AN INQUIRY

GIPE-PUNE-003330

THE CAUSE OF INDUSTRIAL DEPRESSION AND OF INCREASE OF WANT WITH INCREASE OF WEALTH.—THE REMEDY

BY

HENRY GEORGE

Make for thyself a definition or description of the thing which is presented to thee, so as to see distinctly what kind of a thing it is, in its substance, in its nudity, in its complete entirety, and tell thyself its proper name, and the names of the things of which it has been compounded, and into which it will be resolved. For nothing is so productive of elevation of mind as to be able to examine methodically and truly every object which is presented to thee in life, and always to look at things so as to see at the same time what kind of universe this is, and what kind of use everything performs in it, and what value everything has with reference to the whole, and what with reference to man, who is a citizen of the highest city, of which all other cities are like families; what each thing is, as to what it is composed, and how long it is the nature of this thing to endure. —MARCUS AURELIUS ANTONINUS.

TO THOSE WHO,
SEEING THE VICE AND MISERY
THAT SPRING FROM THE UNEQUAL DISTRIBUTION
OF WEALTH AND PRIVILEGE, FEEL THE POSSIBILITY OF A
HIGHER SOCIAL STATE, AND WOULD STRIVE
FOR ITS ATTAINMENT.

There must be refuge ! Men
Perished in winter winds till one smote fire
From flint stones coldly hiding what they held,
The red spark treasured from the kindling sun ;
They gorged on flesh like wolves, till one sowed corn,
Which grew a weed, yet makes the life of man ;
They mowed and babbled till some tongue struck speech,
And patient fingers framed the lettered sound.
What good gift have my brothers, but it came
From search and strife and loving sacrifice?—EDWIN ARNOLD.

Never yet
Share of Truth was vainly set
In the world's wide fallow :
After hands shall sow the seed,
After hands, from hill and mead,
Reap the harvests yellow.—WHITTIER.

PREFACE.

THE views herein set forth were in the main briefly stated in a pamphlet entitled "Our Land and Land Policy," published in San Francisco in 1871. I then intended, as soon as I could, to present them more fully, but the opportunity did not for a long time occur. In the meanwhile I became even more firmly convinced of their truth, and saw more completely and clearly their relations; and I also saw how many false ideas and erroneous habits of thought stood in the way of their recognition, and how necessary it was to go over the whole ground.

This I have here tried to do, as thoroughly as space would permit. It has been necessary for me to clear away before I could build up, and to write at once for those who have made no previous study of such subjects, and for those who are familiar with economic reasonings; and so great is the scope of the argument, that it has been impossible to treat with the fulness they deserve many of the questions raised. What I have most endeavoured to do is to establish general principles, trusting to my readers to carry further their applications where this is needed.

In certain respects this book will be best appreciated by those who have some knowledge of economic literature; but no previous reading is necessary to the understanding of the argument or the passing of judgment upon its conclusions. The facts upon which I have relied are not facts which can only be verified by a search through libraries. They are facts of common observation and common knowledge, which every reader can verify for himself, just as he can decide whether the reasoning from them is or is not valid.

Beginning with a brief statement of facts which suggest this inquiry, I proceed to examine the explanation currently given in the name of political economy of the reason why, in spite of the increase of productive power, wages tend to the minimum of a bare living. This examination shows that the current doctrine of wages is founded upon a misconception; that, in truth, wages are produced by the labour for which they are paid, and should, other things being equal, increase with the number of labourers. Here the inquiry meets a doctrine which is the foundation and centre of most important economic theories, and which has powerfully influenced thought in all directions—the Malthusian doctrine, that population tends to increase faster than subsistence. Examination, however, shows that this doctrine has no real support either in fact or in analogy, and that when brought to a decisive test it is utterly disproved.

