# The Volume of Consumer 

## Instalment Credit, 1929-38

This book presents annual and monthly estimates of the quantity of consumer instalment credit over a ten-year period. It deals with the following topics:
retail instalment credit - credit granted, repayments, outstandings. and net credit change for dealers in new and used automobiles, department stores, furniture stores, household appliance stores, jewelry stores, and "all other stores";
cash loan instalment credit-credit granted, repayments, outstandings and net credit change for personal loan departments of commercial banks, credit unions, industrial banking companies, personal finance companies, and unregulated lenders;
estimates of retail and cash loan instalment credit combined;
instalment credit in relation to income payments.

Continued preparation of these estimates is being carried on by the Credit Analysis Unit, Marketing Research Division of the Bureau of Foreign and Domestic Commerce, under the auspices of the Department of Commerce.

# Relation of the Directors to the Work of the National Bureau of Economic Research 

#### Abstract

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the Bureau is carried on in strict conformity with this object. 2. To this end the Board of Directors shall appoint one or more Directors of Research. 3. The Director or Directors of Research shall submit to the members of the Board, or to its Executive Committee, for their formal adoption, all specific proposals concerning researches to be instituted. 4. No study shall be published until the Director or Directors of Research shall have submitted to the Board a summary report drawing attention to the character of the data and their utilization in the study, the nature and treatment of the problems involved, the main conclusions and such other information as in their opinion will serve to determine the suitability of the study for publication in accordance with the principles of the Bureau. 5. A copy of any manuscript proposed for publication shall also be submitted to each member of the Board. If publication is approved each member is entitled to have published also a memorandum of any dissent or reservation he may express, together with a brief statement of his reasons. The publication of a volume does not, however, imply that each member of the Board of Directors has read the manuscript and passed upon its validity in every detail. 6. The results of an inquiry shall not be published except with the approval of at least a majority of the entire Board and a two-thirds majority of all those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the 'publication proposed. The limit shall be forty-five days from the date of the submission of the synopsis and manuscript of the proposed publication unless the Board extends the limit; upon the request of any member the limit may be extended for not more than thirty days. 7. A copy of this resolution shall, unless otherwise determined by the Board, be printed in each copy of every Bureau publication.

## Financial Research Program: Committee

In the conduct of this and other studies under its program of research in finance the National Bureau of Economic Research has benefited from the advice and guidance of its Committee on Research in Finance. The functions of this committee are to review and supervise the specific research plans of the staff of thie Financial Research Program. The membership includes:
Winfield W. Rigpler, Chairman-Institute for Advanced Study
Ralph A. Young, Secretary-University of Pennsylvania; Director, Fi-nancial Research Program
Whima J. Carson-University of Pennsylvania; Executive Director, National Bureau of Economic Research
Thomas Jefferson CoolidgemChairman, United Fruit Company
David Frmay-Chairman, National Bureau of Economic Research;Consulting EconomistE. A. GOLDENWELSER-Director, Division of Research and Statistics,Board of Governors of the Federal Reserve System
F. Cynil Jangs-Principal and Vice-Chancellor, McGill University
Wesley C. Mitcherx-Columbia University; Director of Research,National Bureau of Economic Research
Shispand Morgan-Vice-President, Chase National Bank; Treasurer, National Bureau of Economic Research

## Preface

This study presents annual and monthly estimates of the quantity of consumer instalment credit, including both retail instalment (sales finance) credit and cash loan instalment credit, for the period 1929-98. It was initiated in 1938 as one phase of the National Bureau's investigation of consumer instalment financing, the first project under the program of research in finance supported by special grants from the Association of Reserve City Bankers and the Rockefeller Foundation.

The estimates have been prepared by Duncan McC. Holthausen in collaboration with Rolf Nugent, Director of the Department of Consumer Credit Studies of the Russell Sage Foundation, and Malcolm L. Merriam, Chief of the Credit Analysis Unit of the Marketing Research Division, United States Department of Commerce. Mr. Holthausen, who was in general charge of the statistical work, was responsible for the first draft of the manuscript. Mr. Nugent prepared the year-end estimates of outstandings of personal finance companies, industrial banking companies, personal loan departments of commercial banks, and credit unions, and collaborated in the preparation of the monthly series for these agencies. Mr. Merriam contributed much special information on retail instalment credit, derived from the Retail Credit Surveys made annually under his direction by the Bureau of Foreign and Domestic Commerce. At all stages of the work close cooperative relations were maintained by the collaborators, and the resulting estimates are in a very real sense their joint product. Mr. Holthausen's original manuscript has been revised and elaborated in the light of criticisms and suggestions made by Mr. Merriam and Mr. Nugent.

For suggestions as to approach and method in the planning and development of the present estimates of consumer instalment credit, we are greatly indebted to W. W. Riefler of the Institute for Advanced Study, and Chairman of the National Bureau's Committee on Research in Finance, and to Simon Kuznets of the University of Pennsylvania and the research staff of the National Bureau. Mr. Riefler especially kept in close contact with the statistical work and assisted in the solution of many technical problems. The initial exploratory work on the estimates was done by Charles L. Merwin, Jr. His careful analysis of previous estimates of the volume of retail instalment credit and their limitations proved an invaluable aid to the final study.

The preparation of these estimates has been greatly facilitated by the cordial cooperation of public agencies and trade associations interested in consumer instalment financing, as well as by private institutions actively engaged in the field. We are obligated for assistance and materials to the research divisions of the Board of Governors of the Federal Reserve System, the Farm Credit Administration and the Federal Housing Administration. The trade associations which have cooperated generously in our work include the American Industrial Bankers Association; Automobile Manufacturers Association; Edison Electric Institute; National Association of Sales Finance Companies; National Automobile Dealers Association; National Retail Dry Goods Association; and National Retail Furniture Association. Leading sales finance companies, personal finance companies, industrial banking concerns, commercial banks operating personal loan departments, credit unions, retailers and manufacturers have responded generously to our requests for information, and we are glad to acknowledge our indebtedness to them.

The successful outcome of this statistical undertaking is due largely to the cordial cooperation received from the Russell Sage Foundation and the United States Department of Commerce, and the National Bureau welcomes the opportunity to express its appreciation to these agencies. The esti-
mates themselves fill a serious gap in existing quantitative data pertaining to the consumer credit field. In recognition of their importance, the Department of Commerce has provided for their continued preparation under its auspices, on a current basis, by the Gredit Analysis Unit, Marketing Research Division of the Bureau of Foreign and Domestic Commerce.
It should be emphasized that the present data do not embrace the entire consumer credit field; they are confined to consumer instalment credit. Year-end estimates of total consumer credit outstandings for the period 1923 through 1937 have already been made by Rolf Nugent of the Russell Sage Foundation, and are presented in his study, Consumer Credit and Economic Stability, published by the Foundation in 1939. In preparing his estimates, however, Mr. Nugent did not segregate iñstalment credit from other forms; nor did available materials permit him to estimate the volume of credit extended during the year, or to develop his estimates on a monthly basis. This study therefore supplements in several important ways the statistical work which he has already done. Certain differences between these estimates and those of the Russell Sage Foundation are pointed out in Appendix $E$.

