EAST INDIA (RAILWAY COMMITTEE, 1920-21).

(117) A 339

Report of the Committee appointed by the Secretary of State for India to enquire into the administration and working of Indian Railways.

VOL. I.

REPORT.

LONDON:

PRINTED BY
HIS MAJESTY'S STATIONERY OFFICE
FOR THE
INDIA OFFICE.

Price 1*s.* 6*d. Net.*

TERMS OF REFERENCE.

1. To consider, as regards railways owned by the State, the relative advantages, financial and administrative, in the special circumstances of India, of the following methods of management:—

(*a*) Direct State management;
(*b*) Management through a Company domiciled in England and with a Board sitting in London;
(*c*) Management through a Company domiciled in India and with a Board sitting in India;
(*d*) Management through a combination of (*b*) and (*c*);

and advise as to the policy to be adopted as and when the existing contracts with the several Railway Companies can be determined.

In considering the question of the East Indian Railway, the Committee will take note of the decision to remove the management of that railway to India, which was arrived at when the contract with the present Company was extended on the amended terms in 1919.

2. To examine the functions, status and constitution of the Railway Board, and the system of control exercised by the Government of India over the Railway Administration, and recommend such modifications, if any, as are necessary for the adequate disposal of the railway business of Government.

3. To consider arrangements for the financing of railways in India, and in particular the feasibility of the greater utilisation of private enterprise and capital in the construction of new lines.

4. To report whether the present system of control by Government of rates and fares and the machinery for deciding disputes between railways and traders are satisfactory, and, if not, to advise what modifications are desirable.

5. To make recommendations that may seem germane to the enquiry.

ESTIMATED COST OF THE COMMITTEE.

INDIAN RAILWAY COMMITTEE, 1920-21.

VOL. I.—REPORT.

CONTENTS.

Chapter I.—Introductory. PARA.

Constitution of Committee 1
Origin of Committee 2
Terms of reference 2
Proceedings of Committee 5
Interim reference from Government ... 11
Committee's reply 12
Outline of Committee's Report 14

Chapter II.—Present Situation of the Indian Railways.

Classification of railways 22
Evidence as to present situation 25
Embargoes on traffic 26
Conditions described neither new nor local 27

Chapter III.—Finance and Financial Control.

Demand for financial reform 28
Description of present methods 32
The system of "allotments" 36
Its practical effect 37
"Programmes" 41
Their various stages 45
The final grant 50
Revenue estimates 53
The system of "lapse" 55
Need for radical reform of system 58
Railway investment directly profitable ... 63
Estimate of indirect profits 64
Comparative borrowings, India and elsewhere 66
Inadequacy of maintenance and renewals ... 67
Diversion of reserves 71
Need for increased rates and fares 72
The surtax on traffic and objections to it ... 73
Need for separate railway budget 74
Government control must remain 74
History of separation question in India ... 77
Its history in other countries 82

Chapter IV.—The Constitution, Status, and Functions of the Controlling Authority.

Financial importance of railways 89
Subordinate administrative position ... 91
Proposed Member of Council for Communications 97
Status of existing Railway Board 105
Its limited powers 107
Its responsibility for local details 109
Constitution of proposed Railway Commission 111
Divisional Commissioners 118
Inspecting Staff, engineering and traffic ... 123
Relations of Railway Department—
To Legislative Assembly 125
And to the Executive 127
Accounts and statistics 129
Civil Service Regulations 135
Seniority 135
Need of more control in essentials 138
Less interference with details 138
Closer touch with public opinion needed ... 139
Central Advisory Council 140
Local Advisory Councils 142
Liaison with Provincial Governments ... 143

Chapter V.—Relations between Railways and their Customers. PARA.

Rates and fares 145
Companies' existing powers 146
Need for greater control 146
Allegations of undue preference 149
"Block rates" 152
Alleged unfair competition with waterways 155
Enquiry recommended 155
Rates Tribunal 156
Its jurisdiction 158
Appeal from Tribunal 161
Owner's risk rates 162
Settlement of claims 163
Bribery in connection with allotment of wagons 164
The third-class passenger, his grievances ... 167
Alleviations and remedies 169

Chapter VI.—Miscellaneous Cognate Questions.

The railways of the Indian States 176
The need for an all-India policy 176
Branch and feeder lines 177
The gauge question 181
Employment of Indians 182
Facilities for technical training 184
Need for extension 184

Chapter VII.—Management and Finance.

Systems of management, four possible alternatives 185
Committee rule out (1) continuance of English domiciled companies; (2) combination of English and Indian domiciled companies 186

Essentially unworkable 211
Has not been successful 212
Company has no initiative 212
Nor has Government 212

PS 9164 Wt. 3337/381 2500 9.21 [I.O.P.]

(2) To examine the functions, status, and constitution of the Railway Board, and the system of control exercised by the Government of India over the railway administration, and to recommend such modifications, if any, as are necessary for the adequate disposal of the railway business of the Government.
(3) To consider arrangements for the financing of railways in India, and in particular the feasibility of the greater utilisation of private enterprise and capital in the construction of new lines.
(4) To report whether the present system of control by Government of rates and fares and the machinery for deciding disputes between railways and traders are satisfactory, and, if not, to advise what modifications are desirable.
(5) To make recommendations that may seem germane to the enquiry.

3. By a letter dated the 11th November 1920 from the India Office the Committee were authorised to read the first line of the reference as "To consider, more especially as regards the railways owned by the State, ..."; and to understand the phrase "the Government of India" in its widest meaning and not in the technical sense of the Governor-General in Council.

4. It will be observed that of the Members of the Committee three are English, with no previous knowledge of India, three represent life-long experience on Indian railways, three represent Indian opinion, while the tenth Member is a representative of the European commercial community in India.

Proceedings of Committee.

5. Five of the Members, including the Chairman, were in England at the time the Committee was appointed, and they proceeded at once to take preliminary and informal evidence from officials of the India Office and the London representatives of the Guaranteed Railway Companies. This evidence was printed and taken out to India for the information of the remaining Members of the Committee. It was subsequently accepted as part of the proceedings of the Committee, and now constitutes the first part of the evidence (Volume II.).

6. The Members who were in England sailed from Marseilles on the 27th November, and proceeded direct from Bombay to Calcutta, where the first formal meeting of the Committee was held on the 17th December. The Committee was, however, short of one of its Members, for Mr. Beadel, who had been originally appointed as representative of the European commercial community, found himself unable to serve, and Mr. White, who was nominated to succeed him, was taken seriously ill the day before the Committee sat. It was not until the 3rd day of January that the vacancy was filled by the appointment of Sir Henry Ledgard.

7. The Committee sat in India for 50 days and examined 142 witnesses. Of these, 48 were railwaymen and 19 Government officials. Of the non-official witnesses, 45 were Indians and 30 were Europeans. Most of the witnesses who were orally examined also submitted written statements. Numerous other statements were received from persons not called as witnesses. The volume of written matter thus placed at the Committee's disposal was so great that it has proved necessary to exclude a portion of it from the printed records of evidence. The excluded matter, however, was for the most part merely corroborative of evidence already fully recorded by the Committee, or otherwise of minor importance. It should be mentioned that before the Committee assembled in India the Government of India decided to publish a questionnaire with the object of drawing attention to some of the principal points arising from the terms of reference, and of obtaining for the Committee's use considered expressions of opinion on these from interested persons. An unforeseen result was that a large percentage of the written statements received were confined exclusively to the particular issues thus given prominence. Too many of the writers also considered themselves bound to attempt to answer all the questions, although a note in the questionnaire pointed out that this was unnecessary. To facilitate an understanding of the replies, a copy of the questionnaire has been prefixed to each of the volumes of the evidence taken in India (Volumes III. and IV.).

8. The Committee left Calcutta on the 14th January, and visited Madras, Bombay, Lucknow, Cawnpore, Lahore and Delhi. It was their intention to visit also Nagpur, the seat of Government of the Central Provinces, and Karachi; but lack of time compelled them to abandon this intention. Witnesses, however, from both these places appeared and were examined at Delhi.

9. The Committee reassembled in London on the 4th May, and received further evidence from the London Companies, from officials of the India Office, and others, before proceeding to consider their Report.

10. Throughout their proceedings the Committee received every assistance from the officials of the Government, both in England and in India, and of the railways. To these, as well as to the numerous representatives of non-official bodies, and private persons who devoted much valuable time to the preparation of written statements and submission of evidence, their best thanks are due.

11. After the close of the sittings in Delhi, the Finance Department forwarded to the Committee the following communication :— Interim reference from Government.

(Extract paras. 2 and 3 from a letter from the Bengal Chamber of Commerce to the Secretary to the Government of India, Finance Department, No. 636–1921, dated the 11th March 1921.)

"The Committee of the Bengal Chamber of Commerce have observed, from the speech of the Honourable the Finance Member when introducing the budget, that no larger provision than Rs. 15 crores can be made in respect of the railway capital programme for the year 1921–22.

"(2) This severe curtailment of capital expenditure on the Indian railway system has been received with deep regret by the Chamber. At the same time, the existing financial situation of the Government of India is not overlooked, and the very serious difficulties in the way of providing funds on a large scale are fully understood. The Honourable Member mentioned the Railway Committee, and expressed the willingness of the Government to consider any recommendation that that body may submit with the object of raising additional railway capital. In this connection I am to invite the urgent attention of the Government to the following suggestion which was made by the late President of this Chamber, Sir Alexander Murray, at the annual general meeting on the 25th February 1921 :—

"'It will be next month,' Sir Alexander Murray said, 'before this (the railway) Committee finish touring India, and after that they propose visiting England in order to hear further evidence. It will, therefore, be months yet before we can expect to receive the Committee's report, far less see any action taken on it. I am no pessimist, but I feel justified in warning the Government of India that this problem of railway transportation requires immediate attention, and I would respectfully suggest that they should call upon Sir William Acworth's Committee for an *ad interim* report on which action should be taken at once. Everybody knows that the main question is one of funds. Money must be found and spent on the railways, no matter whether we are to have direct State management, or management by boards sitting in London or in India. We can wait for the Committee's views on this latter part of the reference to them, but with new industries springing up and new coal areas waiting to be developed, it is absolutely necessary that the earliest possible steps should be taken to put the railways in a better position to deal with the traffic of the country.'

"(3) The railway position is so grave, and the need for very large capital expenditure is so urgent, that the Chamber has no hesitation in strongly supporting Sir Alexander Murray's suggestion. It may be that the Railway Committee is already in a position to make recommendations, and, even if these could not be brought into operation immediately, their consideration now would greatly expedite their adoption. And there is a precedent for the course proposed by Sir Alexander Murray, inasmuch as the Indian Railway Committee of 1908 presented an interim report some considerable time before the issue of its final report. The same procedure should, and the Chamber trusts will, be followed by the present Railway Committee."

12. The Committee at once met and unanimously passed the following resolution :—

"The Railway Committee, while fully agreeing with the Bengal Chamber of Commerce as to the urgent need of the provision of additional capital on a large scale, feel that the duty imposed upon them by the Secretary of State is to report, not upon a temporary but upon a permanent financial policy. This they are not in a position to do till they have completed their enquiry in London. They, therefore, feel that it would be beyond their province to encroach upon the responsibility of the Finance Member and the Government of India for any emergency measures which may be required to deal with the present critical situation." Committee's reply.

13. We have set out this communication and our reply to it in full at this early stage in our Report, not only because it is part of the record of our proceedings, but also because we think it desirable to emphasise the position we then assumed. Our duty, as we understand it, is to report "not upon a temporary but upon a permanent financial policy." It has been urged upon us more than once, and not by the Bengal Chamber of Commerce only, that the question we have to deal with is mainly, some have said wholly, "how is money to be raised?" In our view, the answer to this question involves our whole reference. That the system, not only financial, but administrative, as it at present exists has resulted in grave failure to raise the necessary funds is not disputed. Any recommendation, therefore, which we may make as to raising money in future involves full consideration of the methods of the past and discussion of the reasons why they failed to produce the desired result, and what changes are necessary to secure a different result in the future. That result we take to be not merely the raising of a certain number of million pounds to meet the present emergency, but the constitution of a system which will secure orderly and continuous progress in the development of the Indian railway system in the future as far as it can at present be foreseen.

Outline of Committee's Report.

14. The reference to the Committee may be summarised under five main heads :—

(A) Management, whether directly by the State or by Companies in England or in India.

(B) The constitution, status and functions of the Government organ of administrative control.

(C) Finance and financial control.

(D) The relations between the railways and their customers.

(E) Miscellaneous cognate questions.

15. The Report which we now have the honour to present contains the unanimous answer of the Committee on the majority of these subjects.

16. On Question A (management) we are unable wholly to agree. We are unanimous in thinking that Indian railways should be managed not from London but in India, and in recommending that the existing contracts with the English Guaranteed Companies should be permitted to expire at their respective dates and should not be renewed. But on the question of the method of management in India the Committee are divided. Some of us consider that the undertakings should be transferred to the direct management of the State, while others consider that some at least of the undertakings should be entrusted to the management of Companies domiciled in India.

17. On Question B (the constitution, status and functions of the Government organ of administrative control) the Committee are unanimous.

18. On Question C (finance and financial control) the Committee are unanimous, except in so far as the answer to this question depends on the answer to Question A. We unanimously recommend a complete revision of the present financial methods and the separation of the railway budget from the general budget of the State. We are also in general agreement as to the methods which should be adopted by the Government for raising new capital. Additional methods of raising capital are also recommended by those members who are in favour of the retention of private management through companies domiciled in India.

19. On Questions D (the relations between the railways and their customers) and E (miscellaneous cognate questions) the Committee are unanimous.

20. We therefore think that the most convenient course will be to forsake the order of subjects in our reference, and to deal first with the matters on which the Committee are agreed, postponing to a later stage matters on which our recommendations diverge.

21. We accordingly submit our Report under the following heads :—

Chapter II.—Present situation of the Indian railways.

Chapter III.—Finance and financial control.

Chapter IV.—The constitution, status and functions of the controlling authority.

Chapter V.—The relations between the railways and their customers.

Chapter VI.—Miscellaneous cognate questions.

Chapter VII.—Management, whether directly by the State or by companies ; and the methods of raising additional capital.

Chapter VIII.—Summary of recommendations, and Conclusion.

CHAPTER II.

PRESENT SITUATION OF THE INDIAN RAILWAYS.

Classification of Railways.

22. According to the Administration Report on Railways there were in India, at the 31st March 1920, 36,735 route miles of railway. These may be divided into five classes :—

(I) State lines worked by the State.

(II) State lines worked by (*a*) Guaranteed, and (*b*) Independent Companies.

(III) Company lines worked by Companies.

(IV) Lines belonging to Indian States.

(V) Miscellaneous.

23. Class I (State lines worked by the State, 7,369 miles) and Class II (*a*) (State lines worked by Guaranteed Companies, 17,768 miles) between them comprise more than two-thirds in mileage of the total 36,735 miles of railway in the country, and very much more than two-thirds in importance. At a later stage we shall refer specifically to the case of the less important systems, but the Committee have devoted their attention chiefly to the case of the main railway system, and it is to this that the evidence taken by them principally relates. Except therefore so far as the contrary may be clearly indicated it should be understood that the recommendations made refer only to classes I and II (*a*).

24. It has been mentioned that the present enquiry was the direct outcome of the consideration of the case of the East Indian Railway necessitated by the approaching termination—in December 1919—of the contract; but it is clear that in any case the time had arrived for a general examination of the whole Indian railway situation.

Evidence as to present situation.

25. For years past, even long before the war, public opinion in India has constantly complained of the entire inadequacy of the Indian railway system to meet the needs of the country. It has been expressed not only in the newspapers but by Chambers of Commerce and in discussions in the Legislative Council at Delhi. The evidence given before us in all parts of the country and on behalf of all sections of the community was overwhelmingly strong as to the urgent need of drastic measures of reform and reconstruction of the entire railway machine. We do not think that any general statement would be sufficient to enable non-Indian readers adequately to appreciate what the real situation is. We therefore summarize extracts from the mass of evidence we have received, showing that the failure to meet the needs of the country is not temporary and not confined to certain places or to certain periods, but universal and permanent.

EVIDENCE TAKEN AT CALCUTTA.

Calcutta Evidence.

MR. INNES, SECRETARY TO GOVERNMENT OF INDIA, DEPARTMENT OF COMMERCE. (Vol. V. paras. 3867 and 3873.)

(There is a large demand for Indian coal for export, but in the absence of adequate transport facilities for meeting it India is missing an exceptional opportunity of establishing itself in the foreign markets where its coal is in great demand. If adequate railway facilities were provided the production of coal could be increased.)

MR. CHURCH, MINING ENGINEER TO RAILWAY BOARD. (Vol. III., paras. 3902 and 3903; and Vol. V., para. 3910.)

There is a rapidly increasing demand for Indian coal, and output could keep pace with it, but is blocked by the limitations of the railway capacity. The railway difficulty in carrying coal is due to a general incapacity to handle the traffic.

Shortage of facilities is manifest at junctions where coal is taken over from the East Indian Railway and Bengal-Nagpur Railway, *e.g.*, at Jubbulpore, where the Great Indian Peninsula Railway takes over trains and has to break them up.

MR. LEGGE, COAL TRANSPORTATION OFFICER (COAL CONTROLLER). (Vol. III., paras. 3914 and 3915).

The supply of wagons for coal traffic has long been inadequate. It is necessary to retain for some time to come the post of Coal Controller, an official who, owing to the shortage of facilities, has to apportion the available wagons under a priority classification.

MR. BELL, MEMBER OF THE RAILWAY BOARD. (Vol. V., para. 3969.)

The capital provided is not sufficient. All the funds likely to be provided by Government for the next few years might be easily absorbed in meeting a single demand (provision of adequate facilities for coal transport).

MR. CARR, ACTING AGENT, AND OTHER REPRESENTATIVES OF THE BENGAL-NAGPUR RAILWAY. (Vol. III., paras. 4051 and 4061.)

Boilers and permanent way materials, which should have been replaced, are kept in service, leading to undue expense in frequent repairs.

The growing trade of India and development of the iron and steel industry is hampered by lack of railway facilities and new lines; 1,100 wagons a day would ultimately be required to meet the total requirements of existing and new works at Jamshedpur and Kulti, as against the present demand of about 350.

MR. HINDLEY, AGENT, EAST INDIAN RAILWAY. (Vol. III., paras. 4138, 4161, 4162, 4165, 4166, 4167, 4185, 4308, and 4323; and Vol. IV., pages 79 *et seq.*)

Overcrowding is the principal source of all difficulties and inconvenience to passengers, which the railways would gladly remedy but for inadequacy of funds. To put on an extra passenger train, the goods service would have to be reduced.

Owing to budget restrictions, the Railway Board had to eliminate from the programme some extremely urgent works, such as the doubling of the Grand Chord, and had definitely instructed the Agent that owing to the shortage of funds new works must be restricted to those required for providing increased traffic facilities, &c.

It is impossible to estimate the loss to trade which would be brought about by the delay in providing essential facilities and the persistent failure to keep the capacity of the lines up to the demands for transportation. The position is already so bad that at times the railway has to restrict or even entirely to close down the acceptance of goods traffic. Only one half of the demand for wagons for merchandise can be met. For the past 26 years there has always been an inability to provide transportation to the extent demanded, and the position is getting worse day by day.

At times when the demands for coal reach their maximum the capacity available for ordinary goods is considerably less than is required—large quantities of merchandise offered for transportation have frequently to be refused. Improved facilities are necessary, not only on the East Indian Railway, but especially on the adjoining lines and junctions.

In one case the European oil seed market was lost definitely owing to lack of railway transport.

That the railway would "muddle through" in the current year as it had in the past was the only hope.

Small stations in the vicinity of the larger centres are closed in order to obtain relief by forcing short lead traffic to the road.

Running of work and van goods trains (station to station pick up goods trains) is suspended when necessary to limit the traffic to the present capacity of the sections.

Bookings of merchandise traffic in the upward direction is restricted even when stock is available in order to leave room for coal traffic.

MR. OSWALD MARTIN, OF MESSRS. MARTIN & CO., CALCUTTA. (Vol. III., para. 4174.)

The sum and substance of the present problem is want of money.

MR. GODFREY, OF MESSRS. MCLEOD & CO., CALCUTTA. (Vol. III., para. 4247.)

Cases are known of country carts carrying, in addition to what the railway carries, jute to Calcutta from distances of 70 or 80 miles.

MR. PATTINSON, CHAIRMAN, INDIAN MINING ASSOCIATION. (Vol. III., paras. 4412, 4413, 4416, 4421, 4422, and 4423.)

Owing to transport difficulties and delays, entirely due to inadequate finance, the coal trade has suffered for years.

The transport difficulty has been constant from about 1905, when the coal output reached 8,000,000 tons in the year. At the present time there are about 10,000,000 tons of exportable coal available at the coalfields per annum, and allowing for the interim increase of transport facilities, the coal trade is handicapped about to the same degree as in 1905, but, of course, on a much larger scale.

Owing to want of transport facilities coal raisings have frequently had to be curtailed.

Many instances of collieries being fully equipped, but unable to despatch coal for want of sidings and with no hope of getting these within the next year or so. One siding had been applied for in April 1918, but was not sanctioned until 1920. This siding, about 17 miles long, will serve a number of collieries; construction will take about a year, but difficulty exists in getting rails moved from Delhi; meanwhile, Rs. 30,00,000 of the coal company's capital is lying idle waiting completion of the siding.

The Rana Colliery is waiting to despatch coal; a siding about a mile long was asked for in 1914, but although sanctioned the work has not yet been begun.

The Chapui and Chalbalpur sidings, applied for in March 1919, have not been sanctioned. Coal is being carted across a river ford, but the output is restricted to a nominal figure for want of facilities.

MR. WALSH, SECRETARY TO THE GOVERNMENT OF BENGAL, PUBLIC WORKS DEPARTMENT. (Vol. III., para. 4474.)

The Government of Bengal lays stress upon the deficiency of transport facilities. Being affected by the carriage of coal and building materials, they found the construction of public works greatly hindered and only done at excessive cost.

MR. BAXTER, REPRESENTING THE NARAYANGANJ CHAMBER OF COMMERCE. (Vol. III., para. 4505.)

There was recently an acute scarcity of wagons for conveying coal for the use of jute-baling firms.

MESSRS. MARSHALL, DODS, FAIRHURST, BURY AND MARTIN. (Vol. III., pages 61 to 68.)

These gentlemen appeared as representatives of some of the principal firms engaged in the metallurgical industries of India. These are the industries established and under development in an area served by the Bengal-Nagpur Railway to the south-west of Calcutta; they include the important iron, steel and copper works, together with numerous associated enterprises specialising in such products as refined zinc and sulphuric acid, jute mill machinery, wire and pressed metal articles, concrete reinforcing material, enamelled hollow ware, electric cables, tinplate, &c.

The outstanding importance of the interests represented and the magnitude of their probable development within the immediate future may be gauged from the following particulars which were placed before the Committee :—

Name of Firm.	Present Annual Freight Movement.		Estimated Freight Movement in 1926.	
	Tons.	Ton Miles.	Tons.	Ton Miles.
Tata Iron and Steel Company (Jamshedpur).	1,760,700	257,316,000	4,137,700	651,665,000
Bengal Iron Company (Kulti) -	433,500	89,080,000	887,000	182,160,000
Indian Iron and Steel Company (Burnpore).	—	—	2,278,000	316,730,000
Eastern Iron Company (Chandal) -	—	—	7,372,000	987,200,000
Cape Copper Company - -	57,500	5,780,000	115,000	11,560,000
Subsidiary companies - - -	—	—	389,400	50,895,000
Totals - - -	2,251,700	352,176,000	15,179,100	2,200,210,000

The approximate investments, labour and pay roll of the above-mentioned companies, their position in 1920, and their estimated position in 1926 were stated as follows :—

——	Investment.	Labour employed.	Annual Pay Roll.
	Rs.		Rs.
Existing - -	10,00,00,000	47,500	2,00,00,000
1926 (*estimated*) -	44,40,00,000	125,000	6,00,00,000

In support of the strikingly high estimate of future expansion Mr. Marshall explained that, of the 15 million tons estimated, 8 millions are practically assured by construction already being carried out with funds that have been provided, while finance has been arranged for a large part of the 7 millions balance. Even making an allowance for uncertainties it was held that the estimate might safely be relied upon to the extent at least of 11 or even 12 million tons.

The evidence showed clearly that the existing railway facilities are entirely inadequate to cope with even the present traffic. There is a serious shortage both of wagons and locomotives for transport of coal and other raw materials as well as of the finished products; and of facilities for moving the wagons which are available. During the good coal mining season the wagon supply is usually so inadequate that the full supply cannot be shipped to the works. It was mentioned in particular that the Tata Iron and Steel Company had probably lost from 3 to 5 per cent. of production during the year 1920 because of the shortage of wagons and of congestion on the railway, a percentage which would be increased when new extensions are put into operation. It was pointed out that if the consequent pecuniary loss were to amount only to 1½ or 2½ per cent. the sum involved would still be very large.[1]

[1] In this connection may be read the following extract from the report of the Tata Iron and Steel Company, Ltd., for the year ending 31st March 1921 :—

"We are now, however, faced with the very serious position regarding the railway transport to which the attention of the Indian public has been drawn in the last few months by the evidence given before the Railway Committee. We have repeatedly pressed this upon the attention of the railways and Government, and although the Bengal-Nagpur Railway has made certain additions to its equipment and has done all it can to help in this direction, the additions are not adequate to handle the traffic which we shall require when the extensions are in full operation. The directors have considered, and are considering, the effect of this restricted development upon the progress of the greater extensions, and will retard these if it appears likely that the railways will not be able to handle the raw materials and finished products, as it would be no advantage to the Steel Company to erect plant that would stand idle for want of railway facilities. But they are pressing, and will continue to press, that the development of the lines serving the works should coincide with our expansion, and we have recently offered to arrange for a loan of four crores of rupees to the Bengal-Nagpur Railway in order to ensure this."

The witnesses, who had prepared their report in consultation with the Bengal-Nagpur Railway officials, calculated that to meet the requirements of the case it would be necessary to double-track 133 miles of the Bengal-Nagpur Railway, while to the existing rolling-stock of all the railways serving the industries in question an addition is necessary of about 13,000 four-wheeled vehicles (or half the number if bogie wagons), and of 322 engines, to meet the anticipated developments of traffic during the next five years. Some 75 per cent. of the increase in rolling-stock would have to be made on the Bengal-Nagpur Railway system.

The evidence was referred to Sir George Godfrey, as Agent of the Bengal-Nagpur Railway, who furnished the Committee in reply with particulars generally bearing out these conclusions, and giving details of the Bengal-Nagpur Railway programme, which provides for completing the line facilities in four years, and explained that the extra locomotives and wagons already under supply out of the existing grants together with the numbers included in the four-year programme practically equalise with the foregoing estimate.

At a late stage of the Committee's deliberations a communication was received on the same subject from Messrs. Bird & Co., in connection with the traffic which they estimated would have to be handled by the Bengal-Nagpur Railway for the purposes of the United Steel Corporation of Asia, Limited, which is to be undertaken by that firm in conjunction with Messrs. Cammell, Laird & Co. Details of the estimated traffic, in three stages of development, were given, working up to the following figures :—

Stage.	Ton Mileage.	Estimated additional Rolling-stock required.	
		Wagons. (4 wheel units.)	Locomotives.
1st - - -	70,838,000	492	9
2nd - - -	592,365,000	4,113	74
3rd - - -	1,112,132,000	7,723	139

The Bengal-Nagpur Railway are in possession of these figures, and it is understood that they will be able to deal with the traffic of the first stage with their four-year programme, but an essential subsequent requirement will be a new outlet for Bengal-Nagpur Railway coal traffic from the coalfields by a new line *viâ* Karanpura to a point on their main line near Manharpur, in the neighbourhood of which the new works are likely to be situated.

MR. NOLAN, ACTING AGENT, ASSAM-BENGAL RAILWAY. (Vol. III., paras. 4555 and 4569.)

The Assam-Bengal Railway has been starved. During the 25 years it has been open it has only been able to construct 90 miles of extensions from money provided by the Government.

The Capital July Forecast of requirements for 1921-22 was Rs. 79·63 lakhs ; 64·80 lakhs was provisionally sanctioned, but in December cut down to Rs. 15 lakhs, which had been increased to Rs. 25 lakhs on pointing out that his home commitments already amounted to Rs. 28 lakhs. Home indents and certain contracts have had to be cancelled and Rs. 43·19 lakhs worth of material will lie in stock in default of an allotment of Rs. 8·33 lakhs for cost of erection in India.

MR. PEAT, CHAIRMAN, INDIAN JUTE MILL ASSOCIATION. (Vol. III., paras. 4596 and 4598.)

Because of lack of railway facilities for the carriage of coal seven large jute mills, employing 40,000 workers, had completely stopped on the 14th January 1921.

There was also a deficiency of wagons for bringing down the jute. Frequently no wagons at all were available at despatching points in the northern jute districts.

MR. WATSON SMYTH, VICE-PRESIDENT, BENGAL CHAMBER OF COMMERCE. (Vol. III., paras. 4602, 4603, 4605, 4609, 4642 and 4643.)

For many years the imperative necessity for a more liberal allotment of funds had been urged. In 1908 representations were made regarding the insufficiency of allotments and grave complaints of inadequacy of facilities for the carriage of coal to Calcutta, and the scarcity of rolling-stock since 1894. The general situation is now worse than in 1908, seven important jute mills being actually closed and the position showing every sign of becoming worse.

Lack of transport has led Government to prohibit the export of shipment coal, causing loss to the shippers, and the movement of general merchandise is delayed and hampered, causing great hardship and reducing business operations to a gamble, *e.g.* :—

One firm trading in linseed, with a good demand and prices high for early shipment, found shipping available, but it was too risky to undertake business because no reliance could be placed upon getting the seed to the port within a reasonable time. The firm had in one case some 700 tons of linseed held up at an up-country station for over four months. The movement of the linseed crop was so impeded that seed from the River Plate filled the demand and India lost the opportunity of selling the seed. Stocks accumulated between April and June were not commenced to be despatched before August, and only 698 tons were cleared in the following two months.

A manganese firm could without any difficulty dispose of double the quantity of manganese if the railways were in a position to move the ore. They have 300,000 tons of ore

in stock. To instance the congestion, at one station there are 70,000 tons, which are only being despatched at the rate of about 3,000 tons per mensem. This station is already two years in arrears with its despatches—at other stations there are large quantities also waiting to be railed, viz. :—South Tirody, 70,000 tons; Balaghat, 60,000 tons; Ramtek, 45,000 tons; Tumsar Road, 20,000 tons; and various quantities elsewhere.

The import of salt into Calcutta is 500,000 tons annually, and owing to lack of wagons to convey the salt up country one firm alone has lakhs of rupees locked up. Owing to the difficulty of getting it away by rail there was not sufficient accommodation for the salt coming in. Recently a ship with 1,400 tons of salt had to take it back again to Liverpool. Another steamer which brought 6,000 tons, after over a month had only unloaded about half its cargo.

Another firm has a sugar refinery in Calcutta which bought several thousand tons of semi refined sugar in Cawnpore deliverable by a specific date, but 600 tons had not yet been delivered. The market has now fallen and the firm has had to refuse to accept delivery, with the result that the sellers must lose heavily because of the railway's failure to perform its duties.

A tar refining industry, opened two and a half years ago, is unable to work at its full capacity owing to the inability of the railways to supply tank wagons. If it had been an independent company it would have failed by now.

The foregoing are merely typical instances of what is constantly happening. Not only do consumers suffer, but the uncertainty of adequate transport is paralysing trade. It is obvious that the whole railway machine is inadequate. What is necessary is an all-round enlargement of the carrying capacity of the railways.

EVIDENCE TAKEN AT MADRAS.

LIEUT.-COL. BARNARDISTON, SECRETARY TO GOVERNMENT OF MADRAS, RAILWAY DEPARTMENT. (Vol. III., paras. 4683, 4684, 4693 and 4701.) Madras Evidence.

Erode Junction is a particularly bad case; facilities are inadequate and nothing can be done until a decision is given as to the arrangements to be made at Erode in connection with the question of the location of the broad gauge South Indian Railway workshops, which has been under discussion for some 10 or 15 years without a decision being arrived at. Further, nothing can be done, pending the Railway's Board decision, with regard to the reconversion of the Trichinopoly-Erode line to broad gauge; this line urgently needs renewal as the rails are worn out and train speeds have been limited to 22 miles per hour. This work is now held up because of the locomotive workshop question, but the question of renewals is one which should have been faced many years ago.

The Government of Madras estimates an expenditure of some Rs. 30 crores as being required to bring railway communications in Southern India to a state of reasonable efficiency. During the 14 years prior to the creation of the Railway Board, 1,200 miles of new railway were built in the Madras Presidency, but in the 14 years of the Railway Board's existence only 535 miles of new lines have been opened, of which 200 were in course of construction when the Board was formed, and 142 were constructed by district boards or other agencies, leaving an annual average of only about 14 miles to the credit of the Railway Board.

MR. MOIR, LATE DIRECTOR OF CIVIL SUPPLIES, MADRAS. (Vol. III., paras. 4733 and 4736.)

There had been a great shortage of rolling-stock, and, he understood, of engine power on the railways, while there was an exceptional scarcity of food over a large part of the Presidency. Many complaints were received from licensed exporters that they could not get their rice carried.

LIEUT.-COL. MAGNIAC, AGENT, MADRAS AND SOUTHERN MAHRATTA RAILWAY. (Vol. III., paras. 4774–4777, 4781, 4800, 4826 and 5125.)

Frequently, for want of sufficient rolling-stock, traffic is delayed in transit. At present the Madras and Southern Mahratta Railway is not refusing traffic because it has fallen off considerably of late. Locomotive coal, formerly taken by sea, from Bezwada to the metre gauge lines in the West, has to be carried over a light section of the line on which heavy engines cannot run, thus causing congestion during the heavy traffic season. Colonel Magniac had never known sufficient rolling-stock to be in existence at times of pressure on the Eastern Bengal, the North-Western, or the Madras and Southern Mahratta Railways, on all of which he had served. His experience was that at certain times public demands could not be fully met, and from the beginning of March to the end of June it is impossible to comply in full with the demands of the merchants on the Madras and Southern Mahratta line. It therefore follows that a priority register for wagon supply is maintained as a matter of course on Indian railways.

The existing lines must be brought up to standard before extensions can be contemplated. The strengthening of bridges is very important, as heavy engines cannot run over many of the existing bridges. The Godavari bridge, for example, is not up to the present standard; it was built some 22 years ago to take a calculated train load of 344 tons, the present trains being over 544 tons.

For the years 1912–13 to 1918–19, Rs. 506·11 lakhs had been asked for on capital account to bring open lines and equipment up to a suitable standard, but only Rs. 269·45 lakhs had been allotted by Government; in 1919–20 the railway got Rs. 18 lakhs more than had been asked for; in 1920–21 the demand was for Rs. 145 lakhs and the sanctioned grant was Rs. 161 lakhs; for the year 1921–22 the demand was for Rs. 164 and the preliminary sanction Rs. 67 lakhs only, necessitating the abandoning of all new projects during the coming year. This is not conducive to economy and makes it impossible to make up existing arrears of works. The Government had refused to allow the companies to raise additional capital as desired by them, and had failed to supply funds for expenditure on rolling-stock and other improvements

THE HON. MR. SIMPSON, CHAIRMAN, AND TWO MEMBERS OF THE MADRAS CHAMBER OF COMMERCE. (Vol. III., paras. 4850 and 4856.)

The Chamber of Commerce are of opinion that it is an absolute necessity for many years to come to improve the existing facilities on and equipment of open lines, and that new construction should be held in abeyance for the present.

The Cochin Chamber of Commerce (who had desired to be associated with the representation of the Madras Chamber) drew attention to the disabilities at present existing through the break of gauge from the South Indian Railway to the narrow gauge of the Shoranur Cochin Railway and the serious shortage of rolling-stock on that line.

Mr. Simpson stated that they had got along fairly well up to 1914, although at certain seasons difficulty had been experienced, but the daily recurrent maintenance had fallen behindhand, and the public are now suffering greatly from the inadequate carrying capacity of the lines. Traffic is growing and must continue to grow. Railway stations are crowded with merchandise, lying frequently for days awaiting transport. It is a matter of urgent necessity to improve the carrying capacity.

REPRESENTATIVES OF THE SOUTHERN INDIA SKIN AND HIDE MERCHANTS' ASSOCIATION. (Vol. III., paras. 4877, 4883 and 4889.)

Better communications are needed between Madras and Pallavaram or Chingleput. There is an urgent demand for the railway to be doubled to enable it to cope with the heavy traffic on it. Merchants, as matters stand, are always afraid of being unable to fulfil their contracts owing to delays caused by the railways.

Piece goods merchants complain that they are kept waiting for weeks together for wagons; even when they get these, consignees cannot count on prompt delivery of goods.

MR. C. DURAISWAMY AYYANGAR, REPRESENTATIVE OF THE MADRAS LIBERAL LEAGUE. (Vol. III., para. 4965.)

There is no disputing the fact that there is great congestion on the railways, and that large sum of money will have to be spent to bring these to a proper standard.

MR. MITCHELL, CHAIRMAN OF THE MADRAS PORT TRUST. (Vol. III., paras. 4988, 4990 and 4992, and page 123.)

Mr. Mitchell emphasised the "utter inadequacy" of the supply of funds for railway purposes; of this, he said, there could be no possible question.

Nobody differed from the Port Trustees' opinion that the carrying capacity of the railways is not adequate. At least at periods of pressure, the railways have been unable to cope with the whole of the traffic offering through the port.

Improvements should be made by duplicating congested portions of the line and by providing more rolling-stock—there are cases in which the full use of the existing rolling-stock is prevented by inadequacy of the line carrying capacity. The largest bogie wagons cannot be fully loaded because of the light standard of certain bridges.

Mr. Mitchell furnished statements comparing the numbers of wagons applied for by the harbour authorities with the numbers supplied by the railways during the six months ending September 1918. The totals are :—

Broad Gauge Wagons—	
Applied for	18,424
Supplied	3,016
Metre Gauge Wagons—	
Applied for	9,846
Supplied	1,617

The figures show that, during the period, the average daily ratio of supply to demand was slightly over 16 per cent. That is to say that only one was furnished out of every six wagons applied for. It is of course not to be understood that only one-sixth of the traffic offered was ever carried.

MR. K. PARTHASARATHY IYENGAR, RAILWAY PASSENGERS' ASSOCIATION, MADRAS. (Vol. III. para. 5009.)

Instances of overcrowding were given, showing :—

	(1)	(2)	(3)
Average number of travellers on a specific train per day	865	842	835
Average accommodation provided	553	297	564

MR. ROSS LOGAN, ACTING AGENT, SOUTH INDIAN RAILWAY. (Vol. III., paras. 5070, 5079, 5080, 5100 and 5110; and page 133.)

Overcrowding is serious on certain sections of the railway, and the line has access to Madras only by a single line which runs over a number of level crossings within the city boundaries. Mr. Logan had no doubt that the line ought to be doubled and the level crossings obviated. There is a deficiency of rolling stock as well as of engines. The railway facilities are inadequate; he could point to no important direction in which the facilities of the railway for dealing with its increasing traffic are sufficient.

There is a good deal of overcrowding on certain parts of the line, and in certain cases it is necessary for passengers to alight and entrain otherwise than at platforms; the railway has been suffering from the shortage of coal. They have about 15 days' stock of coal on hand, but before the war used to have a two months' stock.

The Coleroon bridge was built about 40 years ago. It is now proposed to rebuild it to the 1908 standard.

A detailed statement is submitted showing that, during the years 1910–11 to 1920–21, Rs. 830.89 lakhs had been asked for on capital account by the South Indian Railway Company in the July Forecasts, and only Rs. 646.66 lakhs had been allotted.

The witness stated the company had done all that it could reasonably do to induce Government to provide the necessary funds, and that the public have no serious grievances except such as are due to lack of facilities, and this is due entirely to the Railway Board's failure to supply the necessary money.

EVIDENCE TAKEN AT BOMBAY.

Bombay Evidence.

MR. LLOYD JONES, AGENT OF HIS EXALTED HIGHNESS THE NIZAM'S GUARANTEED STATE RAILWAY COMPANY. (Vol. III., paras. 5155–5157 and 5165.)

The Nizam's Railway is in a position to give 900 tons of traffic daily to the Great Indian Peninsula Railway at Manmad, but has frequently been restricted to 200 tons. For this reason the Nizam's Railway desired to find another outlet, but were prevented by the claim for protection of the Great Indian Peninsula Railway from making lines to take the traffic elsewhere.

For some years past the cotton seed traffic offering has been many thousand tons more than could be carried during the season, and there have been constant complaints from merchants that they cannot move their crops. Mr. Lloyd Jones could recall one occasion when it had been necessary to burn cotton seed owing to the inability of the railways to carry it; in many cases, the movement of the crops to the railway stations did not take place owing to the known inability of the railways to take them away. In 1919 the Nizam's Railway was involved in heavy losses on account of damage to cotton bales which could not be moved until the beginning of August, and the losses to the merchants would probably be more than those of the railway. The railway had insufficient shed accommodation to stock the goods, which were left in the open.

There were also restrictions at Wadi, on the Great Indian Peninsula Railway, which had affected the castor seed traffic to Bombay.

MR. MACNAGHTEN, DEPUTY CHAIRMAN OF THE CHAMBER OF COMMERCE, BOMBAY. (Vol. III., para. 5206.)

The railways having access to Bombay have not provided adequate facilities in recent years. Delays in transport are considerably greater than they were eight or ten years ago. The Chamber of Commerce receives a very large number of complaints from its members.

KHAN BAHADUR A. M. DALAL, PRESIDENT, DISTRICT BOARD, BROACH. (Vol. III., para. 5253.)

The industrial development of India is likely to be throttled for want of adequate railway facilities.

Merchants experience the greatest difficulty through traffic to Bombay being frequently stopped for days together. Trade suffers all round as the unreliability of railway communication interferes with merchants' ability to make or fulfil contracts.

It is a matter of common experience, happening almost every other year, that heavy losses are incurred through damage to cotton seed and cotton bales, which deteriorate owing to their having to be left in the open in the rains for want of railway transport.

Carts sent to the railway station have frequently to take goods back because booking is stopped.

MR. RUMBOLL, AGENT, GREAT INDIAN PENINSULA RAILWAY. (Vol. III., para. 5278.)

Thirty-one years ago the then railway authorities said that the railways ought to adopt the vacuum brake, and now 31 years later at least 20–30 per cent. of the stock is not fitted with it, and even where the stock is fitted the equipment is often not used, and the equipment therefore deteriorates owing, for instance, to the rubber fittings perishing. The consequence is that money has been wasted on machinery of which full use is not made.

DEWAN BAHADUR K. R. GODBOLE. (Vol. III., para. 5343.)

Recently he had seen on one of the lines managed by the Great Indian Peninsula Railway Company a number of passengers who had had to wait one or even two days for a train; they were compelled to remain on the platforms as there was no accommodation in the trains.

MR. RAMJI BHARMAL, OF MESSRS. BHARMAL, SHRIPAL & CO., BOMBAY, REPRESENTING THE GRAIN MERCHANTS' ASSOCIATION, BOMBAY. (Vol. III., paras. 5488 and 5492.)

Goods brought to the railway station lie there sometimes for months before receipts can be obtained, as the railway companies do not issue receipts until wagons are available.

As regards an accident, mentioned in the written evidence, in which several deaths and cases of injury were occasioned by passengers having to travel on the footboards of the train, owing to the carriages being overcrowded, the witness stated that this had happened about six months ago on a train from Thana to Bombay. It was due to the fact that the railway was not using sufficient carriages on the suburban trains.

EVIDENCE TAKEN AT LUCKNOW.

Lucknow Evidence.

MR. HARVEY, AGENT, OUDH AND ROHILKHAND RAILWAY. (Vol. III., paras. 5743, 5744, 5751, 5752 and 5930.)

The carrying capacity of the Oudh and Rohilkhand and connected railways is inadequate owing to want of facilities for handling, sorting yards and the like; as a result traffic cannot be handled efficiently.

Restrictions had to be imposed on the movement of traffic owing to the weakness of the road.

The railway is very short of coal—stocks being as low as six days' supply on the whole line and three in Lucknow. Last Christmas they had to cancel something like 20 passenger trains, and now the position is much worse. The coal supply is dependent on junction facilities.

Recently the Oudh and Rohilkhand Railway had had to clear, in connection with *mela* traffic, some 50,000 passengers from Allahabad, who were left behind because the ordinary trains had not been able to carry them. These might have been brought by the East Indian, or the Bengal and North-Western Railway.

At the present time, if the Oudh and Rohilkhand Railway were asked to take another two trains from Moghal Serai to Saharanpur these could not be hauled for want of locomotives. In no case could more than two extra trains be run, as they would be blocked at Lucknow and at other stations owing to there not being sufficient accommodation.

LIEUT.-COL. ANDERSON, TRAFFIC MANAGER, OUDH AND ROHILKHAND RAILWAY. (Vol. III., paras. 5932 and 5933.)

Colonel Anderson said that 16 trains could be run each way as a maximum, that is, nearly double the present number. It was done once in connection with through *mela* traffic, which involved little marshalling work, but threw the whole line into confusion for two or three days. At the most, two more trains could be run each way—the capacity of the line was limited as they had not sufficient yards and crossing places.

As only part of the goods stock is fitted with the vacuum brake, rapidity of movement is impaired, since braked vehicles have to be picked out and put in front when making up trains.

LIEUT.-COL. IZAT, AGENT, BENGAL AND NORTH-WESTERN RAILWAY. (Vol. III., para. 5767; and Vol. IV., page 219.)

The extent to which traffic can be transhipped at junctions, from the Bengal and North-Western Railway to the adjoining State and company worked lines, is seriously limited by the lack of capacity of these. Even before the war this congestion occurred at busy seasons to such an extent that the company had had strongly to represent to the Secretary of State the difficulties experienced by the railway and the need for extensions. Restriction of traffic is typical of the post-war situation; the Bengal and North-Western Railway would normally be able to offer adjoining lines—

via Bari Banki, 600 tons daily (now limited to 150 tons).
via Benares, 250 tons daily (maximum, now limited to 50 tons).
via Mokameh Ghat, 2,000 tons daily (now limited to 600 tons).
via Allahabad City, 120 tons daily (now limited to 30 tons).

MR. MUMME, AGENT, ROHILKUND AND KUMAON RAILWAY. (Vol. III., para. 5795; and pages 239 and 240.)

Traffic to adjoining lines is restricted in the same way as from the Bengal and North-Western Railway. Details were given showing restrictions of traffic *via* Kashganj, varying from an absolute refusal to accept any merchandise to the prescription of different limits of quantity, from December 1919 to February 1920, during which period about 1,500 tons daily might have been loaded in the absence of restriction. From 21st February 1920 to 29th May 1920, traffic *via* Lucknow was restricted by the Oudh and Rohilkhand Railway to 50 tons daily, whereas double the quantity was available for despatch

Similarly traffic *via* Moradabad was restricted at various periods to from one-eighth to two-thirds of the available goods.

If the railway presses foreign lines for the return of its stock, restrictions are immediately placed on the receipt of traffic by those lines from the Rohilkund and Kumaon Railway. He did not think this unreasonable from the point of view of the railways concerned; it meant that they had to return stock in a hurry, which would lead to uneconomical working.

MESSRS. VERRIERES AND BILLSON, REPRESENTATIVES OF THE GOVERNMENT OF THE UNITED PROVINCES. (Vol. III., paras. 5912, 5915 and 5920.)

Complaints are general about the blocks in traffic. The main difficulty experienced is that of the blocking of traffic at the junctions between the metre and broad gauge lines.

The policy of the Railway Board appeared to be that main line communications should be broad gauge, although the companies were prepared to make metre gauge connections.

EVIDENCE TAKEN AT CAWNPORE.

Cawnpore Evidence.

SIR THOMAS SMITH, PRESIDENT, UPPER INDIA CHAMBER OF COMMERCE. (Vol. III., paras. 5830-5.)

In 1920 the average time taken in transport of goods between Calcutta and Cawnpore was 14–15 days, and between Bombay and Cawnpore about 24 days. It was observed that though in each specific case of delay some special reason might be adduced, the fact was that little traffic got through without encountering some special difficulty.

MR. SHAKESPEAR, MEMBER OF THE UPPER INDIA CHAMBER OF COMMERCE. (Vol. III., paras. 5835 and 5836.)

Mr. Shakespear observed that it was a common practice for railways to shut down acceptance of goods, perhaps for 10 days together, without even giving notice to the trade.

He had known of cases of thousands of tons of tobacco lying exposed to the weather and being damaged owing to the inability of the railways to transport it. The sugar industry had been much hampered by restrictions on bookings.

EVIDENCE TAKEN AT LAHORE.

MR. C. A. H. TOWNSEND, DIRECTOR OF AGRICULTURE, PUNJAB. (Vol. III., paras. 5955, 5957, 5961–4, 5956 and 5967.) Lahore Evidence.

Third-class passengers are undoubtedly overcrowded. It is specially noticeable in the more populous districts of the Punjab; so much so, that practically free fights take place between would-be passengers and those already travelling who do not desire others to get into the carriages. He observed that the railway staff maintain an air of majestic aloofness.

Something should be done to ensure greater consideration of the views of the Local Government. A case within his experience occurred some four years ago, when it was a matter of urgent necessity that cotton seed should be moved in time to permit of sowing. The matter was so urgent that the Punjab Government Financial Secretary interviewed the North-Western Railway Traffic Manager and Agent, but was told, although they were very sympathetic, they could do nothing, being bound by orders received from the Traffic Controller in the Railway Board's offices. The matter was so serious that the Lieut.-Governor wrote to Delhi, with the result that after a member of the Railway Board had visited Lahore it was ultimately set right.

Referring to instances of delays in the carriage of traffic offering, this had happened at all stations in the canal colonies and was especially noticeable in the winter and spring of 1918, during which period hundreds of bales of cotton lay about waiting for wagons.

In the case of the attempt to introduce Punjab-American cotton—a new variety of cotton which the Agricultural Department had been pushing during the past eight years—the management of the Empress Mills at Nagpur bought a fairly substantial quantity of this cotton in December 1917. In the following winter the witness happened to visit Nagpur and went over the mills. He asked the manager how he liked the Punjab-American cotton. His reply was, "We like it all right, but we are not going to buy any more" He gave as his reason the fact that the cotton bought in December 1917 had not reached Nagpur until July 1918, and they could not afford to have their money locked up in that manner. These mills had purchased no more Punjab-American cotton.

During the long period of delay the coverings of the bales had been torn off and it had been found difficult to identify the consignments. The cotton is going at present largely to Japan and is shipped from Karachi and Bombay. Experience was that it was easier to carry the goods to Karachi than to Nagpur.

Some 20,000 acres of land were under Punjab-American cotton last autumn where practically none had been grown before. In this case, the proprietors of cotton ginning factories some 100 miles away by rail purchased a large quantity of the cotton, one of them having bought about 40 wagon loads. When Mr. Townsend visited the locality about a fortnight ago the cotton was still lying in the goods stations and the merchant asked for his assistance in securing its transport, complaining that his money was locked up and, while the cotton lay at the stations, his ginning factories were unemployed. This merchant had refused to buy more cotton during the recent sales. The North-Western Railway Traffic Manager was written to but was unable to help owing to lack of coal, which in turn was ascribed to the shortage of railway transport facilities from the colliery.

Mr. Townsend said that the proprietor of a glass and flour mill factory at Ambala had told him that for want of coal he has occasionally to shut down his factory for two or three days.

Mr. Townsend mentioned that serious damage is caused to goods, lying unprotected from the weather, by rain, owing to the lack of adequate covered accommodation at the railway stations, especially on the Lahore-Karachi main line. Annually in the winter rains *toria*, a delicate grain, gets damaged by lying in the open yards.

In 1907 the heavy rains in May and June caught the congested accumulation of wheat on the colony stations and these were again rained upon in July and August. When it was finally moved, owing to the stench becoming intolerable, many firms found that they had lost all the bottom bags and sometimes two rows of bags. A special staff had to be employed to clear the stations of the rotten wheat, which was caked into the mud of the open goods yards and probably a cholera epidemic was only narrowly avoided.

Mr. Townsend said that he attached most importance at the present time to the lack of proper storage accommodation on the line serving the Montgomery colony, where the railway facilities are not keeping pace with its development, with the consequence that goods are damaged. The North-Western Railway Agent was anxious to help, but was hampered from want of funds.

Mr. Townsend said that the present time traffic can only be got through by special appeals and applications, instead of being accepted, as it should be, as a matter of course when offered.

MR. WATTS, MANAGER, BHUPENDRA FLOUR MILLS, BHATINDA. (Vol. III., paras. 5979 and 5986.)

During the past four years, through the inability of the North-Western Railway to handle their goods, the Bhupendra Flour Mills had on an average lost six working days in a month. This was largely due to the practice of the railway taking possession of coal sent to the mills with the consequence that the mills frequently ran short of it. The mills had recently been burned down, but just before that happened they were so short that they would have had to shut down altogether. The position was generally so bad that he asks for compensation to be made by actual replacement of the coal and not by paying a sum of money.

Mr. Watts said that on the North-Western Railway booking is at present closed for certain goods, including the classes of goods he turns out in his mills.

Bhatinda is capable of handling only one-third of the local traffic that offers there. From Bhatinda his mills could only send two-thirds of what they are capable of producing. The mills had at no time handled more than 65,000 maunds though they could deal with 100,000, and this fact gave them no encouragement to increase their capacity.

They made *besn* (a special wheat flour), and though prices for this are high in Bombay, could not take advantage of them as the railway could not carry the maximum quantity they could

produce. Without further extension the mills could double the output—if there were greater railway facilities more could be manufactured and thus the price to the poorer Hindu population would be reduced.

LALA MULK RAJ BHALLA, PUNJAB CO-OPERATIVE BANK. (Vol. III., paras. 6000 and 6001.)

