SECULAR MOVEMENTS IN PRODUCTION AND PRICES

THEIR NATURE AND THEIR BEARING UPON
CYCLICAL FLUCTUATIONS
SECULAR MOVEMENTS IN PRODUCTION AND PRICES

THEIR NATURE AND THEIR BEARING UPON CYCLICAL FLUCTUATIONS

BY

SIMON S. KUZNETS, Ph.D.

1930
PREFACE

THIS series of books owes its existence to the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, who have desired to encourage a wider interest in the study of economic and commercial subjects. For this purpose they have delegated to the undersigned committee the task of selecting or approving of topics, making announcements, and awarding prizes annually for those who wish to compete.

For the year 1928 there were offered:

In Class A, which included any American without restriction, a first prize of $1000, and a second prize of $500.

In Class B, which included any who were at the time undergraduates of an American college, a first prize of $300, and a second prize of $200.

Any essay submitted in Class B, if deemed of sufficient merit, could receive a prize in Class A.

The present volume, submitted in 1928 in Class A, was considered worthy of publication.

The Committee is not responsible for any opinions of an author.

J. LAURENCE LAUGHLIN, Chairman

The present investigation attempts to inquire into the nature of the long-time movements in production and prices, as well as into their influence on cyclical fluctuations. It attempts to establish some uniformly observed characteristics of the so-called secular movements, and in the process to draw analytic distinctions between different groups of these movements. The latter are studied as they appear in the available statistical series of various countries. The aim is to formulate these movements in such a way as not only to reveal their common characteristics, but also to facilitate measurements of the relation between cyclical oscillations and the underlying secular changes.

A definite hypothesis concerning characteristics of industrial growth forms the basis of our statistical description of long-time movements. This hypothesis is derived from a preliminary observation of the wide field of statistical evidence and from material furnished by the chronicles of specific industries. The exact formulation of this tentative generalization and the historico-statistical material on which it rests are presented in Chapter I.

The conclusions of the first chapter furnish a definite approach to the methods of statistical analysis which can be applied to the body of available material. A consideration, however, of some of the general principles of statistical description of long-time movements makes clearer the exact type of analysis to pursue. This consideration forms the contents of Chapter II.

Chapter III presents the body of statistical data drawn from five countries; United States, Great Britain, Belgium, Germany, and France. Altogether about 60 series of industrial output and 35 series of prices are analyzed. The secular movements are segregated from the cyclical oscillations and are analyzed into two distinct groups of changes, the primary and the secondary. Each pair of production and price series is accompanied by brief comments drawn from the history of the particular industry whose output and prices are described quantitatively.

The measurable characteristics and the nature of the
secondary secular movements, whose existence is established in Chapter III, are discussed in Chapter IV. The discussion inquires into the causes of these secondary secular movements in production and prices, and deals with the question whether they can properly be called major cycles. The appendix to the chapter surveys the more important theories of major cycles set forth by various writers.

In Chapter V, the influence of secular movements on the cyclical oscillations is studied statistically. The aim is to discover the existence or absence of correlation between the rapidity of secular growth and the amplitude of cyclical oscillations.

The theoretical connection of these two measures of forces as revealed by contemporary business cycle theory is treated in Chapter VI.

The concluding chapter deals briefly with the theoretical significance of the results of the investigation and attempts to evaluate them in the light of economic theory, both past and present.

The investigation was begun in the summer of 1925, and was carried on uninterruptedly to the end of the calendar year 1926, during which time I enjoyed the opportunities of a research fellow of the Social Science Research Council. The study was not completed, however, before the summer of 1927, and has been materially revised since. Throughout these years I profited much by the help of many kind friends. Professor Wesley C. Mitchell was an inspiring and kind critic whose interest was of great assistance. To him especially I wish to express my deeply felt gratitude. Professor Henry Schultz and Dr. Hans Staehle read the manuscript and made a number of valuable suggestions. Dr. Dorothy S. Thomas's friendly interest was frequently most helpful. Professor Edwin F. Gay suggested a recasting of the manuscript which resulted in a considerable improvement. Mr. Irving Allen has gone through the arduous task of stylistic editing. And in the tedious labor of reading the proofs I was greatly relieved by the kind help of Miss Edith Handler. To all these friends I express my sincere thanks.

