper]; I will read the question:

"CHICAGO, May 19, 1914.

"Pursuant to your request of my position with respect to the waitresses' union, permit me to say that I will continue in the future as I have heretofore, namely, to give union waitresses the preference when in need of help and to pay the following wage scale:

"Steady girls, six days, 80 hours or less, \$8 per week.

"Night girls, six days, 60 hours or less, \$8 per week.

"Dogwatch girls, six days, 60 hours or less, \$9 a week.

"Dinner girls, six days, 60 hours or less, \$4 per week.

"Furnish linen and pay for laundry of same.

"I will instruct the managers of my restaurants, in the presence of a committee of three, to call on the waitresses' union when in need of help.

"The business agent of the waitresses' union shall have the privilege of organizing the waitresses in my establishments, the business to be timed when the help are not overly busy.

"The help that have gone out on strike shall be taken back as soon as possible."

Was that submitted by you to anybody with the request that he sign it?

Miss MALONEY. It was submitted to Mr. Becker, of the bakery drivers, and was submitted to the bakers.

Mr. THOMPSON. Was it with your approval?

Miss MALONEY. No; it was more as a solution; I could not approve it; I have no authority as business agent of our organization to approve anything, except the closed-shop agreement, without a vote of my organization. It was just submitted as a proposition to be submitted to them. Allow me to make a full explanation.

When we went out on strike the bakery drivers and bakers working for the Powers, Knab, and Efting companies went out on a sympathetic strike. They

were only out about 20 days. Their organization took the matter out of the hands of the business agent and put it in the hands of a committee, because they were not satisfied with the action of their business agent, because, while the controversy was on, he renewed the agreement with the Powers, Efting, and Knab people, and for that reason the organization took the matter out of his hands and put it in the hands of a committee. This committee felt they would like to return their men to work, because the employers were trying to get all the master bakers to repudiate that agreement, and that was the story they put up to them, and the bakers were anxious to return to work, and the bakers went to see Mr. Knab in conjunction with the bakery drivers. The bakery drivers had been out only two days.

The bakers went to see Mr. Knab, and I am sorry that Mr. Thompson has not submitted his proposition that he would call on us when in need of help. The second proposition to preferential—a preferential shop—but as our organization had an agreement with Mr. Knab we felt that we could not be sure of our position without a closed-shop agreement, because we had a closed-shop agreement for four months and we did not see why we should accept a preferential shop. They did get that agreement, and an hour after it was signed, when the business agent went over, he said, "I will not sign the cooks' agreement," and that agreement I signed was not a statement from my association, but simply for the bakers to allow them to go back to work. So the next day the bakers who had already gone back to work and the bakery drivers went to Mr. Knab to see what he was going to do about it, and he offered them preferential arrangement, which they declined to accept. We had a meeting that afternoon and by unanimous vote repudiated the preferential shop, having no faith in it and felt that we would have no protection under that agreement.

I and Miss Alexander went to Mr. Knab and explained the situation and that we felt we would not have any protection and the strike is still on, and for that reason we turned it down.

Mr. THOMPSON. Didn't you tell Mr. Knab that this preferential agreement was satisfactory to you and later tell him that your girls had considered it and would not accept it and wanted the closed shop or nothing?

Miss MALONEY. I never told Mr. Knab that that agreement was satisfactory to me. It was submitted to me first, but was submitted to Mr. Becker and the organization of bakers. I did not interview Mr. Knab until our organization had turned the proposition down.

Mr. THOMPSON. You have not had a closed-shop agreement with Efting or Powers. Are you willing to enter into a preferential agreement with Efting and Powers?

Miss MALONEY. As an official of an organization, I am not empowered to speak for the union, but it would have to be submitted to the union as to whether they would accept a preferential shop or not.

Mr. THOMPSON. Then, your whole picketing and boycotting now is to force a closed-shop agreement and you will not accept a preferential agreement?

Miss MALONEY. I think that question has been answered by the former answer, that it is up to a vote of my organization as to what they would do to a preferential shop at the two houses in question.

Mr. THOMPSON. Is there anything more you want to say on that subject?

Miss MALONEY. No.

Mr. THOMPSON. In your position as official of the union for 10 years you have had an opportunity and have studied the industrial problem, have you not?

Miss MALONEY. Somewhat; yes.

Mr. THOMPSON. And the unrest which is evidenced?

Miss MALONEY. Yes.

Mr. THOMPSON. What opinion have you with reference thereto as to the causes and the remedy that might be suggested within the scope of a commission like this?

Miss MALONEY. I think the causes of so much industrial unrest are the unsettled grievances—unlistened-to grievances and the utter ignorance of any grievances that exist. The reply is, "If you do not like this position, get another job." I think that has prevailed so much that when people get beyond the point of endurance that there is certainly a question of unrest that must be remedied. I think it is the unsettled grievances that cause it.

Mr. THOMPSON. How would you remedy that condition, or what remedy would you suggest?

Miss MALONEY. I think it can be best solved—I do not know what sort of legislation should be brought to bear on that, but I think if a commission were

appointed of an equal number of employees and employers and they could choose a party to represent the public and go into the trade and see both sides of the question, they could then settle it. I think it can be best settled that way.

Mr. THOMPSON. Do you think that such a commission, if it were a Federal commission and had broad powers over the country, would be better?

Miss MALONEY. I should think so.

Mr. THOMPSON. In other words, you are in favor of such commission, either State or national, as may be best?

Miss MALONEY. Yes, sir; I am in favor of such commission, either State or national, as may be best, but the people to be chosen on one hand by the workers and on the other hand by the employers, and not to be appointed by either the State or Nation.

Mr. THOMPSON. You heard Mr. Walker's testimony?

Miss MALONEY. Yes; and I am heartily in accord with that.

Mr. THOMPSON. He expressed your views?

Miss MALONEY. Yes, sir.

Mr. THOMPSON. You spoke something about representing a democratic organization and that you expressed its views. What have you to suggest, if anything, in the way of rules and regulations, or laws that would safeguard the democratic expression of the views and attitude of the members of trade-unions?

Miss MALONEY. Well, we have in our organization a certain routine to go through before a strike can be called, and a certain routine to be gone through before a settlement can be had other than that authorized by the organization to be put through. In that way I think it is democratic, because it at all times expresses the wishes of the rank and file.

Mr. THOMPSON. You think the individual members of the union ought to be protected in the expression of their views the same as in the State in voting?

Miss MALONEY. Yes, sir.

Mr. THOMPSON. And if there is any interference with that the interference ought to be removed?

Miss MALONEY. Yes, sir.

Mr. THOMPSON. And regulations of institutions like the primary law we have in the State should be inaugurated in order to protect the purity and free expression of the will of the members?

Miss MALONEY. Yes, sir.

Mr. THOMPSON. A certain portion of the people, I take it, can be safely said, feel there is not that free expression in all labor organizations. Have you given it any consideration, and, if so, what remedy would you suggest there?

Miss MALONEY. Well, for the most part my main study has been with the organizations of women, and I think my experience has been that they have tried to get out of the individual girl her expression on every subject possible. They have urged her to get up and state her views, feeling that everybody should give expression to the question before them.

Mr. THOMPSON. As far as you know, is anything like the Australian ballot used in the unions to safeguard the secrecy of the ballot?

Miss MALONEY. It is used in our organization, and that is the way we elect our officers, and that is the way the strike vote is taken, and that is the way all questions are decided.

Mr. THOMPSON. You believe the use of that method is a safeguard in organizations?

Miss MALONEY. I think you get the true expression of the members in that way.

Mr. THOMPSON. Do you think that is generally true of labor unions in this city?

Miss MALONEY. With those I have come in close contact with I do.

Mr. THOMPSON. Do you think that sort of expression exists in the building trades?

Miss MALONEY. I only know just in the women's organizations. Not being a member of the building trade I could not very well express myself on it.

Mr. THOMPSON. Have you any views with reference to the establishment of a minimum wage, such a law as has been offered to the legislature at Springfield?

Miss MALONEY. The Women's Trade Union League, with which our organization is affiliated, did submit a bill which we thought was a good bill at the last session of the legislature. We thought it was a very good one. It was drawn for the creation of a commission of three to investigate with power to appoint a minimum wage board consisting of an equal number of employers

and employees in each industry and some one to represent the public, chosen by those, and to go into the details of the industry from both standpoints and arrive at what they thought would be a fair wage for the worker and at the same time fair from the business standpoint, and we thought we had a very good bill.

Mr. THOMPSON. Did you hear Mr. Taylor's testimony?

Miss MALONEY. Yes; and I heard it at Springfield, too.

Mr. THOMPSON. What have you got to say with reference to what he said?

Miss MALONEY. I will repeat what he said at Springfield, I think that would be the best way to explain it. He was asked by Senator Juul—I believe his articular clients at that time were the candy manufacturers, at least they seemed to be very much in evidence. He was asked by Senator Juul, when he had taken the side to oppose all legislation—by the way, there were about seven bills pending before the legislature—Senator Juul asked him if he didn't think any girl who had given her services all week was entitled to enough compensation to get three meals a day and a decent place to sleep. He answered no. He was asked where he thought the responsibility lay if it was not a responsibility on the part of the employer, and he said no, that he thought the responsibility should lie with the parents and that the employer should be complimented for giving them anything at all while fitting them for commercial life. And he was then asked if he had a daughter of his own, and I believe he answered yes. I wish to say that I believe that was a very inhuman answer. I think that expresses my view on it.

Commissioner O'CONNELL. Are there printed records of those hearings?

Miss MALONEY. I think they can be had of the secretary of state.

Chairman WALSH. Were shorthand notes taken of the hearing before the committee at Springfield?

Miss MALONEY. I don't know.

Mr. THOMPSON. He has substantially said the same thing at this meeting.

Miss MALONEY. He admitted the testimony.

Mr. THOMPSON. That a girl 16 years of age wasn't able to earn her living.

Miss MALONEY. Yes, sir.

Mr. THOMPSON. What have you to say with reference to that subject? Where should the responsibility rest to support that girl?

Miss MALONEY. I think when the employer—you know as soon as they come out of school you read the ads in the papers how they want the girls just fresh from school so as to learn their methods. She is very quick to pick them up, and she ought to be worth at least her living, and I don't consider her living just three meals a day and a decent place to sleep. When you look at the profit side of any concern and look at the wage column, and see the wages as low as two or three or four dollars a week, and you know that industry is piling up millions of dollars at the expense of the girls, that side of the table should be equalized a little more, and I think a girl should be entitled to live decently and properly and enjoy some of the things in life that her employer wants his children to have.

Mr. THOMPSON. Would it affect your answer you have given even if it was true for a period of time like two or three or even six months a girl was unable to actually earn the wages she receives?

Miss MALONEY. We made a sort of provision for that; we tried to make a provision for that in the minimum-wage legislation. We asked the minimum-wage board to go into the question of apprentices, and state a stipulated salary below which they should not go. This was to be determined by this wage board, and also for people who were deficient; that is, if they were in any way deficient, by which their earning capacity would not be as great as some of those who were stronger.

Mr. THOMPSON. Have you considered whether it would be fair or unfair to charge against the industry the education of the worker in the industry, to do that specific work?

Miss MALONEY. To charge it against them?

Mr. THOMPSON. Yes; whether the industry should pay for it, or the parents, in preparing the girl for industrial life?

Miss MALONEY. I think after a girl has received what we call a common-school education, and that is what is compulsory now—I think that after she has been in the service anywhere six months she ought to be—the company won't keep her if she can't turn out a certain output in their line of work. If she is worth anything at all to that house or that manufacturing establishment

or that mercantile place she ought to be worth a decent living or salary enough for a decent living.

Mr. THOMPSON. Some one has got to keep her until she does learn a trade or industry.

Miss MALONEY. And they especially want a girl fresh from school so as to adapt her to that line of work. If she is necessary to industry and they choose to take her, they should not be allowed to hide under cover that because she just came from school and is proficient in every way she should be held to very low wages.

Mr. THOMPSON. That is all.

Chairman WALSHE. Mr. Weinstock would like to ask you a few questions.

Commissioner WEINSTOCK. I understand 10 hours is a maximum number of hours fixed by the law that women can work in Illinois?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. The law does not fix the minimum wage as yet?

Miss MALONEY. No, sir.

Commissioner WEINSTOCK. The 10-hour schedule for waitresses was due to the law?

Miss MALONEY. We first had it through organization, and in conjunction with the Women's Trade Union League we introduced the first bill for the 10-hour day. That bill was just limited to the trades in the first law—laundries, manufactories, and mechanical establishments—because there was a supreme court decision against the limitation of women's hours of work in certain lines, and we knew we would have to face the supreme court and have them reverse that decision, and so we took the identical Oregon law. Then it was carried to the court in the case of the Ritchie Co., and the law was upheld in the supreme court and it reversed its prior decision and included all trades. The waitresses had it by organization before that.

Commissioner WEINSTOCK. For what period was the agreement of your association with Mr. Knab?

Miss MALONEY. Only from the 1st of January to the 1st of May.

Commissioner WEINSTOCK. Only four months?

Miss MALONEY. Yes.

Commissioner WEINSTOCK. Had he violated any agreement?

Miss MALONEY. In one house there was a violation. In fact we desire to have all these things settled in one hearing.

Commissioner WEINSTOCK. The agreement was only signed for four months?

Miss MALONEY. Yes; the agreements all expire the 1st of May each year.

Commissioner WEINSTOCK. The issue at this time is to compel Mr. Knab to renew the agreement?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. Whether he wishes to or not?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. How many workers went on strike on the 1st of May from Knab's place?

Miss MALONEY. Out of 96 girls, 75 have gone on strike.

Commissioner WEINSTOCK. You say 75 out of 96?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. Are they still out on strike?

Miss MALONEY. Yes, sir; they haven't gone back there. Some of them are working at other places.

Commissioner WEINSTOCK. None of the proportional 75 returned to Knab's?

Miss MALONEY. Only two.

Commissioner WEINSTOCK. Can you tell the commission how many waitresses there are in Chicago?

Miss MALONEY. I think the last census showed 2,000.

Commissioner WEINSTOCK. What proportion of that number belong to your union?

Miss MALONEY. Between 600 and 700.

Commissioner WEINSTOCK. About 30 per cent are organized?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. The remainder are unorganized?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. That is all—in speaking of the minimum wage, do you favor a minimum wage?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. Does your organization favor the minimum wage?

Miss MALONEY. I can't speak for all of the organizations; but I believe the women's do.

Commissioner WEINSTOCK. The women favor it?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. The unions composed of men, have they fought it in any way?

Miss MALONEY. Not in this State.

Commissioner WEINSTOCK. They have not?

Miss MALONEY. No, sir.

Commissioner WEINSTOCK. In speaking of the minimum wage, you were saying that the lowest wage ought to be called a living wage?

Miss MALONEY. Yes, sir.

Commissioner WEINSTOCK. Put yourself, for the moment, in the position of the employer. Suppose you wanted to hire a woman and there were two women before you, two applicants; one was more efficient than the other, in your judgment, which would you select, the more efficient woman or the less efficient woman?

Miss MALONEY. I should think, naturally, I should want the more efficient; but, then, perhaps, if I could not afford her salary I might choose the less efficient.

Commissioner WEINSTOCK. Suppose both were ready to work for the minimum wage, you would naturally select the more efficient?

Miss MALONEY. I would naturally select the more efficient.

Commissioner WEINSTOCK. Suppose every employer did the same thing, what would become of the less efficient ones?

Miss MALONEY. I will answer that by saying I don't expect in setting a minimum wage—we are setting it so low, we want to make a standard below which nobody can go. Anybody, who pretends to be in an industry at all, can get that. We don't expect when the minimum wage is established, if you show more efficiency you can't go above it.

Chairman WALSH. At this point we will adjourn until 2 o'clock. Please return to the stand at 2 o'clock.

AUGUST GANS. My name is August Gans. I represent the Knights of Labor, No. 43 B Street, Washington. I want to know whether I will be admitted—

Chairman WALSH. If you will kindly address any communication you have to me in writing, I will be glad to answer it.

(Adjournment was here taken until 2 o'clock p. m. of the same day, Wednesday, July 22, 1914.)

AFTER RECESS.

Now, the hour of 2 o'clock having arrived, the commission met pursuant to adjournment.

Present, same as before.

Chairman WALSH. You may proceed, Mr. Thompson.

Mr. THOMPSON. Miss Maloney, please take the stand again.

TESTIMONY OF MISS ELIZABETH MALONEY—Continued.

Commissioner WEINSTOCK. I think, Mr. Chairman, I was in the midst of the examination.

Chairman WALSH. Yes, Mr. Weinstock.

Commissioner WEINSTOCK. Coming back, Miss Maloney—

Mr. THOMPSON. One question I desire to ask, Miss Maloney: You state you believe in the minimum-wage law?

Mr. THOMPSON. I have this question to propound to you: Would you compel an employer by law to give employment to the unemployed at the minimum wage?

Miss MALONEY. To the unemployed?

Mr. THOMPSON. Yes.

Miss MALONEY. You mean some one who had never been employed by them?

Mr. THOMPSON. What is that?

Miss MALONEY. Do you mean some one that they never had in their employ?

Mr. THOMPSON. This is the language of the question—I will say frankly—well, the question is as follows, the question by Mr. Drew: Would you compel an employer by law to give employment to the unemployed at the minimum wage?

Chairman WALSH. Would you compel an employer to hire persons that were unemployed, at the minimum wage, whether he needed them in that industry or not?

Miss MALONEY. Oh, no; certainly not.

Mr. THOMPSON. If not, how would you take care of the unemployed?

Chairman WALSH. I don't believe I would ask Miss Maloney that question. Ask somebody else that has a broader knowledge. You don't need to answer that; it is all right.

Miss MALONEY. I can answer how they would take care of them in our own organization.

Chairman WALSH. How do you take care of them in your own organization?

Miss MALONEY. In union shops in slack seasons—now, this is the summer season; it is our rush season—you take in the months of February and March, you take a house that has 40 or 50 employees, in place of putting any of them off the pay roll they will have each girl leave off one or two meals a week; that is the way we handle that.

Chairman WALSH. Now, Mr. Weinstock.

Commissioner WEINSTOCK. For your information, Miss Maloney, I might explain that in the British countries—in England, New Zealand, Australia—where the minimum wage was initiated, the legal minimum wage, they have a graduated scale, beginning with the boy and the girl that starts in fresh from school. The scale rises year by year until the maximum minimum is obtained. Now, is that your conception of the minimum wage? Would you pay what is called the maximum minimum wage right at the very start without having any graduated scale?

Miss MALONEY. Well, I think that you would start on the minimum and up toward the maximum.

Commissioner WEINSTOCK. You would have a graduated scale?

Miss MALONEY. Yes.

Commissioner WEINSTOCK. That is, you would not pay the boy and girl of 16 the same as you would the young man and young woman at 20?

Miss MALONEY. No, sir.

Commissioner WEINSTOCK. Would you have that scale rise by age, as it is in other countries, or by experience? In those countries they start in at 16 years, so much a week; 17 years, so much a week; 18 years, so much a week; 19 years, so much a week; and 20 years, so much a week, and there is no maximum to that except what the individual can create for himself.

Miss MALONEY. Can obtain through efficiency?

Commissioner WEINSTOCK. By way of efficiency.

Miss MALONEY. Yes; I would approve of that plan.

Chairman WALSH. Mr. Lennon would like to ask a few questions.

Commissioner LENNON. Is it or is it not your understanding that the wages of waiters are to be paid from the tips of the customers? I don't mean that there is an agreement, but do you believe that that practice of tips is taken advantage of by employers in order to make the wages less?

Miss MALONEY. In some instances; yes, sir. In the recent Henricl strike that was one of the strong resources they relied upon in paying \$7 wage. They said they received good tips. I wish to say that organizations don't believe that the deficiency in the pay roll should be made up out of the charity of the patrons. That is the way the organization feels about it.

Commissioner LENNON. What is the attitude of your union as to the tipping system?

Miss MALONEY. We would like to see it eliminated and a decent living wage in its place.

Commissioner LENNON. If a living wage was paid, do you believe that would help to eliminate the tipping system?

Miss MALONEY. I believe it would.

Commissioner LENNON. Now, I want to find out from you something about wages and conditions in this city. Take, say, a year ago or two years ago, what wages were paid to waitresses in nonunion houses?

Miss MALONEY. In nonunion houses they work seven days for \$8 and some houses seven days for \$7, and lunch work from \$3.50 to \$3.90. You see there was a dollar difference in the wages there in that respect as far as the union is concerned. Some houses, for instance, in the Knab House, they work seven days for \$7.

Commissioner LENNON. What wages were paid in union houses—

Miss MALONEY. For \$8, I mean.

Commissioner LENNON. What wages were paid in union houses that long time ago?

Miss MALONEY. Six days and \$8 in the houses that had closed-shop agreement.

Commissioner LENNON. What rules existed in restaurants and hotels wherever waiters are used as to their payment for breakage? Suppose they break a tray of dishes, who has to pay for those?

Miss MALONEY. If the waitress or waiter breaks it, he pays for them.

Commissioner LENNON. Is that always the case, or is each case judged on its own particular merits?

Miss MALONEY. In some houses you pay for the breakage irrespective of the merits, but in contracted union houses they can only charge for breakage in the case of gross negligence.

Commissioner LENNON. Who determines the question of negligence?

Miss MALONEY. If there is a question, it is left to the business agent of the union and the manager, and if they can not settle it they call on the committee, but it is usually settled by the business agent and the manager of the restaurant as to the merits or demerits of the case, and if they can't agree they put it to a committee.

Commissioner LENNON. In the nonunion house who determines it?

Miss MALONEY. The management. The waitress has no alternative except to accept the ultimatum of the manager or head waiter.

Commissioner LENNON. And have no appeal to anyone?

Miss MALONEY. The waitress has no appeal to anyone except to quit their job.

Commissioner LENNON. Do you know anything about the fines—any fine system. Suppose a girl is an hour late in the morning or at noon, are they fined in the house for being late? What is done?

Miss MALONEY. Well, I think, as a general rule, if a girl were to report an hour late she would lose her job.

Commissioner LENNON. Say 10 or 15 minutes late?

Miss MALONEY. In some houses they have a system of fines for that—fine them 1 cent for every minute they are late.

Commissioner LENNON. Is that anyway general or is that an isolated thing?

Miss MALONEY. It is not a general thing. They expect us to be on time, because your work starts in right away, and if you can't be on time you lose your job.

Commissioner LENNON. What effect has the establishment of your union and contracts in some of the restaurants had upon nonunion houses as to the raising of the wages and the limitation of hours?

Miss MALONEY. They raise within a few cents of our scale so as to keep the girls from becoming members of the organization. Our 600 members set the wage scale for the 2,000 girls of this town. They keep within 10 cents of it or maybe make them work a day longer, but the \$8 wage, as a general rule, is paid in this town because it has been established by the union.

Commissioner LENNON. Does your union take cognizance of women employed like chambermaids in the hotel?

Miss MALONEY. They were organized at one time here in Chicago about 10 years when we went through quite a struggle and their organization was disrupted at that time, but we have made investigations of their work and do organize them into our national union.

Commissioner LENNON. Do you know about the wages they receive?

Miss MALONEY. Yes; I had occasion to investigate the case of a chambermaid in one of the large hotels here. From \$14 to \$15 a month. I investigated the case of a girl where they were poisoned on food that was spoiled and I went into quite a thorough investigation of that and found out from those girls that they received food that was three or four days old and when they got it it was in a half decomposed state. These girls were poisoned through eating spoiled roast pork, and in speaking with them I went to the room of the girls because they were in bed from those attacks of ptomaine poison and found on their window sills boxes of crackers and bottles of milk and other eatables. I said, what does this mean, don't you get your board at the hotel? Yes; but it is not fit to eat half of the time and whatever tips I get I use to get things to eat. There was an illustration of a regular delicatessen store, you might say, on the window sill of this girl's bedroom.

Commissioner LENNON. Has the union agitation bettered their condition, if you know, in this city?

Miss MALONEY. I think it has to some extent.

Commissioner LENNON. How many women do you suppose are engaged in that business in his city; have you any idea at all?

Miss MALONEY. Oh, I should judge about 3,000.

Commissioner LENNON. How do the waitresses' wages compare with the girls that are employed in the cloak and suit industry, do you know that?

Miss MALONEY. Well, that I do not know, because they work on a piece system, the majority of them. I could not answer that question because I have not ever worked in that trade and could not go into detail on it.

Commissioner LENNON. Speaking of the minimum wage, in expressing your approval of it, I am not sure whether you have yet indicated whether you believe in a minimum wage by a statute law of the State or whether you believe in it by the creation of wages boards?

Miss MALONEY. I believe in it by the creation of wages boards. I think that is the only way to determine it to arrive at what a proper wage would be for each trade.

Commissioner LENNON. Has your organization ever taken any official action on the question of the minimum wage?

Miss MALONEY. They have indorsed it, and part of the people in the Women's Trade Union League went to Springfield at the last session of the legislature to get a minimum wage law.

Commissioner LENNON. That is, your local union, you mean?

Miss MALONEY. They cooperated in the action of the Women's Trade Union in that sort of legislation and indorsed it.

Commissioner LENNON. That is, your Chicago local union cooperated?

Miss MALONEY. Yes.

Commissioner LENNON. Your International union, has it taken any action?

Miss MALONEY. Yes; our waitresses in San Francisco appeared before the legislature there for the same kind of a law and our girls did also in Washington.

Commissioner LENNON. What age are girls employed as waitresses?

Miss MALONEY. From 16 years up.

Commissioner LENNON. About what standard of education are they; are they pretty well through the eighth grade?

Miss MALONEY. Most of them; some of them have been graduates from day schools, and they are mostly girls who come here from small towns and have come here to start out in offices and the salary was small and they had to go into the restaurant work for the sake of getting their meals. They can get along a little better by just having to pay their room and laundry and get their meals; but in some of the nonunion houses they do not get good substantial food such as they get in the union houses.

Commissioner LENNON. Has the city of Chicago in making provision for vocational education made any provision to teach girls the work of waitresses?

Miss MALONEY. Not yet.

Commissioner LENNON. Has your union ever taken up the question at all?

Miss MALONEY. No; not in a specific way, speaking generally.

Commissioner LENNON. As much as you know of this general subject, do you believe in the State furnishing such education to some extent, to a reasonable extent?

Miss MALONEY. I should say so; it is a trade. People are going to eat just the same as they are going to wear clothes and gloves and anything else. This is a trade that will be with us all the time. There is no reason why it should not be taught properly.

Commissioner LENNON. I wonder if it is not an art, once in a while, when I see them carrying a load around. I think that is all.

Chairman WALSH. Mr. Ballard would like to ask you a question or two.

Commissioner BALLARD. Please, Miss Maloney, you spoke of the tips—can you give us some idea about what the tips would amount to in the course of the week with the average waiter girl?

Miss MALONEY. Well, it would depend on the class of house and the girl's station in the house.

Commissioner BALLARD. Well, the class of house you have been referring to.

Miss MALONEY. Well, if you referred to the house where the strike is on, the question of tips don't arise there to any great extent. The tips don't amount to much in that kind of house; it is a popular-priced house.

But in the case of Henrici's they made very startling statements, almost unbelievable; they claimed that the girls in that house made \$25 a week. Our investigation shows that the girl in a good station would average from

90 cents to \$1.10 a day, that is getting the girls who work there—their opinion—what they actually got.

Commissioner BALLARD. You say you are the business agent of the waitresses' union. Are you a waitress yourself?

Miss MALONEY. Yes, sir.

Commissioner BALLARD. Where have you been working?

Miss MALONEY. Well, I have worked in quite a number of restaurants in this town. I learned the business in the Fair department store; worked in Siegel's, Rothschilds, and then worked in quite a number of the lunch rooms around town.

Commissioner BALLARD. Are you working the last few years since you became business agent?

Miss MALONEY. I haven't worked at the business in two years.

Commissioner BALLARD. Is your union a national union or merely a local union?

Miss MALONEY. This is a local union affiliated with an international union covering the United States and Canada.

Commissioner BALLARD. When your girls are on strike, do they receive strike benefits?

Miss MALONEY. Well, not a stated strike benefit. We have what we call a defense fund.

Commissioner BALLARD. Where does that fund come from?

Miss MALONEY. Well, it is an international fund.

Commissioner BALLARD. The unions in other cities will send the money here to help you?

Miss MALONEY. They will send it to the international union and from the international union to us.

Commissioner BALLARD. That is all, Mr. Chairman.

Chairman WALSH. Mr. Delano would like to ask some questions.

Commissioner DELANO. There are a good many employers, I suppose, that employ only union girls?

Miss MALONEY. Yes, sir.

Commissioner DELANO. Now, do those employers have any immunity from trouble, do they get any better character of girls, is there anything done by your union to make it to their interest to do that?

Miss MALONEY. Yes, sir. In the first place, they get steadier help, girls whose actions are responsible to their organization. A girl must give an employer 24 hours' notice if she wants to leave. She must report at least 15 minutes before the hour called for work. She does everything that she can to always have a satisfactory substitute in her place when she leaves his employment. And there are so many advantages from it that the people who have contracts with us have no hesitancy at all in saying that they are well satisfied with the help that we send them. You see, they are responsible to the organization for their actions, and in order to have the protection of an organization they are anxious to make good when they are on the job.

Commissioner DELANO. Are they liable—are those employers liable to sympathetic strikes or anything of that kind?

Miss MALONEY. Well, we haven't had any sympathetic strikes. We provide for that by way of arbitration.

Commissioner DELANO. That is all, Mr. Chairman.

Chairman WALSH. Miss Maloney, why do you object to the giving of tips; or what evils, if any, have you found coming from that so far as the girls themselves are concerned, or the industry, the workers in the industry are concerned?

Miss MALONEY. Well, in the first place, where there are tips it always creates a great deal of dissatisfaction, for one thing, because the girls don't receive them, and yet their wages would be lowered on account of those who do, and the precedent established by those who do makes it hurtful on those who do not.

And then another thing. When a girl has to depend on tips for her existence, it is pretty hard for her to draw the line—where the line of propriety should be. It is very hard for her to determine. She is likely, while she resents things that are said to her, she don't resent them in the way that she would when she knows that the man is going to leave her a dime or a quarter, because she wants the money, and, although she knows that the thing that he is saying should be resented, she hesitates about it because she wants the money.

Chairman WALSH. You recognize that as a distinct evil where young girls are concerned in restaurants?

Miss MALONEY. Yes, sir.

Chairman WALSH. And that is why you have worked against it?

Miss MALONEY. That is why we are trying to standardize the trade and increase the wages and hours and eliminate the tipping system.

Chairman WALSH. What hours do chambermaids work in hotels generally—in large hotels?

Miss MALONEY. Well, while the 10-hour law was under discussion we had a great deal of that sort of thing. They usually work from 8 to 9 hours, but then they have what they call their long-watch days; and, of course, before the 10-hour law went into effect they used to be on watch 12 and 13 hours, but now, of course, the law protects them.

Chairman WALSH. Has there been any effort to protect any other industry where there are large numbers of girls and women employed in Chicago?

Miss MALONEY. Yes.

Chairman WALSH. In what industries, for instance—typical ones?

Miss MALONEY. Well, they are organized in the garment trades; they are organized in the glove workers; they are organized in the boot and shoe workers. Commissioner WEINSTOCK. Laundresses?

Miss MALONEY. Well, they have got a very small organization of laundry workers.

Chairman WALSH. Are the telephone girls organized?

Miss MALONEY. They are not organized here in Chicago.

Chairman WALSH. What others?

Miss MALONEY. I could not name them all offhand.

Chairman WALSH. Is that all that you can think of?

Miss MALONEY. Oh, there are more than that.

Chairman WALSH. Miss Nestor will probably have a list of them.

Miss MALONEY. She will have a list of those affiliated with the women's trade-union.

Chairman WALSH. Is there any question, Mr. Thompson?

Commissioner GARRETSON. Mr. Chairman—

Chairman WALSH. Mr. Garretson would like to ask you a question.

Commissioner GARRETSON. Are the 10 hours under the State law worked consecutively, or is there a period allowed in between?

Miss MALONEY. Yes; there is a period allowed between; they can make you take time off.

Commissioner GARRETSON. They can work you five hours and then a recess, and then work and then a recess and work again?

Miss MALONEY. Yes, sir; and I might say that when we tried to get the nine-hour law at the last session of the legislature, that Mr. Taylor and the organization that he represents defeated that sort of legislation, defeated the nine-hour law, defeated the one day rest in seven, defeated all minimum wage legislation, so that they are absolutely opposed to remedial legislation for women workers in this State; that is shown by their actions; and they are equally opposed to organization, because their entire efforts have been directed to breaking them up, in place of meeting them and trying to deal with them.

Commissioner GARRETSON. You mean opposed to organization for others or for themselves?

Miss MALONEY. Well, for others, but not for themselves.

Commissioner GARRETSON. Oh.

Chairman WALSH. Any other questions? Mr. O'Connell has a question he would like to ask.

Commissioner O'CONNELL. Has there been any legislation before the State legislature introduced in behalf of labor or by labor in a remedial way that that association of employers have given support to?

Miss MALONEY. Not that I know of, except when there were commissions appointed they come in and agree upon bills; otherwise they always fight.

Commissioner O'CONNELL. The legislation that has been introduced, they have made opposition to it. I would like to ask you, Do you believe there should be a union among domestic servants in the homes?

Miss MALONEY. I certainly do.

Commissioner O'CONNELL. That is all.

Chairman WALSH. Unless you have something else you have thought of you wish to volunteer, Miss Maloney, that will be all.

Miss MALONEY. I wanted to bring out the point that where there is no organization of the women workers, legislation in their behalf does not do any

good, because their fear of the loss of their position keeps them from having the law enforced. Now, you take the Polish girls who are working in hotels and restaurants, they report a violation, and even after they have reported the violation they hesitate to come into court and appear as a witness because of the loss of their positions, because they must then in turn give two more dollars to the employment agency to get another position; so that no matter what legislation you may have concerning the women workers, you must have an organization of those workers to make that legislation effective.

Chairman WALSH. Is that all?

Miss MALONEY. Yes.

Chairman WALSH. Thank you, Miss Maloney.

Call your next witness.

Mr. THOMPSON. Mr. Bent.

Mr. Taylor would like to make a short statement to the commission with regard—

Chairman WALSH. Mr. Taylor who has been on the witness stand?

Mr. THOMPSON. He does not want to give any testimony; he only wants to make a statement.

Chairman WALSH. We will recall Mr. Taylor.

Mr. THOMPSON. I will tell the chairman what he has to say. There were some things Miss Maloney has stated that he wants to counteract, and he would be willing to submit a statement in writing, if that is satisfactory to the commission.

Chairman WALSH. We would rather call Mr. Taylor in rebuttal. We will arrange a place for Mr. Taylor to be heard again.

TESTIMONY OF MR. EDWARD T. BENT.

Mr. THOMPSON. Will you give your name and your business address and your occupation?

Mr. BENT. Edward T. Bent; 1110 Fisher Building; president of the Ogilvie Coal Co., Ogilvie, Ill.

Mr. THOMPSON. That is a bituminous coal mine?

Mr. BENT. Yes.

Mr. THOMPSON. Are you connected with the executive board of the Illinois Coal Operators' Association?

Mr. BENT. I am a member.

Mr. THOMPSON. You are a member of it?

Mr. BENT. Yes, sir.

Mr. THOMPSON. How long have you been a member of that board?

Mr. BENT. Since I retired as secretary-treasurer. I was secretary-treasurer for 10 years, and the last 3 or 4 years has been as a member of the board.

Mr. THOMPSON. Then, for the last 13 years you have been connected with the executive board?

Mr. BENT. Yes, sir. I have been connected officially from the organization of the association.

Mr. THOMPSON. How long have you been engaged in the mining of coal in this State?

Mr. BENT. Since 1880.

Mr. THOMPSON. Since 1880?

Mr. BENT. Yes, sir.

Mr. THOMPSON. Will you please tell us what sort of an organization the Illinois Coal Operators' Association is and its purposes?

Mr. BENT. The Illinois Coal Operators' Association was formed at the close of the strike in the year 1897, in which the operators were defeated, and the miners of the State for the first time were generally organized, and it was organized to deal collectively with the miners in making contracts and in interpreting and enforcing them. That is still its main purpose, and it does, and to take up certain other matters, such as the matter of safety, safety legislation, and the proper stocking of Illinois coal and enlarging these markets.

Mr. THOMPSON. What are the existing relations? In the first place, what proportion of soft-coal operators or coal operators generally of the State of Illinois does your association include?

Mr. BENT. Until four years ago it included nearly all the shipping mines of the State. At the end of an unsuccessful strike four years ago the association was very much weakened. A new association was formed in the St. Louis district, and a great many companies have been independent since then, and since

the mines of the Manville district passed into the possession of the Steel Trust that large tonnage has not been represented by us, perhaps less than 50 per cent now.

Mr. THOMPSON. What are the existing relations between your organization and the union?

Mr. BENT. Of collective bargaining, and very elaborate—perhaps the most complete arrangement in the mining industry of the country. The relations with their responsible leaders are very pleasant, and there is mutual respect and confidence, but the trade agreement as a whole is subject to very serious strain.

Mr. THOMPSON. Have you a constitution and by-laws that are printed?

Mr. BENT. Yes, sir.

Mr. THOMPSON. Have you any objection to furnishing this commission with that?

Mr. BENT. No, sir; I have a copy here.

(The paper so presented was marked "Exhibit No. 1, Witness Edward T. Bent, July 22, 1914.")

Bent Exhibit No. 1, "Constitution of the Illinois Coal Operators' Association," adopted February 26, 1907, in effect June 1, 1907, was submitted in printed form.)

Mr. THOMPSON. Is there any statement with reference to your organization you would like to make, supplementing the constitution and by-laws, more than you have already made?

Mr. BENT. Not that I recall.

Mr. THOMPSON. You have spoken about the existing arrangement between your association and the miners. I take it that is an arrangement between your association as such and the union as such in this State?

Mr. BENT. Yes; since the breaking up of our jurisdiction we meet with the other associations of the State in joint State convention with the miners and a single contract is made, signed by the three associations on our side and the miners' union.

Mr. THOMPSON. You said something about conditions being strained, or in bad shape, as I understood you, a moment ago. Please explain what you mean by that.

Mr. BENT. I didn't refer to any one thing, but a number of things, but particularly the miners seek to make a basic contract for the four States—western Pennsylvania, Ohio, Indiana, and Illinois—and on that basis contract all other bituminous coal contracts of other States are predicated, and the miners seek, usually successfully, to bring us into that interstate conference. The contract conditions that have always obtained in these four States are so unequal and the machinery provided so utterly impotent to correct the competitive inequalities that the relationship is very unsatisfactory to the coal operators of Illinois, and I would like to say also unsatisfactory to thoughtful mine officers of Illinois. The last interstate movement started after the strike of 1897, when the miners had been successful and had made a very, very large—in some cases nearly 100 per cent—increase in the labor scale, and when Ohio hadn't passed through any such readjustment. The inequalities that existed in the original contract practically remained still. To illustrate, in Illinois the contract gives 7 cents per ton less for machine coal than for hand-mined coal. The new contract in Ohio also for mine-run coal makes a difference of 20.6 cents. Both contracts are predicated upon a \$1 rate for scale coal, and 90 per cent of the Ohio coal going to the Lakes—90 per cent of the Ohio coal being mined by machinery, and the coal we are in competition with going across the Lakes, so that we are competing with a paper scale. That is one of the inequalities. The miners of Illinois have sought to correct that by bringing about an adjustment in the East and have failed. We have sought to correct that by bringing about an adjustment in the West and have failed. That is one of the difficulties under which we labor. The miners' organization has practically decentralized and no longer can control its membership in a responsible way. The national organization is in no position to impose views on the miners' organization of Illinois. The responsible leaders in Illinois are unable to control the locals in any way, nor are they able to control in a reasonable way the negotiations for contracts. This year we were three weeks in Philadelphia trying to make an interstate agreement and failed, and then reassembled in Chicago and failed again. At the meeting a policy committee was appointed to outline measures on which the miners of the various States were instructed to make a contract if possible. Both the Illinois and the national leaders told us there would be no

difficulty in completing a contract at Peoria later, because we stood ready to give the terms of the previous year, which were being accepted elsewhere and offered by the policy committee, and yet the miners' convention electing its own scale committee, a majority of whom were not familiar with the subject or what the contract meant, we were six weeks in negotiation and then narrowly averted a strike, and yet it was recognized in advance that the contract could not be changed under existing conditions materially. The miners' responsible officials have recognized that the terms of employment in Illinois are the most favorable of any State in the competitive field in the country, but simply are unwilling to surrender anything that they want here, and we are waiting for an adjustment either up or down, and it don't come.

Mr. THOMPSON. In your opinion, does the fact that that adjustment does not come render of no value the agreement which exists between your association and the miners?

Mr. BENT. No, sir.

Mr. THOMPSON. Or is it one of the things that has not been adjusted?

Mr. BENT. It very greatly lessens its value, but it still has value, and I prefer it to the other system. But even with the miners unable to adjust wages in the East and unwilling to give us relief in the West, their organization could easily be made responsible so that the trained leaders could direct instead of being directed by men who are uninformed—the mass.

Mr. THOMPSON. In the soft-coal industry, as a matter of fact, is it true that there is a great variety of prices and that the fixing of prices for coal is more or less of a complicated proposition?

Mr. BENT. Very complicated and technical, particularly so in Illinois.

Mr. THOMPSON. How many prices have you in Illinois, if it may be put in that language?

Mr. BENT. I can file a copy of our agreement, which answers that question.

(The paper so presented was marked "Exhibit No. 2, Witness Edward T. Bent, July 22, 1914.")

(Bent Exhibit No. 2, "Agreement between the Illinois Coal Operators' Association, etc., and the United Mine Workers of America, District No. 12, expiring March 31, 1916," was submitted in printed form.)

Mr. THOMPSON. Scores and scores?

Mr. BENT. Yes; I don't know that there are scores and scores of different rates, but scores of different schedules.

Mr. THOMPSON. Are those contained in this book?

Mr. BENT. Yes, sir.

Mr. THOMPSON. Comparing the conditions that exist in the coal fields in this State to-day, as you have named them, with conditions that existed prior to 1897—that is, leaving out economic questions, just the labor problem—has advance been made or were the old conditions the best?

Mr. BENT. It depends on what is meant by advance. The conditions are as unfair and intolerable to the employer now as they were to the laborer before. They were very unfair to the employee before.

Mr. THOMPSON. Now, as far as the employees are concerned, was it more unpleasant, and more strikes before 1897, or are there more strikes and troubles to-day? I don't mean trouble in contract making.

Mr. BENT. You mean contract making?

Mr. THOMPSON. No; strikes and industrial conflicts.

Mr. BENT. There was more under the old conditions—open strikes.

Mr. THOMPSON. To what extent has the making of contracts, such as you now have, reduced the occurrence of strikes in this State, generally speaking?

Mr. BENT. To a large extent, but hasn't eliminated them.

Mr. THOMPSON. To what do you ascribe the fact that the strike has not been entirely eliminated, if you have an opinion on that subject?

Mr. BENT. There are three kinds of shutdowns that occur in the mining industry, all of those serious. There is the local revolt to impose—to establish some demand not sanctioned by the organization. The remedy for that is the penalization of the guilty.

Mr. THOMPSON. Is that generally applied?

Mr. BENT. No, sir; generally not. As Mr. Walker said yesterday, it is applied with discretion. It is done occasionally and a great deal of good results. It ought to be done more often where there are not extenuating circumstances. The thing would be broken up very quickly if it was imposed.

Mr. THOMPSON. In whose discretion is it applied?

Mr. BENT. We ask to have it done automatically, and it is subject to review, but it can't be done without the consent of the two organizations, and that is too often withheld.

Mr. THOMPSON. Who asks oftener, the employer or the coal miners?

Mr. BENT. The employer.

Chairman WALSH. As I understand you, the employer has nothing to do with that, it is a matter for the union?

Mr. BENT. It is a joint matter, the employer asks for the imposition of the fine and evidence is taken—

Chairman WALSH. What are the two organizations you refer to that decide whether it is to be applied or not?

Mr. BENT. It must have the consent of all the organizations.

Chairman WALSH. What do you mean by the two organizations?

Mr. BENT. The coal operators' association and the miners' union. The second kind of a shutdown that is called, has always been where a dispute has been taken up in the proper way and finally reaches the joint executive board without being settled. The miners' executive board will give five days' notice before shutting down the mines. That has occurred often enough to be serious. It is very offensive to the employers. We claim that when the labor is bought for two years, the coal sold for two years, that that should mean operation of the mines for two years, and with the elaborate machinery we have provided for the settling of disputes on their merits. Comparative few places that are not so settled should either go to arbitration or a breach of the peace. Shall I at this time explain what change has just been made through dealing with that proposition?

Mr. THOMPSON. Yes; we would like to have that. You have stated there were three causes for strikes. You had stated two. Do you wish to go on and state the third?

Mr. BENT. Yes. The third is the general suspension either for the country or competitive field of Illinois. When a contract has expired because of failure to negotiate another one. That is the suspension of the three that very greatly affects the public interests.

Mr. THOMPSON. Does that occur often?

Mr. BENT. No, sir. It occurred this year in Ohio. It occurred four years ago in Illinois, and it occurred in Indiana two years ago. It occurs often enough to be very serious. But still more often, probably, every two years there is a fear that a shutdown will occur and some stock of coal, or some speculation in coal, or some injury to the public, or some injury to the miners, and some injury to all the operators, except those who are speculators, who are the common enemy.

Mr. THOMPSON. What remedy have you to suggest for such a situation?

Mr. BENT. I feel that, with Mr. Walker, that the means of handling both these disputes and the means of reaching agreements should be left as far as possible inside the industry. And I feel that the employers and employees, particularly the mining industry when the public is so vitally concerned, should provide their own machinery for the preventing of such an occurrence and the making it reasonably certain. But I feel back of that that if the employees and employers in any such industry will not do it, the Government should provide the machinery, properly safeguarded.

Mr. THOMPSON. In that connection would you feel that such a board as a Federal industrial council with power to investigate industrial conditions would be of assistance?

Mr. BENT. I think if properly constituted; I feel much as Mr. Walker expressed himself yesterday, feel the greatest necessity, and I go further than Mr. Walker, because I believe that the feature in the Canadian act that he criticized was a wise one and in the mining industry a necessary one. But it does not seem to me legitimate that the miners should, in order to win a strike, be able to catch the public unawares and win by virtue of the public necessity. The operators, of course, feel that pressure of the public need first; but it is an advantage to the miners that they are not entitled to, and I feel that the forbidding of strikes and lock-outs until after the investigation is a wise and necessary one.

Mr. THOMPSON. What have you to say of the complaint of the workers on the other hand that the forbidding of a strike, as was done in Canada for 30 days, gives the operators an opportunity to pile up coal?

Mr. BENT. It is undoubtedly true.

Mr. THOMPSON. And especially with regard to the men out on the strike.

Mr. BENT. It is undoubtedly true; but does that starve out the men on the strike? They have had to dig the same coal. In Illinois they simply dug double the quantity in February and March, and were idle in April and May, but they have got the livelihood; they have furnished the coal. And isn't it right that the railroads, performing a public function, and the large consumers of coal in general should have coal during the time that this question is being disposed of? Should not the Government find some way of disposing of it, even by force at the public inconvenience?

Mr. THOMPSON. Is there anything more you would like to say about the Illinois coal situation especially?

Mr. BENT. Yes; the independent action and new contract provision in regard to that.

Mr. THOMPSON. That is what you wanted to speak of.

Mr. BENT. The contract prior to this year for a number of years provided that matters could be sent to arbitration either before or after going to the joint executive boards, after they had disagreed in the field, but voluntary and an independent action should only be taken in matters of vital concern to one organization or the other. The miners' organization was its own judge as to whether a matter was of vital concern or not, and independent action was taken so often that the arbitration provision became a dead letter. The new contract provides very adequate machinery for the arbitrating of disputes. I want to explain that later. It is still voluntary, but provides that independent action in matters affecting the contract can only be taken when the other side refuses arbitration. It seems to me that is a very wise provision. It stops short of compulsory arbitration and does reasonably insure peace.

Mr. THOMPSON. Will you state briefly, Mr. Bent, the specific machinery now being used to arbitrate troubles that have reached that stage?

Mr. BENT. The new board has not been created yet. The machinery has been created, and there is no disagreement as to the personnel. It simply has not been completed.

Mr. THOMPSON. Well, what kind of machinery have you?

Mr. BENT. The provision, the rule is laid down for the guidance of the commission first, the plain provision of the contract; second, the stipulated interpretation of the contract in the record; third, the practice in the past undisputed; and, fourth, what seems to be fair in the particular case and sound in principle—in that order of sequence. The commission is to be composed of one direct representative of the mine workers selected by it; one direct representative of the operators, selected by the three associations of operators; and three disinterested parties preferably familiar with the mining industry.

The theory is, we believe that—both the miners and we believe that arbitration too often fails because there is only one disinterested party; one man can err in judgment or be partial. The consensus of opinion of three we feel is very much safer. It reasonably insures justice. And in order to simplify, those two direct representatives are to be carefully selected, and it is hoped that they will themselves dispose of the majority of the cases. If they can't, they have the privilege of agreeing upon any one of those other three to come in with them. To simplify the procedure and make less expense, particularly in discharge cases where the main thing is to dispose of it quick and get rid of it, that is followed. But where the two disagree then the disinterested parties are called.

Mr. THOMPSON. Have these provisions that have been agreed upon, the union men and the operators, been put into writing?

Mr. BENT. Yes.

Mr. THOMPSON. As it is valuable information, would you mind furnishing the commission with a copy of it?

Mr. BENT. This part that is in the contract itself will be found in section 13 of the contract that I gave the secretary. The machinery that was since provided by commission is here.

(The paper so produced was marked "Exhibit No. 3, Witness Edward T. Bent, July 22, 1914.")

See Bent Exhibit No. 3 under "Exhibits.")

Mr. THOMPSON. Is there anything special you would like to say in regard to that, other than what you have now said?

Mr. BENT. No; I think not.

In order to avoid unnecessary trouble there are certain provisions in our contract that I think it is well to mention. The walking delegate is eliminated. The miners have a pit committee of not to exceed three, who must be employees

of the company and who can not go about looking for trouble. They only have jurisdiction where the employee personally and the mine manager have disagreed. Mr. Walker explained the rest of the machinery yesterday.

Mr. THOMPSON. In regard to the Illinois coal fields, what proportion of days in the year do the miners get work, do you know?

Mr. BENT. There is a very serious overproducing capacity, and the industrial commission in the mining industry is at the bottom of the strain in our labor negotiations that I spoke of. There are about 80,000 miners in this State. Under the contract the mines could work but 8 hours out of the 24. The capital is idle two-thirds of the time, anyway, and on account of Illinois coal not stocking very well, and the reasonable demand being so great in the fall and winter, the mines could not naturally operate more than from 240 to 250 days a year. But they could operate that steadily and meet the public need. Yet they operate about 170 days. As a consequence the miners, while enjoying the most favorable wage scale in the country, have an inadequate annual earning, and I suppose that that provokes the additional demand from the rank and file of the miners that we face each two years.

Our answer to that is the more you shove up the Illinois scale the less they will earn instead of more, because the less work.

When President Walker retired as president of the mine workers in Illinois to accept the position of president of the Illinois Federation of Labor he told the miners in the Peoria convention that the operators were at their mercy, and that they could impose almost any additional demands on them that they chose. I am not quoting him literally. And he said the industry is carrying all it can safely, and you can't add to the burden without getting less work. And that was the character of picture.

Mr. THOMPSON. Briefly, Mr. Bent, what are the reasons that limit the amount of work to 170 days in a year, whereas in your opinion they might run from 200 to 240?

Mr. BENT. The reasons are most difficult. In the first place, but for artificial conditions we are in the midst of God's country, in an enormous consuming country. If Illinois could enjoy the markets that naturally belong to it, the home market, not to the exclusion of others, but as it should, the labor of these—there are 25,000 more men in the State in the mines than are needed. Those 25,000 men would be employed, and the mines would be run as they should. The discrimination of the wage scale that I have spoken of, and inequalities in transportation rate, all enter into the problem and are all being considered by the industry.

Mr. THOMPSON. Then, the two factors that relate to the industry are the first two?

Mr. BENT. I think so.

Mr. THOMPSON. And the transportation is another matter?

Mr. BENT. Yes, sir.

At this point I should say that I think the mining industry is in a class by itself, and that unless Congress recognizes that these troubles are going to continue, they are going to be just as hurtful to the workers and to society as they are to the employers. The waste of keeping 25,000 men in the mines of Illinois that are not needed, the waste of the opening of mines that are not needed, the poverty that follows the inability to make investments to properly safeguard the workers, the inability to take any but the cheapest mine coal, the abandoning of a mine before it is two-thirds worked out, the abandoning of part of the coal because it can't be produced for what it will bring—all of that waste is attendant upon the present condition. It seems to me destructive competition in the mining business is in the interest of nobody, and we are willing to face it. We are willing to have not only—I am speaking for myself and for those that feel as I do, and I think it is the prevailing opinion—we are willing to have publicity, all the carls on the table. We are willing to accept Government control. We are willing to have prices disallowed that are extortionate, but we do believe that something like the German system, if constitutional, if needed in this country. In Germany a mine is not allowed to be opened unless there is commercial need for it.

Mr. THOMPSON. Are there any other suggestions that you would like Congress to carry out in that respect other than this German system where a mine would not be allowed to be opened? How would you take care of the present mines that are already opened?

Mr. BENT. Well, it seems to me that enough mines are going to the graveyard every year to very quickly overcome the oversupply of coal, if the opening of

new mines is regulated. And then the business in spite of all these things that I have spoken of, the business is growing by leaps and bounds. Even the Illinois tonnage has doubled every 10 years, and the first revival of business would very quickly restore the balance if unnecessary mines were not opened in addition.

Mr. THOMPSON. Then, you have no other definite recommendation that you would make in that respect?

Mr. BENT. Why, I feel that the Government might permit reasonable restraint of trade in the mining business. No attempt of that sort is made under existing laws at all any more to my knowledge. But we are just going to destruction; 17 failures in the mining business in Illinois in the last year, and apparently there will be more this year than last.

Mr. THOMPSON. I want to put one or two more questions to you in regard to this coal proposition:

Do you find among either the operators or the unions a sense of responsibility for the interest of the general public?

Mr. BENT. I think that more and more the coal operators, as a whole, feel that responsibility and that the organization, as a whole, don't. We have sought officially the last few years to have steps taken to prevent any shut-down when the contract expires. Not only that, but to have the public know that there will be no shutdown so that this expensive stocking of coal by the railroads and others could be eliminated.

Two years ago a provision with that in view was inserted in the contract, but simply created the machinery for attempting to do it, subject to the ratification of the two sides.

President White, of the mine workers, took it up with his convention and handled one phase of the subject, but not the other, and presented his plan to us at Philadelphia. We pointed out wherein it was totally insufficient, and, after tying up the convention for several days, accepted the half loaf as better than no bread. Mr. White's plan, the plan which the miners have adopted and which is a step forward, is that if a basic agreement has been made—by that meaning a four-State agreement, before April 1—that then the work shall continue in the various districts pending the working out of the supplemental agreements. We said that that does not eliminate at all the necessity for coal stocking, because there is no one that can give assurances that a basic agreement can and will be made before April 1. As a matter of fact, we tried for a month this year, and there was no agreement by April 1. And as a matter of fact the railroads had and did stock coal in the past to avoid the feared suspension. The policy committee, however, authorized work to continue, and work did continue nominally, but there was no work to do because the coal stocks were on hand. The mines were nominally open in April and May, but actually idle. And the railroads, as one of the commission can tell you, incurred just as large expense for insurance purposes this year as usual.

Mr. THOMPSON. Is there any tendency to take advantage of the public and force submission?

Mr. BENT. Yes, sir.

Mr. THOMPSON. In what respect?

Mr. BENT. The miners desire to have coal supply insufficient when a contract expires, when negotiations are pending. They have discussed it, but are unable to do it under the contract, causing mines to run on short time to prevent coal stocking before the expiration of the contract. They have not done it, but the contract is there and they have frequently avowed that policy. Mr. Walker avowed it yesterday, objected to the Canadian law because coal stocking could occur before they strike.

Mr. THOMPSON. In what percentage of cases would you say that method is used by the union?

Mr. BENT. Well, the coal contracts expire in the spring when the business is quiet and they have not the opportunity to employ it often. But they desire to do it.

Mr. THOMPSON. You think it is there?

Mr. BENT. Yes, sir.

Mr. THOMPSON. Have you any restriction of output resulting from the desire of the men to make more work?

Mr. BENT. Our State contract forbids it, and the miners' officials are more or less successful in preventing such restrictions as the number of cars that the miners shall load in eight hours. There is strife over the machines, and in every convention we have considerable trouble meeting those questions of restrictions

as to how many miners shall be allowed behind a machine. The operator states the length of time for the machine and the method for the machine and the miners probably insist there shall be no more men behind the machine than operate and there is friction over it.

Mr. THOMPSON. Wherever that has been done, the output restricted, does it result in creating more work, or what is the result; is it the opposite?

Mr. BENT. I think the opposite. In general most of these restrictions have been handled successfully. The crying restriction in this State is the handicap placed upon the machines. It is based upon the earning power of the men, but the effort is to restrict the use of the machines, and if they are to be used at all to deprive the employer from any profit in them.

Mr. THOMPSON. Is there any cooperation between the operators and the men to improve the conditions of the industry in Illinois so as to put it on a better competitive basis with other States?

Mr. BENT. I think both the miners and operators sincerely are desirous of having it placed upon a fair competitive basis with other States. But I do not know of any cooperative work to that end. The miners have spent a great deal of money in trying to organize unorganized fields, such as Kentucky and West Virginia, which are a menace to collective bargaining, and we are accused of helping that movement by the check off. The check off is imposed upon us. We have assiduously sought to be relieved from it or to have it limited to the organization, the needs of the maintaining of the organization locally, that is the local and the State, and we have failed in those endeavors. I have no doubt that the money that the check off, both from the unwilling and the willing under this contract, is used in very large sums in this propaganda, properly or improperly.

Mr. THOMPSON. Would such cooperation be beneficial?

Mr. BENT. Within the limits of the legitimate; yes, sir. But how far can we go legitimately? We have been asked by the miners to make a scale for States not represented in the joint conference and have declined.

Mr. THOMPSON. The question relates, Mr. Drew tells me, to greater efficiency in increased output and matters of that kind.

Mr. BENT. Oh, by all means; yes, sir. Like the witness yesterday, I do not see that the rank and file of the miners or the organization as a whole is giving thought to the efficiency and increase of results to the industry. But they are giving thought simply to what they get out of it while limiting what we get of it, our ability to pay to them. I am in entire sympathy with their efforts to get better and better wages and control the number of hours and help the reasonable, comfortable, working conditions, if they were imposed upon us and our competitors alike. I am in sympathy with Mr. Mitchell's statement that the miners will never be satisfied and there is a certain kind of unrest which exists. Now, that helps and ought to continue. And the condition of the laboring man in the years to come will be better. What I complain of is the exactions that interfere with our efficient management of the properties and that cost us money; that don't give the miner any practical result, that don't add to his earnings nor make his conditions of employment appreciably better, but do add to the cost and the imposing of conditions upon us and the conditions that trouble us every year more than the rate. We pay the highest rates. We tell the miners so. The east settle the scale first and we take it. We tell the miners so in advance, whether it is up or down or stationary. That is not the controversy in Illinois except in localities in the adjusting of the State scale. The controversy is about conditions, conditions that add to the cost of production, increase in costs that are covered. If we pay the miners 3 cents advance a ton, mine run, we know how much correspondingly it adds to the labor, we know how much the increase cost, that is, to our output, we are able to convince the railroads that we are paying so much extra cost and we transfer that to the consumer and we should; but the thousand and one advances that you can not convince the consumer of, that you can not even measure yourself until after, are gradually putting Illinois out of business.

Mr. THOMPSON. Could you state these encroachments, could you classify these encroachments without naming a thousand and one? Do they fall in certain classes?

Mr. BENT. If I looked at the contract—take them up one after another. You take this question of cleaning coal, for one. Our business is dependent upon the making of a merchantable product, and the miners, while we want to clean the coal, object to the process. I noticed the other day men were docked for dirty coal by the mine manager—by the man in charge—and those docks were

officially canceled because the contract specified that only a certain man designated by the operator as inspector can impose a dock. They have sought to prevent that man from inspecting the coal, except in one place, under certain specific conditions. We struggled over that question quite at length at Peoria. Instead of trying to make the situation efficient to us, anywhere and everywhere they oppose it; every inch of ground is contested, and that is very representative of what I speak of.

Mr. THOMPSON. Could you send in to the commissioners, in written form, at some later date, an analysis of these encroachments, as you call them, by the union, classifying them if you can?

Mr. BENT. Illustratively; yes, sir.

(The information requested was later sent in and is printed as Bent Exhibit No. 4.)

Mr. THOMPSON. Do unnecessary restrictions and limitations have the direct result of preventing possible wage increases?

Mr. BENT. May I have that again?

Mr. THOMPSON. Do unnecessary restrictions and limitation of output have the direct result of preventing possible wage increases?

Mr. BENT. Yes, sir.

Mr. THOMPSON. Going back, Mr. Bent, to the machinery which you say you have lately perfected in this State for adjusting of grievances, how is it that Illinois has reached that state of development in the adjustment of industrial troubles and in Colorado and Michigan they have no such thing, and apparently are making no attempt toward the inauguration of such machinery?

Mr. BENT. Miners licked us in 1897, and the other thing followed. That is one answer. And they have not yet licked the employers in these other States. But that does not mean that a large proportion of the coal operators to-day are entirely friendly to collective bargaining, but, if conducted in a businesslike way, we very much prefer it to the other way of doing business. I think nearly all are converted to it. I speak freely, because I and my father before me were always in favor of it. We had the first recognized union in the State and the first written agreement made with a committee in this State. Some modifications and some of those provisions are in the present contract; so I have been always in favor of it. I do think, however, that there is a great deal to be said in defense of the position of the operators of Colorado and West Virginia and metal men of northern Michigan. In Colorado, as I understand it, there has been almost an equal disregard of law on the part of both operators and miners. One abuse had led to another. We will never know who started it. We do know what organized labor did out there, but I think employers having unorganized labor knew two things, truly or falsely, and the first is they do stand for or will not prevent disorder and destruction of property; and, second—just a moment; I will have that in just a moment—they look to the experience in the organized fields to see whether this is the businesslike method that gets results that organized labor says it does, and we regret to say that—what they learn about it; the ease with which we transact our business—it is not very encouraging.

Mr. THOMPSON. You have said, Mr. Bent, that you believe in the theory and in the practice of collective bargaining?

Mr. BENT. Yes, sir.

Mr. THOMPSON. What is your opinion with reference to collective bargaining in connection with the union as we have it to-day; that is, the international union in an industry? Do you look upon that as being a good plan or a poor plan or the best plan?

Mr. BENT. It varies in different industries. I have already stated that I did think the plan was a little better than to not have it; in some industries I feel that employers are justified in refusing to have anything to do with it. In other industries I think it is very much better. I think it would be very easy indeed, if the miners could make a few changes, to make it a most excellent thing. I think in Illinois we have got the machinery perfected, and machinery is to be proposed by the miners and ourselves both; and if they would correct weaknesses in their own organization so that the national organization had some control over the State, and so that the officers of the State and their executive board had reasonable control over their men, and so that instead of doing as they have that they would have responsible representatives, as they had a few years ago in the days of Mr. Mitchell, that he could get most excellent results. We are not disagreeing with the miners' leaders. They are able to do what they think is right and best. We conducted a young ladies' semi-

nary at Peoria for six weeks when there was no substantial disagreement between us and the miners, national and State officials, at the beginning. We did that on the basis of the miners' policy committee. But the miners elected their scale committee, and a lot of them were uninformed; a lot of them have the making of good men, and will be good men in time. We proceeded to educate them, and they did not go to the convention to vote until they were educated. That should not be.

Mr. THOMPSON. Do you believe unions should be financially responsible for breach of contracts or infliction of unlawful injuries?

Mr. BENT. Yes, sir. I would like to add that I have the warmest respect and admiration for many of the miners' leaders. Yet the best of them have to bend to the storm. The State officials, as I understand it, are elected for one year, and they are hardly more than in office until they have to have one regard for their reelection. Men that they consider incompetent will take their places. We can rarely settle the simplest of questions before miners' elections.

Independent action occurs more often, and so the whole machinery is blocked before each election and the election comes around often.

Commissioner O'CONNELL. I did not quite catch what you meant by running a young ladies' seminary.

Mr. BENT. I meant instead of meeting their business men, miners, leaders of this thing, we took men from the mines that had never met before, that had never negotiated a contract before, who were not familiar with the reasons entering into the existing provisions of the contract, and we spent six weeks convincing them that they were the very provisions and the best that could be done.

Commissioner O'CONNELL. You were simply schooling them?

Mr. BENT. Schooling them.

Chairman WALSH. That is just a pleasant name for it?

Mr. BENT. Yes; for an unpleasant fact.

Mr. THOMPSON. What is the reason the biennial negotiations for wage settlement are delayed until such a short time before the expiration of the contract, that the uncertainty and apprehension of whether there will be a contract or not causes undue storing and speculating in coal?

Mr. BENT. For that very reason we have sought to have the negotiations begin earlier and be disposed of before there would be any coal stocking, but have failed completely. In 1908, I think, there was a miners' meeting which asked for an appointment at an early date, and they began marking time, and we did not understand it at first, but finally found out that they had no authority to negotiate even a tentative agreement. They had to adjourn until after their interstate conference.

Mr. THOMPSON. Why are not negotiations taken up, say, six months before the expiration of the contract?

Mr. BENT. I know of no good reason why, except the miners' refuse.

Mr. THOMPSON. Have the operators ever tried to bring this about, and why did it fail?

Mr. BENT. The operators of Illinois have tried to do so, and I think the operators of other States. The miners are not prepared to meet us that way they say until after their international convention. They set their meeting of the international convention so late that going into session immediately afterwards, we have this condition every two years.

Mr. THOMPSON. Is there anything more you wish to say about the check off of union dues and the effect the practice has, if any, in turning a normally open shop into a closed shop? What effect has it upon the fair equality or advantage in contract making?

Mr. BENT. I think the check off has given Illinois a closed shop absolutely, under open-shop contracts.

Commissioner O'CONNELL. Is not that generally the condition?

Mr. BENT. I think it is very common, but the check off is what has done it in Illinois in the mining industry.

Commissioner O'CONNELL. Does not the contract method for open shops result in the closed shop?

Mr. BENT. I am not an authority, but I think it must be so, but it has proven to be so in our State. I attribute a great deal of that to the check off. I presume one-third of the miners in Illinois pay the check unwillingly.

Commissioner O'CONNELL. The check off is imposed on how many employees who do not submit cheerfully to it but only because they fear the results to themselves if they do not submit?

Chairman WALSH. He said one-third submitted unwillingly.

Mr. BENT. Yes, sir.

Commissioner O'CONNELL. What, in your opinion, would happen to men who refused to submit or attempted to work nonunion?

Mr. BENT. Their discharge would be demanded and work interrupted if they were not discharged. We have never made the attempt of late years. I am not objecting to a limited check off, but just pointing out what its effect has been. I would like to say a word more in regard to collective bargaining.

I believe in collective bargaining. In order to have it successful the two sides ought to be of approximately equal strength; then justice will be done. I don't think it is fair to say that the operator is benighted that won't consent to collective bargaining, and held up to public condemnation, if the employees can alternatively bargain collectively and then abandon the system. The miners four years ago, when they could not make a contract—they admitted that the contract offered was more favorable than other States—we had one association at the time and they demanded a contract that imposed additional demands, and we refused them, and we had a four and a half months' strike, and in order to win that strike they offered the contract to one district to withdraw from our association and sign up, and offered it to individuals, and so weakened our association we don't meet on anything like equal terms since. There are three associations in the State and a lot of unorganized operators, and I say if the miners are asking for collective bargaining they should accept collective bargaining. Because we had a temporary disagreement for a few days, the fact that it can't be arbitrarily disposed of is no reason why a permanent arrangement should be set aside and guerrilla warfare established. It is exactly the same thing as if the operators should import men and try to open up the mines, which we don't attempt at all. We abided by the collective bargaining, even in the four months' strike, which the miners did not. There has nobody worked harder than Mr. Walker to secure an agreement, but after we had been there six weeks he said that if an agreement could not be reached with the three districts in the whole State he knew there were operators in the State that would sign up, and I protested against that method.

Mr. THOMPSON. In regard to the secession of the St. Louis operators—that district—the trouble there was that the employers didn't stick by their union; isn't that true?

Mr. BENT. Yes, sir. Are we to attempt all the time to induce members of a mine workers' union of Illinois not to stick by their contract, or are we to foster their union and they to foster ours, or at least keep hands off?

Mr. THOMPSON. You said you agreed with Mr. Walker's suggestion for a board composed of operators and miners and public representatives, having for its purpose the preparation of contracts. In your opinion the mine operators would fare better under such arrangements while the conditions you complain of exist?

Mr. BENT. No, sir; I think that the miners' organization in one way or another must be made responsible, financially or otherwise. When they can meet us anywhere on the face of the earth on the basis of equality, then I believe Mr. Walker's plan would be effective. It would do some good even now.

Mr. THOMPSON. In your pursuit of the industry of coal mining and dealing with labor for many years you have given some consideration, I take it, to the question of industrial unrest?

Mr. BENT. Yes, sir.

Mr. THOMPSON. What in your opinion is the cause of the industrial unrest, if such exists, and what do you think should be applied as remedies?

Mr. BENT. As I said before, I think part of the unrest is perfectly normal and healthy and will always exist. Some of it, I think, is due to evidence of recent years, exploitation on the side of capital and a feeling that they are victims of it. Part of it is due to new social ideas that are being promulgated. I think part of it is due to a new-found and unrestrained strength in organization, and finding out what organization will do for them, and new desires so created, and that these demands pass all reasonable bounds.

Mr. THOMPSON. Mr. Drew wants me to ask you whether or not you consider the envy the man who hasn't anything has for the man who has something is not the cause of a great deal of unrest?

Mr. BENT. Yes, sir.

Mr. THOMPSON. You spoke some time ago with reference to your belief that the operators and the miners, I take it, should be permitted to make certain agreements now prohibited by law with respect to the industry—agreements

which would be called in restraint of trade now. Generally and briefly, what are the agreements you would like to see made?

Mr. BENT. I did not have anything particularly in mind, except that anything that would relieve the present situation of destructive competition and leave a fair margin, so that people could live and let live. Whether a direct price agreement with the right of some Government board to disallow them—a power similar to the Interstate Commerce Commission—would be a proper solution or not, I don't know. That would help. The legislature of Illinois amended the antitrust act for that very purpose when the mining industry was in its present situation, and provided a proviso that the law should not apply where either the intent or effect of the price agreement was to either maintain or advance wages, but the year of the anthracite strike the law was tested and held to be unconstitutional.

Chairman WALSH. Is that all, Mr. Thompson?

Mr. THOMPSON. Just one more question.

Is there any importation of miners into Illinois by coal operators?

Mr. BENT. No, sir.

Mr. THOMPSON. Is employment in mining freely open to men coming to Illinois from other States?

Mr. BENT. Yes, sir. I would like to say a word in that connection in regard to immigration. One of the great questions that we face in Illinois and other States, both the miners' organization and ourselves, is the large influx of non-English-speaking miners from southern Europe. Not speaking the language, neither the employer nor the miners' organization can reach them effectively. Oftentimes a man that translates to them mistranslates, and wherever there is an undue per cent of men of any one non-English-speaking nationality in a mining camp, there is a condition of disregard of mining contracts, and an equal menace to the mining organization and ourselves. Whether the remedy is to still further check immigration, whether the per cent from certain countries should be limited to the per cent coming in the past or not, I don't know. I have no well-defined view as to whether immigration should be stopped for a time or not. But I do feel it is a menace for a large number of men coming to this country without knowing anything about our institutions, knowing nothing about organized labor, and knowing nothing about society—if suffered to go en masse to the mines of any State, as they are doing in Illinois, they will be a danger both to the miners' organization and the operators.

Mr. THOMPSON. So far as you know, the operators have not been bringing these people into the country?

Mr. BENT. So far as the operators of the Middle West are concerned they are not at all responsible. I have heard it charged that the operators in the East were, and I have no reason to believe it. We take the men offered, and most of us give preference to the English-speaking and skilled men, but when they are not offered we take the best we can get.

Mr. THOMPSON. But whether the operators in the East bring in these men or not, you have no knowledge?

Mr. BENT. I have no knowledge.

Mr. THOMPSON. That is all.

Chairman WALSH. Mr. Garretson would like to ask you some questions.

Commissioner GARRETSON. One of the questions asked you was this: Is not one of the causes of unrest the envy of the man who has nothing of the man who has. In your experience, is or is not that envy often justified?

Mr. BENT. Sometimes it is and sometimes it isn't often justified.

Commissioner GARRETSON. It is an even break?

Mr. BENT. I am not condemning his envy.

Commissioner GARRETSON. Oh, no; but I want your experience on the subject.

Mr. BENT. My experience in the early days was that the employees got the worst of it. My experience in the latter years in Illinois is that the operators got the worst of it.

Commissioner GARRETSON. You speak of the growing responsibility on the operators in their relation to the public. Is there really a moral sense of responsibility quickened, or is it good business foresight, for fear of legislation and regulation?

Mr. BENT. I think both moral and good business judgment, but not because of fear of legislation, because there are two things we want—the light thrown on the subject and legislation.

Commissioner GARRETSON. Accompanied by regulation?

Mr. BENT. Yes, sir.

Commissioner GARRETSON. Then it is a blending of morals and good business?
 Mr. BENT. As all human things are.
 Commissioner GARRETSON. That is all.
 Chairman WALSH. Anything else? That is all.
 Call your next witness.

TESTIMONY OF MR. DUNCAN McDONALD.

Mr. THOMPSON. Give your name.
 Mr. McDONALD. Duncan McDonald.
 Mr. THOMPSON. Your business address.
 Mr. McDONALD. Springfield, Ill.
 Mr. THOMPSON. And your occupation.
 Mr. McDONALD. I am secretary-treasurer of the United Mine Workers of Illinois.

Mr. THOMPSON. How long have you been in that position?
 Mr. McDONALD. Four years past, in April, but previous to that time I held other positions with the organization.

Mr. THOMPSON. For how many years?

Mr. McDONALD. For all told, 12 years.

Mr. THOMPSON. And you are pretty fairly familiar with the operation of the organization in the coal fields of Illinois, I take it.

Mr. McDONALD. I am supposed to be or ought to be from the experience that I have had.

Mr. THOMPSON. Have you heard the testimony here this afternoon of Mr. Bent?

Mr. McDONALD. Yes, sir.

Mr. THOMPSON. What have you to say in regard to the relations between the employers and employees in this country?

Mr. McDONALD. Well, I feel this way about it, that so far as the relationship between individuals is concerned they are very friendly. Naturally, there is a clash of interests between the two sides, because each side is trying to drive just as hard a bargain as they can and to get the best out of it.

In that connection I might say that some of the employers are not as loyal to the association nor true to carrying out the contract as they should be. Some of the coal companies violate the contract every day in the week.

Mr. THOMPSON. Does your organization seek, or did it four years ago seek, to get coal operators to desert their organization and make individual contracts with your union?

Mr. McDONALD. During the time of the 1910 strikes, after we had failed to reach a contract with the coal operators' association, a great many independent or individual coal operators came to us and volunteered to sign our contract if they would be permitted to work.

In one instance a number of employers came at the same time, representing, I believe, or employing about 15,000 or 18,000 men, and said they would sign our contract if we would make a contract with them, which we did, and as a result they pulled away from the coal operators' association and signed our contract and the men went to work.

After that we signed with anyone who would sign the contract. The operators used what influence they could to prevent the operators from—or the association, rather—sought to prevent individuals from signing the contract. And in one particular instance in the city of Chicago, where one coal operator resided who was in business here, a committee called on him every day and insisted that he should not sign the contract.

The man happened to be in the hotel business in this city, and he finally decided to sign the contract anyway. And he told me afterwards that the operators had boycotted his hotel because he signed the contract, and the president of the association was stopping there at the time and he took his grip and left the hotel and said that he would never stop there any more.

Mr. THOMPSON. During that time do you know whether or not the operators' association sought to get your members to go back to work individually?

Mr. McDONALD. No, I don't; except in a few isolated instances. But they were not successful.

Mr. THOMPSON. Comparatively, has the operators' association shown more respect for your organization than your organization has for theirs?

Mr. McDONALD. Well, I might say yes, and it is not because they like our organization altogether; but it is because we have a thorough organization in the

State. We are not responsible for the fact that their association has disintegrated and broken up into three different associations.

I am told by the representatives of two of the associations that the reason they left the association was because it was dominated largely by railway interests and they were simply pawns in the game and were not able to take care of their business in competition with the railroad business.

Mr. THOMPSON. Did you hear what Mr. Bent had to say with reference to the institution of machinery for arbitration and conciliation in this Satté?

Mr. McDONALD. Yes.

Mr. THOMPSON. Is there anything that you would care to add to what he said in that respect?

Mr. McDONALD. Nothing, except that Mr. Bent and myself are primarily responsible, or in a large measure responsible, for working out this plan that he suggested.

Mr. THOMPSON. And the rules and regulations which has been handed in to the commission are the ones that—

Mr. McDONALD. Are the agreed rules; yes.

Mr. THOMPSON. Are the agreed rules and give such data as can be given in regard to the operation of that machinery; I mean, give such information as is necessary to understand it?

Mr. McDONALD. Why, we have had so many disputes arising out of the fact—largely because of the fact that our work is nearly all piecework. That is, there is the tonnage price paid for mining the coal, and the different prices paid for different classes of work. Naturally, there are a great many disputes arising out of that. As the result of these disputes and the slow method, or the long drawn-out method that we had of arriving at a solution, we have decided now to try to work out an arbitration scheme that will prevent disputes pending for such a length of time and find a means of more quickly solving those questions. The arbitration commission, as he has stated, was agreed to by the representatives of the operators' associations and our organization. It contemplates having both sides directly represented by one man on each side and three disinterested parties, who will be perfectly familiar with mining and yet have no connection with either side. The powers of the two direct representatives will be to select—or the authority will be theirs—to select from the three independents either the three independents or any one of the three in arbitrating a dispute.

Mr. THOMPSON. Is there any other thing you would like to say, Mr. McDonald, now, with reference particularly to the industrial conditions existing in the Illinois coal fields other than what has been said by Mr. Walker and Mr. Bent?

Mr. McDONALD. Well, the industrial conditions in Illinois now in the mining industry are the worst that I have ever known in my experience. There are more idle men in Illinois this summer than we ever had before. Scarcely a day goes by, or in fact every day, there are some 50,000 out of employment in Illinois in the mining industry alone. The same men are not idle every day. They may get a day's work this week and perhaps a half day's work next week. But as a general proposition since the 1st of April we have had approximately 40,000 men idle all of the time, and 20,000 others idle a greater portion of the time.

Mr. THOMPSON. To what do you attribute this condition—the slowing down of business or any special reason in the industry?

Mr. McDONALD. Well, I think there are a number of reasons that contribute to this. In the first place, there is a very general industrial depression; and in the second place, so many of the railroad companies and other large concerns that have developed coal fields in Illinois are now mining their own coal, getting the same at cost, where formerly they bought their coal from the independent coal operators. As the result of this, these large mines and the old mines still in operation, we now have equipment in Illinois and enough men to supply three times the amount of coal that normally is demanded. I think that is one of the prime reasons for the present condition.

Mr. THOMPSON. What remedy would you suggest for this last condition you have spoken of?

Mr. McDONALD. I know of no remedy, except the people or the Government or the State; the public will take over the industry and regulate it in such a manner that we won't have six mines where there is only business for one.

At the present time I know of no law that will prevent men from investing their money in mines and developing them if they see fit. We have now several companies in the State who are sinking new mines, notwithstanding the fact that there is no work now for more than a third of the men, and the equipment is either running one-third of the time or one-third of it is idle all of the time.

Mr. THOMPSON. Did you hear the suggestion of Mr. Bent with reference to that subject, and how he thinks it could be handled?

Mr. McDONALD. In reference to the German law?

Mr. THOMPSON. The German law, yes; and, in fact—

Mr. McDONALD. Yes. I personally favored that before the efficiency commission in Springfield a short while ago. But the fear I have is that it requires so much time to put into operation the law that he suggests that it is going to be a long time before we arrive at results.

Mr. THOMPSON. What other quicker method could be adopted, in your opinion?

Mr. McDONALD. Well, to be candid, I know of no immediate remedy for the situation. The fact that practically all of the railroads coming into Illinois, or a number of them, are now mining their own coal, and each mine that they sink is a large mine usually having from three to four thousand tons capacity, naturally displaces three or four or five of the smaller mines having an output of from 300 to 1,000 tons a day. And as a result of this the old mines are still there, the miners are still there waiting for the whistle to blow for work, and the companies that are developing these new mines require a large force of men, which they are bringing in or encouraging to come in from other States and furnishing them employment.

Mr. THOMPSON. Is there anything further you would like to say about the conditions in the Illinois coal fields?

Mr. McDONALD. I feel this way, that under the present arrangement, largely by reason of the competition between the companies in this State and the companies in other States, there is a very great waste in the present method of producing coal. Some of the mines in the State are only getting out approximately 60 per cent of the coal, where in reality they should get out at least 90 per cent of the coal. There is a great waste in the resources of the country in that way. This is due, I believe, in large measure to competition and the desire to get profits as early as possible after the mine is sunk, and the desire to get the coal as cheaply as possible, without regard either to the product or to the welfare of the miners employed in the mines.

Mr. THOMPSON. Referring, Mr. McDonald, to the unions and their organizations—to yours as well as others—they are considered by the people in them as democratic institutions, are they not?

Mr. McDONALD. I think so; yes.

Mr. THOMPSON. There is an opinion prevails among a certain portion of the public that in many instances, by reason of political methods used in the elections, that the unions get into the hands of a certain ring or party of union politicians. Have you yourself seen any evidence of that character in the union?

Mr. McDONALD. That does not prevail in the miners' organization, for the reason that the mines are scattered over a vast extent of territory and each individual has a right to express himself in the nominating of any candidate for office in the organization. We have the complete initiative and referendum in the matter of election of our officers. Every individual is given a ballot, and they nominate and elect under the Australian ballot system. Each man is permitted to nominate who he pleases, and is also permitted to vote for who he pleases. We have a penalty in our law that prohibits anyone from interfering with elections, and we try in every instance to enforce that penalty.

Mr. THOMPSON. The expression of the will of the individual in a union is a very important matter, is it not?

Mr. McDONALD. Yes, sir.

Mr. THOMPSON. And it should be safeguarded in any way that the experience of men shows should be used?

Mr. McDONALD. Yes, sir.

Mr. THOMPSON. Just the same as in the expression of the will of the people at the polls in State matters?

Mr. McDONALD. Yes, sir.

Mr. THOMPSON. And you see no reason why methods which may be used practically that are used in State matters should not be used in protecting the ballot in union matters?

Mr. McDONALD. The same methods are employed, and particularly in the local union of which I am a member. We have our own hall, and on political election days they rent our hall as a polling place. On the miners' election day we borrow from the election commissioners the booths used in the general election, and they are used there in the same manner, and the judges are selected in the same manner, and the same instructions are given.

Mr. THOMPSON. What is your opinion about the State itself making regulations, perhaps governing the carrying on of elections in union matters?

Mr. McDONALD. You mean the State government?

Mr. THOMPSON. The State government passing laws, for instance.

Mr. McDONALD. Well, I feel that the State government could well afford progress along that line in their own elections before they go and attempt to regulate the affairs of someone else.

Mr. THOMPSON. Well, assuming that the State, that the present primary law is a good one, and we generally understand it is because it was followed apparently by the Progressives, etc.—would such a law, if passed by the State for the purpose of having relation to labor unions, be a good or bad thing?

Mr. McDONALD. Personally I would not have any objection to the State having some regulation over the unions if the State itself had clean skirts in this matter. But I do feel that in the past in a great many instances political parties have dominated the situation, and I fear that if they were given the right to legislate on the matter of how the miners should conduct their affairs, they would legislate in a manner that would redound to the credit of the political organization, perhaps, and attempt to corral the vote in that way. For that reason I am opposed at the present time to the State enacting such legislation.

Mr. THOMPSON. For fear you may not have got my idea, Mr. McDonald, I don't mean that the State should supervise the elections and appoint the officials, but just pass these laws like the primary law, which should be used by the unions themselves in carrying on their elections.

Mr. McDONALD. Personally I haven't any objection to that being done, because it has been my desire ever since I have been connected with it to see that every individual is given the full right of expression, whether it is for or against myself or anyone else. In fact, complaint has been made in some instances that we have carried our democratic institution just a little too far, and as a result didn't have the responsibility that we should have otherwise. For instance, men have been elected that weren't very well known to the membership, and they themselves attempted to remove them from office afterwards on the ground of inability. But I am willing to agree to any plan that will give the worker full right to express his views on matters connected with the affairs of the organization.

Not only do I favor that in the election of the officers, but before a general settlement is made or a strike is declared, we submit the matter to our membership by referendum vote to determine whether or not they will accept the contract or go on strike.

Mr. THOMPSON. I take it, Mr. McDonald, in your capacity as a union official, having your attention practically all the time directed to the industrial problems, you have some views with reference to the industrial unrest, if any such exists, and remedies for it. I would like you to state briefly, if you can, your opinion about the unrest, if it exists.

Mr. McDONALD. There is a very general feeling of unrest, has been for some time, but it seems to have become intensified this year. In the first place, as I said, we have thousands of men who have been unable to obtain employment since the 1st of April. Generally during the winter months the men get reasonably steady work, and it enables them to lay up a few dollars for the coming summer. Last winter many of the miners did not average more than two or three days a week. As a result they were not able to provide anything for the future. Then since the 1st of April the mines, many of them have been closed down. Men are out of employment. They are unable to get the necessities of life in some instances. We are now using quite a large fund that we had accumulated in the organization, to take care of the most needy cases. We have expended this summer in the neighborhood of \$100,000 to relieve the distress of our own members, and will probably be obliged to spend another \$100,000 before conditions improve.

The men knowing, realizing that some others are doing better than they are, naturally feel dissatisfied. Not only that, but the average wages of the miners of the State of Illinois for a number of years has approximated \$500. There is not any man who can pay his way and maintain a family with the present high cost of living on \$500 a year and live in a comfortable home. A great many of the men have been reading some governmental statistics that were published some years ago showing that under ordinary circumstances a man should have something over \$700 to maintain himself and his family. Now, we have only received, on an aggregate, about \$500 a year, and it takes \$700 to exist; it is

pretty hard to induce that fellow to believe that he is happy and contented under those circumstances. Naturally, there is a very great deal of unrest. And I presume that will continue until some other solution is found for the present industrial conditions than we have arrived at up to this time.

I might say in this connection that as a result of the overcrowded condition of the mines in some instances there has been a very outspoken tendency toward regulating immigration. Men that have been here for a great many years feel that the other fellow should not be allowed to come. In some places that feeling has grown to considerable proportions and there is some little feeling between the nationalities on that account. They feel, some of them, that if the immigration had been restricted some time ago the present situation would not be as acute as it is now.

Mr. THOMPSON. Do you think, Mr. McDonald, that the wages of the miners in this State could be increased from \$500 to \$700, in the face of the conditions that have been stated by Mr. Bent and Mr. Walker?

Mr. McDONALD. Do I think they could be increased?

Mr. THOMPSON. Yes; could the industry still survive?

Mr. McDONALD. The industry could still survive, and the wages could have been increased by decreasing the number of miners employed—and if we had less mines operating—so that those which are at work could have more regular employment.

Now, Mr. Walker neglected to qualify that statement by saying that that is true so far as the day-wage rate concerned. There has been an increase, it is true; so far as the tonnage rate is concerned, there has been an increase. But the fact remains that the annual average earnings of the miners is about the same as it has been for many years. For instance, a few years ago the average number of days of actual mine operation was 225 days a year and upward. The last year the coal reports showed 170 days, and the coal reports that will be published shortly will show that it will be less than 150 days of actual operation. Now, these days of actual operation are not full days of eight hours. For instance, the mine may run two hours, and in that time they will get sufficient coal to fill the cars that are on the track, and when the two hours are up the men are sent home. There is no more work that day. The next day they may work four hours or six hours. As they are working at the tonnage rate or by the hour rate, their pay stops the moment the mine stops operating, so that in reality they do not get 170 days of actual operation on an eight-hour basis.

Mr. THOMPSON. What remedy, or, what other remedy, would you suggest to relieve or lighten the unrest in the industrial world than you have stated?

Mr. McDONALD. Well, I do not think there is a possibility of eliminating entirely the unrest until the worker is given—I want to agree with Mr. Walker in this regard—until the worker is satisfied that he is getting the portion of wealth that his labor creates. Unfortunately, now, some of the miners don't know actually who they are working for. The stockholders of the concern may be living in New York or they may be living in London. They are not at all familiar with his conditions. They are not particularly interested in his conditions. But they are interested in knowing how much money they can make on the actual capital, of getting their interest on the paper values that have been used quite freely in mining ventures, the same as they have in others. Now, the miner does not feel inclined to be entirely satisfied where he can see some employer of labor that does not work any longer hours laboring than they do, and he sees him riding around in an automobile when they can not afford the price of an ordinary railroad ticket. They feel that as they are the actual producers of the welfare of the concern that they should share in the wealth of the concern in proportion that they are creating it. Until that time arrives it is going to be a hard matter to satisfy with regard to having them in any way content.

Mr. THOMPSON. Have you in mind any temporary devices or methods by which the unrest may be ameliorated?

Mr. McDONALD. We are endeavoring to work out the solution of one of our troubles now by establishing cooperative stores in the State of Illinois on the same principle that they are operated in England and other European countries. The men have been required to pay exorbitant prices for their goods in the outlying mining communities in a number of places. Now, in a number of places we have established cooperative stores, with a view of cutting down the cost of living and giving the miners their share in the operation of the institution. We have a number of these stores operating—in two particular instances to my knowledge—that have paid to the stockholders, who are miners, dividends

ranging from 8 to 12 per cent per quarter. In other words, from 32 per cent to 36 per cent per annum. That is one step that we have taken with a view of trying to reduce the present high cost of living and make it conform more nearly to the earnings of the miner. There is a very strong desire on a part of the miners to establish the cooperative store system throughout the State. And some of them hope and feel that with the cooperative store would be operating a cooperative mine.

Mr. THOMPSON. What, in your opinion, do you think this commission could do or could recommend, say, that would help lighten the burden?

Mr. McDONALD. I feel that steps should be taken to curb the operations of the large railway concerns that are gradually absorbing all the coal properties of the State by reason of their control of the coal mines and getting their coal at absolute cost. They are requiring the other operator, they are in position to require the other operator who expects to sell his coal to sell on the cost basis, or nearly so, or he can't get any business from the railroad company. I think that they should not be allowed to dictate the price of the product, which they are doing now.

I think steps should be taken in some manner for the Federal Government to have authority to prevent the sinking of new mines until there is an actual demand for the coal.

Steps should be taken to prevent the great waste of the natural resources which takes place now.

Now, in this connection I feel that if it were not for the State's rights proposition we could secure Federal legislation regulating the mining industry of the United States, and it would go a long way toward eliminating the present difficulties that we meet.

For instance, Mr. Bent has complained of the competition from other States and the prices that prevail there. The complaint is well grounded. In Kentucky, where the miners are not organized, they are mining coal much more cheaper than we are in Illinois. In the matter of legislation they have practically none there to protect the miners' lives. That is largely true in West Virginia. The result of that is that the loss of life in West Virginia is approximately five times as great as it is in Illinois. There is no miners' organization there to champion the mining legislation. And as a result, they are compelled to pay for it in the loss of life—in the miners' lives in the mines. If there was any method by which we could enact Federal legislation that would apply to all of the mines of the United States and strict enforcement of it, it would be a long step in the way of solving the present problem.

Mr. THOMPSON. I am asked by Mr. Drew to put a question to you: What can you say as to the union opposition to new devices, machinery, or as to restriction of output?

Mr. McDONALD. Our organization as an organization has never opposed the introduction of machinery. Personally those of us who have been connected with it officially, they favor the introduction of machinery if it is a labor-saving device. But at the same time we have endeavored to try to make an arrangement so that our men will not simply be thrown out of work as the result of the introduction of machinery. We try to make a rate for the machine, so our people can live under it.

In this connection, too, I might say we have not attempted to restrict the output in any particular. Some few of our members, perhaps, may at times have attempted to have done that. But as soon as it was discovered by the organization we have told them that it would not be permitted under our contract.

The only attempt we have made to resent this matter is where the company was trying to get along with too few mining machines, when in reality they should have had more, and they have attempted to crowd as many men after the mining machine to load the cars as they could get. As a result, the miners' wages were practically cut in two—perhaps in three—of what they should have. We attempted to have the number of men after the machine, so that their wages would not be materially reduced. But our object has been to try and arrange it in such a way that they would have as many loaders after each mining machine as they could reasonably take care of the whole cut by the machine. We have neither tried to prevent the introduction of machinery nor have we tried to restrict the output of the mine. In fact, I might say a little further, it would be folly on our part to attempt, in many instances, to regulate the amount of coal a man would load when he is paid for it on a tonnage rate. If he was working by the day, we might be able to manipulate that a little better.

Mr. THOMPSON. Is it not a fact there is opposition, both to the introduction of new machinery and devices restricting the output, even though it is not officially sanctioned by the union?

Mr. McDONALD. I do not know of a single instance where the output has been restricted, except where the companies complain that they have not allowed them the number of loaders that they thought they ought to have for the machine, and we have tried to induce them to buy additional machines, so that they would not have that complaint. In some instances they did so, and in others they took the other method of working the machine day and night, in order to take care of the situation and eliminate the necessity of buying the machines.

Mr. THOMPSON. Do you think that both the union and the employer should be liable for breach of trade agreements?

Mr. McDONALD. Under present conditions both sides are morally responsible for the carrying out of that contract.

Mr. THOMPSON. Do you think that there should be financial responsibility for their acts?

Mr. McDONALD. I do not believe that I would care to assume a financial responsibility for the acts of men who in some instances have been encouraged to come here by certain employers who are not as familiar with our contract as they should be if these men violate the contract. Individually I would not want to hold the organization to account for that. I don't feel that the organization is.

Mr. THOMPSON. Where the organization itself breaks the contract, what would you say then?

Mr. McDONALD. I have no knowledge of any instance where the organization itself broke a contract, not since my connection with it.

Mr. THOMPSON. What would be your view of financial responsibility, or what should be the financial responsibility in such a case?

Mr. McDONALD. Well, I feel that if I were an employer and they would not carry out the provision of their contract I would want them to give some guaranty that they would carry out their financial guaranty. But what is true of the miners in that respect would be equally true of the employers. And members of the Illinois Coal Operators' Association to-day and of what is known as the fifth and ninth district associations to-day are violating the contract to-day. We are insisting on our men continuing at work even under the violation of the contract until we can get an opportunity to take it up.

I might point out the violation of contract. We have a clause in our contract, which you will find if you examine it, that provides that the advancing of money between pay days shall be at the option of the operator, and no commission shall be charged for cash advanced between pay days. Certain companies in Illinois, among them the O'Gara Coal Co., are to-day levying 10 per cent against the members for everyone they can induce to draw their money in advance, and they have the thing in operation, and it has been a violation of our contract. These companies are carrying on the same, although I want to say in behalf of the representatives of the operators' association that they have assured me time and again that they will not tolerate that condition as far as their association is concerned.

Mr. THOMPSON. Do you advocate closing some of the mines and working full time in the others?

Mr. McDONALD. Under present conditions that would work a hardship upon the men who would be thrown out of employment. I would much rather that the arrangement could be made to distribute the work among the different mines, so that each of the men would get some reasonable share of the work done.

Mr. THOMPSON. That is all.

Chairman WALSH. Mr. Delano would like to ask a few questions.

Commissioner DELANO. I wanted to ask one question: You made the statement, Mr. McDonald, that some of the members of this coal operators' association left the association, alleging the railroad domination. Do you know that of your own knowledge or just by hearsay?

Mr. McDONALD. That is the statement they made to myself and to other representatives of the organization.

Commissioner DELANO. What railroad domination did you refer to?

Mr. McDONALD. Well, they mentioned especially the Illinois Central Railroad, which operated under the name of the Madison Coal Corporation. They claimed

that it dominated the car supply along that road and were in a position to dominate prices in another way.

Commissioner DELANO. Any other railroad?

Mr. McDONALD. I do not recall that they mentioned any other railroad specifically. They did refer to another company, a large company; that was the Peabody Coal Co.

Commissioner DELANO. That is not a railroad company.

Mr. McDONALD. That is not a railroad concern, except that they have a small road and haul their own coal a short distance, as I understand it.

Commissioner DELANO. You would not call that a railroad?

Mr. McDONALD. Not in that particular instance; but many other large railroad systems have their mines in Illinois, and mentioned the North Western and the Chicago, Milwaukee & St. Paul.

Commissioner DELANO. The North Western, I believe, are not members of the Illinois Coal Operators' Association?

Mr. McDONALD. They are members of the fifth and ninth operators' association.

Commissioner DELANO. I wanted the commission to know exactly what you knew as to the railroad domination. Now, you have told about the Illinois Central. What others are there?

Mr. McDONALD. The Consolidated Coal Co. is generally understood to be part of the Gould interests, and the Wabash and Missouri Pacific systems.

Commissioner DELANO. I can positively say it does not have anything to do with the Wabash now. I do not know as to the others.

Mr. McDONALD. Well, I do not know how it is now. I understood the Wabash is in the hands of a receiver, but it was understood some time ago that was true.

Commissioner DELANO. Any others?

Mr. McDONALD. The Rock Island Railroad operates a small property known as the Coal Valley Mines Co. Take the Chicago, Milwaukee & St. Paul, they operate the St. Paul Coal Co. mines.

Commissioner DELANO. Did they dominate this Illinois Coal Operators' Association, either of them?

Mr. McDONALD. It was alleged at the time that these men withdrew from the association that the Madison Coal Corporation, the O'Gara Coal Co., which it was said was connected with the New York Central, and they mentioned the Consolidated Coal Co. at that time, that they were railroad properties and were dominating the situation. But the small operators have had no show with them in the association.

Chairman WALSH. Anything else? Any further questions? Do you want to ask any questions, Mr. O'Connell?

Commissioner O'CONNELL. Yes. Mr. McDonald, what is the average number of days a year that the miner is engaged in working, taking the good and bad years together?

Mr. McDONALD. That average number for the past five years would be approximately 175 days; that is, days that the mine works some. Some days they run two hours, some days they run four hours, and some days they run six hours. But about 175 days would be an average, I believe, for the last five or six years.

Commissioner O'CONNELL. That would be 170 full days in the year for each miner?

Mr. McDONALD. Beg pardon?

Commissioner O'CONNELL. I wanted to get in the record the number of full days a miner works in a year and approximately the annual earnings.

Mr. McDONALD. It would be impossible to give the number of actual full days they operate, from the fact that the coal report does not give the hours' work; it simply gives the days' work. I am informed that that is not a full eight-hour day, simply the day the mine operates, so it would be impossible to give that.

Commissioner O'CONNELL. There is an eight-hour law in this State—eight hours constitute a day's work?

Mr. McDONALD. We have that by agreement.

Commissioner O'CONNELL. Approximately in your mind what is the number of eight-hour days a miner works in the State of Illinois, annually?

Mr. McDONALD. I presume about 150 days.

Commissioner O'CONNELL. One hundred and fifty?

Mr. McDONALD. Yes.

Commissioner O'CONNELL. What would be his annual earnings?

Mr. McDONALD. Something over \$500 a year.

Commissioner O'CONNELL. Then, the question raised by Mr. Bent that the opposition to efficiency systems, ideas, and so on, a justifiable reason for even consideration of such a thing would be the fact that the miners were practically out of employment all the time?

Mr. McDONALD. Absolutely. We have, I might say in this connection, during the last year we had some mines that only operated 30 days and others operated 40 and others operated 200 days.

Chairman WALSH. Mr. Weinstock would like to ask one question.

Commissioner WEINSTOCK. How long have you been operating under the cooperative-store system?

Mr. McDONALD. We are not operating as an organization, we simply incorporated our members and assist them to get started. We have had one store operating now for two years.

Commissioner WEINSTOCK. How many stores have you got?

Mr. McDONALD. I think we have eight stores in operation now.

Commissioner WEINSTOCK. You have been operating them for two years?

Mr. McDONALD. No; since that time. This one that I spoke of has been operating two years and since that time a number of others have been started.

Commissioner WEINSTOCK. What proportion of them have succeeded?

Mr. McDONALD. In that time none of them have failed. They have all been successful.

Commissioner WEINSTOCK. What prices do you charge the members?

Mr. McDONALD. You mean the prices they get?

Commissioner WEINSTOCK. Yes, the prevailing prices; do they charge the prevailing prices?

Mr. McDONALD. They charge the prevailing prices. They do not cut prices to local merchants.

Commissioner WEINSTOCK. They simply rebate to the members the surplus?

Mr. McDONALD. Yes.

Commissioner WEINSTOCK. In proportion to purchases?

Mr. McDONALD. Yes.

Commissioner WEINSTOCK. Anybody can become a member?

Mr. McDONALD. Anybody can become a member.

Commissioner WEINSTOCK. It is managed collectively by the members?

Mr. McDONALD. Managed by directors selected from the stockholders?

Commissioner WEINSTOCK. That is all.

Chairman WALSH. You had one question, Mr. Thompson?

Mr. THOMPSON. I have one question Mr. Bent would like to ask. Do you consider a 7-cent machine mine differential in Illinois at a 20.6 cents in Ohio a fair proportion?

Mr. McDONALD. No, I do not. I want to agree with Mr. Bent on that, that a number of years ago we succeeded in fixing 7 cents as the price allowed for the machine in Illinois. During the time that price has been in effect machine mines in Illinois have increased wonderfully. More mines equipping and more operators have equipped their mines with machines each year. The 7-cent fixed difference between machine and hand mining in the other States, each of us, the operators have a higher differential or a higher price for the machine, and we have not been able to take it away from them or get them to agree to come down from the 7-cent machine differential.

Mr. THOMPSON. That is all.

Chairman WALSH. That is all. Much obliged.

We will now stand adjourned until to-morrow morning at 10 o'clock.

(At 4.30 p. m. of this Wednesday, July 22, 1914, an adjournment was taken until to-morrow, Thursday, July 23, 1914, at 10 o'clock a. m.)

CHICAGO, ILL., Wednesday, July 23, 1914—10 a. m.

Present: Chairman Walsh, Commissioners Delano, Weinstock, Ballard, Lenon, O'Connell, and Garretson; also William O. Thompson, counsel.

Commissioner DELANO (acting chairman). The chairman has been unavoidably detained, and he has asked me to call the meeting to order. Mr. Counsel, will you call your first witness?

Mr. THOMPSON. Mr. Fitzpatrick.

TESTIMONY OF MR. JOHN FITZPATRICK.

Mr. THOMPSON. Will you give your name, please?

Mr. FITZPATRICK. John Fitzpatrick.

Mr. THOMPSON. And your business address?

Mr. FITZPATRICK. 166 West Washington Street.

Mr. THOMPSON. And your position?

Mr. FITZPATRICK. President of the Chicago Federation of Labor.

Mr. THOMPSON. For how many years have you been president of the Chicago Federation of Labor?

Mr. FITZPATRICK. About seven years.

Mr. THOMPSON. How long has the Chicago Federation of Labor been in existence?

Mr. FITZPATRICK. In its present form from 1896.

Mr. THOMPSON. And what form did it have before that?

Mr. FITZPATRICK. Well, it was the same organization, only under another name; it was the Chicago Trades Labor Assembly.

Mr. THOMPSON. The Chicago Federation of Labor is affiliated with the American Federation of Labor, is it?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. And holds a charter from that body?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. And what are its powers in the labor world, and what are its purposes?

Mr. FITZPATRICK. It is a federation of the various organizations of labor in the city of Chicago.

Mr. THOMPSON. What does the charter of the federation—what do the regulations of the American Federation of Labor, what power do they give to the organization as such?

Mr. FITZPATRICK. Of course the Chicago Federation of Labor is governed by the general laws of the American Federation of Labor.

Mr. THOMPSON. And your organization is to deal with the local situation in the labor world, organizations solely affiliated with the American Federation of Labor?

Mr. FITZPATRICK. Directly and indirectly.

Mr. THOMPSON. Directly and indirectly?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. But you do not deal, do you, with organizations which are not affiliated?

Mr. FITZPATRICK. No, sir.

Mr. THOMPSON. What control has the American Federation of Labor got over your organization?

Mr. FITZPATRICK. Control in issuing a charter to the Chicago Federation of Labor, recognizing it as an integral part of the American Federation of Labor.

Mr. THOMPSON. Assuming that you violated—your body violated—some of the rules and regulations of the American Federation of Labor which you say govern your organization, what powers of government or discipline has the American Federation of Labor over your organization?

Mr. FITZPATRICK. Nothing more than to withdraw the charter.

Mr. THOMPSON. Nothing more than to withdraw the charter?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. With reference to the Illinois State Federation of Labor, which because of its charter covers the territory which includes Chicago, how is the power or authority of those two bodies—that is, the Chicago Federation of Labor and the Illinois State Federation of Labor—divided? Did you hear the testimony of Mr. Walker in that respect?

Mr. FITZPATRICK. To some extent.

Mr. THOMPSON. Have you anything to add to or alter what he said?

Mr. FITZPATRICK. The Illinois State Federation of Labor is a branch of the American Federation of Labor, covering the State and doing the work in that capacity which the State organization is supposed to do. It does not conflict in any way with the operation of the Chicago Federation of Labor. The Chicago Federation of Labor is a part of the Illinois State Federation of Labor, and the organizations that go to make up the Chicago Federation of Labor also go to make up the Illinois State Federation of Labor.

Mr. THOMPSON. Does the Chicago Federation of Labor send delegates to the Illinois State Federation of Labor?

Mr. FITZPATRICK. Yes, sir.

Mr. THOMPSON. And they sit with the same power and authority and right to vote that the delegates do from unions?

Mr. FITZPATRICK. Yes; they have the right to vote and take part in the deliberations.

Mr. THOMPSON. What organizations in Chicago are affiliated with your body? First, are all of the unions which are affiliated with the American Federation of Labor that have locals here affiliated with your body?

Mr. FITZPATRICK. Not all. The Chicago Federation of Labor is made up of some 200 labor unions.

Mr. THOMPSON. What class, if there is a class, of labor unions are not affiliated with your body that still are affiliated with the American Federation of Labor?

Mr. FITZPATRICK. There is no particular class. There is a local here and there that does not see the necessity of being a part of the Chicago Federation of Labor and stays out.

Mr. THOMPSON. Are the building trades affiliated?

Mr. FITZPATRICK. I think a large portion are affiliated with the Chicago Federation of Labor.

Mr. THOMPSON. There is also a building-trades council, or somebody by that name?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. Is your organization related to that body?

Mr. FITZPATRICK. No; that is a group of trades engaged in the building industry, and they get together for their own mutual benefit and protection and transact their business pertaining to that organization and take that work out of the Chicago Federation of Labor.

Mr. THOMPSON. Your body holds meetings how often?

Mr. FITZPATRICK. Twice a month.

Mr. THOMPSON. At which delegates from the different unions attend?

Mr. FITZPATRICK. Yes, sir.

Mr. THOMPSON. And are the resolutions passed at such meetings the governing power of your body? I mean are they to be given power, or do you have your constitution and by-laws, which are superior to any resolutions passed by your meeting?

Mr. FITZPATRICK. We have a constitution and by-laws, and, of course, that is the fundamental law of the federation.

Mr. THOMPSON. Would you mind giving a copy of those to the commission?

(The paper so presented was marked "Exhibit No. 1, Witness John Fitzpatrick, July 23, 1914.")

Fitzpatrick Exhibit No. 1, "Constitution and by-laws of the Chicago Federation of Labor," adopted December 6, 1896, including the amendments, was submitted in printed form.)

Mr. THOMPSON. What part does your organization take in the labor movement in Chicago, both in times of peace and times of conflict, such as strikes and lockouts?

Mr. FITZPATRICK. When the Chicago federation is called upon to take part in a matter of that kind it exerts itself to its fullest extent to bring about an understanding between the contending parties.

Mr. THOMPSON. State in your own language briefly a history of the activities of your organization as you have conducted it.

Mr. FITZPATRICK. Well, of course, the Chicago Federation of Labor is interested in seeing that the city ordinances are enacted which will protect the interests of the workers. That where ordinances are presented that are unjust to the workers, that they are opposed, and also in the State legislation. We cooperate with the Illinois State Federation in trying to enact legislation which will be beneficial to the workers, and opposing legislation which will be detrimental, and in any other questions of public policy the Chicago Federation of Labor generally identifies itself with it for the best interests of the community. In matters of labor disputes wherever the Chicago Federation of Labor can lend itself to be helpful to bring about a reasonable understanding, it is always ready and willing to do that. Possibly in all of the large strikes in the city of Chicago during its existence the Chicago Federation of Labor has been identified in them.

Mr. THOMPSON. In such things as strikes and lockouts generally in the past few years the Chicago Federation of Labor has taken an active attitude, has

it not, rather than a passive one? Where a strike has been between firms of the city and unions, where the unions have been affiliated with your body?

Mr. FITZPATRICK. The Chicago Federation of Labor always tries to be active in the interests of the affiliated organizations.

Mr. THOMPSON. What power of control has your organization got over the affiliated unions? Suppose they refuse to carry out your by-laws or your constitution, or refuse to carry out any resolution your order may pass at any of its meetings.

Mr. FITZPATRICK. There is no power of compulsion.

Mr. THOMPSON. There is no coercive influence in the federation?

Mr. FITZPATRICK. We are unable to make any organization do this, that, or the other thing. It is only by moral suasion. If an organization don't like the things the Chicago Federation of Labor participates in, they can withdraw.

Mr. THOMPSON. How does your body work in connection with, we will say, industrial conflicts? Are those generally in the first instance in the hands of the local union or international union, which has the matter up with the employer?

Mr. FITZPATRICK. Always first in the hands of the local organization, and if the local is a local of the international organization, then it goes to the international organization. Then if the local and international involved agree that the assistance or cooperation of the Chicago Federation of Labor is advisable or necessary, they can ask it or it is offered—it is generally offered.

Mr. THOMPSON. In the offering of assistance or the denying of assistance, does a question of that kind come before the officers as such, or the executive committee, or does it come before the open meeting of your body?

Mr. FITZPATRICK. Sometimes it is made direct to the officers, and sometimes, most generally, it is discussed in the federation of labor meetings.

Mr. THOMPSON. And brought up by the delegates on the floor?

Mr. FITZPATRICK. Yes; by the organizations involved, and they ask for assistance and cooperation of the affiliated organizations.

Mr. THOMPSON. What power of control has your body over a strike either to begin it or terminate it?

Mr. FITZPATRICK. None.

Mr. THOMPSON. None?

Mr. FITZPATRICK. No, sir.

Mr. THOMPSON. Its power is simply advisory, and in the matter of counsel and to pass, perhaps give financial assistance, is that right?

Mr. FITZPATRICK. The Chicago Federation of Labor can not inaugurate a strike; of course it can be helpful in securing money to sustain those engaged in a strike.

Mr. THOMPSON. Is there any general rule or rules that are followed by your body in determining whether or not it shall take part in a strike either to assist it or to oppose it? For instance, do you oppose what is called sympathetic strikes, or is that matter left solely to your meeting for the delegates to determine?

Mr. FITZPATRICK. Left solely to the organizations involved.

Mr. THOMPSON. The local unions here who decide to assist the local by ordering what is commonly called a sympathetic strike, is that within the power of the local union and the international?

Mr. FITZPATRICK. It is within the power of the local under the jurisdiction of the international if they are such. If they are local unions of the American Federation of Labor, then comply with their own laws and rules in that regard.

Mr. THOMPSON. Does the Chicago Federation of Labor have power, and does it ever at any of its meetings by vote of those present delegate or advise unions to either go on a strike or because of the grievances that they have themselves, or advise unions to assist others by sympathetic strikes?

Mr. FITZPATRICK. Not directly. We might suggest or advise that it is to the best interests of the movement, if they are involved, it is to the best interest to stand together; we might take some advisory action of that kind.

Mr. THOMPSON. And a great many strikes occur, do they not, Mr. Fitzpatrick, in the city, not because of causes or complaints or grievances against the employer, but because of differences of opinion among certain international unions as to jurisdiction of work? Do those strikes ever occur in Chicago?

Mr. FITZPATRICK. Yes; I think it is possible strikes of that kind have happened.

Mr. THOMPSON. Is the power of your organization in reference to this any different than in reference to any other strikes?

Mr. FITZPATRICK. No.

Mr. THOMPSON. Is the power of your organization in regard to Jurisdictional strikes as broad as the power, or, rather, as broad—the word “power” is not appropriate—is your jurisdiction as broad as that of the American Federation of Labor?

Mr. FITZPATRICK. I think it is about on a par with that of the American Federation of Labor. The American Federation of Labor has no more control over an international organization than the Chicago Federation of Labor.

Mr. THOMPSON. But the American Federation of Labor has a building trades department, and you say it is to take up jurisdictional troubles. Have you such a department in your organization?

Mr. FITZPATRICK. Not within. There is a local of the building trades department of the American Federation of Labor which comprises that group of building trades that are also under the board of the Chicago Federation of Labor.

Mr. THOMPSON. Generally, are the jurisdictional building troubles in Chicago taken up by the building trades council?

Mr. FITZPATRICK. Also as far as building trades are concerned.

Mr. THOMPSON. And in matters and troubles of that character it is generally assumed by your body that the building trades council will take charge of the matter, is it not?

Mr. FITZPATRICK. That the local unions will try to agree among themselves, and if they can not agree they will take it up through their international organization, and if it can not be adjusted there, then to the building trades department of the American Federation of Labor, and so on.

Mr. THOMPSON. Have you any power in a strike of that kind, a jurisdictional strike, to terminate it, or order it to be terminated, or is your power the same in that respect as with reference to other strikes?

Mr. FITZPATRICK. We have no power to either start or finish any strike.

Mr. THOMPSON. So far as your body is concerned, there is no check, of course, apparently, on jurisdictional strikes. What power, so far as you know, in the organizations of the labor world—the American Federation of Labor, the Illinois Federation of Labor, or your organization—what power or check is there on such strikes?

Mr. FITZPATRICK. It is within the international organization, the local union of the international organization.

Mr. THOMPSON. They are a power unto themselves?

Mr. FITZPATRICK. By their vote they say whether they will engage in a strike or whether they will terminate it.

Mr. THOMPSON. In your position as president of the Chicago Federation of Labor you have had occasion to come in contact with the conditions of labor in various industries in the vicinity of Chicago more or less, have you not?

Mr. FITZPATRICK. Yes; somewhat.

Mr. THOMPSON. What is the condition of labor, generally speaking, in the vicinity of Chicago? In some places is the condition favorable, in your opinion, and others unfavorable?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. If they are; in what places, in what industries?

Mr. FITZPATRICK. I think in the organized trades the condition is good; I think in the unorganized occupations that it is bad—very bad.

Mr. THOMPSON. Is that true generally, or are there exceptions to either of those fields?

Mr. FITZPATRICK. I think it is pretty general.

Mr. THOMPSON. Do you know of any field, say, specific field, wherein unorganized labor is well situated, or do you know of any field wherein organized labor is not well situated?