Overcrowding is serious in all classes on the railway, excepting the first class. He had travelled, in one case, in a second-class compartment which was so crowded that he wanted to leave it to change his ticket and get into the first class, but had been unable to get out owing to the crush in the carriage.

Goods wagons are used for passengers on many branches, quite apart from special conditions of pressure due to pilgrimage traffic.

SETH PRABHU DAYAL, MILLOWNER OF MULTAN. (Vol. III., paras. 6010-13, and 6022.)

The position is very serious as instanced by the fact that for the past month not a single wagon load has been carried from any station in the Multan district and two or three other districts. His factory at Gojra has had to close down on account of shortage of coal.

A fortnight hence the cotton sowing season will commence, and at present the seed is lying at stations waiting to go to its destination; sometimes bags of seed rot while waiting for transport and become completely useless.

Mr. Scott, the Director of Industries, had recently induced the Agent of the North-Western Railway to supply 200 wagons daily to take pressed cotton to Karachi. The North-Western Railway would take it only to Karachi and not allow transport off its own line. It goes ultimately from Karachi to Bombay by sea. As merchants make forward contracts they lose heavily owing to their inability to deliver to time.

The position is that, whether it is a matter of transporting seed to growers, cotton to presses, coal to the factories or pressed cotton to the consumers, blocks constantly occur everywhere on the railways.

As an example of the ill-effects of the uncertainty with regard to wagon supply the witness's factory at Gojra, which is now working, will be closed next week for want of trucks for coal or wood fuel, as loading in several districts on the North-Western Railway is stopped—cotton worth lakhs of rupees is lying in the factory compound.

MR. BOALTH, TRAFFIC MANAGER, NORTH-WESTERN RAILWAY. (Vol. III., para. 6014.)

For the last month there has been an absolute stoppage in the matter of carriage of goods, and from the 29th January onwards the orders were to stop all booking, the coal situation being critical.

MR. SCOTT, DIRECTOR OF INDUSTRIES, PUNJAB. (Vol. III., paras. 6047, 6049 and 6050.)

The witness cited the following merely as examples :—

On the main line in the Lahore district speed was reduced to 25 miles an hour due to bad sleepers.

Owing to bad track speed was restricted to 5 miles an hour for down trains entering "A" platform from Lahore and Kasur side at Amritsar.

In Saharanpur district the speed of trains was restricted to 10 miles an hour because of a defect in the masonry of a bridge.

In Lyallpur district the speed of all trains was restricted to 20 miles an hour, and the running of heavy class engines on the section stopped.

With regard to traffic restrictions the public are at the mercy of the railway staff, as it is impossible for them to familiarise themselves with all the details.

It is quite reasonable to give preference to the movement of foodstuffs; it is not necessarily reasonable to restrict traffic in materials, upon which a man may be dependent for his livelihood and without which he cannot purchase the foodstuffs for his use, *e.g.*, if undue restrictions were imposed on the carriage of cotton, factories would close down, resulting in a large force of labour being thrown out of work and deprived of the means wherewith to buy their food.

MR. BANFIELD, PUNJAB TRADES ASSOCIATION. (Vol. III., para. 6071.)

Referring to parcels sent by passenger train, he did not think that more than 10 per cent. of the traffic from Howrah gets through to Lahore (1176 miles) in the 2½ days which might reasonably be allowed for its transport by ordinary passenger trains. Normally it takes from three to eight days. In many cases it takes much longer.

It had taken 31 days for 195 cases of whisky to be transported from Karachi to Lahore, about March 1920.

MR. HADOW, AGENT, AND OTHER REPRESENTATIVES OF THE NORTH-WESTERN RAILWAY. (Vol. III., paras. 6131, 6180 and 6189.)

Wagon shortage is due not to shortage of rolling-stock, but to the lack of facilities for moving it. The North-Western Railway is badly off in the matter of station facilities; if he had money he would use it to improve these.

The railway representatives were invited to discuss the following note, which had been given by the Director of Agriculture to the Committee :—

"On 27th February 1921 I saw 40 camels taking unginned cotton from Chichawatni to Montgomery, 25 miles, moving parallel with the railway to the Japan Company's ginning factory at Montgomery.

"This was done as cotton could not be booked by rail.

"They were being paid 7 annas per maund for this. It would be interesting to see how this compares with railway freight for that distance. If in excess, it is waste which somebody must pay for—the railway there is working nothing like up to its maximum capacity."

Mr. Boalth said that the rail freight would have been about two annas a maund, and admitted that unginned cotton had been refused owing to the difficulty of moving this kind of traffic on account of shortage of coal. Mr. Hadow mentioned the railway is so deficient of facilities that it could not move everything it would wish to carry.

There had been great delay in doubling the line between Rohri and Kotri, a length of about 200 miles. The work was begun in 1913 and had been completed only a few months ago. Equally serious delays had occurred in the strengthening of bridges, due to difficulty of obtaining material.

LALA KASHI RAM, SUTLEJ FLOUR MILLS, FEROZEPORE. (Vol. III., paras. 6146 and 6149.)

The witness laid stress upon the overcrowding of passengers in the third-class carriages and in women's compartments.

His firm had suffered heavily from stoppage of bookings, sometimes for months together. It would not help him to tell the purchaser of his goods that the railway to which he consigned them refused to carry them. He is bound to pay compensation, and yet has no claim against the railway.

EVIDENCE TAKEN AT DELHI.

MR. COLLINS, DIRECTOR OF INDUSTRIES, BIHAR AND ORISSA. (Vol. III., paras. 6361, 6363 and 6378.) Delhi Evidence.

The country in general, and Bihar and Orissa in particular, is suffering for lack of railways and railway development.

As a result of the lack of coal which has been brought about by the present unsatisfactory railway transport conditions, oil seed crushing mills in Bihar and Orissa are in difficulties. Some of them use wood and some even had to close down altogether. He had received a letter from the management of a mill at Katihar complaining that they had been unable to get coal for three weeks and had to stop work. He furnished the Committee with copy of a letter, said to be typical of several others received, from which the following is an extract :—" . . . in " Bhagalpur last rains, I found that of four or five oil mills there, one was closed down and three " others were only being kept going by the use of wood as fuel."

He had lately heard that a copper smelting works and refinery at Rakha near Jamshedpur had closed down for about a fortnight for the same reason.

No single concern is getting all the coal it would like, many do not get the minimum they require, while all live in a constant state of apprehension of failure of supplies. Mr. Collins said that coal supply had always been bad, and though the situation varies from time to time it is only a question of the relative degree of badness.

If coal companies could be sure of wagon supply they would put in labour-saving devices such as electric cutters and increase the output.

THE HON. SIR MANECKJEE DADABHOY, MEMBER OF THE COUNCIL OF STATE. (Vol. III., paras. 6496, 6497 and 6499.)

Delays up to six weeks or two months are not uncommon.

At the present moment large quantities of manganese are awaiting shipment because they cannot be moved to Bombay, the position being that there is plenty of manganese available, plenty of shipping at the port, and a good market in the United Kingdom; but the business is hampered by the impossibility of getting wagons to convey the material from the Central Provinces to the port. 40 per cent. more manganese might be despatched but for the shortage of railway facilities.

REPRESENTATIVES OF THE MUNICIPALITY OF KARACHI. (Vol. III., para. 6592.)

The inadequacy of funds for railway purposes in the past has been so obvious that the answer to the enquiry on this point in the questionnaire was a foregone conclusion. Funds have been inadequate all round. No railway extensions should be undertaken until open lines have been put in order.

EVIDENCE TAKEN IN LONDON.

SIR JOHN HEWETT, LATE LIEUTENANT-GOVERNOR OF THE UNITED PROVINCES. (Vol. II., paras. 8423 and 8441 ; *see* also note on page 266.) London Evidence.

Sir John Hewett placed at the disposal of the Committee copy of a letter, dated the 13th July 1912, from the Government of the United Provinces to the Government of India, from which the following extracts are quoted :—

" I am directed to address you regarding the congested state of traffic on railways which has caused, and is continuing to cause, immense loss to the agricultural and trading communities in this province and has also seriously affected the administration of forests.

* * * * *

" 2. From enquiries which have been made it appears that the block first became noticeable in December 1911, when all goods traffic passing from the Bengal and North-Western Railway *viâ* Anwarganj (Cawnpore) to the Bombay, Baroda and Central India Railway was stopped for four days. In January 1912 also bookings by this route were much restricted, while the transfer of goods from the Bengal and North-Western Railway at Bara Banki for broad gauge lines was still more hampered. Owing to the accumulation of metre gauge wagons at that station, the contents of which could not be taken over, the Bengal and North-Western Railway was compelled to suspend all bookings on its line for Bara Banki from 11th January to 23rd January, and again from 1st February to 14th February, and 18th February to 7th March.

* * * * *

"3. From the statement made by the President, Railway Board, in the Legislative Council of the Governor General on 8th March 1912, it would appear that the causes of the block are the want of facilities at ports, the incapacity of various lines leading to the ports, and the coincidence of a large export trade, a congestion in coal traffic and a special press of traffic in connection with the supply of grain and fodder to the tract in Western India affected by famine.

* * * * *

"On 1st March the quantity of grain lying at railway stations on the Bengal and North-Western Railway in a single district (Gonda) amounted to 132,922 maunds, while 87,586 maunds were awaiting despatch in bazars close by. In the middle of April the Deputy Commissioner of Kheri saw hundreds of bags of maize which had been lying on a station platform exposed to the weather since December and January. The bags had rotted and could not be lifted. The maize was musty, badly attacked by weevils and probably unfit for human food. In March last the Lieutenant-Governor himself saw considerable accumulations of jagri at the goods station of the Rohilkund and Kumaon Railway Company at Bareilly which had been lying there for a long time intended for despatch to Rajputana by the Jodhpur-Bikaner line, but detained at Bareilly because it could not be booked beyond Kashganj. This jagri had nearly all been spoilt and become unfit for consumption. There was at one time some danger of a failure in the supply of coal for the large municipal waterworks, only averted by a direct appeal to the railway authorities, who were able to spare sufficient to keep the engines going. The collection of metal for road repairs has been much delayed, and the trade in timber and bamboos has been seriously hampered.

* * * * *

"The Lieutenant-Governor has made an enquiry as to the amount of produce awaiting despatch at railway stations on 15th June and lying in bazars close to stations. The results of this are shown in the two statements, copies of which are attached, showing the amount of produce by civil divisions and by railways. They show that the weight of grain alone at stations on that date was 3,800,000 maunds or nearly 140,000 tons. In bazars the amount exceeded 5½ million maunds or 200,000 tons. According to the latest information received there has been some improvement, but this is mainly due to the fact that owing to the weakness of the monsoon there has been a tendency to hold up the new crop. This will no doubt be counteracted by the news in the telegram issued by the Meteorological Department on 11th July that monsoon conditions have now extended over practically the whole country. And that congestion still exists is shown by a report from the Commissioner, Jhansi, dated 8th July, which states that at Kalpi in the Jalaun district 173,500 bags, each containing two maunds of grain, were actually counted, chiefly in the bazar.

"5. His Honour wishes to lay stress on the fact that in spite of the special circumstances referred to in para. 3 the traffic offering in the present year is a fair guide to what may be expected in the future.

* * * * *

"The province has now (1912) recovered from the effects of the three bad seasons 1905–6 to 1907–8. Fresh markets have been opened, and there is a greater demand for the export of certain kinds of produce. The cultivation in the submontane tracts is extending, especially in the large areas lying between our boundaries and the Nepal hills. The Lieutenant-Governor anticipates that, given good seasons, the demands on the railways are not likely to be less in future years than in the present one.

* * * * *

"I am to draw special attention to the statistics of gur (raw sugar). Nearly 45,000 maunds of this article were lying at stations on 15th June, while 188,000 more (including sugar) were waiting in bazars. The problem of improving the condition of the sugar industry is engaging the earnest attention of the Government of India and of Local Governments. In the Gorakhpur district the difficulties of disposing of the produce was so great that cane was actually grazed by cattle this year to avoid the expense of cutting and manufacturing. The Lieutenant-Governor has under consideration projects to assist the foundation of a modern factory in that district, and to establish there a farm for the propagation and distribution of improved canes. But such projects will fail at the outset if railways are unable to provide the necessary facilities for export to Western India, which is the chief market."

Embargoes on traffic.

26. The meaning, in daily experience, of such defects as these, extending over a series of years, will be more fully appreciated from a perusal of the statement given in Appendix No. 1 of the traffic restrictions in force on the principal railways on the 1st April 1921. There were scores of embargoes all over the country, affecting all classes of traffic, and many of them of long standing. The Committee, of course, recognise that some of the restrictions enumerated exist for reasons other than the inadequacy of railway equipment, but the greater number, and the most important, of them are unquestionably due to the absence or inadequacy of facilities and rolling-stock—the result of insufficiency of funds. We quote the following examples as being specially noteworthy :—

Burma Railways.—There is a general shortage of stock and consequent difficulty in meeting demands for wagons.

East Indian Railway.—The acceptance of all goods traffic was suspended from the 24th March 1921 to stations on the Bengal and North-Western Railway *vid* Mokameh Ghat, and from the 29th March 1911 to the Oudh and Rohilkhand Railway *vid* Moghal Serai.

Bengal-Nagpur Railway.—Capacity is inadequate in general, both as regards rolling-stock and other facilities.

South Indian Railway.—There are 11 specific restrictions in traffic, *viâ* the principal junctions, affecting both local and through traffic.

Great Indian Peninsula Railway.—Inwards traffic from the East Indian ; Bengal-Nagpur ; Bombay, Baroda and Central India ; Madras and Southern Mahratta ; Nizam's Guaranteed State ; and other railways is restricted at 15 junctions to from 600 to 30 wagons daily. Local traffic is also severely restricted.

Bombay, Baroda and Central India Railway.—Numerous restrictions are specifically ascribed to such causes as want of transhipment facilities ; insufficient locomotive power ; and paucity of wagons.

Jodhpur Bikaner Railway.—Traffic *viâ* Kuchaman Road is limited to one-half of what could be accepted were it not for the coal shortage.

North-Western Railway.—To accommodate the passenger traffic offering it would be necessary to run four additional mail trains and 55 additional passenger trains on various sections. The existing restrictions are due chiefly to a shortage of coaching stock.

Conditions described neither new nor local.

27. It will be remarked that the evidence summarised in this chapter relates to the railways of the north equally with those of the south, of the east as of the west ; that the tale of inability to cope with the traffic relates alike to lines managed through companies and those directly administered by the State ; and that many of the complaints made date from long before the war period, though they have naturally been intensified by the abnormal conditions of recent years.[1] (Congestion at some time or at some place is a commonplace of railway management in every part of the globe. But in India for years past it has recurred each season ; it has now become normal and will become permanent unless bold measures are taken to deal with the situation.)

[1] It is fair to say that during the war the congestion has been heightened by the transfer of coal traffic from water carriage to the railways. In the pre-war year 1913–14 the freight ton mileage of goods traffic was approximately 15,623 millions. In 1918–19 the figure had risen to 22,140 millions, representing an increase of 42 per cent. For coal alone the ton mileage increased during the same period from 5,203 millions to 9,987 millions or by 92 per cent., and the carriage of coal monopolised practically one-half of the broad gauge stock. This sudden and unexpected increase in the coal traffic was largely due to the complete cessation of coastal shipping services.

CHAPTER III.

Finance and Financial Control.

Demand for financial reform.

28. The defects mentioned in the last chapter are due primarily to the failure of Government to provide the railways with adequate funds for capital expenditure on development and extensions, and even for the essential operations of renewal and repairs. They are the inevitable results of a paralysing system which has not been adapted and developed to meet the requirements of what is essentially a commercial enterprise of the first magnitude.

29. As to the necessity for great financial reforms, the evidence placed before the Committee is practically unanimous.

30. Witness after witness told us that the present financial methods need drastic revision, and that the basis of the reform is the complete separation of the railway budget, in respect both of capital and revenue, from the general budget of the country. The Associated Chambers of Commerce of India and Ceylon expressed the general opinion in the following resolution, which they passed at their annual meeting held in Calcutta on the 24th and 25th January 1921 :—

> "That this Association is strongly of opinion that the present method of financing the annual capital expenditure programme of railways in this country, and the general system of control exercised by Government over their administration, are in urgent need of revision and reform. This Conference further considers that, as an essential condition precedent to such reform, immediate steps should be taken to render the railway administrations independent of the provisions of the general budget and to secure for them a separate budget of their own."

31. This resolution under both its heads embodies conclusions at which we have independently and unanimously arrived. To explain our reasons, it is necessary to describe the system that has hitherto prevailed and the results to which it has led.

Description of present methods.

32. The financial methods of the Government of India are closely modelled on their English prototype. The English Government, as is well known, does not present a balance-sheet comparable to that of an ordinary business. The Budget is merely what an accountant would call a cash statement. It is on the one side a summary of the actual money received, and, on the other side, of the actual money paid out, during the financial year. It takes no account of monies receivable on the one hand nor of accounts due on the other in respect of transactions closed within the current year. Further, the Budget appropriates to each Department of Government a certain sum ; and whatever portion of this appropriation is not spent within the year automatically lapses, and the power of the Department to spend only arises afresh when a new appropriation for the ensuing year is made. We need hardly emphasise the difference between this system and the methods of a commercial company, which takes stock of the position year by year in its revenue account and balance-sheet. A company treats its business as a continuously going concern with a carefully thought out programme, both of revenue and capital expenditure, for years ahead, and with provisional financial arrangements calculated to correspond.

33. The total Budget receipts of the Indian Government for the year just closed, leaving out railways, were in round figures 180 crores[1] of rupees ; the revenue receipts of the railways were Rs. 82 crores. In other words, the railway receipts were nearly half as large as all the other items of receipts in the Budget put together. And while the receipts from ordinary taxation vary only slightly and slowly from year to year—unless of course old taxes are reduced or abolished or new taxes imposed, the effect of which is readily calculable in advance—railway receipts vary abruptly from time to time in accordance with harvest results and trade fluctuations. And alongside of the increase or decrease in traffic which the gross earnings connote, comes usually a smaller expansion or contraction of working

[1] One hundred thousand rupees (written Rs. 1,00,000) = one lakh. Ten million rupees (written Rs. 1,00,00,000) = 100 lakhs = 1 crore. The rupee par of exchange was till the war 1*s.* 4*d.*, *i.e.*, Rs. 1 lakh equalled 6,666*l.* ; Rs. 1 crore equalled 666,000*l.* In 1919 the exchange value of the rupee ran up at one time as high as 2*s.* 11*d.* At the time of writing it is about 1*s.* 3½*d.* For the purpose of this year's Budget the Indian Government is assuming the figure of 1*s.* 8*d.*

expenses. Consequently the railway net receipts, *i.e.*, the money left after paying working expenses, fluctuate from year to year. The following table shows the gross receipts, working expenses, and net receipts of the Indian railways back to the year before the war:—

Table showing Gross Receipts, Working Expenses and Net Receipts—State Railways (worked by the State and by Companies).

	Gross receipts.	Working expenses.	Net receipts.
	Rs. crores	Rs. crores	Rs. crores
1913–14 - -	56·32	29·36	26·96
1914–15 - -	54·16	29·53	24·63
1915–16 - -	57·26	29·53	27·73
1916–17 - -	62·95	29·97	32·98
1917–18 - -	68·92	31·36	37·56
1918–19 - -	76·26	37·08	39·18
1919–20 - -	79·06	45·52	33·54
1920–21 (estimate) -	81·32	54·22	27·10
1921–22 (estimate) -	87·06	58·70	28·36

34. Now, it is the prime duty of the Indian Chancellor of the Exchequer, the Finance Member of Council, to balance his Budget. In times of bad harvests and bad trade receipts fall off. The Finance Member is constrained to economise. He cannot reduce the army or the civil services wholesale at short notice. Nor can he refuse to pay railway wages or to provide currently consumable stores. He can and does curtail his appropriation to railways for renewals and betterment works. And he cuts down still more drastically expenditure on new works and extensions, even though they may be in process of execution. The Mackay Committee of 1907 considered that the Government should fix periodically a standard of annual capital expenditure which at that time they thought might be taken as 12,500,000*l.* = Rs. 18·75 crores,[1] and they laid stress on the desirability of Government adopting a steady annual rate of expenditure which they might reasonably hope to maintain even in times of difficulty. In practice the Government did not see their way either to attain the modest standard recommended by the Committee, or to adhere over a series of years to any uniform rate, as is seen from the following figures at which the capital programmes from 1908–09 were fixed:—

Year.	Capital programme.	Year.	Capital programme.	Year.	Capital programme.
	Rs. crores.		Rs. crores.		Rs. crores.
1908–09 -	15·00	1913–14 -	18·00	1918–19 -	6·30
1909–10 -	15·00	1914–15 -	18·00	1919–20 -	26·55
1910–11 -	16·30	1915–16 -	12·00	1920–21 -	21·98
1911–12 -	14·25	1916–17 -	4·50	1921–22 -	17·82[2]
1912–13 -	13·50	1917–18 -	5·40		

35. It was of course inevitable that the outbreak of the war should lead to a stoppage of railway development, but the failure to which we refer to carry into effect either of the recommendations of the Mackay Committee is sufficiently obvious from the figures prior to 1915–16.

The system of "allotments."

36. The effect of this policy of inadequate allotments, varying irregularly up and down from year to year, would have been bad enough in any case. But it is made worse when, as not infrequently happens, the allotment is suddenly cut down during the currency of the year to which it relates, and works in progress are suspended, staff are disbanded at a moment's notice, and materials are left lying on the ground for an indefinite period. An almost equally bad effect is produced when late on in the year, the general financial position having unexpectedly improved, the Finance Member with equal suddenness lifts his hand and thus encourages the railways to spend more freely. For then, in fear of the guillotine of "lapse" which must descend on 31st March, in eager haste the railway officials start to spend, with inadequate staff and hurriedly collected materials, the money unexpectedly thrust upon them.

[1] The evidence of Lord Inchcape before us in London is interesting in this connection:—

"What we would have liked to have done would have been to have spent not 12,500,000*l.*—Abrahams cut me down, you will remember, he was the Financial Secretary here—we would like to have spent 20,000,000*l.* if we had had our way. I did not like to press him too much, he was more or less responsible as Financial Secretary to the Secretary of State."

[2] Includes a sum of Rs. 2·82 crores to cover loss by exchange.

Its practical effect.

37. A good instance of the unbusinesslike system of doling out funds for railw capital purposes, as and when there is a little money to spare, is afforded by a let sent by the Railway Board to the Great Indian Peninsula Railway Company December 1920. It runs as follows:—

> "I am directed to inform you that five lakhs have been allotted in the six months' estimates w a view to making a commencement on the construction of the Warora-Pisgaon Railway from M to Rajur. I am to request that you will make arrangements for construction to proceed as quic as possible with preliminaries up to the limit of this allotment. There is no expectation at pres of any money being available for this line in next year and work may have to be tempora suspended."

Our attention was drawn by the Company's Agent (*see* Volume III., para. 52 to the unreasonableness of thus granting money a few months before the end of t year, when there was too little time to spend it advantageously; and to the unwisd of proposing the commencement of a railway when the prospects of being able continue it were so uncertain.[1]

38. Another example on a larger scale is afforded by the history of t Itarsi-Nagpur Railway. This line is 238 miles in length; it presents no seric engineering difficulties; and its importance as a new connection from nor to south is not disputed. Its construction was begun in 1908. It is not y completed. Apparently construction was about half finished in the six years befc the war; even during the war it was not wholly suspended, and since the war has been taken up again. For the current year an allotment of Rs. 10 lakhs, 66,000*l.*, has been made. We were given to understand that, if everything went w and allotments continued to be made as at present the line would be opened t through traffic in 1925 or 1926, 17 or 18 years after construction was begun. T total cost of the line will then be Rs. 4¾ crores out of which Rs. 3¼ crores will be actual construction and Rs. 1½ crores for interest on the capital which lay idle wh the line was still under construction.

39. We need not here enlarge further upon the practical effect which the pres system of financial control has produced. The evidence which we have summaris in Chapter II. is sufficient. We now proceed to describe in detail the mechani through which this control operates.

40. The administration of each railway, whether worked by the State or by Guaranteed Company, submits each year to the controlling authority, the Railw Board, two sets of statements. These overlap and are to some extent combined the same printed documents, but can best be considered separately.

"Programmes."

41. First there is a statement relating both to "Programme" Capital Expenditu and "Programme" or "Special" Revenue Expenditure which the Agent of ea railway is required to submit to the Railway Board in or about the month of Ju in each year. This is known as the "July Forecast." It is a provisional combinati of the two programmes, and sets out the amount the Agent desires to have allotted him for expenditure on renewals, betterments, additions and extensions during t year commencing on the following 1st of April. This statement has to speci separately all works estimated to cost more than Rs. 25,000 (say 1,650*l.*).

42. Nominally, this "Programme" deals not only with the ensuing year, but wi the two years next following it. But the figures for the latter years are practica meaningless. The Agent has not attempted to make them accurate, for he kno that circumstances over which he has no control will entirely alter conditions befo his forecast can possibly take effect. This system of forecasting for three years ahe was introduced in 1904. It was in the direction of an improvement evident desirable. At that time people were sanguine enough to imagine that

[1] Compare also the evidence of Mr. Nolan, Acting Agent, Assam Bengal Railway, who, referring the inadequate provisional allotment of Rs. 25 lakhs to his line for capital expenditure in 1921–22, s that in consequence of this he had had to cancel many of his requisitions for stores and had telegraph to his Board of Directors to cancel certain contracts if possible. One result would be that a Rs. 43 lakhs worth of rolling-stock materials from England would lie idle for want of about Rs. 8 la for the cost of erection in India. (Para. 4569, Vol. III.)

Colonel Cameron, Agent of the Eastern Bengal Railway, gave similar evidence. He observed t dependence on the general financial position of Government from year to year causes embarrassm money sometimes not being available when required and at other times being extravagantly expende a rush to avoid a lapse. He told the Committee that at the time of his evidence there was a cer amount of rolling-stock due for replacement, a number of engines had been ordered from home, but ow to the difficulty of financing the payment for them he had suggested their being transferred elsewh (Paras. 3885 and 3959, Vol. III.)

would be possible to secure some continuity in Indian railway financial policy under the existing system. That hope having been subsequently abandoned, the second and third year forecasts, though the figures still continue to be inserted in order to comply with regulations, are treated by both sides as negligible. The Railway Board ignores them; and we need not refer to them further.

43. The Programme of which the July Forecasts may be regarded as the first edition deals with an expenditure a part of which is for renewals, a part for betterments, and a part for additions and extensions. It is in the main a programme of capital expenditure, but is, in fact, a programme in which Revenue and Capital expenditure are closely associated. If 10 miles of 75 lb. rail is taken up and replaced with new 75 lb. rail, the whole is obviously a charge on Revenue. If, on the other hand, when the 75 lb. rails are taken up, they are replaced with new 90 lb. rails, the extra weight of rail, being an addition to the assets of the undertaking, is—from the strict accountant's point of view—a legitimate charge to Capital. If an engine or a carriage or a wagon is replaced by a similar one, the whole cost is chargeable to Revenue. If a more powerful engine, or a larger vehicle, is provided in substitution, the cost of the extra tractive power, or the greater capacity, can be legitimately debited to Capital.

44. We now return to the history of the July Forecast as submitted by the Agent. It by no means represents all the money which he thinks he ought to spend on his railway in the coming year, though it will certainly represent a larger sum than, judging by previous experience, he has any hope of getting. The Agent's demand is kept down not only by his feeling that it is useless to ask for the unattainable, but also by his knowledge that, in default of a settled programme of uninterrupted construction resting on secured finance, his power of spending is restricted to that with which his existing engineering organisation can cope.

Their various stages.

45. Shortly after sending in his Forecast in July each Agent follows it to Government headquarters and discusses it with the Railway Board. In these discussions the Railway Board arrives at a preliminary agreement with each Agent as to the sums which might reasonably be allotted to him for expenditure in the ensuing financial year on (*a*) *Capital Account* (this includes the whole cost of new works, and such portion of the cost of substitutions or replacements as represents betterments and additions); and (*b*) *Revenue (Programme) Account* (this includes so much of the cost of such works of renewals and replacements as is chargeable to Revenue, but excludes all revenue expenditure of the nature of wages, current working expenses and ordinary day-to-day repairs).

46. The Railway Board, having before it all the Forecasts as amended—the amendment is always in one direction, downwards—in these discussions, is now in a position to add them up, and to place before the Finance Department the consolidated estimate of the railways' Capital and (Programme) Revenue requirements, and to ascertain to what extent the Finance Member considers himself likely to be in a position to supply the requisite funds in the ensuing year.[1]

47. The Railway Board, having found, let us say, that the Agents' total demands reach Rs. 30 crores for Capital and Rs. 11 crores for (Programme) Revenue Expenditure; having itself in discussion with the respective Agents reduced the figure, to say, Rs. 28 crores and Rs. 10 crores respectively; and being advised that the Finance Department is not likely to find more than Rs. 20 crores for Capital and Rs. 8 crores for (Programme) Revenue Expenditure, again re-examines the Forecasts and thereupon intimates to each Agent, about the month of August, the extent to which it now hopes to be able to meet his requirements, and instructs him to revise his programme of works on this basis.[2]

---

[1] We are describing the procedure now in force. The Railway Board informed us that the practice prior to 1920–21 was to inform the Finance Department of the total demand by railways before details had been scrutinized, and subsequently to go through the programmes and reduce them to the limits prescribed.

[2] We endeavoured to ascertain whether each Agent's demands suffered a *pro rata* reduction, or whether, on the other hand, priority was conceded as between one undertaking and another for the most urgent works. We were told by well-informed witnesses that, if a community is more than usually clamorous, if a district is easily accessible from Delhi, or even if an Agent is more than usually persuasive, that community, district, or Agent tends to get an unfair share at the expense of the others. The members of the Railway Board, on the other hand, were of opinion that, as in fact no project ever reaches the stage of having a prospect of money forthcoming for it till it has been discussed and re-discussed for a long series of years, they were in a position to decide with reasonable certainty as to the respective urgencies of priority. In view of the Railway Board's lack of machinery to keep them in touch with local conditions, a point with which we deal at length elsewhere, we think their opinion errs on the side of optimism.

48. A consolidated triennial railway programme of capital expenditure is at this stage compiled by the Railway Board, by combining the accepted portion of the programme for new works with the Capital figures associated with the Programme Revenue Expenditure. It is submitted to the Secretary of State for his approval by the Government of India under cover of a Despatch, sent by mail usually in November, in which they explain the considerations which have influenced them in determining the total amount, and in which they set out their proposals for financing the proposed expenditure.

49. Subject to any special modification which the circumstances of the particular year may necessitate, the programme is usually approved by him, and the figures in it are thereafter in due course incorporated in the regular budget documents. As soon as the Secretary of State's cabled approval has been received, the Railway Board communicates to each railway Agent the Provisional Grant, that is the sum which he may expect to have placed at his disposal in the ensuing financial year. It will be observed that this grant is provisional only; that it is made about four months before the commencement of the financial year to which alone it applies; and that money allotted for expenditure, as we have said, "lapses" at the end of the year for which it is granted. But important works, renewal of bridges, doubling or electrification of lines, remodelling of stations, &c., cannot possibly be completed within the year; and rolling stock, and especially locomotives, ordered in England, particularly where new designs and working drawings have to be got out, can hardly be delivered within the same period.[1]

The final grant.

50. Finally, in the last week of March, a few days before the new financial year begins, the Capital Grant, also called the Final Allotment, for that year is definitely made to each railway. The grant may or may not be the same as the provisional grant of the previous December. It may be expected to differ very substantially from the preliminary verbal agreement with the Railway Board in the autumn, and to have even slighter connection with the Agent's forecast of his actual requirements made in the previous July.

51. We give in tabular form the various stages of the process in respect of the Capital Grant for the year now current as well, for comparison, as for a pre-war year. It should be premised that the Agents had been warned at an early stage that the amount of capital available during the year 1921–22 was likely to be very seriously restricted, and that therefore their demands as set forth in the July Forecasts were already restricted to what each regarded as absolutely essential:—

——	Year 1913–14.	Year 1921–22.
	Rs.	Rs.
Amount asked for by railways in the forecasts submitted in July of the previous year.	19,98,38,000	35,70,00,000
Amount approved by the Railway Board, in August - -	19,98,38,000	28,00,00,000
Amount provisionally accepted by the Finance Department, in August.	18,75,00,000	12,00,00,000
Budget Allotment (end March) - - - - -	18,00,00,000	17,82,00,000[2]

52. On receipt of the final allotment each railway draws up the "final issue" of the Budget estimate, showing in detail each work individually costing over Rs. 25,000 (say 1,650*l.*) and submits it to the Railway Board in the course of the following month.

Revenue estimates.

53. The Preliminary Revenue Estimates for the ensuing financial year are not submitted by the Agents till about November of each year; they comprise forecasts of the probable receipts from traffic under various heads and of the probable expenditure which will be necessary to earn them. Salaries and wages, consumable stores, and day-to-day repairs are the main items of what are usually called the "ordinary working expenses," and to these is added the figure which, as will be seen from the previous pages, has independently been accepted as the

[1] In the case of expenditure in England there has grown up an elaborate system of "advance indents," in effect orders for goods which it is expected will not be delivered and be paid for until the grant for the succeeding year has been determined. This system we do not think it necessary to discuss in detail.

[2] It will be observed that in the figures for the current financial year the budget grant is considerably greater than the amount at first provisionally approved by the Finance Department. In the interval some railway agents had protested that it would be impossible for them to carry on without more money.

probable grant on account of "Special" Revenue Expenditure. This estimate, dealing as it does mainly with figures of receipts and expenditure that necessarily continue year after year, is normally accepted without much discussion by the Railway Board. The combined revenue estimates of all the railways are then forwarded to the Finance Department in December for inclusion in the Budget. On the basis of the estimates thus submitted the final budget orders are issued at the end of March annually. Each railway administration has thereupon to prepare and submit detailed and voluminous "Establishment and Authorisation Rolls" covering the whole of the expenditure chargeable to revenue, in agreement with the grants thus fixed for what has now become the current financial year. It has been made ground of complaint that the Finance Department sometimes alters the revenue estimates when submitted to it. The reply is, we think, adequate: that the officials of the Finance Department, with their long experience, their access to past records and to statistics and information obtained from many quarters and in many ways, are able to make a better estimate of future probabilities than any individual railway Agent. We do not think the existing practice in this matter, except that an unnecessary amount of detail is required, is any hindrance to efficient railway management. After all, the Finance Department only calls for revenue estimates such as would naturally be prepared for the use of the governing body in any commercial concern.

54. Apart from the successive stages of discussion and estimating already indicated, there are frequent revisions and reviews of the figures and estimates, which are necessitated mainly by the inclusion of the railway figures in the general budget of the country. The grants intimated to the railways at the end of March, that is just before the commencement of the year to which they relate, are far from being "final" except in name. Changes are frequent throughout the year; they are sometimes necessitated by developments in the railway position which lead to increased demands which could not have been foreseen, or to surrenders of funds which for one reason or another it has proved impracticable to spend advantageously within the period covered by the grant. But they are also occasioned by considerations of a quite extraneous nature; grants may be cut down during the year because the Finance Department has to meet increased demands from other departments, or they may be increased unexpectedly at a late stage in the year because of some unforeseen windfall.[1]

The system of "lapse."

55. The question of "lapse" was fully discussed by the Mackay Committee in 1908. They came to the conclusion that the objections taken to the system were largely due to misconception. They pointed out that, if to a certain railway there had been allotted during a given financial year the sum of, say, Rs. 100 lakhs for improvements and extensions, and of that sum only 80 lakhs had actually been spent, technically the 20 lakhs would lapse. But they thought that the resources of the Government of India at the opening of the new year would have been increased by this 20 lakhs surplus from the preceding year, and that they would thus be able to allot to the railway for the ensuing year 20 lakhs more than they otherwise could have supplied. The reply is obvious, not only in theory, but on the basis of actual experience: the 20 lakhs may be re-allotted to the same railway, or may be allotted to another railway, or may not be allotted to railways at all.

56. The Mackay Committee accepted the system of lapse as unavoidable, summing up the whole case in these words:—"The whole arrangement works back to the "fundamental principle that the Government of India provides as much money in "each year as it possibly can, all things considered, for expenditure on railways, "and distributes that money in the way which it conceives to be most advantageous "for the country as a whole."

57. If the matter were purely one of finance we should hesitate to disagree with the opinion of so authoritative a Committee. But we would observe that the Mackay Committee was appointed to report not on Indian Railways, but on Indian Railway Finance and Administration: and that it did not include among its members anyone with experience of practical railway management.

Need for radical reform of system.

58. In the circumstances it is perhaps permissible to say that the Committee was appointed to consider, and did in fact consider, not so much what form of financial administration was best adapted to the needs of a great commercial enterprise, as

[1] We can hardly expect that this necessarily brief summary of an extraordinarily complicated system will be sufficient for readers who desire to understand it fully. A valuable and exhaustive statement, marked Statement No. 57, furnished to us by Major-General Sir Henry Freeland, Agent of the Bombay, Baroda and Central India Railway, and formerly a temporary member of the Railway Board, will be found at page 197 in Vol. IV.

how best railway management could be fitted into the rigid framework of the existing financial system of the Government of India. We have said that we do not believe that it is possible so to fit it. We do not think that the Indian railways can be modernised, improved and enlarged, so as to give to India the service of which it is in crying need at the moment, nor that the railways can yield to the Indian public the financial return which they are entitled to expect from so valuable a property, until the whole financial methods are radically reformed. And the essence of this reform is contained in two things: (1) the complete separation of the Railway Budget from the general Budget of the country, and its reconstruction in a form which frees a great commercial business from the trammels of a system which assumes that the concern goes out of business on each 31st of March and recommences *de novo* on the 1st of April; and (2) the emancipation of the railway management from the control of the Finance Department. The primary function of any such Department is to reduce to a minimum expenditure in order to keep at the minimum the corresponding taxation. Its officials are not qualified either by training or experience to judge the essentially commercial and technical question where and when the circumstances of a railway undertaking justify bold expenditure of large sums, having regard not merely to the actual conditions of the physical machine at the moment, but to the prospects of development and the requirements of the future.

59. We think that the sentence which we have quoted above from the Report of the Mackay Committee, to the effect that the Government of India provides all the money it can and distributes it in the manner which it conceives to be most advantageous, is based on a misconception of the real position. It confuses two different things: the functions of the Government as a Government, and the functions of the Government as the owner of a great commercial undertaking. A Government as a Government always has before it many objects for which it would gladly spend money were the money available. No one will question that the expenditure of large sums on, for instance, sanitation and education would be greatly to the benefit of the people of India. Neither of these services are, however, directly remunerative. Their cost can only be met by taxation. The question for the Government is whether, especially having regard to the attitude of the taxpayer, the object is so essential and so urgent as to justify the imposition of new taxation. The railways are in an entirely different position. It is no question of new taxation. It is merely a question of allowing the railway undertaking to finance its own requirements out of its own resources and at its own time. There has been no need for many years past to call upon the taxpayer to come to its assistance. On the contrary, year after year the railway revenues have been applied for his relief. Since the beginning of the present century the Finance Member has always budgeted for a considerable contribution from the railway net revenues towards the general expenses of Government. Of recent years that contribution has been quite large. In his budget speech of March last the Finance Member complained that for the current year the contribution would be only Rs. 4 crores, which he said would not be sufficient. This contribution, be it observed, is made by the railways after they have paid their own working expenses, full interest on all debt outstanding on their account, and the further sum of about Rs. 1 crore per annum in redemption of the principal.

60. To say, as the Mackay Report does, that the Government provides such money as it possibly can is to confuse the issue. Had the Railway Budget been separate from the general Budget when that Report was written, there would have been no difficulty in providing all the money the railways needed on terms which would have secured for them a handsome profit after payment of interest on the loan. And its provision would have done nothing to check, would indeed have done much to promote, the growth of the ordinary revenue of the Government available for such purposes as sanitation and education.[1] The Indian Government is now

[1] The following extract is from a statement submitted to the Committee by a very experienced official, Sir Reginald Craddock, now Lieutenant-Governor of Burma:—

"During the decade preceding the war the various Finance Ministers of the Government of India found themselves with large surpluses from which, after making liberal grants for education and sanitation, they still had large balances left which they disposed of by the remission of taxation. To my mind they would have done very much better for the country if they had devoted those surpluses to railways and irrigation. Windfalls of this kind could best be utilised on works of capital construction, which will add to the resources of the country, from which resources again improvements in education and sanitation of a recurring nature can best be carried on. If you have a tract of country which is thinly populated and poor, but which admits of great improvement by means of railways and irrigation, you will have far greater success with your education and sanitation if you first devote your resources to the material improvement of the backward tract. To put it somewhat crudely, you must fill the stomachs of the people, and then you will have much greater success in filling their minds."

compelled—the further postponement of expenditure being impossible—to pay as high as 7 per cent. for money which before the war could have been had at or under 4 per cent.

61. We have traced, from the point of view of the Agent entrusted with the management of a great commercial undertaking, the system, and its annual progress of steady *diminuendo* from the least sum that is commercially reasonable through the various reductions made by the Railway Board and the Finance Department, culminating now and then in a *crescendo* of hasty spending to evade lapses. On the face of it, it does not look businesslike. What it means in practice to the public, which railways exist to serve, has been seen in the particulars set forth in Chapter II. of this Report.

62. We cannot but feel that the authorities ultimately responsible for Indian railway finance—how far that responsibility was located in Whitehall, and how far in India, we cannot say—have entirely failed to appreciate the position of the Indian railways as a commercial undertaking. The owner of a factory, with a record of success behind it, who found his entire output reduced and slowed down for lack of a certain new machine costing, say, 10,000*l.*, and refused to buy this new machine, saying he could not raise more than 3,000*l.* to pay for it except at a rate of interest to which he was unaccustomed, would ere long find himself in the Bankruptcy Court. And his fellow business men would say he had deserved his fate. This is in effect what has been happening in India from a date long before the war. With this difference: the manufacturer only brings down a single factory. The Indian case is that railway undertakings, in which a great capital has been invested all over the country, have been held up for lack of the relatively small new investment in new machinery required year by year to make the whole of the plant efficient and economically productive. And there is another difference. If the single factory goes down, the customers can go elsewhere to fill their wants. The unfortunate customers of the Indian railways have nowhere else to go to. They merely suffer. They are ceasing to suffer in silence.

Railway investment directly profitable.

63. How much the economic development of India has suffered, not from hesitation to provide for the future—no attempt has been made to do this—but from the utter failure even to keep abreast of the day-to-day requirements of the traffic actually in sight and clamouring to be carried, it is impossible to say. Had the Government thought fit to borrow money even at a rate considerably higher than the rate of net return that the railways could earn on it, we believe its action would have been abundantly justified.[1] But in fact the Indian Government never needed for many years previous to 1914 to face this position. A reference to the curve of net revenue given in the Administration Report on Railways in India will show that, though in the earlier years the interest on railway capital had to be met partly out of taxation, for the last 45 years the net earnings of the capital invested in Indian Railways has never sunk below 4 per cent. For the last 20 years it has only three times sunk below 5 per cent., and this result was attained though a substantial sum had been charged against revenue for repayment of capital and in spite of the fact that a not inconsiderable part of the total mileage had been built not on commercial grounds but for strategic purposes. Now the average rate payable by the Government of India on this borrowed money is about $3\frac{3}{4}$ per cent. We are unable with these figures before us to find any justification for the policy which has been persistently pursued of starving the development of Indian Railways.

Estimate of indirect profits.

64. Evidence was given to us from various quarters tending to show the indirect benefits to the economic development of the country—and this must always imply a corresponding increase of taxable capacity—to be obtained from extension of railway facilities. We have endeavoured to obtain from Land Settlement officers in different parts of the country precise figures on this point, not, however, with much success. When conditions change in the 20 or 30 years' period between one settlement and the

[1] We give extracts from Lord Inchcape's evidence before us on this point:—

"I forget what the rate of interest was 13 years ago, probably $3\frac{1}{2}$ or 4 per cent. We advocated, if I remember rightly, not to stick for 1 per cent. but to get the money and invest it in the railways. . . . We said, 'Get your money if you are going to pay another 1 or $1\frac{1}{2}$ per cent. for your railways.'"

Q. "You still hold to that view?—*A.* I am a little doubtful now that it has gone up to $7\frac{1}{2}$ or 8 per cent. . . . If I had a railway, and wanted the money, and saw the trade there, I should raise the money, even if I had to pay $7\frac{1}{2}$ or 8 per cent."

next, it is not easy to isolate a single cause and to say how much of the change is due to that single cause. But we give here not only such statistical evidence as we have been able to obtain, but also what is perhaps more valuable, the testimony of experienced officials.[1]

Settlement Commissioner and Director of Land Records, Bombay.

In Bombay our land revenue was assessed almost before the railway was thought of, and it was then assessed with reference to what was vaguely termed "the profits of agriculture." It is difficult to analyse rental value into its elements. The opening of new high roads, still more of a new railway, brings the tract within the reach of markets from which it was before separated by heavy cost of transit. This will also send up the rents and increase the number of people willing to settle on the land, and encourage them to apply capital and enterprise to its development. The following remarks apply to a few selected tracts :—

In Bijapur District the railway was opened in 1884. The district had suffered terribly from famine in 1876–77, so much so that it was almost depopulated, and not enough people were left to recommence cultivation in 1877–78. About 1884 several talukas[2] were resettled, just before the railway was opened, though in the settlement proposals the fact that the railway would be there was taken into account. For instance in Bagalkot, though its settlement was revised just after the big famine, the revenue increased 27·9 per cent., and in the settlement of 1914, 30 years after the opening of the railway, a further increase of over 23 per cent. was sanctioned. In the similar case of Badami, the assessment was increased by 15 per cent. in 1884, and again by 10 per cent. in 1915. On the other hand—taking talukas which are not affected by the railway—Sindgi, adjoining Bijapur, was first settled in 1874–76 just before the famine, it was revised in 1907 and found to be still very poor, and no increase was recommended. Similarly, the assessment of Muddebihal, another taluka without a railway, was revised after 30 years in 1908, and no increase was found possible.

In the Dharwar District the railway was opened through Gadag taluka in 1884, and 22 years later the assessment was revised. In the case of villages near the railway there was an increase of from 24·6 to 27·8 per cent. The Ron and Karajgi talukas were also affected by the Madras and Southern Mahratta Railway. In Ron the assessment was revised 22 years after the railway was opened, and an increase of 30·8 per cent. was obtained. In Karajgi the increase after 33 years was only 18·5 per cent., but in this case a substantial part of the taluka lies a very long way from the railway. In the Hangal and Kod talukas only those groups fairly near the railways were enhanced.

There are, of course, instances in which tracts quite unaffected by a railway have been substantially enhanced, but there is no doubt that as a broad principle the advent of a railway is universally admitted to justify substantial increases in the rental value.

Mr. Lloyd-Jones, Agent, H.E.H. the Nizam's Guaranteed State Railway.

The total revenue of the Hyderabad State has increased from 3½ crores in 1899 to 6½ crores to-day. It is estimated that the indirect benefits accruing from the railway accounts for over 1 crore of rupees per annum. During the same period the gross earnings of the railway has increased by 98 lakhs, approximately the same figure as the estimated indirect benefit of the railway to the State. In one particular district—Nanded—the land revenue has increased from 15½ lakhs in 1900 to 19½ lakhs to-day; this figure including only land revenue, not excise and customs. The earnings of the railway stations serving this district have increased in the same period by 9 lakhs. In addition to the land revenue of this area it is estimated that the Customs and Excise have certainly doubled in the same period. It appears from these figures that the increase of Government revenue resulting from the railway is roughly equal in amount to the increase in the gross earnings of the railways.

Mr. Townsend, Director of Agriculture, Punjab.

Tahsils[2] are reassessed to land revenue every 20 or 30 years.

Number of tahsils.	Increase of land revenue at last readjustment.	Extension of railways.
9	10 per cent. or less	No extension of railways between assessments.
18	10 per cent. and less than 20 per cent.	In 5 extensions, in 13 no extensions.
29	20 per cent. and less than 30 per cent.	In 10 extensions, in 19 no extensions.
22	30 per cent. and less than 40 per cent.	In 9 extensions, in 13 no extensions.
3	40 per cent. to 50 per cent.	In 1 extension, in 2 no extensions.
25	Over 50 per cent.	2½ extensions, 1 no extension.

The tahsils which show increases in assessment of over 30 per cent. are generally those in which canal irrigation on a considerable scale had been extended in the interval. In itself this is a more important factor in deciding what assessment land can pay than is improvement in railway facilities. But the latter comes high on the list of these factors.

So far as these figures go, they certainly show that improved communications send up prices, thus causing the agriculturist to get a better price for his produce and to pay a heavier assessment to Government. This is indeed a commonplace of revenue administration and reassessment in the Punjab.

Sir Reginald Craddock, K.C.S.I., I.C.S., Lieutenant-Governor of Burma.

The railways of India have conferred an immense benefit upon the people and have proved a very valuable asset to the State. The actual return which they have given in direct earnings upon the capital invested has been a very small part of the benefits enjoyed by the country as reflected in the revenue returns.

[1] Statements bearing specially on this point will be found at pages 345 *et seq.* of Vol. IV.
[2] Talukas and tahsils are both sub-areas of a district.

One has only to look at the expansion of the revenues of the country since railways were constructed, and to imagine what would have happened if they had not been constructed, to realise this.

In earlier days Government was somewhat bolder than it is now in these matters, and there are many important lines in India which might never have been constructed if the test had been the immediate net earnings of the project undertaken.

Khan Bahadur Adarji Mancherji Dalal, President, District Local Board, Broach.

The Broach-Jambusar Railway, which was built some six or seven years ago, after nearly 40 years of pressure for its construction, resulted in a great improvement of land revenue, and trade has become much more prosperous in that part of the country through which it passes, while famine conditions are rarer.

The Broach-Jambusar Railway was opened in 1913-14 and it taps the talukas of Jambusar, Amod, Wagra and part of Broach.

In all departments a noticeable and healthy advancement is made, such as income tax, excise, stamps, land revenue, and area under cultivation.

In regard to relieving distress during famines and scarcity years, comparative statistics are not available, but as I have been associated with campaigns of relief measures since 1877-78 I can emphatically say that had this railway not been built the severe famine conditions of 1918-19 would have resulted in appalling mortality of cattle and human beings which was wholly absent—because of the facilities for transporting grass and fodder for cattle and food for human beings in this tract.

In regard to vital statistics and sanitary improvement, reliable data are not available, but the improvement in the economic conditions of the people by facilities for quick locomotion has taught the people to avail themselves of medical relief.

The Agent of the Assam-Bengal Railway.

An examination of the graphs (not reproduced) for Chittagong, Noakhali and Tipera districts, which are the most important of those through which the railway passes, indicates a distinct rise in the revenue curve following the opening of the railway. In the case of the Sylhet and Cachar districts this rise is particularly noticeable and also in that of the Sibsagar district.

Survey and Settlement Department, Government of the Central Provinces.

A rise in the prices of agricultural produce, as a matter of course, always follows the opening up of a district by rail.

Mr. D. M. Stewart, Deputy Commissioner, Gorakhpur District, United Provinces.

I consider that a suitable standard of the benefit conferred by the railway construction can be obtained by a comparison of the rate of enhancement of revenue in the Northern as compared with the Southern and Central tahsils. Now, in the case of these latter, while the rate of enhancement is somewhat under 40 per cent., in the case of the Northern tahsil the final enhancement of revenue is close on 70 per cent. The difference between the enhancement actually made in the Northern tahsil and that which would have been obtained on the same scale as in the other two tahsils is no less than Rs. 130,000, and when other influences are eliminated it would appear that one would be justified in saying that the introduction of railway communications into the neighbourhood of this tract had certainly resulted in an enhancement of the Government revenue in this tahsil by not less than one lakh of rupees.

Sir T. R. Wynne, Managing Director of the Bengal-Nagpur Railway Company, and late President of the Railway Board.

General revenues are largely increased by the indirect results of constructing railways in India. For instance, railway construction increases the sale of salt, which brings in revenue to the Imperial budget; it increases imports on which the Customs revenue benefits; and it increases land revenue. As an instance, before the Bengal-Nagpur Railway was built the Sambalpur district was a land-locked area, where rice and other grain could be had for the asking, as there was no means of export. Knowing that the railway was being made the authorities felt justified in raising the land assessment very considerably, and this was done to the extent, in some cases, of 300 per cent.

Sir John Hewett, late Lieutenant-Governor of the United Provinces.

Sir John Hewett expressed the opinion that the introduction of a railway into a district must inevitably tend to an increase and a growth of land revenue. He agreed with the view of Sir Reginald Craddock, that instead of trying to take revenue from the railways for the purposes of sanitation and education it should be used to build up the railways, thus leading to the production of a much larger revenue that could be so applied. He held that the country should be developed so as to be able to bear taxation for purposes such as sanitation.

65. We are aware that those responsible for Indian finance are impressed with the idea that borrowing must be restricted lest the rate of interest be advanced, and the credit of the Government of India be thereby impaired. Speaking with all modesty on a matter on which the bulk of the Committee have no expert knowledge, we are unable to agree. So long as the solvency of the borrower remains unquestioned, all experience shows that the rate of interest the borrower has to pay depends not on the amount of his borrowing, but on the market value of money at the date of the issue. First-class English railway debentures are quoted to-day at, roughly, two-thirds of their pre-war price. The companies have not borrowed in the interval; the security

of the debentures remains unquestioned; it is only the value of money which has changed.

Comparative borrowings, India and elsewhere.

