Mr. GRIER. The directory is J. B. Haggin, New York; F. G. Drum, San Francisco; F. Clark, San Francisco; H. L. Tevis, San Francisco; E. H. Clark, New York; Thomas Turner, San Francisco; Richard Clark, San Francisco; president, J. B. Haggin; vice president, F. G. Drum; secretary, Fred Clark; treasurer, J. B. Haggin; chief consulting metallurgist, C. W. Merrill, San Francisco; Chambers Keller, Lead, S. Dak., attorney; superintendent, T. J. Grier, Lead.

Acting Chairman COMMONS. We were considering the operating account.

Mr. GRIER. I think I gave you the capital stock at \$251,116, didn't I? That ought to be \$251,180. There are several pages here and I will have to add them up.

Acting Chairman COMMONS. Does it give the total operating account?

Mr. GRIER. I don't make up this report, Mr. Chairman. It is made up by the secretary in San Francisco from the statements that are sent to him of receipts and disbursements here at the mine every month.

Acting Chairman COMMONS. Well—

Mr. GRIER. Would you like to have it in the record?

Acting Chairman COMMONS. Yes; can you make that an exhibit?

(The paper so presented was marked "Exhibit No. 1, Witness Grier, August 3, 1914.")

(Grier Exhibit No. 1, pamphlet entitled "Report of the Homestake Mining Co. from January 1 to December 31, 1913," was submitted in printed form.)

Acting Chairman COMMONS. What is the total pay roll of the company, can you give that?

Mr. GRIER. For labor?

Acting Chairman COMMONS. Well, the total for all purposes, all classes—salaries and wages?

Mr. GRIER. I should say, approximately, \$225,000 for labor in all departments of the service.

Acting Chairman COMMONS. That includes all pay, but not including the superintendents, I understand?

Mr. GRIER. Yes; it does include them. It includes the salaries of everybody in the service, and I should think it would be just about at this time \$225,000 a month. During the summer season ordinarily it is \$5,000 or \$10,000 a month more than it is in the winter because whatever outside improvements the company is making it tries to do it during the good weather, and I think \$225,000 a month is a fair average for the year.

Acting Chairman COMMONS. Then, for the year as a whole, that would come at about what figure?

Commissioner LENNON. \$2,700,000.

Acting Chairman COMMONS. \$2,700,000 for the entire pay roll.

Going back to the question of the employment office department, what is the policy of the company and what are the wages—wage scale and methods of payment that you employ at the present time?

INDUSTRIAL CONDITIONS GOLD MINING OPERATIONS, S. DAK. 3547

Mr. GRIER. Regular miners' wages; underground, \$3.50 a day for an eight-hour shift; can men and shovelers get \$3; timber men get \$4; shift bosses get \$4, and assistants to the general foreman get \$4.50, \$5, \$6, and \$7 a day, but \$3 is the lowest for underground operatives.

Acting Chairman COMMONS. Now, above ground in the mills?

Mr. GRIER. In the mills the head amalgamator gets \$5 a day, the amalgamators working under him get \$3.50 and \$4. In the foundry they get \$2.50, \$2.75, \$3, \$3.50, \$4, and \$5. In the machine shop they get from \$3 to \$5. In the blacksmith shop about the same; in the drill-sharpening shop about the same. In the assay office they get from \$100 to \$150 a month, and the men in charge \$400 to \$500 a month.

Acting Chairman COMMONS. That means in the assay department, the metallurgical department?

Mr. GRIER. Well, the metallurgical heads.

Acting Chairman COMMONS. \$400 to \$500, the chief metallurgist, do you call it?

Mr. GRIER. Metallurgist.

Acting Chairman COMMONS. Gets \$500 to—

Mr. GRIER. I am not so sure but what he gets \$600. Let me see; yes, \$600. The chief metallurgist gets \$600 and his assistant \$500.

Acting Chairman COMMONS. What are the salaries of the technical force in the other departments, engineering and electrical?

Mr. GRIER. The assistant chief engineer gets \$350 a month; others get \$250, \$225, \$125, \$115, and \$130.

Acting Chairman COMMONS. Does that include the electrical?

Mr. GRIER. The chief electrician gets \$240 a month. His first assistant gets \$205, and the others get \$3, \$4, and \$5 a day.

Acting Chairman COMMONS. How is it in the hospital service; what are the salaries there?

Mr. GRIER. The chief surgeon gets \$500 a month; the first assistant, \$300; second, \$275; third, \$250; fourth, \$225.

Acting Chairman COMMONS. What does the kindergarten pay?

Mr. GRIER. The director gets \$100 a month; first assistant, \$75; second, \$65; third, \$60; the matron gets \$40; fourth assistant—or fifth assistant, I think, gets \$50.

Acting Chairman COMMONS. What is the lowest age at which you begin to employ boys or men for any kind of work?

Mr. GRIER. I should think 17 or 18.

Acting Chairman COMMONS. And what kind of work are they put to?

Mr. GRIER. Light, very light work on top of ground mainly to help around the houses. We had applications for boys of more tender years than I have named, but we don't take them; tell them they ought to be at school.

Acting Chairman COMMONS. That is, you place 17 as the lowest age?

Mr. GRIER. I think Mr. Irwin can tell you better than I can.

Acting Chairman COMMONS. What is the lowest age you hire anybody?

Mr. IRWIN. The youngest we have ever had is 16. They are hired temporarily to work during the summer around the mills. Underground, is 18.

Acting Chairman COMMONS. What is the rate of pay of boys that begin at 17 on light work?

Mr. GRIER. What do they get?

Mr. IRWIN. Two dollars and a half on the surface and \$3 underground, except one class of work, keeping the screens clean in the mills we pay them a dollar and a half. It is just light work, keeping the chips and debris away from the screens.

Acting Chairman COMMONS. About how many would be employed at that rate, \$1.50, at the present time?

Mr. IRWIN. I should judge 15 to 18.

Acting Chairman COMMONS. What is the next step when a boy starts in at that age; then he gets up to 18, when he is promoted to some other class of work? What would be the next class of work he would get and the pay?

Mr. GRIER. You mean underground?

Acting Chairman COMMONS. No; these boys starting in at \$1.50, temporarily, cleaning screens, what would be the line of promotion?

Mr. GRIER. Well, naturally the next step would be \$2.50, helping on the plates.

Acting Chairman COMMONS. Helping on the plates?

Mr. GRIER. Helping or cleaning the amalgamating plates.

Acting Chairman COMMONS. Ordinarily how long would they be kept at that rate at that work?

Mr. GRIER. Well, they would be kept at it until there is a vacancy, and we have a pretty stable force. These boys that go to work, they don't continue in the service very long. They come in during the summer vacation for three months and they change pretty often.

Acting Chairman COMMONS. Well, they are boys that live in the community?

Mr. GRIER. The policy of the Homestake Co. always has been to give employment to the sons of the old veterans of the company to the fullest extent possible. It gives the preference to Lead boys, who are the sons of men who have been in the service for a great many years. We do not want those boys, as a matter of fact, at that tender age. A mother will come and plead for a month's work or a few months' work, and often gets it in that way.

Acting Chairman COMMONS. Are there any educational requirements that you impose on the boys before you take them in? Must they pass a certain grade in the school?

Mr. GRIER. No.

Acting Chairman COMMONS. Then it is just the age that you take into account?

Mr. GRIER. Educational qualifications in doing that kind of work are really not necessary. We do all we can to encourage boys to go to school, but no educational qualifications are necessary.

Acting Chairman COMMONS. Well, do you recruit a large number—is there an important part of your force recruited right from the mining community here, boys that come in and continue, that the company are advancing to the higher positions?

Mr. GRIER. Oh, yes. If they continue with the company, they are advanced as rapidly as they can be without putting some boy out who is performing his duties. Of course, if you have a stable force of operatives, promotion sometimes is pretty slow.

Acting Chairman COMMONS. These wages that you have given, how long have they been in force, this scale of wages?

Mr. GRIER. In the various departments?

Acting Chairman COMMONS. Yes; have there been changes in recent years, or how far back does that scale run?

Mr. GRIER. The scale for miners, car men, shovelers, carpenters, machinists, foundrymen, and millmen has been in force for 35 years; the wage scale for miners has not been changed since the mine started 35 years ago, nearly 36—in fact, over 36.

Acting Chairman COMMONS. That is, the men who are getting \$3.50?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Now, the men that are getting \$3, has there been any change in that?

Mr. GRIER. That scale has been unchanged for 35 years.

Acting Chairman COMMONS. The same about as the other?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And the other scale, the lower scale, the \$2.50 scale, has there been any change in that?

Mr. GRIER. Well, that has been in effect for the same length of time.

Acting Chairman COMMONS. For the same length of time?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Do you have figures compiled which will show the number of men employed at these several rates of pay?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Could they be furnished to us now?

Mr. GRIER. I have a statement made up once a year which will show just exactly what you call for, Mr. Chairman.

Acting Chairman COMMONS. The number at each rate of pay?

Mr. GRIER. At each rate of wage; yes.

Acting Chairman COMMONS. How long has the schedule regarding hours of labor, which I understood you said is eight hours throughout—how long has that been in effect?

Mr. GRIER. It is eight hours in every department of the service. That has been in effect, I think, for half a dozen years; I don't remember accurately.

Acting Chairman COMMONS. What was it before that time?

Mr. GRIER. Ten hours at the mine.

Acting Chairman COMMONS. Ten hours where?

Mr. GRIER. At the mine.

Acting Chairman COMMONS. That is underground?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Was there any other 10-hour scale, any other 10-hour employment except that underground?

Mr. GRIER. I think at the foundry, machine shop, blacksmith shop, and those places it was 10; in the mills it was 12—two shifts. You understand in the mine while the 10-hour schedule is in effect, that a man does not get to work for from 15 to 45 minutes from the times he leaves the top and goes down to his place of employment. So with a 10-hour schedule it does not mean very much over 8½ hours' work as it may be 10, 15, 20, or 30 minutes before he actually gets to work.

Acting Chairman COMMONS. Take the eight-hour schedule, a man goes to work, when he comes to the shaft to go down, when he goes down, from the times he goes down until he comes up, what time elapses?

Mr. GRIER. That he is at work?

Acting Chairman COMMONS. No; the total time between those two.

Mr. GRIER. The cage starts down at 6.50, we will say, in the evening. The first cage load that goes down, if they are working near the station where they stop, they probably get to their places of employment at 7. If they have to go a long distance and are going down after the first cage load, I do not suppose that they get to work—instead of getting to work at 7, probably it would be a quarter to 8 before the last cage load would get to work. They are not hoisted now for their meal, lunch at night or dinner at noon, as they used to be in the early days here, but they take a half an hour, underground, to eat their meals, and they leave their places of employment from 15 minutes to half an hour before their time is up, so that, as a matter of fact, a man does not work for the company over six and one-half hours and some not over six.

Acting Chairman COMMONS. According to the figures there, it is about eight and one-half hours from the top to the top again, if that is the term you use, from the time they enter the cage until they come out of the cage; it runs about eight and one-half hours?

Mr. GRIER. The last cage; yes.

Acting Chairman COMMONS. And that would be about the average time from the time the men start to go underground until they come out?

Mr. GRIER. Well, perhaps that would be pretty near correct.

Acting Chairman COMMONS. Then out of that you figure that on the average there would be half an hour taken for lunch, which would leave eight hours underground of time available for work?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Now, going to and from his work underground, he takes at the outside an hour and a half; that is, you figure he works six and one-half actual hours?

Mr. GRIER. Yes; I call an hour and a half the outside.

Acting Chairman COMMONS. And the shortest time it would take him to go and come from the work if he was living close by the shaft would be no appreciable time he would lose?

Mr. GRIER. In the aggregate it is a good deal of time because they gather at the shaft in large numbers and wait for the cage to come for them.

Acting Chairman COMMONS. They must be there on time?

Mr. GRIER. It is only necessary for the first cage load to be there when it starts up, say, at 4.30.

Acting Chairman COMMONS. What is the average that they lose short of eight hours' work?

Mr. GRIER. I don't think that the company gets much over six and a half hours.

Acting Chairman COMMONS. On the average?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Six and a half hours would be the maximum; then that could not very well be the average. If the maximum loss is an hour and a half, what would be the average?

Mr. GRIER. I wouldn't hesitate to say seven hours would be the average.

Acting Chairman COMMONS. That they are actually working?

Mr. GRIER. Wherever they are employed.

Acting Chairman COMMONS. On the surface in the mills the time is full time?

Mr. GRIER. The time is practically full time.

Acting Chairman COMMONS. They are working all the time?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Now, underground, what standard have you o determining the amount of work a miner should do during the time he is ther the eight hours or seven hours on the average—the amount of it?

Mr. GRIER. You can't very well fix a standard for the reason there are variou sorts of machinery used for drilling and some are more efficient than others and some ground is harder than others, so that you can't arbitrarily fix the number of feet a man should drill. All that is expected is a man should b reasonably diligent in doing what he can as an honest and fair day's work.

Acting Chairman COMMONS. Each man keeps a record each day of how muc he actually drills?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. He makes a report of that to the—to whom doe he report; through his boss?

Mr. GRIER. That goes through the boss to the office.

Acting Chairman COMMONS. Are those kept of record?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Can we have a form of the form used for the report that he makes?

Mr. GRIER. Mr. Irwin will, when he gets back with the report I asked for—

Mr. YATES. The engineer's office has the reports

Mr. GRIER. Will you get them, Mr. Yates?

Acting Chairman COMMONS. I mean the individual report each man turns in of the amount of work he has done.

Mr. YATES. A blank form?

Acting Chairman COMMONS. Yes; just a blank form. I take it from what you say that it will be practically impracticable to pay miners by the tonnage of drilling done or anything of that kind?

Mr. GRIER. No; it would not be impracticable. It is done in some places, but there are people who object to piecework in this country and it has never been insisted upon here.

Acting Chairman COMMONS. You have never had any contract system or piecework contract mining?

Mr. GRIER. Well, a good many years ago the experiment was made of letting a contract to a party of men to mine and stope, paying them so much per ton for the ore delivered at the shaft. But I guess it is 20 years since we had any of that, isn't it?

Mr. YATES. Yes; I think as much as that.

Acting Chairman COMMONS. How long did that practice or experiment continue?

Mr. GRIER. Not very long.

Acting Chairman COMMONS. What were the difficulties about continuing that?

Mr. GRIER. Well, the men who were doing the contract work seemed to be more interested in getting out tons than working the stope so that it would be safe.

Acting Chairman COMMONS. Namely, safety—

Mr. GRIER. Entered largely into the objection, the matter of safety.

Acting Chairman COMMONS. It was mostly safety in order that they might take more care. In what particular, where does the care come in?

Mr. GRIER. Well, the safety of a stope, of an excavation underground, depends a good deal on how you take out the ore; how you leave the walls, and how you leave the roof.

Acting Chairman COMMONS. You don't have much timber compared with coal mines; your timbering is very small, of course.

Mr. GRIER. Well, we haven't as much timbering now, anywhere near it, that we used to have. A number of years ago we adopted a new mine, a new style, and that was of letting waste down from the top, from the level above, and after breaking the stope full of ore, taking it out across the ledge and following that with the waste coming down as you went across. The waste is to hold the walls while the ore was removed.

Acting Chairman COMMONS. How long ago did you adopt that method?

Mr. GRIER. A dozen years ago, perhaps.

Acting Chairman COMMONS. Does that permit the miner to do a larger amount of work; that is, turn out a larger output, larger tonnage, than this method, than it did under the old method?

Mr. GRIER. No; I don't know that it does.

Acting Chairman COMMONS. What is the advantage, more economical?

Mr. GRIER. The advantage is in using the waste rock to protect the walls of the stope instead of timbers.

Acting Chairman COMMONS. It saves on the timber?

Mr. GRIER. Yes. I can give you now, Mr. Chairman, the total number of men—this applies only to the mine, however—working at different scales of wages. Shall I read it into the record?

Acting Chairman COMMONS. Yes; please put it in.

Mr. GRIER. Number of men: 86, at \$2.50; 3, at \$2.75; 743, at \$3; 535, at \$3.50; 1, at \$3.75; 41, at \$4; 51, at \$4.50; 1, at \$4.75; 8, at \$5; 1, at \$5.50; 1, at \$7; 1, at \$8; and 1, at \$10.

One, at \$350 a month would be nearly \$12. That is the men—you understand that this first lot of 86 at \$2.50 are men doing ordinary labor on surface.

Acting Chairman COMMONS. What is the occupation, what is the name of the occupation that they perform?

Mr. GRIER. Oh, various things about the surface, cleaning up and changing things continually going on.

Acting Chairman COMMONS. Just labor?

Mr. GRIER. Common laborers.

Acting Chairman COMMONS. Now, that is for the underground work, that is a total of how many employees—1,100?

Mr. GRIER. In addition to those, there is 20 contractors. Their rate is not given. It would be whatever they earn, but it makes a total of 1,440 men, and that was for January, 1914.

Acting Chairman COMMONS. Are those contractors on timber work, is that it, or what class of work?

Mr. GRIER. Those are drifters, they are running tunnels and drifts and crosscuts.

Acting Chairman COMMONS. Why is it that you have the contract system for drifters, is that something that is measurable in advance, can you measure that out so that you know what you are going to do?

Mr. GRIER. They start from a certain point that the engineers, the mine engineers give them, we will say on the first of the month, and at the end of the month the number of feet run is measured, and they are paid at the rate per foot agreed upon when they start. [Addressing Mr. E. F. Irwin.] Can you tell the chairman about what they make?

Acting Chairman COMMONS. The contractors.

Mr. GRIER. Say take an average of the men drifting in the mine.

Mr. IRWIN. Last month we averaged up all the drifts for the month, and they averaged \$4.50 per day per man for eight hours.

Acting Chairman COMMONS. Do they work in gangs?

Mr. IRWIN. Four men usually take a drift, two on each shift.

Acting Chairman COMMONS. Well, the four men may go together, do they?

Mr. IRWIN. Yes.

Acting Chairman COMMONS. Divide equally?

Mr. IRWIN. Sign the contract, and divide the money equally after paying for their supplies, and they averaged \$4.50. That is the last average we figured up.

Acting Chairman COMMONS. Do they pay for their supplies?

Mr. IRWIN. They pay for their powder, caps, fuse, and carbide.

Acting Chairman COMMONS. Well, is this figure that you give net?

Mr. IRWIN. Net for labor after deducting all the supplies.

Acting Chairman COMMONS. After deducting all their supplies?

Mr. IRWIN. Yes, sir.

Mr. GRIER. This is the form.

(The paper so presented was marked "Exhibit No. 2, Witness Grier, August 3, 1914.")

Grier Exhibit No. 2, the paper referred to, was submitted in printed form.)

Acting Chairman COMMONS. This statement that you have sums up the pay roll for the month of January?

Mr. GRIER. Yes. We have this sort of a statement made in January of each year. This is January, 1914.

Acting Chairman COMMONS. Can you file that as an exhibit?

Mr. GRIER. Why, yes, be glad to.

(The paper so presented was marked "Exhibit No. 3, Witness Grier, August 3, 1914.")

See Grier Exhibit No. 3, under "Exhibits.")

Acting Chairman COMMONS. Have you similar for the mills and surface work, have you a similar summary of the pay roll?

Mr. GRIER. We have not a statement like that for the surface, no. We have never made one except for the mine.

Acting Chairman COMMONS. Why is it—

Mr. GRIER. However, we can bring in for you, if you would like to have them examined, say, the whole pay rolls of the company for—this is August 1; we could not give them to you for July. We can give them to you for June if you would like to look at them.

Acting Chairman COMMONS. Can you make a transcript of the pay roll?

Mr. GRIER. Well, I would not like to undertake it. I would like to have you look at them—too much work.

Acting Chairman COMMONS. Well, how do you happen to make up this one each January; is it because you have the figures?

Mr. GRIER. Yes; they are easily compiled, and—well, we just did it for information, not for any special purpose that I know of.

Acting Chairman COMMONS. Now, as to keeping the record of the amount of work that is done, I have the blank here that each man is required to measure each hole drilled by himself and record the measured depth in the proper place on the other side of this card at the end of the shift. The card shall be deposited in a box provided for the purpose at the shift station. The shift boss shall collect the cards each day, O. K. by signing his name, and turn into timekeeper's office. If the shift boss shall find any holes not measured correctly he shall make out a duplicate card with correct measurements recorded.

That, I take it, then, would give for each man each day the amount of actual feet that he has drilled, or inches, or whatever it is?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And it gives the level and the slope or drift. That would indicate the character of the work, would it?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Whether it was hard drilling or soft material?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And the number of holes drilled. What use is made of this record regarding the man himself, the compiling of a record of the work that each man does?

Mr. GRIER. Well, it is for the purpose of furnishing the office with such information as it ought to have regarding the service a man is giving to the company. And, as I said a little while ago, you can't arbitrarily fix the number of feet a man should drill for various reasons. Different types of drills will accomplish—one drill will accomplish more than another, because it is a better machine, while perhaps it operates more smoothly and no little difficulty arises in the mechanism of it. And another thing that affects the work that a man accomplishes is the quality of the drill steel, or the steel out of which the drill is made. You understand that various firms manufacturing drill steel give to the consumer different qualities. Sometimes it is a pretty hard matter—in fact, it is all the time—to obtain an absolutely uniform quality. Well, then comes in the shape of the work, the drill making or drill sharpening, and that in turn is affected by the temper of it, and a number of things enter into it, what it is possible to accomplish, and it can not always be controlled, so that you can not arbitrarily fix a certain number of feet that a man must drill in order to satisfy you as to his having done a day's work. And then the texture of the rock through which he drills varies considerably on different parts of the mine. This form that we keep is intended to furnish us with information by which we can judge what a man is doing in a certain place and what the man on the opposite shift is doing in the same place, and then that compared with other parts of the mine where the work is either harder or softer, and even then you can't say that a man hasn't done his duty, because he may have had steel that was not properly tempered, his drill wasn't sharp enough, or he may have had to wait to get a supply of drill steel.

Acting Chairman COMMONS. Is there any compilation made or statistical table made up each month?

Mr. GRIER. Yes, sir; every 10 days we compile the work done by the various drills and men.

Acting Chairman COMMONS. Does Mr. Irwin keep that record?

Mr. GRIER. The report is made up in the engineer's office.

Acting Chairman COMMONS. And it is the record of each man's work?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Could we have one of the 10 days' statements?

Mr. GRIER. Certainly. Have you got one?

Mr. YATES. Not of each man's work.

Acting Chairman COMMONS. I would like to see what sort of record is kept on each man.

Taking the shovelers or loaders; I believe you call them shovelers that load the car, do you not?

Mr. GRIER. Well, they shovel the car full and push it, so that they are really both carmen and shovelers. From the point they load it, they push it to the station or place where the train picks it up. We have air motors underground that draw trainloads, and pick them up all along and take them to the shaft.

Acting Chairman COMMONS. How far would a man have to push a car until he got to the main track or main line?

Mr. GRIER. Sometimes a long distance and sometimes just a few feet, depending on where he is working.

Acting Chairman COMMONS. What is your standard of a day's work during the eight hours of that class of labor?

Mr. GRIER. There is no standard. A man shoveling from a large pile of rock may be loading from what would be called a run of small rock, and he could shovel twice as many cars from that run of small rock into his car and push it to where he had to go—he could load twice as many cars as a man could who encountered large pieces that rolled down in a pile that is in the slope and from which they shovel. The number of cars that a man shovels and runs to a certain place is left to the judgment of his boss, and no boss is expected to impose upon a man more than he can honestly do, and if he does fix a number of cars in a certain place for a man to shovel and run in a day, he is expected and directed to take into consideration all the circumstances surrounding the work that the man is doing, and if he fixes 10 cars for him to do and the man does not do more than 5, he is supposed to take into consideration the circumstances surrounding his work, and the next day he might be able to shovel 20 cars with greater ease than he could the day before shovel 5.

Acting Chairman COMMONS. What record is kept of the number of cars that a shoveler fills?

Mr. GRIER. There are tally men at the places the cars are dumped, and each man's cars are marked.

Acting Chairman COMMONS. Each man puts a check on his car?

Mr. GRIER. No; there is a tally man there, and as each man comes with his car—

Acting Chairman COMMONS. Oh, the man comes himself?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And he credits him?

Mr. GRIER. Credits him with the number of cars he dumps into the bins or the receptacle, or reservoir, or whatever you choose to call it.

Acting Chairman COMMONS. Those are the men getting the \$3?

Mr. GRIER. Three dollars.

Acting Chairman COMMONS. What are your regulations in case that there are any complaints on the part of either the miner or the shoveler that the shift boss is not giving him a fair show on an amount of work or has laid him off because he has not done the amount of work?

Mr. GRIER. The shift boss, if he has laid a man off for any cause, no matter what, is required to report to the employment office the dismissal of the man and the reason therefor. Of course when a man is dismissed he goes to the employment office and asks for his time. He is asked why he is quitting. If his story does not agree with the shift boss's story, investigation is made, and if it is found upon investigation a man is not at fault and the shift boss is, the man is required—is restored and the shift boss reprimanded.

Acting Chairman COMMONS. Who investigates that?

Mr. GRIER. The employment office.

Acting Chairman COMMONS. That is Mr. Irwin?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Does he do that himself individually, or does he have a force?

Mr. GRIER. He does it individually.

Acting Chairman COMMONS. Goes down at the workings?

Mr. GRIER. No. The shift boss must assign the cause for the dismissal of a man, and he turns his name into the office as having been retired from the service. Then the man who is retired calls at the employment office to get his time, or his pay, and he is asked why he is leaving. If the story that he

tells does not agree with the story that the shift boss tells, then investigation is made. If the shift boss is at fault he is reprimanded and the man is restored to his work.

Acting Chairman COMMONS. In case a man makes a complaint against the shift boss, that, of course, is a part of this report that he makes?

Mr. GRIER. Yes.

Acting Chairman COMMONS. To the timekeeper's office?

Mr. GRIER. Yes; that goes into the employment bureau.

Acting Chairman COMMONS. Now, then, the shift boss can discharge a man—or what is it, a discharge or a suspension that the shift boss does?

Mr. GRIER. Well, both things occur. For some faults the shift boss has the privilege of laying a man off a day, or two, or three, or a week, according to the gravity of the offense; ordinarily a man is given about three chances, and then if he—

Acting Chairman COMMONS. What is the highest number of days that the shift boss can lay a man off?

Mr. GRIER. Well, I don't think that any maximum number of days has ever been fixed. It generally runs, as I suggested, from a day or two to 10 days. Mr. Irwin, what would be the average?

Mr. IRWIN. Generally five days to two weeks.

Mr. GRIER. Further than that, they discharge them.

Acting Chairman COMMONS. Then they can discharge them, and the man takes it up with the employment office, it is investigated there, and the shift boss can be turned down?

Mr. GRIER. Yes.

Acting Chairman COMMONS. On either a suspension or a—

Mr. GRIER. Dismissal.

Acting Chairman COMMONS. Or dismissal?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Can he be vetoed or turned down on a suspension?

Mr. GRIER. Sir?

Acting Chairman COMMONS. Can the employment office reverse on a suspension and send the man back to work again without suspending him, without permitting him to be suspended?

Mr. GRIER. Well, you know one day would elapse before an investigation could be made.

Acting Chairman COMMONS. He has got one day, anyhow?

Mr. GRIER. Yes; but he can be restored if the cause is found insufficient.

Acting Chairman COMMONS. Do you keep a record of the suspensions? Is there a report made to you of the number of suspensions and the days?

Mr. GRIER. A report is made to me at the end of each month of the number of men leaving the service, the cause which they give for leaving, and the cause given by the shift boss.

Acting Chairman COMMONS. Could we have a copy of one of those reports?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. The employment office hires all of the men, as I understand?

Mr. GRIER. Yes.

Acting Chairman COMMONS. You require them to sign an application and to take a physical examination?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Would you describe the procedure? What sort of examination questions are asked of the men?

Mr. GRIER. A man applying for employment, if there is a reasonable chance of his going to work within a few days, is referred to the medical department to be passed upon. That is done because the company wants to know whether he is physically able of doing the work he seeks. Occasionally you will find, well, probably a man who would like to get on the Homestake pay roll so that he can enjoy the benefits of the aid fund. That would be an imposition on the able-bodied men who contribute regularly to the fund and who enjoy its benefits—to have somebody who was not capable of doing a day's work enter the service and probably be taken sick within a week or less or more and be on then for the rest of his life and if he died his heirs get the death benefit.

Acting Chairman COMMONS. When was this physical examination first adopted? How long has that been the practice?

Mr. GRIER. Very soon after the establishment of the aid fund.

Acting Chairman Commons. It grew out of the aid fund?

Mr. GRIER. It grew out of the aid fund; yes.

Acting Chairman Commons. Now, the report of the physician, then, is final, is it?

Mr. GRIER. Yes, sir.

Acting Chairman Commons. What things does he take into account; the question of age, does he take that into account?

Mr. GRIER. Well, we rely, I might say, absolutely upon his judgment. And the man's age, I presume, would be taken into consideration in connection with his physical ailment, if he has one.

Acting Chairman Commons. But the company, the superintendent, does not lay down and rule regarding the age—no age limit which is recognized?

Mr. GRIER. There never has been an age limit prescribed in passing upon the qualifications of a man.

Acting Chairman Commons. What has been the actual experience as regards the highest age of men newly taken on, say, in the past year?

Mr. GRIER. Well, that is all a matter of record. If you will excuse me, I think Mr. Irwin can give you a better answer.

Acting Chairman Commons. Have you compiled the figures showing the different ages of the men taken on during the year?

Mr. IRWIN. We have that in our monthly report.

Acting Chairman Commons. That is included in this one I have asked for?

Mr. IRWIN. Yes.

Mr. GRIER. Would you like to see this?

Acting Chairman Commons. Yes.

Mr. GRIER. Containing the age record and everything.

Acting Chairman Commons. That report, Mr. Irwin, is not here?

Mr. IRWIN. I have just sent for it.

Acting Chairman Commons. You have a schedule, have you, of the form that you use that the man fills out, Mr. Irwin?

Mr. IRWIN. Yes.

Acting Chairman Commons. All these are made out by the employment department?

Mr. GRIER. Yes, sir.

Acting Chairman Commons. Here is the name, age, height, weight, color of hair and eyes—those, I presume, are simply for identification purposes?

Mr. GRIER. We want the fullest information possible to obtain so that a man may be fully identified in every way, shape, and form. There have been cases where a man is under the employment of the company and has been unfortunate enough to have met death, either by accident or natural causes, and we have been at a loss to identify him to people that have inquired even across the ocean, so that we have the fullest possible identification of the man that we can get so that we are able to give that information to anybody that might inquire.

Acting Chairman Commons. Well, then, physical defects; are those the obvious defects, I presume, or does the man fill this out himself?

Mr. GRIER. Well, the man is not always willing to fill in the defects. I think that is done pretty much by the physician.

Mr. IRWIN. Those questions are all answered by the man, and I write them down.

Commissioner O'CONNELL. You wouldn't call the color of a man's hair a defect; you might say it was red or black.

Mr. GRIER. It would not be a defect, but it would be a means of identification.

Acting Chairman Commons. Now, it is stated here whether he is a married man, and his nationality. What is your policy regarding the employment of married men as against unmarried men?

Mr. GRIER. The policy of the company for many years has been to give preference to married men, other things all being equal. Men with homes here are more desirable than what we call the rolling stone. A man who has no interest in any person, place, or thing on earth, who goes about from one town to another, seeking whom he may devour oftentimes, we don't want. I am free to say, that sort of employee, and therefore if a man has a home here and a family he is very much more desirable to enter the service of the company than one who is a man with a suit case.

Acting Chairman Commons. If he is a married man with a family some place else the same thing would hold?

Mr. GRIER. The same thing would apply if a man expected to remain permanently in the service, and brought his family here.

Acting Chairman COMMONS. Suppose his family is abroad.

Mr. GRIER. We have those cases and are continually urging upon the married man here with family in Italy or Sicily or some place else to get them here if he intends to remain.

Acting Chairman COMMONS. Does your record show the number of men with families abroad?

Mr. GRIER. I think it does.

Acting Chairman COMMONS. Could you furnish the number of men who have families abroad?

Mr. IRWIN. We have no record of that. It gives the address of his wife. There is no record kept of the number of employees with families in the old country, just the present address of the wife at the time he is employed.

Mr. GRIER. That indicates whether the family is abroad or not?

Mr. IRWIN. We haven't any compiled record.

Acting Chairman COMMONS. If his family is moved here, there is a record made of that?

Mr. IRWIN. No.

Acting Chairman COMMONS. You only have a record showing what was the situation when he was employed?

Mr. IRWIN. At the time he was employed.

Acting Chairman COMMONS. So that you don't keep it up to date as to that point?

Mr. IRWIN. No, sir.

Acting Chairman COMMONS. What proportion of your 2,200 men would be married men? I presume Mr. Irwin would have that, wouldn't he?

Mr. GRIER. I presume Mr. Irwin could give a better guess on that.

Mr. IRWIN. Sixty-five per cent, I should say.

Acting Chairman COMMONS. Sixty-five per cent married, and have their homes here?

Mr. IRWIN. Well, that would not be as high. Probably 15 or 20 per cent who have not their families here. There are always a class of employees coming in and having their families at their former home and moving them here as soon as they get established.

Acting Chairman COMMONS. Regarding the nationality, what is the attitude of the employment office on the different nationalities that are employed?

Mr. GRIER. The policy is to give preference to Americans, but we have some very good employees from the other side of the Atlantic, not so many, however, now as we had a few years ago. It was thought wise not to restrict the operating force entirely to American or English-speaking people, thinking it might give cause or give rise to the idea we were prejudiced against other nationalities. I should think we have in the mines in round numbers, I should say, 100 Italians, 100 Finlanders, 100 from the Slavonic Provinces, and probably a dozen other what you would call foreign nationalities represented, but in very much smaller numbers, all aggregating possibly 500 men out of between 1,100 and 1,200 employed in mines.

Acting Chairman COMMONS. Your employment office would have a record of that so that we could get it?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Have you that, or Mr. Irwin?

Mr. GRIER. You can get that sheet. Have you an extra copy?

Acting Chairman COMMONS. According to your statement there would be about as much as half of those underground that are—

Mr. GRIER. Distributed among 14 or 15 nationalities.

Acting Chairman COMMONS. Taking the number as a whole, which is 2,200, would that run about the same, about half?

Mr. GRIER. No, sir; in the other departments there is not anything like as high a per cent of foreigners as there is in the mines.

Acting Chairman COMMONS. How does that happen there should be more underground foreigners?

Mr. GRIER. Well, it seems that the foreign element applying for work applies for work in the mines rather than in the departments.

Acting Chairman COMMONS. Have they been miners in the old country? Is that the idea?

Mr. GRIER. Well, either some of them have; and some of them have had mining experience in other camps in the United States.

Acting Chairman COMMONS. Well, beside the question of giving position to Americans on the ground of nationality, is there any ground on the basis of efficiency? Do you find the Americans are better workmen than foreigners?

Mr. GRIER. Well, I think they are just as good, and we rather prefer them.

Acting Chairman COMMONS. You stated formerly there was a much larger per cent, I think, of the foreign element?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. How long ago was that?

Mr. GRIER. Five or six years ago.

Acting Chairman COMMONS. Now, you changed. What was the proportion that time? Say, it is about half foreign now, what was it at that time?

Mr. GRIER. Well, I would rather Mr. Irwin gave you that; he has a closer account of it.

Acting Chairman COMMONS. What is the amount of it?

Mr. IRWIN. Seventy-two per cent.

Acting Chairman COMMONS. Do you remember now the figures for the present?

Mr. IRWIN. Seventy-one per cent English and American speaking, and 29 per cent foreign and non-English speaking.

Acting Chairman COMMONS. That is, formerly 72 per cent were foreigners and non-English speaking, and that would mean 28 per cent English speaking, and now it is just reversed?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Seventy-one per cent English and 29 per cent foreigners?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. The policy has apparently changed entirely regarding the employment of foreigners?

Mr. GRIER. I would like to ask Mr. Irwin if in giving this per cent he refers to foreigners he includes Germans who speak English well, Scotchmen and Irish and people from the other side of the Atlantic?

Mr. IRWIN. The English speaking will include English, Americans, Scotch, and Irish only.

Mr. GRIER. I think that can be shown better in a statement to the commission—the statement Mr. Irwin has sent for—what the nationalities represented are and the number of each.

Acting Chairman COMMONS. We can take that up when that comes in. You ask a question regarding religion. What is the reason for asking that?

Mr. GRIER. Just the same as asking the politics, nationality, color of hair, and height, and everything else.

Acting Chairman COMMONS. What is that reason?

Mr. GRIER. Identification.

Acting Chairman COMMONS. Identification?

Mr. GRIER. Yes, sir; identification.

Acting Chairman COMMONS. Is there any reason to think that people of one religion or another religion are better employees than another?

Mr. GRIER. There has been no discrimination on account of religious affiliation.

Acting Chairman COMMONS. A person who claims himself as having no religion whatever, being an infidel, would that make any difference?

Mr. GRIER. Well, as long as we don't class him as an anarchist or something akin to that we wouldn't object to him. We have a very few of that kind on the pay rolls, but I think they all have a little religion in their hearts even though they say, none.

Acting Chairman COMMONS. Well, is it the policy of the company to encourage the establishment of churches and religious organizations in the community?

Mr. GRIER. The company has been a regular contributor to all of the churches represented here in Lead and on what we call the belt along its hoisting works and mills and line.

Acting Chairman COMMONS. What would be the denominations, for example?

Mr. GRIER. Well, I think we have about all of the denominations in the country represented. All of the Protestant denominations and the Roman Church and the Mormons—well, we don't give anything to the Mormons; they have only lately come into camp.

Acting Chairman COMMONS. The contributions of the company, are they made out of the treasury of the company?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Or given out of Mrs. Hearst's private funds?

Mr. GRIER. From the Homestake treasury.

Acting Chairman COMMONS. Is there any particular ruling regarding the amount each denomination gets?

Mr. GRIER. It has been \$200 a year to about 15 or 16 different denominations for a great many years.

Acting Chairman COMMONS. \$200 each a year?

Mr. GRIER. \$200 each a year.

Acting Chairman COMMONS. Does the company aid them in any other way, such as buildings or land, and things of that kind?

Mr. GRIER. Yes, sir; in other ways. The company has assisted the religious organizations. I think the company gave \$1,000 to Bishop Busch a year or two ago to help him in his building adjoining his church, or on the church property here, and I know of very many other ways in which nearly all if not all of the religious denominations have been helped from time to time in addition to the \$200 contributions.

Acting Chairman COMMONS. Does your company donate land or buildings to any religious denomination that wishes to put up a structure?

Mr. GRIER. They don't donate the land. It is not their policy to give the land, but they freely give a permit to occupy it and try and locate them in a spot where perhaps they never would be interfered with by reason of any mining operations that the company wished to conduct.

Acting Chairman COMMONS. What is the nature of this permit?

Mr. GRIER. Just a permit to occupy, the company paying the taxes regularly on the land, but giving them a free permit to occupy it.

Acting Chairman COMMONS. Is that revocable at any time?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. It is a permit at will?

Mr. GRIER. But there never has been a revocation in the 35 or 36 years I have been here, and I don't expect there will be for 36 years more.

Acting Chairman COMMONS. Are these permits given to schools besides—religious schools as well as the churches?

Mr. GRIER. I don't think there is a religious school in this district excepting the parochial school now closed. But it was operated by the Roman Catholic Church here for a number of years. I don't think there is any other denomination that has a school.

Acting Chairman COMMONS. Well, in that case, in the case of that parochial school, are they located on land for which they have a permit from the company?

Mr. GRIER. Well, I can't recall the title they have. It is possible that it is—well, I am quite sure now it is on the old original town site that was laid out in the early days, and after litigation extending over a term of years between the mineral claimants and the town-site people it was finally adjusted to the satisfaction of the department in Washington by giving a title to the people who were then in occupancy and reserving the rights to the mineral claimants.

Acting Chairman COMMONS. What proportion of the land is under that arrangement in the town of Lead?

Mr. GRIER. Well, roughly, I should say the biggest half.

Acting Chairman COMMONS. Most of the buildings are constructed on that sort of title?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. That gives the title to the surface?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Is that a fee?

Mr. GRIER. No; it is not a fee.

Acting Chairman COMMONS. It is not a permit?

Mr. GRIER. No; that is not a permit; that is a title that was agreed upon during this litigation between the mineral claimants and the town-site people many years ago, under the terms of which the mineral claimants transferred to a board of trustees the right to the occupancy of the surface, and in turn those trustees passed title to the occupants.

Acting Chairman COMMONS. That is a perpetual title they have to the surface?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And how is that affected by the operations, the mining operations underneath? If there is any damage done, the mining company would be held?

Mr. GRIER. I think under that agreement that the mineral claimants would have the right to conduct operations that were legitimate, absolutely necessary,

and could not be avoided from underneath the surface, and if the surface was endangered, the surface occupant, I think, would have to move after having been given a reasonable length of time in which to move.

Acting Chairman COMMONS. Well, would he be compensated for the loss of his improvements?

Mr. GRIER. I don't think there is any provision for compensation.

Acting Chairman COMMONS. Not in the deed?

Mr. GRIER. I think not.

Acting Chairman COMMONS. Who could give us that information, Mr. Keller, regarding the titles?

Mr. GRIER. Why, that, I guess Mr. Keller can. [Addressing Mr. Keller:] Have we an extra copy of that agreement, Mr. Keller?

Mr. KELLER. I think we have several copies of the agreement that was entered into at the time.

Acting Chairman COMMONS. That could be furnished us? Will you secure that then, Mr. Keller?

Mr. KELLER. Yes.

Acting Chairman COMMONS. The policy evidently of the company, then, is to encourage the establishment of religious organizations in the locality, is it not?

Mr. GRIER. Yes. Their contributions indicate that.

Acting Chairman COMMONS. By contributing something?

Mr. GRIER. Annually.

Acting Chairman COMMONS. Something to the extent of possibly three or four thousand dollars a year, at the rate of \$200 to each denomination?

Mr. GRIER. Yes, sir; I think our—I think the company's contributions have reached thirty-six hundred dollars.

Acting Chairman COMMONS. Thirty-six hundred?

Mr. GRIER. But it would not average that; it would probably average thirty-two hundred.

Acting Chairman COMMONS. Thirty-two?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Well, is it your idea that a man that attends church and belongs to one of these denominations is something like a married man, more likely to be a steady and sober man, and thus that should be a reason for encouraging religious activity?

Mr. GRIER. Why, that would be a natural conclusion, I think.

Acting Chairman COMMONS. That is one of the reasons why you encourage religious denominations?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Do these denominations live and get their additional money from local people, or do they get it from outside? Do you happen to know about that?

Mr. GRIER. Well, they get some of their money from followers of the faith, those who attend their services; and in some instances, I think, they are helped to some extent by the general board of missions of the particular denomination.

Acting Chairman COMMONS. So that they get some outside help as well?

Mr. GRIER. Some of them do. I think there are some that do not.

Acting Chairman COMMONS. You don't know which ones?

Mr. GRIER. No; I don't.

Acting Chairman COMMONS. Your contribution has nothing to do with what they get?

Mr. GRIER. Nothing whatever.

Acting Chairman COMMONS. The wealthy ones would get just as much as those—

Mr. GRIER. Well, they all get it.

Acting Chairman COMMONS. They all get it, there is no favoritism as regards denominations?

Mr. GRIER. None at all.

Acting Chairman COMMONS. But the general practice of supporting religious institutions, those that have schools are not supported any more than those that do not have schools?

Mr. GRIER. They all get the same amount.

Acting Chairman COMMONS. Does the company contribute to any schools besides the kindergarten?

Mr. GRIER. I think only by regular way of taxation.

Acting Chairman COMMONS. Regarding the question on politics, I suppose that means of course political parties. What is the reason for that in addition to a mere matter of identification?

Mr. GRIER. Well, I suppose it would fully identify a person to know everything about him that it is possible to know.

Acting Chairman COMMONS. Have you the figures of the different—perhaps Mr. Irwin has those figures.

Mr. IRWIN. They are in that report.

Acting Chairman COMMONS. Has that been brought here? Where is that report?

Mr. IRWIN. You have the report.

Acting Chairman COMMONS. This is a report for June 30. This is for the month of June, I presume, and it states that during that month 68 were employed, and of those, 38 were Republicans, 10 were Democrats, 18 were minors—of course they would not decide—and two were foreigners, making a total of 68. "Foreigners," I presume, means those that haven't taken out their final papers?

Mr. IRWIN. Those that have not taken out the first papers.

Acting Chairman COMMONS. Not taken out the first papers. Can they vote in this State after they have taken out the first papers?

Mr. IRWIN. No, sir.

Acting Chairman COMMONS. So that a foreigner here would be one who had not taken out his first papers?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Who could not vote?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Is your record kept up to date?

Mr. GRIER. The record of politics is only required when they make the application.

Acting Chairman COMMONS. Suppose they change their politics?

Mr. GRIER. We have not—I should say it was not kept up to date; that the record was made of the man when he entered the service. Is that right, Mr. Irwin?

Mr. IRWIN. No permanent record other than the man's individual application.

Acting Chairman COMMONS. When did you start this record of their politics? How long ago was that taken up?

Mr. GRIER. When was it, do you remember?

Mr. IRWIN. 1910 or 1911.

Acting Chairman COMMONS. I notice there are no Progressives in here or Socialists. Is it the policy of the company to discriminate against Progressives and Socialists?

Mr. GRIER. I think we would discriminate against Socialists. I do not think there would be any discrimination against Progressives, because we pretend to be progressives ourselves, and each year we are adding to our record and developing as perfect a system as we are capable of. Something suggests itself to us one year, that it would be well to have a record of, and we go into it, and next year something else. Our report shows 26 nationalities represented, Mr. Chairman.

Acting Chairman COMMONS. I did not refer to progressive principles, but I referred to Progressive politics. That is the question. Is the question simply taken up as a matter of record with each man, then?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And if he changes his politics, he might become Progressive?

Mr. GRIER. He would indicate that at the ballot box, where he has a right to, if he wants to. I think he might proclaim it from the housetops; I don't know.

Acting Chairman COMMONS. The question of residence, occupation, and experience. What is included under "experience"?

Mr. GRIER. Well, if a man comes here and applies for a position as a miner, he is asked what experience he has had as such wherever he has been before coming here. If he has had two years' experience in Arizona as a miner, three in Montana, three in Colorado, two in Lake Superior—where he has had an extended experience in that particular kind of work to qualify him, that is what I mean.

Acting Chairman COMMONS. By whom last employed and where and in what capacity, how long. That simply gives the last record. Do you make a special effort to inquire of the last employer as to his record, how long he has been working for them?

Mr. GRIER. I do not believe we have ever made an inquiry from the last employer of an applicant.

Acting Chairman COMMONS. Simply try the man out?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And on the basis of his own story?

Mr. GRIER. In questioning a man at an employment office, we can form a pretty correct conclusion as to the qualifications of a man; that is, a man who is trained in this work can.

Acting Chairman COMMONS. Is this record used to answer inquiries when other employers apply to you with regard to a man who has quit your employ and gone to some other mine? Do you get letters from them asking about him?

Mr. GRIER. We get inquiries of that kind, oh, I don't know, two or three times a month?

Mr. IRWIN. Oftener than that.

Acting Chairman COMMONS. Oftener?

Mr. GRIER. Occasionally we get an inquiry.

Acting Chairman COMMONS. Do you give the information asked for?

Mr. GRIER. What do you give, Irwin?

Mr. IRWIN. Give them his record; that is, we don't go back.

Acting Chairman COMMONS. You give them his record with you? How much of this application do you give them?

Mr. IRWIN. We do not give him anything; give him simply the record of the man at work since he has been with us—while he is here.

Acting Chairman COMMONS. There is no association of mine owners or employers, is there, who exchange the information with regard to employees?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. So that there is no system of interchange at all regarding employees in changing of occupation?

Mr. GRIER. We have never had any.

Acting Chairman COMMONS. Use liquor in excess or morphine. I presume that goes to the medical department, does it not?

Mr. GRIER. Yes.

Acting Chairman COMMONS. For final determination. The policy of the company, of course, is not to employ men who use liquor to excess?

Mr. GRIER. We do not want them.

Acting Chairman COMMONS. And that is good cause for discharge?

Mr. GRIER. Very good. However, a man is usually given two or three and sometimes four or five chances to reform.

Acting Chairman COMMONS. Do you consider by this method you have got a more temperate class of employees?

Mr. GRIER. I do.

Acting Chairman COMMONS. What are your standards of measurement or how do you make up your mind regarding that? What standard do you use to demonstrate that you have a more temperate body of employees?

Mr. GRIER. Well, I think the crowd in the street shows, for one reason. I know the general way the work goes on in the various departments of the service.

Acting Chairman COMMONS. That is, a question of efficiency?

Mr. GRIER. Yes.

Acting Chairman COMMONS. How do you measure your increase in efficiency? What are your standards of telling how your efficiency has increased since this system has gone into effect, which, I take it, is about three years?

Mr. GRIER. This regulation about the use of intoxicants has been in effect here for 35 years.

Acting Chairman COMMONS. Thirty-five years?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Well, during what time have you noticed an improvement in the temperate condition of the employees?

Mr. GRIER. Well, we have never had a very bad lot in Lead. This is with a view of keeping up the good conduct.

Acting Chairman COMMONS. Oh, you have always had a good temperate set of men?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Does that apply equally to all nationalities?
Mr. GRIER. Well, nearly so.

Acting Chairman COMMONS. What is the attitude of the company toward the liquor business in the town; I presume the saloons are located on property belonging to the corporation, the same as churches and others.

Mr. GRIER. The saloons are located on the original townsite, reference to which was made a little while ago. The title passed through the trustees when the compromise was made between the mineral claimants and the townsite people.

The attitude of the company toward the saloons is to endeavor, so far as it is within their power, to make them conduct their business in as decent a way as possible. The company realizes that as long as the Government permits liquor to be manufactured that somebody is going to drink it, and the dispensing of it should be pretty closely guarded. And the efforts of the company are always emphasized in that direction.

Our saloons, in the early days here, used to remain open so long that I guess they were never closed, including Sundays. That was during the formation period of the camp, you might say. After awhile it was realized that that condition ought not to continue, and I think through the efforts of the Homestake office the saloons were closed on Sunday. A little bit later on they were closed after 11 o'clock at night. Still later they were closed at 9 o'clock in the evening. That is the hour they close at now.

Acting Chairman COMMONS. How long have they been closing at 9 o'clock—for how many years?

Mr. GRIER. When did that law go into effect?

Mr. KELLER. Four years ago.

Acting Chairman COMMONS. Four years ago?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Was a member of the labor union. Along with the statement Chapman makes that he is not a member of any labor union, "That in consideration of my being employed by the Homestake Mining Co., agree I will not become such while in its service"; when were those two questions adopted and put in the application blank?

Mr. GRIER. In the fall of 1909.

Acting Chairman COMMONS. Now, does this apply to all labor unions or to only certain types of labor unions?

Mr. GRIER. To all.

Acting Chairman COMMONS. To all unions?

Mr. GRIER. Yes.

Acting Chairman COMMONS. It was adopted at the time of the lockout or strike which occurred?

Mr. GRIER. Yes.

Acting Chairman COMMONS. With the Western Federation of Miners?

Mr. GRIER. Yes.

Acting Chairman COMMONS. What were the circumstances leading up to that trouble which caused the company to lay down this rule, since 1909—that would mean it has been in force now since the fall of 1904—that has been in force nearly five years, say?

Mr. GRIER. Yes; the Lead City Miners' Union was organized in 1877 and continued to exist until 1909. A goodly number of the employees of the mining company, the Homestake Mining Co., were members of that union. The company never asked them, up to that time, when a man made application for employment, whether he was a member of a labor union or not. There never had been any differences between the labor organization and the mining company that were worthy of mention.

During the summer of 1909 the Western Federation of Miners sent into Lead, in the person of Mr. William E. Tracy, an organizer, with instructions to completely organize the camp and the district. Mr. Tracy called to his aid several members of the local union, and after perhaps three months' work succeeded in increasing the numerical strength of the union to a very considerable extent, in many cases using coercive measures, intimidating the employees of the mining company, making threats against their personal safety by false pretense and in various other ways. The time came about the middle of October, when Mr. Tracy thought the Western Federation of Miners in its constituency was strong enough to demand that all those who up to that time had not become its members should do so. And late in October, by resolution which was published in the daily papers, notified all concerned that on and after the 25th of

November, 1908, members of the federation would not work with those working for the Homestake Mining Co. who failed or neglected to become members in good standing. At that time there was perhaps 2,500 men in the service of the Homestake Mining Co., and I should say about 500 out of that number had failed or refused to become members of the federation.

The 25th of November, the day set for ceasing work on the part of the federation members, was Thanksgiving Day. Not having enough of a force numerically to continue to operate at such a capacity as would be profitable, the Homestake Mining Co. ceased to operate its mine on the evening of the 24th, and gave notice of its intention to do so in a notice published in the daily papers. The mining company had no lawful right to compel those who were not members of the federation to join it, and there did not seem any other course for them to adopt but to quit work and either remain closed, no one could tell how long, or allow those men who through the federation had notified the world that they would not work with nonunion men on and after the 25th of November. So they notified those far and near who wished to to come and join hands with the 500 nonunion men and resume operations, and allow those who had given notice that they would not work, to continue their idleness if they wanted to.

Large numbers came and joined hands with the nonunion men who were available and ready to go to work at any day—resume work at any day, so that on the 18th of January, I think, 1910, a sufficient force numerically was available to start up the largest mill that the Homestake Co. operates. Continuing to come in the course of the next week the company had enough men to start another mill, and a few days later another and another, until finally, on the 3d of March, 1910, they had more men than they wanted, and every plant was running at full capacity, which it has continued to do from that day to this.

Acting Chairman COMMONS. Those 500 men who did not join the organization were the underground men?

Mr. GRIER. They were in all departments of the service.

Acting Chairman COMMONS. Some were underground and some in the other departments?

Mr. GRIER. In order to operate a mill, you understand, it was necessary to have so many miners, so many shovelers, so many carmen, so many timbermen, so many motor men underground hauling ore, so many hoisting engineers, so many men in the stamp mill, so many men in the cyanide works, the regrind plant, and the foundry, the machine shop, and repair shops generally, and all through the service—500 wasn't enough, divided up, as they would have to be, to operate one mill, so that there was nothing for the company to do but to stop.

Acting Chairman COMMONS. Yes. Prior to this notice, or this activity of the organizers in 1908, had you had any written contracts or agreements with this local of the mine workers?

Mr. GRIER. No; never had a contract.

Acting Chairman COMMONS. Never had had any written contract?

Mr. GRIER. Nor verbal.

Acting Chairman COMMONS. Nor verbal?

Acting Chairman GRIER. No.

Acting Chairman COMMONS. What was the nature of the arrangement, suppose that a—did the union at that time have any salaried employees that you know of, or were they simply acting through their own committee men, own workmen?

Mr. GRIER. They had a president and a treasurer, secretary, board of directors, I suppose, I don't know.

Acting Chairman COMMONS. Do you know whether they were all employees of the company, all the officials of the union?

Mr. GRIER. Excepting the secretary I think they were all employees, and I am not so sure that he did not work part of the time, too.

Acting Chairman COMMONS. Now, did the secretary or any of their board representing the men ever take up any complaints or grievances; would they appeal to you or to any of your superior officers, superintendents, and so on?

Mr. GRIER. I was appealed to during 30 years probably a half dozen times for trivial matters that were adjusted in five minutes.

Acting Chairman COMMONS. That is, you would confer with these representatives of the union?

Mr. GRIER. It would be a committee that I suppose they characterized as a grievance committee.

Acting Chairman COMMONS. And they would be selected from time to time to take up matters with you?

Mr. GRIER. They would be appointed at a meeting of the union and given credentials certifying that they were appointed for the purpose of presenting a grievance, whatever it happened to be.

Acting Chairman COMMONS. Those, you say, were trivial and trifling?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Do you happen to remember any of them, what they were?

Mr. GRIER. I think once or twice some complaint was made about inattention on the part of some of the hospital doctors. The greatest grievance that was ever brought to my attention was when an appeal was made for an eight-hour day for the underground workers only, and there was some—that was not quite as easy of adjustment as the other matters, because there was a whole lot more involved. While the matter had been under consideration for a considerable time by myself no action had ever been taken. But the time came, however, when by readjusting the affairs in several of the establishments or departments of the service, it was found that it might possibly be a very slight loss to the company to adopt the eight-hour rule, and it was not only adopted and made operative in the underground, but it was applied to every department of the service.

Acting Chairman COMMONS. Do you remember about what year that was when that was done?

Mr. GRIER. Half a dozen or more years ago—six or eight years ago.

Acting Chairman COMMONS. Nineteen hundred and six or seven. How many employees were affected by that change?

Mr. GRIER. Every employee in the service of the company.

Acting Chairman COMMONS. That is, all of the underground men had been working 10 hours?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And they were all put on an eight-hour basis at that time?

Mr. GRIER. Yes, sir; every person in the service of the company was given the benefit of the eight-hour schedule.

Acting Chairman COMMONS. In the shops the machinists, the molders, and others had been on a 10-hour basis?

Mr. GRIER. They were all put on the eight-hour schedule.

Acting Chairman COMMONS. Do you remember the grievance committee that took that up. Did it represent all classes of labor, the committee that called on you at that time?

Mr. GRIER. Well, no, sir; it was—well, I wouldn't say. I don't remember who the committee was, except one of them was Mr. Ryan, secretary of the local organization. I think there were three. I think Mr. Shimmman—chairman—

Acting Chairman COMMONS. Was he a miner?

Mr. GRIER. Yes, sir. I don't know whether any other department of the service was represented or not.

Acting Chairman COMMONS. Machinists or molders or carpenters, all that class of labor, were they represented in the grievance committee—in the committee?

Mr. GRIER. I could not say, Mr. Chairman. I don't remember it, but I don't think there was any other department but the miners represented, because all that was asked for was that the eight hour apply to the underground workers.

Acting Chairman COMMONS. But you went further than that and applied it to all the shops?

Mr. GRIER. Applied it to everybody in the service of the company.

Acting Chairman COMMONS. How long were those negotiations underway; do you remember?

Mr. GRIER. No, sir; I do not.

Acting Chairman COMMONS. Now, when this action of this committee, or this union, was taken October 25, 1909, what was the first knowledge you had of the action?

Mr. GRIER. You mean of the action taken—

Acting Chairman COMMONS. By the union in its declaring it would not work after a certain date?

Mr. GRIER. Well, all sorts of rumors were in the air for a month or two or three, but I think the publication of this notice in the newspaper is the first definite knowledge—knowledge that I could rely upon—that I had.

Acting Chairman COMMONS. That is, there were rumors prior to that that they were likely to take some action on that; is that it?

Mr. GRIER. Oh, yes; all sorts of rumors.

Acting Chairman COMMONS. The question was up for discussion?

Mr. GRIER. You could not rely upon much that you heard.

Acting Chairman COMMONS. You mentioned Tracy as being brought in by the national organization. Did Tracy call on you at that time?

Mr. GRIER. Yes; he called upon me with Mr. Ryan, Mr. Kirwin, Mr. Joey, and Mr. Christianson.

Acting Chairman COMMONS. All your employees?

Mr. GRIER. No; Mr. Joey and Mr. Christianson were employees, but, of course, Mr. Tracy, the federation organizer, Mr. Kirwin, a member of the executive board of the Western Federation of Miners, and Mr. Ryan, secretary of the local union here, were not in the employ of the company.

Acting Chairman COMMONS. What did Tracy propose when he called upon you? This was probably before this action by the local union, wasn't it?

Mr. GRIER. No, sir; after it.

Acting Chairman COMMONS. I am speaking before that action.

Mr. GRIER. Oh, before it.

Acting Chairman COMMONS. Before it; while these rumors were in the air?

Mr. GRIER. Mr. Tracy didn't call upon me before.

Acting Chairman COMMONS. Did any representative of the organization call upon you with reference to this closed-shop proposition?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. Prior to this action?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. This information came to you, then, in what way?

Mr. GRIER. It came to me from a great many men employed by the Homestake Mining Co. who came and asked me if they were compelled to join the union to hold their positions with the company, and complained of threats made against them by certain assistants of Mr. Tracy who were helping him in organizing.

Acting Chairman COMMONS. Were these assistants of Tracy brought in from the outside also?

Mr. GRIER. No, sir; they were members of the local here in Lead.

Acting Chairman COMMONS. Did they represent different nationalities?

Mr. GRIER. I don't think so; I think they were Americans.

Acting Chairman COMMONS. At that time apparently 72 per cent of the employees were non-English speaking. How did the union organize the non-English speaking, do you happen to know, at that time? How did they reach them?

Mr. GRIER. How did the organizers reach these men?

Acting Chairman COMMONS. Yes, sir.

Mr. GRIER. You understand all the men in the employ of the Homestake Mining Co. can both speak and understand English; that is a requirement.

Acting Chairman COMMONS. At that time there was 72 per cent—

Mr. GRIER. They could do it at that time.

Acting Chairman COMMONS. They could?

Mr. GRIER. Yes; not as well as you can, but still they could understand perfectly well enough to know when they were asked to do a certain thing in the mines. We would not have a man in the mines who could not understand?

Acting Chairman COMMONS. You never had a man there who could not understand?

Mr. GRIER. That has been a rule always.

Acting Chairman COMMONS. So that the organizers were all English-speaking organizers, so far as you know?

Mr. GRIER. Well, now, the organizers were not all English-speaking people. There was a man sent here by the federation named Yancoterzich, an Austrian. He was sent here for the express purpose of holding in line the Austrian element.

Acting Chairman COMMONS. That is the Slav element?

Mr. GRIER. Yes; and there was a man here—I think he was a resident, though—who was supposed to look after the Finnish element. I don't recall whether there was anybody here looking after the Italian element or not; but there was enough of them, all told.

Acting Chairman COMMONS. There were only two, then, brought in from the outside—Tracy and Yancoterzich?

Mr. GRIER. That is all I recall at this moment.

Acting Chairman COMMONS. Now, in acting upon this resolution, did you assume the responsibility, or did you take it up with your directors or president?

Mr. GRIER. I assumed the responsibility myself.

Acting Chairman COMMONS. You had such authority, or you would not have done it?

Mr. GRIER. Well, I exercised it whether I had it or not.

Acting Chairman COMMONS. Have you any knowledge whether the organization went to the stockholders or not?

Mr. GRIER. I know they did. I know that Mr. Kirwin, who was a member of the executive board, telegraphed Mr. Haggin, the president of the company, presenting the situation and ask him to have the ultimatum, as they called it, withdrawn that was issued here in order to avoid a strike. Mr. Haggin replied that the matter was in my hands; that while he would deplore a strike, that the matter was in my hands for such adjustment as could be made.

Acting Chairman COMMONS. Did you know of any other application to stockholders besides Mr. Haggin?

Mr. GRIER. There was a committee of two went down to see Mrs. Hearst at her home in Pleasanton, Cal. That was Mr. Bunney—Richard Bunney—and Pete Jurey.

Acting Chairman COMMONS. Were they employed here?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What were the representations to Mrs. Hearst, as far as you know?

Mr. GRIER. Well, I could not tell you very definitely, but she suggested to them just about what Mr. Haggin suggested to Mr. Kirwin, that the matter was in my hands and she wouldn't interfere.

Acting Chairman COMMONS. Had you had any other dealings with representatives of the organization before this notice? You have spoken of the eight-hour and small grievances about the hospital. Were there any other claims that came up; for example, was there any complaint you had to make against the way in which the union was being conducted during those 20 or 25 years?

Mr. GRIER. When efforts were made by officers of the committee, of the local union here, to increase their strength numerically, they did just what the federation did—they intimidated and made threats of personal violence; and not only made threats, but executed them. I addressed a letter to the president of the union at that time, whose name was Fisher—

Acting Chairman COMMONS. That was in the summer after Tracy had come?

Mr. GRIER. No, sir; that was a long time before that.

Acting Chairman COMMONS. Do you remember the date?

Mr. GRIER. I can give you the date. [Examines papers.] On the 19th of March, 1903, I wrote to Mr. Fisher, president of the Lead City Miners' Union, as follows:

"My attention has so often been called to the acts at various times of personal violence offered by members of your association to certain employees of this company simply because the latter did not wish to become members of the former, that I wish to ask if such acts were duly authorized and approved at legal meetings of your association?

"It is complained that each act has been committed by a large number of members of your association operating jointly against one employee of this company under cover of darkness, making identification of the attacking party by the lone man more or less difficult. May I ask the favor of a written reply on Tuesday, the 24th instant?"

It seems that I gave him five days to answer. I don't know why. In response to that I have a letter of the same date, March 19:

Mr. T. J. GRIER,

Superintendent Homestake Mining Co., Lead, S. Dak.

DEAR SIR: Your letter of March 19, addressed to J. B. Fisher, president of this union, was referred to the undersigned committee. As you understand, this union is organized for the mutual benefit of its members, both financially and otherwise. To that end we have paid out in sick benefits and are paying now more money than we receive in dues, and to keep this union up financially we do ask and urge each and every man working in and about different mines to join our union for their own benefit as well as ours. We experience no difficulty with the old reliable worn and tried men, but, on the contrary, the young, strong, and men who are well able to bear their share of the burden are the men that is making all the trouble. This union has at no time authorized the forcible

ble action referred to in your letter, but where men when civilly approached to join this union have insulted the parties so asking them and have stated that they had so much influence with the officials of the company that employed them that they did not have to join the union, and generally make themselves abusive, there is no doubt but what they have been coerced.

Yours, respectfully,

THOMAS J. RYAN,
JOSEPH SCOTT,
RICHARD BUNNY,
Committee.

Acting Chairman COMMONS. What action further was taken in 1903 on that; did that close the incident?

Mr. GRIER. It closed the incident, I guess, for the time being.

Acting Chairman COMMONS. Now, what was your objection to considering the proposition coming from the union in the way in which this one came to you?

In the first place, you say the union in 1909 did not make any formal request upon you for an agreement that you employ only union men. That was the situation; that is, the first that you knew of it was this notice that you saw?

Mr. GRIER. That was the first definite information that I had that the Western Federation intended to take that action.

Acting Chairman COMMONS. Then did Mr. Tracy or other representatives call upon you at any time prior to the November term of court when you shut down—did they call upon you, any representatives of the organizations?

Mr. GRIER. I don't think any member of the local union or the Western Federation called on me at any time until after that publication.

Acting Chairman COMMONS. Until after the publication of their notice. Their notice was published October 25?

Mr. GRIER. October 25, 1909, I think.

Acting Chairman COMMONS. Yes.

Mr. GRIER. No; they never called on me.

Acting Chairman COMMONS. Did they call on you after that publication?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Between October 25 and November 24?

Mr. GRIER. No.

Acting Chairman COMMONS. They did not?

Mr. GRIER. No.

Acting Chairman COMMONS. You published your notice on November 17, I think.

Mr. GRIER. November 17; yes.

Acting Chairman COMMONS. November 17?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And no one called on you after you had published your notice—representing the organization?

Mr. GRIER. After, did you say?

Acting Chairman COMMONS. Yes; after.

Mr. GRIER. Yes; after that publication of our notice, this committee consisting of Mr. Ryan, Mr. Kerwin, Mr. Joey, and Mr. Christianson.

Acting Chairman COMMONS. What was the tenor of their proposition to you at that time?

Mr. GRIER. Well, they wanted the Homestake Mining Co.'s notice withdrawn.

I have a full account of the meeting here. That was what the federation called the Homestake's ultimatum, and which Mr. Kerwin telegraphed to Mr. Haggin to have withdrawn. My notice was on November 17.

Acting Chairman COMMONS. Yes.

Mr. GRIER. The meeting of this committee was November 21.

Acting Chairman COMMONS. Yes.

Mr. GRIER. There is a full record of it [handing paper to the commission].

Acting Chairman COMMONS. Was this record taken in shorthand?

Mr. GRIER. It was.

Acting Chairman COMMONS. You submit this as an exhibit?

Mr. GRIER. You may have it.

Acting Chairman COMMONS. Mr. Reporter, make note of that.

Mr. GRIER. The authenticity of it I don't think you can doubt, because it was published in full in the federation newspaper.

(The paper so presented was marked "Exhibit No. 4, Witness Grier, August 3, 1914.")

See Grier Exhibit No. 4, under "Exhibits.")

Acting Chairman COMMONS. It was published in the federation newspaper; that is, it was jointly taken down by both sides?

Mr. GRIER. No.

Acting Chairman COMMONS. By your stenographer?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Well, Mr. Grier, suppose you just sum up the substance of what occurred at that place.

Mr. GRIER. Well, they went over the subject of unionism—the good that it was doing to the operating force of the Homestake Mining Co.—and announced their determination to unionize the camp, and asked for a withdrawal of the company's notice.

Acting Chairman COMMONS. In other words, they stood by their—

Mr. GRIER. Attitude.

Acting Chairman COMMONS. Their resolution?

Mr. GRIER. Yes; their resolution.

Acting Chairman COMMONS. They didn't offer to withdraw their resolution if you would withdraw yours?

Mr. GRIER. Oh, no; not at all.

Acting Chairman COMMONS. You considered that an ultimatum from them also?

Mr. GRIER. Oh, yes; I don't know how I could consider it anything else. They published it to the world.

Acting Chairman COMMONS. Will you examine this clipping which was furnished to me, which is marked advertisement? I presume that is something that is published by your company as an advertisement in the Lead papers?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And will you look at that one and see if that one also is?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And this also?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. We will mark these as exhibits, then.

(The papers so presented were marked "Exhibits Nos. 8, 9, and 10, Witness Grier, August 3, 1914.")

The exhibits referred to, newspaper clippings, were submitted in printed form.)

Acting Chairman COMMONS. This first one entitled "Who began interference with the liberty of action of Lead workmen?" That has been published by you continuously, daily, since the time of this trouble?

Mr. GRIER. I think it is still running.

Acting Chairman COMMONS. You consider that a running ad.?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. In what papers?

Mr. GRIER. In the Lead Daily Call.

Acting Chairman COMMONS. And the other one, the "History of Homestake shutdown"?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Marked "Advertisement," the same?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And this one which does not bear date, the clipping that I have, is a notice dated "Lead, S. Dak. To whom it may concern: In view of the fact, the mining industry in the Black Hills district is the source from which all of the other business interests in the said district derive their main support, and that said industry intends to establish permanently in said district what are commonly called nonunion labor conditions, it is respectfully suggested to all such other business interests that their actions should be vigorously in support of the aforesaid expressed intention." There follow then the names of the Homestake Mining Co., by yourself as superintendent, and a number of others. At what time was that first published, about at the time of this strike or of this clash?

Mr. GRIER. I think that was first published very soon after the mine shut down.

Acting Chairman COMMONS. And then apparently you requested or joined with the owners of other mines to take the same action?

Mr. GRIER. I did not request; they offered it.

Acting Chairman COMMONS. They offered to join in?

Mr. GRIER. To join in.

Acting Chairman COMMONS. And this advertisement was addressed to what business interests then?

Mr. GRIER. Well, I suppose—

Acting Chairman COMMONS. It is signed by all the mining interests, is it not?

Mr. GRIER. Yes; every other business interest that there was in the district.

Acting Chairman COMMONS. That is, all the mining interests. I wonder if all of these are—these are apparently all mining companies?

Mr. GRIER. Well, I think there is only three or four of them that operate to any extent at all.

Acting Chairman COMMONS. They are all small companies?

Mr. GRIER. Oh, yes.

Acting Chairman COMMONS. Are they all in the Black Hills district?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What proportion of the total output of gold is turned out by the Homestake Co.?

Mr. GRIER. I guess about 90 per cent, fully.

Acting Chairman COMMONS. Then these others would turn out about 10 per cent?

Mr. GRIER. Or less.

Acting Chairman COMMONS. Or less?

Mr. GRIER. Yes.

Acting Chairman COMMONS. That is, if the Homestake turns out \$8,000,000 a year, the others would turn out about \$600,000?

Mr. GRIER. I don't believe they do that.

Acting Chairman COMMONS. Then, what other business interests besides the mining interests were in mind here?

Mr. GRIER. Well, the mercantile interests, or anybody that was engaged in business of any kind or character.

Acting Chairman COMMONS. The idea was that all union labor, no matter whether it was Western Federation of Labor or otherwise—

Mr. GRIER. Should cooperate.

Acting Chairman COMMONS. Should be put out of activity in this district?

Mr. GRIER. That was the intention; yes.

The object in doing that, Mr. Chairman, was because the labor unions—for instance, the barbers' union and the bartenders' union and various other unions belong to a different federation, or different federations—the musicians' union, too—and they were contributing to the Western Federation fund, out of which were paid strike benefits, so that it was thought that as long as contributions were being received from all other industries, all other federations, that the struggle would be prolonged just that much longer.

Acting Chairman COMMONS. Now, the result is that all of the other unions discontinued business here, as well as the miners' union, is that the situation?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Is there any remnant of a miners' union in this district?

Mr. GRIER. About possibly a year ago, maybe a little bit longer or a little bit less, the Western Federation of Miners canceled the charters of all the unions in the hills—all miners' unions, excepting, I think, the Galeana union—and in lieu thereof organized a district union, which they call No. 12.

Acting Chairman COMMONS. And how extensive is that organization; what mines does it have membership in?

Mr. GRIER. Well, the intention of the district union, like that organized by the western federation, is to draw into membership in the district union as many people in this district as they can get, and if they should succeed in becoming numerically strong enough, after a while, of course, they would become assertive.

Acting Chairman COMMONS. You consider that simply a nucleus?

Mr. GRIER. Yes.

Acting Chairman COMMONS. Is its membership known or open?

Mr. GRIER. I don't know how generally it is known, but the information that I am giving you is correct.

Acting Chairman COMMONS. Do you know about how many members they have at the present time?

Mr. GRIER. I do not.

Acting Chairman COMMONS. I think we will take a recess at this time until 2 o'clock. It is the desire of the commission to continue the hearing this

evening at 8 o'clock. We will adjourn now, and, Mr. Grier, can you take the stand again at 2 o'clock?

Mr. GRIER. I think so.

Acting Chairman COMMONS. We will get through as rapidly as possible.

Mr. GRIER. All right.

Acting Chairman COMMONS. Much obliged.

(And thereupon, at 12.30 o'clock p. m., on this, Monday, the 3d day of August, 1914, an adjournment was taken until 2 o'clock p. m.)

AFTERNOON SESSION.

The commission met pursuant to adjournment.

TESTIMONY OF MR. THOMAS J. GRIER—Continued.

Acting Chairman COMMONS. The commission will come to order. Mr. Grier, I think we were talking about the incidents during the fall of 1909 and the beginning of 1910. I think you said that by March 8 you had a sufficient force to operate all of the properties of the company?

Mr. GRIER. Yes, sir; at full capacity.

Acting Chairman COMMONS. What portion of them were old employees that came back to work, or what number would you say?

Mr. GRIER. A goodly number. I should think in the neighborhood of a thousand.

Acting Chairman COMMONS. A thousand of those who had gone out or who had belonged to the organization—the miners' union?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. About a thousand of them came back and gave back their cards?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. About what number are now employed who were former members?

Mr. GRIER. I don't think I quite understand the real meaning of the question.

Acting Chairman COMMONS. You said there were about a thousand that went to work on March 8, of those who had been in the miners' union prior to the October or November shutdown, and I was asking, of that thousand, how many are now employed?

Mr. GRIER. Practically all of them.

Acting Chairman COMMONS. You have about a thousand now who were former members of the union in your own employment here?

Mr. GRIER. I should think about that many; yes, sir.

Commissioner O'CONNELL. Hasn't the number been increased of the old employees since that time?

Mr. GRIER. Yes, sir.

Commissioner O'CONNELL. That is what I wanted to get at.

Mr. GRIER. Oh, yes.

Commissioner O'CONNELL. The number of former employees that were in the union—has it been increased over a thousand since the mines were started up?

Mr. GRIER. If a thousand is approximately correct, the number has been increased; yes, sir.

Acting Chairman COMMONS. Would you have any record of that in the employment office?

Mr. GRIER. Yes; the employment-office records will show—it can be picked out from to-day back until that time, March, 1910. That would be three years or more.

Acting Chairman COMMONS. Did you organize another association or union as a substitute for the one which was locked out; that is, did you form a new organization of any kind?

Mr. GRIER. No; we did not organize anything.

Acting Chairman COMMONS. The people that came in to take the places of the strikers—were they organized as an association in any way?

Mr. GRIER. No; they came and signed the card that the Homestake Mining Co. required them to sign and went to work; no organization was formed.

Acting Chairman COMMONS. Were there any legal proceedings during this trouble—any injunctions or court proceedings that were brought, arrests, or anything of that kind?

Mr. GRIER. The Homestake Mining Co. brought a suit against the miners' union for \$10,000, I think for—well, I can't quote you the complaint, Mr. Keller probably has a copy of it.

Acting Chairman COMMONS. Mr. Keller.

Mr. KELLER. What is that, Mr. Chairman?

Acting Chairman COMMONS. The question is, What was the complaint in the suit that was brought by the company against the miners' union?

Mr. KELLER. Yes; I can get the pleadings if the board desire them and would care for them.

Acting Chairman COMMONS. Yes; if you will get them.

Mr. KELLER. Yes; I will.

Acting Chairman COMMONS. What was the complaint?

Mr. KELLER. The International was sued for damages for interfering with the men who desired to work, driving them from work and preventing them from going to work.

Commissioner GARRETSON. Coercing the employees?

Mr. KELLER. That is the substance of it. It was never brought to trial. In fact, I think the issues were never framed, and it has stayed that way ever since. I do not think the records or anything of that kind will add much.

Commissioner GARRETSON. Was a writ filed on the other side, presumably a writ of demurrer, asking for the filing of specific instances?

Mr. KELLER. No.

Commissioner GARRETSON. By the company?

Mr. KELLER. No; not that I recall. Simply a demurrer. My recollection is the defendants demurred on the ground that the complaint did not state facts sufficient to constitute a cause of action, and neither side ever forced it to argument.

Commissioner GARRETSON. But it called for an amended writ on your part, alleging specific instances, did it not?

Mr. KELLER. That is not my recollection. It would be very easy to find out.

Commissioner GARRETSON. I should imagine that was easily determined.

Mr. KELLER. Yes.

Commissioner GARRETSON. And the action dropped from that?

Mr. KELLER. Well, the action had never been formally dismissed, Mr. Garretson. They were simply placed upon demurrer, and that was all that was ever done in either suit. It never has been disposed of.

Commissioner GARRETSON. And the chances of a resurrection are—

Mr. KELLER. Well, they are nil.

Commissioner GARRETSON. Nil?

Mr. KELLER. That really answers it. That was the only piece of litigation which the Homestake had, except some—well, that is the only piece the Homestake, as such, has.

Acting Chairman COMMONS. Can you furnish us a copy of the cards that you use in keeping the records of the men, the employees?

Mr. GRIER. It is a blank card, just an index card; no form; and the man's name and the time he goes to work, and if he is relieved from duty, the reasons therefor, and if he returns to the service. And if he returns and applies for service, we have this card, showing his record while he worked; and if it is satisfactory, there is no objection to his resuming work when there is a chance for him, an opening.

Acting Chairman COMMONS. How far back do these records go? Is it back to the beginning of the company's existence?

Mr. GRIER. Back, I think, to the establishment of the employment office, about 10 years.

Acting Chairman COMMONS. The employment office was established about that time?

Mr. GRIER. Was established then. Prior to that time each head of a department employed his own men.

Acting Chairman COMMONS. And the records, then, start with that time?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. It was all put under one head?

Mr. GRIER. One head; in one man's hands.

Acting Chairman COMMONS. Will we have an opportunity to look over some of these cards and see the character of notes or memoranda that are made or recorded there?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Could you bring some over, so that we could examine the character of the memoranda that are made?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Can you, Mr. Grier, give us any information regarding the cost of house rents in Lead, about the amount of rent per month that employees of different classes pay for rent—for house rent here?

Mr. GRIER. A large number of the employees of the Homestake Mining Co. own their own homes.

Acting Chairman COMMONS. About what proportion, would you say?

Mr. GRIER. Well, I could hardly state to the commission. The question of rentals may be had quite accurately from men who are engaged in the business of renting, and I notice that one of them is here present in the room now, Mr. Curran.

Acting Chairman COMMONS. Have we got his name down on our list?

Commissioner GARRETTSON. Curran, yes; city commissioner.

Acting Chairman COMMONS. Well, with your permission, Mr. Grier, as we have Mr. Curran on our list—

Mr. GRIER. Certainly.

Acting Chairman COMMONS. Is Mr. Curran present?

Mr. CURRAN. This is Mr. Curran.

Acting Chairman COMMONS. Mr. Curran, you heard the question that was asked of Mr. Grier about what the rentals are that miners and helpers and laborers are paying for their houses?

Mr. CURRAN. Well, the rents of houses—a pretty good house rents for \$15. We rent houses from \$7 up—from \$8 up—that will average a pretty fair house; from fifteen and then on up to twenty, twenty-two, and to twenty-five. Twenty-five is about the limit.

Acting Chairman COMMONS. About the highest rent?

Mr. CURRAN. And there isn't hardly any men working at laboring work that rents a \$25 house.

Acting Chairman COMMONS. About what rents do the \$3 men pay?

Mr. CURRAN. Well, they pay about fifteen—twelve to fifteen.

Acting Chairman COMMONS. And what would the men—

Mr. CURRAN. Some a little higher; maybe run to sixteen or eighteen.

Acting Chairman COMMONS. They pay from twelve to eighteen dollars?

Mr. CURRAN. Yes, sir; yes; from eight up to—

Acting Chairman COMMONS. What is the equipment of these houses in the matter of water, light, and so on?

Mr. CURRAN. There is gas and electric lights, city toilets, city water in mostly all the houses that run to \$15.

Acting Chairman COMMONS. That is, the \$15 house and above would have these?

Mr. CURRAN. Yes, sir.

Acting Chairman COMMONS. And those below fifteen would not?

Mr. CURRAN. Those below fifteen might have city water, but no toilet in the house, you know.

Commissioner O'CONNELL. Would the \$15 have a bathroom?

Mr. CURRAN. No, sir; no.

Commissioner O'CONNELL. How high would you go to get a bathroom?

Mr. CURRAN. Well, to get a modern house you have got to go from twenty to twenty-five—twenty-two. There might be some few rented at a little less, maybe \$18.

Acting Chairman COMMONS. A \$15 house would have how many rooms?

Mr. CURRAN. Well, some of them four and some of them five; the location in the city, you know, close in, makes the difference on the rental with the same combination.

Acting Chairman COMMONS. On the average, you would say, then, apparently about \$4 a room per month is the rent?

Mr. CURRAN. Well, no; it would not average that, I guess.

Acting Chairman COMMONS. Well, what would you say, then, \$3.75, about?

Mr. CURRAN. On an average, a four-room house, it would be probably about \$14.

Acting Chairman COMMONS. For a four-room house, that would be \$3.50 per room. That would be a house that would have water?

Mr. CURRAN. Yes, sir; some of them have toilets.

Acting Chairman COMMONS. What would they pay for water service?

Mr. CURRAN. Where it is modern, it is \$2.50 per month; that includes toilet and bath.

Acting Chairman COMMONS. Two dollars and fifty cents?

Mr. CURRAN. Yes, sir.

Acting Chairman COMMONS. And without toilet and bath?

Mr. CURRAN. Well, without toilet and bath it is \$1.50.

Acting Chairman COMMONS. How far back is your acquaintance with the business?

Mr. CURRAN. Well, I am in the rental business about 25 years in this town.

Acting Chairman COMMONS. What changes have taken place in the amount of the rents during that period; have they come down or up or how have they changed?

Mr. CURRAN. Well, there is not much change.

Acting Chairman COMMONS. \$1.50, you said, was the minimum for water?

Mr. CURRAN. Yes, sir.

Acting Chairman COMMONS. That is a month?

Mr. CURRAN. Yes, sir.

Commissioner O'CONNELL. Eighteen dollars a year for water?

Mr. CURRAN. Yes, sir.

Commissioner O'CONNELL. Without bath?

Mr. CURRAN. Without toilet and bath.

Commissioner O'CONNELL. And it is \$2 or \$2.50 with it?

Mr. CURRAN. Two dollars for water in the house with toilet and \$2.50 with bath.

Commissioner O'CONNELL. That is \$36 for water?

Mr. CURRAN. It is \$30 a year; yes, sir.

Commissioner O'CONNELL. Thirty dollars a year for water with bath?

Mr. CURRAN. Yes, sir; private bath.

Acting Chairman COMMONS. That is about what it has been for 20 or 25 years?

Mr. CURRAN. Well, in the early days we did not have any bath or any toilet—I did not have water in the houses, very few of them did. I kept house when I had to carry water two or three blocks to my residence. I paid \$22 a month for a five-room house without any water, in 1886.

Commissioner O'CONNELL. What would a six-room house with a bath—what would that cost a person per year, say, in the immediate center, or residence section of the city?

Mr. CURRAN. In a good location of the town it would cost, with toilet and bath, \$25 for a six-room house.

Commissioner O'CONNELL. That would be \$25 and \$2.50 additional for water?

Mr. CURRAN. Yes, sir; \$2.50 additional for water; some of them \$25.

Commissioner O'CONNELL. What does the light run?

Mr. CURRAN. That is according to what you burn.

Commissioner O'CONNELL. Well, the general average, for instance, of a six-room house?

Mr. CURRAN. Most of these houses I think the minimum rate would be about \$1.50, something like that.

Acting Chairman COMMONS. What is the rate per thousand for gas?

Mr. CURRAN. It is \$1.60; 10 per cent off.

Commissioner O'CONNELL. What is your electric light?

Mr. CURRAN. The electric light—now, I am not prepared to answer that just exactly. I know about what it costs at my residence; it is according to what you burn; they have different rates.

Commissioner O'CONNELL. They have a minimum rate, of course.

Mr. CURRAN. Yes.

Commissioner O'CONNELL. They have a meter charge?

Mr. CURRAN. You mean—

Commissioner O'CONNELL. Do they have a meter charge?

Mr. CURRAN. They do have.

Commissioner O'CONNELL. In some cities they have a regular minimum charge, and then a charge for the meter.

Mr. CURRAN. They charge \$5 for the meter in houses that are rented.

Commissioner O'CONNELL. Five dollars a year?

Mr. CURRAN. No; that is a bonus that you put up. If you pay your electric-light bill, you get your \$5 back when you move out.

Acting Chairman COMMONS. What is the cost of building a house of that type on the average?

Mr. CURRAN. What do you mean? A six-room house?

Acting Chairman COMMONS. Yes; a house that would rent for \$25.

Mr. CURRAN. Well, I think to build a house, a six-room house, that is modern—of course it is according to the kind and style—I don't think you can build one for \$2,500.

Acting Chairman COMMONS. A house that would rent for \$15, what would that cost?

Mr. CURRAN. Well, the value of those houses that rent for about \$15 would be probably about \$1,800 or \$1,900, and maybe \$2,000.

Acting Chairman COMMONS. Has the cost of building gone up in the last 10 or 15 years?

Mr. CURRAN. That would include the lot, you know.

Acting Chairman COMMONS. The price that you gave included the lot?

Mr. CURRAN. Yes; generally

Acting Chairman COMMONS. How much did you figure the lot?

Mr. CURRAN. Oh, I would figure these lots about \$500, \$600, \$800, according to the location and locality.

Acting Chairman COMMONS. That is a person putting up a \$2,500 house would pay out of that \$1,000, would he, for the lot, you mean?

Mr. CURRAN. No.

Acting Chairman COMMONS. In addition to the \$2,500? He would pay \$1,000 for the lot?

Mr. CURRAN. No; you could not get a house for \$2,500 and a lot that would rent for that.

Acting Chairman COMMONS. Thirty-five, you mean?

Mr. CURRAN. A five-room house would cost, I should think, in the neighborhood of about \$2,000 to build the house, and maybe more. It is according to the style of the house you build, you know.

Acting Chairman COMMONS. Well, take the same style of house.

Mr. CURRAN. Built reasonably; about as cheap as you can build.

Acting Chairman COMMONS. Take that same style of house. How much as the cost gone up? What would it have cost 15 years ago, a \$2,000 house of the same kind?

Mr. CURRAN. Well, the lumber at that time was a good deal less than it is to-day—probably \$10 to \$12 a thousand, and some of it more, some of it a good deal less than that. Labor at that time was not any higher than it is now. I think it was cheaper. They worked 10 hours instead of 8 at that time. There was no value on the lots like there is to-day. It was not near as high. I think in those days you could build a house for \$1,500 that you could not build to-day for less than \$2,300 or \$2,500, and maybe more.

Acting Chairman COMMONS. Well, has the cost of building a house gone up about 40 per cent, do you believe?

Mr. CURRAN. I should think that would be near about right.

Acting Chairman COMMONS. Well, you think the lots—the rents have remained stationary, have not gone up in the same way?

Mr. CURRAN. There has not been much advance in rents that I know of for the same quality of house; the rents have been about the same.

Acting Chairman COMMONS. When a person builds a house, how does he finance it? He buys the lot first, and then can he borrow at the bank or how can he get finances?

Mr. CURRAN. Yes; a man with a good lot can get money enough to put the house on it—a reasonable house.

Acting Chairman COMMONS. If he is able to pay for the lot, then he can get the money for the building of a house, can he?

Mr. CURRAN. Yes, sir; if a man has got a good lot and is a good man, he can get money at 8 per cent to build his house.

Acting Chairman COMMONS. Now, Mr. Grier, what proportion did you say—or did you say what proportion you thought of your employers were house owners?

Mr. GRIER. No; I did not say, and I really would not like to guess.

Acting Chairman COMMONS. You wouldn't like to guess. Would you know, Mr. Irwin, what proportion of your employees are house owners?

Mr. IRWIN. I think 50 per cent or over; possibly 60.

Acting Chairman COMMONS. And the rest would be—

Mr. IRWIN. I think single men.

Acting Chairman COMMONS. You say most of the married men are house owners?

Mr. IRWIN. Yes.

Acting Chairman Commons. And the single men, of course, would not be. Mr. Grier, do these tenants, or do these home owners, build on this property that you described a moment ago, or this morning, rather, on which they get a surface title, or do they build on property that is owned by the mining company?

Mr. Grier. Originally, many years ago, when this compromise was entered into between the mineral claimants and the town-site people, the policy of the company was to issue a permit to its employees only. Employees who built in those days, many of them are here now; some of them have drifted away and when they went away they sold their house to another and had the permission to occupy the land which they held transferred to the person that they sold the house to. So that there are quite a good many homes in Lead now occupied by people who do not work for the Homestake Mining Co.

Acting Chairman Commons. But they have a permit?

Mr. Grier. On a permit.

Acting Chairman Commons. These permits they have transferred?

Mr. Grier. Transferred to them.

Acting Chairman Commons. Is that permit considered marketable? Can they sell it to some one else, a successor?

Mr. Grier. Well, they transfer the permit and sell the home erected on the land for which the permit is issued, and I suppose count, in the price they ask for the property, something to represent the lot.

Acting Chairman Commons. Well, now, this permit is revocable, I think you said, at the will of the company?

Mr. Grier. Yes, sir.

Acting Chairman Commons. It is not like these other titles where you can not be revoked only in case of the undermining—that is, in those which are to have surface title they give up the house in case mining operations undermine the house?

Mr. Grier. The permits that were issued for building purposes outside of the town site, which was involved in this litigation, are revocable at the will of the company, but the company does not have to engage in underground operations to call for vacating the land. But those conditions have prevailed here for 30 years and the company has not found it necessary to issue any notice revoking the permits.

Acting Chairman Commons. Well, when this lockout occurred there was apparently about a thousand men left the community and a thousand that remained. Those thousand that left, some of them probably had houses built on these permits. Do you know what methods they followed to dispose of their holdings when they left?

Mr. Grier. I think some of them still own their property, rented it out when they went away, and some sold, transferring the permit with the sale of the home.

Acting Chairman Commons. And the company did not in any case exercise its right to revoke that permit in the case of those who left?

Mr. Grier. The Homestake Co. has never issued an order revoking a permit.

Acting Chairman Commons. Never revoked a permit?

Mr. Grier. No, sir.

Acting Chairman Commons. Of the 50 per cent. we will say, who are employed, what proportion of those would be on these lots which have a permit title; half of them?

Mr. Grier. Within the original town site, which was the subject of litigation, the houses, I think, are very much closer together. I don't know whether half of them would be outside or less than half. There are a goodly number within and without the original town site. There are about 8,000 people in the town.

Acting Chairman Commons. Are there employees of the company living outside of the corporate limits of the town of Lead?

Mr. Grier. Well, the company has a pumping station over on the East Fork of Spearfish Creek, which is 10 miles from Lead. Of course, they are outside of the city limits. It has a light plant at Deadwood, which, of course, is outside of the corporate limits of Lead.

It has a hydroelectric power plant down on the main Spearfish Creek, and of course they are outside of the corporate limits of Lead.

Out in the timberland, where the timber and lumber are manufactured—that is, outside of the corporate limits but within walking distance, you might say,

of the corporate limits of Leads—there are a few, I think, that are not living on the company's land.

Acting Chairman COMMONS. They are not living on it?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. These that are outside are in some cases living on the company's land with permits, are they?

Mr. GRIER. In some cases; yes; and in some cases no.

Acting Chairman COMMONS. Then you think about half are living—half of these home owners are living on property which they hold by permit, and half got their titles in other ways?

Mr. GRIER. I think so.

Acting Chairman COMMONS. Have you paid attention to the cost of living apart from house rent of the employees in the town of Lead, food and clothing, during the last 15 years or so?

Mr. GRIER. Well, yes, sir; I have paid some attention to it. The cost of food is less than it was 10 years ago and prior to that time, if you will except meat. Clothing is a trifle higher, and boots and shoes a trifle higher, but I think the increased price on boots and shoes and clothing will be more than offset by the lesser cost of foods outside of meat.

Acting Chairman COMMONS. By other food, you mean flour?

Mr. GRIER. I mean ordinary grocery supplies in the house.

Commissioner O'CONNELL. Flour and potatoes are less now, you say, than they were 10 or 15 years ago?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. How are fresh vegetables brought into this town. Apparently there is nothing grown here to amount to anything.

Mr. GRIER. I have seen a good many little gardens around here. I have one myself with beans and peas and cauliflower growing in it. The main supply, I should say, comes from the valley of Spearfish and Sturgis and other towns within 10 or 15 or 20 miles.

Acting Chairman COMMONS. It is brought into town from that distance?

Mr. GRIER. Yes, sir. Now, Mr. Chairman, if you will excuse me for suggesting, those things are susceptible of being shown more correctly probably by some of the grocery men in town than I can possibly give them to you.

Acting Chairman COMMONS. What I was getting at is whether you had made any inquiry on your own account as to the change that has occurred during those years.

Mr. GRIER. Well, I think the conditions are very near like what I have represented them to be.

Acting Chairman COMMONS. You haven't made any definite inquiry?

Mr. GRIER. Well, I have in a way. I haven't gone and asked the price of sugar and tea and coffee and salt and pepper and all those things, but in a general way the grocery bill of the home, outside of meat, I think, is decidedly less than it was 15 or 20 years ago.

Acting Chairman COMMONS. And you think the higher price of meat is offset?

Mr. GRIER. By the lower price of groceries.

Acting Chairman COMMONS. Is this reduction brought about by improved transportation and cheaper vegetables?

Mr. GRIER. Well, there is no question probably but what some of it is. In the early days, you know, we hauled everything in here on wagons two or three hundred miles.

Acting Chairman COMMONS. That would not run back 10 years though, would it?

Mr. GRIER. No; our railroads have been in here more than 10 years.

Acting Chairman COMMONS. In general throughout the country there has been quite an increased cost of living in all these items which you mention, I think.

Mr. GRIER. Well, I would not confound the increased cost of living with the increased—or with the cost of the articles that they live on. There are various other things that make the increased cost of living increase. I think the increased cost of living may be found to be started by the buyer for the house. You may go into the kitchen and into the dining room and out to the garbage can and in quite a material degree account for the increased cost of living.

Acting Chairman COMMONS. Well, I am speaking solely of the prices for staples, for units, recognized units generally, the cost of living on staples of that kind has gone up 30 to 40 per cent in the last 15 years generally, regardless of the change in wastefulness?

Mr. GRIER. People are living better to-day than they did 10 years ago, 15 years ago, 20 years ago; they demand more.

Acting Chairman COMMONS. Would there be any reason in Lead besides the cost of transportation that would reduce the cost of living; that is, the prices they pay for the same articles as compared with what they used to be?

Mr. GRIER. In their cost than the cost of transportation?

Acting Chairman COMMONS. Yes.

Mr. GRIER. Well, the first cost might make a difference, but I am speaking of the prices at retail, which here in Lead for food is less to-day, outside of meat, than it was 20, 15, or 20 years ago.

Acting Chairman COMMONS. The Homestake Co. has no definite financial relations with the Hearst department store or mercantile company?

Mr. GRIER. Nothing whatever.

Acting Chairman COMMONS. What do they deal in, all kinds of groceries and—

Mr. GRIER. It is a general department store, groceries and dry goods and clothing and hardware and—well, almost everything any community would need.

Acting Chairman COMMONS. Well, an employee of the company can get credit there, can he?

Mr. GRIER. He can.

Acting Chairman COMMONS. For how long a time?

Mr. GRIER. Well, in very many cases I know where the credit has been extended a year for them. If a man was building a home, furnishing it, it could not be expected that he would pay at his first pay day. He was given, if he was a good man, almost as much time as he wants, paying for it in installments monthly.

Acting Chairman COMMONS. That is, he would pay part of his grocery bills there and get credit for the rest?

Mr. GRIER. Yes.

Acting Chairman COMMONS. And the security that he gives is his wages at the Homestake Co.?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. How is the account kept between the Homestake Co. and the mercantile company on the credits?

Mr. GRIER. There is no account between the Homestake Mining Co. and the Hearst Mercantile Co. If a man wants credit to help him build or furnish or improve or change his home and he is worthy of credit, the Hearst Mercantile Co. has for many years extended that credit. In turn the man gives the Hearst Mercantile Co. an order to go to the Homestake Mining Co. and draw his check at the end of the month, the understanding being that, oh, five, ten, fifteen, or twenty dollars a month shall apply on the credit that is extended over and above his living expenses. And there are cases where the account has run on for one or two or three years.

Acting Chairman COMMONS. Well, then, the mercantile company assists men to build their homes, does it, in that way?

Mr. GRIER. It has in many instances.

Acting Chairman COMMONS. Does it make—it does not make advances or loans, does it?

Mr. GRIER. Why, yes, it does loan money. Every month there probably would be—[witness confers with Mr. Murrin]. More than I thought; four or five hundred men will probably call for five or ten or fifteen dollars in cash between the first and the end of each month.

Acting Chairman COMMONS. That is, they will borrow from the mercantile company five or ten dollars in cash?

Mr. GRIER. Yes; that is just charged into their bill.

Acting Chairman COMMONS. They just give an order on their—

Mr. GRIER. They give an order to the Hearst Mercantile Co. to go to the Homestake office and draw their checks on the pay day.

Acting Chairman COMMONS. Now, for their ordinary, current living expenses, how is that handled by the mercantile company?

Mr. GRIER. Well—

Acting Chairman COMMONS. Between pay days?

Mr. GRIER. A man or some member of his family goes to the store and gets what he wants, has it charged to him, and delivered to his home. At the end of the month he pays that account unless—he pays it in full unless he has been permitted to overdraw a few dollars, and if he has a balance coming to him it is given to him in cash.

Acting Chairman COMMONS. That is, he practically gives an order on the Homestake for his purchases during the month?

Mr. GRIER. He gives the store an order on the Homestake Mining Co. for his wages to secure the credit which was extended to him from one end of the month to the other.

Commissioner O'CONNELL. Suppose I work for the Homestake Co. and I run a bill for, say, \$50 for the month at the store.

When I get my check from the Homestake Co., do I get a \$50 or a \$100 check, and you pay the \$50 to the store?

Mr. GRIER. You don't get any check at all.

Commissioner O'CONNELL. I don't get any check at all?

Mr. GRIER. No. You give an order to the Hearst Mercantile Co. for your check, whatever it may happen to be, and then you go into the store and you have your account made out, receipted, and handed to you, and the difference between your account and the amount of your check is given to you in cash.

Commissioner O'CONNELL. In the store?

Mr. GRIER. Yes, sir.

Commissioner O'CONNELL. And all the employees who deal with the store have to go through that system before they get their cash from the company?

Mr. GRIER. They do it; yes, sir.

Acting Chairman COMMONS. It amounts to an assignment of their entire wages to the company, and the company then deducts?

Mr. GRIER. In deference to the man.

Acting Chairman COMMONS. Now, are all the employees of the company paid in that way through the Hearst mercantile store?

Mr. GRIER. No; not at all. There are a great many of the employees of the Homestake do not deal at the Hearst Mercantile Co.'s store at all.

Commissioner O'CONNELL. About what proportion?

Acting Chairman COMMONS. About what proportion would you say out of, say, the 2,500 employees?

Mr. GRIER. One-half of them probably deal at the store.

Acting Chairman COMMONS. That is, one-half don't have any accounts at this store, is that the idea?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS (addressing Commissioner Garretson). You wanted to ask a question?

Commissioner GARRETSON. When they get this money during the month, five or ten dollars, is the current rate of interest charged, or any interest?

Mr. GRIER. No interest is charged.

Commissioner GARRETSON. None.

Acting Chairman COMMONS. How about the prices charged at the store. Are you—

Mr. GRIER. I am not as familiar as Mr. Murrin, who is the manager of the store.

Acting Chairman COMMONS. Perhaps we might call on him about the prices charged and the change in prices since the store started. When was this store started, Mr. Murrin?

Mr. THOMAS D. MURRIN (manager of Hearst Mercantile Co., Lead, S. Dak.). 1878-79. During that winter, I believe.

Acting Chairman COMMONS. Now, going back over a period of 15 years, what is your observation about the cost of living in the sense of taking identical articles and the prices charged during that period?

Mr. MURRIN. The tendency of the prices on staples, I would say, in the course of 10 or 15 years is a little lower to-day than it was 15 years ago.

Acting Chairman COMMONS. By staples, what do you mean?

Mr. MURRIN. Ordinary articles of food, meats excepted.

Acting Chairman COMMONS. How about fresh vegetables?

Mr. MURRIN. Well, we depend upon local markets and we are not subject to any outside influence. If we raise a crop here, the price is uniform all the year around.

Acting Chairman COMMONS. You buy it direct from the farmers?

Mr. MURRIN. Yes; local growers.

Acting Chairman COMMONS. And sell it direct?

Mr. MURRIN. Yes, sir.

Commissioner O'CONNELL. We don't want to go back, we won't go beyond when there was not proper transportation facilities for bringing things in here.

Mr. MURRIN. Yes, sir.

Commissioner O'CONNELL. But a period when you had proper transportation, whether that be 8, 10, or 12 years ago, whatever it was. When that proper transportation existed, we will say 10 years ago, what was the price of ordinary potatoes at that time?

Mr. MURRIN. Ten years ago the nominal price retail here would be 75 to 80 cents.

Commissioner O'CONNELL. What are they now?

Mr. MURRIN. Right to-day they are probably half new crop; we are, understand, just in between two markets. We are getting new potatoes.

Commissioner O'CONNELL. Take the same period in the other years.

Mr. MURRIN. Well, say the same period—

Commissioner O'CONNELL. Flour.

Mr. MURRIN. Flour is less now than it was 10 years ago.

Commissioner O'CONNELL. Less now?

Mr. MURRIN. Yes.

Commissioner O'CONNELL. Tea, coffee?

Mr. MURRIN. Coffee is slightly higher; sugar less. Tea is about the same.

Commissioner O'CONNELL. You have a most remarkable situation here, that is all, if true, contrary to all experience of the best authorities we have in the United States, who say that the cost of living has increased 59 per cent in 10 years.

Mr. GRIER. That would not necessarily be the cost of the things you live on.

Commissioner O'CONNELL. Oh, yes; absolutely; not of waste, not of people cooking and throwing it out in the ash barrel or something, but the actual cost of things, what you pay in money; that is United States Government statistics. All of the authorities we have say 59 per cent.

Acting Chairman COMMONS. Mr. Garretson has a question.

Commissioner GARRETSON. Mr. Murrin, have you paid any attention to the tables of statistics as prepared by the Government on 18 articles of food supplies?

Mr. MURRIN. I have read them several times, sir.

Commissioner GARRETSON. Are you familiar that the results they show on the same amounts in 1890 and the same amounts to-day, that is, the family consumption the same then and now—

Mr. MURRIN. I could not recall it from memory; no, sir.

Commissioner GARRETSON. Are you aware of the fact that the average of those 18 articles forming the staple amount that a common laboring family buys shows a 59 per cent increase?

Mr. MURRIN. I am aware it shows an appreciable increase; yes, sir.

Commissioner GARRETSON. That is the average; 59 per cent?

Mr. MURRIN. Yes, sir.

Commissioner GARRETSON. What is it carries Lead so thoroughly out of the category of the average of the entire United States; have you any idea?

Mr. MURRIN. No, sir; but there has been some question raised as to the accuracy even of the Government statistics.

Commissioner GARRETSON. Then, one of two things only would explain. Either the normal transportation was excessive, or the price was unreasonable, or the present one is unreasonably low; wouldn't that only explain it?

Mr. MURRIN. That would explain it.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. Mr. Grier, regarding the hospital arrangements here and the aid society, prior to this lockout I think you stated that the miners' union had a benefit system of some kind, and they apparently brought that up as one reason or one of their points. Did they have a benefit system?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Do you remember the details of that benefit system; what dues they paid and what the benefits were?

Mr. GRIER. Why, I think the dues were \$1 a month, but I wouldn't undertake to say what the benefits were.

Acting Chairman COMMONS. Did it include hospital services, medical services, as well as financial payments, do you remember?

Mr. GRIER. No, sir; I don't know.

Acting Chairman COMMONS. At what date did you begin your aid association here; was it following March 3 when you began?

Mr. GRIER. August, 1911.

Acting Chairman COMMONS. During the intervening time, then, there was no benefit association here?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. Would you describe to us the benefit system, and perhaps I can ask the questions. There are one or two points I would like to get. The payments made by the employees are how much per month?

Mr. GRIER. One dollar each.

Acting Chairman COMMONS. One dollar for each employee. Do all employees of the company pay that?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Is that a part of their contract of employment?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. That is paid into a fund which is kept by yourself as treasurer?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What is the surplus that has been accumulated?

Mr. GRIER. I think \$35,000 in round numbers.

Acting Chairman COMMONS. In the course of three years, it has been running just three years?

Mr. GRIER. August, 1911, to the present time will be three years.

Acting Chairman COMMONS. Do you know what claims are outstanding that should be deducted from that?

Mr. GRIER. From the surplus?

Acting Chairman COMMONS. Yes, sir.

Mr. GRIER. There are none.

Acting Chairman COMMONS. All claims have been paid?

Mr. GRIER. When I say \$35,000, I mean in round numbers. I think that is at the close of business for June.

Acting Chairman COMMONS. At the end of June?

Mr. GRIER. Yes; the accounts for July are not written up yet; they will be in a few days.

Acting Chairman COMMONS. If an employee is killed in an accident, he is paid \$1,000 from that fund, is he, or his family or dependents?

Mr. GRIER. Yes, sir; \$1,000 for death by accident.

Acting Chairman COMMONS. And for sickness?

Mr. GRIER. Death from sickness, \$800.

Acting Chairman COMMONS. Do you have many cases of consumption, miners' consumption?

Mr. GRIER. We have so-called miners' consumption.

Acting Chairman COMMONS. What record is kept of that? Who keeps the record?

Mr. GRIER. The hospital.

Acting Chairman COMMONS. Have you that record with you so that we could refer to it?

Mr. GRIER. No, sir; I have not. Dr. Clough was here this morning; he might get it.

Acting Chairman COMMONS. In the case of sickness, what is paid by the day or by the week?

Mr. GRIER. The rate is \$1 a day.

Acting Chairman COMMONS. Well, then, the medical service is entirely additional, free—furnished free?

Mr. GRIER. Yes, sir; free.

Acting Chairman COMMONS. Then, in case a person has consumption and loses work on that account, he would be paid \$1 a day during his sickness. Would that amount be deducted from the \$800 which goes as a death benefit?

Mr. GRIER. No, sir.

Acting Chairman COMMONS. He would get that in addition?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Do the employees carry insurance in other companies to any extent?

Mr. GRIER. I think they do. There are quite a number of fraternal organizations here which have insurance departments.

Acting Chairman COMMONS. Fraternal?

Mr. GRIER. Yes; fraternal organizations. And, in addition to that, I think some of the old-line companies have policies here. I do not know to just what extent.

Acting Chairman COMMONS. Did you get those cards, Mr. Irwin?

Mr. IRWIN. They are bringing them up now.

Acting Chairman COMMONS. You have figures on accident work, I understand, which show the results that have been brought about through your safety work, accident records for four or five years?

- Mr. GRIER. We have. Is that the hospital report you asked for?
Acting Chairman COMMONS. Yes; the hospital report.
- Mr. GRIER. Well, we have that report made on the first of each year, or immediately after the close of the year.
- Acting Chairman COMMONS. I think you furnished us with figures showing us the daily rate of pay. Have you tables which would show the earnings of each employee during the year, what his payments were he received for working through the year?
- Mr. GRIER. Two years ago the company began the disbursement, at the close of the year, of a bonus of 7 per cent upon the amount of money earned by each employee. That pay roll would show you exactly what each employee in the service of the company earned. I have not got that with me.
- Acting Chairman COMMONS. We will find that in the office?
- Mr. GRIER. Yes, sir.
- Acting Chairman COMMONS. In Mr. Irwin's office?
- Mr. GRIER. No; in the general office.
- Acting Chairman COMMONS. In the general office?
- Mr. GRIER. Yes.
- Acting Chairman COMMONS. Is that bonus paid each year?
- Mr. GRIER. Yes, sir.
- Acting Chairman COMMONS. At the end of the fiscal year.
- Mr. GRIER. At the end of the calendar year.
- Acting Chairman COMMONS. To all employees?
- Mr. GRIER. To everybody in the service of the company.
- Commissioner O'CONNELL. Is it made up by the month, or does the employee have to work the full year?
- Mr. GRIER. It is made up at the close of each calendar year, and applies to all employees whose names are on the pay roll for the month of December.
- Acting Chairman COMMONS. Even only they had been working only a month they get their share of the bonus?
- Mr. GRIER. Yes.
- Acting Chairman COMMONS. The employment in your business is very steady, I take it. You are operating without being subject to panics and depressions. What do you consider the average number of days that a man can work during the year?
- Mr. GRIER. He is at liberty to work 365 days—except the Fourth of July, Christmas, and New Year—
- Acting Chairman COMMONS. Well, about how many?
- Mr. GRIER. And some other holidays.
- Acting Chairman COMMONS. About how many days has he actually put in, or have you made any compilation of that?
- Mr. GRIER. No; I have not.
- Commissioner O'CONNELL. Have they always had that condition, that they were running 365 days a year?
- Mr. GRIER. Yes.
- Commissioner O'CONNELL. All departments?
- Mr. GRIER. All departments. Well, there are some of the departments that lay off on Sunday in part. I think quite a number of the foundry men lay off; quite a number of the assay-office force lays off; quite a number of the engineering force lays off; and at the mine if a man wants to lay off on Sunday all he has to do is to tell his shift boss Saturday afternoon when he quits work that he won't be around the following day.
- Commissioner O'CONNELL. Suppose they all took a notion to do that, what would be the result?
- Mr. GRIER. If they took the notion and put it into effect, they would all be off.
- Commissioner O'CONNELL. What would be the result?
- Mr. GRIER. They have had the opportunity on several occasions to lay off if they wanted to.
- Commissioner O'CONNELL. If they want to?
- Mr. GRIER. If they want to.
- Commissioner O'CONNELL. Do they want to work on Sundays?
- Mr. GRIER. They do; 99 per cent of them.
- Commissioner O'CONNELL. Why?
- Mr. GRIER. Ask them. Twenty-five or thirty years ago, in the formation period of everything around about this industry, town, camp, and district, two young men came in to me, baseball enthusiasts, seeking employment from the Home-

stake Co. They came to me and asked if they organized two baseball clubs, if the boys in the mine would be permitted to lay off one Sunday, so that they could go and enjoy the game. I told them "Yes." They organized two clubs, graded off a baseball diamond at the east end of town, erected a grandstand and bleachers, and after some practice announced their readiness to give an exhibition. The boys in the mine laid off and attended the game. I suppose that, like everybody else taking a holiday, they spent 25 cents or 50 cents, or maybe more, for cigars, a glass of beer, or whatever their taste called for. That thing went on for six weeks about. When their pay day came, which was about the middle of the month, I do not recall the date, they found that their check was short as many Sundays as they laid off multiplied by their wages for the day. They had not realized that that would occur up to the time they got their checks. They then made up their minds that inasmuch as they changed shifts every month they would have a chance to see the baseball game in the afternoon four Sundays in the month, and then they would not see it for the next month that they were on opposite shifts; so they concluded that they did not want any more laying off on Sunday and asked if they might not resume work. I told them yes.

In 1910 our working force was reorganized after the lockout, or whatever it was. A large number of the men who came here from outside camps complained to the employment office about being compelled to lay off Sunday and asked—complained and said that if they had known that they were to be laid off they would not have come here because that was one of the reasons that brought them here—they understood the work was continuous. The reason for laying them off was that we had too many men and all of the reservoirs of the mine were overflowing with ore all the time, and it was really necessary to lay off and let the supply run down. The remedy for that was a reduction in the operating force of the mine which was accomplished gradually. The result was that it was found necessary for the men to work on Sunday.

Commissioner O'CONNELL. Is that usually the sentiment of the town here, to work on Sunday? I noticed Sunday right opposite your hotel, next to your store, some building trade work, somebody hammering and riveting on Sunday afternoon as though it was the middle of the week. Is there any occasion for that sort of thing in the city?

Mr. GRIER. You will have to ask the contractor. The building is being erected by contract. So far as the Hearst Mercantile Co. are concerned, the contractor did not have to work unless he wanted to. And that is the second Sunday that he worked since he began operations. Why he did it I do not know.

Commissioner O'CONNELL. Well, you say ask the men why they work on Sunday. I understood you to say, Mr. Grier, that there had not been any change in the wage rate for the past 30 years in the conditions in the mine.

Mr. GRIER. That is true.

Commissioner O'CONNELL. By the company. Now, is it because the men find it absolutely necessary to work on Sunday in order to maintain themselves in what they figure and consider reasonable living conditions here that they must work on Sunday to make both ends meet? Is that a possibility?

Mr. GRIER. It is a possibility that I think the men could answer for themselves better than I can if they were called and given an opportunity.

Acting Chairman COMMONS. Commissioner Lennon would like to ask a few questions.

Commissioner LENNON. Do you believe, Mr. Grier, that the best interests of industry are served by continuous work seven days a week—men, animals, or anything else?

Mr. GRIER. Well, I wouldn't undertake to answer that question positively.

Commissioner LENNON. Does not the history of man show the necessity for that much rest?

Mr. GRIER. The people here work 8 hours a day—that is, 8 hours out of 24—and they have 16 in which to rest and recreate. But we are rather an isolated community here. The advantages for recreation and pleasures of various sorts—sight-seeing and so forth—are not what you have in the large cities, where men have some place to go. Here they would stand around the streets, or, in the early days, time used to be spent in saloons and various other places.

Commissioner LENNON. What has been the trend of the moral uplift and progress of substantial civilization since mankind limited, in the main, their work to six days a week the world over?

Mr. GRIER. Well, I wouldn't like to answer that very definitely. You probably remember that verse in the Bible, which you will find in the twentieth chapter of Matthew, first verse; like the kingdom of heaven, this man, who was a householder, went out early in the morning to hire laborers in the vineyard, and he worked those men 12 hours a day and gave them a penny.

Commissioner LENNON. There is some doctrine taught in the early chapters of the Bible in the Old Testament in regard to the matter of seven days' labor, and my own experience has convinced me that six days is all a man ought to work. I mean, from the moral standpoint as well as from physical reasons. That is all I would ever work.

Mr. GRIER. I don't think the morals of this community are hurt by working seven days a week. I think they are benefited.

Commissioner LENNON. You do? That is all.

Acting Chairman COMMONS. Mr. Garretson would like to ask some questions.

Commissioner GARRETSON. Yes; I want to ask a question right there. Do you believe the parable you referred to is of any greater force than the early verse that says, "Six days shalt thou labor and do all thy work?" Do you think God was figuring on 8 hours a day or 12?

Mr. GRIER. In the same chapter you will a verse that says, "Thou shalt not kindle a fire in thy house on the Sabbath day." Do you think that would apply to Alaska?

Commissioner GARRETSON. I don't know whether Adam lived in Alaska. If he did live in Alaska, I would suppose he could get along without a fire in Alaska. Which is of the most force, though?

Mr. GRIER. I don't know.

Commissioner GARRETSON. You don't?

Mr. GRIER. Well, if a man wants to work on Sunday, I don't think he should be denied the privilege.

Commissioner GARRETSON. Merely because God said he shouldn't; is that it?

Mr. GRIER. I didn't say that.

Commissioner GARRETSON. Well, that is what the book says God said; I don't know whether he did or not. I will admit possibly that the book says that he did. That is all on that subject, Mr. Chairman.

Acting Chairman COMMONS. Any other questions?

Commissioner GARRETSON. Yes.

I understood you to say when this notice was published, signed by all the mining interests in the district, that it was for the purpose of discouraging and if possible abolishing unionism in the district. Did I understand you to say that it was successful, that unionism is a dead letter in the district?

Mr. GRIER. Not entirely.

Commissioner GARRETSON. Not entirely. Then it hasn't altogether had its purpose. There are men, are there, laboring men, union men, working in the district under agreement?

Mr. GRIER. I don't know, but I am quite sure there are some labor union men in the district.

Commissioner GARRETSON. Working under agreement with their employers?

Mr. GRIER. I don't know whether they have any agreement, either written or verbal.

Commissioner GARRETSON. Are you aware of the fact that every railroad employe in the train and engine service are union men working under agreement?

Mr. GRIER. Why, I didn't think of the railroads that are operating in the district.

Commissioner GARRETSON. Are they not quite an interest in here?

Mr. GRIER. Oh, yes; of course we could not do without them.

Commissioner GARRETSON. Those are all union men, are they not?

Mr. GRIER. I think so.

Commissioner GARRETSON. All working under agreement, written agreements, with their board?

Mr. GRIER. And high class, too.

Commissioner GARRETSON. Thank you; I am one of them. What is the practice of your company, or the policy of your company, in regard to betterments? Now, I am drawing the line sharply between maintenance and betterment. Is it met by the capital account or from income?

Mr. GRIER. Until the capital of the Homestake Mining Co. was increased the last time—I don't recall the figures—all of the charges for betterment and

maintenance went into operating expense. About two years ago, when this increase in capital was made—

Commissioner GARRETSON. Was it as long ago as that?

Mr. GRIER. Well, possibly not.

Commissioner GARRETSON. Wasn't it in 1913?

Mr. GRIER. About a year and a half. I think it went into effect a year ago last spring. I don't exactly recall that matter as to a month or two. That increase was the capitalization of—whatever the amount was—two or three million dollars. I have nothing to do with that part of the company's business. I am not a stockholder and don't pay very much attention to it.

Commissioner GARRETSON. Were those expenses for that year charged to both income and capital, because a large amount of them were charged against income for the year 1913, and the capital increase also took place in 1913. Your balance sheet as of January 1, 1913, shows a capital stock of \$22,000,000, of which \$160,000 had not yet been issued, while your balance sheet as of January 1, 1914, shows a capital of \$25,116,000, all of which presumably had been issued, and still during that year you charged against income a very considerable amount as acquiring new property—at least it is listed as purchase of property, new machinery, running into hundreds of thousands of dollars, and various other charges of similar character during the same period in which the increase of capitalization took place, presumably to meet the same thing.

Mr. GRIER. That is the way it appears in the statement, but I have nothing to do with that.

Commissioner GARRETSON. I am quoting from the figures furnished here.

Mr. GRIER. I say that is the way it appears.

Commissioner GARRETSON. And still you added during that period to your surplus a certain amount. Your expenditures during 1913 for those various items approaches—well, it compares very well up with the amount you paid out in dividends and still you added to your surplus, while paying the old rate of dividend—the old dividend rate \$7.80, I don't know whether that is the old dividend rate or not, but the one that has been referred to here, it paid \$7.80 in 1913.

Mr. GRIER. That is the present rate at the present time.

Commissioner GARRETSON. And you paid it all during 1913 excepting possibly one or two months. That rate became effective, I think you testified, early in 1913?

Mr. GRIER. Yes, sir.

Commissioner GARRETSON. Along about February?

Mr. GRIER. I think so.

Commissioner GARRETSON. Consequently, if you paid that dividend rate, this disbursed almost as much in betterments, added to your surplus, what is the book value of your stock from your own standpoint? What is the estimated book value of the stock of the par value of \$100?

Mr. GRIER. What do you have the charge for betterments last year?

Commissioner GARRETSON. I didn't take the total of betterments; I only took one item, machinery alone. For machinery alone you spent, new, in 1913, \$362,000. For property purchased, you spent \$79,000. For certain other renewals or new methods, some \$2,000. You charged against the Spearfish Hydro-Electric plant \$19,000, presumably betterments or construction, one or the two, and for machinery, \$362,000. Then, you spent on re-creation, one item at least of \$102,000. Taking the total of all those, you run close up against half of the amount you paid out in dividends.

Mr. GRIER. How much was paid in dividends?

Commissioner GARRETSON. I took your own figures; I didn't follow ours. You remember there was a slight discrepancy in the figures which you corrected afterwards of the capital stock. It is over \$2,000,000, your dividend cost was. I didn't put that down, because it was here—\$2,146,000. The total of those expenditures will not run half of that; I was running on the other figures, but they run between six and seven hundred thousand dollars disbursed for betterments or acquisitions or buildings.

Mr. GRIER. That would be about one-third.

Commissioner GARRETSON. Just about one-third. Now, the question is on that method of procedure, what do you figure your book value would be, your surplus being \$1,400,000?

Mr. GRIER. How would you arrive at book value with those figures before you?

Commissioner GARRETSON. How is that?

Mr. GRIER. How would you arrive at the book value with those figures before you?

Commissioner GARRETSON. Well, I could not arrive at it unless I knew whether the company had unlimited power for betterment from income, or whether it intended to change that method for the future.

Mr. GRIER. I am sure I don't know what they intend to do.

Commissioner GARRETSON. Then, you and I both have the same difficulty in figuring book value, haven't we?

Mr. GRIER. I think so.

Commissioner O'CONNELL. Is there stock for sale or has there been any sales recently? What has it sold at per share?

Mr. GRIER. I don't know.

Commissioner GARRETSON. If you only took the surplus in your book value it would be easy to figure, but if you took earning ability, then you would be against another problem. The earning ability as shown in this report is far in advance of the dividends paid, is it not?

Mr. GRIER. Well, the earnings, I suppose, should cover the dividends and cost of operation.

Commissioner GARRETSON. Well, if you spent one-third as much money in betterments—

Mr. GRIER. Then the earnings should also cover betterments.

Commissioner GARRETSON. The earning capacity is far ahead of what is evidenced by its dividend rate, is that not correct?

Mr. GRIER. Well, you can only discuss last year's earnings with the figures before you.

Commissioner GARRETSON. Well, as the operating officer of the company—

Mr. GRIER. The earnings, I suppose, shown in that annual statement for 1913 will show that the net production of bullion was sufficient to cover everything that was charged against it, the dividends, the operating expenses, the betterments, and anything else, if there is anything.

Commissioner GARRETSON. And if you spent in addition to the property from income one-third as much as you paid dividends—I am just taking it roughly—then in fact the property, if there had been no expenditures from income, if that had all been originally charged against capital account, the property would have paid one-third more dividends than it really did, or could have paid it?

Mr. GRIER. You have the figures before you and I haven't. I don't make up that statement at all, you know.

Commissioner GARRETSON. Have you days you look at it and study it?

Mr. GRIER. Mighty little.

Commissioner GARRETSON. That is all on that question.

Acting Chairman COMMONS. Anything more?

Commissioner GARRETSON. Yes; there is another question I want. While you say that the company has never revoked a permit under the system that obtains, Mr. Grier, what would be the result if the company would revoke a permit? Who would the improvements belong to under the code of law, the house and barn that might be on that ground, and the fences?

Mr. GRIER. The attorney for the company can answer the question better than I can.

Mr. KELLER. I will answer that for you. Under the terms of the permit the occupant is given the privilege of removing them himself.

Commissioner GARRETSON. Within what period?

Mr. KELLER. Ninety days.

Commissioner GARRETSON. If he didn't remove them within 90 days, then they fall to the company?

Mr. KELLER. Yes, sir; they do.

Commissioner GARRETSON. Is there any valuation process whereby he can recover anything then?

Mr. KELLER. No, sir.

Commissioner GARRETSON. In the case of valuable improvements, for instance, a business building—this one—would that building or improvement have any value except as junk?

Mr. KELLER. No, sir; it might not.

Commissioner GARRETSON. You would be absolute master of the situation?

Mr. KELLER. Under those permits. But in that connection and at this time let me make a statement as to the title, because I think it is not altogether clear

as to what the situation is. In the city of Lead there is really what you might call three titles or three conditions of real estate holdings. The first comprise five tracts of ground which were patented by the Federal Government as town-site property.

Commissioner GARRETSON. How great is the extent of that?

Mr. KELLER. About 14 acres.

Commissioner GARRETSON. Right there, will you let me ask a question. How many acres—now you can get it into comparison form—how many acres covered with buildings within the city limits of Lead?

Mr. KELLER. I could not tell you that?

Commissioner GARRETSON. Approximately.

Mr. KELLER. I could not tell that. About 140 acres comprised the original town site.

Commissioner GARRETSON. I thought you said only 14?

Mr. KELLER. No, sir.

Commissioner GARRETSON. This is the third vein. Go on.

Mr. KELLER. The original town site of land patented to Leonard Gordon county judge, comprised 138 and a fraction acres. Of the second situation there was a second patent applied for. There was afterwards a controversy in the land office between the mine claimants and the town-site applicants acting through the county judge. The result of that controversy, running through a series of years, was that the patent to Gordon was canceled, or at least his entry canceled as town-site property, the department ruling that the ground was more valuable for mineral purposes than town-site purposes, but that was only done after a compromise between the various litigants.

Commissioner GARRETSON. That is the one that has been referred to here?

Mr. KELLER. No, sir; that is not yet the one; it is only a part of the one. The result of that compromise was this, that a portion of the ground actually patented as town-site property under the town-site law in that application comprised about 14 acres. Now, as to the ground—

Commissioner GARRETSON. Let me ask a question there. The title to that 14 acres is held by the present holders under warranty deed?

Mr. KELLER. Absolutely in fee.

Commissioner GARRETSON. The only ground in town that is held in fee?

Mr. KELLER. Exactly, and that is the fee title to that portion. Now, there is still another portion of ground here in Lead which is held under agreement and that portion is held in this way, the mine owners, comprising a number of different mine owners, not only the Homestake, but a number of others, agreed to deed the surface of the ground at that time occupied to three trustees in trust for the then occupants, to the extent of their occupancy, reserving the minerals. Those three trustees were named Emmons, Gersher, and Mayer. Under that agreement the Homestake Co., as well as a number of other mine owners, conveyed the surface to these three trustees.

Now, by the agreement the Homestake Mining Co. and Mr. Haggin and Mr. Fidler—well, a number of mine owners here conveyed the surface to these trustees, and under the terms of that agreement the mine owners have the right to mine underneath the surface, and also whenever in any activity, in the course of their mining operations they see fit, they have a right to come to the surface. They have it. All they have to do is to serve notice upon the occupants that the mining operations are dangerous, and if the improvements are not moved and damage results it is at their loss. Now, that is the condition of the title.

Commissioner GARRETSON. That is equivalent to a surface quitclaim except in the event that they want to use it?

Mr. KELLER. Exactly. It is hardly as good, possibly, as an absolute quitclaim to the surface, because there is not an absolute right on the part of the mining corporation to sustain the surface, as is the rule with an ordinary rule quitclaim to the surface.

Now, there is still another what you might call a title. It is not a title, but there is a great deal of ground owned absolutely by the Homestake Mining Co., to which it owns the fee, which was patented without any controversy, which was not involved in that litigation at all, and they have an absolute fee title to the entire surface and minerals.

A number of people at different times have desired to build upon that, or portions of it, and they have come to Mr. Grier as the superintendent and asked for permission to do so. And it is as to that third class of ground that these permits have been issued. Those permits are permits revocable at will, with a 60-day notice to remove the improvements.

Commissioner GARRETSON. A 60-day—I thought it was 90-day?

Mr. KELLER. Ninety days.

Commissioner GARRETSON. Ninety.

Mr. KELLER. Now, in that connection I wish to state to the committee that in the 10 years I have been counsel for the company, and seven years previous to that that I was associated with the previous counsel, I have never known of any thought or attempt of any kind to exercise that privilege. But on the contrary I wish to state that upon a number of occasions where surface improvements were made upon the grounds that the Homestake Co. owned, and as to which a permit had been given, when subsequently we desired to use that ground, instead of serving a notice for the occupant to move we actually paid him, and paid him the full value of his improvements. That has been done a number of times without any legal obligation resting upon the company to do it. That has been done a number of times.

Commissioner GARRETSON. Let me ask you right there: But if the company had desired to do it?

Mr. KELLER. They could have done it.

Commissioner GARRETSON. They could have done it, and virtually confiscated everything the man had if the improvements were valuable enough?

Mr. KELLER. They could, and the fact—if you will permit me to say it—

Commissioner GARRETSON (interrupting). Yes.

Mr. KELLER (continuing). That that fact is known to every layman in the country as well as every lawyer, the fact that so many men have absolutely been willing to build under that condition, seems to me is about the highest tribute that has been yet paid to the management of the Homestake Mining Co.

Commissioner GARRETSON. Hasn't that same tribute been paid to many a personal ruler who had the power of life and death, but didn't exercise it?

Mr. KELLER. Quite likely.

Commissioner GARRETSON. But still the tendency has been to abolish the power of life and death vested in any one person, has it not?

Mr. KELLER. Always.

Commissioner GARRETSON. Good. Then the natural tendency is to take power of this character, which you say is not, but which might be despotically used—should it be continued?

Mr. KELLER. But pardon me, this is property which the person is not obligated to build upon if he doesn't see fit.

Commissioner GARRETSON. Oh, a man—

Mr. KELLER. There is any quantity of property here which could be obtained if they would want to buy it. Mr. Fillian has some beautiful building lots in the other end of town, but rather than pay Mr. Fillian the ordinary price for lots the prospective builder prefers to rely upon the integrity of the Homestake Mining Co. and get it for nothing.

Commissioner GARRETSON. Well, a lot of the others of us are long-shot men.

Mr. KELLER. Well, it might have been a long shot 40 years ago, but the history of the rule of chances, I think by the course of events, has been pretty well eliminated.

Commissioner GARRETSON. Could or could not that be used as a deadly weapon?

Mr. KELLER. It could have been, but it was not.

Commissioner GARRETSON. Oh, I am making no assertion in that direction.

Mr. KELLER. Not even at the time when we were at war with almost a half of our operatives, not even then.

Commissioner GARRETSON. If you had been at war with the other half, you might have nailed them all to the cross.

Mr. KELLER. No; not all.

Commissioner GARRETSON. Well, I mean all that had permits.

Mr. KELLER. A very small number, comparatively, a very small number comparatively.

Commissioner GARRETSON. Mr. Grier, are there any women employed in any capacity?

Mr. GRIER. I don't think of any others than three in the private telephone exchange.

Commissioner GARRETSON. What wages are paid there?

Mr. GRIER. Thirty-five dollars a month.

Commissioner GARRETSON. I notice in the recapitulation of men that were employed, that there are 15 or 20—I have forgotten which now—men desig-

nated as guards. Are those men what you described this morning as watchmen or are they your detective force?

Mr. GRIER. Special night watchmen.

Commissioner GARRETSON. All of them?

Mr. GRIER. Yes.

Commissioner GARRETSON. In this detective force you state, I believe, that it mostly consisted of the men in charge, largely?

Mr. GRIER. Yes, sir.

Commissioner GARRETSON. Have you any men employed in the various departments in their regular pursuits who report to the chief of detectives, or whatever his title is, and receive additional sums therefor—espionage?

Mr. GRIER. We have.

Commissioner GARRETSON. You contribute so much to the churches, \$200 to each denomination. I assume that in the territory there are not many churches, much duplication of churches of the same denomination; probably one church of each in most instances at least?

Mr. GRIER. I think only one.

Commissioner GARRETSON. Is there any effort made to influence those who are in charge of those congregations?

Mr. GRIER. In what direction?

Commissioner GARRETSON. In the direction of using their influence over their parishioners?

Mr. GRIER. None whatever.

Commissioner GARRETSON. A contribution is never held up on account of an undesirable man occupying the position?

Mr. GRIER. It never has been.

Commissioner GARRETSON. That is all, Mr. Chairman.

Acting Chairman COMMONS. Mr. Grier, we are very much obliged to you.

We will call the next witness. Is Bishop Busch present?

TESTIMONY OF THE RIGHT REV. JOSEPH F. BUSCH.

Acting Chairman COMMONS. Give your name and address.

Bishop BUSCH. Joseph F. Busch, Bishop of Lead; residence, Rapid City, S. Dak.

Acting Chairman COMMONS. You have taken an interest in this question of the Sunday work, I believe, in Lead. Have you any knowledge of the number of people that work on Sunday?

Bishop BUSCH. I haven't any knowledge of what number of people work in the mines except indirectly as far as the people of our denomination are concerned.

Acting Chairman COMMONS. Do you know how many of your denomination there are of that kind?

Bishop BUSCH. Well, when I first came up here we took a census and we found about 665 wage earners who were supposed to be members of our congregation.

Acting Chairman COMMONS. Are those underground workers?

Bishop BUSCH. I supposed that the greater percentage were, although they are distributed among a great many other departments.

Acting Chairman COMMONS. In the Sunday work, what way have you found that it conflicted with their attendance?

Bishop BUSCH. We found that it was seemingly impossible physically for perhaps the larger number to attend church regularly as the church regulations expected.

Acting Chairman COMMONS. What are those regulations?

Bishop BUSCH. Well, they are supposed to attend the morning service, which we will call the mass.

Acting Chairman COMMONS. At what hour is that?

Bishop BUSCH. Well, we tried to arrange the hours to suit the convenience of the men. We had services as early as half-past 4 in the morning, and then again at 6, or a little before 6, 7, 8, 9, 10, half-past 10—at different times; but we found we could not find a single hour that would suit our purpose and would serve the majority.

Acting Chairman COMMONS. Why did you put it at 4.30?

Bishop BUSCH. Because some of the men came off of their shift work at half-past 3 Sunday morning, and we thought if they would come to church

before they went home for rest, that would serve their convenience. That was only an experiment for a few months.

Acting Chairman COMMONS. How did that result?

Bishop BUSCH. It did not prove satisfactory.

Acting Chairman COMMONS. Why?

Bishop BUSCH. I suppose they came from their work tired and were anxious to get back home.

Acting Chairman COMMONS. Well, then, the next shift goes on at what time?

Bishop BUSCH. There are seemingly different hours for different departments. We found quite a number of them who went to work at 7 o'clock in the shops, etc., and for the convenience we had the 6 o'clock service. That seems to suit perhaps a larger number than the other way.

Acting Chairman COMMONS. Six o'clock?

Bishop BUSCH. A quarter to 6, I believe, it is just now.

Acting Chairman COMMONS. Does that suit the underground men?

Bishop BUSCH. Why, I don't know how many of the underground men are satisfied that way.

Acting Chairman COMMONS. You do not know whether it is of more advantage to the shop men?

Bishop BUSCH. And then this is to be taken into consideration. There are differences each Sunday; one man will work one Sunday morning, and then the next Sunday he will go on about noon, and so on. Then there is the change between the day shift and the night shift again, so that makes a great deal of irregularity. And it is practically impossible to suit our church services to meet the situation.

Acting Chairman COMMONS. How long were you in charge of the church?

Bishop BUSCH. I took charge of the church here in June, 1910. Of course, I have lived here personally until last spring.

Acting Chairman COMMONS. About three years?

Bishop BUSCH. Yes.

Acting Chairman COMMONS. Did you find there were a certain number of employees that would lay off Sunday in order to attend church?

Bishop BUSCH. Well, I daresay there may have been a very few; but very few indeed.

Acting Chairman COMMONS. That would do it regularly?

Bishop BUSCH. Yes.

Acting Chairman COMMONS. Did you ascribe this to the desire of the men to make more money?

Bishop BUSCH. I am satisfied in a certain number of cases that was the reason; but I am also satisfied that a certain number felt that they would be more or less at a disadvantage if they took advantage of the option that is said to have been extended to them.

Acting Chairman COMMONS. What was the nature of this option as you understand it?

Bishop BUSCH. Well, in October, 1911, I took up this matter in a rather formal way. I drew up what I thought a declaration of the Sunday situation demanded. I advised with several people who were more or less in touch with the company—and I felt that I was impartial in every way—and I published the declaration. Seemingly it met with considerable favor. There was an association of the clergymen of the other churches who held their regular meetings, and they immediately indorsed this proposition. I looked for a copy of their resolution, but I must have mislaid it.

Then the superintendent happened to be away at the time that I sent him a copy, but he assured me that on his return he would look into the matter, and if Sunday observance could be arranged he would do all that was possible toward that end.

A few weeks after that I was told by some of the men that word had been sent through the mine by the shift bosses reminding them that according to an old rule of 25 years' standing it was an option with any workman that Sunday observance would not be made obligatory, but that according to—

Acting Chairman COMMONS. You mean Sunday work?

Bishop BUSCH. That Sunday observance would not be made obligatory—nobody would be obliged to lay off Sunday—but that those who wished to lay off could do so by giving notice on the previous Saturday to the shift boss or to the timekeeper's office. When this information was given to me I inquired of the company whether this report was authentic, and I received in answer a letter of the superintendent, which I have, in which it is stated that word was

sent to the timekeeper's—through the timekeeper's—office by the shift bosses that Sunday observance would not be made obligatory, but that, as I stated, those who wished to lay off could do so by giving notice on the previous Saturday.

Well, with that in my possession, I was also told that I could make any use of it I wished. I announced from the pulpit I would hold the individuals responsible for Sunday observance; that it was optional; it was their duty to take advantage of the option. And I was rather severe, some of them, at least, thought on this matter in insisting on this obligation on their part. But some of the men told me then that they were afraid to take advantage of the option; they were afraid of the fact that they would be discriminated against in some way or other. And so I took the matter up with the company, and I informed them that while I considered the offer made in good faith there were some of the men who were afraid to take advantage of it. But the company insisted that it was made in good faith and that they had no reason to fear. But, I said, the fact exists that they do fear some discrimination, and I asked the company to use its influence.

Well, I was told, of course, that they would hesitate about doing something that might seem to interfere with the personal liberty of the men. Then I was also told that when the shutdown occurred agents were sent out soliciting employees, and that one of the inducements held out to them was that they could work here seven days, if they wished, every week, and that some of them had come here with that understanding and would feel that they had a grievance if the mine would shut down.

So I admitted there might be many things to consider, and that at that time I was not asking at all for absolute Sunday observance. I merely asked the company to grant me these things to create public sentiment in an effort to inspire Sunday observance. I asked them to give me a letter indorsing the Sunday-observance movement, saying that they would be glad to have their employees take advantage of this option that was given to them in good faith. Well, that letter was denied.

I felt that I had exhausted my efforts with the local management. I had been under the impression that Mrs. Hearst was the majority stockholder of the concern, so I undertook to write her a private letter and told her of what my sentiments were and that I understood that she was the majority stockholder, and that the public interest and obligation would rather expect her to be responsible for conditions if she was, and I asked her to have some independent neutral examination made of local conditions.

She answered me that she was only the part owner and that she left all the details to the local management. I wrote back to her, saying that I understood she was the majority stockholder and therefore I insisted, if that was the case, that she have an independent investigation of conditions made, because I felt they were very unsatisfactory to a very large number in the community. Then, of course, I felt that it was my duty to insist upon Sunday observance, as far as possible, and about a year ago at a convention of Catholic societies in Milwaukee I was asked to speak about the conditions of labor in the mines. I had not expected to be put on for that subject. I came there and was confronted with the subject. I told them my only experience was my three years in Lead, and I tried to explain the situation as well as I could. Some of the statements were taken up without the qualification I thought I had succeeded in making at the time, were published broadcast, and created a great deal of indignation when the reports reached here.

There was a mass meeting called by the mayor, participated in by a large number of the citizens, in which they seemed to condemn my actions very roundly.

When this news reached Lead I was told by one of the heads of one of our Catholic societies that the superintendent had called him into his office and said to him that he would hold the Catholics here responsible for my actions. Considering the general feeling that I was satisfied existed here, I felt that that was rather a serious threat, and I appealed to the governor to have some investigation made through the attorney general's office. The governor did not directly answer my appeal. When the mass meeting was called, I telegraphed to the governor, and he answered me that he could not do anything to interfere with this particular mass meeting. But I wrote back to the governor that that was a secondary matter, the mass meeting, that I thought the whole condition deserved an investigation; that the nonobservance of Sunday was reaching such a stage where it was a serious menace to the peace and well-

being of the community. But there was nothing done, and the attorney general wrote back that he had no more authority to institute proceedings than any private citizen—than I myself had. Then I wrote to the Commissioner of Labor in Washington and was assured that they would take the matter up when they got to it.

Shortly after the membership of this commission was organized, and I took up the matter with the commission, and I am very thankful to the commission for the great interest that they have taken in this matter and for the fact that they have placed Lead in their itinerary.

I feel that the conditions in Lead in many ways are away beyond anything that exist in any similar industrial center. I have always been very anxious to give my unqualified indorsement for all of the excellencies that existed in the community; but I have always also felt that the influence of this corporation was so overwhelming in this community that if it was not used in the proper way either consciously or unconsciously, there was much danger of a great deal of harm being done. And I did feel, and I do feel that there are certain elements that belong to the natural heritage of men that consciously or unconsciously are not taken into account in some of the activities in this community. And among them I believe is the disregard of the necessity of one day's rest for the workmen, and for one day's worship for the man of religion. Now, my experience from a religious standpoint is that our religious work can not be carried on in a normal way under existing conditions. We have tried every expedient that I had ever seen, heard of, or read about, and I have gone backwards instead of making progress. I have tried out every possible thing, and my experience is reechoed by almost every priest who has exercised the ministry here during the last two years.

Acting Chairman Commons. Do you recognize any necessity on the part of industry to operate continuously?

Bishop Busch. I asked that question, and I was told, just as you were informed a little while ago, that they were laid off for six weeks at one time, and that the thing could be repeated any time when it would be desired.

Acting Chairman Commons. That is, that they had discontinued Sunday work altogether?

Bishop Busch. Yes; for six weeks; and that they could discontinue it again; that there was no reason why the mine property, at least, needed to be operated on Sunday—the underground work. I was told that possibly they would have to enlarge their bins, etc., but even that was denied by an officer of the company. And I noticed in a United States report on mining in South Dakota and Wyoming, that at the end of 1913 there were over 2,000,000 tons of ore loose in the stopes. I understand the capacity of the stamp mill is less than 5,000 tons a day, so that they could run 40 days without blasting any more rock, according to my understanding.

Then, the objection was made that it would be a great loss to let the fires go down and get up steam again on Monday. But with the introduction of the hydroelectric plant that ought to be obviated. In fact, I was assured it was not an impossibility to observe Sunday far greater and more than it is observed. And it was my contention that not only the individual man but also the company should recognize Sunday, because it is a State law to abstain from all work except such as is of necessity.

We are all, the churches, chartered corporations that are authorized to do their work, and the only day we can do it effectively is the day that the law reserves to us, and I feel that the example of the company influences a great many others to work on Sunday that otherwise would not. This company is so influential that any stand it takes on any question, whether it is political, moral, or religious has a great weight with a large number of the men, and I feel and I felt that the company, if they would merely say that they really desired to see Sunday observed, that that would be sufficient argument for a large number to quit work on Sunday. I know that in all, or in most other industries that have to work on Sunday, the hardest objection to Sunday observance was the desire of the men for the Sunday wage.

The Pittsburgh Steel Trust found that its greatest obstacle to persuade men to give up their three, three and a half, or four dollars a day, and I am sorry to say there are a large number now that seem to feel that they need that Sunday wage. In fact, some of them say they do. They do because of their exaggerated way of living, in many cases.

Acting Chairman Commons. Have you inquired into the practice of other mining communities so that you are informed as to what is the practice?

Bishop BUSCH. No. As I said, my experience was almost entirely limited to my three years here in Lead.

Acting Chairman COMMONS. Have you acquainted yourself with legislation on this subject in other countries?

Bishop BUSCH. I know that this question of one day's rest in seven is one of the most popular legislative problems that is concerning legislatures. I know that in quite a number of countries during the last five or six years that has been introduced. I know that at their annual convention a number of organized labor societies have requested this one day's rest in seven, and I know that the Progressive Party as well as the Socialist Party have had that in their program.

Acting Chairman COMMONS. And from the standpoint of the religious communities, would that be a satisfactory solution—one day in seven?

Bishop BUSCH. The theory is that conditions are such that if one day's rest in seven was made obligatory it naturally would get to be Sunday for the very large majority; and all the other people who are not laboring who can keep one day rest in seven keep the Sunday that the religious people do. That it is a legislative enactment, etc.; that if the industries would grant one day's rest in seven for the vast majority it would be the first day, from economic reasons, too, they say.

Acting Chairman COMMONS. Where you have an industry that operates continuously?

Bishop BUSCH. I understand that.

Acting Chairman COMMONS. To distribute the men through the year?

Bishop BUSCH. Certainly. Our Sunday law does not require absolute Sunday observance. It is only when it is reasonably possible, and I recognize that in these industries there are departments and there are many men who absolutely would have to be employed on Sunday.

Acting Chairman COMMONS. You think they would have enough Sundays free throughout the year under a one-day-in-seven principle?

Bishop BUSCH. Yes; I do. And I tried to have a law introduced into our legislature to that effect, but it only got as far as the committee.

Acting Chairman COMMONS. I think such a law is now in force in New York City.

Bishop BUSCH. Yes; I believe it is, and several places in Europe have indorsed it within the last few years; also in South America.

Acting Chairman COMMONS. Have you ever lived in other communities which have Sunday work such as this community has?

Bishop BUSCH. No; I never did.

Acting Chairman COMMONS. So you can not make a comparison with those?

Bishop BUSCH. No.

Acting Chairman COMMONS. Would you say that the Sunday work has an injurious effect not only on the working people, but on their homes as well as on their churches?

Bishop BUSCH. Well, it seems to me that it can not be without evil effect.

Acting Chairman COMMONS. In what way?

Bishop BUSCH. Why, I think that home life is interfered with to a very large extent. The way men work it is not possible for them, even though they only work eight hours a day, it is not possible for them to see their families for a normal period of time; some of them work two weeks in the night, and do not see their children at all, and the next time they work two weeks in the day, and these things interfere. And I do not believe there is a proper understanding of family affairs, domestic economy, I think, suffers a great deal. I think all the domestic relations are affected by it.

Acting Chairman COMMONS. You state this from your observation of the communicians in the community?

Bishop BUSCH. Yes; I think so. Yes; I think that the moral standard is not as high here as it would be with Sunday observance, by far; otherwise I would not have agitated the question at all. That was my only motive.

Acting Chairman COMMONS. On the physical side, the fact that they had eight hours' work a day, which makes 56 hours a week.

Bishop BUSCH. It has been contended by those who are experts on the question that a man can not revive except he has one day off in seven. That has been up as a scientific theory and men of authority seem to uphold it, that there is this little loss every time and it takes the whole day to get back to where they were at the beginning of the week.

Acting Chairman COMMONS. In a community of this kind where recreation and circuses and things of that kind are not frequent, is it not likely that the situation would be different from what it would be in other places?

Bishop BUSCH. Well, I don't know as the circuses come around very much on Sundays anywhere.

Acting Chairman COMMONS. Well, cut out the circuses; deal with the general recreation.

Bishop BUSCH. And other forms of amusement. I don't know; of course, they are limited here in some ways. Still, we have beautiful surroundings here, and there are many ways of having outings that are hardly possible for a great many other communities. And if we had Sunday observance here, we could originate a great many forms of recreation that are now absolutely impossible. Now, we could hold special meetings for different sections; different church societies, etc., which we find it is impossible to do now.

Acting Chairman COMMONS. Your observation, then, is that this Sunday work is practically universal?

Bishop BUSCH. It has got so bad that I felt in conscience bound to protest against it. Work that was absolutely unnecessary was being carried on. This great recreation building here was built Sunday and week day right along. The mortar grinder was so busy one day when the bishop of the Episcopal Church was holding a function in the near-by church that he told me afterwards that he was shocked at the situation. And the children coming to church on Sunday would see all this kind of work, and the example of this large, influential company engaging in absolutely unnecessary work on Sunday was demoralizing everybody else. They would be carrying around furniture, carting off ashes, and doing everything of that kind.

Acting Chairman COMMONS. Do you think that legislation should be adopted on this subject of one day in seven, even though the workmen desire to work?

Bishop BUSCH. Yes, sir; I certainly do.

Acting Chairman COMMONS. On what ground?

Bishop BUSCH. Well, that it is necessary for man's own welfare, and that the moral interests of society require a day of rest and a day of worship. These men that work in the mines have got to have ideals, and if they don't get them in church or some place similar, why they are going to grow more and more materialistic and socialistic.

Acting Chairman COMMONS. Well, that would take away from them their liberty and freedom for doing as they pleased with their time?

Bishop BUSCH. Yes, sir; but I don't believe that a man has absolute liberty to do as he pleases in every possible way. We take it away from them in a great many other things. He is not allowed to go down here and take a glass of beer at 10 o'clock at night.

Acting Chairman COMMONS. But still—

Bishop BUSCH. When he marries a wife, he is supposed to take care of her.

Acting Chairman COMMONS. This is somewhat different from that. This is an instance where a man is desiring to work for the good of his family to secure more earnings for them.

Bishop BUSCH. Yes; but the question is whether it really is for the good of his family, whether his family isn't suffering a great deal more from his work on Sunday. I have heard men tell me time and time again that after they try both ways, that they have never prospered in the work they did on Sunday, that they can get along just as well. And I have been told by representatives of the company that they thought the company would be at an advantage if the men only worked six days in the week.

Acting Chairman COMMONS. Your feeling is that this policy proceeds from the stockholders, then?

Bishop BUSCH. I am not inclined to place the responsibility anywhere. I just simply think that it is a feature that is not sufficiently appreciated. I don't think there is any conscious policy about it at all. It is just simply going in the line of least resistance, just because there is not any principle that suggests some other method. And I believe that the other method should be insisted upon.

Commissioner O'CONNELL. It is just like Topsy; just grew.

Bishop BUSCH. Yes.

Acting Chairman COMMONS. As far as you know, it has always been the practice in the past?

Bishop BUSCH. Yes; and I believe in early times, perhaps, it was more or less necessary and justifiable; but I think we have outgrown those days, and I think our responsibilities are greater. Everybody, these corporations and society, is becoming more and more conscious of its responsibility to the rights of mankind and manhood.

Acting Chairman COMMONS. Suppose the company, suppose the State of South Dakota should legislate on this subject and arbitrarily establish this proposition that nobody should work more than six days, should not only impose penalties on the company but also on the employee; is it likely that this company could secure such a capable body of workmen as they evidently have?

Bishop BUSCH. With all the other advantages that they offer, I do not see why they should not.

Acting Chairman COMMONS. But considering that throughout the country in other mining communities they can work seven days.

Bishop BUSCH. I believe that it would only be a few years before they would flock here rather than go to the other places.

Acting Chairman COMMONS. Well is that your opinion?

Bishop BUSCH. That is my honest conviction.

Acting Chairman COMMONS. Is that opinion based on what you believe?

Bishop BUSCH. Well, everybody who I have heard discuss the question, who have tried both ways, working seven days out of the week and six days out of the week, were satisfied that he was better off when he laid off on Sunday.

Acting Chairman COMMONS. Even though he—

Bishop BUSCH. Lost that money.

Acting Chairman COMMONS. His earnings were about 15 per cent decreased?

Bishop BUSCH. Yes.

Acting Chairman COMMONS. That is, he said so, taking all things into account. You believe that is the general feeling?

Bishop BUSCH. Yes; I do.

Acting Chairman COMMONS. Do you have any questions, Mr. Lennon?

Commissioner LENNON. Yes.

Acting Chairman COMMONS. Mr. Lennon wants to ask you some questions.

Commissioner LENNON. What effect do you believe it would have on the moral fiber of the people of this country if all industries were carried on continuously seven days in the week?

Bishop BUSCH. Well, I don't know as there would be much moral fiber left. I think it would hasten the things that we are all afraid of.

Commissioner LENNON. It would be conducive to the growth of irresponsibility?

Bishop BUSCH. I think so; yes, sir.

Commissioner LENNON. I think so. I agree with you.

Bishop BUSCH. I think what this country lacks at this time is a sense of responsibility, is conscience; and I don't see anywhere else to build up conscience except on Sunday and through the churches.

Commissioner LENNON. That is all, Bishop.

Commissioner GARRETSON. Bishop, do you believe that the regulation by law of the days of labor is any more an invasion of the personal rights of man than the Ten Commandments are?

Bishop BUSCH. No; I don't.

Commissioner GARRETSON. Precisely the same character as the quarantine laws, vaccination, and all requirements of that character, which are just as much so, and still considered absolutely necessary for the common good?

Bishop BUSCH. Indeed, I believe that an industry that has the influence and that can by its influence create a sentiment in favor of Sunday observance is criminally wrong—is guilty of wrongdoing by not exerting that influence. I believe that corporations are responsible just as well as individuals.

Commissioner GARRETSON. Isn't it a fact—no, I will state it another way. Is it your opinion that the tendency on the part of an employer, whether corporate or individual, to require men to labor seven days is anything else than a part of the modern tendency to put the dollar ahead of everything else?

Bishop BUSCH. No; I think that is—I don't know whether that is consciously done by employers generally that are working for seven days, but it is the ignoring of a certain feature that is necessary for man's well-being.

Commissioner GARRETSON. If it was done unconsciously or subconsciously, is it not an evidence that that very evil has got so great a hold?

Bishop BUSCH. Exactly.

Commissioner GARRETSON. That they do it subconsciously?

Bishop BUSCH. Exactly.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. Any questions, Mr. O'Connell?

Commissioner O'CONNELL. I understood you to say, Bishop, after this address that you delivered at Milwaukee, that there was some form of a meeting called here, a protest meeting of some kind?

Bishop BUSCH. Yes, sir.

Commissioner O'CONNELL. For what purpose?

Bishop BUSCH. To set the country at large aright in regard to the statements—or the misstatements that I was supposed to have made in that address.

Commissioner O'CONNELL. And your statements were that the mines here were operating seven days a week?

Bishop BUSCH. I have a copy of the address here.

Commissioner O'CONNELL. Will you just file it with the commission?

(The paper so presented was marked "Exhibit No. 1, Witness Busch, August 8, 1914.")

Commissioner O'CONNELL. Well, this is rather historical of the whole situation, as I catch it?

Bishop BUSCH. Yes.

Commissioner O'CONNELL. Can you briefly just give us the principal points in your address?

Bishop BUSCH. The burden of my address was that I maintained that human nature was essentially selfish, and that unless that was modified by some other features, why it would always show itself in one way or the other; that I believed that was an explanation of the troubles that existed not only in Michigan, but Virginia, which at that time were having special labor troubles, and that it was quite apparent in most all mining communities, because in a mining community a miner was more dependent upon the employer than the employee of most other industries; and that from hearsay I had heard that in the early days those who had things under their control were inclined to take advantage of their position, in different ways, which I related there. But I insisted that those were very long passed conditions, and that at present in Lead we had a situation that was from a material standpoint rather preferable than most other communities had, but that in some particular item, why, there seemed to be a disregard for what I thought were the rights of the people; that in almost any direction you would turn you would feel the all-pervading influence of this company; that I had experienced it when I tried to secure Sunday observance; that I felt I had exhausted my efforts with the company; that I could not secure any public sentiment, because there wasn't any independent sentiment in the community.

Commissioner O'CONNELL. I notice you quote the figures of the corporation, its wealth and all that, its production and its ownership of property, and all that. Your idea in quoting that was to show that this corporation could well afford—it would not be a question of financial loss to them, that is, to their stockholders, if an arrangement could be brought about where a six-day arrangement of work would be brought about without loss of property and so on—that is, without proper protection to property, and that, as I gather from those whom I have talked with here, and the impression I am gathering now, that the community were aroused to an opinion that you had held that this community was an ungodly community.

Bishop BUSCH. I took very particular pains not to say a single word about the moral conditions of this community, because I believe it is a mean bird that fouls his own nest.

Commissioner O'CONNELL. Well, from what other source could they have molded the opinion here against, for instance, people of your own faith so quickly, unless it was by some method of that kind? What method was adopted here to bias, to bring that bias all at once, or so suddenly, there must have been some underlying causes?

Bishop BUSCH. They had nothing to base their action on except the newspaper reports that had come to them, chief among which was the Milwaukee Leader, which, of course, was a very socialistically inclined paper, and which had some very, very glaring headlines and things of this kind. I brought the copy with me if you care to see it.

Commissioner O'CONNELL. Yes, just make a copy.

(Which said quotation from the Milwaukee Leader, of Tuesday evening, August 12, 1913, vol. 2, No. 210, is in words and figures as follows, to wit:)

[Heading in red across entire page.]

BISHOP DRIVEN OUT BY GREED OF GOLD APPEALS TO FEDERATION.

CATHOLIC BISHOP SAYS CAPITALISM FORCED HIM OUT—HAD TO ABANDON SEE AT LEAD, S. DAK., WHEN MINE WORKERS FLED FROM INTOLERABLE CONDITIONS.

Driven from Lead, the See city of his bishopric, by the Homestake Mining Co., his flock scattered to the winds, his religion flaunted, the Right Rev. Joseph F. Busch, Bishop of Lead, S. Dak., appealed to the Federation of Catholic Societies, Monday afternoon, for support, to enable him to return to Lead and resume his duties.

As he told how the company controlled by the mother of William Randolph Hearst had crushed all independence in its employees, terrorized public authority, and even sought to censor the priest in his pulpit, the audience was roused to a high pitch.

In the early days of Lead as a mining camp, the bishop explained, wages were at the subsistence point, the miners were not permitted to own any land, houses cost an average of \$85 each, and the "cemetery was filled with the bodies of those who died premature deaths." Then conditions were somewhat improved. Underground wages were raised to \$3 a day, a company hospital was built, and the threat of a strike reduced the hours from 10 to 8.

Then came a fire that compelled the closing of the mines for several weeks, during which the young, the strong, and the energetic left the city. "The fire burned out the heart of the community as well as out of the mine," was the way the bishop described it.

MAKES ATTACK ON UNIONS.

When the mine resumed work there was discontent, due, so the bishop seemed to think, to "agitators" from the Western Federation of Miners. "Socialism, anarchy, and Irreligion were preached upon the very streets," he said, betraying that he had not himself heard the speeches, else he would have known that this combination is one never found.

The men threatened a strike. The mine owners retaliated with a lockout. Then came the long struggle and the opening of the mines under the "card system," by which each applicant for work pledged himself never to join a labor union.

"Under these conditions, between 75 and 80 per cent of the Catholics left the town," said the bishop, unconsciously paying a splendid tribute to the faithfulness of his flock to the principles of unionism.

At this point he became bishop of Lead. He came in as the company was importing scab miners and guards "Without whom," naively remarked the bishop, "there would have been serious trouble." A moment later he added that these guards and miners were the "Riffraff of all the world, who were given fine furniture, better houses, and wages higher than the old employees had ever received."

Wages were now paid at the "Hearst Mercantile Co." store with the credit man standing close to the line as they drew their envelopes. If a man received any cash, he was at once asked, "Why don't you spend your money where you get it?" He told how the women, ignorant of the business methods, were induced to exceed their credit account early in the month and were left practically starving during the days just before pay day. So completely were the men kept in debt that the bishop declared that they dared not move away, but were practically enslaved.

LOST STANDING WITH MEN.

In this white-hot blaze of the class struggle Bishop Busch tried to remain without being scorched or without taking sides. "Soon after I came," he said, "I remarked that it seemed to me that some sort of a union was necessary. This at once aroused the suspicion of the company. A few weeks later I preached a sermon against socialism and then I lost standing with the other side of the camp."

There was but one power in the town, that of the mine superintendent. When a mild epidemic arose, the health officer closed the churches, but left the

saloons, the company store, and the mines to run. The bishop remonstrated with the health officer and was laughed at, carried his complaint to the mine superintendent, only to be laughed at again.

The bishop mildly sought to secure sufficient leisure on Sunday to enable his people to come to mass. This started the storm that drove him from the city. After a campaign of begging the superintendent graciously permitted the shift bosses to tell the men that those who wished might stay home on Sunday. Then the bishop preached a sermon on Sunday observance, and said it was up to the employee now. But he soon learned that those who asked for Sunday off were given "Monday and Tuesday and Wednesday, and all the other days of all the other weeks off." The bishop bowed to that "economic determinism" that he did not believe in. "I therefore receded from my position and said to my people, 'If you think that you will lose your jobs by coming to mass, you will be excused from your church obligations.'"

UP AGAINST CAPITALISM.

He begged the superintendent for a letter that would permit Catholics to be absent on Sunday without penalty. But the spectacle of a Catholic bishop asking that his people be permitted to observe the forms of their religion did not appeal to the superintendent. "although he is a 'Turk' by birth and by marriage," added the bishop. "He said he could not think of thus interfering with the personal liberty of the men. But I have noticed that he did not worry about personal liberty when on election day the attorney for the company made out a ticket and handed it to the men, and they knew that if they did not see that that ticket was elected they would lose their positions."

Worn out at last in his efforts to move the superintendent, he went after the "woman higher up," Mrs. Phoebe Hearst. Letters to her brought only the reply that she could do nothing, although, says Bishop Busch, I have positive proof that she is a majority holder of the stock in the Homestake mine. But the letters came back to the superintendent, and the power of the local czar was set in motion. Supplies for the bishopric, his church, and his beloved school fell off. An appeal for aid brought another lesson in economic determinism from the superintendent, who said: "We are in Lead for the Homestake Mining Co. first, last, and all the time, and whoever dislikes that fact can move out of Lead."

By this time the men feared to attend church because of the spies. They seemed to have lost interest in their religion. "When it is a question of bread and butter," added the bishop in his unconscious exposition of economic determinism, "many think more of it than of their religious consolation."

So, puzzled and defeated for the moment, Bishop Busch was driven out of the city of his episcopacy, "an exile from his see city," he explained; he was then living on a little farm near Rapid City, where an assistant raised sufficient vegetables to maintain him. He begged that publicity be given to his story, that the federation extend its aid, and that the Lead parish be given into the charge of an order. "They can kill a man, but not an order," he said.

DUFFY NOT IN LINE.

The report of the Rev. Peter E. Dietz, secretary of the social service commission, which had charge of the Monday afternoon meeting in the auditorium, showed that 3,264 pamphlets were distributed last year in the war against Socialism and in the advocacy of the reform of the commission.

Frank Duffy, general secretary of the United Brotherhood of Carpenters and Joiners, spoke on apprenticeship and industrial education, and took a point somewhat at variance with the general drift and sentiment of the convention, since he held that industrial education must be a function of the public schools.

The Rev. Salvatore Cianci, in his discussion of "Social work among immigrants," complained that the Italians are leaving the Catholic Church. "They are not converted to Protestantism," he explained. "They are either Catholics or nothing."

Joseph Jorzan Devney, president of the Cleveland Lyceum Bureau, advocated a law restricting fortunes to \$100,000.

Denying that the Catholic Church interferes in secular matters, and affirming that "The partition of jurisdiction into the spiritual and the temporal

is a principle of Catholicism; no less is it a principle of Americanism," Archbishop Ireland answered those who affirm that the Catholic Church is a gigantic machine, at the auditorium Monday night.

IRELAND TALKS OF POLITICS.

He declared that the Catholic Church was under much more favorable conditions here with religious freedom than in those countries where the church and state are united. As to politics, he pointed to the division of opinion among Catholics to prove the absence of any concerted action. "As a matter of fact, legions of Catholic voters believe me hopelessly wrong in politics," he said, amid laughter. "As a citizen I may regret that my political influence is no wider; as a Catholic I am glad of the independence of the citizenship of America." He ridiculed the charge that the Catholic Church was un-American, saying, "Shall we call Almighty God a foreigner? yet He is not exclusively the God of America," and he described the international character of the church as follows: "The Catholic Church is extra-American, supernational, begotten for all nations, not for America alone."

YUAN SHI KAI CATHOLIC.

That Yuan Shi Kai, the present head of the Chinese Government, is a close friend of the Catholic Church, and that his private secretary and his minister of foreign affairs are both Catholics, was stated by Bishop Koester, of China, at the business session of the federation Tuesday morning.

According to Bishop Koester the Catholic missions have great power in the present administration, which he believes will be permanent. The recognition of the Republic of China by the United States, he says, has helped greatly to increase the friendly spirit between the two nations.

The Rev. Joseph Husslein, S. J., called upon the convention to protest against the aggression of the Portugese Republic upon the Catholics of that country. He drew a touching picture of the sufferings of the Catholic orders and priesthood in Portugal, and declared that the revolution was wholly against religion and in no sense political. According to the Rev. Husslein the present Government has suppressed all freedom of speech and of the press, and has persecuted the sisterhoods, that, so he claims, were engaged only in works of mercy. He presented a resolution calling for action by the President and Congress, and urged that similar resolutions be adopted by all the federated societies.

Archbishop Koudelka pleaded the cause of the Catholic Colonization Society. Like many other speakers at the convention, he lamented the fact that immigrants drift away from the church, and urged that by the formation of colonies based on religion and race this could be prevented. He closed by calling attention to the fact that in the diocese to which he had just been appointed, that of Superior, there "are millions of acres of vacant land which should be settled by Catholic colonists."

SHOULD TEACH RELIGION.

"The failure to teach religion in the public schools has produced a population of 50,000,000 people who never go to church," was the complaint of Archbishop James A. McFaul, Trenton, N. J., in addressing the Catholic women in the St. John's Cathedral auditorium.

"The 50,000,000 don't know the commandments," continued the archbishop, raising his voice, "but, thank God, they are not like the atheists of France.

"The failure to teach religion in the public schools is the reason for the slow death of Protestantism" he continued. "If the Catholics were to abolish the parish school, they might just as well tear down the churches."

He then pointed out that there were 6,000 empty Protestant churches in the Middle West, charging that there is little religion in the homes and very little in the Protestant church. He scored those among the Protestants who were trying to surround the "virgin birth" and the "divinity of Christ" with doubt.

He said that instead of the "three Rs" there should be "four Rs" taught in every school, adding religion to reading, 'riting, and 'rithmetic.

At Monday's session of the Catholic women who are planning to form a national organization, Archbishop Sebastian G. Messmer promised that the discussion of women's suffrage would not come before the meeting. He said that nothing would be said either in favor or against granting women the ballot.

Archbishop McFaul forgot all about this promise as he launched into a diatribe trying to show that woman's place is in the home.

"Children are burdensome to women who like to eat at restaurants," was one of his witticisms which received some applause. "The father should engage in political affairs while the mother confines her attentions to the home. She is the head of the household. She moulds the life of the child and tends to its physical, intellectual, moral, and religious welfare.

"You have heard a great deal about women's suffrage. The church has not yet spoken on this subject. Whether the mother has the ballot or not, she is the head of the household; she is the queen of the home."

DISCUSSES VICE.

Archbishop McFaul then took up the question of vice, and gave some attention to white slavery. He told of conditions in New York City and Philadelphia, and read from the reports on vice that have been made as the result of extended investigations.

"Very few women become immoral as the result of their own volition," he declared, and then pointed out that there was a conflict of opinion of the question of how much low wages had to do with driving women into lives of shame.

He declared that the Catholic women could do much good by seeing to it that working girls were properly housed and protected against vice.

DISCOVERS REPORTERS.

After the archbishop had finished speaking it was suddenly discovered that several reporters were listening to the proceedings. Before the regular order of business was taken up these were promptly ousted, along with all non-Catholic women who happened to be attending the conference as visitors. Several women spoke in favor of keeping the meetings open to all, but this feeling was promptly squelched.

It seems assured that Miss Elizabeth G. Marshall, Milwaukee, will be named first president of the Catholic women's national organization now being formed. The committees on constitution and organization made their reports Tuesday. Mrs. Rose Rittman, Chicago, is presiding at the business sessions.

Bishop BUSCH. Of course, if at that time they hadn't grown indignant so quickly, if somebody had given me a chance to say something about the matter, why, probably, I could have set myself right, but things were boiling so that it was impossible for me to get near it. I could not expect to get any help from the local newspaper, because I didn't feel that the local newspaper was impartial. I felt that the local newspaper was very much in sympathy with that sort of thing.

Commissioner O'CONNELL. So I see the influence that you speak of having spread has grown over this newspaper, too?

Bishop BUSCH. Yes.

Commissioner O'CONNELL. And the public press of the city is within the grasp of the same influence?

Bishop BUSCH. I think so.

Commissioner O'CONNELL. And it meant, possibly, that there is no free press nor free speech here?

Bishop BUSCH. Hardly; I think even outside, even Deadwood, I think hardly anybody lives in the Hills who has not more or less fear and suspicion of this company. I came here with the most optimistic feeling, and I always wished to give a man credit for honesty as long as I could. But I have felt this suspicion, and it has come to me in so many ways that I almost share it. I would be most happy if I could be disabused of it and find that there was no ground for it; but it exists here and it exists throughout all the Hills. Everybody is afraid to say a word against this great company.

When I first came to Lead I remarked that this was a one-man town. Do you believe me, the men shielded their mouths with their hands and whispered to me. "You are right."

Commissioner O'CONNELL. I suppose the one man referred to was the manager of the company?

Bishop BUSCH. Well, the Homestake Co. of course.

Commissioner O'CONNELL. That same influence applies, I suppose, to the political life in the community.

Bishop BUSCH. That is the impression.

Commissioner O'CONNELL. Does the fact of the election of certain men to office to handle the affairs of the community indicate that? Are they employees or ex-employees, and so on, of the company?

Bishop BUSCH. I was told—

Commissioner O'CONNELL. Were they in the employ when elected?

Bishop BUSCH. I was told by a gentleman who acted as city attorney here some years ago, that during his term of office whenever any important question came up that might have in any way had any interest for the company, it was always laid on the table until the next meeting.

Commissioner O'CONNELL. That would indicate that some person had to be seen some way?

Bishop BUSCH. Well, that is what I was told.

Acting Chairman COMMONS. Any other questions?

Commissioner GARRETSON. No.

Acting Chairman COMMONS. We are very much obliged to you, Bishop.

Is Rev. Mr. Warren present? Will you take the stand, Mr. Warren?

TESTIMONY OF REV. D. C. WARREN.

Acting Chairman COMMONS. Will you give your name and address and position to the reporter?

Rev. WARREN. D. C. Warren, Lead City, S. Dak., 101 Wall Street.

Acting Chairman COMMONS. What is your position with the religious denominations of Lead, Mr. Warren?

Rev. WARREN. I am a member of the Methodist Church.

Acting Chairman COMMONS. What official position have you?

Rev. WARREN. I am a local elder in the Methodist Church. I am the secretary of the ministers' association.

Acting Chairman COMMONS. What is the ministers' association of Lead?

Rev. WARREN. The ministers' association includes all the ministers in the northern Hills.

Acting Chairman COMMONS. In the Hills?

Rev. WARREN. Yes, sir. It is interdenominational.

Acting Chairman COMMONS. Catholic and others?

Rev. WARREN. No; it does not include the Catholic, and I think the new Episcopal preacher here is not in, but the one that preceded him was.

Acting Chairman COMMONS. Has the ministerial association at any time during your connection with it as secretary considered this subject of Sunday work and Sunday observance in Lead?

Rev. WARREN. The ministers' association has considered the question.

Acting Chairman COMMONS. How long have you been secretary?

Rev. WARREN. This is my second year as secretary.

Acting Chairman COMMONS. You were a member prior to that?

Rev. WARREN. Yes.

Acting Chairman COMMONS. For how many years were you a member?

Rev. WARREN. Well, I have been here 29 years, and I have been associated with the ministers' association during all of its experience.

Acting Chairman COMMONS. When did this question first come up in the ministers' association, in your recollection, of Sunday observance, and Sunday work, as applied locally?

Rev. WARREN. I could not give the date only just to say that it was about the same time with Bishop Busch—if I could get that date, it would be about the only way that I could give the date.

Acting Chairman COMMONS. That is the first date that the matter was discussed in your association?

Rev. WARREN. No; I think that there was discussion preceding, a short time preceding; perhaps preceding the time that Bishop Busch took it up.

Acting Chairman COMMONS. How long before he took it up was that first discussed?

Rev. WARREN. It came practically at one time.

Acting Chairman COMMONS. It all came together?

Rev. WARREN. Yes, sir.

Acting Chairman COMMONS. This Sunday work has been continuing since you have been in Lead, has it?

Rev. WARREN. Yes, sir.

Acting Chairman COMMONS. The same practice?

Rev. WARREN. Practically the same.

Acting Chairman COMMONS. How do you account for it that the ministerial association did not take it up prior to the time that Bishop Busch took it up?

Rev. WARREN. Well, our ministerial association does not date back very far beyond that.

Acting Chairman COMMONS. About how far back does it date?

Rev. WARREN. You see the association of the preachers in Lead preceded not very long previous to that, and the association, as we now have it, includes the preachers in Deadwood and northern Hills—all the northern Hills—has perhaps been six months.

Acting Chairman COMMONS. The past six months from the present date?

Rev. WARREN. Yes.

Acting Chairman COMMONS. What was the first way in which the matter was presented to the ministers' association when Bishop Busch took it up first, and what action did the association take?

Rev. WARREN. The first action that the association took, if I remember, was that all the ministers of the association, as far as we could get them to do so, would preach a sermon on Sunday observance on a certain Sunday.

Acting Chairman COMMONS. That was the first occasion?

Rev. WARREN. That was the first occasion.

Commissioner O'CONNELL. Was that done?

Rev. WARREN. I think it was unanimously done, with the exception of the Episcopal preacher, who said that he would reserve the time at which he would preach on that subject until he would have longer time for preparation.

Acting Chairman COMMONS. For preparation?

Rev. WARREN. Yes, sir.

Acting Chairman COMMONS. Did the ministerial association adopt resolutions on the subject apart from this recommendation to preach?

Rev. WARREN. Yes; the month afterwards, if I remember right, they passed resolutions.

Acting Chairman COMMONS. What was the tenor of those resolutions? Have you a copy that you could file?

Rev. WARREN. I haven't a copy, but I can give the substance.

Acting Chairman COMMONS. Yes; if you will.

Rev. WARREN (continuing). Of what the resolution was.

Acting Chairman COMMONS. If you please.

Rev. WARREN. After making some general statement of the confidence that the members of that association had in the management of the Homestake Co., we expressed ourselves that we would be glad to cooperate with the Homestake Co. in any effort that they could put forth to secure a better observance of the Sunday and other reforms in the city.

Acting Chairman COMMONS. Was this resolution sent to the company?

Rev. WARREN. I believe it was.

Acting Chairman COMMONS. You were secretary?

Rev. WARREN. I wasn't secretary at that time.

Acting Chairman COMMONS. Oh, you were not; no. Was it sent to the stockholders?

Rev. WARREN. Not that I know of.

Acting Chairman COMMONS. Just simply sent to the resident manager of the company?

Rev. WARREN. I believe that it was generally known as to the position that we took.

Acting Chairman COMMONS. Are you able to state from your knowledge of the discussions held in the ministerial association what is the prevailing opinion of that association regarding the effects of Sunday work upon the church attendance in the various denominations?

Rev. WARREN. It is injurious.

Acting Chairman COMMONS. Injurious?

Rev. WARREN. Yes.

Acting Chairman COMMONS. To what extent would you say that it is injurious and interferes with it?

Rev. WARREN. That would be only a matter of personal opinion, and I don't believe it would be specially valuable.

Acting Chairman COMMONS. What is their idea about its effect upon the moral conditions of the town in general?

Rev. WARREN. Our people believe it is bad.

Acting Chairman COMMONS. And what is their idea regarding its effect on the physical condition of the working people?

Rev. WARREN. I think there is a great difference in our people in that regard when we consider that the work is an eight-hour day.

Acting Chairman COMMONS. They are divided on that question?

Rev. WARREN. Yes.

Acting Chairman COMMONS. And as respecting its effect upon the home life, of their pursuance of it, what is their opinion?

Rev. WARREN. The opinion of the church people all throughout, so far as I know, is that one day in seven should be exempt from labor.

Acting Chairman COMMONS. Has the association taken any action as to whether this should be strictly one day in seven or simply the one seventh day—you understand the difference?

Rev. WARREN. One day in seven. By the way, the federation of churches—of the Christian churches in America—are making this slogan for their special work for the past few years.

Commissioner LENNON. I am on the commission that is carrying that out.

Rev. WARREN. How?

Commissioner LENNON. I am one of the Federal commission that is engaged in the work, representing the Presbyterian association.

Rev. WARREN. Our conference passed a resolution—our annual conference passed a resolution along that same line, favoring the one day in seven for industrial rest.

Acting Chairman COMMONS. Have you any questions, Mr. Garretson?

Commissioner GARRETSON. No.

Acting Chairman COMMONS. Have you any, Mr. O'Connell?

Commissioner O'CONNELL. No.

Acting Chairman COMMONS. Very much obliged to you, Mr. Warren.

TESTIMONY OF MR. JAMES KIRWAN.

Acting Chairman COMMONS. Will you give your name?

Mr. KIRWAN. James Kirwan; employed in the State auditor's office, in the city of Denver, State of Colorado.

Acting Chairman COMMONS. Mr. Kirwan, are you a member of the Western Federation of Miners?

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. How long have you been a member of the association?

Mr. KIRWAN. About 16 years.

Acting Chairman COMMONS. When did you first occupy an official position?

Mr. KIRWAN. In 1903 I was appointed member of the executive board of the Western Federation of Miners for this district. This district included South Dakota, Wisconsin, Michigan, and Minnesota.

Acting Chairman COMMONS. What was your local organization at that time?

Mr. KIRWAN. I belonged to the Terry Peak Miners' Union, a mining camp 3 miles from here.

Acting Chairman COMMONS. Were you working in the mines at that place?

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. What was your line of work?

Mr. KIRWAN. A miner.

Acting Chairman COMMONS. How long had you been employed or followed the mining occupation?

Mr. KIRWAN. About 10 or 11 years at that time.

Acting Chairman COMMONS. Were you on the executive board when they instructed Mr. Tracy to come here?

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. Do you remember at that time whether you instructed others to come with him?

Mr. KIRWAN. No, sir; I don't recollect at that time.

Acting Chairman COMMONS. Do you remember whether others were instructed?

Mr. KIRWAN. No, sir; I don't think there was anybody just at that particular time instructed to come here.

Acting Chairman COMMONS. Well, following his coming here?

Mr. KIRWAN. Yes, sir; afterwards.

Acting Chairman COMMONS. After the lockout?

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. How many others were instructed to come here?

Mr. KIRWAN. Mr. Terzich, a member of the executive board, who was an Austrian, came here, and Mr. Lowney, who was a member of the executive board, came here from Montana.

Acting Chairman COMMONS. What nationality is he?

Mr. KIRWAN. Only Irish.

Commissioner O'CONNELL. Just Irish.

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. What others?

Mr. KIRWAN. I remember Mr. Davidson from British Columbia came here.

Acting Chairman COMMONS. Then there were of English-speaking four, and one Austrian?

Mr. KIRWAN. Yes, sir; they were all members of the executive board.

Acting Chairman COMMONS. By Austrian you mean Slavonic?

Mr. KIRWAN. Yes, sir; we designate them that way.

Acting Chairman COMMONS. What instructions were given to Mr. Tracy?

Mr. KIRWAN. To use all legitimate means to get the employees of the mining companies to become members of the Lead Miners' Union No. 2.

Acting Chairman COMMONS. How did it come that the executive board was induced to take such action at that time?

Mr. KIRWAN. Previous to that time the men secured the eight-hour day through the efforts of the organization.

Acting Chairman COMMONS. When was that?

Mr. KIRWAN. In the fall of 1906. I might state during the year 1906 there was quite a revival of the mining industry throughout the country, and the executive board thought then was the opportune time to secure better conditions in those camps that had not secured those conditions. For instance, Utah, Montana, Colorado, Nevada, Arizona, and some sections of California had enjoyed the eight-hour day for years previous to that time—10 to 14 years. Some camps in California, and Lead City, Terry, and other districts in the Black Hills, the men were still working 10 hours a day. We talked the matter over and decided the time was opportune; all the men were employed and the time was ripe for action to reduce the hours of labor on those camps. The matter was talked over and the agitation was started.

Acting Chairman COMMONS. Just a moment. Did you send any national organizers at that time?

Mr. KIRWAN. No, sir; but it was started through the local.

Acting Chairman COMMONS. Through the local organization?

Mr. KIRWAN. The local organization was to take the matter up. After the eight-hour day was secured here the members of the organization felt that the men who had reaped the benefit of this eight-hour agitation should contribute their share toward building up the organization or contribute their dollar a month to the support of the organization. In addition to that the union had taken steps to incorporate sick benefit, increasing the amount paid as sick and death benefits, but in order to do so it would be necessary to have all men employed under the jurisdiction of the local and it would be necessary to bring them into the organization. This matter was talked over by the delegates from this union to the federation convention, and after the convention had adjourned the executive board took the matter up and it was decided to make an effort to organize this particular section, the other districts being fairly organized all around it.

Acting Chairman COMMONS. Did the executive board authorize or endorse at any time the resolution which was adopted by the local at Lead giving notice that after the 25th of November, 1909, they would not work with—

Mr. KIRWAN. They had no knowledge that any such resolution was introduced.

Acting Chairman COMMONS. They had their representative here, Mr. Tracy?

Mr. KIRWAN. Yes; Mr. Tracy was here. At that time I was in Michigan assisting in building up the organization of miners in northern Michigan, and I did not read anything about it until I read it in some paper—our official paper or some other papers, I don't remember now which.

Acting Chairman COMMONS. What at that time was the constitution of the Western Federation of Miners regarding the authority which a local might have to go ahead with a thing of that kind without the approval by the national organization?

Mr. KIRWAN. The local could not go on a strike unless by vote of the membership—a three-fourths vote of the membership—without the approval of the executive board of the Western Federation of Miners.

Acting Chairman COMMONS. Has that been your rule?

Mr. KIRWAN. That has been our rule for a number of years. It was two-thirds once, and I think it was changed to three-fourths.

Acting Chairman COMMONS. You think it was three-fourths at that time?

Mr. KIRWAN. I am not real sure whether three-fourths or two-thirds.

Acting Chairman COMMONS. Then, according to that, it seems that this meeting took—you heard the resolution read?

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. You are familiar with that resolution?

Mr. KIRWAN. Yes.

Acting Chairman COMMONS. Was that regular?

Mr. KIRWAN. Well, I don't know. If you will note, the resolution is not directed to the management of the mining company. I might state when this agitation for the organization of the nonunion men was started it was not the intention of the executive board and organization to involve the company in any way in it. For that reason no demand was made on the company. This resolution is not directed to the company in any way.

Acting Chairman COMMONS. However, the company would naturally consider it as directed toward them?

Mr. KIRWAN. I don't know what they would consider, but it was not directed toward them.

Commissioner O'CONNELL. What effect did it have on the men?

Mr. KIRWAN. The majority joined.

Commissioner O'CONNELL. When trouble occurred, how many nonunion men?

Mr. KIRWAN. There were six nonunion men eligible for membership that were not members.

Commissioner O'CONNELL. And the mine closed down?

Mr. KIRWAN. I was sent here some time before the lockout order took effect. I went over the situation with the men in charge at that time; they gave me the names of the six men who up to that time had refused to join. These six men—I met two of them personally later and they informed me they would join. You understand, a number of the men employed by the company were not eligible to membership—for instance, the shift bosses, the foremen, men in the assay office, and men belonging to other organizations—for instance, the machinists and carpenters—we didn't insist on the members of other organizations joining the Western Federation of Miners.

Acting Chairman COMMONS. Was it the policy of the Western Federation, and had it been at that time, to secure the closed shop?

Mr. KIRWAN. Yes, sir.

Acting Chairman COMMONS. And it had been secured generally in that way?

Mr. KIRWAN. Yes, sir; by continued agitation among the men; pointing out to them the benefits of organization and securing for them either a reduction of hours or increase in wages or some other material improvement in their working condition.

Acting Chairman COMMONS. Has it ever been incorporated in a written agreement with any firm—any mining company?

Mr. KIRWAN. No, sir; for a number of years the organization did not enter into any contract. They do at this time.

Acting Chairman COMMONS. The practice, then, was to simply notify the nonunion men they would not work with them?

Mr. KIRWAN. Yes, sir; they didn't involve the company in it in any way.

Acting Chairman COMMONS. In taking that action here they were following the practice they were accustomed to follow, generally?

Mr. KIRWAN. The only method was to present our side of the case to the nonunion men; point out to them the advantages; and we had an extraordinary opportunity here, where, through the organization, we had secured an eight-hour day for them.

These men were enjoying the benefits, and we pointed out to them the advantage of organization and appealed to their manhood. Some of them who had worked for 12 hours a day for a number of years were now working for 8 hours a day with no reduction in wages, and we appealed to those men to join in with us.

Commissioner O'CONNELL. You say you secured the eight-hour day for them? I understood the manager, when he was on, to say he had never dealt with your organization in any way and that the eight-hour day was volunteered by the company.

Mr. KIRWAN. I might state that the question of a strike here in the Black Hills on the eight-hour day was discussed by the executive board and the matter discussed as to the method of raising finances and the estimated probable cost of a strike for an eight-hour day, and a committee from the local union met with Mr. Grier on one or two occasions. I wasn't here at that time, but I was informed by representatives of the local union that they had met with Mr. Grier and, if I am correctly informed, he attended one meeting and told them under no consideration would he grant an eight-hour day. A mass meeting was held later on and at this meeting it was discussed and an effort made by certain individuals to sidetrack the issue. But sufficient numbers were present to take the matter up and they decided to send a telegram to the board of directors, who were then meeting in Frisco. The meeting unanimously approved of the idea and adopted the motion to send that telegram. I don't know the exact wording of it, but it was a request for the eight-hour day.

Now, that telegram was never sent. Before that telegram would be sent the secretary of the local union was notified by Mr. Grier, or some one else, to come down to the office, and he was told the eight-hour day would be granted.

Acting Chairman COMMONS. You stated that at the time it was the policy of the federation not to make written agreements?

Mr. KIRWAN. No, sir.

Acting Chairman COMMONS. Not to make any written or oral agreement of any kind?

Mr. KIRWAN. No, sir. There were probably verbal agreements between superintendents of the companies and the unions of the various locals—understood. For instance, Terry; we raised the wages of the surface men from two and a half to three dollars a day, but there was no agreement; simply had a verbal understanding with the employers.

Acting Chairman COMMONS. Would it not naturally occur to you now, looking back over that, if a union proposed to have a closed shop that the employer would also naturally decide he might also close the shop?

Mr. KIRWAN. Well, it depended a great deal. If he thought he was strong enough, why, probably he would; on the other hand, if we thought we had sufficient strength we would insist on a closed shop.

Acting Chairman COMMONS. So that at that time you were not on matters of negotiation?

Mr. KIRWAN. No, sir.

Acting Chairman COMMONS. But simply a trial of strength?

Mr. KIRWAN. At that time it was the idea among the members of the federation that the company should not be involved on any matter affecting the organization of the men. We were opposed to the methods adopted by the United Mine Workers. They entered into a written agreement with the employers and the dues are even deducted from the men's wages and turned over to the union. We were opposed to that system at that time; we believed that the employer should have nothing to do with the organization of the union.

Acting Chairman COMMONS. Has your organization at that time or since taken any action on Sunday work?

Mr. KIRWAN. No, sir; I don't believe they have ever taken any action.

Acting Chairman COMMONS. Do your unions work Sundays?

Mr. KIRWAN. Yes, sir; in the majority of the mining camps in the West.

Acting Chairman COMMONS. You never had any strikes on account of Sunday work?

Mr. KIRWAN. Oh, no.

Acting Chairman COMMONS. Suppose a law was enacted prohibiting Sunday work in the mining industry, what would be the attitude of your organization?

Mr. KIRWAN. Well, it would be hard to say at this time what their attitude would be.

Acting Chairman COMMONS. From your knowledge of the men and the feeling of the members of the union, what is your notion of their idea regarding Sunday work?

Mr. KIRWAN. I worked in the mines a number of years and I know personally the feeling of a great many men. They are not in favor of Sunday work only for one reason—that it increases their pay check. If the wages was raised in accordance they would be willing and eager to abolish Sunday work, and would lend every possible aid to do so if they could receive the equivalent in the wages for other days of the week.

Acting Chairman COMMONS. Any questions?

Commissioner GARRETTSON. One question I would like to ask.

Acting Chairman COMMONS. Mr. Garretson has some questions.

Commissioner GARRETSON. You heard the statement made a little while ago in regard to an action that was brought against the local union in regard to coercing members or employees of the Homestake Co.?

Mr. KIRWAN. Yes, sir.

Commissioner GARRETSON. Have you any knowledge of that action?

Mr. KIRWAN. Yes, sir. At the time the action was filed our attorneys filed a demurrer. I am not familiar with this legal phraseology, but the complaint of the Homestake Mining Co. stated that coercion was used. We denied that any coercion was used, or intimidation of any kind. We deny it yet and challenge the Homestake Mining Co. or any individual here to point out any specific case. Our attorneys insisted and filed this demurrer, as it is called, or some other legal phrase, asking that some specific instance be cited, and up to this time we have never heard of any.

Commissioner GARRETSON. That is what killed the action?

Mr. KIRWAN. Yes, sir; and there has never been anything else done with this case since that time when the specific cases were asked for. I personally interviewed probably 200 men in this camp, and I never used anything but gentlemanly language to any employee of the Homestake Mining Co. that I approached. I pointed out to them the advantages of organization and tried to persuade them to become members of the organization; didn't resort to threats or coercion or any intimidation.

Commissioner O'CONNELL. Do you know about this Miners' Hall here in the city—the building down below here?

Mr. KIRWAN. Yes, sir; I know something about it.

Commissioner O'CONNELL. It looks to me like the largest building in the city.

Mr. KIRWAN. Yes, sir; the miners' unions own all of the largest buildings in all of the cities.

Commissioner O'CONNELL. I notice this building is absolutely empty; looks like a warehouse. What is the cause of that?

Mr. KIRWAN. You might ask Mr. Grier.

Commissioner O'CONNELL. I am asking you.

Mr. KIRWAN. Well, after the union disbanded the upper floor was rented for lodge rooms and nobody seemed to want to engage it for that purpose. The second floor was used for an opera house, but no shows came into the town. It was practically worthless. The lower floor was rented—one part for a store; he went out of commission. There was a saloon in another part, and that went out of commission. The basement was occupied by the city administration as a city hall—

Commissioner O'CONNELL. That didn't go out of commission?

Mr. KIRWAN. Oh, no—yes, they did. They decided to reduce the number of councilmen; the old form of government was abolished in the last few years.

Commissioner O'CONNELL. They apparently have a new place.

Mr. KIRWAN. Yes, sir; and there was a newspaper office in the lower part of it.

Commissioner O'CONNELL. How long since the two business places—the store in one room and the saloon in the other—that went out of business were there—they went out of business?

Mr. KIRWAN. Yes, sir.

Commissioner O'CONNELL. It is since the lockout?

Mr. KIRWAN. Yes, sir; I don't know how long.

Commissioner O'CONNELL. Why did they go out of business?

Mr. KIRWAN. I don't know.

Commissioner O'CONNELL. I notice a number of saloons up and down the street doing business.

Mr. KIRWAN. I believe they have reduced the number of saloons.

Commissioner O'CONNELL. And got that one in there?

Mr. KIRWAN. I suppose so; I have been absent for several years.

Commissioner O'CONNELL. What was in the store?

Mr. KIRWAN. A grocery store.

Commissioner O'CONNELL. What became of that?

Mr. KIRWAN. I don't know.

Commissioner O'CONNELL. Is there some local man that knows about that?

Mr. KIRWAN. Yes, sir.

Commissioner O'CONNELL. Have you a local union man in town?

Mr. KIRWAN. Yes, sir.

Commissioner O'CONNELL. That lives here?

Mr. KIRWAN. Yes, sir.

Commissioner O'CONNELL. Work here?

Mr. KIRWAN. Well, our union men that are working are not known.

Commissioner O'CONNELL. Well, there has been some litigation over this building, some one or two or three men are trying to claim that they own this building?

Mr. KIRWAN. Yes; it seems at the time the building was built that articles of incorporation were filed and—

Commissioner O'CONNELL. Certain men were named as incorporators?

Mr. KIRWAN. Yes; as incorporators; and I am not thoroughly familiar with it, but they attempted to hold the building as their own personal property, some three or four or five members, former members of the Lead City Miners' Union, and as a result there has been some litigation in connection with it.

Commissioner O'CONNELL. The local union of the organization at Butte holds the mortgage?

Mr. KIRWAN. Yes, sir; \$40,000. These men that attempt to hold the building tried to repudiate the payment of that mortgage and instituted some suit. It was decided in favor of the Western Federation of Miners.

Commissioner O'CONNELL. That is, the court held that they held a legal mortgage on the property?

Mr. KIRWAN. Yes; that the mortgage was legal and valid.

Commissioner O'CONNELL. Now, what position does that place the property in; who does it belong to now?

Mr. KIRWAN. I am not familiar with it now.

Commissioner O'CONNELL. You miners, I suppose, have a legal claim to the property?

Mr. KIRWAN. Yes, sir; I think so.

Commissioner O'CONNELL. I suppose under the present situation the mortgage is not a very valuable asset, is it?

Mr. KIRWAN. No, sir.

Commissioner O'CONNELL. Has there been any proposition that you know of to buy the building from the miners?

Mr. KIRWAN. No, sir; not that I know of. There may be, but I don't know of it. I have not been officially connected with the organization for three or four years.

Commissioner O'CONNELL. One of the gentlemen who was subpoenaed, Mr. Ryan, is connected with the building?

Mr. KIRWAN. He is the janitor. He is supposed to own the entire building.

Commissioner O'CONNELL. He was one of the incorporators and claims ownership?

Mr. KIRWAN. He was not one of the incorporators but is trying to assume the claim of the incorporators.

Commissioner O'CONNELL. Does he make any claim as to ownership?

Mr. KIRWAN. Yes, sir.

Commissioner O'CONNELL. That is all.

Commissioner GARRETSON. Let me ask one question about that suit. I remember noticing in the Deadwood papers under date of last Saturday a notice, I think it is termed a citation, to Moyer and other officers of the Western Federation of Miners, in which the name only of the attorney for the plaintiff is given. Do you know who the real plaintiff is in that action?

Mr. KIRWAN. We have our suspicions.

Commissioner GARRETSON. Is it in connection with that building?

Mr. KIRWAN. Yes, sir; there is some technical point involved in that notice; I don't exactly understand it; I am not familiar with it.

Commissioner O'CONNELL. I understood you to say that the eight-hour day has prevailed at Butte and Colorado and many other places for many years prior to its being put in here.

Mr. KIRWAN. Yes, sir.

Commissioner O'CONNELL. What are the wages of the miners at Butte?

Mr. KIRWAN. They have what they call a sliding scale. For any man that goes underground the minimum is \$3.50; it does not make any difference what kind of work the man is performing, if he goes underground he gets \$3.50. If copper goes over 15 cents a pound he receives \$3.75; if it goes to 17 cents or over he receives \$4 per day.

Commissioner O'CONNELL. What is the rate in Colorado?

Mr. KIRWAN. That is different; there are no copper mines in Colorado.

Commissioner O'CONNELL. But you have gold there.

Mr. KIRWAN. The rate in Colorado is about the same as here only as to machine men; they get 50 cents a day more than they do in the Black Hills.

Commissioner O'CONNELL. Does the rate and wages of the metallurgical miners generally throughout run as high or higher, as a general proposition, than they are in the Black Hills?

Mr. KIRWAN. I believe they are higher in the majority of the mining camps of the West.

Commissioner O'CONNELL. Is it your opinion that the cost of living has increased or decreased in this territory during the past 10 years?

Mr. KIRWAN. I believe it has increased.

Commissioner O'CONNELL. To what extent do you think it has increased?

Mr. KIRWAN. Well, I could hardly tell.

Commissioner O'CONNELL. That is all.

Acting Chairman COMMONS. The commission will now take a recess until 7.30 p. m.

(And now, at 5.30 o'clock p. m. of this Monday, August 3, 1914, a recess was taken until 7.30 o'clock p. m. of the same day.)

EVENING SESSION.

Now, the hour of 7.30 having arrived, to which time the commission took a recess, the following proceedings were had:

Acting Chairman COMMONS. The commission will please come to order. Mr. Irwin, will you please take the stand?

TESTIMONY OF MR. E. F. IRWIN.

Acting Chairman COMMONS. Just give us your name.

Mr. IRWIN. E. F. Irwin, Lead, S. Dak.

Acting Chairman COMMONS. Mr. Irwin, you have charge of the employment office of the Homestake Mining Co.?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Please describe the duties of the office, the work that you do in your office.

Mr. IRWIN. Well, the duties of the office are to employ the men required in the different departments of the workings of the Homestake; take applications from the men; pick out the most desirable positions where men are needed.

Acting Chairman COMMONS. How long have you held that position, Mr. Irwin?

Mr. IRWIN. Ten years this month.

Acting Chairman COMMONS. The system that is now in use you developed yourself in the course of the 10 years?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. How do the requisitions for help come to you?

Mr. IRWIN. They usually come in the way of telephone, or consultation with the head of the department requiring men, coming around and talking over the kind of men they want, the qualifications necessary, with a view to getting as good men as possible always for the places where they are needed.

Acting Chairman COMMONS. All applications are made at your office, are they?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Are you familiar with the system that they formerly used in the hiring of men?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. What is the advantage of your present system over that?

Mr. IRWIN. Well, we are enabled to look over the men, talk with them along the lines of the work that they have been doing, ask them all sorts of questions to bring out what kind of men they are for the particular kind of work in which they were engaged, or want to engage in. A great many things that one gets by experience that leads to forming of a judgment as to the character of men that apply and whether they are necessary and desirable, and those that are undesirable; it gives one more time to make a selection than it did under the old rule where a shift boss or foreman selected a man from a bunch of men who were standing around the shift looking for work, resulting in better men.

Acting Chairman COMMONS. When you send a man to shift boss, he puts him to work at once, does he? Does he have any voice in the matter?

Mr. IRWIN. No, sir; he puts him to work and tries him for the position that he is hired for.

Acting Chairman COMMONS. I notice here in this exhibit that you handed in you have reasons for men leaving, given by bosses, and reasons given by employees for leaving the service. These reasons given by the bosses, they come to you in what form?

Mr. IRWIN. They come to me in writing on a form that is used for that purpose.

Acting Chairman COMMONS. Have we a copy of that form? [Mr. Irwin produces paper and hands same to the chairman.]

(The paper so presented was marked "Exhibit No. 1, Witness Irwin, Aug. 3, 1914.")

Acting Chairman COMMONS. Simply a statement that he leaves the service, and gives his reason for it.

Mr. IRWIN. Gives the shift boss's reason for his leaving.

Acting Chairman COMMONS. The shift boss's. It comes directly to you from the shift boss, then, does it?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Then the man that leaves the service comes to you for his time, and you will take from him his reasons for leaving?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Do you find that these agree or disagree, in general? What is the different ways in which they give their reasons?

Mr. IRWIN. Well, in the main they generally agree.

Acting Chairman COMMONS. I notice that this tabulation here during this month showed that there were 68 men taken on. Wait until I find the number that left the service. It does not give the number that left the service.

Mr. IRWIN. I think it does there.

Acting Chairman COMMONS. Thirty-eight.

Mr. IRWIN. Just next to the bottom on the first page.

Acting Chairman COMMONS. Yes; 38. You have a force—you have to keep up a force in your office of how many men?

Mr. IRWIN. Three.

Acting Chairman COMMONS. I mean working force, employees.

Mr. IRWIN. In the office, you say?

Acting Chairman COMMONS. Well, I mean in your office that is responsible for furnishing the company with a force of 2,200 men. Is that the number that you are responsible for?

Mr. IRWIN. I have the hiring of the men to that number, or covering that number.

Acting Chairman COMMONS. To keep up that force.

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Now, how many men do you hire in a year to keep up that force?

Mr. IRWIN. Five hundred and fifty to six hundred. That is not to keep up that force exactly, because extra men are put on during the summer for extra work and laid off in the fall who are counted in on the year's total of hiring.

Acting Chairman COMMONS. Well, those extra men are for extra construction work, I presume?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. To keep up the working force, aside from the new construction, how would it figure out?

Mr. IRWIN. I should say that 35 would cover the underground workings a month; probably 8 or 10 the surface; maybe not that much; I don't think it would be over 6 or 8 for the surface, making a total of 40 to 45.

Acting Chairman COMMONS. That would be about 500 men?

Mr. IRWIN. No; not that many—450.

Acting Chairman COMMONS. Four hundred and fifty?

Mr. IRWIN. I think it would be, for the year; yes, sir.

Acting Chairman COMMONS. Have you made a comparison with other mining operations of the number of men they are required to hire for keeping up their force?

Mr. IRWIN. No, sir.

Acting Chairman COMMONS. In the coal mines or any others?

Mr. IRWIN. No, sir.

3610 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Acting Chairman Commons. You have to hire, practically, then, about one man during the year for every four or five?

Mr. Irwin. One for every six; yes; 20 per cent.

Acting Chairman Commons. That would indicate a very steady force.

Mr. Irwin. It indicates that 80 per cent of our men stay with us through the year.

Acting Chairman Commons. Possibly 80 per cent?

Mr. Irwin. Possibly 85.

Acting Chairman Commons. Ordinarily a company would have to hire a much larger number than that to keep up the force.

What records have you of the length of service of your 2,200 employees? Can you give the length of service or the number of years classified by the time they have been with the company?