Mr. FITZPATRICK. I do not know of any field where unorganized labor is well situated.

Mr. THOMPSON. Do you know of the Link Belt Co.?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. Have you any knowledge—definite knowledge—of the condition of labor there?

Mr. FITZPATRICK. I think it is bad.

Mr. THOMPSON. On what is that opinion of yours based, Mr. Fitzpatrick?

Mr. FITZPATRICK. On that the control, the control of the men who manage that concern, is so decisive that they are just like parts of the industry. They start and stop with the industry. They do not amount to any more than that.

Mr. THOMPSON. Have you made any investigation, or is this opinion which you have, Mr. Fitzpatrick, caused by complaints of the men or in a general survey of the field?

Mr. FITZPATRICK. Well, in the general survey. I know something about the plant. I live very close to it, and know the conditions that have existed there for a number of years.

Mr. THOMPSON. There has been some complaint, Mr. Fitzpatrick, on the part of some of the community as to the government of labor unions. Generally, unions are democratic bodies and are handled as such, are they not?

Mr. FITZPATRICK. I think, always.

Mr. THOMPSON. Are the same safeguards used in the voting and giving the expression to the will of the member in union bodies as there is in the States, to see that the voter expresses his opinion—his voice?

Mr. FITZPATRICK. And all the rules in regards to giving the expression is within the hands of the members themselves. If they find that the rules are oppressive they can change them and make them to their own liking.

Mr. THOMPSON. But it is alleged that in various meetings that the union members are afraid to get up and express their opinion—they fear coercion—and that at the voting there is no protection such as a secret ballot would afford to a member in passing on resolutions or in electing men to office. What have you to say, from your experience, in regard to that matter?

Mr. FITZPATRICK. Of course you say "it is alleged," and I think it is alleged by the Chicago press. I don't think you will find any statements of that kind in the publications of the trade-unions of the country.

Mr. THOMPSON. Then in your opinion the members of the trades-unions have the same opportunity to express their opinion without coercion in regard to the government of their bodies as the citizen does in the State?

Mr. FITZPATRICK. Yes; I think so.

Mr. THOMPSON. Of course, in the State, Mr. Fitzpatrick, it has been found necessary in order to protect the voter from the coercion of the ordinary politician to provide the secret ballot, such as the Australian ballot, and to provide a primary law by which candidates may be nominated by the people, and other similar laws. As far as you know, are any laws of such a character adopted by the unions in order to protect the free expression of the opinion of the member?

Mr. FITZPATRICK. I think most of the organizations resort to the Australian voting system. Some of them may not, but I think the majority of them do; and I think that they generally recognize the principle of the initiative and referendum on all important questions.

Mr. THOMPSON. Then, in your opinion—

Mr. FITZPATRICK. And as far as the primary is concerned, my experience with the organizations in the city of Chicago is that the primaries in the labor organization have been a free-for-all.

Mr. THOMPSON. A free-for-all?

Mr. FITZPATRICK. That anybody who wants to name himself for any office has the privilege of so doing.

Mr. THOMPSON. Is it your opinion that it would be a good thing to those unions who have not the Australian ballot or the secret ballot, and who have not a referendum, to adopt such in the government of their bodies?

Mr. FITZPATRICK. Oh, I think it is best to let them determine it for themselves as to what particular way they want to adjust their own matters.

Mr. THOMPSON. And in your opinion would that be a good way to handle their affairs, from your personal standpoint?

Mr. FITZPATRICK. Well, now, that is a question as to the conditions that surround the union. They may be able to devise even a better way. If they could, why, I would rather see them devise the better way.

Mr. THOMPSON. You believe in the protection of the ballot, then. Mr. Fitzpatrick, have you made a study of the condition of industry as to whether unrest exists or not in the industry here in Chicago and generally throughout the country?

Mr. FITZPATRICK. Yes; I think I have got considerable.

Mr. THOMPSON. You believe there is considerable unrest?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. What, in your opinion, are the causes of it, and what would you recommend as remedies which are within the power of this commission to recommend to Congress—I mean something not Utopian, but practical.

Mr. FITZPATRICK. Why, I think the unrest which exists among the workers, both organized and unorganized, is the control which big business has over not only industrial affairs but public affairs; that grip which they have on the affairs of government and which they use against the workers continuously and everlastingly causes a disrest—an unrest among the workers to get from under that—that control, that holding down, which they have held for so long.

Mr. THOMPSON. And how would you meet that?

Mr. FITZPATRICK. Well, I—I don't know just exactly how we are going to meet it, only that we will find a way out. The workers of the world have always been oppressed and they have always been able to find relief, and I think that just as the heavy hand is laid on the back of the worker of our day and time that he will be able to devise the ways and means for getting out from underneath it.

Mr. THOMPSON. Do you believe, Mr. Fitzpatrick, that an industrial council—say a Federal industrial council—with power to investigate labor conditions and with power to conciliate and mediate and to arbitrate on request of the parties would assist in reaching a solution of some of the troubles which exist to-day in the industrial world?

Mr. FITZPATRICK. Well, of course, if we had the proper kind of conditions—if we had the proper kind of employers or had the proper kind of public officials to form a board of that kind—it might be helpful to some extent, but I think you will have to go some before you will reach that stage.

Mr. THOMPSON. You believe that truth would come out in those troubles, do you not?

Mr. FITZPATRICK. Believe what?

Mr. THOMPSON. You believe the truth should be ascertained—that the facts should be ascertained?

Mr. FITZPATRICK. Absolutely.

Mr. THOMPSON. Then, having an impartial body, if such body could be found, which would make a fair investigation of the facts in any dispute would be a good thing, would it not?

Mr. FITZPATRICK. If you could have the truth brought out and then published and not twist and distort it, it would be helpful; but our experience is that you don't get that no matter how well intentioned the commission would be, no matter what altruistic motives may be ascribed to it, there are other forces in the country that are able to circumvent it.

Mr. THOMPSON. Upon what experience is this opinion based?

Mr. FITZPATRICK. In dealing with these questions in Chicago here and trying to get the truth to the public and in a good many cases and failing absolutely.

Mr. THOMPSON. But you have not dealt in that matter with a Federal commission, have you? You have not dealt in regard to those matters with any Federal commission?

Mr. FITZPATRICK. Not with the Federal commission; no, sir.

Mr. THOMPSON. Or any State commission?

Mr. FITZPATRICK. Oh, I think we have; not investigating; no, sir.

Mr. THOMPSON. Are you a believer in conciliation and mediation?

Mr. FITZPATRICK. Yes, sir.

Mr. THOMPSON. And arbitration where the parties want it?

Mr. FITZPATRICK. Arbitration where they can have open and aboveboard arbitration, not where the arbitrators can be purchased by the fellow who has got the most influence. We disagree or disapprove of the controlled umpire in arbitration, and that has been all our difficulty with arbitration, is that the employer would resist the appointment of the umpire until they felt pretty sure they had the man they wanted.

Mr. THOMPSON. And you are not, then, advocating the use of a third man in arbitration, or what are your theories as to the method of handling arbitration, as to whether it should be sporadic and accidental, as it were, when a dispute arises, or whether the arbitration is best in the hands of a body who would act for an industry, we will say, and in such case would not call in a third man, or have you any opinion on that to express?

Mr. FITZPATRICK. I think some of the preliminary stages of conciliation and mediation do the best of the whole program. If the men can get together and find out where their rights and interest and equalities between both parties lie and then proceed along that line, that is the best possible way of settling

adjustment. Arbitration is not so satisfactory, because if the employer—if the award happens to be averse to the interests of the employer, he has kind of got it up his sleeve and is always looking to take advantage. If the worker feels the award went against him, he has it up his sleeve, and he is waiting for a time when he is going to solve these questions without that kind of a decision against him. Arbitration is not altogether satisfactory. It is a means to an end.

Mr. THOMPSON. Take cases where an arbitration board is established for an industry as such, that the arbitrators sit more or less permanently—not sit every day—what I mean are the ones to be called upon in case a controversy arises; that in such cases the third man instead of deciding the thing—taking the authority to decide himself immediately—does all he can to get the other two arbitrators to agree with one another and get them from time to time nearer together, and then only finally gives a decision when they can't agree. Would that kind of arbitration appeal to you as being a good proposition?

Mr. FITZPATRICK. I think it would be better than some of the tactics that have been called arbitrations in Chicago.

Mr. THOMPSON. Would or would not that be better than just having an equally divided board of arbitrators with no authority anywhere to finally make a deciding vote?

Mr. FITZPATRICK. I don't like the proposition of having a power anywhere to decide that we have got to do this, that, or the other. I don't like that scheme of things at all. I think that just as long as you develop that kind of power and put it some place, that you are going to have more or less trouble. When you get to the position you are going to put that power to make the decision, we will have to have a different human family than we have on the earth at the present time. It wouldn't do any time in the past, and we may have to go along some time into the future before we have that kind of a human family on the face of the earth that would be practical.

Mr. THOMPSON. Of course an industry is for the production of commodities for human being use. In your opinion, does the introduction of the union into an establishment have any effect, either favorable or unfavorable, on the industry as such?

Mr. FITZPATRICK. I think where reasonable, intelligent conditions have obtained that the unionization of the men would be most practical and bring the best possible results.

Mr. THOMPSON. Did you hear Mr. Plez's testimony the other day?

Mr. FITZPATRICK. I heard part of it.

Mr. THOMPSON. In that respect—in respect to that question. In respect to that question, did you hear his testimony?

Mr. FITZPATRICK. Yes; I heard him make a statement in regard to the activities of the union within his plant, and in figuring the thing over in my own mind I have come to the conclusion that that is all right for Mr. Plez's position, because Mr. Plez entered into the industry in that kind of way and for that purpose, as I understand it, and his view and his whole being is commercialized, and it is making profit—making good in the eyes of the directors and stockholders of the concern—and as he goes out in the market to purchase his different kinds of material and other things for his plant he goes on the one-eighth of a cent or one-fifteenth of a cent and all those things in doing it. They are in his mind when he is purchasing or making a deal in the interest of the concern of which he is a part. He is the hired man, you understand, to do that thing, and when he deals with labor he deals with labor in the same fashion. Labor is a thing. It is not human, so far as he is concerned. That is his whole mind; his whole make-up.

Commissioner O'CONNELL. He loses sight of the human side of the producer.

Mr. FITZPATRICK. Absolutely. He can't bring within his mind's eye that the person who works in the factory, that operates that machine, that that is a human being. He loses sight of that entirely. He thinks that is a part of the machinery to start it or stop it, or to do some other thing in connection with it. He has no idea there may be a wife and children back of that man working in his factory out there. It does not enter his mind. As far as his plant is concerned out there, they have a nice green lawn in front, boxes of flowers in front of the stenographers' windows to look out over the place; automobile drive around in front when you go by on the street car that is fine to look at. Absolutely nice. But get back down in there with the factory help and then see the conditions that exist there.

Commissioner O'CONNELL. No flowers in the factory?

Mr. FITZPATRICK. Very few. They may have some kind of iron design they are making for the ornamentation of a park fence or something of that kind.

Mr. THOMPSON. What opinion have you with reference to whether or not the introduction of a union into a plant leads to friction and antagonism between the men in it and the management?

Mr. FITZPATRICK. Well, where the commercial spirit is so entrenched in the minds and the hearts of the men who run that business you have got a hard situation. But in other industries, where the men want to do the right thing and want to be on an equal basis with their competitors and others, then a union can go along and be of great value and assistance, both to the worker and to the employer.

Now, there are two kinds of employers. There are employers who want to deal fairly and squarely with the public, with their employees, with their customers, and everybody. And there is the labor skinner, the fellow who is grinding and coniving and scheming and gouging every place that he possibly can. It does not make any difference whether he can squeeze a half cent out on some commodity that he is purchasing or whether he can squeeze a half cent out of the lives of the men in the factory.

Mr. THOMPSON. Most business to-day, Mr. Fitzpatrick, is a competitive proposition, is it not—most business?

Mr. FITZPATRICK. I think so.

Mr. THOMPSON. Generally speaking, one competitor has to meet the price for his article that the other competitor is willing to make; is that generally true, in your opinion?

Mr. FITZPATRICK. Well, it cuts quite a figure.

Mr. THOMPSON. Consequently an employer can not pay more for his raw material and for his labor than what he can get back from the consumer and at the same time survive and have his business go ahead, can he?

Mr. FITZPATRICK. Well, of course, when you apply all of that on the side of labor, and I guess labor is pretty generally taken advantage of. For instance, I understand that the labor that goes into the making up of a high-class pair of shoes—we will say a \$5 pair of shoes—I am informed by practical men in that business that the labor going into the make-up of that \$5 shoe would be about 65 cents, and the material would not be much more than that. And then for handling and selling and all of that there is another added price, and altogether, to put the \$5 shoe in the hands of the consumer, it would cost about—less than \$2.50 or thereabouts. And then the purchaser of the shoe is mulcted to the extent of the other half.

Mr. THOMPSON. In other words, you think that the saving—

Mr. FITZPATRICK. Now, the shoe manufacturers will grind the faces off the workers in order to hold them down to the very last point; will not let them get above that 65 cents which enters into the manufacture of the shoe; try to keep pushing them below that all the time.

Mr. THOMPSON. Of course, as a general proposition, it is true that the employer must be able to sell the labor at a profit. Isn't that true?

Mr. FITZPATRICK. They do; leave it to them.

Mr. THOMPSON. In your opinion, from your experience as a leader of organized labor, Mr. Fitzpatrick—or, at least, what is your opinion with reference to the necessity or not of a financial responsibility on behalf of the union toward employers?

Mr. FITZPATRICK. I didn't get that.

Mr. THOMPSON. What opinions have you with reference to whether or not there should be a financial responsibility on behalf of unions toward employers? That is to say, whether in case they have a contract and violate it they should be made to stand for any damages, for instance, that the employer suffers?

Mr. FITZPATRICK. I think that the labor organizations have made mistakes when they haven't exacted that kind of a requirements from the employer. I think if we undertook to collect damages for violation of contract on the part of employers we would have some money coming to us.

Mr. THOMPSON. Do you believe, in your opinion, it would be a good thing for organized labor and the employers to enter into contracts, give bonds to one another, to stand liable in money damages for the failure of either party to keep the contract?

Mr. FITZPATRICK. Every instance that I know of where labor organizations have been willing to put up the bonds the employer has always dodged it.

Mr. THOMPSON. Always dodged it?

Mr. FITZPATRICK. Yes.

Mr. THOMPSON. Have you had experience with such instances?

Mr. FITZPATRICK. Yes. I have seen employers bluffing around and wanting to have a bond, and when the organization was ready to furnish the bond the employer neatly sidestepped the proposition.

Mr. THOMPSON. In order that we may understand you, you have a belief, however, as a matter of your opinion, that a financial responsibility on behalf of both parties is a good thing?

Mr. FITZPATRICK. I think that the labor organizations are more determined to carry out their contracts, their agreements, even if they do it at some disadvantage.

Mr. THOMPSON. How would you interpret that or put that in terms of financial responsibility? Would you say that they should give bonds or other financial guaranties or not?

Mr. FITZPATRICK. Where they enter into—

Mr. THOMPSON. A contract.

Mr. FITZPATRICK. A mutual contract?

Mr. THOMPSON. Yes.

Mr. FITZPATRICK. I do not know just exactly what effect it would have. I think that the spirit that the men of labor have when they go into a contract is that they give their word of honor in that situation, and that is much better than their bond or anything else that they could use. If it became necessary, I think possibly organizations—

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Weinstock would like to ask a question or two.

Commissioner WEINSTOCK. In the course of our hearings, Mr. Fitzpatrick, in various cities, we have had an opportunity to listen to quite a good many non-union employers, employers who are opposed to the recognizing or dealing with the unions. I have briefly summarized the reasons they have offered for refraining to recognize these unions. I am very sure this commission will be very glad indeed to have your answer, as an intelligent representative of labor, to these charges that were made against unions, and the reasons given by employers why they would not deal with them. Briefly, these are among the reasons that have been offered:

First. The representatives of unions are largely engaged in graft, or that they are blackmailers.

Second. Unions resort to violence in strikes and become lawbreakers.

Third. That they break agreements.

Fourth. That the strong unions make unreasonable and unfair demands against employers.

Fifth. That they stand for the diminishing output, which makes for the dead level among the workers.

Sixth. That they are disloyal to the State because they object to their members joining the National Guard.

Seventh. That the innocent employers are very frequently seriously injured by jurisdictional disputes, as in the case of the brickmakers, which case has been referred to as one of those instances.

And, finally, that the unions are irresponsible and the employers are, on the other hand, responsible.

Now, take these up seriatim, and we will be very glad indeed to get what answer you care to make to these various statements made on the other side. For instance, the case of graft in unions.

Chairman WALSH. One at a time, perhaps, would be better.

Commissioner WEINSTOCK. It would be of interest to this commission to know what action unions take officially to deal with that problem.

Mr. FITZPATRICK. I think where organizations would find any semblance of graft that they would immediately eradicate it.

Commissioner WEINSTOCK. Could you furnish this commission, Mr. Fitzpatrick, with instances where grafters have been punished by the unions and expelled?

Mr. FITZPATRICK. I can not recall offhand where graft has been proved. We hear a great deal of charges about graft, but we do not get any evidence of graft. We find that the employers are interested in possibly undoing some labor official who has been successful in manipulating the affairs of his organization, and it is to the employer's interest to undo him, and they make the charge of graft, or something else, against him; then the newspapers carry

that to the public, and they try to discredit the trouble. But to come right down to the real proof of graft, where is it?

Now, for instance, we have 260 organizations affiliated with the Chicago Federation of Labor. Each of these 260 organizations has anywhere from 9 to 11 officers, which makes quite a group of men. The Chicago Record-Herald for the last three or four weeks has been working night and day trying to get something to hook onto some of the men connected with the labor organizations. They have named three or four organizations in all of the search and re-search amongst all of the officers of these labor organizations. They have named three or four organizations and among them are—they have named five or six and three or four are irresponsible organizations; they are not affiliated with any body, not identified with any body; they are free-lances, and what they do in the community is charged up to organized labor movements. They have got one or two officers of the organizations that have been connected with that possibly, and they have had the graft charges, and if they were able to get any more you may rest assured that they would have them. They would have their front pages teeming with that kind of information.

Now, out of several thousand officers of labor organizations, they have only been able to charge supposed graft to one or two men. But instead of going through the proper channels and bringing that fellow to justice as a lawbreaker, they do not do that. They want to destroy the whole labor movement because one or two men happen to fall down here or there or elsewhere. They use the combined power of the press, newspapers, magazines, and other things to destroy it because of them.

Commissioner WEINSTEIN. On the question of violence in strikes, Mr. Fitzpatrick, what is your answer to that?

Mr. FITZPATRICK. If you find violence on the part of any labor organization in the city of Chicago in a strike, organized violence, I would like to see it. In any of the strikes that have happened in the city of Chicago—the stockyards strike, the teamsters' strike, the newspaper strike, or any of these other strikes that have happened—organized violence on the part of labor organizations was not known. There may be here and there a misguided member of some labor organization who has hurled a brick or struck a man a blow in argument, or something of that kind may have happened, but not to any extent.

But what do we find on the other side? We find organized violence. We find these employers' associations, these blacklisting institutions that they have here, resorting to every possible means that they can to create turmoil and strife on the streets of the city of Chicago. Take, for instance, the employers' association during the teamsters' strike; what did they do? They brought men in and paraded them around the streets of the city of Chicago in coal wagons with pick-ax handles and blackjacks, and with guns, and marched them up and down and marched them around the old courthouse over at Washington and La Salle Streets just to incite riots on the streets of the city of Chicago; and they had a group of respectables, the high-class citizenship of the city of Chicago, in the governor's office at Springfield; members of the manufacturers' association, of the employers' association, in the governor's office in Springfield, hoping that the riots that they would be able to precipitate on the streets of the city of Chicago would necessitate a telegram from the sheriff for assistance, and that the employers would be there in the office to insist that the militia might be sent into the city of Chicago to quell the riot on the part of the workers. That is an actual happening.

Now, then, in the newspaper war, this situation was manipulated by the newspaper publishers' association to destroy the unions of the workmen in the printing plants in the city of Chicago, where the agreements were absolutely violated without regard to the conditions that were agreed to and subscribed to; they shoved those things aside and precipitated a war in the streets of the city of Chicago.

And the newspaper publishers' association, I think if you will go to the—if you will secure the minutes of the newspaper publishers' association during the time that that fight was on to disrupt the pressmen's organization, if you can get their minutes I think you will find a good deal of information as to how organized violence is operated on the part of the employers. I think that if you will go to the coroner's record of Cook County that you will find there in the records of the coroner's office that the agents of the newspaper publishers' association purchased guns in quantities and threw them on the table and told the fellows that they brought in here—irresponsible characters, no matter where

they could pick them up, brought them in here, clothed them with the authority of a special police or a deputy sheriff, and then told them to go into that room and pick up their arms, guns or blackjacks or knives, and whatever they wanted, and then walked out on the streets of the city of Chicago and murdered innocent citizens. I think that the coroner's records of the city of Chicago would make that statement stand up.

Commissioner WEINSTOCK. Is this commission to understand, Mr. Fitzpatrick, that all this was done before there had been any violence committed at all, that they took the initiative?

Mr. FITZPATRICK. There wasn't any violence.

Commissioner WEINSTOCK. If there was no violence, what occasioned all this?

Mr. FITZPATRICK. To cause trouble, to discourage and dishearten and weaken the men who were involved in the controversy.

Commissioner WEINSTOCK. To intimidate them?

Mr. FITZPATRICK. For instance, the trouble started in the Hearst papers, and the officers of the union were there urging and requesting and insisting that the agreements and arrangements with the organization be followed out. And when the time came that the newspaper publishers' association had decided that this fight would start from different places within the pressroom of the Hearst papers, the officers—Paddy Lavin, the notorious strike-breaking police official of the police force of the city of Chicago, was in the basement there with all of his men, his lieutenants and his henchmen, to start the trouble. And they picked up the officers of the union who were there, insisting that their agreements be carried out, and they carried them out bodily and threw them out on the street, thinking that the other men would resent such tactics of that kind. But they didn't. They said, "All right, if you are going to use brutality and organized violence of that kind we will have to grit our teeth and bear it," and they did.

Commissioner WEINSTOCK. Your statement, then, Mr. Fitzpatrick, is that you deny the charge that organized labor in the city of Chicago resorts to violence?

Mr. FITZPATRICK. And, in contradiction of that, that the employers' associations, their blacklisting divisions that they have, resort to organized violence.

For instance, the Association of Commerce will not become embroiled in a controversy with labor organizations. Not at all; they leave that to the other division. This institution is presided over by a man by the name of Webster; and this one presided over by a man by the name of Dudley Taylor; and another one over here in the Medinah Temple building. These under-organizations are the ones who carry on that kind of work. The Association of Commerce itself won't do that. It is engaged in a very high and holy undertaking. It is interested in vocational education. It is interested in regulation of traffic. It is interested in the City Beautiful, and all manner of that kind. But when the employers want to serve notice on the forces of government in the city of Chicago, or in the county of Cook, or in the State of Illinois, then it is the big men of the Association of Commerce who get up a committee of the citizens; and Mr. Simpson, of Marshall Field & Co.; and Mr. Rosenwald, of Sears-Roebuck; Mr. Thorne, of Montgomery Ward & Co.—they will get a committee, and they will call upon the mayor, and they will make protest. Their protest is nothing more or less than serving notice of what they want done. It is indirect notice to the chief of police; it is indirect notice to the sheriff's office; it is an indirect notice to the courts as to what they expect when these matters come up before them. That is the way the thing is done.

The Union League Club down here: You could not expect that the Union League Club would be guilty of openly coming in contact with any situation of that kind. Of course not. But they will invite the assistant chief of police down to dinner there, and he will come and have his meals, and he will meet Mr. Simpson, or Mr. Thorne, or Mr. Rosenwald, or some other mister. You don't have to tell him pointblank what you expect, and there is the situation in existence.

Commissioner O'CONNELL. Would you term that graft, in a sense?

Mr. FITZPATRICK. How?

Commissioner O'CONNELL. Would you term that graft, in a sense?

Mr. FITZPATRICK. Well, I don't know as you could call it graft. Some of the ex-police officials of the city of Chicago are reckoned as being millionaires, but they were never accused of grafting. I would not want to accuse them of that, either.

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3291.

Commissioner WEINSTOCK. I gather from your testimony, Mr. Fitzpatrick, that your attitude is this, that if violence has happened it has been in the nature of an offensive action on the part of the employers or their agents, and a defensive action on the part of the workers. You deny that the workers have ever used offensive violence.

Mr. FITZPATRICK. Absolutely.

Commissioner WEINSTOCK. Now, in the matter of the alleged charge of breaking agreements, Mr. Fitzpatrick, what can you tell us about that? Do you know of any instances where unions have deliberately broken their agreements?

Mr. FITZPATRICK. Where unions have?

Commissioner WEINSTOCK. Yes.

Mr. FITZPATRICK. No; I don't know of one instance where an organization has disregarded its relations under an agreement.

Commissioner WEINSTOCK. Do you know of any instances—

Mr. FITZPATRICK. I know I have come in contact with many situations where I think the employers have manipulated the situation to compel the organization to violate their agreements. They have made the conditions under the agreement almost inhuman or unbearable.

Commissioner WEINSTOCK. Do you know of any instances on record where the employers have broken agreements?

Mr. FITZPATRICK. Well, I could not name them offhand. I know that the Chicago Federation of Labor often has to exert itself to its fullest extent to insist on the living up to the agreements on the part of employers.

Commissioner WEINSTOCK. Are there any such instances of record?

Commissioner O'CONNELL. You say the Chicago newspapers have broken their contracts?

Mr. FITZPATRICK. Yes.

Commissioner O'CONNELL. I thought I understood you to say that.

Mr. FITZPATRICK. Yes.

Commissioner WEINSTOCK. Can you furnish this commission, Mr. Fitzpatrick, with a list of instances where employers broke agreements?

Mr. FITZPATRICK. I think I would be able to get some information on that score. The particular one would be the newspaper publishers' association.

Commissioner O'CONNELL. If you can, we would appreciate it.

(Mr. Fitzpatrick subsequently sent in the following communication:)

FEDERATION OF LABOR,
Chicago, Ill., October 6, 1914.

Mr. LEWIS K. BROWN,
Secretary, United States Commission on Industrial Relations,
Chicago, Ill.

MY DEAR SIR: I received your letter in regard to my failure to submit list of instances where employers broke agreements, and in reply will say I am glad now to have occasion to comply.

I think it will be only necessary to submit three instances where large and vital interests in the community were involved. We contend that if the large interests so recklessly violate agreements it proves the tendency of lesser concerns to follow suit.

Our assertion that employers violated agreements is directed against the Chicago Packing Houses, commonly known as the "Beef Trust," v. The Amalgamated Meat Cutters and Butcher Workmen; Montgomery Ward & Co. v. The Garment Workers; and the Newspaper Publishers' Association of Chicago v. Pressmen and Stereotypers' Local Unions.

Yours, very sincerely,

JOHN FITZPATRICK.

Commissioner WEINSTOCK. Now, the alleged charge that the strong unions make unreasonable demands and are extortionate in their attitude, what have you to say on that score?

Mr. FITZPATRICK. I suppose you would have to define what unreasonable was. If these men were asking for something they were not entitled to, that might be considered unreasonable, but what is there that workers might ask for that is unreasonable?

Commissioner WEINSTOCK. He might ask for wages greater than the industry could bear; he might ask for hours that were shorter than in the industry in other parts of the country, or restrictions that would be a serious handicap to

the industry in competition with other industries of other States and other localities.

Mr. FITZPATRICK. Well, I think the records would show that the stronger the organization becomes the more conservative it becomes. It goes more into investigating, in finding details and facts, and in determining the situation and being guided accordingly. I don't think the statement would stand.

Commissioner WEINSTOCK. That is, you would want specific instances?

Mr. FITZPATRICK. I don't think it exists. I don't think the strong organization makes any unreasonable demands anywhere. The stronger the organization becomes the more likely it would be to investigate and get the facts before it would make any kind of move. The small organization might become involved in some kind of erratic move, but I don't think that would be possible on the part of the larger organization or powerful organization. I think as an organization becomes stronger that they are more conservative and careful with the power that comes into their possession. An irresponsible organization will go off and do this, that, or the other thing, and are not responsible to anybody. You will not get that on the part of the big organizations and the strong organizations.

Commissioner WEINSTOCK. In the matter of the alleged diminished output, making for the dead level, what is the answer to that charge? Do the unions stand for the limitation of the amount of work a man shall do in a given time?

Mr. FITZPATRICK. I don't think that that is ever prescribed in the laws of an organization. The organization says that the membership will perform a real day's work for a reasonable amount of compensation. That is about the program now. That is about the program. But suppose that the—suppose an organization would say to its members, "This group of employers are only willing to pay so much a day for the amount of energy, mental and physical, we are going to exert. We are going to give them that in full, we are going to give them the full measure of that amount of money." It does not mean that the worker is going to let the employer prescribe the amount of compensation for the day's work and then go in and toil long and hard and exhaust himself mentally and physically and practically deplete himself in a few years under circumstances of that kind. It is not reasonable to expect. The employer won't do it in his dealings with his commodity. The employer's commodity is a production which he is manufacturing. If you go into his place to-day he will tell you the price per yard or per foot or per pound, whatever it is, and you have to give him his price, and all you get is that much, and you are very lucky if he hasn't gotten the measure fixed on you or the scales. You are very lucky. But, on the other hand, they want to get the worker's product, which is his labor, and want to get it unlimited for the amount of money that they want to prescribe as a day's pay. That is the situation.

Commissioner WEINSTOCK. Do I understand you also deny the charge of alleged diminished output?

Mr. FITZPATRICK. Yes, sir.

Commissioner WEINSTOCK. What is the attitude of your union where employers voluntarily, for higher efficiency, pay men more than the minimum wage? Suppose the minimum wage is \$3 a day, and suppose the employer, in order to encourage his workers and show appreciation of their efforts, should pay some men \$3.25 and some \$3.50, what action, if any, would be taken on the part of the union in a case of that sort? Would they object to the man being paid above the minimum, or demand that all shall receive whatever maximum is paid any individual worker for higher efficiency?

Mr. FITZPATRICK. Organizations never put a limit on the earning capacity of the individual. They do establish a minimum rate of wage which no man doing that particular class of work ought to go below and ought to get all above that he can earn. The proposition, while it is a big, broad, humane proposition as advanced by the organizations, the employers take advantage of our minimum and make it their maximum, and agree among themselves that "when the organization fixes its minimum we will make it our maximum, and we will hold our good men down to the level of the poorest in the proposition, and try to punish that good man by holding him down to the level of the lowest, and see if we won't get a revulsion of feeling and a kick over the traces and break up the situation."

Commissioner WEINSTOCK. I don't think it works out that way.

Mr. FITZPATRICK. That is our experience with it.

Commissioner WEINSTOCK. This question has been tested in Australia. At Sydney, Australia, I had a statement of a very large employer on that point. He

said when the law first went into operation fixing a minimum, he, being a furniture manufacturer, cut his men down to the level of the bottom, and two things happened. When he cut his 12-shilling man down to the level of the 10-shilling man he didn't get 12 shillings' worth of work. The man lessened his exertions. The second thing was, he found that his competitor took out his best people and offered them a premium. The result is that to-day 55 per cent of the workers receive more than the minimum. The same law will operate the same in this country, because human nature is the same.

Mr. FITZPATRICK. The only answer to that is this, that employers in Australia are not as well organized as big business in the United States.

Commissioner WEINSTOCK. They are better organized, because the Government encourages them to organize.

Mr. FITZPATRICK. The situation here is that big business has control of the forces of the Government and don't let anything get away from them. They manipulate that situation here where they can't get by.

Commissioner WEINSTOCK. Are there no people in your trade that get above the minimum wage fixed by the union?

Mr. FITZPATRICK. In some instances they may. It does not occur generally.

Commissioner WEINSTOCK. It is exceptional?

Mr. FITZPATRICK. It is exceptional. I think in all the occupations the minimum is made the maximum, and that is all there is to it; and the fellow at the head of the concern don't understand that. That information hardly ever gets to him. It is manipulated by the superintendent and the manager and the sub-boss down below. The man at the head of the concern hardly ever knows of the injustices that have been practiced on the workers in the plant, and it very seldom gets to him.

Commissioner WEINSTOCK. What is the answer to the charge that the unions stand for disloyalty to the State and in discouraging, and in some instances going as far as to forbid, its members from joining the National Guard?

Mr. FITZPATRICK. I do not believe that condition exists anywhere. I think the records of some organizations would show that in the sixties where the organizations were going along transacting their business when the war cry came along, they adjourned their organizations and went and enlisted in the Army, and then discontinued the operation of their organization until the internal strife was over.

Commissioner WEINSTOCK. Do you know of any case, Mr. Fitzpatrick, where they had in their by-laws a provision that the members are not to be permitted to join the National Guard?

Mr. FITZPATRICK. I do not know a single instance in any organization in the city of Chicago where such a rule as that exists.

Commissioner WEINSTOCK. Do you know of a case where a unionist has been expelled from the union because he did not join the National Guard?

Mr. FITZPATRICK. I do not. I haven't any such information. But I do know that there is quite a resentment amongst the rank and file of the members of the labor organizations in the city and elsewhere against the militia being used by the employers to defeat the purpose of organization. When the employers find that their gunmen and thugs are not sufficient to browbeat and discourage or dishearten the workers then they resort to the police force and then to the deputy sheriffs, and, in some instances, the United States marshals have been used. And when that is not sufficient they try to use the militia, and where the militia of the State has not been sufficiently servile to carry out the edict of big business in a manner and form in which it wanted to use the militia that they have injected into the militia these gun men and others, and clothed with the authority of the militia, in order to do the dirty work in the name of the State. When a condition of that kind exists in this country it discredits the forces of the Government. The citizen, the average citizen, has not a revulsion of feeling against the militia as such, but against the purposes for which it is used and permitted by the officers of the State to be used. They have nothing to complain about. Take for instance in Colorado, when the Federal troops were sent into Colorado, the striking miners thought it was a godsend.

I have seen the times in Chicago here, when we would have thought the Federal troops coming in here to protect the citizenship against that kind of men that the employers' association had there—would have looked upon the Federal troops as a good thing to save our homes and our wives and our children and our people from the depredations committed by those characters.

Commissioner WEINSTOCK. Now, as to the charge, Mr. Fitzpatrick, that the innocent employers of union labor are at times seriously injured through no fault of their own by jurisdictional disputes. Take this brickmakers case as an illustration, where I am told that building was paralyzed for 80 or 90 days and many men seriously crippled financially, and employers were the same way, through absolutely no fault of their own.

Mr. FITZPATRICK. That I do not know as the brickmakers' case is just the kind of situation that ought to be presented. There was a good deal in connection with that case that it would not bring out an identical case that we ought to draw. An employer whose interests are involved in a controversy between two organizations, that, of course, is a serious situation and a bad one. But I do not think that any labor organization gloats because some employer's interests happen to become involved in that way. I think that even while the organizations are wrangling over these points that both sides, no matter how intent they may be on gaining their point, that they have serious interest in the employer being involved and they are willing to do almost anything that would not be an injury, but he happens to be in the conflict. That is all.

Commissioner WEINSTOCK. He is between the upper and nether stone.

Mr. FITZPATRICK. He just happens to be in the situation at that particular period of time.

Commissioner WEINSTOCK. What is the remedy for that?

Mr. FITZPATRICK. I think when we get a little bit further along, in a different period of time, industry will settle down for a while and then labor organizations will be able to adjust themselves to that situation. Of course, it is not going to stay that way. We can never hope that things are going to be satisfactory as long as we are human beings on earth. Things are going to be changed ever. But the industry—the jurisdictional disputes are largely brought about because of the change of the industry. And, of course, the employer insisting on what he believes is right and other things that are involved, and the organization, of course, believing that their rights are involved, they are going to try to protect themselves while fighting each other. Of course, the rules of the trades, the regulations of the trades have got to be changed also. Men can't be moved along like stones, they can't be pushed from over here and over there, when their interests seem to be involved and jeopardized, they are going to try to see that they are protected. They are going to argue and wrangle and quarrel over these things. It is not serious though.

Commissioner WEINSTOCK. In the matter of the final charge, that is made by employers who object to dealing with organized labor, on the ground that they are responsible and organized labor is not responsible, what answer have you to that?

Mr. FITZPATRICK. I would like to find the responsible employers' organization.

Commissioner WEINSTOCK. The employers as a rule individually are responsible and can be made to meet their obligations unless ruined.

Mr. FITZPATRICK. Yes; but he won't get into any organization and take his chances like the union man will in his organization. As soon as an employer gets into an organization he has got the advice of a group of attorneys that are back of it. They have always got an abundance of that kind of brains at their fingers' ends, and he will be advised as to the moves to make, and they will incorporate or something else that will let them out as individuals under the law as to what the organization may do. The union man, the citizen, the man who believes in respect for the law, he does not want any incorporation, he does not want to seek anything to protect him against the law, he is willing to stand out in the open and respect the law and do things within the law.

Commissioner WEINSTOCK. I have heard this reason offered, Mr. Fitzpatrick, by union men as to why unions do not incorporate. I want to know whether it is in harmony with your point of view. They contend that if they did incorporate and made themselves financially responsible they would be harassed to death by employers' associations and who would keep them in court continually. Is that one of the reasons that makes organized labor hesitate to incorporate, the fear of being harassed?

Mr. FITZPATRICK. I do not think it is fear; I think it is the possibility of the attorneys connected with these employers' associations always trying to pull down some fees, to keep themselves going, and to keep the organizations possibly in hot water all the time. What has the workingman got that the employer wants but his labor? He hasn't got anything else, only his labor.

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3295

Chairman WALSH. That will be all, Mr. Fitzpatrick. Call your next witness.

Mr. THOMPSON. Mr. Glenn.

TESTIMONY OF MR. JOHN M. GLENN.

Mr. THOMPSON. Mr. Glenn, will you give us your name?

Mr. GLENN. John M. Glenn.

Mr. THOMPSON. Your business address?

Mr. GLENN. 1227 American Trust Building, Chicago.

Mr. THOMPSON. And your business?

Mr. GLENN. I am secretary of the Illinois Manufacturers' Association.

Mr. THOMPSON. How long have you been secretary of that association, Mr. Glenn?

Mr. GLENN. About 15 years.

Mr. THOMPSON. Generally speaking, of what kind of employers is its membership composed, manufacturers alone?

Mr. GLENN. Yes; there are a few, maybe, that are not actually manufacturers, but their business is such as is in harmony with the interests of the other members of the organization.

Mr. THOMPSON. And has members from all over the State?

Mr. GLENN. Yes, sir; principally.

Commissioner O'CONNELL. Mr. Thompson, will you please develop what his business was prior to being secretary, whether he was ever an employer, and so on?

Mr. THOMPSON. I will.

Mr. GLENN. I was just prior to being secretary of the Illinois Manufacturers' Association, I was secretary of the civil service commission of Chicago. Prior to that for a great many years I was in the newspaper business as a reporter.

Commissioner O'CONNELL. Were you ever an employer of labor?

Mr. GLENN. Well, no; not a—

Commissioner O'CONNELL. Manufacturer?

Mr. GLENN. Not a manufacturer, no; only as I might be indirectly interested in some organization. I ran a farm one time.

Mr. THOMPSON. About how many members has your association, and I would like to ask whether it has classes of membership?

Mr. GLENN. No; it only has one class of members. The membership constitutes about 1,230, or 40 firms. They join by firms, not as individuals.

Mr. THOMPSON. Not as individuals?

Mr. GLENN. No.

Mr. THOMPSON. How long has the association been in existence, if you know?

Mr. GLENN. I think it was organized first in 1893 or about that time—maybe 1894. But it was not active until about 1897.

Mr. THOMPSON. That is, two years before you became its secretary, just shortly before?

Mr. GLENN. Yes. I think I went there in 1898, in February, as I remember it.

Mr. THOMPSON. Is the association affiliated with any other manufacturers' association or employers' association in this State?

Mr. GLENN. No.

Mr. THOMPSON. Or in the United States?

Mr. GLENN. No. It cooperates and acts with other organizations whose interests are the same, but it has no affiliation that would in any way bind it to act with any other organization. It cooperates with various organizations that have objects somewhat similar or may have some particular thing in which we are interested that is the same.

Mr. THOMPSON. Take the National Association of Manufacturers, that would probably then be composed perhaps of your membership?

Mr. GLENN. Some of the—a good many of the Illinois members of the National Manufacturers' Association belong to the Illinois Manufacturers' Association; probably all of them.

Mr. THOMPSON. And the relationship which exists between your organization and such an organization as that, or that organization specifically, is one of merely mutuality of interest?

Mr. GLENN. That is all.

Mr. THOMPSON. You have no contracts?

Mr. GLENN. No.

Mr. THOMPSON. Either definite or indefinite?

Mr. GLENN. No; directly or indirectly.

Mr. THOMPSON. No understanding?

Mr. GLENN. We are going the same road there and sometimes we travel together.

Mr. THOMPSON. As a matter of fact, do you ever travel in opposite directions on any question?

Mr. GLENN. Well, we don't always agree as to policy on some questions.

Mr. THOMPSON. How would that be with reference to the Chicago Employers' Association?

Mr. GLENN. Well, we are usually in harmony with it.

Mr. THOMPSON. But it might be that you could take different positions and each be within your jurisdiction?

Mr. GLENN. Yes, sir.

Mr. THOMPSON. In other words, you have no control over one another?

Mr. GLENN. No.

Mr. THOMPSON. That would be true also with reference to the other associations of employers around Chicago?

Mr. GLENN. The same thing.

Mr. THOMPSON. Of which there are quite a few?

Mr. GLENN. Yes.

Mr. THOMPSON. What is the purpose and object, of objects, of your organization?

Mr. GLENN. Well, to deal with all questions in which there is a common interest.

Mr. THOMPSON. That would include, of course, the labor problem?

Mr. GLENN. Yes; anything that the board of directors might see fit to take up in which the members of the association had a common interest.

Mr. THOMPSON. Will you tell us, in your own language, Mr. Glenn, briefly, what part your association has taken in the industrial problems in the State of Illinois where conflicts have arisen or where there have been no conflicts?

Mr. GLENN. Well, the influence of the association in labor controversies has generally been used to see that the law was enforced. We have never undertaken to settle a dispute between any particular set of manufacturers or members of the association and any particular labor organization.

We have been very actively interested in legislation, both for the welfare of the men employed and the welfare of the men that operate the industries.

We have taken the initiative in a great deal of legislation that is called sometimes reform legislation.

Mr. THOMPSON. Well, you might name these.

Mr. GLENN. We took the initiative in Illinois on workmen's compensation. We introduced the first bill that was introduced in the Illinois general assembly to create a commission to draft a bill to submit to the general assembly. Our friends, the labor unions, locked it up in a committee and let it die.

Mr. THOMPSON. Will you name other legislation in which you either helped to pass or encouraged.

Mr. GLENN. We cooperated in the matter of factory legislation. We have always favored what you call the occupational-disease legislation and matters of that kind. We have always been more or less in favor of the welfare work.

A great many of our members, long before these ladies and gentlemen discovered this welfare work, and that the industries ought to do it, had created the departments and were looking after their men.

A man that is operating a plant is as much interested—he is more interested in the welfare of the men under him than he is in anything else, even though he may not have any humanitarian view, or what you might call a high moral view. He is interested in preserving that man, because he is part of his organization. And any good operator is interested in having his men in good condition and having the whole organization in good condition. He don't abuse a man or he don't abuse a machine if he has got any sense.

Mr. THOMPSON. Well, has your association published any literature with reference to the welfare work and recommendations to members of your association?

Mr. GLENN. Yes; a great deal. We maintain a bureau in the association called the safety-first bureau, and it is in the hands of a committee, and it sends out considerable literature.

Mr. THOMPSON. Have you any of that literature now, and would you be willing to furnish it to the commission?

Mr. GLENN. Yes; you can have anything we have got.

Mr. THOMPSON. If you will send in.

Mr. GLENN. Any records or any literature. We never had a secret in our lives.

Mr. THOMPSON. I may say this, that we are not prying into secrets.

Mr. GLENN. Well, we haven't any.

Mr. THOMPSON. Anything that you don't want to tell, Mr. Glenn—

Mr. GLENN. All our stuff is open and goes out and everybody sees it. Sometimes we hold out on the newspapers a little, but not often.

Mr. THOMPSON. Have you a welfare department in your association?

Mr. GLENN. Not unless you would call the safety-first bureau, which has a lot of suggestions along that line.

Mr. THOMPSON. Have you a labor bureau in your association?

Mr. GLENN. No, sir.

Mr. THOMPSON. You have not?

Mr. GLENN. No.

Mr. THOMPSON. Any matters that relate to the labor problem would come up before the board of directors generally?

Mr. GLENN. Oh, yes; all those questions having to do with labor.

Our situation may be a little different from other organizations of employers for this reason, that they are not classified; that is, we have all kinds of interests, all kinds of employers. We have men that are engaged in foundry work and men that are engaged in manufacture of clothing; concerns that are engaged in meat packing; concerns that are engaged in making pig iron; concerns that are engaged in making, manufacturing ladies' hats, and men that are making cars. So you see the diversity of interests, and you have to be careful to avoid conflict.

Mr. THOMPSON. Do you have any committee that deals—any standing committee that deals with labor problems?

Mr. GLENN. No; all those questions come before the board of directors.

Mr. THOMPSON. The board of directors?

Mr. GLENN. The board of directors meets once a month; sometimes twice a month.

Mr. THOMPSON. Has your association taken part in any particular strike in Chicago or in the State of Illinois that you would care to mention to this commission?

Mr. GLENN. Oh, we have been interested in every labor controversy; that is, we haven't taken any active part many times, but we have often, as I said a while ago, used the influence of the association to see that law and order were preserved.

Mr. THOMPSON. That has been your purpose?

Mr. GLENN. Yes, sir. We have never undertaken to adjust the differences.

Mr. THOMPSON. Now, Mr. Glenn, in your position as secretary of this large association, you have had occasion more or less to keep in touch with the industrial situation; that is, the labor problem?

Mr. GLENN. Yes, sir.

Mr. THOMPSON. And as to whether or not a state of unrest exists therein. If such does, in your opinion, what is its cause, and what are your views thereon; what remedies would you suggest?

Mr. GLENN. Well, I think, if you want my opinion, that it would be very bad indeed for the country and for all of us if we were entirely satisfied. I think that if a state of unrest to some extent did not exist we would all be dying of dry rot. I think that so far as this investigation is concerned, that it was brought about when there wasn't any abnormal state of unrest. The commission was originally created by—that is, the agitation for the law under which the commission is operating was originally interested, or created, started by a number of people that were interested in maintaining unrest between capital and labor.

Chairman WALSH. Who were they; who were the persons?

Mr. GLENN. Well, the names—I don't like to be personal.

Chairman WALSH. Well, I wish you would now, if you make that charge.

Mr. GLENN. The movement was started and the committee was created, was headed by William T. Devine, of New York; Washington Gladden, of Columbus, Ohio, was on the committee; Miss Jane Addams was on the committee; John M. Glenn, of New York, was on the committee; and a number of those people first caused the bill to be introduced in Congress.

Chairman WALSH. Now, do you think there is no unrest sufficient to call for an investigation by anybody?

Mr. GLENN. There was not at that time.

Chairman WALSH. Is there now?

Mr. GLENN. I think the situation has very materially changed. I think this commission could do a lot of good, and maybe, probably will do a lot of good. I have no criticism to offer as to the work of this commission.

Chairman WALSH. Now, then, if there is any industrial unrest at the present time, in your opinion, Mr. Glenn, do you think there is widespread industrial unrest in the Nation?

Mr. GLENN. Yes. Will you let me answer that in my own way?

Chairman WALSH. I would like you first to answer my question, if you think there is industrial unrest widespread. If you can answer that yes or no, then make any explanation that you choose.

Mr. GLENN. Yes.

Chairman WALSH. Very good. Now, what explanation; did you want to say something on this?

Mr. GLENN. The commission—that is, the original law, when it was passed by Congress, the agitation against employers and against business was seized by everyone that wanted to make a speech against—

Chairman WALSH. Now, here, we have tried to conduct this without characterizing persons or questioning the motives of anyone. We have tried to conduct all of our examinations in that way, if possible. Now, I would like you, Mr. Glenn, if you would, to confine yourself to your explanation following your answer that you did think at the present there was widespread industrial unrest.

Mr. GLENN. Well, I wish you would let me say why I think some of this unrest exists; why this unrest, as you call it, is possible. I simply want to call attention to some things. I haven't any criticism to offer against this commission that is operating now.

Chairman WALSH. That isn't the question. What I am trying to confine you to is the question asked by counsel, which is, in your opinion, from the experience you have had representing employers in the way you have stated, have you a conclusion to the effect that there is widespread industrial unrest?

Mr. GLENN. Yes, sir.

Chairman WALSH. If there is, would you kindly indicate to the commission the cause of the unrest at the present time, and any suggestion that you might have in your mind that would tend to ameliorate it, or tend to put an end to it?

Mr. GLENN. I don't know that I could offer a suggestion that would be satisfactory to the commission. You told me if I would answer the question yes or no I could make an explanation.

Chairman WALSH. I told you you could make an explanation, but I desired you to confine yourself to the question asked by counsel, which was whether, in your opinion, from the experience you have had representing employers in the way you have stated, have you a conclusion to the effect that there is widespread industrial unrest. May I ask you to do that, if you have such an opinion.

Mr. GLENN. Repeat the question. I would like to go back to what the foundation of the unrest was.

Chairman WALSH. I would like you not to go back to what the foundation was, especially at this time. Some other question may draw it out.

Mr. GLENN. If counsel will put the question I will try to answer it.

Chairman WALSH. Your answer was that at the present time, I believe, there is widespread unrest.

Mr. GLENN. You put the question, and I answered it affirmatively.

Chairman WALSH. What is the cause of the unrest, do you think, at the present time?

Mr. GLENN. Largely agitation.

Chairman WALSH. Anything else except agitation?

Mr. GLENN. Well, there is depression in business.

Chairman WALSH. Anything else?

Mr. GLENN. Why, no; I don't think so. Not that I think of at this minute. If you mean to draw out whether conditions warrant it—

Chairman WALSH. I want you to give us anything—

Mr. GLENN. As between capital and labor, I don't think they do, further than that we haven't the orders to run the plant.

Chairman WALSH. Have you any suggestion you would like to make to the commission as to how this industrial unrest could be diminished or done away with?

Mr. GLENN. Well, I don't know as I have any I want to offer. ?
Chairman WALSE. Very good. Any other member of the commission like to ask Mr. Glenn any question?

Commissioner GARRETSON. You say in your opinion this industrial unrest started with the passage of the act creating this commission?

Mr. GLENN. I don't say that it started; I think it was fanned by that.

Commissioner GARRETSON. But there was not any great degree existing before that time?

Mr. GLENN. No, sir; the country was prosperous.

Commissioner GARRETSON. How about the unrest that existed in other countries? Was that created by the passage of this act, also?

Mr. GLENN. I don't know anything about other countries only in a general sort of way from reading the newspapers.

Commissioner GARRETSON. Has there been a time within the history of the race, so far as we possess it, that it hasn't existed?

Mr. GLENN. Unrest?

Commissioner GARRETSON. Industrial unrest.

Mr. GLENN. No, sir; and I hope it always will exist. It is an incentive to push on.

Commissioner GARRETSON. Has industrial unrest had anything to do in so-called civilized countries with slavery?

Mr. GLENN. Has it?

Commissioner GARRETSON. Yes.

Mr. GLENN. You mean industrial unrest—has that had anything to do with slavery in the United States?

Commissioner GARRETSON. I do not mean outside of the country; I mean in a civilized country.

Mr. GLENN. Civilized unrest; I don't know as industrial unrest is a cause—

Commissioner GARRETSON. Do you believe the slave was satisfied?

Mr. GLENN. No.

Commissioner GARRETSON. Was the free labor that he came in competition with satisfied?

Mr. GLENN. No; I would not think so.

Commissioner GARRETSON. Prior to the passage of this act, did the labor of this and other countries have any grounds for industrial unrest?

Mr. GLENN. In some instances, yes; in some instances, no.

Commissioner GARRETSON. Then there were men who had no grounds?

Mr. GLENN. I think so.

Commissioner GARRETSON. Labor men?

Mr. GLENN. I think there were men whose condition was good and whose condition was bad, probably, but general conditions were favorable.

Commissioner GARRETSON. In your opinion, has industrial justice prior to the passage of this act—we will put it all back of that—ever existed?

Mr. GLENN. Industrial injustice?

Commissioner GARRETSON. Industrial justice.

Mr. GLENN. No; I don't think anything was ever perfect. I do not think we will get the ideal conditions, but I think we should try to get as near the ideal condition as we could.

Commissioner GARRETSON. Then, in your opinion, is there any more industrial injustice existing since the passage of this act than before?

Mr. GLENN. I do not know what you mean by industrial injustice.

Commissioner GARRETSON. Well, is the laboring man getting all he is entitled to?

Mr. GLENN. In some instances, yes; in some instances, no.

Commissioner GARRETSON. What instances; could you cite one where he does?

Mr. GLENN. I should think that in a good many; I wouldn't say how many; I don't know how many, but I suppose there are industries in which the laboring man gets his share of what you might call the accumulation of the business. I think he would now in the train operators—

Commissioner GARRETSON. How is that?

Mr. GLENN. I think the train operators and the engineers, and the train operators—the men that operate the railroads.

Commissioner GARRETSON. Is the condition among the engineers on the railroads at the present indicative of the fact it will be so?

Mr. GLENN. The men that operate the engines believe so?

Commissioner GARRETSON. Yes.

Mr. GLENN. I do not believe he does.

Commissioner GARRETSON. Is he entitled to a belief in the matter?
Mr. GLENN. He certainly is; he is entitled to it as much so as anybody else, and probably more.

Commissioner GARRETSON. Isn't he asserting that right now?

Mr. GLENN. Yes; I think they are in some sections of the country.

Commissioner GARRETSON. In this city?

Mr. GLENN. Yes; I understand they are.

Commissioner GARRETSON. If he is entitled to a right in that direction, is his opinion entitled to as much credence as the opinion of his employers?

Mr. GLENN. Yes.

Commissioner GARRETSON. Then the present condition would not prove that industrial unrest was nonexistent in that craft?

Mr. GLENN. If he was satisfied he would not raise any objection, would he?

Commissioner GARRETSON. He is raising it all right.

Mr. GLENN. Yes; they are.

Commissioner GARRETSON. One of the main purposes of your organization you stated to be to see that law was applied as it exists?

Mr. GLENN. I said we had done that.

Commissioner GARRETSON. That is the way it was stated?

Mr. GLENN. Yes.

Commissioner GARRETSON. That is, the conformance of law you insist on?

Mr. GLENN. Yes.

Commissioner GARRETSON. Conformance by whom?

Mr. GLENN. By the public officials, see that public officials enforce law.

Commissioner GARRETSON. Do you have any instances in which the members conform to the law?

Mr. GLENN. Yes.

Commissioner GARRETSON. Do you bring any actions to see that the laws are enforced by them?

Mr. GLENN. You mean any actions in the courts?

Commissioner GARRETSON. Yes.

Mr. GLENN. We have done things. I don't remember—we do not take into the membership everyone that applies.

Commissioner GARRETSON. Oh, no; but have you ever instigated an action against an employer to make him conform to law?

Mr. GLENN. I do not know that any complaint was ever brought to the board of directors that an employer was violating the law.

Commissioner GARRETSON. Oh.

Mr. GLENN. We find we have not always agreed with all of our members all the time.

Commissioner GARRETSON. I wondered whether your interest in law applied to all alike.

Mr. GLENN. Yes.

Commissioner GARRETSON. To public officers and to your own members and to laboring men?

Mr. GLENN. It does. I do not think any cases have been brought where any members have done what you seem to be intimating.

Commissioner GARRETSON. Do you believe that so-called welfare work is philanthropy or good business?

Mr. GLENN. Good business and philanthropy, too.

Commissioner GARRETSON. No obligation rests on the employer?

Mr. GLENN. Certainly; he has got a moral obligation to treat all his men right.

Commissioner GARRETSON. None of your members ever class welfare work as philanthropy, do they?

Mr. GLENN. I do not know as they do. I don't remember hearing anyone express an opinion on that.

Commissioner GARRETSON. What was your attitude—you say you dwelt strongly, your organization being attached to compensation laws. What was the attitude of your organization and yourself personally toward the present compensation law of the State of Illinois after it had been passed by both houses?

Mr. GLENN. Some of the members thought that the committee that represented the association had not agreed to such provisions that were fair, or that it had agreed to certain provisions that were unfair to the employer, and asked the governor to veto it. Other members of the association asked him to sign it.

Commissioner GARRETSON. But did the association run a special train down here?

Mr. GLENN. Yes.

Commissioner GARRETSON. To protest against his signature?

Mr. GLENN. Yes.

Commissioner GARRETSON. Peculiar attachment to the compensation, wasn't it? Mr. GLENN. I do not know why we should agree to a law that we did not favor. We favored the adoption of a compensation law.

Commissioner GARRETSON. Providing you did not compensate?

Mr. GLENN. No, we wanted to see compensation. We have done everything we could, even though we did not get the law we wanted at first. It was amended at the last session of the general assembly, and both the labor organizations and the association agreed to these amendments, and it is working very satisfactorily. We have done everything we could.

Commissioner GARRETSON. Then your hindsight was better than your foresight?

Mr. GLENN. No, our foresight was that there should be a compensation law in Illinois, and we introduced the first bill.

Commissioner GARRETSON. Your intermediate action was you did not want it because it was too strong?

Mr. GLENN. We got what we didn't want, but we tried to change it afterwards, and did change it.

Commissioner GARRETSON. You tried to kill it, didn't you?

Mr. GLENN. We tried to change, we didn't want to kill it.

Commissioner GARRETSON. The governor competent to change it?

Mr. GLENN. There were not 10 men in the legislature in either house read the bill when it passed.

Commissioner GARRETSON. Is one of your functions to educate, to conduct a school of instruction for legislators?

Mr. GLENN. I would be willing to do it if we thought we could do it.

Commissioner GARRETSON. There are instances of employers' and manufacturers' associations, are there not?

Mr. GLENN. I do not know.

Commissioner GARRETSON. What was your attitude toward the child-labor law, the attitude of your organization?

Mr. GLENN. Did not take any action at all.

Commissioner GARRETSON. Isn't it a fact you bitterly opposed them?

Mr. GLENN. We did not.

Commissioner GARRETSON. Individually if not—

Mr. GLENN. Me—

Commissioner GARRETSON. Individual members of your association.

Mr. GLENN. Some of them did and some of them were for it, and some very actively for it.

Commissioner GARRETSON. What attitude toward the 10-hour law for women?

Mr. GLENN. We did not favor that legislation.

Commissioner GARRETSON. Want to work women as long as you can?

Mr. GLENN. No, we did not want to do that, but I think some of the courts took the position that women ought to work 10 hours in a factory and 8 hours in a factory and go home and do a day's work after she got home. That is the way—

Commissioner GARRETSON. Your attitude gave fair familiarity with the thing in the courts, you carried it to the courts twice, the supreme court?

Mr. GLENN. Yes.

Commissioner GARRETSON. First the 10-hour law for women and the extension to women in mercantile establishments?

Mr. GLENN. The first time it went up it was the 8-hour law and it was obtained.

Commissioner GARRETSON. Through your efforts?

Mr. GLENN. Yes, through the efforts of the association.

Commissioner GARRETSON. Then in general the attitude of philanthropy of the organization is somewhat tempered by expense?

Mr. GLENN. I don't know how you mean, tempered by expense.

Commissioner GARRETSON. Why, if that law was costly for the employer or institutions who employ large numbers of women.

Mr. GLENN. Yes, but it has not been established that the law was philanthropy.

Commissioner GARRETSON. Oh; was it humanitarian?

Mr. GLENN. Well, I don't know. It must—some people must think that it was humanitarian. I don't know what they thought.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Weinstock wants to ask some questions.

Commissioner WEINSTOCK. Mr. Glenn.

Chairman WALSH. Did I understand Mr. Glenn to say some court had decided that a woman ought to work eight hours and then go home and do a day's work?

Mr. GLENN. I said that the decision of the supreme court in Illinois in that case would seem to indicate that the judge who handed down the opinion felt that a woman ought to, after she had worked 8 or 9 or 10 hours in a factory, ought to be able to go home and do a day's work for the men of the family.

Chairman WALSH. What is the title of the case, please, if you recall?

Mr. GLENN. I will give it to you.

ILLINOIS MANUFACTURERS' ASSOCIATION,
Chicago, July 28, 1914.

HON. FRANK P. WALSH,
United States Commission on Industrial Relations,
Hotel La Salle, Chicago, Ill.

DEAR SIR: The decision of the Illinois Supreme Court in the women's 10-hour case to which I referred in my testimony the other day, was rendered on the 21st day of April, 1910. The case was *W. C. Ritchie & Co. v. The State of Illinois*.

Yours, very truly,

JOHN M. GLENN, *Secretary*.

Chairman WALSH. That is all.

Commissioner WEINSTOCK. In my absence from the room I understand you have made some statement from what I heard since I came back, relative to your opinion of the influence of the bill creating this commission. Will you be good enough to repeat that for me?

Mr. GLENN. The chairman stopped me, as I understand it.

Chairman WALSH. I stopped you, and stated the reason I did was because it probably would be testified to later. We are compelled to try to conduct these examinations along certain lines.

Mr. GLENN. I want to help all I can.

Chairman WALSH. If you will answer this question without reference to any rulings heretofore you will probably get what you desired in the first place.

Mr. GLENN. The agitation as to unrest was carried into the convention—the political conventions in 1912. The most inflammatory kind of talk was indulged in in all three of the conventions. Each one seemed to vie with the other as to how much they could rake up to censure—how much censure they could heap on industry; they were appealing to the voting class in that way.

Commissioner WEINSTOCK. Do you connect that with this particular bill creating this commission?

Mr. GLENN. The bill—

Commissioner WEINSTOCK. Just a minute. Pardon me. The question Mr. Garretson put at the time I entered the room—I gathered you held the act creating the industrial commission responsible for the agitation.

Mr. GLENN. I said no. I didn't think at the time the bill was passed creating the commission that there was the necessity for the investigation that there may be now; that I didn't think that the unrest at the time the bill was enacted existed that exists at this time. In other words, I rather was of the opinion that there was not any necessity for the passage of the bill at the time it was passed.

Commissioner WEINSTOCK. Well, for your information it may be well to explain that this commission was brought into life not through the action on the part of the authorities; the initiative was taken altogether by a group of publicists and sociologists.

Mr. GLENN. That is what I stated in my testimony. I stated the first commission wasn't confirmed. I have watched the history of the commission.

Commissioner WEINSTOCK. Let me ask whether your members deal with or recognize unions?

Mr. GLENN. Some members do and some do not.

Commissioner WEINSTOCK. Does your association as an association take any collective action of that sort?

Mr. GLENN. No, sir.

Commissioner WEINSTOCK. In other words, there are associations of employers not only in this country but abroad whose fundamental doctrine is not to recognize or deal with unions; is that the attitude of your manufacturers' association?

Mr. GLENN. No, sir.

Commissioner WEINSTOCK. It is left to the individual judgment of the member? Mr. GLENN. We have dealt with the unions in legislative matters; we have never presumed when the Federal Government created a law that should create a commission that employers should be represented on there; that we had anything to do with who the Government named on the other side; and we have always sat down at the table with the labor unions if they were representing labor organizations.

Commissioner WEINSTOCK. I am not speaking of that sort of recognition—I mean with the matter of collective bargaining.

Mr. GLENN. We don't deal with that because, as I stated while you were out of the room, on account of the diversity of interests in the association, we could not very well deal with questions of that character. For instance, the association is made up of all kinds of manufacturers; some of them, as I stated a while ago, manufacture freight cars; some of them manufacture ladies' wearing apparel; some of them manufacture pig iron; some of them manufacture furniture for churches.

Commissioner WEINSTOCK. Well, it was brought out in the testimony yesterday—an association of restaurant owners were pledged among themselves, and put up a forfeit not to deal with or recognize unions. Now, is there any such situation in your organization?

Mr. GLENN. No, sir.

Commissioner WEINSTOCK. It is left to the judgment of the individual member, and he may or may not deal with the union as he prefers?

Mr. GLENN. Entirely.

Commissioner WEINSTOCK. Is there any penalty attached to one of your members recognizing and dealing with the unions and engaging in collective bargaining?

Mr. GLENN. No, sir; we have no prejudice against labor organizations or labor unions. Personally I think that labor organizations the way they are conducted now, is more or less an enemy to civilization. I don't see how the labor union and the church can exist forever. The labor organization can be of great benefit to its men, but I have been listening to the testimony, and I don't see how labor organizations can enforce their demands without violence. I have seen the question raised here as to whether it ever did participate in violence. I don't know. My experience has been a little broad as far as this community is concerned. I was in the newspaper business here for a long while. I have been in a great many strikes; I have seen a great deal of violence one way and another; I had more or less to do with the labor troubles that took place in 1886 here, and in 1894, and other times, and I don't see how labor organizations, the way they are constituted, can maintain their position without force, and I was surprised to hear the question raised here that it did not use force. The employer—I don't see any necessity for his guarding his property if there is not violence. The first act of violence is in the strike. They start the strike. I tried to put some men to work, and the labor organization tries to stop me. Then there is naturally a conflict, and the kettle calls the pot black, and vice versa, and there they go.

Commissioner WEINSTOCK. You heard the testimony of Mr. Fitzpatrick?

Mr. GLENN. Yes, sir.

Commissioner WEINSTOCK. And he takes the ground that offensive acts of violence were initiated by the employers, and if the workers engaged in violence it was defensive. What is your opinion on that score?

Mr. GLENN. How could that be? How could I take the initiative? Suppose I am running a plant and my men have struck, why should I introduce violence in the situation? What I am trying to do is run the plant. I try to get some other men if the old men won't come back. The first act of violence if the employer is honest and the unions are fair—the first act of violence must come from the men who go out whether organized or not organized.

Commissioner WEINSTOCK. Then you differ radically from the opinion of Mr. Fitzpatrick?

Mr. GLENN. I certainly do.

Commissioner WEINSTOCK. And you contend that the initiative in violence in labor troubles is taken on the part of the laborers?

Mr. GLENN. Yes; I should say that in 99 cases out of 100. I don't suppose all employers in the United States have got white wings or are perfect by any means, and I think human nature is the same in all classes of society. Some classes may be a little better informed and better educated and have better control over themselves than others, but human nature is the same one place as it is another.

Commissioner WEINSTOCK. You stated a little while ago in your opinion unionism is wrong as at present constituted. Will you point out for the information of this commission what you regard as the weak spot in unionism?

Mr. GLENN. Violence. That is the weakest place. If they don't get their way right off, smash something.

Commissioner WEINSTOCK. What is the remedy?

Mr. GLENN. Well, I suppose cooperation is the remedy. I have heard it discussed here. I have heard courts criticized here. I have heard suggestions made that maybe a commission might be appointed; I have heard them say, "Why could we not have a commission like the Interstate Commerce Commission?" The Interstate Commerce Commission slept 20 years. It has been months and months and months deciding a rate case that the people all over the country in the United States are on their ears waiting for the decision. How could you get along with a commission to adjust labor matters, when I had a plant in South Chicago or Deering, when I was waiting for this decision? It would be like the farmer praying for rain and the corn burned up and he turned it over and then it rained. It didn't do him any good.

Commissioner WEINSTOCK. Then, you haven't any faith I take it, Mr. Glenn, in the commission remedying the evil?

Mr. GLENN. I don't say that a commission could not be created that would remedy the evil, but I don't think you are going to get a benefit just by passing a law and creating a commission. In other words, the public has got it into its head, especially in our State for a score of years, that the way to correct a bad condition was to pass a law. Then they pass a law and go to sleep. We have so many laws in Illinois, that there is not a single citizen can go downtown without violating half a dozen. They don't enforce them. What you want to do is enforce laws. I have no doubt we have enough laws on our statute books now to take care of this situation to-day. The criticisms of the courts in some cases are just and in some are not. The courts in Illinois and around here are, generally speaking, all good. There may be occasional judges that are afraid of decisions, but that is human nature. You get a commission and you would have men on the commission that were afraid of their horses, just the same as judges. It is human nature. We can't correct everything by just passing a law and starting all over again every few minutes. Let's stick to one thing for a while. Let's scrap it out with the labor organizations. Mr. Fitzpatrick was big enough and broad enough to say awhile ago that maybe something would develop after awhile. I don't think all in Mr. Fitzpatrick is bad, by any means, just because I don't agree with him.

Commissioner WEINSTOCK. Well, you understand, of course, Mr. Glenn, that Congress has placed upon this commission a certain burden and a certain responsibility.

Mr. GLENN. Well, I don't think you gentlemen are to blame for that; I think some other people were.

Commissioner WEINSTOCK. As a member of the commission, Mr. Glenn, what, in your judgment, would be the best thing—if you were a member of the commission, what would you recommend to the Congress in the way of immediate action?

Mr. GLENN. Oh, I don't know. I would do just what you gentlemen are doing, and I would listen to everybody and get all the information I could, and then I would sit down and think. One great trouble with the people of the country is they never think—only about 60 per cent of them. The remark was made at the hearing the other day about the labor unions, that there was an apathy of about 60 per cent in the labor unions. That exists everywhere. That exists in almost all organizations. They talk about the primary, the direct primary. Why, they thought that the millenium was coming when they got the primary in Illinois. And what happened? Why, half of them, 60 or 70 per cent of them go to the polls and haven't the remotest idea who they are voting for, don't know at all.

I met a gentleman in Springfield last winter, and I asked him—saw him in the hotel lobby, and asked him what he was doing in Springfield. Well, he said he came down there, he came down to go before the senate committee on the minimum wage bill, and he wanted to go before the house committee on what is known as the Pinkerton bill, which is a bill that they have tried before a great many legislatures to get passed in Illinois, preventing the guarding of property in cases of strike.

Senator Harris was sitting right behind me. He may be interested in this story. He introduced this minimum wage bill. This gentleman lived in Evanston. Evanston is a purely residential community, made up of men that are employers, manufacturers, bankers, and educators. And he asked me where—who this man Harris was that introduced this bill. And I told him he was our senator. I happened to live in that district. Why, he said, he didn't know how that could be. He asked me next, "What business is he in?" I says, "He is an official of the typographical union." This man was a printer. He didn't see how that could be. Now, there he was, an intelligent citizen, prominent man, a man of means that didn't know—had voted for Senator Harris probably, and didn't know he had voted for Senator Harris, and Senator Harris had introduced the bill that he was down there to try to beat.

Now, that is the apathy. I don't know as you gentlemen care for such a long, drawn-out story as that. I don't want to waste your time. But it came up as a good illustration.

Commissioner WEINSTOCK. Have you any suggestions to make, Mr. Glenn, from the standpoint of the manufacturer, that would be likely to aid this commission in its work?

Mr. GLENN. Well, I think it would be well if the commission should bring out some kind of a plan by which there could be more cooperation between the men that run the plants and the men that work for them. I don't think that I will get good service out of a man if the man is working for me and he feels all the time that he is not getting his share. There is more or less envy in this world, and all that. But you have got to have your men satisfied to get the best results—there is no question about it. But you can't ever get this perfection where one lady won't feel sore at another lady because she has not got as good a hat as she has. That is natural.

Commissioner WEINSTOCK. That is all.

Chairman WALSH. Did you want to ask some questions, Mr. Delano?

Commissioner DELANO. I do. I would like to ask one question.

Chairman WALSH. Mr. Delano would like to ask you a question.

Commissioner DELANO. Mr. Glenn, do you believe in the supervision of corporations, of large corporations?

Mr. GLENN. By the Government?

Commissioner DELANO. Yes.

Mr. GLENN. Well, I believe that the best government is the government that falls as lightly as possible on the shoulders of its people. I don't believe in passing any more laws than are necessary to protect the rights of the citizen. I think that so far as corporations are concerned, a great many of them have been afraid of investigation, or afraid of having their affairs known, when they should not have been. And those that have stood for investigation and have been compelled to show up are much better satisfied than they thought they would be before the investigation or the showing took place. I think the average small corporation is very much opposed to having its affairs investigated. The big corporation that has its stock on the market, the more investigations and publicity it gets, why, the more water on its wheel.

Chairman WALSH. The question was, whether you, Mr. Glenn, are in favor of supervision of corporations by law.

Mr. GLENN. To some extent.

Commissioner DELANO. Do you think there ought to be any supervision of large trade-unions or labor organizations that have great power on the same theory I mean there should be supervision of corporations?

Mr. GLENN. Well, I was never in favor of the State government's recognizing the party organization. I don't know whether it would be a good thing for the State or Federal Government to recognize labor organizations any more than it would be right to recognize the church or the Knights of Pythias, or some of those organizations. You are getting in a complicated situation, if the Government is going to take cognizance of every organization that springs up. I don't think I have got any more rights than any other citizen, or that the Illinois

Manufacturers' Association has got any rights that should not be given to any labor organization.

Chairman WALSH. The question was whether you are in favor, or opposed to, the supervision of labor unions by law, by the State.

Mr. GLENN. I don't think I am.

Commissioner DELANO. That is all.

Commissioner GARRETSON. I want to ask you one question growing out of a statement you made.

Chairman WALSH. Mr. Garretson would like to ask one question.

Commissioner GARRETSON. You said, Mr. Glenn, that you believed the labor organizations as run are exclusive, you didn't see how they and the church could exist.

Mr. GLENN. Well, I said that they were antagonistic as a proposition, the church is based on love and the labor union is based on selfishness.

Commissioner GARRETSON. Let me ask you one thing, I assume from your strong religious feeling that you are somewhat familiar with these matters: Whose tables did Christ upset when He went into the temple?

Mr. GLENN. Well, I don't know.

Commissioner GARRETSON. Those of the money changers and those that sold doves—the banking and mercantile classes. He didn't say anything about laborers. And what statement did He follow it up with?

Mr. GLENN. They weren't there, were they?

Commissioner GARRETSON. Ah, I suppose they were.

Mr. GLENN. They are not in the church now.

Commissioner GARRETSON. He was a laboring man, and He was there. What did He say after that, addressed to those men?

Mr. GLENN. Well, you have got to let me think a little bit. I don't know. You answer.

Commissioner GARRETSON. "I have called Mine house a house of prayer, but you have made it a den of thieves."

Mr. GLENN. Well, are you going to apply that to the men that are in the industries now?

Commissioner GARRETSON. Christ applied it to those classes as represented there. Is the labor union—

Mr. GLENN. Do you think Christ is in the Brotherhood of Engineers?

Commissioner GARRETSON. I don't think He was in the Brotherhood of Engineers, but I think He was in the brotherhood of man.

Mr. GLENN. So do I. I will agree with you on that.

Commissioner GARRETSON. Good. Where is the laboring man of the country more at variance with the church than the lawyer? And the church is wide enough to cover all things that are decent, that are human, that are spiritual. Why can't the church and the union live side by side?

Mr. GLENN. They ought to be able to.

Commissioner GARRETSON. You said they could not, you did not believe, why?

Mr. GLENN. I said on the present basis, because the labor union is founded on selfishness.

Commissioner GARRETSON. And the employers can live along with the church because they are founded on nonselfishness?

Mr. GLENN. Charity.

Commissioner GARRETSON. That is all, Mr. Glenn.

Chairman WALSH. Is there any other questions that any of the commission want to ask?

That is all. Thank you, Mr. Glenn.

We will now stand adjourned until 2 o'clock this afternoon, meet here at 2 o'clock this afternoon sharp.

(Whereupon an adjournment was taken until 2 o'clock p. m. of the same day, Thursday, July 23, 1914.)

AFTER RECESS.

Now, the hour of 2 o'clock p. m. having arrived, the commission met pursuant to adjournment.

Present, same as before.

Chairman WALSH. You may proceed now, Mr. Thompson.

Mr. THOMPSON. Is Mr. Insull here?

TESTIMONY OF MR. SAMUEL INSULL.

Mr. THOMPSON. Give your name.

Mr. INSULL. Samuel Insull.

Mr. THOMPSON. Your business address?

Mr. INSULL. 21 West Adams Street, Chicago.

Mr. THOMPSON. And your business?

Mr. INSULL. My business is to run public utilities companies. I am president of the Commonwealth Edison Co., of Chicago; president of the Public Service Co. of Northern Illinois; chairman of the board of directors of the People's Gas Light & Coke Co., of Chicago; chairman of the executive committee of the various elevated railways running in Chicago; president of a holding company known as the Middle West Utilities Co. that operates in a number of different States, mainly in the Middle West, particularly in the Southwest and the Eastern States.

Mr. THOMPSON. For how many years, Mr. Insull, have you been connected with public-service corporations in this community?

Mr. INSULL. In this community about 22 years I have been.

Mr. THOMPSON. How many years have you given to that form of industry elsewhere?

Mr. INSULL. Practically the best part of 30 years.

Mr. THOMPSON. You employ a great many men in these various corporations?

Mr. INSULL. Yes; in the aggregate about 18,000.

Mr. THOMPSON. Some of these men members of organized labor, if you know?

Mr. INSULL. Some of them are, I presume.

Mr. THOMPSON. And some are unorganized?

Mr. INSULL. Yes.

Mr. THOMPSON. In regard to the managing and operating of these public-utility companies, Mr. Insull, you have been called upon, necessarily, to give some thought to the labor problem?

Mr. INSULL. Yes; I have given some thought, not so very much, as I have not had very much trouble.

Mr. THOMPSON. Have you any opinions with reference to the question as to whether it is advisable or inadvisable for the employees of public-service corporations to be members of organizations, ordinarily called unions, or not?

Mr. INSULL. That is a pretty broad question, and might be answered by, if I may be allowed, asking you a question. Do you refer to the college graduate or do you refer to the common day laborer or do you refer to the mechanic who is learning his trade?

Mr. THOMPSON. I refer more particularly, Mr. Insull, to that part of the force of such companies as are engaged in operating them, like on the elevated roads, the motormen, the conductors, the gatemen; take the men who work in the lighting and heating plants.

Mr. INSULL. Now—

Mr. THOMPSON. In other words, more particularly the operating force as such.

Mr. INSULL. Well, the operating force includes all the men whom I have specified.

Mr. THOMPSON. Now, Mr. Insull—

Mr. INSULL. I want to answer your question, but I want to get a specific idea.

Chairman WALSH. First, let us apply it to mechanics.

Mr. THOMPSON. Take, the chairman says, the question of mechanics in the shops and service.

Mr. INSULL. In the Commonwealth Edison Co. we have never had, so far as I know, any serious collective trouble with our mechanical forces engaged in operating our stations. On the other hand, the wage schedule, I think, of all classes of what you would call operating help in the elevated railroads are union men, and their scale of pay has been adjusted by negotiation with the officials of the union they represent.

Chairman WALSH. The question was, from the employing standpoint, do you consider it advisable or inadvisable to deal with the labor unions as such?

Mr. THOMPSON. In public-service corporations.

Mr. INSULL. No, sir; I do not.

Mr. THOMPSON. What is your reason for feeling that it is inadvisable to deal with labor organizations in public-service corporations?

Mr. INSULL. Because we are in a line of business that is an absolute necessity to the community, and we are under obligations, ordinance obligations, to perform the services we are engaged in, and our duty is first to the community to see that that service is properly supplied.

Mr. THOMPSON. How, in your opinion, does the organization of employees in a public-service corporation affect injuriously the performance of the public duty by the corporation?

Mr. INSULL. Well, in case of strikes. If we had the Commonwealth Edison Co. run what is commonly called a closed shop, in case of strikes we would be at the mercy of the union as to whether we could perform our duty to the public. If they should decide not to work and we should be unable to get other employees, a large portion of the wheels of industry would cease in this community. The operation of transportation would cease in the community; a great number of the newspapers would cease publication; the telephone service would be very seriously crippled; and I might go on and mention a thousand and one other things that would be brought to a standstill. Our function is a semi-governmental function.

Mr. THOMPSON. In your opinion, then, or is it your opinion, that the organization of employees in a union leads to more strikes than if the employees are unorganized?

Mr. INSULL. We have never had any strikes, I think, except one time we had a slight strike in our operating organization. We have had no strikes outside of that.

Mr. THOMPSON. The question I wanted to ask—the point I want to get at is this: Your opinion is that the service should not be organized, because in case of strikes it would lead to such disastrous results to the community as such?

Mr. INSULL. Yes, sir.

Mr. THOMPSON. Now, the question is, Does the organization of labor lead to more frequent strikes than labor that is not organized?

Mr. INSULL. Well, the best evidence it does in our particular case is we are not troubled with strikes.

Mr. THOMPSON. I would like to get at the basis on which you formed the opinion that it is better not to deal with organized labor in public-service corporations.

Mr. INSULL. Well, I have given you one basis. I can give you another basis. There is no demand for it in our particular line of business. Now, I am talking of electric light and power business and of the gas business. I am not talking of the transportation business.

Mr. THOMPSON. Well, I am not seeking any one specific line of public service, Mr. Insull; just the field generally. In other words, I do not want to examine you as to your particular relation in these light and heating companies.

Mr. INSULL. Yes.

Mr. THOMPSON. Strikes do occur among unorganized employees, do they not?

Mr. INSULL. Yes. Oh, yes.

Mr. THOMPSON. And a strike among unorganized employees would be just as bad, as long as the strike was effective, as if the employees were organized?

Mr. INSULL. Absolutely.

Mr. THOMPSON. And if it were true that by reason of the organization of the employees more permanent agreements could be made with the help, say, not alone of these public-service corporations, then it would be advisable to deal with them; that would be true, would it not, Mr. Insull?

Mr. INSULL. Not necessarily so, sir.

Mr. THOMPSON. Well, if such were the case?

Mr. INSULL. Not necessarily so.

Mr. THOMPSON. Well, what exception, Mr. Insull, would you make to that?

Mr. INSULL. Why, our ability to perform our obligations to the public would be subject to the control of the labor organizations.

Mr. THOMPSON. Then, the fact that the labor organization, if it existed, would divide the power and authority in running the public-service corporation—that would be a grave danger?

Mr. INSULL. I think it would be. Mind, the question has never arisen that I have any knowledge of in our particular business.

Mr. THOMPSON. Do you believe that there should be any special regulation of the labor problem in public-service corporations by the Government, as distinguished from other industries?

Mr. INSULL. It is a very high—I might explain, if I may. It is a very high-paid class of service. The aim, our aim, is to get our people on monthly pay

rolls. Part of the contract of service is a system of liberal pension. Part of the arrangements that we have with them is to try to interest them as proprietors in the securities of our companies; to teach them how to save their money, so that they will have a stake in the property that they are working for and in the community in which they are working.

The average pay of our men, I think, at the present time in the Commonwealth Edison Co. is somewhere between \$60 and \$70 a month, of the men on the monthly pay roll. I do not happen to know—have in mind—the exact proportion on weekly pay roll, but it is relatively small. We have about 4,800 employees. Of that number 3,179 employees are eligible to subscribe to a fund that eventually would make them stockholders of the company. Of that 3,179, 1,983 are in process of becoming part proprietors of the corporation they are working for.

Now, that is my answer as to how I believe in handling the public-service proposition so far as labor is concerned. I believe in making them proprietors. I believe in their having a stake in the property, which also means a stake in the community. And I believe in doing that with them as a matter of contract right and not as a matter of favor. I believe that the cost of the products—that is, the cost of the energy we sell—should cover items that will take care of the men engaged in the business in old age. I think the cost of the product of any business should cover that item. I believe in having these things arranged as a matter of contract with employees. I do not think the question of labor difficulties or whether a man is a member of a union or not ever arises if you are dealing with people under those circumstances. Of course, you can't do it in every business. Do I give you my point of view?

Mr. THOMPSON. You do.

Chairman WALSH. No; I don't exactly understand it. I think the question was whether or not you thought it was desirable to have some sort of governmental supervision—

Mr. INSULL. Oh.

Chairman WALSH (continuing). Over labor unions in industries such as yours, as distinguished from ordinary industries. Wasn't that the question?

Mr. THOMPSON. No; there was just one little difference there, leaving out labor unions, Mr. Chairman—supervision over labor unions in public-service corporations.

Mr. INSULL. Well, I am not familiar with that portion of the public-service commission bill of the State of Illinois, but I am under the impression that the commission has more or less control over us on that subject. They have control on everything, so I presume it would cover that.

Mr. THOMPSON. Then you have got no definite opinion on that subject?

Mr. INSULL. Necessarily, I can not have any different opinion when I have been dealing with the company 22 years, in the Commonwealth Edison Co. and its predecessor company, and that question has never arisen. Our people are reasonably satisfied. I am talking about operating people. I only know of two strikes of any consequence. We have had strikes with wiremen who were building, but that is not necessarily a part of our business. It is not performed by all public-service companies in all cities, and we have had strikes with men engaged on our overhead system. Those are the only two strikes that I know of.

Mr. THOMPSON. There is an opinion, Mr. Insull, among a large portion of the community that there is a great deal of industrial unrest existing. If in your opinion such does exist, what are its causes and what would you suggest as remedies for it? This is beyond the exact field of your company.

Mr. INSULL. I could only speak so far as this community is concerned. The main cause of industrial unrest in this community since I have been here has been sympathetic strikes. That has been the main cause of the trouble. I do not know. They may be justified or not, but as an outsider, as an observer, it strikes me that has been the main cause of trouble.

Mr. THOMPSON. What do you mean by sympathetic strikes?

Mr. INSULL. What is ordinarily meant by sympathetic strike, when a union goes out on a strike and another union goes out on strike because the first union goes out on a strike.

Mr. THOMPSON. In your opinion, the major portion of the strikes in Chicago has been of a sympathetic character?

Mr. INSULL. I think so. The worst strikes have been naturally in the building trades. Sometimes they are jurisdictional in character, one union strikes

because another man is doing what he thinks is his job, and the poor investor has to pay for it.

Mr. THOMPSON. Have you got any suggestions as to a remedy to be used in either a sympathetic or a jurisdictional strike?

Mr. INSULL. Oh, I think if we could get some arbitration on those things that it would be very desirable—general arbitration.

Mr. THOMPSON. Then you believe generally in arbitration and conciliation?

Mr. INSULL. Oh, absolutely. In the case of the elevated roads, within the last year, there has been not a dispute, but a contract on labor had expired, and the parties to the contract could not agree and provision was made for arbitration. It never got quite as far as arbitration, but provision was made, and the thing was settled satisfactorily on both sides.

Mr. THOMPSON. Do you think that a Federal industrial council with power to investigate the facts in any labor contract, and the power to mediate and conciliate and arbitrate, if asked by the parties, would aid in settling any of this industrial unrest?

Mr. INSULL. If it were a great national affair it might do some good. Any body of any character, governmental or otherwise, that comes in and temporizes between parties who are acting in passion, such bodies do good; but in dealing with local affairs the thing would be over and forgotten before it were possible for a Federal board to get around to its consideration.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Do you want to ask Mr. Insull any questions, Mr. O'Connell?

Commissioner O'CONNELL. Yes; I would like to ask a question. This commission has had before it in various parts of the country in which we have met, men in various walks of life and I asked a number of them this question—those particularly who are interested in public utilities—as to what their personal opinion was as to the public utility being owned by the people. What is your opinion on this subject?

Mr. INSULL. Well, my opinion on that subject—it is the difference between whether it is privately owned and publicly owned, is the difference between the Government official without the incentive of personal gain performing certain duties and the business being run on a basis of the highest possible efficiency with a view of getting a profit on the money invested. I don't think under Government ownership that you can possibly get as high a class of efficiency, as low a cost of production, and as low a selling price to the public as you can under private ownership, and then neither do I think you can—in my own line of business that is borne out by experience the world over. You take in a new line of business, you can't possibly get the development of that business with Government ownership that you could get under private enterprise and private ownership.

Commissioner O'CONNELL. Bring it a little closer.

Mr. INSULL. I am speaking of the electrical business.

Commissioner O'CONNELL. Bring it closer to home. In the matter of the elevated railroads at Chicago being owned by the citizens of Chicago, by the city, what is your opinion on that?

Mr. INSULL. Why, it is a little close to home, Mr. Commissioner, and I don't want to be put in the position of public criticism.

Commissioner O'CONNELL. You don't need to answer if you don't want to.

Mr. INSULL. I will answer it in the way I think will be satisfactory. I will answer by saying if you will examine into the efficiency of operation of certainly one of the services—public services rendered to the citizens of Chicago by the authorities, I think, and compare it with a similar enterprise privately owned, I think you would come to the conclusion the same as myself, that it would not be to the advantage of the citizen for the elevated railroads of Chicago to be owned and operated by the city of Chicago.

Commissioner O'CONNELL. The city of Chicago owns and operates its own water plant, does it not?

Mr. INSULL. Yes, sir.

Commissioner O'CONNELL. Is that operated as cheaply, do you think, and as well managed as it would be under private ownership?

Mr. INSULL. No, sir; I don't think so. I would rather not get into that kind of a discussion, but I don't think so. I think the facts in the annual report will bear that out.

Commissioner O'CONNELL. You say you have a plan of pension?

Mr. INSULL. Yes, sir.

Commissioner O'CONNELL. Is that a printed form?

Mr. INSULL. Yes, sir.

Commissioner O'CONNELL. Can you file that with the commission?

Mr. INSULL. I will be very glad to file it. I have it in two of my corporations. I will be glad to give you any explanation of them.

(The papers so presented were marked "Exhibits 1, 2, 3, 4, and 5, Samuel Insull, July 23, 1914.")

Insull Exhibit No. 1, circular letter dated July 15, 1914, addressed to the employees of the Commonwealth Edison Co., of Chicago; Insull Exhibit No. 2, entitled "Rules and Regulations Governing Employees' Savings Fund of Public Service Co. of Northern Illinois, 1914"; Insull Exhibit No. 3, entitled "Service Annuity System of Public Service Co. of Northern Illinois," in effect December 1, 1913; Insull Exhibit No. 4, entitled "Rules and Regulations Governing Employees' Savings Fund of Commonwealth Edison Co., 1914"; Insull Exhibit No. 5, entitled "Service Annuity System of Commonwealth Edison Co.," in effect January 1, 1912, were all submitted in printed form.)

Commissioner O'CONNELL. As I understand it, in the elevated service there you have contractual relations with your employees?

Mr. INSULL. Yes; that was the situation when I came in control of the property.

Commissioner O'CONNELL. In the electric concern, you have not?

Mr. INSULL. We have not.

Commissioner O'CONNELL. Under the one situation of the elevated men, they meet you in conference and arrange for hours and wages and conditions of employment and all that?

Mr. INSULL. Yes, sir.

Commissioner O'CONNELL. How are the conditions and wages and hours arranged in the other departments, where that does not exist?

Mr. INSULL. That is arranged in conference between myself and my heads of departments and it is on a liberal basis.

Commissioner O'CONNELL. But the employees are not taken into conference in the matter?

Mr. INSULL. No, sir; if anyone is dissatisfied he would make a complaint and it would be adjusted. We have a regular committee to deal with all that class of things. Theoretically it comes to me for approval; the practice is it is dealt with by the committee of heads of departments and foremen and men of that character.

Commissioner O'CONNELL. How many people are working in the electric end of the business you are engaged in?

Mr. INSULL. In the electric end there is 4,870 and in the gas 4,548, and in the elevated 4,048, and in the suburbs around Chicago in another corporation called the Public Service Co. 2,017.

Commissioner O'CONNELL. What I would like to get at is how with 4,000 employees in your electric department, if one of these employees has been discharged, either justly or unjustly, he feels unjustly, how does he proceed to have his case adjusted or brought before you or the proper party?

Mr. INSULL. Well, he could come—he would appeal to the man next in charge, to the foreman, and he would go on up until, if he were dissatisfied he could come right to me. I have got a case right on my desk of a man that feels he has not been properly treated. And I will call a conference of everybody interested and listen to their story, and listen to his story. Of course, we have so little of that that it is a rare thing for anything to come to my attention.

Commissioner O'CONNELL. Well, you present quite an anomaly in the fact that you have one large division of your interests in which you are dealing direct with employees, and another the reverse situation.

Mr. INSULL. Well, the reason is I found that condition when I took hold of the elevated roads. I have never made any attempt to disturb it. It worked reasonably well there, and what is the object, if a man is busy, in disturbing a thing that works reasonably well?

Commissioner O'CONNELL. Have your employees, or have you in connection with your business, an insurance or sick organization among the employees in the shops where they pay weekly sick benefits to each other, and contribute a small sum per week or month into a fund, or something of that kind?

Mr. INSULL. We take care of most of that ourselves. A man who is on monthly pay roll, providing he gets the company's doctor certificate is entitled to so much lay off during the period of sickness. I do not know that exact period now. I would be very glad—

Commissioner O'CONNELL. Is it covered by this?

Mr. INSULL. I don't think it is covered in that, but I will be very glad to cover it, any questions you ask I will be very glad to cover by memorandum after.

Commissioner O'CONNELL. I would be very glad if you would furnish the rules and regulations you have regarding that.

Mr. INSULL. Yes. I think, if anything, we would be criticized for liberality in connection with matters of that kind.

Chairman WALSH. Mr. Weinstock, you would like to ask a question of Mr. Insull? Would you please speak a little louder so that they can hear you at the other end?

Commissioner WEINSTOCK. Yes.

There are those, Mr. Insull, who take the position that one of the remedies for industrial unrest, so far as public utilities are concerned, is public ownership of public utilities. They seem to believe that the workers would be likely to receive better conditions, better wages, better hours, under public ownership than they do receive under private ownership. You have expressed the opinion that in your judgment public ownership would make for a lessened efficiency in public service—in public-utilities service. Well now, admitting that, granting that public ownership of public utilities would mean a lessened degree of efficiency, and let us assume that that would be a cost that we would have to pay for public ownership, might it not be pointed out that on the other hand that cost would be more than compensated for in this, aside from the condition of the workers, that much of our public graft and public dishonesty has been due to the purchase and sale of public franchises, which under public ownership of public utilities would be made impossible, and that therefore the advantage to society on the whole, despite the fact that there may be a lessened efficiency, would be along the lines of a higher state of civic morality?

Mr. INSULL. Well, that is a highly argumentative question, that it is very difficult for me to answer unless I have it right before me to reply to.

Commissioner WEINSTOCK. Well, I will put the question—

Mr. INSULL. But I will try to answer it.

Commissioner WEINSTOCK. All right.

Mr. INSULL. I think as long as to err is human that you will have public and private dishonesty. You will have lots of it until the community and the people are educated to a higher appreciation of their duty as citizens. Personally, I very much question whether there is such a universal graft, such universal graft in connection with the granting of franchises, as is assumed by your question. My experience does not lead me to that conclusion.

Commissioner WEINSTOCK. Those are matters of history in this Republic, that there has been much graft which always accompanied it, from New York to San Francisco.

Mr. INSULL. Oh, I am not saying that. Yes.

Commissioner WEINSTOCK. In the purchase and sale of public franchises.

Mr. INSULL. Yes, and there has been in other matters, too.

Commissioner WEINSTOCK. Yes; but is it not true that the difference between the high degree—that one of the chief causes for the difference in the high degree of honesty in public officials, say in Australasia, where all the public utilities are publicly owned, and the general disrepute of many officials in this country is due to that very matter of privately owned public utilities?

Mr. INSULL. No. If you will excuse the criticism of the answer, I think it is a higher appreciation of the duties of the citizen, if such is the case.

Commissioner WEINSTOCK. Well, is it or is it not the fact—

Mr. INSULL. I am getting into an argument, and I only want to answer your questions.

Commissioner WEINSTOCK. Is it or is it not a fact that in proportion as we can remove temptation to do wrong, in that degree we will find a higher degree of citizenship?

Mr. INSULL. That is so, but you are going to vastly increase the proportion of temptation to do wrong. You are going to change, if I understand you to mean that in asking the question, that it would be advantageous if the local public utilities could be publicly owned—if that is your position you are going to change what we will call the striking cases or headline cases of graft to the little peculating cases on a far more extensive scale.

Commissioner WEINSTOCK. You mean you would have much petty graft?

Mr. INSULL. Yes.

Commissioner WEINSTOCK. In place of less wholesale graft?

Mr. INSULL. I am assuming in your statement that there is a universal wholesale graft. I do not agree with you. I think there has been in different times, but I don't think it is so at this time.

Commissioner WEINSTECK. Will you point out, for the information of this commission, Mr. Insull, what are the advantages and disadvantages as you have seen them in individual bargaining and in collective bargaining, as it were?

Mr. INSULL. Well—

Commissioner WEINSTECK. You are operating both ways, so you are able to pass opinions both ways. You do collective bargaining in one branch of your work and individual bargaining in another branch of your work; therefore, you ought to be a very important authority on that subject.

Mr. INSULL. We do individual bargaining with a class in one business, with a class of employees that are much higher, have a much higher order of intelligence.

Commissioner WEINSTECK. That is, you do individual bargaining?

Mr. INSULL. Individual bargaining with those, I assume you call where we do not deal with the union; we call that individual bargaining?

Commissioner WEINSTECK. Yes.

Mr. INSULL. We do collective bargaining in other corporations where the class of men we employ are more in proportion, men that are engaged in some kind of manual labor. I think that is probably the distinction. Any institution that has over 3,000 employees on its monthly pay roll whose average pay is between \$69 and \$70 a month would be considered a pretty high order of intelligence, or average intelligence—3,000.

Commissioner WEINSTECK. Well, I gather, then, from your statement, Mr. Insull, that as a matter of choice, having at heart the common good, that you would not establish collective bargaining for all or individual bargaining for all, but that you would differentiate and that under certain conditions you would think collective bargaining to be the preferred method under certain conditions, and that individual bargaining is the preferred method under certain other conditions?

Mr. INSULL. I think that is probably my point of view. Naturally we, all of us, apply the personal element to this. I have never needed any collective bargaining myself. I started as low down in the scale of wages as anybody, probably receiving not any more per week than the lowest paid immigrant landing on these shores receives per day. I have not needed any collective bargaining.

If you look up the men who achieve in any line of business, not necessarily men who achieve the positions that you gentlemen have achieved and which it has been my good luck to achieve, but you look at the men lower down in the scale; if they are men of intelligence they do not need any collective bargaining. But on the other hand I can not forget that I was brought up in a country district where the wages of the agricultural laborer were only about \$1.75 a week. I know that their condition was improved by collective bargaining. Any man who is engaged in that kind of work, all under one organization, he is engaged in collective bargaining. He can be the laborer or the college graduate if he so wishes, also engaged in collective bargaining, but they must do it on the same basis of respect for the laws of the land. That is the only difference, gentlemen.

Commissioner WEINSTECK. Do you think, then, taking the Nation as a whole, taking the conditions as we find them to-day, that labor as a whole would be better off under a system of individual bargaining or better off under a system of collective bargaining?

Mr. INSULL. I think that is almost an impossible question to answer. I am candid enough to say that there are some classes of labor that I think are decidedly better off.

Commissioner WEINSTECK. Where do you draw the line?

Mr. INSULL. I think that when a man who has habits of thrift and who has the ambition to achieve a position of independence, when he gets to a point that he has got a stake in the community in which he lives he begins to get restive under collective bargaining.

Commissioner WEINSTECK. That is, you think that collective bargaining would have a tendency to hold him down?

Mr. INSULL. Yes; it would; collective bargaining, in my judgment, must of necessity take care of the average intelligence, not of the maximum or the minimum intelligence. It does take care in a way of men theoretically.

Commissioner WEINSTOCK. Inferentially, then, I assume, Mr. Insull, that you would say to the workers, "If you are above the average in ability and in ambition and in energy, do your own individual bargaining"?

Mr. INSULL. Yes.

Commissioner WEINSTOCK. And if you are below, if you are only the average, then do collective bargaining?

Mr. INSULL. Yes; I think I would say that. I am talking now irrespective of what I am doing myself in my corporations that I control.

Commissioner WEINSTOCK. There has been a great deal talked about collective bargaining in this country—various branches of industry in various parts. As an employer who is general in his sphere and as a man who has a broad horizon, an unusual opportunity for observation, you think that the country, as a whole, has been helped or hindered by this collective bargaining that prevails in so many directions?

Mr. INSULL. I do not know that I can speak with any authority on that subject. During my career I have met the leaders of a great many of the labor unions, the large labor unions of this country. And I have thought them men of high intelligence and men with the highest sense of the duties of citizenship. On the other hand, during my career it has been my misfortune to have to deal at times with just the opposite. I do not know whether the one balances the other. If the millennium has arrived, if it were not human to err, why I should say that the country as a whole had not suffered by collective bargaining. There have been times when particular parts of the country have suffered very much, and there have been times when Australasia, for instance, suffered very much from the collective bargaining when there has been a very serious blot on its record.

Commissioner WEINSTOCK. What, in your opinion, would be the condition, say five years hence, if it were possible somehow to wipe out organized labor? Would the condition, in your judgment, be better or worse for the average worker? Of course, we are dealing only with opinions now.

Mr. INSULL. Oh, you are dealing with a thing that is impossible. That is a thing you can't imagine.

Commissioner O'CONNELL. You don't think it is possible for that to come to pass?

Mr. INSULL. Oh, no; not at all.

Commissioner WEINSTOCK. That is all.

Chairman WALSH. Do you want to ask a question? Mr. Garretson would like to ask a question.

Commissioner GARRETSON. If I didn't misunderstand you, you expressed a belief that employees of public-service corporations should be subjected to certain limitations in the matter of organization. Do you believe there is any obligation toward the public that should be made to rest more strongly on the employees of public-service corporations than on the owners of public-service corporations?

Mr. INSULL. Abstractly, no; but—

Commissioner GARRETSON. Concretely, then.

Mr. INSULL. No; but the fact is that the employee does not consider in practice the obligation of the corporation to the community, as a rule.

Commissioner GARRETSON. Is there any greater obligation on the man to do that than on the owners?

Mr. INSULL. No; except one thing. The owners, or rather the men who run the property and represent the owners—of course, I am in no sense the owner of these properties I run. The Commonwealth Edison Co., for instance, has upward of 2,000 owners.

Commissioner GARRETSON. You are the representative of the owners?

Mr. INSULL. I represent the owners. It is my duty to look particularly after the question of the operation or obligation of the corporation to the community. I have been educated to do that. The employees lower down haven't. I am the employee who has.

Commissioner GARRETSON. Does education create an obligation that does not in equity exist?

Mr. INSULL. No, sir.

Commissioner GARRETSON. Then the obligation of you and the employee to the public is exactly the same?

Mr. INSULL. Theoretically; yes, sir.

Commissioner GARRETSON. Actually?

Mr. INSULL. All right, actually. But he don't fulfill it as a rule.

Commissioner GARRETSON. The question is not of fulfillment just yet; but if you take away from those men the power of organization, assuming for a moment it may be a benefit, don't you place a mightier weapon in the hands of your employers than the ordinary employee who is in the public service has?

Mr. INSULL. How did I understand that?

Commissioner GARRETSON. Take away the power or right of organization.

Mr. INSULL. Yes; if you do take it away.

Commissioner GARRETSON. Certainly; and you express yourself in favor of taking it away?

Mr. INSULL. No, sir; I did not.

Commissioner GARRETSON. Then I misunderstood you. What was the first question I asked you, if you did not express your belief that the employees of public-service corporations should not be permitted to organize like other employees?

Mr. INSULL. I have never taken it away from any of them.

Commissioner GARRETSON. I misunderstood you.

Mr. INSULL. I am operating both what you would call a closed shop and an open shop.

Commissioner GARRETSON. I am not talking about a closed shop at all, but the right to organize and the right to present a demand precisely as other employees present it. That is, the public-service employees.

Mr. INSULL. I have never taken that away from any employee.

Commissioner GARRETSON. Oh, no.

Mr. INSULL. I haven't any idea of doing it.

Commissioner GARRETSON. I mean, do you believe in legally doing it?

Mr. INSULL. Legally doing it? No.

Commissioner GARRETSON. By legislative enactment.

Mr. INSULL. Oh, no, no, no, no, no.

Commissioner GARRETSON. Well, that was where that misunderstanding came in.

Mr. INSULL. No.

Commissioner GARRETSON. Because that opinion has been repeatedly expressed, that public-service employees should be curbed in directions where others were not.

Mr. INSULL. No; I don't think that is the way to settle that question.

Commissioner GARRETSON. You referred to the fact that one of the things that your employees enjoyed—and you recited it as a wage benefit—was the prospect of a liberal pension.

Mr. INSULL. Yes, sir.

Commissioner GARRETSON. That pension is wholly dependent upon tenure of service, is it not?

Mr. INSULL. Yes, service; yes.

Commissioner GARRETSON. Can any pension dependent upon tenure of service be considered as a wage element?

Mr. INSULL. I consider it so.

Commissioner GARRETSON. Unless it is guaranteed to the man and collectible as wages are. If he leaves your service he gets nothing.

Mr. INSULL. No; he gets nothing.

Commissioner GARRETSON. No matter for what cause, of his own volition or yours?

Mr. INSULL. Yes.

Commissioner GARRETSON. Therefore can it be legitimately considered as a wage element?

Mr. INSULL. Well, that is a subject of argument that you people and our people have been arguing for years.

Commissioner GARRETSON. Well, your opinion is that it can?

Mr. INSULL. Yes, sir.

Commissioner GARRETSON. Well, that is all I wanted on that subject.

Now, how is it—you said that a large number of your men were very highly paid?

Mr. INSULL. Yes.

Commissioner GARRETSON. On the monthly system?

Mr. INSULL. Yes.

Commissioner GARRETSON. Did I understand you that these monthly men were paid \$80 a month?

Mr. INSULL. Yes; that would come right down, you know—our aim is to put everybody, possibly, on monthly pay roll.

Commissioner GARRETSON. Yes.

Mr. INSULL. That we possibly could. I haven't got the exact figures on monthly pay roll, but I will be very glad to file it with you.

Commissioner GARRETSON. Well, in general, what is your largest class?

Mr. INSULL. Well, in general, we have got, out of 4,870 people on our pay roll last week—on the 1st of July—3,179 have been working for us over a year, and a very large proportion of that 3,179 would be monthly employees.

Commissioner GARRETSON. And what would the larger number of monthly men draw as a monthly wage?

Mr. INSULL. Well, I would have to have that figured out for me. I happen to remember seeing on my desk in the last few days that the average pay of our monthly men was \$70 a month.

Commissioner GARRETSON. Average pay of the monthly men is \$70?

Mr. INSULL. Yes; that would be men, women, and young people.

Commissioner GARRETSON. That would mean that the highest man—that average would be created by a few high and many lower?

Mr. INSULL. No, no. I would think that that—I have never looked into it from that point of view.

Commissioner GARRETSON. Well, take the average wage.

Mr. INSULL. I would be very glad to give you that information later on, but my general impression would be that our monthly men, if you leave out, if you like, the officers and simply take from the foreman or superintendents down, our monthly men would show pretty high.

Commissioner GARRETSON. Wageworkers?

Mr. INSULL. Yes; wageworkers.

Commissioner GARRETSON. As against salaried men?

Mr. INSULL. Well, any man on monthly pay roll is looked upon as a salaried man.

Commissioner GARRETSON. Well, some men who draw salaries object to being called wageworkers.

Mr. INSULL. Well, I don't.

Commissioner GARRETSON. I don't, either.

Mr. INSULL. I work for wages, and expect to be paid.

Commissioner GARRETSON. Now, do you think that for the average man that knows the business he follows—

Mr. INSULL. Yes, sir.

Commissioner GARRETSON. That \$70 is a high wage?

Mr. INSULL. Oh, no; that is not a fair statement. I said the average pay of our monthly men. I did not say the average pay of our monthly men who know the business. That includes office boys; that includes students whom we—whom for half of their time we contribute part of their tuition to learn the business.

Commissioner GARRETSON. Well, does your average mechanic get more money than that?

Mr. INSULL. Oh, yes.

Commissioner GARRETSON. Monthly men?

Mr. INSULL. I think so. I will be very glad to have it figured out for you. I would not attempt to answer it here, but I would be very glad to have it figured out for you and file with you the wages of any branch of our work that you want filed.

Commissioner GARRETSON. I would be very glad to have that, and as complete as you can make it.

Mr. INSULL. If you will just tell the secretary to tell me what you want, I will be very glad to let you have what you want.

Commissioner GARRETSON. Now, with regard to the efficiency of private and public—

Mr. INSULL. Excuse me, Mr. Chairman, is that within the scope of this commission?

Chairman WALSH. What is the question?

Mr. INSULL. The question of the discussion of municipal ownership.

Chairman WALSH. Well, it takes quite a large range, and we can't fix it to any definite proposition. You see how it started, Mr. Insull.

Mr. INSULL. Yes, sir.

Chairman WALSH. You were asked whether or not the belief in the minds of a great many people that public ownership was a good thing caused them to be restless under private ownership. Now, there are eight commissioners here, and it would be impossible to—

Mr. INSULL. If I had known I was going to be asked questions on this subject I would have brought the cost of running a steamboat on the Thames; I would have brought the cost of running the steamboats between Staten Island and the Battery in New York; I would have brought the cost of operating all the municipally owned plants in Europe. I—

Chairman WALSH. I would—

Mr. INSULL (continuing)—would have showed the price at which we sell our energy falls lower than the cost at which they produce it in the average municipally owned properties of England.

Commissioner GARRETSON. Yes; that is perfectly germane to the question we have got before us.

Mr. INSULL. But I didn't know I was going to have to discuss that kind of subject.

Chairman WALSH. It is in the general scope of our inquiry, but was not in the topics given to you.

Mr. INSULL. Well, I am probably excusable.

Chairman WALSH. And not being put in the topics, why I think it would be best not to branch off into it.

Commissioner GARRETSON. Mr. Insull, you made the statement here—

Mr. INSULL. Excuse me, Mr. Chairman, I am probably excusable because I thought that was a dead issue. I would have had the information.

Commissioner GARRETSON. It is not the first corpse that has been galvanized.

Mr. INSULL. I agree with you.

Commissioner GARRETSON. Mr. Insull, if I understood you, you made the statement that public utilities could not be as successfully operated in your opinion by governmental agencies as by private direction; am I right?

Mr. INSULL. Yes, sir.

Commissioner GARRETSON. And from your experience—the city here owns its waterworks?

Mr. INSULL. It is not fair to get me into a discussion with the politicians of Chicago. Now, that is not fair. Name any other city you like, and if I know anything about it I will discuss it. Let us discuss the municipally operated ferryboats of New York Bay, say.

Commissioner GARRETSON. Well, or the eclipse of the sun.

Mr. INSULL. Yes. No; don't, as a matter of fairness, gentlemen, don't take me into the discussion with the city hall. I try to keep away from it.

Commissioner GARRETSON. I am trying to find the shadow on the sun now.

Mr. INSULL. Yes.

Commissioner GARRETSON. What, for instance, what is the average wage in municipally or governmentally administered public utilities and privately managed?

Mr. INSULL. I could not give you those figures. As I told you, I would have come posted if I had known I was going to deal with a corpse.

Commissioner GARRETSON. Do you know what the city of Chicago, for instance, pays inspectors?

Mr. INSULL. Yes. In what line of business?

Commissioner GARRETSON. Well, in the waterworks.

Mr. INSULL. No; I don't. I don't; all I know about is the—all I can discuss about the waterworks is my bill for water.

Commissioner GARRETSON. And the quality of the water.

Mr. INSULL. Yes. It is good; as a citizen, I say.

Commissioner GARRETSON. Well, they do produce a certain amount of good work?

Mr. INSULL. Oh, yes; it is good. And this hot weather, it is very fine.

Commissioner GARRETSON. Well, if that is the case we will let it go at that.

Chairman WALSH. Did you want to ask some questions, Mr. Delano?

Commissioner DELANO. Yes.

Chairman WALSH. Mr. Delano would like to ask you some questions.

Commissioner DELANO. Mr. Insull, if I understood you, your point was that the public-service corporations stood in different relation to the public from the ordinary employer or other employer. Is that your point?

Mr. INSULL. That is my point.

Commissioner DELANO. That on account of those obligations that you owe the public—of being compelled to furnish light or heat or gas every day in the year and every hour in the day—that you think it is unsafe to enter into arrangements with unions. Is that your point?

Mr. INSULL. Yes, sir.

Commissioner DELANO. Well, now, if the unions, recognizing that, that public service was different from ordinary service, were under public supervision and were under the same responsibility to the public that you are, would that alter your opinion in dealing with them?

Mr. INSULL. That is—well, supposing our service absolutely was killed and we would be held harmless by some legislative enactment superior to our contractual relations with the city.

Commissioner DELANO. Or that the unions would be penalized instead of you being penalized for the rupture in service.

Mr. INSULL. Well, that would be a question of their credit. Would you penalize them financially?

Commissioner DELANO. Well, there are other penalties that might be just as effective—the withdrawing of a charter or something like that. I am asking this question because it is one of the duties of this commission to try to find some middle ground between the extremes of the positions on both sides. I know you have been in the service so long—

Mr. INSULL. I probably hesitate at answering that because in main businesses I have run the subject of unionizing our operatives has never come up seriously. I don't mean to say that no one has ever made the demand for it; it has never been a serious proposition. Naturally I would rather be left alone to deal with my own people in my own way, see? I think they are well satisfied with the way they are dealt with. Mr. Delano is a citizen of Chicago, and he can probably tell just as well as I can whether they are reasonably well satisfied with the way they are dealt with.

Commissioner DELANO. That is all, Mr. Chairman.

Chairman WALSH. Mr. Lennon would like to ask you a question or two.

Mr. INSULL. Yes, sir.

Commissioner LENNON. Mr. Insull, in speaking of the matter of individual bargaining as to wages and hours and conditions of labor and collective bargaining, I understood your answer to be that for the more intelligent you believed that individual bargaining would bring to the individual the best results. Is that correct; did I understand you correctly?

Mr. INSULL. Yes. I don't think brains have any needs of collective bargaining.

Commissioner LENNON. Now, in connection with that, do you believe the social well-being of the world is better served by high pay for the few or a living pay for the many?

Mr. INSULL. Well, I think if it could be provided, there should be living pay for the many. After all, that is a question of supply and demand when you come down to fundamentals.

Commissioner LENNON. If collective bargaining would protect the many to a greater extent than individual bargaining, which would best serve the interests of society?

Mr. INSULL. Why, if collective bargaining would better serve the interests of the world as a whole—employees as a whole, why collective bargaining would be better for society, but the fact is not—the facts are to the contrary. Statistics of labor show very distinctly that there is infinitely more individual bargaining the world over than there is collective bargaining.

Commissioner LENNON. Does the history of this country in industry show unorganized workers receive as good pay or better pay than organized workers?

Mr. INSULL. That I could not answer.

Commissioner LENNON. Take the different industries in which you are interested, the one industry representing the elevated railroad men, how do their wages compare with the other departments?

Mr. INSULL. I would be very glad to give you a comparative table on that to file with your commission.

Commissioner GARRETSON. I would like to have that, but can you say from memory whether that averages better or below?

Mr. INSULL. I could not say it from memory. I would say offhand—and it is purely a guess—I would much rather file the figures.

Commissioner LENNON. All right.

Mr. INSULL. I would say that the elevated roads would average lower, simply from my general knowledge of the employees.

Commissioner LENNON. That is all.

Chairman WALSH. That is all. Call your next.

TESTIMONY OF MR. VICTOR A. OLANDER.

Mr. THOMPSON. Mr. Olander, give us your name.

Mr. OLANDER. Victor A. Olander.

Mr. THOMPSON. Your business address.

Mr. OLANDER. 570 West Lake Street.