Mr. Holthausen was assisted in preparing these data by the following members of the statistical staff of the Consumer Instalment Financing Project: Mary Deeley, who carried the brunt of the statistical tabulations; Esther Skala, Aileen Barry and Dorothy Weitzel, who assisted generally in the statistical work. The final charts were prepared by H. I. Forman. Bettina Sinclair and Isabel L. Davis edited the manuscript, and both the text and the tables have greatly benefited from their careful work.

| 1929 | $\$ 296.6$ | $\$ 272.0$ | $\$ 24.6$ | $\$ 183.0$ | $\$ 172.9$ |
| 1930 | 274.8 | 276.7 | -1.9 | 181.1 | 188.8 |
| 1931 | 237.3 | 254.0 | -16.7 | 164.4 | 178.0 |
| 1932 | 153.5 | 198.0 | -44.5 | 119.9 | 144.3 |
| 1933 | 158.1 | 152.8 | 5.3 | 125.2 | 116.5 |
| 1934 | 187.5 | 177.1 | 10.4 | 135.6 | 127.3 |
| 1935 | 211.9 | 200.0 | 11.9 | 147.5 | 133.1 |
| 1936 | 238.9 | 211.8 | 27.1 | 174.6 | 152.2 |
| 1937 | 254.2 | 240.2 | 14.0 | 188.6 | 181.2 |
| 1938 | 229.1 | 230.3 | -1.2 | 187.4 | 195.0 |

- This group includes all types of retail establishments which are not covered in the other five classifications (dealers in new and used passenger automobiles, department stores, furniture stores, household appliance stores, and jewelry stores) but whose instalment sales are made largely to consumers.
$b$ Minus sign indicates a decrease in net credit; otherwise an increase is to be understood.

APPENDIX B

## Tables on Cash Loan Consumer Instalment Credit

TABLE B-1
Annual Totals of Average Outstandings for Five Types of Cash-Lending Institutions and for FHA Loans," 1929-38 (millions of dollars)

| $\boldsymbol{Y e a r}$ | Average Outstandings |
| :---: | :---: |
| 1929 | 531.8 |
| 1930 | 619.4 |
| 1931 | 613.0 |
| 1932 | 545.9 |
| 1933 | 458.7 |
| 1934 | 461.9 |
| 1935 | 608.9 |
| 1936 | 888.0 |
| 1937 | $1,078.5$ |
| 1938 | $1,124.9$ |

- These estimates include commercial banks (personal loan departments), credit unions, industrial banking companies, personal finance companies, unregulated lenders, and insured FHA (Tite I) loans of $\$ 2,000$ or less.

TABLE B-2
Annual Totals of Instalment Loans Made, Repayments, Net Credit Change and Outstandings for the Four Principal Types of Cash-Lending Institutions Combined, ${ }^{\text {a }}$ 1929-38 (millions of dollars)

| Year | Loans Madeb | Repaymentse | Nat Credit Changed | Outstandings |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | End of Year | Average for Year |
| 1929 | 5983.3 | \$860.5 | \$ 122.8 | \$ 556.8 | * 486.7 |
| 1930 | 995.1 | 970.8 | 24.3 | 581.1 | 568.0 |
| 1931 | 938.5 | 978.5 | $-40.0$ | 541.1 | 561.6 |
| 1932 | 712.3 | 795.8 | -83.5 | 457.6 | 501.2 |
| 1933 | 584.3 | 633.1 | -48.8 | 408.8 | 420.1 |
| 1934 | 723.6 | 690.7 | 32.9 | 441.7 | 417.2 |
| 1935 | 885.0 | 788.0 | 97.0 | 538.7 | 479.8 |
| 1936 | 1,221.7 | 1,071.9 | 149.8 | 688.5 | 606.4 |
| 1937 | 1,477.9 | 1,288.2 | 189.7 | 878.2 | 782.3 |
| 1938 | 1,575.6 | 1,516.8 | 58.8 | 937.0 | 901.5 |

## APPENDIX D

Methods of Estimate and Limitations of the Data

## Methods of Estimate and Limitations of the Data

In developing the quantitative measures of consumer instalment credit which have been presented in this study we employed one general method for the retail group estimates and another for the cash loan estimates. It was necessary, however, because of the diversity of the source material within each of the two major categories, to deviate from these general methods in compiling certain individual series. The following exposition sets forth the principal procedures used for the two major fields of instalment credit, and the modifications used in special cases to adjust them to the peculiarities and limitations of the data at hand.

## RETAIL INSTALMENT CREDIT

## General Procedure

The following procedure was used to construct the estimates for the five principal types of establishments comprising the retail group: dealers in new and used passenger automobiles, and department, furniture, household appliance, and jewelry stores.

1. Annual total retail sales series were obtained for each of the five principal types of retail establishments.
2. The percent of total sales made on an instalment basis by each type of establishment was calculated for each year.
3. The annual retail sales series were multiplied by the percent of retail sales made on instalment to produce annual
series of instalment sales. These sales were considered to represent the amount of instalment credit granted.
4. The instalment sales, or amounts of credit granted, were then distributed on a monthly basis for each year covered.
5. The average duration of indebtedness in months was computed for each retail field.
6. The size of monthly payment for each amount of credit granted was derived through division of the amount of credit granted in each month of a particular year by the average duration of customer indebtedness (in months) for that year.
7. The amount of repayments made in each month was calculated by addition of the monthly payments due in a given month on all unliquidated credit grants of previous months.
8. Outstandings were estimated by subtraction of total repayments from total credit granted.

## Characteristics and Limitations of the Data

This method was not applied rigidly to all classifications in the retail group, since differences in the character of source materials necessitated certain additional steps in procedure, as follows.