Mr. Irwin. Well, we have a card system—card-index system—that covers the last 10 years. Previous to that we have no record of that kind without going to the individual names on the several pay rolls back indefinitely.

Acting Chairman Commons. I see. What proportion have been here 10 years?

Mr. Irwin. Over half. Consider, though, that we had the changing of the men during the trouble. It is pretty hard to make an estimate of that. I think there are over half of the men here that were here 10 years ago.

Acting Chairman Commons. Then, about 1,000 men here were here 10 years ago?

Mr. Irwin. Yes, sir. We have a Homestake Veterans' Association which has 150 members, men who have worked for the Homestake for 21 years or over, some of them 35 and 36.

Acting Chairman Commons. How many men in that?

Mr. Irwin. One hundred and fifty.

Acting Chairman Commons. One hundred and fifty that have been here?

Mr. Irwin. Yes, sir; that have been in the service over 21 years.

Acting Chairman Commons. What class of labor are they? Are they men that have been—they must be men along in years, of course.

Mr. Irwin. Naturally; yes.

Acting Chairman Commons. Are they men who are miners, or are they bosses?

Mr. Irwin. Well, they are recruited from all the different departments of the company. A great many of them are miners, machinists, blacksmiths, millmen.

Acting Chairman Commons. The question was raised to-day about the number of days per month or per year that the men actually put in on their work. Have you any exhibit with you, or any data that you could show us about the amount of time that they put in?

Mr. Irwin. I took three time books for the month of July at random from the 20 or 30 time books, which will show the amount of time that these men put in for the month of July, to give you an idea.

Acting Chairman Commons. That is, the past month?

Mr. Irwin. Yes, sir.

Acting Chairman Commons. May I just look over that? Suppose I take up the different occupations as I go along. First comes timbermen in this list I have here. Timbermen get how much pay, Mr. Irwin?

Mr. Irwin. \$3.50 a day; some \$4.

Acting Chairman Commons. \$3.50 and \$4. Each book is for a certain level?

Mr. Irwin. For the shift bosses.

Acting Chairman Commons. And he has one level, or how?

Mr. Irwin. It is according to how many men he has. Some have two levels; but mostly one.

Acting Chairman Commons. Is it your idea that this would be a representative month? If you took any month during the year, July would be about the same as any month?

Mr. Irwin. Yes, sir; they run pretty regular; just about the same the year around.

Acting Chairman Commons. I notice these men that get \$3.50 the days that they work run 28, 30. There was 31 days possible in July?

Mr. Irwin. Yes, sir.

Acting Chairman Commons. 30, 29, 30, 24, 29—446 days for the number of men on that page. I can't figure out that average—what that amounts to. The lowest is four days. One man was off two weeks.

Mr. IRWIN. Yes; off on vacation. A great many men are off for a vacation during the months of July, August, and September. Sickness or vacation would cause that. It would not be for any other reason that I know of.

Acting Chairman COMMONS. Juris was off one week; Minsen was off all but four days. The rest run from 28 to 30. The high pay was made by a man who got \$4, who gets \$117 for that month for 29½ days. It would look as though the average number of days that they put in was something like 29.

Mr. IRWIN. Twenty-eight or twenty-nine. I think twenty-eight would be nearer the average.

Acting Chairman COMMONS. That is, they were off on the 4th and 5th quite regularly?

Mr. IRWIN. That is a combination of a national holiday with change day following. The men change. So that we gave them two days off as much as the request of the men as any other reason, so that they could enjoy two days' vacation, one being a national holiday.

Acting Chairman COMMONS. Is there any special reason why timbermen should work more regularly than others—any necessity?

Mr. IRWIN. Well, they do work. They do possibly more a month because they are working on other days when other men are off, timbering in the places where miners are working at other times.

Acting Chairman COMMONS. So that they are likely to put in more days than others?

Mr. IRWIN. You have two other books for the miners working on other levels. It will show nearly the same amount of time.

Acting Chairman COMMONS. Miners seem to run 29, 27, 28½, and here is one 21, and 29 and 29. The general average seems to be about the same, isn't it?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. You would say that is about the same, 29 days for miners?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. The laborers apparently the same. The great majority run 28 and 29, 29½. What position is the barmen; what do they do?

Mr. IRWIN. Men go through the stopes and bar down the rock from the roof wherever it appears to be unsafe, so as to make it perfectly safe for the miners and carmen and shovelers that work underneath.

Acting Chairman COMMONS. That is a skilled position, and they get \$3.50?

Mr. IRWIN. Yes; they have to be good miners and understand the ground.

Acting Chairman COMMONS. There is only a small number of those?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. The shaft men are skilled men, \$4.50?

Mr. IRWIN. \$4 and \$4.50.

Acting Chairman COMMONS. They run the cage?

Mr. IRWIN. No, sir; they look after the repairs in the shafts, and go through the shafts between shifts and see everything is safe for the following shift.

Acting Chairman COMMONS. Are they miners?

Mr. IRWIN. No, sir; timbermen primarily—recruited from the timbermen ranks.

Acting Chairman COMMONS. They put in 32, 32, 33½, 32½, 34; how would they get in extra half days?

Mr. IRWIN. They are on duty eight hours; then if there is any repair work to be done or anything to be changed in the shaft between shifts they put in overtime that time, a quarter shift possibly. You see, there are several quarter shifts running through their time during the month. They are not working eight hours steady all day. They are on duty ready for any emergency that arises.

Acting Chairman COMMONS. They are emergency men?

Mr. IRWIN. Yes, sir.

Chairman COMMONS. They must be there between shifts, I presume?

Mr. IRWIN. Yes, sir.

Chairman COMMONS. Some of them must be there, and they make \$128 to \$146. The pipe men, what is their line of work?

Mr. IRWIN. Putting in air pipes throughout the mines—air and water.

Acting Chairman COMMONS. That is a \$3.50 and \$4 position?

Mr. IRWIN. \$3.50 and \$4.

Acting Chairman COMMONS. They have 24 to 31 days, 31½; they get overtime?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. And they are working between shifts?

Mr. IRWIN. Not so much; no, sir.

Acting Chairman COMMONS. What about the watchmen. They get \$3.50. What is the duty of the watchmen?

Mr. IRWIN. The mine watchmen go to work at 10.30 in the morning and work until 4.30 at mining or timbering, whatever the shift boss or foreman has for them to do, and after the shift leaves the mine they visit the various parts of the mine, dividing the mine up into sections, where timbers are, and looking out for fires or anything being wrong; that is, there is time until the next shift comes on so as to give them eight hours work beginning at 10.30 in the morning and ending at 7 at night.

Acting Chairman COMMONS. Are they able to get a little overtime, these men that are mining at the drill?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Then they seem to run 30, 27½, 28, 29½, 30 23½, 28½ days off; run four and five. Laborers about the same apparently, four and five are the days off, and they work 25, 28, 30, 28, 30—it seems to run along there with laborers about the same, about 28 or 29.

Mr. IRWIN. You will notice where you are reading the figures there for any particular man, 21, 22, 24, 25, they are off at some particular time, that the time is usually all bunched together, he is off at his own request and not being laid off by the company, only at very rare intervals.

Acting Chairman COMMONS. Where it notes a low figure, it is evident that he has been off two or three weeks? For example, 9½ days; one, 16 days; another, 2 days. I was trying to get the men that were working steadily, apparently. One man 20; another, 26½; but they don't seem, any of them to take their Sundays off. When they do take days off, with the exception of four or five, they have taken a week off or several days in succession. That seems to be the prevailing practice, does it not?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. Track men. Is there any reason why they should be steadily at work?

Mr. IRWIN. Well, they are men who are keeping up the tracks throughout the mine, tracks that the cars are run on, and it is necessary for them to be there, or somebody in their place every day, because the work is necessary to be done.

Acting Chairman COMMONS. Are they on between shifts, or work on the regular shifts?

Mr. IRWIN. They usually work a straight shift; not very often they work overtime.

Acting Chairman COMMONS. They work with the shift, then?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. I presume these other books will probably show similar conditions?

Mr. IRWIN. Just about; yes, sir.

Acting Chairman COMMONS. About the same. When a man wants to lay off on Sunday, does he come to you or does he come to the shift boss?

Mr. IRWIN. He asks the shift boss, or notifies him the day before he wishes to lay off Sunday.

Acting Chairman COMMONS. It is left to the shift boss to decide, is it?

Mr. IRWIN. Well, it is not. The shift boss is instructed to let any man lay off Sundays that asks to get off—without question.

Acting Chairman COMMONS. That is, the instructions are to let them off without question?

Mr. IRWIN. On Sunday.

Acting Chairman COMMONS. On Sunday, that is what I am asking about.

Mr. IRWIN. Yes.

Acting Chairman COMMONS. Taking up this sheet nationality report of mine employees for June, for the mine, you have 1,286, of which 653 are put down as Americans; I presume that means born in America, does it?

Mr. IRWIN. Born in the United States.

Acting Chairman COMMONS. Born in the United States?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. And the largest number outside of that is Englishmen, 120. Then, next comes the Austrians 112, Italians and Finlanders about 92 or 93 each, so that about one-half are American born according to that?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. That is about the present status?

Mr. IRWIN. Yes, sir.

Acting Chairman COMMONS. You stated, I believe, that six or seven years ago the proportion was—have you records for that time?

Mr. IRWIN. Not here. I stated 29 per cent Americans and English, and 71 per cent foreign, outside of English-speaking nationalities.

Acting Chairman COMMONS. Taking all employees, 2,100 during the month of June, there were 1,214 that were Americans; that is, 57 per cent. The foreigners then are mainly underground, are they not?

Mr. IRWIN. The larger number; yes.

Acting Chairman COMMONS. The Austrians 117 altogether, 112 underground?

Mr. IRWIN. Yes.

Acting Chairman COMMONS. Mr. Garretson, would you like to ask a question?

Commissioner GARRETSON. The statement was made to-day that the questions that appeared in your application for employment were for the purposes of identification, certain questions therein. Does that mean that in common with other occupations listed as extra hazardous, for the purpose of identification in case of an accident happening?

Mr. IRWIN. Well, not as much as it is for the purpose of identification in case anyone writes to us concerning that man, or about him, from any place else. Frequently relatives will ask if we have such a man, a certain man, describing him.

Commissioner GARRETSON. As a means of identification to those relatives, a man's politics and his religion—

Mr. IRWIN. We want to know after the man leaves our service, we want to keep a record of him, so that when he returns we can identify him that much easier if we have such a record.

Commissioner GARRETSON. No danger of him changing either his politics or his religion in the meantime?

Mr. IRWIN. There certainly is.

Commissioner GARRETSON. Then, how would it serve as a means of identification?

Mr. IRWIN. I didn't say that that served as a means of identification.

Commissioner GARRETSON. Well, it was testified that was the object of it.

Mr. IRWIN. No, I did not.

Commissioner GARRETSON. That is not the object, then?

Mr. IRWIN. Mr. Grier testified that was the object?

Commissioner GARRETSON. Yes.

Mr. IRWIN. But everything taken together on that application, generally speaking, it is for a means of identification, and we want to know something about a man's past life and his views and his convictions. We don't want to put a man in the mine who is an anarchist, was against all government and everything else. We take that means to protect ourselves.

Commissioner GARRETSON. Then that is part of the definition of what you testified a moment ago you got better men?

Mr. IRWIN. Yes; that is one reason.

Commissioner GARRETSON. They are the better fitted for the purposes you want them for?

Mr. IRWIN. I think so.

Commissioner GARRETSON. Then you mean to convey the idea that it is not because you want to know whether a man is a Catholic, a Baptist, or a Presbyterian, but you want to know whether he is an atheist?

Mr. IRWIN. Well, yes; we want to know whether he has any belief in a Supreme Being in his heart.

Commissioner GARRETSON. Then, in regard to politics, you do not want to know whether he is a Republican or Democrat, but whether he is a Socialist?

Mr. IRWIN. I don't think a man makes a very good employee who has no belief in a Supreme Being or has no respect for government.

Commissioner GARRETSON. Then, belief in a Supreme Being and in obedience to his commands go hand in hand or not?

Mr. IRWIN. They should theoretically, but they don't always practically.

Commissioner GARRETSON. Is it done here?

Mr. IRWIN. I think there are exceptions to the rule.

Commissioner GARRETSON. These 125 men in your veterans' association.

Mr. IRWIN. One hundred and fifty.

3614 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Commissioner GARRETSON. One hundred and fifty. How many of them are below the rank of shift boss?

Mr. IRWIN. Below the rank of shift boss and officials, I should judge there are 50 or 60 per cent.

Commissioner GARRETSON. Fifty or sixty per cent?

Mr. IRWIN. From the ranks.

Commissioner GARRETSON. Have you a list of that veterans' association easily available?

Mr. IRWIN. I have one.

Commissioner GARRETSON. With the positions of the men?

Mr. IRWIN. I can get you one.

Commissioner GARRETSON. Will you furnish that?

Mr. IRWIN. I will.

(See Irwin exhibit, under "Exhibits.")

Commissioner GARRETSON. We would be very glad to have it. That is all, Mr. Chairman.

Commissioner LENNON. What does the physical measurement of a man amount to? What standard do you insist on, taking a miner, for instance?

Mr. IRWIN. When an application is taken at my office all those questions are answered and the answers filled and the application is signed by the applicant. It is then put in an envelope, directed to the Homestake Hospital where he goes, and one of the attending physicians examines him just as thoroughly as he would be examined for an old line insurance company.

Commissioner LENNON. You examine him just about the same?

Mr. IRWIN. Physically, because we believe that they ought—every man working for the company belongs to the aid fund association, and we do it in some measure to protect them, we take their measure physically to see that they are not physically unfit to enter any other life insurance company. We protect our own employees in that way and also get good men physically for the work.

Commissioner LENNON. That is all I want to ask.

Acting Chairman COMMONS. That is all, Mr. Irwin; thank you. Dr. Clough.

TESTIMONY OF DR. F. E. CLOUGH.

Acting Chairman COMMONS. Give your name and address.

Dr. CLOUGH. F. E. Clough; I live at Lead, S. Dak.

Acting Chairman COMMONS. How long have you been connected with the company?

Dr. CLOUGH. Twelve years.

Acting Chairman COMMONS. In the position you now hold?

Dr. CLOUGH. No; I am only in temporary charge of the hospital while the chief surgeon is in Europe; regularly I am his first assistant here.

Acting Chairman COMMONS. You started in there as what?

Dr. CLOUGH. Started in as the office doctor.

Acting Chairman COMMONS. How many doctors are there employed?

Dr. CLOUGH. We have six doctors who devote their time exclusively to the Homestake Hospital; one man who devotes a small part of his time to it.

Acting Chairman COMMONS. Are these men graduates of medical colleges?

Dr. CLOUGH. Yes, sir; every one.

Acting Chairman COMMONS. What does the company do toward advancing their education after they are employed?

Dr. CLOUGH. It compels us to take a month's vacation every year to attend different clinics throughout the country.

Acting Chairman COMMONS. Where you go away on pay?

Dr. CLOUGH. Yes, sir; that is our work, but the pay never equals what we have to spend; but we are compelled to go one month out of every year.

Commissioner GARRETSON. You doctors have no grievance committee?

Dr. CLOUGH. No; we have no grievance committee.

Acting Chairman COMMONS. Does your office make the physical examination that Mr. Irwin referred to?

Dr. CLOUGH. Yes, sir.

Acting Chairman COMMONS. Would you describe that examination and give some indication of how thorough it is, what standards are that you use, and other things.

Dr. CLOUGH. We examine the man about the same as he is examined for the Army. His eyesight is examined; his hearing is examined; his lungs and his heart are gone over; his abdomen is examined; is examined for hernia, for signs

of kidney trouble; he is examined for varicose veins and hardening of the arteries; we look for evidence of chronic alcoholism; we generally size up the man, whether he is perfectly fit or not.

Commissioner LENNON. How near a perfect standard are they required to be in order to get the job?

Dr. CLOUGH. He has to be physically perfect. We don't accept any man who is blind in one eye or who can not see well with both eyes; we do not accept any deaf man; no man who has any heart disease of any description or any lung trouble. We discard him if he has hernia, if they have marked varicose veins, any form of kidney trouble, hardening of the arteries, or if they look particularly weak or look like they were not healthy enough to stand the work underground.

Commissioner O'CONNELL. How long has that examination been going on, Doctor?

Dr. CLOUGH. It has gone on since September, 1911.

Commissioner O'CONNELL. Those that were employed before that time, have they been examined?

Dr. CLOUGH. No, sir.

Commissioner O'CONNELL. All the employees, then, in the service of the company before this arrangement was established continued their employment without examination, regardless of their physical condition?

Dr. CLOUGH. Yes, sir.

Commissioner GARRETSON. Have you ever developed a case of hardening of the arteries except one of two things—age or premature age?

Dr. CLOUGH. Yes; we have some alcoholics that show signs of that.

Commissioner GARRETSON. But they are generally stronger in another direction, though?

Dr. CLOUGH. Yes.

Commissioner GARRETSON. It will affect the liver before the arteries, as a rule?

Dr. CLOUGH. In some cases.

Commissioner LENNON. This is a little outside of the thought, but did you ever consider the advisability of an examination of the old employees for tuberculosis? Has it ever been considered by the staff?

Dr. CLOUGH. Well, the proposition is this: Running the hospital the way it is, we see practically every employee when they are there sick the least bit, and they are likely to come to one of the hospital doctors, and in that way we know practically everybody on the pay roll who has any form of tuberculosis.

Commissioner LENNON. You know something of the work Dr. Sachs is doing in the industrial situation in Chicago?

Dr. CLOUGH. Yes, sir.

Commissioner O'CONNELL. What is the number of accidents the hospital takes care of per month?

Dr. CLOUGH. We took care during the year 1913 of 1,109 accidents. That includes the most trivial accident and the most serious. Of those 1,109 accidents 800 were men working in the mine and around the works; the other 309 occurred in members of the families of Homestake employees.

Commissioner O'CONNELL. How many serious accidents were there?

Dr. CLOUGH. There were probably 30 serious accidents.

Commissioner O'CONNELL. How many deaths?

Dr. CLOUGH. There were 4 deaths from accident, there were 15 deaths from sickness, in the year 1913.

Commissioner O'CONNELL. What were the causes from the deaths from accident?

Dr. CLOUGH. All injuries underground. One man was caught between a motor and the wall of a draft and crushed; the other three were due to falling rock crushing the men, who died of skull fractures. One died of a crushed-in chest.

Commissioner O'CONNELL. Are there any first-aid stations around the places, or do they bring them right direct to the hospital?

Dr. CLOUGH. We have first-aid boxes around through the mines, but it only takes 10 or 15 minutes to get the men to the hospital. There is always a doctor on duty at the hospital before an accident of any consequence arrives, and most of the first-aid work is done right in the hospital.

Commissioner O'CONNELL. Have you an ambulance?

Dr. CLOUGH. We have an ambulance; yes, sir. We have in all of the levels of the mine stretchers so arranged that a man can be strapped directly onto them, and not moved off from it. These stretchers can be taken up into any place in the workings; they can be taken down a manway or run down with a

windlass, and when the man gets to the surface the stretcher is put into the ambulance, brought immediately into the hospital, and he is not taken off of it until the doctor assumes charge of the case.

Commissioner O'CONNELL. Are there any cases of men losing their arms and legs.

Dr. CLOUGH. I should say in the last eight years—that is as far back as I could remember surely—we have amputated two legs and two hands. Those were all due to crushing injuries. We do not have the severe crushing injuries that they have in railroad work. These injuries that we get are mostly due to heavy rocks coming down and crushing them, but not smashing them absolutely as the wheels of a train would running over a man's leg. As a result, the great majority of our fractures of the leg all get well, and that is the commonest kind of severe injury that we have here.

Commissioner O'CONNELL. Any cases of men losing their sight?

Dr. CLOUGH. Some. There have been two or three men who have totally lost their sight. There have been quite a few men who have lost one eye.

Commissioner O'CONNELL. What has become of those men that lost their sight?

Dr. CLOUGH. The only one that I knew anything about went back to his relatives in Finland. I think there have been only two or perhaps three in a number of years.

Commissioner O'CONNELL. The men that have lost their limbs, what has become of them?

Dr. CLOUGH. They are right here.

Commissioner O'CONNELL. Working?

Dr. CLOUGH. Working every day; yes, sir.

Commissioner O'CONNELL. What is the man with the one hand doing?

Dr. CLOUGH. Working hard.

Commissioner O'CONNELL. Doing what, watchman?

Dr. CLOUGH. Tallying.

Acting Chairman COMMONS. What part in the selection does the ages of the men have with reference to physical examination?

Dr. CLOUGH. Not very much; some old men are good men, and some young men are no good. Sunday noon a man 60 years old was passed for work.

Acting Chairman COMMONS. I notice here that in this list the oldest man that was examined and passed was 66 years of age. Is that correct—that is, a man that was actually hired during this present calendar year, up to the present time, there is one 66 years of age. On what ground was such a man allowed to be employed?

Dr. CLOUGH. I don't know, unless he was a man who hadn't aged much.

Mr. IRWIN. He was a painter for temporary work.

Acting Chairman COMMONS. Well, take the one at 58.

Dr. CLOUGH. He probably was the same way. This year they have hired a good many men to finish this recreation building, working on until that was completed. The majority of these older men would never be hired for permanent work. And undoubtedly on the record that the doctor turned in this man was passed and marked for temporary work only.

Acting Chairman COMMONS. Well, that would probably hold for men down to 44 years of age. I notice there is one man at 44 and at 45.

Dr. CLOUGH. Yes; every once in a while one comes on for permanent work who is older than that.

Acting Chairman COMMONS. For permanent work who is older than 44?

Dr. CLOUGH. Yes, sir.

Acting Chairman COMMONS. Then at the age of 43 the number increases. There are five, and five at 42.

Commissioner LENNON. Do you have many applications of men over 40?

Dr. CLOUGH. I don't know; Mr. Irwin could tell you that.

Mr. IRWIN. We have a good many applications from men from 45 to 50, but we only select the best of them.

Commissioner O'CONNELL. What is the standing of a man that wears glasses and is otherwise fit?

Dr. CLOUGH. Unless he is shortsighted we let him go to work. If he is a shortsighted man, and has to wear his glasses underground, we do not accept him.

Acting Chairman COMMONS. Take the examination that you make of men after they are employed; what proportion of the men would be considered to have tuberculosis?

Dr. CLOUGH. We have on hand right now 20 cases of pulmonary tuberculosis amongst all the Homestake employees.

Acting Chairman COMMONS. What ages are they?

Dr. CLOUGH. Well, they run, I should roughly say, from 30 years up. A great majority of them have occurred in those who have worked underground for very many years. One other peculiar thing is that the great majority of these cases of tuberculosis develop in men who start their underground working before they become of age. It is peculiarly true among Cornishmen that almost without exception they went to work over in Cornwall when 12 or 13 or 14 years of age and have continued it right along since.

Acting Chairman COMMONS. You find this mostly among foreign born?

Dr. CLOUGH. Yes; a good many among the foreign born. The Cornish and the Italians; some few Italians are more prone to tuberculosis than our northern Americans. The Americans who come up from Kansas and southern Missouri, a great many of those develop tuberculosis.

Commissioner GARRETTSON. Are a good many of the mines of the Cornish workings below sea level?

Dr. CLOUGH. Yes; they all are.

Acting Chairman COMMONS. What has been done since this matter of examination was installed? What has been done toward improving conditions so as to avoid tuberculosis?

Dr. CLOUGH. It has been a campaign of education every way around. One of the most potent factors I think for reducing this has been in taking in of the water machines for drilling. Doing away with the clouds of dust the men inhaled. We never could get the men to use any kind of respirator in the mines. They would stand and breathe this kind of dust rather than to have anything over their mouth. A good many even preferred dust flying in their faces to a little bit of mud from the water machines. They are getting educated to that. Another thing we have found difficult to handle is getting these men to sleep with open windows. Particularly the Austrians, I think, like to pile on all the bedclothes they can find and shut down all the windows.

Acting Chairman COMMONS. What other condition in the mines or other nature of work that causes tuberculosis—the dampness?

Dr. CLOUGH. I don't know that that is a particular factor.

Acting Chairman COMMONS. You wouldn't count the dampness?

Dr. CLOUGH. No, sir; I don't think so.

Acting Chairman COMMONS. Would you count the smoke of blasting?

Dr. CLOUGH. I think one other factor, perhaps, that had something to do with it, that which has been entirely eliminated, has been the building of this "dry" at the Ellison hoist. Before that the men as they came up had to run across the bridge in cold weather to the "dry" on the other side of the hill, and a good many of them had chronic colds as a result of that. Now they don't get chilled at all.

Acting Chairman COMMONS. That is, they change their clothes?

Dr. CLOUGH. They change their clothes right at the Ellison and put on dry clothes, and that has been eliminated.

Acting Chairman COMMONS. What steps have been taken in addition to what you have mentioned in improving the surroundings in the levels?

Dr. CLOUGH. I could not say as to that.

Acting Chairman COMMONS. The main thing, you think, is the substitution of the water drill, is it?

Dr. CLOUGH. Substitution of the water drill and leading hygienic lives, general clean-up of conditions around town.

Commissioner O'CONNELL. Have you any form of slips you have around and little "don'ts" and simple remedies?

Dr. CLOUGH. We are just starting that now.

Commissioner O'CONNELL. They are very effective, very effective, without putting themselves to too much inconvenience, distribute them among the homes.

Acting Chairman COMMONS. Do you keep the accident statistics showing the number of accidents each year?

Dr. CLOUGH. Yes, sir.

Acting Chairman COMMONS. Have you the figures?

Dr. CLOUGH. I can give you the total figures, not for the Homestake employees alone but for the Homestake's employees and their families. We haven't divided these figures except for the last year. Now, for the years from 1909 to 1913 the surgical cases run like this: 783, 918, 1,276, 1,228, 1,109. Now, whether the same per cent—that is, 27 per cent of these statistics for 1913

occurred in the families of our employees; whether the same per cent would hold true for the other five years I am not certain, but it would be fairly close to that.

Acting Chairman COMMONS. Does that show a reduction or not?

Dr. CLOUGH. It shows a reduction in the last year of 118.

Acting Chairman COMMONS. Of operations?

Dr. CLOUGH. One hundred and eighteen surgical cases less. The first three months of 1914 show a reduction of 32 per cent over the first three months of 1913, and it was in 1913 we began inaugurating the safety campaign. We have no safety bureau, but we have a safety campaign that is becoming pretty vigorous.

Acting Chairman COMMONS. That is, in 1913?

Dr. CLOUGH. Yes, sir.

Acting Chairman COMMONS. It has been running just a little over a year?

Dr. CLOUGH. Just about a year since we got it going good.

Acting Chairman COMMONS. What was the first year's improvement?

Dr. CLOUGH. The per cent of our serious-accident cases was very much diminished. The small-accident cases haven't shown so much decrease yet. By the small-accident cases I mean mashed fingers, where it does not lay the men off more than a day or two, or a cut on the leg, or something of that kind.

Acting Chairman COMMONS. You have records showing the amount of time lost?

Dr. CLOUGH. No, sir; that is not kept at the hospital office; the timekeeper keeps that.

Acting Chairman COMMONS. Do you, Mr. Irwin, have that record?

Mr. IRWIN. We have that record for 1914 only.

Acting Chairman COMMONS. So that it does not give any comparison?

Mr. IRWIN. No, sir.

Acting Chairman COMMONS. That is all.

Commissioner LENNON. Does the standard of living in the different nationalities or different families affect the frequency of tuberculosis either in the children or the parents?

Dr. CLOUGH. To a certain extent, I think there has been a great change made in the sanitary conditions in most of these homes in the last few years. There is not so much crowding. That is a very potent factor for reducing tuberculosis. There are still some of the homes around here where they have two or three boarders, but in the old times there was five or six room families where in the house they would have one crew night shift and one crew day shift men living in the same room. That does not at all exist now.

Commissioner O'CONNELL. The one that got home first got the best?

Dr. CLOUGH. Yes; at the time they put the eight-hour shift into effect, and the men started coming home at 8 o'clock in the morning, there was a great deal of scrambling around here for a while to get that shift off.

Commissioner O'CONNELL. If they happened to lay off at the same time there would be some struggle, I suppose.

Acting Chairman COMMONS. Has the hospital service or nurses taken an active part in this matter of education regarding crowding and overcrowding, and so on?

Dr. CLOUGH. Not a great deal.

Commissioner O'CONNELL. How many nurses up at the hospital?

Dr. CLOUGH. We employ six graduate nurses.

Commissioner O'CONNELL. Do you take any other cases at the hospital other than company cases?

Dr. CLOUGH. Once in a while. We are generally pretty well filled. When any emergency case comes up that demands it we always see they are taken care of.

Commissioner O'CONNELL. Are there any other hospitals in the city?

Dr. CLOUGH. No, sir; all other accident cases are taken to the hospital at Deadwood.

Acting Chairman COMMONS. What is the expense of operating the hospital service?

Dr. CLOUGH. I have been told it is costing \$50,000 a year.

Acting Chairman COMMONS. That includes everything?

Dr. CLOUGH. That includes everything.

Acting Chairman COMMONS. Nurses and so on?

Dr. CLOUGH. Nurses and doctors and maintaining the hospital.

Acting Chairman COMMONS. The company spent also about \$12,000 in the aid—sickness aid?

Dr. CLOUGH. Twelve thousand dollars and the care of the aid fund, clerical force, and supplies.

Acting Chairman COMMONS. What additional expense is there in the way of taking care of sickness and accidents?

Dr. CLOUGH. That is all.

Acting Chairman COMMONS. That would be about sixty to sixty-five thousand dollars?

Dr. CLOUGH. Yes; that will cover it all.

Acting Chairman COMMONS. Cover the entire expense?

Dr. CLOUGH. Yes, sir.

Acting Chairman COMMONS. The practice for the families—the homes and families of the employees is done free of charge also, is it not?

Dr. CLOUGH. There is no charge for any medical or surgical service whatsoever to any Homestake employee or those directly dependent on him.

Acting Chairman COMMONS. Do many of them engage outside practitioners besides?

Dr. CLOUGH. I think we take care of at least 85 per cent of all the work occurring in the families of Homestake employees.

Acting Chairman COMMONS. How many physicians in the city outside of those employed by the Homestake?

Dr. CLOUGH. There are five.

Acting Chairman COMMONS. Their practice, I take it, is not with the employees except in a small proportion?

Dr. CLOUGH. Not so much. Then they depend a great deal on the outlying camps for their work.

Acting Chairman COMMONS. Do you want to ask any questions?

Commissioner GARRETTSON. Yes; I want to render unto Caesar that which is Caesar's. I am president of an insurance company, and I have some business with doctors. I want to say you are the first doctor I have seen that could talk that long without using technical terms or Latin phrase, and I compliment you.

Dr. CLOUGH. If you had been up against some of these people around here, you would have to talk a good deal simpler language to them.

Acting Chairman COMMONS. Mr. Ryan.

TESTIMONY OF MR. THOMAS RYAN.

Acting Chairman COMMONS. Mr. Ryan, will you give us your name and address?

Mr. RYAN. I am a little deaf; you will have to speak loud.

Acting Chairman COMMONS. Will you give us your name and address?

Mr. RYAN. Thomas Ryan; I am secretary of the union miners.

Acting Chairman COMMONS. Are you a member of the miners' union?

Mr. RYAN. I do; yes, sir.

Acting Chairman COMMONS. A member and secretary.

Mr. RYAN. Yes, sir.

Acting Chairman COMMONS. How many members in the union?

Mr. RYAN. At the last meeting we had 12 members. We have possibly about 16 members attending meetings off and on.

Acting Chairman COMMONS. Are they employed in Lead?

Mr. RYAN. Some of them are employed around the country, not all of them in town—the outskirts of the town.

Acting Chairman COMMONS. What is the number of the local?

Mr. RYAN. Of the total?

Acting Chairman COMMONS. What is the number of the union?

Mr. RYAN. About 16.

Acting Chairman COMMONS. No.—

Mr. RYAN. Oh, No. 2.

Acting Chairman COMMONS. Is it a local union or district union?

Mr. RYAN. Sir?

Acting Chairman COMMONS. Is it a local union or district?

Mr. RYAN. It is an incorporation. We were called No. 2 of the Western Federation of Miners, but President Moyer, of the Western Federation of Miners, January 3, 1913, declared us defunct on account of us not paying dues.

The executive board—Miller came in in December, and hung around the union for about a week, and Saturday night, the first Saturday night in January, he handed me a letter, dated December 17. This letter read:

"This is to officially notify you that the custodianship of the Lead City Union Miners' Hall, which I have invested in you is hereby revoked. You are hereby ordered to turn all property over to Thomas Gorman, my representative, who has been appointed this day."

We were supposed to own the building. The summer of 1910, I think it was late in the fall, there was one of our tenants got about \$500 behind in the rent and would not pay us. We could not get the money out of him, and we brought suit in a local court, and the lawyer told us, on account of a deed of trust that we had given Moyer, we would have to get his consent before we could bring suit.

I wrote to President Moyer in regard to it, and he sent us a kind of paper that enabled us to bring suit to get that money. And President Moyer, December 17 this letter was dated, revoked that order.

On Saturday night, the first Saturday night in January, he served that paper on me.

On Sunday night I says to him, "I suppose you will wait until the union meets on Monday night." He didn't answer thoroughly, just kind of grunted.

On Sunday night he handed me a paper dated January 3: "This is to officially notify you that on account of executive board Miller having reported to me that you have not the required amount of due-paying members, according to article so-and-so of the constitution and by-laws of the Western Federation of Miners, this is to officially notify you that your charter is hereby revoked. You are ordered to turn all money, books, papers of all descriptions over to executive board Miller, who will receipt for same."

On Sunday morning prior to that, executive board Miller came to my house about 10 o'clock, and I had just gotten up. It was a very cold morning in January, and he says: "I can't get in the building." "Well," I says, "you can get in the register's office." He says, "Yes." I says, "I will be down in a minute." I saw there was something strange. I came down and went to the register's office and says, "Mr. Miller, you want to work?" He says, "Yes." I says, "Come up here." I went in the office and I asked what he wanted, and he said he wanted to look at some of my books. I opened the safe and turned the books over to him, and he got what he wanted.

I have three bunches of keys in my pocket, and I had laid them down, and I turned around for the keys and the keys were gone. I closed the safe and I wasn't positive whether I had brought down three bunches or only two. I was looking for them when Miller came to the door. I says, "Have you seen my keys?" He says, "I have them." He says, "I want to see your charter upstairs." So we went upstairs, and I says, "Miller, give me them keys before I forget it." He says, "Oh, no; I think I will keep them keys; I have an order for you to look at, ordering you to turn all property over to me." That was after he had given me the notice that the custodianship of our building was revoked. So I had to take the keys away from Miller.

Well, about a week afterwards it was reported to the union that Miller had went to the office of a safe expert in town on Sunday morning and woke him out of bed, sent Mr. Gorman, his agent, to wake him up to open our safe.

Mr. Bartell, the expert, came over to the register's office, and they asked him if he could open the front door and open the safe. He told him he could not do it, he didn't think. That, in order to open it, he would have to blow it open. Mr. Bartell was not prepared to go ahead, or Miller was not either.

We didn't know that until a week after, after Miller had left. It is getting a little bit ahead of the story. If you want me to tell it, I would rather go back to the beginning—the beginning of the lockout.

Commissioner O'CONNELL. There are a few facts only I want to get. Do I understand you are not affiliated with the Western Federation of Miners now?

Mr. RYAN. No, sir.

Commissioner O'CONNELL. Then this union you claim to be a member of is simply a union composed of a dozen men here?

Mr. RYAN. It is an incorporation that was incorporated in 1880. The Lead City Miners' Union organized in 1877; they were incorporated in 1880 under a benevolent and charitable organization. This charter that we have from the State is perpetual; on account of the way it is we have a charitable and benevolent organization. This charter was to be renewed every 20 years, but according to a decision of Judge Bryan it was not necessary.

In 1898 we were the oldest unions that helped to organize the Western Federation of Miners in Butte. Off and on from that time we were a member of the Western Federation of Miners up to the time that Moyer declared us out.

Commissioner O'CONNELL. This union that you say was chartered under the State became a part of the Western Federation of Miners?

Mr. RYAN. Yes, sir; as was said to-day, just as we became a part of the trade assembly in the town and the district—

Commissioner O'CONNELL. But, as I understood you, what do you mean by under cover in some way?

Mr. RYAN. All our business was done under the name of the Lead City Miners' Union, a corporation. Whenever we were sued we were sued under the name of the Lead City Miners' Union, a corporation.

Commissioner O'CONNELL. Was this corporation composed of just its own men?

Mr. RYAN. Oh, no; the membership ran as high as they—

Commissioner O'CONNELL. What became of the rest of them?

Mr. RYAN. They gradually left the town after that lockout.

Commissioner O'CONNELL. These people that remained assumed the ownership of the property of the other men?

Mr. RYAN. These men—according to the articles of incorporation, the property can not be sold while there are nine men still there.

Commissioner O'CONNELL. Wasn't there some other people that had a financial interest in that property?

Mr. RYAN. They certainly have; in Butte, Mont., there is hundreds of men there interested in it, and they have shown it in what they done in Butte a few months ago.

Commissioner O'CONNELL. Haven't they got a mortgage on this property of a considerable amount?

Mr. RYAN. I would like to go back and tell you about the lockout and tell you about the mortgage; it would not take very much time.

Commissioner GARRETSON. Mr. Chairman, is there anything involved in this testimony except the title to a piece of property?

Acting Chairman COMMONS. Anything you want to bring out?

Commissioner O'CONNELL. I simply want to bring out the facts.

Mr. RYAN. Mr. Kirwan gave testimony here to-day regarding the lockout, and I want to give testimony here to show that we are not what we are said to be all over the United States.

Commissioner O'CONNELL. Who do you refer to—you say "we"?

Mr. RYAN. I mean the Lead City Miners' Union, the men in Butte, Mont., the men all over this country that are fighting the administration of Charles Moyer.

Commissioner O'CONNELL. As I understand it, you are not a member of the organization?

Mr. RYAN. They are not members; we are; and there are members in the fight that were old members of this union, and lived here all their lives until they left after the lockout. They are interested in the welfare of the members here that are holding this property for them. They are interested so much that we frequently hear from them. Now, we had—I have been in Van Tassel all summer. I got a letter from our lawyer last week, and he told me that he had a buyer for our share of that property for \$10,000 that he was offered for it. He said he would be able to get \$12,500 for our interest in that property. I wrote to Butte to members of the union that are interested in that property—that is, that was considered to be interested—

Acting Chairman COMMONS. I think that will do, Mr. Ryan. We would not care to enter into it any further.

Mr. RYAN. Sir?

Acting Chairman COMMONS. I think that will be sufficient this evening. We are very much obliged to you Mr. Scoggan.

TESTIMONY OF MR. WARREN E. SCOGGAN.

Acting Chairman COMMONS. Will you give your name and address?

Mr. SCOGGAN. Warren E. Scoggan.

Acting Chairman COMMONS. And your address?

Mr. SCOGGAN. Lead, S. Dak.

Acting Chairman COMMONS. Your present occupation?

Mr. SCOGGAN. Carpenter.

- Acting Chairman COMMONS. Have you been a miner?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. Member of the miners' union?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. At what time were you a member?
 Mr. SCOGGAN. I have been a miner since 1893.
 Acting Chairman COMMONS. Are you a member at present?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. Of what organization?
 Mr. SCOGGAN. Western Federation.
 Acting Chairman COMMONS. We find now there are two. Which?
 Mr. SCOGGAN. How is that?
 Acting Chairman COMMONS. Which one?
 Mr. SCOGGAN. Well, I belong to what is called the district union, spoken of here this morning.
 Acting Chairman COMMONS. The one that Mr. Kirwan represented?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. Or the one that Mr. Ryan represents?
 Mr. SCOGGAN. The one that Mr. Kirwan represents.
 Acting Chairman COMMONS. The one Mr. Kirwan—
 Mr. SCOGGAN. Well, that he spoke of, rather.
 Acting Chairman COMMONS. That he spoke of. Then you are a member of this district union, so-called, that is being formed?
 Mr. SCOGGAN. I don't know as it is being formed; it is the remains of what is left.
 Acting Chairman COMMONS. Where are the headquarters of that district union?
 Mr. SCOGGAN. Deadwood.
 Acting Chairman COMMONS. At Deadwood?
 Mr. SCOGGAN. Yes.
 Acting Chairman COMMONS. Are you one of the officers?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. Could you give the membership?
 Mr. SCOGGAN. No, sir.
 Acting Chairman COMMONS. Are they employed at mining in this district?
 Mr. SCOGGAN. Some of them.
 Acting Chairman COMMONS. Were you a member of the union at the time of that lockout that has been described here?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. You have heard the story of the lockout that was presented here to-day?
 Mr. SCOGGAN. Yes, sir.
 Acting Chairman COMMONS. Is that substantially correct?
 Mr. SCOGGAN. Well, I don't—it is not entirely correct, I think there is some mistake on the part of some.
 Acting Chairman COMMONS. For example?
 Mr. SCOGGAN. They were mistaken as to how things came about, etc.
 Acting Chairman COMMONS. Would you state just by way of correction any point that you feel some error has been made on?
 Mr. SCOGGAN. Well, only the impression that was made on me in the testimony as was given, was too much stress was laid on the publication in the paper of the cause of the lockout as the reasons for locking them out. As my understanding as a member of the Lead City Miners' Union for 20 years—that the method of communicating with the company was there was committees appointed with credentials given with the seal of the union and officially signed by the officials. That was the official way of communicating between the union and the company, not through newspaper publications. And these newspaper publications was not served on the company; that is, looking at it from what you say, we didn't intend it for that. It was simply publication for employees working for the company; not for the company.
 Acting Chairman COMMONS. Was the union at that time accustomed to address communications to the management of the company?
 Mr. SCOGGAN. Well, from my recollections and the reports from the management here—local management, that was one of the things that I heard reported, that any business they had to do with the company, that must come from the union as a committee with credentials with them. That was reported, and that is what they acted on after that.

Acting Chairman COMMONS. That was, you say, prior to this meeting in October, 1909?

Mr. SCOGGAN. Yes; that was all prior.

Acting Chairman COMMONS. It was the recognized practice that you should appoint committees?

Mr. SCOGGAN. Yes, sir.

Acting Chairman COMMONS. To see the management?

Mr. SCOGGAN. Yes, sir; not by publication.

Acting Chairman COMMONS. But in this particular case the organization did not follow that method, and adopted a resolution and sent it to the members for publication?

Mr. SCOGGAN. Yes, sir.

Acting Chairman COMMONS. Now, what is the difference between the two methods that you wish to emphasize?

Mr. SCOGGAN. Well, the difference: One was the custom, and the other was new, something that had never been done before.

Commissioner LENNON. Well, was the passage of that resolution in the union equivalent to a strike vote?

Mr. SCOGGAN. Oh, no.

Commissioner LENNON. How did the union look upon that passage of that resolution? Was it equivalent to a strike vote on the 25th of November?

Mr. SCOGGAN. No, sir; not to my knowledge; not to my way of understanding it. As it was stated here this morning, if they were to vote on a strike it would be voted by three-fourths majority, and this was simply passed like a motion and carried by a majority.

Commissioner LENNON. Well, was there any other unfinished business on the books of the organization which would bring the question of the strike vote up at a later date, say a week after the 25th, or two weeks—within a short time after the 25th?

Mr. SCOGGAN. I don't understand the question.

Commissioner LENNON. Well, was there pending any action by the union; that is, if the resolution was not complied with that the strike vote would be taken?

Mr. SCOGGAN. I don't remember of anything being talked of a strike vote. I want to say that in regard to that, that all of this publication and the agitation, and this man Tracy spoken of here this morning, brought in as organizer, were the efforts to get the men that were working for the company, not belonging to the union, into the union. And that was the intention of the publication, and all that they done was successful in getting members into the union. They were trying to make it unanimous, as it was said here this morning the reasons why—I was on the committee myself that went down to talk with the superintendent of the company—the reasons why they wanted them to belong to the union. It simply was because their receipts were falling below their expenses, and that was on account of so many working for the company that did not belong, and so many of them that did belong to the union was growing old, like some of us, and we had more sickness, and the expense was higher than it ought to be, and the younger members not belonging, something had to be done. The reason I speak of that is because I was on the committee myself that went down and conferred.

Commissioner LENNON. How many years had you maintained this benefit society?

Mr. SCOGGAN. Well, I have been in Lead for 20 years and over, and it was in existence when I came here, but they changed their rates, different at different times. When I came here they was paying, I believe it was \$6 a week; they finally raised it to \$1 a day, and finally raised it to \$10 a week. That was the best they ever paid for a sick benefit, and \$75 funeral benefit in case of death—that is natural.

Commissioner LENNON. How much did each member pay to maintain that benefit?

Mr. SCOGGAN. \$1 a month.

Commissioner LENNON. Now, tell me, how was the money raised to erect this building down here?

Mr. SCOGGAN. Well, it was raised by an assessment—not an assessment, by a voluntary giving of \$5 a month out of their pay, those in the employ of the company. That was taken out of each one, the pay of each one working for the company that belonged to the union. If a man didn't belong to the

union, why he could go and take his voucher and go down and get his money. They could not take their pay.

Commissioner LENNON. In that way the members then contributed the money to erect the building?

Mr. SCOGGAN. Yes; that was done.

Commissioner LENNON. Did they have it clear of indebtedness?

Mr. SCOGGAN. Oh, certainly. That was done, this \$5 proposition was paid in until they had the amount of \$50, and then you were issued a bond drawing 8 per cent interest.

Commissioner LENNON. That is, each individual when he had invested \$50, then he got a bond?

Mr. SCOGGAN. If he had the amount of \$50 in vouchers he was given a bond drawing 8 per cent interest. The bonds ran until they passed maturity, and was finally paid up.

Commissioner LENNON. I don't know that it is pertinent to any investigation here, but in wandering by that building, walking up and down the street, we can't understand as strangers here why that building stands there empty. What's the matter? It looks like a good building, and it has a good location. Is it because of litigation, or what is the reason?

Mr. SCOGGAN. Well, if I could express it in my way I would say it is on account of a family row. Neither one of the factions wants to move in.

Commissioner LENNON. That is all.

Acting Chairman COMMONS. You are excused. Is there anything further that you care to add?

Mr. SCOGGAN. Oh, I think nothing that I have a great desire to testify to, only that I want to say as I have taken quite an active part in this, as most all know, the reasons why I have taken an active part in it, and the objections I have to the part the company took in it, is simply that it is published in the paper every day, the Lead City Call, the card that goes with the other that you read to-day and that was offered here as an exhibit, and that was the stand that the unions took. The statement was made here this morning that the other organization supported the miners, not because it was a miners' fight or anything of that kind, but because this card attacked all unions regardless of miners' federation or any other federation. The card simply said you could not belong to any union. Of course that affected all of us. That is the part that I want to testify, as this is an investigation, that any union man that believed in the principle of unionism and knows what it is, he knows what unionism means—which I think I do, and I do not know whether I do or not, but I think so—under that condition he could not work under the card if he believed in the principles of unionism and wanted to live up to them. I think the card is simply an encouragement—or for deception and a discouragement to the truth. At the time it was adopted everything was union here comparatively, we were working under what is called union conditions, and of course that card simply meant that they all had to go out of business, and that is why it stands empty. At that time the building was used, but with no unions allowed to exist under the card system, which they could not; the building is out of use and no use for it.

Commissioner O'CONNELL. You mean by the card system the union card?

Mr. SCOGGAN. I mean the card system that is published in the paper that is supposed to be the official paper of the company; that is, all of these notices that we got here this morning as exhibits; in them is the card which has been spoken of here this morning.

Commissioner O'CONNELL. That means that a union man won't be employed?

Mr. SCOGGAN. Yes; that is what I am referring to; that is the difference between the Homestake Co. and the unions. That is the difference.

Commissioner O'CONNELL. That seems to be quite a broad difference.

Mr. SCOGGAN. That is the difference that the lockout went out on. That is what the unions went out on.

Commissioner O'CONNELL. That is sort of the immovable up against the irresistible.

Mr. SCOGGAN. Well—

Acting Chairman COMMONS. That is all the questions we have. We will excuse you.

Mr. SCOGGAN. Yes.

Acting Chairman COMMONS. The commission will now stand adjourned until 9 o'clock to-morrow morning.

(And now, at 9 o'clock p. m., of this, Monday, August 3, 1914, an adjournment was taken until 9 o'clock a. m., Tuesday, August 4, 1914.)

LEAD, S. DAK., August 4, 1914—9 a. m.

Present: Commissioners Commons (acting chairman), Garretson, Lennon, and O'Connell.

Acting Chairman COMMONS. The commission will come to order. Is Mr. Howard present?

TESTIMONY OF MR. H. L. HOWARD.

Acting Chairman COMMONS. Give us your name, please.

Mr. HOWARD. H. L. Howard, Lead, S. Dak.

Acting Chairman COMMONS. You are the mayor?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Will you describe briefly the form of government of the city—what are the governing officials?

Mr. HOWARD. We have a board of three commissioners.

Acting Chairman COMMONS. A mayor and two commissioners?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Are they elected at the same election?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. The three elected at the same time?

Mr. HOWARD. No, sir; their terms are for five years, but they are elected at different times—that is, three were elected at the first election for different lengths of time, but it is for a term, and the following election is for five years.

Acting Chairman COMMONS. When was this system started?

Mr. HOWARD. It was in May, 1912.

Acting Chairman COMMONS. And when was the first election?

Mr. HOWARD. In May, 1912.

Acting Chairman COMMONS. The present commissioners were elected at that time?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Who are the commissioners?

Mr. HOWARD. Myself, as the mayor; J. W. Curran; and W. J. Fogelsong.

Acting Chairman COMMONS. Foltz?

Mr. HOWARD. Fogelsong.

Acting Chairman COMMONS. The commissioners are the governing body?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Do they appoint all subordinates?

Mr. HOWARD. They do.

Acting Chairman COMMONS. What are the divisions of the city government into departments?

Mr. HOWARD. A mayor, finance commissioner, the commissioner of public property, police, and fire; the commissioner of waterworks and sewers.

Acting Chairman COMMONS. Is this divided among the three commissioners?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Which do you have?

Mr. HOWARD. I am the mayor.

Acting Chairman COMMONS. Do you have charge of any other department?

Mr. HOWARD. I have charge of the finance department and general supervision over the other two departments.

Acting Chairman COMMONS. Who has charge of the public property?

Mr. HOWARD. The public buildings are under my control, but public property other than that is under the control of Mr. Fogelsong.

Acting Chairman COMMONS. The school property.

Mr. HOWARD. That is under the board of education.

Acting Chairman COMMONS. How is that board selected?

Mr. HOWARD. They are elected by the people.

Acting Chairman COMMONS. In the same way?

Mr. HOWARD. In the same way.

Acting Chairman COMMONS. At large?

Mr. HOWARD. They are elected at large, five members of the board.

Acting Chairman COMMONS. Who makes the appropriations for school purposes?

Mr. HOWARD. That is made by the board of commissioners, but the school board meets and figures what their appropriation should be, and reports it to the board of commissioners, and the board of commissioners, of course, accepts their figures absolutely.

Acting Chairman COMMONS. So that it starts with the board of education, and the commissioners accept their figure, is that the idea?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Is there a tax limit for educational purposes?

Mr. HOWARD. There is.

Acting Chairman COMMONS. Fixed by the State law?

Mr. HOWARD. Fixed by the State law.

Acting Chairman COMMONS. Who has charge of the waterworks and sewage?

Mr. HOWARD. Mr. Curran—J. W. Curran.

Acting Chairman COMMONS. Who has charge of the police?

Mr. HOWARD. The law reads in this way, that the commissioner of public property, police, and fire is charged with the enforcement of the police and fire regulations. The enforcement of the law is entirely with the mayor; consequently he has considerable to do with the police department.

Acting Chairman COMMONS. He practically controls the police department?

Mr. HOWARD. I don't give any attention to the details of the police department, but in other ways your statement would be correct.

Acting Chairman COMMONS. Can you state the total tax levy of the town?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. What is it?

Mr. HOWARD. The levy for 1913 was 7 mills; for 1914 it will be 5½ mills.

Acting Chairman COMMONS. Take 1913, the taxes have been paid for that?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. What was the total revenue from taxes?

Mr. HOWARD. The assessed valuation of the city in 1913 was \$3,948,854; that produced practically \$61,000. We had other sources of revenue, however.

Acting Chairman COMMONS. What are the other sources?

Mr. HOWARD. You want the entire revenue of the city?

Acting Chairman COMMONS. Take the entire revenue.

Mr. HOWARD. The appropriations for the year 1913—our fiscal year begins September 1—for the fiscal year September 1, 1913, to August 31, 1914, the total appropriation was \$91,878.21.

Acting Chairman COMMONS. Does that include schools?

Mr. HOWARD. No, sir; that is city.

Acting Chairman COMMONS. Add the school appropriation?

Mr. HOWARD. City alone.

Acting Chairman COMMONS. Add the school appropriation.

Mr. HOWARD. I would have to get that for you.

Acting Chairman COMMONS. Approximately.

Mr. HOWARD. Well, I could not give you that without looking at their revenue statement, because they have the—the limits of the city and the limits of the school district are not identical, and then the school district has other sources of income from the State, which makes it quite an extensive proposition.

Acting Chairman COMMONS. What is the school levy?

Mr. HOWARD. Four mills.

Acting Chairman COMMONS. Well, then, that would make it about four-sevenths of what the other is?

Mr. HOWARD. No; the valuation of the independent school district is much larger than the valuation of the city because the limits are much greater. It covers a great deal more territory than the city.

Acting Chairman COMMONS. Well, so far as the property within the city is concerned, it pays 4 mills.

Mr. HOWARD. It pays 4 mills.

Acting Chairman COMMONS. So that on the city property the schools would pay four-sevenths for education of what they do for general purposes?

Mr. HOWARD. The total levy that the property in this city paid last year was 17 mills; the State tax is 1 mill, county tax is 4 mills, city, road, and bridge tax 1 mill, school tax 4; total, 17 mills.

Acting Chairman COMMONS. Seven mills brings \$91,000, does it?

Mr. HOWARD. No; 7 mills would bring practically \$61,000.

Acting Chairman COMMONS. Seven mills brought \$61,000; 1 mill would bring about \$9,000; 17 mills would bring about \$153,000 from the levy on the property of the town?

Mr. HOWARD. That is, you want just city and school purposes alone?

Acting Chairman COMMONS. I want all of the tax levy that is imposed on the town.

Mr. HOWARD. Well, you will have to take 17 mills then, and take the valuation which I gave you of eight millions, and multiply that by 17 and you will get the total amount of taxes paid by the city of Lead.

Acting Chairman COMMONS. That brings it out about one hundred and thirty-six million for the town?

Mr. HOWARD. One hundred and thirty-six thousand.

Acting Chairman COMMONS. One hundred and thirty-six thousand; yes.

Now, is that collected by one assessor or by the county treasurer?

Mr. HOWARD. That is collected by the county treasurer in this State.

Acting Chairman COMMONS. Can you state the total amount of taxes paid by the Homestake Co. in the town?

Mr. HOWARD. I don't think I could. It is approximately, I think, 53 per cent.

Acting Chairman COMMONS. Of the total taxes?

Mr. HOWARD. Yes.

Acting Chairman COMMONS. That is, of this one hundred and thirty-six thousand they pay 53 per cent?

Mr. HOWARD. Yes, sir; that is my recollection.

Acting Chairman COMMONS. Over half of it, half of the taxes. What other sources of revenue are there besides taxes?

Mr. HOWARD. Well, I will read you my revenue statement.

Acting Chairman COMMONS. Will you kindly have it handed in as an exhibit?

(The paper so presented was marked "Howard Exhibit No. 1.")

The statement referred to "Financial Statement, City of Lead, S. Dak., March 1, 1914," was submitted in printed form.)

Mr. HOWARD. We had miscellaneous receipts, \$3,018.36; from sundry licenses, \$1,073.35; liquor licenses, \$14,000; municipal court, \$5,051.20; sale of city hall bonds, \$10,063.33; internal improvement bonds, \$2,019; park receipts, \$813.

That was for the year March 1, 1913, to February 28, 1914, when this statement was made up.

Acting Chairman COMMONS. The waterworks here, do you have a separate company, or is that the Homestake Co.?

Mr. HOWARD. That is controlled by the Homestake Mining Co.

Acting Chairman COMMONS. Do they have a franchise in the city?

Mr. HOWARD. They have an agreement with the city to furnish water here; yes, sir.

Acting Chairman COMMONS. What is the nature of that agreement?

Mr. HOWARD. It was entered into at a very early date here, and there is no franchise granted by the city for the purpose. These pipes and reservoirs were made here before the city had any practical existence; the town was only organized in 1890.

Acting Chairman COMMONS. Do the commissioners have authority to regulate waterworks?

Mr. HOWARD. They have under a State law, I believe.

Acting Chairman COMMONS. Have they exercised that authority?

Mr. HOWARD. No, sir. We never had enough money to put in a water plant; it is a very big proposition.

Acting Chairman COMMONS. I do not mean a municipal proposition, but to regulate the charges, the rates charged by the private company?

Mr. HOWARD. No; we have no such authority by the State.

Acting Chairman COMMONS. You have no such authority?

Mr. HOWARD. No; our powers here in this State, as far as the municipality is concerned, are all prescribed by the State laws.

Acting Chairman COMMONS. How large is your police force?

Mr. HOWARD. We have four men, four regular men.

Acting Chairman COMMONS. What salaries are paid?

Mr. HOWARD. We pay the chief of police \$115 a month; we pay a night captain \$100, and two patrolmen \$90 a month each.

Acting Chairman COMMONS. How many men in the fire department?

Mr. HOWARD. We have 21.

Acting Chairman COMMONS. What are the salaries of the commissioners?

Mr. HOWARD. The commissioners?

Acting Chairman COMMONS. Yes.

Mr. HOWARD. My salary is \$1,800 a year, and the commissioners \$1,000 each.

Acting Chairman COMMONS. You are not required to give your entire time to the city work—that is, to give up private business—are you?

Mr. HOWARD. Well, the success of the commission form of government depends solely on the amount of time each man gives to it. It is a government by specialists, and if the man does not give his entire time to it the commission form of government can never be a success.

- Acting Chairman COMMONS. Do you carry on a private business?
- Mr. HOWARD. No, sir; I give my entire time.
- Acting Chairman COMMONS. You give your entire time?
- Mr. HOWARD. And part of my wife's.
- Acting Chairman COMMONS. Mr. Curran, does he give his entire time?
- Mr. HOWARD. He does not.
- Acting Chairman COMMONS. He carries on a private business, does he?
- Mr. HOWARD. Yes, sir.
- Acting Chairman COMMONS. Mr. Fogelson, does he give his entire time?
- Mr. HOWARD. No, sir; not his entire time.
- Acting Chairman COMMONS. So that it is expected the mayor should give his entire time?
- Mr. HOWARD. Yes, sir.
- Acting Chairman COMMONS. And all the others should give part of their time?
- Mr. HOWARD. Devote only a portion of the time.
- Acting Chairman COMMONS. How are the elections conducted? Is there a party ticket or is there a nomination by petition?
- Mr. HOWARD. Nomination by petition. There is no party designation; nothing at all on the ballot except the names of the men and the office for which they are candidates.
- Acting Chairman COMMONS. At the last election—the first election, rather—how many candidates were put up for mayor and commissioners?
- Mr. HOWARD. There were two candidates for mayor and I think there were five candidates for the two commissionerships.
- Acting Chairman COMMONS. And those that stood at the head of the ticket were elected?
- Mr. HOWARD. They must obtain the majority, and the two that obtain a majority are elected.
- Acting Chairman COMMONS. What was the vote cast for mayor?
- Mr. HOWARD. It was between 1,700 and 1,800, I believe.
- Acting Chairman COMMONS. What is the total registration?
- Mr. HOWARD. About 2,200 or 2,400, I think.
- Acting Chairman COMMONS. What did each candidate receive?
- Mr. HOWARD. For mayor I can only give it to you approximately; I don't remember.
- Acting Chairman COMMONS. Well, that is all right.
- Mr. HOWARD. I think I received about 1,200 votes; my opponent, the balance.
- Acting Chairman COMMONS. Are campaign expenses limited in this State by law?
- Mr. HOWARD. We have got a corrupt-practices act, I believe, now that is pretty severe. You have to publish the amount of your expenses.
- Acting Chairman COMMONS. What were your expenses?
- Mr. HOWARD. I don't remember now what they were.
- Acting Chairman COMMONS. Did you publish them?
- Mr. HOWARD. They were not required to be published at that time. This law was not then in effect; if I had published them, I would probably remember it. However, they were not extraordinarily heavy.
- Acting Chairman COMMONS. How do you conduct your campaign—on the streets?
- Mr. HOWARD. Principally through the newspapers.
- Acting Chairman COMMONS. Through the newspapers. Are there civil-service examinations for subordinate positions?
- Mr. HOWARD. No, sir.
- Acting Chairman COMMONS. They are appointed by the—
- Mr. HOWARD. Commissioners.
- Acting Chairman COMMONS. By the commissioners?
- Mr. HOWARD. Yes, sir.
- Acting Chairman COMMONS. What is the business in which Mr. Curran is engaged?
- Mr. HOWARD. Mr. Curran is in the real estate business, and I guess he would be classed as a capitalist. He is a man of some means.
- Acting Chairman COMMONS. And the business that Mr. Fogelson is in?
- Mr. HOWARD. He is in the retail coal business.
- Acting Chairman COMMONS. How long have you been a resident of this city?
- Mr. HOWARD. Twenty-two years.

Acting Chairman COMMONS. How long has Mr. Curran been a resident of this city?

Mr. HOWARD. I think perhaps nearly 30 years.

Acting Chairman COMMONS. And Mr. Fogelsong?

Mr. HOWARD. I believe, perhaps, as long as Mr. Curran.

Acting Chairman COMMONS. They have been in this business during the time that they have been here?

Mr. HOWARD. Well, I couldn't say as to that, that they have been in their present business—they have been in their present business for quite a long time.

Acting Chairman COMMONS. What are the principal causes of arrest by the police? Have you the police record of arrests between those dates?

Mr. HOWARD. Yes, sir. The small breaches of the peace, as a rule. I think I can give you the number. The court here—that is, during the year this statement covers—288 criminal cases under city ordinances, 81 State criminal cases, and 102 civil cases, making a total of 471 cases, criminal and civil, handled by the court during that year.

Acting Chairman COMMONS. State the intemperance and disorderly conduct cases; how do they run, drunkenness, etc.?

Mr. HOWARD. The city is remarkably free.

Acting Chairman COMMONS. Have you that separate in your report?

Mr. HOWARD. No.

Acting Chairman COMMONS. They are not separated; they come under those criminal cases?

Mr. HOWARD. Yes; they come under the criminal cases.

Acting Chairman COMMONS. Has there been any improvement in the arrests for disorderly conduct?

Mr. HOWARD. There has been a very marked improvement.

Acting Chairman COMMONS. Could you verify that by some figures?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Well, in what ways, state.

Mr. HOWARD. The records of the court would show that.

Acting Chairman COMMONS. You don't have them in mind; about what they were?

Mr. HOWARD. I can give you one instance which might show. When I was first elected mayor we had 17 policemen; now we have 4, and you gentlemen can draw your own conclusions.

Acting Chairman COMMONS. The reduction in number, then, is owing to the falling off in the number of arrests required?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. The 17 were busy, were they?

Mr. HOWARD. They were needed.

Acting Chairman COMMONS. Would you say that that would be a fair indication of the reduction in disorderly conduct and intemperance, from 17 policemen down to 4? Would that probably indicate what you say would be the improved moral condition of the town as the result of these three years?

Mr. HOWARD. Yes, sir; that would be, I would think, good grounds for taking that view of the matter.

Acting Chairman COMMONS. What has been your policy regarding saloons?

Mr. HOWARD. I have a State-wide reputation as a man handler of saloons.

Acting Chairman COMMONS. That means making them live up to the law?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Will you state the law? What is the law regarding saloons?

Mr. HOWARD. The law requires a saloon to be located in a building not connected with—in a room not connected with any other room in the building, and to be open at all times to public inspection by having the windows and doors unobstructed. Prescribe the hours in which they may sell; prohibits them from selling to drunkards who are known as such or to persons after they have been notified not to do so by certain parties, and we absolutely prohibit all gambling.

Acting Chairman COMMONS. In case there are violations after notice, do the commissioners have power to revoke the license?

Mr. HOWARD. I think they could, but they would be governed by rules of law.

Acting Chairman COMMONS. Have you closed any saloons during this period since 1912?

Mr. HOWARD. The State legislature passed a law limiting the number of saloons to one to 600 of population, and that automatically cut the number of saloons from 18 to 14.

Acting Chairman COMMONS. When did that law go into effect?

Mr. HOWARD. I think it was two years ago.

Acting Chairman COMMONS. While you were mayor?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. Who decides—the commissioners were the ones that decided?

Mr. HOWARD. They were the ones that decided.

Acting Chairman COMMONS. There were four that the commissioners decided should be discontinued?

Mr. HOWARD. There were three. Only three out of the four applied, and those three were dropped; but I believe that we made a requirement which was in the law, that these men should deposit the amount of their license fee before we would consider their application, and I think that there were only 15 who produced the money. We considered those 15 and granted 14 of them.

Acting Chairman COMMONS. What is the fee—license fee?

Mr. HOWARD. One thousand dollars a year.

Acting Chairman COMMONS. When you were elected mayor, what was the closing hour?

Mr. HOWARD. Eleven o'clock.

Acting Chairman COMMONS. Can the commissioners change the hour?

Mr. HOWARD. No, sir.

Acting Chairman COMMONS. What is the closing hour now?

Mr. HOWARD. Nine o'clock.

Acting Chairman COMMONS. Is that a State law?

Mr. HOWARD. Yes, sir.

Acting Chairman COMMONS. When was that put in force?

Mr. HOWARD. I think that was about three years ago.

Acting Chairman COMMONS. Have you revoked any licenses?

Mr. HOWARD. No, sir.

Acting Chairman COMMONS. On the ground of violation of the law?

Mr. HOWARD. No, sir; I have had no trouble to enforce the law.

Acting Chairman COMMONS. How?

Mr. HOWARD. I have had no trouble to enforce the law.

Acting Chairman COMMONS. Well, I think that will be sufficient. Much obliged to you.

Mr. HOWARD. Much obliged to you.

Acting Chairman COMMONS. Mr. Northam.

TESTIMONY OF MR. G. A. NORTHAM.

Acting Chairman COMMONS. Give your name and address.

Mr. NORTHAM. G. A. Northam; Lead, S. Dak.

Acting Chairman COMMONS. What is your position, Mr. Northam, with the Homestake Co.?

Mr. NORTHAM. I am known as the special agent of the Homestake Mining Co.

Acting Chairman COMMONS. What are your duties?

Mr. NORTHAM. Well, I look after all their properties and works. If I see anything going wrong, I make the report to Mr. Grier.

Acting Chairman COMMONS. And how much of a force have you under your direction?

Mr. NORTHAM. At present, or during the month of July, I had 19 men. That is the smallest amount that I had.

Acting Chairman COMMONS. And what is the largest number that you had?

Mr. NORTHAM. Well, I have had away up into a hundred.

Acting Chairman COMMONS. At what time?

Mr. NORTHAM. During the lockout.

Acting Chairman COMMONS. Where do you distribute these 19 men?

Mr. NORTHAM. They are distributed, the most of them, around the works, our most valuable business.

Acting Chairman COMMONS. What salaries are paid these men?

Mr. NORTHAM. The majority of them are paid \$3 for eight hours' work.

Acting Chairman COMMONS. Do you operate in three shifts with them?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. How is that? You have 19 men, each of them at 8 hours, but you have 24 hours of watching and guarding.

Mr. NORTHAM. I watch during the darkest part of the night. My men now go on at 9 o'clock and work eight hours.

Acting Chairman COMMONS. How many of them are night watchmen?

Mr. NORTHAM. They are all night watchmen except four, I think.

Acting Chairman COMMONS. And what are the four—what are their duties?

Mr. NORTHAM. Special; looking after business in my line.

Acting Chairman COMMONS. You detail them for any work that comes?

Mr. NORTHAM. Yes, sir; day and night.

Acting Chairman COMMONS. How long have you been in this position, Mr. Northam?

Mr. NORTHAM. I have been in the employ of the Homestake Mining Co. in this capacity for 22 years—about 22 years.

Acting Chairman COMMONS. And the chief of this service?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Of this department?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Are you sworn in as a State officer?

Mr. NORTHAM. I am deputy sheriff.

Acting Chairman COMMONS. You are a deputy sheriff?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. How long have you been deputy sheriff?

Mr. NORTHAM. I have either been deputy sheriff or a constable for all of that time.

Acting Chairman COMMONS. And you have been on the pay roll of the company during the same time?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Do you have pay as deputy sheriff from the county?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. How many of your men under your direction have similar authority as deputy sheriffs?

Mr. NORTHAM. All of them.

Acting Chairman COMMONS. They are all deputy sheriffs?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. What authority does that give you in addition to what you would have were you simply the special agent of the Homestake Co.?

Mr. NORTHAM. Well, if my men were going to and from their work on the Homestake grounds, they would have to pass through the city; and if they were carrying firearms, which they have a right to carry when they are deputy sheriffs, an officer could arrest them for carrying concealed weapons in the city limits; but when they pass onto our grounds—I speak of our grounds; I mean the Homestake grounds.

Acting Chairman COMMONS. What additional advantage does it give?

Mr. NORTHAM. In case that anyone molests property by trespassing, they have a right to arrest them.

Acting Chairman COMMONS. Without warrant?

Mr. NORTHAM. Yes, sir; if they catch them in the act.

Acting Chairman COMMONS. In case they make an arrest, what is the disposition of the case, what is the procedure?

Mr. NORTHAM. I am notified, and they turn them over to me, and I in turn turn them over to the sheriff of the county and make the complaint against them, whatever the nature of the case may be.

Acting Chairman COMMONS. And the trial comes up in what court?

Mr. NORTHAM. Well, if they were arrested in Deadwood, as I have a watchman down there, the proposition is that I would have them taken before the court in Deadwood. If it was up here, they would be taken before the municipal court here.

Acting Chairman COMMONS. That is the city. What is the status of that court, is it practically a justice court?

Mr. NORTHAM. Justice court.

Acting Chairman COMMONS. The lowest court. Who prosecutes the cases in such cases, you?

Mr. NORTHAM. The district attorney.

Acting Chairman COMMONS. The district attorney prosecutes them?

Mr. NORTHAM. Yes.

Acting Chairman COMMONS. And you furnish the evidence?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. What is your record of the number of arrests that you have made during the past two years?

Mr. NORTHAM. I haven't any record.

Acting Chairman COMMONS. How?

Mr. NORTHAM. I haven't any record of the number. I never kept a record of the number of arrests that were made.

Acting Chairman COMMONS. Well, could you just give us some sort of an estimate?

Mr. NORTHAM. Why, no; not definitely. I don't think I could.

Acting Chairman COMMONS. Well, would you arrest during the year a dozen men, do you think?

Mr. NORTHAM. During the years of 1910 and 1911 it would probably be that many and might exceed it.

Acting Chairman COMMONS. What year was that?

Mr. NORTHAM. 1910 and 1911.

Acting Chairman COMMONS. About 10 or 11 men. Did you make arrests during this lockout?

Mr. NORTHAM. Quite a number.

Acting Chairman COMMONS. Do you have in mind about how many were made?

Mr. NORTHAM. No; I could not say.

Acting Chairman COMMONS. How?

Mr. NORTHAM. I could not say.

Acting Chairman COMMONS. You had about a hundred men at that time?

Mr. NORTHAM. Yes, sir; under my control; yes.

Acting Chairman COMMONS. The only arrests that you make are on the basis of trespass on the property?

Mr. NORTHAM. That is all.

Acting Chairman COMMONS. Do you make arrests, supposing that one employee attacks another employee and one of your men—of your deputies—were a witness, you would have authority to arrest?

Mr. NORTHAM. We would have the authority to arrest; yes, sir.

Acting Chairman COMMONS. Do you make such arrests?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. How do you do in such cases?

Mr. NORTHAM. We report it.

Acting Chairman COMMONS. Report it?

Mr. NORTHAM. They report it to me, and I report it to the officers.

Acting Chairman COMMONS. You have besides these that are on salaries, do you have any other deputies or persons assisting you?

Mr. NORTHAM. They are included in these 19 men.

Acting Chairman COMMONS. Do you have charge of these men who are employees who are to make reports on the work that is done by men, say, underground, and that class of work which is not visible, with your deputies?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. You have no such report coming from the men underground?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. The policy of your company is to prohibit any man from belonging to a union. That is in their questions of application. What is your activity in discovering men who are secretly fomenting trouble or disturbers or members of unions, agitators of that class of people who might come to town and stir up trouble, find fault or try to organize a union?

Mr. NORTHAM. I report him to our employment agent, Mr. Irwin.

Acting Chairman COMMONS. You report to him?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Your four special agents are detailed to this class of work?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. The watchmen are not?

Mr. NORTHAM. Yes, sir; they are, too, if they find a man of the description that you are putting.

Acting Chairman COMMONS. What do you consider to be a disturber or agitator; is it necessarily a man who is trying to organize a union? What is the test of a disturber you will report under such circumstances?

Mr. NORTHAM. Any man that would come in here and try to reorganize the Western Federation, I would call him a disturber.

Acting Chairman COMMONS. Suppose one of the employees should be reported as having expressed some inclination to organize a union; then you would report him?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. All employees?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Could you say how many men you have reported on this ground during the past year?

Mr. NORTHAM. No, sir; I can't.

Acting Chairman COMMONS. Have you reported any?

Mr. NORTHAM. Yes, sir; a good many.

Acting Chairman COMMONS. A good many?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Could you say whether these men have been dismissed or not from the service?

Mr. NORTHAM. Some of them have.

Acting Chairman COMMONS. On the ground of what?

Mr. NORTHAM. Disturbers.

Acting Chairman COMMONS. Is this put on record in the employment office?

Mr. NORTHAM. I think it is.

Acting Chairman COMMONS. You are familiar with the employment office records?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. And you use that as a guide in following up these men?

Mr. NORTHAM. I don't use their record as a guide. I make the report to them as I find the men that are working for the company.

Acting Chairman COMMONS. I notice that the company also asks the men regarding the political parties that they belong to when they employ them. Do you report to the employment office regarding the politics of any employee?

Mr. NORTHAM. I took this up with every man that was working for me and found out their politics and handed in a report to Mr. Irwin.

Acting Chairman COMMONS. That is the men of your staff?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. And about the men that are working in the mines?

Mr. NORTHAM. I have nothing to do with that.

Acting Chairman COMMONS. You make no report whatever of the politics of the men working in the mines?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. If a man was a Socialist, would you report him?

Mr. NORTHAM. Well, if he was the kind of Socialist I have run up against I certainly would.

Acting Chairman COMMONS. Have you reported men as Socialists?

Mr. NORTHAM. Yes, sir; I have.

Acting Chairman COMMONS. About how many?

Mr. NORTHAM. I can't tell you.

Acting Chairman COMMONS. Well, suppose a man was reported as being a Progressive or Bull Moose, would you report him?

Mr. NORTHAM. I used to like the Bull Moose.

Acting Chairman COMMONS. Would you report him?

Mr. NORTHAM. No, sir; I would not.

Acting Chairman COMMONS. You would not?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. Why would you not report him?

Mr. NORTHAM. Because he is not an agitator.

Commissioner O'CONNELL. Would you call the chief Bull Moose an agitator?

Mr. NORTHAM. Sir?

Commissioner O'CONNELL. Would you call him an agitator?

Mr. NORTHAM. You didn't understand my answer. I said because he was not an agitator.

Acting Chairman COMMONS. One of the principles of the Bull Moose Party is to do away with all Sunday work. A man agitating doing away with Sunday work would be a disturber to that extent. Would you report a man who agitated in favor of doing away with Sunday work?

Mr. NORTHAM. No, sir; I would not.

Acting Chairman COMMONS. Then your principle of distinction is purely a question as to whether the man is an agitator in the sense that he would be likely to induce the men to organize?

Mr. NORTHAM. That is it.

Acting Chairman COMMONS. It all centers on that one proposition, and the only political side to it comes where the political party was in favor of organizing a union and would be an agitator to that extent. In case any of these men were reported to you, do you deal with the man himself who has been reported as an agitator?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. You simply report him to Mr. Irwin?

Mr. NORTHAM. After he is reported to me I investigate him. If I find the report was correct, then I turn my report in to Mr. Irwin.

Acting Chairman COMMONS. To Mr. Irwin?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Then it is Mr. Irwin's business to take it up with the man himself?

Mr. NORTHAM. Yes, sir; or see that that man does not go to work if he hasn't already gone to work.

Acting Chairman COMMONS. So that as far as the accuracy of the reports are concerned, it is up to you to make the investigation?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. And find whether the report is accurate?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Mr. Irwin does not investigate those questions?

Mr. NORTHAM. No, sir.

Acting Chairman COMMONS. You report these cases to Mr. Grier?

Mr. NORTHAM. Yes, sir.

Acting Chairman COMMONS. Also as well as Mr. Irwin?

Mr. NORTHAM. Yes, sir; when Mr. Grier is here.

Acting Chairman COMMONS. So that you would say with your force you have a pretty accurate knowledge of the entire working force of the company on these points?

Mr. NORTHAM. Yes, sir; I think I have.

Acting Chairman COMMONS. I believe that is all.

Mr. NORTHAM. I want to state I have—

Acting Chairman COMMONS. Have you any statement you would like to make?

Mr. NORTHAM. There is a statement I have to make each month and turn it in to the time office, the number of men working for me and their nationality, and here is a copy of it if you wish.

(The paper so presented was marked "Exhibit No. 1, Witness Northam, August 4, 1914.")

The paper referred to is printed under "Exhibits.")

Mr. NORTHAM. And if you want to know where these men work—

Acting Chairman COMMONS. Yes, sir.

Mr. NORTHAM. I have a list here of their places that these men work.

Acting Chairman COMMONS. You may submit that also.

(The paper so presented was marked "Exhibit No. 2, Witness Northam, August 4, 1914.")

The paper referred to is printed under "Exhibits.")

Acting Chairman COMMONS. Will you take that last statement you handed in? Where do these men work?

Mr. NORTHAM. You want me to read the list?

Acting Chairman COMMONS. Just state what are the places.

Mr. NORTHAM. Reservoir; Ellison hoist; B. & M. hoist; Golden Star hoist; Golden Prospect hoist; Pocahontas and Monroe mill yards; tunnel; cyanide No. 1; cyanide No. 2; slimes; house, call office, and barn; specials; Hidden Fortune hoist; Hidden Fortune mill; Morning Glory coal chute; night captain.

Commissioner LENNON. Do any of these men perform regular labor in the places where they are?

Mr. NORTHAM. No, sir.

Commissioner LENNON. They are just doing the work you have them to do?

Mr. NORTHAM. Yes, sir.

Commissioner O'CONNELL. Do you or any of your force report the morals of the workmen in any way as to whether they are practicing intemperance or visiting in saloons?

- Mr. NORTHAM. Yes, sir.
 Commissioner O'CONNELL. If you find a man that is a frequent visitor of saloons, you report that he is doing so?
 Mr. NORTHAM. Well, no, sir; not unless he is drinking so as to incapacitate himself.
 Commissioner O'CONNELL. If you found him under the influence of liquor once?
 Mr. NORTHAM. No, sir; once I wouldn't report him.
 Commissioner O'CONNELL. Twice?
 Mr. NORTHAM. I can't say I would.
 Commissioner O'CONNELL. How often would you have to find him under the influence of liquor before you would report him?
 Mr. NORTHAM. Well, if he was constantly hanging around the saloons in a condition not to be able to go to work with safety to himself and the people that he was working with, I should report him.
 Commissioner O'CONNELL. Do you report on the home social relations of the family?
 Mr. NORTHAM. No, sir.
 Commissioner O'CONNELL. That you may find?
 Mr. NORTHAM. No, sir.
 Commissioner O'CONNELL. Are the homes of the families watched in any way by you or by your force?
 Mr. NORTHAM. No, sir.
 Commissioner O'CONNELL. You keep no record of them in any manner?
 Mr. NORTHAM. No, sir.
 Commissioner O'CONNELL. Except in the matter of intemperance?
 Mr. NORTHAM. That is all.
 Commissioner O'CONNELL. In no other way are the morals looked after at all by you or by your force?
 Mr. NORTHAM. No, sir.
 Acting Chairman COMMONS. Just one other question.
 I have been around town visiting quite a number of people, trying to get impressions. Do you know the people I have visited?
 Mr. NORTHAM. No, sir.
 Acting Chairman COMMONS. You have had no report?
 Mr. NORTHAM. No, sir.
 Acting Chairman COMMONS. That will do, I am much obliged to you.

TESTIMONY OF MR. CHAMBERS KELLER.

- Acting Chairman COMMONS. Will you state your name and residence?
 Mr. KELLER. Chambers Keller; residence, Lead, S. Dak.
 Acting Chairman COMMONS. It is quite generally reported to me that you are active in the political activities of the company. Will you describe your activities in the campaign of the primary and election of 1912?
 Mr. KELLER. 1912?
 Acting Chairman COMMONS. You are attorney of the company, I believe?
 Mr. KELLER. Yes, sir.
 Acting Chairman COMMONS. How long have you been that?
 Mr. KELLER. I have been attorney since April 1, 1904. Prior to that time I was a partner with Judge Moody, of Deadwood, who was the attorney of the company.
 Acting Chairman COMMONS. I would like to have you tell about your activities.
 Mr. KELLER. I always have taken a pretty active interest in the politics of the country. I don't know that I was any more active in 1912 than I am every presidential election or every county election or every city election. In 1912 I did what I could to elect President Wilson as President of the United States. I also did what I could to elect Mr. Johnson as governor of South Dakota; he was the Democratic candidate. We were not fortunate enough to succeed in the latter, though we contributed much to the election of the former. In looking after political matters in which I am interested either personally or politically, I presume I do what every man does, try to enlist the cooperation and sympathy of his friends.
 Acting Chairman COMMONS. Are you on any political committee?
 Mr. KELLER. No, sir.
 Acting Chairman COMMONS. Simply acting as a citizen?

Mr. KELLER. That is all. In 1912, it seems to me, if I am not mistaken, that Mr. Stanley was the county chairman; I am not certain; I know he was one year, and I believe that was the year. Mr. Stanley is my partner. It is possible that was the year he was chairman of one of the political committees, but I am not certain. I have never been chairman of any of the large county committees. I usually attend the conventions and I always take an interest and an active interest in political matters.

Acting Chairman COMMONS. What party do you affiliate with?

Mr. KELLER. Republican.

Acting Chairman COMMONS. But in the fall election—

Mr. KELLER. In 1912 I did what I could for Mr. Wilson.

Acting Chairman COMMONS. In the Republican primaries of that year, 1912, what did you do?

Mr. KELLER. Let me see, 1912—in the primaries of that year—my recollection is I wasn't very active in politics. The gubernatorial candidates, Mr. Egan, Gov. Byrne, and Mr. Richards, I don't think I took much interest—Judge Cull was one of the candidates—my recollection is I voted for Judge Cull, who only got a scattering vote in the State; he didn't run very strong. It was pretty evenly divided. My recollection is Mr. Egan carried Lead city. I am sure he did. Mr. Egan carried Lead city, and Gov. Byrne ran second, and Mr. Cull, Judge Cull, a poor third in Lead city.

Acting Chairman COMMONS. Which one is your candidate?

Mr. KELLER. Judge Cull.

Acting Chairman COMMONS. In the fall election how did Lead go?

Mr. KELLER. The fall election? The fall election of 1912, Lead went for Gov. Johnson; that is, the Democratic candidate for governor, as I recall it.

Acting Chairman COMMONS. At the presidential election?

Mr. KELLER. It went for President Wilson.

Acting Chairman COMMONS. Do you remember about the vote at that time?

Mr. KELLER. How close, you mean?

Acting Chairman COMMONS. Yes.

Mr. KELLER. Well, I don't, Mr. Chairman.

Acting Chairman COMMONS. Do you know about how many votes were cast at the presidential election?

Mr. KELLER. Well, I should say about 1,800.

Acting Chairman COMMONS. Do you remember what Johnson's number was?

Mr. KELLER. No, sir; I don't remember that.

Acting Chairman COMMONS. Were there three tickets here?

Mr. KELLER. There was the Republican and Democratic, there were only two major tickets, just those two at the fall election.

Acting Chairman COMMONS. How did you conduct your campaign in the fall as regards the employees of the Homestake Co.? Did you have any of them in your office instructing them how to vote, who to vote for, either the Wilson or Johnson ticket?

Mr. KELLER. Very likely. There is never a campaign that I am interested in that I do not do that. If I am interested in it I see the men that I am acquainted with and that I think will cooperate with me, and go over the matter with them.

Acting Chairman COMMONS. Did they come to your office?

Mr. KELLER. Well, they usually do. I presume they did that year.

Acting Chairman COMMONS. How did you get word to them?

Mr. KELLER. Well, in various ways. It depends on who they are. If it is—well, it may be men that I will meet on the street, or men that I can telephone to, get in touch by telephone easier than I can see them; it just depends on who they are.

Acting Chairman COMMONS. Are there certain individuals that you depend upon to get word to them?

Mr. KELLER. Well, no; I can't say that there is. It depends entirely on who they are, Mr. Chairman.

Acting Chairman COMMONS. Do you ask the shift bosses to notify you of the men under their direction to come to see you?

Mr. KELLER. No; I do not know that I have ever done that. Usually I will speak to a shift boss himself, and if I think he is favorably inclined to an individual or the ticket I desire to help I will talk to him about it; if I think he is not, why, I don't, naturally. The shift bosses of the Homestake Mining Co. have their own notions politically and have exercised them, and that is demonstrated here constantly. We do not have an election—

Acting Chairman COMMONS. About how many shift bosses are there?

Mr. KELLER. I should judge about 40. That is just a guess.
Acting Chairman COMMONS. About how many of them are you personally acquainted with?

Mr. KELLER. Oh, I suppose half of them.

Acting Chairman COMMONS. About 20?

Mr. KELLER. Yes, sir.

Acting Chairman COMMONS. And that 20 you would consider your friends?

Mr. KELLER. I should think so.

Acting Chairman COMMONS. So that you could depend upon about 20 of them to give these invitations to—

Mr. KELLER. Well, when I speak to a shift boss I do not expect him to simply speak to the men under him, not by any means; some of our shift bosses are some of our most influential citizens here. They have friends all over the town in different walks of life, and if they can assist politically and are supposed to do it I expect them to do just as any man would do, just as I would do, use their influence where they can. They do not confine it to the men under them, and they do not direct it to the men under them.

Acting Chairman COMMONS. Are all of the voters of this town of Lead able to read their ballots in English?

Mr. KELLER. No; I do not believe they all are. Probably a small percentage can not; but I think it is a small percentage.

Acting Chairman COMMONS. About 10 per cent, would you say?

Mr. KELLER. I should not think over that.

Acting Chairman COMMONS. Then say there are 1,800 votes; you would say about 200?

Mr. KELLER. Well, there would not be to exceed that at the outside, in my judgment. In that amount I believe there is usually a timidity or reticence developed on the part of the men who can not do that, to vote at all. It seems to be a feeling that they do not care to try it. I have noticed that.

Acting Chairman COMMONS. In this campaign did you talk with any of these that could not speak English?

Mr. KELLER. No, sir.

Acting Chairman COMMONS. And instruct them as to the method of voting?

Mr. KELLER. No, sir. It is bad enough to have to talk politics to a man who can understand you. I never tried to talk it to a person who could not, either with or without an interpreter.

And in that connection, Mr. Chairman, I wish to suggest, I don't think the chairman used the word in that sense, but the word "instruct" was used. And I disclaim ever at any time instructing any of the men in the sense of trying to tell the man how he should vote if he is not so inclined.

Acting Chairman COMMONS. Certainly; I didn't intend to use it.

Mr. KELLER. Yes; I thought you meant to explain.

Acting Chairman COMMONS. I misused the word. What is the method of voting here; do they have the Australian system?

Mr. KELLER. Yes, sir.

Acting Chairman COMMONS. Is it a machine vote?

Mr. KELLER. No, sir.

Acting Chairman COMMONS. Written?

Mr. KELLER. Written. Written method. We have a ballot and the names of the candidates are printed upon the ballot, and the method of voting is by placing a cross in front of the name you desire to vote for. We have the ordinary Australian regulations as to preserving the integrity of the polling place. And in the 18 years that I have lived in Deadwood and Lead I have never known of a row or trouble or difficulty at a polling place of any description whatever. I don't believe there is a more orderly set of elections held anywhere in the country than those held in this community in that period of time.

Acting Chairman COMMONS. That is, there never has been any investigation of ballot-box frauds or anything?

Mr. KELLER. No, sir; nor never a suggestion of any kind that ever I have heard of, except last fall—I think it was last fall—there were some statements in one of the eastern papers that the registration in Lead was entirely too large, that the vote wasn't here. But aside from that one time I have never known of any suggestion of its being made.

Acting Chairman COMMONS. In case a man can't read English, under the law he has an interpreter?

Mr. KELLER. He has a right to an interpreter to explain it.

Acting Chairman COMMONS. He can call for it?

Mr. KELLER. He can ask to have the ballot explained to him, and he can, under our system, request either one of the three judges to mark his ballot for him—the judge shall be permitted to go into the booth with him. But I have not known of that being done even once. It is in the law, but I have never known of its being exercised, that privilege.

Acting Chairman COMMONS. And is that the ground on which you base your idea that there is reluctance on the part of the non-English voter?

Mr. KELLER. I think that is the reason. I think that is one of the reasons.

Acting Chairman COMMONS. That is the main reason?

Mr. KELLER. We have had at times some very immature or inadequate voting. For instance, frequently quite a number of the ballots will be found with just one cross on them, and that cross will be before some inferior and insignificant office that does not amount to anything and that nobody is taking any interest in, but this voter has happened to have known the person and wanted to vote for him with that cross. Every election, even in the presidential elections, you will find any number of ballots that will be voted for just one little city official, nobody else.

Acting Chairman COMMONS. Would you name any other gentleman in the locality that are interested as you are in politics and that make an effort to secure voting according to their ideas?

Mr. KELLER. Well, it is pretty general. I think we are like every community. Acting Chairman COMMONS. Who would be considered your principal man who believes with you and works with you on such lines of politics?

Mr. KELLER. Well, I should say that ordinarily I consider Mr. J. W. Curran and Mr. R. H. Driskol, cashier of the bank; P. A. Gushurst, the grocer man here; Mr. Royce, who is Mr. Irwin's assistant; Mr. Ernest May, who is also in the grocery business here and has represented this county in the State senate for a number of years; and Mr. Howard, the mayor.

Acting Chairman COMMONS. These gentlemen are generally Republicans?

Mr. KELLER. Yes; they are all Republicans, I think.

Acting Chairman COMMONS. Were they all for Wilson at this last election?

Mr. KELLER. Well, I don't know as to that. I don't really remember. I don't think Gushurst was. I think Gushurst was—I am quite sure Gushurst was not.

Acting Chairman COMMONS. In your position as attorney for the company, I suppose you would recognize, of course, that your wishes would go a very long way with employees. Is Mr. Grier acquainted with your political activities?

Mr. KELLER. Well, only in a very general way. I talk political matters with Mr. Grier, and I usually feel that I have Mr. Grier's sanction for whatever I do politically. He is very active—although not always, because frequently Mr. Grier is not here, and Mr. Grier does not take the interest in politics that I do by any means. We don't agree on some matters politically.

Acting Chairman COMMONS. Would you mind telling what you don't agree on?

Mr. KELLER. Well, Mr. Grier I have always thought was more inclined to—well, to favor what some people call socialistic and some progressive ideas than I am.

Acting Chairman COMMONS. You are a standpatter?

Mr. KELLER. I am a standpatter, so-called, although I do not consider myself a hidebound standpatter, by any means.

Acting Chairman COMMONS. Well, you can change, I can see that.

Mr. KELLER. I think I have changed. I consider that a great many of the most progressive pieces of legislation that have been enacted both Federally and in the State have been wise legislation, and I favor them. Some of them I don't know.

Acting Chairman COMMONS. When you changed from the Republican Party in 1912 to the Democratic Party in the election, did you discuss this matter with Mr. Grier?

Mr. KELLER. I think Mr. Grier was away at the time. [Addressing Mr. Grier:] Weren't you, Mr. Grier, in Canada?

Mr. GRIER. Yes.

Mr. KELLER. I think Mr. Grier was in Canada, sick.

Acting Chairman COMMONS. It was solely on your own conviction?

Mr. KELLER. Yes, sir; the Homestake Mining Co. had nothing to do with it.

Acting Chairman COMMONS. You think you could say definitely so far as the mining company represented by Mr. Grier is concerned, that he leaves that matter entirely to you on your own initiative to do as you please?

Mr. KELLER. Well, I would not want to assume too much authority in a matter of that kind. I should say that notwithstanding the awful and extraordinary suspicions and all that, I should say that the Homestake Mining Co. does not take a very great part in politics. I know we don't take as much part as a great many people would like to have us. There is not an election held, neither primary nor general, that the candidates, some of them, do not come and request us to take a part in and request me to, and I invariably decline to do it. It is not because we want to participate in those things.

Acting Chairman COMMONS. Mr. Garretson has a question.

Mr. KELLER. Yes, sir.

Commissioner GARRETSON. The chairman asked you in regard to these gentlemen that you named as your associates, going to the Democratic Party. He asked it in the national sense. Did any of those gentlemen join with you in the State, back the State Democratic nominee?

Mr. KELLER. Well, sir, I could not tell you, Mr. Commissioner, because I have simply talked to my friends, who are usually my political friends, too. But we don't always agree, by a good deal.

Commissioner GARRETSON. Did the announcement of the Republican candidate in regard to the appointment of a tax commission have any effect on anybody's change of political opinion in this territory?

Mr. KELLER. No, sir; I don't think so.

Commissioner GARRETSON. He did appoint the commission, didn't he?

Mr. KELLER. The national?

Mr. GARRETSON. No; your own Gov. Byrne of this State.

Mr. KELLER. Yes; he appointed the commission.

Commissioner GARRETSON. What did that commission do to valuations in this locality?

Mr. KELLER. They increased, the commission, as this commission well knows, they increased the assessed valuation of the Homestake about double.

Commissioner GARRETSON. That is all, Mr. Chairman.

Mr. KELLER. And I may say that we supported Gov. Byrne in this last primary.

Acting Chairman COMMONS. Is there any other statement you care to make?

Mr. KELLER. Will the record take that?

Acting Chairman COMMONS. Is there any other statement you care to make?

Mr. KELLER. Well, yes; if the chairman pleases. At the close of the testimony of Mr. Kirwan yesterday, there was brought out by Mr. Commissioner Garretson the fact that in one of the Deadwood papers there was pending a notice, or citation as Mr. Commissioner called it, and Mr. Kirwan was asked in regard to that. And upon leaving the stand, or just before leaving the stand, suggested he thought there was something back of the suit. Mr. Commissioner Garretson evidently in the casual reading of the notice did not discover the name of any—

Commissioner GARRETSON. Plaintiff.

Mr. KELLER (continuing). Plaintiff. And I have taken the trouble of looking that up, Mr. Commissioner. And I find in the notice that the plaintiff's name is stated, but up in the top part of the title, which probably obscured it when you read it.

Commissioner GARRETSON. Very likely; it was a Saturday Deadwood paper.

Mr. KELLER. Yes, sir. I find it here in the Daily Telegram of Saturday.

Commissioner GARRETSON. I am uncertain of the name of the paper.

Mr. KELLER. Well, I found it by calling up Mr. Hodson, who represents Mr. Kirwan in this litigation. I didn't know what it was.

Commissioner GARRETSON. What is the plaintiff's name?

Mr. KELLER. The plaintiff is the Lead City Miners' Union, plaintiff.

Commissioner GARRETSON. Well, that is—

Mr. KELLER. Versus Charles—

Commissioner GARRETSON. Well, that is Mr. Ryan, is it not?

Mr. KELLER. I presume it is. But I may say that Mr. Commissioner Garretson in conversation with Mr. Kirwan and myself after the adjournment stated that he thought that Mr. Kirwan had in mind Mr. Ryan, and Mr. Kirwan had in mind the Homestake Mining Co. But I thought they had that in mind, that the Homestake Mining Co. was back of this, and for that reason I took the trouble of looking this title up.

Acting Chairman COMMONS. You make that as a correction?

Mr. KELLER. I wish to make that as a correction. And I also desire to state, with the permission of the commission, that the Homestake Mining Co. has not and has never had either directly or indirectly or remotely any interest even, or anything to do with this litigation from its beginning to the present time. In fact, all I know of it is what Mr. Hodson told me last night over the telephone when I called him up.

Commissioner GARRETSON. You might just as well put the rest of this in the record:

Immediately following that the witness asked me in regard to it, and I stated to him then that my interpretation was that the witness, Mr. Kirwan, meant Mr. Ryan.

Mr. KELLER. Exactly.

Commissioner GARRETSON. Is that correct?

Mr. KELLER. Exactly.

Commissioner GARRETSON. And the witness further stated to me what he has just stated here, that the Homestake had no connection therewith. And I said to him then that if they had I had no doubt on earth they had a perfect alibi. Is that the exact language, Mr. Witness?

Mr. KELLER. Yes, sir; that is the exact language.

Commissioner GARRETSON. That I used?

Mr. KELLER. That you used. But I wish to make it so positive that I wish to remove any thought that we are trying to establish an alibi.

Acting Chairman COMMONS. Yes.

Mr. KELLER. I also wish to call attention to another matter, and that is the reference which was made to the pending—to the suit instituted by the Homestake Mining Co. against the Lead City Miners' Union, and to which reference was made under examination by Mr. Commissioner Garretson when Mr. Kirwan was upon the stand. Mr. Kirwan stated that in that suit the suit had been filed and that they had demanded or filed an answer or some sort of paper demanding that we set forth in detail the specific instances of coercion. I have examined my files in that case, and I find that the facts are these:

The plaintiff, Homestake Mining Co., brought suit against the miners' union for \$10,000 damages, the suit being commenced in November, 1909; that in this complaint we alleged various acts; that is, we alleged intimidation and coercion, as has been suggested. The defendant filed a demurrer to this complaint, the demurrer being upon the technical legal grounds as follows: "First, that said complaint does not state facts sufficient to constitute a cause of action against defendant. Second, that said complaint does not state or show facts showing that the plaintiff is entitled to any relief against this defendant. Third, that said complaint shows on its face that plaintiff has no cause of action against defendant. Fourth, that said complaint shows on its face that this court has no jurisdiction in the alleged cause of action. Signed, Robert C. Royce, Richardson, and Hawkins, attorneys for plaintiff."

The demurrer, under the practice in the Federal court on common law actions in this State, confesses the truth of the statements in the complaint but raises the sufficiency of the complaint as a matter of law. And I wish to state further that there is not or never was filed—neither filed nor served any answer, any demand, or notice of any kind or description whatever asking, demanding, or requesting the plaintiff to set forth the several and particular instances of coercion, but the matter has rested in this condition from the time of filing the demurrer to the present time.

I simply felt that the statement of Mr. Kirwan ought to be corrected in accordance with the record.

Acting Chairman COMMONS. We are much obliged to you.

Mr. KELLER. I desire at this time, though I really do not see the relevancy of this, but inasmuch as it has been injected in here and the commissioners seemed to think it had some bearing, I desire to file the complaint and the demurrer if the commissioners desire.

Acting Chairman COMMONS. As an exhibit?

Mr. KELLER. Yes.

(The paper so presented was marked "Keller Exhibit No. 1.")

Said demurrer so presented was marked "Keller Exhibit No. 2.")

Mr. KELLER. I was also requested by the commissioner, Mr. Garretson, I think, or perhaps Chairman Commons, to file a copy of the agreement under which certain of the titles were fixed.

Commissioner GARRETSON. I did not request that; it was Chairman Commons.

Acting Chairman COMMONS. You may file that.

(The paper so presented was marked "Keller Exhibit No. 3.")

Keller Exhibits Nos. 1, 2, and 3 were by direction of the commission, at the request of Mr. Keller that they be returned, ordered copied into the record and returned, and will appear at the close of this day's hearing.)

Mr. KELLER. In looking over the papers, I did not find a copy of the agreement, but I did find a deed executed pursuant to the agreement which embodies the same terms.

Acting Chairman COMMONS. Would the agreement show any terms or penalties that the deed did not show?

Mr. KELLER. No, sir; I think they are identical.

Acting Chairman COMMONS. So you think they are all embodied in the deed?

Mr. KELLER. In the deed. There is no provision for compensation in the deed. In that connection I think in fairness to the situation here I ought to state, because it may be a little obscure in the record that all the property within Lead City is owned or held by the Homestake Mining Co. That impression might have been conveyed by the trend of conversation that has taken place here.

In this connection, if the commission is pleased—I understood I was excused.

Acting Chairman COMMONS. Yes; you are.

Mr. KELLER. In reference to this pending suit, and the colloquy which took place over it, as I judge it, for the purpose of indicating that there were no cases of coercion—I do not know that that is material or relevant, but it seems to have been thought so—in that connection I desire to say we have present, so I understand, two men whom we would like to have the commission examine as to that very matter. Of course we can furnish any number of acts of violence and coercion and everything else after the trouble began, and if that would interest the commission at all—we assume the commission is not interested in that—but we have two witnesses here who can substantiate the statements in this complaint to the effect that coercion and very radical coercion was used as against them prior to the time of the trouble when the organization was in progress. We should like to have the commission examine those two men.

Acting Chairman COMMONS. Mr. Neary.

TESTIMONY OF MR. J. L. NEARY.

Acting Chairman COMMONS. Please give your name.

Mr. NEARY. J. L. Neary, Lead City, S. Dak.

Acting Chairman COMMONS. What is your position with the Homestake Mining Co.?

Mr. NEARY. Credit man.

Acting Chairman COMMONS. Or rather with the Hearst Mercantile Co.

Mr. NEARY. With the Hearst Mercantile Co., I should say.

Acting Chairman COMMONS. Will you explain your duties and what your office procedure is?

Mr. NEARY. In opening up new accounts, handling the credits, handling—part of the system of the Hearst Mercantile Co., passing on different accounts; that is, the men that are employed by the company come to me to get an O. K. for what they need to go to work in the mine.

Acting Chairman COMMONS. That is what, for example; what does that cover?

Mr. NEARY. That covers what is necessary to start in, such as overalls, shoes, dinner pail, lamp, cap, underwear, everything that is practically necessary to start in.

Acting Chairman COMMONS. Then are the credits also for supplies, household supplies?

Mr. NEARY. Yes, sir.

Acting Chairman COMMONS. Clothing?

Mr. NEARY. Clothing; yes, sir; groceries, furniture, hardware, and dry goods.

Acting Chairman COMMONS. How do you secure yourself, secure the Hearst Mercantile Co.?

Mr. NEARY. We take an order from the men for their check.

Acting Chairman COMMONS. That check is monthly?

Mr. NEARY. Monthly; yes, sir.

Acting Chairman COMMONS. And is that an order for the entire amount that they sign over to you?

Mr. NEARY. Yes.

Acting Chairman COMMONS. Then what is the next step?

Mr. NEARY. On pay day, whatever pay day it is, we take that check in the office and deduct the account and pay him the difference. That is, in a great many cases, of course, where people have been here for a few years and we are acquainted with them, we allow them to pay as they please, practically, on their account—that is, we do not hold it all out. That is, say a man owes an account of \$60 or \$70, his check may be \$90, and he wants to draw \$40 or \$30 out of his check; he is paid that amount.

Acting Chairman COMMONS. Do you pay the cash, the balance to the men?

Mr. NEARY. Well, there is another gentleman, Mr. Fincher; we really handle the cash between us—that is, when he is out at meals I usually pay off and take my chance when he is out and he does the same for me.

Acting Chairman COMMONS. What is Mr. Fincher's position?

Mr. NEARY. Mr. Fincher's position is cashier; he handles all the cash.

Acting Chairman COMMONS. Cashier for the Hearst Mercantile Co.?

Mr. NEARY. For the Hearst Mercantile Co.

Acting Chairman COMMONS. Then who pays the men who do not trade at the Hearst Mercantile Co.?

Mr. NEARY. They are paid in the Homestake office.

Acting Chairman COMMONS. Who pays them?

Mr. NEARY. Well, they have an office force there, four or five, that usually pay the men there when they come in.

Acting Chairman COMMONS. They get their checks or cash—are they paid in cash?

Mr. NEARY. They are paid in checks on the First National Bank.

Acting Chairman COMMONS. On the bank in Lead?

Mr. NEARY. In Lead.

Acting Chairman COMMONS. What man has charge of paying them?

Mr. NEARY. Mr. Fogelson is chief of the clerks in the Homestake office.

Acting Chairman COMMONS. Who is Mr. Fogelson, is he an employee?

Mr. NEARY. He is an employee of the Homestake Mining Co.

Acting Chairman COMMONS. Is he the city commissioner?

Mr. NEARY. No; he is his brother.

Acting Chairman COMMONS. He is a brother of the city commissioner?

Mr. NEARY. Yes, sir.

Acting Chairman COMMONS. So all of the employees of the company are either paid by you or by Mr. Fincher?

Mr. NEARY. Mr. Fincher or myself or under the direction of Mr. Fogelson. He has four or five assistants there. Of course, as they come in it takes more than one man to wait on them.

Acting Chairman COMMONS. How many accounts have you?

Mr. NEARY. We have in the neighborhood of twelve or thirteen hundred accounts, men working for the Homestake Mining Co.

Acting Chairman COMMONS. What classes of employees?

Mr. NEARY. What classes?

Acting Chairman COMMONS. Yes; laborers, miners?

Mr. NEARY. All classes of employees—that is, men of all parts of the works, all departments. Then, of course, we extend credit to others that do not work for the Homestake Co. For instance, adjoining camps and in the city here.

Acting Chairman COMMONS. How many of that class of accounts have you?

Mr. NEARY. We perhaps have six or seven hundred, I should judge; I am not quite positive to say offhand.

Acting Chairman COMMONS. They are conducted on the same way, are they?

Mr. NEARY. Well, of course, the older inhabitants that have been here for years, their credit is established, we know them, of course, and there is nothing except to come in and pay their bill.

Acting Chairman COMMONS. They do not sign their checks to you?

Mr. NEARY. No; ordinarily.

Acting Chairman COMMONS. What proportion of those thirteen hundred sign over their checks to you?

Mr. NEARY. Well, I suppose 60 per cent of the checks come into the Hearst Mercantile office, but all those are not orders. What I mean to say is, there are a great many of the men employed who request us to cash their checks.

Acting Chairman COMMONS. What would be the reason for that?

Mr. NEARY. Convenience to a great many that come in, for instance, after the bank is closed.

INDUSTRIAL CONDITIONS GOLD MINING OPERATIONS, S. DAK. 3643

Commissioner O'CONNELL. You simply cash it for them?
Mr. NEARY. Simply cash it for them. They get their money and they do not have to go to the bank. It is a convenience in that way.

Acting Chairman COMMONS. The accounts accumulate for a month, then, as a rule?

Mr. NEARY. Yes, sir.

Acting Chairman COMMONS. That is the general idea?

Mr. NEARY. Yes, sir.

Acting Chairman COMMONS. About what would you say would be the general average run of indebtedness at the end of a month? Is there any way of investigating that? That is, what is the balance paid to the employee at the end of the month? Take laborers first.

Mr. NEARY. Well, of course, I do not know as I could answer that directly—that is, to be positive—but there is, perhaps, in the neighborhood of \$100,000 handled at the cashier's window every month.

Acting Chairman COMMONS. That is, that is paid out?

Mr. NEARY. All business transactions.

Acting Chairman COMMONS. That would indicate 600 who are not employees?

Mr. NEARY. That would indicate that about; yes, sir.

Acting Chairman COMMONS. Do they run about the same as the employees?

Mr. NEARY. The accounts?

Acting Chairman COMMONS. Yes, sir.

Mr. NEARY. Well, not quite so heavy. Of course, people of that character on the outside would perhaps have their accounts limited maybe to dry goods; another maybe might have clothing; another one might be groceries; so the accounts, of course, are scattered.

Acting Chairman COMMONS. All new employees come to you, then, to get the equipment?

Mr. NEARY. Yes, sir. They have a slip with the name, given to them by Mr. Irwin, the employment agent of the company; he presents that slip at the window, and I give him an O. K. slip in turn to the different departments for the supplies that he wants.

Acting Chairman COMMONS. Suppose an account during the month runs greater than the check?

Mr. NEARY. Well, of course, where it is noticed that it is extravagantly used, of course, they are cautioned as to what they are earning and what they are buying; but a great many of the accounts run over the check. That is, in case a man may be earning \$90 or \$100 a month and his account might run \$115, \$120, \$125, or \$130, there would be nothing said at all about that unless it was where it really showed signs of extravagance.

Acting Chairman COMMONS. That is, his credit must be kept good?

Mr. NEARY. Yes, sir.

Acting Chairman COMMONS. I believe that is all. Much obliged to you, Mr. Neary.

TESTIMONY OF MR. S. R. SMITH.

Acting Chairman COMMONS. Mr. Smith, give your name.

Mr. SMITH. S. R. Smith.

Acting Chairman COMMONS. How long have you lived in Lead?

Mr. SMITH. I have lived here something over 37 years.

Acting Chairman COMMONS. What has been your business during that time?

Mr. SMITH. I have been in the mercantile business mostly, in the furniture and undertaking business.

Acting Chairman COMMONS. What is your business at the present time?

Mr. SMITH. At the present time I am out of business, all with the exception of the piano business. I am getting out of business. I had the undertaking business. A year ago, a couple of years ago, I closed out my furniture business, cleaning it up a year ago, and on the 1st of this month I disposed of my undertaking business.

Acting Chairman COMMONS. What other business have you had?

Mr. SMITH. Well, the piano business and all branches of the furniture business, and also the livery business.

Acting Chairman COMMONS. You have been connected with the banking business?

Mr. SMITH. Yes; I have been a stockholder and also a director in one of the banks.

Acting Chairman COMMONS. What bank?

Mr. SMITH. I was a stockholder in the First National Bank here at one time also the First National Bank in Deadwood, and in the Miners and Merchants Bank when they opened here I was a stockholder there. At the present time I am not a stockholder in any. I was also on the board of directors of the Miners and Merchants'.

Acting Chairman COMMONS. You may state what were your reasons for going out of the furniture and undertaking business.

Mr. SMITH. Why, I went out of the business because it was becoming very much unprofitable. I used to make a success of the business and used to make money in it. Influence was brought to bear against my business to such an extent that I have closed it out.

Acting Chairman COMMONS. What is the nature of the influence that was brought to bear?

Mr. SMITH. It has been strongly from the managers of the Homestake Mining Co.

Acting Chairman COMMONS. On what ground did they bring that to bear?

Mr. SMITH. Well, that is what I have not been able to ascertain as the reason why, because during my residence in the city here I have always worked to aid the Homestake Mining Co. and industry, being the only industry that we have here in the city; but I have been led to believe that possibly, in the first place it was because I was elected on the school board, and at that time the Homestake Mining Co.—

Acting Chairman COMMONS. At what time was your election to the school board?

Mr. SMITH. That was about 1890.

Acting Chairman COMMONS. That is, 25 years ago?

Mr. SMITH. Yes; about that time.

Acting Chairman COMMONS. That is a long time ago.

Mr. SMITH. Yes.

Acting Chairman COMMONS. Anything more recent than that?

Mr. SMITH. I would like to make a little explanation on that if you will allow me to give it—the reason why I believe it.

Acting Chairman COMMONS. Did the company show hostility to you? When did you first become aware of their hostility?

Mr. SMITH. Well, shortly after that I was on the school board.

Acting Chairman COMMONS. You may state what was the nature of that.

Mr. SMITH. It relates to taxes. The company refused to pay the school tax, which was about \$6,000. I had got very much interested in the school work here, as it had been in very bad condition. And we added the high-school branch to the school and repaired the buildings and built a new schoolhouse down in Washington addition. And another point that we made was to employ our home teachers, girls that had graduated from the normal school at Spearfish, and—

Commissioner O'CONNELL. Speak right out; you are big enough.

Mr. SMITH. Yes. I insisted on the collection of the tax, and we compromised on half of it. They paid three thousand dollars instead of six. And from that time on I have noticed that the managers were a little hostile.

Acting Chairman COMMONS. What was the next instance of hostility?

Mr. SMITH. Well, I would like to finish this, if you will allow me to, when I got off from the school board, because there might be a little reason from that, people might think I had done something in the school district, and would like to clear it up now, if you will permit me to do so.

My term was three years as treasurer. And at the expiration of that Mr. N. W. Gregory was elected. I did not run again. And after he was elected he failed to qualify. I presume because the bond was \$10,000 and he did not care to give it. Then I was asked to remain on the board by the superintendent of schools, a woman. And finally, after her persuading me to do so, I consented until another election.

But one day Mr. Ernest May, a business man here, came in with an appointment to succeed me. I very gladly turned it over, turned over the books and money to him, and during the time that I was on the school board we purchased from the C. G. Tanner—who had been in the real estate business here—a mining claim, I think it was called the Corbett claim, which lays in the heart of the mining belt, and very close to the mills. We bought it for a very small sum for the reason that his son, about 12 or 14 years old, was obliged to be moved from Lead, and he exacted a very small amount for this mining claim that he might get a ranch to take him on in the valley.

We arranged for Mr. Tanner to get the Government patent title and deed it to the school district. I remember that I remarked to another member of the board that that would bring us from thirty to forty thousand dollars some day, would build a schoolhouse. But after I had gone off the school board, I was informed by Mr. Tanner that he had deeded that to the Homestake Co. under instructions from the school board for \$600.

Acting Chairman COMMONS. What is the next instance?

Mr. SMITH. Well, after I was in the Miners & Merchants Bank they seemed to renew hostilities.

Acting Chairman COMMONS. What was your attitude toward this organization of labor during the lockout?

Mr. SMITH. Well, I took the part with the Homestake, and worked to assist them in opening up the mines again in every way possible.

Acting Chairman COMMONS. Was your business largely with the employees?

Mr. SMITH. It was.

Acting Chairman COMMONS. With the old employees?

Mr. SMITH. Yes, sir.

Acting Chairman COMMONS. With the new ones?

Mr. SMITH. Well, when the new ones came I didn't get their business so much as I had with the old ones who had dealt with me for many years.

Acting Chairman COMMONS. Then you account for the falling off of your business, the incoming of new employees?

Mr. SMITH. Yes; I know that they were influenced to work against my business.

Acting Chairman COMMONS. And following that what other indications have you they were influenced to trade elsewhere?

Mr. SMITH. Detectives in their employ knocking my business, men that didn't know me—I heard them in the hotel knocking my business and saying, "Don't trade with that Smith over there."

Acting Chairman COMMONS. What other evidence?

Mr. SMITH. Well, for instance, in the undertaking business, at the hospital they told me they had been instructed to turn the business away from me by the several doctors.

Acting Chairman COMMONS. What other indications?

Mr. SMITH. Well, a good many in a business way. For instance, I was trying to sell my barn down here to a party, and asked \$8,000 for it, and he was very much interested in it. A few days later I heard their attorney told him to only offer me \$4,000. The next time I saw him he made me that offer of \$4,000. Those are only one of the great many instances that have occurred in which they were influenced.

Now, let me give you another, if you will. I sold the building down here to the Elks Lodge for a home. It is a large three-story glass-front building. In erecting that I erected it myself, and I had my name put in the stone at the top. In selling this building I took over half of the bonds of the entire issue, so that I owned over half of the building at that time, and a year ago last winter I was in California and when I returned I found my name was cut off of the stone. The man, the contractor that was working on the building, was an old friend of mine, and I asked him about it, and he told me that he had cut it off because he had been urged so strongly by the attorney that has been on the stand here, by Mr. Neary, one of the witnesses who was just here in the chair, and others who are at the head of the Homestake Mining Co., until it bothered him to such an extent he cut the name off.

Acting Chairman COMMONS. Your patrons now, then, I take it, are not employees of the Homestake Mining Co.?

Mr. SMITH. Well, not at the present time. I haven't anything left except pianos, and I am going to haul them into the country where I will get away from the employees of the Homestake Co. to sell them.

Acting Chairman COMMONS. The general weight of your evidence will be to the proposition that the company, for some reason you are not familiar with, has directed trade away from you so that practically you have been compelled to give up business in this town?

Mr. SMITH. Why, yes, sir; I think if you would converse with anybody that they would be free to tell you that that is the condition. It is general talk among a great many, and a great many of my friends have given me information that I wouldn't care to embarrass them by giving it, so that I am positive on that question.

Commissioner O'CONNELL. Who did you dispose of your furniture and undertaking business to?

Mr. SMITH. The furniture business I closed out until I got the stock reduced and moved into a building in the next block, and just as soon as I got moved I was burned out.

Commissioner O'CONNELL. Burned out?

Mr. SMITH. Burned out. In fact, the last load I took in about 5 o'clock in the evening, and at 12.20 that night the building was on fire, and I had to escape with my wife and myself through the front window. I had to drop her onto the sidewalk, and in dropping her it broke a joint in her backbone and I also was crippled in my knee by breaking the bottom of the kneecap and all the ligaments on the side of the knee, and I have been crippled ever since.

Commissioner O'CONNELL. Were there any other furniture men or undertaking people in the city with whom a combination was entered into by you to keep prices up in any way?

Mr. SMITH. No, sir; I have never combined with anyone to hold prices up. I have to mention that some years ago we started to organize a local undertakers' union for the Black Hills, and at that time I made an effort to reduce the price of embalming, and I took it up with all the undertakers living in the Hills, and all but one favored charging \$50 for embalming. That one was Mr. Burns, at Rapid City, who wanted to make the price \$25. I myself have made the price much less than \$50, with the exception of, possibly, some few cases that I have to have extra work on account of long shipments.

Commissioner O'CONNELL. Is there a merchants' association in the city?

Mr. SMITH. Not to my knowledge.

Commissioner O'CONNELL. Is there any form of board of trade?

Mr. SMITH. There is a commercial club.

Commissioner O'CONNELL. That is a club?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. That is for amusement and social purposes?

Mr. SMITH. No, sir; they are supposed to look after the business interests of the city—the Lead City Commercial Club.

Commissioner O'CONNELL. It is the same as the board of trade or organization of the commercial men of the town for the interests of the town in the commercial world. Is that still in existence?

Mr. SMITH. We have not an organization that still exists. There is not any combination of the merchants at all; it is only a commercial club. It is organized such as most any other.

Commissioner O'CONNELL. Do you own any real estate that you rent—houses that you rent?

Mr. SMITH. Not now. I only own one building in the city, and that is a barn.

Commissioner O'CONNELL. A barn?

Mr. SMITH. A livery barn; yes, sir.

Acting Chairman COMMONS. Since you have mentioned your case, are there other business men, to your knowledge, who have been driven out in the same way?

Mr. SMITH. Well, there are several who have quit business and gone away from here.

Acting Chairman COMMONS. Are you familiar with the names of any that you could cite that have had similar experiences to yours?

Mr. SMITH. Not to the extreme my business has been handled, I don't think.

Acting Chairman COMMONS. That is sufficient. We are very much obliged to you.

Is Mr. Lusier here?

TESTIMONY OF MR. VICTOR A. LUSIER.

Acting Chairman COMMONS. Give your name.

Mr. LUSIER. Victor A. Lusier.

Acting Chairman COMMONS. Your business?

Mr. LUSIER. Cashier of the Miners & Merchants Savings Bank.

Acting Chairman COMMONS. What is the capital stock of your bank?

Mr. LUSIER. Twenty-three thousand dollars.

Acting Chairman COMMONS. What are your deposits?

Mr. LUSIER. One hundred and fifty thousand dollars.

Acting Chairman COMMONS. What class of business do you handle?

- Mr. LUSIER. Just a general banking business.
 Acting Chairman COMMONS. Is it a commercial business?
 Mr. LUSIER. Yes, sir.
 Acting Chairman COMMONS. Is there a savings account also?
 Mr. LUSIER. Savings and commercial account.
 Acting Chairman COMMONS. What is your savings account?
 Mr. LUSIER. One hundred and four thousand dollars.
 Acting Chairman COMMONS. One hundred and four thousand dollars?
 Mr. LUSIER. Yes, sir.
 Acting Chairman COMMONS. And your other commercial accounts?
 Mr. LUSIER. We have what we call commercial accounts about \$30,000, and about \$15,000 time certificates, or time deposits, as you might call them.
 Acting Chairman COMMONS. How long has your bank been in existence?
 Mr. LUSIER. Since 1902.
 Acting Chairman COMMONS. Does the Homestake Mining Co. have deposits in your bank?
 Mr. LUSIER. No, sir.
 Acting Chairman COMMONS. It does not do a checking business?
 Mr. LUSIER. No, sir.
 Acting Chairman COMMONS. The savings accounts you mentioned, they consist of savings from the employees of the Homestake Mining Co.?
 Mr. LUSIER. Mostly; yes, sir.
 Acting Chairman COMMONS. How many of those accounts have you?
 Mr. LUSIER. I don't know.
 Acting Chairman COMMONS. What is the average amount of the accounts?
 Mr. LUSIER. I would not be prepared to say that either.
 Acting Chairman COMMONS. Do you pay interest on those?
 Mr. LUSIER. Four per cent.
 Acting Chairman COMMONS. Your loans are all commercial, are they?
 Mr. LUSIER. Yes, sir.
 Acting Chairman COMMONS. The savings account, what are those loans for?
 Mr. LUSIER. Our loans total \$115,000.
 Acting Chairman COMMONS. Are they for business?
 Mr. LUSIER. For business and otherwise; for instance, mortgage on homes and collateral securities.
 Acting Chairman COMMONS. What part would be on homes and securities?
 Mr. LUSIER. Well, we have about \$27,000 on real-estate securities.
 Acting Chairman COMMONS. And the balance be loaned to business men?
 Mr. LUSIER. No, sir; some investors and some otherwise. I never figured it up to see how much was commercial and how much was otherwise.
 Acting Chairman COMMONS. What are the other banks in town?
 Mr. LUSIER. The First National Bank.
 Acting Chairman COMMONS. What is the capital stock?
 Mr. LUSIER. Fifty thousand dollars.
 Acting Chairman COMMONS. Is that the only other bank?
 Mr. LUSIER. That is the only one.
 Acting Chairman COMMONS. That is the bank that has the business of the Homestake Co.?
 Mr. LUSIER. Yes, sir.
 Acting Chairman COMMONS. Who is the cashier?
 Mr. LUSIER. Mr. Driscoll.
 Acting Chairman COMMONS. I think that is sufficient. I am much obliged to you.
 Mr. Grier, will you kindly take the stand again?

TESTIMONY OF MR. T. J. GRIER—Recalled.

- Acting Chairman COMMONS. Mr. Grier, you have heard some of these witnesses who have been produced here with reference to the policy of the company that you represent; are there any of these witnesses whose testimony you care to comment upon in any way? I will ask you individually—Bishop Busch—have you anything to say about the testimony which he gave?
 Mr. GRIER. Well, yes, sir; I would, Mr. Chairman.
 Acting Chairman COMMONS. Just state in your own way briefly the main point that you have reference to in his testimony.
 Mr. GRIER. I think what I have to say would properly come under the head of "Remedy for industrial unrest."

Acting Chairman COMMONS. Well, would you care to take up individually any of these witnesses' testimony—for example, Mr. Smith's testimony?

Mr. GRIER. Why, almost everything that Mr. Smith testified to here is new to me excepting the hostility he suggests came to him from the Homestake Mining Co., and on that score I am perfectly free to say that I objected very strongly to Mr. Smith charging the unfortunate operatives of the Homestake Mining Co who had occasion to call for an embalmer to make a charge of \$50 for embalming, in view of the fact that the embalming fluid cost about 50 cents. I objected to any such charge as that as an outrage. I think it is my duty to protect as far as I can the employees under my supervision against any such outrage, and I secured a reduction from \$50 to \$10, which is the charge to-day.

Acting Chairman COMMONS. For embalming?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. And how did you proceed to secure that reduction?

Mr. GRIER. Well, I think we asked the other undertaker in town, called his attention to the cost of the embalming fluid, and asked him why a fair charge—for instance, \$10—could not be made, and he agreed to it. "Very well," I said "I will recommend the trade to you."

Acting Chairman COMMONS. Was that true also of undertaking and coffins?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What had Mr. Smith been charging?

Mr. GRIER. Well, charging prices that I thought were outrageous; and I came into the possession of, or came into the knowledge of, the cost by reason of one of the undertakers here in town coming to me and offering me his business—to sell out to me. I told him I didn't want to buy it, but in the course of that interview I learned what the actual cost for coffins and furnishings and the conduct of a funeral were, and, knowing what Mr. Smith's charges were, I considered his charges as outrageous and disapproved of them.

Acting Chairman COMMONS. Have you any idea of how much you reduced the cost?

Mr. GRIER. I wouldn't undertake to say, excepting very materially.

Acting Chairman COMMONS. In the other case you apparently reduced it from \$50 down to \$10?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. That would cut off four-fifths?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Would you think the same?

Mr. GRIER. No; I should think 25 or 30 per cent, perhaps.

Acting Chairman COMMONS. Is it your general policy where you find that merchants are charging more than a fair price to take it up in this way? Have you done that in other instances?

Mr. GRIER. Well, generally; yes. As a matter of fact, the small stores of Lead city have fixed the prices, and that has been for 36 years; and instead of the Hearst Mercantile Co. doing it, to a large extent it has followed, and whenever the Hearst Mercantile Co. reduced prices on the staples, necessities of life, there was a bitter complaint from the other stores, and the question was asked, "Are you reducing these prices to such a low figure that you want to run us out of town?"

Acting Chairman COMMONS. So that the store has cooperated with you in keeping down prices and the cost of living?

Mr. GRIER. The Hearst Mercantile Co.?

Acting Chairman COMMONS. Yes.

Mr. GRIER. You understand, Mr. Chairman, I am president of the corporation, the Hearst Mercantile Co.

Acting Chairman COMMONS. Oh, I see. Yes. So that has—

Mr. GRIER. Although I would like to say I am not a stockholder and have no interest in its profits.

Acting Chairman COMMONS. Yes. So that using the Mercantile Co. you have been able to keep down the prices that the merchants charge?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. For all articles?

Mr. GRIER. There isn't any doubt of it.

Acting Chairman COMMONS. All right. Does the Hearst Mercantile Co. have any standard about the fair rate of interest that they think they should earn on the stock?

Mr. GRIER. No.

Acting Chairman COMMONS. What have been the dividends on that company's stock?

Mr. GRIER. Well, the Hearst Mercantile Co. has been quite a profitable business for 35 years.

Acting Chairman COMMONS. And what was the last dividend rate, for 1913?

Mr. GRIER. Well, that return is made by Mr. Murrin to the income-tax office. I forget what it was.

Acting Chairman COMMONS. You could give that to us, could you?

Mr. GRIER. I could; yes.

Acting Chairman COMMONS. All right, we will call for it. And the capitalization and inventory?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. We could get that?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. I should like to on this question of the underlying causes that you bring up, I should like to for my personal use, not as stating any of the ideas of my colleagues, to state to you what seems to me to be our purpose and line of suggestions which from my standpoint would be of use in the work that we have to do.

As I stated at the beginning, we are required by Congress to investigate the underlying causes of industrial unrest and to make recommendations of legislation to Congress, and naturally to States; if we find unrest, what are its causes, and what legislation or what recommendation we should make.

Now, I might state what seems to me the summing up of this testimony, the way it strikes me in my own point of view, not representing either the employer or the employee, but simply as a looker-on, you might say—that you have here the most remarkable business organization that I have come across in the country.

You have developed welfare features which are beyond anything that I know of, and are given with a liberal hand. You have a high scale of wages and reasonable hours, very fair hours. There has been evidently great progress made in taking care of employees and in the hospital service, and you have taken care of the cost of living, have kept that down beyond what employees in other communities have been forced to pay.

You have practically been able by your great strength here as a huge corporation, dominating the whole community, and looking out for the welfare of your employees, to bring in a desirable class of citizen. It seems also that you are influential in politics, that you secure a good class of officials, and that you secure the enforcement of law and the reduction of immorality.

It seems also that you make an effort to build up the religious life of the community, and that your policy is broad and liberal in all respects.

I take it also that this policy depends solely upon you personally. Such inquiry as I have made of you would indicate that in all cases the stockholders leave all of those matters to you personally, and that this broad policy has been carried out by you on your own initiative, and that you have felt that it was necessary for the good of the community, the securing of a fine class of labor here, that you undoubtedly have done, that you should hold the reins pretty tight on this community.

Now, the question that comes up in my mind in summing up our work and the recommendations which we should make to Congress—and this is the suggestion I would like to have from you: Would you recommend or advise or suggest that we should recommend to Congress that this method that you have here would be the best solution in this country of industrial unrest, that we should advocate or recommend to Congress the encouragement of huge corporations that dominate the locality and can control all of the interests that can put a business man out of business if he does not live up to the best interests of the community, that can through its attorney influence the politics—possibly dominate the politics of the locality, that through its contributions could encourage and keep up the religious life, the educational life of the community.

You have had experience here 36 years. Up to four or five years ago you had to divide your power with an organization of labor, so that you are in a position to make a fair comparison. In all of the reports that are made here, and all of the talk that I hear about town—indicates that you have wielded your power with the greatest fairness and with the confidence of the community and with the idea of building up a good community.

What I hear in the matter of investment is, however, that it is felt that this is all a one-man proposition; that here is a man that we can all depend upon

as long as he lives and is active in controlling the affairs of the community. The only uncertainty that I find in this community consists in the questioning of what will happen after you have been compelled to lay down your reins of power and some successor has come in to take your place.

Consequently I find that feeling amongst business men that they should keep their property in movable form so that they could get out if anything should happen, owing to these titles and the great power of the company in dominating them.

Now, taking the whole view, the situation prior to this lockout—for I take it that from that point is where you crushed out all opposition, not only labor opposition but all business opposition, in so far as you cared to do it. You have had that previous experience, and now you have this experience, and we certainly can make a finding, as I see it, that this is a model community; that it is ahead of any mining community, certainly, that I have any knowledge of. And what we must do is to make a recommendation which will look to the future as to whether as to a permanent policy in this country we should recommend to Congress and the States that this form of industrial solution—or solution of industrial unrest—should be the one which we think on the basis of what we have found here would be the proper and lasting solution for the country as a whole.

I don't know as I have expressed all of my ideas on the subject. Much of it comes from the evidence which I got here. Some of it comes from my talks around with business men, around in this town.

I find that it is almost impossible to get a business man to come forward and tell us on the stand things which he tells me privately. And consequently it is made up partly of formal evidence which I have found here, partly of my personal inquiry. It may be that I am not giving all of the facts accurately.

I should like to have you state just your judgment upon my summing up of the situation, and then for recommendations what you would suggest that we should recommend in our report to Congress.

If that is satisfactory to you, and that seems the proper way, you might take that matter up in your own way, Mr. Grier.

Commissioner LENNON. I would like to have inserted in the record that the expressions given by Prof. Commons are by Prof. Commons individually as a commissioner, and are not collective for the board of commissioners present. Now, I am not saying that we dissent from it or that we are in accord with it. I am simply stating that it is his statement.

Acting Chairman COMMONS. Well, I might say on that point—

Commissioner O'CONNELL. Well, for all the commissioners that would go, because there are some things stated I would not agree with under any circumstances.

Acting Chairman COMMONS. Well, I will make it a little stronger, Mr. Grier.

As I see the situation between you and this union here, it was simply a struggle for power. Witnesses on the part of the commission showed, and evidence that you brought forth showed, that they expected to dominate this community through the closed shop and through their strength as a union; that they did not have a policy of agreeing and negotiating and taking up matters with you. On the other hand, that you also accepted the challenge on that issue and it was simply a struggle for power between the two organizations.

And my notion of that is that in the long run a corporation of this kind will always be able to destroy the organization of labor; that is, when it comes down to a fight of this kind, that the big corporation will have the smaller—will have the labor organizations at a disadvantage, and can put them out of business. Now, that would be my comment upon the situation as regards the merits of the labor cause which these men represented. At the same time it seems to me from evidence that the conditions—this eight-hour system was brought about very largely by the fact that there was this strong organization of labor in 1906 and 1907, and that it was a useful thing at that time. It may not have been at other times when it attempted these coercive methods. Now, that is a part of the way it appeals to me individually.

I am perfectly pleased to have the safeguard put in here that I am not speaking for anybody else. Unfortunately the employers who should be present here are tied up by business obligations at the present time. And if you could continue on that basis I think we would not interrupt you again.

Commissioner LENNON. I must add a word to the record, and only a word:

While it is true that as an individual I was appointed because of my experience in the labor movement, I am serving on this commission as an Ameri-

can citizen; and as the evidence shows and as my conscience dictates my findings will be on this, as well as all others.

Acting Chairman COMMONS. Have you anything to say, Mr. O'Connell?

Commissioner O'CONNELL. Only that I haven't the slightest objection to the chairman's statement to the witness.

Commissioner LENNON. Neither have I.

Commissioner O'CONNELL. It is quite purely his own statement, and without consultation with the rest of us.

Acting Chairman COMMONS. Mr. Garretson, have you anything to say?

Commissioner GARRETSON. Nothing except that the chairman is speaking for the Chair.

Acting Chairman COMMONS. Mr. Grier, you see the situation. Are you willing to continue?

Mr. GRIER. I would like to subscribe to everything that the chairman of the commission has said, even though it does possibly flatter me. I would like also to have the views appear in the record of a gentleman who has given the subject of remedy for industrial unrest much study and who a year and a half ago proposed to me a plan to ameliorate the conditions of workingmen, which, although I expressed disapproval of at the time, I should like to submit at this hearing so that this commission may have at its leisure an opportunity to study the plan and give such consideration to it as it deems advisable.

The plan submitted by the gentleman contemplated the organization of a society in Lead with objects set forth in the following article [reading]:

"The object of this society shall be the protection and the development of the moral and material interests of its members. It is to occupy itself with the amelioration of the economic conditions of the workingmen within the limits of its jurisdiction by encouraging as far as possible a mutual fellowship, both religious and national, by favoring the creation of cooperative stores and credit associations, as also by the establishment of a bureau of employment which will guarantee the honest workingman against deceit and assure the employer honest and competent work, a popular savings bank, professional circles, and finally special schools where the young who have passed through a course in the model or commercial schools already established can acquire before entering upon their apprenticeship the technical knowledge indispensable in the exercise of their profession—in organizing, in a word, the work on the principles of justice, equity, and charity in conformity with the laws of the church, notably to those given by Pope Leo and Pope Pius X. The guild is Catholic in its essence."

Acting Chairman COMMONS. I didn't get that word.

Mr. GRIER. Guild.

Acting Chairman COMMONS. Oh, the guild; yes.

Mr. GRIER. "It prefaces the entire doctrine of the church and endeavors to be inspired above all in all its actions for the solution of economic and social problems of its members by the infallible teachings of the Chair of St. Peter, of which the bishops in union with the Pope and particularly the ordinary of the diocese are the authorized interpreters. This guild is not in any way or in any form a political or municipal association. Interesting itself as it does in the social and economic questions of the hour, it avoids all appearance of discussion in its meetings and reunions of a political and municipal character, leaving to its members an entire liberty to use their rights as citizens in following their own convictions."

Gentlemen of the commission, our experiences here following the lockout, so called, by the Homestake Mining Co. on the 24th day of November, 1909, would suggest the possibility of conducting the operations of a great industry with perfect fairness and human treatment to all of its operating force without the interference of a federation. And in thinking deeply of the matter I have wondered whether or not it would be an improvement on present conditions if the relationship between capital and labor might not well be conducted by the employer, incorporated or unincorporated, with the employee, organized or unorganized.

I think that the rolling stone—and there are such in all industries amongst the operating staff or the employees—who has no interest in any person, place, or thing on earth, who has no intention of staying in any place for any further length of time than to accumulate enough to buy a ticket to some other place—I think that such a person is the first to become dissatisfied with the conditions surrounding his work no matter how good those conditions may be; and that if he feels that there is a federation treasury behind any trouble that he is able

to precipitate that he is more apt to make the effort to precipitate the trouble than he would be if he had only his local organization behind him.

And, therefore, I say I have wondered whether or not conditions would be improved if the federation, both of employees and the federation of industries, were abolished, and let each industry deal directly with its employees, whether they are organized or whether they are unorganized.

I do not wish to be understood as voicing denial of the right to any body of men to organize. They have just as much right to organize as capital has. But I think it would be well, at least worthy of a trial, if both the employee and the employer were compelled to organize under a law, and if that law is not now in existence enact it, putting just as much responsibility and penalty on the shoulders of the organizer or the employee as is placed upon the shoulders of the employer.

I think it is very wrong that a scale of wages should be made by a federation, and that that scale should be made to apply at all of the locals in the jurisdiction of the federation. I think that each property should be allowed to make its own scale of wages and agreement with its employees, because there are no two industries in the world, even though they are in the same district, where the operating conditions are identical, where the work can be made identical, and all of the conditions surrounding the work identical.

That is why I am suggesting that the federation should not establish a scale to apply all through its jurisdiction as is too often the case. One mine might make a handsome profit at a scale of wages adopted by the federation, and that scale might absolutely prohibit the development of contiguous property. The result would be that there would be a lot of idle men in the district.

And is it not better for a man to remain idle, walk the streets, or do anything else that he might do—and we know that idle hands find mischief to do—rather than take a dollar a day less, or a quarter a day less, or 75 cents a day less, or a dollar a day less for the time being, so that the property might be proven, its worth become known, its ability to raise its scale to the standard? Or is it better for these men to walk the streets in idleness?

The federation makes a scale that applies all over, wholly regardless of the conditions or the intrinsic worth of a property, not only in various places but in the same district. I don't think that is a wise thing to prevail. Now, whether or not my suggestion would work out beneficial to all, I don't know. But it has occurred to me that in view of our experience here for the last four years that it might be well to try it.

I don't hesitate one moment to say that there never would have been any trouble here had it not been for the interference of the Western Federation of Miners. We were able always to settle in five minutes whatever little differences came up between the employees of the Homestake Mining Co. and the company as long as the local organization was in existence—for thirty-two or three or four years.

Acting Chairman COMMONS. Mr. Grier, that deals with your question. Would you give your idea on the Sunday work question? Now, what is the proper solution of that? I take it, as shown by the evidence, practically all the men that are working work practically all of the Sundays. When they take a vacation, it is a vacation, not a Sunday off. Apparently, the company has power to enforce that rule. And on the other hand it is based on the selfishness of the men. Apparently, then, the company is at the mercy of the men in that case; the men are selfish and want the money and it would require legislation to bring both of them—that legislation would naturally be uniform for all the country.

Would you think that we should recommend national or State legislation requiring one day in seven to be enforced, that would permit of continuous operation, but might not give every man a Sunday, but would gravitate toward a Sunday, and at the same time which would require probably a larger force of men, say probably 15 per cent of men.

Would you say that a guild of this kind that you suggest could accomplish that object without legislation, and should we recommend legislation to deal with this situation and similar cases in other places?

Mr. GRIER. There is a decided disposition on the part of the operating force of the Homestake Mining Co. to ask for a lay off at times when it suits them best. There was manifested decided opposition to the issuance of a compulsory order laying off the men on Sunday.

So far as church attendance is concerned, there is no reason why the operating force of the Homestake Mining Co. can't attend a religious service once every Sunday if they want to.

Acting Chairman COMMONS. The figures show that they don't.

Mr. GRIER. That they don't want to, that is the reason.

Acting Chairman COMMONS. Yes; that they are working on Sunday regularly.

Mr. GRIER. Well—

Commissioner O'CONNELL. The figures don't show that.

Mr. GRIER. The day shift gets off at 4.30. Is there anything to prevent that shift from attending evening service?

Acting Chairman COMMONS. I take it, then—

Commissioner O'CONNELL. But there are some people who do not feel they are attending the proper Sunday service when they attend the evening service. That is not their full requirement. That is not the fulfillment of their church obligation.

Mr. GRIER. Why couldn't the service be made to accommodate the men?

Commissioner O'CONNELL. At what time?

Mr. GRIER. Five o'clock.

Commissioner O'CONNELL. As I understand it, there were arrangements made here to commence church as early as 4 or 5 in the morning.

Mr. GRIER. Yes.

Commissioner O'CONNELL. Five, or six, or seven o'clock.

Mr. GRIER. But why didn't they make arrangements to attend service at 5 o'clock when both shifts were off?

Commissioner O'CONNELL. I don't know.

Mr. GRIER. And the chances are that the attendance would be an overflow congregation.

Commissioner O'CONNELL. Those who appear before us say that they failed in getting the attendance at those hours.

Mr. GRIER. Why? The men were off.

Commissioner O'CONNELL. The men have got calloused to their duties, I suppose.

Mr. GRIER. Is there anything to prevent a man going to morning service at 5 o'clock when he gets off at 4 or 4.30?

Commissioner O'CONNELL. I imagine that a man's physical condition would urge him to go home and go to bed after working until 4 o'clock in the morning.

Mr. GRIER. Is there anything, then, that would prevent that man attending service at 5 o'clock in the afternoon?

Commissioner O'CONNELL. No; I say again that service would not fulfill the man's church requirements, possibly. There are certain requirements, at least I believe so.

Acting Chairman COMMONS. I think, Mr. Grier, that your idea is this: That we should not recommend legislation on Sunday work?

Mr. GRIER. That is my idea, Mr. Chairman.

Acting Chairman COMMONS. In various industries.

Mr. GRIER. Now, I would like to suggest this to the commission: Twenty-five years ago when the operating force of the Homestake mine laid off for a number of Sundays to attend baseball games on Sunday afternoon, it was suggested that if they could do it then, why not now. I can tell you why. That was in the early day of the mine when the development had not gone very far. I can best illustrate the condition of the Homestake mine to-day, I think, by likening it to a honeycomb or a big sponge. Do you gentlemen realize that there are 70 miles of tunnels, crosscuts, drifts, winzes, and so forth, underground? Do you realize that carload after carload is dumped down, 4,000 cars a day into a winze that goes to the next level, and that it is continually wearing and wearing the sides of these openings, and if you wear away the wall around the holes or interstices in a sponge or honeycomb, you break it away, and if you break many of them away what occurs? A collapse. Do you realize that the wear is not a hundredth part as much on these walls if they are kept continually full and you dump your car into it, it drops on the ore and not on the wall, so the continuous operation—

Acting Chairman COMMONS. The suggestion that I make would permit of continuous operation.

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. It would simply be a rule, not Sunday. Sunday would not be named in the law, but it would be required that each employee should have 1 day in 7, or 36—a set number of consecutive hours, that those should be arranged by the management in such a way as they chose, putting them at different points, and it might put some minimum number of Sundays, say, 16 out of the 52 days that a man is off during the 1 day in 7, would be on

a Sunday. I am speaking now of the form of legislation which is being adopted in foreign countries and in the State of New York, and which permits continuous operation but requires 1 day off, so that kind of legislation would be a complete answer to what you have just now stated. It would not be Sunday observance strictly, but it would be 1 day in 7, and along with continuous operation of the mine.

Mr. GRIER. I do not know that there could be any serious objection to 1 day out of 7. I merely spoke as I did to call attention to the suggestion that was made that the company could just as well do it now as they did 25 years ago.

Acting Chairman COMMONS. Granting that your answer to that is correct, then you still feel we should not recommend legislation of one day in seven, roughly in the form in which I have stated. Would you still say that that kind of legislation we should not recommend?

Mr. GRIER. I think I would.

Acting Chairman COMMONS. You would recommend one day in seven?

Mr. GRIER. No, sir; I think I would recommend leaving the matter open to each State to work out as it does now.

Acting Chairman COMMONS. We have authority to recommend legislation to the States. Shall we recommend to the States that they adopt a uniform system of one day in seven?

Mr. GRIER. Well, I don't want to suggest to the commission action of that kind. I would like to add to what I said a moment ago, if you will pardon me, that in wearing away these walls you are weakening the physique of the mines.

Acting Chairman COMMONS. What you say now does not affect my proposition at all, because I am perfectly willing to concede you should have continuous operation of the mines. The only question is consistently with consistent operation of the mine, shall we legislate so as to give one day in seven to the employees?

Mr. GRIER. Well, if you will add, to as many as is possible to lay off.

Acting Chairman COMMONS. Well, you would apply that uniformly to all men. The company would have to then fix their shifts and change their shifts in such way that each man would have his proper term when he would get his seventh day off. That would be a minimum of 52 days a year.

Mr. GRIER. I know exactly what you mean, Mr. Chairman.

Acting Chairman COMMONS. Is there any reason, in your mind, except the greater profits of the company, that would stand in the way of our recommending that kind of legislation to the State of North Dakota?

Mr. GRIER. South Dakota.

Acting Chairman COMMONS. South Dakota.

Mr. GRIER. Well, if the people want it I suppose they ought to have it.

Acting Chairman COMMONS. And what objection would you raise to the people when they propose to do it?

Mr. GRIER. Well, I think we would try and meet the situation.

Acting Chairman COMMONS. So that you see no objection?

Mr. GRIER. Well, I would not say I don't see any; but—

Acting Chairman COMMONS. But put it a little different: Taking into account the public policy as well as the profits of the corporation, do you think that we might reasonably recommend that kind of legislation?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. I want to ask you a little further about this guild system you propose.

Mr. GRIER. Why, Mr. Chairman, don't misunderstand me; that is not my proposition.

Acting Chairman COMMONS. It is mine; I asked you what you thought about it.

Mr. GRIER. That was proposed to me, and I disapproved it.

Acting Chairman COMMONS. Oh; this guild system?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. Then, if that is true, it is the wish of the commission you should go on and make any other statements you desire with reference to the general proposition, the facts as I have stated them here, and the recommendations.

Commissioner O'CONNELL. I would like you to take into consideration this proposition, as the chairman, in the statement made to you when you first took the stand, stated the conditions, and so on, he found here, I would like to have you express your opinion as to what would be the result to this community if a dishonest, extremely unfair man, an unjust man was occupying your position.

I suppose you expect to die some time like the rest of us. Suppose a man of the type that we hear of conducting Tammany's affairs in New York—that is, seizing from everybody revenue, taxing for every conceivable, imaginable thing, selling vice in the community—what would become of this community under circumstances of that kind?

Mr. GRIER. Well, first let me thank you for the compliment; but if the type of man you suggest should take the reins from me he would probably make some changes; I don't know. But it seems to me that bridge might be crossed when it is reached.

Commissioner O'CONNELL. That would be too late.

Mr. GRIER. I have a weak heart muscle, and am liable to go any time.

Commissioner O'CONNELL. It is liable to overtake us all at any time.

Commissioner GARRETSON. Then we will have to be careful not to excite you.

Mr. GRIER. I have to go away from here every year for three months to a sea-level altitude. But the suggestion you make has been made time and again, and, as I say, some changes would probably be made; my policies might not be approved by my successor; but do you think it is necessary to provide for that now?

Commissioner GARRETSON. Would you be willing to advocate to this commission that it should recommend to Congress the enactment of laws that would foster, continent wide, the creation of communities like this, ruled as this one is in the summing up given by the chairman from his standpoint ruled; a despotism, benevolent though it may be, but which by changes in the saddle might become malevolent?

Mr. GRIER. I plead guilty to the charge of benevolence in a high degree, but not the charge of despotism.

Commissioner GARRETSON. I merely quoted one man's conclusion.

Mr. GRIER. I think you are as capable of judging the conditions that prevail in this town as well as I am, with the information you have, and you are as capable of saying what the result would be if these conditions prevailed all over the world.

Commissioner GARRETSON. It wasn't the question of what I thought. I asked if you were willing to advocate to the commission—

Mr. GRIER. If they are the best in the world, why not?

Commissioner GARRETSON. Do you hold that they are?

Mr. GRIER. I won't say they are the best in the world, but I think they are as good as there are in the world.

Commissioner GARRETSON. Another question I would like to ask. It seems from your testimony that the main fault you found with the obstruction or intrusion of the Western Federation of Miners was that the wages should be fixed locally according to the conditions there existing; is that correct?

Mr. GRIER. I said the wages ought to be fixed locally and not by the federation.

Commissioner GARRETSON. Where is the price of that which is paid as wage fixed, locally? Where is the value of gold determined? Because wage is paid in gold or its equivalent is it fixed locally, or is it fixed in one exchange for the world—the purchasing power of it?

Mr. GRIER. Well, I don't fix it.

Commissioner GARRETSON. No; nor it is not fixed in "Led," is it?

Mr. GRIER. "Leed," not "Led."

Commissioner GARRETSON. "Leed." I will make it "Leed." Gold and lead probably don't go well together.

Mr. GRIER. No; it is not fixed in Lead.

Commissioner GARRETSON. No. Then why should the price of that which it buys be fixed in Lead?

Mr. GRIER. I think I gave what ought to be a sufficient answer to that when I said that the conditions surrounding—that there were no two properties around which the conditions were identical.

Commissioner GARRETSON. But there are no two properties in which so much time and labor from a man is not worth so much money, if the labor and time that he gives is equivalent. Where is the price of wheat fixed; is it fixed locally?

Mr. GRIER. I do not fix it.

Commissioner GARRETSON. It has been fixed in London for the past 25 or 50 years, hasn't it, and for a large portion of the world for three centuries? Isn't that ordinarily the accepted fact that that is where it has been fixed—the London wheat market?

Mr. GRIER. I suppose so.

Commissioner GARRETSON. Where are freight rates fixed, locally or centrally?

Mr. GRIER. I think the Interstate Commerce Commission is fixing them now.

Commissioner GARRETSON. But they don't fix them here in Lead, do they? They fix them for half a continent or for a whole one, as the case may be. Why should not the men that transport that freight have a universal wage rate? Do you really believe that your point locally as to fixing the wage is a consistent one?

Mr. GRIER. I do.

Commissioner GARRETSON. When confronted with the other?

Mr. GRIER. Yes.

Commissioner GARRETSON. When capital fixes every commodity that it deals in universally, then wage should be fixed locally? Is that a prejudice or an argument?

Mr. GRIER. Whichever you choose to call it.

Acting Chairman COMMONS. Mr. Grier, did you complete the point?

Commissioner LENNON. I did not want to ask any questions, but I want to say to Mr. Grier that I shall study the talk that he has made as I have studied none that have been made before the commission. There are some ideas in it that I am not really a green hand at in this business. I do not care to ask any questions.

Commissioner O'CONNELL. Mr. Grier, what are the retail prices of coal in Lead, I would like to know; anthracite coal, for instance?

Mr. GRIER. I don't think there is a ton of anthracite used in Lead.

Commissioner O'CONNELL. It is all bituminous? Does the bituminous coal come from Colorado—the soft coal?

Mr. GRIER. The coal that is used here for domestic purposes comes mainly from Wyoming.

Commissioner O'CONNELL. What does soft coal sell for? Is there some one here who has that information?

Mr. GRIER. Yes.

Commissioner O'CONNELL. What is the retail price of coal in Lead?

Mr. MURRIN. The price of soft coal, delivered from northern Wyoming, is \$6 per ton delivered in Lead City.

Commissioner O'CONNELL. Six dollars?

Mr. MURRIN. Yes.

Commissioner O'CONNELL. As I understand there is no anthracite used by you at all?

Mr. MURRIN. No; very little.

Commissioner O'CONNELL. Very little. Does any come in?

Mr. MURRIN. Yes; we ship probably one car annually only.

Commissioner O'CONNELL. And what does anthracite retail at?

Mr. MURRIN. Seventeen dollars to the ton.

Commissioner O'CONNELL. Seventeen dollars?

Mr. MURRIN. Pennsylvania anthracite.

Commissioner O'CONNELL. I don't blame them for not using anthracite.

Mr. MURRIN. The principal part of that price is consumed in the freight.

Commissioner O'CONNELL. Oh, undoubtedly.

Acting Chairman COMMONS. Mr. Grier, I wonder if you really got the situation from our standpoint—from my standpoint—in answer to some of the questions that were brought up, granting that we should not try and cross the bridge before we reach it, in your particular case.

Mr. GRIER. Yes.

Acting Chairman COMMONS. Not to be too personal or invidious, we might say complimentary; but as a matter of fact, is the control of this company's interest here left practically by the stockholders to your direction?

Mr. GRIER. Yes, sir.

Acting Chairman COMMONS. What do you submit to them for their approval? What class of questions or policy do you submit to them, stockholders or directors, for their approval?

Mr. GRIER. I do not believe that I submit anything to them.

Acting Chairman COMMONS. Then, you consider that situation seems to be that they simply have confidence in you and leave it all to you and refer everybody to you. Ordinarily we find that a man in your position would be compensated according to the profits of the business; that is, would have some share of stock. Would you be willing to say why it is that difference is made

in this case? Perhaps that has some important bearing on the general situation, that you are not a stockholder in any of these companies.

Mr. GIBBS. I am not a stockholder in the Homestake Mining Co. and never was. I have always thought that having no shares of stock in the company that I was in a stronger position. It is well known that oftentimes a superintendent who is a stockholder, and speculating in the stock of the company whose operations he supervises, takes advantage of his position to mine and mill the richest ore in the mine for the purpose of advancing the price of the stock so that he might sell it; that after he has sold out he then commences to mine and mill the lowest grade of ore so that the stock may fall and he buy it back; that goes on continuously. I have felt that my duty was to the owners of the property to work it to what I thought was the greatest advantage to all concerned, preserving the physique of the mine by so operating the property that the door was not open for any criticism.

Acting Chairman COMMONS. That seems a very important point. Would you think that we might profitably recommend such a proposition to be enacted in the corporation law?

Mr. GIBBS. Yes.

Acting Chairman COMMONS. That the operating end, the head of the operating end, should not be a speculator or holder in the stock of the company?

Mr. GIBBS. Yes, sir.

Acting Chairman COMMONS. You feel that that not only gives you a better attitude toward keeping the physique of the property, but does it give you a better attitude toward the wage earners, do you think—the employees of the company—that you are not interested in the stock?

Mr. GIBBS. I think so.

Acting Chairman COMMONS. In what way?

Mr. GIBBS. Well, I think that an operating force would regard the superintendent of the property that they were working for in a better light than if they thought he was largely interested in it and was manipulating its product for his own personal gain.

Acting Chairman COMMONS. In taking it out of that, would that be the notion?

Mr. GIBBS. Probably.

Acting Chairman COMMONS. Ordinarily, in giving employees an interest in the stock, there is a usual and customary method of giving the superintendent or management some contingent compensation on the basis of the saving they make, or the efficiency; are you paid just a straight salary, or is there a contingent compensation?

Mr. GIBBS. Straight salary.

Acting Chairman COMMONS. What is your salary?

Mr. GIBBS. Twenty-five hundred dollars a month.

Acting Chairman COMMONS. You feel that a straight salary, being disinterested, you might say, a man standing between the stockholders and the staff at a mill, that is commensurate with the undertaking?

Mr. GIBBS. Yes, sir.

Acting Chairman COMMONS. Is the proper way. How long have you been receiving that salary?

Mr. GIBBS. When I entered the service of the Homestake Mining Co. 37 years ago I was paid \$250 a month. After being in the service for two or three years I was given \$300 a month.

When my predecessor in office died, in 1884, that salary was not raised for, I think, four years. I continued to draw \$300 a month. At the expiration of four years it was raised to \$300 a month. I do not recall how long I worked at that salary. It was raised from that to \$750, and from that to \$1,000, and from \$1,000 to, I think, \$1,250 a month. The raise has been gradual. I have not been drawing \$2,500 a month very long. But it has been gradual from the time I entered the service, 37 years ago.

Acting Chairman COMMONS. You are responsible for property of twenty or twenty-five millions capital, are you not?

Mr. GIBBS. Yes, sir.

Acting Chairman COMMONS. And an operating expense of something like three million a year?

Mr. GIBBS. Yes; over three million a year.

Acting Chairman COMMONS. And an operating income for dividends, and so on, of about the same, or about three million?

3658 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. GRIER. I think the operating expenses would be a whole lot more than three millions; I think it would be nearer four; the labor, too.

Commissioner GARRETSON. Was not the income in excess of seven millions last year?

Mr. GRIER. Sir?

Commissioner GARRETSON. Was not the total income in excess of seven millions last year?

Mr. GRIER. No; six.

Commissioner GARRETSON. That includes surplus that was carried over?

Mr. GRIER. Yes; it is about six.

Acting Chairman COMMONS. Well, saying it was three million, the salary which you get is such a small fraction on the great interest at stake that the ordinary rule of paying railroad presidents would go far beyond the compensation?

Commissioner GARRETSON. No; it would not. No railroad president on this continent draws over one hundred and fifty thousand; and the capitalization amounts to ten and twenty times what that is.

Mr. GRIER. Water and all?

Commissioner GARRETSON. Water and all.

Mr. GRIER. It is water and all.

Commissioner GARRETSON. And in very few cases water and oil.

Commissioner O'CONNELL. Do you take care of water in this capitalization?

Mr. GRIER. No; there is not any at all.

Commissioner O'CONNELL. No water at all?

Mr. GRIER. No.

Acting Chairman COMMONS. Just one other point. You seem to think that from our standpoint of recommending legislation for a permanent policy we should simply take the standpoint of the corporation itself and take our chances on the next administration, the next man?

Mr. GRIER. I think so.

Acting Chairman COMMONS. And that legislation should not endeavor to provide for any of these provisions of voluntary guild system, that there should be no question of political, municipal, State, or national supervision in such a way as to protect the employees against abuse and to protect the stockholders? What is your idea about that?

Mr. GRIER. I have not had very much supervision.

Acting Chairman COMMONS. So you could not help us on that?

Mr. GRIER. No; I could not.

Acting Chairman COMMONS. And whatever we might find regarding your situation here would not be a good guide for us for the problem in general?

Mr. GRIER. You are much better able to decide on that point, Mr. Chairman, than I am. I have been here all my life, and I am not as familiar as you will be after you get through with this work with conditions elsewhere.

Acting Chairman COMMONS. I am sure, Mr. Grier, we have been very much profited by your testimony and by the situation.

Any other member of the commission desire to ask any questions?

Commissioner GARRETSON. Nothing more.

Acting Chairman COMMONS. We wish to thank you for your courtesy and the instruction you have given us and the citizens and mayor and those who have taken care of our convenience while here.

The commission will stand adjourned.

(Whereupon, at 12.10 o'clock p. m. Tuesday, August 4, 1914, the commission adjourned to meet in the city of Butte, Mont., Thursday, August 6, 1914, at 10 o'clock a. m.)

EXHIBITS.

GRIER EXHIBIT NO. 3.

GRIER EXHIBIT NO. 4.

NOVEMBER 21, 1909.

Minutes of conference held at Homestake Co.'s office, in Lead, S. Dak., at 5 o'clock p. m., November 21, 1909, between T. J. Grier, superintendent of the Homestake Mining Co., Richard Blackstone, assistant superintendent of Homestake Mining Co., and Chambers Kellar, general counsel, representing Homestake Mining Co., and T. J. Ryan, Peter Jorey, Chris Christenson, William E. Tracy, and James Kirwin, representing union employees of Homestake Mining Co.

Certificate showing appointment of committee from miners' union presented to Mr. Grier, dated November 21, 1909, in the following words:

"This is to certify that at a mass meeting of the union employees of the Homestake Mining Co., held in the Lead Opera House on Sunday afternoon, November 21, 1909, the following-named gentlemen were appointed a committee to confer with the superintendent of the Homestake Mining Co. in regard to a settlement of the present controversy between the employees and the mining company: T. J. Ryan, Peter Jorey, Chris Christenson, William E. Tracy, James Kirwin.

"WILLIAM E. TRACY, Chairman.

"E. G. HUNTLEY, Secretary."

Mr. GRIER. Well, gentlemen, who is your chairman?

Mr. RYAN. If you and Mr. Kirwin will fight it out it will please me better.

Mr. KIRWIN. I prefer that Mr. Ryan act as chairman.

Mr. RYAN. I will say to start with that the mass meeting this afternoon was informed that the business men had arranged a meeting with you and it was on the strength of that that this committee was appointed in order to try and arrange a settlement of the difficulty existing. I may go further and state that the union, all of them in fact, I believe, are determined upon an entire unionization of the camp as far as possible. There is some little flaw in this our ultimatum. That don't mean that every man shall join the union, but as far as they are eligible to join. Now, then, this ultimatum that you have issued in regard to these men withdrawing from the union, we want that withdrawn. We want a closed shop by the Homestake Mining Co. That doesn't mean that the company necessarily shall employ union men; they employ whoever they wish and after a reasonable time, say 45 days, they become members of our organization or some other organization. Of course, if this is granted it does away with this discrimination against any man who has not signed this list. You know, Mr. Grier, as well as the rest of us, that the union has had a hard time here for a number of years. Ever since I have been secretary for the last seven years we have been continually on the fight for membership, always, you might say, scrapping simply because some are

union men and others are nonunion. Now, if the company would help us, or if they can not help, to remain neutral, not to have any discrimination, but allow us to work in an honorable way to induce these men to join the union, I think something can be arranged. The way it is you can not tell what time there will be trouble starting up. With union men and nonunion men it brings the company and the union antagonistic to one another continually. It is no more than they have in Butte and in other camps. They have a hospital in Colorado. * * * Everybody belongs to the union. It is the same way in Butte; same way in other camps in the west. Of course when this agitation started there were lots of stories. In fact there were men, I believe, walked in front of the office here one night, going to ask for a raise of wages, but they did not belong to our organization at all. They had always antagonized us. They were the first to ask for a raise of wages. I believe I speak with full knowledge of every man here. Nothing like a raise in wages was ever contemplated. It was simply to get men into the union to help us. I myself for 18 months paid \$5 a month to build that building (speaking of the Miners' Union Hall). There were other men paid more than that. Afterwards a \$2 assessment was levied. I feel and others feel that others should bear a share of that burden. When I leave it is left for the employees of the Homestake Co., members of the union. It was built for the purpose of helping the union men. Helping to pay a sick benefit for members. That was the idea for building that building. We increased our sick benefits to \$10 a week. We have under contemplation at the present time a further increase and accident benefit; something that will protect our members. I feel that the union sentiment in the town, in the Hills, is strongly in our favor, and it is something that we can command at the present time. That is the way I feel about it.

Mr. Krawin. Well, Mr. Grier, when the work of organization started here it was due to the fact that a great deal of dissatisfaction existed in the western mining camps over the situation here in Lead. Men would come from Lead to Butte, to British Columbia, to Arizona, without cards. They would ask where they came from. "From Lead." "Why don't you have a card?" "We don't have to." These complaints continually came up, and they thought Lead ought to be made a union camp. For that reason the executive board took the matter up and we made an effort to organize Lead. I stated publicly that we didn't intend to involve the company in any way in this proposition. I think I am correct in stating that if the company kept their hands off the proposition everything would be all right. We didn't like to bring the company in it. And so the work of organization has been carried along and been carried along successfully. Now, there is another thing right in the mines here. There is a union man and there is a nonunion man. The union man is never satisfied. He knows the nonunion man is receiving the same benefits he is receiving. He is getting the benefit of working conditions which the other fellow has brought about through organization, and there is naturally a feeling of discontent and dissatisfaction continually creeping up. We don't ask the company to employ union men. We realize that the poor fellow who is working for a job who doesn't belong to the union has the same rights that we have, and he is entitled to secure employment if he can, but after a reasonable time for him to be placed on his feet we ask him to come in with us to maintain our organization, help to take care of the poor devils who have been unfortunate through sickness or accident or any way, and give them a decent burial when they die. We have the same conditions in other places, and I believe if Mr. Grier and the Homestake Mining Co. will take this matter up and come to some agreement with us, I believe everything will run along nice and smoothly and all trouble can be prevented not only now but in the future. We are not only anxious for some kind of an understanding at the present time, but we want to take steps to prevent trouble in the future, because every intelligent man knows that grievances will be coming up in spite of everything. But we want to dispose of those grievances, and my idea would be that if we have an understanding with the company that the miners' union have a good, level-headed committee to act as an adjustment or grievance committee and when any difficulty arises this committee will take the matter up with Mr. Grier and an effort made to reach a settlement and the work continue, and by this organization the stories circulated will be cut out. It will be better for everybody, I think. We are not looking for any trouble; never anticipated that anything of this nature would come up at this time when we started to organize this camp. But per-

sonally I am not an employee of the Homestake Mining Co. and am not a member of this union. I am a member of the Terry Miners' Union, and I have been elected on the executive board of the Western Federation of Miners, and naturally have to take a hand in straightening out little difficulties that come up in different parts of the country, and I don't care to take up too much of your time in this matter. I feel that the members of the Lead City Miners' Union are capable of handling their own business.

Mr. RYAN. I will state, Mr. Grier, that they meet again this evening to receive the report of this committee. We have got to report back to them. Of course, upon our report will depend a great deal whether we have a meeting on the 25th. Of course, you understand that we consider—that I consider you as a friend, and we are not doing this because we have any real grievance against you. We understand that you are superintendent of the Homestake Co. and working for them, and you needn't feel that personally we will hold you responsible for anything that may transpire, and I feel sure that you will not hold any member of the union responsible in connection with what he will do in connection with the union. At least, he should not be held. I believe in unionism; was brought up at ——. There had been a strike there. The union sent \$200, besides levied an assessment of 25 cents a member, and I feel that each member that goes out for a principle, that he should be considered that he is losing that much himself, and if you are working for the company, I consider you are working for the company, not for us. Anything you do I certainly will appreciate. Anything you can not do, personally I would not think of holding you responsible for it.

Mr. TRACY. Mr. Grier, I don't think I can add very much to what has been said by Mr. Ryan and Mr. Kirwin. I have been a man that was sent here and actively employed in this work of organization. I was sent here for the purpose of thoroughly organizing Lead and making a union camp of it. In that respect we have been practically successful. At this time very few men now remain outside of the union ranks, and most of those have signified their intention of becoming union men. I have been told repeatedly by employees of the Homestake Co.—by men who claimed to be personally acquainted with you—that you had no objection whatever to the organization of men in the union, and that you had often and repeatedly expressed a sentiment in that respect and in that way, but that you had positively and always refused to take any part or render any assistance to such organization. For that reason as much as any other I didn't consider that it would be quite proper for me to approach you and discuss the subject, and I had some doubt as to whether you would be willing to give me an audience. I proceeded along such lines as seemed to be best, most practicable for the purpose of accomplishing the object that we had in view. I have been questioned a great many times about intended strikes, about increased pay, and other changing of conditions, and to all of such questions I have replied that the Lead City Miners' Union or the Western Federation of Miners are not contemplating any such course of action. We consider that the first principle of unionism is the protection of the union men; to protect them in their wage scale and in fair working conditions, and in order that it may be effective in affording this protection we consider that it is necessary for the union to enforce its jurisdiction, because where a union is unable to enforce its jurisdiction, where it is unable to compel membership or require membership of men employed, it is at all times possible for nonunion men, and especially during times of industrial depression when there are a number of men out of employment—there is always present before a man a great temptation to go in and underbid another worker and secure the employment away from him. That is frequently spoken of as one of the rights of the American citizen. A great many men appear to be deluded by that. But in reality we consider that it is a mistake; that no more men would be employed in mines or factories or railroads of a company if the wages were reduced by half than there are now employed; simply the living conditions would be reduced to that much lower extent. I don't know that it is necessary for me to explain any further. You gentlemen are probably, all of you—Mr. Grier in particular—as well aware of what your sentiments are as you would be if I continued to explain any further. It may be that I have been deceived by personal friends of yours, Mr. Grier. A great many employees seem to regard you with a spirit of love and affection. I have been repeatedly told that I had nothing to fear of Mr. Grier; that he was certainly a good man—a man well thought of and respected and loved by practically all the citizens of the com-

munity; and, with a few exceptions perhaps, that is true. Having these things in mind I proceeded with this work of organization without taking counsel with you or in any manner bringing you or the Homestake Co. into the matter at all. I felt that it was fully possible by preaching and teaching union sentiments to induce men to organize and unite with the union, and I have been successful so far to the extent that practically the camp is now organized. I was indeed much surprised when I saw the opposition that was coming from your side, but at that time I was not in position to withdraw, and, in fact, if I had been so inclined it would have been thoroughly impossible for me to undo the work that I had already done. Now, I don't know that there is anything more to say on this occasion. If you have any questions to ask I will be pleased to answer them. I don't know of anything further to say.

Mr. JOEY. Gentlemen, I don't believe that I have anything to add to what has been said by the gentlemen that have preceded me at this time. If any questions are asked later on, I may be able to answer some of them. That is all I have to say at this time.

Mr. CHRISTENSON. Just one little word now. If we can go back and report that little word "yes" the roof will nearly come off that opera house. We have probably 98 per cent of the men who are with us, and they would wish for just such a result and there will be no trouble. There will be a ring of the old anvil and there will be harmony in the camp. I believe the workingman is right in asking to that extent, and I know positively that it will be the greatest joy that this camp has ever seen for that one little word. Another word, if you please. There is no possibility of trouble even though a number of them want it. The friends of the Homestake are into the organization. There are men in there that have been here for years and years, and they are there and will stay there without any question. There is a suspense at this particular time that we must have answered, and we hope that it is in the affirmative.

Mr. GRIER. First, gentlemen, I want to thank you all most heartily for the expressions of personal regard for me that you have made. I feel that they have been sincere, and I hope that I have merited them, and I hope that personally between all of us the same feeling will continue. But in this case the action of the Homestake Mining Co. was neither hurriedly nor unadvisedly taken, and the company is not willing to recede from its position.

Mr. RYAN. Then you refuse to rescind your ultimatum; you refuse to employ a man that is a union man?

Mr. GRIER. I shall have to stand by the notice as published by the company, and signed by me in my official capacity, of course, which you understand. There isn't anybody more sorry than I am. There isn't anything else that I can do.

Mr. CHRISTENSON. In organizing the camp it was never meant that the age of those men who have been in the service such a great length of time—that they would come under this rule; neither men that was physically or mentally unsound would come under the rule.

Mr. GRIER. We don't want any unsound men. We strive with all our might to take care of the men who are incapacitated in the service.

Mr. RYAN. I will state that I don't agree with Mr. Christenson. The union takes in all who are wage earners. Anyone that expresses a desire to join our union we take in whether physically sound or not.

Mr. CHRISTENSON. That is not quite what I intended to say. I intended to say that we don't insist upon them coming in.

Mr. RYAN. I believe Mr. Grier knows that those are really the men we have no trouble with. It is men that is physically sound and well able to bear their share—that are too mean or something. That is the way I take it. The men who will not join us are men like that.

LEAD, S. DAK., January 1, 1914.

Mr. T. J. GRIER,
 Superintendent Homestake Mining Co.,
 Lead, S. Dak.

DEAR SIR: I herewith submit the following report of the hospital department (including Nemo and the hydroelectric plant) for the year 1913.

During the year 14,271 professional calls were made to the homes.

Office calls \$2,076, consisting of dressings, examinations, prescriptions, etc.

Confinements taken care of.....	224
Surgical cases treated in homes and office.....	959
Surgical cases treated in hospital.....	150
Total	1,109

Home and office cases as follows:

Fractures:		Fractures—Continued.	
Skull vault.....	2	Phalanges	20
Lower jaw.....	2	Tibia	3
Malar bone.....	1	Tibia and fibula.....	1
Clavicle.....	2	Metatarsals.....	3
Ribs.....	2	Metacarpals.....	5

Dislocations:		Office operations, etc.—Continued.	
Elbow	2	Cysts removed—Continued.	
Shoulder	1	Eyelids	2
Patella	2	Face	4
Total	5	Neck	2
Office operations, etc.:		Papilloma of leg	1
Amputation of—		Tonsils and adenoids	41
Fingers	7	Turbinates removed	4
Toes	1	Hydrocele tapped	5
Circumcisions	26	Corneal wounds	115
Burns	4	Paracentesis of eardrum	1
Abscesses opened	41	Polypus of nose	1
Cysts removed—		Mastoiditis	1
Hand	3	Lacerated, contused, and punctured wounds	729
Scalp	1	Grand total	959

Hospital report.

During the year we have treated in the hospital—

Medical cases from 1912	2
Medical cases in 1913	45
Surgical cases from 1912	4
Surgical cases in 1913	146

Total	197
Total number of days in hospital	2,935
Average number of—	
Patients per month	16.4
Patients per day	8.04
Days in hospital per patient	14.9

MEDICAL CASES.

Abortion	1
Arteriosclerosis	1
Alcoholism	3
Appendicitis	1
Confinements	2
Cellulitis, pelvic	1
Carcinoma of—	
Stomach	1
Uterus	1
Colic, intestinal	2

HOWARD EXHIBIT NO. 2.

CITY OF LEAD (PRONOUNCED "LEED"), COUNTY OF LAWRENCE, STATE OF SOUTH DAKOTA.

(Date of charter, 1890; area, 733.14 acres; population, 1910, 8,392; estimated, 1913, 9,000.)

- Mayor, H. L. Howard. Term expires May 1, 1917.
 Commissioner of public property, police, and fire, A. D. Ferguson. Term expires May 1, 1914.
 Commissioner of waterworks and sewers, J. W. Curran. Term expires May 1, 1914.
 Judge of municipal court, John H. Rogers. Term expires May 1, 1915.
 Auditor, J. William Stoner.
 Chief financial officer, treasurer Joseph F. Peters.
 Superintendent of public instruction, Theodore Saam.
 Secretary of board of education, Carrie M. Voigt.
 City engineer, Lucian D. Lea.
 Chief of police, Joseph Keffeler.
 Chief engineer of fire department, John B. Mayo.

3672 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Health officer, Dr. J. W. Freeman.

Public utilities, owned by private companies—water, light, and power, gas. Number of miles of gas mains or conduits, 10. Rate per 1,000 feet, \$1.60 for manufactured gas.

Waterworks: Owned by private company. Capacity, 10,000,000 gallons per 24 hours. Miles of service-pipe lines, 13. Miles of intake-pipe lines, 8.8. Miles of transmission-pipe lines, 9.8. Pressure at fire hydrants, 27 to 135 pounds per square inch.

Electric-light plant: Owned by private company. Miles of overhead circuits, 120. Miles of underground circuits, 1. Number of arc lamps, 12. Cost per lamp, \$120, including renewals and maintenance per year. Number of incandescent lamps, 92. Cost per lamp, \$36, including renewals and maintenance per year. Number of clusters, 62. Cost per cluster, \$52, including renewals and maintenance per year.

Number of miles of sewerage conduits, property of city, 11.

Miles of streets, avenues, and thoroughfares unimproved, 12.

Miles of streets, avenues, and thoroughfares improved with brick, concrete base, 1.

Miles of streets, avenues, and thoroughfares improved with water-bound macadam, 2.

Miles of streets, avenues, and thoroughfares improved with Tarvia macadam, 1.

Miles of streets, avenues and thoroughfares sprinkled by water, 1.

Building permits issued last fiscal year. No record prior to May 1, 1913.

Total cost of construction. No record prior to May 1, 1913.

Miles of trolley lines within the corporate limits, 1½; single track, all.

Number of parks, 1; area in acres, 12,634; municipally owned.

Fire department: Number of officers, 2. Number of employees, 19. Equipment: Three horse-drawn combination hose and chemical wagons and one horse-drawn ladder truck.

Police department: Number of officers, 2; patrolmen, 3.

Number of public schools, 8. Expenses for maintenance fiscal year just past, \$59,960.04. Public school enrollment, 1,508. Cost per pupil average daily attendance, \$50.98. Average daily attendance, 1,177. Cost per pupil on total enrollment, \$39.68.

Number of private schools, 1.

General items that make up the expense for maintenance: First, expense of general control; second, expense of instruction; third, expense of operation; fourth, expense of maintenance of school plant; fifth, expense library; sixth, miscellaneous.

Estimated area of vacant land for industrial purposes, 250 acres; estimated area of vacant land for residential purposes, 100 acres.

TRIAL BALANCE, MARCH 1, 1914.

ASSETS.

Fixed assets:	
Real estate	\$47,960.00
Public works and improvements	132,550.43
Equipment	25,940.50
Current assets:	
Cash	3,814.44
Accounts receivable	144.45
Supplies	1,505.20
Sinking fund assets:	
Cash	763.22
Investments	4,000.00
Tax levy, 1913	61,927.97

KELLER EXHIBIT NO. 1.

In the Circuit Court of the United States, Eighth Judicial Circuit, within and for the District of South Dakota, Western Division.

COMPLAINT.

HOMESTAKE MINING Co., A CORPORATION, PLAINTIFF, v. THE LEAD CITY MINERS' UNION, A CORPORATION, DEFENDANT.

Said plaintiff complains of said defendant and for cause of action alleges:

(1) That said plaintiff is, and was at the times hereinafter mentioned, a corporation organized and existing under and by virtue of the laws of the State of California, and owning property and transacting business in the State of South Dakota. That said defendant was at all of said times, and now is, a corporation organized and existing under and by virtue of the laws of the State of South Dakota, and having its principal business in the city of Lead, S. Dak.

(2) Said plaintiff is the owner of certain mines and mining claims located in the city of Lead, in Lawrence County, S. Dak., and of a number of mills, hoists, and plants used and employed by the plaintiff in the mining, extraction, treatment, and reduction of minerals, metals, and ores, and is now engaged in the business of mining, extracting, manufacturing, treatment, and reduction of metals, minerals, and ores in said city of Lead, S. Dak. That in the conduct of its business plaintiff employs about 2,500 employees. That a large number of plaintiff's employees are employed in underground work at various depths beneath the surface in the prosecution of the business of mining and hoisting to the surface the ores from the plaintiff's mines. That a large number of men are engaged in the operation and management of the machinery used in hoisting ores from beneath the surface to the surface, and in lowering the men from the surface to the different levels beneath the surface, and in hoisting the men from their respective places of work in the mines. That an extensive and varied character of machinery is employed by the plaintiff upon the surface in the operation of the various mills and reduction plants of plaintiff, and in the various hoisting works, and in the development of steam and electrical power for use and transmission throughout the mines and works of plaintiff, and in the operation of underground railways for the transportation of ores, and in divers other operations of the plaintiff, both upon and beneath the surface, and that in all of said employments a high degree of skill, care, and attention is required of plaintiff's employees.

(3) That said defendant is a corporation whose members are composed of the various employees of the plaintiff, and that the object and purposes of said defendant corporation are to combine and unite the various members thereof in an association so as to act as an organized body in all matters connected with their said organization. That for more than a quarter of a century the plaintiff has employed, without discrimination, members of the said defendant and of other labor organizations and unions, and also persons who were not members of the defendant or of any other union or labor organization.

(4) That said defendant, on or about the 11th day of October, 1909, at a mass meeting of the members of said defendant held in the said city of Lead, S. Dak., passed and adopted a resolution, a copy of which is hereto annexed to this complaint, marked "Exhibit A," and which is hereby made a part of this complaint as though fully incorporated herein at length. At the same time the said defendant, at said mass meeting, selected and appointed divers and sundry bodies of men, styled and called by said defendant "committees," for the purpose of visiting each level of the plaintiff's mines, and each portion of plaintiff's surface plants, and ascertaining the names of all nonunion men, and for the purpose of intimidating and threatening all of plaintiff's employees who were not union men, i. e., not members of the defendant or of some similar labor organization or union, and of compelling all such employees of plaintiff to become forthwith such union men, or to free and compel such employees, by intimidation and threats of great bodily harm and of life, to leave the employment of plaintiff, and that said various committees were authorized and instructed to give such nonunion men until October 24, 1909, within which to become members of the defendant or of some similar union or labor organization. That thereafter, on said October 24, 1909, at a mass meeting of the members of said defendant, the said defendant passed and adopted a resolution, a copy of which is annexed to this complaint and marked "Exhibit B," and which is hereby made a part of this complaint as though fully herein incorporated at length. Plaintiff alleges that after the passage of said resolution of October 11, 1909, the said defendant has from time to time and upon sundry and different occasions and times, acting through said bodies of men styled and called "committees," wrongfully and unlawfully and by stealth, entered upon different portions of the mines, works, and plants of plaintiff, both upon and beneath the surface, and upon different levels of the plaintiff's mines, and has wrongfully and unlawfully endeavored, by the use of threats and intimidations, to force and compel the employees of plaintiff who were not members of said defendant or some similar labor union, to become members of said defendant, and has threatened the said employees of plaintiff with great bodily harm and with the loss of life if such employees should refuse to become members of said defendant, and has in said manner and by said means upon sundry and divers occasions, and in all portions of the plaintiff's mines and works, both surface and underground, so terrified and intimidated such employees of plaintiff as to prevent them from performing the labors and duties of their respective positions, thereby depriving plaintiff of the value of their respective services and the

value of the services of numerous other employees whose labors and duties were such that they could not be properly and efficiently performed without the continuous, diligent, and attentive performance of the labors and duties of the said employees of plaintiff so threatened and intimidated, and has greatly lessened and impaired the efficiency and value of the services and labors of numerous of plaintiff's employees in various departments, all to plaintiff's damage in the sum of ten thousand dollars (\$10,000).

Wherefore plaintiff prays judgment against the said defendant for the sum of ten thousand dollars (\$10,000), together with costs of this action.

STATE OF SOUTH DAKOTA, *County of Lawrence, ss:*

Thomas J. Grier, being first duly sworn, deposes and says that he is the superintendent and general manager of the Homestake Mining Co., plaintiff in the above-entitled action; that he has read the foregoing complaint, knows the contents thereof, and that the same is true of his own knowledge, except as to matters therein stated upon information and belief, and as to such matters he believes them to be true.

THOMAS J. GRIER.

Subscribed and sworn to before me, this 10 day of November, 1909.

[SEAL.]

BLANCHE COLMAN, *Notary Public.*

EXHIBIT A.

Whereas, owing to the efforts of the Lead City Miners' Union No. 2, W. F. M., acting in conjunction with Central City Miners' Union No. 3, W. F. M., certain improvements and betterment of conditions obtained to all men employed in and around the various mines, mills, and surface work within the jurisdiction of the said unions, among which may be noted the establishment and maintenance of the 8-hour workday at the same scale of wages which formerly prevailed when 10 or 12 hours' labor was required from each employee for a shift's work; and

Whereas the policy of these unions has ever been lenient in the extreme, inviting all honorable miners, millmen, mechanics, and other laborers connected with the mining and milling industry to join and affiliate with them in their respective unions, for the purpose of maintaining the same in a position of strength and efficiency and in order that all might be entitled to full and equal participation in all benefits and benefactions accruing from membership in such union; and

Whereas it now appears that on account of such liberal policy on our part there are at this time a large number of men employed within our jurisdiction who have neglected to unite with our organization and many who have fallen in arrears to the extent of severing their connection with our union, and many others who are avowed enemies of unionism—scabs and spies and strike breakers—among whom and with whom we can not as self-respecting union men long continue to labor or associate with: Therefore be it

Resolved, That we demand of all ex-members who are now in arrears that they shall at once reinstate and place themselves in good standing in our union, and that we demand and require all eligible men who are employed within our jurisdiction to at once obtain cards certifying their membership in the proper local of the Western Federation of Miners.

Resolved, That any and all men within our jurisdiction who shall see fit to neglect or to ignore these just demands and requirements shall be dealt with in the near future accordingly as we may determine to act in each of their respective cases. And be it further

Resolved, That a full and sufficient number of these resolutions be ordered printed and posted in conspicuous public places and be distributed thoroughly throughout our jurisdiction, and that such public notices be printed in several different languages, viz, Croatian, Finnish, Italian, and English.

EXHIBIT B.

Notice: At a mass meeting of the members of Western Federation of Miners, held at Lead Miners' Union Opera House on Sunday afternoon, Oct. 24, the following resolutions were adopted by a unanimous vote:

Whereas a resolution adopted on Oct. 10, calling upon all workers in the jurisdiction to join the W. F. of M., has been quite generally complied with: Therefore be it

Resolved, By us, the members of the Lead City Miners' Union No. 2, W. F. of M., and Central City Miners' Union No. 3, W. F. of M., in joint session assembled, that all men neglecting or refusing to become members in good standing of the local in whose jurisdiction they may be working, on or before November 25, 1908, will be declared unfair to the W. F. of M. And be it further

Resolved, That we, the members of the aforesaid unions, refuse to work with any and all men who become unfair to our organization by or through refusing to comply with the provisions of this resolution.

LEAD CITY MINERS' UNION No. 2, W. F. OF M.
CENTRAL CITY MINERS' UNION No. 3, W. F. OF M.

KELLER EXHIBIT NO. 2.

In the Circuit Court of the United States, Eighth Judicial Circuit, within and for the District of South Dakota, Western Division.

DEMURREE.

HOMESTAKE MINING CO. (A CORPORATION), PLAINTIFF, v. THE LEAD CITY MINERS' UNION (A CORPORATION), DEFENDANT.

Comes the defendant above named and demurs to the complaint filed in the above-styled cause, and as grounds of demurrer defendant alleges:

First, that said complaint does not state or set forth facts sufficient to constitute a cause of action against defendant.

Second, that said complaint does not show, or state facts showing, that the plaintiff is entitled to any relief against this defendant.

Third, that said complaint shows on its face that the plaintiff has no cause of action against defendant.

Fourth, that said complaint shows on its face that this court has no jurisdiction of the alleged cause of action set forth, or attempted to be set forth, in said complaint.

ROBERT C. HAYES,
RICHARDSON & HAWKINS,
Attorneys for Defendant.

KELLER EXHIBIT NO. 3.

This indenture, made and entered into this 1st day of March, 1892, by and between the Homestake Mining Co., a corporation organized under the laws of the State of California, and transacting business in Lawrence County, S. Dak.; James B. Haggin, of San Francisco, Cal.; Thomas J. Grier, of Lawrence County, S. Dak.; James Milliken, of Bellefonte, Pa., parties of the first part, and Cyrus H. Enos, Peter A. Gushurst, and Ernest May, all of Lead City, State of South Dakota, acting as trustees for and on behalf of the several occupants of the surface ground, situated within the boundaries and area of the Lead City town site as entered in the United States land office at Rapid City, parties of the second part:

Witnesseth, that said parties of the first part, in consideration of \$1 to them in hand paid and other good and sufficient consideration, have and by these presents do convey and quitclaim unto the said parties of the second part, in their capacities as trustees, as aforesaid, subject to the conditions hereinafter expressed, the right to the surface occupancy of all the following described lots, pieces of lots, and parcels of ground situated within the boundary of said Lead City town-site entry, to wit:

Lots 49, 50, 51, the northerly 52 feet of lot 52}. Lots 53, 54, 55, and 56, block 9, in Lead City. All that part of lot 80 in block 11 which is situated on the Elephant Lode claim, Lead City. Lots 33, 35, 36, 37, 38, 39, 40, and 41, in block 5, Lead City. Lots 41 to 48, inclusive, in block 6, Lead City. Lots 17 to 24, inclusive, in block 3, Lead City. Lots 25 to 32, inclusive, in block 4, Lead City. Lots 1 to 10, inclusive, in block 7, South Lead. Lots 1 to 10, inclusive, in block 1, South Lead. Lots 9 to 16, inclusive, block 2, Lead City. Lots 1 to 3, inclusive, block 1, Lead City. Lots 65 to 72, inclusive, block 7, Lead City. Lots 73, 74, 75, 300, 301, 302, 303, 304, 305, 306, and 307, in block

10, Lead City. Lots 1 to 7, inclusive, in block platted and known as Robbins Row, South Lead. Lots 1 to 11, inclusive, in block D, South Lead. Lots 1, 2, and 10, the easterly 58 feet of lot 3. Lots 4, 5, 6, and the westerly 72 feet of lot 8 and lot 9, except so much thereof as is used and occupied for an alley or street, which is 12 feet wide, and extending from Bleeker Street easterly the whole length of said lot. It being intended to except out of lots 8, 9, and 3 the alleyway aforesaid and a piece of ground in the rear of said lots 8, 9, and 3, 48 feet by 70 feet, known as the Golden Star No. 2 shaft, lot and premises, all in block 2, South Lead. Lots 1 to 10, inclusive, block 6, South Lead. Lots 1 to 10, inclusive, block 8, South Lead. Lots 1 to 10, inclusive, block 5, South Lead. All those portions of lots 1 to 11, inclusive, Homestake Boulevard, which are now occupied by townsite claimants. Lots 1 to 5, inclusive, Church Place, Lead City. The premises known as the Swartout Place, Lead City. Lots 1 to 12, inclusive, Lower Main Street block, Lead City. Lots 1 to 9, inclusive, in block 1, Washington. Also lots 2 to 8, inclusive, in what is known as the Tuttle Place, Washington. Also lots 1 to 8 and 11 to 20, inclusive, in block 2, Washington. Also lots 2 to 9, inclusive, and lots 11, 12, and 13, in block 4, Washington. All those portions of the Elephant and Gordon lode claims lying along the north line of said townsite entry, within the said townsite-entry limits, which are now occupied by townsite settlers, except such portions of said claims as are included within the right of way of the Black Hills & Fort Pierre Railroad Co., which right-of-way portions are excluded from this indenture. That portion of what is described on the plat as the Billing's place, which is now occupied by dwellings or townsite settlers. All that portion of block 25, Lead City, except lots designated on the plat as E, F, G, and H. The whole of block A, in Lead City. The west 100 feet of lots 1, 2, 3, and 4, making those lots 50 by 100 feet. And all of lots 5 and 6, in block B, Lead City. So much of the Costello mill site as is now occupied for business purposes by Mrs. Phebe A. Hearst in connection with the Brick Store business, Lots 60, 63, and 64, block 8, Lead City. Lots 4, 5, and 6, block 19, Lead City, and Lead City district school grounds, Lead City. Lots 1 to 11, inclusive, in block 21, Lead City. Lots 84, 85, 86, 88, 89, and 90, block 12, Lead City. Lots 1 to 9, inclusive, block 20, Lead City. Lots 99, 100, 101, 103, 104, on Glvin mill site. Lots 1 to 20, inclusive, block H, South Lead. Lots 1 to 4, inclusive, block K, South Lead. Lots 1 to 5, inclusive, block N, South Lead. Lots 1 to 10, inclusive, block M, South Lead. Out lot Y, South Lead. Lots 1 to 10, inclusive, block 4, South Lead. Out lot T, South Lead. Out lot R, South Lead. Out lot S, South Lead. Lots 7 to 11, inclusive, block B, South Lead. Lots 1 to 10, inclusive, block A, South Lead. Smith & Pringle & Co.'s mill site, Lead City. The foregoing descriptions are according to the plat of said town-site entry known as Hopkin's map.

To have and to hold unto the said party of the second part, their successors and assigns forever. This conveyance is to extend to the said trustees, the parties of the second part, their successors or assigns, with authority to convey the same to the beneficiaries of said trust, their assigns or successors in interest. This indenture and all conveyances by the said parties of the second part, trustee, as aforesaid, is and shall be subject to the following conditions and reservations: The said parties of the first part, and either of them, their successors, heirs, or assigns, and either of them, according to their respective ownership, shall have and continue to possess the right to mine underneath said surface and to use it for all such underground mining purposes by running drifts, tunnels, stopes, excavations of ore, or other material mining operations, including the sinking of shafts from the surface for actual mining purposes in good faith, such privilege and reservation to be exercised whenever and from time to time in the discretion of the said parties of the first part, or either of them, their successors, heirs, or assigns, or either of them, they may choose so to do, in order only to extract the ores therein for the purpose of reducing and milling them to obtain the gold and other metals therefrom; and in the course of such workings whenever it becomes important or necessary in the exercise of good faith on the part of said parties of the first part, or either of them, their successors, heirs, or assigns, or either of them, to come to the surface or so near the surface as to endanger the surface occupancy in mining or extracting the ore bodies, or in necessary air shafts to enable such work to proceed, they shall have the privilege of doing so; and in such case the said parties of the first part, or either of them, their successors, heirs, or assigns, or either of them, shall give to the particular occupant or occupants of the surface ground which is thus necessary to the working of the ore body under-

neath not less than 60 days' notice of the intention to come to the surface or so near the surface as to endanger the structures on the surface, and thereupon within 90 days from such notice said party or parties shall remove the structures from said surface ground, or so much thereof as shall be thus endangered; and in case of a neglect to thus remove such structures within the period aforesaid the mine owners may themselves remove such structures, or regard them as abandoned, and shall not be liable for any damage which may occur to the owner or occupant of such structures. Such notice shall be given personally to the owner of such structures if he can be found within the State by the exercise of due diligence; if not, then notice shall be given to the person in actual possession and occupancy as a tenant or otherwise if he can be found within the State by the exercise of reasonable diligence; otherwise by posting notice upon the structure thereon, which posting shall be sufficient service thereof. The shafts spoken of herein are to be sunk only in such portions of any of the lots or grounds thus quitclaimed as are not occupied or covered by valuable structures and in such place in any lot or parcel of ground as shall result in the least damage to the owner or occupant.

By this indenture it is not intended to dedicate to the public any of the streets or alleys in said town-site area except the surface use thereof subject to the same rights and reservations as herein set forth relating to the occupied lots and parcels of ground, with this modification, that notice to be given of any excavation which is to come to the surface or so near the surface as to endanger the surface occupancy of such surface as a street or alley, shall be given to the mayor or head official of the city of Lead.

The said parties of the second part, the said trustees, may at their option reconvey to the then owner or owners of the mineral claim on which any lot or parcel or parcels of ground may be situated all the right and title which they may acquire by this indenture discharged of the trust therein imposed.

In witness whereof the said parties of the first part have hereunto set their hands and caused these presents to be executed the day and year first aforesaid.

SMITH EXHIBIT NO. 1.

LEAD, S. DAK., *August 4, 1914.*

COMMISSION ON INDUSTRIAL RELATIONS.

GENTLEMEN: I wish to reply to a statement of Mr. Grier's testimony given on the stand to-day after mine. In regard to the prices I charge for embalming, I wish to state that I did not charge \$50 for embalming any of the employees of the Homestake Mining Co. for many years except in one single case. This was a nephew of Mrs. Phebe A. Hearst, who we embalmed to ship to California. She being very wealthy, I charged the full price that was charged by other undertakers in this section at that time. In most of the cases, where they had limited means, I did not charge anything for such work. The average price I charge for embalming will not amount to \$10.

Respectfully,

S. R. SMITH.

MINING CONDITIONS AND INDUSTRIAL
RELATIONS AT BUTTE, MONT.

(For exhibits under this subject see pages 3867 to 4095.)

COMMISSION ON INDUSTRIAL RELATIONS.

BUTTE, MONT., Thursday, August 6, 1914—10 a. m.

Present: Commissioners Commons (acting chairman), Garretson, O'Connell, and Lennon.

Acting Chairman COMMONS. The commission will come to order.

I wish to state to the witnesses and others that members of the commission who expected to be here have been unavoidably kept away. One of the commissioners has been appointed to another public position which, I presume, keeps him from attending; another one has been hit by the war in Europe—two others have been hit by the war in Europe—and consequently there are only four members of the commission present. The counsel of the commission also has been affected by the conditions in Europe and is not able to be present. The chairman of the commission has also been detained. The result is that the members here have chosen me to act as chairman and as counsel.

Regarding the kind of information which this commission desires to secure, I ought to say in advance that we are acting under an act of Congress requiring us to investigate the underlying causes of unrest and to make recommendations as to what Congress or other legislative bodies should do under the circumstances. We are not appointed as a board of mediation or arbitration or with the purpose of settling any troubles or disputes; our object is to make recommendations which in the future may allay unrest. Furthermore, our field does not permit us to enter into any personalities or individual controversies that may arise.

For this reason it seems to those of the commission who are present that we should not enter into any of the events which have occurred since the 13th of June; and we shall not take up any of those later events which do not seem to come under the mandate which we have in our investigation.

Is there anything further?

Commissioner LENNON. No.

Acting Chairman COMMONS. The first witness is Mr. Kelley, C. F. Kelley. Will you kindly take the chair?

TESTIMONY OF MR. C. F. KELLEY.

Acting Chairman COMMONS. I should explain that none of the witnesses will be placed under oath. While we have that authority, our purpose is more fundamental than to settle any particular situation, but rather to get all of the information and assistance which we can from the gentlemen who are kind enough to appear before us in fulfilling the law which we are appointed to carry out.

Mr. Kelley, will you give your name and address?

Mr. KELLEY. My name is C. F. Kelley.

Acting Chairman COMMONS. And your position or address—your address.

Mr. KELLEY. My address is Butte, Mont. By profession I am an attorney. My chief occupation is vice president and managing director of the Anaconda Copper Mining Co.

Acting Chairman COMMONS. Will you state the relation between the Anaconda and the Amalgamated?

Mr. KELLEY. The Amalgamated Copper Co. is a holding concern, organized under the laws of the State of New Jersey and owning a large proportion, or percentage, of the capital stock of the Anaconda Copper Mining Co.

Acting Chairman COMMONS. Does it own the stock of other corporations?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. In this State?

Mr. KELLEY. I know of none in this State; no, sir.

Acting Chairman COMMONS. What property does the Anaconda include?

Mr. KELLEY. The Anaconda properties are chiefly the mining properties in and about the city of Butte; the smelting and reduction works at Anaconda, about 26 miles distant; a smelting and reduction works and refinery at Great Falls, about 170 miles distant; sawmills located at Bonner, Hamilton, and St. Regis within the State of Montana; coal properties located at Washo and Lockree within the State of Montana; coal mining properties and sawmills located without the State of Montana; and stock of various small subsidiary corporations.

Acting Chairman COMMONS. These different properties you mentioned, are they owned directly by the Anaconda or through the holding of stock?

Mr. KELLEY. The main important properties are owned directly by the Anaconda; some of the departments you might call them that are incidental to the main properties of the company have, for the purpose of convenience, been placed in subsidiary companies, the stock of which are owned by the Anaconda Co.

Acting Chairman COMMONS. They were organized by the Anaconda Co.?

Mr. KELLEY. I think so; yes, sir.

Acting Chairman COMMONS. What, for example?

Mr. KELLEY. We have a number of small corporations; for instance, the Mines Timber Co.—that is a small concern, comparatively small—that operates in the woods for the purpose of furnishing stulls to the mines. That business is of such character that it can be carried on very advantageously by a small corporation without passing its business through the main corporate concern. We operate that as an independent concern. Also the Mill Creek Fluming Works, a similar concern; Deer Lodge Valley Farming Co., a farming concern; the Black Foot Land Development Co., which has been organized to handle cut-over or logged-over land of the company. So on I might enumerate additional small concerns, but that is the general character of the business that is done by them. The main business of the Anaconda Co. is conducted directly by the company, and the main properties of the company, the physical title to them, is vested in the concern itself.

Acting Chairman COMMONS. Could you state the capitalization of the Amalgamated company, the holding company?

Mr. KELLEY. The capitalization of the Amalgamated is \$150,000,000, divided into shares of the par value of \$100 each.

Acting Chairman COMMONS. What is its bonded indebtedness?

Mr. KELLEY. It has no bonded indebtedness.

Acting Chairman COMMONS. It has no bonded indebtedness?

Mr. KELLEY. No, sir.

Acting Chairman COMMONS. It is strictly a holding company?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Where are the offices of the Amalgamated?

Mr. KELLEY. At 42 Broad Street, New York City, the principal office.

Acting Chairman COMMONS. Who are the officers—president, treasurer, and directors?

Mr. KELLEY. Mr. John D. Ryan is president of the company. I don't know that I could give you the full board. Mr. A. H. Melin, I think, is treasurer. I should be very glad to submit a list of them, if you wish.

Acting Chairman COMMONS. Will you kindly do so?

Mr. KELLEY. Yes, sir.

(The following list was later submitted.)

Officers and directors of the Amalgamated Copper Co.: President, John D. Ryan; secretary and treasurer, A. H. Melin; directors, John D. Ryan, William G. Rockefeller, Benjamin B. Thayer, William Rockefeller, J. Horace Harding, H. H. Rogers, A. C. Burrage, and Charles N. King.

Acting Chairman COMMONS. Who are the principal stockholders of the Amalgamated?

Mr. KELLEY. That I do not know. The stock is very widely distributed; it is held practically all over the world—that is, investment world.

Acting Chairman COMMONS. What proportion of the stock of the Anaconda has the Amalgamated?

Mr. KELLEY. Roughly, about 75 per cent.

Acting Chairman COMMONS. What is the capitalization of the Anaconda?

Mr. KELLEY. The authorized capital of the Anaconda is \$150,000,000, divided into 8,000,000 shares of the par value of \$25; the issued capital is, I think, about 4,600,000 shares.

Acting Chairman COMMONS. In what way is the Anaconda controlled in its management by the Amalgamated?

Mr. KELLEY. I should say that the Anaconda is not directly controlled by the Amalgamated. The Amalgamated as the largest shareholder in the Anaconda is represented on the board of directors of the Anaconda, and through a community of interest there is rather a cooperative control than any direct or actual control.

Acting Chairman COMMONS. Who are president and officers of the Anaconda?

Mr. KELLEY. Mr. B. B. Thayer is president, I am vice president, and Mr. Melin is secretary and treasurer.

Acting Chairman COMMONS. Where are the offices of the Anaconda?

Mr. KELLEY. At 42 Broadway, New York City.

Acting Chairman COMMONS. Can you give the valuation, both the assessed and true values of the properties held by the Anaconda Co.?

Mr. KELLEY. I can give you the assessed valuation of the properties. I do not know that I understand exactly what you mean by the true valuation.

Acting Chairman COMMONS. The market value.

Mr. KELLEY. That would be impossible for any man to give, because, particularly in the case of mining property and particularly where the mining property is of such a character and extent as that owned by the Anaconda Co., the valuation that might be placed upon it must necessarily be very largely a matter of opinion, must also be in the absence of complete development—which is entirely impossible—a matter of speculation to some extent; and it would be a matter of—merely a matter of opinion, and I am very frank to say to you that concerning its actual value in dollars and cents I have, and I think no man has any opinion—definite opinion as to the exact amount of money that is represented by these properties.

Acting Chairman COMMONS. Are the stocks of Anaconda listed on any exchange?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. New York?

Mr. KELLEY. The stock of the Anaconda Co. is listed on the New York Stock Exchange.

Acting Chairman COMMONS. Also the stock of the Amalgamated?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Well, if you will continue, then, with the assessed valuation.

Mr. KELLEY. I presume you are inquiring [producing papers]—

Acting Chairman COMMONS. Will you kindly submit it as an exhibit?

Mr. KELLEY. Yes, sir. I suppose you are referring to last year, 1913.

Acting Chairman COMMONS. The last full fiscal year, completed fiscal year.

Mr. KELLEY. You understand, Mr. Chairman, that in this State the year is not the same for the payment of the different kinds of taxes. Our assessment is made up as the first Monday in March of each year, but we pay on the net proceeds of mines from the first Monday in June to the first Monday in June.