Mr. THOMPSON. Your business.

Mr. OLANDER. Secretary of the Lake Seaman's Union, and vice president of the International Seamen's Union.

Mr. THOMPSON. How long have you held those positions?

Mr. OLANDER. About 12 years. No; as vice president about 12 years; as secretary, about 4; and subordinate positions previous to that.

Mr. THOMPSON. What jurisdiction or over what territory does your union cover?

Mr. OLANDER. The international union covers the United States and Canada. The Lake Seamen's Union is the Lakes district—that is, the Great Lakes—takes into membership the sailors, marine firemen, and marine cooks. The Lake Seamen's Union, however, being confined to sailors only. The two other organizations, one for firemen and one for marine cooks of this district.

Mr. THOMPSON. What jurisdiction has the local union got, of which you are secretary?

Mr. OLANDER. We haven't a local union in the sense that other unions have. The Lake Seaman's Union is a district organization; it has headquarters at Chicago and local branches around the chain of lakes. The membership of a member is a membership at large in the district. He can go anywhere in the district without changing their books or any questions being asked.

Mr. THOMPSON. You are acquainted with the conditions of labor on the Great Lakes, of course?

Mr. OLANDER. I am familiar with it.

Mr. THOMPSON. Is that condition satisfactory or not?

Mr. OLANDER. Decidedly unsatisfactory.

Mr. THOMPSON. What are the reasons for that, if you know?

Mr. OLANDER. There are a great many reasons. I hardly know how to begin to answer that question. I think the main reason is due to the fact that the corporations owning the vessels generally hold the position that they don't propose to permit the men who navigate or work those vessels to have anything to say as to wages or working conditions, or how they shall live, because you know we exist with our employment, and are with it all the time, live right on board ship. Corporations take unto themselves the right to say what shall be done in all those respects. Experience in the past years has taught us that means mighty hard lives for us. When I began sailing my sailing was mostly—my experience has mostly been on steam vessels—wages were from \$12 a month up to \$25 a month, occasionally \$30 a month being paid for the men that—the class of men that are in our organization now; some of the better class, of course, getting a little bit more. They operated a system of laying off men almost every trip.

In those days it was difficult to get over a month's employment steadily. That continued without any change for the better. Food was bad. Of course, this is all in varying degrees. Now and then there was an employer who paid a little bit more, whose food was a little bit better, and who furnished better quarters, but I speak of the general condition; there was no change in that until the men organized. Since then wages have increased materially, but not to where we believe they ought to be. The men who formerly got \$12 are now getting about \$30 a month. The man that formerly got \$25 is now getting about from \$50 to \$55 a month. The work is seasonal, however, so far as the Lakes are concerned, and the average working time, taking it good and bad, as a whole, is about six months and perhaps a little more. The men seek employment elsewhere; many of them go to the coast. The change I spoke of—that is, the change from \$12 or \$15 a month to \$30 a month—has taken place within a period of about 14 years, that being the scale in about 1898 and 1899, the low scale. The higher, the prevailing scale to-day is the higher scale. They also now make a practice of paying the men a little bit more for the last two sailing months of the season—that is, October and November. The wages for the higher class, the higher paid men being then raised to \$65, and for the others to \$40 a month; but the \$15 scale still prevails in some vessels where the organization has not been effected. A number of our Chicago passenger vessels, in a number

of them you will find that the majority of the deck crew, the large majority of the deck crews, do not get any more than \$15 a month for their monthly wage. As the supply of men decreases for some reason or other—that is, the supply of the kind of men that they use—they pick up anybody that they can get hold of; as that decreases they may raise that scale to a dollar a day. The rule on many of the vessels now with reference to deck hands there is that they get 50 cents a day by the day. If they stay one week, they are paid off at a dollar a day. There are times when they pay them 25 cents an hour for handling freight; that is, when the supply of men is short.

Mr. THOMPSON. What percentage, if you know, of the men operating on the vessels of the Great Lakes is organized?

Mr. OLANDER. I should think about a little better than one-third of them now.

Mr. THOMPSON. Is the organization confined to certain classes of vessels or by certain companies, or general?

Mr. OLANDER. The vessels which go outside the harbors. We have nothing to do with the vessels that remain in the harbors. We have nothing to do with vessels, with the tugboats, although they do go outside, but don't go very far. I might say the vessels that run from port to port are the vessels that we are on.

Mr. THOMPSON. Does your union have collective bargaining with any of the owners of vessels?

Mr. OLANDER. At the present time and since the fall of 1907 practically every shipowner on the chain of Lakes refuses to recognize the organization. And there has been no collective bargaining except in very few isolated instances.

Mr. THOMPSON. Is your union better organized, better on certain classes of boats running outside the harbor than on other classes?

Mr. OLANDER. Yes; we are better organized on the lumber vessels than we are on any other class of vessels.

Mr. THOMPSON. How about ore vessels?

Mr. OLANDER. On the ore vessels a man who wants to sail on an iron-ore vessel of the Great Lakes as a union man keeps quiet about it—never tells he is a union man. It usually means his discharge if that becomes known.

Mr. THOMPSON. When you speak of the wages which are being paid for the services, do you mean the wages paid to union men alone, or is it a general wage obtaining on the Lakes?

Mr. OLANDER. That is the general wage scale. When we in 1899 and 1900 began to make ourselves effective as an organization, we changed the wage scale everywhere, except for the deck hand on the passenger vessels. They are the poorest class of men employed. I mean that in every sense, not only as workmen but as men. They are picked up largely around South Clark Street, in the lodging-house districts. They are the down and outs, and the worst kind of men that lay around there. We effected the wage scale everywhere. In 1903 we entered into an agreement with the Lumber Carriers' Association and the Lake Carriers' Association. The Lake Carriers' Association, comprising the iron-ore vessels and grain vessels, and so on, that being the largest association. Those agreements were renewed from year to year with both associations until 1907. At the close of the year 1907 there was some indication that the Lake Carriers' Association did not propose to continue the agreement any longer, and when we tried to secure a meeting with them in the spring of 1908 they declined to meet with us, and adopted a resolution, something that they term the open shop.

I think that the general expectation of the Lake Carriers' Association at the time was that we would go out on strike. It was not a very good business year. There were indications that the vessels would not have much to do, and it was a good time to put the union out of business and they started in to do that.

We, however, did not go out on strike. I can tell the story of that year if you are interested.

Mr. THOMPSON. Briefly, if you will, Mr. Olander.

Mr. OLANDER. After this open shop resolution was adopted when they declared that they did not propose to discriminate against union men, we officially decided that there should be no strike, took it up in our meetings all over the chain of Lakes, and the men everywhere decided that we would try out the new system. We had never enforced rules requiring the exclusive employment of union men at all times. We always left the door open for the outsider to come in and if there were not sufficient union men around they could employ anybody. We usually got the man into the organization, al-

though we did have an understanding if he worked at the business that he would come into an organization. We went to work. Navigation opened up in the latter part of April. In May, very shortly after the opening, the Lake Carriers' Association announced a rule that thereafter none of the men would be shipped directly by the captains as had been the practice previously, that the captain who knew John Smith and could go to get him in the boarding house or wherever he could find him, and the man who knew the captain somewhere could go and find him wherever there happened to be a vacancy. They stopped that system and inaugurated a rule that every man would have to ship through an employment office under the jurisdiction or under the direction of the Lake Carriers' Association. He would have to register in that employment office and carry a card from that office.

We said nothing to that. We went to the offices. We knew what was coming; so many people misunderstood what the open shop meant that we thought before we had any real fight that we would let the Lake carriers show what they meant exactly by the open shop, and so we decided to wait and see what it was.

On the 10th of June the captains employed on the ships of the United States Steel Corporation—that is, the Pittsburgh Steamship Co.—went to their crews and said to them that if you want to sail on this vessel any longer you have got to surrender your membership in the union and give me your membership book. The first case of that kind was the steamer *Bunson*, of Conneaut, Ohio.

From that day on news of that kind came in very quickly until a very large proportion of the vessels, the captains of the vessels were giving this kind of orders to the men. That was the open shop that they had declared. We met that. Business conditions were so poor that we did not think we could win a strike. If we had thought we could have won the strike we would have struck and struck hard, but we did not think we could win a strike under those conditions, so many unemployed men throughout the country, and we are not as free to move as men of other callings are.

So we met that by a system of duplicate membership cards; that is to say, we gave each man two cards, or rather a book and a card. We have no card. We have a book in which the constitution, membership card, the membership certificate and everything is bound. We issued duplicate cards and said to the men if you want to hold your employment through this period of depression give your book to the captain and keep your card in the other pocket and remain a union man just the same and hold on to the job for a while. And we did that very extensively.

The employers attempted to meet that first by going to some of the men and saying, "You can not remain on this ship unless you make an affidavit to the effect that you have severed your connection with the union and that you do not propose to have anything to do with the marine labor organization so long as you are in our employ."

They tried that thing in a few cases. As soon as we managed to get it before the public that stopped. It was a thing that could not be done in the open, and it was so raw, if I may use that word, that even some members of the Lake Carriers' Association did not like to have the name of doing a thing like that. I have got the slips here somewhere, and perhaps I had better not try to go through that. I can give that to the commission.

Chairman WALSH. Let me see the samples, if you have them.

Mr. OLANDER. I am afraid it would take me a little time to find it—here they are. One of them states, "I declare on my honor I am a union man and propose to stay with my union." That was about the effect of it. The other says, "I declare I am not connected with any organization," or something to that effect, and I am free to act for myself. They went to the men through the shipping masters and said, "We don't want to discriminate against you; it really was not our fault; some of the captains misunderstood our orders, and they did some of them discriminate, but it was not the fault of the association, and all we want is to be absolutely fair. If you are a union man we want you to say so, sign this and it won't be held against you. You will be registered in the office that way and if the captain wants a union man we will hire you. If you are not a union man, sign the other, and if the captain want a nonunion man he will hire you. There will be absolutely no discrimination."

Of course, it was simply a trick to put the men on honor, in an effort to find out whether or not they were union men, for the purpose of getting rid of them. I advised the men to sign in each instance they were nonunion men, just as I

had previously advised them to take the affidavit to the effect that they would never have anything to do with the organization, saying to them they were justified in violating that affidavit. Some of them did it. I went to the newspapers with the story right away, and that cleaned that up, but the system of slips continued throughout that season.

As to what their attitude was, I have here a letter written by one of the board of directors of the Lake Carriers' Association giving instructions to his captain. Early in the season—May 3—a card was issued to William Hare, a member of our organization, who does not object to his name being known now. The card was used a good deal before this. He was a wheelsman on the steamer *Matopa*, of the Pittsburgh Steamship Co. He was discharged and this notation made on the card by the master of the vessel: "Good wheelsman, but he had too much to say about unions. J. H. Regan, master, steamer *Matopa*." Later this came into my possession on the letterhead of John Mitchell. I believe he is the president of the company. He represents the Cleveland Steamship Co., the *Ætna* Steamship Co., the Buffalo & Susquehanna Steamship Co., and the Masaba Steamship Co.:

CLEVELAND, OHIO, June 19, 1908.

Capt. F. D. GALTON,

Steamer "*Moses Taylor*," Milwaukee, Wis.

DEAR SIR: I inclose you herewith copy of a letter from the Lake Carriers' Association, giving list of the shipping masters' offices at the different ports. When you are in need of anyone be sure to ship what men you need through the shipping offices. When you find that you have any union sailors aboard who have books, you discharge them unless they give up their books. What we want to do is to relieve our ships of union men. Be sure to let no walking delegate go aboard your boat at any time under any circumstances. Keep a man at the head of the ladder when in port, and when a man tries to get aboard your boat ask him his name and what he wishes, and if he can not give you a satisfactory answer do not let him aboard.

If I find that any delegates get aboard your boat, I am going to ask for your resignation, unless you have a very good reason for it.

Yours, very truly,

JOHN MITCHELL.

LAKE CARRIERS' ASSOCIATION,
OFFICE OF THE PRESIDENT,
Detroit, Mich., May 6, 1908.

To the vessel owners and managers:

In pursuance of one of the purposes for which our association was formed, viz, to establish and maintain shipping offices for the convenient securing of seamen on vessels on the Great Lakes and to establish and maintain amicable relations between employers and employed, and in view of the legislation which goes into effect July 1 of this year in regard to efficiency of crews, our association from its experience concluded that the best and fairest way to carry out these ideas is through what is commonly known as the "open-shop" principle.

To carry this out in its proper spirit and intent requires the cooperation of the owners and the executive officers of the ships.

The association has established the following shipping offices, through which seamen may be employed, and every reasonable and proper effort will be made to insure the furnishing of efficient men; and if the shipping officer has not visited the ship your master or engineer should communicate with the shipping office and report any neglect of any shipping officer to give prompt attention:

Port.	Location.	Shipping master.	Telephone.
Buffalo.....	154 Main Street.....	A. Limerick.....	Seneca 1265.
Ashtabula.....	Kahna Block.....	S. W. Gould.....	Main 55.
Conneaut.....	Bank Building, corner Day and Park Streets.	W. M. Ford.....	103 K.
Cleveland.....	98 on the Dock.....	Wm. F. Wall.....	Bell Main 980, Cuy. Cent. 744.
Toledo.....	102 Marine Block, Water Street.....	H. Wellet.....	Main 370.
Chicago.....	100 Van Buren Street.....	J. Blair.....	Harrison 4833.
South Chicago.....	151 Ninety-second Street.....	C. B. Morse.....	South Chicago 98.
Milwaukee.....			
Duluth.....	Board of Trade.....	J. Currie.....	306.

It is essential that the owners and the licensed officers cooperate thoroughly with this effort by obtaining their crews through the established shipping offices and then by insisting throughout that the men have absolutely fair treatment. There must be, so far as possible, watch and watch; no unnecessary work, such as scraping and painting, and the like, should be permitted on Sunday; no man should be required or asked to work over the side of the ship while underway. There must be no discrimination in the matter of mess rooms, and every complaint from any member of the crew must be received and carefully considered by the master of the ship.

The executive committee has arranged that the shipping offices issue to each man as shipped a card, giving the date of shipment, the capacity in which employed, and the ship. Where necessity requires the shipment of men at places where there is no shipping office, on arrival at a port where there is a shipping office such card will be furnished. On reporting on board the seaman shall give this card to the master or, if in his department, to the chief engineer, and on leaving ship may require its return, but only with certificate indorsed thereon by the master or chief engineer, according to the department, of the reason for leaving the vessel and statement of qualification and character of service rendered.

As on many of the docks strangers will be excluded, the card will be an identification of the seaman with the ship, and will serve the very substantial purpose of furnishing a record of men on board our ships in case of accident.

Please, therefore, have the officers of your vessels ship their men in this way; also instruct your officers to station one or more members of the crew at appropriate places to exclude admission on the ship of any person except actual members of the crew or such as have permission to go on board from the office of the manager or agent of the ship, and refer to the executive officer in charge of the vessel application from such parties.

Yours, truly,

W. LIVINGSTONE, *President.*

That letter is a fair illustration of the orders given to practically all of the masters of the Lake Carriers' Association by the various owners. They did not all do it by letter, but all of the masters carried out that with very rare exceptions—carried out those kind of instructions.

We went through the season of 1908, and in 1909 they inaugurated what was known as the Lake Carriers' Association welfare plan. And against that we went on strike and carried on a strike for three years, beginning on May 1, 1909, and calling the strike off in, I think, the latter part of March in 1912. We did not win the strike. We are carrying on the agitation against the welfare plan yet, because we believe it is a system of slavery under which men of our race can not afford to even attempt to exist. We will fight it as long as we have got anything to fight with.

Mr. THOMPSON. Briefly, will you tell us what that welfare plan is, or, if it is published in a book, will you file with the commission a copy of the book.

Mr. OLANDER. I have here a pamphlet entitled "Cause of the Seamen's Strike," which is an extract from the official proceedings of the Committee on Merchant Marine and Fisheries, House of Representatives, dated February 17, 1910, beginning on page 46. It consists of copies of documents and affidavits, being a list—and some of the letters being written by myself and a copy of the welfare plan as taken from a pamphlet issued by the Lake Carriers' Association. However, this particular pamphlet is issued by the union and my copy here might be questioned, so I would say to the commission that copies of the welfare plan appear in the report of the department of labor of the State of New York for 1910 and in the report of the board of arbitration of the State of Wisconsin for that same year, 1910 or 1911, I am not sure which.

(The pamphlet referred to, entitled "Cause of the Seamen's Strike," dated Washington, D. C., February 25, 1910, was submitted in printed form.)

Mr. THOMPSON. Now, referring, Mr. Olander, to the state of industrial unrest which pertains in the shipping world on the Great Lakes, what, in your opinion, is the cure for that condition? How could it be remedied or could the major portion of the unrest be alleviated?

Mr. OLANDER. Well, a good deal has to be done in our case. We live under different laws than people on shore are subjected to. There is much stronger, necessarily must be stronger disciplinary laws on board ship. And until some other laws are inaugurated that will give us—while we don't want those

disciplinary laws changed as far as they apply while the ship is out at sea, we feel there ought to be some other laws on the statute books that would safeguard our interests somewhat. It is necessary in our case; we admit the necessity of having a law, for instance, that permits the master to punish a man for willful disobedience of orders. It is pretty hard to draw the line as to what kind of orders they must be. Sometimes a very small thing may endanger the ship while she is at sea. And we recognize that this is necessary.

But that gives that master tremendous power over us, and gives the owner through the master tremendous power; so that in our case it is necessary to have some regulations, not only for the protection of the men in an industrial sense, but also as a matter of safety.

Under the law now we have got to sign a contract whenever we go to work. The terms of that contract, except in the matter of wages, is laid down by the Government; that is, it is laid down by law, and we sign it and accept those terms and go to sea if we want to. It we don't want to do that, we can't work at our employment; we have got to stay ashore.

Now, under that contract, if we quit the vessel in the domestic trade, that is to say on the Lakes or on the coasts, before the expiration of the terms of that contract—which we call shipping articles—we lose all the money that we have earned and all of the clothes or other belongings that we leave on board. We are trying to get the law changed now, so that we will have a right to collect half pay at every port of discharge, because during that period we can not get any money for the necessities of life. We might want to get some clothes or something of that kind; we may not be in a condition to wait until the end of the trip or the end of the month.

And we want the law so changed that we can collect half at any port of discharge or loading.

In the foreign trade—perhaps you may think I am getting somewhat off the Lakes, but not so much as you might think—in the foreign trade, we are subject to arrest and imprisonment for quitting the vessel. If, for instance, when we are in some foreign country, outside of Mexico and the West Indies and Canada, we become dissatisfied with the conditions on that ship we may be willing to lose all the wages that we have earned, and that might be anything from two weeks to six months; we may be willing to sacrifice everything that we have got on board, and still we can't quit if the master does not want us to.

That is the right under the law and under the treaties with foreign countries, where he can apply to the local police and take us back on board ship. That same law applies to sailors on foreign ships in the ports of the United States. And I have seen men arrested right here on the Lakes who have been on foreign ships, under contract with foreign ships, and wanted to quit. I have seen them taken back on board. Of course, there is not so much of that on the Lakes, because there are not so very many foreign ships here, but a great deal of it on the coast. Until those kind of things are changed we haven't got much chance.

Mr. THOMPSON. Have you any other specific proposition calculated to help the situation?

Mr. OLANDER. I might say before answering that, that these—we are trying to get these things changed. We have got a bill before Congress now that, aside from its safety regulations, provide for these things. I have—

Mr. THOMPSON. Have you got a copy of that bill with you now?

Mr. OLANDER. Sir?

Mr. THOMPSON. Have you got a copy of that bill with you?

Mr. OLANDER. No; but I can furnish the commission with a copy of the bill.

Mr. THOMPSON. We would be pleased to have you do so.

Mr. OLANDER. But there is still a copy of the report that has a condensed and a brief analysis of the bill, and the bill itself.

Commissioner LENNON. Give the number of the bill, and we will find it.

Mr. OLANDER. It is Senate 136—in the form that it passed the Senate in October. It has been reported out of a committee in the House now in very bad shape; so that the committee report is not the seamen's bill, but the action of the Senate in October was the seamen's bill.

Mr. THOMPSON. Now, Mr. Olander, referring to the general question of industrial unrest, have you, as an official of your organization, given some attention to that subject?

Mr. OLANDER. Yes; I have given a great deal of attention, so far as I am capable of doing.

Mr. THOMPSON. Do you believe that there is unrest in industry generally among workers?

Mr. OLANDER. Undoubtedly; grave unrest.

Mr. THOMPSON. What, in your opinion, is the cause, briefly, and cure, if you have any theory?

Mr. OLANDER. It will be difficult for me to state that very briefly. But I might say this: That I think that there is a very prevalent feeling that a very small part of our citizenship has taken it upon themselves to exercise altogether too much control over the rest of the people, and that there is a very strong rebellion against that—a feeling that the man who works for another fellow ought to have something to say about the conditions under which he works, and about his wages, and so on, because those things affect him outside of his time of employment. They affect his home. His wages determine the schooling of his children, the food that they use in the home, and the home itself, or whether he is to have one, or whether he is to have children, and determine whether he is to get married, and all those kind of things.

People generally, I think, even the nonunionist feels this, and feels it strongly. They believe that they ought to have something to say about that. There may be some differences of opinion among the working people here and there as to just how they ought to use it, but I feel that they all and all classes feel that they ought to have some right in that respect—a demand for a greater democracy, in other words.

And I think that this condition of unrest is going to continue and grow until that question is met, because my observations lead me to believe that most of our people live very close to the point where it will be difficult for them to obtain the necessities of life, and that they are going to feel that more and more. I do not mean to say that they live actually on the point of starvation, but where it will be difficult for them to get enough to live as they think they ought to live. Even a fairly well-paid mechanic, or what we call a fairly well-paid mechanic, living in rented rooms, having fairly good wages, feels this: "I don't know how long this job is going to continue. It may end and there may be a period of unemployment. I haven't got enough money to carry me over that. I may have a very serious case of illness in the house, and the few dollars that I have saved won't be quite sufficient to take me over that."

And then these men make up a very large proportion of the citizenship of our country, and they look into our city slums, where they don't live, and they see before them a picture of the possibilities—the thing they may have to face, the pit that they may have to get into. So that I think that the greatest of the unrest comes from that portion of the people that fear that they are going to be driven to the bottom again rather than from those who are not actually at the bottom.

Mr. THOMPSON. What remedy have you in mind, Mr. Olander, that you think this commission could recommend to Congress, for instance, to relieve in part or in whole either this general unrest or any specific unrest that occurs from time to time?

Mr. OLANDER. Since I believe that the unrest is very largely or almost entirely due to this feeling that men want more to say about themselves, about the conditions under which they live and work, I think the commission, if it concludes that that is one of the great causes of unrest, ought to say so, and ought to say that all of these agencies through which the men can be given—the men and women can be given a better chance to express themselves, can be given an opportunity to have something to say about their own lives—that these agencies should be encouraged by the Government as much as it is possible for the Government to encourage them.

Mr. THOMPSON. Do you know cases, Mr. Olander, where the unrest breaks out in industrial conflicts, such as strikes or lockouts—have you any ideas or remedies by which such situations might be treated, either to prevent when the situation gets warm—to prevent the outbreak from occurring, and if it does occur, reduce it to the limits, the least possible limits?

Mr. OLANDER. I would not agree to anything that has for its purpose the prevention of strikes. I do not believe that any repressive measures would be good; would have much the same effect as filling a kettle full of water and then plugging it up and setting it on a fire. It will blow up after a while. You can't, if you have that fire going there, you can't confine that water in that kettle, no matter how hard you try. It will explode eventually.

Mr. THOMPSON. Leaving out repressive measures, Mr. Olander, because I think the public are agreed that they can't be used, what would you say should be done?

Mr. OLANDER. Conciliation; get the two sides together. Sometimes there are conditions in an industry—I can conceive of conditions in an industry where it might be—or in a particular part of an industry, where it might be a very difficult thing for the employer to do all that was necessary in order to be actually fair to the men. The thing for that employer to do, in my opinion, is to take the men into his confidence, meet them on equal terms, and when they are telling him their troubles let him tell them his troubles, treat them as equals, and I think that we will get over those things without very much trouble if that is generally recognized.

Mr. THOMPSON. Do you believe a board of conciliation and mediation and arbitration will result in good?

Mr. OLANDER. I think that arbitration is really valuable only so far as it leads to conciliation, and I think that the main thing to do is to try to get the two sides together and have them adjust their affairs so that there may be an agreement satisfactory to both sides and put them on honor to carry it out. That is the strongest kind of contract you can have.

Mr. THOMPSON. Have you followed out the work of the United States Board of Mediation formed under the Newlands Act in the railroad world?

Mr. OLANDER. Not very much. It has been confined purely to the railroad industry, and I haven't watched it very closely.

Mr. THOMPSON. Do you believe a national board of conciliation to deal with industrial problems and make investigations and mediate and conciliate would be a good thing?

Mr. OLANDER. No, sir; I don't like the board idea. It smacks too much of the courts and the establishment of precedents, the dealing with one situation exactly as you deal with another. You have different people to deal with and different localities, and a thousand and one things. Aside from that, you have different times to deal with—different periods—and we are going ahead all the time, and I fear a permanent board would get into a rut before long and accept conditions as they are to-day and try to apply them to-morrow, and I don't think that would work.

Mr. THOMPSON. Have wages decreased since 1907, or increased?

Mr. OLANDER. You mean wages generally?

Mr. THOMPSON. Yes; on the Great Lakes.

Mr. OLANDER. I think if anything there has been a slight increase, taken as a whole.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Any questions?

Commissioner LENNON. I would like to ask one question: If your organization had a contract with the vessels on the Great Lakes would you in that contract or through the influence of your organization endeavor to protect the interests of the people who are passengers on the vessel; that is, by requiring skilled men to be employed, rather than unskilled?

Mr. OLANDER. That is what we tried our level best to do during all the time we had the agreement, and it is one of the things we are fighting before Congress now. I would say that we could undoubtedly—I haven't the slightest doubt we could have obtained from Congress long before this the things necessary to remedy the industrial evil under which the men work now except for the fact that part of the bill provides for the safety of the traveling public, and it is on that account the bill has been held up during the past year.

Commissioner LENNON. You remember the *General Slocum* disaster in New York, do you not?

Mr. OLANDER. Yes; I remember very well.

Commissioner LENNON. Was the conclusion reached by men who are competent to judge that the disaster was largely caused by the employment of people who were not seamen as seamen?

Mr. OLANDER. That was the report of the United States commission on the investigation of the *General Slocum* disaster. That statement, very nearly like the one you uttered, is included in the statement of that commission.

Commissioner LENNON. And other disasters at sea—haven't verdicts been rendered in other cases that the employment of able seamen was inadequate for the proper management of the vessel?

Mr. OLANDER. That is generally a recognized evil everywhere. They try hard to hide it in some reports, but it is there somewhere in every one of them.

Commissioner LENNON. And the seamen's union has stood squarely for the employment of able seamen everywhere?

Mr. OLANDER. Yes, sir.

Commissioner LENNON. That is all.

Chairman WALSH. Are men in your industry required to earn enough in 8 months to subsist on for the entire 12?

Mr. OLANDER. That is the situation on the Lakes, but it is hard to do it, and they find other employments. I might call your attention to the fact that our wage scale, like the wage scales throughout the United States, are not sufficient to support a family, and for that reason we have a very small per cent of married men.

Chairman WALSH. How much below the minimum amount to support a family in decency do your wages fall, if you can tell approximately?

Mr. OLANDER. I would say as applied to the industry as a whole in the United States it is about one-half too small.

Chairman WALSH. Was there any other matter upon which you would like to give testimony that has not been called out by these questions?

Mr. OLANDER. I answered a question with reference to the establishment of a conciliation board by saying I didn't believe in the establishment of a board for that purpose. I would like to make that clear. I would like to make my views clear on that, because my attitude will be misunderstood in the answer.

Chairman WALSH. Very good. Proceed.

Mr. OLANDER. I do believe the Government can do a good deal toward conciliation, and I have been watching with great interest the work of the Department of Labor in that respect. Section 8 of the law provides that the Secretary of Labor is to act as mediator and conciliator in industrial issues, and men have been appointed to represent him to go to industries where disputes do occur, and try to get the two parties together. I believe that something might be done to extend that work. I don't think that it all ought to depend on any particular permanent man who is employed. That the department might delegate anybody to represent the department to go there for the purpose of trying to bring the two sides together. I think you can't get anything permanent unless you get the two sides together. I think they do much good, and I think the work of the department has been good, and if the commission hasn't looked into it I think they ought to look into it.

Commissioner GARRETSON. What is the difference, from your standpoint, between the Department of Labor using the same man for that purpose continuously and somebody being delegated as an independent mediator to serve continuously, in regard to him getting into a rut?

Mr. OLANDER. There is this difference, that the Department of Labor was created for a special purpose to watch over the interests of the wage earners of the country. I would have in it other bureaus than the conciliation bureau, that would work in conjunction with the bureau of that kind if it was established.

Commissioner GARRETSON. You think that would keep a man out of a rut?

Mr. OLANDER. I say this, that there ought not to be anybody permanent there except perhaps a bureau head. I do not believe in permanent conciliators. I do believe in permanent conciliation.

Commissioner GARRETSON. That is the point I was desirous of information on; if the bureau leader is there and the commissioner of conciliation is there, what influence could put one in the rut and keep the other out?

Mr. OLANDER. I think that a man doing a particular job over and over again gets into a habit of his own, and he applies his own methods to it, and he finds that a certain procedure is good and he holds to it, never getting away from it, and does not try to do anything new. I think that explains my view with reference to the possibility of it becoming a rut.

Commissioner GARRETSON. You take the same individual and denominate him commissioner of conciliation, and then give him the name of commissioner of conciliation under the Labor Department, would he act differently in the two capacities?

Mr. OLANDER. I wouldn't have him in the field. I would simply have him as a bureau head.

Commissioner GARRETSON. Let him supply conciliators in any particular?

Mr. OLANDER. I think if you put him on the job of conciliation, that is, put him in the field, that would be just as true of him as it would of anybody else. I would set him down in Washington and keep him there.

Commissioner GARRETSON. Have you seen the letterhead, that he is in the field?

Mr. OLANDER. I did not know that there was a bureau of conciliation established.

Commissioner GARRETSON. There is a commissioner under the department, or at least he has a letterhead to that effect.

Mr. OLANDER. I understand that there is one man in the field. I understand there have been several others at various times.

Commissioner GARRETSON. I only know of the one. That is all, Mr. Chairman. Chairman WALSH. That is all. Thank you, Mr. Olander. Call your next witness.

Mr. THOMPSON. I will call Miss Mary E. McDowell.

TESTIMONY OF MISS MARY E. McDOWELL.

Mr. THOMPSON. Give us your name.

Miss McDOWELL. Mary E. McDowell.

Mr. THOMPSON. And your address?

Miss McDOWELL. 4630 Gross Avenue.

Mr. THOMPSON. A little louder, please.

Miss McDOWELL. Gross Avenue, 4630.

Mr. THOMPSON. And what connection have you with the University of Chicago settlement?

Miss McDOWELL. I am head resident, and lived there for 20 years.

Mr. THOMPSON. Twenty years?

Miss McDOWELL. Yes.

Mr. THOMPSON. During your service as head resident of that settlement, have you come in contact with labor problems more or less?

Miss McDOWELL. Yes; more.

Mr. THOMPSON. More?

Miss McDOWELL. Yes.

Mr. THOMPSON. And what particular field in the labor world around Chicago have you come in contact with mostly?

Miss McDOWELL. In my immediate community, with the unskilled worker.

Mr. THOMPSON. Where generally are they employed mostly?

Miss McDOWELL. In the great packing houses and stockyards.

Mr. THOMPSON. What is the condition, if you know, of labor in the industry to-day, generally speaking, and in your own way tell us.

Miss McDOWELL. I have a very late study made by one of our residents, which I can put on record, which will give you all the facts about wages and such things.

Mr. THOMPSON. If you have that we will be pleased to have it.

(The book so presented was marked "Exhibit 1, witness Miss Mary E. McDowell, July 23, 1914." A book entitled "A Study of Chicago's Stockyards Community," by J. C. Kennedy and others, published by the University of Chicago Press, was submitted in printed form.)

Mr. THOMPSON. In your own way, Miss McDowell, tell us as briefly as you can the condition of labor in that field?

Miss McDOWELL. That is a very big question, and I do not know—I have not made a study—I am not an economist—sociologist—I am only a neighbor, living there and know it by contact in that way.

Mr. THOMPSON. Any particular branch of that labor you have made a study of?

Miss McDOWELL. I know particularly of the family. I know what it means not to have quite enough wages. I know what it means not to have a sure job, through personal neighborly contact. And I think very much of the unrest to-day comes from the fact that a community is constantly demanding and putting forward stimulus that creates a growing standard even in unskilled workers' families. You see, even in the immigrant's family, how the simple wants become more and more, and then wages don't supply the needs, and the man's, the husband's wage is not sufficient in that industry, the job is not sure, it is not educational. I don't think there is any difference much in that than in any other great infinitesimally organized industry of to-day. I think that there is no pleasure in the work. It is monotonous. The wages are the only regard. The man does not see the result of his work. He only sees this one single infinitesimal thing he has to do every day and every hour. It is nerve racking; it is irritating. Of course there is no result in it. It seems to me that has a great deal to do. Then I think that this growing standard of—for instance, this very hot weather, it is very hard on the little babies. The commissioner of health says: "You must kill the flies. You must have sweet milk. You must have certified milk for babies." Well, the man that does not get \$2 a day

every day the year around can not supply the ice box, can not supply the ice, and you can not have fly screens. They are crowded into four rooms.

That is the unit generally, that is the standard, below which the American people will not go. And the newly arrived immigrant who has not money enough and crowds boarders, because there are great numbers of young men and young women coming into our neighborhood. They have to live somewhere, and the whole family help out, and it is the family income is the income, and even that is not enough to keep up to its demands. Even our public school's demands to-day, the demand of civilization to-day is greater. We require now in the public schools through our dental and medical inspection, we require that all the avenues to the mind shall be kept free, the adenoids must be removed. The mother is told that, the father is told that the teeth must be cared for, the eyes must be cared for. This is all a tremendous expense in any family life. And when it comes to the unskilled worker's life, you know they can not supply it. And workers the world over, this is not local—workers the world over I think are demanding the minimum of civilized life. But I do not know, it is very difficult to answer just what to do. I think some of us know what we would like to have done. We know what we dream about, what may come to put down this unrest which springs eternal in the bosom of every human being, because it is the same hope that has been expressed in various ways all down the ages, I think. I do not know, I may be very vague.

I went through an experience in 1904 with the stockyards strike. In every language in the neighborhood you heard, "We can not live a decent American life on 15½ cents an hour with 40 hours a week." That was the average hours through the year. And the union had brought that 15½ cents up to 17½ cents an hour. And skilled workers or unskilled workers, 60 per cent in the stockyards had their wages; they were organized quite down to the last man. It had their wages raised 2½ cents. Now, outside people do not know, they can't realize, the fight, the struggle of six weeks over 2½ cents; it seems to the average outsider a petty thing. It really means the line between poverty and existence to the greatest number of people in that neighborhood. And one woman said: "I would not care if I was sure my husband would have \$1.50 every day the year around. But 15 cents an hour, or even 17½ cents, with 40 hours a week—I am not sure that we can take care of sickness."

That was the attitude. It is this growing standard of living. I heard it all the time. It was the basis of the whole struggle. Of course they lost out, you know. I think Mr. Kennedy shows in his studies that they never went back to 8½ cents an hour. The greater number now get 16½ cents an hour where they used to get 15, so that the union did that much for them.

Mr. THOMPSON. Are the laborers in the stockyards organized, or do you know?

Miss McDOWELL. Only a few; little groups here and there; not in any large way at all.

Mr. THOMPSON. Were they organized?

Miss McDOWELL. The personnel is so changed. The fighting Irish have all gone out, mostly, except they work at the bottom a little bit; and the nationalities are so mixed that there is not very much fellowship, and it is a very difficult thing. I don't know whether they are going to do better or not.

Mr. THOMPSON. Were they organized prior to that strike?

Miss McDOWELL. Yes; Michael O'Donnell, I think, organized a very marvelous organization, from the squillgee man up to the top. It was organized in the yards at that time, and it was organized that way, I think, very democratic in its organization. They had a council; they brought in representatives from all the organizations, from the meat cutters and everyone else.

Mr. THOMPSON. That was destroyed by the strike, was it?

Miss McDOWELL. Yes; except, of course, there are some organizations there now, like blacksmiths and electricians, and such as that.

Mr. THOMPSON. How did the strike terminate—killed off or just dying out, or what was the cause of its failure, if you know?

Miss McDOWELL. Well, I do not know. I was not in the heart of it enough to be able to tell just what the failure was due to. I do not know. I think a strike, like a war, can not be run democratically. I think Michael O'Donnell tried to run it democratically. It was his first strike, and the awful expensiveness of democracy we learn by doing.

Mr. THOMPSON. Then you think you must draw one line against a democratic condition?

Miss McDowell. No; not at all; not at all. I think we have got democracy. We just learn by doing. It is only we have to learn it that way, I think.

Mr. THOMPSON. What views have you as to any remedy which might be applied to help this industrial unrest and discontent which you speak of? I mean that this commission could do.

Miss McDowell. I think along—I do not think anything will ever allay the unrest except democracy in industry. I don't know just what that means, but I think it has to come to pass some way; and I do not feel cocksure about that—about anything, very much. I am very pragmatic. I believe there are many things we ought to do. I think labor is very much involved in the whole city government. I think we must divorce municipal government from national parties, so that we can thus, perhaps, take over some industries.

I think that we must have municipal housing, because I do not see how we are going to house the unskilled workers, from the point of view of health and sanitation and morality, unless the city does it, as they do in Europe. And we do not want a city government to be the landlord, unless—if they are working all the time for some Presidency that is far off, that has nothing to do with municipal housing or garbage, or anything of that kind. Then, I think, as I have listened here, it seems to me we must have some piece of machinery that gives us facts that we believe in. The board of trade in London and in England is believed in; both labor and capital appeal to the board of trade. The minimum-wage boards came out of the board of trade. We have nothing here. Our labor statistics in the State everybody laughs at, always have laughed at; everybody knows that our whole labor department in the State is political, not scientific in any way whatever. We do not trust them. I think that is one of the very first things, one of the very things that I am sure Prof. Commons is tremendously interested in the study. That is one of the very first things that we ought to have.

Mr. THOMPSON. Do you believe perhaps a national industrial council, with power to investigate the facts in the industry both in times of peace and times of conflict, and in time of conflict with power to mediate and conciliate, would be a step in the right direction?

Miss McDowell. If we could be sure always, as every labor man has told you, there was no politics and it was nonpartisan and scientific, I should say yes.

Mr. THOMPSON. Assuming we could get those conditions, do you think that would be a step in advance?

Miss McDowell. Yes; I think that if we can get the truth and the facts can be made public, and we can trust them; but this is a big country for any one board to take care of, I should think.

Mr. THOMPSON. What other specific idea have you got to state to this commission that they could consider and recommend, perhaps, to Congress to help the situation?

Miss McDowell. Germany has an industrial court that I do not know much about, but what little I know about it, it seems to me that was good locally. It was made up of groups of people interested in labor disputes. I should like to have that considered, but I don't know that I have anything more. I think we will have to have, perhaps, a minimum wage for unskilled workers if we are going to—it does seem to me just now that in this country we are deciding what kind of Americans we want; and if we want to keep the standard of American citizenship up to that which—I think the trade-unions always speak of the American standard of living; our neighbors do; the first thing that the immigrant gets is that American standard of living, which means something very distinctive. I think we must have a short workday. I think that is very necessary and ought to be general and ought to be a legal one, so that in some way it could be worked out slowly and not upset all of our industrial life; but all of the demand that is made is for this right to leisure.

Mr. THOMPSON. Speaking about democracy, Miss McDowell, what ideas, if any, have you with reference to helping along democracy in the trades-union itself?

Miss McDowell. Well, the only trade-union I knew intimately was the Amalgamated Meat Cutters and Butchers' Workmen of North America, and I thought them very democratic. I at one time went to an initiation of the cattle butchers, when a negro man brought in the group to be initiated, and it took seven interpreters to initiate the group. And as an Irish girl went out with me from the meeting she said, "Well, that is brotherhood all right, isn't it?" I think they were organized in that very democratic way.

Mr. THOMPSON. Well, do you share the opinion which some people have, that in unions there is a large percentage, or a large per cent of unions, that are not democratic?

Miss McDOWELL. Yes; I think there are some unions that are very aristocratic, and yet I hold that even the aristocratic union helps toward the standard of living we demand in America.

Mr. THOMPSON. I was speaking of democracy more looking at the—

Miss McDOWELL. Well, I think they limit their membership; I think they ask a perfectly enormous initiation fee. In Germany I found the metal workers with a half million membership and the smallest initiation fee, making it easy for every metal worker to get into that union.

Mr. THOMPSON. I was looking at it more from the standpoint of the selection of officers and the calling and settling of strikes.

Miss McDOWELL. Well, I don't know a great deal about that, except in the butchers' union, and I thought they were very democratic there.

Mr. THOMPSON. Are you acquainted with what the average rent is for four rooms, say, in the district you speak of?

Miss McDOWELL. Yes. Well, it varies so; as the real estate man says, it is what you can get out of them. Miss Breckenridge and Miss Abbot made a very fine study of 10 blocks, and I think they were not able to tell exactly. But I have computed it at about \$2.50 per room, without any conveniences whatever. They give nothing but cold water.

Mr. THOMPSON. Has the rent increased the last few years?

Miss McDOWELL. Yes; it has increased somewhat in the last few years.

Mr. THOMPSON. What do you know about conditions in domestic service; have you made a study of that branch of work?

Miss McDOWELL. Well, the women's trade-union league has organized domestic servants. I think it is one of the questions that the women don't tackle as well as they might. I think it is our special job, but perhaps the brethren will have to do it, because it comes so close to us, just as factory conditions come so close to the manufacturer.

Mr. THOMPSON. Is it generally thought desirable by women workers in such service?

Miss McDOWELL. No. Nobody wants to do domestic service.

Mr. THOMPSON. Do you believe that organization of the servants would help?

Miss McDOWELL. I beg your pardon?

Mr. THOMPSON. Do you believe that an organization of domestic servants would help?

Miss McDOWELL. Well, I would like to see it tried. It is a service where the supply is so slight, the demand so great, that I don't know how far it could go. I think it needs very much to be regulated in some way. I think that outside of a certain small group of people domestic servants don't have at all the right conditions.

Mr. THOMPSON. Is there any other statement you would like to make to the commission?

Miss McDOWELL. I don't think so; it seems I have said a great deal.

Chairman WALSH. Well, you have. We thank you very much. We are trying to hurry through with our program. Mr. Weinstock wants to ask you a question.

Commissioner WEINSTOCK. You have been engaged in your work now for 20 years, Miss McDowell?

Miss McDOWELL. Twenty years in that settlement back of the yards.

Commissioner WEINSTOCK. And you are neither an employer or worker; you speak disinterestedly?

Miss McDOWELL. Oh, I am an employer of a janitor and maids.

Commissioner WEINSTOCK. Yes; but not an employer in the broad way?

Miss McDOWELL. No.

Commissioner WEINSTOCK. Will you tell us, as the result of your observation and experience, Miss McDowell, whether society generally, forgetting the individual employer and forgetting the individual worker and looking for the common good, whether society generally would be made better or worse; that is, the conditions made better or worse by the wiping out of unionism?

Miss McDOWELL. Oh, much worse, I think.

Commissioner WEINSTOCK. Much worse?

Miss McDOWELL. Yes; I think the great mass of skilled workers, cheap labor that is below the scale perhaps of organization, is drawn up and held up by the very standard of organization of labor.

Commissioner WEINSTOCK. You believe, then, that the organization of labor has had an upward tendency?

Miss McDOWELL. Oh, decidedly. I didn't know anybody thought any other way.

Commissioner WEINSTOCK. Well, there are those who think differently. How would the conditions under which the average family of the unskilled worker live to-day compare with those, say, of 20 years ago, when you first entered the work? Are the conditions better or worse?

Miss McDOWELL. It is very hard to answer, because there is a new group coming in all the time from the old country.

Commissioner WEINSTOCK. But striking a general average, if you can?

Miss McDOWELL. Well, I think the generation that lives through the whole process lives on a higher grade, and I think the desire is to be American very soon. It shows itself in the clothes at first.

Commissioner WEINSTOCK. Well, take the average family in your district, in your vicinity, in your territory, in what respect are they better off to-day than a corresponding family was 20 years ago when you first came there?

Miss McDOWELL. Well, they have all moved away; you see what happens to our neighborhood.

Commissioner WEINSTOCK. I am not speaking of any particular family.

Miss McDOWELL. No; I know.

Commissioner WEINSTOCK. But, taking the average family of to-day, how do they live as compared with families in a corresponding strata 20 years ago?

Miss McDOWELL. Well, a study was made of 165 families of unskilled workers, who had \$1.65 to \$2 a day, all English-speaking, most of them, and it was a study made of the children who could not keep up with their grades, and a very intimate study was made; and it was found that those children did not have sufficient food, because the family had a standard above taking in lodgers and crowding their four rooms with lodgers.

Commissioner WEINSTOCK. That is a recent condition?

Miss McDOWELL. Yes; that is the condition.

Commissioner WEINSTOCK. Were there cases of that sort 20 years ago?

Miss McDOWELL. No.

Commissioner WEINSTOCK. There were not?

Miss McDOWELL. No; and we didn't have 20 years ago such an overcrowded condition there.

Commissioner WEINSTOCK. What is left to them, I should gather from what you say, then, that conditions are not so good to-day as they were 20 years ago?

Miss McDOWELL. Well, you see, I am thinking all the time of one group that has gone away, the whole mass of people that has left us, and the whole mass of people coming over from Galicia and Ruthenia. That is hard to tell.

Commissioner WEINSTOCK. Are we to understand, then, that the family that was in your district 20 years ago is to-day very much better off?

Miss McDOWELL. Yes; if they lived through the process, those that live through the process and the process of becoming—

Commissioner WEINSTOCK. Go up?

Miss McDOWELL. Yes; go up.

Commissioner WEINSTOCK. The tendency is upward?

Miss McDOWELL. Yes; I think the tendency is upward—well, it is hard to say what is upward, of course.

Commissioner WEINSTOCK. You say that the average worker, unskilled worker, gets about \$1.65 a day in your vicinity?

Miss McDOWELL. Yes; \$1.65.

Commissioner WEINSTOCK. Can you recall what that same kind of worker got 20 years ago?

Miss McDOWELL. Well, all those figures are in that book. I am not very good about figures, and I have handed them over. But there has been an increase in the lowest wages and a decrease in the middle wages of the stockyards. It is such a huge industry, don't you know, there are very few skilled at the top—60 per cent so-called unskilled.

Commissioner WEINSTOCK. That is all, Mr. Chairman.

Commissioner O'CONNELL. Do you think, Miss McDowell, there ought to be any further restriction of immigration?

Miss McDOWELL. I don't think we ought to restrict immigration except on the lines that prevent artificial stimulus, until we have tried every other method of caring for the immigrant in this great country of ours. I can't bear the idea of restriction of immigration.

Chairman WALSH. That is all. Thank you, Miss McDowell.

Call your next.

Mr. THOMPSON. Is Prof. Deibler here?

TESTIMONY OF MR. F. S. DEIBLER.

Mr. THOMPSON. Prof. Deibler, will you give us your name, please?

Prof. DEIBLER. F. S. Deibler.

Mr. THOMPSON. What is your address?

Prof. DEIBLER. No. 2119 Sherman Avenue, Evanston, Ill.

Mr. THOMPSON. Are you connected with the Northwestern University?

Prof. DEIBLER. Yes, sir.

Mr. THOMPSON. In what capacity?

Prof. DEIBLER. I am associate professor of economics.

Mr. THOMPSON. I didn't get you.

Prof. DEIBLER. I am associate professor of economics.

Mr. THOMPSON. How long have you occupied that position?

Prof. DEIBLER. I have been in the Northwestern University for 10 years.

Mr. THOMPSON. For 10 years. Are you connected with the City Club of Chicago?

Prof. DEIBLER. Yes, sir.

Mr. THOMPSON. What position do you occupy there?

Prof. DEIBLER. I am chairman of the labor committees of the City Club.

Mr. THOMPSON. Now, Mr. Deibler, in your position as a professor of economy, have you considered the question of the industrial unrest which exists, or is supposed to exist, throughout the country?

Prof. DEIBLER. Well, I have given the labor conditions in general quite a good deal of thought the last few years.

Mr. THOMPSON. Well, do you think such unrest exists, as a matter of fact?

Prof. DEIBLER. I think there is unrest; yes.

Mr. THOMPSON. To what extent, in your opinion, does it exist, what is its cause, what is your idea of the cure to be applied?

Prof. DEIBLER. Well, it is pretty hard to say to what extent or to say what are the causes, because I think there are a good many causes of unrest. Some of them are pretty deep-seated, and depend upon our general economic conditions. We have gone through in the last 25 years quite a good deal of centralization of industry which has had a marked change upon the general market conditions. The opportunities for draining off labor supply, taking up the land supply, and things of that kind. More immediately, I think, that the prices have risen faster than wages, and that has been the cause for dissatisfaction and unrest. Others might be mentioned. I think, perhaps, those cover the main features.

Mr. THOMPSON. What, in your opinion, would be the remedy?

Prof. DEIBLER. You would have to fit the remedy to the specific unrest. On questions of wages, I think that wages in the main could be—the conditions affecting wages could be remedied largely through organization both on the part of the employer and the employee. I think that would be one of the most effective methods of improving those conditions. In some respects it would require legislation, perhaps. I have in mind now particularly the situation here in Illinois, which, I think, obtains in certain other States. We need better organization of our labor department and we need in that organization certain modifications of the law which would enable us to have better arbitration features than we have and a number of features of that character that could be mentioned. I think that this commission would be helpful if it would work out some sort of arbitration scheme and more or less standardize the conditions of arbitration in the various States. I recognize the difficulty of the Federal Government interfering with the State government; but we all know the uniform State child-labor law, that was adopted by a committee, was influential in standardizing the child-labor law in the various States.

I have a feeling that a commission of this character, giving its stamp of authority to some sort of legislation and organization of a department, and also as to the means of arbitration and conciliation between employer and employee, would be followed in the various States and standardize that condition.

Mr. THOMPSON. Do you think that the establishment of a national or Federal industrial council, with power to investigate the condition in industries, both in times of peace and specific questions in dispute in time of dispute, and with ad-

ditional power to conciliate, mediate, and, if necessary, arbitrate upon agreement of the parties—do you think that would be a good thing or not?

Prof. DEIBLER. I feel an industrial council somewhat similar to the industrial council of England would be beneficial.

Mr. THOMPSON. Have you any specific idea you would care to give to the commission with reference to the subject of conciliation and arbitration?

Prof. DEIBLER. Well, I think that the conciliation as it has appeared in the various States—by a committee that has been appointed, usually, by the governor—has not been very successful, and I think it would be very much better if that industrial commission of the labor department, organized something like New York or Wisconsin, an industrial commission would be helpful.

And there might be within the State an industrial council made up of employers and employees, from which there could be selected in the various industries—I don't expect to give all the details, but it appears to me there could be elected proper conciliators. I think there is a disposition among laborers and employers to disregard the arbitration as it appears in most of the States and to regard it as a nonentity. It does not have their confidence. They don't have confidence in it. It does not have any influence. Whereas if the conciliation and arbitration is conducted and administered, perhaps, from their own members, they would have more confidence in them. However, if such a plan is not connected with some more or less permanent State body, it would lose the benefit of experience, and hence I think there should be a centralized labor department with conciliation features so that there will be permanent machinery.

Mr. THOMPSON. Referring to the subject of collective bargaining, what are your ideas thereto as to utility and need and help to the worker and industry generally?

Prof. DEIBLER. Well, my own opinion is that in most cases—most industries—collective bargaining is necessary to protect the interest of the employee. The individual bargaining does not adequately protect the interest of the employee, for this reason, the wage to the individual is of much more importance to him than the services of one man is to the employer; but if all of the men agree to work in common his interest in all of their services is quite as much as the interest of any individual is in his own wage; consequently, in modern industry, I don't see any way out but what collective action is necessary to establish economic justice between employer and employee.

Mr. THOMPSON. Take the subject of trade-unions, as to method and scheme of their organization, either as to craft or industry, and also as to the method they use during time of peace and during time of strike; what have you to say to the commission.

Prof. DEIBLER. Well, that covers a number of points in that question, I think. Of course there is a good deal of agitation at the present time as to whether industry should be organized on the craft line or on industry lines. I have the opinion, feeling, perhaps I should say, that the tendency is in the direction of organizing labor on industry lines, so that the bargain will be coextensive.

Commissioner O'CONNELL. Do you mean organizing on industry lines or organizing an industry organization?

Prof. DEIBLER. Well, I have in mind this situation, that take the coal miners. There was a time in which there was some craft organization.

Commissioner O'CONNELL. That is an organized industry.

Prof. DEIBLER. Yes, sir.

Commissioner O'CONNELL. But not an industry organization, in the sense of organizing the entire—

Prof. DEIBLER. Oh, no.

Commissioner O'CONNELL. I want to differentiate between the two.

Prof. DEIBLER. Not taking all labor together, but making a collective agreement, coextensive with the individual; that is the thing.

Commissioner O'CONNELL. The organization of an industry?

Prof. DEIBLER. Yes, sir.

Chairman WALSH. Proceed. I think you were saying something when Mr. O'Connell asked you that question. I thought you didn't quite finish it.

Prof. DEIBLER. I was just saying I think the tendency was in the direction of organizing labor on the basis of the industry rather than on the basis of the craft.

Chairman WALSH. I thought you were going to give whether or not that was desirable.

Prof. DEIBLER. I think it is desirable, otherwise it tends in the direction of jurisdictional disputes, and I think it works for unrest and dissatisfaction all the way around.

Chairman WALSH. Where should the line be drawn?

Prof. DEIBLER. I think it should largely be drawn by the extent of the organization of the employers. If the industry includes certain classes of workers, I think on the whole it would be better that the agreement cover all that are involved there, otherwise there is a chance for the employer to play one group up against the other.

Commissioner O'CONNELL. In the steel industry, would you go into the ore, too?

Prof. DEIBLER. Well, I haven't thought of that particularly.

Commissioner O'CONNELL. For instance, the United States Steel Co., they own ore mines. Would you put them in one organization?

Prof. DEIBLER. Perhaps it might be necessary under those circumstances. I know some industries have difficulty. I know certain unions that have had to deal with such problems, and in negotiating their agreement they have negotiated for particular groups, although different unions. Of course those are problems.

Commissioner O'CONNELL. Would you put all railroad employees in one union?

Prof. DEIBLER. I think I would, as their tendency is in that direction; the federation is in that direction.

Commissioner O'CONNELL. I leave you to the mercy of Brother Garretson.

Prof. DEIBLER. I have no doubt.

Mr. THOMPSON. What have you to say with reference to the methods used by the unions in time of peace and in time of war?

Prof. DEIBLER. Well, could I ask to have that a little more specific?

Mr. THOMPSON. Well, I mean have you any views as to the method used, such as restriction of membership in time of peace; high initiation fee?

Prof. DEIBLER. I think the trade-union that undertakes to limit its membership by high fees tends to establish a monopoly of labor and is unwise from their point of view, and would be just as detrimental to the community as monopoly on the side of the employer.

Mr. THOMPSON. Take the limitation of output, check-off system, standardization of wages, closed shops.

Prof. DEIBLER. I do not believe in limitation of output, as it is commonly stated. Of course there are different kinds of limitation of output; we have limitation of output, I suppose, when we pass an eight-hour day, and things of that kind that would be perfectly legitimate if in behalf of humanity. If it is taking the matter into the hands of the employee without the consent of the employer and limiting the output, as the accusation is sometimes made, I think, that is detrimental. I think it operates detrimentally to the laborers themselves to the extent which the limitation of output goes when you abuse its use.

Mr. THOMPSON. Is there anything else you specifically have in mind that you would like to tell this commission which will throw light on industrial problems, in regard to any angle of it, on which you feel you have something to say and would like to say?

Prof. DEIBLER. I have not prepared a brief. I was expecting to answer questions more particularly.

Chairman WALSH. At this point we will adjourn to meet in this room tomorrow morning promptly at 10 o'clock.

(At 4.30 p. m., Thursday, July 23, 1914, an adjournment was taken until Friday, July 24, 1914, at 10 o'clock a. m.)

CHICAGO, ILL., Friday, July 24, 1914—10 a. m.

Present: Chairman Walsh, Commissioners Delano, Lennon, O'Connell, and Garretson. William C. Thompson, counsel.

Chairman WALSH. You may proceed now, Mr. Thompson.

Mr. THOMPSON. Is Mr. Gindele here?

TESTIMONY OF MR. CHARLES W. GINDELE.

Mr. THOMPSON. Will you give us your name?

Mr. GINDELE. Charles W. Gindele.

Mr. THOMPSON. Your business address?

Mr. GINDELE. 3333 La Salle Street.

Mr. THOMPSON. And your business?

Mr. GINDELE. General contractor in the building construction line.

Mr. THOMPSON. Your business is all over the country, is it?

Mr. GINDELE. To a certain extent; yes, sir. Of course, most of it in the Middle West.

Mr. THOMPSON. Principally in Chicago?

Mr. GINDELE. Very little work, if any, in Chicago.

Mr. THOMPSON. Are you speaking now or generally that you do little work here in Chicago?

Mr. GINDELE. We have not done any work to amount to anything in Chicago since 1887.

Mr. THOMPSON. Are you familiar, Mr. Gindele, with the labor conditions in the building trades in Chicago?

Mr. GINDELE. To a certain extent.

Mr. THOMPSON. Are you familiar with the conditions of labor in the building trades in the Middle West generally?

Mr. GINDELE. Not very much.

Mr. THOMPSON. Well, in your work as a contractor you have come in contact with labor. You use it, do you not?

Mr. GINDELE. Personally, I have not come in contact with labor to a great extent since 1900.

Mr. THOMPSON. 1900?

Mr. GINDELE. I am the head of the Charles W. Gindele Co., and the business is generally run by the general manager.

Mr. THOMPSON. Who is the general manager of the company?

Mr. GINDELE. Charles H. Riach.

Mr. THOMPSON. Has he more information in reference to the labor problem than you would in that particular?

Mr. GINDELE. I hardly know as he would, for this reason: That in whatever city we do work in the construction line we comply with the conditions as far as labor is concerned in that city.

Mr. THOMPSON. I am speaking of the building industry in this city; is labor well organized?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. It is?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Have the various labor organizations agreements with the builders?

Mr. GINDELE. To a great extent; yes, sir.

Mr. THOMPSON. Are the builders—I mean contractors—in the city of Chicago organized into an association?

Mr. GINDELE. Yes.

Mr. THOMPSON. Have they been for many years?

Mr. GINDELE. There have been contractors' organizations for years in the city of Chicago. There has always been what is known in the city of Chicago as the building contractors' association, which is out of existence at the present time, and in its place has sprung up the Building Construction Employers' Association, which organization at the present time, July 1, has in it 640 members; recently the carpenters' association affiliated with us, making an additional number of 506, making a total of eleven hundred and some odd members.

Mr. THOMPSON. Is it general in making arrangements with organized labor in this city that these associations of employers make agreements with the organizations of the unions?

Mr. GINDELE. Yes, sir; the major portion of them. The fan back here knocked off your question.

Mr. THOMPSON. I will talk a little louder. What I mean is, the individual contractor as such does not make an agreement with the union, does he? In other words, the agreements are made by the association of contractors?

Mr. GINDELE. In so far as your first question is concerned, the individual contractor has no hand in the making of the contract, the union generally puts the contract before him which he has to sign.

Mr. THOMPSON. The union seeks to make a contract, putting it in that way, and do they seek the contract from the individual contractor, or seek it from the association of contractors?

Mr. GINDELE. Well, there is an organization of employers, and they generally try to make an agreement with them, but there are some instances where

they go out on a strike, and if they get advantage of the strike they compel the employers to sign individual contracts of their own making.

Mr. THOMPSON. But leaving out the question of strike conditions, but in time of peace and the ordinary pursuit of the industry, the unions seek to make contracts with the organization or association of contractors?

Mr. GINDELE. Generally.

Mr. THOMPSON. In Chicago to-day is that the rule?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Have you an arbitration board in Chicago under arrangement with the unions in the building trade?

Mr. GINDELE. We have a number of arbitration agreements in existence in Chicago at this time. There is one agreement that is formulated between the two central organizations, the building construction employers' association on the one side and the building trades council on the other. That is an agreement in which any jurisdictional matters that may arise are to be adjusted by the joint conference committee, consisting of 12 members. Under the agreement, during the adjustment of the jurisdictional matter, there is to be no cessation of work. Then there is an arbitration agreement existing between the employers' association on the one side in a trade and the employees on the other side. But in a great many instances those agreements are not fully carried out by the employees. So far as the joint board of arbitration is concerned, those agreements stipulate that under no circumstances shall there be any cessation of work or any strike called by any business agent until the grievances have first been submitted to the two presidents of the organizations, and if they can't agree, to be submitted to the joint board of arbitration, but in a great many cases the business agents or officials of employees' organizations do not abide by that agreement.

Mr. THOMPSON. Taking up the first form of arbitration you spoke of, that relating to jurisdictional disputes. By jurisdictional disputes you mean, of course, the disputes between the ranks of the unions themselves, between different unions?

Mr. GINDELE. I can't quite catch all of that.

Mr. THOMPSON. You mean by jurisdictional disputes one that is between different unions?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Have there been many such disputes in the building trades in the city of Chicago?

Mr. GINDELE. Yes.

Mr. THOMPSON. Would you say they have been of frequent occurrence?

Mr. GINDELE. They were prior to July 18, 1912.

Mr. THOMPSON. Were these jurisdictional disputes marked with a great deal of—

Mr. GINDELE. Allow me to correct that. I think I said 1912. 1913, last year.

Mr. THOMPSON. Were these jurisdictional disputes marked with a great deal of bitterness on the part of the unions?

Mr. GINDELE. They were.

Mr. THOMPSON. Do you know whether there were any violations of the law in the carrying out of those disputes; I mean such as the beating up of men, and in other respects?

Mr. GINDELE. Up to the time of 1911 I wasn't very well conversant with the labor situation in Chicago for the reason I had retired to a great extent from business and also from the labor game, and in 1911 I again joined hands with some of the contractors of Chicago for the purpose of formulating the central organization which is in existence to-day. At that time and prior to that time the jurisdictional matters caused a great deal of trouble and distress in our city. From that time on they have been getting fewer and fewer, until we had a cessation of work in June and July a year ago. The outcome of that cessation of work brought about the formation of this joint agreement that is between the building trades council and our association to-day. At that time there were a great number of jurisdictional matters in dispute, and they were adjusted during that conference, and since that time there have been very few jurisdictional matters come up that the joint board had to adjust.

Mr. THOMPSON. The formation of your arbitration agreement was caused by the fact of these jurisdictional disputes, I take it?

Mr. GINDELE. To a great extent; yes, sir.

Mr. THOMPSON. In the formation of that board of arbitration to meet that condition, did you take into consideration the effect of the arbitration board in New York in the building trades?

Mr. GINDELE. Well, to a certain extent. The New York arbitration board really got their first formation of arbitration from the city of Chicago, the strike of 1900—or the lockout of 1900. At that time the building industry of Chicago got at peace and harmony, and continued so for a number of years, and in the meantime the building contractors' council was not as effective, because they thought peace and harmony would reign. But during the time organized labor again built up and became strong, and when they commenced feeling their strength, why, then again depredations and strikes, and such like, came on up until 1911, when the contractors again got together and then formulated the organization that exists to-day, on some different basis than it ever had been formed before. And as the thing stands to-day, we believe we have got about as good a system, as far as local conditions are concerned, to be adjusted in labor matters.

Mr. THOMPSON. Referring to the labor agreement that you have and the form of arbitration, is that in printed form?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Have you got a copy of that with you now, Mr. Gindele?

Mr. GINDELE. I have got a copy of the constitution and by-laws. This is the document; this is the constitution and by-laws [producing paper]. I wish to say, Mr. Thompson, with reference to our constitution and by-laws, they were formulated in the spring of 1911. The association has been in existence now for three years, and during those three years we have found where it has been advisable to amend the constitution and by-laws according to certain conditions that were encountered during the last three years, and the committee on the revision of the constitution and by-laws is at work at the present time, but they have not made their report as yet.

(A paper entitled "Synopsis of proceedings of joint conference committee, the Building Construction Employers' Association of Chicago and the Building Trades Council of Chicago, held at Chamber of Commerce Building, Chicago, July 8-18, 1913," and a booklet entitled "Constitution and By-laws of the Building Construction Employers' Association of Chicago," were submitted in printed form.)

Mr. THOMPSON. When they do, Mr. Gindele, would you mind seeing that the commission is furnished with a copy of the amendment?

Mr. GINDELE. With pleasure.

Mr. THOMPSON. Taking up the question of jurisdictional strikes, Mr. Gindele, again, in addition to the violence which you have spoken of, which they caused, did they cause a loss to workmen, to contractors, and to the owners of buildings in this city?

Mr. GINDELE. They caused what, Mr. Thompson?

Mr. THOMPSON. A loss, financial loss?

Mr. GINDELE. Well, at any and all times when there is a cessation of work, there are losses.

Mr. THOMPSON. Have you got any record, or are there any records in existence in this city showing the number, character, and extent of the jurisdictional disputes here in the building trades?

Mr. GINDELE. Our association has none. We do not keep that sort of record; but the newspapers generally keep that record, and they keep it more accurately than the association, because we can't always get the full facts from both sides.

Mr. THOMPSON. Have you any opinion now in round figures as to the probable loss to the people of Chicago—working people and contractors and owners of property—arising from the jurisdictional disputes?

Mr. GINDELE. I can not give you any figures. All I can give you is what I have heard during the existence of jurisdictional methods that have brought about a cessation of work where the merchants and everybody else complained about dull times. I have no doubt it ran into millions of dollars.

Mr. THOMPSON. To put it in another form. Have those jurisdictional strikes been a serious financial loss to the community as such?

Mr. GINDELE. Yes, sir; they were prior to 1913. Not so much up to the present time.

Mr. THOMPSON. In this printed information which you have given to us with reference to the present arbitration board to take care of jurisdictional strikes,

does it contain all of the details of the organization and other information so that the commission will understand how it works?

Mr. GINDELE. Well, there is not much detail about it. The agreement just merely stipulates in itself that a joint committee is to exist, consisting of an equal number from the employers' and employees' organizations, and that any jurisdictional matters that may come up will be adjusted by that committee and there will be no cessation of work during the adjustment of it. That is about all the detail there is to it.

Mr. THOMPSON. Have any decisions been made by this board of arbitration?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Are they in writing?

Mr. GINDELE. Printed form.

Mr. THOMPSON. Printed form?

Mr. GINDELE. Those that have been made up to the present—to the date of this present pamphlet.

Mr. THOMPSON. Will you be willing to furnish the commission a copy of that document?

Mr. GINDELE. Yes. This is up to May 1, 1914. And there have been a few made since, which I will call on the secretary to furnish you before the commission adjourns.

(The witness later submitted, in printed form, a booklet containing "Decisions of the joint conference committee representing the Building Construction Employers' Association of Chicago and the Chicago Building Trades Council," under the joint agreement adopted July 18, 1913.)

Mr. THOMPSON. With regard to the organization in the building trades, Mr. Gindele, do you feel, from your experience as a contractor and builder, that a union among the men is a good thing? Do you feel that it is necessary, we will say, to have an organization among the contractors and builders also? In other words, do you believe that both sides should be organized and strongly organized?

Mr. GINDELE. Yes, sir; for this reason: For the welfare of the rank and file, with an agreement as it exists at the present time between the central organizations of our city, and if it is abided by by the parties affiliated with the agreement it is something that the rank and file has never had heretofore. As the agreement stands, and if it is abided by by the parties to the agreement, the rank and file is in a position where when he leaves the house in the morning he is guaranteed a day's work, and where before this agreement was formulated he never knew when he would have a day's work or whether he would not have a day's work. But one trouble is that as far as the agreement is concerned on the party of one side they do not quite all acquiesce to the agreement. A major portion of the affiliated bodies of the building trades council adhere to the agreement, but there are some dissenting organizations. Why, I know not. They evidently know to the best of their own reasons about it, but if every organization of employees would adhere to the agreement as it exists between the two central organizations I know of no better system to bring about rest in industrial building in the city of Chicago.

Mr. THOMPSON. In your opinion, do you believe that you could have brought about this present arbitration agreement of settling jurisdictional disputes if you had not had a strong body of contractors, or organization of contractors?

Mr. GINDELE. The agreement that is in existence to-day between the two central organizations was brought about by a very small organization of contractors at the time it was installed. The labor element, the conscientious labor element, was heart and soul for the formation of this agreement; and the conscientious labor man, leader, to-day upholds it, and is only too willing and anxious that it shall remain in existence.

Mr. THOMPSON. Were you in the city of Chicago, Mr. Gindele, at the time of the late brick strike?

Mr. GINDELE. Yes.

Mr. THOMPSON. Do you know whether or not the brickmakers who went on a strike were affiliated with the building trades or not?

Mr. GINDELE. I understand the brickmakers were affiliated with no organization.

Mr. THOMPSON. About how many brickmakers were there on a strike, in general numbers?

Mr. GINDELE. All I know is from the report I have seen in the daily papers, about 2,700.

Mr. THOMPSON. About 2,700? What was the effect of that strike of 2,700 men on the building industry of the city of Chicago?

Mr. GINDELE. It was quite extensive. It threw out of employment in the building industry, according to calculation of our association, 125,000 to 150,000 men.

Mr. THOMPSON. What was the loss in wages, in your opinion, to the 125,000 to 150,000 workers in the building trades who were thrown out of work by reason of the strike?

Mr. GINDELE. Not having made any tabulation or calculation and from what reports I have seen from the papers, over a million of dollars.

Mr. THOMPSON. A million dollars per month?

Mr. GINDELE. No, sir; during the three months. On those figures I am not positive, you know.

Chairman WALSH. Your approximation is that the loss of wages ran into the millions of dollars?

Mr. GINDELE. Yes; I don't undertake to state that as far as the building industry is concerned, but also as far as the general public is concerned.

Mr. THOMPSON. Now, Mr. Gindele, have you any opinion or any remedy in mind or anything which would help the situation like that and prevent such an enormous loss to the community by reason of a strike of a few hundred men?

Mr. GINDELE. I didn't get the question.

Mr. THOMPSON. In the consideration of that trouble and the loss it occasioned to third parties, have you any idea as to what should be done to remedy such a situation?

Mr. GINDELE. Yes, sir. I believe if every organization of employers in the city of Chicago should affiliate with some central party and that body have an agreement with the employees similar to the agreement that exists between the building employers' association and the building trades council, it would do away with all difficulties so far as the future is concerned with reference to agreements and such like and which has existed heretofore and which exists to a certain extent to-day. The one-man power on the employees side, known as the business agent, has got entirely too much authority. There are a number of organizations of employers and employees which have agreements between them and the business agent to a great extent ignores the stipulations in those agreements. If he finds anything that in his mind he thinks should not be, whether it is right or wrong, he calls off the men, not only as far as his part of the work is concerned, but with the exchange of cards the business agents have, they also call off the other men, and not paying any attention or abiding by the agreement. Wherever any difficulty arises under that agreement the business agent's duty should be to notify the president of his organization, and the two presidents get together, as I sat in the fore part of my testimony, if they could, to adjust the differences, and if they can't adjust them, then the matter should go to the joint board of arbitration. If they would conform to the agreement there would be a great deal of trouble that would be avoided and a great many men have their day's work. But the power is too great—the one-man power.

Mr. THOMPSON. What remedies would you suggest, Mr. Gindele, to reduce the power of this one man, who apparently violates agreements made in good faith?

Mr. GINDELE. First of all, I believe that any and all labor organizations ought to be incorporated under the State laws of every State they exist in, so that they would become a responsible body. As they are to-day they are an irresponsible body in case of trouble. The same way as far as the employers' organizations are concerned. And when that can be brought about, rules and regulations can be made whereby the business agent, calling for a strike, not having given it a thought, but calling it promiscuously, there would be a punishment imposed upon him, and for the second offense that he be removed from office.

Mr. THOMPSON. I didn't get the last, Mr. Gindele.

Mr. GINDELE. And for the second offense be removed from office.

Mr. THOMPSON. Have you any ideas as to what reforms could be carried on in the organizations of the unions themselves which might curb or prevent the exercise of such arbitrary power by one man?

Mr. GINDELE. That is a reform that ought to be brought about within the organization itself.

Mr. THOMPSON. You have no notions as to how it might be obtained?

Mr. GINDELE. It could be done by perhaps a referendum vote or election where each and every individual of the organization can deposit his ballot as he sees best, and after that ballot has been deposited that it is fairly counted.

Mr. THOMPSON. You think that would help a lot?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Referring to the employers' associations, Mr. Gindele, where you have a strong employers' association, has it the power to discipline one of its own members?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. So as to compel him to perform and carry out contracts made?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. With organizations of labor?

Mr. GINDELE. Yes, sir. The building constructors employers' association membership are under bond; each and every individual member executes a bond in accordance with the amount of work that he generally does during the year. He also signs an agreement, which stipulates as to what the duties are and for any violation, and if he violates any of the stipulations or anything that the executive board may do or bring about the matter is brought before the grievance committee, the case investigated, and a penalty imposed.

Chairman WALSH. Has he a form of the bond?

Mr. GINDELE. If he don't pay the penalty, why, we call on the bondsman.

Mr. THOMPSON. Have you a form of the bond that you use in your association?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Will you furnish the commission with it?

Mr. GINDELE. Also a form of the agreement.

Mr. THOMPSON. While he is getting those documents I will ask you this question, Mr. Gindele: A strong employers' organization gives an opportunity to repress the unfair employer and to compel him to conduct fair means.

Mr. GINDELE. Those who are members of the organization; yes, sir.

This is the agreement that each individual member has to execute.

(The agreement mentioned was submitted in printed form.)

And this is the bond that covers the agreement.

(The form referred to was submitted in printed form.)

Mr. THOMPSON. Have you in operation in Chicago, Mr. Gindele, a system among the unions known as the permit system?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. What is the permit system?

Mr. GINDELE. The permit system—first, an organization, a certain number of members, and they feel inclined to take in no more members into that organization, although in that craft there may be a number in the city or there may be a number who come from other cities who belong to and carry the card of the international organization or the national organization. The employees' organization, instead of increasing its membership when application is made, they issue a permit. For instance, I want a man in a certain trade, and I call upon the office of the secretary of that trade and ask him if he can send certain men to my job. He says, "Mr. Gindele, we haven't got any now; we will send you a permit man or two." They give that man a permit. He comes to my job. The consequence is he may be a good, first-class mechanic, and I am pleased to have him. But just so soon as one of the members of the organization is out of a job they send that man to my job and take off my permit man, whether I like it or not, whether the man they send is as competent as the one I have got. The permit business is something that is detrimental, not only to the employee but also to the employer to a great extent.

Mr. THOMPSON. What remedy would you suggest for it, Mr. Gindele, if you have one?

Mr. GINDELE. Well, there could be several. First of all take the permit men, for the reason, if he is a union man, they have a right to give him a clearance card. That clearance card ought to allow him to work on any job in the city. If they do not want to take him up as a member, or if he don't want to take or feel inclined to become a member of this local, he may be a local of some other city; second, if the permit system should exist and he be carried on in the future, the employer should have the right to say when that permit man is to be laid off, and not to be laid off at the dictation or suggestion of the business agent.

Mr. THOMPSON. These permit men, of course, are union men?

Mr. GINDELE. Yes.

Mr. THOMPSON. And belong to the same international?

Mr. GINDELE. Same national or international organization.

Mr. THOMPSON. What is your idea of the reason that the local unions in Chicago insist upon handling the matter in the way you say they do?

Mr. GINDELE. As I understand—I do not know it to be a fact, but I believe it—the permit man pays a certain amount to the business agent or the association for the privilege of working, and in that way quite a revenue—to whom I know not.

Mr. THOMPSON. Is the system in general operation in the city of Chicago?

Mr. GINDELE. To a great extent.

Mr. THOMPSON. Have you any other ideas as to the method of settling jurisdictional disputes other than what you have stated?

Mr. GINDELE. I know of no other. I believe the system that we have adopted, as far as our local conditions are concerned, are about the best that we have found out in all the years of this labor unrest.

Mr. THOMPSON. But these international unions, Mr. Gindele, who have jurisdictional disputes here operate, most of them, all over the country, do they not?

Mr. GINDELE. To a great extent; but still at the same time you take it, as far as national or international organizations are concerned, and a jurisdictional matter should spring up between some of their affiliated bodies and in annual convention convened, those who who have the major portion of the influence of that body, whether right or not, harass. Also the national bodies have made decisions that conflict with one another and thereby bring about greater unrest. If the jurisdictional matter—that is, the settling, or the system that has been put in Chicago—be central organizations, where local conditions are concerned, they are more versed with the situation and know better how to decide, as far as jurisdictional matters are concerned.

Mr. THOMPSON. Do you see any danger in the fact you may have in Chicago one settlement of a jurisdictional dispute and in New York you may have the opposite settlement?

Mr. GINDELE. No; for the reason we decide on local conditions.

Mr. THOMPSON. But does that embrace the conflict between international organizations for possession of the work?

Mr. GINDELE. As far as our present conditions in Chicago are concerned, with our employees we have agreed to abide by the decisions, so far as local conditions are concerned, irrespective of any decision, so far as the national organization is concerned.

Mr. THOMPSON. You believe that is the best method?

Mr. GINDELE. Yes; for the reason the conditions here may be a great deal different from what they are in New York, Cincinnati, or elsewhere.

Mr. THOMPSON. In your business as a contractor, coming in contact with labor, I presume you have some idea with reference to the industrial unrest which is said to exist in the Nation?

Mr. GINDELE. I know not so much about what exists in the Nation, but as far as the unrest is concerned in our city here, it is caused greatly by certain labor leaders, and especially so far as the business agent is concerned; there would be very little unrest in the labor conditions in our city if each party would carry out the agreement to the letter as they exist.

Mr. THOMPSON. Where labor is unorganized there is no business agent, of course?

Mr. GINDELE. Certainly not—I don't suppose there is.

Mr. THOMPSON. Do you believe that unorganized labor in and about Chicago is contented with its lot?

Mr. GINDELE. I don't believe they are as contented in their lot as organized labor would be contented provided the agreements are carried out according to the letter and spirit of them.

Mr. THOMPSON. I am speaking more generally of industrial unrest on behalf of the people as a whole.

Mr. GINDELE. Well, as far as the whole is concerned, I believe that, as far as the field is concerned—I am speaking now of the building industry and not in other branches—that organized labor fares better than unorganized labor, but I believe, as far as shop conditions are concerned, that unorganized labor fares better than organized labor, for this reason: In shops the men are generally employed the year around, year in and year out. In the field it is a floating craft, as far as craftsmen are concerned, and I believe, as far as shop condi-

tions are concerned, they are a hundred per cent better off without union conditions than they would be, for the reason that if union conditions existed in shops there is always some disturber among them who creates a sort of dissatisfaction, and after he has created the dissatisfaction he dwindles out of sight and has nothing said about him, and for that reason I believe shop conditions ought to be left open for the welfare of the employees and in the field work union organizations.

Mr. THOMPSON. With reference to the general cause of industrial unrest, you have nothing to say—you have no opinion as to whether a general state of unrest exists or not, outside of the building trade?

Mr. GINDELE. Well, I haven't given much attention outside of the building trade. I have made that more of a study, but evidently there is not so much unrest in the unorganized labor in our country for the reason that there is a very small per cent of it organized, and if a general unionism throughout the country is more beneficial than unorganized labor I naturally suppose there would be more organizations.

Mr. THOMPSON. Referring to the building trades again, just for a moment. You say you do business not only in Chicago, but throughout the Middle West here?

Mr. GINDELE. Yes, sir.

Mr. THOMPSON. Do the Chicago decisions with reference to jurisdictional matters have weight elsewhere, outside of Chicago?

Mr. GINDELE. They have, as far as any work of my company is concerned.

Mr. THOMPSON. Isn't it a fact your business is not a local business—the building trade is all more or less of a nation-wide character?

Mr. GINDELE. Well, we are not local and we are not nation wide for this reason: There are certain corporations we do some work for within a radius of 500 miles of Chicago and we very seldom go beyond that radius.

Mr. THOMPSON. That is all.

Commissioner GARRETTSON. You made the statement you believed labor organizations should be incorporated as well as employers' associations, and that a business agent who violated an agreement should be punished therefor, and for the second offense removed from the office. That was your declaration?

Mr. GINDELE. That is, as far as the building industry is concerned, in our city.

Commissioner GARRETTSON. Yes; I am perfectly willing to narrow it to the building industry. Do you believe that the contractor or subcontractor who violates an agreement should be punished and the second time be barred from following that avocation?

Mr. GINDELE. I do.

Commissioner GARRETTSON. Good. That is all.

Commissioner DELANO. Mr. Gindele, when you do work in a city, whether Chicago or elsewhere, where these labor conditions are such as to cause jurisdictional strikes or interruptions, does that add to the cost of doing work—building work?

Mr. GINDELE. Any cessation of work adds to the cost of the building work.

Commissioner DELANO. Well, who in the long run pays that cost; do you contractors have to stand it or do you add it to the cost of the building?

Mr. GINDELE. To a greater extent it is paid by the contractor for the reason that he has a set price for his work. And if any cessation of work occurs during the construction of that building he is in no position to stop his overhead expense, and in that way it increases the cost to the contractor.

Commissioner DELANO. If you take a job in the city that was notoriously bad in that respect, or where you had had bad experience before, would you, in making your bid for work, or would any other contractor—would he add something to the price of doing the work?

Mr. GINDELE. Some might and some would not. Those that did would be liable to lose the job.

Commissioner DELANO. That is all, Mr. Chairman.

Chairman WALSE. Mr. O'Connell.

Commissioner O'CONNELL. Mr. Gindele, have there been any members of your association expelled for noncompliance with the rules and regulations?

Mr. GINDELE. No, sir.

Commissioner O'CONNELL. Have there been any concerns in your association that have violated their contracts with the unions?

Mr. GINDELE. Yes, sir.

Commissioner O'CONNELL. What has been done in their case?

Mr. GINDELE. They have been fined.

Commissioner O'CONNELL. Fined how much?

Mr. GINDELE. According to the offense—from \$50 to \$250.

Commissioner O'CONNELL. About how many of them have been fined \$250?

Mr. GINDELE. Oh, quite a number of them; I don't know just how many off-handed.

Commissioner O'CONNELL. Fifty?

Mr. GINDELE. Sir?

Commissioner O'CONNELL. Fifty of them?

Mr. GINDELE. No; I don't think there were that many that were fined—50 of them fined \$250. There was quite a number. Perhaps the secretary, when you get him on the stand, can tell you that.

Commissioner O'CONNELL. Have any of these that have been fined been fined a second time?

Mr. GINDELE. No, sir.

Commissioner O'CONNELL. The one fine seemed to correct it?

Mr. GINDELE. It helped it.

Commissioner O'CONNELL. Are there any particular firms that seem to have trouble more than other firms with the unions or the business agents?

Mr. GINDELE. Well, that depends a good deal on the magnitude of the job. For instance, you take a large building like the Lumber Exchange that is being constructed across the way, when it gets a little further advanced there will be a large number of crafts working in the building. And sometimes from the number of craftsmen there, little difficulties may arise—it gives a general contractor a little bit more trouble than if we were out on the prairie somewhere putting up a flat building or something like that, so that the larger number of people employed of the different crafts there is more apt to be trouble.

Commissioner O'CONNELL. Did I understand you to say that you believed the workmen on the outside or in the building should be organized, but those in the factories should not? Did I get your idea right on that?

Mr. GINDELE. You did; yes, sir.

Commissioner O'CONNELL. What is your reason for that peculiar theory?

Mr. GINDELE. As I stated before, shop employment—the shop employees are generally hired throughout the year, year in and year out, where in the field it is a floating craft, and the employee has not the same advantage to put in his day's work as he has in the shop, and where there is an open shop there is more of a tendency to keep harmony than where it is unionized, and you get some disturber amongst the men in the shop who creates trouble. That is my reason for believing that an open condition as far as show work is concerned is better than a unionized shop.

Commissioner O'CONNELL. What is your reason for that, Mr. Gindele?

Mr. GINDELE. For this reason, it is a great deal better to deal with organized labor in the construction of buildings than with unorganized labor for this reason. The agreement existing between the organized employers and employees on that building, as you know, the conditions that you have got to work under and the wages you have got to pay.

Commissioner O'CONNELL. That brings the matter of putting up a building down to rather a science?

Mr. GINDELE. To a certain extent.

Commissioner O'CONNELL. Would not that same thing apply in a building of a locomotive, where they have a number of employees building different parts, or in the making of an automobile or a street car, or any particular thing in which a number of people were engaged rather cooperatively in building? Would not the same science be necessary to bring about the best results there?

Mr. GINDELE. As far as the result is concerned, my experience is very limited in reference to mechanical work of that nature. I believe in the shops that you have mentioned, Mr. Commissioner, that most everybody has a sort of special piece of work to perform.

Commissioner O'CONNELL. Well, take the printing of a great newspaper in the city of Chicago. You have the printing department, and the press department, and the stereotyping department, and the different number of departments, but they are all cooperating together to get out a great newspaper here in the morning. Is that not the same cooperation—getting along together? And shouldn't the same principle obtain there?

Mr. GINDELE. Maybe so. I am not so well versed with that. As I stated in opening my testimony, I am only talking in regard to the building industry. As

far as open shop is concerned in the building industry, I want to explain this, that the man in the mill that does the millwork—maybe make the trims, or make a show case, or he may make a table, or this or that—he ought to be in a position where, if he is through with a piece of trim, that he can put him on something else—a show case, a table, as the case might be. With organized labor in the shop, he would not be able to do that, because they would define their work—Tom does this, and Harry does that, and Pat does the other. Therefore I say that the open-shop condition, as far as the building industry is concerned, is better off in that way, as far as the employer and employee both are concerned.

Commissioner O'CONNELL. That is all.

Commissioner LENNON. Mr. Gindele, let us go back to the matter of the adjusting of jurisdictional questions. This matter has been before the commission a number of times. And I want your view as to why it would not be for the benefit of the building trades generally if the jurisdictional disputes could be settled nationally so as to cover the whole country. Why would that not be a benefit? Just take some specific case if you wish; take the case between the carpenters and metal workers. Suppose that could be settled for the entire Nation by the organizations at interest, or by a combination of the contractors' organizations and the trades involved, would that be a better thing to settle in Chicago in one way and in New York in another way, and in Philadelphia in another way?

Mr. GINDELE. It might be if political influence was not brought to bear on the decision to be rendered.

Commissioner LENNON. You do not mean national political influence?

Mr. GINDELE. No, sir.

Commissioner LENNON. You mean with the union?

Mr. GINDELE. I mean organized political influence; there is as much political influence in the organization as there is any place else.

Commissioner LENNON. You think the plan could be worked out that way satisfactorily, to settle it nationally?

Mr. GINDELE. Not as well as locally.

Commissioner LENNON. Where it is settled locally, is it not true that that is likely to be the cause for controversy in settling it somewhere else? A union gets an advantage in settling in Chicago. They are at a disadvantage in Quincy, I will say, because of the difference. Isn't it likely to reopen the matter, reopen the fight in Quincy in order to get the same thing they have got in Chicago?

Mr. GINDELE. No, sir; not unless, or when they settle on local conditions.

Commissioner LENNON. Not when they settle on local conditions?

Mr. GINDELE. No, sir.

Commissioner LENNON. If the shops where trim is made and furnishings are made for buildings are run unorganized, how are the men to secure a reduction of the hours of labor, for instance, or the increased wages? How is that to be done? How are they to better their conditions in that regard?

Mr. GINDELE. If they are working for a fair-minded employer, he will reduce the hours of work in accordance with the capacity of the men, for he knows that the human being is a good deal like the beast, that you can not overwork him and get the best results. The shorter hours that he works the better the results as far as his work is concerned, and pay him a fair rate of wage.

Commissioner LENNON. Is not the fair-minded employer subject to the influence of competition of the unfair man?

Mr. GINDELE. Well, to a certain extent. Still, at the same time, he can't put himself on the same basis as the unfair man, because he seeks his work in different places as the unfair man does. We have men in our city who are paid beyond the scale of wages in years gone by, the one wage exists, and they haven't taken advantage of the supply being larger than the demand.

Commissioner LENNON. Do you feel, then, that the building trades ought to be organized and not the shopmen? Is not that a good deal because of the fact that the contractors are organized and they want the building trades organized for protection and for their benefit?

Mr. GINDELE. No, sir.

Commissioner LENNON. It is not?

Mr. GINDELE. No, sir.

Commissioner LENNON. That is all, Mr. Garretson.

Commissioner GARRETSON. I want to ask another question: Mr. Gindele, in answer to Commissioner O'Connell as to your attitude toward who would and

who should not be organized, I understood your differentiating point is whether the employment—

Mr. GINDELE (interrupting). The what?

Commissioner GARRETSON (continuing)—of the men is outside and seasonal, or whether they are steadily employed; is that it? Is that what you base it on?

Mr. GINDELE. I didn't quite catch your question, Mr. Commissioner.

Commissioner O'CONNELL. He didn't hear you quite.

Mr. GINDELE. You see this fan makes so much noise.

Commissioner GARRETSON. Is your idea that men who are steadily employed and not subject to reasonable conditions are better off unorganized, and men whose employment is seasonal should be employed?

Mr. GINDELE. I have always found that in every place that I have been conversant with the matter.

Commissioner GARRETSON. Well, take a class of men who work 365 days a year—I am saying 365 advisedly—the railway employees in train and engine service; do you believe that they would be better off unorganized than organized, and would their employers be better off?

Mr. GINDELE. Provided they organized for a certain purpose, if they organized for their protection as far as health, as far as hours of work, and as far as wage is concerned, perhaps they would. But where shop conditions exist as they existed in the past, and men being employed year in and year out and at a fair rate of wage and a medium number of hours, I think they are better off in the open shop.

Commissioner GARRETSON. You believe, then, that better results would be obtained, both by the men and the employer, if the railway employees were not organized?

Mr. GINDELE. Well, I haven't had any experience as far as the railway employee is concerned, and I don't know; I am not conversant with his condition as well as I am with the building industry.

Commissioner GARRETSON. That is all.

Chairman WALSH. That is all. Thank you.

Mr. GINDELE. Before I leave the stand, Mr. Thompson asked me a question I didn't quite catch fully, and I want to state this, when he asked in reference to what I thought was the best way to overcome the unrest. I believe that if there were less organization of different crafts, in Chicago or elsewhere, that there would be better conditions under agreements. For illustration, you take the district council of carpenters of our city here to-day, which is composed of a large number of locals, but all those locals are working under the same agreement. Now, if the same thing could be accomplished in the other branches—for instance, the pipe trades, which would cover steam heating, plumbers, gas fitters, and such like—they to be under one organization and under one agreement so that the employers should call here and there a gas fitter or a plumber, as the case might be, and then he would not be infringing on one or the other member's trade. By that way it would create and bring about a good deal of rest. Furthermore, there are certain lines of trade to-day that are specializing their work. For instance, in the plumbing trade, in years gone by, the plumber would come on the job; he would do the roughing-in, and when the roughing-in was done the plasterer got to work, and he would also put in the fixtures. Now, that is getting specialized. There is one fellow who does the roughing-in, and another fellow comes along and he does the fittings. Now, they have all got different agreements. Now, if they were all organized under a district council, the same as the carpenters are organized, why, then, we would be working all that craft in the different lines under that one agreement instead of having three or four agreements in the meantime in effect and bringing about this unrest which you gentlemen are seeking to correct. Now, the same way in other lines. Now, if that could be brought about, why the consequence would be there would not be near the trouble, and there would be less agreements which we have our attention called to to carry out.

Chairman WALSH. Mr. Delano would like to ask you a question.

Commissioner DELANO. I want to ask you a question further along the line of increasing the cost of doing work. In these jurisdictional cases, do you have any trouble from having a skilled craft claim the jurisdiction and doing a piece of work that can be done just as well by unskilled labor? For instance, take the case of reinforcing rods—fitting reinforcing rods in concrete. You are required in some places to employ high-priced skilled labor to do that, whereas in other places you can employ ordinary laborers.

Mr. GINDELE. Well, in that to a great extent it brings about the increased cost of building, where you employ skilled labor where it can be done by unskilled labor. A great many of the jurisdictional matters are brought about very unreasonably. The business agent for the welfare of his organization will sometimes claim things which really he has no right to do and thereby bring about jurisdictional troubles. Now, if all these matters, as in the building line at the present time, there is always something new creeping in, and just as quickly as some new line of material or something in the line of trim, or anything of that kind, certain organizations make a grab for that work and other organizations do the same thing, and bring about these jurisdictional matters. Whenever anything of that kind occurs, with the agreement we have in Chicago, and especially as far as the employers' association is concerned, which takes it mostly upon themselves, anybody who brings in new material, they make an examination and determine what craft is to install that kind of material, and by doing that we save considerable trouble.

Commissioner DELANO. Do those matters increase the cost of doing work, and if so, on whom does that increase fall?

Mr. GINDELE. As I stated before, any time a jurisdictional matter causes a cessation of work it increases the cost, and the increased cost comes on the contractor to a certain extent, on account of the overhead expense and the implements lying idle and interest on the money and the amount of money invested in the building.

Commissioner DELANO. That is all.

Chairman WALSH. That is all. Thank you. Call your next.

Mr. THOMPSON. Mr. O'Donnell.

TESTIMONY OF MR. SIMON O'DONNELL.

Commissioner LENNON. Ask him first to talk loud.

Mr. THOMPSON. It is requested you speak loudly.

Mr. O'DONNELL. I don't, as a rule, speak very loud. I will try to make myself heard, though.

Mr. THOMPSON. Will you please give us your name?

Mr. O'DONNELL. Simon O'Donnell.

Mr. THOMPSON. And your business address?

Mr. O'DONNELL. As it happens, I represent the plumbers, also, as well as being president of the building trades council.

Mr. THOMPSON. Give us either address.

Mr. O'DONNELL. 166 Washington Street, room 700.

Mr. THOMPSON. You may state the positions you occupy.

Mr. O'DONNELL. I am representative of the Chicago Journeymen Plumbers' organization and also business agent; also active president of the building trades council—chairman of the Chicago Building Trades Council.

Mr. THOMPSON. How long have you been business agent of the plumbers' union here?

Mr. O'DONNELL. About 14 years—13 or 14 years.

Mr. THOMPSON. How long have you been president of the building trades council?

Mr. O'DONNELL. Going on five years.

Mr. THOMPSON. How long has the building trades council been in existence as a body?

Mr. O'DONNELL. In the city of Chicago?

Mr. THOMPSON. Yes.

Mr. O'DONNELL. Well, there was a building trades council before I ever showed on the job. Do you refer to this present building trades council?

Mr. THOMPSON. Yes; that is now in existence.

Mr. O'DONNELL. The one now in existence?

Mr. THOMPSON. Yes.

Mr. O'DONNELL. I believe about six years.

Mr. THOMPSON. What is the object and purpose and jurisdiction of the building trades council in the labor world here in the city?

Mr. O'DONNELL. We have jurisdiction over what is known as Cook County and vicinity, over all the labor that goes into the construction of a building. Taking in all the trade crafts and laborer organizations.

Mr. THOMPSON. Is your body under charter from the American Federation of Labor?

Mr. O'DONNELL. Through the building trades department.

Mr. THOMPSON. Through the building trades department?

Mr. O'DONNELL. Yes.

Mr. THOMPSON. Is there any conflict in the jurisdiction of your body and that of the Chicago Federation of Labor?

Mr. O'DONNELL. No; none at all.

Mr. THOMPSON. Does your body and the Chicago Federation of Labor work harmoniously and cooperate in labor matters in this city?

Mr. O'DONNELL. In a way. Our body does not affiliate with the Chicago Federation of Labor as a body, but we do affiliate through our organizations. The affiliated organizations in the building trades of Chicago also have affiliation with the central body known as the Chicago Federation of Labor.

Mr. THOMPSON. By that you mean that, say, the plumbers have delegates to the Chicago Federation of Labor?

Mr. O'DONNELL. What is that?

Mr. THOMPSON. By that you mean the plumbers have delegates to the Chicago Federation of Labor?

Mr. O'DONNELL. They may affiliate or may not, just as they see fit; but they do; that is, most of them.

Mr. THOMPSON. Is your body affiliated with the Illinois Federation of Labor?

Mr. O'DONNELL. Individually through the organizations, that is the only way. Our body is not; no, sir—just a moment, I believe we are. We were a year ago, and I believe we are paying our per capita tax in there, I think so, I would not say for sure.

Mr. THOMPSON. About how many workmen in the city of Chicago are there engaged in the building trades that are organized?

Mr. O'DONNELL. About how many men, you say, are working in the building industries that are organized, you say?

Mr. THOMPSON. Yes; that belong to unions, affiliated unions, in your organization.

Mr. O'DONNELL. I think we issue cards to the extent of between seventy-five and eighty thousand.

Mr. THOMPSON. Are there other organizations working in the building trades that are not affiliated with your organization?

Mr. O'DONNELL. Not that I know of.

Mr. THOMPSON. You would probably know them if they existed?

Mr. O'DONNELL. I haven't been able to discover any in the last two or three years.

Mr. THOMPSON. There used to be organizations that were unaffiliated, were there not?

Mr. O'DONNELL. Yes; the building trade was in a split condition about two or three years ago—they were divided.

Mr. THOMPSON. Did you hear the testimony of Mr. Gindele given here?

Mr. O'DONNELL. I heard some of it.

Mr. THOMPSON. Has your organization an agreement with the master masons' association?

Mr. O'DONNELL. We have an agreement with what is known as the construction employers' association, which takes in, I believe, some of the master masons and carpenters—that is, the carpenter contractors' associations and most of the contractors that handle the buildings are members of that—most of them.

Mr. THOMPSON. Prior to the formation of this arbitration board that Mr. Gindele spoke of, there were a great many jurisdictional fights in the city of Chicago in the building trades, were there not?

Mr. O'DONNELL. Yes. Yes; there were quite a few.

Mr. THOMPSON. And a great deal of trouble arose and a great deal of violence?

Mr. O'DONNELL. I won't say there was any violence; but quite a number of disputes and in some instances strikes called on account of disputes.

Mr. THOMPSON. At least the papers in Chicago had a great many accounts of violence arising from that trouble, did they not?

Mr. O'DONNELL. Yes; but very often the papers call the attention of the public when different acts of violence came off that they blame on the laborers anyhow. We were not in a position to dispute that anyhow; we have no paper.

Mr. THOMPSON. And there was a great loss financially to the members of the organization and the labor organization and the public generally because of the jurisdictional disputes?

Mr. O'DONNELL. What you mean is a considerable annoyance to the public?

Mr. THOMPSON. The loss of wages to the worker, was there not?

Mr. O'DONNELL. I believe more a source of annoyance to the wage earner—the fellow working on the job—than it was to anybody else. I do not know how it affected the public.

Mr. THOMPSON. That answers that. Mr. Gindele spoke of the arbitration board. Has there been a decrease of jurisdictional fights in this city since the inauguration of that board?

Mr. O'DONNELL. Yes; considerable.

Mr. THOMPSON. Considerable?

Mr. O'DONNELL. Yes.

Mr. THOMPSON. In your opinion is the present arbitration board established for the purpose of preventing jurisdictional disputes the best method of handling that proposition?

Mr. O'DONNELL. Well, what it was originally intended for was to take care, not of disputes especially, but especially jurisdictional strikes brought on by disputes. I do not know as we will ever be able to eliminate the disputes. I guess they will always be with us; but our intention was to eliminate disputes or strikes—strikes on account of the disputes.

Mr. THOMPSON. Have you any opinion as to whether it is better to settle jurisdictional disputes in a nation-wide manner, or whether they should be settled locally, one way in one city and another way in another city?

Mr. O'DONNELL. I have my own opinion. I have discovered to my satisfaction—I feel this way: It would be absolutely impossible for any body of men or any set of men or any one man to sit down here and lay down jurisdictional laws to cover certain classes or work that would be applied successfully throughout the country on account of local conditions being so different. I could cite you numerous cases. I could call you attention to instances such as in my business, the plumbing business. For instance, in the city of New York the steam fitters do sprinkling fitting, and in Chicago here we have what is known as the sprinkler fitters' organization, a local in itself, which does nothing but install these sprinkler heads, sprinkler systems. In Pittsburgh we have a plumber who does gas fitting, and in Chicago we have a gas fitters' organization, and so on down the line. I claim they are entirely different.

Mr. THOMPSON. Referring now not to a settlement, Mr. O'Donnell, made in the city, but to a national settlement by a body with authority to settle it in such manner should take into consideration the varying conditions in each city and make a decision for each city, would that be, in your opinion, a good method of settling the industrial problem?

Mr. O'DONNELL. If they could do that.

Mr. THOMPSON. Isn't that just what has been done in the recent amalgamation of your organization of the plumbers?

Mr. O'DONNELL. That is what has been done.

Mr. THOMPSON. Well, but didn't that same body, while locally you settled it here, and while locally it was settled also in St. Louis, and while locally it was not settled in New York for instance—

Mr. O'DONNELL. In some cases they followed different lines.

Mr. THOMPSON. But we will overlook those. Were your international officers seeking to arrange for a national settlement; wasn't that true in case of the amalgamation of your two bodies?

Mr. O'DONNELL. I think there were some sort of steps to bring about a national agreement—an international agreement between both the contractors and the building-trades department. Is that what you refer to?

Mr. THOMPSON. No; I mean in the case of the amalgamation of the two organizations, the steam fitters and the plumbers. Mr. McAlpine, the head of the amalgamated organization.

Mr. O'DONNELL. Oh, I see, you are getting back. Yes, that is so.

Mr. THOMPSON. And he and the other officers, however, helped to bring about this settlement of the jurisdictional dispute between those two trades, did they not?

Mr. O'DONNELL. We decide our own jurisdictional disputes.

Mr. THOMPSON. I understand that.

Mr. O'DONNELL. It is all one head now; all the trades under that body.

Mr. THOMPSON. Well, then, what he would say about that would probably be the fact, would it not?

Mr. O'DONNELL. Yes, sir.

Mr. THOMPSON. There have been a great many other strikes in the building trades, Mr. O'Donnell, in this city, have there not, other than jurisdictional strikes?

Mr. O'DONNELL. No, I can't say there has been.

Mr. THOMPSON. Well, you have had some experience in strikes, have you not?

Mr. O'DONNELL. Yes, quite a few. There have been incidents where some dual organization would attempt to work on a building, as against the organization that was affiliated with the building trades council, or something like that—strikes called on that account.

Mr. THOMPSON. Well, I want to be broader than that jurisdictional dispute; I want to take in any kind of character of strikes. Now, from your experience as a labor leader, what would be the best method to prevent, in the first place, the beginning of a strike and, in the next place, if it should occur, to settle it? Have you got any remedies or suggestions that you would like to make to this commission with regard to that matter?

Mr. O'DONNELL. I have no other remedy, only the one that I am trying to work to a conclusion, and that is this agreement that we have now with the construction employers' association, which, if carried out to the letter, would prevent trades from calling any strike until such a time as it was submitted to the joint conference board. In fact, our rules are that where two organizations get into a dispute they must get together and try to adjust it themselves. In case they can't do that, it is submitted to the grievance committee of the building trades council. If they take exceptions from the ruling of that committee they still have an appeal and can take it into the joint conference board, where the matter is threshed out, and that decision is final and binding on both sides.

Mr. THOMPSON. Now, referring, Mr. O'Donnell, to the unions themselves and industry—building industry is pretty well organized in this city, is it not?

Mr. O'DONNELL. I might say thoroughly.

Mr. THOMPSON. Thoroughly organized? What is the general attitude of the building trade of this city toward permitting union men coming from other cities to work here?

Mr. O'DONNELL. I have always heard Chicago is the most liberal city in the world in reference to accepting any clearance cards and strangers with open arms. In fact, I think we have in the city of Chicago more outsiders employed at the present time than any other country, or, rather, any other city in the country.

Mr. THOMPSON. Well, can a member of any of the building unions coming from other cities go up to the union headquarters here and freely and without restriction get a clearance card and start to work here?

Mr. O'DONNELL. They can deposit their clearance card and get employment wherever they can—seek employment wherever they can.

Mr. THOMPSON. Well, did you hear Mr. Gindele's testimony as to the permit system?

Mr. O'DONNELL. I heard some of his answers to your questions. I want to state that different organizations have, possibly, different systems in reference to permits. There are—sometimes in the plumbers' organization—I am speaking for the plumbers, which I am entirely familiar with; a man may get back in his dues, might leave town for five or six months or a year. You can't very well hand him a clear card, and it is really necessary to use the permit system on him—hand him a permit—and he pays up his back dues according as he goes along. That is the only case where we use permits.

Mr. THOMPSON. Take a case, Mr. O'Donnell—

Mr. O'DONNELL. Or a man can pay on initiation until such time as his initiation is paid up and he becomes a member.

Mr. THOMPSON. Will you say that the permit men are restricted to men who are either back in their dues or who have failed to pay up their initiation?

Mr. O'DONNELL. In our case; yes.

Mr. THOMPSON. In your case?

Mr. O'DONNELL. Yes, sir.

Mr. THOMPSON. As to the other unions, you don't know?

Mr. O'DONNELL. Well, there may be some smaller organizations that there is the demand for certain seasons of the year—there is a demand, possibly, for twice as many men as what they have in their membership, taking into consideration, possibly, the hoisting engineers. Then they would draw from the stationary engineers. Part of their international, I believe. And according as the work drops off, I believe, they drop off the permit men.

Mr. THOMPSON. Then, so far as your organization is concerned, Mr. O'Donnell, if a union plumber belonging to your international in St. Louis was paid

up in his dues and in good standing and he could come here and file his card and start to work right off?

Mr. O'DONNELL. That is all he has got to do. He deposits his card. Then it is up to the city; if he has got a State certificate he can work. Of course, that is up to the local authorities here.

Mr. THOMPSON. Now, Mr. O'Donnell, lately in Chicago there was a brick strike—strike of the brickmakers—was there not?

Mr. O'DONNELL. Yes, sir.

Mr. THOMPSON. In which about 2,700 men were out on a strike?

Mr. O'DONNELL. I believe they claimed about 2,000.

Mr. THOMPSON. What effect did that strike have on the other workers in the building trades in Chicago?

Mr. O'DONNELL. It had an immediate effect.

Mr. THOMPSON. Did it throw them out of work?

Mr. O'DONNELL. Immediately, I might say. Yes; that is, the bricklayers.

Mr. THOMPSON. Was there a great loss in wages to the members of the building trades unions in Chicago because of that brick strike?

Mr. O'DONNELL. Oh, I believe there were about 50,000 or 60,000 men forced on the street for about three or four months.

Mr. THOMPSON. Well, their wages would amount to several hundred thousand dollars a day, would they not?

Mr. O'DONNELL. I never stopped to figure them up.

Mr. THOMPSON. They would amount to a great deal of money?

Mr. O'DONNELL. Yes.

Mr. THOMPSON. What was the settlement of that strike, if you know, in what increase in wages did that strike result to the brickmakers?

Mr. O'DONNELL. They got a very little increase.

Mr. THOMPSON. About a cent an hour, wasn't it?

Mr. O'DONNELL. I believe it was; yes.

Mr. THOMPSON. And did they make or not make concessions to the employers on their side?

Mr. O'DONNELL. Well, they were forced to in a way owing to the fact another organization came in here and was about to take their places.

Mr. THOMPSON. Well, would you say that the final conclusion of that strike was about a stand-off, as to who got any benefit out of it?

Mr. O'DONNELL. I think if they had adjusted it up as they went along with the employers over there, they possibly might have got a better adjustment than what they got afterwards. But there was a reason for that.

Mr. THOMPSON. Well, now, Mr. O'Donnell, from your experience as a leader of labor for many years in building trades, what remedy would you suggest to this commission, or to labor, or to the business world generally, to prevent just such conditions arising wherein the strike of a few hundred men throws many thousands out of work for months at a time?

Mr. O'DONNELL. I would hardly know what to suggest or what to recommend. They were an independent organization that had withdrawn from the international, I believe. The brick manufacturers had an agreement with the international, and I think if they had gone along with the agreement and carried it out to the letter there is a possibility there would have been no strike there. I think they could have adjusted it. I really believe that breaking of contracts, violation of these agreements, are a great deal of the causes of a number of these strikes. If they were carried out, these agreements, I think that would eliminate quite a number of these misunderstandings, disputes, and strikes.

Mr. THOMPSON. Well, do you think—

Mr. O'DONNELL. I believe in agreements.

Mr. THOMPSON. Do you believe that all workers in the industries that affect your particular line should be organized and belong to a central body?

Mr. O'DONNELL. Absolutely so.

Mr. THOMPSON. If that were done you think then this situation could have been prevented which threw your workers and others out of work?

Mr. O'DONNELL. I believe so. We eventually had to get in there and settle it, anyhow.

Mr. THOMPSON. Mr. O'Donnell, it has been said by some, opinion held perhaps generally, that there is a great deal of industrial unrest in this country. Do you believe such exists?

Mr. O'DONNELL. There is around Chicago.

Mr. THOMPSON. Well, in your opinion, what is the cause of it, and what would you suggest to remedy it?

Mr. O'DONNELL. The unrest to my mind is on account of the unemployed that are out of work. A lot of them walking around the streets, they are broke. This kind of weather they need money to buy ice, and I suppose in a few months they will need the dough to get some coal. The man is loafing, out of employment—I think that would be excuse enough for considerable unrest.

Mr. THOMPSON. You have nothing to suggest in the way of changing the situation?

Mr. O'DONNELL. I do not know anything I could suggest would change it. There don't seem to be work here to do at the present time.

Mr. THOMPSON. Referring to the organization of the unions, it has been stated here that the business agent had a great deal of power in the building trades. How are the building trades unions organized? Have the members a vote in electing the officers?

Mr. O'DONNELL. The business agents of the various organizations are elected from their locals, elected by the rank and file, individual membership. They in turn then are sent as delegates to the building trades council, and sometimes they are business agents and sometimes they are not; it is not necessary for them to be business agents to be delegates to the building trades council.

Mr. THOMPSON. Generally in the building trades—in the unions—are the officers of those unions elected by the membership?

Mr. O'DONNELL. All of the business agents that I know of are elected by the membership of the organization they represent.

Mr. THOMPSON. The other officers; how about them?

Mr. O'DONNELL. All officers; yes, sir; from the president down.

Mr. THOMPSON. What is used in your union to get the expression of the membership by ballot? What kind of ballots do you have?

Mr. O'DONNELL. The Australian system?

Mr. THOMPSON. The Australian system?

Mr. O'DONNELL. Yes, sir.

Mr. THOMPSON. Are the members permitted to go freely to the booths and register their votes without suggestion or dictation of any group?

Mr. O'DONNELL. Yes; it is a secret ballot.

Mr. THOMPSON. A secret ballot?

Mr. O'DONNELL. Yes.

Mr. THOMPSON. How are the ballots counted—by whom?

Mr. O'DONNELL. Judges and clerks.

Mr. THOMPSON. Who elects these judges and clerks?

Mr. O'DONNELL. In our organization they are appointed by the chair.

Mr. THOMPSON. By the chair?

Mr. O'DONNELL. Yes.

Mr. THOMPSON. Do you think, Mr. O'Donnell, that is calculated to bring out the best result from the election, or do you think—

Mr. O'DONNELL. I believe so.

Mr. THOMPSON. Or do you think that could be improved if the judges and clerks were elected by the rank and file of the union the same way that the officers are?

Mr. O'DONNELL. In my opinion you would have the election all over. Suppose you elected the judges by the rank and file; the chairman must necessarily appoint the judges and clerks to count the ballots of the election and the judges and clerks to be elected to count the ballot; you are going to go over this twice in my mind. Do you understand what I mean? Suppose you say the judges and clerks are elected by the rank and file; who is going to count those ballots? Necessarily they must be appointed by the chair—the judges and clerks to count your ballots.

Mr. THOMPSON. You ask me? I say necessarily they should be elected in the same manner.

Mr. O'DONNELL. How is that?

Mr. THOMPSON. They could be elected in the same manner.

Mr. O'DONNELL. Yes; but to my mind you would be going over the same ground twice.

Mr. THOMPSON. I do not see it, but it is all right. Do you believe that the—

Commissioner O'CONNELL. They would have to be if you went back. There must be some beginning.

Mr. THOMPSON. The body of the membership could do the same thing then. But that does not make any difference. We will let that go.

Commissioner O'CONNELL. I will argue that out with you at lunch.

Mr. THOMPSON. We can argue that out later. Do you believe in a law that may be passed in the State to protect the purity of the ballot? You do, do you not, Mr. O'Donnell? You believe in the Australian ballot and the primary systems? Anything which would give protection to the will of the citizens?

Mr. O'DONNELL. Yes; certainly.

Mr. THOMPSON. And you believe those same things should be carried out in the trade-unions, do you not?

Mr. O'DONNELL. Certainly, carried out in the trade-unions.

Mr. THOMPSON. Yes.

Mr. O'DONNELL. Yes; I believe trade-unions and organizations should decide that for themselves.

Mr. THOMPSON. Generally, in the building trade, do you believe that the membership are protected in that right?

Mr. O'DONNELL. I never knew of a case where they were not.

Mr. THOMPSON. That is all, Mr. Chairman.

Mr. THOMPSON. Who sets the rods in the reinforced concrete work in Chicago?

Mr. O'DONNELL. The building laborers at the present time.

Mr. THOMPSON. Who was awarded that work by the building trades council of the American Federation of Labor?

Mr. O'DONNELL. I believe at a convention the work was awarded to the structural ironworkers at Tampico, Fla., on a convention called there. I believe on a vote they awarded that portion of the work to the structural-iron workers.

Mr. THOMPSON. But in Chicago that has not been effective?

Mr. O'DONNELL. You could say that for quite a number of other cities besides Chicago. Labor has been doing that work ever since its inception here.

Mr. THOMPSON. Who do you think ought to have the jurisdiction of that work?

Mr. O'DONNELL. That is like other work, at its inception they used to throw that iron in in long strips. In other words, they would just lay it right in there. Afterwards they started to tie it in. Now, they cut it and have holes in the steel beams, and it is inserted through those holes and sometimes nuts and lock bolts put on and tied on that way. To my mind the present way of putting it in, it should be the work of the structural ironworkers. At the time they started out the iron the way it was laid in was really laborers' work. It was carried up and laid down. Since they are using tools and so on to place it in position to tie it in. I think it is the mechanic's, and so expressed myself.

Chairman WALSH. I understand, of course, you are a strong believer in collective bargaining and industries generally dealing with unions. That is correct, is it not?

Mr. O'DONNELL. I don't hardly catch you.

Chairman WALSH. You are a strong believer in collective bargaining, are you not; that is, in the employers or industries dealing with the unions rather than the individual?

Mr. O'DONNELL. Yes; I believe in that.

Chairman WALSH. Now, there were certain objections that we find voiced on the part of the employers at different places to their dealing with unions. Questions have been asked some of the other witnesses, and I am going to ask them seriatim of you. It has been charged by employers in many places that there is graft in labor unions, or dishonesty, and therefore they do not desire to deal with them, or think they are proper organizations so far as industries are concerned. What have you to say to that as a person who deals with the matter directly?