Annual retail sales series of four types of retail establish-ments-department, furniture, household appliance, and jewelry stores-were obtained from the Census of Business ${ }^{1}$ for the censal years 1929, 1933 and 1935, and from Department of Commerce estimates ${ }^{2}$ for intercensal years. These sales figures are presented in Table D-1. Using the 1935 Census instalment sales percentages as bases, series on instalment sales as a percentage of total sales for these four groups were then derived from the trend shown in the annual Retail

[^35]TABLE D-1
Retail Saxes of Department Stores (1925-38), Furniture Stores (1924-38), Household Appllange Stores (1928-38), and Jewelry Stores (1928-38) (thousands of dollars)*

| Year | Department Stores | Furniture Stores | Houschold Appliance Stores | Jewelry Stores |
| :---: | :---: | :---: | :---: | :---: |
| 1924 |  | \$ 1,544,125 | $\cdots$ |  |
| 1925 | \$ 4,262,840 | 1,621,980 | . . | ... |
| 1926 | 4,394,010 | 1,694,859 | . . |  |
| 1927 | 4,426,800 | 1,724,170 |  |  |
| 1928 | 4,492,380 | 1,717,301 | \$ 771,499 | ( 508,518 |
| 1929 | 4,607,150 | 1,803,888 | 950,832 | 536,281 |
| 1930 | 4,230,050 | 1,451,718 | 747,854 | 380,585 |
| 1931 | 3,803,770 | 1,067,439 | 549,893 | 300,662 |
| 1932 | 2,852,830 | 590,398 | 304,144 | 187,914 |

| 1934 | 3,115,160 | 716,097 | 368,899 | 203,077 |
| 1935 | 3,279,110 | 845,803 | 435,184 | 232,689 |
| 1936 | 3,639,810 | 1,065,712 | 539,628 | 279,227 |
| 1937 | 3,803,770 | 1,118,998 | 572,006 | 308,825 |
| 1938 | 3,541,440 | 939,958 | 429,005 | 276,090 |

- Based on Census of Businass, 1929, 1933 and 1935, Bureau of the Census, United States Department of Commerce; and on Department of Commerce estimates for intercensal years.

Credit Survey ${ }^{\mathbf{3}}$ for 1925-27 and 1929-38. The total instalment sales of each of these four types of retail establishments were computed by multiplying their retail sales estimates by the percent of their total sales made on instalment in each year.

Monthly instalment sales series were constructed as fol${ }^{8}$ Retail Credit Survey, Credit Analysis Unit, Bureau of Foreign and Domestic Commerce, United States Department of Commerce. Each Retail Credit Survey reports the operation of an identical number of stores over a two-year period. Stores are separated according to type of business, i.e., furniture, jewelry, household appliance, etc. Using the figures relating to the percent sold on instalment, we calculated the increase or decrease in these percentage figures over a two-year period for identical stores, then worked backward and forward to apply the calculated results to the 1935 Census of Business instalment sales percentages as a base (Census of Business: 1935, vol. VI, p. Il). Thus the magnitude of the series is governed by the 1935 Census of Business figure for each of the trades mentioned, and the trend of the series is that exhibited by the Retail Credit Survey reports.
lows. The estimated annual total instalment sales series were distributed monthly according to the monthly instalment sales of similar trade samples reporting under the Retail Credit Survey for most recent years; additional compilations were obtained through the use of rough seasonals, calculated from Federal Reserve Board data, retail association data, and other sources. These sample data employed for the calculation of monthly estimates of instalment sales varied in sales coverage and in geographic representativeness, and some of them are subject to the errors inherent in any sampling process.

These estimates of instalment sales were considered to represent the actual amount of credit granted by each of the four types of retail establishments. There was little accurate information on average down payments and finance charges for the instalment sales of these four retail groups; and since amounts of instalment sales and amounts of credit granted are approximately equal for these groups, it was decided that the instalment sale might be regarded as the actual amount of credit granted. ${ }^{4}$

The average duration of instalment indebtedness was then estimated for each year and each type of establishment. These estimates were computed from yearly collection ratios ${ }^{5}$ reported to the Retail Credit Survey; the 1937 and 1938 collection ratios, excluding down payments taken from

[^36]the 1938 Retail Credit Survey, were used as bases. Working backward, and using link relatives calculated from collection ratios of surveys of the years preceding, we estimated collection ratios for 1929 through 1936 in each of these four retail classifications. Use of the formula $n=\frac{2}{c r}-1$ then enabled us to compute figures on duration of indebtedness. ${ }^{6}$ Corresponding figures for $1925,1926,1927$ and 1928 for all retail outlets were extrapolations based upon available data. For furniture stores and household appliance stores, a two-year moving average was applied to the durations of indebtedness estimated by the regular formula, since collection ratios indicating contracts extending for 18 months or longer are attributable predominantly to contracts granted.in the previous year. In these estimates for department stores, furniture stores, household appliance stores, and jewelry stores, the actual duration of indebtedness, or "paying-out" time, was accounted for largely by computation from annual collection ratios. Such ratios showed in statistical terms the annual effects of prepayments, delinquencies, renewals, and repossessions upon the volume of repayments and outstandings. The series did not reflect, however, fortuitous monthly occurrences affecting the repayments and outstandings columns. Having computed the durations of indebtedness for these four retail groups, we then applied these figures to the monthly amounts of credit granted in corresponding years to calculate outstandings, repayments and net credit change. ${ }^{7}$

To simplify the explanation of the method used for calculating outstandings, let us assume a "paying-out" period of

[^37]12 months for a given number of credit grants. Each monthly credit grant would then be divided by 12 to produce the monthly payment due for the 12 months following the extension of that particular amount of credit. In order to compute outstandings as of the end of the first year, for example, we totaled the credit grants for the 12 -month period and deducted from that sum the amount of payments made during the last eleven months on credit extensions of that year. After the first outstandings estimate was made, we calculated successive month-end outstandings as follows: we obtained the difference between credit granted and repayments made in a given month; if this difference was positive, we added the amount of grants in excess of repayments to the outstandings for the preceding month; but if it was negative, we subtracted the decrease from the outstandings of the preceding month.

In order to take account in our estimates of the short and long maturities which go to make up the average, we used a breakdown of the average durations of indebtedness, splitting them into 12 and 24 -month series for some groups, and into 12 - and 30 -month series for others. If an average duration of indebtedness were 18 months under the 12- and 24month series, 50 percent of the credit grants in that year would run for 12 months, and 50 percent for 24 months. Under a 12- and 30 -month series, 67 percent of the credit extensions would run for 12 months, and 33 for 30 months. Outstandings, repayments, and net credit change were calculated in the same manner as that described in the preceding paragraph, except that the 12 - and 24 -month series or 12- and 30 -month series for these items were summed up for each month. ${ }^{8}$

For automobile dealers, the estimates of retail sales were

[^38]those supplied by the Automobile Manufacturers' Association, ${ }^{9}$ covering the number of new passenger cars sold each year. The ratio "used cars sold as a percent of new cars sold" was also obtained from the Association's figures ${ }^{10}$ and then employed for a calculation of the number of used cars sold (see Table D-2). The next step was to multiply the number of new cars and the number of used cars sold each year by the percent of each type sold on an instalment basis, ${ }^{11}$ a process which yielded the number of new and used cars sold on instalment. Series on the number of new and used cars sold on instalment each month were then computed as follows: the number of each type financed during a year was distributed by months to conform to the number of new and used cars financed monthly during the same year by approximately 456 companies reporting to the Bureau of the Census, United States Department of Commerce. ${ }^{12}$ The total numbers of new and used cars financed each month were then multiplied by the average amount of note ${ }^{18}$ in corresponding months for both new and used cars as reported by the same sales finance companies. The sum of these two products for each month produced the total amounts of actual credit granted per month on new and used automobiles.
${ }^{9}$ Automobile Facts and Figures (1989), Automobile Manufacturers' Association. The Association's estimates of new cars sold are based upon reports collected monthly on new-car sales of the dealers connected with each automobile manufacturing company.
10 Published in the Composite Experience of Sales Finance Companies and Automobile Dealers (1938), National Association of Sales Finance Companies. 11 Ibid. These instalment percentages were taken from annual surveys made by the National Automobile Dealers Association, and agree closely with those reported by General Motors Acceptance Corporation.
12 Automobile Financing, Bureau of the Census, United States Department of Commerce. From 1928 through 1931, 356 companies reported, in 1982, 318 companies, and approximately 456 companies from 1993-38 inclusive.
${ }^{18}$ Amount of note is the instalment sale price minus down payment plus financing and insurance charges. In the case of used automobiles, the average amounts of note were reduced 10 percent at the suggestion of several persons with long experience in the sales finance field. It is the practice of most sales finance companies to buy only the better used-car paper, so that an average figure from their used-car records would not be altogether typical. In the opinion of some observers, however, this allowance of 10 percent is somewhat high.