I would like to make a word of explanation in that connection.

Acting Chairman COMMONS. Yes.

Mr. KELLEY. Under the Montana law all property, except mines, are assessed upon a cash valuation. Mining properties are assessed first, upon the surface at the price paid the United States Government for that surface, unless the surface is devoted to some other purpose than that of mining, in which event the valuation of the surface for the purpose to which it is devoted is taken. Upon the mine itself, the ores, minerals, mining companies—or mining properties are assessed upon the net proceeds—that is, the actual value of the metal taken—of the ore after allowing for the expenses of extraction, reduction, and so forth, in addition to which all improvements that are placed upon the surface are assessed as other property.

Now, of course, we make the return on the first Monday in March. We pay at the usual time in the fall, after November, upon the general property; but upon the net proceeds of mines, the statute fixes that at from June to June.

I might submit this as an exhibit. This is the assessment of the—it is a comparative statement of the assessment prepared for our office files, and correctly shows the assessment for 1912 and 1913.

(The paper so presented was marked "Kelley Exhibit No. 1." The same is printed under "Exhibits.")

Acting Chairman COMMONS. Will you state the total of this assessment as distinguished from the other, the net proceeds?

Mr. KELLEY. Yes, sir. You want the total amount of assessment exclusive of the net proceeds?

Acting Chairman COMMONS. Yes.

Mr. KELLEY. In 1913 it was \$15,094,426.

Acting Chairman COMMONS. Now the net proceeds for the same year.

Mr. KELLEY. Eleven million four hundred and fifty-five thousand six hundred and forty dollars; that is, for the period ending in June.

Acting Chairman COMMONS. Of 1913?

Mr. KELLEY. 1913; yes, sir.

Acting Chairman COMMONS. What is the rate of tax on the assessed value?

Mr. KELLEY. The rate of tax varies in the different counties of the State somewhat, but will run from—approximately 30 mills is the levy.

Acting Chairman COMMONS. And what is the rate on net proceeds?

Mr. KELLEY. The same.

Acting Chairman COMMONS. Then it would be approximately 30 mills on thirteen million plus eleven millions, or twenty-six millions.

Mr. KELLEY. Yes, sir; approximately, about that, \$26,000,000.

Acting Chairman COMMONS. By whom are these assessments made, and the ascertainment of net proceeds?

Mr. KELLEY. The assessments are made by the local assessing officers of the different counties. The ascertainment of net proceeds is arrived at by the actual book figures showing the cost and profit on the sale of metals, and is returned by the company.

Acting Chairman COMMONS. To whom?

Mr. KELLEY. To the local assessor.

Acting Chairman COMMONS. Is there any State tax commission, or State supervision of these assessments?

Mr. KELLEY. There is a State tax law which was adopted by the legislative assembly two years ago, but which has not as yet become effective in its operation. It is going through the preliminary stages necessary to put into effect.

Acting Chairman COMMONS. Does that provide for a State board of revision?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Have you distinguished in your assessment there between machinery, improvements, and real estate?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. That is shown?

Mr. KELLEY. It is itemized and segregated by counties.

Acting Chairman COMMONS. For that same year, what were the gross revenues or income of the Anaconda Co.?

Will you kindly submit that as an exhibit? Is that your annual report?

Mr. KELLEY. This is the annual report for the year 1913.

Mr. KELLEY. I have not—the gross business is not stated here. I can get that for you, or I can give it to you approximately.

Acting Chairman COMMONS. Well, I mean the operating income of the company; you might state it roughly.

Mr. KELLEY. I would have to get that. I haven't it in mind. It would be somewhere in the neighborhood of forty-five to fifty millions of dollars; but I can get that for you, and will be pleased to do it. You see, the reason this is not shown upon the balance sheet, or that you can not ascertain it readily from your production, there is no extra ratio or proportionate relationship between production and sales. There is nothing so uncertain as the copper market. Probably no commodity in which stocks accumulate faster and our production from January 1 to December 31 of any year would not give an index to the gross business done, because of the differences in inventories there may be at the different periods. You understand?

Acting Chairman COMMONS. Yes. I am trying to get at also the operating expense. Can you give that total operating expense? I want to get at the way in which you reach this \$11,000,000 of product.

Mr. KELLEY. Oh! Well, the \$11,000,000 is arrived at by—we can furnish the detail of that, if you wish—it is arrived at by taking the cost of production, including the items which are specified in the statute, and deducting from it the credits which are also specified in the statute, not estimated at all, but the result is absolute book entries which can be checked back against the balance sheet of the company.

Acting Chairman COMMONS. That will not be the gross business of the company at all?

Mr. KELLEY. No, sir. The net proceeds of the company would be the profit made on the sales made by the company.

Acting Chairman COMMONS. That is what I want to get at; you can get that from this statement?

Mr. KELLEY. Yes. That was for the year, that period that you inquired, it was \$11,450,000.

Acting Chairman COMMONS. What was the gross item that was used in ascertaining that amount? Then what was the expense item or—

Mr. KELLEY. I haven't that statement here. I have got it for this year, 1914, which is a later one.

Acting Chairman COMMONS. You may put that in.

Mr. KELLEY. That is the one I was requested to bring. For the year 1914 the number of tons of ore extracted was 4,714,853.40. The gross value per ton was \$8.37. The gross value in dollars was \$39,464,004.29; the gross cost per ton of mining that ore was \$3.779, or a total of \$17,816,505.99; the cost of transportation per mile per ton to the place of reduction was \$0.2981, or 29 cents plus; the total cost of transportation was \$1,405,558.18; the amount of money expended for necessary labor was \$16,331,821.88; the amount expended for machinery and cost of supplies used in operation was \$9,542,580.60; the marketing charges, including seaboard, refining, freight, and selling charges, was \$3,570,478.90, leaving a net proceed in value or value in dollars of \$8,613,564.93, which was our return for the period from June, 1913, to June, 1914.

Now, right there I want to suggest that you can see immediately the tremendous influence—what might appear to the casual observer—that an ordinary rise and fall in the copper market has on the profits or loss of this business. For the year ending 1913 they made a net return of \$11,450,000. Now, upon as large a tonnage practically—yes; it was a larger tonnage, and about the same copper production in the year ending 1914 we got from \$11,450,000 to \$8,057,000.

Acting Chairman COMMONS. What was the drop in the average price of copper?

Mr. KELLEY. I haven't it distinctly in mind, but I should say it was approximately 2½ cents, from a prevailing price of nearly 18 cents to a prevailing price of under 14 cents in the two periods, per pound.

Acting Chairman COMMONS. What was the highest price in the preceding year?

Mr. KELLEY. I would not be certain about that; my recollection is that copper advanced in the year 1912-13 to nearly 17 cents for a short period.

Acting Chairman COMMONS. What was the lowest in the latter?

Mr. KELLEY. In the last? Well, around 18 cents—18 cents flat, I think.

Acting Chairman COMMONS. You gave the item of labor as \$16,300,000?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. You also gave transportation; there is no duplication there?

Mr. KELLEY. No, sir; no. Roughly speaking, it may be stated—I notice that this is a little under because on a low price of copper. Our wage scale diminishes somewhat, but roughly speaking 50 cents out of every dollar's production goes directly to the labor expended in mining and smelting. Our pay roll, for instance, where our expenditures, total expenditures, will run somewhat over \$40,000,000, between \$40,000,000 and \$45,000,000 in a year, of that expenditure \$20,000,000 is direct pay-roll expense in mining and smelting. Now, the cost of transportation is in addition, of course, to the cost of mining.

Acting Chairman COMMONS. Transportation does not include your own railroad?

Mr. KELLEY. No, sir; I want to explain that, if you will permit me. In mining you can, of course, classify your accounts primarily into three main causes—mining, transportation, and reduction. Now, the transportation here referred to is the transportation of the ore to the smelters, a large part of it going to Anaconda over a railroad, the majority stock of which is owned by the Anaconda Co. on a very small charge, a charge that scarcely pays expenses, the remainder going to Great Falls over the Great Northern Railroad at a somewhat higher, though, we think, a fair charge.

Acting Chairman COMMONS. This \$1,400,000 mentioned also includes the labor item of transportation?

Mr. KELLEY. Well, whatever labor is paid for by the railroad company.

Acting Chairman COMMONS. I see; it is a separate company with which you keep a separate account?

Mr. KELLEY. Yes, sir.
Acting Chairman COMMONS. And it has its own labor cost the same as you do?

Mr. KELLEY. Of course, as a ramification, that is an interesting subject in connection with this inquiry. Probably of the total expenditure of \$40,000,000, if you ramify it out into its principal items of transportation, fuel, supplies, proportionately as large a part as we pay directly for labor is paid out by the various concerns that are engaged in furnishing the different lines of service required in the business, and in this transportation charge—I think I have explained that part of the ore goes over the B., A. & P., which is the Anaconda controlled company; and part of it goes over the Great Northern, with which we have nothing to do.

Acting Chairman COMMONS. This item of machinery, \$9,000,000—I think I am right, it is machinery—what would that include?

Mr. KELLEY. That includes the machinery supplies and necessary appliances used in the mining of the ore; a detailed statement of that can be furnished if required; I haven't it here.

Acting Chairman COMMONS. How do you figure your depreciation account?

Mr. KELLEY. The depreciation account of what?

Acting Chairman COMMONS. For the mine and machinery.

Mr. KELLEY. Well, of course, that depends on the particular fact, mill or machine. Necessarily all of the different plants have not the same depreciation. It is the custom of the Anaconda Co. to allow a reasonable depreciation charge, and our plants have been depreciated; but that is not a uniform per cent of anything; it depends on the character of the plant and the work it is doing and probable life.

Acting Chairman COMMONS. Is that included in this total operating expense, the depreciation?

Mr. KELLEY. The depreciation would be included; yes, sir.

Acting Chairman COMMONS. It is not stated in this analysis which you gave here, the cost of mining, labor, machinery, and marketing. I presume it is set up against new machinery or something of that kind.

Mr. KELLEY. Yes; of course the subject of depreciation in corporate accounting; it is, of course, in itself almost impossible to make any general answer. It is our experience that that question comes up with reference to practically every operation, and you have to decide those things very largely upon each individual transaction. Of course our general plant can be covered by blanket depreciation, but here, where we are constantly changing machinery and putting in heavier and taking out lighter, the question of replace value, breakdown value, possible utilization in other properties of the company, as well as the cost and life of new machinery, enters into the depreciation charge.

Acting Chairman COMMONS. Is there any accounting system or supervision of accounts of your supervision similar to that prevailing in the matter of railroads?

Mr. KELLEY. Government supervision?

Acting Chairman COMMONS. Yes; State or Federal.

Mr. KELLEY. With reference to some of the departments of our business; yes, sir.

Acting Chairman COMMONS. With reference to the transportation department.

Mr. KELLEY. With reference to the transportation department and public utilities, we have some other public utilities, but not as to general business. I wish to say this, however, that our accounts are subject to critical examination by a firm of certified public accountants of good standing, and the transaction recorded in the balance sheet certified is the balance sheet from the public accounts certified by the public accountants.

Acting Chairman COMMONS. Do you make reports under the income-tax law?

Mr. KELLEY. Yes, sir; a most exhaustive report.

Acting Chairman COMMONS. What amount was turned over to the Amalgamated as dividends or various other forms by the Anaconda Co. during this fiscal year you have been speaking about—the one that was finished in 1913? This \$11,000,000, is that the amount?

Mr. KELLEY. Yes. The dividend rate was \$3 for the year, I think; and, figuring roughly, 75 per cent of that would have been—twelve million—the dividend exceeded the earnings; was made up out of surplus. Now, the amount that was paid the Amalgamated would be 75 per cent of the total—

about that, of the total dividend, which, as I remember, was \$3 a share. That is just a question of arithmetic.

Acting Chairman COMMONS. Amongst these properties which you hold do you have any company houses used by employees?

Mr. KELLEY. Not as a rule. In Butte we have none; Anaconda none.

Acting Chairman COMMONS. What is the title to the surface, and how do you arrange with the surface owner or lessee?

Mr. KELLEY. Well, the title to this property was originally a deed from a quartz and placer patent from the United States Government.

In the vicinity of Butte, not upon the hill where active mining operations are carried on so much, but in the outlying property, there has been a segregation of the surface from the underground title, and all surface has been platted and sold as real estate. That, however, in most instances, if not all, was done by the predecessors in interest of the Anaconda Co., the original owners of the property.

Acting Chairman COMMONS. The Anaconda owns the mining claims beneath the surface, does it?

Mr. KELLEY. In many instances; yes, sir.

Acting Chairman COMMONS. And the surface ownership is entirely separate?

Mr. KELLEY. Yes; in many instances; although for the most part the big bulk of the mining property of the Anaconda Co. is owned, both surface and sub-surface, by the company itself.

Acting Chairman COMMONS. Take this, for instance, then, where the surface is owned and structures are built by private enterprise other than your company, what are the terms of the contract of sale?

Mr. KELLEY. Well, that all depends. You will have in each individual case to go back to the deed that was made by the original mineral owner when the surface was segregated.

This whole city, practically, outside of a very restricted area that was embraced in the original town site, is in just that condition.

Some of the most valuable property in the city of Butte was traced back originally from the quartz and placer ownership. There is not any uniformity of segregation. It depends upon the contract that the individual mineral owner made with his individual grantee.

Acting Chairman COMMONS. Did the Anaconda accumulate all of the mineral claims, no matter what the original source?

Mr. KELLEY. Oh, no; not by any means at all. We have accumulated quite a good deal of that property where the two titles were segregated. Now, the general clause that is contained in that deed is either one of two characters: First, that the surface is granted down to a specified depth, with an obligation not to conduct any mining operations above a certain limit, say, 50 feet. Usually such a deed has a clause, a general clause, which would prevent the underground worker from causing any damage to the property. In other deeds it is just merely the proposition of reserving the right to mine without causing surface damage.

Acting Chairman COMMONS. Have you had cases of surface damage to property owners?

Mr. KELLEY. Have there been?

Acting Chairman COMMONS. Yes.

Mr. KELLEY. Why, I think so.

Acting Chairman COMMONS. What plan of settlement has been the method of settlement of damages?

Mr. KELLEY. Well, those matters have been settled.

Acting Chairman COMMONS. According to the contract?

Mr. KELLEY. Yes.

Acting Chairman COMMONS. Damages are paid in all cases?

Mr. KELLEY. I think so; where it is clear what the cause is.

Commissioner GARRETTSON. One question right there, Mr. Chairman.

Acting Chairman COMMONS. Yes.

Commissioner GARRETTSON. Is there any clause in any of those agreements which bars the right of recovery if damage does ensue?

Mr. KELLEY. No; I think not, unless, of course, it would be a question of legal interpretation as to what consequential damage might be claimed in the event of the agreement that you would not mine within, say, 50 feet of the surface.

Commissioner GARRETTSON. Well, that would fall under the provisions of the law and not of the agreement, then?

Mr. KELLEY. Oh, yes.
Commissioner GARRETTSON. But there is no absolute clause barring right to recovery?

Mr. KELLEY. I don't know of any; no, sir.

Acting Chairman COMMONS. How many employees have you in this, in the mining and reduction work?

Mr. KELLEY. Under normal conditions we would employ in the mining end here in Butte between nine and ten thousand men; at Anaconda between two thousand and twenty-two or twenty-three hundred; at Great Falls between seven hundred and fifty and a thousand.

Acting Chairman COMMONS. Making a total in the mining operations of—

Mr. KELLEY. Of, say, ten, twelve—nearly thirteen thousand.

Acting Chairman COMMONS. And what proportion of your men are underground?

Mr. KELLEY. Well, a very large proportion of the nine to ten thousand that would be employed here in Butte would be underground, although the surface department is a very large department. I haven't the figures for that in mind, but I can get them, and will, if you wish.

(The information requested was later furnished, and is printed as "Kelley Exhibit No. 3.")

Acting Chairman COMMONS. We would like to get that, the total number of miners and helpers and underground men, classified.

Mr. KELLEY. Yes.

Acting Chairman COMMONS. What number are employed in the smelting operations and reductions works?

Mr. KELLEY. Well, about two thousand to twenty-three hundred at Anaconda, and seven hundred and fifty to a thousand at Great Falls. You want the number of men employed underground?

Acting Chairman COMMONS. Classified by their occupations—miners, helpers, loaders, or whatever they are.

Mr. KELLEY. Well, underground here, with the exception of the men who are in specific parts, all men who go underground are classified as miners and receive the same wage scale, the same minimum wage scale. We have no classification, so far as pay roll is concerned, between miners, helpers, and muckers underground. They all receive the same minimum wage scale that has been one of the regulations of the union that existed here in Butte. Of course, we have the different lines of work, so that I may understand you, as timbermen, pump men.

Acting Chairman COMMONS. Yes; I would like to get the scale for each man, each class of work. You say the minimum is \$3.50 for miners, helpers, and muckers, as they are called?

Mr. KELLEY. Well, I don't remember saying that, but that is a fact. I can give you our wage scale.

Acting Chairman COMMONS. I would like to have you submit that as an exhibit? Will you hand it to the reporter to be numbered?

Mr. KELLEY. Yes.

(The paper so presented was marked "Kelley Exhibit No. 4." See Kelley Exhibit No. 4.)

Mr. KELLEY. And I wish to make a word of explanation with reference to it. This is the direction, is a copy of the direction to the timekeeper for the making up of time, and gives the minimum scale for each employment that is listed here. It shows—we have a splitting point in all occupations, at 15 cents for mining, another splitting point at 17 cents, and a third splitting point in the wage scale for all at 18 cents copper. This gives the rate of wages at the different splitting limits of copper. You understand that our wage scale is based upon—

Acting Chairman COMMONS. Will you explain the wage scale, if you will?

Mr. KELLEY. Well, the income as shown by these net-proceeds returns of a copper mining company is so directly affected by the price of copper that in order to maintain a satisfactory scale of wages, a scale of wages which is high enough under all circumstances to give a fair return to the employee, it has been deemed advisable to base it on the price of copper. Accordingly our wage scale is based with a minimum rate when copper is under 15 cents. At 15 cents copper—that is, upon the basis of a monthly wage—when copper is 15 cents or over, the rate of wages of all employees advances 25 cents a day. At 17 cents, or when copper is 17 cents per pound for a month, the rate of all men who are employed underground advances an additional 25 cents, but not of the

other employees. At 18 cents copper the rate of all employees, both above and below ground, advances an additional 25 cents.

Now, I want to say with reference to this wage scale that is submitted that that is the minimum scale. It does not include the special wage scale paid in almost every line of employment where work is of a particularly hazardous nature, dangerous nature, unhealthy nature, or where for any reason factors are introduced that do not affect common employment—additional compensation is paid.

Acting Chairman COMMONS. It does not include, either, the sliding-scale feature?

Mr. KELLEY. This does; yes; this has.

Acting Chairman COMMONS. It states what it would be?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Does it state for this prosperous year, when your dividends were twelve millions, and this present year eight millions, what has been the actual payment to these classified employees, who vary with the price of copper?

Mr. KELLEY. No; this is the general scale here; but I can give you those figures. In fact, I have them prepared and will be very glad to give them.

As a matter of fact, our wage scale last year was over \$2,000,000 more than it was the previous year, notwithstanding the price of copper was less.

(See Kelley Exhibit No. 2.)

Acting Chairman COMMONS. Last year—you mean the calendar year 1913?

Mr. KELLEY. I mean the calendar year 1913. According to my recollection, our pay roll was something over \$20,000,000. For 1912 it was something over \$18,000,000.

Commissioner O'CONNELL. And the wages are based upon the price of copper, regardless of the dividends?

Mr. KELLEY. Exactly. And when copper is very low and you have an enormous overhead expense to take care of you have got to increase your product rather than decrease it with a decreasing price of copper, and you have got to mine more tons of ore. And while the individual wage drops to three and a half, the aggregate wage scale upon a less total income is more than in a prosperous year. You get the point?

Commissioner GARRETSON. During the year—

Mr. KELLEY. You have got to make more production, in other words.

Commissioner GARRETSON. During the year, as I understand the testimony, the men during that year were working at the minimum rate, were they not, the bulk of them?

Mr. KELLEY. No.

Commissioner GARRETSON. On the sliding-scale basis?

Mr. KELLEY. No; during the year 1913—I think the greater part of the year 1913—the men were working on the scale in effect above 15 cents.

Commissioner GARRETSON. Above 15?

Mr. KELLEY. Yes.

Commissioner GARRETSON. What dividend rate was paid during the 15-cent period?

Mr. KELLEY. The same dividend rate, 75 cents a quarter per share, I think.

Commissioner GARRETSON. When the reduction did take place in the pay of the men owing to the sliding scale and the low price of copper, was there any reduction in the dividend rate?

Mr. KELLEY. There was a reduction in earnings, not in dividend rate, because there was a sufficient accumulation of surplus to take care of the deficit.

Commissioner GARRETSON. But none of that surplus was used to keep the wage at the same rate; it was used to keep the dividend at the same rate?

Mr. KELLEY. Well, I don't know that I get your point; I can't see any—

Commissioner GARRETSON. The point is, what I wanted to develop was this: Whether the low price of copper worked the same result on the stockholder and the employee.

Mr. KELLEY. It did unquestionably in ultimate result.

Commissioner GARRETSON. Oh, but not in immediate result.

Mr. KELLEY. Well, it did in this way: If you had a rate of wages based upon your income, there is a direct ratio between the amount paid as wages and the amount which the company has as net income. Now, then, if instead of paying all of that net income to the stockholders, a reserve is accumulated so that when you have a frightfully lean year such as we have had in the copper business at various times, when you can't save on your pay roll to make

a dividend, you have got a little in the box that you can take out to make up the difference.

Commissioner GARRETSON. In equity, is there any more reason in the lean year that the stockholder should be protected than there is that the employee should? Now, bear in mind, I am barring the existence of your agreement and only passing on the equity of it.

Mr. KELLEY. If you desire my view on the economics, I would be very glad to give it to you, but I should regard that as quite distinct, any application of that view, to the business management of a corporation.

Commissioner GARRETSON. If you could express without extended argument your opinion of whether or not a reduction in wage should in equity be accompanied on account of the market value of the product—should be accompanied by a reduction in dividend rate, I should be very glad to hear it.

Mr. KELLEY. I think unquestionably so, and I think unquestionably that that necessarily follows. You take one year and balance it against another particular year, there may not be the absolute reduction there. But in working out the business life of a corporation things must be kept at the same ratio, and they will be kept at the same ratio, and I concede you freely that it is my opinion and it is my belief that in prosperous times the whole prosperity should not go to the stockholder, but the wage earner should participate in it. That is the policy that I have tried to perform.

Commissioner GARRETSON. And that in lean times also—

Mr. KELLEY. And that in lean times it applies exactly the other way.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. There is one point that you mentioned regarding the lean years, or at least when the price is low.

Did I understand that in those years there is more employment, that you turn out more product in those lean years when the price goes down, we will say, to the 15—below 15?

Mr. KELLEY. That is true up to a certain limit. Now, I want to make this suggestion before I leave the topic discussed by the gentleman here [indicating Commissioner Garretson], and that is that vice versa of the fact that last year and year before last year the wage was reduced to the minimum, and the dividend was not, we have had years, a number of them, when there was absolutely no dividend at all paid or earned, and when the wage scale was not reduced.

Now, answering your question: If you endeavor on a lean copper market to keep your costs down you must increase your tonnage. As long as there is any profit in the business, which means as long as there is any continuous market for the copper, you may be able by increasing tonnage somewhat and consequent decreasing of expenses to make a profit. When the market ceases so that your copper can not be sold at all, then of course you must put a limit on your expenses, because you can not pay your bills in copper.

Acting Chairman COMMONS. Well, that is a little peculiar idea there. You speak of the market ceasing altogether?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. The market would not cease altogether if you reduced the price?

Mr. KELLEY. It has at this time. At this time there is absolutely no foreign market for copper. There is no means of transporting copper to Europe, and there is no method by which you could collect for copper if you transported it. The bills, the drafts, that were drawn against the enormous stocks of copper that had been transported to European countries within the last 80 days, copper that is now afloat, are now coming back—that have been discounted, those drafts are coming back for repayment in New York to-day.

There is no local market for copper, no selling agency. While there is a price quoted at 13 cents, I believe, or 13½, I don't believe that within the last 10 days there has been a pound of copper sold in the United States.

Acting Chairman COMMONS. Even at that low figure?

Mr. KELLEY. Even at that low price.

Acting Chairman COMMONS. Now, this is, of course, an extraordinary situation.

Mr. KELLEY. Very.

Acting Chairman COMMONS. What you say would you intend to apply generally in other times?

Mr. KELLEY. Yes; what I say—I can straighten out my exact meaning by suggesting this situation to you:

In 1907 for a while there was a financial stringency that absolutely wiped out our domestic market. At that time we could sell copper abroad for a while and keep going on that basis. When it got so bad we had to close down—now, up to the point you could afford to accumulate a stock of copper on a low-price market you can produce it; when you get to the point you can not carry copper any longer, then you have to stop.

Acting Chairman COMMONS. Up to that point, you can really increase the amount of employment as the price or profits go down.

Mr. KELLEY. Well, of course, you must take that in a very qualified manner. If you wish to keep up the production, the normal production, if you wish to maintain your production the same, that would be true.

Acting Chairman COMMONS. In which case you would have to build up your stock?

Mr. KELLEY. Have to build up your stock, and you could only do that as long as the markets take your stock. When the market stops then, of course, you have to curtail.

Acting Chairman COMMONS. Will you describe the operating organization of your system? You are the general manager. Take it down the line, the different grades of superintendents, foremen, and so on.

Mr. KELLEY. Our organization is a very simple one. Our various lines of business are divided into departments, and each department, or subdepartment, has a man in charge with the rank of superintendent or manager of that department. As illustrative of that, if you wish, my title is vice president. I have general charge of the operations. Mr. Gille is manager of mines, has charge of all the mining operations. Mr. Mathewson, the manager of the works in Anaconda, has general charge of the operations there. Mr. O'Grady, of Great Falls; Mr. Toole, of the lumber operations, and so forth.

Acting Chairman COMMONS. Then beneath each of these general superintendents, what is the next organization?

Mr. KELLEY. Well, in the mining organization we have the manager of mines, assistant manager of mines, general superintendent of mines. And they a foreman over each individual mine. Beneath him are assistant foremen and shift bosses.

Acting Chairman COMMONS. What are the salaries, beginning with the shift bosses and going up, what are the salaries paid to the shift bosses?

Mr. KELLEY. The shift boss' salary is \$5 a day, with an increase when the price of copper is over 15 cents. The salaries of the assistant foremen vary somewhat. I think they are on the whole—I think they range about \$200 a month—where is Mr. Gille? Mr. Gille could give you that information.

Acting Chairman COMMONS. Well, we will take that up. Mr. Gille is here?

Mr. KELLEY. Mr. Gille. I can give you that. The assistant foremen are about \$200 a month; foremen, \$225 a month for the small mines and \$250 for the larger mines, in addition to which they have in some instances house rent, light, supplies of that kind furnished them.

Acting Chairman COMMONS. That comes up to the superintendent?

Mr. KELLEY. Yes.

Acting Chairman COMMONS. What are their salaries, what do they get?

Mr. KELLEY. The assistant superintendent is \$6,000; \$7,500 for general superintendents. The assistant manager, do you wish these salaries?

Acting Chairman COMMONS. You can file a statement of that.

Mr. KELLEY. I would sooner do that; I would be more sure it was accurate.

Acting Chairman COMMONS. Yes; file that as a part of your statement. Do these shift bosses, foremen, superintendents receive any payments additional to those salaries based on either the price of copper or the earnings of the company?

Mr. KELLEY. Well, I told you that the shift bosses—

Acting Chairman COMMONS. Yes.

Mr. KELLEY. And the assistant foremen receive an increase or decrease on the price of copper the same as the miners. In addition to that there is no added salary for income, but there is a bonus for safety. We pay—set aside \$1,000 a year, which is paid in sums of \$750 and \$250, respectively, to the foreman of the mine which shows the least number of accidents in the mine proportionate to the number of shifts worked.

Commissioner O'CONNELL. That is competitive, then?

Mr. KELLEY. Yes.

Commissioner O'CONNELL. And there is no regular standard system of bonuses to all those in charge of the mine?

Acting Chairman COMMONS. That is, the bonus for safety goes to the foreman of each mine and no lower than foreman, is that the idea?

Mr. KELLEY. It goes to the foreman of the mine which makes the best showing in that respect.

Acting Chairman COMMONS. It is a prize offered?

Mr. KELLEY. It is a prize; yes.

Commissioner GARRETSON. He does not divide that?

Mr. KELLEY. He does, as a matter of fact, divide—

Commissioner GARRETSON. I mean under your system he is not supposed to, but he in fact does?

Mr. KELLEY. He can do as he pleases with it. I do not know what he does.

Commissioner GARRETSON. It is his?

Mr. KELLEY. It is his.

Acting Chairman COMMONS. How long has that kind of a bonus been in operation?

Mr. KELLEY. Two years.

Acting Chairman COMMONS. Have you found good results?

Mr. KELLEY. Yes; I think we have.

Acting Chairman COMMONS. What reduction did the winner this last year make in the number of accidents?

Mr. KELLEY. Well, in the matter of percentage I do not know that I could give it to you. I can give you statistics on it. My recollection is the record for his mine was one accident for every 104,000 shifts worked underground, which figured out upon the basis of probable injury, considering the hazard of the business, we regard as rather extraordinary.

Acting Chairman COMMONS. By 104,000 shifts you mean men shifts?

Mr. KELLEY. Yes.

Acting Chairman COMMONS. One accident to 104,000. Does that include all kinds of accidents?

Mr. KELLEY. That includes accidents which incapacitate for a period of 30 days or longer.

Acting Chairman COMMONS. I presume you have kept a complete record of accidents?

Mr. KELLEY. Yes.

Acting Chairman COMMONS. How far back do they go?

Mr. KELLEY. Well, it does in some of the properties. You see, what is now the Anaconda Co. was originally a number of separate operating companies, and their method of settlement, their method of carrying insurance and keeping statistics, differed somewhat, so that for all of these properties we have not uniform statistics extending back any considerable length of time.

Commissioner GARRETSON. Have you since the consolidation?

Mr. KELLEY. Yes, sir; since 1909 we have the original; we have the complete Anaconda since 1900.

Acting Chairman COMMONS. Could you furnish us with that record?

Mr. KELLEY. I think so. It would take some time to get that together, but I would be very glad to do it and send it to you.

(The matter referred to is printed as "Kelley Exhibit No. 5.")

Acting Chairman COMMONS. Reduced to this basis that you spoke of, man shifts?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. How about the accidents of less than 30 days?

Mr. KELLEY. We have a record of those. We have a record of every accident which either caused the man to come to the surface or to go to the hospital for a dressing. We have a record of the length of time he was in the hospital; that is, we try to keep that record, and of the time when he came back to work.

Acting Chairman COMMONS. You could furnish that record, too, could you not?

Mr. KELLEY. I could. It might take some little time to compile it; it is not in just that shape, because as we have it it is intermingled with other things and is not kept with reference specifically to those things you would be interested in, but I would be glad to get it for you.

Acting Chairman COMMONS. You will do that, then?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Regarding the wages of men below the shift boss—that is, miners, helpers, and others—why is there no distinction made between miners and helpers, and what is the other term? Are they loaders?

Mr. KELLEY. Muckers.

Acting Chairman COMMONS. They are the loaders—shovelers, are they?

Mr. KELLEY. Well, the reason for it is that the Butte miners' union adopted at the time of its organization the principle that every man who went underground should receive the miner's wage, and while we have always felt there should be—should reasonably and logically be a classification of the employment underground, that has been one of the things that has been conceded by the employing companies and the employers at Butte.

Commissioner LENNON. I was going to ask, is it established by agreement with the union, or simply accepted?

Mr. KELLEY. Well, originally I think it was a part of their organic law, whatever it was, by-laws or constitution—and was agreed to by the operators and later when the contract system, as we speak of it and know it now, was put into force, it was agreed to by the operators; yes, sir. There is this distinction, perhaps I should say—there is this much classification, that in our contracts of employment certain lines of employment above, requiring more skill than the ordinary miner, are classified and additional wages are paid them.

Acting Chairman COMMONS. Is that a copy of the contract?

Mr. KELLEY. This is the original agreement. I was told to bring the original agreement, and I have it. I can furnish you with a copy; I wouldn't like to give you this.

Commissioner O'CONNELL. You can turn it in and we will have it copied right here and return it to you.

Mr. KELLEY. Yes, sir. Men engaged in shafts, stations, cutting winze, station tenders, are classified separately and receive an addition of 50 cents to the current wage per day. Now, in addition to that, in bad places we have a contract system and a contract wage frequently runs as high as \$6—sometimes, \$7 per shaft.

Acting Chairman COMMONS. You will allow the reporter to number that exhibit you had, and we will have it copied.

Mr. KELLEY. Yes, sir. There is the contract of 1907 and the contract of 1912.

(The papers so presented were marked "Kelley Exhibits Nos. 6 and 7.")

See Kelley Exhibits Nos. 6 and 7.)

Acting Chairman COMMONS. The latter being the current one?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Do you wish to make a copy yourself?

Mr. KELLEY. Yes, sir; I don't like to let that out of my possession.

Acting Chairman COMMONS. You would like to present a copy instead?

Mr. KELLEY. Yes, sir; I will have a copy made and present them, and your stenographers can compare them if they wish.

Acting Chairman COMMONS. You may submit the copies, then, in place of the original.

Mr. KELLEY. All right.

Acting Chairman COMMONS. This additional of 50 cents extra on classified employees, did that come up as a proposition from the management?

Mr. KELLEY. That was a condition that was agreed upon by both the union and the management when the contract was signed.

Acting Chairman COMMONS. Has the company ever proposed a different scale for the different miners and helpers and muckers?

Mr. KELLEY. Well, the matter has been discussed, but there has been a sort of understanding there would be a row to change that.

Acting Chairman COMMONS. How long must a man work underground before you allow him to operate a machine as a miner?

Mr. KELLEY. There is no fixed term. There is no fixed term of apprenticeship in the mining business.

Acting Chairman COMMONS. This system, then, apparently permits you, on the operating side, to advance any man to the position of miner at any time or place, and he gets no additional pay; is that the idea?

Mr. KELLEY. Yes; of course good miners are what you want. They are scarce compared to the general labor market, and as rapidly as men can perform the work of a miner they are advanced to that position.

Commissioner LENNON. Is there any given amount of production on which you pass the judgment as to whether the man is fit to be used—to make a mucker fit to be used as a miner, or a helper fit to be used as a miner?

Mr. KELLEY. No, sir; there is no relationship between the production per man.

Acting Chairman COMMONS. You spoke a moment ago of the contract; what do you mean by contract? That is the agreement with the union, is that the idea?

Mr. KELLEY. Yes, sir; in 1907 when the sliding scale was adopted, a five-year contract was entered into between the different operating companies here and the miners' union and other affiliated crafts. That is, each craft that is engaged here in Butte has an operating contract, and they all have their own contracts with the operating company. On the expiration of that contract in 1912 a three-year contract was entered into in which there was some modification of the wage scale.

Commissioner LENNON. The contract of the other trades is not based on the sliding price of copper?

Mr. KELLEY. Yes, sir.

Commissioner LENNON. Machinists, and so on?

Mr. KELLEY. Yes, sir; everything—every employee.

Acting Chairman COMMONS. How long have you been in charge of the Anaconda properties?

Mr. KELLEY. I think in my present position about three years and a half.

Acting Chairman COMMONS. How long have you been connected with the operations of the company?

Mr. KELLEY. I have worked for the Anaconda Mining Co. off and on 30 years, nearly 30 years.

Acting Chairman COMMONS. The first contract was signed, then, in 1907, was it?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. What was the situation prior to that regarding any agreement?

Mr. KELLEY. There was an established wage scale here, but none by agreement, and no sliding scale. The minimum wage of the miners in Butte from the time of the organization of the Butte miners' union was \$3.50 a day, and it had always been regarded that certain classes of work underground should be paid additional to that minimum wage; shaft sinking, station cutting, winze, are regarded as additional. And there was an understanding as to what they should be paid, but I don't know that there was any difference of opinion about it. In 1907 the first contract was entered into, and it provided for a minimum wage for miners of \$3.50 per day and \$4 when copper sold at 18 cents and over. These other classifications of the mining business were increased proportionately. On the expiration of that contract we made the contract of 1912, which gave a 25-cent increase at 15 cents instead of making the 50-cent increase at 18 cents, and to the miners an additional 25 cents at 17 cents, and an additional 25 cents at 18 cents.

Acting Chairman COMMONS. So that in effect the amount amounts to an increase, when copper reaches 17 cents, of 25 cents over the old scale?

Mr. KELLEY. No; when copper reaches 15 cents. Our minimum up to 15 cents is \$3.50, from 15 cents to 17 cents it is \$3.75, from 17 cents to 18 cents it is \$4, and above 18 cents it is \$4.25; that is the minimum.

Acting Chairman COMMONS. And prior to the contract of 1912?

Mr. KELLEY. It was \$3.50 to 18 cents and over 18 cents \$4.

Acting Chairman COMMONS. So that it amounted to about 25 cents a day increase over what it was?

Mr. KELLEY. It amounted to 50 cents a day increase over what it was.

Acting Chairman COMMONS. Until it gets up to 17 cents?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. Under the old agreement at 18 cents the man would have gotten 50 cents increase, which would put him to \$4?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. Under the new agreement at 18 cents he would get \$4.25?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. What was the prevailing wage at the time that agreement was signed; I am speaking of the minimum; was it \$3.50 or \$4?

Mr. KELLEY. The price of copper—I happen to remember that because I was watching it—it was just a shade under 17 cents and it was so close that the contract—we negotiated that contract in June and the average price for copper, although the contract was not signed until in July, we made it retroactive and settled on a 17-cent basis; it was a shade under 17 cents.

Commissioner GARRETSON. How soon after that did the price of copper lower the wage?

Mr. KELLEY. I could not say, it was some months.

Commissioner GARRETSON. Has it ever gone up since?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. For how long a period?

Mr. KELLEY. Very short.

Commissioner GARRETSON. Then went back down?

Mr. KELLEY. Yes, sir; but has stayed for quite a considerable period of the period above 15 cents.

Commissioner GARRETSON. It went even to the \$4.25 rate once?

Mr. KELLEY. No, sir; went to the \$4. I don't think copper sold over 18 cents—I know it hasn't in the last few years.

Acting Chairman COMMONS. What were the reasons for the change to the contract system in 1907?

Mr. KELLEY. Well, in 1907, there developed a considerable agitation for an increase in wages, and the management of the company was willing to grant the increase to apply that to when they could afford to pay it, and the result was that the negotiation was conducted and it was agreed that if this five-year contract was made they would adopt the sliding scale; that seemed to be fairly satisfactory all around.

Acting Chairman COMMONS. Did the proposition come from the management or from the union to adopt the contract system?

Mr. KELLEY. Well, I think the proposition at the time when the union started was straight \$4, and then it was a matter of negotiation that ultimately resulted, I think—it was negotiated by both sides.

Acting Chairman COMMONS. What I am getting at is prior to that you simply operated on an understanding?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. I take it those understandings originated in a rule or by-law adopted by the union?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. And you simply accepted it?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Now, when it came to 1907 you began negotiating with them?

Mr. KELLEY. They began negotiations; they made a demand for \$4.

Acting Chairman COMMONS. And the negotiations started?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. It was mutually agreed it should be put in writing?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. And that is what you call the contract?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Is there any advantage in that system over the prior method?

Mr. KELLEY. Well, I think so—I think so. I think anything which tends to simplify and put on an agreed basis the relationship between employer and employee is of mutual advantage to both.

Acting Chairman COMMONS. You spoke a moment ago of a different scale for what you call, I think, unwholesome or bad places of work.

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. What do you mean by that kind of places.

Mr. KELLEY. Well, we have some places that are wet, for instance. I might say this, in mining necessarily the work is continually progressing; we reach a certain elevation and open it up; call that a level. Now, when we have to go below that and open up a new level, you encounter water, the air is bad, the powder smoke is bad, work of that kind is entirely entitled to additional compensation, or in drifting work, drifting where the ventilation is not good.

Acting Chairman COMMONS. Then, that only occurs, then, in opening up new levels?

Mr. KELLEY. Chiefly occurs there; yes, sir.

Acting Chairman COMMONS. Does it also occur in working on the older levels?

Mr. KELLEY. No, sir; not after the level is opened up and developed.

Acting Chairman COMMONS. Then, what is there in the contract governing the increased pay which a man shall receive?

Mr. KELLEY. Fifty cents additional for shaft cutting, shaft sinking, winzes, and work of that kind.

Acting Chairman COMMONS. That kind of work would be plain, I am speaking as to the question of whether the work is unwholesome.

Mr. KELLEY. That is the kind of work that is unwholesome.

Commissioner O'CONNELL. It is agreed that that is the unwholesome work, among you?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Oh, I see. That is fully provided in the agreement. Do any disputes arise over that question, as between the men and the shift bosses?

Mr. KELLEY. I have never known of any.

Acting Chairman COMMONS. Who determines the character of the work?

Mr. KELLEY. Well, the work is just as well classified as it can be. It has a fixed definite meaning, and there could not be any room for dispute about it.

Acting Chairman COMMONS. Now, what has been the history of the hours of labor, the 8-hours system, in the mine; when did it begin, and was it universal; or has it been extended to new classes of labor?

Mr. KELLEY. Well, originally the shift here in Butte was 10 hours in the day and 9 hours at night; and, I think, in 1901 the legislative assembly passed an 8-hour law applicable to employees engaged in mines, mills, concentrators, etc. Since that time 8 hours has been the prevailing rule.

Acting Chairman COMMONS. Does that apply to—what I am getting at, does it apply to all work and labor of all kinds?

Mr. KELLEY. It applies to everything except a few watchmen, who are really pensioners just kept on.

Acting Chairman COMMONS. Does that apply to such men as work on construction work—building trades and ironworkers?

Mr. KELLEY. Yes, sir; all trades.

Acting Chairman COMMONS. The law has not been limited to underground and smelting work?

Mr. KELLEY. No, sir; practically all employment in this district is on the eight-hour basis.

Acting Chairman COMMONS. Is that by agreement with the union, or by act of the legislature?

Mr. KELLEY. Well, it is by both; the act of the legislature covers some branches and the agreement with the union covers the others.

Acting Chairman COMMONS. Now, could you state which are covered by the law?

Mr. KELLEY. I can get the statute in a moment.

Acting Chairman COMMONS. Will you kindly send for that, or have it brought in?

Mr. KELLEY. I wish to state that the Anaconda Co. was on an eight-hour basis before the statute was passed.

Acting Chairman COMMONS. That was brought about by agreement?

Mr. KELLEY. Yes, sir. I have here a statement which I sent for—that was requested in the course of the examination—very fine in detail, the statement I made in regard to wages paid during 1912 and 1913. In 1912 the total pay roll amounted to \$18,306,209.47, and in 1913 it amounted to \$20,215,039.05, about \$2,000,000 more.

Commissioner GARRETSON. It was the same wage—virtually paid to more men?

Mr. KELLEY. Really, I think—

Commissioner GARRETSON. Or less wages, possibly, paid to a still greater number?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Does that give the tonnage?

Mr. KELLEY. No, sir; but you have that in connection with the reports that have been submitted, and this shows by the departments. I would be glad to submit that again.

Commissioner GARRETSON. Can you submit a statement showing the rate of pay that obtains for the two years—that is, covering this \$3.50 minimum rate?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. Or other minimum rate, whatever it might be, showing the exact period to which each have applied.

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. You said that the Anaconda Co. had had the eight-hour operations earlier than 1901?

Mr. KELLEY. Yes, sir; that is my recollection.

Acting Chairman COMMONS. In what branches?

Mr. KELLEY. Mining.

Acting Chairman COMMONS. In all classes?

Mr. KELLEY. I would not be certain enough about that to make a statement. Acting Chairman COMMONS. You don't know how many or what grades were affected by the law of 1901?

Mr. KELLEY. No, sir; but I am quite certain that the underground employees at least were on an eight-hour basis prior to that time.

Acting Chairman COMMONS. When was the change made from the 10 and 9 hour shift to the 8 hour, do you remember?

Mr. KELLEY. I think about 1900.

Acting Chairman COMMONS. 1900?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. The year before the law was adopted?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Have you in mind the influence or agitation that led to the adoption of that law of 1901?

Mr. KELLEY. There was an agitation.

Acting Chairman COMMONS. Was the union instrumental in that?

Mr. KELLEY. Yes, sir; the union was instrumental in it; the politicians assisted; some of the employing companies who were equally engaged in politics at that time likewise assisted.

Acting Chairman COMMONS. It was a general demand for the eight-hour day, was it?

Mr. KELLEY. Well, yes, sir; you might say it was a general demand, and not very strenuously opposed.

Commissioner GARRETTSON. Did it reduce the personnel of the agitators—

Mr. KELLEY. I didn't use that name.

Commissioner GARRETTSON. I was using it in the actual sense; I was only speaking of the persons who agitated as agitators, not in the offensive sense—only turned the crank. Were any of those persons who were engaged in agitation—I will put it in better form, possibly—dual in their character? Was the union man also a politician or the politician a union man, or was any officer of the company also an officer of the company and a politician?

Mr. KELLEY. I think all sorts of those combinations have at times existed.

Commissioner GARRETTSON. I wondered.

Acting Chairman COMMONS. Do the shift bosses employ and discharge the miners and helpers and those under them?

Mr. KELLEY. No, sir.

Acting Chairman COMMONS. What is your system regarding employing and discharging men?

Mr. KELLEY. The foreman or assistant foreman, I think, employs men; the shift boss may discharge them.

Acting Chairman COMMONS. Do you have any central employment office?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. What are the duties of that office?

Mr. KELLEY. Well, I don't know just what you mean by duties. I could describe the method; probably that would give you the answer.

Acting Chairman COMMONS. Well, explain that.

Mr. KELLEY. No man is hired without he has what is termed a rustling card. Any man who desires to seek employment may apply at the employment bureau and receive a card.

Commissioner O'CONNELL. Just explain what a rustling card is.

Mr. KELLEY. That is what I am doing now. A card which is termed a "rustling card"; this card is presented to any of the men who have the employment of men; a man is hired, and this card is turned in to the timekeeper and returned to the employment bureau; I think that is the system.

Commissioner O'CONNELL. Who is in charge of the central employment office?

Mr. KELLEY. Mr. LEWIS; he has been subpoenaed, I believe.

Commissioner GARRETTSON. Is a man allowed to work in the district without he is in possession of one of those cards?

Mr. KELLEY. In the district; yes, sir; but not for the Anaconda Co.

Commissioner GARRETTSON. But not for the Anaconda Co.?

Mr. KELLEY. No, sir.

Commissioner GARRETTSON. Then it is equivalent, after he runs the gantlet of the man who issues them, he is permitted to work for the Anaconda Co.?

Mr. KELLEY. No, sir; I don't know as I would phrase it quite so strong as running the gantlet. I think these cards are issued—as far as I know of my personal knowledge, they are issued to any applicant.

Commissioner GARRETTSON. To any applicant?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. There is no investigation of the man's record or anything of that kind before issuance?

Mr. KELLEY. No, sir; among the questions which must be answered is where he was previously employed, and there is an investigation, as I understand it, of that question, but he is not held up in the meantime.

Commissioner GARRETSON. The card is issued, and then if the reference is unsatisfactory it is revoked; is that it?

Mr. KELLEY. No, sir; I don't know of any card having been revoked.

Commissioner GARRETSON. Then what is the object? Maybe you can tell us that.

Mr. KELLEY. I can, very freely, very frankly tell you the object of it. The object—I think any business that is doing the business that the Anaconda is doing should have some systematic method of employing its men. It is necessary in the first instance in order to keep a record of the employees straight; it is necessary particularly in a town like Butte where a credit system is employed in all the stores to keep track of the employees. We have any goodly number of men who were working under at least two or three different names in the same month with garnishments and bills and assignments coming from those tradesmen downtown, and the general information which I think an employer has a right to acquire as long as he does not abuse any information acquired, by maintaining a system of employment.

Commissioner GARRETSON. Then the only object lying behind it is the protection of the credit system?

Mr. KELLEY. No, sir; the object lying behind it is to give the Anaconda Copper Mining Co. the information concerning its employees which it deems it has a right to obtain, and which to my knowledge has never been abused in any way.

Commissioner GARRETSON. Is there any code system or arrangement or phrases on this card to serve as an indication to those to whom he presents it as to whether or not he is a desirable man to employ?

Mr. KELLEY. Absolutely nothing whatever.

Commissioner GARRETSON. Nothing?

Mr. KELLEY. No, sir.

Commissioner O'CONNELL. What is meant by the word "rustling"?

Mr. KELLEY. That is a phrase that is used to cover the seeking of employment.

Commissioner LENNON. That he goes from one foreman to another?

Mr. KELLEY. Yes, sir; he is rustling a job; that is the phrase that is used—he is seeking employment.

Commissioner LENNON. Can you state the total number of men who are on the list of eligibles to rustle?

Mr. KELLEY. There is a great many. My last information on that I think there were over 20,000, with an employment of 9,100 or 9,200. That many cards have been issued.

Commissioner LENNON. What is the total number of employees actually working? Does that apply to this total of 14,000?

Mr. KELLEY. No, sir; that applies to Butte.

Commissioner LENNON. The 9,000 jobs in Butte—

Mr. KELLEY. And there have been over 20,000 cards issued.

Commissioner GARRETSON. In how long?

Mr. KELLEY. Oh, less than a year. You know the labor situation here is somewhat peculiar. While we have a very large per cent of employees who are permanent residents and who live here and work continuously, there is a very large floating population coming in and going out at Butte, and I think that 25 per cent of the total number of men employed here are not men who permanently reside here; they come in and go out, and the personnel of the employees in the Butte district will probably change 25 per cent each year, while I should say 50 per cent of them do not change materially from year to year.

Commissioner GARRETSON. Well, this system I should think would not be calculated to furnish steady employment for the employees?

Mr. KELLEY. Would not be calculated?

Acting Chairman COMMONS. No; it would be calculated to have a large number of men on the ground who would be going around seeing the different shift bosses or foremen—they are the ones that employ the men—to see whether they

would have employment or not, and might get occasional employment and still enough to keep them here and keep them hanging on.

Mr. KELLEY. Well, I don't think that is correct.

Acting Chairman COMMONS. Isn't that the effect of such a system?

Mr. KELLEY. No, sir; I don't know how you arrive at that conclusion. If you would suggest to me what you have in mind—

Acting Chairman COMMONS. My suggestion would be this: Would you not make your force steadier and have more men steadily working during the year if this employment office—the office that issues the rustling cards—would also do all the employing instead of leaving it to the various foremen at the various mines? Wouldn't that encourage steady employment and do away with this floating population that you speak of?

Mr. KELLEY. No, sir; I don't think so. I don't think that the question of floating population is one of not being able to obtain steady employment under normal conditions it is more a question of the man who obtains the employment. They don't wish to remain. When a man obtains a job underground it is a very steady position if he takes care of it; but I think that 25 per cent of the men who come in and go out each year would go on irrespective of whether they were permanently employed. I don't think employment has anything to do with it; usually they can get employment, but they don't remain; they are floating.

Acting Chairman COMMONS. Then this 20,000; you have nothing which would show how many of them are in Butte at any one time—at the present time? There are 20,000 cards out, and the holders of those cards may have gone elsewhere, is that the idea, and taken their card with them?

Mr. KELLEY. Yes, sir. I have heard of them scattered all the way from Alaska to Mexico.

Acting Chairman COMMONS. They work here only a short time?

Mr. KELLEY. Those who take the card away never work; if they go to work, the card is returned to the employment office, you see.

Commissioner GARRETSON. If they want to gain employment in another one of your places, wouldn't they go and get a new card?

Mr. KELLEY. No. Well, he would have to get a local card at that local place. There is no interchange of cards between the different departments.

Commissioner GARRETSON. Well, but he would have to go back to this same man?

Mr. KELLEY. Oh, no; the smelter at Great Falls and the smelter at Anaconda, they both have employment offices.

Commissioner GARRETSON. I mean, that you have a number of men here, and the shift boss in each place puts the man to work, does he not?

Mr. KELLEY. No; the foreman.

Commissioner GARRETSON. Well, the foreman?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. The man goes to the rustling office and gets his card?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. And presents himself to a foreman in one of your plants who hires him?

Mr. KELLEY. Yes.

Commissioner GARRETSON. And takes up the card?

Mr. KELLEY. That is it.

Commissioner GARRETSON. And if he left the employment would he be given back the card?

Mr. KELLEY. He would go back and get another card, but not the same card.

Commissioner GARRETSON. That is what I say; if he wanted to leave one place on one hill and go to one on the other he would have to go to the office of the man who issued the cards and get a new card?

Mr. KELLEY. Yes.

Commissioner GARRETSON. I see. He would have just as many cards as he had jobs—I mean, he would draw as many cards?

Mr. KELLEY. Yes, sir; and possibly one more.

Commissioner O'CONNELL. His one more would be a card in a prospective position?

Acting Chairman COMMONS. What advantage do you see in this system above simply letting the foreman hire and discharge?

Mr. KELLEY. Absolutely no information or record of any kind under the former system. Under this system you simply have a record of your employees, that is all; that is the only advantage. I agree with you that it might be an

advantage to have a central employment office to hire all the men, but I do not think that it is of enough advantage to make it a matter of any controversy or inconvenience.

Acting Chairman COMMONS. I simply am interested because I have never yet known of a system of this kind, but I do know of many where they have a central employment office which hires all the men, and it seems to be, I might say, quite an anarchistic system you have got here, as I look at it—that there is no system to it.

Mr. KELLEY. Very little, that is true.

Acting Chairman COMMONS. Very weak, and gives no security to any man at all, does not protect him in any way. All he has got is he has got permission to go and get somebody else's permission to work.

Mr. KELLEY. He has got permission to go to work. We have got a record of him; that is, of the work that he did.

Commissioner O'CONNELL. He is simply cleared through his last position?

Mr. KELLEY. That is all. Suppose a man had been guilty of drunkenness and his actions would submit himself and his fellows to danger, and that man would come to you, you could refuse him employment. We have had cases of that kind; but no man has been refused any card because of any—

Commissioner O'CONNELL. But suppose in the meantime that man had not only done that but performed some lawbreaking act, and in the interim of the service of employment had gone to some other party and under an assumed name, and came back here and gave you the same assumed name, you would have no accurate record?

Mr. KELLEY. No; that is right. I do not know how you would handle that situation. You can't, in my judgment, in fairness to the great body of men who seek employment and who are not lawbreakers and who should not be deprived of the means of obtaining speedy employment, hold them up and refuse them employment until you make some investigation to see whether back at any previous time in their lives they did do something that might preclude them from obtaining employment.

I would sooner, as a matter of policy, take the chance of employing an occasional man who might not be entitled to it, than to deprive a great many fellows who are really entitled to go to work of the opportunity of doing it.

Commissioner O'CONNELL. Does not this system really do this in its working out, does it not furnish your company with a far greater safeguard against getting undesirable local men than undesirable foreign men?

Commissioner GARRETSON. Isn't that the actual working out?

Mr. KELLEY. Well, I don't know that I follow you there; possibly it might.

Commissioner GARRETSON. In other words, a man who may have quite a wide acquaintance—

Mr. KELLEY. Yes.

Commissioner GARRETSON. And have reasons regardless of what may be considered undesirable; it gives you a cinch on him?

Mr. KELLEY. Oh, it could be so used, yes; but, in fact, is not.

Commissioner GARRETSON. Well, I am only speaking of the possibilities that appear in it.

Mr. KELLEY. Of course.

Commissioner GARRETSON. From the exposition there has been of it.

Mr. KELLEY. Taking a man of the character that you describe, you would not need any employment office or any system, if you did not want to employ him.

Commissioner GARRETSON. While this devolves the duty on one man alone in the identification bureau locally?

Mr. KELLEY. Yes.

Commissioner GARRETSON. To a certain degree, doesn't it?

Mr. KELLEY. Yes; that is true.

Acting Chairman COMMONS. When a man makes application for a rustling card—is that what you call it?

Mr. KELLEY. Yes; that is what it is called.

Acting Chairman COMMONS. What are the questions that he answers on that card?

Mr. KELLEY. I could not give them to you. Mr. Lentz undoubtedly can furnish you with a copy of the application.

Acting Chairman COMMONS. Is he here?

Mr. KELLEY. Yes; he is on your program—he is subpoenaed.

Acting Chairman COMMONS. Is he here now?

Mr. KELLEY. Yes; he is here now.

Acting Chairman COMMONS. Mr. Lentz.

Mr. GEORGE W. LENTZ. There is a copy of it here.

Acting Chairman COMMONS. Then I would like to ask you to bring certain things.

You have a copy of the application blank. Bring some of the records that you keep, and the time sheets—any records that have been in your office—so that we may get a complete understanding.

Commissioner GARRETSON. And the form of request on references.

Mr. L. O. EVANS. I told him to bring the general letter that they write to the former employers who are referred to by the employee, you know; it would practically cover all these questions.

Acting Chairman COMMONS. And a complete set of forms and the actual records—samples of the actual records.

Mr. EVANS. And a sample of the letter of inquiry that he sends out regarding the men.

Mr. KELLEY. I want to say this in addition: Without having some means of obtaining the information we are required to furnish the Government—without having some such system as we have got now—we would be utterly unable to furnish the statistics that the Government, both State and National, inquire of us and require that we shall furnish. Moreover, some system that would enable even greater check than this will be absolutely indispensable in the event of the passage of compensation legislation, and this system was put into effect partly in view of anticipated legislation of that kind.

Acting Chairman COMMONS. Yes; I concede that. But my point is that it does not go far enough.

Mr. KELLEY. Well, I understand that it does not.

Acting Chairman COMMONS. All of the points that Mr. Garretson makes could be made against this system that you have in mind, but it would be much greater protection to the men and it could all be concentrated in the hands of one responsible man, even if it is scattered amongst a great number of irresponsible foremen?

Mr. KELLEY. Well—

Acting Chairman COMMONS. In the hiring and discharging of men?

Mr. KELLEY. I agree with you to this extent frankly, that this employment system of ours is really nothing but a preliminary sort of step that might be put into some use in the event of its becoming necessary either on account of compensation legislation or any other reason, and I agree with you that it is a means of doing what it is commonly supposed to do—which it had not been purposed to do—it is perhaps not as effective a system as can be put into force, but I don't think it fair to say that the foremen are irresponsible.

Now, the foremen of these mines, the men who hire these men, are usually men who have had long experience and long occupation in the district and who have a certain acquaintance with the men who are seeking employment, particularly those who are of the fixed population, and they have a better idea of what they want when they are hiring a man than any one man or set of men not directly connected with the operations would have, I think.

Acting Chairman COMMONS. Well, that is undoubtedly true in the first instance, but still they have absolute power over the men?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Without reference—without having been compelled to have their decision passed upon by some person higher up who is directly in contact with the policy of the general superintendent and the general manager, you can't be sure how they will treat the men who are under them, even though you are asking them for the delivery of product. They may use all kinds of discrimination.

Mr. KELLEY. Well, I think in fact there is very little of that done. We would hear about it.

Acting Chairman COMMONS. Your system, however, does not take care of it?

Mr. KELLEY. No; it does not.

Acting Chairman COMMONS. What is your system of policing and detective force? You have a chief of watchmen or guards; what is your plan?

Mr. KELLEY. No; we have—the principal system of watchmen is to try to find berths for fellows who are broken down and can't do anything else.

Acting Chairman COMMONS. Well, what about night watchmen?

Mr. KELLEY. Well, we have night watchmen, but I would not dignify them by the term of a police force. The local mine, the local plant, the men at

each local plant hire a certain number of watchmen. Usually those positions are given to old-timers, fellows who need the money and can't work underground. It is not an efficient military force in any sense of the word.

Acting Chairman COMMONS. Do they carry arms?

Mr. KELLEY. No, sir. Oh, no.

Acting Chairman COMMONS. They have no power of arresting trespassers?

Mr. KELLEY. Well, I think some of them may have been deputized. Each property maybe does have one or two men who have been deputized and who carry arms, but the big body of watchmen are not deputies and do not carry arms.

Acting Chairman COMMONS. At each property you have a deputy sheriff?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. He is deputized by the county sheriff, is he?

Mr. KELLEY. Yes, sir. I would not say at each property, but such men as we have are deputized that way; yes, sir.

Acting Chairman COMMONS. They are on your pay roll?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. They are not county officers?

Mr. KELLEY. Oh, no.

Acting Chairman COMMONS. Except to the extent that—

Mr. KELLEY. They are deputized to make legitimate the exercise of their functions.

Acting Chairman COMMONS. Now, do that class of men have authority over these watchmen?

Mr. KELLEY. No.

Acting Chairman COMMONS. The watchmen don't report to them?

Mr. KELLEY. No.

Acting Chairman COMMONS. Do these deputies; are they responsible, is a particular deputy responsible for any particular mine?

Mr. KELLEY. Well, I think I—I don't know of any system of that kind.

Acting Chairman COMMONS. How many of these deputies have you that are deputized by the sheriff?

Mr. KELLEY. Oh, very few, as the regular thing. I don't know. I could not tell you. Not more than probably a dozen altogether.

Acting Chairman COMMONS. Who could give us the accurate figures on that?

Mr. KELLEY. I could get it for you.

Acting Chairman COMMONS. Will you get those figures then, or send for them?

Mr. KELLEY. Yes, sir. Now, let me understand, what is it that you wish?

Acting Chairman COMMONS. Well, I wish to know what is the number of men on your force who are deputized either by the sheriff or any other public authority with the power to make arrests.

Commissioner LENNON. And carry firearms, carry arms.

Commissioner GARRETSOON. Well, do they report to any controlling office?

Acting Chairman COMMONS. Well, I was just going to take that up. And also I wish to know the organization of that force, Mr. Kelley; who is the chief of that force?

Mr. KELLEY. There isn't any. There is not in the sense that you are using it. There is no such force and there is no chief to it.

Acting Chairman COMMONS. Who do these various deputies report to?

Mr. KELLEY. Well, the deputies, I suppose, report at the mines where they are stationed.

Acting Chairman COMMONS. Do they report to the foreman?

Mr. KELLEY. Yes; he is in charge of the mine.

Acting Chairman COMMONS. Well, if each deputy is not localized at one mine, he would have to report to a number of foremen then, would he not?

Mr. KELLEY. Well, so far as we have any deputies, they are localized at these mines.

Acting Chairman COMMONS. Who hires the deputies?

Mr. KELLEY. The man who hires the watchmen, the foreman of the mine.

Acting Chairman COMMONS. Then these deputies are hired by the foreman in the same way that the wage earners—the miners—are hired, are they?

Mr. KELLEY. Yes; some watchman that he has hired has been deputized.

Commissioner LENNON. Well, do they make reports every day or every week, or do they make reports only when something abnormal occurs?

Mr. KELLEY. I never heard of them making a report at all.

Commissioner LENNON. Well, if something—

- Mr. KELLEY. Oh, if something—I catch this drift.
- Commissioner LENNON. Yes.
- Mr. KELLEY. Under abnormal conditions we would probably take steps to deputize for that particular condition.
- Commissioner LENNON. I don't mean that; suppose—
- Mr. KELLEY. And then we would have some organization.
- Commissioner GARRETSON. He only means the regular force. Is there a systematized method by which he makes regular reports of things that he sees?
- Mr. KELLEY. No.
- Commissioner GARRETSON. Does he perform espionage?
- Mr. KELLEY. No; no, sir.
- Commissioner GARRETSON. Or have you in your regular force employed in the mine or in the mill, or in any part, employees performing their regular duties, but in addition thereto are paid sums for reporting their associates?
- Mr. KELLEY. Not one.
- Commissioner GARRETSON. Not one?
- Mr. KELLEY. Not one man who is working in any plant—we have not—who gets an additional dollar because of any such service; and I wouldn't want it.
- Commissioner GARRETSON. Nor do you exercise any surveillance over the man in his social relations?
- Mr. KELLEY. No, sir.
- Commissioner GARRETSON. Or his home life?
- Mr. KELLEY. No, sir.
- Commissioner O'CONNELL. If these men see one of the men intoxicated—frequently intoxicated—would they report it to anybody?
- Mr. KELLEY. Well, I don't know of any man whose duty it would be to report that fact, beyond this proposition, that it is the duty of the timekeeper if, when a man applies and turns in his time or reports for work, if he is intoxicated, of course, the timekeeper would immediately notify the foreman. It would be the duty of the foreman, if he saw an intoxicated man at the mouth of the shaft, to send him home, or the shift boss if he discovered it. But it is not any man's duty to go about looking for intoxicated men.
- Commissioner O'CONNELL. Around the town, I mean.
- Mr. KELLEY. Oh, no; oh, no.
- Commissioner GARRETSON. You recognize that as a duty of administration, and not of surveillance?
- Mr. KELLEY. Yes, sir.
- Acting Chairman COMMONS. Do you make any investigation of the men that make application to the employment office for these rustling cards—any physical examination?
- Mr. KELLEY. No; we don't; but it was one thing we had in mind that might become necessary in the event of compensation legislation.
- Acting Chairman COMMONS. Then there is no physical examination of employees that are sent to work?
- Mr. KELLEY. No, sir.
- Acting Chairman COMMONS. Do you have a system of sick and accident benefits for employees?
- Mr. KELLEY. No, sir. No; nothing that you would call a system. I believe that the company extends help as readily as any employer wherever it knows of any deserving need.
- Acting Chairman COMMONS. Who has charge of the rendering that help—what officer of your organization?
- Mr. KELLEY. Well, it is in the claim department primarily.
- Acting Chairman COMMONS. Who is that?
- Mr. KELLEY. Mr. Madden, who is subpoenaed before you.
- Acting Chairman COMMONS. Is there any benefit society?
- Mr. KELLEY. Well, I think all of these organizations—unions—have sick benefits.
- Acting Chairman COMMONS. Sick and accident benefit?
- Mr. KELLEY. I am not sure about accident benefit.
- Acting Chairman COMMONS. Does the company contribute to these funds in any way?
- Mr. KELLEY. To the funds of the union? No.
- Acting Chairman COMMONS. For benefit purposes?
- Mr. KELLEY. No.
- Acting Chairman COMMONS. Does the company have hospitals that it operates?

Mr. KELLEY. No; the company has no hospitals. Hospitals have been established here, but they are not owned or operated directly by the company.

Acting Chairman COMMONS. What arrangement does the company have with these hospitals?

Mr. KELLEY. Well, the hospitals—a contribution is made by the men. One dollar a month is deducted from the wages of the employees. That supports the hospital; and then they receive attention at the hospital in the event of sickness or injury.

Acting Chairman COMMONS. Is that required of every employee, a part of his employment contract, that he should contribute his dollar?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. And how much attention does that entitle him to in case of sickness or accident?

Mr. KELLEY. Well, I think he is entitled to medical service.

Acting Chairman COMMONS. Free of any additional cost or charge?

Mr. KELLEY. Yes, sir.

Commissioner O'CONNELL. Does that apply to his family?

Mr. KELLEY. Well, I think it does in some instances. I am not sure about that. As a general rule; no.

Acting Chairman COMMONS. Well, then, does the company designate the hospital to which this dollar of each man shall go?

Mr. KELLEY. It designates it in this way, that there are two large hospitals here in Butte and only two; they do the business.

Acting Chairman COMMONS. And either one of them is eligible. The money is collected by the men?

Mr. KELLEY. No; the money is not collected—

Acting Chairman COMMONS. Collected by the company?

Mr. KELLEY. Yes, sir; and turned over to the hospital.

Acting Chairman COMMONS. In what way is it turned over to the hospital?

Mr. KELLEY. Turned over to the hospital by check.

Commissioner LENNON. Half to each one, divided equally between those two hospitals?

Mr. KELLEY. Well, that has been the aim of the company to divide it equally between the Sisters' Hospital and what is known as the Murray Hospital, but at times that gets out of line, because where it can't be avoided, unless the men themselves have a preference for one of the hospitals, we don't like to have more than one hospital to one mine. We want to have one hospital designated for each mine, so that we don't have to look up and see whether the fellow is paid to this hospital or to the other.

Acting Chairman COMMONS. If a foreman discharges a man, is that final?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. The employment office does not listen to any appeal?

Mr. KELLEY. No; it is final, but not permanent, if that is what you mean.

Acting Chairman COMMONS. Well, I am trying to get at what a man's status is after a foreman has fired him.

Mr. KELLEY. Well, he takes out another card and looks for another job.

Commissioner O'CONNELL. Well, if he thinks he has been unjustly discharged, is there any person that he can appeal to?

Mr. KELLEY. No, no; there is not. The discharge of the foreman or shift boss is final.

Commissioner GARRETSON. Do you mean to say that the unions have no—

Mr. KELLEY. Oh, yes.

Commissioner GARRETSON (continuing). Means whereby they take up these things?

Mr. KELLEY. If a man was unjustly discharged, I suppose the union would take it up. It is reserved in their contract that the union may take up any matter of grievance with the management.

Commissioner GARRETSON. In fact, is that regularly done?

Mr. KELLEY. It has been done, but the occasions are rather infrequent.

Commissioner GARRETSON. Well, if they go to this foreman, as I assume they would—

Mr. KELLEY. No; they would probably go to Mr. Gilie.

Commissioner GARRETSON. Well, there is appeal, then, from the foreman, is there?

Mr. KELLEY. Oh, yes; if the union takes it up or if the man himself comes to see Mr. Gilie. Our purpose has been to absolutely encourage either the union

or any employee who felt that he had been unjustly discriminated against or unjustly treated to present his grievance. They have that right at any time.

Commissioner GARRETSON. How many instances, Mr. Kelley, have there been, we will say, in a year?

Mr. KELLEY. I don't know.

Commissioner GARRETSON. Where the men—well, I will reduce this problem, if you don't know how many cases have arisen, how many men have been reinstated in a year, through the efforts of himself individually or the committee of the union.

Mr. KELLEY. I don't know. That matter would not come to my attention. I would not say.

Acting Chairman COMMONS. I think you said that Mr. Gillie would know.

Mr. KELLEY. Mr. Gillie.

Acting Chairman COMMONS. What is your position, Mr. Gillie?

Mr. JOHN GILLIE. Manager of mines with the Anaconda Copper Mining Co.

Acting Chairman COMMONS. Perhaps you could answer the question that has just been put.

Mr. GILLIE. Yes, sir; there probably have been within a year a half dozen occasions, including those that appeal from the hospital treatment, and also appeal from the abuse of a boss.

Commissioner GARRETSON. Those were handled with the man individually?

Mr. GILLIE. Individually. We court that and let it be known that they may come to our office if they are uncivilly or unfairly dealt with by any boss in our employ.

Commissioner GARRETSON. Well, how many of them in case of discharge—we will just put it on that basis—where the man claimed he had been unjustly discharged, how many have come to you?

Mr. GILLIE. Well, I don't know, but possibly one.

Commissioner GARRETSON. What was the result?

Mr. GILLIE. The man was told to go to some other place, because it would not be pleasant for him to put him under the same boss, and he was given a job at another place. It was simply a personal matter that arose between that boss and the man, that is all; there was probably something on the outside behind it. And with reference to the hospitals, we have the same condition; that is, we ask the men to report to our office any inattention or unfair treatment that they may receive at the hospital, because we only act as the agent of the hospital in collecting the money and paying it, and so we want to see that the men get fair treatment, and will go with the men or with the relatives or whomsoever they wish to see that the treatment has been carried out.

Commissioner GARRETSON. Well, the hospital is only an incident to the man's service, and in the service you say that if he was returned there, it would be unpleasant because he didn't get along well with the boss. If a boss or foreman develops the quality of being unable to get along with his men peacefully, what do you do with him?

Mr. GILLIE. Well, he don't last.

Commissioner GARRETSON. But in the meanwhile a lot of other fellows have suffered from the mortality rate under him?

Mr. GILLIE. Well, they may have before it has been brought to our attention, but we certainly get rid of a boss who is disagreeable or can't get along peaceable with his men.

Commissioner GARRETSON. Have you ever gone in after getting rid of a boss of that kind, have you ever gone back and looked up whether other men have been unjustly discharged by him growing out of that very feature?

Mr. GILLIE. Well, we have when there has been any strenuous complaint, numerous complaints.

Mr. KELLEY. In other words, where we have fired him.

Commissioner GARRETSON. It would not be apt to be very strenuous unless it was made by the representatives of the unions; it would not be hardly classed as strenuous?

Mr. GILLIE. Well, I mean by strenuous where there is a great number.

Commissioner GARRETSON. That is all, Mr. Chairman.

Acting Chairman COMMONS. As I understand it, then, such complaints as there are, or appeals, you might call them, from the action of the foreman are made by each individual workman who feels himself aggrieved, and they are not made to you by any representatives or by any committee of the union?

Mr. KELLEY. But they can be.

Mr. GILLIE. They can be and have been.

Acting Chairman COMMONS. Well, out of these six or seven that have been brought to your attention, how many have been brought by the union?

Mr. GILLIE. Oh, probably two or three, and more particularly in connection with the trades-unions.

Acting Chairman COMMONS. And not miners?

Mr. GILLIE. And not the miners; no, sir.

Acting Chairman COMMONS. Have there any been brought by the miners?

Mr. GILLIE. Oh, possibly within a few years there may have been one or two. It would not average one a year, I know, and I think that there has been perhaps in four or five years—there have been one or two cases.

Acting Chairman COMMONS. What are the unions that have brought complaints?

Mr. GILLIE. What unions?

Acting Chairman COMMONS. What unions; yes.

Mr. GILLIE. Why, those—principally machinists, boiler makers, or some one of the trades-unions who have a better opportunity, being in daylight, to see whether a man has been abused or not, and there is always a shop committee who take care of those things. But the occasions are very rare in which we are appealed to for reinstatement of a man.

Acting Chairman COMMONS. Well, would there likely be any appeals under your system? Your system apparently leaves it to each foreman to decide for himself, and if a man has been fired by one foreman then the only chance under your system of his having any justice done to him in case there is injustice would be to look up some other foreman who is equally powerful and controlling.

Mr. GILLIE. Well, naturally he would go to other foremen with which there was nothing against him, and many of them return even after the unpleasantness wears off.

Commissioner O'CONNELL. Mr. Kelly, can you give us an estimate of the amount of money that is paid per month to the hospitals or the amount of money that is collected by this \$1 a month?

Mr. KELLEY. Well, that would be directly proportionate to the number of employees of our company when operating normally—between nine to ten thousand dollars here in Butte.

Commissioner O'CONNELL. Between nine and ten thousand dollars a month?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Does the company endeavor, in addition to that, to contribute anything to those hospitals?

Mr. KELLEY. No, sir.

Acting Chairman COMMONS. It would in accident cases, wouldn't it; where it is responsible for the accident?

Mr. KELLEY. Not to the hospital; it does to the man.

Acting Chairman COMMONS. Oh, it pays the man?

Mr. KELLEY. Yes.

Acting Chairman COMMONS. Then, he takes care of himself?

Mr. KELLEY. That dollar a month takes care of it, absolutely, in the hospital; you see he gets medical attention, his room, and his meals.

Acting Chairman COMMONS. Can you furnish us with a statement of the amount of money that has been paid in the last year—for the past two or three years—on account of accidents to employees?

Mr. KELLEY. I could furnish that to the committee, but I would prefer not to.

Commissioner O'CONNELL. Is there not a systematic method by which a man is paid when he is off? Suppose a man breaks his leg, for instance, and he is off for 10 weeks with it; outside of the medical attention he gets at the hospital what is the method by which he is compensated for the loss of time?

Mr. KELLEY. The Anaconda Co. has been practically upon a compensation basis for the last 14 years, to my knowledge; and during that time has compensated practically every man who received any injury. Its method of handling the business is through a claim department, and that department is run somewhat differently from the ordinary claim department, as I understand it.

If a man is injured and he has a family we endeavor to look after the family first. We do not pursue the man; do not go after him for any settlement at all. When a man is out of the hospital we endeavor to get him back to work as soon as possible; and upon the presentation of a claim an allowance is made—settlement is not made dependent upon legal liability, although legal liability would of course be one factor that would be taken into consideration

in determining the amount which would be paid; whether the man is married or single; the number of dependents in his family and the general conditions; and we endeavor to make an equitable settlement, all other factors being taken into consideration. This statement will be disputed by some of the lawyers who will later appear, as I see from the program.

Commissioner GARRETSON. How satisfactory has that turned out to be to the injured man?

Mr. KELLEY. I believe that it has been absolutely as satisfactory as the relation between employer and employee can turn out anywhere on earth.

Commissioner GARRETSON. How many suits were brought, for instance, in the last two years?

Mr. KELLEY. I would not say how many. I don't know as I can tell you. I can get that for you. But I want to be as emphatic in it, and I think among the employees of the Anaconda Co. as good a feeling prevails on that account as can be possible between employer and employee anywhere.

Commissioner GARRETSON. How many verdicts have been rendered against the company in that time?

Mr. KELLEY. Personal injury verdicts?

Commissioner GARRETSON. Yes.

Mr. KELLEY. None. I do not know how many suits have been tried. How many [addressing Mr. EVANS], Mr. EVANS?

Mr. EVANS. We have only tried one in three or four years, the Anaconda Co. We have had verdicts against some of the subsidiary companies.

Mr. KELLEY. I am talking about the Anaconda. Probably one case, and when you consider the hazard of the business, not many.

Commissioner GARRETSON. Do you say that the Anaconda Co. have only been sued once in two years?

Mr. KELLEY. One case tried, I said. I think there have been verdicts rendered.

Commissioner GARRETSON. What has been the fate of the others where an action was brought?

Mr. KELLEY. Many of them have been settled by compromise with the attorneys and the—

Commissioner GARRETSON. After the action was brought; that is, and before it came to trial?

Mr. KELLEY. After; yes.

Commissioner GARRETSON. Well, then, it was ordinarily settled not on the scale of your method of compensation, but on something above that, as a rule?

Mr. KELLEY. I would question that statement.

Commissioner GARRETSON. Was not your method of compensation open to the man before he brought suit?

Mr. KELLEY. In some instances; in some instances the advance agents of the attorneys who make it their principal occupation to make—bring that character of litigation, met the man before he has had an opportunity to come to the claim department; and obtain possession of the case in the first instance.

Commissioner GARRETSON. You are not able to keep them out of the hospital, these advance agents out of the hospital?

Mr. KELLEY. We don't try to, we don't wish to enter into competition for the securing of the action, and, as a rule, they can make a fair settlement.

Commissioner GARRETSON. We can get data with regard to those claims from the records, I understand?

Mr. KELLEY. Yes.

Acting Chairman COMMONS. Have you made any comparison as to what would be the probable cost of compensation for accidents under a compensation law and the present cost according to the system that you have just now described?

Mr. KELLEY. We have endeavored to make such comparison. Of course, they are more or less uncertain because of the very many factors that must be taken into consideration. I believe that upon the basis of what I think would be a fair compensation law there would not be any very great difference. I believe that upon the basis of a compensation law which would create a political bureau and throw the entire cost of administration upon employers, the difference would be very great.

Commissioner GARRETSON. Are you familiar with the cost of administration in these countries where it has been in effect?

Mr. KELLEY. Not particularly.

Commissioner GARRETSON. Do you know of the German system—what the administration cost is?

3710 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. KELLEY. I have not figures at the present time in mind.

Commissioner GARRETSON. Not to exceed 12 per cent?

Mr. KELLEY. Twelve per cent of the fund.

Acting Chairman COMMONS. To carry your own insurance, that don't insure the employer?

Mr. KELLEY. No; we carry no insurance.

Acting Chairman COMMONS. Have you figured out how you come out as compared with what terms you could make with insurance companies?

Mr. KELLEY. Well, yes, in this way, that originally one of these mining companies—the Boston & Montana Co.—carried insurance, employers' liability insurance, to which both the company and the employee contributed. And after we had had statistics compiled for a number of years, some of them—the Anaconda and the B. & M., for instance—we were in a position to make a comparison, and the general operations were about the same; and we figured—we felt that we could do, we could make a more economic administration by doing the business ourselves, and a more satisfactory one, for the reason that we could take the payment of the money; we found that the insurance companies were prone to contest cases, and where they did refuse payment suit was brought in the name, against the company, against the mining company, although we might have used our good offices in endeavoring to get the insurance company to settle. We felt also that the money which went for attorneys, doctors, and officials of insurance companies could more profitably be directed by us directly to the people, and in that way—

Commissioner GARRETSON. Do you make the statement that the employers pay part of the liability cost?

Mr. KELLEY. No; that is not the statement; I say that there was an insurance policy.

Commissioner GARRETSON. In what industry is that common, Mr. Kelley?

Mr. KELLEY. They don't pay part of the company's part, but they themselves carry insurance.

Commissioner GARRETSON. Oh, that is another problem.

Mr. KELLEY. The company also carries insurance.

Commissioner GARRETSON. But the way you phrased it originally was misleading. You said that they bought their liability of an insurance company and the employers paid part of the cost; I think that was the exact language you used.

Mr. KELLEY. What I should have said was this, that the employees of the B. & M. Co. were insured; they had insurance of their own.

Commissioner GARRETSON. Oh, well, that is another matter.

Mr. KELLEY. We had insurance of our own, and we paid in addition part of their insurance.

Commissioner GARRETSON. That was entirely different, as I understood you to state it.

Mr. KELLEY. I want to correct it, then.

Commissioner GARRETSON. If that was not what you meant, I want you to have the opportunity to correct it, because it is something I have never come across in all the years that I have dealt with problems of that kind.

Mr. KELLEY. They had their own insurance policy that they paid for. We insured our liability, and in addition we carried part of their insurance for them.

Commissioner GARRETSON. Are you familiar with the figures of the average commission, or of the commissions that have investigated this question, as to how much out of each dollar paid by the employer reaches the injured employee under the liability systems in existence, or the insurance systems?

Mr. KELLEY. Well, in a general way I have seen those figures.

Commissioner GARRETSON. Out of every dollar that you as an employer pay, from 33 to 34 cents of that dollar gets to the injured man?

Mr. KELLEY. That is one reason why I believe it is far better to have the employer deal directly with the employee and give him one hundred cents on every dollar that the business has to stand.

Commissioner GARRETSON. Well, is not that the object of workmen's compensation legislation?

Mr. KELLEY. It should be the object.

Commissioner GARRETSON. To save the attrition that wears down the dollar before it gets to the man.

Mr. KELLEY. It should be the object of the legislation, but I doubt if under some plans that is the result.

Commissioner GARRETSON. Well, in some it may, but in the betterment.

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. It undoubtedly would be the result?

Mr. KELLEY. It should be; yes, sir.

Acting Chairman COMMONS. The commission will now stand adjourned.

Mr. Kelley, you will resume the stand at 2 o'clock.

(At 12.10 o'clock p. m., an adjournment was taken until 2 o'clock p. m., of the same day, Thursday, August 6, 1914.)

AFTER RECESS—2 O'CLOCK P. M.

Acting Chairman COMMONS. The commission will come to order. Mr. Kelley, take the stand.

TESTIMONY OF MR. C. F. KELLEY—Continued.

Acting Chairman COMMONS. There were some things called for this morning that you wish to speak about?

Mr. KELLEY. I think you asked for the copy of the law, the 8-hour law.

Acting Chairman COMMONS. Yes; as to what occupations it applied to.

Mr. KELLEY. Yes, sir. It appears there was an act passed in 1897 that was applicable to hoisting engineers; that is section 1731 of the Revised Code of 1897. I suppose it would be sufficient merely to give the reference?

Acting Chairman COMMONS. Yes, sir.

Mr. KELLEY. And in 1903 there was a second act passed applicable to hoisting engineers in which there was a division made on the horsepower of the engine or size of the engine as a classification; that is found in section 1784. In 1901 there was an act passed applicable to all men working in underground mines; that is found as section 1736; and at the same time an act was passed applicable to men working in smelters, stamp mills, sampling works, concentrators, and other institutions for the reduction of ore. That is designated as section 1737.

In 1907 an act was passed constituting eight hours a day's work on all undertakings carried on or aided by any municipality, county, or State government; that is designated as section 1739.

In 1907 what is known as the 16-hour law was passed, applicable to railroad employees; that is designated as section 1741.

Commissioner GARRETSON. That was simply a copy of the Federal act?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. In almost all its provisions?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. Those were all the 8-hour enactments, were they?

Mr. KELLEY. Yes, sir; except the railroad—

Commissioner GARRETSON. Except the hours of service act, as it is called?

Mr. KELLEY. Yes, sir; in the railroads.

Acting Chairman COMMONS. You had another statement that you were going to bring.

Commissioner LENNON. Those agreements.

Mr. KELLEY. Those agreements are being copied. We had copies of the 1912 but not of the 1907, and that is now being made. There were some other matters asked for that I have been unable to get during the brief interval of the noon hour.

Commissioner GARRETSON. I would like to ask if it is possible to get one other copy. This is for purposes of comparison. You spoke of the fact that there were two general forms in effect in regard to transfer of title in the town sites—or in the town site here. Can you readily furnish a copy of each of those two general forms? You said there were a number different.

Mr. KELLEY. Yes.

Commissioner GARRETSON. But there were two general forms in effect.

Mr. KELLEY. Perhaps I should have stated that better, Mr. Garretson, if I made no references to form, but if I said that the obligation—respective obligations of the grantor and grantee—

Commissioner GARRETSON. Yes.

Mr. KELLEY (continuing). Assumed one of two forms.

Commissioner GARRETSON. There you have it.

Mr. KELLEY. They may have been differently phrased. I don't know that there is any standard phraseology used. And I should perhaps correct a state-

ment to which my attention has been called during the noon hour in that particular matter. I said here this morning that the company here owned no houses. What I intended to convey was that the Anaconda Co. did not make any practice of building company houses and renting them to employees. It is a fact, however, that in acquiring necessary ground for mining operations we have, as independent transactions, purchased property upon which there was or may have been some houses constructed. And those houses have been rented irrespective of whether the occupants were employees or not.

And I also wish to make this qualification to another answer where I said there was no obligation as between grantor and grantee in these conveyances that would prevent the grantee from securing damages in the event of injury because of underground operations. We have occasionally picked up some tract of land with a house on it that was adjacent to mining operations, where it was necessary to secure it in order to carry on our operations, and in some cases where there has been merely a nominal consideration for such a house, or where we have voluntarily donated real property for the building of churches or matters of that character, we have imposed an obligation that there shall be no damage secured by reason of mining operations, irrespective of whether the damage is caused by surface or not. The matters that I intended to cover this morning were the general status.

Commissioner GARRETSON. These are exceptions in each case and not the rule?

Mr. KELLEY. That is it. I wish also to correct a statement inadvertently made this morning to the effect that the Amalgamated Co. did not own the stock of any other company in Montana except that of the Anaconda Co. It does own the capital stock of the Big Black Foot Milling Co., a corporation which formerly operated the sawmills that supply these mines with timber. Those sawmills have been conveyed directly to the Anaconda Co., and the Anaconda Co. owns the physical title.

Acting Chairman COMMONS. Mr. Kelley, in reference to the hours of labor, is there any provision regarding Sunday work, about employment on Sunday, in your agreements or in your practice?

Mr. KELLEY. As a general rule, not. The regular employment includes Sunday labor. I think that—well, I think that is the general rule.

Acting Chairman COMMONS. What is the practice about letting men off on Sunday?

Mr. KELLEY. Well, ordinarily every second week is change day, and a good many of the change days the men are not employed and as a rule there would be no serious objection to any man laying off Sunday.

We would like, if it was agreeable—I will state my own position about that: I would be very much in favor of Sunday closing if it could be brought about and was desired by the employees. We find, however—as a matter of fact—that, I think, would create a good deal of opposition. I think most of the men would prefer to work on Sunday.

Commissioner GARRETSON. Right there I would like to ask you one question.

Mr. KELLEY. I wanted to finish that answer or statement by suggesting that it might be a difficult matter in the smelters to do that, where the smelters must run continuously and require constant operation.

Commissioner GARRETSON. Outside of that one fact, would the business in general suffer a great deal from regular cessation on Sunday?

Mr. KELLEY. Well, I think it would suffer to some extent.

Commissioner GARRETSON. Well, would it suffer enough, in your opinion, to more than equalize—well, we will call it the physiological benefit for want of a better term.

Mr. KELLEY. Well, I really haven't figured that out in dollars and cents, but I think that it would be a desirable thing to bring about, if the cost wasn't out of all reason.

Commissioner GARRETSON. I assume from your position that you are a believer, as most men are that have given a study to the subject, than any animal, including man, is better off for rest one day in seven?

Mr. KELLEY. Yes, sir; I think that is a matter that should be brought about.

Acting Chairman COMMONS. Has the union at any time asked the company for a Sunday off, or one day in seven?

Mr. KELLEY. Not to my knowledge. That matter has never been discussed at all.

Commissioner GARRETSON. From your knowledge of their attitude of the subject do you think the members would generally be opposed?

Mr. KELLEY. Well, I don't know that I have sufficient information to make that statement. I believe that to be true, without having made any specific inquiry into it.

Commissioner O'CONNELL. Would the records show that the employees who do take a day off take it on rather a week day than a Sunday?

Mr. KELLEY. I haven't that information on that.

Commissioner O'CONNELL. We went through a set of books a few days ago that would indicate just that thing.

Mr. KELLEY. Yes.

Commissioner O'CONNELL. That the men took a day off, usually they work Sundays and their off days were some other days in the week. That was pretty generally the rule. What effect has the matter of your operating on Sunday on the attendance on churches, Sunday schools, and things of that character in the community?

Mr. KELLEY. Well, of course the men who are employed Sunday morning have no opportunity of going to Sunday morning service. I think usually there is either the afternoon or evening service. As a matter of fact, I think that the general church attendance in Butte, of all denominations, is very good.

Commissioner GARRETSON. What is the general attitude of the ministerial union, if there is such a thing here, toward Sunday labor?

Mr. KELLEY. I have never discussed it with them.

Commissioner GARRETSON. It has never been a mooted question?

Mr. KELLEY. No.

Acting Chairman COMMONS. What is the system of changing shifts every two weeks on Sunday; how do you double up?

Mr. KELLEY. Well, the day shift works until noon, and then the shift that was off the previous—that was out the previous night comes on. That is the way it used to be. Mr. Gillie can answer that question properly.

Mr. GILLIE. The shift that had been employed during the previous two weeks on night shift work until half-past 2 or 3 o'clock on Sunday morning; then there is no shift comes out until Monday morning excepting when there is a requirement, an extraordinary requirement, for ore, then or some other condition, or there may have been a lay off in the mine.

Acting Chairman COMMONS. Then the night shift works 16 hours?

Mr. GILLIE. The night shift then comes on at 2.20 or 3 o'clock in the morning, goes to work Monday morning at 8 o'clock.

Acting Chairman COMMONS. One shift works 16 hours?

Mr. GILLIE. No, sir; no shift works 16 hours. The night shift went on Saturday evening at 6 o'clock, and worked the 8½ hours—that is, including the half hour for lunch—until 2.30 in the morning, and comes off and does not go to work again on change Sundays until Monday morning at 8 o'clock.

Acting Chairman COMMONS. Then it has 36 hours off?

Mr. GILLIE. Yes, sir.

Commissioner GARRETSON. But that is only on break Sundays?

Mr. GILLIE. A change Sunday.

Commissioner GARRETSON. Take it through the week, do you work two shifts or three?

Mr. GILLIE. Two generally. Sometimes work three where we are sinking a shaft, a small per cent, 4 or 5 per cent, and working three shifts.

Commissioner O'CONNELL. Then there is really a closing down of operations every second Sunday?

Mr. GILLIE. Practically so, unless there have been some interruptions.

Commissioner O'CONNELL. How many workmen does that affect of the total? Of course the smelters are running and all that, where you have furnaces?

Mr. GILLIE. It affects practically all underground men, unless certain repair men. It does not affect mechanics or hoisting engineers or men of that character; they are on regularly.

Commissioner O'CONNELL. How long has that arrangement of having that extra Sunday off been in existence—this present method?

Mr. GILLIE. Since the eight-hour law and before that always. It has always been two weeks on and two weeks off ever since the district has been worked—on two shifts. There has always been a change Sunday off every second Sunday.

Commissioner O'CONNELL. When the men change to working regularly every seven days, is there any advantage in that that they may get a day off or day to stay at home, or do they work steadily the same part of the day the year around?

Mr. GILLIE. They usually work the same.

3714 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Commissioner O'CONNELL. There is no change in the time with them?

Mr. GILLIE. No, sir.

Commissioner O'CONNELL. The men working certain parts of a night, does that continue the same?

Mr. GILLIE. There are very few of that position.

Mr. KELLEY. The men that don't change are all on the day shift.

Commissioner O'CONNELL. What I wanted to get at is this, because this is a very important matter to us because we have just gone through a very peculiar matter where it was up, and it was suggested they should do just what you are doing, and it was said that wouldn't operate there. What I want to get at is what per cent of your total number of employees have a second Sunday off or every other Sunday off so that they can at least have a day's rest every second Sunday and stay at home or go to church or play ball or do what they please on the second Sunday.

Mr. GILLIE. I could not say accurately, but I would say 80 per cent of them.

Commissioner O'CONNELL. Won't that apply not on every second Sunday, but every fourth Sunday? It will affect half of the men on one of the breaks while the other one is really laying off, it will be a little short where they lap inside of each other?

Mr. GILLIE. No, sir; it affects the whole crew if you lay off both shifts.

Commissioner O'CONNELL. As I understand, every second Sunday the mine is practically shut down?

Mr. GILLIE. Except for repairs and things like that. As a matter of fact the weather conditions here and the condition of places of amusement and so on and opportunity for enjoying amusement about nine or ten months of the year are limited, with the result that the men are anxious to work 31 days a month, if you will give it to them.

Commissioner O'CONNELL. That may be true. You hitch a horse to a wagon and he will pull until he falls down, if somebody does not say "whoa"?

Mr. GILLIE. Yes; but he does not do it of his own accord, and they do.

Commissioner LENNON. Do I understand you work two shifts every day?

Mr. GILLIE. Yes; with a majority of the men.

Commissioner LENNON. Then, are the mines shut down the other eight hours or do they come back on again?

Mr. GILLIE. They are down. We divide the time in order to give a chance for ventilation and blowing out of gases and so on.

Acting Chairman COMMONS. What unions do you have agreements with besides the miners' union?

Mr. KELLEY. We have agreements with practically all unions that are employed. As I recall now, we have agreements with the blacksmiths, machinists, electrical workers, engineers, carpenters, painters, boilermakers, ironmolders, ironworkers, rope men, teamsters, and all of the different classes that are employed.

Commissioner GARRETSON. I suppose there are train-service organizations also?

Mr. KELLEY. That is an independent organization.

Commissioner GARRETSON. I know, but through your railroad?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Does your company or subordinate companies operate any coal mines?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. You have agreements there?

Mr. KELLEY. We have agreements there with the United Mine Workers.

Acting Chairman COMMONS. Where are those mines?

Mr. KELLEY. One mine is at Washoe, in the southeastern part of Montana; one at Lochree, in the northern part of Montana; and at Diamondville, in the State of Wyoming.

Acting Chairman COMMONS. About how many mine workers are employed in the coal mines?

Mr. KELLEY. That varies somewhat, one thousand to twelve hundred men.

Acting Chairman COMMONS. You have written agreements with the coal-mine workers—United Mine Workers?

Mr. KELLEY. Yes, sir; I think we have in practically all of their districts; they have agreements with the operators. As I understand it, the United Mine Workers work under a district plan and sign up agreements with the operators operating in each district.

Acting Chairman COMMONS. And you are a member of the operators' association?

Mr. KELLEY. Yes, sir; not having any separate agreement with them.

Acting Chairman COMMONS. You have no separate agreement with them?

Mr. KELLEY. No, sir; the rate that applies to all operators applies to—all operators that do business with the United Mine Workers.

Acting Chairman COMMONS. How long has this policy been prevailing with making agreements with the other unions besides the miners?

Mr. KELLEY. Well, locally that came into force at the same time that our first contract with the miners' union was had in 1907.

Acting Chairman COMMONS. 1907?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. The company at that time made these various agreements?

Mr. KELLEY. The various agreements with all trades. I think there was one or two at that time that were opposed to making term contracts, and they didn't come in.

Acting Chairman COMMONS. Do these other unions have clauses in their agreements providing for taking up grievances of its members?

Mr. KELLEY. Yes, sir. In every contract there is a clause that nothing contained in the contract shall prevent the taking up and considering of grievances at any time.

Acting Chairman COMMONS. That is in all contracts?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. That it can be taken up at any time?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. What has been the policy with reference to employing exclusively members of the union in these different agreements or working under these agreements?

Mr. KELLEY. Well, in the different agreements jurisdiction of the different lines of work is conferred upon the different unions, and the unions themselves have seen to it that the men employed were union men. Wherever anybody refused to join the union, and it was called to the attention of the company, the employee refusing has been discharged.

Acting Chairman COMMONS. In other words, the attitude of the company has been favorable to the employment of union men exclusively?

Mr. KELLEY. Very decidedly. I should like to say in that connection that I don't know of any place where the employers have taken a more favorable attitude toward organized labor than they have in this locality. I think that that is the reputation that has been enjoyed here for a great many years.

I think it has been due very largely to the fact that most of the men who have had to do with the operation, with the Anaconda Co. at least, are men who have been raised in a union atmosphere, and who believe in the principle of organized labor, and I may say that it has uniformly been the policy of our company to do business with organized labor and we prefer that as a matter of policy.

Acting Chairman COMMONS. And consistent with that you feel that you do not—you give the preference to the union man and even discharge men—

Mr. KELLEY. This has been an absolutely closed shop in that respect.

Acting Chairman COMMONS. Closed shop—not open, but closed?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. That is not in the agreement, is it?

Mr. KELLEY. Except to the extent in the agreement we recognize the jurisdiction of the union. For instance, in our agreement with the structural ironworkers or machinists or engineers, we recognize their jurisdiction over the men that may be employed in that particular vocation, and, of course, that necessarily means we must employ nobody except the members whom the union sanctions.

Acting Chairman COMMONS. The actual process consists in the union officer representing to you that some person is not a member of the union, who is eligible and has been invited to join and who refused to join, is that the way?

Mr. KELLEY. Yes, sir; they have walking delegates or business agents or officers who look after that.

Acting Chairman COMMONS. In case a man has not been paying dues, do they give similar notice?

Mr. KELLEY. Yes; if he becomes ineligible, if he is no longer a member in good standing.

Acting Chairman COMMONS. If he has allowed his dues to lapse, they report him?

Mr. KELLEY. Yes, sir; that has been the practice.

Acting Chairman COMMONS. And each time they report a man for not paying dues, what would be the next step to such man?

Mr. KELLEY. Notify the man to get in good standing or quit.

Acting Chairman COMMONS. In the history of your connection here with the organization and business has that occurred frequently?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. You have been called upon frequently to do that?

Mr. KELLEY. Yes, sir; Mr. Gillie would be more competent to give you that information than myself, but I know that has been done. The trades, the international crafts, exercise a greater supervision over their men than the miners' union does. As a matter of fact, the miners' union probably never had more than perhaps 75 or 80 per cent of the men in the union working in the mines. But in the trades crafts, working on the surface, in shops, where they can be gotten at and reached, every man belongs, and we probably have, oh, not to exceed three or four complaints a year that a man would not get in good standing.

Acting Chairman COMMONS. How do you account for that difference of the unions—they presumably have the same policy and requirements?

Mr. KELLEY. Differences between the miners' union?

Acting Chairman COMMONS. The miners' union has an international also.

Mr. KELLEY. It is pretty difficult to reach all the miners. A man would come in town and he would go to work at one of our mines and perhaps the agent of the miners' union might learn of him, and might not. He might come down and join the union of his own accord; he might work six months or a year before he would be found out; if his partner did not report him or they found out some other way why he would continue to work.

Acting Chairman COMMONS. So that you think it is the difficulty of keeping the tab on the men that has caused the miners—

Mr. KELLEY. Yes; to a great extent, and they dodge the paying of dues, many of them I know, notices have been posted on our shaft house, for instance, that on a certain date every man working in the mine must present his card. Now, the miners' union delegate would be there to see the cards of the men that go down; the men that did not have cards would lay off.

Acting Chairman COMMONS. Would that be regular, is that a monthly occurrence?

Mr. KELLEY. No; it is not monthly. No; that was done at stated times. They did not do that monthly. Occasionally they would post a notice at a shaft and say the employees, miners going down this shaft must present their cards before going on work on a certain date, and the representative of the union would be there to inspect the card. Men have laid off. We know that. We are always short a few men when such a notice was posted.

Commissioner GARRETSON. Are your shift bosses' lists at the disposal of the representatives of the union?

Mr. KELLEY. No.

Commissioner GARRETSON. Nor your pay roll?

Mr. KELLEY. No.

Acting Chairman COMMONS. In case a man is causing trouble in the mine, or an agitator, do you make any distinction in the matter, Mr. Gillie, retaining in your employee such men?

Mr. KELLEY. That matter would be one we would probably hear of so little that I would say as a rule, no.

Acting Chairman COMMONS. Who would decide on that, the foreman?

Mr. KELLEY. Yes; but I do not know of that occurring. As a rule, there is a very small amount.

Acting Chairman COMMONS. The foreman would get rid of such a man?

Mr. KELLEY. He might and might not; there is no rule about it at all.

Acting Chairman COMMONS. It would be left to you; there is no general policy that would be true in case a man was a Socialist; if he should discharge a man for being a Socialist would you or the company or your central employment office know anything of the matter?

Mr. KELLEY. No.

Acting Chairman COMMONS. It would be simply a matter of the foreman?

Mr. KELLEY. That is true.

Acting Chairman COMMONS. And if it came to you, if it came up at all, it would come up by way of appeal to Mr. Gillie?

Mr. KELLEY. I suppose so; yes, sir.

Acting Chairman COMMONS. Have you ever had any appeals on that ground, Mr. Gillie, of men being discharged for being agitators or anarchists or Socialists?

Mr. GILLIE. We had one general appeal that was made by a committee from the union for discharges of a number of men at one time here. That is the only instance that I know of.

Commissioner GARRETSON (addressing Acting Chairman Commons). What was the number that was discharged?

Acting Chairman COMMONS. What is that?

Commissioner GARRETSON. What was the number that was discharged?

Acting Chairman COMMONS. You ask the question.

Commissioner GARRETSON. How many men were discharged in that instance?

Mr. GILLIE. About 140, I think.

Commissioner GARRETSON. That was here in Butte?

Mr. GILLIE. Yes, sir.

Commissioner GARRETSON. Has there been a like instance in Anaconda?

Mr. GILLIE. Not to my knowledge; no, sir.

Commissioner GARRETSON. There has not been a larger number than that discharged at any one time?

Mr. GILLIE. No; I don't think there has been anything near like that. Mr. Mathewson, our madager, is here, and he can tell you.

Commissioner GARRETSON. What was the allegation in that instance where those hundred-odd men were discharged? On what ground, what ground was set up?

Mr. GILLIE. Well, an undesirable class, I would say.

Commissioner GARRETSON. How is that?

Mr. GILLIE. An undesirable class.

Commissioner GARRETSON. I didn't get that last word.

Mr. GILLIE. I say an undesirable class of employee.

Commissioner GARRETSON. Oh, "class."

Mr. GILLIE. Yes.

Commissioner GARRETSON. Were they all of one belief?

Mr. GILLIE. Well, I don't know what their belief was, but—we didn't know, of course—of men that are of one belief, because we put—

Commissioner GARRETSON. Well, I don't mean religious belief, I mean political belief.

Mr. GILLIE. Well, I don't know about their policy.

Commissioner GARRETSON. Was it their political or social opinions that made them undesirable?

Mr. GILLIE. Well, their general community living conditions.

Commissioner GARRETSON. Then, it was part of it conduct?

Mr. GILLIE. Conduct and their—

Commissioner GARRETSON. And avowed opinion, social opinion?

Mr. GILLIE. Yes, sir; as well as their undesirability as citizens of the community.

Commissioner GARRETSON. What were they, Socialists?

Mr. GILLIE. I don't know.

Commissioner GARRETSON. Well, I wonder, if you don't know what their belief was, how you know it was undesirable?

Mr. GILLIE. I don't mean their belief, their method of living.

Commissioner GARRETSON. Oh, then, it was purely conduct, and not belief?

Mr. GILLIE. Well, it is—their assembling here, or their living in habitations the way they do live and the conducting of saloon matters and their social conditions generally.

Commissioner GARRETSON. By whom were these men designated?

Mr. GILLIE. By whom were they designated?

Commissioner GARRETSON. Yes.

Mr. GILLIE. Why—

Commissioner GARRETSON. Who made the investigation in regard to the conduct, if not belief; or, if belief entered into it, in regard to the belief?

Mr. GILLIE. Well, I will tell you as a matter of—

Commissioner GARRETSON. And who furnished the—who made up the list?

Mr. GILLIE. Well, I will tell you, as a matter of fact there was no disposition to lay off that number of men, but when there was information given to some of the foremen that a few men were undesirable people, why they exer-

cised a larger right and did—and went a good deal further than was expected.

Commissioner GARRETSON. They "socked" it to everybody?

Mr. GILLIE. With the result that we reinstated more than two-thirds of those people within two or three days.

Mr. KELLEY. That is right; I think it is fair to say that that was a misinterpretation, and it was remedied almost immediately.

Commissioner GARRETSON. What was it, 150 in the original instance?

Mr. GILLIE. About 140.

Commissioner GARRETSON. One hundred and forty, and two-thirds of them were personally immediately returned to the service?

Mr. GILLIE. Yes, sir; within a very short time.

Mr. KELLEY. I think they all did, ultimately.

Mr. GILLIE. They all did, ultimately—well, not ultimately, but most of them.

Acting Chairman COMMONS. What year was this?

Mr. GILLIE. Three or four years ago.

Mr. KELLEY. Something like that.

Commissioner GARRETSON. I wondered how the men were identified, that was all, in the original instance, as undesirable, because the other day we had the problem put up to us that the question of a man's religion was a matter of identification. And we could not tell why a dead Mohammedan looked any different from a dead Baptist.

Acting Chairman COMMONS. Mr. Kelley, what attention has the company given the subject of tuberculosis in the mines—miner's consumption—and what activity with reference to decreasing it?

Mr. KELLEY. The matter of tuberculosis has been one that has been investigated from time to time and an effort made to ascertain what, if any, causes connected with the occupation of the men were conducive to it, and those causes, when ascertained, have been remedied.

Acting Chairman COMMONS. Have you compiled any statistics or figures which would indicate the extent of tuberculosis—

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Amongst the employees?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. Is that available so that you could furnish it to us?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. And does it show the number of deaths during a period of years?

Mr. KELLEY. Yes, sir.

Acting Chairman COMMONS. And you will give the death rate, will you?

Mr. KELLEY. How? I beg your pardon.

Acting Chairman COMMONS. Give the death rate, rate per thousand employees, or anything of that kind?

Mr. KELLEY. Well, I think it does. If not, we can readily furnish that. I may say this to the commission, that we have been intensely interested in the subject of tuberculosis and have had ourselves in addition put in possession of information concerning the investigations of others. And while we realize that there may be, and probably is, an intimate relation between the occupation and the disease, we feel that our investigation shows that in the cases here in Butte there is a closer relationship between the manner and method of living in certain neighborhoods, certain insanitary conditions, that are beyond the power of the employer to rectify.

These tests, I may say, have taken the line of investigating thoroughly sanitary conditions above and below ground, of having analyses made of the air, water, and the passageways underground, and of also making a house to house survey of the district in examination of the death records and the health records for the purpose of ascertaining the houses and the locality of the disease. And all matters of that kind have been gone into quite thoroughly.

The general subject of mine ventilation, upon which I would prefer Mr. Gillie to dwell, if it was gone into in detail, as I think it should, has been one that we have given a great deal of attention to.

I think at the present time, in addition to the natural draft that is created by reason of differences in elevation and temperature underground, that we are forcing into these mines at least a million cubic feet of fresh air a minute. I remember that our charge last year against ventilation alone amounted to something like \$275,000.

I know that it has been the opinion of competent investigators—I mention Dr. Tuttle, who was secretary of the State board of health; Prof. Hoffman, who made an examination for the Prudential Life Co.; and Dr. Lansey, of the United States Bureau of Mines—that every possible effort that could be made in that direction was being made.

And I would like very much to extend and do extend to the commission an invitation to go through our surface plants, our underground workings, or both. We would like to have you go through them and see what we are doing in that respect.

Now, then, I don't know how far you want to go into this matter, but I will state as a general proposition that it is the result of investigation that the tuberculosis underground we feel is not communicated underground, but is communicated upon the surface. We believe, in the first place, that the sulphides in the ores and that the sulphuric acid in the waters that flow underground in these copper mines are of themselves germicides. That is undoubtedly true, because of the utter lack of diseases common to mining which prevail in other mining communities and of which we have none here.

And it is likewise true that the analyses will show that the air underground has upon the whole a percentage of oxygen that is in excess of what any of the authorities require before air is regarded as vitiated. It is also true that the carbon dioxide is less than was found in many surface rooms. We do find that in certain localities in the city the living conditions are not good, and there is an overcrowding in the sleeping apartments—there is not enough free air.

Commissioner GARRETSON. Is that racial?

Mr. KELLEY. It refers—to some extent; yes, sir. There is not enough oxygen or free air to accommodate the occupants. That it is also a question to some extent of susceptibility, the ratio differing according to nationality; that is tabulated. And we found what is particularly conducive to enlightenment upon the subject, that the area of tuberculosis in the city is restricted within well-defined limits, and that outside of an area which the health records indicate, the average rate of tuberculosis in this community is not any higher than it is in what are regarded as the most healthful cities in the State, notwithstanding the fact that those localities are populated almost entirely by miners.

For instance, you can take in this community a Maltese cross that would be represented by a line up and down Main Street and east and west on Broadway, and outside of that cross, which would contain suburbs such as Meaderville, Walkerville, and parts of Centerville, where the population is made up entirely of miners, the death rate, or tuberculosis rate, is not in excess of what it is in cities like Missoula, Livingston, and other places in the State.

Within this area which is undoubtedly the area of infection and which is inhabited to some extent by people who are particularly susceptible either because of their natural tendencies or method of living to tuberculosis, the rate is high. These statements of mine, which I make generally, are substantiated in detail by the figures which we have.

Commissioner GARRETSON. Have any agencies, municipal or State, made any effort or exercised any power to correct those conditions in the area to which you refer?

Mr. KELLEY. To some extent; yes.

Commissioner GARRETSON. But not far enough that there has been any result?

Mr. KELLEY. I think not.

Commissioner GARRETSON. Worked out yet?

Mr. KELLEY. I think not.

Commissioner GARRETSON. Now in regard to this ventilation and the efforts that you have made underground, is it not a fact that, contrasted with other mine propositions, your conditions, some of the conditions that exist in your mine, were so naturally, I mean now, so bad, that corrective measures become an absolute necessity in many cases?

Mr. KELLEY. That is absolutely not true.

Commissioner GARRETSON. It is not?

Mr. KELLEY. I do not believe that there is anywhere in the world in mining districts where the conditions are or have been as good underground as in the Butte district.

Commissioner GARRETSON. I should like to see you and other gentlemen we listened to the first part of this week in the same room.

Mr. KELLEY. I should love to be there. Of course it is true that to a certain extent conditions have improved, because our knowledge of those things and the

method of securing appliances to relieve them within the past few years has made great progress. The utilization of electric power, by which we can take a fan of enormous capacity and place it on an air shaft, attach a motor to it, and get it working, those things have helped wonderfully; and we have taken advantage of them as fast and as rapidly as we have known how.

Commissioner GARRETSON. We have had represented to us within the immediate past that the conditions in a mine which existed in the locality were so far ahead of any other that that in itself will really constitute a fair compensation for working there without any pay, and by contrast the conditions in mines here were often referred to.

Mr. KELLEY. Well, I should simply feel like congratulating the other operator, without acknowledging it is true at all, the basis of his comparison. There is not any occupation which is free from difficulty. And underground mining to my mind—I have been associated with it all my life—is one of the hardest, most dangerous, and difficult occupations. I do not mean to paint a picture that working underground in any mine is any paradise or any snap. But I do feel that in so far as the occupation is concerned that we have been, we are trying to do, and we are willing to do whatever can be done reasonably, practically to alleviate the condition.

Commissioner GARRETSON. Well, I personally agree with you to this extent. While I have inspected a number of mines, I would say this to you: While I appreciate the kindness of your invitation to go down, I am not going to accept anybody's but the undertaker. He is the only man who is going to get me underground.

Mr. KELLEY. Well, I think that if you will take the number—I do not want to harp on the question of the casualties that is incidental to underground mining—I think if you will take our statistics and make a basis of comparison with any mining district, you will find it is about as safe here as anywhere. It is not—

Commissioner O'CONNELL. I was just going to ask you that question, Mr. Kelley. Will we be furnished by some one here, or can you furnish us a statement showing the accidents, casualties, and so on for the period of a year or two years or some such a matter?

Mr. KELLEY. Yes, sir.

Commissioner O'CONNELL. And the number of cases that have been attended to in the hospital here from the miners?

Mr. KELLEY. I have no doubt the hospital can furnish you that record. We could not, because we are only one company.

Commissioner O'CONNELL. What I want to compare is what the men are getting for this dollar per month they are paying as compared with some similar information that has been furnished us?

Mr. KELLEY. I have no doubt that the management of the hospital would be very glad to take you through if you can find time.

Commissioner O'CONNELL. I presume they keep a record of the cases.

Mr. KELLEY. You want a list of our casualties in the last five years?

Commissioner O'CONNELL. Yes.

Mr. KELLEY. I will give it to you, and also the number of shifts worked.

(See Kelley Exhibit No. 5.)

Commissioner O'CONNELL. Yes; so that we can get the basis or proportion between the accidents and the number of people employed.

Acting Chairman COMMONS. Will you file the report of this investigation on tuberculosis, or a summary of it?

Mr. KELLEY. I haven't but one copy of this report. I would be very glad to have a copy of this made and furnished to the commission. It is the only copy I have.

Acting Chairman COMMONS. It represents this investigation that you have been speaking of?

Mr. KELLEY. Yes; this one investigation, the last and most complete. This investigation was made under the direction of Dr. Tuttle, secretary of the State board of health, and in it he had probably five or six assistants besides men who were running the laboratories, and so forth. It is a summarized report. The entire report is extremely voluminous, but I can give you the summary of his report.

Acting Chairman COMMONS. Yes.

Mr. KELLEY. And I will be very glad to do it.

(See Kelley Exhibits Nos. 8 and 11.)

Acting Chairman COMMONS. Have you anything further, Mr. Kelley, that you care to mention?

Mr. KELLEY. I would like, if the commission has time, that Mr. Gillie should make a statement concerning the ventilating and sanitary methods.

Commissioner GARRETSON. I would like to ask Mr. Kelley one or two more questions. You replied to a question early in your statement as to the relations of Amalgamated and Anaconda?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. That the Amalgamated did not, in one sense, was I think the qualifying phrase you used, control or dictate the action of the Anaconda?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. How many directors are of the Anaconda?

Mr. KELLEY. Seven directors.

Commissioner GARRETSON. How many of them are represented on the Amalgamated?

Mr. KELLEY. Let us see. We have, I think, three common directors.

Commissioner GARRETSON. Three interlocking?

Mr. KELLEY. Yes.

Commissioner GARRETSON. And does the fourth represent Amalgamated interests, although not being a common director?

Mr. KELLEY. Well, I perhaps had better explain it this way: In fact, the Amalgamated Copper Co. can elect the whole board of directors and control Anaconda. What I meant to convey to you was that in the actual operations the Amalgamated Co. as such does not direct operations.

Commissioner GARRETSON. Still it is an undoubted fact that when the board of directors of Anaconda meet, their action is in accord with the desires of Amalgamated?

Mr. KELLEY. I haven't any doubt about that, sir.

Commissioner GARRETSON. That is one point I wanted to touch on.

Mr. KELLEY. I would rather put it this way, that if there was any conflict between—there has not been—but if there should develop any conflict between the board of directors of Anaconda and the board of directors of Amalgamated, I suppose that Amalgamated could exercise its power and put in certain directors.

Commissioner O'CONNELL. Because of its control of the stock?

Mr. KELLEY. Yes.

Commissioner GARRETSON. In making your reports to the State of Montana—that is, your reports for assessment—the phrase was used that under the law one of the elements of taxation is the product, the production is taxable. Is that exactly synonymous with the report that you make to the Commissioner of Internal Revenue under the income-tax law? There are other elements that enter into the State report?

Mr. KELLEY. Yes.

Commissioner GARRETSON. And that would naturally form the base of an income-tax report?

Mr. KELLEY. They would practically be synonymous with this exception, that there would be a difference, due to difference in period. They would not be identically the same report, as one would be for the calendar year, and the other would be for the—

Commissioner GARRETSON. For the contemporaneous period covering it they should present exactly the same elements?

Mr. KELLEY. Exactly, except for the differences in exemptions and things of that kind.

Commissioner GARRETSON. Now, in making up that report which you stated was made by deducting from gross income the cost of operations?

Mr. KELLEY. Yes.

Commissioner GARRETSON. Is there a line drawn between maintenance or betterment, which are two distinctly separate things—bear in mind they have been interpreted in the railway reports.

Mr. KELLEY. Yes.

Commissioner GARRETSON. And that replacement does often occur under the guise of maintenance?

Mr. KELLEY. Well, I stated this morning, Mr. Garretson, that that might be regarded maintenance and what might be regarded replacement, you can not make a general answer to that, because certain principles entered into the interpretation of those terms, but the State provides what we may deduct.

Commissioner GARRETSON. Yes.

Mr. KELLEY. That is the continuous factor.

Commissioner GARRETSON. Well, bear in mind what you say that it can't be done, it was because the railway companies took the position that it could not be done, that they were required to make the reports, keeping those items separate, not under their own interpretation but under the interpretation of the commission.

Mr. KELLEY. Exactly; and if you will pass, or if any authorized body will pass a law that will define these terms, then we can have a uniform practice; but where those terms are not legally defined it is very often a question which is maintenance or whether it is something else.

Commissioner GARRETSON. In the hands of, we will say, an unscrupulous manipulator of accounts, one term or the other might be like charity, covering a multitude of sins?

Mr. KELLEY. That is true, but—

Commissioner GARRETSON. Now, do you believe—this is what I want to know: Do you believe that for corporations of the magnitude, we will say, yours, that either Federal or State supervision to deal with just such details as that and place all such corporations on a parity with each other would be reasonable and desirable?

Mr. KELLEY. I will answer that in this way: That whatever is applicable to all corporations no one could find fault with. Now—

Commissioner GARRETSON. You want to bear in mind, I have no more beliefs than you that it should be played against one or against the other.

Mr. KELLEY. I believe that to a certain extent regulation and supervision is extremely desirable. I do not believe it is desirable when it gets to the point that the Government undertakes to run your business for you instead of permitting you to run it for yourself.

Commissioner GARRETSON. In other words, you believe, then, that when regulation reaches the stage—

Mr. KELLEY. Management.

Commissioner GARRETSON (continuing). Where it might create a deficit, that then the power that created the deficit should at least be responsible for the deficit?

Mr. KELLEY. Yes, you might put it that way. I believe that when a corporation—

Commissioner GARRETSON. Do not think now I am preaching Government ownership, because that is what it amounts to.

Mr. KELLEY. I believe this, that no corporation can cheat itself very long without paying the penalty. I do not believe in making a bookkeeping profit at the expense of your capital stock, or your shareholders, or your employees. I do believe in making a proper depreciation charge, a proper maintenance charge, but just how those shall be made and what it shall amount to is a matter which is pretty hard to answer generally. In this particular instance, I want to say, however, that the items which go against gross income are fixed and determined, I think with reasonable accuracy, I think with as much accuracy, as could under any form of supervision. And I want to insist upon this proposition before the commission, because it may be attacked, that the net proceeds return on mines is a return that is based absolutely on a hundred cents to the dollar. There is no 33 $\frac{1}{3}$ per cent valuation, or 50 per cent valuation about that. Every dollar that is made from the sale of metals pays the tax, and that is the only property in the State of Montana or elsewhere that I know of that pays on an absolute basis of 100 per cent value.

Commissioner GARRETSON. Except realty in the form of small homes?

Mr. KELLEY. Well, that does not apply here. I do not know how it may apply elsewhere.

Commissioner GARRETSON. In most States?

Mr. KELLEY. It does not apply here.

Commissioner GARRETSON. Real estate in the form of small homes?

Mr. KELLEY. I think it comes nearer than any other, except our own business. I want to make this further statement: I want you to understand at this time this proposition, that I would be glad to come back at any time, if the matter becomes involved in this discussion, as it may, I am prepared to demonstrate that the Anaconda Co. is paying a higher valuation and greater taxes than any other citizen of the State that I know of.

Commissioner GARRETSON. That is all.

Mr. KELLEY. I will endeavor to get these supplemental matters and file them as soon as possible.

Acting Chairman COMMONS. Mr. Clarence Smith.

Mr. KELLEY. I did want Mr. Gille to say a few words upon sanitation and ventilation, if you are interested.

Acting Chairman COMMONS. Suppose we take that up later. I have called the next witness now.

Mr. KELLEY. All right.

TESTIMONY OF MR. CLARENCE A. SMITH.

Acting Chairman COMMONS. Give your name and address to the reporter.

Mr. SMITH. Street address? Clarence A. Smith, 1114 South Arizona Street.

Acting Chairman COMMONS. State your present occupation.

Mr. SMITH. I am manager of the Socialist Publishing Co. and acting mayor at the present time.

Acting Chairman COMMONS. How long have you been acting mayor?

Mr. SMITH. About 80 days.

Acting Chairman COMMONS. What position did you hold by election?

Mr. SMITH. Member of the city council and president of the city council. By virtue of being president of the city council I act as mayor in the absence of the mayor.

Acting Chairman COMMONS. When were you elected?

Mr. SMITH. In April, 1913.

Acting Chairman COMMONS. Were you connected with the city government prior to that?

Mr. SMITH. Yes; I was first assistant treasurer for two years.

Acting Chairman COMMONS. When were you elected?

Mr. SMITH. That was an appointive position. I was appointed to the position May, 1911.

Acting Chairman COMMONS. Going back further, what was your first connection with the city government?

Mr. SMITH. That was my first connection with the city government.

Acting Chairman COMMONS. How long have you been connected with this publication—the Socialist publication?

Mr. SMITH. Since December, 1910. Not in exactly the same capacity, however, as at present.

Acting Chairman COMMONS. What publication do you refer to? What are the publications? Is it a printing office or a newspaper office?

Mr. SMITH. Both newspaper office and printing office. We print the Butte Socialist and the Montana Socialist, two separate publications.

Acting Chairman COMMONS. How long have those papers been published?

Mr. SMITH. The Butte Socialist was established in December, 1910. The Montana Socialist, September, 1912.

Acting Chairman COMMONS. How long have you been connected with the Socialist Party?

Mr. SMITH. Since June, 1902.

Acting Chairman COMMONS. Which wing?

Mr. SMITH. Why, at that time there was only one. In fact, at the present time there is only one Socialist Party in Butte. It was known in 1902 as the Socialist Party of America. It had just a short time previous to that been reorganized at Indianapolis—the Socialist Democratic Party and the Socialist Party had merged at a convention in Indianapolis previous to my joining the Party.

Acting Chairman COMMONS. Have you been active as an organizer of that party?

Mr. SMITH. Not as an organizer. I have been more or less active as a member of the party during all of that time.

Acting Chairman COMMONS. And what national conventions have you attended?

Mr. SMITH. Why, I attended the national convention at Indianapolis in 1913, and I was a visitor at the convention in 1904. I have attended two national committee meetings, I believe.

Acting Chairman COMMONS. Are you a member of the national committee?

Mr. SMITH. No; I am not; not now.

Acting Chairman COMMONS. What labor organizations are you affiliated with?

Mr. SMITH. None at present. I am not eligible to membership in the labor organizations.

Acting Chairman COMMONS. You are not connected with any national organization?

Mr. SMITH. Not at this time.

Acting Chairman COMMONS. Except the Socialist Party?

Mr. SMITH. That is correct.

Acting Chairman COMMONS. What others have you been connected with?

Mr. SMITH. I became connected with the Knights of Labor in June, 1893, and I remained a member of that organization until 1898, when the local to which I belonged organized as the local of the Western Labor Union, which was organized in Salt Lake City in 1898. I remained a member of that organization which later changed its name and jurisdiction to the American Labor Union until 1905, when the Western Federation of Miners and the Western Labor Union and several other organizations formed the Industrial Workers of the World in Chicago. Shortly after that—

Acting Chairman COMMONS. Were you a delegate to that meeting?

Mr. SMITH. Yes; I was one of the representatives of the American Labor Union at that meeting.

Acting Chairman COMMONS. What has been your connection with that organization, the I. W. W., since?

Mr. SMITH. I remained a member of the local in Butte, in which I held membership until, I think, some time in 1907, when my occupation took me outside of the jurisdiction of the union.

Acting Chairman COMMONS. So that you lapsed membership in the I. W. W.

Mr. SMITH. Yes.

Acting Chairman COMMONS. Are you not now a member of that organization?

Mr. SMITH. No.

Acting Chairman COMMONS. How long have you lived in Butte?

Mr. SMITH. Since September, 1900.

Acting Chairman COMMONS. Has your occupation been that of a newspaper man or publisher.

Mr. SMITH. Well, my occupation has been more or less along newspaper line since I was 17 years old. There has not been more than three or four years during that time that I have not been employed in one way or another with newspapers.

Acting Chairman COMMONS. Has your occupation kept you in touch with the labor conditions in Butte?

Mr. SMITH. Well, I will say with reference to that that when I came to Butte in 1900, as secretary-treasurer of the Western Labor Union, the organization that I speak of as having been formed in conjunction with the Western Federation of Miners, and I remained in that position until the organization was merged into the I. W. W. Headquarters in Butte.

Acting Chairman COMMONS. I am speaking now particularly of the local labor situation since 1900; have you been acquainted with the local labor situation?

Mr. SMITH. Yes; I have been pretty closely connected with it since that time. Not officially, as a member of the Socialist Party, but the party is in very close affiliation with the local labor organizations.

Acting Chairman COMMONS. When did the Socialists first become a factor in the labor-union movement of this place?

Mr. SMITH. Well, I should say that the Socialist Party became a serious factor in the labor movement here as early as 1902. I do not mean to say by that that the party principles and policies dominated the movement at that time, but it had a strong influence in the movement at that time.

Acting Chairman COMMONS. How has its influence increased? Has its influence increased during that time?

Mr. SMITH. Its influence has increased gradually and continuously since that time.

Acting Chairman COMMONS. Among the membership of the miners' union?

Mr. SMITH. Among the membership of, I should say, nearly all unions in Butte.

Acting Chairman COMMONS. Nearly all of the unions?

Mr. SMITH. In Butte; yes.

Acting Chairman COMMONS. When did the Socialists first put up candidates for office in the town or city of Butte?

Mr. SMITH. They had a city ticket in 1900. Their first county ticket was in 1902. The city ticket was named in 1903, the following spring.

Acting Chairman COMMONS. When was the first election in which they were successful in the election in the county?

Mr. SMITH. In April, 1911. Did you say in the county?

Acting Chairman COMMONS. In the county.

Mr. SMITH. They elected an alderman in 1903.

Acting Chairman COMMONS. About when was the next election?

Mr. SMITH. Well, we had no greater strength than a representative from that ward until the election of April, 1911, when we elected all of the general officers of the city and five of the eight aldermen who were elected at that time.

Acting Chairman COMMONS. Then the later elections; what has been the growth of the vote and of the party?

Mr. SMITH. Well, I mean going on from the election of 1911—in the campaign of 1912 the discharge of these Socialists on the hill had a strong influence in that campaign.

Commissioner GARRETSON. That was the incident referred to in previous testimony?

Mr. SMITH. Yes. But the intimidation upon the voters generally because of that discharge, and the reasons that were openly given for discharging the men, together with a coalition of the Democratic and Republican Parties in that campaign resulted in our defeat, in spite of the fact that our party polled a greater vote than either of the other parties.

We elected only one alderman in 1912. In 1913—I should come from 1912, from the spring election to the county election, that was a very strenuous campaign between the Socialist Party and the Democratic Party of this county. I may say on the face of the returns the Socialists were beaten. Very close vote, however.

Acting Chairman COMMONS. That is the fall of 1912?

Mr. SMITH. Yes, sir.

Acting Chairman COMMONS. What next?

Mr. SMITH. 1913, a year ago last spring, the party again elected or reelected all of its general officers and seven of the nine aldermen. There was one vacancy to be filled. We elected all of the general officers and seven of the nine aldermen to be elected.

Acting Chairman COMMONS. That is the present—

Mr. SMITH. That is the present complexion of the city council.

Commissioner GARRETSON. I would like to ask one question right there. You used a peculiar phrase a moment a moment ago, "On the face of the returns."

Mr. SMITH. Yes, sir.

Commissioner GARRETSON. What lies behind that?

Mr. SMITH. I don't know that it is worth while—

Commissioner GARRETSON. That is dead now?

Mr. SMITH. We believed that nearly all of our candidates were elected. I am not able to prove it to you, though.

Commissioner GARRETSON. I didn't know whether you meant that or not.

Commissioner O'CONNELL. Isn't that pretty generally true of the defeated candidate usually?

Mr. SMITH. No, sir; I don't believe it is. That is the only election we have ever contested in the city or county.

Commissioner O'CONNELL. You did contest?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. You had a recount?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. What was the result of the recount?

Mr. SMITH. The result of the recount followed very closely to the vote as shown in the election. I may say in connection with this, however, that a number of the sacks containing the ballots were opened—showed they had been opened when the recount came.

Acting Chairman COMMONS. To go back to the relation of the Socialist to the miners' union, will you follow that out a little further the same way you have the city election? Have the Socialists elected their people to positions in the miners' union and has there been an effort to do so to get control both of the union and of the city and county governments?

Mr. SMITH. I don't think the commission could understand that very well without going briefly into the—I have here a list of the officers of the miners' union some place. I wish to say that the issue between the Socialist Party and the opposition in the miners' union has not been strictly a party question; in fact that applies to some extent to the political situation here. The Socialist Party, since the fall campaign of 1910, when considerable strength was shown, has been recognized in this city and county as the active opposition to the in-

fluence of the mining corporations in both economic and political organizations in this city and county. Both economic and political reasons. For that reason the support of the Socialist Party in miners' union elections, as well as in the political campaign, has come largely—not very largely, but to some extent—from persons who were not well-grounded Socialists; you understand, it has simply been a question as to a division of the people, as to whether this community should be dominated by mining corporations both in labor organizations and in the city and county governments or by the people themselves. That is a reason I don't want the record to show as coming from me, that the fight for control of the officers in the miners' union has been a political question simply.

Commissioner GARRETTSON. You mean a large number of people voted with the Socialists politically and fraternally because they were at variance with certain conditions which they thought the Socialists were the best means of correcting?

Mr. SMITH. That is the idea.

Commissioner GARRETTSON. When you speak of the influence, the increasing influence of the Socialists in the miners' union, do you mean the regular card Socialists or the sympathizers?

Mr. SMITH. I meant the influence which exhibited itself in the vote for officers of the miners' union and in matters of that sort.

Commissioner GARRETTSON. How has that influence or that effort developed during these years since 1902?

Mr. SMITH. I thought I had a list of the officers here that would indicate that. Now, in the election of 1907 the active opposition to what is commonly known here as company control of the miners' union caucused before the election and nominated candidates and were successful in electing some of them, among whom was one Flynn as president of the miners' union.

Acting Chairman COMMONS. Just mention, while you are there, the different positions in the miners' union which are subject to election.

Mr. SMITH. Well, the important positions are the president, vice president, recording secretary, financial secretary, and executive committee. I believe there are other minor positions—warden, and so forth—but those are the important positions.

Acting Chairman COMMONS. Other positions are appointed by the executive committee?

Mr. SMITH. Yes; such as walking delegates and assistant secretaries. I believe that some assistant secretaries are elected also.

Acting Chairman COMMONS. Well, now, you may continue.

Mr. SMITH. Yes. In 1909; in the election in the miners' union in 1909 the so-called anticompany ticket was successful. A very large vote was cast. Dan Sullivan was elected president.

Commissioner O'CONNELL. Have you the vote there?

Mr. SMITH. No; I haven't the vote.

Commissioner O'CONNELL. You say a very large vote was cast. What percentage was the vote of the total membership?

Mr. SMITH. That can better be answered by some of the members of the union at that time. I should say my recollection is that about 3,000 votes were cast at that election, probably 50 per cent of the membership, which is a large vote of the miners' union. Now, in the year 1911, the following election, the same ticket was successful; that is, the anticompany ticket won then, too. After that, in 1912, what we commonly call the company crowd—and I don't wish to cast any reflection upon any one at all, but that is the only way we can designate things here, and the only way we do designate them to those who understand the situation—in 1912 what was known as the company crowd was again successful. And since that time they have retained control of the officials of the miners' union.

Commissioner O'CONNELL. That is, you mean the local miners' union?

Mr. SMITH. The local miners' union.

Commissioner O'CONNELL. No. 1.

Mr. SMITH. Yes.

Acting Chairman COMMONS. That is, the election of 1909 and 1911 were similar in their results, is that it?

Mr. SMITH. Yes.

Acting Chairman COMMONS. Was there an election in 1910?

Mr. SMITH. Yes; 1909 and 1910 and 1911.

Acting Chairman COMMONS. Three years?

Mr. SMITH. I believe that Sullivan was elected twice, if my recollection is correct; in 1909 and 1910.

Acting Chairman COMMONS. Did this faction, whatever you call it—the anti—did they have control of all the offices?

Mr. SMITH. I believe that they did. There may have been a minor office or two.

Acting Chairman COMMONS. Was there any change in the policy of the union as the result of those three years of control?

Mr. SMITH. Why, there was a considerable change with regard to the policy of the union. It was during the legislative session of 1911 an attempt was made by the officials of the union to influence State legislation in favor of better ventilation and safer conditions in the mines.

Commissioner O'CONNELL. How about its influence upon the policy of the company?

Mr. SMITH. Well, I may say that the influence of this organization, or the fact that the policy of the union had been changed, together with the further fact that the anticcompany element had secured control of the city government and threatened control of the county government and State legislators from this county, had the effect of making the company very bitter toward the Socialists in this county, if that is the question that you ask.

Commissioner O'CONNELL. Then you encouraged their hostility rather than anything else, as I catch it?

Mr. SMITH. Well, I may answer that by saying that any influence that tends to interfere with the control of the company encourages the hostility of the company.

Acting Chairman COMMONS. The control was lost in 1912, then, was it; the election of 1912?

Mr. SMITH. Yes, sir.

Acting Chairman COMMONS. What was the vote at that time, and what were the reasons for its loss of control? Had you not been able to accomplish the program?

Mr. SMITH. Well, I would prefer that that question be answered by some of the miners themselves. It is generally believed that the judges of election, who were elected on a ticket opposed to the incumbents at that time, largely influenced the result.

Commissioner O'CONNELL. Was the effect of the administration—city administration of the Socialist Party when in the city hall—as I understand there were one or two years you were in control of the offices of the city government?

Mr. SMITH. Yes.

Commissioner O'CONNELL. What had been the result of that control?

Mr. SMITH. We have been in control since 1911, and are still in control.

Commissioner O'CONNELL. 1911?

Mr. SMITH. What do you mean by the result?

Commissioner O'CONNELL. Well, what had been the—I take it that before you were in control, from the time you spoke about—1902 and 1903, because you disagreed with the situation in the city, the administration of the city, the political parties that were running the city, and so on, you set toward getting control of the city government yourselves, the Socialists? Now, what has occurred by the Socialist Party since then in the city hall, as you say, as an improvement over what was being done by those who were in power before you?

Mr. SMITH. Why, I can't say that for the economic advancement of the workers themselves that a great deal has been accomplished, except that the health conditions have been greatly improved in the city during that time. That is the biggest thing that the Socialists have done here in my judgment.

Commissioner O'CONNELL. The health conditions?

Mr. SMITH. The health conditions in the city have been vastly improved.

Commissioner O'CONNELL. For instance?

Mr. SMITH. As, for instance, as shown in the diminished death rate from communicable diseases and from contagious diseases.

Commissioner O'CONNELL. And what was done to lessen the ratio of deaths? Mr. SMITH. The better cleaning of the city, a systematic and practical disposal of garbage, and that sort of thing, enforcement of sanitary regulations. I think that has been probably the most important thing that has been accomplished.

Commissioner O'CONNELL. And has the cost of citizenship been reduced in any way; I mean living in the community, the owning of homes, taxation.

Mr. SMITH. No; the cost of living has not been reduced, because in the city administration that would not be possible.

Commissioner O'CONNELL. The moral condition of the city has been improved?

Mr. SMITH. The moral condition has been improved considerably.

Commissioner O'CONNELL. In what way?

Mr. SMITH. Well, the sale of liquor in the restricted district has been done away with. Saloons have been closed there for one thing, and the pianos—music has been taken out of the district. Wine rooms have been closed.

Commissioner O'CONNELL. You mean by restricted district that commonly known as the red-light district?

Mr. SMITH. Yes, yes.

Commissioner O'CONNELL. Has that been closed entirely?

Mr. SMITH. Oh, no; not closed entirely; simply the attractive features taken from it.

Commissioner O'CONNELL. The attractive features?

Mr. SMITH. The features that attracted people to it, such as music, the matter I refer to, the sale of liquor in the district; the matter of having music there nights and all that sort of thing.

Commissioner O'CONNELL. Have the hours of closing the saloons been made earlier?

Mr. SMITH. Never been any change in that respect since—

Commissioner O'CONNELL. What are the hours of closing now?

Mr. SMITH. I don't think they ever close. I have never seen them closed except on election days and such days.

Commissioner O'CONNELL. They have no keys at all?

Mr. SMITH. I wish to say that the first time I recollect the saloons ever having been closed in this community is on election days since the Socialists have had control of the city government.

Commissioner O'CONNELL. Well, is that by choice of the saloon keepers themselves or by some action?

Mr. SMITH. That is by order of the mayor of the city.

Commissioner GARRETSON. Have any civic economies been effected, either that expenditures for public works or any kindred purpose have been lowered or that you have got more for the same amount of money expended?

Mr. SMITH. Oh, yes; I don't think that is disputed seriously by anyone, that we have got better—more and better service for less money than ever before in the city.

Commissioner GARRETSON. Has any special privilege heretofore enjoyed by any interest been curtailed in any degree, or has it ever been alleged that they had any special favor?

Mr. SMITH. Yes; there are special privileges enjoyed, but they are secured through State legislation entirely. The city is powerless in the matter of things of that kind.

Commissioner GARRETSON. City's charters, then, aren't the source of the things complained of?

Mr. SMITH. No. I don't know what the line of questioning is, but since we touched upon that matter of discrimination I should like the record to be a little fuller than it is through the testimony of Mr. Kelley.

Acting Chairman COMMONS. Of discrimination?

Commissioner GARRETSON. You mean against men for beliefs?

Mr. SMITH. Yes.

Acting Chairman COMMONS. The Socialists. Well, you were connected with the Socialists, and I presume you could speak of your own knowledge.

Mr. SMITH. Yes.

Acting Chairman COMMONS. On the subject.

Mr. SMITH. I could speak of my own knowledge and I have a copy of a paper that we issued, a special issue of a paper that we got out immediately after the discharge of these men on the hill.

Acting Chairman COMMONS. You might file that.

Mr. SMITH. It will give references.

Acting Chairman COMMONS. Kindly have the reporter mark it.

Mr. SMITH. I want to see if it is all here. I see it has been torn, some of it. Yes; I guess it is all here.

(The paper referred to, entitled "The Butte Socialist," volume 2, No. 8, dated Butte, Mont., March 28, 1912, was submitted in printed form.)

Mr. SMITH. The statement beginning on the first page is the important one. Now, will you copy that and return it, or how about it?

Acting Chairman COMMONS. File it as an exhibit?

Commissioner GARRETSON. Is that your only copy?

Acting Chairman COMMONS. Is that your only copy?

Mr. SMITH. I don't know. I telephoned to the office. I don't know whether we have another copy or not.

Acting Chairman COMMONS. Now, you may state, if you will, your interpretation of that situation.

Mr. SMITH. Well, I simply want to state that men were discharged because they were known to be active members of the Socialist Party. I have the words of the men themselves that they were told that when they were discharged.

Acting Chairman COMMONS. What year was this, 1912?

Mr. SMITH. 1912, yes.

Acting Chairman COMMONS. How many of them were discharged?

Mr. SMITH. It was stated here that one hundred, a hundred odd.

Acting Chairman COMMONS. A hundred and twenty.

Commissioner GARRETSON. One hundred and forty.

Mr. SMITH. One hundred and forty.

Commissioner GARRETSON. That is correct, isn't it?

Mr. SMITH. My recollection is that our estimate of the number at that time was between 300 and 400.

Acting Chairman COMMONS. Well, then, they were reinstated, some of them. What proportion, or what number were reinstated?

Mr. SMITH. I could not say as to that how many were reinstated. Quite a number left town. Others who were the most active members of the party, who failed to secure reinstatements—positions were found for them in the city under the city government. Others failed to secure employment of any kind. One man that I could refer to here is Ole Kolstead who was a repair man at the St. Lawrence mine for 20 years, was discharged. He was told that if he would sever his connection with the Socialist Party he could stay at work. He refused to do that, and he was discharged. I may say that after that Mr. Kolstead failed to secure employment, and tried to go into business for himself. I helped him to some extent, but he failed through lack of experience or capital, and later tried to commit suicide. He didn't succeed at that. I believe he is in the insane hospital now. I am not certain whether he died there during the last winter or not. This is one of a number of such cases.

Acting Chairman COMMONS. Your statement of 300 or 400 is based on enumeration?

Mr. SMITH. Based on enumeration and an estimate made at the time by members of our party.

Acting Chairman COMMONS. And your statement regarding the number that were not reinstated, on what do you base that?

Mr. SMITH. Well, that I would not be able to say, as to the number that were not reinstated, because, as I said, many left town.

Acting Chairman COMMONS. How many, of your own knowledge?

Mr. SMITH. Were not reinstated?

Acting Chairman COMMONS. Yes.

Mr. SMITH. Oh, I think I could safely say 20 of my own knowledge who remained here.

Acting Chairman COMMONS. And those that left town?

Mr. SMITH. And others that left town; yes.

Acting Chairman COMMONS. How many that left town?

Mr. SMITH. Well, that would only be a guess; if I should attempt to say that, I should say a hundred left town.

Acting Chairman COMMONS. And the number that were reinstated you don't know?

Mr. SMITH. No; I could not answer that; I could not say as to that.

Acting Chairman COMMONS. Well, would you want to say that the number was—in view of what has been said, that the number was more than 140 that were removed on this occasion?

Mr. SMITH. Yes; I believe, I firmly believe that more than 300 were discharged at that time for that reason.

I may add this, however, that it is my judgment that more were discharged than were intended to be discharged by the persons in authority; that is to say, I have reason to believe that bosses took advantage of the situation to get rid of men that they had personal grudges against. In fact I know men were discharged for being Socialists at that time who were actually not Socialists.

Acting Chairman COMMONS. Did the union take this matter up with the company?

Mr. SMITH. Yes, sir; a petition was circulated, as I remember it, for a special meeting of the union to consider this matter. The meeting was held and a committee appointed to wait on the company and demand the reinstatement of these men. This point also can probably be covered a little closer by some one who is active in the union now. The committee met with the officers of the company; the company took the position that they had the right to say who should work for them or not, without interference from anyone else. The position the company took the committee reported back, and I believe a larger and increased committee was made at that time to negotiate further with the company, which they did, and it finally resulted in a referendum vote being taken on the question of striking to support the discharged men.

Commissioner GARRETSON. To support the demand for the reinstatement of the men?

Mr. SMITH. Yes; to support the demand for the reinstatement of the men.

Acting Chairman COMMONS. You spoke of two factions in the union; which faction took this matter up; which faction was in control when this matter was taken up?

Mr. SMITH. The so-called radical faction was in control of the officers of the union at that time and they were responsible for the initiation of the move to reinstate the men.

Acting Chairman COMMONS. You spoke of one faction as radical; what is the other faction?

Mr. SMITH. Well, I don't know that the words are proper words to use, radical and conservative, because they do not properly identify the interests.

Acting Chairman COMMONS. Will you explain that a little more fully—what do you mean?

Mr. SMITH. The matter of company-controlled officers, or an officer who was not so controlled, that would be my definition of the situation.

Commissioner GARRETSON. How are they described locally? Company men or anticompany men?

Mr. SMITH. That is the generally accepted description.

Acting Chairman COMMONS. Are they also described as conservatives and radicals?

Mr. SMITH. Yes, sir; that is the phrase that the newspapers use in preference to the other—the daily newspapers.

Acting Chairman COMMONS. What is the fact; is it that the conservative men favor the company and the radicals are opposed to the company—is that your notion?

Mr. SMITH. No, sir; I should say that it is because the men who are styled conservatives by the daily papers are really representatives of the interests of the company, and that the others are representatives of the interests of the workers themselves.

Acting Chairman COMMONS. What specially have you in mind? State what your distinction is between conservative men who have in mind the interests of the company and radical men who do not. What specific act directly marks their actions? What have they done or not done?

Mr. SMITH. Well, we can go back to about the time I came here in 1900; the fight was on then for the eight-hour law in this State. The economic masters were Daly, which at that time became Amalgamated, and Clark and Heinze. The Daly interests, or Amalgamated interests, controlled the officers of the organization, and their manner of control is a matter that can be gone into later, if you wish. But just to show the difference, what is meant by company control or otherwise, I may say in spite of the fact that the Daly or Amalgamated interests controlled the officers of the union at that time, that this man Heinze, who was in a fight with the Amalgamated for the control of the courts, was able to get such a hold upon the rank and file of the workers as to win in that election, the election of 1900, and at no time, however, to my knowledge, from that time to 1908 or 1909 did the actual control of the officers of the union pass from the company.

Acting Chairman COMMONS. Generally that is the feeling of the Socialist element of the town, that the conservatives of the union are company men?

Mr. SMITH. Well, I should say that that is the feeling of the community generally; it is a recognized contest.

Acting Chairman COMMONS. Any questions?

Commissioner GARRETSON. Yes; one or two questions I want to ask. My attention was distracted for a moment, and I didn't hear the last questions you asked. In this eight-hour contention was there any violence whatever?

Mr. SMITH. You mean of the obtaining of the eight-hour law years ago?

Commissioner GARRETSON. Yes, sir.

Mr. SMITH. No, sir; no violence.

Commissioner GARRETSON. The rank and file of the men favored the eight-hour law, and the officers of the union opposed it; is that the history?

Mr. SMITH. The officers of the union, while not openly and actively campaigning against the eight-hour law, would not permit the union to be used in its favor.

Commissioner GARRETSON. It was a still hunt on their part it is alleged.

Mr. SMITH. That is correct.

Commissioner GARRETSON. Is politics in general—I want to phrase that in a way—you heard about Caesar's estimate of what his wife should be, pure and above reproach?

Mr. SMITH. Yes, sir.

Commissioner GARRETSON. Is the average politician—in politics in general in this locality, would she have any business here?

Mr. SMITH. Why, I have an idea she would be safe in the Socialist Party here, Mr. Garretson.

Commissioner GARRETSON. In that case is the Socialist Party lonesome in that respect? Are politics conducted here on a high plane, in the general opinion of the citizens themselves?

Mr. SMITH. Why, that has not been the case. I believe politics are going to be conducted on a higher plane because of laws that we have recently secured.

Commissioner GARRETSON. You are familiar with what took place in Adams County, Ohio, a short time back?

Mr. SMITH. Not very familiar.

Commissioner GARRETSON. A large number of voters were disfranchised for selling their votes.

Mr. SMITH. Yes, sir.

Commissioner GARRETSON. What effect would it have on the electors in this locality if a like investigation should take place? Any?

Mr. SMITH. I don't think the same condition would be revealed here.

Commissioner GARRETSON. It is simply persuasion instead of money.

Mr. SMITH. Men sell their votes for jobs; that is the influence that controls.

Commissioner GARRETSON. A man that don't have jobs to dispose of would not be a political factor, is that it?

Mr. SMITH. I would put it the other way, that the man with the most jobs to dispose of would be the strongest political factor.

Commissioner GARRETSON. That is all.

Commissioner O'CONNELL. Tell me, what positions in the city administration are appointive?

Mr. SMITH. Why, the city clerk is appointed, the superintendent of streets, the commissioner of public works, and the city attorney.

Commissioner O'CONNELL. The chief of police?

Mr. SMITH. No, sir; the chief of police is really appointive, but he holds under the civil-service law.

Commissioner O'CONNELL. Chief of the fire department?

Mr. SMITH. The chief of the fire department holds in the same manner, practically civil-service regulations.

Commissioner O'CONNELL. The civil service applies to all the police department and the fire department?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. And not any other department?

Mr. SMITH. No, sir.

Commissioner O'CONNELL. Does the city operate its own waterworks?

Mr. SMITH. No, sir; no, indeed.

Commissioner O'CONNELL. That is a private corporation?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. Is that owned by the mining company?

Mr. SMITH. Why, it is by the same interests, we understand.

Commissioner O'CONNELL. But it is not as the Anaconda or Amalgamated Co.?

Mr. SMITH. No, sir.

Commissioner O'CONNELL. It is the Butte Water Co., or something of that kind?

Mr. SMITH. The Butte Water Co.

Commissioner O'CONNELL. When the administration changed as it is from the old to the new method, were all the appointive officers changed? When the last mayor, or the mayor who was elected at the last election, did he appoint all the positions he had authority to appoint?

Mr. SMITH. I believe that he did. I don't think any of the appointive officers held over except a subordinate here and there probably.

Commissioner O'CONNELL. Were all those appointments made from those men who were holding membership in the Socialist Party or from the citizenship generally?

Mr. SMITH. They were not confined to members of the party at all; in fact, we have had a city auditor for nearly four years, a man who is now a candidate for nomination on the Democratic ticket in this county, and Dr. Horst, city health officer, was retained from the old administration.

Commissioner O'CONNELL. What number of appointments were of the same party that was in power, for instance the city attorney?

Mr. SMITH. You mean what appointments were made from members of the Socialist Party when they took power?

Commissioner O'CONNELL. Yes, sir.

Mr. SMITH. City attorney, city clerk; I don't know—street commissioner, I believe those were the only heads of departments that were changed.

Commissioner O'CONNELL. Were there appointments under the chiefs of those departments?

Mr. SMITH. Yes, sir; there were appointments, some of the old-party men were retained, and others were appointed who were of other parties. The commissioner of public works, for instance—I think I had better tell you, it won't take but a minute—whether I can state all of them or not I won't be sure—the city engineer was a Republican, I am speaking of appointments made by the Socialists in 1911, the city engineer was a Republican, the health officer was a Democrat, and the city auditor was a Democrat. I believe those three heads of departments were the only heads of departments that were not Socialists. The Socialist heads of departments were the street commissioner, city clerk, and city attorney.

Commissioner GARBETSON. Right there, was there a competent engineer affiliated with the Socialist Party?

Mr. SMITH. Well, there were engineers affiliated with the party, but we didn't consider them as competent as the man who was given the place.

Commissioner O'CONNELL. Where is the mayor? Is he in the city?

Mr. SMITH. No, sir; he is in Salt Lake City at present.

Commissioner O'CONNELL. Incapacitated in some way?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. Does he reside there?

Mr. SMITH. No, sir.

Commissioner O'CONNELL. You are simply holding the position during his absence?

Mr. SMITH. Yes, as president of the council. The mayor was stabbed about a month ago.

Commissioner O'CONNELL. That is all.

Commissioner LENNON. What party was in power in the union when the last agreement was made with the company—I should not say party, but were what you call the radical faction in power, did they hold the offices when the last agreement was made?

Mr. SMITH. I don't know as to that, and it is not of much importance, anyhow, because it was a matter of referendum vote, the matter of that agreement.

Commissioner LENNON. That is, the agreement was formulated by a committee and approved by a referendum vote, is that what you mean?

Mr. SMITH. Yes, sir.

Commissioner LENNON. Were you here this morning when Prof. Commons, the chairman, opened the session?

Mr. SMITH. No, sir; I didn't get here until about 11 o'clock.

Commissioner LENNON. He made the statement before we started in, that we were not here to undertake to settle internal quarrels or act as mediators, but to ascertain the causes of industrial unrest and report such recommendations as we might finally conclude were advisable to Congress for the amelioration of this unrest. He also stated that we would not take up any occurrence taking place on June 13 or since that date. Now, will you, or are you in position to give us an idea of the growth of the division into factions of the

miners' union in this city which caused such unrest—the division of the union as it apparently was divided prior to June 13?

Mr. SMITH. There are so many elements entering into that that I may be able to give you some idea of it. The basis for the division, I should go back, as I have stated, at least 14 years, to the time I came here, and possibly follow back from that.

I believe that the basis of the division is the matter of company interference in union affairs, I think that is the chief point of contention in the miners' union; many other things enter into it. For instance, the agitation for a better form of unionism than has prevailed in this country hitherto has probably been stronger here than any other part of the country. I believe that the rank and file of the workers in Butte have made a closer study of the matter of organization, labor organization, than is the case of any other part of the country. The feeling is pretty general here I think among those who have studied the question, and many have, that the mining industry ought to be within the jurisdiction of one labor organization, just as the operation of the mine is under the jurisdiction of one operating concern, and not split up among a number of craft organizations. The Western Federation of Miners has largely represented, that idea; has represented that principle to some extent, but not wholly so. The trades here, the machinists and blacksmiths and carpenters, plumbers, iron molders, those different trades still maintain their separate jurisdictions with the company. The engineers, of course, belong to the Western Federation of Miners, but the fact that they have an organization separate has been responsible for some friction between the unions themselves at times. Well, there is that feeling on the matter of organization that has entered into it, and that brings us to the influence of the Industrial Workers of the World in this question.

Just at the time that the agitation for industrial organization was at its height here, the Industrial Workers of the World was formed in Chicago. Just about that time and while the organization, through what many of its members considered a mistaken policy, has alienated the workers of this community from it, yet the principle of industrial unionism has remained here, and the fact that the I. W. W. stood for those principles has given a sort of prestige to the organization here up to the present time.

Commissioner GARRETTSON. How many members has the I. W. W. here?

Mr. SMITH. I would guess 200 members of the Propaganda League.

Commissioner GARRETTSON. And in the organization proper?

Mr. SMITH. They have no organization proper.

Commissioner GARRETTSON. Do you know what the number is the organization itself has enrolled?

Mr. SMITH. The general organization?

Commissioner GARRETTSON. Yes, sir.

Mr. SMITH. I could only guess. If I was to guess I would say nine or ten thousand in good standing.

Commissioner GARRETTSON. You are not very far off. Mr. St. John testified before the commission there was thirteen or fourteen thousand in good standing. That was in the month of June, I think.

Commissioner O'CONNELL. Is it the I. W. W. of Chicago you speak of, or this new faction of the I. W. W. known as the Detroit faction in the I. W. W.? With which faction does the I. W. W. of Butte affiliate? Do you understand the difference between the two?

Mr. SMITH. I understand the difference. The Detroit faction has no connection out West, I believe, at all.

Commissioner LENNON. What do you understand as being the difference between the two factions?

Mr. SMITH. Well, the difference between the two factions can be given as the difference between—perhaps I can get at it in a better way by telling the actual history leading up to the difference.

Commissioner LENNON. Well, just state it in a very few words. It is not a material detail as it has already been given to us.

Mr. SMITH. It won't take but a few minutes.

In the convention of 1905 the principles sought for by myself and others representing the labor unions in the Western Federation of Miners was the principle of industrial organization and organization on matters of political action, independent political action of the working classes. The I. W. W. subscribed to that but the next convention or the second convention after that,

I believe, took a stand against political action entirely—opposed absolutely to political action.

Commissioner LENNON. That is practically correct.

Mr. SMITH. And that marked the split in the organization, as I remember it Commissioner O'CONNELL. Some believed in contractual relations, and others absolutely not.

Mr. SMITH. I didn't understand that.

Commissioner O'CONNELL. Some believed in contractual relations or dealing with employers, and others none whatever; that is as given to the commissioner by the secretaries on both sides.

Mr. SMITH. Yes; that is correct.

Commissioner LENNON. Besides the discharge of these men that you have indicated you believe were discharged because of being Socialists, what other instances can you cite to the commission of the domination of the miners union by the company?

Mr. SMITH. What other instances of actual domination?

Commissioner LENNON. Yes, sir.

Mr. SMITH. Well, I can say in the fight in 19—I believe it was 1902 and not 1900—the campaign was very bitter between the Amalgamated on one side and Heinze on the other, and the officers of the miners' union were active company men. Ed. Long, for instance, was president of the union at that time; afterwards he worked a profitable lease from the company.

Commissioner LENNON. Well, what more recent instances?

Mr. SMITH. I don't like to testify as to recent occurrences in the miners union, because I know you have miners who will follow me on the stand who are more familiar with those things.

Commissioner LENNON. How have you reached the conclusion that the existence of these small-craft unions—comparatively small-craft unions in this city, were by any possibility tending to dominate the industrial situation as far as the miners are concerned—how do you reach the conclusion that the existence of those unions has been some cause for the widening of this breach and the creation of these factions?

Mr. SMITH. Well, this is the chief reason for that feeling. The craft unions down town, in the work outside of the jurisdiction of the mining companies, themselves enforce a scale of wages considerably in excess of the wages of the miners. For instance, the miners get \$3.50 a day, and the carpenters, plumbers, lathers, and building-trade men get wages of from \$6 to \$8 a day. The same tradesmen work for the mining company for considerably less.

Commissioner LENNON. In the same union?

Mr. SMITH. In the same union. As much difference as a dollar and a half to \$2 a day in some places; yes, more than that with regard to the plumbers. That creates a feeling among the miners that they are being grafted upon—not only are they being exploited through the sale of their labor power at the mines but also by the working class itself that belong to these other unions when they build houses and have work done in which these other tradesmen take part.

Commissioner LENNON. Have the factions arisen because of the desire to reduce the wages of the crafts or a desire of the miners to get the same wages the craft unions are getting?

Mr. SMITH. Well, I don't think there has ever been any express wish on the part of the miners to reduce the wages of any craftsmen in Butte.

Commissioner LENNON. I would like to get the information that my first question indicated, if I could. Perhaps we can get it somewhere from the miners themselves, and that is what caused this growth of these factions to the point where it did reach?

Mr. SMITH. Well, the last point that resulted in the break was unquestionably the domineering actions of the officers of the unions in dealing with the miners; but, as I say, the miners themselves can tell you better about that than I can.

Commissioner LENNON. That is all.

Commissioner GARRETSON. Your idea is that the culminating act was that the rank and file of the miners believed that their officers—the officers of the union—exercised—appropriated and exercised—a power that properly only belonged to the union as an entirety?

Mr. SMITH. Yes, sir. Not only that, but that the officers used every means to suppress any effort of the rank and file to reassert their constitutional rights or regain the control of the union through constitutional means.

Acting Chairman COMMONS. You were speaking of this split in the wages of the skilled craftsmen. What trades did you have in mind, the building trades?

Mr. SMITH. The building trades, particularly; yes, sir.

Acting Chairman COMMONS. You do not include machinists in that?

Mr. SMITH. I don't think there is—I was going to say I didn't think there was any difference in the wages of the machinists working for the company and other concerns, but I believe there is a slight difference. I did not have the machinists in mind, however, when I spoke of a difference.

Acting Chairman COMMONS. Generally, then, you say that the building trades working for outside contractors get a higher rate of pay than those who work for the Anaconda Co.?

Mr. SMITH. Yes, sir.

Acting Chairman COMMONS. And you say that runs from a dollar to a dollar and a half a day?

Mr. SMITH. I believe there is even a greater difference than that. In the case of the plumbers I believe there is a difference of two or three dollars. I am not positive as to that, however.

Acting Chairman COMMONS. Can you state whether or not there is any difference in the amount of work that they can put in in a year? How much does the building trades in this climate—how many months do they get in in outdoor work?

Mr. SMITH. Well, they can't—there are plumbers that work the year around; there are carpenters that work the year around for private contractors, quite a number of them, quite a number of them; what proportion of them I could not say. I might say that is an argument that is used in favor of the difference in the scale as between the company and private contractors.

Acting Chairman COMMONS. Does the Amalgamated or Anaconda give fairly steady work to these trades?

Mr. SMITH. I should say so; yes, sir.

Acting Chairman COMMONS. And in general the outside contractor could not give as steady work?

Mr. SMITH. Well, a number of outside contractors give steady employment to a number of men.

Acting Chairman COMMONS. But take the building construction, how many months in the year can bricklayers and carpenters get outside work in this climate—can they get seven months?

Mr. SMITH. Well, I have seen them laying brick here pretty much all winter—hurry-up jobs. I should say seven months is the average.

Acting Chairman COMMONS. On the average about seven months outside?

Mr. SMITH. Yes, sir.

Acting Chairman COMMONS. And on the inside, such as the Amalgamated; they get about 12 months?

Mr. SMITH. Yes, sir; and on inside work in town they get as much as 12 months.

Acting Chairman COMMONS. There is a considerable amount of inside besides that which is furnished by the Amalgamated?

Mr. SMITH. Yes; for instance, in the erection of a large building. It is generally intended to get the framework up and be ready to do the inside work when cold weather comes.

Acting Chairman COMMONS. Does the union make a scale with reference to inside or outside work, or with reference to the company? Is the Amalgamated Co.'s rate lower than that of operators outside who give steady work?

Mr. SMITH. Oh, yes; the operator outside who gives steady work pays as much as the contractor who only gives occasional work.

Acting Chairman COMMONS. The outside operator would have part of his work exposed and limited to seven months, and the finishing work would be limited to the extent of 12 months?

Mr. SMITH. Yes, sir; but in answer to your question, to be plain about it, the private contractor, even though he works the men steadily 12 months in the year, pays the downtown scale or a scale considerably higher than the wages paid by the company for the same tradesmen or members of the same union.

Commissioner GARRETTSON. But which employment does the average carpenter choose—the low rate of the Anaconda or the high rate of the contractor?

Mr. SMITH. I don't know that there is a choice in it.

Commissioner GARRETTSON. He exercises it when the opportunity offers, does he not, one way or the other—or does he?

Mr. SMITH. Now, in the wintertime, when work is scarce, he would prefer to work for the company rather than to be idle.

Commissioner GARRETSON. Is there any service fairly established?

Mr. SMITH. Yes, sir.

Commissioner GARRETSON. They stay with the low rate the year around?

Mr. SMITH. Yes, sir; I believe they do. Of course, there are carpenters downtown that have steady work.

Commissioner GARRETSON. Oh, yes; but if the opportunity offered to a man who was regularly employed by the Anaconda to get regular work with the contractor, does he or not as a rule leave the low wage and go to the high one?

Mr. SMITH. I should say so. Of course, he would consider then the probability of a permanent employment.

Commissioner GARRETSON. He would consider probable all the factors that enter into it?

Mr. SMITH. Yes, sir.

Commissioner GARRETSON. But what I want to know is, how does it work out practically; which do they do?

Mr. SMITH. I think the best answer to that would be that the best carpenters, I believe, are not working for the company. I think the more skilled tradesmen are not working for the company.

Commissioner GARRETSON. The finished men?

Mr. SMITH. Yes, sir.

Acting Chairman COMMONS. The company, I should judge, does not have that kind of inside-finish work that requires skilled labor; their work would probably be rough work?

Mr. SMITH. Nearly all; yes, sir.

Acting Chairman COMMONS. So that they wouldn't need that high skill. But take a man, a common, ordinary carpenter that does the ordinary rough work; would he in this town prefer to have a steady job with the Anaconda, or such as he could pick up in competition with better skilled men among the outside contractors?

Mr. SMITH. Well, the less skilled the man, possibly the more anxious he would be to secure the steady job, naturally.

Acting Chairman COMMONS. That would be the only type of man the Anaconda people would have?

Mr. SMITH. No, sir; they require skilled work in some cases.

Acting Chairman COMMONS. Then this fine inside-finish work, where you need a man to make a very fine work finishing—

Mr. SMITH. Not much of that. They do have some of that work, though.

Commissioner O'CONNELL. How about the miscellaneous trades outside? Take the cigar makers, printers, and tailors—those miscellaneous trades.

Mr. SMITH. There are practically no cigar makers here. The printers get less than the carpenters or plumbers or blacksmiths or lathers. The scale for the printers is less than for any of those other trades mentioned.

Commissioner O'CONNELL. It would average so among any of the miscellaneous trades that there might be, regardless of the number?

Mr. SMITH. Yes, sir.

Commissioner O'CONNELL. That is all.

Acting Chairman COMMONS. That will be sufficient, Mr. Smith. Mr. Dennis Murphy.

TESTIMONY OF DENNIS MURPHY.

Acting Chairman COMMONS. Give your name and address.

Mr. MURPHY. Dennis Murphy, Butte, Mont.

Acting Chairman COMMONS. What is your present occupation?

Mr. MURPHY. Miner.

Acting Chairman COMMONS. For what employer?

Mr. MURPHY. The Anaconda Co.

Acting Chairman COMMONS. What pay do you get?

Mr. MURPHY. Three fifty a day.

Acting Chairman COMMONS. How long have you been in the mining business?

Mr. MURPHY. About 10 years.

Acting Chairman COMMONS. Have you been active in the miners' union?

Mr. MURPHY. Yes, sir.

Acting Chairman COMMONS. Have you held office?

Mr. MURPHY. Yes, sir.

Acting Chairman COMMONS. What office?

Mr. MURPHY. President of the miners' union.

Acting Chairman COMMONS. When was your first official position in the miners' union?

Mr. MURPHY. I commenced in July, 1912, and ended July, 1913.

Acting Chairman COMMONS. I take it, then, you represented that element that was previously described as the company crowd?

Mr. MURPHY. Exactly.

Acting Chairman COMMONS. Did you hold a position prior to the time of 1912, when the antis came out?

Mr. MURPHY. No, sir.

Acting Chairman COMMONS. Had your record been such as you were recognized as opposing these antis during the career of the union and their career?

Mr. MURPHY. I don't know as I had any known record before 1912.

Acting Chairman COMMONS. But you were picked up as a candidate in 1912?

Mr. MURPHY. Yes, sir.

Acting Chairman COMMONS. For this reason. Do you call yourself a conservative or company man?

Mr. MURPHY. I call myself a conservative.

Acting Chairman COMMONS. What distinction do you made between those two terms?

Mr. MURPHY. Why, I believe a conservative union man is the man that would live up to the rules of organized labor strictly, and I suppose a company man would be a man that would work to the interests of the company in the union. That is the distinction I would make.

Acting Chairman COMMONS. Well, explain that a little more fully. What has been the attitude of the conservative element in the union toward the employer—toward the Anaconda Co.—in, say, the period since 1906 or 1907?

Mr. MURPHY. Why, I don't know that I have—the question again.

Acting Chairman COMMONS. I asked what has been the attitude of the conservative element toward the employer as compared with the attitude of the radical element?

Mr. MURPHY. I don't know as there was any particular attitude in force toward the company between the radical or conservative element to amount to anything during that period.

Acting Chairman COMMONS. Do they take a different attitude? Was the policy different toward the company than that which the radical element followed?

Mr. MURPHY. In some things their policy was different.

Acting Chairman COMMONS. In what was it different during the years 1909 to 1912? For example, what were the issues you put up against them in the campaign of 1912 in asking for election?

Mr. MURPHY. The issue was some of the literature they were subscribing to; that was one of the issues that was made in that campaign, that the radical element that had been in power were subscribing to.

Acting Chairman COMMONS. What, for example?

Mr. MURPHY. The Ripsaw was one paper.

Acting Chairman COMMONS. Where was that published?

Mr. MURPHY. I believe it is published in the State of Washington.

Acting Chairman COMMONS. What line of philosophy does it represent?

Mr. MURPHY. The I. W. W. philosophy.

Acting Chairman COMMONS. Which branch does it represent?

Mr. MURPHY. I am not positive which branch.

Acting Chairman COMMONS. What other paper?

Mr. MURPHY. The Solidarity was another paper.

Acting Chairman COMMONS. That represented the I. W. W. of what type?

Mr. MURPHY. I don't know which faction of the I. W. W. it represented. I know it was edited by an I. W. W.

Acting Chairman COMMONS. What other paper?

Mr. MURPHY. Those were the only two I recollect.

Acting Chairman COMMONS. Why should the subscribing for these papers occupy such a large place in your mind? Why should that be a reason for condemning them, or making it an issue in the campaign?

Mr. MURPHY. Those papers are generally condemnatory of the policy of the Western Federation of Miners, that was one reason.

Acting Chairman COMMONS. What were the points on which they condemned the policy? I take it your idea is not merely the subscribing to these papers, but that they indorse the principles, is that it?

Mr. MURPHY. Exactly.

Acting Chairman COMMONS. Now, those principles were attacking the Western Federation?

Mr. MURPHY. Yes, sir.

Acting Chairman COMMONS. Now, on what points did they attack them or oppose them?

Mr. MURPHY. I suppose in their method of procedure and line of conducting strikes and one thing and another.

Acting Chairman COMMONS. Their mode of procedure, what was their attack on the mode of procedure of the Butte union, I am here speaking of—not the Western Federation generally, but the Butte union?

Mr. MURPHY. The mode of procedure of the Butte union?

Acting Chairman COMMONS. What did they attack in the mode of procedure of the Butte union?

Mr. MURPHY. Well, I could not say, could not specifically state anything.

Commissioner O'CONNELL. Didn't they charge you were inactive? That you had done nothing for the miners and that sort of thing; that wages had not been increased or altered here for years? Wasn't that one of the charges?

Mr. MURPHY. Those charges had been made I expect; yes, sir.

Commissioner O'CONNELL. On that line of inactivity?

Mr. MURPHY. Yes, sir.

Commissioner GARRETSON. Didn't they also attack the method of election?

Mr. MURPHY. Not to my knowledge—in those papers.

Commissioner GARRETSON. That wasn't a question of procedure involved?

Mr. MURPHY. No, sir.

Commissioner O'CONNELL. But regardless of the papers, among the men here at Butte, those who were talking of it and agitating it and speaking on the street corners, if there was such a thing, in their denunciation of the union—I am not saying this because of any information that I have in mind in the matter. I am drawing on my imagination—was there statements to the effect that the Western Federation of Miners had done nothing and was inactive and belonged to the company and could not do anything because they belonged to the company?

Mr. MURPHY. Such statements as that were made.

Commissioner O'CONNELL. Such statements were circulated; I am drawing that from the testimony given here before by Mr. Smith?

Mr. MURPHY. Such statements were circulated.

Commissioner O'CONNELL. Were those the things that were charged?

Mr. MURPHY. Yes.

Commissioner GARRETSON. Was it also alleged that one of the assets of the Anaconda Co. was the ability to control the union of the miners?

Mr. MURPHY. It has never been alleged specifically to me that it was one of their assets.

Commissioner GARRETSON. Well, they might not express it in that way, but that the company was the gainer by controlling the union?

Mr. MURPHY. Such reports might have been made, not in my hearing.

Commissioner GARRETSON. Not in your hearing? [Laughter.]

Acting Chairman COMMONS. Order, please.

Commissioner GARRETSON. That is all.

Commissioner LENNON. Mr. Murphy, you spoke about their taking those two publications, the Ripsaw and Solidarity. You didn't object to their individually subscribing for those papers, did you?

Mr. MURPHY. No, sir.

Commissioner LENNON. Did they take the money out of the treasury for the papers?

Mr. MURPHY. Yes, sir.

Commissioner LENNON. For all the members of the union?

Mr. MURPHY. Yes; there was a clause in the constitution that specified, I believe, that 1 per cent of the dues should be turned over for educational purposes.

Commissioner LENNON. And under that clause those were the papers the union selected at that time?

Mr. MURPHY. Yes, sir; some of the papers.

Commissioner O'CONNELL. Who decided that those papers were the proper literature for the members?

Mr. MURPHY. I suppose it was decided at meetings of the miners' union.

Commissioner GARRETSON. By a majority action?

Mr. MURPHY. I expect so; yes, sir.

Commissioner GARRETSON. From your standpoint, has a democratic body like a union a right to assert its own preference in those matters?

Mr. MURPHY. I think so.

Commissioner LENNON. That is all I have, Mr. Chairman.

Acting Chairman COMMONS. What do you consider has been the accomplishments, or what has the union in the past 15 years accomplished for its members in the improvement of conditions—take sanitary conditions?

Mr. MURPHY. Well, I could not speak for 15 years.

Acting Chairman COMMONS. Well, since your activity, since your knowledge of the activity of the union and your participation in it.

Mr. MURPHY. I don't think they have accomplished very much in those lines. [Laughter.]

Acting Chairman COMMONS. The room will have to be cleared if there is any interruption of the witness. What about representing members of the union in the matter of damage suits or liability, and getting compensation for accidents? Has the union had a benefit system?

Mr. MURPHY. Yes, sir; they carried a sick benefit for 10 weeks in the year for anybody who was injured.

Acting Chairman COMMONS. How much was the benefit?

Mr. MURPHY. Ten dollars a week.

Acting Chairman COMMONS. And what was the amount of money which the member paid to entitle him to that, a dollar a month?

Mr. MURPHY. A dollar; and \$90 burial benefit.

Acting Chairman COMMONS. Were the total dues of the union \$1 a month?

Mr. MURPHY. Yes, sir.

Acting Chairman COMMONS. During the six years?

Mr. MURPHY. The dues of the union.

Acting Chairman COMMONS. Does that cover all expenditures of the union?

Mr. MURPHY. All expenditures of the union.

Acting Chairman COMMONS. Were there special assessments at any time?

Mr. MURPHY. There were special assessments for men that were afflicted with tuberculosis or were unable to work. It has been the custom of the union during the last five or six years to levy two bits or 50 cents assessments, according to the number of the men that were on the list to receive the money that would be derived from those assessments.

Acting Chairman COMMONS. So that a dollar a month was not sufficient to keep up this amount of benefit which the union was paying?

Mr. MURPHY. Well, not sufficient; the union thought that they could further help their sick and injured members by adding this assessment every other month, or every third month, as the case might be.

Commissioner GARRETSON. In that way did they pay more than the 10 weeks in the year?

Mr. MURPHY. This was a special assessment, and what was derived from it went for this particular purpose.

Commissioner GARRETSON. Were those particular persons for whom it was levied?

Mr. MURPHY. Exactly.

Commissioner GARRETSON. And paid them more than what was paid for in the regular dollar assessment?

Mr. MURPHY. Exactly.

Acting Chairman COMMONS. Has the union taken any steps toward protecting men who have been discharged?

Mr. MURPHY. The only steps that have been taken to my knowledge was in the one that was mentioned here to-day, where these 140 men—or whatever the number was—was discharged at the time.

Acting Chairman COMMONS. Were you president of the union at that time?

Mr. MURPHY. No, sir.

Acting Chairman COMMONS. You don't know, then, how that was taken up with the company?

Mr. MURPHY. Well, I wasn't active in it; just from being a member of the union. I wasn't active in that.

Acting Chairman COMMONS. Any other questions?

Commissioner GARRETSON. Yes; I have one. I would like to know two or three things.

Acting Chairman COMMONS. Go ahead.

Commissioner GARRETSON. Has your organization any regular protective machinery for the purpose of protecting men who claim to be unjustly discharged, and who, after investigation, the organization finds are unjustly discharged?

Mr. MURPHY. It never had to my knowledge.

Commissioner GARRETSON. Don't many organizations have—don't the average labor union have machinery of that character?

Mr. MURPHY. The United Mine Workers have, to my knowledge.

Commissioner GARRETSON. Well, don't every other one, almost, that you come in contact with?

Mr. MURPHY. I don't know whether any of the local craft unions have any such.

Commissioner GARRETSON. Do you ever come in contact with the railway organizations here, the Orphans' Home, the B. M. P.?

Mr. MURPHY. No; I haven't.

Commissioner GARRETSON. Their agreements all have a clause that reads: If a man is unjustly discharged, he shall have the right to a hearing, accompanied by committees of the organization, or representatives of the organization, it reads in some cases, and the right to appeal to the highest officer of the company. Those clauses are universal in all the agreements of men of that craft. Your organization has nothing of that kind?

Mr. MURPHY. No, sir.

Commissioner GARRETSON. Nor no method of raising money for the payment of dues for such purposes?

Mr. MURPHY. No, sir.

Commissioner GARRETSON. Have you at any time during your term in office in the union, or prior thereto, seen any effort—seen or been aware of any effort on the part of any officer of the company, or anybody from the shift boss up, to influence the action—the union action or political action of men in the union?

Mr. MURPHY. It has not been with me directly; I can't state for anybody else.

Commissioner GARRETSON. Well, have you ever seen evidence of it directed toward others?

Mr. MURPHY. Not to my knowledge.

Commissioner GARRETSON. Have you ever seen any effort to use men for or against legislation that the company either considered inimical to its interests or desirable for its purposes?

Mr. MURPHY. I haven't seen any. I was just going to state that I was a member of the last legislature in Montana, and I didn't witness anything of the kind during the session.

Commissioner GARRETSON. What was the attitude of the company toward eight-hour legislation originally?

Mr. MURPHY. I wasn't in Montana—

Commissioner GARRETSON. You don't know?

Mr. MURPHY (continuing). At the time.

Commissioner GARRETSON. Well, that is going too far back, then, for you?

Mr. MURPHY. Yes, sir.

Commissioner GARRETSON. That is all.

Commissioner O'CONNELL. I will ask this one question: Mr. Murphy, was there any influence in Butte or in this vicinity coming from people either in business or laboring men or in any of the walks of life in the community tending toward interference with the affairs of the miners' organization, who were not miners at all? Is there any outside influence that is endeavoring to dictate the policy or control the affairs of the miners' union for purposes not altogether for the miners?

Mr. MURPHY. Well, I could not state that there is. I haven't any specific knowledge of any.

Commissioner O'CONNELL. I don't mean by that the copper company altogether.

Mr. MURPHY. I know what you mean—from any source.

Commissioner O'CONNELL. Yes. For instance, your Socialist papers, or some of the Socialists in the city who are not miners, working at other trades, and who seem to take exceptional interest in the miners' affairs and probably little in their own?

Mr. MURPHY. They are certainly interested in them. I can't very well deny it. They are interested for political advantage.

Commissioner O'CONNELL. That is all, Mr. Chairman.

Commissioner GARRETSON. One more question, Mr. Chairman.

Acting Chairman COMMONS. All right.

Commissioner GARRETSON. Mr. Murphy, have you ever had reason to believe that the company which you serve was active politically or legislatively?

Mr. MURPHY. I had no reason to believe they were active legislatively during the last session of the legislature, though I was a member of it.

Commissioner GARRETSON. Nor locally in politics?

Mr. MURPHY. As far as I know, I have no knowledge.

Acting Chairman COMMONS. That is sufficient, Mr. Murphy. Mr. Gillie.

Mr. EVANS. Mr. Chairman, here are the two copies of the contracts that you desired made.

(See Kelley Exhibits Nos. 6 and 7.)

TESTIMONY OF MR. JOHN GILLIE.

Acting Chairman COMMONS. Mr. Gillie, you have some statement regarding the ventilation scheme. Could you state briefly and file with the reporter the details that you have?

Mr. GILLIE. Yes.

Acting Chairman COMMONS. When did the company start in with its improved attention or greater attention to improved ventilation?

Mr. GILLIE. Well, as the mines commenced to gain greater depth, say 10 years ago, when the mines were comparatively shallow, you have shafts enough and the ventilation takes care of itself, but when you get at greater depth these sulphide-ore mines get very warm, and it necessitates forced ventilation. One thing that favored us in that was the making of very favorable contracts for electric power, all we could use, within the last few years, so that we could scatter around these ventilating fans wherever we wished or wherever we had an opening to place a fan. The result has been a much more marked change in, say, the last five years than previous to that time and is going on at the present time. With reference to this ventilation, I would like to file an itemized statement showing here that the capacity, the fan capacity that we are using now—that we were not using 10 years ago—has increased to 2,000,000 feet cubic feet of air per minute for ventilation purposes. This copy, if it is of any use, I will leave.

(See Gillie Exhibit No. 1.)

Mr. GILLIE. Mr. O'Connell here asked Mr. Kelley about a condition that might obtain in these mines.

Commissioner GARRETSON. Not Mr. O'Connell. This is Mr. O'Connell [indicating]. My name is Garretson.

Mr. GILLIE. Garretson; yes, Mr. Garretson. There is a condition here that does not obtain in some mines, and that is due to the character of the ores. The ores are a compound of sulphur.

Commissioner GARRETSON. It is a chemical condition, then?

Mr. GILLIE. Yes, sir. That is, the ores are known as sulphide ores, being composed of certain ingredients, rock ingredients and sulphur combined. The oxidation of this sulphur and a large amount of timber that we have to use in mining operations here, the oxidation of that produces considerable of heat, although we don't have anything like some other mines, and for that reason our workings are naturally very much warmer, and we use probably what was referred to at your other mining investigations.

Commissioner GARRETSON. No; the question of heat was brought up here in this hearing. That didn't refer to heat?

Mr. GILLIE. Yes, sir.

Commissioner GARRETSON. It referred to dampness and to bad air and to one or two other features.

Mr. GILLIE. Well, of course, we could challenge any of the others in the world, I think, on air, as far as the component parts of the air are concerned.

The humidity and the temperature we have got a great deal the worst of it on, and it is quite extensive, when I state that for the Government mine inspector—or the State mine inspector, the ventilating figures alone amounted to \$279,000 for 1913.

Commissioner O'CONNELL. Well, of course, they haven't got the same gases to work against that you have?

Mr. GILLIE. Well, yes. We have no deleterious gases like a coal mine, inasmuch as they are explosive, or anything like that. We have powder gas, of course; gas from powder, but the heat and the humidity is the one thing that we have got to contend with. This electric power was a godsend to us in being able to string a wire a quarter of a mile away and stick a fan on there underground. We carry them anywhere and we have a fresh supply of air. You can stick a fan anywhere and just carry your wire for the power, and it relieves the condition very materially. Now, this is not entirely a condition—that is, this ventilating, it is not entirely a condition that we bring about ourselves on account of the men, which we would do. It is to our advantage.

Commissioner GARRETSON. It is a business proposition?

Mr. GILLIE. It is a business proposition, yes; nothing but that.

Commissioner GARRETSON. You don't palm it off as philanthropy, you make it business?

Mr. GILLIE. No. In addition to the taking care of the health of the men as far as we can, why it is so much to our good, because a man can do a day's work if he has got some air, and if he hasn't he can't; that is all.

Commissioner GARRETSON. I like good business works when they are put up as good business works, but when a man does a thing he ought to do and then claims credit for philanthropy for it, why I don't like it on the basis of so much a philanth.

Mr. GILLIE. Well, we are not philanthropists altogether exactly.

Acting Chairman COMMONS. Is that all?

Mr. GILLIE. That is about all.

Acting Chairman COMMONS. Well, if you will file your statement, then, we are very much obliged.

Mr. GILLIE. But would you care to know the difference in the rate of wages between the hill and town scale?

Acting Chairman COMMONS. Well, you have that information, have you?

Mr. GILLIE. Well, I haven't got it, but I can give it to you offhand.

Commissioner LENNON. I wish you would give us that. I was going to ask it of some of the workmen when we got to that.

Mr. GILLIE. We have no difficulty in securing all the craftsmen—that is, the trades craft—that we require on the hill—as we call the hill at the mines. Our employment is steady. They have comfortable places to work. Our wage scale at the present time is \$4.50 a day for machinists, for a carpenter, for a blacksmith, for a plumber. We only have one or two plumbers; we haven't many of those—for a boilermaker. Downtown that plumber would get \$8, the carpenter would get \$7. The machinist gets the same scale downtown and on the hill.

Commissioner GARRETSON. There is \$3.50 spread in that plumber, isn't there?

Mr. GILLIE. Oh, yes. Well, the plumber—you know what he is everywhere.

Commissioner O'CONNELL. He gets his.

Commissioner GARRETSON. I am not far enough away from home to find fault with the plumber. He might fix me next winter.

Mr. GILLIE. But we have no difficulty in securing good workmen. When we want a cabinet maker, for instance—that is, on finer work—if we have an office building on the hill that requires some fine fixtures, we have no difficulty in securing that man. We can get good men, and we can get them without any trouble. They will work for us at that scale in preference to working downtown and catching jobs wherever they can.

Commissioner GARRETSON. Well, now, let me ask you the same thing I asked the other witness.

Mr. GILLIE. Yes, sir.

Commissioner GARRETSON. If the man has regular employment down there, with all that goes with it, does he ever leave to go to you for regular employment?

Mr. GILLIE. No; he would not. Certainly not; because the carpenter is better off with \$7 regular employment than he is with four and a half.

Commissioner GARRETSON. Well, that was the feature?

Mr. GILLIE. Sure.

Commissioner GARRETSON. I wanted to determine.

Mr. GILLIE. Yes.

Commissioner GARRETSON. But, on the other hand, I suppose that if a man with you regularly had the opportunity for the steady employment in the town he would embrace the opportunity?

Mr. GILLIE. Yes, sir. Now, when we go into the town on our own building, for instance, we have got an office building right there on Main Street. If we send a man from our own mines up there into the town, we pay the \$7 to a carpenter, or the town scale. If we send an electrician, he gets \$6.

Commissioner GARRETSON. Your scale applies only to mine work around the mine?

Mr. GILLIE. To mine work directly in connection with the mine.

Commissioner GARRETSON. Or is there a territorial provision?

Mr. GILLIE. No; it is not territorial; directly in connection with the town and for town building we pay the regular scale to our own men; we pay the regular town scale.

Acting Chairman COMMONS. Anything further? Much obliged.

The commission will stand adjourned until to-morrow morning at 9 o'clock.

(And thereupon, at 5.15 o'clock p. m. of this August 6, 1914, an adjournment was taken until the following day, August 7, 1914, at the hour of 9 o'clock a. m.)

BUTTE, MONT., Friday, August 7, 1914—9 a. m.

Present: Commissioners Commons (acting chairman), Garretson, Lennon, and O'Connell.

Acting Chairman COMMONS. The commission will come to order. Mr. Pope.

TESTIMONY OF MR. JOHN D. POPE.

Acting Chairman COMMONS. Give your name and address to the reporter.

Mr. POPE. My name is John D. Pope; I reside near Butte, Mont.

Acting Chairman COMMONS. What is your business?

Mr. POPE. I am general manager of the North Butte Mining Co.

Acting Chairman COMMONS. What is your company, its capital, and so on?

Mr. POPE. It is a mining company with an authorized capital of 600,000 shares of the par value of \$15; of those, 430,000 have been issued; the rest is unissued.

Acting Chairman COMMONS. Is your company one of the companies held by the Amalgamated?

Mr. POPE. No, sir; there is none of our stock held by the Amalgamated Co., as far as I know. I do not think they hold any in it at all.

Acting Chairman COMMONS. Held by any other companies?

Mr. POPE. No; it is very widely distributed; held in small lots. We have over 4,000 shareholders.

Acting Chairman COMMONS. Are they local shareholders largely?

Mr. POPE. There are some in Butte; some in Duluth and Minneapolis, Minn.; some in Milwaukee; some in Pittsburgh; some in New York City; most of them in lots scattered through Massachusetts, Connecticut, Rhode Island, and New England. I think almost half of it is held in small lots in New England.

Acting Chairman COMMONS. What are the products—copper?

Mr. POPE. Copper, silver, and gold; copper and silver are the principal products; a small amount of gold.

Acting Chairman COMMONS. How many employees do you have?

Mr. POPE. When running at normal capacity we have about 900.

Now we have about 1,050, because we are doing some construction work, putting in some new machinery. But our regular crew is from 900 to 925.

Acting Chairman COMMONS. You heard the testimony of Mr. Kelley regarding wages, hours, relationship to union, and so on?

Mr. POPE. Yes, sir.

Acting Chairman COMMONS. Have you anything additional to add, or anything that differs in your company as compared with the Anaconda?

Mr. POPE. The wages and hours are the same with us that they are with them. We have separate contracts with the various unions here in Butte. These contracts are necessarily identical with the contracts which the Anaconda Co. has, because naturally the unions won't enter into a different contract with us than what they would with them.

But they are separate and individual contracts, but our working conditions are practically the same.

There is one difference that I noticed from the testimony of Mr. Gillie in regard to Sunday work and change days. We work Sunday night; that is, the men who work Saturday from 8 to half past 4, then lay off until Sunday night at 6, and work from 6 until 3.30 Monday morning.

Acting Chairman Commons. So that they are off how many hours?

Mr. POPE. They are off 25½ hours.

Acting Chairman Commons. And the men that work Sunday night?

Mr. POPE. The men that work Saturday night?

Acting Chairman Commons. The men that work Saturday night?

Mr. POPE. Go off at half past 2 Sunday morning and come to work Monday, so that there they have about 24 hours. I notice from his testimony that they don't work Sunday nights on change days, but we do and always have.

Commissioner GARRETSON. They shut down on change, and you don't?

Mr. POPE. Their mine is down two shifts, while our mine is down one shift. I didn't know that was the case with them. We have always worked Sunday night.

Acting Chairman Commons. How many days' work does a man get with you a month?

Mr. POPE. A man who is working steadily and as we would like to have him work will get from 29 to 31 days.

Acting Chairman Commons. Is your work steady during the year?

Mr. POPE. Our work is steady. We aim to keep the mine in operation regularly and steadily. We don't shut down unless we have to.

Acting Chairman Commons. Are you affected by the price of copper as the other company?

Mr. POPE. Just the same way, we have to sell our copper on the market as they do.

Acting Chairman Commons. Copper is the main product?

Mr. POPE. Copper is the main product. We produce in the year between twenty-seven and twenty-eight million pounds of copper and about a million and a half ounces of silver, so that, while our silver production is important, the copper is the main production and main value.

Acting Chairman Commons. You have the same contracts and same dates with the Western Federation of Miners' Union as the Anaconda?

Mr. POPE. Not the same date. Ours was signed about two or three weeks after theirs; that is, the Anaconda Co. made the contract. They didn't consult us about it at all. They made the contract with the miners' union, and then the union came around to us, and so the only thing for us to do was sign the same contract, because we could not get them to work for us under different conditions than for the Anaconda.

Acting Chairman Commons. What conditions are there in the contract for taking up individual grievances?

Mr. POPE. I don't recall the details of it, but they are the same as in the contract Mr. Kelley gave you.

Acting Chairman Commons. Has the union during the time you have been in charge brought up any grievances?

Mr. POPE. They have brought up the one question as to the discharge of Socialists at the same time they took the question up with the Anaconda. Besides that, they have taken up old grievances of that kind with me.

Acting Chairman Commons. Have you the same system of discharge—you have just one shaft?

Mr. POPE. We are operating just one shaft. We have several shafts, but there is only one that we operate now.

Acting Chairman Commons. The foreman there hires the men?

Mr. POPE. The foreman hires all underground men. The shop foreman hires his men, the master mechanic hires the machinists, and the master blacksmith hires his men, and the same with the boiler-makers, and so on.

Acting Chairman Commons. If there is any appeal, it comes to you?

Mr. POPE. Any appeal from any foreman, it comes to me.

Acting Chairman Commons. Were there Socialists discharged?

Mr. POPE. Yes, sir.

Acting Chairman Commons. And the matter brought to you by the union?

Mr. POPE. Yes, sir.

Acting Chairman Commons. And what was the action?

Mr. POPE. I told the union or the committee from the union that in order to maintain proper discipline in the mine I considered it necessary to have the right to discharge men at will; that I wouldn't blacklist anybody or try to keep a man from working somewhere else; but that very often the reason for discharging a man was so involved that I considered it necessary that we should have the right to discharge men for any reason that seemed good to us.

Acting Chairman Commons. Was that accepted?

Mr. POPE. Apparently; yes, sir.

Acting Chairman COMMONS. You have no need of this system described as rustling?

Mr. POPE. We don't use any such system at all. A man seeking work goes up and shows himself to the foreman, and if the foreman likes his looks and wants a man he puts him on.

Acting Chairman COMMONS. Are your instructions to the foreman such that he shall employ only members of the union?

Mr. POPE. No, sir; we pay no attention to that at all. We hire any man that seems to us to be a good man; but he is required afterwards to join the union, unless he already belongs. We work with the union to that extent. We don't inquire whether a man is a union man or not when he comes for a job; but after he gets a job, unless he is already a member in good standing, he is required to join.

Acting Chairman COMMONS. If you should discharge a man belonging to the union, you do not give him any reason for his discharge?

Mr. POPE. Not necessarily. Sometimes if a man does something we don't like; if he does not put in a set of timber as we want them, the boss will tell him he ought to know better, and to get out; we don't believe he is a good miner or he would not have done it.

Acting Chairman COMMONS. Is there any such thing as a man being discharged for union activity?

Mr. POPE. That has never occurred in the North Butte Mining Co.

Acting Chairman COMMONS. There has been no complaint of that kind?

Mr. POPE. No, sir; we never discharge a man because of union activity.

Acting Chairman COMMONS. How deep are the workings?

Mr. POPE. Our lowest level is 3,000 feet below the surface; our lowest extensive work is 2,800 feet. We have just started a station on the 3,000; no work aside from that.

Acting Chairman COMMONS. What have you done toward miners' consumption, ventilation, etc.?

Mr. POPE. We of course know of the work which the Anaconda Co. has done, and, while we have not been in on it, we know the result; and it has always seemed to me from that that the sole cause of miners' consumption, as far as conditions in the mine are concerned, was due to the dust. There are places in our mines where, if they are allowed to remain, are excessively dusty. The mines are dry and the rock, aside from the copper and minerals, is light and breaks fine. So, in some places there is an excessive amount of dust; but if you ventilate properly, use fans, and assist your natural ventilation, it increases the amount of that dust by drying out the workings more. Now, in order to allay that dust, we have tried to introduce a spraying system with the drills; but we find that the men are very averse to using that, and unless you stand right over a man he won't use it. They are quite a nuisance and sort of interfere with the men working to a certain extent, and they won't use them unless they are absolutely compelled. So, we tried the system of wetting down the mine where it is dusty, the manways and piles of dirt, before they are handled at all.

Acting Chairman COMMONS. Is that a success?

Mr. POPE. It seems to me it is very successful; yes. Of course, as to the results on the men we can't check up, because we have no system of medical examination. That is what I mean when I say it is absolutely successful. It does reduce the dust, and in those parts of the mine it absolutely stops it. As to the absolute effects on the men I don't know, because we have no system of examining them before they go to work or after they are working or when they quit.

Acting Chairman COMMONS. Does it increase the dampness in the mine in such a way that you consider it a bad thing?

Mr. POPE. No; it does not cause any bad effects of that kind at all.

Acting Chairman COMMONS. How do you control the temperature?

Mr. POPE. The only control we have over temperature is the introduction of air from the surface. Of course, that air is cooled and cools down the parts of the mine where it is introduced.

Acting Chairman COMMONS. What are your temperature records of the lowest workings?

Mr. POPE. I think our highest natural temperature is about 92.

Acting Chairman COMMONS. Is that a continuous temperature on the different levels?

Mr. POPE. Well, that is the natural temperature of the rock in the lower levels.

Acting Chairman COMMONS. What would the air reduce it to?

Mr. POPE. Well, we have reduced that below 90, I think, in every place that we were able to introduce the artificial ventilation. There are certain ends of the workings where you can't introduce that air current.

Acting Chairman COMMONS. So the men are working practically under a 90 or 92° temperature?

Mr. POPE. In the hottest places; yes.

Acting Chairman COMMONS. In the hottest places; yes.

Mr. POPE. Of course, there are only a few of them.

Acting Chairman COMMONS. Yes; on the lower levels.

Mr. POPE. On the lower levels, where the development is going on and where the development is ahead of the stopes. As the stopes are opened up the air gets better at once and circulates after the workings are connected with them.

Acting Chairman COMMONS. You, of course, have accident records?

Mr. POPE. Yes.

Acting Chairman COMMONS. Could you file with us a statement of the accident records?

Mr. POPE. I can give you the deaths. I don't know whether I can give you the minor accidents complete or not. I think I can.

Acting Chairman COMMONS. How do you compile the death statistics?

Mr. POPE. Well, we simply have records of the accidents at the office.

Acting Chairman COMMONS. You heard the figures given the other day—yesterday?

Mr. POPE. Yes.

Acting Chairman COMMONS. How do yours compare?

Mr. POPE. I think ours are about the same as the Anaconda. Wherever we have compared them they have been about the same.

Acting Chairman COMMONS. Would you file a statement showing those figures?

Mr. POPE. Yes, sir; I can give them to you for the last two or three years.

(See Pope Exhibit No. 1.)

Acting Chairman COMMONS. Yes.

Mr. POPE. I don't know that they run back further than that—that is, the figures prior to that I don't think are accurate, because they were not kept as carefully as they were in the last few years.

Acting Chairman COMMONS. What are the nationalities employed in your mine?

Mr. POPE. They are very much mixed—Americans, English, Irish; there are some Scotch also, and Welsh.

Acting Chairman COMMONS. How about the foreign born?

Mr. POPE. Well, there are quite a few of them that are foreign born, you know, the English and Irish and Scotch and Welsh are, a good proportion of them, foreign born. Then we have probably between 5 and 10 per cent of the Finlanders, and about the same amount of Austrians, as we call them. They are Serbians, mostly Serbians, and Montenegrins, I think.

Acting Chairman COMMONS. Is there any—

Mr. POPE. We have four or five Mexicans in the crew.

Acting Chairman COMMONS. Does the company exercise any preference in reference to employing men?

Mr. POPE. No; except that I don't like to see too many of one nationality put together. I would rather keep them mixed. Otherwise, there is no preference. I think you get better results if you don't have all of your employees belonging to one clan or nationality.

Acting Chairman COMMONS. Is there any other question?

Commissioner GARRETTSON. Yes. How many men did you discharge for being Socialists at the time referred to?

Mr. POPE. I think it might have been a half a dozen.

Commissioner GARRETTSON. This was at the same time that the Anaconda did?

Mr. POPE. Just about the same time; yes.

Commissioner GARRETTSON. Did the other mines do likewise?

Mr. POPE. I understood so; yes.

Commissioner GARRETTSON. Was this the outcome of an understanding between the managements of the various mines?

Mr. POPE. No; I don't think it was a definite understanding.

Commissioner GARRETSON. But a general understanding that you would all throw the harpoon at once?

Mr. POPE. Well, I think that perhaps is putting it a little too strong; but that is the idea.

Commissioner GARRETSON. That is what worked out?

Mr. POPE. That is the way it worked out; yes.

Commissioner GARRETSON. Do you think that the best result is obtained in the employment of men where a man of the grade of foreman is given an absolutely free hand in the discharge of men?

Mr. POPE. I have found it so; yes.

Commissioner GARRETSON. Do you believe that with men of good class the feeling in the minds of those men that they are at the mercy of a man who may be swayed by personal prejudice—bear in mind I am bringing no charge against the class but against individuals of the class, and I am bringing it from the standpoint of a man who worked under other men for many years—do you believe that the building of the idea in the minds of good employees that they are at the mercy of a man of that class and that ready means of going above him are not available creates a desirable sentiment?

Mr. POPE. In the first place that does not exactly represent the conditions here. There is a very easy way for a man to go above the foreman.

Commissioner GARRETSON. Yes.

Mr. POPE. The men have come to me individually quite a number of times with complaints of unjust discharge. In some cases I have rectified—wherever I considered their point was properly taken, I have rectified it.

Commissioner GARRETSON. Yes.

Mr. POPE. Generally speaking, I have not, because, generally speaking, I have been satisfied that the foreman was right.

Commissioner GARRETSON. Yes.

Mr. POPE. So I want to qualify that question with that by saying that that is not—

Commissioner GARRETSON. You heard the testimony yesterday with regard to the number of appeals that have been made with the large number of men that the other organization employ?

Mr. POPE. Yes.

Commissioner GARRETSON. And you can see how it works out there?

Mr. POPE. Yes, I think that that is very largely a matter of personality and feeling—personal feeling between the foreman and the employees. Here in Butte I think that in the very large majority of cases it has worked out well. I think it is a good thing in a hazardous occupation like mining for the men to know that they must do in detail as the foreman or shift bosses ask them. They are continually ordering men to make their place safe. It is the general understanding that the man should take care of his heading first. Then he is to do his work. Now, these men have not the judgment of the foreman. That is why he is put in as a foreman, because he is the best miner that we can pick out, knows underground conditions, and knows what to do better than they do. And I think it is necessary that they should feel that whenever he issues an order for them to put in a wedge or block or piece of timber, that the orders are to be carried out to the letter under penalty of discharge.

Commissioner GARRETSON. You believe that is an extra hazardous feature of the employment?

Mr. POPE. I think so; yes; it has been my experience.

Commissioner GARRETSON. Doesn't the opposite maintain among other extra hazardous service?

Mr. POPE. I do not know. My experience has been entirely in mining work. I have no experience elsewhere.

Commissioner GARRETSON. Is not railway service extra hazardous?

Mr. POPE. It seems to me; yes; from the accident statistics; yes.

Commissioner GARRETSON. There are more railway employees killed and injured on an average, well, since the war started in Mexico—there have been more railway employees killed and injured in the same period than there have been in the Mexican war.

Mr. POPE. Yes; I suppose that is true.

Commissioner GARRETSON. That being the case, it would class as extra hazardous?

Mr. POPE. Yes.

Commissioner GARRETSON. But while the direct opposite condition maintains there and universally, no man can be discharged without the company is prepared to show cause, and justifiable cause; and it goes clear to the president of the property. Have you any reason to believe that discipline on the railway was impaired thereby?

Mr. POPE. Well, I have not had any railway experience except traveling over the line.

Commissioner GARRETSON. You ride on railways, I suppose, occasionally?

Mr. POPE. I do. But I do not think their discipline is as good as mine discipline, no.

Commissioner GARRETSON. No; and it is not as good as it is in the Regular Army.

Mr. POPE. No; I don't think so.

Commissioner GARRETSON. They don't shoot them for disobeying orders.

Mr. POPE. Neither do we.

Commissioner GARRETSON. Oh, no; you just shoot them out.

Mr. POPE. But the conditions here are different from almost any other community that I know of. If a man is discharged, in Butte at least, and generally speaking in Montana, as far as my experience goes, it is not considered that he is sentenced to starve to death; that he is not allowed to get a job somewhere else; he can go back the first of the month and get a job.

Commissioner GARRETSON. You don't consider in the other service either. Isn't it a fact that the day of absolute judgment is passing?

Mr. POPE. In some lines.

Commissioner GARRETSON. The general tendency I am speaking of.