Mr. O'DONNELL. The charge has been made that they don't care to deal with the individual membership or individual representatives on account of graft? I don't know what I could say on it.

Chairman WALSH. Does it or does it not exist?

Mr. O'DONNELL. It may in some cases.

Chairman WALSH. Have the unions done anything in the attempt to eliminate it?

Mr. O'DONNELL. Yes; they have from time to time whenever it was discovered.

Chairman WALSH. What in a general way have they done?

Mr. O'DONNELL. Here and there sometimes put their officers out of office.

Chairman WALSH. Has that occurred in Chicago?

Mr. O'DONNELL. Well, in a number of instances they have been partly dropped. I could not name any specific case, but I have my suspicions.

Chairman WALSH. And it has also been charged it is not desirable to deal with unions because they resort to violence during strikes. What have you to say as to that?

Mr. O'DONNELL. As I said before, I represent labor organizations around here about 14 years, and I never knew any time there was any occasion for violence or anything along that line. I did not see the necessity of resorting to it.

Chairman WALSH. Do you say there is or is not violence in the prosecution of strikes in this city?

Mr. O'DONNELL. Not to my knowledge.

Chairman WALSH. You have no knowledge of any such occurrence?

Mr. O'DONNELL. No, sir.

Chairman WALSH. It is claimed that the unions are not an economic body to deal with for the reason that they limit output. What have you to say as to that?

Mr. O'DONNELL. That is not so.

Chairman WALSH. You deny that they limit output?

Mr. O'DONNELL. I absolutely deny it, because there are sections in most of our agreements with the building trades organizations that cover that. There shall be no limitation to the day's work.

Chairman WALSH. Is that all you care to say about that?

Mr. O'DONNELL. I believe that all that is necessary.

Chairman WALSH. I didn't catch your answer.

Mr. O'DONNELL. I can't see but what that is all that is necessary. We have signed agreements to the effect there shall be no limitation to the amount of the day's work.

Chairman WALSH. It is also charged it is undesirable to deal with unions because they habitually break agreements after they enter into them. What have you to say as to that complaint?

Mr. O'DONNELL. Not any more so than contractors. Here and there we will find contractors who will violate agreements just as much as we do of the employees' side of it.

Chairman WALSH. It has been claimed that the unions are disloyal to the Government in that they forbid their members to enlist in the National Guard. Is that correct or not, that complaint?

Mr. O'DONNELL. I never knew any section that prohibited men from enlisting.

Chairman WALSH. Is there any union in the city of Chicago that forbids its membership enlisting in the National Guard?

Mr. O'DONNELL. Not that I know of.

Chairman WALSH. It has been charged that it is undesirable to deal with unions because innocent employers can not protect themselves against jurisdictional disputes between the unions. What do you have to say as to that?

Mr. O'DONNELL. Innocent employers?

Chairman WALSH. That is, employers that are not directly concerned in the particular dispute can not protect themselves in jurisdictional disputes. What would you have to say as to that?

Mr. O'DONNELL. They have the same protection that every contractor has that I know of. There is a recourse there for them, they can take it up with the construction employers' association, with which we have an agreement with reference to jurisdictional disputes. They have the same right.

Chairman WALSH. Is that all you care to say?

Mr. O'DONNELL. I suppose that possibly the innocent employer is taken advantage of, but—

Chairman WALSH. By jurisdictional disputes causing loss in matters he does not control himself and is not at fault in any way.

Mr. O'DONNELL. What do you mean by "innocent employers"? They would be employers that do not belong to the organization that had an agreement with us; that is what I would infer.

Chairman WALSH. What I mean by that is, an employer who is willing to deal with any union and desires to have his work done, but two unions get into dispute as to which should do that particular class of work, and that

while he is still willing to deal with any union that can do the work for him he is not permitted to pursue the work because the union is having the trouble over the jurisdiction of that particular work.

Mr. O'DONNELL. I was going to say, with reference to that, that in some cases employers have come in with complaints to the effect that they were not familiar with the jurisdictional agreement as laid down by our organization, and in quite a number of cases they would employ laborers to do a mechanic's work, and their claim of course would be they were innocent employers; that they didn't know because possibly of the fact that they didn't belong to the central organization which has the agreement with us. Of course that would be the usual claim anyhow. That was their subterfuge, that they didn't know. But you will always find, where jurisdictional disputes or strikes are called, it is where a contractor is attempting or is using a certain trade or a certain labor to do a certain class of work and he only has to pay about half as much to have done.

Chairman WALSH. Do I understand you, then, to say that in your experience you are unaware of any jurisdictional dispute having arisen in which some employer was not to blame?

Mr. O'DONNELL. Not in all cases. Sometimes I have seen cases where the journeymen's side of it were to blame, sometimes.

Chairman WALSH. It has been charged that it is undesirable to deal with unions because when they become very strong as to members they dictate harsh and unreasonable terms to employers. What has been your experience with reference to that?

Mr. O'DONNELL. Well, right there would be a violation of the agreement, because when signing up these agreements there has always been a section in it to my knowledge that covers the thing, that no legislation, no motion, or anything can be adopted that would conflict with the agreement, and in that way the employer is protected, and if they do that, why there is a violation of the agreement right there.

Chairman WALSH. What is meant by that, I will illustrate, is that in case of a hundred per cent union in a trade, is it possible for the union to dictate harsh terms to the employer before the agreement is made—compel by force of its power the employer to make agreements that he otherwise would not make?

Mr. O'DONNELL. Now—

Chairman WALSH. Do I make that clear to you, Mr. O'Donnell?

Mr. O'DONNELL. Yes; owing to the power that he has through exact a corner, as it were, in having a hundred per cent organization, he would exact terms and certain conditions he would not otherwise. I would not say that it has always been as harsh as that, but there may be cases where they would run away with their power sometimes. But they are very often brought up with a short halt.

Chairman WALSH. They are often brought up how?

Mr. O'DONNELL. Brought up with a short halt; call in members of other organizations and listen to both sides when they can't get together, and very often it is matters like that which are adjusted where they get into a jam and can't get together on agreements. I believe we have adjusted possibly five or six since this board has been organized, similar cases, where one side or the other wanted to exact certain terms that really, possibly they were not entitled to. But they were called in there before this board, or a subcommittee of this board, and we got them together, and they always went along and signed up.

Chairman WALSH. It has been charged frequently that it is undesirable to do business with unions because they are financially irresponsible as a whole, and almost without exception employers have suggested that they should be organized into corporations. What have you to say as to that, if anything, Mr. O'Donnell?

Mr. O'DONNELL. Well, I never had that—I never—in doing business, I never heard any employer, contractor, or any of them fellows say that they objected to doing business with the building trades council, or with our organization. I never had them try to suggest anything along them lines to me personally.

Chairman WALSH. Do you believe that unions should be incorporated? Have you given it any thought?

Mr. O'DONNELL. I never give it a thought. I am pretty busy looking after local affairs around here and it keeps me on the jump.

Chairman WALSH. And you have nothing to say as to that?

Mr. O'DONNELL. No; I haven't.

Chairman WALSH. That is all. Any other question? That is all, thank you, Mr. O'Donnell.

Mr. THOMPSON. Just one more question, Mr. Chairman, I would like to ask Mr. O'Donnell.

Chairman WALSH. Mr. Lennon would like to ask a question.

Mr. THOMPSON. Yes.

Commissioner LENNON. Mr. O'Donnell, have there been any strikes in Chicago over jurisdictional matters between the steamfitters and the plumbers since they were consolidated in one organization?

Mr. O'DONNELL. No; not one.

Commissioner LENNON. Have there been any strikes in other parts of the country, so far as you know, in that trade over jurisdictional matters since the consolidation took place?

Mr. O'DONNELL. I haven't heard of any.

Commissioner LENNON. Well, isn't that an evidence that if these questions can be settled nationally that it will settle them for the entire country?

Mr. O'DONNELL. I believe so; in most cases it could be.

Commissioner LENNON. Now, I want to ask you a few questions regarding the powers of business agents. It is charged that business agents do nearly everything under the sun that they should not do and very little that they ought to do. You know that very well, the same as I.

Mr. O'DONNELL. I know.

Commissioner LENNON. How do the business agents get their power to call men on strike? Where does their power originate?

Mr. O'DONNELL. From the locals they represent. The business agent in our case—he handles the business of that organization between meetings the same as anyone would handle the business of any corporation. He is responsible and looks after their interests and is endowed with the power of calling strikes or—

Commissioner LENNON. Well, does the union at some time or another take action which gives the power to the business agent to do those things?

Mr. O'DONNELL. Well, I never knew of a case where the business agent did not have the power to call a strike, and I suppose the organization that he represents must give him that power.

Commissioner LENNON. What I want to get at is—I can't suggest it, because that is right—

Mr. O'DONNELL (interrupting). In the calling of a general strike—

Commissioner LENNON (interrupting). Do the unions at any time take a vote, or does the building trades council at any time take a vote as to the cooperation of unions with each other, and the extension of power to the business agents to make that cooperation effective?

Mr. O'DONNELL. Oh, yes; the business agent, if he has a grievance on a job, takes it before the building trades council meeting and asks—requests of the rest of the boards to assist him in straightening out the difficulty. He also wants to hold the committee on so in case he can not get it straightened out he can stop the men until such time as it is straightened out.

Commissioner LENNON. In other words, the power originates with the membership?

Mr. O'DONNELL. Yes, sir.

Commissioner LENNON. And is not sprung into existence by the business agent himself?

Mr. O'DONNELL. Oh no; he gets it right from the membership.

Mr. THOMPSON. I would like you to state, Mr. O'Donnell, whether any graft was involved in the strike—

Mr. O'DONNELL (interrupting). If there was I didn't get any of it; I didn't know anything about it.

Mr. THOMPSON. That is all.

Mr. O'DONNELL. I will say I am as much responsible as anybody for the adjustment and settlement of that strike, and I didn't see anything about that.

Commissioner LENNON. Call your next witness.

Mr. THOMPSON. Mr. Craig.

TESTIMONY OF MR. E. M. CRAIG.

Mr. THOMPSON. Will you give your name?

Mr. CRAIG. E. M. Craig.

Mr. THOMPSON. And your business address?

Mr. CRAIG. 133 West Washington Street.

Mr. THOMPSON. And your business?

Mr. CRAIG. I am secretary of the building construction and employers' association.

Mr. THOMPSON. What is the scope, character, and aim of that association?

Mr. CRAIG. Primarily to maintain peace and harmony in the building industry in Chicago, to promote the welfare of its members, and do all those things in lawful manner and not contrary to the laws of the country.

Mr. THOMPSON. What membership has it?

Mr. CRAIG. Its membership is possibly about 1,100 at the present time.

Mr. THOMPSON. That is the organization Mr. Gindele spoke of?

Mr. CRAIG. That is the total membership comprised of individual trade organizations.

Mr. THOMPSON. Have you anything to add to what Mr. Gindele said with reference to the arbitration agreement that you have with the building trades-union?

Mr. CRAIG. No; I do not know as I could cite anything more to what he said except it has been working very satisfactorily since it has been in operation, it has been giving good results, meeting the approval of the contracting community and the architects and the owners community of the council, and in fact since the arbitration board has been in existence or the joint conference committee has been in existence we have had peace and harmony in the building industry, practically a reversal of conditions in one, where we were bothered with strikes, sympathetic and jurisdictional; since the joint conference committee has been in session there has been little or no striking in the city of Chicago since that time. I do not think that you could recall to-day over one or two strikes in the entire building industry in Chicago. Those are over just trivial matters.

Mr. THOMPSON. Referring to the jurisdictional strikes, which you had before you had this arbitration agreement, have you kept any track of their number, their extent, and their cost to the community as a whole, including labor?

Mr. CRAIG. Oh, I have a record of them, but I have never compiled it.

Mr. THOMPSON. Well, was it a serious trouble?

Mr. CRAIG. How is that?

Mr. THOMPSON. Was it a serious trouble?

Mr. CRAIG. I thought you referred to the number. I say I have a record of all the jurisdictional disputes and strikes that came up in the last number of years, but I have never compiled them to find out just how many there were and to what extent they caused a loss to the contractors or the owners or how many men were involved.

Mr. THOMPSON. What I ask you now is, was it a serious or a grave trouble?

Mr. CRAIG. In some instances; yes, sir.

Mr. THOMPSON. I mean to the industry as a whole?

Mr. CRAIG. To the industry as a whole; yes, sir.

Mr. THOMPSON. In addition to the loss of money in wages and otherwise, did they occasion and cause violence?

Mr. CRAIG. Not to my knowledge; no. No violence.

Mr. THOMPSON. Not to your knowledge?

Mr. CRAIG. Not in my time.

Mr. THOMPSON. Then you would have the commission understand that in the jurisdictional strikes that occurred in Chicago prior to your agreement no violence was connected with it?

Mr. CRAIG. Not to my knowledge.

Mr. THOMPSON. Not to your knowledge.

Mr. CRAIG. No, sir.

Mr. THOMPSON. When you say "not to your knowledge," what do you mean by that?

Mr. CRAIG. I mean there were rumors and newspaper talks of violence in several instances on jobs, but those particular jobs I am referring to were not brought to my attention. Prior to 1911, when this organization was organized, our organization then consisted of a small organization, and it was not possibly given the support by the employers that it should have been given; consequently a large number of these troubles that would come up were never brought to our attention. But since the organization of the building construction employers' association in 1911 practically everything of that nature has been brought to our office.

Mr. THOMPSON. So you did not have much contact with those things prior to that time?

Mr. CRAIG. Considerable contact, but not any particular instances.

Mr. THOMPSON. Do you believe in the existence of strong employers' associations?

Mr. CRAIG. Yes, sir.

Mr. THOMPSON. Do they lead to peace in your opinion?

Mr. CRAIG. Yes, sir.

Mr. THOMPSON. Do you believe both sides should be strongly organized?

Mr. CRAIG. I do, sir.

Mr. THOMPSON. What advantage is there, in your opinion, to the preservation of peace?

Mr. CRAIG. When they are both organized, it promotes peace and harmony between them because they can generally get together and settle their difficulties, such as we have, in my mind. I do not believe there is any kind of a dispute that can not be settled when the parties get together and discuss the matter.

Mr. THOMPSON. From what you say, I take it you believe in collective bargaining?

Mr. CRAIG. I do, sir.

Mr. THOMPSON. That is, agreement between organized workmen and employers or organized employers?

Mr. CRAIG. Yes, sir.

Mr. THOMPSON. In your opinion is that the best method of dealing with the labor problem?

Mr. CRAIG. In my opinion, yes, sir; the best method and the most satisfactory method to both employer and employee.

Mr. THOMPSON. What else have you to specifically say in regard to that, if anything? What would you say with reference to the question of arbitration? Have you any methods or plans or schemes of arbitration you think are better than others?

Mr. CRAIG. You mean referring locally?

Mr. THOMPSON. Well, generally, in your study of the labor problem.

Mr. CRAIG. I have not found any other scheme that would be more satisfactory than the one we have. I have always taken the position that there is nothing that could not be arbitrated satisfactorily if you could only get the two parties together. That has been the rule with our organization where an organization had a jurisdictional dispute and it could not be settled between themselves it was to be brought into our organization and placed before the joint conference committee, and we invariably, without any single exception, have adjusted every jurisdictional dispute that has been brought to our attention since we have been organized. Our arbitration committee, as Mr. Gindele stated, the employers and employees, represent the combined organization of employers and employees, and we haven't got anybody except the Chicago Masons Builders' Association in this city outside the employers' association to-day. But on the other side the building-trades council have all their representatives and employees' unions in the organization. So it is very easy for us, if we can come to a decision, to force that decision upon our respective members of our organization.

Mr. THOMPSON. Referring to the permit system, which has been mentioned here to-day, you heard the testimony of Mr. Gindele and heard the testimony of Mr. O'Donnell. What have you to say in reference thereto or add to their testimony?

Mr. CRAIG. In one or two cases Mr. Gindele referred to, and in one one or two trades that is not general. In one or two trades there is a rule of that kind in which the membership of the organization practically limits in busy times the employer if he wants to help a permit man—in some cases I understand the permit men in busy times outnumber the actual membership in the union. And as Mr. Gindele also stated that these permit men, no matter how good a mechanic he may be, was compelled to quit his job upon the demand of a regular member of the union who happened to be out of work, notwithstanding the fact that he might be giving his employer good service and well liked and perfectly competent to that work.

Mr. THOMPSON. To what extent is that system used, have you anything to say in addition to what Mr. Gindele said?

Mr. CRAIG. Not to any great extent. It is confined to one or two organizations, and I am under the opinion now that in the next three or four months

that that abuse will probably be eliminated in the making of agreements with those organizations.

Mr. THOMPSON. Referring now to what you said a few minutes ago about having strong organizations on both sides, I would like to ask you this question: What effect upon the public would a strong organization of employees and employers have as to cost of work, buildings, rents, and so forth?

Mr. CRAIG. Referring to the building public of Chicago, the building public of Chicago thoroughly indorsed our organization, and ultimately it must be to their profit to have an organization of this character that would produce a satisfactory result and enable the owner to erect a building without its being stopped in the course of its construction. In larger building operations in this city, particularly these large skyscrapers, that has been the trouble in the past seven or eight years, that they were interfered with so much in their construction that they not only disorganized the forces of the contractor and sent a loss on him, but that the owners had contemplated making leases at a certain date and were unable to do so because of the fact that they could not complete the building. Through the medium of this joint arbitration board or joint conference committee which we have instituted here to-day, it is possible here now for an owner to start a building and complete it on schedule time.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Any questions from the commission?

Commissioner DELANO. I want to ask a question.

Chairman WALSH. Mr. Delano would like to ask you a question.

Commissioner DELANO. Do you have any trouble in this even-numbered board of 12 men, a deadlock of a vote of 6 to 6 on any question?

Mr. CRAIG. No; we haven't had a single case come up to us as yet where we—with but one exception where the vote has not been unanimous in giving its decision.

Commissioner DELANO. Where the vote was not unanimous?

Mr. CRAIG. Where the vote was not unanimous; only one exception it was thoroughly thrashed out.

Commissioner DELANO. Do you have any provision at all for an umpire?

Mr. CRAIG. Not in this joint conference committee as yet. Understand, this joint conference committee is practically only in a tentative shape at the present time. We haven't actually completed the formation of the board, but it has been going along so nicely that we are perfectly satisfied with the condition of it as it is.

Chairman WALSH. Any other question? That is all. Thank you, Mr. Craig.

Mr. CRAIG. Thank you.

Mr. THOMPSON. Mr. Metz.

TESTIMONY OF MR. JOHN A. METZ.

Mr. THOMPSON. Mr. Metz, will you give us your full name?

Mr. METZ. John A. Metz.

Mr. THOMPSON. And your address?

Mr. METZ. 73 West Randolph Street.

Mr. THOMPSON. What is your business?

Mr. METZ. I am representing the carpenters, as the president of the organized carpenters.

Mr. THOMPSON. I don't get you.

Mr. METZ. I represent the organized carpenters, as their president.

Mr. THOMPSON. As their president?

Mr. METZ. Yes, sir.

Mr. THOMPSON. How long have you been president of the organized carpenters?

Mr. METZ. About 10 years.

Mr. THOMPSON. How long?

Mr. METZ. About 10 years.

Mr. THOMPSON. You will have to speak a little louder, Mr. Metz.

Mr. METZ. About 10 years.

Mr. THOMPSON. About 10 years. In Chicago have you a system of an apprenticeship and compulsory education?

Mr. METZ. Yes, sir.

Mr. THOMPSON. In the carpenters' union?

Mr. METZ. Yes, sir.

Mr. THOMPSON. Will you state briefly the scheme that you have?

Mr. METZ. I would prefer to read it, if it would not be too long.

Mr. THOMPSON. You may read it, if you have it ready.

Mr. METZ. Excuse me until I get my glasses [reading]:

"Each responsible party to this agreement shall have the right to teach his trade to apprentices, and such apprentices shall serve four years, as prescribed in the apprentice rules as agreed upon by the joint arbitration board, and shall be subject to the control of said arbitration board.

"Sec. 2. Apprentices shall be under the jurisdiction of the joint arbitration board, which has the authority to control them and protect their interests, subject to approved indentures entered into with their employers and the rules adopted by the joint board. The applicant for apprenticeship shall not be more than 17 years of age at the time of making application, except under conditions satisfactory to the two presidents. Applicants more than 17 years old must bring satisfactory proof of having worked at the trade. The contractor taking an apprentice shall engage to keep him at work in the trade for nine consecutive months in each year and see that during the remaining three months of the year the apprentice attends school, during January, February, and March, and a certificate of attendance from the principal of the school attended must be furnished to the joint arbitration board as the compliance with this requirement before he is allowed to work during the coming year. A contractor taking an apprentice shall keep him steadily at work or school. Failing to do so, he shall pay him as though he had worked for him. In case of an apprentice at the end of his term of four years has not received the proper instruction and is not a proficient workman, and if after a thorough investigation the joint arbitration board finds that the contractor to whom he was apprenticed did not give him proper instruction and opportunity to learn his trade, he may be required to serve another year with whom he and the joint arbitration board may determine, and at a rate of wages less than the minimum in his trade. The difference between said rate and the minimum wage in his trade shall be paid him, through the arbitration board, by the contractor to whom he was apprenticed. A contractor entitled to an apprentice may take one on trial for two weeks, provided that applicant holds a permit from the joint arbitration board, and if after said trial conditions are satisfactory to both parties, they will be required to sign indentures agreeable to the joint arbitration board. If not satisfactory, the contractor is not bound to indenture him, but he will be required to pay the boy \$6 per week for the two weeks. No boy will be allowed a trial with more than two contractors, or a contractor with more than two boys consecutively. The rate of wages of an apprentice at the date of indenture shall be in no case less than \$364 for the first year, \$442 for the second, \$520 for the third, and \$676 for the fourth, payable in lawful money of the United States, and shall be payable in 52 weekly installments at the following rate per week: \$7 for the first year, \$8.50 for the second year, \$10 for the third year, and \$13 for the fourth year. The issuing of permits for an apprentice to work for another contractor than the one he is indentured to shall be left to the joint arbitration board. The contractor shall not have more than two apprentices at any one time. Contractors shall be allowed apprentices on the following basis: Yearly average of 4 journeymen, 1 apprentice; yearly average of 10 journeymen, 2 apprentices. The apprentice upon completing his indenture shall report to the joint arbitration board and shall, after furnishing said board with satisfactory proof of his competence as a skilled mechanic in his trade, receive a certificate approved by the board, which shall entitle him to a journeyman's working card.

"And it is further agreed by and between the parties hereto that power shall be vested in the joint arbitration board to enforce the spirit as well as the letter of this agreement."

Well, that does not apply to that, Mr. Chairman.

Mr. THOMPSON. What is the general attitude of the journeyman and contractors toward your plan?

Mr. METZ. Very friendly.

Mr. THOMPSON. Mr. Metz, as head of your organization I presume you have made more or less of a study or given more or less thought to the industrial unrest which exists in the country, or is said to exist.

Mr. METZ. I must confess I have confined myself and have been so situated that my time is occupied largely at home—little time for reading.

Mr. THOMPSON. Referring to the carpenter's situation in Chicago, what is the average length of work per year that the man has in your industry under normal conditions?

Mr. METZ. We have no means—we are now trying to perfect a plan to ascertain that, but I would judge about eight months in the year.

Mr. THOMPSON. Eight months of the year?

Mr. METZ. Yes, sir.

Mr. THOMPSON. Have you got anything to say to this commission on the matter of conciliation and arbitration?

Mr. METZ. I firmly believe in both.

Mr. THOMPSON. You know of this plan now in existence, of course?

Mr. METZ. Yes; somewhat.

Mr. THOMPSON. Is that satisfactory to your organization?

Mr. METZ. Yes; I believe so.

Mr. THOMPSON. At least it represents what you think is the best scheme?

Mr. METZ. I think it is in the right direction.

Mr. THOMPSON. Referring to your educational system and apprenticeship scheme, what character of workman has that resulted in creating?

Mr. METZ. In a very good class of mechanic. Mr. Chairman, I might say in this country men of my age, born in this country in the carpenter line, there were very few of them bound to contractors and served apprenticeships. The carpenters that worked in this city for a great many years until about 10 or 12 years ago when the carpenters became thoroughly organized, we formed this joint agreement that provided for the apprentices. I believe they are eminently satisfied with it; I know we are. The large mass of carpenters, I will say, throughout the country are—not speaking of foreign carpenters that come in from some other country—it must be admitted that to some extent they were picked-up tradesmen and we have to supplant the men that have passed away in this method we are adopting. We believe we are successfully doing it.

Mr. THOMPSON. That you are creating more of a craft of your business than it was theretofore?

Mr. METZ. Yes, sir.

Mr. THOMPSON. Anything else you would like to say in regard to that matter?

Mr. METZ. No, sir.

Mr. THOMPSON. That is all.

Chairman WALSH. Anything else? Mr. Lennon would like to ask you some questions.

Commissioner LENNON. During the period of compulsory school attendance what are these apprentices taught—the ordinary curriculum of the school or something pertaining to the trade as well?

Mr. METZ. I have a list here—there are about nine different subjects that are taken up—in fact, not full subjects. Mechanical drawing, estimating, plan reading, history, lectures on civics, and such other matters as pertain to the trade.

Commissioner LENNON. The scheme is to develop mechanics and develop good citizens?

Mr. METZ. Yes, sir.

Commissioner LENNON. The boys turned out are young mechanics turned out; are they making good both as men and as mechanics?

Mr. METZ. I believe I could safely say that 98 per cent of the 800 boys that have been turned out under this system would stand up most anywhere. Some are taking the affairs of their fathers over, some are in partners with others, some are in architects' offices, some are superintendents, and some are regular journeymen—the majority are.

Commissioner LENNON. So that the result of this education, in connection with the practical experience in the trade, is developing the right kind of men?

Mr. METZ. We believe so.

Commissioner LENNON. That is all.

Chairman WALSH. Any other question? That is all. Call your next.

Mr. THOMPSON. Mr. Mullenbach.

TESTIMONY OF MR. JAMES MULLENBACH.

Mr. THOMPSON. Will you give us your name?

Mr. MULLENBACH. James Mullenbach.

Mr. THOMPSON. And your address?

Mr. MULLENBACH. Oak Forest, Ill.

Mr. THOMPSON. And your present occupation?

Mr. MULLENBACH. Superintendent of Oak Forest Institution.

Mr. THOMPSON. How long have you been there?

Mr. MULLENBACH. Since last September.

Mr. THOMPSON. What were you doing prior to that time?

Mr. MULLENBACH. I was secretary of the Illinois Committee on Social Legislation. I had been five years superintendent of the municipal lodging house. I had been two years chairman of the trade board of the Hart, Schaffner & Marx firm and their employees.

Mr. THOMPSON. Were you connected with the organized charities of this city, too?

Mr. MULLENBACH. I was three years assistant superintendent of the United Charities of Chicago.

Mr. THOMPSON. In the course of your work have you had occasion to study the industrial situation?

Mr. MULLENBACH. Yes, it has come to my attention in several ways.

Mr. THOMPSON. And the condition of the working people?

Mr. MULLENBACH. Yes, sir.

Mr. THOMPSON. Have you any opinion as to whether or not a state of industrial unrest exists?

Mr. MULLENBACH. Yes, I think there is a definite unrest among what we might call the unorganized workers, the immediate causes of which are low wages, long hours, bad conditions in the shops, and arbitrary treatment. I think some of those conditions run over into the organized trades. Among the organized trades, I think it is chiefly due to the rising standard of living here in America and the position of the unions to maintain an American standard of living. In fact it was pointed out yesterday that wages do not overtake prices.

Mr. THOMPSON. What remedy would you suggest for this condition?

Mr. MULLENBACH. Well, for the present day under the present state of the industry for the workers in my mind there is no help for him except as he organizes and expresses his desire and will through a definite collective action. I think he has to sacrifice his individual liberty as a man, as a worker, and pool his general interest with the others in order to secure a reasonable amount of liberty under our present industrial system.

Mr. THOMPSON. What practical thing, Mr. Mullenbach, could you suggest to this commission that it could do or recommend to Congress?

Mr. MULLENBACH. The only experience I have directly had with labor unions has been in connection with the trade board of which I am chairman. Some information—a great deal of information has no doubt been given to the commission, and it is not necessary for me to review it except to express my personal judgment of how it works. This trade board of which I happen to be chairman is made up of five members of the Union of United Garment Workers of America, represented by their joint board and five members representing the firm, chiefly shop foremen and superintendents. Before that board come all disputes not able to be settled by representatives of the firm and representatives of the people who are known as chief deputies and assistant deputies. There is a trade board, to use a legal term, although I am not a lawyer, is a court of original jurisdiction in all disputes that they may not be able to settle between the workers and the firm. These disputes are brought before us and evidence given, and a decision given by this board. It has worked now I think quite successfully for over two years. I have statistics here to show the effect of it if you care to read them into the record.

Mr. THOMPSON. I don't think that now we care for the statistics in that regard. I want to get at your opinion more generally as to the unrest.

Chairman WALSH. Might I get that while you are asking them and won't they be put in the record in connection with his testimony later?

Mr. THOMPSON. It was not my intention.

Mr. MULLENBACH. They were published in an article about a year ago. It was the first year's work of the organization. It appears on page 174 of this journal.

Mr. THOMPSON. I think, as a matter of fact, we have those in Washington at the time we had our hearing on collective bargaining there.

Chairman WALSH. I wasn't present.

Mr. THOMPSON. Referring to the general question, of course, while this commission could say that its opinion was that organization would help the condition of the unorganized worker, of course there is nothing Congress could do or the commission could do to compel them to organize. What constructive

thing in your opinion could this commission do to ameliorate the condition of unrest?

Mr. MULLENBACH. I don't know, Mr. Counselor, just what the authority is of the commission. It seems to me, speaking as a citizen, that the way in which this commission could help the people of the United States would be by collecting definite information as to the various methods that have been used, or have grown up out of previous labor struggles and had been found to work in some definite way for the amelioration of conditions and for the promotion of the welfare of the workers and employers, and consequently of the general public. That may be too general a reply.

Mr. THOMPSON. That is all right.

Mr. MULLENBACH. I don't know that I can make it more definite.

Mr. THOMPSON. From your experience in adjusting labor disputes as chairman of this board, do you believe a national industrial commission with power to investigate facts in time of peace in industries and also in time of conflict, and with power to mediate and conciliate and arbitrate if called upon, do you think that would be an addition?

Mr. MULLENBACH. I think it would. I think, speaking as a private citizen, that whenever a great industrial struggle takes place—a strike, for instance, in Calumet, Mich., or Colorado, that what the public feels is a general confusion of thought regarding—information as to what is actually taking place and that there is now no definite tribunal or power authorized to go out and collect the facts and give them to the public from a perfectly impartial, independent, and unprejudiced basis. In other words, such a body, it seems to me, would shed a great deal of light where in one part of our country there was a great deal of heat.

Mr. THOMPSON. You believe in the principle of conciliation and arbitration, I take it?

Mr. MULLENBACH. Yes; I believe that, that a large part of our labor trouble could be saved where you can get a strong union on one side and a strong organization of employers on the other who will have the good will and confidence in the purpose of each. I believe that out of that would come an organization of disinterested intelligent, courageous tribunal that would be able to settle disputes between both parties fairly and amicably.

Mr. THOMPSON. What plan or method of arbitration do you think is best suited to settle disputes?

Mr. MULLENBACH. I think that continuous—if I may use the word "continuous"—arbitration is to be used as against isolated arbitration, for the reason that it would permit the impartial members of your board of arbitration, or court, whatever you choose to call it, to establish a regard for confidence for sure-footed judgment, for impartial apportionment of judgments and awards that would run over the months and the years, and would act not only as a court, not only rendering decisions, but in finding out wherein the interests of each party lay and then pulling them together, so that this board of arbitration is not strictly a court, as it were, hearing evidence upon which they might also base their judgment.

Mr. THOMPSON. What is the objection to this sporadic and incidental arbitration?

Mr. MULLENBACH. It seems to me that the difficulty lies in the fact that in most arbitrations one or the other party has to suffer in the adjudication of the case, and that the party that does suffer feels that there is nothing, after all, to arbitration. It simply goes to create an additional belief, an additional burden upon the ugly feeling that may exist between employees—one group of employers and a group of employees.

Mr. THOMPSON. And that, then, you think, is allowed by continuous arbitration?

Mr. MULLENBACH. Yes.

Mr. THOMPSON. People can get acquainted with the arbitrator?

Mr. MULLENBACH. People can get acquainted with the arbitrator and know his habit of thought and his ways of arriving at his judgment, his general attitude and purpose.

Mr. THOMPSON. Is there anything further you would like to say with reference to the subject of collective bargaining, which you would like to say now?

Mr. MULLENBACH. Except I believe in collective bargaining; that the employer who goes into collective bargaining ought to find opposite him a strong union, well laid. The employer will hardly accept collective bargaining as a principle in his business unless he is forced by a strong union to do so.

I do not believe he ought to be unless there is a strong union, because that union with which the collective bargaining is made ought to share the responsibility of the conduct of the business and the kind of leadership and its power is a thing with which he is vitally interested. In other words, if there is collective bargaining, the employer should be just as much interested in building up a strong, well-laid labor union as any of the labor men themselves.

Mr. THOMPSON. What do you believe should be the responsibility of labor in collective bargaining when made?

Mr. MULLENBACH. The responsibility of labor in collective bargaining is to see to it that they have capable, conscientious, as far as possible, disinterested leadership. This is largely in judgment against the personality—

Mr. THOMPSON. Have you any special ideas to suggest as to what form the responsibility of the labor union should take?

Mr. MULLENBACH. I think the elections in the labor union ought to be perfectly free. I am not sure I care to advise a method, but just simply the principle of it, that they ought to be free elections, so that there will be a full adequate expression of the individual members' judgment as to the leaders of the union.

Mr. THOMPSON. Do you believe, or have you any opinion as to whether or not the incorporation of labor unions would help?

Mr. MULLENBACH. Mr. Conselor, I have not thought seriously enough about that to express an opinion.

Mr. THOMPSON. Have you thought as to whether or not there should be financial responsibility of labor unions?

Mr. MULLENBACH. Not on that, either. I think they are too serious questions for one to speak of in this manner.

Mr. THOMPSON. Have you given any thought to the question of the relation of labor to the law, as to whether there is a failure of proper adjustment there or not?

Mr. MULLENBACH. Well, I feel, as a private citizen, that too frequently where the employer by organization of labor has enforced—has had the pressure put upon him, has gone from the economic field, if you will, has yielded that and gone over into the courts and sought power from the courts that he did not have in his hand in his contest with the labor union when it was thoroughly organized; in other words, he has resorted to injunctions. I think that as a free American citizen, I feel that sometimes the courts have been, at least it is in some confusion in my mind as a layman, the courts have resorted to this, what seemed to him ex powers in order to oppose the union in such particular struggles.

Mr. THOMPSON. Do you think that the establishment of industrial courts, bodies that could deal with grievances arising, or that giving to our present courts, when a party comes before it asking for an injunction, power to not only pass on the law points, but to go into the questions, the industrial questions, and settle them, would that be a good thing?

Mr. MULLENBACH. That might be a good thing, but I believe that seriously I have not thought about it enough to give an opinion.

Mr. THOMPSON. Well, Mr. Mullenbach, is there anything that you would like to say to the commission?

Mr. MULLENBACH. I think not. I would like to say this about violence: As a citizen, it seems to me there is a good deal of pretense and hypocrisy on both sides with regard to this matter of violence. I think as long as we have human society held up at the point of the bayonet, that when we have a local labor war, in which the livelihood of an immense number of people is at stake, and where perhaps the existence of a great business is at stake, that while the leaders on each side may not definitely lay plans to resort to violence, that it is almost inevitable, human nature being what it is, that violence will arise. I do not think that either side would admit that they were the instigators of violence. I do think that as long as men are organized as they are, and that the worker on one side has his livelihood at stake, and his family welfare, his home and that he has within him only his physical power, not having financial or legal power; that then the resort to physical power would be very easy under provocation. And I think that equally on the other side the business man who is responsible for an immense plant and can not afford to take this chance with human nature, and he wants to protect his plant, that out of that clash you will almost inevitably have some violence. I can't see how it can be avoided, although it may not be intended on either side.

Mr. THOMPSON. Then you don't think that that violence should be charged either to the union as such or the employer as such?

Mr. MULLENBACH. No, sir.

Mr. THOMPSON. But you would lay it at the doors of human nature?

Mr. MULLENBACH. I think that all of us are about the same garden variety of human beings.

Mr. THOMPSON. That is all.

Chairman WALSH. Any questions?

Commissioner DELANO. I would like to ask a question.

Chairman WALSH. Mr. Delano would like to ask a question.

Commissioner DELANO. You have expressed the opinion, Mr. Mullenbach, that when we have employers very strongly organized and the workers were very strongly organized, that you get better results?

Mr. MULLENBACH. Yes, sir; I think that is true.

Commissioner DELANO. Now, what is to prevent—supposing there is 100 per cent organization of employers in any particular field of industry, and 100 per cent organization of workers, what is to prevent simply increasing the cost to the consumer of the product, and does not that, as a matter of fact, happen?

Mr. MULLENBACH. I think that that may come out of such an organization, Mr. Commissioner. I am simply speaking now for our present order of industry, which I think is not free.

Commissioner DELANO. Now, what protection does the public—does the consumer have—in a situation like that? We have had before this commission several instances where about that condition of affairs exists.

Mr. MULLENBACH. Well, it seems to me that if the profits grew too large for each side, the wages of the one and the profits grew too large for the employer, under such a scheme of things—

Commissioner DELANO. I did not say they were too large. I simply asked what would prevent the increasing the—

Mr. MULLENBACH. Yes; and they keep increasing the cost, which would mean, as I take it, that each of the parties to the contract would have the same profit; in other words, the profit of the employer and the wages would be raised.

Commissioner DELANO. You misunderstood my question: The employer would simply say, "Why, so long as I can make the public pay for this thing, I don't object to paying more wages." And he would go on paying increasing wages every year. Where does the public come in in a question like that?

Mr. MULLENBACH. Except when he became too costly, the public would probably organize in some other way to find redress. Somebody would put some capital into another scheme of organization. That is the only way I can see out of it.

Chairman WALSH. Might not the law itself step in?

Commissioner DELANO. The situation would get so bad that it would break down?

Mr. MULLENBACH. How is that, sir?

Commissioner DELANO. The situation would get so bad that it would break down?

Mr. MULLENBACH. It might.

Commissioner DELANO. It might?

Mr. MULLENBACH. It might become such an isolated and conspicuous monopoly that it would break down.

Commissioner DELANO. Such a thing has not come to your attention?

Mr. MULLENBACH. No; I haven't seen an instance of it; neither have I seen, I think, an instance of a complete or thorough organization. It is very exceptional where you have all of your employers or all of your people organized.

Chairman WALSH. Do you want to ask a question, Mr. Garretson?

Commissioner GARRETSON. I want to ask one proposition coming out of the last question: Make your proposition nation wide, and organize your employers 100 per cent and your employees 100 per cent, and doesn't it answer itself, because the employers and the employees will furnish 95 per cent of the public?

Mr. MULLENBACH. Well, they probably will, but I was thinking of particular trades when Mr. Delano spoke, some particular section.

Commissioner GARRETSON. But make it nation wide and you have got the answer itself, haven't you, in that particular fact?

Mr. MULLENBACH. Yes.

Chairman WALSH. Is that all?

Commissioner GARRETSON. Yes.
 Chairman WALSH. Thank you very much, Mr. Mullenbach. That is all.
 We will now stand adjourned until 2 o'clock.
 (At 12.30 o'clock p. m. of this Friday, July 24, 1914, an adjournment was taken until 2 o'clock p. m. of the same day.)

AFTER RECESS.

Now, the hour of 2 o'clock p. m. having arrived, the commission met pursuant to adjournment.

Present: Same as before.

Chairman WALSH. The commission will please come to order. All right, Mr. Thompson.

Mr. THOMPSON. Mr. Reynolds.

TESTIMONY OF MR. GEORGE M. REYNOLDS.

Mr. THOMPSON. Mr. Reynolds, will you please give your name?

Mr. REYNOLDS. George M. Reynolds.

Mr. THOMPSON. And your business address.

Mr. REYNOLDS. 72 West Adams Street.

Mr. THOMPSON. Are you president of that bank?

Mr. REYNOLDS. I am.

Mr. THOMPSON. How long have you been president?

Mr. REYNOLDS. About eight years president.

Mr. THOMPSON. As a banker interested in the financial state of the community, do you take into consideration the various business and commercial elements?

Mr. REYNOLDS. We try to; yes, sir.

Mr. THOMPSON. And you follow the conditions of the crops, I believe, more or less thoroughly?

Mr. REYNOLDS. We try to follow them as closely as we can; yes, sir.

Mr. THOMPSON. That is true also of the other commercial conditions?

Mr. REYNOLDS. Yes; in a general way we try to keep in touch with whatever goes to make existing conditions.

Mr. THOMPSON. In that observation of the general commercial and business conditions, has the labor problem come under your consideration?

Mr. REYNOLDS. Yes, sir; in the way of observation. I never have myself been situated where I have had direct contact in the employment of union labor, however.

Mr. THOMPSON. What, in your opinion, is the effect of industrial disputes on the general commercial and financial conditions of the community in which they occur and the country generally?

Mr. REYNOLDS. Well, I think that when labor and capital are both employed and business is running at its maximum or normal activity, anything which interferes with the conduct of that business anywhere has some effect upon the whole situation. The amount of the effect depends entirely, or the measure of the effect depends entirely upon the magnitude of the matter under dispute and the number of people affected by it.

Mr. THOMPSON. Have the disputes which so far have occurred—massing them—had an appreciable effect on commercial conditions?

Mr. REYNOLDS. I think they have at different times.

Mr. THOMPSON. Could you illustrate that by any particular industrial trouble in Chicago?

Mr. REYNOLDS. Well, I think more recently the brick strike here would illustrate the thought I have.

Mr. THOMPSON. What are your conclusions in regard to the effect of that strike, taking it as an example?

Mr. REYNOLDS. I think it delayed the erection of many buildings here. It created a stagnation of business, and inability on the part of manufacturers of products to use them, and resulted in people being out of work to that extent.

Mr. THOMPSON. Was that due to a considerable extent or an appreciable extent or not?

Mr. REYNOLDS. Yes; I think it was noticeable to all classes of business; more, of course, to the manufacturer and producer of the commodity that would be used in the erection of buildings under contract.

Mr. THOMPSON. Did that have any effect on banking?

Mr. REYNOLDS. Indirectly, to some extent; but not so much in other directions.

Mr. THOMPSON. What, in your opinion, is the desirability of industrial peace and regular carrying on of business free from strikes—labor strife?

Mr. REYNOLDS. I think anything which could regulate business to such an extent that we would not have the frequent interruptions through contentions between labor and capital would be most helpful in any direction. Anything that would stand for stability, for that matter, so that we might proceed some length of time without any dissension of any kind, would be very helpful in all lines.

Mr. THOMPSON. Is there any particular view held generally among the banking community with reference to these industrial strifes?

Mr. REYNOLDS. Well, I would say, with my knowledge, there is, because I am frank to say I don't consider myself an expert or especially strong student on that particular thing you are dwelling on for the moment. I would not say I am an involuntary witness here, but I am not a voluntary witness to the extent I believe my views are infallible by any means.

Mr. THOMPSON. As a citizen of the community, have you any views as to the ordinary remedies which are used, such as conciliation, mediation, and arbitration in the settlement of industrial disputes?

Mr. REYNOLDS. Only as I have got it by observation. As I said before, I have had no personal contact with labor organizations of this kind where I have been personally engaged in any of that work of conciliation or mediation or arbitration as far as that is concerned, but it seems to me that everything along the line of a peaceful and conciliatory avenue is to be desired. I am something of a believer in the theory that if two parties to a disagreement are honest in their contention and honest in their efforts to correct the differences of opinion, and they will both put their cards on the table face up, that it is not a very difficult thing, as a rule, to adjust those differences.

Mr. THOMPSON. We live to-day in an age of organization, do we not?

Mr. REYNOLDS. Yes; to a great extent.

Mr. THOMPSON. That is particularly true of the banking industry, is it not?

Mr. REYNOLDS. Yes; the same as everything else.

Mr. THOMPSON. And large manufacturing industries?

Mr. REYNOLDS. I suppose you mean by that that things are done in large units as the result of organization of big corporations. Everything nearly is done more or less that way.

Mr. THOMPSON. In other words, more cooperation and working together for the handling of the various avenues of business endeavor which we have in the world to-day.

Mr. REYNOLDS. It would be most desirable, I think, if they could do so.

Mr. THOMPSON. Well, in the productive world, in the steel world, in the coal industry, and in the banking business that is fairly true, is it not?

Mr. REYNOLDS. Yes; I think so. I think the period of consolidation and of organization of large things as it has obtained in recent years has been with a view of creating a more efficient result in the accomplishing of the things you have just mentioned.

Mr. THOMPSON. Now, Mr. Reynolds, some people are of the opinion, however, that the organization of the workmen as such into large units—unions—leads to a decrease of efficiency and to the disorganization of production; on the other hand, some people believe that that leads to a more orderly state of production. Have you any views as to whether or not—

Mr. REYNOLDS (interrupting). Nothing—

Mr. THOMPSON (continuing). The workmen should follow the general trend of the age or not?

Mr. REYNOLDS. My views upon that would be secondhand rather than otherwise. And you are having plenty of evidence here from people who are directly interested and who can give that proposition more definitely, more accurately than I could.

Mr. THOMPSON. The idea there, Mr. Reynolds, is that you are to a certain extent removed from the active field of conflict?

Mr. REYNOLDS. That is it. Yes, sir.

Mr. THOMPSON. And as an important member of the public, general public, you might have some views that would really, perhaps, be more beneficial than those directly interested.

Mr. REYNOLDS. The thought I have in connection with that is this: Sometimes the expressions of people in more or less high places in business, on subjects

that are national in their scope and are complex in their character and effect, as this discussion of this question affects so many people—I say, the discussion of those questions by people who are not thoroughly conversant with them, creates confusion and does more harm than if people would frankly admit, as I am willing to, that I am not especially versed in that phase of this situation.

Mr. THOMPSON. From the standpoint of the public at large, you can see no objection to the organization of the workingman in industry?

Mr. REYNOLDS. Not at all. No, sir. I think that—

Mr. THOMPSON. I beg your pardon.

Chairman WALSH. You thought what?

Mr. REYNOLDS. I beg your pardon.

Chairman WALSH. I thought you were interrupted; you thought what?

Mr. REYNOLDS. I say I think that where large bodies of men engaged in any kind of work or enterprise get together collectively into any kind of an organization for any purpose, I think pretty generally speaking the purposes for which they are collected into these organizations are laudable enough within themselves. I think, however, that human nature applies with the same measure that the law of supply and demand, or the law of averages would direct, rather, in each of those organizations. Now, there may be in labor organizations men who are not wholly unselfish in their use of their organizations just as there are in other civic organizations, in my line of work, the everyday line of workmen, who simply exceed what many of us might agree would be their proper limits.

Mr. THOMPSON. Would that hold true, in your opinion, Mr. Reynolds, with reference to men working in public-service corporations?

Mr. REYNOLDS. It might, sir; I do not see why it should not.

Mr. THOMPSON. Have you any opinion with reference to whether or not collective bargaining is a satisfactory measure to meet with some of the difficulties of the labor problem?

Mr. REYNOLDS. Well, it might do that. It might meet some of the objections.

Mr. THOMPSON. It has been stated by many, Mr. Reynolds, that there is a condition of industrial unrest, I do not mean commercial or business unrest, today; but I am distinguishing the position of the worker as such from the rest of the community. He feels the results under present conditions, not the condition of this year, but generally. Do you believe such unrest exists?

Mr. REYNOLDS. Well, we see more or less evidence of it every day. Sometimes I am rather prone to believe that maybe a good deal of what we superficially call unrest is an exaggeration of existing conditions. When you stop to study and analyze the situation in this country, as it is applied to all classes, and compare that with the same situation in foreign countries, it seems to me that the measure of success and prosperity that has attended the people of this country has been such that there ought not to be as much discussion of the question of a condition of unrest as there is. I could illustrate that perhaps by—well, take last winter in this city, for example, the associated charities undertook to raise a very large amount of money to take care of the worthy and needy poor in the city, a very laudable undertaking. But in their effort to do this, they were advertising all the time that there were many thousands of people out of employment. They were painting that part of the picture as dark as they could, in order that they could get as large a donation as possible from the public, in order that they would give more freely. Now, I think in all civic organizations there is more or less of that sort of thing going on all the time. A few people form an organization with a view of trying to correct some condition that they regard as being unsatisfactory. They start upon the theory that they are going to impress the necessity of a responsibility of the public upon the importance of the situation and they immediately paint that picture just as dark as they can. And I sometimes think that maybe a good deal of our troubles are mental troubles, after all is said and done.

Mr. THOMPSON. What would you say, Mr. Reynolds, with reference to the strike in the copper region—Calumet and Colorado?

Mr. REYNOLDS. Well, I know of nothing that except as I get it from the public press. It seems to have been a very bad state of affairs. Business was almost paralyzed in those communities; men were out of employment and unable to buy the necessaries of life. With all, as I understand it, a very bad condition was created.

Mr. THOMPSON. There apparently was a breakdown in civil government in both places.

Mr. REYNOLDS. Yes, sir.

Mr. THOMPSON. The martial law was declared?

Mr. REYNOLDS. Yes, sir.

Mr. THOMPSON. Is that, in your opinion, a very bad state of affairs?

Mr. REYNOLDS. It is a very bad state of unrest, and ought to be corrected, if it is possible to do it.

Mr. THOMPSON. That condition, I think, existed also in West Virginia until within the last year.

Mr. REYNOLDS. Yes, sir; in the coal strike.

Mr. THOMPSON. Take those symptoms, not as opinions of philanthropic bodies, but as actual existing conditions, take that state of facts, the unrest, what would you say with reference to its cause and what would you suggest as a remedy for its cure?

Mr. REYNOLDS. Well, I should say the causes there were too much agitation from all sides. And in saying that I say that the agitation probably came from both sides to a certain extent. It should be corrected, if possible, and it is a pretty big question as to how and what would be the best way to correct that. Personally, I have always believed in an effort on the part of the interested parties through conciliatory efforts to reach an agreement if possible, and failing in that, it seems to me, that it could be accomplished through enforced arbitration after a certain point. I would not begin from the start, but after a contention between two parties had reached a state where people were entirely apart and the two sides of the contention were being affected, then I think enforced arbitration of some kind by some commission, some body, of a kind that would be competent to keep tab and in touch with cases of that kind might do it—something after the order of the Canadian plan. I do not know just what they call it, but I understand it is equivalent to a Cabinet officer in this country. That he has general supervision over their industrial difficulties and at a certain point he has a right to step in and insist upon arbitration.

Mr. THOMPSON. Do you think, Mr. Reynolds, that the existence of a Federal industrial council, a body of men selected for their ability and disinterestedness in that subject, perhaps, who could investigate the facts in such an industrial dispute and who would have power of conciliation and mediation and, upon the request of the parties, the power to arbitrate, do you think such a body, with powers to throw light on the subject, would assist in any way, at least?

Mr. REYNOLDS. Yes; I think it could be very helpful. Of course, the crux of the whole thing would be in a measure the unselfishness that would be applied and the measure of equity and the justice that would be applied. And if a body of that kind was formed, with men familiar with their activities, and they would be entirely unselfish and make justice and fairness watchwords, then I can see a good deal of good might come out of it.

Mr. THOMPSON. Is there anything else you would like to state at this time with reference to the industrial problem?

Mr. REYNOLDS. I do not know that I do, sir.

Mr. THOMPSON. That is all.

Chairman WALSH. Mr. Garretson would like to ask a question.

Mr. THOMPSON. Just a moment. One more question: Do you think there should be some method by which the union should have a more stable responsibility and position in the industrial matters?

Mr. REYNOLDS. I am talking again entirely from a theoretical point of view when I try to answer that. But my own opinion is, from knowledge I have, that incorporation of the union where a responsibility could be properly fixed would help solve that problem.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Garretson would like to ask you a question or two.

Commissioner GARRETTSON. Mr. Reynolds, you made the statement, I believe, one of the things to be desired was stability. Do you believe the maintenance of stability would be justified if stability meant the perpetuation of a moral wrong toward either interest?

Mr. REYNOLDS. No; I don't. I would answer that by saying that I would have unselfishness, justice, and fairness the basis of all negotiations.

Commissioner GARRETTSON. Then, if the demand of a body of employees or the resistance of the employer was against a manifest injustice on either side, the one that contested and brought on the war would be justified thereby under those facts, in your opinion?

Mr. REYNOLDS. Well, I would not want to undertake to say what justification—

Commissioner GARRETSON. Without passing upon what the definition of justification is.

Mr. REYNOLDS. Passing the question of the justification, I should say the settlement of a misunderstanding of that kind might well be left to people who would be disinterested.

Commissioner GARRETSON. Do you believe that the question of where it is manifest that where injustice exists either way that the obligation rests on any man to leave it to third parties to say whether he shall resist?

Mr. REYNOLDS. Well, if we are to submit our differences of opinion and contentions to law at all, I don't know why it should not apply there as well as any place else. Otherwise we would all be taking the law into our own hands, and executing what we regarded as right and wrong.

Commissioner GARRETSON. Is there any law in existence that will make any man work against his will?

Mr. REYNOLDS. No; that is very true, and should not be.

Commissioner GARRETSON. Any more than it could compel you to remain in the banking business; one would be as fair as the other, would it not?

Mr. REYNOLDS. Yes, sir; entirely so.

Commissioner GARRETSON. Is the commercial supremacy of a country and the amassing of wealth to be considered supremely desirable, if that can only be brought about by the social submerging of a large portion of the citizens?

Mr. REYNOLDS. No; I quite agree with you.

Commissioner GARRETSON. In your opinion, has a commercial enterprise any right to exist unless it can be so conducted as to give those who conduct it a reasonable compensation for their labors?

Mr. REYNOLDS. As a whole I should answer no. There might be an individual commercial organization which, through competition of some kind or other, might be forced into such a condition, but collectively I should say no.

Commissioner GARRETSON. The man himself who owns the enterprise would be perfectly justified in starving himself to make it win if a reward lay ahead, but that would not apply in your opinion to the men who were hired to carry it forward?

Mr. REYNOLDS. I don't think I would have any right to express the measure of starvation the other man should go to; no, sir.

Commissioner GARRETSON. Has your experience in business life led you to believe that a higher conception of moral as well as legal responsibility obtains in associations of business men than in associations of laboring men?

Mr. REYNOLDS. I have not been close enough related to associations of labor to have a very definite idea on that subject. As I said before, I am rather reluctant to express an opinion that only represent theories and not knowledge from practical experience.

Commissioner GARRETSON. Then knowledge has not led you to believe that a greater portion of the laboring men as connected with organizations are dishonest than of men engaged in other pursuits?

Mr. REYNOLDS. My general belief is that the great majority of all civic bodies, including union labor organizations, are honest and well meaning and, as I said before, that the purposes of their organization are laudable. In many cases, individuals take advantage of their official positions, and that will apply to civic organizations—

Commissioner GARRETSON. Including labor unions?

Mr. REYNOLDS. Yes, sir.

Commissioner GARRETSON. We have got to that common ground, anyhow. You refer to the Canadian act. After using the phrase "forced settlement" or "forced arbitration," were you aware that the Canadian act, known as the industrial disputes act, has nothing of the forced arbitration in it?

Mr. REYNOLDS. I don't think perhaps the word "forced" is a proper word to use in connection with that statement. My knowledge of this is based almost entirely upon an address which I heard the officer—I don't now remember his name—

Commissioner GARRETSON. The minister of labor—Maxwell King—former minister of labor.

Mr. REYNOLDS. In that address he told in a general way of the treatment of their labor disputes in Canada as compared with our methods in this country and it impressed me generally as being a good thing.

Commissioner GARRETSON. It provides for compulsory investigation, but has no method of making its verdict binding upon either party.

Mr. REYNOLDS. The result shows that nearly all of those things are compromised after they enforce those investigations; the same result.

Commissioner GARRETTSON. Have you also seen the fact developed that it also—seen the fact reported—it also developed utter disregard for the law on the part of large bodies of men?

Mr. REYNOLDS. No, sir; I have not.

Commissioner GARRETTSON. That is all, Mr. Chairman.

Chairman WALSH. Any questions? That is all. One minute, Mr. O'Connell wants to ask you a question.

Commissioner O'CONNELL. I don't want to bring you back, but I want to make just one comparison. There are among bankers—banking interests—those who are not considered straight always in their dealings with their depositors, and as a result there are bank failures at times. The cause of a bank failure or some officer of a bank misappropriating or doing away with the funds of the depositors, would not be justification for the discontinuance of the banking system of this country, nor would it be evidence that the bankers were dishonest.

Mr. REYNOLDS. No, sir; I don't think so. I think that illustrates again the law of averages. I think that is the determining influence in it.

Commissioner O'CONNELL. By the same argument, then, it would be no more justifiable than to say that some labor leader had been charged with grafting and that labor organizations should be done away with?

Mr. REYNOLDS. Not unless the infractions—well, I would not say of law, because it is not law—unless the infractions or grievances would show they were more common than they are in the failures of banks, I would not say so.

Commissioner O'CONNELL. That is all.

Chairman WALSH. That is all. Thank you.

TESTIMONY OF MR. JOHN G. SHEDD.

Chairman WALSH. Take that chair, please, Mr. Shedd.

Mr. THOMPSON. Mr. Shedd, will you give us your name, please?

Mr. SHEDD. John G. Shedd.

Mr. THOMPSON. You are president of Marshall Field & Co.?

Mr. SHEDD. I am.

Mr. THOMPSON. How long have you been connected with Marshall Field & Co., Mr. Shedd?

Mr. SHEDD. Forty-two years.

Mr. THOMPSON. Marshall Field runs a wholesale and retail dry goods business, so called?

Mr. SHEDD. They do.

Mr. THOMPSON. Probably the largest business of its kind in this city?

Mr. SHEDD. We have that name.

Mr. THOMPSON. Is Marshall Field also engaged in the manufacture of goods here and elsewhere?

Mr. SHEDD. Yes, sir.

Mr. THOMPSON. In Europe, I believe?

Mr. SHEDD. No, sir—well, to a very slight extent; I don't know but I would qualify that a bit by saying to a slight extent—in a small way.

Mr. THOMPSON. Where are their principal manufacturing plants?

Mr. SHEDD. For the manufacture of laces, at Zion City, Ill.; in the cotton industry, in Spray, N. C.

Mr. THOMPSON. Any other factories that you run and operate?

Mr. SHEDD. Well, we are in the underwear manufacturing business in New York City.

Mr. THOMPSON. New York City?

Mr. SHEDD. Yes.

Mr. THOMPSON. Do you manufacture any women's clothing, or men's?

Mr. SHEDD. I beg your pardon; we also have a factory at Monticello, Ind.

Mr. THOMPSON. What do you manufacture there, Mr. Shedd?

Mr. SHEDD. We manufacture threads, yarns, etc.; at least, we convert them.

Mr. THOMPSON. Do you know, in round numbers, about how many people you employ in the manufacturing establishments of Marshall Field & Co.?

Mr. SHEDD. Well, in a round way, about 3,000.

Mr. THOMPSON. About 3,000. How many do you employ in the wholesale and retail business here in Chicago?

Mr. SHEDD. It varies between about 12,000 to 15,000. It varies.

Mr. THOMPSON. Now, in handling the business of that firm, both in the manufacturing and the selling and the distributing of goods, Mr. Shedd, you have had more or less occasion to come in contact with the labor problem?

Mr. SHEDD. Yes.

Mr. THOMPSON. Have you any collective bargaining or agreements with your people as such in any department of your industry?

Mr. SHEDD. Not which you might strictly term that, I think, and yet in a degree, perhaps, with the underwear manufacturing plant in New York and in the decorating department of our Chicago business.

Mr. THOMPSON. Have you any agreement with teamsters, we will say?

Mr. SHEDD. None whatever.

Mr. THOMPSON. None whatever. But you have had something to do with organized labor?

Mr. SHEDD. Something.

Mr. THOMPSON. Now, from your experience in the commercial and business world, Mr. Shedd, have you any opinion regarding the extent and causes for labor dissatisfaction in industry, and any remedies for its cure? Have you got a paper there which you would like to read?

Mr. SHEDD. Yes; if you will allow me. I received from the chairman of your commission a list of the general questions which it was suggested might be propounded, or matters which they desired to go into, and I hastily dictated general replies to each question, which I should like to submit.

Mr. THOMPSON. Well, you may read that, Mr. Shedd.

Mr. SHEDD. The first question suggested was, "Opinion regarding the extent and causes for dissatisfaction and unrest in industry."

My answer is that unrest in industry is world-wide and is caused by a desire for better conditions, better food, better housing, better clothing, and more leisure. A large element is also the prevailing agitation by politicians for purely political purposes and by irresponsible agitators for purposes of notoriety, until they finally convince the public that certain wage earners are deprived of their just dues.

Another element is the rapidly increasing complexity of industrial conditions during the past 25 years. Unrest is a sign of progress, not necessarily an evil. Another reason is the immigration of great numbers of unskilled workers from countries of great suppression to one pictured to them of great personal freedom and golden opportunity, which leads them to fall an easy prey to the agitator. The extent to which such unrest has apparently spread would dwindle to small proportions if the whole subject were removed from the realm of politics. A condition very apparent is the determination on the part of a great many people to indulge in luxuries at a sacrifice of providing for their future welfare and comfort in old age. The flocking of great masses of people to the large industrial centers, seeking excitement, who could live under better conditions in the small town or country. Lastly, the high cost of living is probably one item which causes warranted unrest and dissatisfaction. This high cost of living is largely attributable to the high cost of labor, not essentially to the cost per hour or per day (which may or may not be too high), but more largely to a lack of desire to do a full day's work for a full day's pay.

Question 2. "Constructive proposals within the scope of the commission's authority for improving conditions and alleviating unrest."

Answer. As to additional legislation, I think the Legislature of the State of Illinois has pretty well safeguarded industrial conditions. You can not, in my opinion, legislate to stifle unrest any more than you can legislate people into a happy frame of mind. To my mind, the greatest happiness and satisfaction comes from a full day's work well done and fully recompensed. A writer has recently said in one of our daily publications, which quotations I fully indorse: "It is well to remember that this country is to-day the best country in the world for the man who has to make his living; that it still offers him the greatest opportunity and the clearest title to regard himself as a real factor in the community. It is well to remember that there is in this country a willingness on the part of large business men to seek sincerely the causes of industrial unrest and to cooperate toward removing them that has no parallel in other countries." To the extent that this unrest is special and caused by agitators, paid or otherwise, the commission might recommend to Congress that the Sherman Act be made more clear in its application to every conspiracy of labor organizations in restraint of interstate and foreign commerce. It might also recommend that it be made a criminal offense for an employer or labor leader, in connection with a strike, whether affecting State, interstate, or foreign com-

merce, to attempt to pay or attempt to obtain a bribe as a reward for his services in securing a settlement.

Question 3. (a) "Collective bargaining—trade-unions."

Answer. My experience in relation to collective bargaining and trade-unions has not been such as to inspire confidence in the result of the various phases of this element. The lack of moral or financial responsibility to carry out the written contracts of these institutions is largely responsible for my state of mind on this question. Collective bargaining, as I have observed it, binds only the employer and not the employee. The peculiar necessities of the business in which I am engaged require service—active and prompt—and require the immediate and conclusive acquiescence of all in the service from the lowest employee to the head of the house. We make no exception to this rule, and we have never found that it was either irksome or detrimental to the interests of the employee. I believe our organization has the highest state of efficiency of any of like nature in the world. To reach this high state of efficiency, we have for nearly 50 years adhered strictly to one policy, probably not deviating once a year from such policy; that is, continual promotion from the ranks, going so far, if you please, as from elevator operators to stock rooms, stock rooms to sales persons, from sales persons to departmental heads. Every officer of our company has gone up through the business from stock boys or errand boys to the high positions they now occupy. As I view it, none of this could have been accomplished if these men in occupying their lower positions had been members of a fraternity to which they were more loyal than to our business.

(b) "Means of securing and promoting industrial efficiency."

Answer. By instilling into the mind of every employee the necessity for industry and an earnest, cheerful endeavor to earn their wage. Individuality instead of collectivity.

(c) "Legislation regulating the conditions of employment of women."

Answer. I have an idea that at the present time we have in Illinois sufficient legislative enactment to care for the interests covered by this question. We have the 10-hour day, employers' compensation, employers' liability, State factory inspection, etc., all of which, I believe, are being effectively administered.

(d) "Minimum-wage legislation."

Answer. The advisability of legislation fixing a minimum wage for unskilled women is one which should have very mature consideration. My present opinion is that it would be very harmful to the class which agitation has suggested it would benefit. For instance, if the minimum wage were fixed at \$8 a week and well-trained help could be obtained at a somewhat increased rate, then there would be no opportunity for the unskilled seeker for position. This would have an immediate tendency to drive the unskilled woman in desperation for lack of employment to the very acts which it is intended to obviate by the suggestion of the minimum wage. Other than this suggestion, I have no opinion to offer.

(e) "Desirability and results of welfare work."

Answer. Welfare work among women employees I believe to be very beneficial, even in cases where it is only advisory. It makes for better social, moral, and physical conditions.

I have stated here, Mr. Chairman and gentlemen, some of the items in which we are engaged. I will hand it to you if you desire. It might be, such as you care to hear, and I will read them:

Some of the items included in the welfare work of Marshall Field & Co.: Vacations, time for necessary outside affairs, hospital rooms, lunch rooms at cost, school for juvenile help, Chicago Public Library substation, music room, social rooms, new gymnasium, choral society, baseball, salesmanship conferences.

Our welfare workers keep in touch with the various employees and get as accurate a knowledge as possible as to the home conditions.

We do not to any extent furnish personal medical assistance, most employees desiring to consult their own physicians, in many cases these being family physicians employed perhaps for years in the families.

We do not believe in paternalism as applied to the surveillance of the employees—just those little touches of interest which are helpful.

I have no further suggestions to make on this subject.

(f) "The administration of labor laws and possibility for improvement."

Answer. It might be well for the National Government to inaugurate a system of public works, such as road building, guaranteeing the bonds of the various States for this purpose and only as an emergency measure in times of great depression.

(g) "Scope of application of conciliation and arbitration and extent to which the State should intervene in industrial disputes."

Answer. I believe that the State should not intervene in industrial disputes beyond the exercise of the usual police powers for the preservation of peace and order.

(h) "Industrial education and vocational guidance."

I believe in vocational training in our public schools, which should supplement but in no wise supersede the fundamental general training which every child should have, and should extend throughout the country.

(i) "Pensions for aged and incapacitated workers."

Answer. As applied to a business like the one in which I am engaged, I am opposed to the general pension system for the reason that it tends to lessen thrift of the individual and creates a general atmosphere of dependence. Our method has been to take up each individual case. All well-conducted businesses should have some equivalent of the pension system. It strikes me that a universal application of the pension system would foster paternalism and tend to take from the individual a sense of personal responsibility for his future and the future of those dependent upon him, which should be incumbent upon every man and makes for a strong nation.

I am of the belief that old-age pensions would not be such a burning question before the public if we, as individuals or collectively, had stamina enough to refrain from the use of tobacco or alcoholic beverages in any form. The savings thus produced, if deposited in a savings bank weekly, would insure our people and their families from dependence in both youth and age.

(j) "Profit sharing."

Answer. Profit sharing, limited to the sharing of profits of successful years, without any responsibility for the losses of unsuccessful years, I believe to be unfair. The system should only be applied to where the responsibility and liability of participation is applied to all alike, whether employer or employee. Instances like the Henry Siegel and Clafin failures in the East confirm me very strongly in this opinion.

This was brought very strongly to my mind by this incident, the unfortunate incidents in New York and Boston, of the failure of the large concerns there. If a man has an interest in the profits as a stockholder and does not participate in the losses, it is a gratuity and should be a part of the general wage paid unless responsibility can be fixed both ways. That, Mr. Chairman, I think, is all.

Mr. THOMPSON. Your business is a competitive business?

Mr. SHEDD. Yes, sir.

Mr. THOMPSON. Are there limits caused by competition to what you could do for your people?

Mr. SHEDD. Are there limits caused by competition to what we could do for our people? I should say not.

Mr. THOMPSON. Generally the competition in your business doesn't affect much your wage system, or wages paid, does it?

Mr. SHEDD. I think it is fair to say not. Of course competition fixes all things, but I think it is safe to say not.

Mr. THOMPSON. Taking the conditions which have existed within the last two years in Michigan and Colorado and western Virginia where civil government has broken down and martial law has been declared, have you any comment to make in respect to those matters, particularly with reference to a statement that the Government should only intervene to the extent of keeping peace?

Mr. SHEDD. Only this: I believe every man, whether he belongs to a union or not, whether he is a party to collective or individual bargaining, should have the right to earn his living anywhere in the world. He should not be deprived of the results of his own labor. He should not be deprived of his right to labor, no matter whether he belongs to a church or not, and no matter whether he belongs to a labor union or not, no matter whether he belongs to any fraternal organization or otherwise. I think every man's inalienable right is that of earning his own livelihood as he pleases as long as he keeps within the law.

Mr. THOMPSON. Have you any opinion—this is suggested by your answer—with reference to whether or not it is advisable for the worker to belong to a union organization or not?

Mr. SHEDD. In the business which I am engaged in I should think it was very detrimental to his interests. If you wish me to confine myself to that.

Mr. THOMPSON. You can make it as broad as you wish.

Mr. SHEDD. There might be relations, I think, in the lower scale of employment where a man is practically, either from a difficulty in speaking the language or any other defect, in his own ability to take care of himself, and I would say that collective bargaining or bargaining through some agency of which he should be the voluntary contributor, would not be objectionable.

Mr. THOMPSON. Even in cases of intelligent men—men who are engaged in the various occupations in this country, do you think that they could bargain as effectively for their wages, for the hours of work, and for working conditions, individually as they could collectively?

Mr. SHEDD. I am not entirely prepared to answer the question. I should think in some of the employments perhaps collective bargaining is to their advantage. I say in the lower scale of labor.

Mr. THOMPSON. Take in garment making, that is not very low.

Mr. SHEDD. No lower, I guess, in a certain field, as in ours, perhaps, because as I understand it—I have had some experience with the garment workers and they are largely of a class, the workers themselves, of those who do not speak the English language.

Mr. THOMPSON. While that probably is true, but the work itself—the various phases of the work require more or less skill, do they not?

Mr. SHEDD. Yes, sir.

Mr. THOMPSON. And skilled work implies intelligence?

Mr. SHEDD. Yes; it may be mechanical, however.

Mr. THOMPSON. Some element of intelligence there.

Mr. SHEDD. It is largely mechanical still and not the element of what you and I would fairly term skill. It would be mechanical.

Mr. THOMPSON. These people may be intelligent, even though foreigners just lately arrived here?

Mr. SHEDD. Oh, yes; yes, sir.

Mr. THOMPSON. And you feel that the union is probably good for them or not?

Mr. SHEDD. Well, I should have to leave that to the individuals themselves. I would be entirely willing that they should belong as long as it is voluntary. I have no comment on that.

Mr. THOMPSON. Do you think, perhaps, a national body, a body appointed and created by the United States Government with power to investigate into the condition of industries and collect facts, particularly in times of strife and trouble, and also with power to mediate and arbitrate, do you think such a body would help the industrial conditions in this country, as you view it?

Mr. SHEDD. If it could be divorced entirely from the element of politics—I don't see hardly myself a way to do that. There is hardly a body that could be formed, whether it is a Progressive facing the wrong way, or whether it is Democratic, or a Republican, or whatever it might be—it seems to me it is a very difficult thing to form such a body that would be entirely impartial. If a body could be formed entirely from the judiciary, from the higher judicial elements, I should say it would be a very excellent remedial legislation or body, but otherwise not.

Mr. THOMPSON. Taking unions generally, have you an opinion as to whether they have been good or bad for industry, and whether they have been good or bad for the members of the union?

Mr. SHEDD. Well, I have heard so much on both sides of that question by union men themselves I don't care to answer that question.

Mr. THOMPSON. That is all.

Chairman WALSH. Mr. Shedd, Mr. Garretson would like to ask you a question or two.

Mr. SHEDD. Yes, sir.

Commissioner GARRETSON. You express a new idea in regard to pensions, Mr. Shedd. If a man refrains from whisky and tobacco, he will create a fund?

Mr. SHEDD. Yes.

Commissioner GARRETSON. That will abolish the necessity for a pension. If that is correct, would he not add to that fund and also shorten the time for which it would be required if he would refrain from bread and meat.

Mr. SHEDD. Why, I should think your logic was correct.

Commissioner GARRETSON. Well, I wanted to know whether I had the correct understanding.

Mr. SHEDD. Yes. I myself don't quite place the same dependence on liquor and cigars as I do on bread and meat, for instance.

Commissioner GARRETSON. Well, I have heard that some people did.

Mr. SHEDD. No; I don't. No; I don't.

Commissioner GARRETSON. But don't whisky and tobacco stand, for many hundreds of poor men, for what all other forms of luxuries and amusements stand to men in better conditions?

Mr. SHEDD. Well, I can't quite answer that question. I—[Laughter and applause.]

Chairman WALSH. Ladies and gentlemen, we must maintain perfect order. I know you will assist me to do so.

Commissioner GARRETSON. Mr. Chairman, that is all.

Chairman WALSH. Mr. O'Connell desires to ask you a question.

Commissioner O'CONNELL. Just briefly—we have had before our commission in New York and Philadelphia the presidents and owners of the very large department stores, like Lord & Taylor, New York; and Mason, and then Mr. Wanamaker, representing Philadelphia and New York. They gave out some idea as to the conditions under which their people were employed, as to wages, and so forth. Can you give us, Mr. Shedd, the minimum rate of wages paid female clerks in your store?

Mr. SHEDD. Sales persons?

Commissioner O'CONNELL. Yes.

Mr. SHEDD. Yes; I think I can. I had some matter, I handed it—I am very much afraid—to the press. I think I have got the information. [Witness examined papers.] Well, I can't answer that question directly.

Commissioner O'CONNELL. Well, will you do it, or have some one do it who can do it, furnish it to the commission?

Mr. SHEDD. Yes; I can give you the average for our present employees in our retail departments.

Commissioner O'CONNELL. What is the average?

Mr. SHEDD. \$12.90.

Commissioner O'CONNELL. But you can't give us the high and the low on that. Is there a minimum wage there that you pay to employees?

Mr. SHEDD. No, sir.

Commissioner O'CONNELL. What is the lowest wage, do you imagine, that you pay a lady clerk in your store?

Mr. SHEDD. I think \$3 a week.

Commissioner O'CONNELL. Eight. And what is the minimum wage that is paid any person in your store; that is, in the sales department, either as a sales person, or as an assistant to a sales person?

Mr. SHEDD. Well, I—when you say "assistant to a sales person," that is a term which is hardly commercial.

Commissioner O'CONNELL. Well, you have such a thing as a cash girl—commonly called cash girl?

Mr. SHEDD. No, sir.

Commissioner O'CONNELL. They are discontinued?

Mr. SHEDD. No, sir.

Commissioner O'CONNELL. Then you have girls, cashiers?

Mr. SHEDD. Yes; we have cashiers.

Commissioner O'CONNELL. What are they paid?

Mr. SHEDD. I could not answer.

Commissioner O'CONNELL. Could not give it?

Mr. SHEDD. Not strictly.

Commissioner O'CONNELL. Will you furnish us with the information?

Mr. SHEDD. Yes; I will be glad to.

(The following communication was subsequently received from Mr. Shedd:)

MARSHALL FIELD & Co.,
Chicago, November 3, 1914.

DEAR SIR: Replying to your letter of the 1st ultimo, would say that the lowest wage paid to any female in our employ is \$5 per week. This amount, or more, is paid to girls 16 or 17 years of age, who are the youngest and most inexperienced we hire.

We hire no girls under 16 years of age.

For this junior class of help we maintain a school, in which the boys and girls spend an hour each day during the regular working hours. They continue to do this until they have completed an education equivalent to graduation from the public schools.

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3377

The minimum wage paid to any female 18 years of age or over is \$6 per week, and none except the most inexperienced receive less than \$8.

The minimum wage paid by us to female sales persons is \$8 per week.

Yours, very truly,

MARSHALL FIELD & Co.,
By JOHN G. SHEDD, *President.*

LEWIS K. BROWN, Esq.,

Secretary United States Commission on Industrial Relations.

Commissioner O'CONNELL. Do you have or do the employees have an association of any kind among themselves, like a beneficial association, that pays sick benefits, and that sort of thing?

Mr. SHEDD. Not to my knowledge. They are free to do it.

Commissioner O'CONNELL. There is nothing of that kind?

Mr. SHEDD. Not that I have any knowledge of. Bearing on your question, I have this estimate, made carefully: The wages of our male employees have increased during the last five years 15.1 per cent, and of our female employees 13 per cent.

Commissioner O'CONNELL. Have you the average of the male employees?

Mr. SHEDD. Yes; this memorandum is not quite clear; I had better not—you would want it exact. The average of all employees at present is \$18.80 per week. That is the average of all the employees, but I have not got the men separate.

Commissioner O'CONNELL. What are the working hours in the store?

Mr. SHEDD. From 8 o'clock in the morning until 5.30 in the afternoon, except Saturdays. In our wholesale department we have a Saturday afternoon holiday the year around, commencing at 1 o'clock.

Commissioner O'CONNELL. But you don't have a Saturday half holiday in the store, in the retail store?

Mr. SHEDD. Not in the retail, only during the months of July and August.

Commissioner O'CONNELL. Do you know in New York this year and in Philadelphia the large retail stores are giving all day Saturday off?

Mr. SHEDD. Yes.

Commissioner O'CONNELL. For three months?

Mr. SHEDD. Yes; I have seen that in the press, that they are.

Commissioner O'CONNELL. So that they are only working five days during the hot season.

Mr. SHEDD. During the hot season. I have seen that.

Commissioner O'CONNELL. That is all.

Chairman WALSH. That is all. Thank you, Mr. Shedd.

Mr. SHEDD. Thank you.

Mr. THOMPSON. Miss Nestor.

TESTIMONY OF MISS AGNES NESTOR.

Mr. THOMPSON. Miss Nestor, will you give us your name?

Miss NESTOR. Agnes Nestor.

Mr. THOMPSON. What is your business address?

Miss NESTOR. 166 West Washington Street.

Mr. THOMPSON. And your present position?

Miss NESTOR. I am president of the Women's Trade Union League of Chicago, and I am also president of the International Glove Workers' Union.

Mr. THOMPSON. How long have you been president of the International Glove Workers' Union?

Miss NESTOR. Less than a year.

Mr. THOMPSON. Less than a year. How long have you been—

Commissioner LENNON (interrupting). I can't hear, and I am near by.

Miss NESTOR. Less than one year.

Commissioner LENNON. Thank you.

Mr. THOMPSON. The audience, too, Miss Nestor, wants to hear.

Miss NESTOR. Yes.

Mr. THOMPSON. Both of us, they say.

Miss NESTOR. I shall try to.

Mr. THOMPSON. How long have you been connected in an official way with the glove makers' union?

Miss NESTOR. I have—almost since we have been organized, which is 12 years.

Mr. THOMPSON. Twelve years?

Miss NESTOR. I have been. Prior to the time that I was elected president of the international I was secretary-treasurer of the international and I served in that capacity for seven years. Before that I was a local officer.

Mr. THOMPSON. Is that an organization principally of women workers?

Miss NESTOR. Men and women.

Mr. THOMPSON. Men and women?

Miss NESTOR. Yes, sir.

Mr. THOMPSON. What proportion, about?

Miss NESTOR. Well, there is a little more than one-half of the organization that is men and the remainder women.

Mr. THOMPSON. What is the purpose of the Women's Trade Union League?

Miss NESTOR. The purpose of the Women's Trade Union League is to organize women into trade-unions and also to cooperate with everybody in every way we can to try to make conditions a little better.

Mr. THOMPSON. Has your organization any affiliation with the American Federation of Labor?

Miss NESTOR. We are not affiliated with the American Federation of Labor. We are affiliated with the Chicago Federation of Labor, and also with the State federation.

Mr. THOMPSON. And the relations between your organization and the American Federation of Labor are friendly or unfriendly—which?

Miss NESTOR. Very friendly.

Mr. THOMPSON. Do you generally have a delegate at their convention?

Miss NESTOR. Fraternal delegate. According to their constitution that is all we can have.

Mr. THOMPSON. Has the Women's Trade Union League got a constitution and by-laws?

Miss NESTOR. Yes, sir; we have.

Mr. THOMPSON. Have you that with you?

Miss NESTOR. I have a copy of our annual report. I do not believe the constitution and by-laws are in this, but I will be glad to file one with the commission. I will file this report also.

(The papers so presented were marked "Exhibit No. 1, Witness Nestor, July 24, 1914," "Exhibit No. 2," "Exhibit No. 3," "Exhibit No. 4," "Exhibit No. 5," and "Exhibit No. 6.")

Nestor Exhibit No. 1, pamphlet entitled "Women's Trade League of Chicago," biennial report, 1911-1913; Nestor Exhibit No. 2, clipping from the press, June 23, 1913, announcing 6 o'clock closing hour for certain stores; Nestor Exhibit No. 3, circular entitled "Women's Trade Union League's statement of the Facts Concerning Hearlcl's, on Randolph Street"; Nestor Exhibit No. 4, folder entitled "Women's Trade Union League of Chicago—Platform"; Nestor Exhibit No. 5, list of workers in various occupations; and Nestor Exhibit No. 6, circular entitled "How the Hours in the Retail Stores can be Regulated Under a Fifty-four-Hour Week Law," were all submitted in printed form.)

Mr. THOMPSON. What have been the activities of the Women's Trade Union League while you have been connected with it as president and otherwise, if you can speak later?

Miss NESTOR. Well, our activities have been to try and organize women into trades-unions. We have worked to secure protective legislation for the women workers. We work with the trades-unions in various ways to strengthen some of the unions that perhaps needed our assistance and advice, and also we have several branches of our work. We have what we call our health-committee work, law enforcement. We work to—we had a committee that did a great deal in bringing about the creation of the fire-prevention bureau that exists in Chicago now. We have been working to help the enforcement of these laws.

Mr. THOMPSON. Just a little louder, please.

Miss NESTOR. We—through our efforts largely the fire-prevention bureau in Chicago was organized, and since the creation of that we have been trying to work with that bureau to bring about better enforcement of the law. It is a new bureau and they have not any adequate funds to have the number of inspectors they ought to have. And we have a committee to find out the condition in the factories, find out any way of violations, of laws being violated, so that we can report to the bureau. But our main work, of course, is the organization of women—our general work.

Mr. THOMPSON. Has your organization taken any part in the enactment of State legislation through what you have mentioned, for instance, the 10-hour law for women?

Miss NESTOR. We work and try to—

Mr. THOMPSON. Did you take part in the work?

Miss NESTOR. It was through the efforts of our organization; I believe, almost entirely that the law was placed on the statute books. Our organization, with the waitresses' union, I mean. We worked the first session to secure the passage of that law. It was a very limited law; it only applied to what are considered the laborious trades. At the next session we worked to extend it to all the other occupations and were successful. At the last session we tried to reduce the hours. We had the 10-hour day, which is 70 hours a week, and we tried to reduce the hours to 54, but were defeated in our efforts. We tried to secure the passage of the minimum-wage law, but we were defeated in our efforts in that. The attitude of the employers in regard to that legislation was, at the last session, that they did not care what it was, they were opposing progress in social legislation; that is what they call that—social legislation. They said they were fighting any progress—

Mr. THOMPSON. Who said that?

Miss NESTOR. Mr. Glenn was the one that made the statement before the House Committee on Labor. When the matter was before that committee there were several questions asked with regard to whether they could not conform to it in these different establishments, and he said what they were opposing was progress in this legislation, and it was not so much a question of—

Chairman WALSH. It was not so much a question of what?

Miss NESTOR. Of the particular provisions of the bill. They were opposing progress. He said they did not consider it health legislation; they considered it social legislation and they were fighting progress in social legislation. When the matter of the minimum-wage bill was before the committee Mr. Taylor was asked whether he was opposed to the wage or whether opposed to a flat rate, and he said they were opposed to all that legislation, giving the impression to the Senate committee they were opposed to anything in the line of minimum-wage legislation. It was a very broad bill.

Mr. THOMPSON. Did you hear Mr. Glenn make that statement?

Miss NESTOR. I was in the committee that meeting; yes.

Mr. THOMPSON. Were those remarks taken down stenographically, if you know?

Miss NESTOR. I do not believe they were. I do not believe the committees were accustomed, unless especially asked, to take stenographic records. But it was a full committee meeting and there were several other persons there who heard it.

Mr. THOMPSON. What part does your organization take in a strike where women workers may be involved?

Miss NESTOR. In any strike in which women workers are involved, if the organization desires our assistance, they have to pass a motion in their meeting that they need our assistance and that is referred to our organization at a meeting of our executive board, which is called particularly for that purpose—if it is not a regular meeting—and we consider it and then vote whether we will give the support.

Mr. THOMPSON. You may tell, if you will, what are the conditions of membership and who compose the membership of your organization.

Miss NESTOR. The Women's Trade Union League?

Mr. THOMPSON. Yes.

Miss NESTOR. The condition of membership is that we ask that some one, of course, vouch for them, some one that we know, and that they subscribe to our platform, which is the organization of women's trades-unions, the eight-hour day, the living wage, equal pay for equal work, and true citizenship for women. That is the platform, the planks in the platform of our organization. We have in our membership trades-unionists; we have workers who are engaged in trades where there is no organization; and we have men and women who are interested in subscribing to our platform, so that it is made up of the various kinds of people.

Mr. THOMPSON. Now, referring to the industrial problems, Miss Nestor, in your position as an active leader in the labor movement, have you studied the conditions of the workers generally, more or less, or given attention to it?

Miss NESTOR. I have had an opportunity to observe it more or less.

Mr. THOMPSON. Do you believe that there is unrest among the workers?

Miss NESTOR. Yes; I do.

Mr. THOMPSON. As such?

Miss NESTOR. Yes; I do.

Mr. THOMPSON. What, in your opinion, is the cause and what remedy could you suggest, or would you suggest, within the scope of the authority of this commission?

Miss NESTOR. Well, I believe the main cause is where the workers have nothing to say in regard to the conditions under which they have to work, the wages they are working for, and the hours of labor. Whether it is in Government, or no matter where it is, where the people have not got a right to voice their demands, I think you will find dissatisfaction. I think you will find an unrest there. And what we want to bring about is—what we feel is the thing that will bring about doing away with this unrest in the workshop and elsewhere, is to let the people have something to say about the conditions under which they are going to work, which, of course, really means working under trade agreements.

Mr. THOMPSON. Under collective bargaining?

Miss NESTOR. Under collective bargaining.

Mr. THOMPSON. In your opinion does that necessitate the organization of the workers into unions of some form or another?

Miss NESTOR. It does. I do not believe that you can reach this problem as it should be reached without the organization of the workers. They are the ones, and they are the only ones, who can solve their own problems. No one else can solve your problem. You have got to meet with your employer. You are the only one who knows the conditions in the shop. I believe more in conciliation than I do in arbitration. I believe, of course, in resorting to arbitration; but I think by the people involved, the workers and the employers getting together, that they will be more likely to adjust the conditions to the satisfaction of both than they will by having an outsider come in. I know—I can cite from my own experience—in my trade we have had agreements with a number of the glove manufacturers in Chicago for the last 12 years. During that time all of our agreements have provided for arbitration in any disputes rather than resorting to a strike during the term of an agreement; and in no instance during that time, which is quite a long time, have we resorted to arbitration. We have always gotten together as both sides, and always said we knew more about it than an outsider; we don't have to have them come in and tell us where we are wrong.

Mr. THOMPSON. What would you say, Miss Nestor, with reference to the organization of unions, so that democracy might prevail in that, too?

Miss NESTOR. Well, I believe that we ought to have—I think the ideal organization is where democracy is, where democracy does exist. I think that in order to have the people satisfied, entirely satisfied, even in an organization, you have got to have democracy. They have got to have a voice in all the affairs of that organization. I think that—

Mr. THOMPSON. Do you believe that industrial trouble has come in some instances because of the fact that the workers themselves, members of the union, did not have an adequate voice in that management?

Miss NESTOR. Well, I do not know of any. In some instances—I think most organizations, the unions—I am talking of the rank and file, they do that, determine the questions that affect our interests. For instance, in the matter of the strikes, a strike is not called unless the members individually have a vote on it, and that vote is always trying to safeguard the ballot, so that we can get a true expression. In the same way, I know when we are making agreements, we will not sign an agreement, no matter what little change is made in the original agreement, with the person that has been named by the organization, until it has been ratified by the organization. They are the ones that are going to determine whether it is something they can go back to work under, or whether they want that kind of an agreement. I think that most of the organizations have absolute democracy. Of course, there are exceptions, like in everything else.

Mr. THOMPSON. Well, have you known of any cases where single men have the power of calling strikes?

Miss NESTOR. Well, I have heard of cases.

Mr. THOMPSON. You have heard it.

Miss NESTOR. But I don't know.

Mr. THOMPSON. You have heard of it?

Miss NESTOR. Yes.

Mr. THOMPSON. What effect do you think that would have on the organization itself?

Miss NESTOR. Well, it may not have any particular effect, and it may. As an officer, I would not want to have that power intrusted to me. I would not want to take that responsibility.

Mr. THOMPSON. You think it would be a good thing for the organization?

Miss NESTOR. I think the more of that power that we invest in the rank and file the safer it is for everybody.

Mr. THOMPSON. You think, then, it is a great power to place in one man's hands?

Miss NESTOR. Well, I think it is too much of a power; I would not want it.

Mr. THOMPSON. In what industries—

Miss NESTOR. At my own beck and call.

Mr. THOMPSON. In what industries around Chicago that you are familiar with are the conditions of the women workers good, and in what other industries are they bad, and what are the reasons, if you can tell them?

Miss NESTOR. Well, for instance, I think the straw and felt hat workers have very good prices, and the bindery and the shoe workers and the suspender workers; I think in all we have about 22 trades in which the women are organized, and in all those trades there are fairly good conditions, and, of course, conditions are improving all the time. Some of them have not been organized very great lengths of time, but comparing them with the unorganized trades I think there is considerable difference. You take a trade, particularly a factory, and other trades where there has never been an organization, and you will find the wages are very low, and you will find there a younger and new group always coming in. There will be one group work perhaps a considerable length of time and then they will become disgusted with the conditions and go out and a new group comes in all the time. I think where we have got the better conditions as we have in the organized shops, you are more likely to keep your good, experienced workers, at least while they are in the trade. There is not the shifting and changing all the time as in the other trades.

Mr. THOMPSON. What opinion have you with reference to a Government regulation, either State or National, of the employment of women?

Miss NESTOR. Well, I think there is certain legislation we ought to have. Of course, we feel very strongly about the limitation of hours. I think we ought to have an eight-hour day, and I believe in the minimum-wage bill. We fought for that in the last session of the legislature. Those are the two particular things, the laws we are working for at the present time. Of course, there are a great many improvements that can be brought about, but even when you have legislation you have to have an organization so that you can get those properly enforced. Why, we found, and I think there are a great many organizations through their investigations this year found, the girls, even though they wouldn't perhaps have the courage to come out and say that the employer violated the law, but that meant dismissal and perhaps self-blacklisting. We have had girls in the city here in certain trades that have been dismissed simply because they went in and testified to working overtime, or whatever the violation was of the law.

Mr. THOMPSON. Referring for the moment to the question of the condition of organized and unorganized trades, have you any data or statistics you can offer with reference to the conditions and wages in each of these?

Miss NESTOR. I think I can furnish you with some—furnish the commission.

Mr. THOMPSON. Will you furnish the commission with such data as you have in that respect?

Miss NESTOR. Yes; as much as we can possibly get. There are certain trades, the box industry and the candy industry; all of us know the wages there are very low. Wherever piecework exists and no organizations, it means the wages are always going down, because the system itself brings about that condition in price.

(The witness subsequently submitted a pamphlet entitled "Clerks! Do you want the Saturday half holiday?" etc.; a handbill reading "There are 125,000 working women in Chicago," etc.; a pamphlet entitled "Training School for Women Organizers of the National Women's Trade Union League of America, Preliminary Report, 1914;" and two booklets, which were, respectively, the programs of the conventions of the National Women's Trade Union League at Chicago, September 27-October 2, 1909, and at Boston, June 12-17, 1911; all of which were in printed form.)

Mr. THOMPSON. Have you ever considered the question of a union among domestic employees?

Miss NESTOR. Yes, sir.

Mr. THOMPSON. What are your opinions about it?

Miss NESTOR. Why, I think they ought to have one. I think, that their hours ought to be standardized. I think that work ought to be standardized, just like any other work is standardized. We know that they work irregular, long hours. We know that they have all sorts of conditions to contend with that they hadn't ought to, and they will never be able to do anything unless they have, and until they have an organization.

Mr. THOMPSON. Have you ever attempted to develop an organization in that?

Miss NESTOR. Yes; we have. We have got one under way. Mr. Chairman, I would like to say in the matter of legislation, just so that your commission will know that no matter what we attempt to do to change and improve conditions, we meet opposition. Now, it is not only when we attempt to legislate about it that there is opposition. When we try to organize we always meet with opposition, or at least, we always have. And then when we try to get those things, reduction in hours, minimum-wage scale, or whatever it is, by legislation, we met the same opposition.

Commissioner O'CONNELL. What is that opposition? Just give us that.

Miss NESTOR. They are the employers' association.

Commissioner O'CONNELL. Now, to develop a little, who are they?

Miss NESTOR. Well, in Chicago, for instance, we have the retail merchants' association. We tried last year to organize the clerks into a trade-union. We found opposition there. We tried to get legislation which would reduce the hours in the stores, especially in the outlying districts, and the merchants came down in big numbers opposing our bill. They said that sort of legislation would put them out of business; they could not compete with the down-town stores, and all of that. They were successful in defeating it. After it was defeated we said, "All right, if we can't get it by legislation, we will get it by organization." We began calling meetings, and had some very successful meetings, and as soon as the merchants out there found out our meetings were well attended and it looked as if through organization we would get these things, they on their own part closed the stores one evening a week, which was admitting the very thing that they denied within a few weeks of that time.

The legislature adjourned in June, and it was at that time they were opposing our legislation. And late in June they announced that in July they would close one night a week, and they put into effect the hours we were asking for by legislation. They did that of course to offset the organization.

Mr. THOMPSON. Is there any other matter, Miss Nestor, that you would like to speak about to this commission in connection with the industrial problems?

Miss NESTOR. Well, the thing in particular of course is that I feel that until we have organization we are not going to solve this question, and that the thing that brings it about, unrest, the thing that brings about trouble, such grievances and dissatisfaction that exist among the workers that have no way of voicing their grievances, until we have that, I think we are going to have unrest; and until we have the employer educated up to the fact he must deal with his people. You know you can get an agreement; perhaps you have a strike, and the employer thinks he can't get anyone to take their place, and he has to go in and signs an agreement. But you don't really get recognition of the union there, you perhaps don't get it for two years. You don't get it until there is a change comes about within that man, until he comes to see that after all he ought to deal with the organization. And I think that some of our employers that have been dealing with organizations have found that it was after all just as well to have a way of finding out what was wrong in that factory. They are a long ways from the shop, sitting down in their offices, they don't know what is going on up there. There is the foreman and there is all sorts of assistants between them and the workers, and very often if you can get to them and let them know the existence of grievances they could be adjusted, and it is necessary to have a way to really get to them.

Mr. THOMPSON. Do you think, Miss Nestor, a Federal industrial council, with powers of investigation, etc., would help in this question?

Miss NESTOR. Yes; I think it would.

Mr. THOMPSON. Particularly in cases like the cases in Michigan and Colorado and West Virginia.

Miss NESTOR. I think it is always well; I think if they could do nothing more than in the case of dispute, or in case of strikes, or in case of trouble, to bring the two parties together, really make them come into conference, and try to adjust it. I don't want compulsory arbitration, I don't believe in it. But I

believe if both sides could be brought together and made to meet each other and talk over their differences, it would go a long ways toward adjusting it very often.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Lennon would like to ask you a question or two.

Commissioner LENNON. Miss Nestor, in speaking favorably of the minimum wage for women and minors, do you desire to secure it by a statute of the legislature or through wage boards?

Miss NESTOR. Through wage boards. I don't believe in a flat rate, and I would very much dislike to see such a bill passed. I would like to see a law whereby there would be a minimum wage commission, and they would have the power to organize wage boards in the different trades, going into each trade separately and inquiring into the wages and conditions, and to have the workers represented on that wage board, have them select their own representatives for it, and have the employers represented on the other side, and the public, and in that way adjust their wage scales. I think it will only be a beginning anyway; I think the workers will finally have to settle the thing with the employers.

Commissioner LENNON. Now, in giving causes for social and industrial unrest, would you include as one of the causes, say, the inefficiency of workmen and work women because of lack of training as children in youth?

Miss NESTOR. I think that is one. It deprives them of opportunities, and I think the supposition of all this work of making people mere machines, putting them at one monotonous piece of work day in and day out, and the long hours—no matter what inventions we have, no matter how much the output is increased, through these inventions, we don't have any comparative reduction in hours as a result of it. We have to work just as long hours; the strain is very much greater, and the work is as we know very monotonous, and that can't help but create an unrest.

Commissioner LENNON. Do you consider the present educational system as ample for the proper training of boys and girls that are to go into industrial life?

Miss NESTOR. No. I think there ought to be arrangements made for the education of the workers for their industrial life just as there is for our professional men and all the other groups to-day. We have only made arrangements—our schools only lead to the colleges, where about 10 per cent of our group go, and we have got that other large group going out in the shop with no training at all. And I feel very strongly that we ought to have industrial education.

Commissioner LENNON. Do you believe that some such arrangement—I don't mean exact, but involving the principles that apply in the carpenter school—should be provided by the State for all the boys and girls that go into industrial life?

Miss NESTOR. I think for apprentices that is a very good plan, and I think for all our young girls and boys, especially our girls, whose trades don't require a long apprenticeship, we ought to have some training whereby they won't go into, as they do now, into all those blind-alley trades, go into the most convenient neighborhood trade, without the proper training.

Commissioner LENNON. Does the Women's Trade Union League favor the raising of the age at which children may enter industry to a higher age than it now is?

Miss NESTOR. We certainly do. I don't believe that any child—we ought to have a law whereby no child could go into industry before 16. I hope some time we will have it even higher than that, but that is what I believe it ought to be, 16 years at least.

Commissioner LENNON. What have you noticed as being the effect upon the morals of women, experience and membership in trade-unions?

Miss NESTOR. Their experience in trade-unions?

Commissioner LENNON. Yes; and membership in the trade-unions.

Miss NESTOR. Well, I think the education that the women receive in trade-unions, just the same as the men, is one of the best educations that they possibly could get. It gives them a wider feeling in regard to their relationship with their fellow workers. It gives them a new idea, I think, of democracy altogether, and in every way it is an education to the workers. I think it is—I think they feel their responsibility to their work more than the unorganized workers do. They know more about the work. Why, unorganized workers don't know anything about the industry they are in. You take an organized group of them and they meet with their employer to adjust grievances, and

they know the different angles; they know some of the perhaps unpleasant things there are in the trade. With the knowledge that they have there I think they are much better workers than they would be if they didn't know anything about the industry at all.

Commissioner LENNON. Is it your experience that where through organization women become more and more interested in their associates and in their welfare that they take greater interest in themselves and in their own welfare?

Miss NESTOR. In some trades we have seen a wonderful change. Especially you take some of the trades of our young immigrant girls that don't know anything about our standards, our wages, our hours, or perhaps haven't had an opportunity to mingle with other groups like some of our American girls have. It really means a new life for them. There has been a very marked change in some of those girls.

Commissioner LENNON. What effect do you believe unions have in what we might call Americanization of foreigners that come into this country?

Miss NESTOR. Well, it has that, and it is the melting pot both. It is a place that breaks down race prejudice and any other prejudice that exists, and we know it does exist in the unorganized shop, because so often one nationality has been used against another. The employer has tried to build up prejudice to simply use the one against the other. I think the trade-union movement has done more to break down that prejudice than any other movement.

Commissioner LENNON. What is the attitude of the Women's Trade Union League as to world peace—peace between nations?

Miss NESTOR. We are for peace.

Commissioner LENNON. That is all.

Chairman WALSH. Any questions? Commissioner Delano would like to ask you a question.

Commissioner DELANO. There are a great many students of this question—industrial question—as between the employer and employee, that feel that we are drifting to a condition where either the Government must supervise all large industrial undertakings or it will be driven to the other alternative of taking them over—Government ownership. What is your feeling on that subject?

Miss NESTOR. I don't know as I got all of your question.

Commissioner DELANO. I say one of two things is going to happen, either the Government will have to supervise all great industrial undertakings to a certain extent or else it will have to take them over by Government ownership, and operate them.

Miss NESTOR. You mean the industry or labor organization?

Commissioner DELANO. The industry.

Miss NESTOR. The industry. Well, I believe we ought to have public ownership of public utilities.

Commissioner DELANO. Of public utilities but not other utilities?

Miss NESTOR. Yes; some other utilities—some others.

Commissioner DELANO. That is all.

Chairman WALSH. Mr. O'Connell would like to ask you some questions.

Commissioner O'CONNELL. Has your league made some study and investigation as to the conditions under which women are employed in the stores in Chicago?

Miss NESTOR. Yes; some.

Commissioner O'CONNELL. What are the conditions under which women are employed in the stores in Chicago, their hours and labor, and the conditions of employment?

Miss NESTOR. Well, up to the time of the passage of the women's 10-hour law, they worked almost any hours. Of course, the stores down town, with the exception of four or five of the large stores, they work overtime during the Christmas holidays—in fact, all the stores worked overtime any time in the year. The doors were not open, the curtains were drawn, and they might be fixing the stores and all of that, but, of course, since the 10-hour law passed they can't work more than 10 hours. But in the outlying districts the stores were at one time open four nights in the week, and then it was cut down to three nights, and that was when they had a temporary organization, and when the law was passed they had to reduce their hours during the day and arrange their shifts so as not to exceed 10 hours and now they work only two nights a week.

Commissioner O'CONNELL. What are the wages of the girls in the stores?

Miss NESTOR. Well, I understand a number of the stores raised the minimum wage and have fixed as a minimum \$8 a week since last year. That was the time the senate committee went through and made an investigation in this State and called before it several of the different industries, and at that time there was quite an agitation about the wage, and as a result a great many of them, I believe, raised the wages—that is, raised the minimum. But, I believe, the others remain the same, although there are a number of stores that still pay less than that amount.

Commissioner O'CONNELL. There is no organization among store clerks at all?

Miss NESTOR. There is no organization among the store girls at all; they oppose the organization.

Commissioner O'CONNELL. Suppose a lady clerk is discharged for a real or imaginary cause for which she feels she has been unjustly discharged, what can she do toward having her grievance adjusted or heard, in one of the large stores in the city?

Miss NESTOR. She has no redress unless she tries to take it up individually. I think we all know that to try to do that in a large concern, especially of the size of the department stores, is quite a futile thing.

Commissioner O'CONNELL. You believe if a girl was discharged she would take it as final rather than go from one to the other on up, and believe she would leave?

Miss NESTOR. She would leave. If she sassed the floorwalker that would probably be the means of her dismissal, and certainly she would have to go and if she didn't go life would be very unpleasant for her anyhow.

Commissioner O'CONNELL. Have you an idea as to the number of female employees in the stores in Cook County, for instance?

Miss NESTOR. Well, I can't say just how many. Mr. Shedd could have told you very quickly that number.

Commissioner O'CONNELL. Do you suppose a hundred thousand?

Miss NESTOR. I could not say whether a hundred thousand. A great many thousand. There are several thousand in one store.

Commissioner O'CONNELL. Are there any systems of the proprietor or manager keeping a record of their employees and transferring the information contained in the records from one store to another?

Miss NESTOR. I have understood there was.

Commissioner O'CONNELL. If a girl, for instance, was discharged in one of the large stores for sassing the floorwalker, or something of that kind, and the employment card was marked in that store as being insubordinate, and she appeared at another store, that information would be furnished?

Miss NESTOR. I understand it is. I have heard that from the girls.

Commissioner O'CONNELL. Then, among the large number of girls employed in Chicago the opportunity of a young lady finding employment after being discharged by one store for some small offense would practically mean her discharge in all the avenues of employment in the city of Chicago?

Miss NESTOR. It should be—it might be—very likely would be.

Commissioner O'CONNELL. Used as a pure blacklist against her future employment, that would have a tendency of driving her into almost any walk of life, into immoral relations in life; poverty might compel her to seek an avenue of life—

Miss NESTOR. It is a pretty serious thing when anyone is blacklisted, of course. I can't say to what extent it is carried on, but I have understood that there are girls who have left one store and have found it very difficult to find employment in another. There are things in that regard we have never found out and perhaps can't find out.

Commissioner O'CONNELL. Wouldn't that condition of affairs be one of the large reasons of industrial unrest?

Miss NESTOR. I think anyone who is not treated fairly, it is that injustice that brings about unrest, whether a matter of employment or a matter of wages, or no matter what it is. If you see you have a grievance and have no way to adjust it, that is one of the things that brings about unrest. I know when our 10-hour law—our present bill—was before the State Legislature, one of the merchants from the northwest side got up and made a statement on the floor; he was trying to see whether the State Street merchants were for it, in order to prejudice the bill, because they didn't work more than 10 hours a day, and said it would drive them out of business. He says, "I know you are not fighting that, because they called us up and said, 'We want to know whether you are fighting the girls' union,' and they said, 'We are fighting the 10-hour

law, what are you doing?' They said, 'We are fighting the union at this time.'" Of course, there were girls discharged that had joined the union.

Commissioner O'CONNELL. That is all.

Chairman WALSH. How long have you been in the trades-union movement?

Miss NESTOR. Twelve years.

Chairman WALSH. What was your trade—glove maker, did you say?

Miss NESTOR. Glove maker.

Chairman WALSH. Was there organization in your craft prior to the time you joined the union, when you went into the industry?

Miss NESTOR. No, sir; there was not. I worked in it with and without organization.

Chairman WALSH. You worked in it with and without organization?

Miss NESTOR. Yes.

Chairman WALSH. Were you born in Chicago?

Miss NESTOR. No; born in Michigan.

Chairman WALSH. In Michigan. And to what extent did you advance in school before you went into industry?

Miss NESTOR. I went as high as the eighth grade. I didn't finish the eighth grade; I went that high.

Chairman WALSH. Have you had opportunity since then, in the way of regular schooling, night school, or anything of that kind?

Miss NESTOR. No, sir; never taken any.

Chairman WALSH. Whatever you have acquired since that time you have acquired in connection with your own work or the trades-union movement?

Miss NESTOR. I have done it really in the trade-union movement.

Chairman WALSH. Have you performed any services for the Government—I believe you have lately?

Miss NESTOR. I recently served on a Federal commission for the—to consider national aid for vocational education.

Chairman WALSH. For what length of time was that commission doing its work?

Miss NESTOR. We sat two months.

Chairman WALSH. How many persons on that commission?

Miss NESTOR. There were nine members—two United States representatives, two Congressmen, and five other members. In all, the commission was composed of nine members.

Chairman WALSH. Were you selected by your craft or by the President, or how?

Miss NESTOR. I was appointed by the President of the United States, but I believe I was indorsed by a great many members of my own craft.

Chairman WALSH. But there was no provision in the law that gave the craft any voice in it?

Miss NESTOR. No, sir.

Chairman WALSH. You were selected by the President himself?

Miss NESTOR. There were two women selected, and I was one.

Chairman WALSH. Who was the other woman?

Miss NESTOR. Miss Marshall.

Chairman WALSH. I want to ask you now to what extent has the movement to organize women in domestic service progressed in Chicago?

Miss NESTOR. Well, organization has been in existence a little over a year. We are making slow but sure progress. Of course, it is something that you have to make slow progress in, because you have got a group working in not one place; you have got to get to work on one person here and one there. They are a scattered group. Then they are leaving; some of our members are living in families, and perhaps they pick up and go abroad or go to their summer homes. One time of the year we have got one group and another time another. Then, of course, it is a more difficult group to organize, of course, than the factory or some place where we have them all together.

Chairman WALSH. Is the Woman's Trade Union giving effort to the work?

Miss NESTOR. They are. We have an organizer who has that in charge.

Chairman WALSH. Who is your organizer?

Miss NESTOR. Mary Anderson.

Chairman WALSH. Is she a woman who was in the trade herself—a girl who was in the business?

Miss NESTOR. She was a shoe worker. We have one organizer, and she has to work with various trades. Sometimes she might be one part and another time another part. We can not have—

Chairman WALSH. Has the effort of organization reached the stage at which demands have been formulated?

Miss NESTOR. They have drawn up their demands with the domestic workers.

Chairman WALSH. Are they in writing?

Miss NESTOR. We have them in printed form.

Chairman WALSH. Will you be kind enough to submit them to the commission?

Miss NESTOR. I will be very glad to. There are some places in Chicago where they are in effect.

(A handbill enumerating the demands of the Household Workers' Association was later submitted in printed form.)

Chairman WALSH. What are those places they are in effect? State them briefly, if you can sketch it.

Miss NESTOR. Just a few women who are interested in this thing have been glad to work them out in their own homes.

Chairman WALSH. They are women connected with the Women's Trade Union League that are not actively engaged in industry, do I understand?

Miss NESTOR. That are not engaged.

Chairman WALSH. That are not engaged actually in industry themselves. Is that a fact?

Miss NESTOR. Yes; those are the ones; yes. We have women in the league who are not engaged in the industry. We have various groups of people in our league.

Chairman WALSH. And they are women that you would not say had any special personal financial interest in the work you are trying to do?

Miss NESTOR. Except that they are interested from the human point.

Chairman WALSH. From the human standpoint?

Miss NESTOR. Yes; the real standpoint.

Chairman WALSH. Do those people give you assistance in your legislation?

Miss NESTOR. Yes.

Chairman WALSH. Leaving aside for the moment organizations of employers, are these employers who assist you in attempting to have those laws passed?

Miss NESTOR. No; I am sorry to say that we have not had any employers that have come right out and helped us to get legislation. We have had some of them, employers who have been favorable to us, that they have helped to this extent: They would try to get the support of their members on it. We had at one session a number of employers who wrote letters. But the ones who go to Springfield to voice either their protest or otherwise are employers representing the associations, and the individual employers who go are usually the employers who are opposing the legislation.

Chairman WALSH. Are these women who are associated with you who are not workers themselves in any instance the wives of men that are engaged in industries, large and small, that employ women help?

Miss NESTOR. Yes; we have some.

Chairman WALSH. How many are there in the organization of the Women's Trade Union League in Chicago?

Miss NESTOR. Well, we have, you see, two memberships. We have an affiliated membership and we have now about 600. We have an affiliated membership of several thousand, because we have different unions of women affiliated with us. We have women's clubs and some other organizations, sort of auxiliary bodies.

Chairman WALSH. The union workers are permitted to join the affiliated union, are they?

Miss NESTOR. No; they can not join a union unless they have a union of their trade. They join the league.

Chairman WALSH. Have you a publication in this city?

Miss NESTOR. Yes; we have a national publication.

Chairman WALSH. Who is the editor of it?

Miss NESTOR. Alice Henry. Life and Labor is the name of it.

Chairman WALSH. Have you an organization which has for its purpose the education of young women in this work that are in industry?

Miss NESTOR. Well, through our national league, we have got a school for the education of those workers to try to help in making them more efficient to carry on their work of organization.

Chairman WALSH. Is the instruction strictly within technical lines of trade-unionism?

Miss NESTOR. Well, they are learning all about organizing the union; they are learning about the history of trade-unionism. We want them to have the

whole background. We want to give them actual field work and do give them actual field work and let them go out without organizers, and we try to have them in some of the conferences so that they will know really what a trade organization is; we give them all the experience that will be beneficial to them in their work for organization.

Chairman WALSH. Is it successful?

Miss NESTOR. It has been successful so far; yes, sir. Of course, it has really only started last year, so we have not had—

Chairman WALSH. I understood you to say that the employers' association which opposed this legislation were represented by counsel?

Miss NESTOR. They are. That is the only way they are ever there, is their counsel.

Chairman WALSH. Do your organizations have representation by counsel?

Miss NESTOR. No.

Chairman WALSH. You go direct to these people that are attempting to help you, lay people usually, women outside of organized labor, and yourselves?

Miss NESTOR. The only ones we have working on our legislative work is the trade workers themselves.

Chairman WALSH. Have you found that the lawyers present this opposition with more vigor and feeling than the person actually involved usually shows—the client?

Miss NESTOR. No; I do not think they make the impression, because they are asked questions, and they don't know anything about the details of the business. They will always put it off and say, "I don't know anything about it; I am just counsel for the whole association." Then they will ask them about the hours, and they will say, "I don't know the hours, because I have—I am just attorney for the entire association." And, of course, the workers themselves know all about the hours of work of the various trades, and that is included in our bill. We do try to print such literature as we can regarding it, but the regulation is carried out in other States and the hours of work in the various industries.

Chairman WALSH. Do you not find that the employment of these lawyers by these employers' associations is a source of irritation to the workers?

Miss NESTOR. Well, I know they have irritated some of our Springfield legislators at times. Those are the only ones I have had any experience with, of course.

Chairman WALSH. What was the number of hours submitted in the proposed legislation—the last proposed legislation by women?

Miss NESTOR. The bill introduced was an 8-hour bill. The bill in the subcommittee was a 54-hour bill. That was reported out. That was the bill that we stood for. But it was when that bill was before the house—the 54-hour bill; that is practically the eight hour—one of the senators told us that they were fighting anything, it didn't make any difference. They said that they were just as much opposed to that as they were to the 60-hour law. They did not want any change in the law.

Chairman WALSH. Did you find that the press gave you what you considered to be fair publicity in your efforts to bring about this legislation?

Miss NESTOR. The press was very fair with us—very.

Chairman WALSH. Now, then, as to the industrial disputes that have resulted in strikes, have there been any other in which women were involved except the waitresses in Chicago within the past year or two?

Miss NESTOR. Well, I can't say within the past year or two. Of course we had a great garment workers' strike, which everybody remembers, here a few years ago. Then we have had—

Chairman WALSH. Well, confine it if you will, to, say, the past two years.

Miss NESTOR. Well, we have had some smaller strikes. I know there was a strike of the straw and felt hat workers just last year. Of course that lasted only a few days. But we have had other very small strikes, but none that have taken on the proportions that the waitresses have.

Chairman WALSH. Were there arrests made in those strikes?

Miss NESTOR. I might say we had a strike in our organization last year. It was a small shop, and it was a strike in which we had similar experiences that the waitresses have had. It was a glove factory out on the west side, and we had arrests occurring; in fact, as I have heard violence discussed at these hearings, and the violence, I might say in that instance, was on the part of the employer. In fact, the information we got was that people were employed and paid for beating up our strikers, and the fellow that we had

in charge of the strike was a very able and a very level-headed fellow, and what they wanted to do was to get him in trouble. And there was a price of \$50 put up to the man that beat him up. And the way we found out was that one of the fellows that really wasn't beating people at all, only he wanted the money, and he didn't want to beat up the man. He told him about it, "We are getting \$10 for beating up your strikers and will get \$50 to beat you up." He said, "I wish you would come down here with your head tied up and look very bad about it, because I want the money and I don't want to beat you up." He didn't do it. Our men were arrested without any warrants at all. We happened to have and we did get fairness in the court up in that neighborhood, but we did not get fairness at the hands of the police.