Thus far the results of the inquiry, though extremely important, are mainly negative. They show that current theories do not satisfactorily explain the connection of poverty with material progress, but throw no light upon the problem itself, beyond showing that its solution must be sought in the laws which govern the distribution of wealth. It therefore becomes necessary to carry the inquiry into this field. A preliminary review shows that the three laws of distribution must necessarily correlate with each other, which, as laid down by the current political economy, they fail to do, and an examination of the terminology in use reveals the confusion of thought by which this discrepancy has been slurred over. Proceeding then to work out the laws of distribution, I first take up the law of rent. This, it is readily seen, is correctly apprehended by the current political economy. But it is also seen that the full scope of this law has not been appreciated, and that it involves as corollaries the laws of wages and interest—the cause which determines what part of the produce shall go to the landowner necessarily determining what part shall be left for labour and capital. Without resting here, I proceed to an independent deduction of the laws of interest and wages. I have stopped to determine the real cause and justification of interest, and to point out a source of much misconception—the confounding of what are really the profits of monopoly with the legitimate earnings of capital. Then returning to the main inquiry, investigation shows that interest must rise and fall with wages, and depends ultimately upon the same thing as rent—the margin of cultivation or point in production where rent begins. A similar but independent investigation of the law of wages yields similar harmonious results. Thus the three laws of distribution are brought into mutual support and harmony, and the fact that with material progress rent everywhere advances is seen to explain the fact that wages and interest do not advance.

What causes this advance of rent is the next question that arises, and it necessitates an examination of the effect of material progress upon the distribution of wealth. Separating the factors of material progress into increase of population and improvement in the arts, it is first seen that increase in population tends constantly, not merely by reducing the margin of cultivation, but by localizing the economies and powers which come with increased population, to increase the proportion of the aggregate produce which is taken in rent, and to reduce that which goes as wages and interest. Then eliminating increase of population, it is seen that improvement in the methods and powers of production tend in the same direction, and, land being held as private property, would produce in a stationary population all the effects attributed by the Malthusian doctrine to pressure of population. And then a consideration of the effects of the continuous increase in land values which thus springs from material progress reveals in the speculative advance inevitably begotten when land is private property, a derivative but most powerful cause of the increase of rent and the crowding down of wages. Deduction shows that this cause must necessarily produce periodical industrial depressions, and induction proves the conclusion; while from the analysis which has thus been made, it is seen that the necessary result of material progress, land being private property, is, no matter what the increase in population, to force labourers to wages which give but a bare living.

This identification of the cause that associates poverty with progress points to the remedy, but it is so radical a remedy that I have next deemed it necessary to inquire whether there is any other remedy. Begin-

ning the investigation again from another starting-point, I have passed in examination the measures and tendencies currently advocated or trusted in for the improvement of the condition of the labouring masses. The result of this investigation is to prove the preceding one, as it shows that nothing short of making land common property can permanently relieve property and check the tendency of wages to the starvation-point.

The question of justice now naturally arises, and the inquiry passes into the field of ethics. An investigation of the nature and basis of property shows that there is a fundamental and irreconcilable difference between property in things which are the product of labour and property in land; that the one has a natural basis and sanction while the other has none, and that the recognition of exclusive property in land is necessarily a denial of the right of property in the products of labour. Further investigation shows that private property in land always has, and always must, as development proceeds, lead to the enslavement of the labouring class; that landowners can make no just claim to compensation if society choose to resume its right; that so far from private property in land being in accordance with the natural perceptions of men, the very reverse is true, and that in the United States we are already beginning to feel the effects of having admitted this erroneous and destructive principle.

The inquiry then passes to the field of practical statesmanship. It is seen that private property in land, instead of being necessary to its improvement and use, stands in the way of improvement and use, and entails an enormous waste of productive forces; that the recognition of the common right to land involves no shock or dispossession, but is to be reached by the simple and easy method of abolishing all taxation save that upon land values. And this an inquiry into the principles of taxation shows to be, in all respects, the best subject of taxation.

A consideration of the effects of the change proposed then show that it would enormously increase production; would secure justice in distribution; would benefit all classes; and would make possible an advance to a higher and nobler civilization.