Mr. POPE. The general tendency is toward democracy, no doubt about that.

Commissioner GARRETSON. That is all, Mr. Chairman.

Mr. POPE. I will have those extra statements prepared for you, Professor.

(See Pope Exhibit No. 1.)

Acting Chairman COMMONS. That is all; thank you. Gov. Stewart.

TESTIMONY OF GOV. SAMUEL V. STEWART.

Acting Chairman COMMONS. For the record, will you give your name?

Gov. STEWART. Samuel V. Stewart; Helena, Mont.

Acting Chairman COMMONS. And you are governor of the State of Montana?

Gov. STEWART. I am.

Acting Chairman COMMONS. How long have you been governor?

Gov. STEWART. Since January, 1913.

Acting Chairman COMMONS. Have you held any State office prior to that?

Gov. STEWART. No, sir.

Acting Chairman COMMONS. The points of interest which have come up in this hearing so far bear upon the general instructions which Congress has given to this commission, that we should investigate the underlying causes of unrest and should make recommendations, either to Congress or to other legislative bodies, with reference to remedying any causes of industrial unrest, that seem practicable and possible. It is not the object of the commission to arbitrate or enter into disputes, but to get the more fundamental, permanent things which should be considered and discussed in the report and recommendations of this commission. The points that seem to have been developed so far turn upon such questions as the influence of corporations in politics, in elections, the control of the judiciary, legislation, local and State governments; the influence of corporations in the control of labor, particularly, in this instance, the control of labor unions.

Now, we should like to have your general opinion on the subject based upon your experience and observation, particularly upon the situation in the State of Montana. First, will you state what is the law and practice of the State regarding the question of the militia and Federal troops and State troops, the enforcement of law, and summary law, and the calling out of the troops in labor disturbances. Has there been any such?

Gov. STEWART. No.

Acting Chairman COMMONS. In this State?

Gov. STEWART. I am not exactly positive about what happened years ago, but certainly there has been no martial law in this State, no troops have been called out, either State or National, for many years. I think back in the nineties, in the railroad strike, I believe it was—that was before my time—there were some troops brought in here, but of course I have no intimate knowledge

of that, and would suggest that you get some person who has more intimate knowledge if you care to go into that feature.

Acting Chairman COMMONS. That is the Federal troops?

Gov. STEWART. Yes. But for the last 20 years no troops of any kind have been brought out in labor disputes; as far as I know none have been requested. This recent strike caused a good deal of talk about the utilization of troops, and it was thought at one time that for the preservation of law and order that resort might be had to troops. But I can say as far as the State government is concerned and as far as we were concerned at that time, that was only viewed as an absolutely last resort and then only for the protection of life and property.

Acting Chairman COMMONS. Is the governor bound by requests?

Gov. STEWART. No, sir.

Acting Chairman COMMONS. It is in his discretion?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. On such information as he may himself have?

Gov. STEWART. That is my construction of the law. I certainly assumed the responsibility wholly for such action or inaction as obtained in the recent disturbance.

Acting Chairman COMMONS. The governor, of course, has authority to send his own investigators and find out the facts?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. What is the force of militia in this State?

Gov. STEWART. About 600 men at the present time.

Acting Chairman COMMONS. What is the financial arrangement regarding their pay and services, and so forth?

Gov. STEWART. Well, they are not under pay ordinarily because they are not in use, but if they are called out they are paid from the State treasury. I assume that the order can be drawn direct on the State treasury for the pay of the men.

Acting Chairman COMMONS. By the governor?

Gov. STEWART. By the governor.

Acting Chairman COMMONS. Without audit by the auditor?

Gov. STEWART. I think that perhaps it would go through his hands; I am not clear on that; I haven't looked it up carefully. In Colorado I understand that they tested it out recently, and it was held that the auditor could not stop it.

Acting Chairman COMMONS. The governor's word is final?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. As to the amount of expense and the persons to whom it should be paid?

Gov. STEWART. That is my understanding.

Acting Chairman COMMONS. The militia are enlisted, or in what way?

Gov. STEWART. They are enlisted; they are the National Guard.

Acting Chairman COMMONS. For what period?

Gov. STEWART. Well, as long as they care to affiliate.

Acting Chairman COMMONS. Is there a limit to the number that may be enlisted? You spoke of 600.

Gov. STEWART. Well, we are supposed to have a regiment, which would be 12 companies; but we only have 10 companies at the present time, and we cooperate with the National Government, with the War Department—and I assume that they wouldn't care to have maintained in this State more than one regiment.

I wish to say we could if we saw fit keep a full regiment; but we have made no particular effort to have them brought up to war strength, although last spring, when the Mexican situation was active there were hundreds of applicants came in from different organizations and different individuals desiring to enlist men and raise companies to take part in that trouble if it was necessary to send troops; but most of these men were not very anxious to remain in the National Guard in time of peace, therefore we did not enlist any new companies; we had 10 companies at that time, and we just simply kept them.

Acting Chairman COMMONS. Does the Federal Government have a certain force in this State?

Gov. STEWART. Not now; they used to have; they had four or five forts. There was one at Missoula, Fort Missoula, and Fort William Henry Harrison at Helena, and Fort Assiniboine at Havre, and Fort Keogh at Miles City, and they are all abandoned at the time; at least, there are no soldiers there.

Acting Chairman COMMONS. That was on account of the Mexican War.

Gov. STEWART. No, sir; they were taken away before the Mexican War came up. There are a few at Missoula only; the last ones were taken away some few months before the Mexican trouble came up; that is, before the United States became involved.

Commissioner GARRETTSON. Those posts are nothing but relics of Indian conditions?

Gov. STEWART. No, sir; that is not true. Missoula and William Henry Harrison and Assiniboine are in a high state of repair and good shape.

Commissioner GARRETTSON. I mean they were so created?

Gov. STEWART. No, sir; I think William Henry Harrison at Helena was created within the last 12 or 15 years. My understanding is that the fort has been enlarged and improved within the last 20 years at least, and over at Assiniboine the buildings are mostly new.

Acting Chairman COMMONS. Does this State have any legislation regarding the employment of armed guards, giving them authority as deputy sheriffs by private corporations?

Gov. STEWART. I don't think there are any regulations on that that I know of.

Acting Chairman COMMONS. There has been no legislation on that subject?

Gov. STEWART. I don't think so. There has been none of it to my knowledge, I haven't known of it being done.

Acting Chairman COMMONS. Do deputy sheriffs have authority to appoint such men as guards when they are in the pay or derive their pay from private corporations?

Gov. STEWART. Deputy sheriffs don't have.

Acting Chairman COMMONS. I mean the sheriff?

Gov. STEWART. The sheriff might have authority to appoint such men if they would be necessary to maintain peace, but I am not clear on that. I have never gone into that feature of it, it has never been brought up as far as I know.

Acting Chairman COMMONS. Questions of that kind have never come up in this State?

Gov. STEWART. Not in my administration.

Acting Chairman COMMONS. Not that you know of?

Gov. STEWART. Not any that I know of. I am not familiar with conditions of that kind.

Acting Chairman COMMONS. The question of the matter of the relation of corporations to the politics of the State, elections, and so on, has been a matter that has been considerably discussed in this State, has it not?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. When did that issue first arise, do you know?

Gov. STEWART. When corporations first began to do business in the State, I suppose the issue first arose.

Acting Chairman COMMONS. What class of corporations—railroad corporations?

Gov. STEWART. Well, all corporations, I presume. Mostly the talk has been about mining corporations.

Acting Chairman COMMONS. Has there been measures taken—legislative measures taken with reference to this activity of corporations in the politics of the State?

Gov. STEWART. Well, I presume that some of the measures on our statute books may have been aimed at reformation along those lines. While they do not specifically state, I presume that some of our legislation may have been actuated by some such reasons.

Acting Chairman COMMONS. What legislation?

Gov. STEWART. Well, just for the protection of the ballot; corrupt practice act, and different safeguards that have been thrown around the voter in the exercise of his franchise. We have, of course, as they have in all the States, I presume, the Australian ballot system, which we have had for a long time. It has been developed from time to time so as to make it as nearly perfect as possible, and we now have a very stringent corrupt practice act.

Acting Chairman COMMONS. When was the corrupt practice act adopted?

Gov. STEWART. The last one was adopted by initiative two years ago. Initiated by the people and passed. Prior to that time we have had from time to time different corrupt practice acts, more or less of them have been enforced strictly, others not.

Acting Chairman COMMONS. Now state the details regarding the publication of expenditures required?

Gov. STEWART. Under the present law it is very strict. Everything must show.

Acting Chairman COMMONS. All contributions must be shown?

Gov. STEWART. Yes, sir; everything.

Acting Chairman COMMONS. All money brought into the State from outside?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. How does the law secure publicity regarding contributions that might come from outside the State?

Gov. STEWART. Well, everything must be published, as I understand it.

Acting Chairman COMMONS. How do they get at a foreign contributor?

Gov. STEWART. Well, I don't know. The man himself is responsible; he is made responsible for everything he does.

Acting Chairman COMMONS. That is, the local man who would receive it?

Gov. STEWART. The man who would receive the contribution, I assume.

Acting Chairman COMMONS. Have any elections been held yet under this new act?

Gov. STEWART. No, sir.

Acting Chairman COMMONS. You are not able to say then how it will work?

Gov. STEWART. I don't know how it will work out.

Acting Chairman COMMONS. Was the old act, the former act, unsatisfactory?

Gov. STEWART. Well, I suppose that there was a need felt for a new one or it would not have been passed. There has always been more or less talk about it, and it was felt by a good many people that the act which was passed was required to put the State in line with other progressive communities.

Acting Chairman COMMONS. Had there been charges or investigations which showed, prior to the adoption of these acts, that corporations had influenced—that their contributions had influenced the elections?

Gov. STEWART. There had been lots of charges, but I don't know of any investigation that ever disclosed those things to be absolutely true or to verify the charges.

Acting Chairman COMMONS. The matter was never investigated in this State?

Gov. STEWART. It was never investigated as far as I know of.

Acting Chairman COMMONS. Officially?

Gov. STEWART. As far as the corporations were concerned.

Acting Chairman COMMONS. So that it is only a matter of hearsay and charges?

Gov. STEWART. That is my understanding.

Acting Chairman COMMONS. And never has been established?

Gov. STEWART. That is my understanding.

Acting Chairman COMMONS. What are the principal mining corporations in this State?

Gov. STEWART. Well, what is known as the Amalgamated group of corporations are, I should say, the principal mining corporations. I wouldn't assume to give the names of all of them, because I don't know.

Acting Chairman COMMONS. The Amalgamated is the main mining interest in the State?

Gov. STEWART. It is the main mining interest, although there are numerous others, but they are the chief employers of labor and the chief producers of precious metals and copper in this State.

Acting Chairman COMMONS. You think that they include more than half?

Gov. STEWART. Yes, sir; I think more than half, considerably.

Acting Chairman COMMONS. Have you any legislation in this State regarding the activities of the lobby in the legislature—so-called lobby?

Gov. STEWART. Well, we haven't very stringent legislation on that subject.

Acting Chairman COMMONS. You say you do have some legislation?

Gov. STEWART. I don't think it is very stringent. There are some laws on the line of bribery and things of that kind.

Acting Chairman COMMONS. Are lobbyists required to register?

Gov. STEWART. No, sir.

Acting Chairman COMMONS. No question of publicity regarding the lobbyists?

Gov. STEWART. No, sir.

Acting Chairman COMMONS. Anything as to the expenditure of money?

Gov. STEWART. No, sir; nothing of that kind. At the last session of the legislature there was a bill of that kind considered more or less, but it never was passed.

Acting Chairman COMMONS. When was the initiative and referendum adopted in this State?

Gov. STEWART. In 1906.

Acting Chairman COMMONS. Is it now in the form in which it was originally adopted?

Gov. STEWART. Yes, sir; it never has been changed. It never was invoked from 1906, the time it was passed, until two years ago, 1912.

Acting Chairman COMMONS. What measures have been initiated and voted upon?

Gov. STEWART. What is known as the primary law, the corrupt-practice act, presidential primaries, and I am not sure whether there was another one or not; I know of those three.

Mr. McCUSKER. We passed a State direct election of United States Senators.

Gov. STEWART. Yes; we passed a State direct election of United States Senators; all of them along that same line, the three of them.

Acting Chairman COMMONS. They were initiated?

Gov. STEWART. Yes, sir; they were initiated by the people.

Acting Chairman COMMONS. Do initiative measures go before the legislature?

Gov. STEWART. Not at all; they have nothing to do with it.

Acting Chairman COMMONS. It goes straight to the people?

Gov. STEWART. It goes straight to the people, and if it receives a majority vote it becomes a law upon the proclamation of the governor.

Acting Chairman COMMONS. Take the three interests—agriculture, transportation and railroads, and mining—which is the predominant interest in this State?

Gov. STEWART. The agricultural, at this time.

Acting Chairman COMMONS. How do you measure that—by the number of people engaged?

Gov. STEWART. Yes, sir; and by the number of representatives which they have in the legislative assembly at this time. We have grown very rapidly along agricultural lines in the last few years. The value of agricultural products has almost reached the value of the production of the mines. I think that last year the production of the mines aggregated right around \$60,000,000, and farm products are right up about that, and recently a great many people have come into this State and located on these Government projects, reclamation projects, and on the Carey land-act projects, and on the dry land, so called. Up to the last few years it was not thought possible we could raise dry-land crops successfully in this State, but recent years have shown, with scientific methods employed, we can raise fine crops of wheat, flax, and sometimes oats and alfalfa and other crops without irrigation. That has caused a great influx of people into this State, and those people have formed themselves into active communities and have been responsible for the segregation of different districts into new counties. We have had since I became governor of the State, in the last 18 or 19 months, created the counties of Big Horn, Stillwater, and Richard, Sheridan, Toole, Webo, and Mineral, and Fallon.

Acting Chairman COMMONS. Are those all agricultural communities?

Gov. STEWART. Nearly all of them, except, perhaps, Mineral. All the others are agricultural counties.

Acting Chairman COMMONS. Elections are not yet held there?

Gov. STEWART. They held elections when they were created and elected their officers under the new law.

Acting Chairman COMMONS. Elected their representatives to the State legislature?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. They have representatives to the legislature?

Gov. STEWART. Of course, the legislature has not been in session since most of those were created. In the session of 1913 some of them were represented.

In the session of 1913 the others elected their members, but they would not have—or they have not availed anything by reason of the fact that no session of the legislature has been held. However, they will elect at the regular election this fall again.

Acting Chairman COMMONS. Has there been representation in the legislature of the so-called labor element?

Gov. STEWART. Oh, yes.

Acting Chairman COMMONS. Labor vote?

Gov. STEWART. Yes; in fact they have always had representatives. That is, they have when they have had representatives—I mean that men affiliated with

organized labor have had membership in every legislature with which I have been familiar.

Acting Chairman COMMONS. Referring to agriculturists and labor and others, how do you divide up the lower house of the legislature, the membership?

Gov. STEWART. Oh, I think that in the last session considerably more than half of the lower house were interested in agricultural pursuits directly and indirectly, most of them directly, if not as actual farmers they were small business men and professional men from the agricultural districts who depend upon the farms for their support.

Acting Chairman COMMONS. And what proportion would be the representatives of labor interests?

Gov. STEWART. Well, I would not be able to say how many laboring men—that is, men who are affiliated with union labor—were in the last session; probably not to exceed—well, not to exceed a dozen, I should say.

Acting Chairman COMMONS. What is the total membership of the lower house?

Gov. STEWART. I have forgotten the membership the last time. It changes so rapidly with these new counties that I could not give it to you, but I can get it from the session laws and give you the figures.

Acting Chairman COMMONS. Are these labor representatives representatives of union labor or are they Socialists?

Gov. STEWART. No, no; they are union-labor men. There was one Socialist in the house and none in the senate the last time, and this Socialist was a farmer.

Acting Chairman COMMONS. Have the labor people been active people in securing measures?

Gov. STEWART. I think so.

Acting Chairman COMMONS. Bearing on the interests of labor?

Gov. STEWART. Yes, sir; I think so.

Acting Chairman COMMONS. What measures?

Gov. STEWART. Well, they have the eight-hour law and the different railroad laws which are on our statute books. Especially the one having to do with personal-injury suits, taking away from the corporations the defenses and the other measures having to do with the regulation of mines, the operation of them. I think that there are very few States that have as many regulations along that line as we have.

Acting Chairman COMMONS. Particularly for the mining industries?

Gov. STEWART. The mining industries and the railroad industries.

Acting Chairman COMMONS. There are no manufacturing?

Gov. STEWART. No; they are not very important in this State.

Acting Chairman COMMONS. Now, the farming interests have supported this class of legislation?

Gov. STEWART. Yes; they have, more or less. Of course, conditions, as I attempted to say awhile ago, are rather changing more or less. There was a time when the mining interests in this State absolutely dominated the situation, because it was looked upon as strictly a mining State. But that view is rapidly changing. Still, by that I do not want to be understood as saying that the mining industry is going backward at all. What I mean to say is that the farming industry is growing so rapidly that it is catching up, and in time must of necessity overtake the other industries.

Acting Chairman COMMONS. When you speak of the mining industry, you mean from the employers'—the corporation—standpoint?

Gov. STEWART. No; I mean just the industry as a whole—the production.

Acting Chairman COMMONS. From the wage earners' standpoint?

Gov. STEWART. From every standpoint.

Acting Chairman COMMONS. They used to dominate more than they do now?

Gov. STEWART. Yes.

Acting Chairman COMMONS. What I am getting at, as between the corporation that operates the mining industry and the employees that work in the industry, what is the attitude of the agricultural interests?

Gov. STEWART. Well, I should say that the attitude of the agricultural interests would be favorable to the employees, as between them and the employers.

Acting Chairman COMMONS. Imposing these protective measures upon the company?

Gov. STEWART. Yes, I understand so.

Acting Chairman COMMONS. On behalf of the employees generally, is that the way?

Gov. STEWART. That would be my judgment; that the sympathy of the nominating member would ordinarily be with the employee rather than the employer.

Acting Chairman COMMONS. Any questions?

Commissioner GARRETSON. I want to ask one or two. You have a State liability law, have you—an employers' liability?

Gov. STEWART. Not—

Commissioner GARRETSON. This applies to all classes, or only railway and mining industries?

Gov. STEWART. That is not what you know as a State compensation liability. Commissioner GARRETSON. No; I am speaking of liability as against compensation.

Gov. STEWART. Yes.

Commissioner GARRETSON. The old form.

Gov. STEWART. Yes.

Commissioner GARRETSON. The common-law remedy.

Gov. STEWART. Yes.

Commissioner GARRETSON. Does that debar—does it abolish the defenses of fellow servant, assumption of risk, and contributory negligence?

Gov. STEWART. Only in the railroad cases, as I understand it.

Commissioner GARRETSON. Only on the railroads. It does not apply to any other class?

Gov. STEWART. No.

Commissioner GARRETSON. Compensation laws have been introduced, but have not yet been enacted?

Gov. STEWART. Several were pending.

Commissioner GARRETSON. Have you had any State commission created for the investigation?

Gov. STEWART. Yes; we have had two or three. There was a commission appointed two years ago—four years ago—that prepared a bill which was introduced in the legislature and that bill was defeated. Several bills were introduced at that time. And again, two years ago, there were a number of bills, and at this time there is a measure pending before the people by initiation.

Commissioner GARRETSON. What has been the general attitude of the employer toward the enactment of compensation laws?

Gov. STEWART. Well, they claim they are favorable, but it is a question of getting together on a basis.

Commissioner GARRETSON. They are favorable to compensation that don't compensate, are they?

Gov. STEWART. Well, I do not know what they favor. I say they claim they are favorable.

Commissioner GARRETSON. The instance you refer to in 1894, when the troops were called, there was no clash between the troops and the people at that time, was there?

Gov. STEWART. I don't think so; I do not recall that there was.

Commissioner GARRETSON. That was the railroad strike, the labor strike, as it was called?

Gov. STEWART. Yes.

Mr. EVANS. It was that Coxey business.

Gov. STEWART. Yes; the Coxey affair.

Commissioner GARRETSON. You remember there were troops in 1894 at the time of the A. R. W. strike, I think? You spoke of the fact that measures had been passed which might indirectly have been actuated by the desire to deal with corporations. Have measures been introduced in the legislature which did actually deal with them and which failed of passage?

Gov. STEWART. Oh, lots of measures have been introduced on every subject.

Commissioner GARRETSON. Including that?

Gov. STEWART. Everything, I think, that you can imagine. We have our regular crop of bills every time the legislature meets.

Commissioner GARRETSON. Have corporations in the State ever debarred their employees from holding political positions while serving the company?

Gov. STEWART. I could not say as to that; I do not know.

Commissioner GARRETSON. You do not know whether there is a rule in effect now in Montana, as well as contiguous territory, by which the employees of railroad companies are debarred from being candidates for public office?

Gov. STEWART. I do not believe so, because we have a lot of them in the legislature each time; they hold our public offices.

Commissioner GARRETSON. That would show that the rule has been withdrawn?

Gov. STEWART. If there ever was it has been withdrawn. We usually have some conductors and sometimes engineers and firemen—always conductors. They seem to be there every time.

Commissioner GARRETSON. I will say there was a rule in effect on one of the railroads crossing the State of Montana and was in effect for many years. You remember the incident of the special train some years ago?

Gov. STEWART. Yes.

Commissioner GARRETSON. That is what brought it about?

Gov. STEWART. Yes.

Commissioner GARRETSON. That was the conductor on that train who was a fugitive legislator.

Gov. STEWART. Yes; I remember it.

Commissioner GARRETSON. In regard to unrest, I would like to ask you one question upon your experience. I know you stated you have not held office before, but I judge from the one you now hold and certain offices, that you have come in contact with many men of many classes. Do you believe that social unrest, I am using the wider word for industry, that social unrest is contributed to by the great aggregation of wealth that occurs in the hands of the occasional individual?

Gov. STEWART. Well, I presume that is true.

Commissioner GARRETSON. Do you believe there is any greater influence to create such unrest than that—that is the result, bear in mind, of a system—and do you believe that any other influence contributes in greater degree to the condition of social unrest?

Gov. STEWART. Well, I do not know that I could answer that intelligently. It seems to be a universal unrest that is over the world, as evidenced by the recent war.

Commissioner GARRETSON. It does—

Gov. STEWART. And I would not be able to say that one thing has contributed in this country more than any other one thing. There is no doubt but what the cause that you mention has had its influence.

Commissioner GARRETSON. I will phrase it in a little different way. If other alleviative measures were originated and made effective, do you believe if that one continued to exist that the great bulk of unrest would be done away with—bear in mind I am putting it on the basis of an envious unrest.

Gov. STEWART. In this case—

Commissioner GARRETSON. I am not putting it on a high moral ground at all—that this envious unrest comes from that?

Gov. STEWART. No; I do not really believe that there is an envious unrest in this State.

Commissioner GARRETSON. I am not applying that question in that respect—world-wide.

Gov. STEWART. Well, it might be true, but I have found from my experience in this State a great degree of loyalty among the employees for the interests of their employers and a great deal of pride in the success of the enterprise in which they are engaged. I think that is more noticeable than the idea of envy. I would not speak as to the rest of the world because I am not familiar enough with general conditions to apply that doctrine.

Commissioner GARRETSON. That loyalty was directed toward the individual employer—I am using individual as applied to corporations as well as men.

Gov. STEWART. Yes, sir.

Commissioner GARRETSON. To the individual employer for whom they serve?

Gov. STEWART. For whom they serve.

Commissioner GARRETSON. But at the same time right with it may exist wild resentment of the wealth accrued with some of them?

Gov. STEWART. Yes, sir; I think that is true; no doubt about that.

Commissioner GARRETSON. I am a believer as you are in the loyalty of the average employee to his employer if he is decently treated.

Gov. STEWART. Yes, sir.

Commissioner GARRETSON. That is all, Mr. Chairman.

Acting Chairman COMMONS. Any other questions?

Commissioner LENNON. Governor, how in your opinion compares the attitude of employers in this State toward organized labor as compared with surrounding States, those that are near by that you have some knowledge of?

Gov. STEWART. I think that the attitude of the employers in this State toward organized labor is infinitely better from the point of view of the employee than it is in any of the other surrounding States. In fact, I don't believe that there is a State in the Union where organized labor is as strong and as well satisfied as the State of Montana.

Commissioner LENNON. Have you any law in this State regarding, we will say, the subject of mediation and arbitration in case of labor disputes?

Gov. STEWART. No; I think not.

Commissioner LENNON. You have no bureau or board to carry out any mediation of that kind?

Gov. STEWART. No; I think not.

Commissioner LENNON. Well, has the governor any power under laws giving him power to appoint special representatives, or has he that general power?

Gov. STEWART. Well, I should say he would have the general power, but the appointees would probably be without authority other than advisory.

Commissioner LENNON. Yes. Do you have a labor-statistics department?

Gov. STEWART. Yes, sir; we have a department of labor and industry.

Commissioner LENNON. Studying not only the questions of labor, but agriculture and mining?

Gov. STEWART. No. We have two departments. Formerly we had the department of agriculture, labor, and industry. At the last session of the legislature we segregated those and created a department of labor and industry, with a commissioner at its head, and a department of agriculture and publicity, with a commissioner. Our department of labor and industry is devoted wholly to the labor and industry world.

Commissioner LENNON. What is the magnitude of the lumber interests in this State, Governor?

Gov. STEWART. They are very large, but I would not attempt to give the figures at this time.

Commissioner LENNON. No. They come next to the matter of mining and agriculture, do they not?

Gov. STEWART. Yes, sir; I should say they do.

Commissioner LENNON. Have you been in the lumber camps? What do you know as to conditions and the mode of living in the lumber camps in Montana as compared with, perhaps, certain parts of Washington and this western country?

Gov. STEWART. Well, I could not—

Commissioner LENNON. Have you ever been in the lumber camps?

Gov. STEWART. I could not compare them. I have never been at any length in the lumber camps of Montana to get a definite idea, and I have never been in any of the camps of the surrounding States.

Commissioner LENNON. Have you been in this State?

Gov. STEWART. Some of them.

Commissioner LENNON. Well, do the men seem to be fairly well cared for?

Gov. STEWART. I think so; I think so.

Commissioner LENNON. Does the Sunday work apply in the camps, do you know?

Gov. STEWART. I am not sure about that. I would say that there is no rule; that that probably would be a matter of local arrangement. It may in some places, and others not.

Commissioner LENNON. Is there any power on the part of the State as to inspection—any department—that might, if they had a sufficient appropriation or inclination, that they might go in there and make inspections?

Gov. STEWART. Well, along what lines would you mean?

Commissioner LENNON. Well, as to sanitation of their camps?

Gov. STEWART. Oh, yes. Yes; indeed. Our health laws are considered to be very good, indeed. At the national associations the secretary of our State board of health told me that our laws were considered by that association to be about as perfect as any in existence, and our State board of health, under the direction—has under its direction a secretary and other officials, who make careful investigations of all those matters.

Commissioner LENNON. Has the State the power to make investigations as to sanitary conditions in the mines at any time they desire?

Gov. STEWART. Yes, sir; we have mine inspectors.

Commissioner LENNON. Yes.

Gov. STEWART. We inspect the mines at all times, and coal-mine inspectors who inspect the coal mines. And, in addition to that, the health department can be called in on anything that affects the health of the employees.

Commissioner LENNON. Do you know—has there been any complaint, any considerable complaint, as to the inefficiency of these departments?

Gov. STEWART. No, sir; I don't think so. I haven't heard it.

Commissioner LENNON. Yes. Has there ever been any considerable land grants from the Government of the United States to corporations in this State, either railroad or mining corporations?

Gov. STEWART. There was a tremendous grant to the Northern Pacific Railway Co.

Commissioner LENNON. Did that grant in giving land to this corporation, did it cover considerable agricultural land?

Gov. STEWART. Oh, yes, indeed; a vast amount of it.

Commissioner LENNON. In whose name do the titles now rest, in the main? I don't mean—

Gov. STEWART. Most of that land has been sold by the railroad companies from time to time to individual settlers, landowners, and the balance of it, I think, now rests with the Northern Pacific Railway Co.

Commissioner LENNON. Have there ever been any grants to mining corporations?

Gov. STEWART. Not to my knowledge.

Commissioner LENNON. Well, in this land grant to the Northern Pacific Railway Co., were there any reservations as to mineral rights?

Gov. STEWART. Yes, sir.

Commissioner LENNON. Has that been the cause of litigation to any extent in this State?

Gov. STEWART. To some extent. There have been some decisions on that. They reserved coal and iron, as I recall it, or everything but coal and iron, and the railroads when they sold reserved everything. And we had a suit last summer in which the supreme court held that the reservations—or reserves, rather, the reserved minerals—were taxable separate and apart from the land.

Commissioner LENNON. Do you remember of the case that was decided that—will you have some one—I have a personal reason for wanting to study the matter—would you have the case, the number of the case, and the book in which it can be found given to the commission?

Gov. STEWART. Certainly; be glad to do so.

Commissioner LENNON. Yes.

(See Stewart Exhibit No. 1.)

Gov. STEWART. I will say that that is a matter that I had under consideration quite a while. When I was practicing law the matter came up, and I formed the opinion that these reservations, or, rather, reserved minerals, were taxable; and after I was elected governor and Mr. Kelly, the present attorney general, was elected attorney general, we discussed the matter, and he entertained the same view. And we advised the assessors to assess those reservations. They did so, and a suit was brought to strike the assessment of these reserved minerals from the tax rolls in Park County last summer. And that was decided by Judge Stark, of the district court in Park County, and appealed to the supreme court and affirmed, both courts holding that they were property separate and distinct from the surface and subject to taxation.

Commissioner LENNON. That is all, Mr. Chairman.

Acting Chairman COMMONS. Is there any law, Governor, in this State regarding the boycott and the blacklist?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. What is the substance of it?

Gov. STEWART. Well, I would not attempt to give you the substance of it, because I haven't looked it up recently, and I would prefer to reserve—give you the citations of the law later and let you incorporate it in that way.

Acting Chairman COMMONS. Has there been any attempt on the part of employers in this State to secure injunctions or damages or prosecutions of organized labor, of unions?

Gov. STEWART. No; I don't think there has been any attempt to prosecute the unions along those lines.

Acting Chairman COMMONS. How do you account for this favorable attitude of organized labor and their representatives in the legislature toward corporations, toward employers? I take it from the answer that you gave a moment ago that you refer simply to the attitude in private relations between the individual and the employer. Is the same attitude shown in the dealing with labor legislation in this State?

Gov. STEWART. You mean the same liberality shown?

Acting Chairman Commons. By the workmen, by the employees, toward the employer; that is, put it in another way, when it comes to a matter of labor legislation, is it conducted simply by a lobby, two lobbies coming before the committee, one representing labor interests and the other the employing interests, regarding, we will say, mine inspection or hours of labor, and then leaving it to the committee to decide? Or is there an attempt prior to that for the employers and employees to get together and agree upon practicable measures that will satisfy both, and thus come before the legislature united on some of these labor measures?

Gov. STEWART. Well, I assume that both methods have been used. For instance, when the eight-hour law was passed it was sort of conceded before the legislature convened that it would be enacted, by reason of the fact that the different parties had declared in favor of it and put it in their platforms. Usually most of the laws embodying reforms have been brought about in that way. There has been an agitation which has resulted in their being made issues, and the different political parties indorsing the theories and pledging themselves to enact a suitable law. And then, of course, when the legislature convenes the method that you mention has been in vogue, and they have committee hearings, and lobbies appear for all sides.

Acting Chairman Commons. Well, coming down more specifically, take such a thing as the mine-inspection laws in this State. I am not familiar with what they are. In the drafting of those laws were the employers, the mine operators, consulted?

Gov. STEWART. I think so. I think all elements were consulted.

Acting Chairman Commons. They were all consulted so that the law was not only effective but practical; it not only reached the object which the labor people wanted, but was practicable in the sense that it fitted in with the business arrangements?

Gov. STEWART. I think so. I would not say that that law nor any other law is entirely satisfactory to both elements. It is, I think, undisputed that if the employers had their way about it absolutely that it would be modified; and if the employees had their way it would be modified in the other direction, and it is probably the result of a compromise.

Acting Chairman Commons. There is no provision in the labor-legislation law and inspection law for the inspector to modify the law to fit the actual conditions?

Gov. STEWART. Oh, no; he can't modify the law. He must administer the law as he finds it.

Acting Chairman Commons. There is no power for him to issue orders in the way of adjusting the law in special cases?

Gov. STEWART. No, sir.

Acting Chairman Commons. Or particular instances?

Gov. STEWART. I don't think so.

Acting Chairman Commons. It is all up to the discretion of the inspector in the field?

Gov. STEWART. Yes.

Acting Chairman Commons. As to whether the law actually applies or not?

Gov. STEWART. Yes; but, of course, he has not the final say. The court must enforce the law, although the inspector should be derelict in his duty and refuse to report an abuse of the law—any individual could make a complaint and bring about a prosecution which would subject the offender to the penalties of the law.

Acting Chairman Commons. Do you happen to know about the prosecutions that have been entered by the mine-inspection department?

Gov. STEWART. Oh, I think there have been a good many.

Acting Chairman Commons. And what is the verdict usually; how does it come out?

Gov. STEWART. Well, I could not say as to that. I know a good many fines are imposed from time to time. But, of course, there are complaints probably that are ungrounded, and in those cases no conviction would obtain. But I think that, taking it as a whole, the law is pretty well enforced.

Acting Chairman Commons. Is there any law in this State regarding work on Sunday in mines?

Gov. STEWART. I don't think so.

Acting Chairman Commons. There has never been legislation on Sunday?

Gov. STEWART. No.

Acting Chairman Commons. Has the matter been up in the legislature?

Gov. STEWART. I am not sure that it has. I believe that it may have been discussed, but I don't believe very seriously.

Commissioner LENNON. Have you any Sunday laws?

Gov. STEWART. Yes; we have some; but, of course, we haven't the strict Sunday laws that they have in some States. Sunday is a nonjudicial day in this State—holiday.

Commissioner LENNON. That is all.

Acting Chairman COMMONS. Have you any suggestions bearing on recommendations that you think this commission should make toward this general subject that has been before you to-day with reference either to the State—the part that the State should take or the Federal Government should take?

Gov. STEWART. No; I could not say that I have. I will say this, that I am a strong believer in the arbitration of differences between capital and labor. And I believe a board such as your board, if clothed with authority, could effect a great reformation in the relations between labor and capital if they were enabled to go in and hold hearings and hand down findings that would be binding on both sides.

Acting Chairman COMMONS. Would your idea be that that should be a Federal board or State boards? Which would you think would be more effective in a matter where we have these large corporations operating throughout the country—I am not speaking of railroads now, because they do have that law for railroads, but for mining and manufacturing men particularly—do you think a Federal board of mediation and arbitration similar to that which is in vogue in the matter of railways would be advisable or would you think that that ought to be left entirely to the States?

Gov. STEWART. Well, that is a hard question to answer. There are advantages on both sides. The Federal board would be further removed from local influences and less likely to be swayed by those local influences. On the other hand, a State board would have perhaps more intimate knowledge of the situation, so that it would be a hard question to answer. On the whole, though, I think a Federal arbitration board would probably be more effective.

Acting Chairman COMMONS. When a disturbance of this kind, a labor disturbance reaches a critical position and large numbers involved, would the State likely be compelled to call for Federal troops instead of relying upon the State militia?

Gov. STEWART. It might.

Acting Chairman COMMONS. Suppose such were the case in Montana, that five or ten thousand men were on strike; could the State militia cope with the situation?

Gov. STEWART. Well, I could not say as to that. It would depend upon circumstances. I believe that the people of this State are loyal enough to respond to any call that would be made to maintain peace and quiet if they had time in which to organize and get in shape. However, in case of strike disorders I think they could be very much more easily quieted by the intervention of Federal troops. My idea is that the appearance of Federal troops prevents resistance in many cases and things quiet down, whereas as with local authorities, such as militia, very often the disturbing elements desire to take a try at them and see if they can't whip them.

Acting Chairman COMMONS. In case Federal troops come in, their only object is to preserve the law and order?

Gov. STEWART. Well, that would be the only object that either one could possibly have.

Acting Chairman COMMONS. Now, in that case would a board, in your opinion, a board of mediation and arbitration, also under the authority of the President of the United States, with power to precede the troops and endeavor to conciliate—would not that follow from the ultimate fact that the President might be compelled to order in the troops in such a case?

Gov. STEWART. Yes; I think that is true.

Acting Chairman COMMONS. Would that, in your opinion, be a justification for a Federal board of this kind, a permanent board, to undertake such mediation in matters which lie solely within a State?

Gov. STEWART. I think so. I think it would be unfair to ask the Federal Government to station troops in any State permanently. And the permanency would necessarily follow if there was no authorized medium through which a settlement of the existing difficulties could obtain. For instance, if you just sent them in there to quell the disorder, they would quell the disorder, and when they were removed, if the cause was not removed, the disorder would

recur. And it would seem to be futile to keep sending them back unless you could remove the cause.

Acting Chairman COMMONS. How far would you go in giving power, legal power, compulsory power to such a board of mediation and conciliation? Or have you thought about that?

Gov. STEWART. Well, I haven't thought about that enough to be able to say, but it does seem that there ought to be some such a board; and I feel this way, that if there was a properly authorized board, that you would never need any troops, because I believe that the employers and the employees in ordinary cases would be satisfied with the results, and would abide by them, with the findings of such an arbitration board. There is not any disposition or desire on the part of the ordinary citizen of this country to indulge in any disorders at all. I think that the disorders that have obtained in this State have been due perhaps to outside influences, although there are grave differences between the men. The ordinary miner in this camp, the man who has lived here and worked here, he may have his grievance, but he is perfectly willing to settle it in an ordinary and legal way and abide by the result. Our people are good losers, and, while they will fight hard for what they want, if they don't get it they don't take up arms. I think that those who resort to that kind of tactics are outsiders.

Acting Chairman COMMONS. Well, then, you think that such a board, if necessary to be constituted, such a board should be in a position to act promptly, in the very initiation, prior to any disturbance?

Gov. STEWART. Yes; I think there would not be the disturbance, because if they knew they had a court, a fair and impartial court, with full authority, they would resort to that rather than to the disturbance.

Acting Chairman COMMONS. Supposing that such a Federal board were created, would you consider that it should have power to enter a State on its own initiative, in a purely local matter, or would it have to wait upon the request of the governor, as is the case in the bringing in of the troops?

Gov. STEWART. Well, they ought to have authority to take up all labor disputes.

Acting Chairman COMMONS. Regardless of whether the governor makes request or not?

Gov. STEWART. I should think so, if a Federal board is to be established?

Acting Chairman COMMONS. Would you give that board the power of taking testimony under oath?

Gov. STEWART. Oh, yes.

Acting Chairman COMMONS. And the bringing in of books, that would be essential?

Gov. STEWART. I think absolutely.

Acting Chairman COMMONS. And with reference to preventing strikes and lockouts pending investigations, like the Canadian system, what would be your idea of adopting the Canadian system?

Gov. STEWART. I am not familiar enough with the Canadian system to speak, but I think there ought to be some such provision as that, so that industries could be continued pending the settlement of differences.

Acting Chairman COMMONS. You haven't considered that phase wholly?

Gov. STEWART. No; I haven't considered it.

Acting Chairman COMMONS. You would want a little more evidence on both sides to form an opinion?

Gov. STEWART. Yes, sir.

Acting Chairman COMMONS. Do you have any questions, gentlemen?

Commissioner GARRETSON. Just one question that has come out of this: Governor, you just stated your belief in arbitration?

Gov. STEWART. Yes, sir.

Commissioner GARRETSON. The moment that arbitration becomes compulsory hasn't it ceased to be arbitration and become a labor court?

Gov. STEWART. Well, that is the trouble. That is the only trouble about it.

Commissioner GARRETSON. The very essence of arbitration is voluntary action on the part of the two who have disagreed?

Gov. STEWART. Yes; that is true.

Commissioner GARRETSON. That is all.

Gov. STEWART. But, of course, until we can get some perfect system we will find any system with its faults.

Commissioner GARRETSON. Oh, yes. Have you been familiar with the workings of the Canadian act?

- Gov. STEWART. What?
- Commissioner GARRETSON. The Canadian disputes act?
- Gov. STEWART. No; I haven't.
- Commissioner GARRETSON. It is a compulsory investigation without any binding power.
- Gov. STEWART. What I have said about this has been brought out right here. I had no idea that this line would be followed, and I haven't any very well defined views on this question. They are more or less unsettled and uncertain and would be subject to change if I could get information on which to base a decision.
- Commissioner GARRETSON. If you had the facts before you, that is true.
- Gov. STEWART. Certainly.
- Acting Chairman COMMONS. One more question: Has the subject of unemployment been a matter of importance in this State?
- Gov. STEWART. No; I think not.
- Acting Chairman COMMONS. Lack of employment?
- Gov. STEWART. No. I think our people have been very largely employed.
- Acting Chairman COMMONS. Does that hold true for a period of years?
- Gov. STEWART. Yes.
- Acting Chairman COMMONS. Past?
- Gov. STEWART. Many years back.
- Acting Chairman COMMONS. You have a considerable force of what is called floating or casual labor?
- Gov. STEWART. Yes; there are a good many so-called floaters—people who work and move on—but we don't have a very large number of unemployed.
- Acting Chairman COMMONS. It is mostly the floating, casual labor?
- Gov. STEWART. Yes.
- Acting Chairman COMMONS. Do you have any State or municipal systems of free employment offices?
- Gov. STEWART. Yes; there are free employment offices in nearly every city in the State.
- Acting Chairman COMMONS. Are they under a State system?
- Gov. STEWART. Well, they are under the city generally, but under a general law.
- Acting Chairman COMMONS. Are you familiar with the operations of any of those?
- Gov. STEWART. Not very familiar.
- Acting Chairman COMMONS. You could not state as to whether they are effective or efficient or not?
- Gov. STEWART. No; I could not say as to that.
- Acting Chairman COMMONS. I think that is all, Governor, and we are very much obliged to you.
- Gov. STEWART. Thank you, gentlemen.
- Acting Chairman COMMONS. Mr. Dan Sullivan.

TESTIMONY OF MR. DAN SULLIVAN.

- Acting Chairman COMMONS. Mr. Sullivan, will you give your name to the reporter?
- Mr. SULLIVAN. Dan Sullivan.
- Acting Chairman COMMONS. Your address is Butte?
- Mr. SULLIVAN. 112 West Broadway, Butte.
- Acting Chairman COMMONS. What is your position at present?
- Mr. SULLIVAN. Superintendent of streets, city of Butte.
- Acting Chairman COMMONS. Have you been employed in the mines?
- Mr. SULLIVAN. Yes, sir.
- Acting Chairman COMMONS. For how long?
- Mr. SULLIVAN. About 23 years, between Montana and Michigan.
- Acting Chairman COMMONS. How long in the mines at Butte?
- Mr. SULLIVAN. Nineteen years, off and on, mostly here in Butte; about 18 months on the outside out of that 19 years.
- Acting Chairman COMMONS. With what company were you employed here, Anaconda?
- Mr. SULLIVAN. Anaconda Co., Heinze Co., the North Butte Co., Butte & Superior Co.
- Acting Chairman COMMONS. All of the companies practically?
- Mr. SULLIVAN. Yes, sir.

3762 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Acting Chairman COMMONS. How long since you have been employed in the mines?

Mr. SULLIVAN. A year ago last June since I—

Acting Chairman COMMONS. Were you discharged at that time?

Mr. SULLIVAN. No; I left my work voluntarily to accept this position for the city.

Acting Chairman COMMONS. Is this an appointive position?

Mr. SULLIVAN. This is an appointive position.

Acting Chairman COMMONS. How long have you been a member of the union, or you are a member and have been, have you?

Mr. SULLIVAN. I have been a member up to some time after I accepted this job, and then I discontinued paying dues to the Butte Miners' Union. I haven't been connected with any union since.

Acting Chairman COMMONS. Not been connected with any union?

Mr. SULLIVAN. Not any since.

Acting Chairman COMMONS. What positions have you held in the miners' union?

Mr. SULLIVAN. I was president of the Butte Miners' Union.

Acting Chairman COMMONS. At what time?

Mr. SULLIVAN. I was elected in December, 1910, and again in June, 1911.

Acting Chairman COMMONS. Are elections held every six months?

Mr. SULLIVAN. They were at that time. Later on they amended their by-laws and constitution to have elections annually instead of semiannually.

Acting Chairman COMMONS. What at that time was the voting membership of the miners' union?

Mr. SULLIVAN. Those eligible to vote, you mean?

Acting Chairman COMMONS. Yes; eligible to vote.

Mr. SULLIVAN. Why, in the neighborhood of 6,000.

Acting Chairman COMMONS. At that time were the number—what was the number eligible to membership? Those were dues-paying members, I take it, 6,000 dues-paying members?

Mr. SULLIVAN. Yes; there were probably 6,500, and some of those men were a few months behind and they are not eligible to vote. You had to be in good standing in the union in order to vote. That meant that your dues would have to be paid up within 60 days of the day you voted.

Acting Chairman COMMONS. Yes; and apparently there were 9,000 men employed in the mines here. Would that number be eligible to membership?

Mr. SULLIVAN. Yes; all the men in the mines and men working around the sawmills and mills or at the surface work that were not connected with any particular trade or craft.

Acting Chairman COMMONS. Well, then, apparently there were some 3,000 eligible who had not paid up their dues?

Mr. SULLIVAN. At that time there was what is called the smelterman's union. Now, they had jurisdiction over all work on the surface and around the surface and in the different mills here, carpenter shops, and so forth, those that were doing the work. Later on the smeltermen's charter was revoked, and they were taken over by Butte Miners' Union No. 1. Then they came under the jurisdiction of Butte Miners' Union No. 1 from that time.

Acting Chairman COMMONS. That was after your election?

Mr. SULLIVAN. Yes.

Acting Chairman COMMONS. When was this consolidation?

Mr. SULLIVAN. That was in the winter of 1912.

Acting Chairman COMMONS. Were you president?

Mr. SULLIVAN. No, sir; not at that time.

Acting Chairman COMMONS. During what period, what dates, were you president?

Mr. SULLIVAN. I was president from the 1st of January, 1911, to the 5th of August, I think, 1911. I served one month of the second term as president.

Acting Chairman COMMONS. When you resigned to take this?

Mr. SULLIVAN. No; I was elected on the executive board of the Western Federation of Miners at the convention that was held here at Butte at that time.

Acting Chairman COMMONS. You resigned to take that?

Mr. SULLIVAN. I was elected on that, to that position, and consequently I left the other position as president of the miners' union.

Acting Chairman COMMONS. Can you describe the system that is known as the rustling card system?

Mr. SULLIVAN. I don't know very much about it. I have never made application for a rustling card—only what I hear other fellows tell about it.

Acting Chairman COMMONS. Has it been a matter which was discussed in the union?

Mr. SULLIVAN. Yes; it was taken up in the Butte Miners' Union.

Acting Chairman COMMONS. And you heard the discussion?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. Did you take part in it?

Mr. SULLIVAN. Yes, I did.

Acting Chairman COMMONS. So that you feel you are informed about it?

Mr. SULLIVAN. Yes; of course, I don't know how the workings in the office are up there, or how you make application, or anything of that kind, because I have never made application to any of the men for any job.

Acting Chairman COMMONS. What date was that system adopted?

Mr. SULLIVAN. It was in the fall of 1912, some time around there.

Acting Chairman COMMONS. Is there any one of these witnesses who knows more about this than you do?

Mr. SULLIVAN. Well, I guess some of them that made application for work; I don't know whether any are going to be called here or not.

Acting Chairman COMMONS. You have noticed the names on the printed list?

Mr. SULLIVAN. I don't know as any of these fellows has made application for a rustling card.

Acting Chairman COMMONS. You may explain the system as you understand it, the best you can.

Mr. SULLIVAN. Well, that rustling card was adopted here by the company and put into execution; and we brought it up in the miners' union and wanted to know at that time if the union was going to take any action to find out about this card, or what was going to be done. The result of it was there was a committee appointed to investigate. They did investigate, and they held a meeting at the auditorium on West Broadway, to report back. That is where they reported back to the membership—this committee, that was appointed to investigate. The meeting was called down there and a majority of the committee reported, and there was a minority report. The majority report was read and the man at the head of the minority report got up to read his report, and he wanted to make some statement before he read his report, and he started in to make his statement to the membership there, and before he got through his statement, before he had really started to make his report on the rustling card system here, the lights were turned out and the meeting broke up there and a large part of the membership left, probably one-third. So they finally got the lights back on and the members that were left there held a meeting, and this man reported on the rustling card system. Now, I don't remember what the report was.

Acting Chairman COMMONS. What was the majority report?

Mr. SULLIVAN. I don't hardly remember what the majority report was. They reported about the card being in vogue here, that they did not think they could do anything. I think that was about what the substance of the report was.

Acting Chairman COMMONS. The majority report was favorable to the card?

Mr. SULLIVAN. The rustling card.

Acting Chairman COMMONS. The minority report was opposed to it?

Mr. SULLIVAN. Opposed to the rustling card.

Acting Chairman COMMONS. Your explanation is that the minority was not allowed to make a report?

Mr. SULLIVAN. Did not make the report with the regular officers at their positions in the union.

Acting Chairman COMMONS. Was other action taken by the union on that system?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. What was it?

Mr. SULLIVAN. Yes, sir. The next Tuesday night, two weeks from that night, the members that were opposed to the card seemed to go to the hall in large numbers. They got the motion through that they take a referendum vote on whether they were in favor of this card or not. And the referendum was held.

Acting Chairman COMMONS. Explain your method of holding a referendum.

Mr. SULLIVAN. Well, the referendum vote means that every man in good standing in the Butte Miners' Union can, on presenting his card to the clerks and judges, cast his vote either way he wants to.

Acting Chairman COMMONS. Must that be done at certain hours?

Mr. SULLIVAN. Yes; between 9 o'clock in the morning and 11 o'clock in the evening. The polls are open all that time; between 9 o'clock in the morning—

Acting Chairman COMMONS. About 14 hours?

Mr. SULLIVAN. Yes.

Acting Chairman COMMONS. Are available for voting?

Mr. SULLIVAN. Yes.

Acting Chairman COMMONS. Does that make it possible for every man that is eligible to vote?

Mr. SULLIVAN. Well, I don't think that under a question of that kind where it was voting yes or no—I do think they could vote the whole, entire membership in that time. If the vote was to pass on different candidates it would require more time.

Acting Chairman COMMONS. They voted on this question yes or no; that is, to approve or disapprove this system?

Mr. SULLIVAN. Yes.

Acting Chairman COMMONS. What was done at the referendum on this?

Mr. SULLIVAN. There were something like 4,000 votes cast; the majority were opposed to the card.

Acting Chairman COMMONS. What was the vote?

Mr. SULLIVAN. I don't remember the exact figures, but the majority won out by 250 or 300. That is about the majority that they had.

Acting Chairman COMMONS. Against the card?

Mr. SULLIVAN. Yes; against the card. And I might state that this ballot that was presented by the officers at that time confused a great many of the members. In order to vote against this here rustling-card system you had to vote yes, instead of, as under ordinary circumstances, if you wanted to vote against a proposition you voted no. The reading of the ballot was such if you wanted to vote against the card you had to vote yes, and a great many of the members thought that was the reason that rustling cards got such a vote that it did.

Acting Chairman COMMONS. That is, you think the majority against it would have been larger?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. But you say that the majority against it was about 200?

Mr. SULLIVAN. Between 250 and 300, I think.

Acting Chairman COMMONS. Out of 4,000 votes?

Mr. SULLIVAN. Out of 4,000 votes.

Acting Chairman COMMONS. And there were about how many eligible to vote?

Mr. SULLIVAN. I don't know how many were in good standing at that time; I would venture to say between five and six thousand.

Acting Chairman COMMONS. You have heard the rustling-card system described here at the hearing, have you?

Mr. SULLIVAN. Partially; yes, sir.

Acting Chairman COMMONS. What you have heard of it is practically substantially correct, is it?

Mr. SULLIVAN. I think so.

Acting Chairman COMMONS. There is another matter that was brought up here, the discharge of certain Socialists. Was a referendum held on that subject?

Mr. SULLIVAN. On the discharge; yes, sir.

Acting Chairman COMMONS. What was the record of that? Were you an officer at that time?

Mr. SULLIVAN. I was a member of the executive board of the Western Federation of Miners, and happened to be here at that time that the men were discharged.

Acting Chairman COMMONS. What was the result of the referendum?

Mr. SULLIVAN. Eleven hundred and twenty-six to forty-four hundred and some odd; I don't know just what it was exactly. The majority were in favor of seeing the men discharged; but that wasn't the way it was put to them; it was put on the strike question.

Acting Chairman COMMONS. I am speaking of what was the referendum on—the question of the discharge of the Socialists? How was that question put?

Mr. SULLIVAN. There was no referendum taken on the discharge of the Socialists.

Acting Chairman COMMONS. What was the question?

Mr. SULLIVAN. It was the question of whether we should go on strike in favor of the discharged members.

Commissioner GARRETSON. In favor of their reinstatement?

Mr. SULLIVAN. In favor of their reinstatement.

Acting Chairman COMMONS. In favor of their reinstatement?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. Will you state the steps in regard to that? First, did the union officers take up the matter of their discharge with the company?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. What was the reply of the company next?

Mr. SULLIVAN. At first—I might explain that in detail the best I know how.

Acting Chairman COMMONS. Yes; in your own way.

Mr. SULLIVAN. I was a member of the executive board at that time, and I happened to be in here, and there were several hundred men discharged. I think there were something over 300 men, by the best authority I could get. I tried to find out the exact number from the different men discharged, and it was something over 300, they told me; I have their word for it.

Commissioner GARRETSON. In all the mines, or the Anaconda only?

Mr. SULLIVAN. In the Anaconda and North Butte; those are the only two I remember of discharging; I don't know of any others. There was complaint came to the union officers up there, and I was around the hall a good deal at the time the few days I was in here, and I wrote out a call myself for a special meeting of the miners' union to consider these questions, and the meeting was held in the miners' union hall, and at that meeting the hall was just as full as it could get. I expect about 700 men would fill the hall. There was a committee of five appointed to interview the management and ascertain, if possible, what the wholesale discharge was for; and we went to see the company officials, and we were told that they reserved the right to discharge men if they felt like it—felt so disposed. That was the substance of their answer, and we reported back to a special meeting at the Orion Theater, on West Broadway. I expect the place will hold 1,200 people—galleries, balcony, and downstairs. We reported and there was a motion made that the committee be discharged. The motion was defeated; so I asked what they intended to do with the committee if they didn't want to discharge them. There was silence for awhile; nobody seemed to know just exactly what to do, and some fellow presented a set of resolutions, and in those resolutions it stated that the committee be enlarged to 25 and given full power to handle this matter, and the resolutions went through, and they were to report back to another special meeting in a day or two after that meeting—I forget the exact date—and this committee went to see the management and got the same reply.

The management of the different mines stated they were not at that time discharging men because they were Socialists, although they admitted there was a larger number of men than usual discharged on those few days. We didn't get any satisfaction from the company, and we went back to report to the special meeting, and I went down at 6.30—the meeting was to be called at 7 o'clock—and all in front of the Orion Theater was packed, jammed right up against the door, all kinds of disorder, but no disturbance, no fighting, or anything of that kind; they were all crowding to get in. When we got in there the hall was jammed full right up, aisles and everything else, and we could get no order; they were all hollering and whooping. There was not anything accomplished other than some member, I think it was a man by the name of Lowney, made a motion that they take a referendum vote next Thursday, I think it was. I believe this was Tuesday, and the referendum was to be held in two or three days from that date. That motion prevailed that they take a referendum vote, and a vote was taken. This committee—this large committee of 25, I might state, I overlooked that—they recommended to the meeting that if the company did not reinstate those men that the committee and the union requested all members in and around the mines to cease work until they were reinstated—much the same as calling a strike.

That was the question that was submitted to the membership, and the motion was made in the hall to take a referendum vote on it, and the referendum vote was held in the miners' union hall, and the polls were open for two days, and the mines, most of the mines, in the camp shut down to give the men an opportunity to vote—all of the different mines. I don't know of any of the mines that worked. The mines that worked the first day shut down the next day in order to let the men vote.

Acting Chairman Commons. What was the total vote at that time?

Mr. SULLIVAN. The total vote?

Acting Chairman Commons. You gave the vote at the time as 1,126.

Mr. SULLIVAN. One thousand one hundred and twenty-six in favor of reinstating those men.

Acting Chairman Commons. One thousand one hundred and twenty-six in favor of reinstating those men?

Mr. SULLIVAN. Yes, sir; and the other 4,400, I forget just exactly, something over 4,400.

Commissioner GARRETSON. Against?

Mr. SULLIVAN. Yes, sir.

Acting Chairman Commons. Against what?

Mr. SULLIVAN. Against reinstating them or against ceasing work to have them reinstated.

Acting Chairman Commons. Was the vote on the question of whether they should strike at that time?

Mr. SULLIVAN. That is the way the thing was put on the ballot: Are you in favor of going on strike for the reinstatement of our discharged brothers or discriminated brothers, or something of that kind?

Acting Chairman Commons. And the vote was 4,400 to 1,126 against striking on account of these discharged Socialists?

Mr. SULLIVAN. Yes, sir.

Acting Chairman Commons. Would you consider that a fair representation of the feeling of the rank and file of the membership as distinguished from this committee of 25?

Mr. SULLIVAN. I don't quite understand.

Acting Chairman Commons. Would that vote of 4,400 to 1,126 be a fair judgment of the feeling of the rank and file on that question as distinguished from any influence that the leaders or officers of the union might have?

Mr. SULLIVAN. I think that was a fair—that was their opinion, they voted that way.

Acting Chairman Commons. They were not in favor of standing out to have these men reinstated?

Mr. SULLIVAN. That is the way they voted.

Acting Chairman Commons. The company is said to have reinstated some of these men. Was that done before or after this vote?

Mr. SULLIVAN. It was done after, I think. I don't think there was anybody reinstated before that vote. And rumor had it on the street there were to be several hundred more discharged.

I believe that the union, or the officers of the union, would not have taken any action only because those rumors were so current on the street that they were going to clean out a certain political party here, right out of the city.

Acting Chairman Commons. It would seem on the face of it that four-fifths of the voters would stand by the company in cleaning out the Socialists?

Mr. SULLIVAN. Well, that is the way they voted. They were voting against a strike, apparently.

Acting Chairman Commons. What date was this election?

Mr. SULLIVAN. It was in—I should judge it was on the 22d or 23d of March, around there—between that and the latter part of March, 1912.

Acting Chairman Commons. What other referendum votes has the union conducted? Did it conduct any on the adoption of these contracts that were adopted here?

Mr. SULLIVAN. Yes, sir; it took a referendum, I think, on both of those contracts. I wasn't here at the last time the contract was made; but I was here at the time the first contract was made.

Acting Chairman Commons. In 1907?

Mr. SULLIVAN. In 1907.

Acting Chairman Commons. Do you remember what the referendum vote was?

Mr. SULLIVAN. No, sir; I don't remember. I could not say.

Acting Chairman Commons. Do you remember which way the vote went?

Mr. SULLIVAN. Well, it took two referendums the first time. I am not quite clear on it now; I have forgotten; but the first referendum was for \$4 straight. The miners' union amended their constitution now, if I remember right, making the minimum wage \$4; and the first referendum they took was—they adopted the amendment to the constitution making the minimum wage \$4, then they had some dickering with the company through committees, the slid-

ing scale was proposed, and they took another referendum on the sliding scale and that was adopted. They amended their constitution again, put the provisions of the contract right into the constitution, and they voted on that and they adopted it.

Acting Chairman COMMONS. And that sliding scale was adopted?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. What officer of the union has a record of those votes?

Mr. SULLIVAN. Well, I guess it is pretty hard to get a record now; they were destroyed.

Acting Chairman COMMONS. Then, from your recollection, what would you say was the majority, or was it an overwhelming vote?

Mr. SULLIVAN. Well, I think it was decidedly in favor of it.

Acting Chairman COMMONS. You say it was strongly or decidedly in favor of it?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. And the next one, the second contract in 1912, you have no recollection of it?

Mr. SULLIVAN. In 1912, I wasn't here at the time; but I think it was something over 3,000 for the contract. I was given the figures; but I forgot what they were.

Acting Chairman COMMONS. Now, what other referendums have they had? There have been several matters that have come up here with reference to the action of the union. What I want to get at is what is the feeling of the rank and file as distinguished from the small number of people that are able to get into that hall. There are only 600 out of 5,000 that can get into the hall. When it goes to a referendum, I take it, then, they have an expression of the rank and file that can not get into the hall. What other votes have they had?

Mr. SULLIVAN. I don't know exactly. I don't remember any others; there may be several others.

Acting Chairman COMMONS. Did they have more than one vote on any of the other questions? They voted twice on the contract, you say?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. And reversed themselves the second vote, was that true?

Mr. SULLIVAN. On which contract?

Acting Chairman COMMONS. That first contract, they changed—the second vote reversed the first vote?

Mr. SULLIVAN. Yes, sir; they did.

Acting Chairman COMMONS. They took the attitude of the company or they took the proposition which the company offered, did they?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. And which was agreed upon by the committee?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. Was that true of the rustling card system; did they have second vote on that?

Mr. SULLIVAN. Not a second referendum vote. Not to my knowledge; I can not remember that they did.

Acting Chairman COMMONS. If the majority against it was 250, it would look as though they would have instructed the executive committee to take some summary action on the question if the 250 majority were against it?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. Why did not that happen?

Mr. SULLIVAN. I don't know why they didn't do it. It was the action of the membership, and they carried it by a referendum vote, and it should have been the duty of the officers of the union at that time to carry out the instructions of the majority.

Acting Chairman COMMONS. Were you here at that time?

Mr. SULLIVAN. Yes, sir; I was here at that time.

Acting Chairman COMMONS. You do not remember of a second referendum on the subject?

Mr. SULLIVAN. No, sir; I don't remember of a second referendum on the subject.

Acting Chairman COMMONS. You were elected in 1909 or 1910—the fall of 1910. What were the issues which you stood for as a candidate for president?

Mr. SULLIVAN. I don't know as there was any issue at that time. I don't think there was any issue, simply two opposing parties at that time.

Acting Chairman COMMONS. On what ground did you make the campaign; was it merely personal grounds?

Mr. SULLIVAN. No, sir; not that I know of. It was this man who testified yesterday, Mr. Murphy, that opposed me the first time I ran for president of the miners' union, and I was elected at that time. I had no personal feeling against Mr. Murphy other than I had the same right to contest for the office that he did.

Acting Chairman COMMONS. Did you oppose the policies of the union as conducted then?

Mr. SULLIVAN. Yes, sir; we opposed the policies of the union to a certain extent. Most of the fellows, I guess, that voted for me were not in favor of the policies of the union.

Acting Chairman COMMONS. For example, what policies?

Mr. SULLIVAN. Well, take, for instance, some of the policies that were carried out later in allowing the rustling card system to be put in vogue in a place like this, where there was no occasion for it. That we should not stand idly by and allow a thing like that to go through and didn't even consult the membership.

Acting Chairman COMMONS. Did you make that an issue?

Mr. SULLIVAN. No, sir; that was before the rustling card system was put in vogue.

Acting Chairman COMMONS. The rustling card system was put in later?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. What were the other issues at that time?

Mr. SULLIVAN. The policies, you mean?

Acting Chairman COMMONS. When were the Socialists discharged?

Mr. SULLIVAN. The Socialists were discharged in March, 1912.

Acting Chairman COMMONS. After your time?

Mr. SULLIVAN. Yes, sir; that was after I was elected president; that was while I was a member of the executive board. I don't think there was any clear-cut issue at the time I was elected president. It was simply a feeling that those fellows were company men and that they didn't really represent the membership.

Acting Chairman COMMONS. In what sense was there a feeling that they were company men; they had made this contract?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. Which had been voted upon by the miners?

Mr. SULLIVAN. Not those particular men, but it was their followers.

Acting Chairman COMMONS. They had made this contract?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. And the membership had supported it apparently?

Mr. SULLIVAN. Yes, sir.

Acting Chairman COMMONS. Then, that was not one of the issues?

Mr. SULLIVAN. No, sir; and prior to this time, I might say back along several years, the company were in the habit of giving leases to the officers of the miners' union.

Acting Chairman COMMONS. What do you mean by that?

Mr. SULLIVAN. Well, a lease—some people call it tribute. They would give them a little ledge of first-class ore in one of the mines to go in and take out—first-class ore or pretty good ore. They ship it to the smelter and get their money for it.

Acting Chairman COMMONS. You mean they would allow them to go in, not working on a wage scale at all?

Mr. SULLIVAN. Yes; a lease is something just the same as a contract you take from somebody. You go in and make what you can. Say, for instance, I lease a little property up here, and I would go down and everything I would get out of there was mine, except a certain commission I gave to the man that I leased the property from—a royalty.

Acting Chairman COMMONS. Was there very much of that?

Mr. SULLIVAN. Why, yes, sir; there was a whole lot of it.

The aldermen of the city got leases, the officers of the union got leases all around down at Green Mountain mine, and at Wild Bill, and different places around the officers had leases.

Acting Chairman COMMONS. During what period was the leasing?

Mr. SULLIVAN. I could not give the dates, but it was when Mr. Scallon was manager of the Amalgamated mines here.

Acting Chairman COMMONS. It was prior to the time that you were elected?

Mr. SULLIVAN. It was before my time.

Commissioner LENNON. That must be 10 years ago or more?

Mr. SULLIVAN. Yes, sir; I think it was.

Commissioner LENNON. Because he has not been manager for 10 years, I am sure. How long was it, Mr. Kelley, since Mr. Scallon was manager?

Mr. KELLEY. It was 11 years last February.

Acting Chairman COMMONS. Did that lease system continue after Mr. Scallon?

Mr. SULLIVAN. I don't think so. I don't think it did.

Acting Chairman COMMONS. Then it had not been in existence from 1905 down until the time that you were elected?

Mr. SULLIVAN. No, sir; I don't think so.

Acting Chairman COMMONS. That could not have been an issue in your election?

Mr. SULLIVAN. No, sir; the leasing proposition wasn't an issue, but those same fellows that were instrumental and very active around the miners' union at the time of the leasing were still actively supporting the men that were opposed to the ticket I was running on.

Acting Chairman COMMONS. You think that that thing that had been seven years ago—seven years previous—do you think that had considerable to do with the feeling in electing you as opposed to them?

Mr. SULLIVAN. Well, I expect it had something to do on account of those fellows.

Acting Chairman COMMONS. Then were there any other issues?

Mr. SULLIVAN. Any other issues?

Acting Chairman COMMONS. Yes.

Mr. SULLIVAN. I don't know of any other issues. Those fellows that were on the other side at that time seemed to do the bidding of the company on different occasions. Say, for instance, the time the clerks worked for early closing here. They wanted to close at 6 o'clock, and most of the stores did close here at 6 o'clock, with the exception of the Hennessy Co., and they wouldn't close at 6 o'clock, and the clerks' union brought their grievances up to the miners' union, to get the indorsement of the miners' union on the stand they had taken, the early closing stand.

Acting Chairman COMMONS. Mr. Garretson, any questions?

Mr. SULLIVAN. The miners' union at that time was pretty evenly divided on the matter, and the fact of the matter was that after the thing was thrashed out they decided against the clerks, against the stand that the clerks' union had taken, and stood with the company store—the Hennessy store.

Commissioner GARRETSON. These leases—in giving of leases by companies like the mining companies, did they give them to many individuals?

Mr. SULLIVAN. No, sir; not to many; they gave them to those men that they thought were influential in the organization.

Commissioner GARRETSON. Are they given to anybody—I mean according to common report—except for a purpose?

Mr. SULLIVAN. Oh, I think they have a purpose; yes, sir.

Commissioner GARRETSON. Were they always profitable, these leases?

Mr. SULLIVAN. I think the most of them were; yes, sir; I am positive they were.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. Mr. Lennon, any questions?

Commissioner LENNON. Had the Amalgamated ever been connected with the company store here?

Mr. SULLIVAN. The Amalgamated?

Commissioner LENNON. Yes, sir.

Mr. SULLIVAN. That is something I could not tell you.

Commissioner LENNON. Was there a time when the people of Butte considered the Hennessy store a company store?

Mr. SULLIVAN. Yes, sir; there was.

Commissioner LENNON. That was before the Amalgamated?

Mr. SULLIVAN. That was before the Amalgamated; yes, sir.

Commissioner LENNON. Before the Amalgamated Co. was in existence here?

Mr. SULLIVAN. Yes, sir.

Commissioner LENNON. Well, was it in reality a company store?

3770 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. SULLIVAN. I don't know; I could not say; but I always thought it was, and I thought so for a long time after the Amalgamated took things over. I thought it was a company store, still I don't know whether it was or not.

Commissioner GARRETSON. What year did this question of early closing in the Hennessy store come up?

Mr. SULLIVAN. That is a long way back; I could not tell you exactly what year.

Commissioner GARRETSON. About 1899?

Mr. SULLIVAN. It probably was 1899 or 1900; somewhere there.

Commissioner O'CONNELL. Is this leasing system still in vogue?

Mr. SULLIVAN. No, sir; I don't know of any of it going on now—that is, the company giving leases.

Commissioner O'CONNELL. How long ago was that discontinued?

Mr. SULLIVAN. It was probably shortly after Mr. Scallon left here.

Commissioner GARRETSON. Do you know whether such leases as that were made a matter of record?

Mr. SULLIVAN. On what book?

Commissioner GARRETSON. Are they recorded in any public place?

Mr. SULLIVAN. I don't think so; no, sir. I don't think they are; I don't know.

Commissioner O'CONNELL. It was some 10 or 11 years ago since the leasing system was in vogue?

Mr. SULLIVAN. Yes, sir.

Commissioner O'CONNELL. What number of men do you imagine had leases?

Mr. SULLIVAN. Well, I could not tell you exactly.

Commissioner O'CONNELL. Do you know personally of men that had leases?

Mr. SULLIVAN. Yes; oh, yes.

Commissioner O'CONNELL. Were they officers of the organization?

Mr. SULLIVAN. Yes, sir. Ed Long, he was president, or past president, he had a lease; Dan Shay, he was a secretary of the miners' union, he had a lease; Jerry Hanley, secretary, he had a lease.

Commissioner O'CONNELL. Had these leases when they held these offices?

Mr. SULLIVAN. No; I think they had left the offices; got the leases after that.

Commissioner O'CONNELL. Got the leases after they retired from office?

Mr. SULLIVAN. Yes, sir.

Commissioner O'CONNELL. That wouldn't indicate, then, they were seeking influence with the officers after he had left the office, would it?

Mr. SULLIVAN. No; it would not. A fellow on the outside might think that they had probably done something that they were paid for after they left.

Commissioner O'CONNELL. Paid for work done?

Mr. SULLIVAN. Yes.

Commissioner O'CONNELL. That was purely imaginary?

Mr. SULLIVAN. My imagination, exactly.

Commissioner O'CONNELL. You mentioned three. Are there any others, any large number, say fifty or a hundred?

Mr. SULLIVAN. Oh, I could mention more. I might mention one more—I don't know whether he was—he was at one time president of the miners' union.

Commissioner O'CONNELL. Were there any humble members of the union who had leases?

Mr. SULLIVAN. Not that I know of.

Commissioner O'CONNELL. Who never held office, who just simply held membership; they probably would not come to your attention.

Mr. SULLIVAN. Well, there was two—I can't call their names—I know one fellow, his first name is Archie, but I can't—

Commissioner O'CONNELL. Did you ever have a lease?

Mr. SULLIVAN. No.

Commissioner O'CONNELL. Ever offered one?

Mr. SULLIVAN. No.

Commissioner O'CONNELL. Every seek one?

Mr. SULLIVAN. No.

Commissioner O'CONNELL. Do you know anything about what the profits on these leases were?

Mr. SULLIVAN. No; I haven't any idea what the profit of those leases was.

Commissioner O'CONNELL. Did the man who had a lease—for instance, one of these officers you mentioned—would his mode of living and his walk in life, his dress, or anything in his make-up or appearance indicate that he was living more profitably than he had before?

Mr. SULLIVAN. Well, I expect so. A fellow can tell pretty nearly whether a man is broke or has a little in reserve. I should judge that by their appearance, while they didn't put on any extra fashions or anything of that kind, that they were very comfortably fixed.

Commissioner O'CONNELL. No indication that they had grown rich very suddenly, however?

Mr. SULLIVAN. This Shay fellow, he bought a ranch down in Bitter Root; he is on it still; he is a judge, justice of the peace, here at the present time.

Commissioner O'CONNELL. You are holding a city position now, as I understand?

Mr. SULLIVAN. Yes.

Commissioner O'CONNELL. What is the salary of the mayor of Butte?

Mr. SULLIVAN. The salary?

Commissioner O'CONNELL. Yes.

Mr. SULLIVAN. Four thousand dollars a year.

Commissioner O'CONNELL. What salary to the position you are now occupying?

Mr. SULLIVAN. Eighteen hundred dollars a year.

Commissioner O'CONNELL. You are appointed by the mayor?

Mr. SULLIVAN. Appointed by the mayor; yes, sir.

Commissioner O'CONNELL. What are the salaries of the other officials; for instance, city attorney?

Mr. SULLIVAN. The city attorney, I don't know exactly what his salary is.

Commissioner O'CONNELL. What is the salary of the chief of the fire department, or whoever is head of that department, or whatever you call him—the chief of police?

Mr. SULLIVAN. I think his salary is \$200 a month; I ain't positive about that.

Commissioner O'CONNELL. What is the salary of the chief of police?

Mr. SULLIVAN. I couldn't say what that is.

Commissioner O'CONNELL. What department are you in charge of?

Mr. SULLIVAN. Street department.

Commissioner O'CONNELL. You are the head of the street department?

Mr. SULLIVAN. Yes, sir.

Commissioner O'CONNELL. What comes under your department?

Mr. SULLIVAN. The work?

Commissioner O'CONNELL. All the street work?

Mr. SULLIVAN. You mean what work I have charge of here in the city?

Commissioner O'CONNELL. Yes.

Mr. SULLIVAN. Street work; that is, cleaning the streets and grading the streets and keeping the crosswalks in, cleaning the gutters, building water boxes, and so forth, and looking after removal of all garbage and ashes.

Commissioner O'CONNELL. What class of skill have you employed?

Mr. SULLIVAN. Common labor.

Commissioner O'CONNELL. All common labor?

Mr. SULLIVAN. Common labor and teamsters.

Commissioner O'CONNELL. What is the salary of the labor?

Mr. SULLIVAN. Four dollars a day for eight hours.

Commissioner O'CONNELL. Teamsters?

Mr. SULLIVAN. Four dollars a day for eight hours.

Commissioner O'CONNELL. All labor coming under your department is \$4 a day for eight hours?

Mr. SULLIVAN. With the exception of the men on steam rollers, and firemen that watch the steam rollers at night, the horseshoers and the blacksmiths; they get a larger scale than \$4.

Commissioner O'CONNELL. How long have you held this position?

Mr. SULLIVAN. Since this last July, the 1st of last July, a year ago—that is, the 1st of last July.

Commissioner O'CONNELL. They are not under civil service, are they?

Mr. SULLIVAN. No.

Commissioner O'CONNELL. Is the same force that was employed when you took office still employed?

Mr. SULLIVAN. Not all of them, no; but I guess the majority of them are still there.

Commissioner O'CONNELL. How are they selected; how are the workmen selected in your department?

Mr. SULLIVAN. Mostly efficiency. Of course, I know a large number of men here, and when I have an opportunity and I know a fellow is a good workman, have known him for a number of years, I give him a chance to go to work.

Commissioner O'CONNELL. Do you know the political affiliations of the employees in your department?

Mr. SULLIVAN. The political affiliations, well, I do not. There are some Democrats, some of them Republicans, and the majority of them are Socialists. Commissioner O'CONNELL. It is not a necessary qualification for employment for them to belong to any one particular party, is it?

Mr. SULLIVAN. No, sir. I have never asked a man what his political affiliations were.

Commissioner O'CONNELL. Would you know without asking him?

Mr. SULLIVAN. No; I have no way of knowing.

Commissioner O'CONNELL. If a man was a prominent Socialist in this city would you know it?

Mr. SULLIVAN. Yes, sir; if he took a prominent part, an active part, in the Socialist movement here, I would know it, I think.

Commissioner O'CONNELL. Then, if he made application for employment, you would have a pretty fair idea?

Mr. SULLIVAN. I would have an idea he was a Socialist.

Commissioner O'CONNELL. That is all.

Acting Chairman COMMONS. That is all, Mr. Sullivan. Thank you.

TESTIMONY OF MR. DAN SHOVLIN.

Acting Chairman COMMONS. Your name and address?

Mr. SHOVLIN. Dan Shovlin, 80 East Park Street.

Acting Chairman COMMONS. What is your occupation?

Mr. SHOVLIN. Miner.

Acting Chairman COMMONS. Are you working?

Mr. SHOVLIN. Yes, sir.

Acting Chairman COMMONS. For what company?

Mr. SHOVLIN. The Davis-Daly.

Acting Chairman COMMONS. Where is that?

Mr. SHOVLIN. It is a mine down on Park Street.

Acting Chairman COMMONS. How long have you been in the work?

Mr. SHOVLIN. Working for that company?

Acting Chairman COMMONS. No; any company in the mining district.

Mr. SHOVLIN. Been mining about 14 years.

Acting Chairman COMMONS. What companies have you worked for?

Mr. SHOVLIN. I worked for the A. C. M. Co., and for the Clark interests when they were here, and for the Davis-Daly people.

Acting Chairman COMMONS. You were active in organizing the new union, were you not?

Mr. SHOVLIN. Yes, sir.

Acting Chairman COMMONS. At what time was that organized?

Mr. SHOVLIN. It was organized on the 23d of June.

Acting Chairman COMMONS. What were the causes leading up to that organization? You heard the statement that Mr. Sullivan made?

Mr. SHOVLIN. Some of them; yes, sir.

Acting Chairman COMMONS. Which of those were prominent in leading to the organization of the new union?

Mr. SHOVLIN. Dissatisfaction with the old organization.

Acting Chairman COMMONS. Well, on what grounds, what particular grounds were prominent?

Mr. SHOVLIN. I believe one of the most important factors in causing the organization of the new union was the refusal of the officers of Butte Miners' Union to accept a motion for a referendum vote on the assessment; that is, the extra assessment that was levied for the strikers in Michigan.

Acting Chairman COMMONS. What time was that?

Mr. SHOVLIN. I believe it was in September that that assessment was levied. First there was an assessment that came from Denver of \$2. I believe that came in September. That is authorized by the executive board; that is, their power to levy that assessment. It was never questioned that they had that right. At a regular meeting also in September, I believe, the—

Acting Chairman COMMONS. Well, now, what meeting, regular meeting of what?

Mr. SHOVLIN. Well, now, a regular meeting of the miners' union. I am speaking of the miners' union now.

Acting Chairman COMMONS. Was that first one the local miners' union or the Denver headquarters that ordered the assessment?

Mr. SHOVLIN. The first assessment?

Acting Chairman COMMONS. Yes.

Mr. SHOVLIN. The executive board. There is no executive board in the local.

Acting Chairman COMMONS. Now, the second one was—just continue.

Mr. SHOVLIN. It was at a regular meeting of the miners. I don't know how many was there. I happened to be night shift at the time. And they voted at that meeting to put on an amount, enough of an amount to make it shift for the month; that is, a shift wages for the month—a day's wage for the month. That would be an assessment that was put on, and we are entitled to a referendum vote on all assessments that are levied in the local. This was put on at a regular meeting.

Acting Chairman COMMONS. In September?

Mr. SHOVLIN. I believe it was in September.

Acting Chairman COMMONS. Well.

Mr. SHOVLIN. And in October—I believe it was the latter part of September—and then the first part of October I happened to go on the day shift again, and I made a motion from the floor of the miners' union hall at another regular meeting that the members be given a referendum vote on that assessment. The president in the chair at the time refused to entertain the motion. I appealed from his decision, as any member has the right. He refused to put the appeal, showing that he did not understand parliamentary tactics, or he just wouldn't put the motion because Shovlin made it, or some reason or other. And then after, I got the floor then and told him what I thought about that for taking such arbitrary action, and finally some fellow in the audience, I believe it was—I ain't sure who it was now—he says: "Oh, give it to them and show them how bad we can beat them." And on the appeal the president put the motion on the appeal, and I lost on the appeal.

Acting Chairman COMMONS. Does the referendum vote in the local require action by a meeting of this kind?

Mr. SHOVLIN. It is not necessary. That was the means we took to force them.

Acting Chairman COMMONS. What is the rule of the union about initiating the referendum vote? Can you do it by petition?

Mr. SHOVLIN. Yes, sir.

Acting Chairman COMMONS. A certain number of names?

Mr. SHOVLIN. Twenty names are sufficient.

Acting Chairman COMMONS. Why didn't you follow that procedure, then, and get 20 members to sign your petition for referendum?

Mr. SHOVLIN. That wasn't necessary, wasn't absolutely necessary. It could have been brought up at a regular meeting and done that, but it wasn't absolutely necessary to petition.

Acting Chairman COMMONS. When they voted you down on that proposition why didn't you try the other method?

Mr. SHOVLIN. Just about as useless to attempt the other method as it was to try to get the floor.

Acting Chairman COMMONS. Why was it?

Mr. SHOVLIN. I thought so.

Acting Chairman COMMONS. Couldn't you have gotten 20 names?

Mr. SHOVLIN. I could have gotten 20 names easily.

Acting Chairman COMMONS. Why didn't you go and get them, then?

Mr. SHOVLIN. Because I didn't think it was worth while after being turned down that way. It would have been a waste of time.

Acting Chairman COMMONS. Why did you think it was not worth while and would be a waste of time? Why did you think it was a waste of time?

Mr. SHOVLIN. I thought it would be a waste of time; I figured it would be turned down just the same as the other was; it might have been, too.

Acting Chairman COMMONS. In what way? We have had a description of the way in which the referendum vote is conducted—12 hours, or two days are given for a referendum vote. Would that be a useless procedure?

Mr. SHOVLIN. If you get a referendum vote it would not be a useless procedure, but you would have to go before the meeting, a regular meeting.

Acting Chairman COMMONS. When you initiate by petition, does it have to come before a regular meeting?

Mr. SHOVLIN. Yes. The initiative for petition has to be submitted to the body, and they take action on it.

Commissioner GARRETSON. The petition is directed to the lodge itself, is it not Mr. SHOVLIN. It is directed to the officers calling for a meeting.

Commissioner GARRETSON. Yes.

Mr. SHOVLIN. That is subject to discussion to refer that.

Commissioner GARRETSON. And the body has to pass on it, the lodge itself has to pass on it before it is referred to the membership for a referendum vote?

Mr. SHOVLIN. Yes.

Commissioner GARRETSON. Referred to the lodge itself?

Mr. SHOVLIN. Yes; that is it.

Commissioner GARRETSON. And not by the originators of the petition?

Mr. SHOVLIN. No; it is not referred by them at all.

Acting Chairman COMMONS. As I understand it, you have two methods, one by the meeting and one by petition?

Mr. SHOVLIN. No.

Acting Chairman COMMONS. Then the petition has to go before the meeting?

Mr. SHOVLIN. Yes; it does. The petition that is gotten up that way is simply a called meeting making that a special order of business.

Acting Chairman COMMONS. Now, what other causes of dissatisfaction?

Mr. SHOVLIN. Then another cause was later on—was the action of the president in having one of the members of the organization working at the High Ore mine discharged without consulting the local; that is, without consulting the members at a regular meeting.

Acting Chairman COMMONS. I didn't get that point.

Mr. SHOVLIN. I say it was the action of the president of the miners' union in having a member of the miners' union discharged from the High Ore mine.

Commissioner O'CONNELL. That means up high?

Mr. SHOVLIN. That means the name of the mine.

Commissioner O'CONNELL. Just continue. Why did he ask for his discharge?

Mr. SHOVLIN. Because they quarreled and they had at the mine—this fellow struck him a couple of times and knocked him down a couple of times, I understand.

Acting Chairman COMMONS. How did he get him discharged—go to the foreman?

Mr. SHOVLIN. No, sir. He went to the foreman first, and the foreman says, asked him if this young fellow—said, "Is he in good standing?" And the young fellow answered, "Yes," and this foreman said, "Well, since you are in good standing, that is all. You can go to work."

Commissioner O'CONNELL. Was that one of the requisites—that the president allow everybody to lick him?

Mr. SHOVLIN. No; that it not a requisite at all, because this fellow happened to be a big, husky fellow, and the fellow that licked him was a little bit of fellow.

Commissioner O'CONNELL. Ashamed of the fellow?

Mr. SHOVLIN. So it was no requisite he would have for that.

Acting Chairman COMMONS. How did he succeed in having him fired?

Mr. SHOVLIN. He went—afterwards he came down town; the foreman refused; and the president came down town, I presume, and went to the office; he seen one of the managers some place, had this fellow discharged; that is, word was sent to the mine for this fellow to come and see Mr. Gillie. I believe he did that there. That was another of the reasons, I believe.

Acting Chairman COMMONS. When did that occur?

Mr. SHOVLIN. Some time in March or April.

Acting Chairman COMMONS. Well, any other instances?

Mr. SHOVLIN. Yes; there was another instance. When we thought possibly we could get a square election up there by having voting machines in. An amendment was submitted to that effect, was read at two meetings, and on the night of the third, why, the action was to be taken, and was brought up that night and read, and I made a motion myself that it be adopted as read. Another member there made a motion that it be thrown in the waste basket. The vote was taken on it—that is, the usual form of vote—and we were not satisfied with that, because the president ruled that the motion had carried to throw it in the waste basket, and threw the amendment in the waste basket. A division of the house was called with reference to it, and he refused to give a division of the house, and—

Acting Chairman COMMONS. Was this another initiative petition of 20 members?

Mr. SHOWLIN. No; just made in the usual form; action taken on the third meeting, regular meeting.

Acting Chairman COMMONS. They refused, then, to adopt the Australian system of voting?

Mr. SHOWLIN. The machine system.

Acting Chairman COMMONS. The machine system?

Mr. SHOWLIN. Yes. And they refused, inasmuch as the president ruled that the motion to put it in the waste basket had carried.

Acting Chairman COMMONS. At what date was this action?

Mr. SHOWLIN. I don't know the exact date; that was some time in April also.

Acting Chairman COMMONS. April?

Mr. SHOWLIN. Yes; recently.

Acting Chairman COMMONS. Has the new union adopted the machine method of voting?

Mr. SHOWLIN. Yes, sir; they are making their first election—that is, the first ballot is on the machines.

Acting Chairman COMMONS. That was one of the issues, then, that you wished to have a machine method of voting?

Mr. SHOWLIN. Most assuredly one of the issues.

Acting Chairman COMMONS. Well, why was that an issue?

Mr. SHOWLIN. Why was that an issue?

Acting Chairman COMMONS. Yes.

Mr. SHOWLIN. Well, because under the old method the ones that happened to have the hall packed the tightest that night would get their judges and clerks in there, and when you get the judges and clerks that was the election.

Commissioner LENNON. Did that apply to both sides, all factions or just one? Whichever faction happened to get possession of the hall, did they carry that plan out?

Mr. SHOWLIN. Yes; whichever faction happened to get possession of it, but it always happened—

Commissioner LENNON. Was that a case of the pot calling the kettle black?

Mr. SHOWLIN. Yes; whichever one, but the two fellows that have got control at that time got their bunch in there, because there was some method they had worked of getting the men down early, see, and packed them into the hall. There was some way that they had to get around to the mine; I don't know how it was—I got my own views of how it was. They used to get them in there and fill the hall right full, and then when us fellows who were called radicals and rebels and revolutionists, and all that sort of stuff, got around, we had an awful time to get in the hall.

Acting Chairman COMMONS. Well, then, it was simply due to the fact that you wanted to have a system by which all the membership could vote, was that it? How would machines help unless it was a referendum vote where everybody voted?

Mr. SHOWLIN. Well, the machines, the way they would help, they could not be—you could not pack them. That's one thing, you could not pack a machine, because the machine is opened in the morning and the numbers taken on the counter, and it is closed, and it is closed until all vote in the evening.

Acting Chairman COMMONS. But if only 600 get in there they could vote just the same on a machine as they could by tellers.

Mr. SHOWLIN. You understand me, the machine, this machine to be used at the election is so fixed, the election is held, the regular hours are from 9 o'clock in the morning until 11 at night on the day of the election. It is not in the hall—it is in the hall and the members pass in and out all during the day.

Acting Chairman COMMONS. Oh, they do?

Mr. SHOWLIN. They are not in there for any length of time.

Acting Chairman COMMONS. Did you also have a machine for referendum purposes?

Mr. SHOWLIN. The machine for all purposes of balloting except the election judges and clerks. That would be done at a regular meeting.

Acting Chairman COMMONS. When was this action in regard to the machine? In April, you say?

Mr. SHOWLIN. In April some time; yes.

Acting Chairman COMMONS. Any other instances that you have? What other causes of dissatisfaction?

Mr. SHOWLIN. I don't know of any others particularly.

Acting Chairman COMMONS. Have you any questions, Mr. Garretson?

Commissioner GARRETSON. What is to hinder the individual passing before the machine and punching each candidate a couple of times?

Mr. SHOVLIN. The machine don't allow that. It only allows them to vote one name for each office.

Commissioner GARRETSON. And repeating is not possible with this?

Mr. SHOVLIN. I don't believe it is possible.

Commissioner GARRETSON. What is to hinder a man coming back?

Mr. SHOVLIN. Got a cinch about it.

Commissioner GARRETSON. If the judges of election are as corrupt on each side as is here inferred, what is to hinder the man from marching around in a circle and going through the performance again?

Mr. SHOVLIN. Possible chance of coming back; the machine is not—he can only vote once each time he comes back, and the other way he could vote half a dozen times.

Commissioner GARRETSON. The percentage would be greater under the old plan than under the new?

Mr. SHOVLIN. Yes, sir.

Commissioner GARRETSON. Has there ever been any instance in an election by referendum where there were more ballots cast than members entitled to vote?

Mr. SHOVLIN. I believe at this last election there was.

Commissioner GARRETSON. You stated that the presiding officer violated parliamentary procedure when he refused to entertain a motion and did refuse to entertain an appeal?

Mr. SHOVLIN. Yes, sir; I did.

Commissioner GARRETSON. I was just wondering, after your statement that whichever side got in certain things occurred, whether or not, in your statement to the presiding officer, when you told him what you thought of him, that you used parliamentary language altogether.

Mr. SHOVLIN. I never used anything that was not fit to use here.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner O'CONNELL. Mr. Shovlin, how long have you been a member of the miners' organization here; I mean the Western Federation?

Mr. SHOVLIN. I don't know just exactly. Frank Connors was in there as secretary when I went in; I can not say exactly?

Commissioner O'CONNELL. Ten or fifteen years?

Mr. SHOVLIN. About 14 years; I wouldn't state that positively.

Commissioner O'CONNELL. That is not necessary to state positively. Have you an idea of what the membership of No. 1 was at that time—it was No. 1, then, wasn't it?

Mr. SHOVLIN. Yes. I did not take an active part at that time, and I couldn't say.

Commissioner O'CONNELL. During your membership what was the largest membership ever had by No. 1 in the city or in the district?

Mr. SHOVLIN. I believe the largest membership was about 8,000. It was at the time Dan Sullivan was president.

Commissioner O'CONNELL. How long ago was that?

Mr. SHOVLIN. I can't tell that exactly.

Commissioner O'CONNELL. Four, five, or eight years?

Mr. SHOVLIN. He stated here a while ago when he was president here.

Commissioner O'CONNELL. Oh, the gentleman that was on before you?

Mr. SHOVLIN. Yes.

Commissioner O'CONNELL. What is the membership of No. 1 now?

Mr. SHOVLIN. I haven't the least idea.

Commissioner O'CONNELL. What is the membership of the organization that you now represent—what do you call it?

Mr. SHOVLIN. The mine workers.

Commissioner O'CONNELL. The mine workers?

Mr. SHOVLIN. It has fifty-four hundred and something, I believe.

Commissioner O'CONNELL. Fifty-four hundred?

Mr. SHOVLIN. Fifty-three or fifty-four hundred.

Commissioner O'CONNELL. In that organization there is what is known and pronounced as I. W. W. men?

Mr. SHOVLIN. Yes.

Commissioner O'CONNELL. What number of that class of men hold membership in your organization?

Mr. SHOVLIN. A very small percentage.

- Commissioner O'CONNELL: Five or 10 per cent?
- Mr. SHOVLIN. I couldn't state.
- Commissioner O'CONNELL. Approximately?
- Mr. SHOVLIN. I couldn't state, but a very small number, though.
- Commissioner O'CONNELL. Do they hold affiliations in any way with the national organization of the I. W. W.? Have they a branch of any of them here?
- Mr. SHOVLIN. The I. W. W.? They have a propaganda like, here. That is all I know.
- Commissioner O'CONNELL. That does not hold a charter from the general organization of the I. W. W. at headquarters of Chicago or Detroit?
- Mr. SHOVLIN. I haven't any idea.
- Commissioner O'CONNELL. You know there are two organizations of the I. W. W., one with headquarters at Chicago, and one with headquarters in Detroit?
- Mr. SHOVLIN. Yes.
- Commissioner O'CONNELL. A split between these two organizations, one having for its purpose the evasion of all contractual relations with employers, as stated before our commission, the practice of sabotage, if necessary; the other just reverse. You do not know which of the parties the I. W. W. here are?
- Mr. SHOVLIN. Are affiliated with, no.
- Commissioner O'CONNELL. Do you know whether they practice sabotage here in any way?
- Mr. SHOVLIN. I don't know.
- Commissioner O'CONNELL. Have there been any rumors that they have?
- Mr. SHOVLIN. I never heard of anything.
- Commissioner O'CONNELL. While this is not a matter for our commission to look into personally, what would be necessary to bring the miners of Butte all back into one organization?
- Mr. SHOVLIN. For them to join the mine workers.
- Commissioner O'CONNELL. That is the coal mine workers?
- Mr. SHOVLIN. No; the Butte mine workers.
- Commissioner O'CONNELL. Oh, your organization?
- Mr. SHOVLIN. Yes, sir.
- Commissioner O'CONNELL. That would be the cure of the disease, if there was any disease?
- Mr. SHOVLIN. Yes, sir; I believe so.
- Commissioner O'CONNELL. Then you have, I take it, among yourselves the policy that your organization is correct and the other is wrong? Of course if yours is the correct policy, the proper thing would be for them to affiliate themselves with you?
- Mr. SHOVLIN. We believe ourselves to be correct, to be the correct policy, and if it is not correct in the minds of the others they have the privilege of correcting where they see it is wrong.
- Commissioner LENNON. Have you a constitution of the new union?
- Mr. SHOVLIN. Yes, sir.
- Commissioner LENNON. In print?
- Mr. SHOVLIN. Yes, sir.
- Commissioner LENNON. Will you furnish a copy?
- Mr. SHOVLIN. We will furnish you with one, yes.
- ("The Constitution and By-Laws of the Butte Mine Workers' Union," Butte, Mont., adopted July 19, 1914, was submitted in printed form.)
- Commissioner LENNON. That is all.
- Acting Chairman COMMONS. Did I understand you to say that personally you belonged to the I. W. W. or not?
- Mr. SHOVLIN. No, sir; you didn't understand me to say that.
- Acting Chairman COMMONS. You say you do not?
- Mr. SHOVLIN. No, sir; I do not belong.
- Acting Chairman COMMONS. And never have?
- Mr. SHOVLIN. No, sir.
- Acting Chairman COMMONS. Your action in this matter is solely based on local conditions?
- Mr. SHOVLIN. Yes, sir.
- Acting Chairman COMMONS. And not on any general principles of philosophy?
- Mr. SHOVLIN. Only on the philosophy of industrial unionism, not that as preached by the I. W. W. I am an industrial unionist, but not an I. W. W.
- Acting Chairman COMMONS. Are you a Socialist?
- Mr. SHOVLIN. No, sir. That is, I don't belong to the Socialist Party.
- Acting Chairman COMMONS. That is all. Mr. O'Brien.

TESTIMONY OF MR. W. L. O'BRIEN.

Acting Chairman COMMONS. Give your name and address, please.

Mr. O'BRIEN. 9 East Granite, Butte, Mont.

Acting Chairman COMMONS. Are you a miner?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. Are you employed now?

Mr. O'BRIEN. Not now.

Acting Chairman COMMONS. How long since you have been employed, Mr. O'Brien?

Mr. O'BRIEN. Six months.

Acting Chairman COMMONS. Are you a member of the new organization?

Mr. O'BRIEN. I am.

Acting Chairman COMMONS. You have heard what Mr. Shovlin has just now said regarding questions asked. Have you anything to add to what he has said as representing the causes of dissatisfaction and the results which led up to the new organization?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. In the first place, do you affirm all the things that he did say?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. Now, what points have you to add as an additional cause of disturbance?

Mr. O'BRIEN. Company control.

Acting Chairman COMMONS. And what is your reason for affirming company control?

Mr. O'BRIEN. Inasmuch as whenever any vital subject came up, the company sent the men home from work, and paid them.

Acting Chairman COMMONS. Sent them home from work?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. And paid them?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. What is your evidence of that?

Mr. O'BRIEN. Men have told me, that worked in the mine, that the boss came to them and told them to go down and vote the amendment down, told them to go down and vote against so and so, as he was a radical or Socialist; and further, whenever anything came up it was easily discerned that there was company control, when there was men attending to the hall that were never seen there before excepting when something of that kind came up.

Acting Chairman COMMONS. Then I take it your evidence is based upon what men have told you as to what the shift bosses have done?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. That the foremen or shift bosses have told them to do?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. And were they men who had done as the shift boss had directed?

Mr. O'BRIEN. They came home, but they always didn't vote the way the shift boss wanted them. The shift boss he don't always know what is in a man's mind. But invariably they did vote as the shift boss wanted, I don't say.

Acting Chairman COMMONS. You say that the men told you that the shift boss laid them off on company's time?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. To go to these meetings?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. Can you give specific instances?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. And names of individuals who have told you that this was the case?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. Will you be willing to furnish the commission with the names?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. Will you do it now or will you submit that later?

Mr. O'BRIEN. I will submit it later.

Acting Chairman COMMONS. Please submit us such a list. When will you submit that?

Mr. O'BRIEN. This afternoon probably.

(See O'Brien Exhibit No. 1.)

Acting Chairman COMMONS. Is there anything further that you have to add?

Mr. O'BRIEN. I would say, if you are after the things that led up to the revolt in this union, that there are numerous things besides company control. Inasmuch as everything in nature dies, I presume the Western Federation has about outlived its usefulness and we buried it, although rather violently. The contract system has a good deal to do, together with the rustling cards; also corruption of officials, excessive assessments improperly applied, and so on and so forth.

Acting Chairman COMMONS. Do you agree with Mr. Shovlin on those points?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. How long have you been in Butte?

Mr. O'BRIEN. Ten months and seven days.

Acting Chairman COMMONS. What mine have you worked in?

Mr. O'BRIEN. Just one—Elmorlu.

Acting Chairman COMMONS. Where had you worked in the mining business before you came here?

Mr. O'BRIEN. All over the world—Africa, Australia, New Zealand, Tasmania, Canada, Alaska, Mexico, this country, and South America.

Acting Chairman COMMONS. And your birthplace is where?

Mr. O'BRIEN. Ireland, County Cork.

Commissioner O'CONNELL. You come from a pretty good county.

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. Have you been a member of labor organizations in other countries than this country?

Mr. O'BRIEN. Yes.

Acting Chairman COMMONS. What countries?

Mr. O'BRIEN. Australia, Africa, New Zealand, Tasmania.

Acting Chairman COMMONS. Metalliferous mining or coal mining?

Mr. O'BRIEN. Metalliferous.

Acting Chairman COMMONS. Do you have any questions?

Commissioner O'CONNELL. Yes. How long were you a member of the Western Federation of Miners?

Mr. O'BRIEN. Twelve years.

Commissioner O'CONNELL. You have been in Butte, you say, 10 months now?

Mr. O'BRIEN. Yes; and seven days.

Commissioner O'CONNELL. How long since you have been employed in a mine here?

Mr. O'BRIEN. Six months.

Commissioner O'CONNELL. You have been out six months?

Mr. O'BRIEN. Was sick half of it; took pneumonia.

Commissioner O'CONNELL. Then you really worked about four months in the mine here?

Mr. O'BRIEN. Yes.

Commissioner O'CONNELL. That is all.

Commissioner LENNON. Has there been presented to you evidence as to the corruption of the union officials?

Mr. O'BRIEN. Yes.

Commissioner LENNON. From the records or simply from conversation?

Mr. O'BRIEN. Conversations, and both.

Commissioner LENNON. Was the matter ever brought before the union?

Mr. O'BRIEN. Not to my knowledge.

Commissioner LENNON. Why wasn't it? You weren't here probably—you know why it wasn't brought before the union?

Mr. O'BRIEN. Because we could get no redress. You would be apt to be thrown from the window or called a socialist, or an I. W. W., or an anarchist, or any other one of the six.

Commissioner O'CONNELL. It is impossible to throw them through the window just now?

Mr. O'BRIEN. No.

Commissioner LENNON. That is all. Mr. Chairman.

Acting Chairman COMMONS. Any questions? Jacob Oliver.

TESTIMONY OF MR. JACOB OLIVER.

Acting Chairman COMMONS. Will you give your name?

Mr. OLIVER. Jacob Oliver, 215 East Quartz.

Acting Chairman COMMONS. Are you working in the mine, Mr. Oliver?

Mr. OLIVER. Yes, sir. I have not been working in the mines for six weeks. The last mining work I worked was Mountain View.

Acting Chairman COMMONS. That is an Anaconda mine?

Mr. OLIVER. Yes.

Acting Chairman COMMONS. How long have you been in the district?

Mr. OLIVER. In this district? Twenty-nine years and seven months.

Acting Chairman COMMONS. And what mines have you been working in?

Mr. OLIVER. In practically every mine in Silver Bow County of any size.

Acting Chairman COMMONS. Have you had any official position in the miners' union in this time?

Mr. OLIVER. No, sir.

Acting Chairman COMMONS. Never have had?

Mr. OLIVER. Never held office in the miners' union in my life.

Acting Chairman COMMONS. Have you had any official position in the city, county, or State?

Mr. OLIVER. Yes; I was deputy inspector of mines in 1890, 1891, and 1892.

Acting Chairman COMMONS. That is 25 years ago?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. Just briefly on that point, have conditions in the mines improved since that time?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. Materially?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. Have you followed that carefully so that you could give this commission accurate information as regards the improvements?

Mr. OLIVER. Well, I believe I am aware of what improvements have taken place.

Commissioner O'CONNELL. We would be glad to hear what improvements have taken place in the mines since you were inspector.

Mr. OLIVER. Twenty-five years ago the man that was on the day shift in the wintertime would hardly see daylight. At that time when he worked on day shift they worked 10 hours; now he works 8. Twenty-five years ago, if a miner left Butte, in the majority of the outside camps you would receive three or four dollars per day, laborers or muckers three dollars. That was the standard wages throughout the State practically, with the exception of Butte, and perhaps Elkhorn was the only other camp that I recall that was paying the wage of three-fifty per day. In Marysville the Drum Lummon mine workers were paid \$3 per day; hammer and drill men and timbermen were paid three and a quarter, and mine men were paid three and a half. So, if the old union hadn't done anything else to maintain the high standard of wages that was established by the old Butte Miners' Union in 1878—

Acting Chairman COMMONS. What about the health conditions in the mines, ventilation, and things of that kind?

Mr. OLIVER. I believe at the present time there is more miner's consumption in the Butte district than ever there was before. While I believe the company to some extent has done their best, or at least made efforts to improve sanitary conditions in the mines, yet I think there is a whole lot of improvement that still could be made.

Commissioner O'CONNELL. What are they now, if you have them right in mind?

Mr. OLIVER. For instance, in driving drifts, cross-cuts, opening up new ground, they could introduce a system of air courses. This method was in vogue here in Butte 25 years by one or two of the companies, and that was about all. In the majority of quartz mines, I am sorry to say, ventilation is not considered, or not to any great extent, unless the men happen to get in places where it is impossible for them to do a shift's work. Then, of course, for their own benefit the different companies then go to work perhaps and install pipe lines or fans, drafts, or something of that kind, to make circulation.

Acting Chairman COMMONS. What is this method that you said was in vogue 25 years ago?

Mr. OLIVER. One of the systems was having air courses.

Acting Chairman COMMONS. Describe the air-course system.

Mr. OLIVER. Well, for instance, in driving a drift—

Acting Chairman COMMONS. Yes.

Mr. OLIVER. The cross-cuts over the timbers, or the sets, that is, in drifts, either by the establishment of a pipe, or a box, making an air current so that there will be an inlet and an outlet for air to make circulation.

Acting Chairman COMMONS. Just go right ahead.

Mr. OLIVER. Making a drift, shaft, or whatever it may be, and then comes in as a rule, it comes in the drift and goes back over the timbers.

Acting Chairman COMMONS. Is it a pipe?

Mr. OLIVER. It all depends; sometimes there is a pipe and sometimes it is a box.

Acting Chairman COMMONS. It is a forced draft; it is forced up to the base of the cut?

Mr. OLIVER. No; it is done naturally; there is no force connected with it, just simply making an air current.

Acting Chairman COMMONS. If it is a drift that is being driven into a new opening, there would be no air courses there except what would be driven?

Mr. OLIVER. Well, you have got to make one; you make one, you see, by sealing up all the crevices and make it air-tight over your drift or your cross-cut, and that will make a circulation then.

Acting Chairman COMMONS. Is that required by the State law?

Mr. OLIVER. No, sir.

Acting Chairman COMMONS. Was it ever required?

Mr. OLIVER. No, sir.

Acting Chairman COMMONS. How did it happen to be in vogue years ago?

Mr. OLIVER. I believe it was introduced by Ben. Tibby.

Acting Chairman COMMONS. How does it happen to have been dropped since that time?

Mr. OLIVER. Well, I don't know. There was an old saying around here that all Ben. Tibby thought about was ventilation. We used to have a josh on Ben.

Acting Chairman COMMONS. When you were inspector, did you have power to require an air course under such circumstances?

Mr. OLIVER. When I was deputy mine inspector the deputy inspector had practically no power at all to enforce anything.

Acting Chairman COMMONS. Has the inspector now authority to order that kind of change?

Mr. OLIVER. I do not believe he has but very little power.

Acting Chairman COMMONS. Not very much power?

Mr. OLIVER. No, sir.

Acting Chairman COMMONS. Have you been connected with the union so that you could give us the causes that led up to this disruption? You have heard the testimony on that point?

Mr. OLIVER. Yes; I have.

Acting Chairman COMMONS. Are there any of those points you care to comment upon?

Mr. OLIVER. Well, I believe the main causes that led up to the eruption and explosion and revolt, whatever you call it, was dissatisfaction with the old officials of the union, mainly.

Commissioner GARRETSON. The local or general officials?

Mr. OLIVER. Local and general, both.

Acting Chairman COMMONS. Specify some of the dissatisfaction.

Mr. OLIVER. I believe the main cause was the little details more than anything else. For instance, I might say lack of courtesy, mainly, and perhaps in some of the officials' incompetency. I believe if the business of the union was conducted on a business principle that this eruption would not have happened. I believe a majority of the miners in Butte are union men and believe in union principles. In fact, the real contention is that, and the real fight is, or what the men consider, really a better union.

Acting Chairman COMMONS. What, for example? What other feature of the activities of employees or procedure of the older officials, former officials, besides lack of courtesy, have you in mind? Is that the only thing you think of? That certainly would not be adequate to cause a revolution.

Mr. OLIVER. Well, for instance—well, there is lots of little things working up to it until, of course, it comes to a revolt. I believe the revolt came through, we might say, the refusal of the president to grant Mr. Shovlin, I

believe was the man to make the motion in the miners' union for a rising vote whether or not on the adoption of the amendment to the constitution—

Acting Chairman COMMONS. Regarding the machine?

Mr. OLIVER. Regarding the machine; yes, sir.

Acting Chairman COMMONS. You think that was an important cause?

Mr. OLIVER. I do; yes, sir.

Acting Chairman COMMONS. What other causes?

Mr. OLIVER. Well, then, there was another one, I think; another incident that came under my notice was the day that the president of the union had trouble at the High Ore mine.

Acting Chairman COMMONS. This instance that was referred to?

Mr. OLIVER. Yes.

Acting Chairman COMMONS. And his statement was correct on that, was it not?

Mr. OLIVER. I believe in its essence it was correct.

Acting Chairman COMMONS. What other, then?

Mr. OLIVER. Well, I believe that is about all. I think those are all.

Acting Chairman COMMONS. Are you connected with the old union or the new?

Mr. OLIVER. I am still a member of the old union.

Acting Chairman COMMONS. Regular; paying up?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. At the present time?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. Have you any questions?

Commissioner GARRETSON. Yes. I gathered from your general statement there that this one last act of refusal to entertain a motion, a proper parliamentary motion—

Mr. OLIVER. Yes.

Commissioner GARRETSON. I take that it was under either your parliamentary procedure or new law that it was the straw that broke the camel's back?

Mr. OLIVER. That is the way it looks to me.

Commissioner GARRETSON. It was the culmination of a great series of—well, mosquito bites?

Mr. OLIVER. Well, yes; that is it.

Commissioner GARRETSON. In your experience in dealing with men, is it not that discontent is usually brought to a head by little things instead of big things?

Mr. OLIVER. That is my idea of things.

Commissioner GARRETSON. You spoke that it used to be a josh that—what is that manager's name?

Mr. OLIVER. Ben Tibby.

Commissioner GARRETSON. Worked for ventilation, is that the phrase?

Mr. OLIVER. Yes, sir.

Commissioner GARRETSON. And that was contrasted among the men, that others worked for dividends?

Mr. OLIVER. Well, I presume that was the idea.

Commissioner GARRETSON. That is all, Mr. Chairman.

Acting Chairman COMMONS. Mr. O'Connell?

Commissioner O'CONNELL. No.

Acting Chairman COMMONS. Mr. Lennon?

Commissioner LENNON. You spoke regarding the increase of miner's consumption now from 25 years ago. What class of people worked in the mines 25 years ago? Who were they?

Mr. OLIVER. They were English, Irish, and Americans.

Commissioner LENNON. Are the people now working in the mines somewhat more anemic or less capable of resisting the inroads of consumption than was the truth with races that were here 25 years ago?

Mr. OLIVER. I don't think so.

Commissioner LENNON. You think the people who are here now, mixed races, are just as capable of resisting consumption as were the races you speak of?

Mr. OLIVER. Yes, sir.

Commissioner LENNON. You do?

Mr. OLIVER. Yes, sir.

Commissioner LENNON. What had the union to do with the introduction of the eight-hour workday in the mines?

Mr. OLIVER. Well, the first agitation for the eight-hour day, that I remember, was in 1888 and 1889. In 1891 an eight-hour measure was introduced in the legislature and was defeated, I think, by a vote of 30 to 31. It seemed that the Democrats and Republicans got together and made it as near a tie vote as they could so that neither one of the parties could be blamed, or at least that is the way it was stated at the time. At that time, even, some of the members and some of the officers of the union signed a petition opposing the eight-hour law—opposing the eight-hour law that was introduced at that time.

Commissioner LENNON. Some of the miners opposed it?

Mr. OLIVER. There was a considerable number of miners opposed to it.

Commissioner LENNON. Well, did the union ever take any action against the introduction of the eight-hour day?

Mr. OLIVER. No, sir.

Commissioner LENNON. But were they active in promoting its enactment?

Mr. OLIVER. I believe the majority of the union were very active in promoting it.

Commissioner LENNON. And that has been maintained ever since?

Mr. OLIVER. No; the eight-hour law was passed in 1901.

Commissioner LENNON. But you have had no cessation of the eight-hour day?

Mr. OLIVER. Since it became a law?

Commissioner LENNON. Since it was introduced.

Mr. OLIVER. No, sir.

Commissioner LENNON. You have been working in the mines a long time. What degree of heat can men work under in the mines without material injury?

Mr. OLIVER. Well, I should say that a man could work in the mines—it is pretty hard to work in the mines at any degree of heat without material injury, because any place—in time if a man works in a place that the air is contaminated, it naturally injures his health. But, of course, I believe a man could—the average man could work where the heat would be, say, 65, or possibly 70.

Commissioner LENNON. Well, are there any places in the mines where the depth is considerable that the temperature does not exceed 65?

Mr. OLIVER. Oh, yes, sir; there are several.

Commissioner LENNON. There are?

Mr. OLIVER. Yes, sir.

Commissioner LENNON. I guess I had better keep away from that subject. I am not a scientist on that.

In the mines that I have personally visited, I have found as we went down the heat increased in all of them, both coal mines and mineral—all mines that I have visited.

Mr. OLIVER. Well, that is natural.

Commissioner LENNON. I have been a visitor; I have not been a scientist or anything of that kind.

Mr. OLIVER. That is natural. The deeper you go, it naturally gets hotter.

Commissioner LENNON. But I can not now recall a case where I went down fifteen and eighteen hundred feet, where I found a temperature of 65°. As I say—

Mr. OLIVER. Well, we have places in Butte, I believe, that run as high as 90 degrees, very few places that are not hot.

Commissioner LENNON. Who do you know in this city that would be considered an expert on a subject of this kind?

Acting Chairman COMMONS. Do you consider Mr. Gillie an expert on that subject?

Mr. OLIVER. Well, I should judge that Mr. Gillie ought to be as capable a witness as you could get on that question.

Acting Chairman COMMONS. Is there anybody better?

Mr. OLIVER. I don't know of anybody; no.

Commissioner LENNON. That is all.

Acting Chairman COMMONS. You spoke, Mr. Oliver, of the question of the vote at the meeting as the final thing; that is, that the suppressing of that vote on election by use of the machine.

Mr. OLIVER. Well, Mr. Chairman—

Acting Chairman COMMONS. Yes.

Mr. OLIVER. The vote really wasn't suppressed. The vote had already been taken, and the chair, after being counted by the secretaries, decided that the amendment to the motion was carried. Then there was an appeal taken from

the chair, or rather a division of the house was called for, and the chair refused to entertain that motion.

Acting Chairman COMMONS. Well, now, was this question, was this issue very important, substituting a machine system for the other system of election? Was that an important issue in the organization?

Mr. OLIVER. I believe that the other side considered it an important question.

Acting Chairman COMMONS. That is, of course, the side that—

Mr. OLIVER. Was in favor of the machine.

Acting Chairman COMMONS. Was in favor of it?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. And what were the grounds of their considering it so important a question?

Mr. OLIVER. Well, they claimed that—their contention was that it was cheaper, that it would not cost the union so much to hold the election. That was the contention, or their argument, that they put forth in advocating the use of the machines.

Acting Chairman COMMONS. Well, from your knowledge of the cost of conducting elections under the system which the union has had, would it be cheaper to run it by a machine?

Mr. OLIVER. Well, I don't believe it would have been but very little cheaper.

Acting Chairman COMMONS. How much time does it take, and how many judges and so on, to count the ballots?

Mr. OLIVER. Well, they usually take a week or two to count the ballots.

Acting Chairman COMMONS. Well, who are the officials that count the ballots?

Mr. OLIVER. The clerks and judges that is elected the week previous to the election at the regular meeting.

Acting Chairman COMMONS. Now, the election is held in the hall, is it?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. And the votes are about 4,000 votes that are cast?

Mr. OLIVER. Well, they run all the way from 4,000, sometimes over 5,000.

Acting Chairman COMMONS. And how many candidates are there up usually?

Mr. OLIVER. Oh, sometimes 50 or 60 candidates.

Acting Chairman COMMONS. And how many offices to be filled?

Mr. OLIVER. When there is an election for delegates to the Western Federation convention, there is something like 30 offices to be filled.

Acting Chairman COMMONS. And how many judges?

Mr. OLIVER. Generally, six judges and four clerks is the general rule.

Acting Chairman COMMONS. Are these judges selected by the candidates?

Mr. OLIVER. No; these judges and clerks are selected by the union at the regular meeting preceding the election.

Acting Chairman COMMONS. Well, then, if there are two factions or two sets of candidates, there is no provision by which each set of candidates can have its judges or watchers?

Mr. OLIVER. Not at the election; no, sir.

Acting Chairman COMMONS. There would be at a political election in a State, wouldn't there?

Mr. OLIVER. Well, the minority party is supposed to get representation, of course, at a general election politically.

Acting Chairman COMMONS. But there is no provision in this for a minority representation in the matter of judges and clerks?

Mr. OLIVER. No, sir.

Acting Chairman COMMONS. Was that also one of the reasons for demanding this ballot?

Mr. OLIVER. I believe that was one of the reasons they set forth.

Acting Chairman COMMONS. Did they demand also minority representation in the judges of election?

Mr. OLIVER. I don't recollect that any such demand was made. The only time that the candidates have representation is for the selection of the clerks and judges, and when this selection takes place the candidate who runs for president names his own tellers, and I happened to be chosen for one of the tellers there at the last election.

Acting Chairman COMMONS. By a candidate?

Mr. OLIVER. By a candidate; yes, sir.

Acting Chairman COMMONS. I take it, then, that your idea of the explanation of this dissatisfaction is that it largely turned on the machinery of the union; that it was not such that it secured a fair expression of the vote of the membership?

Mr. OLIVER. Well, that is what it is claimed. In fact, one fellow got up there in the union and he says, "Well," he says, "if you fellows will get the clerks and judges, you will win. If we get the clerks and judges, we win." And he was a candidate himself.

Acting Chairman COMMONS. Well, then, your suggestion—what is your suggestion, or have you any to offer?

Mr. OLIVER. My suggestion would be that each candidate should be represented on the board of judges.

Commissioner LENNON. Well, if you had 50 candidates that would make rather a large force.

Mr. OLIVER. Well, each candidate there would be a candidate for the office of president.

Commissioner LENNON. Yes.

Acting Chairman COMMONS. That each candidate should be allowed to elect, should be entitled to judges and clerks?

Mr. OLIVER. Yes, sir; should have at least a minority the same as any political party in a general election.

Acting Chairman COMMONS. That is, you would copy what has been copied in the primary election?

Mr. OLIVER. Yes, sir.

Acting Chairman COMMONS. And in judges of the ordinary elections that you have for public officials?

Mr. OLIVER. That is my idea, sir.

Acting Chairman COMMONS. Well, do you feel that there is any other issue more fundamental than that of the division caused in this union?

Mr. OLIVER. No.

Acting Chairman COMMONS. This question of industrial unionism has been brought out. Do you consider that that is an important issue here?

Mr. OLIVER. No; I don't really think so, only in so far that the industrial unionists, of course, would naturally take advantage of any trouble that might come up, and jump to the front. But I don't believe the I. W. W.'s are very strong in Butte, from my observation.

Acting Chairman COMMONS. And this charge that the men are company men, what is your judgment regarding that?

Mr. OLIVER. Well, there was a good deal of race feeling in connection with that.

Acting Chairman COMMONS. Of what kind of a feeling?

Mr. OLIVER. Race feeling.

Acting Chairman COMMONS. Race?

Mr. OLIVER. Yes.

Acting Chairman COMMONS. How is that?

Mr. OLIVER. Well, the majority of those men who were discharged at that time were Finlanders.

Acting Chairman COMMONS. Socialists?

Mr. OLIVER. Well, they were supposed to be Socialists. Now, I don't know, if my observation of it is true, I don't see what reason, the company had, if they wanted to get rid of the Socialists, why they would fire the Finlanders, because the great majority of the Finlanders are not voters. Therefore they would have no say as to the decision of the elections in Silver Bow County.

Acting Chairman COMMONS. Well, then, why should they be discharged because they are Finlanders?

Mr. OLIVER. Well, I don't know.

Acting Chairman COMMONS. What race discharged them?

Mr. OLIVER. Well, I guess they were all races that got after them at that time; that is, the foremen. I believe that there is men of every race almost holding jobs either as shift bosses, foremen, or superintendents in the different mines.

Acting Chairman COMMONS. Well, then, I can't quite understand. You ascribe the division to race feeling, and you turn it on the Finlanders. You must assert some race or some other combination of races against the Finlanders.

Mr. OLIVER. Well, it came on to my notice when the referendum vote was taken on whether or not the union should go out on strike, or the miners should go out on strike, to compel the company to reinstate those discharged men.

The sentiment seemingly throughout the camp was that the men would be sustained; in other words, the company would be compelled to reinstate those men. But in general conversation with the men I found that a sentiment was

opposed to going out on strike to reinstate the Finlanders. There were several reasons given, mainly on account of they claimed the action of the Finlanders at that time in Michigan. Some years ago it seems that the Finns refused to organize in Michigan. And the sentiment here at that time, I believe the sentiment of the Americans and I believe of the English and the Irish were opposed to the Finlanders. They said, "They drove us out of Michigan and other places. They are not going to drive us out of Butte." I heard that expression several times.

Commissioner GARRETSON. Well, then, wasn't the racial question really applied to the question of reinstatement and not to the question of discharge?

Mr. OLIVER. Well, I could not say as to that.

Commissioner GARRETSON. Wouldn't that show?

Mr. OLIVER. They were men of different races discharged at that time. They were not all Finlanders, although I believe the majority were Finlanders.

Commissioner GARRETSON. What is the buzzer system?

Mr. OLIVER. What?

Commissioner GARRETSON. What is the buzzer system?

Mr. OLIVER. The buzzer? Well, that is the—that is a small machine. It is what is called a hammer drill, and it is supposed to be used by one man, and in drilling uppers or holes—that is, looking straight up—it is a very handy machine at times for drilling short holes, plugs, and that like in mines, but, of course, those machines can not be used universally, because they are not practicable for drilling water holes.

Commissioner GARRETSON. In your opinion is there any relation between the operation of these machines and health conditions or not?

Mr. OLIVER. Well, I don't believe the buzzer machine would tend to lengthen the life of the miner by any means.

Commissioner GARRETSON. Are there enough of them used that they would have any direct effect except on the ones operating them?

Mr. OLIVER. That is all, I take it.

Acting Chairman COMMONS. That is all, Mr. Oliver. The commission will stand adjourned until 2 o'clock.

(And thereupon, at 12.25 o'clock p. m. of this, Friday, August 7, 1914, an adjournment was taken until 2 o'clock p. m. of the same day.)

AFTER RECESS—2 P. M.

Acting Chairman COMMONS. The commission will come to order. Mr. Rankin. Is Mr. Rankin here—J. B. Rankin?

TESTIMONY OF MR. J. B. RANKIN.

Acting Chairman COMMONS. Give your name.

Mr. RANKIN. J. B. Rankin.

Acting Chairman COMMONS. Your address?

Mr. RANKIN. Anaconda, Mont.

Acting Chairman COMMONS. What is your line of work?

Mr. RANKIN. Mill work—concentrator. I work in the concentrator at the smelter.

Acting Chairman COMMONS. At the smelter—how long have you been working there?

Mr. RANKIN. Nearly 15 years.

Acting Chairman COMMONS. What are the wages at the smelter?

Mr. RANKIN. Three dollars and up.

Acting Chairman COMMONS. What class get more than \$3?

Mr. RANKIN. Well, there are different classes in the concentrator and converter and glass. It runs up as high as four and four and a half.

Acting Chairman COMMONS. Is this a scale that is agreed upon in the contract that has been spoken of?

Mr. RANKIN. Yes, sir.

Acting Chairman COMMONS. Is there a smeltermen's union separate from the miners' union?

Mr. RANKIN. Yes, sir.

Acting Chairman COMMONS. Well, you may give the history of that union. How was it organized?

Mr. RANKIN. It was organized, I think, about 1901—some time in the latter part of 1900 or 1901—the beginning of 1901, or some place about there; and all

employees at the smelter—that is, the mill and smelter, with the exception of the tradesmen—belong to the mill and smelter union, chartered by the Western Federation of Miners.

Acting Chairman COMMONS. Does that maintain a separate organization from the miners' union?

Mr. RANKIN. A separate local.

Acting Chairman COMMONS. A separate local?

Mr. RANKIN. Yes; it is chartered by the Western Federation of Miners.

Acting Chairman COMMONS. What is the number and name?

Mr. RANKIN. Anaconda Mill and Smelters' Union, No. 117.

Acting Chairman COMMONS. How many members of that union?

Mr. RANKIN. Well, it will run around 1,700.

Acting Chairman COMMONS. How many are employed in the mill and smelter that are eligible?

Mr. RANKIN. That is, under our jurisdiction?

Acting Chairman COMMONS. Yes, sir.

Mr. RANKIN. I judge around all the way, probably, from seventeen to eight-hundred; sometimes it will run more than that. It might go as high as 1,900. We have had as high as 2,200 members, but now, lately, it has gone down. The last—those showing in good standing—you know what I mean in good standing; a man entitled to sick benefits—the 1st of July was fourteen hundred and something; but that will vary, the chances are, 200 in a month. But it hangs around sixteen fifty to seventeen hundred; it will average that.

Acting Chairman COMMONS. There are about 2,300 employees, are there not, in the plant?

Mr. RANKIN. Oh, I believe more than that. You mean tradesmen and all?

Acting Chairman COMMONS. No; just the various—

Mr. RANKIN. No, sir; there is not that many under our jurisdiction.

Commissioner O'CONNELL. You have all over whom you claim jurisdiction, as I take it?

Mr. RANKIN. We are entitled to have all of them.

Commissioner O'CONNELL. But there are more or less employed, and your organization goes up and down?

Mr. RANKIN. Yes; we don't bother anyone unless he is working steadily. If a man comes along and works probably a few days and moves along, he is never bothered. Unless a man gets fairly good pay for a couple of months we don't bother him.

Acting Chairman COMMONS. Everybody that is working there over two months and eligible to your organization becomes a member?

Mr. RANKIN. Yes, sir.

Acting Chairman COMMONS. Does your organization have a grievance committee to take up any complaints?

Mr. RANKIN. Yes, sir.

Acting Chairman COMMONS. How is that constituted?

Mr. RANKIN. Why, the two secretaries and president of the union always constitute the grievance committee.

Acting Chairman COMMONS. And what is the nature of grievances that are taken up?

Mr. RANKIN. Oh, that differs. About the only grievances that we have is men sometimes think they are discharged for nothing, and they will come to the union with their grievance and we will go to the management with it.

Acting Chairman COMMONS. What attitude does the union take regarding discharges by foremen?

Mr. RANKIN. Well, we don't have very much of it. There has only been, I believe, two cases reported in the last year.

Acting Chairman COMMONS. That is, the union gives the company a free hand regarding all discharges?

Mr. RANKIN. Oh, yes. Yes; that is, unless there is complaint made to the union that a man considers that he is discharged without any just cause—why, he comes to the union with it.

Acting Chairman COMMONS. How many of those complaints are there?

Mr. RANKIN. Well, I think there was two in the last year back.

Acting Chairman COMMONS. Only two members; two discharged men made complaint?

Mr. RANKIN. Yes; made complaint direct to the union.

Acting Chairman COMMONS. To the union?

Mr. RANKIN. Yes.

Acting Chairman COMMONS. You are president of the union, are you?

Mr. RANKIN. Yes, sir.

Acting Chairman COMMONS. How long have you been president?

Mr. RANKIN. Since—well, I was elected in June last year and reelected June this year again.

Acting Chairman COMMONS. So that during the time you have been president there have been about two complaints?

Mr. RANKIN. Two complaints; that is what there was, if I remember correctly; just two.

Acting Chairman COMMONS. The question has been brought up here with reference to the miners' union regarding the discharge of Socialists. What is the attitude of your union on that matter, or have Socialists been discharged in similar ways?

Mr. RANKIN. I haven't heard any mention whatever of it.

Acting Chairman COMMONS. There never has been any discharged?

Mr. RANKIN. Not that I know anything about. We never—I don't know of any case where a man was discharged because he was a Socialist or anything else, as far as that goes.

Acting Chairman COMMONS. The question has never come up to your union, then, regarding the discharge of Socialists?

Mr. RANKIN. Well, not that I know anything about. Not in my time.

Acting Chairman COMMONS. That is, that means during the past 15 years?

Mr. RANKIN. Well, there was Socialists here some years ago, but I don't know. There was something going on at that time, but whether or not it was socialism or not I don't know. I am not in position to say what it was.

Acting Chairman COMMONS. What improvement has been made in the working conditions or in the operations under the jurisdiction of your union?

Mr. RANKIN. Improvements in what way?

Acting Chairman COMMONS. Well, as for hours of labor, first?

Mr. RANKIN. Well, we have enjoyed the same conditions as Butte and all the other departments of the company.

Acting Chairman COMMONS. How long has that been?

Mr. RANKIN. The same time as the eight-hour law went into effect.

Acting Chairman COMMONS. And the sanitary conditions—protection of health?

Mr. RANKIN. It looks pretty good to me. I think it is as good as could be. There was a time when accidents were pretty—there was a good many accidents when the new works first started out, that is only on the air line. There was a few that was killed in other parts, but I guess there were more killed on the air line than any other department. And I think it was young fellows trying to run the engines too fast, as near as I can tell.

Acting Chairman COMMONS. You have a benefit system?

Mr. RANKIN. Which?

Acting Chairman COMMONS. A benefit system?

Mr. RANKIN. Yes, sir.

Acting Chairman COMMONS. Does it cover the same as the miners?

Mr. RANKIN. Pay sick and funeral benefit.

Acting Chairman COMMONS. To the same amounts, same amounts?

Mr. RANKIN. Ten dollars a week sick benefit.

Acting Chairman COMMONS. Any question?

Commissioner GARRETSON. Yes; I would like to ask one or two.

Acting Chairman COMMONS. Go ahead.

Commissioner GARRETSON. With regard to what you said is the attitude of your union about men being discharged or protecting them in their employment: Do you recognize the right of the company to discharge any man if they consider him for any reason, business or otherwise, undesirable?

Mr. RANKIN. Well, they claim that right.

Commissioner GARRETSON. I say, do you recognize that right?

Mr. RANKIN. Oh!

Commissioner GARRETSON. Does your union recognize it?

Mr. RANKIN. Well, I can't say that it does.

Commissioner GARRETSON. Does your union set up, as the average labor union does, that as long as a man properly performs the service for which he is hired that his discharge without specific cause is not justified?

Mr. RANKIN. Well, I have only been on two cases, and that is all I know anything about. In one of those cases in particular we had the man reinstated.

Commissioner GARRETSON. You demonstrated that he had been unjustly discharged, in other words?

Mr. RANKIN. Yes; that is, through the foreman.

Commissioner GARRETSON. How is that?

Mr. RANKIN. The foreman was as much to blame; they considered the foreman was as much to blame as the man.

Commissioner GARRETSON. Yes. In other words, there were extenuating circumstances there?

Mr. RANKIN. Yes.

Commissioner GARRETSON. There have only been two cases presented in a union that has an average membership of probably 1,600 men?

Mr. RANKIN. Yes.

Commissioner GARRETSON. Two cases in a year?

Mr. RANKIN. I have been on two cases in my time.

Commissioner GARRETSON. That of itself is rather fair evidence that the membership of the union itself recognizes that it would be hopeless in a general way to bring cases there, does it not?

Mr. RANKIN. I don't see why it should be.

Commissioner GARRETSON. How many men have been discharged in the period of a year?

Mr. RANKIN. Oh, I am not in position to answer that.

Commissioner GARRETSON. Haven't any idea?

Mr. RANKIN. No; I haven't any idea. I could not answer that.

Commissioner GARRETSON. Don't you know what the general rate of discharge among your membership is?

Mr. RANKIN. Well, no, I don't. Men are coming and going there every day, I don't know whether they are discharged or not. If they are discharged, they say nothing about it. I don't know anything about that. I couldn't answer that, how many are discharged.

Commissioner GARRETSON. Well, doesn't the average labor union keep some track of the lurders upon its members?

Mr. RANKIN. Well, we try to.

Commissioner GARRETSON. A protective labor organization.

Mr. RANKIN. We try to keep track of them, but men will come there and be there months, you know, and then they will drop out.

Commissioner GARRETSON. Well, I am not speaking of discharge of men in increase or decrease of force. I am speaking of men who are in regular employment and who are removed, fired.

Mr. RANKIN. I understand. Well, I am not in position to answer how many are fired. No; I can't answer that because I only work in one department, and men being fired in that department there are very few.

Commissioner GARRETSON. Well, I would suppose that regular reports were made by the men in all departments as to the occurrences in their departments.

Mr. RANKIN. Well—

Commissioner GARRETSON. What is laid down as the object of your organization?

Mr. RANKIN. Why, the object of the organization is the same as laid down by the Western Federation of Miners—protect the workingmen.

Commissioner GARRETSON. Is the union founded on the basis of the protective feature—that is, protecting a man in his service is one of the greatest benefits that can come to him?

Mr. RANKIN. Yes.

Commissioner GARRETSON. In other words, protecting him against the caprice ordinarily of subordinate representatives of the employer?

Mr. RANKIN. Well, that is what it is supposed to be; yes.

Commissioner GARRETSON. But still it has only worked out two cases in a year?

Mr. RANKIN. I said there was only two cases reported to the union.

Commissioner GARRETSON. Well, I mean it has worked out that the union has had official notice of two instances?

Mr. RANKIN. That is all.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. Any questions?

Commissioner LENNON. Mr. Rankin, has your union been divided, as evidently has been the case in Butte recently?

Mr. RANKIN. Which?

Commissioner LENNON. Is your union, the smeltermen's union, divided up as it is in Butte?

- Mr. RANKIN. No, sir.
- Commissioner LENNON. They are still intact?
- Mr. RANKIN. Yes, sir.
- Commissioner LENNON. Still affiliated with the Western Federation?
- Mr. RANKIN. Yes, sir.
- Commissioner LENNON. Have you ever had in your union any of the complaints that we have heard here, regarding elections of officers, for instance that were supposed to be unjust?
- Mr. RANKIN. That is, you mean anything wrong about the elections?
- Commissioner LENNON. Elections; yes, sir.
- Mr. RANKIN. None that I have heard tell of.
- Commissioner LENNON. You have heard of nothing of the kind?
- Mr. RANKIN. No, sir.
- Commissioner LENNON. Are the conditions that you have over in Anaconda maintained generally throughout the United States in similar plants—the wages, for instance?
- Mr. RANKIN. The wages?
- Commissioner LENNON. Yes.
- Mr. RANKIN. Well, the lowest wages paid is \$3 a day. I don't know what they pay in other parts of the country.
- Commissioner LENNON. You don't?
- Mr. RANKIN. That is the lowest paid.
- Commissioner LENNON. Yes. That is all, Mr. Chairman.
- Acting Chairman COMMONS. That is all.
- Commissioner GARRETSON. Let me ask about one other matter: Have you ever seen any evidence of an effort on the part of the company to secure the vote of its employees in any given direction politically?
- Mr. RANKIN. Well, I can't say that I did; that is, directly; no.
- Commissioner GARRETSON. Well, how indirectly?
- Mr. RANKIN. Oh, I have heard it said that the company wanted a certain party elected, or something like that.
- Commissioner GARRETSON. How is the news passed around?
- Mr. RANKIN. Oh, well, I don't know; the news started and then it goes around. Of course, no person ever said anything to me.
- Commissioner GARRETSON. You don't know of any instance where there have been specific instances?
- Mr. RANKIN. You mean direct orders?
- Commissioner GARRETSON. Oh, no. Requests is a better word.
- Mr. RANKIN. Well, I have heard it said in a general way that the company wanted a certain ticket elected.
- Commissioner GARRETSON. Have you ever heard that expressed by a man whom you had reason to believe was a direct representative of the company's will?
- Mr. RANKIN. Oh, no; I can't say that; no. Fellows that lined up with the party that wanted the party elected, I suppose.
- Commissioner GARRETSON. Then you have no direct knowledge on that subject?
- Mr. RANKIN. I have never mixed in politics close enough to be led that way.
- Commissioner GARRETSON. You are not a political agent?
- Mr. RANKIN. Not a political agent; no; never was.
- Commissioner GARRETSON. That is all.
- Acting Chairman COMMONS. That is all.
- Mr. Mathewson.

TESTIMONY OF MR. E. P. MATHEWSON.

- Acting Chairman COMMONS. Give your name and address, Mr. Mathewson.
- Mr. MATHEWSON. E. P. Mathewson, Anaconda, Mont.
- Acting Chairman COMMONS. Your position?
- Mr. MATHEWSON. Manager of the Washoe reduction works of the Anaconda Copper Mining Co.
- Acting Chairman COMMONS. What do you mean by reduction works?
- Mr. MATHEWSON. Where ores are reduced to the metal.
- Acting Chairman COMMONS. Reduced what?
- Mr. MATHEWSON. Brought to metal; metal is extracted from the ores.
- Acting Chairman COMMONS. Will you describe the processes, just briefly, so that we may have an idea?
- Mr. MATHEWSON. You mean of our particular plant?

Acting Chairman COMMONS. Yes.

Mr. MATHEWSON. The ore is brought from Butte; is for the most part put into what is known as a concentrator, where by the action of gravity and water we separate the waste material from the better ore, richer ore. This we call concentrating and about three tons of the ore coming from Butte will be concentrated into one ton of concentrates.

These concentrates are then sent to the roasting furnaces, where the sulphur, surplus sulphur, is extracted by heat. Then the calcine, as it is then called, or roasted material, is put into melting furnaces, either blast furnaces or reverberatory furnaces, and melted. This material is melted down and separated in that way from a lot of worthless material; we get two products—a slag, which is thrown away, and a mat, which contains the copper, silver, and gold in the ore. This mat runs possibly between 40 and 50 per cent in copper. This material is then taken to the converters and in these furnaces—this material is taken molten to the converters—and in these furnaces air is applied under pressure, and the iron and sulphur in the mat are eliminated. The sulphur goes off in gas and the iron is fluxed with some silicious ore and makes a slag. This slag is poured off and returned to the blast furnaces for further treatment, as it contains values, both in metal and as a flux. There is left nothing, then, but the copper containing the silver and gold. This copper containing the silver and gold is put into what we call casting furnaces. In these furnaces it gets a rough refining, the object being to get the metal to such a state that it can be poured into molds, and the plates thus formed will have an even, level surface or nearly level surface; if it were not refined, the surface would be very irregular, and the metal would not be in shape for the next step in the process of refining. We call these plates of metal anodes. These anodes we ship to our refinery in Perth Amboy, N. J., where they are treated and the different metals extracted. Certain of the ores in Butte are rich enough to go direct to the blast furnace without any preliminary treatment. Those ores are mixed with flux and melted with coke as fuel in the blast furnace. The product is the same as in the reverberatory furnace, mat and slag. The mat is the same composition and takes the same treatment. The slag is mixed with the slag from the reverberatory furnace, and is of no further value and is thrown away.

Commissioner GARRETSON. Isn't that process in the handling of the ores the same as what is known in free milling?

Mr. MATHEWSON. Yes. Free milling is a term that does not apply to copper ores.

Commissioner GARRETSON. At all?

Mr. MATHEWSON. It does to gold.

Commissioner GARRETSON. Well, gold and silver, too.

Mr. MATHEWSON. Yes; gold and silver ore; but our ore is known as sulphide ore, and has to go through this treatment.

Acting Chairman COMMONS. Then the next is—

Mr. MATHEWSON. Roasting, to remove sulphur, then melting or smelting. That is, the smelting proper.

Acting Chairman COMMONS. What process does reduction cover?

Mr. MATHEWSON. That covers the whole business.

Acting Chairman COMMONS. Concentrating, reduction, and smelting?

Mr. MATHEWSON. Yes, sir; it is reducing the metal from the ore to the metallic state.

Acting Chairman COMMONS. The term you used, ore smelting, where does that come in?

Mr. MATHEWSON. That is the same word as melting. Smelting and melting are synonymous terms.

Acting Chairman COMMONS. The term reduction covers the whole process?

Mr. MATHEWSON. Yes, sir.

Acting Chairman COMMONS. Is this unskilled labor, all of it?

Mr. MATHEWSON. No, sir.

Acting Chairman COMMONS. How large a force is unskilled?

Mr. MATHEWSON. All the helpers and common laborers around the plant are unskilled. The furnace men are skilled men, and men after a little practice in the different departments become skilled and more valuable to us than ordinary new men coming in.

Acting Chairman COMMONS. How many employees altogether in these processes?

Mr. MATHEWSON. Usually we have in the whole plant about 2,300 men employed.

Acting Chairman COMMONS. What proportion would be unskilled?

Mr. MATHEWSON. Probably half of them would be unskilled men.

Acting Chairman COMMONS. What proportion are three dollar and a half men?

Mr. MATHEWSON. It is pretty hard to tell you. I could get you a list of the men and give you all those rates, but offhand I could not tell you.

Acting Chairman COMMONS. How high up does it go?

Mr. MATHEWSON. We go up on our regular pay roll to \$4 for furnace men. Furnace men get \$4, and there are men in the concentrators that get \$3.50. Most of the men get \$3 in the concentrators. In the roasting department the men are \$3 men. There is a furnace man on each shift that gets \$4, and the helper gets \$3. In the converter the skimmers get \$3, and the crane men get \$4. Some men get \$3.50, and the balance \$3. In the blast furnace the feeders and tappers get \$4, and the helpers get \$3. In the stationary engineer's department, where the compressors are, the men get \$4, and the helpers get \$3. Most of them are engineers.

Acting Chairman COMMONS. All of the work is continuous, is it?

Mr. MATHEWSON. Continuous except in trade work, which is stopped on Sunday.

Acting Chairman COMMONS. And three shifts?

Mr. MATHEWSON. Three shifts.

Acting Chairman COMMONS. And how do you arrange the change in shifts?

Mr. MATHEWSON. They change at 7 and 3 and 11.

Acting Chairman COMMONS. Well, on day and night shifts?

Mr. MATHEWSON. Every two weeks they change. One shift will work a long shift and the other come in its regular turn again.

Acting Chairman COMMONS. What would be the long shift, 16 hours?

Mr. MATHEWSON. Sixteen hours; it would be 16 hours.

Acting Chairman COMMONS. A man works 16 hours how often?

Mr. MATHEWSON. He would work 16 hours and lay off 16 hours.

Acting Chairman COMMONS. How often?

Mr. MATHEWSON. Once in two weeks. Immediately after that shift he will lay off 16 hours.

Commissioner GARRETSON. Every two weeks?

Mr. MATHEWSON. Yes, sir.

Commissioner GARRETSON. One shift doubles and the other two spread?

Mr. MATHEWSON. Yes, sir; that is it.

Acting Chairman COMMONS. How long have the conditions been as you have now described them?

Mr. MATHEWSON. You mean how long has the plant been in operation?

Acting Chairman COMMONS. I mean how long have the wages and hours and shifts been on this basis?

Mr. MATHEWSON. Well, ever since I have been connected with the plant it has been like that, except the wages. The wage question was settled in 1907, when this contract was entered into with the mill and smeltermen's union and other unions.

Acting Chairman COMMONS. How did that contract affect it? Was there a change in the wages?

Mr. MATHEWSON. Yes, sir; it raised the wages for a great many of our common laborers.

Acting Chairman COMMONS. What had they been paid?

Mr. MATHEWSON. They had been paid two dollars and a half. A good many of them had been paid two dollars and a half a day.

Acting Chairman COMMONS. It affected probably half?

Mr. MATHEWSON. I think as much as half.

Acting Chairman COMMONS. Those now getting \$3 would have been getting two fifty?

Mr. MATHEWSON. Some of them had been getting \$3 a little before that. There was some agitation before the contract was made and some increase had been made in certain departments, but the bulk of the increase was made at that time.

Acting Chairman COMMONS. How long have you been in charge?

Mr. MATHEWSON. In actual charge since the 1st of June, 1903, but I was in charge of a department of the plant for a year previous.

Acting Chairman COMMONS. Since 1903 what changes have been made in the matter of health or the protection of health of the workmen have you entered into?

Mr. MATHEWSON. The health?

Acting Chairman COMMONS. Yes, sir.

Mr. MATHEWSON. We have done away with the clay mill—what was known as the clay mill—where powdered ore was in the air considerably. We have put in ventilators wherever we could see they would do any good. We have improved the flue system so as to get the deleterious gases away from contact with the employees. We have put up all manner of safety appliances to prevent the men from having accidents, and in every way we could think of we have tried to improve the conditions of the men. We have also introduced a first-aid system in case of accidents. We have on the pay roll of the company a professional nurse, and we have a first-aid room, and we have all manner of first-aid appliances there, and medicines and bandages and so on, to attend to the men promptly in case of accident. This is all at the company's expense and has nothing to do with the hospital fund, which is a separate fund and is worked something like it is worked here in Butte at the mines. We collect from the men a dollar a month and turn that over to the Sisters Hospital, the only hospital in town, and for that dollar the men get medical attendance and hospital attendance.

Acting Chairman COMMONS. Would your accident figures be comprised in the figures we have asked for?

Mr. MATHEWSON. Yes, sir; the same claim agent looks after the mine as the smelter.

Acting Chairman COMMONS. The previous witness stated that the company has complete control of the matter of the discharge for any reason or no reason whatever. Is that the way in which the management operates the removal of men from employment?

Mr. MATHEWSON. No, sir; our arrangement regarding the removal of men from the employment is this: We put it up to the foreman in charge of the different departments to hire their own men, and if the men are not satisfactory to discharge them. If the man is discharged, the foreman must send in a report to the general manager's office, and state the reason of the discharge, or if a man is laid off for more than 10 days, the same thing must be done, the same report must be made. Then if the man is not satisfied with the explanation given him by his foreman, he has the right to come to the office either himself or come through the union. They very seldom come through the union, but frequently come themselves.

Acting Chairman COMMONS. To whom would they come?

Mr. MATHEWSON. They come to me generally.

Acting Chairman COMMONS. Or to the next—

Mr. MATHEWSON. Or to the next man in charge.

Acting Chairman COMMONS. Who is the next man in charge?

Mr. MATHEWSON. Mr. Laist, who is called general superintendent of the plant.

Acting Chairman COMMONS. In case you take action or arrive at the opinion that the man has been unreasonably discharged, what action do you take with reference to the foreman?

Mr. MATHEWSON. You say if he has been unreasonably discharged?

Acting Chairman COMMONS. Yes.

Mr. MATHEWSON. I generally call the foreman up to my office and have him explain his side of the story, and if his explanation is satisfactory to me I let the thing stand as it is. If it is not satisfactory to me, I tell him to put the man back to work.

Acting Chairman COMMONS. Have you done that?

Mr. MATHEWSON. I have done that many times. Put the man back to work many times. I consider the foreman didn't use good judgment. If I found it was a personal difference between the foreman and the man—that is, some personal equation came in and the man was a capable man and capable of giving good service to the company—I have changed him to some other foreman. I have done that also frequently.

Acting Chairman COMMONS. Would you consider requiring a foreman to take back a man he has discharged—

Mr. MATHEWSON. Beg pardon.

Acting Chairman COMMONS. Would you consider requiring a foreman to take back a man he has dismissed? Does not that weaken his discipline?

Mr. MATHEWSON. I don't allow him to take him back unless he is willing to take him back. If I can persuade him to take him back, all right. I never force him to take him back.

Acting Chairman COMMONS. He must find another foreman?

Mr. MATHEWSON. He must either find another foreman or get out.

Acting Chairman COMMONS. Do you have this system that has been described as the rustling card?

Mr. MATHEWSON. Yes, sir.

Acting Chairman COMMONS. Where is that card secured for your work?

Mr. MATHEWSON. At our gate—the gate of the plant.

Acting Chairman COMMONS. And who has charge of that?

Mr. MATHEWSON. There is a special clerk on that job called an employment agent.

Acting Chairman COMMONS. And what is his name?

Mr. MATHEWSON. Mr. Martin.

Acting Chairman COMMONS. Is he under the general direction of the general employment office?

Mr. MATHEWSON. No, sir; he is under my direction solely.

Acting Chairman COMMONS. Solely?

Mr. MATHEWSON. Yes, sir.

Acting Chairman COMMONS. What are the questions which are asked on the employment blank?

Mr. MATHEWSON. I am not sure that I can recall all of them, but they are simply something like this: The man's name is asked, his birthplace, and his age, and where he last worked. He is asked if he is an American citizen and if he has any property in Anaconda. I think that is about all that is on the list.

Acting Chairman COMMONS. You have 2,300 men employed—that is, steadily—we will say. How many are on the list that have cards permitting them to rustle?

Mr. MATHEWSON. Oh, there are a great many. I think the number now is up around fifteen or sixteen thousand. This system has been in vogue for a long time in Anaconda.

Acting Chairman COMMONS. Of course, then, you don't keep a record with reference to the men on the ground? The great bulk of those have left town?

Mr. MATHEWSON. Oh, yes; a great many of them have come and gone.

Acting Chairman COMMONS. Can you state how many men you hire in a year in order to keep up your force of 2,300.

Mr. MATHEWSON. I could not state with any degree of accuracy. I can get the figures.

Acting Chairman COMMONS. Can you state by the month?

Mr. MATHEWSON. I say I could not do that with any degree of accuracy; it varies very much. Some seasons we have a great many men coming in and changing, and in other seasons they work very steadily.

Acting Chairman COMMONS. Could you furnish a statement that would show the number of men hired during the year?

Mr. MATHEWSON. I could furnish it for recent years; yes, sir.

Acting Chairman COMMONS. Will you furnish such a statement?

Mr. MATHEWSON. Yes, sir. For how many years back would you like it?

Acting Chairman COMMONS. For one year is sufficient.

Mr. MATHEWSON. During the past year.

Acting Chairman COMMONS. That means the number of men—the number of new men taken on by foremen.

Mr. MATHEWSON. During the year; yes, sir.

Acting Chairman COMMONS. It should include also the number of men dismissed.

Mr. MATHEWSON. That would be a separate thing. I might say there are very few men discharged in our plant.

(The following communication was subsequently received from Mr. Mathewson:)

BUTTE, MONT., August 8, 1914.

The number of rustling cards issued by the reduction works of the Anaconda Copper Mining Co., Anaconda, Mont., from July 1, 1913, to August 1, 1914, was 1,926; the number of men discharged in same period was 85.

There were several hundred men added to our force during this period for construction work and included in the 1,926.

E. P. MATHEWSON.

Manager Reduction Works,

Anaconda Copper Mining Co., Anaconda, Mont.

COMMITTEE,

United States Labor Commission.

Acting Chairman **COMMONS**. Apparently there is no such thing as discharge here; simply the foreman don't take them on; is that it?

Mr. **MATHEWSON**. They are laid off. The men are laid off sometimes. If a foreman gets a notion he don't like a man, he will lay him off, and the man gets discouraged and stays away. That is the way some foremen act. If a man is real quarrelsome or drunk or something like that and generally useless to the foremen, they simply discharge them; but it is very seldom they do discharge them.

Acting Chairman **COMMONS**. Have you ever considered concentrating your employment in the hands of a chief employment agent directly in your office?

Mr. **MATHEWSON**. Have I ever considered what?

Acting Chairman **COMMONS**. Ever considered the proposition of changing the system and not permitting the foremen to hire and discharge men, but having them hired directly from the central office?

Mr. **MATHEWSON**. We used to have a system something like that, but it was very unsatisfactory.

Acting Chairman **COMMONS**. In what way?

Mr. **MATHEWSON**. Well, it resulted in nepotism; they would have friends and relatives that would be coming around and wanting jobs. They would come and bring influence to bear on the office, and somebody would say he would like for Tom, Dick, or Harry to have a job, and we would give him a note to some foreman, and he would put him on because he had a note from the office. And the result was that we had two men for every job on the plant, and when times got hard we had to change the method, and we took the foremen into our counsel and asked them how it was they had so many men on the job when really there wasn't work for them.

They said the men were sent from the office, and he could not get any work out of them and had to hire other men. We made this ruling—that the foremen should be absolutely responsible for the hiring and discharging of the men, and we would hold the foremen responsible for the work, and if there were any men in his employment who were beyond work—been faithful servants of the company in the past—we should send them up to the office and we would take care of them.

Acting Chairman **COMMONS**. I was thinking of a little different plan that is in vogue at different places—that the foreman would simply make a requisition. When he has discharged a man or has laid off a man, he makes a requisition on the office, so that there would not be this piling up of men waiting to be put to work. That does not follow that that centralized system requires that there be men kept in such large numbers on the reserve list. It could be operated in a different way from what you have described.

Mr. **MATHEWSON**. Well, the great trouble would be, you have three shifts, day and night. You would have to have somebody in the employment office day and night to supply these men. The nearest approach we have to that system is the timekeepers' office. If a foreman is shy a man, he telephones up to the timekeeper, and says, "Send me down a rustler; we are short a man."

But our great trouble has been too many men seeking employment. The men are too numerous, and at times we have to shut off rustling cards altogether on account of too many men coming into town. We are very seldom short of men.

Acting Chairman **COMMONS**. I should think your system encourages men coming here and hanging around without any opportunity of steady employment. It encourages the accumulation of idle men in the town who will hang on and think that they might possibly secure work, but secure only a small amount of work. Now, isn't that the effect of your system?

Mr. **MATHEWSON**. There is a certain amount of that. They hang around a while, but they very soon get to know whether or not they are going to get on. After they have rustled a little while, they tumble to the fact there is not likely to be a vacancy in the particular department in which they are rustling and go on to the next place, but most of our men are very steady and the chances for a rustler are extremely slim, and the man who rustles is generally a newcomer or floater who just comes around for a few days to see if he can get a job and rustles a few shifts, and if he don't strike a job, he goes on some new place.

If a man rustles faithfully for a month, they are pretty sure to get a job, but they don't do that. They try two or three days, and are not satisfied with getting a job and so they go on.

Acting Chairman **COMMONS**. It don't seem to me that is a very good system.

Mr. **MATHEWSON**. It has worked out in our case very satisfactorily. We haven't had any trouble.

Acting Chairman COMMONS. I wonder if we could get accurate figures that would show the number of men that are hanging around rustling, as compared with the number of men that have steady work?

Mr. MATHEWSON. Well, in ordinarily busy seasons under normal conditions perhaps we will have 20 rustlers there a day.

Acting Chairman COMMONS. Out of 2,300?

Mr. MATHEWSON. Out of 2,300 men working there will be 20 rustlers at the gate every day, under normal conditions. With hard times, there would be 200.

Acting Chairman COMMONS. Well, that is a very small proportion, 20 to 2,300 probably would be very small.

Mr. MATHEWSON. Yes, sir; that is about the proportion.

Acting Chairman COMMONS. What is the method that you have in dealing with personal injury cases?

Mr. MATHEWSON. We make a report of every accident, and give the names of the witnesses and so on; file that report with the claim agent at Butte, and he attends to the matter, we have nothing further to do with it.

Acting Chairman COMMONS. It is all turned over to him?

Mr. MATHEWSON. It is all turned over to the claim agent at Butte.

Acting Chairman COMMONS. Does he have his representative there?

Mr. MATHEWSON. No, sir; we are his representatives. We make the investigation and the foreman makes the report.

Acting Chairman COMMONS. Any questions?

Commissioner GARRETSON. You stated that when the employment agent did the hiring that nepotism entered into it to a certain degree. Do you find that your foreman is less human than the employment agent in that direction?

Mr. MATHEWSON. Well, he is for this reason: We hold the foreman responsible for the work where we could not hold him before.

Commissioner GARRETSON. What measure of efficiency have you for making a comparison on?

Mr. MATHEWSON. We know how many tons a day he should get out of a certain product with a certain number of men, and there are a certain number of men sent to a certain job, so many men to a furnace. He can't put more than that on. He has a limited number to put on each furnace.

Commissioner GARRETSON. How would he do in the old days?

Mr. MATHEWSON. Put them on any way he liked. Let them hide around behind boxes or anywhere.

Commissioner GARRETSON. Didn't you hold him responsible for that?

Mr. MATHEWSON. We tried to whenever we could catch him, but there was no way of catching him.

Commissioner GARRETSON. You can catch him easier now?

Mr. MATHEWSON. Yes, sir.

Commissioner GARRETSON. You say there are very few men discharged. They don't discharge unless a man gets on a drunk, but you suspend him and refuse to put him back again. What is the difference between discharge and suspension of that character?

Mr. MATHEWSON. Well, in one case a man would have to get a new card and go to rustling all over again in some other department, and in the other case he has his brass check and can go in anywhere and has a better chance than a rustler.

Commissioner GARRETSON. You mean a man suspended in one department, while under that suspension, can work in another department?

Mr. MATHEWSON. Yes, sir.

Commissioner GARRETSON. That is a new one. That is all.

Acting Chairman COMMONS. Mr. O'Connell, any questions?

Commissioner O'CONNELL. No questions.

Acting Chairman COMMONS. That is all. Mr. Daly.

TESTIMONY OF MR. WILLIAM B. DALY.

Acting Chairman COMMONS. State your name.

Mr. DALY. William B. Daly.

Acting Chairman COMMONS. Your business?

Mr. DALY. General superintendent of mines for the A. C. M. Co.

Acting Chairman COMMONS. I think we were asked to substitute you for Mr. Lentz.

Mr. DALY. Yes, sir.

Acting Chairman COMMONS. On the ground that you had installed this rustling card system?

Mr. DALY. Yes, sir.

Acting Chairman COMMONS. And were informed about its workings?

Mr. DALY. Yes, sir.

Acting Chairman COMMONS. Have you brought with you the blanks and forms we requested yesterday that Mr. Lentz should get?

Mr. DALY. Yes, sir.

Acting Chairman COMMONS. Will you kindly file them?

Mr. DALY. This is a form of record—

Acting Chairman COMMONS. By the way, I should like to have you start in at the beginning of the system and describe it in regard to what inquiries are made, and we will not ask you any questions, but you describe it in your own way.

Mr. DALY. The first thing that is done if a man seeks employment is to apply at the office for a rustling card. When he makes application he is required to fill out and sign this blank.

Acting Chairman COMMONS. Let the reporter have that.

Mr. DALY. The blank is as follows:

(Place for number.)

APPLICATION FOR EMPLOYMENT, A. C. M. Co., BUTTE, MONT.

Name of applicant, age, birthplace, if foreign born, are you a citizen of the United States.....
 Trade or occupation.....
 Were you ever in the employment of this company? If so, in what mine or in what department were you last employed?.....
 State date of leaving last employment.....
 Can you read and write English?.....
 Single or married; if married, where does your family reside?.....
 My present address is.....
 Date and place for the signature of the applicant.....

When he has filled out this application blank, if he has never received a rustling card before and has not been in the employment of the company at any time since the installation of the department, he is required to furnish a previous service record—that is, to state the name of his employer and the time that he worked for the different employers, the period of years, and so on, that have passed since the installment of the office.

Acting Chairman COMMONS. Is that on the blank?

Mr. DALY. No, sir; it is written on the back of this blank in longhand, that information. When he has done that he is given this card.

(The paper so presented was marked "Document Serial No. 390, August 7, 1914, Witness Daly.")

Mr. DALY. This card is as follows:

A. C. M. Co., BUTTE, MONT.

Application No.

Name.....

Date of issue.....

ANACONDA MINING Co.

By — the party issuing the card.

On the reverse side of this card—to connect the story—after having received this card, he proceeds to rustle in any of the departments of the company he wishes. If he obtains employment, he presents this card to the timekeeper at the first shift—the beginning of the first shift, and signs his name on the back of it. The timekeeper then fills in the balance of it at the desk in the mine or department and designates the time or department that he is employed and the date of starting and his trade or occupation. The timekeeper signs that and returns it to the office. That completes that part of the card, and the card is taken up.

Commissioner LENNON. Do you file the card or make a book record from the card?

Mr. DALY. We make a book record from the form I have just presented and file the card also.

Acting Chairman COMMONS. You didn't speak of that book record.

Mr. DALY. This is the form. The record is kept in loose-leaf form. This is one of the leaves on which the record is kept.

(The record referred to was submitted in printed form.)

Commissioner GARRETSON. The column headings agree with the blanks on the card in general?

Mr. DALY. Precisely.

Commissioner GARRETSON. Every line is a virtual copy of the application and card?

Mr. DALY. Well, this states the name and number and date of application, and date employed, mine or department, and date left service.

Commissioner GARRETSON. Oh, I see.

Mr. DALY. That completes our record for a job.

Commissioner GARRETSON. In conjunction with the card, it gives the man's record?

Mr. DALY. Exactly. Every one of those lines will give a man 12 jobs before he would have to be transferred to another page.

Commissioner GARRETSON. That is, you mean he could be employed 12 times in the same department or be employed once in 12 departments?

Mr. DALY. Either way.

Commissioner GARRETSON. Either way?

Mr. DALY. Yes, sir.

Commissioner GARRETSON. Or six times in two departments?

Mr. DALY. He can get as many cards as he can get jobs.

Acting Chairman COMMONS. That is, there is a separate rustling card for each column?

Mr. DALY. Yes, sir; for each line and for each job he must secure a new card. In that connection, with new men who have applied for work who have not worked for the company before, a form of information of previous record of service is obtained. After issuing the card the information is checked up by correspondence. This is the form of letter that is sent out to the parties for whom he claims to have worked. Do you wish to make that a part of the record?

Acting Chairman COMMONS. Yes.

(The blank record referred to was submitted in printed form.)

Acting Chairman COMMONS. You may go on.

Mr. DALY. I was going to read it, if you wanted to hear it; but if you prefer to look at it and examine it, all right.

Commissioner GARRETSON. That provides for the return of the inquiry to you?

Mr. DALY. Precisely.

Acting Chairman COMMONS. It is filled out?

Mr. DALY. Yes.

Acting Chairman COMMONS. The answer is filled in.

Commissioner GARRETSON. It says, "Please reply herein."

Mr. DALY. The purpose of that is having this reply upon the letterhead, that without that a great many replying would not refer to the name, who the man was that was inquired about, and when they replied we wouldn't know who it was that they had replied about—the name of the one we inquired of.

Commissioner GARRETSON. It has developed also that there is another good purpose to be served in that direction, has it not?

Mr. DALY. I do not know of any.

Commissioner GARRETSON. I do not know that it has in your business, but it has in others.

Mr. DALY. I would not see how it could be covered by that.

Commissioner GARRETSON. Well, under the law of some of the States you would probably find that it would have a very serious effect in that direction. It is well to have all your communications on the subject returned.

Mr. DALY. That was not the purpose of this.

Commissioner GARRETSON. Well, that may be, but reference letters are generally.

Mr. DALY. Well, I don't know about that because there are many cases where the letter has not been returned and they will answer upon their own form.

Commissioner GARRETSON. And there have been instances where the failure to return—have you ever known of any instances where the failure to return was hard to get around?

Mr. DALY. No; I have not.

Commissioner GARRETSON. It may not have developed in your business at all.

Mr. DALY. No; there are certain employers who have a very elaborate filing system. Anything that once comes to them is filed, and they never leave it go back. We have numerous instances of where the letter would be filed immediately, and they would answer them on their own forms covering the same information.

Commissioner GARRETSON. I know that is true. I have had occasion to follow references up in my business.

Mr. DALY. Yes.

Commissioner GARRETSON. Where I developed in it not only the information I was looking for but other.

Mr. DALY. Do you wish me to read these or do you wish them filed?

Acting Chairman COMMONS. No. I do not care to read it. That completes your statement?

Mr. DALY. That completes that. I have some of the answers here just for a sample. I would prefer to keep this, because that is our record.

Acting Chairman COMMONS. They are typical answers?

Mr. DALY. Yes. Here is one which says: "Union Lumber Co., Fort Bragg, Cal., dated July 27, 1914. Mr. Harry Ballard, age 25, birth place, Iowa, has made application to this company for employment as miner. He states that he was employed by you as follows: As a craneman, under Mr. Johnson, boss, from December, 1912, to June, 1913. Kindly inform me if this statement is correct. Your reply will be treated confidentially. Yours, very truly, George W. Lentz, superintendent." The answer: "I find that this man was employed here during the time mentioned as a lumber handler and slingman on crane but not as a crane operator."

Here is another one, written to the Gold Tunnel Mining Co., Silverton, Colo.: "Mr. John Ssalonen, age 33, birth place, Finland, has made application to this company for employment as miner. He states that he was employed by you as follows: As a miner at the Highland Mary mine, under Mr. John McClain, boss, from August, 1912, to June, 1913." That is the general trend of all of the replies that come back. If the reply is received the man has not worked there, the reply will say his statement is not correct, don't know him, or something.

Commissioner GARRETSON. Do you ask for the man's record with the company, as a rule, only for the term of his employment?

Mr. DALY. Only as to whether he worked as he has stated; that is all that we ask. The part of the letter which makes inquiry is, "Kindly inform me if this statement is correct."

Commissioner GARRETSON. That is a perfectly legitimate method of inquiry.

Mr. DALY. Yes. Of course I have others, but they are along the same line.

Acting Chairman COMMONS. Your filing system is on this loose leaf; you do not have a system of card filing?

Mr. DALY. No. The record is kept on that form, and then the cards and application are filed in a paper envelope.

Acting Chairman COMMONS. Any questions regarding this? Very much obliged.

Mr. EVANS. I have two deeds you desired, showing the mineral reservation, asked of Mr. Kelley.

Commissioner LENNON. The deeds?

Mr. EVANS. The deeds upon these forms.

(See Kelley Exhibits Nos. 9 and 10.)

Acting Chairman COMMONS. Mr. J. L. Bruce.

TESTIMONY OF MR. J. L. BRUCE.

Acting Chairman COMMONS. Will you kindly give your name?

Mr. BRUCE. J. L. Bruce.

Acting Chairman COMMONS. And your address?

Mr. KELLEY (interrupting). I have here a copy of the medical report.

Acting Chairman COMMONS. Dr. Tuttle's report?

Mr. KELLEY. Yes. And a list of the officers of the Amalgamated Co. I think that is all except some statistical information that is being prepared.

- Commissioner GARRETSON. Your Anaconda smelter is this Washoe?
 Mr. KELLEY. Yes.
 (See Kelley Exhibit No. 8.)
 Acting Chairman COMMONS. Mr. Bruce, will you state your business?
 Mr. BRUCE. General manager, Butte & Superior Mining Co.
 Acting Chairman COMMONS. And your address is Butte?
 Mr. BRUCE. Yes.
 Acting Chairman COMMONS. Is your company part of the Amalgamated?
 Mr. BRUCE. No; it is not.
 Acting Chairman COMMONS. Where are your stockholders, mainly?
 Mr. BRUCE. The stockholders are quite widely distributed: Boston, New York, Detroit; quite a little stock held in Butte.
 Acting Chairman COMMONS. What is your production—copper or zinc?
 Mr. BRUCE. Principally zinc, some lead, and a good deal of silver.
 Acting Chairman COMMONS. In the mining production much the same as in copper?
 Mr. BRUCE. The mining is very similar.
 Acting Chairman COMMONS. Similar?
 Mr. BRUCE. Yes.
 Acting Chairman COMMONS. And the reduction, is that similar?
 Mr. BRUCE. Yes; in a general way. It is water concentration. It is followed up by a floatation of concentrates by oil floatation method.
 Acting Chairman COMMONS. Is that reduction done here?
 Mr. BRUCE. Yes.
 Acting Chairman COMMONS. The same as the other?
 Mr. BRUCE. It is done at the mine, right close to the mine.
 Acting Chairman COMMONS. How long have you been manager of the company?
 Mr. BRUCE. About 17 months.
 Acting Chairman COMMONS. Have you been employed with them before?
 Mr. BRUCE. No, sir.
 Acting Chairman COMMONS. How many employees have you?
 Mr. BRUCE. Ordinarily about 950.
 Acting Chairman COMMONS. Do you have an agreement with the miners' union?
 Mr. BRUCE. Yes, sir.
 Acting Chairman COMMONS. You have heard what has been said by Mr. Kelley regarding the agreement there, and what has been said by others?
 Mr. BRUCE. We have the same agreement.
 Acting Chairman COMMONS. The same agreement?
 Mr. BRUCE. Yes, sir.
 Acting Chairman COMMONS. In all respects?
 Mr. BRUCE. I think in every respect. I have never compared them, but I think it is the same thing.
 Acting Chairman COMMONS. On the question of removals, that is left to your foreman?
 Mr. BRUCE. Discharges, you mean?
 Acting Chairman COMMONS. Discharges; yes.
 Mr. BRUCE. Formerly the shift bosses discharged the men.
 Acting Chairman COMMONS. And if there is any appeal, to whom does it come?
 Mr. BRUCE. Well, it may come to their immediate superior officer, or it may come to me; some of them come to me.
 Acting Chairman COMMONS. Does it come through the union?
 Mr. BRUCE. I do not remember of any instance in which I had a complaint coming through the union.
 Acting Chairman COMMONS. The individual appeals directly?
 Mr. BRUCE. Yes, sir.
 Acting Chairman COMMONS. What are the depths you are working?
 Mr. BRUCE. About 1,600 feet.
 Acting Chairman COMMONS. What is the capitalization of your company?
 Mr. BRUCE. Three hundred and fifty thousand shares of the par value of \$10.
 Acting Chairman COMMONS. In general, what has been said by witness regarding the Anaconda Co. would apply to this, would it not—wages, hours, agreements, methods of handling their labor?
 Mr. BRUCE. Those things are all practically the same.
 Acting Chairman COMMONS. Governed by contracts of similar tenor?

Mr. BRUCE. Yes.

Acting Chairman COMMONS. And adopted, one in 1907 and one in 1912?

Mr. BRUCE. I don't know whether our company made any contract in 1907. Ours is one of the younger companies here. They were just commencing operations about that time.

Acting Chairman COMMONS. I believe that is satisfactory.

Commissioner GARRETSON. Just one question: In general you recognize the Anaconda as the wage fixing agency in the district in conjunction with the unions?

Mr. BRUCE. Yes.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. Mr. Maury.

TESTIMONY OF MR. LOWNDES MAURY.

Acting Chairman COMMONS. Give your name, please.

Mr. MAURY. Lowndes Maury.

Acting Chairman COMMONS. What is your business, Mr. Maury?

Mr. MAURY. I am an attorney at law.

Acting Chairman COMMONS. What is your practice, mainly?

Mr. MAURY. Why, my practice has been very varied. I have been city attorney of the city of Butte; I have worked for the Montana Power Co.; I have been an apprentice in an office that worked for the Clarkes and for the Heinzes. I have prosecuted personal-injury suits; I have defended them. I have been engaged in mining suits, almost every variety of practice except in criminal practice, in the last eight or nine years.

Acting Chairman COMMONS. How long have you been engaged in personal-injury suits?

Mr. MAURY. Oh, I think the first personal-injury suits in which I had any success was eight or nine years ago.

Acting Chairman COMMONS. About how many cases have you handled?

Mr. MAURY. It is impossible for me to say, sir. I think I have handled—my firm has handled as many as 100 a year.

Acting Chairman COMMONS. On which side has your firm usually been?

Mr. MAURY. Both sides. More often for the plaintiff.

Acting Chairman COMMONS. What proportion would you say?

Mr. MAURY. When I was city attorney for two years, more often for the defendant, other times more often for the plaintiff. Probably eight-tenths before I was city attorney for the plaintiff, probably the same proportion for the defendant when I was city attorney. That is an estimate only.

Acting Chairman COMMONS. Is it your idea that a workmen's compensation law would be preferable to the existing system of personal-injury service?

Mr. MAURY. Yes, sir; between master and servant, very preferable.

Acting Chairman COMMONS. How would it affect the business of attorneys, as yourself?

Mr. MAURY. It would put them out of business a year or so after it got to be thoroughly understood.

Acting Chairman COMMONS. You think that would be a desirable end to accomplish?

Mr. MAURY. I do, sir; in that line of work for the men, for the people at large, but of course not for the attorneys.

Acting Chairman COMMONS. How many attorneys in this town are similarly engaged in this personal-injury work?

Mr. MAURY. For the plaintiff?

Acting Chairman COMMONS. Yes; for the plaintiff.

Mr. MAURY. For the plaintiff, not more than 8 or 10 of any large practice. I am including firms by that.

Acting Chairman COMMONS. Are you able to state the number of cases each year by all the firms, or give some idea?

Mr. MAURY. I should say three a week are probably commenced.

Acting Chairman COMMONS. And those are mainly against what companies?

Mr. MAURY. They are against all companies, commenced against all companies, tried against some companies.

Commissioner O'CONNELL. Just what do you mean by that—commenced against all companies and tried against some companies?

Mr. MAURY. There was very rarely a trial against the Anaconda Co. and its associates.

3802 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Commissioner GARRETSON. They settled after notice of action was filed; is that the explanation?

Mr. MAURY. They settled, usually, immediately before trial.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. How do the liability or the personal injury lawyers secure their clients?

Mr. MAURY. I know that some of them seek their clients. For my part, I have never sought the work of any man, woman, child, or corporation.

Acting Chairman COMMONS. Are there professional ambulance chasers?

Mr. MAURY. Yes, sir; both for the companies and for the persons injured.

Commissioner O'CONNELL. For the companies to secure settlements?

Mr. MAURY. Yes, sir; and for the companies to get statements from the men when they are in the hospital as to how the accident occurred, and for other reasons.

Commissioner O'CONNELL. When judgments are given by the courts, usually to what amounts or in what amounts?

Mr. MAURY. Are the verdicts?

Commissioner O'CONNELL. Yes.

Mr. MAURY. And judgments?

Commissioner O'CONNELL. Yes.

Mr. MAURY. I have obtained verdicts as high as \$25,000, though none for \$25,000 has ever been affirmed. There have been affirmances in my firm, myself, as high as \$20,000—\$21,000, I think—no; \$20,000 was the highest. The one I had in mind for \$21,000 was settled before final argument in Supreme Court.

Commissioner O'CONNELL. Where settlements are made after cases are filed, how are they usually settled—on what percentage of claims?

Mr. MAURY. Why, that would convey no idea. Suits are brought for fantastic amounts, and that would convey no idea. I have known of suits for \$50,000 being settled for \$500, and suits for \$20,000 being settled for \$14,000. It would convey no idea. That is merely dependent on the whim of the lawyer bringing the suit.

Commissioner GARRETSON. Does the amount that is paid in settlement in these settlements immediately preceding the trial, as a general rule, exceed the amount that the plaintiff could have secured before going to trial?

Mr. MAURY. No, sir.

Commissioner GARRETSON. It does not?

Mr. MAURY. No, sir.

Commissioner O'CONNELL. What is usually the basis upon which these attorneys take these cases?

Mr. MAURY. Well, cases against some companies—I can only speak of my own firm—cases against some companies, where it may not go forward to a successful trial, or there is a reasonable chance of it—it does not go to successful trial—we have two rates, one-half and one-third. One-third if the client advances the costs. Against the A. C. M. Co. I never make a contract. The rate is variable. I usually, when it is settled up just before trial, charge something like 10, 15 per cent; but because the client is notified in advance that there can be no recovery except on a settlement, that it is impossible to win against them.

Commissioner O'CONNELL. Has there never been a case tried against this company in which a verdict has been rendered?

Mr. MAURY. In Silver Bow County, not in seven years, where it has been finally affirmed either against the Anaconda mine nor against the North Butte Mining Co., is my study of the statistics and of the court records. Of course, I have not examined all of the court records.

Commissioner LENNON. Is that true of cases tried by jury as well as those heard only by the court?

Mr. MAURY. It is true as to both classes of cases. There can be no recovery against that company in Silver Bow County.

Commissioner O'CONNELL. To what do you attribute that situation?

Mr. MAURY. I attribute it to the situation, political and economic, which has existed for many years and has been constantly growing in intensity.

Commissioner O'CONNELL. Would you indicate by that that these companies were in a position to influence the court?

Mr. MAURY. Yes, sir.

Commissioner O'CONNELL. And juries?

Mr. MAURY. Yes, sir; and companies and attorneys.

Commissioner O'CONNELL. Well, it is pretty hard to beat that game.

Mr. MAURY. That is the situation.

Commissioner GARRETSON. Mr. Chairman, I shall be glad, if the witness has no objection, to hear him state, if he will, how those influences are exerted or how they work.

Mr. MAURY. I can give sporadic instances; be willing to do so. Of course all of the instances I can give must have the connection to know them, Mr. Commissioner.

Commissioner GARRETSON. I shall be very glad indeed to hear that.

Mr. MAURY. Going back for a period of 15 to 18 years, largesses to the judiciary, and as long as 16 or 17 years ago when one particular justice of the supreme court when off the supreme bench he went into the employment of the Boston & Montana Co., now one of the companies composing or merged into the Anaconda Copper Mining Co. Later than that, when a judge was appointed to the district bench here, a day or so after he was appointed, why, there had been an old fee allowed of \$5,000 in a receivership case, and the Boston & Montana Co. was appealing from that fee. A day or so after he was appointed to the bench here the fee was paid him in cash. One of the judges on the district bench here was sued for separate maintenance by his wife. A great many of the attorneys for the Anaconda Co. and of the Boston & Montana Co. entered their appearance in his defense. A year or so ago a justice retired from the supreme bench of Montana. He was taken into the employ of one of the street railway companies in Helena on a salary. That is one way in which largesses have been paid and bestowed by the company on the judiciary. There are other ways—employment after they leave the bench. That has not been confined to the Anaconda Copper Mining Co. at all, but it was carried on by the Heinze interests before they started what is called the copper war here.

In the early days of that copper war here one attorney was said to be employed because he had been a partner of a Federal judge before the Federal judge was appointed, and that is the way that—generally the way in which the influence is exerted on the judiciary, leaving out the political support at the elections. Of course the present judiciary was supported at the elections politically by the employees of the Anaconda Copper Mining Co. and the old companies that were merged into this company. The way the juries are influenced here in the Federal court—the influence is caught at the fountain head right now. The Federal jury commissioner, Mr. Brophy, is a man of high ideals, but a political and economic fanatic. He fixes with the clerk of the Federal court the jurors that serve in that court; goes through the city directory and picks out the acceptable and leaves out the unacceptable, and in that way that is controlled right at the fountain head. In the district court here, the State court here, there is a little different method. In watching the drawings of jurors here in this district court, where it is supposed to be by lot from all the 4,000 or more taxpayers of the county, why, you will see come out of the box names that are acceptable duplicated. That has happened right here in this court room. The acceptable will be more often, and the same name will be repeated in the jury box and sometimes be drawn out twice in the same day. The influence that is exerted in the courts when the jurors are actually on trial after they have been hand sorted is more apparent than any other way.

When there is a case against a mining company you will notice the great solidarity of capital and corporations here. You will notice that the case is against the Butte & Alec Scott Co., which is a very small company—you will notice shift bosses from the Butte & Superior or other head servants of the Butte & Superior—if there is a Butte & Superior man on the jury—come here about some immaterial expert matter, and they will qualify as experts and demonstrate that they want one kind of a verdict from that jury. And you will find witnesses—if there are Anaconda men on the jury and the case is against the Butte & Alec Scott Co.—you will find witnesses from the Anaconda Copper Co.'s mines on the most trivial expert questions, and you will see them load them with 9 or 10 witnesses on a little expert question, and sometimes their testimony will be to the ordinary man absolutely false. I have heard nine of them in succession—shift bosses—upon this witness stand in this court room not two months ago go on and swear that 60 per cent nitroglycerin powder was not more dangerous than 40 per cent, and simply for the purpose of influencing the juries and controlling the verdicts.

There are other ways in which those verdicts are controlled. It will be whispered around during the trial that the company has offered so much and no verdict will ever exceed that so much, if that has been the amount offered

in compromise, that will be whispered around. In this particular case that I think of where these nine witnesses followed each other one after the other to prove that 60 per cent nitroglycerin dynamite was not any more dangerous than 40 per cent nitroglycerin dynamite—why, I was told by one of the jurors who heard before the verdict that the company offered that man \$5,000, and though he had lost both eyes and one hand in the accident, and in which they found in his favor, the verdict was \$5,000. And you hear similar stories all through the trial, and those whisperings speak with the voice of the prophet, you know what is coming.

Commissioner O'CONNELL. You say—Mr. Brophy, I think it was.

Mr. MAURY. Jury commissioner.

Commissioner O'CONNELL. Is a political fanatic, you said.

Mr. MAURY. Why, yes, sir.

Commissioner O'CONNELL. What particular species of politics does Mr. Brophy follow?

Mr. MAURY. Democrat.

Commissioner GARRETSON. That is the first thing you have said, Mr. Maury, that went below the belt.

Mr. MAURY. A Democrat, sir; I say that Mr. Brophy—

Commissioner O'CONNELL. Is that character pretty general with the Democrats in this locality?

Mr. MAURY. In this section; yes, sir. Mr. Brophy was foreman of the jury, or was on the jury, anyway, in the case of Leary v. A. C. M.—that is, Anaconda Copper Mining Co. That is about—well, the Leary case, he was on the second jury—that was when the jury decided against Leary. On the first jury he wasn't on there was a verdict against the company. That was seven years ago at least. That was the last verdict against the company; and on the second trial of the case the supreme court reversed it and sent it back for a new trial. On the second trial of the case Mr. Brophy was foreman—was on the jury in the State court and decided against Leary. And after that decision he was retained as jury commissioner. He is a holder of copper interests himself—interested in the Butte Range Copper Co.—and he has sold copper lands to the North Butte Copper Co., receiving large amounts of money. And Mr. Brophy in his own mind is a high-class, intelligent gentleman, but a fanatic.

Commissioner GARRETSON. I would understand from that statement as to his eligibility for jury commissioner that applicants for official position here have to have a rustling card?

Mr. MAURY. Why, applicants for official position here, I don't know. I have been an applicant for official position, and my rustling card was a membership in the Socialists.

Commissioner O'CONNELL. Just let me ask this question about the jurors: Are there a number of so-called professional jurors, who are around all the time ready to be drawn and serve in these jury cases?

Mr. MAURY. That was noticeable a year and a half or two years ago. We have a provision that a man can serve only once in a year—a calendar year, that is. About half of the jurors that were serving in this department, which was then in another building—this courthouse hadn't been completed then—showed up in December, about half of them were serving in January in another department. But really they were not a bad class of jurors; they were men who were beyond the desire for jobs. They were old stiffs, and they were a pretty good class of men, because they had passed beyond the age where—

Commissioner O'CONNELL. They could use employment; that is beyond the age of assimilation in this atmosphere.

Mr. MAURY. Yes; yes, sir. To a large extent there were no trials against the A. C. M. Co. at that time, as I remember. There might have been one or two, but if there were they were unsuccessful.

Acting Chairman COMMONS. Have you any other point to make?

Mr. MAURY. I was speaking of political qualifications to hold office—I notice one remark of the governor this morning, if I understood the governor, and my hearing is not of the best—the governor said that there has been prosecutions for breaches of the safety appliance act. I was sitting back in the back part of the room. There has never been but one in Silver Bow County. There have been men killed time without number for failure to put the gates on as required by law—there has never been but one prosecution, and that was many years ago soon after the law was passed, and for the purpose of getting it declared unconstitutional.

Acting Chairman COMMONS. Are you familiar with the coroner's inquests?

Mr. MAURY. Yes, sir.

Acting Chairman COMMONS. Coroner's courts?

Mr. MAURY. Yes, sir; I have attended a great many of them, and I knew the personnel of the juries and the universal verdict.

Commissioner O'CONNELL. That is, the universal verdict is—

Mr. MAURY. Is that the man came to his death by touching an electric wire or by a rock falling on him, or by—just the physical facts. They never go into the negligence of the concern for whom he works. I venture to say that of the 40 or 50 coroner's verdicts a year in the last 10 years of mining casualties there has never been a single solitary one in which any blame was laid on the master. I only gain my information from through having been to those trials or coroner's inquests, and from newspapers' accounts. I have been there representing the master; I have been there representing the servant.

Acting Chairman COMMONS. Any other question?

Commissioner GARRETTSON. No.

Acting Chairman COMMONS. That will do, Mr. Maury. Much obliged to you. Call Mr. Evans, representing the company.

TESTIMONY OF MR. L. O. EVANS.

Acting Chairman COMMONS. Give your name, please.

Mr. EVANS. L. O. Evans.

Acting Chairman COMMONS. What is your position?

Mr. EVANS. I am chief counsel for the Anaconda Copper Mining Co.

Acting Chairman COMMONS. How long have you been counsel?

Mr. EVANS. Well, I have been counsel for the company, one of the companies, retained and employed by the company, the Anaconda Co., since 1901. I was employed by subsidiary companies to the Amalgamated, which were afterwards merged into the Anaconda Co., prior to that time and from the latter part of 1895.

Acting Chairman COMMONS. Have you had charge of the personal-injury cases of the company?

Mr. EVANS. Well, since I have been chief counsel I have had charge of them, and I have been familiar with them all through; I think all through that period. I have been familiar with all the legal business of the company, and in a large measure familiar with the business affairs of the company, too, from the fact that I have been familiar with most of the important operations of the company.

Acting Chairman COMMONS. Who has defended those cases?

Mr. EVANS. I have, a number of them that have been tried, and in the settlements I have had a great deal to do with them.

Acting Chairman COMMONS. What?

Mr. EVANS. In the settlements and negotiations for settlements and in the actual trials, I have been. I have been in most of the trials and in the settlements. I have had to do and have known of most all of them, I think. The matters that Mr. Maury spoke of, I think I am particularly familiar with them. I have investigated the facts back and forth. I have been in court proceedings where these charges were made by Mr. Maury, and I think am fully familiar with all the facts that go to enter into them.

Acting Chairman COMMONS. What is the position of Mr. Madden with reference to your men?

Mr. EVANS. Mr. Madden is the claim agent; he takes up any case of any difficulty; the question of liability or matters of that kind he takes up with us.

Acting Chairman COMMONS. Who makes the settlements?

Mr. EVANS. He makes the settlements, and it was the practice to allow the men, to pay them something, to try and reach some satisfactory settlement in almost every case. But, of course, in the more serious cases, the question of possible liability of the company, where that enters in, particularly on the questions of legal liability, he takes it up with the attorney.

Acting Chairman COMMONS. Does Mr. Madden act under your advice?

Mr. EVANS. Yes, sir.

Acting Chairman COMMONS. Your legal advice?

Mr. EVANS. Yes, sir.

Acting Chairman COMMONS. Do you ever aim to secure a release from all employees who have had accidents?

Mr. EVANS. Where there is a settlement.

Acting Chairman COMMONS. Where a settlement is made?

Mr. EVANS. Yes; certainly.

Acting Chairman COMMONS. In all cases?

Mr. EVANS. Yes, sir; all cases. All cases where settlements are made we take releases, complete releases; that is, complete as we can make them.

Acting Chairman COMMONS. What are the lowest settlements that have been made—the lowest amount that has been paid in a settlement?

Mr. EVANS. Oh, we have had men come in with two or three days—as a rule not much attention is paid to as slight an injury as that, but, I think, oh, twenty-five or thirty dollars, I think, where there is a question of a few days, something of that kind, and the man has gone back to work.

Acting Chairman COMMONS. The lowest settlement, then, is twenty-five or thirty dollars?

Mr. EVANS. I think so.

Acting Chairman COMMONS. What has been the highest settlement made?

Mr. EVANS. If the commission please, I would be glad to submit the figures to the commission, but we have some particular objection to making these figures public. I will be very glad to give all the figures to the commission before you leave—anything that you desire in that line.

Acting Chairman COMMONS. You have heard the statement of Mr. Maury?

Mr. EVANS. Yes, sir.

Acting Chairman COMMONS. Regarding politics?

Mr. EVANS. Yes, sir.

Acting Chairman COMMONS. The judges?

Mr. EVANS. Yes.

Acting Chairman COMMONS. The jurors?

Mr. EVANS. Yes.

Acting Chairman COMMONS. The coroners?

Mr. EVANS. Yes.

Acting Chairman COMMONS. What have you to say with regard to that?

Mr. EVANS. Well, I have heard it, it is not novel at all; I have heard a good deal the same statement from Mr. Maury a number of times. He varies it a little bit, some new idea occurs to him. Why, there is absolutely no foundation for it. Now, as shown by [laughter]—

Acting Chairman COMMONS. The audience will be quiet.

Mr. EVANS (continuing). Statistics, of course this commission isn't expected to try out this question upon the evidence produced. If it desires to do so, we would be very glad to go into it fully, but the situation is more or less this:

Now, first the charges as to the judges. I am not going to defend the judges of Silver Bow County, either the State or the Federal judges. Their reputations are well known here. The commission can get that from any reputable citizen. The charge in detail that I remember, Mr. Maury suggested the way of influencing the present judges by employing other judges as they left the bench. I think that started with a supreme court justice, Judge De Witt. I think he referred to, who has been dead a number of years. Judge De Witt was an attorney practicing in Butte here, employed by the different mining interests here, and went from here to the supreme court as one of our supreme court justices, and his record, the Montana reports will show the record that he made there. He came back here to practice, opened up an office, and was in general practice before he was employed by the corporations, something like a year, I think six months. He officed in the same building that my partner and myself were in the Silver Bow block. It was right at the time of the Heinze fight, Heinze-Amalgamated fight, which was getting right about its height then, and it was absolutely necessary to have other counsel, and able counsel, and Judge De Witt was employed, and he gave at least a dollar's worth of service—I think several dollars' worth of service for every dollar he was paid. He was an awfully hard working lawyer, and simply practiced law legitimately for the company. Now, I think that is the history of the first case that Mr. Maury refers to.

I didn't catch the second, I was called aside here. I wish somebody would tell me about the second.

Mr. KELLEY. The fee that was paid in cash the day after the first one was appointed judge, I think.

Mr. EVANS. After who?

Mr. KELLEY. I didn't get it; I am not familiar with it myself.

Commissioner O'CONNELL. It was regarding the payment of the amount of \$5,000 that had been hanging fire in some case and was paid.

Commissioner GARRETTSON. Receiver's fees.

Commissioner O'CONNELL. Yes; a receiver's fee.

Commissioner GARRETSON. In the Butte and Montana case, a receivership case here was being adjusted in court, and that within a certain period after his designation as judge it was paid in cash by the same company that was contesting it.

Mr. EVANS. Well, I don't know what that referred to, what the details were. In the Boston & Montana litigation or receivership the firm of—I am not sure Mr. Maury was a partner of Judge Pemberton—they got a fee. I am not sure Mr. Maury was in as a partner at the time that the service was rendered for which the fee was paid. I do not think that would refer to Judge Pemberton. Judge Pemberton had been on the supreme bench, and came here and was employed by this receiver. It was a hostile receivership to the Boston & Montana Co., and of course Judge Pemberton's employment could not be attributed to that company.

Judge McClernan, who is now on the district bench, was also attorney for the receiver. There was reference to him. But how it was paid and when it was paid, I don't know. He was attorney for the receiver and rendered service, and there was bound to be payment by the company. I don't know just about that detail.

Commissioner GARRETSON. In regard to his allegations, as he phrased it, of largess.

Mr. EVANS. Yes; of largess.

Commissioner GARRETSON. For judicial actions only, are the facts—leaving inferences aside, are the facts in the individual cases named by Mr. Maury, as he stated them—that is, were those employments given in the cases named?

Mr. EVANS. Well, I have taken them up and I was telling the actual facts, as I had endeavored to do.

Commissioner GARRETSON. Well, as far as you have covered it, your facts and his agree.

Mr. EVANS. Well, except that—

Commissioner GARRETSON. But your inferences do not?

Mr. EVANS. Well, my facts are much fuller. Now, as to Judge De Witt, the supreme court justice. He was employed here in Butte. He was a mining lawyer and employed, and he went to the supreme court and came back.

Commissioner GARRETSON. Let me ask you one question on a term you used. You said able counsel in that case was needed?

Mr. EVANS. Yes; very much.

Commissioner GARRETSON. Is there a difference between able counsel and influential counsel?

Mr. EVANS. Well, I think—no; I don't—I had no—made no distinction; almost any able counsel has more or less influence, of course. And Judge De Witt had retired from the bench; his term had expired some six months or a year before the employment was had.

I don't know of any attorney, and I remember we were canvassing for assistance here—I don't know of any attorney in this section that was competent for the service that Judge De Witt was employed for; I mean mining attorney of ability, who could be employed to step into that litigation.

Commissioner GARRETSON. What made me ask that question as between able and influential, I have had in court myself in the same case two lawyers hired.

Mr. EVANS. Yes.

Commissioner GARRETSON. One for what he knows, and one for what he could do.

Acting Chairman COMMONS. Now, the other instance.

Mr. EVANS. Yes; the other. Mr. Maury referred to a separate maintenance suit being brought against a district judge, and the counsel for the company—he was a little vague about it—entered their appearance for him. Now, I am positive there has been no such occurrence of that kind. One of our district judges had some difficulty, I think it was either a maintenance suit brought by his wife, but if any counsel for our companies appeared for him or took any part in it, I knew nothing about it. I am sure it didn't occur.

Commissioner GARRETSON. Will the records disclose whether it did or not?

Mr. EVANS. Yes; the record will disclose who the counsel were. All I know about that proceeding, at the time we had a local bar association here that was active at intervals—it was spasmodically active. Charges were filed in the bar association based upon the same things. Two of the lawyers for the wife presented charges in the bar association. I was appointed on a committee to—no; the judge himself presented the matter to the bar association and

wanted an investigation. I was appointed one of—I was on the standing grievance committee, I think, or the committee that covered that—I have forgotten whether that was the title of it or not. I was one of five on that committee.

Commissioner GARRETSON. I didn't know that anything but a labor organization had a grievance committee.

Mr. EVANS. Oh, yes; attorneys have more grievances than anybody.

I was appointed on a committee to investigate this matter, so the committee called upon the judge. It had been laid by him before the committee, and we asked for any statement that he had as to the facts in the matter, and he said he declined to make any, that whatever charges his wife—statements she chose to make—that he didn't propose to enter into it at all. In fact, he took a very high moral position about it, and he didn't leave the committee anything to do, and that was the end of it. Now, as far as appearing in court, I am quite positive that no attorney for our company appeared in it or took part in it.

Commissioner GARRETSON. Well, that should be capable of proof.

Mr. EVANS. Yes, certainly. Now, the other, the only other—I don't know what Mr. Maury means by a supreme court justice going into the employ of a street car company at Helena. Our companies—I can think of no concerns that they are affiliated with that I know of that have any interest whatsoever in the Helena Street Railway Co.

Commissioner GARRETSON. No; but bear in mind Mr. Maury distinctly and specifically stated that his charges in those directions were not wholly against the Anaconda Co., but against corporations in general.

Mr. EVANS. Well, did you understand that they extend to all the others in the State?

Commissioner GARRETSON. As far as that is concerned, I don't know how far he intended to extend it. At the same time, I don't know whether—I am only speaking from my own understanding—it applied specifically to Silver Bow County and State officials, and I didn't hear any explanation about other counties.

Mr. EVANS. Yes; I thought there must be some attempt to connect the corporations of Silver Bow County or something.

Commissioner GARRETSON. No; he connected, I think, corporations in general.

Mr. EVANS. Oh.

Commissioner GARRETSON. Standing shoulder to shoulder.

Mr. EVANS. Well, as far as that is concerned, I think that most of the attorneys who reach the point of where they are selected as supreme court justices, either before they are on the bench or afterwards, they are pretty apt to accept employment by corporations. As a rule, they are looking for that class of lawyers. And, if you are going to extend it to corporations all over the State, all over the country, I don't suppose that there is a man who ever reached a high judicial position on the bench who didn't have the opportunity either before or afterwards, and most of them have accepted it, to enter into corporate employ as lawyers. It is the most desirable employment, as a rule; it is the most lucrative employment, and as a rule they are usually looking for lawyers who at least have ability enough to go upon the district and supreme benches.

Commissioner LENNON. Does the record show that Mr. Maury ever appeared for any corporations in the courts in this district?

Mr. EVANS. Of this district?

Commissioner LENNON. Yes; about here.

Mr. EVANS. Yes; Mr. Maury, I think, has appeared a few times for the Montana Power Co. He was employed for awhile. That employment has been terminated. But his main corporation employment, I think, that he refers to, was while he was city attorney of the city of Butte two years under the Socialist administration, I think his practice has been, in the main, the personal-injury practice.

Now, I should very much have liked Mr. Maury to have extended his denial about the soliciting of personal-injury cases, not alone to himself but to his partners. Now, as to the other matter, I want to present this briefly. I don't want to take any more of the commission's time—but as to the charge that justice can not be had in Silver Bow County. If any reason is given by Mr. Maury about this general corporation influence and the domination and control of the jurors or anything of that kind, I want to say that we have broad change of venue laws. They provide for a change of venue to other counties upon a showing of any of these facts that Mr. Maury has attempted to detail

here. Mr. Maury has never made an application in this court for a change of venue upon any of those grounds. He would be entitled to it. If he didn't secure it from the district judge, it is a matter that is capable of revision in the Supreme Court. Now, as to judges, if Mr. Maury considers, as he stated here openly before this court, that the judges are judges—and we have three different judges in Silver Bow County in the State court—are dominated by anybody so that justice can not be obtained before them, and I think that will be a shock to every reputable man in this county to hear that statement, that is, if it is a fact under our law. We have a peculiar law known as the disqualification of judge law. A man can disqualify, any litigant can disqualify any judge, district judge, by simply filing an affidavit stating that he has reason to believe, and does believe, that he can not obtain a fair and impartial trial before that judge.

No facts are required or no trial. That in itself disqualifies the judge. Now, we have three in Silver Bow County, three district judges. A man is allowed to file two of these, any litigant. When he has filed two, then the case must go to a judge from an outside county, so that in this county simply by the filing of this formal affidavit Mr. Maury or any of his clients can procure a hearing before a judge from an outside county. Now, that is the situation, so that if he desired to present this matter, which should be a matter of judicial inquiry in the district court, he is not required to present it to any of our local judges. Now, as to the State court, he never has filed application. What he has done in advertising himself and his personal-injury business in this county is to get up in his Socialist meetings, get up in the street and other places and make these charges and then fail to support them or to take them to the proper place. Now, as to the Federal court, Mr. Maury has appeared in a number of cases in the Federal court, personal-injury cases. He has four there now pending that he is interested in. He brought a case some years ago. Our Federal court sits—it is divided—the court sits now in a number of cities in the State—Butte, Helena, Billings, Missoula, and Great Falls. It was divided into divisions, and at the time I speak of it was divided into two divisions, the southern and the northern. Butte was the court seat of the southern and Helena of the northern.

The statute provided that cases arising in the several counties composing the southern district should be filed at Butte and cases in the other should be filed at Helena. Provision was made for a judge to go from one to the other by the court at its discretion at any time whenever the ends of justice or a reason that appealed to the court decided. Besides that—that is the condition now—but besides that, the court rules provide for a change from one place to another, and has been the same as provided in our local State statutes upon change of venue to cover any of these grounds that Mr. Maury suggested. Now, the Federal court, Judge Hunt sitting there some four or five years ago, the first time any of these applications were heard of in open court, Mr. Maury filed a personal-injury case at Helena instead of filing it here. It arose here. Instead of filing it here as the rule contemplated, he filed it at Helena. So the defendant company, the Boston & Montana Co. it was at that time, filed an application at Helena for a change of the place for trial. Mr. Maury resisted that upon the ground that he has given here, that he could not obtain a fair trial before a jury in Silver Bow County. A full hearing was had, affidavits of all the prominent citizens here—not all, but a representative number of prominent citizens of every class, attorneys, doctors, bankers, the officers of our local commercial organizations, officials—everybody that you could think of that would be representative, were presented there, showing that there was absolutely no merit in the contention. Mr. Maury had his own affidavit, I think, and one of his litigants and one or two more, a few more to the contrary.

The matter was all thrashed out before Judge Hunt, who is now the circuit judge of the United States, stationed or assigned to Philadelphia, and Judge Hunt granted the motion, ruling flatly against Mr. Maury's contention.

Now, Judge Hunt had lived ever since his boyhood in Montana. He came here as a young lawyer; he had been on the State bench; he had been on the State district bench, the State supreme bench, and was appointed by President Roosevelt governor of Porto Rico. He was absent for two or three years and came back here and was appointed to our United States court sitting at this time.

Now, that is the first application, and I have a copy of the order in my pocket of Judge Hunt granting the application to bring that case to Butte, ruling

against Mr. Maury's contention, where he had full opportunity to present all of the proof that he could of these sensational charges that you gentlemen have heard to-day.

Now, the second time it came up was here within the last three months. Mr. Maury made the same application in four personal-injury cases in the Federal court here. That was thrashed out, a full hearing had, affidavits taken there, and affidavits produced, a great number of them, and Judge Bourquin, after taking the matter under advisement for a while—a short time, when he reached the matter, decided—made his written order finding against Mr. Maury and his affidavits, and then referring to the fact that both parties had referred to the personal knowledge of the judge as a resident of Silver Bow County, and then gave his views and opinions from his observations as a resident of this county for 20 or more years, finding that there was absolutely no justification for the charge.

Now, I wish, if the commission have no objection, I would like very much to present copies of these orders for a part of your record, these judicial determinations.

Acting Chairman COMMONS. They may be presented.

(See Evans Exhibits Nos. 1 and 2.)

Mr. EVANS. Now, the judge—I wish to state this: I don't want to be understood or say anything in addition, eulogizing him or anything, but simply because the record of Judge Bourquin, of the Federal court, in this matter, I think, ought to be known. He worked in the mines before I ever heard of him, studied law, educated himself, and was appointed either register or receiver of the land office at Helena. He was a resident of Butte. He was a Republican. He was appointed, it must have been, by President Harrison away back, 20 or more years ago.

After his return from there, he came back to Butte and practiced law for a number of years, and then was elected to the district bench and served four years upon our State bench here. He was defeated for reelection by a Democrat, and then practiced law here for a number of years, and then was appointed to the Federal bench, upon the resignation of the then judge, by President Taft.

Mr. Maury was one of his indorsers for the position upon the Federal bench, as I am informed that he wrote a very eulogistic letter to the President, commending him for that position. I think he was supported by the bar generally. But his knowledge of conditions in Silver Bow County runs back a much longer time than my own, more than 20 years; and he was the judge who passed upon this application after a full hearing. The evidence was all presented, the matter argued, briefs filed. Mr. Maury filed two briefs and rendered the decision that I wish to make a part of the record. I have the orders, both of Judge Bourquin and Judge Hunt.

Now, I wish to say this, that any man here—I am perfectly familiar with this matter, of course, when these charges have been made I have been handling them for these companies. I would go out to the citizens of Butte and talk with them about this matter in order to obtain their affidavits, going to the representative men here, the bankers and men that have no connection with them in any possible way, the men—if we have any men in Silver Bow County at all who are men who are not dominated and controlled, why, they are the men whom we would select and who would be free from these influences. We would go to those men without hesitation. They state the facts just as I have given them to you, and these have all been matters of court records; I mean, the affidavits upon these two hearings that I speak of.

Commissioner O'CONNELL. Just briefly, something about this charge of general influence over the courts and the jurors, and the implication of the coroner, and the implication of the coroner's juries and everybody, for instance, were either under the influence of somebody or corrupt themselves.