Chairman WALSH. I was going to ask you for your experience, and if the police treated you fairly.

Miss NESTOR. They did not. And when we wanted to have a meeting, an open-air meeting, in the neighborhood, which would be away from traffic—they say you can't blockade the traffic—away off on the prairie, where we would not disturb anyone, we were refused, and we had to—I can say that we had to take it to the chief of police to get permission. It was not Mr. Gleason, who is chief now, because Mr. Gleason was captain of the station where all this—where we were getting all this unfair dealing.

Chairman WALSH. Did you secure the permission?

Miss NESTOR. We secured the permission. Mr. Gleason was very much opposed to us having the meeting, and when we did have it he had a whole array of police surrounding the platform where our speakers stood to address the meeting. I know; I presided at that meeting; and you would think that we were a most lawless, the most lawless characters, if you had seen the number of police around there and detectives. It seemed to some as if they were trying to incite violence and wrath, but they didn't succeed in it.

Chairman WALSH. But it caused irritation, however?

Miss NESTOR. It did cause very much irritation.

Chairman WALSH. You say the courts in that particular situation treated you fairly?

Miss NESTOR. They did.

Chairman WALSH. It was a local magistrate?

Miss NESTOR. No; it was the municipal judge.

Chairman WALSH. And you were tried directly before the judge without the intervention of a jury there?

Miss NESTOR. Well, we could have a jury if we wanted to, and we could waive. In some cases we took a jury trial, and in some cases we waived it.

Chairman WALSH. You feel you were treated fairly in both instances?

Miss NESTOR. Absolutely fairly in both instances.

Chairman WALSH. As to the waitresses' strike, what has been the attitude of the police toward them, in your opinion; fair or unfair?

Miss NESTOR. Unfair.

Chairman WALSH. In what respect; briefly?

Miss NESTOR. Well, in the unjust arrests. Why, there the judges have ruled that they can do this peaceful picketing. Why, it was only yesterday, or the day before yesterday, I don't know which day, that I passed there, and there was another girl with me, and we said, "Why, everything is very quiet," and the girl was walking up and down; she wasn't speaking to anybody. In fact, she was walking up and down alone, and after we had got down I guess two or three doors we heard the patrol coming, and we said, "I bet that is for that waitress." And we turned around and we just got up to the corner, and they were putting her into the wagon. Now, that is occurring all the time, and it is simply to take them off from the picket line and put them to all the trouble they can put them to. Of course, you know one of the ways that the employers try to defeat us in a strike is to tie up our money in court fees and lawyers' fees, and all that, and the more they can get us in jail and the more they can inconvenience us, they think, too, it will break the spirit of the girls. It does not usually do that. It usually has the opposite effect, it makes them all the more determined.

Chairman WALSH. Have the waitresses counsel, regular counsel employed during this strike?

Miss NESTOR. Yes; they have.

Chairman WALSH. Now, prior to the issuing of this last injunction order, what was the practice with respect to picketing?

Miss NESTOR. They have been doing this, as far as I can learn and know; that is, the Knab strike, silent picketing; they have been walking up and down without saying anything to anybody. They have a sign on them saying, as Miss Maloney said the other day, "With your assistance we can win our strike."

Chairman WALSH. Previous to the issuance of this injunction in that waitresses' strike, did the workers claim the right and have the right to suggest to persons that they should not patronize the place, orally?

Miss NESTOR. In the Henrici strike they did, they told them there was a strike on, and I think all they said was, "Don't eat under police protection; there is a strike on."

Chairman WALSH. And so the change has been that there is no personal solicitation on the part of the pickets?

Miss NESTOR. None at all.

Chairman WALSH. Now, generally speaking, have these young women that have been arrested been fairly treated by the courts?

Miss NESTOR. I don't believe they have—well, by the courts when they finally got up to them, but it takes forever to get your case to trial. They would waive, of course, the trial and say they wanted a trial by jury, and they would keep putting it off and putting it off—the cases—and the girls would be going there for their cases and they would be postponed.

Chairman WALSH. How great a delay?

Miss NESTOR. The great injustice, I think, was against the police department.

Chairman WALSH. How great a delay; what is the greatest delay that you know of that has occurred between the arrest and the trial?

Miss NESTOR. I think a number of weeks.

Chairman WALSH. Where the defendant insisted upon a trial?

Miss NESTOR. Well, I think a number of weeks, I could not say definitely on that; I would not want to give information that was not absolutely correct, but I think several weeks.

Chairman WALSH. What has been the policy of the defendants with reference to seeking, or not seeking, early trials of these cases?

Miss NESTOR. I think they were very anxious to have trial in the early days, because they wanted to have some cases to go up as a test case, and as clearly as I can remember, they had a difficult time getting a trial.

Chairman WALSH. How many of these waitresses have been tried within the last month?

Miss NESTOR. Well, there were hundreds arrested, I am sure, in the Henrici case. I don't know during this strike how many arrests they have had, but it was a large number.

Chairman WALSH. You are not familiar with the arrests?

Miss NESTOR. I am not. They have been arresting so fast I can't keep track.

Chairman WALSH. When juries were demanded—

Miss NESTOR. They have all been found not guilty.

Chairman WALSH. Were the juries fairly democratic in their composition?

Miss NESTOR. I think they were.

Chairman WALSH. With reference to the classes, with reference to business men, and such like?

Miss NESTOR. I think they were; I can't say positively about that, but I think they were; I think they were fairly picked.

Chairman WALSH. So, outside of the local injustices on the part of the police officers, you would think that the courts have held up fairly well under the strain of administering justice?

Miss NESTOR. Well, in our local courts, because you can get a jury trial, and that means that you have an opportunity to get justice.

Chairman WALSH. Well, the girls have been acquitted?

Miss NESTOR. Yes.

Chairman WALSH. In all instances?

Miss NESTOR. I think the big abuse here in connection with our courts and all that is the terrible police situation, the unjust arrests, the constant unjust arrests, and in some instances, and in a number of instances, they have allowed them to be arrested without warrants, which is absolutely against the law, as I understand it.

Chairman WALSH. Without individualizing, are there certain police officials that are believed by the workers to be inimical to them?

Miss NESTOR. Yes; they are.

Chairman WALSH. And have they or have they not progressed in the department?

Miss NESTOR. In the police department?

Chairman WALSH. In the police department, have those that were inimical, have you any observation on that; that is, that they were treated better or treated worse by their superiors?

Miss NESTOR. Well, that I could not say.

Chairman WALSH. Very good.

Miss NESTOR. Of course, I put the blame on the head. I think that they get their orders from higher up, and whatever he says, they are going to do. I think a great many of the police perhaps like to use their own will about things, but there are others who simply do it because they get their orders from higher up, and as long as the chief of police will tolerate that we are going to have it.

Chairman WALSH. That is all. Thank you, Miss Nestor.

Mr. THOMPSON. About how much ball was given by the waitresses in the Henrici strike; what was the total of it, do you know?

Miss NESTOR. I think Miss Maloney mentioned it the other day. In some instances they have even had to give cash bonds, they had to put up cash bonds, and they got the ball so high, I think they had it \$500 as a minimum.

Mr. THOMPSON. Did it run over \$100,000, if you know?

Miss NESTOR. Oh, it must have gone up to that, anyhow. I know it was enormous.

Mr. THOMPSON. Referring to the question of the unrest especially, Miss Nestor, if under a collective-bargaining agreement you could get the conditions you wanted in an open shop, what would be then the advantage of a closed shop?

Miss NESTOR. Well, I don't like to talk about closed shops, because I call it the union shop. I don't think we have any closed shops.

Mr. THOMPSON. Well, talk about a union shop, then, Miss Nestor.

Miss NESTOR. I don't believe you can have harmony where two kinds of people are working in the shop. You can't mix oil and water. And if you are going to have union and nonunion people mixing together, you are quite likely to have discord in the shop. And if you want real harmony, you have got to have all of one; you have got to have all union people. And then, too, if an organization makes an agreement, it is difficult to make it unless you are certain that you are going to make it really for all the people in that industry, and if they are not members of the union, you can't make an agreement for them, because you have no authority over them. You only have authority over those people who are your members, and know that they will live up to their trade agreement.

Chairman WALSH. That is all. Thank you, Miss Nestor.

Call your next.

Mr. THOMPSON. Miss Abbott.

TESTIMONY OF MISS GRACE ABBOTT.

Mr. THOMPSON. Miss Abbott, will you give us your name?

Miss ABBOTT. Grace Abbott.

Mr. THOMPSON. Your business address?

Miss ABBOTT. 920 South Michigan Avenue.

Mr. THOMPSON. What position do you now occupy?

Miss ABBOTT. Director of the Immigrants' Protective League.

Mr. THOMPSON. How long have you been that director?

Miss ABBOTT. For about six years.

Mr. THOMPSON. Six years. What is the Immigrants' Protective League?

Miss ABBOTT. It is a private organization maintained for the purpose of protecting immigrants against exploitation; for putting them in touch with the various civic and social forces in the community; and for rendering, so to speak, a sort of first aid to those who find difficulty in connection with their relations to American conditions.

Mr. THOMPSON. What is the extent of the organization of the Immigrants' Protective League? Is it local to Chicago?

Miss ABBOTT. Local.

Mr. THOMPSON. Is it local to Chicago?

Miss ABBOTT. Local.

Mr. THOMPSON. And its board is composed of Chicago people?

Miss ABBOTT. Chicago people.

Mr. THOMPSON. Practically solely?

Miss ABBOTT. No, sir; there are a few outside ones; but practically solely Chicago people.

Mr. THOMPSON. Has your organization any affiliation or reciprocal relation with other similar organizations elsewhere?

Miss ABBOTT. None, except we cooperate with them, just as we cooperate with other organizations here in Chicago that we have no official connection with.

Mr. THOMPSON. Have you a written or printed by-laws or constitution?

Miss ABBOTT. We have not printed by-laws, but I would be glad to furnish the commission with a written copy, if they desire.

Mr. THOMPSON. Have you any other literature of your organization?

Miss ABBOTT. Yes, sir; we have various reports and investigations; I would be glad to furnish those also.

Mr. THOMPSON. Would you be willing to furnish them to the commission?

Miss ABBOTT. Yes; I would be glad.

(Documents, entitled "League for the Protection of Immigrants," annual report, 1909-10; "Fourth Annual Report of the Immigrants' Protective League," for year ending January 1, 1913; "Fifth Annual Report of the Immigrants Protective League," for year ending January 1, 1914; "The American Journal of Sociology," No. 3, Vol. XIV, November, 1908; "The Bulgarian—A New Element in Chicago's Immigration Problem," by Grace Abbott, published by charities publication committee, New York; "A Study of the Greeks in Chicago," by Grace Abbott, were submitted in printed form.)

Mr. THOMPSON. We would be glad to have them, if you will. What, in your opinion, is the effect of immigration on the general industrial situation with reference to wages, standards of living, and labor organizations?

Miss ABBOTT. The presence of the immigrant, of course, who is the weakest industrial unit in the community, because of his ignorance of English and because of the fact that he is ignorant of English that he must serve in the unskilled ranks, always means that we have an unskilled group here that is especially weak, weaker than any one group in any country, and they are therefore much more in need of protection through social legislation of all kinds and sorts because of the complex conditions. I don't believe that the coming of the immigrant is responsible for industrial conditions, for low wages or bad conditions, because I don't believe that the old theory, that wages and industrial conditions are governed solely by supply and demand, can at all be borne out by facts. Supply and demand have some influence on wages, but that theory has been generally exploded, about in the way in which the wage-fund theory was exploded a generation ago, or a hundred years ago.

Mr. THOMPSON. You might generally state, Miss Abbott, what you have to say on the subject of immigration and the industrial question.

Miss ABBOTT. I should like to make the point very much that the immigrant is in need of a certain kind of protection through legislation—that is, more than any other he needs regulation—because it is impossible for him to bargain in the matter of hours. The immigrant women need the protection of a minimum wage, because they never really do bargain in the matter of the wages for which they work; and they need all the other kinds of devices which will insure them better working conditions. I feel very strongly that we are in need of the development of a national labor exchange which will perform for the immigrant services which they have had to rely upon in the private employment agencies, who have been a source of exploitation and confusion and disorganization of the communities into which they have been sent, where work was not wanted and where they were losers, so that nobody profited except the private employment agent. I think that we should have then a very large development of an American labor exchange, but not in that law to undertake to distribute immediately on arrival, but to redistribute after they have come to their relatives and friends, because the great majority of those that come are coming directly to relatives and friends already here, but only to connect with them and to distribute them out afterwards.

Mr. THOMPSON. What effect, Miss Abbott, do you think that the immigrant has on general industrial unrest and on the industrial problem as it affects others?

Miss ABBOTT. Well, I think the immigrant in the community complicates the industrial situation, because the racial prejudice is not confined to any one class or group; it exists throughout them all. And the complication of having a number of different races in a single industry will lead to confusion and difficulty. It complicates it; it does not make it. And there is no doubt that

there is confusion arising out of the racial conditions and feelings and languages.

Mr. THOMPSON. Is there anything else you would like to say with reference to the immigrant problem and the industrial problem as to the manner in which they affect each other?

Miss ABBOTT. Well, I should like very much to—I believe, of course, in organization of the working people. I believe very decidedly in organization which will include the unskilled group. I feel, of course, that for the proper accomplishment of that we have got to have organization of the industry instead of the industry of the class, and that when we get in those groups that it will go better. I think some of the most brilliant leadership in the trade-unions has come from the recent groups, and I think we are going to feel that very generally in the labor movement, and that one is dependent upon the other for its ultimate solution.

Mr. THOMPSON. Would you supplement a minimum wage law by some method of State vocational training so as to bring up the capacity of the worker to the wage standard?

Miss ABBOTT. The problem of vocational training is a very difficult one. I think very little is possible. With the younger immigrant it is about the same as with the American group—that is, that there is no difference in the situation.

Mr. THOMPSON. What, in your opinion, could this commission do to help it in solving the immigrant problem?

Miss ABBOTT. I should recommend protective legislation from the time of their arrival so that it could prevent exploitation; recommend the establishment of a national labor exchange; recommend such a commission as can investigate any causes of industrial uprising—where very often the immigrant is concerned, it is more like a peasant revolt rather than organized workers—where, therefore, the conditions are extremely difficult to get at, need the most patient sort of searching, because their demands are not formulated such as they are formulated where they are organized. They should investigate and determine what is at the root of the difficulty.

Mr. THOMPSON. Would you think a national industrial council with powers of investigation could meet that situation?

Miss ABBOTT. Well, I have no feeling about the name—the National Industrial Council.

Mr. THOMPSON. One who would also take not only the immigrant but take up the general industry.

Miss ABBOTT. I do not think the immigrant should be taken up separately. I think it should be taken up as a part of the whole industrial situation which is a part. To isolate him will seem to be a hardship to the people with whom he comes in competition.

Mr. THOMPSON. Do you think that the existence of the immigrant in large numbers affects seriously the industrial situation and causes industrial unrest or at least contributes to cause it?

Miss ABBOTT. No; I think the immigrant, of course, is a part of the unrest; he is most restless in industrial conditions, very decidedly at times.

Mr. THOMPSON. That is all.

Chairman WALSH. Any questions? That is all. Thank you, Miss Abbott.

TESTIMONY OF MR. JOHN R. HIBBARD.

Mr. THOMPSON. Will you give your name?

Mr. HIBBARD. John R. Hibbard.

Mr. THOMPSON. And your address and business?

Mr. HIBBARD. 1021 People's Gas Building, Chicago; commissioner, National Metal Trades Association.

Mr. THOMPSON. And your occupation, Mr. Hibbard?

Mr. HIBBARD. Commissioner, National Metal Trades Association.

Mr. THOMPSON. What is the National Metal Trades Association?

Mr. HIBBARD. It is a voluntary association of about 700 employers of machinists and polishers, pattern makers—the ordinary run of machine-shop help.

Mr. THOMPSON. Of course the word "National" means national?

Mr. HIBBARD. Yes, sir.

Mr. THOMPSON. What is the position of commissioner of the National Metal Trades Association?

Mr. HIBBARD. Well, he is the executive officer and a number of individual members of these concerning the council composed of the controlling body.

Mr. THOMPSON. Is the chief executive an officer of the association?

Mr. HIBBARD. Well, there is a president. There are the ordinary run of executive officers of the association. You might illustrate it by superintendent, or commissioner is the name, the term.

Mr. THOMPSON. The commissioner is the one who is in active charge of a growing business?

Mr. HIBBARD. Yes, sir.

Mr. THOMPSON. Tell us, Mr. Hibbard, more definitely the character or terms that compose this association and the business they carry on?

Mr. HIBBARD. Well, it is a very wide distribution in locality and in character. The western boundaries of the membership would be St. Louis and St. Paul, and from there to the coast, and the Gulf. It is a very diversified membership—automobiles, anchors and chains, and motor cycles, machine tools; almost anything that is made in the ordinary machine shop.

Mr. THOMPSON. What is the purpose of the organization?

Mr. HIBBARD. The purpose, the preliminary purpose, or the reason for its existence, in the first instance, was undoubtedly mutual protection.

Mr. THOMPSON. Against what?

Mr. HIBBARD. Against—in labor disputes. The individual manufacturer could not. I could read the objects of the association. They are in two paragraphs. Or I can submit those.

Chairman WALSH. They are very short, are they not?

Mr. HIBBARD. Yes.

Chairman WALSH. Please read them.

Mr. HIBBARD (reading):

"To secure and reserve equitable conditions in the workshops of members for the protection of both employer and employee.

"2. Investigation and adjustment of questions arising between members and their employees which may come within the jurisdiction of the association."

Mr. THOMPSON. Is that a copy of your constitution and by-laws?

Mr. HIBBARD. Yes.

Mr. THOMPSON. Have you any objection to giving that to the commission?

Mr. HIBBARD. No, sir.

(The paper so presented was marked "Exhibit No. 1, Witness Hibbard, July 24, 1914.")

Hibbard Exhibit No. 1, pamphlet entitled "National Metal Trades Association—Constitution, By-Laws, and Declaration of Principles," adopted June 18, 1901, was submitted in printed form.)

Mr. THOMPSON. Is your organization affiliated with other organizations?

Mr. HIBBARD. No, sir; not directly. It is an independent organization. We are part of no other organization.

Mr. THOMPSON. Have you any close mutual relations with other organizations?

Mr. HIBBARD. Yes, sir. As we operate in the same field with the Master Founders' Association, our membership is very much the same, and even the officers of one association have at times been officers of the other.

Mr. THOMPSON. And often their annual meetings or conventions are held at the same place and same time, are they not, or nearly so?

Mr. HIBBARD. No, sir; they may have been in the past at some time, but I don't recall it having been so now. They are at different times.

Mr. THOMPSON. Were the meetings of these two associations or certain portions of them held at the same time this year in Worcester, Mass.?

Mr. HIBBARD. That was our convention; the Master Founders' Association held its convention in New York, just on what date I can't now say.

Mr. THOMPSON. While the Employers' Association, as such, has not the same parent association that the unions have with the International Federation of Labor, still, as a matter of fact, they work more or less together, do they not?

Mr. HIBBARD. I should say yes, although there is no organization effort of that kind. They might unite on a certain particular thing, but that would be only by mutual consent of all the different associations.

Mr. THOMPSON. The reason for acting together under such conditions is because of their mutual interest?

Mr. HIBBARD. Undoubtedly.

MR. THOMPSON. They have the same mutuality that labor organizations have and associate together?

MR. HIBBARD. Yes; as I said, very largely the same membership.

MR. THOMPSON. Members of your association could also be members of, or could be, and probably are, members of the national association?

MR. HIBBARD. Undoubtedly some are, not all. They are undoubtedly members of the American Antiboycott Association, but not all. I don't know.

MR. THOMPSON. Does your association take any decided stand with reference to the labor problem?

MR. HIBBARD. Yes.

MR. THOMPSON. State what it is, if you care to state. Have you a statement of this matter you would like to make in your own way?

MR. HIBBARD. I think it will come out, but you submitted to me a list of certain questions or points, and I have made memorandum or at least syllabus that I could talk from if the questions are asked about as they are submitted here in this paper.

MR. THOMPSON. Well, if you have it in that order, suppose you make your statement in your own way and then I will ask you any questions that may arise from your statement.

MR. HIBBARD. You have practically covered the first three questions on this paper already. Your fourth question is the attitude of the association with reference to various topics: A. Hours of labor and conditions of shops and factories. The association I think realizes that there is a tendency toward the shorter workday. The experience of employers has been that from the old long hours there has been a general reduction in working hours. While there is no rule—by the way, the association has no power to compel a member to work a certain number of hours or to pay certain wages; at the same time it has an influence in a general way. We endeavor to maintain fair and reasonable conditions. Those depend largely upon going conditions. To illustrate this hour proposition, I would say at the present time undoubtedly three-fourths of the members of our association are now working 54 to 55 hours a week, Saturday half-holiday, whereas comparatively a few years ago they were working 60 hours. In reference to shop conditions—we are all very much interested in the condition of all the shops in the association. In the first instance, as I suggested, the association is to a certain extent a mutual insurance association; that is, we protect each other from labor difficulties. A fruitful source of labor difficulty is, of course, insanitary conditions, unsafe conditions, extreme long hours, or any working conditions that to-day is recognized as not fair or not proper. The influence of the association is therefore to bring the personnel of the association up to reasonably proper condition. That is said in good faith; it is intended in good faith. That is the effort of the association.

Collective bargaining is your second item. Some years ago, as some of the residents in Chicago at least know, I was in favor of collective bargaining. I believed in it. At that time I was the president of the Chicago Metal Trades Association, a local body at that time not affiliated with the National Metal Trades Association. We had an agreement. This agreement provided for further agreements with due notice. At the expiration of this agreement the due notice was given. It became clearly apparent that the crucial test of the collective bargaining was whether, granting that increases would have to be granted or were proper under certain economic conditions, the corollary of the proposition is just as true, there must be decreases under other conditions. In all fairness I am taking the conditions as they really existed. It is impossible to conceive a constantly rising scale of anything; a bushel of wheat, a ton of coal, a ton of rails, the purchasing power of gold, there is no standard that I know anything about that is fixed. Therefore the whole crux of the problem depends upon whether it is possible to provide for reasonable just deductions or decreases the same as for increases. Without going into detail I will submit for the commission a detailed statement which can be very easily verified by original correspondence and by the files of all the Chicago newspapers—some of which are quoted in here, showing that the agreement fell down—I am not going into the details of the thing at issue.

(The paper so presented was marked "Exhibit No. 2, Witness Hibbard, July 24, 1914.")

Hibbard Exhibit No. 2, pamphlet entitled "Negotiations between Chicago Metal Trades Association and the International Association of Machinists, District No. 8, preceding the strike of May 24, 1904," was submitted in printed form.)

It was a question as to whether certain kinds of work might not be provided for under a cheaper scheme of things—cheaper operation. I am not attempting to say that the point was not arbitrable, or at least that it was not a mooted question—was not a question for argument; I am merely pointing out that the agreement absolutely fell down, first, because while I think that the committee of union men who were with us at that time admitted our proposition—at any rate some of them said they did—at the same time, when those problems were passed back to the union there wasn't power enough to bring the union to agree to a peaceable reduction and the agreement failed. I merely call the attention of the commission to the fact that in two different letters after the agreement had fallen arbitration was offered. Even granting that the agreement had fallen down, and even granting that arbitration wasn't what we might hope or expect, at the same time we offered arbitration in two separate letters. Now, that all brings me to this point, Why do I now not believe in collective bargaining?

Well, first, because of lack of responsibility. I am not suggesting that incorporation is the answer or financial responsibility, but I am suggesting that just as the public has found there are big businesses, large corporations, accumulations of power have been—it has been necessary to control and supervise, just so I think that before unions can be dealt with on a collective bargaining basis there must be some control.

That is my first objection at the present moment to collective bargaining. My second I have already indicated in my talk in regard to the previous agreement as to whether it can be peaceably provided that reductions as well as increases can be provided for. It comes to my mind right now, of course, that I can think of one or two instances of where men now in national prominence recommended a decrease and the men accepted them. It was considered a very, very wise thing at the time and the union man certainly gave his men very, very good advice at that time. But they are the exceptions, there are very few others you can name.

My third objection is this, and it is a hard one, I can not conceive of a condition of affairs where everybody belongs to the union. It may be possible, but I can't conceive it, any more than I can conceive of everybody belonging to the Catholic Church or the Presbyterian Church or the Democratic Party or the Bull Moose. I can't conceive of everybody belonging to one body. The nonunion man is here, he will be here as long as human individuals think differently. You can't compel everybody to join the union. The minute you try to you will have a revolt. Now, I do not know of any scheme of things under which in a shop where there is an agreement that we can properly and peacefully provide for the nonunion man to work in the same place. Now, what conditions may be in other lines, what they are in the garment workers, or what they are in the mines, or other lines of trade, I don't pretend to say, because I don't know, but I do know from practical experience that—well, my judgment is such an arrangement as that kind does not practically exist. If you start with an agreement it means before long that entire department is unionized, about which I shall have something to say later. Now, this growth of the union, do we assent to it? Do we object to the union man? Now, I am not going to make the old-time honored statement that there are good unions and bad unions, and we have no objection to the good unions; I am going to make this objection, I can honestly say that we do not object to the union man. There is no discrimination against the union man in the shops of the association to-day all over this country. There are any number of union men I have no doubt in many of the departments of the various members of my association. The unionization may be very large in per cent, but our objection starts right here. If the shop becomes 50 per cent unionized or 60 per cent unionized or some other per cent that I don't know, it then becomes impossible to run an open shop. The nonunion men can't stay. After thorough organization all the ills which we find then practically in the way of limitation, discrimination, shop stewards, all the balance follow. Now, I want to make this statement in all fairness and all good faith, I have no fight with the unions, I have plenty of union men on my list, I think, as friends, but I am pointing out the economical difficulties of a man running a shop and trying to run under the collective bargaining agreement and at the same time trying to run an open shop. It is impossible, as a matter of practical experience.

Chairman WALSH. At this point we will adjourn until to-morrow at 10 o'clock, to meet here promptly at 10 o'clock to-morrow morning.

(At 4.30 p. m. of this Friday, July 24, 1914, an adjournment was taken until to-morrow, Saturday, July 25, 1914, at 10 o'clock a. m.)

CHICAGO, ILL., Saturday, July 25, 1914—10 a. m.

Present: Chairman Walsh, Commissioners Delano, Lennon, O'Connell, and Garretson; also William O. Thompson, counsel.

Chairman WALSH. You may proceed.

Mr. THOMPSON. Is Dr. Sachs here?

TESTIMONY OF DR. THEODORE B. SACHS.

Mr. THOMPSON. You may sit down there, if you will, Doctor. Will you give your name?

Dr. SACHS. Theodore B. Sachs.

Mr. THOMPSON. I can not hear you, Doctor.

Dr. SACHS. Theodore B. Sachs—S-a-c-h-s.

Mr. THOMPSON. What is your business address?

Dr. SACHS. 25 East Washington Street.

Mr. THOMPSON. How long have you been a practicing physician?

Dr. SACHS. Nineteen years.

Mr. THOMPSON. How long have you been in Chicago as such?

Dr. SACHS. Twenty-five years.

Mr. THOMPSON. Are you president of the Chicago Tuberculosis Institute?

Dr. SACHS. Yes, sir.

Mr. THOMPSON. How long have you been president of that institution?

Dr. SACHS. The last three years.

Mr. THOMPSON. How long has the institute been in existence?

Dr. SACHS. About eight years.

Mr. THOMPSON. What is the purpose of it?

Dr. SACHS. It is an organization of citizens to carry on an educational campaign for the suppression of tuberculosis.

Mr. THOMPSON. Has it a limited membership?

Dr. SACHS. The membership consists of a few hundred.

Mr. THOMPSON. A few hundred?

Dr. SACHS. Yes, sir.

Mr. THOMPSON. Are they individuals or, in some cases, firms, corporations, that are members of the institute?

Dr. SACHS. Most are individuals; some are firms.

Mr. THOMPSON. What are the plans of your institute with reference to the investigation of sickness in industry, if they have any plans?

Dr. SACHS. About four or five years ago the Chicago people became convinced that under the present conditions, the conditions existing at that time, that tuberculosis was discovered late in the vast majority of working people, and that the cases that came for treatment to dispensaries and private practitioners were cases in a stage that was incurable as far as the disease is concerned, and as far as the restoration of working power is concerned. And so the conviction was gradually forced upon the board of the tuberculosis institution that certain arrangements were lacking in the present system in the working places for early detection of tuberculosis. The institute appointed about three years ago a committee on factories. The function of the committee was to study the existing conditions in reference to health in the working places and suggest some plan by which tuberculosis could be detected early.

Gradually the committee came to the conclusion that no matter what the arrangement is for early detection of tuberculosis in the working place, it will fall short of the result unless the arrangement takes into consideration detection of any disease of the employee, and so gradually the work of this committee on factories brought into the work of formulating of plans by which sickness, breakdowns in the working people, could be detected at the stage when these breakdowns are remediable and the working power can be restored.

I wish to say, my statement will be as brief as possible, that we gradually came to the conclusion that the preservation of health and working power of the employee is one of the fundamental conditions of right industry relations,

and that systematic supervision of health of the employee is very essential to the preservation of the health of the working people.

Now, this principle was recognized by the Chicago Tuberculosis Institute in its work against tuberculosis in working places, but as I said before we came to the conclusion very early in the campaign that in order to have the right kind of an arrangement in the working places for the protection against tuberculosis this arrangement should be made to ascertain any breakdown in the physical condition of the workman.

I wish to state briefly just what are the considerations that led to the work of this committee on factories. First, as I said, the most important is the early diagnosis of the disease. Second, that I haven't mentioned yet, is the protection of the employee from communicable diseases. We felt that as far as tuberculosis was concerned that there will be sources of tubercular infection in factories, stores, and other commercial and industrial establishments unless there is some kind of arrangement by which these sources of infection can be ascertained.

For instance, about four or five years ago in a certain firm whose attitude toward their employees is benevolent and broad minded a case was brought to the attention of the Institute where a man for a period of 10 or 12 years was in the advanced stage of tuberculosis, but more or less able to work, and continued to work among hundreds of employees without the knowledge of the owners of that firm. That is only one of the examples that is nearly every day brought to the attention of this committee on tubercular work. So that the protection from the communicable diseases was the other consideration.

The third consideration was this, that the tubercular institute felt that an arrangement for the detection of sickness in a working place is much easier to determine than the unfavorable conditions of work. As, for instance, in the course of the investigation in a certain firm in the city it was shown that chronic bronchitis, asthma, and tuberculosis are more prevalent in a certain department of that concern, and that led to the installation of a more comprehensive ventilating system and dust-removing system, and so on. Those considerations the institute considers very important, that without an arrangement for the detection of illness in employees it is very difficult to determine just where the unfavorable conditions of work exist.

The fourth point that lies at the basis of this recommendation of supervision of the health of employees is that right assignment of work in a very large percentage of the cases is impossible without a knowledge of the conditions of the worker.

Fifth, in order to establish the right conditions that favor the health of the worker it is very important that the employer should recognize the health of the worker as an important condition of his efficiency.

This committee on factories, during the last three years, published three pamphlets, of which 25,000 copies were distributed among the employers of this city, and about 5,000 outside of Chicago.

We began with conferences about three years ago, at which a few firms were represented; and during the last three years we had 20 conferences, generally noonday conferences, at which in all 47 firms were represented, these 47 firms employing about 190,000 people.

At these conferences the subject of supervision of health of employees was discussed from every standpoint, from the standpoint of the interest of the workmen, the interest of the employer, and the interest of the community. And so during the three years these conferences have served as a kind of school for every one here in the city, to study the very phases of the important problem of health of employees.

The advantage of the systematic supervision of health of employees can be summarized as follows:

First, I ought to state just exactly what the committee on factories of the Chicago Tubercular Institute recommends. The committee on factories recommends the establishment of an arrangement by which the foreman, thoroughly instructed by a competent physician or nurse, will look for any breakdowns on the part of any employees. And then after this system is in operation for some time the committee on factories advocates the establishment of medical examination of new employees and reexamination of old employees.

The advantage of such a system may be summarized as follows:

First, early detection of breakdowns. I wish to call attention here to this point, that in the course of the operation of such a system of supervision of the health of employees it is not only disease that is discovered in workmen that

can be very easily detected and remedied by advice of a physician and change in the régime of the work. In the vast majority of cases it is absolutely necessary that the worker quit work, and, as far as possible, abstinence from harmful practices and so on. There is also reestablishment of the health of the worker. Of course, in a certain percentage of cases it means leave of absence for a certain time to repair the health of the worker. So early detection of these breakdowns is the first advantage.

Second, early diagnosis of various diseases. Now, for instance, it has been shown that in a number of firms that had had no supervision of the health of the worker three or four years ago the only cases of tuberculosis that came to the surface were cases of advanced tuberculosis that could not be remedied, while in a number of these firms that had in operation the system of supervision of health of employees during the last three years, at the present time, the vast majority of cases that are discovered are of the incipient variety that can be treated and cured in a period of a few months and the working power re-established.

The third advantage of such a system is, as I mentioned before, detection and control of sources of infection. It is absolutely impossible to know the extent and source of infection unless there is an arrangement for the detection of various kinds of diseases among the working people.

The fourth, as I mentioned before, is the gradual appraisal of harmful conditions. As I stated before, time and time again, certain diseases were prevalent or certain diseases were discovered in certain departments of the firm that were entirely unknown to the owners of the firm, and for this reason systematic supervision of the health of employees is considered by our committee as very essential in connection with the prevention of the occupational diseases.

Fifth, that, as I alluded to before, the advantage of systematic supervision of health of employees is the gradual changing of the attitude of employees. For instance, it has been shown in some firms, during the operation of this practice by the employers and the benefit associations, people who were working and suffering from incipient diseases and a few months' treatment in a sanitarium would help them, three years ago in quite a large percentage of cases workers would not go, while at the end of the operation of such a system with such firms at the present time at least 80 or 90 per cent of the cases go to a sanitarium to take advantage of this offer that comes through the operation of the employers' benefit association to which workers are contributors.

Then, the next advantage is the high standard of health efficiency of the working people.

And the last one, and probably one of the most important questions, stands high in the eyes of the committee on factories, is the resulting better understanding between the firm, the superintendents, and the employees.

Now, this matter was submitted at the various conferences of this committee and then summarized by representatives of this committee and also by representatives of Chicago firms at the last annual meeting of the National Association for the Study and Prevention of Tuberculosis. And out of the deliberations that were held now during the last three years by business men, superintendents of employees' welfare associations, and different industrial positions, nurses, and other men and women interested in this work, it appears that the following arrangements probably are necessary in order to make this system of supervision of health of working people permanent and a just institution:

First. Industrial sickness and invalidity insurance, probably by Federal law.

Second. A system of supervision of the health of the employees as a part, as an integral part, of this industrial sickness and invalidity insurance. I think it is the conviction of men that have made a study of this subject that unless systematic supervision of health of employees is made a part of industrial sickness and invalidity insurance, then the cost of maintaining the sickness and invalidity insurance would be much less than it would be otherwise.

And that the third point that under such conditions the employee will become not only the recipient of certain assistance that is extended to him in the case of illness by certain benevolent firms, but he would become also the administrator, one of the administrators, of the insurance funds, and consequently this will lead to a better understanding between employers and employees.

This represents in a brief way just what I wish to present to the committee, and I hope that the statement was not too long.

Chairman WALSH. Thank you. Mr. Lennon says he would like to ask you a question, Dr. Sachs.

Commissioner LENNON. Not exactly a question particularly; I want to publicly commend the work that you and your society has done for humanity. I am very familiar for an outsider, and it gives me great satisfaction to say that you and your committees have done excellent work—a work that deserves to be given credit. That is all.

Commissioner GARRETSON. Mr. Chairman.

Chairman WALSH. Mr. Garretson.

Commissioner GARRETSON. Doctor, from your experience with the correlation of disease and labor, if you feel free to express the opinion, I would like to know whether you consider any employer has the right to employ people under insanitary conditions—the moral right to?

Dr. SACHS. I would say that he has no moral right.

Commissioner GARRETSON. Do you believe that it is an obligation that rests upon the employer to furnish properly healthful quarters for the performance of the work that he requires of his men?

Dr. SACHS. I don't understand your question.

Commissioner GARRETSON. Do you believe that it is an obligation that rests upon the employer to furnish proper sanitation and other similar appliances?

Dr. SACHS. I would say that we believe that there should be minimum hygienic requirements for various forms of industry. And in connection with this, if I may be permitted to say, that we believe also that this Nation ought to have a department of health that would formulate such minimum hygienic requirements for various industries.

Commissioner GARRETSON. And make them an absolute requirement?

Dr. SACHS. Yes.

Commissioner GARRETSON. That is all.

Mr. THOMPSON. That is all.

Chairman WALSH. Is that all, Mr. Thompson?

Mr. THOMPSON. Yes.

Chairman WALSH. That is all. Thank you, Doctor.

Dr. SACHS. I wish to leave this [handing papers to the chairman].

Chairman WALSH. Thank you very much. That is fine, Doctor.

(The papers so presented were marked "Exhibit No. 1. Witness Theodore H. Sachs, July 25, 1914"; "Exhibit No. 2"; and "Exhibit No. 3.")

Sachs's Exhibit No. 1, pamphlet entitled "Examination of Employees for Tuberculosis," published by the Chicago Tuberculosis Institute, and Sachs's Exhibit No. 2, pamphlet entitled "Medical Examination of Employees," a symposium before the advisory council of the National Association for the Prevention of Tuberculosis, Washington, D. C., May 7 and 8, 1914, were submitted in printed form. Sachs's Exhibit No. 3 will be found under the heading of "Exhibits.")

TESTIMONY OF JOHN D. HIBBARD—Recalled.

Mr. THOMPSON. Mr. Hibbard, you may continue where you left off last night.

Mr. HIBBARD. I think I had just completed talking about B of your fourth question. C and D on your list refer to piecework or day wages, relative merits of both systems—premium or bonus systems. I haven't very much to say about that, for the simple reason that the association itself has no control of the manner of payment or the conditions under which work is done. That depends very materially on the character of the work; some lend themselves to piecework and others do not. The only condition—or, at any rate, so far as my official connection with the members of our association is concerned—the only thing that is insisted upon is that the wages shall be reasonable and fair for the conditions in the locality and that, as I suggested yesterday, the hours should also be reasonable.

In other words, the association has no direct control over either of those two items—sanitation of shops or factories. We are doing everything in our power to bring the character of a shop of the members of the association up to the grade that is to-day recognized as being proper; that for the reason, as I also stated yesterday, that these are frequent causes of labor difficulties, labor complaints, and that it results later in trouble; and we have an inspector—sanitation and safety inspector—who inspects the shops of our members, whose reports of the State factory inspector or the inspector of the insurance company. Many of our members are insured against accident in insurance companies who are inspected by insurance inspectors, but our own examinations, I believe, are

more thorough than even those. Very frequently the factory inspector is a political creature, and the inspections are not always what they ought to be.

I want to diverge just a little bit there, perhaps. I think that many of us realize that the employer of several years back was not a philanthropist. He represented an opportunity to do a great many things that should have been done. A great many of the improvements that have been brought about in shop conditions, sanitation and safety, child labor, sweatshops, and unreasonable hours have been brought about very materially and very largely due to the efforts of unions. I do not believe, however, that proper credit is given at the present time to the manufacturer and employer who to-day realizes he has been taught, as all the public has been taught, as union men have been taught, as we all have been taught, that these conditions as they used to exist were not proper, and he is just as good a citizen, he is just as humane an individual, and just as much interested in the improvement of conditions as are any of the rest of us. Individually they are just as high a type of men as you can find anywhere else, and I merely wanted to make this point, that to-day the employers of the country are not given the credit which they should be given for really honestly and sincerely assisting these betterment movements.

Your next question was in regard to compensation in case of accident.

The association is on record in favor of compensatory legislation, and in certain States members of our association have been on the State boards that have furnished such legislation. We are in favor of compensatory legislation.

G. Card-index system of keeping personal record of employees: The national office keeps no record of men. We have on file always applications for employment of various kinds from shop superintendents and foremen down. But there is no systematic record kept. There are some 14 branches of the National Metal Trades' Association in various cities that do have their labor bureaus, and those labor bureaus do keep records of men of efficiency and where they are employed. In some instances, or in some particular cases, the record may show whether they are union men or not; but they do not do it in all cases. And, as pointed out yesterday, the mere fact that a man is a union man does not necessarily deprive him of having employment. I will say this, that there are individual cases where trouble has been so constant—just one continual round of pleasure—that some individual members do not care to have union men in their employ. That is true. But so far as the association—that is, the machinery of the association—its local bureau, or its local file index, or its record of men being used in any way to discriminate against the union men, except in cases or particular instances that I have mentioned, it is not so.

Blacklisting of agitators: I do not want a man in my employ who is not loyal to me. I do not care whether it is in the shop or in the foreman's or superintendent's position or in the office. Moreover, I do not believe that anyone who interferes with the ordinary routine of business is a very desirable employee. I should object just as much to a religious fanatic who took my time and my pay to exploit his views as I would a labor agitator, perhaps. But, at any rate, if a man is an objectionable employee I don't want him. If I can find out who he is I will let him go.

Now, so far as there being any systematic record, or any blacklist, there is none in existence that I know of or ever heard of.

Attitude of trade-unions in regard to three or four items:

First, restriction of output: We are opposed to it, and it exists. I don't know what more I can say.

Chairman WALSE. You are opposed to it?

Mr. HIBBARD. We are opposed to it, but it does exist.

Chairman WALSE. Yes.

Mr. HIBBARD. Exists in certain trades and certain conditions; certain places more than others. But I don't believe that any sane man who is familiar with the trade or in business would for one moment gainsay the fact that there is a very material amount of restriction of output.

Limitation of apprentices: The apprentice question is a very hard one. We are laboring under the difficulty of not having skilled labor enough. In my own shop, which I operated some years ago, but am not now actively engaged in operating, there was not a place where I could properly put a boy. I had nothing to teach him. My shop could not have taken an apprentice with any degree of fairness to the boy himself. We had no apprentices. I can conceive of other places where a large number of boys could be taught trades, and taught very properly. I think that is very largely a question of conditions and of particular cases. I don't believe there is any God-given ratio of 5 to 1 or 60 to 1, or any

other ratio that determines what should be a rule as to how many apprentices should be employed under any and all conditions.

Standardization of wages: I believe that that is impossible, for the reason that, so far as my own association—and, by the way, most of my remarks naturally are referring to the trades and conditions that I know about, and what they may happen to be in some others, I don't know; I am not attempting to say. But conditions vary so in different cities in different trades that I don't believe it would be a possible thing for our association to agree to a standard wage. I think that would have to be more determined by the character of the business and, as I say, the location.

There is one point that I want to mention here before I forget it. In all discussion of employers one is very apt to picture in his mind the big employing institutions, large business, and forget—and he forgets and does not know that a condition of affairs exists in this country which few people realize.

I have some notes here from the last census.

An examination of some 286,500 employers, in such lines as ours, employing 6,600,000 workers: Of the people who did their own work, the little tailor, the tinsmith, or the carpenter, who have less—might be who had no employee at all; was engaged in trade and doing the work himself, there were 27,712. Those that employed from 1 to 5 wage earners, 186,289; 6 to 20, 87,196. In other words, 81 per cent of all the employers in this country in certain lines employed less than 20 employees. Only two-tenths of 1 per cent employed over 1,000 workmen.

I think that gives people a little different mental picture of things. In the legislation in regard to compulsory compensation, minimum wage, we are apt, possibly, in our efforts to hit the big fellow, but in going for the big fellow we are hitting the little fellow at the same time. A large corporation or a large business with a wide field of operation and with a very large capital can adjust itself to new conditions very much easier than the little bit of a fellow up on Milwaukee Avenue, who has the department store to contend with, high rent, and is probably only making a very reasonable living. If his conditions are materially increased—if his expenses are materially increased—he is the one that suffers. But he is 80 per cent. He is 80 per cent of the employers.

I can conceive that the big department store on State Street could not want anything better than a minimum-wage law in Illinois, which would make it almost impossible for the little employer up on Milwaukee Avenue or on Archer Avenue or Cottage Grove Avenue to do business. That is one of the objections, as I see it, to this standardization of wages as applied to my own case, as refers more particularly to the lines of trade and the location.

Boycott on material: The boycott is an extremely dangerous weapon; it is a powerful weapon, and I had that in mind yesterday when I spoke about the union being under some form of Government supervision or control, because, so far as the public is concerned, it does not distinguish; it can't distinguish; it rarely learns the facts. It gets an ex parte statement of conditions, and as to whether the employee shall be supported or the employer should be supported in a given instance is rarely accurately determined by the public, who knows nothing whatever about the facts.

Therefore, where irreparable damage can be done to the individual or to business, I believe that before a boycott is permitted there should be some control of the situation.

Closed shop: Well, I am opposed to it. Our association is opposed to it. And it spells, in the last analysis, to our mind, as the result of experience, limitation and higher cost, and the public pays the bill.

The attitude of our association toward strikes, sympathetic strikes: Well, I think possibly what I said about boycotting might apply to sympathetic strikes. It is also a powerful weapon and, if to be used, ought to be under some form of control. The main objection to it being that it rarely concerns itself with the primary issue, with the real difficulty, the start of the whole trouble—that is, the dispute in the first instance.

Picketing, peaceful and otherwise: I do not know what peaceful picketing means. I know what the words say, but they convey absolutely no idea to my mind. I know I have never seen any. Picketing, if it is picketing, is coercion and threat. If it is not that, it is not picketing. That is my experience.

Boycotting I have already spoken about.

Violence: Unfortunate, and it is only too common. I heard what Mr. Mullenbach said here yesterday about the human element, human nature; the

fight that perhaps is inevitable; and also his point that violence or force was the only weapon at the hand of the workmen, whereas possibly the employer had money or power to bring about legislation or anything else, while the union had to resort to force. That may be true. We may both be culpable. We may both be to blame. There may be cases of individual employers who have instigated trouble. I have heard of some. As a matter of fact, a good friend of mine, a big employer, told me that he believed in one instance the employer had done such a thing. But it is simply absurd on the face of it to claim that employers begin violence. It means expense; it means trouble; it means a notoriety and publicity he does not desire and does not want, and is harmful; it hurts his business. I personally never heard of an employer who started out to shoot up his men because they went out on a strike. Personally I don't know of a single case of violence started by the employer. There may be; I don't know. Well, I say I don't know, I may have heard of this one case I will refer to.

In the nature of the case what happens? My men go out on a strike; right or wrong, good cause or bad cause, I am at fault or they are at fault; waiving all those questions, I try to get men to go to work; I find men who will go to work. I know perfectly well that unless I protect those men that they will be harmed; there is a moral obligation on me as an employer to take care of my men, and violence results.

Now, it is a sad commentary that such things as Butte, the northern peninsula, Colorado—these awful industrial wars—take place, and there is going to be some way found to handle them. Our present conditions aren't stable. The result of all this turmoil and all this commotion is going to be a relation between employer and employee that is much better and much finer than we know. There may be crimes of employers, and doubtless are, but that is a particular crime that is not a crime of the employer; that is the crime of a union, this particular topic.

Opinion regarding extent and cause of industrial unrest: Well, they are general. They are very complex. I do not believe we can explain them on the ground of \$3 a day or \$3.50 a day, or \$3 a day and \$4 a day; I don't believe money is the measure of contentment or happiness. If we all receive tomorrow \$100 more a month than we are getting now, or \$500 more a month tomorrow, I don't believe that would settle our difficulties or our unrest. It may be Jim Hill's version—the cost of high living. We are extravagant; we are desirous of doing what other people do; we are extravagant in our automobiles; we are extravagant in our movies and our hats and clothes and pretty much everything we do. Whether these or all or any of them are elements of the problem I do not know, but I don't believe in a word we can possibly attempt to say what the causes of our social unrest are, and as for me, if I have any suggestion in regard to constructive measures, I don't know of any panacea that is going to get us out of all this trouble. However, I wish I knew something that I could suggest. I think, so far as the employer is concerned, there has been and there must continue to be a more sympathetic feeling in regard to his men. He has got to make his shop safer and more sanitary; he has got to realize that short hours are coming and higher wages are going to be paid, just so far as the law of economics will let us go.

I think on the part of the unions that there must be a greater responsibility, perhaps this Government supervision of some sort that I have suggested. And the improvement in the union or the corrections of abuse must come from inside. They must come from the unions themselves. We people on the outside can scrap and fight and suggest things, and suggest legislation, and all that sort of thing, but the real work is up to the officers themselves to clean out their own bodies, as they are trying. I believe, to do in Chicago at the present time. And on the part of all of us there must be more intelligent and more sympathetic regard for the other people's wishes and rights.

Mr. THOMPSON. You have given apparently a good deal of thought and a good deal of your life to the labor problem, as commissioner for the metal trades association. Is it your opinion that, generally speaking, the organization of workmen into unions has helped or hurt his position in industry?

Mr. HIBBARD. I should say there was not any question but that the fact that the position of the man—the position of the workingman in general—has been helped by his union; yes, sir.

Mr. THOMPSON. And that is because of his organization in unions?

Mr. HIBBARD. Undoubtedly.

Mr. THOMPSON. Now, assuming that the American workingman realizes that fact, as you realize it, do you think that the idea of organization is going to grow or is going to die off in his mind?

Mr. HIBBARD. Well, I don't believe it is going to die off.

Mr. THOMPSON. If he would use the same intelligence that we expect an ordinary business man to use, he would say, as you have said, "This has been a good thing, we ought to keep it up," would he not?

Mr. HIBBARD. I should think so.

Mr. THOMPSON. Now, if other people in the ranks of the employers should realize, as you realize, that the union has been a good thing for the workingman, don't you think that they would make the deduction that the union has probably come to stay in industrial life?

Mr. HIBBARD. Oh, I don't hear anybody argue that it has not, or I don't come in contact with those who believe that it has not.

Mr. THOMPSON. Then, assuming that the union, Mr. Hibbard, has come to stay in our industrial life, do you think that in that case, speaking generally now for the moment, that collective bargaining is a bad or a good thing? You can answer that in your own way; I am not asking you for yes or no.

Mr. HIBBARD. Mr. Thompson, I am not here to evade any question. I realize that I have certain ideas, and I want to help you all I can; and if I can be of any assistance to the commission that is what I am here for. I am not here to exploit any particular notion. As I told you, I haven't any. There are certain difficulties and certain abuses that we run into that we are opposed to, and will continue to oppose.

I said yesterday that there was one stage of my life there where for a year I fought as hard as any man could fight among my own people, on our own side of the fence, for a collective-bargaining agreement, as men in this room know; that I was forced out of that position for simply the cause, as I have pointed out, that so far I have yet to find where the fluctuations, economic fluctuations, can be peaceably taken care of. Now, whether that is because there is not enough of fiber behind the other side of the agreement, I don't know.

Mr. THOMPSON. What I was trying to do, Mr. Hibbard, was to see whether your objection to collective bargaining, as you have stated, was fundamental to the thing itself or rather to certain phases of collective bargaining—

Mr. HIBBARD. Oh, I can answer that, I think, very frankly. It is not. It is not fundamental. As you know, our own association, this Chicago Metal Trade Association, in the first place that I know about, that was not affiliated with the national trades, the National Metal Trades Association; it has tried it; the National Founders' Association tried it, indicating all those people believed in the theory of collective bargaining, and I do not know but now you will find most of the men would say, "Why, yes; theoretically I believe in it all right, but practically here are certain steps in the thing that have always fallen down." I think I can honestly say that in a different condition of affairs that I would be in favor of collective bargaining.

Mr. THOMPSON. Now, assuming, then, that unionism has come to stay—the organization of workingmen—and that fundamentally and on the right basis collective bargaining is a proper method to deal with such a situation, would you believe that the work of this commission should be directed toward harmonizing these fundamental propositions to our present industrial life so that they may be carried out and brought about with the least friction to industry?

Mr. HIBBARD. I think that would be fine work.

Mr. THOMPSON. Well, wouldn't that be the natural direction in which a mind, looking at it from a practical standpoint, must work?

Mr. HIBBARD. I should think so.

Mr. THOMPSON. Are there any other directions that you would think that we ought to go, Mr. Hibbard, and explore?

Mr. HIBBARD. Well, that will keep you busy for a while.

Mr. THOMPSON. I think so, but it might be you think other things are more important, for instance, in the industrial problem?

Mr. HIBBARD. No, no; I think that you are right on the most important thing that you can tackle right there. *

Mr. THOMPSON. Now, going to the question of violence just a few moments, Mr. Hibbard, do you believe that it can be fairly stated that the general attitude of the American workingman, as he is gathered together in these organizations, is for the purpose of committing violence?

Mr. HIBBARD. Oh, no; I would not claim that a minute.

Mr. THOMPSON. Don't you believe that he, as the average American citizen, would prefer to gain his objects by peaceful and ordinary methods?

Mr. HIBBARD. No question, if you ask me; I believe that the workmen in the city of Chicago belonging to the various unions in the city of Chicago—I am now referring to outside my own trade—building trades—on the average are just as good citizens as I am or you, that want the laws obeyed just the same as you and I want them obeyed or anybody else, that they are in every particular just as patriotic, just as good citizens as we. I should say, offhand, yes, beyond any question. But there is a machine, as there sometimes is in politics, that operates the thing.

Mr. THOMPSON. Well, I was leaving out for the moment, Mr. Hibbard—

Mr. HIBBARD. Now, I was going to say that as a similar case, exactly in the same way, while the rank and file of any particular union beyond any question are good citizens, the powers that be sometimes plan and do things that I don't believe the rank and file would stand for if they knew all the facts.

Mr. THOMPSON. I am leaving out for the present consideration, Mr. Hibbard, those cases of violence which apparently as we get them in the newspapers are premeditated acts of little coteries or leaders or politicians; I am taking the general strike as it occurs over the country where hundreds and thousands of men are out of work, and where under the law as it exists to-day the employer, we will say, seeks to replace them by other workers which the people on strike generally call scabs. Now, violence has often occurred, if we may believe the reports, in those cases. Would you say in those cases that that violence is the result of a coterie of men, or rather it grows out of the situation itself?

Mr. HIBBARD. Undoubtedly there are a good many cases where it grows out of the situation. Those are the kinds of sporadic things, however, that we could overlook. I do not think they are either serious or extended. It is the systematic violence that I have in mind.

Mr. THOMPSON. Well, Mr. Hibbard, are there records that we can get that have been compiled by your association or by other employers' associations in this country which would give us evidence, except in perhaps these small coterie cases I speak of, that violence has been premeditated and carried on in a wholesale manner?

Mr. HIBBARD. Our association has no such record, but I can refer you to various cities whose criminal calendars will give you the names of all the people that you want.

Mr. THOMPSON. Well, is there anywhere that you know any records kept that we could have access to that would help the commission?

Mr. HIBBARD. Right there—

Mr. THOMPSON (interrupting). In studying this—

Mr. HIBBARD (interrupting). Right there I can give you one particular city.

Mr. THOMPSON. What do you mean, that the criminal court records would show it, or what?

Mr. HIBBARD. Yes; and the details of the case and the whole history. Our association keeps no such record.

Mr. THOMPSON. Then the only source of information is this you have stated?

Mr. HIBBARD. Yes, sir.

Mr. THOMPSON. Now, Mr. Hibbard, in reference to the question of picketing, a good deal has been said on this subject pro and con. Theoretically, the right to peaceful picketing, I presume, must be extended, as the right to collective bargaining. Why, in your opinion, is peaceful picketing impossible? Do you believe that in all cases there is a systematic attempt to use violence wherever a strike occurs?

Mr. HIBBARD. Mr. Thompson, what it may be in the restaurant business I don't know. I have had no experience. But it would take more than the average amount of nerve for you to go into a plant where we have a strike on that is picketed.

Mr. THOMPSON. Well, that brings up and is allied to this question of violence. As I understood you, you believe that where violence occurs, just because of the fact that men are out on a strike and others take their places, you said that was sporadic.

Mr. HIBBARD. Oh, I said it might be. There might be cases.

Mr. THOMPSON. Now, in your opinion, then, in most of the strikes of the country, so much so as to be said to be the general proposition, there is an organized effort at intimidation and violence?

Mr. HIBBARD. In my experience; yes.

Mr. THOMPSON. Well, why do you believe that, leaving out now, we will say, certain lines of trade in large cities, taking the country over, in manufacturing plants, why do you believe that this large body of law-abiding citizens of workmen would countenance so generally, as you say, violent picketing, so much so as to make the name of peaceful picketing an absolute nonentity? I mean describe a situation which does not exist.

Mr. HIBBARD. I will attempt to tell a story. We used to have here in town a steam fitter that worked for us by the name of Barney. Barney was a good fellow, a good friend of mine. I said, "Barney, why is it you have such a walking delegate as you have here in the city of Chicago?" I said, "I know you, and I know Jim, and I know Dan, and the other fellows, and you are a decent lot. This walking delegate don't represent you." "Well," he says, "Mr. Hibbard, you believe, don't you, that if the people of the city of Chicago had the chance to vote for what was right and what was wrong, a good principle or a bad principle, that they would choose the right, wouldn't they? That they would elect good men rather than bad?" I said, "Yes." He says, "You show me why you have that bunch at the City Hall and I will tell you why we have our walking delegate."

In other words, Mr. Thompson, to answer your question direct, the control isn't in the hands of the many.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. O'Connell would like to ask you some questions.

Commissioner O'CONNELL. I understand you are not now in the manufacturing business?

Mr. HIBBARD. No, sir.

Commissioner O'CONNELL. Not an employer?

Mr. HIBBARD. No, sir. I have been commissioner for about a year or a little more.

Commissioner O'CONNELL. There are about 700 firms, you say, holding membership in the National Metal Trades Association?

Mr. HIBBARD. Yes, sir.

Commissioner O'CONNELL. How many firms approximately in the United States that would be eligible to membership in the national association?

Mr. HIBBARD. That I haven't any idea of knowing.

Commissioner O'CONNELL. One hundred thousand?

Mr. HIBBARD. Why, you see any man who employs machinists or pattern makers or buffers or polishers even though employing only one or two, would be eligible. I haven't any figures. It might be as many as you state; I don't know.

Commissioner O'CONNELL. I suppose you have 5 per cent of the eligible firms in the country in the association?

Mr. HIBBARD. Perhaps I can put it this way, which will be of more value: About a year ago, unfortunately not so at the present time, but about a year ago the total number of employers on the pay roll of the entire association, I think, was 340,000 to 350,000 men. Now, how that ratio will jibe up with the total number of employees in the country I can't tell you, but it must be a pretty reasonable per cent of the total productive force. It is not anywhere as large as the manufacturers' association or a great many others.

Commissioner O'CONNELL. My idea in asking you the question is because of a statement made of the per cent of organized workmen and of the per cent of unorganized workmen in the country. Some estimates being something very low and others very fair and so on.

Mr. HIBBARD. Yes, sir.

Commissioner O'CONNELL. Now, Mr. Hibbard, I understood you yesterday, and I have the verbatim testimony before me here, to say your first break with the union here was because of a certain situation that arose in which the leaders had agreed to a certain proposition of the employers here but could not force their union to accept it.

Mr. HIBBARD. I did not say—I don't believe—correct me if I am wrong—I don't believe I said the union officials had agreed, but I said I thought they agreed with us that it was the proper thing to do.

Commissioner O'CONNELL. Yes.

Mr. HIBBARD. And they were going to use their influence to bring the union around to their viewpoint.

Commissioner O'CONNELL. Do you believe the officials, if they were in perfect accord with your association's ideas—that they should have the power or be in

the position to influence the membership to accept something they thought was right and the membership thought was wrong?

Mr. HIBBARD. Well, you very frequently would have to delegate a committee to act for you. A committee may or may not carry out the individual wishes of everybody, but in that particular instance the employers who were there present were qualified and did bind all the other members of the association. And what would have been agreed to by them would have been binding on the association. They would have had to live up to it or else get out.

Commissioner O'CONNELL. Now, does the National Metal Trades Association have within its make-up an organization of employees, of workmen?

Mr. HIBBARD. Not as I understand your question; no, sir. It does not. It has an office force.

Commissioner O'CONNELL. Oh, yes; I understand. But, for instance, do you organize, or maintain a force of men trained for the purpose of taking the places of strikers or workmen when they go out on a strike?

Mr. HIBBARD. No, sir.

Commissioner O'CONNELL. They have not maintained sometime in their history an organization of that character?

Mr. HIBBARD. Not that I know of, Mr. O'Connell. I do not believe that they have. Men of that kind are ordinarily obtained because we have known of a certain man having been on another job, or by advertising or in some other way.

Commissioner O'CONNELL. Are there not membership cards or cards of some character, preferential cards given to workmen that give them preference of employment in the various shops of the companies holding memberships in your association?

Mr. HIBBARD. If a man has been faithful during a strike on a job, been decent, a good workman, sober and industrious, after he is through with his work we have in some instances given a card. I do not believe there are a great many of them.

Commissioner O'CONNELL. Isn't there a prize or a premium or a present of some kind given to men—or a bound volume or a book or something of that kind—given to men because of their loyalty to the National Metal Trades Association?

Mr. HIBBARD. I think there have been; yes.

Commissioner O'CONNELL. Have you a copy of such a book?

Mr. HIBBARD. I have not. I could get you one.

Commissioner O'CONNELL. Will you furnish the commission with one of them?

Mr. HIBBARD. I will be very glad to.

Commissioner O'CONNELL. Will you furnish the commission with samples of your employment lists, applications for employment, and a statement of the methods the applicant goes through seeking employment?

Mr. HIBBARD. What is your question?

Commissioner O'CONNELL. I want the various forms and applications that are handed to workmen seeking employment in the shops or at your office; all forms in connection with the matter of employment.

Mr. HIBBARD. I will be very glad to furnish them to the commission. Allow me to say, to point out, however, as I said yesterday, the national office carries no employment bureau of any kind. We have no such forms or cards there. There is no uniform or standard in the 14 different branches. We exercise no control except a very general control over them. We do not specify their forms, and each individual secretary has one which suits him.

Commissioner O'CONNELL. Will you furnish those in Chicago?

Mr. HIBBARD. The Chicago branch?

Commissioner O'CONNELL. The Chicago branch.

Mr. HIBBARD. Yes, sir.

Commissioner O'CONNELL. Mr. Hibbard, in the case of a strike at the plant of one of your members, what does your association do to be of service to your member?

Mr. HIBBARD. Presupposing all the time that the cause of the strike is just and fair and it is one that the association will undertake to handle—we don't handle any old thing, you know; a man must come into court with clean hands; he must have a good cause. A good cause to our mind, for instance, an absolute claim for unionism of the shop. That we fight.

Commissioner O'CONNELL. Well, in that case?

Mr. HIBBARD. The member is entitled—if the men go out, the association is under obligation to furnish him seven-tenths of the number of men which he reports in that department of the association.

Commissioner O'CONNELL. And in a financial way, what do they do?

Mr. HIBBARD. Why, that is about all—that is, they place the men in the shop and start them going.

Commissioner O'CONNELL. Do they furnish him capital to keep his business running?

Mr. HIBBARD. No; no. That they may have done so in individual cases I do not know, but there is no obligation in the constitution, by obligation, that they shall do so. I know in that 1904 Chicago strike we had a good many weak sisters, and there were some of those that were helped along in their pay roll by some of the members of the association. That is not part of the National Metal Trades Association.

Commissioner O'CONNELL. Supposing there was a general strike occurred for reduction of hours, increase in wages, any general thing that would affect the shops pretty much alike, against the members of your association, would you permit one of your members to withdraw at any time during that controversy with a clear card from your association?

Mr. HIBBARD. He has a right to resign at any time he desires.

Commissioner O'CONNELL. Would you think he was doing a justifiable thing in resigning under a situation of that kind?

Mr. HIBBARD. Well, we keep reverting to our old topic of discussion—that is, the old Chicago situation. At one time, you might remember, there was one man went out to whom we did not feel very kindly at that time. He was the only one we lost.

Commissioner O'CONNELL. Do your members put up a bond of any character to secure their membership in the faithful performance of their allegiance to the constitution and by-laws?

Mr. HIBBARD. No, sir.

Commissioner O'CONNELL. Have you read this piece that is published this morning in the Manufacturers' News—the hat manufacturers' agreement upheld?

Mr. HIBBARD. I have not seen that; no, sir.

Commissioner O'CONNELL. The case of the hatters' association suing one of their members for a claim of \$5,000 for quitting the association during the strike of the association. The case is upheld by the court with the approximate amount of funds of \$75,000 in sight for the association from firms that have withdrawn from the organization. Did your association attempt to deal in that way with your members who withdrew?

Mr. HIBBARD. No, sir. I say that I haven't seen that article. I have not. But now that you mention the case and the point, I believe the case was decided on this theory: If you and I agree to do a certain thing, it is a crime for somebody else to try to induce either one of us to violate that contract. If I agree with you that I will run an open shop, if you do, anything that is done in contravention to that contract, as I understand it, is liable to result in trouble.

Commissioner O'CONNELL. Then, if two men agree to go on a strike for a certain thing with each other, for an increase of wages or some other thing, in which they are interested—

Mr. HIBBARD. And I try to induce one of them to go back?

Commissioner O'CONNELL. And you tried to induce one of them to go back—

Mr. HIBBARD. I would probably be trying to make them break their contract and be amenable to law myself.

Commissioner O'CONNELL. You think you would be liable for damages in doing that?

Mr. HIBBARD. I think I might under that decision. However, I am not a lawyer.

Commissioner O'CONNELL. Neither am I.

Mr. HIBBARD. That is a layman's guess.

Commissioner O'CONNELL. Neither am I, but I think we have dealt in a number of cases together and understand what we are talking about. Did you hear Mr. Plez, the president of the Link Belt?

Mr. HIBBARD. I wasn't here; no, sir. And I only saw what was in the paper.

Commissioner GARRETTSON. That is all.

Chairman WALSH. Any other questions?

Commissioner GARRETTSON. Yes.

Chairman WALSH. Mr. Garretson has some questions.
 Commissioner GARRETSON. You made a statement a few minutes ago that might have a very broad inference to be drawn from it. You made the statement that the employer of 10 years ago was not a philanthropist. Do you mean by that every employer of to-day is one?

Mr. HIBBARD. No, sir.

Commissioner GARRETSON. Oh.

Mr. HIBBARD. No, sir; he is very much better, though, and is a very much broader-minded man, with more milk of human kindness in him than he had 10 years ago.

Commissioner GARRETSON. You said this result was produced in some degree by the activities of the union or agitation of the union and along various lines—

Mr. HIBBARD. You mean those various things I thought have been corrected?
 Commissioner GARRETSON. The betterments that have taken place in the shops of the employer.

Mr. HIBBARD. Yes; I think very largely.

Commissioner GARRETSON. Then the union is to be credited with missionary work in that direction?

Mr. HIBBARD. Yes, sir.

Commissioner GARRETSON. You read from a census statement to the effect that there were only two-tenths of 1 per cent of employers that employed over a thousand men.

Mr. HIBBARD. Yes, sir.

Commissioner GARRETSON. What proportion of the men employed are employed by that two-tenths of 1 per cent?

Mr. HIBBARD. As I remember, the 80 per cent that I first mentioned employed 14.7 per cent.

Commissioner GARRETSON. Eighty-one per cent of employers—

Mr. HIBBARD. Only employ about 15 per cent.

Commissioner GARRETSON. Fifteen per cent of the workers.

Mr. HIBBARD. The two-tenths per cent employ 15 per cent of the workmen. In other words, the two-tenths per cent employing over 1,000 men employ as many as the 81 per cent.

Commissioner GARRETSON. As many as the 81 per cent below?

Mr. HIBBARD. Yes; at that particular moment I had more in my mind the effect of legislation of one kind and another on the employer.

Commissioner GARRETSON. But what was the origin of the legislation and what was its purpose, for the employee or for the employer?

Mr. HIBBARD. You mean—

Commissioner GARRETSON (interrupting). Sanitary and humanitarian legislation.

Mr. HIBBARD. Oh, undoubtedly for the workmen.

Commissioner GARRETSON. Therefore the proportion of employers affected by it is not really generic, but the proportion of employees?

Mr. HIBBARD. Yes; but my own theory would be that in those plants that hire men there were certain vicious cases, of which we all know, but my own impression is in the larger plants the sanitary conditions were better. In our own practice, we find the shops that have to be jacked up the hardest are those not so large. The big shops, the good shops, are sanitary and well lighted and good air and all that sort of thing.

Commissioner GARRETSON. In other words, in the big shops the union, through the force of members and number of members, can exercise an influence it can't in the small shop, isn't that true?

Mr. HIBBARD. Yes; that statement is true; but I don't see what bearing it has on what I said just before.

Commissioner GARRETSON. The amount of pressure that they put on the employer to better conditions is more than in the industries that are small?

Mr. HIBBARD. Yes. You said a moment ago that I left a statement open to broad interpretation. Now, you are—you are inferring the only corrections made in the shop was due to the force of the union. But that is not true.

Commissioner GARRETSON. I grant you that is not true, but according to your own testimony they did build the fire.

Mr. HIBBARD. Beg pardon?

Commissioner GARRETSON. They built the fire that put the pot to boiling.

Mr. HIBBARD. Yes, sir.

Commissioner GARRETSON. You operate no employment bureau in the Nation Metal Trades?

Mr. HIBBARD. Not from the national office.

Commissioner GARRETSON. Are the majority of your members also members of the N. A. M.?

Mr. HIBBARD. I don't know that, but I should say no. As a matter of fact I am quite sure no. There may be individual members.

Commissioner GARRETSON. But such of them as are could avail themselves of the employment agency of that institution, could they not?

Mr. HIBBARD. That I don't know.

Commissioner GARRETSON. Have you seen the testimony of the director of that agency?

Mr. HIBBARD. No, sir.

Commissioner GARRETSON. You used the statement that a boycott is a dangerous weapon.

Mr. HIBBARD. Perhaps I should have said a powerful weapon. It is dangerous unless advisedly used.

Commissioner GARRETSON. Do you believe it is equally a dangerous weapon regardless of where it is directed and is equally a vicious weapon?

Mr. HIBBARD. A 16-inch gun is a dangerous weapon. I am not talking about what you point it at.

Commissioner GARRETSON. Then a boycott of men on account of union affiliations is equally vicious with—as a boycott if directed against manufacturers?

Mr. HIBBARD. I am not in favor of such a boycott as that.

Commissioner GARRETSON. Does it not exist absolutely in a large number of shops in the country?

Mr. HIBBARD. I didn't get that. What is the question?

Commissioner GARRETSON. Are there not a large number of places where the fact that a man is a union man will bar him from employment?

Mr. HIBBARD. Well, barred may be relative. I don't know of very many places of my own personal knowledge where every single man in the place is a nonunion man.

Commissioner GARRETSON. Every single man may not be a nonunion man.

Mr. HIBBARD. Put it the other way around. I know very few places where men would be barred because he was a union man.

Commissioner GARRETSON. But there are such places?

Mr. HIBBARD. There are where we have had trouble.

Commissioner GARRETSON. Is a boycott of that character less criminal than a boycott of a product for any reason, for unfair reasons, we will say, for being on the unfair list?

Mr. HIBBARD. I do not know as I can answer the question. In other words I can conceive of reasons why, for a man's absolute protection, if he has got it run away, he does. If men want to refuse to buy, I suppose they can.

Commissioner GARRETSON. Don't you believe that if one man, for his own protection, financial protection, boycotts union men in employment that he is on as bad moral and legal ground as that man is in refusing to purchase a product if what he believes is for his own financial protection?

Mr. HIBBARD. As an individual act, yes; he has got just as much right.

Commissioner GARRETSON. And in reality is there any difference between the system of passing men around through a series of factories by an interchange of information; is the result of it any different as applied to men as to what a boycott is as applied to goods?

Mr. HIBBARD. I don't understand what you mean by that first condition there.

Commissioner GARRETSON. No. It is stated before this commission that in employment agencies which are maintained that interchange of information as to the causes of discharge of a man can be secured by any man a member of that association.

Mr. HIBBARD. Yes, sir.

Commissioner GARRETSON. It is admitted that agitation is one of the seven deadly sins.

Mr. HIBBARD. Yes.

Commissioner GARRETSON. Now, if information on this basis is circulated that bars a man from employment, that is a boycott of the man, isn't it?

Mr. HIBBARD. Well, Mr. Garretson, suppose a man is a drunkard, would it be proper? Suppose a man was dishonest, would he be proper?

Commissioner GARRETSON. Does the union place it in the category of that?

Mr. HIBBARD. No; I haven't said that.

Commissioner GARRETSON. I didn't think you did.

Mr. HIBBARD. I can—

Commissioner GARRETSON. Bear in mind I wasn't charging you with holding any opinion of that kind.

Mr. HIBBARD. You are jumping now from agitator to unionizing.

Commissioner GARRETSON. From what?

Mr. HIBBARD. From an agitator—you were talking about agitator.

Commissioner GARRETSON. Sure, I was. And I have seldom heard it applied in industrial circles to anyone but a union man.

Mr. HIBBARD. Yes; I know you have. And also it is true there are cases where you have heard union men talked about without their being called agitators?

Commissioner GARRETSON. In that instance—

Mr. HIBBARD. I think it is equally true that there are men that are not agitators.

Commissioner GARRETSON. The man who used the word qualified it by meaning the criticism of conditions or the advancing of the organization.

Mr. HIBBARD. Well, that is a question of degree. I don't object to a man's advocating another man to join the union if he wants to. That doesn't constitute an agitator, in my mind. An agitator is a man that is causing discontent and unrest and all the other things. Now, a certain amount of discontent is all right—we appreciate that—that is one of the steps of progress, we will say.

Commissioner GARRETSON. Well, narrow it to unionism; would you consider the barring of a man through a wide area from employment because he was a union man as a boycott against the man?

Mr. HIBBARD. Well, if that is all they had against him, why, I should not be in favor of it.

Commissioner GARRETSON. In touching upon violence, you spoke of the fact that there was a moral obligation resting upon the employer to protect the strike breaker. Have you ever noticed in any employer the fact that that recognition of moral obligation was much more lively than some others—some other moral obligation?

Mr. HIBBARD. I don't understand you, Mr. Garretson.

Commissioner GARRETSON. Have you ever known an instance where an employer whose sense of moral obligation to his employees was somewhat dormant in general?

Mr. HIBBARD. Yes, sir.

Commissioner GARRETSON. Where he might have a very quick sense of moral obligation for protecting the strike breaker?

Mr. HIBBARD. He might.

Commissioner GARRETSON. That is all.

Chairman WALSH. Any other question?

Commissioner DELANO. Yes; one.

Chairman WALSH. Mr. Delano would like to ask you one question.

Commissioner DELANO. Mr. Hibbard, I understood you to say that the boycott was a dangerous thing, or some words to that effect. I did not get the impression that my fellow commissioner did from your remark, but I wanted to see if I perfectly understood you. In saying it was a dangerous thing, did you mean by that that it could not be used—should not be used in any case?

Mr. HIBBARD. I am not prepared to say that.

Commissioner DELANO. Is your view illustrated, perhaps, by this, that you would say, for instance, that a six-shooter was a dangerous weapon?

Mr. HIBBARD. I should.

Commissioner DELANO. You would say that it was unnecessary to carry in a perfectly civilized community where every citizen was protected, and all that sort of thing?

Mr. HIBBARD. Well, Mr. Delano, I think most of us are opposed to the theory of boycott. Whether it is proper to be used under any conditions or not is a matter that has bothered the biggest courts in our land, and I don't think that I would attempt to say whether it was ever permissible or not. I merely—my primary object in speaking of it as I did was merely that it was a tremendous engine for good or ill, with tremendous powers. Therefore it should not be handed over to little boys to let play with.

Commissioner DELANO. That is all; that is the impression I got.

Commissioner GARRETSON. Mr. Chairman, just one thing I want to draw the attention of the commission to; that is, it was testified here that a union-labor community is not a civilized community; therefore his example does not apply.

- Commissioner DELANO. I did not say that.
- Mr. HIBBARD. Those are not my views, Mr. Garretson.
- Commissioner DELANO. The commission don't hold that view, nor the witness.
- Chairman WALSH. That is all, thank you.
- Mr. THOMPSON. Just a minute.
- Chairman WALSH. Excuse me, Mr. Thompson; I intended to ask you if you had some more questions, but I forgot.
- Mr. THOMPSON. Would you approve of the bringing any pressure to bear on an employer to prevent his employing union men?
- Mr. HIBBARD. Why, to answer the question generally, I should say no. There might be specific cases where I would recommend it.
- Mr. THOMPSON. Is such pressure used, if you know?
- Mr. HIBBARD. Yes, sir.
- Mr. THOMPSON. It is?
- Mr. HIBBARD. In specific instances.
- Mr. THOMPSON. Is the business of your members comparative?
- Mr. HIBBARD. Not in any way. I pointed out yesterday they were automobile builders or chain manufacturers. The field is very diversified. If you mean, Mr. Thompson, by your question to imply that there was any kind of a price agreement, or an agreement of any kind of that character—
- Mr. THOMPSON. No.
- Mr. HIBBARD. There is no such thing, owing to the character of the personnel of the association, which makes it impossible.
- Mr. THOMPSON. I take it—the question is to bring out this point: Whether or not the competitive nature of the business limits the wages, hours, and conditions of the men in your shops?
- Mr. HIBBARD. Yes, it does; and for the reason also that Mr. O'Connell pointed out—that is, that the National Metal Trades Association presumably only has a very small percentage of the number of employers in these various lines in the country. Economically, shorter hours and higher wages mean that the public will pay more for that particular thing.
- Mr. THOMPSON. Has your association kept any records of the relative costs of work in an open shop and work in a union shop?
- Mr. HIBBARD. No, sir.
- Mr. THOMPSON. You have not?
- Mr. HIBBARD. Only sometimes a strike develops that—that is, from a condition of complete unionization, complete control, after the strike is over and you are running under different conditions the economic effect is very apparent and different.
- Mr. THOMPSON. Well, have you made any study, for instance, of the way—
- Mr. HIBBARD. Not systematically, in the way that you are asking your question; no, sir.
- Mr. THOMPSON. If there was any change of cost, that cost would be felt by the consumer?
- Mr. HIBBARD. Oh, I think so, because in the great run of machine shops the profits are not so large as we are sometimes told.
- Mr. THOMPSON. Well, are the wages paid to the men an appreciable part of the cost of the product?
- Mr. HIBBARD. A very material part.
- Mr. THOMPSON. Do you think there is a difference between refusing to patronize or employ and bringing of pressure to bear upon others to keep them from patronizing or employing?
- Mr. HIBBARD. Read that again, please, Mr. Thompson.
- Mr. THOMPSON. Do you think there is a difference between refusing to patronize or to employ and the bringing of pressure to bear upon others to keep them from patronizing and employing?
- Mr. HIBBARD. Oh, I don't know how to answer that question.
- Mr. THOMPSON. Perhaps let me state it another way: Is there any difference, in your opinion, first, as to whether the refusing to employ is any more serious than refusing to patronize; and, next, whether there is any difference between doing it and bringing pressure to bear to have it done?
- Mr. HIBBARD. Well, you are getting—it is a hard question there. Are you talking about individual acts or collective acts, or what?
- Mr. THOMPSON. Well, it is more or less of an abstract question, I take it.
- Mr. HIBBARD. Yes; I can't answer it categorically.
- Chairman WALSH. Just let it go.

Mr. THOMPSON. That is all.
 Chairman WALSH. That is all, thank you, Mr. Hibbard.
 Mr. THOMPSON. Mr. Fry.

TESTIMONY OF MR. CHARLES W. FRY.

Mr. THOMPSON. Mr. Fry, will you give us your name, your address, and your present occupation?

Mr. FRY. Charles W. Fry. I am business agent of the machinists; address, 106 North La Salle Street.

Mr. THOMPSON. What jurisdiction territorially speaking have you as business agent, the city of Chicago?

Mr. FRY. At the present time I am business agent for one local exclusively, men employed in the building construction work.

Mr. THOMPSON. Building construction work. Are you acquainted with the metal workers in this city? Are you acquainted with the general metal workers' condition in this city?

Mr. FRY. Yes; I am.

Mr. THOMPSON. What is the situation of the workers?

Mr. FRY. The metal craft of this city are composed of some groups, 10 or 11 various organizations working in the metal line, such as machinists, pattern makers, blacksmiths, electricians, sheet-metal workers, and molders, etc., grouped under what is known as the metal trades council. This council is not organized for the purpose of sympathetic strikes or things of that nature, but simply to assist one another, the different organizations, in organizing men, getting better conditions, conciliation, etc., with various employers. They have never had a sympathetic strike in the metal trades organization of this city to my knowledge in the last 10 or 12 years. They have at various times up until about 11 or 12 years ago, possibly 10 years ago, had agreements with the manufacturers' association in this city.

At the present time I believe the molders are still making agreements with the foundry men's association and the metal trades association to-day. Some 10 or 11 years ago, I think it was in 1903, the last agreement was made with the Chicago Metal Trades Council. Mr. Hibbard was one of the committee who signed that agreement. The following year the Chicago Metal Trades Council went on record to abrogate the agreement as to hours. A year or two previous to that there had been a general movement throughout the country for the nine-hour day. It had been obtained by shortening the hours on the step-rate plan, half an hour each year, until finally in 1902, I believe, or 1901, we secured the nine-hour day.

The formation of the Metal Trades Council of Chicago was next, and the unions, in conjunction with the manufacturers, assisted materially in getting this. And as I say, we made agreements in 1902 and 1903, but in 1904 we broke. This is the agreement that was signed in 1903, and Mr. Hibbard's name appears on it representing the John Davis Co. at that time.

As I said, we probably would have got together in 1904, only the manufacturers desired to break. The one thing that we had fought many years for, the shortening of the workday—the wages was not such a material proposition—but they posted notices in all the shops that on a date, that on and after a certain date the hours would be 9 hours a day, 54 hours a week, or as many hours as they wished to run. That is the time we broke with the Chicago Metal Trades Council and with the National Manufacturers' Association.

In my opinion, they are one and the same thing. I want to submit, if it pleases the commission—and in my opinion that evidence can be obtained much better from the manufacturers' association themselves, or through their attorneys, who are hired to assist them in these various affairs, than it can through us union boys, because they have got it complete.

But as an exhibit to show that the Chicago Metal Trades Council and the National Metal Trades Association are one and the same thing, I submit a copy of the Chicago Metal Trades Association arms and also the National Metal Trades Association. They are one and the same thing.

Mr. THOMPSON. Hand those to the stenographer.

(The papers so presented were marked "Exhibit 1" and "Exhibit 2," Witness Charles W. Fry, July 25, 1914.)

The pamphlets entitled "The Following Firms are Members of the Chicago Metal Trades Association, May 1, 1904," and "Officers and Members of Na-

tional Metal Trades Association, March, 1906," were submitted in printed form.)

Mr. FRY. As I say, we broke at that time; and since that time there has been no agreement between us. Some of the members of their association quit their association at that time and made agreements with us. I would be very much pleased if this commission will make a personal investigation of the conditions in union shops and of the conditions in nonunion or open shops. While I am on that question of open shops, let me say, Mr. Chairman, that the kind of open shop in the minds of Mr. Hibbard, Mr. Piez, and the gentlemen who belong to the association means absolutely a nonunion shop. In Mr. Piez's shop, the Link Belt Co. I do not believe you can find a union man with a fine-tooth comb. There is no such thing as one. There, if he joins the union, he is discharged immediately, for cause, not because he belongs to the union, but for some other cause. I have an anonymous letter here that was handed to a member of the commission by a machinist who worked for the Link Belt Co. It does not prove anything in particular, only that, as the poor fellow says, he worked for him several years. He would not be allowed to come before this commission, probably, and state his reason or his grievance, but he has put it in writing in his humble way. He did not sign any name to it, and, I presume, the members of the commission will not say I shall file it.

Mr. THOMPSON. Do you yourself know who the man is?

Mr. FRY. No, sir.

Mr. THOMPSON. I say do you know who the man is?

Mr. FRY. No; I do not know the man or the origin of the letter. It was handed to a member; written to one of the members of this commission, and I secured it from him. It is not addressed to anybody particularly. It says that he worked for him for several years, that he finally joined the union, and the next day after he joined the union he was discharged. I do not know that that letter is of any value. If it is, you can have it.

Mr. THOMPSON. Has your organization, Mr. Fry, any agreement now with the people in the metal trades in this city, the employers who are not connected with these associations?

Mr. FRY. Yes, sir.

Mr. THOMPSON. You have?

Mr. FRY. Yes, sir.

Mr. THOMPSON. In round numbers, or in a general way, what contracts have you got, how many and with what kind of shops?

Mr. FRY. We probably have agreements, if not written agreements, verbal agreements, with the most of the organizations; I might say, in the metal trades they consider that a verbal agreement is as good as a written one—if a contractor breaks his word he will break his bond. It is immaterial in that respect. Probably 50 per cent of the shops in this city are under an agreement or are working with nonunion men in them thoroughly organized in them, and so understood by the employer, and working under working rules furnished by the organization. In those shops, Mr. Chairman—Mr. Thompson, I mean—the conditions will be found to be so much greater, the class of men, the type of citizens in those shops will be so much greater than the ones working in the nonunion shops, as much difference as there is between day and night.

Mr. THOMPSON. Would you furnish this commission with a list of the shops which you would want to have investigated as showing the conditions that exist under unionism?

Mr. FRY. I would be very much pleased to furnish a list of some of the union shops and some of the nonunion shops, and to have a comparison made of conditions, and so forth. I will agree to this that in some of those nonunion shops the view from the outside is grander than it is from the union shop. I will agree that probably Mr. Piez, the Link Belt Co., on the South Side, has a splendid outlook from the outside. It looks just as nice as a bridal chamber does, but at the same time the conditions existing are not as good as in the union shop. I want to say further that what union men want, as a rule, is a sanitary condition. He does not care about the shower bath in the shop. And even the girls in their workroom do not care about those swell, elaborate rest rooms. They would much rather have better wages and shorter hours so that they can enjoy the rest rooms and the bathrooms, and so forth, in their own homes. That is what they are fighting for now, not for these things like there are in many of the shops.

Mr. THOMPSON. In your opinion, is there a great deal of discontent in Mr. Piez's plant, the Link Belt Co.'s place?

Mr. Fry. That would be a hard question to answer, inasmuch as the employees in his plant are all of a certain caliber of men. Just as soon as a man expresses discontentment he is no longer an employee. I imagine though, Mr. Thompson, if this man could be interviewed and taken out from under the influence of Mr. Piez that the discontent would show very plainly.

Mr. Thompson. Have you got any specific evidence to submit to this commission which would back up the belief that there is discontent there? Could you indicate either privately, or to the commission here publicly, any such evidence?

Mr. Fry. I haven't anything definite. I imagine, though, if the commission could interview some of the men employed there privately that that discontent would show very plainly.

Mr. Thompson. What are the relations between the various metal trade-unions in this city, one with another?

Mr. Fry. Very friendly. No jurisdictional questions of any kind occur. They settle them all within the council.

Mr. Thompson. Has that been so a great many years?

Mr. Fry. Practically always. More so since the council was organized.

Mr. Thompson. How many different classes of unions in the metal trades-union?

Mr. Fry. I believe about 10 or 11, I am not entirely sure on that.

Mr. Thompson. Would you mind naming them?

Mr. Fry. Machinists, sheet-metal workers, electricians, blacksmiths, boiler makers, pattern makers, molders, polishers, engineers, probably one or two others that I fail to recall at this time.

Mr. Thompson. Have they any organization between themselves—have they any council?

Mr. Fry. They have—each one of these trades is a national organization, or a local of an international organization, and many of them have some three or four locals in this city. Those three or four locals have what is known as a district council, and that district council, where there is one, is affiliated with the metal trades council.

Mr. Thompson. Now, Mr. Fry, how long have you been with the machinists' organization?

Mr. Fry. As the business agent, a little over nine years.

Mr. Thompson. And you have been otherwise connected with it for how many other years?

Mr. Fry. For the last 20 years.

Mr. Thompson. Have you had any occasion to study the labor problem?

Mr. Fry. I have had it confront me quite forcibly.

Mr. Thompson. What opinion have you as to whether or not there is a state of unrest existing in the ranks of labor in and around Chicago and elsewhere?

Mr. Fry. Well, there is—of course, there is at this time a depression in business which throws a great number of men out of employment. That in itself establishes a feeling of unrest.

Mr. Thompson. I mean irrespective of that.

Mr. Fry. At the present time the relations between the employees and the employers, especially in the metal trades craft, are not very friendly. They are strained in great measure, and that in itself produces considerable unrest. At this time also there is a feeling on the part of a great many of us that the employer has the benefit of the courts and all the machinery and laws, and so forth, and that big business interests are getting much the better of all those decisions. In other words, that the poor are getting poorer and the rich richer.

Mr. Thompson. Well, what remedy have you, Mr. Fry, or what do you think could be done, in a personal way?

Mr. Fry. Well, that is a pretty broad question, Mr. Thompson. I believe that this commission can accomplish much good in a conciliation manner. I would not be ready to express a willingness to agree to arbitration with conditions as they are. But I really believe that the commission in its way of conciliation between the employer and the employee could do much good. And I believe that if the proper investigation was made, that if, irrespective of what I say, or Mr. Hibbard, or Mr. Piez, or anybody else from either side do say about this question, that if the thing was went right into an investigation made of the various plants, of the wages that are paid in the union shops, and the wages that are paid in the nonunion shops, that the commission would be satisfied in itself that they would find some remedy for the evil.

Now, I can't tell you what to do to make business good. Some of the big business men, if you get them in here, could do that a good deal better than I could. Marshall Field's representative here, who grew from the ranks of labor and had amassed probably a million or more of dollars in that time, could tell you better how to make business good, possibly by loosening up some of that million, than I could.

Mr. THOMPSON. We are not interested in the business situation, Mr. Fry.

Mr. FRY. Oh, all right.

Mr. THOMPSON. Referring to the courts, is there anything definite in the action of the courts that has given you the feeling you have in regard to them, any specific cases or any line of decisions, or is it a general feeling that you have?

Mr. FRY. Why, it is a general proposition that every time a union man appears before the courts that not only prosecution but persecution—they try to make him suffer to the fullest extent. That is true in every single instance almost. There is no exception, to my mind, between the courts, the high or the low courts, or any other courts, they are all the same.

Mr. THOMPSON. Are you speaking now of all the courts, or what kind of courts, the courts that issue injunctions or the lower courts, the police courts as well?

Mr. FRY. Every one of them, no exceptions to any of them that I know of.

Mr. THOMPSON. Have you made a study of that, Mr. Fry?

Mr. FRY. Well, I believe that my organization, the organization that I belong to and represent in a way, has had more injunctions served against us than any other one in the city, so that my familiarity with it hadn't ought to be doubted.

Mr. THOMPSON. Take the police courts. What about them more specifically?

Mr. FRY. The police courts—I have heard a good deal said that we ought to have laws restricting injunctions, and so forth. Now, it doesn't appear to me they are going to do much good as long as the police force and the city authorities are at the beck and call of the employers, so that they may arrest people for disorderly conduct. Whether they convict you or not, the mere matter of men who are engaged and women who are engaged in strikes being arrested and thrown into jail is in itself enough to intimidate the men and women so that they will lose their interest in the strike itself. That is the case in all strikes. It don't cut any figure they don't get a conviction in all those cases.

Take the late strikes of the waitresses, and so forth. Although hundreds of these girls have been arrested no convictions have been obtained; still they are intimidating these poor girls at the same time. In our strikes in the past 10 or 11 years—we haven't had many of them in the last 5 or 6 years; we saw to it that we kept out of them when we realized that the cards were stacked against us, and we have had to accomplish what we desired in some other way than the matter of going on strike, because we knew the manufacturers have got the courts, and so forth, at their command.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Do you want to ask any questions, Mr. Delano?

Commissioner DELANO. No.

Chairman WALSH. Mr. O'Connell would like to ask you some questions.

Commissioner O'CONNELL. Mr. Fry, have you any knowledge as to the methods employed by the local Metal Trades Association of Chicago, as to their method of employing workmen?

Mr. FRY. Yes, sir.

Commissioner O'CONNELL. What are the plans that they follow—the methods?

Mr. FRY. They have an employment bureau established over here on Dearborn Street. Men apply there for work and they are asked—I might say, Mr. Chairman, that before applying there, if perchance a man should go to a metal trades shop, that he is handed a card with the address of the employment bureau on it and told that he must apply there; that they don't hire any men at the shop door, they hire them through the employment bureau. If he makes application there, he waits in a line and takes his turn, and finally a clerk asks him what his business is, what his vocation is, his trade, where he has worked before, and so forth. And he telephones into the next room and the man in the next room looks up a file. And it is common knowledge, as far as the machinists are concerned—at least in this town—that there is a record, a file of every man in this town who has ever applied to the employers' association bureau for work. There is not only a record of the men who are employed there, who

have applied there, but a record of every man who works in these shops there, the union or the nonunion shop, because it is unfortunate that they have their policemen amongst us, and they know who are union men and they know more about us, some of them, than we know ourselves. And it is a fact that there is a record of every man kept. And I can furnish you, Mr. Chairman—and I believe that the association bureau itself could furnish you in a much better state and much more complete than I could—the complete list and a copy of all their application blanks and their records, how they are kept, and so forth.

Commissioner O'CONNELL. Well, we will get all those, Mr. Fry. What I want is to get at just the method as you see it.

Now, if this local association of the national metal trades maintains a card-index system of some character, with the names of the various trades of the men who have applied to them or live in the city of Chicago, have they a record of their causes of discharge from various shops where they may find employment earning their livelihood in the city, and is that list used in a manner to appear as preventing a man from securing employment in one shop after he leaves another or is discharged in another? Is it used in a way you believe to blacklist the employee?

Mr. FRY. I believe, Mr. O'Connell, that it is absolutely a boycott list in the most aggravated form. I believe that it is gotten up, not by the manufacturers, but by the shrewd attorneys that they hire for that purpose itself.

Commissioner O'CONNELL. That is all.

Chairman WALSH. Any other questions? Mr. Thompson wants to ask you some more questions.

Mr. THOMPSON. Do you have a system of fines in your own union?

Mr. FRY. Fines?

Mr. THOMPSON. Yes.

Mr. FRY. We have a constitutional provision applying to men who do something against the organization, yes; and try them and fine them in the meetings by the members themselves.

Mr. THOMPSON. If a local fines a man, is information of that fine sent to other locals?

Mr. FRY. Not necessarily so, but it is common property of the organization, inasmuch as our locals are open to all members of our organization, and when anything like that is going on, of course, there is lots of them interested in it.

Mr. THOMPSON. Suppose a man has been subjected to a fine by your organization and has failed to pay it, and he should apply for work in a closed or union shop, would he be permitted to work there?

Mr. FRY. Not if the amount of that fine equaled a sufficient number of months' dues so that he would be suspended. He would automatically suspend himself and would not have any card.

Mr. THOMPSON. That would result in throwing the man out of work and preventing him having work, would it not?

Mr. FRY. It might, Mr. Thompson, but there has never been a case of that occurred to my knowledge in this city. There is always, the man if he was fined he was sufficiently guilty to acknowledge the fine, and then if he could not pay it, arrangements were made so that he would have time to pay it or something.

Mr. THOMPSON. How would you compare the action of the employer in having some objection to a man and refusing to employ him, for instance, if he was a union man, and the objection which the union would have in refusing to permit a man to work in a shop because he had not paid a fine? What difference is there between that action, if any?

Mr. FRY. The union man would attempt to get the nonunion man to join the organization, or if he was under suspension from his organization, to get him to pay the fine, to conciliate with him and advise with him, and loan him money possibly and help him out, whereas the employers' organization would not consider for a moment the employment of the union man.

Mr. THOMPSON. Do you permit your men to work in open shops?

Mr. FRY. We do; yes; providing they get the money, wages, etc., that the organization sets out to get.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. That is all. Thank you, Mr. Fry.

Call your next.

TESTIMONY OF MR. T. E. DONNELLEY.

Mr. THOMPSON. Mr. Donnelley, will you give your full name?

Mr. DONNELLEY. Thomas E. Donnelley.

Mr. THOMPSON. And your address?

Mr. DONNELLEY. 731 Plymouth Place.

Mr. THOMPSON. And your business, Mr. Donnelley?

Mr. DONNELLEY. Printing and publishing, binding and engraving.

Mr. THOMPSON. Where are your plants located, and what is the name of the company?

Mr. DONNELLEY. The name of the company is R. R. Donnelley & Sons Co. The main plant is at 731 Plymouth Place. A branch plant is at Twenty-first and Calumet Avenue, and we are operating a small plant in Indianapolis.

Mr. THOMPSON. About how many employees, in round numbers, do you have?

Mr. DONNELLEY. Over 1,000.

Mr. THOMPSON. How long has your printing plant, or the plant of R. R. Donnelley & Sons, been running?

Mr. DONNELLEY. Well, my father came to Chicago just 50 years ago this year. It has not been a continuous concern since then, but the present corporation has been running just 25 years.

Mr. THOMPSON. In the course of your connection with the firm have you had occasion to study the labor problem?

Mr. DONNELLEY. Well, I don't know as you would call it study, I have had a lot of experience.

Mr. THOMPSON. Well, call it experience, then. In the printing trades there are organizations of workers into unions, are they not?

Mr. DONNELLEY. Yes; I think all the trades are organized. I didn't know that the binder girls were organized until I heard it here yesterday, but all the other trades are.

Mr. THOMPSON. How many trade organizations in the printing industry that you can state yourself, that you have knowledge of?

Mr. DONNELLEY. Well, there must be 10 or a dozen, I would have to stop and count them over.

Mr. THOMPSON. Are those trades organized now in your plant or not?

Mr. DONNELLEY. They are not.

Mr. THOMPSON. Have you at any time had your plant organized in any one of the trades?

Mr. DONNELLEY. We have had them organized in all of the trades. The main trade which we employ are the compositors—typographical union—the pressmen, the feeders, the binders, and engravers. Those are the main trades, but we employ a few engineers and machinists, and so on.

Mr. THOMPSON. Have you had a written trade agreement with these unions?

Mr. DONNELLEY. That is quite a history.

Mr. THOMPSON. Well, will you give us your history in your own way, then?

Mr. DONNELLEY. The first trade agreement between the printers of Chicago and any of their trade was an agreement entered into along about 1900 between the printers and the feeders. The feeders had an uncomfortable way of coming to us suddenly and demanding a raise in salary at any time whatsoever, with the insistence that it should be put into effect immediately. Of course, that meant that it had to come out of our pockets and could not be put onto the public, because our contracts had been made, and so we finally said, "If you will make a contract with us, an agreement that any change in the wage scale on either side will be subject to six months' notice, we will give you the raise."

That agreement was signed up, and after about a year and a half we all received notice on our desk one morning that the next Monday morning the scale would be raised \$3, which was about 20 per cent. We notified the union that that wasn't according to the agreement, and they said they didn't give a blank for the agreement, they were going to get that money, and we might just as well come across. That resulted in a strike. That was the first general strike we had in the printing business that I remember.

The strike resulted in 133 cases of assault, and finally in one murder. The strike was never settled, because we never again—that is, I say never again—a great many of the employers never again had anything to do with the union and are still running with nonunion feeders.

The next agreement we had with the labor union was their national one. In 1901 Mr. Higgins, of the pressmen's union, came before our national body and asked if we could not make a national agreement which would prevent strikes

and lockouts. A committee was appointed from our organization, called the United Typothetæ, to deal with a similar committee from the pressmen. It being agreed that all we could do would be to agree upon a form of agreement which would have to be referred back to our national convention. I was a member of that committee, and I drew the terms of the contract—that is, I suggested them. Our national body is a body in which we do not attempt to control our members. Everybody in our membership has the right to do what he likes, and anything that is done by the officers must appeal as reasonable to our members for them to accept it. We had at that time throughout the country some of our members who were not employing union pressmen, although the majority of them were. We plainly told the pressmen that we could not compel our members to employ union pressmen, or unionize, but we were willing to go so far that if we made an agreement between them for hours and wages, and they would agree that our living to the wage scale and our scale was a fulfillment of that agreement, utterly regardless of the employees' union affiliations, we would compel our members to accept it. In other words, it was the first start of collective bargaining. The basis of that bargain was that the employers would insist that their fellow members should pay the wages and live up to the shop practices, that a man could run a union, or nonunion or open shop, as he liked. In fact, any employer who employed a man under those conditions was living up to the terms of the agreement, and there could be no strike.

That agreement was put through our special convention of the typothetæ with considerable difficulty, but it was accepted and morally lived up to after that. It was also accepted by the pressmen.

We operated for five years under that agreement. During that agreement there was one strike in Boston. I think Mr. Findlay spoke of that strike in Boston where the men went out individually. There were 18 disagreements, not one of which had to go to an arbitration. Mr. Higgins testified that during the life of that agreement the union grew 60 per cent, and there was not one case where the union had complaint to make that the employer had dislodged a union man for a nonunion man or changed the conditions in any way whatsoever. That agreement was for five years, running to 1907.

During 1905 the typographical union struck for an eight-hour day, which was resisted by a great many of the members of the typothetæ. I would think that with the exception of Boston the pressmen stayed on their presses during that strike.

During the convention of 1906 the pressmen authorized a committee to renew the contract with the typothetæ provided the eight-hour day was agreed to within a reasonable time. The men on the committee appointed by the typothetæ were not given authority to finally close that agreement, because the unions were asking for something they did not have, and we had to submit it to our membership. When we came to that meeting we asked Mr. Higgins plainly if he had authority on his part to close an agreement if our convention would accept it, and he said he had; that the only question in their minds was the fact of what was a reasonable time. There was a great deal of discussion about that, some members of the committee thinking that instead of a 48-hour week we ought to come down gradually in two hours for three years, and then let the future take care of itself.

But finally it was agreed that a year and a half from the time of signing the agreement, that that was sufficient notice to the publishers to arrange their business so that they could go—48 hours a week, and the agreement was signed. We called a special convention and accepted it, and supposed that everything was closed.

Mr. Higgins had been the president of the pressmen's union for quite a number of years. I would say that I never remember of my father ever telling of a strike of the pressmen, and until that time, 1907, there had never been any strike or any fight of any kind with the pressmen in Chicago that I know of.

Mr. Berry, representing the radical element of the union, was anxious for the position of president, and he wanted to make an issue. He made an issue on the fact that this agreement was an open-shop agreement. He took it to the convention, and by a vote of 162 to 93 the convention decided that they would not accept the agreement, and that their officers exceeded their authority, and that unless the typothetæ excluded from the agreement the open-shop clause they would take a vote about going out for the eight-hour day immediately.

That committee met the convention of the typothetæ, and the typothetæ refused to consider the change in the agreement. This was supposed to have been agreed to after a referendum. The Chicago union, on the week before October

1, Saturday night, had a meeting. At 11 o'clock that night a printed notice was mailed to the typotheta that within one week the eight-hour day would be put into effect. I remember that I personally had some very important contracts on the press, and I kept away from the office as long as I could. They finally got me Friday. They came into my office and said, "Are you going to give us an eight-hour day Monday?" I said, "No; I am not going to give you the eight-hour day on Monday. I am going to give you the eight-hour day on the 1st of January, 1909, according to the agreement." "Then you won't give it to us?" "No."

They blew the whistle and 150 employees from my pressroom were on the street. That was the pressmen's strike.

They also struck in New York, but they did not strike anywhere else. They struck in Milwaukee, but all the other places in the country continued work under their agreement to January 1, 1909, and the eight-hour day as promised was established at that time.

We had other labor troubles, too. We had a strike of the typographical union. The typographical union in 1905 decided to inaugurate the eight-hour day. We had conferences about it. We agreed to disagree. They started the strike. The strike was resisted by about, I think, 600 members throughout the country; I am not sure. The result was that a great many of the officers went open shop, and have remained open shop since.

We had a strike in our bindery. Our bindery men were unionized. The girls in the bindery had never been unionized. They started a bindery union. And they put the proposition up to me, and at that time I had no reason to object, and I said, "Anybody can join the union that likes, without discrimination."

I had a delegation of 25 girls come to my office, who had started working in our place and had never worked anywhere else, and stated they did not want to join the union, and asked if they had to. I assured them that they did not, and because I would not make the 25 girls join the union the union struck.

We also had a strike with our engravers. Our engraving shop is union under a written contract. The contract expired, and they brought me a contract to sign and I said, "I can't sign that contract; I will not sign any closed-shop agreement. I assure you I will make no change in the union conditions there. Of course, I recognize your right if I do, for you to strike." And they struck and insisted on me signing the agreement. That is nonunion.

That is the story of my union experience. Now—

Mr. THOMPSON. Go ahead. Was there anything else that you wanted to say? If you do, state it just now.

Mr. DONNELLEY. All right, sir.

Mr. THOMPSON. You say you have a nonunion shop; you mean you have open shop, so-called?

Mr. DONNELLEY. Well, I want to be frank about that. If the unions would accept the open-shop principle—that is, if the unions would agree that their men would work along with nonunion men—our shop would be open. But, of course, the situation of the unions is that they will not accept an open shop. So the only reason why they should put men into our plant is so that they would get an organization in there and again embarrass me. Under those conditions union men do not work in our shop.

Mr. THOMPSON. So that you feel under the conditions of the organization in the printing trades that if members of the crafts were to get into your printing establishment it would be to create trouble?

Mr. DONNELLEY. I would like to say that the shop in Indianapolis does run union. It was under union conditions when we took it, and of course, there has been no desire on our part to change it.

Mr. THOMPSON. Have you made any study, Mr. Donnelley, so as to be able to speak authoritatively as to the relative cost of a nonunion shop, as you call yours, and a union?

Mr. DONNELLEY. Well, I think the most enlightening difference is the difference in our pressroom. This is rather a large subject, and it is pretty hard to handle it consecutively. Of course, union shops always mean a constant increase in cost of production. As machinery is invented, of course unions will accept it, but the unit of efficiency is always decreasing in a union shop, and the cost of labor is always going up.

Now, one of the great reasons that men do not want to run union shops who are carrying on large industries is the fact that the unions interfere with the efficient management of the shop. Now, I know that people have an idea that

employers are trying to beat down wages, that they are in a way hostile to laboring men. Now, that is not a fact. I know, of course, a great many employers, and I would testify, I would back up what Mr. Hibbard says; I think most of the employers are men who want to do good in this world. We employers are in our business, and we feel that the best place for us to work out the cause of righteousness is in our own works. Now, I know that the feeling of employers is that of kindness to workmen. It is not a question of their fighting unions because unions are helping the workmen, but we are fighting unions because we believe that they are not the best way to help the workingman and that they do harm to the workingman and to the industry and to the public. I would like to make that plain. It is not a feeling of trying to grind down men.

Now, industry has changed in 10 years tremendously. The whole question of accounting and cost keeping has absolutely been revolutionized in 10 years.

When I came into the business we did not have a time ticket in our factory. Nobody had any idea of how many hours of labor it took to do a job, and nobody had any idea how much the price of that hour was after you had gotten the overhead and so forth. Well, there has been a great education in that, and now we have got to this position in industry, that every piece of work which goes into a factory is predetermined before it is worked upon. The results and labor cost of that work is reported next morning, and every unit of labor in the factory, and you immediately know what men are efficient and what men are not efficient.

Now, we all know that the efficient men are the valuable men and the profitable men. Now, in nonunion conditions the theory is to reduce the cost of the unit by offering a prize of increased wages for effort. Now, that is the whole theory of modern industry, to decrease the cost of the unit by offering a bonus so that a man can earn more money by simply attending to his work.

Now, that is not a speeding proposition at all. Everybody always says, "Well, that is a speeding proposition." Of course, there has been a great many instances in our business of the unions slowing up. I know that in the old days of the Franklin Union—that is, the feeder's union—they had a tabulation of just how much they could bluff every foreman in Chicago. Here was the foreman at R. R. Donnelley & Sons. They could bluff him so that they could make him believe 7,000 was a day's work. Here was one over at Rand-McNally's, a little harder to bluff; they had to get off with 8,000 down there. They had that whole thing tabulated, and they carried it through.

Now, I don't think that that is the great factor under union conditions, because I believe that union men as individuals are honest men and they want to give a fair day's work for a fair day's pay. But the proposition is that their traditions, they don't realize what can be done. They go along in a jogging sort of way, they get so much wages anyway, and they don't give that attention to the work of the machine or themselves which really does not mean any more speeding to them, but it means a great deal of difference in results.

Mr. THOMPSON. And that is the reason the workingman is working also, to get a share of the production?

Mr. DONNELLEY. I can't imagine anybody working for anything else.

Mr. THOMPSON. Under the present state the employer with his capital and with his managerial brains must work with the workingman, and vice versa, that is true.

Mr. DONNELLEY. That is a most important thing in the industry, to have the cooperation between the employer and the workingmen. I think Mr. Sheid brought that out yesterday. No concern can be successful unless there is a spirit of cooperation from start to bottom—from top to bottom. That is exactly what the open shop does and it is exactly what the closed shop does not do.

Mr. THOMPSON. I will reach that by several questions. I will go on. Whatever the article may be, in the competitive world the producer or the manufacturer always receive a certain price for it?

Mr. DONNELLEY. Yes; competition always fixed that.

Mr. THOMPSON. And that price must be divided, of course, among the various elements that enter into the production?

Mr. DONNELLEY. Yes, sir.

Mr. THOMPSON. The manager for his brains and interest on his capital and workman for his toll and skill and intellect he put into the job?

Mr. DONNELLEY. I don't think the managing goes into the price. I think that is the profit. In other words, the same price and a poor managed business is a loss and a well managed business is a profit.

Mr. THOMPSON. I meant on the general proposition, because if it didn't need any management the workmen could do it themselves, you know. Now, taking that into consideration, that the different elements are there to get their share of the profit or their share of the return, under the open shop, of course, or rather under a nonunion shop—

Mr. DONNELLEY. He gets a larger share under the nonunion shop.

Mr. THOMPSON. But the determination of the share would be determined, or more or less subject to the decision of the employer, would it not be?

Mr. DONNELLEY. No, sir; I don't think it would be.

Mr. THOMPSON. I realize, of course, that outside labor market and the general price appertaining to the industry would be governing features that the employer would take into consideration, but he would be the deciding factor, would he not?

Mr. DONNELLEY. I would think that is a fallacious argument for this reason, that the larger the business gets the more complex, and the more complex the organization the more necessary it is for that man to have a capable productive workmen. Now, you can't get cooperation of work out of a sulky person. They will do their best. So, therefore, the employer must have satisfied workmen. Now the great problem is to get his workmen satisfactory wages and have the unit cost down. That is the whole problem. I would like to explain if I could, the reasons why high-priced workmen are so much more profitable than low-priced workmen. We have in our business, say, typesetting machines. These figures are not correct—say we pay a man 50 cents an hour for setting 2,500 ems, and pay a man, another man, a dollar an hour for setting 5,000 ems. That is apparently paying according to the ability of the man. But there is a dollar an hour expense on the machine whether the man is setting 2,500 or 5,000 ems, so that we are trying all the time to do this, to offer an inducement so that the man will produce a tremendous amount on the machine, and pay him a high wage accordingly. There are quite a number, of course, of printers in Chicago who are running union places. Last year the union pressmen made a demand for an increased wage. The increase was \$25 men increased to \$27.50, and the \$27.50 men increased to \$35, and the men instead of running two presses should run one—something like 125 per cent increase—some strong increase. The union employers said they could not afford to pay the wage because of nonunion competition. The union men said that that competition didn't amount to anything, because while the nonunion men were paid lower wages they were less efficient, so that at the request of the union employers an investigation was made of the union shops and nonunion shops. The situation was that they found the nonunion men were getting more money and the unit cost was less. That was the situation right here in Chicago.

Chairman WALSH. At this point we will adjourn until 2 o'clock this afternoon. Meet promptly at 2 o'clock.

(At 12.30 o'clock p. m. Saturday, July 25, 1914, an adjournment was taken until 2 o'clock p. m. of the same day.)

AFTER RECESS—3 P. M.

The commission met pursuant to adjournment.

Chairman WALSH. The commission will please come to order.

TESTIMONY OF MR. T. E. DONNELLEY—Continued.

Mr. THOMPSON. Mr. Donnelly, my idea is not to conduct a cross-examination of you in this matter. What I want to do is to bring out from you, in the experience you have had with the labor proposition, your views for the benefit of the commission, and for that purpose I am presenting different angles that have come up in the study that the commission has made, and in our previous hearings. I preface my remarks so you will understand the purpose is not to confuse or embarrass you, but to bring out rather for the benefit of this commission your opinions and views on different angles of the labor problem.

Now, referring for a moment to the fact that industry is run for profit and that the worker shares in the proceeds of what comes into the business, assuming it is properly run, what method in your mind would best conserve the interests of all parties, that is to say, the manufacturer and the men, in seeing that equitable distribution should be made to each of the income of the business? Perhaps I might help you a little by saying some people believe appar-

ently that the man who owns the business should be the sole judge; other people believe that the union, perhaps, should have the more deciding voice; and again others, apparently, believe that there should be an agreement or a meeting between them by which there will be a joint consideration of opinion in that regard.

Mr. DONNELLEY. Well, I think that competition entirely settles the matter. I can explain it this way: That if we charged 6 per cent on the investment in our business and we made a horizontal rise of 5 per cent in wages, some years we lose money. It seems to me that in an open competitive business like ours the margin between the entire cost and what you get for your product is very meager indeed, and I can not see any way except the wage system and competition to regulate it.

Mr. THOMPSON. What in that relationship do you mean, concretely, by the wage system?

Mr. DONNELLEY. I mean the wage system that you employ a man to do a particular work for so much money, offering him inducements for efficiency, etc. When the man has performed his duty his obligation is over and the question of whether the business is a success or not is the employer's obligation.

Mr. THOMPSON. Assuming that business is run not unfairly, but run actually on a selfish basis—that is to say, a business man is in business to make money—what check is there on his seeking to exploit labor, we might use that term, in increasing his profits?

Mr. DONNELLEY. I would have to ask you what you mean by the words "exploiting labor."

Mr. THOMPSON. The phrase is commonly used in the discussion of labor matters. Fair employers are at the mercy of unfair employers, and may it not be possible that while this plant, run by a man whose mind was taking into consideration the needs and wants of the other fellow that results in a fair division, still with the unfair employer, using that term in a general sense, the worker would suffer under the scheme.

Mr. DONNELLEY. Well, I have to answer that question from my own experience. I don't want to go afield on a theoretical discussion, but the protection to the worker is the fact it does not pay to exploit labor. In other words, in such industry as I am, the age and situation of the industry is the controlling factor, whether we make money or lose it. To every intelligent employer it is to his advantage to build up a permanent, efficient organization. You can't build up a permanent or efficient organization by paying less than fair wages, and you can't have it by conducting it for selfish interest, and that is the greatest protection to the men that they will be treated fairly.

Mr. THOMPSON. But, looking over the productive field, the cotton mills and other mills, leaving out for the moment your own organization, which may need high organization to produce efficiency, would you say your rule would hold good or does hold good in the industry to-day?

Mr. DONNELLEY. I don't know the cotton industry, but I think that rule always holds good in all organizations of a large number of employees. That is my experience. I do not want to be dogmatic on that.

Mr. THOMPSON. Do you think the workers themselves should have a voice in saying whether or not the efficiency of an establishment should be the sort of criterion by which their pay and work and hours should be regulated? Might not the opinions of employers in that respect differ?