66. India has a population of 300,000,000. It has an area of 1,800,000 square miles, and it is under the British Flag. Argentina has a population of 8,000,000, an area of 1,150,000 square miles, and it is not under the British Flag. At the time when the Mackay Committee reported that it might be possible to borrow up to 9,000,000*l.* per annum in the London market for the extension of Indian Railways, the Argentine railway companies were raising money in the same market at an average rate of about 11,000,000*l.* per annum, solely on the security of the railway earnings; and the credit of the Argentine railway companies was not impaired. We are not aware that there has been any suggestion that the Argentine railways were extended with undue haste. India has, as we have said, a population of 300,000,000. It has to-day 36,700 miles of railway. In railway mileage it stands intermediate between Canada, with 39,000 miles for a population of 8,000,000, and Australasia with 29,000 miles for a population of 6,000,000. We cannot believe that India would have occupied so humble a position had the railway management not been fettered by a policy which has constantly restricted the raising of new capital for improvement and development.[1]

Inadequacy of maintenance and renewals.

67. That the railway development and therefore the economic development of India has been starved, is not the only charge which we are compelled to bring against the system of financial control to which the railways have been subjected. It might have been expected that control purely from the financial point of view would at least have resulted in correct and unimpeachable financial orthodoxy. This has not proved so in practice. We have spoken above of the "Programme" expenditure and the method by which its amount is determined. Now in every commercial concern Capital expenditure and Revenue expenditure are constantly intermixed. And a prudent board of directors, especially when the concern which they are managing is prosperous and paying substantial dividends, takes very good care that Revenue is debited with its full share. The principle is clear that by the time the useful life of an asset or a building has expired, its full original cost should have been written off out of Revenue.

68. This has not been the case on the Indian Railways. There are scores of bridges with girders unfit to carry train loads up to modern requirements; there are many miles of rails, hundreds of engines, and thousands of wagons, whose rightful

[1] Through the courtesy of the Editor of the *Economist*, we are able to give the following table of the money raised in the London market in the years preceding and following the issue of the Mackay Report by the Argentine, Australasian and Canadian Railways and Governments. The corresponding figures relating to India have been furnished by the India Office:—

Borrowings in London by Railway Companies and Governments.

Year.	Argentina.			Australasia.	Canada.			India.		
	Railways.	Government.	Total.	Government.	Railways.	Government.	Total.	Railways.	Government.	Total
	£	£	£	£	£	£	£	£	£	£
1900	925,100	Nil	925,100	4,076,000	1,380,000	Nil	1,380,000	3,237,000	5,357,000	8,594
1901	4,465,000	Nil	4,465,000	11,146,400	1,152,600	432,500	1,585,100	3,021,800	971,500	3,993
1902	3,166,200	Nil	3,166,200	7,146,300	255,500	336,000	591,500	2,570,000	1,018,700	3,588

1910	12,240,000	2,232,600	14,472,600	10,029,600	6,425,900	11,755,000	18,180,900	44,300	4,200,800	4,245
1911	10,025,000	Nil	10,025,000	1,950,000	19,608,300	505,000	20,113,300	−40,000	1,856,100	1,816
1912	9,226,700	Nil	9,226,700	10,541,100	7,971,600	970,000	8,941,600	495,000	2,248,900	2,743
1913	6,077,500	1,324,900	7,402,400	13,910,200	9,491,000	7,893,600	17,384,600	4,552,800	−500,000	4,052
1914	8,903,500	Nil	8,903,500	16,980,500	18,502,600	15,199,600	33,702,200	3,882,600	6,500,000	10,382

(The figures show the actual money raised, not the nominal amount of the issue. Issues made to repay maturing obligations are excluded).

For the 15 years the respective averages of the three countries are:— £

Argentina	8,658,133
Australasia	6,713,693
Canada	11,407,486

For India the corresponding average figure is £6,303,233.

date for renewal is long overpast. Their cost has not been written off.[1] They stand in the books at the original figure. The Government has formed no replacement reserve. It is not now physically possible within a short period of one or two years to replace all the plant of which the economic life is exhausted. If it were possible, it would be a burden upon current revenue too heavy to be borne without upsetting the normal railway finance. The position due to the unwise methods of the past must be redressed gradually. It will never be redressed under the present system of programmes and annual grants and lapses, but only when commercial accounting methods are introduced in the management of a commercial undertaking.

69. In our judgment, a financial system which produces these results stands self-condemned. We are far from desiring to suggest that blame attaches to the distinguished men who have held office for years past both at the India Office and in the position of Finance Member of Council or to the able and conscientious officials who have served them. From one point of view at least their financial management can be described as meritorious. Throughout history the capital which has been put into the Indian railways has been raised by entirely honest and straightforward methods of finance. The booked capital outlay of these railways, so far as we are aware, represents nothing but sovereigns and rupees actually put into the property. We have nowhere found any trace of what is commonly called "water." We doubt whether any other great railway system, with so long a history behind it—the pioneer company, the East India Railway, has just issued its one hundred and fiftieth half-yearly report—could say as much. Further, on the whole such capital as has been provided has been economically spent. After making all allowances for low cost of Indian labour, for the generally easy nature of the country, and for the under equipment of the lines, on the one hand, and for the high cost of imported materials and the large amount of very expensive bridge work on the other, we think the capital cost per mile of the Indian railways must be regarded as very moderate. But the faults on which we lay stress outweigh the merits, and in our judgment they are inherent in the existing financial system. Railway management is a highly technical business. It should be placed in the hands of those who understand it. It has little in common with the raising of taxation on the one hand or with the control of the expenditure of ordinary Public Departments on the other.

70. The Great War is an explanation, if not an excuse, for many practices which no one would defend under normal circumstances. We cannot think that even the war is sufficient to explain the treatment of Indian railway revenue in the last few years. Till quite recently India produced hardly any of the supplies that her railways require. Locomotives, carriages, wagons, or at least their component parts, rails, signalling work, bridge work—all were imported from Europe. Even now India produces only a very small part of what she needs. At an early stage of the war it became difficult to obtain from Europe the customary supplies. Later on it became practically impossible. The inevitable result was that maintenance and renewals fell seriously into arrears from 1914 to 1918, as is shown by the percentage of expenditure on programme revenue works to gross earnings:—

1913–14 - -	6·1 per cent.	1916–17 - -	3·3 per cent.
1914–15 - -	5·7 „	1917–18 - -	2·1 „
1915–16 - -	4·6 „	1918–19 - -	2·4 „

(*Evidence of the Accountant-General, Railways, Vol. III. para.* 6512.)

Diversion of reserves.

71. Obviously the expenditure was only postponed, and had to be faced later on. An ordinary commercial concern would, as a matter of course, have carried the money so underspent to a reserve for renewals, to be spent when the materials were again available. The independent railway companies did this. Not so the State. The money was treated as part of the ordinary revenue of the Government in the year in which it was not spent, with the result that the net profits of the State railways are shown in the official returns as having risen steadily from 4·54 per cent. in 1914 to 7·07 per cent. in 1918–19. The apparent gain was not real. Had there been a separate railway budget the money underspent would have been earmarked in it as advanced to the Government for general purposes. It was indeed announced at one time that a reserve was being made, or would be made. The end of the war has come, and the money is not there; other liabilities had been too strong for the

[1] A full statement as to the position of one guaranteed company, the Great Indian Peninsula, was furnished to us. The figures, quoted in para. 5606 in Volume III., show that the policy of undue postponement of revenue renewals, which in fact has meant taking as net revenue money that should properly have been treated as working expenses, is of long standing and not merely the result of the exigencies of the war period.

Government of India and so the reserve fund vanished. The railway machine is in urgent need of repair, and funds to put it right are not forthcoming. The position at present is this: maintenance is lamentably in arrears. The cost of materials of all kinds is far above pre-war level. Wages likewise have advanced steeply.

Need for increased rates and fares.

72. Indian railway rates and fares have always been among the lowest, if not actually the lowest, in the world. They have only been advanced in the last few years very slightly as compared with the rest of the world. A general and substantial increase is overdue. Witnesses from all parts of India have agreed in recognising that rates and fares should be increased, and saying that they will be ready to pay the increases, provided a reasonably efficient service is given in return. One of the most important railway companies applied many months ago to the Railway Board for permission to increase its rates beyond the maximum hitherto authorised. It met with a refusal.

The surtax on traffic and objections to it.

73. In March the Finance Minister presented his budget to the Legislative Assembly at Delhi, showing on the basis of the then existing taxation a deficit of over 19 crores. He pointed out that the State railways, after defraying working expenses and all interest and sinking fund charges, would only contribute towards the general expenses of the Government 4 crores as against nearly 16 crores in 1918–19. This was not sufficient. To increase railway rates would, he said, take time, and the matter was urgent. As to the urgency we agree. For the statement that "it is not possible "to readjust the various rates in time enough to give us the money we need during the "next financial year" only a perfunctory, and in our opinion an inadequate, reason was given. The feat has certainly been accomplished during or since the war in almost every other country in the world. He accordingly proposed, not to increase the railway rates—the proceeds of which would naturally have gone in the first place to the railways, and which, at a time when the general revenue owes to the railways the many millions diverted from them during the war, should certainly have been retained for railway purposes—but to increase the small existing surtaxes on railway goods traffic, which had been introduced only as a war measure, to an extent estimated to amount on the average to 12½ per cent. of the freight on the goods, and to produce, not for the railways, but for the general expenditure of the country, an additional revenue of Rs. 5½ crores. The proposed surtaxes have, we understand, been considerably modified as the result of discussion in the Council of State (the Indian Upper House); but they still remain as surtaxes, and in our judgment any such tax, whatever the amount, is bad in principle. All economists agree that taxes on transport are an undesirable method of raising revenue. There is a further and very serious objection to imposing a surtax on railway receipts instead of increasing railway charges which is peculiar to India—that it is unfair to the shareholders of the Companies which divide profits with the Government. Had the railway rates been raised the Government would have taken, in the case of the Guaranteed Companies, about nine-tenths of the additional net revenue. But the shareholders would have obtained, what they are unquestionably entitled to, the remaining tenth. As it is, the Government takes the whole.

Need for separate railway budget.

74. We now proceed to discuss the manner in which reform should be carried out. At the outset we wish to disclaim any idea that the railway organisation should be independent, an *imperium in imperio*. This is quite out of the question. The Indian Government owns the railways; the Indian Government must control them. But that is no reason why the control should take the form which is found suitable in respect of other departments of the State. What we propose is in outline that the railways should have a separate budget of their own and assume the responsibilities for earning and expending their own income. The first charge on that income, after paying working expenses, is interest on the debt incurred by the State for railway purposes. The amount of this debt is known—we may call it roughly 252,000,000*l*. The annual liability of the Indian Government for the interest is 8,700,000*l*. Whether the railways should pay precisely this amount, or a larger amount, in consideration of the fact that in early years taxation had to be imposed to meet that portion of the interest which the railway receipts did not then cover, or a smaller amount, in consideration of the expenditure which the railways have since incurred for non-railway purposes, is a matter for argument. We have no wish to express a positive opinion, though we think there is much to be said for letting bygones be bygones and fixing the payment to the Government at the same sum that the Government has itself to find at the present time for interest on the railway debt. The point is that the Railway Department,

Government control must remain.

subject to the general control of Government, once it has met its liability to its creditors, should itself regulate the disposal of the balance, and should be free to devote it to new capital purposes (whether directly or as security for new debt incurred) or to reserves or to dissipate it in the form either of reduction of rates or improvement of services.

75. We have expressed our own view that the only payment by the railways to the general Exchequer should be the interest at a fixed rate on the capital advanced. But we desire to point out that this is not necessarily involved in the separation of the railway budget. It would be possible, however undesirable, for the Government to impose a surtax on railway traffic such as is now in force, or even to call upon the railways for an emergency contribution to the necessities of the State. Neither method would involve interference by the Finance Department with the Railway Department's control of its own internal finance.

76. Naturally, the steps taken to raise new capital and in general the large questions of policy must continue to be controlled by the Government, *i.e.*, by the Viceroy's Council and the Legislative Assembly, and in the last resort by the Secretary of State and the House of Commons. But there must be a Member in charge of railways, taking part in the Council deliberations, and able to discuss with his fellow Members railway questions equally where they concern finance as where they are management questions proper. Under the new constitution the Budget is to be voted by the Legislative Assembly. This right must, of course, be preserved. But there is no reason why the Railway Budget should not be submitted by the Railway Member as an annex to the general Budget instead of by the Finance Member himself. Even in England, though departmental estimates have to be approved by the Treasury, and the Treasury control over them is undoubted, the estimates for the War Department are submitted to Parliament, not by the Chancellor of the Exchequer, but by the Secretary of State for War.

History of separation question in India.

77. Though the Mackay Committee did not allude to the fact, the question of the separation of the railway finance from the general finances of India was discussed as long ago as 1899, during the Viceroyalty of Lord Curzon. Colonel Gardiner, then in charge of the Public Works Department, to which at that time the railways were attached, proposed in a Minute dated the 16th October 1899 and forwarded to the Secretary of State on the 29th March in the following year:—

> "that the financing of the Public Works Department should be a distinct branch of the Imperial finance, that the capital borrowed for it should be earmarked, and that the amount to be raised should be regulated on a commercial basis depending (subject to the general condition of the possible effect on the credit of the country looking to whatever other borrowings may be necessary and may be considered of prior importance) on the amount it is desirable to spend (*a*) in developing the country; and (*b*) on meeting the requirements of already developed and paying projects. . . . .
>
> "I am unable to see the objections to the proposed departure from the present practice, nor so far have I heard any of the arguments there may be against it. The only objection I have heard raised is the general, and it seems to me rather doubtful, objection that it is a new departure."

78. Lord Curzon, on the 18th February 1900, in a Minute which was also forwarded to the Secretary of State with the above, wrote:—

> "The system under which our railways are now financed seems to me to be a faulty system, and to be fatal to development at the very time when development may be most needed. As long as the system continues, the Finance Department have no alternative but to adopt the attitude, *e.g.*, that they have done with reference to next year's programme. But neither their orthodoxy nor the stern compulsion of immediate facts makes me any more in love with a system which renders our railway policy wholly subordinate to the exigencies of our general financial position."

79. Another Minute was also sent, prepared jointly by Lord Curzon and the Hon. Sir A. C. Trevor, then Member in charge of the Public Works Department, of which the following is an extract:—

> "By that time we hope the way will be clear for the adoption of measures for the separation of moneys raised or granted for productive works from the general finances of the Empire and for their future administration on the lines indicated by Colonel Gardiner, with whose views we are in substantial accord."

80. The Secretary of State, however, expressed the opinion that, as long as the railways depended for money on the Government, they must share in the vicissitudes of the public finances.

81. The question was again raised by Sir John Hewett, the Commerce Member of Council, in 1906. Sir John only occupied this office for a short time, being appointed Lieutenant-Governor of the United Provinces in 1907. Unfortunately no trace of the draft minute prepared by Mr. Harvey, then Secretary in the Department, but who died shortly afterwards, can be found. Sir John, however, has been good enough to give evidence before us and it appears that his proposal was substantially the same as that made by Colonel Gardiner and that he has not changed his views as to the desirability and practicability of adopting the course which he then advocated.

Its history in other countries.

Prussia.

82. The question of the separation of the railway finances from the general Budget of the country has quite a long history in other countries. When Bismarck nationalised the railways in Prussia in or about 1878, the scheme as originally put forward provided for a separate railway budget. But when the scheme came to be embodied in an Act, this provision was omitted. Its absence was a constant ground of complaint by Liberal members in the Prussian Parliament. The common phrase was that the railways were treated as "the milch cow of the Treasury." The Prussian bureaucrats, who appreciated the advantages of possessing an income, which in some years ran as high as 20,000,000*l*., non-votable by Parliament, were too strong for the Prussian Liberals; and the milch cow remained in charge of the Treasury up to the outbreak of war. It was not denied, however, that the sharp variations in receipts between years of good and years of bad trade introduced an undesirable element of uncertainty into Prussian public finance.

Switzerland.

83. The Swiss people voted in 1908 to nationalise their railways. The Purchase Act provides—and it was common knowledge at the time that the provision was the result of Prussian experience—that "the railway accounts shall be kept separate from "the other Federal accounts so that the financial position of the railways can at all times "be clearly ascertained, and that railway earnings shall be devoted only to railway "purposes." The control of new railway capital issues, of railway tariffs, and the voting of the railway budget, are reserved to the Swiss Parliament. Any surplus of railway revenue, after meeting working expenses, interest and sinking funds, is devoted to railway purposes. Should the revenue fall short of meeting expenses, the deficit is to be met by the State. The railway budget is compiled by the Railway Board of Management and submitted to the Council of Ministers. The Council, after discussing it with the Railway Minister, forwards it with a covering report to the two Chambers. In each Chamber it is referred to a special Committee and thence reported to the full body. If in either Chamber further information is required, the Railway Minister gives it. Very rarely are the proposals of the Budget altered by the Chambers.[1]

Belgium, Italy, France.

84. In Belgium there has never been a separate railway budget, and for years past there has been an agitation in Parliament for a reform in this respect. A Bill carrying out this object, at least in some degree, has been prepared as the result of a Committee Report and submitted by the Government to the Chamber of Deputies. It is at present under discussion. It is criticised, however, on the ground that it does not go far enough and still leaves the Government too great powers of interference. In Italy the railways have a separate budget. In France the budget of the railways which are worked by the State is treated as an "annexe" to the general budget.

South Africa.

85. The Act constituting the South Africa Union, which brought together Cape Colony, Natal, the Transvaal and the Orange River Free State, each with its own railway system, provides that the railways of the Union shall be so worked that the gross receipts shall not be more than sufficient to cover working expenses, reserves, and the interest on capital. If there is a surplus, it is to be devoted either to improvements in facilities or reduction in rates. If, on the other hand, there is a deficit, rates and charges shall be increased to cover it. It is specially provided that, if Parliament shall require the Railway Commissioners to fix rates or to construct new lines or extend facilities which in the opinion of the Railway Commissioners will

[1] We are indebted to the courtesy of the Swiss Railway Administration for the information on which this paragraph is founded.

not be commercially justifiable, the Commissioners may appeal to the Auditor-General, who, if he agrees with their opinion, may demand that Parliament shall vote to the Commissioners such a sum as in his judgment is sufficient to meet the cost of the requirements of Parliament.

86. In Japan, also, the railway budget is entirely separate. The official Report of the Japanese Government, dated May 1919, sets out so clearly the grounds for the separation of the two budgets, the gradual process by which it was accomplished and the benefits which have resulted from the reform, that we quote it here at full length :— Japan.

Railway Special Account Act, 1909.

"According to the established rules that govern the framing of the Imperial Budget, an undertaking carried on by a Government office is set apart as a special account, the earnings of which are, in principle, to meet the disbursements. Any balance accruing is to be turned over to the General Account. The finance of the Government railways before the nationalisation was no exception to this general arrangement. Hence, any surplus of the total receipts over the total expenses was surrendered to the Treasury, instead of being placed at the disposal of the railways. On the other hand, all expenses involved on the work of extensions and improvements were met by the proceeds of loans or of taxation.

"This accounting system was modified in 1906, and the new method was put into force from the fiscal year 1907–8, when a new *régime* came into being with the suddenly expanded business of the railways, in consequence of the State acquisition of the 17 private railways. According to this system, all the money already invested, or to be invested, in the railways (together with interest thereon computed at 5 per cent.) from the inception of the railway service to March 1907, less the sum surrendered to the Treasury during the period, was set apart as railway debt. The distinction between the capital and the revenue accounts was clearly established, and the annual revenue was divided into two parts, one destined for the payment of interest on the liabilities and the other for the redemption of the principal.

"The revision of 1906 placed the net revenue accruing from railway operation beyond the disposal of the Treasury, and was undoubtedly a great improvement on the superseded system, but it effected nothing in the way of putting the Railway Budget on an independent footing, so far as concerned the financing of railway extensions and improvements. They were open, as before, to the influences of the variable financial situation of the State.

"The complete divorcement of the Railway Budget from the General Account, with a view to removing this perennial cause of uncertainty in the continued prosecution of the programme, was brought about in 1909 by the promulgation of the Railway Special Account Law, which has continued in force down to this day.

"In consequence of the drastic renovation effected in its financial arrangement in 1909, as outlined above, the Railway Account has become a special account entirely distinct in its essential features from the General Account. It is needless to add that this financial independence has given very great conveniences and facilities in the management of the Imperial Railways, as, indeed, it has made the railway finance one of special character among all the special accounts created by the Imperial Treasury. In short, the change has made the railway finance a financial agency specially adapted for the management of railway business."

(Railway Nationalisation in Japan.)

The position of the Japanese railways under the Act of 1909 may be summarised as follows :—

(1) The railways have a separate Capital Account.
(2) Railway profits are devoted to extensions and improvements, and may be supplemented by Government loans.
(3) The whole of the loans issued for railway purposes are charged against the railway account, and the railways pay over each year to the National Debt Consolidation Fund the money required for interest and sinking fund on these loans.
(4) Temporary advances may be made by the Treasury if required to meet railway current expenses.

87. We have still to make recommendations as to the raising of railway capital in the future. Those Members of the Committee who consider that State management should be definitely adopted as the permanent policy for India naturally contemplate that capital will in future be raised wholly by the State. Those Members, on the other hand, who think that Indian companies should be constituted will equally naturally make recommendations as to the method of raising such portion of the capital as the new companies will be responsible for. We therefore postpone the consideration of this matter to a later stage of this Report and now proceed to discuss the further questions on which the opinion of the Committee is unanimous.

CHAPTER IV.

The Constitution, Status, and Functions of the Controlling Authority.

88. Our Reference instructs us to report upon the constitution, status, and functions of the body exercising control over the railways on behalf of the Government. We have given this matter our best consideration. We had the benefit of long discussions at Delhi with the members of the present controlling authority, the Railway Board. And of all the witnesses who appeared before us there were few who did not offer criticisms and make suggestions on the subject. As the result of our investigations we recommend great changes alike in the constitution, the status, and the functions of the Railway Board. But before proceeding to make them we wish to emphasise what we have indicated in Chapter III. of the Report, that in our judgment the controlling authority must be single and self-contained. The recommendations which follow are based on the assumption that the railway authority is master in its own house, not sharing its responsibility with any other department, but answerable directly through its own chief to the Governor-General in Council and the Legislative Assembly.

Financial importance of railways.

89. We have been impressed with the disproportion between the importance of the railways financially and economically, and the position which the existing Government organisation assigns to the Department charged with their administration. The Government railways, as we have said, bring in one-third of the total Government receipts. Their working expenses amount to about one-quarter of the total Government expenditure. Their net receipts cover not only the interest on the total railway debt incurred by the Indian Government and a substantial contribution to sinking funds,[1] but leave a substantial sum over in relief of general taxation. In the Budget Statement, however, the railways occupy a much more modest position.

90. The estimate for the current year enumerates 10 "principal heads" of revenue. The total amount estimated to be obtained under these 10 heads by the Central Government is Rs. 69½ crores. Of the principal heads, six bring in less than one crore. Down below the principal heads in the Statement come the railways. Their net receipts are stated at Rs. 27¼ crores. Customs, estimated to yield Rs. 37¾ crores, forms the only item in the Budget exceeding the railway net revenue in importance. We give this as an illustration, for it appears to us typical.

Subordinate administrative position.

91. Administratively the railways are only regarded as of sufficient importance to be entrusted to the control of a Member of Council who takes his title from his other functions. In former years they were in charge of the Member for Public Works; of recent years their administration has been one of the functions of the Member for Commerce, who (except for a brief interval during the past year or two) has also been in charge of Industries. The responsibility of the Member in charge of Railways for their supervision has certainly been in recent years more nominal than real. There has been furnished to us a list of the subjects which were assigned to the Department of Commerce. It is as follows:—

> Company Law; Customs; Excise; Shipping; Posts and Telegraphs; Emigration; Indian labour questions such as Assam migration; Peace Treaty affairs such as collection of debts and other matters relating to enemy firms.

92. The Department of Industries is responsible, in addition to the general subject of the development of industries, for controlling the Indian Salt Department, the Geological Survey, Stationery and Printing, Patents and Designs; the administration of the Factories, Mines and Electricity Acts; and other miscellaneous subjects.

---

[1] The annuity payments made to the shareholders of the original East Indian, Great Indian Peninsula, and Madras Railway Companies, up to the end of the year 1920–21, included not only the interest on the capital outstanding but the redemption of 17,467,953*l.* of capital.

93. Having regard to their number, their diversity, and the delicacy of some of the subjects—as, for instance, Indian emigration, and the rapidly growing importance of others such as the development of Industries—which must necessitate the Member's attention at every stage, it is quite evident that the Member for Commerce and Industry cannot personally keep in touch with the railway business which he nominally supervises. In fact, it is hardly expected that he will do so; for while he controls the Commerce and Industries Departments each through the normal departmental organisation of a Secretary to Government at the head of a clerical staff, on the railway side there is a Board of three Members which occupies a position of what may be called semi-independence.

94. Briefly the administrative position is this. The ultimate authority for the Government of India rests with the Secretary of State as representing the House of Commons. He delegates to the Governor-General in Council—commonly spoken of as the Government of India—certain powers, reserving others, a matter with which we shall have to deal more fully at a later stage. The Government of India in turn delegates some, or some portion, of these powers to the Railway Board. Official communications from the Board are headed—

Government of India (Railway Board), Railway Department.

Within the scope of these powers the Railway Board are free to act, subject always to the Finance Department. Even in cases beyond the Board's powers of sanction they frequently make references to the other Departments concerned without troubling their own Member, though if any decision is likely to have far-reaching consequences the Board are expected to refer to him before acting. Cases which are likely to engage the attention of the Executive Council must necessarily be taken to the Member, for while the President of the Board has the status of a Secretary to Government, and therefore the right of direct access to the Viceroy, he cannot take part in discussions of the Council, attending there only to give information and explanations when called upon.[1]

95. Now the natural effect of the interposition of this semi-independent Board is that the Member responsible for it is not in constant touch with its work. When questions which have to be submitted to the Council are brought to him, it is necessary for the Board to "coach" him. He may not agree with them, and yet may hesitate to override those much more conversant with the matter than he can possibly be. Even if, after hearing the case as put forward by them, he does agree with them, he can only deal with the matter, which may be highly technical, before the Council with second-hand and incomplete knowledge. It would, moreover, be in accordance with human nature if he supported a policy not his own less resolutely than a policy of the side of the office of which he is the real and not merely the titular head; and if, when the Railway Board's proposals met with serious opposition at the Council, he attached more weight to the arguments of colleagues, with whom he is in constant and intimate relations, than to those of a Board which brings before him, not their everyday work, but only such portions of it as are important and likely to be contentious. The Railway Board is in effect in the position of a stepchild, and, like most stepchildren, tends to be less well treated than the other children of the family. We are convinced that the Indian railways will never be able to give a satisfactory account of themselves, to earn the revenue which they should earn, and to render to the public the service which they ought to render, until they are represented in the Viceroy's Council by a Member who is fully in touch with their daily work.

96. Were there no other way of securing it we should feel constrained to urge that this representation should be provided by the appointment of a Member of Council solely for railways. But we do not think it necessary to recommend this.

---

[1] A Secretary to Government corresponds to an English Permanent Under Secretary in that he is the official Head of his Department under the Member of Council, that is the Cabinet Minister, responsible for it. But his status is higher than that of a Permanent Under Secretary in that he has direct access to the Viceroy—in effect the Prime Minister—with whom he has a fixed meeting once a week, and to whom he is entitled to express, if he thinks fit, his disagreement with the policy of his chief. If the Viceroy thinks proper, the full Council can then be invited to discuss the matter in question. Further, under the new Constitution he is a nominated Member of the Council of State or of the Legislative Assembly, where he speaks and votes on a footing of full equality with the other Members. A Secretary to Government, however, attends meetings of the Executive Council of the Governor-General only to give information if called upon to do so, and to record decisions.

Proposed Member of Council for Communications.

97. All we ask is that there shall be a Member of Council in constant touch with railway affairs, and who feels that railways are entitled to his full attention. And this can, we think, be secured by a rearrangement of work among the Members. Within the last few months the number of Members of Council has been reduced by recombining Commerce and Industry. We recommend that the former number be restored, and that there be a Member of Council in charge of Communications, whose portfolio should comprise Railways, Ports, and Inland Navigation, Road Transport (so far as it is under the control of the Government of India) and Posts and Telegraphs.[1] Perhaps in making this recommendation we are going beyond the strict terms of our Reference, which is concerned only with railways, but the connection of railways with other forms of communication is so close that we think we are entitled to make it.

98. The advantages of a close relationship between railways, ports, water transport and road transport are obvious. They need correlation by a common controlling authority; they are feeders to each other, but at the same time their conflicting interests as carriers necessitate expert supervision and protection: all methods of transport are necessary for the development of India, and all new schemes, whether for transport by rail, road or water, require to be considered by the same authority as a part of a well-ordered general programme. Only Imperial questions connected with road transport would, under our scheme, come under the immediate supervision of the Ministry, local road questions being left, as now, to local authorities.

99. The only connection at present even between the railways and the ports which they serve is through the Member of Council who is common to both. The Departments that deal with them are separate. And in many respects the ports are subject, not to the Central Government at all, but to the Local Governments. All the witnesses whom we examined on this point agreed that there were strong reasons for a change. One instance will suffice. The Calcutta Port Authority are undertaking the enlargement and re-equipment of their Kidderpur Docks to accommodate the rapidly growing traffic. They have in contemplation a large scheme involving the expenditure of many millions. They are also adding to the accommodation of their port railways. The lay-out of the docks cannot be settled till it has been decided how much of the necessary siding accommodation is to be provided respectively by the railways on railway property and by the Port Authority on dock property. The Port Authority cannot be certain what coal-tipping appliances to order till it is settled what form of coal wagons the railways will use. The railways, on the other hand, cannot be certain that the appliances will be suitable for their wagons. There is no machinery for bringing together the various parties in interest, still less for deciding when the parties differ. The Department of Commerce, the Railway Department, two Railway Companies, the Calcutta Port Authority and the Government of Bengal, all are involved and take a hand in the decision.

100. The necessity for close co-ordination so as to dovetail together the work of the docks and the railways that serve them has long been recognised in England. In recent years—not without hesitation as to the propriety of strengthening railway monopoly—Parliament has allowed railway companies, in order that the two services might be in one hand, to acquire the docks in the first-class ports of Southampton and Hull. Still more recently, private arrangements have secured the same result in the great port of Cardiff. And the Ministry of Transport Act, 1919, gives to the Minister considerable powers to co-ordinate the facilities and methods of working between railways and such dock undertakings as are still independent.

101. Posts and Telegraphs are not so intimately connected with transport as the other services mentioned above, but the connection is at least closer than with the subjects in charge of any other Member, on account of the carriage of mails by railway and road and the telegraph practice which is common to both.

[1] After we had come to this conclusion the India Office furnished us with a memorandum setting out the scheme for the rearrangement of portfolios recommended by the Committee on the Government of India Secretariat Organisation, presided over by Sir Hubert Llewellyn Smith. The other arrangements proposed do not, of course, concern us, but we are glad to find that that Committee's recommendation for the formation of a new Department of Ways and Communications is almost identical with ours. We understand that, though certain minor charges consequent on Sir Hubert's report have already been made, the broad question of rearrangement has been reserved for the decision of the present Viceroy.

102. The Member's work will be divided into three main sections. In the first place he will be the head of the transport organisation; with this we deal at length hereafter. Secondly, he will be Chairman of the Central Railway Advisory Council, the establishment of which we recommend in a later part of this Report. Thirdly, he will control the Posts and Telegraphs through the existing organisation of that Department.

103. This work will tax his undivided energies; he must not be made, as Sir John Hewett describes the Member for Commerce as having become, an "office drudge" on whom additional miscellaneous duties unconnected with his primary function can be imposed. He will—especially during the next few years of reorganisation—be a busy man, but should allow himself sufficient freedom from the routine of his office to meet frequently the representatives of the trading and travelling public. The formation, as is proposed below, of Local Advisory Councils at the main railway centres, and the periodical conferences with the Central Advisory Council, will afford him opportunities of obtaining first-hand information on transportation questions; but it is hoped that in addition to this he will find time to meet occasionally the Chambers of Commerce and Harbour Boards on their own ground. Such meetings we have no doubt will be mutually beneficial and will be time well spent, especially if he is accompanied by his Technical Adviser, the Chief Commissioner of Railways.

104. We have given much thought to the question whether the Member of Council need himself be a railway man by profession. If a man could be found to combine the qualifications of a capable administrator, parliamentarian and railway expert, he would be an ideal selection for the post. But to find a man with all these qualifications would be very difficult; to find one possessing them who would be attracted by the salary attaching to the appointment of Member of Council would be impossible. We take it for granted, therefore, that the Member must rely upon others for technical advice; but we consider it essential that he should himself possess the other qualifications mentioned.

Status of existing Railway Board.

105. We turn now to the question of the Railway Board, and the constitution of the body which we consider should be substituted for it. The constitution of the Railway Board itself is somewhat peculiar. Its President has the responsibilities and the rights of a Secretary to Government, though he does not bear the title. The other two members have not. And yet as a member the President is nothing more than the senior among three colleagues. Originally he was only *primus inter pares*. There was another period when, though possibly not by legal right, the President was really supreme, and the decision of the Board was, in fact, his decision.

106. The present position is that, in a matter within the competence of the Department itself, any member of the Board who disagrees with his colleagues is entitled to refer the matter to the Member in Charge. If, on the other hand, the matter is one that has to go to the Council, the minute referring it must state whether the decision is unanimous. If it is not, the Board's minute has to embody the views of the majority, but a dissenting member is at liberty to append a minute showing on what points and for what reasons he disagrees.

Its limited powers.

107. We have now to deal with the practical working of the organisation. At several points in this Report we call attention to the constant interference of the Government in the details of railway executive management. The whole of this work falls upon the Railway Board. We are informed that 71,000 communications were issued from or were received by the Board's office last year; a large proportion of these have to be brought before, if not the full Board, at least one of the Members That is one side of their work. In some respects it is not the most arduous; for just as, on the one hand, the sanction of the Railway Board is required in matters which on an English railway would hardly get further than the head of a sub-Department, so, on the other hand, the Railway Board itself has frequently to apply, not merely to the Government of India on the spot, but to the Secretary of State 6,000 miles away for sanction in matters of apparently quite trifling importance. We have had furnished to us a large folio volume, containing 115 pages of text and 25 pages of index, entitled the "Schedule of Powers of the Government

SERVANTS OF INDIA SOCIETY'S
BRANCH LIBRARY
BOMBAY

of India and the Railway Department (Railway Board) in railway matters." This document enumerates under nearly 400 heads the various subjects in which, and the extent to which, power is delegated by the Secretary of State to the Government of India and re-delegated to the Railway Department.

108. We give two instances: one in which the powers of the Government of India are limited, and the powers of the Railway Department are further limited; the other a case in which the Government of India has received full power and only part is subdelegated.

Authority.	Item No.	Subject.	Extent of powers and conditions.
I.—S. of S.'s Desp. No. 30, Financial, dated 31st March 1911, in F. D. Pros. Accounts, &c., June 1911, Nos. 342-344, A. II.—Article 137 (i) of Vol. I. Civil Account Code.	178	Advances to officers for the purchase of a motor car or motor boat.	I. *Government of India.*—Power to amend the rules regulating such advances, subject to the condition that any modification of the portion of the rules limiting the advance to Rs. 7,500 and the period of recovery to three years should be referred to the Secretary of State for approval. II. *Railway Department.*—Power of a Department of the Government of India under Government of India, Finance Department, Resolution No. 3138 A., dated 25th May 1911. [Article 137 (i) of Vol. I, Civil Account Code.] *Note.*—Advances for the purchase of motor cycles may be granted in accordance with Government of India, Finance Department, Resolutions No. 1242 E. B., dated 21st September 1915 (E., October 1915, Nos. 8-9, A.), and 1523 E. B., dated 1st December 1915 (E., December 1915, Nos. 30-31, A).
I.—*Practice* - - II.—Railway Board's Pros. R. C., Aug. 1908, A., Nos 162- R. C. Feb. 1914, Nos. 12-15 A.	352	Expenditure on entertainments to railway employés and the public on the occasion of the opening of new lines of railways or of any works of great importance.	I. *Government of India.*—Full power. II. *Railway Department.*—Empowered to sanction such expenditure, up to a limit of Rs. 5,000, in each case, as a charge to *revenue*. In cases where, owing to contractual conditions, *e.g.*, where a branch line is worked by a main line for a percentage of the former's gross earnings a charge to revenue would not be proper the Railway Department is empowered to sanction such outlay as a charge against *capital* up to the same limit. For payments in excess of this amount the concurrence of the Finance Department is required.

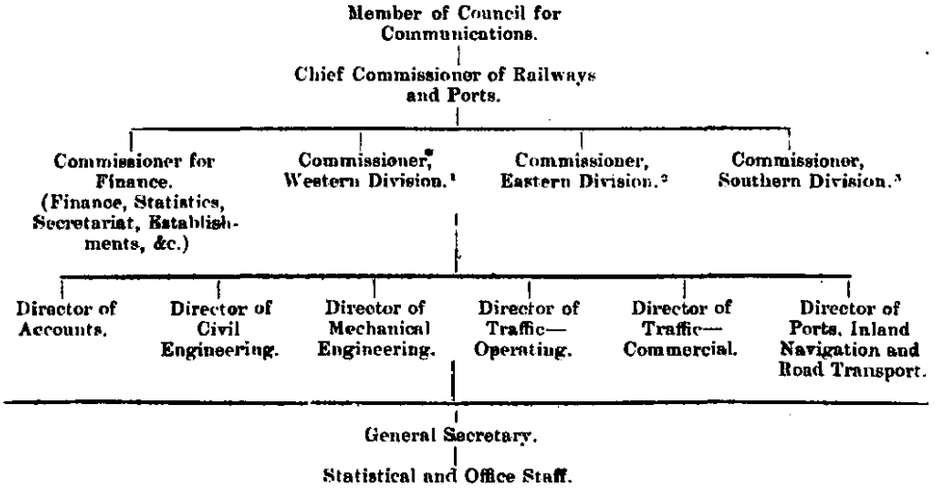
Its responsibility for local details

109. It seems to us that, in consequence of the regulations under which the Railway Board act, they spend a large part of their time, on the one hand, in doing the work of their subordinates, which these subordinates ought to do for themselves; and on the other hand, in obtaining from their superiors permission to do the things which they are fully competent and ought to be permitted to do for themselves. This is one fundamental criticism which we have to make of the present system of railway control; the other, equally fundamental, we have made already at sufficient length, namely, that the railways, not being masters in their own house, are not able to shape their own policy; it is shaped for them by the exigencies of the Finance Department.

110. Complaint was made to us in different parts of India that the Members of the Railway Board seldom or never visited them. In Delhi we were told that, if a Member of the Board absented himself for a fortnight, the accumulation of papers would be so great that it would be almost impossible for him ever to overtake them. And we fully believe it. There is laid upon their shoulders a burden of routine work which is more than three men can cope with. The proper function of the Railway Board is not to carry out routine duties, but to shape policy, to watch, to think, and to plan. Throughout the whole of India, but more especially in the South, witnesses complained to us of the actions, or the inaction, of the Railway Board. We were told that letters were left unanswered; that decisions were delayed indefinitely; that when charges against the companies were made the Board referred them to the companies

themselves, and then washed their hands of the matter; that applications to the Board for redress of grievances had been proved to be fruitless and so had ceased to be made.

111. We subjoin a chart showing how we think the organisation of the Communications side of the new Ministry should be planned :— Constitution of proposed Railway Commission.



112. The Chief Commissioner of Railways and Ports will, of course, be a technical railway man. Presumably he will be nominated as a member of one of the Houses of the Legislature, but it is to be assumed that he would be required to attend only when transport questions are under discussion. He would have the status of a Secretary to Government and so would have a right of access to the Viceroy; and we consider that he should be invited to attend meetings of the Executive Council when matters relating to the Commission are under consideration, with freedom to advise on technical matters, but without a vote.

113. The Chief Commissioner should be assisted by four Commissioners, as follows: One Financial Commissioner; three Railway Commissioners in charge of territorial divisions.

114. The Financial Commissioner should be Second in Command to the Chief Commissioner at headquarters. He should arrange that the services of the directors of the various sections, and the office staff generally, shall be available to all the Commissioners.

115. The fundamental differences between the constitution of the Railway Commission which it is proposed to set up and the present Board are :—

(*a*) The appointment of one responsible Chief Commissioner.
(*b*) The addition of a Financial Commissioner.
(*c*) The supervision of territorial areas by separate Commissioners.
(*d*) The addition to the technical staff of Directors of Mechanical Engineering, Commercial Traffic, Ports and Road Transport.

116. Given the right men to fill the positions, we feel confident that a controlling organisation on the lines defined will be the means of eliminating the disabilities so apparent in the existing régime. At present the Board, consisting of three members, two of whom can outvote the third, and all of whom are concerned in every general railway question that arises, cannot act with promptness and decision. Except when the matter is urgent and a member of the Board is absent, the whole Board has to be consulted upon every important action taken, and each member therefore attempts to keep himself informed of all that is taking place. India is a vast continent, transport questions of the present and the future are many and complex, and the task that has been set the members of the existing Board is more than they can efficiently undertake. The duties of supervision require to be subdivided, and the responsibility

[1] The Western Division would include the Great Indian Peninsula; Bombay, Baroda, and Central India; North-Western and Jodhpur-Bikaner Railways; together with the ports and the branch and feeder railways in their areas.

[2] The Eastern Division would include the East Indian; Oudh and Rohilkhand; Bengal and North-Western; Rohilkund and Kumaon; Assam-Bengal; Bengal-Nagpur and Eastern Bengal Railways; together with ports and local railways as above.

[3] The Southern Division would include the Madras and Southern Mahratta; South Indian; H.E.H. the Nizam's and Burma Railways; together with ports and local railways as above.

of each member clearly defined. Under the existing organisation the individual members of the Board would require what they cannot possibly have, a thorough and up-to-date knowledge of India as a whole. In connection with matters of moment the constitution of the Railway Board must inevitably lead to delay for the purposes of a conference, with the probability of further delay for information, followed often by compromise in order to obtain unanimity.

117. The responsibility—under the Member of Council—for arriving at decisions on technical questions, or for advising the Member on matters of railway policy, should be vested in one man and one man alone. The present organisation, under which the members have practically equal voting powers and responsibilities, inevitably leads to lack of initiative, lack of decisiveness, and lack of a definite policy.

Divisional Commissioners.

118. The appointment of a Chief Commissioner, who will be an executive officer with full powers, will not in itself eliminate the disabilities under which the controlling authority is at present labouring. Local touch and local responsibility must also be developed. At present the Railway Board has not the means for obtaining the necessary intimate local knowledge. The local authorities and public are fully aware of this, and in consequence have no confidence in the Railway Board, of which the members are seldom seen, and in consequence the Board is practically disregarded. Subdivision and concentration of supervision will cure this. We have for this purpose apportioned the railway map of India into three divisions, and it is proposed to allocate a Commissioner to each division. It will be the duty of the Commissioner in charge of a division to concentrate and specialise upon the study of its transport problems so as to become thoroughly intimate with them. He will by this means obtain a confidence and power of decision which knowledge alone can give, and in addition will win for the Board throughout India the confidence in its control which is now non-existent.

119. Thorough local knowledge on the part of the Commissioners will bring with it a power of initiative and anticipation of transport problems which is so necessary to the future development of India. Closer supervision of the individual railway's working by the Commission will bring increased efficiency in operation, and ensure money for traffic facilities and development being spent to the best advantage.

120. Subdivision of supervision must necessarily lead to closer investigation of results and a more prompt and fair appreciation of ability and energy of management. Statistics of operation will be subdivided also, and a healthy emulation will be set up between the divisions and the separate railway units within the divisions which will all assist in promoting keenness, efficiency, and economy.

121. The trading and travelling public will undoubtedly directly benefit by closer supervision from the seat of Government, and from more intimate local knowledge. The public will soon appreciate the advantage of being able to appeal to a particular Commissioner, who not only knows but sympathises with the legitimate aspirations of his own Division, and who is able, owing to the concentration of his responsibilities, to afford the time to investigate on the spot problems as they arise, and consider beforehand with those most intimately concerned schemes for future development within his area of control.

122. Consultation between the Commissioners as a body, under the Chief Commissioner, will, of course, take place whenever matters of general policy are under consideration.

Inspecting staff, Engineering and Traffic.

123. At the present moment there are eight different Circles in India, each with an Engineering Inspector who is required to make a minute inspection of every mile of railway in his Circle every year.[1] We cannot believe that this amount of inspection is necessary, and we recommend therefore that economy be effected by reducing the Engineers' circles to three, viz., the three divisions for which Commissioners will be appointed. It may, however, be necessary in one or more of the divisions to appoint in addition an Assistant Engineering Inspector. The monetary saving effected can be utilised for the appointment in each of the divisions of an Inspector of Traffic who will work under the Commissioner of the

[1] One of the engineering inspectors is also Secretary in the Railway Department of a Local Government. The Local Governments have no control over railways. They have, and frequently exercise with advantage, the right to press local grievances, and to represent local requirements. But the position of an official, who spends part of his time complaining on behalf of one employer of the action, or inaction, of the body that employs him for the remainder of his time, seems to us, to say the least of it, anomalous.

division. Such Inspectors are more especially needed at the present time. The railway machine is, as we have said, quite inadequate for its work. It cannot be brought to a state of reasonable efficiency for a good many years to come. But from our own observation, and from such comparisons as we have been able to make between one railway system and another, we are persuaded that, if the operating methods of the least efficient line were brought up to the standard, not of ideal perfection, but of the most efficient operation existing in India at the present moment, considerable improvement in service would be effected.

124. The changes and additions we have proposed in the headquarters establishments will involve some additional expenditure, possibly something like 25,000*l.* or 30,000*l.* per annum. The expenditure is necessary, and is in the interest of true economy. It will be offset to an appreciable extent by the saving of clerical labour and printing which will be secured by the reform of the existing accounts and statistics, as recommended later in this Chapter. The present emoluments of railway service in India, whether at headquarters or in the management of individual undertakings, are entirely inadequate. Perhaps we shall best make clear the situation if we say that the highest salary paid in the Indian railway service to-day is hardly more attractive than that of the head of a sub-department on a big English railway, such as the Deputy Goods Manager, or Outdoor Superintendent of the Line. To expect that at this price the Indian railways will obtain the services of the right class of men is to expect the impossible.[1] We do not think that Indian opinion will grudge to pay adequate salaries for efficient service.

Relations of Railway Department

125. We must now deal in somewhat more detail with the relationship which should in future exist between the reconstituted Railway Department, and the authorities above it on the one hand, and the railway management responsible to it on the other. In dealing with the first half of this question it is impossible for us to avoid touching upon the field of general politics. Hitherto, the Government of India has had to carry out instructions of the Secretary of State. And the Secretary of State, from the fact that his salary was paid by the Indian taxpayer and not included in the English estimates, though of course he could be made ultimately responsible to Parliament, occupied a semi-autocratic position. Since the Government of India Act came into effect at the beginning of 1921 the position is entirely changed. The Legislative Assembly, three-quarters of whom are elected by popular vote, have now large control, both of legislation and administration, and in particular have the control of expenditure through their power to refuse to vote the items in the Budget, subject to the reserve power of the Governor-General in Council to reinstate any item struck out if in his opinion it is essential to the discharge of his responsibility. This great constitutional change must modify profoundly the responsibility of the Secretary of State for the management of Indian railways. For we may assume that he will hesitate either to veto expenditure which the Legislative Assembly has sanctioned, or to enforce expenditure for which they have refused to find the money. On the other hand, Parliament, which has taken over the India Office vote and established a permanent Joint Committee of the two Houses on Indian Affairs, must be assumed to intend to exercise in future through the Secretary of State supervision over the broad policy of the Indian Government.

To the Legislative Assembly

126. But in any case, and apart from constitutional changes, it seems to us that a revision of the powers reserved to the Secretary of State in respect of railway management is overdue. We have had an opportunity of perusing the Despatches and the cable messages on railway subjects exchanged between the India Office and the Government of India since January 1920. They are numerous; they are voluminous; and not a few of them are concerned with quite petty details. We have found, for instance, Despatches addressed by the Secretary of State to the Viceroy in full official form dealing with matters such as the following:—

Despatch No. 7 of 1920. Sanctioning gratuity to a travelling inspector of accounts of an amount proposed in Government of India, Finance Department, Despatch No. 446 of 6th November 1919.

Despatch No. 11 of 1920. Reporting re-engagement of an engine driver as result of correspondence ending with a cablegram from the Government of India.

Despatch No. 2 of 1921. Sanctioning payment of a pension of Rs. 100 per month (say 80*l.* per annum) to the widow of an engine driver killed in an accident.

[1] We have reason to believe that recently in more than one case railway agents have refused to accept appointments to the Railway Board, and that two agents have resigned their railway posts to accept appointments elsewhere, in Indian public service though not under the Government of India.

We cannot believe it necessary to employ a Nasmyth hammer to crack such small nuts as these.

And to the Executive.

127. We assume that in future the Railway Commission will be responsible for its own administration; will itself fix scales of pay and conditions of service for its own staff, and be free to engage and dismiss them as it thinks proper; will prepare its own programme of work and expenditure; and within the limits of its budget, as approved by the Government of India and the Secretary of State and accepted by the Legislative Assembly, will carry it into effect; that, in a word, though remaining an integral part of the Government machine and subject to control on broad questions of policy and the major questions of finance on which policy must depend, it will be an independent administration.

128. We now turn to the relations between the Railway Commission and the managements of the separate railways. Both in reference to lines directly managed by the State and those managed by companies we recommend that the control in matters of detail be relaxed as far as possible, in order to eliminate constant references for sanction to the Commission and to leave to each official—whether an agent or one of his subordinates—unless for special reasons, the same amount of freedom in incurring minor expenditure or in dealing with his staff as would be left to a corresponding official under ordinary company management.

Accounts and statistics.

129. There are, however, important respects in which the existing organisation does not provide for the exercise of adequate general supervision and control over the railways. Economical railway management cannot be ensured without a proper system of railway accounting. Apart from a mere audit check of receipts and disbursements, a railway requires a large number of financial returns of various kinds; not in order to say whether expenditure incurred has been duly authorised, or receipts duly accounted for, but to say whether expenditure is being wisely incurred, whether retrenchment of habitual expenditure is possible under one head, whether new expenditure under another is proving profitable, or even whether a larger expenditure would be likely to be fruitful; and so on. These are not matters to be left to an outsider. A practical railway man who knows what he is doing in the present, and what changes he is meditating for the future, is alone competent to prescribe and to make use of returns of this kind. But the accounting staff controlling the Indian railways, from the Accountant-General (Railways) at Delhi down, in the case of the State managed railway, to the latest joined clerk in a local office, are officials, not of the Railway Board, but of the Finance Department. No doubt these officials gradually get to see the railway point of view, but they must be guided by rules laid down by the Finance Department, framed largely in view of the requirements of the non-commercial departments of Government.

130. At present the railway accounts are very complicated; some portions are produced in different forms for the use respectively of the Railway and of the Finance Department. And when, as has happened in the case of the Committee, enquiries are based on the statements made in the Railway Administration Report, and reference is made to the corresponding portions of the Finance and Revenue Accounts of the Government of India, there is great difficulty in reconciling the two sets of figures. We are quite sure that, if the whole matter were under the control of a single department, simplifications could be introduced which would not only make the accounts more intelligible, but result in considerable saving of expenditure. The Report of the Auditor-General would continue available as at present to secure the financial rectitude of the Railway Administration.

131. We recommend that the Railway Department should be responsible for its own accounts. We do not exclude, of course, such independent and separate audit as the Government of India may think proper to make, on the same principle that obtains in any commercial company, where the shareholders appoint an outside firm of accountants to check and report on the books which are kept by the servants of the directors, the ordinary accounting staff. We think also that the present form of accounts should be examined and reported on by experienced railway accountants conversant with modern practice in England and America.

132. Statistics are closely connected with accounts. In volume we believe the Indian railway statistics surpass those of any other country.[1] Their value is not proportionate to their volume. The present form of statistics was, we understand, introduced about the year 1880, a period in railway history which may be described as mediæval. They have not been revised since. The Members of the Railway Board are in full agreement with us in thinking that the time for revision is overdue. It is admitted that the time of a large number of clerks is occupied in their preparation, and that much money is spent on their printing, and that when duly prepared and printed little use is made of them for any practical purpose. Further, we gather that these statistics are not always what they purport to be, arithmetical calculations from accurately recorded figures ; that in some cases at least they are no more than computations of averages based on data inadequate both in width of scope and length of time.

133. Adequate statistics are urgently required, not only to enable the Railway Board to control the management of the railways for which it is responsible, but to enable the managers themselves and their officials to see how the work which they are doing compares with the work done elsewhere; and also to see that they are not retrograding, but improving in efficiency year by year. Such statistics are not produced for Indian railways. In some cases, but not in all, useful comparative figures can be extracted from the tables furnished in the present Administration Report, but they are not given, as they should be, as comparisons in the Report itself. A keen manager of an individual railway may extract such comparisons for his own use; but they remain available for himself alone. Other managers, in ignorance of what their neighbours have accomplished, lag far behind the achievement which they might reach were they stimulated by knowledge of the results attained elsewhere. Moreover, if the railway statistics were adequate and if the members of the Railway Board themselves had leisure to study them, and then apply the results they had ascertained to the case of an administration that was backward in improving the State property entrusted to its management, we are persuaded not only that more traffic could be carried, even with existing facilities, but that State profits would be largely increased.

134. As for the form of the statistics, it is clear that it is in need of radical reform. China, like India, has a large number of railways, belonging to the State but managed separately. Some 10 years ago the Chinese Government saw the need for appointing a Commission to harmonise and amplify the statistics furnished by the separate managements. After long and careful investigations the Commission reported, and new forms of statistics were drafted with the assistance of an expert statistician of the highest reputation, who for many years had been in charge of the statistical branch of the Interstate Commerce Commission of the United States. The Annual Report of the Chinese Government Railways, of which five issues have now appeared, is a model of its kind, probably more up to date than that produced in any other country in the world. On enquiry at Delhi we were told that knowledge of its existence had not yet reached the office of the Railway Board.