Mr. EVANS. Well, there is absolutely no foundation for it. Now, our feeling, for instance, that the courts—I feel that in going into these courts, and I think we meet the usual—I think we meet the experience that every corporation has with juries. I think we meet a willingness on the part of the courts to give us the laboring oar a little bit because we are large. I think it is a natural thing for a judge to feel that if anybody is going to be given a little more of the burden of it, these corporations should do it, and that there has been absolutely no leaning of any kind. Now, as to juries, I think we have the same experience, when you come to them.

Commissioner GARRETSON. Before you come to the juries, let me ask you a question in regard to these court records, the court decisions on this point that you are introducing?

Mr. EVANS. Yes.

Commissioner GARRETSON. I mean, as to their value and as to their effect on the question that is raised. I am putting this question to you as a lawyer.

Mr. EVANS. Yes, sir.

Commissioner GARRETSON. And if the charges made are well founded that the corporations have their hand on the judiciary, then the finding of a court in accordance with the lines named would have no value as evidence. On the other hand—

Mr. EVANS. Well—

Commissioner GARRETSON. Wait; let me put the other side of it.

Mr. EVANS. Yes.

Commissioner GARRETSON. On the other hand, if the condition did not exist, and the entire charge was false, then it would be valuable as evidence.

Mr. EVANS. Certainly.

Commissioner GARRETSON. Have I stated it correctly?

Mr. EVANS. Why, certainly. I have given you the decisions of two Federal judges appointed for life—been given after full hearing. Now, if these two men—Judge Hunt, a man whom, perhaps, many of the commission know, and Judge Bourquin—are corrupt or influenced, as Mr. Maury charges, why, of course, their decisions are valueless.

Commissioner GARRETSON. Then they prove the other man's contention?

Mr. EVANS. Certainly, certainly; and uphold Mr. Maury's contention. This commission must necessarily find that these two Federal judges were corrupt, because they had the evidence and they both of them know the local conditions.

Commissioner GARRETSON. Don't even get an inference that this commission is going to pass a verdict.

Mr. EVANS. No.

Commissioner GARRETSON. On that.

Mr. EVANS. I haven't any.

Commissioner GARRETSON. As a personal question.

Mr. EVANS. I haven't the slightest idea that the—

Acting Chairman COMMONS. Now, Mr.—

Mr. EVANS. Now, as to the State court, the point I make is this, that Mr. Maury has never made an effort in the State court to have this matter judicially determined, and he would not have to stop with our local judges; he would get outside judges to determine it. He would not stop with them because he would appeal to our supreme court, so that to sustain Mr. Maury's contention on that, this commission has not alone got to impeach our two Federal judges, but you have got to impeach our whole body of men on the supreme court down, you have got to impeach every reputable citizen of Silver Bow County who has made these affidavits—you have got to show that men in Silver Bow County are not men.

Commissioner O'CONNELL. Did I understand you to say, Mr. Evans, that your bar association is not in existence here now?

Mr. EVANS. Well, I say it is active spasmodically.

Commissioner O'CONNELL. How is it now; is it healthy now?

Mr. EVANS. Well, there has not been a meeting for some time; I think it is a little dormant.

Commissioner O'CONNELL. I want to ask you a couple of questions; you need not answer them if you don't want to.

Mr. EVANS. I will answer them.

Commissioner O'CONNELL. Are you a member of it?

Mr. EVANS. Yes.

Commissioner O'CONNELL. Is Mr. Maury a member of it?

Mr. EVANS. Yes; I presume he is. He was the last I knew. Mr. Maury and I have both been at different times president of the thing.

Acting Chairman COMMONS. Do you agree with Mr. Maury—you disagree with him evidently—but do you agree with him on the proposition that it would be preferable to have a compensation law that would eliminate all of these questions?

Mr. EVANS. Very much.

Acting Chairman COMMONS. Personal Injury cases.

Mr. EVANS. Very much so. I think that a proper compensation law, a compensation law on the theory of your Wisconsin law, a compensation law with

fair return to the men and upon some fixed definite basis, where an employer can to-day or this year know how much his accidents are costing him, and not have it accumulated and be paying for the accidents that were caused by corporations 20 years ago, or somebody that went out of business yesterday. I think any fair compensation law that will do nothing less than put the matter into judicial hands where it would allay any feeling, any chance of charges of that kind, coercion of the men and unfair treatment—I think it would be very desirable and we are very much in favor of it.

Commissioner GARRETSON. Don't all compensation laws take it out of judicial hands?

Mr. EVANS. No.

Commissioner GARRETSON. And put it into automatic hands?

Mr. EVANS. I mean all judicial channels; I mean where it is administered by somebody other than the two parties themselves.

Commissioner GARRETSON. Oh, you are not applying it to the bench?

Mr. EVANS. No; but most all of the compensation laws have methods of judicial determination, you know.

Commissioner GARRETSON. Well, that is only on moot questions?

Mr. EVANS. Yes; certainly.

Commissioner GARRETSON. But the ordinary application would be that in—

Mr. EVANS. Yes.

Commissioner GARRETSON. The records of the courts, then—

Mr. EVANS. Where the injury is certainly—

Commissioner GARRETSON. Would determine?

Mr. EVANS. Yes.

Commissioner O'CONNELL. Whereby the injured would be paid a hundred cents on the dollar?

Mr. EVANS. Yes; that is it exactly; it would all go to him, and that has been our aim in connection with ours. Now, I want to tell the court—Mr. Maury has referred to his failure to get verdicts. And to give a specific instance, now I am not calling on my imagination as to the courts in these matters; they are matters of general knowledge. Mr. Maury had here about two years ago, he had some cases coming on before the Federal court here, on for trial on the jury panel; he had four in a row, and two of them—one of them was against the Boston & Montana, one of the former companies merged into the Anaconda Co., one was against the North Butte Co., and two against other corporations. The jury panel up there, about half of them were entirely outside Silver Bow and Deer Lodge Counties, about half; that is the approximate number. I don't remember exactly. The others were residents here.

In our Federal court here we get the best men; we get the most intelligent fellows. We can't call them the best, but perhaps the most intelligent class of people that we have. They get splendid juries. The judges don't excuse them for trivial causes. They make them stay. Mr. Maury got up, the first case he tried in that panel, he got up before the jurors who were sitting in the box who had been called in that case, with the rest of the panel sitting in the court room, and he told them that he didn't expect a verdict at their hands, because he knew they were dominated or coerced so that they would not give a verdict. He was reprimanded by the court, and within 15 minutes he did it again. He was punished by the court, and fined \$500 for contempt of court. He took that to San Francisco, and the sentence was affirmed. This jury panel that he had insulted tried his three or four cases. I think one of them was taken away by the court. The other three went to this jury panel with the natural result. Now, one of the cases Mr. Maury bases, one of the cases where the jury found against him, was a case against the North Butte Mining Co., Melichovich against the company, the judge granted a new trial because of an error in instructions, and there were two causes of action. He granted a new trial upon one of them. Mr. Maury went down to Minnesota and brought it over again; he could not get a fair trial before a jury in this county, so he went down to Minnesota, and it was tried there. Our attorney, who was familiar with the case, was unable to go because of the recent labor trouble, and we sent one of the younger men in the office, who never heard of the case until he took up the papers, he never had any familiarity with it before he got on this train and went down there, and was assisted by a young man from Duluth who had had no experience in mining matters at all. The unanimous verdict was returned against Mr. Maury, to the same effect as the verdict returned here, in one hour and a half. Now, that is the actual fact regarding Mr. Maury's jury trials and experience.

But, as I said, my view of this is that these matters should be tried in the courts, if our courts are so corrupt, why, of course, we are in bad shape in Silver Bow County; we are in very bad shape, but I don't think any member of the commission is going to believe that.

Commissioner GARRISON. Then your position would be that in Montana there is no invisible government?

Mr. EVANS. Why, no; not to any serious extent. Everybody has influence.

Commissioner GARRISON. That phrase is not mine; I borrowed that.

Mr. EVANS. Yes, I understand; it is a phrase that has been used here and used everywhere. Every corporation, of course, has more or less influence. Every person has who amounts to anything. Everybody has a little, and in Montana there is no unreasonable influence in Silver Bow County, particularly in regard to the courts and litigation, I think. And I think I know this company and its influence and its ins and outs as well as anyone in the past 12 or 15 years.

Acting Chairman COMMONS. That is all you have to say, then, Mr. Evans?

Mr. EVANS. Unless the commission desire to ask any question. Now, I can present all the details about the cases and the history of them, and everything that the commission would like. I can obtain it in a few minutes. If there is anything the commission think they would like to have in the way of records—

Acting Chairman COMMONS. Well, we will let you know to-morrow.

Mr. EVANS. Thank you.

Acting Chairman COMMONS. The commission will stand adjourned until 9 o'clock to-morrow morning.

(See O'Brien Exhibit No. 1 and Pope Exhibit No. 1.)

(Thereupon, at 4 o'clock p. m. on this 7th day of August, 1914, an adjournment was taken to the following day, Saturday, August 8, 1914, at 9 o'clock a. m.)

BUTTE, MONT., Saturday, August 8, 1914—9 a. m.

Acting Chairman COMMONS. The commission will come to order. Mr. H. G. Miller, will you take the stand?

TESTIMONY OF MR. H. G. MILLER.

Acting Chairman COMMONS. Mr. Miller, will you give your name and address to the reporter?

Mr. MILLER. H. G. Miller; Kalspell, Mont.

Acting Chairman COMMONS. Mr. Miller, what is your occupation?

Mr. MILLER. I am in the lumber business.

Acting Chairman COMMONS. How long have you been in the lumber business in this State?

Mr. MILLER. Since 1891.

Acting Chairman COMMONS. Is there an association of lumber, mill owners?

Mr. MILLER. There is in our section of the country an association of manufacturers.

Acting Chairman COMMONS. That is, owners of timberlands?

Mr. MILLER. Yes, sir.

Acting Chairman COMMONS. In what section of the State is this association?

Mr. MILLER. The section known as Flathead County and Lincoln County; northern and western part.

Acting Chairman COMMONS. What is the object of this association?

Mr. MILLER. The association primarily is one to secure uniform grading of the product.

Acting Chairman COMMONS. What is the class of lumber?

Mr. MILLER. The lumber is principally made from larch trees with a percentage of fir, pine, and spruce.

Acting Chairman COMMONS. How many members are there of this association?

Mr. MILLER. I think there are nine now.

Acting Chairman COMMONS. Does that include the principal production of the lumber of this State?

Mr. MILLER. It does in that section. The mills in the southern part of the State are not connected with us.

3814 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Acting Chairman COMMONS. About how many employees would be in the service of these nine?

Mr. MILLER. That will vary with the season. When the logging operations are on more men are employed than at other times. The operations are not continuous; sawing is conducted in the summer, and logging as a rule in the winter.

Acting Chairman COMMONS. Can you estimate the number?

Mr. MILLER. Number of men employed?

Acting Chairman COMMONS. In the winter and in the summer.

Mr. MILLER. There is no data on that subject in our section of the country. My estimate would be approximately 2,000 men.

Acting Chairman COMMONS. In the winter?

Mr. MILLER. Yes, sir.

Acting Chairman COMMONS. And in the summer about—

Mr. MILLER. No; in the winter it would exceed that. Three thousand in the winter.

Acting Chairman COMMONS. And about 2,000 in the summer?

Mr. MILLER. Two thousand in the summer.

Acting Chairman COMMONS. Are the same men employed in both operations?

Mr. MILLER. No, sir.

Acting Chairman COMMONS. How much work, how many months' work will the men engaged in the logging operations secure in the winter?

Mr. MILLER. From September to March.

Acting Chairman COMMONS. How many months for the men in the milling operations?

Mr. MILLER. And they begin in April and they will run until September, the latter part of September. There are one or two institutions that supply themselves by rail, log by rail and not by water. Those institutions get 9, 10, or 11 months' operation.

Acting Chairman COMMONS. Are they large ones or small ones?

Mr. MILLER. Both.

Acting Chairman COMMONS. What method have you of securing your help?

Mr. MILLER. There is no concerted effort, no regular method.

Acting Chairman COMMONS. Where do you apply for help?

Mr. MILLER. We don't apply; the men apply themselves.

Acting Chairman COMMONS. They are men, then, who have been in the camp before and return?

Mr. MILLER. The mills employ men who are largely family men. Those men get the preference, and from year to year we have a large number of men that we can always depend on and they depend on us. The contrary rule is in effect in the woods. Those men are very largely drifting men.

Acting Chairman COMMONS. Now, these men at the mills, what is their occupation during the other months of the year when the mills are not running?

Mr. MILLER. A great many of them do nothing; others scatter around and pick up odd jobs. You will find them working at the carpentry business or anything else that offers employment during the idle period.

Acting Chairman COMMONS. Some of them go to logging?

Mr. MILLER. Yes, sir; some of them go to logging.

Acting Chairman COMMONS. What are the prevailing rates of wages for the men at the mills?

Mr. MILLER. The minimum wage is \$2.50 for 10 hours.

Acting Chairman COMMONS. You said there were about 2,000?

Mr. MILLER. Yes, sir.

Acting Chairman COMMONS. What proportion get \$2.50 for 10 hours?

Mr. MILLER. Sixty per cent.

Acting Chairman COMMONS. What is the next scale—\$3?

Mr. MILLER. No; \$2.75, \$3, \$3.25, \$3.50. Then, there is a limited class of employees, flers, head sawyers, superintendents, and foremen who earn from \$5 to \$8 a day; that would vary with the different mills, the degree of responsibility, etc.

Acting Chairman COMMONS. Are these mill men organized in unions?

Mr. MILLER. No, sir; there is no organization.

Acting Chairman COMMONS. Has there ever been an organization?

Mr. MILLER. No, sir.

Acting Chairman COMMONS. A man in the—

Mr. MILLER (interrupting). I want to correct that. There have been two organizations at one mill, but the organizations have been abandoned.

Acting Chairman COMMONS. Which mill was that?

Mr. MILLER. The Sommers Lumber Co.

Acting Chairman COMMONS. At what place?

Mr. MILLER. At Sommer, a town 12 miles from Kallispell.

Acting Chairman COMMONS. What year?

Mr. MILLER. I can't recall the year.

Acting Chairman COMMONS. Recently?

Mr. MILLER. The last one, I think, three years ago.

Acting Chairman COMMONS. Do you know about how long it lasted—a few months?

Mr. MILLER. The organization?

Acting Chairman COMMONS. Yes.

Mr. MILLER. I don't know when it began. There was a difficulty over it, a strike, and I think that lasted about six weeks.

Acting Chairman COMMONS. These men that work in the winter—these 3,000 men—do they—is there any concerted method by which they know when they are coming or where they are going—any organization at all?

Mr. MILLER. No, sir; no organization among them as far as I know.

Acting Chairman COMMONS. Are they sent in by employment agencies?

Mr. MILLER. No, sir.

Acting Chairman COMMONS. Then, they just wander in without any—

Mr. MILLER (interrupting). They usually have a general knowledge of when logging is likely to begin, and about that time you begin to see them show up.

Acting Chairman COMMONS. What nationalities do they include?

Mr. MILLER. I think they include every nationality?

Acting Chairman COMMONS. And what is the pay of the men in the winter?

Mr. MILLER. The custom in our country is to supply the board and lodging, and in addition to that they get from \$40 to \$60 per month, varying with the supply. If it is very difficult to get men, why they start in and build up on us. They will move from one camp to another, and the various logging companies bid against each other for employees if they are short.

Acting Chairman COMMONS. Do they go in bunches?

Mr. MILLER. Well, in times of high wages the men drift from one camp to another. They seem to want to go, and the custom has been to have about three crews, one coming and one going and one at work. That is about the way it divides itself up. They know the moment they leave one camp they can stop at the next.

Acting Chairman COMMONS. Has your association or any other association made any effort to organize this matter of securing help in the winter?

Mr. MILLER. There was one year when it was very difficult for us to get employees, and we sent representatives to the State of North Dakota, where the harvest was about over, and tried to get additional men from there. It was only partially successful.

Acting Chairman COMMONS. And that has never been tried again?

Mr. MILLER. No, sir.

Acting Chairman COMMONS. What do you consider the board and lodging worth?

Mr. MILLER. I think that would vary with the different places. We keep actual count of it and our expenses are 22 cents per meal. That covers everything—the provisions and service.

Acting Chairman COMMONS. And the lodging?

Mr. MILLER. Well, that is immaterial. The lodging is in a building that the company constructed, and the men all carry their own bedding; it is a practice of the country.

Acting Chairman COMMONS. They take care of the building?

Mr. MILLER. Yes; the company always provides an attendant for these bunk houses, as they are called. He provides the water and fuel and sees that it is cleaned up each day.

Acting Chairman COMMONS. Is there any State legislation governing the conditions?

Mr. MILLER. I think not.

Acting Chairman COMMONS. In the lumber camps?

Mr. MILLER. I think not.

Acting Chairman COMMONS. Does your association take into account the conditions of the bunk houses?

Mr. MILLER. No, sir.

Acting Chairman Commons. That is left to each company?

Mr. MILLER. Yes, sir; that is an individual affair. I want to add in that connection that those matters have to be attended to properly, because you can't keep your crew unless your conditions are favorable. You have got to have good water, and it is nearly always running water—in the cleanliness of the place; the character of the food and the quantity of it—all these things are considered by the men; and if they don't like it, as they say, they "bunch the job."

Acting Chairman Commons. What are their hours of labor?

Mr. MILLER. It varies with the length of the day in the woods. The short days, of course, they do not get in over 8 or 9 hours; the long days they put in 10; but at the manufacturing—at the mills—those are all 10-hour shifts.

Acting Chairman Commons. Have you knowledge, or even hearsay, with regard to what these men do in the other seasons—when the other season is on—where they go?

Mr. MILLER. No, sir; I have conversed with some of them. They don't show up each season; the same men. I have seen men show up three years after we previously employed them. They give an account of where they might have gone—in Alaska, California, or in the East. They apparently were continually on the move to see the country.

Acting Chairman Commons. How many positions do you have in your mill; how many men do you have at this time in your employ?

Mr. MILLER. Not to exceed 120 at any one time.

Acting Chairman Commons. Is the logging?

Mr. MILLER. No; in the logging, not over 80.

Acting Chairman Commons. Well, how many will you hire during the winter, the logging season, to keep up that 80?

Mr. MILLER. In a normal season, probably 160 men; in an abnormal season, probably 1,000.

Acting Chairman Commons. You mean by abnormal, what?

Mr. MILLER. When labor is very scarce and the men are moving from camp to camp.

Commissioner GARRETSON. The scarcer it is the more men you hire?

Mr. MILLER. The more men we hire.

Commissioner GARRETSON. That is, the more hirings are made?

Mr. MILLER. Yes, sir.

Acting Chairman Commons. And that is the time that the higher wages are paid?

Mr. MILLER. Yes, sir; and that is the time when the men are less efficient?

Acting Chairman Commons. You think you will have to hire a thousand men at \$60 to keep up a force of 80?

Mr. MILLER. When the conditions are very hard; yes, sir.

Acting Chairman Commons. In the course of seven months; I think you figured about seven months.

Mr. MILLER. About seven.

Acting Chairman Commons. And when the times are hard—that is, when there is an abundance of labor—the men will stick to the job then?

Mr. MILLER. They will.

Acting Chairman Commons. And you can get—you only need to hire 160 men?

Mr. MILLER. In a season.

Acting Chairman Commons. To keep up that 40?

Mr. MILLER. Well, not 40; no sir; 40 is the minimum; it will range from 40 to 50, depending upon the class of employment. For instance, when an ordinary workman is getting \$40, a four-horse teamster may get \$50.

Acting Chairman Commons. I am speaking about the difference; the minimum is—

Mr. MILLER. Yes; the minimum is 40.

Acting Chairman Commons. Where the wages are at the minimum—that is, when the work is—they keep their jobs and don't move on.

Mr. MILLER. Yes; they will do twice as much then for \$40 as they will do for \$60, in my observation.

Acting Chairman Commons. It looks as though it was badly disorganized, doesn't it?

Mr. MILLER. Totally unorganized.

Commissioner GARRETSON. Is that on the same principle that when the price of a commodity is high the scale beam is watched lots closer by the man that sells?

Mr. MILLER. Precisely. That is the operation of supply and demand purely. Commissioner GARRETSON. And the application of human nature?

Mr. MILLER. Precisely.

Acting Chairman COMMONS. Do you know whether any of those men, either in the mills or in the logging, alternate with mine working?

Mr. MILLER. I don't think so.

Acting Chairman COMMONS. They don't go into the mines?

Mr. MILLER. That is, not in our neighborhood. Now, in the southern part of the State, which is close to the mining region, that statement might not hold good. I don't know as to that. But in our country it does not hold good.

Acting Chairman COMMONS. Any of these that work in the winter, do they have homesteads?

Mr. MILLER. Yes; there are a considerable number of what are known as dry-land farmers, coming into the State in the last five years. These men have a pretty hard time, and in the winter they will drift over in the mountains and work in the lumber camps to get a grub stake for the next season.

Acting Chairman COMMONS. Are they superior to this drifting class of men?

Mr. MILLER. They are much more dependable men after they learn the business. To begin with, they know nothing about it and are practically useless for a month or so until they are taught.

Acting Chairman COMMONS. Do you pay them more than this other class?

Mr. MILLER. No, sir; they are subject to the same laws that I have described, depending on the supply of labor and the urgency of the conditions.

Acting Chairman COMMONS. Do you keep a record in your mills of the accidents?

Mr. MILLER. No; we don't. We keep copies of the notices that are sent to the liability insurance companies. We are insured, of course, for our legal liability. That is necessary, and these policies obligate us to report each accident in detail to the insurance company. Copies of those letters are kept.

Acting Chairman COMMONS. You don't compile any?

Mr. MILLER. We don't.

Commissioner LENNON. How are the settlements made—by the representative of the insurance company or by yourselves?

Mr. MILLER. In all cases of legal liability where the company has admitted they make the settlement. The policy requires that. We are not permitted to get in. Where there is no liability we have to make the settlement.

Acting Chairman COMMONS. What is the premium that is paid?

Mr. MILLER. One dollar and thirty-five cents a hundred.

Acting Chairman COMMONS. That covers the entire pay roll?

Mr. MILLER. The entire pay roll.

Acting Chairman COMMONS. One dollar and twenty-five cents?

Mr. MILLER. One dollar and thirty-five cents.

Commissioner GARRETSON. In the terms of that policy, Mr. Miller, you are in fact barred even from taking action that you would desire to take?

Mr. MILLER. Certainly.

Commissioner GARRETSON. In the case of an injured man, because the terms of this policy throws the liability onto you if you do it?

Mr. MILLER. That is one of the worst things about it. We have men that are our personal friends, and right in the time of their adversity we want to help them out and can't.

Acting Chairman COMMONS. Does your association as an association insure with the liability companies?

Mr. MILLER. No; it is an individual affair with each company.

Acting Chairman COMMONS. But the rate is the same for each?

Mr. MILLER. I think it is.

Acting Chairman COMMONS. What is the rate of the logging operations?

Mr. MILLER. It is the same.

Acting Chairman COMMONS. You have the same rate?

Mr. MILLER. Yes, sir.

Acting Chairman COMMONS. For all operations?

Mr. MILLER. Yes, sir.

Acting Chairman COMMONS. Is that a board rate made by agreement amongst the companies?

Mr. MILLER. I think it is now. In the beginning it was not, but now I think that all the companies enforce the same rate.

Acting Chairman COMMONS. You have then no system, no benefit system or insurance system or anything of that kind?

Mr. MILLER. Nothing of the sort.

Acting Chairman COMMONS. Outside of—

Mr. MILLER. Except that we have a hospital fee system which covers both sickness and accidents for a period of six months. The men pay that at \$1 per month.

Acting Chairman COMMONS. Where are the hospitals?

Mr. MILLER. They are located in KallsPELL.

Acting Chairman COMMONS. Do all the companies that are connected with the association—

Mr. MILLER. No; where the places are remote from KallsPELL they have hospitals, so called. They are not really good hospitals, but they do the best they can under the circumstances. Usually some physician will establish a hospital for that purpose in a small community. The camps that are accessible to KallsPELL all depend upon the KallsPELL hospitals. I can furnish you with a copy of that contract which we have with the hospitals if you wish it.

Acting Chairman COMMONS. If you will file that with us.

Mr. MILLER. Yes, sir.

(The paper so presented was marked "Document Serial No. 403 August 8, 1914, Witness Miller.")

The contract referred to was submitted in printed form.)

Acting Chairman COMMONS. Do you know what the premium rate in your business is under the system in the State of Washington?

Mr. MILLER. What are you referring to?

Acting Chairman COMMONS. The premium rate.

Mr. MILLER. On insurance?

Acting Chairman COMMONS. Insurance, yes; under the compensation law.

Commissioner GARRETSON. State insurance system.

Mr. MILLER. Oh, the State insurance system?

Acting Chairman COMMONS. State insurance system of the State of Washington, yes.

Mr. MILLER. What our business would be under that classification?

Acting Chairman COMMONS. Yes.

Mr. MILLER. It would be two and one-half under the State of Washington.

Acting Chairman COMMONS. Against \$1.35?

Mr. MILLER. Well, there is no comparison. You know the liability in the State of Washington is complete and covers everything. Under these policies that we have nothing but legal liability is covered; that is to say, where the company is culpable, the policy covers, but where there is no culpability on the part of the company, the policy does not apply. The man is adrift; he gets nothing. In Washington every man gets something if he is injured.

Commissioner GARRETSON. As between the \$1.35 that you pay liability and the two—what did you say?

Mr. MILLER. Two and a half.

Commissioner GARRETSON (continuing). That you would pay under the Washington State insurance system, the return—what would be the proportionate return, not speaking now of yourself as an employer and the man as an employee, but both as citizens.

Mr. MILLER. What would be the return to the community?

Commissioner GARRETSON. Yes.

Mr. MILLER. There would be in the beginning an absence of litigation of the matter. There will be an absence of any bad feeling between the employer and the employee. There would be in all cases something to help the man bridge over, according to the circumstances of the case, and the general public, so far as possible, would pay the entire bill through the added cost of production. But in competitive conditions, where producers could not add to their cost and still compete, in such cases the employers would be paying the whole bill, except such part of it as was used up in administering the law that comes from general taxation in the State of Washington.

Commissioner GARRETSON. In other words, it would really distribute the casualties and the cost arising from every industry upon the patrons of that industry instead of upon the taxpayers of the community?

Mr. MILLER. If the competitive condition permitted the addition.

Commissioner GARRETSON. Certainly. And when it becomes a legal statute the competitive conditions have to yield to the law?

Mr. MILLER. No; the competitive conditions do not yield to the law.

Commissioner GARRETSON. Competitive conditions in that sense will be compelled to yield to law, will they not, because the competitors have to conform to the law?

Mr. MILLER. Well, they would in a certain State. If the average production of any State in a State is sold within that State and does not come in competition with similar products shipped into that State from another State, then your holding would be correct.

Commissioner GARRETSON. Assume a continent-wide or nation-wide condition, because there are certain social questions that can never be considered from the standpoint of the community.

~~Mr. MILLER. Yes, you are right.~~
Commissioner GARRETSON. I mean in their last analysis.

Mr. MILLER. In their last analysis, that nation-wide application—that would be strictly true.

Commissioner GARRETSON. That is what I mean. Then the practical benefits that are received from the two and one-half payment are as a totality far greater than would be indicated in the difference between one thirty-five and two fifty?

Mr. MILLER. Oh, yes; there is no comparison at all.

Commissioner LENNON. Would you tell us, as nearly as you can, if you remember, what is furnished for the three meals a day—breakfast, dinner, or whatever you call it, and their evening meal?

Mr. MILLER. The staple food is meat in various forms. In addition to that all obtainable vegetables, except that not very many fresh vegetables are used. Some are used. A great deal of canned fruit and canned vegetables is used; and, of course, the staples like potatoes, turnips, and articles of that kind are bulk.

Commissioner GARRETSON. Don't forget beans.

Mr. MILLER. No; we use a good many canned beans. The table is supplied with all they can possibly eat, and there is no question about food supply; but of course the boarding houses are urged to avoid any waste. Food that is not used is frequently recooked in some form that is palatable and sanitary.

Commissioner LENNON. The meals are practically all about alike, are they?

Mr. MILLER. Oh, no; there is a constant variety, meat, however, being the staple; and there is a good deal of pastry used.

Commissioner LENNON. What are the toilet facilities for the workers?

Mr. MILLER. At the mill places?

Commissioner LENNON. No; at the camps in the lumber?

Mr. MILLER. They are of purely a temporary character; they are changed frequently, as necessity may require.

Commissioner LENNON. Not with running water, hardly ever?

Mr. MILLER. No, sir; no running water used in connection with the toilet facilities, as far as I know.

Commissioner LENNON. But they are repeatedly changed?

Mr. MILLER. Oh, yes.

Commissioner LENNON. What did I understand you to say the cost—did you say the cost per day or per meal was about 22 cents?

Mr. MILLER. Per meal. That is actual cost.

Commissioner GARRETSON. That includes overhead?

Mr. MILLER. No, sir; there is no overhead, unless you can call the cook overhead.

Commissioner GARRETSON. That is what I meant.

Mr. MILLER. Yes, sir; it includes that; it includes service.

Commissioner GARRETSON. That is all the overhead there could be in a performance of that kind.

Mr. MILLER. No, sir; there is the construction of the building and things of that kind, but those are not included in the cost of the meal.

Commissioner LENNON. That makes the wage about \$60 per month, when you are paying \$40 approximately?

Mr. MILLER. Well, it would be a little more than that. However, that is an approximation; that is close enough.

Commissioner LENNON. What do the men provide as to their accommodation for sleeping? What does the man bring to use as a bed?

Mr. MILLER. A roll of blankets.

Commissioner LENNON. Does he have any mattress of any kind?

Mr. MILLER. No, sir.

Commissioner LENNON. Or a straw tick?

Mr. MILLER. No, sir; the company furnishes the hay.

Commissioner LENNON. The hay is spread in the bunk, and they use their blankets?

Mr. MILLER. Yes, sir

Commissioner LENNON. Is the hay changed from time to time, or lasts through the season?

Mr. MILLER. No, sir; it is changed from time to time. Of course, where parties are careless and the men don't care, there might not be changes in the hay as far as I know, but the practice is to change it frequently.

Commissioner LENNON. Do you have an inspector? Does each camp have an inspector to see that these things are taken care of properly, or does it depend on the men themselves?

Mr. MILLER. It depends largely on the men themselves; all their demands are met, anything within reason.

Commissioner LENNON. Suppose they want clothing or shoes, or anything that they may want, tobacco or anything else, where do they get it?

Mr. MILLER. The camp foreman usually has a supply of that on hand.

Commissioner LENNON. The camp foreman?

Mr. MILLER. Yes.

Commissioner LENNON. Are these supplies owned by him and sold by him, or owned by the company?

Mr. MILLER. Owned by the company.

Commissioner GARRETSON. Are they sold at a low rate?

Mr. MILLER. Oh, yes; they can get anything they want now by parcel post if they are not suited at the camp.

Commissioner GAARRETSON. That is one thing that competition regulates?

Mr. MILLER. Yes, sir; they can write a letter to town and get anything they want by parcel post.

Commissioner LENNON. That is done to a certain extent, is it?

Mr. MILLER. I think so.

Commissioner LENNON. I think that is all.

Commissioner GARRETSON. Has your experience shown you that liability companies all quote you the same rate?

Mr. MILLER. Yes, sir.

Commissioner GARRETSON. Do you know whether that rate is fixed by a State tribunal of the insurance companies or by headquarters?

Mr. MILLER. I understand it is all a headquarters proposition.

Commissioner GARRETSON. It becomes perfectly evident to you when you desire to buy you are not buying liability insurance in a competitive market?

Mr. MILLER. Sure.

Commissioner GARRETSON. Is your association composed only of manufacturers, or it is also composed of wholesalers and retailers?

Mr. MILLER. I think they are all manufacturers.

Commissioner GARRETSON. The wholesalers and retailers have their own association?

Mr. MILLER. Yes, sir.

Commissioner GARRETSON. Have you any connection with any of them?

Mr. MILLER. Well, yes, sir; I think I have. We operate one retail yard.

Commissioner GARRETSON. I mean, is there any understanding or gathering or meeting between them?

Mr. MILLER. The organizations?

Commissioner GARRETSON. Representatives of your association as manufacturers and theirs as jobbers or wholesalers or retailers?

Mr. MILLER. Nothing of that sort at all.

Commissioner GARRETSON. Have you any connection with any national body?

Mr. MILLER. No, sir.

Commissioner GARRETSON. Is your organization or the others ever charged with price fixing?

Mr. MILLER. We never have been.

Commissioner GARRETSON. How about the retailers or wholesalers—I am only speaking of common rumor? Is it so charged?

Mr. MILLER. Oh, it is so charged everywhere that the lumbermen are all robbers; yes, sir.

Commissioner GARRETSON. Where is the burden placed, as a rule, on the retailers and wholesalers or manufacturers?

Mr. MILLER. Usually placed on the manufacturers, I believe.

Commissioner GARRETSON. That is all, Mr. Chairman.

Action has never been brought in any direction on that basis in this State?

Mr. MILLER. No, sir; the question has never been raised here, as far as I know.

Commissioner GARRETSON. Nor have any of your association ever been a party to actions brought elsewhere?

Mr. MILLER. No, sir.
 Commissioner GARRETTSON. You are familiar with the actions that have been brought against the national association?
 Mr. MILLER. In a general way.
 Commissioner GARRETTSON. That is all.
 Acting Chairman COMMONS. That is all, Mr. Miller; much obliged. Mr. DRENNAN.
 Commissioner GARRETTSON. I would like to ask Mr. Miller just one question; you need not return to the chair. Has the health department of the State ever exercised any power of supervision over lumber camps in the State, as far as you know—inspectors, I mean?
 Mr. MILLER. Yes, sir.
 Commissioner GARRETTSON. And required of employers any certain measures?
 Mr. MILLER. Yes, sir.
 Commissioner GARRETTSON. Sanitary and otherwise?
 Mr. MILLER. Yes, sir.
 Commissioner GARRETTSON. That has been done?
 Mr. MILLER. Yes, sir.
 Commissioner GARRETTSON. That is all.

TESTIMONY OF MR. HENRY DRENNAN.

Acting Chairman COMMONS. Give your name and address.
 Mr. DRENNAN. Henry Drennan, Billings, Mont.
 Acting Chairman COMMONS. What place?
 Mr. DRENNAN. Billings.
 Acting Chairman COMMONS. Are you a mine worker?
 Mr. DRENNAN. Yes, sir.
 Acting Chairman COMMONS. Coal miner?
 Mr. DRENNAN. Yes, sir.
 Acting Chairman COMMONS. In what place?
 Mr. DRENNAN. Well, I represent the coal miners in this State.
 Acting Chairman COMMONS. What is the organization that you represent?
 Mr. DRENNAN. The United Mine Workers of America.
 Acting Chairman COMMONS. What is the district?
 Mr. DRENNAN. Twenty-seven.
 Acting Chairman COMMONS. Where are your headquarters?
 Mr. DRENNAN. Billings.
 Acting Chairman COMMONS. Where are the mines?
 Mr. DRENNAN. The mines are located pretty much all over the State. They are segregated to some extent; for instance, we have mines in practically the extreme southern part of the State, some practically in the central part of the State, and some within 100 miles of the north boundary of the State. The field here is not regular; therefore, the segregation.
 Acting Chairman COMMONS. They are all in one district, however?
 Mr. DRENNAN. Yes, sir; Montana comprises district 27.
 Acting Chairman COMMONS. Are the coal operators organized?
 Mr. DRENNAN. Yes, sir.
 Acting Chairman COMMONS. What is the name of their organization?
 Mr. DRENNAN. The Montana Coal Operators' Association.
 Acting Chairman COMMONS. Who are the officers?
 Mr. DRENNAN. The president and secretary—we have a commissioner that acts as secretary of the organization.
 Acting Chairman COMMONS. Who is the commissioner?
 Mr. DRENNAN. Mr. Purcell.
 Acting Chairman COMMONS. Where is his office?
 Mr. DRENNAN. At Billings.
 Acting Chairman COMMONS. Do you give all your time to the work of the mine workers' union?
 Mr. DRENNAN. Yes, sir.
 Acting Chairman COMMONS. What is the number of mine workers in the district?
 Mr. DRENNAN. Well, it fluctuates. The fact of the matter is in the summer months, as a rule, like all coal-mining districts, the membership is lower in the summer time than it is in the wintertime. Now, about from this time on we will have a membership, probably, of 3,700 or 3,800, and in the summer time right around 3,000—that is, the fluctuation of it.

Acting Chairman COMMONS. By membership you mean paid up?

Mr. DRENNAN. Well, yes, sir; they are paid up. All the men that work in the State belong to the organization—that is, all the men that are in the mines and who have been working more than 7 to 10 years. There is not a mine in the State that is not under the union mine workers, except little country banks around in different localities.

Acting Chairman COMMONS. You have agreements with the mine operators' association?

Mr. DRENNAN. Yes, sir.

Acting Chairman COMMONS. How long have those been in operation?

Mr. DRENNAN. They have been in force ever since I have been here, I have only been in the State seven years.

Acting Chairman COMMONS. When were they first inaugurated?

Mr. DRENNAN. About 1903 or 1904; I am not absolutely certain as to the exact date.

Acting Chairman COMMONS. What is the scale of wages for coal miners?

Mr. DRENNAN. The scale of wages?

Acting Chairman COMMONS. Yes; and the hours?

Mr. DRENNAN. The hours are eight in all of the mines of the State—in every department. The scale is based upon different classifications of work.

Acting Chairman COMMONS. Take the surface laborers, that is the lowest scale, what is the minimum wage?

Mr. DRENNAN. The lowest scale of wages for surface laborers is \$2.90.

Acting Chairman COMMONS. For eight hours?

Mr. DRENNAN. For eight hours; yes, sir.

Acting Chairman COMMONS. What is the next classification?

Mr. DRENNAN. Well, we have a classification of the outside scale. The lowest, that is the ordinary laborer, in classification, he receives \$2.90; the others are classified from the fact that they work on the tippie, the tippie man gets \$3; the head dumper, the man that dumps the coal, get \$3.15; the man that works down on the flat, he gets \$3.50; the man that runs the box car loader that distributes the coal in the car, you understand, the head brakeman—we have to have a brakeman around the yards to take care of the cars in this State—and the head brakeman receives \$3.20; and the other brakeman \$3; so, you see, that the whole business is classified from one item to another.

Acting Chairman COMMONS. Take the men underground.

Mr. DRENNAN. The men underground, they are classified as well. The unclassified get \$3.40.

Acting Chairman COMMONS. For eight hours?

Mr. DRENNAN. Eight hours; yes, sir.

Acting Chairman COMMONS. Define that eight hours, is it net or gross?

Mr. DRENNAN. Pardon me?

Acting Chairman COMMONS. Is it eight hours at the face?

Mr. DRENNAN. Yes; eight hours at the face—supposed to be.

Acting Chairman COMMONS. And at the surface?

Mr. DRENNAN. We have an agreement that generally applies to this matter. You are supposed to take time enough to get to your working place by 8 o'clock, for instance, if that is the working time. They have different starting times in different locations, it is a matter of the humor of the men more than anything else that is involved, you understand. It is immaterial to the company whether they start at 7 or 8 o'clock, so that they get eight hours just the same.

Commissioner GARRETSON. Is that eight hours in the pit or that you start?

Mr. DRENNAN. No, sir; it is from bank to bank. It is eight hours exclusive of the time going to and coming from work, except where shooting time is. We are allowed under the contract 15 minutes before we could get time for shooting.

Commissioner GARRETSON. Is that eight hours from the pit mouth, when he has to go to work; that is, he leaves the pit mouth?

Mr. DRENNAN. No; it is not; from bank to bank.

Commissioner GARRETSON. It is not?

Mr. DRENNAN. No; it is eight hours exclusive of going to and from the bank, excepting where shooting time is not allowed.

Acting Chairman COMMONS. Does that come out of this eight hours, is that company time or yours?

Mr. DRENNAN. That is on their own time.

Acting Chairman COMMONS. You say it is?

Mr. DRENNAN. It is eight hours work at the working place.

Acting Chairman COMMONS. At the face of the coal, the working place?

Mr. DRENNAN. Yes.

Acting Chairman COMMONS. You said the unclassified laborer gets \$3.40 for eight hours?

Mr. DRENNAN. Yes; the work such as shoveling, such as working on the roadway, the timber man, the track man, or something of that character. Then the classification for the miner other than contractor, understand, for day work, understand, is \$3.80.

The man that lays the track gets \$3.80, the timber man gets \$3.80, the driver gets \$3.60. So that is the classification.

Acting Chairman COMMONS. The driver, the driver of what?

Mr. DRENNAN. That is the man that pulls the coal, either horse or motor.

Acting Chairman COMMONS. What are the tonnage rates?

Mr. DRENNAN. Well, the tonnage rates vary.

Acting Chairman COMMONS. How much is a man expected to earn under the tonnage rate?

Mr. DRENNAN. All he can.

Acting Chairman COMMONS. What do they?

Mr. DRENNAN. That is a matter that is quite a difficult proposition from the fact that it varies from the different working conditions, you understand. The conditions in this State are so varied, that there are not two mines that work under the same conditions.

Acting Chairman COMMONS. Take the worst mine, the lowest-paid mine in the State.

Mr. DRENNAN. The lowest-paid mine in the State, it will average about \$3.50 a day; that is, for their working days.

Acting Chairman COMMONS. By contract you mean what?

Mr. DRENNAN. That is the term.

Acting Chairman COMMONS. Three fifty?

Mr. DRENNAN. That is, I would say that as an estimate, as near as I can get.

Acting Chairman COMMONS. That is less than the day rate, which is three eighty?

Mr. DRENNAN. Yes; that would be less than the day rate, the lowest day rate.

Acting Chairman COMMONS. What is the highest?

Mr. DRENNAN. I couldn't just answer that to be absolutely correct, but there is contract men in this State will make as high as, I would say, \$8 and \$9 a day. That only applies, however, in certain localities, understand.

Acting Chairman COMMONS. Would that apply to some mines, to the entire mine?

Mr. DRENNAN. Well, no, it would not apply to any entire mine. The classification of our work in the coal mine, of course, it is varied, understand. The entry work, for instance, which is termed in the case of quartz, hard-rock work, gangway, entry work is better paid than the room work. Simply as a matter of fact we are paid yardage over tonnage price, it is the same price as the contract man gets.

Acting Chairman COMMONS. I was not after the entry work, I was after the other.

Mr. DRENNAN. The average on the other work is so varied that to take an average of the entire State I never tried to figure it up, really never did.

Acting Chairman COMMONS. Just the highest and lowest.

Mr. DRENNAN. Well, the lowest, I would say, is probably some lower than \$3.50 a day; there is some, you know, in some instances that therefore it is a pretty hard proposition from the natural conditions of the work or the physical conditions that you work under makes it a very hard proposition to get.

Acting Chairman COMMONS. How many months does a man get during the year?

Mr. DRENNAN. Well, that is according to localities, as well. We have mines in this State at the present time that have not lost a day in three weeks all summer. We have other mines in the State that haven't worked three weeks all summer. So that there is a proposition so far as the coal business is concerned.

Acting Chairman COMMONS. Is the Ausconda Co. or the Amalgamated Co. the owner of any of the mines in district 27?

Mr. DRENNAN. Yes, sir; two.

Acting Chairman COMMONS. Two?

Mr. DRENNAN. Yes, sir.

Acting Chairman COMMONS. How many days' work in the year are secured in those mines?

Mr. DRENNAN. Well they will average—with some of the mines they will average fairly good; with others they are not up to the average. That is, I mean to say by that, that, for instance, in the Bear Creek field we have a mine—that is, in the southern part of the State—they have a mine what they call the Washoe, and it is practically the same field as the Bear Creek—we have a field down there that is called the Bear Creek field, a little creek runs down there, and that is the name of the creek, and all the mines go under that name down there, although under different names; it is all called Bear Creek; the Washoe people down there have worked a little better on the average this summer than the other mines have, excepting one. The six mines in the field—the five mines in the field, one mine as compared, as working days, with the Washoe, about on an average of probably three days a week this summer; the other mines in the field have probably worked an average of a day and three-quarters.

Acting Chairman COMMONS. Take this summer and also run over the last two years, this Washoe mine, about how many days' work per year do your men get or can they count on getting?

Mr. DRENNAN. Well, now, I told you, you can't count on anything.

Acting Chairman COMMONS. How many days has it operated?

Mr. DRENNAN. Well, I would say on the average of about three days a week.

Acting Chairman COMMONS. For the last three or four years?

Mr. DRENNAN. No; I am speaking of the summer months. Now, in the winter-time; that is, where the coal business, you understand, fluctuates to a certain extent.

Acting Chairman COMMONS. Could you put it this way, about the number of days per year in the year they have operated? Would you say 250 days?

Mr. DRENNAN. No; I don't believe I would. I never figured it over to see, understand.

Acting Chairman COMMONS. I wonder if we could get those figures from some one. Mr. Evans, could you get this?

Mr. EVANS. Yes; I think so. As to the Washoe, how did you say that compared to the other mine there?

Mr. DRENNAN. What is that?

Mr. EVANS. How does Washoe compare with the other mine?

Mr. DRENNAN. It does not compare favorably.

Mr. EVANS. It is better than three days and not as good as one?

Mr. DRENNAN. Yes; that is about the way the thing would average.

Mr. EVANS. You mean just as to the Washoe?

Acting Chairman COMMONS. I am trying to get all the mines. I want to find what the coal miner earns as compared to the mine workers of Butte, including the rate of pay and the number of days they work during the year.

Mr. DRENNAN. If that is the idea of the proposition, I will say that the coal miners, as far as their day's work is concerned, in Butte, compared with contract miners, in comparison with day's work, understand, not putting the sum total up against the seven days a week, against the Butte miners, but putting the number of days the coal miner in Butte, compares any way you want to take it.

Acting Chairman COMMONS. Suppose the contract miner gets, we will say, from three and a half up to five or six per day.

Mr. DRENNAN. The contract miner in the Washoe mine. I will say that, I would say that the Washoe miner, coal miner, makes a better average, by far, than the Butte miner does with seven days a week; that is, for the days they work, not taking the seven days a week; they don't work seven days a week.

Commissioner O'CONNELL. What would the year's average be?

Mr. DRENNAN. I never figured it up.

Commissioner O'CONNELL. Would the Butte miner have the best of it at the end of the year?

Mr. DRENNAN. I can say this much, that they work seven days a week, you understand. I might probably say that the miners in the Washoe mine or in all except a couple of mines in the Bear Creek field, for the days they work, will average about five and a half a day.

Acting Chairman COMMONS. Do you have a six-day rule?

Mr. DRENNAN. Yes, sir; absolutely so.

Acting Chairman COMMONS. Is that a uniform regulation?

Mr. DRENNAN. Yes, sir; it is recognized by contract. I have a contract here. Acting Chairman COMMONS. Suppose you file that with the stenographer. (The paper so presented was marked "Document Serial No. 404, August 8, 1914, Witness Drennan.")

Acting Chairman COMMONS. That is your present contract?

Mr. DRENNAN. Yes.

Acting Chairman COMMONS. How do you account for the difference in the attitude of the two organizations, the Western Federation, which generally insists on continuous seven-day work, and your organization, which insists on six-day work?

Mr. DRENNAN. How do I account for it?

Acting Chairman COMMONS. Yes; why should there be such a difference? They are both miners and both underground.

Mr. DRENNAN. I fall to understand the proposition myself. I have never been able to find out why it is these men wanted to work seven days a week.

Commissioner LENNON. Good boy.

Mr. DRENNAN. I never understood. I have had lots of men try to tell me about it, but I never could understand why they wanted to work seven days a week.

Acting Chairman COMMONS. Is it your impression, or your knowledge, that the metalliferous mine workers do want to work seven days?

Mr. DRENNAN. Apparently so.

Acting Chairman COMMONS. Do you get any idea that they are forced to do so by the wishes of the company—employers?

Mr. DRENNAN. If they have any organization, any contract that means anything, they could not force them to work seven days a week.

Acting Chairman COMMONS. I don't quite understand. What I am getting at, has it always been the policy of the metalliferous miners to work seven days a week?

Mr. DRENNAN. That is really the whole business, in my opinion, it has been the policy; that is all.

Acting Chairman COMMONS. They have never agitated any other conditions?

Mr. DRENNAN. I have never heard of it.

Acting Chairman COMMONS. You have discussed it with them at times?

Mr. DRENNAN. Oh, I have talked to individuals, understand. I never discussed it to any extent. I would just meet with the miners, the metalliferous miners in any locality, and I have talked to different individuals and they don't seem to think they could get along if they didn't work seven days a week. That is the way they put it up to me.

Acting Chairman COMMONS. Could not get along?

Mr. DRENNAN. Could not exist properly, or they think they could not, unless they are working seven days a week.

Acting Chairman COMMONS. Is there any interchange between coal-mine workers and metalliferous-mine workers in working cards?

Mr. DRENNAN. The Western Federation and the United Mine Workers interchange cards.

Acting Chairman COMMONS. Changing from coal mines to metalliferous and back?

Mr. DRENNAN. Yes.

Acting Chairman COMMONS. Amongst the mines?

Mr. DRENNAN. Yes; and has been right along all the time; that is, the Western Federation now, you understand.

Acting Chairman COMMONS. Yes.

Mr. DRENNAN. The only exchange of cards we have, as far as the United Mine Workers are concerned, is between the Western Federation and the United Mine Workers of America; no other organization.

Acting Chairman COMMONS. I mean as changing from the Butte mines, or the mines in this neighborhood, and going to work in the coal mines.

Mr. DRENNAN. Oh, yes.

Acting Chairman COMMONS. Have you talked with them about their estimate of the comparative conditions, earnings, health, etc.?

Mr. DRENNAN. That is a very peculiar thing to talk to a man about, especially if a man is a little dissatisfied. Take an individual that is a little dissatisfied in either Butte or any other place, when he transfers or leaves Butte, for instance—I am taking Butte, because we are in Butte, and that is one of the biggest mining centers—transfers from Butte into the United Mine Workers' territory, of course, everything is wrong with Butte with that in-

dividual, as a rule, understand. I suppose when he gets down to the mine workers and works for a while and is ready to make another change, then something goes wrong down there. So that is human nature.

Acting Chairman COMMONS. He comes back to Butte?

Mr. DRENNAN. He goes to some place, anyway. That is rather peculiar about the human, I find.

Acting Chairman COMMONS. So you never, in your own mind, figured—not what you think yourself, but what the men themselves think that are changing back and forth between mines, as to which they would prefer?

Mr. DRENNAN. That is a pretty hard thing to tell, simply because the men give varied opinions on those things, don't you see. There are lots of men, men working in Butte to-day, if they could get located in localities they had worked in, in coal mines, tell me that they would never go back to the metalliferous mines again.

Acting Chairman COMMONS. Well, how about the other fellow?

Mr. DRENNAN. Well, the other fellow I haven't talked to a great deal. I don't mix a great deal with the metalliferous miners.

Acting Chairman COMMONS. So far as you know, this condition applies?

Mr. DRENNAN. Well, in some instances, yes; it might be considered so.

Acting Chairman COMMONS. Now, what other mines, coal mines, does the Anaconda Co. operate, or their subsidiaries?

Mr. DRENNAN. Well, they—

Acting Chairman COMMONS. Besides the Washoe.

Mr. DRENNAN. Well, they operate a mine at Tracy; that is, out in the—

Acting Chairman COMMONS. And what will the contract miner average there?

Mr. DRENNAN. Well, really I am not hardly in a position to say, from the fact that recently we made a contract scale there and I haven't been in close touch with the situation for some months or so, and I am unable to give it.

Acting Chairman COMMONS. Did the scale bring about any increase?

Mr. DRENNAN. Well, I rather think it did.

Acting Chairman COMMONS. Do you know what they were earning before this scale?

Mr. DRENNAN. They were working day work—\$3.80.

Acting Chairman COMMONS. Day work?

Mr. DRENNAN. Under the classification of miners.

Acting Chairman COMMONS. It wasn't all day work?

Mr. DRENNAN. That is, the majority of it. Under certain systems you see the system changes from contract pick work to contract machine work, that is where the difference changes. Then the scale of wages, it requires another modification of the scale to put the machines in the mine. However, that is taken up and agreed on just the same as if we were going into conference to make a contract with the operators, the operators represented by the commissioner. I represent the coal miners, and we take the matter up of that condition with the superintendent of the mine there, and I have the committee of the coal miners, and we go into details and discuss it.

Acting Chairman COMMONS. What other mine have they outside of Tracy?

Mr. DRENNAN. That is all I know. Recently they have taken the Tracy mine over so far as I know, at least it is considered so.

Acting Chairman COMMONS. Any other questions?

Commissioner GARRETSON. Mr. Drennan, in this matter of seven-day working, as a labor man who has dealt for wage for a good many years, do you or do you not believe that the practice of working seven days has a tendency to bring about a condition where the seven-day man only gets as much in the year as the six-day man?

Mr. DRENNAN. Absolutely so.

Commissioner GARRETSON. That it produces in statistics an unfair estimate of what a man's wage is, or a man's earnings for the year?

Mr. DRENNAN. Yes, sir; absolutely.

Commissioner GARRETSON. Unless the fact is brought out that he has worked 52 days more in the year than the average laborer does.

Mr. DRENNAN. Yes, sir; absolutely.

Commissioner GARRETSON. In your business does vein depth run the same all over the State—thickness of vein?

Mr. DRENNAN. No, sir.

Commissioner GARRETSON. Does it run the same in the same district?

Mr. DRENNAN. No, sir.

Commissioner GARRETSON. The thickness of vein will cut a very considerable figure, will it not, in the earnings under the tonnage system?

Mr. DRENNAN. Yes; it does, to a great extent.

Commissioner GARRETSON. And the clearness of the vein, or the presence of reject material?

Mr. DRENNAN. That is where the matter lies more than anything else.

Commissioner GARRETSON. That is all, Mr. Chairman.

Acting Chairman COMMONS. Mr. Lennon?

Commissioner LENNON. Mr. Drennan, what system have you in this district as to taking care of grievances of men? Suppose the men are discharged by the foreman, or by whoever has the power of discharge at the mine, does the union take the matter up with the employers, or how does it come about? Do the men make complaint, or how are those things handled?

Mr. DRENNAN. That is provided by contract. The matter is first handled—the individual concerned has the right under our contract to take his own grievance up first to see if he can settle it. If he fails, then we have a mine committee. The individual can go to the mine committee and lay his case before the mine committee. If they think there is any injustice done the individual, then they can go to the mine foreman, and can take the matter up and discuss it again from that point of view under the terms of contract which provides for the working conditions. If they fail to agree then there is an executive committee of that union in that locality where we have a local union at each mine. The executive committee comprises the executive officers of the local union—president, financial secretary, and the vice president. They meet the superintendent of the mine, and they in turn take the matter up and discuss it with him, being removed from the first part of the case all concerned. In a great many instances they are enabled to settle those grievances. However, there are hundreds of them where the claim goes on up, which is provided by contract that in case they disagree then it provides that the matter shall be sent to the commissioner of the mining coal operators' association and the president of the district.

Acting Chairman COMMONS. That is yourself?

Mr. DRENNAN. Then we come on the ground; we go to the locality involved and get the witnesses together and take the matter up in that line. And in many instances we settle the grievances. Lots of the time we have to continue the case, which is a provision made that it goes to the international organization, and then the commissioner has the right to get in on the case again. And in case of we will say a discharge and it is proven that an injustice is done this man, after traveling this course, and he has been idle 15 days, the company has to compensate him for 15 days' work.

Commissioner LENNON. How long have you been a coal miner?

Mr. DRENNAN. About 27 or 28 years.

Commissioner LENNON. What I wanted to find out now is, does this procedure of handling grievances reduce the number of discharges in the mines, or are there just as many discharges as there were before the system existed?

Mr. DRENNAN. Oh, it reduces it.

Commissioner LENNON. Materially reduces it?

Mr. DRENNAN. Oh, yes; oh, yes.

Commissioner LENNON. Well, now, suppose the man is discharged and unjustly discharged, but he makes no complaint to anybody, he simply accepts it and goes away. Then, would the union intervene? The man has to start the complaint, does he?

Mr. DRENNAN. Yes; absolutely so.

Commissioner LENNON. That is the way it is handled?

Mr. DRENNAN. Yes, sir.

Commissioner LENNON. About the cost of these appeals, that is borne by the union, and by the operators' association on their side; it don't fall back on the individual miner in any case, does it?

Mr. DRENNAN. Oh, no; no; the organization stands the expense.

Commissioner LENNON. In the coal-mining business throughout the country and throughout the world, as you know it, what about the six-day work policy? What is the policy of coal miners in the United States on that subject?

Mr. DRENNAN. Well, the policy, so far as I know, the places that I have worked—I have worked pretty much west of the Ohio, clear to the Pacific coast. There are places in the West, or was a short time ago, where they work seven days a week. They were in a position that they could not get away from it. There was no organization there, and they were forced to do it. If you

didn't work on Sunday, why, you didn't have any job on Monday. But, of course, the organization, and since they have got to that point in the making of contracts the operators are very well satisfied, I think, with six days a week. In fact, it don't require seven days a week. There is an overproduction of coal even in this State, and there are only a few mines. Of course, we are surrounded by mines both in Utah on the south of us, and south and west of us, and the line on the other side, which their coal field lays right on the line. Crows Nest Pass is right on the boundary of Montana, and Wyoming is right next to us. Sheridan County is practically a part of Montana, and we are surrounded by coal. In every respect, therefore, there is an overproduction of coal.

Commissioner LENNON. Have you ever worked in a mine where the seven-day rule prevails?

Mr. DRENNAN. Oh, yes; yes, sir.

Commissioner LENNON. Well, what does your observation teach you as to the amount of production by the mine for, take the winter season—will they produce more coal, taking the entire six months of winter, or seven months of winter, with the seven-day rule prevailing or with the six-day rule prevailing?

Mr. DRENNAN. Well, I would say this, it is just according to whether you are working on the contract basis or wage contract—day-wage basis. I don't think there is any individual man I know will dispute the fact that a man will do more under contract than he will under day wage. There is no question about that; that is not disputed by anybody. I think that is reasonable.

Commissioner LENNON. That is piecework?

Mr. DRENNAN. Yes; he will naturally go ahead and produce more that way than he will the other way, so you will have to compare it from one to the other; it will have to come from the day-wage standpoint or the contract standpoint. However, taking in consideration the day-wage production in those mines where you are compelled to work seven days, you practically have a task to fill. If they don't fill it, they want to know why. They generally find out why, too, as a rule; that is, I am speaking of the company or the foreman in charge.

Commissioner LENNON. That is all, Mr. Chairman.

Commissioner GARRETSON. Does the Anaconda Co. mine only for its own consumption or for market purposes?

Mr. DRENNAN. Well, really I could not say.

Commissioner GARRETSON. You don't know?

Mr. DRENNAN. I am not in position to say.

Commissioner LENNON. Their coal is all shipped, is it?

Mr. DRENNAN. It is all shipped.

Mr. EVANS. They sell a little.

Commissioner GARRETSON. They are in the market?

Mr. EVANS. They sell a little.

Mr. DRENNAN. I am told so, but I could not say.

Commissioner GARRETSON. Your organization holds and practices that the protective feature of the organization is of just as much importance as the wage fixing?

Mr. DRENNAN. Absolutely so.

Commissioner GARRETSON. Mission?

Mr. DRENNAN. Yes, sir.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. Are there any nonunion miners in this State?

Mr. DRENNAN. No nonunion coal miners; no, sir.

Acting Chairman COMMONS. Are they such in adjoining States?

Mr. DRENNAN. Well, Utah has all nonunion miners.

Acting Chairman COMMONS. How does your scale compare with the scale in other States where you have agreements?

Mr. DRENNAN. Well, we have a much higher scale than any State except Washington.

Acting Chairman COMMONS. Except Washington?

Mr. DRENNAN. That is, I am speaking of the day-wage rate, understand. As far as the contract basis is concerned, it is pretty much the same that is earned, comparing a man getting out coal. For instance, I can explain it better this way: We have mines in this State that work by the undercut machine, mining machine, understand. We have mines in this State where they undercut the coal, and the miner shoots it down and loads it into the car. He gets a lesser price than the man that shoots it off of the solid or mines

if off of the solid and loads it out. For instance, we have men in the State that get 73 cents a ton for solid work; that is, you know, working off the solid—and 51½ cents for the same work; that is, contract, you understand, so you see—

Acting Chairman COMMONS. I am taking either.

Mr. DRENNAN. The man that works behind the machine has got to load more coal than the other fellow.

Acting Chairman COMMONS. Yes, I know; but take the machine scale in this State and the machine scale in adjoining States for similar work.

Mr. DRENNAN. Oh, we have a higher machine scale than they have.

Acting Chairman COMMONS. And the pick rate is higher, too?

Mr. DRENNAN. Yes.

Acting Chairman COMMONS. For the same class of work?

Mr. DRENNAN. Yes, sir; but then I have got to explain that, too, so there is no misunderstanding. We have in this State a semibituminous coal. It is between a lignite and bituminous coal. In the adjoining States they have a purely lignite coal. Their veins are high. They have some veins in Wyoming, you know, that is 60 to 70 feet thick, and in the Sheridan field is a large vein that is 10, 12, or 14 feet. Well, their system of taking the coal out there has no comparison with ours. We have one vein in this State that works about 13 feet, and there is about 2 feet of dirt and rock, now that has to be picked out by the miners.

Acting Chairman COMMONS. Take it on the basis of earnings, then, daily earnings.

Mr. DRENNAN. Well, the daily earnings compare practically the same as far as the contract is concerned. Our day scale is higher than theirs. Their highest rate in Wyoming is three forty, and our highest rate is three eighty; that is, for the miner, truckman, etc. Our low-class labor in this State is three forty compared to their highest rate.

Commissioner GARRETSON. Do you know what the wage is in Utah for the same class of men?

Mr. DRENNAN. I don't know. I don't think there is anybody can tell you that.

Commissioner GARRETSON. It is the caprice of the employer?

Mr. DRENNAN. That is exactly it.

Acting Chairman COMMONS. You are not acquainted with the workings of the unions in Butte further than you have already mentioned, are you?

Mr. DRENNAN. Well, I haven't—you know I am not thoroughly acquainted with their conditions. I could not say a great deal about that. I have been in Butte on a number of occasions and met some of their officials at different times. I don't know anything practically about their business, and I am not much of a hand to mix in anybody else's business. I have got all of my own to attend to myself in my line, and it keeps me on the road practically all the time. There is hardly a day of the week that I am not some place settling up some matter of some character so far as the miners are concerned.

Acting Chairman COMMONS. Have you never been called in by them to give them advice?

Mr. DRENNAN. Which; in the Butte situation?

Acting Chairman COMMONS. Yes.

Mr. DRENNAN. Well, not officially, only once; and then I didn't meet the individual that called me in.

Acting Chairman COMMONS. You didn't give them any advice, then?

Mr. DRENNAN. No; I didn't give them any advice. I never was asked for it outside of once, and I didn't happen to meet the individual that sent me the request, through some strange circumstance.

Acting Chairman COMMONS. Is there anything else?

Commissioner GARRETSON. Just one question, and that question you are at perfect liberty to answer or not, just as you desire. From your general knowledge of the methods that have obtained in the conduct of contractual affairs in this mining district, would you consider it a desirable method to follow yourself as an officer of the union?

Mr. DRENNAN. You mean in this locality here?

Commissioner GARRETSON. Yes.

Mr. DRENNAN. I should say not.

Commissioner GARRETSON. That is all.

Acting Chairman COMMONS. That will be all. Mr. Drennan.

Mr. Madden; is Mr. Madden present; Dan Madden?

Mr. EVANS. I understood you would not want him. Oh, Dan Madden. Mr. Chairman, may I inquire as to the data you desired me to get about the coal mining concerning our Washoe mine or other mines, the number of days that they have worked for a period of years past that they have operated, and the minimum and maximum earnings of the men?

Commissioner LENNON. Yes; day men and contract men.

Mr. EVANS. Yes; it would be hard—

Commissioner LENNON. A couple of years would be enough for it.

Mr. EVANS. One year?

Commissioner LENNON. A couple of years at the most.

Mr. EVANS. Well, what I was in doubt about was whether you want us to try to average what they make. That would be rather difficult, I think; they are changing all the time.

Acting Chairman COMMONS. No.

Commissioner LENNON. How many days they work and what their rate is.

Mr. EVANS. Well, their rate, of course, is in this contract.

Acting Chairman COMMONS. The number of days operating during the year for all of your coal mines.

Mr. EVANS. Yes; we have only—have two in the State now, and a small one in northern Montana—the Washoe.

Acting Chairman COMMONS. You have another one outside?

Mr. EVANS. At Diamondville, Wyo. Would you like to have that, too?

Acting Chairman COMMONS. Yes; and the wage scale there, too.

Mr. EVANS. I would like to ask Mr. Drennan. I am not sure but they are under the same scale. [Addressing Mr. Drennan:] Are they under the same scale at Diamondville, Mr. Drennan?

Mr. DRENNAN. I beg your pardon?

Mr. EVANS. Are they under the same scale at Diamondville?

Mr. DRENNAN. No, sir.

Mr. EVANS. They have their separate contract there?

Mr. DRENNAN. Yes.

Mr. EVANS. Well, I can get that for you.

Acting Chairman COMMONS. Yes.

TESTIMONY OF MR. DAN MADDEN.

Acting Chairman COMMONS. Mr. Madden, will you give your name to the reporter?

Mr. MADDEN. D. Madden.

Acting Chairman COMMONS. What is your occupation, Mr. Madden?

Mr. MADDEN. Carpenter.

Acting Chairman COMMONS. Carpenter in Butte?

Mr. MADDEN. In Butte.

Acting Chairman COMMONS. You are president of the central organization, are you?

Mr. MADDEN. Yes, sir.

Acting Chairman COMMONS. What is the name of that organization?

Mr. MADDEN. The Silver Bow Trades and Labor Council.

Acting Chairman COMMONS. What organizations are eligible and are members?

Mr. MADDEN. Why, there are about 40 different unions affiliated with the Silver Bow Trades and Labor Council. I could give you a list of the different unions if you wished me to.

Acting Chairman COMMONS. It includes all classes?

Mr. MADDEN. Includes all classes, the Workmen's Protective Union, and all classes.

Acting Chairman COMMONS. Affiliated with the American Federation of Labor?

Mr. MADDEN. Affiliated with the American Federation of Labor.

Acting Chairman COMMONS. Does the carpenters' union make a separate scale with the Anaconda Co. and with the master carpenters in the city of Butte?

Mr. MADDEN. Yes, sir.

Acting Chairman COMMONS. What is the difference in the scale?

Mr. MADDEN. The difference in the scale is the carpenters working for the companies work on a sliding scale. It all depends on the price of copper. We

get 4 and 6 bits per hour. The carpenters that work around the city get \$7 per day.

Chairman COMMONS. What is the highest pay they have gotten on the sliding scale with the company?

Mr. MADDEN. Four dollars and seventy-five cents.

Acting Chairman COMMONS. And \$8, did you say?

Mr. MADDEN. Seven dollars for the scale downtown.

Acting Chairman COMMONS. How long has this \$7 scale been in effect?

Mr. MADDEN. It has been in effect about—in my judgment, about 10 months, or probably a year.

Acting Chairman COMMONS. What was the scale prior to that?

Mr. MADDEN. Six dollars.

Acting Chairman COMMONS. How long had that been in effect?

Mr. MADDEN. That had been in effect for about three years, I presume.

Acting Chairman COMMONS. And what preceded that?

Mr. MADDEN. Five dollars.

Acting Chairman COMMONS. And how long had that been in effect?

Mr. MADDEN. That had been in effect about 15 or 16 years, probably.

Acting Chairman COMMONS. That had been the scale for 15 or 16 years—\$5?

Mr. MADDEN. Yes, sir; at that time—

Acting Chairman COMMONS. At that time what was the scale with the Anaconda Co. when you had the \$5 scale for carpenters outside?

Mr. MADDEN. Four and a half.

Acting Chairman COMMONS. So there has always been a difference. There was one time here in Butte that they paid more in the companies to carpenters than they did down in the city. That is some years ago. I presume it is 28 or 29 years ago. Were you here at that time?

Mr. MADDEN. No, sir; I was here a few years later.

Acting Chairman COMMONS. What was the difference then?

Mr. MADDEN. There was about 4 bits difference, 50 cents.

Acting Chairman COMMONS. Fifty cents; that is, the company paid 50 cents more than the contract?

Mr. MADDEN. Than the contract.

Acting Chairman COMMONS. About 20 or 30 years ago?

Mr. MADDEN. About 28 years ago, I presume.

Acting Chairman COMMONS. So that gradually you have increased this differential. First the contractors paid less, then they paid 50 cents more, then they paid increasing amounts at different times until now it is—

Mr. MADDEN. Seven dollars.

Acting Chairman COMMONS. It is how much?

Mr. MADDEN. Seven dollars.

Commissioner LENNON. And four seventy-five?

Mr. MADDEN. And four fifty, at the present time.

Commissioner LENNON. Four fifty and seven?

Mr. MADDEN. And \$7.

Acting Chairman COMMONS. Two dollars and a half difference.

Mr. MADDEN. Two and a half difference.

Acting Chairman COMMONS. What was the reason for making this difference during this period of 30 years?

Mr. MADDEN. The difference in making the changes in the wage scale down town and the company scale is that the down-town men, as we call them, don't get any more than half time, don't work half time in the year.

Acting Chairman COMMONS. You mean six months?

Mr. MADDEN. I mean six months, and they work steady on the hill, so that the man that works on the hill gets more wages at the end of the year than the man that works down town.

Acting Chairman COMMONS. Is there any class of carpenters down town that gets steady work?

Mr. MADDEN. I don't know of any; there may probably be two or three.

Acting Chairman COMMONS. Two or three men?

Mr. MADDEN. Two or three men.

Acting Chairman COMMONS. How many men are there in the union?

Mr. MADDEN. There are at the present time 690, or probably there are 700. There are 690 at least.

Acting Chairman COMMONS. Then you would say that out of about 700 men that 2 or 3 are getting steady work the year through at \$7?

- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. Not more than that?
- Mr. MADDEN. Not more than that to my knowledge, but probably there is. But I would not say that there is.
- Acting Chairman COMMONS. Have you any official position in the carpenters' union?
- Mr. MADDEN. No, sir; none.
- Acting Chairman COMMONS. Would there be anyone in the carpenters' union that would have more accurate knowledge than you?
- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. Who would that be?
- Mr. MADDEN. Why, the business agent would have.
- Acting Chairman COMMONS. What is his name?
- Mr. MADDEN. Aleck Martin.
- Acting Chairman COMMONS. What is his address?
- Mr. MADDEN. His address? Now, I don't know, but you could get him at the carpenters' hall at noon to-day, at 12 o'clock. I could find out his address, though.
- Acting Chairman COMMONS. That is sufficient on that point. You would know whether carpenters preferred the steady job at the Anaconda or the \$7 job, outside of those two or three with contractors. What is the preference amongst carpenters?
- Mr. MADDEN. Well, to my knowledge the men that are working for the companies are more satisfied than the men that are working around town. They prefer—the men that are working for the companies—prefer to work for them than they do down town.
- Acting Chairman COMMONS. You have talked with numbers, have you?
- Mr. MADDEN. Yes, sir; I have talked.
- Acting Chairman COMMONS. Have you worked yourself for the company?
- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. And have you worked down town?
- Mr. MADDEN. I have worked—yes, sir; I have worked around town.
- Acting Chairman COMMONS. Have you had a steady job with the company?
- Mr. MADDEN. Not a steady job; no. Probably I would have one for a year, six months or a year, three months along, but not steady work with them. I have worked as high as six years with the one company.
- Acting Chairman COMMONS. Do all the men working for the company have steady work?
- Mr. MADDEN. Well, the majority of them do, except as it comes the same as they have at the present time, a curtailment of the output, then the carpenters are laid off as at the present time.
- Acting Chairman COMMONS. I am not speaking of a special event like this, but generally all the carpenters there have steady jobs?
- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. The company, in other words, has a steady force of carpenters while it is operating the mines?
- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. About how many are employed there?
- Mr. MADDEN. Really I could not answer the question, how many carpenters are employed at the different mines. Sometimes there will be probably as high as 50 or 75 working in some of those mills and mines.
- Commissioner LENNON. Are half the membership of your union carpenters who work in the mines? You say you have 700; do 350 of them work in the mines?
- Mr. MADDEN. I don't believe it is quite that much.
- Commissioner LENNON. Well, do 250 work in the mines?
- Mr. MADDEN. Yes, sir; there is 250, I believe.
- Commissioner LENNON. Somewhere between 250 and 350?
- Mr. MADDEN. To my judgment, yes, sir.
- Acting Chairman COMMONS. Has the Butte Miners' Union No. 1 been a member of this central body?
- Mr. MADDEN. No, sir.
- Acting Chairman COMMONS. Has it ever been a member?
- Mr. MADDEN. Not to my knowledge.
- Commissioner LENNON. How long have you been president?
- Mr. MADDEN. This is my second term, I should say seven months.
- Acting Chairman COMMONS. Has that union been eligible to membership?

- Mr. MADDEN. I don't believe it has.
- Commissioner LENNON. Let us clear that up. Mr. Oliver, has the Butte Miners' Union been a member of the central body?
- Mr. OLIVER. Yes, sir; at one time.
- Commissioner LENNON. Some years ago?
- Mr. OLIVER. Yes, sir.
- Commissioner LENNON. How long since?
- Mr. OLIVER. I think something like 14 or 15 years since it was a member of the Silver Bow Trades and Labor Council.
- Acting Chairman COMMONS. It has not been a member since your connection with the central body?
- Mr. MADDEN. No, sir.
- Acting Chairman COMMONS. How long has it been eligible to be a member?
- Mr. MADDEN. To my knowledge I don't know as the miners' union ever made application for to have delegates sent to the central body.
- Acting Chairman COMMONS. Are only organizations affiliated with the American Federation of Labor eligible, are they?
- Mr. MADDEN. There are others that are not affiliated with the American Federation that have delegates to the council.
- Acting Chairman COMMONS. Oh, there are others. Are there at the present time others?
- Mr. MADDEN. At the present time I believe there is one or two.
- Acting Chairman COMMONS. Are you familiar with any reason or do you know any reason why it has not made application for membership?
- Mr. MADDEN. I do not.
- Acting Chairman COMMONS. You have no knowledge?
- Mr. MADDEN. I have no knowledge whatever.
- Acting Chairman COMMONS. Has the central body ever extended an invitation to this union?
- Mr. MADDEN. Not to my knowledge.
- Acting Chairman COMMONS. Is it the policy or is it not the policy of the central body to secure adherents of all labor unions in the localities?
- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. But you have not endeavored to secure the adherence of this union?
- Mr. MADDEN. No, sir; we have not.
- Acting Chairman COMMONS. You have made an exception in that case?
- Mr. MADDEN. Not particularly; no, sir.
- Commissioner GARRETSON. Is this the largest union in the Territory?
- Mr. MADDEN. Which?
- Commissioner GARRETSON. The miners?
- Mr. MADDEN. Yes, sir.
- Acting Chairman COMMONS. Up to recent times?
- Mr. MADDEN. Yes, sir.
- Commissioner GARRETSON. Yes; up to the time as it is mentioned as being in existence or dominating the situation?
- Mr. MADDEN. Yes, sir.
- Commissioner GARRETSON. The 13th of July, was it?
- Mr. MADDEN. June.
- Acting Chairman COMMONS. Has the central body cooperated with the miners' union notwithstanding it not being a member?
- Mr. MADDEN. Yes.
- Acting Chairman COMMONS. In what way has it cooperated?
- Mr. MADDEN. It cooperated with the miners' union in taking up matters pertaining to the union at the time there were grievances with the employers. It took up the matter and a committee was appointed—Silver Bow Trades and Labor Council took up the matter with the miners' union, and also appointed a committee to investigate the trouble.
- Commissioner LENNON. Investigate what?
- Mr. MADDEN. Trouble.
- Acting Chairman COMMONS. When was the first occasion that grievances of this kind were taken up on the part of the central body on behalf of the miners' union?
- Mr. MADDEN. To my knowledge it was a year ago this month, in August.
- Acting Chairman COMMONS. What was that grievance?
- Mr. MADDEN. That grievance was to investigate the hospital for consumptives located at Deer Lodge Valley. There had been a grievance brought in to

the Silver Bow Trades and Labor Council that the county commissioners would not make application for admission to this institution. There was two complaints brought in that miners that wanted to go to the institution made application to the county commissioners, and they wouldn't do nothing for them.

Commissioner GARRETSON. What is that, a State institution?

Mr. MADDEN. A State institution; yes, sir.

Acting Chairman COMMONS. A State institution for tuberculosis?

Mr. MADDEN. For tuberculosis; yes, sir. So that matter was taken up and there was a motion made for a committee of three to be appointed to investigate. That committee of three was appointed, and they went to the miners' union and asked for a like committee from the miners' union to work in conjunction with the committee from the Silver Bow council to investigate that case, which the miners' union done.

Acting Chairman COMMONS. What was the next instance of cooperation?

Mr. MADDEN. The next instance of cooperation was in regard to the air brakes and the heating of the vestibules on the street railways cars.

Acting Chairman COMMONS. Did the grievance come from the miners' union to the Silver Bow Trades and Labor Council?

Mr. MADDEN. No, sir.

Acting Chairman COMMONS. How did it originate?

Mr. MADDEN. It came from the—some of the delegates of the Amalgamated Street Car Union.

Acting Chairman COMMONS. What was the connection of the miners' union with the grievance?

Mr. MADDEN. The miners did not have no grievance. When the grievance was brought into the Silver Bow in regard to the heating of the vestibules and the calling for the air brakes there was also a committee of three appointed at that time, and that committee likewise went to the miners' union to ask them to work in conjunction with them.

Acting Chairman COMMONS. What was the next instance of cooperation?

Commissioner GARRETSON. In those two instances, did they cooperate?

Mr. MADDEN. Yes, sir. The next was, I believe, on the picnic for Labor Day.

Acting Chairman COMMONS. Did they have a joint picnic?

Mr. MADDEN. They had a joint picnic.

Acting Chairman COMMONS. What was the next?

Mr. MADDEN. I don't remember of any other.

Acting Chairman COMMONS. You spoke of investigation of recent trouble. What did the central body—

Mr. MADDEN (interrupting). In what trouble?

Acting Chairman COMMONS. You said that the central body appointed a committee to investigate recent trouble, did you not?

Mr. MADDEN. Yes, sir.

Acting Chairman COMMONS. Did the central body appoint such a committee?

Mr. MADDEN. Oh, no, sir; not the recent trouble. I never said anything about that.

Acting Chairman COMMONS. I misunderstood you. Those you mentioned are the only instances in which the central body has acted with reference to the affairs of the miners' union?

Mr. MADDEN. To my knowledge.

Commissioner LENNON. That is, that is within the term you have been president?

Mr. MADDEN. Well, that occurred before I was president. I was a delegate there. But since I have been president there have been no—

Commissioner LENNON. Have you any knowledge of, say the last 10 years, of the miners' union assisting in the matter of improving the condition of the clerks and other organizations about the town, cooperating with the Silver Bow Trades and Labor Council?

Mr. MADDEN. I have not. I wasn't a member or delegate to the Silver Bow Trades and Labor Council at that time.

Commissioner LENNON. You are just covering the things that come under your knowledge?

Mr. MADDEN. The things that come under my knowledge; yes, sir.

Commissioner LENNON. You don't mean it shall be understood as covering all the cooperation that has ever existed here between the Silver Bow Trades and Labor Council and the miners?

Mr. MADDEN. No, sir; not at all.

Commissioner LENNON. That is all.

Commissioner GARRETSON. Has there been causes of—well, possibly criticism or possibly disagreements between the trades and labor assembly and the miners?

Mr. MADDEN. None whatever, to my knowledge.

Commissioner GARRETSON. None to your knowledge. There has been no hostility between the two?

Mr. MADDEN. None whatever.

Commissioner GARRETSON. They have each simply followed their own way?

Mr. MADDEN. Yes, sir.

Commissioner GARRETSON. Only coming together in these instances you have named?

Mr. MADDEN. Yes, sir.

Commissioner GARRETSON. That is all, Mr. Chairman.

Acting Chairman COMMONS. You have followed the testimony regarding the causes of difference which led up to the—

Mr. MADDEN (interrupting). Sir?

Acting Chairman COMMONS. You have followed the testimony regarding the causes that led up to the disagreement in the miners' union?

Mr. MADDEN. I have not?

Acting Chairman COMMONS. You have not?

Mr. MADDEN. I haven't had time.

Commissioner LENNON. You were not here yesterday?

Mr. MADDEN. No, sir.

Acting Chairman COMMONS. That is all, Mr. Madden. Mr. McCusker.

TESTIMONY OF MR. M. McCUSKER.

Acting Chairman COMMONS. Give your name and address.

Mr. McCUSKER. M. McCusker, Livingston, Mont.

Acting Chairman COMMONS. Your occupation.

Mr. McCUSKER. I am now employed by the industrial commission.

Acting Chairman COMMONS. How long have you been a member—a resident of Butte, or are you a resident of Butte?

Mr. McCUSKER. No, sir; Livingston. I have been in Montana about six and one-half years.

Acting Chairman COMMONS. You have made a study of the mortality statistics of this county—life statistics?

Mr. McCUSKER. Yes, sir.

Acting Chairman COMMONS. With reference to the subject of consumption?

Mr. McCUSKER. I have.

Acting Chairman COMMONS. Will you state briefly a summary of your investigation, what you have investigated, and the result?

Mr. McCUSKER. I will. In doing so I wish to merely present to the commission the method by which the investigation was pursued, so that they can have a more thorough knowledge of it. We have compiled tables for each year.

Acting Chairman COMMONS. Have you an exhibit which you will file?

Mr. McCUSKER. This exhibit I will file; yes, sir.¹

Mr. McCUSKER. This is the monthly table made up by occupations, ages, and nationalities, covering each year and each month.

Acting Chairman COMMONS. Since when?

Mr. McCUSKER. Of all cases from 1907 to 1913.

Commissioner GARRETSON. From what source are these figures taken?

Mr. McCUSKER. These figures are taken from the death certificates of Silver Bow County.

Acting Chairman COMMONS. Are they taken from the official statistics published?

Mr. McCUSKER. They are not taken from any statistics. It is rather peculiar. We have statistics that are not statistics. We have some very good reports and some that are not even good guesses, so that it was necessary to check the death certificates; and after I had checked them the fourth time, verified my figures the fourth time, I got the statistics from the State, so at variance with the facts in the matter that it was necessary to go over the entire matter the fifth time to check.

Acting Chairman COMMONS. When you say that you went over the entire matter, what does that mean—over the death certificates?

¹ Exhibit not transmitted with testimony.

Mr. McCUSKER. Yes, sir; for seven years.

Acting Chairman COMMONS. For all causes?

Mr. McCUSKER. For tuberculosis; and we made then a comparative table—

Acting Chairman COMMONS (interrupting). Just a moment. Have the first one identified.

Mr. McCUSKER. You want it identified for each year or the several years?

Acting Chairman COMMONS. The exhibit as it is will cover the seven years?

Mr. McCUSKER. Yes, sir.

Commissioner GARRETSON. The death certificates are basic?

Mr. McCUSKER. They are the real record.

Acting Chairman COMMONS. You went over this record yourself?

Mr. McCUSKER. Yes, sir; I checked them four times myself, and the assistant checked them once; and although many others checked also, yet every one of those figures was verified by a check of my own. I have here a comparative table showing the deaths in Silver Bow from tuberculosis and from all other causes.

Acting Chairman COMMONS. Will you file that?

Mr. McCUSKER. I will file it.¹

Mr. McCUSKER. By the growth of tuberculosis I wish to call your attention to this, the vital statistics covering a period of 10 years in America over the registration area is 11.2 per cent for all causes of tuberculosis.

Acting Chairman COMMONS. All kinds of tuberculosis?

Mr. McCUSKER. Yes, sir; exclusive of stillbirths and premature births. The record that I have here shows that in 1907 there were 11 and a fraction of 423/45700 per cent, which is just a trifle higher than 11.2 or the average in the United States. From that there is a gradual increase up to 1913, when it reaches 17-62/11400 of 1 per cent.

Acting Chairman COMMONS. That is deaths from tuberculosis?

Mr. McCUSKER. The deaths from tuberculosis, in comparison.

Acting Chairman COMMONS. Are 17 per cent of the total death record?

Mr. McCUSKER. Yes, sir.

Acting Chairman COMMONS. Exclusive of stillbirths and what else?

Mr. McCUSKER. And premature births. In 1911 it reached 18 per cent and a fraction of about one-tenth.

Commissioner GARRETSON. That includes all forms of tuberculosis?

Mr. McCUSKER. That includes all forms of tuberculosis, and I wish you to keep that particularly in mind. The low death rate from tuberculosis in comparison, and other statistics which I will present, and keep in mind the fact that the fact is that the rate here in Butte covering everybody was comparatively the same as over the registration area of the United States. Will you identify this exhibit?²

I have here made a comparative table covering the same periods of deaths of miners and by occupations and per cent. For instance, January, 1907, of all the deaths of tuberculosis—this is merely dealing with tuberculosis deaths, 68-7/11 miners. February, 57 miners.

Commissioner LENNON. What year?

Mr. McCUSKER. 1907, and during the year 1907 there were total deaths of 109 of tuberculosis in the city of Butte or Silver Bow County, and of those 63 were miners, or 57-78/10800 of 1 per cent of miners. In 1907, carrying out the idea, there were 63 died of tuberculosis and 36 killed in the mines, making a per cent of 37-27/72 who either died of miner's consumption or killed in the mines. In 1908 the same thing is carried down until the summary of the total deaths of miners to the whole number was 68-93/10300 of 1 per cent.

Acting Chairman COMMONS. That is miners for all causes?

Mr. McCUSKER. No, sir; miners that died with tuberculosis, the comparison to the whole number of deaths from tuberculosis in this city. In 1908 the total deaths of miners was 244; 72 of those were tuberculosis and 27 killed in mine accidents, which made 41-31/61 per cent in that year. In 1909 there was 168 deaths from tuberculosis in Silver Bow County, and 115 deaths of miners, making 69 per cent of deaths of tuberculosis were confined to miners engaged in mining, and from the two causes in Silver Bow County there was 68-96/23300 of miners died from either tuberculosis or were killed in mines.

Commissioner GARRETSON. Miners' families are not included in the figures of miners at all, but in the other column?

Mr. McCUSKER. Yes, sir; in the other causes. I will call attention to that in a moment. In 1910 there were 144 deaths of tuberculosis in the city, and

¹ Exhibit not transmitted with testimony.

90 of those miners, making 62½ per cent of all tubercular deaths were caused in the mines.

We had for the two causes that year 56 per cent of all miners dying from tuberculosis and mine accidents. In 1911 we had from the causes a death rate of 57½ per cent of miners die from miner's consumption or from mine accidents, being killed outright in the mine. In 1912 we had 68½ per cent of all deaths from tuberculosis in Silver Bow County were deaths of miners, and 47½ per cent—were the deaths of all miners caused by accidents and tuberculosis in comparison to the deaths of all miners.

In 1918 we had 190 deaths; out of those 190 deaths there were 137 died from tuberculosis; there were 137 deaths from tuberculosis in the miners, or 72½ per cent; and 69½ per cent of the deaths of all miners was caused by tuberculosis or killed in the mines.

Now, I wish to state to the commission this fact: That this does not include all the deaths of miners from tuberculosis in Silver Bow County, because of the peculiar fact, as I find by making a quiet investigation of many of the physicians here, that many of the physicians here, practitioners, have naturally a great deal of sympathy for men who they have been acquainted with for a number of years, and many of these men have taken out insurance policies and contracted consumption and died before the time limit set in the insurance policy so that they would be able to collect. And I understand also that possibly some of the men have tuberculosis or miner's consumption at the time that they got the policy. Hence, whenever they die, they give it the name of local pneumonia, or something of that kind.

Now, many of the miners here, when he contracts tuberculosis, will leave and go back to their old homes. Miners die who contract tuberculosis in Butte in every country possibly in the world. And that must be taken into consideration. But there is no way by which it can be checked—comparative tables.

Commissioner GARRETTSON. You mean checked in the sense of tally?

Mr. McCUSKER. Yes; you can't go behind the death record. I would like to have the two marked as exhibits.¹

Mr. McCUSKER. As far as I was concerned, I did not have access to Dr. Tuttle's report before this time. I have been trying to get hold of Dr. Tuttle's report ever since they have been made and have been unable to do so for one excuse or another. I am very glad to and sometime may be able to say, if my conclusions are at variance with his, it is not on account of wishing to be at enmity or difference, but merely that I have to go ahead with this on an entirely different line from him, and if there is a difference within the merits of either this report or Dr. Tuttle's report they will have to be compared and a conclusion drawn. Either Dr. Tuttle's report is wrong or this report is wrong; either Dr. Tuttle's conclusions are wrong or my conclusions are wrong. It has been stated here that it was owing to the insanitary condition in certain homes of the city, and in connection with that it was inferred that it was owing to the foreign element, and so forth and so on, of insanitary conditions in boarding houses, etc.

Commissioner GARRETTSON. Housing conditions?

Mr. McCUSKER. Housing conditions in general. The table here will show the ages and nationalities—

Acting Chairman COMMONS. Just have it identified.¹

Mr. McCUSKER. My information is that the English-speaking races of people in the city of Butte are living in as good sanitary conditions as \$3.50 a day will permit. That is my conclusion. And it is my conclusion that the English-speaking races of Butte will compare favorably with the English-speaking races or people in any place on the American Continent. So in order to determine as to whether or not the figures—how the figures would come out, I compared the nationality table, and I found that we had a total death in seven years of 675 from miner's consumption in the city of Butte and the county of Silver Bow. Out of that 675 there were 155 Americans, there were 140 Englishmen, there were 271 Irishmen, and 9 Welsh, and 5 Scotch; and the other nationalities are virtually very small. For instance, we have the Finlanders, I think, with the highest other rate of 33. The number of English-speaking miners who died from tuberculosis was 572 out of this 675, leaving for the foreign-speaking races 103 deaths. Or we had a percentage of English-speaking miners of 84½ per cent. The figures that have been given to me, were given to me, I believe, by Mr. EVANS. Is Mr. EVANS here?

Mr. EVANS. Yes.

¹ Exhibit not transmitted with testimony.

Mr. McCUSKER. I understood, or at least that is my understanding, that approximately 75 per cent of all miners working in this camp were English speaking.

Mr. EVANS. I didn't give you that.

Mr. McCUSKER. I didn't get that from you?

Mr. EVANS. You made no inquiry of me.

Mr. McCUSKER. Then it was Mr. Kelley from whom I made inquiry. But, anyway, that is what I think are about the facts.

Mr. EVANS. I don't know.

Commissioner GARRETTSON. Testimony has been given here on that, and it is a matter of record.

Mr. EVANS. I think so.

Mr. McCUSKER. Of the 75 per cent of English-speaking miners in the district 84 and a fraction of deaths are English speaking, so that it shows that the prevalence of tuberculosis is not among the foreigners in the city of Butte. But the higher death rate, even if it exists among the English-speaking races, I don't believe the charge of insanitary conditions or insanitary living would hold true.

Commissioner GARRETTSON. Then you are a believer in the theory of the Maltese Cross, as you heard referred to here?

Mr. McCUSKER. There is another table here, and then I will refer to the Maltese Cross. Bearing out Dr. Tuttle's theory of insanitary conditions, it would necessarily resolve itself down as to whether or not the tuberculosis was in the homes. I have made a comparative table of deaths of all women and children in the city of Butte, including the housewives, domestics, and children.

Acting Chairman COMMONS. Please identify those.¹

Mr. McCUSKER. In 1907 there were 109 total deaths here from tuberculosis; there were 10 housewives, 2 at-homes, 6 children, and 1 domestic. In 1908 there were 4 housewives, 2 at-homes, 1 child, and no domestics. In 1909 there were 12 housewives, 2 at-homes, 8 children, and 3 domestics. In 1910 there were 12 housewives, 4 at-homes, 8 children, and no domestics. In 1911 there were no housewives, 2 at-homes, 9 children, and 14 domestics. In 1912 there were 7 housewives, 1 at-home, 11 children, and 8 domestics. In 1913 there was 1 housewife, 1 at-home, 11 children, and 9 domestics. Now, I wish to segregate that report for the benefit of the commission. The children in nearly every instance died of tubercular spinal meningitis, which was caused by syphilitic taints in the parent. The at-homes and domestics—it is my opinion particularly that the at-home deaths from tuberculosis in the restricted district of Butte, the domestics were servants that have been in the employ of servants, and nearly every one of them were foreign, Swiss and Finlanders prevailing.

To get a comparative report right down to the home, and to determine as to what actual effect the insanitary conditions of the home in Butte have to the tubercular rate, it was necessary to segregate and compare the total death rate from tuberculosis with the total deaths of housewives in the city of Butte. The total deaths from tuberculosis during the seven years was 1,021; the total number of housewives dying was 46, or a percentage of 4 1/2 per cent. So if the housewives now would be more affected with insanitary conditions in the home than anyone else would be because she would be there a much greater length of time, and if there was any truth in the conclusions as to insanitary home conditions, if this table means anything at all it means that it does not hold true. Those are my conclusions. I have here another exhibit I wish you would mark.

Commissioner LENNON. Is that all of that record with regard to tuberculosis?

Mr. McCUSKER. This is the tubercular exhibit, too.

Commissioner O'CONNELL. Under whose auspices was that made?

Mr. McCUSKER. The auspices of the commission.

Commissioner O'CONNELL. How long have you been working on that?

Mr. McCUSKER. Well, now, since approximately—that would have to be explained. I have been working approximately pretty near every night and at least some part of the day, possibly on the average of 16 to 18 hours a day, since the 5th day of July. And in connection with my work has been the assistance of an office force ranging from 5 to 9.

(Five microscopic slides containing samples of ground ore were submitted.)

Mr. McCUSKER. I have here a microscopic examination of the ores from the different mines. I will make a report and submit them with my report.

¹ Exhibit not transmitted with testimony.

I merely wish to show that we pulverized certain classes of ore, made it into a very fine dust, and then put it under the microscope to see exactly how the ore would break up, what form it would take after it had broken up. One of the specimens shows that the ore breaks very sharply—that is, most of the fragments of dust have a little hook on them, or sharp places, jagged edges.

My general conclusion, so far as the investigation and figures are concerned, is this: A tubercular germ is a scavenger for civilization virtually—that is, civilization, as we understand it, is combating the nature forces. We try to break down the law of the survival of the fittest. The tubercular germ, when a man is in perfect physical health and condition, will not attack him if his physique—his general system—it in good condition; the germs are incapable of affecting him, and he is capable of resisting them if they do attack him. A man comes here to work in the mine. Now, the mines are, the chances are, as cool as they can be made. I don't know. That is a matter for other men to assert one way or the other; I do not know; but, at least, I know this, that the conditions underground 3,000 feet are not as good as conditions on the surface. In other words, the conditions in a mine are not a health resort. The heat in the mine, the same as in the Tropics, will weaken a man's vitality. The mine is more or less full of dust, such as this ore pulverizes. He is breathing that continually, and the sharp particles with the little jagged edges on the dust hold them into his lungs and gradually cut off the amount—the ability of the lungs to absorb their normal amount of oxygen—which again weakens his condition.

Another thing, he is generally a worker, particularly if he is married and is building a home, he has to work nearly every day of his life. Then if he is going to build a home and educate his children or anything of that kind, it is necessary to again work even harder, put in every shift that is possible for him to put in, which again weakens his condition, owing to the seven shifts. The conditions underground are exceptionally hard. I understand they are good, though I don't make that assertion, but I understand that some do not think it is necessary; but a certain amount of blasting on shifts is done. Then, again, you must take into consideration the sulphide ores. Some places in the mine here, I understand, those ores are burning. The gases from these ores and the gas that would naturally be thrown off from the high-charged sulphur water would all have effect. That would be naturally industrial effect over which no man could have any control. See? Now, I may not be exactly right in regard to whether these fumes from the burning, the oxidization of the sulphide has any material effect or not, but I know there is a complication of different industrial causes which all tend to weaken the physique of a man.

Taking that into consideration with the age of the miners—apparently miner's consumption does not attack the young man; it attacks him at a certain time in life when his physique is actually beginning to weaken. It should not, and in the ordinary man outside, the laboring man who works hard, it does not, but along about the age of 40, 35 to 40, I find it is a decided increase. For instance, there were no miners died below the years of 20; from 20 to 25, there were 14; that is, in seven years; from 25 to 30, there were 30; from 30 to 35, there were 67; from 35 to 40, there were 108; from 40 to 45, 125; from 45 to 50, 140. That is the apex. It suddenly breaks down again, going the other way. So it shows that along at the years when a man is struggling, raising a family, building a home, or acquiring something, it is at that time when he is doing his very best that the tuberculosis seizes him.

Commissioner GARRETTSON. Have you compared those figures with the accepted tables of the probability of life?

Mr. McCUSKER. I have not compared the tables with the statistics, but I did compare a table submitted to me by the State, which was found to be glaringly incorrect.

Commissioner GARRETTSON. Well, you take what is known as the fraternal tables, or the old-line tables?

Mr. McCUSKER. I have not compared them at all.

Commissioner GARRETTSON. You have not compared with either of these?

Mr. McCUSKER. No, sir.

Commissioner GARRETTSON. Those are the two accepted tables.

Mr. McCUSKER. No; I have not compared them with the mortality tables of life insurance companies.

Commissioner LENNON. Did you make any study as to the effect of the use of alcoholic beverages in causing these increasing deaths at certain ages and the breaking down of the constitution?

Mr. McCUSKER. There is not any question but that alcoholic stimulants, the same as any other cause which would tend to break down a man's vitality, has a direct bearing upon tuberculosis. Though, as I said, all those causes which would tend to weaken his physique would be prolific.

Commissioner GARRETTSON. It would lessen his power of resistance, his factor of resistance?

Mr. McCUSKER. His factor in tuberculosis.

Commissioner O'CONNELL. Have you any idea as to the number of saloons in the city of Butte?

Mr. McCUSKER. I have never made much of an investigation as to the number of saloons particularly.

Commissioner O'CONNELL. I ask it simply because walking up and down here about every other place seems to be a booze shop.

Mr. McCUSKER. I didn't notice them so much out here. I have not personally noticed very many.

Commissioner O'CONNELL. So if this is a cause, one of the breaking causes toward breaking down a man's constitution, there are certainly a large number of breakdown shops here very close together.

Mr. McCUSKER. It would be, in my opinion, if some such system could be devised to eliminate entirely intoxicating liquors, that it would be a mighty good thing. I do not know whether anything has been successfully devised or not, but merely as a suggestion in this way, that I believe anything that tends to break down a man's physique is an evil in civilization, and should be at least curtailed to a large extent.

If the commission will permit me, I will check these reports before they are finally submitted, if I might have that privilege. Many of these have just come from the stenographer now.

Commissioner LENNON. That is all right; except the records that you have made of statements can not be changed.

Mr. McCUSKER. The record of statements would not necessarily have to be changed. All the figures I have given are the true figures, but some of the other things—there might be a figure struck in the wrong place, or something of that sort.

Acting Chairman COMMONS. Dr. Tuttle.

TESTIMONY OF DR. T. D. TUTTLE.

Acting Chairman COMMONS. Give your name.

Dr. TUTTLE. Dr. T. D. Tuttle.

Acting Chairman COMMONS. And your address?

Dr. TUTTLE. State Tuberculosis—

Commissioner GARRETTSON. We can't hear you.

Dr. TUTTLE. State Tuberculosis Hospital at Deer Lodge.

Acting Chairman COMMONS. Your official position?

Dr. TUTTLE. President of the State tuberculosis sanatorium.

Acting Chairman COMMONS. There has been submitted to us an exhibit on the report of your investigation on sanitary conditions in mines, and of the conditions under which miners living in Silver Bow County work. Will you kindly examine them and identify it as to whether it is your report [handing document to the witness]?

Dr. TUTTLE. It is, with one or two typographical errors in it.

Acting Chairman COMMONS. When did you make this investigation, Dr. Tuttle?

Dr. TUTTLE. In the summer and fall of 1912.

Acting Chairman COMMONS. Will you state your method and conclusions that you reached?

Dr. TUTTLE. I studied all the death certificates, a study of the death certificates was made from the death certificates—a study of the death records was made from the death certificates filed with the State board of health under a law known as the registration act, passed through the legislature of 1907, and went into effect some time during the spring of 1907, but was really not in operation until 1908.

Acting Chairman COMMONS. Is this the uniform registration act required by the United States census?

Dr. TUTTLE. The registration act drawn up and sent to me by the United States Census Bureau and was passed by our legislature without amendment.

Acting Chairman COMMONS. Are you yourself connected with the registration office?

Dr. TUTTLE. Not at the present time.

Acting Chairman COMMONS. You examined the original physicians' certificates, did you?

Dr. TUTTLE. The original physician's certificate on file with the State board of health. At that time I was an officer of the State board of health.

Acting Chairman COMMONS. And your figures in this record are based on your examination of those physicians' certificates?

Dr. TUTTLE. Yes, sir.

Acting Chairman COMMONS. What was your next?

Dr. TUTTLE. After the study, or in connection with the work—studying the death certificates was one part of it—a study of the conditions in which mining, and on the surface, was carried on; there were two men working in the mine, one a photographer, the other a physician. He exposed culture plates, took samples of air, samples of drinking water, and photographs of such conditions by flashlight as were considered of special interest. There were two men working on the surface, one man a physician and one man a photographer, who followed the same process on the surface, examining the houses in which miners lived, and the houses in general—the community in which the miners lived. During this time, in connection with the study, these culture plates were submitted to a physician who was employed as a bacteriologist and who studied from a bacteriological standpoint; samples of air and water, drinking water, were sent to Bozeman, where the chemist of the agricultural college was employed, to analyze the air and water. Records were also taken of the temperatures in both wet and dry bulb temperature, so as to secure the humidity in the mines. In connection with the study of the death rates a map of Silver Bow County was secured—a large map—and at each point where a case had died from tuberculosis a pin was put in the map—the locality. The deaths that had occurred in the hospital were not reported at the locality of the hospital but at the point from which they went to the hospital; that is, if a man died in the hospital—St. James Hospital, or Marys Hospital but whose residence was somewhere on Wyoming Street or Iowa Street—that death was recorded at the point at which it came from to the hospital, the effort being to find in what locality tuberculosis was most prevalent in the city.

Having no reports of tubercular cases, we could only use the death certificates as a basis of locating the points at which tuberculosis existed. The statistical study, as the gentleman stated that some of the statistics were not statistics, that is very true; but it is considerably a matter of opinion as to which are statistics. Where the statistics for 1907 came from, I do not know. We had in the State no law relative to registration of deaths prior to 1907, and the working of that law was not in operation at all until the middle of June, 1907, and had not become sufficiently initiated to be of any value until the end of 1907.

Acting Chairman COMMONS. So that the beginning of 1908 is the first year of reliable statistics?

Dr. TUTTLE. Reliable statistics at all; and we were not admitted as a registration State until 1909. My records are not recognized until 1909. They were tested by the United States Census Bureau, tested by examining newspaper reports of deaths, and they checked up our records; and in 1909 we were recognized as a registration State. The study of the death certificates is frequently a matter at which you have to guess. Some doctors are not very careful about how they state the cause of death, or just what they state the cause of death to be; others are very careful. A knowledge of the customs of the practices of the individual physicians is necessary to appreciate the value of a death certificate. You get that knowledge by studying the various certificates of different physicians.

Acting Chairman COMMONS. Well, you were the official in charge of these vital statistics during the period of 1908 until what time?

Dr. TUTTLE. December, 1912.

Acting Chairman COMMONS. You are at present there?

Dr. TUTTLE. No; I am not connected with it now.

Acting Chairman COMMONS. Now, in making that study of the physicians' death certificate, did you accept each certificate at its full value, or did you correct it in the way you have just now described?

Dr. TUTTLE. I have never corrected any, although certain were discarded a valueless.

Acting Chairman COMMONS. Certain reports of physicians?

Dr. TUTTLE. Reports of cases of—

Acting Chairman COMMONS. Deaths from tuberculosis you discarded?

Dr. TUTTLE. No; if they would report a case of death from tuberculosis they would not be discarded, but it would be where there was a question of whether it was tuberculosis or not. For instance—

Acting Chairman COMMONS. About how many of those cases which the physicians reported as tuberculosis did you discard?

Dr. TUTTLE. I never discarded any that were reported as tuberculosis.

Acting Chairman COMMONS. Then, I did not get your point on that.

Dr. TUTTLE. If a physician signed a death certificate like this: "Pneumonia has had a cough for five or six years; might be tuberculosis."

Commissioner GARRETSON. Only a diagnosis, unless the diagnosis was positive?

Dr. TUTTLE. Unless it was positive.

Commissioner GARRETSON. You discarded it?

Dr. TUTTLE. Discarded those cases.

Acting Chairman COMMONS. All doubtful cases you discarded?

Dr. TUTTLE. Yes.

Acting Chairman COMMONS. About how many would you say were doubtful what proportion?

Dr. TUTTLE. Oh, I judge the number I discarded was 20 or 30.

Acting Chairman COMMONS. During the entire time?

Dr. TUTTLE. That might have been tuberculosis and might not.

Acting Chairman COMMONS. What is the general conclusion that you reached? Would you state briefly regarding the relative importance of these three factors that have been mentioned, mines, the housing, and the individual matters?

Dr. TUTTLE. It would be hard to say between ill housing and the mines, because they are associated so closely. The mines—undoubtedly the mining occupation furnishes irritation to the lungs. I do not think anybody questions that. The occupation of mining must necessarily furnish a source of irritation to his lungs. You bring that miner out of the mine with his lungs irritated, as it necessarily is, and put him in a house where one has suffered from tuberculosis, and where there is undoubtedly an insufficient amount of air, he is far more apt to contract tuberculosis than is the man who lives—the woman who lives in that house all day, because she has not got this irritated condition in her lungs. The house condition as a direct immediate source of infection, I believe is greater than the mine. Alcohol, I think, bears a strong, a very strong relation to infection with tuberculosis.

I have always believed it, and during the nearly two years I have had charge of the sanitarium I have had it forced home on me stronger than ever before, almost without an exception the miners who have been committed to the sanitarium have been heavy drinkers and are heavy drinkers. The fight against the liquor habit—is the fight we have with them. It is a strong, hard fight for most of them. I say almost without exception—that don't mean without a single exception, there are several of them that have not been heavy drinkers—but the majority of them—several of them have come there almost in D. T's.

Commissioner GARRETSON. One question on your statement there, doctor. Take the condition of the irritation of the lung which you refer to, which breaks down the man's power of resistance and renders him liable to infection, would you from your conclusions tell us what proportion of responsibility for that condition in the case of infection you would place upon the occupation which created the condition of irritation?

Dr. TUTTLE. Oh, I would place a very large per cent of the responsibility on the occupation.

Commissioner GARRETSON. Because if he was following a pursuit where that irritation did not take place he would have more power of resistance, the same power of resistance as the housewife.

Dr. TUTTLE. Oh, yes. A man working in marble dust gets the same irritation of his lung. He may work there in the marble dust day in and day out and he would not get tuberculosis unless he got around where the bug was.

Commissioner GARRETSON. How about a thrasher man?

Dr. TUTTLE. Not to the same extent because the dust of the thrasher does not keep up so long.

Commissioner GARRETTSON. It is only for short periods, anyhow?

Dr. TUTTLE. I have never known it before. It is news to me that syphilis is a source of tuberculosis. I always thought that they were an entirely different species of bug that caused the two diseases.

I wish to state in connection with this map work, the Maltese cross has been mentioned, the Maltese cross just struck me on the map as a peculiar thing. These deaths seem to have occurred in an area that mapped itself out in a Maltese cross. They were in the older parts of the city and the means of disinfecting the houses in which people lived was brought to me so forcibly, that these infections take place in those houses, or else they go back there, and that tuberculosis is a disease that needs disinfection as much as scarlet fever or smallpox—more so than smallpox, because you can vaccinate, and a man who is vaccinated don't have to have smallpox, but you can not vaccinate against tuberculosis.

Commissioner LENNON. Doctor, would you say whether there was more than one death from tuberculosis, indicated by the returns, in the same house?

Dr. TUTTLE. Yes.

Commissioner LENNON. Were there periods, say, one death perhaps in 1908, and then a period of several years elapse before another death would occur?

Dr. TUTTLE. That I do not recall.

Commissioner LENNON. You do not recall that?

Dr. TUTTLE. Take a boarding house, you know—

Commissioner LENNON. Yes.

Dr. TUTTLE. And they have a number of deaths, the majority of them would go to the hospital and die, but they come from that boarding house, that same boarding house.

Commissioner LENNON. You did not investigate as to whether they were occupants of the same room, or anything of that kind?

Dr. TUTTLE. Yes; we did. We find one or two instances where we could follow it back where we found two or three deaths had come from the same house. And we have had the physician that was doing the surface work inquire as to whether these men occupied the same room. And in one or two instances we found they had occupied the same room. I found that with patients at the sanitarium that have occupied the same room, the man who had died of tuberculosis a short time before.

Commissioner GARRETTSON. One other question: Doctor, medical experts always dodge hypothetical questions when they are on the witness stand, as a rule. I want to put one, but I am not going to make it 1,800 words long. If the death rate among men in a certain locality, the men of the family, or the men who reside there was heavy, and the death rate of the family was low, what would that demonstrate?

Dr. TUTTLE. Well, it would demonstrate one of two things.

Commissioner GARRETTSON. In a general way.

Dr. TUTTLE. Possibly some of both. That a man's occupation was an occupation that predisposed him to tuberculosis, and that the man, as is a well-known fact, is also a heavier drinker than the woman, might be a good deal in that, he has helped that depressing effect by overdrinking.

Commissioner GARRETTSON. On the other hand, if the conditions were—what would it prove in regard to the difference, only that it was insanitary to a degree that overcame low resistance and not high; would that be?

Dr. TUTTLE. That would be a fair proposition.

Commissioner GARRETTSON. A fair way of stating it?

Dr. TUTTLE. Yes.

Commissioner GARRETTSON. If the reverse was true and the death rate was low among the men or high among the family, then wouldn't it prove that the insanitary conditions was the primal matter?

Dr. TUTTLE. Insanitary condition would be the sole matter?

Commissioner GARRETTSON. Yes; I put it as first. That is all.

Commissioner LENNON. Doctor, is it true or not that men in this county exceed in numbers the women to a greater extent than in most counties throughout the United States?

Dr. TUTTLE. That would be just a guess. The same question prevails in the State in regard to these figures.

Commissioner LENNON. I asked the question—

Dr. TUTTLE. Because I do not know how many Irish live here or how many Jews or how many something else.

Commissioner LENNON. I asked the question for the reason that in one of the papers I have seen here I see the number of registered voters given as something less than 18,000. I do not know whether the statement is right or wrong. If that is true, that is an extraordinary number of registered voters for a city of this size. I know no cities in the East that do have that number of registered voters for a city of seventy-five or eighty thousand.

Dr. TUTTLE. I think there is a fair basis to judge that, sir. You take the number of deaths in a locality as an index. You find as many deaths among women as you find among men, and there is something radically wrong for the deaths among women, for there are a good many more men than there are women. And our death records, though I haven't studied them completely, it is in evidence from these reports than we have more men than women in Montana, very decidedly more.

Acting Chairman COMMONS. That is all, Doctor.

TESTIMONY OF MR. M. McCUSKER—Recalled.

Mr. McCUSKER. May I present an exhibit for the commission? It is an exhibit, a comparison here, or correction of the State reports in regard to the actual facts as they exist upon the death records in the city. I wish merely to submit it for what it is.

Acting Chairman COMMONS. What does it show in general?

Mr. McCUSKER. It shows that the State records, so far as tuberculosis and deaths from all causes are concerned, are glaringly inaccurate in comparison to the records on file in the board of health office in Silver Bow County.

Acting Chairman COMMONS. I suppose as far as you and Dr. Tuttle are concerned, both of you have had the original death certificates, so that there is no disagreement.

Mr. McCUSKER. I know I have used a copy filed in this county. The original goes to Helena.

Acting Chairman COMMONS. He used the original at Helena, and you have used the copy in this county?

Mr. McCUSKER. I do not know what he used, but I know I used a copy.

Acting Chairman COMMONS. He says he used the original death certificates at Helena.

Mr. McCUSKER. Where is Dr. Tuttle? Did you have the originals?

Dr. TUTTLE. The originals.

Mr. McCUSKER. Did you take them?

Dr. TUTTLE. I have charge of the health department, and I took the original certificates; had them right in my hand.

Acting Chairman COMMONS. And he took it from the original and you took it from the copy. Is that a carbon copy?

Mr. McCUSKER. Carbon copy.

Acting Chairman COMMONS. Did the physician making out the report include the carbon and send one to the office at Helena and one to the office here?

Mr. McCUSKER. I do not know what their system is, but the original copy that was made in connection with the carbon on file here was sent to the office at Helena.

Acting Chairman COMMONS. Presumably they are identical?

Mr. McCUSKER. They are identical.

Commissioner O'CONNELL. In these figures showing the death rate of the various nationalities have you any basis, or did you make any investigation in gathering information—have you a basis as to the total rate per thousand in the nationality so that they could be compared? Unless we have something of that kind, such statistics are absolutely useless.

Mr. McCUSKER. Regarding how many there are here?

Commissioner O'CONNELL. Yes. For instance, how many Irish have you per thousand, how many Germans per thousand, or any per thousand?

Mr. McCUSKER. I have the total here, as near as can be covered. We have 75 per cent English-speaking miners, and I might be able to say that there was 84 per cent of English-speaking deaths among those and 75 or 76 of the—

Commissioner O'CONNELL. How much more of a per cent of English-speaking people are there in your figures than non-English-speaking?

Mr. McCUSKER. I just said there was 75 per cent of the English-speaking people in the district, and 84 per cent of the tubercular deaths of the English-speaking people in the district shown upon the table there.

With regard to the registration figures, you will notice the registration is in the school election, and the women participate.

Commissioner LENNON. It showed the number of women comparatively small.

Dr. TUTTLE. I wish to state with regard to the original death certificates, that the law upon this in this State is: The undertaker secures the family history of the deceased, and he takes that death certificate to the physician who fills in the cause of death, and there is no carbon copy made.

Acting Chairman COMMONS. No carbon copy?

Commissioner GARRETSON. Is the original death certificate on file here, or where?

Dr. TUTTLE. At the State board of health in Helena.

Commissioner GARRETSON. The certificates themselves?

Dr. TUTTLE. The original certificate signed by the physician and by the undertaker is on file in Helena. Miss Curtis has the charge here, and she can tell you how the records are kept.

Acting Chairman COMMONS. Is Miss Curtis here?

Miss CURTIS. Dr. Horst is here, and he can give you that information.

TESTIMONY OF DR. C. H. HORST.

Acting Chairman COMMONS. What is your position?

Dr. HORST. I am city health officer.

Acting Chairman COMMONS. How long have you been city health officer?

Dr. HORST. About four years.

Acting Chairman COMMONS. Are you in charge of the vital statistics?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. Registration?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. Is it done by you or by some one under your direction?

Dr. HORST. Done by my clerk.

Acting Chairman COMMONS. Who is your clerk?

Dr. HORST. Miss Curtis.

Acting Chairman COMMONS. Does she report to you?

Dr. HORST. Well, the work is done under my direction.

Acting Chairman COMMONS. You examine the certificates?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. Will you explain your system?

Dr. HORST. The death certificates are turned into the health office, as Dr. Tuttle just reported.

Acting Chairman COMMONS. To your health office?

Dr. HORST. Yes, sir. And then we issue a burial permit for the body, and then we make a typewritten copy of the death certificate and file it in our office. Those are the death certificates that Mr. McCusker examined.

Acting Chairman COMMONS. Then he was incorrect in saying that it was a carbon copy?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. It is a typewritten copy?

Dr. HORST. It is a typewritten copy made by the clerk at the health office.

Commissioner GARRETSON. And the certificate then is finally sent to the State board of health?

Dr. HORST. Yes.

Acting Chairman COMMONS. How long have you kept these typewritten copies?

Dr. HORST. Well, I have been here for, as I said, about four years, and during that entire time it has been kept in that way. Our records are from 1907.

Acting Chairman COMMONS. From 1907?

Dr. HORST. Yes.

Commissioner GARRETSON. Had Silver Bow County required these certificates prior to the enactment of the later law?

Dr. HORST. Well, with regard to the law, sir, I am not familiar with it, how long it has been in force, but this I do know.

Commissioner GARRETSON. Either the registration law or—that dates from 1908, doesn't it?

Dr. HORST. 1908.

Dr. TUTTLE. 1907.

Commissioner GARRETSON. 1907. When did it become effective?

Dr. HORST. It became effective immediately, but was not in operation to any degree until about the beginning of 1908. We were not admitted as a registered State, our records were not recognized, until 1909.

Commissioner GARRETSON. That is where the discrepancy comes in in that testimony. You have no personal knowledge of how complete it was in 1907?

Dr. HORST. No, sir.

Acting Chairman COMMONS. Dr. Horst, have you given particular attention to this subject?

Dr. HORST. Beg pardon. I want to get my notes. With regard to the records of our deaths, we have also a large book, and we keep a typewritten copy of each death certificate. That is on a yellow piece of paper. Then besides that we register each death, and we have a very large volume which gives the details of that which is found in the death certificate.

Commissioner GARRETSON. Does the column book vary with the details in the certificate?

Dr. HORST. The first book—no, sir; not entirely; but the last book we have made, the one we have been using for about six months, agrees in every detail with the death certificate.

Acting Chairman COMMONS. Dr. Horst, has this city of Butte a municipal regulation regarding houses, housing, cleanliness, and sanitation of houses?

Dr. HORST. No, sir.

Acting Chairman COMMONS. There are no municipal regulations?

Dr. HORST. No.

Acting Chairman COMMONS. What regulations govern housing conditions?

Dr. HORST. Well, if there are no regulations, we have no regulations regarding the housing—you mean in private dwellings?

Acting Chairman COMMONS. Yes; in private dwellings. There are no regulations?

Dr. HORST. No, sir.

Commissioner LENNON. Have you no power of abatement of a nuisance in a private dwelling?

Dr. HORST. Yes; if it was a nuisance, we have power to go and investigate it and to compel the people to arrest this. For instance, if a man is putting up a building we have no jurisdiction; we assume that they will put it up in a sanitary manner.

Acting Chairman COMMONS. The building permit does not require any supervision by you?

Dr. HORST. No, sir.

Commissioner GARRETSON. Can you declare a nuisance, or is a nuisance established by an action at law?

Dr. HORST. We can declare a nuisance; we have that power.

Acting Chairman COMMONS. What action have you taken in this city toward remedying the housing conditions with reference to abating such things as would come under the head of consumption, the predisposition to consumption?

Dr. HORST. Well, we have taken these measures: We have cleaned the alleys and we have installed garbage cans; we have made the people clean their cess-pools; we have made the citizens connect the sewers wherever we could. There were certain people who were so poor that we have allowed them time on it. We have made a great many people that had large buildings improve their plumbing. We have kept as strict a quarantine on houses as possible. We have lately had the doctors report in to us the number of cases of tuberculosis that were living, and in turn have given those to the visiting nurse, who is visiting the homes for tuberculosis. In these cases where people have desired it, we have fumigated the room where people have died.

Commissioner LENNON. Suppose a case of escaping sewer gas is reported to you, can you compel either the evacuation of the house so far as the tenants or concerned or compel the correction of the evil; can you force that?

Dr. HORST. Yes, sir; we can force that.

Commissioner LENNON. Well, who would you serve the process on, the tenant or the owner of the house?

Dr. HORST. The landlord.

Commissioner GARRETSON. Have you any regulations in regard to overcrowding in the matter of lodgings principally?

Dr. HORST. Yes; we have in lodging houses, that each individual person shall have 800 cubic feet of air.

Commissioner GARRETSON. You can do away with the overlodging?

Dr. HORST. Yes, sir; we can; but we have not made any great effort to do that; most of our efforts in the health office so far have been cleaning the city. Acting Chairman COMMONS. Does your jurisdiction extend underground to the workings in the mines?

Dr. HORST. Well, I don't know. We never have attempted to exert the influence. Most of the mines here are in the county.

Acting Chairman COMMONS. Not in the city?

Dr. HORST. Yes, sir; not in the city.

Acting Chairman COMMONS. What mines are in the city?

Dr. HORST. Well, the Davis-Daly is in the city, but I don't remember any other mines. I don't remember any other mines in the city.

Mr. EVANS. The Original?

Dr. HORST. Yes, sir; the Original.

Acting Chairman COMMONS. Have you ever taken up with any of the officers of the company—

Dr. HORST. No, sir.

Acting Chairman COMMONS (continuing). The question of ventilation or improvement of mine conditions?

Dr. HORST. No, sir.

Acting Chairman COMMONS. With reference to this subject?

Dr. HORST. No, sir.

Commissioner O'CONNELL. How much of a force do you have in your office?

Dr. HORST. I have eight men.

Commissioner O'CONNELL. Eight men?

Dr. HORST. Eight persons; yes.

Commissioner O'CONNELL. They go around inspecting food and different things?

Dr. HORST. Yes, sir; we have two food inspectors.

Commissioner O'CONNELL. Two food inspectors?

Dr. HORST. Two food inspectors; yes. We have two sanitary inspectors—three sanitary inspectors.

Commissioner O'CONNELL. Where do the food inspectors operate?

Dr. HORST. They operate in the city.

Commissioner O'CONNELL. I know; but what I mean is at the stores?

Dr. HORST. They operate everywhere foodstuff is sold, sir.

Commissioner O'CONNELL. Only where it is sold?

Dr. HORST. They operate in the restaurants and in the produce stores and in the butter shops.

Commissioner O'CONNELL. They operate only where it is sold; for instance they don't go, after it is sold, to the houses or hospitals or restaurants?

Dr. HORST. Yes, sir; our milk inspector goes to the restaurants, and we also have inspections of the ice boxes in the restaurants and in the hotels.

Commissioner O'CONNELL. Have you a standard requirement as to the conditions under which a restaurant shall operate?

Dr. HORST. Yes, sir; that is a State—

Commissioner O'CONNELL. The kitchens and hotels and so on?

Dr. HORST. Yes, sir; that is a State law.

Commissioner O'CONNELL. Those are all investigated and given certificates of cleanliness and health?

Dr. HORST. Yes, sir.

Commissioner O'CONNELL. Those certificates are published, they are given a certificate, and is it put up or anything?

Dr. HORST. Well, I think this week in the Socialist will be the first time we have published it.

Commissioner O'CONNELL. This week what?

Dr. HORST. This week it will be published for the first time in the Socialist; that is, in the city. But the State Bulletin published in Helena also gives the results of examinations of butters and of milk and of various things.

Commissioner O'CONNELL. Is there a requirement that it shall be published by law?

Dr. HORST. Not that I know of, sir.

Commissioner O'CONNELL. And why is it being published, for instance, in the Socialist? Why not in the Socialist and some other paper?

Dr. HORST. Well, it is not published in the Standard. It is not published in the Standard because when the first reports came from a study of our milk,

I took them to the Standard office for the purpose of having them published, and it was refused, so I gave it up.

Commissioner O'CONNELL. It is being published gratuitously in the Socialist, is it?

Dr. HORST. Yes, sir.

Commissioner GARRETSON. Was it considered a reflection on local methods, the reason given as the refusal to publish?

Dr. HORST. They gave no reason, sir.

Commissioner GARRETSON. Just refused?

Dr. HORST. They said they would not publish; yes, sir.

Commissioner O'CONNELL. Well, were you prepared to pay for its publication?

Dr. HORST. No; we were not.

Commissioner O'CONNELL. Or did you ask them to publish it as a matter of news?

Dr. HORST. I wanted it put in so that it would help the standard of our milk. I wanted it put in so that all of us who drink milk would know what we were drinking.

Commissioner O'CONNELL. The papers would not cooperate with your department?

Dr. HORST. Well, I don't know, sir. I would not give any reason what they had for not wanting to publish it. So I let it drop.

Commissioner GARRETSON. Was it presented to the other papers?

Dr. HORST. I did not present it to the Miner, but I did take it over to the Standard.

Acting Chairman COMMONS. Does the city have a hospital service?

Dr. HORST. It has a small hospital called the Emergency Hospital.

Acting Chairman COMMONS. Do you have supervision over the hospitals?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. In the city?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. Are cases of consumption, tuberculosis, admitted to the hospital?

Dr. HORST. No, sir. The Emergency Hospital, sir, is used—consists of but a few rooms, is situated over the jail; and it is intended to take care of people just over night. Occasionally we have people who come there who are seriously injured and who can not be moved for a week or 10 days, but it is merely a first-aid hospital.

Commissioner LENNON. Well, have you charge of the other hospitals—inspection and direction of the other hospitals?

Dr. HORST. Well, we—I think that our ordinance would allow us of that, but we have not made any attempt to inspect them.

Commissioner O'CONNELL. Does your inspection lead you to barber shops?

Dr. HORST. No, sir.

Commissioner O'CONNELL. Is there any requirement about barber shops sterilizing their instruments and furnishing clean towels and all that sort of thing?

Dr. HORST. No, sir.

Commissioner O'CONNELL. The prices would indicate here that they ought to be able to furnish them. I don't know whether they do. But you have no investigation of the barber shops at all?

Dr. HORST. No, sir.

Acting Chairman COMMONS. That is all, Dr. Horst.

Dr. HORST. Well, I would like to state to the commission here why I think the miners die of consumption.

Commissioner O'CONNELL. Why the miners die of consumption?

Dr. HORST. Yes, sir.

Acting Chairman COMMONS. What is your idea?

Dr. HORST. Now, it is my opinion that the miners die of consumption because of the dollar contract system that exists in this town. Everybody—

Commissioner O'CONNELL. The dollar contract system?

Dr. HORST. Yes, sir.

Commissioner O'CONNELL. You mean this paying \$1 a month to the hospital?

Dr. HORST. Yes, sir. Everybody recognizes that in order to cure any malignant disease, whether it is tuberculosis or cancer, that it has to be recognized in its incipency. If you allow it to develop so that any layman can tell that a miner is dying of consumption, then by sending him to the Montana Tuberculosis Sanatorium you send him down there to die, which he probably does.

Now, this dollar contract system takes these miners' dollars, and they, when these miners go to them for treatment, if they have tuberculosis they get no treatment. They are allowed to go back in the mine and work until the disease stops them from working. That is when they stop working—when the disease stops them; when they are unable to work any longer.

Now, I hold that if the contract miner—the mining doctors would do their duty, that each and every miner should be examined three or four times each year, and that those miners who came down there who had incipient tuberculosis would then be either discharged from service or taken care of properly in a sanitarium until such time as their lungs healed.

If any of you gentlemen would go to the mine doctor and he told you that you were coming down with incipient tuberculosis, and the best thing you could do would be to go down to work in the mine until you died off, you would not think it was very good advice. But that is practically what these fellows are doing. They are taking these miners' dollars and these miners are developing tuberculosis; but instead of trying to help them and cure them, they are sending them down in the mines to stay until such time as the tuberculosis kills them, and then they bury them. But they keep on collecting the dollars just the same.

Commissioner GARRETSON. They don't give them more than the dollar's worth?

Dr. HORST. What is that?

Commissioner GARRETSON. They don't give them more than the dollar's worth in return, is that it?

Dr. HORST. Well, if a man takes—if a man takes a dollar from the miners and contracts to take care of them for their physical ailments, he should take care of them for tuberculosis.

Commissioner GARRETSON. You and I won't disagree on that.

Dr. HORST. Well, so it comes to pass that this is what is the truth, that about 90 per cent of all of us here in this room have got lesions of tuberculosis in our lungs. Now, these lesions may be healed or they may be unhealed, or they may—some of us might have the disease well developed. Now, if we go in the mine and we inhale this dust and we inhale this air—which no person on earth, no matter who he is, could expect would be as good as it is on top—it will start up an irritation in that lung. Now, if this process is in an unhealthy state, this irritating dust will cause extra irritation there, and soon this man will be developing tuberculosis. If he has a healed process of tuberculosis, then the irritating dust can develop tuberculosis. There are many miners here who have worked 25 or 30 years and they haven't got it, and that is the way I would explain that.

Now, about these housewives, and this thing of people contracting the disease in their own homes, that is about the most absurd thing I have ever heard anybody talk about.

From May 1, 1913, to May 1, 1914, I have collected the number of people who died of pulmonary tuberculosis in Silver Bow County. There were a total of 152 patients died of pulmonary tuberculosis in our city, 147 males and 5 females, and 118 of these males were miners, and 34 of the males were some other occupation. Now I will have you gentlemen understand that many miners after being miners, when the disease gets more or less developed, or before it is fully developed, would take up the occupation of janitor or teamster or farmer.

Commissioner GARRETSON. Surface pursuits.

Dr. HORST. Yes, sir; and that is what pretty nearly these whole 34 are, they are ex-miners. Now, just remember of that number, the terrible home conditions killed off 5 females and 147 males. I don't think there is any question to it, and it is agreed by all medical authorities that in order to cure tuberculosis or any other malignant disease, it must be taken at the beginning and treated then; and no miner, no matter whether Irish or German or Finlander, can ever expect to go with the disease down in the mine and come out anything but worse. That is why miners die of tuberculosis.

Acting Chairman COMMONS. Who has charge of the hospital?

Dr. HORST. One hospital, the St. James Hospital—

Acting Chairman COMMONS. Who is in charge?

Dr. HORST. The charge of that is by the Sisters of Charity. The other one, the Murray Hospital, is presided over presumably by Dr. Murray.

Acting Chairman COMMONS. Is Dr. Murray here?

Dr. HORST. Yes, sir; he sits here to my left.

Acting Chairman COMMONS. Then we will listen to Dr. Murray.
 Commissioner GARRETTSON. Let me ask the gentleman one question. Can you give us from vital statistics the proportion of men and women that die of tuberculosis the country over?

Dr. HORST. No, sir.

Commissioner GARRETTSON. You can't tell the proportion?

Dr. HORST. No, sir.

Commissioner GARRETTSON. That is all.

Acting Chairman COMMONS. Dr. Murray.

TESTIMONY OF DR. T. J. MURRAY.

Acting Chairman COMMONS. Give the reporter your name, please, and address.
 Dr. MURRAY. T. J. Murray, Butte, Mont.

Acting Chairman COMMONS. You have charge of what hospital?

Dr. MURRAY. I have charge of my hospital.

Acting Chairman COMMONS. How long have you had charge?

Dr. MURRAY. I started to build the hospital in 1890, and I have had charge of it ever since.

Acting Chairman COMMONS. What is the form of the contract referred to, this one-dollar contract it is called?

Dr. MURRAY. We haven't any real contract.

Acting Chairman COMMONS. What is the proposition?

Dr. MURRAY. We make the proposition to the mine if they will collect \$1 a month for each man that is working there, we will treat them for all diseases not arising from immoral habits or contagious diseases while in the employ of the company.

Acting Chairman COMMONS. This proposition, then, is made with whom?

Dr. MURRAY. Made to the mine.

Acting Chairman COMMONS. To the miners?

Dr. MURRAY. To the mine.

Acting Chairman COMMONS. The miners' union?

Dr. MURRAY. To the mine owners and railroads.

Acting Chairman COMMONS. They collect the dollar from the wages, then?

Dr. MURRAY. Yes, sir.

Acting Chairman COMMONS. And pay it to you?

Dr. MURRAY. Yes, sir.

Acting Chairman COMMONS. How much do you receive a month in that way?

Dr. MURRAY. Well, it varies very much; it is altogether owing to how the mine is working.

Acting Chairman COMMONS. Well, just give an example.

Dr. MURRAY. If they are working along, it has run up as much as \$3,000 a month.

Acting Chairman COMMONS. That is the highest; and what is the lowest?

Dr. MURRAY. It runs down to \$100 a month, and sometimes even less than that.

Acting Chairman COMMONS. During the past year?

Dr. MURRAY. The past year?

Acting Chairman COMMONS. Yes.

Dr. MURRAY. It has run from six to eight thousand dollars.

Acting Chairman COMMONS. Do you treat these miners for consumption?

Dr. MURRAY. No, sir; we do not. That is a contagious disease and we exclude it from our proposition. We treat them—if a man comes in with lung trouble, we make as thorough an examination as he will allow, a thorough, careful physical examination.

Acting Chairman COMMONS. Then, as far as this contract is concerned, it does not cover consumption?

Dr. MURRAY. It does not cover consumption.

Acting Chairman COMMONS. So that when a man comes in and you ascertain it is consumption, what is your next step that you take?

Dr. MURRAY. If he has consumption, we recommend to him that he has consumption and tell him what he ought to do and persuade him to quit his work in the mine and go to the country if he can, and tell him just as much about consumption that we know.

Acting Chairman COMMONS. Do you keep a record of the number of cases which have come to you which you have diagnosed as consumption?

Dr. MURRAY. Yes, sir; we have a record.

- Acting Chairman COMMONS. Can you furnish us that record?
- Dr. MURRAY. We have it all in the book. There is a record of it, but it would take a good deal of time to compile it.
- Acting Chairman COMMONS. Take the last year, for example.
- Dr. MURRAY. It would probably take 10 days' work to get it up.
- Acting Chairman COMMONS. How many new cases apply each year?
- Dr. MURRAY. I can't tell that.
- Acting Chairman COMMONS. Of all cases.
- Dr. MURRAY. When a patient comes to our hospital, we take his name and address and then we make the diagnosis and put that on, tell what has been done with him, and follow the record, and keep a record of all of that, and it is on our books.
- Acting Chairman COMMONS. Do you make a report to any State authority?
- Dr. MURRAY. Do we make a report to any State authority? No, sir; not any more than is required in the way of certificates—death certificates.
- Acting Chairman COMMONS. Do you publish an annual report?
- Dr. MURRAY. We don't publish an annual report; no, sir.
- Acting Chairman COMMONS. You publish no report?
- Dr. MURRAY. No, sir.
- Acting Chairman COMMONS. You have never considered it necessary to make a report of the total operations?
- Dr. MURRAY. Yes, sir; I consider it necessary to make these reports. It would be necessary to keep a more complete record and make bigger reports and get them up, but it costs a great deal and adds expense to us, and we have taken the attitude that if anybody wants the data to use we are willing to give it to them.
- Acting Chairman COMMONS. When the case comes in and you fill out the report, do you have it on file?
- Dr. MURRAY. That is our record.
- Acting Chairman COMMONS. But you have not made any statistical summary?
- Dr. MURRAY. No, sir; I haven't.
- Acting Chairman COMMONS. You think it would take considerable time?
- Dr. MURRAY. It would take time.
- Acting Chairman COMMONS. Would you permit the commission to do it?
- Dr. MURRAY. Yes, sir; certainly.
- Acting Chairman COMMONS. Any questions?
- Commissioner GARRETSON. Doctor, how many cases do you average in the hospital? What is your current number of patients?
- Dr. MURRAY. We usually run about between 56 and 60 a day per year.
- Commissioner GARRETSON. Inmates or visitors?
- Dr. MURRAY. You mean—
- Commissioner GARRETSON (interrupting). Are those all inmates of the hospital?
- Dr. MURRAY. They are patients.
- Commissioner GARRETSON. What part of them come there daily?
- Dr. MURRAY. These are patients in the hospital.
- Commissioner GARRETSON. They are in the hospital?
- Dr. MURRAY. Yes, sir.
- Commissioner GARRETSON. In addition to that, how many apply for treatment that do not enter the hospital?
- Dr. MURRAY. There are patients we visit on the outside and patients we see at the hospital for dressing and treatment and prescriptions, they will run from 75 to 100 a day.
- Commissioner GARRETSON. The \$8,000. We will take an average, we will take the lower maximum you gave, \$6,000 a month. That represents the contributions of 6,000 men?
- Dr. MURRAY. Yes, sir.
- Commissioner GARRETSON. Each month what proportion of those 6,000 men or their families receive treatment in any form whatever?
- Dr. MURRAY. We don't treat the family.
- Commissioner GARRETSON. You don't treat the family?
- Dr. MURRAY. No, sir.
- Commissioner GARRETSON. Nothing but the individual?
- Dr. MURRAY. Yes, sir.
- Commissioner GARRETSON. What proportion of those 6,000 men present themselves in the ordinary month?
- Dr. MURRAY. Well, as I told you, we have about 25—we have from 56 to 60 patients in the hospital a day, part of them are private patients and not in the

mining business at all. Then we would run probably 25 or 30 in the hospital from fractures and injuries a day, and then we will treat, we will dress and visit probably 75 to 100 outside and in the hospital.

Commissioner GARRETSON. A very large proportion of the men that make the payment never avail themselves of your services except in cases of accident?

Dr. MURRAY. Quite a number; yes, sir. It is not necessary, because they are not sick or injured.

Commissioner GARRETSON. Oh, no; I realize that they wouldn't come to you just to get something for their money.

Dr. MURRAY. Certainly.

Commissioner GARRETSON. Unless he complained of something. They are not like a negro I know that bought accident insurance, and he would not have it any more because he had paid seven years and never got anything. I suppose you have men who have paid year after year and never got anything?

Dr. MURRAY. Yes, sir; we have men that send their boys to the hospital to get castor oil to grease the machine.

Commissioner GARRETSON. Have you any idea of the proportion of men who pay the hospital fee who never present themselves?

Dr. MURRAY. No, sir; I could not tell that.

Commissioner GARRETSON. You have no data that would show that?

Dr. MURRAY. No, sir.

Acting Chairman COMMONS. Any other questions?

Dr. MURRAY. Now, I would like to say this much, that these men, a great many of these men that go to their homes, and our doctors visit them at the home and treat them for the tuberculosis, but not in the hospital.

It is a contagious disease, and we feel to have them in the hospital would affect our surgical cases and affect other people, and we think it is dangerous, and we won't take them in.

Acting Chairman COMMONS. Your practice is to treat the man at the home?

Dr. MURRAY. Oh, yes; we treat them at the home.

Acting Chairman COMMONS. All cases of tuberculosis are treated at the home?

Dr. MURRAY. Yes, sir; we make this agreement, but we do treat them at the home, and we treat a great many others at the home, but not in the hospital where it would endanger the people in the hospital.

Acting Chairman COMMONS. I think that covers the ground. Much obliged to you.

Joe Shannon. Is Mr. Shannon here?

Mr. EVANS. Mr. Mathewson sent up this statement that you asked for yesterday.

Acting Chairman COMMONS. Here is an exhibit submitted by Mr. Mathewson.¹

TESTIMONY OF MR. JOE SHANNON.

Acting Chairman COMMONS. Give your name to the reporter.

Mr. SHANNON. Joe Shannon.

Acting Chairman COMMONS. And your residence?

Mr. SHANNON. Butte, Mont.

Acting Chairman COMMONS. Your street address?

Mr. SHANNON. 1117 Maryland Avenue.

Acting Chairman COMMONS. Are you employed at the mines in Butte?

Mr. SHANNON. Yes, sir.

Acting Chairman COMMONS. What is your occupation?

Mr. SHANNON. I have been following mining.

Acting Chairman COMMONS. How many years have you been employed?

Mr. SHANNON. About 17 or 18, not all the time. There was a part of the time they thought my health was bad, and they gave me a rest.

Acting Chairman COMMONS. You are working now?

Mr. SHANNON. Yes, sir.

Acting Chairman COMMONS. You heard the testimony of Mr. Shovlin here, who was a witness yesterday. Did you hear that testimony?

Mr. SHANNON. No, sir; I did not.

Acting Chairman COMMONS. Did you hear the testimony of Mr. Sullivan?

Mr. SHANNON. No, sir.

Acting Chairman COMMONS. Will you state your idea of the causes that led up to the recent disagreement within the Butte Miners' Union?

Mr. SHANNON. Well, the causes that led up to that, I would have to go back quite a little ways and trace the various events up to the present time.

¹ Exhibit not transmitted with testimony.

Acting Chairman COMMONS. Well, take the first cause that led up to it.

Mr. SHANNON. About the first cause that I would consider that led up to that had its inception in—what transpired here last month or the month before—was after the Amalgamated got into control here in Butte.

Acting Chairman COMMONS. I didn't get that.

Mr. SHANNON. After the Amalgamated came into Butte?

Acting Chairman COMMONS. Yes.

Mr. SHANNON. That was in 1898.

Acting Chairman COMMONS. What do you consider the first cause?

Mr. SHANNON. The first fight we had with them was for the eight-hour law, that was in 1900. They put up a pretty vigorous fight against the miners here trying to get the eight hours. There were one or two companies here that gave the eight hours, and we appointed a joint committee from the smelters' union and the miners' union to see what we could do with the Amalgamated Copper Co., and one of the men that was on the committee was working for the Amalgamated Copper Co., and we sent them up to interview the powers that be on the hill, and they were told promptly they would never get eight hours, and this man that was working for the company got fired, and he was told he would never get a job on the hill again, which he never did. We then had an election in 1900, and the legislature that was elected—the members of the legislature, of which there were 12 from Silver Bow County, that were elected, were pledged to support the eight-hour day for the miners and smelters, which they did in the face of tremendous temptation in the way of bribes over there at the legislature. The eight-hour day then went into effect, and we had to send out circulars all over the country in 1901, right after the bill became a law, notifying organized labor throughout the country to post circulars to state that there was no man wanted in this county because it was overrun with idle men. They started to bring in men, and advertised for idle men to come in. At that time the union had to issue circulars notifying outside organized labor to keep men from coming in here. The bill went into effect in May, 1901, and the Amalgamated Copper Co. didn't give the eight hours for five years later. It has been stated here that they gave it in 1901, but I don't know whether it was a slip of the mind or what it was, but it was not a fact, they didn't enjoy the eight-hour day until 1906, in May, then they were forced to give it.

Acting Chairman COMMONS. What was the next instance?

Mr. SHANNON. The next instance after that was they induced the miners' union to buy 500 shares of stock of the Amalgamated Copper Co. to boost the stock and bear this market.

Acting Chairman COMMONS. Yes. What was the next instance?

Mr. SHANNON. They came pretty nearly that time dividing the union and busting it up.

Commissioner GARRETTSON. Did the union buy it as a union, or the individual members?

Mr. SHANNON. They bought it as a union, bought it out of the union treasury. They rushed the hall full of some of their ardent supporters and put it over.

Commissioner O'CONNELL. You say for the purpose of boosting the stock?

Mr. SHANNON. Yes, sir.

Commissioner O'CONNELL. How many shares did they buy?

Mr. SHANNON. Five hundred shares, at \$100 a share, and the stock at that time was worth 110, and the bulletins went up in Berlin and on the Bourse, and the other stock exchanges, and the word went out that the horny-handed sons of toil had bought the stock.

Commissioner O'CONNELL. Five hundred shares?

Mr. SHANNON. Yes, sir.

Commissioner O'CONNELL. Do you know how many shares of stock are dealt in on the New York Exchange?

Mr. SHANNON. I could not tell you anything about it. It was just the bait on the end of the line. I will tell you why. We were guaranteed, but we had to keep the stock for a year, but if the stock went down to \$30 or \$2 we were to receive back our \$100 a share, which we did when it went down.

Commissioner O'CONNELL. You didn't buy the stock outright; who did you buy it from?

Mr. SHANNON. Got it from the Daly Bank; John D. Ryan was president. There was quite a general discussion in the union; it took about four or five meetings to decide this. In the meantime one of the trustees had left town,

and they had to elect another. The meeting was held, and after the meeting adjourned—it was 11.20 or 11.30 when the meeting adjourned—he took the funds out of the union, and they changed the banking system in Butte to accept it at about a quarter to 12. The Daly bank was open when he brought down the money.

Acting Chairman COMMONS. What is the next instance?

Commissioner O'CONNELL. The Amalgamated copper stock on the New York Exchange is a very active stock, one of the most active stocks in the exchange. Some days there are dealt in more than a hundred to two hundred thousand shares that change hands in a day.

Mr. SHANNON. But that would not have the effect on the country that this 500 shares had.

Commissioner O'CONNELL. Probably not.

Acting Chairman COMMONS. What is the next instance you have in mind?

Mr. SHANNON. We then had political conditions right here. They called a session of the legislature to enact what was known to them as the fair-trial bill.

Acting Chairman COMMONS. A what?

Mr. SHANNON. A fair-trial bill?

Acting Chairman COMMONS. Fair trial?

Mr. SHANNON. Yes, sir. They closed the mines down. First they gave a barbeque and fed all the miners up, and the next day they shut the mines down. So then after the mines were shut down they had a meeting of the miners' union, and they called on the hill at headquarters from the union. They were the whippers of all the unions in the State. The big union had to whip all the other unions into line. They appealed to the governor to have a special session of the legislature to pass this bill. It cost the State something like twelve or thirteen thousand dollars in the extra session, and at the next general session they wanted it repealed, this fair-trial bill. That caused dissension in the ranks of the miners' union, and all of those things started to widen the breach. It didn't heal it by any means, and it kept coming along down the line until they asked for a raise of wages in 1907. We asked for the raise of wages in 1906 and they gave a voluntary raise of two bits before we asked for the four bits. We then asked for the raise of 50 cents a day, and it was refused.

The next thing there was an amendment offered to our constitution and by-laws asking for this, and at first it was denied, and then they asked for a larger committee that they could do business with; asked for a meeting; it was held. So then it developed that among the things we were going to get was Mr. Ryan, who was the president of the Amalgamated Copper Co., had discovered in looking over the account books or some other things of that kind, that he had about \$5,000,000. The dust was on it, and they didn't know it. It was going to waste, and they thought they would invest it and build homes for the miners if they would sign the contract, so that the real estate sharks would not be getting all of our money for rent. That was one of the inducements, and this \$4 a day, and they got the \$4 from April to November, and that was the only time they enjoyed it for five years.

You must understand also that the miners' union worked for \$3.50 a day for 29 years, and then signed a contract they would work for \$3.50 a day for 5 years more. After working for 29 years without a contract they signed one then they would work for \$3.50 a day.

Acting Chairman COMMONS. What is the next instance?

Mr. SHANNON. Those men who were instrumental in doing this, they went over and bought real estate in Ireland—the most of them, the majority of them did. They went back home and didn't have to stand any of this dust you are hearing so much about.

Acting Chairman COMMONS. What is the next case?

Mr. SHANNON. Well, after that contract expired we had another one for three years, and that is now in vogue, and it will terminate—that is, to those fellows that stand with the union, old No. 1, as they call themselves—next June. By this time the company had complete control of the officers of the union, complete control. The papers used to ridicule any one who would go up to the hall and express an opinion different from those men who the company owned. The papers ridiculed them. Even at the time that they bolted the convention in 1907, the Inter Mountain came out and said they were going to bolt the convention the evening they left. They left Thursday, and the convention was to convene next Monday, and the Inter Mountain had it that they would bolt the convention when it came to order, which they did. They were going according to instructions.

The conditions that exist now and existed when the mines were shallow are entirely different. The mines then were cool. When the men received \$3.50 a day the mines were cool, the ground was cool. As they went down in the sulphide the ground got hotter, and it is now a regular hell hole down to the present time, and they do as much work now in the 8 hours as they did in the 10 hours or more. They are compelled to do it because there is an army of unemployed at the surface waiting to take your place, and you are fired and fired indiscriminately. If you are active in union affairs you are blackballed and blacklisted. I have a card that shows you what they do up at the employment office, it might be good to take just a little look at it. In case you don't tell the truth they will do the next thing to you.

Acting Chairman COMMONS. You file that?

Commissioner GARRETSON. Put that in as an exhibit.¹

Acting Chairman COMMONS. You file that with the commission?

Mr. SHANNON. Certainly.

Commissioner GARRETSON. Do you hold that adage, or is it held to apply to every employee of the Anaconda Co. regardless of whatever position he may occupy?

Mr. SHANNON. In getting the rustling card, that is what it applies to.

Commissioner GARRETSON. In getting the rustling card?

Mr. SHANNON. Yes, sir.

Commissioner GARRETSON. That means only tell the truth in getting the card?

Mr. SHANNON. It does not say. If you tell a lie in favor of the company, it is all right.

Commissioner O'CONNELL. You speak of blacklisting and so on. Can you give us some specific case? Have you been discharged at any time yourself?

Mr. SHANNON. Well, I rustled for work; I could not get it, and I was told the blacklist had been against me.

Commissioner O'CONNELL. Do you work for the company now?

Mr. SHANNON. No, sir; not for that company; I could not.

Commissioner O'CONNELL. How long since you have worked for them?

Mr. SHANNON. Quite a while.

Commissioner O'CONNELL. How long—how many years?

Mr. SHANNON. Probably 12 or 13.

Commissioner O'CONNELL. Have you any specific case of men you know? You yourself have been blacklisted and can't get work?

Mr. SHANNON. Myself.

Commissioner O'CONNELL. Any other cases?

Mr. SHANNON. Several of them; yes, sir; people had to leave here and get out with their families. People from Anaconda came up and could not get work here. They have a system there that they give you a tag; you lose your name. No matter what they christened you, you are given a number. They give you a brass tag and you get a paper tag and go to work with it. If you lose the brass tag, it costs you a dollar. If you come in and there is a blue card hanging up, that means you are discharged and no more work for you. That is the way it has been there, and it is the same way here—the invisible government; the iron hand working all the time.

Commissioner O'CONNELL. If there had been this persistent and consistent discriminating and blacklisting, from the indications we have had, there have been no cases of complaints taken up by the union on this charge with the company?

Mr. SHANNON. If a man robs you and takes your watch, do you suppose you would put him on the stand to be the judge between himself and you?

Commissioner O'CONNELL. I think I would adopt some other method.

Mr. SHANNON. That is what we were trying to do in the union when this fracas came up. That very thing. To better our own conditions. Anything that tended toward it they absolutely put their foot down on it, and they have the support of the press.

Commissioner O'CONNELL. Of the president?

Mr. SHANNON. The press.

Commissioner O'CONNELL. Oh, the press. What I am trying to get at is, with this five or six or seven thousand miners here, if this was going on, and I take it from what you say it was flagrantly and openly going on, what were these five or six thousand miners doing that they didn't compel a sort of stopping and adjustment and standing still of things to see where they were?

Mr. SHANNON. About 300 men would fill the hall.

Commissioner O'CONNELL. Three hundred men would fill the hall?

¹ Exhibit not transmitted with testimony.

Mr. SHANNON. Yes, sir.

Commissioner O'CONNELL. Wasn't there vacant spaces around either in the flat or in places where you could gather them together?

Mr. SHANNON. There is lots of room now, you can gather them altogether now.

Commissioner O'CONNELL. I am talking about the past.

Mr. SHANNON. Exactly, that is what I am talking about. We could not get them to stick. It was an utter impossibility to take these things and get this cosmopolitan union of ours together, but they are more or less together now.

Commissioner GARRETSON. Was there any difference in the question of domination—you stated since the Amalgamated Co. came in certain conditions existed. Is there—is it any easier, so far as domination then is concerned between the time before the Amalgamated Co. came in and the time after, only now there is one master and before that you had a number.

Mr. SHANNON. Well, you had more of an even break before; you had then fellows fighting.

Commissioner GARRETSON. You could play them against each other?

Mr. SHANNON. Exactly; more or less.

Commissioner GARRETSON. Was the object of the men that were in opposition to the union—to make the question clear—a good many men have testified here that if one gang got its election clerks in they won, and if the other gang got their election clerks in they won. That has been testified to a number of times as to the conditions that existed. Did the party that was in opposition desire to get into power to reform things, or to run it themselves?

Mr. SHANNON. Well, the time that the union was in the hands of the union men was about two years at that time. They tried to get some bettermen then, and ran things along what we considered union lines, and we put \$35,000 in the treasury. That is more than was ever put in since or before. It was conducted on businesslike lines.

Commissioner GARRETSON. You really tried—your intention was not to get your election clerks in and run things, but to run them right?

Mr. SHANNON. To run them right, that was our aim. We paid as much sick benefits and death benefits at that time as any other time since or before, for any two years.

Commissioner GARRETSON. And did you do anything more in the way of protecting your membership from unreasonable discharge and the conditions you say you are subject to than you did before?

Mr. SHANNON. At that time? No, sir; we tried to educate them.

Commissioner GARRETSON. You heard the testimony of the president of the United Mine Workers for district 27 this morning?

Mr. SHANNON. Part of it; I could not hear him distinctly.

Commissioner GARRETSON. You heard him outline the method they followed in the protection of the men?

Mr. SHANNON. I am familiar with it.

Commissioner GARRETSON. Do you believe in that method?

Mr. SHANNON. Yes, sir; more or less.

Commissioner GARRETSON. More or less is rather an elastic expression. Do you believe that the mission of the union is to protect their men when they are right?

Mr. SHANNON. That is what the union is supposed to be for.

Commissioner GARRETSON. I haven't heard that declaration. Maybe you have heard that declaration here, but I haven't. That don't seem to have been the mission of this branch of the miners' union here, from what has been testified here.

Mr. SHANNON. The mission of these men here was—we were trying to educate them out of it—but the mission of this bunch here was that they were an asset of the Amalgamated Co.—they took care of the machine. We are trying to teach them a way of getting away from those conditions.

Commissioner GARRETSON. For the good of their soul and body?

Mr. SHANNON. This soul business is a kind of myth with me, more or less.

Commissioner GARRETSON. You look after the body?

Mr. SHANNON. I believe in looking after the body and letting the other fellow take care of the soul after it leaves the body. We have enough to do to take care of the body.

Commissioner O'CONNELL. Is the miners' union, the one you spoke of as supporting those things, is that composed of men exclusively engaged in the mining industry?

Mr. SHANNON. Yes, sir; in and around the mines, the same as the other one was.

Commissioner O'CONNELL. Are there any men holding memberships in this organization who are engaged in any other occupation in the city of Butte?

Mr. SHANNON. In which way?

Commissioner O'CONNELL. Any way—carpenters, street car men, newspaper men, lawyers, doctors, or any others.

Mr. SHANNON. Not that I know of. It only includes those working in and around the mines.

Commissioner O'CONNELL. Are you sure?

Mr. SHANNON. To my certain knowledge there are none that I know of, only those in and around the mines. The statement has been made here—

Commissioner O'CONNELL. I have heard the statement made, is the reason I asked, that it does take in everybody indiscriminately.

Mr. SHANNON. The statement has been made here about copper fluctuating and one thing and another. There was a time in this camp when they sacked the little bits of ore they got and put them on jackasses and walked them down 80 miles until they got to the narrow-gauge railroad, and then put them on the narrow gauge and ran on that until they got to the wide gauge and then went to Galveston and put them aboard sailing vessels and took it to Wales and got 9 cents a pound and paid \$3.50 a day at Butte. That is the condition we are up against here.

And at that time they would have 15 men, or a total of 45 on three furnaces, and others were employed at it. They still can give us a dollar more now; that is, and hold the kite with the tail on the end.

Commissioner GARRETSON. Well, you probably have a different method of figuring the financial value of things than the company has.

Mr. SHANNON. Well, I have mine and they have theirs. There is no identity of interest, you know, between us.

Commissioner GARRETSON. By that you mean that the workman is trying to get for his labor the best he can, and the other side is trying to get labor at the least possible price?

Mr. SHANNON. Yes.

Commissioner GARRETSON. Or reduce it to the lowest, is that what you mean by that?

Mr. SHANNON. That is what I mean all the time.

Commissioner GARRETSON. All right.

Acting Chairman COMMONS. Any other questions?

Mr. SHANNON. Now, there is another question that ought to be brought up here, and that is with regard to the health of the miners. Of course, I am not a physician or a doctor, but I have handled these things that they call the "buxy." They are a nice thing to discuss up here in the Silver Bow Club, where the air is good. They are a one-man drill, and there is a lot of those what we call them fine-day miners that has never taken hold of them.

Commissioner GARRETSON. What do you mean by fine-day miners?

Mr. SHANNON. Those fellows that have got an easy place in the mine, where the air is good, and they always have a good word for the company for giving them the job. But they are not down where the actual work has got to be done or where the heat is intense, where you don't eat anything and where you drink a keg of water and never urinate once in the 24 hours—you sweat it out. They are the places, and you gentlemen ought to take a look at them.

Commissioner O'CONNELL. I think some of us were down last night in the mines; I was down.

Mr. SHANNON. Now, these buxy machines, they grind the dust up extra fine, and it comes out without the old method of clearing itself, and you inhale every bit of that dust as it comes out. The dust settles in your lungs and you can't get away from it. You are right there facing it, and it is pumped into you, the same as the hose turned on you. And the man down below you shoveling, he inhales it just as bad as you.

Commissioner O'CONNELL. And those jobs appear to go to the men that are not inclined to be company men, as you state it?

Mr. SHANNON. The good, robust fellows, you know.

Commissioner O'CONNELL. Strong men?

Mr. SHANNON. Strong men; yes.

Commissioner O'CONNELL. Men who have—

Mr. SHANNON. Weak in the head.

Commissioner O'CONNELL (continuing). Talked right out what they think about things?

Mr. SHANNON. Exactly, like anybody should. No; nothing to be afraid of discuss things any chance you get to better your condition, the same as you would. If you were going to buy a ticket on the railroad to-morrow, you would discuss which would be the cheapest and best road. You would have a certain right of discussing that which you are going to travel over.

Commissioner O'CONNELL. Do you suppose that the company puts the weaker men—you say the stronger men go down below—the weaker men, because of their health conditions, into the better air and better working conditions? Is there any humanity in connection with it?

Mr. SHANNON. I think, sir, you do, when you come to rustle, the same as you would consider buying a good strong horse if you wanted him for the farm. You wouldn't buy a weakling; you would buy a good strong horse even if you had to pay \$250 or \$300. They look at it the same as they did on the slave down South.

Commissioner O'CONNELL. I understand there isn't any physical examination?

Mr. SHANNON. Well, the boss is a pretty good physical examiner.

Commissioner O'CONNELL. Well, would you expect him to hire indiscriminately everybody who comes along, regardless of whether he was sickly or has some disease that he could communicate to others?

Mr. SHANNON. Not necessarily.

Commissioner O'CONNELL. Wouldn't you think that those who were inclined to grow old or weak or sickly, that they ought to have the preference as to work—easier jobs and so on, as a matter of humanity?

Mr. SHANNON. Yes; they don't do it, however.

Commissioner O'CONNELL. That is not the reason, you think?

Mr. SHANNON. They don't get those jobs. There is a lot of these young healthy fellows that is up there getting them. There is a lot of these men that has put in 30 years of their life up here. And a miner's work, you know you never can prelearn it; especially in bad ground they don't pick up these miners and shove them in there, they have to put in the old-timers in bad ground where it is caving.

Commissioner O'CONNELL. Well, now, if you were given the authority to outline a plan by which the mines in this territory should be operated, under what conditions or how would you have these mines operated? What would you suggest as a means of correcting all the ills and complaints that you speak of here and object to in the mining industry?

Mr. SHANNON. The first thing is about the men, a shorter workday.

Commissioner O'CONNELL. Less than eight hours?

Mr. SHANNON. Yes.

Commissioner O'CONNELL. Now what would you do next if it were left up to you? This commission is to inquire and report back.

Mr. SHANNON. The next thing is to ventilate the mines.

Commissioner O'CONNELL. Ventilate?

Mr. SHANNON. When you go down into a place, you know, and you stand right up and sweat boils out of you and runs over the tops of your shoes, you ain't inclined to kill yourself working.

Commissioner O'CONNELL. You say this—

Mr. SHANNON. If we had those places properly ventilated, them things will not be there. There is one thing of trying to cure the effect; but if you go to the cause, you know, then is where you are to remedy the thing.

Commissioner O'CONNELL. Then let us go to the cause.

Mr. SHANNON. That is the cause, because they are not ventilated, inadequate ventilation in the mines at Butte. Now, there was a man in this camp—

Commissioner O'CONNELL. What you want is to get better ventilation, and it seems that the same ventilation that is on top of the earth can't be brought below. That seems an impossibility, but we will agree that it can be improved materially. Now, in order that we may give more time to still getting better air into the system, you will agree, will you, that the mines shall be closed on Sunday?

Mr. SHANNON. Well, I am always in favor of six days' work.

Commissioner O'CONNELL. What will the miners say to that? You must have one day's rest just as you give the horse you talked about. Will you agree to that?

Mr. SHANNON. Yes, sir.

Commissioner O'CONNELL. Will all the miners agree to that?

Mr. SHANNON. I should think they would.
 Commissioner O'CONNELL. Do you think if it was put to a vote, that they would all vote "yes"?

(A bystander here attempted to speak to the witness.)

Commissioner O'CONNELL. Just let the gentleman speak for himself, I think he is capable.

Mr. SHANNON. I am capable of answering any question.

Commissioner O'CONNELL. I think you are, sir.

Acting Chairman COMMONS. All of them.

Commissioner O'CONNELL. I think you are.

Mr. SHANNON. If the miners were to say, "We will have Sunday," and the company, "Anybody that went out Sunday, he can't work"—

Commissioner O'CONNELL. No; regardless of the company. We will say to the company, "Now you have got to do this," and they will do it?

Mr. SHANNON. Yes.

Commissioner O'CONNELL. We want one day's rest, that is the first thing we want?

Mr. SHANNON. Yes.

Commissioner O'CONNELL. Then we will get some air. Nobody can take that away from us in the open, if we are there where we can get it.

Mr. SHANNON. Yes. There is lots of them gets all that kind of air they want. They are laid off here two or three months at a time to teach them to be good.

Commissioner O'CONNELL. That is incidental; what I want to get at is the fundamentals.

Mr. SHANNON. There is lots of them gets that; there is lots of them that don't work 30 days a month, more like they work 20.

Commissioner O'CONNELL. We have gone over that.

Mr. SHANNON. A miner works the general rule seven days a week with the exception of one day every two weeks.

Commissioner O'CONNELL. You still have it a little better here in that direction than they have in some other places, because they work every Sunday, and we found, upon investigation of the daily report books, that the men worked every Sunday but laid off other days. They seem to have an especial preference for Sunday, don't like Sunday leisure. I don't know why. It interferes with their church relations. They want to go to church; at least some men do, if not all. They ought to have that day off for religious service, for recreation, for pleasure, and they ought to be in a position to get a sufficient compensation for the six days so that they would not have to work Sunday.

Mr. SHANNON. That is the idea. That is what we are after.

Commissioner O'CONNELL. Now, is that one of the things you would agree to?

Mr. SHANNON. No work Sunday, the shorter workday during the rest of the week—we will agree to that.

Commissioner O'CONNELL. Now we have the shorter workday, better ventilation, the observance of Sunday—or one day's rest in seven—and a better wage rate.

Mr. SHANNON. We will take all that. And we will go further. We will take a half holiday on Saturday, if you will give it to us. We will take all that. We are not a bit adverse to it, not a bit. But we want more money because it takes all you can get here to make both ends meet.

Commissioner O'CONNELL. Well, I think I have got for my own satisfaction some of the things that might help.

Mr. SHANNON. Yes, sir.

Acting Chairman COMMONS. Any questions?

Commissioner O'CONNELL. That is all.

Acting Chairman COMMONS. You have finished stating all of the causes that you had in mind of dissatisfaction?

Mr. SHANNON. Well, they are the primary causes.

Acting Chairman COMMONS. That is sufficient, then, much obliged to you.

Call Mr. Kelley again to take the stand.

TESTIMONY OF MR. C. F. KELLEY—Recalled.

Acting Chairman COMMONS. You were the first witness, and you stated in a general way the questions that were uppermost in our minds at that time. There have been various charges made that you have doubtless heard. Is there anything that you wish to say regarding any of them?

Mr. KELLEY. Of course, I haven't been here all the time. The charges that I have heard have been more or less of a general nature. I don't know of any specific instances that were referred to. There has been a general charge of company domination of the Butte Miners' Union. So far as that charge is concerned, I wish to say this to the committee—the commission: There has been for many years a situation existing here that is by no means peculiar to Butte, but I think can be found in every industrial community. Wherever organized labor has asserted itself, it is universally conceded that the principal line of division of its membership comes between those who are possessed of radical tendencies, whose policy it is to wage an eternal warfare against the employer, who will be satisfied with no concession, but who believes that it is a principle of organized labor to engage constantly for something that in many instances can not be granted.

On the other hand, there is a division which believes in fairness as between the employer and the employee in endeavoring to carry on the controversies that arise in such a way as to ameliorate as far as possible the condition of the worker, while at the same time recognizing that the employer has some rights. That was the primary division in the Butte Miners' Union. That, as I understand it, is the primary division in a great many labor organizations. Now, I deny that the Anaconda Co. has ever, directly or indirectly, attempted to assert any domination over the Butte Miners' Union in its internal affairs. I assert that the sole interest which this company has—at least during the period covered by my knowledge of its affairs, manifested in the doings of the miners' union or any other labor organization in this community, was to endeavor at times to get as large a proportion of the membership as possible to attend the meetings, so that the action which would be taken would not voice the sentiments of a few radical agitators, but would more nearly represent the voice of the great body of the union who were to be affected by the action taken. In that I assert that the employer did not step out of his way or out of his function. If we have a body of 9,000 men working for us here, and if we are to live up to and follow what the union dictates, if we are obliged to meet the action of the union, it seems to me that an effort on the part of the employers to get as many employees interested in the union as possible is not only within our proper function, but is entirely commendable.

Now, then, that is as far—so far as this domination, ownership, and control of men is concerned, I deny that that exists. You will hear that charge everywhere where a condition such as obtains in Butte exists, where there is one large corporation that is the dominating factor in the industrial life. But I assert that so far as the different officers of this union are concerned—and I perhaps have had as intimate dealings with them as any—that I haven't known these men. I don't know that within my time of administering the affairs of this company that I have ever known a man who has been placed in nomination for office before he was placed in nomination or before he came to see me on some business connected with the union. That certainly will apply to at least the last three administrations of the Butte Miners' Union; that we have never known them, we have never undertaken in any way to say who should be or who should not be officers of this union. Now, then, of course, we have wished, we have desired to get along with our employees, to have amicable relations. There are a number of gentlemen who have given evidence, if you call it evidence here—I mean because of the lack of an oath, is all—and with them I think in a good many cases they have not been in the employ of this company, or the company that I represent, at least. They have not for many years been in the employ of the company.

Now, there are some specific matters that were referred to here. One was the relative cost of production in early days as compared with the cost of production at this time. And I think Mr. Shannon gave as an illustration how the copper was transported by various means to Swansea in early days, when \$3.50 was paid for wages, and he compared it with the present day operating conditions. Well, to a certain extent that is true. When the Butte Miners' Union was organized, as I remember in 1876, they paid the minimum scale of \$3.50 a day. That was for a 10-hour day. And later the number of hours was reduced to eight, and later some modification was made in working rules. That is the only thing I can think of as possibly being involved in the statement of Mr. Shannon that this company did not grant eight hours until 1906. I know of my positive knowledge that the statement, except as it may be modified in some trivial way, is not correct. When the copper mines of Butte first began their operations, at the time testified to by Mr. Shannon, this was a pioneer country. The scale of wages was probably the highest

then adopted for similar business anywhere in the United States, anywhere in the world.

A BYSTANDER. Except Virginia City.

Mr. KELLEY. Except Virginia City in the early days; that may be true. In the copper-mining business the scale of wage that is maintained in Butte has been the highest wage paid anywhere in the world, with one exception that I know of, and that is in Arizona. And to-day and yesterday, with the curtailment there, they are putting into effect in Arizona a reduced wage scale that brings the miner's wage to \$3.60, the helper to \$3, and the mucker to \$2.75. Now, at that time these surface deposits were just beginning to be explored. The surface ores of Butte were of enormous richness. Calcicite, which ran chemically to the standard, above 70 per cent copper, was found. Ore that went anything like the vast bulk of the ore that is being treated to-day could not be taken from the ground. The ore that was shipped to Swansea was ore that went from 30 to 70 per cent copper, and associated with it was silver in varying quantities of from 20 to 150 ounces per ton. It likewise carried a very large gold value. Now, ore of that kind of course yielded a tremendous profit. To-day the average grade of the copper ores in Butte that are mined is about 8 per cent, and they will carry approximately 2 ounces, is it, Mr. Gillie, of silver to the ton?

Mr. GILLIE. Yes.

Mr. KELLEY. And there will be an approximation of about 25—well, a very small percentage of gold. Now, during the period from the early days when this ore of enormous value was sent to Swansea—and that was only sent during a period of time when it was—when they were getting money out of this high-grade ore, leaving on the dump what was then considered low grade, which would be ore that is vastly richer than any we have got to-day. They sent this high-grade ore over there, selected and sent it, and got money back here to begin the development of these mines, and to build these smelters and railroads and other things that have been made that were necessary in order to make this an industrial center and a mining center. Now, the conditions have changed since then. With increasing depth increased costs have been brought about. It has been a constant fight against increased depth, remoteness of ore, which involved heavier tramming costs, increase in costs of supplies, increased labor cost. Labor has increased more proportionately in cost than would be expected merely by the reduction in wages, or by the reduction in hours because of a decreased efficiency in the class of labor. All of these factors have been brought about to increase the costs until the profit to-day on mining operations bears no comparison to the profit that was obtained at the time of which Mr. Shannon speaks.

And remember this—and it should be remembered—that we are mining copper to-day from the 3,000-foot level, or going to the 3,000-foot level of these mines with the installation of perhaps the most costly mining machinery in the world. With transportation problems that make us ship our ore from Montana to the Atlantic seaboard and then around the world in competition with mines that are favorably located with reference to transportation facilities all over the world. That, with every item of our operations increased in cost, we are in competition with the copper that is being produced all over the world. We are in competition with the copper that comes from the labor of the Mexican peon, who gets 50 to 75 cents a day in Mexican money. We are in competition with the Peruvian mines, the Spanish miner, the Japanese miner. Out of a production, a world's production of 2,000,000,000 pounds of copper, we make less than 300,000,000 here in Butte. We can not control the market. We can not fix the price. Our copper sells in Berlin or Hamburg or London or Paris at so much a pound in competition with the copper that comes from any other mining district in the world. And it simply means that with a margin of profit that is now extremely close, as close as it is in any industrial business—not any mining business, which is a wasting business and a depreciation of capital constantly—it means greatly added expenditures in the production of copper, and this means that copper will cease to be produced: that is all. You can't meet the competition of the world if you are not willing to fight your cost of production, and if it is tremendously higher than copper can be produced elsewhere.

The single item of freight alone upon our copper—our railroad bill last year was \$7,000,000 out of a gross business of something over \$40,000,000. Railroad freight is seven million. We are in competition with the water transportation from Chile, from Peru, from Japan, from Spain. Now, then, I simply wanted to make this general statement so that we may dissipate the

idea that was suggested a moment ago by one of the commission that there is a fight on the one hand on the part of the operator to get as much as possible out of labor, and there is a fight on the part of labor to get as much as it can out of the employer. There comes a line of division beyond which if the cost of production goes, production must cease. That has reference to the shorter workday that was suggested by Mr. Shannon. At the present time, with the mines on an eight-hour basis, that means eight hours from the collar of the shaft. My recollection is, and Mr. Gillie can verify it if I am wrong, because he is far more familiar with these mining details, that on an average it takes 26 minutes for a man to reach his place of work. The shift begins shooting, the shift terminates with the blasting, and that is anywhere from a half an hour—usually about a half an hour—before the termination of the shift.

I will venture the assertion without fear of successful contradiction that six hours of actual labor is not put in upon the average in the stopes of the mines of Butte. A shorter workday would mean an increased cost of production that could not be maintained, because I know of no business in which the cost of labor bears a more direct relation to the total cost of production than it does in the mining business. As I made the statement to you the other day that you can take out of every round dollar—I have some charts on that that I would be glad to submit—out of every round dollar that is taken out of these mines, more than 50 cents goes directly to the man in the mine and the man in the smelter. Now, then, one of the great items of cost is lumber, timber. We use, say, 75,000,000 feet a year in timbering these mines; 300,000 stulls are used, and a big proportion of that cost, the cost of our lumbering operations, is labor. As I told you a moment ago, we pay \$7,000,000 in freight. The railroad labor is a big part of that, so that the labor cost of producing copper is probably as great, if not greater, than that which would obtain in any other industry. So far as the general subject of ventilation of mines is concerned, we have been somewhat between the devil and the deep blue sea on that, if you will pardon the expression. I had occasion to refer to it. Mr. Gillie had occasion to refer to it. If we had absolutely no humanitarian motive at all, but it was a straight-business proposition of dollars and cents, it stands to reason that anything that we can do to increase the efficiency of a factor that is representative of more than 50 per cent of our gross expenditures, we are going to do it.

It is very easy for men to say, who are not engaged with this proposition, that we don't do this and we don't do that. We have every opening figured, the area of that opening, the possibilities of that opening with reference to either forced or natural ventilation, the carrying capacity of every hole in the ground here is figured, and a scheme of ventilation is laid out, not alone because it is absolutely necessary in order that these men may live underground. But I want to say without any bouquet about that, that I think the management of this company takes as much interest in that as does any industrial organization that I know of. But as a pure matter of efficiency of labor we would figure that, and we do figure it. I don't know whether Mr. Gillie gave you the figures, but my recollection is that we have 6,000 horsepower, isn't it?

Mr. GILLIE. About 3,000.

Mr. KELLEY. How is that?

Mr. GILLIE. About 3,000.

Mr. KELLEY. About 3,000. And you know when you take a hole down here and over here another, and there is a difference in temperature, you have natural ventilation. And you have the cages going there, and you have got these drills working. And in addition to that we have 3,000 horsepower pulling fans and trying to get air down into these mines.

Now, it may be that the ultimate end of these mines will be the limit of the possibility of ventilating. But just as long as mechanical means can be devised to furnish ventilation underground, why we are going to take advantage of it and do the best we can to ventilate these mines. Now, that is incidental perhaps. You take it in the lower levels here where the mines are wet, we can ventilate. The draft—without respect to draft. Of course, in the upper levels where the water has leached out, ventilation is accompanied with the raising of dust. You can't help that. You see you get one evil—in trying to correct one evil you notice the effect of another. Because the dust we recognize is the harmful factor, so far as pulmonary troubles are concerned. Now, so far as appliances are concerned, we have endeavored to use the best appliances possible. The buzzer drill was referred to. I think that was the

only appliance that was mentioned by Mr. Shannon. The buzzer drill is a recognized appliance in mining all over the world. We have endeavored to use a canvas bag that would catch the dust. We have endeavored to get a muzzle worn. But any man who has had anything to do with employing labor knows and understands that one of the hardest things is to get that laborer to do that proportion of what he ought to do in the protection of himself that he should do.

Why, the other day I went through a cement plant, a plant where they were dumping cement over here in the construction of a dam, and dumped cement down into a blower. And the moment I went in I asked the man if there were muzzles furnished the man who were handling the cement there. And he said, "Yes." I said, "There is a man who has not got his muzzle on." He turned around and the muzzle was hanging on a nail. Now that is illustrative. I could tell you our experience in camps where we have had sanitation under our control and have endeavored to enforce regulations. You almost have to enforce them with military discipline in order to get the average miner or the average man to help you in those matters. I will tell you that if the grog shops upon this hill were shut up and men took as much care of themselves as they could take when they are off shift, as they have it within their own control to exercise, if they did as much as they expect us to do, the general sanitary conditions would be much improved, and the accident record, the casualty record would be closed. Let these reformers get at the fundamental causes. We will meet them half way. We have a condition that prevails here where every man going off shift—I won't say every man, but a great many of them, stop to drink at these places. They drink going on shift. It would be looked upon as a serious interference with their American privileges if that was cut off. But a man that comes up to the collar of the shaft with a half a dozen drinks under his belt and gets by the timekeeper and the foreman and the shift boss, and then goes underground into this superheated atmosphere, when it begins to ooze out of him, is the man who many times falls into a chute, loses his hold upon a lever, or misses a loose piece of ground that is over his head. And then, of course, the employer is the sole responsible party.

Now, I don't know that there are any other specific matters. If there are other matters that I haven't heard of, other matters that you wish to ask me about, I shall be very glad to answer any questions within my knowledge that the commission desires to ask.

Commissioner GARRETTSON. In regard to the statement that if conditions exceeded a certain point the production of copper might be stopped in the Butte district, or would of necessity be stopped, have you any opinion that any industry has the right to survive unless it can pay a reasonable wage?

Mr. KELLEY. No; absolutely not. But where an industry that is being conducted all over the earth, as the copper-mining industry is, is paying in a particular locality the highest wage that is paid by that industry in any part of the earth, and is carrying on that industry under conditions that are better, we believe, than accompany that industry in any other part of the earth, I don't think that industry should be put out of business in that particular locality because of its inability to meet the demands of, we will say, a certain number of unreasonable men.

Commissioner GARRETTSON. In passing upon the reasonableness or unreasonableness, that, of course, becomes a question of fact.

Mr. KELLEY. A question of fact, which is determined by the universal standard that pertains in any particular line of business.

For instance, if you say whether this is a reasonable wage here for this business or for that business, how do you determine it? You take the standard wage that is paid by that class of employment wherever it is conducted. Now, if we here have a rate of wages which is higher than they have in any other locality for a similar business, it would be fair to assume that we are paying a reasonable wage as controlled by the factors that must necessarily enter into it. If we are not paying a reasonable wage, then nobody in this line of business is paying a reasonable wage. And if the copper business can not be conducted here upon the conditions that pertain, it can not be conducted in any other part of the world because they would be more unreasonable than we. You see the point?

Commissioner GARRETTSON. If a man predicates an opinion on these matters upon a thesis that in itself is false for a basis, then—I am using false in the sense of incorrect—

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON (continuing). Then naturally the whole theory comes into the same category.

Mr. KELLEY. Oh, yes.

Commissioner GARRETSON. Because a structure that maintains—or will not rest, can not rest, upon a secure foundation.

Mr. KELLEY. No, sir; your premise must be right or your—

Commissioner GARRETSON. There you have it.

Mr. KELLEY (continuing). Conclusion will be wrong.

Commissioner GARRETSON. And if the operative conditions in the trade had always controlled questions of this character, there never would have been betterment; it is only when—

Mr. KELLEY. No; I—

Commissioner GARRETSON (continuing). Advance has been attempted independent of comparison that betterment has ensued.

Mr. KELLEY. I grant you that is true to a certain extent. Of course, anyone who is familiar with economic history knows that every advance that has been made by the wage earner has come as the result of agitation, of demand, and of successful attack, you might say.

Commissioner GARRETSON. More or less successful.

Mr. KELLEY. More or less successful.

Commissioner GARRETSON. I would put it that way.

Mr. KELLEY. I say every advance has been the result of that. That spells progress. Now, then, you reach a point—you reach a point at which you can no longer conduct your business profitably from one standpoint, and the wage earner thinks that it can no longer be conducted because of insufficient remuneration from his standpoint. That means the cessation of that business or the introduction of some other system of working.

Commissioner GARRETSON. From the experience you have had, I would like an expression of opinion from you on one subject. You bear in mind this is purely ethical.

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. It may become practical. Do you believe the true—now, this is not in your experience as an employer at all—but in your experience as a citizen, is the truest remedy, in your opinion, for many industrial evils an increase of wage or a betterment of conditions?

Mr. KELLEY. I would say, in answer to that, it would mean ultimately a betterment of conditions. Now, whether that comes from increased wage or not is another proposition. Of course, what everybody is striving for, what we are all striving for—I regard myself as an employee and a wage earner. I am striving for it. I have no fault to find with any man who works for the Anacosta Co. who is striving to better his condition. Now, it does not necessarily follow that two bits a day more—or 50 cents a day more—is going to mean that betterment in condition.

Commissioner GARRETSON. If the 50 cents went to every wage earner the condition would have been equalized?

Mr. KELLEY. Absolutely.

Commissioner GARRETSON. Unless his hours of service and conditions under which he furnishes his labor had at the same time been bettered?

Mr. KELLEY. I think that is true, because, it seems to me, we have had a peculiar illustration of the working out of that principle right here in Butte. Wages were high here to begin with. They have been maintained at a high standard. And, incidental to the development of the mining business here, a community grew up. And with the upbuilding of that community numerous trades and crafts came in here and obtained employment.

And, starting with a high rate of wages, each craft has endeavored to boost a higher rate of wages, until the rate paid some of the trades-unions in this city, as compared with the scale that maintains generally, is absolutely out of all reason and all proportion. Now, then, the great bulk of employment here comes back, one class employs another, it seems to me. If your butcher is getting a very high rate of wages, of course, it is added to the price of meat. If your plumber is getting a very high rate of wages, it is added to the cost of putting a bathroom or a sink or a faucet in your house, and so on. Now, then, we are all cannibalistic in a way. We live off one another. And it seems to me the high rate of wage, the extremely high rate of wages that has prevailed among the local crafts in the community downtown here has been one of the factors that has made living very high here and has entered into, very largely,

the problem that has faced the big body of workmen—the miner and the laborer—in meeting the necessities of life. So that I don't think that increased wages of itself is going to do any good unless all the other factors that surround these things are going to be bettered and leveled.

Commissioner GARRETSON. And I assume that you hold the opinion that even in the absence of increase of the wage, the shortening of the time of labor, and the betterment of the condition under which the man works would produce the effect that of itself.

Mr. KELLEY. I don't know that I quite get that.

Commissioner GARRETSON. Would produce the effect and remedy many of the things that are complained of.

Mr. KELLEY. I think so; certainly.

Commissioner GARRETSON. For instance, you will take what you cite yourself as what may become an impossible condition in your lower levels; that is, the inability to ventilate?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. The only solution that would be left, then, in that impossible condition for a man in which he would recognize the impossibility of staying there eight hours would be to reduce that period, as I believe it was. Weren't there some Nevada mines where men only worked in a three or four hour shift?

Mr. KELLEY. Yes. They have worked 20 minutes here.

Commissioner GARRETSON. On account of the excessive heat. Well, that would be the only solution left, if it was continued?

Mr. KELLEY. Certainly.

Commissioner GARRETSON. And all onerous conditions of service would in the long run be met by the contraction of the period of service therein on account of the onerous character?

Mr. KELLEY. Certainly; that would have to follow.

Commissioner GARRETSON. Isn't it the natural result? Now, you state in speaking of precautions or the measures taken by your company in regard to demonstration and figuring as to each air passage and its capacity. Isn't a man who is down there and suffers from the conditions impervious to the idea that those figures exist?

Mr. KELLEY. Just a minute; your question contains an assumption that I could not concede for a moment. Now, then, in the lower levels, before ore can be taken out, you understand—

Commissioner GARRETSON. Yes, sir.

Mr. KELLEY (continuing). And you get your system of ventilation completed—for instance, you sink down and you start off a level, and you have got a dead end there that you can only get an artificial means of ventilating from the hose pipe that works the machine, or by carrying in a pipe.

Commissioner GARRETSON. You can't keep it in the extreme end?

Mr. KELLEY. Yes; we do; but the ventilation is not as good there as it is after your connections are made and your air courses are established. Now, I will admit that there are those necessary places that are not properly ventilated, but that these mines as a whole in their working levels or stopes are improperly ventilated, that they are to any considerable extent suffering because of insufficient ventilation, I would absolutely deny. The records of temperatures, the records of oxygen content, of carbon dioxide content contradict this, and the records of the men themselves.

Commissioner GARRETSON. There is a shade of meaning there, suffering and discontent.

Mr. KELLEY. Well, there is discomfort.

Commissioner GARRETSON. They may be two things.

Mr. KELLEY. I think that the most comfortable place—I speak from experience—I have worked underground. I think the most comfortable place I have ever worked was underground, and I don't think that I drew at all times the places that were characterized by my friend Shannon as "fine-day-miner" places.

Commissioner GARRETSON. Would you choose one of your lower levels to spend a vacation in?

Mr. KELLEY. No, no. But I have never yet been able to secure my occupation by selecting a place for a vacation.

Commissioner GARRETSON. You only secure the vacation by that?

Mr. KELLEY. Incidental to the occupation.

Commissioner GARRETSON. Yes; I have seen men that had a vacation—very long—and it wasn't incidental to the occupation.

Mr. KELLEY. I haven't had that good fortune.
 Commissioner GARRETSON. I haven't had that experience myself; I have been in rather continuous service.

Mr. KELLEY. There was one other matter that was referred to, and that was the investment of the miners' union funds in Amalgamated stock. My recollection of that transaction, gentlemen, was about this: At that time I was counsel for the company and didn't have any direct connection with it, but I remember talking about it. The miners' union had some fifty-odd thousand dollars that they wished to invest. Mr. Ryan at that time was not connected in any way with the Amalgamated Co. or the Anaconda Co.; he was president of a bank and doing a banking business. My recollection is that the miners' union treasurer came and talked to him. The Amalgamated Co. was paying 6 or 8 per cent, and he recommended an investment in the stock provided they could be guaranteed against loss. The matter was taken up with the then managing director, I think Mr. Scallon, and it was arranged if this \$50,000 was invested in stock it could be sold at any time after a period of a year and irrespective of the market price of stock, the price that they paid would be guaranteed to them.

Commissioner O'CONNELL. Have you any idea that the sale of this 500 shares had any effect on the fluctuation of the stock?

Mr. KELLEY. I have had too much experience in buying and selling Amalgamated stock myself to believe that.

Commissioner GARRETSON. Have you any knowledge as to whether or not it was heralded as an advertising feature?

Mr. KELLEY. I never knew it was heralded or spoken of really in any way except that it was a safe investment for the Butte Miners Union, far safer than some others they have made, and that it would be a good idea. Perhaps the thing that induced the management to guarantee it was that any community of interest between employer and employee is a good thing to establish.

Commissioner GARRETSON. As a business man, Mr. Kelley, wouldn't you hold that in a region where there was no means of investigating, that no better demonstration or illustration could be furnished to prospective purchasers of stock than to represent to them that the men who dug it out of the mine took it as an investment?

Mr. KELLEY. Yes, sir.

Commissioner GARRETSON. It is good business?

Mr. KELLEY. You bet it is.

Commissioner GARRETSON. Fine advertising material?

Mr. KELLEY. That is good business all around.

Commissioner GARRETSON. That is what it is.

Mr. KELLEY. And there would be no better business than to have every miner in Butte a shareholder in Anaconda stock.

Commissioner GARRETSON. I hold it is good business and showing its value to the prospective purchaser as a convincing argument that the men who knew were buying it.

Mr. KELLEY. Yes, sir; it is possibly good business.

Acting Chairman COMMONS. Have you any other statement?

Mr. KELLEY. Yes, sir; there was a matter that was referred to by, I think, Mr. Sullivan or one of the other gentlemen who referred to the fact that during the Socialist, so-called, administration of the Butte Miners' Union they attempted to get legislative action on the subject of ventilation, and that a committee from the union went to Helena. It is true they did go. A committee came to Butte and made an investigation into the ventilation of the mine and into the sanitation of the mine. I have a copy of the testimony and a copy of the report of that committee, and I would like very much to furnish a copy to the commission. This is the only one I have, and I would like to make a copy and have it amplified, or I would be glad for your own stenographers to take it and have it copied and send it back to us. Can you do that?

(See Kelley Exhibits Nos. 11 and 12.)

Acting Chairman COMMONS. Yes; there are some other things we asked which you will submit also. Any other witnesses that desire to submit any statement or affidavit can do so.

The commission will now stand adjourned.

Mr. McCusker. I have here the affidavits and papers that were called for in Mr. Maury's testimony.

(See Maury Exhibit No. 1.)

(Whereupon, at 1.45 o'clock p. m., of this Saturday, August 8, 1914, an adjournment was taken until Monday, August 10, 1914, at the city of Seattle, Wash., at 10 o'clock a. m.)

EXHIBITS.

KELLEY EXHIBIT NO. 1.

Total assessment Anaconda Copper Mining Co. in State of Montana for 1913.....	26, 550, 066
Increase for 1913.....	1, 249, 883

NET PROCEEDS OF MINES, 1912 AND 1913.

Anaconda Copper Mining Co.....	\$10, 525, 730
Coal department, Washoe.....	7, 922
	10, 533, 652
Anaconda Copper Mining Co.....	11, 448, 902
Coal department, Washoe.....	8, 738
	11, 457, 640
Increase 1913.....	921, 988

In explanation of the various increases and decreases of the foregoing statement I beg leave to submit the following:

Anaconda Copper Mining Co.—Decrease in assessment caused principally by the reduction in the stocks of lumber, logs, etc., at the company's plant in Hamilton; also coal department, assessment at Belt, and account of sale of town lots at Anaconda. Wherever increases are shown in the department, they are caused by the addition of new machinery and stock on hand.

Original mines department.—Decrease in this department caused by a reduction of \$10,000 obtained on the assessment of buildings at the Butte Reduction Works and sales of lots and improvements thereon during the past year.

Washoe mines department.—Decreases in the assessment caused by sale of lots and improvements thereon.

Lumber department, Bonner.—Increase over 1912, \$294,328. In the counties of Flathead and Lincoln the increases were on account of the assessment on other property in both counties being raised from 8 to 10 per cent, and some of our timberlands were increased in that proportion. In Missoula County the assessor increased our return by \$451,327. We appeared before the board of equalization of that county, and after three days' work succeeded in having the assessor's increase of \$451,000 reduced to \$37,000. In Powell County the assessor increased our return \$79,000. The board of equalization of that county promised to cut this down to \$31,000. I protested against the increase and filed my protest with the board.

The increases in the following departments, viz., Boston & Montana and Butte & Boston mines departments were caused by the addition of new machinery and improvements during the year.

Butte, Anaconda & Pacific Railway Co.—Increase in the assessment of this company caused by two reasons, viz., the state board of equalization increased the assessment of all main lines in the State from \$19,925 to \$21,000 per mile. The Georgetown extension of 16.2 miles came up for assessment before the State board for the first time and I managed to have the same assessed for the year at the rate of \$3,000 per mile.

I wish to call your attention to the decision of the attorney general of this State, who instructed the assessors of this State to assess the mineral reserved by any of the companies selling lands and making such reservations in their deeds. Under these instructions the assessors of Carbon and Ravalli Counties have assessed the Anaconda Copper Mining Co. for the reservations made on lands sold in these counties. Protests were prepared by our legal department and filed with the boards of equalization of these counties, who declined to take any action at this time.

The entire increase in the State of Montana for the year 1913 was \$1,249,888, of which amount the net proceeds of mines' increase over 1912 amounted to \$921,988, leaving a total increase in all other property of the company of \$327,900, being an increase of 24 per cent almost entirely on the timberlands owned by the company and the assessment of the Georgetown extension of the Butte, Anaconda & Pacific Railway Co.

Respectfully submitted,

CHAS. SCHWARTZ,
General Land and Tax Agent.

Total number of shifts worked, 10,984,957.

For each 67,500 shifts worked, 1 man was killed.

For each 1,888 shifts worked, 1 man was injured.

In 1910 per 1,000 men employed, 4.91 were killed.

In 1911 per 1,000 men employed, 3.98 were killed.

In 1912 per 1,000 men employed, 4.47 were killed.

In 1913 per 1,000 men employed, 5.29 were killed.

For the four years, the average was, per 1,000 men employed, 4.68 killed.

KELLEY EXHIBIT NO. 6.

This agreement, made and entered into this 4th day of April, A. D. 1907, by and between Butte Miners' Union No. 1, Western Federation of Miners, party of the first part, and the Anaconda Copper Mining Co., party of the second part, witnesseth: That

Whereas the said second party hereto employs a number of members of the first party hereto at and about its mines, in the vicinity of Butte, Silver Bow County, Mont., and it is the desire of each of the respective parties hereto to perpetuate friendly relations and at the same time to have a definite agreement with reference to the compensation to be paid the members of said first party by said second party:

Now, therefore, in consideration of the mutual promises and agreements herein specified it is agreed between the respective parties hereto as follows, to wit:

1. That eight (8) hours in each twenty-four (24) hours shall constitute a shift or day's work.

2. That the miners shall start to go down the shaft or into other mine opening at the beginning of the shift and shall leave their places of work at the expiration of eight and one-half (8½) hours from that time, it being understood that the miners shall have one-half hour of said time in which to eat lunch, the miners to be hoisted or come from their work on their own time. It is also understood that where three consecutive shifts are employed eight (8) consecutive hours shall constitute a day's work.

3. Where the word "miner" is used in this agreement it shall mean all underground men engaged in any of the work of mining.

4. The rate or amount of wages to be paid miners for a day's work, or proportionately for a part of a day's work, to be determined as follows: The aver-

average market price per pound of electrolytic copper as given in the Engineering and Mining Journal for each calendar month shall be the basis for determining the rate of wages.

5. When the average monthly price of electrolytic copper shall be eighteen (18) cents per pound or over, then the wage rate shall be four (\$4) dollars per day for all miners other than miners in shafts, station cutting, winzes, and station tenders, and for all miners in shafts, station cutting, and winzes, and station tenders the wage rate shall be four dollars and fifty cents (\$4.50) per day.

6. When the average monthly price of electrolytic copper shall be under eighteen (18) cents per pound, then the wage rate shall be three dollars and fifty cents (\$3.50) per day for all miners other than miners in shafts, station cutting, and winzes, and station tenders; and for all miners in shafts, station cutting, and winzes, and station tenders the wage rate shall be four dollars (\$4) per day; and in no case shall wages be less than specified in this section.

7. Should a miner's employment terminate by reason of voluntarily quitting, discharge, or other reason, before the end of any calendar month, the rate of settlement in such cases shall be as follows: The wage rate for any settlement made for any part of a month up to and including the 15th of said month shall be based upon the previous month's average price of electrolytic copper. The wage rate for any settlement made for any part of a month extending beyond the 15th of said month shall be made for the whole time of employment in said month at a rate based upon the average price of electrolytic copper for the first 15 days of the calendar month of settlement.

8. Should the authority used in ascertaining the market price of copper appear to either party to this agreement to be false or wrong at any time, then either party shall have the right to request that a representative be appointed by each party, and those two persons to appoint a third, a majority of whom shall decide on the method or means to be used in arriving at the correct market price of copper for purposes of this agreement.

9. Nothing in this agreement shall deny or preclude the right to employees, either themselves or through the first party hereto, from taking up with the second party hereto the question of any grievance or unfair treatment, or any matter not herein agreed upon that may require adjustment.

10. It is agreed that this agreement and contract shall remain in full force and effect for a period of five (5) years from and after the 1st day of April, A. D. 1907; and said agreement shall remain in full force and effect thereafter until thirty (30) days' notice shall be given by either party of its desire to terminate the same.

In witness whereof said party of the first part has caused these presents to be executed, in duplicate, by the following committee, thereunto duly authorized by the said first party; and the second party has caused these presents to be executed, in duplicate, by its proper officer, thereunto duly authorized, the day and year herein first above written.

ANACONDA COPPER MINING Co.,

By JOHN D. RYAN,
Its President, Party of the Second Part.

KELLEY EXHIBIT NO. 7.

This agreement, made and entered into this 3d day of July, A. D. 1912, by and between the Butte Miners' Union No. 1, Western Federation of Miners, hereinafter designated as the "Union," party of the first part, and the Anaconda Copper Mining Company, hereinafter designated as the "Mining Company," party of the second part, witnesseth:

Whereas the said Mining Company employs a number of the members of the Union at and about its mines in the vicinity of Butte, Silver Bow County, Mont., and it is the desire of each of the respective parties hereto to perpetuate friendly relations and at the same time to have a definite agreement with reference to

the compensation to be paid the members of the Union employed by the Mining Company;

Now, therefore, in consideration of the mutual promises and agreements herein specified, it is agreed between the respective parties hereto as follows, to wit:

1. That eight (8) hours in each twenty-four (24) hours shall constitute a shift or day's work.

2. That the men employed underground belonging to said Union shall start to go down the shaft or into other mine opening at the beginning of a shift, and shall leave their places of work at the expiration of eight and one-half (8½) hours from that time, it being understood that the miners shall have one-half (½) hour of said time in which to eat lunch, the miners to be hoisted or come from their work on their own time. It is also understood that where three consecutive shifts are employed, eight (8) consecutive hours shall constitute a day's work.

3. Where the word "miner" is used in this agreement it shall mean all underground men engaged in any of the work of mining and cage tenders at the collar of the shaft.

4. The rate or amount of wages to be paid miners for a day's work, or proportionately for a part of a day's work shall be determined as follows:

The average price of electrolytic copper as given in the Engineering and Mining Journal for each calendar month shall be the basis for determining the rate of wages.

5. The Mining Company agrees that it will during the continuance of this contract pay a minimum wage scale which shall be equal to the amount which the members of the Union were receiving during the month of May, 1912.

6. When the average monthly price of electrolytic copper is fifteen (15) cents and over, and under seventeen (17) cents, the wages of all men within the jurisdiction of the Union employed underground shall be increased twenty-five (25) cents per day over and above the wage scale in effect during the month of May, 1912; when the price of electrolytic copper is seventeen (17) cents and over, the wages of all men employed underground belonging to the Union shall be increased an additional twenty-five (25) cents per day over the scale of wages received during the month of May, 1912.

The intention of the foregoing is that when the average monthly price of electrolytic copper is under fifteen (15) cents per pound, all miners other than miners employed in shafts, station cutting, and winzes, and station tenders, shall receive \$3.50 per day; for all miners employed in shafts, station cutting, and winzes, and station tenders, the wage rate shall be \$4 per day; when the average monthly price of electrolytic copper is fifteen (15) cents and under seventeen (17) cents then the wage rate shall be \$3.75 per day for all miners other than miners employed in shafts, station cutting, and winzes, and station tenders, and for all miners employed in shafts, station cutting, and winzes, and station tenders, the wage rate shall be \$4.25 per day; when the average monthly price of electrolytic copper is seventeen (17) cents per pound or over, the wage rate shall be \$4 per day for all miners other than miners employed in shafts, station cutting, and winzes, and station tenders, and for all miners in shafts, station cutting, and winzes, and station tenders, the wage rate shall be \$4.50 per day.

For all men employed upon the surface at or about any of the mines of the Mining Company, over whom the said Union has acquired jurisdiction from the mill and smelters' union, the wage rate shall be as follows: When the average monthly price of electrolytic copper is under fifteen (15) cents the wage rate shall be the scale formerly required by that union when copper was under eighteen (18) cents per pound; when the average monthly price of electrolytic copper is fifteen (15) cents and over and under eighteen (18) cents per pound, then the wage rate shall be increased twenty-five cents (25¢) per day above that scale, and when the average monthly price of electrolytic copper is eighteen (18) cents per pound and over then the wage rate for such employees shall be increased an additional twenty-five cents (25¢) per day. It is understood that whenever the Company has been paying during the month of May a rate in excess of the Union wage scale, the foregoing increase shall not apply, but in no case shall any employee receive less than the union scale as above specified.

7. Should a miner's employment terminate by reason of voluntarily quitting, discharge, or other reason before the end of any calendar month, the rate of settlement in such cases shall be as follows:

The wage rate for any settlement made for any part of a month up to and including the 15th of such month shall be based upon the previous month's price of electrolytic copper.

That wage rate for any settlement made for any part of a month extending beyond the 15th of such month shall be made for the whole time of employment in said month, at a rate based upon the average price of electrolytic copper for the first fifteen (15) days of the calendar month of settlement.

8. Should the authority used in ascertaining the market price of copper appear to either party to this agreement to be false or wrong at any time, then either party shall have the right to request that a representative be appointed by each party and those two persons shall appoint a third, a majority of whom shall decide on the method or means to be used in arriving at the correct price of copper for the purposes of this agreement.

9. Nothing in this agreement shall deny or preclude the right of employees, either themselves or through the said union, from taking up with the Mining Company the question of any grievance or unfair treatment or any matter not herein agreed upon that may require adjustment.

10. It is agreed that this agreement and contract shall take effect from June 1, 1912, and remain in full force and effect for a period of three (3) years from and after the date hereof, and that said agreement shall remain in full force and effect thereafter until thirty (30) days' written notice shall be given by either party to the other of its desire to terminate the contract.

In witness whereof, the said party of the first part has caused these presents to be executed in duplicate by the following committee, therunto duly authorized by said first party, and the party of the second part has caused these presents to be executed in duplicate by its proper officers, therunto duly authorized, the day and year first above written.

KELLEY EXHIBIT NO. 8.

(A portion of this exhibit, entitled "Report of investigation of sanitary conditions in mines, and of the conditions under which the miners live in Silver Bow County," is printed as Kelley Exhibit No. 11.)

REPORT SHOWING RESULT OF INSPECTION OF DWELLINGS, HOTELS, ROOMING HOUSES, AND BOARDING HOUSES AND THEIR SURROUNDINGS.

(In this report we have detailed only conditions found to be insanitary. A report covering all of the houses inspected would make too large a volume.)

No. 24 North Atlantic. Very dirty. Ten people; five rooms; 819 cubic feet air space to each. Toilet in house; sewer connection. Use condensed milk. One case tuberculosis, April, 1912. Disinfected six months ago. Tenant lived there five years.

No. 246 Anaconda Road, rooming and boarding house. Sixteen people; eight rooms, two people in each room; average air space, 540 cubic feet to each person. Toilet outside; sewage disposed of in creek. Own cow. Very dirty and insanitary place. Woman was cooking meal and looked very unclean. One tuberculosis, September, 1909; one, March, 1910; and one, May, 1910. Never disinfected.

No. 110 East Broadway. Forty people; 35 rooms; average 1,760 cubic feet air space to each person. Two toilets inside; sewer connection; fairly clean, but poor ventilation in the toilets; one tuberculosis, November, 1909. Never disinfected.

No. 508 East Broadway. Six people; one bedroom 16 by 9½ by 9; 228 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Independent Dairy. House fairly clean; poorly ventilated. Toilet very dirty; bad odor. One tuberculosis, March, 1910; one scarlet fever, May, 1909. Never disinfected. Tenant lived there one month.

No. 486 East Broadway. Two people; one bedroom; 480 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Very small house; dark and dirty. One scarlet fever, December, 1908; one tuberculosis, July, 1911. Never disinfected.

No. 833 East Broadway. Nine people; three rooms; room No. 1, five people, 304 cubic feet air to each; room No. 2, 643 cubic feet; and room No. 4, 742 cubic feet air space to each person. Toilet inside; sewer connections. Milk from Montana Dairy. Sanitary conditions very bad; toilet very dirty. One tuberculosis, April, 1911. Never disinfected.

No. 462 East Broadway. Seven people; three rooms. Room No. 1, three people, 836 cubic feet air space each; room No. 2, two people; and No. 3, two people, average 495 cubic feet air space to each person. Toilet in the house; sewer connections. Milk from Western Dairy or Creamery. Very insanitary; many flies; no screens; dirty rooms; and poor plastering. One tuberculosis, March, 1909. Never disinfected.