CONTENTS

I. RETARDATION OF INDUSTRIAL GROWTH

Ceaseless change as the dominant characteristic of the modern economic system. Problem of the long-time movements of economic phenomena. Factors discussed by economic historians: growth of population, changes in demand, technical changes. Four reasons for the decline in the rate of an industry's growth: (I) the slowing down of technical progress. Examples from the cotton industry, woolens and worsteds, iron and steel, shoe manufacturing, paper, copper. The steam engine. The extractive industries. Summary of the dynamics of technical changes in industry. (II) Slower growing industries exercise a retarding influence upon the faster growing complementary branches. Similar influence of the rapidly growing industries upon their competitive branches. Statistical data for the United States on the ratio of value added by manufacture to the cost of materials: metals, machines, lumber and woodworking, textiles. (III) The funds available for expansion decrease in relative size as the industry grows; the automobile industry. (IV) Retardation of an industry by competition from the same industry in a younger country; Great Britain. Summary of factors that tend to cause a decreasing rate of growth of an industry within a nation. A word of caution regarding the validity of the hypothesis.

Appendix: Statistics of patents.

II. THE STATISTICAL DESCRIPTION OF LONG-TIME MOVEMENTS

The definition of secular movements. The dependence of the concept upon our definition of cyclical fluctuations. Two groups of purposes pursued in the analysis of time series. The influence of the choice of purpose upon the period taken, the method of description, and the method of fitting the line of secular trend.

The choice of methods in our specific case. The need of a curve embodying some assumptions. Our assumptions stated and made more specific. The choice of the logistic and the
CONTENTS

Gompertz curves. The application of the logistic curve to cases showing a decline. The arbitrary element involved in our choice of curves. The methods of fitting.

Appendix: Some properties of the simple Gompertz curve. The simple equation for a curve of decline.

III. THE STATISTICAL MATERIAL PRESENTED

The procedure followed for each pair of production and price series. The concept of primary and secondary secular movements. The significance of secondary secular movements. The general nature of the comments accompanying each pair of series.

The tentative character of the comments given. General conclusions of the survey. Warning against over-interpretation.

IV. THE NATURE OF SECONDARY SECULAR MOVEMENTS

The correlation between secondary movements in production and prices. The precedence of the price movements. The average duration of the swings.

The explanation of the movements in production, those in prices being taken for granted. The decline in the purchasing power of wage rates and the rise in profits — both during an upward secondary movement in prices. How can production of consumers' goods accelerate in these conditions? Tentative answer: larger employment, diminution in savings, larger stocks, etc.

The factors tending to carry forward a price increase. The lag of production movements behind price movements. The "gestation" period. The disparity in movements between producers' and consumers' goods industries.

The retarding factors. The decline in the productivity of
CONTENTS

labor. The diminishing output of monetary metals and of metals entering circulation.

Are the secondary secular movements 'major cycles'? Limitations of the discussion in the chapter.

Appendix A: Note on the studies of major cycles.

Appendix B: Comparative amplitude of secondary secular movements in industries producing producers' and consumers' goods.

V. RAPIDITY OF GROWTH AND AMPLITUDE OF FLUCTUATIONS — STATISTICAL TEST

The measures of the rate of growth and of the amplitude of deviations from the various trend lines. The four sets of relationships to be studied.

The comparisons of various industries within each of the countries. United States, United Kingdom, Belgium, Germany, France. Summary. The table of rank coefficients of correlation.

The comparisons of various national branches of the same industry. Coal, Pig Iron, Steel, Zinc, Copper, Wheat. Summary. The rank coefficients of correlation for these groups.

General summary of conclusions.

Change of the amplitude of deviations within the same series with the passage of time.

Appendix: Formule for computing the average percentage rate of increase. Logistic and Gompertz curves.

VI. RAPIDITY OF GROWTH AND AMPLITUDE OF FLUCTUATIONS — THE RATIONALE

The influence of rate of growth upon the amplitude of secondary secular movements. The probable reasons for it.

The influence of cycle-duration upon the amplitude of secondary secular movements — argument and test.

The influence of rate of growth upon cyclical fluctuations. The support in business cycle theories. The somewhat uncertain character of the latter.

