INDEX.

	Page.
1. Introduction	1
2. The part social reform can play in slum reform	1
3. Open space required for light and perfation of air... ..	1 & 2
4. Demolition and dishousing necessary	2
5. Preventive measures must precede remedial; by-laws must provide for adequate control over building operations	2
6. Prevent bad from getting worse... ..	2
7. Open areas not yet built on—high standard at once	3
8. Areas partially built over, not congested—high standard ultimately	3
9. Densely congested areas—lower standard temporarily, ultimately higher... ..	3 & 4
10. In densely congested areas buy up open plots and levy betterment charges:	4
11. also plots cleared by fire and by demolition of obstructive buildings	4 & 5
12. thus creating small garden sites of great value	5
13. Dishousing can now be started, but slowly, waiting on provision for rehousing	5 & 6
14. Private enterprise failing, we must develop estates ourselves and if necessary give a lead in building	6
15. We can house the poor only at a loss till wages increase	6 & 7
16. Hence economy in site and building necessary	7
17. In spite of objections to subsidising employers, we must house displaced poor, if private persons won't	7
18. Where are chawl sites to be found—in cheapest locality near old houses	8
19. even though we give up land which ought to be put to more paying uses.	8 & 9
20. Position and size of chawl site... ..	9
21. Chawls should be erected a few at a time to test demand	9
22. The competition of insanitary rooms should be avoided by legislation against overcrowding and for closure of U. H. H. rooms... ..	9 & 10
23. To help the rehousing of those above the poorest classes by private enterprise, we must improve communications	10 & 11
24. Danger of improving communications before strengthening by-laws to prevent formation of new slums	11
25. We should encourage co-operative building societies	11 & 12
26. Where should acquisition and demolition be first undertaken?	12
27. If we wish to avoid heavy initial outlay, we must commence with the least congested parts	12 & 13
28. Otherwise we may attack the most congested parts, but at risk of failure to rehouse the dishoused	13
29. <i>Ceteris paribus</i> , areas where buildings are in regular lines should be treated before higgledy piggledy areas	13
30. In the former only parts of houses should be acquired and demolished to create rear open spaces, and betterment should be levied from properties that benefit thereby	13 & 14
31. Where funds are scarce, slum reform programme should be— i. Bring building operations under strict control and prevent bad from getting worse, ii. Attract people away from slums, iii. Wholesale acquisition and demolition of depreciated slums.	14
32. Conclusion	14