TABLE D-2
Number of New and Used Passenger Cars Sold, 1925-38

| Year | New <br> Automobiles | Used <br> Autornobiles |
| :---: | :---: | :---: |
| 1925 | $3,132,028$ | $3,094,443$ |
| 1926 | $3,399,506$ | $3,039,158$ |
| 1927 | $2,762,585$ | $3,273,663$ |
| 1928 | $3,258,883$ | $3,812,893$ |
| 1929 | $3,996,612$ | $5,139,643$ |
| 1930 | $2,651,875$ | $4,773,375$ |
|  | $1,903,342$ | $3,464,082$ |
| 1931 | $1,095,720$ | $2,454,413$ |
| 1932 | $1,525,595$ | $\mathbf{2 , 6 6 9 , 7 9 1}$ |
| 1933 | $1,927,847$ | $\mathbf{3 , 1 6 1 , 6 6 9}$ |
| 1934 | $2,866,782$ | $5,767,509$ |
| 1935 | $3,513,858$ | $6,173,695$ |
| 1936 | $3,507,781$ | $4,619,346$ |
| 1937 | $1,957,350$ |  |

Maturities in the automobile group were calculated from the figures referring to the actual length of contract granted by three large sales finance companies. For outstandings and repayments the average length of contract for cars bought on instalment was applied to the monthly amounts of credit granted. From this point the procedure was the same as that described above with reference to repayments and outstandings of the other four types of retail establishments.

Since length of contract in automobile transactions refers to the number of months specified at the time of the sale, the actual time consumed in the paying off of instalment obligations was not accounted for in the automobile dealer series. The statistical effects of prepayments of instalment accounts, renewals of notes, delinquencies and repossessions are therefore not reflected in the repayments and outstandings columns of the automobile dealer series. Presumably there would be a tendency for the estimated outstandings to acquire a downward bias when actual delinquencies and renewals exceeded prepayments, and an upward bias when prepayments exceeded delinquencies and renewals. Delin-
quencies and renewals probably exceed prepayments, as a rule, resulting in a consistent underestimate in this series. However, these outstanding estimates were checked wherever possible against the actual automobile receivables of three large sales finance companies, and were found to agree closely, both in seasonal and cyclical movements, with the sales finance company figures.

Since the source data for the series covering all types of retail establishments made no allowances for purchases of instalment paper from retailers by sales finance companies or other agencies, the estimated outstandings must be regarded as the total amount of consumer instalment debt arising from instalment sales by retailers. The total outstandings are not to be considered the instalment receivables of these retailers alone; they are also the receivables of sales finance companies, industrial banking companies, commercial banks, and any other agencies which purchase retail instalment paper.

The foregoing description covers the basic data and procedures used to calculate the quantitative estimates of retail instalment credit for the five principal groups of establishments. Divergences in sources of data and method are described for the separate types of establishments comprising the entire retail group.

## Dealers in New and Used Automobiles

With few exceptions these estimates (which cover passenger cars only), were calculated according to the above procedure. Unit new-car sales data for 1925 through 1929 were taken from the new-car registration figures prepared by R. L. Polk and Company, and adjusted according to estimates made by the Automobile Manufacturers' Association. For the period 1925-27, the numbers of new and used cars financed yearly were distributed according to the Polk figures. The average amounts of note in this period were assumed to be the same during each month of a year. Since no monthly average amount-of-note calculations were available for these three
years, annual estimates prepared by Milan V. Ayres, Secretary, National Association of Sales Finance Companies, were employed. ${ }^{14}$

## Department Stores

Total department store retail sales were taken from the Census for 1929, 1933 and 1935. For non-census years the Federal Reserve Board index of department store retail sales was used for estimates of yearly sales. The instalment sales percentage for 1928 was an extrapolation, and the percentages for 1925 through 1927 were based on the National Retail Credit Survey published in 1930. ${ }^{15}$ For the periods 1929-33 and 1936-38 yearly instalment sales were distributed by months according to the monthly instalment experience of department store samples reporting to the Retail Credit Survey for these same years. The monthly retail sales of the $R e$ tail Credit Survey samples conformed closely to the monthly pattern of retail sales exhibited by the Federal Reserve Board's monthly department store index, indicating that these samples may be considered representative of total department store sales for these years. For the periods 1934-35 and 1925-28 we took monthly instalment sales indices for 1929, 1930, 1931, 1932 and 1933 from the Retail Credit Survey, covering 33 department stores, and computed them as a percent of the monthly retail sales indices for these 33 stores during the same years.

The ratios between these instalment sales indices and the retail sales indices were computed for each month over the 5 -year period, and averaged. These averages were then multiplied by the monthly Federal Reserve retail sales indices in $1925,1926,1927,1928,1934$ and 1935, to produce instalment sales indices for these same years. In computing these indices, the average month in each year was treated as a base (i.e., average month $=100$ ).

[^39]
## Furniture Stores

For non-census years, yearly estimates of retail sales by furniture stores were derived from a number of sources. For 1936 through 1938 the figures used were supplied by the Market Data Section of the Bureau of Foreign and Domestic Commerce. For annual sales for 1934, and for 1929 through 1932, it was assumed that 57 percent ${ }^{16}$ of the furniturehousehold appliance group sales estimated by the Market Data Section for these years were furniture store sales. For 1924, 1927 and 1928, retail furniture sales were estimated from Federal Reserve Board data on furniture sales of department stores. ${ }^{17}$ The 1925 and 1926 estimates were based upon Retail Credit Survey data.