The inquiry now rises to a wider field, and recommences from another starting-point. For not only do the hopes which have been raised come into collision with the widespread idea that social progress is only possible by slow race improvement, but the conclusions we have arrived at assert certain laws which, if they are really natural laws, must be manifest in universal history. As a final test, it therefore becomes necessary to work out the law of human progress, for certain great facts which force themselves on our attention as soon as we begin to consider this subject, seem utterly inconsistent with what is now the current theory. This inquiry shows that differences in civilization are not due to differences in individuals, but rather to difference in social organization; that progress, always kindled by association, always passes into retrogression as inequality is developed; and that even now, in modern civilization, the causes which have destroyed all previous civilizations are beginning to manifest themselves, and that mere political democracy is running its course towards anarchy and despotism. But it also identifies the law of social life with the great moral law of justice, and, proving previous conclusions, shows how retrogression may be prevented and a grander advance begun. This ends the inquiry. The final chapter will explain itself.

The great importance of this inquiry will be obvious. If it has been carefully and logically pursued, its conclusions completely change the

character of political economy, give it the coherence and certitude of a true science, and bring it into full sympathy with the aspirations of the masses of men, from which it has long been estranged. What I have done in this book, if I have correctly solved the great problem I have sought to investigate, is, to unite the truth perceived by the school of Smith and Ricardo to the truth perceived by the school of Proudhon and Lasselle; to show that *laissez-faire* (in its full true meaning) opens the way to a realization of the noble dreams of socialism; to identify social law with moral law, and to disprove ideas which in the minds of many cloud grand and elevating perceptions.

This work was written between August, 1877, and March, 1879, and the plates finished by September of that year. Since that time new illustrations have been given of the correctness of the views herein advanced, and the march of events—and especially that great movement which has begun in Great Britain in the Irish land agitation—shows still more clearly the pressing nature of the problem I have endeavoured to solve. But there has been nothing in the criticisms they have received to induce the change or modification of these views—in fact, I have yet to see an objection not answered in advance in the book itself. And except that some verbal errors have been corrected and a preface added, this edition is the same as previous ones.

HENRY GEORGE.

CONTENTS.

INTRODUCTORY

	PAGE
The Problem	I

BOOK I.

WAGES AND CAPITAL.

CHAPTER		PAGE
I.	The current doctrine—its insufficiency	10
II.	The meaning of the terms	20
III.	Wages not drawn from capital, but produced by labour	33
IV.	The maintenance of labourers not drawn from capital	49
V.	The real functions of capital	56

BOOK II.

POPULATION AND SUBSISTENCE.

I.	The Malthusian theory, its genesis and support	63
II.	Inferences from fact	71
III.	Inferences from analogy	90
IV.	Disproof of the Malthusian theory	98

BOOK III.

THE LAWS OF DISTRIBUTION.

I.	The inquiry narrowed to laws of distribution—necessary relation of these laws	107
II.	Rent and the law of rent	116
III.	Interest and the cause of interest	122
IV.	Of spurious capital and profits often mistaken for interest	134
V.	The law of interest	138
VI.	Wages and the law of wages	145
VII.	Correlation and co-ordination of these laws	157
VIII.	The statistics of the problem thus explained	156

BOOK IV.

EFFECT OF MATERIAL PROGRESS UPON THE DISTRIBUTION OF WEALTH.

I.	The dynamics of the problem yet to seek	160
II.	Effect of increase of population upon the distribution of wealth	162
III.	Effect of improvements in the arts upon the distribution of wealth	172
IV.	Effect of the expectation raised by material progress	180

CONTENTS.

BOOK V.

THE PROBLEM SOLVED.

CHAPTER		PAGE
I.	The primary cause of recurring paroxysms of industrial depression	185
II.	The persistence of poverty amid advancing wealth	199

BOOK VI.

THE REMEDY.

I.	Insufficiency of remedies currently advocated	211
II.	The true remedy	233

BOOK VII.