No. 897 East Broadway. Four people; three bedrooms. Room No. 1, 405 cubic feet air space and rooms 2 and 3, 810 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Own cow. House clean but henhouse and barn in back yard are very insanitary. Slops and waste water thrown into streets. House and surrounding lots are owned by the Anaconda Mining Co. One scarlet fever, February, 1910. Never disinfected. Tenant lived there 18 years.

No. 600½ East Broadway. Two people; one bedroom; 256 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Lundgren. Neat, clean house. Water pipe under sink leaking, and owner refuses to repair; causes house to be damp. Never disinfected. One tuberculosis, March, 1911.

Nos. 246-250 East Broadway (Florence Hotel). Rooms fairly clean, but toilets very bad; eight toilets in basement very dark and dirty. Rear of this hotel, in alley, very dirty and insanitary. Shops and refuse thrown into shed in rear. (See picture No. 1 of this shed and the pile of refuse.) One tuberculosis, February, 1911; one tuberculosis, January, 1912.

No. 209 East Broadway. Four people; three bedrooms; poorly ventilated. Toilet outside; sewer connections. Milk from Independent Dairy. Very dirty and insanitary. One enteritis, April, 1911. Never disinfected.

No. 824 East Broadway. Eight people; four bedrooms. Room No. 1, 270 cubic feet air space to each person; room No. 2, 1,512 cubic feet air space to each person. Toilet inside; sewer connection. Milk from West Side Dairy. No screens on doors or windows; flies swarmed the place. Dirty and insanitary. One scarlet fever, June, 1910. Don't know when disinfected. Tenant lived there eight months.

No. 2201 Cottonwood. Four people; two bedrooms, 756 cubic feet air space to each person; fairly clean. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Children playing around house with swollen necks, discharge from ear, and eruptions on face. Never been disinfected. One scarlet fever, December, 1911; one scarlet fever, January, 1912. Tenant lived there 11 months. If place had been disinfected since January, 1912, present tenants would know.

No. 210 Curtis. Five people; two bedrooms. Room No. 1, 494, and room No. 2, 741 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Holstein Dairy. Never disinfected. One enteritis, August, 1909. Very dirty; cesspool only 4 feet from house.

No. 17 Corra Terrace. Four people; two bedrooms. Room No. 1, 544 cubic feet, and room No. 2, 342 cubic feet air space to each person. Toilet outside; sewage disposed of through a pipe from the house to the alley; carries slops, etc., into street. Milk from Mrs. Pierce, who has no license. Never disinfected. One tuberculosis, September, 1909.

No. 22 Cora Terrace. Four people; one bedroom, 272 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Own cow. Never disinfected. Very dirty house. Cowpen at back door. Many flies; no screens. Pipes in sink leaking and water dripping from side of house. One enteritis, August, 1909, and one August, 1911.

No. 1519 Clayton. Toilet outside; sewage disposed of in cesspool. Milk from Thomas, who has no license. House fairly clean, but yard very dirty. One tuberculosis, January, 1911. Never disinfected.

¹ Not printed.

No. 2127 South Colorado. Toilet inside; sewer connections. Milk from Holstein Dairy. Never disinfected. One tuberculosis, December, 1909. House fairly clean, but yard very dirty.

No. 123 Covert. Twelve people; seven bedrooms; average 800 cubic feet air space to each person. Toilet inside; sewer connections. Use condensed milk. One enteritis, July, 1910. Toilet very dirty, small, and dark and poorly ventilated. Never disinfected.

No. 1817 South Dakota. Ten people; one room; 352 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Use condensed milk. Never disinfected. No communicable disease past two years. Very filthy, dirty place. Only one bed, and those who do not get into bed must sleep on old clothes or mattress on the floor. Glass broke out of windows and paper substituted. Hole in middle of the room; slops and dish water thrown into it. Odor in house very bad. Tenant lived there seven years.

No. 137 East Daly. One room; one bedroom; 980 cubic feet air space. Toilet outside; sewage disposed of into street. Do not use milk. Never disinfected. One tuberculosis, April, 1912. Very dirty and filthy place. Bad odor. Woman very unclean, and stated had running sores on her hips; her face and hands were covered with pimples. No garbage can, and slops, etc., thrown into street.

No. 823 North Excelsior. Four people; two rooms; 756 cubic feet air space to each person. Toilet in house; sewer connection. Milk from Mrs. Shea, who has no license. One tuberculosis, October, 1910. Never disinfected. Very dirty place and yard.

No. 2108 Flrr. Five people; one room; 372 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Use condensed milk. Never disinfected. One tuberculosis, November, 1909. Fairly clean, but crowded.

No. 908 George Street. Three people; two rooms; 800 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Delmore. Never disinfected. One typhoid, June, 1910. House fairly clean, but cesspool only 10 feet from house.

No. 1121 Gallatin. Fairly clean house, but cesspool only 5 feet from house. Toilet outside; sewage disposed of in cesspool. Milk from Nine Mile Dairy. Disinfected February, 1912. One scarlet fever, January, 1912.

No. 307 East Granite. Vacant house, very dirty; surroundings very insanitary. One enteritis, September, 1909. Do not know when disinfected.

No. 1139 East Galena. Five people; two rooms; 360 cubic feet air space to each person. Toilet outside; sewage disposed of into street. Milk from John Bono. Never disinfected. One enteritis, August, 1910. House clean inside, yard and surroundings very dirty and insanitary; pools of dirty water around and under the house; people state would dig cesspool soon.

No. 124 East Granite (Hazel Block). Ninety people; 48 rooms, average 535 cubic feet air space to each person. Rooms fairly clean, but garbage allowed to accumulate outside the kitchen door and apparently not hauled away for some time. Four toilets in house; sewage disposed of into sewer. Milk from Independent or Eagle Dairy. Disinfected September, 1909. No communicable disease in past two years. One typhoid in June, 1910. Tenant lived there six years.

No. 1019 East Galena. Two people; one room, 540 cubic feet air space to each person. Toilet outside; sewage disposed of into street. Milk from Turner, who has no license. Never disinfected. One enteritis, December, 1910. Dirty water from houses upon hill, making it very insanitary around this and other places in this vicinity.

No. 2210 Hays Street. Five people; two rooms, 450 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Milk from Meaderville Dairy. Disinfected March, 1912. One scarlet fever, March, 1912. Very dirty and insanitary. Hogpen 20 feet from house, and refuse and slops thrown into alley.

No. 102 Kemper. Four people; one bedroom, 264 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Milk from Montana Dairy. Never disinfected. One enteritis, August, 1909. Cesspool only 10 feet from house; very dirty, and odor is so bad people state they are going to move on this account; has not been cleaned for some time.

No. 27 East La Platte. Ten people; four rooms. Room No. 1, 324 cubic feet air space, and rooms 2, 3, and 4, 697 cubic feet air space to each person. Sewage disposed of into street. Toilet outside. Milk from Mrs. O'Brien,

who has no license. Never disinfected. One enteritis, August 1911. House fairly clean, back yard dirty and insanitary.

No. 61 East La Platte. Four people; one room, 378 cubic feet air space to each person. Toilet outside; sewage disposed of into street. Milk from Mrs. O'Brien, who has no license. One typhoid, April, 1910. Disinfected April, 1912. House fairly clean, but great deal of water running through yard, and big puddle of water standing in front of the house (green color).

No. 395 East Mercury. Twelve people; three rooms. Room No. 1, 187 cubic feet air space to each person; rooms Nos. 2 and 3, 140 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Milk from Riley. Never disinfected. No communicable disease in past two years. Place very dirty, insanitary, and crowded.

No. 254 East Mercury (Chinese laundry). Five people; one room, 500 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. No communicable disease in past two years. Very dirty and insanitary.

No. 49 Missoula Avenue. Five people; three rooms, 714 cubic feet air space to each person. Toilet outside; sewage disposed into cesspool. Own cow. Never disinfected. One enteritis, August, 1911. Very dirty and insanitary place.

No. 347 East Mercury (dago village). Three people; one room, 514 cubic feet air space to each person. Toilet outside; sewage disposed of in street. Use condensed milk. Never disinfected. One tuberculosis, 1909, and one tuberculosis, 1911. No garbage cans in this neighborhood, and slops and dirty water thrown into street. Three men batching here. Very dirty and insanitary in and around the house. (See photograph¹ No. 3, two of the occupants of the house standing in front of garbage pile. No. 2, manure pile rear and close to street. Photograph No. 4 is another view of this settlement; houses very close together, several families living in less than 50 feet; slops and refuse thrown into street; looks very insanitary.)

No. 214 East Mercury. Three people; two bedrooms, 540 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Montana Dairy. Disinfected regularly. One tuberculosis, March, 1910. Inside of house neat and clean; water pipe broken in sink, and holes in bottom of sink; owner refuses to connect and repair. Cesspool and toilet only about 15 feet from house and three families use them; very insanitary.

No. 276 East Park (Clarence Hotel). Kitchen in a very insanitary condition when inspected August 7, 1912; scraps of food on floors and porch, and heaps of it in back yard.

No. 17 South Oklahoma. Seven people; two rooms. Room No. 1, five people, 259 cubic feet air space, and room No. 2, two people, 540 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Use condensed milk. One enteritis, August, 1909. Never disinfected. House very dirty and crowded; poorly ventilated.

No. 301 East Park. Four people; two bedrooms, 540 cubic feet air space to each person. Toilet inside; sewer connections. Milk from John Bros, who have no license. Never disinfected. One scarlet fever, August, 1910. Very dirty, dark, and poorly ventilated. Tenant lived there 20 years.

No. 705 East Park. One person; one room, 1,404 cubic feet air space. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Disinfected August, 1911. One tuberculosis, February, 1909. Two dogs in kitchen; uncovered food also in kitchen. Toilet and kitchen very dirty and insanitary.

No. 837 East Park. Four people; two rooms, 544 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis, August, 1909. Many outside toilets in this neighborhood; not very clean or sanitary.

No. 918 East Park. Five people; two bedrooms. Room No. 1, three people, 447 cubic feet air space; room No. 2, two people, 405 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Never disinfected. One tuberculosis, April, 1912. Milk, Holstein Dairy. Very dirty; many flies; floors dirty and slop pails uncovered.

No. 449 East Park. Two people; two rooms, 1,060 cubic feet air space to each person. Toilet outside; sewer connection. Use condensed milk. Disinfected August, 1910. One enteritis, June, 1910. Fairly clean. No ventilation from toilet, except through the kitchen. Very insanitary.

¹ Photographs not printed.

No. 340 East Park (rear). Three people; one room, 273 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Do not use milk. Never disinfected. One tuberculosis, August, 1909. Very dirty and insanitary. Many flies; no screens on doors or windows. Back yard full of trash and rubbish.

No. 361 East Park. Two people; 2 bedrooms, 911 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis, April, 1910. House condemned. Tenants pay no rent. Very filthy and dirty.

No. 343 East Park. Six people; four rooms. Rooms 1 and 2, 540 cubic feet air space; 3 and 4, 1,200 cubic feet air space to each person. Toilet inside; sewage disposed of in cesspool. Milk from Montana Dairy. Never disinfected. One tuberculosis, January, 1910. Very dirty house; no screen doors or windows; many flies; water pipes leaking in toilet and toilet very dirty and insanitary.

No. 117 West Pacific. Four people; one room, 380 cubic feet air to each person. Toilet outside; sewage disposed of in cesspool. Milk from Reliable Dairy. Never disinfected. One enteritis, September, 1909. House very dirty, poorly ventilated, and crowded.

No. 349 East Park. Four people; one bedroom, 236 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Use condensed milk. Never disinfected. One tuberculosis, February, 1909. House fairly clean, but crowded; four families use same toilet.

No. 253 West Pacific. Ten people; 3 rooms. Room No. 1, 390 cubic feet air, and rooms 2 and 3, 520 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Phillips, who has no license. Never disinfected. One enteritis, July, 1910. Fairly clean. Water pipe from sink empties into street within few feet from the house; bad odor.

No. 19 Plum Street. Three people; two bedrooms, average air space to each person 434 cubic feet. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One scarlet fever, December, 1911. House small and dark; little chance to isolate scarlet-fever patients. Tenant lived there one month. Would not know about disinfection.

No. 30 Plum Street (flat No. 1). Eight people; 2 rooms. Room No. 1, 449 feet, and room No. 2, 166 cubic feet air space to each person. Six people in room No. 2. Toilet outside; sewage disposed of in cesspool. Milk from George Pinchello. Never disinfected. One tuberculosis, April, 1911. House fairly clean but very crowded.

No. 30 Plum Street (flat No. 2). Five people; two rooms. Room No. 1, three people, 480 cubic feet air, and room No. 2, two people, 720 cubic feet air space to each person. Toilet outside; sewage disposed of into cesspool. Milk from George Pinchello. Never disinfected. One tuberculosis, April, 1911, and one tuberculosis, October, 1911. House fairly clean, but pigpen at back door, very insanitary.

No. 41 Plum Street. Six people; three rooms, 715 cubic air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Pinchello. Never disinfected. One typhoid fever, October, 1910. House fairly clean, but back yard filthy; cowpen at back door, very insanitary.

No. 1105 East Park. Seven people; three rooms. Room No. 1, 420 cubic feet, room No. 2, 600 cubic feet, and No. 3, 700 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Disinfected September, 1910. One tuberculosis, February, 1910. House fairly clean, but conditions in back yard very bad; many flies, etc.

No. 21 Plum Street. Condition in vacant half block adjacent to this place is very insanitary; people in streets above keep hogs and cows; slops and refuse are thrown into alley, rain washes it down into flat where it lodges in an old cellar on flat, close to 21 Plum Street; no drainage from this hole and water stands in it until dried up by the sun; cats are drowned here and dead animals are thrown into this hole; people compelled to keep windows and doors closed on account of the odor from this place.

No. 430 East Park. Vacant brick house; very dirty and insanitary in and about the place. Family living in basement. Very dirty; no garbage cans; slops and refuse thrown in back yard close to back door. Never disinfected. One tuberculosis, January, 1909.

No. 312 East Park (saloon and rooming house; proprietor, Mr. Saur). Saloon and rooms insanitary, and back yard very dirty; slops and refuse thrown

under stairway at back door; odor from this very bad. Saair's attention called to it and photo No. 5¹ shows the pile of refuse under the stairway.

No. 29 East Quartz (Silver Lake Hotel). Seventy-five people; 35 rooms; two people in each room; average air space, 720 cubic feet to each person. Toilet inside; sewer connection. Milk from Crescent Dairy. Disinfected regularly. One scarlet fever, April, 1910, one tuberculosis, January, 1911, and one diphtheria, August, 1909. House and rooms clean and neat inside. Alley in rear very dirty and insanitary. Refuse from the hotel thrown out of windows into vacant lot on west side; landlady of the Napton Hotel stated smell from this vacant lot very bad at times and has often lost roomers on this account. There is also a large open box at rear of hotel in alley which is used for garbage, etc.; the lady at Napton stated this box is often filled and then not cleaned out for two or three days and this also causes her roomers to complain and leave the hotel. The alley in general is very dirty (except at rear of Napton Hotel) and needs cleaning up.

No. 1259 East Second. Four people; three rooms. Room No. 1, two people, 770 cubic feet; room No. 2, one, 1,100 cubic feet of air space to each person; room No. 3, not occupied. Toilet outside; sewage disposed of in cesspool. Milk from Mrs. Peary, who has no license. Never disinfected. One tuberculosis, March, 1909. House fairly clean, but cesspool only 8 feet from house.

No. 818 Shields. Six people; one room, 220 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Parrott Dairy. Never disinfected. One enteritis, July, 1910. Dirty and insanitary; poor ventilation; but one small window in bedroom.

No. 401 Shields. Six people; one bedroom, 200 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Delmore. Never disinfected. One enteritis in February, 1912. House dirty, dark, and damp. Raining while inspector there, and the people had pan in the center of the room to catch the water which leaked through the roof.

No. 530 Shields. Six people; three rooms, average 450 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Used condensed milk. Never disinfected. One enteritis in August, 1910. House fairly clean, but cesspool only 4 feet from house and very insanitary. No sewerage in this neighborhood. Present tenant has lived there six months.

No. 22 East Summit. Four people; two bedrooms, average 576 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis, April, 1910. House and back yard fairly clean, but slops, etc., thrown into street.

No. 12 East Summit. Two people; two bedrooms, 960 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Mrs. Sullivan, who has no license. Never disinfected. One enteritis in August, 1910. House fairly clean. Cesspool dirty and insanitary, needs cleaning badly.

No. 1550 Second Avenue. Five people; two bedrooms. Room No. 1, 540 cubic feet of air space, and room No. 2, 810 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis in January, 1910. House fairly clean. Two small windows on one side and one 2 feet square on the other. Yard very dirty; full of debris. Chicken coop and toilet 10 feet from house and very dirty and insanitary.

No. 103 Toboggan. Three people; two rooms. Room No. 1, 1,080 cubic feet of air space, and No. 2, 702 cubic feet of air space to each individual. Toilet outside; sewage disposed of in cesspool. Milk from Mrs. Hollahan, who has no license. Never disinfected. Two tuberculosis in March, 1910. House fairly clean, but surrounding neighborhood is dirty and insanitary; neighbors throw slops and wash water into streets.

No. 920 Waukesha. One person; two bedrooms, 1,512 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool and garbage can. Use condensed milk. Never disinfected. One tuberculosis in April, 1912. Very dirty and insanitary.

No. 525 North Wyoming. Two people; one room, 605 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. Two tuberculosis in May, 1909. This and following two houses are very dirty and insanitary. Poor ventilation. Occu-

¹ Not printed.

pants of house state there are but two people in each cabin, but Inspector McMullan believes there are more from indications.

No. 712½ North Wyoming. Seven people; three rooms. Rooms 1 and 2, 882 cubic feet air space per individual; and room No. 3, 588 cubic feet of air space per individual. Toilet outside; sewage disposed of in cesspool. Milk from Mrs. Sullivan, who has no license. Never disinfected. One enteritis, August, 1911. Very dirty neighborhood. Houses built back from street and close together. Many people keep hogs and cows. Slops and refuse thrown into alley. Many flies, and odor bad. No sewer.

No. 720½ North Wyoming. Six people; two rooms. Room No. 1, two people, 450 cubic feet of air space per person; No. 2, four people, 324 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Mrs. Sullivan, who has no license. Never disinfected. One tuberculosis in April, 1910. Very dirty and insanitary. Houses built close together back from street. Pigs and cows around. Slops and refuse thrown into alley. Many flies; no screens. Bad odor.

No. 725 North Wyoming. Four people; three rooms; average 600 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Milk from Mike Mickovich, who has not license. Disinfected September, 1908. Two tuberculosis, November, 1910. This neighborhood is dirty, but this house is filthy. Fifteen or twenty men live here, while the party who answered questions claimed but four live here. Slops thrown in back yard. Bedrooms very dirty and insanitary.

No. 825 North Wyoming. Two people; two bedrooms; average 1,320 cubic feet of air space to each person. Toilet inside; sewer connections. Own cow. Never disinfected. One tuberculosis in May, 1909. Very dirty and insanitary house.

No. 315 South Wyoming. Three people; three rooms; 1,009 cubic feet of air space to each person. Toilet inside; sewage in main sewer. Milk from party on South Jackson; could not give name. Disinfected regularly. One tuberculosis, June, 1910. Very neat house and yard.

No. 2210 Yew Street. Seven people; four rooms; average 780 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis in May, 1909. Widow with several small children live here. Very crowded and dirty.

No. 2211 Yew Street. Seven people; four rooms; average 780 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis in October, 1909. No garbage cans; garbage and slops thrown in back yard. Very insanitary.

No. 420 West Virginia. Two people; one bedroom; 882 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis in December, 1910. Cesspool about 4 feet from house. Very dirty and insanitary.

No. 395 East Mercury. Twelve people; three rooms. Room No. 1, three people, 180 cubic feet of air space, and room No. 2, five people; room No. 3, four people, 140 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Never disinfected. Milk from Riley. No communicable diseases within past two years. Very dirty and crowded.

Just east of Mountain Con mine. Four people; three rooms, average 480 cubic feet of air space to each person. Toilet outside; sewage disposed of in cesspool. Own cow. Never disinfected, one tuberculosis in December, 1911. House fairly clean, but slops, etc., are thrown into street and there is a very bad odor.

No. 29 North Main. Thirty-five people; 82 rooms, average 636 cubic feet of air space to each person. Toilet inside; sewer connection. Milk from Independent Dairy. Never disinfected. One tuberculosis in January, 1911. Rooms very small and dark; halls about 3 feet wide, dark and poorly ventilated. Inner rooms no windows and no ventilation except through transom. Landlady stated but one person in each room, but there seems to be more.

No. 624 Placer. Four people; one room, 180 cubic feet of air space to each person. Toilet inside; sewer connection. Milk from Montana Dairy. Never disinfected. One tuberculosis in January, 1911. Bathrub and toilet are in the hall. Toilet pipes leak and odor is very bad.

No. 321 East Summit. House and yard are fairly clean, but sewer pipes are burst and stopped up; odor very foul and insanitary.

No. 405 East Summit. Five people; two rooms. Room No. 1, 360 cubic feet of air space, and No. 2, 480 cubic feet of air space to each person. Toilet outside; sewage disposed of in street. Milk from Mrs. Shea, who has no license

and lives at No. 8 Ridgley Avenue. Never disinfected. One enteritis in October, 1911, and one case of tuberculosis in the house now. House and yard fairly clean, but Ridgley Avenue, where slops, etc., are thrown, would require a boat to get through.

No. 47 East Woolman. Seven people; three rooms. Room No. 1, three people, 286 cubic feet of air space to each person, and No. 2, three persons; room No. 3, two people, 224 cubic feet of air space to each person. Toilet outside; sewage disposed of in street. Use condensed milk. Never disinfected. One tuberculosis in February, 1910. House fairly clean. Toilet very dirty and insanitary. Slops thrown into street and run back into kitchen.

No. 20 East Woolman. Seven people; three rooms. Room Nos. 1 and 2, 756 cubic feet air space to each person. Toilet outside; sewage disposed of in cesspool. Use condensed milk. Never disinfected. One tuberculosis in 1911. House very dirty and insanitary. Some cabins in connection in rear are filthy dirty.

No. 492 East Park. In basement, very dirty and insanitary. No garbage cans. Back yard very dirty. People up stairs complain of the insanitary conditions below.

Mrs. McGrath, on Transit Street, selling milk to Mrs. William Malcare, 326 West Daily, has no license. Place very dirty and insanitary. Small barn. No ventilation. Chickens, ducks, turkeys, and pigs and cattle all together in same barn. Large manure piles at rear and side of barn. Great many flies. Pools of water here and there. Women very unclean.

Photograph No. 1,¹ manure piles at rear of 422 Transit. People have two or three cows and understand sell milk. Many flies around here, also, and conditions very insanitary.

No. 137 East Daily. Woman living alone; she is very dirty and filthy. House very unclean; queer odor; should be fumigated. Woman stated she had running sores on her body and her face was covered with pimples. East Daily to Main Street very dirty and insanitary. People throw slops and dirty water into street. No sewer in this neighborhood. Many children playing in this water.

East Galena Street. From 416 to 1139, very dirty and insanitary. No sewerage. Slops and dirty water thrown into yards and streets. Foul odor. Water from houses on the hill above this street comes down and runs through yards below. Pools and small streams of water every few yards. At 1139 East Galena water in pools under and around the house. Odor very foul.

No. 435 East Mercury (see photo 89).¹ Three cows. Yards and barns very dirty and filthy. Wet manure 3 or 4 inches deep all over yards. Two calves about 2 months old; chickens, ducks, turkeys, cows, and calves all mix together. Woman claimed she did not sell milk, but am of the opinion that she does. Stated she was a widow and alone and could not keep yard any cleaner.

No. 214 West Mercury. Three families use the same toilet and cesspool, very small and insanitary. Water pipes and sink in house 214, but not connected, and owner refuses to connect. Sink full of holes. Should have new sink and pipes connected, as it would help to make the place more sanitary.

Mrs. Gray, 1215 West Granite. Selling milk to Mr. Pat Koane, 1207 West Granite; has no license. Barn small and no ventilation. Lady stated did not house cattle, but let them roam the hills night and day. Chickens and ducks housed in barns.

Basement of Napton Hotel (Young Woman's Association). Lady in charge called attention to rear window in kitchen which opened out on alley at rear; stated slops and other refuse is being thrown into this open window from adjoining houses and at times the stench is terrible. All the cooking for the Y. W. A. is done here, and on account of these people using this open window for a garbage can makes it very insanitary.

Photo No. 85,¹ back yard and toilet, 337 East Park Street. Very insanitary. Photo No. 86,¹ back yard, 1100 block, East Broadway. "X" shows opening into shallow sewer, which has been provided for carrying off the slops. General conditions around this place insanitary.

Photo No. 87,¹ rear of 490 East Broadway. General junk pile and children at play.

Photo No. 88,¹ back yard, 490 Lee Avenue. Very insanitary.

Photo No. 89,¹ manure pile and barn, near 435 East Mercury. Very dirty cow yards and barn. Three milch cows, two young calves, and chickens, ducks, etc., all mixed together. Very insanitary.

¹ Not printed.

REPORT OF CONDITIONS NOTED IN STREETS.

By M. J. McNallan, M. D.

Little Minah. This street is about 20 feet wide. Houses are built close together. No sewer. Toilets close to back door at many houses. Rubbish and slops thrown into street. Alley between Minah and Buffalo about 12 feet wide; very filthy. Garbage thrown into alley. No sewer.

Mullin Street. Pile of decayed meat in alley near butcher shop. Refuse thrown on street in front of Mullin House. This part of the street is flat and very little drainage. Refuse from Wells and Center Streets washed down and becomes stagnant here. Some of the people have cows, and the manure is very much in evidence.

East La Platte. No sewer. Slop thrown in street. Many people have cows. Very dirty back yards. Refuse from Bennett and O'Neill Streets drain into East La Platte. Alley between Bennett and O'Neill Streets very dirty and narrow. So much refuse thrown into ally it is almost impossible to drive through. People also have pigs, and troughs are built to carry refuse from back yard into alley. This drains into East La Platte.

Toboggan Avenue. Receives drainage from Lexington and Gladstone Streets. Many people have cows and chickens. Tin cans and refuse thrown into street. Avenue steep and narrow, and people depend on floods to clean the street.

Anaconda Road. This street is not very dirty. There is no sewerage, however.

Clear Grit. Street is narrow but fairly clean. Houses are very small.

North Wyoming, 700 block. This is one of the dirtiest and most insanitary places inspected. Houses built throughout the block with little regard for alleys. Small and dirty. Slops thrown into street from nearly all the places. Houses are so thick there is scarcely room for toilets, and from the odor think toilets are not cleaned regularly. Some people have cows, and their places are filthy.

East Woolman Street. Tin cans and slops thrown into street. One place (47 East Woolman) do not carry slops as far as street but throw it out of the back door and let it run over the sidewalk. People on south side throw refuse out back door, and it runs into Gagnon Street. No sewer.

Ohio, Hopkins, New, and Mahoney Streets. This section is what is known as the Cabbage Patch and is too filthy to describe. Found but one garbage can covered; many of the garbage cans on the sidewalks and in the streets. Houses small, poorly ventilated; alleys filthy. Dead dog found in alley and, judging from odor, believe had been dead three or four days. Understand many miners live in this section on account of the cheap rent.

Meaderville Street. Slop and refuse thrown into street on south side of Main, north end of town. People have toilets built near the creek and trenches running from toilets to creek. Many keep pigs and cows.

Flat. The flat in general is pretty clean, but it is too flat for drainage. Many people have dug wells and use the water.

KELLEY EXHIBIT NO. 3.**GRANT DEED.**

This indenture made the eighth day of April, A. D. 1912, between Robert Laing (unmarried), of Butte, Silver Bow County, Mont., party of the first part, and Archibald Chisholm, of the same place, party of the second part:

Witnesseth that the said party of the first part, in consideration of the sum of one and no one-hundredths dollars, lawful money of the United States of America, to him in hand paid, the receipt whereof is hereby acknowledged, has granted and conveyed, and by these presents does grant and convey, unto the said party of the second part, and to his heirs and assigns forever, all of the following-described property, situated in Silver Bow County, State of Montana, to wit:

Lot numbered twenty-three (23) in block numbered five (5) of the Hope Addition to Butte, Mont., according to the official plat and survey thereof now on file in the office of the county clerk and recorder of the said Silver Bow County, Mont.

Excepting and reserving, however, from this conveyance all ores and minerals beneath the surface of the above-described premises, with the right to

mine for and extract the same, provided that in the exercise of such mine right the surface thereof shall not be disturbed or interfered with or in any wise damaged.

Together with all and singular the tenements, hereditaments, and appurtenances thereunto belonging or in any wise appertaining, and the reversion, remainders, rents, issues, and profits thereof.

To have and to hold all and singular the said premises, together with the appurtenances, unto the said party of the second part and to his heirs and assigns forever.

In witness whereof the said party of the first part has hereunto set his hand the day and year first above written.

ROBERT LAING.

STATE OF MONTANA, *County of Silver Bow*, ss:

On the 9th day of April, in the year 1912, before me, ISAAC W. Genzberger a notary public in and for State of Montana, personally appeared Robert Laing (unmarried), to me personally known to be the person whose name I subscribed to the foregoing instrument, and severally acknowledged to me that he executed the same.

In witness whereof, I have hereunto set my hand and affixed my notarial seal, the day and year in this certificate above written.

[SEAL.]

ISAAC W. GENZBERGER,
Notary Public for the State of Montana,
residing at Butte, Mont.

My Commission expires March 25, 1914.

Filed for record September 5, A. D. 1913, at 35 minutes past 2 o'clock p. m.
DAVE KEHOE, *County Recorder,*
By LEO BUTLER, *Deputy.*

(Recorded in vol. 108 of deeds, at page 456, records of Silver Bow County State of Montana.)

KELLEY EXHIBIT NO. 10.

This indenture, made the 9th day of May, in the year of our Lord one thousand nine hundred and fourteen, between the Butte Land and Investment Co. a corporation duly organized and existing under and by virtue of the laws of the State of Montana, the party of the first part, and Alexander Mackel, of Butte, Silver Bow County, Mont., the party of the second part.

Witnesseth, that the said party of the first part, for and in consideration of the sum of one and no hundredths dollars (\$1), lawful money of the United States of America, to it in hand paid by the said party of the second part the receipt whereof is hereby acknowledged, does by these presents grant, bargain, sell, convey, and confirm unto the said party of the second part, and to his heirs and assigns, forever, all those certain lots, pieces or parcels of land situate, lying, and being in the county of Silver Bow and State of Montana described as follows, to wit:

Lots numbered thirty-eight (38) and thirty-nine (39) in block No. two (2) of the Huriburt Addition to the City of Butte, Silver Bow County, Mont., according to the survey and plat thereof on file in the office of the clerk and recorder of Silver Bow County, Mont.

Excepting from this grant and from the operation thereof, and reserving to the grantor herein, all veins, lodes, ledges, ores, mines, minerals, metals and mineral-bearing earth, rock and deposits, within or belonging to the above described tract of ground; together with the right to enter beneath the surface of the above-described tract of ground, and to mine, prospect for, and extract any and all of said ores and minerals, metals, and mineral-bearing earth, rock and deposits within or belonging to the said above described tract of ground, underneath a horizontal plane parallel to and fifty (50) feet below the natural surface of the said premises.

It is an express condition of this grant that the said described premises shall not, nor shall any part thereof, be used for saloon or road-house purposes, and that in the event of said described ground, or any part thereof, being used for saloon or road-house purposes, such use shall at once terminate this grant as a condition subsequent, and the title shall thereupon at once revert to the

grantors, who shall thereupon be entitled to reenter and take possession of said ground.

The grantee further agrees that he will erect thereon a house to cost not less than twelve hundred and no hundredths (\$1,200) dollars, and further agrees that in construction of such house no building will be erected closer than 20 feet from the front line of the lot described.

The grantee further agrees that in the occupation of said land he will not maintain or suffer to be maintained thereon anything in the nature of a public nuisance.

Together with all and singular, the tenements, hereditaments, and appurtenances thereunto belonging or in anywise appertaining as usually had and enjoyed, save and except as hereinbefore excepted and reserved.

To have and to hold, all and singular the said premises unto the said party of the second part, and to his heirs and assigns forever.

It is understood and agreed that this deed is given in satisfaction of a certain agreement between the respective parties hereto dated the 23d day of October, 1913, wherein first party agrees to sell and second party agrees to buy above-described premises, and first party does not warrant title to said premises against any liens or encumbrances that may have arisen since the date of said agreement, affecting the same and not caused by said party of the first part.

In witness whereof said party of the first part has caused its corporate name to be hereunto signed by its president and attested by its secretary, thereunto duly authorized, and its corporate seal to be hereunto affixed the day and year first above written.

KELLEY EXHIBIT NO. 11.

REPORT OF INVESTIGATION OF SANITARY CONDITIONS IN MINES AND OF THE CONDITIONS UNDER WHICH THE MINERS LIVE IN SILVER BOW COUNTY.

(See also Kelley Exhibit No. 8.)

This investigation was undertaken to determine, if possible, the source of the high death rate from tuberculosis in Silver Bow County. The question has been discussed repeatedly, and it seems that there has never been a study of conditions on which the statements made by some "that all the tuberculosis in Silver Bow County comes from surface conditions," and that made by others "that all the tuberculosis in Silver Bow County comes from conditions in the mines," could be based.

The first work was that of studying the death records relative to tuberculosis from December, 1908, up to April, 1912, inclusive. We found that there had been 556 deaths from tuberculosis during this period. A map of Silver Bow County was secured, and the location of this disease was indicated thereon

with pins inserted into the map. The deaths occurring at hospitals were locate at the point from which the patient went to the hospital. In other words, the death was classed as having occurred at the place where the patient lives rather than at the hospital where he had been only a short time.

We find that of the 526 deaths 29 were among imported individuals—that is individuals who did not live in Silver Bow County. Of the deaths reported as having occurred at the poor farm we find that in 32 the residence was not given, making a total of 61 that we could not class as regards residence. Of the 465 deaths whose residence we were able to locate we find that 330, or 71 per cent, occurred in a portion of the city and county, which, when mapped out forms an irregular Maltese cross. (See diagram at end of this article.)

Outside of this area the pins indicating the deaths from tuberculosis are not more numerous than we find in any other city of the State.

A remarkable feature in connection with this study is the scarcity of death from tuberculosis in Walkerville and Meaderville. These two localities are populated largely by miners, and yet the deaths from tuberculosis among the residents of these two localities are very few compared with those within the "irregular Maltese cross area." This would seem to indicate that there is something within this "Maltese cross area" that has an influence on tuberculosis. Granting that the proportion of miners within this "Maltese cross area" is equal to that in Walkerville and Meaderville, why should there be such a large death rate among those living in one locality and such a comparatively small death rate among those living in the other locality? We believe that the fact that tuberculosis has existed in this "Maltese cross area" for such a long time that many, if not all, of the houses in this area are infected with this disease, while comparatively few of those in Walkerville and Meaderville have become infected. A study of the detailed report of conditions found would seem to support this theory.

The next study with regard to deaths from tuberculosis was a study of the deaths by nationalities. Of the 526 deaths reported we find that they occurred as follows:

Irish.....	270	Canadians.....	1
English.....	82	Polack.....	1
Swedish.....	17	French.....	1
Finlanders.....	38	Russians.....	1
Austrians.....	10	Scotch.....	1
Hungarian.....	1	Germans.....	1
Norwegians.....	3	Swiss.....	1
Italians.....	11	Chinamen.....	1
Welsh.....	8	Americans.....	3

This data is practically valueless unless we could know what proportion of each nationality constituted the population of Silver Bow County. On this subject we have been unable to secure reliable figures.

STUDY OF CONDITIONS IN MINES.

The study of the mines was carried out in the following manner. Two men accompanied by an engineer went through 10 of the mines, this being all that we were able to cover in the three and one-half months devoted to this work. A report was made with regard to each level and special reports relative to conditions found on any level, the following being the more important questions embodied in the report:

- Date of inspection.
- Name of mine.
- Character of mine.
- Photographs taken (flash-light pictures taken of all conditions of special interest).
- Location in mine (with regard to level and position in level, number of men working, approximate air space where men are working).
- Method of disposal of excreta.
- Method of handling drinking water.
- Source of drinking water.
- Source of ice in water.
- Condition of the level with regard to moisture (whether dry, moderately dry, or wet).

Whether or not sample of water was taken.
 Method of ventilation (temperature, wet and dry bulb).
 Whether or not sample of air was taken.
 Whether or not culture plate was exposed to air.
 Whether or not any level in mine is on fire, and if so, what measures are taken to control fire.
 Condition of dry.
 Condition of lockers in dry.
 Whether or not culture plate were exposed to air in dry.
 Bathing facilities in dry, how heated.
 General condition.
 Ventilation.
 Whether or not pictures were taken of dry, and if so, number of the pictures.

Where culture plates were exposed to air, these were sent to the bacteriologist and report made on cultures found in such plates. Water and air samples were forwarded to Prof. W. M. Cobleigh, of Bozeman, Mont., and his report on these samples is embodied in the detailed report. A report answering the above question was made with regard to each level in each of the mines inspected, and also with regard to conditions in the various levels showing matters of special importance.

INSPECTION OF SURFACE CONDITIONS.

In the surface inspection 438 houses and their surrounding conditions were inspected. There were 2,949 occupants in these residences. There were 1,418 rooms in these residences. In regard to the air space per individual in the residences, we found as follows: 5 rooms, between 100 and 200 cubic feet of air space; 27 rooms, between 200 and 300 cubic feet of air space; 67 rooms, between 300 and 400 cubic feet of air space; 133 rooms, between 400 and 500 cubic feet of air space; 186 rooms, between 500 and 600 cubic feet of air space; 165 rooms, between 600 and 700 cubic feet of air space; 251 rooms, between 700 and 800 cubic feet of air space; 180 rooms, between 800 and 900 cubic feet of air space; 56 rooms, between 900 and 1,000 cubic feet of air space; 348 rooms, over 1,000 cubic feet of air space; average, 335 cubic feet per individual.

There should certainly be a strictly enforced law prohibiting boarding houses, hotels, etc., renting rooms wherein the air space is less than 650 cubic feet per occupant.

In the study of the living conditions of the miners the following questions were answered with regard to each house:

Street and number.
 Name of householder.
 Number of photographs taken, if any.
 Date and hour inspected.
 Number of people living in house.
 Number of bedrooms in house.
 Cubic feet of air space per each individual occupying each room.
 Whether or not more than one shift sleeps in any room.
 Number of toilets in house.
 Disposal of sewage.
 Number of bathtubs.
 Condition of bathtubs, whether clean or dirty.
 Whether or not meals are served to boarders; and if so, source of milk supply.
 Whether or not there has been a communicable disease in house during last two years. If so, when was house last disinfected?
 How long present tenants have lived in house.
 Whether or not sample of air was taken.
 Whether or not culture plate was exposed.

When culture plates were exposed, or sample of air taken, these were submitted to the bacteriologist or chemist and their report is found in the detailed report submitted herewith.

AIR ANALYSIS.

In regard to air analysis, both in the mines and out, we find in Alexander Smith's College Chemistry the following: "Pure country air contains about 3

parts in 10,000 of carbon dioxide. In city air there are 6 to 7 parts in the same volume, while in air of audience rooms or where ventilation is defective the proportion may rise as high as 50 parts. The per cent of oxygen in dry air ranges between 20.26 and 21, the latter being the proportion in normal air.

We further quote from Dr. Thomas R. Crowder, in a bulletin of the Kansas State Board of Health, as follows:

"Since textbooks on hygiene and on ventilation and heating generally specify that carbon dioxide shall not be allowed to go above a few parts in 10,000 of air, it is supposed that any greater excess acts as a poison. The truth of the matter is quite otherwise; for whatever the percentage of CO₂ in the surrounding atmosphere may be, that in the air of the lungs remains constant at about 5 per cent of an atmosphere, and it is maintained so by the action of the respiratory center. The air of the lungs is never pure air; it never even remotely approaches pure air; and no one breathes pure air into his lungs. A each breath we take back into the alveoli the expired air contained in the nose and large bronchi, and this constitutes about one-third of the whole inspiration. This reexpiration is necessary in order to keep the CO₂ of the blood from falling too low. No excess of CO₂ enters into our bodies by breathing the atmosphere of the worst ventilated rooms, where the CO₂ certainly does not reach a higher concentration than 1 per cent of the atmosphere. The only result of breathing such an excess of CO₂ is a slight increase in the depth of respiration, which is exactly adjusted to keep the concentration of CO₂ in the alveolar air at the normal 5 per cent of an atmosphere.

"It has been pointed out by Lehmann and Hill that men who tend the fermentation vats in breweries work for long hours in an atmosphere containing 0.5 to 2.5 per cent of CO₂, and that they are healthy and long-lived. Many investigators have subjected themselves or others to an atmosphere artificially charged with CO₂, and the results have uniformly shown that less than 3 or 4 per cent has no influence on the health of those who breathe it and can not be detected by them through any subjective channels."

This idea is thoroughly supported by the general reports on ventilation at the International Congress on Hygiene, held in Washington in September 1912. In connection with this work Prof. Cobleigh made the following analysis of air at Bozeman. The outside air near the Agricultural College at Bozeman showed as follows:

August 17, 3.6 parts carbon dioxide per 10,000.

September 20, 4 parts carbon dioxide per 10,000.

October 5, 5.3 parts carbon dioxide per 10,000.

On August 17 he analyzed the air of the experiment station laboratory, a fairly large room where only one man was working, and found it to contain 5.5 parts of carbon dioxide per 10,000. It will be noted that on August 17 the outdoor air contained 3.6 parts per 10,000. On October 5, at 8 a. m., before anyone went to work in the food laboratory, the analysis showed the air to contain 6.3 parts carbon dioxide per 10,000, whereas the outside air on the same date showed 5.3 parts per 10,000. On September 20, with Bunsen burners going and two men working, an analysis of air showed 21.8 parts of carbon dioxide per 10,000. On October 5 after two Bunsen burners had been working for one hour in the laboratory, the analysis showed 15 parts carbon dioxide per 10,000.

From the above quotations, we know that normal air carries from 20.26 per cent to 21 per cent of oxygen. Reference to the analyses of samples of air taken in the mines shows that they uniformly come up to this standard, the only question open being with regard to the per cent of carbon dioxide present in the air. We find that in a laboratory considered a well-ventilated laboratory, that the per cent of carbon dioxide reached 21.8 parts per 10,000, whereas we find in the mine that the oxygen in no instance was reduced below 20 per cent, and in most instances the carbon dioxide was within 25 parts per 10,000, very little higher than found in a large laboratory in one of our State institutions, and a well-conducted laboratory at that.

In one mine, however—namely, the Mountain Con—we find the carbon dioxide unusually high. Here we found the carbon dioxide to reach as high as 61.4 parts per 1,000. In the 1,100 level of the Little Minab we also found the carbon dioxide rather high, namely, 46.9 parts per 10,000, and here also the oxygen was reduced to the lowest point found in any mine, namely, 19.8 per cent.

Another interesting analysis of air is the sample taken from the bottom of a sump, where we found 28.2 parts of carbon dioxide per 10,000 not an extremely high amount of carbon dioxide; and yet, on account of the stillness of

the air in the sump, together with the temperature and humidity of the air, the men complained of the effects of poor ventilation.

In the face of these analyses and confronted by reports of recent studies relative to ventilation, we must recognize the fact that analysis of the air gives us little or no information relative to what we are disposed to call good or bad ventilation, but that the effect on the individual is not due to carbon dioxide nor to the quantity of oxygen present, but is due to the temperature and degree of humidity in the air; that is, a comparatively high temperature and high per cent of humidity has a greater influence on the ability of the individual working in common atmosphere than does an increase of carbon dioxide or decrease of oxygen in the same air.

We must therefore recognize that ventilation is a matter of relation between humidity and temperature rather than between oxygen and carbon dioxide present in the air. In the various levels of the mines the humidity is stated in the reports of air analyses, this being estimated from the difference between the reading of the wet and dry bulb thermometers.

We find that in some of the levels the humidity and temperature are both quite high, but have no suggestion to make as to how the humidity or temperature could be lessened in these levels.

SANITARY CONDITIONS.

In regard to the sanitary conditions found to exist, these varied extremely in various mines and are set forth in the detailed report.

One or two matters of importance we desire to call to your attention.

First, that the bacteriological count in the Original and Gagnon mines is lower with regard to the bacilli of the colon type than we found in the other mines inspected. This we believe to be due to the fact that toilet cars are provided throughout these two mines, but notwithstanding this we found bacilli of the colon type and typhoid bacilli present in the air in two levels of these mines. We would call your attention to the fact that while the instructions are strictly that these toilet cars shall be cleaned daily with live steam, our inspectors found on more than one occasion that this was not done; that the men whose duty it was to so clean these cars neglected to do so.

We also found that the miners make a practice of urinating in the mines at any convenient point, regardless of whether a toilet car is provided or not. This is an important matter, and the miners should be made to understand that after one has recovered from typhoid fever the urine will frequently contain typhoid bacilli for many months, and when an individual thus recovered urinates promiscuously he distributes typhoid fever germs. It is highly probable that the germs found in the air for those two mines came from this source.

We note in bacteriological reports that colon and typhoid fever bacilli are more or less frequently found in the air. From the various reports made it would seem that typhoid fever is comparatively rare in Silver Bow County. For instance, we find that in 1910 there were 7 cases reported from Silver Bow County and 9 cases reported from the city of Butte, but at the same time we note in 1910 there were 2 deaths reported from Silver Bow County and 10 from the city of Butte. Again, in 1911 we note that there were no cases of typhoid fever reported from Silver Bow and there were no deaths reported as being due to typhoid fever, but in Butte there were 9 cases of typhoid fever reported and 8 deaths. This means that in 1910 there was a death rate in Silver Bow County, outside of the city of Butte, from typhoid fever of 42.8 per cent, and that within the city limits more people died of typhoid fever than were cases reported, while in 1911 the death rate from typhoid fever, according to cases reported, would be 83.8.

If we allow a death rate of 10 per cent for typhoid fever (this is a high death rate) there should have been reported in Silver Bow County and the city of Butte together, for 1910, 130 cases instead of 16 cases, and in 1911 there should have been 80 cases reported instead of 9 cases, thus indicating that typhoid fever is by no means a rare disease in the city of Butte. If we were to assume that one-half of the cases that should have been reported occurred among miners, this would mean that in 1910 there were 65, and in 1911, 40 typhoid carriers returned to work in the mines.

The question of how to prevent the men from urinating promiscuously in the mines and how to prevent their answering nature's calls in improper places in mines where toilet cars are not provided, at first appears to be a

difficult problem, but in large institutions where efforts have been made to educate the employees along sanitary lines and where the educational matter has been presented in an interesting manner, it has been found that the men, though frequently of a very unintelligent class, take remarkably kindly to an effort by such teaching. It might be said as opposed to educating the miner along these lines that a good per cent of them only work a comparatively short time in one locality. On the other hand, it is undoubtedly a fact that a good per cent of the miners work for a long time in the same locality. If this were not true, we would not find them owning their own homes in any locality, and if these men who live and expect to continue to live in a locality are taught the importance of proper disposal of human excreta, they will endeavor to see that their working mates, though transient in character, do not commit acts that will endanger the health and lives of the permanent residents of the locality. Educating these people along such lines would be a tedious task to begin with, but when once started, it would undoubtedly give good results in the working capacity of the men employed.

In some of the mines we find that the men use dead crosscuts for answering nature's calls, and in some instances they go into these dead crosscuts, use for this purpose, to eat their luncheons. I believe that any miner who answers nature's call in a dead crosscut should be immediately discharged, and the foreman who discharges him congratulated on his care and precaution.

In most of the mines where horses are used we find a decided increase in the bacteria found in the air. In several instances bacteria peculiar to horses were found, bacteria of a character especially dangerous to man. I refer to the anthrax bacteria and actinomycosis. This would indicate the importance of having horses sent into the mines examined very carefully for anthrax and lump jaw. I wish especially to note that in no instance did our inspectors notice any indication that any horse in the mines was suffering from anthrax or actinomycosis, but frequently these diseases are not noted in their early stages only after a most careful examination.

We found in several instances that the analysis of the drinking water indicated that the vessels were not as thoroughly cleaned as they should be. Note the analysis of the water from the Steward mine, 1,700 and 1,800 levels and also at the 1500 station in the Little Minah. Comparing the analysis of the drinking water in the open vessels and that in closed vessels, the water in the open vessels shows a decided tendency toward contamination. Again, compare the analysis of the drinking waters from the closed steel tanks and those from closed wooden vessels. These analyses would seem to indicate that either the wooden vessels are not as thoroughly cleaned as are the steel tanks, or that the same cleaning does not suffice for the wooden vessels as does for the steel tanks.

Your attention is respectfully called to the general conditions found in the Mountain Con mine. Of the 10 mines examined, this mine showed the most insanitary conditions in general. Not only were many of the conditions found insanitary, but the ventilation in this mine was not as good as that of any other of the mines, the carbon dioxide in every instance being much higher than that found in samples of air taken from any other of the mines. Your attention is also especially called to the condition of the barn in the 2,100 level of this mine.

CONDITIONS OF THE MINES AS REGARDS MOISTURE.

It has been claimed by some that the moist or wet condition of deep mines would prohibit the spread of communicable disease, such as tuberculosis, in the mines. This we recognize as true to a certain extent, but our inspection does not support the theory as a whole. We found the tubercle bacillus, typhoid bacillus, and other germs in the air of the mines. This is not a theoretical finding, but an actual practical demonstration of the presence of these germs in the air.

We find, however, that these germs are more prevalent in the dry levels than in the wet levels. This statement on the very face of it does not conform with the idea that these mines are all wet. In fact, we found as a matter of fact that the very deep levels are wet, that the intermediate levels are more or less damp or wet, whereas the more superficial levels are perfectly dry. It is absurd, of course, to assume that when a consumptive expectorates promiscuously in one of these dry levels, that the sputum will not become dried and blown about

with the dust in the air of the mines, just the same as it would be on the surface in a dry locality.

As to the moisture in the air, we find a high degree of humidity in practically all of the levels, the humidity of course being higher in wet levels than in dry levels, but being higher in the driest levels than we find on the surface in this locality. This humidity of course can not be prevented, neither can the high temperature in the very low levels be avoided. This is a condition incidental to the mining industry that can not be overcome.

CONDITIONS IN REGARD TO DUST.

In the wet levels we found comparatively little dust, except immediately surrounding the localities where the drills were in operation, and even there the dust was comparatively little (much less than we find on the streets of our cities during windy days), except when the drills were just starting.

In the dry levels, however, we noted considerable dust at all times. This dust necessarily irritates the air passages of those working in dry levels and places such air passages in fit condition to make an ideal culture ground for disease germs, which may enter the air passages in the mines or which may enter them in localities outside the mines, and we are inclined to believe that the conditions under which we found many of the miners living are more conducive to the introduction of disease germs into the system than are the conditions that we found to exist in the mines. So far as the writer knows there is no way by which the dust in the dry levels can be avoided.

The only thing that could be done would be to educate the miners relative to the dangers of spitting promiscuously in the mines, remembering always that a consumptive is not dangerous except when he expectorates where the germs in his sputum may become dried and blown about in the air.

HOUSE-TO-HOUSE INSPECTION.

In this work 438 houses, with 1,418 rooms and 2,949 occupants, were inspected. In the detailed report we mentioned only such places as were found to be in an insanitary condition.

The division of air space per capita in all of the houses inspected is set forth above, showing an average of 335 cubic feet of air space per capita. People living and sleeping in such restricted air space can not expect to maintain health. Even with the best ventilation possible 335 cubic feet of air space is not sufficient by any means, but our inspection shows that ventilation is frequently not provided even with this restricted air space.

The sanitary conditions found in many of these houses (a great many of them are boarding or rooming houses) are anything but satisfactory, to say the least. In some of the houses where the sanitary conditions were found to be fair the conditions surrounding the houses were found decidedly insanitary. For fuller description see the detailed report and photographs attached.¹

The study of the map showing the location of deaths from tuberculosis indicates that the disease is confined to a very large degree to the old part of Butte, and the fact that these houses have never been disinfected for this disease leads us to believe that they are a fruitful source of infection with tuberculosis, a disease to which the miners are especially susceptible on account of the irritated condition of the air passages, resulting from unavoidable conditions incidental to their vocation.

Your attention is also especially called to the report made by Dr. M. J. McNellan, relative to conditions found in certain streets inspected.

Recently a clipping was forwarded to the writer, calling attention to the reduction in the number of deaths from enteric diseases in Butte during the last year, and claiming that this reduction was due entirely to the improved sanitary conditions in the city of Butte. If conditions as found by our inspectors are "improved conditions" we can not conceive of what they were before they were "improved." We believe that the reduction in enteric diseases in Butte, as well as over the entire State of Montana, is due solely to the improvement in the food supply made under the pure-food law passed by the last legislature.

¹ Not printed.

CONCLUSIONS.

As a result of this study, I am forced to the conclusion that neither the statement "that practically all of the tuberculosis in Silver Bow County is due to the conditions in the mines" or "that practically all the tuberculosis in Silver Bow County is due to surface conditions," is correct; but that the conditions in the mines together with the conditions on the surface result in the high death rate from tuberculosis, with a decided leaning toward the conditions on the surface having a greater influence on the high death rate from tuberculosis than do the conditions in the mines.

In addition to this many of the conditions in the mines can not be remedied. For instance, the high humidity and high temperatures can not be avoided. They are natural conditions and, so far as is known, there is no way of preventing their existence. On the other hand, such conditions as the improper disposal of excreta, open water vessels, and dirty barns in the mines can readily be remedied, though the improper disposal of excreta will require, not only the supplying of proper places for such disposal, but the education of the employees as to the importance of using such places.

Conditions on the surface are all remediable. There is no excuse for permitting the renting of rooms or houses that are not provided with proper air space and adequate ventilation.

There is no excuse for permitting the existence of the insanitary conditions found to exist in many of the houses, yards, and streets inspected.

We believe with a thorough enforcement of proper sanitary laws and regulations and with a complete control of tuberculosis among the dairy cattle that the death rate from tuberculosis in Silver Bow County can be cut in two within a period of five years.

SUGGESTIONS.

Relative to mines.—It being impracticable to discharge the men at present employed in the mines who are afflicted with tuberculosis, we earnestly urge that efforts be made to educate these men relative to the dangers of expectorating promiscuously in the mines, and that all new employees be carefully and thoroughly examined for any evidence of tuberculosis, and that any applicant who shows any evidence of tuberculosis whatever be not employed.

It being a well-known fact that those who have suffered from typhoid fever frequently carry the germs of this disease in their excreta for many months, and in rare instances even for years, that the excreta of all employees be examined to determine which are typhoid carriers, and that all typhoid carriers be excluded from the mines; and further, when any employee is found to be suffering from any enteric disease that his excreta be carefully examined for typhoid bacilli, and if such bacilli are found that he be not permitted to return to the mines until his excreta is found to be free from typhoid germs, and that this same examination be made of all new applicants for work in the mines.

That toilet cars be provided in all mines and that the men be strictly required to use these cars for answering all of nature's calls, with a penalty of being discharged for failure to comply with this requirement.

That all drinking water be supplied in covered and locked metallic containers.

That all horses taken into the mines be examined by an experienced veterinarian for anthrax and other communicable diseases.

That frequent and thorough inspections be made in order to see that toilet cars, water vessels, barns, etc., are thoroughly cleaned at proper intervals in order to keep them at all times in a clean and sanitary condition.

Relative to surface conditions.—That proper laws be enacted to secure the keeping of the surface conditions in a clean and sanitary condition at all times, and that a heavy penalty be imposed on the officer whose duty it is to see that sanitary conditions are maintained should he fail to perform the duties required of him.

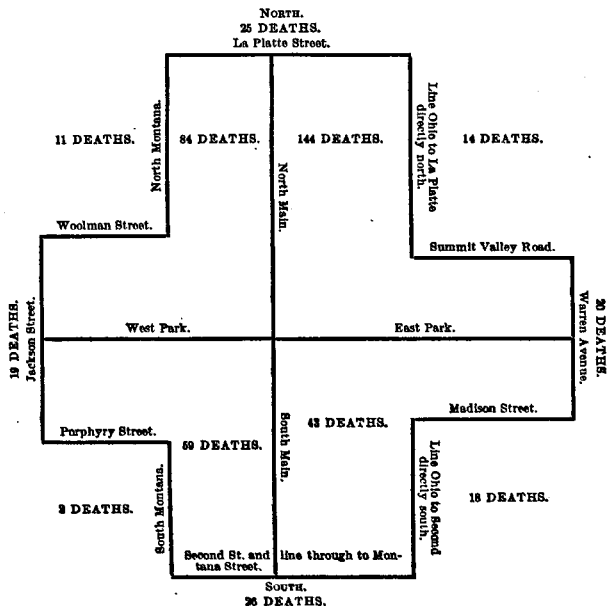

That laws be enacted prohibiting the renting of any room in which the air space shall be less than 650 cubic feet per occupant, and that such room be provided with windows for proper ventilation.

That tuberculosis be made a reportable disease with a heavy penalty against those who fail to report it, and that all rooms or houses, public or private, where any case of tuberculosis is known to have existed be thoroughly disin-

fectured before such house or room is rented or sold, or its occupancy permitted by any individual.

Finally, that the officer in charge of enforcing sanitary regulations be required to devote his entire time to this work and to refrain from the practice of medicine in either public or private capacity.

Map showing in a general way the location of deaths from tuberculosis.

KELLEY EXHIBIT NO. 12.

PROCEEDINGS OF THE JOINT COMMITTEE OF THE SENATE AND THE HOUSE OF THE TWELFTH LEGISLATIVE ASSEMBLY APPOINTED TO INVESTIGATE THE SANITARY CONDITIONS AND THE CONDITIONS OF VENTILATION OF THE MINES OF THE STATE, ESPECIALLY OF BUTTE.

Be it remembered that on the 4th day of January, 1911, the following joint committee of the senate and house to investigate the sanitary conditions and the conditions of ventilation of the mines of the State, especially of Butte, was appointed:

From the senate: Senators I. A. Leighton, W. E. Christopher, J. C. McCarthy, C. P. Tooley, and L. E. Leary.

From the house: Representatives P. J. Duffy, J. C. Duffy, Nelson Story, jr., M. L. Hewitt, and O. N. Byrnes.

JANUARY 5, 1911.

The joint committee above mentioned left Helena for Butte at 2.55 p. m. and upon their arrival in Butte notified the management of the mines and also the officers of the miners' union that their mission was to investigate the sanitary and ventilating conditions of the mines, and informed them that they would proceed with the investigation the following morning.

BUTTE, MONT., *January 6, 1911.*

The joint committee was taken to the Leonard Mine at 9.30 a. m., accompanied by John Gillie, general superintendent of the Amalgamated mines; B. H. Dunshie, assistant superintendent of the company; J. C. Adams, superintendent of the Boston & Montana Consolidated Mining Co.; and Thomas Mitchell, foreman of the Leonard mine; Dan Sullivan, president of the Butte Miners' Union and Joe Guelis, vice president of the miners' union.

The committee inspected the change room or dry, where they found 60 lockers for the use of the men employed in which to change their clothes, with cement floors, shower baths, and washrooms.

They were then lowered to the 1,200-foot level and shown the doors installed for the purpose of changing the course of air; then lowered to the 1,400-foot level, and went through stope No. 1623 to the 1,800-foot level at crosscut No. 1803; the temperature there registered 73°, and at breast 82°; then through the 1,800-foot level to the West Calusa mine and Comanche air shaft. Went on surface for lunch at 12 m., when committee went through several stopes and drifts of the Mountain View and Pennsylvania mines. The temperature of the water dropping from the back of crosscut No. 1813 of the Pennsylvania was 76°. After coming to surface the committee were taken to the engine room and shown the safety appliances on the engine to prevent the cages or skips from going into the sheave wheels.

BUTTE, MONT., *January 7, 1911.*

The committee visited the Original mine and were lowered to the 2,000-foot level to the pump station; temperature at this point was 73°. Through stope No. 2101, temperature registered 88°. Climbed through stopes and drifts of Gagnon and Original mines to 2,400-foot level of the Original mine, where the temperature in the west drift was 78°. Went on surface for lunch. After lunch the committee went to the plant of the Missouri Power Co., near the High Ore mine, and then to the Speculator mine, of the North Butte Mining Co., where they were lowered to the 1,600-foot level, accompanied by John Pope, manager, and Dan Courtney, foreman, and went through stope No. 1816. On the twentieth floor the temperature was 80°. Then went to No. 1820 raise, where the temperature was 80°; then through stopes to stope No. 1838, 300 feet west of No. 1816, where the temperature was 72°; then to 1,800-foot level and climbed down raise No. 2018, through the stope, where the temperature was 80°, and then to the 200-foot level station, where the temperature was 78°; and from this point to surface, when the committee, after a consultation with the officers of the companies and the miners' union, concluded that they had been shown through the best and the worst places that both parties had to show them, and decided to leave for Helena, to continue the investigation at a later date upon some course that the majority of the committee might determine.

JANUARY 10, 1911.

The committee met in the parlor of the Grandon Hotel, at Helena, Mont., with all members present. Chairman Leighton called the meeting to order, and stated that he had telephoned the president of the Butte Miners' Union and was answered that the union would meet to-night.

A lengthy discussion ensued as to the course to be pursued by the committee in order to enlighten themselves on the subject of sanitation and ventilation of mines.

On motion duly seconded, the chairman was authorized and instructed to request the Butte Miners' Union to appoint one of their members from each of the following mines—

Original, Stewart, Gagnon, Montana, Con, Bell & Diamond, East Gray Rock, Speculator, Badger, Buffalo, High Ore, Never Sweat, Anaconda, St. Lawrence, Colorado, Pennsylvania, Tramway, Silver Bow, West Calusa, Leonard, Pitts-
mont, Blackrock, Elm Orin—to appear before this committee to give such evidence as they might wish, each of said members to be working in the

mine he represents; also to notify the managements of those properties of the action taken.

On motion duly seconded, the committee adjourned to the call of chairman.

JANUARY 24, 1911.

The committee met at the call of the chairman at the courthouse in Helena, on January 24, 1911, at 7.30 o'clock p. m.

Present: Senators I. A. Leighton (chairman), W. E. Christopher, J. C. McCarthy, C. P. Tooley, and J. E. Leary; also representatives P. J. Duffy, J. C. Duffy, and O. N. Byrnes.

Senator I. A. LEIGHTON (chairman). Now, gentlemen, there is one thing that I wish to state, and that is this, that in the testimony that will be given by the various witnesses here, I wish that it would be confined absolutely to those two conditions that this joint committee is called upon to thoroughly investigate and inquire into, and those are the sanitary conditions of the mines of the State, especially of Butte, and the conditions of ventilation. In our other meetings that we have had and those whom we have met, especially at the meeting of Butte, they seemed to drift off from those two subjects and wandered into other things. As we are now to begin to take testimony pertaining to those two subjects, we can not allow extraneous matter to be brought in, but only evidence pertaining to these two subjects, sanitary conditions and the condition of ventilation; and we propose to subpoena and bring here, before this committee, other miners from Butte, as we may see fit, and also the mine owners, or any man whom we think can bring us any information in regard to this matter, for it is the object of the committee, and it is the desire of the twelfth legislative assembly, that we should go to the bottom of this matter and see if we can not enact some law or in some manner correct these things that seem to be prevailing over there that are wrong. Consequently, I asked those who take the witness stand to remember that we can not allow anything but that pertaining to these two subjects.

Representative P. J. DUFFY. Mr. Chairman, in answer to you, I will say this: From what we saw, your investigation committee, what we saw over there we know exists. If you get 500 men here as well as 8 who have worked over there, 4 or 5 or 20, we know the evil exists, and with a small number, with a small committee, we can come around to the same conclusions, same judgments, far more than if we got 500. Of course, that lies in the chairman's power to do whatever he suggests. I am with you on any question, but on this affair a small committee can sit down and tell conditions which exist, can try and eliminate affairs, and it will be better far, with a small committee. They will sit down with us and help us to eliminate. That is what we are asking for. A big committee will be talking against one another. You will take the men who are working in the Leonard mine, they will tell you the conditions which exist in the Leonard mine, and another one will tell you of the High Ore, where the fire is at present, the way the fire broke out, another will tell you of the Speculator, and another of the Bell, and another of the Diamond, another of the Gagnon, and that, as far as we are concerned we all know that we can not regulate each and every mine in the city of Butte, but at the same time we can come down with men who have worked in the various mines and come to a sound conclusion, correct judgment, to our own way and to the best way. We are representing the State of Montana, not alone Silver Bow County. If you get 500 men here, we will be waiting until the legislature adjourns. What we want is this, what my idea was this, something to alleviate the present affairs, something to get conditions around to what they ought to be. If you get three witnesses to-day, four to-morrow, two the next day, and so on, subpoenaing witnesses—you know, everyone of us knows on this committee what we want to do. What is the use of bringing 500, 100, or 1,000 over here? What we want is action, not hot air, there is enough of it over there, and God knows that is what we are trying to get rid of in the mines. The first place we visited was the best mine in the city of Butte. You saw the conditions there, where fans were working, where conditions—

Representative J. C. DUFFY. Excuse me, Mr. Chairman, we are not discussing the report, whatever report the committee sees fit to tender. As I understand, we are here to accept the testimony of these gentlemen here who are in a position to offer any, and not to render any particular report, as far as the committee is concerned that I know of, and I would like my friend, Mr. Duffy, to confine himself to the question.

Representative P. J. DUFFY. I certainly am confining myself to the question at all times, and as one I want to say this to you, that you have got two experts in the Butte Miners' Union of the executive officers of the Western Federation of Miners, and an ex-State officer. If you bring a hundred over here, one's testimony would not figure over the others. If the names are here to-morrow from the different mining companies, what good is that going to do this committee? We know what they want; we already have come to the conclusion that something ought to be done. There is no use peddling hot air on this question. What we want is something practical. We don't want to wait until the last day of this session, but we want it now.

Senator McCARTHY. As Mr. Duffy seems to know what we want so thoroughly I would suggest that he be sworn to give his testimony in the formal manner, and his recommendations along with it.

Senator LEIGHTON. That appeals to me as being certainly all right, and I think that would be well, as we are dealing with one of the most important matters that will come up before the twelfth legislative assembly that every member of the twelfth assembly agrees to. Then if that is correct, why I am going to ask that we thoroughly investigate this matter, and I believe that Senator McCarthy's suggestion is certainly good.

Representative P. J. DUFFY. I certainly accord with the gentlemen.

Senator LEIGHTON. And, Mr. Duffy, with permission of the committee, we will put you on the witness stand now.

(Whereupon Representative P. J. Duffy was called and sworn as a witness and testified as follows:)

By Senator I. A. LEIGHTON:

Q. Will you give us your name?—A. P. J. Duffy; Patrick J. Duffy.

Q. And where do you reside?—A. Silver Bow, at 1122 Broadway, Butte, Mont.

Q. And your age.—A. Thirty-three.

Q. And your occupation also?—A. At the present time—well, you can call it surfaceman; I am working for the A. C. M. Hardware; haven't worked in the mines since last May, 27th day of May, when I quit the mines.

Q. You have held some position there in the miners' union?—A. President of the miners' union for three terms.

Q. What years were they you were president of the miners' union; what were the years?—A. From September, 1906, to April, 1908.

Q. What mines have you worked in in Butte, Mr. Duffy?—A. To commence with, the St. Lawrence.

Q. How long did you work in the St. Lawrence mine?—A. About five months—four months—between three and five months. That is going back years ago.

Q. May I ask what was your work there?—A. Miner.

Q. Just a miner?—A. Miner.

Q. What other mines have you worked in?—A. Diamond.

Q. How long did you work there?—A. About—less than a month; I couldn't state the exact date.

Q. Filled the same capacity there as you did in the others.—A. Yes, sir.

Q. Now, Mr. Duffy, will you state to this committee—A. (Interrupting.) I have worked in about 20 others since then.

Q. Yes; but that will be plenty. Will you state to the committee what the conditions from a sanitary standpoint, and from a standpoint of ventilation, the conditions that you found in any of those mines were?—A. I will state this first: The St. Lawrence mine six years ago last September—six, I think it is, possibly, seven; I wouldn't be positive; either six or seven last December—I helped—I was one of the parties to it, to lay the sill for the 1,500 raise, where men were smothering; the temperature was fiercer and hotter than any place your committee visited. Water over ankle deep; you would have to feel with your hands under water to lay a sill, to get it level. After the raise was done ventilation was in there; it was good; as good a place as a man would want to work in Silver Bow County in the mines. The raise connected with the 1,200 level of the Pennsylvania, one side of where your committee visited the fan. Prior to the fan being installed there, the place was something where you could not work and do justice to the company. After the fan was installed the tonnage with the report of the company over doubled.

By Senator J. C. McCARTHY:

Q. I would like to ask Mr. Duffy how far in advance of the air were you working, or, rather, how far away from any established air current were they working at the time you speak of?—A. Possibly not—I couldn't accurately

answer you; but to the best of my judgment, Senator McCarthy, about 1,800 feet from the St. Lawrence shaft.

Q. You stated that after the air was driven to the place where you were working the tonnage supplied by the men doubled. Am I right?—A. If not more; if not more.

Q. What would you consider was the reason that the company maintained a condition where their men could only produce half the amount that they produced when conditions were better?—A. It was before the amalgamation of the Anaconda and B. & M. properties.

Q. Was it possible for the company with any reasonable expense to better conditions there at the time they were working?—A. Yes, sir.

Q. In what way?—A. By raises to connect with the level.

Q. How far would they have to raise?—A. The St. Lawrence was worked from two to the sixteen when I worked there six years ago.

Q. That is really not an answer. How far would they have to make this raise?—A. From the two hundred to the sixteen she was working.

Q. That is 1,200 feet?—A. And from the two to the surface answers itself.

Q. How long would it take them to make that raise?—A. That depends on how many or how much of a force—and what condition they attempt to drive a raise on.

Q. The company generally worked three shifts in a place of that kind, did they not?—A. Sometimes, and sometimes no.

Q. Well, assuming that they work three shifts of 8 hours each in the 24, how much progress would they make in 24 hours, approximately?—A. If they worked three shifts, Senator, they would make about—let's see—now, here I have to take the ground into consideration on that; if you strike a bar on ground—you know what I mean, Senator McCarthy?

Q. I am referring to average conditions.—A. Average conditions, over one set in 24 hours.

Q. Give the distance in feet?—A. Over 7 feet every 24 hours.

Q. Then, in order to get this air course, and to better conditions on the 1,200-foot level, they would have to drive 1,200 feet, would they not?—A. No, sir; I didn't say that.

Q. Well, I understood you to say, Mr. Duffy, that they would have to raise from the 1,200-foot to the 200-foot level.—A. No, sir; I said the mine was working from the 200 to the 1,600.

Q. Well, my question was, how far would they have to raise to get better air in the place where you were working?—A. If the 200-foot level was only 200 feet below ground, how far would that be?

Q. It would be just 200 feet.—A. Well, that's it.

Q. Just 200 feet, then, was all they would have?—A. They were working, then, from the 200 feet I told you to the 1,600 foot. From the two to the sixteen, I said, if the stenographer will read it over, I said from the 200 to the 1,600 foot they were working.

Q. You understand, it is not my purpose to ask you any aggravating questions?—A. No, no; oh, gee whiz, no.

Q. We are looking for the light, and if we can obtain it from you we will be glad; and the purpose of my question was this, to know whether or not conditions could be remedied more speedily by the raise you suggest than by connecting with the shaft—what is the name of that other shaft? What I wish to get at is this, whether the company could more speedily get relief by making this raise you suggest than by connecting with the shaft that was afterwards connected, when they increased the tonnage from the mine 100 per cent?—A. That depends now whether the raise is cheaper or whether the drift is cheaper.

Q. But the time; the time I was after. I am not thinking of the cost to the company; the time?—A. Well, they connected it afterwards with the Metcalf shaft.

Q. How long afterwards?—A. About a year.

Q. In your judgment—A. Somewhere in that neighborhood; now, I am not positive.

Senator J. C. MCCARTHY. That's all.

Senator A. I. LEIGHTON. Any other members of the committee wish to ask any questions of the witness? Mr. Duffy, have you anything further that you can enlighten us on?

A. All I have got to say, Senator, is this, that by putting such as you saw in the B. & M. property, intake and outtake fans on the different levels with air shafts, that it is this, it will make better conditions for miners, longer life,

and more work for men, better tonnage for the production of the mine if the will give better air, such as we saw there in the B. & M. properties, than I will take, such as we saw in the Original and North Butte. I admit this much, though, that under the conditions we saw affairs—never mind the property; I don't want to discriminate against anybody; but where air was good where ventilation was there, where sanitation was there, there were better results than such as was shown in other properties.

Senator J. C. McCARTHY. I would like to say, Mr. Chairman, that, as I understand it, the purpose of this committee is not either to discriminate or to protect.

A. That is it exactly; but I don't want to discriminate against anybody.

Senator J. C. McCARTHY. I would like to have the witness state his views regardless of where it strikes. Is that not your idea?

Senator I. A. LEIGHTON. That is my idea.

A. If that is what you want, gentlemen, I want to say this to you: With all the raises you can drive, with all you can do, the North Butte property can not be ventilated such as other mining properties which we visited.

Senator I. A. LEIGHTON. Do you mean to state, Mr. Duffy, that under no condition can it be?

A. Not the way she is worked.

Q. Can it be improved in that particular?—A. Not the way she is worked.

Q. Have you any suggestions to make wherein they could improve it?—A. Why, that is up to the management of the company.

Senator J. C. McCARTHY. Well, the committee would like, Mr. Duffy, to have your views as to what possible manner the North Butte could be worked so as to bring it up to the standard of the Leonard and the adjoining property.

A. I could explain it—but let her go. Here I want to say this to you: First, Senator McCarthy, you, as a mining man, did you ever work a ledge four floors up and four floors down? You, as a mining man, know it looks more like a sheep herder's mine to me than it does like a mining mine. As we went through that mine it was climb down, climb up—how are you going to get your air into a place, ventilation, with such conditions as we found in that mine? It was up and down, up and down. Perhaps with their management the extraction of ore may be cheaper the way they work it, but for ventilation, sanitation, and for the condition of men, you know, as all of us know, that 18 floors below us a man can not climb for sanitation.

Senator J. C. McCARTHY. What would you suggest, Mr. Duffy, in the way of change of the present method of working the North Butte property?

A. Not being an authority to dictate to them what way they should work it, and if the management, such as it is, is working it to a success, I couldn't do it.

Q. You couldn't suggest any change in the present method at all?—A. The only suggestion I would make is this: Work it as the B. & M. properties—in sections.

Q. Well, that is a valuable suggestion.—A. Where the stope is so wide and so long, ground heavy, take it in sections. What I mean by sections is not take the full stope, such as was there; take so much of the heavy ground, hard to hold. What I mean by hard to hold is where your hanging is breaking. Take only—work so much of it at a time, and go up with that, fill it in, and then go down and take the other. Better results and better ventilation and sanitation can be obtained. Sanitation, I mean by this, as this committee knows, if you go to far east or to far west, whatever the way the stope runs. Generally the ledge at Butte runs a little—let me see; hanged if I know underground; I know on top. If you go too far one way, you meet the other mine workings, the workers ahead of you; if you go under there for sanitation, you ain't going to climb no 8 or 10 or 12 or 14 or 18 floors. The place where the sanitation will confine himself will be right in under you. If you go too far ahead, you will meet the man ahead of you; he will say, "God damn you, get back where you belong"; go back 6 feet, 10, and under you, you will be told to get over where you belong. There is no place under the present conditions for a man's duty when nature calls its course.

Q. What is the height of a floor, Mr. Duffy?—A. Seven feet two inches is the post in the clear.

Q. Does that include the flooring for the fill?—A. No, sir.

Q. What is the height including the flooring?—A. Seven feet two inches in the clear.

Q. How far apart are the levels of the North Butte mine?—A. From the twelve to the sixteen is 200 feet, say, because they are driving an intermediate level now.

Q. What is the height of the different levels in the Leonard mines, approximately?—A. They are using 12 by 12 timbers and 6 feet 10 inches—

Q. But the height of the different levels?—A. One hundred feet.

Q. One hundred feet; just half of the distance in the North Butte mine?—A. Yes.

Q. Then, your idea is, Mr. Duffy, that better sanitation and better ventilation may be obtained by driving the levels 100 feet apart instead of 200?—A. For sanitary conditions and ventilation 200 feet is just as good as 100 feet after the raise is through; she is poor, but after the raise is through, for ventilation, why, I would agree with the 200 feet, because it is a cheaper way of working a mine, to pay dividends all around, because after you go above the twelfth floor you come down on it. What I mean by coming down on it is this, that after you go above the sixth floor on a hundred feet lift—what I call a lift—you will come down on it; you will get off on the level above where you are working, come down, and go into the stope where you are working—after you get above the twelfth floor of a 200-foot lift you come down on it, or of the twentieth floor; it is easier to climb down than it is up; you will lower stuff down instead of raising it up.

Q. How wide is the vein in the North Butte property?—A. Well, it is from 2 to 10.

Q. Ten what?—A. Two posts for one set, 10 sets.

Q. Give the distance in feet, if you please?—A. In feet?

Representative J. C. DUFFY. Excuse me, but I don't think that is a pertinent question. We have no desire to discuss the commercial feature of the North Butte property, any more than any other, and I think this is not a proper question at this time.

Senator J. C. McCARTHY. Well, don't answer the question.

Senator CHRISTOPHER. I would like to have you explain some question. I am not a mining man and am not asking from that standpoint, but for general information—what would you suggest, take where men are working there, we will take the worst place shown to us as an average place, how could that be remedied to help those men while they were working there, so that they could receive the benefit from it?

A. There is only one way to remedy it.

Q. That is what I want to know.—A. By raises with fans to give air.

Q. By raises or fans, or by raises and fans, did you say?—A. If the shaft is downcast, put up a raise that is an upcast, to get fans in the most inner depths of that mine, the lowest places with suction pipes there to take the smoke, gases and bad obnoxious gases away. At the present time you haven't got them.

Senator J. C. McCARTHY. I think Mr. Chairman, that the senator from Sanders County has elicited more information in that one question than in all the questions I asked.

Senator I. A. LEIGHTON. I think so, too, senator, and I hope the balance of the committee will watch carefully the questions and answers given, and any time when you see that they can ask a question that will enlighten us to do so. That is a good question, Senator Christopher. Are there any other questions you think of, any member of the committee, that you would like to ask the witness?

Representative J. C. DUFFY. Is it necessary to raise 1,400 feet to make air connections that was necessary in the St. Lawrence?

A. I say most emphatically no.

Q. That is my interpretation of it, and I believe that is the manner in which the answer was given.—A. When a mine is worked from the 200-foot level to the 1,600-foot level, you don't have to raise 1,400 feet to get a raise to the surface.

Q. It was in order to get clear that I asked the question. I venture to say that there are levels every hundred feet, are there not?—A. Every hundred feet in the St. Lawrence; yes, sir.

Senator J. C. McCARTHY. Mr. Duffy, has it been the practice in the Butte mines to make the raises at the same time, or as near thereafter as possible, that they made the shafts?

A. No, sir.

Q. Could you name any striking instance of that at the present moment, for instance, a place where they sunk a shaft to a depth of 1,000 feet and commenced operations and afterwards endeavored to make an upraise for the purpose of ventilation?—A. I want to answer you this way: If they sink a shaft 1,000 feet, they drift for an ore body; if they have got to raise 1,000 feet, they will never do it unless there is ore above them; they drift above again to see if there is ore on the upper level, and drift again. Compressed air then is the means and the only means and the only thing the miners have got to live on. Compressed air is composed of no oxygen; there is no oxygen in compressed air; she is made air.

Senator McCARTHY. Oxygen has been compressed in the air originally, Mr. Duffy, and how did you eliminate it?

A. In made air?

Senator McCARTHY. Yes.

A. Very little, because as she circulated she loses what is in her; it is not the same as pure air and air on the surface.

Q. I understand that, Mr. Duffy, but I can not understand how oxygen is eliminated from compressed air and I am asking the question for the purpose of getting right on the matter, if you can give it to me—A. All I know is just the theory which engineers and which scientists tell us; reading is all I know about it; I have never made it.

Q. You understand, Mr. Duffy, that oxygen is a part of the air we are breathing at the present moment?—A. Exactly.

Q. Now, assuming that this chamber is hermetically sealed.—A. Yes.

Q. And that a suction pipe leads into it—A. Yes.

Q. And all the air is withdrawn from this room and compressed, how is it possible to eliminate the oxygen from that air?—A. How is it possible to eliminate the oxygen from that air? Where is your inlet?

Q. I am asking the question for information.—A. But I am asking you right back where is your inlet to it? Where does this air come from?

Q. It came out of this room, of course.

Senator J. C. McCARTHY. I am afraid, Mr. Chairman, the question is too deep for the witness to answer or for me to explain. I am free to confess that I know very little about matters of that kind. That is a question for chemistry to determine.

A. That's it exactly. It answers itself right in that case.

(Witness excused.)

Whereupon DAN HOLLAND was called and sworn as a witness and testified as follows:

Senator I. A. LEIGHTON. Your name, Mr. Holland?—A. Dan Holland.

Q. And where do you live?—A. 137 East Center Street, Butte, Mont.

Q. Your age?—A. Thirty-five, going on thirty-six.

Q. And how long have you resided in Butte?—A. Fourteen years.

Q. Fourteen years. During that time what has been your principal business?—A. Mining.

Q. Mining; in what mine have you worked?—A. I worked in mostly all the mines of the camp.

Q. Nearly all of the large mines of the camp?—A. Most of them, yes. I haven't been employed in the mines for a year and a half.

Q. You haven't been for a year and a half?—A. No, sir; I have been president of the union.

Q. You are somewhat familiar with the conditions from a sanitary standpoint, and ventilation standpoint, are you, of these mines in Butte?—A. Yes, sir.

Q. Mr. Holland, now I wish you would state from your knowledge and observation of the conditions of those mines pertaining to those two subjects, what you know.—A. The sanitary conditions are generally bad; that has been my experience.

Q. Will you describe to the committee what conditions that they are in, that would lead to you to believe or know that the sanitary condition is bad?—A. The ventilation, no means of egress or ingress provided for air. Stopping is done in a great majority of cases without any raises to let the gases and smoke emanate to the surface and to the outer air. I will say, Mr. Chairman, that, acting under your suggestions of yesterday, Mr. Lowney, Mr. Oliver, and I got together and outlined a skeleton of some work that we would suggest to the committee to improve conditions in the mines. If you care to have it submitted I can let you have it.

Senator I. A. LEIGHTON. Does the committee so desire that it be submitted now or after we are through with the testimony?

Senator J. C. McCARTHY. I would suggest the communication to be read, if there is no objection to it.

Senator W. E. CHRISTOPHER. We asked him to do that.

Senator I. A. LEIGHTON. Yes; you can submit that, if you will.

A. "First. That in underground workings no powder be used until the expiration of a shift, except in places where it does not vitiate the air breathed by employees at said work; and that where such blasting be permitted, means of egress be provided for smoke and gases from usage of powder to the outer air." That is the first clause, if you want to ask me any questions on that.

"Second. That in cases where water is needed for drinking purposes, it be lowered in sufficient quantity in covered receptacles, said receptacles to be thoroughly cleansed at the expiration of each shift."

Water in a great many cases is lowered to the mines in open receptacles and copper water and dirt and one thing and another dropped into it while it is being lowered in the shaft or while it is in the station, and men come along who are dripping sweat, stoop over the water keg and drink and sweat drops out of their heads and faces into the water. That is a cause of a good deal of the disease that prevails amongst the mines—consumption.

The third is, "That sanitary toilets be installed in each level of a mine where men are employed; or means be made available for employees to repair to surface on such occasions." That is where men are employed in that particular level; there are lots of levels where no men are employed, that have been worked out.

The fourth is, "That where extensive stoping is being conducted, raises be run at intervals of so many feet apart for the purpose of ventilation." We haven't come to any conclusion as to the number of feet, but conditions would vary the matter so that we would not name any certain amount of feet.

And that last is, "That in all underground workings of a temperature exceeding 80°, or where no current of air is available, six hours shall constitute a day's work." That is, we merely drew up the skeleton to give the committee an idea of what we need, and you can ask questions on any of these particular clauses.

Senator I. A. LEIGHTON. Are there any questions that any member of the committee would like to ask this witness?

Representative P. J. DUFFY. I would like for him to explain where six hours has prevailed in the city of Butte, and what the results were where the air was bad and drifts were driving in on the lower levels of mines to connect with High Ore mine?

A. In mostly all of the bottom levels of the High Ore mine, for eight or nine years past, long drifts have been run all on six-hour shifts. I have heard of them in other mines, but I haven't got any positive proof; that is hearsay that I discovered as president of the union; but I worked in those places myself.

Representative P. J. DUFFY. Please make it explicit. From what mines you worked to the High Ore drift?

A. In the High Ore mine?

Representative P. J. DUFFY. Driving to another place, you were on the incline then?

A. Driving to the ledge; to the lead?

Senator A. I. LEIGHTON. Mr. Holland, in regard to this sanitary condition; there, when nature calls one—I am just asking you this in a broad way—do those cars, those little toilet cars, if they were put in operation, would they be satisfactory?

A. Of a certainty; yes, sir.

Q. They would be all right, would they, if they were in general use throughout all the mines?—A. Yes, sir; this particular mine, I mentioned, the High Ore, those cars are in use.

Q. And wherever they are in use they are satisfactory to the men?—A. Yes, sir; they have been taken on top at the expiration of each shift and thoroughly flushed with water hose under pressure.

Senator J. C. McCARTHY. Are those cars in use in any other mine in Butte?

A. Not to my knowledge.

Q. We saw several of those cars in the Original mine; have they ever been used in that mine to your knowledge?—A. No. I couldn't tell you.

Q. That is, we saw them on top; not in the mine.—A. Yes; I haven't been in the mine.

Senator I. A. LEIGHTON. They are in use in the High Ore?

A. Yes, sir.

Q. And as far as your knowledge goes, you don't know that they are in use in other mines in Butte?—A. In any other mine; no, sir.

Q. But the High Ore?—A. Yes, sir.

Senator J. C. MCCARTHY. Are they in use on all the levels of the High Ore mine, or just in some of them?

A. I am not positive of that either.

Q. The assumption is that they are in use where there are any great number of men employed?—A. Yes, sir.

Senator I. A. LEIGHTON. How many tollet cars are there in use in the High Ore mine?

A. The first I saw of them was—I believe it was about two months ago that I saw this car, and it looked a little strange to me, and I did not know what its use was, and I inquired what it was. I only saw the one car, and I inquired, and I was told what its purpose was, what it was intended for, and told, I think it was the shift boss, that those cars were all on the levels.

Q. In all of the levels of the High Ore mine?—A. Or on the levels that they did not have them they were obtaining more and others were in process of being made.

Q. Then, Mr. Holland, wherever those tollet cars are in use you would not complain or would not think that any man would have any complaint on that one condition?—A. Any complaint would be groundless when they are given all the facilities. It was disgusting to any person, excepting somebody with an exceedingly strong stomach, to sit down to a meal on the ninth or tenth floor of a stope and have your nostrils disgusted with the stench of somebody down beneath you answering a call of nature.

Senator I. A. LEIGHTON. It is not very pleasant.

A. It does not make a meal taste better.

Senator MCCARTHY. Are you inclined to believe, Mr. Holland, that in case those cars were in general use that the men would avail themselves of them at all times?

A. Yes, sir.

Q. And, Mr. Holland, where those cars were in use at any time did you notice whether the men had refused to use them, or rather had not used them and had used the levels?—A. I have never seen them, Senator; they have never been used in my time when I was underground. These are a modern innovation at Butte.

Q. In other words, wherever those cars are, you think they are generally used by the men?—A. I believe so; yes.

Q. In your judgment, Mr. Holland, are conditions better in Butte at the present time than formerly; that is, at the time you were employed in the mine?—A. I believe they are growing worse?

Q. Growing worse?—A. Yes, sir.

Q. You mean as regards ventilation?—A. As regards ventilation.

Q. What did you give as reasons?—A. That is, in some mines; conditions have improved in some mines and conditions have retrograded in others. I don't know whether they both balance or not.

Q. In which mine do you consider conditions are worse than they were when you worked underground?—A. This is hearsay—

Q. Yes.—A. "The Speculator" is one. "Mountain Consolidated" is another. "Never Sweat," I believe, from all I can hear. "The Parrott" is growing steadily worse from what I can hear, and that is about all I can think of.

Q. Could you give us the name of a reliable witness from each of the mines you mentioned?—A. No, sir; I couldn't; men change around so much; and when I was president of the union I could lay my hand on the men and tell where they were working; now I am out of the union for the past three weeks or four, when my term of office expired, and men change around so much that I couldn't locate them; I wouldn't be sure of any.

Q. Did they pump by steam or electricity when you were underground?—A. By steam.

Q. Don't you think, Mr. Holland, that conditions will be remedied when the use of electricity is more generally employed underground in the mines of Butte?—A. I don't know, I am sure; that is something I haven't given any serious thought.

Senator J. E. LEARY. Mr. Chairman, I would like to ask if these mines that you have mentioned are owned by one company or by several companies?

The Witness. They are owned by one company.

Q. The last ones you mentioned? A. Those companies are designated sometimes as "The Parrot Mining Co.," "The Mountain Consolidated Mining Co.," or the "Anaconda Mining Co.," but I believe they are the Amalgamated Mining Co.; that is what we understand, I haven't got any inner knowledge of it, but from my understanding they are all the Amalgamated properties.

Senator J. C. McCARTHY. There is no question in my mind whatever but what all the mines belong to the Anaconda Copper Co.

Representative P. J. DUFFY. Except the North Butte and the Pittsmtont, and this Davis-Daly.

The Witness. That is a cause of a good deal of the insanitary conditions that prevail, that when a ledge is worked out, the sill floor is worked out before a raise is done, men start to stope, one gang follows another and blasts in the middle of a shift and that powder smoke just naturally dies and hangs around there all the time, that powder smoke and gas; no means of egress for the gas, no raises have been run through yet.

Senator I. A. LEIGHTON. You spoke of water receptacles there, may I ask are there any in use in any of the mines in Butte that would meet with your requirements in any of the mines?

A. Yes; they are in use in nearly all of the mines on some levels where 25 or 30 or 40 men work on a level; then where there are 4, 5, or 6 men working they will lower a keg.

Senator I. A. LEIGHTON. You want them universally used.

A. Yes; they can cover a keg just as well as they can cover an iron tank.

Q. Yes; I understand; but I did not know but what there was some kind of special kegs?—A. No, sir. We don't have any special kind of kegs in view, but something to be covered so as to keep the dirt from dropping into it or water or sweat or anything of that kind.

Q. They do use them in the mines, but not universally?—A. Yes, sir; they do in a great majority of places—they are used in a majority of places—those water tanks, but not in all cases. I often saw a case where a man came to a station for a drink with the sweat just dropping off of him, pouring off of him, and stood over a keg and drank out of it; that sweat dropped out of his body into the keg, somebody else who didn't see that comes along, didn't see that and even if he did, he needed a drink so badly he drinks anyhow.

Senator J. C. McCARTHY. Mr. Chairman, when this committee was over there, when we were down in some of those mines I think in the Leonard and in the Mountain View—ain't that the name?

The Witness. Yes, sir.

Senator J. C. McCARTHY. We drank—I did at least—we drank out of, if I remember correctly, it seems like an iron tank.

A. Yes; with wheels on it.

Q. And wheels on it and there was a cover on that.—A. They are used in a great majority of cases.

Q. Where do they get that water? Do they bring that water into the mine from the surface?—A. They take those to the surface and fill them at the surface.

Q. That is city water is it?—A. Yes, sir.

Q. Those tanks, that is what you call them?—A. Yes, sir.

Q. Those tanks that they were using in the Leonard and Mountain View, where they were covered, that we drank out of, those are satisfactory?—A. Are satisfactory; yes, sir.

Q. That is, where this copper that drops down the copper water can not get into that?—A. No, sir.

Q. Now, the miner that comes along perspiring can not perspire into it?—A. Where they are into use they are all locked.

Q. But there are some mines, I think you testified to, where they did have those, they did not provide the miners with those?—A. Yes, sir.

Q. What are those, simply open buckets?—A. Just a keg with one end knocked off.

Q. The water they bring in them is city water, is it not?—A. Yes, sir.

Q. But they do not provide them with covers?—A. Do not provide any cover. And we also—what we request about the tanks is that they be thoroughly cleansed. There is a whole lot of carelessness in cleaning those tanks.

Representative J. C. DUFFY. Do you think, Mr. Holland, if upraises were in vogue, say, within every 300 feet, that it would materially improve the conditions so far as circulation is concerned?

A. You mean to raise it?

Q. Yes.—A. To a certainty, yes; where the air is put through any such places as you say the ventilation is good, that is, comparatively good.

Q. Senator I. A. LEIGHTON. Mr. Holland, wherever the fan system is installed in those mines the air is—the ventilation—the air seems to be all right, does it, wherever they are installed?

A. I never worked in any place where a fan was in use, only in one place, and that was about 10 years ago, and we found no beneficial effect from that fan, not even straight ahead for 75 or 80 feet, or an acute angle either way; going 15 to 20 feet on either side of that pipe the conditions were just as bad; that air had no means of circulating; it just turned around and reverted back on itself.

Q. I would like to ask you in reference to the compressed air, what is your opinion in reference to the amount of oxygen that is in this compressed air?—A. I suppose just the same amount as there is where it is pumped from. I don't see where it can lose it.

Q. It is beyond my knowledge, but still I have no knowledge of such things, particularly speaking; it does not lose any of the oxygen?—A. Not that I know of. I am not an expert, but I never heard of it. Oxygen is a component part of air and if the air is pumped through a compressor it will naturally have the oxygen from where the air is pumped; at least I would suppose so.

Senator J. C. MCCARTHY. But your opinion is, Mr. Holland, that the compressed air is not as healthful as the free air from the surface.

A. No, sir.

Q. I agree with you.

(Witnessed excused.)

Whereupon JACOB OLIVER was called and sworn as a witness and testified as follows:

Senator I. A. LEIGHTON. Your name?

A. Jacob Oliver.

Q. Where do you reside?—A. 215 East Quartz, Butte, Mont.

Q. And your age?—A. Forty-six.

Q. How long have you resided in Butte?—A. About 25 years.

Q. What is your occupation?—A. Miner.

Q. How long have you followed that? All this time? The 25 years?—A. About 35 years.

Q. Pretty good miner, then?—A. Apt to be.

Q. Mr. Oliver, you were the gentlemen, Mr. Holland and the other gentleman, when you made up this paper together?—A. Yes; we had to draw the line somewhere, as far as the ventilation part of it was concerned, and we thought that by making it a certain degree of heat the company would use their own judgment or discretion whether they would allow the work there six hours, six hours to constitute a shift, or by some other means to bring fresh air into that stope or place of work. So we would give the company the option either to cool the place off by ventilation, either by openings, or fans, or otherwise give the men a six-hour shift. And I think as far as that is concerned I think it is a good practicable way, for this reason: If a place is so hot that a man can not work hard eight hours, then the company loses, and if a man can not work eight hours it is better for him to work six and go up to the fresh air or go home and have that much more time in the fresh air.

Q. What mines in Butte have you worked in?—A. I have worked in practically all the mines in Butte.

Q. And what is the deepest mine there that you have worked in?—A. Twenty-two hundred feet is the deepest mine I have worked in.

Q. That is what mine?—A. The Mountain View.

Q. Mr. Oliver, I would like to ask you some questions in reference to the toilet cars. Have you worked in the mines over there where those toilet cars have been installed, where they have been in use?—A. There was no toilet cars in any mine in Butte while I worked there.

Q. How long has it been since you worked in the mines?—A. I worked there last week.

Q. And at the 2,200-foot level, is it?—A. I am working on what is called the 900, or 13; we call it 900 for the reason there is connection made with the Leonard, which is 400 feet deeper, you see, and the first level is the 400 level of the Mountain View; and it is connected with the Pennsylvania and the Leonard.

Q. How many mines in Butte are using these tollet cars that you know of?—A. Only one that I know of, the High Ore, and I can not state positively that they are used there; it is just hearsay.

Q. The High Ore?—A. Yes. They can work those hot places by giving the men six hours or by bringing air there, just as they see fit.

Senator J. C. McCARTHY. Mr. Oliver, would you consider 80° injurious, assuming that you had plenty of fresh air?

A. Fresh air, no, sir; I don't.

Q. Could you state to the committee the temperature of the ground in, say, the 2,000-foot level of any mine in Butte, the natural temperature?—A. No; I have never took it, and I have never seen it taken, so I couldn't state.

Q. Do you know how much the heat increases as it goes down for 100 feet?—A. Now, I have seen statements made where experiment shafts have been sunk from time to time in different parts, but I can not recall now the increase of the heat; I can not recall at all how much the increase is.

Q. Do you know how much the temperature is in the Calumet and Hecla mines at Michigan at a depth of 5,000 feet?—A. No. But I have been told—whether it is true or not I don't know—that in cutting one of the stations, I think it was in the High Ore mine, that the heat ranged from 100° to 120°.

Q. How deep was that station?—A. I think it was 16; now, I am not positive.

Q. What mine was that?—A. The High Ore. As far as the Calumet is concerned, I don't know anything about it, any more than what we read.

Q. Were they using a steam pump at that place?—A. Sure.

Q. Is your judgment the use of the steam was what made the temperature so high?—A. Well, naturally it increased the temperature, of course.

Q. I think the natural temperature increases at the rate of about 1° to 70 feet; that is, the general raise all over the world; somewhere about that; I wouldn't be certain about the amount.—A. I don't hardly think it would increase that much, because if it did, by the time you got down 5,000 I don't see how a man could live.

Q. You understand, Mr. Oliver, that means are provided for cooling that temperature at that depth, by means of forced draft, air being pumped continuously through it? That is what makes it possible.—A. Senator, you know if you were to work a mine, a ledge, take out a body of ore, you know the first thing is whether it will pay or not, and you might be right, as far as that is concerned, but I don't know whether it would increase that much; I don't think hardly it does, from my own observation. You sink a shaft out in the country, in the granite, in what we term country rock, sink it in the rock alone, not putting in any timbers nor use any steam, and you would go down a long ways before you would find any heat. Timbers, you know, create heat.

Q. Yes; we understand that.—A. And that is what is creating so much heat in Butte.

Q. That is, the decaying timber increases temperature.

Representative P. J. DUFFY. You have known rock itself to attain a certain heat, haven't you?

A. You take right here in Butte, around in certain places in the lead right where it is close to hot stopes, the rock itself is warm, of course; when you get close to the fires it is hot, but that is artificial heat; that ain't the natural heat of the earth, you see.

Q. I have known the rock to be so hot in some cases that it was dangerous to load their holes.—A. I have been told that the St. Lawrence, when she was working, the men have had to pour water into the holes before they loaded them to blast.

Q. Is that on account of the condition of the ground?—A. No; that is on account of the fire.

Q. The fire naturally made the ground hot?—A. Yes.

Q. In raises—if you have not worked in them you have been told where the glycerine would drip out of the holes in the raise when there would be a missed hole in the raise—have you ever?—A. That has never come under my observation.

Q. You have been told it?—A. I have heard it.

Q. Your humble servant experienced it. You worked in the Mountain Consolidated?—A. I worked in the Mountain Consolidated something like 20 years ago.

Q. Those properties are removed from the fire zone altogether are they not?—A. Oh, yes.

Q. And still you experienced the heat before?—A. Well, the timber you know? Q. I mean the rock, the ore I mean.—A. No.

Q. How long have you been employed around the mines of the city of Butte and went over there to Marysville to work in the Drum Lummon and with the Empire?—A. Went to Granite, finally to Butte again, and have been there practically ever since.

Q. You were the assistant State mine inspector?—A. I was deputy inspector of mines in 1890, 1891, and 1892.

Q. Do you believe, Mr. Oliver, that with the facilities in the B. & M. mines that better conditions could not be brought about in the other properties?—A. Well, I believe myself that the B. & M. mines are worked more practically or scientifically than any of the other properties in Butte.

Senator I. A. LEIGHTON. The B. & M. you mean, the Boston & Montana?

A. The Boston & Montana.

Q. That belongs to the amalgamated?—A. Certainly it does.

Representative P. J. DUFFY. Comprising the Mountain View, Pennsylvania, and the Leonard, and the East and West Colusas?

A. Yes.

Q. Those properties are worked to better advantage, to your way of thinking, than the other properties are and better results received?—A. There is no doubt about it at all.

Q. In those mines, Mr. Oliver, where these fans are installed, are the men there better satisfied than in the other mines?—A. Well, I presume so, they do not seem to change there so often; the men hold their jobs longer.

Q. What you mean by change, men do not quit their jobs to go elsewhere to get a job, but they work there continuously?—A. As a rule, yes.

Senator J. C. MCCARTHY. How do conditions in Marysville compare with present conditions in Butte?

A. Now, in the Drum Lummon mine they had toilets, as far as the sanitary conditions were concerned they were better; as far as the ventilation is concerned they were not as good.

Q. What kind of toilets did they have?—A. They had a kind of a box fixed on a track and they had a seat formed for the men to sit on and then ran this truck under this seat.

Q. Something in the form of a toilet car?—A. The toilet car you might say was boxed, and there was an old fellow there who had the job of cleaning them; that's all the work he had to do.

Representative P. J. DUFFY. I will ask you, Mr. Oliver, if you had not known in some mines where some men have been discharged when it was known that they deposited underground.

A. That was before men had to eat their lunch underground. Since that time, of course, we know that nature must take its course and men have got to use themselves sometimes during the shift, and of course it is overlooked now, but when the mines were working 10 hours and the men were hoisted on top to eat their lunch, then it was against the rules, of course, for men to crap underground.

Q. And if nature called them, the cages were at their service to go up to the surface?—A. Yes.

Q. Since skips went into vogue, men are not hoisted when rock is being hoisted?—A. Well, only through the chippy shaft.

Q. And there is where timbers and other tools and stuff have to come down?—A. Yes.

Q. Since skips went into vogue—and men have been denied eating on top from that time on nature, if it comes her course, nature's course if it comes, understand what I mean, you do business underground?—A. Sure; there's when a man will have to.

Q. That is the only place for you?—A. Yes.

Q. There is no doubt in the world that something ought to be done to alleviate the conditions that exist in some of the mines. As far as the Mountain View mine is concerned, I believe that they make every reasonable effort to ventilate the mine to the best of their ability and go to great extent. Of course, it is pretty hard to tell a company how they shall conduct a mine; the owners

have something to say to that; and even then the officials have different ideas and ways as to operate; two men haven't the same ideas of doing hardly anything.

Representative O. N. BYRNES. Mr. Oliver, what percentage of the mines do you recognize make a reasonable effort to get them in good shape?

A. Well, the percentage is rather small; I think the percentage is rather small.

Q. You said the percentage would be small. Do you think it is one-fourth or one-third, or what percentage? Give us a rough idea—or 10 per cent, or what?—A. Well, I don't hardly know.

Q. It is your opinion that the management of the Butte Mines are neglecting getting those mines in shape so that they will be more healthy, better ventilated, and so on?—A. I think some of them are a little negligent in that respect.

Q. There are so many of them that—would you know what per cent of the mines are—that some attempt is being made to get them in good shape, and what percentage are not?—A. Do they neglect in the majority of cases?

Q. Do you think the majority are making an effort, or are not?—A. Are not. Are not making an effort. That is all I want to ask you.

Senator J. C. McCARTHY. Mr. Oliver, you heard Mr. Duffy testify that where conditions were placed in the best possible shape the output per man would double. What is your opinion of that testimony?

A. Well, I don't know. Of course, it is natural that where conditions are good, ventilation is good, a man can accomplish more, do more work, but, you see, where they used compressed air they can go practically into a poor-air drift almost and bring up pretty near the same amount as they would where there is fairly good air. I have worked myself, contract, in a place in drifts where they have been 500 feet from any current of air; we did just as much work there as we would where there was good air, by the use, you see, of compressed air.

Q. That seems to contradict Mr. Duffy's testimony.—A. Now, in drifts, you see, of course, in stopes it is different; they can't do that. The total output of the mine, of course—the better the mine is ventilated, of course, the better results would be obtained. Now, for instance, the old Parrot Mine one time was considered the best ventilated mine in Butte during Ben Tibby's time. I know the time there when you could go in the main drift and blast any time during the shift, and in a few minutes walk right in and resume work. All the smoke and gas would be gone. You see, they had air courses over the timbers, carried in air courses along with the drift, and the air would come in the drift and go back over the air course.

Q. Is there any reasons why all of the mines in Butte couldn't be ventilated on that system?—A. No, sir.

Q. None whatever?—A. None whatever.

Q. And in view of the fact that by putting that kind of ventilation all through Butte the output of the mines would be doubled.—A. Well, I wouldn't say that it would be doubled; that is quite a bit. There is no doubt in the world—it would be increased and they would obtain better results.

Q. What increase do you think it would make in the output per man—that is, speaking broadly, you understand?—A. Well, I would say I believe they could make at least a 25 per cent increase.

Q. Then a mine employing 500 men at an average increase of 25 per cent would make a net saving, at \$3.50 per day, of approximately \$450?—A. I think so.

Q. What is the reasons, in your judgment, that the management do not put their mines in shape to effect that increase?—A. Well, in the first place, Mr. Tibby was an old miner; he studied ventilation. Under him was a practical miner, first-class man. They developed that property from the surface. Most of the other properties went to work, you might say, blindly; ventilation wasn't considered at all; they just got down after the ore, that was all there was to it, to get returns. The B. & M. mines, they were started on a practical basis under Capt. Couch; he laid out a system, what is termed block system; he has manways and air courses; in every chute or raise he would have a trap door, a slide door, you know, to bring back, to close and keep the air down in the drifts, and the air always was kept in motion, and that system prevailed to a certain extent to-day. That is one of the reasons why the B. & M. property is in better condition than any other property in Butte.

Q. You mentioned the Parrot property as one of the properties now in very bad condition?—A. That was considered the best.

Q. It was considered the best? You do not consider it in good shape at the present time?—A. It ain't fit for a man to work in to-day; in fact, I don't believe there is anybody working there.

Q. Mr. Oliver, not at present?—A. No; it is closed down.

Representative O. N. BYRNES. Do you give the present poor conditions of the mine to the fact that here is no plan, no system of working adopted to their present needs?

A. Now, I believe under this new management they are trying to systematize their work.

Q. But it comes from the fact that there was no plan?—A. In the first, there was no system at all when those properties were developed, practically none.

Q. They just go for the ore and take any chance on the ventilation?—A. Yes.

Q. That is what it was?—A. Yes.

Senator J. C. McCARTHY. Do you think the extensive litigation over the Butte mines has something to do with the bad conditions existing at the present time?

A. I don't know; I believe the extensive litigation helped conditions; they have done a whole lot of work down there—upraising and drifting, drifts and that like—that made conditions better.

Representative P. J. DUFFY. Mr. Oliver, when you are 500 feet or more in the drift working under compressed air, does it affect you the same as if you had a general current of air?

A. Oh, no; I should say not. I have enough of it; I don't work at it very long.

Q. But you can't do the same work. You can for a while, but eventually what is the result?—A. Well, the result is a man keeps it up, and in a little while miner's consumption, that is what he gets; but you know it can be done, and it is done, that's all.

Q. They can do the work for a short time and then play out?—A. Yes.

Q. That is a plain answer to it?—A. That's right.

Q. What is your opinion as to the average life of a miner in Butte under the present conditions?—A. I don't believe a man will average—I don't think he will average 16 years; of course, I have no statistics to bear me out in that.

Senator I. A. LEIGHTON. That is your opinion?

A. It is just off-handed; I have not given that matter any consideration; that is just off-handed.

Representative O. N. BYRNES. Do you think, Mr. Oliver, in 15 years a man's health would fail?

A. Yes, sir.

Q. The average man, say, 25 years old, 15 years after he would be a broken-down old man?—A. Yes; the majority of men that was working in Butte when I started working there—well, there are very few left. Of course, I haven't worked continuously in the mines. Sometimes I have been out of them a year or two; I have had charge of properties myself and tried to do a little promoting, and other ways, and I haven't been in the mines continuously. If I had, I don't think I would be as good a man as I am to-day.

Representative J. C. DUFFY. I will ask you, Mr. Oliver, if there is any of those people you knew 25 years ago living to-day that are working continuously in the mines since?

A. There are a few.

Q. That are working continuously?—A. Yes.

Representative P. J. DUFFY. If you go into a drift that is over 500 or 1,000 feet, with no outlet, just the one opening, the drift, and you get there, you have got compressed air blowing on you continually to keep that clear, have you not?

A. Sure.

Q. That is the only way you can work?—A. That is the only way.

Q. If you have water, when you go into it to keep the gases and dust down, do you not?—A. As a rule, this work is done under contract, and you ain't throwing water down to do anything, you are getting that dirt out.

Q. There is drift after drift in the B. & M. properties that drove, and you have got a water line with your air line, in your stope?—A. I have never seen any.

Q. They are all around where I have worked—water line with your air line. You disconnect the hose from the air line and connect it with the water line in those transfer joints, so there won't be dust below.—A. In the Mountain View they have large tanks, just as large as they can get through the drifts,

get into the stopes, and they use a hose in some of the dusty stopes to damp down the dust, but I never have seen a water line there.

Q. There is a water line; disconnects the air hose off the air line, put it on your water line and wet down to kill the gases; but all the time you are in, after you get three or four hundred feet, you have that air blowing all the time on your back in order to do the work?—A. Sure, you have got to.

Q. That is the compressed air; in the face of your drift, at the breast like, it is clear. You go back, and you have got to stoop down to keep out of the smoke and gases, do you not?—A. Sure, sometimes.

Senator W. E. CHRISTOPHER. What condition would remedy that in regard to that gas and smoke in there that would be practicable?

A. The only way, you can make an air course by boxes; of course, if you are using timbers you can make an air course over the timbers, which is very easily done; but all this new development work, as a rule, is done without timbers if the ground will stand, and after, of course, they get in so far, strike a lead, for instance, of ore, you know, then of course they start to use timber. You know it would be pretty expensive to drive a drift and bring the fresh air right in that drift all the way. That is all right if you are drifting ore. (Witness excused.)

Whereupon J. C. LOWNEY was called and sworn as a witness, and testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. J. C. Lowney.

Q. And where do you reside?—A. 405 North Idaho Street, Butte.

Q. How long have you resided there, Mr. Lowney?—A. Resided in Butte about—well I come there about 22 years ago.

Q. And what has been your occupation in that length of time?—A. Miner.

Q. All the time—the 22 years?—A. I will state that I have not worked, to start with, that I have not worked in the mines for pretty near five years, so I would not be along the direction which you have outlined; I would not be able to give practically any testimony to this committee. My occupation at the present time is an organizer—board member of the miners for the district of Montana—and I travel throughout the State in that capacity.

Q. And you have been following that occupation for the past five years?—A. About five years.

Q. Ah, do you think, in your judgment, you couldn't—A. I couldn't give any testimony on the conditions of the mines at this time. Of course, if the committee wishes to ask me any questions about suggestions or things as I generally know them, I might be able to answer them.

Q. But the present conditions, at this present time, you have no personal knowledge of it?—A. No, sir.

Representative J. C. DUFFY. Which was the last mine you worked in?—A. Silver Bow mine.

Q. That is five years ago?—A. About five years ago, or four years last May was the last shift I worked.

Representative J. C. DUFFY. I think the Chair ought to ask Mr. Lowney to offer such suggestions as he sees fit in the matter to remedy conditions.

Senator I. A. LEIGHTON. Do you hold any position with the Western Federation of Miners at the present time?—A. Yes, sir.

Q. What is it?—A. I am executive board member and organizer for the States of Montana and Wyoming.

Q. How long have you held that position?—A. About four and a half years.

Q. Mr. Lowney, have you any suggestions to offer in the matter of remedying present conditions?—A. I would say that in my opinion and from my previous knowledge of the mines, working there, that the condition, the condition of the mines will inevitably become worse as they go deeper and for development, and I believe that this suggestion that was offered by the other members, other witnesses here, to-night, that if we would establish a six-hour day for those places that a certain degree of heat obtained, that the indorsement of this provision would be a self-acting penalty for the employer to make conditions better; that is, there are places in the mines where it is difficult immediately to make good sanitary conditions or good ventilation, and if the employers thought that it was cheaper to rush through the development in order to create this ventilation, they would do so in order to eliminate the six hour proposition, and if they did not deem it better, then the men working would have the

benefit of the shorter workday in order to prolong his health. We who live in Butte know that the conditions, the health conditions of the men there, have been very bad; that probably the greater portion of all those working there are affected with miners' consumption or have died with it; I think a greater portion than have been killed or injured in any other way; and as a condition for that the Butte Miners' Union, as an organization, distributes on an average about \$1,200 a week in sick benefits, mostly through the effect of consumption and the conditions obtaining from insanitary and bad ventilation of the mines. And I believe that this proposition of submitting a practical solution in the way of a shorter day for those places would inflict no hardship upon the operators or employers. It would simply be a self-acting penalty whereby they would try to make better conditions or else bear the expense of the shorter workday; and I believe, from a humanitarian standpoint, a shorter workday is an absolute necessity in the worst overheated places in the mines. That is about all I would suggest, in addition to the other sanitary matter in regard to water and toilets. We have often given this considerable consideration as to what we could do. We realize that there will be some opposition to the suggestion, but on the whole I believe this is the most practical, and it is not anything unreasonable, because employees to-day on the surface, throughout the State, in municipal work, where they have good sanitary conditions, they work the eight-hour workday, and we believe it is nothing unreasonable to ask the employers to give the shorter workday in those insanitary places.

Representative P. J. DUFFY. Mr. Lowney, do you think by bringing more members, miners employed in Butte, that that would give any more knowledge of conditions than what we have got from the committee which is here before you?

A. Why, I believe there are men working, if they would wish to come here and testify, if you could suggest men in some of those mines, who could give the committee the same information as to the comparatively intolerable conditions in some of those places?

Q. I don't mean that. Could we learn any more than we have learned to-night?—A. I don't understand that.

Q. Could we learn from those men any more than we have learned here to-night?—A. That is a question I couldn't answer; that is the judgment of the committee, what they wish to learn.

Senator J. C. McCARTHY. I would like to ask, Mr. Lowney, what is the cause, what is known as the cause, of the disease known as miners' consumption; is it caused by poor ventilation or by the dust or by bad sanitary surroundings?

A. Principally, I believe, from smoke permitted to remain in the stopes and drifts, etc., and stopes not cleared sufficiently, and dust, in addition to that—the dust generated naturally by the operation of the mines.

Senator I. A. LEIGHTON. Mr. Lowney, is it a fact that in a number of post mortem examinations that have been made, that we have found an enormous amount of this dust that you speak of lodged in the lung tissues—bronchial tubes?

A. I believe that it is almost a general condition, Doctor.

Q. As a professional man, I have attended a few of those examinations, and we have in all those cases—I think there have been four for me—in all those cases we have found an enormous amount of deposit in the lung tissues, in the small air cells; in other words, of the lungs?—A. I worked in the Parrot, I believe it was 1902; the 1,400 level was the bottom level at the time, and there was two ledges being worked; there were something like from 9 to 12 machines working there, and one of the levels was worked up to the seventh floor, and the other to the fourth and fifth, and there wasn't at that time any raise through either of the ledges; I did not work there since, but I did work. I might say, in a really bad place since.

Senator J. C. McCARTHY. What causes you to believe, Mr. Lowney, that the conditions will get worse as the mines are developed more fully?

A. Why, as they go deeper, they naturally meet with the same conditions of development that they would nearer the surface with regard to ventilation, and as they go deeper they will naturally grow hotter, and the greater amount of timber in the mines, as I understood it when I was working in the mines, that it generated heat. Now, so far as the natural depth, the question that you asked a while ago of Mr. Oliver, a generally creating greater heat, so many degrees as you go to depth, that wouldn't altogether obtain in a mine where ventilation was good; but I have seen in the Anaconda mine in 1892 in

the 600 level, where one side was cool and the other around 100°; men used to work naked, with the exception of overall pants—no shirt or anything. I worked there myself and would say the heat was 100°.

Senator J. C. McCARTHY. Was there any general reason why one side of the mine was so hot and the other so comfortable?

A. Undoubtedly the lack of proper ventilation, the circulation of air.

Q. So far the committee have had very little information as to the better method of ventilating the mines. Could you at this time or any time to-morrow bring any witnesses before the committee who would be prepared to submit a better method of ventilating the Butte mines? Have you knowledge of such men?—A. No, sir; I have not; I couldn't suggest, because I believe that Mr. Ollver here is about as well acquainted as any other we could suggest for the conditions along that line, and has had lots of experience; and furthermore, I presume if the committee would call witnesses here, they will testify from the other side that they would make reasonable efforts to try, that we have known by actual experience in the past that the immediate officials of the corporations had neglected it to a great extent?

Q. In all cases?—A. Not in all cases; but I will say, in a great many cases in the past when I worked in mines several years ago.

Q. Then, your opinion is that conditions are not very much better now than when you worked in the mines?—A. As far as I can learn, they are not.

Q. As far as you can learn. You have no actual experience?—A. No; not for the last four or five years, I couldn't give no personal testimony in the matter whatever.

Q. Could you give us the name of any man who worked in the mines at the same time you did, and is working there at the present time—that is, I mean some reliable, intelligent miner, who would give us any information along that line?—A. No, sir; for the mine I worked in the last five years, I believe, I worked between four and five years in this mine, and the conditions are comparatively good there—that is, the Silver Bow mine—so it wouldn't be any use to send anybody from that particular mine.

Representative P. J. DUFFY. This is a single jack mine which we worked in, understand, it is not one of the big producers of Butte. There is men there—William Faulkner, working in the Silver Bow right now.

Senator J. C. McCARTHY. He would be able to give no testimony as to the actual conditions in bad places, that is what I mean. What the committee desires is some person who has general knowledge of the working conditions years ago and at the present time, and what we are trying to get at, if I reflect the views of the committee, is for some one to enable us to arrive at some intelligent understanding of the conditions and the means to remedy them. We know that conditions aren't what they ought to be in all cases, and we are anxious for light, for recommendation, from some practical person, and we would like very much to get the name of that person. Am I right?

Senator I. A. LEIGHTON. Yes, indeed. That is what we are after.

A. I believe that the proposition of getting somebody before you to give you some practical information or suggestions as to perfect ventilation, or as perfect as possible, that is a very difficult proposition. We believe in the continuous process of development that the companies will demonstrate that they are attempting to do this. I am candid in saying that I believe I could express the opinion of a great many that the only practical method of benefiting the men working in those places at this time is to introduce the shorter work day, and then leave it optional with the company to find which method would be cheaper for them—to ventilate to make conditions tolerable, or concede a shorter work day, which is a necessity under the bad conditions.

Senator J. C. McCARTHY. You understand that this committee, or this legislature, or no one else has any power to compel a shorter or a longer work day, and all suggestions along that line would be futile. What this committee wants is some information that would enable them to give the State mine inspector authority to adopt certain rules and regulations, and it is utterly foolish to discuss either a shorter or longer day; it won't serve the purpose of the committee at all. That is a matter that must be taken up between the miners' union, of Butte, and the operators of the various properties; it is purely a labor question, not a legislative function.

A. Senator, in reply to that I would say that this would be purely within the province of a health measure. The eight-hour day was passed purely as a health measure; that was a police measure, enforcing health regulations.

Q. I understand that; but in order to put that law in force, we would have to adopt a constitutional amendment. Isn't that your understanding of it?—A. It wouldn't be necessary to adopt, it would be a bill passed by this legislature, would be all sufficient for this purpose as a sanitary measure, as a health measure, for the protection of the health of certain employees in certain underground places.

Q. I am not clear on that point, Mr. Lowney, and I will inquire into it.—A. I will state I am satisfied the senate and the members of the committee are of course, all aware of the fact that the eight-hour law passed in 1901 was a police-power measure for the protection of certain employees in certain occupations. That stood for two years without any protest from anybody. The fact it was made a constitutional proposition. Now, a separate health measure for the protection of employees in certain underground places specifying the conditions would also be a health measure, and I believe would be constitutional except I believe it would be tested in the courts by the employers. It is purely suggested by these witnesses here, by myself, and the others as a practical method of enforcing sanitary conditions in the mines or penalizing the non-enforcement of those sanitary conditions and ventilation and being a possible means of reducing the temperature in those hot places, which is certainly detrimental to the health of the men working there, and if the company does not deem it practical to make those conditions possible, then they could grant a shorter work day, which would be equivalent to at least a little betterment of the conditions.

Senator I. A. LEIGHTON. Where could we enact a law to draw a line between the short hour and the long hour, or the six hours and the eight hours, as it is now?

A. Simply by establishing what you would consider a reasonable standard of temperature, or places that would not be available for air, for practices of ventilation by the circulation of air in those places. We know a lot of those places exist.

Q. Then, even that, wouldn't it be a matter that would come up between the men who are working and the companies themselves?—A. Undoubtedly they would determine where the law would apply.

Q. Where the law would apply?—A. Yes.

Q. This law, you suggest the short hours, the benefit that the men would derive from it, the fact of forcing the companies to give them better air and improve—A. To compel them to make, to force the air through or make better sanitary conditions, better ventilating conditions in those places so that the six-hour day would be obviated.

Q. In other words, you think the companies do not do that, that is, they do not try to better the conditions in those places?—A. I believe that the officials, the immediate officials of the company who have the practical operation of the work, that they do not consider to any great extent the welfare of the employees, if they can get results; I believe if they can get certain work done in certain places, they will send men there to do it, and if they can get it done without going to any extraordinary expense and method of ventilating or anything, that they will proceed to continue with that work; for one reason they give contracts in drifts, etc., men earn better wages than the daily average wage would be, the men work harder to try to make all they can, and they put men on contracts in some places in order to get men to work at all in those places and make the pay more considerable; nevertheless, the men who work in those places under contract generally lose their health.

Senator J. C. MCCARTHY. As a practical proposition, Mr. Lowney, how could you apply that six-hour day? In other words, would it be necessary to designate somebody who would be the arbitrator in a case of that kind as to whether the temperature was too high and when it was below the standard set for six hours?

A. That would be a proposition that would to a large extent lay with probably the officials of the union and those men working in those places, who may make a complaint and request an investigation of the places; that is, if the employer himself did not cheerfully concede it, or the foreman.

Representative P. J. DUFFY. Mr. Lowney, you, as an officer of the Federation of the State of Montana, could you not as one, see to this affair, if such an affair were not in vogue?

A. I don't think it would be hardly—

Representative P. J. DUFFY. With the mine inspector?

A. It would be hardly necessary or practical at all times. There are local officials of the union at all times that would be sufficient to inquire into that matter if there was complaints made of it.

(Witness excused.)

Senator J. C. MCCARTHY. I move we now adjourn subject to the call of the chair.

Representative C. N. BYRNES. Second the motion.

(The motion being put by the chair was unanimously carried.)

JANUARY 30, 1911.

The committee met at the call of the chairman at the courthouse in Helena, on January 30, 1911, at 7.30 p. m.

Present: Senators I. A. Leighton (chairman), W. E. Christopher, J. C. McCarthy, C. F. Tooley, and J. E. Leary; also Representatives F. J. Duffy, J. C. Duffy, Nelson Story, jr., and O. N. Byrnes.

Senator I. A. LEIGHTON. Now, gentlemen, we will begin by taking testimony in reference to the sanitary conditions and the conditions of ventilation of the mines of the State, and especially those in Butte, and I want to say this, that we want to confine ourselves strictly to those two subjects. The questions and answers must be limited to those two subjects. As there are one or two witnesses that are anxious to get back to Butte, I will accommodate them by calling them first.

Whereupon JOHN VICKERS, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. John Vickers.

Q. And where do you reside?—A. Walkerville, Mont.

Q. Your age?—A. Thirty-five.

Q. How long have you resided in Butte?—A. Five years.

Q. What is your occupation?—A. Miner.

Q. How long have you been following that occupation?—A. For the last seven months I have not; no, sir.

Q. How long have you been following that occupation?—A. For 10 years?

Q. About 10 years?—A. Yes, sir.

Q. In what mines in Butte have you worked?—A. Chiefly in the North Butte and for the Red Metal Co.

Q. How deep are those mines?—A. At this time, the North Butte is 2,400, I believe, and the Tramway, why, I think they are between 1,800 and 2,000.

Q. You have worked in the lower levels of these mines, have you?—A. No; 1,800 is the lowest work I did in the Speculator, and 1,400 was the lowest place I worked in the Tramway.

Q. From a sanitary condition, what condition did you find these mines in?—A. In the big stopes pretty bad.

Q. Will you explain to the committee what conditions they were in, the condition you found them in, that makes you think that it is in a bad condition?—A. Why, in most cases the big stopes are hot, and men naturally going underground do their business around the stopes, which is insanitary in my opinion.

Q. Do they continue that right along—those men who work in the lower levels?—A. To the best of my knowledge, it is so on all levels that I worked on.

Q. Is there no provision for toilet places?—A. I have never seen any.

Q. Have they ever installed any of the toilet cars in these levels?—A. Not to my knowledge.

Representative NELSON STORY, Jr. How hot do these stopes get, Mr. Vickers?

A. That is something that I couldn't say; I never had the opportunity of carrying a thermometer in my pocket to test them.

Q. Is the heat such that it affects you during one shift, materially?—A. Why, very much; one is naturally weak after working eight hours in a hot place.

Q. What effect does that have on a man when he follows that from day to day?—A. He has to quit and get a cooler place to work in; that has been my experience.

Q. How long did you work at one time in any particular stope, how many days?—A. How many days?

Q. Yes.—A. We usually run it a month, not figured by days.

Q. That is, you worked in one of these hot stopes for a month?—A. Yes, sir; and I have for a couple of months at a stretch.

Q. How many men do they work in one of those hot stopes?—A. That varies according to conditions.

Representative P. J. DUFFY. Please state the condition.

A. If there is a big ledge of ore, there is quite a number of them; if it is small lead, there is not so many men.

Senator C. P. TOOLEY. Would you state there is no disposition on the part of the owner to remedy the sanitary conditions there; that is, providing suitable toilets?

A. I never seen any.

Representative NELSON STORER, Jr. Did you ever encounter bad odors in the stopes, or bad air, Mr. Vickers; that is, so bad that it made you sick, or anything of that sort?

A. No; I can not say that I did get sick with it.

Q. It was on account of the heat more than it was the foulness of the air was it?—A. Well, the heat and the sanitary conditions combined naturally affects a man; that is naturally weakening.

Q. Well, in your estimation, can the conditions be improved without any excessive outlay of capital or labor?—A. Well, I tell you that is a question don't think I am able to answer. I am not well enough acquainted with the matter to know what the expense of anything like that would be.

Q. Regardless of the expense, could it be done?—A. That is something could not answer either.

Representative P. J. DUFFY. You couldn't answer it?

A. No; I can't, practically speaking. I never studied ventilation, but it is my own opinion that it could be altered.

Q. Have you worked in cool places?—A. Yes, sir.

Q. What made that place cool?—A. Circulation of air.

Q. What caused the circulation of air?—A. I didn't see any forces at all that caused that.

Q. Was there plenty of raises?—A. There was.

Q. And drifts opened?—A. Yes, sir.

Q. Does that cause circulations?—A. In some places.

Q. Take a hot box, such as we term it, with connections to upper levels where there are cool places, would that cause a hot box to get cool and other facilities?—A. I don't know; I seen hot boxes with raises in with a very small inlet of air that did not get cool.

Q. But, there was a small inlet of air you say?—A. Yes, sir.

Q. By a small inlet, what do you mean, Mr. Vickers?—A. I mean a place where a person is trying to keep within the vein in a stope.

Q. And, in that case, there was not sufficient place to keep the air cool?—A. I don't think there was enough air to keep this place cool.

Representative NELSON STORER, Jr. Have any of these properties in which you have worked or formerly worked changed hands lately, Mr. Vickers?

A. Yes; just about the time I quit the mine, the Red Metal Co. changed hands.

Q. Of your own knowledge, then, you don't know whether the conditions since then have improved or not?—A. I could not say; I have not been underground since the change; they changed a few days before I quit.

Senator C. P. TOOLEY. Seven months ago?

A. Seven months ago, since I quit the mine.

Representative J. C. DUFFY. You say the Red Metal Co. changed hands?

A. Yes, sir. The last check I drew I drew from the Anaconda Co., the one check I drew there.

Q. Isn't it under the same management at the present time?—A. I guess so that was the only check and last check I drew.

Q. Isn't the same foreman there?—A. The same foreman.

Q. Have you got any theory or any knowledge in regard to how these conditions could be bettered, Mr. Vickers, that could enlighten this committee?

A. There is one thing I would suggest; that is that toilet cars be put on every level and enforce the men to use them.

Senator I. A. LEIGHTON. Repeat that answer, please.

A. Toilet cars put on every level and force men to use them, and enforcement made that they be used, and have sanitary conditions in the stopes.

Q. I would like, Mr. Vickers, for you to explain the conditions in those stopes where you have been, in plain language, so that we will all understand. There are no ladies present; speak plainly, so we will understand.—A. It comes very natural that a man going down underground, he has got to do his business some place.

Q. How many men would do that in any one stope that you were working in there; how many men were in one stope there?—A. That would depend on the number of men working there.

Q. How many?—A. In places you will find 20; other places you will find 50; in places you will find only 3 or 4.

Q. Was there a large amount of foul matter in this stope?—A. Yes; there was sometimes, and sometimes there was not.

Q. Was there any great amount of stench or odor from that?—A. In places; yes, sir.

Q. Would men be allowed to go to the surface if they wanted to?—A. Not to my knowledge.

Q. Did you ever at any time, or any man that you know of working in the mine, complain to the company or to the superintendent of the conditions that you say existed there?—A. No, sir.

Q. Is that custom practiced in nearly all of the mines in Butte?—A. Practically in every place I worked.

Q. Will you kindly name the mines that you have worked in?—A. I named them before—North Butte and Speculator.

Q. Only the two?—A. Yes, sir.

Q. The North Butte and Speculator, did you say?—A. At least I should have said the Speculator and the Red Metal Co.

Q. These mines are owned by what company?—A. The North Butte Co. and, I believe, the Anaconda Mining Co. own the Red Metal at the present time.

Q. Did the men find a great deal of fault with the sanitary conditions while you were working there?—A. At times; yes, sir.

Q. Do you, or did they seem to think that there was any sickness that had arisen from that condition?—A. I should judge that such condition would naturally have a tendency to cause sicknesses.

Representative NELSON STORV, Jr. Would there be any difficulty in getting these men to use these toilet cars if they were handled?

A. That is something I could not say.

Q. Well, judging from the class of men that usually work in the mines, do you think it would need much urging on the part of the management to get them to use the cars?—A. That is something I could not really answer, because human nature is rather fickle.

Senator C. P. TOOLEY. In conjunction with that question, I will ask you whether the men that are employed would attend the car if they were installed?

A. That is rather a difficult question to answer; anyone knows how men are, anyway.

Q. They generally have their preference as to the particular class of work they will pursue?—A. I don't understand your question, Senator.

Q. I mean, if these cars were installed the men would not care particularly to attend to them, to do that work, would they?—A. That is something I could not answer; I know for myself that I would use them.

Q. I mean to attend to them, to empty them, to cart them away from the mine?

Representative NELSON STORV, Jr. They would have to hire a separate man to do that; they could not expect a miner to attend to that work.

Representative P. J. DUFFY. Did you kick over men coming close to the vicinity that you were working in, and letting the duties of nature take its course?

A. Yes, sir; lots of times.

Q. If, with such convenience in a mine, as stated in previous questions, and the same could be removed, do you not think that men would not use the same?—A. That is the same question as before.

Q. I know it, but I am coming right back at you.—A. You know human nature as well as I do.

Q. Would not the majority of men if you kicked or said a word to them—would they not go to a toilet car in preference to eating their own stench in a stope?—A. I know I would.

Q. Where air is poor; no toilet car in vogue where you had to eat your supper or your lunch, did they—to use a common name as we call them in the mines—shit flies—did they ever bother you?—A. Yes, sir; and cockroaches, too.

Q. Do you think in your judgment with toilet cars in vogue on a level, that this could be eliminated?—A. Well, the men would have no excuse.

Q. That is not plain to me. With toilet cars on a level and the same to be used, would these shit flies be in the stope?—A. I don't see how they could be up there.

Representative NELSON STROY, Jr. In your judgment, it would have a tendency to do away with such as that?

A. I would think so; if there was nothing in there I don't see where they would breed from.

Q. Has there been any typhoid-fever cases in any of the mines that you ever worked in?—A. No; but there have been epidemics of typhoid fever and small pox around town; you don't get them in the mines; you don't stay there long enough.

Q. Do you think the conditions in the mines ever gave rise to typhoid fever that is, the conditions in a mine?—A. That is something I can not say; a medical man could tell you better than I.

Q. What particular disease affects the miners over there more than any other?—A. Miners' consumption is the worst disease.

Q. Do men advanced in stages of consumption work in a mine?—A. They work until they can not work any longer; when they lose their strength they have got to quit.

Q. There is no enforcement of any rule by the miners' union itself, or by the management itself that would keep a man with consumption from going into the mines to work, is there?—A. None that I am aware of.

Q. Is there ever any complaint by men not afflicted with consumption to go against those that are to work?—A. No; furthermore you will hardly get a man to acknowledge when he has got consumption that he has got it.

Q. Would you work with a partner that had consumption?—A. Necessity would perhaps compel me to do so.

Senator C. P. TOOLEY. Could a person that has a general case of consumption keep up his end?

A. Why, naturally not.

Representative NELSON STROY, Jr. Do miners as a rule, Mr. Vickers, regard consumption in a mine—miners' consumption—as a particularly infectious or contagious disease?

A. Why, that is something I never made a study of. I think from what I have heard about it that physicians will tell you it is infectious.

Q. Is the prevalence of consumption in the Butte mines ever regarded seriously by the men as a whole?—A. I think the men as a whole are accustomed to the subject and keep working.

Q. The miners themselves to your knowledge have never taken any steps that would tend to decrease this disease, have they?—A. Two years ago the miners' union sent a bill over here on these same lines and tried to get it through, I believe.

Senator C. P. TOOLEY. What was the subject of the bill?

A. Well, the details of the bill I don't know, because I never read it.

Senator J. C. McCARTHY. Were you connected with the miners' union at that time?

A. Just a member; that is all.

Q. Not in an official capacity?—A. No, sir.

Q. Who drew that bill, do you know?—A. That is more than I can state.

Q. Do you know of any one of the witnesses here that has any knowledge of that particular bill?—A. I don't know.

Q. You have no knowledge of the scope of that measure at all, have you?—A. No, sir.

Q. Could you name any one who had?—A. I think—

Representative J. C. DUFFY. I think Peter Breen was the man that drafted the bill; that is my opinion; I am not positively sure about it, but I think so. Perhaps Mr. Lowney can tell us something about that. Mr. Lowney, do you know who drafted that bill?

Mr. LOWNEY. I haven't any personal knowledge about it, but I understood it was Peter Breen.

Senator J. C. McCARTHY. The bill was printed, did you say?

Representative J. C. DUFFY. So I understood.

Senator J. C. McCARTHY. Have you any knowledge as to whether or not the bill was printed?

A. In the house?

Representative J. C. DUFFY. Yes; I can answer that question.

Senator J. C. McCARTHY. Then, we can get a copy of it from the Historical Library to-morrow.

Representative P. J. DUFFY. I have a copy of it that I got from the secretary of state by writing over here last October for it.

Senator J. C. McCARTHY. Mr. Vickers, assuming that you were the owner or manager of the Speculator mine, what change or changes would you make in order to make mining conditions better underground—what changes would you suggest from the present method?

A. Do you mean in the general workings?

Q. General working.—A. That is rather a lengthy subject to go into for a man that never studied mining any more than breaking rock.

Q. You haven't any suggestions at all to offer, have you?—A. I have already stated what I would do from a sanitary standpoint, but in regard to the ventilation of a mine I am not able to answer.

Q. I will ask you what would you do in order to better the ventilating appliances in use at the present time?—A. To tell you the truth, I am practically at sea to know anything about ventilation.

Representative NELSON STORV, Jr. Would you be in favor of a bill preventing a miner with consumption in its incipient stage going underground?

A. I am afraid you will have to call one-third of the miners out of the mines in Butte at the present time.

Representative O. N. BYRNES. What proportion of miners do you think have miners' consumption?

A. One-third; that is, of those who have worked there any length at all. It is pretty hard to convey any definite idea at all for the reason that the miners in Butte are a moving population to a great extent; any of them that have worked any length of time are more or less afflicted with it.

Senator C. P. TOOLEY. How long does it take to manifest itself?

A. That is something I couldn't answer either.

Q. It is according to how a person takes care of himself, I suppose?—A. Yes, sir.

Representative P. J. DUFFY. Will you kindly give us a rough estimate, is it injuries or miners' consumption that draws the biggest benefits from the miners' union for sick benefits?

A. Why, injuries, I think, are just about a stand-off with diseases.

Q. The diseases are comprised mostly of what?—A. Why, the greatest disease that human nature is afflicted with.

Q. Namely?—A. Miners' consumption; there is also typhoid fever, scarlet fever, measles, all kinds of diseases lately.

Representative J. C. DUFFY. But the greatest benefits as paid by that union, is it paid for typhoid fever, scarlet fever, or measles, or what is it paid for?

A. Typhoid fever and those cases are a small percentage?

Q. Then, what is the big percentage paid for?—A. The big percentage of benefit is for tuberculosis.

Representative O. N. BYRNES. Doctor, is there not a record of deaths and its causes in Silver Bow County?

Senator I. A. LEIGHTON. There should be. We can get that from the health officer. There is a law, I believe, that a record of the deaths and causes, as well as the births, shall be made.

Representative O. N. BYRNES. That ought to be on file for last year?

Senator I. A. LEIGHTON. That law is in the hands, you understand, of the State board of health. That is, they are the ones that enforced that. The health officer in each county in the State has to report to the secretary of the State board of health every month the deaths, causes, and all diseases.

Senator C. P. TOOLEY. That is accessible, I suppose, Mr. Chairman. Those records are accessible to the committee, are they not?

Senator I. A. LEIGHTON. Oh, yes; we can get them right in the capitol building from Dr. Tuttle.

Representative NELSON STORV, Jr. Do you think that anything that the management—any measure that the management of these mines could take in the way of improving sanitation and ventilation, would be as effective in offsetting the ravages of tuberculosis, as keeping men afflicted with this disease out of the mines?

Answer. Well, there is another question that I could not answer. I understand from medical men that is disease will spread, so that is rather a conflicting kind of a question.

Senator W. E. CHRISTOPHER. Is the mining management over there making any effort to improve the conditions as to what they were a year or so ago?

A. I can not tell what they have done in the last seven months, as I have not been underground.

Q. In the way of putting in and installing fans, machinery, etc.?—A. The had not been in operation when I came out, and I don't know what they are doing now.

(Witness excused.)

Whereupon DAN. D. SULLIVAN was called and sworn as a witness, testified as follows:

By Senator I. A. LEIGHTON:

Q. Give your name.—A. Dan. D. Sullivan.

Q. And where do you reside?—A. Butte, Mont.

Q. Your age?—A. Thirty-five.

Q. How long have you resided in Butte?—A. Fifteen years.

Q. And what is your occupation?—A. Miner.

Q. How long have you been a miner there?—A. In Butte?

Q. Yes.—A. Fifteen years in Butte.

Q. What mines have you worked in there?—A. I worked in the Speculator, Lexington, Anaconda, St. Lawrence, Bell, Minnie Healy, I guess that about all.

Q. What position do you now occupy as to the miners' union?—A. President.
Q. Mr. Sullivan, I wish you would state to the committee the conditions of these various mines, as to sanitary conditions and ventilation?—A. Well, I have not worked in any of the Amalgamated mines for a year now; I could not state how the conditions are in those mines at the present time, but I worked in the Speculator for a year, and quit there two months ago. I worked on the 2,200 level of the Speculator, of the Jessie lead, for about eight months and conditions there were pretty bad.

Q. Will you describe what those conditions were?—A. Well, they were real warm there, and it was a downcast raise coming in there; there was one raise through, it was a downcast and all the manways are open there, and air come right down the raise, right down the first manway; it would not travel through the stope, and the men working in the stope would not get the benefit of the air; and they blast there at noon; blasts going off irregularly; the smoke hung around in the west part of the stope where the air did not circulate where the most of the men worked, the smoke hung there for a couple of hours, generally died out; they would turn on the compressed air and blow it out.

Representative P. J. DUFFY. Now, it is an absolute necessity, or is it just mining management affair, that they blast at noon. Could not they drift a shifts and blast when they are going off, and leave rock enough for the next shift?

A. Certainly they could; they could drill all day and have rock on both shifts.

Q. Do you blast twice?—A. You would have to blast when the shift boss told you to.

Q. But it could be worked by drilling one whole shift, and then the blast going off, and leave rock enough for both shifts.—A. Yes, sir.

Q. And the smoke would be nearly all gone when the next shift came on?—A. Yes, sir.

Q. If you blast at noon, as I call it, when you eat your meal, would it not be smoky and gassy around when you go back to that stope?—A. Yes; certainly would for hours afterwards.

Q. Almost impossible to see in some places, I suppose?—A. If you are in the air course the air will take some of it out. Of course, if you turn on the air compressor that would move it away, cause a suction.

Q. After you would blast at dinner time—day shift as I call it—or at supper time—night shift as I call it—shovelers and miners, it would be impossible for them to go back to work when time was up, after their lunch was eaten?—A. It would be impossible for them to go right back to work.

Q. Yea.—A. No, sir; they couldn't, they would have to stand back.

Q. Then you are losing time by blasting at dinner time or supper time, are you not?—A. Yes, sir.

Representative NELSON STORX, Jr. Is that customary?

A. Yes; it is customary all over. I don't know whether it is the shift boss' fault or whose fault it is; if they are short of rock, they will come around and tell you to blast.

Senator C. P. TOOLEY. You are not losing this time on your own account are you?

A. Oh, no; the company is losing it.

Representative P. J. DUFFY. Men do suffer from the obnoxious gases and smoke so as to cover over the shovelers, so that the ore can be transferred, do they not?

A. Yes.

Q. Is that correct?—A. Yes; that is correct.

Representative NELSON STORT, Jr. Is there any lasting effect due to this cause, or does it just temporarily make a man sick?

A. It makes him good and sick. Sometimes for a week I have had a headache. If you happen to work on night shift, it affects a man more than on the day shift; it affected me more on night shift, and that is the way it is with some people, and I would have a headache the next day when I would wake up, from the effect of those gases and smoke.

Q. Do you consider that that state of affairs was one incidental to the successful operation of a mine, or could it be obviated?—A. I should think so; yes, sir. I think they could operate a mine successfully otherwise, without blasting at noon, that is my opinion.

Representative P. J. DUFFY. Noon, or supper, as it may be termed, do you mean?

A. Yes, sir; noon hour we call it, when we go to eat.

Senator J. C. MCCARTHY. What object does a company gain to compel a man to go in at a time when they are unable to do their best work?

A. I don't know whether a company wants a man to do that; the shift boss might want to make a reputation for himself, get up more rock than the other fellow, that may be the object.

Q. You can not see any gain to the company from that mode of procedure?—A. No, sir; I think it is a loss to the company.

Q. Don't you think that the company should learn those things, and change their system, if there was not some benefits to gain by that method of procedure?—A. It seems as though they ought to.

Q. How would you carry air—you spoke of a little while ago—from the downcast up through the stope?—A. This raise is coming down on the stope, that we were working there, right down through, the air was coming down there.

Q. How would you distribute that air to where the men were working?—A. I might be able to get it through that stope; I couldn't offer you any remedy of ventilation, but I would cover over the manways—I would put in a double door there, make the entire manway open and let the air go in that way, come down on the inside where the men were working. Cover all the manways and keep rock in the chute.

Representative P. J. DUFFY. Wouldn't you cover this manway on the floor you were working?

A. Probably the floor underneath would not be filled up. I would cover right close to the bottom.

Q. You would cover over on the floor that was filled in, where the shovelers were working?—A. I don't know; I would rather cover over on the floor—right on the sill, cover over tight, keep rock in the chute and keep air right where the men were working, right down along the breast. Of course it is impossible to keep the chute full where the carmen are down below hammering on the door for rock.

Representative NELSON STORT, Jr. From your judgment and acquaintance with the mines in Butte, do you think it would be a very hard job to distribute the air fairly well through all those stopes, either by the natural flow of the air down the shaft, or the manways, or by forcing the air in there with fans and tools?

A. It would be a hard job for me to do that because I don't understand it. If you had a man there that understood ventilation I don't think it would be a hard job.

Q. Don't you think they have got men there that understand ventilation?—A. I don't know; it don't seem so.

Q. Now, speaking of the conditions caused by the excretion of the miners, spoken of by Mr. Vickers, you are acquainted with that, Mr. Sullivan, the foul smell, are you not?—A. Yes, sir.

Q. Do you think the miners would use those sanitary cars if they were put in there handy?—A. You put a penalty on them, and they will use them; if you

catch any of them people doing it around the stope, drop the flag on him, and the next man will go down.

Q. Would they have to be forced to use those?—A. If a fellow is way up seven or eight floors and in a warm stope, and he has got to climb down to the level, if he thinks the boss is not around he might sneak around in a corner and drop it in the corner.

Q. Don't you think the men themselves would enforce that rule pretty thoroughly?—A. I think some of them would probably; it may be like some of the men in the South; for instance, Habana. They had a very insanitary condition there, and there was a law that was passed over there. Since then they have a pretty sanitary city, so I am told.

Q. I take it that the civilized conditions existing among the miners in Butte is a little better than what they had down there?—A. I don't know anything about that; but I know the Cubans are free; that they got their freedom.

Senator C. P. TOOLEY. Have you noticed any improvements in recent years in sanitary conditions?

A. Just that day I was down with your committee; that is the time I could tell about those mines, where the improvements had been made in the Amalgamated mines.

Q. Were they better than they were before?—A. I never seen those fans in operation in the mines before, except at the North Butte; they had a small fan there on the 2,200 level, about 20 inches in diameter.

Q. But from your last observation, conditions are really improving a little bit, are they not?—A. I was never in the Leonard mine before; I don't know what they were before. I couldn't say.

Representative C. J. DUFFY. Don't you know that the B. & M. own the mine?

A. I don't know who owns the mine, but it is generally called an Amalgamated mine.

Senator C. P. TOOLEY. It is immaterial who owns the mine, is it not, Mr. Chairman?

Representative P. J. DUFFY. I am not going into that. The Mountain View, Leonard, East and West Colusa, Pennsylvania have always been known as B. & M. mines, have they not?

A. Yes, sir.

Q. It is all the mines that you know of that they own?—A. It is all the mines I have been through. That is the first time I ever was through those mines; I couldn't tell you what the conditions were before that.

Senator I. A. LEIGHTON. How did you find the conditions as far as the ventilation and sanitation of those mines were concerned that we went through?

A. They were real good through the Leonard, where we went through the Pennsylvania, and over the Mountain View through that level, and down through that stope conditions were good. There was a little dust in the Pennsylvania; you could notice a little dust in there, otherwise it was cool and in great shape.

Q. Then, would you suggest any improvement, any change in any of those mines that we went through;—that is, the Leonard and the Mountain View and the West Colusa?—A. Well, I couldn't suggest any improvements along there; that place was in pretty good shape where we went through. The only fault I could find anywhere there, that there was a little dust going through there; but every place we went through were good, except that little place in the Pennsylvania where that water was dripping. It was pretty warm in there, and down in the 1,800 of the Leonard it was real warm in there.

Senator J. C. MCCARTHY. How warm was it; do you know?

A. I don't know; I really couldn't tell you.

Representative P. J. DUFFY. The warm place in the Pennsylvania was the new drift, was it not?

A. Yes, sir.

Q. Just drifting as a prospect for ore?—A. I don't know what the object was of drifting that drift.

Q. Well, naturally, a drift is driven as a prospect, is it not?—A. Yes, sir.

Q. Through the stopes of the Pennsylvania you found conditions good?—A. Certainly; they were fine down in the stopes.

Q. You saw water running there with an air line, did you not?—A. In the Pennsylvania. I didn't notice any water line.

Q. There was water on one side of the air line?—A. I didn't see that. I didn't go up in the stope; I went down through.

Q. I thought that you were with us through that stope.—A. No, sir; I didn't go up there.

Representative NELSON STORY, Jr. Mr. Sullivan, do you think that there is any necessity of any more mining laws to be put on the statute books of the State of Montana, or would you empower the mining inspector to see that the laws on the books were enforced?

A. Well, I would give him a little more power if I had the doing of it. I would give the mining inspector the power whereby those mines could be cooled off or call off the shift. I understand that can be done. Fellows tell me that have worked in coal mines that it could be done.

Q. And you would empower the mining inspector to that extent, that he could order it done; otherwise to call off the shift until it was done?—A. Yes; I think that mining law ought to have a penalty attached to it. If the mining inspector says you are violating the law there should be a penalty attached so that they will not violate it. This ought to be changed. The mining inspector told me that he has given orders, but that he couldn't accomplish anything; there is not any penalty attached.

Representative P. J. DUFFR. Do you think the same conditions prevail in the Original, Gagnon, North Butte such as prevail in the Pennsylvania?

A. Do I think they could?

Q. Yes.—A. I should think so. I don't see why they couldn't. I might be mistaken, but it looks as though if they could drive the air through the stopes and drifts in one mine they could do the same in the other.

Q. You saw the fan in operation in the Pennsylvania?—A. I didn't see the fan in operation, but I seen just where it was; I heard it work and felt the air there.

Q. You saw the air, how it was conducted, and the way the air was split?—

A. I don't know anything about the air splitting.

Q. You saw the air was conducted by these doors?—A. Yes, sir.

Q. Could not the same conditions prevail in other mines as it does there, or, in your judgment, do you think it would be impossible to conduct it the same in other mines?—A. I don't think it would be; no, sir. If it is feasible and possible there in the Leonard, why I don't see why they couldn't do the same in other mines.

Representative NELSON STORY, Jr. Speaking of consumption, did you ever give it any personal attention?

A. No, sir; I never gave it any personal attention more than seeing some of my fellow workmen falling every day; they had my sympathy, they had my sympathy; I suppose, if I kept on, I would be getting somebody else's sympathy.

Q. You are a little bit afraid of it, then?—A. Yes, sir; I certainly am.

Senator J. C. MCCARTHY. Do you know if miner's consumption prevails in Michigan, Mr. Sullivan?

A. I spent several years there; I never heard of it. I never heard of a miner's consumption in Michigan. There are men working in the mines there that have been working there for 40 years and they are pretty lively old chaps yet; they are trotting around with their buckets.

Q. How do you compare conditions of the Calumet and Hecla and the large mines in Butte?—A. I never worked at the Calumet and Hecla.

Q. Well, any of the Michigan mines?—A. I worked on the 3200 level of the Franklin; conditions were good there.

Q. How do they keep those mines cool?—A. It seemed to me that they did not pay any attention to ventilation; they worked the whole thing and didn't fill in, and the air circulated through there; it seemed naturally; I never seen a door put up anyway there through any mine I worked in.

Q. Are there any fans there?—A. No fans in any that I worked in, none down below or none on top.

Q. How wide is the vein?—A. It varies from 4 feet to 30 feet; they leave a pillar of ground, and don't fill in at all, maybe 100 and 200 feet apart, and stope everything else out.

Representative O. N. BYRNES. They have not any decaying timber there, have they?

A. Not in the mine I worked in; the timber was in the shaft; there was not much timber throughout the mine except in the shaft, in the mine I worked in. In the Calumet and Hecla they have more timber; they timber with square sets there, something on the order that we have in Butte, only that we have longer caps, longer plates, and longer posts; I have never seen them, but I understood they were practically the same as what we had here.

Representative NELSON STORV, Jr. Does the nature of the ore make any difference in the heat of the mine?

A. I don't know much about the nature of the ore; I don't think that would have much to do with it, but I believe the country rock has something to do with it; I believe the granite and porphyry is impregnated with lime, and naturally there is heat where there is lime, that is, in our Butte mines.

Senator J. C. McCARTHY. You couldn't get lime mixed in with the granite at that depth, could you?

A. Yes, sir.

Q. I mean Michigan.—A. Oh, there is no granite walls in Michigan; they call it trap rock and sandstone; in the Calumet and Hecla it is trap rock on one wall and sandstone on the other.

Q. Have you worked in any of the Arizona mines?—A. No; I never was in Arizona.

Q. Your experience has been confined entirely to Michigan and Montana?—A. Exactly.

Representative NELSON STORV, Jr. Do you know of any epidemic occurring in Butte from conditions in those mines; that is, typhoid fever, for instance?

A. Not an epidemic; no, sir. I had typhoid fever myself while I was there. Q. Do you think you caught it from the mines?—A. I couldn't tell you; I caught it while I was working in the mines some 10 years ago, I guess.

Senator J. C. McCARTHY. Did they use the city water in the mines at that time?

A. They brought water up from Anaconda at that time on flat cars.

Q. The Butte city water was not in use at that time underground?—A. I don't think it was; they stopped them from sprinkling the streets there with that water.

Representative NELSON STORV, Jr. Mr. Sullivan, would you be in favor of a law prohibiting men in any advanced stage of consumption going down into a mine to work?

A. Would I be in favor of such a law?

Q. Yes.—A. Prohibiting that?

Q. Yes.—A. I don't know; it would be kind of depriving a man of his bread and butter, if he is able to work.

Q. I realize that, but for the protection of the men that have not caught it, you say, yourself, you wouldn't like to go down and work with a man that had consumption.—A. No; you didn't ask me that question.

Q. I will ask you that question. You wouldn't like to work with a partner that had consumption, would you?—A. I have worked with them.

Q. You didn't like it?—A. I don't like it. Circumstances alter cases; it all depends on the size of your pile.

Q. The reason I asked that question is because there is more or less agitation in the State of Montana for the establishment of a tuberculosis hospital to take care of those men, and if it were possible to take care of them the best that could be done; don't you think that it would be one of the best things for the miners if there was some regulation prohibiting a man having consumption going underground in a mine?—A. Yes; if you had a hospital for consumptives; I think the place to put them would be in the hospital, not down in the mines.

Q. Don't you think that the fact that they are allowed to mine with other men is largely due to the spread of consumption of the miners over there?—A. Well, I couldn't answer—I couldn't answer that question; it takes a man like the doctor there; he might give you a little information.

Q. I think you know just about as much about it as he does; I have got my idea about it, but I have not got it to work yet.—A. If your State would appropriate enough to keep these people, I would be in favor of putting them in the hospital as soon as you found out one had consumption—put him in the hospital and keep him away from the rest. If we had no hospital, or no place to keep them, you have got to let them work to make a living.

Representative P. J. DUFFY. If he is a married man, who will take care of the family?

A. I couldn't tell you what to do with that fellow's family; I would not be in favor of shutting off their bread and butter. If this disease is contagious, as they claim, or infectious—I don't know that it is or not; I understand it is, I understand it is—

Representative NELSON STORV, Jr. I don't think there is any doubt about that. My opinion is that while conditions in the mines may be advantageous to the ravages of the disease, that the thing we have got to do, in the first place, is

to keep the men from going down there; you have got to make provisions to take care of them.

Senator I. A. LEIGHTON. Mr. Sullivan, how many miners are there at work in Butte; that is, approximately?

A. I couldn't exactly tell how many there are now; there are not as many now as there were eight months ago.

Q. Just in your judgment, in your opinion, how many are there?—A. Well, I suppose there are probably 3,000; I am not sure.

Q. What percentage of the 3,000 are afflicted with what is known as miner's consumption?—A. I couldn't tell you that.

Q. In your opinion?—A. Well, that is not a fair question to ask a man; I could not begin to make a guess, or anything like that; I am not a judge of a man that has consumption, in the first place.

Q. Mr. Vickers thought that was about one-third.—A. I can not tell when a man has the first symptoms of consumption, and can not even tell until he is right down with an advanced stage of consumption, and then anybody can tell; but when a man is first afflicted I couldn't begin to tell.

Representative J. C. DUFFY. How much benefits did they pay out of the union as the result of diseases and accidents, we will say, annually?

A. The last quarter we paid \$17,000 in sick benefits, over \$17,000—I don't remember what the funeral benefits were—and I think the last 15 months something over \$114,000 sick benefits alone.

Senator I. A. LEIGHTON. One hundred and fourteen thousand dollars?

Mr. VICKERS. I can answer that question, if I am allowed to do so.

Q. You may do so.

Mr. VICKERS. The last 15 months we paid out for sick benefits \$94,425; we had 199 funerals we paid for.

Senator I. A. LEIGHTON. How many months?

A. Fifteen months.

Representative J. C. DUFFY. That is largely due to the disease?

A. I can not tell you how much was paid out for those diseases, because I have not been there so long. There is a 25-cent assessment every second month, and there is a 85-cent assessment on this month for those men that are in advanced stages of consumption.

Q. Do you classify the amount paid for those different diseases?—A. If we dug into the treasury for all those fellows that had miner's consumption, we wouldn't have any treasury at all; they would pick up another scheme and assess the members 25 cents more every second month—we wouldn't have any treasury left at all.

Senator I. A. LEIGHTON. What physician or physicians would you suggest for us to subpoena before the committee that would be the best informed in reference to the cause of this miner's consumption that develops in those mines in Butte?

A. Well, it seems to me the hospital physicians over there would be the proper people; still I don't know, but I should think they would be the proper people to have come before you.

Representative NELSON STORY, Jr. Do you ever sweep the dust away with a broom? When we went down through a manway it was so damn dusty—

A. No; I never seen a broom used around the stopes; they used them around the stations, and probably in the mule station, but I never seen them in the stopes—well, I don't know much about it, anyway.

(Witness excused.)

Whereupon JOSEPH GUELFY, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Where do you reside?—A. 26 North Main Street, Butte, Mont.

Q. How long have you resided in Butte?—A. Twenty-two years.

Q. What is your occupation?—A. Miner.

Q. Have you followed that occupation for the whole 20 years?—A. I should say not; no, sir.

Q. What other work have you been engaged in in Butte?—A. Previous to that time I used to go to school.

Q. I didn't understand your first answer, or you didn't understand my first question. I asked you if you had been working there for those 22 years?—

A. I have been residing in Butte the last 22 years.

Q. How long have you been working in the mines?—A. Fourteen years; worked in the Buffalo, Silver Bow, Pennsylvania, Leonard, East Colusa, Specular, the Corra; I guess that's all.

Q. Do you hold some position in the miners' union?—A. Yes, sir; vice president.

Q. At the present time?—A. Yes, sir.

Q. You sent over here a list of several witnesses to be examined before the committee. We understood that as an expression or desire on the part of the Butte Miners' Union that those witnesses should be examined and no others were we correct?—A. As far as the union is concerned; not me.

Q. You do not object—the Butte Miners' Union do not object to our getting any information from any other source, do they?—A. I don't know what they want or what they will object to.

Mr. D. D. SULLIVAN. May I answer that question, Mr. Chairman?

Senator I. A. LEIGHTON. You may.

Mr. D. D. SULLIVAN. I will answer that question. We have no objection at all to your getting all the information you can from all the Butte miners you can get hold of. The reason we sent that list over here was in fear that some people would come here saying they represented the miners' union where they did not.

Representative P. J. DUFFY. All the witnesses here have got proper credentials authorized by the miners' union, have they?

A. Yes, sir; they have got credentials authorized by the union.

Mr. GUELI. I would say that at your suggestion, or the suggestion of the committee, we brought this matter before the union, that you people were to subpoena whatever committee that this organization wanted to send over here.

Senator J. C. MCCARTHY. I think that this committee has asked for the name of one miner from each of the various mines in Butte, and, as we understood later, that request was refused, and the committee names, instead of one man from each of the various mines, just a certain number of the members of the union?

A. If you will allow me to refresh your memory, Senator, it was you that told us, after that suggestion was made, that a smaller committee, in fact would be more effective.

Q. Immediately after that talk, which I do not have a very clear recollection of, although I won't contradict it, it was formally requested from the Butte Miners' Union to supply a person from each of the mines and the miner's given name?—A. Yes; that request was made.

Q. You did not comply with that request—the union did not comply with that request?—A. We told the union about it, and they did not comply with it no, sir.

Q. Have you any witness here capable of giving us any information as to the best method of ventilating the Butte mines?—A. Well, I believe we got witnesses here—they are practical coal miners, and they know something about ventilating mines.

Q. They are here at the present time?—A. Yes, sir.

Q. What suggestion have you to offer as to the best means of ventilating any of the mines you spoke of?—A. Probably there might be different systems adopted—by driving raises, enlarging air shafts, fans, trap doors, and other things—ventilation changes could be effected.

Representative NELSON STROY, Jr. There is no doubt in your mind but what this could be done?

A. Not probably in all cases.

Q. Well, pretty near all cases.—A. Well, yes, sir.

Q. A sufficient number could change conditions over there?—A. Quite a number of cases.

Senator J. C. MCCARTHY. Do you consider the mines at the present time as being in better shape than they were several years ago when you went underground the first time?—A. Oh, no, not in some; in some there is, but not in others.

Q. Could you give us the name of a mine that is not in as good condition at the present time as it was 10 years ago; that is, depth considered?—A. I am going to tell you about the mine that I worked in 10 years ago and those that I worked in later. I left the Pennsylvania mine, she was good; I went to the Rarus, and I tell you I got into a good hot hole, what I call hell, and over; as soon as you would get on clothes that you had to work in, why the clothes were wet with sweat; I would take off my shirt and wring it out

there—and before I could do anything at all—and by the time I got through straightening out the clothes ready to operate with the machine I was ready to take another shower bath, as I call it—take off my shirt and wring it again.

Q. How long ago was that?—A. That was six years ago.

Q. Do you know anything of the conditions at the Pennsylvania mine at the present time?—A. The only time I was in the Pennsylvania mine since then was when you folks were over there.

Q. You found conditions improved, did you not?—A. As far as one place; yes. There was one bad place that I saw there and that was where they were working in that cross out; that advancement they were making in that cross out.

Q. You understand that it is impossible to drive those advances and keep the temperature as cool as they will in the part of the mine where the men are working; you understand that, don't you?—A. Sure.

Q. And that condition can not be avoided by any system you could devise?—A. No, sir; they could be bettered in some cases, all right, even at that.

Q. You have not any general plan, then, for bettering conditions in Butte, have you?—A. I don't know; they might have for all I know.

Q. I mean you yourself, personally, you have no general plan of bettering conditions in Butte?—A. There is a stope in the Pennsylvania that could be improved; the air was going down in the manway, and there was nothing there, not a particle of air there; that air could have been confined and held on the floor; that is, it would circulate on that floor.

Q. Did you ever discuss the conditions of the underground working at Butte in the Butte miners' meeting?—A. Well, sometimes in a general way.

Q. I think it would be a good thing if you would.—A. Probably it would.

Q. I recommend you to do it.—A. We might take your suggestion, then.

Representative P. J. DUFFY. Six years you worked in the Pennsylvania, you said?

A. No; the last I worked in the B. & M. was at the Leonard; I believe it was six years ago, though I am not quite sure; I had left the Pennsylvania.

Q. What level did you work on last in the Pennsylvania?—A. The last level I worked on was the Harris and Lloyd tunnel.

Q. You never worked on the lower levels, then, six years ago?—A. Yes; I worked on the 1,200 for a while.

Q. What stope on the 1,200 did you work in?—A. I forget the number, 1,200 and something.

Q. The Red Metal?—A. No, not the Red Metal.

Q. Or Big Woods?—A. I suppose they call it Big Woods for all I know.

Q. What was the condition in there?—A. The Big Woods?

Q. Yes.—A. Oh, Moses; pretty hot.

Q. In going through the Pennsylvania last time with this committee on the 1,800, did you recollect where you were at then; did you know the country you were in?—A. No, sir.

Q. You didn't work there in what is commonly known as the Big Woods, in the 1,200 of the Pennsylvania, after the fan was installed, did you?—A. No, sir.

Representative NELSON STORV, JR. There is no doubt in your mind but that the use of the sanitary mining cars would tend to that part of, 't all right enough—you know those cars that are in use?

A. I seen one car at the Rarus for two years, I believe, on top; never seen one in the mines.

Q. There were some new cars that we saw over there, up to the Original, setting outside—some new cars?—A. I understand that they have been working them lately.

Q. Well, there is no doubt but what the installation and use of those would tend largely to do away with the odors arising from the offal of the men?—A. I will say, if their use is steady, it certainly would have a great tendency to do away with that smell from the offal of any man.

Representative O. N. BYRNES. You say you worked in the mines 14 years?

A. Yes, sir.

Q. You worked most of the time in the mines in Butte?—A. Not altogether in Butte; I worked in Corbin.

Q. But you are acquainted with conditions in Butte for that length of time?—A. With the exception of the last six or seven months.

Q. What do you say about the conditions now as compared with six or eight years ago, have the conditions improved in Butte?—A. In some of the mines they have, and some mines they have not.

Q. That really does not mean anything to us. What we want to know whether there is any effort made by the companies in Butte to better those conditions.—A. The company may have made an effort in some of the mines, but all I know, because I have not been in them for some time.

Q. But as a member of the union wouldn't you know from discussions with other miners as to what is the general conversation among the miners in Butte?—A. I don't go on hearsay very much; you hear all kinds of tales.

Q. We have to go on hearsay testimony here; that is the reason we can not get any direct answer. What we would like to know about is whether or not there has been an effort made by the company to improve the conditions in Butte, and we can not find out in any way except what you people tell us.—. If you specify any particular mine that I have any knowledge of I can answer you, yes or no.

Q. Yes; but we are called to investigate all the mines in Butte.—A. If we were sent out to investigate the mines in Butte, I would investigate them then you would know from your personal knowledge whether or not they are bad or good shape.

Q. You were there with the committee the other day?—A. Yes, sir.

Q. You were there five or six years ago?—A. Yes, sir.

Q. Have they improved any?—A. No, sir.

Q. What place was that?—A. That was the sixteen hundred on the Speculator.

Q. Is that the same as it was there six years ago? Are the conditions just as bad now as it was six or seven years ago?—A. It is only three years ago.

Q. It has not improved any in three years?—A. No, sir.

Q. How about the other mines?—A. The other mines, I couldn't say; worked in the Buffalo after that; the Buffalo is all right.

Q. Is there anybody that could give us that information?—A. I should think it would be an impossibility for anyone to so say, for you would have to work in all the mines. Well, I am not able to give you that information only in this particular instance. I know that that particular condition has not been changed from the last time I was there to the last time I saw it.

Q. That is, within a period of three years?—A. Yes, sir.

Q. Can you suggest any way that this committee can get that information? We were there through those mines lately; we don't know what was there three or four years ago.—A. I don't know.

Q. If we had to find out from our own knowledge, we would have to state there the rest of the year.—A. I don't know any way.

Q. Senator C. P. TOOLEY. Is there a disposition on the part of the mine owners to improve the conditions there, do you think?

A. I believe there is to a certain extent. At least in one particular mine that I know of—that is, in the Buffalo—I know they are trying to carry the air through there all the time.

Q. As a matter of fact it is to their interest to do that, and they would get better results, would they not?—A. I should think they would.

Q. They are good business people that own those properties there; they are conceded to be, are they not?—A. I don't know; I never had any business dealings with them.

Q. If they could get the same returns, or better, why, they would certainly improve the conditions, would they not?—A. Well, I should think that it would be to their interest to keep the air as cool as possible, because they would get more labor for the energy.

Senator J. C. McCARTHY. Have you read the law governing the operation of the precious metals mine of the State of Montana?

A. No, sir; I have not.

Q. You have never read that law?—A. No, sir.

Q. You never read the mine-inspection law?—A. I read the inspector's report, but not the law.

Q. The law is embodied in the report?—A. Yes, sir.

Q. You never read the law?—A. No, sir.

Q. But you have no suggestions at all as to what further power should be given the mine inspector?—A. Yes; I believe the mine inspector should have more power; according to his own statement, or in an interview that I had or talk that I had with him, he said he couldn't enforce any law whatever because he has got no law to enforce.

Representative NELSON STORV, Jr. No law to enforce, or no authority to enforce the law?

A. No authority to enforce the law; in fact, he told me he had no law to enforce, if I am not mistaken.

Representative J. C. McCARTHY. Has the Butte Miners' Union taken up the matter of that law—and granting more power to the mine inspector?

A. I suppose the individual members may have; I don't know as the union itself has taken it up as a matter. I believe they did two years ago; I believe there is an agitation on toward electing a State mine inspector and giving him more power.

Q. That is, as to the election of a mine inspector?—A. Yes; to give him more power.

Q. Have you anything to suggest at this time on that matter?—A. I believe we could go to work and extend the law of the State, whatever is required in the matter, having some form of commission appointed, or something; see what laws are required for the safest ventilation and sanitation of the miners.

Q. But the Butte Miners' Union has no commission, or no one designated especially to look into that matter?—A. No, sir; not that I know of.

Q. You would know it if it had?—A. Probably not.

Q. You are vice president of the union, are you not?—A. I am not supposed to know everything.

Q. No one expects you to, but you ought to know something about the body of which you are vice president.—A. I do; in certain things in the organization lines; I am the walking delegate; I generally go around the mines and take a look at the cards, and see how they stand; that is my business.

Q. The principal work of the Butte Miners' Union seems to me to be that every man that works in Butte is a member of the miners' union?—A. That is one thing.

Q. That is one of their functions?—A. Yes, sir.

Q. Have they any other functions?—A. They may have.

Q. Do you understand anything as to the manner in which coal-mine operatives handle their business, I mean their coal miners?—A. I don't know about the operators, because I never owned a coal mine.

Q. I mean with men working in a coal mine?—A. I have talked with quite a few of them; yes, sir. I read their report here, and read their laws in the State of Montana, and I believe they have good laws. I would like to see that such laws existed in the metalliferous mines.

Senator J. C. McCARTHY. I would like to recommend here and now to the Butte Miners' Union that they employ a coal miner of ordinary intelligence, and that they open up a kindergarten in behalf of the Butte Miners' Union.

A. Allow me to thank you on behalf of the union.

Representative P. J. DUFFY. To correct one of your statements here, if there was any commission authorized by the Butte Miners' Union, you certainly would know it, would you not?

A. I say that I would not necessarily know it.

Mr. D. D. SULLIVAN. Mr. Chairman, would you allow me to answer that question?

Senator I. A. LEIGHTON. Yes, sir.

Mr. D. D. SULLIVAN. There is not such a body there.

Representative P. J. DUFFY. During your employment in the Buffalo mine, which is a cool mine, were not the shovelers able to turn out more rock, and I wish you would tell us to the best of your ability about how much more rock they would handle than they would in a hot box, in the Speculator, where you worked?

A. A man—that is, it depends on the floor he has got, and the rock, you understand that has a whole lot to do with it. A man can work in the Buffalo, I should judge, anyhow, 50 per cent more comfortably; that is very conservative, too.

Q. Can do 50 per cent more work in the Buffalo than he will in the hot box in the Speculator?—A. Yes, sir.

Q. And with good air, such ventilation as the Buffalo has got, they will do—one man will do almost twice as much work as a man will do in a hot box, in some of the other hot boxes in the city of Butte?—A. I know because when I was in the Speculator you couldn't do very much.

Representative P. J. DUFFY. Why I asked this question is this: I made that statement when I was on the stand here, with good ventilation and good air, that the output would be to the best of my judgment about 50 per cent more.

Representative NELSON STORY, Jr. You never worked in the Original?

A. No, sir; never worked in the Original at all.

Representative P. J. DUFFY. If you are working in a drift, with compressed air blowing on you to keep the gases and dust out, could you do as much as you could in a well-ventilated drift—in a well-ventilated stope or drift?

A. Why, I don't suppose I could; no, sir.

Representative NELSON STORV, Jr. Do you know anything about the quality of compressed air?

A. The quality?

Q. Yes.—A. Well, I don't know what the quality of compressed air is. Of course, I suppose, it is forced air, whatever that is. I know if you take it and apply it on you, blow it on you this way [illustrating], while you are sweating, it chills you so quick, you know, you get out of it in a jiffy.

Q. It is worse than if you didn't have it, is it?—A. That is the way it acted on me; I don't know how it acted on anybody else. I know what compressed air is all right. We had an experience of that in the Rarus; when we came in the Mountain View, where that hole goes through, they had that hole closed up and we had to use that compressed air; there is where you could find the difference between the natural air and the compressed air.

Q. I have heard the statement made before this commission that the compressed air was vitiated; that the oxygen was more or less gone?—A. I couldn't tell you the quantity of compressed air. I suppose there is a certain amount of oxygen because it has got to be taken from the surface; there might be a certain percentage of it.

Representative P. J. DUFFY. Is compressed air wet or dry?

A. Well, both; wet at times and dry at times; there is water in its make up. Q. Do they not use oil to compress the air?—A. Yes, sir; you have to have oil for the machinery.

Q. Does not this oil and other ingredients which they use, don't that get into the air?—A. I don't know how the compressor generates the air; I don't know the mechanics of that part of it; I know that it makes air, that is all; how she makes it, I don't know.

Q. You know that the oil goes into the air?—A. No; I don't know, because I never seen it.

Q. You have seen times when compressed air—you would turn it on, you would open your valve where she would be, it would be very moist—haven't you seen that?—A. I seen it that way; yes, sir.

Senator W. E. CHRISTOPHER. How long did you say you worked in the Buffalo?

A. I quit there last July—pretty near two years and eight months, I believe, previous to that.

Q. And all the time you worked there conditions improved?—A. They were good all the time.

Q. What did the management of that mine; what operation did they put in there to stop the conditions of the mine, such as they were?—A. Wherever they had a current of air coming—that is, from either the Pauline or Stella shafts—they would go to work and course that air by doors to the one manway, or the balance of the manway would be trapped—trapdoor put on them air-tight, the air would be down one end of the stope and go out through the other end of the stope. There was only one outlet to that air; it would come down to the east end and flow out on the west; go through continuous passage there; go down to the next level; it would go in those stopes in the same way; they would make it a rule to go to the air course as quick as they could to tap it in either one of the shafts; they had ventilating shafts for that purpose.

Representative NELSON STORV, Jr. You have never seen any appliances whereby air could be put in, like in the dead end of that stope of the Pennsylvania that we were in?

A. Lots of air could be put in there if a fellow had any practical knowledge of those things. How to keep that air in there, you can figure that up on a piece of paper; you have got to work and do it right. I seen air conveyed in all dead ends in the East Colusa and Pennsylvania by just a little space above the cap in the main drift, just about 18 inches high, and the flooring and the sheeting above the cap was fixed, you know, so that it would be air-tight, so that it could not leave, so that it would go out through the top and out the bottom, or either, vice versa.

Representative P. J. DUFFY. Speaking of the Buffalo, how many shafts connect with its workings?

A. Well, there is the Stella, connects with it on one level, and, I believe, the Pauline on all levels. The Buffalo, you see, that is the operating shaft, one

level. The Pauline is further to the west—that is, pretty near connected on all levels—and the Stella is connected with one level alone with the Buffalo.

Q. All drifts are drove from the Buffalo shaft?—A. Yes, sir.

Q. So almost exclusively to make air connections?—A. The first thing.

Q. Take it on the 700 or 800, I am not positive which, you have got a third shaft?—A. Yes, sir.

Q. Is it a small lead?—A. Yes, sir; that is a winze. That is an intermediate winze; that don't go to the surface.

Q. That is one of the exceptions of the mines in Butte, is it not?—A. I should say it is. The East Colusa is good; the Buffalo is good, too.

(Witness excused.)

Whereupon JOHN DRISCOLL, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. John Driscoll.

Q. Where do you reside?—A. Butte, Mont.

Q. How long have you resided there?—A. Ten years.

Q. Your age?—A. Thirty.

Q. What is your occupation?—A. Mining.

Q. Do you hold any position in the miners' union?—A. No, sir.

Representative STORV NELSON, Jr. Are you mining at the present time, Mr. Driscoll?

A. I am not mining; I am timbering at present.

Q. You are in the mine?—A. Yes, sir.

Q. What mine are you in?—A. Gagnon.

Q. What part of it?—A. The 2,200, 2,300—both levels.

Q. How long have you been there?—A. Four months.

Q. In that length of time have you noticed any effort on the part of the management to improve the conditions of that particular mine?—A. There has been some; I will answer yes.

Q. What are the conditions; what are the general conditions from your standpoint as a miner?—A. Bad, in most place.

Q. In what particular feature?—A. Heat, vermin, and filth.

Q. Is the air foul or just stagnant?—A. I suppose foul and stagnant in places.

Q. Is that mine wet or dry?—A. It is dry where I am working; it is dry in places and wet in places.

Q. Dusty?—A. Yes; more or less.

Q. Are you affected in any degree by the smell of the offal of your fellow men?—A. I certainly am; while I am at work down there it hurts me.

Q. How many men are working with you on your shift?—A. I couldn't say, exactly; but I should judge there are 150 men working on the shift.

Q. Is there any provision made for sanitation; are there any of these sanitary cars of which you have spoken of?—A. I have not seen any. I understand there is on the Original side. If we had these cars you would have to climb up from where I am at—you would have to climb up six floors from the 2,200—not six floors; where I am it is seven floors to the 2,200. You would have to go down five or six floors to the level of the Original mine where they have got a car.

Q. The fact is, that the inaccessibility of this car makes it almost useless?—A. I consider it a very good thing.

Q. Well, my question was this: That if the car is so far away from the point at which you are working that it is quite a job to go from your work to the car?—A. Well, it is not such a job after all. Of course, if a man is answering a call of nature he may not have time to reach it; but under normal conditions he would have plenty of time; no hardship on him.

Q. How is that particular point of the mine ventilated?—A. Well, it is ventilated; there is the main shaft and there is the air shaft. The main shaft is downcast and the air shaft is an upcast. Until four or five days ago, as near as I can recollect, from what I heard, speaking about the air shaft, it is down to the 15 level of the Gagnon; but they have been driving raises from the 2,200 to the 30—I am wrong; I think it is the 1,800 level—and they drove raises from the 22 to the 20, and there was another party raising from the 20 to the 18. I understand that they have got them connected down to the 2,200 from the surface.

Q. Were you timbering in the stopes?—A. Yes, sir; raising the chute occasionally. I am timbering in the stope.

Q. When you speak of the raising, you speak about being connected up with two air shafts. The air dropped down through the downcast and up through the stope?—A. It comes down the shaft and goes up through the air raise. The air raise is an upcast shaft; it draws up.

Q. It comes up through the stope where you are working?—A. Yes, sir.

Q. If that was in shape it ought to give you a fair ventilation?—A. It does; it has improved conditions in that particular, I suppose; but there are other portions of that mine that are awful hot.

Q. Who is commonly supposed to own that property?—A. Why, the Amalgamated Copper Co.

Q. Has your observation in the mine of late been such that you could state with any degree of accuracy whether or not their idea is to improve this?—A. I don't understand your statement.

Q. Are they putting forth any effort, from your observations, to better the conditions, as a general thing, in the mines in Butte?—A. Well, in this particular case there has; it shows that they have plainly, because they run the air raise from the 2,200 up to the 18. It shows they are doing something toward ventilation. They are also making a new shaft which is down, I think, to the 1,200, and their intention is to drive it down to the bottom of the 2,300. I am not in a position to state, but I suppose that is their intention.

Senator J. C. McCARTHY. Is that an air shaft pure and simple?

A. No; the way I understand it, it is to be a hoisting shaft; it is a large shaft.

Q. When that shaft is in operation they can use one of the other shafts as an air shaft?—A. Yes; provided it goes to the bottom; it certainly will improve the conditions of that mine to a great extent.

Q. Is it the opinion of the miners there that it is going to the bottom?—A. Well, I have never consulted many of the miners to that effect, but what men I heard speak of it—that is, the suspicion—that it is to go to the 2,300. I also understand that it is the main shaft when they get it down to the depth. I am not in a position to state what the management is going to do.

Q. Did they make that connection that was spoken of when we were in Butte between the Gagnon and the Original mines?—A. They have connected with the Gagnon and several levels.

Q. They spoke about a new shaft from the Original, and they said when that shaft was completed, which they expected to do in a very few days, that it would improve conditions very much in both of those mines. Do you know if that connection has been made?—A. That is the connection I have spoken of. This air raise they have connected from the 18 to the 22—that is an air raise; it is not exactly a shaft, but what they term an air raise; it is something similar to a shaft.

Q. Could you offer us any better scheme—any general scheme—to better the conditions in the particular mine in which you are working?—A. Well, no; I would suggest—I would state that if this shaft, the main shaft that they are sinking; if it is to be a main shaft and go to the bottom it will improve this mine; I think that that is what they are trying to do; it will greatly improve that mine; such as blasting at noon. I agree perfectly with Mr. Sullivan that blasting at noon is injurious to the health of the miners. When they blast in the drift in the first or second or third or fourth floors, the smoke naturally goes up higher to where the men are working, and if it is hot and the ventilation is poor it hangs there for two or three hours; but the system they have there in mining is about as good as any I have seen.

In many cases they rig up their machines on the night shift and they will drill all the shaft and leave it there until the next day shift comes along and finishes up the rounds, and then blast; but there are times when the boss will order you to blast at any time. I have been ordered to blast there at any time, whether that was through the order of the boss to the shift boss I am unable to state.

Q. Do you think it would be possible to maintain a general average in Butte by drilling on one shift and blasting?—A. I think it would help to a great extent.

Q. Do you think it would be possible to maintain a general average in Butte would.

Q. Well, what, in your judgment, is the reason that the company does not adopt that system?—A. Well, from my point of view, there has been a constant

cry for rock ever since I have been working in Butte—one shift boss trying to beat the other—that is about the only reason I can think of.

Q. Then, your opinion is that the men have been sacrificed to a certain extent in order to maintain the reputation of the shift boss? Is that your idea?—A. I think it has been prejudiced to that extent.

Q. And not helping the company in any way?—A. I don't consider it such; of course, I have no knowledge of how the management should be run, not ever having run a mine myself?

Representative NELSON STROY, Jr. Are the shift bosses members of the union?—A. Yes; they have a right if they see fit to continue their membership in the union. They are entitled to a sick benefit, funeral benefit.

Q. Well, do they as a rule continue their membership?—A. Most of them do, but they have no voice in the affairs of the organization.

Representative P. J. DUFFY. The union has no jurisdiction over a shift boss, have they?

A. No; not while he is employed in that capacity; the union has nothing whatever to do with it. If he continues in the union, it is as a beneficiary member.

Senator J. C. McCARTHY. Do they object to continuing him as such, as a rule?

A. As a beneficiary member?

Q. Yes.—A. No, sir; it is optional with the bosses themselves.

Representative NELSON STROY, Jr. Do you know whether conditions are better in the big mines operated by the Amalgamated or in the small ones operated by some one else, Mr. Driscoll, or are you in a position to state?

A. I am not in position. I have never worked in very many. What small mines I have worked in, which are very few in this State, conditions are far better in the small mines, because there is a reason for that—the workings are not as large, much better to ventilate. I should think that would be so, naturally; where the workings are not so large, it is easier to ventilate.

Q. Did you mine before you came to Montana, Mr. Driscoll?—A. Yes, sir; a short time.

Q. Where was that?—A. Michigan.

Q. How were the conditions there as compared with Butte?—A. Vast difference.

Q. As to the method of mining, the nature of the ore, or the facilities of the company?—A. Well, I think they are a little better in all respects; their methods of mining are quite different from here.

Q. Did you ever pay any particular attention to the so-called miner's consumption, Mr. Driscoll?—A. Well, I paid attention to it to this extent, that I have seen a great portion of our membership in the last four or five years dying with miner's consumption.

Q. The men, the old miners in Butte, are affected by it largely, to a large degree, are they?—A. Yes; I think about one-third of the old-timers are affected with miner's consumption that have worked for some time in the mines. It is certainly a sad sight.

Senator J. E. LEARY. I would like to ask you if it were necessary to use as much powder in the mines in Michigan as it is in Butte?

A. If it is as necessary?

Q. Yes; if they use as much?—A. Well, yes; the rock is a good deal harder than it is in the Butte district.

Representative NELSON STROY, Jr. Have you any suggestions whereby you could do away with this blasting in the middle of the day or in the middle of a shift, whatever it is?

A. As I stated before, if they would blast going off shift, that it would be more beneficial to the health of the miners.

Q. Yes; I understand that; but have you any idea whereby such an arrangement could be perfected? Don't you suppose that if it was put up to the company in the proper light that they would see it that way, or do you suppose that the shift do it without consulting their superiors?—A. I couldn't state.

Senator J. C. McCARTHY. What Mr. Story wishes to get at is this: One shift drills the entire day through and puts in their full day's work and blast as they are leaving shift, and that would allow the smoke to escape in the meantime before the other shift came on.—A. Why, I think so in the majority of stopes.

(Whereupon the hearing was adjourned until Tuesday, January 31, 1911, at 7.30 p. m.)

JANUARY 31, 1911.

Pursuant to the call of the chairman of the joint committee the committee met at the courthouse a Helena, Mont., on January 31, 1911, at 7.30 o'clock, the following members being present:

Senators I. A. Leighton (chairman), W. E. Christopher, J. C. McCarthy, C. P. Tooley, and J. E. Leary.

The following representatives were also present: Representatives P. J. Duffy, J. C. Duffy, and Nelson Story, Jr.

The meeting having been called to order.

Dr. P. H. McCARTHY was called and sworn as a witness and testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. P. H. McCarthy.

Q. And you are a physician and surgeon, are you?—A. A physician and surgeon.

Q. How long have you resided in Butte?—A. About 18 or 20 years.

Q. During this time you have been practicing your profession all the time— all this time?—A. Practicing my profession in Butte about 11 years.

Q. Previous to that time what were you doing—working in the mines?—A. Working in the mines; that is, part of the time.

Q. Yes, sir; and, Doctor, during your professional life there have you come in contact with a great many of so-called miner's consumption?—A. I have.

Q. Will you state to the committee—first, let me ask did you ever hold an autopsy on one of these subjects?—A. Yes, sir; a great many.

Q. Doctor, will you go on and state to the committee the conditions that you found the body in—the lungs, etc.—according to your research in those matters?—A. When we find consumption of the lungs, as a rule, of course, the body was badly emaciated and run down, as you will find in any case. We would find the tubercular nodules in the lungs; and the cases in Butte are just the same as in any other case of consumption. We find the tubercular bacillus—that is, the germ that causes it—find the giant cells and tubercle. We would find the lungs hardened and indurated; in the miner's lung we would find also what we call, or what is known in medical parlance, anthracosis; that is, a blackened deposit in the lung tissue itself. That is about the only appreciable difference that you would find in the consumption that we have among the miners and any other kind of consumption. Anybody that has lived in Butte, or in any smoky city, where they are absorbing the smoke and dust, we find the lungs in almost the same condition; but amongst the miners you find it worse, because you find deposits of fine granite-like substance or sulphur-like substance, whatever it may be.

Q. Doctor, may I ask you a question right there? In these fine deposits that you found in the lung tissue—that is where you found it?—A. Yes, sir, Senator.

Q. Did you ever place that under a microscope to ascertain just what it was?—A. Yes; I have, but I never made—you would find just small, small particles of dust, but not making any chemical examination of it, why, I wouldn't be able to state, of course, what it is.

Q. Was there very much of that deposit, that fine dust deposit, in the lung tissue. Was there a large quantity of it?—A. No, no; not a large quantity, just sufficient to blacken the tissue of the lungs.

Q. May I ask again; you stated that a black deposit—that is what you meant by a black deposit?—A. Yes.

Q. Why do you call it a black deposit? Because it is darkened?—A. Because it is dark in color, and, of course, it is just typical, what we call the anthracosis, just the same as they get in the anthracite regions of Pennsylvania, the same kind of deposits, or the same kind of deposits that we would get from anybody in a smoky city.

Q. Now you may proceed, Doctor.—A. Well, that is about all I could tell. Representative NELSON STORY, Jr. You say, Doctor, never having made a chemical analysis of this black deposit you are not prepared to state exactly what it consists of?

A. No; it is pretty hard. Of course, it would be constituted of a great many different things, for instance, it may be from smoke, some of it would be from coal smoke, and some may be from the dust in the drifts, some of it may be from the smelter smoke that we have had there for years, so you would find different elements in this deposit undoubtedly.

Senator I. A. LEIGHTON. What do you mean, Doctor, by that—you find different deposits?

A. Undoubtedly.

Q. What were those different deposits besides the real rock itself? Real rock dust?—A. Well, I wouldn't be prepared to say, of course, only that we know that smoke, any kind, say the sulphur smoke. Now, if we analyze that we find—we may find some arsenic, we may find some sulphur, we may find just calcium salts, we may find any of those in there.

Q. In your opinion, Doctor, as a professional man, Doctor, do you think that these deposits that have been drawn into the lungs that you describe would produce the condition that you find the man in, a tubercular condition in other words?—A. No, no.

Q. Then, Doctor, do you think that the man had tuberculosis, had consumption, before he started to work in the mines?—A. No, not necessarily; no. He may have, but not necessarily; no.

Q. Then, if he contracted the disease while working in the mine, how in your opinion did he get this, how did he contract it?—A. I think he contracted consumption by coming in direct; that is, he directly contracted consumption or phthisis, whichever name we wish to call it, by coming in direct contact with the tubercular bacillus, that is, the germ that causes consumption, that is the real cause. Now, there is no question about it that a predisposing cause to that would be, this dust could irritate the lungs, a man could be in bad air, powder smoke, or different conditions of that kind, it would lower his resisting powers, then when he came in direct contact with this tubercular bacillus, given off from perhaps somebody that is working in the stope or drift or a raise with him, he is more liable to contract consumption than he would if he was out in the sunlight, and he has a better chance because he is in a close, boxed-up place.

Q. You regard, Doctor, consumption a germ disease, do you?—A. Undoubtedly.

Q. You don't consider it to be contagious, or do you?—A. Well, of course, we would have—

Q. Information is what we want, Doctor?—A. Of course, I am not in a position to say whether it is contagious absolutely or not, but I do know it is infectious.

Q. Right here, Doctor, isn't it so considered by the medical profession today that consumption is not a contagious disease but an infectious disease?—A. Correct; I think according to the best authorities we have.

Q. Yes; that is my understanding. Then, Doctor, you could say that the large number of so-called miner's consumption, consumptive cases, that we understand are now in the city of Butte among the miners there, one-third has been claimed, that one-third of the miners to-day are affected with this disease, we understand you to claim that they do not contract that disease through the conditions of the mine?—A. Not entirely; no.

Q. Well, do they in any sense of the word?—A. Well, just as I say, it may predispose; if we can take the cause and trace it back entirely, we would have to say that mining is a position that would predispose to those diseases like consumption, it would irritate the lungs sufficiently to give this tubercular bacillus an opportunity to act, and I firmly believe that a good healthy person can throw off those tubercular bacilli for a great many times; their resisting powers are greater than a man working in a mine where the air is bad and such things that you can describe that you will find in the mines, but if they never came in contact with this tubercular bacillus they would never have consumption; but it is a predisposing cause, mining is.

Q. Doctor, the healthy lung, then, will take in that that you found—the deposit in the lung, the healthy lung?—A. Yes, sir.

Q. If their conditions, then, were good; that is, if they were not mingled with consumptives after that, what would be the result of these deposits in the lungs, in your opinion?—A. It may cause a sort of a form of asthma, in a way, your breath would become shorter, the air cells of the lungs may be impaired some, but it would not cause death.

Q. Well, do you mean by that, Doctor, that the lungs, in time, would throw that off?—A. The deposits?

Q. Yes.—A. No; not entirely; you would always have this anthracosis condition, or, in other words, as we understand anthracosis, it is a disease, but it is not a fatal disease, and you can live on for years and have your lungs. To explain it to a committee not understanding what it means, of course, an

anthracosis condition will just leave the lungs just kind of hardened from this deposit, and when you breathe you don't take in the air as readily and let out the CO₂, the carbon dioxide, the poisonous material from the body, as readily as a good healthy lung, but it won't cause consumption.

Q. What would be the results, Doctor, in your opinion, of a large amount where large amounts of these deposits—would it, then, in your opinion, make any difference as to developing into a tubercular condition?—A. No, sir; you never could get tuberculosis without the tubercular bacillus.

Q. What is the opinion of the medical profession; that it is a germ disease?—A. That is the opinion of the medical profession all over the world, I think. I know the best authorities—

Senator I. A. LEIGHTON. Any member of the committee would like to ask the Doctor some questions; he is practically here as an expert on that.

Representative NELSON STORR, JR. Doctor, what is your opinion of the general prevalence, or the general presence of these tubercular germs in the average man; that is, take an analysis of an average community that is alive with them what percentage of men would you find that had these tubercular germs in their saliva?

A. Different localities; it would depend.

Q. Well, take Montana, take here for instance—take in this room?—A. Well, we may go over this entire room and not find it, but the chances are that we would find it in some; but nature will throw it off a great many times. Sunlight will kill the tubercular germs quicker than anything else that we know of at the present time. Different localities, of course, you find it, like New York or the State of Michigan or different States that have got sanitariums to take care of the tubercular patients, of course, you don't find the tubercular bacillus around as great as you do in places where they are let run at large entirely and no restrictions whatever upon it. Of course in New York State and in different States they take care of the patients and almost have a quarantine on them, and they carry their sputum box to spit in, etc., and that is burnt up; some of them are arranged so that there is an antiseptic in the box, that when they spit the germ is killed off, and then they don't fly around the country, and you don't find as many germs. Consumption is absolutely infectious, and it is a mighty easy matter to get irritation, just the slightest irritation, or an abrasion on the hand, any place, you may take tuberculosis or consumption; it is the same thing you find it a great many time in the bones of the leg, find it a great many times in the skin, or cases of lupus, that is consumption, but it is local, it is superficial, and we can kill it off. Any place that we can get at the germ we can kill it, or any place we can get at the disease we can kill it, but in the lung we can't get at it.

Q. Then, Doctor, this disease called miner's consumption, there is really no such thing as miner's consumption?—A. No; there is really no such thing. The only reason, I suppose, we would call it miner's consumption is because we find it oftener among the miners; the miners are exposed to infection oftener than any other class of people.

Q. Are tubercular germs ever passed through the bowels like typhoid-fever germs?—A. Where you have a tubercular condition of the intestines you pass it through the body, but not like typhoid.

Q. Does that prevail to any extent among the miners?—A. No, sir; it don't; no; you very seldom find a germ in the stool unless you have a tubercular condition of the intestines, stomach, or esophagus, or stomach; there are a good many times it could be passed through, of course, but as a rule you spit them out. Of course, you will find it in the urine; you take a tubercular condition of the kidney, or urethra, or the bladder; you will find it in the urine; wherever the conditions, that is where you find the germ.

Q. In your estimation, would it be easier to contract consumption in a dry place than in a damp one?—A. Yes, sir; it would.

Senator I. A. LEIGHTON. Doctor, it has been said that one-third of the miners in Butte are consumptives. How do you account for that thing?

A. They are becoming—unquestionably, they are becoming infected from each other. You take one man will be good and healthy, and he will get down in a drift with another man that has consumption; this drift is a small narrow place, the dust, of course, arising from the drill and from the air; they spit out there on the ground, the sputum dries up, and the air and dust bring it into the lungs; the dust undoubtedly will irritate the lungs sufficiently to give the tubercular germ a chance to act, and they become infected from each other.

Representative NELSON STORV, Jr. Now, if you were authorized to stamp out this miner's consumption in Butte, what would be one of the first steps that you would advocate, Doctor?

A. The very first step—O, well, if they put me on to stamp it out, the only way I could go at it would be this way: I would get just as good condition of the mines as I possibly could to start with; the next thing I would do would be to allow no man with consumption to work in the mines, especially with a healthy bunch of men; I would have to quarantine sufficiently to keep them separated.

Representative J. C. DUFFY. You hold, then, Doctor, that the dust that is in the mine is not responsible for the miner's disease?

A. Absolutely not responsible for the disease. I say that it predisposes; in other words, Mr. Duffy, it takes the germ of consumption to cause consumption, and you can not have consumption any other way; but I say this, that if dust will irritate the bronchial tubes, etc., and leave a raw surface there it give this germ a better opportunity; but you never have consumption unless you come in direct contact with tubercular bacillus or the germ that causes consumption.

Q. If you send two healthy men down to work in a virgin mine without coming in contact with any of those people who are affected with this disease, there is no danger of them contracting that disease?—A. No; not in that mine—

Q. No matter what the ventilation may be or dust?—A. No matter what the ventilation or dust may be, they would never get consumption, but they would get this other condition—what I call anthracosis; but it takes these tubercular bacillus to cause consumption, and without the tubercular bacillus you haven't got consumption; you may have another disease; you may develop an asthma; the deposits of dust in the lungs may be sufficient to prevent you taking the oxygen in the air and giving out the CO₂, the carbon dioxide, or the waste material from the blood; the circulation of the lung would be plugged up and the arteries hardened that they couldn't get those off; still that wouldn't be consumption.

Q. Doctor, it is possible that this may be asthma, and not consumption, as we term it?—A. Why, we know that it is not; we know the tubercular bacillus is present in a great many cases, as far as we have examined, and we have examined a great many.

Q. How do you distinguish the difference between miner's consumption and mill consumption, Doctor; is there any difference?—A. No; I don't really believe there is any difference between any kind of consumption. Now, I am strictly speaking of consumption.

Q. I have reference to what we term as miner's, both mine and mill consumption. Perhaps we may not be correct in using that phrase?—A. Yes; I think that would be quite correct, Mr. Duffy; I think that if you work in a mill or you work in a mine it is a hazardous job undoubtedly, and you are not breathing in as good and as fresh air as somebody on top; your lungs are weakened to a certain extent, then when you come in contact with the tubercular bacillus, or the germ that causes consumption, you can get it very readily. But there is only one consumption that is absolutely due—that is known as the disease of consumption—that is due to the tubercular bacillus; and if my lungs are irritated and the surface is a little raw in there, and I am not feeling good, my resisting powers have weakened and I come in direct contact with that tubercular bacillus I am going to develop tuberculosis or consumption. But the dust will predispose to consumption that way; bad ventilation, bad sleeping rooms, anything that will lower the resisting power of the body will predispose to consumption.

Q. You know, Doctor, that the air is ever so much better in the mill than it is underground a couple of thousand feet, and can you account for out of the thousand or twelve hundred men that die in a period of, say, between six and seven years in Granite County, how it came about. It is certainly a fact that the air was good—if this wasn't caused by dust?—A. Of course we know—you saw whole families wiped out in five years that never saw a mine or mill with consumption, haven't you?

Q. Not as general as this.—A. Can you recall of any families where you have heard that consumption was hereditary and they all died, and it was almost hopeless if your father and mother had consumption; you would expect the whole family to go soon—you recall those cases, don't you?

Q. I have heard of those cases.—A. That is the same thing—one infected the other. I think now the only way I could explain Granite County was the

dust undoubtedly irritates the lungs; somebody came in amongst those men that had consumption; they caught that, one from the other. We know in the State of Michigan, or in the State of New York that the question—well, in every State in the Union—the question of consumption is becoming quite a question, and the different States have got institutions to separate them as much as they can, because one catches it from the other. Before the State of Michigan put on restrictions on consumption their death rate was larger than any State in the Union; 12 years ago they started to quarantine them, more or less, build institutions for them, and they have cut their death rate down at least 85 per cent. Our death rate in the State of Montana from consumption is running upward, while theirs is running down; New York is the same; they got a quarantine on it, more or less, and they are lowering their death rate very considerably, and, in fact, in a short time they expect to wipe it out, and I think they can, just the same as they have the yellow fever; any of those places, by putting restrictions on. Typhoid—you saw hundreds and hundreds die of typhoid—well, they became infected from the typhoid germ; when they put on the proper sanitations we had no more typhoid. I think if the proper sanitations are put on consumption we would have no more of it; it is absolutely a disease that can be handled.

Representative NELSON STORX, Jr. Do you know, Doctor, what the ratio of deaths in Montana from consumption is, compared with the deaths from other causes?

A. No; I do not. I haven't looked it up, but it is something appalling.

Q. Isn't it a fact that there are more people die from consumption than from all the rest of the diseases in the State of Montana?—A. I wouldn't say that for sure, but I think it is close to it; I haven't looked it up; I couldn't answer definitely.

Senator I. A. LEIGHTON. Any other questions to ask by the committee?

Representative P. J. DUFFY. Do you think the sanitary conditions in the mines in Butte has got anything to do with the breaking down of the men?

A. Yes; that is, the air, undoubtedly.

Q. I mean from nature's call of men, where they are right around among themselves, do you think that has got anything to do with the breaking down of their health?—A. It is not a good thing; I think it has, more or less. Of course, I think drinking cups, different things like that have a great deal to do with it, the breaking down of the men.

Q. What I mean is strictly—is this—A. All right; be plain.

Q. Shitting in the stopes right under you, 7 feet under you, and this smell going around, has that got anything to do with the breaking down of men?

Representative NELSON STORX, Jr. Ammonia irritates the lungs, does it not?

A. Yes.

Q. That undoubtedly arises from a man's stool?—A. Yes; NH₃ is given off; any time it starts to decompose NH₃ is given off; that is not good; it is not healthy.

Senator I. A. LEIGHTON. Any other questions any other member of the committee would like to ask?

Representative J. C. DUFFY. Are you somewhat familiar with the mines in Michigan?

A. Well, a year ago or a year and a half ago, I think, I went down in one of them; that is the only time I ever went in the mines in Michigan.

Q. What do you find the conditions there as compared with the mines in Butte, where large bodies of men are working? Is the disease as prevalent as it is in Butte?—A. I hardly think so; I don't think so; I don't think it is; I think at present Butte is worse than any place I know of.

Q. You don't know how to account for that, Doctor?—A. No; only in the evidence I have given in the past. Perhaps the Michigan mines are wetter; there is not as much dust given off, I think. I have never been through any of the Michigan mines; I have just been down.

Q. Then the dust would have something to do with it?—A. Dust will irritate the lungs; that is my absolute contention, and anything that will irritate the lungs will predispose to that disease.

Representative P. J. DUFFY. Smoke will.

A. Yes.

Q. Powder smoke will irritate.—A. Powder smoke will irritate low resistance. But if the germ isn't present we would never have consumption.

Representative J. C. DUFFY. When asthma sets in, as you say, shortness of breath, the lungs at that time are weaker, are they not?