Brief presentation of arguments. The theories that make the processes of industrial growth themselves the source of cyclical fluctuations. The factors determining uncertainty and the secular changes in them. The factor of emotional contagion. The disparity between savings and investments.
CONTENTS

The disparity between volume of output and volume of purchasing power disbursed. Other factors.

Can there be cycles without upward secular movements?
The influence of secondary secular movements upon cyclical fluctuations.

CONCLUDING NOTES

The present status of the problem of long-time movements in economic theory.

Survey of the path traced in this study. Brief summary of the conclusions. The limitations of this study.
The theoretical significance of the investigation. Possibilities of future development in economic theory. Its present state. The probable future of its static and dynamic aspects.

APPENDIX

INDEX
TABLES

CHAPTER I

1. Acreage and Yield per Acre, Four Crops, United States, 1866-1925 36
2. Area and Yield per Hectar, Three Crops, Germany, 1878-1912 36
3. Area and Yield per Hectar, Two Crops, France, 1815-1910 37
4. Acreage and Yield per Acre, Wheat, Australia, 1860-1921 38
5. Annual Output per Worker of Four Mineral Ores, Germany, 1860-1909 39
6. Annual Output per Worker of Coal, Belgium, 1831-1924 40
7. Annual Output per Worker of Coal, Great Britain and France, 1887-88-1911-12 40
8. Ratio of Value Added to Cost of Materials — Metals and Metal Products 44
9. Ratio of Value Added to Cost of Materials — Machines 45
10. Ratio of Value Added to Cost of Materials — Lumber and Woodworking 46
11. Ratio of Value Added to Cost of Materials — Textiles 46

APPENDIX

12. Number of Patents Issued for Typewriters in United States, 1872-1923 55
13. Number of Patents Issued under the Title 'Sewing Machine,' United States, 1849-1923 56
14. Number of Patents Issued, Plow and Plow Sulky, United States, 1850-1923 56
15. Number of Patents Issued in the Electrical Field, Total, United States, 1866-1924 57
16. Number of Patents Issued for Various Electric Appliances (I), United States, 1872-1921 57
17. Number of Patents Issued for Electric Appliances (II), United States, 1879-1923 58

CHAPTER IV

1. Tabular Summary of the Correlation of Secondary Movements in Production and Prices 201-202
2. Distribution of Turning Points (Pairs — Production-Prices) in the Secondary Movements 203
TABLES

3. Frequency Distribution of Periods of Rise and Fall in the Secondary Secular Movements — Production Series 204
5. Movement of Wages and the Cost of Living, France, 1810–1900 209
6. Net Earnings of Belgian Corporations, 1870–1890, Deflated 211
7. Net Earnings of German Corporations, per cent of their Nominal Capital, 1870–1900 212
8. Net Amounts Received by the Post-Office and Trustee Savings Banks, United Kingdom, 1867–1914 218
9. Net Receipts, Caisse d'Epargnes Ordinaires, France, 1870–1908 219
10. Year to Year Change in the Average Size of Deposits in Savings Banks, and in the Rate of Money Wages, United States, 1854–1912 221
11. Daily Output of Coal per Worker and the Number of Days Worked in the Year, Coal Mines, France 234
12. Annual Coal Output per Worker Employed, Metric Tons, Belgium, 1835–1910 236
13. Annual Output per Worker, Metric Tons, Four Industries, Germany, 1863–1907 238
14. World Output of Gold (Deviations from Primary Trend Line), Soetbeer Data 252
15. Annual Gold Output, Gold Coinage, and Total Coinage, World, 1873–1913 255

APPENDIX

16. Average Deviation (Secondary Movements), Consumers’ and Producers’ Goods, Production Series, United States 266

CHAPTER V

1. Rate of Percentage Increase and Average Deviation from Secular Trend Lines. Ranking of Various Industries, United States 269
2. Rate of Percentage Increase and Average Deviation from Secular Trend Lines. Ranking of Various Industries, United Kingdom 273
3. Rate of Percentage Increase and Average Deviation from Secular Trend Lines. Ranking of Various Industries, Belgium 274