JUSTICE OF THE REMEDY.

I.	Injustice of private property in land	235
II.	Enslavement of labourers the ultimate result of private property in land	245
III.	Claim of land owners to compensation	254
IV.	Property in land historically considered	261
V.	Property in land in the United States	273

BOOK VIII.

APPLICATION OF THE REMEDY.

I.	Private property in land inconsistent with the best use of land	282
II.	How equal rights to the land may be asserted and secured	286
III.	The proposition tried by the canons of taxation	290
IV.	Indorsements and objections	299

BOOK IX.

EFFECTS OF THE REMEDY.

I.	Of the effect upon the production of wealth	306
II.	Of the effect upon distribution and thence upon production	311
III.	Of the effect upon individuals and classes	316
IV.	Of the changes that would be wrought in social organization and social life	321

BOOK X.

THE LAW OF HUMAN PROGRESS.

I.	The current theory of human progress—its insufficiency	335
II.	Differences in civilization—to what due	345
III.	The law of human progress	357
IV.	How modern civilization may decline	373
V.	The central truth	386

CONCLUSION.

The problem of individual life	393
--------------------------------	-----

INDEX.

- Bagehot, Walter, arrest of civilization, 340, 341; why barbarians waste away, 353-356.
- Bastiat, cause of interest, 122-133.
- Bisset, Andrew, knight's service, 274 n.
- Muckle, assumes current doctrine of wages, 11; on Malthus, 64, 70; interest and profits, 111; relation between rent, wages, and interest, 120 n.
- Cairnes, J. E., high wages and interest in new countries, 13.
- California, economic principles exemplified in, 12, 43, 55, 101, 102, 122, 182, 183, 193-195, 207, 244, 245, 274, 275, 280, 284, 309.
- Capital, current doctrine of its relation to wages, 10, 11; idle in industrial depressions, 13; theory that wages are drawn from, 13, 14; deductions from this theory, 15; varying definitions of, 21-23; difficulties besetting use of term, 25; exclusions of term, 26; distinguished from wealth, 28-33, 49-51; used in two senses, 39; definitions of Smith, Ricardo, McCulloch and Mill compared, 29, 30; wages not drawn from, 15-19, 33-49; does not limit industry, 17-19, 39-41, 57-61; does not maintain labourers, 49-55; modes in which it aids labour, 56, 132, 133, 139, 140; real functions of, 56-62; may limit form and productiveness of industry, 57-59; apparent want of generally due to some other want, 58-61; limited by requirements of production, 61; poverty not due to scarcity of, 61; not necessary to production, 115, 116; a form of labour, 115, 141, 144; its essence, 123; spurious, 134-138; not fixed in quantity, 138; if the only active factor in production, 143, 144; its profits as affected by wages, 219, 220; wastes when not used, 222; invested upon possessory titles, 275.
- Carey, Henry C., on capital, 23; rent, 161.
- China, cause of poverty and famine, 85; civilization, 340, 341.
- Civilization, what, 337; prevailing belief as to progress of, 337-339; arrest of, 340-345; differences in, 345-357; its law, 357-373; retrogression, 342-345, 383; to endure must be based on justice, 390-392; character of European, 369, 373.
- Civilization, modern, its riddle, 6; has not improved condition of the lowest class, 200-203; development of, 266-273; superiority, 370, 371; may decline, 373-386; indications of retrogression, 383-386; its possibilities, 321-334, 392.
- Communities, industrial, extent of, 140.
- Confucius, descendants of, 78.
- Consumption, supported by contemporaneous production, 50-53; demand for, determines production, 53, 54; only relative term, 93, 94; increase of, shows increasing production, 104-106.
- Co-operation, not a remedy for poverty, 224-226; but will follow from the extinction of poverty, 321-334.
- Debts, public, not capital, 134, 135; origin and abolition, 272, 273, 322.
- Demand, not fixed, 173, 175, 176. (See Supply and Demand.)
- Deutsch, Emanuel, human nature, 351.
- Development, concentration the order of, 232.
- Development Philosophy, relations to Malthusianism, 69-71; insufficiency of, 335-357.
- Discount, high rates of, not interest, 13 n.
- Distribution, terms of exclusive, 25, 114; laws of, 107-158; their necessary relation, 112-116; as currently taught, 113; contrasted with, true laws, 155, 156; equality of, 320.
- Education, no remedy for poverty, 217, 218.
- Exchange, functions of, 18, 19, 53-55; a part of production, 32; brings increase, 129, 132; extends with progress of civilization, 140; promotes civilization, 362.
- Exchanges, credit in, 196, 197; effect of wages on international, 220, 221.
- Fawcett, Professor, Indian expenditures, 83 n; value of land in England, 205.