A. Yes.

Q. That weakens them?—A. Yes.

Q. Then it is very easy for them to contract the disease?—A. Yes, easy; the circulation in the lungs is interfered with; the tissue is not as flexible as it would be if it didn't have those deposits. Then, of course, it is harder for the oxygen to get in there; your circulation becomes stagnant, perhaps causes—well congestion in any particular spot; then there is the irritation in the air cell proper, and the moment that the tubercular bacillus enters there it gives it a good field to act upon.

Representative NELSON STORV, Jr. Impoverishment of the blood necessarily reduces the vitality of man.

A. Reduces the vitality of man. That supply of oxygen is not as great as though you were in the open air; any kind of mining will more or less predispose, it don't matter where; it lowers your vitality; your air is impossible to get in as good, and the better the air the better your condition will be. No question about that.

(Witness excused.)

Whereupon JAMES MCGUIRE, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. James McGuire.

Q. Where do you reside?—A. Butte, Mont.

Q. How long have you resided there?—A. Two years ago last May I came in there this last time.

Q. What is your age?—A. Thirty-seven, 17th of last February.

Q. What is your occupation?—A. Miner at present.

Q. How long have you worked at that business?—A. At mining?

Q. Yes.—A. Well, I have worked now 25 years underground.

Q. Twenty-five years?—A. Yes.

Q. Twenty-five years. Are you working at the present time; that is, in any mine up there now?—A. Yes, sir.

Q. What mine?—A. The Speculator.

Q. How long have you worked in this mine?—A. Since the 10th of last November.

Q. Can you say whether the conditions now are better or worse than when you first began to work in this mine?—A. Well, no; not in that length of time. I can not say that they have varied any one way or the other.

Q. Have you anything to suggest or offer as to how the present conditions could be improved?—A. Well, the air certainly can be improved in any mine that I have ever worked in in Butte. Remember, I am quite an old-timer around there, too; I have been there before.

Q. Mr. McGuire, is there any apparent effort upon the part of the management in the mines to improve conditions?—A. Well, as near as I know, the air is not practically handled—or properly handled.

Q. Will you explain to the committee what you mean by that, Mr. McGuire; I don't know as I really understand what you mean.—A. When I say this—it is not carried in a direct air course when it ought to be.

Q. Well, then, you can go back to the question that I asked you a while ago. Is there any suggestion you would offer as to the improvement in that particular?—A. Well, my suggestion is, carrying an inlet and an outlet to where each man and every man is working, as it ought to be, and it is not expensive to the company, or very small one; I believe an inlet and outlet on your sills especially; that is, on the lead of the ore.

Q. Would you explain to the committee how that could be done?—A. Well, it could be done by carrying the first floor within 30 or 40 feet of the breast of the sill, or four or five sets from the breast, and bring the first floor over the top of the sill; that gives you an inlet and an outlet.

Q. Have you anything to offer as to the conditions as you found them in this mine, from a sanitary standpoint?—A. Well, sir, what would be a very good thing in these mines, although they don't use them, are the sanitary cars, although they don't use them in a coal mine, but the sanitary conditions are just as good and ought to be used in a mine just the same as they are used on the surface; can be worked just as clean.

Representative P. J. DUFFY. Couldn't you give us further explanation in the way of ventilation; how to get better ventilation?

A. Well, they could use fans and give you a forced ventilation; anything helps; where you have a single air current there is different ways of getting air, a better ventilation of air in Butte. You can put doors on each and every manway and leave a few cars of rock in the chute, and your stope will make your natural air course for you, as it ain't done in no mine that I ever worked in in Butte, the air will come down a raise, and maybe it will go to the next chute or manway and down onto the sill, and chance is to her outlet and out the shaft.

Senator J. C. McCARTHY. Has a man pushing a car any means of knowing how much ore is in a chute before he starts to load?

A. He has a pretty fair idea; he knows when he pulls the car out of the chute it will make a noise enough to leave him know.

Q. And he can learn by sound?—A. He can learn by the sound, according to how much rock there is in the chute, or make a pretty fair guess; he can pretty near tell whether there is 7 or 8 cars in there, or whether there is 40 or 50.

Q. Has he the privilege of going to any chute he pleases to load his car?—A. Well, the way they conduct it now, they go to any chute that they have got rock in and clean them all out, as clean as they possibly can get them.

Q. Is that done at the end of every shaft; is that the idea to clean out all the ore there is at the end of each shift?—A. That is done from the time they start on shift until they go off; the chute is generally empty all the time, without you happen to blast right over the top of them, and then there may be 40 or 50 or 100 cars go in there at once, and they would take them in there to pull it out.

Q. Then you think if a little rock was left in each chute, enough to shut off the air that the conditions in the stope would be much improved?—A. The conditions in the stope would certainly be much improved over what air we have got at the present day without getting better air.

Q. Then do you think there is any gain to the company by cleaning out the chutes every shift?—A. No, sir; I think it is detrimental to them.

(Witness excused.)

Whereupon JOHN DALY was called and sworn as witness, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. John Daly.

Q. Where do you reside?—A. Butte.

Q. How long have you resided there?—A. Well, I have been off and on around there for 12 years.

Q. Your age?—A. Thirty-one.

Q. What is your occupation?—A. Mining.

Q. How long have you been following that business?—A. Well, since I was 12 years old.

Q. Twelve years old?—A. Yes, sir.

Q. What mine do you work in?—A. I am now working—now, at the present time—in the North Butte, Speculator mine.

Q. How long have you worked in this mine?—A. Well, I have worked there four or five different times, but this last time I started in there last spring and been working there ever since.

Q. Can you say whether the conditions in the North Butte mine are now better or worse than when you first worked there?—A. Well, they are a little better in some places, and other places they are worse.*

Q. Then on the whole would you say the conditions are improving or not?—A. They are improving some in certain places, where the air reaches, and other places where the air does not reach at all they are actually worse.

Q. Have you any suggestions to offer as to the improvements on the present conditions of the mines?—A. Yes; the air could be conveyed from where it is good, where there is lots of it, and turned in a proper manner by carrying air courses, of course; that is, turning the air so it could travel through these hot places, and not letting it get back to the surface; it takes the short route from the intake to the outlet and they don't take enough means to prevent it. They can do it by shutting it off and transferring it into these hot places.

Q. Is there any apparent effort upon the part of the management to improve these conditions?—A. Well, I see a little; they are making efforts, but it don't seem that they have enough knowledge to follow it up.

Q. I don't understand that.—A. It don't seem that they have enough knowledge in ventilation to follow it up.

Senator I. A. LEIGHTON. Any member of the committee wish to ask any questions?

Senator J. C. MCCARTHY. Mr. Daly, you have worked in coal mines a great deal, haven't you?

A. Yes; I have.

Q. What part of the country or the world did you work in? Did you work in England for some time?—A. Worked in England when I was a boy; that is where I was first broke in; I worked in several States in the Union, pretty much from the Atlantic to the Pacific.

Q. Do you know of any reason why the North Butte, or the Speculator I believe you mentioned, couldn't be ventilated properly?—A. I don't see why it shouldn't. I haven't seen a mine yet, or any part of a mine, that couldn't be ventilated if it was undertook. It just simply means, if they ain't got enough air down there they could use forced ventilation to convey it there. Anyhow, all they have got to do is to transfer it after they get it down, but they have got to give it a chance; they have got to make a distinct air course; the air has got to come down and it has got to make circuit; I don't mean by driving raises through from one level to the other. The more raises that is drove through those levels from the air courses is detrimental to the current of air when it is traveling on its course.

Q. You stated a little while ago that they made no efforts to take from the air courses, to transfer it to the inside workings? How could that be done? By doors?—A. By doors and brattich. Brattich is a term we use in coal mining; it simply means light lumber placed for ventilating purposes; in other words, they use canvas; in places they use canvas in place of brattich.

Q. There is both an intake and outlet to that mine, of course?—A. Yes; they have got an intake on the one lead, and, of course, the main hoisting shaft is the outlet, as far as I can see.

Q. In your opinion, does the operation of the cage in that interfere with the ventilation very much?—A. Well, not necessarily; their outlet is really larger than their intake, and the cages cause a vacuum anyhow and help it, I should think, because you can feel it; there's instances when you are working in on the main air course you can tell, you can feel like the vibration of air, and you can tell when these cages are running. Of course, an expert could determine that; I am speaking from a practical standpoint.

Q. How many levels are there in operation at the present time in that mine?—A. Well, I couldn't state. I think it is in the neighborhood from the 600 down that is working at the present time.

Q. To what depth?—A. I think they are drifting on the 24; I am not positive now; I know they were cutting a station a while ago.

Q. Suppose the management issued an order that a certain amount of rock be allowed to remain in the chutes at all times; would that effect the air very much?—A. It certainly would; it would be beneficial to the air if the air was left in the chute and the manways with trapdoors, or offset it from the sill. Of course, I mean by this that you take your air; this is your permanent air course—your sill is your permanent air course to your innermost workings to the sill. Well, everything is to be concealed along there between there and the work above, that has got to be shut off entirely, trapdoors put on the manways; either that or offset and trapdoor entrances to the manways, and this rock has got to be left in the chute just in order for to keep—just enough to keep the air from coming through. I have seen this worked out myself in Butte, where I worked in the Stewart mine.

Q. You saw that plan in operation in the Stewart mine?—A. Yes, sir; saw it in operation in the Stewart mine.

Q. Well, how did it work?—A. Well, it worked pretty fair, but they didn't have quite enough air, and they got kind of lacking in their discipline; they didn't look after things; it fell off; it wasn't carried on properly; it was carried on to a certain extent, you know, but it just simply dropped off. They had pretty good results; it was a little warm in the stopes, but they have the continual fresh air going in there, and the sill was an exceedingly fine place to work. That was on the 1,800.

Q. Isn't the air course of the Speculator mine connected with the different levels?—A. Well, it is; it is branched off—the branches from the air course into all levels, you understand.

Q. Then your idea is, Mr. Daly, that the air could be split, as they say in coal mines, a certain proportion sent to the different levels and distributed in the way you mention?—A. Certainly it could be taken from the nearest point from the air shaft, and, for instance, you have got men on the east, west, and north, of course, you have got to make a division according to the number of men you have got and what direction you are working in; if you have got more men on one side, you can make your division a little larger.

Q. That could be easily arranged?—A. It certainly can.

Q. How many men are there at work in that mine?—A. Well, I couldn't tell you.

Q. Approximately?—A. Oh, I should judge about 300 a shift, I guess; something like that.

Q. What is the size of the air course?—A. I was never down the air course at all.

Representative NELSON STORY, Jr. Then, if you had an air course that supplied sufficient air to the mine it would be just as easy by the use of those trapdoors and brattices, as you call them, to distribute that air around the mine as it would be for a farmer to put the water from his ditches around on the different parts of his land?

A. Just the same to a practical miner.

(Witness excused.)

Whereupon PATRICK CLOONAN, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Where do you reside?—A. Butte, Mont.

Q. How long have you resided there?—A. A little over 10 years.

Q. What is your age?—A. Thirty-two.

Q. What is your occupation?—A. Miner.

Q. How long have you followed that occupation?—A. A little over 10 years.

Q. What mine do you now work in?—A. Well, at the present time I have not been working in any mine, the last mine I worked in was the Buffalo.

Q. When?—A. About two months ago, or a little more.

Q. How long did you work in the Buffalo?—A. Just about two years.

Q. Can you say that the conditions that you worked in at the Buffalo mine—that the conditions were better or worse when you first began to work in the Buffalo mine?—A. I couldn't tell you any different, I didn't see any difference; it was about the same all the time.

Q. Have you anything to offer, any suggestion to make as to how the present conditions could be improved?—A. Well, the only condition at the Buffalo mine that could be improved was that the sanitary conditions could be improved.

Q. How; explain to the committee?—A. Well, there could be cars taken in the crosscuts in the mine, and have a place for me to go to answer a call of nature, or when a call of nature comes on them, besides going down where men are working; it is then very easy to take the car out on top and take the hose and wash it, and wash it out, and take it down again.

Q. Was there any effort on the part of the management to improve those conditions?—A. Not the sanitary conditions.

Q. None whatever?—A. No, sir.

Representative NELSON STORY, Jr. What are the general conditions in the Buffalo mines?

A. Good.

Q. Ventilation is first class?—A. Yes; the ventilation is good.

Senator I. A. LEIGHTON. Did I understand you to say that the conditions as to ventilation and the conditions from a sanitary standpoint are good?

A. I said ventilation is good.

Q. But the sanitary conditions, what did you say, I didn't understand how you answered that question? I thought Representative Story asked you that question?—A. Well, the sanitary conditions are just the same there as it is in other mines; there is nothing used in any other mines, no more than men go down and crap anywhere they want to, that is all.

Senator J. C. MCCARTHY. How wide is the Buffalo vein?

A. It varies, you know, in places.

Q. What is the widest place that you recall?—A. I guess about 10 sets.

Q. About 70 feet?—A. Yes, sir; just about.

Q. You don't find any excessive heat there, do you?—A. No, sir.

Q. How deep is it where the widest place is?—A. I believe the widest slope they have there is in the four, I think, if my memory serves me, right.

Representative NELSON STORV, JR. If the sanitary conditions were improved there, would it be as good a mine as you could expect to work in—would the other conditions be as good as you would naturally expect in a mine?

A. Yes, sir; just about.

Q. That is, if the rest of the mines were as good as that, you wouldn't have any great kick coming?—A. No, sir; I don't believe there would be a kick coming.

Senator J. C. McCARTHY. Have they a fan in that mine?

A. No, sir.

Q. Natural ventilation clear through?—A. Yes; natural ventilation.

Representative P. J. DUFFY. It is considered as one of the best mines in Butte, as far as ventilation goes, is it not?

A. Yes, sir.

Senator I. A. LEIGHTON. I would like to ask those who have testified, anyone of the witnesses, if they have anything further that they would like to tell the committee, that might be of interest to the committee, any of those who testified, I would like to have them do so at this time; if not, I will call Mr. GILLIE to take the witness stand.

(Witness excused.)

Whereupon JOHN GILLIE was called and sworn as a witness and testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. John Gillie.

Q. Where do you reside, Mr. Gillie?—A. Butte, Mont.

Q. How long have you resided in Butte?—A. Nearly 30 years.

Q. What is your position there? What position do you hold with the Amalgamated Co.?—A. I am general superintendent of the properties at Butte.

Q. Mr. Gillie, the committee would like to have you, as you thoroughly understand the object of this committee, to go ahead and make any statement that you feel as though you would like to make to inform the committee of anything that would be of interest to them. As you understand, this committee is selected by the legislature to investigate the sanitary conditions and the conditions of ventilation of the mines of Butte, and if you have any suggestion, or anything to offer to the committee, we would like to hear from you.—A. The question that seems to be of more importance, not only to the miners themselves, but to the company, is the one affecting the health of the men; and in this connection a great deal has been said with reference to miner's consumption. It has been very excellently explained by Dr. McCarthy, and his explanation is in perfect accord with reports that we have had made many times by physicians and surgeons who have been connected with the camp, hospitals, principally of the district, for a great number of years.

The first serious disease that seemed to attack the men in the early days of the camp was pneumonia. This was very prevalent some years ago, and our own investigations led us to believe that it was exposure of the men coming from the warm mines and going to their homes in that condition without proper cooling or attention. We started on that within the last 10 or 12 years very systematically, in furnishing change houses where the miners could come in their regular clothes, change, have a suitable place to lock up their clothes, and, on going from the mines, having means provided for thoroughly washing off and showers or pans as they wished, and put on their ordinary clothes and go home in a suitable condition. This has had a marked effect and has cured to a great extent that pneumonia scourge that we had in Butte.

The other serious disease that we have, the miner's consumption, so-called, no different from any other consumption, led us to investigate pretty thoroughly, and at first we were disposed to think that a disease had come into the mines of Butte similar to that which they have in Cornwall, Germany, Spain, and Prussia, all the mines of the old country, known as ankylostomiasis. This is a disease that attacks the human person, similar to the bot disease that attacks a horse or animal. It is a worm that attaches itself to the intestines and takes the substance from the person that should go to him, the same as it does in an animal, causing an anemic and run-down condition. It is not a fatal disease unless the occupation or avocation is pursued throughout a long term, and then he gradually will die from decline, worn out. In the older countries

they rest, and they are sent away, or they rest from it, and they overcome it. It is not communicated to the members of the families; for instance, the wife or children do not have it, but the infection is spread through the mines by coming in contact with the excrement in some way, for instance, the urine or the excrement, it may get on around ladders in some way and the germ get to the mouth, and it is communicated in that way. The physicians there, at our request, made numbers of tests; they found some persons affected with it, new arrivals, or comparatively new arrivals, but in the older men, or after having worked in the Butte district for a time, it disappeared, so we were not alarmed about the spread of the disease. It is quite prevalent in the older countries, and has been the subject of government investigation by all of them, and we secured a number of those reports, also opinions from physicians and others over in that country.

Having disposed of that question, that that was not attacking the Butte miners, why, it comes down to the question of what was; and we found it, as explained by Dr. McCarthy, to be incident to the occupations; that is, it is consumption of tuberculosis produced by the occupation, such as stonecutter have, marble workers, quarrymen, quartz mill, tanneries, factories of numerous kinds wherever the air is vitiated or filled with dust to a greater or less extent.

The dust feature is probably the worst one we have to contend with, and the one that we can hardly completely overcome. When you take into account that there is exploded in the Butte mine about 4,000,000 pounds of powder per year, and realize the amount of attrition, rubbing, and bursting of rocks into small particles, it not only affects the immediate section of the explosion but every portion of the mines, it causes reverberations clean to the top in the old workings, it starts dust from everywhere, places that you could hardly get at.

Something was said by some of the witnesses with reference to these explosions of powder, as to when they occurred, or the blasting operations, as it is commonly called. We attempt to work in Butte two shifts, two eight-hour shifts. In that way we have a certain period of time, as long as possible between shifts in order for the settling of the dust and the clearing out of the smoke and gases produced by the combustion of the powder, and our general practice is that the shooting is done a short time before the shift goes off—that is, the great majority of the blasting is performed at these times. There are many places in all mines where development work is being carried on, where you are carrying on drifts for development or for ventilating purposes, or for sinking shafts to get down where we worked through shafts; that means, of course, that the explosions or the blasting must be done at other time than those mentioned between shifts, but that is a small percentage of the total blasting; it, however, starts dust and causes gases. In some of the mines where the dust has shown to be excessive, we have introduced water, but only in a few places can you get that water effective; that is, where you know there is a very dusty place you can carry water to that point, but in two or three hours before, when the heavy blasting was going on, the dust from all portions of the mine and old openings has been started, why you can hardly detect it in the air; if you will breathe through a handkerchief or some object like that, you will still find these particles of dust in the air. That is an incident to mining, and not only is it in metalliferous mines, but in coal mines or any other form of excavation; outside in quarries it has a better chance to disappear.

As I say, we are doing something toward that, but we can not prevent that feature. The gases from the powder we are attempting to get out as quickly as possible. If you do not get them out, you do not get the efficiency out of the men, and the man, if he attempts to do an honest day's work, why, he is worn out and can not do it, and it is only a question of time until your crew is demoralized. That is the whole substance of it. So it is to our benefit to do the best we can in that direction.

The other point, the question of temperature, is not such a serious one, although it may cause a lassitude or enervating condition, I do not think it affects the health materially. It is also very difficult to overcome. In the mines of Butte there is used about 75,000,000 board measure feet per year and about 250,000 round timbers in addition to these 75,000,000 feet of sawed timber. This timber as soon as it goes into a mine working, there is an oxidation taking place, the heat is given out from that timber, and, to illustrate, it is practically the same as though you are consuming or burning or starting a fire with that and giving out its heat. It may be distributed over

20 years, might be 40 years, but the same amount of heat units that there is in a stick of timber, if it is entirely rotted or consumed, is given off as though it were burned in a stove. You can readily understand the number of thousands of cords of wood going into the mines to illustrate and put it in that way, and this is being burned or consumed by oxidation, which is simply a burning. This causes a large proportion of the heat. We have, also, due to the character of the ores of Butte, which are sulphide, or sulphur, and other compounds called sulphides, and an oxidation going on in the rock itself which produces heat. This, in connection with the heat given off by the timbers, is the great causes of the higher temperature in the mines. Also, in going into the earth's crust at almost any point, whether you are going after ore, whether you are drilling a well, no matter what you are doing, if you are going into the earth's crust, the normal increase in temperature in going in toward the center of the earth is about 1 degree for each 60 feet you go down. This does not hold true in Butte, it does not increase nearly as fast as that, but that is the average of the earth, excavation into the earth, so that you can understand by going into the earth a half a mile, even though there is no oxidation or no heat from the timbers, the natural temperature of the rocks would be considerably higher than when you started.

Now, as to what we are doing in Butte in the way of ventilation. I can state, in the last four or five years, and particularly in the last two years, we have been equipping with a system of forced ventilation. When mines are shallow, or comparatively shallow, the natural or induced ventilation by providing one air course down and another one out, it will naturally ventilate itself. We find that it is too slow in going into deep workings, and have got to get this air quicker, and we are doing that with a system of fans. I have a list of the fans that we have installed during this period and the amount of air that we are putting into the mines is 753,000 cubic feet of air a minute. That, of course, is not all; in addition to the natural—we have a number of natural or induced air openings or ventilating shafts or air courses, as you may call them. Some of these places we are forcing the air in, others we are exhausting the warm air out, which has to be replaced by cooler air from some other places, because when you exhaust the air its place must be taken with more air. This we have found to be very effective. We have had one of our properties, known as the Gagnon mine—some of these gentlemen who testified have worked in it—we opened up twenty-two and twenty-three hundred foot levels. We couldn't get efficiency out of the men who were working in those lower openings, and they came out more tired and run down than they would with probably twice the labor on the surface or at some other place. We installed an exhaust on the air courses in that mine as soon as it was possible to purchase electric power, and we made those levels, twenty-two and twenty-three hundred, the deepest in the mine, comparatively good places to work. We could notice the difference in a very short time.

It might appear to some of the gentlemen of this committee that those things could be systematically started, means of ventilation, and they do in a coal mine. Senator McCarthy is interested in coal mining, perhaps some of the other gentlemen also have operated coal mines; and that is a very essential part of operating a coal mine, is the ventilation of any mines, but coal mines in particular you have got to have it. The difference between our metalliferous mines and the coal mines are roughly as follows: A coal mine consists of a vein or seam in the ground, which is as uniform almost as a sheet of paper in a pile of sand. You start entry on it, your slope, and you start your air courses and you carry them along with you. You can lay out your ventilation system on a piece of paper that is good for 20 years, just what you would do in the operation of that mine, once you have proven your coal seam or vein. With our ore mines, we go down, a vein will appear to be fairly regular, it will be faulted, or it may be continuous; we run a crosscut off into one of the walls, we encounter another body of ore, we start the other way and we encounter something else, another body of ore there; now, we haven't got separate openings to the surface from each one of those bodies of ore—it would be an impossible condition; these bodies of ore might not reach but one or two hundred feet, they might be small, as they often are, small lenses or bunches, as we would call them, separate and apart; it would be impossible to have a separate shaft and air courses for each particular body of ore. That is about the principal difference, when it comes to carrying your air. The other feature of timber in a coal mine, they use a few props and usually draw those when they get out of the way and let the roof come. We can not do that with a coal mine. We frequently have

to go back to the 400 level—we will say, the 400—when we have opened some thing on the 800, to see if it did not exist up there. We can not let the opening come like that—that is, walls or roofs of a coal mine—they let it come, and they do not have any excessive amount of timber in a coal mine, practically no timber around a coal mine.

In this Gagnon mine that I referred to, as to what we are doing there is ventilation, one of the gentlemen referred to it here, was the shaft that was sinking on the west end; that is, on the extreme west end of the property, as far as we know that the values go, situated 1,000 feet westerly from the main shaft. We are sinking an air shaft at that point, which to the 2,300 where it is proposed to go—at present that is the depth of the mine—we expect to carry it as far as the mines go, but that piece of work alone to the depth that we have outlines will cost over \$230,000. That is for air. Now, we are not doing that as philanthropists; we expect to get the value back on the number of tons of ore a day per man; it is economic mining. It tends, of course, to the better health and the better conditions of the miners, and the better he is the better he is for us.

Within two years we have sunk one shaft 1,500 feet, connecting with the group of mines to the north, known as the Badger State shaft, which has made a great difference in that section of the country. We are sinking at the east Colusa, and as soon as we took over the Heinze properties the first work that was started was the air shaft to the 1,300, which has made possible the working of the Rarus mine when that was completed. When we took it over it was in an impossible condition; it was all you could do to go through it.

On speaking of the miners' consumption, I omitted to mention what appears to be the great prevalence of it in the Butte district, which is exaggerated and is greater in that district than in any other district that I know of; one of the reasons is this: When a new camp opens, like Corbin, in your district, Doctor, or Radersburg or Salmon City, the big strong men would sooner—and rightly, too; his judgment is good—would sooner work in the shallow mines of Corbin or Radersburg or a new district, if he is going to follow mining, than he would work in the deeper mines of Butte, where they are bound to be warm; he can not avoid a certain amount of high temperature in the properties. They leave us; none of the men with miners' consumption—that is, that are affected enough to be noticeable—go to those places, because the man at those properties will pick out a good, big, strong man that appears and offers himself for work. This leaves the Butte mines with the older crew all the time; and the younger men have better opportunities in the new camp, and they are going to those new places; they have gone to Nevada and Idaho and Alaska and our own districts in this Rocky Mountain region. The opportunities are better and generally the wages are the same, and I do not blame them for going. We do not, as I said before, claim that we are doing the ventilation solely for the benefits of the miner, although we do attempt to take as good care of him as we can; it is to our benefit in doing that for the men. I think we attempt to use them pretty fairly, and we expect to improve conditions right along. I think a number of those gentlemen who have testified can remember what a hot box the St. Lawrence was. It was in the vicinity of the fire that we have in the Anaconda mine. That fire started, November, 1889, and is burning yet. We put down air shafts and made connections there so that the St. Lawrence is one of the good mines to work in.

Another very favorable feature is the one of consolidation. It used to be, when we made a connection with a neighbor that we were not interested in, if our good air went his way when we made a connection, as soon as possible we bulkheaded or closed that opening up. Now, we are in a position where we can see, owning that adjoining property, that openings must be made and must be left open. One of the principal features in connection with the improvement of conditions in the St. Lawrence was due to the acquisition of the Boston & Montana adjoining property, the Pennsylvania. We were able to make connections with that property and keep them open, and that is true in all the properties, the more openings you can have and can utilize them systematically, the better. We expect to continue this ventilation problem; pursue it to the fullest extent possible, and get the best air to the men that are working in the mines. It means not only good to them but to us.

Representative NIXSON STORV, Jr. You are following our general plan that means a perfect system of ventilation to all the properties that you are operating there now?

A. You can hardly say that it is one definite plan, because conditions arise from time to time that you have to change those. You find that one shaft—you think that you will make an upcast from a certain shaft, and you go along and you make connections and you find out that it is not the best way.

Q. But the air won't go there?—A. We are following the general idea of making as many openings and keeping them in as good shape as possible, and we are making them larger. This opening that we are making for the air shaft of the Gagnon has a clear opening of 5½ by 17 feet; that is exclusive of timber or anything else in the shaft; a good-sized opening.

Q. What percentage of your wages at the present time are being paid for improvements and ventilation?—A. Well, a very large proportion just now, or a considerable proportion just now, for the reason that production has been decreased over there; that is, producing of tons of ore, and development has not been curtailed, so we are doing a good deal more in proportion than we would ordinarily. We have a number of those dead-work openings going; that makes the proportion large to the amount of ore we are producing. The other matter touched upon here—considerable was said about it—was sanitation. That is a pretty difficult matter to control for the reason that it is about the only thing that they do not join us in; that is, the men themselves do not join us in. If the men would take the precaution to go into the stopes, which is usually considered the place where he is supposed to go, instead of to a dead end of a drift or an unused drift, the mines would be very much more cleanly. We are continually up against the problem of trying to keep these unused drifts—by that I mean unused; they are not used for tramping purposes or actual mining purposes—a cross-cut may have been run off here 200 feet, or something for a connection of some kind, or for a prospect opening, and it remains there. Pretty soon it is fouled from one end to the other. If you go into the stope to perform a call of nature, it goes into the gob and is soon covered up.

Senator I. A. LEIGHTON. Let me ask you, Mr. Gillie, how is it covered up? What is the method?

A. We have got to fill these stopes all the time.

Q. By filling?—A. We have got to fill all the time; the filling covers them up sooner. And in this connection I would state that any other kind of mines than these sulphide mines would be very much worse off; and a worse condition than they are in the sulphide deposits or ores. They are disinfecting themselves to a great extent, to a very large extent. It is one of the reasons for the disappearance of this disease that I mentioned before—the germ can not live in the presence of this sulphide dust, or whatever moisture comes in contact with this sulphide ore, the slightest amount of it forms an acid that is a great disinfectant. However, there was considerable agitation on this sanitary business and we have tried to work out some scheme, and we have for about a year and a half in one of the largest properties, we have toilet cars. Also we have experienced a great deal of trouble in getting the men to use them, but a large proportion now, by keeping after them, they are using them. Many of them I have talked with myself would prefer to go to the stope, where he don't come in contact where any other person has been, than he would go to a water-closet. The toilet car is simply a water-closet that he gets on there; the same as any other toilet. It is not like a toilet in a hotel, for instance, that is porcelain and washed off every day. This is washed twice a day for that matter, but there has been a great number of men there before him, and he don't know but that he might come in contact with some kind of a disease; that is natural for anyone to think so. The mine I refer to equipped with the—was one of our large properties, the High Ore mine; they are equipped with those toilet cars. There is a car run on each level where there is any considerable number of men working, and put in a convenient place, and they are supposed to go and use them, and we make the best effort we can to have them all use them. It has got a sealed top with a removable bottom, made like an inverted pyramid in the bottom, and is taken on top and run out on the dump and washed out with a hose; that is, at the end of each shift, and then returned to its place. It is about the best thing we have been able to devise. In no other place have we been able to learn of where they have any appliance of the kind. We are equipping the Original; we are getting those cars made at the present time for the Original, Gagnon, and Stewart properties, and we expect to put them in throughout if we find that it is suitable and is in favor with the employees. It does not mean any great

expense; it takes but two or three hours twice a day for a man, but we are willing to do anything like that that we can that will improve conditions.

Senator I. A. LEIGHTON. Mr. Gillie, in the levels that you have just explained where the men would not use, would not respond, to the calls of nature to the places that would better the sanitary conditions, isn't it a fact that your shift bosses could force them to do so; that is, to see that they did do that?

A. Well, you can to a large extent. It is what we are attempting to do that means. But a shift boss, when he gets a pretty good crew and he gets a good man—for instance, if he found that a man went off in the stope soon where and attended to a call, why, he wouldn't want to send him on top shift because he didn't go down to the car. But we are using our best efforts to prevail upon all of them to use that appliance, and we will equip through and see what effect it has. If it is in favor, and they will use them, why, we will continue to use and get completely equipped with the toilet cars; and it is the best one we know of, best one we can learn of. They have them in other places. It is something like our change houses. When we first put in the shower baths 15 or 20 per cent of the men would use them. We have been insisting all the time that they use them more until now a great large portion of them use these shower baths and change properly and avoid pneumonia troubles. We have probably received more compliments from the families from a good many of these men than from anybody else in the equipping the change houses. Men would go, for instance, to the boarding houses and such places with their old clothes. They are a nuisance and an odor from the etc. Now they can leave them at the mine.

Senator I. A. LEIGHTON. Are all the large mines in Butte equipped with the change houses, as you call them?

A. Nearly so. We have in our properties that we have taken over recently the Original and the Stewart, which are not very well equipped. They had got change houses there, but there is no shower bath; nothing but a wash pan; but we will correct that as early as possible, because we find it very beneficial to the men.

Representative NELSON STORV, Jr. Did it ever strike you, Mr. Gillie, that some of your drinking-water appliances in the mines are mighty poor as regards the prevention of the spread of consumption?

A. Well, no; for this reason: That, no matter how many tin cups you furnish at the water car or water keg, they disappear, with the result that they are not drinking out of the same cups continually. For instance, contagion can be spread in that way. They take water often in their lunch buckets, take the bucket with them and have their own lunch buckets; take the bucket with them and they take the top of their own buckets and use it when drinking from the water tanks that we provide.

Representative NELSON STORV, Jr. I noticed some of them, though, just at the cup down into the tank.

A. We have some that way; and also all of them are provided with a spigot valve, for drawing the water from the bottom. I don't think the water conditions can be very much improved now. Everybody drinks out of them. I saw you gentlemen, too. I don't think you have hardly anything to complain of there. We furnish all the ice that is required; and one thing about working in that warmer temperature, ice does not seem to have any deleterious or poor effect on the men. They drink the ice water in unlimited quantities without any bad effects.

These, generally, are explanatory of the condition and what we propose to do. Within the past year and a half, since electric power is in sight in practically unlimited quantities, we can install these fans either above or below ground. You couldn't install such a fan, such as you gentlemen saw there the other day, on the 1,200 of the Pennsylvania, if we had to carry a steam line through there. By carrying power down with wires it is an easy matter, comparatively so, to install any such appliance. With reference to the compressed air, which also was mentioned here, we are much better off than at the smaller properties, or when the properties were in their early stages of development. The nearer you are to a compressor the nearer you are in use of the air to a compressor the poorer the air is, that is, it is saturated or takes up the oil that is used in lubricating the machines, as Mr. Duffy referred to and if you use the air close to the machine compressing it you get that oil vapor; if it travels some considerable distance that condenses and it is not given out in vapor. Our compressor plants now are consolidated, that is, furnishing say 20 to 25 of the mines. There are just three or four points the air

has to travel in some instances as much as half a mile; some one or two traveling a mile, to the point of use. This gives the air or puts that air in much better condition; it is not quite as effective for work, because it is cooled off, but it is much better for using and ventilating, and as a matter of fact the use of compressed air, the large amounts that are used there, is a great assistance in reducing the temperature. When you compress air you cause heat; when you expand it again, reduce its pressure, it produces cold very fast, in fact it is one of the means of refrigeration; I have seen in pumps 1,500 feet underground, where we would use air instead of steam, I have seen the exhaust all covered with ice. That is on account of the property of air on expansion causing a reduced temperature. I don't know that there is anything further I wish to say. If there is anything you gentlemen wish to ask, I shall be pleased to answer.

Senator I. A. LEIGHTON. Any questions you gentlemen would like to ask, any member of the committee?

Representative J. C. DUFFY. I would like to ask what is the estimated cost of installing one of those fans such as we saw the other day.

A. You mean the cost of the fan?

Q. And the attachments, everything pertaining thereto?—A. That would depend on how far you have got to carry an electric line; but you can roughly say for \$2,000 you can install one of those large fans, and it will take about \$225 worth of power per month to run it; some slight attentions, probably three or four days in the month, would be the total attention; and then there is oil and repairs, or renewals.

Representative P. J. DUFFY. There is nobody have to take care of them fans after once installed, only just once in a while, except repairs?

A. He just goes out to see that they are properly lubricated, excepting when the power shuts off, like it did here just now [the electric lights having gone out for a moment]; if we have that occur on our power line, our motor stops and it don't start up again.

Q. Somebody has to go out and start it, nobody has to go out and stay with it—they did for a while?—A. Yes; but they are perfecting them so that they take care of themselves, excepting a trip a day, or something like that. I would state that I have this list of fans which have been installed, if you wish to have them. It shows what we have installed up to January, 1911.

Capacity of ventilating fans now installed, January, 1911.

	Cubic feet per minute.		per minute. Cubic feet

Senator I. A. LEIGHTON. If there are no further questions you can step aside.

Whereupon JOHN D. POPE, called and sworn as a witness, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. John D. Pope.

Q. And your position—what position do you occupy?—A. I am manager of the North Butte Mining Co., in Butte, Mont.

Q. Now, Mr. Pope, I will ask you the same as I did Mr. Gillie; if you have anything that will be of interest to the committee to proceed and tell it. We are looking for information.—A. Well, on the question of ventilation: During the year 1910 we have sunk the Granite Mountain shaft and connected it from the 500, which was the bottom of the shaft, to the 1,800 level. That was an upcast shaft. That gives an extra upcast shaft. Our main hoisting shaft, the Speculator shaft, has been an upcast shaft for several years, and partly because it was not large enough and partly because the cage was running in it we saw the necessity of sinking another shaft so we could connect the Granite Mountain to the 1,800, and during the present year we will connect up to the

2,000. Our air comes down through two shafts; one is the Gem shaft, which in 1909 we sank from the 700 to the 1,600, and the other is the Badger shaft belonging to the Anaconda Co., which connects with our workings on the 1,800. The committee will probably remember, as they went there, the 1,800 as we approached the Badger shaft the air was very much cooler; going out was very cool, but going through that large stope the air heats up, although the same air goes from one end of the stope to the other, and the settling ground—the oxidation of the timber—heats the air as it goes through. During this present year we will connect the Gem shaft, which is another down cast from the 1,600, its present bottom, down to the 22, which will give us more cold air on the 22, and these extensions of air shafts, or of others, we will have to sink later on; they will have to be continued continuously; as long as the mine is worked we will have to extend the present air shaft and probably sink new ones. We are working at the present north of our Gem shaft, and as that work is extended north it will need new air connection and these, of course, we will expect to provide. During the present year, also, we will enlarge both these air shafts, both the Granite Mountain and the Gem shafts; we will bring them up to full size, which will be 5 by 17 in the clear both of them, and we will probably, as soon as the work is done on the Granite Mountain, install a suction fan at the Granite Mountain shaft. It will be impossible to install this and operate it, of course, while the work in the shaft is going on, because when the fan is installed it will be necessary to box the top of the shaft and take all the air through the fan to get the suction, which suction will reach from the shaft to the fan, and so it will be impossible to install this and operate it while this work is going on in the shaft itself. This work will have to start at the surface, and it will start in the month of February; and it will be necessary to handle the dirt and the men from the surface, and as soon as that work is done—we get below far enough so that the work can be handled from the underground workings—we will install the fan at the Granite Mountain shaft.

The temperature of the stope in the North Butte mine has been very materially decreased in the last three years. The mine, as you perhaps know, is a new one; it was first opened up in 1905, so that for large productions it has been operated, say, from January 1, 1906, or thereabouts, making the mine about five years old altogether. In that time we have opened up two large veins and several small ones, and started at first from the 1,600, where the ore was first discovered; it was necessary to get an air connection from there to the surface besides our hoisting shaft. When I first went there there was no connection—air connections—north of the hoisting shaft at all, and all of our work was done north of the shaft. The mine was developed first on the 1,600, and the only connection was south of the shaft on the 1,600 to the High Ore. Since that time we have made the various connections on the Jessie vein to the surface, including the connection to the Jessie shaft itself and the deepening of the Gem shaft, which was 700 feet deep, to a depth of 1,600 feet; and lately the volume of air which will get through the main hoisting shaft is insufficient, so that we have taken up the Granite Mountain shaft and extended that down to the 1,800 by means of raises, as that was the quickest and cheapest way of doing it, and now we are going to enlarge that to a full-sized shaft, so that it will take a very much larger volume of air than it is now carrying.

In regard to the sanitary conditions, I don't know that I have anything to add to what Mr. Gillie has just said. He has covered the subject more thoroughly than I could, because they have installed the sanitary cars, which we have not. We have always tried to get the men to use the stopes, because if a man will use the stopes it is covered almost immediately, the waste cars are close behind the stope, and the process of filling is continuous in every stope the waste is dumped in continuously behind the men as the ore is taken out in front of them, so that I don't think I have detected any odor in the stopes more than a few times in the last five years. Generally speaking, it is covered up immediately. We have also the same trouble that he has in getting the men to use the stopes altogether, and we find it necessary to board up every drift and crosscut which is not actually in use. Of course, if we did cover that there is any demand for these cars and the men will use them generally, we won't have the slightest objection to installing them, because the expense is small, they can be looked after very easily by the men on top, it won't be any particular expense, and it won't be very much trouble. But I don't think it will ever be possible to compel all the men to use them. Our

levels are 200 feet apart, which is the usual distance in Butte, and I don't think many of the men will climb down, say, 100 feet to use the car and climb back again. The men on the levels will probably use them. That simply means the men who are doing the development, drivers, loaders, and the station men.

Representative NELSON STORV, Jr. Men working in a stope usually use the stopes anyway?

A. Yes; and I think they will continue to do so.

Q. Your ideas of the tuberculosis situation coincide with Dr. McCarthy's?—A. I did not hear all of Dr. McCarthy's testimony; I just heard the last end of it; but as far as I heard it, they are, generally speaking, the same as his. I know several cases in which men have contracted tuberculosis where I have ascribed it to the effect of the dust, probably in the way he described—not the dust directly, but the dust has caused weakening of the lungs. I haven't noticed any large percentage of the men in Butte being troubled that way, but I know if a man works in the dust too long he wants to get out of it. That is, perhaps, especially true in upraise work, because the dust in drilling is always falling on the men and it is much harder for them to keep out of it than when working on the sills. The increased ventilation will not help that condition at all; in fact, the stronger air current you have I think the more dust you will have, because it drives the dust up and will make it fly in the air, but I don't consider that an argument for poor ventilation.

Representative NELSON STORV, Jr. In your opinion, would it be practical to put water into the mines so that they could be sprinkled? Could water be used on those overhead drills?

A. I am not sure whether you could use them in the upraises or not. I think that can be very easily avoided though if a man will wear a wet sponge. I have tried to get men to do that with very small success, because it is not a comfortable thing to wear. I know when I worked in a dry mill I used to wear a sponge all the time and it wasn't comfortable. I didn't feel like working very hard with a wet sponge strapped in front of my face, but I used to do it just the same, because the dust was so thick that I had to. The dust is very largely in the manways.

Representative NELSON STORV, Jr. I noticed that.

Q. And mostly in the manways—that is, the completed manways—I mean the manways where the men are not working—in some places where they have to travel to and from, going and coming from work, and it comes very largely from the ore being passed through the chutes. We have cleaned them down in several cases and we find that it is a continuous process and have to keep cleaning them, and even then the dust keeps collecting. It is very easily stirred up; it is very light and, generally speaking, the manways with the strongest drafts are the dustiest.

Senator J. C. MCCARTHY. How far apart are your air chutes, Mr. Pope?

A. The air shafts, you mean?

Q. The ore chutes in the different levels?—A. In the large ore bodies they are 50 feet apart—50-foot centers. In the small ore bodies they are 40-foot centers.

Q. About what is the average length of the levels? How far will the sill floor extend?—A. Well, it is apt to extend a half a mile. Most of them, of course, do not extend that far, but we have some that are approximately half a mile long. There are various drifts running from those crosscuts there in various directions.

Q. Would there be any particular disadvantage to the company in allowing a certain amount of rock to remain into two or three of the lowest air chutes in the different levels?—A. Why, in most cases I should imagine not. It would be a very hard thing to do though.

Q. You heard Mr. Daly's testimony in which he stated that if ore chutes were kept with a little rock in them and some trapdoor put at the air course, the air would flow along the sill floor continuously where the men are working. Do you think that is practical?—A. I think he has a wrong idea about that. I think it is better to take the air up through the stopes and carry it along the top of the stope where the men are working rather than along the sill. The men on the sill are generally insignificant in number and, generally speaking, the sills are fairly cool, especially where the men are working; but generally the place to get the air is up in the stope itself, because most of the men are working there, and I think it is better to carry it up in the stope and carry it along the stope where the men are working.

Q. You understand that when two or three ore chutes next to the air course are opened, all the air will flow up to those chutes, and the men working inside

of them will not have any air at all?—A. Well, that is true, too; that is, it not strictly true. Of course, the air will divide to a certain extent; the air of much larger amount than one manway will ordinarily carry, but I think it better to take the air up to the stope and run it along the level and allow it to go up to the far end—

Q. It comes back over the entire stope, does it not?—A. Yes, but it has 1 make a double circuit to do it, while, if it goes up to the near end and travel along the stope—goes up the other end—it makes simply the one circuit; does not have to make the complete circuit of the stope; in on the level, when you take it up and then take it along the stope, it will only have to travel once—the distance—the distance once; of course the conditions in ventilation necessarily change as the stope advances and gets higher. In opening up the sill when the stope is close to the sill, it is better to take it into the sill first and then back, gradually ascending as it comes back, but when the stope is advanced as most of our stopes happen to be at present, it is better to take up the nearest manway and take it through the back, where the men are working, and the carry it along the far end.

Q. Would you mind drawing me a diagram of one of those stopes you speak of? [Witness complies.]

(Witness excused.)

Senator J. C. McCARTHY. I move that we adjourn.

(The motion receiving a second was, on vote, unanimously carried.)

Senator I. C. LEIGHTON. Gentlemen, we will meet here again to-morrow night at 7.30 o'clock.

FEBRUARY 1, 1911.

The committee met at the call of the chairman at the courthouse in Helena on February 1, 1911, at 7.30 o'clock p. m.

Present: Senators I. A. Leighton (chairman), W. E. Christopher, J. C. McCarthy, C. P. Tooley, and J. E. Leary; also, Representatives P. J. Duffy, J. C. Duffy, Nelson Story, Jr., and Marcus Hewett.

Senator I. A. LEIGHTON. Gentlemen, if there are no objections, Mr. McQuire who was on the stand last night has asked me to allow him to go onto the stand to-night for a short time.

Senator C. P. TOOLEY. I move you, Mr. Chairman, that he be allowed to testify again.

(Whereupon the motion was duly seconded and carried. Whereupon Mr. McQuire testified as follows:)

Senator I. A. LEIGHTON. I have no questions to ask you. You asked to return to the witness chair; there is something that you want to say; you can proceed.

A. Well, last night I was asked to explain if I had—

Senator I. A. LEIGHTON. In order that Representative Hewett will understand it, I will state to you, Mr. Hewett, that Mr. McQuire was on the witness stand last night, and he requests to return to the witness chair, as he wants to make a statement. I don't know whether it is for a correction or what, but it is not a regular witness, he is just given permission to return to the stand. You can proceed now, Mr. McQuire.

A. Well, I was asked last night if I had any way or means—knew any way of ventilating these here mines in a practical manner or proper manner.

Senator I. A. LEIGHTON. You were asked the question, have you any suggestions to offer as to how the present conditions could be improved. That is the question that you want to answer.

A. Yes, sir.

Q. All right.—A. Well, I have. If they would only put in a continuous air course, as they have many of them to-day; if they will put in trap door enough to keep them continuous with the workings that they are working, and on top on the Bell & Diamond Mine they represent just one shaft. Now, they are installing fans, and I believe they intend to install fans in this mine particularly—have two suction fans from this Diamond mine.

Q. You have reference to the Diamond mine—A. Diamond and Bell; all their ores go from the top level, represents the Bell, and the bottom level represents the Diamond. They have a fan on top of the Corra Mine, a suction fan, supposed to pull 280 cubic feet a minute, by the mine inspector's report, and also the same on top of the Parnell. Now, the Parnell is connected on the 1,000, or the south side of the Diamond, or the Bell, as you call them; the Corra is connected on the 2,200 on the north side of the Diamond, and for the want of putting in a few doors here and there, as they should ought to have: on every chute or every manway, and places they should ought to have

them on the main air course and turn the air up on their sill just wherever it is needed, they are not there. Now, the air will go straight down the Diamond shaft, and part of this air, I couldn't say how much, because it makes its own split, will go to the Corra shaft and straight up when it travels under some of the stopes, and where it is a suction in places, to have every manway and chute left open, and there is no door to make the continuous air courses as they should ought to be. The other course of the air will go over to the Parnell, principally, the same way, and up the shaft, up the Parnell shaft, to the fan. Now, if there was doors on each and every level to carry this air on the south side of the shaft to the 2,200-foot level, and carry it from there into the stopes, and continue from the stope, or to the breast of the sill, I should say, continue on up over to the next level until they get to the 2,200 level, they have got raises, all kinds of them, from level to level, lots of them, if they would put in these doors they would have continuous air courses; when they carry it back up to the 1,000-foot level they could turn the air into the outlet or leave it go to the surface. If it was necessary, if they had levels working up there, they could carry it above this outlet and then back up to this level to this fan and up the Parnell shaft, but it seems they lack the experience of doing so, or else they don't want to use the little lumber to make a door and the labor to put it on. Now, I have got a map drawn out here, and I believe there is men on this here committee that understand this here map, and if they want to have it I will give it to them, or I will explain it to them.

Representative NELSON STORV, Jr. I would suggest that Mr. McQuire explain to the committee; he showed it to me a while ago, and you can understand it very readily by following it on his map here.

Senator C. P. TOOLEY. I would suggest that it be left here with the committee as an exhibit.

Senator I. A. LEIGHTON. That would be better, I would think, to leave the map with the committee so that they can go over it.

Representative NELSON STORV, Jr. Senator McCarthy is also familiar with that map.

The WITNESS. There is a little more I would like to say that I have got on this map that I didn't explain; there is places in here, it may be 15 or 20; it may be 50 feet, and it may be possibly 100 feet, that ore is not in paying quantities, and they will leave in a pillar between the stope and another body of ore that they run into, if they continue along, that is in paying values, and they will start to work this place without a raise, no possible show for air, to get it in there, or out of it; there is a possibility of getting it in if it was put in, no possible show for it to get out; they have no continuous air course; whereas with a few hundred dollars it would give them an inlet and an outlet, but it seems that they don't want to expend that money in a place of that kind; that is mostly the cause of killing the miners off to-day in Butte than any other cause.

Senator I. A. LEIGHTON. In what way do you mean in killing them off?

A. He has got no air in there; it is just the same principle nearly as locking a man in an ice box; he has got nothing there to live on, with the exception of compressed air; they run a 2 or 3 inch line, whichever is running in there to run the machinery; and I don't believe in them places, if it was not for compressed air, that a candle would burn.

Senator J. C. MCCARTHY. I would like to ask you where you would suggest placing the door. I ask the question for the purpose of getting it into the record. Just refer to that map now and say where you would place the door so that the air course would be continuous and give the best results?

A. I will make a continuous air course on there, if you wish to have it made, I will mark every place.

Q. Just explain it, if you will, naming the levels on which you would place the doors?—A. In each and every one of the top levels I would have to have a door on a down-cast shaft, for the working shaft is a down-cast shaft; I would have to have a door on each and every top of them; the bottom level would get the first of the air, it doesn't matter how deep it is, whether it is twenty-two, ten or twelve, or twenty-eight, as I have worked on the twenty-eight of the diamond myself, and you will leave the bottom level open, so you will have to have a door on each and every level from the surface until you come to your lowest level, and you leave it open to make your continuous air course.

Q. And, in addition to that, would you advise placing your trapdoors in your various manways?—A. I would advise trapdoors in pretty near every manway

in the mines only where I have to continue my air course, whichever way it would come. Various ways of doing these things when you go to do them yourself. You will carry your air in on the sill, just as Mr. Daly drew out that there program on the blackboard there, carry it on the sill and bring it up onto the first floor and then onto the stope.

Representative NELSON STROY, Jr. Then would you need trapdoors in your sills, would you?

A. Not and continue in the way it was made.

Q. On your map over there?—A. On my map I would.

Representative J. C. DUFFY. I would suggest that this map be handed the chairman as an exhibit.

Senator I. A. LEIGHTON. You will kindly leave your map with the committee. Have you anything further that you would like to offer?

A. No; I have nothing further.

(Witness excused.)

Whereupon DR. F. MCGINN, a witness, called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. Edward F. McGinn.

Q. And where do you reside?—A. Butte, Mont.

Q. You are a physician and surgeon?—A. I am a physician and surgeon.

Q. How long have you resided in Butte?—A. About six years.

Q. Dr. McGinn, in your practice up there you have had something to do with the so-called miner's consumption.—A. I have.

Q. Doctor, I wish that you would use the simplest terms possible, so that not only those who don't belong to our profession can understand better, and I wish you would go on and explain the conditions that you found the lungs in, and your ideas as to the cause of this so-called miner's consumption.—A. Well, in the first place, I would like to state that the consumption that we get is not a miner's consumption in the true sense of the word. We have really no such thing as a miner's consumption. We have what we call a pneumococcus, in other words, a scarification in the lungs, which is the first affection they develop, that affection produced interferes with the amount of air that is being interchanged with the blood in the lungs, and therefore reduces a man's resistance; reduces his vitality, and if he comes in contact with the germ of tuberculosis, he has a prepared field which allows him to contract the disease, which usually runs a rapid course. Now then, consumption, to begin with, is a disease that the majority of the population in the world at some time or other are affected with. The fact that they have good conditions, plenty of fresh air, and plenty of sunlight, and plenty of food, also plenty of rest, allows the majority of them to overcome the effect of the disease and thereby get well. Those that have not quite that amount of resistance go on as mild tubercular cases. I merely explain this to show that we get all degrees of the disease. Now, we will say that consumption is primarily a condition due to confinement, and the affection of the germ is in some part of the body, usually the lungs. Now I think that is a fair explanation of it, unless you want something else.

Q. Doctor, in the autopsy—I suppose you have held a number of them, by the way?—A. Yes, sir.

Q. Did you find a large amount of the deposits of this fine dust that naturally arises from the process of mining deposited in the lungs?—A. We find in the autopsies, on people that have been working in mines, driving coal wagons, and doing work in which they will come in contact with a large amount of dust, we find the lungs much darker, much less resistant, and more scarified than we do in those people who are not following such occupation. Take the lungs of a young person, you will find a light, clear-colored lung. Take the lung of a man who has worked under ground for years, in the dust, you will find a darker colored lung, very much thicker and hardened lung, and a lung in which the air spaces are limited. In regard to the type of the dust, we get a great many different types, and I have not gone into the question in regard to the type of dust, because I never felt it was necessary. I presume on analysis, though, we could tell what type of dust it was and what it comes from. The fact of the dust being there, the fact of the irritation of the lung prepared the field for the tubercular germ. A man's age is another question that would have to be taken into consideration; a man that has worked for years at the mine has reached a stage where treatment for tuberculosis will be less successful.

Q. In your opinion, Doctor, do the miners contract tuberculosis after they go into the mines in Butte?—A. I think they go into the mines as healthy men—the majority of them; they may have some tubercular germs, but they prepare the field for the tubercular germ in their work.

Q. Just explain that statement.—A. I mean, by preparing the field, that a man goes in there with a lung that is very good, and that takes in a normal amount of air; that after he has worked for years in the dust the lungs have become hardened, and they become irritated until the lung tissue has been replaced in a large amount by scar tissue. Then, there is not a sufficient amount of oxidation taking place, his resistance is lowered, and if he comes in contact with the tubercular germ, irrespective of whether he gets it underground, or whether he gets it in the house in which he is living, which is very possible in Butte, he will gradually die of the disease.

Q. Doctor, if I understand you correctly, the man who is afflicted with this so-called miner's consumption, it was in his system when he came there, when he started in to work in those mines?—A. It was either in his system when he came there, or the preparation of the field by lowering his resistance has allowed him to contract, or rather assimilate the germ and he is unable to throw it off. I don't like to say that it was in his system when he went there, because it is an impossibility to tell that.

Q. What have you to say, Doctor, in regard to this enormous amount of dust deposit that you found in the lungs in holding your autopsies, as to the cause of it producing consumption?—A. I would say that the dust and the irritation of the lungs prepares the field in such a manner that the minute the man comes in contact with the tubercular germ he assimilates the germ, and therefore he is a good subject for tuberculosis. I would say that tuberculosis is a disease which is generally conceded to be due to poor air, poor food, confinement, and lack of rest; it is essentially a house disease; that is, a disease that is not contracted by being out of doors in the fresh air.

Q. It is a germ disease, is it not?—A. It is a germ disease; yes, sir; but the field must be prepared for the germ; a person's resistance must be lowered.

Q. For the germ to develop, you mean?—A. For the germ, to develop and make its advances.

Senator I. A. LEIGHTON. Are there any questions that any member of the committee would like to ask the doctor?

Representative NELSON STORV, Jr. In his testimony last night Dr. McCarthy said that tuberculosis could not happen without the tubercular bacillus?

A. That is true. The name itself is taken from the bacillus. With the tubercular bacillus we would have this condition that I mentioned first. We were speaking of the miner; he works a long time in the mine; he would have a scarification of the lungs; in other words, pneumococcus; in that way if the man did not develop tuberculosis, it would be only on account of the fact that he did not have the germ in his system or he did not come in contact with it. If he picked up the germ, he would die rapidly with it. In that condition he would have an impaired breathing space and an impaired circulation and a disturbed heart. That would refer to active cases of tuberculosis. Take a man who is expectorating, and bringing the germ in his sputum, he is in a condition to spread the disease; and once in the mine or in his house—the general majority of the men in Butte rent their houses, live in a small house. They are not ventilated as they should be. A good many of them leave that house and go into another and leave an infected house. Another man will move into that house, apparently perfectly sound. He sleeps in that house, the windows are closed and the doors are closed and breathes these germs that have been expectorated on the window sills and walks, and he becomes afflicted with tuberculosis. The same thing can occur in the mine. Coming down to a question of examination, first with a tuberculin test, we would find the majority of the men up to the age of 30, they would give a positive reaction; they would be tubercular subjects; they would be liable to the germ, or would have had it some time or other in their system, although it might not be active. It would hardly be fair to exclude those men from the mines, for you would be excluding the majority of the workmen to-day. The ones in the active state should certainly be excluded; should be put in institutions and treated for tuberculosis.

Representative P. J. DURR. Doctor, what effect has hot smoke and gases on the lungs?

A. It has the same effect as the dust we have been speaking about or any other irritant. It irritates the lungs, and in that way gradually reduces the resistance of the lungs. The man is not going to breathe any more of that

smoke than he can; therefore he will not dilate all the air space of the lung, and part of the lung will become inactive, will become scarified, and those portions of the lung will leave a field for the tubercular bacillus, if he comes in contact with it.

Q. It will not kill?—A. Kill what?

Q. Smoke and gas. Will it kill, enough of it, or have they got to have this tubercular bacillus?—A. You mean will kill this tubercular bacillus?

Q. Yes.—A. No; the smoke and gas of sufficient strength to kill a tubercular bacillus will be of sufficient strength to kill the patient.

Senator I. A. LEIGHTON. Doctor, I am not sure whether I asked you this question or not. If I have not, I would like for you to explain to the committee—explain to them the condition that you found the lungs in where you have held a post-mortem or autopsies?

Representative NELSON STORX, Jr. I think that is the first question you asked him?

A. Yes; I believe I answered that. I spoke of the lung as being scarified.

Q. Dr. McCarthy spoke last night, in describing it, of some very dark spots?—

A. Well, we get dark spots in the lungs of a person, especially if the person—for that matter, who has lived in a large city, breathing the smoke and dirt of a city, you will find the lungs dark, and you will find in the lungs, and the lungs of a patient who has died of tuberculosis—it depends entirely upon the type of the lesion that you find the lung in; that is, the appearance of the lung. But this so-called miner's consumption, as I said before, you have, first, the lack of air space; the air space has been reduced and scarified until it has contracted; and we have the discoloration, the appearance of dust deposits in the lungs; we may have calcareous deposits due to the tubercular bacillus; we may have a small miliary type, which may have got in there the size of a millet seed; we may have those all over the lungs. But the main point of these cases which we get after working in the mines, the fact that the lung space is limited, contracted, and the tubercular coming on them, on the limited air space, is practically sure death, because we have a circulatory disturbance with it.

Representative NELSON STORX, Jr. Then an abundance of fresh air would mitigate against the condition to some extent, would it not?

A. To some extent; yes, sir.

Q. I asked Dr. McCarthy last night if he were in power to stamp out tuberculosis in the city of Butte, what would be the first step he would take. What would be your first step?—A. The first step to stamp out tuberculosis in Butte would be to insist upon reports to the health officer of all tubercular cases, tubercular houses in which people have died or have lived with tuberculosis; to furnish the people with an abundance of fresh air, sunshine, good food, plenty of rest, and keep the tubercular patient in such a manner that there would be no chance for the people not affected with tuberculosis coming in contact with a tubercular germ.

Q. That would necessitate more or less of a quarantine?—A. It would in a way necessitate a quarantine, but not a true quarantine; but, as I said before, the majority of the people in the United States—in fact, the majority of the white race—at some time in their lives have shown signs of it. If we started in with a perfect quarantine we would probably have to quarantine almost the whole white race. The only cases that should be handled should be the active cases of tuberculosis, those that are coughing and expectorating the germs; those are the only ones that should be handled in that manner. I believe if we started to stamp out tuberculosis in Butte we would not only have to look for fresh air but we would also have to improve their condition out of mines, and we would have to keep the active tubercular cases out of the mines and away from the others as much as possible.

Q. Your idea is, then, that a sanitarium or a hospital in which these active cases could be sent is an imperative necessity?—A. Yes, sir; that would be my idea; that we have sanitariums in which they would get the open-air treatment; that treatment has been used since 1836, first started in Switzerland, and has been a very successful treatment.

Senator I. A. LEIGHTON. Any further questions to ask the doctor?

Representative P. J. DUFFY. Has poor sanitary conditions got anything to do with the breaking down of the miner in Butte?

A. Poor sanitary conditions, taken all the way through, is practically the real cause of a man's contracting tuberculosis; poor sanitation causes tuberculosis.

Senator I. A. LEIGHTON. Do you mean to say that the insanitary conditions produced the germ?

A. No; it prepares the field for the germs.

Q. It develops the germ, in other words?—A. It prepares the field so that a man himself coming in contact with the germ can not throw it off, can not hold it in an inactive state.

Senator I. A. LEIGHTON. Any further questions to ask the witness; any member of the committee would like to ask any further questions?

(Witness excused.)

Whereupon Dr. T. J. MURRAY, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name, Doctor?—A. Dr. T. J. Murray; live in Butte.

Q. How long have you resided there?—A. I went there in 1885, and I have been practicing there ever since.

Q. 1885?—A. Yes, sir.

Q. And, Doctor, you have had considerable to do, I suppose, with this so-called miner's consumption?—A. Yes, sir. We have been treating those cases. I have been running a hospital for a great part of this time, and we are treating them—some of them—all the time. A man in general work naturally comes in contact with them.

Q. Have you ever held an autopsy on these cases?—A. Yes; I have seen autopsies performed. As I understand it, this committee is trying to investigate the conditions in Butte of the mines, and other conditions, or of the conditions that affect the miners, or people that might be diseased; is that the condition of it?

Q. It is to investigate into the sanitary conditions and the condition of ventilation that affects the health, etc., of the miners.—A. And, then, your special efforts are devoted to tuberculosis?

Q. That is what we have been doing.—A. This miner's consumption, as they call it, I think a great many of these cases are not tubercular cases at all. There is a condition there, that Dr. McGinn explained, of the lungs from injuries, such as gas and dust and things of that kind, on account of the injury. Now, when you get consumption, as we understand it, it is tuberculosis. Now, then, these other conditions outside of the infection, it is a special disease. Now, when this patient is affected with that dust, it begins to develop and breaks him down rapidly; it is a special disease, the same as diphtheria, or scarlet fever, but a diphtheria germ will not produce typhoid fever, no more than a typhoid-fever germ will produce diphtheria. Any person coming in contact with these germs—and their condition is such that they will take them up and find a field that they will grow in, the same as corn will grow in Missouri, or wheat will grow in Wisconsin, or anything of that kind. Wherever they get a good field to work in they will develop much more rapidly and grow. That makes the distinction. They are distinct germs. Now, there are a great many conditions there in Butte that predispose to this—that makes it a good field for it. We have got, apparently, a great deal of the miner's consumption, I understand, while I am taking the public term of it; but there are a great many of these men, more than usual. When I went there there were a great number of young men—young people—and these injuries from the dust did not exist so much. The miners' habits in Butte are not good in a great many instances.

Q. Kindly explain those, Doctor, for the interest of the committee.—A. I have had to talk so much to those fellows there. What I mean, they don't take care of themselves, in a certain way; they don't know how to take care of themselves. A great many of them, in the first place, they eat a great deal of very rich food; they live well; a great many of them drink enough, and that doesn't do them very much good; they don't take care of themselves; they don't bathe themselves as much as they ought to; while a great many of them are clean, they are not cleanly. A great many places in Butte—the sanitary condition outside of the mines is not good. The boarding houses and a great many of the houses in Butte have their privies close to the house; and they throw garbage out; they have open privies; there are a great many places of that kind in Butte; it is a breeding place for flies, and the flies are the greatest carriers of the disease we have got.

Q. What is the matter with your health officer over there?—A. Our health officer is a politician.

Q. The same as in Jefferson County, do you mean?—A. Oh, no; it has not been controlled; these conditions have never been controlled. They are much better than they were 25 years ago; very much better since we have got ir water in Butte and got a certain amount of sewerage; still we have a great many open privies. It can be remedied a great deal more. However, the conditions are better; quite a number of our people have families that they didn't have 25 years ago; they take better care of their children.

Now, there is one thing, in older communities where people are broken down in years, in older cities like Philadelphia and Boston, where the people are broken down and poorly fed—hard worked and poorly fed, badly housed brought into poor ventilated rooms, a great many of the children enter these houses. This class of people have tuberculosis, they have hip-joint diseases, spinal diseases and tuberculosis, peritonitis. That you don't see in the region of Butte; it is very rare that you see that. Now, these are all contributory causes that produce, or contribute, to a person that is exposed to tubercular bacillus; they may become affected. While quite a number of these miners have not the tuberculosis at all; for instance, we take a man, a man that comes into a hospital; he has a cough, a bronchial cough; he loses flesh; he does not regain his strength with a certain amount of nutrition, from his food, and we will take that man's sputum and examine it and find no tuberculosis at all, tubercular bacilla; we do that over and over again. I think the conditions outside of the mines probably contribute as much to their poor health, and may be a little more so than the mines.

Q. What is your opinion, Doctor?—A. Yes, sir. The surroundings; you take a great many of these people and they sleep in very small rooms; they are poorly ventilated, and they will use blankets on their beds—not so much now as they did—those blankets are not changed very often. They spit on the floor, the blankets become soiled and they sleep in them. That is a source of infection, that is one of the sources. And then the privies, as I spoke of before, they are another source of infection, and the natural filth around the houses is bad in all communities. I don't know whether it is worse in Butte than in other places, but it is bad there. There is one thing that I have had a theory about in the mines; that we have not been able to demonstrate yet, but I doubt very much that many of these germs will live in the copper mines, especially where there is moisture; the sulphate of copper if it don't kill these germs, it retards them, a great many of them. A few years ago there was thought to be intestinal worms brought over from the miners working in the mines of Germany. I don't think that the miners have ever been infected with them very much in Butte. I think it is owing to the copper water that these germs have passed. They will get in the mine, in the dust, it gets wet, the copper in it retards it. That has not been worked out yet, but it is being worked out, it is being developed. Now, if there is any questions that you want to ask me, I will be pleased to answer.

Senator I. A. LEIGHTON. Any question that any member of this committee would like to ask the doctor?

Representative P. J. DUFFY. The sanitary condition that you spoke of, is outside of the city of Butte, outside of the city limits, is it not?

A. Oh, no; it is right inside the city limits, it is up in that block that I live in, it has got plenty of it in. There is the old Langlois barn, there is small houses back of Langlois's barn that haven't got sewer connections, and there is not a block in town that has not got some of it in.

Q. Isn't Centerville and up that way, worse?—A. No, sir; Centerville is not very much worse because it is drained. Some of these other places are not drained.

Q. Then with poor conditions existing, which are told to exist in the mines, don't you think that helps to break down men?—A. I don't think that that is worked out clear yet. I think that where you have got poor air in the mines, that is a detriment, there is no question about it. If you have got poor air, that is poor sanitation. Now, I don't think that there is any infection that you get from the mines proper; I doubt very much if any of the germs, any disease germs, will live in the Butte mines, in a copper mine, and be active.

Q. The smell of where men have to answer nature's call in stopes, when that has been done don't that help break down the men?—A. Oh, yes; that has got to, if you have got fecal matter; that is, exposed naturally.

Q. You speak of rooms being close, and attribute that partly to the cause. In other mining camps where sheets are not known, they use blankets and comforts exclusive, why is it there is not more consumption prevalent there?—A. Well, I don't know that is the condition.

Q. In Utah, for instance, where bunk houses—rooms as large as this court-room, bunk houses—one row of men sleeping on the top of another row—you don't hear of conditions there as bad as they are in Butte, do you?—A. Then you probably don't hear. This part is demonstrated beyond a doubt; this tubercular bacillus will, when expectorated, when thrown out any place, it will dry, and the dust will carry them into the people, carry them into any room; wherever we find a field where they get nourishment they will grow. Now, the condition that you speak of, where men are huddled together in that way, in blankets, one man with consumption may infect nearly all these men. That has been demonstrated. That is demonstrated by cows and cattle, where they are crowded together in a warm barn, when they are hot, and one of them is infected, it may infect the whole herd. Now, those things are absolutely worked out, and there is no question about that as a fact. Now, you have got the same conditions that you speak about, huddling these men together on beds, and there is no sheets; but when you make that statement I don't think you are fully advised, because if you were to go down here to your hotel and find a row of beds there, and that a tubercular patient had been sleeping there, and his sputum was around the room, wouldn't you walk the streets, or would you sleep there?

Q. Sheets are unknown in the bunk houses, and you will see men from Butte—leave Butte and go down there for rest, and build up in those places.—A. Do they come back?

Q. Yes.—A. That is not the condition. If I were to run a hospital in that way in Butte the miners would go down there and burn it up, and I wouldn't blame them for doing it, either.

Q. These patients that have such as is termed miners' consumption, you can not receive all of them in your hospital?—A. No, sir; we can not.

Q. Your place is one for injured men, or for men who are hurt, or for fever or pneumonia, such diseases as that?—A. We have a contract, we haven't any contract, but we make a proposition to the miners to take them in, if they pay us a dollar a month for any diseases not arising from vicious or immoral habits; such diseases as scarlet fever, tuberculosis, and infectious disease, smallpox, some of those things the city won't allow us to take. We take care of typhoid fever. We don't let any of these others in when we can avoid it; but, for instance, a man may come in there with a fractured thigh, he has got tuberculosis, and we have got to isolate him, put him in another room; we do that, we keep him separated just as far as we can. We make it pretty broad, we take care of all that we can take care of. I don't think it is safe to put tuberculosis patients near well people.

Q. Then the poor farm is their home?—A. No; I don't think so, I don't think so.

Representative J. C. DUFFY. Do you receive patients from other vocations other than mining?

A. Oh, yes; we do general surgery and do general practice.

Q. Well, as a matter of comparison, such as teamsters, smelter men, when the smelter was running there, brickmakers, or any of the other callings, how do they compare with mining as far as this class of disease is concerned? Did you discover the disease to be as prevalent among other classes as you do among miners?—A. To answer that question intelligently, for the answer to be worth anything, we would have to keep very elaborate statistics of the miners and the others as to their callings, and, another thing about it, we have no means of examining these miners before they go to work, so that we can not tell when their disease began.

Q. Well, approximately?—A. It would be merely a guess, the answer would not be worth anything; I couldn't give you an intelligent answer.

Q. Now, teamsters attract a great deal of dust in the shoveling of these ores, as a rule, don't they?—A. Yes; and a teamster has got other things to contend with. I used to dread to see a teamster come in the hospital. As a rule they take less care of themselves than anybody else, and drink more; they are hard people to handle.

Q. In proportion to the number of teamsters employed as compared to miners, have you noticed as many cases?—A. No; I haven't any statistics, nothing that I could work on to give an intelligent answer to that question.

Q. How is it as to the smelter men?—A. Great many of those men were bothered with lung trouble on account of the gases in the smelter; a great many of the smelter men used to have pneumonia, but as far as comparing it with the tuberculosis of the miners, I don't know.

Q. Have you had many cases, Doctor, from these two callings?—A. That I would have to go to the records and find out. We make a record of a man, where he is working, and his disease. We don't take those up and find out whether so many men were smelter men, or whether so many smelter men have typhoid fever, or whether they have pneumonia, or whether they have had diphtheria, or anything of that kind. We have no record of that kind.

Q. As a matter of observation; you have no line on it at all?—A. I have no line on it.

Representative P. J. DUFFY. There is one more question I would like to ask you. Does a man who is injured with a broken limb in a mine, does that take that man longer to heal than it does from a man who is working outside?

A. Oh, no. A great many of these men are of fine physique and heal very rapidly. Another thing is peculiar about a great many of these people, we get many from the same mine with almost identically the same injuries, they are put in a room, and there may be two or three weeks' difference in the time that the bones will heal.

Representative NELSON STORY, Jr. Does this condition that you described there at first, as not being a true consumption, yield readily to treatment?

A. Oh, no; as it goes on the worse it grows. As Dr. McGinn explained to you, there is a change in the lungs; you have got an injury there from these irritants, such as the smoke and the fine dust, and it changes the whole lung tissue. Lung tissue, when it comes in contact with mucous membrane—that is the lining inside—then you have the work of blood vessels; they run out and catch the air; then you have the cellular tissue; then you have a gland tissue in there; and all this making up the lungs. Now, when you get this, you lessen the functions of these tissues; the blood vessels become contracted; the glands won't do the work; the mucous membrane won't perform its functions; it won't do the work because it is changed, it is a scarred tissue; the circulation is not proper. Now, then, we have all that condition; you have a breathing like a man with asthma; he is short of breath; he feels that he can not get enough air. That throws the work on the heart—extra work on the heart—it throws extra work on the blood vessels, and it is all changed. A great many of these men that you talk about having this miner's consumption, they are not infected at all; it is a change like old age coming on. It will come on all of us if we drink too much and don't take enough exercise in the open air and keep in good condition.

Q. You haven't any idea of the average length of a man's life after he becomes seriously affected with this condition?—A. That is altogether owing to his habits after he gets it. If you will take that man and give him certain kinds of food and a certain amount of exercise and plenty of baths and keep him clean and enough exercise to keep his blood vessels active, he will live much longer than if you overcrowd him. It doesn't make any difference whether you put him in a mine or boarding house, if the conditions are bad, if he becomes infected, it don't make any difference whether it is typhoid fever or not, he will get pneumonia; he will get diphtheria, kidney trouble; he hasn't got the resistance, the resisting forces a young man would or a healthy man would.

Q. Under favorable conditions, would a man in that state be more or less self-supporting?—A. How's that?

Q. I say, under favorable conditions, would a man in that state be more or less self-supporting?—A. Yes; at certain vocations; if he has light work to do out in the open air, with good food. Send him to the seacoast in the winter-time—warm sea air—send him to the mountains in the summer time, and give him plenty of money to spend; keep him in good humor; let him enjoy himself.

Q. Take a man in the incipient stages of consumption, will the disease yield to any treatment?—A. Yes, sir. A great many of those cases that have tubercular deposits in their lungs, it becomes insistent, and he may come around and die from some other disease—from old age, or something of that kind.

Q. What would be your idea of a State sanitarium to take care of those men?—A. There are a great many factors connected with a State institution. The great difficulty with a State institution is to get men to go to it. That is the first thing to contend with. In the first place, you would have to get a sanitarium that would be attractive; and, in the next place, you have to have a sanitarium big enough to keep these men far enough apart that they would not infect each other. It is a very difficult matter, especially with the old people, it doesn't make any difference whether they are miners or what they are, to get them to quit their habits and get them to leave their families and friends. It

is a very serious proposition. If they get homesick, they are the most miserable creatures you can find.

Q. Then a man's mind is one of the principal factors as to his improvement?—
A. I don't think that the mind controls his physical condition, but it is a factor. It would be very difficult for a man to believe he was comfortable if he had to stand with his feet in a bucket of ice water.

There is a great deal of the conditions in Butte that can be bettered, and, as I understand from the owners of the properties and the people who have control of them, they are trying to work that out. They are trying to work out the sanitary conditions and ventilation conditions. The sanitary conditions in Butte, certainly a great many of them can be remedied on the surface; and from what they say about the mines some of them can be remedied, and they are doing it. They are a great deal better now than they were 10 years ago, or 5; 25 years ago we had no hospitals. We have a pathological laboratory, and that is rather an expensive thing; and those are the things where a great many of these things can be worked out; that is a big expense. When I practiced medicine a pathological laboratory was hardly known; that was 30 years ago; and still to-day we can not get along without it; you can not run a hospital successfully—a good hospital—without it. It is a necessary equipment of it—as much so as the instruments or anything else. It is necessary in diagnosis. With that you can take and find out a great many things about the mines. For instance, about these germs, to know whether they will live in this copper water. You will remember that when we had water in Butte that there was a great deal of odor to it, and we didn't know what to do with it. Mr. Carroll worked it out; he took copper in sacks, brought it down in his reservoir at Basin, and that water was purified. There is no question but that a great many of these germs will not live in copper water.

Senator C. P. TOOLEY. Do the mine owners render your hospital moral support?

A. Oh, yes.

Q. They are interested in the welfare of their employees?—A. Yes, sir; not only that, but they are doing a great many things to make it better all the time—both of the hospitals, not only one. For instance, I was down in one of their coal mines; I was with one of the officials of the coal mines, and there is a town above the other there, and there was a defect in the sewerage from the upper town. When he found out the conditions he went to work at it, and has been working at it ever since, but he run up against a politician who was the health officer, and he has got to wait.

Senator C. P. TOOLEY. That is beyond the scope of our investigation.

Dr. T. J. MURRAY. I thought this committee could come pretty near regulating anything; I was in hopes so.

Representative P. J. DUFFY. What is your opinion—how do these flies get in certain portions of the mine?

A. That I don't know anything about. What kind of flies are they?

Q. It is generally understood from the miners that they breed from the insanitary conditions; for instance, a man's deposit in the stope.—A. They have horses and mules in the mines; flies breed a great deal, I don't know what the condition is you speak of, but flies breed a great deal from horse manure; that is where their eggs are deposited and hatched, and it is a great source of their breeding.

Q. Using a miner's phrase, they are commonly known as shit flies?—A. That might apply to horse manure.

Q. It is not very convenient for the horses to get up in these stopes?—A. If there is fecal matter around in the mines, why, it is dangerous.

Senator C. P. TOOLEY. Do you make frequent trips through the mines?

A. No, I don't make frequent trips; I go through occasionally.

Q. Have you ever seen any such flies?—A. No, I never seen the flies; I never seen the flies in the mines.

Senator J. C. McCARTHY. Do you think that the decaying timber would breed flies?

A. I don't know about that. They couldn't breed those flies there anywhere without they got their eggs deposited in there somewhere.

Representative P. J. DUFFY. Isn't it generally in these places where a man has responded to a call of nature?

A. I think it might be there, but that is something I don't know about.

Q. And it is contended on the part of the majority of the miners that they are injurious to health?—A. I think flies are injurious to health anywhere;

they carry more disease than anything else. You see, they light everywhere, they fly around these houses where they have open privies, or where they have a case of typhoid fever, and they will throw their excrement out, the flies light on it, carry it right back, and carry it right to another house. They carry typhoid; they carry diphtheria; they carry nearly everything. Of course there are other means by which it can be carried.

Senator I. A. LEIGHTON. You stated that you went down the mines occasionally—that is, once in a while?

A. Yes, sir.

Q. How recent has been your last visit?—A. It has been a year since I was down there; I have not been down in a mine for a year.

Q. What did you notice at that time as to the sanitary conditions, whether they had improved or otherwise?—A. That I don't know, because they would probably take me down in a place that was not very bad; I would go through and see some of the ore and hear these men talk about it, and see how they were doing the work, and see the size of the stope.

Q. They don't have near as many cases of pneumonia in Butte as they used to?—A. No; not near so much.

Q. What do you understand the reason of that is? Is it the improvement of the general conditions?—A. I think the sanitary conditions are better. When we had our great amount of pneumonia there it was about 15 or 16 years ago—we had the grippé—it was the year we had a great deal of grippé, and quite a number of the miners that were sick caught pneumonia; then they would go out on the flat to these funerals, and it was owing to the exposure of these parties; at the same time we had fumes from the smelter. We have less pneumonia and have less typhoid fever now.

Q. And, Doctor, is it your opinion that if the sanitary conditions or the insanitary conditions of the city, aside from the mines, was looked after that it would lessen the number of tubercular cases that they now have?—A. I think that it will lessen all the diseases that we have, especially typhoid fever, and it will lessen any infectious diseases; it will lessen a great deal of it. You can understand that if a case of smallpox is reported everybody is afraid of it, and they want to get away from it as soon as they can, but they pay very little attention to a case of typhoid fever, and that is much more dangerous, a great deal more dangerous, than the smallpox. We had last spring, I think it was six or eight cases of typhoid fever from one boarding house, and upon investigation all we could find was a filthy boarding house.

Q. Filthy boarding house?—A. That was all; threw the slops right out the door and let them lay there.

Q. I presume that was reported to the health officer?—A. Yes; we reported it.

Q. That is all the good it did?—A. We reported it.

Q. He is a politician, you say?—A. (No answer.)

(Witness excused.)

Senator I. A. LEIGHTON. I will ask the State mining inspector to take the stand.

Whereupon WILLIAM WALSH, a witness called and sworn, testified as follows:

By Senator I. A. LEIGHTON:

Q. Your name?—A. William Walsh.

Q. Where do you reside?—A. Helena.

Q. What is your occupation?—A. State mine inspector.

Q. How long have you filled that position?—A. Six years; will be six years the 4th of March.

Q. I don't know that I have any questions that I care to ask the mine inspector. I will turn him over to the committee.

Senator C. P. TOOLEY. He might in a general way state the conditions in Butte.

Senator I. A. LEIGHTON. Yes; he might state.

Senator C. P. TOOLEY. In story form.

Senator I. A. LEIGHTON. You may go on, Mr. Walsh, if you have any information that you can give the committee; the general conditions in Butte; the general conditions in Butte.

Representative J. C. DUFFY. I would say in connection with that, any recommendations to the committee as well.

Mr. WALSH. I will state that there are conditions in some of the mines in Butte that have been noticeably improved in the last two or three years, while there are conditions in other mines that are worse than they were five or six years ago. That is in regards to ventilation and sanitation. There are a great many of the mines that have installed mechanical means to assist the natural means of ventilation. That is, by installing electric fans, and opening up several air courses, in order that the air may be taken into portions of stopes that they are operating in. There are a great many of the mines that still stick with the natural means of ventilation. In the first place, they have not got the proper openings to create the amount of air required into the mine to supply the different portions of the mine where men are at work. And my idea to overcome certain parts of the conditions would be to open up larger air courses and carry them to the extreme bottom level of the mine, keep the air as low as the working portion of the mine, and distribute it from there, or distribute to any level that they would need it by the use of air doors, and stoppings of any kind, that they may place in drifts or openings of any kind on the regular course of the air. In the mines in Butte several of them have adopted the system of fans and stoppings and doors and levels to systematize the air, and keep it in motion. The conditions have been improved.

Senator J. C. McCARTHY. Have you, in your official capacity as mine inspector, ever received any complaint from the Butte miners' union as to bad conditions in Butte?

A. Not officially; no, sir.

Q. Have you received any complaint from individuals, any written complaint?—A. Written complaints—no, sir.

Q. Under the law are you required to keep written complaints as secret in the office?—A. I keep them on file if I receive them.

Q. Does the law specifically provide that provision?—A. It does; yes, sir.

Q. Then any miner in Butte making a complaint to you, he would have the assurance that his complaint would be a secret to the office?—A. Yes, sir.

Q. What authority have you to enforce any better regulations in the Butte mines?—A. I have not had any under the law.

Q. Have you made any recommendations to the Butte mine owners as to how their properties could be bettered?—A. I have, every time I made an inspection. I have always recommended and suggested some of them. Some of them have been carried out. I remember five years ago, I believe it was, or five years ago last spring on my visit to the Gray Rock there. I believe that was the worst mine I ever came in contact with in the Butte district at that time, and I suggested several changes and recommendations to the foreman, who was Mr. Emerson at that time. I found men working in places that reached above ninety, between ninety and one hundred, and where a candle would not burn and hold it in a standing position; in order that the light might burn you would have to turn it on the side, so that the grease or tallow from the candle would run on the wick and cause the flame to burn, and I recommended to him that a certain crosscut be driven a certain distance where an air course could be tapped. And from there the air could cause a circulation; it would cause a circulation from the lower portion of the mine on what we termed the still floor; take the air from the air course up through this stope and out through this crosscut, and strike the main air course to surface, and the air would always be in motion; he didn't do that, and I made a trip to that same particular mine, I think it was five months later, and I still insisted that he make those changes. It was a very short time after I made the second inspection he was fired, or at least—

Q. Resigned, maybe?—A. He resigned and a man by the name of William Daly got his place. I made a tour of inspection with Daly, and we came to the conclusion that the best method and course to pursue—I laid down my idea and he laid down his idea—so we came to the conclusion and he worked it out, and some nine months from that day the superintendent told me that they were extracting ore from the Gray Rock mine 35 cents cheaper a ton than they could under Emerson's time. I said: "What has brought about the change?" He said: "The ventilation that Daly had brought to the portion of the stope where men couldn't work."

Q. How many tons of ore per day do they hoist from the Gray Rock?—A. Oh, it is not a very large property; I believe seven or eight hundred tons in 24 hours; something like that.

Q. That would mean a saving of \$250 a day then?—A. And after driving this crosscut north it tapped what we call the Corra mine. Then to connect—to ventilate the lower portion of the mine—we tapped several raises, made con-

nections from one level to another in order that the air might circulate. He placed a fan on this Corra shaft, which assisted the natural means of ventilation and caused a suction, and there is not—I don't know that there is a place in that mine to-day that a man could kick to work in; I don't know of any. While there are some places that are a little warm, it is an utter impossibility to make every portion of a metalliferous mine as men would want it.

Q. Through visits of inspection to the Butte mines do you carry a thermometer?—A. Well, not very often; I have at times.

Q. Do you know if the fans that are now installed in the Butte mines are placed on main air courses where they can get an abundance of fresh air?—A. Well, mostly all of them.

Q. In which of the mines did you notice the conditions had improved? Can you give the names?—A. Well, the Gray Rock; the Original has improved a great deal the last six months or a year; the East and West Colusias and the Leonard, and also the Pennsylvania; and the Diamond has improved somewhat.

Q. In which of the mines have the conditions grown worse?—A. Well, I believe there are—I found conditions in the Mountain Con mine, while I couldn't say that they are worse, but they are as bad as they were.

Q. In other words, the conditions have not improved?—A. Have not improved; no, sir.

Q. How about the North Butte property?—A. Well, that is a property that has not improved. In some portions of it air has improved a little in the last year. I believe since there has been several air courses tapped it has improved a little; it has improved conditions close to the air course, but you get off the air course and conditions are practically the same.

Q. I have not been able to read your report; I have not had the time. In your report to the governor do you mention any specific instances of where improvements could be made in any particular mine, or do you simply dwell on general conditions?—A. I report on general conditions. I never report the conditions of any particular mine.

Q. Well, would the same recommendation govern in all cases in the Butte mines?—A. The same conditions—

Q. Recommendations, the same recommendations; in other words, would a general recommendation touch every particular property where men are employed at the present time?—A. Well, yes; in a way it would.

Q. Have you any suggestions to offer as to the bettering of conditions in the Butte properties as to ventilation and sanitation?—A. Well, now as to the matter of sanitation, that is one of the easiest and simplest things that I know of. To better the sanitary conditions the solution is to take the offals—which I don't think it would take any great argument to satisfy any reasonable man—where there are seven or eight hundred men underground every day in the year, more or less, and nature's calls are all deposited below, and where there are a certain amount of decayed timbers, causing heat, and the heat and the oxidation in the mineral in the ground itself, which causes heat, and all this mixture—I believe that is all that it is necessary to state that something should be done in a sanitary way. You take, for instance, in comparison—you take a little band of soldiers, put them out here on the plain where they have the canopy of heaven to carry off everything, and let them do as the miners do underground—pass it off anywhere they happen to light, and do that around their camp and camp there for five months, what would be the condition of that camp?

Q. That is not exactly a parallel case.—A. That is just a comparison I drew.

Q. Because such a camp as you have described is not being covered over all the time, such as the stopes are in Butte. The surface where those obnoxious deposits are placed are not being covered over like those stopes are in Butte.—A. Well, the solution of the sanitary question, in my opinion, the only solution is the sanitary car, which can be built—there is not a mine in Butte that I know of that has not trucks of cars that are still strong enough to be replaced for that purpose. Take the old mine car, line the old box—that is, the bottom of the car—with a heavy sheet iron or light steel, make it air tight; make a regular privy cover on that that will clasp tight; two stools on there where two men can approach the car at once, at one time together; put lids on them just the same way as you would have them in any of your toilets, only have it iron, so that when it goes down it will strike on a rubber band, the suction will hold it tight. This mine car, when the time comes to run to the surface, they could go right out on the track and on the cage, taken to surface, and a hose turned in; it can be cleaned and disinfected in that way. All they have to

do is to throw a small portion of chloride of lime in them and seal them up. Put one on each level in every mine; it will settle the sanitary condition to some extent.

Q. I would like to ask you how many times you visited the Butte mines per year, or your deputy?—A. Well, I make a trip every year; some of the time twice a year. How many trips my deputy makes—he is called pretty often in places.

Q. Are you compelled to make regular examinations at stated periods?—A. Yes, sir.

Q. In all the working places in the mine?—A. All the working places.

Q. That is an annual inspection?—A. Yes, sir.

Q. And in all that time that you have been the mine inspector you have received no written complaint from any member of the Butte miners' union?—A. No, sir; to the best of my recollection I never have.

Q. Just simply verbal complaints is all that you have received?—A. Oh, just meeting the miners when I would go to Butte, or they might just have a conversation, one or two together, something like that, and make some remark of how a certain stope in a certain mine or conditions in this mine or that mine, generally in an off-hand way.

Q. If written complaints had been made to you would you feel compelled to examine the places where the complaint was made—would you feel in duty bound to inspect it?—A. Well, other than sanitation or ventilation, yes. But for those two particular things a second inspection I never thought was required, because I didn't have any authority under the law to enforce anything; the law does not touch on that; there is nothing governing sanitation or ventilation at all.

Senator C. P. TOOLEY. What is the law specific on, Mr. Walsh?

A. Well, the safety of mines, timbering, and escapes—general safety of the miners.

Senator I. A. LEIGHTON. From accident, do you mean?

A. From accidents—general safety.

Q. And it does not touch upon sanitation or ventilation?—A. No, sir.

Q. Then, if written complaint should have come in from the miners' union to you you would have no power under the law to correct these conditions?—A. Other than I suggested, if the management would say the conditions were not as represented, or were fairly good, why, my authority ceases.

Q. And did I understand you to say that it would not be your duty to investigate those matters, if a written complaint had come in pertaining to sanitation and ventilation? In other words, it is not a part of your duties to look after that part?—A. It is my duty, to a certain extent; but to force anyone to remedy it, why, I don't know that I could do it. I didn't have the authority under the law.

Q. Well, why would it be your duty, if you are not clothed with authority to correct?—A. Well, we do a great deal by suggesting governing things that the law does not touch on in a general way. Of course, if I can see in any particular mine where the lives of the men are endangered or can prove that the health of the miners is jeopardized in any way, why, I believe I have got a certain amount of authority, while it is not specific in the law.

Representative NELSON STORV, Jr. What changes would you suggest in the law at present to make your office as effective as it ought to be?

A. I would ask that a law be enacted governing ventilation and sanitation to some extent—lay down some rules governing the conditions.

Q. Could you, with your experience, give this committee intelligent lines upon which to draft some legislation—some proposed legislation?—A. Well, I could give them an idea—set forth an idea—that would better conditions.

Q. And would you suggest any effective way of putting it in operation?—A. Well, the same conditions don't exist in all mines. A remedy that will better the conditions in one mine may not be effective in another. Some mines you can bring to a fairly good condition—bring about a fairly good condition in regard to ventilation by natural ventilation, but others would have to be assisted by mechanical means in order to better the condition. It is a great deal more difficult to ventilate metalliferous mines than it is coal mines.

Q. But you think a general law could be drafted that would help cover most of the cases?—A. Well, a general law might be drafted that would help remedy the conditions.

Q. And if its enforcement was left largely to the discretion of the mine inspector and he was empowered to see that it was put in force, do you think

that conditions could be vastly improved?—A. Well, any law that is enacted governing the conditions in a mine is left entirely to the discretion of the mine inspector. He is the only man in the world that would have the authority to enforce.

Representative NELSON STORY, Jr. Well, that was my idea.

Senator J. C. McCARTHY. Can you state, Mr. Walsh, from your knowledge whether or not conditions have improved during your term of office in the Butte mines?

A. Well, as I say, in some of them; in some of them they have not.

Q. I mean speaking as a whole.—A. Well, in a great many of the mines the conditions are noticeably improved in places, while in several of those mines where the conditions in part of the mine have been improved, there are portions of the mine still remaining in the same condition—bad.

Representative J. C. DUFFY. Do you consider mining as carried on in Butte, in hot places, as a healthy occupation?

A. Well, I wouldn't say that it is.

Q. Do you believe that the longer number of hours that a man works in those places the more injurious 't is to his health?—A. Well, he would be better off not to have to work in them at all.

Q. Do you believe that a shorter day would improve the conditions any?—A. Shorter day in the bad places?

Q. Yes; as far as the miner is concerned?—A. Yes; I believe it would.

Q. How long did it take you, Mr. Walsh, to go through all the Butte properties—make a general inspection, I mean, from top to bottom, and go over the workings?—A. Well, a man not losing any time, it would take him close to two months. He would have to put in eight hours a day, at that. I inspected the North Butte property last April; I put in four days in that one mine, and I went down with the men and came up with the men.

Senator C. P. TOOLEY. Did the committee get a fairly good idea of the condition?

A. Where, in Butte?

Q. Yes.—A. Well, as far as they went, I expect.

Q. Well, they traveled pretty well for two days there?—A. Well, they did for amateurs.

Senator I. A. LEIGHTON. The mining inspector was with us all the time.

Senator J. C. McCARTHY. If there are no further questions, I move you, Mr. Chairman, we adjourn.

Representative P. J. DUFFY. I might ask one question: When are we going to meet again? We want to get together; I think the chairman ought to designate some time. I understand we are through with all the witnesses.

Senator C. P. TOOLEY. As a substitute to Senator McCarthy's motion, I move that all witnesses be discharged and the secretary make a record of their mileage and per diem, and a bill appropriating money to pay all expenses of this hearing be presented.

(Whereupon the motion, having been duly seconded, was unanimously carried.)

The SECRETARY. I would like to ask under what capacity would I put in items, just like the mining inspector, for instance?

Senator I. A. LEIGHTON. You can go to the sergeant at arms and find out what time they were subpoenaed and allow them from that time until they were discharged.

Senator J. C. McCARTHY. I think those questions are determined by statute; just simply turn in the number of days and the number of miles.

Senator C. P. TOOLEY. The attorney general's office will supply all that information.

Senator I. A. LEIGHTON. Gentlemen, on behalf of the committee we thank you for your attention, having taken you from your business, which I know is quite a hardship to come here and give testimony before this committee. Most of your testimony has been very instructive indeed, and it will probably lead to some means whereby the committee will try and give you the proper relief. We hope so, at least.

Senator J. C. McCARTHY. I move that we adjourn subject to the call of the chairman.

(Whereupon the motion, being duly seconded, was unanimously carried.)

FEBRUARY 8, 1911.

Pursuant to the call of the chairman of the joint committee the committee met at the courthouse at Helena, Mont., on February 8, 1911, at 7.30 o'clock p. m., the following members being present:

Senators I. A. Leighton (chairman), W. E. Christopher, and J. C. McCarthy. The following representatives were also present: Representatives P. J. Duffy, Nelson Story, jr., O. N. Byrnes, and J. C. Duffy.

The meeting having been called to order, Senator J. C. McCarthy asked as to whether or not there was any business before the committee.

Senator I. A. LEIGHTON, Gentlemen of the committee, while the other evening, when we adjourned, it was practically understood that we were about through with the testimony, personally I feel, and one or two others of the committee, that we would like to have Mr. Orem take the witness stand, and if the balance of the committee haven't any objection, I will put him on the stand—that is, if you would like to hear him.

Representative J. C. DUFFY. I would like to hear from Mr. Orem; have him give a general outline.

Representative P. J. DUFFY. Mr. Orem knows more about the mines in Butte than any other man that has been up here yet.

Whereupon W. B. OREM was called and sworn as a witness and testified as follows:

By Senator I. A. LEIGHTON:

Q. Where do you reside?—A. Butte, Mont.

Q. How long have you resided there?—A. About 16 years this last time.

Q. What is your occupation?—A. Deputy State mining inspector.

Q. In your official capacity you have had something to do with reference to the various mines in Butte?—A. Yes, sir.

Q. Mr. Orem, in the shafts that are sunk here for air purposes, I would like for you to state to the committee in reference to them, or whatever you think would be of interest to the committee.—A. Well, there have been various air shafts sunk there; take the Leonard for a starter—I mean the Rarus. Some years ago the Rarus was supposed to be one of the hottest mines in Butte.

Q. The Rarus?—A. The Rarus. It belongs to the Anaconda Co.; that is, it belongs to the Red Metal Co., but it is all the Anaconda Co. When Mr. Walsh and I first went into office this was considered a very warm mine; but within the last three or four years they have sunk a four-compartment shaft on the west end of the ground 1,600 feet deep. They installed a very large fan on top; I think it had a capacity of 140,000 cubic feet of air a minute. At the present time there is not much work going on in the Rarus mine, the Rarus ground; but this shaft is used to ventilate from the Tramway to the crosscut and raised from the bottom levels. They also have a fan on the 1,300 of the Tramway. That has a capacity of, I should judge, thirty or forty thousand cubic feet of air a minute; they also have a fan on the 1,700 of the Tramway with a capacity of about 70,000 cubic feet of air a minute. This air is conveyed through the lower workings of the Tramway mine. There is a raise connected with this crosscut that goes over to this air shaft; it is used to ventilate the two mines.

Now, the Leonard mine, they sunk a new four-compartment shaft within the last three or four years; it is down to the 1,800-foot level now. It has benefited the mine a great deal in the matter of ventilation, being a strong, downcast shaft, and they have also sunk two air shafts on the west end of that mine. They are down to the 1,000-foot level, and it is right on top of their first district; but they have raises going up through—connected to those two air courses—air shafts. Both air shafts are equipped with fans. Within the last year the old Original shaft—which was 1,200 feet deep—they have sunk and raised that shaft now until it is a three-compartment shaft 1,600 feet deep, with a fan on there, I should judge they would have fifty to sixty thousand cubic feet of air a minute, and they intend to raise from the 1,800 up to that 1,600 shaft, which will make a connection clear to the bottom of their mine. They are also sinking an air shaft west of the East Calusa, which is going to be sunk, I should judge, to the 1,800 level, or the bottom. The intention of the company is to equip the top of this shaft with a very large suction fan. The way the conditions are now they have a strong downcast shaft pulling air into this mine, and that is not outlet enough, and the idea of

the management is to get that shaft down to connect those two air shafts and have a suction fan drawing out and giving a circulation from the two downcast shafts.

The Pennsylvania mine was a rather warm mine when we first went into office, and all through our administration we have been recommending air shafts, getting down as near the bottom as they could with the working shaft, so that they would have air connection with the bottom.

Q. What do you mean by "we"?—A. The mine inspector and myself. They have a raise. They have a new shaft known as their air shaft; it is 1,200 feet deep. They have a large fan at the bottom of that—you remember when you were in there. They are also going to raise that shaft to the bottom to connect with their eighteen hundred, but they have raises now connecting the lower level separate from the one they are now raising, which has cooled the mine off comparatively.

Take the Speculator, now—or the North Butte. The North Butte has been a rather warm mine on account of not having air shafts down to help ventilate the mine, but within the last year they sunk the Granite Mountain shaft. It is down to the 1,800-foot level now. They sunk and raised 1,250 feet last year, and they intend raising this down to the bottom. They have also made connections with the Badger on the eighteen hundred and fourteen hundred—you remember that is where we got that current of air in there when we were down in the bottom levels—which has helped this mine considerably. I recommended to Mr. Pope, the superintendent, a short time ago—their main shaft is a downcast shaft, and this Granite Mountain, this new shaft that they have sunk and raised to the eighteen hundred, is an upcast shaft—I recommended that they should put a fan on that to help draw out the hot air, and that is the intention of the company to put it on there. But they are going to raise out another compartment and make it three compartments.

Take the Gagnon: The Gagnon main shaft used to be an upcast, but they put a fan on it and reversed it, making the suction downward, and they have it connected with their air raise that they have up on the west end of their ground there. They have kept pretty well down to the bottom; I think it is down to the twenty-two hundred now, but within the last two years they sunk a three-compartment shaft on the west end of the ground; it is down 1,520 feet now, and they soon will have their air connection down there, so that this air will go down through the bottom of the mine. The intention of the company is to sink clear to the bottom, and it will be their main hoisting shaft.

The West Stewart mine: It was a strong downcast shaft, and they had a shaft on the east end of the ground there that was closed up, so Mr. Walsh and I recommended that they should retimber that shaft, and use it as an air shaft. Well, they retimbered it down to the twelve hundred, and it was doing a great deal of benefit to the mine, but through Clark's management—he was very slow in putting up raises, and such like, so the development was always ahead of the air shaft; the consequences were that they did not get the results that they should have. At the present time that has become the property of the Anaconda Co., and the Original, too, and they are putting raises up there to connect with that shaft, which will be a great benefit, too, in regard to ventilation, because it will help—the main shaft is a downcast shaft—it will help take out all the warm air that is down there. The Original has also been a very warm mine from the lack of proper management during the time that Clark had it, but now, since the Anaconda Co. has got it they can connect with the Gagnon and they will get a great deal of that air that is going to come in from the Gagnon on the west, and it will be only a short time, I think, until the conditions in that mine are greatly improved.

Take the Diamond mine: The Diamond mine has also been a rather warm mine on account of the general condition there—the ore is scattered and a long ways apart; but after they became the owners of the Corra property that shaft was closed, and through the recommendation of Mr. Walsh and myself they retimbered part of it and opened it up to the twenty-two hundred, and this connected over with the Diamond shaft, and is doing a great deal in the matter of ventilation in the Diamond mine. They also sunk and raised the Parnell shaft, down where they got their main ore body, that is connected down to the eighteen hundred now; they also have a fan installed on the top of this shaft pulling out, and it has done a great deal for the mine. That has been done within the last two years, and the Parnell within the last three years.

The East Grey Rock, why, I don't know but what it was the warmest mine in Butte when we went into office. I don't think there is a question about it.

The West Grey Rock at the time that we took office was in the hands of leasers, but fortunately they developed some pretty rich ore bodies in there, and after the lease expired from those leasers Mr. Walsh and I recommended that they should sink this West Grey Rock shaft down to the eleven hundred to connect with the East Grey Rock shaft. This was done, and raises put up from the bottom of this shaft down to their sixteen hundred, and the condition there changed wonderfully. I suppose it is one of the best ventilated mines in Butte to-day.

The Mountain View mine: The Mountain View mine also was warm in portions of it, it having very extensive ore bodies. This mine was worked, I should judge, from the two hundred to the bottom on every level. They have also sunk and raised an air shaft down to the eighteen hundred; it is connected to the bottom of the mine; that has been done within the last three or four years. They sunk 800 feet this year. (You remember when we went from the Mountain View to the Leonard.) I should judge down in the bottom before that connection was made to the Leonard and the air shaft, that it was 85 and 90. I don't believe I ever was in a hotter place than I was in there, but it is cool now.

The Tuolumne, of course, is a cool mine, but they have also put an air raise from the sixteen hundred to surface. I think that takes in pretty nearly all of them. There has been a vast amount of money spent in the last four or five years in the matter of ventilation. When we took this office they had no air shafts, practically; they have all been started since. Oh, yes; there is the St. Lawrence.

Representative J. C. DUFFY. What about the conditions in the Anaconda, in the matter of suppressing the first?

A. It has been necessary there to sink several air shafts in order to take out the fumes and gases in those mines. They have got the Mollie Murphy down to the fourteen hundred; the Sweet Metcalf shaft is connected down—that is, in the southern portion of the St. Lawrence mine, southern end; that is where they get their main supply of air, that is connected down through all the workings in the mine at the present time, and during the recent fire that they had in the Anaconda the main shaft has filled up, which was 2,400 feet deep, and they are now engaged in retimbering it and cleaning it out to the bottom. They have retimbered something like 1,300 feet in the last year or so. I think that is about all the air shafts that I remember of. I ought to have a list.

I actually believe that they have done almost everything within reason that they could do, and my idea about this matter of ventilation is that these air shafts should be kept down with the working shafts, and should be sunk in solid ground, away from all mine workings, where crosscuts could be closed with a door, so that it would be easy to convey air to different parts of the mine. If those connections are kept at any reasonable depth of the working shaft—that is, the air shafts are kept within any reasonable depth of the working shafts—you have got a circulation that you can not get any other way; fans are no good if you have not got any circulation; you have got to have some place to draw air from to make a fan do any good at all. If you have got a downcast shaft—they are beginning to experiment a great deal on that—they use a fan at the bottom of their shafts, see, on their downcast, and in the upcast a fan is put on top to pull out.

Another thing people have got to take into consideration is that those mines within the last year or so have had several bad fires. In the Leonard mine, practically a new fire from the twelve hundred down; they lost all their stopes above that from fire, and, consequently, it has been warmer and has made the mine warmer than it would have been if they had not had that fire. I think Mitchell told me the last time I was down there that they had 125 concrete bulkheads and have got the fire fenced off. I think they are doing nearly everything that they can.

Senator I. A. LEIGHTON. From your testimony I would say that many of the air shafts have been sunk through the recommendation of the office of the State mining inspectors?

A. Yes; and through our working with the company. We have always recommended those air shafts.

Q. And the company willingly responded to your recommendations?—A. Within the last few years they have taken a great interest in it, because the mines became warm, and they wouldn't get the results without having the air down there. I also recommended those sanitary cars to be installed in all working levels.

Q. In all working levels?—A. In all working levels; and Mr. Dunshee told me that they had ordered cars for that purpose and were going to install them in all their mines.

Q. Mr. who?—A. Dunshee; he is assistant superintendent under Gillie. I believe those are all the air shafts that I can remember now.

Senator I. A. LEIGHTON. Any one of the committee would like to ask any questions?

Representative P. J. DUFFY. Mr. Orem, in most of the mines in Butte they are working from the two hundred to bottom, are they not, or the three hundred?

A. Well, some are, Pat, and some are not. Of course, take a mine like the Original, and those—the Original mine is worked out to the nineteen hundred level.

Q. There is raises through to every level in all these mines. Is there?—A. Most of them; there is one or two raises through nearly in all of them.

Q. Do these raises extend to the surface?—A. Yes, sir.

Q. And it is very little they have to sink in order to connect with these raises, which is a very cheap way of getting air carried through?—A. Well, yes; I would say that in some cases you might do that, but where you are working a mine down to the nineteen or eighteen hundred foot level, or twelve hundred, or in places like that, if you have got one raise through to surface, it is not so bad; it would be impossible to put every raise through to surface.

Q. No; we do not want every raise to the surface; but you have got to have a main air course?—A. Yes; that is what it is supposed to be; that is what I am recommending these air shafts for, so that they will have two separate air courses.

Q. One is the intake and the other is the outlet?—A. That is an intake and the other an outlet.

Q. Is that it?—A. Yes; that is the idea, exactly.

Q. Most of these air courses have chippy engines on, and fans also to get the air down, do they not?—A. Some have and some have not. That Rarus shaft has no chippy on it at all; the Gambetta No. 1 and No. 2 of the Leonard has no chippy on it at all.

Q. Where these air courses are in mines with chippy engines on them already, are they not a saving to the company, because they are practically in the center of their mine, where most men are employed?—A. Well, they are a great saving to a company. But supposing you have a three-compartment shaft, like they are sinking on the Gagnon; you practically have two compartments open; then if you have got two compartments open and an engine working on it, you have got two compartments—

Q. Free for air?—A. Yes; and they never sink a shaft unless they have two compartments.

Q. This shaft you speak of on the Gagnon, do they not intend to use for their main working shaft?—A. Yes; that will be the main working shaft, and they can use the Gagnon shaft—

Q. For an air course?—A. You see there is practically two shafts there. There is the Original and Gagnon right together; chances are they will make an upcast with the Original when they connect with this west end.

Q. How deep would they have to sink—what is the top level of the Mountain Con mine at the present time where men are employed extracting ore?—A. They are working on the three hundred of the Mountain Con.

Q. What is their lowest level?—A. Twenty-two hundred.

Q. Are mines through from the twenty-two hundred to the three hundred?—A. Yes, not necessarily; they are not, because they are connected to other shafts in there.

Q. How far would they have to raise or sink from the top level of the present workings of the Mountain Con to reach surface?—A. From the top level of the Mountain Con?

Q. Yes.—A. Well, Pat, they don't need that, I will tell you why. They are connected to two or three different shafts on the 200, and that air goes right down through the stope.

Q. In the bottom level?—A. You said from the top level.

Q. I want to get you to the bottom from the top level of the Mountain Con. How far would they have to raise, or is there any raises through to the sixteen or eighteen hundred?—A. Yes; I believe there is. I think I started at the two hundred, if I remember, and went down, I wouldn't say positively, to the seven or eight hundred foot level. Then they are connected with the

Buffalo, and they are also connected with the Little Mina on the thousand, and all that air comes in through there.

Q. There is no fan on this property at all at the present time?—A. I will tell you; let me explain that before we go any further. There was a fan on the top of the Green Mountain until this fire broke out over on the High Ore and they moved this fan from there to put on the Modoc shaft. That High Ore mine until this recent fire was supposed to be one of the coolest large mines in the Butte district. They have sunk the Modoc shaft within the last three years 1,200 feet; it is down to the 1,800-foot level now. That also connects with the Ballaklava, which has a strong downcast shaft; this air was conveyed through raises down to the two thousand. They have also got raises now starting from the twenty-two hundred and twenty-four hundred to connect up there until this fire broke out, but it is all bulkheaded off at the present time, and no telling how long it will be before they will be able to work in there. Of all air shafts that I have ever recommended, it has always been our intention to have those air shafts for that purpose and nothing else. But after taking the thing under consideration, if a shaft is a three-compartment shaft, if you have got two compartments for air it is going to give you quite a supply. In most of those places where they run chippies they use it mostly for lowering timbers into the stope. Of course, no mining inspector has got authority to tell them what they can do after they sink those shafts; they use them to suit themselves. Every time that a shaft has been sunk and kept at a reasonable working depth, it has benefited the mine, because it has given a circulation that you could get no other way. I guess that is about all unless you fellows want to ask me something.

Q. That was my idea in asking you this question, to show that it was a benefit to the company to keep the place ventilated in the working places where men were employed.—A. Yes; it is a benefit to them; it is not detrimental.

Q. I want to convey this idea. That when their air shafts are sunk, in the majority of cases, it has been around in the main workings so that the company could use them for other purposes besides air.—A. Oh, yes; they are a great benefit, there is no question about that.

Q. Do you know of any mine in Butte which they had to sink exclusively for air, that they could not use that shaft for another purpose?—A. Well, there are shafts that they are not using for any other purpose but air, but they could be used at any other time for other purposes; at the present time they are using them for nothing else than air.

Q. The Mountain View shaft which is stated was working at the present time while they were repairing their engine and shaft, they are using that air course and hoisting ore and working men while they are making the repairs, are they not?—A. Yes, sir.

Q. It has been a benefit, then, to the company as well as to the men?—A. Oh, yes; there is no question about that.

Q. Do you think that company could make an improvement on their present air courses?—A. Well, I would say this, that within the last two years they have taken a great interest—the last four years—in regard to their air courses, because the mines were getting warm and it became necessary that they should do those things.

Q. Men have been able to do a great deal more with good air than with poor air?—A. Well, I can give you an example of that. In that East Grey Rock mine, that I was telling you about, that was so warm, after they got this air shaft to the 1,100 and connected down to the 1,600, the superintendent told me that it reduced the cost of their mining of their ore 35 cents.

Q. A ton?—A. Yes; a ton.

Senator J. C. McCARTHY. Mr. Orem, do you know of any reason why trap doors could not be used for manways in the different levels so as to maintain a continuation of air in the stopes?

A. In some places they have; they are just beginning to do that recently. I have noticed during the last year where they are putting doors in the manways, and have them so that they can close them when you go down through them.

Q. Do you consider that a very good improvement?—A. I do.

Q. Do you know of any reason why a certain amount of ore could not be kept nearly all the time in the various chutes in order to help the circulation of air?—A. Yes; but the shift bosses won't let you do it.

Q. Assuming that the shift bosses had orders from the general manager to do that, would there be any drawback to the management, as a rule, by leaving

the ore—or, at least, a little ore in the various chutes?—A. You mean in order to stop the circulation going up the chute?

Q. Yes; that is my idea.—A. Well, if you could do it it wouldn't hurt anything.

Q. Would it help any at all?—A. Well, it might. Supposing, for example, that your floors were practically worked out where your manways were, and your chutes were near the top, and your biggest part of ore was at the breast, by keeping that place closed you drive your air to the stope where the men were working, that is your idea?

Q. That is my idea exactly. Of course, you understand, Mr. Orem, that in case that they discontinue the use of an ore chute, a small trapdoor would answer the purpose equally as well.—A. Yes; but they will fill them with waste.

Q. It would answer the purpose, would it not?—A. They saw off the mouth of the chute and fill it with waste—they fill the chute with waste.

Q. Then, your idea is, Mr. Orem, that the rivalry between the shift bosses to establish a record on their particular shift is the reason why ore chutes are sometimes emptied of ore?—A. I think that is half of it.

Q. Isn't that the whole of it?—A. A man is generally figured on the amount of rock that he gets up. You know if a shift boss walks down through a sill and don't hear the rock rolling in the box, there is something doing when he goes up, Jerry. That is my general idea about that. I might give you a little more data as to the mines in Butte, but I would have to remember it from memory.

Q. Your idea, as a whole, is that the conditions are being rapidly improved in Butte?—A. Oh, they are 100 per cent better than they were a year ago. I do believe that they should keep those air shafts down within a reasonable depth of their main working shaft.

Q. What would you consider a reasonable distance?—A. Any place so that they could connect within 100 feet or so.

Representative J. C. DUFFY. It is not practical for to carry your air course down within 100 feet or 200 feet of your work shaft, because you have got to extend your drift?

A. It is all right to keep them so that you can connect them right up. I will tell you what I have seen recently, to show you how they are doing those things. Over there in the Gagnon, Ferns had the same system; he would sink a winze down 50 or 60 feet; see, way in over there above their bottom level, then when they get under that place, you see they would only have to run a raise 40 or 50 feet and they would have their raise through—the air would be in the bottom—they would put their waste in and start to fill their stopes. It is a great help. They are using that system a great deal there now.

Senator J. C. McCARTHY. Have they uniform sizes to go by in the matter of establishing air courses in the various mines?

A. No; they have not, but if they find it is not large enough—they are going to do that on this Granite Mountain; they sunk a two compartment, now they are going to raise it out another compartment. They did the same thing on the air course in the Rarus; they first raised it out two compartments; they saw it was not pulling air enough, so that they raised it out four compartments. It is quite a job, you know, to keep those places open.

Representative P. J. DUFFY. In most shafts they sink now, which are sunk now, they sink one or two compartments and then raise, do they not?

A. They never sink a shaft less than two compartments.

O. And raise it and make it four compartments or whatever size they want it?—A. Yes.

Q. Now, in blasting, is it necessary to blast at noon in these mines, or could they drill all shift and blast going off each shift and leave rock for the muckers?—A. Well, now, that is a hard proposition. Supposing your partners were working in a drift and they drilled four or five holes, you come on and drill five more, do you think it would be right to wait until night before blasting that round of holes?

Q. In cases it takes more than eight or nine holes to pull it?—A. Sometimes it does not and sometimes it does. I have not any authority to tell them when they shall blast or shall not; but it is not customary to blast in most of the mines in Butte at noon, because their mine would be full of smoke during some hours afterwards; but you take places—now, Pat, where you are working in drifts, and crosscuts, and places like that, if you limited the time of blasting you would stop the progress—would stop the progress, would you not?

Q. I will answer you this way. In most drifts where you have got to drill five holes, clean out your holes, tear down, get floors, you have got a shift's work.—A. Oh, no. Let me tell you another thing in regard to the working of a mine. They are generally either running a crosscut or drift in on the same level. It is generally customary to drill in one while they muck in the other. I think that is a good scheme; they generally blast going off shift.

Senator J. O. McCARTHY. In other words, you think it is impractical to establish any particular line of work or determine what can be done in any particular vein in all places of the mine?

A. No; I don't think it is practical.

Senator W. E. CHRISTOPHER. Is there any authority in the law, either the civil or penal law, that clothes you with authority as mine inspector to overcome these conditions; that is, do you know of any?

A. Why, all I know of is that we can recommend. I believe that there is a place there, as I am not mistaken, that if a man gets a statement from a man signed by two or three different individuals in regard to the safety of a place; that is the duty of the mine inspector or his deputy to investigate that. I believe I have had one or two occurrences of that when I went into office, signed by two miners that worked in the place, and I immediately went over there and rectified that demand.

Representative P. J. DUFFY. That is a matter of protection and safety to the miners?

A. Anything that endangers or pertains to the life of a miner, it is the mining inspector's business to recommend that those places should be fixed safe.

Q. How long would it take you to go through all the Butte mines and examine them?—A. Well, for a fellow to go through them thoroughly it would take him two months and a half or three months. I mean if he would go through every raise. He could go through in less time than that by hurrying.

Q. I mean to examine them, to see what condition they are in?—A. I believe it would take that time.

Q. Two months and a half or three months?—A. Yes. I have certain times that I go through if I have an accident, or such; I generally go through a level or two. That way you are generally in touch with them all the time; you see from memory I can tell you pretty near everything around there.

Q. Is there enough work there for another deputy with you?—A. Well, I don't hardly think there is, Pat. There might be. I believe one man can attend to that district all right. Of course a man over there is up against it a great many times; he is the limelight for everything.

Q. That is what I am getting at.—A. He is a gentleman sometimes and sometimes he is otherwise.

Q. Do you think that with another deputy that any good could be accomplished?—A. I don't believe so in that district, because friction might come between the two deputies. That's all.

(Whereupon Mr. William Walsh, mine inspector, submitted written paper for the consideration of the committee.

Upon motion duly made, seconded, the meeting was adjourned subject to the call of the chairman.)

REPORT OF JOINT COMMITTEE.

HELENA, MONT., February 16, 1911.

To the honorable Senate and House of Representatives of the State of Montana.

GENTLEMEN: We, your committee, duly and regularly appointed for the purpose of investigating and reporting upon the sanitary conditions and the conditions of ventilation of the mines in this State, especially of Butte, respectfully report as follows:

The entire committee visited the city of Butte on January 5, 1911, arriving there at 2.55 p. m., and upon arrival notified the different managers of the mines, and also the officers of the Butte miners' union, that our mission was to investigate the sanitary and ventilating conditions of the mines, and informed them that the committee would proceed with the investigation the following morning.

On the following morning at 9.30 a. m., accompanied by Mr. John Gillie, general superintendent of the Amalgamated mines; B. H. Dunshee, assistant superintendent of the company; J. C. Adams, superintendent of the Boston & Montana Consolidated Mining Co.; Thomas Mitchell, foreman of the Leonard

mine; D. D. Sullivan, president of the Butte miners' union; and Joseph Gueñ, vice president of the Butte miners' union, the committee inspected the change room or dry room, where they found 600 lockers for the use of the men employed in which to change their clothes, with cement floors, shower baths, and wash rooms. The committee was very favorably impressed with the fact that the companies were doing what they could to prevent the men from exposure.

We were then lowered to the 1,200-foot level of the Leonard mine, and we were shown doors installed for the purpose of changing the course of air. We were then lowered to the 1,400-foot level and went through stope No. 1623 to the 1,800-foot level. At the crosscut No. 1803 the temperature there registers 73° and at the breast 82°. Then we went through the 1,800-foot level to the West Calusa mine and Comanche air shaft. We were then taken to the surface for lunch. After lunch the committee went through several stopes and drift of the Mountain View and Pennsylvania mines. The temperature from the back of the crosscut No. 1813 of the Pennsylvania was 76°.

After coming to the surface the committee were taken to the engine-room and shown the safety appliances on the engine to prevent the cages or skip from going into the sheave wheels.

On January 7 the committee, accompanied by the officers of the miners' union, went to the Original mine, and we were lowered to the 2,000-foot level to the pump station. Temperature at this point was 73°; through stope No. 2101 temperature registered 88°. Climbed through stopes and drifts of Gagnoi and Original mines to 2,400-foot level of the Original mine, where the temperature in the west drift was 78°. Went up to surface for lunch. After lunch the committee went to the plant of the Great Falls Power Co., near the High Ore mine, and to the compressor room of the Diamond mine, and then to the Speculator mine of the North Butte Mining Co., where they were lowered to the 1,600-foot level, accompanied by Mr. John Pope, manager, and Mr. Dai Courtney, foreman, and went through stope No. 1816. On the twentieth floor the temperature was 80°. Then we went to No. 1826 raise, where the temperature was 80°; then through stope No. 1838, 300 feet west of No. 1816 where the temperature was 72°; then to 1,800-foot level and climbed down raise No. 2018, through the stope, where the temperature was 80°, and then to the 200-foot level station, where the temperature was 78°; and from this point to surface, when the committee, after a consultation with the officers of the companies and the miners' union, concluded that they had been shown through the best and worst places that both parties had to show them, and decided to leave for Helena to continue the investigation at a later date upon some course that the majority of the committee might determine.

On January 10 the committee met pursuant to call of the chairman. Chairman Leighton called the meeting to order and stated that he had telephoned the president of the Butte miners' union, and was informed that the union would meet that night. On motion, duly seconded, the chairman was authorized and instructed to request the Butte miners' union to appoint one of their members from each of the following mines—

Original, Stewart, Gagnoi, Mountain Con, Bell & Diamond, East Grey Rock, Speculator, Badger, Buffalo, High Ore, Never Sweat, Anaconda, St. Lawrence, Colorado, Pennsylvania, Tramway, Silver Bow, West Calusa, Leonard, Pittsmt, Blackrock, Elm Orlum to appear before this committee to give such evidence as they might wish, each of said members to be working in the mine he represents; also to notify the managements of those properties of the action taken.

The chairman thereupon notified the Butte miners' union of the action of the committee, as above set forth; whereupon the Butte miners' union informed the chairman that they preferred sending a committee of five or six to appear before this joint committee.

Whereupon, at the request of the Butte miners' union, the committee caused to be summoned to appear before them the following witnesses: Dan Holland, Jacob Oliver, J. C. Lowney, John Vickers, Dan D. Sullivan, Joseph Gueñ, John Driscoll, James McQuire, John Daly, Patrick Cloonan, and William Walsh. Other witnesses appearing before the committee were Dr. P. H. McCarthy, John Gillie, John D. Pope, Dr. W. F. Maginn, Dr. T. J. Murray, and W. B. Orem.

Whereupon, on January 24, the committee was called to order by the chairman, and Chairman Leighton made the following statement as to what testimony should be adduced before the committee:

Gentlemen, there is one thing that I wish to state, and that is this, that in the testimony that will be given by the various witnesses here, I wish that it

would be confined absolutely to those two conditions that this joint committee is called upon to thoroughly investigate and inquire into, and those are the sanitary conditions of the mines of the State, especially of Butte, and the conditions of ventilation. In our other meetings that we have had and those whom we have met, especially at the meeting in Butte, they seemed to drift off from those two subjects and wandered into other things. As we are now to begin taking testimony pertaining to those two subjects, we can not allow extraneous matter to be brought in, but only evidence pertaining to these two subjects, sanitary conditions and the conditions of ventilation; and we propose to subpoena and bring before this committee other miners from Butte, as many as we see fit, and also the mine owners, or any man whom we think can bring us any information in regard to this matter, for it is the object of the committee, and it is the desire of the twelfth legislative assembly that we should get to the bottom of this matter and see if we can not enact some law, or in some manner correct those things that seem to be prevailing over there that are wrong. Consequently I ask those who take the witness stand to remember that we can not allow anything but that pertaining to these two subjects.

Whereupon the following witnesses were called, duly sworn, and testified: P. J. Duffy, Dan Holland, Jacob Oliver, and J. C. Lowney.

Whereupon, on January 30, the committee was called to order by the chairman, and the following witnesses were called, duly sworn, and testified: John Vickers, Dan D. Sullivan, Joseph Gueff, John Driscoll.

Whereupon, on January 31, the committee was called to order by the chairman, and the following witnesses were called, duly sworn, and testified: Dr. P. E. McCarthy, James McQuire, John Daly, Patrick Cloonan, John Gillie, and John D. Pope.

Whereupon, on February 1, the committee was called to order by the chairman, and the following witnesses were called, duly sworn, and testified: James McQuire, Dr. W. F. Maginn, Dr. T. J. Murray, and William Walsh.

Whereupon, on February 8, the committee was called to order by the chairman, and Mr. W. B. Orem was called, duly sworn, and testified.

After considering all the testimony adduced before us and after due deliberation, we respectfully submit our conclusions as follows:

We find that the companies in Butte are doing all in their power to perfect their ventilation and sanitary conditions, and are not sparing expense in doing so. The mining sanitary cars are to be installed in all of the mines in Butte, some already being in use.

The testimony of Mr. Gillie shows that the following mines have been installed with fans in the last year:

	Cubic feet per minute.		Cubic feet per minute.
1,200 Pennsylvania.....	60,000	Green Mountain shaft.....	54,000
Mitchell shaft.....	40,000	Parnell shaft.....	75,000
Gambetta shaft.....	40,000	Corra shaft.....	75,000
1,600 Leonard.....	60,000	Original shaft.....	50,000
Rarus air shaft.....	90,000	East Stewart shaft.....	50,000
1,700 Tramway.....	78,000		
1,200 Tramway.....	50,000	Total.....	753,000
Gagnon air shaft.....	36,000		

From the testimony of Mr. John Gillie, Mr. John Pope, William Walsh, State mine inspector, and Mr. W. B. Orem, deputy mine inspector, it will be seen that raises are being put in all the mines to produce better ventilation. Mr. Gillie, superintendent of the Amalgamated Co., and Mr. Pope, superintendent of the North Butte Mining Co., assured the committee that they were sparing no expense to have the mines properly ventilated and the sanitary conditions perfected; their testimony shows that it is to the interest of the companies to bring about good sanitary conditions and ventilating conditions. The preponderance of the testimony of the miners themselves shows that the operators in Butte are making a systematic effort to improve the sanitary and ventilating conditions in that district.

The committee summoned to appear before them three able physicians from the city of Butte, who had performed many autopsies on these miners who were supposed to have died from the so-called miners' consumption. Their testimony definitely proves that the conditions of the mines can not alone produce consumption, but that the occupation of a miner is such, due to absence of sunshine and natural surface conditions, that it tends to so weaken and irri-

3982 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

tate the lungs that a miner is more liable to contract the disease called consumption, and for this reason tuberculosis is more prevalent in a mining community than elsewhere.

The testimony taken upon the several hearings held by our committee has been transcribed and is herewith submitted and made a part of this report.

Your committee also submits and presents herewith a suitable bill for an act, which your committee believes might tend to correct any troubles complained of, and recommended to the consideration of the legislature.

Respectfully submitted.

NOTE.—It should be explained that the accidents entitled "Slight" embrace the most trivial accidents such as a cut or bruised finger or toe, and in the large majority of these cases the employee loses no time at all. The above is drawn up in accordance with the Form used by the Bureau of Labor at Washington, and serious accidents are those which prevent a man from returning to work in less than two weeks.

STEWART EXHIBIT NO. 1.

THE STATE OF MONTANA,
DEPARTMENT OF ATTORNEY GENERAL,
HELENA, November 18, 1914.

HON. LEWIS K. BROWN,

Secretary U. S. Committee on Industrial Relations,

Chicago, Ill.

DEAR SIR: Your letter of the 13th instant, addressed to Hon. Sam. V. Stewart, governor, Helena, Mont., has been by him transmitted to this department, with request that the desired information be furnished from this office.

In compliance therewith I am directed by Attorney General Kelly to give you the following:

The decision of the Supreme Court of Montana, with reference to the taxation of minerals, etc., reserved by railroads when land is sold, separate and apart from the land, will be found in the case of Northern Pacific Railroad Co. v. Mjelde, reported in 48 Mont., 287; 137 Pac., 386.

We have no law in this State specifically relating to boycott.

The law of our State with reference to protection of discharged employees and the prevention of blacklisting, is found in sections 1755, 1756, 1757, and 8647, Revised Codes of 1907. For your information these sections are set forth herein:

"1755. If any person, after having discharged an employee from his service prevents, or attempts to prevent, by word or writing of any kind, such discharged employee from obtaining employment with any other person, such person is punishable as provided in paragraph 8467 (656), of the Penal Code, and is liable in punitive damages to such discharged person, to be recovered by civil action; no person is prohibited from informing, by word or writing, any person to whom such discharged person or employee has applied for employment, a truthful statement of the reason for such discharge.

"1756. If any company or corporation in this State authorizes or allows any of its agents to blacklist, or any person does blacklist, any discharged employee, or attempts by word or writing or any other means whatever, to prevent any discharged employee, or any employee who may have voluntarily left said company's service, from obtaining employment with another person, except as provided for in the next preceding section, such company or corporation or person is liable in punitive damages to such employee so prevented from obtaining employment, to be recovered by him in civil action; and is also punishable as provided in paragraph 8467 of the Penal Code.

"1757. It is the duty of any person, after having discharged any employee from his service, upon demand by such discharged employee, to furnish him in writing a full, succinct, and complete statement of the reason of his discharge, and if such person refuses so to do within a reasonable time after such demand, it is unlawful thereafter for such person to furnish any statement of the reason of such discharge to any person, or in any way to blacklist or to prevent such discharged person from procuring employment elsewhere; subject to the penalties and damages prescribed in this chapter.

"8467. Every person who violates any of the provisions of Chapter XXI (now Chapter II), Title VII, Part III, of the Political Code, relating to the protection of discharged employees, and the prevention of blacklisting, is guilty of a misdemeanor."

Yours, very truly,

JOHN J. MCGUINNESS,
Secretary to Attorney General.

O'BRIEN EXHIBIT NO. 1.

Court House, Butte, Mont.

INDUSTRIAL RELATIONS COMMISSION.

DEAR SIRS: In accordance with my promise I herewith submit to you the names of men who the Amalgamated Co. sent home to vote on the night of May 19, 1914, also on the night of May 26 of the same year.

I wish to state that in my wide experience in the various mines of the world that I might be able to give some valuable testimony regarding removing the cause of tuberculosis in the mines of Butte.

Sincerely, yours,

WM. O'BRIEN.

Names of men who were sent home by the company to vote on above date: Have interviewed two of these men and they refuse to have their names submitted through fear of being blacklisted.—W. O'B.

EVANS EXHIBIT NO. 1.

In the District Court of the United States, District of Montana.

JOSEPH MODENA, AS ADMINISTRATOR, v. ANACONDA COPPER MINING Co. No. 151.

This action is for wrongful death. It was commenced in this court and in Silver Bow County, in the Butte division of this Federal district, where

the cause of action arose. For trial plaintiff moves to transfer it to Lewis and Clark County, in the Helena division. The motion is resisted. Like motions are made in three like cases. The grounds of the motion are that plaintiff can not have a fair or an impartial trial hereof in Silver Bow County and can not have such fair or impartial trial "before a jury or panel composed in whole or in part of residents of Silver Bow County or Deer Lodge County, in Montana." Said counties are two of four constituting the Butte division. The motion was heard on affidavits and oral testimony. The oral testimony was that of one of defendant's counsel, a witness for both parties, to certain employment of him and other of said counsel by others than defendant, to property purchases by defendant, and other matters of little materiality.

Plaintiff presented affidavits of twenty-three attorneys and four other persons, and defendant presented affidavits of thirty-one attorneys and forty-one other persons. Of these, defendant asserts plaintiff's are of attorneys interested in personal injury litigation and plaintiff retorts defendant's are of attorneys interested in corporation practice. In the main both are correct, with no apparent discredit to either.

Plaintiff's four affidavits other than by attorneys are by two persons interested in this and the like motions and one by a person who heretofore has been unsuccessful in a personal-injury action against defendant. Defendant's forty-one affidavits other than by attorneys are mostly by prominent and leading business men and public officers of the counties of Silver Bow and Deer Lodge, with some few by agents and employees of defendant. In substance, plaintiff's affidavits are that defendant is of great and preponderatory magnitude in the mining and smelting industries of said counties to the extent of employing therein nearly one-half the men thereof; that nearly all the people of said counties depend for support upon mining and the good will of defendant; that defendant's agents and servants have taken an interest in politics and have dominated conventions in Silver Bow County; that defendant and its agents have other business connections in said counties; that defendant maintains a card system to identify its employees; that defendant is of wealth and influence, and (note, one affidavit only by one of plaintiff's counsel to all the following) so great has been that influence in "the life political, economical, and judicial" of said counties it has established in the minds of the people thereof "a fear of deciding any cause against this corporation or against any other corporation in favor of an individual"; that in a little more than the last seven years, though many cases have been brought against defendant and other named corporations, affiant is informed and believes that there has not been a verdict rendered in Silver Bow County against any of said corporations; that in the last seven years, though personal-injury and death cases have been tried in this court sitting in Silver Bow County, affiant is informed and believes that there has not been a verdict rendered for any plaintiff; that affiant "averts that it is impossible for any ordinary litigant to secure a fair or an impartial trial in the above-entitled court before any jury consisting in whole or in part of residents of Silver Bow County or of residents of Deer Lodge County in Montana."

Twenty-six of plaintiff's affidavits are duplicate copies of a single blank original, wherein each attorney executing one inserted his name in the proper blank. These affidavits recite that affiants have "heard many people talk on the subject of whether any ordinary litigant or any litigant at all can have a fair and impartial trial before any jury whereon there are residents" of said counties. But this is a mere intrusive or detached statement and goes for nothing, for not only is there silence as to the tenor of the "talk" or of consensus of opinion by it expressed, if any was expressed, but it is not alleged it is in any way the basis of affiants' belief therein declared that "it is impossible in the above-entitled action to have a fair or an impartial trial of this cause before a jury consisting in whole or in part of residents" of said counties.

In substance defendant's affidavits are that the makers are in a position to know, and do know, the state of public opinion and sentiment in said counties in relation to the defendant; that there is not therein any bias or fear or favor or prejudice or sentiment making in behalf of defendant nor any dread or fear of defendant nor any condition, sentiment, or reason which in the affiants' opinion would in any way prevent plaintiff from securing a fair and impartial trial hereof in Silver Bow County and before a jury composed of residents of said counties; that they have never heard of any attempt by defendant to influence or punish any litigant, witness, or juror (note, plaintiff does not charge any thereof); that (note, affidavits by defendant's agents only) defend-

ant pays no attention to the residence of witnesses and jurors and neither seeks nor obtains information in respect to their conduct in any case; that defendant in no manner discriminates in its employments or otherwise because of witness or jury service or for any reason at all due to litigation.

And all those executing defendant's affidavits declare that they know of no reason, and believe none exists, why this case cannot be fairly and impartially tried herein and before a jury of residents of said counties, and that they believe a fair and impartial trial can be so had. In an affidavit by one of defendant's counsel it is stated that for years defendant's policy has been to settle, when reasonably possible, all claims against it for personal injuries irrespective of liability; that in 1913 it settled 403 such claims; that since March, 1910, but two personal-injury cases against defendant have been tried in Silver Bow County, though 87 thereof have been there commenced, and almost all of which have been settled; that so far has defendant pursued this policy that to one of those executing an affidavit presented herein by plaintiff defendant paid \$3,500 after his action for personal injuries against defendant had been upon trial finally disposed of adversely to him; that in a little more than seven years last past in the State court in Silver Bow County in actions against defendant or the other corporations named in plaintiff's affidavits six verdicts were rendered for plaintiffs and seven for defendants; that in the same period in this court sitting in said county in personal-injury or death actions, wherein juries were properly instructed and verdicts not directed, four verdicts were rendered for plaintiffs and six for defendants; that in the last five years in the State court in said county in personal-injury actions against the city of Butte and other corporations not of those named in plaintiff's affidavits a great many verdicts have been rendered for plaintiffs and approximately 40 for defendants, including 12 for said city. It is also therein alleged that efforts have long been made by one of plaintiff's counsel and others to promote "personal-injury business" and to that end in said counties, by political and other abuse, to create public sentiment adverse to defendant and other corporations, which is by said counsel in so far as he is concerned in effect denied.

It is further alleged that in none of the cases aforesaid in the State court was any effort made to secure a change of venue from Silver Bow County; that in said county juries, even as elsewhere, are inclined to return verdicts for plaintiffs in personal-injury cases "if any basis whatever can be found therefor," and that if this motion for transfer for trial be granted it will inconvenience witnesses, increase expense, and in effect establish that none of cases wherein defendant is a party shall be tried where they originate in Silver Bow County or before any jury whereon are residents of either of said counties. This statement of what court records show is undenied, has been verified in this court, and is taken as true in respect to the State court. It is first to be observed that by statute and rule of court of the force of statute the place of trial of this action is where it originated and was commenced. Both parties have a vested, substantial, and valuable right to have it there tried, of which neither of them can be involuntarily deprived save for good cause. Inability to there secure a fair trial or impartial trial would be good cause to transfer the action elsewhere for trial. The presumption is that a fair and impartial trial can be had where, in accordance with statute and rule, the action was commenced, and the party who alleges contrary has the burden to sustain it by a preponderance of legal evidence in quality and quantity sufficient to satisfy the court of the truth of his allegation. Here this burden is upon plaintiff, and he has not sustained it. No labored discussion of the affidavits is necessary to demonstrate this. It suffices to say that, taken as a whole, in quantity, quality, trustworthiness, and weight not only do defendant's affidavits balance and offset those of plaintiff, but they preponderate over them.

It is worthy of note that plaintiff attempts to prove too much. He goes far beyond the necessities of his motion and by most sweeping allegations embracing all and any litigation and parties, he would proscribe from any jury service the nearly 100,000 inhabitants of Silver Bow and Deer Lodge Counties. These are taken to be exaggerations and sought to be fortified by erroneous information and belief in respect to court records available to all. Exaggerations are not excused by zeal. They help no cause, and disprove to the extent here, discredit the proceedings wherein they appear. Stripped of nonessentials, argument, inferences, conclusions, and beliefs, not of themselves evidence save that in so far as conclusions and beliefs are based upon and supported by facts therein they may be considered. Plaintiff's affidavits are that defendant is of industrial preponderance in said counties and its many employees exercise

their political rights therein—insufficient to support the conclusion of the “fear” alleged and insufficient to warrant the belief alleged that plaintiff can not secure a fair and impartial trial in Silver Bow County. Both parties hereto have departed from the record and appealed the knowledge of the court. In proceedings of this character courts may and do resort to their own knowledge in view of the premises the writer hereof will say that while a great variety of criticism of defendant, to put it mildly, justly or unjustly has been for years the chief plank in the platform of many members of all parties in Montana, so far as his experience of twenty years at the bar and on the bench of Silver Bow County and Montana, and some participation in the political activities of the county and State qualify him to speak, he has not believed and has had no reason to believe at any time that in the courts sitting in Silver Bow County or elsewhere in Montana any jury was either influenced by or infected with fear or any other unworthy emotion constraining or inducing it to favor defendant.

No substantial reason appears why this case can not be fairly tried in Silver Bow County before a jury drawn as the rule requires. Plaintiff's belief to the contrary may be founded on the erroneous information aforesaid. At any rate, although it is highly desirable that every litigant have confidence in the jury before which his cause will be tried, merely to inspire this confidence therein his opponent's right to a trial at a particular place is not to be denied. Substance must not be made to yield to shadow. The motion is denied, and a like order will be entered in each of the other cases.

JULY 22, 1914.

BOURQUIN, J.

EVANS EXHIBIT NO. 2.

In the Circuit Court of the United States, Ninth Circuit, District of Montana 31st day April Term, 1909. Thursday, June 17, 1909. In open court.

MYTTLE NORTHAM AND HEDLEY NORTHAM, PLAINTIFFS,

vs.

BOSTON AND MONTANA COPPER AND SILVER MINING CO., A CORPORATION,
DEFENDANT. No. 906.

This cause, heretofore submitted to the court upon motion of defendant to transfer said cause from records at Helena, Mont., to records of Butte, Mont. came on regularly at this time for the decision of the court, and, after due consideration, it is ordered that said motion be granted and cause ordered transferred. Exception of plaintiff to said ruling noted.

Entered, in open court, June 17, 1909.

Attest: A true copy of order.

MAURY EXHIBIT NO. 1.

In the District Court of the United States, for the District of Montana.

At law. Complaint. No. 151.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

Plaintiff complains, and for a cause of action, alleges:

1. That Corrado Modena died on August 19, 1913.

2. That Joseph Modena, this plaintiff, was by order and judgment of the district court of the second judicial district of the State of Montana, in and for the county of Silver Bow, duly and regularly appointed administrator of the estate of Corrado Modena on the 31st day of January, 1913, and he immediately thereafter qualified as such administrator, and is now the duly appointed, qualified, and acting administrator of said estate.

3. That Joseph Modena is an alien; that he is a citizen and subject of the King of Italy.

4. That the defendant is a corporation duly organized and existing under and by virtue of the laws of the State of Montana, and a citizen of said State.

5. That the amount involved in this controversy is of a greater amount than the sum of three thousand (\$3,000.00) dollars, exclusive of costs and interest, and is of the sum of twenty thousand (\$20,000.00) dollars.

6. That the defendant on the 19th day of August, 1913, and for several years prior thereto, carelessly and negligently maintained a pond of water close to the town of Meaderville, in Silver Bow County, Montana; that said pond was very attractive to children, and a large number of children, more than one hundred (100), living in and about said Meaderville were attracted to said pond and were accustomed to play in and about said pond almost daily for more than a year prior to the said 19th day of August, 1913, with the knowledge and consent of the defendant; that the said pond was through the negligence of the defendant left open and entirely unguarded; that said pond, through the negligence of the defendant, contained a deep hole, to wit, about twelve (12) feet deep in the center thereof with perpendicular sides or walls; that said pond, through the negligence of the defendant, was filled with murky copper water, the same being very poisonous and dangerous to human beings, and it was also impossible for persons to see beneath the surface of the same.

7. That on the said 19th day of August, 1913, plaintiff's decedent, Corrado Modena, a boy of about eight (8) years of age, while exercising due care and caution on his part, was attracted to said pond, and while playing in and about the same fell into said deep hole in the center thereof, and his mouth, stomach, lungs, and internal organs were filled with said copper water, and he died from the effects thereof about ten or fifteen minutes thereafter.

8. That said Corrado Modena was a bright and intelligent boy for his age, of good capacity to work, and would have earned much money after he became twenty-one (21) years old but for the wrongful and negligent acts of the defendant herein set out; that by the wrongful and negligent acts of the defendant herein set out the said Corrado Modena was deprived of a long and happy existence, his earning capacity was completely destroyed, he was caused to suffer great physical and mental pain and anguish, all to his damage in the sum of twenty thousand (\$20,000.00) dollars.

9. That between the wrongful and negligent acts of the defendant herein set out and the falling by said Corrado Modena into said hole in said pond and the death of said Corrado Modena he had a cause of action against this defendant; that the same was not prosecuted prior to his death, and is now being prosecuted by this plaintiff.

Wherefore plaintiff prays judgment against the defendant for the sum of twenty thousand (\$20,000.00) dollars and costs of suit.

II.

Plaintiff, for a second cause of action against the defendant, complains and alleges:

1. That Corrado Modena died on August 19, 1913.

2. That Joseph Modena, this plaintiff, was by order and judgment of the District Court of the Second Judicial District of the State of Montana, in and for the county of Silver Bow, duly and regularly appointed administrator of the estate of Corrado Modena on the 31st day of January, 1913, and he immediately thereafter qualified as such administrator, and is now duly appointed, qualified, and acting administrator of said estate.

3. That Joseph Modena is an alien; that he is a citizen and subject of the King of Italy.

4. That the defendant is a corporation duly organized and existing under and by virtue of the laws of the State of Montana and a citizen of said State.

5. That the amount involved in this controversy is of a greater amount than the sum of three thousand (\$3,000.00) dollars exclusive of costs and interest, and is of the sum of twenty thousand (\$20,000.00) dollars.

6. That the defendant on the 19th day of August, 1913, and for many months prior thereto, carelessly and negligently, upon its property, maintained and permitted a shaft, drift, and cut more than ten (10) feet deep to remain open, exposed, and unprotected without any cover over the same or any fence around the same, the same being within the limits of the town of Meaderville, Silver Bow County, Montana, and within one mile of the corporate limits of the city of Butte, Silver Bow County, Montana, and the same also being within three

hundred (300) feet of a street, road, and public highway of the said town of Meaderville, and the said city of Butte, and the said county of Silver Bow, Montana; that the plaintiff's decedent, Corrado Modena, on the said 19th day of August, 1913, while exercising due care and caution on his part, and while playing about said open, exposed, and unprotected shaft, drift, and cut, fell into the same and received such grievous personal injuries that he died therefrom on said day about ten or fifteen minutes after falling into the same.

7. That said Corrado Modena was a bright and intelligent boy for his age, of good capacity to work, and would have earned much money after he became twenty-one (21) years old but for the wrongful and negligent acts of the defendant herein set out; that by wrongful and negligent acts of the defendant herein set out the said Corrado Modena was deprived of a long and happy existence, his earning capacity was completely destroyed, he was caused to suffer great physical and mental pain and anguish, all to his damage in the sum of twenty thousand (\$20,000.00) dollars.

8. That between the wrongful and negligent acts of the defendant herein set out and the falling by said Corrado Modena into said shaft, drift, and cut, and the death of said Corrado Modena he had a cause of action against this defendant; that the same was not prosecuted prior to his death, and is now being prosecuted by this plaintiff.

Wherefore plaintiff prays judgment against the defendant for the sum of twenty thousand (\$20,000.00) dollars and costs of suit.

Plaintiff, however, prays for but one judgment for the sum of twenty thousand (\$20,000.00) dollars and costs of suit.

J. D. EASAN, JR.,

Notary Public for the State of Montana, Residing at Butte, Mont.

My commission expires October 1, 1918.

Filed February 6, 1914.

United States of America, District Court of the United States, District of Montana.

No. 151. Action brought in the said district court and the complaint filed in the office of the clerk of said district court, in the city of Butte, County of Silver Bow.

JOSEPH MODENA, AS ADM. OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, *v.*
ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

The President of the United States of America, greeting, to the above-named defendant, Anaconda Copper Mining Company, a corporation:

You are hereby summoned to answer the complaint in this action which is filed in the office of the clerk of this court, a copy of which is herewith served upon you, and to file your answer and serve a copy thereof upon the plaintiff's attorney within twenty days after the service of this summons, exclusive of the day of service; and in case of your failure to appear or answer, judgment will be taken against you by default for the relief demanded in the complaint.

Witness the honorable Geo. M. Bourquin, judge of the United States district court, district of Montana, this 6th day of February, in the year of our Lord one thousand nine hundred and fourteen and of our independence the 138.

[SEAL.]

GEO. W. SPROULE, Clerk.

By HARRY H. WALKER, Deputy Clerk.

Filed February 7, 1914.

UNITED STATES OF AMERICA,

District of Montana, ss:

I hereby certify and return that I served the annexed summons on the therein-named Anaconda Copper Mining Company, a corporation, by handing to and leaving a true and correct copy thereof with C. F. Kelley, vice president of said company, together with a true copy of bill of complaint, in said action certified to by clerk of U. S. district court, service made at Butte, County of Silver Bow, on the 6th day of February, 1914.

WILLIAM LINDSAY,
United States Marshal.

No. 151. At law.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

DEMURRED.

I.

Comes now the above-named defendant and demurs to the first cause of action attempted to be set forth in the complaint of plaintiff, upon the ground and for the reason that the same does not state facts sufficient to constitute a cause of action against this defendant.

II.

Defendant demurs to the second cause of action attempted to be set forth in the complaint of plaintiff, upon the ground and for the reason that the same does not state facts sufficient to constitute a cause of action against this defendant.

III.

Defendant demurs to the complaint of plaintiff upon the following grounds and reasons:

First. That the said complaint does not state facts sufficient to constitute a cause of action against this defendant.

Second. That the court has no jurisdiction of the person of the defendant or of the defendant.

Third. That the court has no jurisdiction of the subject of the action.

No. 151. At law.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

ANSWER.

First.

Now comes the defendant and, for answer to the first cause of action set up in plaintiff's complaint, admits, denies, and alleges as follows, to wit:

1. Defendant admits that Corrado Modena died on August 19, 1913.

2. As to whether or not the facts alleged in paragraph 2 of said plaintiff's first pretended cause of action are true, this defendant denies that it has any knowledge or information thereof sufficient to form a belief.

3. As to whether or not Joseph Modena is an alien, or as to whether or not he is a citizen, and subject of the King of Italy, defendant denies that it has any knowledge or information thereof sufficient to form a belief.

4. Defendant admits paragraph 4 of said first pretended cause of action, and also paragraph 5 thereof.

5. Defendant denies that on the 19th day of August, 1913, or for several years prior thereto, or at any time or at all, it carelessly or negligently, or carelessly and negligently, maintained a pond of water close to the town of Meaderville, in Silver Bow County, Montana, or elsewhere; denies that at said times, or at any other time, it maintained a pond of water close to the town of Meaderville, in Silver Bow County, Montana, other than to the extent and in the manner as hereinafter in this answer set out; denies that said pond was very, or at all, attractive to children, or that a large number of children, more than one hundred, or any other number of children, were attracted to said pond; denies that a large number of children, more than one hundred, or any other number of children living in and about Meaderville or elsewhere, were accustomed to play on and about said pond almost daily, or at all, for more than a year prior to the said 19th day of August, 1913, or for any time prior thereto, with the knowledge and consent, or knowledge or consent, of the defendant, or with or without such knowledge or consent; but admits that on the said 19th day of August, 1913, certain children did play on or about a small pond or body of water situated upon lands belonging to the said defendant; but denies that such playing of such children thereon was with the knowledge and consent, or knowledge or consent, of the defendant; denies that said pond was, through the negligence of the defendant, or otherwise, left open and entirely unguarded, or left open or unguarded; denies that said pond, through the negligence of the defendant, contained a deep hole, to wit, about twelve feet deep, in the center thereof, with perpendicular sides or walls, or contained a hole of any depth whatever other than a depth of about eight or nine feet; denies that said pond, through the negligence of the defendant, or otherwise or at all, was filled with murky copper water or that the water therein was very poisonous, or poisonous at all, or dangerous to human beings on account of poisons contained therein; and denies that it was impossible for persons to see beneath the surface of the same.

6. Denies that on or about the 19th day of August, 1913, plaintiff's decedent, Corrado Modena, while exercising due care and caution, or due care or caution, on his part, was attracted to said pond, but admits that the said Corrado Modena went to said pond or pool of water, and went and waded therein; denies that while playing in and about the same, the said Corrado Modena fell into said deep hole in the center thereof, or got into said deep holes at all, other than as hereinafter stated in this answer; denies that his mouth, stomach, lungs, and internal organs, or his mouth, stomach, lungs, or internal organs, were filled with copper water and denies that he died from the effects thereof, about ten or fifteen minutes thereafter; or from the effect of any poisonous or copper water; but alleges the fact to be that the said Modena went into said pool or pond of water which said pool or pond of water was not poisonous, and while in said pool or pond of water, attempted to get upon a log or railroad tie therein situate, and ride thereon and that in doing so he got into water beyond his depth and was drowned from the effects thereof, and that his death by reason of such drowning was instantaneous and contemporaneous with the time of his getting into water over his head and beyond his depth.

Defendant admits that the said Corrado Modena was a boy about eight years of age, but as to the exact age of the said Corrado Modena this defendant denies that it has any knowledge or information thereof sufficient to form a belief.

7. Defendant admits that said Corrado Modena was a bright and intelligent boy for his age; denies that he was of good capacity to work, and would have earned much or any money after he became twenty-one years old but for the alleged wrongful and negligent or wrongful or negligent acts of the defendant, set out in plaintiff's complaint; denies that said defendant was guilty of any wrongful and negligent or wrongful or negligent acts set out in plaintiff's complaint; denies that by the wrongful and negligent acts, or by any wrongful and negligent or wrongful or negligent acts of the defendant the said Corrado Modena was deprived of a long and happy existence or a long or happy existence, or his earning capacity was completely or otherwise destroyed; denies

that by any wrongful and negligent or wrongful or negligent acts of the defendant, set out in plaintiff's complaint, the said Corrado Modena was caused to suffer great or other physical and mental pain and anguish or pain or anguish, to his damage in the sum of twenty thousand dollars, or in any other sum whatsoever.

8. Defendant denies each and every other allegation contained in plaintiff's pretended first cause of action, not hereinbefore expressly admitted or denied.

Second.

For a first, separate, and affirmative defense to plaintiff's first pretended cause of action, defendant alleges: That on the 19th day of August, 1913, the defendant was the owner of a certain tract of land near what is known as the Berkeley Mine, and that upon said tract of land there was located and situated a certain pond or pool of water which is the pond or pool of water mentioned in plaintiff's pretended first cause of action; that prior to the acquisition of title to said land by said defendant, the predecessors in interest, and the then owners of said tract of land, had made and constructed an excavation upon the same for the sole purpose of building thereon a smelting and reduction plant and making a boiler room to be used in connection with said smelting and reduction plant, which said smelting and reduction plant and boiler room were thereafter constructed thereon; that prior to the acquisition of the title to said land by this defendant said smelting and reduction plant had been torn down and removed by its predecessors in interest leaving upon said land the said excavation as aforesaid, and that said excavation at no point therein exceeded in depth eight or nine feet from the rim of the same to the bottom itself; that said excavation was so situated that when, and after said smelting plant was dismantled as aforesaid, natural waters from the surface of the earth, caused by heavy rains and melting snows, settled and remained therein, and that the said excavation was by the said defendant being used on the said 19th day of August, 1913, and had for a long time prior thereto been used by the said defendant for the purpose of a receptacle for certain waters from the boiler room and from the boilers and from the dry used in connection with the operation of said Berkeley mine, and that said waters were drained out of and away from said Berkeley mine and said boilers, boiler room, and dry thereof, by means of an artificial watercourse and pipe line, into said excavation; that said excavation was inclosed by a wall of rock constructed around the whole thereof, and that the deeper portions of said excavation were inclosed also by a wall which came up to the surface of the waters contained therein, and was clearly visible, and could be seen by any person who was in or about said excavation, or the waters therein.

That on or about the 19th day of August, 1913, the said Corrado Modena went to said pond or pool of water in connection with two or three other boys, some of whom were about as old and others older than he, and went upon the lands so belonging to the defendant as aforesaid and waded in said water and about said pond; that the said Modena fully knew and understood the conditions of said pond, as herein related, and fully knew and understood and appreciated all dangers of death or injury to himself should he get into said water over his depth and any and all dangers of drowning in said water; that shortly prior to the time of his death he was warned by a man passing there by of the dangers attendant thereon and directed and ordered to leave and go away from said pond of water; that there was at that time floating upon said water a log or railroad tie or piece of timber, and that the said Modena attempted to mount said log, railroad log, or timber and ride thereon over the deepest portion of said water; and that thereupon he was warned by one of his companions not to do so, and notified that it was dangerous and that the water was deep; and that notwithstanding such warnings as aforesaid and such full knowledge and appreciation on the part of the said Modena he voluntarily and of his own free will remained in and about said water and waded therein and went into said deeper portion of said water and attempted to mount and ride upon said log, thereby getting into water over his head, and was by reason thereof drowned, and the drowning of said Modena occurred by reason of conditions which were obvious, open, notorious, well understood by and appreciated by the said Modena; and when the said Modena voluntarily went into said pool of water and remained therein, as herein stated, and went about said deeper portions of said pool of water, as herein stated, and failed to observe the warnings of other persons, as herein stated, he assumed all risk of injury or death

by reason of drowning or getting quantities of water in his lungs or stomach, or all risk of injury or death accruing to him in the manner set out in plaintiff's complaint, and this defendant is not liable therefor.

Third.

Defendant for a further, second, separate, and affirmative defense to plaintiff's pretended first cause of action alleges:

That on the 19th day of August, 1913, the defendant was the owner of a certain tract of land near what is known as the Berkeley mine, and that upon said tract of land there was located and situated a certain pond or pool, which is the pond or pool of water mentioned in plaintiff's pretended cause of action; that prior to the acquisition of title to said land by the said defendant the predecessors in interest and the then owners of said tract of land had made and constructed an excavation upon the same for the sole and only purpose of building thereon a smelting and reduction plant and making a boiler room to be used in connection with said smelting plant, which said smelting plant and reduction plant and boiler room were thereafter constructed thereon; that prior to the acquisition of the title to said land by this defendant said smelting and reduction plant had been torn down and removed by its predecessors in interest, leaving upon said land the said excavation as aforesaid, and that said excavation at no point therein exceeded in depth eight or nine feet from the rim of the same to the bottom thereof; that said excavation was so situated that when and after said smelting plant was dismantled as aforesaid natural waters from the surface of the earth caused by heavy rains and melting snows settled and remained therein, and that the said excavation was by the said defendant being used on the said 19th day of August, 1913, and had for a long time prior thereto been used by the said defendant for the purpose of a receptacle for certain waters from the boiler room and from the boilers and from the dry used in connection with the operation of said Berkeley mine, and that said waters were drained out of and away from said Berkeley mine and said boilers, boiler room, and dry thereof by means of an artificial watercourse and pipe line into said excavation; that said excavation was inclosed by a wall of rock constructed around the whole thereof, and that the deeper portions of said excavation were inclosed by a wall which came up to the surface of the waters contained therein, and was clearly visible and could be seen by any person who was in or about said excavation or the waters therein.

That on or about the 19th day of August, 1913, the said Modena fully knew and understood the conditions of said pond as herein related, and fully knew and understood and appreciated all dangers of death and injury to himself should he get into said water over his depth, and any and all danger of drowning in said water; that on said day the said Modena went to said pond or pool of water accompanied by two or three other boys, some of whom were about as old and others older than he, and went upon and over the lands so belonging to the defendant aforesaid, and negligently waded in said water and about said pond; that shortly prior to the time of his death he was warned by a man passing there by of the dangers attendant thereon, and directed and ordered to leave and go away from said pond of water; that there was at that time floating upon said water a log or railroad tie or piece of timber; that the said Modena was warned by one of his companions that the water in said pond was deep and that it was dangerous, and that it was dangerous to attempt to mount and ride upon said log or piece of timber; that notwithstanding said warnings so given to the said Modena, and his full appreciation and understanding of the danger of drowning in said water, and the said Modena continued to negligently wade and play in and about the said water; and the said Modena negligently attempted to mount said log, railroad tie, or piece of timber so floating upon said water, and negligently went into said deeper portion of said water, thereby getting into water over his head, and was, by reason of his said negligence, drowned in said pool of water, all of which negligence upon the part of said Modena was a proximate cause of his injury and death, without which his injury and death would not have occurred; and if the said death of the said Modena occurred by reason of any negligent act or acts charged by the plaintiff in said pretended first cause of action against the defendant the said negligent acts of the said Modena in so wading in said water as aforesaid, and in so failing to heed the warnings so given him as aforesaid, and in so getting into the water over his head as aforesaid, and in so attempting to mount said log, railroad tie, or piece of timber as aforesaid,

under the conditions aforesaid, combined and concurred with the negligent acts of the defendant, if any, and contributed directly as a proximate cause to the injury and death of the said Modena, and without which his injury and death would not have occurred.

II.

For answer to plaintiff's pretended second cause of action, alleged and set out in plaintiff's complaint, defendant admits, denies, and alleges as follows, to wit:

First.

1. Defendant admits that Corrado Modena died on August 19, 1913.
2. As to whether or not the facts alleged in paragraph 2 of said plaintiff's pretended second cause of action are true this defendant denies that it has any knowledge or information thereof sufficient to form a belief.
3. As to whether or not Joseph Modena is an alien, or as to whether or not he is a citizen, and subject of the King of Italy, defendant denies that it has any knowledge or information thereof sufficient to form a belief.
4. Defendants admits paragraph 4 of said second pretended cause of action, and also paragraph 5 thereof.
5. Defendant denies that on the 19th day of August, 1913, or for many months prior thereto, it carelessly and negligently or carelessly or negligently, upon its property or elsewhere, maintained and permitted, or maintained or permitted, a shaft, drift, and cut, or a shaft, drift, or cut more than ten feet deep, or of any other depth, to remain open or exposed or unprotected, or without any cover over the same, or any fence around the same; denies that any shaft, drift, or cut upon the property of the defendant was within the limits of the town of Meaderville, Silver Bow County, Montana, or within one mile of the corporate limits of the city of Butte, Silver Bow County, Montana, or within three hundred feet of a street, road, or public highway of the said town of Meaderville, or the said city of Butte, or the said county of Silver Bow, Montana; denies that the place into which it is alleged the said Corrado Modena fell was either a shaft or drift or a cut; denies that the said Corrado Modena on the 19th day of August, 1913, or any other time, or at all, while exercising due care and caution, or due care or caution on his part, or while playing about any open, exposed, and unprotected, or open, exposed, or unprotected shaft, drift, and cut, or shaft or drift or cut, fell into the same, and denies that by falling into any shaft, drift, and cut, or shaft, drift, or cut the said Modena received any personal injuries whatever, or that he died from any personal injuries received by falling into a shaft, drift, and cut or shaft, drift, or cut on said day, or upon any other day, or about ten or fifteen minutes after falling into the same, or anytime whatever thereafter.
6. Defendant admits that said Corrado Modena was a bright and intelligent boy for his age; denies that he was of good capacity to work and would have earned much of any money after he became twenty-one years of age but for the alleged wrongful and negligent, or wrongful or negligent, acts of the defendant, set out in plaintiff's complaint; denies that said defendant was guilty of any wrongful and negligent, or wrongful or negligent acts, set out in plaintiff's complaint; denies that by the wrongful and negligent acts, or by any wrongful and negligent, or wrongful or negligent, acts of the defendant the said Corrado Modena was deprived of a long and happy existence, or long or happy existence, or his earning capacity was completely or otherwise destroyed; denies that by any wrongful and negligent, or wrongful or negligent, acts of the defendant, set out in plaintiff's complaint, the said Corrado Modena was caused to suffer great or other physical or mental pain and anguish, or any pain or anguish, to his damage in the sum of twenty thousand dollars, or in any other sum whatsoever.
7. Defendant denies each and every other allegation contained in plaintiff's pretended second cause of action not hereinbefore specifically admitted or denied.

Second.

For a first, separate, and affirmative defense to plaintiff's second pretended cause of action defendant alleges:

That on the 19th day of August, 1913, the defendant was the owner of a certain tract of land near what is known as the Berkeley mine, and that upon

said tract of land there was located and situated a certain pond or pool of water, which is the pond or pool of water mentioned in plaintiff's pretended second cause of action; that prior to the acquisition of the title to said land by the said defendant the predecessors in interest and the then owners of said tract of land had made and constructed an excavation upon the same for the sole and only purpose of building thereon a smelting and reduction plant and making a boiler room to be used in connection with said smelting and reduction plant, which said smelting and reduction plant and boiler room were thereafter constructed thereon; that prior to the acquisition of the title to said land by this defendant said smelting and reduction plant had been torn down and removed by its predecessors in interest, leaving upon said land the said excavation as aforesaid, and that said excavation at no point therein exceeded in depth eight or nine feet from the rim of the same to the bottom thereof; that the said excavation was so situated that when and after said smelting plant was dismantled as aforesaid, natural waters from the surface of the earth, caused by heavy rains and melting snows, settled and remained therein, and that the said excavation was by the said defendant being used on the said 19th day of August, 1913, and had for a long time prior thereto been used by the defendant for the purpose of a receptacle for certain waters from the boiler room and from the boilers and from the dry used in connection with the operation of said Berkeley mine, and that said waters were drained out of and away from said Berkeley mine and said boilers, boiler room, and dry thereof by means of an artificial water course and pipe line into said excavation; that said excavation was enclosed by a wall of rock constructed around the whole thereof, and that the deeper portions of said excavation were enclosed by a wall which came up to the surface of the waters contained therein, and was clearly visible and could be seen by any person who was in or about said excavation or the water therein.

That on or about the 19th day of August, 1913, the said Corrado Molena went to said pond or pool of water in connection with two or three other boys, some of whom were about as old, and others older, than he, and went upon the lands so belonging to the defendant as aforesaid, and waded in said water and about said pond; that the said Modena fully knew and understood the conditions of said pool as herein related and fully knew and understood and appreciated all dangers of death or injury to himself should he get into said water over his depth, and any and all dangers of drowning in said water; that shortly prior to the time of his death he was warned by a man passing thereby of the dangers attendant thereon and directed and ordered to leave and go away from said pond of water; that there was at that time floating upon said water a log or railroad tie or piece of timber, and that the said Modena attempted to mount said log, railroad tie, or timber and ride thereon over the deepest portion of said water; that thereupon he was warned by one of his companions not to do so, and notified that it was dangerous, and that the water was deep and that notwithstanding such warnings as aforesaid, and such full knowledge and appreciation on the part of the said Modena, he voluntarily and of his own free will remained in and about said water and waded therein and went into said deeper portion of said water and attempted to mount and ride upon said log, thereby getting into water over his head, and was by reason thereof drowned, and the drowning of said Modena occurred by reason of condition which were obvious, open, notorious, well understood by and appreciated by the said Modena, and when the said Modena voluntarily went into said pool of water and remained therein, as herein stated, and attempted to mount said log, as herein stated, and went about said deeper portions of said pool of water as herein stated, and failed to observe the warnings of other persons, as herein stated, he assumed all risk of injury or death by reason of drowning, or getting quantities of water in his lungs or stomach, or all risk of injury or death, accruing to him in the manner set out in plaintiff's complaint, and this defendant is not liable therefor.

Third.

Defendant, for a further second, separate, and affirmative defense to plaintiff's pretended second cause of action, alleges:

That on the 19th day of August, 1913, the defendant was the owner of a certain tract of land near what is known as the Berkeley mine, and that upon said tract of land there was located and situated a certain pond or pool of water, which is the pond or pool of water mentioned in plaintiff's pretended

second cause of action; that prior to the acquisition of title to said land by the said defendant, the predecessors in interest, and the then owners of said tract of land, had made and constructed an excavation upon this same for the sole and only purpose of building thereon a smelting and reduction plant and making a boiler room to be used in connection with said smelting and reduction plant, which said smelting and reduction plant and boiler room were thereafter constructed thereon; that prior to the acquisition of the title to said land by this defendant said smelting and reduction plant had been torn down and removed by its predecessors in interest, leaving upon said land the said excavation as aforesaid, and that said excavation at no point therein exceeded in depth eight or nine feet from the rim of the same to the bottom thereof; that said excavation was so situated that when, and after said smelting plant was dismantled, as aforesaid, natural waters from the surface of the earth, caused by heavy rains and melting snows, settled and remained therein, and that the said excavation was by the said defendant being used on the said 19th day of August, 1913, and had for a long time prior thereto been used by the said defendant for the purpose of a receptacle for certain waters from the boiler room and from the boilers and from the dry used in connection with the operation of said Berkeley mine, and that said waters were drained out of and away from said Berkeley mine and said boilers and boiler room and dry thereof by means of an artificial water course and pipe line into said excavation; that said excavation was enclosed by a wall of rock constructed around the whole thereof, and that the deeper portions of said excavation were enclosed also by a wall which came up to the surface of the waters contained therein and was clearly visible and could be seen by any person who was in or about said excavation or the waters therein.

That on or about the 19th day of August, 1913, the said Modena fully knew and understood the condition of said pond as herein related and fully knew and understood and appreciated all dangers of death or injury to himself should he get into said water over his depth and any and all danger of drowning in said water; that on said day the said Modena went to said pond or pool of water, accompanied by two or three other boys, some of whom were about as old, and others older than he, and went upon and over the lands so belonging to the defendant as aforesaid and negligently waded in said water and about said pond; that shortly prior to the time of his death he was warned by a man passing thereby of the dangers attendant thereon and directed and ordered to leave and go away from said pond of water; that there was at that time floating upon said water a log or railroad tie or piece of timber; that the said Modena was warned by one of his companions that the water in said pond was deep, and that it was dangerous, and that it was dangerous to attempt to mount and ride upon said log or piece of timber; that notwithstanding said warnings so given to the said Modena and his full appreciation and understanding of the danger of drowning in said water the said Modena continued to negligently wade and play in and about the said water, and the said Modena negligently attempted to mount said log, railroad tie, or piece of timber so floating upon said water and negligently went into said deeper portion of said water, thereby getting into water over his head and was, by reason of his said negligent conduct, drowned in said pool of water, all of which negligence upon the part of said Modena was a proximate cause of his injury and death, without which his injury and death would not have occurred; and if the said death of the said Modena occurred by reason of any negligent act or acts charged by the plaintiff in said pretended second cause of action against the defendant, the said negligent acts of the said Modena in so wading in said water, as aforesaid, and in so failing to heed the warnings so given him, as aforesaid, and in so getting into water over his head, as aforesaid, and in so attempting to mount said log, railroad tie, or piece of timber, as aforesaid, under the conditions aforesaid, combined and concurred with the negligent acts of the defendant, if any, and contributed directly as a proximate cause to the injury and death of the said Modena, and without which his injury and death would not have occurred.

Wherefore defendant having fully answered the complaint of plaintiff herein, prays to be dismissed hence with its costs.

Notice. No. 151.

JOSEPH MODENA, AS ADMINISTRATOR, PLAINTIFF, *v.* ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

To the defendant above named, and to Messrs. L. O. Evans, its chief counsel, and D. Gay Stivers and W. B. Rodgers, its attorneys: Gentlemen, take notice:

That on Monday morning, the 25th day of May, 1914, at the hour of ten o'clock, or as soon thereafter as counsel will be heard, the plaintiff will present to the above-entitled court in the Federal Building at Butte, Montana, the motion hereunto annexed.

Dated, May 20, 1914.

B. K. WHEELER, A. A. GRORUD,
MAURY, TEMPLEMAN & DAVIES,
Attorneys for Plaintiff.

Service of the above notice admitted and copy received this 20th day of May, 1914.

JOSEPH MODENA, AS ADMINISTRATOR, PLAINTIFF, *v.* ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

MOTION TO CHANGE THE PLACE OF TRIAL.

Now comes the plaintiff above named and respectfully moves to change the place of trial of the above-entitled action from Butte, in the county of Silver Bow, in Montana, to Helena, in the county of Lewis and Clark, in Montana.

This motion will be based upon the affidavit of M. Kerr Beadle, C. N. Davidson, Homer G. Murphy, A. A. Grorud, I. G. Deeny, J. D. Eason, jr., George B. Dygert, M. J. English, P. E. Geagan, L. M. Van Etten, H. L. Clinton, J. O. Davies, H. A. Tyvand, Wm. F. Davis, Timothy F. Nolan, Lewis P. Donovan, Edward C. Smith, Alexander Macken, Charles A. Wallace, and Lowndes Maury (two).

It will be based upon further affidavits to be served previous to the motion. It will be based upon oral testimony to be given at the hearing of the motion;

and the ground of the motion is that the plaintiff can not have a fair or an impartial trial of the above-entitled action in Silver Bow County, Montana, wherein is the department of the court where the cause is pending; and on the ground that the plaintiff can not have a fair or an impartial trial of the above-entitled action before a jury or a panel composed in whole or in part of residents of Silver Bow County or Deer Lodge County in Montana; and on the further ground that this is an action at law properly tryable to a jury and no jury has been waived by the plaintiff.

B. K. WHEELER, A. A. GROBUD,
MAURY, TEMPLEMAN & DAVIES,
Attorneys for Plaintiff.

JOSEPH MODENA, AS ADMINISTRATOR, PLAINTIFF, v. ANACONDA COPPER MINING Co., A CORPORATION, DEFENDANT.

AFFIDAVIT.

STATE OF MONTANA,
County of Silver Bow, ss:

Lowndes Maury, being duly sworn on his oath, does say: I am resident of Silver Bow County, Mont., and have resided therein for 19 years last past. I am by occupation a lawyer. I am acquainted with the defendant Anaconda Copper Mining Co. The defendant is engaged in quartz mining in said county, and is engaged in smelting and treating the ores mined in Silver Bow County, in Deer Lodge County, Mont., near the city of Anaconda, and has been so engaged in quartz mining and smelting in the said counties for more than 10 years last past. The principal and almost the only industry in Silver Bow County is that of mining. The principal industry of Deer Lodge County, and the principal industry in or near the city of Anaconda therein, is smelting.

The defendant Anaconda Copper Mining Co. owns, operates, and controls nearly all of the important mines in Silver Bow County. Nearly all of the inhabitants of Silver Bow County and of the cities of Butte, Walkerville, and towns of Centerville and Meadersville therein, are dependent either directly or indirectly for subsistence and support upon the mining industry and upon the good will of the defendant. The defendant employs, directly or indirectly, in the said counties of Silver Bow and Deer Lodge far more than ten times as many laborers than any other employer of labor in the said counties or in either of them.

That affiant in a general way is familiar with the history of the trial of cases had in Silver Bow County during 10 years last past, wherein defendant has been a party; that affiant has heard many people talk on the subject of whether any ordinary litigant, or any litigant at all, can have a fair and impartial trial before any jury wherein there are residents of Silver Bow County or of Deer Lodge County.

That affiant verily believes that it is impossible for the plaintiff in the above-entitled action to have a fair or an impartial trial of this cause before a jury consisting, in whole or in part, of residents of Silver Bow County or of Deer Lodge County.

LOWNDES MAURY.

Subscribed and sworn to before me this 18th day of May, 1914.

JOSEPH MODENA, AS ADMINISTRATOR OF CORRADO MODENA, DECEASED, PLAINTIFF
v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

AFFIDAVIT OF LOWNDES MAURY.

STATE OF MONTANA,
County of Silver Bow, ss:

Lowndes Maury, being first duly sworn, on his oath does say:

I am by occupation and profession an attorney at law. I have lived in Butte for more than 19 years last past, and practiced my profession of law there and elsewhere in the northwest portion of the United States for more than 18 years. I am a member of the law firm of Maury, Templeman & Davies. I have been trusted with a large measure of the litigation in Silver Bow County for the last seven or eight years. I have been attorney of record in the courts of Silver Bow County and in the United States district and circuit courts in more than 100 pending cases at one time and often. I have been city attorney of the city of Butte for a term of two years, and at the time that I took office as such there were pending undetermined actions at law and suits in equity in which the city was interested, more than 85 and almost all of these were tried and disposed of during my term of office, and in such trials I gave personal attention to all of them except two or three in which I was disqualified by reason of my having appeared or given advice concerning the same before my appointment as city attorney, and I personally was present and assisting my deputies in the trials of almost all of these 85 cases; and many more cases were commenced in which the city was interested during my term of office, and in which cases I appeared and conducted the trial. So tense has been the litigation for the city, and so voluminous has it been, and such litigation as that I was interested as an attorney, that in one day 5 cases in which the city was a party were presented by argument to the Supreme Court of Montana (and in some of these I wrote the briefs), and on the same day 16 cases consolidated into 1 against the city were being defended by me personally in Silver Bow County.

I have had experience as an attorney and counselor at law, retained by the city to serve for Butte Electric & Power Co., Montana Power Transmission Co., Billings & Eastern Montana Power Co., Madison River Power Co., and other concerns, finally merged into the Montana Power Co.

I have had experience in the prosecution and defense of many personal-injury and death cases outside of the previous matters hereinabove described. More than seven years ago, in a meeting of the bar association of Silver Bow County, I announced that it was impossible to get a fair or an impartial trial

before a jury consisting of residents of Silver Bow County in a cause to which the following-named corporations or any of them were parties, to wit: The Anaconda Copper Mining Co., the Parrot Silver & Copper Co., the Butte & Boston Consolidated Mining Co., the Trenton Mining & Development Co., the Boston & Montana Consolidated Copper & Silver Mining Co., and the Washoe Copper Co., and since the said time I have watched the progress of litigation against the said companies in Silver Bow County. I have carefully noted court records and newspaper accounts of litigation in which any of the said companies were concerned—I have not, of course, read all of the court records nor all of the newspaper accounts—and in the said time, I am informed and believe, that there has not been a verdict rendered against any of the said companies by any jury or any court in Silver Bow County; and I know of my own knowledge that scores of cases against one or more of these companies have been commenced in Silver Bow County.

At some time during the last seven years all of the said corporations have been merged into the Anaconda Copper Mining Co. The properties, mining, mills, and smelters of all of the other said companies have been transferred to the Anaconda Copper Mining Co., and it is now operating substantially the same properties as all of the other companies and itself did operate before the said merger. About seven years ago, and for sometime thereafter, there was a corporation operating mines and a smelter in Butte known as Colusa Parrot Mining & Smelting Co., and since the said time it has transferred to the Anaconda Copper Mining Co., all of its mining properties and its smelter, as affiant is informed and believes, and such company is dissolved, as affiant is informed and believes, and properties previously worked by it are being operated by the said Anaconda Copper Mining Co. Said Anaconda Copper Mining Co., as affiant is informed and believes, is the owner of 51 per cent of the capital stock of a railroad operating between Butte and Anaconda, known as the Butte, Anaconda & Pacific Railway Co. The said Anaconda Copper Mining Co. does a large amount of smelting of customs ores from other mining companies produced in Silver Bow County, to wit, it smelts ores, as affiant is informed and believes, of North Butte Mining Co., which concern operates with usually three or four hundred men, of Tuolumne Copper Mining Co., of Butte Alex Scott Mining Co.

That, in addition to its mines in Silver Bow County, affiant is informed and believes, that the said Anaconda Copper Mining Co. has in the last two or three years obtained control of and owns and is operating large gold producing mines at Southern Cross and elsewhere in Deer Lodge County, Montana.

That, as affiant is informed and believes, the said Anaconda Copper Mining Co. gives employment to 12,000 men in Silver Bow County, and about 1,800 men in Deer Lodge County; that, as affiant is informed and believes, the Anaconda Copper Mining Co. maintains a so-called "blue card" system, a system for the identification of men, and that no man may enter the employ of the said company in Silver Bow County without first procuring such a card from a central office and identifying himself before such card is obtained.

That the same counsel who appear generally for the Anaconda Copper Mining Co. also represent in litigation the Butte Water Co., which furnishes all water for domestic consumption to the inhabitants of the city of Butte; for the Montana Power Co., which is a concern with a capital stock of \$100,000,000; for the Butte, Anaconda & Pacific Railway Co., aforesaid, a large mercantile company—probably the largest in Silver Bow County—to wit, the Hennessy Co.; for a large banking establishment in Butte, in Silver Bow County, known as the Daly Bank & Trust Co., of Butte; for a large banking establishment in Anaconda, known as the Daly Bank & Trust Co., of Anaconda, and also for the said North Butte Mining Co.

That the said Anaconda Copper Mining Co. can exert a great power over most, if not all, of the merchants of Butte, in that most, if not all, of the merchants of Butte extend credit to laborers, servants of the said company, on the security of assignments of the time and wages of said servants, and such method is a great convenience to the merchants of Butte.

That for many years the chief local servants of the Anaconda Copper Mining Co., its superintendents, its managers, its servants, have taken an intense interest in the politics of Silver Bow County. They have sought to dominate political conventions and have dominated many of them. And so great has been the influence of this corporation in the life political, economical, and juridical of Silver Bow County that it has established in the minds of the people of Silver Bow County and Deer Lodge County a fear of deciding any

cause against this corporation or against any other corporation in favor of the individual.

Affiant has in a general way kept track of and searched the records of the above entitled district court sitting in Silver Bow County. Affiant is informed and believes, and therefore states the fact to be, that there has not been a verdict in favor of the plaintiff in any case for personal injuries or tortious death in the department of the above-entitled court, either district court or circuit court in seven years, that the last verdict obtained by a plaintiff in such a case in the above-entitled court in so far as Silver Bow County is concerned was in the case of Monohan versus Colusa Parrot Mining & Smelting Co., the said verdict being rendered on or about the first week in April, 1907; that since the said time, such causes have been tried in the above-entitled court or in the circuit court which was merged into the above-entitled court, and in the Federal Building in Butte, causes for personal injury or death by the following counsel: The firm of Walsh, Nolan & Scallon, one of whom is now United States Senator from Montana, one of whom has been attorney general of Montana, one of whom has been chief counsel for, and local managing director of, and chief local officer of the Anaconda Copper Mining Co. Other similar causes have been prosecuted by Peter Breen, former county attorney of Silver Bow County, and esteemed one of the ablest members of the bar of the county; Lewis P. Forestell, formerly city attorney of the city of Butte, and esteemed one of the able members of the Butte bar; and many have been prosecuted by the firm or firms of which affiant is a member, or has been a member in the said time, and many other attorneys at law of high standing and great ability have gone down to defeat before juries in the same court in the said seven years.

And by reason of the foregoing facts, affiant avers that it is impossible for any ordinary litigant to secure a fair or an impartial trial in the above-entitled court before any jury consisting in whole or in part of residents of Silver Bow County or of residents of Deer Lodge County in Montana; that the present panel of jurors and all of the panels of jurors that have been drawn for jury service in the said department of the said court, to wit, that department which sits in Silver Bow County, and in Butte therein, consists and have consisted largely of the residents of Silver Bow County and Deer Lodge County; that on the present panel, out of 24 members and men constituting the panel, as affiant is informed by the clerk and believes, 7 are residents either of Silver Bow County or of Deer Lodge County, and the remainder are residents of other counties in the State, and such has been a fair proportion of their panels.

LOWNDES MAURY.

J. D. EASAN, Jr.,

Notary Public for State of Montana, residing at Butte, Mont.

My commission expires October 1, 1916.

Service of foregoing affidavit admitted and copy received this 20th day of May, 1914.

C. F. KELLEY ET AL.

In the District Court of the United States in and for the District of Montana.

JOSEPH MODENA, AS ADMINISTRATOR OF CORRADO MODENA, DECEASED, PLAINTIFF, v.
ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

STATE OF MONTANA,
County of Silver Bow, ss:

Burton K. Wheeler, being first duly sworn, on his oath does say: I am by profession an attorney at law. I have lived in Butte for about eight years last past, and practiced my profession of law there and elsewhere in the State of Montana. I have had experience as a member of the Legislative Assembly of the State of Montana. I am now district attorney of the United States in and for the district of Montana.

I do not believe that the plaintiff above named can have a fair or impartial trial of the above-entitled cause against the Anaconda Copper Mining Co. at Butte so long as any material portion of the jury empaneled to try the cause is drawn from citizens of Silver Bow County, wherein Butte is situated, or from citizens of Deer Lodge County, wherein Anaconda is situated.

My reasons for holding this opinion and expressing this belief are as follows: The Anaconda Copper Mining Co. is engaged in the business of mining copper, silver, and gold ores in Silver Bow County, and in the mining of gold ores in Deer Lodge County, and in the smelting and reduction of all such ores in Deer Lodge County.

In the county of Silver Bow the said company owns, operates, and controls approximately 90 per cent of all the copper, gold, and silver production of the county. In the county of Deer Lodge it produces approximately 75 per cent of all the gold mined and extracted in the said county.

In the county of Silver Bow in Montana the Anaconda Copper Mining Co. has been in business and the chief factor in the industrial and political life of the said county for now more than five years. The county of Silver Bow has a population variously estimated to approximate 75,000 people. Almost its sole productive industry is that of copper and zinc mining, with gold and silver as by-products. It has no material agricultural interest either in products directly of the soil or in herds of cattle or flocks of sheep or other domestic animals. Of this population there are about 10,000 children of school age; of the remainder of 65,000 people there are one-third women; of the remaining 40,000 people there are about one-third directly in the service of the Anaconda Copper Mining Co.

This company and its directors and managing agents have large interests in other financial and mercantile institutions in the city of Butte and county of Silver Bow. The largest mercantile institution in Silver Bow County is known as the Hennessy Co. One of the largest banks in Silver Bow County is the Daly Bank & Trust Co. of Butte. The sole source of electric power supply, either for lighting or other power purposes, in Silver Bow County is the Montana Power Co. and its various hydroelectric dams. There is a railroad running from Butte to Anaconda known as the Butte, Anaconda & Pacific Railroad. These five companies are all represented in Butte by the same attorneys at law whenever there is litigation for or against any of them.

In the last two years there has been established by the Anaconda Copper Mining Co., and maintained continuously, a correct and scientific bureau of espionage and means of identification of all of its servants who apply for work at the mines, known as the "blue-card" system; and by this system, though the company employs underground about 10,000 men, yet no man can procure service underground in the mines of the said company unless he present to the proper foreman, superintendent, or shift boss a clearance card from this bureau.

There is another mining concern, known as the North Butte Mining Co., which has usually had an interlocking directorate with Anaconda Copper Mining Co. The North Butte company employs about 700 men. All of its ores are treated at the smelter of the Anaconda Copper Mining Co., at Great Falls, and such system has continued for several years. The North Butte Mining Co. is also represented by the same attorneys at law whenever it has litigation in court.

All of the water supply of Butte, the principal city in Silver Bow County, is supplied by the Butte Water Co., a corporation. The general superintendent of that company, one Eugene Carroll, has for many years generally been rumored to be active in furthering the political advancement of the Anaconda Co. By reason of its great wealth and influence it is not possible, in my belief, to have a fair trial of the above-entitled cause in Silver Bow County.

B. K. WHEELER.

Attorney for Defendant.

Filed May 28, 1914.

In the District Court of the United States, District of Montana.

No. 151. At law.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

REPLY.

Comes now the plaintiff and, for his reply to the answer of the defendant on file herein, admits, denies, and alleges as follows, to wit:

Admits that on the 19th day of August, 1913, the defendant was the owner of a certain tract of land near what is known as the Berkeley mine, and that upon said tract of land there was located and situated a certain pond or pool of water, which is the pond or pool of water mentioned in plaintiff's complaint; that prior to the acquisition of the title to said land by said defendant, the predecessors in interest, and the owners of said tract of land, had made and constructed an excavation upon the same for the sole purpose and only purpose of building thereon a smelting and reduction plant, and making a boiler room to be used in connection with said smelting and reduction plant, which said smelting and reduction plant and boiler room were thereafter constructed thereon; that prior to the acquisition of the title to said land by this defendant said smelting and reduction plant had been torn down and removed by its predecessors in interest, leaving upon said land the said excavation as aforesaid; that said excavation was so situated that when and after said smelting plant was dismantled as aforesaid natural waters from the surface of the earth, caused by heavy rains and melting snows, settled and remained thereon; and that the said excavation was by the said defendant being used on the said 19th day of August, 1913, and had for a long time prior thereto been used, by the said defendant for the purpose of a receptacle for certain waters from the boiler room and from the boiler and from the dry used in connection with the operation of said Berkeley mine; and that said waters were drained out and away from said Berkeley mine, and said boilers, boiler room, and dry thereof, by means of an artificial watercourse and pipe line into said excavation; that said excavation was enclosed by a wall of rock constructed around the whole thereof, and that the deeper portions of said excavation were inclosed by a wall; that on or about the 19th day of August, 1913, the said Corrado Modena went into said pool or pond of water in connection with other boys, some of whom were about as old and others older than he, and went upon the lands belonging to the said defendants, and waded in said water and about said pond.

Admits that there was at that time floating upon said water a log or railroad tie or piece of timber.

As to whether or not the said Modena attempted to mount said log, railroad tie, or timber and ride thereon over the deeper portions of said water this plaintiff denies that he has any knowledge or information sufficient to form a belief.

Admits that plaintiff's decedent got into the water over his head and was by reason thereof drowned.

Admits that the death of said Modena occurred by reason of the negligent act or acts charged by the plaintiff in his first cause of action against the defendant.

And denies each and every other allegation and all other allegations contained in said answer.

Plaintiff, for his reply to the answer of the defendant on file herein, denies generally each and every other allegation and all allegations therein contained except such allegations as have been hereinbefore specifically admitted or denied.

Wherefore plaintiff, having fully replied to the answer of the defendant on file herein, prays judgment in accordance with the prayer of his complaint.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

AFFIDAVIT OF JOHN GILLIE.

STATE OF MONTANA,
County of Silver Bow, ss:

John Gillie, being first duly sworn, on oath deposes and says that he is now, and for more than 11 years has been, the general superintendent of the Anaconda Copper Mining Co., the above-named defendant, and that prior to becoming the general superintendent of the Anaconda Copper Mining Co. alicant occupied the position of general manager of the Butte & Boston Consolidated Mining Co.

That affiant has been a resident of Silver Bow County since the year 1881, and prior to devoting his time to the affairs of the above-named corporations was engaged in a general civil and mining engineering business, with his headquarters at Butte, Silver Bow County, Mont.; that affiant is thoroughly acquainted with the properties, affairs, and operations of the said Anaconda Copper Mining Co.

That there is no connection of any kind or character between the Daly Bank & Trust Co. of Butte, Mont., and the Anaconda Copper Mining Co., save the fact that the banking business of said Anaconda Copper Mining Co. is largely transacted at said Daly Bank & Trust Co.; that the said Daly Bank & Trust Co. and its affairs are conducted independently of said Anaconda Copper Mining Co., and are conducted in the same manner as that of the six other banking institutions of Butte, Mont., at least one, and possibly two, of which are larger in amount of deposits and business transactions than the Daly Bank & Trust Co.

Affiant further says that the said Anaconda Copper Mining Co. is not the owner of any stock of or interested in any way in the Montana Power Co.

That said Anaconda Copper Mining Co., nor any of its officers or agents, so far as affiant knows or can learn, have any interests whatsoever in the Hennessy Co. or its business affairs.

That in employing its miners or other workmen the defendant is in no way affected or influenced by the fact of whether the person applying is a debtor or customer of the said Hennessy Co. or any other merchant or mercantile house; that the affairs of the said Anaconda Copper Mining Co. are conducted in the same manner, as they affect the said Hennessy Co., as any and all other merchants and others engaged in business in the city of Butte and elsewhere.

That it is not true that the Anaconda Copper Mining Co. has exerted, or can exert, a great or any power over the merchants of the city of Butte or anyone else by reason of any custom of the employees of said company in assigning their wages due, or to become due, as security for indebtedness; that the affairs of said Anaconda Copper Mining Co. are conducted as those of all other mining companies operating in Silver Bow County, so far as such assignments are concerned, and all merchants are treated alike in respect to them; that when assignments, or other notice thereof, are given to the said Anaconda Copper Mining Co., they are recognized and paid out of any money coming to the employee.

Affiant further says that the population of Silver Bow County, Mont., is estimated as being from seventy-five to eighty thousand; that for the State election held in November, 1912, the registration records in the office of the county clerk and recorder of Silver Bow County show that approximately 17,149 men were registered, and that affiant believes that there are many more eligible to registration at the present time in Silver Bow County; that a large proportion of the employees of said Anaconda Copper Mining Co. are not citizens of the United States or eligible to registration, and that an additional large proportion of said employees are not taxpayers, and many more are under the age of 21 years and over the age of 70, so that a comparatively small proportion, which affiant believes, from the information he has been able to obtain, is less than one-third of the employees of the said Copper Mining Co. in Silver Bow County, Mont., would be eligible for jury service.

That the said Anaconda Copper Mining Co., in and about its mining properties and operations in Silver Bow County, Mont., is employing not to exceed 9,100 men; that there are many other mining companies operating in Silver Bow County, Mont., employing large numbers of men, among which are the North Butte Mining Co., employing approximately 1,000 men; the Butte & Superior Copper Co., employing approximately 1,000 men; the Elm Orlu mine; the East Butte Mining Co.; the Butte-Ballaklava Mining Co.; the Butte-Alex Scott Mining Co.; the Tuolumne Mining Co.; the Davis-Daly Mining Co.; the Pilot-Butte Mining Co.; the Rainbow Lode Development Co.; the Butte & Duluth Mining Co.; the Bullwhacker Mining Co.; the Butte-Zenith Mining Co.; and other comparatively small operators; that in addition to those mentioned above, there are a large number of other employers of men in Silver Bow County, among which are the Chicago, Milwaukee & St. Paul Railway Co.; the Great Northern Railway Co.; the Northern Pacific Railway Co.; and Oregon Short Line Railway Co., employing more than 625 men; the Montana Power Co., employing approximately 125 men; the Street Railway Co., employing ap-

proximately 185 men; and many other industries—breweries, mercantile houses, factories, etc.—employing large numbers of men.

That the Butte, Anaconda & Pacific Railway Co., a majority of the stock of which is owned by the Anaconda Copper Mining Co., employs approximately 185 men in Silver Bow County.

Affiant further says that the conduct and handling of litigation, in which the said Anaconda Copper Mining Co. is interested, is turned over to the attorneys for said company, who entirely control and handle the same, investigate the facts, and call upon the operating department for such witnesses as are necessary to testify to the facts; that while affiant, as a witness, has attended a number of the trials, it has not been the practice of the officials or other representatives or agents of the said company to attend upon the trial of any case unless required as witnesses, and that the practice has been for the representatives of the Anaconda Copper Mining Co., other than the attorneys, to pay little, if any, attention to the cases pending or being tried.

Affiant further says that the said Anaconda Copper Mining Co., during the period of affiant's connection with it, has not, of affiant's knowledge or belief, coerced or influenced, or attempted to coerce or influence, in any way any resident of Silver Bow County who has been called or who has acted as a juror or witness in any case in any court; and that the said company has not, of affiant's knowledge or belief, at any time rewarded or punished, or attempted to reward or punish, in any way, or refuse to give or gave employment to any person because of his acting as such juror or witness in any of the courts; and the fact that any person has acted as juror in any case in Silver Bow County, whether the said company was party thereto or not, or as a witness in any action, has not been permitted to influence the company's action in any way, whether extending him employment or otherwise.

That affiant knows of nothing in the conduct of the company's affairs in Silver Bow County, during the period with which he has been familiar with them, and affiant thinks he would know of such if it had existed or occurred, which would establish or cause in the mind of any resident of Silver Bow County or Deer Lodge County any fear of deciding or hesitation in justly deciding any action brought against this corporation or against any other corporation in favor of any opposing litigant.

Affiant further says that he knows of no sentiment or feeling of condition of fear or bias or other sentiment or feeling in Silver Bow or Deer Lodge County, Mont., in favor of the said Anaconda Mining Co., or against any opposing litigant, which would prevent such litigant from obtaining a fair trial as against said Anaconda Copper Mining Co. before a jury composed of residents of either Silver Bow County or Deer Lodge County; and affiant knows of nothing and does not believe that anything exists in the operation or method of operation of the said defendant corporation which would give rise to any such sentiment of fear or bias or any other sentiment or feeling which would work to the disadvantage of such opposing litigant. That affiant knows of no reason or condition why the above-named plaintiff can not secure a fair and impartial trial before a jury composed of residents of either Silver Bow or Deer Lodge County, and, on the contrary, affiant believes that said plaintiff can and will, if such action is tried, secure a fair and impartial trial, whether the jury be made up of residents of Silver Bow or Deer Lodge County or elsewhere.

JOHN GILLIE.

Subscribed and sworn to before me this 28th day of May, 1914.

CARL J. CHRISTIAN,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires March 14, 1916.

Filed May 29, 1914.

AFFIDAVIT OF W. J. JOHNSON.

STATE OF MONTANA,

County of Deer Lodge, ss:

W. J. Johnson, being first duly sworn, on oath says: That he is now, and for 29 years last past has been, a resident of Anaconda, Deer Lodge County, Mont.; that affiant is not now and has not at any time been connected in any way, either in business or otherwise, with the Anaconda Copper Mining Co.; that during all of said time affiant has been engaged in business in said county and for a period

of more than five years last past has been a member of the board of county commissioners of such county and is now chairman of such board; that affiant has taken part in and participated in various political campaigns during his residence in Anaconda, and has a large acquaintance with the business, laboring, and professional men and those engaged in mining and other pursuits in said county; affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County in relation to the said Anaconda Copper Mining Co. and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of nor has he heard of any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial; and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residence of said county and his knowledge of the public sentiment therein, in his opinion there is no condition of general interest in or fear of or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case wherein the said company is a party, before jurors selected from the residents of said Deer Lodge County, and affiant believes that no difficulty would be had in empanelling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

That affiant knows of no reason and believes none exists why this action could not be tried in the United States court, or any other court, before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

W. J. JOHNSON.

AFFIDAVIT OF THOMAS J. WALKER.

STATE OF MONTANA,
County of Silver Bow, ss:

Thomas J. Walker, being first duly sworn, on his oath deposes and says: I am now and for 25 years last past have been a resident of Silver Bow County, Mont.; that I am an attorney at law and have been practicing my profession as such in Silver Bow County and Deer Lodge County, Mont., for a period of more than 10 years last past. That for four years prior to the first Monday of January, 1913, affiant was county attorney of said county of Silver Bow, and for several years prior to becoming county attorney affiant acted as assistant or deputy county attorney for such county; that during all of the years affiant has been so practicing his profession he has been carrying on a general practice, and has tried a great many cases, some against corporations, and has participated in the defense of cases for corporations as parties defendant; that affiant has been generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession there, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and the other corporations engaged in business in Silver Bow County. That during all of the years of his practice affiant has taken part in and participated in the various political campaigns in the county of Silver Bow and has a large acquaintance personally among the inhabitants of Silver Bow and Deer Lodge Counties, including the miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the Anaconda Copper Mining Co.; that from his knowledge of the conditions and sentiment in Silver Bow County, in affiant's opinion, there is no condition of bias or prejudice in favor of the said Anaconda Copper Mining Co., or of fear or dread or other sentiment in favor of said company, or any other condition or reason which would in affiant's opinion in any way prevent the plain-

tiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow or Deer Lodge County; affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow or Deer Lodge County, in the above-entitled court in the county of Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above-entitled action if tried in Silver Bow County, Mont.

Filed May 29, 1914.

AFFIDAVIT OF CHARLES S. HENDERSON.

STATE OF MONTANA, County of Silver Bow, ss:

Charles S. Henderson, being first duly sworn, on oath deposes and says: That he is now and for the past 27 years has been a resident of Silver Bow County, Mont.; that during the years 1907 and 1908 affiant was sheriff of Silver Bow County, Mont., and that for many years prior thereto and since affiant has been engaged in the mercantile business and various business enterprises in Silver Bow County, Mont.; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County; and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 10 years in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies and in relation to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company or any of the other mining companies operating therein among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant therein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

4010 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

AFFIDAVIT OF HERMAN BLANK.

STATE OF MONTANA, *County of Silver Bow, ss:*

Herman Blank, being first duly sworn, on oath deposes and says: That he is now and for more than 21 years last past has been a resident of Butte, Silver Bow County, State of Montana, and during said time has been engaged in the wholesale liquor business and is and has been interested in other business enterprises in said city.

That for a period of 10 years prior to the formation of the Butte Chamber of Commerce, which was organized about the month of March, 1912, affiant was president of the Butte Business Men's Association, an organization composed of the business and professional men of the city of Butte and organized and maintained for the purpose of promoting the welfare of the business and other interests of the city of Butte. That affiant during approximately the entire period of its organization was a member of said Butte Business Men's Association and took an active interest in its affairs. Affiant says that he does not recall that Mr. C. J. Kelly ever attended a meeting of said Butte Business Men's Association, and that Mr. Kelly certainly had very little, if anything, to do with the affairs of said association, and that affiant while president of said organization made an effort to have Mr. Kelly take a more active part in said organization, and affiant regrets that he was unable to do so, as he felt that it would have been to the interest of said organization and Butte generally to have enlisted more of Mr. Kelly's efforts in this behalf. That at no time during the incumbency of this affiant as president of said organization, nor at any time while affiant was a member thereof, has the said Kelly, of the Hennessey Co., or anyone else, ever attempted, to affiant's knowledge, to directly or indirectly influence the affairs of said Butte Business Men's Association on behalf of the said Kelly or said Hennessey Co. or on behalf of the Amalgamated Copper Co. or the Anaconda Copper Mining Co. or any other mining company. That none of the said corporations has ever, to affiant's knowledge, attempted directly or indirectly to influence or dominate the said association or the individual members thereof. That, aside from supporting in a legitimate manner, when requested so to do, matters of public importance and benefit, no influence of any kind, to affiant's knowledge and belief, has been exercised by said corporations, or either of them, or on their behalf.

Affiant further says that from his knowledge of conditions in Butte, and from his associations with the other residents of said city, he feels that he is well acquainted with the conditions and sentiment existing in said city and Silver Bow County, and that it is affiant's belief that the above-named plaintiff can have a fair and impartial trial before a jury of residents of Silver Bow County, Mont., in the above-entitled action, or upon any other issue to which he may be a party or be interested in, and that affiant knows of no condition, sentiment, or reason which would in anywise prevent or interfere with the obtaining by plaintiff of a fair trial before such jury against said Anaconda Copper Mining Co.

HERMAN BLANK.

AFFIDAVIT OF J. K. O'ROURKE.

STATE OF MONTANA, *County of Silver Bow, ss:*

J. K. O'Rourke, being first duly sworn, on oath deposes and says: That he is now, and for 13 years last past has been, a resident of Butte, Silver Bow County, Mont. That affiant formerly was engaged as a timekeeper in and about the Butte mines, and since the first of the year 1909 has been sheriff of Silver Bow County, Mont. That affiant was Sheriff of Silver Bow County for four years ending in January, 1913. That during the period of his residence in Butte affiant has had, and now has, a very large acquaintance personally with the miners and workmen in and about the Butte mines, and has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 12 years in the vari-

ous general elections had in Silver Bow County during said period, and that the plaintiff in this action, and the other large mining companies operating in and near Butte, have been discussed and asserted as issues more or less in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, and in his opinion, there is no condition of general interest in or bias in favor of said plaintiff company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., and there is no prejudice, in affiant's opinion, against the above-named plaintiff.

That affiant has no connection with, and is not interested in, the above-entitled action, nor in the Anaconda Copper Mining Co., plaintiff therein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion, there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury of residents thereof.

AFFIDAVIT OF D. GAY STIVERS.