135. There is another reform which is urgent. We do not think that the ordinary Civil Service Regulations and practice are suitable for application in so specialised a concern as a railway. The relations between the employer and the staff should be more in conformity with ordinary commercial practice. In particular, the weight attached to seniority in the appointment of men in the State railway service to vacancies is at present too great. We have had brought to our notice cases where an officer, with only quite a short period of service before his date of retirement, has made good his claim to be transferred from his own railway to another State railway, where the corresponding grade carried a slightly higher salary, on the ground of seniority. Again, there have been cases where an officer of high proficiency in his own technical branch on one railway has been transferred to another railway as agent,

Civil Service Regulations.

Seniority.

[1] The voluminous nature of these may be judged by a single instance. There is in Kathiawar an entirely unimportant narrow gauge railway, 58 miles in length. We have extracted from Vol. II. of the Administration Report the information furnished in respect of this railway. It occupies 21 pages of typewritten folio; and is given in as full detail as though this little line was a main line system. It is, for instance, recorded that, during the year, the railway raised Re. 1 from the carriage of beer, Rs. 5 from the carriage of engine parts, Rs. 8 from the carriage of silk and the same sum from the carriage of cigars.

though lacking in general administrative experience. Transfers such as this do not promote efficiency.[1]

136. We have been frequently told by the advocates of company management that rigid regard for the claims of seniority, and the consequent shifting of men from posts for which they are suitable to others for which they are not, is a necessary concomitant of State management. We can see, however, no causal relation between one and the other. Whether this practice is proper in ordinary Government service is not a question for us. When the railway administration has attained independence and has established the necessary machinery for closer local supervision, it ought not to be continued so far as railways are concerned. So injurious is this system, that, if we had believed it must necessarily be permanent, those of us who have recommended the adoption of a State management policy would have hesitated longer before doing so. We may add that experience in India has not shewn that selection by company boards of their chief officials is always successful.

137. On the State railways the Government has a free hand. It can delegate or retain powers as it thinks fit. It can even on due cause shown distinguish between the powers granted on one system and on another. It can instruct the agent to carry out works or to spend money as it sees fit. But with the railways of the Guaranteed Companies the position is different. They have contractual rights which must be respected. Broadly, the Government can only prevent; its power of initiative is strictly limited. The Government can order a company to execute works or to adopt methods required in the interest of safety; but not if they are required only on grounds of convenience or of economy. In the latter case they can suggest, but could not enforce if the Company were to refuse.

Need of more control in essentials.

138. Sometimes the Government cannot even prevent. It cannot, for example, prevent the appointment or the retention in office of an unsuitable officer. We think the Railway Commission must have some control over the appointment and retention of the principal officers, and more power than at present to initiate and enforce reforms, possibly with some such appeal on the grounds of reasonableness, where they imply the expenditure of considerable sums of money, as is provided in the Railways Bill, 1921, now before Parliament. But we have no doubt that, if the Companies are taken into consultation on this subject, a satisfactory agreement can be come to; and that they will be ready to accept the possibility of control exercised occasionally in extreme cases in return for release from constant and irksome interference with everyday details. The Government has in its contracts with the various Companies power in the last resort to act by legislation. The contracts provide that—

Less interference with details.

> "No claim shall be made upon the Secretary of State by the Company for compensation in respect of the prejudicial effect upon the undertaking or the profits thereof of any Act [of general applicability[2]] of His Majesty's Indian Legislature for the time being in force, and the Company and the undertaking and its equipment shall be subject to the provisions of every such Act."

Closer touch with public opinion needed.

139. So far we have dealt with the working of the administrative machinery. But this machine is at the present moment, and must, as we have said, continue to be for some years to come, worked mainly by non-Indian officers. Witness after witness representing Indian opinion has complained that the Indians have no voice in the management of their own railways. We think that no scheme of reform can attain its purpose of fitting the railways to the needs of the Indian public unless that public has an adequate voice in the matter. Control in the strict sense of the

---

[1] In this connection the following extract from the record of Sir William Meyer's evidence may be quoted:—

(*Chairman.*) "I was reading the other day Lord Haldane's evidence in connection with the constitution of a theoretical Government department . . . and he said the proper system to adopt was seniority tempered by a very stern and rigorous rejection. How does that appeal to you as a principle?

(*Witness.*) "I think seniority tempered by the rejection of the unfit is very good, and, indeed, essential until you get to what you call the administrative grades in India—the biggest appointments in any service. There, I think, you ought really to go by selection. Of course, seniority will always have some weight. You could not upset the service entirely by taking quite a junior man . . . ."

[2] These additional words appear in the contracts of some companies.

word, the power, that is, to give orders to the Railway Executive, Indian opinion can only exercise through its constitutional mouthpiece, the Legislative Assembly at Delhi. But though control is reserved, it is possible for bodies representing the public to exercise great influence. In no country was the control of railways more autocratic than in Prussia. Yet it would be probably true to say that, in the generation before the war, the railways of Prussia were subject to less hostile criticism from their public than those of any other country. In Prussia there was a carefully planned system of railway councils, a single national council, and a number of local councils. They consisted of representatives of the Departments of State specially concerned with railway matters, associated with a majority of members nominated by the Chambers of Commerce, Chambers of Agriculture, the great municipalities, and similar bodies representing the public. They had no powers. But they had great power. They had a secretary, and met at stated intervals with an agenda on which any member could put down any subject for discussion he thought fit, and on which the railway officials put down any subject, such as changes and improvement in train services or alterations in rates for and classification of merchandise, which concerned the public interest and convenience. The railway administration, so it has been reported, very rarely acted except in accordance with the views expressed by the councils in all matters within their competence.

Central Advisory Council.

140. We understood from the Indian witnesses that they would welcome the establishment in India of Councils, Central and Local, with substantially similar constitutions and functions. We propose that there should be a Central Advisory Railway Council, meeting perhaps at Delhi at the beginning, and towards the end, of the cold weather, and that it should be of a manageable size.

141. We give in a footnote[1] below the constitution of the Railway Council which has just been established in Poland. It will be observed that, like the Prussian Council and the corresponding *Comité Consultatif des Chemins de fer* in France, it is quite a large body. We are inclined, however, to think that in India it would be well, at least in the beginning, to constitute a Council on a smaller scale with a membership of not more than 25 in all. The Member for Communications would of course be Chairman of the Council, and his duties in that capacity would be amongst the most important functions he would have to discharge. The whole of the Commissioners should, if possible, attend the meeting, bringing with them any other officials whose presence is required by the business in hand. The Commissioners should, in our opinion, be free to speak, but should have no vote. The Council should include representatives of the Departments of Commerce and Industries, Agriculture, and possibly some others. One-half of the non-official members should be nominated by the leading commercial and industrial associations, both European and Indian. The other half should be representative of rural interests and of the Indian travelling public in different parts of the country. In the absence of any prominent associations definitely identified with these interests we think this object would best be attained if one representative were appointed by the Legislative Council of each of the provinces, not necessarily from amongst themselves.

Local Advisory Councils.

142. All the railway officials to whom we put the question expressed themselves as ready and willing to work with Local Advisory Councils and endeavour to make them a success. These Councils should, we think, be somewhat similar in constitution to the Central Council, and, perhaps, half the size. There might be either a local Council at each of the railway centres, at which the Agents of all the railways having their headquarters there would be present, one of them taking the chair; or on the other hand, there might be a Council for each railway, meeting at the headquarters

---

[1] *Constitution of the Polish Railway Council.*

(1) Representatives of the Ministries of Trade and Industry, Agriculture, Posts and Telegraphs, Finance, Public Works, Food, and Military Affairs, who will be appointed by the corresponding Ministers, one for each Ministry.
(2) One representative of each of the ten largest towns in Poland to be appointed by the corresponding City Councils.
(3) Sixteen representatives of industrial and commercial associations.
(4) One representative of each railway directorate.
(5) Six experts to be appointed by the Minister of Railways.
(6) Representatives of other Ministries, at the invitation of the Minister of Railways, if matters concerning such Ministries are under discussion.

of that railway, in which case one Agent only would take part.[1] This is a matter which may well be settled by discussion with the local interests specially concerned. But we think it of great importance that these Councils should be established as soon as possible. The Indian public is deeply and justifiably incensed by the conditions to which both passengers and traders have long been subjected; and it is desirable that their representatives should at the earliest possible moment be acquainted with the steps that are being taken for the redress of their grievances.

Liaison with Provincial Governments.

143. One other point should be added. The whole administration of railways is, as we have said, with quite unimportant exceptions, a subject reserved for the Central Government. But Local Governments are much more closely in touch with the local population, especially since certain departments of local administration have been entrusted to responsible Indian Ministers. We think that the Local Governments should be represented on the local Railway Councils, whether by an official or by an unofficial nominee it will be for them to decide. Further, we have been told that two Local Governments, those of the Punjab and of the United Provinces, have recently established Boards of Communications, and from what we have learned of the success of these Boards we think that the example is likely to be followed elsewhere.

---

[1] In the latter case we think that the North-Western Railway should establish a second Council at Karachi, which is rapidly growing, is in a different Province, and has interests distinct from Lahore. There is much to be said also for a Council at Cawnpore.

CHAPTER V.

Relations between Railways and their Customers.

144. The fourth paragraph of our Reference instructs us to report "whether the "present system of control by Government of rates and fares and the machinery for "deciding disputes between railways and traders are satisfactory, and if not, to "advise what modifications are desirable." The fifth paragraph instructs us "to make recommendations that may seem germane to the enquiry." We therefore propose in this section of our Report to deal with the question of the relations between the railways and their customers, whether traders or passengers, as a whole, and not to confine ourselves to the two special points of charges and disputes.

145. We have at various stages of this Report called attention to the very close and detailed control exercised by the Government of India over the management of the Indian railways. In the matter of fixing rates and fares, on the other hand, there is left to the Companies a large measure of freedom. **Rates and fares.**

146. The Government's right to control rates and fares is embodied in the following clause in the contracts with the various Companies :— **Companies' existing powers.**

> "The Secretary of State shall from time to time authorise maximum and minimum rates within which the Company shall be entitled to charge the public for services rendered by way of, or in connection with, the conveyance of passengers and goods on the undertaking, and shall prescribe the several classes and descriptions of passengers and goods to which such rates shall be respectively applicable."

In practice the Government exercises this right by framing a classification and fixing maximum and minimum rates, usually in the relation of about three to one, for each class. In the case of railways worked by the State, the permissible limits of charge are prescribed in the same manner for the guidance of the Agent. Now fixing maximum and minimum rates does nothing to protect the trader from what is known as undue preference, that is, charging in one place or on one class of traffic rates unreasonably disproportionate to those charged elsewhere or to other competing traders. There is a nominal protection against undue preference in the provisions of the general Railways Act, 1890. But the enforcement of the remedy under this Act involves the setting up of a special court to try each individual case, and this procedure is so cumbrous and inapt that in fact no court has ever sat. Allegations of undue preference are frequently made and have been strongly urged before us. If a cheap and expeditious tribunal were established to try such cases we have reason to believe that not a few complainants would appear before it. Under present conditions it is only natural that many traders nourish a sense of grievance which on investigation might, in some cases at least, prove to be unfounded. **Need for greater control.**

147. Our attention was called to the fact that the contracts of the most important Companies appear to give to the Secretary of State further control over rates and fares than is given by the clause which we have quoted. In their case there is an additional section of the clause after the words cited which runs as follows :—

> "as well as the extent to which, within the maxima and minima so authorised, the Company may vary the said rates in respect of the distance or weight or special conditions under which such conveyance takes place or services are rendered."

When we were in Delhi we discussed this matter with the Railway Board, and invited their opinion as to the effect of this additional provision, in respect of the Companies in whose contracts it appears. They informed us that their opinion, after taking legal advice, was that these words did not deprive the Companies of the legal right to vary rates at their discretion within the prescribed maxima and minima. The Board have naturally acted on this interpretation of their powers. But we are not wholly satisfied that their view is correct. The clause is badly drawn, and legal authorities in England whom we have consulted have difficulty in interpreting it. But we have no doubt what its intention was. It was meant, in our opinion, to give power to the controlling authority, not merely to fix the maximum and minimum of each class, but to say what consideration should be given to length of haul or size of consignment or other special circumstances in varying the rates within these limits.

148. Whether, however, the clause, if tested by legal proceedings, would be found to have the effect which we believe it was intended to have, is not of great consequence. We have no doubt whatever that further power to control rates ought to exist and be exercised by some appropriate public authority. We believe that the clause cited in para. 138 of the Report, which exists in all contracts, and provides in effect that every Company shall be liable to have its position modified by subsequent Acts of general applicability, enables the Government to confer such power upon a competent authority.

Allegations of undue preference.

149. It is an Indian grievance of old standing—it was voiced in the Legislative Assembly at Delhi in 1915 by a distinguished Indian, now a Member of the Executive Council of Bombay, Sir Ibrahim Rahimtoola—that the railways fix their rates to suit their own pecuniary interests—if indeed it be not to suit the interests of European merchants—regardless of the effect of these rates on the native industries of India. And we have no doubt that the charge is accepted as proved by a large proportion of Indian traders.

150. Charges based upon motives are difficult to prove or to disprove. It was not our duty to investigate specific cases in detail, nor would the time at our disposal have permitted us to do so. Unquestionably, low exceptional rates exist for traffic to and from ports, especially the great ports of Calcutta and Bombay. But exceptional rates such as these exist in every country, and are there justified on the ordinary grounds, not only of the economy of handling goods in large volume, but also of competition between railway systems serving the same distributing or consuming area.

151. In one respect, at least, the Indian railways have refrained from following the accepted railway practice in other countries. It is usual in most countries to concede for export traffic through a seaport rates which are not available to that seaport for local traffic; and *vice versâ*, in countries which adopt a Free Trade policy, to fix lower rates for the carriage inwards of goods imported through a port than for goods produced locally at the port town. This practice is not, so far as we have been able to ascertain, followed in India. Bombay receives from up-country large quantities of raw cotton, part of which is worked up on the spot and part exported. Similarly, Bombay distributes to up-country points large quantities of cotton cloth, part of it locally manufactured and part imported. The raw cotton rates down to Bombay port and to Bombay town are the same, and so are the manufactured cotton rates upwards. The same principle, we understand, is applied elsewhere, in the case, for instance, of the great Calcutta jute trade.[1]

"Block rates."

152. Complaints are also loud and frequent from Indian traders in respect of what are known as "block rates." The term is peculiar to India and needs explanation. A block rate, as we understand it, is a high rate quoted with the object of retaining traffic on the line on which it originates and preventing, or "blocking," it from passing off, after only a short lead, on to a rival route. Some Indian witnesses, however, use the term as meaning a rate which is higher because the route over which the traffic is carried is in the hands of two separate administrations. But this is in no way peculiar to India. Railways all over the world charge more per mile—largely because it costs more—for a haul of 50 miles than for a haul of 500; if, therefore, traffic is hauled in one case 500 miles over a single system, while in another case it travels 50 miles over one line and then 450 miles over another, the total charge in the first case will—other things being equal—normally be lower than in the second. No instance has been quoted to us as existing at the present time of what would be a real block rate, *i.e.*, a rate from A to B for traffic going beyond B on another company's system higher than for a rate from A to B for traffic which goes no further. Block rates have certainly existed in the past, and Indian popular opinion is fully persuaded that they are typical of existing conditions. One of these cases is so notorious that it deserves a paragraph to itself.

153. About 100 miles to the North of Bombay, Broach, a small but ancient port, is situated on the main line of the Bombay, Baroda and Central India Railway. In the year 1908 an enterprising Bombay firm started a steamer service between Broach and Bombay. The Bombay, Baroda and Central India Company found that a certain amount

[1] There was, we were told, a special export rate for coal to Calcutta, but it has recently been withdrawn.

of traffic was being diverted. They therefore appealed to the Railway Board, pointing out that, as the great bulk of the profits of the Company went to the Government, the Government was interested in putting a stop to this diversion, and they suggested that, in order to enable them to impose on the through traffic for the short distance to or from Broach rates sufficiently high to leave little or nothing for the steamer portion of the journey, the Railway Board should permit them to raise the classification of certain competitive articles to the highest class. The Board assented. In one case at least, that of sugar, the article was raised from the first class to the fourth; in other words, the Company's power of charge was increased fourfold. The steamers withdrew from the unequal struggle, and the merchants of Broach not unnaturally protested. One sentence in the reply of the Railway Board deserves quotation :—

> "The contention . . . . is altogether opposed to the universally accepted policy which recognises that the unfettered freedom enjoyed by sea transport agencies in the quotation of rates entitles railway administrations to greater freedom when competing with water transport than is legitimate when competing amongst themselves."

154. It is difficult to believe that the writer of the letter really thought that putting up railway rates to a prohibitory point, with the object of preventing traffic ever reaching the water route at all, could be justified by the analogy of the normal practice of reducing railway rates to retain or obtain traffic which otherwise might be attracted to the water route; but if there is any other instance in history where a railway has been authorised by the controlling authority to do what the railway company did in the Broach case, the Railway Board did not specify it. The steamer service was taken off, "killed," said the merchants of Broach, by the block rates. Thereupon they petitioned that these rates, having served their purpose, might be withdrawn. The Railway Company refused to assent on the ground that there was still water competition maintained by country craft—small sailing vessels manned by Indian crews. Finally, the Government of Bombay intervened, as representing a public opinion which was becoming vocal, and then the Railway Board submitted and announced to the Railway Company that the exceptional increases in classification could no longer be sanctioned and must be withdrawn. But the Broach block rates lasted from 1910 to 1919, and the memory of them is still green in the hearts of traders all over India.

Alleged unfair competition with waterways.

155. The Broach case, though the most surprising, is not the only instance where railway companies have been accused, in dealing with water competition, of going or attempting to go to a length which seems to us indefensible. In Madras our attention was called to three cases. Leading into Madras itself there is a canal, known as the Buckingham Canal, which was of considerable importance at one time, but whose traffic since the advent of a railway has greatly fallen off. It was admitted on behalf of the railway company that they put in exceptional rates so low as to leave to them a very small margin of profit in order to divert traffic from the canal. Evidence was also given of an agreement between the South Indian Railway and the British India Steam Navigation Company, the effect of which was to induce the Steamship Company to cease to call at certain small ports, and so leave to the railways a monopoly of the traffic. Again, a letter was submitted to us in which the Agent of the same railway put forward a proposal that the Government should entirely close the small port of Tirumalavasal, and so force the local traffic on to the railway of which the Government was the owner. We think this is eminently a matter to which the Communications Department, which, if our recommendation is adopted, will have charge not only of railways but of canals and ports, should direct its attention.

Enquiry recommended.

Rates Tribunal.

156. We have discussed with very many witnesses, representing not only the Indian public, but the railway companies, what the authority to control rates should be. We have found a unanimous readiness on both sides to accept the constitution of a new Tribunal, practically identical with that recommended for the same duties by the Rates Advisory Committee constituted under the English Ministry of Transport Act, 1919, and accepted as satisfactory both by the railway companies and by representative organisations of the traders in England. We recommend the establishment of a Rates Tribunal consisting of an experienced lawyer as chairman and two lay members, one representing the railways and the other the commercial interests, with power, in any case deemed of sufficient importance, to add two additional members, one on each side. We do not think it necessary to go into the constitution and powers of the suggested Tribunal in any further detail. The proposals of the Rates Advisory

Committee, which are the result of an exhaustive public discussion by all parties interested from all points of view, are embodied in Part III. of the Railways Act, 1921, just passed by Parliament. The clauses in Part III. raise all the questions in issue and are available for reference when the time comes for practical action to be taken in the matter.

157. That the proposed Tribunal in England will not lack work is evident. It is not, however, possible at present to say how far this will be the case in India. We suggest that in the first instance the lay members of the Tribunal should be appointed, but only paid a retaining fee until it can be seen what the work is. We think, however, that the legal chairman should be appointed forthwith as a whole-time officer. The law of railway rates is not a simple matter. In addition to legal knowledge there is required a grasp of the economic principles involved and at least a general familiarity with geographical and business relations and the communities to which they are to be applied. Railway rates are not a subject in which, as far as we know, any lawyers in India have specialised at the present moment. There are not a few lawyers who have so specialised in England. But to preside over an Indian Tribunal a chairman would need both to be a specialist in railway law and to be familiar with Indian conditions. It is evident that the Indian Railways Act, which dates from 1890, requires extensive revision. We consider that the lawyer appointed as Chairman of the Rates Tribunal could not be better employed at the outset than in an examination of the Act in the light of modern developments, both of circumstances in India and of legislation in other countries. and preparing for the consideration of the competent authorities the draft of a new Railways Act.

Its jurisdiction.

158. The jurisdiction of the new Tribunal should, we think, embrace all questions of the reasonableness of rates even within the contractual maxima and minima, and of the conditions attached thereto, whether the question be the unreasonableness of a rate *per se* or its unreasonableness as compared with the rates charged to other persons or at other places in what are alleged to be comparable conditions. The same Tribunal might have jurisdiction in respect of the obligation to provide reasonable facilities, a matter which at present also has to be determined by a Railway Commission.

159. But both in respect of reasonable rates and reasonable facilities we think the Tribunal should be protected from being flooded with applications. We think that by a procedure analogous to that under section 31 of the Railway and Canal Traffic Act, 1888 (commonly known as the Conciliation Clause), application should in the first instance be addressed to the Ministry of Communications. The Ministry should bring the two parties together, not necessarily, having regard to the great distances in India, face to face, but by the interchange of statements, and should then express its opinion on the merits of the dispute.[1]

160. We do not think that applicants should be prevented from taking their case to the Tribunal by the fact that the opinion of the Ministry was adverse to their claim. But the question should be considered whether frivolous allegations should not be checked by requiring the deposit with the Tribunal of a certain sum—a figure of Rs. 100 has been suggested—to be dealt with at the discretion of the Tribunal.

Appeal from Tribunal.

161. We recommend that in cases of importance, either by reason of the amount of money involved or because they raise a question of general principle, there should be an appeal. We suggest that it should lie to the Governor-General in Council—this is in accordance with the Canadian precedent. Leave to appeal might be granted either by the Tribunal itself or by the Governor-General in Council.

162. A good deal of evidence has been given to us by Indian traders alleging grievances in respect of owners' risk rates. The question is not peculiar to India. It is a constant source of disputes between railways and traders in every country. We think a full investigation of the whole subject by the Tribunal would be welcomed both by the railways and the trading public. The Tribunal should decide for what articles in the classification "owners' risk" rates should be quoted as well as "railway risk" rates; what shall be the precise definition of the Company's liability under each rate; and what difference in *quantum* between the two rates—corresponding to the

Owner's risk rates.

[1] This was the practice of the Board of Trade for some years after the passage of the Act of 1888. Subsequently, however, the Board ceased to express an opinion and merely presided over a discussion. If the discussion failed to produce a settlement, the parties were left to their legal rights. With the change in procedure the conciliation procedure lost a good deal of the value which it had been found to possess in earlier years.

difference in the liability imposed on the railway undertaking—may reasonably be made. It is not, however, our idea that the tribunal should exercise the jurisdiction of an ordinary Court of Law where it is a question of fact whether goods have been lost or injured in transit, and, if so, at what precise sum the damages should be assessed.

Settlement of claims.

163. Closely connected with the question of risk rates is the matter of settlement of claims. Whether the cause be slackness or shortage of staff, there is no doubt that unreasonable delay on the part of certain railways in dealing with damage claims, and their refusal to settle and pay even where the claim is undisputed, has caused deep and justifiable discontent.[1] The claimant has, of course, his remedy; he can sue in a Court of Law, where he will probably get judgment both for his claim and costs. But business cannot be conducted by law suit. We think the matter is one in which the new Ministry should take more interest than the Railway Board has done hitherto. If the Ministry were to call for returns showing how many cases are outstanding and for how long a period, and were to continue to call for such returns at frequent intervals, probably this would be sufficient to put an end to the grievance. Failing this, the closer supervision and additional powers we have suggested for the Railway Commission will enable them to take stronger action than perhaps has been possible hitherto.

Bribery in connection with allotment of wagons.

164. There is another matter which we think deserves much more attention both from the Railway Board and from the management of the individual railways than it has hitherto received. According to the immemorial custom of the East, inferiors, after the manner of Joseph's brethren who went down into Egypt, when they come into the presence of their superiors bring presents in their hands. Accordingly, it seems to have been usual in India, when the trader applied at a railway station for the use of a wagon, to pay some small fee, 8 annas (8*d.*) or Rs. 1 (1*s.* 4*d.*). In recent years, the supply of wagons being utterly inadequate to meet the demand—owing, like all the physical deficiencies of the Indian railways, to lack of funds—these small fees have grown to portentous dimensions.[2] Evidence all over India has been given to us on the subject. Payments of Rs. 50 or Rs. 100 are apparently common. Rs. 200 have been mentioned more than once. In one case we were told—and we see no reason to disbelieve the evidence—that Rs. 800 (say 50 guineas) were actually paid, to obtain a single wagon at a time when prices were fluctuating wildly and when consequently heavy damages were liable to be incurred for non-fulfilment of contract.

165. It is not too much to say that petty payments for wagons have now grown into a system of organised blackmail. The Railway Board and the railway officials, though they hesitate to admit that the evil is as serious and widespread as the traders claim, do not attempt to deny its existence. They deplore it, but are disinclined to accept responsibility. The practice, they say, can only be stamped out by convicting and punishing the bribe-taker. This has been done in some cases, but not with sufficient frequency or certainty to stop the practice. If conviction of the bribe-taker in a law court were the only means of stopping the practice, it would evidently continue indefinitely. For normally the only witness against the bribe-taker is the bribe-giver, and as he is *particeps criminis* and equally liable to punishment, he can hardly be expected to come forward to give evidence. The practice must be stopped, not by conviction of offenders, but by prevention of the offence. And this we are convinced can be done as soon as the authorities are sufficiently in earnest about the matter. We feel that the evil would not have grown so serious if the Railway Board had appreciated its magnitude, and after a thorough investigation had grappled with it as

---

[1] Below is a communication received from a district where traffic is so scant that claim disputes might be expected to be of rare occurrence:—

> "It has come to the notice of the Chief Commissioner that there is the greatest difficulty in getting any claim, however petty, settled, and, even when the claim is admitted, in obtaining payment of the money. Since the 1st January last 40 notices of suit have been received by the Revenue Commissioner . . . from traders in this Province, who have been unable to obtain settlement of their claims by other means. This number exceeds the total notices for the last three years and makes it appear that the machinery for the settlement of claims is gravely defective."

[2] The trader, when the wagon which he needs is not supplied, understands that shortage of wagons means that the number of wagons in existence is insufficient. This may be so or it may not. The trader may fail to obtain his wagon, not because the wagon is non-existent, but because, owing to inadequacy of running lines and of junction facilities or of marshalling sidings, it cannot be brought to the station where it is required. We have no doubt that the supply of wagons in India is at present insufficient; but we think that the shortage from which the traders suffer is due more to blocks in circulation than to actual insufficiency of numbers.

a general question affecting all India and had insisted on reforms of the methods of wagon distribution.

166. Various steps have been taken in various places to deal with the matter locally. One official at least told us the methods by which he believed he had stopped the practice in his own area. More than one trader explained to us the elaborate checks by which he had succeeded in securing for himself his fair allotment of wagons without giving bribes. Another witness, not a railway man, but a trader, suggested several expedients that would, he believed, greatly reduce, if not absolutely prevent, corrupt allocation of wagons; and the railway representatives who heard the evidence admitted that the proposals seemed worth a trial. We think it is the business of the railway authorities both to excogitate methods for themselves and to try harder to enlist the help of the public. The matter is of serious importance. The feeling aroused is not merely one of resentment. One witness told us straight out that the reason the practice was not stopped was that the bribes do not stick to the hands of the subordinate to whom they are paid, but percolate much higher up through the railway service. It is most unfortunate that suspicions of this kind—and, however unjustifiable, they are as much to be expected as to be deplored—should be allowed to exist. The bitter feeling is not lessened by the fact that powerful European firms are believed to get without payment treatment at least as good as that which Indian traders say they can only get by bribery. We impute no blame, nor indeed did the Indian witnesses, to the European firms. Whether the reason of the distinction, which apparently does exist, is that subordinate officials dare not submit important Europeans to the treatment which they venture to mete out to their less influential fellow countrymen, we cannot say.

The third class passenger, his grievances.

167. We received many complaints regarding the treatment of third class passengers. Their grievances are of long standing and have often been recognised. Stress was laid upon them by Sir Thomas Robertson in his report of 1903, and—more especially with regard to mela traffic—by the Pilgrim Committees of a few years ago, whose reports showed plainly that even with the insufficient means of transport available more might easily be done for the passengers' comfort; it might, for instance, be necessary in exceptional circumstances for passengers to travel in trucks, but the trucks could at least be cleaned beforehand. We may quote the following sentence from the letter dated 27th September 1916, from the Sanitary Commissioner to the Government of India, submitting the reports of the Pilgrim Committees:—

> "The Government of India can hardly be aware of the amount of ill-feeling and ill-will towards themselves that these two conditions (viz. (1), overcrowding of ordinary trains and pilgrim specials, and (2) the use of goods wagons to carry pilgrims) engender."

168. As voiced before us, the complaints of third class passengers still continue under the following heads:—

(*a*) Overcrowding, to the extent at times of double or even more than double the approved carrying capacity.
(*b*) Inaccessibility and insanitary condition of w.c.'s in third class carriages for long distance journeys.
(*c*) Dirty condition of third class carriages.
(*d*) Inadequate water supply on station platforms.
(*e*) Inadequate food supply arrangements.
(*f*) Inadequate waiting sheds or waiting rooms.
(*g*) Insufficient booking office facilities.
(*h*) Uncivil treatment by railway staff.

169. In India, with its vast population, normally sedentary, but at intervals—sometimes of months, sometimes of a year, sometimes of several years—flocking in enormous numbers to melas (fairs or fêtes) or on pilgrimages to holy places, occasional overcrowding is inevitable. To construct and equip the railways so that on rare occasions they should be able to accommodate without inconvenience traffic out of all proportion to the normal is evidently impossible. And so long as the present shortage of funds persists serious hardship is unavoidable. But when it comes to overcrowding as a constant everyday affair, carried to the length that Members of the Committee have seen with their own eyes—passengers by regular trains perched in the luggage racks and in suburban services hanging on outside or squatting on the steps of the coaches, it is another matter. Serious measures must be taken to deal

with it. It cannot be done away with till funds are provided on a scale sufficient to allow of railways being brought up all round to a much higher standard of efficiency. But even with restricted facilities something more might be done by measures such as borrowing stock to the utmost possible extent from other lines to meet exceptional local pressure, and by strict supervision of matters such as enforcing cleanliness and the provision of drinking water. We consider that in such ways as these the utmost efforts should be made to minimise the inconveniences to which the lower class passengers are subjected. Alleviations and remedies.

170. We were told by the Agent of the East Indian Railway that the Railway Board had recently disallowed any capital expenditure, even to provide such things as installation of additional water supplies or erection of waiting sheds, as they did not directly improve the movement of traffic. Whatever the shortage of funds, we cannot think that if an order so sweeping as this was given it was in the general interest.

171. The view has been urged upon us that the third class passengers suffer relatively more than other users of the railways from the lack of adequate facilities, and that, though they contribute by far the greater part of the coaching earnings and nearly one-third of the entire railway revenue, their requirements have received less attention than those of the organised traders and more vocal classes of passengers. There is a strong feeling on the part of the Indian public that the improvement of the conditions under which the mass of the passengers travel has a priority claim.

172. In this connection we may refer to the existence on a few lines of a special class of official, known as Passenger Superintendents, who are engaged at some of the principal stations in looking after the comfort and convenience of the lower class passengers. These officials are usually retired Indian Army officers, who give much assistance to travellers. The evidence given to us shows that their services are appreciated, where they exist, and we recommend an extension of the employment of such officials.

CHAPTER VI.

Miscellaneous Cognate Questions.

173. We proceed to deal with several matters of considerable importance which, though not falling within the four main heads of the Reference, seem to be strictly germane to our enquiry. The first has reference to the railways other than the three State systems worked by the State, and the eight State systems worked by Guaranteed Companies, which we discuss elsewhere.

174. The Railway Administration Report enumerates no less than 174 railway undertakings, divided into 14 different categories. The divisions between the different categories are often very slight, resting on small technical distinctions. We do not think it necessary to reproduce them here. For the purpose of this Report it will be sufficient if we classify the 163 undertakings other than the 11 major railways under the same headings which we adopted in Part I. of this Report:—

A.—State lines worked by independent companies;
B.—Company lines worked by companies;
C.—Lines belonging to Indian States;
D.—Miscellaneous (branch and light feeder lines of various kinds).

175. With reference to the railways in Class A (the Tirhoot State Railway, worked by the Bengal and North-Western Railway Company, and the Lucknow-Bareilly Railway, worked by the Rohilkund and Kumaon Railway Company), or those in Class B (of which the Bengal and North-Western and Rohilkund and Kumaon are the most important), we have no recommendations to make.

The railways of the Indian States.

176. Class C, the lines in the Indian States, belong usually, with the important exception of one of the largest of all, that owned and worked by the Nizam's Guaranteed State Railway Company, to the States themselves. Some of them form quite considerable systems. The total Indian State-owned mileage is 4,847, of which 2,819 miles, mostly metre-gauge, are worked by the States themselves, and 2,028 by the adjoining main line administrations. The Government of India exercises certain powers of control in matters relating to public safety, and also over the adoption of new routes. But speaking broadly, these undertakings enjoy a large measure of independence, secured to them by the treaties between the Government of India and the several States. With the rights so secured there can, of course, be no question of interference. But a glance at the map of India is sufficient to show that the Indian States are scattered all over the country, and that main line construction must be turned aside from the route which physical and commercial geography would naturally suggest, if the frontiers of Indian States are to be regarded as inviolable. It has not been suggested to us that the States have shown themselves as in any way unreasonable in the past, but it is manifest that there must frequently be room for differences of opinion on questions of alignment of railways affecting the States; and we think that, when the Railway Commission finds itself in financial circumstances which make it possible to take up long postponed projects of extension and new construction, the relation between the railways belonging to the Government of India and the railways belonging to the Indian States will have to be reviewed from the broad standpoint which we have indicated.

The need for an All-India policy.

Branch and feeder lines.

177. Class D, which we have described as branch and light railways, consists mainly of small feeders of the main lines constructed under what are known as Branch Line Terms. These terms in essence involve, either that the State guarantees a minimum return on the capital, or, alternatively, undertakes that the line shall receive out of the earnings of the main line from traffic contributed by the branch such a sum, known as a rebate, as will make up the total earnings of the branch to a given sum. The branch in each case shares with the main line any profits exceeding the guaranteed minimum. This method of encouraging the construction of lines admittedly required to serve local needs, but for which the Finance Department declined to furnish the capital, was first adopted 28 years ago. It has enabled lines to be built which would otherwise not have been built, and has thereby helped considerably to develop the country. The method, as far as we can see, has no other advantage.

The financial terms usual before the war are now naturally quite inadequate, and will have to be revised if the system is to continue. Numerous witnesses have urged that this should be done. But one and all have admitted that, if the main line were in a position to build a given branch itself, and they were asked whether they would prefer it to be built by the main line or as a separate undertaking, they would choose the former alternative.

178. The Branch-Line Company is usually a fifth wheel to the coach. It implies in some cases a separate construction staff; it always implies a separate Board of Directors, and separate accounts. In cases where the branch is worked by the main line, if its Directors feel that the management is unsatisfactory, they not only can make representations to the main line administration, but in the last resort can appeal to the Railway Board. And this does not make for harmony. It is further evident that capital raised by a small private undertaking, even with a Government guarantee, will cost more than money raised directly by the State. As against this a certain weight must in fairness be attached to the claim that the Branch Line Company obtains from local sources money that would never be subscribed to a Government loan. There may also be certain cases of a branch line of smaller gauge worked independently, where the Branch Line Company can operate more economically than is possible to a main line.

179. But there is an objection to Branch Line Companies which goes much deeper. India has only 36,700 miles of line. The Mackay Committee 14 years ago said India needed 100,000. But if the extensions are to be made by scores and hundreds of little independent companies, the resulting confusion will be inconceivable. Naturally each company, small or great, desires to reserve for itself what in the diplomatic world is called a sphere of influence; and jealously claims that, if any new-comer intrudes into that sphere, he shall pay toll to the original concessionaire. Take the case of two main lines, starting out alongside from Bombay or Calcutta, and gradually diverging from one another. When they are at a distance of 200 miles from the terminus, at which point the two lines are 50 miles apart, there is a station on line A. Halfway from this station in the direction of line B there is a point of some local importance. A branch line is made to it and the local point develops. Thereupon the proposal is made to connect up this point with a corresponding station on line B, and a new branch line company is provisionally organised for the purpose. Difficulties at once arise. The old branch line company protests that the local point is within its sphere of influence, and main line A follows suit with a claim that it will lose the contributive value of the branch line traffic. How much attention the Railway Board pays to these protests must of course depend upon the facts of the individual case. But they are sure to be made. Sometimes they will prevail. And in any case they unnecessarily complicate a situation which ought to be considered solely from the point of view of the public interest. Or, again, there arises another class of cases where similar results follow. Company A affords a connection between two points. They are 100 miles apart as the crow flies, and 150 miles by the company's road. A small independent company proposes to connect the two points by a direct line, which in India is known as a chord. Naturally the old company protests, and permission for the construction of the new line—however obvious be the public benefit involved—is either refused or only given on a basis of elaborate accounting between the new company and the old for the profits which hypothetically would have belonged to the old line had the new line not been opened. Sometimes, in the Madras Presidency for instance, where exceptional powers exist to levy cesses for feeder railways, the promoter of a new branch line is not a company, but a District Board. And then considerations other than purely commercial come in and introduce further complications and protestations.[1]

[1] Mention may be made here of the views expressed by the Government of Madras, who draw attention to a case in which, although no short-circuiting is involved, there has been a delay of over 10 years in arriving at a decision in regard to the terms for working a district board railway (the Nidamangalam-Manargudi-Tiruturaipundi-Vedaranniam Railway) by the South Indian Railway Company. The Government of Madras also refer to the South Indian Railway Company Board of Directors' letter to the Agent, No. 248, dated 8th September 1920, from which the following extracts are quoted:—

"All that the Board now ask is that . . . . the protection which was promised them should be secured to them whenever the Government are granting concessions for the construction of new lines which will be, or which some day may become, part of Chord lines."

"The Board are anxious, as they have always been, to help . . . . the Government in any schemes for the advancement of the country, but they cannot be expected to make sacrifices . . . . of revenue when they can see no compensating benefits in other directions."

SERVANTS OF INDIA SOCIETY'S
BRANCH LIBRARY
BOMBAY

180. Far from approving of a policy which increases the number of possible claimants for the traffic of a given area, we think the aim of the Government should be to reduce by amalgamation the number of existing companies. At the same time we ought to say that the opinion has been pressed before us that, unless separate companies are allowed to make branch lines, in some cases they will never be made at all. We therefore feel bound to record our opinion that if the State cannot and will not provide adequate funds private enterprise in this direction should be encouraged.

The gauge question.

181. The "standard" Indian gauge is 5 ft. 6 ins. It is called the standard gauge. But in fact it is not the usual one. For of the 36,735 miles of railways in India, only 17,990 miles, slightly less than half, are on the 5 ft. 6 ins. gauge. There are over 15,000 miles of metre gauge line, nearly 3,000 miles of 2 ft. 6 ins. gauge, and over 600 miles of 2 ft. A thorough investigation of the gauge problem is urgent at this moment. How it should be solved, it is not for us even to suggest. But we think that the situation, as it at present exists, must be faced as a broad problem affecting the whole of India, and examined from the engineering, operating and financial side by a special Commission of two or three of the first experts who can be found after careful search, not in one country only.[1]

Employment of Indians.

182. At the date of the last report there were employed on the railways of India about 710,000 persons; of these, roughly 700,000 were Indians and only 7,000 Europeans, a proportion of just 1 per cent. But the 7,000 were like a thin film of oil on the top of a glass of water, resting upon but hardly mixing with the 700,000 below. None of the highest posts are occupied by Indians; very few even of the higher. The position of a District Engineer, District Traffic Superintendent, or of an Assistant Auditor is, with one or two exceptions, the highest to which Indians have hitherto attained. The detailed figures in Appendix No. 2 show that, on the principal railways of the country, out of 1,749 posts classed as superior, 182, or rather more than 10 per cent., are filled by Indians. Of the 182 Indians, 158 occupy posts as assistant district officers in the various departments; 24 have reached the higher grade of district officers.

183. That they have not been advanced to higher posts, that even in the subordinate posts of the official staff there are not more of them, has been a standing subject of complaint before us. With so natural a grievance we fully sympathise. And we agree with the Railway Board in desiring that the grounds for it should be as far as possible removed. Still, facts are stubborn things. The appointment of Europeans to the superior posts in the railway service is unavoidable unless and until Indians qualified by training and experience are available to fill them. The process of training them in a small way and in one branch only of the railway service —the Traffic Department—began a good many years ago on the State-managed lines. As a result, on those lines 13 Indian officers out of 68 have already attained the position of district officers, as against 11 out of 114 for all the other lines. Taking all Indian appointments together, we find that some companies have caught up, or nearly caught up, with the State lines. The State line percentage per 100 employees is 14·60; the percentage on the East Indian is 14·61; on the Bengal-Nagpur 12·12, and on the Assam-Bengal 10·17. Other companies, however, fall a good deal short of this. On the Great Indian Peninsula the figure is under 5 per cent., and on the Burma Railways it drops to under 3 per cent. The highest percentage of all, 15·25, is reached by the Nizam's Guaranteed State Railway Company. The employment of Indians in the higher posts is growing, but the process should be accelerated. We think the Government of India might consider the propriety of establishing a minimum percentage of Indians to be reached within a fixed period. The minimum would have to be higher or else the period shorter in the Traffic than in the Engineering or Locomotive Departments.

Facilities for technical training.

184. Until recently opportunities for the technical training of Indians were lacking. And in the absence of opportunities, naturally few Indians were able to reach the standard required for the superior posts. Certain opportunities are now being provided. At Calcutta, on the Oudh and Rohilkhand, and on the North-Western Railways, we have heard of interesting developments which are, however, still in the

[1] Sir Henry Burt dissents from this paragraph and has expressed his view in a Note attached to the Report.

initial stages, and much more remains to be done. India is a wide country and facilities in the north are of little use to Madrasis. Moreover, what educational facilities exist are concerned mainly with engineering; and engineering is only one side, and nowadays perhaps not the most important side, of the railway profession. Formal instruction in methods of operation in all their ramifications—signalling, train control, station management and so forth—needs to be provided. And from the economic and commercial side, courses dealing, for instance, with the relations between railways and the controlling authorities on the one side and their customers on the other, are, as far as we know, non-existent. And two classes of railway men have to be catered for: the men of higher education and social position in training for the superior posts, and the much larger number who do not usually advance beyond the subordinate grades. We are also of opinion that the system of selection and training of the young men appointed as probationers in the Traffic Department on Indian railways needs reconsideration. The whole subject is one which in our view should be in the special charge of the Railway Commission; and we think substantial grants of money should be made for the purpose of developing such instruction. Need for extension.

CHAPTER VII.

Management and Finance.

185. We have remarked that, of the 36,735 route miles of railway in India, 7,369 miles are owned and worked by the State, and 17,768 also owned by the State are worked by guaranteed companies. The question on which we now have to advise in reference to these two classes is: should the State-worked lines be handed over to management by companies—English, or joint English and Indian, or Indian—or should the company-managed lines be resumed by the State; or should the maintenance of the present dual system be accepted as a permanent policy?

Systems of management. Four possible alternatives.

186. The Committee are unanimous in advising that the system of management by companies of English domicile should not be continued after the termination of their existing contracts; we agree also that a system of management by a combination of English and Indian domiciled companies is impracticable; but we have been unable to agree as to the relative merits of management directly by the State and indirectly through companies domiciled in India. We proceed accordingly to deal with this part of our Report in three sections. The first gives a brief account of the existing conditions of the English guaranteed companies, and sets out the reasons for our unanimous opinion that the managing authority should in future have its headquarters in India and not in England. The second explains why five Members of the Committee, including the Chairman, hold that the management in India should be by direct State agency. The third presents the case, supported by the remaining five Members, for continuing a system of company management but through companies domiciled in India. The question how money required for future capital expenditure can be raised is so closely associated with the question of the system of management that it can best be dealt with in the latter two sections as an integral portion of the recommendations contained in them respectively.

Committee rule out—(1) continuance of English domiciled companies, (2) combination of English and Indian domiciled companies.

Section 1.—Regarding management by Guaranteed Companies of English domicile.

187. The idea of a guaranteed company is familiar in railway politics. Normally a guaranteed company is a private enterprise, obtaining a concession for a limited period, and subscribing funds to build a railway, with a guarantee from the State that the earnings on the share capital shall not be less than a certain minimum figure. If the earnings fall short, the State makes up the deficiency; if they exceed the minimum, the company takes either the whole or a certain fixed proportion of the surplus. Such are the companies in France; such were some of the companies in Holland and the companies in Prussia and Italy till they were taken over by the State; such companies still exist in many of the South American States. And such at the outset were the Indian guaranteed companies. The East Indian built upwards from Calcutta through the rich Ganges plain; the Great Indian Peninsula built north-eastwards from Bombay, to Delhi on the one hand, and to a junction with the East Indian Railway from Calcutta on the other; and so on.

English guaranteed companies. Their history.

First period.

188. We see no reason to doubt that the formation of guaranteed companies with headquarters in London was wise at the time when the policy was adopted. India needed railways. The money to build them could only be found in England. And in the middle of the nineteenth century company shares were the form in which capital would naturally be raised. And no company could be expected to embark its capital without a guarantee from the State. Unfortunately, however, the companies fell for many years short of earning their guaranteed dividends, which had, therefore, to be made up to them by the State.

189. Reference to the details in Appendix No. 3 will show that there were three well marked periods. To the end of the last century there was an annual loss, amounting in the aggregate to £51½ millions. For the next 10 years the State secured a small annual profit ranging roughly from 100,000*l.* to £1¼ millions. For the last 9 years the profits have been considerable, averaging upwards of £4 millions per annum. The final result is a total profit of £44¾ millions—44¼ in the last 19 years—against the loss of £51½ millions in the earlier period.[1]

[1] Profit is to be understood as meaning net contribution to the general revenues of the State after payment of the working expenses of the railways, the interest on all debt incurred on their behalf, and certain repayments of capital amounting roughly to 1,000,000*l.* per annum.

190. From 1869 the formation of guaranteed companies ceased, and except in a few cases such new lines as were built in the next 10 years were constructed by the Government and operated and managed directly by them. The contracts with the original guaranteed companies ran for 50 or 60 years. But in every case the Government reserved the right to terminate the contract, and buy out the companies at an intermediate date after 25 or 30 years. And these powers, which first began to be exerciseable in 1879, have been in every case exercised. The form in which the purchase price has been paid varies; in some cases it was in cash, in some it was in India stock, in others it was wholly or in part in terminable annuities. We give two instances of the process adopted. The East Indian contract was terminated in 1879. The value of the Company's shares was fixed at 125*l.* per 100*l.*; the purchase price was accordingly ascertained to be 32,750,000*l.*, and this sum was commuted into a terminable annuity of 1,473,750*l.*, payable annually till February 1953. The East Indian system thereupon became the property of the State. The concession of the Great Indian Peninsula was for 50 years from 1850. It was not denounced in 1875, and accordingly ran till 1900. This line also was mainly paid for by the issue of terminable annuities. Certain lines constructed by companies which passed into the ownership of the Government on the termination of the concessions have remained under direct State management. Of these the Scinde, Punjab and Delhi, now absorbed in the North-Western, the Oudh and Rohilkhand, and the Eastern Bengal are the most important. Intermediate period.

191. But by this time—the early eighties—the current of opinion in favour of direct State management had spent its main force. The State thereafter acquired the ownership of the other guaranteed companies' lines, but it retained the direct management of few. At this time also it was considered by Government expedient to enlist the aid of private enterprise in the construction of several railway extensions urgently required as a protection against famine. The most important of these were the Southern Mahratta, the Bengal-Nagpur and the Indian Midland Railways. The capital originally contributed by these Companies, which has gradually become only a small proportion of the total cost of their existing systems, received a guarantee of interest, the working of the lines after completion being entrusted to the companies, which in addition to the guaranteed interest were allowed to retain a share of the surplus profits. Third period.

192. It will be seen that the State has acquired, or retained, the ownership of all the lines, but their management is mostly in the hands of Companies. The bulk of the lines were handed back to the management of the old Companies or of new Companies constituted on the basis of the old, or specially brought into being as described in the last paragraph. Government sole owner.

193. And herein lies the essential difference between the existing guaranteed companies of India and the original ones. The old Companies were owners; the new Companies are not owners of the undertakings which they manage. When the old East Indian contract terminated, the Company was bought out, as has already been said, for 32,750,000*l.*, and payment of this price was made in the form of terminable annuities amounting to 1,473,750*l.* annually. Under the new contract shareholders, representing 6,550,000*l.*—one-fifth, that is, of the purchase price—agreed to postpone their annuity and in place of it to accept a new contract. These so-called deferred annuitants—*quasi* shareholders, as they might be called—now constitute the East Indian Railway Company. Under their contract with the Secretary of State the management of the undertaking is entrusted to them, and they are guaranteed 4 per cent. on the capital, plus a certain share of the surplus profits. Surplus profits mean so much of the gross receipts as remain after meeting working expenses, annuity sinking fund payments, and interest on loan capital, whether in the form of debentures and debenture stock of the Company, or of loans or advances by the Secretary of State. Of this profit the Company was entitled—subject to minor conditions which need not be mentioned—under the contract of 1880 to one-fifth, and under the contract of 1900 to one-fifteenth. Under the present interim contract the Company's share is one-hundredth. Even if we ignore the present interim contract and go back to the previous one, it will be seen that the Company's proportion of the total profits is very small. Status of the guaranteed companies. The East Indian Railway Company. The State's preponderant interest in profits.

194. And there is more than this. The capital of the deferred annuitants represents actual cash handed over and invested for the capital purposes of the undertaking. The Secretary of State's share, on which his proportion of the surplus income is based, does not necessarily represent the actual cash invest- Goodwill belongs to the State.

ment. Some part of it is merely a capitalisation of the goodwill created under the original contract by the joint efforts of the owning Company and the guaranteeing Government. The proposition was worked out in this way: The Government acquired the undertaking of a given Company for, say, 1,000,000*l*. The undertaking had been earning on the average of the last five years a net revenue of 100,000*l*. In other words, capitalised on a 5 per cent. basis, the property was worth 2,000,000*l*. When it came to fixing the respective capital of the two parties to the new contract, on the basis of which the surplus profits were to be divided, the Secretary of State's capital was assumed to be not the 1,000,000*l*. cash which he had paid, but the 2,000,000*l*. which the asset was regarded as worth; while the amount put in by the Company was taken to be not more than the cash capital which its shareholders subscribed. In a word, the Secretary of State acquired the property out and out, and the goodwill, realised by the joint efforts of the old Company and the owning Government, passed with the physical assets. The new contract was given to a Company which, though it had the old capital, the old directors, and the old shareholders, was regarded as a new Company starting *de novo* with no inheritance of the goodwill partly due to its former efforts.

195. Under the existing contract the share of the East Indian Company in the surplus profits has been reduced almost to a vanishing point. In the words of the Agent of the Railway: "to afford the deferred annuitants an extra shilling per cent. per "annum I must either effect economies or increase earnings by Rs. 40 lakhs (say "250,000*l*.) in the year."

Companies not joint owners.

196. From this brief recital of an exceedingly complicated story two broad facts stand out. The one is that the entity known as the East Indian Railway Company is not, in the ordinary sense of the word, a railway company at all. Not only does it not own a mile of railway nor a single engine, but it is not joint owner even to an infinitesimal extent of the East Indian Railway undertaking. The East Indian Railway belongs, lock, stock and barrel, to the Government of India. If, on the termination of the latest contract in 1924, the Secretary of State declines to renew the contract, the Company merely expires. It hardly seems to need to be wound up, for it will possess no assets. The quasi-shareholders, the deferred annuitants, will revert to the position of ordinary annuitants. If the Company survives, it will only continue to exist as a machine for the distribution to the annuitants of the annual payments due to them.

197. We have described at some length the position of the East Indian Railway, as it is both the earliest and most important of the guaranteed companies, and though the process of the extrusion of the private investor has been carried further in the case of that railway, the East Indian position is practically typical of the whole situation of all the other guaranteed companies. It is true that in no other case have the shareholders so small an interest in the profits of the undertaking, for the share of surplus profits receivable by the other companies ranges from one-twentieth in the case of the Great Indian Peninsula Railway to slightly more than one-third ($\frac{12}{35}$) in the case of the Burma Railways. But of all it is true that the so-called shareholders have no share of the assets of the undertaking. The difference between the East Indian Railway and the other guaranteed companies is that whereas the share capital of the East Indian has already been commuted into annuities, the other companies still retain a share capital which has to be repaid to them when their contracts are terminated.

Their debentures not a charge on assets.

198. We have pointed out that a shareholder in an Indian guaranteed railway company is not a railway shareholder at all as the word is commonly understood. We find that the debenture holder of a guaranteed railway occupies an equally unusual position. His security—the guarantee of the Secretary of State—is doubtless ample; but it is not what it would naturally be supposed to be. Normally a debenture holder has a charge on the undertaking to which he lends money, and can enforce his rights either by the appointment of a receiver or by foreclosure and sale. The debenture holder of an Indian railway has no such charge. The company to which he lends money is not the owner of the undertaking; he has only a personal contract with the owner of the undertaking, the Secretary of State. What happens is this. The prospectuses of all the debenture issues that we have seen state that the money is "required for the general purposes of the Company." The subscriptions are actually paid into the Bank of England, by or on behalf of the

Company, to the credit of the Secretary of State. If the Company is in debt to the Secretary of State for advances, these advances are written down in his books by the amount of the new issue, but the actual cash received remains in his possession. A witness described the procedure to us by saying that the Secretary of State acts as, in a sense, banker to the Company. Seeing that the Secretary of State holds the money in his own name; that the Company have no power to touch it without his consent; that in fact he frequently applies it to expenditure on another railway; and that, even on the undertaking of the issuing company, the money can only be spent when and to such an extent as the Secretary of State permits, and on works which he approves, it does not seem to us that the use of the term "banker" is really helpful in understanding the actual facts of the case.