Instalment sales for 1936 through 1938 were distributed monthly according to indices computed from Retail Credit Survey samples for those years. For 1934 and 1935 indices, a procedure similar to that used in the department store series was employed. In this case average ratios of monthly instalment sales indices to retail sales indices were derived from a sample of 15 stores reporting retail and instalment sales to the Retail Credit Survey for 1929 through 1933. ${ }^{18}$ These ratios for each month were multiplied by. the retail indices (average month in each year $=100$ ) taken from National Retail Furniture Association reports ${ }^{19}$ for 1934 and 1935; the result was instalment sales indices for these two years. For 1932 and 1933, ratios were computed which showed the average monthly relationship between retail sales indices,

[^40]1934-38 (average month in each year $=100$ ), of furniture stores reporting to the National Retail Furniture Association ${ }^{20}$ and retail sales indices of department store furniture sales, 1984-38 (average month of each year $=100$ ), calculated from sales data reported to Federal Reserve banks. ${ }^{21}$ The Federal Reserve banks' department store furniture sales indices for 1932 and 1933 were multiplied by these ratios to produce retail sales indices for these years. The retail indices so obtained were then adjusted in the light of the monthly variation between instalment and retail sales indices for furniture stores.

For the instalment sales indices for 1924 through 1931, we first calculated a rough seasonal index of furniture store retail sales from monthly indices (1934 through 1938) of stores reporting to the National Retail Furniture Association. The procedure was as follows: the percentage change in total retail sales of these stores for each year over the previous year was worked out and a two-year forward moving average was applied to these percentages; dividing the results for each year by 12, we computed what was termed the average monthly change in sales for each year; these monthly change percentages we proceeded to multiply by $5 \%, 4 \%, 3 \%, 2 \%$, $1 / 2,1 / 2,1 / 2,11 / 2,21 / 2,31 / 2,41 / 2$, and $51 / 2$ for January through December respectively. Where the monthly change for a year was a decrease, the results were subtracted from the first halfyear figures of the monthly retail sales index for that year (computed from the above-mentioned National Retail Furniture Association data by using the average month in that year as equal to 100 ), and added to the last half-year figures.

The indices thus estimated for each year from 1934 through 1938 were averaged for each month to yield the seasonal in-

[^41]dex. To this seasonal index were added and subtracted the average amounts of monthly change in retail sales for the years 1924 through 1931 multiplied by $5 \%$, $4 \%$, etc. These average monthly changes were again calculated by a two-year forward moving average of the percentage change in sales over the previous year. In this case, however, where the monthly change for a year was an increase, the results after multiplication were subtracted from the seasonal index for the first half-year and added to the seasonal index for the last half-year. ${ }^{22}$ Thus retail furniture sales indices were compiled for each year of the 1924-81 period. These indices were then adjusted for variation between instalment and retail sales indices to yield instalment sales indices.

Because the basic data for the early years of this series were fragmentary, the methods used to distribute monthly instalment sales over these years were necessarily rough. As a result, our figures for these years may tend to overestimate sales in certain months and underestimate them in other months, but the extent of such bias cannot be determined with the data now available.

## Household Appliance Stores

Retail sales were obtained from Census data for 1929, 1933 and 1935. Market Data Section estimates of household appliance store sales were used for the years following 1935, while for intercensal years 43 percent of the Market Data Section estimates of the furniture-household appliance group sales were employed. ${ }^{28}$ The 1928 retail sales figure was an extrapolation, as was also the instalment sales percentage for the same year. Instalment sales in 1996, 1937 and 1938 were distributed according to the instalment sales of stores reporting to the Retail Credit Survey in the same years. For the years 1932 through 1985, average monthly ratios of the Retail Credit Survey instalment indices (1936-38) to the Federal Reserve banks' indices of department store household appli-

[^42]ance sales (1936-38) ${ }^{24}$ were computed. The monthly indices of department store household appliance sales (1932, 1933, 1984 and 1935) were then multiplied by these ratios to produce instalment indices for these years. Instalment indices for 1928, 1929, 1930 and 1931 were based upon a seasonal index of instalment sales computed from instalment indices of the years 1932 through $1938 .{ }^{25}$ The seasonal index was adjusted on the basis of the monthly change in sales during each of the four years (1928-31) to yield the instalment indices for these years.

As a check against the monthly pattern of household appliance store sales developed through the above method, sales data were available, for the later years covered by our estimates, from several large corporations in the household appliance business. These figures showed a close resemblance to our estimated series. For earlier years, however, no figures exist with which to compare our results, so that it is impossible to judge how much our estimates tend to distort the monthly sales pattern.

The 1938 collection percentage reported for household appliance stores was adjusted on the basis of collection ratio movements for other outlets in order to offset the artificial rise in the collection ratio caused by a very rapid decline in household appliance sales.

## Jewelry Stores

Census figures were used for retail sales in 1929, 1933 and 1985, and Market Data Section estimates for the other years. The 1928 figure was an extrapolation, as was the instalment sales percentage for that year.

Since no reliable sample data were available for jewelry store instalment sales, it was necessary to use monthly retail sales indices to distribute instalment sales on a monthly basis. Basic to such a distribution was the assumption that

[^43]the percentage of retail instalment sales remained constant throughout the 12 months of each year. This is, of course, not strictly true; as noted in our discussion of the other retail series, there is some variation between the monthly distribution of total retail sales and of retail instalment sales. It is, however, impossible to judge how closely these jewelry store estimates conform to the actual sales pattern, since no material is available with which to compare our figures.

The retail sales indices employed were the calculations of the Marketing Research Division, Department of Commerce, for the years 1936, 1937 and 1938, and those of the International Statistical Bureau for the years 1929 through 1935. The 1928 index was arrived at after a computation of a seasonal index of retail sales from the indices of 1929 through 1938 and adjustment of the seasonal index on the basis of the average monthly change in sales during 1938.

## "All Other Stores"

This group includes all types of retail establishments which are not covered by the preceding five classifications, but whose instalment sales are made largely to consumers. ${ }^{26}$

In developing these estimates, we used the retail sales estimates (1929-38) of the Market Data Section for retail groups which included our "all other stores." A figure on instalment sales of our "all other stores" category (reported in the 1935 Census) as a percent of total retail sales in 1935 of the Market Data Section estimates was calculated. With this 1935 figure as a base, we calculated similar percentage figures for 192934 and $1936-38$ by applying the percentage change from 1995 exhibited by the combined instalment sales percentages for the 5 principal types of retail establishments. The percentages thus calculated were multiplied by the Market Data
${ }^{26}$ These establishments are as follows: country general stores, drygoods and general merchandise stores, gasoline filling stations, garages, automobile tire and accessory stores and other automotive stores, the entire apparel group, hardware stores, bookstores, sporting goods stores, florists, secondhand stores, drugstores, bicycle shops, fuel and ice dealers, gift, novelty and souvenir shops, and luggage stores.

Section sales estimates to produce estimates of instalment sales for the "all other stores" group. End-of-year outstandings (1929-38) were then estimated as follows: the total of instalment sales of "all other stores" in each year was multiplied by the average ratios for the same year's outstandings (end-of-year) to instalment sales for the 5 principal types of retail establishments.