STATE OF MONTANA,

County of Silver Bow, ss:

D. Gay Stivers, being first duly sworn, on his oath deposes and says: That he has resided in Butte, Silver Bow County, Mont., 24 years last past, is an attorney at law by profession, and has been practicing as such at Butte, Mont., since May, 1895; that affiant has been continuously employed as an attorney at law by the Anaconda Copper Mining Co., Parrot Silver & Copper Co., Washoe Copper Co., Butte, Anaconda & Pacific Railway Co., and the Colorado Smelting & Mining Co., and its successors in interest, the Trenton Mining & Development Co., from March, 1899, until the consolidation of the properties of said companies with the Anaconda Copper Mining Co. in 1910, and since that time has been continuously employed by the Anaconda Copper Mining Co.; that prior to such consolidation affiant, for a period of about nine years, was also employed by the Butte & Boston Consolidated Mining Co. and the Boston & Montana Consolidated Copper & Silver Mining Co.; that affiant as attorney for the said corporations, and particularly for said Anaconda Copper Mining Co., has been generally familiar and acquainted with its business and affairs and particularly with the conduct of its litigation and other legal business, and for the past 10 years has participated in almost all of the trials of cases to which said Anaconda Copper Mining Co. was a party in Silver Bow County, Mont.; that among the cases in which affiant has assisted in the trial of have been a number of what are known as "personal injury" cases against the said corporations, and affiant has been familiar with the history of such cases and the results thereof, and has also been generally familiar with the history of trials of other cases in Silver Bow County, Mont., including those against other corporations; that it has been affiant's observation and his opinion that the same condition prevails in Silver Bow County, Mont., as elsewhere, and has prevailed during the past few years, in respect to the prejudice of certain members of juries against corporations in personal-injury cases, or of bias toward the plaintiff in such cases, and it is affiant's opinion that with juries in said Silver Bow County, Mont., as elsewhere, difficulty is met in inducing them to give the same consideration or weight to

4012 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

evidence in cases presented by defendant corporations in personal-injury cases as that accorded the cases of plaintiffs in such class of cases; that upon the trials of cases in which the said Anaconda Copper Mining Co. and other corporations above named have been parties the conduct and control of such cases has been left entirely to affiant and other attorneys for said companies, and it has not been the practice for the managers, foremen, or other officials or representatives of said companies to attend upon the trials of said cases or give attention thereto in any way except when called or required as witnesses, and as a general rule, upon the trial of all such cases, no one representing such corporations has been present in the court room except the counsel and the witnesses; that affiant knows of nothing, and that he believes he would know if such existed, in the operation or conduct of the business of the Anaconda Copper Mining Co. or the other corporations above named which in anywise would tend to give rise to any feeling of fear or hesitation or any other feeling or sentiment in any of the residents of Silver Bow County, or which would in any other way tend to cause any of such residents to hesitate in fairly and impartially trying any cases to which the said company might be a party; that to affiant's knowledge and belief there is no feeling or sentiment or condition of bias or other leaning toward the said corporation, or of dread or fear of the same in Silver Bow County, and affiant knows of no condition or sentiment or feeling of any kind which would in anywise prevent the residents of Silver Bow County from acting fairly and impartially if called as jurors on cases to which the said Anaconda Copper Mining Co. or any other corporation is a party.

Affiant further says that he knows of no fact, condition, or reason, and does not believe that any exists, why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above court, in Silver Bow County, Mont., and affiant believes that a fair and impartial trial could be had by the plaintiff in the above action if tried before a jury of Silver Bow County residents in Silver Bow County, Mont.

Notary Public for the State of Montana,
Residing at Butte, Mont.

My commission expires January 27, 1915.

Filed May 29, 1914.

AFFIDAVIT OF J. L. WINES.

STATE OF MONTANA, *County of Silver Bow, ss:*

J. L. Wines, being first duly sworn on his oath, deposes and says: That affiant is now and for more than 19 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law, and has been practicing his profession in Silver Bow County, and in other counties in the State of Montana for a period of more than 19 years last past.

Affiant is not now, and never has been, connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession he has been carrying on a general practice, and has been concerned in and has tried a great many cases, some against corporations, and has participated in the defense of cases for corporations as parties defendant; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow, and has a large acquaintance personally among the inhabitants of Silver Bow and Deer Lodge Counties, including miners and workmen in and about the State mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County; in relation with the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread, or other sentiment or reason, which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow and Deer Lodge Counties.

Affiant has heard discussions among attorneys practicing in Silver Bow County of the claim advanced by Mr. Loundes Maury in this action; that litigants could not obtain a fair trial before a jury composed of residents of Silver Bow County in an action against the Anaconda Copper Mining Co., or where said company was an opposing party, and that the said Maury is the only one whom affiant has heard claim or advance an opinion that a fair trial could not be had under such circumstances, while affiant has heard others of such attorneys express their opinions to the contrary.

Affiant believes that if in his practice he should bring action against said Anaconda Mining Co.; that he could and would submit the cause to a jury of residents of Silver Bow County and obtain a fair and impartial determination thereof, the same as if the same was against any other party.

Affiant further says that he knows of no reason why the above entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow and Deer Lodge Counties in the above-entitled court, in the county of Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be had by plaintiff in the above entitled action, if tried in said Silver Bow County, Mont., before a jury of residents of said county.

J. L. WINES.

Subscribed and sworn to before me this 27th day of May, 1914.

T. J. HARRINGTON,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires December 16, 1916.

AFFIDAVIT OF GEORGE F. SHELTON.

STATE OF MONTANA, *County of Silver Bow, ss:*

George F. Shelton, being first duly sworn, on his oath deposes and says: That affiant is now and for more than 12 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law, and has been practicing his profession in Silver Bow County and in other counties in the State of Montana for a period of more than 30 years last past.

That affiant is not now and never has been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession he has been carrying on a general practice and has been concerned in and has tried a great many cases, some against corporations, and has participated in the defense of cases for corporations, as parties defendant; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the histories of cases tried before juries, including those tried against the Anaconda Copper Mining Co., and other corporations engaged in business in said Silver Bow County; that affiant has a large acquaintance personally among the inhabitants of Silver Bow and Deer Lodge Counties, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County, in relation to the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread, or other sentiment, in favor of said company, or any other conditions, sentiment, or reason which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow and Deer Lodge Counties.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow and Deer Lodge Counties in the above-entitled court, in the county of Silver Bow, State of Montana; and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont.

AFFIDAVIT OF WILLIAM MEYER.

STATE OF MONTANA, *County of Silver Bow, ss:*

William Meyer, being first duly sworn, on his oath deposes and says: That affiant is now, and for more than 29 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law and has been practicing his profession in Silver Bow County and in other counties in the State of Montana for a period of more than 104 years last past.

That affiant is not now and never has been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession he has been carrying on a general practice and has been concerned in and has tried a great many cases, some against corporations, and has participated in the defense of cases for corporations as parties defendants; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow, and has a large acquaintance personally among the inhabitants of Silver Bow County, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County, in relation to the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment in favor of said company, or any other condition, sentiment, or reason which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow County. That affiant has brought and tried a number of what are known as "personal-injury" cases, and is and has been familiar with the history of such litigation in Silver Bow County; that affiant has brought a number of such cases against the Anaconda Copper Mining Co., and the Butte, Anaconda & Pacific Railway Co., most of which have been settled on a satisfactory basis; that affiant would not hesitate to try such a case, or any case against either of said corporations before a jury composed of residents of Silver Bow County, and with the expectation and belief that a fair trial and an impartial trial would be had before such jury.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County and in the above-entitled court in the County of Silver Bow, State of Montana; and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont.

CARL J. CHRISTIAN,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires March 14, 1916.

AFFIDAVIT OF ANDREW J. DAVIS.

STATE OF MONTANA,
County of Silver Bow, ss:

Andrew J. Davis, being first duly sworn, on oath deposes and says: That he is now, and for more than 30 years last past has been, a resident of Silver Bow County, Mont.; that during all of said time he has been connected in a business way with the First National Bank of Butte, and for 20 years last past has been, and now is, the president of the said First National Bank of Butte; that during all of said times affiant has been, and now is, widely ac-

quainted with the business men, miners, and workmen in Silver Bow County, Mont.; that affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employes and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with, and is not interested in, the above entitled action, nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

ANDREW J. DAVIS.

Subscribed and sworn to before me this 28th day of May, 1914.

[SEAL.]

JOHN E. COBETTE,

*Notary Public for the State of Montana,
residing at Butte, Mont.*

My commission expires June 18, 1916.

AFFIDAVIT OF DAVID J. CHARLES.

STATE OF MONTANA,

County of Silver Bow, ss:

David J. Charles, being first duly sworn, deposes and says: That he has been a resident of Butte, Silver Bow County, Mont., for more than 30 years last past, and during said time has been engaged in various mercantile businesses, and since its organization has been, and is now, president of the Miners' Savings Bank & Trust Co.

Affiant says that he was, after its organization in the month of March, 1912, and until January, 1914, president of the Butte Chamber of Commerce, an organization of business and professional men, residents of Butte, organized for the purpose of promoting the general welfare and prosperity of Butte, and suburbs.

That the Butte Business Men's Association ceased to exist about the time of the formation of the chamber of commerce, the chamber of commerce having been organized to carry out the same purpose for which the business men's association was formed, but with somewhat broader objects and views.

Affiant says that the chamber of commerce, during affiant's presidency, had a membership of approximately 310, and that out of said membership not over approximately 16 or 17 are employes of or connected with the Anaconda Copper Mining Co., the Butte Water Co., or the Butte, Anaconda & Pacific Railway Co. That neither the said Anaconda Copper Mining Co., nor any of its employes, or anyone for it, has attempted in any way to influence the action of said chamber of commerce or to control its movements, and that all of the active members of said chamber of commerce and its officers have been engaged in promoting the welfare of Butte generally, without regard to any particular interest, corporation, or individual.

Affiant further says that he has been more or less connected with politics in said Silver Bow County, Mont., and that during his residence here he has been, and is now, well acquainted with the people of Butte, including large numbers of the miners and workmen, and feels that he is well acquainted with the feeling and sentiments generally in said Butte City.

Affiant further says that he knows of no sentiment, feeling, or other reason why the plaintiff in the above-entitled action can not obtain a fair trial

therein before a jury of residents of Silver Bow County, in Silver Bow County, Mont., and that it is affiant's belief that the said plaintiff can have a fair and impartial trial before such a jury in Silver Bow County, Mont., in the above-entitled action, or upon any other issue to which plaintiff may be a party.

Affiant is not now, and never has been, employed by or connected with the business or affairs of the Amalgamated Copper Co. or the Anaconda Copper Mining Co., and that affiant has no interest whatsoever in the above-entitled action or its outcome.

DAVID J. CHARLES,

Subscribed and sworn to before me this 28th day of May, 1914.

[SEAL.]

JOHN E. CORETTE,

Notary Public for the State of Montana,

residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF DONALD CAMPBELL.

STATE OF MONTANA, *County of Silver Bow, ss:*

Donald Campbell, being first duly sworn, on oath deposes and says: That he is now, and for the past 22 years has been, a resident of Silver Bow County, Mont.; that affiant is now a practicing physician and surgeon, and has been such in Silver Bow County, Mont., for the past 22 years; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 22 years in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action and other large mining companies operating in and near Butte have been discussed and asserted as issues more or less in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co., and the other large mining companies, and in relation generally to the matters in which the said companies and their employes and the public generally have been interested in said Silver Bow County.

Affiant in his practice has treated a great many men who have been injured in accidents while employed by the mining and railroad corporations operating in or near Butte, and has often discussed with them their injuries and their claims for compensation on account thereof.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company or any of the other mining companies operating therein among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connections with, and is not interested in, the above-entitled action, nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action would be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

DONALD CAMPBELL.

Subscribed and sworn to before me this 28th day of May, 1914.

[SEAL.]

JOHN E. CORETTE,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF F. L. MELCHER.

STATE OF MONTANA, *County of Silver Bow, ss:*

F. L. Melcher, being first duly sworn, on oath deposes and says: That he is now, and for the past 24 years has been, a resident of Silver Bow County, Mont.; that affiant is now and for the past 24 years has been engaged in the foundry and ironwork business and employs in the neighborhood of 45 men; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the said period in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action and other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people of said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action; and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

F. L. MELCHER.

Subscribed and sworn to before me this 28th day of May, 1914.

[SEAL.]

JOHN E. CORETTE,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF HUGH DALY.

STATE OF MONTANA, *County of Silver Bow, ss:*

Hugh Daly, being first duly sworn, on oath deposes and says: That he is now, and for the past eight years has been, a resident of Silver Bow County, Mont.; that affiant is now one of the owners and the manager of what is known as Gregson Springs, Mont., said Gregson Springs being a large hotel and bathing resort within the limits of Silver Bow County, Mont., and that at said place affiant, as such manager, employs in the neighborhood of 50 men; that affiant prior to becoming an owner and manager at Gregson Springs was for many years in the hotel business in Butte, Silver Bow County, Mont., and the actual manager of different hotels at said place; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County; and that during said period, and the period while at said Gregson Springs, affiant has been more or less active in politics and political matters.

Affiant has also taken part in and participated in various political campaigns during the past six years in the various general elections had in said Silver Bow County, Mont., during said period, and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as an issue, more or less, in said campaigns; that affiant is well

acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with, and is not interested in, the above-entitled action, nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

HUGH DALY.

Subscribed and sworn to before me this 28th day of May, 1914.

CARL J. CHRISTIAN,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires March 14, 1916.

AFFIDAVIT OF P. J. BROPHY.

STATE OF MONTANA,
County of Silver Bow, ss:

P. J. Brophy, being first duly sworn, on oath deposes and says: That he is now, and for the past 31 years has been, a resident of Butte, Silver Bow County, Mont.; that affiant during said period was and is engaged in various business enterprises in the city of Butte; that affiant has no connection with, and is not interested in, the above-entitled action, nor in the Anaconda Copper Mining Co., defendant therein; that affiant has now, and during his entire residence in Butte has had, a large personal acquaintance generally in said Butte city, and especially with the workmen in and about the Butte mines, and affiant has also been more or less active in political matters; that affiant is well acquainted with the condition and public sentiment both politically and generally in Silver Bow County, Mont., in relation to the mining companies and business enterprises conducted therein, and other matters of general public interest in said Silver Bow County, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court, in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury of citizens of said Silver Bow County.

P. J. BROPHY.

Subscribed and sworn to before me this 28th day of May, 1914.

[SEAL.]

CARL J. CHRISTIAN,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires March 14, 1916.

AFFIDAVIT OF M. J. SHEEHAN.

STATE OF MONTANA,

County of Silver Bow, ss:

M. J. Sheehan, being first duly sworn, on oath deposes and says: That he is now, and for the last 24 years has been, a resident of Butte, Silver Bow County, Mont.; that affiant is now and since about the month of December, 1911, has been county treasurer of Silver Bow County, Mont., and for the four years immediately preceding the year 1911 he was deputy treasurer of Silver Bow County, Mont. Affiant further states that he has taken part in and participated in various political campaigns during the past 16 years in the various general elections had in said Silver Bow County during said period, and that the defendant in this action, and the other large mining companies operating in and near Butte, have been discussed and asserted as issues more or less in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co. and the other mining companies, and in relation to the matters generally in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion there is no condition of general interest in, except the usual interest in all industries in said community, or bias in favor of said defendant company, or any other mining companies operating therein, among the people in said Silver Bow County, Mont., and there is no prejudice, in affiant's opinion, against the above-named plaintiff.

That affiant knows of no fact or reason why the above-entitled action couldn't be impartially tried in Silver Bow County, before a jury composed of residents of Silver Bow County, and, in the affiant's opinion, there would be no difficulty in securing a fair and impartial jury of such residents to try this action and render a fair and impartial verdict therein, and, in affiant's opinion, there is no sentiment of fear, or bias, or prejudice, or other sentiment, or feeling, or any condition in Silver Bow County, Mont., which would in anywise interfere with or prevent the plaintiff in the above-entitled action from securing a fair and impartial trial, and that the same could be fairly and impartially tried before a jury of citizens thereof, in said Silver Bow County, Mont.; that affiant is not interested in the above-entitled action, nor in the Anaconda Copper Mining Co., the defendant therein, or in any of the other mining companies operating in said Silver Bow County, Mont.

M. J. SHEEHAN.

Subscribed and sworn to before me this 28th day of May, 1914.

AFFIDAVIT OF T. J. BENNETTS.

STATE OF MONTANA, *County of Silver Bow, ss:*

T. J. Bennetts, being first duly sworn, on oath deposes and says: That he is now, and for the past 24 years has been, a resident of Silver Bow County, Mont.; that affiant is now and for more than 23 years last past has been engaged in the mercantile business in Silver Bow County, Mont., and does and has employed numerous men; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters; affiant has also taken part and participated in various political campaigns during such period, in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less in said campaigns; that affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co., and the other large mining companies, and in relation generally to the matters in which the said companies, and their employees, and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and, in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court, in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias, or prejudice, or feeling of fear, or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

T. J. BENNETTS.

AFFIDAVIT OF WILLIAM BAWDEN.

STATE OF MONTANA,
County of Silver Bow, ss:

William Bawden, being first duly sworn, on oath deposes and says: That he is now, and for the past 27 years has been, a resident of Silver Bow County, Mont.; that affiant is now, and for the past 27 years has been, engaged in the foundry and ironwork business, and is now president of the Western Iron Works, and employs in the neighborhood of 45 men; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County; and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the said period in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co., and the other large mining companies, and in relation generally to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana, that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially

tried in Silver Bow County, Mont., before a jury composed of residents of said county.

AFFIDAVIT OF MALCOLM GILLIS.

STATE OF MONTANA,
County of Silver Bow, ss:

Malcolm Gillis, being first duly sworn, on oath deposes and says: That he is now, and for the past 25 years has been, a resident of Silver Bow County, Mont.; that affiant is now, and since about the month of April, 1907, has been, postmaster of the city of Butte Mont.; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 25 years in the various general elections, and in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and, in his opinion, there is no condition of general interest in or bias in favor of said defendant company or any of the other mining companies operating therein among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court, in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the defendant in the above action and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

AFFIDAVIT OF CHARLES P. NEVIN.

STATE OF MONTANA,
County of Silver Bow, ss:

Charles P. Nevin, being first duly sworn, on oath deposes and says: That he is now, and for the past 31 years has been, a resident of Silver Bow County, Mont.; that affiant was mayor of the city of Butte from May, 1909, to May, 1911, and at the present time and for several years last past has been engaged in the plumbing and heating business in the city of Butte, Mont., and employs numer-

ous men in and about said business; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 12 years, in the various general elections had in said county of Silver Bow, Mont., during said period, and that the defendant in this action and other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies and in relation generally to the matters in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion there is no condition of general interest in or bias in favor of said defendant company or any of the other mining companies operating therein among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action, nor in the Anaconda Copper Mining Co., defendant herein, nor in any other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

CHAS. P. NEVIN.

Subscribed and sworn to before me this 27th day of May, 1914.

[SEAL.]

W. T. BLEICK,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires January 27, 1915.

AFFIDAVIT OF CHARLES E. ALSOP.

STATE OF MONTANA,

County of Silver Bow, ss:

Charles E. Alsop, being first duly sworn, says on oath: That he has been a resident of Butte, Mont., for the past 24 years, and for the past 3 years has been assistant secretary of the Butte Association of Credit Men, and has during all of said time devoted his entire time to its affairs; that affiant is not employed by or connected with or interested in the Anaconda Copper Mining Co. or the Amalgamated Copper Co., and has no interest whatsoever in the above entitled action.

That affiant is acquainted with Charles J. Kelly, manager of the Hennessy Co.; that affiant has never seen the said Charles J. Kelly at any of the meetings of said association, and is of the opinion that said Kelly has never attended such meetings; that the said Charles J. Kelly has never influenced or directed or attempted, to affiant's knowledge, to influence or direct the action of the said association of credit men in any way whatsoever, directly or indirectly, and that there has never been any attempt or effort by any person or corporation whatsoever to influence said credit men's association in favor of the Hennessy Co. or the Anaconda Copper Mining Co., or any of the other mining companies operating in Silver Bow County, Mont.

That the said credit men's association was organized and is maintained for the purpose of keeping supervision over the credits extended by the wholesale dealers of the city of Butte to the retail dealers and others, and of assisting retail merchants requiring assistance to carry on their respective businesses,

and for other purposes of mutual assistance to the wholesale and retail dealers of Butte; that the business or affairs of the Anaconda Copper Mining Co., or any other mining corporation, has never in any way entered into the administration of the affairs of the said credit men's association, but the same has been conducted on business principles and to the interest of all concerned as in any other community.

Affiant further says that his business has at all times and does now bring him in contact with all classes of people in said city and county, and that he is generally familiar with the sentiment in such community, and that affiant does not know of any sentiment or feeling of fear or bias or otherwise, or other reason why the plaintiff in the above-entitled action can not obtain a fair trial therein before a jury composed of residents of Silver Bow County, in Silver Bow County, Mont., and that it is affiant's belief that the said plaintiff can have a fair and impartial trial before such a jury in Silver Bow County in the above-entitled action or upon any other issue to which the said plaintiff may be a party.

CHARLES E. ALSOP.

Subscribed and sworn to before me this 28th day of May, 1914.

AFFIDAVIT OF PATRICK CONLON.

STATE OF MONTANA,

County of Silver Bow, ss:

Patrick Conlon, being first duly sworn, on oath deposes and says: That he is now, and for the past 36 years has been, a resident of Silver Bow County, Mont.; that during all of said time affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 36 years in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action and other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise in said Silver Bow County, in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action; and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

PATRICK CONLON.

Subscribed and sworn to before me this 28th day of May, 1914.

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF CHARLES AUSTIN.

STATE OF MONTANA.

County of Silver Bow, ss:

Charles Austin, being first duly sworn, on oath deposes and says: That he is now, and has been for the past 10 years, a resident of Butte, Mont., and is at present and has been since January, 1907, assistant secretary of the Merchants' Association of Butte, an association for the retail merchants of said city, formed by said merchants for mutual protection, particularly in connection with the credit business done by them, and devotes his entire time thereto; that affiant is also secretary of the Butte Chamber of Commerce; that affiant is well acquainted with Mr. Charles J. Kelly, manager of the Hennessy Co. in said city, and that during affiant's connection with said merchants' association the said Kelly has never been active in its affairs; that said Kelly or the said Hennessy Co. or anyone else has never at any time attempted to exercise or use any influence in connection with said merchants' association, either on behalf of or against the Amalgamated Copper Co. or the Anaconda Copper Mining Co. or any of the other mining corporations of Butte or vicinity; that the matters taken up by the said merchants' association in connection with credit to be extended to the customers or the members of said association has been entirely along business lines, and has not been based upon or influenced in any way by any interest of the Anaconda Copper Mining Co. or any other mining corporation or based upon or influenced by the relations, friendly or otherwise, of said persons with said Anaconda Copper Mining Co., but that all of such matters have been based upon the facts in each case, and upon the merits without regard to such mining companies or their affairs. Affiant further says that there has been nothing in the affairs of said merchants' association or the business conducted by it which could in any wise affect or bias any person or persons whatsoever in Silver Bow County toward or against the parties to the above-entitled action or any other mining corporation or enter into in any way or influence in any way any proceeding in the above-entitled action to affiant's knowledge.

That affiant is familiar with the method followed by the Hennessy Co. and the other merchants of Butte in regard to taking, where necessary, assignments from wage earners in connection with the sales made, and that all the merchants of Butte are afforded the same opportunity by the various mining companies, including the Anaconda Copper Mining Co., for presenting and having accepted such assignments, and for the purpose of obtaining the information necessary in connection therewith; that the credit extended the wage earners by the various merchants and business houses in Butte is based solely upon the right to credit of each individual, and that the relation of such individual to any mining company, or the feeling of such individual toward the mining company or the mining company toward such individual, does not enter into the matter.

Affiant further says that his business has at all times and does now bring him in contact with all classes of people in said city and county, and that he is generally familiar with the sentiment in such community, and that affiant does not know of any sentiment or feeling of fear or bias or otherwise or other reason why the plaintiff in the above-entitled action can not obtain a fair trial therein before a jury composed of residents of Silver Bow County in Silver Bow County, Mont.; and that it is affiant's belief that the said plaintiff can have a fair and impartial trial before such a jury in Silver Bow County in the above-entitled action or upon any other issues to which the said plaintiff may be a party.

CHARLES AUSTIN.

Subscribed and sworn to before me this 28th day of May, 1914.

JOHN E. CORETT.

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF E. F. MATHEWSON.

STATE OF MONTANA,

County of Deer Lodge, ss:

E. F. Mathewson, being first duly sworn, says on his oath: That he is and has been for 10 years last past manager of the Anaconda Copper Mining Co., in the city of Anaconda, county of Deer Lodge, State of Montana, of what is known as the Washoe smelter, situated near said city; that as such manager

he has had general direction of the policy of said company in said county, and is familiar with the conduct of all of its affairs, and with the employment and discharge of men in the employ of said company, and has also been familiar with the conduct of said company toward the citizens of said city and said county; that said company in its operations in said county has never discriminated in any way, either for or against, any citizen of said county in giving or refusing employment to such citizens of said county, or in any other way, on account of or by reason of any conduct of any of the citizens thereof, as jurors, as witnesses, in the courts of said county, or in the United States courts, or elsewhere; that no attention has ever been paid as to whether any citizen of said county had served upon the jury in said county or in the courts of the United States, or had served or sat in any cases in which said company was interested, and no information was ever sought or obtained in reference to the action or conduct of any citizen of said county when acting as a juror or witness in any of said courts, or any attention whatever paid to the conduct of such citizens while acting as such jurors or witnesses, if they so acted, and that the said company, nor any of its managers, agents, or servants, have not to the knowledge of this affiant, or with the consent or approval of any official of said company or of the said company itself, ever given or refused employment to any juror or witness in either of said courts by reason of or on account of any testimony given by any witness or any verdict rendered by any juror in any case, of any kind or character, in either of said courts. Affiant further says that neither has he as such manager of such company, nor any of its servants or agents to his knowledge, nor any officials of said company or the company itself, discriminated for or against any citizen of said county in any manner whatever, whether such citizen be employed by said company or engaged in his own individual or private pursuits for or on account of any evidence given or any verdict rendered by such citizen, either as a witness or as a juror in the court of said county or in the courts of the United States, and that said company has not concerned itself or made inquiries concerning, nor attempted in any way to interfere with the full liberty of any citizen of said county in the discharge of his duties, either as a witness or juror, in either or any of said courts during the whole time of the incumbency of this affiant as manager of said company extending from about the 1st day of June, 1903, until the present time.

Affiant further says that he is thoroughly acquainted in the said county of Deer Lodge both with persons in the employ of said company and with the other citizens thereof engaged in other lines of business, and upon their own account, such as mining, ranching, mercantile, and other lines of trade and business, and that he has associated and mixed generally with the citizens and people of said county.

That it is generally estimated that the population of said county is about 15,000 people, and that it is estimated generally that the population of the city of Anaconda is about 13,000 people; that there are large numbers of qualified jurors in said county engaged in their own individual pursuits and not dependent upon said Anaconda Copper Mining Co. other than the welfare of every citizen of every community is dependent generally upon the prosperity of the community; that there is quite a large independent farming community made up of men who are qualified as jurors in the courts of the United States in the State of Montana; that there are a large number of men engaged in mercantile and other general businesses of like character.

Affiant states from such full knowledge of the conditions and the full acquaintance with the citizens of said county that he does not believe that the citizens of said county would not entertain any fear of injury to themselves from any conduct of said company toward them, and that he does not believe that the citizens of said county would entertain any fear of injury arising to them, or to any of them, by reason of their conduct as either witnesses upon cases in which said company was interested or jurors in the trial of the same, and that he does not believe that said citizens of said county would be influenced at all in the trial of cases wherein said company is interested in favor of said company, by reason of any fear, or dread of, or bias, or favor of, or hope of reward from said company; and affiant further says that he does not believe that there is any feeling among the citizens or residents of Deer Lodge County, either of bias in favor of said company or fear or dread of the same, which would influence the citizens of said county or any of them should they be called as jurors and be selected to sit in the trial of a cause wherein said company is interested.

4030 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Deer Lodge County, Mont., and that in affiant's opinion a fair and impartial trial could be had in the above action before a jury composed of such residents of Deer Lodge County.

E. P. MATHEWSON.

Subscribed and sworn to before me this 28th day of May, A. D. 1914.

HIRAM W. RODGERS,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires January 23, 1916.

AFFIDAVIT OF JOHN E. CORETTE.

STATE OF MONTANA, *County of Silver Bow, ss:*

John E. Corette, being first duly sworn, on oath deposes and says: That affiant is now, and for more than 23 years last past has been, a resident of Silver Bow County, Mont.; that affiant is an attorney at law, and has been practicing his profession in Silver Bow County for a period of more than 10 years last past; that affiant has been during the greater portion of said time, and is now, employed by the Anaconda Copper Mining Co., and in addition has been engaged in general practice as an attorney at law, with his office in Butte, Mont.

That affiant is the attorney for the Daly Bank & Trust Co., of Butte, Mont.; that such employment and the services rendered under the same have had no connection with or relation to the Anaconda Copper Mining Co. in any way, and that the affairs of said bank are conducted entirely independently of said Anaconda Copper Mining Co. and its business and affairs; that affiant has also at different times rendered professional services to the Hennessy Co., of Butte, Mont., but that the Hennessy Co. has also employed a number of other attorneys to the same extent, some of said attorneys so employed being among those who have made affidavits for the plaintiff in this action, including T. F. Nolan and L. P. Donovan.

That during the years that affiant has been practicing his profession he has been generally familiar with the history of the trials of cases in Silver Bow County, including those tried before juries and against the Anaconda Copper Mining Co., and other corporations engaged in business in said Silver Bow County; that affiant has also during said time taken part in various political campaigns in the county of Silver Bow, wherein the Anaconda Copper Mining Co. and other corporations of Silver Bow County were discussed and made issues more or less. Affiant knows practically all of the lawyers practicing in Silver Bow County, Mont., and also has a large acquaintance amongst the miners, business men, and other residents of Silver Bow County, and is well acquainted with the conditions and public sentiment, both political and otherwise, in Silver Bow County, in relation to said Anaconda Copper Mining Co.

That to affiant's knowledge and belief, and affiant is of the opinion that he would know if such existed, there is no condition or sentiment or feeling of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment, feeling, or condition, which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow County.

That affiant has heard discussed, and has discussed with many residents of Silver Bow County, including business men, lawyers, and other professional men, bankers, and men engaged in almost every other business and industry, the claim advanced by H. Lowndes Maury that a litigant could not obtain a fair trial against the Anaconda Copper Mining Co. before a jury of residents of Silver Bow County, and affiant states that, with the exception of the said Maury and two or three others of the lawyers who have made affidavits in the above action, he has never heard a claim made or opinion expressed that a fair trial could not be had under such circumstances; and on the contrary all of the others of such residents, including lawyers, have expressed themselves to the contrary, and emphatically and unhesitatingly given it as their opinion that there is no reason whatever why any case could not be fairly and impartially tried as against said Anaconda Copper Mining Co. before a jury of residents of Silver Bow County.

Affiant further says that he knows of no fact or reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, Mont., in the above-entitled court in said

county, and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried before a jury of Silver Bow County residents in said Silver Bow County, Mont.

JOHN E. CORETTE.

Subscribed and sworn to before me this 28th day May, 1914.

W. T. BLEICK,
Notary Public for the State of Montana,
residing at Butte, Mont.

My commission expires January 27, 1915.

AFFIDAVIT OF CARL J. CHRISTIAN.

STATE OF MONTANA,

County of Silver Bow, ss:

Carl J. Christian, being first duly sworn, on oath deposes and says: That he is now, and for more than 23 years last past has been, a resident of Silver Bow County, Mont.; is an attorney at law by profession, and has been practicing his profession in Silver Bow County, Mont., for a period of seven years last past; that affiant during the time of his said practice has been employed as an attorney by the Anaconda Copper Mining Co., and has also been engaged in general practice outside of the services rendered said corporation; that affiant has been in and about the court rooms of Silver Bow County, Mont., including the Federal court, a great deal during the time he has been practicing and is generally familiar with the trial of cases in Silver Bow County, including those tried before juries, and including the cases tried against the Anaconda Copper Mining Co. and the other corporations operating in Silver Bow County, Mont.; that affiant has also, during all of said time, been an active member of the Silver Bow County Bar Association and has made a practice of attending its meetings. That affiant knows practically all of the lawyers practicing in Silver Bow County, and also has a large acquaintance among the other residents of said county; that to affiant's knowledge and belief there is no condition of bias or prejudice in favor of the said Anaconda Copper Mining Co., or of fear or dread or other sentiment, condition, or feeling which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action, or any other litigant, from securing a fair trial as against said Anaconda Copper Mining Co. before a jury composed of residents of Silver Bow County; that affiant has heard a number of discussions among lawyers and other residents of Silver Bow County in regard to the claim advanced by H. Lowndes Maury that a litigant would not obtain a fair trial against the Anaconda Copper Mining Co. before a jury composed of Silver Bow County residents, and that the said D. Lowndes Maury and one or two others of the lawyers who have made affidavits to such effect in this case, are the only ones that affiant has ever heard advance such opinion or claim, while on the contrary affiant has heard a large number of other residents, including lawyers practicing here, express an opinion to the contrary, and to the effect that there was no foundation for such a claim or belief, that a fair trial could not be obtained against the said Anaconda Copper Mining Co. before a jury of Silver Bow County residents, and that there is no reason why such fair trial could not be obtained under such conditions.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont., before a jury of residents thereof.

CARL J. CHRISTIAN.

Subscribed and sworn to before me this 28th day of May, 1914.

W. T. BLEICE,
Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires January 27, 1915.

AFFIDAVIT OF J. J. O'MEARA.

STATE OF MONTANA,

County of Silver Bow, ss:

J. J. O'Meara, being first duly sworn, on oath deposes and says: That he is now and for the past 33 years has been a resident of Butte, Silver Bow County,

Mont.; that affiant for a long period was engaged in working in and about the mines of Butte, and for a number of years last past has been engaged in various business enterprises in the city of Butte; and is at present general manager of the Centennial Brewing Co.; that affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant therein, nor in any of the other large mining companies operating in Butte, Mont.; that affiant has now, and during his entire residence in Butte has had, a large personal acquaintance generally in said Butte City, and especially with the workmen in and about the Butte mines, and affiant has also been more or less active in political matters; that affiant is well acquainted with the conditions and public sentiment both politically and generally in Silver Bow County, Mont., in relation to the mining companies and business enterprises conducted therein and other matters of general public interest in said Silver Bow County, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice of feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried before a jury of citizens of Silver Bow County in Silver Bow County, Mont.

J. J. O'MEARA.

Subscribed and sworn to before me this 28th day of May, 1914.

[SEAL.]

JOHN E. CORETTE,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF CHARLES E. YOULDEN.

STATE OF MONTANA,
County of Silver Bow, ss:

Charles E. Youlden, being first duly sworn, says on oath: That he has been a resident of Silver-Bow County for a period of 13 years, and during such period has been engaged in various mercantile businesses, and is now president of the Davidson Grocery Co., engaged in the wholesale grocery business, and also a member of the firm of Youlden Grocery Co., engaged in the retail business in Butte City; that affiant is not employed by or connected with or interested in the Anaconda Copper Mining Co. or the Amalgamated Copper Co., and has no interest whatsoever in the above-entitled action; that affiant was for two years from and after February, 1912, president of the Butte Association of Credit men, having succeeded Mr. Charles E. Virden as such president; that prior to becoming president of such organization affiant was active in connection with its affairs and has attended most of its meetings; that affiant is acquainted with Charles J. Kelly, manager of the Hennessey Co.; that affiant has never seen the said Charles J. Kelly at any of the meetings of the said association, and is of the opinion that said Kelly has never attended such meetings; that the said Charles J. Kelly has never influenced or directed or attempted, to affiant's knowledge, to influence or direct the action of the said Association of Credit Men in any way whatsoever, directly or indirectly, and that there has never been any attempt or effort by any person or corporation whatsoever to influence said Credit Men's Association in favor of the Hennessey Co. or the Anaconda Copper Mining Co., or any of the other mining companies operating in Silver Bow County, Mont.

That the said credit men's association was organized and is organized for the purpose of keeping supervision over the credits extended by the wholesale dealers of the city of Butte to the retail dealers and others, and of assisting retail merchants requiring assistance to carry on their respective businesses, and for other purposes of mutual assistance to the wholesale and retail dealers of Butte; that the business or affairs of the Anaconda Copper Mining Co., or any other mining corporation, has never in any way entered into the administration of the affairs of the said credit men's association, but the same has been conducted on business principles and to the interest of all concerned, as in any other

community; that affiant is familiar with the method followed by the Hennessey Co. and the other merchants of Butte in regard to taking, where necessary, assignments from wage earners in connection with the sales made, and that all merchants of Butte are afforded the same opportunity by the various mining companies, including the Anaconda Copper Mining Co., for presenting and having accepted such assignments, and for the purpose of obtaining the information necessary in connection therewith; that the credit extended the wage earners by the various merchants and business houses in Butte is based solely upon the right to credit of each individual, and that the relation of such individual to any mining company or the feeling of such individual toward the mining company or the mining company toward such individual does not enter into the matter.

Affiant further states that his business has at all times and does now bring him in contact with all classes of people in said city and county, and that he is generally familiar with the sentiment in such community, and that affiant does not know of any sentiment or feeling of fear or bias or otherwise or other reason why the plaintiff in the above-entitled action can not obtain a fair trial therein before a court and jury composed of residents of Silver Bow County, in Silver Bow County, Mont., and that it is affiant's belief that the said plaintiff can have a fair and impartial trial before such a jury in Silver Bow County in the above-entitled action, or upon any other issue to which the said defendant may be a party.

CHARLES E. YOULDEN.

Subscribed and sworn to before me this 28th day of May, 1914.

AFFIDAVIT OF A. T. MORGAN.

STATE OF MONTANA,

County of Silver Bow, ss:

A. T. Morgan, being first duly sworn, on oath deposes and says: That he is now, and for the past 24 years has been, a resident of Silver Bow County, Mont.; that affiant is now, and for the past 24 years has been, engaged in the real estate and insurance business in Silver Bow County, Mont.; that during all of said time affiant became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 22 years, in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co., and the other large mining companies, and in relation to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

Affiant has been a member of jury panels in the State and Federal courts of Silver Bow County, and, as such, has acted upon the trial cases against corporations and others; that affiant has no connection with, and is not interested in, the above-entitled action nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court, in the county of Silver Bow, State of Montana; and in affiant's opinion there is no public

4034 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

JOHN J. KALOUSEK,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires October 20, 1916.

AFFIDAVIT OF SAMUEL BARKER, JR.

STATE OF MONTANA,

County of Silver Bow, ss:

Samuel Barker, Jr., being first duly sworn, on oath deposes and says: That he is now and for the past 30 years has been, a resident of Silver Bow County, Mont.; that affiant is now and since the year 1886 has been, a civil and mining engineer, practicing his profession in Silver Bow County, Mont.; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past six years, in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less, in said campaign. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co., and the other large mining companies, and in relation generally to the matters in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with, and is not interested in, the above entitled action, now in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

AFFIDAVIT OF H. J. McDONALD.

STATE OF MONTANA,

County of Silver Bow, ss:

H. J. McDonald, being first duly sworn, on oath deposes and says: That he is now, and for the past 24 years has been, a resident of Silver Bow County,

Mont.; that affiant is now, a practicing physician and surgeon, and has been such in Silver Bow County, Mont., for the past 24 years; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines, and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in political matters and politics. Affiant has also taken part in and participated in various political campaigns during the past 24 years, in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action, and other large mining companies operating in and near Butte, have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co., and the other large mining companies, and in relation to the matters in which the said companies and their employees, and the public generally has been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with, and is not interested in the above-entitled action, nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

Notary Public for the State of Montana,
Residing at Butte, Mont.

My commission expires June 18, 1916.

AFFIDAVIT OF S. L. TRIPP.

STATE OF MONTANA,

County of Silver Bow, ss:

S. L. Tripp, being first duly sworn, on oath deposes and says: That he is now and has been for the past 13 years a resident of Butte, Mont., and engaged in the mercantile business, and is secretary-treasurer of the Tripp & Dragstedt Co., engaged in the grocery business in said city. That affiant was vice president of the Merchants' Association of Butte, Mont., during the years 1912 and 1913, an association of the retail merchants of said city, formed by said merchants for mutual protection, particularly in connection with the credit business done by them. That the said association has now merged with the Butte Chamber of Commerce.

That affiant is well acquainted with Mr. Charles J. Kelly, manager of the Hennessy Co., in said city, and that during affiant's connection with said merchants' association, covering a period of a number of years, the said Kelly has never been active in its affairs. That said Kelly, or the said Hennessy Co., or anyone else, has never at any time attempted to exercise or use any influence in connection with or to influence or use any proceedings in connection with said merchants' association, either on behalf of or against the Amalgamated Copper Mining Co. or the Anaconda Copper Mining Co. or any of the other mining corporations of Butte or vicinity. That the matters taken up by the said merchants' association in connection with credit to be extended to the customers of the members of said association has been entirely along business lines and has not been based or influenced in any way by any interest

of the Anaconda Copper Mining Co. or any other mining corporation, or based upon or influenced by the relations, friendly or otherwise, of said persons with said Anaconda Copper Mining Co., but that all of such matters have been based upon the facts in each case and upon the merits, without regard to such mining companies or their affairs. Affiant further says that there has been nothing in the affairs of said merchants' association or the business conducted by it which could in anywise affect or bias any person or persons whatsoever in Silver Bow County toward or against the parties to the above-entitled action, or any other mining corporation, or enter into in any way or influence in any way any proceedings in the above-entitled action to affiant's knowledge.

That affiant is familiar with the method followed by the Hennessy Co. and the other merchants of Butte in regard to taking, where necessary, assignments from wage earners in connection with the sales made, and that all the merchants of Butte are afforded the same opportunity by the various mining companies, including the Anaconda Copper Mining Co., for presenting and having accepted such assignments, and for the purpose of obtaining the information necessary in connection therewith. That the credit extended the wage earners by the various merchants and business houses in Butte is based solely upon the right to credit of each individual, and that the relation of such individual to any mining company, or the feeling of such individual toward the mining company or the mining company toward such individual does not enter into the matter.

Affiant further says that his business has at all times and does now bring him in contact with all classes of people in said city and county, and that he is generally familiar with the sentiment in such community, and that affiant does not know of any sentiment or feeling of fear or bias or otherwise or other reason why the plaintiff in the above-entitled action can not obtain a fair trial therein before a court and jury composed of residents of Silver Bow, in Silver Bow County, Mont., and that it is affiant's belief that the said plaintiff can have a fair and impartial trial before such a jury in Silver Bow County, in the above-entitled action, or upon any other issue to which the said plaintiff may be a party.

S. L. TRIPP.

My commission expires July 18, 1916.

AFFIDAVIT OF H. W. RODGERS.

STATE OF MONTANA,
County of Deer Lodge, ss:

H. W. Rodgers, being first duly sworn, says on oath: That he is an attorney at law admitted to practice in the courts of the State of Montana and also in the district court of the United States for the district of Montana, and that for more than 10 years last past he has been a resident of Anaconda, Deer Lodge County, Mont., and has been during such time engaged in the practice of law, having had during all the time above mentioned an office in the city of Anaconda, Deer Lodge County, Mont., being a member of the law firm of Rodgers & Rodgers, composed of W. W. Rodgers and H. W. Rodgers; that for more than two years last past he has been employed as one of the attorneys for the Anaconda Copper Mining Co., and during the course of his employment as such attorney for said company to a considerable extent he has had charge of the legal business of said company in the county of Deer Lodge, State of Montana.

Affiant further says that he has a large acquaintance with the business, laboring, and professional men and those engaged in mining and other pursuits in said county; affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County in relation to the said Anaconda Copper Mining Co. and in relation generally to matter in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of nor has he ever heard of any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial; and affiant believes that if any such thing

occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion, there is no condition of general interest in or fear or bias in favor of the Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case wherein the said company is a party before jurors selected from the residents of said Deer Lodge County; and affiant believes that no difficulty would be had in impanelling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

That affiant knows of no reason, and believes none exists, why this action could not be tried in the United States court or any other court before a jury composed of residents of said Deer Lodge County; and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

H. W. RODGERS.

Subscribed and sworn to before me this 28th day of May, A. D. 1914.

CARL J. CHRISTIAN,

Notary Public for the State of Montana, residing at Anaconda, Mont.

My commission expires March 14, 1914.

AFFIDAVIT OF E. J. BOWMAN.

STATE OF MONTANA,

County of Deer Lodge, ss:

E. J. Bowman, being first duly sworn, on oath says: That he is now and for eight years last past has been a resident of Anaconda, Deer Lodge County, Mont.; that affiant is not now and has not at any time been connected in any way, either in business or otherwise, with the Anaconda Copper Mining Co.; that during all of the said time affiant has been a resident of Anaconda, in Deer Lodge County, Mont., he has been connected in an official capacity with the Daly Bank & Trust Co. of Anaconda; for about the first five years of his residence in Anaconda he was the vice president and manager of said Daly Bank & Trust Co. of Anaconda, and that for the last three years he has been the president and manager of said Daly Bank & Trust Co. of Anaconda; that said Daly Bank & Trust Co. is incorporated under the laws of the State of Montana and does a large general banking business in said county of Deer Lodge; that in his connection with said bank in such official capacity and otherwise he has become acquainted with a great many people and residents of the said county of Deer Lodge; that the Anaconda Copper Mining Co. has not now and never has had during any of the time affiant has had such official connection with said bank any ownership or control of said Daly Bank & Trust Co. of Anaconda; nor has the Anaconda Copper Mining Co. directed or controlled the affairs or policy of said bank in any way; and affiant believes that prior to the time that he became connected with said bank in such official capacity as above stated that the Anaconda Copper Mining Co. never at any time had any ownership or control of the said Daly Bank & Trust Co.; and affiant believes that if it ever had had such control he would have obtained knowledge of the same from the records of said bank and from other sources available to him.

Affiant further states that he has a large acquaintance with the business, laboring, and professional men, and those engaged in mining and other pursuits in said county; affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County, in relation to the said Anaconda Copper Mining Co., and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of, nor has he ever heard of, any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial, and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion, there is no condition of general interest in or fear of bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair

and impartial trial in a case wherein the said company is a party, before jurors selected from the residents of said Deer Lodge County, and affiant believes that no difficulty would be had in impaneling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

The affiant knows of no reason, and believes none exists, why this action could not be tried in the United States or any other court, before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

AFFIDAVIT OF T. C. DAVIDSON.

STATE OF MONTANA,
County of Deer Lodge, ss:

T. C. Davidson, being first duly sworn, on oath says: That he is now and for 34 years last past has been a resident of Deer Lodge County, Mont., and for 20 years last past has been a resident of the city of Anaconda, in Deer Lodge County, Mont.; that affiant is not now and has not at any time been connected in any way, either in business or otherwise with the Anaconda Copper Mining Co.; that during all of said time affiant has been engaged in business in said county; and that a number of years ago, for about three years, affiant served as county commissioner in and for Deer Lodge County; that affiant has a large acquaintance with the business, laboring, and professional men, and those engaged in mining and other pursuits in said county.

Affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County in relation to the said Anaconda Copper Mining Co., and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of, nor has he ever heard of, any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial, and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion, there is no condition of general interest in or fear of bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case wherein the said company is a party, before jurors selected from the residents of said Deer Lodge County, and affiant believes that no difficulty would be had in impaneling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party; that said affiant knows of no reason and believes none exists why this action could not be tried in the United States court, or any other court, before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

AFFIDAVIT OF W. H. TRIPPET.

STATE OF MONTANA,

County of Deer Lodge, ss:

W. H. Trippet, being first duly sworn on oath, says: That he is now, and for more than 30 years last past has been, a resident of Deer Lodge County, Mont.; and for more than 15 years last past has been a resident of the city of Anaconda, Deer Lodge County, Mont.; that he has, during all of said time, been an attorney at law, regularly admitted to practice in the courts of the State of Montana, and has been actively engaged in the practice of law in the county of Deer Lodge, Mont.; that for more than 15 years last past he has had his office in the city of Anaconda, in said county; that during the time above mentioned, he has been county attorney of the county of Deer Lodge for six years, having last held said office during the term of two years from the first Monday in January, 1909, and expiring immediately prior to the first Monday in January, 1911; that affiant is now city attorney in and for the city of Anaconda; that affiant is not now, and has not at any time, been connected in any way, either in business or otherwise, with the Anaconda Copper Mining Co.; that affiant has a large acquaintance with the business, laboring, and professional men, and those engaged in mining and other pursuits in said county, and is generally well acquainted with the people residing in said county, and has been well acquainted generally with the people in said county during all the time above mentioned.

Affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County in relation to the said Anaconda Copper Mining Co., and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of, nor has he ever heard of, any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial; and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion, there is no condition of general interest in or fear or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case wherein the said company is a party before jurors selected from the residents of said Deer Lodge County, and affiant believes no difficulty would be had in impaneling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party; that affiant knows of no reason, and believes none exists, why this action could not be tried in the United States court, or any other court, before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

HIRAM W. RODGERS,

Notary Public for the State of Montana, residing at Anaconda, Mont.

My commission expires January 23, 1916.

AFFIDAVIT OF ALFRED J. VERHEYEN.

STATE OF MONTANA,

County of Silver Bow, ss:

Alfred J. Verheyen, being first duly sworn, on his oath deposes and says: That affiant is now and for more than 14 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law, and has been practicing his profession in Silver Bow County, and in other counties in the State of Montana, for a period of more than two years last past.

That affiant is not now and never has been connected with the Anaconda Copper Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession, he has been carrying on a general practice and has been concerned in and has

tried a great many cases, some against corporations and has participated in the defense of cases for corporations as parties defendant; that affiant is generally familiar with the history and trial of cases in Silver Bow County, since he has been practicing his profession in said county and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow, and has a large acquaintance personally among the inhabitants of Silver Bow and Deer Lodge Counties, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions, and with public sentiment, both political and otherwise, in said Silver Bow County in relation to the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein, there is no condition in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co. or of fear or dread or other sentiment in favor of said mining company, or any other conditions, sentiment, or reason, which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow and Deer Lodge Counties.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow and Deer Lodge Counties in the above-entitled court, in the county of Silver Bow, State of Montana; and affiant further believes that a fair and impartial trial could be had by the plaintiff in the above-entitled action if tried in said Silver Bow County, Mont.

ALFRED J. VERHEYEN.

AFFIDAVIT OF T. J. DAVIS.

STATE OF MONTANA, *County of Silver Bow, ss:*

T. J. Davis, being first duly sworn, on his oath deposes and says: That affiant is now and for more than 17 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law, and has been practicing his profession in Silver Bow County, in the State of Montana, for a period of more than 2 years last past.

That affiant is not now and never has been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during the period affiant has been so practicing his profession he has been carrying on a general practice; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow and has a large acquaintance personally among the inhabitants of Silver Bow County, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County; and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co. or of fear or dread or other sentiment in favor of said company, or any other condition, sentiment, or reason which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow County.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court, in the county of Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont., before a jury from said county.

AFFIDAVIT OF TIMOTHY J. HARRINGTON.

STATE OF MONTANA,

County of Silver Bow, ss:

Timothy J. Harrington, being first duly sworn, on his oath deposes and says: That affiant is now and for more than 24 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law, and has been practicing his profession in Silver Bow County, in the State of Montana, for a period of more than three years last past; that affiant is now and has been ever since the first Monday in January, 1913, public administrator of said Silver Bow County.

That affiant is not now and has never been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during the period affiant has been so practicing his profession he has been carrying on a general practice; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow; and has a large acquaintance personally among the inhabitants of Silver Bow County, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County in relation to the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment in favor of said company, or of fear or dread or any other condition, sentiment, or reason which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair and impartial trial before a jury composed of residents of Silver Bow County.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; and affiant believes that a fair and impartial trial could be

had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont., before a jury from said county.

Hopkins, being first duly sworn, on his oath deposes and says: That affiant is now and for more than 32 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law and has been practicing his profession in Silver Bow County and in other counties of the State of Montana for a period of more than 10 years last past.

That affiant is not now and never has been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during the years affiant has been so practicing his profession he has been carrying on a general practice, and has been concerned in and has tried many cases; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow, and has a large acquaintance personally among the inhabitants of Silver Bow County, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County in relation to the Anaconda Copper Mining Co., and that from his knowledge as to the conditions and sentiment therein there is no condition in affiant's opinion of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment, or any other condition, sentiment, or reason which would in affiant's opinion in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow County.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court, in the county of

Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont., before a jury of residents of said county.

HENRY C. HOPKINS.

AFFIDAVIT OF F. J. FURMAN.

STATE OF MONTANA,

County of Silver Bow, ss:

F. J. Furman, being first duly sworn, on his oath deposes and says: That affiant is now and for more than five years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law and has been practicing his profession in Silver Bow County and in other counties in the State of Montana for a period of more than four years last past.

That affiant is not now and never has been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession he has been carrying on a general practice and has been concerned in and has tried a great many cases, some against corporations, and has participated in the defense of cases for corporations as parties defendant; that affiant is generally familiar with the history of the trial of cases in Silver Bow County, since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow and has a large acquaintance personally among the inhabitants of Silver Bow and Deer Lodge Counties, including miners and other workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition in affiant's opinion of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment in favor of said company, or any other condition, sentiment, or reason which would in affiant's opinion in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow and Deer Lodge Counties.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow and Deer Lodge Counties in the above-entitled court. In the county of Silver Bow, State of Montana; and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont.

FRED J. FURMAN.

AFFIDAVIT OF W. A. JACKSON.

STATE OF MONTANA,

County of Silver Bow, ss:

W. A. Jackson, being first duly sworn, on his oath deposes and says: That affiant is now and for more than four years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law and has been practicing his profession in Silver Bow County, in the State of Montana, for a period of more than three years last past; that affiant is now and since January 1, 1912, has been deputy county attorney of said Silver Bow County.

That affiant is not connected with or interested in the Anaconda Copper Mining Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession he has been carrying on a general practice; that affiant is generally familiar with the history and trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of the cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow and has a large acquaintance personally among the inhabitants of Silver Bow County, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County, in relation to the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition in affiant's opinion of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment in favor of said company or any other condition, sentiment, or reason which would in affiant's opinion in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow County.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow in the State of Montana; and affiant believes that a fair and impartial trial could be had by the plaintiff in the above-entitled action if tried in said Silver Bow County, Mont., before a jury of residents of said county.

AFFIDAVIT OF MILES J. CAVANAUGH.

STATE OF MONTANA,

County of Silver Bow, ss:

Miles J. Cavanaugh, being first duly sworn, on his oath deposes and says: That affiant is now and for more than 20 years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law and has been practicing his profession in Silver Bow County and in other counties in the State of Montana for a period of more than 25 years last past.

That affiant is not now and never has been connected with the Anaconda Copper Mining Co., professionally or otherwise.

That during all of the years affiant has been so practicing his profession he has been carrying on a general practice and has been concerned in and has tried a great many cases, some against corporations, and has participated in the defense of cases for corporations, as parties defendant; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow and has a large acquaintance personally among the inhabitants of Silver Bow and Deer Lodge Counties, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County in relation to the Anaconda Copper Mining Co.; and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co. or of fear or dread or other sentiment in favor of said company, or any other condition, sentiment, or reason which would in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow and Deer Lodge Counties.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow and Deer Lodge Counties in the above-entitled court, in the county of Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont.

M. J. CAVANAUGH.

AFFIDAVIT OF PERCY NAPTON.

STATE OF MONTANA,

County of Silver Bow, ss:

Percy Napton, being first duly sworn, on his oath deposes and says: That affiant is now and for more than eight years last past has been a resident of Silver Bow County, Mont.; that affiant is an attorney at law and has been practicing his profession in Silver Bow County and in other counties in the State of Montana for a period of more than 12 years last past; that ever since the first Monday of January, 1913, affiant has been and is now deputy county attorney of said Silver Bow County.

That during the years affiant has been so practicing his profession he has been carrying on a general practice and has been concerned in and has tried

many cases; that affiant is generally familiar with the history of the trial of cases in Silver Bow County since he has been practicing his profession in said county, and particularly with the history of cases tried before juries, including those tried against the Anaconda Copper Mining Co. and other corporations engaged in business in said Silver Bow County; that during all of the years of his practice affiant has taken part and participated in the various political campaigns in the county of Silver Bow and has a large acquaintance personally among the inhabitants of Silver Bow County, including miners and workmen in and about the Butte mines; that affiant is well acquainted with the conditions and with public sentiment, both political and otherwise, in said Silver Bow County in relation to the Anaconda Copper Mining Co., and that from his knowledge as to the conditions and sentiment therein there is no condition, in affiant's opinion, of bias or prejudice in favor of said Anaconda Copper Mining Co., or of fear or dread or other sentiment in favor of said company, or any other condition, sentiment, or reason which would, in affiant's opinion, in any way prevent the plaintiff in the above-entitled action from securing a fair trial before a jury composed of residents of Silver Bow County.

Affiant further says that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana, and affiant believes that a fair and impartial trial could be had by plaintiff in the above-entitled action if tried in said Silver Bow County, Mont., before a jury of residents of said county.

AFFIDAVIT OF D. F. KEHOE.

STATE OF MONTANA,
County of Silver Bow, ss:

D. F. Kehoe, being first duly sworn, on oath deposes and says: That he is now, and for the last 14 years has been, a resident of Butte, Silver Bow County, Mont.; that affiant is now, and since the first of the year 1913 has been, county clerk and recorder of Silver Bow County, Mont., and for the four years immediately preceding said time was deputy county clerk and recorder of Silver Bow County, Mont. Affiant further states that he has taken part in and participated in various political campaigns during the past 10 years in the various general elections had in said Silver Bow County during said period, and that the defendant in this action and the other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns; that affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other mining companies, and in relation generally to the matters in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont, and in his opinion there is no condition of general interest in, except usual interest in all industries in said community, or bias in favor of said defendant company or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., and there is no prejudice, in affiant's opinion, against the above-named plaintiff.

That affiant knows of no fact or reason why the above-entitled action could not be impartially tried in Silver Bow County before a jury composed of residents of Silver Bow County, and, in affiant's opinion, there would be no difficulty in securing a fair and impartial jury of such residents to try this action and render a fair and impartial verdict therein; and, in affiant's opinion, there is no sentiment of fear or bias or prejudice or other sentiment or feeling or any condition in Silver Bow County, Mont., which would in any wise interfere with or prevent the plaintiff in the above-entitled action from securing a fair and impartial trial, and that the same be fairly and impartially tried before a jury of citizens thereof in said Silver Bow County, Mont.; that affiant is not interested in the above-entitled action nor in the Anaconda

Copper Mining Co., the defendant therein, or in any of the other mining companies operating in said Silver Bow County, Mont.

D. F. KEHOE.

Subscribed and sworn to before me this 28th day of May, 1914.

AFFIDAVIT OF WILLIAM M. TUOHY.

STATE OF MONTANA,

County of Silver Bow, ss:

William M. Tuohy, being first duly sworn, on oath deposes and says: That he is now, and for the past 24 years has been, a resident of Silver Bow County, Mont.; that affiant is now, and since January, 1914, has been, president of the Butte Chamber of Commerce and is now, and has been for the past 12 years, engaged in the wood and coal business in Butte, Mont., and employs in the neighborhood of 15 men; that during all of said times affiant became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 24 years in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action and other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns; that affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

AFFIDAVIT OF TIM DRISCOLL.

STATE OF MONTANA,

County of Silver Bow, ss:

Tim Driscoll, being first duly sworn, on oath deposes and says: That he is now, and for the past 27 years has been, a resident of Silver Bow County, Mont.; that affiant is now, and since the first Monday of January, 1913, has been, sheriff of Silver Bow County, Mont.; that during all of said times affiant

became widely acquainted with the miners and workmen in and about the Butte mines and the business men and other residents of Silver Bow County, and that during said period affiant has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 27 years in the various general elections had in said Silver Bow County, Mont., and that the defendant in this action and other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns; that affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and the other large mining companies, and in relation generally to the matters in which the said companies and their employees, and the public generally, have been interested in said Silver Bow County.

Affiant further states, from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., other than the usual interest in any community in the industries carried on therein.

That affiant has no connection with and is not interested in the above-entitled action nor in the Anaconda Copper Mining Co., defendant herein, nor in any of the other large mining companies operating in or around Butte, Mont.

Affiant further states that he knows of no reason why the above-entitled action could not be fairly and impartially tried before a jury composed of residents of Silver Bow County, in the above-entitled court in the county of Silver Bow, State of Montana; that in affiant's opinion there is no public or general or other sentiment of bias or prejudice or feeling of fear or other feeling in Silver Bow County, Mont., which would in any way interfere with or prevent a fair trial before such a jury in the above-entitled action, and affiant believes that a fair and impartial trial could be obtained by the plaintiff in the above action, and that the said action could be fairly and impartially tried in Silver Bow County, Mont., before a jury composed of residents of said county.

AFFIDAVIT OF J. J. FOLEY.

STATE OF MONTANA,
County of Silver Bow, ss:

J. J. Foley, being first duly sworn, on oath deposes and says: That he is now and for the 34 years last past has been a resident of Butte, Silver Bow County, Mont.; that affiant is at present, and since January, 1909, has been, the clerk of the District Court of the Second Judicial District of the State of Montana, in and for the county of Silver Bow; that during the period of his residence in Butte affiant has had, and now has, a very large personal acquaintance with the miners and workmen in and about the Butte mines, and has been more or less active in politics and political matters. Affiant has also taken part in and participated in various political campaigns during the past 12 years in the various general elections had in said Silver Bow County during the said period, and that the defendant in this action, and the other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns. That affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co., and in relation generally to the matters in which the said company and its employees and the public generally have been interested in said Silver Bow County.

Affiant further states from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in, except the usual interest in all industries in said community, or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., and there is no prejudice, in affiant's opinion, against the above-named plaintiff.

That affiant knows of no fact or reason why the above-entitled action could not be impartially tried in Silver Bow County before a jury composed of residents of such county, and in affiant's opinion there would be no difficulty in securing a fair and impartial jury of such residents to try this action and render a fair and impartial verdict therein, and in affiant's opinion there is no sentiment or fear, bias, or prejudice, or other sentiment or feeling or conditions, in Silver Bow County, Mont., which would in anywise interfere with or prevent the plaintiff in the above-entitled action from securing a fair and impartial trial, and that the same could be fairly and impartially tried in said Silver Bow County, Mont., before a jury of citizens of said county; that affiant is not interested in the above-entitled action, nor in the Anaconda Copper Mining Co., the defendant therein, or in any of the mining companies operating in said Silver Bow County, Mont.

AFFIDAVIT OF GUS J. STROMME.

STATE OF MONTANA,
County of Silver Bow, ss:

Gus J. Stromme, being first duly sworn, on oath deposes and says: That he is now, and for the last 26 years has been, a resident of Butte, Silver Bow County, Mont.; that affiant is now, and since the first of the year 1911, has been a member of the board of county commissioners of Silver Bow County, Mont., and is now chairman of said board, and for the two years 1907 and 1908 was county auditor for Silver Bow County, Mont. Affiant further states that he has taken part in and participated in various political campaigns during the past 20 years in the various general elections had in said Silver Bow County during said period, and that the defendant in this action, and the other large mining companies operating in and near Butte have been discussed and asserted as issues, more or less, in said campaigns; that affiant is well acquainted with the conditions and public sentiment, both politically and otherwise, in said Silver Bow County, in relation to the said Anaconda Copper Mining Co. and the other mining companies, and in relation generally to the matters in which the said companies and their employees and the public generally have been interested in said Silver Bow County.

Affiant further states from his knowledge of public sentiment in said Silver Bow County, Mont., and in his opinion, there is no condition of general interest in, except the usual interest in all industries in said community, or bias in favor of said defendant company, or any of the other mining companies operating therein, among the people in said Silver Bow County, Mont., and there is no prejudice, in affiant's opinion, against the above-named plaintiff.

That affiant knows of no fact or reason why the above-entitled action could not be impartially tried in Silver Bow County before a jury composed of residents of Silver Bow County, and in affiant's opinion there would be no difficulty in securing a fair and impartial jury of such residents to try this action and render a fair and impartial verdict therein, and in affiant's opinion there is no sentiment of fear or bias or prejudice, or other sentiment or feeling or any condition in Silver Bow County, Mont., which would in any wise interfere with or prevent the plaintiff in the above-entitled action from securing a fair and impartial trial and that the same could be fairly and impartially tried before a jury of citizens thereof in said Silver Bow County, Mont.; that affiant is not interested in the above-entitled action, nor in the Anaconda Copper Mining Co., the defendant therein, or in any of the other mining companies operating in said Silver Bow County, Mont.

AFFIDAVIT OF E. E. MOORE.

STATE OF MONTANA,
County of Deer Lodge, ss:

E. E. Moore, being first duly sworn, on oath says: That he is now and for 19 years last past has been a resident of Anaconda, Deer Lodge County, Mont.; that during all of said time above mentioned affiant has been the manager of the Copper City Commercial Co.; that said Copper City Commercial Co. is now a branch of what is known as the Hennessy Co., a corporation whose principal place of business is Butte, Mont., but that the Copper City Commercial Co. is now and has been during all the times above mentioned a large department store with numerous customers, and doing a large retail and wholesale business in the city of Anaconda, Deer Lodge County, Mont.; that as such manager of the said Copper City Commercial Co. affiant has direct and immediate charge of its affairs in the city of Anaconda, County of Deer Lodge, State of Montana.

That the Anaconda Copper Mining Co. is not interested in either the Copper City Commercial Co. or in the Hennessy Co. above mentioned, to affiant's best knowledge, information, and belief, and he believes that if the Anaconda Copper Mining Co. had any interest therein that he would know of the same owing to his position as manager of the Copper City Commercial Co.; that affiant is not now and has not at any time within nine years last past been connected in any way, either in business or otherwise, with the Anaconda Copper Mining Co.

Affiant further says that as such manager of the Copper City Commercial Co. and otherwise during all the time of his residence in the city of Anaconda, Deer Lodge County, Mont., as above set out, he has had occasion to meet large numbers of people and residents of Deer Lodge County, Mont., and has been intimately acquainted with many of them; and that he has a large acquaintance with the business, laboring, and professional men, and those engaged in mining and other pursuits in said county.

Affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County in relation to the said Anaconda Copper Mining Co. and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of nor has he ever heard of any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial; and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion there is no condition of general interest in or fear or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial, in a case wherein the said company is a party, before jurors selected from the residents of said Deer Lodge County, and affiant believes that no difficulty would be had in impaneling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

That affiant knows of no reason, and believes none exists, why this action could not be tried in the United States court, or any other court, before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

AFFIDAVIT OF MYLES KELLEY.

STATE OF MONTANA, County of Deer Lodge, ss:

Myles Kelley, being first duly sworn, on oath says: That he is now, and for 20 years last past has been, a resident of Anaconda, Deer Lodge County, Mont.; that affiant is now the sheriff of Deer Lodge County, Mont., and has been sheriff of Deer Lodge County, Mont., since the first Monday of January, 1913; that since he has been such sheriff he has not been connected in any way either in business or otherwise with the Anaconda Copper Mining Co.; that affiant has a large acquaintance with the business, laboring, and professional men, and those engaged in mining and other pursuits in said county; that affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County in relation to said Anaconda Copper Mining Co. and in relation generally to matters in which the said Anaconda Copper Mining Co., and the public generally, are interested in Deer Lodge County, Mont.; affiant does not know of, nor has he ever heard of, any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial, and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion there is no condition of general interest in or fear or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case where the said company is a party before jurors

selected from the residents of said Deer Lodge County, and affiant believes that no difficulty would be had in impaneling a jury from the residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

The affiant knows of no reason, and believes none exists, why this action could not be tried in the United States court, or any other court, before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

AFFIDAVIT OF B. D. MAHAN.

STATE OF MONTANA,
County of Deer Lodge, ss:

B. D. Mahan, being first duly sworn, on oath says: That he is now, and for 23 years last past has been a resident of Anaconda, Deer Lodge County, Mont.; that affiant is not now, and has not within 18 years last past, at any time, been connected in any way, either in business or otherwise, with the Anaconda Copper Mining Co.; that during all of said time affiant has been engaged in business in said county, and since first Monday in January, 1913, has been a member of the board of county commissioners of Deer Lodge County, Mont.; that affiant has a large acquaintanceship with the business, laboring and professional men, and those engaged in mining and other pursuits in said county.

Affiant is well acquainted with the conditions and public sentiment in said Deer Lodge County, in relation to the said Anaconda Copper Mining Co. and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of, nor has ever heard of, any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial; and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion, there is no condition of general interest in or fear or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial wherein the said company is a party, before jurors selected from the residents of said Deer Lodge County; and affiant believes that no difficulty would be had in impaneling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

AFFIDAVIT OF W. B. RODGERS.

STATE OF MONTANA, *County of Deer Lodge, ss:*

W. B. Rodgers, being first duly sworn, says on oath: That he is an attorney at law, admitted to practice in the courts of the State of Montana, and also in the District Court of the United States for the District of Montana; that for more than 16 years last past he has been a resident of Anaconda, Deer Lodge County, Mont.; that from about the 1st of March, 1898, until about the 1st of March, 1902, he held the office of the United States attorney for the district

of Montana, and was located at Helena, Mont., but maintained his legal residence in Deer Lodge County, Mont.; that at the expiration of his term of office as such United States attorney he returned to Anaconda, and has ever since been engaged in the practice of law in Deer Lodge County, though for the last several years, since on or about the 1st day of September, 1910, he has been principally engaged in the practice of law in the city of Butte, Silver Bow County, Mont., but has maintained his residence in Anaconda, Deer Lodge County, Mont.; that for about 12 years he has been employed by the Anaconda Copper Mining Co., as one of its attorneys, and has to a considerable extent during all of said time had charge of the legal business of said company in the county of Deer Lodge, State of Montana, though since the employment of one H. W. Rodgers, as an attorney for said company, said affiant has devoted most of his time to the legal business of said company in Silver Bow County, Mont., and also to a certain extent in other counties of said State.

Affiant further says that he has a large acquaintance with the business, laboring, and professional men, and those engaged in mining and other pursuits in said county; affiant is well acquainted with the conditions and public sentiment in Deer Lodge County in relation to the said Anaconda Copper Mining Co. and in relation generally to matters in which the said Anaconda Copper Mining Co. and the public generally are interested in Deer Lodge County, Mont.; affiant does not know of nor has he ever heard of any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial, and affiant believes that if any such thing occurred during his residence in such county he would have heard or known of the same.

Affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion, there is no condition of general interest in or fear or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case wherein the said company is a party before jurors selected from the residents of said Deer Lodge County, and affiant believes that no difficulty would be had in impaneling a jury from residents of said Deer Lodge County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

That affiant knows of no reason, and believes none exists, why this action could not be tried in the United States court or any other court before a jury composed of residents of said Deer Lodge County, and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Deer Lodge County.

That affiant has a considerable acquaintance with the residents and citizens of Silver Bow County, Mont., and with the conditions and public sentiment in said Silver Bow County in relation to the said Anaconda Copper Mining Co. and in relation generally to matters in which the Anaconda Copper Mining Co. and the public generally are interested in Silver Bow County, Mont. Affiant does not know of, nor has he ever heard of any attempt by said company to influence jurors or witnesses in any court in their action as such, nor of any attempt to reward or punish or affect in any way a juror or witness who has participated in any trial; affiant further says that from his acquaintance with the residents of said county and his knowledge of the public sentiment therein, in his opinion there is no condition of general interest in or fear or bias in favor of the said Anaconda Copper Mining Co. which would prevent a litigant from obtaining a fair and impartial trial in a case wherein the said company is a party before jurors selected from residents of said Silver Bow County, and affiant believes that no difficulty would be had in impaneling a jury from residents of said Silver Bow County who would try a case fairly and impartially wherein the said Anaconda Copper Mining Co. is a party.

That affiant knows of no reason, and believes none exists, why this action could not be brought in the United States court or any other court, before a jury composed of residents of said Silver Bow County; and affiant believes that a fair and impartial trial could be obtained in the above action before a jury made up of residents of Silver Bow County.

W. B. RODGERS.

Subscribed and sworn to before me this 28th day of May, A. D. 1914.

HIRAM W. RODGERS.

Notary Public for the State of Montana, residing at Anaconda, Mont.

My commission expires January 23, 1914.

AFFIDAVIT OF L. O. EVANS.

STATE OF MONTANA,
County of Silver Bow, ss:

L. O. Evans, being first duly sworn, deposes and says: That he is now, and since December, 1895, has been, residing and practicing his profession at Butte, Silver Bow County, Mont.

That until the consolidation of the said companies with the Anaconda Copper Mining Co. in the year 1910 affiant was continuously employed as an attorney at law by the Boston & Montana Consolidated Copper & Silver Mining Co. from early in the year 1895, by the Butte & Boston Consolidated Mining Co. since shortly after its incorporation in 1897, and by the Parrot Silver & Copper Co., Anaconda Copper Mining Co., Washoe Copper Co., and Trenton Mining & Development Co. and its predecessor in interest, the Colorado Mining & Smelting Co., since the summer of 1901, and by the Butte, Anaconda & Pacific Railway Co. from the summer of 1901 to the present time; and that since the properties of the above-named companies, excepting those of the Butte, Anaconda & Pacific Railway Co., were conveyed to the Anaconda Copper Mining Co. by conveyances as of March 31, 1910, affiant has been and is now employed as an attorney by the defendant Anaconda Copper Mining Co.; that affiant, as attorney for said corporations, has become familiar with their affairs and business, and particularly with that of the Anaconda Copper Mining Co.

That affiant has read the affidavits filed on behalf of the plaintiff upon application for a change of place of trial to Helena in the above action and is familiar with their contents; that the Anaconda Copper Mining Co. is not now and has not been at any time since affiant's connection with it engaged in mining or other industrial business in the county of Lewis and Clark, State of Montana; that said company has large smelting works in Deer Lodge County, Mont., but the only mine operated by said company in said Deer Lodge County is a gold-producing mine known as the Southern Cross, which employs approximately 100 to 150 men, said mine situated a distance of about 18 miles from the city of Anaconda.

That affiant and John E. Corette, of Butte, Mont., are and have been for a number of years the sole attorneys for the Butte Water Co., and affiant has been so employed since long prior to his employment by the Anaconda Copper Mining Co.; that the affairs and business of the Butte Water Co. are conducted entirely independent of and separately from the operations of said Anaconda Copper Mining Co.; and that within the past five years the only cases tried by or against said water company have been two in number, one a case involving the construction of a contract with the city of Butte, which was tried by the court without a jury and decided in favor of the Butte Water Co., and affirmed by the Supreme Court of Montana; the other, a case involving the title to real estate, was tried by a jury of residents of Silver Bow County, and a verdict returned by said jury against said water company in direct conflict with the instructions given the jury by the court, for which reason the verdict was afterwards set aside by the court and the case afterwards settled and dismissed.

That affiant is also attorney for the North Butte Mining Co., a large mining company operating in Butte, Mont., and has been such attorney since immediately after the incorporation of the company in about 1905.

That neither the Anaconda Copper Mining Co. nor the Amalgamated Copper Co. has ever had any interest in said North Butte Mining Co., and affiant is informed and believes that there never has been at any time and are not now any common directors or officers of said North Butte Mining Co. and said Anaconda Copper Mining Co. That as shown by the records of the courts of Silver Bow County there have been two cases tried in said county in which the North Butte Mining Co. was a party since its organization, both of which were of the class known as personal-injury cases; in one of these cases the plaintiff, whose injuries were shown to have been of the slightest, recovered a verdict of \$1,500, and in the other, tried in this court, the jury returned a verdict for the defendant. That the said North Butte Mining Co. has always followed the same general practice of settling all claims and cases, if possible, as that followed by the Anaconda Copper Mining Co., as hereinafter specified. That the management and operations of the said North Butte Mining Co. have at all times been entirely separate and distinct from said Anaconda Copper Mining Co., the only thing in common between them, so far as affiant knows, or has been able to learn, being their employment of the same counsel and assistants in connection with the claims and suits and other legal matters.

Affiant is also one of the attorneys for the Montana Power Co.; that the operations of said company are entirely independent of and separate from those of the Anaconda Copper Mining Co. and the other mining companies in Butte; and that the said Anaconda Copper Mining Co. has no interest in or connection with the said power company.

That the ores produced by the Alex Scott Mining Co. are not smelted at the works of or by the Anaconda Copper Mining Co., said ores being treated and reduced at the smelter of the East Butte Mining Co.; that the ores produced by the North Butte Mining Co. and the Tuolumne Mining Co. are smelted and reduced by the Anaconda Copper Mining Co.; and that the said ores are handled and treated as other custom ores, and there is no other connection with the said companies.

That ever since affiant has been connected with the said corporations above named it has been the policy of each and all of them, and particularly has it been the policy of the Anaconda Copper Mining Co. during recent years, to settle, if possible, every claim or case brought, whether there appeared a possibility of legal liability to the plaintiff or not, and where a settlement within reason could be obtained.

That in addition it has been and is the practice of the Anaconda Copper Mining Co. to settle almost every claim presented, whether there was apparently any legal liability assertable on the claim or not, and that in addition to the settlement of cases actually begun it has been the practice of said corporations, and particularly the Anaconda Copper Mining Co., to settle are possible claims without litigation. That affiant has not been able to collate from the records even an approximation of the number of claims settled without litigation upon personal-injury claims, but that the records kept by said corporation show that in the year 1913 there was 403 settlements made by said Anaconda Copper Mining Co. upon claims for personal injuries and deaths. That in addition to the direct settlements made by said corporations upon claims presented, all of the said companies, and particularly the Anaconda Copper Mining Co., have assisted their employees injured and the relatives of employees killed or injured in a great many cases in substantial amounts where no claim of liability was made, and in addition in a great many cases where no claim of liability was made they paid the expense of medical attendance and burial, and besides the settlements above stated the above-named corporations, and particularly the Anaconda Copper Mining Co., have pursued the practice of giving positions as watchman or other congenial employment to workmen crippled in their employ, and in a number of cases have created positions for such crippled employees.

That as a result of the foregoing but very few cases have been tried to which the said Anaconda Copper Mining Co. or the other companies above named have been parties; that since the consolidation of said companies, which was made as of date March 31, 1910, as shown by the records, there have been but two personal-injury cases tried in Silver Bow County against said Anaconda Copper Mining Co., one of which was tried by the court sitting without a jury, and a decision rendered in favor of the defendant and affirmed by the supreme court; the other was tried before a jury, and a verdict was rendered for the defendant; in this latter case the evidence introduced by the plaintiff, in affiant's opinion, clearly disposed of any claim of liability as against the defendant.

That there have been since the time of said consolidation approximately 87 personal-injury cases brought against said Anaconda Copper Mining Co., almost all of which have been settled and dismissed. That affiant has read the statement of H. L. Maury, in his affidavit filed herein, that for a period of more than seven years there has not been a verdict rendered against the Anaconda Copper Mining Co., the Parrot Silver & Copper Co., the Butte & Boston Consolidated Mining Co., the Trenton Mining & Development Co., and Boston & Montana Consolidated Copper & Silver Mining Co., or the Washoe Copper Co., in Silver Bow County. That the records of the courts of Silver Bow County, including this court, show the history of cases tried against said companies and against the Butte, Anaconda & Pacific Railway Co., a majority of the stock of which is owned by the Anaconda Copper Mining Co., during a period of approximately seven years last past, to be as follows:

No cases whatsoever have been tried against said Butte & Boston Consolidated Mining Co.

The Washoe Copper Co. has tried three cases, two by the court sitting without a jury, in one of which the court found against the said Washoe Copper Co. and the other for said Washoe Copper Co.; and the other, a case tried

against the Washoe Copper Co., in which the verdict was rendered for said Washoe Copper Co.

Two cases have been tried by said Parrot Silver & Copper Co., in one of which a nonsuit was granted by the court and the other a verdict was returned for the defendant by the jury.

Two cases have been tried against the said Boston & Montana Consolidated Copper & Silver Mining Co., in one of which, the case of Osterholm against said company, for injuries to plaintiff's foot, tried in the district court, Hon. George M. Bourquin, judge presiding, the jury returned a verdict for the plaintiff in the sum of \$7,500 on November 7, 1905; this judgment was reversed by the Supreme Court of the State of Montana and the case afterwards settled and dismissed; and the case of Northam against said company, tried in this court, in which a verdict was rendered for the defendant. Upon the first trial of this case the jury was instructed by the court to return a verdict for the defendant; upon appeal the judgment was reversed and the case remanded for a second trial; the judgment upon the second trial was by this court set aside because of erroneous instructions, a new trial granted, and the case afterwards settled for the sum of \$4,500 and dismissed.

No cases have been tried against the Trenton Mining & Development Co.

Against the Anaconda Copper Mining Co. four cases were tried, in one of which, the case of Dennis P. Leary against said company, there were two trials; upon the first trial a verdict for \$6,500 was returned against the company; upon appeal to the supreme court the judgment was reversed because of erroneous instructions, and on the second trial a verdict was returned for the defendant; after the case had been disposed of, affiant is informed and believes, a settlement was made with the plaintiff Leary wherein he was paid the sum of \$3,500 and other compensation.

The case of Maronen against the Anaconda Copper Mining Co. was tried by the court sitting without a jury, and judgment was rendered for the defendant and affirmed by the supreme court upon appeal.

In the case of O'Reilly against the said Anaconda Copper Mining Co., a nonsuit was granted by the district court, Hon. George M. Bourquin, presiding judge.

In the case of Katie Kearney against the Anaconda Copper Mining Co., a verdict for the defendant was returned by the jury.

Against the Butte, Anaconda & Pacific Railway Co. there have been five cases tried, in two of which there were two trials each; four of these cases were personal-injury cases, the other for damages on account of fire alleged to have been set by the railway company's engine.

In the case of Bernard Harrington against the railway company, tried in February, 1907, the case being brought by the plaintiff, a minor, for injuries which resulted in the loss of part of one arm, a verdict was returned for the plaintiff in the sum of \$20,000. A new trial was granted by the district court, and upon the second trial of the action, in March, 1908, the jury returned a verdict in the sum of \$20,000. The district court, Hon. George M. Bourquin, judge presiding, held the amount excessive and reduced the same to the sum of \$12,000, which with costs was paid by the defendant.

The case of J. P. Harrington, the father of Bernard Harrington, was brought up against the railway company, to recover for loss of service, was tried in February, 1907, and a verdict returned for the sum of \$4,000; on appeal to the supreme court the judgment was reversed on the ground, among others, that the evidence was insufficient, and a second trial was had in May, 1908; upon the second trial the jury returned a verdict in favor of plaintiff in the sum of \$7,500; upon motion for a new trial, Hon. George M. Bourquin, presiding judge, reduced the same to \$4,000, holding that the verdict was excessive, and this judgment with costs was paid.

The case of Nicholas against the Butte, Anaconda & Pacific Railway Co. was for injuries claimed to have been received by reason of the frightening of a team of horses at a railroad crossing.

Knuth against the Butte, Anaconda & Pacific Railway Co. was a case for damages from a fire claimed to have been set by one of the railway company's engines.

Boyle against the Butte Electric Railway Co. and the Butte, Anaconda & Pacific Railway Co. jointly was for injuries claimed to have been received by Boyle, an employee of the street railway company. In both of these two latter cases verdicts were returned for the defendants, the verdict in the Boyle case being in favor of both defendants.

In the approximate period above given the records show that of the 18 cases tried against the said companies 3 were tried by the court without a jury, 2 being decided in favor of the corporations and one against them; and in 2 cases tried before juries nonsuits were granted by the court; and in the cases in which verdicts were rendered, including the Harrington cases, 6 were against and 7 in favor of the corporations.

That affiant either assisted in the trial of the above cases or was familiar with the evidence in the same, and that, in affiant's opinion, in every case in which the defendant corporations were successful before juries, the evidence was overwhelmingly against the plaintiffs and in favor of said defendants.

That affiant has been familiar not alone with the cases tried against the corporations above named but generally with the history of the trial of cases in Silver Bow County since he has been a resident thereof, and that, in affiant's opinion there is not now and has not been at any time during affiant's residence in Silver Bow County any difficulty whatever in securing a fair and impartial jury to try any case against any corporation or person therein. That it has been affiant's experience and is his opinion that the same conditions to a large extent prevail and have prevailed in Silver Bow County as elsewhere in respect to the prejudice of juries against corporations in personal injury cases or bias toward the plaintiffs in such cases, and it is affiant's opinion that many jurors in Silver Bow County, as elsewhere, do not give the same consideration to the evidence of a defendant corporation in a personal-injury case as that accorded the evidence presented on behalf of the plaintiff, and that such jurors, through sympathy or prejudice, are inclined to return verdicts if any basis whatever can be found therefor, for the plaintiff in such cases.

Affiant further says that he knows of nothing in the operations of the defendant corporation or the conduct of its business affairs which would tend to influence or coerce or intimidate in any way or prevent the free exercise of their judgment by any jurors of Silver Bow County, Mont., who might be selected to try a case against said corporation.

Affiant further says that he is and has been for a number of years well acquainted with H. Lowndes Maury, counsel for the plaintiff in this section, and who had made an affidavit in his behalf; that with the exception of the employment of the firm of which the said Maury is a member by the Montana Power Co. and its predecessors in interest for a period, the said retainer having come to said firm through one of the members, Mr. J. L. Templeman, who, previous to entering said firm, had been and was then employed by the predecessors of said Montana Power Co., and, with the exception of his service as attorney for the city of Butte for one term—a successor having been chosen for him at the end of the first term, although affiant is informed and believes that said Maury actively sought reappointment to the office—the legal business of the said Maury has been almost wholly made up of what is known as personal-injury litigation, including actions for injuries which have resulted in deaths, mainly against corporations. That the said Maury and certain partners associated with him early in his career, as affiant is informed and believes, established the business of soliciting said business on contingent fees, and the said Maury had persistently, for the past eight years or more, conducted a campaign of hatred and abuse against corporations in Silver Bow County, and particularly the defendant corporation, for the purpose, as affiant is informed and believes, of advertising and aiding his personal-injury business.

That affiant is informed and believes that the said Maury became a member of, and has continued an active membership in, the Socialist Party in Silver Bow County for the purpose or effect both in securing such business and aid in carrying on the same from members of the party as parties, jurors, or otherwise. That as a part of said campaign the said Maury began to circulate in public and private at practically every opportunity, and has continued so to do, the claim advanced in his affidavit in this case, that his clients and other litigants could not obtain fair trials in cases in Silver Bow County against the corporations hereinbefore named, including the defendant corporation. That it has been the habit and custom of the said Maury, whenever opposed or defeated in any of his purposes or plans or cases, to inflict a tirade of abuse and slander upon the offending person, whether judge, juror, opposing counsel, or others, and that in affiant's opinion, while his lack of success in recent years—affiant being informed that the said Maury has lost approximately the last nine cases which he has tried, and none of which were against this defendant corporation—in the trial of cases in Silver Bow County has probably been due mainly to lack of merit in his cases; it has also probably been due in part to such

practices and habits of the said Maury. That affiant is informed and believes that the said Maury has not made and does not now make, the charge of inability to obtain a fair trial against this defendant corporation in good faith, or for the purpose of obtaining a fair trial in such cases elsewhere, but in order to make such litigation expensive and irksome to the defendant and increase the said Maury's revenues from settlements of each year.

That affiant has read the statement in the affidavit of said Maury; that for a period of seven years last past no verdict for plaintiff in a personal-injury suit has been returned in this court, or the circuit court, which preceded this district court. That affiant has caused the records of this court to be examined for seven years, running back to April 7, 1907, and is advised that the said records show, and affiant therefore states the facts to be, that during that period there have been 14 personal-injury cases tried to juries in said courts; in four of these, verdicts were returned for the plaintiffs; in three, verdicts were returned for the defendant under peremptory instructions from the court, and in seven of the cases verdicts were returned by the juries for the defendants; the above includes the case against the Chicago, Milwaukee & St. Paul Railway Co., in which a verdict for \$7,500 was returned in favor of plaintiff within a day or two after the filing of the said Maury affidavit herein. One of said cases was against the Boston & Montana Consolidated Copper & Silver Mining Co.; one against the North Butte Mining Co., and the others against various other corporations, which are not charged to be or have been affiliated in any way with the said Anaconda Copper Mining Co.

That affiant has also caused the records of the district court of Silver Bow County, for the past five years, to be examined, and is advised that such records show, and affiant therefore states the fact to be, that in approximately 40 cases, including 12 wherein the city of Butte was a party, verdicts have been rendered in personal injury cases by juries in favor of corporations other than corporations charged in any of the affidavits filed herein on behalf of plaintiff, to be or to have been in any way affiliated or connected with the Anaconda Copper Mining Co., and that during said period a great many verdicts have also been rendered against corporations.

Affiant further states that for some years past in Silver Bow County there has been a political party called the Socialist party, the campaign of many of the members of which party has largely consisted of tirades and attacks upon corporations, and particularly upon the defendant corporation; that the following, among those who have made affidavits on behalf of the plaintiff in this action, are commonly reputed to be, and as affiant is informed and believes, and therefore states, are and have been members of such party: H. Lowndes Maury, Charles A. Wallace, Alexander Mackel, William F. Davis, H. A. Tyvand, J. D. Eason, Junlor, I. G. Denny, Jalmar Koskinen, Frank Osterman and Joseph Modena; and the said Susie Maronen, who made an affidavit herein, or a person of the same name, is the widow of August Maronen, deceased, and will be one of the chief beneficiaries under any judgment which may be recovered in the action of Latvia against the Anaconda Copper Mining Co.; the said Jalmar Koskinen, who has made an affidavit on behalf of plaintiff herein, as affiant is informed and believes, has been active in presenting or attempting to present, claims for damages for personal injuries against this defendant corporation, and as affiant is informed and believes, as one of the chief advisers of the said Susie Maronen, prevented a satisfactory settlement being made with the said Susie Maronen for the claim based upon the death of her husband; the said Dennis P. Leary, who has made an affidavit herein, or a man of the same name, is a man who prosecuted an action for personal injuries against the Anaconda Copper Mining Co., as herein set forth, and who, after his action had been finally defeated, was paid the sum of \$3,500 and other valuable consideration by the defendant; the said H. Lowndes Maury, Charles A. Wallace, Alexander Mackel, H. A. Tyvand, and J. O. Davies, P. E. Gangan, A. A. Grorud, and B. K. Wheeler as attorneys practicing in Butte, the principal part of whose business consists of the prosecution and presentation of claims for personal injuries and damages against corporations and others; that said R. L. Clinton, who has made an affidavit herein, has been chief attorney in very bitter litigation on behalf of certain farmers residing in Deer Lodge County against this corporation, and is also counsel in other pending litigation against this defendant; that the said Edward C. Smith has not, to affiant's knowledge, practiced law in Silver Bow County, and affiant is informed and believes that since residing here he has devoted his time to stenographic work, and affiant is informed and believes that the said Smith has been employed more or less by the said H. Lowndes

Maury; that about the time the said Smith first came to Butte, the said Maury acted as attorney for the said Smith, or was employed by the said Smith in an action in which the said Smith was very much interested. That the said Edward C. Smith, P. E. Geagan, M. J. English, George B. Dygert, J. D. Eason, Jr., I. G. Denny, A. A. Grorud, C. N. Davidson, M. Kerr Beadle, and Ed Fitzpatrick, who have made affidavits in behalf of plaintiff, have never tried a case against this defendant corporation in Silver Bow County. The said Homer G. Murphy, who has made an affidavit on behalf of plaintiff, is a resident of Lewis and Clark County, Mont., and affiant is informed and believed is not widely acquainted in, and has spent but little time in Silver Bow or Deer Lodge County.

Affiant further says that although there is and has been during all of said times in force in the State of Montana a statute providing for a change of venue from the county wherein a case is brought, where there is reason to believe that a fair trial can not be had therein, and although there has been filed in the District Court of Silver Bow County, Mont., since the early part of the year 1910, more than 87 cases against this defendant corporation, and many actions filed prior to that time, there has never been but one application in Silver Bow County, wherein the defendant was a party, for a change of venue on account of inability to obtain a fair trial against defendant, which application was by the court, after a full hearing, denied, and the only other case in which such question has been raised or objection raised, was the case of Northam against the Boston & Montana Consolidated Copper & Silver Mining Co., wherein the said H. Lowndes Maury, as attorney for plaintiff, objected to the transfer of the cause from Helena to Butte upon such ground, which objection was by the circuit court, Hon. William H. Hunt, presiding, overruled, and the case ordered transferred.

Affiant further says that on or about Thursday, May 7, at the time that this court overruled the demurrers of defendant in the cases of Latvia against the defendant corporation, and Osterman against this defendant corporation, the said H. Lowndes Maury requested this court to set the said two cases and the case of Modena against this defendant corporation for trial; the defendant corporation in each of said cases was given until Thursday, May 14, in which to file answers in such cases, and said Maury announced that upon the answers being filed he would immediately ask that the said cases be set for trial before the jury panel then in attendance upon this court. After the filing of defendant's answers in the said three cases, on Saturday, May 16 last, affiant requested the court to set the case of Latvia against the defendant corporation for trial, and objection was made by the said H. Lowndes Maury, he then stating that he intended to file an application for change of venue in that and the other two cases, and when reminded of his request a week before to have the cases set for trial, the said Maury, in substance, stated in open court that at the time he had requested the cases set for trial, he was satisfied with the jury panel and would have been satisfied to have let his cases go to trial before the jury panel as it then stood.

Affiant further states that the premises where the accident occurred, which is the basis of this action, are situated in Silver Bow County, Mont., and that all of the counsel for the defendant corporation, and also counsel for plaintiff, reside at Butte, Silver Bow County, Mont.; that upon the trial of said cause it will be necessary, as affiant is advised, to have witnesses, at least five in number, on behalf of the defendant, all of whom will be residents of Silver Bow County, and that if the venue of the cause be changed from Silver Bow County, Mont., the attorneys and witnesses residing in Butte will be compelled to go to Helena and will be caused considerable inconvenience by so doing, and defendant will be put to large and additional expense; that by reason of the fact that if a change of venue be granted upon the application made in this case, the same reasons which would impel the same would exist in almost any other action brought against the defendant corporation, and the result would be that the defendant would have to employ local counsel at the place to which the venue would be changed and be put to more or less expense in employing counsel and securing the attendance of such counsel from Butte as would be necessary upon the trial of such cases.

Affiant further states that since the claim was first advanced by the said H. Lowndes Maury that a fair trial could not be obtained before a jury of residents of Silver Bow County, in a case wherein the defendant corporation or the other corporations, predecessors of this corporation, were parties, affiant has heard many discussions of such claim, and has himself discussed the claim with many residents of Silver Bow County, including attorneys, merchants,

bankers, miners, and others, and that outside of the said Maury and several other attorneys interested in personal-injury litigation, affiant has never heard anyone advance the opinion or claim that a fair trial could not be had under such circumstances; on the contrary, affiant has heard scores of representative and reputable residents of Silver Bow County unhesitatingly and emphatically express their opinion that no difficulty whatsoever would be had in securing a fair and impartial jury from residents of Silver Bow County in any case against the said defendant corporation or any other corporation.

That affiant has participated more or less in political campaigns wherein the defendant corporation and other corporations of Silver Bow County were discussed and attempted to be made issues more or less, and that affiant has a wide acquaintance among the residents of Silver Bow County; that it is affiant's belief that there is no condition or sentiment or reason whatsoever why the plaintiff in the above-entitled action could not obtain a fair trial against the defendant corporation before a jury impaneled from the residents of Silver Bow County, Mont., and affiant believes that such a fair and impartial jury could be readily obtained from the residents of either Silver Bow or Deer Lodge County, and that it is affiant's opinion that if this action be tried in Silver Bow County, no difficulty will be had in impaneling in the manner provided by law a fair and impartial jury, whether the same be made up in whole or in part of residents of Silver Bow County or Deer Lodge County.

L. O. EVANS.

W. T. BLEICK,

Notary Public for the State of Montana, Residing at Butte, Mont.

My commission expires January 27, 1915.

AFFIDAVIT OF C. F. KELLEY.

STATE OF MONTANA,

County of Silver Bow, ss:

C. F. Kelley, being first duly sworn, on his oath says: That he has resided in Silver Bow County, Mont., for a period of over 30 years; that he is an attorney at law and has been practicing such profession in Silver Bow County, Mont., for more than 15 years last past; that since the year 1901 affiant has been employed as an attorney at law by the Anaconda Copper Mining Co., the Parrot Silver & Copper Co., the Colorado Smelting & Mining Co. and its successor the Trenton Mining & Development Co., the Butte, Anaconda & Pacific Railway Co., the Washoe Copper Co., the Boston & Montana Consolidated Copper & Silver Mining Co., and the Butte & Boston Consolidated Mining Co., until the consolidation of the said companies above named, excepting the Butte, Anaconda & Pacific Railway Co. with the Anaconda Copper Mining Co. in the year 1910; that since such consolidation in 1910 affiant has been acting as attorney for said Anaconda Copper Mining Co., and for a period of more than two years last past affiant has been vice president and managing director of the said Anaconda Copper Mining Co. in the State of Montana; that during all of said period affiant has been familiar with the operations conducted by said companies, and particularly with the operations conducted by the said Anaconda Copper Mining Co. since and including the year 1910.

That the said Anaconda Copper Mining Co. since the date of said consolidation has been the employer of a great many men in the county of Silver Bow, approximately 9,000; that the principal industry of Silver Bow County is mining, and in addition to said Anaconda Copper Mining Co. there are a number of other corporations engaged in mining on a comparatively large scale, among such companies so operating being the Butte & Superior Copper Co., operating mines and large concentrating plant; the East Butte Mining Co., operating mines and a smelter; the Tuolumne Mining Co.; the Butte Balaklava Mining Co.; the David-Daly Copper Co.; the North Butte Mining Co.; the Rainbow Lode Development Co.; the Bullwacker Mining Co.; the Butte & Duluth Mining Co., and corporations owned or controlled by ex-Senator W. A. Clark, operating what are known as the Clark properties, and other smaller operators; in addition there are many men employed in Butte by the four railway companies—the Northern Pacific Railway Co., the Great Northern Railway Co., the Chicago, Milwaukee & St. Paul Railway Co., and the Oregon Short Line Railway Co.—and many men engaged in foundries, factories, and mercantile and other businesses and industries of various kinds.

Affiant further says that a great many men in the employ of the Anaconda Copper Mining Co. are not citizens of the United States, and many employees who are citizens of the United States are not taxpayers; so that a comparatively small portion of the residents of Silver Bow County, Mont., eligible for jury service, is found among the employees of said Anaconda Copper Mining-Co.

Affiant further says that in Silver Bow County the mines of said defendant corporation are operated through a number of independent shafts or openings, each of which has a foreman or other executive agent who employs the men for that particular work. That in the conduct of its mining operations and the employment of its men it became desirable to adopt some uniform method of hiring its employees, principally for the following reasons:

First. Numerous charges had been made against some of the foremen in the employ of said company and against the so-called representatives of men of different nationalities in the city of Butte who were charged with being able to procure for a consideration the hiring men by said foremen in the companies' mines, and it was believed by adopting a uniform system of hiring their men, and keeping check on those hired, the possibility of any "grafting," as the practice was commonly called, would be eliminated.

Second. In the employment of so many men under the system previously in force it became impossible to exclude drunken and incompetent employees, and as a matter of safeguarding the welfare of the competent and sober employees of the company it was believed that effective results could be accomplished by keeping a record of the men discharged and the reasons therefor.

Third. Many of the business men of the city of Butte had complained to the management of the company, from time to time, of the fraudulent practices that were being pursued by certain of the company's employees who obtained credit at the different mercantile institutions in the city of Butte and who, for the purpose of avoiding payment of the indebtedness thus incurred, moved from one mine of the company to another, changing their names as they took their respective employments at different mines, and the earnest cooperation of the company was requested by the business men of Butte to adopt some system that would prevent this practice being followed.

That on account of the foregoing reasons and as a matter of company policy it was decided more than a year ago to adopt a uniform policy with reference to the hiring of men which would require the men to apply for and receive an employment card entitling them to seek employment at any of the different mines owned by the company; that following the adoption of this plan the system was installed which is referred to in the affidavit of H. L. Maury as the "card system."

Affiant further says that, so far as he is informed and believes, no man who has applied for a card has been refused the opportunity to seek employment, but that a record has been kept of those who have been employed and discharged, and the reasons therefor.

Affiant further says that it was not the intention of the Anaconda Copper Mining Co., in establishing said system, nor has it been its practice in following it, to establish any blacklist, and that in fact no blacklist of any kind or character has been established, and that the said uniform employment system was not established for the purpose and has not been used for the purpose of interfering with the freedom and liberty of any employee, either politically or in connection with any of his other duties as a citizen or a member of the community.

That it has not been the practice of said Anaconda Copper Mining Co., during affiant's familiarity with its affairs, and to affiant's knowledge or belief there has never been a single instance wherein the company in its operation has discriminated in any way against the, or for any of the, business men in the city of Butte; that the said company has not of affiant's knowledge or belief coerced or attempted to coerce or influence in any way any resident of Silver Bow County who has acted as a juror or witness in any cause in the courts of said county or the Federal or other courts, and that the said company has not of affiant's knowledge or belief at any time attempted to reward or punish or refuse to give or give employment to any person because of his having acted as such juror or witness in any of such courts, and the fact that any person has acted upon a jury which has rendered a verdict against the said company, or as a witness in such action, has not been permitted to influence the company's action in any way, whether in extending him employment or otherwise; that affiant knows of nothing in the conduct of said company's affairs in Silver Bow County which would establish in the minds of

any resident of Silver Bow or Deer Lodge County, Mont., any fear of deciding or hesitation in justly deciding any action brought against this corporation or against any other corporation in favor of any opposing litigant.

Affiant further says that the said Anaconda Copper Mining Co. can not and is not in a position to exert a great, or any, power over the merchants of Butte because of the fact that such merchants extend credit to laborers or servants of the said company on the security of assignment of their time and wages; that all of such servants and laborers have a legal right to make such assignment if they desire, and any corporation to require the same; and no distinction is now made, or has at any time been made, to affiant's knowledge or belief, as between any of the respective merchants in Silver Bow County; that they are, and all have been, treated alike.

Affiant further says that as attorney for the said corporation he has participated in the trial of many cases in Silver Bow County, both in the State and Federal courts. That affiant knows of no sentiment of fear or bias or other sentiment or feeling in favor of the said Anaconda Copper Mining Co., or against any opposing litigant, which would prevent such litigant from obtaining a fair trial as against the said Anaconda Copper Mining Co. before a jury composed of residents of either Silver Bow or Deer Lodge County, and that affiant knows of nothing and does not believe that anything exists in the operation of the said corporation which would give rise to any such sentiment of fear or bias or other sentiment or feeling which would work to the disadvantage of such opposing litigant; that affiant knows of no reason why the above-named plaintiff can not secure a fair and impartial trial before a jury composed of residents of either Silver Bow or Deer Lodge County, and on the contrary, it is the belief of affiant that the plaintiff can and will, if said action is tried, secure a fair and impartial trial before such a jury.

C. F. KELLEY.

Subscribed and sworn to before me this 26th day of May, A. D. 1914.

[SEAL.]

W. T. BLEICK,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires January 27, 1915.

AFFIDAVIT OF C. F. KELLEY.

STATE OF MONTANA,

County of Silver Bow, ss:

C. J. Kelley, being first duly sworn, on his oath deposes and says: That he is the general manager of the Hennessey Co., engaged in the mercantile business at Butte, Mont.; and that he has occupied said position since the time of the organization of said company in July, 1909; that prior to said time this affiant was and had been since January, 1908, general manager, and since 1899 the secretary and treasurer of the Hennessey Mercantile Co., a corporation to which the above-named Hennessey Co. is successor in and to its mercantile business.

Affiant further says that he has at all times since the year 1899 been familiar with the ownership of the stock of the Hennessey Mercantile Co., and since its organization with the ownership of the stock of the Hennessey Co. Affiant further says that at no time has the Amalgamated Copper Co., or any of its subsidiary companies, or the Anaconda Copper Mining Co., or anyone for any of said corporations, been the owner of any of the stock of the Hennessey Co. or had any interest therein, and that since prior to the 15th day of May, 1904, neither the said Amalgamated Copper Co., nor any of its subsidiary companies, nor the Anaconda Copper Mining Co., or anyone representing them or either of them, owned any of the stock of the Hennessey Mercantile Co. or been interested therein.

Affiant further says that the said Hennessey Mercantile Co. from and since prior to May 15, 1904, until it was succeeded by the Hennessey Co., and the Hennessey Co. have at all times been independent of the said Amalgamated Copper Co. and the said Anaconda Copper Mining Co. and any and all of their subsidiary companies or representatives and that the only relationship of any kind or character which exists between the said corporations is that of landlord and tenant arising out of the fact that the Hennessey Co. leases from the Anaconda Copper Mining Co., for the purpose of carrying on and conducting its business, certain real property belonging to the said Anaconda Copper Mining Co.; that said lease is for a definite period at a stipulated rental of a fixed

character provided for therein, so that the said Hennessey Co. is independent of the said mining companies and all of them.

Affiant further says that he has never attended a meeting of either of the Butte Business Men's Association or the Butte Credit Men's Association, and that neither affiant nor the said Hennessey Co. has ever taken any active part in the affairs of said organization; that affiant has never nor has anyone else to affiant's knowledge on behalf of said Hennessey Co. attempted to influence or direct any action whatsoever in either of said organizations, and that affiant has never taken part in any of the commercial organizations of Butte, except to assist toward certain movements desired by the other merchants and residents of Butte, and in which the said Hennessey Co. and affiant had no particular interest; affiant says that any statement as to this affiant ever exercising or attempting to exercise any influence in the said Butte Business Men's Association or any business organization of Butte on behalf of said Anaconda Copper Mining Co. or said Amalgamated Copper Co. or any other mining company or that affiant ever attempted to exercise influence possessed by him in said organizations or either of them against any person, association of persons, or corporation whatsoever, on account of any supposed unfriendly relations existing between the Amalgamated Copper Co. or the Anaconda Copper Mining Co. or any other mining company on the one part and such person, association, or corporation on the other is wholly and absolutely untrue.

Affiant further says that so far as affiant knows there has never been any action taken by the Butte Credit Men's Association or the Butte Business Men's Association or any other mercantile organization of Butte at the solicitation of or on behalf of the Anaconda Copper Mining Co., the Amalgamated Copper Co., or any other mining corporation, or anyone acting for it or either of them.

Affiant further says that so far as affiant knows or can ascertain neither the Anaconda Copper Mining Co. nor the Amalgamated Copper Co. ever exercised any influence or control whatsoever over the business houses of the city of Butte through any of the business men's associations or otherwise. Affiant further says that he knows of nothing in the conduct of the operations of the Anaconda Copper Mining Co., and affiant thinks he would have known of such condition or occurrence if it had existed or occurred, which would cause any dread or fear of said company among the business men or other residents of Silver Bow County.

Affiant further says that while it has been the practice of the Hennessy Mercantile Co. and the Hennessy Co. to extend credit in many cases to the laboring men of Silver Bow County, such credit is not and has not been based upon the fact that the men were employees of any of the so-called Amalgamated companies, any more than any of the other companies or employers in Butte; that the said Hennessy companies have in many cases taken assignment of the wages due such debtors, following a practice common to all the merchants of Butte, the practice being the same as to all other companies and employers as with the so-called Amalgamated companies, and that all of the men engaged in business in the city of Butte have had, for a number of years, at least, and now have the same facilities as are possessed by the Hennessy Co. for obtaining information necessary in connection with the taking of such assignment and in presenting and having such assignments accepted by the mining companies, including the Anaconda Copper Mining Co.; that it is not true that all classes of laboring men, or all laboring men who accept credit of the Hennessy Co. must assign their wages to the company or purchase their merchandise from said company; that it is not true that if such wage earners are in debt to the said Hennessy Co. their chances for obtaining employment from the Amalgamated interests are greater than if they were not in debt to the said Hennessy Co.; that neither the said Hennessy Co. nor affiant nor any of the other representatives of said company, so far as affiant knows, have anything to do with the obtaining employment from the Amalgamated interests by trading with the said Hennessy Co.; that affiant denies that there is any belief among the wage earners that their chances for obtaining employment from the Amalgamated interests are better or their chance of obtaining credit are better with the said Hennessy Co. if the relation of debtor and creditor exists with the said Hennessy Co.; that the said Hennessy Co. does not enjoy any advantage whatsoever over other merchants with the mining companies, or any of them, and conducts its business and extends its credit in the manner usual to mercantile houses everywhere.

That affiant is the president of the Daily Bank & Trust Co. of Butte and is acquainted with the various other banking houses and concerns engaged in

business in Silver Bow County, Mont., and neither the Anaconda Copper Mining Co. nor the Amalgamated Copper Co. are stockholders or otherwise interested in the affairs of the Daly Bank & Trust Co. and have no connection therewith, excepting that the Anaconda Copper Mining Co. does a considerable portion of its banking business through the said bank; that the said Daly Bank & Trust Co. is but one of the seven organized banking houses doing business in Butte City, Mont., at least one of which, the First National Bank of Butte, with deposits, as shown by its published statements, of approximately \$4,850,000 and loans and discounts to the amount of \$2,933,000, is much larger in the matter of deposits and volume of business transacted than the said Daly Bank & Trust Co.; and probably one other, the banking house of W. A. Clark & Bro., a private bank, according to the best information and belief to be the fact, has deposits approximately the same, or a slightly larger amount, than the said Daly Bank & Trust Co.; that the affairs of said Daly Bank & Trust Co. are conducted in practically the same manner as that of the other banking house of Butte, Mont., and entirely without regard to the effect of such banking operations and business upon the Anaconda Copper Mining Co. or its employees, and that the conduct of the same could in no way influence the sentiment of the citizens and residents of Butte in regard to the said Anaconda Mining Co.

Affiant further says that he has been a resident of the city of Butte for more than 13 years last past and has a large personal acquaintance in said city and Silver Bow County, and particularly with the men working and employed in and about the mines, and is familiar with the conditions existing in said city and county of Silver Bow; that affiant knows of no, and does not believe that there exists, conditions or sentiment or feeling of fear or bias, or other feeling, sentiment, or condition which would prevent the residents of Silver Bow County from fairly and impartially acting as jurors in any cases where the Anaconda Mining Co. is a party upon any issue in which he may be interested before a court and jury composed of residents of Silver Bow County, in Silver Bow County, Mont.; and that he believes that the above action can be impartially and fairly tried before a court and jury of residents of Silver Bow County, in said Silver Bow County.

C. J. KELLEY.

Subscribed and sworn to before me this 28th day of May, A. D. 1914.

[SEAL.]

CARL J. CHRISTIAN.

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires March 14, 1916.

In the District Court of the United States in and for the District of Montana.

AFFIDAVIT OF LOWNDES MAURY.

STATE OF MONTANA,
County of Silver Bow, ss:

Lowndes Maury, being first duly sworn, on his oath does say: He is the person mentioned in the affidavit of L. O. Evans, filed on behalf of defendant in this case. On page 2 of the affidavit said Evans mentions that the injuries to one Kinsel were of the slightest, and a verdict was recovered of \$1,500. The testimony showed that Kinsel was a young man about 27 years of age, and in the injuries was caused a permanent lesion of the heart from which he would never recover.

That affiant did not actively seek reappointment for the office of city attorney, and while such appointment of affiant's successor was being debated affiant did not vote on the question personally and was absent in the city of Spokane on business. Said Evans states in his affidavit that the said Maury and certain partners associated with him early in his career established the business of soliciting said business on contingent fees. The said statement is false, known by the said L. O. Evans to be without foundation; that affiant has never at any time solicited any business of any man, woman, child, or corporation; that affiant has never conducted any campaign of hatred or abuse against corporations, nor did the affiant become a member of or continue in active membership in the Socialist Party for the purpose of effect of securing business or aid in carrying on the same from the members of the party, either as jurors or otherwise; that at the time that affiant announced his readiness to go to trial before

the present panel in one of the cases against the company defendant there were more than half of the panel consisted of persons not resident of either Silver Bow or Deer Lodge County; that when the court excused persons until there were only seven of the panel nonresidents of Silver Bow and Deer Lodge it was deemed by affiant and his cocounsel, Mr. Charles A. Denny, in a third case impossible to obtain a fair or an impartial trial of the causes or any of them.

The said Evans says in his affidavit that a satisfactory settlement was prevented in the case of Susie Maronen, mentioned in the affidavit. The settlement offered by the defendant was \$2,000. Affiant was one of the attorneys in that case and knows of no other offer having been made, and that action was for death, by reason of the breach by the defendant of a statutory duty of the said Susie Maronen's husband, a young man about twenty seven or eight years old, living with her and supporting her and their child. It was not accepted.

LOWNDES MAURY.

Subscribed and sworn to before me this 1st day of June, 1914.

[SEAL]

J. D. EASON, Jr.,

Notary Public for the State of Montana, residing at Butte, Mont.

My commission expires October 1, 1916.

Service of the foregoing affidavit admitted and copy received this 1st day of June, 1914.

No. 149.

FRANK OSTERMANN, PLAINTIFF, *v.* ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT.

BRIEF ON MOTION TO CHANGE THE PLACE OF TRIAL IN THE SAID CASES.

The situation of these cases before the court is probably unique in the history of American jurisprudence. The question as to whether there shall be a change of venue or not places the Constitution of the United States directly on trial. The founders of the Republic realized as clearly as we now do that there would be individuals and corporations of such great local influence that national courts must be established for the protection of a fair trial and the purity of the fountain of justice in causes arising between aliens and citizens of other States and such influential individuals in the forum of their residence.

The founders of the Nation realized that control over a man's subsistence was control over his will, and in laying the foundation of our National Government they openly averred that this rule of private economics applied not only to ordinary individuals, but even to the judiciary, and in order to remove the judiciary which should preside over trials between aliens and citizens

of other States when litigating persons of strong local influence it made the tenure of these Federal judges terminable only by death or bad behavior, and the Constitution, following out the wisdom of the convention which promulgated it, made their salary undiminishable during their term of office. Their appointments were dependent on the National Executive and the National Senator. Every possible precaution was taken by the fathers to remove this Nation from the disgrace of iniquity of an unfair tribunal.

The question confronting the court is whether that wise and wholesome provision of foresight of our ancestors is to be carried out by their descendants.

All of the foregoing causes are actions at law tryable to juries, over whose verdicts the court has no positive control, except to the extent of granting new trials if the verdict so far depart from the perpendicular as to offend the court's sense of justice. The granting of new trials is not a means of procuring justice, but only of correcting injustice. Repeated new trials are but a makeshift, and offensive to that provision of the Constitution that justice shall not be delayed.

While the foregoing propositions seem elementary, yet, lest we forget and fall out of the straight and narrow way laid by the founders of the Constitution, and because the reasons of those men are better expressed in their own language than by subsequent writers, we shall quote at length from that unique collection of essays known as the "Federalist":

"Because when once an efficient National Government is established the best men in the country will not only consent to serve, but also will generally be appointed to manage it; for although town or country or other contracted influence may place men in State assemblies, or senates, or courts of justice, or executive department, yet more general and extensive reputation for talents and other qualifications will be necessary to recommend men to offices under the National Government. * * * Hence it will result that the administration, the political counsels, and the judicial decisions of the National Government will be more wise, systematical, and judicious than those of individual States, and consequently more satisfactory with respect to other nations, as well as more safe with respect to us." (Federalist, pp. 13 and 14.)

"The standard of good behavior for the continuance in office of the judicial magistracy is certainly one of the most valuable of the modern improvements in practice of government. In a monarchy it is an excellent barrier to the despotism of the prince; in a Republic it is a no less excellent barrier to the encroachments and oppressions of the representative body. And it is the best expedient which can be devised in any Government to secure a steady, upright, and impartial administration of the laws." (Federalist, p. 539.)

"Next to permanency in office nothing can contribute more to the independence of the judges than a fixed provision for their support * * *. In the general course of human nature a power over a man's subsistence amounts to a power over his will. And we can never hope to see realized in practice the complete separation of the judicial from the legislative power in any system which leaves the former dependent for pecuniary resources on the occasional grants of the latter." (Federalist, p. 548.)

The very basis of the motion for a change of venue is found in that maxim, "A power over a man's subsistence amounts to a power over his will." Our application of the maxim is of course to the juries taken from Silver Bow County and Deer Lodge County; not by any means to the presiding judge, for his subsistence has been provided for by the Constitution, and his tenure is for life. Nor in fact would we have applied it to the presiding judge were his particular subsistence unproved for or his tenure determinable. We have too good an evidence of his independence in the Osterholm nisi prius decision and others that we might mention. But the rule while not universal in its effects is universal in its tendency. To deny the existence of the tendency is as to deny the tendency of men to sink in water and drown by reason of the fact that many are seen overcoming the tendency.

This line of thought so clearly evinced in the Federalist brings us to the facts in the instant cases, and these facts are unique. These facts are beyond dispute. The defendant controls the subsistence of two counties, and such control has been continually increasing for fifteen years. It employs approximately twelve thousand men. In those counties there are not one hundred thousand people, counting the men, women, and children; and the men employed by it directly are far more than one-half of the able-bodied men in those two counties. An arbitrary shutdown of its works and mines has in the history of those counties driven all of the interests in those counties to despair,

and to the calling of a special session of the Montana Legislature to answer its demand for laws for its benefit.

We limit this to this defendant because the physical properties of all of the concerns which made that demand are now of the composition of this defendant.

It will be answered that this defendant's power in politics of the two counties is not supreme. It can not be truthfully answered that it is not supreme in the county of Deer Lodge. It might be answered that it is only a little more than half of the power in Silver Bow. But a partly fair trial is not what we are entitled to. A partly fair trial is like a tolerably good egg. This question of a fair trial does not seem that the plaintiff shall have six jurymen leaning his way and the defendant six jurymen leaning its way by any means. A fair trial on an action at law means that the plaintiff shall present his evidence before twelve men who have no leaning either toward the plaintiff nor toward the defendant; and that the defendant shall have the same right.

It will doubtless be answered that in the political complexion of Silver Bow County there is a political party of great strength opposed to the defendant. That is true, but that merely accentuates the unfairness of a trial in Silver Bow and with men from Silver Bow. Were one of the jury commissioners of this court of that party we would doubtless easily succeed in getting a panel where half the men would have a leaning against the defendant and half a leaning for the defendant. Jurymen are not drawn by lot in Federal court, and neither of the jury commissioners are members of the political party exhibiting in the last two or three years such increasing strength.

This question of what constitutes local influence has not come up frequently in causes where a change of venue was sought in the Federal court, though we are not without precedent. In the causes of Terry v. Skinner, Tuttle v. Terry, Terry v. Nalor et al. (110 Fed., 494), we quote the following:

"The parties favoring removal put it upon the ground of convenience and economy. Terry insists because of local prejudice against him and in favor of Thomas G. Skinner, an ex-congressman, State senator, and prominent man in that section * * *:

"In this case or the two cases many affidavits are filed and good reasons given for the position of each party; the one arguing that Elizabeth City is more convenient to parties, witnesses, and records, the other, local prejudice, as before stated, arguing, if not successful, he will pay the cost of witnesses, etc. In exercising a sound discretion, these arguments should be given proper weight, but it is not necessary to answer or consider every reason in detail. Parties litigant should not only have a fair trial, but, as far as may be, even the unsuccessful party should feel that his case has been decided by an impartial court and jury. Mr. Terry evidently believed there is strong prejudice against him in the section of the district surrounding Elizabeth City, and that Mr. Skinner has great influence with jurors summoned to that court. He files strong affidavits to this effect. These affidavits are met with equally strong affidavits denying the prejudice against Terry, records showing he has been reasonably successful in former litigation in that section, but not denying the influence of Mr. Skinner. Allusions are made in the rebutting affidavits to Mr. Skinner's health, but it is hoped this is only a temporary complaint. He spent much time in Raleigh last winter, and it is hoped will again add to the pleasure of friends in that city. The question of economy should have but little weight. Elizabeth City is more than 100 miles from Raleigh, and the rules for taking depositions are ample. True, it is more satisfactory to counsel to have witnesses face the jury, but this is not essential in arriving at the facts in a case, and the court can set aside a verdict not in accordance with the law and evidence. But why go through this when at a little inconvenience and additional expense a trial can be had on equal grounds, where there can be no just cause for even a suspicion. Terry lives in Ohio, Skinner near Elizabeth City. In Raleigh they must meet on neutral ground. One case remains in the court at Raleigh, and in the exercise of a sound discretion it seems it would better serve the ends of justice that all, which are to some extent interwoven, should be tried in the same division of the court, at the same place."

As to what constitutes local influence, we find more and better expressions in decisions on those cases where causes have been retained by the Federal courts after being removed to them from the State court under the act of Congress providing for such removal where local influence or prejudice exists against a defendant.

Our contentions are based on the following proposition:

Local prejudice and influence does not necessarily consist or partake of hostility toward a plaintiff. It may as well and more frequently does consist of a feeling of respect, fear, or friendship arising from great wealth and political influence and industrial strength of the defendant in the locality of his home and of his mighty works. In this we are borne out by the decision in the case of *Neale v. Foster* (31 Fed., 54).

We quote from that opinion:

"The affidavits of the defendants amount to nothing. Of course, there is no prejudice in the county against the plaintiff personally, for he is unknown to the community. But there may be a prejudice in favor of his adversary that would be as much in his way of obtaining as a prejudice against himself. The prejudice and local influence mentioned in the statute is not merely a prejudice or influence primarily existing against the party seeking a removal. It includes as well that prejudice in favor of his adversary which may arise from the fact that he is long resident and favorably known in the community. Then there is the element of local influence, which implies that in a controversy between a stranger and resident parties having the power, through wealth, business or social relations, or personal popularity, or all combined, to direct or materially aid in the direction of political parties and control the selection of public officers and the distribution of party emoluments, the former may be a great disadvantage if not powerless to assert his right.

"And this implication is no unusual reflection on any particular community or persons. On the contrary, it is such a well understood and recognized frailty of human nature that jurisdiction of controversies between citizens of different States was expressly given by the Constitution to the National Government and this, not only as a means of doing justice, but of facilitating only the trade and intercourse between the people of the several States, which was what the Constitution was formed for more than any other purpose, to protect and promote. Neither is it unreasonable that in a case like this, where a stranger from another State is seeking to set aside conveyances made in favor of local creditors of long standing and high character in the community by a failing debtor of like standing and character that there should be prejudice and local influence, not against the plaintiff personally, but against his cause, and in favor of his adversaries. How far this influence and local prejudice might extend and whether it would consciously influence the mind and action of the court would depend largely on the temper and character of the judge.

"Counsel for the defendants maintain that, admitting there is a prejudice and local influence in Linn County in favor of the defendants in this case, the case being an equity one, to be decided by the court without a jury, there is no reason to think or believe that the circuit judge would be affected or influenced by it in the least degree. On the other hand, counsel for the plaintiff contends that on the proofs, and in the nature of things, there is a strong prejudice and influence in Linn County in favor of the defendants in this controversy; and that the circuit judge who holds his office by the good will of this community, and is a particular friend of the principal defendant, may be and probably will be more or less unconsciously affected in his mental vision and conclusion by these circumstances."

Another proposition on which we rely is that it is impossible absolutely to determine in advance that a party can not have an impartial trial. The question for the court to consider is that a party might not have a fair trial or an impartial trial. And this idea is well expressed in the following language:

"It was not the purpose of the Constitution and law passed to effect its intent, to put the removing party to proof that he could not obtain justice in his particular case or that he would not, but only that he might not obtain justice."

Montgomery County v. Cochran (116 Fed Rep., 992). For the convenience of the court and because of the enormous importance to these four litigants we quote at great length from the opinion in this case:

"The order of removal having been made ex parte at the last term upon the statement of the facts contained in the verified petition, it was insisted by the defendants that the plaintiff is without right to traverse the facts set forth in the petition, or now, to call in question the order of removal. *Whelan v. Railroad Co.* (C. C.), 35 Fed., 849, and other cases following it, are cited in support of this view. The plaintiff relies on *Ellison v. Railroad Co.* (50 C. C., 530; 112 Fed., 805), which holds to the contrary. Congress having power to authorize removals of controversies between citizens of different States on

that ground alone, the mode of ascertaining prejudice, making it to appear, under the present statute could not be jurisdictional unless the statute prescribed an exclusive mode. Congress has prescribed no mode. The existence vel non of prejudice or local influence, as distinguished from the mode of making it to appear, is a jurisdictional fact under the present statute. It does not predicate jurisdiction here on diverse citizenship alone but couples it, the further condition of the existence or prejudice or local influence to be ascertained by the court. If the ascertainment of a jurisdictional prejudice or local influence is the ascertainment of a jurisdictional fact, a party to the suit certainly has the right to be heard as to it at some stage of trial, as much so as upon any other issue of fact which affects his case. It is the duty of the court at any stage of the proceedings to dismiss or remand the suit if it finds that it is without jurisdiction.

"Irrespective of what is merely modal and what is jurisdictional, it is quite clear that Congress by its last legislation on this subject intended to charge the conscience of the removing court with the ascertainment of the existence of prejudice or local influence, and to constrain the court to refuse jurisdiction unless the existence of such prejudice or local influence was made to appear, to its satisfaction. The whole subject of Congress in making the change in the former law would be defeated if any other view is taken of the question. Save in the instance where local influence or prejudice is claimed to grow out of notorious matters of local history and the like, of which the court may take judicial notice, how can the judicial mind be satisfied of the existence of prejudice vel non when it has acted ex parte and then refuses to hear the other side, who offers to prove that the court has been misled or deceived and that the allegations of fact, from which the existence of prejudice was ascertained, are utterly false? Unless the court hears the parties on such an issue it can not know whether the denial which involves a denial of jurisdiction is true or false. If it does not know whether the denial is true or false, it can not know whether it has jurisdiction. This is not the condition of being legally satisfied, which the supreme court declares the law exacts before it permits the court to take jurisdiction.

"It is not meant to declare that the court can not in any case order a removal ex parte. The act gives it a very broad field of discretion. The facts relied on in some cases, as in this instance, may be so notorious, recent, and so related to local history that a judge might well take judicial notice of them, or at least utilize such knowledge in determining whether from the petition prejudice or local influence was sufficiently made to appear. In a case of that character the court might well believe it is unnecessary to take up time hearing an issue which the opposite party might raise. It was upon such considerations that the court acts in making the ex parte order here. It was not contemplated, however, that such action could bar the right of the opposite party to traverse the petition for removal, or to be heard thereon, or lessen in any degree the duty of the court to inquire into such matters at his instance. The contrary view involves the denial of a clear right to the plaintiff. The court therefore heard the plaintiff who had not been heard before on the merits of the order of removal, and having reopened the matter, allowed both sides to offer evidence, the substance of which is not of importance in this phase of the case.

"2. The word, justice, is used but twice in the constitution of the United States. It is first found in the preamble giving the reasons for the formation of the Constitution, one of which is declared to be 'to establish justice.' It is next found in one of the provisions of the Constitution intended to effect its purpose—'to establish justice'—by requiring persons who 'sue from justice' to be delivered up, etc. Necessarily, 'to establish justice' the Constitution must provide for the exercise of legislative power to that end, and jurisdiction in certain tribunals to construe and enforce the laws thus passed. Accordingly the Constitution provides that legislative power shall be vested in Congress and judicial power shall be vested in the Supreme Court and other tribunals to be established by Congress, and that the judicial power thus vested 'shall extend' to certain matters which the Constitution specifies with great particularity. Save as to certain jurisdiction of the Supreme Court, legislation is necessary, of course, to distribute to any court any part of the judicial power. Among the matters thus committed to the judicial power of the United States are controversies between citizens of different States. In ascertaining the purpose of the framers of the Constitution in extending the judicial power 'to controversies between different citizens of different States'

we must look to the history of the Constitution, the causes which led to its adoption, and the evils disclosed by the working of the Government under the articles of confederation which was intended to be remedied by the new instrument. The Federalist declared that one evil which 'crowns the defects of the confederation' is the 'want of judiciary power.' This want of a judiciary power developed numberless ills, not the least of which was the inability of the Government to protect the equality of the rights of 'citizens of different States' when a citizen of one State litigated in the courts of a State with a citizen thereof.

"It is a matter of common knowledge, at least among all well-informed persons, that at the time of the formation of the Constitution there was a prevalent opinion that 'the stranger in a strange land' might not have, and often did not have, that measure of justice in the courts of a State which was accorded to its own citizens. There was no common tribunal deriving authority and power from the whole people, responsible to them only, which could protect or enforce or supervise the enforcement of equality in this respect. There were local jealousies, local interests, and local opinion in the different States which worked adversely to the nonresident citizen in favor of the resident citizen who prosecuted in the courts of his own State a complaint against the nonresident citizen. These things caused some bitterness, tended to diminish free intercourse and trade 'between citizens of different States and stood in the way of a more perfect union.' The framers of the Constitution, in providing for jurisdiction in the Federal courts of 'controversies between citizens of different States,' had in mind to cure the imperfection in these respects of the articles of confederation. The purpose was 'to establish justice' as to such controversies by authority to be conferred over them on courts deriving their power from the Constitution, freed from dependency in any respect on local power and removed as far as possible from the effects of local environment which might militate against a nonresident in favor of the citizen of the State where the court sat. The purpose was to give the nonresident citizen the right to resort to these courts when he sued the citizen of another State or to remove his case out of the State when sued therein by a citizen thereof, in order to avoid local jealousies, interest, or passion which might sway or tempt the decision by the State court in favor of its own citizen. The purpose was to sweep aside the risk of injustice in the local tribunal growing out of the status of a nonresident contending with the home man. The 'justice' which the Constitution, and laws passed in pursuance thereof, intended to 'establish' in such controversies was to be worked out by giving the nonresident citizen the right, when properly demanded, to remove the trial of his cause from a local court whenever local interest, prejudice, opinion, or passion might be thought to expose him to the risk of a trial in which he might be put on an unequal footing with or measured in a different way from his adversary in the State court, and thus exposed to a hazard of determination against him on consideration other than the real merits of the case. As stated in the very able opinion in *City of Detroit v. Detroit City R. Co.* (C. C., 54 Fed., 18), 'The justice which the defendant has a right to obtain is a hearing and decision by a court wholly free from and not exposed to the effect of prejudice and local influence.' It was not the purpose of the Constitution, and laws passed to effect its intent, to put the removing party to proof that he could not obtain justice in his particular case, or that he would not, but only that he might not obtain justice. More than this, in the nature of things, he could not prove in advance, for the contention that he could not or would not obtain 'justice' in the particular case could be shown only by test of trial in the State court, and then it would be too late to remove. When, therefore, we seek the purpose of the words 'He will not be able to obtain justice in such State court,' we must give those words the purpose which, as we have seen, the Constitution had in view when it used the word 'justice' and gave the Federal courts jurisdiction of that particular class of controversies in order to establish that justice. The purpose intended to be effected by the grant of jurisdiction to the Federal courts 'over controversies between citizens of different States' is stated in broader terms as to other matters in section 2 of Article IV, which declares, 'The citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States.'

"Having seen the reasons for the constitutional policy, it is quite plain that the fact that the local judge tries the cases without a jury can not withdraw such a controversy from the influence of the rule. The terms and spirit of the Constitution include cases where the judge alone tried the facts as well as those in which the jury tries the facts. The jurisdiction extends to all cases in law and equity. Both are brought under the same rule for the same purpose

by the most explicit command of the Constitution itself. Apart from this, the operation of prejudice or local influence upon the judge may be so far harmful to the nonresident litigant that when such influences move the jury a judge can correct the wrongs done by a jury. Their verdict amounts to nothing if it does not have the stamp of his approval. On the other hand, if the judge is improperly moved by 'local influence,' it is, in many cases, impossible to correct the wrong; and in no case is that difficulty more insurmountable than where he not only determines the law, but is sole trier of the facts. If there is any evidence which can support his findings in such a case, however may it be opposed to the weight of testimony, his verdict, although it may be induced by 'local influence,' must stand, for there is no way to review it, which is not the case when the finding only involves the application of the law."

In view of the hue and cry that there is one law for the rich and one law for the poor in this Nation to-day, it might be well to cite the court to the records of the circuit court, the predecessor of this one, where, against a puny adversary, on no such showing as that of 20 disinterested members of the bar, the same counsel as resist this motion, then acting for a corporation now merged into this defendant, obtained an order changing the place of trial from Butte to Helena, and that was in a cause where the additional expense of a trial in Helena was doubtless 10 times as much as the additional expense of trying all the causes of the nature of these four causes arising against the defendant in 10 years—certainly 10 times as much as has arisen in this court in causes of this nature during the life of the defendant or the life of this court.

No contention is made that the defendant will not get a fair trial in Helena. Neither side avers that as a fact. The causes of Federal jurisdiction are remarkably few compared with the great volume of jurisdiction. We are asking for the same kind of relief that has been granted by the predecessor of this court to the predecessor of this defendant, applying through these same counsel. We ask no advantage over our adversary. We ask to go to equal ground, where Ostermann, Martinez, Latvia, and Modena are still strangers in a strange land.

The reason for resistance is not the matter of expense in the trial, because that could be provided for easily in the way of requiring a bond for costs if the court makes a conditional order. The reason for resistance is because a fair trial before an uncontrolled, unprejudiced, unbiased jury is the last thing that the defendant wants. It is suffering from the same terror that overcame a defendant in a criminal prosecution when he was told by his attorney that he would get justice before a particular judge. We ask the privilege of fighting on equal ground, and that the defendant be made to come from behind its breastworks of influence erected by it through a period of increasing industrial and political strength now lasting 20 years. Fair play and no favors is what we are seeking.

Respectfully,

B. K. WHEELER, C. A. WALLACE, I. G. DENNY,
MAURY, TEMPLERMAN & DAVIES,
Attorneys for Plaintiff, Respective.

Service of the foregoing brief admitted, and copy received this 29th day of May, 1914.

D. GAY STIVERS,
Of Attorneys for Defendants.

In the District Court of the United States in and for the District of Montana.

No. 151. At law.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT, AND OTHER PENDING CASES.

MEMORANDUM OF POINTS AND AUTHORITIES ON BEHALF OF DEFENDANT UPON MOTION FOR CHANGE OF VENUE.

STATEMENT.

The affidavits filed in support of these motions are of three substantial classes:

1. The affidavit of H. Lowndes Maury, when stripped of the personal allusions to himself and the history of his activities, begun over seven years ago, to

create an impression in Silver Bow County that litigants could not have fair trials against the Anaconda Copper Mining Company or its subsidiary corporations, is in substance as follows:

(a) That the Anaconda Copper Mining Company is a very large corporation, employing ten times more men than any other single employer of labor in the counties of Silver Bow and Deer Lodge, owning an interest in the capital stock of the Butte, Anaconda & Pacific Railway Company, and smelting under contract certain ores from other mining companies in Silver Bow County.

(b) That certain attorneys for the Anaconda Copper Mining Company also appear as counsel for certain other interests in Silver Bow and Deer Lodge Counties, to wit, Butte, Anaconda & Pacific Railway Company, Hennessy Company, Daly Bank & Trust Company, North Butte Company, Butte Water Company, and Montana Power Company.

(c) That certain of the servants of the Anaconda Copper Mining Company have taken a great interest in politics in Silver Bow County, Montana.

(d) That the Anaconda Copper Mining Company can exert a great power over the merchants of Butte, because said merchants do business on the credit of assignments made by employees of said company.

(e) That the corporation has been so active in the life of the county that it has established in the minds of the people of Silver Bow County and Deer Lodge County a fear of deciding any cause against this corporation or against any other corporation in favor of an individual.

This latter statement, of course, can not be given any force, for it is impossible for the affiant to know the condition of the minds of the people of Silver Bow County except as that condition may be disclosed by visible or tangible facts. The affiant states that no facts from which he derives the conclusion that this undisclosed fear exists in the minds of the people of Silver Bow and Deer Lodge Counties. The extravagance of affiant's statement is also disclosed by the fact that he includes all other corporations, whether allied with the Anaconda Company or otherwise.

That for seven years there has been no cases decided in the district court of the United States in any case for personal injuries or tortuous death in favor of the plaintiff and against the defendant.

(g) That it is impossible (of course this can be stated only as an opinion) for an ordinary litigant to have a fair and impartial trial before a panel of jurors consisting in whole or in part of residents of Silver Bow County or Deer Lodge County.

The said Maury also files an affidavit in rebuttal of certain statements contained in the affidavit for the defendant and oral testimony of Mr. O. L. Evans. The denials contained in this affidavit are, of course, of the most evasive character. Nowhere therein does he deny the conversation testified to by Mr. Evans, wherein the said Maury states that he was a double character, one the Socialist Maury and the other the corporation Maury; neither does the said Maury in the said affidavit any place deny or attempt to explain the solicitation of personal injury business on the basis of contingent fees by various firms with which he has been connected.

The affidavit does, however, contain a most important admission, which reads as follows:

"That at the time that affiant announced his readiness to go to trial before the present panel in one of the cases against the company defendant there was more than one-half of the panel neither residents of Silver Bow or Deer Lodge County; that when the court excused persons until there was only seven of the panel nonresidents of Silver Bow and Deer Lodge Counties, it was deemed by affiant and his cocounsel, Mr. Charles A. Wallace in one case, Mr. E. K. Wheeler in another case, and Mr. I. G. Denny in a third case, impossible to obtain a fair and impartial trial in the causes, or any of them."

2. The affidavit of Burton K. Wheeler, which affidavit states the belief of the said Wheeler that the plaintiffs in these causes can not have a fair and impartial trial, and proceeds to outline his reasons for such belief. They are, in substance, as follows:

(a) That the defendant produces a large percentage of the copper, gold, and silver produced in Silver Bow County, and is, in brief, a large concern. An important fact, however, disclosed by his affidavit is that there are forty thousand men in Silver Bow County, and that about one-third of such number are in the employ of the Anaconda Copper Mining Company. The statement, however, that about one-third of forty thousand men are employed by the Anaconda

Copper Mining Company must, of course, yield to the positive sworn statement set forth in affidavits in these causes by people who know that the number of men employed in Silver Bow County by the Anaconda Company in 1910, thus leaving 80,000 men, according to the affidavit of Mr. Wheeler, in Silver Bow County not connected in any way with the defendant in this cause.

(b) That directors and managing agents of the defendant have large interests in financial and mercantile institutions in the city of Butte, Silver Bow County; that certain large interests here—the Hennessy Mercantile Company, the Montana Power Company, and the Butte, Anaconda & Pacific Railroad Company, the North Butte Mining Company, and the Butte Water Company—are represented by the same attorneys as the defendant. Reference is also made to what is termed as the "blue card" system employed by the defendant in the employment of men.

3. Certain affidavits of certain professional gentlemen in the city of Butte engaged in the practice of law, and the affidavits of the plaintiffs in these respective actions. In substance these affidavits are all the same, and disclose that the mining and smelting of ores, is the principal industry in Silver Bow and Deer Lodge Counties. That the Anaconda Copper Mining Co. employs 10 times as many men as any other single employer of men; that each of the affiants has heard people talk on the subject as to whether an ordinary litigant could get justice in the courts of Silver Bow and Deer Lodge Counties. Each of them concludes as follows:

"That affiant verily believes that it is impossible for the plaintiff in the above entitled action to have a fair and impartial trial in this case before a jury consisting in whole or in part of residents of Silver Bow and Deer Lodge Counties."

It will be observed that none of these affidavits disclose that any litigant has heretofore ever failed to have a fair and impartial trial in either of these counties; it is not disclosed that the large number of employees of the defendant are interested or have ever taken any interest, or have ever exerted any influence of any kind or character to forward the interests of the defendant in litigation, or to prevent any of its antagonists from obtaining a fair and impartial trial; it is not disclosed that any official or any counsel of the defendant, or any person whomsoever or that the defendant itself, has ever sought to influence the course of litigation in said counties, or sought either directly or indirectly to control the action or judgment of any juror, or any man about to become a juror, or any witness in any trial, in which the said defendant was interested; it is not disclosed that said company or any of its agents, has ever attempted to coerce, punish, or to reward any juror or witness for any action upon their part, it is not disclosed that any extraordinary circumstances exist touching these respective cases, or that the situation of these litigants is different or other, in so far as the question of fair trial is concerned, than the situation of all other litigants, for years past has been and is now; neither is it disclosed what, if any, kind of influence the defendant company could if it would bring to bear upon the 80,000 men in Silver Bow County, not employed by said company, and the large number of men in Deer Lodge County not employed by the company, to influence or control their actions to the prejudice or injury of any litigant in this court.

The affidavits and the testimony of the witnesses on behalf of the defendant are too numerous to quote from at length in this statement; they not only meet every suggestion of unfairness, or every suggestion of any reason why any unfair trial should be had in these counties, but they go far beyond the requirement of the case, and disclose absolutely, by a large number of reliable witnesses and a large amount of uncontradicted testimony, that the situation is such in either of these counties that a litigant adverse to the defendant could have a fair and impartial trial. They show the number of men employed by the defendant in Silver Bow County to be 9,100; they show that large numbers of these men are not qualified jurymen; they show that the various companies mentioned by the affiants in their affidavits, such as the Hennessy Mercantile Co., the Butte Water Co., and the Daly Bank & Trust Co., the North Butte Mining Co., the Montana Power Co. and others, are not associated or connected with the defendant in any way whatever, and that the defendant has no interest whatever in them, or in their success; they show that the same general counsel are not employed by the defendant and these several companies, but that some one or other of the several counsel of the Anaconda Copper Mining Co. are employed either or at intervals in attending to the legal business of these companies.

They take up the history of the trial of all cases which have been tried between the defendants and what were at one time its subsidiary companies, and other parties, and show that the defendant herein, or such subsidiary companies, neither won nor lost an unusual number of such cases either in the courts of Silver Bow County or in the district court of the United States.

They show that during the period of seven years last past eighteen cases were tried against the defendant and the companies which were in 1910 consolidated with the defendant; that three of these cases were tried by the court without a jury, two being decided in favor of the corporations and one against them, and in two cases tried before juries nonsuits were granted by the court, and in the cases in which verdicts were rendered, including the Harrington cases, against the Butte, Anaconda & Pacific Railway Company, six were against and seven in favor of the corporations.

The affidavits of Messrs. Evans, Stivers, Rodgers, Kelley, Gillie, and others, either of counsel for the defendant or in the general management of its affairs in Silver Bow County and Deer Lodge County and who would be in a position to know if such were true, show conclusively that neither the said defendants nor any of its agents, servants, counsel, or employees have ever attempted to prevent any litigant from obtaining a fair and impartial trial, or have ever sought to influence the action or conduct of any juror in any case or of witnesses in any case, and that the conduct of said company has never been such that any juror or citizen of either Silver Bow or Deer Lodge County would be influenced by said company in the discharge of his duties or would have any just ground to fear that any evil consequences would be extended to him on account of any action of his when sitting upon a jury in a case in which said defendant was interested.

They show the personal interest, bias, and prejudice of the chief movent in these proceedings, Mr. H. Lowndes Maury, and the interest, bias, and prejudice of most of the affiants whose affidavits have been filed by the plaintiffs in these cases; they show that of the cases brought against corporations in the United States district court in the seven years last past, referred to in Mr. Maury's affidavit, only seven cases were tried; that five of these cases were tried at the October term, 1912, of the district court; that H. Lowndes Maury was attorney in four of these cases; that on the trial of the first of these cases Mr. Maury wantonly insulted the jury panel; that two of the verdicts rendered in these cases were set aside by the court on account of the court having misdirected the jury in regard to the law; that another one of these cases was nonsuited; that they show that very large numbers of qualified jurors in both Silver Bow and Deer Lodge Counties have no connection whatever, either directly or indirectly, with the Anaconda Copper Mining Company. The so-called "blue card" system is fully and satisfactorily explained and shown to have no association or connection, either directly or indirectly, with litigated matters in court. They show that great inconvenience and expense will be caused the defendant by the removal of these causes to Helena for trial, and the affidavits of scores of as reputable men as live in the counties of Deer Lodge and Silver Bow, engaged in all lines of business and professions, including many lawyers of wide experience, show beyond controversy that there is no reason to conclude or even to suspect that an ordinary litigant opposed to the defendant will not and can not obtain a fair and impartial trial in this court before a jury composed either in whole or in part of residents of these two counties.

We invite the court to a careful reading and analysis of these affidavits, being compelled to content ourselves with the foregoing brief summary of some of the important points covered by same.

ARGUMENT.

This motion is of more than ordinary significance. Ordinarily a motion for change of venue arises out of conditions which are transient and which appertain to the particular case involved, and may be expected to pass away. Therefore, while the right to trial at a particular place is an absolute right unless such right is forfeited by some exceptional circumstances, still the injury of removal to the party claiming such right may not be very great. Upon these motions, however, the question whether the Anaconda Copper Mining Company shall be entitled to a trial of its causes in the forum where by law it is entitled to try the same is involved. The conditions which bring about this application are permanent; they have existed for many years; they will, so

long as the Anaconda Copper Mining Company is a going concern, continue to exist. There is no unusual or exceptional circumstance connected with any of these cases. There is no popular excitement, and the public mind is not in the least aroused. The cases are ordinary in their issues and ordinary in their results. If these cases are to be removed to Helena for trial the court must necessarily, and to be consistent, remove all other cases of every nature in which the defendant is interested. Not only must this court do so, but if this court remove these cases, and is right in such removal, it necessarily follows that it is incumbent on all the judges of the district courts either in the county of Deer Lodge or the county of Silver Bow to remove all cases wherein said company is a party to some other county in the State for trial.

It is the general policy of the laws of the United States to trust to the judges of the courts of the United States to see that every party has a fair and impartial trial and that not by giving them power to remove causes from one district to another, but by the general power which they have over juries and their verdicts. Such a thing as a removal of a cause from one district to another on account of bias or prejudice existing in one district against a party in the minds of the jurors or persons qualified to act as jurors is unknown to the laws of the United States; neither is it an ordinary practice in the court of the United States on such grounds to remove causes from one place to another, and wherever such power is exercised it is in pursuance of some rule of the court or some special statute. Therefore, the direct questions here presented are practically without precedent, so far as the decisions of the courts of the United States are concerned.

The power here invoked by the plaintiffs, if it exists, arises under section 92 of the Judicial Code of the United States and rule 9-2 and rule 9-3 of this court adopted on the 6th day of September, 1912. Section 92 of the Judicial Code reads as follows:

"The State of Montana shall constitute one judicial district to be known as the district of Montana. Terms of the district court shall be held at Helena on the first Mondays in April and November; at Butte on the first Tuesdays in February and September; at Great Falls, on the first Mondays in May and October; and at Missoula, on the first Mondays in January and June; and at Billings, on the first Mondays in March and August. Causes, civil and criminal, may be transferred by the court or judge thereof from Helena to Butte or from Butte to Helena or from Helena or Butte to Great Falls or from Great Falls to Helena or Butte, in said district, when the convenience of the parties or the ends of justice will be promoted by the transfer, and any interlocutory order may be made by the court or judge thereof in either place."

Rule 9-2 divides the district of Montana into divisions known as the Butte, Great Falls, Helena, and Billings divisions, and to the Butte division the territory in the counties of Silver Bow, Madison, Beaverhead, and Deer Lodge is allotted.

Rule 9-3 provides as follows:

"All causes shall be assigned to that division of the district wherein they properly belong by conformity, as near as may be, to the laws of the State of Montana governing the places of trial in a court thereof; and the trial of all issues shall be at the place where court is held within the division to which the cause is assigned, unless by agreement of the parties, with the consent of the court, or by order of the court, in its discretion, or for good cause shown, such trial is ordered elsewhere. The plaintiff shall endorse on the complaint or bill the division wherein the cause is assignable."

In view of the fact that no such thing is known as the transfer of a cause from one district of the United States to another district on account of inability of a party to obtain a fair trial before a jury and prejudice and bias on behalf of the residents of such district, it might very well be doubted whether the indefinite terms used in section 92 of the Judicial Code were intended to cover the transfer of trials for that reason; that it might also be very well doubted whether the language "for good cause shown," used in rule 9-3, was intended for the same purpose. The ends of justice might require the removal of the cause for other reasons altogether than the one suggested, and "good cause shown" might be intended to cover not only convenience of parties, but also the question of the expense attendant upon trials. Our doubt upon this subject is further increased when we consider the almost unlimited power which the judges of the United States courts have in the selection of jury panels and the absolute unlimited power which they have for any reasons whatever which appeals to their conscience and judgment to set aside the verdicts of juries.

In the code of the State of Montana, section 6506, the language of the United States statute appears in subdivision 3 of said section and clearly does not include a change of the place of trial for the reason set up in these motions. The language of this subdivision is, "when the convenience of witnesses and the ends of justice would be promoted by the change," but the question of an impartial trial is treated in subdivision 2 of the same section, which reads as follows:

"When there is reason to believe that an impartial trial can not be had therein."

It therefore clearly appears that the language "ends of justice" is a different and other reason for the change of place of trial under the laws of the State of Montana than the fact that an impartial trial can not be had in any particular county.

We will, however, in the further argument treat this case upon the theory that the language "ends of justice" used in the statute and the language "for the good of the cause shown" used in the rule includes the change of the place of trial from one division of the district to another on account of the bias and prejudice of the people of such division generally against one of the parties.

By rule 9-3 causes are to be assigned to that division of the district wherein they properly belong, by conformity as near as may be, to the laws of the State of Montana governing the place of trial in a court thereof. The trial of all issues shall be at such place, unless for good cause shown, the place of trial is changed by the court.

By this rule, then, a positive right is given to the defendant in any action to have his cause tried in that division of the district wherein the venue would be, provided the case had been brought in the State courts, and it was clearly the intent of the court in so far as said rule did not conflict with the section of the Judicial Code above quoted to conform with the change of place of trial as nearly as may be to the laws of the State of Montana; otherwise issues would not be tried in the division of the district wherein they would be tried, provided the suit was brought in the State court. Assuming that the words "ends of justice" in the United States statute include a change of venue for bias and prejudice of the citizens of the division of the district in which the case is pending, then this would be a good cause shown under rule 903, but the showing would be in conformity with the rules of law and the decisions of the courts of the State of Montana.

Under the decisions in the State of Montana, as well as in many other States, the mere belief of the affiant, sworn to on behalf of the plaintiffs, that the said plaintiff can not have a fair and impartial trial is valueless to the court. The facts out of which such a condition arises must be shown to the court, and the court must draw its own conclusion. In every affidavit filed by the plaintiffs, while it is stated that the affiant has heard the question discussed in Silver Bow County, there is absolutely no statement whatever as to the trend of such discussion but the bald, naked fact that the affiant so believes constitutes the entire substance of this portion of the several affidavits. That all this is valueless and must be disregarded is shown by the following cases and others in our own State which might be cited, as well as cases from other jurisdictions: *Kenyon v. Gilmer*, 5 Montant 259; *State v. Spotted Hawk*, 22 Montana, 52; *Willard v. Norcross*, 75 Atlantic, 269.

In *State v. People* the supreme court of this State said: "Venue may be changed for only good cause shown. The matter does not rest in the mere discretion of the court; the court has no authority to exercise any other than a judicial discretion. The affidavit must show the cause by a statement of facts. The court must arrive at a conclusion from the facts stated and not from a conclusion of the witnesses. An affidavit against a whole community that states the mere conclusion of the witness is of no consequence whatever; it ought to state the facts so that the court, and not the witness, may determine whether the community is prejudiced. The court is to make a finding from the facts. It is to determine in a judicial manner whether an impartial trial may be had. An affidavit which states that the affiant is acquainted with and knows the general sentiments and opinions of the public in reference to said action and the parties thereto, and from his knowledge of such public opinion affiant has reason to believe and does believe that defendant can not have a fair and impartial trial of said cause in the county named, is a mere conclusion of the witness and does not state any facts upon which the court can ascertain the sentiment of the community. In support of this proposition the court cites with approval the following cases: *People v. Yoakum*, 53 Cal., 587;

People v. Congelton, 44 Cal., 85; People v. Shuler, 28 Cal., 495; People v. Mahoney, 18 Cal., 185; People v. McCauley, 1 Cal., 383; Cloan v. Smith, 3 Cal., 418.

"In People v. Spotted Hawk, supra, it was said: 'It is also the rule that the application must set forth the facts upon which it is based, and not the mere opinion of the affiant or witnesses who are sworn in support of them.'"

Stripped, then, of these useless statements of belief found in plaintiffs' affidavits the only probative fact stated in these affidavits which is not utterly overcome and overthrown by the affidavits of the defendant upon which the court could make a finding in favor of the plaintiff that the same has been established is that the defendant is a large corporation engaged in a large productive industry, operating in the counties of Silver Bow and Deer Lodge, employing about 9,000 men out of about 40,000 men residents in Silver Bow County, and a considerable portion of the men residents in the county of Deer Lodge; and we most respectfully submit that this does not operate as a reason why the defendant should be deprived of its legal right to have its causes tried in this division of the district. If this were true, then there is probably not a county in the State of Montana wherein there are not residents, individuals or corporations, who on account of their wealth, progressiveness, and industrial standing would be deprived of the same right, and would be compelled to undergo the inconvenience, expense, delay, and annoyance of following their lawsuits throughout the length and breadth of Montana; and also deprived of the right, which is as ancient as the common law itself, to have their causes submitted to juries drawn from the political or judicial subdivisions in which they reside.

Of course, none of the men employed by the Anaconda Copper Mining Co. can sit upon juries in its causes; therefore they must be eliminated. Not being present their influence can not be felt. As heretofore pointed out, it does not appear that these men take any interest whatever in the litigation of the company, or exert their influence in the company's behalf. On the contrary, it affirmatively appears that they do not. No attempt is made in the affidavits of the plaintiffs to show that in the trial of these causes any jury selected would be influenced by unusual conditions, by the attendance upon court of the company officers or its employees, by inflammatory or untruthful articles in newspapers, or by any exterior influence whatever.

On the contrary, it clearly appears that the plaintiffs do not rely upon any such condition of affairs, by the affidavits filed by the plaintiffs, of H. Lowndes Maury, in which he states that only two weeks prior to the filing of the motions for these changes he was entirely satisfied with the jury panel which had been called to sit in this court, it clearly appears that plaintiffs complain only of their inability to obtain fair and impartial men for jury service, but do not complain of being compelled to try their causes in Silver Bow County on account of influences which might be brought to bear upon jurors.

A change of venue will not be granted for the reasons which do not disqualify jurors from sitting in the trial of causes. (Gilbert v. Washington Water Power Co., 115 Pac., 925.)

The statutes of the State of Montana by which the qualifications of the jurors in the district court of the United States are tested cover every disqualifications of the same.

Among these we do not find any provisions "that a juror shall be disqualified to sit in the trial of a case wherein any person residing in the same county as such juror is a party, if such party is wealthier than any other person in the county, or employs ten times, or any number of times more men than any other single employer of labor."

Neither do we find any statute providing "that all persons within a certain political or judicial subdivision of the State shall have the right to have their causes tried therein unless it shall appear that they are wealthier than any other person in the community or employ ten times more men, or a greater number of men than any other single employer of labor in said political or judicial subdivision."

Until some such a statute or statutes shall be enacted, this fact does not present any valid, just, or legal reason why the conditions should warrant a change of the place of trial.

In Gilbert v. Washington Water Power Company, supra, the Supreme Court of Idaho said:

"In determining a question for a change of venue where the affidavits in support of a motion are based merely upon the fact that such articles were published, the court must keep in view what the law requires as grounds to disqualify a person from sitting as a juror. (See sec. 4380, Rev. Codes.) It may be that every citizen in Kootenai County read the articles published in these different newspapers, and yet none of them, on account of the mere reading of such articles, would be disqualified from sitting as a fair and impartial juror in the trial of the cause. The place where the juror resides, whether he has talked it over with his neighbors or with his family, and whether he has ever expressed his views about it, all have to be considered, and while it might require greater care upon the part of the trial judge in the case to obtain a jury of fair minds to try the case when such publications have been made, yet the fact that such articles were published and were read by a juror would not of itself necessarily disqualify the juror."

Again in the same case it is said:

"The bias or formed opinions which would disqualify jurors is not shown by the affidavits filed in this case."

In the brief filed in this cause by counsel for the plaintiff, taking us back to the days of the founders of the Republic, the articles of the Federalists, and putting the Constitution of the United States on trial, we find a statement which, of course, we do not controvert and that has always been recognized, "that power over a man's subsistence is power by will." The Statutes of the State of Montana by which the qualifications of jurors in the courts of the United States are to be tested, fully recognize this principle, and establishes the only recognition of the same which is permissible by this court in determining the qualification or disqualification of jurors. It disqualifies a juror where he is indebted to or is a creditor of one of the parties; it disqualifies a juror if the relation of master and servant exists between them, or the relation of agent and principal, attorney and client, etc. It does not disqualify a juror because he happens to live in a community where one of the parties is dominantly rich or employs an extraordinary number of men in his business affairs, or where one of the parties adds to the material or productive wealth of the community. Such a disqualification would be absurd and would be a ridiculous misapplication of the principle above so enunciated by plaintiff's counsel. The agriculturists of the world produce everything necessary for the subsistence of mankind. Should they cease to grow grain and vegetable, and raise crops of corn, wheat and oats, barley and rye, and engage in the stock-raising industry, all people would soon be on the verge of starvation. Would this be any reason why a change of venue should be granted to a party because the community in which the case was lawfully triable was engaged alone in agricultural pursuits or because the other party owned ten times more land or employed ten times more laborers in such agricultural pursuits than any other single farmer in that community? Nothing could more clearly demonstrate than this the illogical and untenable position taken by the counsel for the plaintiffs.

The question of how many cases have been won or lost within the last ten or fifteen years by the Anaconda Copper Mining Company in the county of Silver Bow is, in our opinion, unimportant, and standing alone, even if a great number of such cases had been won by the Anaconda Mining Company, would furnish no proper predicate for a conclusion that ordinary litigants could not have fair trials before jurors in said county against the said Anaconda Mining Company. Before this fact would be of any value to the court, the court would be compelled to make a complete analysis of each of said cases; to know the frame of the pleadings; to know all the testimony introduced; to be advised as to all the rulings of the court and its instructions; to have been present and observed the conduct and demeanor of counsel, as well as the conduct and demeanor of witnesses and the condition of plaintiffs; the court would be compelled to measure the skill and ability of counsel; in short, the court would have to place itself in a position to be able to judge from all the facts and circumstances connected with the case and its trial, whether or not an unworthy or unlawful motive actuated the jurors who tried the case. However this may be, an analysis of the cases tried during the period disclosed by the affidavits shows that the Anaconda Copper Mining Company, defendant, lost more cases than it ought to have lost, and absolutely contradicts the statement of plaintiff's witnesses that fair trials can not and could not in the past be obtained by plaintiffs of personal injury suits against said company, and the other companies which have in recent years been con-

solidated with it; it is proof strong as Holy Writ that no condition exists in Silver Bow County which prevents an ordinary litigant from having a fair and impartial trial before a jury composed in whole or in part of residents of said county.

There is a statement contained in the rebuttal affidavit of Mr. Maury filed in all of these causes, and by which statement all of the plaintiffs are bound, which brands their claim that they can not have a fair and impartial trial in the district court of this division as untrue and false, to which we desire to invite the court's particular attention. This is the statement wherein Mr. Maury swears that a short time prior to the filing of these motions after a jury panel had been drawn to serve in this court, which jury panel was made up of about one-half of residents of Silver Bow and Deer Lodge Counties, he was satisfied with the jury. Of course, this is equivalent to saying that the plaintiffs were satisfied that the jury panel then in attendance would give them a fair and impartial trial, for Mr. Maury and his clients would not be satisfied with any jury which would not give them a fair and impartial trial. The claim of the plaintiffs here is that no fair and impartial trial can be obtained from any jury drawn on this division of the District Court of Montana, composed in whole or in part of residents of Silver Bow and Deer Lodge Counties. By his sworn statement he shows that such a jury was drawn and was in attendance within two weeks of the trial of these motions, and it was only after, on account of lack of sufficient members of the jury a special venire was issued and certain additional men were drawn from Silver Bow County that he became dissatisfied with the jury and concluded that in reference to that particular panel he could not have a fair and impartial trial; that particular panel having served its purpose; its time has expired and it has been discharged; defendant can not have these cases tried before that particular panel which dissatisfied the plaintiffs. It is shown by this affidavit that the disquietude of the plaintiffs arose from the personnel of a particular panel; since that panel has been discharged the obstacle in the way of plaintiffs having a fair trial has disappeared, and it certainly is clear to the court that if, during one term of court, the first panel drawn was satisfactory to the plaintiffs although the panel composed of about one-half (the evidence shows more than one-half) of persons drawn from Silver Bow and Deer Lodge Counties, that the statement and claim of plaintiffs is untrue that they can not have a fair trial before any panel composed in whole or in part of residents of Silver Bow and Deer Lodge Counties, and the court can not and will not conclude that because one panel drawn is unsatisfactory to the plaintiffs that the panel which shall be in attendance upon the court at the next trial of jury causes will likewise be unsatisfactory and prejudiced, when it appears that during the same term of court at which an unsatisfactory panel was in attendance there was for a large period of said term a panel in attendance against which even the plaintiffs and their counsel could not urge any objections.

The cases cited by the plaintiffs in support of their contention are, in our opinion, not in point, and in so far as they might be deemed in point, they do not correctly state the law applicable to the cases now under consideration.

The case of *Terry v. Skinner* (110 Fed., p. 494) is the only case cited wherein the question of removing a cause from one place of holding court in a district to another was under consideration. This was in the District Court of North Carolina. In that district neither the law nor any rule of the court gave either of the parties an absolute right to have his cause tried at a particular place of trial. It is quite important that this should be remembered because under the rules of this court, hereinbefore quoted in full, this absolute right is given to the defendant in these cases. A case might be filed in the District Court of North Carolina by one party, at any place in the district where court was holden; there was, however, a rule of court which provided that upon "the affidavit of a party plaintiff or defendant the court may, for good cause, remove a place of trial from one place of holding court to another." In this case the application was not for a change of venue, but the application was to remove a cause which was pending at one of the places of trial in said State, on the ground of convenience of witnesses. The party against whom the application was pressed resisted the motion on account of undue influence of the movant in said other place of trial; there was one case already pending in Raleigh in connection with the same matters. The court having considered the matter, thought that no good cause appeared why the place of trial should be removed from Raleigh to Elizabeth City, and in the exercise of discretion decided not to so remove it. In this case the question of one trial only was

involved. It did not involve the question as here presented of outlawing for all time a large corporation with a large amount of litigation. The differences herein pointed out and which appear in the opinion render this case of no value as an authority. In the course of this opinion it was said:

"Parties litigant should not only have a fair trial but, as far as may be, even the unsuccessful party should feel that his case has been decided by an impartial court and jury."

As a rule for the guidance of this court in reference to change of venue from one subdivision of a district in the State of Montana to another, this statement of the learned judge is not applicable. It does not conform to the decisions of the court of the State of Montana, neither does it conform to the decision of the highest courts of the United States on questions of removal of causes from State courts to United States courts on account of bias or prejudice of the people of the State. Indeed, it is not the law anywhere or any place. Who ever heard of an unsuccessful party feeling that he has had a fair and impartial court and jury, and who ever before heard of this being a rule of law to guide any court in determining the question as to whether or not one of the litigants should have his absolute legal right to have his case tried in a particular jurisdiction taken away and the venue of the place of trial changed?

So far as the other cases cited by counsel for plaintiffs are concerned, so far as they depart from the rules laid down by the Supreme Court of the United States in the following cases cited, they, of course, do not state the law applicable to the subject discussed therein. (In re Pennsylvania Co., petitioner, 137 U. S., 451; P. Schwenk & Co. v. Strang, 59 Fed., 209; Bellaire v. B. & O. R. R. Co., 146 U. S., 118; Flisk v. Henarie, 142 U. S., 465.)

The first act of the Congress of the United States provided for the changing of the place of trial from a State court to the United States court, on the ground of local bias and prejudice, was passed in 1867, and it grew out of the animosities and bitterness of the war between the States. This act gave to the moving party the absolute right to have the transfer made upon a petition or affidavit that he had reason to believe that, on account of such local prejudice, he could not obtain justice in the State court. Under this act the right was absolute, the same as it is under our change-of-venue law in the State of Montana, for a change of judges. No inquiry could be made into the facts, and upon the filing of a proper petition the duty of the court was imperative to order the change. Therefore decisions under the act are not at all pertinent.

In 1887 the act was amended so as to read as follows:

"Any defendant being such citizen of any State may remove such suit into the circuit court of the United States for the proper district at any time before the trial thereof when it shall be made to appear to said circuit court that, from prejudice or local influence, he will not be able to obtain justice in such State court or in any other State court to which the said defendant may, under the laws of the State, have the right, on account of such prejudice or local influence, to remove said cause."

As to the law governing the courts of the United States in determining the question whether such local prejudice existed as to require a removal, it was said by the Supreme Court of the United States in re Pennsylvania Company, supra, as follows:

"There is another question raised in this case, on which it is proper that we should express our opinion. It arises upon the following words of the act: 'When it shall be made to appear to said circuit court that, from prejudice, etc.' How must it be made to appear that, from prejudice or local influence, the defendant will not be able to obtain justice in the State court? The act of 1867 only required an affidavit of the party that he had reason to believe that, from prejudice or local influence, he would not be able to obtain justice in the State court. By the act of 1887 it must be made to appear to the court. On this point also various opinions have been expressed in the circuit courts. Our opinion is that the circuit court must be legally (not merely morally) satisfied of the truth of the allegation that, from prejudice or local influence, the defendant will not be able to obtain justice in the State court. Legal satisfaction requires some proof suitable to the nature of the case; at least, an affidavit of a credible person, and a statement of facts in such affidavit which sufficiently evince the truth of the allegation. The amount and the manner of proof required in each case must be left to the discretion of the court itself. A perfunctory showing by a formal affidavit of mere belief will not be sufficient. If the petition for removal states the facts upon which the allegation is

founded, and that petition be verified by affidavit of a person or persons in whom the court has confidence, this may be regarded as prima facie proof sufficient to satisfy the conscience of the court. If more be required by the court, more should be offered."

In the case of *Fisk v. Henarie*, supra, in an opinion by Mr. Justice Fuller, it was said:

"The prejudice or local influence must be made to appear to the circuit court—that is, the circuit court must be legally satisfied by proof suitable to the nature of the case of the truth of the allegations that by reason of those causes the defendant will not be able to obtain justice in the State courts, and review on writ of error or mandamus is taken away."

In the case of *Bellaire v. B. & O. R. R.* (146 U. S., 118) it was said:

"Under the act of Congress in force at the time of the removal of this case and of the refusal to remand it, prejudice and local influence which would prevent the party removing it from obtaining justice in the State court must be proved to the satisfaction of the circuit court of the United States if its jurisdiction is to be supported on that ground."

In the case of *Schwenk & Co. v. Strang*, supra, the circuit court of appeals of the eighth circuit, by Caldwell, circuit judge, said:

"In a word, the affidavit does not contain a hint of any fact or circumstances from which any court could say that it had been made to appear that, from prejudice or local influence, the defendant would not be able to obtain justice in the State court. The grounds upon which the affiant arrived at the conclusion to which he swears are not disclosed. His residence is not disclosed. It does not appear that he ever was in Madison County, or knows a single citizen of the county or knows anything about the sentiments or feelings of the people of the county toward the plaintiff or the defendant. If he had stated the facts upon which he founded his conclusions, the court could then have determined whether his deductions were sound.

"It not unfrequently occurs, as every judge who has had experience on the circuit knows, that affidavits like the one under consideration are filed when it is perfectly obvious that the only prejudice that has any existence in fact is the prejudice of the affiant against the people of the county, of whom he knows nothing, and whose impartiality and fairness he impeaches without the slightest foundation of fact. Instances are not wanting where such affidavits had no better foundation than an earnest desire on the part of defendant to harass and delay the plaintiff in his suit. It was the knowledge of these facts that induced Congress to change the law on this subject. Under the statute in force prior to the present act, the removal of the cause from the State to the Federal court upon the ground of prejudice or local influence was effected by simply filing an affidavit in the State court stating that the party has reason to believe, and does believe, that from prejudice or local influence he will not be able to obtain justice in such State court. No inquiry into the truth of the affidavit was permissible. Under the act of 1887 the application for the removal on the ground of prejudice or local influence must be addressed to the circuit court, and the language of the act is that 'when it shall be made to appear to the circuit said court that from prejudice or local influence he will not be able to obtain justice in such State court, etc.' It will be observed that this act does not provide as did the act of 1887, that the cause shall be removed upon filing an affidavit alleging in general terms the existence of prejudice or local influence. * * *

"How must this fact be made to appear? Obviously, in some of the recognized modes by which facts are proved in courts of justice. It is not made to appear by the simple declaration in an ex parte affidavit that it does exist. That declaration proves nothing, and is evidence of nothing but the opinion of the affiant that the issue is not one to be determined by the opinion of an expert. An opinion or conclusion expressed in an ex parte affidavit which does not disclose the facts upon which the conclusion is founded, has no probative force. The court can not abdicate its functions and transfer to the maker of such an affidavit the high duty imposed upon it by law, of judging after inquiry and deliberation. The judicial faculty can not be farmed out in this manner. Before the court can remove the cause it must be made to appear that the fact exists upon which the right to the removal depends. The statute contemplated a judicial inquiry into the alleged fact. The court must take the responsibility of determining and adjudging judicially that prejudice exists before it can order the removal. Its judgment on this question must be reached by the customary and approved judicial methods."

An *ex parte* affidavit, which states no fact, but simply the affiant's opinion or conclusion, is sometimes made sufficient by statute for certain purposes. The act of 1867 is an example of such a statute. But in the absence of the statute such an affidavit ought not to be accepted as satisfactory evidence of the existence of any fact upon which the judgment of the court is to rest. When the court is charged with the duty as it is under the act of 1887, of ascertaining and determining for itself the existence or nonexistence of prejudice or local influence, it ought not to accept an *ex parte* affidavit such as was filed in this case as sufficient evidence, or indeed, as any evidence on the point. To give effect to such an affidavit is practically to nullify the act of 1887 and revive the act of 1867. The question should be determined by the court, as it would determine any other issue of fact arising in the progress of the case affecting the rights of the parties to the suit. The parties to be affected by the action of the court should have reasonable notice of the application for removal and an opportunity to contest it. When notice to the party adversely interested is practicable, the court should not in any case rest its judgment on a mere *ex parte* showing. Such hearings are often deceptive and misleading and for this reason are not favored. When the court comes to act upon the application it may receive evidence upon the point by affidavits which state facts or by deposition or by oral examinations of witnesses.

At this point it is proper for us to call the court's attention to the fact that the objections which we urge against plaintiff's affidavits which are supported by the decisions cited from the Supreme Court of Montana and the one last above quoted from can not be successfully urged against the affidavits which we have filed in this case on behalf of the defendant.

Our affidavits show long residence in the counties of Silver Bow and Deer Lodge, an intimate acquaintance with the people of the several counties, and in some instances, particularly the affidavits of counsel and officers and employees of the Anaconda Copper Mining Company, they show very particular acquaintance with the methods of that company in relation to court matters. Each of the affiants states that notwithstanding his long residence and acquaintance with conditions and with people they know of no fact that would indicate that the plaintiffs could not have a fair trial; that if any such facts existed they show that they have been in a position and would most certainly have known of the same, and that it is their belief and opinion that no conditions of affairs exist that would deprive the plaintiffs or any other litigants in the courts of said counties of a fair and impartial trial.

The plaintiffs are required to prove the affirmative of the issue in these cases, and in proof of an affirmative fact it is necessary to have some positive evidence of the same.

Upon us the duty devolves of proving the negative. Proof of the negative may be established by absence of anything to indicate the contrary. Therefore the statement of those who made affidavits in behalf of the defendant that they know of no fact leading to the conclusion that a fair and impartial trial can not be had and that in their opinion they believe that such a trial can be had, and that if any of the facts existed which would lead to a contrary opinion they would have known of the same, necessarily negative facts to the contrary, and the condition being a negative and normal one the situation is entirely different from that of the defendant, and therefore such testimony on the part of defendant's witnesses and such opinions and beliefs become satisfactory proof of the nonexistence of a state or condition which would deprive the plaintiffs of a fair and impartial trial. (*Gilbert v. Washington Water Power Co.*, 115 Pac., 925; *Willard v. Norcross*, 75 Atl., 269.)

Under well-settled rules in jurisdictions with statutes similar to our own, if this court is to be guided by the laws of the State of Montana in regard to change of venue, the court might well wait, and it is within the discretion of the court to wait until the trial and by actual experiment in impaneling a jury ascertain whether a fair jury could be obtained in this county. (*State v. Gray*, 19 Nev., 212; *State v. Millan*, 3 Nev., 409; *People v. Plummer*, 9 Colo., 299; *People v. Mahoney*, 18 Cal., 299; *Watson v. Whitney*, 23 Cal., 375; *Cook v. Pendergast*, 61 Cal., 72.)

Upon the general subject of change of venue see the following: *Gilbert v. Washington Water Power Co.*, 115 Pac., 924; *Willard v. Norcross*, 75 Atl., 269; *Noonan v. Luther*, 112 N. Y. Sup., 898.

The right of the defendant in these cases to have not only these cases but all others similarly situated tried in the southern division of this district is a substantial legal right, of which it ought not to be lightly deprived. Not only

is this so on account of the rules of this court, which have the force and the effect of law, but the right of parties to a trial by jury of the vicinage is as old as the common law; the plaintiffs in all of these cases are entitled to this right, unless they choose to waive the same; if they choose to do so, that is their affair. The defendant is entitled to his right, unless a legal reason exists why it should not be granted to him. If an individual is a party litigant and the cause of action is properly triable in the community in which he resides, he is entitled to such trial. If he is a reliable, credible individual, if by right living and just conduct he has established a good reputation in such community for truth and veracity and honesty and fair dealing, he is entitled to whatever benefit he may legitimately derive therefrom. This is one of the just rewards of good citizenship, and no one would say that this is a reason why his cause must be tried elsewhere.

Corporations, like individuals, acquire reputations. The court will undoubtedly take judicial notice of the fact that the tendency of ordinary juries is to entertain more or less feeling or prejudice against corporations generally. The larger this corporation may be the more this prejudice is accentuated. The court will also take judicial notice of the fact that the Anaconda Copper Mining Company has been much talked about in the State of Montana; that many persons seeking public office and many politicians desiring to take advantage of the natural feeling of antagonism toward a large corporation have upon political platforms of the State abused and vilified the Anaconda Copper Mining Company; that many newspapers have done likewise. Among those who have been most active in this effort to arouse public antagonism to this company throughout the entire State of Montana is some of the counsel who are now seeking to have these cases removed into communities where it is hoped that the misrepresentations indulged in will be beneficial to the plaintiffs in these and other causes which are to be hereafter removed. To remove these causes would expose the defendant to imminent danger of injury to its rights, arising out of this persistent and long-continued campaign of misrepresentation and vituperation, and the trial of the same in a community affected by this prejudice, having no knowledge of the corporation and its method of conducting business and its reputation among those who know it, would be a most dangerous experiment and would certainly not tend to promote the ends of justice. If the defendant during the period of its legal existence has been good conduct and a fair and just conduct, we respectfully submit that it, the same as an individual, ought not to be deprived of any benefits which may legitimately accrue therefrom.

The charges contained in plaintiff's affidavits are serious allegations against the people of the counties of Silver Bow and Deer Lodge, and in one sense their honesty and integrity is called in question. Under the proof there are alone in the county of Silver Bow disassociated altogether from the Anaconda Copper Mining Company over 80,000 men; in the county of Deer Lodge there is also a large number. These men have no disqualifying relations with the Anaconda Copper Mining Company; they are certainly as reliable and honorable and as conscientious, as a whole, as any other like body of men to be found in the State, and observe the ordinary amenities of civilized life. They come from every State in the Union and from every country almost of the world. It is sought to have the court hold that out of this large number of men no man can be found to sit upon a jury and fairly try a case against the Anaconda Copper Mining Company, simply because the company is rich and a strong company. In times of great excitement arising out of some particular conditions even honest men may be unconsciously swayed from the strict line of duty when acting as jurors; and, therefore, under such circumstances no very great influence upon a body of citizens is contained in an order granting a change of venue on account of bias and prejudice, but no condition of that character exists in the instant cases. If these men are disqualified and unfit to sit as jurors, the disqualification must arise from sordid and unworthy motives; they must be held to be willing, simply because the defendant is rich and strong and powerful, to violate their oaths as jurors—both the oath which is to direct them in their consideration of these causes and also the oath which binds their conscience when they answer questions with regard to their qualifications. The court should certainly hesitate long before by solemn judicial judgment it impeaches the honesty and integrity of almost one hundred thousand people.

One reason why these causes should not be removed is the almost unlimited power of this court over the verdicts of the juries.

In the case of *Montgomery County v. Cochran*, 116 Federal, on page 198, it was said:

"Apart from this, the operation of prejudice or local influence upon the judge may be far more harmful to the nonresident litigant than when such influences move the jury. A judge can correct the wrongs done by a jury. Their verdict amounts to nothing if it does not have the stamp of his approval. On the other hand, if the judge is improperly moved by local influence, it is, in many cases, impossible to correct the wrong, and in no case is that difficulty more insurmountable than where he not only determines the law but is sole arbiter of the facts."

This case correctly states the rule, and the power which is given to the judges in the Federal courts to grant new trials from which there is no appeal to either party is one of the instruments placed in the hands of the Federal judiciary to protect all litigants from any bias or prejudice or unjust act of a jury. Probably no one is in as good a position to judge of whether an unworthy motive or prejudice has actuated the verdict of a jury as the judge who tries the cause. Certainly the experience of the judge of this court upon the bench in Silver Bow County and in this court in the trial of causes wherein the defendant and other corporations have been defendants or plaintiffs against ordinary litigants much better qualifies him to judge the facts than the reading of newspaper accounts of such trial qualifies the gentlemen who have made affidavits for plaintiffs.

In the trial of the pending cases if this court should conclude from all the matters before it that any jury has been swayed from the paths of rectitude by bias or prejudice, or any other unlawful or illegal motive, and from this there is no appeal, and if this court should conclude from his observation or any unusual conduct on the part of juries that the allegations of the plaintiffs are true and that no fair and impartial trial can be had of a cause wherein the Anaconda Copper Mining Company is a party litigant, it will then be time enough for the court to consider the exercise of the extraordinary power of depriving this corporation of the right to try any of its suits in the southern district of this State.

There is no reason which renders it necessary for these or any other causes wherein the Anaconda Copper Mining Company is a party to be transferred to Helena or elsewhere for trial. No complaint is made against jurors summoned from Powell and Beaverhead Counties. The complaint is directed against those only from the county of Silver Bow and the county of Deer Lodge. The court has the unrestricted power in the trial of any of these causes to set aside any and all jurors drawn from the county of Silver Bow or the county of Deer Lodge, and try the cause with the jurors drawn from the other counties of the district. The court also has the unrestricted power to draw an entire jury panel from any of the other counties of the district and equally the court has the power to draw a jury panel from any county within the district of Montana and try all cases with such jury panel. This manner, however, should not be invoked and, of course, will not be invoked as a mere expediency or for the purpose of satisfying the clamor of the lawyers who have initiated and are pushing forward this movement. Courts are primarily made for litigants and for the people and not for any particular class of the members of the bar. Should, however, the court find the allegations of the plaintiffs are true—that no juryman from Deer Lodge County and Silver Bow County should be permitted to sit in a cause wherein the Anaconda Copper Mining Company is a party litigant—then such a course would be both legal, expeditious, remedial, and certainly would be the only proper course to pursue, especially in view of the fact that the only crime laid at the door of the defendant is that it is rich, powerful, employs many men, and in an industrial way adds mightily to the prosperity not only of the people of the counties of Deer Lodge and Silver Bow but of the whole people of the State of Montana.

Respectfully submitted.

In the District Court of the United States in and for the District of Montana.

No. 151. At law.

JOSEPH MODENA, AS ADMINISTRATOR OF THE ESTATE OF CORRADO MODENA, PLAINTIFF, v. ANACONDA COPPER MINING COMPANY, A CORPORATION, DEFENDANT, AND OTHER CASES PENDING.

REPLY BRIEF ON MOTION FOR A CHANGE OF PLACE OF TRIAL.

We desire to make a short analysis of the brief of the Anaconda Copper Mining Company in reply. We shall go through the brief of the company backwards, and wherever the company has taken occasion to step outside of the record we propose to follow it.

The company ends with the statement that "in an industrial way it adds mightily to the prosperity of Deer Lodge and Silver Bow and of the whole people of the State of Montana." Such statement, if germane, might well be doubted.

Before it monopolized the copper industry of Montana there was greater prosperity in Butte than right to-day in proportion to the number of people here, and there was something here then dearer to these people than industrial prosperity. There was a spirit of liberty, freedom of thought, independence of action. These have been banished by assault after assault, invariably successful, made in the courts on independent operators.

Twenty years ago the Societe d'Anonyme de Lexington was assaulted by a predecessor in interest of the defendant. After a bitter litigation in the courts of Silver Bow County and the Supreme Court of Montana its activities were destroyed.

Eighteen years ago the mightiest individual operator that ever lived in all the world of finance, W. A. Clark, was operating a group known as the Colusa Parrot. A deadly clash came between him and this defendant. He was mulcted for a million or two and took a compromise, which was an acknowledgment of defeat.

Later a little leaser started up into life one Geyman Mining Company. It had no sooner commenced to ship ore than its prime mover was pursued by a predecessor in interest of this company, smoked out of its hole, and landed in jail.

Later came a mighty genius for fight. He realized that to carry on successful war against the present defendant and others associated with it he had to invade the citadel of the defendant, the courts in Silver Bow County. As long as he could control these he was successful. As soon as his possession there was disturbed his wreck became complete.

About the same time Raven Copper Company opened up some ore bodies on the sacred hill. It was told by this defendant or one of its predecessors in interest to evacuate the premises, though the ore bodies were admittedly beneath its surface lines. It did evacuate the premises, lingered long, languishing, and in December of last year quoth nevermore.

One James Murray, many times a millionaire, opened up ore bodies beneath the surface of the Ticon claim, also on the sacred hill. As soon as the claim commenced to produce the present defendant, or its coadjutor, the North Butte Mining Company (it matters not which), by means of an injunction, a court ring thrown around the neck of the smaller snake, stifled its activities, and as far as mining is concerned it lingers hibernating, as is permitted to such cold-blooded animals, to these many years.

Coming down in point of time, Edward Hickey and Michael Hickey, locators of the Anaconda mine itself, attempted to open up a claim with the Lixie Fraction. As soon as commercial ore was struck they were colled by the Anaconda, and after the proper amount of oil had been spit upon them to make them go down slick they were swallowed in a mining way.

Following along in point of time, the Butte & Balaklava, at an expenditure for land, equipment, and development of six or seven hundred thousand dollars, opened up an ore body. Charmed by the approach of the serpent with its weapon, the courts and their subsidiary officers, the jurors, it shut down and finally took the same old compromise—was allowed to retain enough of its ore bodies to pay for its development and get out even with the game.

Then came the final and closing contest with the former Senator from Montana. We have spoken of him as the great individual operator of the world of finance; and as an individual operator he is without a peer. Brutus and Crassus amassed their enormous wealth by the sacking of Provinces and Govern-

ment aid; the Rothchilds, theirs through five generations of hoarding; Li Hung Chang, by the aid of a mighty Government which had existed over an Empire of unequalled richness; the Morgans and the Rockefellers amassed theirs not by individual effort but by associating themselves with mighty allies, and then (according to Mr. Mellon) fleecing them. But this individualist commenced 50 short years ago as a country school-teacher, without allies and without Government aid, has risen to second place in the world of finance.

But four or five years ago, when the present defendant announced to him that among the other assets of Heinze it had purchased the Umbrella Apex, he folded his tent, acquiesced in the decision, dares not fight, sold his properties which had been the scene of his youthful mining activities, the fountainhead of his mighty fortunes and were still in their infancy of development, for a sum paltry to him and to the value of his properties, and departed from the production of copper in Montana.

Another independent operator, the Tuolumne Copper Mining Company, also supported by the Hickeys, the locators of the mighty nucleus of the wealth of the defendant, after an expenditure in development of two hundred thousand or more dollars, opened up valuable ore bodies. The ally of this company defendant then proceeded to commit champerty, bought and held an outstanding claim of a man who believed that he had sold the interest to the Tuolumne Company, and by champerty the ally of this defendant proceeded to the courts presided over by the judges which it can and has elected, and served by juries which it can (it denies that it does) control. And without risking a final trial, such cessions of its ore bodies was made for peace that the price of its stock fell from approximately five dollars to to-day's quotation of thirty-five cents.

The author of this brief is not making this statement out of chagrin at a personal loss, because the author long before the litigation came, knowing the tenets and tendencies of this defendant and its ally, proceeded with due diligence to get in the clear.

And then, coming further down, a secret assault was made on Butte-Alex Scott, an independent concern, and it took the same old compromise.

The latest is Pilot Butte, which, at an expenditure for property and development of five or six hundred thousand dollars, opened up a little ore body. As soon as this happened an injunction was sought, and so little confidence had the buying public and the owners in Pilot Butte in the chance of a fair trial in Silver Bow County that the day after the commencement of this suit the stock of this concern went from about nine dollars a share to a dollar and a half. And why should it not do so? Were they not the same people who are called the "invisible government" of Montana, and rightly so; because it is a matter of history in this State that it said, when it was hurt in a lawsuit, to the governor and to the legislature of the State, "This is our will; do this because we want it," and they did it. And so we aver that the statement that "this defendant has added mightily to the prosperity of Deer Lodge County, Silver Bow County, and the State of Montana" is seriously open to argument.

The general proposition of taking away ten millions of dollars annually from the natural resources of the State is thought by some to detract in the long run mightily from the prosperity of a people who live in the State.

Going further backward through the brief, a compromise is offered to the court of bringing in jurors from the outside. For our part we know that this would be an improvement on the present system of trying these cases, but in the Federal courts we were taught to expect a system of trials which would guaranty a trial as nearly perfect as human wisdom could ordain.

The day after this argument, and in an attempt beyond a doubt (for it could be for no other purpose unless it be to satisfy the spleen of counsel) to influence the Federal judge presiding over these motions, the press of this defendant, one of which claims a circulation of ten thousand copies, another a circulation of eight thousand copies, and its ally for this purpose, the paper of the mighty individualist, printed at length, column after column, of the most one-sided stuff about this motion; and much of this stuff was false. It was from the affidavit of one Lew Orvis Evans.

Among the falsehoods was a statement that the writer had lost the last nine cases in which the writer had actively participated. This statement was not germane in any way, and by the presiding judge of the Federal court, of his own knowledge known to be false, and will doubtless be known to be false by the circuit court of appeals, which may eventually review this matter, because there are pending before that court at the present writing two cases in which the writer was successful. And the statement was equally false as to the record of cases in the State courts of Silver Bow County.

But nothing will satisfy the wrath of this concern against a man who makes a demand that they meet their opponents on equal ground.

In the affidavit of this same Lewis Orvis Evans there are accusations that an ex-chief justice of Montana, William Young Pemberton, was an "ambulance chaser" and a solicitor of litigation; that Robert B. Smith, with whom the writer had a kind of a partnership agreement, one of the ex-governors of Montana, and the man who first helped in a professional way the maker of the affidavit up the ladder of the profession, was likewise engaged in the same business. The writer's feelings are not hurt by the slanders of the man who promulgates the affidavit. It places the writer in the class with all of the able lawyers who have opposed Evans in his professional career. No such vituperation has been cast at the writer by Evans as has been cast by him in days gone by at Corbet, at Clayberg, at Bach, at Toole, at McHatton, at Denny, at Leonard, at Vale before he joined the ranks of the Amalgamated lawyers. Nor is the vituperation which has been cast at the writer by Evans anything to equal the wrath which will be secretly hurled by him at the presiding judge of this court when this motion goes against him.

Going further backward through the brief the writer is accused of raising a turmoil against this defendant lasting during seven years. The writer has consistently announced that no fair trial can be had against this defendant in this county.

The politics of the State was invaded in the brief of the defendant. May we likewise venture into that field of public knowledge, and say that it is the writer's candid belief that all that I have said on this subject has weighed little when compared with the effect of one of those speeches made on heated occasions, which lasts for years through a community, and made in the auditorium of the city of Butte, in a Republican convention some decade ago, snatches of which linger yet in the memories of people who heard it. I can see a man stirred by righteous indignation, a man earnest for the truth, earnest for righteousness in government, pointing his hand to various leaders of that convention, announcing, "Here is a shift boss; there is a superintendent; you are but sheep," and other similar burning words. That speech, coming from that man in that convention, did more to convince the people of Silver Bow County and this State that the political situation and civil government of Silver Bow County was entirely under the thumb of the Anaconda Copper Mining Company than any words of the writer, a member of an opposition party.

So that, while I may be to blame and have been guilty of this lese majeste, I have much good company with me.

We are entitled to get out of this environment. We are entitled to a trial away from the influence of a concern which can control great political parties. They say that they have never used this tremendous power in lawsuits. It is useful to them without being called into activity by any overt act of theirs. It is as much of an advantage as the man who plays with secretly marked cards against an adversary playing a fair game. Their plan is to the court of trust them not to call to their aid this mighty power. Now, there are men who are honorable enough to even play with marked cards and not take advantage of their adversaries, but these men seldom object to bringing in a new deck. And for my part, there is nothing so indicative of retrogression of the bar from its high standards as the fact indicated here, that there are men who claim to be better than we who strain heaven and earth to keep their adversaries in a lawsuit at a disadvantage.

Going backward through the brief, we find that there are many newspapers in Montana that have opposed the defendant. So far as we know, there is a weekly called the "Montana Socialist"—the same printed matter is delivered in Butte under the head of "Butte Socialist"; a weekly in Helena called the "Montana Progressive"; a daily in Missoula called the "Missoulian." We have not asked for a transfer to Missoula. In Helena there is a weekly. They would gladly force to trial entire strangers in Butte in the presence of that mighty press, the Standard and the Post, with the Miner equally interested against all such cases as these. They admit the power of the press and its persuasive influence in the trial of lawsuits when they admit their fear of a little weekly like the Montana Progressive. Their admission speaks volumes for our right to remove from the region of their press.

The writer did and does aver that no individual can get a fair trial against any large corporation in Butte. Nothing more clearly demonstrates that than the horde of corporation counsel and office-holding lawyers that rushed to the rescue of this defendant and showed willingness to swear to a negative (never as worthy of belief as men who swear to an affirmative proposition).

The first set of affidavits was a chorus of county attorneys; another the sheriff, the ex-sheriff, and the ex-ex-sheriff; and then the corps of corporation lawyers—the Milwaukee lawyers, the Great Northern lawyers, the Northern Pacific lawyers, the East Butte lawyers, the Oregon Short Line lawyers, the Clark lawyers, the North Butte lawyers, and the Montana Power Company lawyers. It sounded like the Salvation Army singing that old song, "Onward, Christian soldiers; we are all united, of one purpose we." Strange is it not that outside of those lawyers none were found willing to join with the defendant and the harmonious unison in which they sang. And the harmonious unison in which they sang demonstrates to the public that any man working for a corporation should not, to retain the friendship of his master, decide against another corporation.

And the results through seven years were foretold seven years ago. In seven years in the district court above entitled, and in the circuit court, its predecessors in jurisdiction, though hordes of cases against corporations for personal injury or death were tried, there was one verdict for two hundred and fifty dollars (in actual money).

There appeared in a law journal some years ago a story of a judge and a trial in one of the Southern States. The law was one way and popular opinion was another, and it was silently agreed on in the community that in this case there should never be a unanimous jury, unanimity being required under the laws of that State. The judge tried the case once with a jury and there was a disagreement, and the same outcome took place until the sixth trial had been conducted, to the same disagreement of the jury. And the judge delivered himself of the following statement:

"In discharging you, gentlemen of the jury, in this the sixth trial of this case, I may state that in a game of crap to throw four sixes once is a very good throw; to throw it twice in succession is remarkable; to throw it three times in succession is marvelous; to throw it four times in succession is phenomenal; to throw it five times in succession borders on the miraculous; but to throw it six times in succession is in nowise miraculous, phenomenal, marvelous, or unusual. Any man can do it with loaded dice and do it almost every time."

We have quoted little law. The only law on the case is to be found in our original brief. It is not answered. This is a question involving knowledge of conditions political, economic, and otherwise. The comparison between the influence of a popular Congressman in North Carolina and the influence of the Anaconda Copper Mining Company in Montana is insignificant, and greatly in favor of the cat when one compares the strength of a household kitten to the strength of a Bengal tiger.

We opened the argument in the first brief with the statement that the Constitution of the United States is on trial. Not in written laws will freedom and justice be preserved. No nation in its government ever rose above the standard of marrow and courage of the men who conducted the government. The Constitution of the United States and all of the decisions construing it, and all of the acts of Congress might be engrafted on Russia by one mighty act of the Czar and the Douma, and the day after it was done and 50 years after it was done it would have made no change in the manner of the liberties of the Russians. But freedom comes from judges such as withstood the aggression of the little Stewarts, or from some village Hampden that with dauntless breast the little tyrant of its fields withstood.

And we may close this brief with Xenophon's remarks to the ten thousand Athenians which had been betrayed in the heart of Persia: "Men of Athens, the glory of Athens is not in her ships, nor in her wealth, her mines of gold or her mines of silver. The glory of Athens is in her men." Unless the men in this Nation can secure justice, then are the bulwarks of liberty provided by our ancestors idle words.

Respectfully submitted.

In the District Court of the United States, District of Montana.

No. 151.

JOSEPH MODENA, AS ADMIN., v. ANACONDA COPPER MINING CO.

This action is for wrongful death. It was commenced in this court and in Silver Bow County in the Butte division of this Federal district, where the cause of action arose. For trial plaintiff moves to transfer it to Lewis and Clark County in the Helena division. The motion is resisted. Like motions are made in three like cases. The grounds of the motion are that plaintiff can not have a fair trial or an impartial trial hereof in Silver Bow County and can not have such fair or impartial trial "before a jury or panel composed in whole or in part of residents of Silver Bow County or Deer Lodge County in Montana." Said counties are two of four constituting the Butte division. The motion was heard on affidavits and oral testimony. The oral testimony was that of one of defendant's counsel, a witness for both parties, to certain employment of him and other of said counsel by other than defendant, to property purchases by defendant and other matters of little materiality.

Plaintiff presented affidavits of twenty-three attorneys and four other persons, and defendant presented affidavits of thirty-one attorneys and forty-one other persons. Of these, defendant asserts plaintiff's are of attorneys interested in personal-injury litigation, and plaintiff retorts defendant's are of attorneys interested in corporation practice. In the main, both are correct with no apparent discredit to either.

Plaintiff's four affidavits other than by attorneys are by two persons interested in this and the like motions and one by a person who heretofore has been unsuccessful in a personal-injury action against defendant. Defendant's forty-one affidavits, other than by attorneys, are mostly by prominent and leading business men and public officers of the counties of Silver Bow and Deer Lodge, with some few by agents and employees of defendant. In substance, plaintiff's affidavits are that defendant is of great and preponderatory magnitude in the mining and smelting industries of said counties to the extent of employing therein nearly one-half the men thereof; that nearly all the people of said counties depend for support upon mining and the good will of defendant; that defendant's agents and servants have taken an interest in politics and have dominated conventions in Silver Bow County; that defendant and its agents have other business connections in said counties; that defendant maintains a card system to identify its employees; that defendant is of wealth and influence, and (note—one affidavit only by one of plaintiff's counsel to all the following) so great has been that influence in "the political, economical, and juridical" of said counties it has established in the minds of the people thereof "a fear of deciding any cause against this corporation or against any other corporation in favor of an individual"; that in a little more than the last seven years, though many cases have been brought against defendant and other named corporations, affiant is informed and believes that there has not been a verdict rendered in Silver Bow County against any of said corporations; that in the last seven years, though personal-injury and death cases have been tried in this court sitting in Silver Bow County, affiant is informed and believes that there has not been a verdict rendered for any plaintiff; that affiant "averts that it is impossible for any ordinary litigant to secure a fair or an impartial trial in the above-entitled court before any jury consisting in whole or in part of residents of Silver Bow County or of residents of Deer Lodge County in Montana."

Twenty-six of plaintiff's affidavits are duplicate copies of a single blank original, wherein each attorney executing one inserted his name in the proper blank. These affidavits recite that affiants have "heard many people talk on the subject of whether any ordinary litigant or any litigant at all can have a fair and impartial trial before any jury whereon there are residents" of said counties. But this is a mere intrusive or detached statement and goes for nothing. For not only is there silence as to the tenor of the "talk" or of consensus of opinion by it expressed, if any was expressed; but it is not alleged it is in any way the basis of affiant's belief therein declared that "it is impossible in the above-entitled action to have a fair or an impartial trial of this cause before a jury consisting in whole or in part of residents of said committee."

In substance, defendant's affidavits are that the makers are in a position to know and do know the state of public opinion and sentiment in said counties in relation to defendant; that there is not therein any bias or fear or favor or

prejudice or sentiment making in behalf of defendant, nor any dread or fear of defendant, nor any condition, sentiment, or reason which in the affiant's opinion would in any way prevent plaintiff from securing a fair and impartial trial hereof in Silver Bow County, and before a jury composed of residents of said counties; that they have never heard of any attempt by defendant to influence or punish any litigant, witness, or juror (note—plaintiff does not charge any thereof) that (note—affidavits by defendant's agents only) defendant pays no attention to the residence of witnesses and jurors, and neither seeks nor obtains information in respect to any of their conduct in any case; that defendant in no manner discriminates in its employment or otherwise because of witness or jury service, or any reason, or at all due to litigation.

And all those executing defendant's affidavits declare that they know of no reason and believe none exists why this case can not be fairly and impartially tried herein and before a jury of residents of said counties and that they believe a fair and impartial trial can be so had. In an affidavit by one of defendant's counsel it is stated that for years defendant's policy has been to settle when reasonably possible all claims against it for personal injuries irrespective of liability; that in 1913 it settled 403 such claims; that since March, 1910, but two personal injury cases against defendant have been tried in Silver Bow County, though 87 thereof have been there commenced and almost all of which have been settled; that so far has defendant pursued this policy that to one of those executing an affidavit presented herein by plaintiff, defendant paid \$3,500 after his action for personal injuries against defendant had been upon trial disposed of adversely to him; that in a little more than seven years last past in the State court in Silver Bow County in actions against defendant or the other corporations named in plaintiff's affidavits six verdicts were rendered for plaintiffs and seven for defendants; that in the same period in this court sitting in said county in personal injury or death actions, wherein juries were properly instructed and verdicts not directed, four verdicts were rendered for plaintiffs and six for defendants; that in the last five years in the State court in said county in personal injury actions against the city of Butte and other corporations not of those named in plaintiff's affidavits a great many verdicts have been rendered for plaintiffs and approximately forty for defendants, including twelve for said city. It is also therein alleged that efforts have long been made by one of plaintiff's counsel and others to promote "personal injury business" and to that end in said counties, by political and other abuse, to create public sentiment adverse to defendant and other corporations, which is by said counsel, in so far as he is concerned, in effect denied.

It is further alleged that in none of the cases aforesaid in the State court was any effort made to secure a change of venue from Silver Bow County; that in said county juries, even as elsewhere, are inclined to return verdicts for plaintiffs in personal injury cases, "if any basis whatever can be found therefor," and that if this motion for transfer for trial be granted it will inconvenience witnesses, increase expense, and in effect establish that none of the cases wherein defendant is a party shall be tried where they originate in Silver Bow County or before any jury whereon are residents of either of said counties. This statement of what court records show is undenied has been verified in this court, and is taken as true in respect to the State court. It is first to be observed that by statute and rule of court of the force of statute the place of trial of this action is where it originated and was commenced. Both parties have a vested, substantial, and valuable right to have it there tried, of which neither of them can be involuntarily deprived, save for good cause. Inability to there secure a fair or impartial trial would be good cause to transfer the action elsewhere for trial. The presumption is that a fair and impartial trial can be had where, in accordance with statute and rule, the action was commenced, and the party who alleges the contrary has the burden to sustain it by a preponderance of legal evidence in quality and quantity sufficient to satisfy the court of the truth of his allegation. Here this burden is upon plaintiff, and he has not sustained it. No labored discussion of the affidavits is necessary to demonstrate this. It suffices to say that, taken as a whole, in quantity, quality, trustworthiness, and weight not only do defendant's affidavits balance and offset those of plaintiff, but they preponderate over them.

It is worthy of note that plaintiff attempts to prove too much. He goes far beyond the necessities of his motion and by most sweeping allegations embracing all and any litigation and parties he would proscribe from any jury service the nearly 100,000 inhabitants of Silver Bow and Deer Lodge Counties. These are taken to be exaggerations and sought to be fortified by erroneous information

and belief in respect to court records available to all. Exaggerations are not by seal. They help no cause, and, disproven to the extent here, discredit the proceedings wherein they appear. Stripped nonessentials, argument, inferences, conclusions, and beliefs not of themselves evidence, save that in so far as conclusions and beliefs are based upon and supported by facts therein they may be considered. Plaintiff's affidavits are that defendant is of industrial preponderance in said counties, and its many employees exercise their political rights therein—insufficient to support the conclusion of the "fear" alleged and insufficient to warrant the belief alleged that plaintiff can not secure a fair and impartial trial in Silver Bow County. Both parties hereto have departed from the record and appealed to the knowledge of the court. In proceedings of this character courts may and do resort to their own knowledge. In view of the premises the writer hereof will say that while a great variety of criticism of defendant, to put it mildly, justly or unjustly, has been for years the chief plank in the platform of many members of all parties in Montana, so far as his experience of twenty years at the bar and on the bench of Silver Bow County and Montana and some participation in the political activities of the county and State qualify him to speak, he has not believed, and has had no reason to believe at any time that in the courts sitting in Silver Bow County or elsewhere in Montana any jury was either influenced by or infected with fear or any other unworthy emotion constraining or inducing it to favor defendant.

No substantial reason appears why this case can not be fairly tried in Silver Bow County before a jury drawn as the rule requires. Plaintiff's belief to the contrary may be founded on the erroneous information aforesaid. At any rate, although it is highly desirable that every litigant have confidence in the jury before which his cause will be tried, merely to inspire this confidence therein his opponent's right to a trial at a particular place is not to be denied. Substance must not be made to yield to shadow. The motion is denied, and like order will be entered in each of the other cases.

July 22, 1914.

BOURQUIN, J

In the District Court of the United States in and for the District of Montana.

No. 151.

JOSEPH MODENA, AS ADM., v. ANACONDA COPPER MINING CO.

This cause, heretofore submitted to the court upon plaintiff's motion to change the place of trial of the above-entitled cause from Butte, Mont., to Helena, Mont., and affidavits in support thereof and in opposition thereto, came on regularly at this time for the judgment and decision of the court; and now, after due consideration had, it is ordered that plaintiff's said motion be and hereby is denied, in accordance with the written decision of the court this day filed.

Entered, in open court, July 22, 1914.

GEO. W. SPROULE, Clerk.