Dates when contracts are terminable.

199. The contract with the East Indian Railway Company, as we have said, expires in 1924; that with the Great Indian Peninsula Railway, the next largest company, in the following year. The contracts with the remaining six guaranteed companies are terminable by the Secretary of State at various dates, ranging from 1928 in the case of the Burma Railways Company to 1950 in the case of the Bengal-Nagpur. In none of these contracts is there any option reserved to the Secretary of State to resume possession of the railway on previously agreed terms at any time during the currency of the contract. The contracts vary widely in terms, financial and other, and also in period of duration. But their essential quality is the same throughout. The nominal shareholders have no share in the property of which they are called shareholders; the nominal debenture holders have no charge upon the property under whose name their debentures are issued.

Proportionate investment, State and Company.

200. The total investment in the undertakings of the eight guaranteed companies is 261,675,900*l*. The subscribed share capital of the eight companies (including the "deferred" annuitants of the East Indian Railway) is 24,620,300*l*. The balance 237,055,600*l*., is loan capital and Government capital invested either at fixed interest or on profit sharing terms.[1] It will be seen that even if the investment of the shareholders be regarded as railway share capital in the ordinary sense, the guaranteed shareholders' interest in the whole of the eight undertakings amounts to less than 10 per cent. of the total invested capital.

201. We have in the foregoing paragraphs briefly described the position which the present guaranteed companies now hold in regard to their financial relations to the State—the owner of the railway; and we have shown that the companies have acted only as agents of the Secretary of State in the raising of capital by means of debentures which in fact have been merely State loans under another name.

Companies not allowed to increase their share.

202. With the permission of the Secretary of State the capital of the several companies could have been increased, and although Sir Thomas Robertson in his Report of 1903 recommended that the companies should be allowed to obtain a larger interest in their undertakings, a recommendation which was renewed in the Report of the Committee presided over by Sir James Mackay (now Lord Inchcape) in 1908, the Secretary of State has steadily refused to accede to the suggestion.

Demand for transfer of control to India.

203. It must be admitted, therefore, that the part which the present guaranteed companies subsequent to the date of their formation have played in financing the railways has, through no fault of their own, been quite unimportant. A reversal of the present policy in the direction of permitting the English domiciled companies to increase their share capital in the undertakings which they now manage would meet with strong opposition from a large body of the public in India. We cannot, there-

[1] The details making up the total are:—

	£
Companies share capital (including East Indian Railway deferred annuities 6,550,000*l*.)	24,620,300
Debentures and Debenture Stock	40,830,500
Government capital invested either at fixed rates of interest or on profit sharing terms	108,084,500
Outstanding capital being redeemed by Annuities	54,914,700
Outstanding debt incurred by Government for the purchase of railways	33,225,900
Total	£261,675,900

fore, recommend the adoption of that course. Moreover, an overwhelming majority of the witnesses who appeared before us in India, whether individually they advocated State or company management, urged that the time had now come when the control, both financial and administrative, of the Indian railways should be transferred to India. That view is entitled, in our opinion, to very great weight.

204. When, in the years succeeding 1880 the present status of the guaranteed companies was fixed, reasons which at the time appeared sound may have justified the adoption of the policy which, while retaining in the hands of Government the absolute ownership of the railways, freed Government from their detailed management and handed over their working to English domiciled companies.

Arguments in favour of London boards.

205. It has been represented to us that the London boards still continue to serve a useful purpose in supervising and controlling closely all expenditure, that there are distinct advantages in keeping in touch through the London Boards with British manufacturers, with British consulting engineers, and with the London Stock Exchange, as also in maintaining an agency in London for the recruitment of the European railway staff. Again, stress has been laid on the technical and administrative knowledge of the directors, on their familiarity with Indian conditions, and on the value of those qualifications in the initiation and elaboration of schemes and projects for the improvement and development of the railways they control.

Arguments against control from London.

206. Advantages may be claimed for the exercise by the London boards of the functions to which we have referred and for the technical and expert knowledge which many of the directors possess. But conditions in India have changed so greatly in the last few years, and are changing so rapidly at this moment, that whatever may have been the position in the past we think the advantages of English management are now outweighed by the great disadvantages of absentee control and the difficulty of keeping in close touch with the modern social and trade conditions of India.

Committee recommend transfer.

207. For the foregoing reasons we unanimously recommend that the English domiciled guaranteed companies should cease to exist at the termination of their present contracts.

208. When the East Indian contract expires in 1924 no money will be required, as there is no capital to repay. The capital of the Great Indian Peninsula Railway, repayable in 1925, is only 2,575,000*l*. The next contract to fall in, that with the Burma Railways Company, is terminable in 1928; the amount of the capital to be repaid is 3,000,000*l*. The contracts of the other guaranteed companies are terminable at the following dates:—

1931, Assam-Bengal.
1937, Madras and Southern Mahratta.
1941, Bombay, Baroda and Central India.
1945, South Indian.
1950, Bengal-Nagpur.

Exceptional position of Assam-Bengal Railway.

The position of the Assam-Bengal Company is exceptional. All the other guaranteed companies earn, in the shape of their share of surplus profits, a substantial dividend above the guaranteed minimum, and their shares, even under the exceptional market conditions of the present moment, stand in the neighbourhood of par. The Assam-Bengal net receipts do not even meet the 3 per cent. guarantee. The shares are consequently quoted at present at about 45. We should hesitate to advise that the Secretary of State should pay off at par in 1931 shares now standing at 45. But the Company is not important, and there is ample time for consideration of this exceptional case between now and 1931. In any case, the amount at issue is not large.

Transfer as contracts expire.

209. A few Indian witnesses who appeared before us urged that the terms should be curtailed and the companies compulsorily expropriated; but the great body of them have expressed themselves content to allow the contracts to expire naturally by effluxion of time. And with this opinion we agree. Not only do we think that compulsory expropriation should always be avoided if possible, but we also are of opinion that for many years to come all the new capital that can be raised for Indian railways will be better spent in improvements and extensions than in paying off private capital that is already invested.

Section 2.—Proposals for Future Management, and the Methods of Raising Additional Capital.

By the Chairman, the Hon. Mr. V. S. S. Sastri, Mr. E. H. Hiley, Mr. Purshotamdas Thakurdas, and Mr. J. Tuke.

Future Management.

210. Our Reference instructed us to consider four possible methods of management of the Indian railways belonging to the State: by English companies, by Indian companies, by a combination of English and Indian companies, or directly by the State; and to advise on the relative advantages of these four methods. The Committee have unanimously ruled out management either by English companies or by combinations of English and Indian companies. There remains, therefore, for discussion only the alternative between management by Indian companies and management directly by the State. But we desire to add to that portion of the Report (Section 1 above) to which the Committee have unanimously agreed, some further observations on the subject of the English companies, which in our judgment have a direct bearing on the question of State *v.* company management in India.

State *v.* Company management in India.

211. The Committee have unanimously recommended that the English companies shall be brought to an end on the broad ground that they do not correspond with modern Indian conditions. But in our judgment there is another and even stronger ground, that they represent a system essentially unworkable. There is a great deal to be said for company management. Few people will be found to deny that a company, investing its own money, managing its own property, and judging its officials by their success in producing results in the shape of dividends, usually conducts its business with more enterprise, economy and flexibility than are found by experience to be attained in businesses directly managed by the State. It is, we think, strictly germane to the question we have now to consider, to point out that the English companies ceased many years ago to be companies in this sense.

Further observations on existing system.

Essentially unworkable.

212. The property entrusted to their management is not their own, and their financial stake in the undertakings is, as we have said, relatively very small. But it might be urged that the objection on these grounds to their continuance is merely theoretical. In a work-a-day world it matters little whether a system is logical, provided that it works. Our experience and investigations in India have led us to the quite definite conclusion that the system never has worked satisfactorily, and cannot be made to do so. The management of the undertakings is nominally entrusted to the several guaranteed companies. We say "nominally," for the Government, feeling itself to be the real owner and ultimately responsible, not only financially, but also morally and politically, for the policy pursued, has always refused to leave any real initiative in their hands. And as by the interposition of the companies the Government is kept apart from direct management, it in its turn does not feel an obligation to undertake the initiative itself.

Has not been successful.

Company has no initiative. Nor has Government.

213. On the board of each company there sits a Director, nominated by the Government, with a power of veto over any decision come to by his colleagues. It is true that we have been informed that this power of veto, though it has existed from the beginning, is believed never to have been exercised in any single case. But the explanation is largely that the existence of the power of veto suffices—a board of business men would naturally refrain from passing a resolution which they were warned in advance would not be permitted to take effect.

Government Director's veto.

214. Further, the Government control is enforceable and enforced by other methods. The freedom of the board and its officials to act is confined in nearly every direction by the Government. The Company does not retain control over its own revenue receipts or regulate its own revenue expenditure. The current cash receipts are required to be paid into the Government Treasury to the credit of the Secretary of State. Such moneys as may be necessary to meet current expenditure are furnished to the Company out of the Treasury as required, subject to restrictions prescribed by Government, and not necessarily to the extent desired by the Company. It is true that the Company appoints its own staff, but the cadres are fixed by the Government—so many officers and servants of each kind at scales of remuneration which the Company may not exceed. Should the Agent of the Company desire in an exceptionally meritorious case to increase the pay of a station-master at a station where the maximum is fixed at

Government's detailed control.

Rs. 250 per month to Rs. 260, Government sanction has to be applied for and obtained. No new appointment, even of a temporary nature, carrying a salary beyond Rs. 250 per month, can be created without specific Government sanction—a sanction which we are told sometimes fails to be obtained till the purpose for which the appointment was urgently desired has ceased to exist. In the case of a temporary appointee, we are even informed that rules laid down by Government, which cannot be departed from without express Government permission, prescribe the maximum leave of absence which the Company is entitled to grant. In a word, the Company does not and cannot manage the undertaking; it cannot, without the permission of Government, break new ground in any direction. Neither does the Government manage; it only controls and restrains. Further, as the control over railways in every case where money is involved really rests, not with the railway, but with the Finance Department of the Government, this control tends to take the form of refusing to face any exceptional investment of new money, however great may be its potential earning power.

Government's control essentially negative.

215. While the Companies have no real power to manage the undertakings nominally entrusted to them, on the other hand, if a Company is supine, the Government, which suffers both as representing the public interest and also in its capacity as shareholder, is powerless to intervene. The agent and his staff are appointed by, and can only be dismissed by, the board of directors. However urgent be the necessity for the adoption of new operating methods, for improvements in plant or equipment, for the modification of freight rates to encourage new traffic, and so forth, the Government can merely propose and suggest; it can only give orders in cases where public safety is involved. A system seems to have little to recommend it under which, on the one hand, a progressive Company is hampered by meticulous Government control of every detail of expenditure, while on the other hand the utmost wisdom on the part of the Government cannot prevent the injury caused by the unwise and unprogressive policy of a Company's board, at once to the revenues of the State and to the economic development of the country.

Freedom for private enterprise non-existent.

216. Our conclusion therefore is, in a word, that the guaranteed companies do not possess the essential attributes which belong to ordinary companies. To claim that, because ordinary companies possess the advantages of energy, enterprise, and so forth, therefore companies of the nature which we have described may be expected to possess these advantages, is to be misled by a mere name.

Establishment of companies with real independence impossible.

217. But it is to companies substantially of the same nature as the present English companies that our colleagues who reject the idea of direct State management propose to transfer the management of Indian railways. Governments in other countries have before now sold their railways out and out to private companies. Whether this was or was not a wise policy we have no need to discuss. No one yet, as far as we are aware, has proposed that private capitalists should buy out and out from the Government the East Indian and the Great Indian Peninsula Railways. It would involve raising capital amounting to something like Rs. 200 crores. Even the purchase of a half interest would mean raising Rs. 100 crores. Nor, in the circumstances, can we imagine that any such proposal, if made, would have any chance of acceptance by the Government or be able to secure from the public the requisite financial support.

And not in fact proposed.

218. The proposal put forward by our colleagues is that the management of these undertakings shall be transferred from English to Indian companies, which would never have more than a minority interest in the undertakings, and that the Government, remaining the predominant partner, shall appoint one half of the directors and nominate the chairman and so retain its control. We do not think that the change of domicile of the board of directors would make the scheme workable. We think that the division of responsibility between the Government and the boards of directors, which has hitherto existed, is in large measure responsible for the failure of the Indian railway system to meet its obligations to the public. We cannot believe that executive officers with a divided allegiance to the board of directors which appoints and pays them, and to the Government authority which stands behind the directors, can ever do the best work of which they are capable.

The force of tradition.

219. But as we have said, the present system has a long tradition behind it. Officials both of the Government and of the railways have grown up under it, and become used to it. And in our judgment if the management of the East Indian and the Great Indian Peninsula Railway is transferred to new companies in Calcutta and

Bombay, substantially similar to the existing English companies, it will be found in practice impossible to break away from the old system. And that system, in our judgment, is essentially bad.

220. We will add one further point. The directors of the guaranteed companies have grown up with the present system. Many of them are retired Indian railway officials who have borne the yoke in their youth. Whether competent boards of directors could be found at the outset in India is a question which we need not discuss, though strong opinions to the contrary were expressed by representative European witnesses in the presidency towns. But we feel certain that, if prominent business men, accustomed to ordinary commercial methods, were to join boards and then find their powers limited by Government control and Government regulations in any measure comparable to those which exist at present, they would very soon resign their posts.

221. Our first reason then for rejecting the proposal to establish boards in India is that in effect they would succeed to the position hitherto occupied by the boards in England. And this position we regard as fundamentally incompatible with successful administration.

Indian demand for direct State management.

222. We now proceed to discuss the question from a quite different angle. Indian public opinion is practically unanimous in demanding that the owner shall manage directly. We see no reason to believe that the mere transfer of the management from companies domiciled in England to companies domiciled in India would satisfy Indian public opinion. Nor, judging from the evidence before us, would such a transfer meet with general approval by Europeans in India. For though almost all the European witnesses whom we examined upon this point favoured company management, only 9 out of 19 supported Indian company management, the remaining 10 contemplated either management by companies domiciled in England or by a combination of English and Indian domiciled companies.

An atmosphere of hostility.

223. We attach great importance to the fact that Indian public opinion is against company management, and this not only on the general ground that Indian opinion is entitled to great weight on a question such as this, but for another reason of great practical importance. It is with money secured on Indian taxation that the Indian railways have been almost entirely built. It is the Indian public that uses the railways and pays the railway rates and fares. It is the Legislative Assembly at Delhi which under the new constitution votes the railway budget. It is of the utmost importance that Indian public opinion should not be prepossessed against the railway management. As a matter of practical politics it must always be remembered that a railway undertaking is a large and widespread concern; it employs a staff numbering very many thousands; and this staff, some of whom will certainly be stupid, careless, and possibly even corrupt, comes in contact every year with millions of customers, whether as traders or as passengers. "Give a dog a bad name and hang him" is a very true proverb in this connection. We do not think in this fallible world company management can be so good as to escape fierce, often unfair, criticism from Indian opinion. Even if we were to assume that State management would not be better, we are quite sure that its failures would be judged more leniently by the Indian public.

Absorption of Oudh and Rohilkhand by East Indian Railway proposed.

224. In the case of the East Indian Railway there is another reason in favour of direct State management. For hundreds of miles in the North West from Ambala roughly to Allahabad, the main line of the East Indian is parallel with the main line of the Oudh and Rohilkhand State Railway. Both lines are at present overcrowded and inadequately equipped to deal with the traffic offering. If they were combined together and worked as a single system they would be at least less inadequate, as through traffic could be diverted from one to the other according to the greater or less demands on either for the accommodation of local traffic. At present the two systems compete and we have the curious but not unnatural position that the company management of the East Indian Railway, being interested to the extent of one-hundredth in the net profits of that undertaking, endeavour to retain on their own line traffic which could more conveniently be carried by the Oudh and Rohilkhand.

"Transfer of domicile" a misleading phrase.

225. It is now necessary to consider what the transfer of the management from a company domiciled in England to a company domiciled in India really means. The phrase "transfer of domicile" has been freely used. It is incorrect. There is

nothing to transfer. The contracts between the Government and the East Indian, and Great Indian Peninsula Railway Companies terminate in 1924 and 1925 respectively. When the East Indian contract terminates, the deferred annuitants, to whom the management is at present entrusted, merely revert to the position of ordinary annuitants. Similarly in the following year the shareholders in the Great Indian Peninsula will be paid off at par. The Company will presumably be wound up. The management of both undertakings will automatically revert to the Government. An Indian company would be a new creation, operating under a new contract. What would be the conditions on which these new companies would be established? What would be their constitution? What would be the nature of their contracts?

The proposed new company.

Our colleagues propose that a new company shall be constituted to manage the East Indian, the bulk of its capital being issued to the Government; that it shall at the outset have a comparatively small amount of privately subscribed capital, say five crores of rupees; and that fresh private capital shall be subscribed year by year as new money is required for the improvement and development of the undertaking, a figure which was put to us by the agent of the railway as probably amounting to about four crores per annum. At this rate after five years the share of the capital held by private investors in the new company would be Rs. 21 crores. The East Indian as capitalised at present has in round figures a capital of Rs. 80 crores. At the end of five years, therefore, supposing the capital invested by the Government has not been increased, the company's investment would amount to only one-fifth of the total. We fail to see why the Government should delegate any substantial responsibility to a body representing so small a share of the total capital at stake. We know of no company in which 80 per cent. of the shareholders depute their rights to the remaining 20 per cent. When, as at the outset, the new company's interest is less than one-sixteenth, the proposition seems still more courageous. If the Government were to recapitalise its interest in the net revenue of this very profitable undertaking, on, say, a 6 per cent. basis, the proportionate interest of the new shareholders in the company would of course be very much less. But unless the Government does delegate substantial responsibility it is useless to talk of the flexibility, enterprise, and so forth, to be obtained by company management.

The minority interest of outside shareholders.

Will majority delegate management to minority.

226. Further, the shareholders in the proposed new company would not be like those in an ordinary company. It is not suggested, as we understand, that they should risk their money relying solely on the prospects of their successful management. It is not claimed that any appreciable amount of capital would be subscribed without a Government guarantee. And this guarantee is to be fixed, not like the guarantees given hitherto at 3 per cent. or 3½ per cent. or 4 per cent., but at 1 per cent. below the price at which the Government can borrow directly, say, at the present moment, a guarantee of 5 per cent. The new shareholder then is to obtain 5 per cent. certain, and in addition a share in the profits, which will make the probable return at least better than 6 per cent. He sacrifices a certainty of 1 per cent. What will he expect in return? We may assume that he will not subscribe unless he feels confident that on the average he will receive at least 8 per cent. That is, he will not regard a potentiality of anything less than 3 per cent. above the guaranteed 5 per cent. as more attractive than a certainty of 1 per cent. That this scheme might secure a certain number of crores of semi-speculative investment, is probable. But that it would secure money in sufficient quantity to relieve the Government of the necessity of borrowing freely in its own name, we cannot believe. And even if it did, it would still be open to the objection that the public would pay dearly for the money.

Shareholders to take little risk.

But large profits.

227. We conclude, therefore, that no scheme for the establishment of Indian domiciled railway companies is acceptable. Only if relieved from risk of loss will shareholders subscribe at all. Even when so relieved, they will only subscribe relatively small amounts. Such small amounts would not justify entrusting them with substantially independent management. And unless management is substantially independent, the justification for the existence of a company disappears. And, therefore, approaching the question, not as one of national sentiment, but purely from the practical point of view, we find ourselves in agreement with the almost unanimous opinion of Indian witnesses, and recommend that the undertakings of guaranteed companies, as and when the contracts fall in, be entrusted to the direct management of the State.

We recommend State management.

228. We think it necessary here to draw special attention to the *caveat* which we have to enter. It is not State management as it has hitherto existed in India, whose

functions we recommend to be so greatly extended. In earlier chapters of this Report the Committee have pointed out the failure and drawbacks of the existing system of control of Indian railways, whether considered from the executive and administrative or from the financial point of view. To the Government Departments concerned, as at present constituted and administered, we should hesitate to entrust any new responsibilities, in respect either of State or company managed railways. Our recommendation as to State management must therefore be read as coupled with and conditioned on the adoption—at least substantially, and in main outline—of the recommendations which we have made with respect to financial and administrative reforms.

But only on condition of essential reforms of Government machinery.

229. Our colleagues who desire to introduce the new system of guaranteed companies with Indian domicile have, in paras. 248 to 310, set out their objections to direct State management. We will deal with them very briefly. Their first point is that "reliance cannot be placed solely on Government for the provision of the necessary funds." That the Government has not provided sufficient money in the past, we fully agree. We fail to find any evidence that it has not been or will not be able to do so. If a borrower fails to get money because he refuses to pay the market price for it, that is no evidence that, when he offers to pay the market price, he will fail to obtain it. The total indebtedness of the Indian Government is some 410,000,000*l.*; and the whole of this except 110,000,000*l.* is earning not merely its interest but a substantial profit. The Commonwealth and State Governments of Australia, with a population of only 5,000,000 people, have been able to borrow more than 800,000,000*l.*, though a much larger proportion of this sum than in the case of India is non-revenue earning. They are still borrowing, and their issues are still readily subscribed in London. If we agreed with our colleagues in thinking that the fact that the Government has not borrowed money enough is a proof that they cannot borrow money enough—they offer no evidence in support of their opinion—we should be prepared to agree with them in their conclusion. For we think it would be a lesser evil that the railways should be managed on what we believe to be a bad system than that they should continue to be starved as they have been in the past.

Government must find adequate funds.

Can get money if it pays the price.

Comparison with Australia.

230. Our colleagues further claim that the improvements in the administration of State railways which have been effected are due to the emulation inspired by company management. But in fact, and speaking of present conditions, we have found no reason in India to think that company management is more efficient or more enterprising than State management. We have found quite as much zeal for improvement, quite as much readiness to adopt new methods, on State railways as on the company lines. This conclusion is identical with that reported in the Government of India's Despatch No. 18, Railway, of the 17th August 1917 to the Secretary of State, which stated their "unanimous view that so far as efficiency is concerned, "there is really nothing to choose between a company managed line in this "country and one under State management." It is also identical with that of the present members of the Railway Board, whose considered opinion in a written statement which they submitted to us in Delhi, is that "judging from the evidence of "results and from our own experience in administration, there is no ground for "supposing that either system of management is intrinsically superior to the other." And this is what might naturally have been expected, for the methods of management of the two classes are substantially the same. The only important difference is that the agents of the companies have the assistance of expert and experienced boards in England. And this expert assistance and experience our colleagues agree it is desirable for them to forgo.

State and Company management in India are equally efficient.

231. We desire to add here that our criticisms of methods of management and control imply no blame to the men who have to work under the disabilities which we have described, and for which they are in no way responsible. On the contrary, on our tour through India, though it was no part of our duty to investigate the management of individual systems, we have seen ample evidence that excellent work is being done in spite of the disheartening conditions both on State and company-managed lines.

Excellent work of officials in spite of discouraging conditions.

232. Our colleagues further suggest that experience in other countries justifies their preference for company management. Our reply is twofold: that in India company management in the ordinary meaning of the words does not exist, and cannot, we believe, be brought into existence; and, secondly, that a report on Indian railways is not the place to discuss the general question of State *v.* company

management. Unless it is fully discussed isolated details are valueless. For its adequate discussion a volume would hardly suffice. We are not unfamiliar with the instances advanced and with the surrounding circumstances, or with the examples of successful management which might be adduced on the other side. But we prefer to leave to our colleagues all the advantage which their references may afford them.

233. The whole reference to foreign countries is, in our opinion, irrelevant. It may be that State ownership in the countries mentioned is a mistake. We have, however, not to advise about the past policy of other countries, but about a future policy for India under the conditions that we find there to-day. Conditions in India being what they are, we have failed to find any solution of the problem submitted to us consistent with the retention of company management. We therefore do not hesitate, though most of us have approached the question with a strong prepossession in favour of private enterprise as a general proposition, to recommend that in India the State should manage directly the railways which it already owns.

234. Our colleagues have adduced lengthy statistics which they consider prove the inferiority of State management in India. The figures would have been more persuasive if the comparison had been made of like with like, or even if all the State-managed lines had been compared with all the guaranteed companies' lines and not with a selection from them.

235. Our colleagues suggest that company management will better secure the appointment and promotion of Indians in railway administration. They give no reasons in support of this opinion. We are unable to supply them. From the evidence we have received we conclude that the Indian public take the opposite view.

The company scheme will contribute little additional money.

236. Lastly, our colleagues consider that, under their scheme, Indian money would be raised so freely that there would be less need than in the past to have recourse to the English market. Our reply is that the total amount of additional money which could be raised by the proposed new companies would be so small a proportion of the whole amount needed that it would not appreciably affect the ratio in which the necessary funds would have to be raised as between the two countries. A rupee put into a Government loan is just as much Indian money as a rupee subscribed to a Calcutta company. And it will cost the Indian taxpayer a good deal less. The real question is not how much can be raised in India by share subscriptions, but how much will be subscribed in shares which would not be put into a Government railway loan. We see no reason to suppose that this latter amount will be other than quite small.

Adverse effect on London market.

237. Our own opinion is clearly that if the East Indian and Great Indian Peninsula undertakings were handed over to the management of Indian domiciled companies the effect would practically be to close the London market against them. Even now the Indian railways are out of favour. Sir Gerald Ryan, Chairman of the Phœnix Assurance Company, drew our attention to the obstacle to investment in Indian railway sterling securities caused by the fact that the total capital at present subscribed and outstanding, amounting to some £122½ millions, is subdivided into 63 different securities, no one of which is large enough to secure free dealing in the market. Sir Gerald remarked: "I would ask the Committee to consider how they can "expect a system of investments—£122½ millions amongst 21 railways, subdivided "into many different denominations and groups—to be anything like as popular as, let "us say, the Canadian Pacific Railway, which has 128,000,000*l.*, or more than the "whole of the Indian railways put together, and where the stocks are in two or three "groups." The Hon. C. W. Biddulph, a member of a firm of jobbers in the Indian railway market, stated that there was only one other firm dealing in Indian railway stocks, as against six in the Argentine market. He gave as the reason for the infrequency of transactions that brokers and their clients say, "This is too complicated and I would rather you had something more straightforward." It is clear that the further increase in the number of different securities and the transfer of the domicile of the companies from England to India would not increase the popularity of Indian railway investments. It might, moreover, be found that the fact that the two chief productive assets of the Indian Government had been handed over to such management would render Indian Government loans themselves less attractive to the English investor.

238. The management of a great railway system by an Indian-domiciled company is admittedly an experiment. State management is not an experiment—it has long

existed in India, and our colleagues admit that it must continue in at least one very important case. Even, however, if it were a question of choice between two experiments, it appears to us that, assuming either experiment to be a failure, it would be easier to transfer a State-managed railway to a private company, as has frequently been done in the past, than to disestablish, on "six or twelve months' notice," a company already established. The machinery for testing the State experiment is in existence at this moment, while the machinery for the company experiment would need to be specially created. Further, in the former case, if the experiment failed, there would be no premium to pay, as our colleagues suggest would be necessary if the State were to take away from the newly-formed company the management of the East Indian Railway.

239. We regret to have been forced into controversy with our colleagues. We have based our recommendation mainly on the broad ground, which seems to us incontrovertible, that as a matter of practical politics companies substantially independent cannot be formed in India, and that without such independence the advantages of private enterprise are lost. The fact that our colleagues can only propose the formation of companies in which the State would own the great bulk of the stock, appoint half the directors, and nominate the chairman, with an ultimate appeal in case of disagreement on the board to the Government itself, has confirmed us in our belief that we have correctly understood the position.

The Method of Raising Additional Capital.

240. We have, in conclusion, to make recommendations as to the method of financing railways in the future. It cannot be done through the existing Guaranteed Companies if the recommendation is adopted that no new capital shall be raised by them and that they shall gradually cease to exist. It cannot be done through affiliated companies, for their establishment is impracticable. The independent companies will continue to finance themselves. With the Branch Line Companies we have already dealt; at best they must always be relatively unimportant. It necessarily follows that in our opinion the State-owned railways must be financed solely by the Government.

New capital must be raised wholly by the State.

241. And, when we speak of the Government, we mean the Central Government at Delhi alone. It is true that by two or three witnesses, and especially by Sir M. Visvesvaraya, whose name deservedly carries high authority, it has been urged that railway management should be largely decentralised and placed under the control of the several Provinces. We are quite unable to agree. If there is one thing that railway history teaches more emphatically than another, it is that centripetal forces are stronger than centrifugal; that aggregation into ever larger units promotes efficiency and economy. Examples are forthcoming from every quarter of the globe. Witness the universal acceptance in Great Britain at the present time of the principle of combining all the railways into four large groups. We have already mentioned how, when the Union of South Africa was formed, the railways of the four separate Provinces were amalgamated into a single system. At this moment there is pending in the French Chambers a Government Bill under which all the railways of France will, for most purposes, including finance, be co-ordinated and controlled as a single system. The war was hardly over when Germany decided to transfer the ownership from the individual State Governments to the Central Government and to work them as a single system. America affords a still more striking instance. In spite of the tenacity with which the Sovereign States of the Union—as they love to describe themselves—hold on to their independent rights, the Transportation Act of 1920 has provided for the transference of almost complete control over railway finance, new construction, rates and operation, from the separate States to the Federal Government.

That is, by the Central Government

242. We have been told by some witnesses that centralisation in India is excessive; that 37,000 miles of railway, spread over a country so large and so diversified, cannot be managed from Delhi. We have already expressed the opinion that a considerable measure of executive decentralisation is necessary. But when we are told that the policy of the railways of India cannot be controlled from a single centre we entirely disagree. The mileage of the unified German railways is considerably more, and their traffic immensely greater. There is more than one private company in the United States at this moment whose traffic is double the total Indian traffic. No one will dispute that the Canadian Pacific, which

Need for central control, decentralised management.

stretches across the Continent, is efficiently managed from a single centre at Montreal. The Canadian National Railways, which also extend from the Atlantic to the Pacific, are managed from Toronto.

Methods of raising money.

243. The precise method to be adopted for raising the new capital which will be required in the future cannot be laid down in advance. Methods must change from time to time according to financial conditions, as to which only experts in daily contact with the market can form an opinion. We do not think that the Indian Government has in the past exhausted all advantageous methods of raising money. In general terms we can say that in our opinion the necessary money must be raised by direct Government loans in India or in England as circumstances may dictate. Whether these loans shall be ordinary Government loans, or railway loans with or without a definite pledge by the Government that the money shall be devoted wholly to railway purposes, or whether again they shall be long or short term loans, are questions on which expert witnesses who have appeared before us have expressed divergent opinions. Our own opinion, after hearing the experts both in India and in England, is that at the present time issues in England should be ordinary sterling loans, but that the rupee loans in India would be more attractive if earmarked as for railway purposes.

Variety, and local distinctions.

Railway extension must wait.

244. The need for large capital expenditure for fresh railway development is great, and will continue as far as we can see for an indefinite number of years to come. But the question to-day is not one of development, but of putting the existing railway system into such a condition as to be able to handle with reasonable efficiency and despatch, not the traffic of the future, but the traffic which at present is clamouring for accommodation that the railways cannot give. How urgent this need is, has been sufficiently shown in the evidence which we have reproduced, but we doubt whether anyone will be able fully to appreciate its meaning unless he has, like ourselves, listened personally to the lamentable tale of railway shortcomings, told by scores of witnesses in all parts of India from Madras to the Punjab and from Bombay to Bengal. In present circumstances we feel that, broadly speaking, future development must wait. But the rehabilitation and bringing up to date of the existing system in the shortest possible time cannot in our judgment be postponed. We believe that, provided railway rates are reasonably increased, having regard to the economy of operation which may be expected once the railway machine is relieved of its present intolerable overloading and is able to receive and handle economically the traffic actually in sight, new money spent for this purpose will pay for itself directly. Even if it did not, we should think it incumbent upon the Government to spend it, and spend it forthwith. It is impossible to put into figures the loss which Indian trade and industry are suffering from the crippled condition of the railways; nor can the Government afford to ignore the discredit which is being brought upon the railway administration by the present conditions, and the bitter feelings aroused in millions of passengers by the overcrowding to which they are now subjected.

Rehabilitation imperative.

245. We therefore consider that, while new development should, so far as possible, be postponed to a more convenient season, the money required to put the existing lines into a position where they are capable of dealing adequately with existing traffic should be raised, even at to-day's price, as soon and spent as fast as the railways can put themselves into a position—by the recruitment of an adequate engineering staff, the enlargement of railway erecting-shops, and the assurance of a continuous flow of the necessary materials—to use it advantageously.

And in this connection we think that the recommendation of the Mackay Committee deserves attention:—

> "It may be possible in some years to obtain larger sums than are required to provide for expenditure at the annual rate which we contemplate, while in other years there may be strong reasons for reducing the loans. We assume that the Secretary of State will, as far as possible, take advantage of periods of easy money to raise funds in excess of his immediate requirements, thus minimising the risk of having to reduce the expenditure at a time of stringency."

This advice was not followed during the period of cheap money before the war. We think the Government will do well not to forget it when market conditions are again favourable.

246. There is a further point in this connection to which we attach great importance. Hitherto the money required by Indian railways has been raised mainly in London. The Government borrowed largely in India during the war.

But this borrowing was not for railways, but for war purposes. We think that from every point of view, not only financial—the recent wide fluctuations in the exchange value of the rupee have emphasised the financial side sufficiently—but also from the economic and political point of view, the money required for Indian railways should as far as possible be raised in India. We are informed that, before the war, Government rupee loans were taken "firm" by the three Presidency Banks, now amalgamated into the Imperial Bank of India, and that these banks subsequently disposed of their holdings to the public. No doubt the new branches which the Imperial Bank is establishing in considerable numbers will enable it to reach a wider circle of investors than before. But we think that the agency for the issue of Government loans requires to be organised much more thoroughly and on a much wider basis, and that the services of all the banks, both European and Indian, should be enlisted.

Organisation for popularising Government loans.

247. Those who had experience of the methods by which the vast sums of money required by the English Government during the war were raised are aware what was accomplished by the enlistment in advance, not only of all the banks, but of other great financial institutions, and even of private capitalists, and how in this way the participation of the whole public which had money to invest was secured. We believe this could be done in the same manner, though, of course, not to the same extent, in India, provided there was adequate preparation and a systematic organisation in the hands of experts. A good deal can be done by personal invitation to Indian Princes and other great landowners and capitalists. But more important still is to tap the surplus resources of the mass of the people, the great bulk of whose savings, according to traditional Oriental ideas, still either goes into articles of personal adornment in gold and silver, or lies idle in each man's own possession. We have had interesting evidence from Indian witnesses as to the extent to which this immemorial custom is beginning to break down in places where any sort of banking facilities are available and how the process can be accelerated in the future. One point is clear: the work of enlisting the support of the masses must be done on a retail scale, and mainly through Indian agencies, money dealers in actual personal touch with the people. The amount of the individual contributions will be, of course, small, but the population of India is immense. And all experience confirms the Indian evidence, that the first step is the most difficult, that the habit of investment grows by exercise.

Section 3.—Proposals for Future Management and the Methods of Raising Additional Capital.

By Sir H. P. Burt, Sir R. N. Mookerjee, Sir A. R. Anderson, Sir G. C. Godfrey and Sir H. Ledgard.

Future Management.

248. The most important issue referred to the Committee is that set out in para. (1) of our terms of reference, the question of direct State management of railways in India as opposed to management by companies; and any decision on this head must inevitably affect the decisions under the other heads of our reference, on which, however, there may be general agreement by the members of this Committee as a whole. But this issue of State *versus* company management is not such a clean-cut one as might appear at first sight, especially to those who advocate State management without any qualification; for it is not a question whether from now onwards all railways in India should be managed by the State or whether all should be managed by companies. On the one hand it is agreed that the position as regards at least one State railway, the North-Western, cannot for strategical considerations be altered; and on the other hand there is the case of the Bengal-Nagpur Railway Company, between whom and the Secretary of State there is a contract which is not terminable for more than a quarter of a century hence, in 1950. The company system cannot therefore be extended to the former, and, as for the latter, it appears to us that prudential considerations alone forbid the pronouncement of a permanent policy for meeting the circumstances which may exist at that advanced date. It is clear, therefore, and it must be recognised at the outset as fundamental to a proper consideration of the question, that for many years to come the dual system of both State and company operation must remain in force.

Pronouncement of permanent policy unwise.

249. There is another fundamental fact, of which the Indian public are perhaps not generally aware or sufficiently appreciative, but which has been brought prominently to the notice of the Committee through evidence; and that is that owing

to the effects of the war on Indian finance the Central Government will be unable for at least the next decade, and probably for much longer, to finance the railway systems to the extent which the development of the country demands. It is admitted on all hands that the State in the past has been fitful and parsimonious in its contributions to railways; it is this failure on the part of the State to provide for the crying needs of rail transport which is responsible more than anything else for the complaints made by the public against railways, and, though a separate railway budget which has been suggested is administratively possible, and may conceivably give more stabilisation, this will not in itself produce more money. For the future as regards railways, the State has not only to face the increased expenditure required to meet the deterioration caused by the war, but also to provide the increased facilities for traffic demanded by trade, consequent on the new industrial development, estimated to cost fully Rs. 30 crores per annum for some years to come without making any provision for the construction of new lines. At the same time the State has to finance the short-term war debt amounting to about 100,000,000*l.* and under the circumstances we are confident that reliance cannot be placed solely on Government for the provision of the necessary funds.

Government alone cannot supply the necessary funds.

250. Finally, there is a third fundamental fact which must not be overlooked, that the reforms of 1919 have created a new Legislature which has a great measure of control over the budget, and India is at the beginning of a new era which is designedly one of transition. As she advances in the direction of becoming a democratically-governed country, she will be faced with the dangers which lurk in the handling of a commercial business through the agency of a State service and which experience elsewhere condemns. India cannot ignore these dangers, even though they may not be immediately imminent.

Dangers of State management.

The immediate problem. E.I.Ry. and G.I.P. Ry.

251. The immediate problem which we have to consider resolves itself into the question what should be done in the case of the two guaranteed companies whose contracts are terminable in the near future, the East Indian Railway and the Great Indian Peninsula Railway, in 1924 and 1925 respectively. The next would be the Burma Railway in 1928, followed at intervals by other railways till 1950, when the contract with the Bengal-Nagpur Railway Company falls in. The importance of the question is greater than is suggested by the mention of the two railways whose contracts shortly expire, because their mileage is approximately one-third of the total mileage of all the guaranteed companies' lines in India, about 6,000 out of 19,000 miles, and they form the great arteries of the Indian system connecting the two largest cities, Bombay and Calcutta, with each other and with the capital at Delhi.

252. The problem raises two issues: in the first place, whether the management of company railways by London Boards should continue, or whether the management should be located in India. This issue has been partially settled by the decision of the Secretary of State, that the management of the East Indian Railway should be moved to India after the expiry of the present contract in 1924. We need not discuss further the arguments for and against a continuance of the London Boards. The weight of evidence in India rejects the present system of management by companies domiciled in England, and for the reasons stated in section 1 of this Chapter, and notwithstanding the valuable services rendered by the companies in the past, we are in agreement that that system should be changed, according as the several contracts can be determined.

253. As regards the second issue, whether, if the complete control be in India, management should be by a Company or by the State, it is desirable in the first instance to summarise briefly the case for each policy, as set forth in the recorded evidence of the Committee. The opinions elicited are very divergent.

Arguments in favour of company management.

254. Let us consider in the first place the arguments of those who favour company management. An important and weighty section of opinion, including that of the Railway Board, is opposed to the view that State management is the best, holding that, as railways are primarily commercial undertakings, they should be managed on a commercial basis, so as to secure economy and efficiency, that is to say, by a Company with a Board of Directors. The following are held by the same body of opinion to be some of the defects in State management: (1) constant transfers of senior officials, resulting in lack of continuity of policy; (2) the tendency to give promotion on the grounds of seniority alone without sufficient regard to efficiency or

Defects of State management.

local knowledge; (3) disregard of public opinion; and (4) lack of initiative and flexibility. Further, as regards the co-existence of company-managed railways and State railways, it is urged that improvements in the administration of State railways which have been effected during past years are mainly due to the emulation inspired by company management; in other words, that the initiative lies with the company-managed railways, and that emulation and comparison provide healthy results in the case of State-worked lines.

Emulation inspired by companies.

255. Turning in the second place to State management, we find that a large section of the Indian public supports the adoption of this system, because it believes that company management does not encourage the development of indigenous industries by sufficiently favourable treatment; that it gives preferential treatment to import and export goods; that under the present system of company management large profits are made in British interests; and that hitherto the companies have not employed Indians in higher appointments except to a very limited extent, and have not granted them adequate facilities for technical training. Without pausing to argue here whether these views are correct or not, we venture to think they are coloured by the impression that company management necessarily connotes management through Boards in London. This, however, is not an essential condition of company management in India, and we deal with this point later.

Arguments in favour of State management.

256. There is, also, in addition to the negative dislike of company management on the part of the Indian public, a positive feeling caused by an awakened national self-consciousness that Indians should have more control in the management of the railways of their own country, and with this feeling we fully sympathise.

Demand for Indian control.

257. We have placed in prominent juxtaposition the opinions, as gleaned from evidence, of those who favour on the one hand State management and on the other company management. Holding, as we do, very strongly to the opinion that company rather than State management is best suited to meet Indian conditions, and agreeing with the views of those who advocate company management, we will proceed to develop the general arguments in favour of that system before attempting to put forward a constructive scheme for attaining that end. Our view is that State management, in other words complete nationalisation, should not be adopted in any country unless there are compelling circumstances which make it unavoidable. Let us examine such circumstances and see if they apply to India.

Company management preferred.

258. Working expenses under certain conditions, such as nationalised wages or extravagant over-expansion, might be so high that a country would be forced to subsidise its railways. This would mean that rates had already been raised to the full extent that passengers and trade could bear or that there was not the traffic to bring in the necessary revenue, and that, therefore, no prospect existed of railways earning their interest or dividend. Under such a condition a State would have to nationalise to safeguard its subsidy, and thereby to maintain its communications. We do not find this to be the case in India.

Arguments for nationalisation do not apply in Indian conditions.

259. Allied closely to the foregoing is another possible condition, that the financial outlook for railways was so gloomy that it would be hopeless to attempt to raise more railway capital. This certainly does not apply to India. One more possible condition may be mentioned; for military reasons it might be considered essential by a country to retain all railway operation in the hands of the State. Here again the conditions cannot possibly apply to India.

260. It has been suggested that in India there is not company management in the ordinary meaning of the words, and that the system which exists there at present has not worked and cannot be made to work satisfactorily. The system is that the State owns the lines and contracts with companies to work them. There are certain faults in the way in which the system has been worked, but these are capable of elimination—they are not inherent in the system.

Faults in company management can be rectified.

261. The alleged imperfections of guaranteed companies are not due, as is currently believed in India, to company management in itself, and the evidence shows that the charges brought against railways are not peculiar to the company-managed lines. The main cause of the imperfections in company working (they are equally in evidence on State worked lines) is undoubtedly to be found in the past policy of the Government of India in regard to the financing of the contracting companies, under which Government, while assuming full responsibility for providing the necessary

Complaints not peculiar to company managed lines.

Their origin.

funds for capital expenditure, and refusing to allow the companies to raise any capital of their own, has at the same time limited the amount to be spent each year to a figure considered financially expedient for the country. This policy of financial caution has proved, from the resultant inadequacy of funds and fluctuations in allotments, to be the serious hindrance to the proper development of the railways. This policy has been defended time after time as being necessary for a poor country like India and as essential for her future financial credit. Whether or not it is agreed that such a policy was sound in the past under the varying conditions that prevailed from year to year, most people will judge now from the perspective of time, that it was at best a timid policy proving disastrous to the trade and industry of the present day.

Inadequate allotments.

262. The difficulties referred to above which have so seriously hindered the railway administrations in India in meeting trade demands and providing better accommodation for passengers, particularly for the third class, afford no proof that the company system must be a failure and no argument in favour of complete nationalisation. In fact the latter might well result in perpetuating and even accentuating the timid financial policy to which we have referred, as it is on record that the companies repeatedly and strenuously pressed for greater liberality in expenditure. The working of the company system as evolved for India can only be judged in the light of the financial difficulties which have surrounded it at every turn. Freed from these difficulties, which are certainly not inseparable from the system, it has, in our opinion, great national advantages suitable for any country, in that it ensures the larger share of any profits which may be made from the railways going into the coffers of the State, while avoiding the extravagance and other serious disadvantages of State management through a vast and growing bureaucracy.

Reliance on Government for funds tried and found wanting.

263. We desire to emphasise this aspect of the case as strongly as possible. Reliance on Government for providing the necessary funds for railway purposes has been tried for many years and found to be altogether wanting. We have during the current year the curious spectacle of Government in its Industries Department doing all it can to encourage trade development, and in its Finance Department failing to supply funds necessary for the development of its transport services on which industries depend. We can see no reason for thinking that Government will be in a position to provide year by year the large sums needed for railway purposes, and we have given our reasons for coming to that conclusion. The future holds out little hope that greater reliance can be placed on Government in this connection, and we are convinced that the position will never be remedied if Government loans are alone relied upon to secure the vast amounts required for railway purposes. The extreme importance therefore of finding new sources for the supply of capital is evident.

No expectation of success in future.

New sources must be found.

Political considerations.

264. In dealing with this aspect of the case certain political factors in the situation must not be overlooked. It will contribute in a large measure to the well-being of India if the money which Government cannot provide for railways is found in that country and its resources tapped for the supply of a part at least of the additional capital needed. The keynote of the present policy in India is co-operation in the widest sense of the term wherever possible, and in our view the system of management which we advocate will secure co-operation in the raising of additional capital without injuring the credit of the Government of India or limiting in any way the control which, as is the universal practice in all countries, Government must exercise over a railway monopoly in order to safeguard the interests of the public.

Objection to State employment of labour force.

265. We have drawn attention in an earlier part of this separate Section to the dangers which India might some day have to face in the working of a commercial business through the agency of a State service. In this connection we cannot refrain from referring to the obvious objections, not to say the positive dangers, of making Government the sole employer of a vast labour force. Strikes so far on Indian railways have been sectional only, and have never as yet seriously affected communications. We feel confident that the position would be very different if the entire staff belonged to a State service.

Relations of State with staff.

266. Another weighty objection often urged against State management is the system of promotion by seniority and consequent lack of continuity of service on one railway. Now there should be no causal relation between the one and the other, but it is impossible to pass over the fact that in actual experience the fault does occur in every State service, owing to the tendency to allow seniority to assume undue importance in the selection of officials for the higher posts. Moreover a State service is always bound by rigid rules and scales of pay, and cannot allow the latitude exercised by a commercial concern in singling out and recognising merit.

267. So far as we know the only safeguard against these dangers and objections, which are inherent in the State operation of railways, is company management.

Example of other countries.

268. We will now allude briefly to the conditions in a few important countries where State management exists. The Swiss Federal railways in seven years (1914-20) have shown a loss of 200 million francs, say 8 to 10 million sterling. Before the war they were earning a small profit. Passenger fares have been increased by 40 to 60 per cent. Prior to 1914 and subsequent to the date of nationalisation there was a steady and often large increase in the cost of the staff and in the operating ratio. The Northern Railway of Austria, before it was taken over by the Government in 1906, paid a dividend averaging for the previous five years 12 per cent.; the Government succeeded in turning that profit into a loss. In Italy for a period of eight years from 1905, when Government took over the working of the railways, there has been a steady yearly increase in the operating costs and the return on the capital has declined. The South African railways show a loss of 2,000,000*l.* on the last two years' working. The American railways are in such a bad way consequent on the period of Government control, that President Harding in a recent address to Congress, after referring to the "heedlessness of cost of Government operation," emphatically asserted that there would be a foundation for rebuilding after the past disaster, if it was clearly understood that there would be no State ownership, and that the people would not be taxed to cover railway deficits. This shows the trend of opinion in a democratic country.

Switzerland. Austria. Italy. South Africa. America.

Effects of war. State operation not recuperative.

269. It is quite clear that war and post-war conditions have had much to do with the high cost of railway operation in all countries, and that figures can be given showing the financial difficulties of company-operated lines; but State operation, hampered by standard rates and standard wages, is bound to be slow in getting back to more normal conditions and through lack of elasticity is likely to be far behind company operation in hastening on recuperation. We attach much weight to the fact that the Indian railways, with the balancing effect of company-managed lines, in spite of the serious handicap of inadequate facilities, and with a comparatively moderate increase of rates and fares, have not fallen into the low financial state of railways of many other countries, and we are confident that the result would not have been the same had all the railways been operated by the State.

Comparisons invariably favourable to company management. Some examples.

270. Comparisons in economy and efficiency invariably prove advantageous to company management, but it is not always easy to obtain suitable comparisons. We can, however, do so in India, and we quote a few figures which may prove enlightening to those who do not possess an intimate knowledge of Indian railway working. These figures have been extracted from statistical returns maintained by the Railway Department and, whether mathematically correct or not, they have all been arrived at on a common basis. It appears to us that the results exhibited, which are uniformly favourable to company management, are of sufficient interest to produce here.

271. On a review of all these considerations, it appears to us that in the interests of India it is as necessary as it is desirable that its railways should be worked as far as possible by company rather than by State agency, and we believe there will be no difficulty in evolving a scheme of company management in India which will meet the legitimate aspirations and claims of all sections of the community, will satisfy both political and industrial interests, will relieve the financial situation and will at the same time give an opportunity for the harmonious co-operation of both Indians and Europeans in the working of the great and vital industries of the country and thereby ensure the rapid development of the resources of India for the benefit of all. We do not think State management can be relied upon to secure the same results.

We recommend company management.

272. We now put forward two constructive schemes for this end. Taking the line that, as between Government and a new (Indian) East Indian Railway Company, there is no reason to complicate matters by taking into account the question of the direct obligations which at the end of 1924 Government will be under towards the late shareholders, annuitants and debenture holders of the existing English company, it is easy to suggest the outlines of a contract which should give the new company a reasonable return for its capital and remuneration for its services as managing agency.

Two schemes suggested.

273. If the East Indian Railway net earnings at the end of 1924 over a period of three years have averaged about Rs. 8 crores per annum, and if 6 per cent. be the then prevailing and estimated future value of money, then the capital value of the line will be about Rs. 134 crores, and this might be taken as a basis for negotiation. A new limited liability company might then be promoted with rupee capital, domiciled in India, with its headquarters at Calcutta the present headquarters of the system. The company would have a nominal capital of, say, Rs. x *plus* 50 crores, of which Rs. x would represent the Government share capital, the balance of 50 crores being the authorised new share capital, of which about 25 crores might be called up in the first few years.

274. Interest at 1 per cent. less than the prevailing rate from time to time for Government loans, on the paid up public share capital, should be a first charge against the net earnings. Government must guarantee this return in order to ensure public confidence and make the shares a trustee security, but in reality this rate of interest would unquestionably be met from the net earnings, and the guarantee would therefore be purely nominal. Interest at the same rate on the Government share capital (x) should next be charged, and the balance of net earnings should be regarded as surplus profits to be divided between the Government and the public shareholders in proportion to their respective holdings. The amount to be assumed for x must be determined on a reasonable basis.

275. Under the foregoing scheme the Government liabilities towards the old East Indian Railway Company are liabilities of the general revenues of India, and would be a matter for Government to deal with quite apart. But if preferred, an arrangement could be made which we call the second scheme, based on the booked capital outlay of the line, under which the interest on the outstanding liabilities would have to be specifically provided for as first charges against the earnings of the new company. In this case, the amount of such charges and liabilities and the amount to be taken as Government capital in the company, would need detailed investigation, but if capital outlay be taken as the Government holding in the new company, it would be equitable that Government should receive a fixed proportion, say one-third of the surplus profits, before division, in recognition of its ownership and guarantee.

276. It should be noted that under both the foregoing schemes, the actual terms and fixation of capital must be settled in the light of the financial conditions prevailing at the time the contract is made.

277. Whichever of the foregoing alternatives be chosen, the following general provisions would apply:— General provisions.

(*a*) The company with the sanction of the majority of the shareholders, which in effect would mean Government, should have the power of raising further capital when required.

(*b*) The Government of India should have the right to acquire the shares subscribed by the public at a stated period, by giving six or twelve months' notice, and at such reasonable premium as may be agreed at the inception of the company.

(*c*) The Board should consist of 10 Directors: five to be elected by the outside shareholders and five to be nominated by Government. It is desirable that half the number of Directors should be Indians.

(*d*) Government should have the right to nominate a chairman from among the 10 members; the chairman should have a casting vote.

(*e*) The management should rest with the Board of Directors as is usual in commercial concerns, except so far as legislation intervenes and except in such matters as control of rates, allocation of capital and revenue expenditure and service to be rendered to the State.

(*f*) Should there be any disagreement between the nominated and the elected Directors which necessitates the exercise of the chairman's casting vote, the matter should be referred to the Government of India, if the minority so desire.

278. Let us now consider the advantages of a scheme of this nature and the possible objections. The experiment of having an Indian domiciled company is certainly worthy of trial, while it would not form an irrevocable policy when existing contracts expire at later dates. As regards advantages, we consider that in the first place Indian public opinion will obtain full recognition without the bureaucratising of a commercial organisation. The Government of India, as now constituted under the Reform Scheme, will provide sufficient assurance that such opinion will not be disregarded; and the remedy against complaints such as unduly favourable treatment of foreign trade, if it exists in competition with internal trade, will lie with the Tribunal which the Committee have unanimously recommended should be set up. Moreover, the members of the Legislative Assembly will be able to keep themselves fully acquainted with the internal working of the railway through their countrymen on the Board of Directors.

Experiment not irrevocable policy.

Advantages.

Public opinion.