Mr. DONNELLEY. I think the workers have a very large say in that. I don't know of any very large organization that is successfully run, that is run on the open-shop principle, where the employers haven't a free access of protest on anything that they feel is unfair. Now, in my own experience in labor, even when I had union conditions, there never came a time and there never would have been a strike in my place if it could have been settled between my men and myself. It was always somebody on the outside that had some ulterior motive that caused the trouble. I think as the years have gone on the question that what the foremen say is final is over. A foreman ordered some of our men to do something. The men refused to do it; they thought they were justified. The thing came to my attention the next day. I brought them into my office; I didn't want to discharge the men; they were good men, and I wanted to keep them in my organization. I carefully explained to them they were guilty of insubordination, which, of course, is a serious breach of discipline in any factory. I said, "Now, I have no objection to you opposing an order of the foreman, but what you must do is do a thing and object afterwards," and I put up to these men the discipline I had insisted upon to main-

tain discipline in our factory, and they all very willingly accepted it, and that has been the end of it. I think that is quite common in various organizations.

Mr. THOMPSON. Have you any organization in your establishment by which employers may send committees or representatives to take up that problem?

Mr. DONNELLEY. It is not necessary.

Mr. THOMPSON. You think it is not necessary?

Mr. DONNELLEY. It is not necessary. I would have no objection to one if they wanted to, but it is not necessary.

Mr. THOMPSON. Do you believe generally, looking at the industrial field as a whole throughout the country, that unions have been a benefit or a detriment to the workers?

Mr. DONNELLEY. Well, I will answer that in a roundabout way, rather. I don't think unions have been necessary. I don't mean to say that they have not helped in the general improvement, but I had to realize the fact that when I was a young man labor was \$1.50 a day; labor to-day is \$2.25 for 9 hours' work, when before it was 10 hours. I have to recognize the fact that when I came out of college I hired a very competent stenographer for \$9 a week, and she thought she was very well paid. That same girl to-day would get \$15 to \$18 a week. I have to realize the fact that 15 or 20 years ago we had to pay a cook \$5 a week, and now we can't get a competent cook for less than \$9 a week.

Now, I do think that all these things have effect, of course. There is some, and there is an effect. But I think the effect that unions have had upon wages has been greatly exaggerated. That is my feeling. And I do not believe that unions really raise wages. I would like to explain what I mean by that.

For instance, take the case of the building trades in Chicago. They are paid an extremely high rate of wages. That is not paid out of any fund owned by employers. That is passed on to the public. And, now, who are the public? The laboring man, the workingman is a very large proportion of it, and they pay it. In other words, now, if that occurs in all trades, in all industries, the same rise, the consequence is everything that we have been using would have gone up just so much more, and we that have been earning, say, \$8 a day instead of \$4, we would have been paying just so much more for our product. In other words, wages actually would not have been raised. The denomination would have been raised, but wages would not have been raised. To my mind labor has never done anything which has increased production. The only way you can raise wages is increase production; in other words, the more shoes there are the cheaper they will be; everybody will have to have them. Labor unions have never been guilty of increasing production.

Mr. THOMPSON. Have you made any study of the different costs of labor in the open shop and in the closed shop?

Mr. DONNELLEY. Well, I have a case in mind—we run a closed shop, as I told you, in Indianapolis. The labor scale in Indianapolis is lower than it is in Chicago, yet a certain article of production which can be compared is cheaper in our Chicago factory than it is in our Indianapolis factory.

Mr. THOMPSON. What is that due to, in your opinion, Mr. Donnelley?

Mr. DONNELLEY. Well, it is simply due to the fact that in Indianapolis they are working day wages and they are conscientious men. They have got a good crew of men down there. But they have never had a standard put up to follow, and they have never realized that they shall use their brains, and that is not their muscles we want so much; we do not care about that, about them using their muscles. They are not all the time figuring out with their heads how things can be more efficient, and you can produce them more efficiently where we could produce more quickly and eliminate all waste motion. That is the reason, I think.

We tried, at least my manager suggested to me, that we try the bonus system we had here. Of course, I told him it would not go.

Mr. THOMPSON. In your opinion, then, the open shop is more efficient?

Mr. DONNELLEY. It is more efficient. The theory of the open shop is this, it is more efficient for a good many reasons. Labor unions are always putting a hamper upon the shop organization. For instance, in the pressroom, when you are running a union press, the press is run by two pressmen and two feeders in the make-ready; in the make-ready they help, yet there were certain things which the pressmen would not allow the feeder to do, which he

is perfectly competent to do, because it was not his business. Of course, that was expense.

Now, on the newspaper; for instance, the newspaper will have two presses, one press they might run a couple of hours for the early edition, and another press that they run a few hours on the later edition. According to the union rules they must have a crew for a full day on the press they are going to run for three hours, and another crew for a full day on the press they are going to run for three or four more hours, instead of letting the same crew go from one press to another—absolutely a waste.

Now, in the composing room of the newspapers of Chicago and throughout the country they have the rule that anything that is set in another office and is brought to that office must be reset. I may explain. For instance, one of the State Street merchants has a full-page ad. that they want to appear in several newspapers of to-morrow morning. Of course, to write out the copy for a full-page ad. is a great, big job, and is a difficult thing. So they will send over to the Tribune, and the Tribune will set that up, and perhaps the advertising manager or the assistant may go to the Tribune office and help the layout, help the display. When they have that all set up they will take duplicate matrices of it and they will send one to the Herald and one to the American and one to the Examiner. That will be printed in to-morrow morning's paper. Some time during next week in the Herald office and in the Examiner office that entire ad. will have to be reset, proof read, and corrected, and then thrown away, an absolute waste energy. I heard from one of the publishers of this country that the labor absolutely wasted—it might just as well be burned up and thrown out in the street—was enormous. That is an example of the constant limitations which unions are putting around employers.

Now, it is not a question of wages and hours with the employers that we are objecting to in dealing with unions. It is the proposition, and when a union once gets a place they put the screws on and put the screws on and put the screws on. That is the proposition. It is not a question of paying money for what you might call conditions, which is ours, but it is the constant limitation which they are putting on us, which, of course, the public has to bear.

Mr. THOMPSON. What is the attitude of the union toward the bonus system, if you know?

Mr. DONNELLY. I have had one experience, and heard an employer who had another experience. Before Mr. Berry called out the men in my shop my cylinder-press room was not making money. It was on account of the fact that people were getting—there was not cooperation. I called in five or six of my printing pressmen and explained to them that I would give them the time that it took we had figured it would take us to do a job on the press. For instance, a job on the press has first to be made ready, made so it will print, and then run off. We figured that took 15 hours. We said to them every hour that they saved we will pay them half their wages extra. That appealed to my men, and they went at it. The first week 10 or 15 of my men earned very substantial bonuses. Within a few days the union walked in to see me and they said we could not do that. I said that we could, and they said we could not. I said it was not in the contract, and asked them to arbitrate. They refused, and I had to give in.

Another gentleman, who had a union pressroom, printed almost the same kind of forms day in and day out, year in and year out, had a chance to try it. They agreed with the men what was a fair day's work. Presses run so fast, and the difference between full 100 per cent production and 50 per cent production was the time that the men waste in getting up from their lifts and getting down and taking a drink of water and getting out not early in the morning and running until the last thing at night. So he said he would pay them a fair day's wage and then he would pay them so much a hundred in addition to that. These men earned substantial bonuses. Within three days the union came over and prohibited it.

That is the only experience I have had with the bonus system.

Mr. THOMPSON. How about the photo-engravers?

Mr. DONNELLY. The photo-engravers in New York at first prohibited a cost system. They prohibited that any man could enter on a slip of paper the amount of time it took him to do a piece of work. After a great deal of negotiation they finally agreed that the office could use slips in regard to the quantity of work done, but not in regard to the quantity of time idle. That was the photo-engravers situation. In other words, they would not stand for a record of their production.

Mr. THOMPSON. Did you run the apprentice school in your shop?

Mr. DONNELLEY. Yes.

Mr. THOMPSON. You may describe that, if you please.

Mr. DONNELLEY. Well, now, I think the greatest charge against the union is the fact that they limit apprentices. If there is any one thing which this country has stood for it is the fact that the young man has a chance. Unions have tried to close that chance. I understand—I am only now speaking from what I remember in reading—that the great majority of criminals are no immigrants, but are the sons of immigrants. Now, we have a condition here in Chicago of thousands and thousands of the second generation of immigrant growing up who are prohibited by the rules of the union from learning a trade. What is before them is this: They have got to stay in what we call common labor, in the ranks of common labor. That means low wages, little opportunity, and social dissatisfaction arises. When we established our open shop I made up my mind that I was going to try, as far as I was concerned to correct that evil. Of course we needed boys 16 years of age. The law prohibited a boy younger than 16, and, as we all know, from working more than eight hours a day, and from working on machinery. Now, the fact is there are very few factories in Chicago running eight hours a day, even union shops, because they run more than eight hours a day in order to get the Saturday afternoon half holidays. We could not get boys at 16 years of age that we need to learn the business, because they had been ruined in the years between 14 and 16 years of age. It is an established practice among the people of the lowest walks of life that when their children are boys of 14 they must go out and earn a living. I do not uphold that, but that is the unfortunate situation. So we made up our minds we would start in to save those boys. We established in our plant a school where a boy came to work for half a day in our factory, and then for three and a half hours he would go to our school. Another boy would go to school in the morning and work at the factory in the afternoon. There were not two boys in the factory at the time and they did not have any disarrangement of the boys lying around. In this school we not only teach them to set type and all the technique of the art of printing, but we teach them arithmetic and give them algebra and geometry and give them English and give them science, etc. Now, when they are 16 we put those boys in the factory full time, except for three hours a week. We have to-day in our factory 87 of those boys. We have been running it now for six years. If I was running union conditions I would be entitled to 28. We have now 87.

Now, I feel very strongly on this question of apprenticeship, and it seems to me it is the greatest charge against unionism.

Several years ago in New Jersey a law was introduced, which was not passed, prohibiting unions from limiting the number of apprentices. I think it should be passed. I think it should be passed here. I think the State should have the right to say—they have the right to say he must go to school until he is 14, and he can not work over eight hours a day until he is 16—and I think the State, the community, should have the right to say that a boy shall have the opportunity of learning a trade, and the union can not prohibit, provided, of course, the boy is really being instructed. I don't think they should be allowed to come in there and be exploited and thrown out in the street after their wages have come to a reasonable rate. But as long as the boys are receiving real instruction I think that they should be allowed to work, should be by law permitted to work and that the unions should not prohibit it.

I would also say that the same scheme which I have adopted in my factory has now been adopted by others, and they have established a school for the whole printing industry that will run the open shop.

Mr. THOMPSON. Taking the skilled trades, as you know from your experience, is there a lack of men in the skilled trades or is there a surplus to-day?

Mr. DONNELLEY. I think right at the present moment there is a surplus. Of course there is a tremendous industrial depression.

Mr. THOMPSON. Take the apprenticeship proposition—assuming there were no unions—what would be the basis of limitation of the amount of apprentices in any shop?

Mr. DONNELLEY. I do not think there should be any limitation, provided the boys are really being instructed. Of course, I can realize—

Mr. THOMPSON. In the industry itself, would the owner of the plant limit, or what would be the proper basis of his limitation if he did?

Mr. DONNELLEY. Well, now, of course I can appreciate that the unions would fear at first that there would be a great influx of boy laborers, which they might think is cutting their wages, but as soon as this proposition was all taken care of—all the boys were employed—of course that would not exist. I think the limitation of apprentices would be the number of apprentices that the man would think he would need at that time. I think if every man tried to take on an average the number of employees in his plant, that would be the natural limit. I am quite sure we are absorbing in our plant the number graduated each year, and there will be no men laid off on account of it.

Mr. THOMPSON. I think that is all.

Mr. DONNELLEY. I would like to say one word, if I may, before I quit.

We have had quite a good deal of talk here about the fact of the labor unions breaking their contract, and I would like to introduce in here the evidence in a pamphlet issued on the Chicago newspaper strike by the typographical union. This is a report of a meeting—a conference held by Gompers between Mr. Berry, when he had called that strike in the newspapers here against their contract, and Mr. Lynch. Berry had broken his contract and he was trying to persuade Lynch to get his unions to break their contract. He had persuaded the stereotypers' union to break theirs. This is what he says in a union publication:

"I am here to get the printers on the street if I can. I would break any contract under similar conditions, and I have tried, and am trying, to get the printers to break theirs."

(The paper so presented was marked "Exhibit No. 1, Witness T. E. Donnelly, July 25, 1914.

The pamphlet referred to, entitled "The Chicago Newspaper Strikes," excerpts from the annual reports of the International Typographical Union officers for the fiscal year ending May 31, 1912, was submitted in printed form.)

Mr. DONNELLEY. Mr. Berry, in saying that, has still been maintained one year, and I think two, as president of his union.

Chairman WALSH. Mr. Lennon would like to ask you a question or two.

Commissioner LENNON. Are you aware of the fact that the limitation of apprentices set by the typographical union is not nearly taken advantage of by the employers or others who employ union printers; in other words, they have less than one-fourth of the apprentices that they could have under the law—under the union law?

Mr. DONNELLEY. I have no record of that. We always had our full number when we were operating under union conditions.

Commissioner O'CONNELL. Did you ever hear of the origin of this reset of ads., that the pressure was first brought by employers who profited by the resetting?

Mr. DONNELLEY. I have read that in Mr. Lynch's testimony. I also remember Mr. Lynch said that order had been older than he was. I know that the American Publishers' Association did try to get that eliminated several times, and it being a matter of international law, which is like the law of the Medes and Persians, can not be changed under any consideration, and they have not been able to get any relief from it.

Commissioner LENNON. I understood you to say that competition settled the matter of wages and shop conditions.

Mr. DONNELLEY. I don't think I said that, at least I didn't intend to. I didn't intend to say that.

Commissioner LENNON. That was my understanding of your reply to one of the questions when Mr. Thompson was asking you as to how wages were to be adjusted. I understood you to say that competition settled the conditions.

Mr. DONNELLEY. I said competition settled the fact that there had to be a wage system. In other words, by competition there is not a sufficient margin above the cost of operation to go into any large profit-sharing basis in competitive industries. That is what I meant to say.

Commissioner LENNON. Is it the usual result of competition to lower or raise prices?

Mr. DONNELLEY. The result of competition is to lower prices by more efficient methods. The result of competition is to produce by more efficient methods at a lower cost.

Commissioner LENNON. Then, wouldn't it naturally follow, if competition worked that way as to the products, that it will lower wages?

Mr. DONNELLEY. No, sir.

Commissioner LENNON. If there is no restriction upon it?

Mr. DONNELLEY. No, sir.

Commissioner LENNON. It won't?

Mr. DONNELLEY. No, sir; it does not in a highly organized organization.

Commissioner LENNON. That is all.

Chairman WALSH. Anything further? Mr. Delano would like to ask some questions.

Commissioner DELANO. I want to ask you this: Give the commission the average length of service of your employees. Any figures on that. I suppose if they all went out in 1907 the organization has been built up since then.

Mr. DONNELLEY. The organization is recent; that is, it is within 8 or 10 years.

Commissioner DELANO. Can you give us any idea of the average permanency of the employees? We want to get the idea of whether you get a large number of fresh hands every year or have a permanent staff.

Mr. DONNELLEY. Our staff for the length of service is quite permanent, and of course, it is to our advantage to make it so. We offer every inducement to keep the men.

Commissioner DELANO. What are the average wages of your employees today as compared with what they were under union conditions in 1907—previous to that?

Mr. DONNELLEY. They are higher.

Commissioner DELANO. How much higher?

Mr. DONNELLEY. I haven't those figures, Mr. Delano, but I remember in our pressroom there were only about three people who were receiving over the scale, which is \$24. We now have—I am sorry to say I haven't those figures here, but our average in our pressroom of our pressmen is \$28.68 plus a bonus of anywhere from \$1 to \$15 a week; that is, if they are on bonus. We can't put everybody on bonus, because we haven't got far enough to have everything worked out on a scientific basis.

Commissioner DELANO. That is all, Mr. Chairman.

Chairman WALSH. Mr. Garretson would like to ask you a few questions.

Commissioner GARRETSON. Mr. Donnelley, that wage that you refer to, is it wage or is it earnings that are higher than the union scale?

Mr. DONNELLEY. Well, I thought all wages are earnings. If they are not you can't pay them.

Commissioner GARRETSON. Earnings are based on wage. A man works 11 hours a day, for instance, and that is his earnings for the day; and if the day is 8 hours it would be based on what is paid him for 8 hours, wouldn't it?

Mr. DONNELLEY. That is a little complicated.

Commissioner GARRETSON. A man may earn far more than another?

Mr. DONNELLEY. Yes.

Commissioner GARRETSON. If he gives far more time to labor.

Mr. DONNELLEY. And more efficient service.

Commissioner GARRETSON. How is that?

Mr. DONNELLEY. And more efficient service.

Commissioner GARRETSON. Efficient service on a daily wage is not an element of earnings on the daily wage system. It is on the piecework system.

Mr. DONNELLEY. We don't run piecework but very little in our business.

Commissioner GARRETSON. On daily wage the amount that is paid for the day is the wage for the day, and if he works overtime, then his earnings will be greater than his daily wage; or if he is paid a bonus, that is in addition to his wage, and the two together will make his earnings.

Mr. DONNELLEY. I see what you mean. In other words, what you might call his rate of wages, not his earnings; yes. I see what you mean.

Commissioner GARRETSON. They are two distinct things?

Mr. DONNELLEY. Yes, sir.

Commissioner GARRETSON. That is what I desired to know, whether the wage of these men is higher than the union men's wages.

Mr. DONNELLEY. Oh, the wages are higher.

Commissioner GARRETSON. The wages are higher?

Mr. DONNELLEY. The basic wages.

Commissioner GARRETSON. Your going rate is higher than the rates named in the contracts that the union men have in the town, is it? I notice that runs as high as \$28, and in some instances \$36?

Mr. DONNELLEY. What is that for?

Commissioner GARRETSON. For pressmen.

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3429

Mr. DONNELLEY. I don't know what that is, for I don't know the wage. I haven't seen a wage scale from them for years.

Commissioner GARRETSON. I don't pretend to be picking out the different classifications; I never got higher in your trade than being a devil. Some people say I never got past that.

Mr. DONNELLEY. As I understand, the basic wage on cylinder presses was \$24 a week and was raised to \$25. Our average before that raise—the average rate in earnings, was \$28.68.

Commissioner GARRETSON. Is that for foremen and all included?

Mr. DONNELLEY. I don't think so; our foremen are not—

Commissioner GARRETSON (interrupting). This is pressmen.

Mr. DONNELLEY (continuing). Our foremen are not on our factory pay roll. Although now—

Commissioner GARRETSON (interrupting). How many men have you in your working force? It has all been built up since 1907, you say?

Mr. DONNELLEY. Since when?

Commissioner GARRETSON. Since 1907, when your present system dates from?

Mr. DONNELLEY. No; I think that the typographical union strike was in 1905 and the feeders' strike was about 1903.

Commissioner GARRETSON. Well, how many men have you in your employ; what proportion of your working force has been with you, say, five year?

Mr. DONNELLEY. I don't know. If I had known that question—

Commissioner GARRETSON. How much?

Mr. DONNELLEY. Why, I would be very glad to have that hunted up.

Commissioner GARRETSON. Can you furnish this commission with that data?

Mr. DONNELLEY. Yes, sir.

(The information requested appears as "Donnelley Exhibit.")

Commissioner GARRETSON. Have you advertised continuously?

Mr. DONNELLEY. Yes.

Commissioner GARRETSON. For the last, say, seven years?

Mr. DONNELLEY. Yes. We will advertise forever—until our apprentices come up to be journeymen.

Commissioner GARRETSON. That is a continuous practice with you daily, year in and year out?

Mr. DONNELLEY. Under union conditions or nonunion conditions, it is very difficult to get good pressmen. They are the hardest people to get; that is, very good pressmen. Now, what we are trying to do is to get exceptionally good pressmen in every case. Now, we have got a lot of men who are just what you might call ordinary journeymen, worth about \$25. Now, we are trying to get \$27.50 men and \$30 men, and we are advertising for them all the time.

Commissioner GARRETSON. You want to build up a force that will conform to your efficiency ideas?

Mr. DONNELLEY. We want the ablest men.

Commissioner GARRETSON. That will speed up?

Mr. DONNELLEY. We want the ablest men can be got to operate the machines.

Commissioner GARRETSON. You will continuously advertise here and in the East?

Mr. DONNELLEY. I think so.

Commissioner GARRETSON. Are you hiring men every day?

Mr. DONNELLEY. Oh, no.

Commissioner GARRETSON. No expansion—no great expansion—of your force?

Mr. DONNELLEY. Well, of course there is not just at the present moment. Sometimes we have what we call a busy season and we have to operate a night force.

Commissioner GARRETSON. Oh, yes; I mean there is not a continuous addition to the staff?

Mr. DONNELLEY. Well, there has been every year; yes, sir; every year has shown—

Commissioner GARRETSON. Takes care of all the applications that are made?

Mr. DONNELLEY. I beg your pardon.

Commissioner GARRETSON. You are able to absorb all the applications that are made.

Mr. DONNELLEY. Oh, no, sir.

Commissioner GARRETSON. What is done with the surplus men?

Mr. DONNELLEY. What is that?

Commissioner GARRETSON. What is done with the surplus men?

Mr. DONNELLEY. We don't take them unless they are very good.

Commissioner GARRETSON. What is that?

Mr. DONNELLEY. We don't take them unless they are very good.

Commissioner GARRETSON. When you advertise for men, and men travel long distances to get positions that are nonexistent, what is your attitude toward them?

Mr. DONNELLEY. They don't do that.

Commissioner GARRETSON. What is that?

Mr. DONNELLEY. They don't do that.

Commissioner GARRETSON. What is the form of your advertising?

Mr. DONNELLEY. It is always an attempt to find out—correspondence, find out through references, how able they are; we refer to their employers and find out whether they are excellent men before we ask them to come on.

Commissioner GARRETSON. They don't present themselves, then, in answer to the advertisements?

Mr. DONNELLEY. No, sir; not unless it is a local advertisement.

Commissioner GARRETSON. Do you make any references of those men to other men who have under consideration strikes with the union?

Mr. DONNELLEY. Well, there is no strike going on at our place now.

Commissioner GARRETSON. Oh, no; not at your own place; when there is, I say, with others, do you loan men for strike-breaking purposes?

Mr. DONNELLEY. No, sir.

Commissioner GARRETSON. Nor refer none to other men, to other employers?

Mr. DONNELLEY. Well, we would refer people, if any man asked us if we knew of any good man that was not employed, and we didn't have him, we certainly would refer him.

Commissioner GARRETSON. Does that system of advertising enable you to build up a roster to draw on?

Mr. DONNELLEY. No, sir.

Commissioner GARRETSON. In the event—

Mr. DONNELLEY (interrupting). No, sir.

Commissioner GARRETSON (continuing). That trouble should occur?

Mr. DONNELLEY. No, sir.

Commissioner GARRETSON. I understood the statement that you made, as Mr. Lennon quoted it, in answer to Mr. Thompson's statement, that competition settled the questions that would be ordinarily settled by conference. You disclaimed that afterwards, though, I mean you disclaimed having that intention. But have you ever known competition to shorten the workday, in the history of industry?

Mr. DONNELLEY. I think there are cases where that has been done, but I can't quote them now; in other words, where people have found—I think it was in Poughkeepsie where people had found by the present-day methods of cost keeping and efficiency records, that greater results could be obtained by a shorter day than a longer day, and the day was gratuitously shortened.

Commissioner GARRETSON. Has it even been done except where data proved, where the union had forced that condition in, that it was good business to do it?

Mr. DONNELLEY. I don't know the condition.

Commissioner GARRETSON. I mean competition independent of every other influence; isn't its natural tendency exactly the opposite?

Mr. DONNELLEY. No.

Commissioner GARRETSON. Why not?

Mr. DONNELLEY. We have reduced the office hours in our factory gratuitously—I mean the office hours in our office.

Commissioner GARRETSON. Yes.

Mr. DONNELLEY. I know that several of the merchants in this town have reduced the hours of their porters, and so forth, gratuitously, because they thought it was a good thing.

Commissioner GARRETSON. Sure. Was any influence exerted by the fact that with the present humanitarian trend they did not care to take the criticism of doing otherwise? Was that a factor?

Mr. DONNELLEY. I don't like exactly that way of putting it. I think that employers, as well as employees, have a very acute sense of their responsibility to the community. I don't think that had been brought about 10 years ago; I know my grandfather had it; I know my father had it. I will admit that under present advances we probably can go further than we could then. But I am not sure that these people were influenced by any ulterior motives, except they thought it was a good thing for their men and a square thing. You

know employers do a great many things for their employees, just because they want to be men, and they want to have sympathy with them.

Commissioner GARRETSON. They do. But did you ever note any great number of them giving that tendency full rein until public activity or public criticism brought it to attention?

Mr. DONNELLEY. Well, now, giving it full rein—I suppose I have applications for altruistic and charity purposes that is ten times my income.

Commissioner GARRETSON. Yes.

Mr. DONNELLEY. There is not one of them that I don't think is worthy, and if I gave my altruistic spirit full rein I would be broke in a month, right off. Now, everybody has to regulate and adjust his altruistic purposes by reason. And I think when you say "full rein," that you are asking something which is impossible.

Commissioner GARRETSON. I will modify the "full rein," and I will say how many of them went to the limit that is now ordinarily required by humanitarian legislation, until the legislation took place?

Mr. DONNELLEY. I don't know.

Commissioner GARRETSON. What has been the attitude, not of some employers but of a very large number of them, toward humanitarian legislation in general? Are you familiar with that?

Mr. DONNELLEY. Quite. The employer looks upon humanitarian legislation in this way: If it is possible to pass a law which is a benefit to humanity, without inflicting other troubles, they are all for it. The United Typothetae of America was the first employers' organization in the country that went on record for an employers' liability law. I understand one of the first.

Commissioner GARRETSON. One minute right there, an employers' liability or workmen's compensation, because they are two entirely different things.

Mr. DONNELLEY. Well, I supposed they were the same.

Commissioner GARRETSON. No; they are entirely different.

Mr. DONNELLEY. Well, workmen's compensation—workmen's compensation. The factory act was not opposed, as I know of, by employers. It certainly was not by any of my associates. There are laws that have been opposed because we believe that they are not for the good of the community. Now, we are often accused of opposing things from a selfish interest when we really believe that the people are mistaken in their methods. Now, there is not much difference between the employer and employee in our desire, and what we are after. But we differ as to methods. And we don't believe, we don't believe that certain things can be accomplished in the way other people do, and we think that there will be a lot of—there will be more distress caused by the law than there will be benefit, and that is a very honest difference of opinion.

Commissioner GARRETSON. I don't want you to gather the idea that I include every employer.

Mr. DONNELLEY. No.

Commissioner GARRETSON. In a certain category. I want this understood, I have met many employers who were just as decent and just as human as their surroundings would let them be, and their associates. They would have gladly been better than they were. But is it not true that the man who desires to introduce the cost of those things into the conduct of his business, is absolutely at the mercy of the employer who will not do it competitively?

Mr. DONNELLEY. It would seem so; but I don't believe it is, because we—

Commissioner GARRETSON. Have you made a study of it practically to know whether it is or not?

Mr. DONNELLEY. Well, we see some very competitive businesses doing some very humanitarian things that cost them a lot of money. They do it and they still compete. I don't think they do it because they think they are going to make any money out of it, but they are able to do it nevertheless.

Commissioner GARRETSON. Aren't a very great many of those instances most apparent from those who have made enough money that they can stand the drain, and they desire the reputation that comes from it?

Mr. DONNELLEY. No; there are lots of things done where people don't talk about them.

Commissioner GARRETSON. It is another form of advertising.

Mr. DONNELLEY. Oh, not necessarily; no, sir. There are a few very noted exceptions.

Commissioner GARRETSON. For instance, a case occurred here in New York, where it was testified that a leading dry-goods store published a very ornate

reading article that they had given a great picnic to their entire employees; and it was testified there that those girls whose pictures were shown, were ordered to appear in the city park to be photographed with their "glad rags" on, and then report at the store, and there you have a sample of that method of doing business.

Mr. DONNELLEY. I don't think that is going to settle any industrial disputes. Commissioner GARRETSON. How is that?

Mr. DONNELLEY. I don't think that line will settle any industrial disputes.

Commissioner GARRETSON. That was brought out in consideration of certain claims made by that store as to how they treated their employees. It is a fair sample, however, of advertising philanthropy, and doesn't it constitute a factor in many of those cases?

Mr. DONNELLEY. I am unable to say; I don't know the gentleman.

Commissioner GARRETSON. You have never seen an instance you thought was that way?

Mr. DONNELLEY. I might have had opinions, but I don't want to express them.

Commissioner GARRETSON. What is the comparative labor cost now as compared with labor cost when you worked under your union agreement for the same volume of work?

Mr. DONNELLEY. I haven't the figures here.

Commissioner GARRETSON. You have never made—

Mr. DONNELLEY. I say, I haven't the figures.

Commissioner GARRETSON. Can you furnish them?

Mr. DONNELLEY. It would be very difficult; we would have to go back over our books for quite a number of years.

Commissioner GARRETSON. I thought possibly it might be made up for a short period, because it would go far to demonstrate the comparison, to take for a reasonable period, as to what the actual labor cost was between the two. I understood your position was that wages would have been as good without unionism as it is to-day.

Mr. DONNELLEY. I said actual wages.

Commissioner GARRETSON. Yes.

Mr. DONNELLEY. Actual wages. The average of the actual wages of everybody would be just as good without as they are with.

Commissioner GARRETSON. As with the union?

Mr. DONNELLEY. I don't say the wages of the union people would be as high, but the higher wages of the union people are paid by the people who are not organized. If everybody would organize they would not be so high.

Commissioner GARRETSON. Who fixes the standard of wages for the laboring men of the country, the small group referred to as organized or the mass unorganized group?

Mr. DONNELLEY. I suppose that is really settled by supply and demand for the productiveness of the labor.

Commissioner GARRETSON. That is a supposition, isn't it?

Mr. DONNELLEY. No, sir; not a supposition.

Commissioner GARRETSON. Well, you said you supposed so.

Mr. DONNELLEY. Well, we will put it as a supposition. But you misunderstand me. That is, the general wages of all the people in the country is settled by the question of supply and demand and productiveness.

Commissioner GARRETSON. Following out your idea in regard to increasing production being the true avocation and that it has a cheapening effect—follow that to its logical conclusion, and if a man produces enough he could bankrupt himself, couldn't he?

Mr. DONNELLEY. I can't follow you.

Commissioner GARRETSON. The statement, as I understood you, was that the only way and the proper way to increase benefits to the man was to increase the production.

Mr. DONNELLEY. Yes, sir.

Commissioner GARRETSON. And that the greater the production the cheaper the price of the article?

Mr. DONNELLEY. Yes.

Commissioner GARRETSON. Now, if a man produces enough he could make the article valueless.

Mr. DONNELLEY. No, sir; that is a ridiculous argument. That is a ridiculous argument to my statement.

Mr. GARRETSON. If you start out by adding to the productiveness, as you make the production greater where does it lead you?

Mr. DONNELLEY. If we produce three times as much wheat in the country as now, the price would not be one-third what it is now. You know that just as well as I do.

Commissioner GARRETSON. I haven't stated proportions at all; you are putting that in. You stated if you increase production you lower the price.

Mr. DONNELLEY. Yes, sir.

Commissioner GARRETSON. And if you increase it enough you lower it clear down.

Mr. DONNELLEY. I never said that. There is a law of the diminishing wage in everything.

Commissioner GARRETSON. If you start it, it will reach the ground after a while.

Mr. DONNELLEY. No; it is not a straight line; it is a parabola.

Commissioner GARRETSON. Are you sure the absurdity is not following part way and quitting when you get halfway?

Mr. DONNELLEY. No, sir.

Commissioner GARRETSON. Well, study over it.

Mr. DONNELLEY. I have.

Commissioner GARRETSON. That is all.

Chairman WALSH. Any other questions?

Call your next.

Mr. THOMPSON. Mr. Wright.

TESTIMONY OF MR. EDWIN R. WRIGHT.

Mr. THOMPSON. Give us your name.

Mr. WRIGHT. Edwin R. Wright.

Mr. THOMPSON. Your business address?

Mr. WRIGHT. Postal Telegraph Building.

Mr. THOMPSON. And your occupation?

Mr. WRIGHT. Printer.

Mr. THOMPSON. Do you hold any official position in connection with the typographical union?

Mr. WRIGHT. President of Local Union No. 16.

Mr. THOMPSON. How long have you been president of that organization?

Mr. WRIGHT. The last time just a month.

Mr. THOMPSON. Have you held it before?

Mr. WRIGHT. Four years.

Mr. THOMPSON. Have you held any official place with the union any other years other than president?

Mr. WRIGHT. I was officer of the union for probably 10 years.

Mr. THOMPSON. You have been president of the Illinois Federation of Labor?

Mr. WRIGHT. Seven years.

Mr. THOMPSON. In your position as leader of organized labor you have had more or less occasion to study the industrial problem and industrial conditions in the country, have you not?

Mr. WRIGHT. I have tried to.

Mr. THOMPSON. Have you any opinion regarding industrial unrest, if in your opinion such exists?

Mr. WRIGHT. I have.

Mr. THOMPSON. You might tell us in your own language as briefly as you can the cause and its cure.

Mr. WRIGHT. The great cause for industrial unrest comes from lack of employment. The cause of lack of employment can be traced to several different causes. One cause I believe at the present time, especially for industrial unrest, is lack of executive ability, which is always the primary cause for industrial unrest. This time more so than ever.

Mr. THOMPSON. What executive ability do you speak of, the workers or whom?

Mr. WRIGHT. I am referring to a condition that confronts us especially at this time in my opinion, and that is the custom of the deferring of the railroad-rate cases of the Interstate Commerce Commission, which has disorganized my trade especially. We have between 20 and 25 per cent of our men out of work at the present time because industry does not know where it stands, and will not know until the rate case is settled one way or the other. Of course, our people are not interested whether the rate goes up or down. That makes no difference to us, but it is important to us that some decision be made so that

employers can get out their printing, put our men to work, and fix prices on their goods and do other things that will allow industry to go ahead.

Mr. THOMPSON. If the rate case was settled, it has been settled now, has it not?

Mr. WRIGHT. No, sir; not unless it was this afternoon. Oh, it has been settled, I believe; yes, sir; but rates have not been announced.

Mr. THOMPSON. But upon the announcement of the rates by the Interstate Commerce Commission, would, in your opinion, the industrial unrest disappear?

Mr. WRIGHT. Our men will go to work, probably 700 or 800 or possibly 1,000 printers can go to work, and there will be less industrial unrest when they go to work and have a pay envelope to take home Saturday night to their families. I am referring to Chicago alone.

Mr. THOMPSON. I would like to have you give us your views of industrial unrest further than you have, as to what other contributing causes there might be.

Mr. WRIGHT. Well, another contributing cause—the primary cause, in my opinion—is lack of education.

Mr. THOMPSON. How does that operate?

Mr. WRIGHT. A certain per cent of our men have not had schooling sufficient to enable them to make the progress in their trade that they believe they have the right to expect. They are handicapped by lack of education—by lack of practical teaching—and they are not able to take the position which they desire and which they think they have the right to expect. That is one of the causes.

Mr. THOMPSON. Is that all you have to say about the cause of industrial unrest?

Mr. WRIGHT. Oh, no; that is one of the primary causes.

Mr. THOMPSON. What are the other secondary causes—are there other primary causes? Just go ahead and go through the category you have in your mind.

Mr. WRIGHT. Another one of the principal causes we have for industrial unrest is competition between the union and nonunion men, and between the journeymen and semiskilled labor, which finds its way into the shops and factories, especially the nonunion shops, with prison labor in industries and other matters of that kind—unfair competition as we believe it to be.

Mr. THOMPSON. Any other causes?

Mr. WRIGHT. I think that will cover the two principal points—we have other causes.

Mr. THOMPSON. What remedy would you suggest to this commission which this commission might carry out or help carry out or recommend to Congress?

Mr. WRIGHT. Sir.

Mr. THOMPSON. What remedy would you suggest for that evil?

Mr. WRIGHT. First, I would send every child to school, give the child a common-school education. I would put a sufficient number of teachers in the schools to actually teach the children. I would put the textbooks the child uses on a basis where the parents could afford to pay. I would prohibit children from going to work in an industry until the child was mentally capable of taking up the work. After the youngster had gone into the trades I would see that the education continued and only a portion of the time be put in at the shop or the factory, and that the common-school education continue under competent instructors. I would carry out the same course with the workmen themselves after they have graduated from being apprentices and have become journeymen.

Mr. THOMPSON. Now, Mr. Wright, have you heard the testimony here of Mr. Donnelley?

Mr. WRIGHT. I did.

Mr. THOMPSON. What have you got to add to what he said?

Mr. WRIGHT. Mr. Donnelley runs a nonunion establishment. He runs—on the question of apprentices he works more than the scale of wages prescribed in union shops. He pays smaller wages. I do not know as there is anything more I could say than that he does not comply to the going rate of wages or the going scale of wages or hours, either one.

Mr. THOMPSON. That is all you care to say with reference to the establishment in respect to what he said?

Mr. WRIGHT. Mr. Donnelley ran a union shop for five years. The shop has been conducted as a union shop upon three different occasions. We have had three strikes in the Donnelley establishment, and twice the shop became union, and we expect it will be presently union again.

Mr. THOMPSON. Anything further you have got to add to the industrial problem further than you have stated now? I see you have some papers before you.

Mr. WRIGHT. Sir?

Mr. THOMPSON. Is there anything further you care to say now on the industrial problem?

Mr. WRIGHT. It is a pretty big proposition—the industrial problem—to say anything in a sentence. But what I have suggested here once or twice, we have tried to place it in effect in my organization. We have tried to make the organization that I represent and which I represented before—we have tried to build up the features, the beneficial features, of our organization so that it would be a desirable place for a man to seek association. For instance, last year we paid \$2,106.92 in funeral benefits to our members in the local organization, and this does not apply to the beneficial organization but this is a relief outside of our benefit organization. We paid \$24,222.71 on account of sick benefits. There are several other items that go along with these two.

We conduct an old-age pension out of our earnings and with no contribution from our employers. This is paid partly by the international union and partly by the local union. We pay \$8 per week for a member after he gets past the day's work or for other causes he is unable to find sustaining employment.

We also have a tubercular home at Colorado Springs, where I believe we cure more cases of tubercular trouble than any other institution in the country similarly conducted—not similarly conducted, but having the same number of patients.

We have other benefit features. We try to make the organization desirable. You see, referring to Mr. Donnelley's shop for a moment, I do not believe there is one employee in the Donnelley establishment or in any other nonunion printing office in the city of Chicago that would not be willing to join the typographical union, and be glad to do so, if he was not confronted with discharge.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Was there some other information, Mr. Wright, that you would like to volunteer before the commissioner starts to ask questions? I thought maybe you had something in your hand you had not put in yet.

Mr. WRIGHT. I have two or three exhibits here.

Chairman WALSH. Very good.

Mr. WRIGHT. The constitution and by-laws of the International Typographical Union, the financial exhibit of Chicago Typographical Union No. 16, and matters of that kind I might pass over to the board to look over at their leisure.

Chairman WALSH. Will you do that? First, give what they are to the stenographers, so they will be a reference to them.

Mr. WRIGHT. Well, the one I mentioned is the financial exhibit for the year ending June 30, 1914, the book of laws of the International Typographical Union, old-age pension law of the International Typographical Union, directory of union printing offices of Chicago, book of rules of the Union Printers' Home. We have a lot of that stuff. If you want—if you want any more, I will be glad to send you more.

(Mr. Wright submitted, in printed form, pamphlets of the following titles: "Financial Exhibit of Chicago Typographical Union No. 16 for the Year Ending June 30, 1914"; "Book of Laws of International Typographical Union, January 1, 1914"; "Old Age Pension Laws of the International Typographical Union"; "Directory of Union Printing Offices of Chicago, May, 1914"; "Book of Rules, Union Printers' Home, Colorado Springs, Colo., 1913"; and "Constitution and By-Laws of Chicago Typographical Union No. 16, 1914.")

Commissioner LENNON. Mr. Wright, have you knowledge as to whether the employing printers of the country have apprentices up to the limitation of the typographical union permit?

Mr. WRIGHT. They have not.

Commissioner LENNON. Is the percentage that I stated approximately correct, that it is only about a little over one-fourth of the limitation, taking the country at large?

Mr. WRIGHT. I think you are approximately correct. In the printing business most of our employers, I am glad to say, take a pride in their work. They wish to turn out the best possible class of printing and they must have good men to do that—journeymen and not apprentices. Any time you put an apprentice on a job you are going to have inferior work, except in certain classes

of work where the apprentice's judgment will go on that particular job—particular class, I should say.

Commissioner LENNON. Suppose we will say that the apprentices employed were up to the limitation?

Mr. WRIGHT. Yes, sir.

Commissioner LENNON. Do you believe the typographical union would give favorable consideration if the trade demanded an increase?

Mr. WRIGHT. We have reduced the number of apprentices. Formerly it was 1 apprentice to every 10 journeymen, or major fraction. Upon the complaint of the employer that he was not getting enough apprentices, we reduced it from that, 1 to 10, to 1 to 7, and if we can not supply the number of journeymen we will reduce it again. We have no desire to inflict any hardship on the employer. All we ask him to do is to pay us our wages. We wish the employer to make money; the more money the employer makes the higher we are going to increase our wage scale and shorten our hours and improve our conditions. The employer can not do it unless he makes money, and we are willing that he should.

Commissioner LENNON. You must know something about this resetting of ads. Is that done solely by the will of the typographical union or do the employers cooperate in that proposition?

Mr. WRIGHT. The employer cooperates in it. Years ago the employer conducted his printing department—that is, of the newspaper—conducted the establishment independent of any other establishment. He set all of his advertising matter in his own shop. Presently the advertising man from some of the big stores, as they grew up, thought to take a short cut and would send their copy to one establishment and proofs would be taken and sent to the other composing rooms and the ad set and placed in the paper. The employers ask if it would not be possible to take the matrices from one establishment to the other and cast the ad and then afterward set the ad on their own time. That was finally conceded to. The employer, however, gets paid for resetting the original ad. It comes to us; is put on the time copy; the men handle it when they have nothing else to do; on certain days of the week our men are very busy for two or, possibly, three days a week; and when in the old days, when the men set the ads originally, they had steadier employment, and this acts as a sort of brake on this continual change in the shop. It is a concession granted the employer, not a demand from the organization. There is a vast difference between the two.

Commissioner LENNON. Will you tell us about the typographical vocational school?

Mr. WRIGHT. Yes, sir. It originated in Chicago some years ago. We had been talking over it for a long while. We had a contract with the United Typothetae, which was referred to a few moments ago, and we endeavored to take up with the typothetae a course of printing so that the apprentices in the shop might become better journeymen than they would otherwise. The typothetae turned us down. Then we went ahead and took it up ourselves and perfected the class ourselves. We did not admit an apprentice into membership until he takes up the course in printing entirely aside from his personal instruction he receives in the shop. It is a course that extends all over the United States and Canada, as far as the International Typographical goes, and it came from Chicago.

Commissioner LENNON. Can you tell us approximately how many printers of any age have taken advantage of these classes?

Mr. WRIGHT. I have forgotten the exact number. I am acquainted with the result which I believe is more important. The average increased wage of the boy who has graduated into a journeyman, who has taken the apprentice course, amounts to something like two or a trifle over two dollars a week in advance of what he would have received had he not taken the course.

Commissioner LENNON. That is all I care to ask.

Chairman WALSH. Did you want to ask any questions, Mr. O'Connell?

Commissioner O'CONNELL. Yes. How many printing shops are there in Chicago, Mr. Wright?

Mr. WRIGHT. How many printing offices?

Commissioner O'CONNELL. Yes.

Mr. WRIGHT. We have our own men working in probably 300 shops.

Commissioner O'CONNELL. I want to get the total number of shops in the city, union and nonunion.

Mr. WRIGHT. I do not know. There are so many private establishments, little shops scattered around in basements one place and another, that it is almost impossible to tell. We don't know. We can not gather it from the directory because many places are listed as printers but are publishers and have no printing department.

Commissioner O'CONNELL. What percentage of the shops where typesetters are employed?

Mr. WRIGHT. We can not get that either, but that is all the shops that are recognized as being printing offices. We probably have 80 per cent—90 per cent. We estimate that we do 85 per cent of the printing in Chicago; that is, the printers do 85 per cent of the production.

Commissioner O'CONNELL. You have contracts with all of the newspaper publications in the city?

Mr. WRIGHT. We have both a local contract and a national—or an international contract.

Commissioner O'CONNELL. How many newspapers that are published in the United States outside of the association of publishers are nonunion? Have you any idea of the number of firms or publications in the newspaper publishers' association?

Mr. WRIGHT. I haven't the data, but practically every newspaper in the United States belongs to the American Newspaper Publishers' Association, which has a contract with the International Typographical Union, an arbitration contract.

Commissioner O'CONNELL. The typographical union has a contract practically with every newspaper published in the United States?

Mr. WRIGHT. Practically, not all. There are a few outside.

Commissioner O'CONNELL. What percentage are outside?

Mr. WRIGHT. Two or three per cent I imagine—just a guess.

Commissioner O'CONNELL. That is all.

Chairman WALSH. That is all. Thank you, Mr. Wright.

Mr. THOMPSON. Mr. Caldwell.

TESTIMONY OF MR. FRANK C. CALDWELL

Mr. THOMPSON. Mr. Caldwell, will you give us your name, please, and your business address, and your business?

Mr. CALDWELL. Frank C. Caldwell. I am president of H. W. Caldwell & Son Co., Seventeenth Street and Western Avenue in this city. We are engineers, founders, and machinists.

Mr. THOMPSON. How long has your firm been in existence; how long have you been connected with it?

Mr. CALDWELL. Since 1875.

Mr. THOMPSON. 1875?

Mr. CALDWELL. Since 1875.

Mr. THOMPSON. Have you any opinions regarding industrial unrest, if such exists, its causes, and what remedies might be applied to it. You may state it in your own way, Mr. Caldwell.

Mr. CALDWELL. I think one of the difficulties in trying to arrive at the reasons for industrial unrest is to select that as the only form of unrest. I think anyone that has observed conditions as they have arisen in the past three or four years has realized that there has been a general unrest, extending not merely to what might be called industry, but it has also been evidenced in social matters, in political matters, and you might say also in moral matters. And that unrest is perhaps, one might say, a species of circular insanity; that is to say, there are probably periods recurring, more or less frequent intervals, when there is a disturbance in the social and body politic, and I apprehend that conditions as we now see them are possibly a recurrence of that situation.

Specifically, as to the industrial unrest, it would be quite unfair for anyone to select any single thing and claim that that was the one or even the principal reason for what we recognize as industrial unrest at the present time. An employer so minded might say that it was due to the union conditions. He might charge that the unrest had been instigated by the agitation on the part of those that are union leaders. Others might say that it is a new awakening of a new democracy. Others might charge that it was due to political reasons, and that the unrest had been fomented by the actions of those politicians who thought to ride into power upon the wave of popular approval.

But to my thought there is no one of these things that ought to be charged with this condition. I think that all of them have something to do with it. And the unrest is here. There are new conditions confronting us which have got to be met in some way or other.

I think, perhaps, Mr. Thompson, I can save the time of the commission and your time if I try to say some things in reply to the questions that you have included with your request to appear here. And with your permission, and for the purpose only of saving time, I will follow that method if it is agreeable to you.

Mr. THOMPSON. Go right ahead, Mr. Caldwell.

Mr. CALDWELL. There has been much said here about the attitude of the employer toward the labor unions, and I might say by way of preface that my concern runs what is euphemistically called an open shop, the result of a misunderstanding—a strike that took place in 1903—something that we would much prefer to forget. But the attitude of the employer toward the labor union, I think, is not always clearly understood by himself. He will say, perhaps, that he is opposed to the labor union. Naturally an open-shop man might be supposed to be opposed to the labor union. But I think the real, basic attitude of the non-union employer, or anyone that may take an extreme view on that side of the case, is rather that he is not opposed to the labor union as a labor union, as an organization for the purpose, as they claim, of benefiting the condition of those that are members of that organization. But he is opposed—and there are very many that are immovably opposed—to those things which they claim, and which they feel, are self-evidently errors and evils that pertain so generally to the American labor union as we know it.

I think that employers generally are not friendly to the closed shop. I think they are opposed to it for very much the same reason that the general mind of the public is bitterly opposed to anything that savors of a trust or a monopoly. I think that the employer recognizes that it is an abnormal economic condition that there should be anything in the nature of a limitation of output, anything in the way of an unreasonable limitation of apprentices, anything by way of a fixed minimum wage which has a tendency to level the wage of the more efficient to those who are less capable. He is opposed to anything in the nature of coercion by means of violence or boycott or any other such method. And he is opposed to anything that will not give the large number of those outside the organization an equal opportunity to earn their living in the trade that they may be acquainted with.

Now, I say that the opposition and the antagonism on the part of the employer is, I think, directed not at the union as such but at the evils and errors that are in such organizations as we know them.

And I want to say this also on behalf of the employer: I think that his attitude in seeking to maintain what he considers right economic conditions is by no means a selfish opposition. I wish to make the point that if the employer were simply seeking to follow his own selfish ends, to endeavor to earn the greatest amount of money with the least possible friction and the least possible annoyance on his part, he might very well acquiesce in everything that a union should demand of him and pass on the cost to the consuming public.

The commission, I apprehend, are probably pretty well acquainted by this time with the anti and pro attitude of employers toward the labor-union proposition. But I think they will perhaps be willing to receive something in the nature of constructive suggestion.

Anybody can tear down, but it takes a pretty wise man to build up. And we can point out the evils that exist, as undoubtedly evils do exist, in this industrial situation. But it is a problem worthy of the wisest of men to suggest something that perhaps may alleviate if not entirely cure this rather woeful condition.

It would be rather a bold business man who under conditions as they now exist would suggest anything by way of additional legislation. The usual complaint is that we are overlegislated as it is now. A certain well-known financier made frequent use of the term "undigested securities." I should say that the body politic now is affected by what might be called undigested legislation as much as any other ill that I can think of.

And while it may seem rather superfluous to suggest anything by way of additional legislation, it does seem to me that it is quite as competent to suggest that there should be a declaration that the closed shop is just as much of a monopoly as any trust that is open to criticism and therefore should be declared to be illegal; furthermore, that anything that tends to limit the production, the fair production, of an employee is an economic wrong that should be prohibited, and anything that tends in that direction should be prevented if possible.

That there should be some means whereby we could arrive fairly and equitably as to what is the right position in this matter of limitation of apprentices. No one can be fair and say there is not something in the claim made by union labor that unlimited allowance of apprentices would tend to debase and overrun the trade. On the other hand, no patriotic American can say but what there should be sufficient freedom in the learning of the different trades in this country so that opportunity should be open, provided the other side of the question is not harmed. There should be some means of arriving at what is exactly the right number of hours it is fair and that ought to be worked. Now, I propose for the consideration of the commission that it may be possible—I hardly think it will be probable—it may be possible that there may be some tribunal which will be instituted not so much for the purpose of conciliation or arbitration but, rather, for the purpose of having a general oversight and general supervision of these issues that are coming up all the time, for the purpose of safeguarding and protecting not the employee and not the employer but the general public at large.

I think in our shortsightedness—when I say “our” I am meaning labor unions and the employer—we are very apt to see no further than our own particular interests in the consideration of these matters, but it does seem to me that there is that third party in interest who seems to have been so utterly helpless and yet so vitally affected by everything done along these lines that the Government might very well do something that would protect that interest of the general public. I understand perfectly well whenever there is a great strike that puts out some public utility or shuts down a coal mine, or in some way a direct and definite conviction to the public, the cry goes up it is this third party, the public, that must be considered; but may I not make the point as strongly as I possibly can, it is not only in such cases that our picked—these cases as incidents, but it is in every case where there is to be an adjustment of wages, an adjustment—a reduction of hours or anything that affects the cost of production of that work and the production of wealth, that the phrase is that the consumer has to have in order to live; whenever that case is up for consideration there must be ultimately some consideration of the general public interest in that matter.

Let me say, for example, I believe every workingman in the city of Chicago, excluding perhaps those that are directly benefited, is paying a premium for living in the city of Chicago, because his rent is a very considerable per cent higher than it should be, due to the excessive cost of building operations in the city of Chicago. And while that may be an obvious case, every case has precisely the same result; the loss is as great as the one is in this instance. It would be perfectly possible to demonstrate to the general public that if there could be formed a farm-labor union who would be able by their compact organization and their complete closed-shop monopoly of that particular industry to be able to reduce the hours of labor on the farm to eight hours per day and apply that Heaven-given salary of \$5 per day, which has been set up by a certain gentleman, it is perfectly plain that everybody in the whole country would have to pay that excessive cost of production of the farm. But it is not so plain—it is not so plain when we say if we increase the pay of the railroad engineers, or we increase the pay of the man working in my shop, remotely connected with the ultimate consumer, that finally the increase of the pay is laid on the already overburdened shoulders of the ultimate consumer, having added to it my profit and every other intermediate profit that goes to make up the final cost he has to pay. I feel that this commission, if it can formulate some plan whereby an unbiased, high-minded, indifferent, unprejudiced body can be brought into being for the purpose of safeguarding the wide interests of the public in these matters, they will certainly have justified their existence.

Mr. THOMPSON. I think he has covered the field pretty broadly, and I have nothing more to ask.

Commissioner O'CONNELL. Will you please define for us what you consider the public?

Mr. CALDWELL. The public is everybody, and it does not exclude the lowest laborer any more than it excludes the man highest up.

Commissioner O'CONNELL. That is all.

Commissioner GARRKSTON. I would like to ask one question: Don't you get Henry Ford and Heaven confused on the \$5 a day wage?

3440 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. CALDWELL. There are some of Mr. Ford's employees that closely relate him to the presiding genius of heaven, I think.

Commissioner O'CONNELL. But the five dollar hasn't come into being yet altogether?

Mr. CALDWELL. I don't know; that is the advertising report.

Commissioner O'CONNELL. The process of evolution is going on yet.

Mr. CALDWELL. It always will.

Commissioner O'CONNELL. That is all.

TESTIMONY OF MR. GEORGE W. PERKINS.

Mr. THOMPSON. Will you give your name?

Mr. PERKINS. George W. Perkins.

Mr. THOMPSON. Your business address?

Mr. PERKINS. 950 Monon Building, 440 South Dearborn Street, Chicago, Ill.

Mr. THOMPSON. Your business?

Mr. PERKINS. President and secretary of the Cigar Makers' International Union.

Mr. THOMPSON. How long have you been president?

Mr. PERKINS. Twenty-two years, six months, and twenty-five days.

Mr. THOMPSON. Then you have been long enough in that position to have some knowledge in regard to industrial unrest, its cause, and possibly have been long enough connected with labor to have some idea of a remedy?

Mr. PERKINS. I think I have.

Mr. THOMPSON. Now, I will give you your own way, just as I gave to Mr. Caldwell. Tell your story in your own manner.

Mr. PERKINS. The question is the cause of industrial unrest and the cure; is that it?

Mr. THOMPSON. If you have it.

Mr. PERKINS. To my mind, grounded upon a lifetime experience, the cause of industrial unrest is due largely, primarily, fundamentally, to low wages and long hours of labor. The fact that immigrants are lied to before they come here, cheated and robbed after they get here, and when they finally realize this then it causes considerable industrial uneasiness. Careless statements as to fundamental facts as to real facts that exist. The notion that there is one law for the rich and another for the poor, whether there is any such thing or not, figuratively speaking. The experience of labor has led me to believe that periodically there is some such difference. Another contributing cause is the mad pace at which industrial workers are driven, a pace that kills 35,000 annually and wounds 2,000,000 in our industries alone; a pace that kills a like number and wounds a like number in our transportation. The fact that 200,000 people die annually from tuberculosis, a preventable disease, a disease that should not exist among us. The fact that 800,000 people die annually from preventable diseases due to occupational diseases is another.

Another cause in connection with the unrest of immigrants in 1909 is the following advertisement appearing in the Pittsburgh, Pa., newspapers: "Men wanted.—Tinners, patchers, and helpers to work in open shop; Servians, Poles, and Roumanians preferred; steady employment and good wages to men willing to work. Fare paid and no fees charged."

You ask me a cure for industrial unrest. I wouldn't cure it if I could, and I couldn't if I would. I say that with a full knowledge of the meaning of the word. Industrial unrest, the agitator and the kicker make for the uplift, a better, social, economical, and political state, and for advancing civilization, and were it not for industrial and social unrest there would be no human progress along lines that were good and beneficial for the great mass of working men and women of our country.

I would, however, minimize that unrest to the lowest possible point. That should be along constructive lines. First, I believe that this commission in its findings and in its search for remedies is handicapped by State rights and State lines. Hence it would be a waste of my time to advance things that can not by any possible stretch of the imagination come within the jurisdiction of this commission.

There is one thing though that I would suggest. Commissions in the past have proven entirely futile and almost useless. Commissions such as this have worked their heads off; have sought diligently, earnestly, and faithfully for a

cause and for a remedy that will be helpful; they make an elaborate report to the United States Government and Congress, which created them. It then becomes everybody's business in general and nobody's business in particular. If this commission would recommend that in the future in cases like this, which is a three-cornered commission, if you please, one for labor, one for capital, and one for the dear public, of whom I would like to speak about a matter later—one of each department should be given a seat in Congress, with a voice and no vote, and he ought to remain there until Congress has acted, has either defeated or adopted its recommendation, and their efforts will not be wasted.

I hold that one of those things you can act upon is to see to it that the immigration laws are properly or become more effective in their restrictions. Labor as such is not opposed to immigration, the kind that formerly landed on our shores and to whom much of our greatness commercially and industrially and socially and politically is due.

But remember the immigrants in those days came in slow, dangerous sailing vessels. They came of their own volition. They came from England, Ireland, Scotland, Germany, Switzerland, and other countries, the people of which rank somewhere near the standard of American citizenship, while to-day, with the quick passage, the fast-sailing vessels, which one vessel will bring in a weeks' time more than you could crowd into half a dozen ships in early days with their low-passage money. Originally it took three months to come over, and now one week. And where do they come from? Without casting any disparagement upon any race or calling, originally they came from England, Ireland, Scotland, Wales, France, Germany, and other countries. To-day, or at least in 1913, over 1,800,000 immigrants came to this country. Two hundred and forty-three thousand came from southern Italy—not Italy, but from southern Italy. You all know what that means; which was more than came from Germany or England, Ireland, Scotland, Wales, France, Switzerland, and Scandinavia. We are not opposed to the natural influx of immigrants. But we do object to the indiscriminate assisted immigrant. We object to the kind that are brought here to enrich the steamship companies primarily and in the first instance. We do not object to them coming naturally and regularly. I said a moment ago that the immigrant was lied to before he came here. I personally know that he is.

In Hamburg, Germany, I saw last year, less than a year ago, great signs plastered over a labor agency, in which it pictured the glories and the Eldorado and wealth of the great State of Washington. It provided for a system of selling tickets on the installment plan. It was figured out, so many marks a week, so many marks every two weeks, so many marks a month will land you on the golden shores of the State of Washington early in the spring of 1915 where acres and acres of virgin soil await you.

Last November, on my way to the American Federation of Labor, I passed through the great State of Washington, and looked eagerly for the acres and acres of virgin soil awaiting for the poor deluded immigrant. I saw, yes, much virgin soil in the State of Washington, but it was dotted with stumps. They had taken off the lumber. The stumps were there. The virgin soil was there, yes, but it was dotted with stumps.

Now, when the immigrant comes there and sees that, do you blame him if he is a little restless? I don't.

What can you do for labor? Take us out from under the restriction now resting upon us by a false application of the Sherman antitrust act and let us carry out our natural activities, subject only to the law of the land, and we will work out our own destiny. We ask no favors from the lawmaking forces. All we ask is the right to carry forward our natural activities, always amenable to the law. We respect the law—the written law of the land. We respect our courts and our judges. We rebel against judge-made law and government by injunction. We deny that the Government or society—I take that back; I don't mean society—we deny that any one has any property right in our work. That belongs to us. It is not the property of any living soul on earth except us. The money that we earn is ours. We demand the right to spend that money where we please and with whom we please. Give us a little more—and this goes both ways—honesty, industrially, politically, and socially. I include ourselves in that, when I say that.

The welfare of society at large, working men and women, and their best interests, should be placed above the dollar mark. Human rights and human interests are of greater value than property rights or the accumulation of the

swollen fortunes of the already predatory rich. We may not advance quite as rapidly industrially or commercially, but after all we will be advancing along sane lines that bode no ill will to any honest man or woman or any good government.

You ask how to cure or to minimize—I haven't gotten a cure—you ask how to minimize this unrest. In my own candid judgment there is only one way to do it; that is to let the industrial workers organize on the one hand and the employing classes upon the other. There is an element of fairness and justice in the human mind, and employers, sociologists, and self-constituted guardians of our morals and social advancement have no corner upon that justice and fairness—there is a sufficient amount of that vested in the working men and women that will protect them from doing anything that will destroy advancing civilization, that will destroy society as it exists to-day. The labor organization that will do the thing that will destroy, will destroy itself before it has the opportunity to do that. The organization that is not just and is not fair is doomed—foredoomed to failure. There are enough ultra-conservatives in the labor organizations to more than counterbalance the radical and the agitator.

Fortunately for the labor organization and for society at large, there are enough level-headed middlemen who are the ballast and who will protect the labor organization and society at large against their machinations.

I may say the general labor movement is unalterably opposed to compulsory arbitration. We are not opposed, however, to legally appointed Federal or State conciliation and mediation, and arbitration, if voluntary. I say this, give the conciliator, the mediator, and the arbitrator a position not grounded upon the fortunes of politics, but on good behavior, his job to last as long as that continues; in fact, give him a life job, and if he does right on the pay roll of the Government, and if he does wrong, in the penitentiary for the balance of his life, and then you will get honesty. Protect the man in his job as long as he does right; give him a life job, if you please; but give him a life job in the penitentiary if he does wrong. You will stop your fear of your arbitrators or your conciliators doing anything wrong.

Just a word. This commission or no living soul on earth can find a remedy for industrial and commercial stagnation. You are wasting your time if you are trying to do so. Yet industrial and commercial stagnation is one of the contributory causes to industrial unrest. Industrial and commercial stagnation is caused not by overproduction but rather by underconsumption. In as plain English as I can state it the working men and women receive less in wages—receive amount in wages that will not enable them to consume all that which they create—and because of that we have a periodical turn of industrial and commercial stagnation which is not due to the personnel of the Government nor its economic policies. The remedy? Let the working men and women organize, and through their labor organizations get as near as possible to the margin of profit; they will then be in a position to consume that which they create, and industrial and commercial stagnation will disappear from the haunts of civilized man. Leaving, if you please, to the captains of industry their full share of that and all that value which they create.

Another suggestion, if you will pardon. Each State ought to appoint a committee of one to act with a representative of the Federal Government for the purpose of formulating a uniform set of laws, applicable to all States in so far as laws concerning overproduction and distribution is concerned. I believe in old-age pensions, industrial insurance for sick and inability, and I believe in the industrial insurance against unemployment, despite the fact that some of my very able colleagues in the labor movement disagree with me.

Migratory labor constitutes one of the most important classes of citizens we have in this country, and instead of being kicked and cuffed about as tramps, the migratory workers deserve more consideration at the hands of society at large than lawyers, doctors, or labor agitators, or anybody else is concerned.

What does the migratory worker do? Things you and I won't do if we can help it. He gathers the harvest in the summer time and ice in the winter; he contributes more to the comfort and well-being of society at large than any other class of workers or professional men, I don't care who or what they are. I believe he should be taken care of. I believe that the migratory worker should be transported free, absolutely, from the industrial center to the agricultural district, apportioning the cost on each community, the State, and the Federal Government; let the three pay for it.

I believe he should be brought back to the ice harvest in wintertime absolutely free. I believe that you should furnish for these workers, not the never-sweats and bums—they are few—they don't amount to that [snapping fingers]. One-sixteenth of 1 per cent. They are not worth counting, yet they are the ones who want to work and who do work and should be taken care of. I would furnish for them during December and January or November and December free lodging, not as a charity but as a right. Think what he has contributed to the good and the advancement of society. I would give him this free labor in February and March, the two bad months, dividing the cost on the State and the Federal Government.

Just a few more words and I am through. A lot has been said about the closed shop. There is no such thing as a closed shop. I want the men who have sat here in this chair and said day after day "the closed shop" to know that there is no such thing as a closed shop. We have strict union shops, but the latchstring of the door to the union hangs on the outside, and every working man and woman is invited to come within and participate in that condition of good wages and shorter hours brought about by trade-union activity. So much for your closed shop.

It is not a monopoly. I have got organizers on the road, paying them big money, to bring unorganized men into the union, to walk into our union shops—not closed shops. And our constitution, a copy of which I will file with you, provides that any cigar maker must be accepted in the union. We can't and don't ballot on him. So much for your closed shops.

(Mr. Perkins submitted, in printed form, a pamphlet entitled "Constitution of the Cigar Makers' International Union of America," as amended and adopted at the Baltimore convention, September, 1912.)

The limitation of output—working men and women do not limit the output beyond a point where it is possible for human beings to work with anything akin to conserving their health and strength. Many say that through the efficiency now in our factories we are relegated to the industrial scrap heap of despair at the early age of 45 years. That may not be entirely true, but it is pretty nearly true. It is the fellow who has reached 50 years of age and got a few gray hairs who can testify. He applies for a position. Talk about limiting the output! Show me a single industry controlled by the big captains of industry that does not close down the minute there is not a ready market at prices that he fixes for his commodities. There is no such thing as the iron law of wages. There is no such thing as supply and demand. Modern means of production and distribution, crystallized into the modern trust, have long since exploded the idea of supply and demand. Your cold storage takes care of the supply and regulates the demand. The big trusts and the combinations of capital shut down their industries the minute there is an overproduction on the market that will in any way influence the prices which they fix for the manufactured commodity. So much for the limitation of the output.

Unions do not increase the cost of living. Seven or eight years ago, through an unfortunate strike, every single workingman in the packing houses in this city, every single labor organization down there, went out of existence. There is not a labor organization that has anything to do with the meat produced in the packing houses which supplies the world with meat. But since that time the price of meat has steadily gone upward. Labor organizations did it? Hum! There are none down there. We eat bread; we eat flour; there is nobody organized in the growing of wheat and flour.

Here is a straw hat. It does not belong to me. A few years ago I could buy a straw hat for a dollar. To-day you pay three for it; and there is not a single man or woman making straw hats that is organized. Who brought up the cost of living? The labor organizations? No, sir. So on down through the things that supply your tables—salt, pepper, oats, oatmeal—everything else that enters into the sustenance of daily life—does not come under organized labor. Don't charge that to us. We have got enough to answer for without being charged with that.

It was said here this morning that the rank and file might be all right, but the insinuation was that the officers, they might be the fellows.

Let me tell you this: Officers of labor organizations haven't got anything to sell, and we are honest because of that, if you please. The local union decides whether they are going to strike or not, and calls the strike off. As the executive officer of the international union I can't call off a strike or I can't organize one, either. I haven't got anything to sell; never did have. The rank and

3444 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

file—in their hands is vested, generally speaking, the right to call or call off strikes. So much for the officers.

The good employer—a whole lot is said about him. He can't do these things if he wants to, because his competitor, the scoundrel or the skinflint, sets the pace. No matter how good he is, he can't do these things because of competition, and this is a competitive age. Organize them and put them on the same footing, the same basis, through our trade-union. That will minimize, in my judgment, social unrest.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Anything from the members of the commission?

Thank you, very much.

The commission will now stand adjourned.

(At 4.30 o'clock p. m., Saturday, July 25, 1914, the commission adjourned, to meet Monday, August 3, 1914, at 10 o'clock a. m., in the city of Lead, S. Dak.)

EXHIBITS.

WALKER EXHIBIT.

ILLINOIS STATE FEDERATION OF LABOR,
Springfield, Ill., October 7, 1914.

Mr. L. K. BROWN,
Secretary United States Commission on Industrial Relations,
Chicago, Ill.

DEAR SIR: Yours of the 30th ultimo received. I recall distinctly about agreeing to send you the records or the agreements made between the United Mine Workers and the coal operators, but I don't recall agreeing to get you those records for the Western Federation of Miners.

However, I have written Secretary Mills of that organization asking him to send you any copies of agreements they may have. I only know of one agreement between the copper-mine owners and the Western Federation of Miners, and that is the one in Butte City, Mont., which, in my judgment, was a rather primitive and crude sort of agreement, and I don't know that it will be of a great deal of value to you, except as an evidence of the beginning of that kind of relations between that organization and the employers.

Fraternally, yours,

J. H. WALKER.

WESTERN FEDERATION OF MINERS,
Denver, Colo., October 14, 1914.

Mr. LEWIS K. BROWN, Chicago, Ill.

DEAR SIR: Inclosed you will find copy of the agreements between the Butte locals of the Western Federation of Miners and the copper companies, which I am sending you at the request of John H. Walker.

Very truly, yours,

ERNEST MILLS,
Secretary-Treasurer.

ILLINOIS STATE FEDERATION OF LABOR,
Springfield, Ill., October 15, 1914.

Mr. LEWIS K. BROWN,
Secretary United States Commission on Industrial Relations,
Transportation Building, Chicago, Ill.

DEAR SIR: Yours of the 15th received. I just got a letter from Secretary Mills, of the Western Federation of Miners, yesterday, in which he said that he was sending to you the copy of the agreements between their organization and the copper-mine owners.

I think there is a copy of an agreement between our organization and the Western Federation of Miners reached between a committee representing both organizations and ratified by the convention in both organizations.

I shall write and ask International Secretary-Treasurer William Green, of the miners' organization, to send you a copy of same, if they have it on file.

With best wishes I am, yours, truly,

J. H. WALKER.

3445

3446 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

UNITED MINE WORKERS OF AMERICA,
Indianapolis, Ind., October 28, 1914.

Mr. LEWIS K. BROWN,
Secretary United States Commission on Industrial Relations,
Chicago, Ill.

MY DEAR SIR: After much delay, occasioned by having been absent from the office for some time, I am now replying to your letter of October 15, addressed to our mutual friend, John H. Walker, who has in turn referred it to me for answer.

There is no working agreement between the Western Federation of Miners and our organization, other than an understanding that we would exchange transfer cards; that is, cards issued by either organization would be accepted by both organizations and admit the bearers thereof to membership without the payment of initiation fee.

It was decided by the last international convention of the United Mine Workers that the international executive board of our organization should confer with the representatives of the Western Federation of Miners, with a view to amalgamation or closer affiliation. Acting in accordance with the action of the convention, our international executive board recently appointed a committee to confer with a like committee of the Western Federation of Miners. I understand the committee has held several meetings, and will, no doubt, in the near future submit a report.

I can not, of course, apprehend what their report will be on the matter, but will be pleased to give you further information on this subject after their report has been submitted and, if such should prove to be the case, adopted by our international executive board.

Very truly, yours,

WILLIAM GREEN,
Secretary-Treasurer.

BENT EXHIBIT NO. 3.

SPRINGFIELD, ILL., June 10, 1914.

The joint commission representing the United Mine Workers of Illinois, the Illinois Coal Operators' Association, the Fifth and Ninth District Coal Operators' Association, and the Central Illinois Coal Operators' Association, appointed for the purpose of providing the machinery for carrying out the arbitration provisions of the existing State contract, hereby provides as follows:

The arbitration commission shall consist of one representative appointed by the miners' organization, one by the three operators' associations acting jointly, and three by the two sides jointly. None of the said three shall be identified with the interests of either side, but preferably a majority thereof shall be men of practical experience in coal-mining matters. The commission shall have jurisdiction in connection with disputes jointly referred thereto. The miners and operators shall each appoint their direct representative prior to July 15, 1914, and in case they have not jointly appointed the other three by that time the two appointed shall make such appointments not later than August 15, 1914.

In making its decisions the commission shall be governed by the following considerations, giving precedence in the order named:

- (1) The specific provisions of existing contracts, State subdistrict, and local.
- (2) Stipulations in the record, unrepealed, interpreting the contract.
- (3) Customs and practices, well established and recognized by both sides locally, not in conflict with the contracts or controlling stipulations.
- (4) In all other matters and to the extent not covered by one or more of provisions 1, 2, and 3 hereof, by what it deems to be equitable between the parties to the dispute and sound in principle.

When the direct representatives on the two sides of the commission have disagreed they may jointly agree to refer any matter in dispute to any one of the other three for determination.

The services of the direct representatives of the two sides shall be continuously available and be compensated for on a monthly or annual basis by the two sides, respectively. The other three shall be paid one-half by the miners' organization and one-half by the operators' associations jointly, covering their traveling and living expenses while in the service hereunder and

either \$10 per day or \$150 per month. The portion of the expense to be borne by the operators hereunder shall be divided between the associations affected upon the basis of the respective annual tonnage of each.

A decision hereunder shall require a majority vote of the commission duly constituted. A duly constituted commission shall require the presence of the two direct representatives, and in the event of their disagreement shall require the presence of the two direct representatives and either the presence of one of the other three when so agreed upon by the two direct representatives, or in all other cases the presence of all the said three.

The commission as originally constituted shall serve for the period of the contract unless otherwise jointly agreed.

On behalf of miners.

JOSEPH POPE.
ADOLPH GERMEL.
DUNCAN McDONALD.
W. M. BURTON.
FRANK HEFFERLY.
FRANK MILEK.

On behalf of operators.

P. J. WILSON.
A. J. MOORSHEAD.
JAMES FORESTER.

BENT EXHIBIT NO. 4.

OGLESBY COAL CO.,
Oglesby, Ill., November 9, 1914.

LEWIS K. BROWN,
Secretary United States Commission on Industrial Relations,
Transportation Building, Chicago, Ill.

MY DEAR SIR: On September 30 you wrote me asking for analysis of certain encroachments of the union on the coal operators' rights, which, at the hearing July 22, I offered to furnish you. Pressure of other duties has delayed my so doing before.

Instances of exactions in general can be cited without number, but I made particular reference to exactions that interfere with our efficient management of the properties and that cost us money, without giving the miner any practical result, that do not add to his earnings or make his conditions of employment appreciably better. I shall aim to distinguish between demands, whether wise and fair or not, that would increase wages, improve working conditions, or shorten hours, and demands which add to the cost of production without any corresponding benefit. I will cite a number of illustrative cases.

First, Illinois Third Vein Coal Co., Ladd. The miners demanded that the pump men and mule feeders discontinue caging coal for the railroad chutes on lile days, contending that this work, which requires from 10 to 20 minutes per lile day, should be done by the regular cagers, and that these cagers be allowed to go to work at 7 a. m. and remain until this caging is completed, although the caging could usually not be done until about 11 a. m. We were willing to give this trifling amount of work to other union men at work or to give it to the cagers if they would come to the mine at the time required, but were unwilling to have men under pay for hours who were not needed.

Second, Wenona Coal Co., Wenona. A day man who was transferred from shift work at the bottom of the shaft to coal mining demanded reinstatement to his former position. The man was transferred because his work was not satisfactory, because there was friction between him and fellow employees, and because he had refused to obey instructions. The miners held that the man could not be transferred unless it was charged and proved that he was incompetent.

Third, Alden Coal Co., Matherville. A miner was fined five times during the month of June for sending up impurities. The contract provides 50 cents for the first offense in the calendar month; for the second offense, \$2; and "for the third or any subsequent offense in the same calendar month, \$2 or be suspended." The miners contended that a miner could not be fined more than

three times in a single calendar month. The fine is made by inspector, who, if incompetent or unfair, can be removed, and the proceeds of the fines go to the miners' union. The only interest of the operators is to secure marketable coal.

Fourth. Wasson Coal Co., Harrisburg. During late August and early September, 1911, the men operating mining machines refused to work on the night shift preparing coal for the miners, throwing several mines idle. When the check off for September was turned in it was discovered that a portion thereof was for the support of the striking machine men. It was arranged as a compromise that these fines would be checked off, but would be held by the company pending a joint decision as to the right of the miners to have such check off. On pay day, August 30, the men demanded that the amount be turned over immediately, and when refused, went on strike September 1.

Fifth. Springfield Coal Mining Co., Taylorville. Owing to an accident to the dynamo, the haulage motor was out of service three days. It was agreed to divide the mine into two sections and have one section work each day until repairs to the dynamo had been completed. The men in one of the sections worked two days under this arrangement and the others worked one day. When the mine manager attempted to regulate the turn to even this up, about 37 men went home and later demanded that their turn be made up for that day.

Sixth. Burnwell Coal Co., Witt. A man who had been discharged about a year before was refused employment at the No. 1 mine, whereupon he went to the mine and engaged in a fight with the boss driver. On the following day the drivers demanded the discharge of the boss driver and refused to work, throwing the mine idle. The next day, a few of the drivers returned and the mine was operated at a greatly reduced tonnage, a number of miners filling the drivers' places. On the day following the miners at this mine and also at the No. 2 mine refused to work, and both mines were thrown idle for a period of about five days.

Seventh. Carterville & Herrin Coal Co., Herrin. The output of the mine was greatly reduced when the men refused to work on account of the railroad cars not being at the mine at 6.30 a. m. This was due to a resolution passed by the local union. A number of cars had been left over from the preceding day and 15 additional cars were delivered by the railroad company five minutes before starting time, giving them a sufficient number to have enabled the mine to operate that day. Only 25 of the men went into the mine.

Eighth. United Coal Mining Co., Christopher. The men refused to work because the supply of railroad cars was not on the mine track at 6.30 a. m., although a full supply was received before starting time. The suspension was due to a resolution adopted by the local union providing that the men would refuse to work unless the cars were placed by 6.30 a. m.

Ninth. Madison Coal Corporation, No. 6, Divernon. The company placed a gang leader in charge of each gang of company men for the purpose of having the work performed in a workmanlike manner and with safety to the men. These gang leaders were members of the miners' organization and had no authority to hire or discharge. The miners objected to these gang leaders, claiming their employment was in violation of the agreement. It was taken up at the time by the special agent and board member and later considered at a meeting of the joint board, no agreement being reached. The miners then served notice of independent action and shut the mine down on April 28, operations not being resumed until an agreement was reached June 6. The record shows that the opposition to gang leaders or face bosses is due to objection to oversight in the interest of efficiency.

Tenth. O'Gara Coal Co., Eldorado. On account of the absence of the regular motorman it was necessary for the mine manager to run the motor, he having been unable to get anyone else competent to do this work. On June 22 the pit committee sent all the men home, when he insisted upon running the motor, notwithstanding the fact that he requested them to perform this work, they refusing, claiming they were not competent.

Eleventh. Christian County Coal Co., Taylorville. On July 26 the miners were sent home by the pit committee, who claimed the mine was in an unsafe condition. Twelve day men had gone into the mine and were sent home by the mine manager when it was found there would be no work. Each of these men demanded two hours' compensation for going into the mine. The mine examiner had reported the mine in good condition and the county mine inspector examined the mine on the date in question and pronounced it safe.

Twelfth. Peabody Coal Co., Kortkamp. The mine was thrown idle from September 1 to 10 on account of a dispute over double-shifting machines.

Thirteenth. Peabody Coal Co., Taylor Springs. On the morning of October 17 one of the pit committeemen advised the men not to go down, stating that the pit committee had a number of cases to be adjusted before the miners could go below. The other two members of the pit committee advised the men to go below, but practically all of the men refused and the mine was thrown idle October 17 and 18.

Fourteenth. Taylor Coal Co., Herrin. A miner was discharged for drilling and charging a dead hole. The assistant mine manager saw the shot and instructed the shot firer to inspect it closely before firing it. The shot firer pronounced it a practical shot and fired it. Both the State and county inspectors examined the shot and pronounced it a dead hole. The miners demanded his reinstatement with compensation for lost time.

Fifteenth. Chicago-Sandoval Coal Co., Sandoval. The miners asked that certain authority be taken away from a man who was employed at the bottom of the mine and who was given orders by the manager to give to other men around the shaft bottom. This man was a member of the United Mine Workers of America. Their purpose was to keep this man from telling anyone what to do in the absence of the mine manager, and thereby to hinder as much as possible the output of the mine, with no reason other than that less work would be performed by the shift men at the shaft bottom. We were compelled to relieve him of this authority.

Sixteenth. Chicago-Sandoval Coal Co., Sandoval. The company wished to drive 21-foot entries, and the men refused to comply and insisted that the company either pay the 20-foot yardage rate or drive the entries 30 feet. The 21-foot entries would cause no reduction in wages to the miners, but the question involves considerable cost to the operator and takes away his management of the property.

Seventeenth. Big Muddy Coal & Iron Co., Murphysboro. Had a room fall in and did not care to neck it, but had the room widened without a neck and the miners insisted that a 4-foot neck be paid for although it was never driven. The company refused to pay for it. The miners served notice of independent action and forced it to pay for work that was never performed. It is no reduction to the miner not to drive this neck, but quite a useless thing to the operator to permit and an outlay of money that is not necessary.

Eighteenth. Throughout, one subdistrict of the State and at many other mines the union forbids member from making any statement as witness in regard to an injury to a fellow workman under penalty of fine. This prevents ascertainment of facts, encourages fraud, and makes well nigh impossible adjusting personal injury claims fairly. Men are also intimidated and sometimes fined who give information contrary to the interests of the miners in the investigation of disputes.

Nineteenth. Madison Coal Corporation, Divernon. The mine manager noticed several cars of coal on the mine bottom which contained impurities. He docked the miners who loaded these cars and assessed fines against them. The miners contended that the mine manager exceeded his authority by acting as coal inspector and asked that these fines be refunded. It was taken up in Springfield, March 1, by Special Agent Burns and Board Member Clark. They agreed that in accordance with the joint records on the docking question the mine manager can not be dock boss and that fines assessed by him in this instance shall be returned to the miners affected.

Twentieth. Benton District Coal Co., Hanaford. The checkweighman claimed one morning that on account of some boards being off the weigh room it was too cold for him to remain at work. The superintendent instructed a top man to make such repairs as the checkweighman desired, but the checkweighman then stated he was ill and went home. The mine worked until noon and the pit committee then went around and told the men that they did not have a checkweighman and the mine was closed down during the afternoon. The following day the checkweighman did not report for work and the pit committee claimed they could not get a man to take his place. The mine operated until 10 o'clock, when the pit committee again went around the mine and informed the men they had no checkweighman and the mine was thrown idle. Later the miners claimed they went home because there was ice in the air shaft. The company insisted that there was no ice in the air shaft on the second day and demanded that the pit committee be deposed, the men fined, and the checkweighman removed.

Twenty-first. Odin Coal Co., Odin. A wheel broke on a machine truck and a new one was ordered from the factory. The company had the night men use

a machine from another territory that was also used on the day shift. After the second night they refused to use it, claiming the company should keep repairs on hand. The wheel did not arrive until 10 days later. Ten loaders and two machine men demanded compensation for time lost.

I am sending you under separate cover proceedings of the last Illinois State Conference. The miners' demands thereat are to be found on pages 8-13, inclusive. Attention is called to paragraph 2 of the sixth clause thereof attempting to obstruct the detection of the loading of dirty coal. Also the eighth clause demanding that only union-made powder be furnished, when comparatively little union-made powder is on the market.

Paragraph I, clause 13, forbidding hiring of any man unless he can be given regular employment when the mine is in operation, although under certain conditions such men are indispensable to maintain the output of the mine.

Paragraph J, of the same clause, attempting to require the employment of men in the order of their application, regardless of qualifications or acceptability.

Clauses 18 and 19, attempting to compel employment of union labor for extensive repair and construction work not subject to the jurisdiction of the miners under the contract.

Attention is also called to paragraph 2, section 2, of the 1914 agreement, found on page 314 thereof. Although assistant bosses obviously add to the efficiency and lessen the hazard, the miners strongly resist their employment, although wholly at the expense of the operator, and this compromise paragraph was reluctantly conceded.

Section 20, paragraph A. Man can be absent from work for one day without consent, without good cause, and can not be disciplined. Many men are idle in consequence semimonthly, after pay day, and intemperance encouraged. So far as I know no such license is given in other organized trades.

On pages 3-6, inclusive, is found an index of the proceedings, listed by contract paragraphs. Attention is called to section 2 (note particularly page 90); section 6 (note particularly page 95); section 10 (note particularly pages 193-194 and 209-254); section 12 (note particularly page 229); section 13 (note particularly paragraphs B and G); section 16; section 20; section 25; section 28; and the subject of subdistrict and local agreements.

I hope I have not given you too many illustrations of the abuses which I had in mind in testifying. The effort is so incessant and so much of it is so illegitimate that the movement is subjected to a needless strain.

Very truly, yours,

EDWARD T. BENT.

NESTOR EXHIBIT.

CONSTITUTION OF THE WOMEN'S TRADE UNION LEAGUE OF CHICAGO.

PLATFORM.

1. Organization of all workers into trade-unions.
2. Equal pay for equal work.
3. Eight-hour day.
4. A living wage.
5. Full citizenship for women.

ARTICLE I.

NAME.

The name of this organization shall be the Women's Trade Union League of Chicago.

ARTICLE II.

OBJECT.

The object of this organization shall be to promote the interests of the trade organization of women, to forward labor legislation, to assist the local trade-unions, and to aid in the formation of new unions in all trades, especially where

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3451

women are employed, such unions to be affiliated with the American Federation of Labor and with their national or international organization, if such exists.

ARTICLE III.

MEMBERSHIP.

SECTION 1. The membership of the Women's Trade Union League of Chicago shall consist of local trade-unions, of individual trade-unionists in good standing, of men and women who sympathize with the objects of the league, called allies, and of other affiliated organizations, all of whom must be approved by a majority vote of the executive board and admitted by vote of the organization.

SEC. 2. Local trade-unions which are affiliated with the national or international unions of their own trades, if such exist, and with the American Federation of Labor are eligible for membership.

SEC. 3. Any trade-unionist in good standing is eligible for membership in this organization by declaring herself or himself in sympathy with its objects and sending signed application blank.

SEC. 4. Other organizations are eligible for membership in this organization by indorsing the platform and by sending signed application blank, signed by their president and secretary, accompanied by dues.

SEC. 5. Organizations not affiliated with the national or international unions of their own trades, if such exist, or organizations in a state of dissention are ineligible to membership.

ARTICLE IV.

REPRESENTATION.

SECTION 1. Trade-unions and other organizations affiliated with the league shall be entitled to two delegates, each of whom shall have one vote at all league meetings.

SEC. 2. All individual members, whether trade-unionists or allies, shall have one vote.

ARTICLE V.

OFFICERS.

SECTION 1. The officers shall consist of president, vice president, secretary, and treasurer.

SEC. 2. Officers shall be elected to serve for one year.

SEC. 3. The president shall perform the usual duties of office.

SEC. 4. The vice president shall perform all the duties of the president in her absence.

SEC. 5. The secretary shall have charge of all correspondence of the league and shall perform the usual duties pertaining to the office.

SEC. 6. The treasurer shall receive and take charge of all money paid into the league and shall deposit it in a bank approved by the executive board in the name of the Women's Trade Union League of Chicago.

SEC. 7. The treasurer shall have charge of the funds of the league, which shall be paid out only upon warrants signed by the president and secretary and authorized paid by the executive board.

SEC. 8. The treasurer shall be bonded in a responsible surety company to an amount determined by the executive board, the fee for this bond to be paid by the league.

SEC. 9. The treasurer shall send out notices for dues.

ARTICLE VI.

EXECUTIVE BOARD.

SECTION 1. The executive board shall consist of 4 officers and 15 members elected at the annual meeting.

SEC. 2. A majority of the executive board shall be trade-unionists in good standing.

SEC. 3. The number of the executive board present shall constitute a quorum, after due notification has been given, provided that there be a majority of trade-unionists present.

3452 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

SEC. 4. Any officer or member of the executive board absent from three consecutive meetings of the board without reasonable excuse shall cease to be an officer or member, and said office shall become vacant after due notice has been given by the secretary.

ARTICLE VII.

COMMITTEE.

SECTION 1. The standing committees shall be organization, legislative, finance, district, health, education, suffrage, grievance, and label committees.

SEC. 2. The president shall appoint the chairman of standing committees, subject to the approval of the executive board.

SEC. 3. The chairman of the standing committees shall report to the executive board.

SEC. 4. The auditing committee shall consist of three members, who shall be elected at the annual meeting.

SEC. 5. The duty of the auditing committee shall be to examine all vouchers and account, and audit the financial affairs of the league quarterly. Its report, signed by the committee, shall be given at the regular meeting of the league.

ARTICLE VIII.

ELECTIONS.

SECTION 1. Nominations for all officers and members of the executive board and for the auditing committee shall be made at the December monthly meeting.

SEC. 2. The president, vice president, secretary, and treasurer shall be elected by ballot, each separately.

SEC. 3. Members of the executive board shall be elected by ballot, and of these a majority must be trade-unionists in good standing.

SEC. 4. The auditing committee shall consist of a chairman and two members, which are elected at the annual meeting.

SEC. 5. Only delegates of trade-unions and of organizations and of trade-unionists and allies whose dues are paid up shall be entitled to vote at league meetings.

SEC. 6. In case of unfaithfulness to duty on the part of any officer, such officer shall be subject to recall by the membership, provided 20 per cent of the membership desires to initiate such recall.

ARTICLE IX.

DUES.

SECTION 1. The dues of individual members shall be \$1 per year. All affiliated trade-unions shall pay a per capita tax of 1 cent per month on women members, payable monthly. Dues for other organizations shall be \$5 per annum.

SEC. 2. Any member who has not paid her or his dues within three months after receiving notification for dues thereby ceases to be a member.

SEC. 3. Upon payment of all indebtedness, such person may be reinstated to membership by vote of the executive board.

ARTICLE X.

MEETINGS.

SECTION 1. Regular meetings shall be held once a month unless otherwise arranged by the executive board after due notification to the members.

SEC. 2. The annual meeting shall be held on the second Sunday in January.

ARTICLE XI.

ORGANIZERS.

SECTION 1. Organizers shall give weekly reports on blanks furnished by the league.

ARTICLE XII.

COOPERATION IN TIMES OF STRIKES.

(Provisions in Article XII were unanimously adopted by the third biennial convention, Boston, June, 1911.)

Section 1. Any union planning a strike and asking assistance from the Women's Trade Union League shall state its grievances and permit two representatives of the league to attend its executive board meetings; and notice of such representation shall consist of a resolution passed by the executive committee of the union requesting assistance from the league.

Sec. 2. When the league is approached in reference to a strike after securing full information as to plans, the league shall take no part till after calling an executive board meeting and appointing a committee to have charge of the strike. The league shall report immediately such action taken to the national league and give a full report of all facts. This plan shall be carried out in accordance with the provisions of the special program for strike situations.

Sec. 3. In the event of cooperating in a strike, the league shall have charge of all arrangements under which girls are sent out to the union asking for moral and financial aid.

Sec. 4. Outline of work in times of strike.—(1) Organization and direction of public opinion, (2) patrolling the streets, (3) fair play in the courts, (4) to help in the raising of funds through unions and allies, (5) where the workers are unorganized, help in the formation of trade-union organization.

Sec. 5. The league shall not cooperate in any strike outside of the city except with the consent of the National Women's Trade Union League.

ARTICLE XIII.

AMENDMENTS.

A majority of those present and entitled to vote at any league meeting shall have power to amend this constitution, 30 days' notice having been given to all members.

ABBOTT EXHIBIT.

BY-LAWS.

ARTICLE 1.

Name.—The name of this organization shall be the League for the Protection of Immigrants. Changed February 23, 1911, to Immigrants' Protective League.

ARTICLE 2.

Objects.—The objects of this organization shall be to apply the civic, social, and philanthropic resources of the city to the needs of foreigners in Chicago, to protect them from exploitation, to cooperate with the Federal, State, and local authorities, and with similar organizations in other localities, and to protect the right of asylum in all proper cases.

ARTICLE 3.

Members.—Members shall be of two classes, individuals and organizations: (1) Any person interested in promoting the objects of the league and approved by executive committee shall be eligible to membership; (2) any organization approved by the executive committee which shall express a willingness to cooperate in the work of the league shall become a member by appointing a delegate to represent it.

ARTICLE 4.

Dues.—The annual dues for individuals shall be \$2, for organizations \$5.

ARTICLE 5.

Board of directors.—There shall be a board of directors consisting of 30 members elected by the league for a term of three years, except that of those first elected, 10 shall be elected for one year only and 10 for two years only. The board of directors shall have power to transact the business of the league in the interim of its meetings.

ARTICLE 6.

Officers.—The officers to be elected by the board of directors for a term of one year, or until their successors are elected, shall be a president, two vice presidents, a secretary, a treasurer, and two members of the executive committee. Their powers and duties shall be those usually appertaining to their respective offices.

ARTICLE 7.

Executive committee.—The officers enumerated in article 6, together with two others to be appointed by the president, shall constitute an executive committee with power to transact business in the interim of meetings of the directors.

ARTICLE 8.

Meetings.—An annual meeting of the league for the election of officers and receiving reports shall be held during the third week of February; other meetings may be held on the call of the president or of three members of the board of directors. The board of directors shall hold quarterly meetings during the third week of February, May, August, and November. Other meetings of the board may be held at the call of the president or of two members of the board.

ARTICLE 9.

Quorum.—One-third of the members of the league and one-third of the members of the board of directors shall constitute a quorum of their respective bodies with full power to do business. Four shall constitute a quorum of the executive committee.

ARTICLE 10.

Amendments.—This constitution may be amended by a majority of those present at any meeting, notice of the proposed amendment having been given in writing in the call for the meeting.

SACHS EXHIBIT NO. 3.

CONSIDERATIONS WHICH LED TO THE CAMPAIGN OF THE COMMITTEE ON FACTORIES OF THE CHICAGO TUBERCULOSIS INSTITUTE FOR MEDICAL EXAMINATIONS OF EMPLOYEES.

The campaign for medical examinations of employees, conducted during the last three years by the committee on factories of the Chicago Tuberculosis Institute, was prompted by the following considerations:

1. The importance of early diagnosis and treatment of physical conditions in working people which can be easily rectified in their early stages, viz, tuberculosis and other diseases.
2. The importance of definite knowledge of physical conditions of employees as means of protecting them from communicable diseases.
3. The importance of definite knowledge of prevalence of certain diseases in certain industries as indicators of conditions of work that should be eliminated.
4. The importance of definite knowledge concerning condition of individual employee, permitting assignment to work suitable to his physical condition.
5. Appreciation of health of employee as foundation of his working efficiency.

INDUSTRIAL CONDITIONS AND RELATIONS IN CHICAGO. 3455

METHODS USED BY THE INSTITUTE TO PROMULGATE THE PRINCIPLE OF MEDICAL EXAMINATION OF EMPLOYEES.

In the early stages of the campaign the institute became aware of the existence of various factors which have to be eliminated or rectified before supervision of health of employees, by means of medical examinations, can become a part of a system in an industrial establishment. Additional factors came into view with the progress of the campaign.

The important factors and the methods used in dealing with them were as follows:

1. Lack of appreciation on the part of the average employer of the health of employee as fundamental condition of his working efficiency. The committee on factories of the institute during the last three years published three pamphlets on this subject. Twenty-five thousand copies were distributed among commercial and manufacturing establishments and labor unions of Chicago; 5,000 among such establishments and various associations all over the country. Copies of these pamphlets are here appended. (Exhibits I, II, and III.)¹

2. Prevalent tendency among business men to believe that their concern has no health problem and, if such a problem as for instance tuberculosis problem exists anywhere, it is to be found in some other establishment.

To direct the attention of the individual employer to the existence of a health problem in his own place the committee on factories of the Chicago Tuberculosis Institute held numerous conferences with individual employers to convince them that no concern knows anything about prevalence of disease among their employees until data are gathered through a system of systematic medical examinations.

To call attention to the various phases of the tuberculosis problem in a working place the committee on factories employed a specially designed chart by which the problem is graphically presented. In many cases concerns were converted by this method. A copy of this chart is here appended. (Exhibit IV.)²

3. Great diversion of views, even among broad-minded business men, concerning the relative importance of the various phases of health work in a concern.

To adjust the existing views and to learn by interchange of experiences and opinions, the committee on factories of the Chicago Tuberculosis Institute inaugurated midday conferences on the various phases of the problem of supervision of health of employees.

At these conferences were present owners of concerns, their superintendents, managers of welfare departments, physicians, and nurses connected with concerns, etc.

In all, in the last three years, 20 conferences were held with the average attendance of 30 to 60. At these conferences 47 firms were represented employing in all about 137,100 people.

The following figures show the progress made:

	At the beginning of the campaign 3 years ago.	At present.
Number of firms participating in the conferences.....	1	47
Number of employees represented.....	20,000	137,100
Examination of all suspicious cases of illness in firms with the following number of employees.....	30,000	150,000
Number of employees in firms practicing examination of new employees.....	0	58,000

4. Importance of a national campaign for the gradual universal adoption of principle of medical examination of employees.

¹ Exhibit I, "Examination of Employees for Tuberculosis," published by the committee on factories of the Chicago Tuberculosis Institute; Exhibit II, idem; Exhibit III, "Bulletin of the Chicago Tuberculosis Institute; History of the Two Years' Campaign of the committee on factories of the Chicago Tuberculosis Institute," were submitted in printed form.

² Exhibit IV, chart, "Tuberculosis Problem in a Working Place," issued by the committee on factories of the Chicago Tuberculosis Institute, was submitted in printed form.

In the course of the campaign conducted by the committee on factories of the Chicago Tuberculosis Institute, it became apparent that the campaign must be made national to achieve progress in a more substantial way. As in all matters of public policy, adoption of fundamental principles must be national in scope to insure substantial progress.

As the first step in this direction, the institute presented the experiences of its three years' campaign at the meeting of the advisory council of the national association. A proofreader's copy of the transactions of the meeting of the advisory council is here appended. (Exhibit V.¹) Additional copies can be furnished by the National Association for the Study and Prevention of Tuberculosis, 105 East Twenty-second Street, New York.

ADVANTAGES OF HAVING A SYSTEM OF MEDICAL SUPERVISION IN LARGE PLANTS AND FACTORIES. EXPERIENCE WHERE SUCH SYSTEM HAS BEEN INAUGURATED.

The advantages of having a system of supervision of health of employees in a working place, as demonstrated by the operation of this principle in various concerns in Chicago and elsewhere, are stated below. The method of supervision is described on page 3 of Bulletin 3 of the Chicago Tuberculosis Institute. (Exhibit III.)

The method comprises: (a) Constant watch of the physical condition of employees by those who direct their work, as foremen, superintendents, etc., who are instructed in this task in periodic conferences with physicians and nurses employed by the firm; (b) examination of all new employees; and (c) periodic reexamination.

The effect of the systematic supervision of health of employees is as follows:

1. Early detection of gradually developing breakdowns. The vast majority of conditions, detected through a system of supervision, belong to this class. The remedy applied is simple and easy of accomplishment in majority of instances. It may imply a rearrangement of individual régime, as extended hours of night rest, better ventilation of bedrooms, avoidance of injurious practices, etc. In some cases a vacation may be desirable, etc. In a small number of cases change of occupation is imperative. Considering that these slight impairments of general condition are very frequent and, if unattended, lead to complete breakdowns or developments of diseases which come in the wake of malnutrition, weakness, anaemia, etc. (such as tuberculosis, for instance), a clear idea can be had of the tremendous advantage of supervision and right medical advice in such cases.

2. Early diagnosis of many diseases which at present are diagnosed, in hopeless stages, in a large percentage of instances. Take tuberculosis for instance. The experience of Chicago concerns (with a system of medical supervision) has demonstrated that in the first year of operation of such a system a large number of advanced cases is discovered. With the progress of the work the largest percentage of cases are incipient, in which the period of necessary treatment may be a few months, and the result in a large percentage of cases is not only restitution of health but working power as well.

3. Detection and control of sources of infection in a working force. It is apparent that workers suffering with tuberculosis (in communicable stages), or other similar conditions remain unknown and unchecked in working places without a system of medical supervision.

4. The gradual appraisal of harmful conditions in various kinds of work, as brought out by prevalence of disease due to such conditions. In the few years' experience with systematic supervision of health of employees in various Chicago concerns, the discovery of increased prevalence of certain conditions in a department—viz, bronchitis, asthma, tuberculosis, etc.—lead to the installation of extensive ventilating systems, dust removing systems, improved sanitation of lavatories, etc.

5. The gradual change of attitude of employees toward health and various preventive measures. A concern finds that with the establishment of medical supervision only 40 per cent of those discovered tuberculous agreed to go to a sanatorium at the expense of the employees' benefit association, in the second year 60 per cent went, in the third year about 80 per cent. A similar change

¹ Exhibit V. "Medical Examination of Employees," a symposium before the National Association for the Study and Prevention of Tuberculosis, reprinted from the Transactions of the tenth annual meeting of the National Association for the Study and Prevention of Tuberculosis.

of attitude observed in relation to various conditions and practices. This rectified attitude extends not only to working people but to their families, to their homes and friends.

6. A higher standard of health and efficiency of the entire working force.

7. A better understanding between a firm, its foreman, and employees, the relationship of which becomes modified by the operation of a system having for its object the preservation of the health of the employee.

SUPPLEMENTARY ARRANGEMENT NECESSARY TO MAKE SUPERVISION OF HEALTH OF WORKING PEOPLE IN THIS COUNTRY A PERMANENT AND JUSTLY ADMINISTERED INSTITUTION.

1. Compulsory sickness and invalidity insurance, with State, employer, and employee as contributors to the insurance fund; a measure very essential to the liberation of our working population from dependence in case of sickness or invalidity.

2. Systematic supervision of health of workers as a part of the system of industrial insurance, resulting in a lower cost of insurance administered on the basis of prevention.

3. Administration of insurance of sickness and invalidity insurance funds with State, employer, and employee adequately represented, thus changing the worker from merely a recipient of advantages of preventive work to an administrator and recipient.

The preservation of the health of the worker is the most important condition of any industrial arrangement in formulating the minimum hygienic requirements for various industries. The conditions of work and the conditions of men employed must be considered. This can be accomplished only through systematic supervision of health of those employed in various industries, as the health of the worker is the most important criterion of what should be the conditions of work.

DONNELLEY EXHIBIT.

R. R. DONNELLEY & SONS Co.,
Chicago, October 20, 1914.

Mr. LEWIS K. BROWN,
Secretary United States Commission on Industrial Relations,
Chicago.

GENTLEMEN: In re time of employment of employees. Replying to your letter of October 1, I would say that of 601 men on our pay roll this week 103 have been with us for more than five years. Out of 209 women 28 have been with us for more than five years. These records do not include any of our apprentices who are not of age nor any of our office or executive force.

This is hardly a fair showing of the present permanent condition of our organization, as some of our departments were just recovering from strikes five years ago, where the entire organization was new, and it takes considerable time to get a permanent organization under such conditions. I am quite sure in another five years our records will be very different.

Concerning the comparative costs of product under union and nonunion conditions, it is impossible for us to compare present costs when we are running closed shop, as our cost systems are entirely different and the wage scale has been materially increased during the last few years. In comparing our plant in Chicago, which we run under open shop, and our plant in Indianapolis, which is run under union conditions, the costs on one item of composition vary as to 3,850 to 4,050 in favor of the Chicago house.

Also, in regard to hand folding, the efficiency per hour in Chicago is about 25 per cent higher than in the Indianapolis plant.

Respectfully, yours,

R. R. DONNELLEY & SONS Co.,
THOMAS E. DONNELLEY, President.

**LIFE AND LABOR CONDITIONS OF
CHICAGO STOCKYARDS EMPLOYEES**

(For exhibits under this subject, see pages 3519 to 3531)

COMMISSION ON INDUSTRIAL RELATIONS.

CHICAGO, April 15, 1915.

TESTIMONY OF PROF. JOHN C. KENNEDY.

Chairman WALSH. Your name, please.

Prof. KENNEDY. John C. Kennedy.

Chairman WALSH. What is your occupation?

Prof. KENNEDY. Secretary of the Socialist Party of Illinois and alderman of the twenty-second ward.

Chairman WALSH. Chicago, Ill.?

Prof. KENNEDY. Chicago, Ill.

Chairman WALSH. What has been your business or profession in recent years—in the recent past?

Prof. KENNEDY. I have been a teacher of economics at Cornell University and University of Chicago, and a sociological investigator.

Chairman WALSH. Covering what periods did those employments exist?

Prof. KENNEDY. At Cornell University I was a teacher in the year 1907 and in the Chicago University in 1908 and 1909; conducted a sociological survey in the Chicago Stockyards district during the years 1910 and 1911; was employed by the Chicago Association of Commerce as housing investigator in 1912.

Chairman WALSH. Please state the circumstances under which the stockyards investigation was made.

Prof. KENNEDY. The University of Chicago Settlement, which was located in that neighborhood, wished to have a study made of the district—the working conditions, the housing conditions, wages, and so on, and in order to understand the conditions under which it was doing its work. At that time I was teaching in the University of Chicago and was acquainted with some of the directors of the University of Chicago Settlement, and they selected me as the one fitted, in their opinion, to conduct that work.

Chairman WALSH. You were teaching in the university at that time?

Prof. KENNEDY. At that time; yes, sir.

Chairman WALSH. I wish you would state briefly what the purpose of the Chicago University Settlement was.

Prof. KENNEDY. The purpose of the settlement is to be of service to the people in that community in the way of educational work. To a certain extent there are classes held in citizenship and instruction is given along the line of sanitation to the people living in the community; lectures are held; discussions held; and there is a great deal of what they call personal-service work; people that are sick or in trouble in one way or another come to the settlement to get assistance or aid. It is also the headquarters of a visiting nurse; there is a kindergarten located there also.

Chairman WALSH. How much of a staff has this university settlement?

Prof. KENNEDY. There is a head resident who devotes all of her time to the work there. Then, I suppose there are a dozen residents, some of whom are paid by various organizations or groups in the community, living outside, interested in one thing and another, such as the kindergarten, visiting nurses' work; I should say there are about a dozen who are resident there. Then there are some others who come and go; work an evening now and then; perhaps a dozen more.

Chairman WALSH. How is the settlement maintained?

Prof. KENNEDY. It is maintained by voluntary contributions from people who are interested in the work that is being done there. The University of Chicago, I believe, contributes the Sunday collections which are taken at Mandel Hall. Then subscriptions are made by people who are interested in the settlement work.

Chairman WALSH. About what is the total cost of maintenance per year?

Prof. KENNEDY. I don't know the budget, but I assume it is in the neighborhood of probably six or seven thousand dollars; it might be more or less; I couldn't say exactly.

Chairman WALSH. Will you please state the methods employed by you and the extent of the inquiry which you made?

Prof. KENNEDY. The work was divided up into sections, one part, dealing with the wages and working conditions in the packing houses, conducted by myself. Another part, dealing with family budgets, was conducted mainly by three assistants, and there was a part dealing with the educational opportunities in the neighborhood and the health of the children, and so on, which was conducted by two other assistants. I think those were the main departments of the investigation.

Chairman WALSH. Was the entire survey under your direction?

Prof. KENNEDY. The entire survey was under my direction; yes.

Chairman WALSH. You say that included an inquiry into wages?

Prof. KENNEDY. Working conditions—wages and working conditions.

Chairman WALSH. I will ask you to please, in your own way, present to this commission a statement of the conditions as you found them and your interpretation of the facts.

Prof. KENNEDY. I might say at the outset much of this data is found in a report which was published of this investigation. This section on wages and family budget, not all of it, but much of the material which I would submit, is found there. Now, perhaps the best thing I can do is simply to comment upon what you can find there.

Chairman WALSH. Well, I wish you would indicate. Was your entire report published?

Prof. KENNEDY. Not all of it. The report as I wrote it consisted of two parts—the statement of fact, and then a statement of the interpretation and suggestion as to what might be done to improve conditions. The statement of the fact was, in the main, published as I wrote it. The interpretation of these facts was not published. I have it with me.

(See Kennedy Exhibit No. 1.)

Chairman WALSH. And the conclusions; how as to those?

Prof. KENNEDY. The conclusions were not published either.

Chairman WALSH. How was the matter disposed of; how was the question of publishing or not publishing disposed of?

Prof. KENNEDY. The report as I prepared it was turned over to an editing committee of the directors of the University of Chicago Settlement.

Chairman WALSH. How many of those?

Prof. KENNEDY. I think there were three on that committee. They were selected by the board of directors of the settlement.

Chairman WALSH. Who were they?

Prof. KENNEDY. I believe Mr. Larned, Mr. Bond, and the late Prof. Henderson, I believe, were the committee. They went over the report as I submitted it and decided that it would be best simply to publish the statement of fact and leave out the recommendations and the interpretation of those facts as I put them. So, that part of the report which I considered most important, personally, was left out.

Chairman WALSH. Well, what was the history, if there was any history, of the leaving out of that part of the report?

Prof. KENNEDY. Well, the board thought that—I might say that my conclusion after looking into the matter was that probably the best thing to help conditions in that district, in that industry, would be the organization of a labor union—that is, that the organization of the workers would be the best protection for the workers, and in my interpretation of the conditions and the facts, as I found them, I emphasized that point very strongly. It seems that the editing committee thought that that was a personal idea that had no place in a scientific report. So it was left out, and the material which bore out that part of my conclusion was left out entirely.

Chairman WALSH. Was there any request made by anyone to leave it out, or was it passed on by anyone else, or referred to anyone else, any of the companies involved?

Prof. KENNEDY. Well, when the report was put in proof it was submitted to the various packers, at least their agents or attorneys, and they, some of them, commended the report, stated they believed it to be accurate in every respect so far as they could see, and others made adverse criticism. And the representa-

tive of Mr. Armour, his attorney, stated that so far as the discussion of the union was concerned that it was a partisan document and was not a scientific report in that respect. I don't know whether that had anything to do with the decision of the committee about leaving that part out of the report or not. At any rate, it was left out.

Chairman WALSH. When you started to do the work, what lines were laid out? Was there a line laid out for you, or did you submit an outline, or anything of that sort?

Prof. KENNEDY. Yes, sir. I made an outline of the various departments to be covered, and the information which seemed ought to be included in that report. That was agreed upon at the outset.

Chairman WALSH. Did your outline indicate that you were to make conclusions or interpret the facts that you found?

Prof. KENNEDY. I should say so; yes, sir.

Chairman WALSH. Have you the correspondence there with reference to the publication of the report?

Prof. KENNEDY. Well, I have it in the grip outside here in the office. I did not bring the correspondence in. I have simply the report.

Chairman WALSH. You can go ahead now in your own way, in answer to the question I asked you a few moments ago. You may submit the correspondence afterwards.

Prof. KENNEDY. Well, I might say that the first part of the investigation did not have any direct bearing on wages. It was a sort of understanding of the community, and to see the forces which surrounded the packing industry or were active in the packing industry. The industry had been growing rapidly in Chicago, I found, by going over the history of it. Furthermore, the personnel had been changed, especially of the employees.

In the earlier days the work had been done chiefly by English-speaking workers. Their places were gradually taken by Bohemian and German workers. Later on, the Slavic immigrants came in in larger numbers, so that by the time my investigation was begun, probably half, and in fact about half, of all the workers in the packing industry were what would be called non-English-speaking workers. They could probably understand a little English, but were recent immigrants, Poles, Slavocs, Lithuanians; so the type of worker had changed very rapidly in the industry, and of course that had some bearing upon the wages, upon the wage conditions, and the working conditions. Now, as to how those immigrants came to Chicago, and why they came, I am not prepared to say. It may be that they came voluntarily, without any urging, or it may be there was advertising done to bring them here. I have not gathered any evidence which would show one way or the other, but at any rate there was a large influx of those types of immigrants, so much so that apparently at all times there is an army of unemployed workers around about the packing houses. I went over to the employment offices of the packers frequently early in the morning to see what the conditions were. And there never was a time when there were not hundreds asking for jobs, and on some occasions it would run up to the thousands that would appear at the employment bureau of Armour, Swift, and Morris and the other companies.

Chairman WALSH. That was during what period?

Prof. KENNEDY. That was during the entire time when I was studying conditions there.

Chairman WALSH. From what date to what date?

Prof. KENNEDY. During the years 1910 and 1911.

Chairman WALSH. You might describe, if you will, please, how the employment was made.

Prof. Kennedy. Well, undoubtedly there were different systems for the different groups; that is to say, if they were selecting an assistant manager, they would select that assistant manager in one way, and there would not be a group of assistant managers lined up at the employment office wanting for someone to come out and tap them on the shoulder and say, "Come along, I want you." The rank and file of the workers, the mass of them, were unskilled. They were hired in about that way. There would be a long row out in front of the employment office as a rule anywhere from 200 to 1,000 men, and these were, as I say, recent immigrants, and are to-day if the conditions are the same as they were then; and the employment agent would look over the group generally and pick out those who seemed to be the sturdiest and best fitted to do the unskilled work. So far as I could see there was no bargaining and discus-

sion about wages, terms of employment, or anything of that sort. Just the employment agent would tap the one he wanted on the shoulder and say, "Come along." And that would be all there would be to it in the hiring process.

Now, generally a few would be hired, and the other hundred would be turned away. Sometimes the policeman would swing his club over their heads to a certain extent, not necessarily to injure them, but to start the movement out of the yards, and say, "Get out of here," and out they would go. The same group would come back the next morning.

Chairman WALSH. They reported but once a day, did they?

Prof. KENNEDY. Yes; that is, the main group.

Chairman WALSH. What hour?

Prof. KENNEDY. From 6 to 7 they would stand around. Now, that is the system of employment or that was the system at that time. The group would assemble every morning, and the employment agent would pick out the number that they thought they needed for that day. Of course, I think you all understand that in the packing industry the employment conditions are very unstable. They do not hire those unskilled laborers by contract, for a week or a month or a year or anything of the sort. A man never knows whether he is hired for an hour or for a week. And in certain departments they have a blackboard which says to report for work at 10 o'clock to-morrow morning, or to report for work at 7 o'clock, or to report for work at any certain hour. The workers never know from one day's end to another as to whether they will work at so many hours or whether they will work the next day. Conditions are very unstable. So it is in hiring these groups of workers. The agent selects as many as he needs that day. They might be discharged that night. Of course, as a rule, they are not. They are employed for a longer time. But there is always this group around there from which the packers can draw the additional labor supply, or at least I never saw any time when there was not a group who were ready to take jobs whenever they had them to give. Now, that, of course, had a bearing on the wage scale. Whenever there is such a supply as that available, of course the employers feel that they are at liberty to pay only such wages as are necessary to keep up their supply of labor.

So far as I could see, the stockyards employers were never in any very great difficulty to get all the unskilled labor they wanted in that community. So I thought that was probably one explanation of the wage scale, probably the most important explanation—the fact that here was a group who were unorganized, who were competing for jobs, many of whom could not speak the English language, were glad to get jobs of any sort under almost any condition. Now, they would go to work where they were put. But I should say 60 per cent of the workers in the packing industry don't need much previous instruction to do their work. The industry has been so organized and developed that in one department after another they depend upon machinery to do a great deal of the work, and by the subdivision of labor into small pieces, very, very small processes, they are able to get most of the work done by those who have had no particular training. So it makes all these peasants available material for the industry, and enables them to keep the wages down to the level of unskilled labor in almost all the departments. Now, the figures which I gathered regarding these wages were taken from the books of the packers in their timekeepers' offices. An arrangement was made whereby in gathering this data I was allowed to consult the books of Armour & Co., and I spent about a month and a half in their offices gathering this material, copying it myself from their books. That is embodied in this report, that material.