## CASH LOAN INSTALMENT CREDIT

General Procedure
The four principal cash-lending agencies are commercial banks (personal loan departments), credit unions, industrial banking companies, and personal finance companies. The general procedure employed in preparing the estimates for these agencies may be summarized as follows:

1. Outstandings totals as of the end of each year were obtained.
2. Monthly outstandings were calculated by interpolation of the year-end outstandings totals on the basis of sample data.
3. Ratios of monthly loans extended to outstandings as of the end of each month were calculated from sample data.
4. The computed monthly outstandings totals (2) were multiplied by the ratios computed (3) to yield total monthly loans.
5. Net credit change was calculated by subtraction of the outstandings of one month from the outstandings of previous months.
6. For the computation of repayments, net credit change was subtracted from loans extended (if an increase) or (if a decrease) added to loans made.

## Characteristics and Limitations of the Data

Outstandings constituted in all cases the starting point for our calculations except the estimates of loans insured by the Federal Housing Administration. ${ }^{27}$ Year-end complete coverage outstandings estimates compiled by the Russell Sage ${ }^{27}$ See pp. 124-25.

Foundation ${ }^{28}$ for each type of cash-lending agency were used for our December estimates and for basing points from which we interpolated monthly outstandings figures on the basis of sample data. To estimate outstandings monthly for a certain agency in 1930, for example, we would divide the Russell Sage Foundation's 1929 year-end outstandings estimate by our sample 1929 year-end outstandings estimate and multiply the quotient by the sample's outstandings totals for January through December 1930. The computed December 1930 figure would then be subtracted from the Russell Sage Foundation's December 1930 estimate, and the difference adjusted so that the calculated estimates would accord with the Russell Sage Foundation's year-end figure. Thus, if the Russell Sage Foundation's December 1930 estimate were $\$ 1,200,000$ larger than our computed figure, $\$ 1,200,000$ would be added to our December 1930 figure, $\$ 1,100,000$ to the November figure, $\$ 1,000,000$ to the October figure, and so forth, on a pro rata scale over the entire year. If, on the other hand, our estimated figure were $\$ 1,200,000$ larger than that of the Russell Sage Foundation, these amounts would be subtracted instead.

In calculating monthly estimates of loans made, we multiplied the estimated total outstandings figures by the ratios of loans made to outstandings for the sample. These figures on loans made include renewals, which represent not new loans but merely the refinancing of old notes. Figures on payments due also include payments on renewals. ${ }^{2 \theta}$

We calculated net credit change for each month by subtracting one month's outstandings from the previous month's outstandings (the net credit change applying to the former month). If the credit change were positive, it would be subtracted from loans made of the same month to show repayments for that month; if it were negative, it would be added to loans made to produce repayments.

[^44]There follows a discussion of the sample data used in each cash loan series (1) to interpolate the Russell Sage Foundation's year-end outstandings, and (2) to calculate our totals of loans made and repayments. In conclusion, we describe the procedure employed in the estimates of Title I insured loans made by all types of lending institutions combined.

## Commercial Banks (Personal Loan Departments)

Commercial bank samples, varying in coverage, were employed as a basis for estimates of month-end outstandings from 1934 through 1938. Our monthly figures for 1929-34 we estimated by assuming a straight-line movement in outstandings between year-end totals. Since month-end outstandings of commercial banks show but slight seasonal variance, the degree of error within these monthly estimates for 193438 should be slight. Eleven banks, accounting for almost 20 percent of the total volume of cash loans extended by commercial banks, provided the data needed for an interpolation of the Russell Sage Foundation's outstandings figures for 1934 and 1935, and for calculating the volume of loans made. Because one bank in this sample was too heavily represented, however, only 10 percent of its figures were included in the calculations.

For 1936, 4 additional banks were added to the initial sample of 11 ; these 15 banks made up 25 percent of total volume of cash loans in that year. For 1937, 7 more banks were added, making 22 in the sample; for 2 of these 7 banks only 10 percent and 50 percent respectively of total loan volume was used. The 1937 sample also accounted for approximately 25 percent of the volume of all cash loans made by personal loan departments of commercial banks in that year. In 1938, the figures of 8 more banks were included, resulting in a sample of 30 banks. This sample contributed 25 percent of the total volume of cash loans by commercial banks for 1938.

For the years prior to 1994, we calculated annual estimates of loans made by applying to the ratio of loans to receivables

$$
\text { METHODS OFESTIMATE } 123
$$

(for 1934) the percentage change in loans to receivable ratios for the previous years as estimated from year-end data supplied by various banks.

## Credit Unions

Monthly reports from a group of credit unions to the Russell Sage Foundation served as a basis for the interpolation of the Russell Sage Foundation year-end outstandings totals. Loans extended annually were calculated according to ratios of loans made to outstandings as computed from state banking reports. ${ }^{80}$

## Industrial Banking Companies

Monthly estimates of outstandings for industrial banking companies were compiled from the figures of a sample of 20 Morris Plan banks which were used for interpolating the Russell Sage Foundation's year-end estimates. This sample covered approximately 30 percent by volume of total industrial banking company outstandings. Loans made monthly were also reported for this sample, so that it was possible to compute ratios of loans made to outstandings. Total loans made monthly we derived by multiplying total estimated monthly outstandings by these ratios.

## Personal Finance Companies

Data from 18 personal finance companies reporting their month-end outstandings from 1929 through 1938 supplied the basis for interpolation of the Russell Sage Foundation's
${ }^{30}$ Cf. The Commonwealth of Massachusetts, Annual Reports of the Commissioner of Banks Relating to Credit Unions, 1929-38; Wisconsin State Banking Commission, Annual Report of Wisconsin Credit Unions, 1934-38. Ratios computed from Massachusetts reports were used for 1929 through 1938; for the years 1994 through 1998 we used means of the ratios calculated from both state reports.

Some credit unions make their charge each month on the unpaid balance of the loan and do not include the charge as a part of the amount of the loan or as a part of the loan balance outstanding. About three-fourths of all credit unions use this lending method, and to that extent the credit union series exclude interest charges.
year-end estimates of total outstandings for all personal finance companies ${ }^{31}$ on a monthly basis. This sample covered about 30 percent by volume of total personal finance company outstandings, but it was too heavily weighted by the figures of two individual companies. In order to counteract this bias in the sample, we used in the summation only 10 percent of one company's outstandings totals and 50 percent of the totals for the other company. For our estimates of loans made, we multiplied our computed outstandings totals by the ratios of monthly loans made to month-end outstandings calculated from the figures of two large companies which together account for approximately 35 percent by volume of all personal finance company outstandings.

## Unregulated Lenders

The year-end outstandings totals are those of the Russell Sage Foundation. In this instance we calculated average outstandings by averaging year-end figures, since there were no monthly estimates by which we might measure average outstandings.