279. In the second place, we hold that the appointment of Indians to high administrative posts and the promotion of specially meritorious Indians from subordinate to higher grades will be better secured under this scheme than on State-managed railways. The proposal will afford to educated Indians the best possible opportunities and facilities for learning the management and control of large commercial and public undertakings, and give them an opportunity of becoming equally competent with trained Europeans in direction and management. This is one of the most important grounds which lead Indian opinion at present to desire State management; but we believe that by our proposal their object can be achieved in a more direct and definite way.

Employment of Indians.

280. Whatever may have been the case in the past, India is now at the parting of the ways; and, simultaneously with political reform, reform in commercial and industrial development is essential. No country can prosper politically without industrial prosperity; and this cannot be secured merely by increasing the number of Government employees.

281. A third advantage is to be found in this new method of financing Indian railways. According to our reference it is a primary duty to suggest means of raising sufficient funds for the development of Indian railways. The difficulties in regard to finance of the Government in India and of companies in England have already been indicated; and on political grounds it is desirable to limit India's indebtedness to the non-resident investor. Now, the scheme which we suggest will, we are confident, achieve our object in finding a new market in India. By the Government guarantee of a fair rate of interest, such trust money as requires investment will be attracted; and there is a great probability, nay, almost a certainty, that a large amount of money from insurance companies, which have of late been rapidly growing in India, will become available. It will have the further advantage of tapping a new field of investors in India itself, to whom a guarantee with additions based on a share of the profits will naturally appeal; for there are many grades of possible investors in India ranging between the public trustee and the speculator.

Appeal to Indian investors.

282. The first loan of the new company will undoubtedly receive a great impetus from what may be described as patriotic motives—as was the case in connection with the issue of the loan for the Development Scheme in Bombay—and when the practice is established of investing in railways, it is likely to become permanent. Moreover, the amount required for the East Indian Railway will, we are informed, not be likely to exceed 4 crores a year for a reasonable period in the future; and we are confident

that with good security and the prospect of a satisfactory dividend, the amount will be forthcoming in India itself, if not entirely from Calcutta.

283. Turning now to possible objections, we find, in the first place, the allegation of a practical difficulty, that suitable directors, both European and Indians, for the boards of the trunk railways in India cannot be found at present. We do not agree as to the impossibility of finding such men. We have no doubt they can be readily found in the Presidency towns, and we desire to increase the opportunities for utilising the services of men who are suitable. The experience already gained in the large organisations of the Port Trusts and Improvement Trusts is not without value; and the traditional commercial communities of India already bring forward men with the requisite administrative skill, financial sense, and business acumen.

Suitable directors can be found.

284. Another objection is that Government would incur great unpopularity by parting with any share in so remunerative a property. We do not admit that Government would under our scheme surrender any part of its proprietary interest. It will merely be converted into share capital, with the prospect of making that capital more remunerative than it could be under direct State management. The sharing with the investing public of a portion of the increased railway profits due to the additional capital subscribed by them cannot be considered an extravagance or a loss to Government, inasmuch as better and more economical management will be secured. Still another objection has been raised that such a company might in the future have to borrow by means of debentures at a rate slightly above the rate for Government loans. We grant this, but would reiterate that the difficulties of Government as regards the provision of funds must be recognised. If money must be obtained it is necessary to offer sufficient inducement. Furthermore, we hold that borrowing by a commercial concern of the highest standing will leave the credit of Government as regards Government loans unimpaired, for, as we have already said, Government will not have parted with any of its assets.

No surrender of Government's proprietary interest.

285. It may be argued by way of general criticism of our scheme that Government must in some way or another find the money for railway development, presumably by fresh borrowings or increased taxation, if it is asked to do so. But the facts should be faced: increased taxation has already been applied to meet the deficit of the present year (1921-22), and there is a heavy burden of floating debt. If, as it is hoped, Government may at some later period be in a position to raise larger sums than at present for the requirements of railways in India, there will be ample scope for utilising that money, first, in bringing State-managed railways to greater efficiency; secondly, in providing funds for the guaranteed company railways which will still remain under contracts; and, thirdly, in constructing the many new lines which are so urgently required. Moreover, past history cannot be ignored, the Government have regularly and continuously failed, and even refused to attempt, to raise the funds so badly required for the railways of the country.

286. In consideration of the advantages mentioned above, and after discounting the objections, we would advise that in view of the special present difficulties of finance a company constituted in accordance with our scheme is the best possible solution for the problem which lies before the Secretary of State in 1924 in connection with the East Indian Railway. It is impossible to foretell what may be the opinions on these matters 15 or 20 years hence, in India, Europe, or the world generally, and we hold that it would be unwise at the present juncture to commit the Government of India to a permanent policy of State operation. If this scheme in regard to the East Indian Railway proves successful in attracting the required capital in and from India, the Great Indian Peninsula Railway Company whose contract expires in 1925, six months after that of the East Indian Railway Company, might be converted on similar lines into a rupee capital company domiciled in India, with its headquarters at Bombay. It would appear from the evidence that the prospects of raising share capital in Bombay are even brighter than in Calcutta.

Management of E.I. Ry.

G.I.P. Ry.

287. The conversion of these two arterial railways into domiciled rupee capital companies and their operation through the agency of boards in India, consisting of Indians and Europeans, including Government Directors, will, we feel sure, give a great impetus to and create an interest in Indian investing circles. The question of the other guaranteed railways whose contracts have still many years to run, will have to be considered on their merits when these contracts become terminable. As for the State-managed railways, with the exception of the special case of the North-Western

Other cases to be dealt with on their merits

Railway, if experience shows that the Indian domiciled East Indian and Great Indian Peninsula Companies can be successfully worked and that sufficient capital for their requirements is forthcoming, public opinion might largely support the extension of company management, and it might then be desirable to convert some of the existing State-managed railways into, or amalgamate them with, rupee capital companies. In this connection we agree with our colleagues as to the distinct advantage which would accrue from the amalgamation of the East Indian and Oudh and Rohilkhand Railways; there would be no difficulty whatever in effecting their combination under our proposal.

288. In the insistent need for larger new capital expenditure on Indian railways, no source of obtaining funds on reasonable terms should be left unexplored. We believe that Government will derive much financial assistance from the Indian domiciled companies when they come into being, but it is probable that further financial help will be needed to supplement State loans, and we have considered whether the London guaranteed companies could be utilised for finding at least a part of any additional money which may be required. We cannot recommend that the London guaranteed companies should now, at this late date, be allowed to increase their share capital, because we recognise that having regard to the demand for the transfer of the administration from London to India, a substantial increase in the share capital of those companies would make the transfer more difficult and possibly more expensive. We agree, however, in recommending that the services of the companies should continue to be utilised for raising debenture loans if the Government of India finds that such a course is convenient and economical.

Existing companies, debenture loans.

289. Further, we doubt very much whether the proposals we have put forward for financing the East Indian Railway in 1924 and possibly the Great Indian Peninsula Railway in 1925, will be of sufficient assistance to Government to enable it to provide the capital necessary for the early construction of any new lines of communication. Many of these have been under consideration for years past; they are urgently needed if the development of the country is not to be arrested. If further methods for financing such extensions are not devised, there is little or no prospect that India will make any material advance in the near future towards obtaining the 100,000 miles of railway considered necessary for the country by the Mackay Committee when they reported on the situation 14 years ago. We are of opinion, therefore, that if funds are not forthcoming, Government should have no hesitation in enlisting the help of private enterprise for financing, with rupee capital, some of the larger schemes for new lines which have already been delayed so long for want of funds.

Private enterprise, extensions.

290. We cannot conclude our separate section of the Report advocating Indian domiciled company management without referring to some of the arguments against the existing system of company management brought forward by those of our colleagues who are in favour of State operation. Passed unnoticed by us, it might be held that those arguments would apply to the system of company management which we advocate.

Replies to our colleagues.

291. Our colleagues maintain that the existing guaranteed company system "never has worked satisfactorily and cannot be made to do so," and further that it is "essentially unworkable." We would point out that though the system may be peculiar to India, and therefore novel to the majority of those opposed to us on the Committee, it has none the less stood the test of time with a great measure of success and has the undoubted advantage of retaining State ownership in combination with company management. We have explained fully in another part of this separate section why the present system has not been a complete success, due mainly to the financial difficulties which have hampered its working; but we maintain that in spite of those difficulties it cannot, as a system, be condemned, and so satisfied are we of its advantages from a long and intimate knowledge of its efficient working, that with certain material alterations we have deliberately recommended that it should be taken as a basis for the creation of the Indian domiciled companies.

Existing system.

292. In section 1 of this chapter (paras. 187 to 209 above) adopted by the whole Committee, some considerable emphasis has been laid on the statement that a shareholder in an Indian guaranteed company is not a railway shareholder, as the word is commonly understood, and that the debenture holder occupies an equally unusual position. On general grounds we think it is advisable here to refer to the position of the share and debenture holders from a different point of view. It is no secret, and so far as our knowledge goes never has been a secret, that all Indian guaranteed

railway undertakings worked under the company system are the property of the Secretary of State for India. Their several contracts show this clearly. Leaving aside the case of the East Indian Railway, which has features more or less peculiar to itself, the leading companies have entered into contracts with the Secretary of State which provide that in return for a definite proportion of capital subscribed by them they shall be entrusted (under control) with the working of their undertakings, shall be entitled to a minimum guaranteed percentage on their subscribed capital, and to share along with the Secretary of State in the net profits of the undertaking, in proportion to the amount of capital held by each respectively in the concern. Shareholders enjoy the further valuable privilege of having their subscribed capital refunded to them at par on the termination of their contracts. Their share capital is moreover a trustee stock, and Indian Guaranteed Railway Company shares may be regarded as among the safest railway investments on the market in that shareholders enjoy a security both as to principal and interest which is better than that pertaining to ordinary shares.

Security of existing shareholders.

293. For all financial and, indeed, practical purposes, the Secretary of State and the companies are partners in the undertakings, with rights and obligations clearly defined in the contracts. If there is confusion in the relative positions of the two, it is due to the position occupied by Government as Government and not as a partner. Similarly as regards the debentures, though they admittedly differ from the debentures issued by an ordinary company in that the debenture holder has no definite charge on the undertaking, they are secured on the revenues of India, and that security can only be prejudiced should India become bankrupt. Consequently they are recognised as gilt edged securities, and it is difficult to see in what respect the debenture holder in an Indian guaranteed railway company suffers any disadvantage.

Security of debenture holders.

294. A further criticism which our colleagues offer in connection with guaranteed companies is that a "company does not and cannot manage the undertaking; it "cannot, without the permission of Government, break new ground in any direction. "Neither does the Government manage; it only controls and restrains." One is constrained to ask, who then does manage? The signatories to this separate section have a close and intimate knowledge of Indian railway working, and we may perhaps be pardoned if we say that the quotations we have made bear no resemblance to the conditions which exist as we understand them. Companies do manage their railways. They employ an efficient and experienced staff, and the initiation of improvements of all kinds has usually originated with company-managed lines. We think those who criticise have done so from an imperfect knowledge of the services the companies' administrations have rendered in the past, and have not appreciated the disability they have for so long been labouring under for want of funds.

Management by existing companies.

295. One of the arguments used by our colleagues in favour of State management is embodied in the following sentence:—

> "We do not think in this fallible world company management can be so good as to escape fierce, often unfair, criticism from Indian opinion. Even if we were to assume that State management would not be better, we are quite sure that its failures would be judged more leniently by the Indian public."

We regard it as our duty to recommend what we consider best for India, not to adopt the line of least resistance or to recommend a course to avoid unfair criticism. While it may be thought that the public would be lenient towards the shortcomings of State-worked railways, it will generally be admitted that when complaints are made against companies the weight of public opinion leads to reforms. The State is often not an attentive listener and is apt to consider itself perfect. That public opinion might judge State railways more leniently is no argument in favour of the general adoption of State management. What India requires is the best it can obtain, and we are confident it will not be satisfied with less.

Line of least resistance not necessarily best.

296. Our colleague's separate Report may be regarded by many as a wholesale condemnation of the system under which the guaranteed railways have been administered. We do not think that such condemnation will be accepted by anyone who has any detailed acquaintance with Indian railways. In the first place we consider that the system of company management, devised and adopted in the latter part of the last century, was an eminently suitable one, and it appears to us that the bargain which the State then made with the companies has proved to be favourable to the Government of India. In the second place, we hold that the English

Merits of existing system.

domiciled companies have rendered valuable service to the State in undertaking the construction of railways at a time when India was unable to undertake the responsibility and burden of the work, and in improving the general standard of efficient management and working. The policy again which, while making over the majority of the State-owned lines to companies to work, retained the working of a few in its own hands, had many distinct advantages which remain to this day. The emulation brought about by company and State management working side by side, has done a very great deal to raise the general standard of efficiency of railway working in India. In our opinion that standard would have been far different from what it is to-day had the management been in the hands of the State from the outset.

State management in India a reflex of company management.

297. It may be argued by those who compare the position of the company and State working as it is to-day, that little difference exists between them, that one is as good as the other, and that in initiative and flexibility and management generally the State-worked lines show results as good as the companies' lines. In this connection we should like to emphasise the fact that State management, as ordinarily understood, has not existed in India for many years past. State management in India has become a reflex merely of company management. Following on the quasi-independence of the companies, Government has deemed it advisable to endow the agents of the State-operated lines with powers similar to those granted to the agents of the several companies, with the result that the former have been free from that amount of petty control and interference from headquarters to which they would undoubtedly have been subjected had there been State working only in India.

298. We consider we have evolved a practical scheme of management through an Indian domiciled company which will prove to be in the interests both of India and of her people, and in putting it forward we desire to emphasise that company management of this kind has not yet been tried on railways in India, and that those who criticise company management for reasons chiefly directed against the boards in London cannot be regarded as opponents of a system which has not yet existed. When our scheme is introduced, we are confident that the public, European and Indian alike, will find many advantages in it, and will appreciate that the country is in a fair way to escape the dangers of railway nationalisation.

Note by Sir Henry Burt.

299. Sir Henry Burt desires to add the following to this part of the Report :— As pointed out by Mr. Kisch in the written statement which he prepared for the Committee, the liability which the State will have to incur on the termination of the existing contracts demands consideration. While I agree that it is desirable that the existing contracts should be terminated when they fall in, it is clear that circumstances may arise, as in the case of the Assam-Bengal Railway, which might throw an undue financial strain on Government if in every case the contracts were terminated on the exact date when they expire, especially in the case of those involving heavy cash disbursements. In my opinion the right must be reserved to Government to deal with each case on its merits, it being recognised that in certain eventualities it may be in the best interests of India that a contract should be extended for a short period.

Methods of raising additional Capital.

Need for money.

300. In conclusion we have to deal further with the very important subject of finance and bring together the recommendations thereon, some of which have already appeared in the foregoing paragraphs. No investigation or evidence was needed to emphasise the urgent necessity for money being provided from one source or another to bring the railways up to the standard of efficiency which the passenger traffic and trade of India demand.

Assistance of Indian domiciled companies.

301. Up to a point there is no disagreement in the Committee as regards the proposals and recommendations for raising additional capital embodied in paras. 240–247 of this chapter. We cannot, however, support the proposals in full, for the reason that we hold, apart from other important considerations, that Government will derive financial assistance of the greatest importance from the Indian domiciled companies whose formation we so strongly recommend.

302. There are undoubted advantages in making use of domiciled companies to find, from independent sources, the funds needed to meet the requirements of two such large administrations as the East Indian and Great Indian Peninsula Railways, estimated to amount to about Rs. 8 crores a year—by no means an insignificant

figure. Direct Government loans bearing a fixed rate of interest appeal to a certain section of investors, but apart from these, there are other, and we believe more important, classes of investors who are attracted by a lower rate of guaranteed interest coupled with the prospect of a share in the surplus profits of the railways; the shares in companies such as we recommend should be formed in 1924 and 1925 will offer attractive investments to such lenders.

Attractiveness of their shares.

303. But these Indian companies cannot come into being till 1924 and 1925, and for the intervening period the responsibility for providing the required funds for railway purposes must rest mainly with Government, and even subsequently to the formation of the Indian domiciled companies Government will still have to raise very large sums.

Intervening period.

304. The precise method for raising new capital cannot be definitely laid down in advance. Methods must change from time to time according to market conditions. Experts can best advise regarding these. But in general terms we recommend as far as money is raised by the Government that it be by direct Government loans, and we believe these would secure additional attractiveness by being advertised, whether in England or India, as required for railway purposes.

Form of Government loans.

305. We anticipate that, as long as income tax in England continues to be levied at the present high scale, money will be obtainable in India on more favourable terms than in the London market, and the Indian money market should be exploited to the fullest extent, though varying conditions, such as those of exchange, may make it expedient for the Government to use the London market for meeting payments on rolling-stock and machinery.

Use of London market.

306. We consider that the assistance of all banks in India should be enlisted when the Government comes into the market for railway loans, and that even independent offers from banks or groups of banks on special conditions, somewhat outside the ordinary Government terms, should not be lightly set aside.

Assistance of banks.

307. An important recommendation was made by the Mackay Committee in 1908, as follows :—

Mackay Committee.

> " We assume that the Secretary of State will, as far as possible, take advantage of periods of easy money to raise funds in excess of his immediate requirements, thus minimising the risk of having to reduce the expenditure at a time of stringency."

We endorse the views of that Committee on this point and strongly recommend that they be adopted.

308. As the total amount required annually is so large and believing that Government itself will not be able to raise in full the funds needed, we hold that no channel through which money can be obtained on reasonable terms should be neglected, and we do not desire to close the door to borrowing from any source thought suitable and economical. Government ought, if possible, to raise the necessary money by direct loans, even by paying a higher rate of interest than on loans for general administrative purposes, but if Government cannot adopt that course without interfering with or discrediting its financial policy, we recommend that full use be made of the existing companies for issuing debenture loans under guarantee.

No door to be closed.

309. Further, if private enterprise is available for financing new lines, whether in the nature of feeder lines or through routes, we recommend acceptance, rather than that the country should lose the new development. We do not wish that all development depending on new lines of railways should be at a standstill until existing railways are brought up to date, because the period cannot be short and many new lines are of urgent importance.

Financing new lines.

310. Our colleagues express the view that if the East Indian and the Great Indian Peninsula Railways were handed over for management to Indian domiciled companies on the lines we have recommended, it might be found that this would render Indian Government loans less attractive to the English investor. We have not suggested that any portion of the capital now held by the Government should be disposed of, and fail to see therefore how the security which the Indian Government will in the future have to offer, will in any way be lessened, or how its financial position can be prejudiced by the formation of the proposed companies.

English investors not discouraged.

CHAPTER VIII.

SUMMARY OF RECOMMENDATIONS, AND CONCLUSION.

A.—Unanimous Recommendations.

Para. 97. Para. 104.

1. We propose great changes in the constitution, status and functions of the Railway Board. We recommend that at the head of the Railway Department there shall be a Member of Council in constant touch with railway affairs; and we suggest that with this object there shall be created a new Department of Communications responsible for railways, ports and inland navigation, road transport (so far as the Central Government deals with this subject) and posts and telegraphs. We think the Member in charge of Communications must be an experienced administrator and able to represent his Department both in the legislature and with the public. We do not think he need be expected to be a technical expert.

Paras. 125 *et seq.*

2. We recommend that, on the one hand, the reconstituted Railway Department should delegate considerably increased power of day-to-day management to the local railway administrations, and on the other hand should be relieved from control by the India Office and by the Government of India except on large questions of finance and general policy.

Paras. 74, 76 and 127.

3. We recommend that the Finance Department should cease to control the internal finance of the railways; that the railways should have a separate budget of their own, be responsible for earning and expending their own income, and for providing such net revenue as is required to meet the interest on the debt incurred or to be incurred by the Government for railway purposes; and that the railway budget should be presented to the Legislative Assembly, not by the Finance Member of Council, but by the Member in charge of Railways.

Paras. 129—134.

4. We recommend that, subject to independent audit by the Government of India, the Railway Department should employ its own accounting staff, and be responsible for its own accounts. We think that the present accounts and statistics should be thoroughly overhauled and remodelled with the assistance of experts familiar with recent practice in other countries.

Para. 111 *et seq.*

5. We recommend that the title of Railway Board be replaced by the title Railway Commission; and that under the Member of Council for Communications there shall be a technical staff consisting on the railway side of a Chief Commissioner and four Commissioners; that of the four, one should be in charge of finance and the organisation and staff of the office, and that the three other Commissioners should be in charge of three respective geographical divisions, western, eastern and southern. The Divisional Commissioners, while normally engaged at headquarters, should devote a substantial portion of their time to personal visits to their divisions.

Para. 111.

6. We recommend that the technical staff attached to the Commission shall be strengthened, especially on the traffic side. We think the staff should be divided into six sections, each under a Director, one of whom should be responsible, under the Commissioners, for Ports and Inland Navigation and Road Transport.

Para. 124.

7. The changes and additions to the headquarters establishment which we have proposed may cost from 25,000*l.* to 30,000*l.* per annum. But we recommend this expenditure in the interest of true economy. And we point out that salaries in the highest posts of the Indian railway services are at present inadequate, and that, in consequence, not only does the service fail to attract the right men, but it is actually losing to other employment those already in it.

Para. 123.

8. We think that the present number of Circles, each with an Engineering Inspector, is unnecessarily great; and we recommend that the number of Engineering Inspectors be reduced, and the money utilised for the appointment of new officers called Inspectors of Traffic.

Paras. 137 and 138.

9. We discuss the rights of management reserved to the guaranteed companies under their contracts, and we recommend that the new Member for Communications should, by agreement, where necessary, with the companies, modify the present

position: on the one hand giving to the Railway Commission greater powers in reference to matters such as initiation and enforcement of reforms and some control over the appointment and retention of principal officers, and on the other hand, giving to the local executive officers greater freedom from interference in matters of everyday management.

10. We suggest that there should be a less rigid regard than hitherto to the claims of seniority. Para. 135.

11. We lay stress on the importance of giving to the Indian public an adequate voice in the management of their railways. And accordingly we recommend the establishment of Central and Local Railway Advisory Councils. We propose that the Central Advisory Council, under the chairmanship of the Minister of Communications, should consist of not more than 25 members, of whom three or four would represent the Departments of Government specially concerned; eight or nine should be nominated, according to a scheme to be arranged, by the various associations representing trade and industry; and a similar number, to represent agricultural interests and the travelling public, should be added by the nomination of one member by each of the Provincial Legislative Councils. Paras. 139 *et seq.*

12. We recommend the establishment of Local Advisory Councils, similar in constitution to the Central Council and perhaps of half the size, either at the head-quarters of each railway, in which case the agent would act as chairman; or alternatively, at each important railway centre, in which case the agents of all the railways concerned should be members, and one of them chairman. Para. 142.

13. We recommend that these councils be established as soon as possible, without waiting for the full introduction of the scheme which we put forward. Para. 142.

14. We recommend the establishment of a Rates Tribunal, consisting of an experienced lawyer as chairman, and two members representing respectively railway and commercial interests; and that there be given to them jurisdiction over all questions of the reasonableness of rates and of facilities; that they be instructed to investigate the conditions attached to "owners'" and "railway's" risk notes at the present time, and to frame new standard forms for use in future; and that there be, under certain circumstances, an appeal from the decisions of the Rates Tribunal to the Governor-General in Council. Para. 156 *et seq.* Para. 161.

15. We recommend that steps should be taken to reduce the delay in settling claims for loss and damage, and that the utmost possible efforts should be devoted, not only by the local officials, but by the Railway Commission itself, to stamping out the very serious and widespread abuses in connection with allocation of railway wagons. Para. 163. Para. 164.

16. We discuss the hardships to which third-class passengers are subjected, especially on the occasion of the great "melas" or pilgrimages; and we recommend various measures which, pending the radical improvement of the situation by the provision of adequate facilities, may do something to mitigate present conditions. Paras. 167 *et seq.*

17. We recommend that there be a reasonable general increase in Indian rates and fares, and that the sur-taxes at present levied on railway traffic be withdrawn. Paras. 72, 73.

18. We recommend that greater facilities should be provided for training Indians for the superior posts in railway service; and that the process of their employment in such posts should be accelerated. Paras. 182–184.

19. We recommend that branch lines shall as far as possible be constructed and worked by the main lines to which they are tributary; and that only if the State is unable or unwilling to provide the funds itself shall the formation of separate branch line companies be encouraged. Paras. 177–180.

20. We recommend that, so soon as financial conditions make it possible for the Government to go forward again with railway development, the Indian States should be called into council, and invited to take part in working out a common plan in the common interest. Para. 176.

21. We recommend an enquiry into the question of inland waterway communication as affected by alleged unfair railway competition. Para. 155.

Para. 181. 22. We recommend a thorough investigation, by a Commission of the most competent experts whom the railway world can furnish, of the gauge question as it affects and is affected by the potential future development of the Indian system as a whole.[1]

Para. 207. 23. We recommend that the system of management by companies of English domicile should not be continued after the termination of their existing contracts,
Para. 203. and that these companies should not be permitted further to increase their share capital.

Para. 186. 24. We recommend that no steps should be taken towards establishing combined companies, both with English and with Indian domicile.

B.—Divergent and Supplementary Recommendations.

By the Chairman; the Hon. Mr. V. S. S. Sastri; Mr. E. H. Hiley; Mr. Purshotamdas Thakurdas; and Mr. J. Tuke.

Para. 227. 25. We recommend that the undertakings of the guaranteed companies, as and when the contracts fall in, be entrusted to the direct management of the State,
Para. 224. and that when the contract with the East Indian Railway terminates in 1924 the Oudh and Rohilkhand State Railway be absorbed into that undertaking.

Para. 240. 26. We recommend that the whole of the capital for the future development of the Indian railways be raised directly by the State.

Para. 241. We do not recommend that the provincial Governments should take any part in the work.

Paras. 244 and 245. 27. We recommend that the money required to put the existing railways into proper shape should be raised, even at to-day's prices, as fast as it can be economically spent, but we do not recommend the immediate raising of capital for the extension of the existing system.

Para. 243. 28. We recommend that Government issues for railway purposes should in England take the form of ordinary sterling loans, while in India rupee loans might perhaps be earmarked as for railway purposes.

Para. 245. 29. We support the recommendation of the Mackay Committee that in periods of easy money funds should be raised in excess of immediate requirements so that it may not be necessary to have recourse to the market at a time of stringency.

By Sir H. P. Burt; Sir R. N. Mookerjee; Sir A. R. Anderson; Sir G. C. Godfrey; and Sir H. Ledgard.

Paras. and 27 25A. We recommend that the system of both State and company management should be continued, and that Government should not be committed to a policy of State management only for all railways.
Para. We accordingly propose a scheme for creating Indian domiciled companies to
Para. manage the East Indian, and, possibly, the Great Indian Peninsula Railways.
Para. The cases of other lines to be considered on their merits when the contracts become terminable.

Para. 26A. We agree that much capital must be raised direct by the State, and that this should be done by the Central Government. We also recommend, from 1924
Paras. and 3 onwards, that the fullest use be made of Indian domiciled companies, as proposed under our scheme, as a means of providing
Para. funds from independent sources. We also hold that as the total amount required is so large, no channel through which money can be obtained on reasonable terms should be neglected; for instance, further debenture loans through existing companies might be negotiated.

Para 27A. We agree that money should be raised as fast as it can be economically spent. Rather than that new development should be arrested, we recommend
Para that the assistance of private enterprise should be enlisted to provide capital for new lines.

Para 28A. We recommend that Government borrowings for State and guaranteed railways should be by direct Government loans advertised, whether in England or India, as being for railway purposes.

Para 29A. We agree in supporting this recommendation of the Mackay Committee.

[1] *See* footnote on page 58.

Paras. 16 and 17.

30. We recommend the establishment of a systematic organisation to familiarise the population of India with the idea of subscribing to Government loans, and specially to reach through local Indian agencies the mass of the people to whom the idea of investment has hitherto been strange.

30A. We recommend that the assistance of all banks in India should be enlisted when money is required to be raised, and that independent offers of loans on special conditions should not be lightly set aside. Para. 306

C.—Conclusion.

We desire to express our sense of our exceptional indebtedness to our Secretary, Mr. T. Ryan. Not only has he performed all the ordinary duties of a Secretary with the utmost efficiency, but during the sittings in India he also bore, owing to our inability to obtain a verbatim report of the proceedings, the heavy burden of preparing each day for our use an accurate précis of the oral evidence received. Further, during the whole course of our proceedings he placed at our disposal the resources of his exceptional memory in reference to the subjects that came before us.

To Mr. E. R. Pole, who came to India as personal Secretary to the Chairman, and was almost immediately appointed Assistant Secretary to the Committee, we also owe our hearty thanks. No task was too heavy for him, and he was always ready to work unsparingly to obtain any information that any member of the Committee desired to obtain.

LONDON,
22nd August 1921.

[1] Subject to the reservations printed on page 90.

Reservations by Sir H. P. Burt.

I cannot subscribe to the recommendation, in para. 181 of the Report, that "a thorough investigation of the gauge problem is urgent at this moment," and should be undertaken by a special Commission. No one will deny that it would have been better for India had it been possible to avoid a break of gauge, and that it was unfortunate that such a broad gauge as the 5 ft. 6 ins. was originally decided upon as the standard, especially as full advantage has not been taken of that gauge in determining the running dimensions of the rolling-stock. But, at the same time, it will be accepted by those who have studied this question that, having adopted the 5 ft. 6 ins. standard gauge, India would never have had at the present day even the relatively small total mileage she now has if that gauge had been insisted on so as to secure uniformity. With the growth in mileage of the standard gauge, the adoption of a smaller and less costly gauge became imperative if the poorer districts of India and the development of India's resources were not to suffer from the want of railway communications. It was financially impossible to do otherwise. Thus the mileage of the two principal gauges has grown until we now have practically 18,000 miles of the 5 ft. 6 ins. and over 15,000 of the metre gauge.

2. There is no alternative now but to deal with the question from a practical standpoint, recognising existing facts and possibilities. The battle of the gauges has been fought out more than once in the past; it is no longer a matter for academic discussion. No reader of our Report can fail to appreciate that the crying need of the moment, and the insistent demand of the future, is and must be, not that the whole structure of the railway system should further be reviewed, or that its equipment should be adjusted to conform to new standards, but that the railways which exist should be brought up to a high standard of efficiency with the least possible delay. Even with the utmost economy this will tax all the resources of Government and all the financial assistance which can be enlisted.

3. To divert attention at this stage, from the position as I conceive it to be, by an enquiry whose results either must be purely negative or else must set up a competing demand for expenditure on a vast scale, yet of manifestly less pressing urgency, would in my judgment be particularly unfortunate. The only effect of instituting such an enquiry would be to furnish a fresh reason for postponing expenditure which should be undertaken without delay to meet the requirements on which we have laid so much stress.

4. Even if new construction be not entirely suspended for several years to come, it cannot, at best, be undertaken on any large scale, and in respect of such new projects as may come under consideration, it must now, I consider, suffice to deal with the gauge problem as merely incidental to, and with regard to the immediate necessities of the particular case. The future policy in regard to the gauge problem so far as it affects new projects and conversion where necessary from time to time may well be left to the Railway Authorities in India to settle.

5. I would add that in my opinion the inconveniences of break of gauge in India are often exaggerated. The Presidency towns and ports of Calcutta, Bombay and Madras, and the port of Karachi, are all connected with each other and with Delhi on the same, the standard, gauge, all the strategic lines north of Delhi being on the same gauge; while the complaint in respect of transhipment between the broad and metre gauges is due rather to lack of rolling-stock than to an objection to transhipment in itself. On these points no evidence whatever has been taken by the Committee. The inconveniences of transhipment could, of course, be removed, but only at an immense cost which, in my view, would be prohibitive unless all improvement and development of railways were arrested for years.

While I have agreed in the recommendations made in Chapter IV. of the Report, regarding the reorganisation of the Railway Department of the Government of India, and while I think they will meet the requirements of the present position, I must record my opinion that the staff proposed for the organisation of the Railway Commission will be inadequate to cope with the work which will be thrown upon it, if State management is generally adopted.

H. P. BURT.

APPENDIX No. 1.

Statement of Traffic Restrictions in force on 1st April 1921.

ASSAM-BENGAL RAILWAY.

Restricted Section.	Traffic affected.	Remarks.
Via Silghat Town - - -	All goods traffic.	Owing to Ghat difficulties.
From Ditock Cherra to Hatikhali (both inclusive) to any station.	Cattle.	Without permission from the Sub-Divisional Officer, North Cachar Hills, Haflong.
Via Gauhati Ghat in through booking with the steamer companies.	Motor-cars and packages over 10 maunds in weight.	Owing to Ghat difficulties.

BURMA RAILWAYS.

The restrictions in force are those usual during the annual busy paddy season, viz., that the number of stone trains for the public is reduced by about half, as the wagons are required to carry grain. For the same reason our railway ballast trains are considerably reduced in number. There is, of course, a great shortage of stock and consequent difficulty in meeting the demands for wagons.

EAST INDIAN RAILWAY (GOODS TRAFFIC).

Restrictions in booking of goods traffic in force on 1st April 1921.

From	To	Date restriction imposed.	Nature of restriction.
All foreign railways.	All stations on E.I. Ry. and *via*.	21 Mar. 1918	Small consignments of transhipment or road van goods, except Government and military traffic. One consignment not more than six maunds from same sender to any one station may be accepted on any one day. Smalls up to a limit of 30 maunds may be accepted from Dehri-Rohtas Light Railway at Dehri-on-Sone for transhipment for each van goods train. "Smalls" may be accepted freely from O. & R. Ry. stations, except to and from restricted areas.
All stations on E.I. Ry. and *via* and foreign railways.	To Khagaria and Gogria out-agencies *via* Monghyr and to stations on B. & N.W. Ry. *via* Monghyr Ghat.	3 May 1920	Restriction applies to piece-goods in bales weighing over four maunds *via* Monghyr and Monghyr Ghat.
Budge Budge and Howrah.	To and *via* Mokameh Ghat.	21 Mar. 1921	Restriction applies to kerosene oil only.
All stations on E.I. Ry. and *via*.	To stations on B. & N.W. Ry. *via* Mokameh Ghat.	24 Mar. 1921	All goods traffic.
All stations on E.I. Ry. and *via*.	To stations on O. & R. Ry. *via* Moghal Serai.	29 Mar. 1921	All goods traffic *via* Moghal Serai.
All stations on E.I. Ry. and *via*.	To Bally Jute Mills.	31 Mar. 1921	Restriction applies to jute only.
All stations on E.I. Ry. and *via*.	To Bakudih.	1 April 1921	All goods traffic in full wagon loads.

SERVANTS OF INDIA SOCIETY'S
BRANCH LIBRARY
BOMBAY

EAST INDIAN RAILWAY (COACHING TRAFFIC).

From	To	Date restriction imposed.	Nature of Restriction.
1. All stations and *via* on E.I. Ry.	To all stations and *via* on E.I. Ry.	13 Jan. 1918	Restriction applies to :— (*a*) Gunnies, hides, skins, chillies, including green chillies, spices, ghee, oil, potatoes, pepper, tobacco, jaggree and sugar, empty kerosene oil tins, brass, machinery and any other articles ordinarily carried by goods train, irrespective of weight, except tea and cases of cigarettes, tobacco and leather manufactured. (*b*) Individual packages exceeding 2½ maunds in weight by passenger train except from city booking offices, where the limit of 1 maund per package applies. Packages of piece-goods may, however, be accepted for despatch by passenger train, subject to a limit of 5 maunds per package except to B.B. & C.I. Ry. and *via*, in which case the limit of of 1 maund per package for all goods will apply. These restrictions do not apply to— In case of (*a*) and (*b*)— Military or urgent Government consignments. In case of public goods (*a*)— (i) Cured hides and skins as trophies. In case of (*b*)— (i) Passengers' luggage ; (ii) Packages containing ice, fresh fish, fresh vegetables, fresh fruits, milk, cream, butter, and other perishables usually carried by passenger trains. Motor bicycles and side cars may be despatched irrespective of weight.

EASTERN BENGAL RAILWAY.

Restriction in force from	Period of Restriction.	Restricted Station or Section.	Traffic affected.	Reason of Restriction.	Date of removal of Restriction.	Remarks.
			Coaching.			
7 July 1919	Until further notice.	*Via* Jagannathganj Ghat.	Live stock, motor-cars and carriages.	Ghat difficulties -	Still in force	
5 Sept. 1916	Do.	To and from Faridpur Station on the E.B. Ry.	Live stock, horses, carriages and motor-cars.	Owing to the permanent station having to be abandoned on account of floods.	Do.	
			Goods.			
4 Nov. 1913	Do.	To Sealdah (Calcutta) Station on the E.B. Ry.	Jute traffic.	This restriction was originally imposed on account of reduction of shed accommodation by fire. It is not proposed to remove the restriction as it is undesirable to deal with jute at Sealdah, the proper Calcutta terminal stations for that commodity being at Chitpore, Cossipore Rd., Ruthtollah, Saheb Bazar Ultadanga, &c.	Do.	Jute may, however, be booked to Sealdah for Soorah Jute Mills for direct line delivery, also to Beliaghatta Jute Mills.

Restriction in force from	Period of Restriction.	Restricted Station or Section.	Traffic affected.	Reason of Restriction.	Date of removal of Restriction.	Remarks.
20 May 1919	Until further notice.	From Pattipukur Station.	Piece-goods	This is one of the Calcutta stations. All piece-goods traffic is dealt with at Sealdah (Calcutta), where proper facilities for the traffic have been provided.	Still in force.	
8 March 1921	Do.	To Kanchrapara and Halishahar Station.	All descriptions of goods traffic for the Loco. Department of E.B. Ry.	Due to Loco. Workshop staff being on strike.	Do.	

BENGAL-NAGPUR RAILWAY.

No specific restrictions on 1st April 1921. Generally speaking, however, the capacity of the Bengal-Nagpur Railway to deal with traffic offering both as regards rolling stock and other facilities, is inadequate, and detailed information on these points has been furnished to the Railway Committee.

SOUTH INDIAN RAILWAY (GOODS TRAFFIC).

Junction or *via* Junction.	Description of Traffic.	Nature of Restriction.	Date imposed.
	Foreign Traffic.		
Via Arkonam for stations south of Villupuram.	All descriptions of traffic except loco. coal and railway materials.	100 tons a day -	1 Mar. '21
Via Katpadi for stations south of Villupuram.	Do. do. -	50 tons of transhipment traffic, and 18[1] metre-gauge loads a day.	1 Mar. '21
Via Jalarpet and Erode to metre-gauge.	Do. do. -	15 broad-gauge loads a day.	1 Mar. '21
Via Mettupalaiyam -	All goods traffic *via* Jalarpet, for stations on the Nilgiri Railway.	20 loads a day -	7 Dec. '19 and 21 Jan. '21
Via Shoranur - -	All goods traffic *via* Jalarpet to metre-gauge *via* Shoranur.	30 loads a day -	21 May '20 and 21 Jan. '21
Via Katpadi, Arkonam, and Jalarpet.	Empty oil tins to and from all out-agencies except certificated traffic, packed in proper crates.	Total stoppage -	15 Dec. '18
	Local.		
From S.I. Ry. metre gauge *via* Arkonam and Katpadi, to S.I. Ry. metre gauge *via* Jalarpet and Erode.	All descriptions of traffic except loco coal and railway materials.	Total stoppage (restriction imposed by M.S.M. Ry.).	2 Mar. '21
From S.I. Ry. broad gauge to S.I. Ry. metre gauge *via* Erode.	All descriptions of traffic - -	40 wagons a day -	25 Mar. '21
From S.I. Ry. broad gauge *via* Jalarpet, Arkonam, and Katpadi, to S.I. Ry. metre gauge.	Do. do. - -	Total stoppage for stations south of Villupuram.	1 Mar. '21
From stations on the Madras District to stations south of Trichy Junction.	Do. do. - -	50 wagons a day -	26 Feb. '21
From stations on the Madura District.	All descriptions of traffic except towards Trichy Junction and Erode.	Total stoppage -	22 Mar. '21

[1] Now increased to 38 temporarily.

GREAT INDIAN PENINSULA RAILWAY.

Restriction on through Traffic.

From	*Via*	Nature of Daily Restrictions.	Remarks.
		Wagons.	
E.I. Ry. - -	Jubbulpore -	300	Limited to about 20 per cent. short of the capacity and available engine power on the section, the balance being reserved for military and local traffic.
	Katni - -	50	
	Manikpur -	50	
	Cawnpore -	80	
	Jumna Bridge	30	
	Delhi - -	50	
B.N. Ry. - -	Katni Murwara	80	
N.G.S. Ry. -	Wadi - -	70	
M. & S.M. Ry. -	Raichur -	60	
		Tons.	
B.N. Ry. - -	Jubbulpore -	100	Limited in keeping with restrictions imposed on broad gauge railways.
N.G.S. Ry. -	Manmad -	600	
B.B. & C.I. Ry. -	Cawnpore -	50	
	Muttra -	100	
	Idgah -	150	
	Delhi Sadr -	100	
G.L. Ry. - -	Gwalior -	200	
D.B. Ry. - -	Dholpur -	200	

Restrictions on Local Traffic.

The loading of wagons in the direction of Bombay is restricted to non-pooled wagons, such as wooden wagons and bogies which are not suitable for interchange purposes with foreign railways.

All suitable wagons are pressed into the coal service and are being pushed down to the colliery districts situated both on this and foreign railways.

BOMBAY, BARODA, AND CENTRAL INDIA RAILWAY (BROAD GAUGE).

Railway.	Junction.	Limit in Wagons.	Nature of Restrictions.	Cause of Restriction.
		Through.		
1. From E.I. Ry. -	To B.B. & C.I. Ry. *via* Agra East Bank.	100	For transhipment to metre-gauge and connected railways.	For want of greater transhipment facilities at Agra East Bank.
2. From G.I.P. Ry. -	Ditto *via* Amalner -	80	- - -	Insufficient loco. power.
3. From Guzerat railways, narrow gauge.	*Via* Champaner -	14 broad-gauge.	Exception :—timber, rafters, *via* Sabarmati and Viramgam.	For want of better transhipment arrangements and shortage of stock.
	Via Godhra - -	3		
	Via Nadiad - -	3		
4. From B.B. & C.I. Ry. metre-gauge section.	Ditto. broad gauge section.			
	Via Muttra - -	20	—	—
	Via Bharatpur -	30	—	—
	Via Rutlam -	40	All traffic livestock in addition.	For want of better transhipment arrangements and shortage of stock. Also loco. power.
	Via Sabarmati -	120		
	Via Viramgan -	6	Only stone traffic limited to 2 wagons from each Morvi, Dhrangadhra and Gondal Porbunder Railways.	

Local.

Nature of Restriction.	Cause of Restriction.
From any station on B.B. & C.I. Ry. :—	
5. To Dadar (Bombay) :—	
(1) Bulsar District, 2 wagons daily Ahmedabad District, 1 wagon daily Rutlam District, Kotah District, 2 wagons weekly each Baroda District, 2 narrow-gauge wagons daily	Insufficient accommodation at Dadar, and paucity of wagons.
Ditto (2) To Mahalakshmi (Bombay), grass limited to 65 wagons daily.	Insufficient stock and engine power.
Ditto (3) To Grant Road (Bombay) : (*a*) Livestock and perishables, to be booked freely (*b*) Firewood, 25 wagons daily (*c*) Coal, 5 wagons daily	Inadequate accommodation at Grant Road, and paucity of wagons.
6. To Viramgam Local Station. Firewood limited to 10 wagons as under :—	
*Bulsar District, 2 wagons daily *Ahmedabad District, 1 wagon daily *Rutlam District, 5 wagons daily *Baroda District, 2 narrow-gauge wagons daily	Inadequate accommodation for unloading, paucity of stock and shortage of engine-power.
7. To Ahmedabad Local Station. Articles requiring crane limited to 8 wagons per day from Bombay	Inadequate facilities to unload.
8. (1) Traffic from Bombay Depôt (Carnac Bridge) to any station is restricted to 120 wagons daily	Inadequate accommodation for loading, but chiefly due to paucity of wagons and engine-power.
(2) Traffic from Bombay Port Trust Railway to any station is restricted to 80 wagons daily	Paucity of wagons and engine-power.
9. (1) Traffic requiring crane from the broad-gauge section of Bombay, Baroda and Central India Railway to any stations on the metre-gauge section *via* Sabarmati is limited as under :—	
Bombay Port Trust Railway, 1 bogie or 2 four-wheelers daily Carnac Bridge, 2 wagons daily *Grant Road District, 1 wagon permitted occasionally *Bulsar District, 2 wagons daily *Baroda District, 2 narrow-gauge wagons *Rutlam District, 1 wagon	Inadequate transhipment (crane arrangements).
(2) Traffic in timber from the broad-gauge section of the Bombay, Baroda and Central India Railway to any station on the metre-gauge section *via* Viramgam is limited as under :—	
*Bulsar District, 2 wagons daily *Ahmedabad District, 1 wagon daily *Rutlam District, 1 wagon daily *Baroda District, 2 narrow-gauge wagons daily	Insufficient stock engine-power on broad-gauge and transhipment falilities at Sabarmati and Viramgam.

Exception.—Timber, 25 ft. in length, not included in the above. It is restricted as under :—

Via Sabarmati.	*Via* Viramgam.
*Bulsar District, 2 wagons daily Carnac Bridge, 1 wagon daily.	Carnac Bridge, 2 wagons rails daily. *Rutlam District, 1 wagon timber rafters, &c.

10. In addition to these restrictions, traffic has generally to be restricted for the following reasons :—
    (1) Lack of junction facilities.
    (2) Inadequate supply of wagons.
    (3) Shortage of loco power.

---

* There are six districts on the broad-gauge section of this railway, and they extend as under :—
Grant Road District.—Stations Colaba to Virar inclusive.
Bulsar District.—Stations Saphala to Surat inclusive, and Tapti Valley and Bilimora Kalaamba Railways.
Ahmedabad District.—Stations Utran to Kharaghoda, Anand–Cambay, Debland–Vaso and Anand–Godhra Branches.
Rutlam District.—Pilol to Shamgarh and Ujjain Branch.
Kotah District.—Garoth to Delhi and Agra–Bayana Branch.
Baroda District.—Gaekwar's Dabhoi, Rajpipla State, Kosamba–Zankhvav and Broach Jambusar Railways.

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY (METRE GAUGE).

The severe restrictions on the metre-gauge are due to shortage of coal supply.

Local booking.—Restricted to items 1 to 8 of Priority List in Monthly Gazette. All traffic may be booked in direction empties are running.

From North-Western Railway to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	*Via* Bhatinda, 10 broad-gauge wagons daily. *Via* Hissar, 5 broad-gauge wagons daily. For Bombay, Baroda and Central India Railway *via* Delhi Serai Rohilla, 10 broad-gauge wagons daily excluding railway and public coal and salt.
From East Indian Railway to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	*Via* Delhi Serai Rohilli, 10 broad-gauge wagons daily from East Indian Railway. 10 broad-gauge wagons daily from Oudh and Rohilkhand Railway. *Via* Agra East Bank, 10 broad-gauge wagons daily. *Via* Hathras Junction, 10 broad-gauge wagons daily. *Via* Cawnpore, 5 broad-gauge wagons daily, excluding railway and public coal and salt.
From Oudh and Rohilkhand Railway, to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	*Via* Delhi Serai Rohilla, 10 broad-gauge wagons daily.
From Great Indian Peninsula Railway to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	*Via* Muttra Junction, 50 tons daily. *Via* Idgah Agra, 50 tons daily. *Via* Khandwa, 100 tons daily. *Via* Ujjain, 100 tons daily. *Via* Delhi Sadr, 50 tons daily, excluding railway and public coal and salt.
From Bombay, Baroda and Central India Railway broad-gauge to metre-gauge section of Bombay, Baroda and Central India Railway.	Goods booking restricted to items 1 to 7 of the Priority List in Monthly Gazette and total number of wagons *via* each junction restricted to 20 wagons daily.
From Rohilkund and Kumaon Railway to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	Restricted to 35 wagons daily, exclusive of railway coal and salt.
From Bengal and North-Western Railway to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	Do. do.
From Jodhpur Bikaner Railway to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	Restricted to 20 wagons daily *via* each junction excluding railway and public coal and salt.
From Kathiawar Railways to and *via* metre-gauge section of Bombay, Baroda and Central India Railway.	Restricted to 20 wagons daily from each Morvi and Bhavnagar State Railways, including through traffic, exclusive of railway coal and salt.

JODHPUR BIKANER RAILWAY.

Via Kuchaman Road, owing to shortage of coal, traffic is restricted to 100 wagons daily, excluding Jodhpur Bikaner Railway consignments. When the coal situation is improved up to 200 wagons daily can be accepted.

NORTH-WESTERN RAILWAY.

As regards coaching traffic, it would be necessary to run four additional mail and 55 additional passenger trains fully to meet the traffic offering. The restricted service is due chiefly to a shortage of rolling-stock.

As regards goods traffic the following restrictions are in force :—

Restrictions on Export from North-West Frontier Province imposed at the request of Director of Civil Supplies, North-West Frontier Province.

1. Booking of wheat, wheat-flour, barley, maize, gram and sugar (other than gur and shakkar), rice and ghee, from any station situated in the North-West Frontier Province, except when covered by priority certificates issued or countersigned by the Director of Civil Supplies, Peshawar, is stopped. This restriction does not apply to consignments booked as military stores or purchases on Foodstuffs Commissioner or Deputy Foodstuffs Commissioner's account or movements on Controller of Contract's certificate.

Restrictions on Exports from Baluchistan imposed at the request of the Director of Civil Supplies, Baluchistan.

2. Booking of wheat, atta, jawari, ghee and other edibles, as well as all other goods traffic, from one station to another station within the Baluchistan Agency, with the exception of goods from north of Quetta to Quetta itself, will only be allowed under permits to be issued by the Director of Civil Supplies in Baluchistan.

(*a*) Booking of livestock from Sibi, Mushkaf and Nari Bank will only be allowed on permits issued by the Director of Civil Supplies.

(*b*) Booking of Bhoosa, foodgrains/edibles, including potatoes and ghee and livestock (excluding horses) from any station in Baluchistan to any station outside that province is stopped.

Restrictions in items 2, 2 (*a*), and 2 (*b*) do not apply to—

(1) Goods booked on military account.
(2) Purchases on Foodstuffs Commissioner or Deputy Foodstuffs Commissioner's account.
(3) Consignments covered by priority certificates issued by the Director of Civil Supplies, Baluchistan.
(4) Wool.
(5) Fresh or dry fruits.

Imports of Civil Goods into Baluchistan controlled by the Director of Civil Supplies in Baluchistan.

3. Booking of civil goods traffic, except foodgrains and flour, from any station outside Baluchistan to any station inside Baluchistan is controlled by the Director of Civil Supplies, Baluchistan, under whose certificate goods can be imported into that province.

Control on Booking of Kerosine Oil.

4. Despatch of kerosine oil from Karachi Port is restricted by Civil Authorities to the following four firms :—

(1) The Burma Oil Company.
(2) The Standard Oil Company.
(3) The Asiatic Petroleum Company, and
(4) Rai Sahib Chelaram, Dullaram, and their accredited agents.

Civil Traffic to the Kalabagh-Bannu and Kohat-Thal Railways.

5. The Kalabagh-Bannu Railway, including Laki Pezu Tank section and Kohat-Thal Railway, are at present used exclusively for the military forces kept in the North-West Frontier Province. Traffic other than military to these areas is controlled by the Director of Civil Supplies, North-West Frontier Province, Peshawar.

Control of Civil Traffic to Rawalpindi District by North-Western Railway.

6. Goods traffic for Rawalpindi district beyond Jhelum *viâ* Lalamusa and Rawalpindi section is controlled by the railway so as to keep it within the quantity that can be carried over that section of the line. (The limit is 165 goods vehicles daily.)

INDIAN RAILWAY COMMITTEE, 1920-21.

VOLUME II.

MINUTES OF EVIDENCE.

A340

PART I.—Evidence taken by the Members in England previous to the visit to India.
PART II.—Further evidence taken in London after the Committee's return to England.

PART I.

FIRST DAY.

Friday, 12th November, 1920.

PRESENT:

MR. W. M. ACWORTH (*Chairman*).

SIR HENRY BURT, K.C.I.E., C.B.E.
SIR ARTHUR ANDERSON, KT., C.I.E., C.B.E.
MR. E. H. HILEY, C.B.E.
MR. JAMES TUKE.

MR. WILLIAM GAULD (*Assistant Secretary*).

TERMS OF REFERENCE.

1. To consider, as regards railways owned by State, the relative advantages, financial and admininistrative, in the special circumstances of India, of the following methods of management:—

(*a*) Direct State management;
(*b*) Management through a company domiciled in England and with a Board sitting in London;
(*c*) Management through a company domiciled in India and with a Board sitting in India;
(*d*) Management through a combination of (*b*) and (*c*);

and advise as to the policy to be adopted as and when the existing contracts with the several Railway Companies can be determined.

In considering the question of the East Indian Railway, the Committee will take note of the decision to remove the management of that railway to India, which was arrived at when the contract with the present Company was extended on the amended terms in 1919.

2. To examine the functions and status and constitution of the Railway Board, and the system of control exercised by the Government of India over the Railway Administration, and recommend such modifications, if any, as are necessary for the adequate disposal of the railway business of Government.

3. To consider the arrangements for the financing of railways in India, and in particular the feasibility of the greater utilisation of private enterprise and capital for the construction of new lines.

4. To report whether the present system of control by Government of rates and fares and the machinery for deciding disputes between railways and traders are satisfactory, and, if not, advise what modifications are desirable.

5. To make recommendations that may seem germane to the enquiry.

India Office,
Whitehall, London, S.W.,
11th November 1920.

Sir,

With reference to the suggestion which you made verbally to Sir W. Duke that in paragraph 1 of the Terms of Reference to the Committee on Indian Railways the words "more especially" should be inserted before the words "as regards railways owned by the State," I am desired by the Secretary of State for India to say that, while he does not think it advisable now to modify the wording of the Terms of Reference, he will welcome any advice from the Committee as to the terms on which subsidiary railways should be constructed and managed. This, in fact, may be considered to be contemplated by paragraph 3 of the Terms of Reference.