Now, it might be well to call your attention to just a few of the figures which I found in the tables. I took the figures for the employees for two different periods in the year. The pay rolls are for two weeks—that is, the workers are paid every two weeks—and these figures are based upon two different pay rolls: One in the time of maximum activity here and another at the time of the minimum activity, the idea being that wages would fluctuate somewhat during the different periods in the year, according to the amount of work that was being done. And in order that a fair, honest opinion might be formed as to the rate of wages it would be necessary to have figures not only for one period but for the other period, the maximum and minimum activities. Now, these figures which were copied, as I say, from their books, I have divided the rate of wages into groups—\$4 or less per week; \$4 to \$5 per week; \$5 to \$7.50 per week; \$7.50 to \$9; \$9 to \$10 per week; and so on.

Chairman WALSH. Those are the earnings?

Prof. KENNEDY. Yes; per week. For all of the employees in Armour & Co.

Chairman WALSH. How many?

Prof. KENNEDY. This was at one period when I took these, 8,160 who were on the pay roll for that particular pay roll. At that time 46.49 per cent received \$10 or less for each of the two weeks on that pay roll.

Chairman WALSH. How many?

Prof. KENNEDY. 46.49 received \$10 or less per week.

Commissioner GARRETSON. That includes only wage men, not salaried men?

Prof. KENNEDY. That does not include salaried men, superintendents and so on. Commissioner AISHTON. Does it include boys?

Prof. KENNEDY. There are very few in the packing industry. In fact, the amount of child labor is practically so little that it might be left out of consideration; only messenger boys are employed there now. It does include female help, both men and women, and the scale of wages for women is somewhat lower than for the men. I have those separately here, too. But I am giving now the groups as a whole. Now, during another period in that year, the slack period—this was during the busy season—in the slack season there were 6,619. You see, there is a drop of 1,500 workers, 1,500 less in that one establishment; 65.22 per cent received less than \$10 a week. So you might see that estimated from these two periods in the year, one during the slack season and one during the busy season, it would be safe to say that all times in the year the average wage of at least half of the employees is \$10 or less per week.

Commissioner GARRETSON. Is that wage or earnings?

Prof. KENNEDY. What they are actually paid—their wages.

Commissioner GARRETSON. The rate per hour did not fluctuate—the time worked?

Prof. KENNEDY. The time worked does fluctuate; yes; that is it, exactly. There are some fluctuations in the rate per hour, but it does not fluctuate very much. So that I struck an average, you might say, of an estimate as to the rate of wages prevailing throughout the year. Now, some people have asked why we did not take and follow each worker through the year and set down a table of the actual earnings for the workers every year. The only reason was lack of funds and time. That would have been an enormous task, and it would have taken a small census bureau to take those 7,000 employees and follow them right through the year and get the figures. So the best we could do was to take a cross section, you might say, one through the busy season and one through the slack season, and see what are the figures exactly as they are taken from the pay roll. These figures are from Armour & Co. Now, another point in this connection is the—

Chairman WALSH. Does your table go further now and give the other percentages of the higher-paid labor?

Prof. KENNEDY. Yes. I can give you the percentage for each group, for example.

Chairman WALSH. I wish you would.

Prof. KENNEDY. During the slack season I can give it group by group. During the slack season 10.95 per cent of workers got \$4 and less on that pay roll per week; 3.58 per cent got from \$4 to \$5; 11.63 per cent got between \$5 and \$7.50. I will leave off the hundredths. Nine per cent got between \$7.50 and \$9; 11 per cent between \$9 and \$10; 21 per cent between \$10 and \$12; 17 per cent between \$12 and \$15; 10 per cent between \$15 and \$20; 3 per cent \$20 and over. That was the total group of employees.

Now, during the slack season it ran as follows: Twelve per cent under \$4; 6 per cent between \$4 and \$5; 20 per cent between \$5 and \$7.50; 15 per cent between \$7.50 and \$9; 9 per cent between \$9 and \$10; 12 per cent between \$10 and \$12; 15 per cent between \$12 and \$15; 17 per cent between \$15 and \$20; about 3 per cent \$20 and over for that period, too. Those include the subforemen and heads of groups, bosses, and so on getting the \$20 or over per week.

Commissioner GARRETSON. They were also continuous workers?

Prof. KENNEDY. Continuous workers; yes. Now, in regard to the continuity of labor, as I was saying, there is a very great fluctuation from month to month in the packing industry. For example, I was furnished with the number of workers on the pay roll for each month during the year. During the year 1910 at one time there were 7,041 workers who received pay; at another time 5,641. There is a difference of 25 per cent in the number of employees on the pay roll on a certain date; that is, they give the figures on a certain date, each employee on the same date, practically the number who were on the pay roll on that day. As I say, on one occasion it was 7,041. That was the maximum on any one date in that year. And 5,641 was the minimum on any one day. So

that there is a margin of about 25 per cent fluctuation in the number of employees. Of course in other years it might be wider or less. But that seems to be a fair estimate of the number of unemployed who were out of their jobs some time in the year.

Chairman WALSH. What is that number again?

Prof. KENNEDY. Twenty-five per cent of the workers; the difference between 5,600 and 7,000—1,400—in that particular firm.

Commissioner AISHRON. What year?

Prof. KENNEDY. That was 1910. I have here in this report a picture of the way they hired the workers, as I have told you about, the group.

Commissioner WALSH. Have you an extra copy of that report?

Prof. KENNEDY. It is the only one I have with me.

Chairman WALSH. Could you submit one?

Prof. KENNEDY. Yes. I think you have one.

(The book referred to, "A Study of Chicago's Stockyards Community," by J. C. Kennedy and others, published by the University of Chicago Press, was submitted in printed form.)

(See Kennedy Exhibit No. 1 for unpublished sections of the above report.)

Now, in addition to finding out the wages, actually drawn, I thought it was desirable to find out the tendency in the wages—that is, the amount from year to year—and I went back to old pay rolls, 1896 and 1903, and other pay rolls, to get a comparison of the rates paid per hour and the wages drawn. And while I could not state right offhand here without going into this report here and reading it by sections, the exact figures, I can give you the general trend.

Between 1896 and 1903 the packing house workers' union was organized there and had most of the workers in its ranks. I believe at one time it had about 20,000. This organization was pressing for higher wages and improved conditions. Probably chiefly as a result of that activity there was a steady increase in wages in nearly all departments between 1896 and 1903, both as to hourly wages and the annual wage and weekly wages. In 1904 still further demands were made. And one of the chief of those demands was for a minimum wage of 20 cents an hour for the unskilled workers. Later on that demand was reduced to 18½ cents an hour. But the packers fought the union, and after a long strike, a hard fight, the union was practically destroyed, and since that fight it has never amounted to anything, at least, in Chicago.

And immediately after the strike the wages of many of the workers were reduced, particularly of the unskilled worker. So that 1 or 2 cents an hour was taken off the scale paid those who had been getting 16 or 17 or 18 cents an hour; immediately after the strike their wages were reduced. Now, in gathering that material it seemed to me that was an important fact for two reasons: Not only as it affected the life of those people there but as a commentary upon the attitude of the packers toward the union. They claimed that the reason they did not want to deal with the union—their principal reason—was that the leaders were irresponsible and that they were not proper men to deal with, for one reason or another. It was a personal objection more than anything else. They said it was not a question of wages or a question of working conditions; that they would be willing to deal with any responsible organization for that; but they wanted to do the right thing there, and they could not afford to have their business controlled by agitators.

Well, now it seemed to me that if that had been the case, why did they immediately reduce the wages as soon as the union was destroyed; if the economic issue was not the real issue—if it was just simply a question of personality, then naturally wages should have stayed where they were. There should have been no reduction. So it seems to me that was in the part of the report which was not printed, this interpretation of the figures.

I believe there we find the real animus of the packers toward the union. They felt it was a menace to them from an economic standpoint. There would have been a constantly increasing demand for higher scale of wages, for improved working conditions, reduction of hours, and so on, and that therefore they felt it was best to make a fight against the organization, and so succeeded in defeating and destroying the organization. That is a fact which was apparent, that the wages were reduced as soon as the union was destroyed—not for all the workers. The high-paid workers did not have their wages reduced, and since that time some of them have had their wages increased.

Since 1908 down to the present time the movement of wages has been very small. There has been a slight increase in most of the departments, so that it would probably be accurate to say that between 1903 and 1915 there has been

a 10 per cent increase in wages right straight through in the stockyards district.

But, on the other hand, during the same period the cost of living has increased much more rapidly. So it is my contention, and was in the report, that the wages, the purchasing power, has declined steadily in the packing industry, has declined all the time from 1903 up to the present date; that is to say, the amount of money which an employee in a given department in the packing industry gets will buy less to-day than the same amount for a similar amount of labor would have bought 10 years ago or 15 years ago. This decline has taken place chiefly during the period since the union was destroyed—that is, the decline of the purchasing power of the workers in that industry. That is a very small part of the movement, and I can not give the exact figures except taking time to read a whole section from this report where it is given by groups and sections.

There are certain other points here which I wish to comment upon. And I might say, by the way, in some of the other cities where the packing industry is conducted, there was a similar reduction of wages immediately after the strike. For example, on page 33 of this report you will find in South Omaha the wages of unskilled workers were reduced from 19 to 17½ cents per hour immediately after the union was destroyed. This is taken from the report of the United States Immigration Commissioner, which had investigators looking into the matter at that time.

There is one statement here on page 23 of the report which is not strictly accurate and it needs a little qualification. That is, that one of the companies has definitely adopted the policy of paying for not less than 40 hours' work to every employee regardless of the actual amount of time put in during the week. That applies to only one or two departments. It should have been qualified to that extent—that they have adopted that policy in one or two departments. But it is not a universal policy by any means. That company is not Armour & Co. It is another one of the packers.

Chairman WALSH. In Chicago?

Prof. KENNEDY. Here in Chicago.

Chairman WALSH. What company is it?

Prof. KENNEDY. Swift & Co. One of the packers told me and told members of the board of the university settlement that they had adopted that policy in some of the departments; they were going to be paid for 40 hours' work each week whether 40 hours were put in or not. That was a recognition of the difficulties under which the employees were suffering, not knowing whether they would get 30 hours' work or 40 hours' or 50 hours' work or whatever it might be; that a certain minimum ought to be established and that minimum was fixed at 40 hours. Now, it seems to me that that was a very interesting departure and something that might go far toward solving the difficulties in such an industry as the packing industry from the workers' standpoint, because with this great fluctuation in the hours of labor, the workers don't know from one week's end to another whether they are going to have enough to live on or not.

Commissioner GARRETTON. They established a weekly minimum wage instead of a daily minimum wage?

Prof. KENNEDY. Yes.

Chairman WALSH. In what department was that; how many workers did it affect?

Prof. KENNEDY. The only one I can remember definitely where it was, the beef handlers, the ones who were carrying the sides of beef from the chilling rooms down to the car. It takes a very strong, sturdy group of workers to do that. I believe the idea was twofold, one to satisfy these men with the wages and the other to keep their organization intact; that is, this group of workers. It takes an unusually strong man.

Chairman WALSH. How many of them?

Prof. KENNEDY. Probably 150, a very small percentage of the total number of employees. That is the only department that I know of where this has been put in operation. It may be that the rule has become much more universal since that time. I don't know. It had not yet been started by Armour & Co. Swift & Co. had started it. Now, as I say, you can get the details of these wages for groups and years in this report. Now, as to the effects of those wages upon the life and home conditions of the workers, that, it seems to me, is the most striking fact of the report. We made a study of family budgets. That is, we went to the homes of the workers there in the community and asked them

to keep a record of the way they spent their money—so much for meat, so much for flour, so much for rent, and so much for every item.

We started out with about 600 families, and by the time the investigation was concluded there were only 184 who had kept budgets which were worth anything, in our opinion. Out of the 600, those 184 budgets were used in determining what a family could live on, what they did live on, and in figuring out how much wages were necessary for a certain minimum standard of living in that community. And as a result of that study I came to the conclusion that the absolute minimum on which any family could get along in this community at all was \$800 a family. The average wage of the husband in those families, the average wage they have received by actual record was \$500—\$503—of those families who have kept records. That left \$300 to be made up in some other manner to keep the minimum standard of living, and the question is, where did it come from. Our investigation showed it came from a great many sources.

In a number of families, about 50 of them, the children went to work between the ages of 14 and 16. In other words, if the head of the family does not earn enough to make the necessities of the family, then that leads to child labor. Not only did the children go to work, but the wives went to work, and in some cases went out as scrub women. And not only that, but many families supplemented their income by taking in boarders, and that led directly to the housing problem. The housing problem in the stockyards is very serious, much more serious than appears from the external conditions. You see these little cottages or frame dwellings out there and it looks as if there is not any great density of population. It is not like the tenements of the East Side of New York, but nevertheless there are housing problems there, and the housing problem in this way; say, a family would have a four-room house and pay \$12 a month for the four rooms. If the income of this family was only \$500 from the husband, they had to increase their income and would go to taking in boarders in those four rooms, roomers, to get such money as they can in that way. And in many cases we found very, very serious overcrowding in those small tenements, in those four-room apartments, which were held by the stockyards workers.

So, in my opinion, the housing problem grew immediately and directly out of the low-wage conditions. That is the child-labor problem and the problem of the women going to work when they ought to be home looking after their children; as far as the children need bringing up is concerned and the housing problem, they were all the direct consequences of the low-wage scale in the packing industry. It seems to me that that was the determining condition, that if the husband or the breadwinner does not earn enough to support the family, then you must look for other means being adopted to supplement that income, and our investigation, our family budget satisfied us that that was the case absolutely without any question at all, that in those families they had to supplement the income in one way or another, and it led to some very serious problems. So that it seems to me that the remedy for child labor in that community was merely a question of wages in the packing houses and those housing conditions were not so much a question of stricter housing ordinances as it was a question of earning an amount to pay for a decent home.

Not only that, but the health of those people out there was seriously affected by the low wage scale.

I went to the health department, went to the death records for what I considered the stockyards district, that is, the district between Thirty-ninth and Fifty-first Streets and Halstead and Roby, the district surrounding the packing houses. I found in the years 1908 and 1909, 429 persons between the ages of 16 and 50 died from all causes in that particular district. Out of that number, 132, or 30.8 per cent, died of tuberculosis. That is from the records of the health department. Nearly one-third of all the deaths was from tuberculosis. I not only gathered that information from a general standpoint, but I gathered it by streets and blocks, and I want to read to you some of those to show you what a terrible slaughter is going on there because of bad sanitary conditions, housing conditions, undernourishment, and so on, which, in my opinion, come directly from the economic situation in the packing industry. Right near the University of Chicago Settlement, the block of Latta Street—I am taking just this one block, which is one of the worst in the whole district, to show you the number of deaths from tuberculosis there in this period of two years. At 4501 there was a death during this period; at 4553 there was a death; 4550, 4556, two deaths; four died in that single block. Of the men,

one man at 4503; another one at 4507, and another one at 4509; another one at 4522, 4523, 4538, 4542; within a year there were 11 adults who died from tuberculosis within a single block in the stockyards district; taken from the records of the health department.

Commissioner GARRBETSON. Is that a single block along one street or along several?

Prof. KENNEDY. It is just as we would say on both sides of the street between, we will say, Randolph and Washington, just between corners, on both sides of the street.

Commissioner AIGHTON. Does your statement show the nationality of those?

Prof. KENNEDY. It gives the name. Most of them are Polish and Lithuanian living out in that district, and the Slovak. I have the records here; the names and addresses of those who have died from tuberculosis in that district. Of course, it is a very high death rate.

Commissioner LENNON. Have you the percentage of the city to show how excessive that is?

Prof. KENNEDY. I have not, except the health department gets out ward maps. I do not happen to have one of them here, but they call the twenty-ninth ward—the stockyards is the twenty-ninth ward—among the worst wards of the city of Chicago. The first and eighteenth wards are worse, but of what are considered residence wards, home wards, the twenty-ninth and thirtieth are the worst in the city of Chicago.

The causes of this high death rate, as are told to me there and elsewhere, are working conditions which are not sanitary, that is, they are working in places where the temperature is chilly, where there is water trickling from the ceilings, and so on, as happens to be the case in some of the workmen in the packing houses; in departments like the fertilizer department, where there is a great deal of dust in the atmosphere, and in those particular departments conditions are favorable for the development of tuberculosis.

Then, housing conditions are not satisfactory, and in many cases the workers are undernourished. Their work is irregular and their habits are irregular, and consequently there is a great deal of resorting to the use of alcoholic liquors on the part of some of these, which is connected up with the general situation, in my opinion. That is to say, a man goes to work at 7 o'clock in the morning, looking for a job. He does not get any. Just outside of the stockyards district is a cordon of saloons, and it is the easiest thing in the world to step out to those saloons and the most natural thing in the world. It seems to me that is one of the main causes of the excessive use of alcoholic liquors, although there may be other causes. So that we have a very high death rate from tuberculosis in that district.

The same way with the infant mortality. At the time I was there, I gathered figures from the health department, showing that 1 infant out of every 3 that is born dies before the age of 2 years, which is seven times the highest in a neighboring ward over near the lake shore. The death rate is just seven times as high, and that is due to many causes, of course.

One of them is overcrowding; bad ventilation; housing conditions are bad; another is that many of the peasants coming to this country are not used to city conditions; they do not understand city methods of life, and consequently they do not take the necessary precautions from a sanitary standpoint which are necessary where people live close together, and many of them need instruction in the care of babies.

That is being taken care of by the work of the infant welfare department, where they are doing a great deal to reduce the death rate. But fundamentally it seems to me that the same basic economic conditions are just working out in another direction there, bad housing, undernourishment, and where we have gained any attention at all, we see how all of those things mean a higher mortality among the children. And it is shown very clearly in the statistics from the health department. Those things are all brought out in this investigation.

There is not any question at all about the facts. This part of the report dealing with these facts was not printed. The significance of those facts, to my mind, are important. I have that report here.

Now, the part dealing with the labor organizations, I stated in that part of the report, in my opinion, the only protection that those workers have out there or will get, is through labor organizations, because here is the situation in the packing industry: The packers are, most of them, very able men personally. They have selected a corps of very able men to manage their business.

skillful men, and able men, to deal with others. They are very highly organized themselves. There is no industry in the country where business is more highly organized than the packing industry. And not only are they organized as individual industries, but they are organized as a group. They act together in dealing with labor—Armour, Swift, Morris, and others—when the strike came on they stood together solidly. So they are always organized and always have been organized, at least in recent years. Their organization is well laid.

Now, the people who deal with them, for the most part, are very recent immigrants—Lithuanians, Poles, Slovaks, and others—who come to this country, and who do not understand the English language well and who know nothing about the conditions of industry, and they come there and compete for jobs, and, competing for jobs, what is to prevent them from running the wages down to the lowest possible level of existence, unless there is an organization to unite those workers together, so they do not catch one another's throats?

It seems to me that was the fundamental fact there in that situation, that without organization, without unity, without some means of balancing the power of the packers on the other side, the wages would be sure to go down to the minimum. Furthermore, that the individual worker would have no means of redressing grievances. What chance has one of these ignorant immigrants got when dealing with Armour, for example? First of all, it is not probable he would ever see Mr. Armour or get an opportunity to talk to him. In the second place, if he did ever see him, could he handle his own case?

Take a man that has been in this country two years, and some of them have been, and they are not able to handle their case at all.

So from the standpoint of wages and from the standpoint of redress of grievances, and from the standpoint of having something to say about their working conditions and the conditions in the industry, there seems to me that in that industry there is need for a powerful labor organization. I so stated in this report.

Not only that, but I submitted a letter from the United States Department of Labor, I believe it was. This also was not published, but while it is a rather long letter, I would like to read it, because of the bearing it has upon this matter. This letter was written in 1904, and it is called "Influence of trade-unions on immigrants." It is addressed to the President of the United States by Carroll D. Wright, who was labor commissioner.

It is as follows:

SEPTEMBER 8, 1904.

To the PRESIDENT:

Referring to your letter of August 4, transmitting a communication from Mary E. McDowell, appearing in the Chicago Daily News of Friday, July 29, and to your letter of August 10, inclosing an editorial from Chicago Tribune, entitled "The union and the immigrant," and asking that in the investigation conducted relative to the meat strike in Chicago the statements in these two inclosures be investigated, I have the honor to report that they have been taken up by our agent, Mr. Ethelbert Stewart, with the following results:

The article of Miss McDowell and the editorial relate practically to one supposed influence of the trade-unions among the foreign element employed in the packing business of Chicago. This influence is exceedingly interesting and throws a valuable side light on the whole question involved. The immigrant is, in the first instance, a wage reducer, either directly or indirectly, although the extent of his influence upon wages can not well be stated; but as a prospective wage reducer he is met by the trade-union in self-defense, just as the trade-union meets female and child labor, except in this, the union seeks to organize the immigrants, while it seeks by legislation to prohibit or limit the work of women and children—that is, the union seeks the aid of the State to prevent wage reductions by means of female and child labor, and it seeks by organizing the immigrants to prevent reduction of wages by immigration. It makes no claim of undertaking any charitable or primarily civic education among the immigrants, but the secondary effect of the union on the immigrant is distinctively civic in character. It is the first and for a time the only point at which he touches any influences outside his clan. Even the progressive forces inside the nationality lines consider the immigrant hopeless and seek only to reach his children—as, for instance, the officers of the Polish National Alliance direct their effort toward getting the Poles to send their children to American public schools and to have them mix with and become part of the whole people. The trade-union, however, must deal with the immigrant himself, and the immigrant, when he learns that the union wants to raise his wages, decrease his

hours of labor, etc., he begins to see the necessity of learning the English language, of understanding the institutions he hears talked about in the union meetings, and other matters which interest him.

At the risk of taking up too much of your time, let me state a bit of history. From 1880 to 1886 the nationalities employed in the stockyards, in the order of their numerical importance, were Irish, Americans, Germans, and a few Scotch. The great strike of 1886 disrupted the only organization of workmen in the yards—that of the Knights of Labor—and after the failure of the strike a notable exodus of American and the more active men among the Irish began. Whether this was entirely voluntary, or in part resulted from activity in the strike, is not germane to this subject. The Poles began to come into the yards in 1886, after the settlement of the strike, but not as strike breakers. This appears to have been voluntary immigration, increasing in volume until by 1890 the most of the unskilled occupations were filled by Poles, who by 1894 had practical control of the common labor.

The Bohemians began to affect noticeably the situation in 1894, going first into the inferior positions, which they shared with the Poles. There were two minor strikes between 1890 and 1894, which, in a measure, aided in bringing about this result. There was some movement upward among the Poles—that is, from lower to higher occupations—but not so marked among the Bohemians. The Bohemians, coming in later, began under the Poles—that is, took the lower positions as the Poles went up—and divided the entire unskilled labor possibilities with the Poles. The Bohemians, however, soon outstripped the Poles in the movement upward from unskilled to skilled occupations.

The strike of 1894 unsettled these movements temporarily. Negro labor was employed to break the strike and has been an element in the situation ever since. In 1880 but one negro was employed in the yards and he worked in Armour's killing gang. While few of the strike breakers of 1894 were retained, yet that event marks the real beginning of the employment of negroes. At the beginning of the present strike some 500 negroes worked in the yards, many of whom belonged to the union.

After the strike of 1894 was settled the Bohemians were introduced more rapidly, and this continued up to 1896. In 1895 the Lithuanians began coming in, followed by Slovaks in 1896, and this continued steadily until 1899, when the number began to increase rapidly. Two years ago an enormous influx of Lithuanians, Slovaks, and Russian Poles occurred, swamping the labor market in the yards. This was caused largely because of the threatening war between Russia and Japan, and the consequent rush of people to escape compulsory military duty. This has been appreciably checked within the last six or eight months.

The proportion of workmen of the various nationalities in the yards at the beginning of the present strike (July 12, 1904) was, approximately: Irish, 25 per cent; Americans and Scotch, about 2 per cent; Germans, 15 per cent; Poles, 20 per cent; Bohemians, 20 per cent. (This is all leading up to the effect of unions on the nationalities.) The remainder were Lithuanians, Slovaks, a very few Krains, and, among the most recent arrivals, Finns and Greeks, the latter, however, not being appreciable in number. No attention has been paid in this investigation to immigrants having a representation fewer in number than the Lithuanians and Slavonians.

Of these nationalities, excluding the Irish and Germans, which are not here considered as immigrants, the Bohemians are the most progressive and have the industrial advantage in this, that many of the foremen are Bohemians and give preference of their nationality when taking on new men. There is no apparent surplus of Irish, Germans, Americans, or Bohemians in the labor market of the district affected, the surplus being composed of Poles, Slovaks, and Lithuanians.

Among the immigrants mentioned, except the Irish and Germans, the clan spirit is at first all powerful. The Bohemians, while Catholics, are Bohemian Catholics, and the Poles are Polish Catholics. This even more true of the Lithuanians and the Slavonians, who are the most clannish of all. No doubt difference in language has much to do with this, but it is by no means the most serious feature. Each nationality has not only its own church, but its own school system, the Lithuanian schools making no pretense of teaching English, some of the teachers not being able even to speak it. The Slavs and Galicians have not as yet opened schools of their own. While the religion of these different nationalities may be said to be one, the associations are along exclusive nationality lines. They settle or rent properties by districts, and in branching out to occupy more territory one side of the street will first become

Lithuanians for a block or so and then the other side of the street will be occupied by the same nationality. The single men invariably board only in families of their own clan. Language has something to do with this, but really less than might be apparent on first consideration and less than might seem to be true. When organizing building and loan associations it is done along strictly clan lines. The Bohemians have four of this class of associations, the Poles three, and the Lithuanians one. The Slavs as yet have none. There are other clannish distinctions, as Lithuanian Republican clubs, Lithuanian Democratic clubs, Bohemian Socialist clubs, Bohemian Democratic clubs, everywhere and always along the strictest lines of nationality.

It is currently reported that before the organization of the union this condition occasionally threatened riots along clan lines, owing to the fact that foremen showed such preference for men of their own clan. The union was organized by trades and departments, and the officials refuse to permit nationality lines to be recognized. In the sheep butchers' union are to be found all the men connected with sheep killing, regardless of nationalities. So severe was the fight made upon this plan by the clan leaders—those who drew emoluments or secured social prestige as leaders of the various strictly clan societies—and so seemingly insurmountable was the objection raised by the Lithuanians to the union that in 1900, when the Lithuanians were first organized, it was permitted in one case to organize a Lithuanian union. The experiment, however, was a signal failure. No subsequent experiments have been permitted.

The unions in the stockyards are controlled by the Irish, ably assisted by the Germans. As a Bohemian or a Pole learns the language and develops he is elected business agent or other official. In the pork butchers' union, for instance, there are about 1,800 members, 600 of whom are Irish, 600 Germans, 800 Poles, and 300 Lithuanians, and Slavs. This union recently elected a Pole as president of the local. In their business meetings the motions made, resolutions read, and speeches delivered are usually interpreted in five languages, though in some locals in only three. All business, however, is transacted primarily in English, although any member may speak to any motion in the language he best understands, his words being rendered into English for the minutes of the meetings and into all the languages necessary for the information of members. It is here that the practical utility of learning English is first brought home forcibly to the immigrant. In all other of his associations not only does his own language suffice, but, for reasons that can be well understood, shrewd leaders minimize the importance of learning any other. (The only notable exception to this is the National Polish Alliance, and even here only the Polish language is used. There is no apparent influence exerted, however, to create the impression that the Polish is all sufficient.)

In this trade-union the Slav mixes with the Lithuanian, the German, and the Irish, and this is the only place they do mix until, by virtue of this intercourse and this mixing, clannishness is to a degree destroyed, and a social mixing along other lines comes naturally into play. Not only is the Amalgamated Meat Cutters' Union an Americanizing influence in the stockyards, but for the Poles, Lithuanians, and Slovaks it is the only Americanizing influence, so far as could be determined in this investigation. It is true this Americanizing is being done by the Irish and Germans, but it is Americanizing nevertheless, and is being done as rapidly as the material to work on will permit, and very well indeed. Again, the reaction is good in its results. The feeling among the Irish against the Dutch and the Polack is rapidly dying out. As the Irish in Chicago express it, "Association together and industrial necessity have shown us that, however it may go against the grain, we must admit that common interests and brotherhood must include the Polack and the Sheeny." It is also admitted that when the speech of the Lithuanian is translated in the meeting of the trade-union the Irish and the German see in it the workings of a fairly good mind. Some of the best suggestions come from Bohemians, and mutual respect takes the place of mutual hatred.

The investigation disclosed the influence of the union in teaching the immigrant the nature of the American form of government. The records of this office, independent of this investigation, show that during an investigation of building and loan associations a few years ago information from the Bohemians, Polish, and other clannish associations of that character could be obtained only through the services of an interpreter. It was found that as soon as a Bohemian or a Pole heard the word "Government," or "Government agent," he closed his mouth, and it was impossible to secure any information.

This has been true in other investigations, notably in collecting family budgets; but with an intelligent interpreter, using their own language, the nature of the work was explained, and no further difficulty experienced. The union is breaking down this trait of character in the foreigners of the nationalities mentioned. This it is doing not as a matter of philanthropy, but from a selfish necessity. The immigrant must be taught that he must stand straight up on his own feet; that the ward politician is dependent on him—on his vote, and so forth—and not he on the ward politician. In this way he first learns that he is a part of the Government, and while this is done by indirection, in a large sense, there is no other force that is doing it at all. The Pole, the Bohemian, the Lithuanian, the Slovak, and to a much lesser degree the Gallician, have inherited the feeling that somehow government is a thing inimical to their natural development—a power forcing itself upon them from afar; an intrusive power for repression, taxation, punishment only; a thing which they must stand in awe of, obey, pay tribute to, and wish that it had not come among their people, even if they did not secretly hate it—a thing, in short, which ought not to be. Being weaker they must be silent in its presence, and if forced to speak, lie, as for them to tell the truth would mean imprisonment or death.

It is not necessary for these things to be true in order that the illiterate peasants should have believed them for generations.

Seventy-five per cent of the stockyard immigrants are of the peasant and agricultural labor class of Europe, and comparatively few of them can read or write in their own language. To make such a people feel that the Government is their friend, that they are a part of it, that development and education, not repression, are its objects and its purposes with and for them, is an enormous task, and one which a trade-union single handed and alone can not be expected to accomplish by indirection in a few years, with the flood of new ignorance that has been brought in by the high tide of immigration into the stockyards.

In every trade-union, however conservative, there are members who will occasionally get the floor and advise their hearers to vote high wages and shorter hours at the ballot box. As the groups of Slovaks gather around after the business is over to have these things explained to them, many of them get their first real idea of what the ballot and election day mean, and the relation of these to the Government itself. In their own home countries the two essential, if not only, elements of the peasant and agricultural laborer's mind is to believe and obey or follow. Advantage is taken of this fact here by clan politicians, as well as the clan leader in every department. Once the leader can make the people believe in him, he thinks for the entire group, and insists that their duty consists in following his lead implicitly. Necessarily the trade-union, in order to get them to break away from the leader that opposed the union on industrial lines, would be compelled to urge them to consider their own personal and group interests as wageworkers; to think and act for themselves along lines where they knew the real conditions better than anyone else, and certainly better than their leader in a child-insurance society or something else as remote. Here, too, are the first germs of what may be called the departmental thinking implanted in their minds—that is, that while a leader may be worthy of their confidence in one thing, it does not necessarily follow that he is so in some other class of interests.

It is doubtful if any organization other than a trade-union could accomplish these things, for only the bread-and-butter necessity would be potent enough as an influence as to bring these people out of the fixed forms and crystallizations of life into which they have been compressed. Certain it is that no other organization is attempting to do this work, at least not amalgamation, which is the only way assimilation can be secured among these various foreign elements. The drawing of these people away from their petty clique leaders and getting them to think for themselves upon one line of topics, namely, the industrial conditions and the importance of trade organizations, result in a mental uplift. The only way they can pull a Slovak away from his leader is to pull him up until he has gotten above his leader along the lines of thought they are working on. The very essence of the trade argument on the immigrant is—unconsciously again—an uplifting and an Americanizing influence. The unionist begins to talk better wages, better working conditions, better opportunities, better homes, better clothes. Now, one can not eternally argue better, "better" in the ears of any man, no matter how restricted the particular "better" harped on, without producing something of a psychological atmosphere of "better" in all his thought and life activities. If better food, better wages, or even better beer, is the only kind of "better" one might get

a Slovak or a Lithuanian to think about, then the only way to improve him is to inject the thought of "better" into the only crevice to be found in his stupidity.

Of course, many object to attempts to improve these people, because the immigrants from Lithuania, Slavonia, and Russian Poland are better off here than they ever were or could be in their own countries; that, left to themselves they would not only be perfectly satisfied but delighted with their improved conditions; that the union must first produce discontent and dissatisfaction with what would otherwise be entirely satisfactory before it can get these immigrants even to talk about joining the union. Again, it is urged that at home they do not expect to eat as good food as other people, nor to dress as well nor to live in as good houses; that, as peasants, they never compare themselves with other people or classes of people.

In opposition to all these things, the union begins by teaching the immigrant that his wages are not so good as another man's, doing practically the same kind of work, while it neglects to tell him he is not doing it so well, so intelligently, not so much of it perhaps; but the union gets him to compare himself not with what he was in Lithuania but with some German or Irish family, and then "stings him with the assertion that he has as much right to live that way as anybody." The union attempts to show the immigrant that he can live better only by getting more money, and that by joining the union he will get it. If left alone he would be entirely satisfied, perhaps, with what he was getting before. It is perfectly true, probably, that in most cases the union does not care for the Lithuanian in the first instance, the real purpose being to protect their own wages by getting the immigrants to demand high wages for their labor. So later on some degree of fellowship is engendered, but self-defense is the real motive.

The union point of view is that for a Lithuanian peasant to be contented, satisfied, and happy with the Lithuanian standard of living in America is a crime, a crime not only against himself but against America and everyone who wishes to make individual and social development possible in America, and that whatever the union's motives for creating discontent, that fact that it does create a discontent among the immigrants which is the first step toward their improvement and ultimate Americanization renders the union so far a public benefactor.

Many persons were interviewed in securing information along these lines—bankers, professional men, and all classes. One gentleman, in the banking business, in the stockyards district for many years, stated that the Slavonians and Galicians have been buying homes within the last 18 months to a most remarkable and unprecedented extent, and that this is in a measure true of the Lithuanians, but not to such a marked degree. He testifies that the union has given these people a sense of security in their positions. By mixing up the nationalities in the union meeting it has made them acquainted with each other and dispelled an undefined dread of pending race war or struggle between nationalities in the yards. Formerly most of the Slovak and Lithuanian immigrants were a floater class. About the only ones who return to their homes now are the Galicians, in whose country a more or less representative form of government prevails. Others testified in a similar way, although some thought the union had done little except to agitate for higher, higher, and higher wages regardless of economic conditions.

On the police side of the problem, a sergeant of the twentieth precinct, that known as "back of the yards," which is crowded with the Bohemian and Polish elements, stated that there had been the greatest improvement since the union was formed, in 1900—less disorder, better living, more intelligence, and more understanding of American institutions and laws; that they employ fewer policemen in the district, and that less crime is committed than prior to 1900.

The studies of the various nationalities involved in the present meat strike brings out some valuable points relative to the restriction of immigration. Among them there seems to be an unalterable opposition to laws excluding those who can not read and write in their own language, and their argument is that the peasant population of central and eastern Europe, from which they came, have more rugged morals, simpler lives, and fewer vices than the inhabitants of the cities and towns, who can read and write, as a rule. They consider themselves not responsible morally or politically for the fact that Russia has fewer schools than Illinois and spends less money on education in a year than does that State. They claim that their ignorance is not of the

kind that is synonymous with vice or with crime; that they are as innocent as ignorant, whereas a far worse town and city population would be admitted without question under such laws. They have some peculiar ideas about prohibiting absolutely any immigration for a specific term of years and then allowing only a certain percentage to come in each year thereafter; but the main point they make is as to the illiteracy of the peasant class, the most desirable we can secure, and the literacy of the criminal classes of the great cities which could come in under such restrictive legislation. These facts are only a part of this study brought out by your two letters, and the study has seemed to me so interesting and, in a way, so novel, that I have taken courage to give you the results quite in extenso.

I am, with highest regards, very respectfully,

CARROLL D. WRIGHT, *Commissioner.*

Chairman WALSH. What letter is that?

Prof. KENNEDY. A letter sent by Carroll D. Wright, who was Labor Commissioner, to President Roosevelt at that time, and the information was gathered by Ethelbert Stewart, who has been connected with the Government Labor Bureau for many years.

Commissioner AISHON. That was about 1910?

Prof. KENNEDY. In 1904, at the time of the strike, and I wish to submit this to show the effect of the union upon those various nationalities in the community; and my own impression bore out this letter, that is to say, that the unifying influences in the community were very few; that there was simply a group of clans of Lithuanians, Poles, Slovaks, Bohemians, etc., and that the union was the most powerful influence in solidifying that community and bringing all of these different nationalities together.

After 1904 the union was gone, but traces of it could be found as late as 1910; you would find old union men here and there and they would talk about what had been done, but that work has not been carried on by any organization or group since the union passed away. So that, not only from the standpoint of wages, but from the standpoint of unifying the community and educating these new immigrants and assimilating them, the union movement was the most powerful one, and the most beneficent organization that could be formed in that community, and that is the reason I spent so much time dealing with it in this report; that is the part of the report that was not published. The settlement board had his survey published for the ostensible reason of gathering data as to working conditions in the community, and the conclusion I came to was that it should be a strong union or organization instead of a philanthropic union, and that is the reason this long letter was introduced.

There is another letter I have that I can give you the substance of without going into it at length; it is from the secretary-treasurer of the United Mine Workers of Illinois. During the same period that wages were being reduced in the stockyards district, or at least not going ahead, that is from 1903 to 1910, wages in the mining industry in the State of Illinois were advanced, and advanced quite considerably. Now, it seems to me this was a significant fact, that practically the same type of labor was engaged in the mining industry as in the packing industry, that is, Lithuanians, Poles, and Slovaks, etc. However, the miners had been organized and they had pushed it and got improved conditions such as shorter hours of labor, better wages, and had gained great advantages in many ways, as was admitted by the miners and by the owners of the mines. But in the packing industry, where they had no union, no advance was made in any way, either as to wages or working conditions or anything of that sort.

Another thing the union worked for, and gained a certain extent up to 1903, was uniformity in regard to hours of labor. They wanted to have it settled, for example, that instead of leaving it for a foreman to decide, on 20 minutes' notice, that the workers should come to work at, say, 8 o'clock, that they would have a regular time for starting to work, and they worked constantly for regular hours in the packing industry. Since then, little has been done and little progress made.

Now, all of this material was introduced in this report, simply because, in my opinion, it really had a bearing upon the improving of conditions of labor in that district; and while those that oppose unions might consider it partisan, it seemed to me it was the only scientific thing to put into the report; it really stated the facts of the case, and nothing should be excluded from the report.

And to my mind the only way of dealing with the housing proposition, the only way of dealing with child labor, as far as it prevails, and the only way of dealing with sanitary conditions, the tremendous death rate out there, and all the other problems, which are, to my mind, secondary, is by the organization of a labor union or organization which can speak for them and be heard in dealing with the owners of the industry.

Now, the owners have started some what you might call health work since the union has gone, and their contention is that everything the union stands for or can get for the workers, they will be ready to provide directly without any union, and do it through various insurance schemes and benefits of one sort or another.

Now, so far as the pension plan has been developed, in some of the companies it applies, or did up to the time I was conducting this investigation—it applies only to the salaried employees—old-age pensions. In my opinion, the ones that need it the most are not the salaried men, but the other fellows. The salaried fellows can save up some money, well, I am not so sure about that, but if anyone can, they ought to be able to do it; they are the ones that get the largest income. What chance has a man who is getting \$10 or \$12 a week to do that? And the man who only gets \$10 or \$12 a week is the one who breaks down first; he is the one that is subject to the changes in temperature, and the heavy work, and when he has broken down physically that is the end of him unless he goes to the poorhouse; and if anyone should get old-age pension, it is those who labor physically, the ones that get the lowest wages and who are subjected to the worst conditions of labor. But, so far, in inaugurating these things they have begun at the top and not done anything for the rest of them. However, there is a sort of sick and death insurance started in some of the companies. There was none in Armour & Co. up to that date, possibly there has been since; they were starting it at that time, which would provide for some sort of benefit in case of sickness or accident.

Now, in all of those insurance schemes, they are contributory, the employees must contribute a certain amount, the employers must contribute a certain amount. That is one form of welfare work, the pension and the insurance, as they call it. Generally these insurance schemes are so drawn that if an employee goes on a strike or does anything that the companies do not like, it takes away his whole future as far as getting anything from these schemes is concerned, so it seems to me like a menace rather than a help to the employees. If they have any stamina and independence and any desire to unite and demand certain things, they are tied up by these welfare schemes, and they hesitate to do anything that will endanger their benefits, so far as that is concerned. So there are two sides to that, one the side of the worker, and the other the side of the employer. So if the worker goes into these schemes he sacrifices some of his advantages on the other side; there is no doubt about that.

I don't know whether I have covered all the points I wanted to. There is one phase of this study which struck me very forcibly, and that is the effect of this modern method of production upon the mind and body of the worker. Perhaps all of you have gone through a packing house. You will find that each one does some little thing; for example, one may do nothing but cut off the hoofs of the cattle, nothing else, just keep doing that one stroke, or slitting up a piece of skin, or something of that sort, and I wonder what is the effect upon the mind and body of a worker if that is his life work, if he is not entitled to a certain consideration for that. Or another worker does nothing but sweep blood off of the floor, that is his life work, provided he does not get promoted to something else; or he may just swing an ax, cutting off a certain piece of pork, as I have seen them do, or something of that kind.

Now, then, all of this labor, we are told, is necessary, and this division of labor is necessary; but are all of the benefits going to one group and to the disadvantage of another group? Are all of the advantages from the division of labor going to the owners and all of the disadvantages, the narrow, routine work which absolutely deadens one, mentally and physically, going to the workers? Is one side to get all of the advantages and the other not get any benefit? That impressed me most deeply in the packing industry. That has not a direct bearing on wages, perhaps, but it has a direct bearing on the lives of these people.

Commissioner O'CONNELL. Does that apply generally?

Prof. KENNEDY. Yes, sir; increasingly in industry after industry; but it is most striking in the packing industry—so many departments of the labor are

disgusting—and I have thought that if I were condemned to that sort of slavery for life, what would I think of it? If I were condemned by the sentence of a judge to do nothing but sweep blood off of the floor of a packing house all the rest of my life, what would I think of it? We need some sort of compensation given to workers of that sort, and that is entirely lost sight of in that industry.

Now, there is one other comment I would like to make along that line. I have here some sections from the report which was submitted by Messrs. Reynolds and Neill at the time of investigation of stockyard conditions from a sanitary standpoint, and while I won't touch upon what they had to say about the sanitary conditions, I want to read what it said in the report in regard to the treatment of employees, because what was said then applies nearly as much to-day. They say here, and I quote from the report they submitted to the President at that time:

"The lack of consideration for the health and comfort of the laborers in the Chicago stockyards seems to be a direct consequence of the system of administration that prevails. The various departments are under direct control of superintendents, who claim to use full authority in dealing with the employees, and who seem to ignore all considerations except those of the account book. (This is as true to-day as it was then.) Under this system proper care of the products and of the health and comfort of the employees is impossible, and the consumer suffers in consequence. The insanitary conditions in which the laborers work and the feverish pace which they are forced to maintain inevitably affect health. Physicians state that tuberculosis is proportionately prevalent in the stockyards, and the victims of this disease expectorate on the spongy wooden floors of the workroom, from which fallen scraps of meat are later shoveled up to be converted into food products."

I do not know whether that is true to-day; I am only referring to the particular effect of the labor conditions. There is a description here of the various workrooms, and those conditions have been somewhat improved since this report was written; that is, the ventilation and cleanliness is better now than it was then. The sanitary conditions have been improved some, but they are still inferior to those in other industries of similar size.

There are many rooms almost without ventilation and in some rooms there was water dripping from the ceiling upon the heads of employees from coolers and one thing and another, and, of course, it was inevitable that those employees would sooner or later have rheumatism or some other disease; no one can work in rooms with comparatively low temperature and water dripping down on them without suffering from it. Those conditions have not been entirely remedied by any means, but the conditions are better than they were.

I spent three months going through every room, as far as I know, in the packing industry—from room to room—and made notes and could tell the exact rooms where I thought the conditions were wrong, and I found a great many where the conditions were far from being satisfactory as to ventilation or temperature or protection of the workers for their health; and that leads to the higher death rate of which I have spoken.

Now, there is another aspect to all of this. On the north side of the city there is a great big tuberculosis sanitarium that is maintained by the city of Chicago; it is supported by taxation, and many of the victims come from this stockyards district.

When conditions prevail in an industry which bring about disease and necessitate the recourse to charity, when you have had housing conditions, and all those things which must be dealt with by the community, why, that is only another method of subsidizing that particular industry if the industry does not pay its employees enough so that they can live in decency and health; the community suffers and that is true in this community in the packing industry. Either the industry is so poor that it can not afford to pay them, or it is not doing what it ought to do—one or the other. There is no question at all but that disease can be directly traced to working conditions and to low wages.

I think that is just about all I care to submit, unless you have some questions to ask me, Mr. Chairman.

Chairman WALSH. Are you familiar generally with the work of these settlement houses, of voluntary organizations and societies of like character?

Prof. KENNEDY. I lived at the University of Chicago Settlement for two years, and I am acquainted with most of the settlements here in Chicago and some outside; yes, sir.

Chairman WALSH. Are you familiar with the methods used by college professors and instructors in studying and ascertaining sociological and economic truths and in disseminating those truths when ascertained?

Prof. KENNEDY. Yes, sir.

Chairman WALSH. What would you say as to the function of philanthropy in our industrial and economic system?

Prof. KENNEDY. At the present time?

Chairman WALSH. Yes; at the present time, and as to what it ought to be if it has a function?

Prof. KENNEDY. I think the function is two or three fold; that is, at present I believe there are some of them interested in these philanthropic institutions who see a great deal of suffering and do the things which seems to them to demand the most immediate relief, without going into the philosophy of it very much or of thinking very deeply on the question. They see suffering and they give immediate relief if they can. I think there are others who think more deeply and say unless you patch things up a little and give immediate relief, it will be necessary to face certain substantial and fundamental changes in social conditions and the best way to head that off and allay discontent, and at the same time appear well in the eyes of their fellow citizens, is to make rather liberal donations to these philanthropic institutions so that they will be called philanthropists instead of exploiters. That is my opinion—that is one of the functions of these institutions to direct public attention away from the seriousness of the conditions and a movement on the part of the public to change those conditions. I think there is that twofold activity on the part of good-hearted people who want to relieve distress and others who are trying to forestall fundamental changes sought to be made to remove serious evils.

Chairman WALSH. Do you believe that great economists and sociologists in our colleges and universities can be relied upon to lead the way in the advancement of social and industrial justice?

Prof. KENNEDY. I do not think the most of them can be relied upon to do that.

Chairman WALSH. Why not?

Prof. KENNEDY. Because, in the first place, most of their information comes from books; they do not know the conditions as they actually are—most university teachers. They read things and study the theory very largely, and they know what Adam Smith wrote, who lived 100 years ago; and what all the various theorists have to say about industry, rent, profit, and so forth; but when it comes to knowing the actual, first-hand conditions, which are being brought out here by this commission, most university teachers of sociology and economy are lamentably ignorant. I know that by personal association with them. Secondly, even if they knew more and this, of course, will not apply to all—there are exceptions—but even if they knew more about actual conditions, in most cases the will to do something seems to be absent. A sincere desire to really deal with fundamental conditions and do it effectively, does not seem to be there in most cases. I would not say in all cases. Whether that is because of their personal associates or whether they think nothing is wrong, or whether they feel that their jobs would be in danger, I would not say, it may be one or all of those; but I think they are a poor crowd among which to look for leaders to bring about any fundamental changes in social conditions.

Chairman WALSH. How wide a circulation did this report get, that you submitted in evidence, carried on under the direction of the board of the University of Chicago Settlement?

Prof. KENNEDY. I do not think it got a very wide circulation; I do not know how many copies were printed or how many were distributed; it did not get a very wide circulation, I am sure of that.

Chairman WALSH. Upon what do you base your statement that it did not get a very wide circulation?

Prof. KENNEDY. Because I would be the one, naturally, who would hear from it, as my name is printed on the report as a director, and I would have received word if there had been a wide circulation of it. I would have been asked questions about it, if nothing else, and I have heard little from it since it was put into print.

Chairman WALSH. Did it get newspaper or magazine publicity?

Prof. KENNEDY. A little newspaper publicity, but not much; very little.

Chairman WALSH. When did it get that publicity with reference to its publication?

Prof. KENNEDY. I could not say as to the exact date it appeared, because the publication was not immediately upon the completion of the report, but copies were sent, I believe, to each newspaper in Chicago at the time it was published, and some of them commented on it rather briefly, but there was no wide publicity in regard to it.

Chairman WALSH. Have you the correspondence that passed between the settlement board and the companies involved?

Prof. KENNEDY. I have some of the letters.

Chairman WALSH. Can you submit them to us, please?

Prof. KENNEDY. Yes, sir; do you wish to have me get them now?

Chairman WALSH. You may wait until the other commissioners get through. Commissioner Garretson wishes to ask a question.

Commissioner GARRETSON. Doctor, do the packing companies, as corporations, or any of the officers thereof, contribute to the support of the settlement?

Prof. KENNEDY. The only support they ever have—I would not say the only support—I know they do support one trained nurse whose headquarters are at the settlement, and it may be there are other contributions; I could not say as to that.

Commissioner GARRETSON. The interpretations and conclusions which you state in that report, and which are not published, are compiled for the purpose of this commission, are they?

Prof. KENNEDY. Yes, sir.

Commissioner GARRETSON. In your investigation into that class of families, where your estimate showed that \$800 was necessary as the annual amount for the maintenance of the family of a certain standard, and where the family only earned—where the head of the house only earned five or six hundred dollars, did your investigation show any percentage—any appreciable percentage—of cases where the heads of the house did not earn \$800 and where child labor and such as that was resorted to to add to the income?

Prof. KENNEDY. There were cases of that sort we discovered, but not a large number.

Commissioner GARRETSON. Not to any appreciable extent?

Prof. KENNEDY. No, sir.

Commissioner GARRETSON. Is it not a fact that Carroll D. Wright, who was the Commissioner of Labor, and made the report you read here, was almost purely an academic before he became Commissioner of Labor? That he had no connection with labor circles prior to that time?

Prof. KENNEDY. I believe that is true; but this report, you understand, was really prepared by Ethelbert Stewart, and Mr. Wright was the one that submitted it to the President.

Commissioner GARRETSON. I want to be advised whether or not he had any labor connection—any labor-union connection.

Prof. KENNEDY. Not that I know of.

Commissioner GARRETSON. You spoke of your impressions in regard to pensions and other associated systems. Upon your standpoint, what is your opinion—can or can not any pension system which is made dependent upon the tenure of service on the part of the employee, and which is administered by the private agency which employs the man, be otherwise than an economic weapon?

Prof. KENNEDY. It will be a weapon in the hands of the employer, in my opinion.

Commissioner GARRETSON. Referring to the welfare work, that is a phrase that is like charity, it covers a multitude of sins; but take it as generally used, do you regard welfare work as anything but a palliative?

Prof. KENNEDY. That is all it is.

Commissioner GARRETSON. Do you look upon speeding up—you expressed your opinion in regard to an industry which loaded down a public sanitarium like a tuberculosis sanitarium as a subsidizing of that industry; do you look upon the speeding up of men, if, as is claimed, speeding up makes young men old, and condenses within a short period their period of productivity, and then they are thrown on the junk pile, is anything else than subsidizing that system?

Prof. KENNEDY. No, sir.

Commissioner GARRETSON. Any method by which a community has that result forced upon it is exploited by having such a burden thrown upon it?

Prof. KENNEDY. Yes, sir.

Commissioner GARRETSON. That is all.

Chairman WALSH. Commissioner Lennon wishes to ask a question.

Commissioner LENNON. Either through your investigation, or your observation as a citizen, in connection with this industry, do you believe that the profits of industry are equitably divided as between the proprietors and the people who do the work, the laborers?

Prof. KENNEDY. I have gotten a statement of the profits of Armour & Co. out of Poor's Manual. I find that in 1913—I was unable to find the statement for this last year, but it has been issued I know; but in 1913 the total net income of Armour & Co. was \$11,356,000. Out of that, \$1,346,000 went to the bondholders, \$1,538,000 was paid for interest on borrowed money, \$1,419,000 for administrative expenses, and \$1,023,000 for taxes, insurance, and so forth, leaving a surplus of \$6,028,000. Out of that surplus, \$2,000,000 was paid in dividends on the \$20,000,000 of stock. That is a 10 per cent dividend, so that the surplus of four—over four—millions of dollars was added to the previous surplus, bringing the total surplus of Armour & Co. for that year up to \$84,223,000. Now, I do not know just where that surplus came from, that is to say, the process by which it was derived, but at any rate, in the course of the business, the development of that concern, they have accumulated a fund of over \$84,000,000, which is classified as surplus. Now, it seems to me that when there are thousands of workers who do not receive enough wages to support their families in decency or even in physical efficiency, for an industry to be able to accumulate out of the labor of those workers, \$84,000,000 in surplus, there is something that should not be tolerated by any civilized community, if there is any way to prevent it. I can not see any justice in it or any good policy for the community. It is the accumulation of an enormous fortune out of the labor of men and women who are not paid enough for a bare existence.

Commissioner GARRETSON. From your studies, have you concluded whether or not the work of trade-unions tends to a better division of the products of industry?

Prof. KENNEDY. I am very certain that it does.

Commissioner GARRETSON. Take it here in the city of Chicago, in regard to the education of the children of the people who work out there; has it enabled them to enter the battle of life in better condition than their parents?

Prof. KENNEDY. There are public schools located there, and it is a fact that very few children of the workers there go beyond those public schools; that is, they do not go to the high schools; they go to work, as a rule, as soon as they are through the public schools, but in those schools they get the ordinary grammar-school education, and that is all. There is no training given along the line of citizenship, as far as I know.

Commissioner GARRETSON. Any vocational work?

Prof. KENNEDY. They are just beginning that. There is a start being made here in Chicago, and those schools are including that among their work—a little industrial or vocational training.

Commissioner GARRETSON. Did you make any study—I ask this question because of a statement that was made to me by the at one time manager of the Reform Schools for Boys at Pontiac—did you make any study as to whether or not there is an appreciable difference between that district as to delinquency of boys, as compared with other districts in Chicago?

Prof. KENNEDY. I have no facts on that particular point.

Commissioner GARRETSON. That is all.

Chairman WALSH. Commissioner O'Connell will ask you some questions.

Commissioner O'CONNELL. Professor, this commission has been authorized by Congress to make an investigation and, if possible, to find the underlying causes of industrial unrest, and to make such recommendations to Congress as it thinks wise in that direction. Briefly, what is your opinion?

Prof. KENNEDY. Well, I believe that the fundamental cause in that industry—

Commissioner O'CONNELL (interrupting). I do not mean in that industry, but industry generally.

Prof. KENNEDY. It is autocratic power in the hands of a few, which is used for their own enrichment rather than the benefit of the community or all of the people. There are a few that are autocrats in that industry, and the moment they see another power developing in that industry which threatens in any way to restrict their autocratic authority, they destroy it; for instance, the labor organization; consequently, that causes widespread dissatisfaction, because it is only human nature that no man wants to be the slave of another man, at least, if he has any brains he does not. Now, the people out there do not want

to be the slaves of Armour, or anybody else, and that is what they are to-day from an economic standpoint, and they are dissatisfied, and they are looking for a way out of that condition so that they will have greater freedom as far as working conditions, the hours of labor, and so forth, are concerned; in other words, have a greater voice in controlling their own lives; and that is democratizing industry; and we will always have unrest until we have democracy in industry.

Commissioner O'CONNELL. Healthy unrest is not undesirable?

Prof. KENNEDY. Not at all; there is a difference between industrial discontent, combined with hatred against the ones in power, and a discontent such as one would have who wants to improve his education, for instance; the latter is a desirable trait in any community, a desire to progress and dissatisfaction with one's present condition; but the other is a dissatisfaction against a certain group, a discontent against a certain crowd in control, who are using the industry for the advantage of a few, instead of the advantage of all.

Commissioner O'CONNELL. How would you remedy it?

Prof. KENNEDY. I believe the only way to remedy that is to get democracy in industry, which means that everybody that has anything to do with that industry, either as a worker, consumer, or owner, must have a voice, directly or indirectly, in the control of that industry.

Commissioner O'CONNELL. Do you mean public ownership?

Prof. KENNEDY. Public ownership is one of the methods of bringing that about; it is not the whole thing; but one necessary step that we must bring about, especially in those large industries. Public ownership of the industry might not bring it about; for instance, in Russia, the Government owns the railroad, and I believe the railroad workers are very much discontented at times. In other words, ownership by the Government would not mean much unless the Government was a democratic Government.

Commissioner O'CONNELL. I think you will concede that we are not going to have public ownership of all public utilities right away?

Prof. KENNEDY. Yes, sir.

Commissioner O'CONNELL. And right now we have industrial unrest?

Prof. KENNEDY. Yes, sir.

Commissioner O'CONNELL. And right now what are we to do?

Prof. KENNEDY. As I have said to many people in the social settlement, the best thing you can do, if you want to do anything at all, is to give these people organization, which gives them a countervailing power to those owning the industry. If the workers can say that the hours of labor shall be 9, instead of 10, that gives them something to say about the conditions; if they can say that the wages shall be 20 cents an hour instead of 18 cents an hour, it gives them something to say about the conditions. The most important thing that can be done out there is to give the workers organization.

Commissioner O'CONNELL. Do you believe that the formation, by the Government itself, of a department or commission of some kind, with the force of the National Government behind it—I do not mean force, but power, with the power of the Government behind it, to act as a board of conciliation, or mediation, and that that board would be compelled to make public both sides of a controversy, and that the men, whether they were organized or unorganized, have to go to it; do you think something of that kind might be organized?

Prof. KENNEDY. I think that would be better than nothing, but it would work much better if the workers were organized. When there are thousands involved in an industry, or engaged in an industry, each one of them individually can not be going and presenting his own personal grievance.

Commissioner O'CONNELL. That would carry with it organization of some kind?

Prof. KENNEDY. Yes, sir; there would have to be organization. If the workers are organized and they have a tribunal at which their grievances can be heard and adjusted, that is an advance toward industrial democracy.

Commissioner O'CONNELL. The result of having such a board would be the bringing of the men together?

Prof. KENNEDY. Yes, sir. And that would be, I think, an advance.

Chairman WALSH. Commissioner Ashton wishes to ask you a question.

Commissioner ASHTON. Professor, I understand that you think the thing that could be done immediately would be to let these employees organize into a union?

Prof. KENNEDY. Yes, sir.

Commissioner AISHTON. I think you said that you either heard from some one, or you stated it was within your own knowledge, that the coal miners had been organized?

Prof. KENNEDY. Yes, sir.

Commissioner AISHTON. And that their rate of pay had increased, whereas this other industry had stood still; now, by the organization of these men there are several things you mention as being things that ought to be eliminated; one was child labor. Have you ever made a survey of the coal-mining industry and its workers, to determine the proportion of child labor in that industry where organization exists, as to whether it is any less or greater than it is with concerns where the employees are unorganized?

Prof. KENNEDY. No, sir; but I believe you will find that wherever the union has had anything to say about it, child labor has been eliminated as far as they have had anything to say about it.

Commissioner AISHTON. But you do not know the facts in that industry?

Prof. KENNEDY. I could not give you a comparison of them. We have a child-labor law here in Illinois, which prevents child labor under 14 years of age. The packers' union was in existence when that law was first passed, and had a representative at Springfield, together with the representatives of other unions, to try to get that law on the books, and that is why we do not have child labor in the packing industry. They are now trying to get it raised to 16 years, as they got it to 14 years before. The reason why there is child labor in some mining districts is because the unions are not strong enough to get such laws passed.

Commissioner AISHTON. Have you ever made any comparison between the housing conditions in the average coal-mining communities and the workers, as compared to the stockyards?

Prof. KENNEDY. Yes, sir.

Commissioner AISHTON. What are they?

Prof. KENNEDY. Well, they vary a great deal. In some mining camps they are not nearly as good as out here, and in other cases they are better. You would have to take a specific mining camp and make the comparison. The conditions are bad in the stockyards and they are bad in many mining camps, too.

Commissioner AISHTON. I think that is true. Of course, you have no figures about tuberculosis or occupational disease in regard to the two industries?

Prof. KENNEDY. No, sir.

Commissioner AISHTON. But the mere fact of organization to secure a higher rate of pay has not eliminated those difficulties in that particular industry?

Prof. KENNEDY. Not entirely; but it has put the workers in a position where they can keep their children at home or in the schools. They do not need that additional income, and as a matter of fact they do give their children a better education where they have a chance, and they have done so here in Illinois and elsewhere. The miners are far from having things perfect, but they have improved conditions.

Commissioner AISHTON. What I was trying to get at was the degree of improvement over the unorganized stockyards employees, or whether they had made any advance.

Prof. KENNEDY. You will find in many instances an advance.

Commissioner AISHTON. Some testimony was given—I don't know whether it was given by you directly—as to the different clans in the yards having building and loan associations.

Prof. KENNEDY. Yes, sir.

Commissioner AISHTON. Are they general in the stockyards districts—that is, the Lithuanians—have they such an association of their own?

Prof. KENNEDY. Most of these nationalities have building and loan associations.

Commissioner AISHTON. And they loan money to the men, or what is it?

Prof. KENNEDY. The ambition of nearly every one of those people coming into this country is to get a little cottage for themselves; you will find that quite generally, and they will start to buy a cottage even if they have to starve their families to get the money.

Commissioner AISHTON. Do they make weekly or monthly payments to these associations?

Prof. KENNEDY. Yes, sir; they enter these associations and pay so much a month, and after they have paid up so much they can withdraw enough to make the first payment on their homes and this sum they pay back in a number of years. Nearly every nationality has one or more such associations out there.

Commissioner AISHTON. And they still have them, you say?

Prof. KENNEDY. Yes.

Commissioner AISHTON. And these men are paying in on these homes all the time?

Prof. KENNEDY. Yes, sir.

Commissioner AISHTON. And they are the stockholders?

Prof. KENNEDY. Some are and some are not; some have not enough money to pay in on anything, but those who have the better positions are the ones that do that.

Commissioner AISHTON. That is all, thank you.

Chairman WALSH. Could you tell the sergeant at arms where to get your papers?

Prof. KENNEDY. I think you will find them there in the black bag.

Chairman WALSH. Commissioner Garretson has a question to ask you.

Commissioner GARRETSON. Doctor, in regard to the housing conditions in the coal-mining regions, you say you have made some investigation of that?

Prof. KENNEDY. Yes, sir.

Commissioner GARRETSON. Is it not true that where the housing conditions are the worst in the mining regions, that the tenements are wholly owned by the mining companies?

Prof. KENNEDY. I think that is generally the condition, and I think you will find it is worse in the unorganized districts than in the organized districts.

Further, in the packing industry in Chicago they are able to build homes because they know they are going to be permanently located there, but in the mining districts, at the end of four years, for instance, a mine may be exhausted, and in Illinois in some districts you will find nothing left but little shacks.

Commissioner GARRETSON. And a hole in the ground?

Prof. KENNEDY. Yes, sir; so it is quite different.

Commissioner AISHTON. You referred to Armour & Co. in most of your talk, Professor?

Prof. KENNEDY. Yes, sir.

Commissioner AISHTON. Do the same conditions apply generally to the stockyards industry?

Prof. KENNEDY. They do.

Commissioner AISHTON. Does your survey include that?

Prof. KENNEDY. This survey included that.

Commissioner AISHTON. Included that?

Prof. KENNEDY. The reason that I referred particularly to Armour & Co. I understood he was to have an opportunity to answer, and of course he could speak for his company, or at least present his side of the case, so I dealt chiefly with Armour & Co.

Commissioner AISHTON. So that the conditions at Armour & Co. are really no different generally?

Prof. KENNEDY. No; not in any appreciable extent.

As to these letters: In this report, including the part that was not published, it was in proof sent to each one of the packing firms. That was an understanding before we conducted the investigation, this statement was made to the representative of the packers—that if we are allowed to examine your books and to gather this information, we will submit proof of the manuscript to you and if you can show that on any question of fact we are wrong—not on any question of opinion—but on any question of fact that there is a misstatement that we will be very glad to correct it.

Chairman WALSH. Was that in writing?

Prof. KENNEDY. No; it was understood, and for that reason the document was sent them before it was published.

Now, here is a letter which was received from the general superintendent of one of the companies, Sulzberger & Sons Co., addressed to William Scott Bond, who was one of the committee and who had charge of the publication of this document, and one of the directors of the settlement:

"Referring to your letters of the 25th ultimo and December 14, would say that we have gone over the proof of report which your board contemplates publishing.

"It has taken us a little longer than we anticipated to complete the reading of this proposed report, but upon completion of same find that as a general proposition we have no suggestions or corrections to offer.

"The report seemed to be a very exhaustive one and shows that this matter has been gone into very thoroughly.

"Am returning your proof of same and assure you we will be glad to cooperate with you whenever the occasion may arise in the future.

"Yours, truly,

"SULZBERGER & SONS Co.
"J. MOOG."

That was one of the letters.

This letter came from the representative of Armour & Co. about the same time:

"MY DEAR MR. BOND: Permit me to apologize for delay in writing you in relation to the proof of the report of your investigation of the working conditions of the employees of the stockyards. My time has been so much occupied that it has been impossible to give it the attention it deserves, and even now I am obliged to write you very briefly.

"The main criticism is that while the article starts out as a scientific study, it develops into an argument in favor of a particular cause. As a scientific study it promises at the outset to be a very valuable contribution to the literature upon the working conditions of the laboring classes, but the moment the field of disputation is entered the value of it as a scientific study is gone. Moreover, it was on the assurance that this was to be purely a scientific study that the information given you was obtained.

"I have pointed out the error in the deductions immediately following Table No. 7. Sufficient prominence in my judgment is not given to the fact that most of the Poles, Slovaks, and Lithuanians are single men, and no mention is made of the fact that they are persistent savers. These are material considerations affecting their social conditions. No reference is made to the beneficent workmen's compensation law, which went into effect a year ago and which has been a subject of constant agitation for three or four years or that this law was opposed by the labor unions.

"The statement that, following the passage of the child-labor law of 1900, 60 convictions were secured against some of the packers is incorrect and should not be given space in this paper in view of our challenge of the statement until the accuracy of it has been demonstrated, even in the form of a quotation. Some of the statistics are computed upon the theory that the slack season and the busy season in the industry are of equal length. This is incorrect. The slack season is comparatively short, and in referring to it mention should be made that it occurs in the warm months of the year, when the employees are less dependent upon their earnings; quite different from the slack season in most industries. In discussing the average wages sufficient emphasis is not placed upon the fact that the statistics include boys and girls.

"Many of the statements under the heading 'Movement of wages' are incorrect and others are misleading. The encomiums of praise given the labor unions in this subdivision fairly characterize the type of the work from this point on."

Now, Swift & Co. submitted a letter which was a comment on the report as a whole.

Commissioner GARRETSON. Doctor, what was the attitude of the packers toward the enactment of compensation laws in Illinois?

Prof. KENNEDY. So far as I know—I was not following that very closely, but some of them favored it. I do not know whether all of them did—that is, the workmen's compensation act. I could not say for all of them, but judging by the letter from Mr. Stratton, of Armour & Co., the packers were supporting that proposition, and he was referring to the State compensation act.

Commissioner LENNON. Will those letters be left for the record?

Prof. KENNEDY. I will be very glad to leave them or duplicates of them.

Chairman WALSH. We will have them copied and the letters returned to you. Doctor, did you form any conclusions—all of your studies, I believe, were in 1910 and 1911, and you say there seemed a great surplus of labor at all times—did you form any conclusion at that time as to what caused the unemployment, the effect of immigration on it, or perhaps a greater centralization of the industry or a greater consolidation or whatever it might be you might call it, what figure that would cut, and so on?

Prof. KENNEDY. Well, the reason for unemployment is rather complex. Everywhere it comes out of the fact that during certain seasons many more are employed than at other seasons. The surplus labor is drawn during the busy season. All the wheels are turning; everything is busy. That draws labor from other districts, and they come there. Then perhaps a month later

they begin to lay off and lay off and lay off until there are two or three thousand of them of that particular industry out of work. Then it is very difficult for them to find work elsewhere, so they keep flocking around there waiting for jobs. But in the meantime they do not have enough to exist upon. They are a burden on the community and on their families; they are sort of caught there high and dry.

Now, that creates a constant unemployment problem in the district, and it always will obtain in these industries where there is a fluctuation, unless two or three things are done. Either the employer must say that we will need a certain number of workers in this industry and they pay them so much a year, every worker they need, or have some sort of unemployment benefit that would take care of them through the slack season of the year, or else there must be some system of employment bureaus to shift unemployment from that industry to another where it will be needed at that particular time. Whether that can be done or not, I am not so certain. It seems to me that the same condition prevails somewhere else about the same time. So that apparently each industry should be called upon to take care of its workers; to pay them enough to live on, at least, pay them up to the point it could stand.

Commissioner O'CONNELL. What about the industry that is seasonal?

Prof. KENNEDY. That is a problem quite distinct from this, although even in this industry they have a seasonal department. The canning, and they have a great deal of canning in this industry, that is really a seasonal industry within the industry.

Commissioner O'CONNELL. That might take care of itself in the industry. But the seasonal industry—that is, the fruit-growing season or the grape-gathering season?

Prof. KENNEDY. It so happens that in some cases the active work in one industry will be done at one period of the year and in another industry at another period of the year. If there was a system of employment agencies throughout the country which would keep the labor supply adjusted to these various demands it might relieve that somewhat.

Commissioner O'CONNELL. They might cut ice in the winter and work in the harvest fields in the summer?

Prof. KENNEDY. Exactly. That might be done to a certain extent. I do not believe, though, that that is a full solution of the problem.

Commissioner AISHTON. What progress has been made abroad in the compensation of unemployment? Has not Germany got some sort of an arrangement along that line?

Prof. KENNEDY. They have a system in some of the cities in particular, whereby particular industries which are organized pay employment benefits to their members, get a subsidy from the city. It is the so-called Ghent system, because it originated in Ghent, I believe. The union may pay \$3 a week benefits, or \$2, to the member who is out of work and the community will equal that, or at least add something to it.

Now, in England—

Commissioner AISHTON. The union pays for part of the benefit and the community the other?

Prof. KENNEDY. Yes. They use the machinery of the union to demonstrate that.

In Great Britain they have now an employment benefit scheme, but I could not say as to how it is working out. The shipbuilding trade and three others—I have forgotten.

Commissioner GARRETSON. The dock laborers is one of them, I think.

Prof. KENNEDY. Yes.

Chairman WALSH. Any other questions?

We are much obliged. You will be excused.

We will now stand adjourned until 10 o'clock to-morrow morning.

(At this point, 4.30 o'clock p. m., Thursday, April 15, 1915, an adjournment was taken until to-morrow, Friday, April 16, 1915, at 10 o'clock a. m.)

CHICAGO, ILL., Friday, April 16, 1915—10 a. m.

Present: Acting Chairman Lennon, Commissioners Aishton, O'Connell, and Garretson.

Acting Chairman LENNON. Our chairman is compelled to be in Kansas City to-day on account of the death of Col. Nelson, and that is the reason he is not here to preside. Mr. Armour.

TESTIMONY OF MR. J. OGDEN ARMOUR.

Acting Chairman LENNON. Just give your name and address, Mr. Armour, and your business, before you start in.

Mr. ARMOUR. J. Ogden Armour; president of Armour & Co., Chicago, Continental Bank Building.

Acting Chairman LENNON. I believe that you were furnished with a questionnaire and a synopsis of the statement made by Mr. Kennedy yesterday, were you not?

Mr. ARMOUR. Yes.

Acting Chairman LENNON. Have you prepared the answers?

Mr. ARMOUR. I prepared the answers to the questions that I have.

Acting Chairman LENNON. All right; just submit those, and then if there are other matters, we will take them up.

Mr. ARMOUR. Do you want to ask the questions?

Acting Chairman LENNON. No; you read what you have prepared.

Mr. ARMOUR. I have prepared answers to the following questions that have been asked me:

Question. In what corporations are you a director?

Answer. Armour & Co. and other subsidiary and affiliated corporations; Chicago, Milwaukee & St. Paul Railway Co.; Illinois Central Railroad Co.; Continental & Commercial National Bank of Chicago; National City Bank of New York; and the Kansas City Railway & Light Co.

Question. In what other corporations do you own considerable stock?

Answer. None to an appreciable extent which would constitute an influential interest, except Armour Grain Co.

Question. Please outline briefly the character of your connection with the corporations in which you are interested.

Answer. Practically my entire time is devoted to the interest of Armour & Co., and I am able to give but little time to the other corporations in which I am interested.

Acting Chairman LENNON. By "Armour & Co." you mean the "Armour Packing Co."?

Mr. ARMOUR. Yes, sir.

Question. In your opinion, to what extent are the directors and stockholders responsible for the labor conditions?

Answer. Directors and stockholders owning or representing a substantial or controlling interest in corporations should, I think, assume responsibility for labor conditions. I feel this is an obligation that they owe both to the corporation in which they are interested and to the labor employed.

Question. Would you consider the issuance by a corporation of a condensed report on labor conditions feasible or desirable?

Answer. I do not know as I understand the purport or intent of this question. From the viewpoint of Armour & Co., I have always felt myself in a measure in the position of trustee of the interests of our employees, and I am firm in the belief that every head of a successful business must, in order to be successful, have a greater interest in the welfare of his employees than could anyone else, even the public. Feeling as I do, I would see no advantages or disadvantages in such a report.

Acting Chairman LENNON. The purport of that question would be, should a corporation issue a report covering the labor conditions as exhaustive as they issue a report covering financial conditions?

Mr. ARMOUR. I think they should in a large corporation.

Question. Has Armour & Co. established any: (a) Length of working day?

Answer. Eight to ten hours.

Question. Yearly income for unskilled workmen?

Answer. No.

Question. Compensation for industrial accidents?

Answer. We endeavor to investigate each individual case and handle on its merits.

Question. Age and conditions under which children should be employed.

Answer. It is the practice at all of our plants to employ no minors under 16 years of age, only in exceptional cases, and then only with the approval of the municipal or State authorities, and on recommendation of charity or social-welfare workers.

Question. Treatment of workmen who have become inefficient after long service with the corporation?

Answer. Three years ago Armour & Co. established a pension fund, the details of which are outlined in the pamphlet which I will leave with you.

(The pamphlet here referred to by the witness was received in evidence, and marked "Chicago, Ill., April 16, 1915, Witness Armour.")

The pamphlet referred to, entitled "Armour & Co. Pension Fund," for the benefit of its employees, to become effective November 1, 1911, was submitted in printed form.)

Answer (continuing). To substantiate this fund Armour & Co. have agreed to see that it shall at all times have a surplus of \$1,000,000. At the present time this covers 7,853 men, or practically one-third of all of our employees. It is the aim of the company, as fast as conditions warrant and methods may be devised, to extend this system until it covers all employees. In addition to this we have always taken care of employees who have been disabled or incapacitated after years of service, regardless of their qualifications for the pension fund. These men are taken care of first by giving them positions of light employment and afterwards by simply caring for them from a special fund.

Question. In which of the corporations in which you are interested are the employees organized?

Answer. I am unable to answer this question in detail. I think in some of the corporations some of the craft are organized; in others, not.

Question. What is your attitude toward the organization of employees for their protection and for the advancement of their interests?

Answer. There is no objection to the organization of employees for their protection in the form of unions, as such. In a general way, I think the solution of that question depends largely upon the nature of the trade or craft to the extent that it is skilled or unskilled, and to the character and degree of intelligence of the individual composing same.

Question. Upon what information or experience is that attitude based?

Answer. Upon observation covering a period of some 30 years with Armour & Co.

Question. What is your attitude toward permitting union organizers who are not employed by your corporation to address employees, and otherwise carry on their work, without interference?

Answer. The character of our business is such that in a measure the work of our employees is that of an endless chain, and handling, as we do, a perishable product when our plants are in operation we could not permit interference.

Question. Do you consider that under existing conditions the rights and interests of the employees of Armour & Co. receive proper recognition and due protection?

Answer. Yes. Every employee has the right and is encouraged to take up his grievances with his foreman, with the knowledge that he has an appeal to the superintendents or the general superintendent. In addition, every employee is welcomed to take up matters of his relations with the company with myself personally, and to that end my door is always open.

Question. As a result of your observation and experience, do you believe that industrial discontent in America is increasing?

Answer. No; I believe that industrial discontent at the moment is on the decrease. I believe that industrial conditions are slowly but surely improving and while there may be temporary fluctuations I can not but feel that prosperity, in which both employer and employee will share, will be upon us again within the next year or two.

Question. If so, why?

Answer. None.

Question. In your opinion, along what general lines should action be taken to prevent the causes for such discontent?

Answer. None.

Question. Did you hear the testimony of Mr. John C. Kennedy?

Answer. No.

Question. Have you read Mr. Kennedy's report on wages and family budgets in the stockyards district?

Answer. Yes.

Question. Have you a statement you care to make covering this subject, more particularly in its relation to the wages and living conditions of employees at your plant?

Answer. Not at this point.

Question. Will you please give this commission the latest figures obtainable on (a) Numbers of workmen employed in your plants getting the various rates per hour?

Answer. I have taken the liberty of requesting the attendance of Mr. John O'Hern, general superintendent of all the packing plants of Armour & Co., who will be glad to give you all the information and statistics you desire relating to our employees. I may say for Mr. O'Hern that he is well qualified to speak on the subject, having been in the employ of Armour & Co. for 25 years, starting in as a laborer at \$1.75 per day.

Question. Percentage of workmen getting each of these various rates?

Answer. Referred to Mr. O'Hern.

Question. Actual amounts paid to representative employees of each of the various classes during October, 1914, and during March, 1915?

Answer. Referred to Mr. O'Hern.

Question. Average number of hours worked per week by each of the various larger groups of employees during the same months?

Answer. Referred to Mr. O'Hern.

Question. Average number of employees for the year 1914?

Answer. Referred to Mr. O'Hern.

Question. Average rate per hour?

Answer. Mr. O'Hern also has that.

Question. Average hours per week?

Answer. Mr. O'Hern has that.

Question. Average weekly earnings?

Answer. I will refer that to Mr. O'Hern.

Question. Average weekly earnings for each of the various larger groups, if obtainable?

Answer. I will refer that to Mr. O'Hern.

Question. Please give the numbers and percentages of employees of each of the nationalities largely represented.

Answer. Referred to Mr. O'Hern. He will be able to give you that.

Question. Please state what means, if any, are employed by the company to keep in touch with the living conditions of its employees.

Answer. We endeavor to keep in touch with our employees through the foremen, who keep their home addresses, timekeeper's department, and the welfare department.

Question. Is there a sociological department or something that would correspond to this?

Answer. Yes; we employ welfare workers who go about giving particular attention to the female employees of the plant. These workers are graduate trained nurses and spend their time visiting the employees during working and resting hours; they are constantly going among them, either in the plant or visiting at their homes. They give particular attention to the conditions surrounding the workers at the plant, as well as personally, as far as their health and the welfare of their family are concerned. The welfare workers visit the home any time there is a female employee absent, to know the cause thereof, and if it is a case of sickness, either employee or members of the family, such assistance as required is given and the case is reported to the superintendent for action, when necessary.

Question. Does the company or any of its officials receive reports from any investigator or agent employed by it, or from any outside source, on conditions in the homes of its employees?

Answer. The welfare department makes a report to the general superintendent of the office at the end of each month.

Question. What policy has your company, if any, as to recruiting employees or endeavoring to control its labor market with the object of making available a force of workmen of any particular nationality or sort?

Answer. None whatever.

Question. Does the company have any agents in Europe for the purpose of diverting immigration or advertising the opportunities of employment at the various packing plants?

Answer. No.

Question. Does the company have agents in New York or any other American centers for the same purpose?

Answer. No.

Question. Please describe the company's machinery for employing men.

Answer. I will refer that to Mr. O'Hern to give you the details of it.

LABOR CONDITIONS OF CHICAGO STOCKYARDS EMPLOYEES. 3489

Question. Is it ever necessary to advertise or solicit, and what is the method of taking on new men?

Answer. I will answer no to the first part of your question, and Mr. O'Hern will answer the second part.

Question. What is the turnover in the labor force during a normal year?

Answer. Referred to Mr. O'Hern.

Question. Does the company consider its unskilled workers as part of its permanent force and feel responsible for giving them employment as continuously and permanently as possible?

Answer. Yes; we continuously endeavor to educate our men for better positions, using our unskilled labor wherever possible as a recruiting force for our organization, attempting to secure therefrom foremen, superintendents, department heads.

And as I say, Mr. O'Hern came with us as a day laborer, and he is now the general superintendent of all our plant.

Question. Please describe the system of identifying laborers by brass check or otherwise.

Answer. Referred to Mr. O'Hern.

Question. Please describe how the time put in by each man is recorded.

Answer. Referred to Mr. O'Hern.

Question. What measures are taken to protect laborers against mistakes, dishonesty, or ill will on the part of employees in the timekeeper's office?

Answer. Referred to Mr. O'Hern.

Question. Are the men encouraged to keep account of their own time?

Answer. Referred to Mr. O'Hern.

Question. What machinery is provided for adjusting differences between individual men and the timekeeper's office as to the amount of time put in?

Answer. Referred to Mr. O'Hern.

Question. What is the policy of the company as to carrying on its pay rolls during short periods of unemployment men who have worked for the company most of the time during the year?

Answer. Our superintendents have orders to give preference to men who have been with us a long time, and it is greatly to the interest of the company to take care of all employees of previous service as far as possible. It is the custom during slack work in one department to move the men of that department to another.

Question. Is the same policy followed toward office employees at the plants?

Answer. Our office employees are considered steady time men and are carried in periods of slack work.

Question. To what extent do subordinate officials of the company know laborers by name and deal with them on a personal basis?

Answer. Armour & Co. are a private corporation in which, I believe, the personal equation is very highly developed and permeates the entire organization. I would venture to say that subordinate officials probably know laborers by name to as great an extent, if not greater, than would be conceived possible in any organization of the size of ours. Not only foremen and superintendents know the vast majority by name, but many employees, who have been with the house for a long time, I know personally by name. It is a well-known fact around Armour & Co. that when any employee who is entitled to consideration, because of service, has any grievance or is in trouble he is welcome to come to see me personally, and I make it a particular point in my work to always see them and investigate and consider each case individually, and I think in a large measure the loyalty of the employees of Armour & Co., which is a well-known fact, is due to the development of the personal equation between the head of the house and its humblest employee. I do not mean that this is carried to extremes, because that would not be possible in a company employing as many men as we do.

Question. What policing force has the company?

Answer. We have a small police force at each plant, employed for the purpose of watching and guarding the property of the company against all hazards, including fire, day and night, and other things.

Question. Are laborers ever searched by watchmen or other employees of the company as they are leaving the plant to find out if they have carried away meat in their dinner buckets?

Answer. Never unless an employee is under suspicion. At times I can imagine that it might be necessary to search several men working in a gang in order to detect the guilty one.

Question. Is there a regular system for doing this?

Answer. No.

Question. What action is taken in cases where men are discovered carrying off pieces of meat for the use of their families?

Answer. It depends largely upon circumstances. If a man's family is in distress we don't do anything about it, but if he takes the meat to sell it we discharge him.

Question. What facilities are provided for the men who work in the killing gangs, the fertilizer works, and other dirty places to wash and change their clothing before leaving the plant?

Answer. Facilities are provided at all plants where they wash and change their clothes.

Question. How many messenger boys are employed by the company at the plant?

Answer. Very few, comparatively. Most of it is done by pneumatic tube service.

Question. What are their duties?

Answer. That of the usual messenger boy; carrying papers, letters, telegrams, etc., to the departments and offices of the plants.

Question. What rules are followed in employing the boys?

Answer. We are very particular about the selection of office boys; in fact that is the most particular work we do around Armour & Co., because as a rule our boys become department heads. Preference is given to the sons of widows.

Question. What measures, if any, are taken to safeguard the moral welfare of these boys?

Answer. Department heads and superintendents, appreciating the desire of the company to develop boys into future officials, are instructed to advise with the boys and help to develop them along the necessary lines to make the best possible use and development of this available material, and, necessarily, this advice extends to and along moral lines.

Question. What are they paid?

Answer. From \$5 to \$9 a week, dependent upon ability and length of service.

Question. Do you believe that a laborer can support his family according to the American standard on an average weekly wage of \$12.20?

Answer. This is a very difficult question to answer and I think naturally depends entirely upon the individual. What is ample for one might be inadequate for another.

Question. Is it a fact, as stated by Mr. Kennedy, that the price of the common kinds of meat and of lard, flour, eggs, butter, sugar, and milk has increased on an average of more than 10 per cent between 1910 and 1913?

Answer. I have not available statistics at hand to answer this question. I believe the Bureau of Statistics at Washington is continuously formulating and issuing statistics, which would answer this question much better and more accurately than I.

Question. Have you ever visited the homes of any of the laborers employed in your plant?

Answer. Personally, no.

Question. Do you consider that the environment in which the children of your employees who live in the stockyards district are brought up is likely to produce healthy and moral men and women?

Answer. Yes; in the same manner and to the same extent that is possible in the residence districts surrounding and adjacent to any industrial community.

Question. Is it a fact or not that, in effect, the packing companies obtain their labor for a wage less than is required by the American standard of living by taking advantage of the necessities of newly arrived immigrants?

Answer. No; I do not think so, and I am certain that in Armour & Co. this fact has never been considered.

Question. Do you regard your plants as a sort of training school for newly arrived immigrants, and expect your employees to pass on to other employment within a few months or years?

Answer. No; it is our endeavor to keep the men around us as long as we are able to. Many men who started in our plant as laboring men have become foremen, general superintendents, and managers.

Question. What would be the effect on the community of conditions that exist in the yards if the movement of immigrants should cease, as it has done largely

since the beginning of the war, and if the men and families employed by you should become a permanent class?

Answer. That is a very difficult question to answer, and my answer could be but a guess at the best; but I can not see how it would have any appreciable effect.

Question. Do you believe that the packing industry could be conducted profitably if the company were to carry an average working force on its pay rolls throughout the year? In other words, were it to insure its employees against unemployment.

Answer. No. I believe 75 to 80 per cent of our employees are regularly and continuously on our pay roll. As to the other 25 per cent, their hours and time are entirely dependent upon the volume of business, which, in turn, is dependent upon the receipts of live stock from day to day. At the Chicago yards, for instance, I think I am safe in saying that 75 per cent of the total receipts of each week are received in the first three days of that week. This stock as soon as purchased must be immediately cared for and slaughtered as soon as possible. This necessarily entails a larger force of men the early part of the week than the latter part. This is a subject to which the packers have given a great deal of thought and study, in an endeavor to work out some plan which would make it possible to distribute the receipts more evenly throughout the week. I think you will immediately appreciate that could this be done it would make possible a greater degree of permanency in the hours of our employers, greater efficiency, and, in turn, reduced manufacturing costs, but a satisfactory solution of this question has never been attained. In addition, receipts vary greatly from week to week and month to month, all dependent upon reasons beyond our control, such as crop conditions, weather conditions, prices, railroad conditions, etc.

Question. Please relate briefly the history of the strike in 1903-4.

Answer. This strike was brought about on account of the wages of unskilled labor. We wanted and offered arbitration, but it was declined.

Question. Prior to this strike what proportion of the men belonged to unions and were dealt with collectively through contracts or agreements?

Answer. I am unable to answer that question. Possibly Mr. O'Hern can answer it.

Question. Were wages reduced after the strike?

Answer. I do not think so. In fact, since that time I believe on an average wages have increased.

Question. What increases have been made since the strike?

Answer. This is a question of detail, which can better be answered by Mr. O'Hern.

Question. Do you believe any employer can be trusted to protect the interests of large numbers of employees who are not organized and who have no means of collectively urging grievances?

Answer. Yes; I believe that any business man to be successful must, and does, recognize that by far the largest contributors to his success are his employees, and that he must obtain the best the market affords, and to obtain the best results from such employees they must have the interest of their employer at heart and must be contented and satisfied. As I have previously said, I do not believe that anyone has the welfare of the employees of Armour & Co. at heart as much as I have. Of course, in the broad sense the answer to your question, I recognize, will always be debatable, because there are so many economic questions going to make up the basis of a reply; but as pertains to our own business I am compelled to answer the question in the affirmative.

Acting Chairman LENNON. Can you state the average amount that is paid for injuries that result in death in your plant?

Mr. ARMOUR. I don't know that I could personally answer that; perhaps Mr. O'Hern can answer that.

Acting Chairman LENNON. And you would not be able to answer as to other phases of injury as to whether their doctor bills or hospital bills and such as that were paid?

Mr. ARMOUR. They usually are; yes.

Acting Chairman LENNON. Those expenses you know are paid?

Mr. ARMOUR. Yes; I do know that.

Acting Chairman LENNON. You do not know what payment they would get for the loss of an eye or of an arm in the case of accident?

Mr. ARMOUR. No; it would depend upon conditions and circumstances.

Acting Chairman LENNON. Mr. Kennedy, in his paper, submitted an argument showing, from his viewpoint, that the one great necessity in your plant, to the perfection and betterment of the condition of the workers, was that they have a labor organization, and that such organization should be recognized and through that organization they should enjoy the right of collective bargaining as to wages and as to their hours of labor and other conditions of their employment. What comment have you to make in regard to that?

Mr. ARMOUR. That has not been the experience at the stockyards.

Acting Chairman LENNON. You maintain that from your viewpoint that is not warranted by the experience at the stockyards?

Mr. ARMOUR. By their past experience; yes; by the last experience.

Acting Chairman LENNON. You spoke regarding the impossibility of representatives of unions appearing among your employees and holding meetings and things of that character. Suppose those meetings were held on Sunday, and of evenings, when the employees were not at work in the plant. Would you consider it within your province to enter objection or prevent such meetings being held?

Mr. ARMOUR. Most decidedly not; no; most decidedly not.

Acting Chairman LENNON. What is the nature of the grievances that are likely to come to you after they may have been first dealt with by subordinate officials? What is the nature of the grievances that usually reach you?

Mr. ARMOUR. Well, I do not know as I can tell definitely what their nature would be.

Acting Chairman LENNON. Discharges, or anything of that kind?

Mr. ARMOUR. Any man has a right to come to me. My door is always open and it is a well-known fact among all our employees that they can come to see me whenever they have a grievance.

Acting Chairman LENNON. Are there any considerable number that do come?

Mr. ARMOUR. It varies—yes; it depends upon conditions.

Acting Chairman LENNON. What does your welfare department consist of what do they do?

Mr. ARMOUR. We have two nurses, and they are trained nurses, and they go around to the homes of the girls, and they talk to the girls during their play and while working, and if they are in trouble they take care of them. They are supposed to give them money and help them out generally at any time when they may be in trouble.

Acting Chairman LENNON. Do they take cognizance of the sanitation at the plant and such things as that?

Mr. ARMOUR. Most decidedly.

Acting Chairman LENNON. Are there any complaints, so far as you know, as to the conditions in your plant in those respects?

Mr. ARMOUR. No, sir; I do not think there is.

Acting Chairman LENNON. In your reply to the question that was asked regarding the employment of peace officers—I don't know just the words used now, perhaps police officers or police force or something—do you employ detectives that mix among the employees to ascertain as to their attitude of mind toward the company, or whether they belong to labor organizations?

Mr. ARMOUR. No, sir; we do not.

Acting Chairman LENNON. You have heard of this system, of course? Called the spy system.

Mr. ARMOUR. I have.

Acting Chairman LENNON. That does not prevail in your plant?

Mr. ARMOUR. No, sir.

Acting Chairman LENNON. These messenger boys that you employ, what standard of education, if any, do you require before a boy can start in that class of work?

Mr. ARMOUR. Just a common-school education.

Acting Chairman LENNON. That is through the seventh or eighth grade, or something like that?

Mr. ARMOUR. Yes; just a common-school education; but, as I said, that is the most particular work we have around Armours, because most of our department heads used to be, in one way or another, office boys around Armours; the office boy of to-day is the department head of to-morrow. We seldom go outside to hire any of our men; we take them from the ranks as far as possible.

Acting Chairman LENNON. The offer of arbitration made by your company, as you stated, in the strike of 1903, was that made through some third party,

or was it made by you, or the representatives of your company, direct to the officials of the union?

Mr. ARMOUR. It was made direct to the officials of the union, Tom Donnell, I think the man's name was. I recollect he was president of the union at that time.

Acting Chairman LENNON. Commissioner Garretson wishes to ask you some questions.

Commissioner GARRETSON. Mr. Armour, is this 8 or 10-hour day, of which you speak, at Armour & Co.'s, a maximum or minimum day?

Mr. ARMOUR. It is neither.

Commissioner GARRETSON. What is it?

Mr. ARMOUR. We endeavor to give them a 10-hour day whenever it is possible, but it is not always possible.

Commissioner GARRETSON. But you do not work them beyond that, is that it?

Mr. ARMOUR. I would not say that; we work them overtime sometimes.

Commissioner GARRETSON. You do not work them overtime, beyond that period, without paying for overtime?

Mr. ARMOUR. Oh, no.

Commissioner GARRETSON. Then you do not pay them for 8 or 10 hours if they work less than that?

Mr. ARMOUR. No.

Commissioner GARRETSON. Then it is a maximum day?

Mr. ARMOUR. Yes; you might call it that.

Commissioner GARRETSON. But there is no minimum day?

Mr. ARMOUR. No.

Commissioner GARRETSON. You have not what was testified to yesterday in regard to as a 40-hour minimum week?

Mr. ARMOUR. We practically have that; yes.

Commissioner GARRETSON. But does it work out?

Mr. ARMOUR. Yes.

Commissioner GARRETSON. Then there is no man that works for you in that class of labor paid less than 40 hours a week?

Mr. ARMOUR. I could answer that question broadly; I do not think I could state specifically so, but it is our endeavor and, I think, we make it work out that way.

Commissioner GARRETSON. Does or can a pension plan, a private pension plan like yours, reach, under its terms, the casual or periodic worker?

Mr. ARMOUR. Well, it does not.

Commissioner GARRETSON. It does not?

Mr. ARMOUR. No; it does not reach the laboring man, if that is what you mean.

Commissioner GARRETSON. That is what I mean; the class of work that was testified to here yesterday that, in the morning, whoever does your hiring—I don't know who that is, whether a gang boss or you have an officer delegated for that purpose—but he walks out and taps so many men on the shoulder to make the peak load that day, and they may use those men one or two days or a week, but only a comparatively short period, and when the run of cattle is less, for instance, in the slaughtering department they are let go until they are needed again?

Mr. ARMOUR. Naturally. I suppose any large company would have some men that would not be permanently in its employ.

Commissioner GARRETSON. They are periodical?

Mr. ARMOUR. That would happen in any company; yes.

Commissioner GARRETSON. And no pension plan so far devised has been able to reach that kind of men?

Mr. ARMOUR. We have not been able to find any.

Commissioner GARRETSON. In the very essence of tenure of service upon which pensions are based, they can not reach those men?

Mr. ARMOUR. I would not think it could.

Commissioner GARRETSON. Then a system of pension, under governmental control and to which the employer contributes for the period the men work for him, would be the only means of reaching that class of labor, would it not? And I am using "governmental" in the sense of either State or National.

Mr. ARMOUR. I guess you are pretty near right.

Commissioner GARRETSON. I would like to know, if you can make it plain, how, on an average of 7,000 employees—that is about an average number, is it, between your high line and your low line, in busy times?

Mr. ARMOUR. You mean here in Chicago, or all over?

Commissioner GARRETSON. In Chicago.

Mr. ARMOUR. I would think so.

Commissioner GARRETSON. I am just taking the plant here in Chicago, where there is a certain amount of contact with the head official of the company; that is what I want to illustrate.

Mr. ARMOUR. Yes.

Commissioner GARRETSON. During the course of a year, how many of those individuals who complain of having received unjust treatment from his immediate superior come to you?

Mr. ARMOUR. Well, I would not think very many; I would think comparatively very few, because I think they only come to me when they can not get justice or can not settle their case with the superintendent.

Commissioner GARRETSON. And in what proportion of such cases as have come to you have you reversed the decision of the man below you?

Mr. ARMOUR. I do not know that I can answer that question, because it would depend entirely on what the case was.

Commissioner GARRETSON. I did not know but that you had a general idea of what your attitude has been toward those cases.

Mr. ARMOUR. I am always very glad to take the side of the men, if possible; that is the only way I can answer that question.

Commissioner GARRETSON. Are there cases of that character settled by you personally, or are they referred to Mr. O'Hern?

Mr. ARMOUR. They are settled by me personally when they come to me.

Commissioner GARRETSON. You spoke of the fact that your business in the plant was in the nature of an endless chain and that you could not afford, on that account, to have organizers interfering during business hours—labor organizers?

Mr. ARMOUR. Yes.

Commissioner GARRETSON. Is the economic side of it, as well as the industrial side of it, something of an endless chain that would be interfered with?

Mr. ARMOUR. Most decidedly; I would not have them there any way; it is no place for them.

Commissioner GARRETSON. The real reason—or is the real reason of the underlying opposition to the unions economic?

Mr. ARMOUR. No; I can only speak from the experience of Armour & Co. The unions have not worked well at the stockyards, because as soon as they have gotten a little power they have not known how to proceed. The success of a union is the same as the success of anything else—in knowing how to run it.

Commissioner GARRETSON. Is it not a fact that it is the unflinching experience of employers dealing with labor unions, virtually from the inception of the American labor movement—I am only talking about this side—that whenever the employer is struggling against the domination of the unions, is it not true that his unflinching claim is that the men become intoxicated with their own power and therefore they are undesirable? I am drawing on my own experience in the labor movement in forming the question, Mr. Armour.

Mr. ARMOUR. I can only answer that question, Mr. Garretson, by saying I know unions that are very well run, and they are a good thing for the employer as well as the employee. I know some other unions that are very badly run, just like running a business.

Commissioner GARRETSON. Do you know what the experience of that good union was in its early days when it was struggling for recognition?

Mr. ARMOUR. No, sir; I do not.

Commissioner GARRETSON. I have heard my own cited as a very good organization and still I have seen it when it was utterly irresponsible and undesirable.

Mr. ARMOUR. That was because they had the wrong man at the head of it.

Commissioner GARRETSON. They had the same man at the head then that is at the head now.

Mr. ARMOUR. Then he has had more experience.

Commissioner GARRETSON. We all profit by experience.

Mr. ARMOUR. Absolutely.

Commissioner GARRETSON. He is growing in experience.

Mr. ARMOUR. He is growing into his job, is all.

Commissioner GARRETSON. I know that most of the questions in regard to the number of hours worked, average pay per month or week or by the day, all of those questions are referred to Mr. O'Hern for reply; personally, you are personally familiar with the financial details of Armour & Co.?

Mr. ARMOUR. I hope so; yes.

Commissioner GARRETSON. Is there anything significant as to the relative importance in the minds of the manager of the two problems—that is, the industrial and the financial—in the fact that you have not the same knowledge of the industrial situation that you have of the financial; does that show the relative importance of the two?

Mr. ARMOUR. No; I don't think so at all, but you can hardly expect a man to know a lot of details that would naturally come under the head of the superintendents. Did I answer your question? I want to.

Commissioner GARRETSON. It would just be a question, it seems to me, of the highest power in the corporation or organization giving his attention, in the matter of detail, to that which he considers of the greatest importance?

Mr. ARMOUR. No; I hardly think so. I think I know in a general way as much about the labor end of our business as I do of the financial end of our business.

Commissioner GARRETSON. But you do not know the detail of the one as you do of the other?

Mr. ARMOUR. I might not know the detail of what our rate of interest is to-day, and that is a detail of the financial end of the business just as much as I might not know what an individual man is getting; I would hardly be expected to know it.

Commissioner GARRETSON. No; I suppose a man's brain has its limitations?

Mr. ARMOUR. Mine has.

Commissioner GARRETSON. In regard to the amount that is necessary to maintain a standard of living, I suppose it is all relative, what constitutes the standard of living? The question was asked you in regard to whether you believed or not that it was possible, under the American standard of living, for a man to live on \$12 a week; do you believe it is possible to raise a family and educate them on such a sum?

Mr. ARMOUR. A lot of people have done it.

Commissioner GARRETSON. What is that?

Mr. ARMOUR. A lot of people have done it; a great many people have done it.

Commissioner GARRETSON. And more have failed, have they not?

Mr. ARMOUR. I don't know; I don't know as I could answer that question.

Commissioner GARRETSON. You take the average business man of the present day, that has highly developed business ability, and are you acquainted with any man of that type who would care to undertake the problem of maintaining a proper standard of living on \$12 a week?

Mr. ARMOUR. No; but I do not know any men that run business that would not be glad to pay their men \$15 or more a week; it puts the money in circulation.

Commissioner GARRETSON. As to whether it was put in circulation, would it depend on the channel for putting it in circulation?

Mr. ARMOUR. No; it all goes into circulation.

Commissioner GARRETSON. The surplus does, too?

Mr. ARMOUR. Yes, sir.

Commissioner GARRETSON. It applies to both?

Mr. ARMOUR. Yes, sir; but the more money in circulation the better for the community.

Commissioner GARRETSON. I suppose the company is not hoarding its funds, by whatever name it calls them, by dividend or surplus or wage?

Mr. ARMOUR. No.

Commissioner GARRETSON. That is all.

Acting Chairman LENNON. Commissioner O'Connell wishes to ask some questions.

Commissioner O'CONNELL. I want to ask, Mr. Armour, about the absentee directorship. I know you stated you gave a large portion of your time to Armour & Co.?

Mr. ARMOUR. Yes, sir.

Commissioner O'CONNELL. But you replied that not much of your time was given as a director of the other corporations, as, for instance, the Illinois Central Railroad. Do you feel there is a responsibility on a director of a corporation that he should give personal attention to the affairs of that corporation, and not only in the interests of the stockholders, but in the interest of those employees that he should familiarize himself with the conditions under which the road, for instance, is being operated and the physical property being taken care of?

Mr. ARMOUR. Yes.

Commissioner O'CONNELL. In some of these hearings that this commission has held—as, recently, in the city of New York—we had a large number of financial men, who were directors in a great number of corporations, before us, and it was brought out that, I think, practically all that appeared before us had not attended meetings of the directors of the corporations in which they were directors, in some cases for years; had not visited the properties of the companies for years; had not even attended meetings of the directors for years, or just occasionally; they were not familiar with the conditions under which the workmen were being employed, or whether they were being treated fairly or not, and were not even furnished with knowledge as to that. If men assume the directorship of a corporation, if it is not possible for them to give personal attention to it, should there not be a system provided whereby they would keep informed indirectly, as it were, by correspondence or circulars or communications?

Mr. ARMOUR. Yes, sir.

Commissioner O'CONNELL. Do you receive, for instance, from the Illinois Central Railroad a report weekly or monthly or semiannually or annually, showing the physical condition of that property?

Mr. ARMOUR. No; I receive the earnings they may have.

Commissioner O'CONNELL. Just the earnings?

Mr. ARMOUR. The earnings.

Commissioner O'CONNELL. Do you know anything about the recent strike on that system, that cost considerable money?

Mr. ARMOUR. I know of it in a general way. I see Mr. Markham once in a while and talked to him about business. He is the president of the road.

Commissioner O'CONNELL. I speak of that as just an incident that came before this hearing. Do you feel that the businesses interests, the public interests, the interests of the citizens are being neglected by a director who does not take an active part in the affairs of the corporation in which he is elected to represent the stockholders?

Mr. ARMOUR. Most decidedly so.

Commissioner O'CONNELL. Do you not feel that the public is being misled—for instance, your name appearing as a director of a corporation, a man of high standing, and people with small sums to invest would say, "Well, Mr. Armour is a director in that corporation, and he will certainly see that things are all right," and people are induced to invest by the mere fact of the names of prominent people used as directors, and used as a means in some cases to induce people to invest their savings, and at the same time probably take the risk of losing what they may invest?

Mr. ARMOUR. I do not think a man should let his name be used as a director unless he is willing to assume the responsibility that goes with it.

Commissioner O'CONNELL. What I am getting at—if a man does not give his time, or at least some of his time, to a business in which his name is being used as a director; if he can not give the time to that and you say, and I take it, that it is not right for him to do so unless he can give his time to it—that is, allow his name to be used as a director?

Mr. ARMOUR. No, sir; I do not think that is right; he does not have to give his whole time to it, but he should give enough so as to know what is going on.

Commissioner O'CONNELL. He should be reasonably familiar with the affairs of the corporation?

Mr. ARMOUR. Yes, sir; I think so.

Commissioner O'CONNELL. So that if things did go wrong in the corporation he would not be in a position to plead ignorance and say he did not know that was the case; for instance, a director in a bank. People are induced to deposit their funds in a bank in many cases because of the personnel of the directorship.

Mr. ARMOUR. Most decidedly; I think that is largely true with banks.

Commissioner O'CONNELL. And if the directors do not attend meetings, but leave it to the president and a few of the officials of the bank to transact its business, and finally financial trouble comes and the bank closes its doors, and the depositors have been deceived by the fact that the directorate was made up of men in which they had the greatest confidence, yet these men did not give any attention, personally or otherwise, to the business, and the funds which these people had deposited, does not such a condition cause an unrest and fear in the minds of the people of our country that some of our representative men

who occupy positions of great trust and great responsibility, and in whom the people have placed confidence, are not doing right by the public?

Mr. ARMOUR. I think I have answered that question before.

Commissioner O'CONNELL. That is all.

Acting Chairman LENNON. Commissioner Aishton wishes to ask some questions. Mr. Armour, we have encountered much of discontent and unrest because of the fact, which seems to be a fact, that in many cases when young men are taken into an industry—say, in your industry—from 18 to 21 or 22 years of age they are simply given an opportunity to acquire a knowledge of a specialty; that they are never given any opportunity to learn anything of the other departments of the company—the work in other departments. How is it in regard to the entry of the young men into your plants? Do they have a chance to learn to do properly anything except one specialty, so that if there is not work at that they can work somewhere else?

Mr. ARMOUR. You mean the laboring men, now?

Acting Chairman LENNON. Yes.

Mr. ARMOUR. Well, of course, you can change the laboring men around from one place to another; they do not necessarily have to know how to do the work.

Acting Chairman LENNON. They have to have some degree of skill, don't they?

Mr. ARMOUR. It depends entirely on the work; but we have departments where we can change men from one department to another, and if there is slack work in one department we can put men in another, because the work is very much the same.

Acting Chairman LENNON. Take work that requires skill or semiskill; are the young men put into the industry given opportunity to learn the work of different departments where skill or semiskill is required, so that if, for instance, your plant is burned down, annihilated, they could go to Kansas City, Fort Worth, or elsewhere and take up work in some department where skill or semiskill was required and make good at it?

Mr. ARMOUR. It would depend a good deal on the man; but I would think, broadly, he could; it naturally depends, like anything else, on the man.

Acting Chairman LENNON. They would have an opportunity to do so?

Mr. ARMOUR. They would know enough that they could go from one department to another.

Acting Chairman LENNON. Commissioner Garretson wishes to ask another question.

Commissioner GARRETSON. What is the capital stock of Armour & Co.?

Mr. ARMOUR. Twenty million dollars.

Commissioner GARRETSON. What is the dividend rate?

Mr. ARMOUR. Ten per cent.

Commissioner GARRETSON. What were the earnings—net earnings—of the company last year?

Mr. ARMOUR. Well, now, I will answer that question by explaining what Armour & Co. is, if you will allow me to.

Commissioner GARRETSON. Good.

Mr. ARMOUR. Our capital is \$20,000,000, but our surplus, which was made out of the earnings from the company from many years, is somewhere in the neighborhood of \$90,000,000, so the total money we have invested is something over \$100,000,000, and we made seven and one-half millions dollars last year.

Commissioner GARRETSON. How much did you pass to surplus last year?

Mr. ARMOUR. Well, we paid dividend of \$2,000,000, and we passed to surplus five and one-half millions.

Commissioner GARRETSON. Then, in reality, you earn something on your capital stock—I am not talking about the surplus—materially in excess of 30 per cent.

Mr. ARMOUR. Well, if you want to put it that way; but that is not the correct way to put it; it is not the fair way to put it.

Commissioner GARRETSON. You are regarding book value as capital, then?

Mr. ARMOUR. Yes; it does not make any difference whether it is capital or surplus; it is the same thing; it is money invested in the business.

Commissioner GARRETSON. You hold that the entire surplus is invested in the business?

Mr. ARMOUR. It is; yes, sir.

Commissioner GARRETSON. That is all.

Acting Chairman LENNON. That is all, Mr. Armour; you will be excused.

TESTIMONY OF MR. JOHN E. O'HERN.

Acting Chairman LENNON. Please state your name, business, and your residence.

Mr. O'HERN. John E. O'Hern; 5706 South Park Avenue; general superintendent of all the Armour plants, the packing plants.

Chairman LENNON. You heard Mr. Armour's reply referring certain questions to you. I think I made a minute of all of them; but if you have them, take them up in regular order, and are prepared to refer to them as you go along, you may take them up in your own way?

Mr. O'HERN. All right, sir.

In answer to the question showing the percentage at the various rates, at the various plants, I made up a table here showing the rate of 17½ cents and under.

Acting Chairman LENNON. That is under question 16?

Mr. O'HERN. Yes, sir; 17½ cents and under; 17½ cents and less than 20 cents; 20 and less than 25; 25 and less than 30; 30 and less than 40; 40 cents an hour and up.

The table that I have includes the plants at Chicago, Kansas City, South Omaha, St. Louis, Fort Worth, Sioux City, St. Joe, and the total recapitulation.

Under 17½ cents—it is rather an elaborate statement showing the number of men and the percentage for each plant. Do you want me to take just one plant or more? I have it here either way.

Acting Chairman LENNON. Give it for the Armour plant here in Chicago.

Mr. O'HERN. The Armour plant in Chicago, for the total number—these figures showing males, minors, and adults: Male employees under 17½ are 94, or 1.32 per cent; 17½ and less than 20, 56.37 per cent; 20 and less than 25, is 23.63 per cent; 25 and less than 30 is 10.33 per cent; 30 and less than 40 is 7.17 per cent; 40 and up is 1.18 percent. This is based on a total number of employees that we had to estimate as average for the year, because it was impossible to arrive at the actual number on account of seasonal conditions under which the work is conducted, totalling 7,150 males.

Acting Chairman LENNON. Give the women employees, if you have it there.

Mr. O'HERN. The women employees for the same, under 10 cents and less, are 17. That is 2 per cent of the total. From 10 to 12½ is 83 per cent; 12½ and up was 15 per cent. As an explanation of that, now, I want to mention that it does not include what might be termed steady-time men, foremen, clerks, or office employees, or any portion of the executive end of this organization. It includes old-time and disabled employees, unfit for laboring work at the present time, who are now employed as doormen, janitors, and other light occupations; boys—that is, boys under 21 years of age; females include both day workers and pieceworkers. The only ones we have under 10 cents are minors between the ages of 14 and 16 years, and whom we employ at the request of parents or the bureau of charity or other interested people—this with the approval of the municipal authorities.

Acting Chairman LENNON. Can you give the statement as to the actual payments to some of those people under each of those different percentages—what they actually receive for, say, a month?

Mr. O'HERN. I have tried to work that out, and it is a pretty hard matter, on account of the fact you would have to take it exclusively by the week. I think the mass of figures I have made on that would only be largely an estimate showing the average earning rate to be \$500 to \$650 per year for those men under 20 cents an hour. That is what we claim our labor rate is; in other words, our labor rate is from 17½ to 19½ cents.

Acting Chairman LENNON. Do you believe that they are paid from five to six hundred dollars per annum?

Mr. O'HERN. Five hundred to six hundred and fifty. Some are earning more on account of overtime work they get in.

Acting Chairman LENNON. They must be steady employees, having to work practically every workday in the year, then, or approximately that?

Mr. O'HERN. Not necessarily. Ten dollars a week would be less than 17½ cents an hour. Six days a week at 10 hours would be \$10.50 a week, and a great portion of the men are 18½ and 19 cent men; the greater portion would be 18½. That is the rate for common labor that we used.

Acting Chairman LENNON. What is the next query you have there?

Mr. O'HERN. We have shown under the next statement the average number of employees and the average amount per week. I have based that on some

tables that were shown in Mr. Kennedy's report, and also some additional ones, showing our larger gangs.

For instance, the Chicago plant, in what we call the hog killing, hog cutting, cattle killing, sheep killing, canning room, sausage room, curing department, mechanical department.

I have also taken it for two different periods—the period ending October 31 and the period ending March 6. I had to take those periods for the reason that we had no time in the short space of time I had to make this up differently. So we took it under a 10-week period in conformity with our accounting system.

The figures I am giving give exact actual amounts of the pay roll and the average number of men employed in the department.

This statement includes the males, the females, adults, and minors.

In the hog-killing department for the period ending October 31, 10-week period, the average number of employees was 347; the total amount earned in 10 weeks, the actual amount we paid out, \$32,906 and some cents; and the average of the employees for the 10 weeks was \$94.84, or for one week, \$9.48.

The hog cutting, in which the average number of employees was 177, the average per week, \$9.78.

The cattle killing, average of 282 men; the average per week, \$11.66.

The sheep killing, the average number of employees, 244, with the average per week of \$10.77.

For the eight-week period in March—those I just gave are the October figures.

For the eight-week period ending in March, hog-killing department, the number of men was 547, as compared with 347 in the previous period, with an average of \$11.06 in March as against \$9.48 in October.

In the hog cutting, 237 men, against 177 in October, with an average pay roll of \$12.52 in March as compared with \$9.78 for the October period.

The cattle killing, 287 employees, approximately the same—October period 282—with an average pay roll of \$11.39 for March as against \$11.66 for October.

The sheep killing, 198 men in March as against 244 in October, with an average of \$9.85 in March against \$10.77 in October.

In explanation of this, I want to state that these periods were during the quarantine period, when the quarantine scare was on, which restricted the receipts of live stock; the receipts were very irregular, and there was a considerable scare on the part of the live-stock people as to whether they ought to send their stock into this market or not.

The canning-room statement for the same periods shows an average number of employees during the period ending October 31 of 800, and their average rate for one week, \$11.86.

That is the busy season in the canning room.

The average for period ending March 6 of this year was 626 employees, or \$9.28 per week.

For the period ending October 31, the canning-room average employees was 800, of which 349 were female, adults and minors, and 23 were boys under 21 years.

For the period ending March 6, 1915, out of an average of 626 employees, there were 310 female, adults and minors, and 23 boys under 21 years of age.

The sausage room for the period ending March 31 was 435 employees, or an average of \$10.34 per week.

For the period ending March 6, there were 434 men, and \$11.24 per week.

I have the actual figures in money here that is taken from our books. If you desire, I will furnish one of these statements.

The curing department in October period had 371 employees with an average of \$11.50 a week.

In March they had 473 employees with an average of \$12.88 per week.

That is the very opposite of the canning room. You will notice that the curing departments were busy when the canning room was slack.

Acting Chairman LANNON. In making up those figures, are they inclusive of all the people who work during that period, or were there some who worked a few hours?