Title I Loans Insured by the Federal
Housing Administration
Loans insured under FHA Title I may be held by commercial banks, by credit unions, and by industrial banking companies (personal finance company loans and loans made by unregulated lenders are not insurable under Title I). In2 It is possible to estimate the amount of interest due and to become due on outstandings totals of personal finance companies through use of the formula $\frac{o i(d+2)}{8}$, in which $o=$ outstandings, $i=$ monthly interest rate, and $d=$ duration of loan. See National Bureau of Economic Research (Financial Research Program), Personal Finance Companies and Their Credit Practices, by Ralph A. Young and Associates (1940) Chapter 1, p. 23.

If we substitute 2.8 for $i$, and 13 for $d$, interest due and to become due amounts to approximately 14 percent of estimated outstandings. In 1938, for example, when average outstandings of personal finance companies totaled $\$ 347,600,000$, interest due and to become due amounted to approximately $\$ 48,700,000$. When these two figures are added together, it is found that total average outstandings of personal finance companies for 1938 (induding interest due and to become due) came to about $\$ 396,300,000$.
sured FHA loans were specifically excluded from our estimates for personal loan departments of commercial banks, so that there is no duplication between this series and the FHA series. In the case of the credit union estimates, insured FHA loans were not specifically excluded, but such duplication as exists is negligible. Insured FHA loans could not be excluded, however, from the estimates for industrial banking companies, and a small amount of duplication therefore exists between this series and that for FHA loans. The two series probably do not overlap by more than a small percentage. Retail instalment contracts sold to sales finance companies are also included in the FHA series; the amount of duplication with the retail series is negligible.

The procedure used for estimating outstandings of notes insured by the Federal Housing Administration was very similar to that employed for the estimates of outstandings of retail establishments. Figures covering the actual length of contract granted on Title I FHA loans were applied to a monthly series of loans extended (1934-38), ${ }^{32}$ and outstandings were estimated according to the method described on pages 109-10. Basic data for estimates of loans made monthly and of actual length of contract granted were taken from Federal Housing Administration Annual Reports (1934, 1935, 1936, 1937 and 1938). For all years, approximately 80 percent of the insured Title I loans of $\$ 2,000$ or less were considered to have been consumer loans; this percentage accounted for all notes for single-family residences, all notes for farm dwellings, one-half the notes for multiple residences, and one-half "all other property" notes.
${ }^{32}$ No Title I notes were insured by FHA during the period from May 1937 through January 1998.

APPENDIX E
Differences Between the National Bureau's Estimates of Consumer Instalment Credit and the Russell Sage Foundation's Estimates of All Consumer Credit

## Differences Between the National

## Bureau's Estimates of Consumer

 Instalment Credit and the RussellSage Foundation's Estimates of
All Consumer Credit

The coverage of the estimates of consumer instalment credit presented in this monograph differs in several important respects from the coverage of the estimates of all consumer credit developed by Rolf Nugent of the Russell Sage Foundation. ${ }^{1}$ Mr. Nugent's estimates measure the outstanding amounts of all types of consumer credit, including both instalment and open accounts arising from retail sales of commodities and services, and cash loans; the National Bureau's estimates measure the outstanding amounts of credit which arise from sales of commodities on instalment terms and from cash loans payable in instalments, as well as the amounts of credit granted, repayments and credit change. The Foundation's figures thus include three classes of consumer credit which are excluded from the Bureau's figures: (1) open account credits arising from sales of commodities, (2) both open and instalment accounts which arise from sales of services, and (3) certain types of loans which are not generally payable on instalment terms.

The two sets of estimates are also broken down by different classifications. The Russell Sage Foundation's estimates are subdivided according to four major classes of creditors${ }^{1}$ Russell Sage Foundation, Consumer Credit and Economic Stability, by Rolf Nugent (1939) p. 124.
retail merchants, service creditors, intermediary financing agencies (those that acquire instalment contracts to which they are not original parties), and cash-lending agencies; and these were further subdivided by specific types of creditgranting institutions. The National Bureau's estimates are divided into two general classes: credit arising from retail instalment sales (the retail group) and credit arising from cash loans (the cash loan groups).

Among the agencies that lend cash to consumers, credit unions, industrial banking companies, personal finance companies, and personal loan departments of banks use instalment techniques almost exclusively. The National Bureau's figures for the cash loan group, consequently, cover the same ground as the Russell Sage Foundation's estimates for these types of cash-lending agencies. For this area, in fact, the National Bureau used the Foundation's estimates and the two sets of year-end figures are therefore identical.

The Russell Sage Foundation did not undertake to measure retail instalment credit apart from other retail consumer credit, and the nature of the basic data used by the Founda-tion-assembled as they were by the agency holding the credit -precludes the construction of such estimates from its materials. The development of a comparable series from the Foundation's estimates would require the elimination of open account balances of retail merchants, of credits arising from sales of services (notably medical and dental financing, insurance financing and the financing of repairs to automobiles), held by intermediary financing agencies, and of some business credits extended by the latter agencies.

In spite of their lack of comparability, differences in the absolute amounts and in the amplitudes of fluctuation of the two sets of estimates are exceedingly interesting. These figures are given in Table E-1. The Foundation's estimates, covering the whole field of consumer credit, are consistently more than twice as large as the National Bureau's figures for consumer instalment credit. There can be no question that the classes of consumer credit excluded by the National Bu-

TABLE E-1
Estimated Amounts of Consumer Instalment Credit and of Total Consumer Credit Outstanding at End of Year, 1929-37

reau represent in the aggregate extremely large sums. It seems probable, however, that the differences between these two sets of figures are somewhat greater than the total amount of the excluded classes of credit.

The Russell Sage Foundation defines consumer credit as the sum of the receivables of agencies which are engaged generally in the extension of credit to the consumer, and it was unable to eliminate entirely instalment credits used for business purposes, such as those arising from the sale of commercial motor vehicles, farm implements, store fixtures, and professional and industrial equipment, which the National Bureau was able to eliminate from its estimates. The Foundation also included figures for instalment receivables arising from manufacturers' retail sales, which the National Bureau omitted as a precaution against duplication. The National Bureau's estimates do not include figures for retail services financed by instalment contracts, nor for certain types of cash-lending agencies which use instalment techniques for part of their lending operations. Further, they do
not allow for the refinancing or extension of instalment contracts. Thus, while the Foundation's figures unavoidably include some instalment contracts which represent business credit, the National Bureau's figures exclude some instalment contracts which might properly be classified as consumer credit.

As might have been expected, the amplitude of fluctuations of the National Bureau's estimates is much greater than that of the Foundation's estimates. Consumer instalment credit, arising as it does primarily from the sale of consumers' durable goods, is far more sensitive to business fluctuations than consumer credit as a whole. According to Mr. Nugent, some types of open account credit even show a countercyclical tendency as the result of freezing when incomes decline. It is notable that the index of instalment credit outstandings dropped more promptly and precipitately after 1929 and rose more promptly and precipitately after 1932 than the index for consumer credit as a whole. Also, the index numbers for 1937 indicate that instalment credit has grown secularly since 1929 , while open account credit has probably declined.