With regard to the enquiry made in your letter of the 5th November as to the scope of paragraph 2 of the Terms of Reference, Mr. Montagu desires me to say that the phrase "the Government of India," as used in that paragraph, may be read by the Committee in its widest sense, *i.e.*, including the Secretary of State for India in Council.

I am, Sir,
Your obedient Servant,
(Signed) W. STANTIALL.

W. M. Acworth, Esq.,

MR. WILLIAM STANTIALL, called and examined.

(*Chairman.*) I have two things to say. In the first place, in reference to the Terms of Reference, I was in communication with Sir William Duke, and I raised a small point with him in reference to the first paragraph, and I raised what might have been a more important point in reference to the second paragraph. I do not know whether the members of the Committee have the Terms of Reference before them, but they will be printed on the Notes, and also the letter from Mr. Stantiall on behalf of the India Office. The Terms of Reference deal with two things. The first is as regards railways owned by the State, the relative advantages of the different methods With regard to the letter addressed to me by Mr. Stantiall, which says: "With reference to the suggestion which you made "verbally to Sir William Duke, that in paragraph "1 of the Terms of Reference to the Committee on "Indian Railways, the words 'more especially' "should be inserted before the words 'as regards "railways owned by the State,'"—my point was that it would be impossible for us not to take into consideration non-State-owned railways, they must come into a general scheme.—"I am desired by the "Secretary of State for India to say that, while he "does not think it advisable now to modify the "wording of the Terms of Reference, he will "welcome any advice from the Committee as to the "terms on which subsidiary railways should be "constructed and managed. This, in fact, may be "considered to be contemplated by paragraph 3 of "the Terms of Reference," which was the reference about the employment of private capital. Then the second point is this. "With regard to the enquiry "made in your letter of the 5th November as to the "scope of paragraph 2 of the Terms of Reference, "Mr. Montagu desires me to say that the phrase "'the Government of India' as used in that para-"graph, may be read by the Committee in its "widest sense, *i.e.*, as including the Secretary of "State for India in Council." The Government of India, I gather, has very commonly the technical meaning of the Viceroy and the Executive Council. It seemed to me that it was impossible to avoid dealing with the question of the railways with the Home Government, and therefore I asked that it might be quite clear that also was within the Terms of Reference.

Then there is a further preliminary point, and that is this. We are sitting here without an opportunity of consulting our Indian colleagues, and without any opportunity for them to ask questions of the witnesses coming here in London, the representatives of the English railways. I think we all understood that our meetings here were preliminary and informal, and that the necessity of them was in order that we might be able to put before the full Committee, when it meets in India, the case as the Companies here in England view it, and that we should be able to take out the report of what they had said, to India, and submit it to the full Committee; and that clearly it would have to be understood that the question of how that evidence was to be treated would be reserved for the full Committee, and that the full Committee might, at a later stage, desire to meet in England for the purpose of dealing with the evidence that had been given to us now. That I think we all understood that we should have to reserve, and therefore I think it will be desirable that we should agree—I do not think the matter arises so much with the official witnesses—before the witnesses from the City come, upon a form of words which we should place before each witness, so that there might be no misunderstanding as to the fact that what we are doing here was preliminary and informal, for the purpose of placing the case from the London point of view before the full Committee, because otherwise, I think it seemed to all of us, we could never get to the end of the matter. If we were to go to India in ignorance of the English views, we should then have to come back to get the English views, and we might possibly have to go back to India to enable the Indian witnesses to express their opinions upon them. I do not know whether any member of the Committee wishes to say anything with regard to that.

(*Mr. Hiley.*) I think that puts the case correctly.

(*Sir Henry Burt.*) I agree with you.

(*Chairman.*) I think we are all agreed on that point of view, and we will try before we meet on Monday to agree upon a form of words. Probably the best plan, I should think, would be to have it printed, and to hand it to each witness. Do you not think so, Mr. Stantiall?

(*Mr. Stantiall.*) I agree.

(*Chairman.*) I think probably that will be the best plan. Then if there is nothing else of a preliminary nature I will ask Mr. Stantiall to give his evidence.

1. We had better get formally on the Notes who you are?—I am Secretary of the Public Works Department in the India Office.

2. As I understand, matters concerning Indian railways come to your Department. Do they all come in the first instance to your Department?—They come to the Office, and are handed over to my Department. All Indian railway administrative questions come to my Department.

3. They all come to your Department in the first instance?—Yes.

4. Even if, as they probably are, they are concerned with finance? You minute them forward in some way to the Finance Department?—We refer them to the Financial Department for their advice, and then sometimes they deal with them directly, but usually they return them to me with their advice, and I deal with them on their advice.

5. Do railway matters come to the Indian Council?—Yes, the procedure is this. They come to me in the first instance, to my Department. I minute on them, and prepare a draft letter or a draft despatch or telegram to India as may appear to me to be necessary. The papers go from me to the Under Secretary of State, and possibly to the Secretary of State, and he refers them to the Council.

6. He refers matters of sufficient importance to the Council?—There is a Public Works Committee of the Council, and he refers most papers to the Public Works Committee in the first instance. They consider them, and after they have made their recommendations the papers go to the Council, being either brought up at a Council meeting, or placed on the Council table for any member to criticise.

7. A paper formally passes the Council?—It formally passes the Council.

8. And then the letter or despatch or telegram goes out?—Every despatch to India has to go through that process. Letters to companies sometimes avoid it, unless they are of great importance; they can go out on the recommendation of the Committee, or a comparatively small matter will be dealt with without reference to the Committee. I deal with some papers on my own responsibility.

9. The despatch goes out in the name of the Council?—It is signed by the Secretary of State, but goes out under the authority of the Secretary of State in Council.

10. But the smaller matters you deal with?—Yes.

11. They go out in your own name?—I frequently send letters to companies in my own name, acting, of course, under the general authority of the Secretary of State.

12. The Government Director who sits on the Boards of the London companies is attached to your Department?—Yes.

13. And reports to you?—Yes. If he wishes to bring to the notice of the Secretary of State any question that arises at a Board, he does it through me.

14. Is there anything more you can usefully tell us about the machinery?—I think I might say that the Government Director, who is always a retired Indian railway official, acts also as adviser to the Secretary of State on technical railway questions.

15. I was thinking more of machinery at this moment?—No, I think there is nothing more to say. That covers the ground.

16. Can you give any idea of the volume of business that comes home, not referring to the Public Works Department as a whole, but to the railways?—The railway business of the Public Works Department is, measured by the time occupied, probably at least 75 per cent. of the whole. The bulk of my work is railway business.

17. One does not like to ask how many letters, because letters may be of such immensely varying importance?—Yes.

18. Could you put it in this way? How many subjects do you suppose come home for decision here in the course of a year?—Do you mean railway subjects?

19. Yes. I am aware that you are much better qualified than I am. Have you any way in which you can indicate to us how much really comes home, if you see what I mean?—Yes.

20. (*Mr. Hiley.*) What is the staff employed?

21. (*Chairman.*) Mr. Hiley suggests the staff employed?—It is very small. I have under me, normally, four clerks, or rather an assistant and three clerks, excluding what we call the Registry staff. At present I am working with an even smaller staff.

22. (*Mr. Hiley.*) Then there is the Government Director?—He does not take part in the work except in the way of giving advice.

23. Is he on your staff?—He is with me practically, but not under me in any sense.

24. (*Chairman.*) He must be pretty fully employed?—Yes.

25. I gather that the Boards of the Companies meet fortnightly?—Yes; half his time, I should think, is spent at Board meetings.

26. (*Sir Henry Burt.*) There is an Assistant Government Director?—Yes.

27. In case the Government Director was absent, or fell ill at any time, there must be somebody to carry on?—Yes.

28. (*Mr. Hiley.*) Has he a clerical staff?—No.

29. (*Chairman.*) Perhaps you can give us something which would give us an indication of the volume of railway business?—Yes. I will try to do so.

30. I think it is important as showing how much the control is, and how detailed?—Yes, I think the number of letters and telegrams from India, probably, and of letters from the railway companies, would be useful.

31. (*Sir Henry Burt.*) And the subjects?—Yes.

32. I think the subjects are as important as anything?—Yes. I will try to give you a summary.

33. (*Chairman.*) Perhaps you could let us have it before we go?—Yes.

34. (*Sir Arthur Anderson.*) In practice, are the references that the Government Director makes to the Secretary of State or to you for decisions over points arising at board meetings, of frequent occurrence?—Very infrequent.

35. (*Chairman.*) Would it be right to say that the bulk of your work is dealing with matters coming from India, and replying back to India?—No. Much of my work is correspondence with the companies in England. They all refer direct to the Secretary of State. They do not necessarily come through the Government Director.

36. (*Sir Arthur Anderson.*) I wanted to bring out that the Boards are fully conversant with their powers and the ideas of the Secretary of State or the India Office upon matters affecting their railways, and that they work in complete harmony with the Government Director?—That is so on the whole, undoubtedly.

Note by Mr. W. Stantiall, Secretary in the Public Works Department at the India Office.

Question 1.—The Indian railways owned by the State, *i.e.*, practically all the more important systems, are at present under one or other of two forms of management, viz., State management and English Company management. The systems under State management are the North-Western, the Eastern Bengal, and the Oudh and Rohilkhand, while those under English Company management are the East Indian; the Bengal-Nagpur; the Great Indian Peninsula; the Bombay, Baroda, and Central India; the Madras and Southern Mahratta; the South Indian; the Assam-Bengal; and the Burma. In addition the Bengal and North-Western and Rohilkhand and Kumaon Railway Companies, which own the lines from which they take their names, work the Tirhoot and the Lucknow-Bareilly State Railways respectively. There is at the present time no large system managed by a Company domiciled in India, although there are some small lines owned and worked by Indian Companies.

The method of management by English Companies dates back to the time of the introduction of railways into India in the middle of last century. It was then decided that the best course to adopt for providing India with railways was to engage English Companies to raise the necessary capital and to work the lines. The result of this decision was the formation of the East Indian; Great Indian Peninsula; Madras; Bombay, Baroda, and Central India; Scinde, Punjab, and Delhi; Eastern Bengal; Great Southern of India (afterwards amalgamated with the Carnatic Railway Company to form the South Indian Railway Company); Calcutta and South-Eastern; and Oudh and Rohilkhand Railway Companies.

In 1870 the policy of the construction and working of railways by the State was introduced and was pursued for 10 years. It was then found, however, that sufficiently rapid progress with the expansion of the Indian railway system was not being made, and the formation of English Companies was again resorted to, but on terms more favourable to the Government than those with the earlier Companies. The Companies formed since 1880 have been the Bengal Central (1881), the Bengal and North-Western, Rohilkhand and Kumaon, and Southern Mahratta (1882), the Indian Midland (1885), the Bengal-Nagpur (1887), the Assam-Bengal (1892) and the Burma (1897).

The arrangements with every Company were embodied in a contract which gave the Secretary of State power to purchase the railway at certain intervals. This power has been freely exercised, but on

acquiring a railway the Secretary of State has in most cases not brought the line under State management, but has entered into a further arrangement with a Company for working it. Thus the East Indian Railway Company (since 1879), the South Indian Railway Company (since 1890), the Great Indian Peninsula Railway Company (since 1900), and the Bombay, Baroda and Central India Railway Company (since 1905) have continued to work the lines which were formerly their property, while the Madras Railway on its acquisition by the Secretary of State in 1907 was divided between the Southern Mahratta (thereafter called the Madras and Southern Mahratta) and South Indian Railway Companies, and the Indian Midland Railway was in 1910 handed over to the Great Indian Peninsula Railway Company for working purposes.

Five lines originally constructed by English Companies have been transferred on purchase by the Secretary of State to State management, viz., the Calcutta and South Eastern (now incorporated in the Eastern Bengal system), the Eastern Bengal, the Scinde, Punjab and Delhi, the Oudh and Rohilkhand and the Bengal Central (also incorporated in the Eastern Bengal system). The Scinde, Punjab and Delhi was united with the Indus Valley and Punjab Northern State Railways to form the North-Western Railway, which it has for strategical reasons been considered necessary to retain under State management. As regards the Eastern Bengal (including the Calcutta and South-Eastern and Bengal Central Railways) and the Oudh and Rohilkhand lines, it was not originally intended that they should remain under State management, and as a matter of fact negotiations have more than once been entered into for transferring them to Companies, but have fallen through.

In 1908 the Mackay Committee suggested that one or more of the State lines might be leased to Companies. The Committee clearly had in mind Companies domiciled in England.

It will be gathered from what is said above that it has been recognised, at any rate until within the last few years, that the English Company method of management possesses advantages which have justified its existence and continuance. These advantages are both financial and administrative.

The financial advantage is that the Companies furnish a means of raising capital in this country alternative to the issue of direct Government loans. It is not necessary for me to enlarge on this point, as Mr. Kisch has dealt with it fully in his note which will be before the Committee, and will give evidence upon it.

The main administrative advantage is that the existence of the Companies with Boards of Directors in this country makes available for the management of the railways the knowledge and experience of a considerable number of retired Indian railway, financial and business men, which would otherwise be lost. The Companies further perform a very useful function in conducting the large amount of work in connection with the supply of stores and personnel from this country which would have to be done under any system of management.

Question 2.—Prior to 1905 the administration of the railways formed part of the functions of the Public Works Department of the Government of India, the Secretary of which was always a high railway official. In that year the Railway Board was set up in consequence of a recommendation by Mr. T. Robertson in his Report on Indian Railways of 1903. As originally constituted, the Railway Board consisted of a Chairman and two members. Two of the three were Indian railway experts and the third was an English railway expert.

At first each member of the Board had an equal voice in its decisions, but in 1908, on the recommendation of the Mackay Committee, the Chairman, whose designation was at the same time altered to that of "President," was given power to overrule his two colleagues, who might, however, represent their views in writing to the Government of India.

Early in 1914 the constitution of the Board was modified. It was decided that one of the members should be a man of financial and administrative experience, and that the railway expert from outside India should be dispensed with on the ground of the difficulty of obtaining such an expert with suitable qualifications and the ease with which information regarding the practice of other countries could be obtained by deputing officers from India to the countries concerned. The power of the President to overrule his colleagues was at the same time taken away. Each member was to be in charge of a branch of the work, with power to dispose of minor cases without reference to the Board as a whole. For matters which came within the cognisance of the Board as a whole, the decision was to be in accordance with the opinion of the majority, a dissentient member having the right to require a reference to the Member of the Governor-General's Council in charge of the Commerce and Industry Department.

In January last it was decided, as a provisional arrangement, pending the examination by the Committee of the question of the constitution of the Railway Board, that the member of financial and administrative experience should be replaced by a third railway expert, and that a Financial Adviser should be attached to the Board with a seat on it for deliberative purposes.

It has been suggested that the Member of Council for Commerce and Industry should be *ex-officio* President of the Railway Board, one of the three railway experts being called "Deputy President" and receiving the salary at present sanctioned for the President.

The functions and powers of the Railway Board are shown in a "Schedule of Powers of the Government of India and the Railway Department (Railway Board) in railway matters," of which copies will be available for the Committee.

It is unnecessary for me to say anything here as to the status of the Railway Board and the system of control exercised by the Government of India over the Railway Administration, as Sir Henry Burt and Sir Arthur Anderson have much greater knowledge on these points than I have.

Question 3.—Apart from branch, district board, and native State lines, the capital required for railway purposes in India is at present provided almost entirely either directly or indirectly by the Government (by indirect provision is meant the raising of money by Companies with the guarantee of interest by the Secretary of State). Even before the war the amount so provided had always fallen far short of that which could be spent with advantage on the improvement of the existing lines and the construction of new lines. During the war comparatively little capital could be supplied, and the result is that there is a great amount of leeway to be made up. Large sums have been spent last year and this year, but, owing to the high prices of materials, they cannot be regarded as adequate. Nevertheless, it is scarcely doubtful that it will be necessary to reduce the rate of expenditure next year unless some new

source of supply can be found. Proposals have been made by the Government of India, and will be placed by them before the Committee, for the formation of Indian Companies, affiliated to the English Companies, with the object of raising capital in India with a Government guarantee.

At present the branch line terms offer practically the only means of raising any considerable amount of capital in India for railways, apart from the Government loans. The original branch line terms were issued in 1893. They were revised somewhat in 1895 and 1896, but they did not prove attractive, only nine Companies having been formed under them by 1910. In that year they were further revised and improved, and since then a considerable number of branch line Companies have come into existence. Two alternative methods of financial assistance were offered under the 1910 terms, a guarantee of $3\frac{1}{2}$ per cent. or a rebate towards making up a return of 5 per cent. on the branch line Company's capital. These terms have not since been altered, but it may be doubted whether some improvement is not now necessary in view of the general rise in the rate of interest on money resulting from the war.

Question 4.—I cannot offer any useful remarks on this beyond explaining that the present system of control by Government of rates and fares is that the Government lays down maximum and minimum rates for each class of traffic, leaving the administration of each railway to fix and vary its rates within the maxima and minima.

W. STANTIALL.

8th November 1920.

---

37. (*Chairman.*) Then, to come to your statement, the first question you deal with is that the Indian railways owned by the State, which represent the bulk of the Indian railways, are partly under State management and partly under English Company management?—Yes.

38. There are no State-owned railways managed at present by a Company domiciled in India?—No.

39. Roughly, if I am not incorrect, the State manages a little more than a quarter, and the Companies a little less than three quarters?—About that.

40. It is about that proportion?—Yes.

41. We need not read the names, but there are Companies in addition, of which the Bengal and North-Western and the Rohilkund and Kumaon are the two important ones, owning their own lines?—Yes.

42. And working their own lines?—Yes.

43. But controlled to a very considerable extent by the Government?—Yes.

44. So that we have State railways worked by the State, State railways worked by Companies, Company railways worked by Companies, and, I believe, there is at least one instance of a Company railway worked by the State?—The Southern Punjab.

45. Is that the only one, or the only important one?—That is the only English Company whose line is worked by the State.

46. So that you have got all systems In this you are leaving out what I called, I think, branch line Companies?—Yes.

47. Would you kindly explain? The branch line Companies are largely owned in India?—Almost entirely.

48. And they are worked——?—Partly by the main lines to which they attach themselves, and sometimes the branch line Companies themselves work them. There are a few instances in which the Companies themselves work them, but they are mostly worked by the main lines.

49. Do you call the Southern Punjab a branch line Company?—It was constructed under the branch line terms.

50. It is a branch line Company worked by the State-managed railway because it naturally belongs to their area?—Yes, there are several instances of that.

51. Are there other instances of branch line Companies worked by a main line system managed by the State?—Yes.

52. I thought you said the Southern Punjab was the only Company owned line worked by the State?—The only English Company. In India there are some small branch line Companies whose lines are worked by the State.

53. And a considerable number of similar lines worked by the big guaranteed Companies?—Yes.

54. (*Sir Arthur Anderson.*) Did I understand you to say that the Southern Punjab was constructed under branch line terms?—Yes.

55. Surely it was constructed before the branch line terms were introduced?—No, it was one of the first branch lines. The formation of the Company practically coincided with the first issue of branch line terms. I know that because I was here at the time, and it seemed to me rather peculiar that it should be constructed under the branch line terms.

56. What are known as branch line terms are of comparatively recent creation?—1893 was the date of the first issue.

57. I was under a wrong impression?—My memory probably goes back further than yours. The first issue of branch line terms was in 1893.

58. (*Chairman.*) The system of operation by guaranteed Companies was the original system?—Yes.

59. It was about 1850 that it began?—Yes, the first contract was 1849.

60. You give a list of the Companies then formed?—Yes.

61. Then in 1870 there was a change of policy?—Yes.

62. Railways were constructed and worked by the State?—Yes.

63. Are there any of the existing organisations that date from that period? Does the North-Western?—Not as a whole. There were two lines, the Indus Valley and the Punjab Northern, constructed in this period. They were worked at first separately.

64-5. As State lines?—Yes. They are now part of the North-Western State Line?—Yes. In 1885 or 1886, when the Secretary of State took over the Scinde, Punjab and Delhi Railway, he amalgamated these three lines together and constituted the North-Western system, which has been worked as a State line ever since.

66. The North-Western has extended very largely out into the west?—Yes.

67. Then it was found that sufficiently rapid progress was not made under the 1870 system?—Yes.

68. Then there came a second period of development under guaranteed Companies?—Not all guaranteed. The Bengal and North-Western Company was formed at this time, and that is not

guaranteed. The Rohilkund and Kumaon Company had a guarantee or a subsidy for 10 years, but since then it has been unguaranteed. The Bengal Central also was at first unguaranteed. This was unsuccessful and the Secretary of State gave a guarantee after a few years.

69. The Bengal Central is not guaranteed?—It was not at first, but after three or four years the Secretary of State gave a guarantee. He altered the contract.

70. You give lists of the second period in which you mention the Bengal Central?—Yes.

71. And the Bengal and North-Western, Rohilkund and Kumaon, and so on; I think we need not read all of them. Three of the big Companies date from that period, the Bengal-Nagpur, the Assam-Bengal and the Burma?—And the Southern Mahratta.

72. Which is now?—The Madras and Southern Mahratta.

73. Then the arrangements with the original Companies gave the Secretary of State a right to acquire within what period?—A lease was given for 99 years, but the Secretary of State had power to purchase at 25 or 50 years.

74. And at 25 were all the powers that he could exercise, exercised?—No, he waived his right to purchase at 25 years in the case of the Great Indian Peninsula, the Bombay, Baroda and Central India and the Madras, and so they went on for 50 years.

75. That would carry on roughly to 1900?—They vary.

76. Something like that?—Yes. The Great Indian Peninsula was the first in 1900, the Bombay, Baroda and Central India in 1905, and the Madras in 1907.

77. They belonged to the first period?—Yes, and their original contracts continued in force for 50 years.

78. We may put it in this way: the powers that arose somewhere after 1875 were exercised in some cases and not in others?—Yes.

79. It would be about after 1875?—Yes. 1879 was the first. That was the East Indian. They were not all exercised at the first period, but they were all exercised sooner or later. Some were exercised at the 50 year limit.

80-1. Some were exercised at 25 years?—Yes, the East Indian was one.

82. Otherwise they were exercised at the expiration of 50 years?—That is so.

83. Then you mention that five lines originally constructed by English Companies have been transferred on purchase by the Secretary of State to State management. Those were guaranteed Companies?—Yes.

84. You have mentioned the Calcutta and South-Eastern, which is now incorporated in the Eastern Bengal system. Those two are put together?—When we purchased the Eastern Bengal, the Calcutta and South-Eastern had for several years been worked as a State line. It was taken over by the State in 1869. It was an unsuccessful line, and the Government bought it and worked it until 1884, when they bought the Eastern Bengal. Then it was amalgamated with the Eastern Bengal, and they have since been worked as a State line.

85. Were the Companies bought out on terms contained in the original contract?—Yes, except the Calcutta and South-Eastern. That was purchased on special terms. The East Indian, the Eastern Bengal, the Scinde, Punjab and Delhi, the Oudh and Rohilkhand, the South Indian, the Bengal Central, the Indian Midland, the Bombay, Baroda and Central India, and the Madras Railways were all purchased under the terms of the contract.

86. You mention that there is a special reason for State management in the case of the North-Western Railway?—Yes. It has always been considered that the North-Western must be a State line, because it is on the frontier, and for strategical reasons it is therefore necessary that it should be in the hands of the State.

87. Is there any distinction made in the accounts or constitution between what may be regarded as commercial lines and lines which must be purely military lines?—Yes, separate accounts are kept for the commercial lines and the military lines.

88. Could you give us their relative importance in mileage or in any other way?—The mileage of the commercial section is given in March 1919 as 2,538 and of the military section as 1,266.

89. It is almost exactly in the proportion of one to two?—Yes.

90. It is one-third military and two-thirds commercial?—Yes.

91. Do they keep separate accounts?—Yes. The earnings of the commercial section are given separately.

92. May we assume that the military section does not pay its way?—Undoubtedly.

93. Who stands the loss, the Railway Department?—Yes, the Railway Department.

94. It is not charged as a War Department expenditure?—No, it is charged against the railway accounts.

95. Do you think you could give us the amount of the loss on the military section?—I have not the figure here with me, but I could get it out.

96. Will you kindly do that for us?—Yes.

97. Is the capital of the military section kept separate?—I expect it is shown separately in the accounts.

98. Will you say in the statement that you prepare how much capital is allocated and what the receipts are?—Yes.

99. The question is interesting from the point of view of how it appears to the Public Works Department. Is it quite fair, in your opinion, that a charge of that kind should be made against the railway accounts?—No. I have always protested against it from the railway point of view.

100. The question has been raised?—Yes, but it has been decided that the military lines are railways and that the charges must therefore go into the railway accounts. I notice that these are the figures that are given in the Indian Railway Administration Report for the two sections. On the commercial section the gross earnings per mile per week were Rs. 784 in 1918-19, and on the military section they were Rs. 193 per mile per week. The proportion of expenses to earnings on the commercial section was 49·61 and on the military section 87·92.

101. On the military section only 12 per cent of the gross receipts are left as net income, and we may assume, I suppose, that that 12 per cent. does not cover the capital expenditure?—It does not cover the interest.

102. Perhaps you could put some figures in on that subject?—Yes, I will do so.

103. Then you mention that as regards the lines other than the North-Western it was proposed to hand them over to Companies, and that negotiations were carried on?—Yes, at different times.

104. But they fell through?—Yes.

105. Can you tell us the reason?—We failed to come to terms with the applicants.

106. You could not find a Company that would take them over on the terms that the Office thought were reasonable?—No.

107. (*Sir Henry Burt*) There were plenty of Companies willing to take them over?—Yes, negotiations were entered upon on several occasions.

108. It was all a question of terms?—Yes.

109. (*Mr. Hiley.*) Has there been any suggestion of separating the commercial from the military section of the North-Western?—You mean putting them under a separate management?

110. Yes?—No, not so far as I know.

111. (*Chairman.*) I suppose that the military section would go back to the great towns in the Punjab, down to Lahore, but Lahore is also a great centre of trade, and therefore it would be difficult to separate them?—Yes.

112. (*Sir Arthur Anderson.*) The commercial section must benefit to a very considerable extent from military traffic. It is in its earlier stages carried over the commercial section?—Yes, in a period of war that would be of great benefit to the commercial section.

113. (*Chairman.*) Do you know anything about the rates and fares which are charged for military traffic? Are there any special rates in India?—I think usually they are carried at lower rates than the commercial.

(*Sir Arthur Anderson.*) They have scheduled rates.

114. (*Sir Henry Burt.*) They are all scheduled in agreement with the Military Department?—I am afraid I do not know much about the details of the rates and fares.

115. (*Chairman.*) That is like the system that exists in England. You cannot tell us whether it is anything like the Continental system, where it is a quarter?—No, I am afraid I know nothing about the details of the rates and fares.

116. You mention that the Mackay Committee suggested that one or more of the State lines might be leased to Companies?—Yes.

117. That, I suppose, assumed that "Companies" meant the Companies with which we are familiar, guaranteed Companies?—Do you mean an existing guaranteed Company?

118. "Company," I suggest, meant a London Company practically?—Yes, undoubtedly.

119. There was no suggestion as early as that of there being Companies domiciled in India big enough to deal with main line railways?—No. They meant English Companies.

120. Has the system of management through London Companies been challenged until recently from the point of view of its being in London?—Not until within the last seven or eight years, I think. I should say that is about the time.

121. That is when it was first raised?—That is when we first heard of it here.

122. One of the advantages that has been put forward as a justification for the system is the duplicate method of raising capital. You have two strings to your bow, so to speak. Sometimes the Secretary of State raises the capital and sometimes the Companies raise the capital?—Yes.

123. We had better get particulars of that in detail from Mr. Kisch. What would you say is the administrative advantage as distinct from the financial advantage?—I think the main administrative advantage is that it enables retired people from India to continue their connection with Indian railways, and to give the benefit of their experience and knowledge to them; otherwise, when they retired from India they would sever their connection entirely with Indian railways.

124. And their experience would be lost?—Yes.

125. You speak also of the supply of stores?—Yes, the Companies do all the supplying of stores for their lines from England.

126. And engage any officers that go out?—Yes, they engage all the personnel in this country.

127. With regard to stores, the Indian Government is a large purchaser of stores apart from railway stores?—Yes.

128. That business, I understand, has now been transferred from this Office to a High Commissioner appointed by the Government of India?—That is so.

129. If any railway were managed in India one may presume it would probably do the same thing; it would employ its own agents to purchase in London?—It must do, I should think.

130. It must either purchase stores through the existing High Commissioner or through what you might call a railway commissioner?—Every Company managing railways in India would have to employ its own separate agent. The High Commissioner would not act for a Company, I imagine; he acts for the Government.

131. (*Sir Arthur Anderson.*) If he were asked to do so he might undertake the work, might he not?—Yes, probably, on payment.

132. (*Chairman.*) Do you see any reason why he should not do so from the administrative point of view?—It would be more convenient undoubtedly to have it all in the hands of one man, and I can see no reason why he should not do it.

133. Of course, you had expert advisers while you did the purchasing here?—As a matter of fact, we had a special department in this Office called the Store Department, which carried out the purchase of stores, and that department has been transferred bodily to the High Commissioner.

134. That department had its own experts?—Yes, it had its own consulting engineers; that is to say, there is a firm of consulting engineers who have been appointed consulting engineers to the Secretary of State, and the Director-General of Stores consulted them.

135. Do not let me misunderstand you. One understands by consulting engineer a person outside the Office who is called into consultation from time to time?—The Secretary of State employs a firm of consulting engineers outside the Office, and refers matters to them from time to time.

136. They are not whole-time officers of his?—No.

137. They are what one ordinarily understands by consulting engineers?—He pays them an annual fee.

138. Sometimes you pay consulting engineers a fee for particular pieces of work, and sometimes you pay them an annual fee?—Yes.

139. They were an outside firm of Westminster consulting engineers?—Yes.

140. And the High Commissioner took them over?—Yes.

141. He has taken over both the staff inside the Office and also the consulting engineers outside?—Yes, he still refers to them, of course.

142. Each Company, as I understand, has its own consulting engineers?—Yes.

143. The great bulk of them employ the same firm?—They employ the firm which acts for the Secretary of State.

144. (*Sir Arthur Anderson.*) The change which has been made is that the Store Department has been transferred from the control of the Secretary of State to that of the High Commissioner, who is an Indian official?—That is so. It is a matter of form more than of substance.

145. (*Chairman.*) That is the first instance, I suppose, of the Government of India dealing with

matters in England otherwise than through the Secretary of State?—Certainly.

146. Can you tell us how that came about? It was, I presume, through a request from India?—It really came about under the Government of India Act. It was part of the Reform Scheme.

147. You cannot tell us anything very definite?—No, I am not fully conversant with the matter. All I can tell you is this. This Office was formerly entirely separate from the Home Government, and all the expenses were drawn from India, but now it has been put under the Treasury. The Treasury now deal with this Office, but they do not deal with the distinctly Indian part of the business.

148. We are to understand that the expense of this Office has been transferred to the English Budget?—Yes, except the portion which is put under the High Commissioner.

149. Does he still live in the building?—For the time being.

150. But presumably, in the course of time, he will have other offices?—It is intended that he shall remove from here.

151. So to speak, the control of the Department is left here, but the English Budget is responsible for it?—Yes.

152. But the actual commercial expenditure part of the charge, so to speak, is naturally left on the Government of India?—Yes, the idea is that all work which is done for the Government of India, agency work, shall be done by the High Commissioner. Control work will be done by the Secretary of State.

153. Now let me take you to the second part of our Reference, the functions of the Railway Board. The Public Works Department in India controlled the administration of railways up till 1905?—Yes.

154. You say that the Secretary of that Department was always a railway man?—Yes.

155. Then in consequence of the Robertson Report the Railway Board was set up?—Yes.

156. The Railway Board consisted, and still consists, of a Chairman and two members, one of whom came out from England?—Yes, when it was originally constituted.

(*Sir Arthur Anderson.*) It is added to now by the addition of the Financial Adviser.

157. (*Chairman.*) As originally constituted the members had equal votes?—Yes.

158. And being only three there could not be a casting vote?—That is so.

159. Then the Mackay Committee recommended that the Chairman should be called "President" and should have a decisive voice?—Yes.

160. Though his colleagues had a right to represent their views to the Government of India, which of course could over-rule the Board?—Quite so.

161. But, in the meanwhile, as executive action his decision was final?—Yes.

162. Then in 1914 they went back on that, and the Board was reconstituted and once again each member was given an equal vote?—Yes, practically.

163. Then the member imported from England retired, and was not replaced by another English representative?—That is so.

164. That was in 1914?—Yes.

165. You say it was decided that one of the members should be a man of financial and administrative experience?—Yes.

166. Does that mean apart from railways?—Apart from railways. As a matter of fact Sir Robert Gillan, who was an Indian civil servant in the Financial Department, was appointed.

167. The work was divided between the members of the Board?—Yes.

168. You mention that the Board officially approaches the Government of India through the Member of Council in charge of Commerce and Industry?—Yes.

169. And that he is usually at least appointed from England?—There have been four, I think, during the existence of the Board, and two of them were Indian civilians.

170. The last two have been from England?—Yes.

171. And they have not been railway men?—No, they have both been officials of the Board of Trade in England.

172. Then there was a further change made in January 1920. In January 1920 it was decided as a provisional arrangement, pending the report of this Committee, to replace the non-railway finance expert by a third railwayman?—Yes.

173. And in order to get financial advice, a financial adviser from outside was attached to the Department?—To the Board.

174. That is Mr. Ryan, who is going to act as the Secretary to this Committee, who is, I understand, a civil servant?—No, he is an accountant. He was in the Accounts Branch; then he became Secretary to the Railway Board; then he went to the Munitions Board, and he has now been attached to the Railway Board.

175. Do you not call him a civil servant?—He is not in the Indian Civil Service.

176. In India civil servant means only a member of the covenanted service?—Yes.

177. (*Mr. Hiley.*) Who pays Mr. Ryan's salary? Is he paid entirely by the Railway Department?—I do not know.

(*Sir Arthur Anderson.*) The final arrangements had not been made when I left India, but the idea was that it should be shared between the two Departments.

(*Mr. Hiley.*) Between the Financial and the Railway?

(*Sir Arthur Anderson.*) Yes.

178. (*Chairman.*) I do not think we need ask you anything about the functions, the status, or the powers of the Railway Board, because we shall get that evidence elsewhere. Do you want to make any suggestions on the point?—I do not think so. I think I would prefer you to get evidence on these points in India.

179. Then we pass to question 3. You say that capital for railway purposes is at present almost entirely provided, either directly or indirectly, by the Government, that is to say, the guaranteed Companies proper never raise any money merely on their own security; it always has a State guarantee behind it?—Invariably.

180. Whether it be debentures or any other form of capital?—Yes.

181. Are there any preference shares in these railways?—Not in any of the guaranteed Companies.

182. So that it is all either debentures or ordinary shares?—Debentures, debenture stock or share capital.

183. The difference between debentures and debenture stock being only the question of the time of repayment?—Yes.

184. Are the debentures all short term?—The debentures are short term usually.

185. And the debenture stock?—No. The debenture stocks are long term; they go on for many years, in fact I believe some of them are only redeemable at the option of the Secretary of State, if I remember rightly.

186. Some are perpetual?—Yes.

187. The interest on them comes back on the Secretary of State's guarantee if the Company

disappears?—He takes over all liabilities.

188. I need not, I think, ask you about the amount of money available, because we shall have evidence on that subject from Mr. Kisch?—Yes.

189. Under present conditions the only way in which Indian capital can be brought in, practically speaking, is for branches?—Yes, under what we call the branch line terms.

190. We cannot imagine Indian capital subscribing for debentures placed in London?—The great difficulty is that they would be liable to English income tax, otherwise we should be rather glad if the Companies could place debentures in India; but that seems to be a very difficult thing.

191. The branch line terms were originally issued in 1893, and they were revised in 1895 and 1896, but still they were not sufficiently attractive to get the capital?—Yes.

192. In the 17 years between 1893 and 1910, under the terms twice revised, only nine Companies were formed?—Yes.

193. Under the revision of 1910 a considerable number of branch line Companies have come into existence. Could you give us a list of the number of Companies and the mileage before 1910, and the number of Companies and the mileage since then?—Yes, I will have that prepared.

194. There are two forms of assistance, are there not—guarantee and rebate?—Yes.

195. Could you distinguish between them when you make out the list?—Yes.

196. (*Mr. Hiley.*) Have you a copy anywhere of the original terms and the revisions?—Yes, I could give you those.

197. (*Chairman.*) I suppose we shall find those in the *History of Indian Railways*?—I do not think you will—not the original terms. I can supply the Committee with copies of the original terms and of the 1895 and 1896 revisions. They were presented to Parliament.

198. Are they all bound together?—There are three bound up together—1893, 1895, and 1896.

199. And 1910?—No, they are separate, but I can supply you with all these.

200. Probably we want not only mileage but capital, do not we?—Yes.

201. Number of companies, mileage, and capital. I do not think you need trouble to give them separately?—Very well.

202. With regard to question 4, I suppose any such terms as a guarantee of 3½ per cent. or a rebate up to 5 per cent. are hardly practicable in order to raise money under present conditions?—I should scarcely think so.

203. Are there any branch line Companies being put forward?—I believe not. I do not know of any recent ones.

204. It is almost impossible for them to be formed; they could not get the material apart from the money?—That is so.

205. (*Mr. Hiley.*) Have you received any applications for revised terms from Companies who are contemplating raising money?—Yes, I saw a proposal the other day.

206. From the Bengal-Nagpur Company?—Not from the main line Company, but from a promoting Company; it was a branch of the Bengal-Nagpur. The promoters wish to have a branch there, and they asked for improved terms.

207. (*Chairman.*) Is anything being done in the direction of drawing up a revised contract?—Not so far as I know.

208. Probably they will wait for this Committee's Report?—Yes.

209. (*Mr. Hiley.*) Did they make any proposal?—They made it informally. Proposals of the kind are mostly made in India. They do not come to us direct. We only hear of them from India.

210. (*Chairman.*) You say you do not wish to say anything on question 4, which refers to rates and fares. I think we know what is the essence of the system—that the original concession lays down a maximum and a minimum, and within those the Company is free to alter?—It is not quite that. You say "the original concession." What we do is to take power in the contract to fix maximum and minimum rates, and then after that the Government of India say what the maximum and minimum rates are to be. It is practically the same thing.

211. They are annexed to the contract, in other words?—No.

212. They are not formally annexed?—No. We have a clause in the contract saying the Secretary of State shall have power to lay down maximum and minimum rates and fares and to fix the classification of goods, and after that the Government of India say what the rates are to be.

213. Are they the same for all companies or are they different?—I think they are practically the same for all railways.

214. (*Sir Henry Burt.*) Except in special cases. The Government of India has the power to vary that maximum and minimum schedule?—Yes, they have the power.

215. (*Mr. Hiley.*) Without consultation with the Secretary of State?—Yes, we do not interfere with it at all.

216. (*Chairman.*) Is it correct to say that the Companies' accounts of receipts and expenditure in India are audited by officers appointed by the Government of India?—Yes.

217. The Companies' receipts and expenditure here are audited by this Office?—Yes, by an officer of the Accountant-General's Department.

218. On behalf of the Government nobody puts the two together, so to speak? It is an audit from the point of view of seeing that the expenditure is correctly vouched?—Yes.

219. But there is no audit of the balance-sheet of the Company as a whole, except that of the Company itself?—I think not, no.

(*Sir Arthur Anderson.*) The Government auditor signs the Company's annual accounts.

(*Chairman.*) Where?

(*Sir Arthur Anderson.*) In India.

220. (*Sir Henry Burt.*) That is not the Chairman's point. The accounts in India are audited by the Government examiner, but not the London office accounts?—Yes. The Company then put them together.

221. (*Chairman.*) When they are finally complete they are not audited as complete accounts?—I believe not.

222. Is there anything you desire to add to your evidence?—You asked me this morning, Sir, whether the administration of the railways was entirely under the Government of India or under the provincial Governments, and I told you that it was under the Government of India. I told you further that when the Railway Board was appointed in 1905 the Secretaries to the Government of Bombay and to the Government of Madras were abolished, and the whole of the administration of the railways in Madras, Bombay, and elsewhere came under the Railway Board. That, I think, was the point the Chairman made.

223. (*Sir Henry Burt.*) Was strong exception taken by the Local Governments to that action?—Yes. They greatly disliked it. I think they have an official even now in Madras whom they call Railway Secretary, but he is not on the same footing as before. Formerly there was a Railway Department

with a secretary, but that was abolished by the Government of India.

224. (*Chairman.*) There were also people called consulting engineers, were there not?—Yes. They were quite different from the consulting engineers over here. They were Government controlling officers.

225. (*Sir Arthur Anderson.*) The consulting engineer and the secretary were generally one and the same man?—Yes.

226. (*Chairman.*) They also disappeared?—Yes, they have been abolished.

227. And such control as is exercised now is exercised wholly by the Railway Board and its officers?—Yes, entirely.

228. How about the audit?—The audit is under the Financial Department.

229. That is not under the Railway Board?—No.

230. All control except audit is under the Railway Board?—Yes. The accounts officers are Financial Department officers.

231. (*Sir Henry Burt.*) I should like to ask you one question mainly for the information of the Committee. Could you by a concrete instance or two illustrate the usefulness of the London Boards to the Secretary of State from the administrative side and not necessarily from the financial side?—Yes, there are two instances in my mind, one particularly. When the new capital of Delhi was being formed, Sir Trevredyn Wynne, who was then the President of the Railway Board, devised a scheme for a terminal station there, the cost of which was anticipated to be somewhere about 1,000,000*l.* I do not think any exact estimate was ever prepared, but it was anticipated that the cost would be about 1,000,000*l.* When the matter came before the Secretary of State from the Government of India he called the Chairmen of the Companies concerned together and put the matter before them. They pointed out the serious defects of this scheme, and as a result it was abandoned and a much smaller and probably a better scheme has been adopted for the station. But for that, if the administration had been entirely in India the Railway Board scheme would no doubt have been accepted and this very large and expensive station would have been built at Delhi. That is an instance in which the advice of the Railway Companies was distinctly advantageous to the Secretary of State. Another instance was the proposal to build a direct line from Delhi to Karachi, instead of the present roundabout line. Sir Trevredyn Wynne devised a scheme for that. When it came before the Secretary of State he referred it to the Companies, and they again advised him in another direction. The result of that also has been a better scheme probably.

232. (*Chairman.*) When you say "referred it to the Companies" would the South Indian Railway Company, for instance, be consulted?—No. When I said "referred it to the Companies" I meant the Companies concerned.

233. (*Sir Arthur Anderson.*) That scheme has not matured yet, has it?—No.

234. It is still under consideration?—Yes. The Secretary of State did not sanction it as it was put before him by the Government of India; he referred it back for further consideration as the result of his consultation with the Companies.

235–6. (*Chairman.*) I suppose in that case it would mean calling in the consulting engineers of the Companies concerned to supplement the traffic experience of the members of the Board?—No, the consulting engineers over here would not have anything to say about it.

237. Were not they consulted?—In a question of that kind they are not necessarily consulted. Their function is mainly to arrange for the supply of stores.

238. (*Sir Henry Burt.*) And to deal with alterations and strengthening of bridges?—Yes.

239. (*Chairman.*) But this was really the members of the Board who were expert railway men?—Expert engineers.

240. And who knew the *locus in quo* very well?—Yes, many of them were engineers.

241. (*Chairman.*) I have seen it stated in various places that dividends have increased because it was impossible to spend money on renewals?—That is certainly the case.

242. Supposing a Company was in the habit of laying 1,000 tons of rails per annum and it could not buy the rails, has it divided the money?—Yes, in some cases it has. Some of the Companies have made proposals to establish reserve funds, but the Government of India has been rather opposed to them.

243. Has the Secretary of State in any case approved of Companies dividing money which was required for the renewal of rails merely because the rails could not be bought?—I am afraid that is so.

244. Whose business would that be? Would it be the business of the auditor in England or the auditor in India?—It would scarcely be the business of the auditor, I should think, to decide.

245. (*Sir Henry Burt.*) The system would be responsible?—Yes, the system would be responsible for that. The auditor simply has to deal with the actual facts, the actual expenditure. It is not for him to question the policy of expenditure, I should imagine.

246. (*Mr. Hiley.*) Would the Government Director have an opportunity of criticising the matter at the Board meeting before the balance sheet was approved by the Board?—No. I do not think it would be his function to do that.

247. So that you really have no control over that?—No.

248. (*Chairman.*) I understand, however, that some Companies at least have asked to be allowed to carry it to reserve for the purpose of deferred maintenance, and the Secretary of State has agreed to permit that to be done?—Yes, in some cases.

249. But no steps have been taken to see that it is done in all cases?—No.

250. (*Mr. Hiley.*) As a matter of fact, has a reserve fund been provided by any Company other than the Bengal and North-Western Company?—No, I think not.*

* *I have since ascertained that the Rohilkhand and Kumaon Company has also been allowed to establish a reserve fund.*

(*Chairman.*) We are much obliged to you, Mr. Stantiall, for your evidence.

The witness withdrew.

(Here follows statement by Mr. William Stantiall.)

SUPPLEMENTARY NOTE BY MR. STANTIALL.

I.—Volume of Railway Business dealt with in the Public Works Department of the India Office. (Questions 16 to 33.)

In my answer to question 2 I stated that all Indian administrative railway questions come to the Public Works Department. It is perhaps desirable for me to explain that questions connected with the supply of stores for the Indian State Railways are dealt with by the Stores Department, and accounts matters by the Accountant-General's Department.

The numbers of letters and telegrams from India on railway matters, and letters from the Railway Companies received in this Department during the 12 months ending on the 18th November 1920, have been approximately as follows:—

Letters from India	From the Government of India	46
	From the Secretary to the Railway Board	178
Telegrams from India		132
Letters from Railway Companies		496

The numbers of letters and telegrams to India on railway matters, and letters to Railway Companies issued by this Department during the same period, have been as follows:—

Letters to India	To the Government of India	68
	To the Secretary to the Railway Board	197*
Telegrams to India		130
Letters to Railway Companies		316†

The most important of these are the letters from the Government of India and the replies. Of the 46 letters from the Government of India, 16 related to *new lines or works*, and in most cases asked for sanction by the Secretary of State. (The new lines or works included the quadrupling of sections of the Great Indian Peninsula and Bombay, Baroda and Central India Railways; the doubling of a section of the Bengal-Nagpur Railway; the electrification of a section of the Great Indian Peninsula Railway; new lines in Assam, Burma and Bikanir; a ropeway to Naini Tal; the remodelling of the yard and passenger station at Poona, on the Great Indian Peninsula Railway; the transfer of the locomotive shops on the South Indian Railway from Negapatam to Trichinopoly; rebuilding of certain bridges on the Bombay, Baroda and Central India Railway, &c.) Of the remaining 30, 13 related to various *establishment or personal matters*, including the recommendations of the Public Services Commission on the State Railway Engineer Establishment; the conditions on which leave is admissible to members of the Railway Board; the proposed grant of a special gratuity to Mr. Haughton, late Engineer-in-Chief of the Eastern Bengal Railway; the deputation of officers on duty in England; the grant of special allowances to certain officers, &c. The subjects of the other letters from India were:—

the formation of the Committee of Enquiry into Indian Railways (terms of reference, &c.);
the transfer of the administration of the Port of Chittagong to the Assam-Bengal Railway Company;
a draft agreement for the working of the Southern Shan States Railway by the Burma Railway Company;
the procedure to be followed when increases of pay are granted to railway subordinates;
the proposed compilation of Indian railway accounts and statistics annually instead of half-yearly;
the position of the Nushki Railway extension in relation to the North-Western State Railway;
a question as to the charge to be made against the Bengal and North-Western Railway Company for accommodation at Anwarganj, Cawnpore;
a complaint by the Bengal and North-Western Railway Company against the East Indian and Oudh and Rohilkhand Railways as regards through traffic;
the Railway Programme for 1920–21;
the creation of Railway Companies in India affiliated to the London Companies; and
questions in connection with the Provident Funds of Indian railways.

The most important subjects dealt with by telegram and not included above were:—

the rate of exchange to be applied to the transactions of Railway Companies;
the unrest among the Indian railway subordinate staff;
the establishment of a Committee to enquire into the systems of railway accounts in England and America;
the proposed arrangements with Messrs. Armstrong, Whitworth & Co. for establishing a locomotive manufacturing industry in India;
the waiver of the Secretary of State's right to determine the contract with the Assam-Bengal Railway Company in 1921;
the settlement of a draft contract with the Delhi-Umballa Kalka Railway Company as to the Jind-Panipat Railway, and
complaints as to the shortage of wagons for manganese traffic.

The telegraphic correspondence related very largely to personal and establishment matters.

The correspondence with the Railway Board and the Railway Companies also dealt to a very large extent with personal questions, but the following additional subjects may be mentioned:—

the settlement of the new contract with the East Indian Railway Company, and questions arising in connection with it;
the interpretation of the contract with the South Indian Railway Company relating to the Dharmapuri-Hosur Railway and the Nilgiri extension;
a question raised by the Rohilkhand and Kumoan Railway Company as to the treatment of traffic between Sitapur and Bombay, which has been referred to the arbitration of Lord Inchcape;
the question of the compensation to be allowed to Railway Companies from which rolling stock, &c., was commandeered during the war;
the method of dealing with losses through enemy action in the war;
the increase of the fees allowed to the Directors of the Indian Railway Companies;

* Letters merely giving cover to documents excluded as far as possible.
† Circulars to all the Companies counted as one letter.

the postponement of the operation of a contract with the Barsi Light Railway Company requiring them to construct extensions;
the proposed transfer of the Dacca-Mymensing Railway to the Assam-Bengal Railway Company;
the increase in the rate of interest payable on advances made by the Secretary of State to Railway Companies;
arbitration on questions in difference between the South Indian Railway Company and the Ceylon Government Railways in relation to through traffic between India and Ceylon;
the purchase by Government of the Mymensing-Jamalpur-Jagannathganj Railway;
a proposed increase in the borrowing powers of the East Indian Railway Company;
recovery from the Ministry of Shipping of freight charges on Guaranteed Railway Companies' stores in excess of rates on Government stores; and
the question whether German tenders for stores of Railway Companies should be accepted.

In the short time available I have not been able to attempt to give an exhaustive description of the Railway questions dealt with by the Public Works Department of the India Office, but I hope that the foregoing particulars will be sufficient for the purposes of the Committee.

II.—Capital Cost and Earnings and Expenses of the Commercial and Military Sections of the North-Western Railway respectively. (Questions 95 to 104.)

North Western Railway.

COMMERCIAL.

Year.	Capital.	Gross Earnings.	Working Expenses.	Net Earnings.	Per cent. of Net Earnings on Capital.
	Rs.	Rs.	Rs.	Rs.	
1911–12	56,93,87,962†	8,78,75,014	4,65,31,429	4,13,43,585	7·26
1912–13*	60,13,89,873	9,13,15,407	4,94,49,081	4,18,66,326	6·90

* Constructed under the Indian Tramways Act, but agreement is about to be concluded for its incorporation in the Guzerat Railways on much the same lines as Godra-Lunawada Railway.

IV.—Branch Line Terms. (Question 199.)

I have handed to the Assistant Secretary to the Committee copies of the Branch Line Terms of 1893, 1895, 1896, 1910 and 1913 (the last with amendments introduced in 1914). The essential point in which the several issues differ is the nature and degree of financial assistance offered by the Government. This is as follows in each case:—

1893 *Issue.*—Rebate not exceeding 10 per cent. of gross earnings of main line from interchanged traffic towards making up (together with net earnings of branch) return of 4 per cent. per annum on capital expenditure on branch line.

1895 *Modification.*—Rebate not exceeding net earnings of main line from interchanged traffic towards making up dividend of 3½ per cent. on capital expenditure on branch line.

1896 *Issue.*—(1) Guarantee of 3 per cent. per annum on capital expenditure with such share of surplus profits as may be agreed upon, or

(2) Rebate as in 1895 modification, the whole earnings in excess of 3½ per cent. per annum going to the branch Company.

1910 *Issue.*—(1) Guarantee of 3½ per cent. per annum on capital expenditure, or

(2) Rebate not exceeding earnings of main line from interchanged traffic towards making up dividend of 5 per cent. on capital expenditure.

In both cases any surplus net earnings in excess of 5 per cent. per annum to be divided equally between the Branch Line Company and the Government.

1913 *Issue.*—As in 1910 issue, with substitution of "approved paid up share capital of the Company" for "capital expenditure."

1914 *Modification.*—This allows capital to be raised for the same branch partly under the guarantee system and partly under the rebate system.

19th November 1920. W. S.

MR. GEORGE DUCHARS, called and examined.

See Written Statement No. 1, Vol. IV.

251. (*Chairman.*) You have been for 1½ years Government Director of Indian Railways?—Yes.

252. Having previously been Deputy Government Director?—Yes.

253. May we know your Indian experience?—I had 32½ years' service in India on State lines entirely.

254. On railway service?—On railway service entirely.

255. In what departments?—Chiefly in construction, but also on open lines.

256. That means as an engineer?—Yes.

257. Not as a traffic man?—No.

258. We know the functions of the Government Director consist of attending the Board meetings and reporting upon them?—Yes.

259. There is a clause in each of the Company's contracts, is there not, authorising the appointment of an *ex-officio* Director?—Yes.

260. And, as I understand, that power is always exercised?—Yes. There always has been a Government Director, as far as I know.

261. The Government Director is mentioned among the Directors in the Annual Report?—Yes.

262. But not the Deputy Director?—No.

263. The deputy or assistant is only what they call in the South African Companies an "alternate"?—Yes.

264. He attends if his chief cannot do so?—Quite so.

265. Of course the merely Company business of transferring the stocks and dividends and so forth does not concern you; it is management that is your business?—Yes.