- Fawcett, Mrs., labourers maintained by capital, 49; land tax, 205, 206.
- Feudal system, recognition of common rights to land, 266-268, 272, 273; infestation, 283, 284.
- Fortunes, great, 138, 276, 277, 280.
- Franklin, Benjamin, his economy, 278.
- Government, improvements in, increase production, 161, 182; will not relieve poverty, 212-214; simplification and change of character, 221-234; tendency to republicanism, 273, 276; transition to despotism, 274.
- Guizot, Europe, after fall of Roman empire, 266; the question that arises from a review of civilization, 292.
- Hyndman, H. M., Indian famine, 83, 84.
- Improvements in the arts, effect upon distribution, 179-180; in habits of industry and thrift, will not relieve poverty, 215-219; upon land, their value separable from land values, 243, 201-202.
- India, cause of poverty and famine, 79-86; civilization, 200, 201, 255.
- Industrial depressions, extent and significance, 3, 284; conflicting opinions as to cause, 7; their cause and course, 189-199; connection with railroad building, 192-193; passing away, 198, 199.
- Industry, not limited by capital, 17, 40; may be limited in form and productiveness by capital, 57-61.
- Interest, confusion of term with profits, 110, 111; proper signification, 114, 122; variations in, 102, 123; cause of, 123-133; justice of, 133; profits mistaken for, 134-138; law of, 138-144; normal point of, 140, 141; formulation of law, 144.
- Interest and wages, evident connection, 17-24; relation, 100, 101, 141-144, 255; why higher in new countries, 158.
- Inventions, labour-saving, failure to relieve poverty, 1-3; advantage of, goes primarily to labour, 127, 129; except when not diffused, 129; effect of, 179-180; brought forth by freedom, 272, 273.
- Ireland, cause of poverty and famine, 86-88; effect of introduction of potato, 216.
- Labour, purpose of, 17-19, 274, 283; meaning of term, 25; produces wages, 15-19, 33-40; precedes wages, 38-41; employs capital, 213, 238; eliminated from production, 143, 144; productiveness varies with natural powers, 145, 146; no fixed barriers between occupations, 149, 150; value of, reduced by value of land, 158; supply and demand, 191, 192; land necessary to, 192, 200, 210; cause of want of employment, 192; family, 213, 216; combination, 219-222; only rightful basis of property, 236-238; efficiency increases with wages, 314, 315; not in itself repugnant, 321.
- Labour and Capital, different forms of same thing, 115, 141, 144; whence idea of their conflict arises, 133, 134, 138; harmony of interests, 140-144.
- Labourers, not maintained by capital, 49-55; where land is monopolized, have no interest in increase of productive power, 200; made more dependent by civilization, 201, 202; organizations of, 219-224; condition not improved by division of land, 230-23; their enslavement the ultimate result of private property in land, 245-253.
- Land, meaning of term, 25; value of, is not wealth, 26, 116, 117; diminishing productiveness cited in support of Malthusian Theory, 67, 68; how far true, 93, 94, 162-172; maintenance of prices, 195; estimated value of, in England, 205; effects of monopolization in England, 205, 206; relation of man to, 209, 210; division of, will not relieve poverty, 228-233; tendency to concentration in ownership, 228-231; necessity for abolishing private ownership, 233, 234; injustice of private property in, 233-281; absurdity of legal titles to, 238-245; aristocracy and serfdom spring from ownership of, 210, 248-253, 266, 267; purchase by government, 255, 256; development of private ownership, 261-273; commons, 268, 269; tenures in the United States, 274-281; private ownership inconsistent with best use, 282-286; how may be made common property, 286-305; effects of this, 306-313; increase of productiveness from better distribution of population, 319 n.
- Landowners, power of, 217, 209, 210, 245-253; ease of their combination, 223; their claims to compensation, 254-261; will not be injured by confiscation of rent, 316-324.
- Latimer, Hugh, increase of rent in Sixteenth Century, 206.
- Laveleye, M. de, on small land holdings, 231, 232; primitive land tenures, 263, 264; Teutonic equality, 266.
- Lawyers, confusions in their terminology, 238; their inculcation of the sacredness of property, 262; influence on land tenures, 264 n.
- Life, quantity of human, 76, 77; limit to, 90-94; reproductive power gives increase to capital, 128; balance of, 130; meaning of, 309.
- Macaulay, English rule in India, 81; future of United States, 38.
- Machinery. (See Inventions.)
- McCulloch, on wages fund, 14 n; definition of capital, 22; compared, 29, 30; principle of increase, 70; Irish poverty and distress, 82; rent, 165; tax on rent, 299-303.