Mr. O'HAN. They are inclusive of the average. We could not take all the people, because a few of them would only work a few hours in a week. We had to take the average number of employees. What I took was the average number by taking the pay roll on a certain day each week, presumably

in most of the plants on Thursday, as we consider that one of our uniformly fair average days.

The mechanical department for October period, which includes mechanic as well as laborers and apprentices, was 718 men, with \$13.89 average pay roll per week, comparing with March, 705 employees with \$14.88 per man per week.

For the period ending October 31, the sausage department average number of employees was 435, of which there were approximately 150 females, adults and minors, and 20 boys, door tenders, etc.

For the period ending March 6, 1915, of an average number of 484 employees 165 were females, adults, and minors, and 24 boys, door tenders, etc.

I believe you have asked for the average number of hours made by certain gangs?

Acting Chairman LENNON. Yes.

Mr. O'HERN. I submit a statement showing the estimated number of hours made per week. We took it for the period from October 4 to 31, inclusive.

Acting Chairman LENNON. That is representative of the period, is it?

Mr. O'HERN. That is the period Mr. Kennedy had mentioned in his statement. I took the exact period, as closely as we could get them to conform to our accounting system.

In the hog killing, average for week was 42½ hours; cattle killing, 50 hours; pork cutting, 43 hours; sheep killing, 44½.

For a period of four weeks in March, March 1 to 27, inclusive, the average hours per week were 43 hours in the hog killing; 46 in the cattle killing; pork cutting, 45; and sheep killing, 37.

This statement does not include a number of men who remained after gang time for the purpose of cleaning up the department, caring for the product and doing such other work as may be required to finish up the work in the department and leave it in condition, ready to start next morning.

I want to say in explanation of that labor that the lower-priced men are always allowed to do the clean-up work. What we call the "gang time" is the time after the major portion of the gang finish and go off duty.

The clean-up work is taking care of the details that can not be taken care of during the time or while the work is going on. That includes about two or three hours' work each day.

As an illustration, I could give you approximately how many of those men have the opportunity to make that two or three hours' extra time in the hog-killing gang. In the hog killing the estimated number in the gang was 350. Eighty of those men were permitted to make two and one-half hours each overtime, which we allow them for cleaning-up purposes. In other words, two, three, or four foremen take a bunch—

Acting Chairman LENNON (interrupting). How many hours had that gang worked as a gang?

Mr. O'HERN. Forty-three hours. The laboring men would have 6 times 2½ hours, or 15 hours more.

Commissioner GARRETSON. Is that 43 hours the average or the actual?

Mr. O'HERN. This is actual time taken. We were able to get the actual time in this particular case. It is the actual time, gang time; the high-priced men received actual pay for what is termed "gang time."

Now, in the cattle cutting there were 280 men. One hundred of these laborers received two hours' extra work each day on the clean-up.

I perhaps should not say that it is six days a week. We have on an average about five clean-ups a week. In other words, there are not many weeks when they work on Saturday, and you can readily appreciate whether we work 1 hour or 10 hours, the clean-up is the same. So that the amount of time necessary to clean up does not vary.

In the pork cutting we had 175 men average in the gang, and 40 men got two and one-half hours each extra.

This gang works practically every day.

In the sheep killing we had 245 men, and 117 got two hours extra in addition to gang time.

I want to say for the gang that on account of the quarantine the receipts were light and we were unable to harmonize our gang with the receipts. For a week we really held men ready, expecting the quarantine to be declared.

Now, we have got other departments, for instance, the canning room, the cutting room, the sausage room, in regard to which I will give you some figures.

In the canning room for the October period 70 hours was the average for the week. That was a very busy season. We worked, I believe, one or two Sundays during that period, and we worked some nights. But the average actual time made by the people in that department for the four weeks' period, taking all the total employees and the number of hours worked, was 70.

I want to say that this is seasonal work, and that it only runs a few months in the year.

Acting Chairman LENNON. What would be the longest limit of hours anyone would have to work?

Mr. O'HEARN. I would say that we call it 8 o'clock. We try to work under Government regulation. We are not permitted to work beyond 7 o'clock without getting a permit from Washington.

We also endeavor to work even time as far as possible. We find it not only decreases the efficiency of the men, but it decreases the efficiency of the work. We do not get the results in overtime, nor do we have the men working as efficiently when there is too much overtime.

Acting Chairman LENNON. Would anyone work 18 hours out of 24?

Mr. O'HEARN. There would be no cases of that kind, with the exception possibly some of the machinery breaks, and they work to fix up the machinery in case of a breakdown. I do not recall an instance of that kind at this time.

I know we have had the big ice machine, for instance, break down; the men did work all day and night trying to put it in order to get it ready for work.

Acting Chairman LENNON. That would not be in the actual butchering?

Mr. O'HEARN. No; there is absolutely none of that.

In the sausage department for the same period, average 62 hours; the curing, 62 hours; the mechanical department, 60 hours.

The mechanical department for the four-week period ending March 1 to 27 was 60, as compared to 60 in the fall. That runs very uniform year around.

The canning department is 50 hours in March, compared with 70 in October period. Compared with the average number of employees in March two-thirds or three-fifths of the number compared with October.

The sausage department was 62. That ran about normal.

The curing department in the spring was heavier again; that ran 68.

The next statement I have prepared here in answer to your question E was the number of males and females employed both in the operating and executive end of the organization. I have total employees at all the plants, males and females, if you desire that.

Acting Chairman LENNON. Yes.

Mr. O'HEARN. Well, at Chicago, 7,150 males; 850 females in the operating department; in the executive department, 1,000 males and 150 females.

Operating: Kansas City, 3,100 males, 300 females; South Omaha, 1,400 males, 150 females; East St. Louis, 1,250 males and 200 females; Fort Worth, 1,250 males and 150 females; Sioux City, 850 males and 50 females; South St. Joe, 630 males and 80 females; Denver, 200 males and 20 females; Jersey City, 205 males and 10 females; branch houses, there were 2,000.

I have got this totaled here. I do not presume you are interested in the grand total, although I will give it—13,435 males and 1,765 females employed in operating.

The executive total was 5,305 males and 285 females.

I have here something in answer to this next question, which I had to get up as near as I could come to answering the question you have asked there.

I believe the question is, What are the comparative amounts earned in the various classes?

I was unable to obtain that in any satisfactory manner.

I believe I heard Mr. Kennedy's testimony, and I believe he stated after two years' study and work he was unable to obtain it.

It is something that is absolutely impossible to get to be of any comparative value for the reason that we have, in our average turnover, 8,000 extra employees coming and going through the year. And in order to find out what the amount or percentage earned would be for the various classes we would have to take into consideration what we term the steady time employees and those who are the floating or temporary employees.

That would have to be a guess. But in order to give you actual figures, as near as we could, and give you this information, the fullest information we were able to obtain on it, we have given you these figures. We have taken the total of our average number of employees for the year at our seven large

plants—the actual pay roll of the labor end of it in each plant—and the amount of money earned at each plant.

Now, in making up this statement, it includes in the figures male, female, adults, and minors. The average at Chicago was \$11.80 per week. That includes men, women, adults, and minors.

Commissioner GARRETSON. That is the sum total of the pay roll for that point divided by the sum total of the employees at that point?

Mr. O'HERN. Yes.

Commissioner GARRETSON. And it gives absolutely no definite information as to what those individuals earned during the year?

Mr. O'HERN. I had no way to get that in the limited time in which I had to prepare these figures.

Commissioner GARRETSON. The man that earned \$4 can't pay grocery bills of an average of \$11.80?

Mr. O'HERN. Not if he only earns \$4.

Commissioner GARRETSON. That is it.

Mr. O'HERN. Not if he only earned \$4.

Commissioner O'CONNELL. Have you any way now of differentiating between the male and female as to the wages of the male and female?

Mr. O'HERN. No, we have not. And I was unable to prepare that kind of a statement. If I can find some way to get a statement of that kind that would be of any information, I would be glad to submit it.

Commissioner O'CONNELL. Have you situations where the male and female are performing the same labor?

Mr. O'HERN. No; we have not. We have males and females doing the same work for a certain portion of the day, but the work in our industry—

Commissioner O'CONNELL (interrupting). In that case would they receive the same pay?

Mr. O'HERN. No; I will explain that in this way: We will have a man at \$1.75 a day and a woman at \$1.25. There might be times during the day when that man would not be busy at his work and he might be sent over to help out, for instance, wrapping labels and doing things of that kind, but the rate of wages would not be changed for the time that he would be there. And they might be both working at the same labor, the same work, but not getting the same rate of pay.

Commissioner O'CONNELL. I understand that.

Mr. O'HERN. In other words, we move a man around, but we change the rate of wages to the highest rate. We never cut their rate of wages when we move them to a position with a lower rate of wages. For instance, a hide dropper gets 37½ cents an hour and a floor man gets 50 cents. If we change the floor man to work as a hide dropper, his rate of wages would not be cut to 37½ cents, which is hide-dropper rate. But if we move the hide dropper to floor man, we would change his rate from 37½ to 50 cents per hour.

Commissioner O'CONNELL. What are the hours of the women and the girls? We have the men.

Mr. O'HERN. I think we have that here. I have a lot of figures.

Commissioner O'CONNELL. If that is going to delay you in any way, we will take it up later; but I thought possibly you had it.

Mr. O'HERN. I may have it here.

Commissioner O'CONNELL. Have you established a minimum wage for female labor?

Mr. O'HERN. The minimum wage for female labor, except in cases of minors, is \$1 per day at most plants; at some plants it is a dollar and a quarter. This is for 10 hours' work.

Commissioner O'CONNELL. What is it in Chicago?

Mr. O'HERN. I think it is a dollar here. I am almost certain of it; I do not have it in front of me, and I can not recall just now.

Commissioner O'CONNELL. Go ahead.

Mr. O'HERN. I think it is a dollar. I know in one plant where I had occasion to go into it just recently, that was a dollar and a quarter minimum.

Now, you have asked for the number of hours worked weekly. From 40 to 44 hours, 4.40 per cent; 40 to 45 hours, 18 per cent; 50 to 54 hours, 13.30 per cent; 55 to 59 hours, 13.40 per cent; 60 to 64 hours, 39.20 per cent; 65 to 69 hours, 7.80 per cent; 70 to 74 hours, 3.10 per cent; 75 to 84 hours, 0.80 per cent.

The above was arrived at by taking the actual gang time worked on the killing gang and the average time for the entire gang on the balance of the

gangs throughout the house. We took the actual time in the killing gangs. The average time in the other departments of the house had to be approximated.

For instance, in the canning-room work the employees in the cookroom come out about an hour or so earlier than the balance of the gang and stop about one to three hours earlier, and for that reason there are men going home at various times during the day, varying in the amount of work put in each day, some of the employees working 8 to 10 hours whilst others make 10 to 12 hours the same day. The proportion of those men is not the same every day, and to make up a statement showing the actual amount made by each of the employees in the plants of that kind covering any extended period would necessitate employing a number of clerks and going into a very great detail.

It must be understood that there is no gang in the entire packing plant that stops as a unit. In other words, a large portion of the skilled men go home at what is called gang time, the balance of the men who stay doing such other work as can not be taken care of during the working hours, and which must be done at the close of work each day.

No females work over 10 hours per day.

Now, with reference to nationality, I have a statement of the nationalities. We have the nationalities at the various plants taken on one day. We could not arrive at it in any other way. It covers Chicago, Kansas City, South Omaha, St. Louis, Fort Worth, Sioux City, St. Joe, Denver, and New York and Jersey City.

Now, we have tabulated the Americans, the Irish, the English, the Scotch, the Germans, the Polish, the Swedish, Bohemian, Lituanian, Russian, Slavonian, Mexican, Croatian, colored, Italian, Belgian, Greek, and miscellaneous.

It would be, perhaps, too tedious to read all of these. I have it recapitulated for each plant in classes.

The English speaking; in one class, German, Bohemian, and Belgian; in another class, Polish and Slovak; in another class, Lithuanians, Austrians, and Russians; in another, miscellaneous.

Acting Chairman LENNON. Have you a copy of that report that you will file with us?

Mr. O'HERN. Yes, sir; you may have that.

Acting Chairman LENNON. Just give a copy of that to the stenographer there, and then give us your synopsis.

Mr. O'HERN. All right.

In Chicago, English-speaking people, 26.44 per cent; Kansas City, 43.52 per cent; South Omaha, 35.48 per cent; St. Louis, 44.83 per cent; Fort Worth, 62.14 per cent; Sioux City, 30.56 per cent; St. Joe, 47.18 per cent; Denver, 40.91 per cent; New York, 35.71 per cent; Jersey City, 60.47 per cent.

German, Bohemian, and Belgian classification—

Commissioner O'CONNELL. Those you gave were the English-speaking?

Mr. O'HERN. The English-speaking.

Commissioner O'CONNELL. What do you include in that?

Mr. O'HERN. The American born, Irish, Scotch, English, and Negro.

Now, in the German, Bohemian, and Belgian classification, Chicago, 12.31 per cent; Kansas City, 5.83 per cent; South Omaha, 23.87 per cent; St. Louis, 8.62 per cent; Fort Worth, 7.86 per cent (practically 8); Sioux City, 6.67 per cent; St. Joe, 10.56 per cent; Denver, 29.55 per cent; New York, 15.71 per cent; Jersey City, 9.30 per cent; with an average total of 11.35 per cent; the average total of 11.35.

American or English-speaking people average for the whole was 36.38 per cent.

The Polish and Slovak, Chicago, 33.75 per cent; Kansas City, 8.53 per cent; South Omaha, 20.65 per cent; St. Louis, 29.66 per cent; Fort Worth, 4.29 per cent; Sioux City, 8.59 per cent; St. Joe, 11.97 per cent; Denver, 4.54 per cent; New York, 18.57 per cent; Jersey City, 23.26 per cent, with an average of 23.56 per cent for the whole—for all the plants.

Commissioner GARRISON. Are those averages by taking and retaking all the totals in all the plants and establishing the averages?

Mr. O'HERN. It is not an average of the averages. It is an average of total employees in each plant.

The Lithuanians, Austrians, and Russians in the classification, Chicago, 24.5 per cent; Kansas City, 79.21 per cent; South Omaha, 6.13 per cent; St. Louis, 15.17 per cent; Fort Worth, 6.7 per cent; Sioux City, 72.38 per cent; St. Joe, 21.13 per cent; Denver, 11.36 per cent; New York, 23.53 per cent; total, 20.60 per cent.

Miscellaneous: Chicago, 3 per cent; Kansas City, 12.35 per cent; South Omaha, 13.87 per cent; St. Louis, 1.72 per cent; Fort Worth, 19.64 per cent; Sioux City, 21.10 per cent; St. Joe, 9.16 per cent; Denver, 16.64 per cent; New York, 1.43 per cent; Jersey City, 6.97 per cent.

It is pretty hard to account for the variation in the miscellaneous. I believe at one plant there is an Italian colony and at one of the plants some others that we have not classified.

Acting Chairman LENNON. That completes the earlier phase of it. And the next question, as I recall it, Mr. Armour said you would answer, is the—describe the company's machinery for employing men.

Mr. O'HERN. We have an employment department, what we term an employment bureau, that is directly under the supervision of the superintendent of each plant, either one of his assistants, or some man designated by him, looks after the employment of all help. That man receives a request each morning from the various department foremen telling him the number of employees he wants, and what kind of employees he wants, and also specifies whether skilled or unskilled men.

Acting Chairman LENNON. What is the average hours a day that he receives that notice?

Mr. O'HERN. The foremen are asked to place their requests the night before where it is possible. On account of the temporary character of some of the employees the foremen do not always find it out the night before, and they have to fill up their gangs after they have organized them after 7 o'clock in the morning, in which event they send down as soon as they can.

Acting Chairman LENNON. That would mean it would be probably 8 o'clock before they would get to work?

Mr. O'HERN. We make a practice not to keep the employment office open after 8 o'clock. We give orders to close the office as near 8 o'clock as we can, and we tell the men so they will not stay around.

Commissioner O'CONNELL. About how many men usually show up in the morning looking for work?

Mr. O'HERN. That will vary, depending on the season of the year. I presume there has been from one hundred to two and three hundred at times, and might have been more.

Commissioner O'CONNELL. Is there a room prepared for them to go in and wait, or do they have to wait out in the open?

Mr. O'HERN. We have in some places an inclosed place. We have not at this plant. We have only recently established the employment bureau, and are working out some details now.

Commissioner O'CONNELL. At Chicago, you say, there is no place?

Mr. O'HERN. There is no place at Chicago.

Commissioner O'CONNELL. When it rains or snows they have to stand out?

Mr. O'HERN. We endeavor in those cases to provide a place. We would permit the men to sit inside the buildings, but we have no place provided. We are now considering erecting a place.

Commissioner O'CONNELL. What is the usual custom now of employing—say a hundred men are there looking for work, standing line—what is the method of getting to the proper office, say it is a rainy morning or a snowy morning and the men are standing there?

Mr. O'HERN. In that event we would notify them right away. We would know within 15 minutes after 7 what men are wanted and tell the rest of the men nothing would be doing for them, and just let our department foremen get along as best they can.

Commissioner O'CONNELL. How many do you employ each morning in addition to your regular force?

Mr. O'HERN. It is pretty hard to arrive at an average for it. But the replacement, the turnover, in a year—in other words, new men we have given new check numbers to—amount to about 8,000. There is practically 80 per cent of the men that might be termed steady-time employees.

Commissioner GARRETTSON. Eighty or eight?

Mr. O'HERN. Eighty.

Commissioner O'CONNELL. You have in your Chicago plant somewhere around 7,000?

Mr. O'HERN. Between seven and eight thousand, I think.

Commissioner O'CONNELL. In order to keep that force up during the year you employ 8,000 more; in other words, you reemploy your entire force, or that part of it, during the year?

Mr. O'HEARN. We reemploy a large number of the 8,000, including men who quit in one department and have gone to another department with a new check number.

Up to this last six months they have been entered on our books as new men. During the last six months we have endeavored to organize the employment bureau under a more satisfactory basis. We have established an index card system for men, so that we can arrange to give the old employees preference, because they know our work—are better for us. A man who left one day and would go into the other department and receive a new check number has been counted as a new man.

Commissioner O'CONNELL. And the men hired every morning and employed to work for the day would get a new number?

Mr. O'HEARN. Yes.

Commissioner O'CONNELL. And would get a new number?

Mr. O'HEARN. Yes. This 8,000 men I told you of includes every man that was given a new check number, whether he was an old employee or not, if he had left his old job.

Commissioner O'CONNELL. An employee taken in each morning—are they given new check numbers?

Mr. O'HEARN. Yes.

Commissioner O'CONNELL. Every morning employed?

Mr. O'HEARN. To make that plain, I might say to you that very seldom, if ever, is a man hired for a day or two. He is hired to take a place on the gang during the time that a department is doing extra work. He is what you might term on for a seasonal period, if he desires, to-day, or is able to do the work.

Commissioner O'CONNELL. What is the method of employing female labor?

Mr. O'HEARN. The female labor is largely employed under our welfare department direction. The girls in the plant, as a rule, also know other girls, and they speak to the foremen about the girls.

Commissioner O'CONNELL. Are they employed in the regular employment office?

Mr. O'HEARN. They will get a ticket. The girls in the various departments know when the help will be needed, and they will speak to the foreman and tell him of somebody perhaps that they know that is looking for a job. A great deal of the female help is employed in that manner. We do that for two reasons. In the first place, we get old help back, and we also get more reliable girls. The girls get somebody in there that is a friend of theirs, and they are naturally interested in her and teach her the work. We give preference, particularly in hiring female help, to the recommendations of our female help and welfare department.

Commissioner O'CONNELL. Do you have facilities whereby the females that are employed are taken care of in case of sickness?

Mr. O'HEARN. Yes, sir; we have. They are under observation by our welfare department.

Commissioner O'CONNELL. A nurse; do you have a doctor in the plant?

Mr. O'HEARN. We have three in our medical force; that is, a doctor and one or two assistants, as well as welfare workers and ladies that spend their time going around through the plant. If a woman is away from work, an investigation is made, and she immediately visits that home and finds out if the employee or anyone in their family needs assistance, in which event first aid is rendered. If you wish, we have a report of the visiting nurse that just come for this month.

Commissioner O'CONNELL. Just give us some idea of it.

Mr. O'HEARN. This is the report of the visiting nurse for the month of March: Number of old patients—that is, the number that she has taken care of—86; number of new patients, 44; total, 130. Number of patients dismissed, 37; number of patients forwarded, 83.

Acting Chairman LENNON. What does that mean?

Mr. O'HEARN. That is where they have patients that have been found sick and they have been sent to a hospital or to an institution or sanitarium, and taken care of after they have been rendered first aid. In other words, they take it up with the associated charities, and find permanent relief for them after that. In all cases they render first aid and get them in touch with these other places.

Number of nursing calls, 83; number of other calls, 81; total number of calls, 264. Improved and recovered, 25; unimproved, 2; died, 1; not found, 1.

To institutions: To the Florence Crittenton Home, 1.

There are four or five places, the Northwestern Dental and the Chicago Polytechnic and the Northwestern Dispensary and St. Bernard's and other institutions.

Acting Chairman LENNON. Just put the statement in the minutes.

Mr. O'HERN. The other part has reference to the diseases and whether they were male, female, adult; whether they were employees or members of some family of employees.

Commissioner O'CONNELL. In that department of the nurses, the welfare department, is there some sort of track kept of possible prevalent disease and to show the method that they have adopted in preventing?

Mr. O'HERN. Yes.

Commissioner O'CONNELL. What is done in that regard?

Mr. O'HERN. There is never a case of contagious disease that is not immediately taken up; it is reported to our doctor and he in turn reports it to the city authorities, and they pursue their investigation and render such aid as in their opinion they think is necessary. The visiting nurse renders such aid at home in the way of comfort and necessities that they think will be of benefit to them, particularly in the way of advice and help toward getting them medicine and nourishment.

Commissioner O'CONNELL. What I was getting at was as to whether they kept any record for 10 years, or 5 years, or such a matter, they could show the decrease in the disease, a decrease in sickness, because of better sanitary conditions, and so on.

Mr. O'HERN. These reports have only been in existence for about three years. They are hardly of comparative value yet, although we are compiling them; we have not yet thought there was much comparative value in it, but we expect in time to devise some practical plan to keep track and have some uniform method of compiling the reports.

Commissioner O'CONNELL. In Prof. Kennedy's report, he spoke of certain blocks where deaths from diseases were quite numerous. Do you make investigation along that line, to ascertain what the facts are?

Mr. O'HERN. We have had some instances of that kind, and I believe—now, I am only speaking from memory, and I do not want to be quoted as an authority; but one instance I have in mind particularly where the nurse reported she had found on investigation one or two families that were infected with tuberculosis, where their sanitary conditions were not conducive to good health, and she found in those families that they were related, if I am not mistaken. That was an instance that I do not think had any relation to what Prof. Kennedy stated where a large number of people living in certain lots or localities being infected with tuberculosis or other contagious disease.

Acting Chairman LENNON. Did you have any specific matters that Mr. Armour referred to, that you have not touched on yet?

Mr. O'HERN. There was question 21, I believe.

Acting Chairman LENNON. That was really practically answered, I think, under 20.

Mr. O'HERN. Yes.

You asked with reference to handling of old employees. We have given instructions in all instances to give preference to old employees. There are several reasons why we should. In the first place they know our work; they are familiar with it; they are educated to that work; their education means six months' apprenticeship for some new men; and in practically every instance we give preference to the old man and to those who have others dependent upon them. For instance, sons of widows and mothers, of that kind. It has been Mr. Armour's orders to give preference along that line.

Did you want a description of how we hire the men and put them to work?

Acting Chairman LENNON. Yes.

Mr. O'HERN. We just issue a man a check, or a ticket, with a number on it, and he exchanges that for a brass check number for identification and for facilitating in handling of the large number of men in and out of the plant in the shortest possible time. It is about the only purpose of the check number.

Commissioner GARRETSOON. You heard Mr. Kennedy describe how they would tap a man on the shoulder and say, "Now, I want you." That is practically correct, is it?

Mr. O'HERN. No; I couldn't say that. To start with, as I just explained to you, the men are picked for their knowledge of the work. For instance, it would be ridiculous when you wanted to hire a butcher to just go and pick out a fellow and tap him on the shoulder. We want men for certain classes of

work. I presume that might do whenever you were wanting to put on a few men for emergency work; for instance, if we had a fire and wanted to put on 25 or 30 men to clean up the debris. I think it is obvious to anybody that when you come to hire men you could not go at it in that indifferent and careless way. I think it would reflect very badly on the operating men in charge to hire men that carelessly.

Commissioner GARRETSON. It would be a good deal in line with a very considerable amount of testimony that has been given here before the commission prior to this time in other industries.

Mr. O'HERN. Well, I can't say it is in ours. I think our increased efficiency and better class of work we are striving to get will necessarily have to come from the men of experience. And we can only get them by taking them back, by taking care of the ones who have experience.

Commissioner GARRETSON. I am somewhat interested in just how some of these averages were arrived at.

Your number of employees for the year was something about 7,100, was it not?

Mr. O'HERN. That is the minimum.

Commissioner GARRETSON. The minimum?

Mr. O'HERN. Yes.

Commissioner GARRETSON. And your total hiring of 80 per cent who are stable, that would be equivalent to 5,700 men steady. You made 8,000 hirings? Mr. O'HERN. Pardon me, the figures submitted show an average of 7,800. That included males and females; 7,100 I think included only the males.

Commissioner GARRETSON. Well, how much of the 8,000?

Mr. O'HERN. Eight thousand included all the employees.

Commissioner GARRETSON. What proportion of the 8,000 is male?

Mr. O'HERN. About 7,100.

Commissioner GARRETSON. Have you got the hirings, the new hirings?

Mr. O'HERN. I haven't got that figure.

Commissioner GARRETSON. You mean you haven't got it separate?

Mr. O'HERN. No; I haven't got it separate.

Commissioner GARRETSON. It would possibly have a similar proportion to the number employed?

Mr. O'HERN. I could hardly say it would. For instance, in the canning room, which is seasonal work entirely, we employ a large number of girls for about four or five or six months.

Commissioner GARRETSON. Yes; but the total—it will work out the same?

Mr. O'HERN. Yes, sir; it would.

Commissioner GARRETSON. Again, if the totals are 8,000 in the average of both men and women, the regular employees, and the total of hirings were 8,000, those 8,000 new hirings are to replace the unstable 20 per cent?

Mr. O'HERN. Yes, sir.

Commissioner GARRETSON. Because you testified 80 per cent remained.

Mr. O'HERN. Well, but I also stated that the 8,000 included a large number of employees who were transferred from one department to another.

Commissioner GARRETSON. Oh, yes.

Mr. O'HERN. But who are coming back as new employees.

Commissioner GARRETSON. It is replacement, just the same.

Mr. O'HERN. Replacement.

Commissioner GARRETSON. In one form or another.

Mr. O'HERN. Pardon me. That would be replacement under the way we handle it.

Commissioner GARRETSON. I grant you that.

Mr. O'HERN. In a small factory, with only 25 employees under one supervision, these men may be constantly moved about to various kinds of work and can be kept permanently employed. In our own place we are organized in departments. We may lay a man off who is a mechanic in a mechanical department and employ him in another place. In departments where they are working under seasonal conditions a large number of employees may be laid off and immediately find employment in the killing gangs or other departments throughout the plant. They may be out of employment a very short time, if at all. They have—

Commissioner GARRETSON. It hasn't hardly a bearing as it appears under your system of picking up?

Mr. O'HERN. That is the way it is, exactly.

Commissioner GARRETSON. But, anyway, the 8,000 are required in this instance to turn over 2,000 positions—virtually 1,500; it is between the two?

Mr. O'HERN. Yes, sir; it is about that.

Commissioner GARRETSON. Now, you further stated that the average was arrived at by taking the number of employees who appeared on the rolls and dividing it into the amount paid by the company, which gave an average wage. Which is your factor in making that division—7,100 or 8,000, as the case may be, or 16,000?

Mr. O'HERN. Eight thousand.

Commissioner GARRETSON. That is a fair example of the real value of averages, isn't it?

Mr. O'HERN. Well—

Commissioner GARRETSON. One would be one-half of what the other is?

Mr. O'HERN. The whole thing depends on whether you hire 1 man for 10 weeks or 10 men for 1 week.

Commissioner GARRETSON. But when it comes to the average wage, it means nothing to the man who gets the smaller amount under the average?

Mr. O'HERN. Oh, no.

Commissioner GARRETSON. It is absolutely valueless as far as what the individual has at his disposal for living purposes?

Mr. O'HERN. No. In that connection I want to state that our wage scale does not represent what he had at his disposal. His income. The number of days which he has worked gives him an opportunity to do many things he could not do otherwise.

Commissioner GARRETSON. Wages will tell nothing, but earnings tell it all?

Mr. O'HERN. Earnings tell it all.

Commissioner GARRETSON. Now, have you the ratings—did you hear the telegraph testimony here?

Mr. O'HERN. No; I did not. I was not here.

Commissioner GARRETSON. It would simplify the illustration.

You rate the men so much per day?

Mr. O'HERN. Yes, sir.

Commissioner GARRETSON. And I suppose the average man is disposed of and paid according to his rating.

Now, a \$10 a week man, you have a certain proportion that are \$10 a week and under. If a man is rated at \$10 a week and he works continuously during the year, his earnings would amount to \$520?

Mr. O'HERN. Yes, sir.

Commissioner GARRETSON. You heard Mr. Armour's testimony that the 40-hour plan, while not specifically applied, he was not prepared to testify to any specific cases, but it applied—it was general in its application in your plant?

Mr. O'HERN. In some of the plant applied as a whole; but in other plants it is applied in this manner: We have instructions to our foreman to adjust their gangs so that they can make 40 hours per week. Their report comes to my desk every week, and attention is called to any gang that works less than 40 hours. This report is also sent to Mr. A. W. Armour, who sees it and note is sent to the various foremen or department superintendents, calling their attention to the fact that the men have made less than 40 hours and warning them to adjust their gangs immediately so that the men will make 40 hours or better.

Commissioner GARRETSON. It is the instruction, then, that it shall be done, but no guaranty to the man that shall receive it?

Mr. O'HERN. It is a guaranty in some plants, but an instruction in others.

Commissioner GARRETSON. Now, men who are rated at \$10 a week—

Mr. O'HERN. Yes, sir.

Commissioner GARRETSON. And he works we will say, a 10-hour day, because it has been testified you have both 8 and 10 hour days in the different pursuits, I suppose?

Mr. O'HERN. It varies from 8 to 10. We aim to keep it over 8.

Commissioner GARRETSON. If a man rated at \$10 a week on a 10-hour-a-day basis, his annual income, if he worked all the time, would be \$520?

Mr. O'HERN. Yes, sir.

Commissioner GARRETSON. If he worked 40 hours, if he worked every day, or at least if he worked every week an equivalent of 40 hours and was paid therefor, then his earnings would be five-sixths of the \$520, or an equivalent of \$433; that is fairly correct?

Mr. O'HEARN. It is, but he gets—

Commissioner GARRETSON. Does it occur that way?

Mr. O'HEARN. Your deduction does not cover all the facts that I have given. Probably you have forgotten. The 40 hours gang time, the laboring men in those gangs are always held to do this other work. As I say, in the gangs it amounts to at least 2 hours work every day, easily 10 hours work a week. So in arriving at the laboring man's earnings you should at least add 10 hours extra to any figures you have for gang time.

Commissioner GARRETSON. And the man who gets the overtime, according to your statement, in 250 men, 100 were probably held—what about the other 150?

Mr. O'HEARN. As a rule, those men are the skilled men that get the higher rate of wages.

Commissioner GARRETSON. Are all the laboring men in those gangs retained for the clean-up work, or only a portion, or do you rate it?

Mr. O'HEARN. We do not rate it. On the contrary, we simply have to take some of the men getting the higher rates in order to get sufficient help; frequently they don't want to stay.

Commissioner GARRETSON. And are there enough men to do that?

Mr. O'HEARN. It would be in most instances ample, but we give preference to the laboring men.

Commissioner GARRETSON. How far were the figures given by Prof. Kennedy out, which he stated that large proportion of the employees in that territory earned an average of \$508 per annum. Would you disagree with that?

Mr. O'HEARN. No; I would not. I have stated that I think our laboring average wage that the men can make if they work full time in the packing house which is available for him to work will be between \$500 and \$650.

Commissioner GARRETSON. Reasonably based upon the data secured from your books?

Mr. O'HEARN. I haven't any reason to question it.

Commissioner GARRETSON. Mr. Armour made the statement that you came from the \$1.75 stage up to your present position. You ought to be fairly conversant then, and I do not disclaim knowledge on that subject myself, from the same causes—fairly conversant with what constitutes the recognized standard of living by people who compose those classes. Do you believe it can be maintained with a wage of that kind?

Mr. O'HEARN. Well, I feel this way; there is a lot to be taken into consideration. I speak from a personal experience. When I started I did not have a family. I was single at the time. And so there are a whole lot of factors enter into that. The actual wage and earning power in one particular job does not necessarily limit a man's earning power in some other line, or some other direction. For instance, in a number of cases these single people can save something out of it. Married people take in boarders. Some have a garden patch; some of them have other means of earning and adding to this income. The standard of living has a great deal to do with it.

When I was getting \$1.75 a day, I got along on it. On that wage I saved proportionately as much as I did when I got a whole lot more; it depends on the way you are living.

Commissioner GARRETSON. Were you satisfied with your standard of living on the \$1.75 rate?

Mr. O'HEARN. Why, that will depend largely on what you call satisfaction. I believe there is always going to be discontent. There is an ambitious discontent that will always exist.

Commissioner GARRETSON. If you had not been dissatisfied, you would not have been where you are?

Mr. O'HEARN. I think a man that is satisfied is not progressing. The man that is entirely satisfied never gets very far ahead.

Mr. Kennedy perhaps left an inference, although I do not think he meant to leave it, when he said that a man started at \$1.75 a day remained at that pay; that he had to raise a family from the time he was married until that family grew up on that wage.

That does not necessarily follow. When I started out in the packing business at \$1.75 most of the men that had any ability, and almost 90 per cent of the men have, were looking for a better job, and they did not stay long on that wage. They will try to equip themselves by learning the work and get a little better salary. And in time they work to where they will improve their working conditions. As they obtain more knowledge and information they are the

3510 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

most available men in time of promotion, so that your men that started, as Mr. Kennedy said, at \$1.75 never stopped at that.

It is true that we have some men that are in such a condition, through physical infirmities and other reasons, that do not fit them for anything except for certain lines of work.

For instance, I have in mind one man right now, a blind man, that has been working 15 years, pulls in the sheep gang. I think he gets something like 28 to 30 cents an hour. He couldn't do anything else. By instinct he has learned to do that work.

We have other men who through age or physical disability, crippled, some one arm and some one limb gone, who do other things. It is not the general rule when a laborer starts in at \$1.75 or \$1.85 or \$1.90, as the case may be, that he stays at that rate of wages any considerable length of time.

Commissioner GARRETSON. I recognize the earmarks of the old adage, that "there is room at the top," in that statement. If every man possessed the instinct that led him to progress, fitted himself in all directions, for this advancement who is going to sweep the blood?

Mr. O'HERN. That is true.

Commissioner GARRETSON. Then the room would all be at the bottom, wouldn't it?

Mr. O'HERN. That is true.

Commissioner GARRETSON. That is all.

Acting Chairman LENNON. Did you have any questions to ask, Mr. Aishton?

Commissioner AISHTON. I think that last question kind of floored me.

You said, Mr. O'Hern, or it has been testified to here, that 80 per cent of the men employed in the plant are what you might call steady-time men?

Mr. O'HERN. They are permanent employees; not classed as steady-time men, but steady employees.

Commissioner AISHTON. So that about 20 per cent of the force is what might be called casual?

Mr. O'HERN. Yes; temporary.

Commissioner AISHTON. And men that you get through your own employment agency?

Mr. O'HERN. Yes.

Commissioner AISHTON. I did not quite understand how that 8,000 was arrived at. Supposing that John Smith is hired to-day through your employment agency and he works four or five days and then there is a reduction in the business, or something, and he is out again, and later if he is hired again, say, a week from now, would his name be counted as two?

Mr. O'HERN. Yes.

Commissioner AISHTON. So that one name might appear a number of times in making up this 8,000?

Mr. O'HERN. Yes; that condition does, in fact, happen. For instance, our beef-boning gang works only parts of the year, and when the men are through with that work the gang is taken to other parts of the house. Some of the men among those 8,000, their names appear five, six, and seven times, so it has no actual bearing on the actual number of new employees that come into our plant. We have no figures on that; our system of accounting will not give that.

Commissioner AISHTON. In this 80 per cent of what you call regular employees of Armour & Co. are there a good many of the old employees; that is, men who have been in the service of Armour & Co. for a good many years?

Mr. O'HERN. Quite a number of them; so much so that not long ago we had a young man connected with the organization who was digging out some soft spots, and he reported on quite a number of old employees where he thought the efficiency could be increased, and I advised him at the time that he might just as well forget it, for if we let them go Mr. Armour would take them back again.

Commissioner AISHTON. That is one of the instances where Mr. Armour takes the part of the employees?

Mr. O'HERN. Yes, sir; he would say, "He has been around here a long time, and you find him something;" that is his characteristic remark.

Commissioner AISHTON. In regard to this "room at the top" they were talking about, as an official in charge of a very large plant, do you not find a good deal of difficulty—is it not one of your principal difficulties, as a matter of fact—to be able to secure men who are competent to fill what you might call the higher positions of the company? Is that not one of the problems you are confronted with?

Mr. O'HEARN. Yes; it is one of the hardest problems I have had in this position, to find men to fill responsible positions. Another fact that is a source of worry is because I know the weaknesses of some, not because of their inability, but because they are inexperienced.

Commissioner AISHTON. The foremen and subforemen and heads of departments in your line of business are ordinarily taken from the ranks of the men working in the plant, are they?

Mr. O'HEARN. Invariably so. We would give preference to a man lacking education who had experience rather than to a man having education and no experience. It is obvious that our work requires men of experience. There is no line of industry outside of the packing industry that equips men in our line of work, so that experience is a big asset with us.

Commissioner AISHTON. That is all; thank you.

Acting Chairman LENNON. Commissioner O'Connell will ask some questions.

Commissioner O'CONNELL. You are practically the executive in charge of the operation of the plants in Chicago?

Mr. O'HEARN. Yes, sir.

Commissioner O'CONNELL. Now, first, who decides what the wages shall be?

Mr. O'HEARN. The question of wages is established—well, I can best illustrate that by stating that the wages that we have at the present time are the wages that have been in effect for some considerable period of time. The question of changes in wages would be by me necessarily referred to the directors and finally to Mr. Armour.

Commissioner O'CONNELL. Are the employees taken into conference at all in any way when wages are to be settled?

Mr. O'HEARN. An increase of wages necessarily comes by request from the employees. Any decrease in wages would never come or would never affect any old employees; we have never made it a practice to ever cut the wages of any of the employees on our books.

Commissioner O'CONNELL. You say there has been no change in wages for some time?

Mr. O'HEARN. There has been no change for some considerable time; and in the event that there had been a change I would know it. I have no experience or knowledge of any change where there was a cut in the wages of the old men. In other words, the practice has been to hire the new men at the lower rate.

Commissioner O'CONNELL. There is no change at the present time, nor has been since the strike, in the matter of dealing collectively with the employees?

Mr. O'HEARN. No; except when perhaps half a dozen men might, so to speak, wait on a foreman and tell him what they would like, and he would in turn represent it to his foreman or to the superintendent, who puts it up to us for action.

Commissioner O'CONNELL. In other words, you are dealing practically with the individual employees? For instance, the man appears in the morning and you say, "We want a butcher and here is the rate of wages we are paying, and if you want the job, take it; if you don't, you can go about your business"?

Mr. O'HEARN. Yes.

Commissioner O'CONNELL. It is purely an individual contract?

Mr. O'HEARN. Yes, sir; it is.

Commissioner O'CONNELL. And if a man does not want to work nine hours, he does not need to go to work?

Mr. O'HEARN. No.

Commissioner O'CONNELL. Suppose the men desire, or are anxious for the inauguration of an eight-hour day in the plants in Chicago; they are unorganized and have not been dealing collectively; how would they proceed to inaugurate an eight-hour day in your plant?

Mr. O'HEARN. Well, I believe that the average man in our plant is familiar with the working conditions to start with, and would not ask for an eight-hour day. He would recognize the fact that it would be practically impossible for us to readjust our conditions in regard to that.

Commissioner O'CONNELL. I am simply supposing a case; make it a 10-hour day, if you will?

Mr. O'HEARN. We would talk that over collectively, I presume; they would take it up with their immediate foreman and it would be by him taken up with the superintendent of the department.

Commissioner O'CONNELL. Would you meet them collectively if they had particular men to represent them?

Mr. O'HEARN. I have gone out—not in the Chicago plant, but in other plants—I have gone to them in gangs, collectively, and talked the matter over with them.

Commissioner O'CONNELL. Is it the policy of the company—I take it from what Mr. Armour said, that while he was not against the organization of the men on the outside—that they could get together and have meetings—yet I take it his position is that he is opposed to the men being organized; is that the policy of the company? Is that your policy?

Mr. O'HEARN. We have not any defined policy on that; there are some unions in the house. I believe the teamsters have an organization in our plant, and possibly the printers, and there are other men belonging to unions. I have had no dealings with them, however, except with the teamsters' union, since I have been here the past three years; but I have at other times. There is no direct opposition to unions or unionism. From personal observation I would say most of the opposition has been to the way it has been applied, rather than to the organization itself.

Commissioner O'CONNELL. You are a man of affairs, because you are the general superintendent of a large business house employing thousands of workmen and have given thought, undoubtedly, to their welfare and given thought to the interest of the public, and must recognize that there has been and is an unrest; an industrial unrest, and that we have strikes, we have lockouts, and all sorts of things going on occasionally now and then. In Chicago this morning I read of a large number, sixteen or seventeen thousand, of carpenters going on strike, and it is an evidence of some industrial unrest. Now, I do not think all of us feel that all unrest is justified, but that there is some of it that is for the good of the community. Now, in your opinion, what is the cause of industrial unrest, that unrest which does not make for progress?

Mr. O'HEARN. Well, I would have no right to express an opinion aside from our own industry. As a matter of fact, I have been so busy on this end of it that I have not been able to study outside conditions. For instance, on the strike condition that exists here locally to-day I could not tell the cause of it, not because I am not interested in it, but because I am too busy to follow it.

Commissioner O'CONNELL. I take it for granted that where there are a large number of people employed, as in the case of your company, there is some industrial unrest; what is the cause of that?

Mr. O'HEARN. There is a natural ambition inherent in every man to do better, and better his condition. I do not believe there is any man, not excepting any one of us, who has not at some time in his life felt that he was not making progress fast enough, and that is possibly as hard for him to work out as for us. I have been interested in the company, and in working up from the ranks any success I have achieved has been from the help of those men, and any success that I will achieve in the future will be from their cooperation, and I have been interested in trying to solve these problems, and I do not know of any general expression I can give in regard to that, except this: That we have to meet each case individually, whether it is the individual, the gang, or the organization. I do not know of anything I can say that will contribute to remedying this general unrest. I do not think, however, in our business, that there has been a time that there has been less discontent than now.

We have no discontent in any of the divisions of our plant, and that is marked at this time of the year where men are employed like ours; they are engaged in indoor work, and they have a natural ambition to get out in the open and away at this time of the year, and it creates unrest because of that. Nearly every spring we have this unrest, but it is not so great this year. In the West the desire to get away from the packing houses and get outdoors is very strong, and the men take advantage of that desire and go out and work in the wheat fields, as in Omaha, where they can go to the country and raise vegetables and things of that kind. That is to some extent industrial unrest, because it disturbs conditions and we have to get in a new lot of men and break them in; but we have not experienced that this year.

Commissioner O'CONNELL. This commission is trying to seek, as instructed by Congress, the causes of industrial unrest and make some recommendation; and it is only by the enlightening opinions of men who have had to do with labor, from men who have to do with capital, with men who have to do with big things; it is only by the accumulated, joint opinions of men of that kind that we can carry out these instructions. Now, have you given any thought as to what could be done, what machinery might be created that would be

at the service of the employer and the employee to prevent this boiling over, or great disturbances, not among organizations particularly, but just the boiling over of people in utter indifference to things, a rioting, blowing up, and general turmoil, those general disturbances that come without rhyme or reason. Can you suggest to us any plan or machinery to remedy that?

Mr. O'HEARN. I have given that a lot of thought, and I will explain why. It is obvious that the success of any man must necessarily come from continuous and harmonious operation, and the only thing I can suggest is what we try to follow—that is, to anticipate, if you can, the feeling of the men and the local conditions and remedy the local conditions where possible. We endeavor to make the work as easy as we can, consistent with the class of work we are doing. In other words, if there is anything laborious or hard about it, there is always some one to devise something that may help out on that, and we never hesitate to put it in, whether it saves us a man or not. We feel this way: That in saying that man that much hard labor we are getting that much more efficiency out of that man and in addition to that we have a man satisfied. In other words, that man may not do any more work there, but his mind is active, and he can study work along other lines.

Acting Chairman LENNON. At this point the commission will stand adjourned until this afternoon at 2 o'clock.

(Whereupon the commission, at 12.30 o'clock p. m., on this Friday, April 16, 1915, adjourned for the recess until 2 o'clock on the same day, then to reconvene at the same place.)

AFTERNOON SESSION—2 P. M.

Acting Chairman LENNON. Mr. O'Hern, please resume the stand. Commissioner O'Connell wishes to ask you some questions.

TESTIMONY OF MR. JOHN E. O'HERN—Continued.

Commissioner O'CONNELL. Mr. O'Hern, we found in our investigations in hearings throughout the country, that a great amount of complaints arose because of the irregularity of employment, and I take it from your testimony this morning that there is a great amount of casual or temporary employment connected with your business. Mr. Armour said they had given considerable thought to minimizing that, citing the fact that the first three days of the week were the important or busy days, and that as yet they had not solved that proposition. Will you be kind enough to give the commission the benefit of the thought you have given to the matter of regulating employment?

Mr. O'HEARN. We have endeavored at such times as we can in the year to adjust the gang, and establish, as I told you a while ago, what would be a minimum wage. While the buying is all done practically from noon on Monday until Thursday, the work continues in those irregular gangs—that is, where the employment is irregular—from Monday noon until Saturday, and we aim to spread that work over that period of time. It is impossible, on account of the Government regulations, as well as it would be on account of the fact that we would destroy the efficiency of the men to work them overtime, to try to take care of the business in the first two or three days of the week, or even try to take care of the excessive receipts on special days; and for that reason we endeavor to distribute the purchases of three days throughout the work of five days and sometimes further, but we aim to make the minimum four days. Now, in arriving at some means in taking care of the gang and equalizing that labor, we have to arrange, wherever practicable and where the men are willing, that whenever we see the receipts becoming light, to move the men into other departments where there is more work and there is an opportunity for the men making lower wages to earn more money. In the manufacturing departments we have tried, even though it is of a seasonal character—we have tried to shape up our organization so as to confine it to an actual 10-hour working day. There may be a little deviation from that, but we endeavor as far as possible to take care of it in that manner.

It is a big problem. The stock yards being a public market where the stock raiser and the farmer can send their stock and find a market for it on the day of its arrival, it is necessary for the packers to take up the quantity of stock that arrives on the market every day, and it is impossible for us to organize to meet that condition; we have no known method of doing it now.

In South America they go out on the plains and buy up 5,000 cattle at a time and drive them into the pens and kill 800 or 1,000 a day, and the working day under those conditions is uniform, with that mode of doing the business.

Commissioner O'CONNELL. Then the reason for the large amount of work on certain days is on account of the buying conditions?

Mr. O'HERN. Yes, sir; the receipts are heavier.

Commissioner O'CONNELL. Does the fact that Sunday is a day of idleness account for the fact that there are larger receipts on Monday?

Mr. O'HERN. No; the live-stock raiser and the farmer have gotten wise to the fact, from experience, that the packers will pay better prices for their stock if they get it at a certain time; for instance, shipments that arrive in the early part of the week so that they can be dressed out to arrive in the eastern markets on Thursday or Friday command higher prices, and accordingly the receipts of cattle and live stock are heavier on the first days of the week.

Commissioner O'CONNELL. Mr. Kennedy in his statement yesterday, told about the existence of a number of building and loan associations and fraternal organizations among the various nationalities. Does the company in any way encourage the organization of such associations and give them free access to the men and allow them to issue propoganda among the workmen?

Mr. O'HERN. The building and loan associations, and organizations of that character, do not work through the men in the packing houses, but as a rule through their homes; they visit the homes of the men in the evening. The banks that have savings accounts there endeavor to meet those men during the time they are off of work, sometimes visiting them during the noon hour. They make arrangement to meet a few each day that way, or make appointment to meet them in the evening.

Commissioner O'CONNELL. Are the officials of the company interested in any way in these associations, or the company itself?

Mr. O'HERN. No, sir; except to induce the men to become members of it. We recognize the fact that the more responsible a man becomes the more interested he is in the business and the better employee he is going to make.

Commissioner O'CONNELL. Are you interested in any way in the organization of fraternal organizations among the men?

Mr. O'HERN. We are not, except in a few of the plants a number of the employees have some little organization like a death-benefit fund. I believe we have in five or six of the plants where the boys, two or three hundred of them, have gone into that plan and given the money to the widows, but beyond that we have nothing that I know of; we have nothing in the way of a benefit plan outside of that.

Commissioner O'CONNELL. Are the men who are leaders of the different nationalities looked to to bring their particular countrymen to the plants?

Mr. O'HERN. No; we rather discourage that; we would rather keep the nationalities mixed. We find the best men we can get are those that readily acquire English. We have not attempted to make up organizations or gangs in one nationality, because we find they will not learn the ways of the American people or the ways around our plant and will not take the interest in the work that they would if there were a few English people among them. They work better if they have an opportunity to watch others do the work well and listen to them talk, than if they are among their own nationalities.

Commissioner O'CONNELL. Are there any gangs or organizations in which they speak only their own language?

Mr. O'HERN. No; I do not know of any; we would try to change it if there were.

Commissioner O'CONNELL. Are there foremen employed on the ground that they only speak the language of certain of the men, for instance?

Mr. O'HERN. No; we would endeavor to have an interpreter as one of the subbosses; we never encourage a gang of that character and we do not encourage interpreters.

Commissioner O'CONNELL. Have you had cases come to your notice where men complained because certain foremen would not employ them unless such foreman was in some way compensated for the employment?

Mr. O'HERN. We have run across that occasionally; whenever we have we investigated it; I do not believe we ever had but one or two instances in 10 or 15 years, that I have in mind, where that has occurred, and that foreman was immediately discharged. We have little of it, because such steps are taken, when we find that condition, that no man wants to take a chance. If it is going on, we do not know it; we do not wink at it, by any means.

Acting Chairman LENNON. Mr. O'Hern, I asked the question this morning as to the possibility of young men entering your plant and going from one skilled or semiskilled department to another until they thoroughly learned the business so that if that was destroyed and they had to go somewhere else, they could go into that industry in some other city and feel sure they could fill the job almost anywhere. Now, you ought to be in a position to know whether or not such a development exists.

Mr. O'HERN. It does; so far as the work of butchering is concerned, it is practically uniform at all points, with the possible exception of the kosher style of dressing, but that is uniform at all plants where it is done. I mention that because at some of the plants the men not familiar with the kosher style would not know how we are doing it here; but, beyond that, every bit of the work the men are doing at this plant is practically duplicated at the other plants. I think that is obvious to everyone why that is necessary. Sitting at a long distance away, we can not know how the work is being done unless we know how it is performed; we must know the methods of operation in order to have it uniform. The only way we can establish uniformity in the product is by uniformity in the method of handling or the operation.

Commissioner GARRETSON. Referring to the kosher form, does that require racial fitness?

Mr. O'HERN. Yes.

Commissioner GARRETSON. On the part of the man performing it?

Mr. O'HERN. Yes; we have to hire a rabbi to take care of that work.

Commissioner O'CONNELL. How is he compensated?

Mr. O'HERN. Sometimes he is paid so much a week and sometimes so much a piece. I can not say what the figures are now. I think, in New York it is piecework; in Chicago, I believe he gets so much a week.

Commissioner O'CONNELL. What is the specific amount?

Mr. O'HERN. I could not say for certain, but I rather imagine it is \$20 or \$25 a week; of course, it depends on the amount he is doing. In some places, you must bear in mind, that we only have 8 or 10 cattle a week, in which event the wages would not be anything like that. If we were doing kosher work continuously, I think we would pay the man \$20 or \$25 per week, but it would all depend upon the number of hours he is engaged. He only comes on the job when they are killing and dressing cattle kosher style and leaves immediately when that is done; he has no other duties to perform.

Acting Chairman LENNON. As to the living conditions in the stockyards district, are the streets properly sewered?

Mr. O'HERN. The sewers and streets in the stockyards district are as good as any place in the city.

Acting Chairman LENNON. And have the same water supply?

Mr. O'HERN. Yes.

Acting Chairman LENNON. And the school facilities, are they considered as good as in other parts of the city?

Mr. O'HERN. I think they are fully as good; I do not think there is any question about it. On that point, I would like to say something because Mr. Kennedy's statement yesterday may leave a wrong impression, which I do not think he intended to leave. I do not think there is a class of industrial workers any place in the world where they are living under any better conditions. I say that because I have lived there for 10 years; I lived there while I was in the work until I left the city. There is one portion of that which is entirely a dry district, and that is the district on the east side of the stockyards district. It is possibly true that not 25 per cent of the working people that are now living in and around the district surrounding the stockyards that are now engaged in working at the packing houses. Twenty-five years ago the men in the business were, as you heard Mr. Kennedy state, composed mostly of English-speaking people and Germans, and to-day their sons and daughters are engaged in other lines of business. Their parents were able to give them an education that fitted them to take up other and better positions. Mr. Armour's instructions to me are to give preference to the sons of the old employees, and I get very few of them for the simple reason that those people are able to get an education to fit them for a better walk in life. I do not think there is an industry in the city that has turned out more professional and business men that are able to hold their own in any walk of life. I think among the teachers, policemen, firemen, clergyment, and other professional men, you will find as many from this district as any other district in the city.

Acting Chairman LENNON. How is it that a part of that district is dry?

Mr. O'HERN. Perhaps, if the people voted on it, the saloons would be voted in; but Father Downey was down there—perhaps you have heard of him—it was his influence that kept them out.

Commissioner AISHTON. As a result of these building and loan associations out in the stockyards district, do a good many of the employees own their own places?

Mr. O'HEARN. A large number own their own homes; in fact, that is what has kept a large number of the old employees that used to work in the plant around there—the fact that they own their own homes there.

I think, if the commission has the time to look it up, it will find that the building and loan associations and the savings accounts in the stockyards district, as well as the money sent home by express companies to the relatives of the employees in the old countries, indicates very clearly that those people are fairly prosperous.

Commissioner AISHTON. As I understand, the receipts of live stock at the yards are concentrated at about three days in the week?

Mr. O'HERN. Yes, sir.

Commissioner AISHTON. The packing houses have no knowledge of what the receipts are going to be longer than 24 hours ahead of the actual arrival at the yards of the shipments?

Mr. O'HERN. No; and they only have an intimation then.

Commissioner AISHTON. And that intimation comes from the word the railroad companies give as to the number of cars they are bringing in?

Mr. O'HERN. That is the only information we have.

Commissioner AISHTON. Those shipments are governed by the business sense of the farmer or stock raiser in the country?

Mr. O'HERN. Yes, sir.

Commissioner AISHTON. And it may be affected by weather conditions, and snowstorms might result in holding the stock over until another day?

Mr. O'HERN. Yes, sir.

Commissioner AISHTON. And muddy roads might influence it, or the condition of the feed lot might determine whether or not the farmer would ship his stock?

Mr. O'HERN. Yes.

Commissioner AISHTON. So that really the packer only has an indication for about 24 hours beforehand of what material he is going to have for his plant to manufacture?

Mr. O'HERN. Yes, sir; that is true, and probably a little more explanation on that subject would be this: The packer does not buy direct from the stock raiser or the farmer. He neither directs nor controls the supply; he has no way of advising the farmer or stock raiser when to ship; he buys on the market ordinarily through a commission man.

Commissioner AISHTON. So that the packer has no direct influence on the movement of live stock, and that, in a measure, is responsible for the casual nature of part of your employment?

Mr. O'HERN. Yes, sir. The only difference there will be there will be the seasonal influence that will come like the cattle being prepared and gotten ready for the market when the grass season is over and the hogs being marketed when the farmer thinks they have fed long enough, so there is that seasonal influence twice a year on hogs and once a year on cattle. And the same is true in the canning department; that is, the canning follows the cattle.

Acting Chairman LENNON. Is there anything further you desire to submit, Mr. O'HERN, which you have not submitted?

Mr. O'HERN. I do not know of anything.

Acting Chairman LENNON. That will be all, then, Mr. O'HERN; we thank you for your attendance.

TESTIMONY OF MR. DENNIS LANE.

Acting Chairman LENNON. What is your name, please?

Mr. LANE. Dennis Lane.

Acting Chairman LENNON. Where do you reside?

Mr. LANE. 532 West Forty-third Place.

Acting Chairman LENNON. What is your business, Mr. Lane?

Mr. LANE. I am general organizer for the Amalgamated Meat Cutters and Butcher Workers of North America.

Acting Chairman LENNON. You have heard considerable of the testimony in regard to the conditions existing in the stockyards; are you familiar with those conditions?

Mr. LANE. Yes, sir.

Acting Chairman LENNON. Just tell us your experience in your own way as to conditions in the stockyards?

Mr. LANE. There was some discussion here in regard to paying four days' guaranteed time, and in justice to the packers the men employed, some three years ago—there was an agitation going on in the stockyards for organization, and Swift & Co. inaugurated this plan of paying four days to all employees, all laboring men, all workers, working by the hour, to head off these men from getting into the organization. That did not stop them all, and some of the men went in; and then the superintendent and the foremen of Swift & Co. had intimidated a great many men into sending in a written resignation of their membership in the union in order to retain their position. They further demanded of some of the men to hand over their cards or be discharged. That was in Swift & Co., Morris & Co., and the National Packing Co., the Hammond branch.

As Mr. O'Hern has stated here, in regard to the percentage of the English-speaking people in the different packing centers, while Chicago showed a less percentage than some of the Western cities, Swift & Co. gave this four days' time in all their packing centers, while the other packers did not give it, and it created an unrest in St. Joe, Omaha, and Sioux City, and during the years of 1912 and 1913 they had uprisings and labor troubles there, and to quiet things the packers made it uniform in all those plants, giving four days' time; but it is not given in Chicago only at Swifts and the Hammond Co.

Acting Chairman LENNON. They are not now giving it?

Mr. LANE. Not up to now, as far as I understand.

Acting Chairman LENNON. Are the other plants giving it?

Mr. LANE. No; just Swift & Co.

In regard to hiring men, it is very often—in the warm season, summer time, when things are busy on the outside—it is difficult to get labor to do some of the work to be done in the offal department, and very often men are hired and brought into some of these plants; I have in mind Swift & Co. particularly, where I have seen men brought in there and their coats and hats taken from them, and when they saw the work they were to be placed at they refused to go to work and wanted to get out, and in many cases I have seen the policemen that brought them up follow them out beating them over the backs with clubs because they refused to work on the jobs they were asked to work at.

Commissioner O'CONNELL. Was that in the Armour plants?

Mr. LANE. No; in the Swift plant. I never saw that in Armour's.

Commissioner AISETON. What date was it you saw this beating of the men?

Mr. LANE. I could not give you the exact year, but it was along in 1905 and 1906, and later than that in the Hammond plant—in 1907 or 1908.

Acting Chairman LENNON. How does the pay for that work compare with other work in the plants?

Mr. LANE. Well, previous to the strike that labor was paid \$1.85, and after the strike they were reduced, some of them, as low as to \$1.50, 15 cents an hour. They used the system of laying off the men and hiring others in their places at reduced wages; that is, in the common labor. For instance, a man is getting \$1.85 on a job and they do not come out flat-footed and tell him that his wages will be reduced, but they lay him off for no reason other than a slack in business, and possibly the next day there will be some one else in his place at a reduction of from a cent and a half to two cents an hour.

In regard to the spotter system which is employed there, it is a fact that there are spotters employed by the packers, as some of our men investigated advertisements from agencies here to work in the packing plants and were told they would receive a regular wage from the agency and whatever employment they were put at in the packing houses, to take it and draw their pay there just the same as if they were working individually for a firm, and to make a report to no one but the agency; that was here on Dearborn Street. I myself became fairly well acquainted with several of these so-called spotters and have met them in various parts of the country; I have met them in Fort Worth, and I have met them in St. Louis, and I have met them in Omaha, and they would go in there and go to work through orders from the office, and possibly take a job sneaking the floors in the killing gang, or possibly out on the railroad watching the cars, and they were to report all information in regard to anyone belonging to labor unions to headquarters, and orders were issued from there to discharge him for cause. That is also supported by our organization furnishing a blacklist after the strike of 1904. There are competent, skilled

mechanics kept out since then and denied employment, and in instances where they have got employment under assumed names they have been discharged when it was discovered they had been employed by the companies they were formerly employed by.

Acting Chairman LENNON. Have you ever seen any such list of names?

Mr. LANE. No, sir.

Acting Chairman LENNON. What evidence have the men given you that they were blacklisted because of their connection with the strike? What have they said to you that convinces you it was a fact?

Mr. LANE. It comes to us in roundabout ways through the foremen.

Another problem that is a very serious matter there in regard to unrest is the discharge or laying off of good competent men because they are inclined to be men that would speak for their rights at times when some employee that had formerly been employed as a strikebreaker wanted a position and one of these other men would have to make way for him, and in many cases a white man would be laid off and a negro put in his place. There are many positions where there are two or more men working at some task, such as chopping hogs on a block on the cutting floor, and they will put a big burly negro on one side and a white man on the other, and let them battle it out for supremacy; that is their method of arriving at efficiency.

In several instances women of foreign birth have taken the places of men in work that I consider unfit for any woman to perform, such as is termed in packing town as working in "gut shanties," cleaning cases and washing beef, and trimming meat in sausage rooms, and such as that. That is work that was formerly done by men, and they are gradually putting women at that work at less wages.

Acting Chairman LENNON. What do you know about the wages paid out there? Do you know what the wages are accurately?

Mr. LANE. I could give it approximately what they range; they range anywhere from 15 cents an hour to 50 cents.

Acting Chairman LENNON. You would not know what proportion received the higher wages, would you?

Mr. LANE. I would approximately say that there is less than one-half of 1 per cent drawing 50 cents an hour.

Acting Chairman LENNON. And drawing 20 cents an hour or more, what proportion would you say?

Mr. LANE. Well, 20 cents an hour or more, I would say 50 per cent.

Acting Chairman LENNON. Have you ever known of the companies undertaking to secure employees otherwise than has been testified here; that is, that they get them practically at the plant? Did you ever know of them sending to Europe or sending to New York or using employment agencies?

Mr. LANE. Why, not since the strike of 1904 I don't. During that time they did.

Acting Chairman LENNON. During that time there were men imported here, during the strike?

Mr. LANE. Yes, sir.

Acting Chairman LENNON. Has that been done since that time that you know of?

Mr. LANE. Since that time I do not know of any.

Acting Chairman LENNON. To your knowledge, have wages increased or decreased since the strike of 1904?

Mr. LANE. They have practically decreased.

Acting Chairman LENNON. Tell us about it.

Mr. LANE. Previous to the strike of 1904 common labor received a minimum of 18½ cents an hour. There are men working in the yards to-day doing the same work at as low as 15 or 16 cents an hour. Skilled mechanics are to-day receiving the same wages per hour, but they have split up the work to such an extent that it is practically two men doing the work that was formerly done by three.

Acting Chairman LENNON. Is there any other matter, Mr. Lane, that you want to submit?

Mr. LANE. That is about all.

Commissioner AIGHTON. Are you actually engaged by any packer now, Mr. Lane?

Mr. LANE. No.

Commissioner AIGHTON. What was the date of your last employment?

Mr. LANE. February 24, 1913.

Acting Chairman LENNON. That will be all, Mr. Lane; you will be excused.

EXHIBITS.

KENNEDY EXHIBIT NO. 1.

The standard of living in the stockyards district rise and fall with the scale of wages paid in the packing industry. It is a conservative estimate to state that 50 per cent of all the male employees in the packing industry are paid \$10 per week or less, and that over 80 per cent of all the women employees in the packing industry are paid \$6 per week or less. Our family budgets prove conclusively that no ordinary workingman can support a family decently on \$10 a week in Chicago. We know it is extremely difficult for any woman to live decently on \$6 per week in Chicago. Therefore these low wages mean a low standard of living for thousands of families in the stockyards district. Our studies have shown that an inadequate income for the head of the family means that boarders will be taken in to help pay the rent, and this generally means overcrowding and lack of family privacy. When the income of the head of the family is too low there is strong economic pressure to send the wife out to work in the packing house, factory, and elsewhere, while the children are sent to work as soon as they become 14 years of age. Even with the income thus derived from boarders and the labor of the wife and children it is sometimes impossible to feed, clothe, and educate the family decently.

When an industry, such as the Chicago packing industry, pays its workers such low wages that it is almost impossible for them to maintain a decent American standard of living, the community as a whole is bound to suffer.

Instead of strong, vigorous, well-educated children being reared for our future citizenship, we are certain to get a group who are weak physically and woefully undereducated. An unnecessary burden is put upon our municipal, State, and charitable institutions, for when the wages are insufficient to care for the family properly, resort must be made to charitable and State institutions. It is not surprising to learn in this connection that one of the busiest branch offices of the United Charities is found in the heart of the stockyards district, nor is it surprising that of all the deaths of adults in the stockyards district 31 per cent are from tuberculosis. In a word, abnormally low wages lead inevitably to bad housing, undernourishment, excessive use of alcoholic stimulants, child labor, unnecessary disease, and many other evils which put a serious burden on the community as a whole.

CONDITIONS BECOMING WORSE.

The wages of the unskilled workers in the packing industry are not only extremely low, but judged by their actual purchasing power they are fully 20 per cent lower to-day than they were in 1903. Thus, wage conditions are not only bad, but they are becoming progressively worse.

Since, as we have shown above, abnormally low wages in any industry are not only a matter of concern to the employers and the employees, but also to the community as a whole, the question arises, What can a community do in such a case to insure that every worker should get at least a living wage? Perhaps there is no single simple solution of this problem, but the following possibilities are offered for what they may be worth:

(1) The State may fix a minimum wage for all the workers in the industry. In doing this the State would simply be exercising its police power in a matter quite as vital to the community as many others which are already under State regulation.

It was found, for example, that if the packing companies were allowed to conduct their slaughtering and meat-packing business as they saw fit, the

health of the consumers of meat products would be endangered by insanitary conditions in the packing houses. Therefore the Government established minimum sanitary regulations which must be observed by every packing company, and it employs a large staff of inspectors to see that these regulations are complied with. Few people question the necessity and value of Government regulation in the packing industry and Government inspection of meat products in order to protect the consumers. In our opinion, it is quite as important to the welfare of the community that the rather ignorant unorganized immigrants employed in such industries as the packing business should receive enough wages to buy nourishing food as that the food should be fit to eat when they get it. Our statistics regarding wages and the cost of living in the stockyards district show that it is just as necessary for the Government to protect the workers in their dealings as wage earners with the packing companies as it has been to protect the consumers. It is hardly the place here to discuss in detail the methods by which a minimum-wage law might be put into practical operation. Such laws are already in operation in Australia and England, and State commissions have been studying the question in Massachusetts, Wisconsin, and Minnesota. If the desirability of such legislation is once generally recognized, ways and means can soon be found to put it into operation.

HORDE OF IDLE WORKERS.

(2) One of the reasons that wages are so low in the packing industry is that there is always a horde of idle workers waiting at the employment offices of the packers for jobs. If some of the workers in this district could be diverted to other places where there is a greater demand for their labor, it is probable that the wages would be somewhat higher. Therefore, if a State or municipal employment bureau were established in the stockyards district, which would acquaint the workers there with opportunities to secure employment elsewhere, the surplus supply of labor might be somewhat reduced.

(3) There was a tendency for wages to increase in the packing houses up to the year 1904 when the great strike took place which destroyed the workers' union. Therefore it seems probable that if the workers in the packing houses of Chicago and other cities could be reorganized they might be able to raise wages at least as rapidly as the increase in the cost of living. What could be more significant than the fact that immediately after the strike of 1904 was lost and the power of the union broken the wages of the poor laborers who were getting 16 to 20 cents per hour were generally reduced 1 or 2 cents per hour.

It should not be forgotten, moreover, that a trade-union is not only an organization for raising wages and improving working conditions, but that it frequently does a splendid educational work, especially among the newly arrived immigrants. There can be no question that a well-conducted trade-union would be of tremendous value to the community in helping to assimilate the thousands of newly arrived Lithuanians, Poles, Bohemians, Slovaks, and other nationalities that are coming to this district.

Although the butcher workmen's union was practically destroyed in the great strike of 1904, traces of its good influence are found in the stockyards district even to-day.

FACT FULL OF MEANING.

It is a significant fact that practically every student of social conditions in the stockyards district up to the time when the union was destroyed praised the work that it was doing for the employees and the community. Prof. John Commons, for example, writes in his work on Trade-Unionism and Labor Problems (pp. 233): "Perhaps the most remarkable gain secured by the cattle butchers' union, and one that was shared by all the others, was the adoption of regular hours of work * * *. It was nearly two years after the union was organized before it felt strong enough to take up this matter. A strike was threatened, but finally a conference was secured with a leading packer. The union spokesman told him of these hardships (due to extremely irregular hours) comparing their position with his own, in that they never knew beforehand when their work would begin or be done, when he could finish up his day's work and go home. The packer only replied that he had never known that such conditions had existed. From the date of that interview, although no promises were made, overtime has been established for the cattle butchers in all the establishments * * *. That a union had to be organ-

ized and threaten a strike in order that the owner of the business might learn of conditions which his own conscience promptly disapproved, is a fact full of meaning for all who are disturbed by the modern unrest of labor."

The question may be raised whether a trade-union would be necessary or desirable in the packing industry providing our first two suggestions were acted upon, viz, the fixing of a minimum wage by the State and the establishment of a State or municipal employment bureau in the stockyards district. Our answer must be strongly in the affirmative. In the first place a minimum wage law would be much more likely to be successful if there were a strong trade-union among the workers to see that it is properly enforced. Secondly, the trade-unions are a powerful agency for the education of their members along civic and social lines and this is especially desirable in industries such as the packing industry, where large numbers of immigrants are employed. Thirdly, as was shown by Prof. Commons, even when the employers are kindly disposed they do not always know the conditions under which their employees labor and the grievances which they suffer. The only way in which such grievances can be redressed is through the assistance of a powerful labor organization.

The Chicago packing companies are among the most powerful corporations in the world. They have practically eliminated competition among themselves and present a united front to labor. What pressure can an individual worker bring upon such powerful corporations to redress grievances and to improve conditions? How can a simple-minded Polish or Lithuanian peasant be expected to hold his own in dealing with these tremendous machines organized solely for the making of profits? On the one hand we find unlimited financial resources, the best of business ability and experience; on the other poverty, ignorance, and thousands of unorganized individuals competing fiercely for jobs. Will anyone contend that packer and peasant now meet on an equal basis? Will anyone contend that the stockyards worker has a fair chance to get the full value of his labor? Our statistics showing the low and decreasing wages in the packing industry are a sufficient answer to that question.

The only hope of anything like a square deal for the workers in the packing industry; the only hope for an intelligent, independent, and vigorous American citizenship in the stockyards district lies in the organization of a powerful trades-union in the packing industry.

UNEMPLOYMENT DRAGS DOWN WAGES.

Unemployment undermines the life of the community not only by dragging down the general level of wages but by creating a group of casual laborers who in the course of time do not want to get regular work. There is a strong tendency for those who can not find work to hang around saloons and to fall into habits which undermine them physically and mentally. The problem of unemployment, therefore, is one of the most serious with which the workers of the stockyards district are confronted.

Unemployment in the packing industry is mainly of three types: First, there is the loss of time from day to day due to the fact that the killing gangs and several other departments work irregular hours. For example, a cattle butcher may work 5 hours on Monday, 11 hours on Tuesday, 9 hours on Wednesday, 7 hours on Thursday, 8 hours on Friday, and 3 hours on Saturday. As was shown in Part I the average number of hours per week put in by the members of the killing gang ranges between 38 and 40. Second, considerable unemployment is caused by seasonal work. In the canning department, for example, there may be a great rush of work at one time of the year and practically nothing to do at another. Probably the majority of the departments of the packing industry are more or less affected by these seasonal fluctuations. Third, irrespective of these causes of unemployment, there is always an army of unemployed in the stockyards district ranging from 2,000 to 7,000, many of whom have never been at work in the yards at all.

Obviously, any solution for the problem of unemployment in the packing industry must recognize the difference between these various kinds of unemployment. Undoubtedly much could be done to eliminate the difficulty in the first case if the packers would deliberately attempt to secure regular hours of work for their employees in all departments. It is probable that the killing gangs could be put on an eight-hour day basis with Saturday half holiday at comparatively little additional expense to the companies. It would mean that in some cases the stock would have to be kept 12 hours longer than otherwise.

Likewise, in regard to the second type of unemployment, much could be done by the packers to improve conditions. In some cases at least work could be spread more evenly through the year, and regular periods of vacation could be established for the employees. With proper foresight and organization of the working force the periods of unemployment and insecurity for the workers could to a considerable extent be changed into periods of vacation and recreation. As it is now the whole burden of insecurity of unemployment is placed upon the shoulders of those least able to bear it. In many of the departments the workers do not know how many hours they are to be employed from day to day, and they don't know when they will be laid off indefinitely. All this should be changed. If this irregularity of employment is inherent in the nature of the packing industry, then the industry as a whole should bear the burden, not those who are struggling on the margin of subsistence. The system whereby the packers hire their help by the hour and the day puts the workers in the most extreme position of insecurity. In one or two cases the companies guarantee the workers a minimum amount of employment throughout the year. If some such device as this were made universal some of the most serious evils of unemployment would be abolished.

The third type of unemployment, that rising from the surplus supply of labor in the district, can not be eliminated by the action of the packing companies. This problem must be solved by the community.

WORKING CONDITIONS BAD.

The working conditions show the need for more thorough inspection and the more vigorous enforcement of regulations to protect the health and welfare of the employees. In many cases, for example, the light and ventilation are very bad. Undoubtedly much of the tuberculosis in the stockyard's district is due to these bad working conditions. When 81 per cent of all the deaths of adults in the stockyards district are caused by tuberculosis it is time that the community should see that the work places of these people are properly lighted and ventilated. The jurisdiction of the State department of factory inspection in regard to matters of ventilation, light, and sanitation in the packing houses is open to question, but if the State department has not the power to secure proper conditions there is no doubt that the Federal Government can enforce any regulations that are reasonable. Some rooms in which the workers are employed should be closed up altogether, while new windows should be cut in others and systems of ventilation fans installed.

In some cases the workers are employed in damp rooms with water dripping from the ceiling. This should not be tolerated, as it could be easily prevented. In other cases the temperature is needlessly high.

Since 1906 there has been a considerable improvement in the packing houses in the provision of wash rooms, toilet facilities, and locker rooms.

Practically no provision for lunch rooms has been made for the employees of the packing industry, except in the canning department of Company B and in the office buildings. It certainly seems reasonable that the employees who spend their working hours amid conditions which are generally disagreeable should at least be permitted to eat their lunches in a clean and sanitary lunch room. The probability is that if the packing companies provided satisfactory lunch rooms for all the workers in their employ they would actually derive a profit from the investment. There can be no doubt that if the employees had a warm, nourishing lunch served in a sanitary, comfortable lunch room they would work more efficiently than they do at present.

The accompanying photograph¹ shows a group of packing-house workers rushing out to "Whiskey Point" at the noon hour, either to eat their lunches in saloons or to get pails of beer to take back to their work places. It can easily be seen that there is a great waste in time and energy, not to speak of the fact that the workers are not getting anything like the relaxation to which they are entitled. Therefore, if we are to look at the matter as a business proposition or from the standpoint of decent treatment of the employees, lunch rooms should be provided for the workers in all departments.

PENSION AND INSURANCE FRAUDS.

In recent years it has been recognized throughout the world of industry that the workers are entitled to protection against the insecurity and dependence arising from industrial accidents, sickness, and old age. Hence, in

¹ Not printed.

inaugurating insurance systems and old-age pensions for their employees, the officials of four of the leading packing companies have taken a progressive and commendable position. But while the recognition of the principle of working-men's insurance and old-age pensions is a step in the right direction, the plans under which these principles have been executed by the packing companies are open in some respects to serious criticism. The pension systems, for example, which thus far have been established by two of the companies, apply to salaried employees only. If the term "salaried" is given its general meaning, the great mass of the workers will be excluded. But it is precisely these workers above all others who need the system of old-age pensions; first, because their earnings are too small in most cases to permit of their laying aside any savings for old age, and secondly, because their work is frequently of such exhausting nature that at the age of 50 or 55 they are worn out and thrown on the scrap heap.

Another respect in which the pension schemes are open to criticism is that they are decidedly undemocratic. Although the employees are compelled to contribute 3 per cent of their salaries annually, they have practically nothing to do with the administration of the funds involved.

In some respects these pension systems appear to be cleverly devised schemes to prevent the more intelligent workers from attempting in any way to bring pressure upon the companies to advance wages or improve working conditions. For example, the provision found in both plans that an employee may be discharged at any time and his contribution to the pension fund returned to him with 4 per cent interest thereon means simply this: If the worker had been in the employ of Company A for 18 years and should join with his fellow workers in a strike, he would thereby forfeit all of his rights to a pension. The companies, of course, may well say that if the worker got back his contributions with interest he has no ground for complaint if he does lose his pension. While there may be some justice in this point of view, nevertheless any scheme which tends to make the workers more subservient in such industries as the packing industry, where they are already at a decided disadvantage in bargaining with their employers, can hardly be looked upon as beneficial from the standpoint of the community.

The insurance systems of Companies B, C, and D, especially of the two former, are open to some of the criticisms made of the pension schemes mentioned above. The plan of Company D is democratic, but the burden falls entirely upon the workers. The company makes no financial contribution and assumes no financial responsibility. The plans of Companies B and C are undemocratic, although the workers do theoretically have a voice in the administration of affairs. The companies really control the whole matter. The benefits for industrial accidents are comparatively low, being much smaller, for example, than those paid by the International Harvester Co. in similar cases.

In general, it may be said that while pensions and insurance systems are highly desirable, if they are to be of benefit to the workers of the community as a whole, the burden must be placed upon the industry rather than upon the workers alone, and the management must be so democratic and the payment of benefits so adjusted that the effort of the workers to maintain their standard of living through trade-unions and other organizations will not be restricted.

SPEND LIFE "PUMPING KIDNEYS."

Anyone who goes through a modern packing house must be struck by the extreme division of labor obtaining in most departments. We enumerated in Part I the various employees required to slaughter 1,050 cattle in a working day of 10 hours. Among the occupations mentioned in this list we find such as the following: "Two shackling cattle," "one trimming bruises," "one washing hind shanks," "one trucking feet," "one pumping kidneys" and so on. Unquestionably the organization of labor which has evolved this high degree of specialization is very efficient from the purely economic standpoint. But here again, as in so many other cases where great economic advantages have been gained in modern industry, the advantages all go to the employers and consumers and the disadvantages are all suffered by the workers.

When society demands of any worker that he shall spend his life "shackling cattle," "trucking feet" or "pumping kidneys," then society must see to it not only that the work is done under the best possible conditions, but that the workers should receive sufficient compensation and have sufficient leisure

to secure for themselves the development and culture which are absolutely denied to them in their daily work.

These specific cases are mentioned here merely to illustrate a condition which is widespread not only in the packing industry but in many other industries. By the introduction of machinery and the extreme division of labor, the day's labor has been made one continuous grind of meaningless drudgery. If these workers are not to become dull and spiritless as the machines which they tend, then something must be done to counteract the effects of their daily labor in the hours when they are outside of the packing house or factory.

Here we have another important reason why a reasonable income must be insured to the unskilled workers as well as regularity of employment, with regular periods for vacation and recreation.

OVERCROWDED—VACANT LAND NEAR.

The facts prove conclusively that housing conditions existing in certain sections of the stockyards district are extremely bad. Although there is much vacant land within 2 or 3 miles of the packing houses, yet the houses have usually been crowded together with little regard to light, air, and sanitation. Most of the houses are poorly constructed frame buildings, and in many cases adequate toilet facilities are lacking. Probably the most serious evil, however, is that of overcrowded rooms.

The housing problem in the stockyards district can not be solved completely without dealing with the housing problem in the whole city of Chicago. Builders should be forbidden to cover more than 60 per cent of their lots with buildings to be used for housing purposes. Better inspection is needed to enforce housing legislation. It is also imperative that a large number of sanitary, attractive dwellings should be erected to be rented to stockyards' workers at a reasonable cost. It is unlikely that such dwellings will be erected by private builders as a business investment. The packers might undertake something of this kind in the same way that Krupp & Co., of Essen, Germany, have erected dwellings for 7,000 of their employees and their families. If the private builders and the packers fail to provide suitable housing accommodations the city should secure the power from the State legislature to engage directly in the housing business.

Municipal housing is quite common in many parts of Europe. There is no sound reason why municipal housing should not be undertaken by American cities if satisfactory accommodations for the workers can not be secured in any other way. It is just as essential for the welfare of the city that its workers should be well housed as that they should have a pure supply of water. It has been found that the water supply can best be furnished by the municipality, and it will probably be found that in some cases, at least, the solution of the housing problem will be accomplished best through municipal ownership.

There can be no question that municipal ownership of the land is desirable, since this would give the city complete control over building operations and would reserve to the whole community the unearned increment in land values which is created by growth of population. If the city goes into the housing business it should own not only the land but the dwellings which are erected upon the land. They could be rented to the workers at a reasonable cost without any financial loss to the city. There is still plenty of vacant land west of Robey Street, which is less than a mile from the principal packing houses.

In the old Twenty-ninth ward the density of population east of Robey Street was 58 to the acre in 1910; west of Robey Street there are 6½ square miles of habitable land with a density of only 3.5 to the acre. If a street car line were run west from Ashland Avenue on Forty-third Street it would open up much of this territory to the stockyards workers. There is a splendid opportunity to build a garden city for the stockyards workers a mile or two west of the stockyards, providing suitable transportation facilities are offered. It would seem that the packers have a splendid opportunity to do something toward the housing of their workers which would prove to be not only extremely beneficial to their employees, but also a good business investment for themselves.

ODORS STILL BIG PROBLEM.

Considerable progress has already been made toward the abolition of the smoke nuisance in the stockyards district. One company has clearly demonstrated that its power plant can be operated successfully without polluting the

air to any noticeable extent. Moreover, officials of this company have stated that their smokeless power plant has been running more cheaply than the one which they had before and which was one of the worst "smokers" in the stockyards. If the city ordinances are strictly enforced, the smoke nuisance, as far as the power houses are concerned, can be nearly eliminated.

Locomotives running into the "yards" pollute the air more now than all the smokestacks of the packing companies. Any real solution of the problem must come through the use of oil as fuel or electrification.

The problem of offensive odors seems to be little nearer solution to-day than it was 10 years ago. As was stated before, the worst of these odors originates in the fertilizer department, glue factories, and tank rooms. The community should demand of the packers either that they find some way of eliminating these odors or that these departments should be moved some distance outside of the city.

The stockyards are known as the most dangerous district for fires in the whole city. The reasons for this are, first, that very few of the buildings in the yards are of fireproof construction; second, that the warehouses and cold-storage rooms are very much like vaults, in which it is very difficult to fight a fire; and third, because there never has been an adequate water supply in the stockyards district. For the protection of the workers and of the firemen whose lives are endangered by these conflagrations, the community should demand, first, that every new building erected in the stockyards should be of strictly fireproof construction; second, that sprinkler systems should be installed in the ceilings of cold-storage buildings, warehouses, and other rooms where it is difficult to fight fires successfully; third, that a high-pressure water system be installed in the stockyards district which will insure plenty of water at a high pressure in cases of emergency.

GETTING THE MONEY.

It may be asked, Where are the packers to secure the money necessary to increase wages and make the improvements suggested in this paper? It may be said that while the various recommendations are highly desirable, they can not be put into effect without bankrupting the companies. Without an accurate knowledge of the profits that are being made by the different packing companies, it is impossible to say to what extent wages can be raised and improvements made under present conditions. We know, however, that one of the largest companies has paid an annual dividend of 7 per cent to its stockholders for several years, besides setting aside a considerable surplus.

The net profits of this company have averaged about 12 per cent for the last five years on the capital investment. It is probable that the other companies have earned as large a profit on their investments as the one just mentioned.

Therefore, we have good reason to believe that the various packing companies are in a position to raise the wages of their employees at least in proportion to the increased cost of living, and to make such improvements in sanitary and working conditions as have been suggested in this study.

O'HERN EXHIBIT.

NOTE.—The above does not include what may be termed "steady-time" men, foremen, clerks or office employees, or any portion of the executive end of the organization. It includes old-time, disabled employees unit for ordinary physical laboring work at the present time, who are now employed as doormen, janitors, and other light occupations.

LABOR CONDITIONS OF CHICAGO STOCKYARDS EMPLOYEES. 3529

Statement showing number of hours worked during four weeks' period, and average number of hours per week, and estimated number of men in each gang.

	Hog killing.	Cattle killing.	Pork cutting.	Sheep killing.
Period Oct. 4 to 31, inclusive, 1914.....hours..	170	200	174	178
Average per week for above period.....do....	42.5	50	43	44.5
Period Mar. 1 to 27, inclusive, 1915.....do....	172	185	178	169
Average per week for above period.....do....	43	46	45	37
Estimated number in gang (2 periods).....	350	260	175	245
Estimated number on clean up, etc.....	1 80	100	1 40	117

1 2 1/2 hours each.

NOTE.—This statement does not include a number of men who remain after "gang time" for the purpose of cleaning up the department, caring for the product, and doing such other work as may be required to finish up the work in the department and leave it in condition, ready to start next morning.

During both the periods above mentioned the quarantine, on account of the hoof-and-mouth scare, has restricted the receipts of live stock. Receipts were very ununiform, and it was somewhat harder than any other time of the year to adjust the gang to what we term good working conditions.

Statement showing number of hours worked during four weeks' period and average number of hours per week in departments mentioned.

	Mechanical department.	Canning.	Sausage.	Curing.
Period Oct. 4 to 31, inclusive, 1914.....hours..	240	281	245	248

Recapitulation showing total number of male and female employees at all armor plants and branch houses for year 1914.

	Operating.		Executive.		Total male.	Total female.	Grand total.
	Male.	Female.	Male.	Female.			
Chicago.....	7,150	850	1,000	150	8,150	1,000	9,150
Kansas City.....	3,100	300	340	10	3,440	310	3,750
South Omaha.....	1,400	150	190	30	1,590	170	1,760
East St. Louis.....	1,250	200	300	5	1,550	205	1,755
Fort Worth.....	1,250	150	95	15	1,345	165	1,510
Sioux City.....	850	50	40	5	890	55	945
South St. Joseph.....	680	30	30	5	710	35	745
Denver.....	300	30	20	5	320	35	355
New York.....	350	—	60	5	410	5	415
Jersey City.....	305	10	30	—	315	10	325
All branch houses.....	2,000	5	3,300	65	5,300	70	5,370
Total.....	18,435	1,765	5,305	255	23,740	2,050	25,790

Average hours worked weekly in year 1914.

	Percent- age of em- ployees.		Percent- age of em- ployees.
40 to 44 hours.....	4.40	60 to 64 hours.....	39.30
45 to 49 hours.....	18.09	65 to 69 hours.....	7.89
50 to 54 hours.....	13.30	70 to 74 hours.....	8.10
55 to 59 hours.....	13.40	75 to 84 hours.....	.80
		Total.....	100.00

NOTE.—The above was arrived at by taking the actual "gang time" worked on the killing gang and the average time for the entire gang on the balance of the gangs throughout the house.

It must be understood that there is no gang in the entire packing plant that stops as a unit; in other words, a large portion of the skilled men go home at what is called "gang time," the balance of the men who stay doing such other work as can not be taken care of during the working hours, and which must be done at the close of work each day.

No females work over 10 hours per day.

3530 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Recapitulation of nationality report of all packing-house employees, showing number of employees and percentage of each nationality.

CONDITIONS OF EMPLOYMENT OF
WAITERS AND COOKS

COMMISSION ON INDUSTRIAL RELATIONS.

CHICAGO, ILL., *Friday, April 16, 1915—2 p. m.*

Present: Acting Chairman Lennox; Commissioners Aishton, Garretson, and O'Connell.

TESTIMONY OF MR. FRED EBELING.

Acting Chairman LENNON. Give your name, please.

Mr. EBELING. Fred Ebeling.

Acting Chairman LENNON. What is your business?

Mr. EBELING. Financial secretary and business secretary of the cooks' union.

Acting Chairman LENNON. Have you followed that business for a number of years?

Mr. EBELING. Yes, sir.

Acting Chairman LENNON. For how many years?

Mr. EBELING. For about 20 years.

Acting Chairman LENNON. I understand from Mr. West, who worked up this hearing largely, that you have a special matter that you desire to submit to the commission regarding something that has to do with the condition of the waiters and the cooks?

Mr. EBELING. Yes, sir.

Acting Chairman LENNON. Will you please proceed and tell your story just as you desire to tell it?

Mr. EBELING. The conditions surrounding the procuring of employment by our people.

Acting Chairman LENNON. That is, the cooks?

Mr. EBELING. The waiters and cooks. The large employers, such as hotels and restaurants, instead of sending to the organization for their help, send down to saloons; and as the jobs get into the saloons the employees are forced to go into these saloons and stand around in there all day long and sometimes for weeks and sometimes all winter looking for jobs, because the jobs get into these saloons, and naturally the people that do the most drinking and are in the best standing with the saloon keepers, they get preference for the jobs, while the people that don't drink so much can stand around and never get any work; they have a hard time to get work.

We have gone to the different authorities, to the State's attorneys and to the mayor, but there is no relief; we can not get any redress. That condition has existed for years and years. We have held mass meetings at different times, and at one time we succeeded in putting one man out of business by getting the men away from there temporarily, but they are driven to other places, so it was just shifting from one saloon to another.

Acting Chairman LENNON. Can't you apply to the chefs—to the cooks—for employment or to the head waiter? Do you have to go to these saloons?

Mr. EBELING. They tell us when they want anyone they will go down to a certain saloon and employ him there.

Acting Chairman LENNON. They direct you to go to the saloon?

Mr. EBELING. Yes.

Acting Chairman LENNON. Do you have to pay anything directly to the saloons for this service besides patronizing them? Do you pay them any particular amounts?

Mr. EBELING. No; they don't. The State law prohibits that, and we have no evidence that such is the case; they are very careful about that.

Acting Chairman LENNON. What effect does such a system have upon the welfare of the waiters and cooks, upon their morals and upon their living conditions as citizens and men, etc.?

Mr. EBELING. It is one of the worst evils we have to contend with in the industry; it is very bad; it causes the breaking up of homes; it causes people that are drinkers, who are able to drink, to be able to get jobs at any time, and others who do not drink, they do not get the work and it is hard for them to get the jobs. They have, to a great extent, to depend upon employment agencies, and they charge a large fee.

Acting Chairman LENNON. Does that system you speak of prevail in other cities or do you know about that?

Mr. EBELING. About two years ago there was a campaign; I read in our official journal of a campaign of the same nature carried on in the city of New York by our international union to try to break it up down there, but how far it exists I do not know at the present time.

Acting Chairman LENNON. Do you desire to submit anything more, Mr. Ebeling?

Mr. EBELING. I might say that we have gone to the restaurant keepers' association about this matter and presented the matter and they refused to meet us on the proposition; they would not do anything about it. The officials of the Chicago Federation of Labor and the Illinois State Federation of Labor went with us to meet with John Vogelzank, and if we went to places like the Bismark and put the proposition before them they say they are unable to do anything about it; that they have to go and see Vogelzank; and Vogelzank says they refuse to meet us on the proposition.

Commissioner AINSWORTH. There are employment agencies, are there not, in the city of Chicago for cooks and waiters?

Mr. EBELING. Yes. The union itself never charges either party for the job and we try to fit the men to their proper places, and there are other organizations that are not unions that try to do the same thing, but the employers, in spite of that, will go to the saloons and get their help there.

Commissioner AINSWORTH. If they all go to the saloons there would not be any opportunity for the employment agency to do business, would there?

Mr. EBELING. There are employment agencies which are practically just as bad; however, they don't do as much business as the saloons.

Commissioner AINSWORTH. That are just as bad as the saloons?

Mr. EBELING. They charge all the way up to \$25 for getting a job; their average charge is 10 per cent of the month's salary.

Commissioner AINSWORTH. There is no debasing moral influence like that of liquor or anything of that kind?

Mr. EBELING. No.

Acting Chairman LENNON. I think that is all, Mr. Ebeling; you will be excused.

With this the hearing of the commission at this time in Chicago will close; we thank the public for its attention.

(Whereupon on this Friday, April 16, 1915, at 3 o'clock p. m., the commission adjourned sine die.)

INDUSTRIAL CONDITIONS AND RELATIONS IN THE GOLD MINING OPERATIONS AT LEAD AND BLACK HILLS, SOUTH DAKOTA

(For exhibits under this subject see pages 3659 to 3679)

COMMISSION ON INDUSTRIAL RELATIONS.

LEAD, S. DAK., *Monday, August 3, 1914—9 a. m.*

Present: Commissioners Commons (acting chairman), Garretson, Lennon, and O'Connell.

Acting Chairman COMMONS. The commission will please come to order.

I should like to say to the witnesses and others that unavoidably some members of the commission and counsel of the commission were prevented from coming at the last moment on account of the war in Europe. Business complications kept them at home.

I have been selected to act temporarily as chairman, in the absence of the chairman, and also as counsel.

Regarding the investigation which Congress has required this commission to make, I would explain that the authorizing act requires us mainly to discover the underlying causes of industrial unrest, meaning by that mainly the relations of employers and employees in all the various lines in which they have dealings with each other in the community and the interests of the public in these relations. The commission is required to make recommendations to Congress for such legislation or such action as the commission determines would be advisable upon the basis of the facts which it discovers and upon the basis of the suggestions or recommendations which its witnesses offer.

I will say also that the witnesses will not be placed under oath. This is an informal investigation, endeavoring to come at the facts, the greater underlying principles and facts, and we expect to secure here such information as is possible regarding the mining situation in this district.

I will call upon Mr. Grier as the first witness. Will you take this chair, Mr. Grier?

TESTIMONY OF MR. THOMAS J. GRIER.

Acting Chairman COMMONS. Mr. Grier, will you give the reporter your name, residence, and position?

Mr. GRIER. Thomas J. Grier, superintendent of the Homestake Mining Co., Lead, S. Dak.

Acting Chairman COMMONS. Your position, Mr. Grier, is that of superintendent. What is meant by that position, what is your relation to the company on the one side and to the employees on the other?

Mr. GRIER. In my official capacity I have charge of all the company's property hereabouts, and am charged with directing the operations of the property.

Acting Chairman COMMONS. You are superintendent of the Homestake Mining Co.; that is the name of the company, is it?

Mr. GRIER. Yes, sir; that is the corporate title.

Acting Chairman COMMONS. Is that a company chartered under the laws of South Dakota?

Mr. GRIER. It is organized under the laws of California.

Acting Chairman COMMONS. What year was it organized—well, just about?

Mr. GRIER. I think 1878; possibly 1877.

Acting Chairman COMMONS. Are you a member of the board of directors of the company?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. Who is the president of the company?

Mr. GRIER. James B. Haggin.

Acting Chairman COMMONS. Where is his address?

Mr. GRIER. His office is at 15 Broad Street, New York.

Acting Chairman COMMONS. And who are your directors?

Mr. GRIER. James B. Haggin, Frank G. Drum, Edward H. Clark, Richard Clark—I don't recall the names of one or two others.

Acting Chairman COMMONS. Where are your annual meetings held?

Mr. GRIER. In San Francisco.

Acting Chairman COMMONS. What is the capital stock of your company?

Mr. GRIER. I think \$25,116,000, divided into 250,160 shares of the par value of \$100 per share.

Acting Chairman COMMONS. Who are the principal stockholders of the company?

Mr. GRIER. As far as my knowledge goes, Mrs. Phoebe Hearst, of Pleasanton, Cal., is the largest individual shareholder; Mr. James B. Haggin, of New York, next. I think the Tevis estate—

Acting Chairman COMMONS. What estate?

Mr. GRIER. T-e-v-i-s, of San Francisco.

Acting Chairman COMMONS. Do you know what number of shares Mrs. Hearst holds?

Mr. GRIER. I do not.

Acting Chairman COMMONS. Nor Mr. Haggin?

Mr. GRIER. I do not. I think that Mrs. Hearst, Mr. Haggin, and the Tevis estate own the majority.

Acting Chairman COMMONS. Is this stock listed on any of the exchanges?

Mr. GRIER. It is; on the New York Exchange.

Acting Chairman COMMONS. And are there sales recorded there that you know of?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Is there a very active market—dealings in the shares?

Mr. GRIER. No; decidedly the other way.

Acting Chairman COMMONS. It is practically held by those interests that you have named for their own investment purposes?

Mr. GRIER. Yes, sir. There are, I think, a thousand other stockholders.

Acting Chairman COMMONS. Could you give an idea of where those stockholders are located? In this district or outside?

Mr. GRIER. I think there are about 15,000 shares held in South Dakota, and more than one-half of that is held in Lead City; a goodly number of shares is held in Deadwood, and quite a number of stockholders throughout the city—Sioux Falls, Aberdeen, Spearfish, Rapid City, and various other places throughout the State.

Acting Chairman COMMONS. Does the company have a system of selling shares to its employees?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. Those who have purchased have simply purchased for investment purposes?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Do employees hold shares to any extent, to your knowledge?

Mr. GRIER. A great many of them do.

Acting Chairman COMMONS. What grade of employees—superintendents, foremen, miners, or laborers?

Mr. GRIER. I think all departments of the service are represented in the stockholdings excepting the superintendent.

Acting Chairman COMMONS. Are there any bonds outstanding?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. What were the dividends declared last year—the last fiscal year—what per cent of dividends was declared?

Mr. GRIER. I think it was very early last spring that the dividend was increased from 50 cents to 65 and has continued at that figure ever since.

Acting Chairman COMMONS. Is that the annual or semiannual?

Mr. GRIER. That is monthly—65 cents per share per month.

Acting Chairman COMMONS. And then beginning last April that has been 65 cents a month?

Mr. GRIER. I would not say April. I rather think it was February or March.

Acting Chairman COMMONS. A year ago?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And that would be at what rate per year—12 times 65, would it not?

Mr. GRIER. Twelve times 65.

Acting Chairman Commons. About 7½ per cent?

Mr. GRIER. Seven and eight-tenths, wouldn't it?

Acting Chairman Commons. Seven and eight-tenths.

Mr. GRIER. Twelve times 65.

Acting Chairman Commons. And on twenty-one million what would that amount to, the total dividends distributed last year at that rate?

Mr. GRIER. Well, it is a matter easily to compute. Not being a stockholder, I haven't paid any attention to the market price of the stock and the percentage paid in dividends.

Acting Chairman Commons. Will you, Mr. Grier, tell us what are the holdings of the company in this district and the area covered and the nature of the holdings?

Mr. GRIER. I was looking for an engineer. I don't think I could be very accurate in recalling the acreage. It is quite large in mineral lands, quite large in timber lands, and not a very great acreage along two or three creeks.

Acting Chairman Commons. Does your company, in addition to these real estate holdings, mining holdings, does it own the stock of any corporation or parts of the stocks of any corporations?

Mr. YATES. I have the figures here in the book in regard to the acreage.

Mr. GRIER. All right, I would like to give it accurately, if you please.

Mr. YATES. This is March 1, 1913.

Mr. GRIER. Would you like me to incorporate that now?

Acting Chairman Commons. Yes, if you will.

Mr. GRIER. Mining claims, 3,723; timber lands, 18,376; water lands, 2,315; right-of-way lands, 14 acres, as of March 1, 1913.

Acting Chairman Commons. Those are all in acres?

Mr. GRIER. Yes, sir; acres. That is a little over a year ago. Purchases since then have not been very great.

Acting Chairman Commons. Are these held in fee—absolute title?

Mr. GRIER. Yes, sir.

Acting Chairman Commons. They are not leased?

Mr. GRIER. All patented and owned by the Homestake Mining Co.

Acting Chairman Commons. So that this company was formed by—its operation consisted in buying up these various claims you have mentioned. There is where its capital is invested?

Mr. GRIER. Yes, sir. The original purchases of the company were made in the spring of 1878 and consisted of the Homestake lode location and Golden Star lode location, aggregating perhaps 15 acres, and from that start the company has been buying from time to time ever since.

Acting Chairman Commons. Does the company hold the stock of any other corporation, any other mining corporation?

Mr. GRIER. No, sir.

Acting Chairman Commons. Does it own outright its waterworks—water supply?

Mr. GRIER. Yes, sir.

Acting Chairman Commons. And the timber?

Mr. GRIER. Fee title to it all.

Acting Chairman Commons. Does the company pay a selling department or agent in New York?

Mr. GRIER. Selling agent?

Acting Chairman Commons. Yes; how is your product sold?

Mr. GRIER. Oh, its bullion product is shipped to one of its bankers in New York City, by the bank turned over to the United States assay office, and after melting and deducting their charges a check is given to the treasurer of the mining company by the assay office for the value of the bullion.

Acting Chairman Commons. Who is the treasurer of the company?

Mr. GRIER. James B. Haggin.

Acting Chairman Commons. In New York?

Mr. GRIER. New York.

Acting Chairman Commons. Can you give us, in the last fiscal year, the operating expenses—total operating expenses of the company? Have you a financial statement we could have?

Mr. GRIER (addressing Mr. Chambers Keller). Could you get an annual report?

Mr. KELLER. Mr. Chairman, yes; it will probably facilitate.

Acting Chairman Commons. Yes; if you could get that.

3542 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Will you state the organization of your force of which you have direct charge? You have an assistant superintendent and on down the line. We would like to get the method of organization and responsibility.

Mr. GRIER. The administration is in the hands of a superintendent and an assistant superintendent. There is a mining department with a general foreman several assistant general foremen, about 30 shift bosses, and about 1,100 men working in various capacities.

Acting Chairman COMMONS. That is in the mining department?

Mr. GRIER. That is the mining department.

Acting Chairman COMMONS. That is what you call the underground force?

Mr. GRIER. Yes.

The metallurgical department, and chief metallurgist and assistant, various assistants in his office. The company operates six stamp mills, has a foreman at each mill, a head amalgamator in each mill. I would like to correct that statement as to foreman. It has not a foreman at each mill. In Lead, one foreman takes care of three mills, but there is a head amalgamator in each mill.

The secondary treatment consists of one regrinding plant, two sand plants, and one slime plant, a foreman at each one of those places, but all under the direction of the chief metallurgist.

Acting Chairman COMMONS. How many employees in this metallurgical department?

Mr. GRIER. Well, the chief metallurgist and his assistant have half a dozen or more men who do the laboratory work and assist them in making determinations from day to day.

Acting Chairman COMMONS. Well, is the operating force under his direction or under the direction of the superintendent?

Mr. GRIER. Well, of course, the whole works is under the direction of the superintendent, but the head of each department is charged with looking after the details of it and is always in consultation with the superintendent.

Acting Chairman COMMONS. What I was getting at is on the underground works. Do you have a general foreman in charge of all the underground work?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And in the stamping mill, do you have a general foreman in charge of all surface work?

Mr. GRIER. Well, the foreman of the stamp mills takes orders from the chief metallurgist direct. The mechanical department is supervised by a master mechanic. That department embraces the drill-sharpening shop, the machine shop, the blacksmith shop, the pattern shop, and the foundry; and, in turn, all of these places have a shop foreman.

The engineering department is directed by the chief engineer, who has a staff to assist him sufficient to take care of that part of the business; the electrical department is supervised by the chief electrician, with a sufficient number of assistants to help him; the timber lands and sawmills are under the direction of a head, with a sufficient force, of course, to carry on his work. And so on through all the various departments into which the operations of the company are divided, with a head to each. I can fill in the other directors now.

Acting Chairman COMMONS. Suppose you check that up after we finish.

Mr. GRIER. Very well.

Acting Chairman COMMONS. As to the employment department, is that something separate, or how?

Mr. GRIER. Excuse me, I forgot that. The employment department has a head, and sufficient help to enable him to conduct that part of the business.

Acting Chairman COMMONS. This department, then, does all the employing and discharging of men—the employment department?

Mr. GRIER. The employment department is charged with the responsibility of employing the operatives needed in all departments of the service, but he does not dismiss them.

Acting Chairman COMMONS. By all departments, do you mean these you have gone over, mining, metallurgy, timber, and electrical?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Up to what grade—he does not employ foremen?

Mr. GRIER. Well, he does not pass finally on foremen.

Acting Chairman COMMONS. He passes finally on miners and helpers and laborers?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And all below foremen?

Mr. GRIER. No, sir; not all below foremen. I should say all below shift bosses.

Acting Chairman COMMONS. I see. All below shift bosses. How many employees, then, are under his control in the sense of employing them?

Mr. GRIER. Oh, about two thousand.

Acting Chairman COMMONS. Does he have control over those that are in the stamp mills, too, as well as under the shift bosses, he hires them also?

Mr. GRIER. He does; but I ought to say that he does not pass arbitrarily on the employment of anybody. He employs a man for any department of the service with, I might almost say, the advice and consent of the immediate boss above.

Acting Chairman COMMONS. Does that mean the shift boss?

Mr. GRIER. Yes; it is all done by consultation. All applications for employment are made at the employment office, and, to a large extent, he does pass upon all of the men under the shift bosses, but makes a point to consult with the men in authority who have supervision over the men that he sends to them to work.

Acting Chairman COMMONS. Then, you have besides that a hospital department, do you not, or medical department?

Mr. GRIER. Yes.

Acting Chairman COMMONS. What is the organization in that department?

Mr. GRIER. The hospital department is presided over by a chief surgeon and physician, with a half dozen assistants, a half dozen nurses, and other help about the hospital necessary to conduct it in a proper manner so that the greatest service and best service possible may be given to the operating force of the company.

Acting Chairman COMMONS. Is this considered as a regular department of the company's work, or is it done by contract?

Mr. GRIER. It is a regular department of the service. The expense of maintenance is paid by the Homestake Co., and there is no charge of any kind or character made against the employees for either doctor's services, nurses' services, or medicine.

Acting Chairman COMMONS. And the salaries of the doctors and nurses come from the company?

Mr. GRIER. Come from the Homestake Co.'s office.

Acting Chairman COMMONS. Well, you have in addition to that a recreation department?

Mr. GRIER. We have a recreation building which is just being put into commission, where there is located a free library, and game tables, and plunge and shower baths. The intention is to put in everything that will contribute to the pleasure and comfort and happiness of the operating force of the company.

Acting Chairman COMMONS. The company finances that out of its funds?

Mr. GRIER. That is free, not only to the operating force of the mining company, but to the people of Lead and to the people of Lawrence County and to the people of South Dakota.

Acting Chairman COMMONS. And the staff of that department are on the—

Mr. GRIER. Homestake pay roll.

Acting Chairman COMMONS. On the Homestake pay roll?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Is that true of the library?

Mr. GRIER. The library is free in every way, shape, and form to all comers, whether they are employees or not, but is maintained by Mrs. Hearst and has been for 20 years.

Acting Chairman COMMONS. That is separate from the company then?

Mr. GRIER. Yes.

Acting Chairman COMMONS. The company furnishes free quarters for the library?

Mr. GRIER. The library has just within the past week been moved into the recreation building to furnish the necessary room for the library.

Acting Chairman COMMONS. Then, you have a kindergarten; what is that?

Mr. GRIER. The kindergarten is free in every way, shape, and form to all who choose to send their children there; and it is maintained by Mrs. Hearst.

Acting Chairman COMMONS. And is not on the company's pay roll?

Mr. GRIER. No; there is a staff of teachers, who are regular graduates of a kindergarten college, with a matron and manservant to help take care of the children.

Acting Chairman COMMONS. You have, of course, a legal department?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What is the force or staff of the legal department?

Mr. GRIER. The legal department of the company is presided over by Mr. Keller. He has associated with him a partner, but I do not know anything about the terms of his partnership. Mr. Keller personally attends to the legal work of the company.

Acting Chairman COMMONS. What is your detective force that you have?

Mr. GRIER. Well, we have not very much of a detective force. We have one man who has been with the company for a great many years; originally started as a bullion guard; goes along when money is transported to the wood camp or the sawmill, and in his leisure time, if he sees anything of interest to the company, he notes it.

Acting Chairman COMMONS. Does he report on employees?

Mr. GRIER. He does.

Acting Chairman COMMONS. How much of a force does he have?

Mr. GRIER. Well, so far as the detective work is concerned, I do not think he has anybody. Oh, we have half a dozen or more special watchmen that are under him—night watchmen.

Acting Chairman COMMONS. Is your detective force commissioned as county or city officers? Do they carry a State commission in addition to being employed by the company? Are they deputy sheriffs?

Mr. GRIER. I was just thinking—I think Mr. Northern has a deputy sheriffship. I know he did have; I don't know whether he has now or not. As to the city, I don't know whether he has any authority from the city or not.

Acting Chairman COMMONS. He can arrest men without a warrant?

Mr. GRIER. Well, I never knew it if he can.

Acting Chairman COMMONS. How?

Mr. GRIER. I never knew it if he can.

Acting Chairman COMMONS. Presumably he could not unless he had a deputy sheriffship?

Mr. GRIER. If he had a deputy sheriffship he could do what the law will allow him to do as deputy sheriff.

Acting Chairman COMMONS. Does the company have company houses, dwelling houses and residences, which it owns and rents?

Mr. GRIER. I don't think the company has a house that it rents, unless it is a house rented by my father-in-law, and he pays \$40 a month. It owns a few houses, however, that are occupied, but no rent is charged. Mr. Keller's chauffeur occupies a house belonging to the company. A very few houses, probably a half dozen, came into the ownership of the company with the ground that they bought and upon which the houses are located. I don't recall that the company has a house that it charges rent for except this one.

Acting Chairman COMMONS. These that the company did secure, they came into the possession of the company in what way, do you mean?

Mr. GRIER. Well, when the company bought a mineral claim or two, oftentimes there would be a house on it, and, of course, the houses went with the claim.

I would like to ask Mr. Yates or Mr. Blackstone, do you know of any houses that the company rents?

Mr. MURKIN. I know of two that were acquired in the way in which you state.

Mr. GRIER. There may be two or three, but that is all.

Acting Chairman COMMONS. What is the relation of the company to the Hearst Mercantile Co.? There is no relationship financially?

Mr. GRIER. None; no, sir. The Hearst Mercantile Co. is owned by Mrs. Hearst. The corporation grew out of a store built by Mr. Hearst during the winter of 1878-79, and was run in his name until about 1892, when it was incorporated, and this was immediately after Senator Hearst's death, and is now owned by his widow and heirs.

Acting Chairman COMMONS. What is the capital stock?

Mr. GRIER. Three hundred thousand dollars.

Acting Chairman COMMONS. Where is it incorporated—in this State or in California?

Mr. GRIER. In this State.

Acting Chairman COMMONS. It is a South Dakota corporation?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What is the relation of the company to the aid association? Is that a department of the company's work, or what is the relationship?

Mr. GRIER. I suppose it might be regarded as a department. It was organized about three years ago, I think. The employees of the company contribute \$1 a month to the fund, and the Homestake Mining Co. contributes \$1,000 a month and administers the fund without any charge of any kind or character, under the direction of a board of directors, elected annually by the employees of the company.

Acting Chairman COMMONS. What is the connection with the hospital?

Mr. GRIER. The benefits paid by the aid association are, of course, paid to aid those who are suffering from sickness due to natural causes or due to accident, and it also pays a death benefit due to natural causes or due to accident. Aid benefits paid on account of sickness from natural causes begin six days after the illness, and benefits paid on account of disability due to accident begin on the day of the accident. Necessarily the relationship between the aid fund and the hospital is close, because the hospital passes on the nature of the illness and the date upon which the aid begins and ends. One of the board of directors is from the hospital department, one from the mining department, one from the metallurgical department, and one from the mechanical department, and one from the surface.

Acting Chairman COMMONS. The surface?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And these directors are elected by each of these departments. Is that the idea?

Mr. GRIER. Yes, sir; annually, I think, on the first Monday in January, by ballot.

Acting Chairman COMMONS. Who is the treasurer of the fund?

Mr. GRIER. I am the treasurer.

Acting Chairman COMMONS. The accounts are kept entirely separate from the company accounts?

Mr. GRIER. Altogether; yes.

Acting Chairman COMMONS. Altogether?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And are any payments made from that fund to the company on any account?

Mr. GRIER. From the aid fund?

Acting Chairman COMMONS. Yes; to the company?

Mr. GRIER. No. I said a moment ago that the company administers the fund without any charge of any kind or character.

Acting Chairman COMMONS. No charge?

Mr. GRIER. Nothing at all.

Acting Chairman COMMONS. And in addition to that furnishes free medical and hospital service?

Mr. GRIER. Furnishes the services of the staff of physicians, the staff of nurses, and also free medicines to all of the employees of the company and to all of those who rely upon those employees for their support and maintenance; that is, the families.

Acting Chairman COMMONS. Who is the secretary or executive officer of the aid association, the one who—you are treasurer—but who is the secretary, the one that draws the checks for the payment of the allowances?

Mr. GRIER. Well, checks are drawn by a bookkeeper who was added to the staff of the Homestake office when the aid fund was organized. It placed or gave to the office staff additional work, and the company employed an extra man to take care of that work.

Acting Chairman COMMONS. So all the accounts go through this clerk's hands?

Mr. GRIER. Yes. The chief of the office is formally secretary of the board of directors and he does a good bit of the work himself, but this extra man in the office draws checks and takes care of the accounts.

Acting Chairman COMMONS. Now, taking up these different departments, what are the names of the individuals who have charge? The general foreman, what is his name?

Mr. GRIER. Of the mine?

Acting Chairman COMMONS. Yes; in the mine department—the general foreman?

Mr. GRIER. The general foreman is Edgar B. Huntley. Mr. O'Brien, who had been foreman for, I think, 16 years, died a few days ago.

Acting Chairman COMMONS. The corresponding position in the stamp mill?

Mr. GRIER. Well, really, the general foreman of all of the mills would be the chief metallurgist, Allen J. Clark.

Acting Chairman COMMONS. Is he in Lead now?

Mr. GRIER. I think so. He was out at Spearfish yesterday, but I think he is back this morning.

Acting Chairman COMMONS. And the head of the employment department?

Mr. GRIER. E. F. Irwin.

Acting Chairman COMMONS. And the hospital department?

Mr. GRIER. The chief surgeon is Dr. J. W. Freeman. At the present he is in Europe. He went there to the congress of surgeons. His first assistant has charge of the department at the present time—Dr. Clough.

Acting Chairman COMMONS. And who has charge of the kindergarten?

Mr. GRIER. Miss Frances Clark.

Acting Chairman COMMONS. And of the aid association—the bookkeeper?

Mr. GRIER. George B. Fogelson.

Acting Chairman COMMONS. Now, taking up that financial statement, we will return to that, if you please.

Mr. GRIER. I can give you the directors now.

Acting Chairman COMMONS. The directors you have there?