CHARTS

9b. Crude Steel, Production and Prices, United States, 1865-1924
10. Portland Cement Production, United States, 1880-1924
10a. Portland Cement, Factory Prices, United States, 1881-1924
10b. Portland Cement, Production and Prices, United States, 1880-1924
11. Copper Production, Smelter, Domestic Ore, United States, 1880-1924
11a. Prices of Copper, United States, 1876-1915
11b. Copper, Production and Prices, United States, 1880-1915
12. Refined Lead Output, Domestic Ore, United States, 1872-1924
12a. Prices of Pig Lead, United States, 1870-1914
12b. Lead, Production and Prices, United States, 1872-1924
13. Crude Zinc Output, Domestic Ore, United States, 1880-1924
13a. Prices of Spelter Zinc, United States, 1870-1914
13b. Zinc, Production and Prices, United States, 1875-1924
14. Salt Output, United States, 1880-1924
14a. Salt, Wholesale Prices, United States, 1875-1915
14b. Salt, Output and Prices, United States, 1880-1924
15. Consumption of Cotton by Textile Mills, United States, 1870-1924
15a. Cotton Textiles, Wholesale Prices, United States, 1866-1915
15b. Cotton Textiles, Production and Prices, 1866-1924
16. Imports of Raw Silk, United States, 1864-1924
16a. Prices of Raw Silk, United States, 1860-1914
16b. Raw Silk, Imports and Prices, United States, 1864-1924
17. Bank Clearings, New York City, Deflated, 1875-1923
18. Bank Clearings, Boston, Deflated, 1875-1923
20. Bank Clearings, Philadelphia, Deflated, 1875-1923
21. Bank Clearings, St. Louis, Deflated, 1875-1921
17-21a. Carl Snyder's Index of General Level of Prices, United States, 1875-1914
17-21b. Bank Clearings and General Price Level, 5 Cities, United States, 1875-1923
22. Number of Locomotives Produced, Baldwin Works, 1835-1923
22b. Number of Locomotives Produced and Pig-Iron Prices, 1835-1923
23. Coal Output, United Kingdom, 1854-1914
23a. Export Prices of Coal, United Kingdom, 1854-1913
23b. Coal, Output and Prices, United Kingdom, 1854-1914
24. Pig Iron Production, United Kingdom, 1788-1913
24a. Prices of Pig Iron, United Kingdom, 1782-1913
24b. Pig Iron, Production and Prices, United Kingdom, 1788-1913
25. Steel Production, United Kingdom, 1875-1914
25a. Steel Production, United Kingdom, 1875-1914
26. Tonnage of Ships Cleared, Ports of the United Kingdom, 1815-1913
26a. Index of the General Level of Prices, United Kingdom, 1815-1914
26b. Ships Cleared and the General Level of Prices, United Kingdom, 1815-1914
27. Imports of Raw Cotton, United Kingdom, 1781-1914
27a. Prices of Raw Cotton, United Kingdom, 1782-1913
27b. Raw Cotton, Imports and Prices, United Kingdom, 1781-1913
28. Consumption of Tea, United Kingdom, 1780-1920
28a. Consumption of Tea and General Price Level, United Kingdom, 1780-1920
29. Coal Output, Belgium, 1831-1913
29a. Prices of Coal, Belgium, 1831-1913
29b. Coal, Output and Prices, Belgium, 1831-1913
30. Pig-Iron Production, Belgium, 1845-1913
30a. Prices of Pig Iron, Belgium, 1845-1914
30b. Pig Iron, Production and Prices, Belgium, 1845-1913
31. Steel Production, Belgium, 1875-1913
31a. Prices of Steel, Finished Products, Belgium, 1880-1914
31b. Steel, Production and Prices, Belgium, 1875-1913
32. Zinc Production, Belgium, 1845-1913
32a. Prices of Zinc, Belgium, 1845-1914
32b. Zinc, Production and Prices, Belgium, 1845-1913
33. Wheat Crops, Germany, 1878-1914
33a. Price of Wheat, Leipzig, 1881-1914
33b. Wheat, Crops and Prices, Germany, 1878-1914
34. Output of Coal, Germany, 1860-1914
34a. Price of Bituminous Coal, Germany, 1860-1913
34b. Coal, Output and Prices, Germany, 1860-1914
35. Consumption of Pig Iron, Germany, 1860-1913
35a. Prices of Pig Iron, Germany, 1850-1910
35b. Pig Iron, Consumption and Prices, Germany, 1860-1913
36. Crude Steel Output, Germany, 1879-1913
36a. Prices of Ingots and Steel Billets, Germany, 1877-1910