- Malthus, purpose of "Essay on Population," 68; its absurdities, 72, 73, 96; his other works treated with contempt, 73; fall of wages in Sixteenth Century, 205, 206; cause of his popularity, 68-70, 239.
- Malthusian Theory, stated, examined and disproved, 63-106; as stated by Malthus, 64, 65; as stated by Mill, 66, 98, 99; in its strongest form, 66; its triumph and the causes, 67-76; harmonizes with ideas of working classes, 68; defends inequality and discourages reform, 68, 69, 98, 99, 239; its extension in development philosophy, 70, 71; now generally accepted, 71; its illegitimate inferences, 73-106; facts which disprove it, 98-106; its support from doctrine of rent, 67, 68, 93, 94, 162, 163; effects predicated of increase of population result from improvements in the arts, 172-280; the ultimate defence of property in land, 239.
- Man, more than an animal, 91-96, 219, 330, 335-337, 341; his power to avail himself of the reproductive forces of nature, 92; primary right and power, 236; desire for approbation, 324-326; selfishness not the master motive, 327, 328; his infinite desires, 95, 96, 175, 176, 178, 330, 331, 358; how improves, 337; idea of national or race life, 344, 345; cause of differences and progress, 345-357; hereditary transmission, 350-357; social in his nature, 360.
- Mill, John Stuart, definition of capital, 23, 50; industry limited by capital, 39; Malthusian doctrine, 66, 77; effect of unrestricted increase of population, 98, 99; confusion as to profits and interest, 111; law of rent, 118; wages, 152; government resumption of increase of land values, 255, 256; influence of Malthusianism, 258; tax on rent, 299.
- Money, when capital, 31; in hands of consumer, 32; confounded with wealth, 42; lack of commodities spoken of as lack of, 189.
- Monopolies, profits of, 136, 137; cause of certain, 292, 293.
- More, Sir Thomas, ejections of cottagers, 206.
- Nature, its reproductive power, 127-129; utilization of its variations, 129, 131, 132; equation between reproduction and destruction, 139; impartiality of, 237.
- Nicholson, N. A., on capital, 23.
- Nightingale, Florence, causes of famine in India, 83, 83 n, 84 n.
- Perry, Arthur Latham, on capital, 23; rent, 161.
- Political economy, its failure, its nature and its methods, 7, 8; doctrines based upon the theory that wages are drawn from capital, 15; importance of definitions, 20, 21, 24; its terms abstract terms, 33; confusion of standard treatises, 38-40, 111-113, 155; the erroneous stand-
- point which its investigators have adopted, 114, 115; its fundamental principle, 7, 145, 155, 398; writers on, stumbling over law of wages, 153; compared with astronomy, 157; deals with general tendencies, 198; admissions in standard works as to property in land, 254, 255; principles not pushed to logical conclusions, 300; the Physiocrats, 301; union with moral truth, 163, 164, 343, 344; its hopefulness, 396; effect on religious ideas, 395, 396.
- Population and Subsistence, 63-106. (See Malthusian Theory.)
- Population, inferences as to increase, 72; of world, no evidence of increase in, 74-77; present, 79; increase of descendants not increase of, 78, 79; only limited by space, 93, 94; real law of increase, 96, 97; effect of increase upon production and distribution, 162-172; increase of increases wealth, 98-106; puts land to intenser uses, 228, 229; in crease in United States, 279.
- Poverty, its connection with material progress, 3-6; failure to explain this, 6, 7; where deepest, 159; why it accompanies progress, 199-210; remedy for, 233, 234; springs from injustice, 241, 388; its effects, 252, 253, 323-329.
- Price, not measured by the necessity of the buyer, 131; equation of equalizes reward of labour, 145.
- Production, same principles obvious in complex as in simple forms, 17-19; factors of, 25, 114, 144, 191, 209; includes exchange, 33; the immediate result of labour, 44-49; directed by demand for consumption, 53, 54; functions of capital in, 56-62, 115, 116; simple modes of, sometimes most efficient, 60; only relative term, 93; increased shown by increased consumption, 104-106; meaning of the term, 109; utilizes reproductive forces, 127-129; time an element in, 127-131; the modes of, 132; recourse to lower points does not involve diminution of, 163-165; tendency to large scale, 229, 230, 232, 379; susceptible of enormous increase, 306-316, 331, 332, 390, 391.
- Profits, meaning of the term and confusions in its use, 110-114, 134-138.
- Progress, human, current theory of considered, 335-345; in what it consists, 345-357; its law, 357-373, 386-399; retrogression, 373-380.
- Progress, material, connection with poverty, 4-7, 159; in what it consists, 161; effects upon distribution of wealth, 162-180; effect of expectation raised by, 180-184; how it results in industrial depressions, 185-199; why it produces poverty, 199-210.
- Property, basis of, 235-238, 242; erroneous categories of, 238; derivation of distinction between real and personal, 269; private, in land, not necessary to use of land, 282-286; idea of, transferred to land, 361.