## $\frac{\text { CHECKED }}{\text { HOOS-O4 }}$

## Studies in

Consumer Instalment Financing

These studies are part of a broad program of research in finance inaugurated by the National Bureau of Economic Research in 1938 under grants from the Association of Reserve City Bankers and the Rockefeller Foundation. They have been prepared with the cooperation of public agencies, private enterprises and university specialists.

The Volume of Consumer Instalment Credit, 1929.38, the seventh volume in the series, was undertaken as a special statistical study. A companion study, the sixth in the series, is now published under the title The Pattern of Consumer Debt, 1935-36. Other studies prepared under this project include five institutional surveys. The first, Personal Finance Companies and Their Credit Praco tices, was published in January, 1940; the second, Sales Finance Companies and Their Credit Practices, appeared in July, 1940; the third, Commercial Banks and Consumer Instalment Credit, was published in June, 1940. Two others, dealing with industrial banking companies and government agencies in the field of instalment finance, are to be published in October, 1940.

The following additional studies are in preparation: a comparative analysis of the operating experience of instalment financing agencies in 1929-33 and 1936, a study of the relation between consumer instalment financing and economic fluctuations, an investigation of risk factors in instalment financing, and a summary of findings.

[^34]:    - The data relative to income payments (excluding work relief wages, dividends and interest) received by those reporting incomes of $\$ 5,000$ a year or less for 1929-37 were developed by the National Income Division, the Bureau of Foreign and Domestic Commerce, Department of Commerce. The estimate for 1938 is our own extrapolation based upon total income payments to all income recipients in that year as estimated by the National Income Division. The above table was compiled by dividing our estimates of total credit granted, repayments and net credit change for each year by the amounts received by the $\$ 5,000$-and-under income group in each year. Unregulated lender loans and insured FHA. (Title I) loans are included.

    This table assumes that the $\$ 5,000$-and-under income group includes almost all instalment users, since about 97 percent of the families indebted for instalment purchases and instalment loans are in the $\$ 5,000$-and-under bracket. See National Bureau of Economic Research (Financial Research Programa), The Pattern of Consumer Debt, 1935-36, by Blanche Bernstein (1940) Chapters 2 and 3. The table also assumes that this was true in all years, and that the same percentage figure applies to single individuals as well as families.
    b Including loan renewals (old balances renewed) of cash loan agencies.

    - Including accounting collections on cash loan balances renewed.
    d Minus sign indicates a decrease in net credit; otherwise anlincrease is to be underatood.

[^35]:    ${ }^{1}$ Census of Business, Bureau of the Census, United States Department of Commerce.
    2 Market Data Section, Marketing Research Division, Bureau of Foreign and Domestic Commerce, United States Department of Commerce.

[^36]:    4 Where average down payments are 10 percent or less, and average lengths of contract 18 months or more with typical financing charges, the cash selling price of an article sold on instalment (i.e., before deduction of down payment) would very likely be equal to or less than the amount of credit granted. This observation is particularly applicable to instalment sales by furniture and household appliance stores. For department and jewelry stores, however, the average contract duration is shorter; in such cases the cash price of the instalment sale is greater than the amount of credit granted. Thus the estimates for department and jewelry stores are biased upward to some extent, and those for furniture and household appliance stores downward. The bias is not likely to be more than 4 percent either way for any individual series. When totals are made of the four groups, these biases are largely offset. For further discussion of this point, see National Bureau of Economic Research (Financial Research Program), Government Agencies of Consumer Instalment Credit, by Joseph D. Coppock (ms. 1940), Chapter 6.
    3 The yearly collection ratio is the sum of the instalment collections during each month of the year divided by the sum of the instalment amounts outstanding as of the first of each month in that year.

[^37]:    ${ }^{0} \boldsymbol{n}=$ duration of indebtedness in months; $\boldsymbol{c r}=$ collection ratio.
    Figures on duration of indebtedness computed from collection ratios by this formula constitute the best available indicators of the actual time covered by the paying out of instalment accounts in these four retail classifications. However, the use of collection percentages in such computation has its limitations as well. If we assume no change in collection conditions or length of indehtedness, we may conclude that a sharp rise in sales will cause a drop in the collection ratio, while a sharp drop in sales will produce a xise in the collection ratio. This limitation has been largely offset through the use of annual collection ratios.
    The procedure employed in this calculation was developed at the National Bureau.

[^38]:    ${ }^{8}$ The department store and jewelry store series, in which the duration of indebtedness varied between 12 and 18 months, were worked up on the basis of 12 - and 24 -month distributions; 12- and 30 -month distributions were used for the household appliance and furniture store series, in which the duration of indebtedness vaxied between 12 and 26 months. Experimentation indicated that further breakdowns of the figures on average duration of indebtedness made no substantial change in the results.

[^39]:    14 Composite Experience of Sales Finance Companies and Automobile Dealers (1988), National Association of Sales Finance Companies.
    ${ }^{15}$ After 1930 the National Retail Credit Survey was entitled the Retail Credit Survey.

[^40]:    ${ }^{16}$ Fifty-seven percent represents the proportion of total furniture and household appliance store sales attributed to furniture stores alone in the 1929, 1933 and 1985 Censuses.
    ${ }^{17}$ In 1924, department stores of 7 Federal Reserve districts reported departmental sales to their respective Federal Reserve banks. The 7 districts were: Boston, Chicago, Cleveland, Dallas, New York, Philadelphia, and San Francisco. For 1927 and 1928, 6 of these districts reported (Philadelphia was the exception) along with the St. Louis and Richmond districts.
    ${ }^{18}$ For purposes of convenience, these ratios are termed the average monthly variations between instalment and retail sales indices. Indices were based on the average month in each year.
    ${ }^{19}$ Retail Furniture Store Operating Experiences, Comptrollers' Division, National Retail Furniture Association, annual reports for 1984 and 1985.

[^41]:    20 Ibid., annual reports for 1984-38 inclusive. Approximately 250 to $\mathbf{3 0 0}$ retail stores were represented in these annual reports. Indices of retail sales for 1986, 1937 and 1988 agreed closely with furniture retail sales indices for similar years reported by the Market Data Section.
    ${ }^{21}$ Approximately 200 department stores from 6 Federal Reserve districts (Boston, Chicago, Cleveland, New York, Richmond, and San Francisco) reported departmental sales data to Reserve banks. These data were obtained through the International Statistical Bureau.

[^42]:    28 The procedure was reversed where the monthly change was a decrease.
    ${ }^{23}$ See footnote 16, p. 115.

[^43]:    4 See footnote 21, p. 116.
    ${ }^{25}$ The seasonal index was calculated in the same way as was the furniture retail sales seasonal index.

    29 If an outstanding loan for $\$ 50$ is renewed, $\$ 50$ is added to the payments due in that month and $\$ 50$ to the loans made. The result is a rise in both loans made and payments due; outstandings, however, remain the same.