- Protection, its fallacies have their root in belief as to wages, 11; effect on agriculturists, 317-319; abolition by England, effect of, 180; how protective taxes fall, 317-319.
- Quassey, his doctrine, 300, 301, 302.
- Rent, bearing upon Malthusian Theory, 67, 68, 93, 94, 169-180; meaning of the term, 116; arises from monopoly, 117; law of, 118-120; its corollaries, 121, 154-158; effect of their recognition, 121; as related to interest, 143, 144; as related to wages, 143-154; advance of, explains why wages and interest do not advance, 157, 158; increased by increase of population, 160-170; increased by improvements, 170-180; by speculation, 180-184; speculative advances in, the cause of industrial depressions, 183-199; advance in explains the persistence of poverty, 199; increase of, not prevented by tenant right, 230; or by division of land, 231, 232; serf, generally fixed, 232; confiscation of future increase, 235, 236; a continuous robbery, 238, 239; feudal rents, 266-268; their abolition, 270-272; their present value, 272, 273; rent now taken by the State, 264, 265; State appropriation of, 266-305, 366, 367; taxes on, 290-295; effects of thus appropriating, 306-314.
- Renda, Winwood, "Martyrdom of Man," 319, 320.
- Religion, necessary to socialism, 297, 298; promotive of civilization, 360, 363, 370, 371; Hebrew, effects on race, 352; retrogression in, 362, 363; change going on, 362, 366; animosities created by, 361; consensus of, 399.
- Ricardo, definition of capital, 20; inference as to population, 40, 50; emancipation of law of rent, 118; narrow view of, 120, 160, 161; tax on rent, 299.
- Royce, Samuel, "Deterioration and Race Education," 324 n.
- Slaveholders of the South, their view of abolition, 290, 291.
- Slavery, chattel, comparatively trivial effects of, 247; modifying influences, 251, 252; not truly abolished in United States, 253, 281; never added progress, 372, 373.
- Smith, Adam, definition of capital, 25, 26, 29-32; recognizes truth as to source of wages, and then abandons it, 34, 35; influence of Malthusian Theory upon, 64; profits, 120; how economists have followed him, 111, 112; differences of wages in different occupations, 147-149; his failure to appreciate the laws of distribution, 153; taxation, 297, 298.
- Socialism, its ends and means, 297, 298; practical realization of its ideal, 30-222.
- Social organization and life, possible changes, 321-334.
- Spencer, Herbert, compensation of land-owners, 255, 258; public ownership of land, 287; evolution, 337, 344; human progress, 339; social differences, 357.
- Strikes, 221-224.
- Subsistence, population and 67-206; increases with population, 90-93; cannot be exhausted, 93, 94; included in wealth, 99, 100, 174; demand for not fixed, 175, 176. (See Malthusian Theory.)
- Supply and demand, of labour, 148, 149; relative terms, 189; as affected by wages, 219, 220.
- Swift, Dean, his "Modest Proposal," 88.
- Taxation, eliminated in considering distribution, 111; reduction of, will not relieve poverty, 212, 213; considered, 290-305; canon of, 290; effect upon production, 290-294; ease and cheapness in collection, 294; certainty, 295; equality of, 297-299; opinions on, 296-301; objections to tax on rent, 299-305; cause of manifold taxation, 304, 305; how taxation falls on agriculturists, 317-319; effects of confiscating rent by taxation, 306-334.
- Tennant, Rev. Wm., cause of famine in India, 80, 81.
- Thornton, Wm., on wage fund, 11 n; on capital, 23.
- Valua, equation of, 120.
- Wages, current doctrine, 10; it coincides with vulgar opinion, 11; but is inconsistent with facts, 11-14; genesis of current theory, 14; difference between it and that herein advanced, 15, 16; not drawn from capital but produced by labour, 19-19, 37-49; meaning of the term, 20, 21; always subsequent to labour, 38-40; fallacy of the assumption that they are drawn from capital, 38-41; for services, 41 n; connection between current doctrines and Malthusian Theory, 64-68; confusion of terms produced by current theory, 212; rate of, 145; law of, 145-154; formulated, 151; in different occupations, 147-150; as quantity and as proportion, 154; not increased by material progress, 216, 217; minimum fixed by standard of comfort, 215; effect of increase or decrease on employers, 220; equilibrium of, 221, 222; not increased by division of land, 230-232; why they tend to wages of slavery, 246, 247; efficiency of labour increases with, 314, 315.
- Wages and Interest, high or low together, 12-14; current explanation, 12; Cairne's explanation, 13; true explanation, 120, 121, 142-144, 157, 158; formulated, 142, 156.

- Wages of Superintendence, 112; used to include profits of monopoly, 136.
 Walker, Amasa, capital, 24.
 Walker, Professor F. A., wages, 11 *n*;
 capital, 23.
 Wayland, Professor, definition of capital, 23.
 Wealth, increase of, not generally shared, 5; meaning of term, 26-28; interchange-ability of, 33, 99, 100, 128, 129, 174-176; confounded with money, 41, 42; increases with population, 99-105; accumulated, 104; laws of distribution, 107-159; formulated, 155, 156; nature of, 103-105, 127, 128, 145, 146; political effects of unequal distribution, 213, 214, 376-382; effects of just distribution, 311-316, 320, 321-334.