266. Your only power over money sanction is that you can sanction certain excesses over estimates against indents from India?—I have to sanction the placing of all orders against indent. They are placed subject to my sanction, and I have the power of sanctioning excesses, if necessary.

267. To any extent, or to a limited extent?—There is no limit.

268. Provided you are satisfied that the excess of cost over the estimate cannot be avoided you sanction it?—Yes.

269. You are present at the whole of the meetings of the Board?—Yes, either I or my assistant.

270. The Boards correspond on the one hand with the Secretary of State here, and on the other hand with their own agent in India?—Yes.

271. Is the agent for all purposes what we in England call a general manager?—In India, yes.

272. He has the full powers of a general manager?—I do not know exactly what the full powers of a general manager are.

273. The general manager is over everybody else on his line?—Yes.

274. Does the agent occupy that position in India?—Yes, he has that position in India.

275. You say that all the official correspondence of the Boards is approved at the Board meetings?—Yes.

276. Therefore it comes before you?—Yes.

277. Is it submitted to you beforehand in draft?—As a rule it is, yes. Letters from the Boards to the agent are always sent to me before the meeting.

278. Before the meeting of the Board?—Yes.

279. And if you have any comments to make you make them when you are at the Board meeting?—Yes.

280. Theoretically at least, then, the letter can only go as altered by you?—Yes.

281. Presumably in some cases they satisfy you that they are right in what they are proposing, and you withdraw your objection?—Quite so.

282. Of course the agent is subject to a double check. If he proposes expenditure, or works that imply expenditure, he first of all gets his own Board's approval?—Yes.

283. And then he has to get the approval of the Railway Board in India, because the bulk of the cost falls on the Secretary of State?—Yes.

284. You say: "The Secretary of State is "made cognisant of all the proceedings of the "Boards by having submitted to him copies of the "minutes of each meeting, and of all letters "despatched to the several agents in India." Is that literally true? Does a copy of each minute every fortnight come to this Office?—Yes.

285. (*Sir Arthur Anderson.*) The printed ones—the official letters?—The minutes.

286. (*Chairman.*) Both letters and minutes. What is the procedure? Does the secretary of the Company forward them?—Yes. They are forwarded every fortnight, after they are confirmed at the subsequent Board by most of the Companies.

287. They are not forwarded until the subsequent Board meeting confirms them?—In most of the Companies. One or two of the Companies send them on before confirmation.

288. The secretary of the Company sends them to whom?—To the Public Works Department.

289. So that there is a complete file of minutes such as you would find in the Board room?—Yes.

290. It is not part of your business to be responsible for that?—The Public Works Department used to send me the minutes when they got them, and I used to initial them in the corner and send them back, but now they have stopped doing that for some reason or other.

291. From what point of view did you initial them?—Just to show that they corresponded with what had passed at the Board meeting.

292. I assume that that is hardly necessary?—No, I do not think it is.

293. They are sent to the Secretary of the Public Works Department?—Yes.

294. But he does not now send them on to you?—No, he does not now.

295. So that you have not a file on your own account?—No. The minutes are gone through at the subsequent Board meeting. They are either read at the Board or circulated among the directors before the Board meeting.

296. So that you are fully conversant with them?—Yes.

297. I am not in the least suggesting that you are not conversant with them. Not only do the instructions from the Board of Directors to their agents come to the Secretary of the Public Works Department here, but they are also sent to the Railway Board in India?—They are sent to the Railway Board in India by this Office.

298. In other words, the Company here cannot give any instructions to its own agents without their being brought to the knowledge of the Railway Board, which is the controlling authority over the agents?—That is so.

299. Is there any restriction on the Companies sending unofficial letters?—To their agents?

300. Yes?—They are not supposed to give their agents instructions without my knowledge, but as a matter of fact demi-official letters are sent. Some of the Companies make a point of showing me their demi-official letters and some do not.

301. Supposing you thought something was not correct, would you have any power to call for any papers in the Office?—Yes.

302. You could call for letters whether official or not?—I understand that I could. That is within my powers.

303. One is familiar with cases, especially of municipal bodies, which go into Committee of the whole body when they do not want the reporters to be present. Supposing the Board were to go into Committee, what happens?—There is nothing confidential from me, if I want to know about it. I have the right to attend all Committee meetings.

304. You have the right under the contract to see all documents, formal or informal?—Yes. The contract says I have the power of veto over all proceedings of the Board whatsoever. That is how it is put. That extends over all proceedings of the Board, including demi-official letters. I do not know that it is exactly laid down, but I suppose demi-official letters come under it. In any case I have the rights of an ordinary Director to see all letters whether demi-official or other.

305. You call it a "veto." I think I saw in one of the contracts that your power is to suspend for 28 days?—I do not know that. May I see that contract?

306. Probably I am wrong; it may be in something else. As far as you know, you have an absolute power of veto?—Yes.

307. If they think you are wrong, the only thing the Company can do is to appeal over your head to the Secretary of State?—I do not know what they would do. As a matter of fact, the veto has never been exercised.

308. You mention in your statement that you never have vetoed anything?—Yes.

309. And as far as you know no predecessor of yours ever has?—No. The Companies always give way with a good grace when there is a difference of opinion.

310. You practically know what would be the policy of the Government, and you say: "Do not do this, otherwise I shall have to object to it." That is about what happens, I suppose?—Yes.

311. Matters of importance on railway policy generally come to this Office and are referred from the Government of India as well as from the Companies?—Yes.

312. They go, as we have been told by Mr. Stantiall, generally to the Public Works Department, but sometimes to the Finance Department?—Yes.

313. Do all these papers pass through your hands?—Not from the Finance Department. The Public Works papers mostly do if they concern me at all.

314. They are sent to you for observations?—Yes.

315. And on your observations and their own opinions the Department acts?—Yes.

316. Supposing, for the sake of argument, a case comes up where the Companies take one view and the Board in India takes another, and it comes up to the Secretary of State in Council, the Public Works Department, I suppose, would put the case before the Council?—It would be considered first of all in the Public Works Committee.

317. Would you be present at that Committee?—Yes.

318. And then again at the Council?—No, not at the Council.

319. Not at the Council, but at the Committee?—Yes.

320. If it comes up to the Council, then the Secretary for the Public Works Department would be there?—No, he does not go to the Council either.

321. The Council sit alone, do they?—Yes.

322. With regard to the question of State *v.* Company management, you have annexed a Table. Will you kindly explain that Table to us?—The Table gives the amount paid by the Government to eight guaranteed Railway Companies for working its lines. The Table shows certain details with regard to each of these Companies. Column No. 1 gives the names of the Companies.

323. We have the Table before us. Will you tell us the point of it—why you have put it in?—The point of it is to try and arrive at some idea of what it costs the Government to manage their railways through Companies. Column No. 10 gives the net earnings, 1,305·86 lakhs. Out of those net earnings the Companies receive 145 lakhs, that is column 8. The share capital altogether is 2,711 lakhs, column 3. If the lines belonged to the Government, the Government would have to pay interest on the amount of capital which belongs to the Companies. The amount of that interest at 4 per cent. is 108 lakhs, as per column 13. The 145 lakhs actually received by the Companies, minus 108 lakhs which the Government would have had to pay as interest on the Companies' share capital, is an indication of what the Companies get for managing the lines, that is, 36½ lakhs, in column 14. The figures are for the year 1913–14.

324. The moral of that is that statements have been made to the effect that the Companies took the whole of their dividends out of India, so to speak?—Yes. It appears to dispose of the idea some people have that Indian Railway Companies are making huge profits out of India.

325. Whereas the only portion that they can be said to have got for themselves is the difference between what they get and what the Secretary of State would have had to pay for the money anyway if he had raised it himself?—Yes.

326. And that is 36½ lakhs?—Yes, or about 2·8 per cent. of the net earnings.

327. (*Mr. Hiley.*) Excluding the East Indian Railway?—Yes.

328. (*Chairman.*) That makes it 55 lakhs?—Yes. The Companies' capital is taken at Rs. 15 to the £, as stated in column 3.

329. You say in your statement: "The Companies have been earning higher dividends since "the war, but this is partly due to the fact that "working expenses have been low owing to renewals "and betterments having to be postponed for want "of materials from England"?—Yes, but I ought to have used the word "returns" instead of "dividends."

330. You will agree that, if you cannot spend money on renewals because you cannot get the materials, it is not an extra profit; it is only deferred expenditure?—Yes.

331. We have been discussing this subject with Mr. Stantiall, and apparently only one railway has carried it to reserve; the rest have divided it, and the Secretary of State has taken his share. Do you agree that that is dangerous finance?—I think most of the Companies have got large reserve funds. They do not all call them "deferred renewal funds" or anything of that kind, but they have mostly got a considerable amount of money in reserve in anticipation.

332. But those are reserves of unexpended profits?—Yes.

333. This is not a profit at all. It is no more a profit than if I did not pay the bills of my butcher or baker or candlestick maker?—And therefore they put some of it into a reserve fund.

334. Has the Secretary of State put any to reserve?—No, he has not put anything to reserve.

335. Has this question ever been raised at any of the Boards here in London?—The question about deferred renewals?

336. Yes?—Yes, it was raised by one or two of the Boards.

337. What has happened?—I am afraid my memory is rather deficient on the point. I should like to have time to look the matter up.

338. (*Sir Henry Burt.*) I think it was left in this way—that if anything was to be done in the matter the initiative should come from the Government of India.

339. (*Chairman.*) Your service has, you have told us, been entirely on State railways?—Yes, except that I was lent to the Burma Railway Company for some time.

340. Speaking purely of management, apart from any political question, you say you do not think there is any serious difference between the two systems?—No. It is a matter of the personality of the agent chiefly, I think, in regard to the actual management and efficiency of working.

341. It is very easy for non-technical people to choose one particular instance, but you can choose them either way?—Yes.

342. You have given us some interesting information in your statement. You say there are 10 Companies whose meetings are attended by the Government Director?—Yes

343. But you mention only eight in your table?—Yes. The other two are not guaranteed Companies—the Bengal and North-Western and the Rohilkund and Kumaon.

344. You have the right to attend the meetings of those lines?—Yes They not only work their own line but a State line also.

345. Is it in that capacity you attend?—Yes.

346. You would not have the right to attend so far as the management of their own line is concerned?—No, there would be no necessity.

347. That makes the 10?—Yes.

348. You say there are 58 directorships which are held by 44 gentlemen of whom 20 are retired Indian railway officials and 10 are retired Indian Government officials?—Yes.

349. Fourteen are business men selected as business men, and not necessarily of Indian experience?—Yes, but most of them have had Indian experience, I think.

350. The 14 then would include retired Indian merchants?—Yes.

351. Do questions of alterations of rates or proposed alterations of rates often come home to the London Board?—Yes, fairly often.

352. The agent says: "I think I should like "to make considerable changes in such and such "rates for such and such traffic"?—Yes.

353. Questions of that kind do come home?—Yes, occasionally.

354. That, as I understand, is within the competence of the agent on his own account?—Very largely.

355. It is not a matter the Government controls provided it is within his maximum and minimum?—That is so.

356. Would you interfere on a question of that kind?—Not so long as they were within their maximum and minimum.

357. Supposing he says: "I want your approval," and they say: "We approve," would an official or an unofficial letter of the Board be sent?—It would most probably be unofficial—demi-official, I should say.

358. That would not normally be submitted to you?—It would be discussed at the Board meetings.

359. Would you hear of it?—Yes, but I should not interfere.

360. Would you not have the right to take part?—I do not know whether I should have a right to take part: I do not think I should.

361. Morally you would not have a right. That is what it comes to, is it not?—Yes.

362. That would not be recorded in the Office here. That is not the kind of letter that would be reported to the Office here?—If it came in an official letter it would.

363. But would it be an official letter?—It might or might not.

364. (*Sir Henry Burt.*) Lately there have been several proposals from the agents in India in connection with the general increase of rates brought about by the increase of working charges?—Yes.

365. All those, I take it, have been dealt with officially, have they not?—Yes, I think they have.

366. It went so far as some railways asking the Boards to agree to their agent going up to the Government of India to get the maximum increased?—In passenger rates.

367. And, I think, in the Great Indian Peninsula in goods too?—There was a long official letter from the Great Indian Peninsula.

(*Chairman.*) How did it start?

(*Sir Henry Burt.*) In connection with the increased rates of working the agents wrote home to their Boards suggesting that there should be a considerable increase in the rates and fares, and in the case of many lines that was only an increase within the existing maxima. But some lines went further than that and asked their Boards to approve of an increase in the maxima, both for passengers and goods.

(*Chairman.*) There you would have to go to the Railway Board. As I understand it, the Secretary of State could authorise the payment of a lakh a mile if he chose. It is not embodied in a contract. It is free to him to raise the maximum at any time.

368. (*Sir Henry Burt.*) Yes. I was only bringing out the point that lately at any rate all really important questions of rates come up officially, do they not?—Yes.

369. Would you agree to that?—Yes. I agree to that.

370. (*Mr. Hiley.*) In that case would the correspondence be kept in this Office too?—Yes.

371. (*Sir Arthur Anderson.*) I understood you to say that all expenditure in India which is sanctioned by the Home Boards is subject to the sanction of the Railway Board being obtained by the agent. There is a certain amount up to which the Boards can go without Government sanction, is there not?—That is only to simplify the procedure.

372. That power in most cases is transferred to the agent so that he can spend up to a lakh or two?—You might add the words "where necessary" to what I said.—"subject to the agent "obtaining the sanction of the Railway Board "where necessary." It is really the same thing.

373. (*Chairman.*) I presume we may take it that the agent would not ask the authority of his Board in England to spend a small trifling sum?—No. Certain powers have been delegated to the Boards of the railways and to the agents by their Boards.

374. Is there much difference between one Company and another in the amount of freedom

left to an agent?—Yes, there is a good deal of difference. Some Companies leave their agents a much freer hand than others.

375. (*Mr. Hiley.*) Do you join in the discussions at the meetings of the Public Works Committee or are you simply just there in case you are wanted?—I am only supposed to give my opinion when I am asked.

(*Chairman.*) Thank you very much Mr Deuchars, for your evidence.

The witness withdrew.

(Adjourned for a short time.)

**

MR. CECIL HERMANN KISCH, C.B., called and examined.

376. (*Chairman.*) We had better formally put on the notes what is your position?—My present appointment is that of Deputy Secretary in the Financial Department of the India Office. Previously I was Secretary to the Indian Currency Committee, and prior to that Private Secretary to the Secretary of State.

377. You have lost two Financial Secretaries within quite recent times?—Yes the late Sir Lionel Abrahams was Assistant Under Secretary of State, and had charge in that capacity of the financial work of the India Office.

378. He had been in charge of the work?—Yes, he had been in charge of the financial work of the India Office for many years, and his death was followed a few months later by the death of Mr. Frank Lucas, who was then Financial Secretary.

379. I think we shall probably put, if not the whole, at any rate the greater part of this memo. in at the beginning of your evidence; I think it will be desirable to have it. We may think that something might be omitted, the appendices for example, but we think we ought to put it in?—I quite agree to that.

NOTE.

The Provision of Funds for Capital Expenditure on Indian Railways.

1. The question of railway finance was last examined by a Committee appointed by Lord Morley in 1907. The Committee consisted of Lord Inchcape (then Sir James Mackay), Sir Walter Lawrence, Sir Felix Schuster, Sir David Barbour and the late Sir Lionel Abrahams. In the course of their report they investigated the question as to the amount of capital that the Secretary of State might expect to provide annually for capital expenditure in India, and they arrived at the conclusion that this amount might under the conditions then existing, be placed at 14,000,000*l.* This estimate included the following amounts to be provided in India:—

Sums to be provided in India.

	Lakhs.
(A) Revenue surplus - - - -	100
(B) Annual appropriation from revenue for reduction or avoidance of debt.	75
(C) Savings bank deposits - - - -	100
(D) Rupee loan - - - - -	325
(E) Moiety of profits on coinage - - -	150
Total - - -	750

At the then rate of exchange of 1*s.* 4*d.* per rupee = 5,000,000*l.*

The balance of the amount required for capital purposes was to be found from borrowings in the United Kingdom estimated to amount to about 9,000,000*l.* a year.

2. Of the 14,000,000*l.* to be provided from India and the United Kingdom for capital expenditure it was assumed that 1,000,000*l.* would be devoted to irrigation works, but after allowing for other expenditure from borrowed money and the uncertainties of the money market, it was hoped that it would be possible to finance a railway programme of 12,500,000*l.* a year.

3. It is generally accepted as desirable that the capital required for Indian public works should be provided as far as possible in India, and the question of the amount which may be required from sources outside India can conveniently be approached by an examination of the amount that may be expected to be obtained in India in the next few years.

4. Since Lord Inchcape's Committee reported, the position has been profoundly changed by the war. Conditions are still unstable, but, even when the extreme uncertainties of the present time are relieved, it must be assumed that for the next decade at any rate those responsible for the financing of Indian railways will have to

deal with a set of factors differing entirely from those familiar before the war. These new factors affect the general scale of expenditure and prices, the rate of interest, and the borrowing capacity of the Government of India. On these questions it is impossible to speak with any certainty. But an examination of some of the wider considerations must nevertheless be attempted.

5. It has to be noted in the first instance that the rate of exchange has risen substantially from that existing at the time of the 1907 Committee's report, and now stands at about 1*s.* 7*d.* sterling. The policy of establishing the rupee on a gold basis at the equivalent of Rs. 10 to the sovereign has now been definitely embodied in Indian legislation, but it has not yet been found practicable to make the new rate effective. For the present purpose it seems best to assume a rate of exchange of 2*s.*, which is the rate adopted in the Government accounts.

6. It will now be convenient to consider in greater detail the sources of capital receipts enumerated (A–E) in paragraph 1 above.

The Government of India's accounts for 1918–19 and the revised estimates for 1919–20 have shown deficits of 3,820,000*l.* and 10,000,000*l.* respectively. The prospects of the existing year are uncertain, but it may be assumed that when the temporary difficulties arising from fluctuations in exchange, abnormal military commitments and other exceptional features pass away, the revenue accounts will ordinarily reveal an annual surplus. As regards this surplus it might be possible, by imposing additional taxation, to obtain for capital purposes a higher amount than the 100 lakhs assumed by Lord Inchcape's Committee, but there are strong objections to the imposition of taxation to meet expenditure on capital projects, which, from their remunerative character, are appropriately financed from borrowed funds. It has, moreover, to be remembered that in connection with the scheme of constitutional reform the Government of India have made large assignments of revenue in favour of the Provinces, and the Select Committee of Parliament have recommended in the strongest terms that the Government of India and the Secretary of State should so regulate their financial policy as to enable the Central Government to dispense as soon as possible with the annual contributions from the Provinces, which are required to make good the deficiency in the Government of India's revenue, as compared with the expenditure they have to meet.[1] In all the circumstances it is improbable that more than 1 crore of rupees will be regularly available from revenue surplus for expenditure on railway capital works.

As regards (B), the item arose from the grant of 1,000,000*l.* a year which was set aside from Imperial revenues for famine relief and insurance. Under the new accounting arrangements which are to be introduced in connection with the constitutional reforms, this grant will disappear and with it the special head "Reduction or avoidance of debt."

As regards (C), it may perhaps be assumed for the purposes of the argument that with growing prosperity and the general advancement of education, receipts from Savings Bank deposits will produce 300 lakhs.[2]

As regards (D), the experience of the war has shown that with the increased wealth of India and improved methods of publicity, greatly increased resources may be obtained by local borrowings. In the current year it was provisionally assumed that 15 crores could be borrowed in India, and the actual receipts from the loan have been 29 crores, of which 11 crores represents new money, the balance taking the form of bonds tendered for conversion into the new loan. But account must be taken of the fact that under the new constitutional scheme for the development of provincial autonomy Local Governments will themselves be competing borrowers with the Government of India in the Indian money market. The Government of Bombay, for instance, is known to require 30 crores in the next few years for housing and local development, and the return on Provincial loans may be expected to be higher than that offered by the Government of India loans.

[1] *Vide* Second Report from the Joint Select Committee on the Government of India Act, 1919 (Draft Rules), No. 172 of 1920.

[2] The Budget estimate for 1920–21 assumed a net deposit of Rs. 2,50 lakhs in respect of Postal Savings Banks and Provident Funds.

Mention must also be made of the legacy of floating debt and short-term bonds with which India, like other countries, has been saddled by the war. In the next few years the following amounts approximately of short-term War Bonds and also the 1915–16 Loan have to be repaid or funded before the position can be regarded as secure :—

	Lakhs.
1921 Bonds	25,65
1922 Bonds	11,33
1923 Bonds	2,15
1923 Repayment of 1915–16 Loan	5,00
1925 Bonds	4,19
1928 Bonds	25,20

In 1930, at latest, provision has also to be made for the funding or repayment of 28 crores of 10-year bonds issued this year.

On 1st October 1920, the Treasury Bills outstanding (excluding those held in the Paper Currency Reserve) amounted to 37 crores.

A prudent policy demands that steps should be taken, as opportunity offers, to reduce the embarrassing floating and short-term debt. It would therefore be unwise to reckon on more than 10 to 12 crores as the sum that the Government of India may be expected to obtain annually by direct borrowing in India for purposes of new capital expenditure.

As regards (E), no reliance can be placed on profits on the coinage of rupees. The Government of India have to meet heavy charges from the depreciation of their sterling securities and gold holding by reason of the rise in exchange. Until these have been made good, and until further experience has been gained of the course of exchange at the new level fixed for the rupee, strong objection can be taken to the appropriation of profits from this particular source for capital purposes. Indeed, the Secretary of State in Council has determined that when the Gold Standard Reserve has reached a total of 40,000,000*l.* the interest on investments held in the reserve as well as the profits on coinage shall be utilised towards wiping out the loss through the depreciation of the gold and sterling securities held in the Paper Currency Reserve in consequence of the change in the ratio of the rupee.

7. If the figures in paragraph 1 are revised in the light of the above review, the Indian contribution to the programme of capital expenditure may be provisionally taken as follows : —

	Lakhs.
(A) Revenue surplus	1,00
(C) Savings Bank deposits	3,00
(D) Rupee loan	12,00
Total	16,00

i.e., 16,000,000*l.* at the new parity of exchange.

8. It will now be convenient to turn to the question of the Government of India's expenditure on capital account. The Railway Committee of 1907 were of opinion that the Government of India would require for capital purposes all the funds that could be provided in India and the United Kingdom. They came to the conclusion, however, that in the circumstances then existing not more than 14,000,000*l.* could be so provided. Of this amount they hoped that 12,500,000*l.* would be available for railway purposes, and recommended that the programme of annual expenditure on railway construction and development in India should be fixed for the eight years following the presentation of their Report at this figure. This period was interrupted by the war. Statement I. (*a*) in the Appendix shows the amount spent on railway construction since 1908. For the years 1908–9 to 1914–15 the average annual expenditure on Indian railway construction amounted to 9,800,000*l.* The highest figures attained were those of 1913–14 and 1914–15, when an expenditure of 12,500,000*l.* and 12,000,000*l.* respectively was incurred. In view of the uncertainty attaching to the level of prices of railway material imported from this country and

elsewhere, and the cost of construction in India, it is difficult to offer any confident opinion as to the amount that would to-day correspond to the figure of 12,500,000*l.* recommended by the Committee of 1907. The rise in the cost of wages and materials in India in recent years is notorious, and it is doubtful when imported rolling stock will be purchasable under substantially more favourable conditions than at the present time. For 1920-21 the capital expenditure on railway construction in India (taking exchange at 2*s.* per rupee) has been estimated at about 25,000,000*l.* The estimate has been swollen to an abnormal extent through the non-delivery of stores for which payment was provided in the previous year's programme, and for which fresh provision has again to be made. But, as will be seen from Statement I (*b*), the bulk of the moneys available have under present conditions to be devoted to open line works, while the outlay on new lines is being strictly limited. The Railway Board anticipate that it will probably be necessary to follow a similar policy for the next few years. In the circumstances it would seem unreasonable to take any lower figure than 25,000,000*l.* as the sum required for Indian railway development in the years ahead.

In addition to the amount required for railway purposes provision must be made for capital expenditure on irrigation, and for the next few years for the construction of New Delhi. Perhaps 1,500,000*l.* may be assumed as the minimum likely to be required for these purposes. It would probably not therefore be far from the mark to assume that about 27,000,000*l.* at least will be required annually by the Government of India for the next few years for the purpose of railway construction and other works financed from capital, if an adequate programme is to be maintained.

9. It has previously been suggested that, under accepted methods of finance, the Government of India may hope to provide 16,000,000*l.* annually towards this programme from funds obtained in India. This leaves a balance of 11,000,000*l.* to be provided either by borrowings in the United Kingdom or by some fresh method of raising funds in India.

10. In present conditions it is not easy to forecast to what extent and on what terms India will be able to raise money in this country during the next few years. The conditions of the London money market have been completely changed as a result of the war and any conclusions arrived at must necessarily be provisional. In the course of the current year the Secretary of State considered very carefully the question of floating a loan in London, and only reluctantly abandoned the idea because he was advised that in the circumstances of the time the issue of a loan of even moderate amount would have to be made on terms that would militate against India's credit in London. Indian loans have for various reasons lost favour in the market of recent years. They have had to contend against increased competition on the part of other borrowers. But the difficulties of placing Indian loans have been aggravated in some measure by political considerations.[1] Statement II. in the Appendix exhibits the relative decline in the price of India 3½ Stock and Consols in the last few years. The table inevitably exhibits some anomalies, but the main tendency is clearly that of an increasing difference in the yield per cent. obtainable on British and Indian Government securities. Thus whereas 15 years ago an investment in 3½ per cent. India Stock only yielded ½ per cent. more than an investment in Consols, to-day the difference exceeds 1 per cent. The significance of these figures will be appreciated when it is remembered that in the last few years the

[1] *Extract from* Evening Standard, *dated 20th September* 1920.

Indian Investments.

Political considerations, rather than economic factors, continue to govern the course of Indian investments. Indian 3 per cent. have gravitated to a level representing a yield of 6*l.* 18*s.* per cent., while the 3½ per cent. show approximately 6*l.* 16*s.* per cent. to the purchaser. The 2½ per cent. at 37-39 represents about 6*l.* 11*s.* per cent.

* * * * *

The contrast with kindred British securities is becoming more pronounced. Consols represent a yield of approximately 5*l.* 9*s.* per cent. at the current price. Irish land 2¾ per cent. would give only 5*l.* 17*s.* per cent. Local loans 3 per cent. stands at a price yielding 5*l.* 15*s.* per cent.

All come into the category of gilt-edged investments selling at a big discount, and therefore possessing that virtue of appreciating in capital value when the investment standard is more modified and becomes stabilised. We are inclined to believe that the margin of virtually 1½ per cent. between the yield on Consols and Indian 3 per cent. is more than a generous allowance for the theoretical investment risks of the two securities.

market has been literally flooded with new British Government securities, whereas no issue of India Stock has been made since 1912. Under existing conditions it is cheaper for India to borrow locally than to enter the London market, and future policy will, no doubt, be directed to confining the demand on London to a minimum.

In present circumstances it must be recognised that it is beyond the reach of the Secretary of State to raise regularly as much as 11,000,000*l.* in London from year to year. Statements III. (*a*) and III. (*b*) in the Appendix show the amounts borrowed for capital purposes in the United Kingdom in the past 20 years distinguishing between monies raised by the creation of India debt and monies borrowed through railway companies. Statement III. (*a*) exhibits the gross borrowings but takes no account of the frequent repayments of India bills and of the periodical renewals of Indian railway debentures. Statement III. (*b*) allows for these corrections and is therefore more relevant to the present discussion. It will be seen that only in 1905–06, 1907–08, 1908–09, 1909–10, and in 1914–15 did the net borrowings in London exceed 9,000,000*l.* The largest single issues of India stock at any one time amounted to 7,500,000*l.* in 1909 and 1910, but it has always been felt that it would be undesirable to rely solely on such direct issues by the Secretary of State. The contracts with the railway companies have accordingly been drawn so as to give the Secretary of State definite powers to call upon the companies to raise capital. A brief summary of the relevant provisions will be found in Statement IV. It will be seen from Statement III. (*b*) that in the 20 years 1901 to 1920, 54,500,000*l.* net were borrowed by the Secretary of State direct, while 30,500,000*l.* net were raised by the railway companies, a proportion of 64 to 36 per cent. Reference may here be made to Statement V., showing the capital liabilities of the Indian Guaranteed Railway Companies outstanding on the 31st March 1920, which shows that existing capital to the nominal value of 65,000,000*l.* has been raised by the Guaranteed Railway Companies taken together. Of this amount 25,000,000*l.* has been raised by the East Indian Railway Company. In the matter of Debenture Stock, the usual form of new borrowing, 33,000,000*l.* nominal capital was outstanding on 31st March last, of which 18,500,000*l.* has been provided by the East Indian Railway Company. The difficulties that may be anticipated in the way of providing adequate funds for capital expenditure in India make it important that no action should be taken that would impair the availability of all the means hitherto open to the Secretary of State for raising funds, and in this matter the Guaranteed Companies have in the past played a most valuable part.

11. But even if all the sources hitherto utilised for the provision of capital for Indian railway development continue to be available, it is difficult to see how the full amount that is necessary can be provided unless fresh channels for raising money can be provided in India. The Government of India have for many years been prepared to offer assistance in the way of guarantee or rebate, with the view to the encouragement of the construction by the agency of private companies in India of branch lines forming feeders either to State lines worked by the State, or to railways worked by the companies. The terms on which Government assistance is given are set forth in the Railway Board Resolution dated 14th November 1913. The amount of money actually raised in India and spent on the construction of lines under these terms amounted on the 31st March 1919 to about 10 crores of rupees. In addition a certain amount of money has been raised in India through the agency of District Boards and Companies subsidised otherwise than under the "feeder line" terms. Suggestions for enabling the Guaranteed Railway Companies to borrow funds in India have been considered from time to time, but at the present moment a serious difficulty in the way of such schemes lies in the fact that under existing law interest paid by the Guaranteed Companies to subscribers of rupee capital resident in India would apparently be liable to British, as well as to Indian, income tax. This difficulty might be surmounted by the creation of affiliated companies in India, and would not arise in the case of independent Indian companies, guaranteed or otherwise, domiciled in India. It seems desirable, therefore, to explore every avenue that may help towards the creation of such new bodies, which could play their part in the financing of Indian railway development. Capital can obtain a high return in India, and in order to attract it to the work of railway enterprise, it may be necessary to offer substantial inducements in the way of profit-earning potentialities.

12. It may be asked whether, if fresh sources of capital supply can be developed in India, the Government is likely to be able to dispense with any of the sources hitherto available. This question might be asked with particular reference to the Guaranteed Companies domiciled in England, whose maintenance raises issues of a political as well as financial character. Some of these are referred to in the correspondence dealing with the renewal of the East Indian Railway Company's contract in 1919 for five years, which will doubtless be laid before the Committee. While it is desirable that funds for Indian railway development should as far as possible be provided in India, other countries, such as Canada, the Argentine and Brazil, have in the past looked to the London market for funds required for railway enterprise, and until India is in a position to supply all the capital needed for the purpose, it would seem that the urgency of her economic development should not be subordinated to other considerations.

Different views have been held regarding the relative efficiency and economy of State and company management of the Indian railways, as will be seen on reference to the correspondence relating to the East Indian Company above referred to. In connection with the cost of the different systems to the Government, attention is invited to the figures set forth in Statement VI., exhibiting the net profits to the State from the Indian railways and the amounts paid away in surplus profits in recent years. These latter figures, however, are in excess of the real cost of this element in the system, since were it not for the prospect of earning surplus profits, the fixed rate of interest guaranteed by the Secretary of State would have had to be on a higher scale. Moreover, having regard to the higher yield capital now commands, and the prices at which profit-sharing stocks of the Indian railway companies can be purchased, it would probably not be suggested that the State has made an unfavourable bargain for itself. The question of the liability that the State would incur on the termination of the existing contracts also demands consideration. There are important differences in this respect between the various companies (*vide* Statement IV.). In the case of the East Indian Railway, the actual payments on termination of the contract are limited to annuities. In the case of other companies, termination of contracts would involve heavy cash disbursements, which it might be difficult at the time to arrange, to pay off existing stockholders. In the case of a company like the Assam-Bengal, which earns no surplus profits and whose stock stands at a heavy discount, termination of the contract would be financially disadvantageous to Government. It is worth mentioning that in the course of the current year the Secretary of State in Council, with the concurrence of the Government of India, has informed the company that he does not propose to exercise his option of termination in 1921.

13. Those who are concerned with the provision of funds for Indian railway enterprise would welcome any suggestions that may help to increase the means for obtaining fresh capital. The conclusions to which this note tends are that in the years ahead India is likely to require all the capital that it can obtain from every source, and that while the development of fresh sources of supply in India is of the highest importance, it is also essential to maintain the link with British capital, which has done so much in the past for the development of the Indian railway system.

C. H. K.

FINANCIAL DEPARTMENT, INDIA OFFICE,
20th October 1920.

APPENDICES.

STATEMENT I. (*a*).

SUMMARY of EXPENDITURE on CONSTRUCTION of INDIAN RAILWAYS during the Financial Years 1886–87 to 1918–19 inclusive, and of the provision made on that account by Companies and by the State respectively.

Year.	Expenditure on Lines worked by Companies.	Expenditure on State Lines.	Total.	Capital raised by Companies.	Provided by the State.	Total.
(1)	(2)	(3)	(4)	(5)	(6)	(7)
	£	£	£	£	£	£
1886–87	3,508,550	3,580,588	7,089,138	3,402,645	3,686,493	7,089,138

STATEMENT IV.

Contracts with Indian Railway Companies (guaranteed by the Secretary of State).

Provisions relating to the Supply of Additional Capital, Division of Surplus Profits, and Termination of Contracts.

Company.	Date of Contract.	Provision as to supply of Additional Capital.	Method of Division of Surplus Profits between Company and Secretary of State.	(1) Provisions as to, and (2) Date of Termination of, Contract.	Provisions for Acquisition of Line by Secretary of State on Termination of Contract. (In all cases the Secretary of State, in addition to making the payment stated, is bound to indemnify the Company against outstanding debts and liabilities which may have been incurred with his sanction.)
Assam-Bengal.	26th April 1892.	"The Secretary of State shall at his option either contribute" further moneys required or "enable the Company to raise them, by the issue, at his option, of shares or of debentures in such manner with such guarantee by the Secretary of State, and generally on such terms as shall be agreed upon between the Secretary of State and the Company." (Clause 43.)	In the ratio of the amounts of capital expended on the undertaking by the Company and the Secretary of State respectively. (Clause 65 (6).)	(1) The Secretary of State may, if this Contract shall not have been previously determined, determine the same on 31st day of December 1921 or on the 31st day of December of any succeeding tenth year, by giving to the Company in England not less than 12 months' previous notice in writing of his intention in that behalf (clause 92 of Contract of 26th April 1892). (2) The Secretary of State has decided not to determine the contract on the 31st December 1921 (P.W. 2440/20), and the next date of possible determination is therefore 31st December 1931.	The Secretary of State shall, out of the revenues of India, pay to the Company in London an amount in sterling equal to the amount which shall have been paid by the Company to the Secretary of State in respect of its original share capital of 1,500,000*l.* and of any further share capital or stock (clause 97 of Contract of 26th April 1892).
Bengal-Nagpur.	6th Nov. 1912.	"All moneys which shall after the 31st day of December 1910 be required for capital expenditure on the undertaking shall, at the option of the Secretary of State, be provided either by means of advances by the Secretary of State (in which case he shall be entitled to require the Company at any time afterwards to raise money for the repayment thereof), or by the issue as the Secretary of State shall decide of debentures or debenture stock of the Company, or by the issue of further ordinary shares to be converted when fully paid into ordinary stock of the Company. Any such debentures or debenture stock shall be subject to the provisions with respect to debentures contained in the Contract of 1901, as varied by any other of the supplemental Contracts or by these presents." (Clause 5.)	In proportion to the respective shares in which the capital for the time being (excluding debenture capital) has been contributed by them (clause 9 of the Contract dated 5th November 1912). The Secretary of State's capital is taken at 15,500,000*l.* (as on the 31st December 1910), to which is added the amount up to the date of his subsequent advances and the Company's capital at 3,000,000*l.* (clauses 2 and 3 of the Contract dated 5th November 1912).	(1) The Secretary of State may terminate this Contract on 31st day of December 1950 or on 31st day of December of any succeeding fifth year by giving to the Company in England not less than 12 calendar months' previous notice in writing of the termination of this Contract (clause 15 of Contract dated 5th November 1912). (2) Next date of possible termination 31st December 1950.	The Secretary of State shall, out of the revenues of India, pay to the Company in sterling in London an amount equal to so much of the Company's original share capital of 3,000,000*l.* as shall have been paid to the credit of the Secretary of State in the manner provided by the Contract, together with the amount of any paid up ordinary capital issued by the Company with the sanction of the Secretary of State for the purpose of providing money for capital expenditure on the undertaking, other than any sum or sums paid by way of premiums in raising these amounts (from clauses 94, 38 and 34 of the Contract of 9th March 1887, and clause 16 of Contract dated 5th November 1912).

BOMBAY, BARODA AND CENTRAL INDIA.	24th Oct. 1913.	"Capital required for the purposes of the undertaking (exclusive of the subsidiary lines) after the 31st December 1911 shall, at the option of the Secretary of State, either be advanced by him (in which case he shall be at liberty to call on the Company subsequently to raise money for its repayment) or be provided by the Company by the issue, as the Secretary of State shall decide, of further ordinary stock or of debentures or debenture stock, in such manner and at such time and on such terms as to interest or otherwise as the Secretary of State shall determine, but in deciding how capital is to supplied the Secretary of State shall, if so requested by the Company, agree to the issue by the Company from time to time of additional ordinary stock to such an amount as shall be necessary in order to maintain as nearly as possible, as between the preferred capital of the Secretary of State and the Company's capital, the ratio of 14 to 1 established as at the 31st December 1911 by clause 9 hereof." (Clause 14.)	In proportion to the respective shares in which the capital for the time being (excluding debenture capital) has been contributed by them (clause 20 of Contract dated 24th October 1913). The Secretary of State's capital is taken at 38,500,000*l.* (as on 31st December 1911), to which is added the amount of his subsequent advances and the Company's capital at 2,000,000*l.* (clauses 12 and 13 of Contract dated 24th October 1913).	(1) This Contract may be determined by the Secretary of State on 31st day of December 1941 or on 31st day of December in any succeeding fifth year by giving to the Company in England 12 calendar months' notice in writing (clause 2 of Contract dated 24th October 1913). (2) Next date of possible termination 31st December 1941.	The Secretary of State shall pay to the Company in sterling in London the equivalent at par of the capital stock of the Company (clause 76 of the Contract dated 8th April 1907).
BURMA	9th March 1897 and 9th June 1909.	"The Secretary of State shall, at his option, either contribute the whole or any part of" further moneys required, "or enable the Company to raise the same or such parts thereof as shall not be contributed by him, in such manner (by the issue, at the option of the Secretary of State, of shares or of debentures or otherwise), and with such guarantee by the Secretary of State, and generally on such terms as shall be agreed upon between the Secretary of State and the Company." (Clause 45.)	In the ratio of 5¾ for Secretary of State to 3 for Company (clause 17 of Contract of 9th June 1909).	(1) The Secretary of State may, if this Contract shall not have been previously determined, determine the same either on the 31st day of December 1928 or on the 31st day of December 1935 or on the 31st day of December 1941 (clause 93 of Contract of 9th March 1897 as modified by clause 18 of Contract of 9th June 1909). (2) Next date of possible termination 31st December 1928.	The Secretary of State shall pay to the Company in London an amount equal to the share capital or stock at par so far as it shall have been paid up in full (*see* clause 98 of Contract dated 9th March 1897 and clause 11 of Contract dated 9th June 1909).
EAST INDIAN	14th Nov. 1899 and 17th Dec. 1919.	"All capital monies required by the Company for the purposes of the undertaking shall, at the option of the Secretary of State, either be provided by him or be raised by the Company by the issue of debentures or debenture stock, in such manner and on such terms as to interest or otherwise as the Secretary of State shall determine." (Clause 7.)	Of the first 29 lakhs of rupees of surplus profits the Company is to take ⅛th and the Secretary of State ⅞ths. Of the remainder the Company is to take $\frac{1}{100}$th and the Secretary of State $\frac{99}{100}$ths (clause 2 of Contract of 17th December 1919).	(1) The said notice by the Secretary of State of his intention to determine the principal Contract on the 31st day of December 1919 is hereby withdrawn and subject to the provisions hereinafter contained the principal Contract as varied by the other indentures hereinbefore referred to shall continue in force until the 31st day of December 1924 when the same shall determine (clause 1 of Contract of 17th December 1919). (2) Date of termination 31st December 1924.	On the determination of the Contract the Secretary of State will resume the payment to the Company of the portion (⅛th) of the annuity of 1,473,750*l.* which is deferred during the continuance of the Contract (section 13 of East Indian Railway Purchase Act, 1879).
GREAT INDIAN PENINSULA.	21st Dec. 1900.	"All capital moneys required for the purposes of the undertaking shall, at the option of the Secretary of State, either be provided by him . . . . . or be raised by the Company by the issue of debentures or debenture stock in such manner and on such terms as to interest or otherwise as the Secretary of State shall determine." (Clause 22A.)	$\frac{1}{20}$th to the Company and $\frac{19}{20}$ths to the Secretary of State.	(1) On the 30th day of June 1925 the Company shall give the Secretary of State possession of the undertaking (clause 60 of Contract dated 21st December 1900). (2) Date of termination 30th June 1925.	The Secretary of State shall pay to the Company the amounts paid up or credited as paid up on all shares or stock in the Company's new capital (*i.e.*, the capital created on the occasion of the reconstruction of the Great Indian Peninsula and Indian Midland Railway Company in 1900 as one system) (clause 60 of Contract dated 21st December 1900).

Company.	Date of Contract.	Provision as to supply of Additional Capital.	Method of Division of Surplus Profits between Company and Secretary of State.	(1) Provisions as to, and (2) Date of Termination of, Contract.	Provisions for Acquisition of Line by Secretary of State on Termination of Contract.
SOUTH INDIAN.	24th Nov. 1890 and 21st Dec. 1910.	"Any further moneys which may from time to time be required . . . . . for any other purposes sanctioned by the Secretary of State under this Contract shall, at the option of the Secretary of State, either be provided by him or be raised by the Company in such manner (by the issue, at the option of the Secretary of State, of shares, stock, debenture stock or otherwise), and on such terms as shall be agreed upon between the Secretary of State and the Company." (Clause 42 of Contract dated 24th November 1890 and clause 17 of Contract dated 21st December 1910).	In proportion to the respective shares in which the capital for the time being (excluding debenture capital) has been contributed by them. The Secretary of State's capital is taken at 13,000,000*l.* (as on 31st December 1910), to which is added the amount of his subsequent advances, and the Company's capital at 1,000,000*l.* (clauses 14 and 25 of Contract dated 21st December 1910).	(1) The Secretary of State may, if this Contract shall not have been previously terminated, terminate the same either on the 31st day of December 1945 or on the 31st day of December of any succeeding fifth year by giving to the Company in England not less than 12 calender months' previous notice in writing of the termination of the Contract (clause 90 of Contract dated 24th November 1890 read with clause 29 of Contract dated 21st December 1910). (2) Next date of possible termination 31st December 1945.	The Secretary of State shall pay out of the revenues of India to the Company in London in sterling the amount of the share capital or stock of the Company excluding any sum or sums paid by way of premium (clause 95 of Contract dated 24th November 1890 and clause 32 of Contract dated 21st December 1910).
MADRAS AND SOUTHERN MAHRATTA.	26th June 1908.	"All moneys which may, during the continuance of the original Contract as hereby varied be required for capital expenditure on the Company's and State lines, and on any lines which may be constructed under clause 49 of the original contract,* shall, at the option of the Secretary of State, be provided either by means of advances by the Secretary of State (which the Company shall repay when required by him to do so), or by the issue of debentures or debenture stock of the Company, or by the issue of further capital stock of the Company. All such debentures or debenture stock or capital stock shall be issued subject to such regulations and upon such terms and conditions and at such times and in such manner as the Secretary of State may approve, and as to debentures or debenture stock shall bear interest at such rate as the Secretary of State may approve, and no debentures or debenture stock or capital stock of the Company shall at any time be issued without the previous sanction of the Secretary of State." (Clause 9.) (* 1st June 1882.)	In proportion to the respective shares in which the capital for the time being (excluding debenture capital) has been contributed by them (clause 17 of Contract dated 26th June 1908). The Secretary of State's capital is taken at 11,250,000*l.* (as on 31st December 1907) to which is added the amount of his subsequent advances, and the Company's capital at 5,000,000*l.* (clause 8 of Contract dated 26th June 1908 and clause 1 of Contract dated 16th March 1911).	(1) This Contract may be determined by the Secretary of State on the 31st day of December 1937 or on the 31st day of December in any succeeding fifth year reckoning from that date by giving to the Company in London not less than 12 calendar months' notice in writing of such determination (clause 2 of Contract dated 26th June 1908). (2) Next date of possible termination 31st December 1937.	The Secretary of State shall pay to the Company in London a sum equal to the nominal amount of the capital stock which shall have been issued by the Company at his request or with his sanction, and in respect of which full payment shall have been made to his credit (clause 23 of the Contract dated 26th June 1908).

* Exchange has been taken at Rs. 15 = 1*l.* for the purpose of these tables.

380. You will appreciate that this is, so to speak, a preliminary and informal obtaining of facts for the purpose of taking it out for the benefit of our Indian colleagues when the Committee proper meets?—Certainly.

381. The facts in this paper represent official facts?—Certainly.

382. But so far as the opinions expressed are concerned, they are not?—No, they are the opinions of the writer.

383. You first call attention to the Committee of 1907, which we always know as the Mackay Committee?—Yes.

384. Lord Inchcape was Chairman, and I am afraid that probably we shall not be able to get his evidence?—That is a pity.

385. I do not think it will be possible, but we will see. Sir Walter Lawrence, Sir Felix Schuster, Sir David Barbour and Sir Lionel Abrahams were members of the Committee. The question referred to them was particularly the provision of funds for capital expenditure on Indian railways?—Certainly.

386. There was no question that the amount was less than it was desirable that it should be. That was accepted on all hands, was it not?—Certainly. If the amount obtainable could have been greater, they would have welcomed it.

387. The question really was how much you could obtain and by what methods?—Certainly.

388. This estimate included 750 lakhs to be provided in India?—Yes.

389. Do you want to say anything about that?—No, I have nothing to say about those figures beyond what I have said in the succeeding paragraphs.

390. How are they made up? For instance, do the extraordinary changes in exchange value affect the profits on coinage? Do they effect them at all?—The profits on coinage are dependent on other things besides the actual exchange, in particular on the relation the exchange has to the price at which you can buy the silver.

391. Silver has gone up, we know, from 26 to 56, or something in that proportion?—The real relevance of the coinage profits is explained in the latter part of paragraph 6 of my memorandum, from which you will see that we cannot reckon on getting anything out of coinage profits for the purpose of railway finance.

392. (*Mr. Hiley.*) This source of revenue is now withdrawn?—Yes. Actually one million odd pounds have been found in the past for railway finance from that particular source. It was an operation to which much exception was taken in certain quarters in India, and the idea was dropped some years ago, before the decision to which I refer at the end of paragraph 6 of my note was taken.

393. (*Chairman.*) Shall we get you to give a brief answer upon each of those headings (A) "Revenue Surplus" and so forth?—Certainly.

394. You say that the last year or two showed the contrary of surpluses?—Yes.

395. I suppose we might say that nobody can say the next few years what the position will be?—It is very uncertain, but we do reckon to budget for a surplus in normal times, and barring accidents, such as those due to exchange, famine or military operations, it is a reasonable assumption that there will be a surplus. I do not think it will be safe for the purpose of providing funds for railways to reckon that the surplus will be more than 100 lakhs.

396. May we assume that the railways would get the first call on it?—Yes, in the following way. The surplus will go into the balances of the Government of India, and in so far as they have free balances, it has always been customary to draw on them in order to relieve the strain on the borrowing operations of the Government.

397. You see no reason why that practice should be interfered with?—No.

398–400. Then as regards (B), that we may wipe out?—Yes.

401. Then with regard to (C), "Savings Banks Deposits," you are assuming 300 lakhs?—Yes.

402. There again you see no reason why anybody else should get in front of you to claim it for something else than railways?—No, it should be available for capital purposes.

403. Do you want to say anything on (D), "Rupee Loans"?—Yes, it is a very speculative figure.

404. Probably it is a thing that people in India will have their pulse on more than anybody here?—Yes, they will be in a better position to speak than I am. I can only give such an opinion as I can form on the basis of previous experience and discussion with people familiar with the position in India.

405. Then with regard to (E), "Moiety of Profits on Coinage;" this you agree has gone?—Yes, nothing can be expected from that source.

406. So your estimate of the total annual capital available from India to-day is 1,600 lakhs against 750 lakhs estimated by the Mackay Committee?—Yes, 16 crores.

407. That is on the assumption that your rupee loan can be practically quadrupled, that is, raised from 3·25 to 12?—Yes.

408. Then the expenditure on capital account I will ask you about quite shortly. You have given me the amount spent on railway construction since 1908 up to what we may call the time when India really got into the war as slightly under 10,000,000*l.* per annum?—Yes.

409. Railway construction means additions to open lines and construction of new lines?—Yes.

410. You have been good enough to give me a table dividing those two items?—Yes.

411. And for the information of the Committee I am going to give it. Taking the average for those seven years you say it is nearly 10,000,000*l.*?—Yes.

412. On the construction of new lines the highest figure was 2,830,000*l.*, which is less than one-third of the average expenditure. There were only two other years where it got as high as over 2,000,000*l.*, and in another three years it was under 2,000,000*l.*, and in the last year it was only 900,000*l.*?—In 1914–15.

413. Yes, the last of your seven years?—Yes.

414. To take 1913–14 separately, the expenditure in 1913–14 was over 12,000,000*l.*, but 11,000,000*l.* of it went in improvements of existing roads?—That is so.

415. Your year ends on the 31st March?—Yes.

416. So that in taking 1914–15 it is mainly 1914?—Yes.

417. In 1914–15 the expenditure was 11,400,000*l.*, of which 10,500,000*l.* was on improvements and only 900,000*l.* on new lines?—That is so.

418. I think that is really of great importance, and I am going to ask you to put that table in as an appendix in the shape you have given it. I suppose it does not come before you actually what the rise in wages and prices is in India?—Yes, we have had a good deal of information on that subject.

419. What is your impression, I mean as a generality?—I should say about 100 per cent. since 1914.

420. Not more?—That estimate is based on the index number of the prices of representative articles which we have had from India recently.

421. Is that materials only, or wages and materials?—I am thinking particularly of foodstuffs, and making a rough estimate. The rise in prices in India has not been as steep as it has been in this country.

422. I had an estimate submitted by a very responsible official the other day, compared with a pre-war estimate of a commission made on the best advice, and he said to-day you should multiply the figures by four for the cost of executing that work.

(*Mr. Hiley.*) That includes wages.

(*Chairman.*) The cost of doing the work. It was the question of the construction of the improvement of a certain canal, and the witness said: "The Royal Commission figures in 1907 were 1,300,000*l.* I estimate it will cost four times."

(*Sir Arthur Anderson.*) In India?

423. (*Chairman.*) No, here. India is what I am trying to get. You would say that the corresponding figure for India is not worse than 100 per cent.?—Perhaps I did not express myself clearly. The figure I had in mind was the increased price of representative foodstuffs and other necessaries which enter into the requirements of the ordinary Indian.

424. You are assuming that wages have to go up in that proportion?—I did make an attempt before coming here to gather some information regarding wages especially, but the materials in this office were very defective.

425. Then for the sake of dealing with the question at this moment we may assume at any rate 100 per cent.?—Yes, I think so.

426. Therefore, clearly on these figures we may say that there is no money worth speaking of available for extensions?—I am afraid that is so.

427. Unless there is some reason to suppose that the improvements on the existing roads are complete?—Your conclusion must, I think, be accepted.

428. Half of 900,000*l.* is not worth talking about?—No. Perhaps I might make one qualification here. In India movements in prices are liable to rapid changes from sudden causes. For instance, the war with its demand for labour for Mesopotamia and elsewhere produced a very rapid effect on the labour market, and a shortage of rain will send up the price of foodstuffs very sharply. Just as there is a rapid movement up at one time I think your colleagues would confirm me that in India there are also rapid movements down.

429. The fact you have to contract over long periods in advance for material from England would rather tend to stabilise your material prices?—I should think that would be so.

430. Did the Mackay Commission distinguish at all between new works and betterments?—They recommended that the equipment and improvement of existing lines should take precedence of the construction of new lines.

431. (*Chairman.*) You say the actual expenditure on railway construction in India, taking the exchange at 2*s.*, has been estimated this year at 25,000,000*l.*?—Yes, I obtained that figure by telegraph from India.

432. You say that the bulk of that will have to be devoted to open line works?—Yes.

433. (*Sir Arthur Anderson.*) Is that 25,000,000 10-rupee pounds?—Yes.

434. (*Chairman.*) Taking the exchange at 2*s.*, and you think that the same amount will be required next year?—I see no reason for thinking that a lower figure would be adequate.

435. The Railway Board think it will be for the next few years, and I assume in that they are taking it that the open line works, as you call them, will absorb the bulk of the 25,000,000*l.*?—Undoubtedly.

436. From that you arrive at the fact that somehow the Government, with or without the assistance of private capitalists other than as subscribers to Government loans, will have to find 25,000,000*l.* a year?—Yes.

437. You suggest, taking the rupee at 2*s.*, that 16,000,000*l.* can be provided in India, which leaves 11,000,000*l.* to be provided in England?—I would like to draw attention to the actual words used —"Under accepted methods of finance" we hope to get 16,000,000*l.* in India.

438. That leaves 11,000,000*l.* to be provided, we may say, by private finance either in England or India?—Yes.

439. That would be correct, I think?—Yes.

440. You will not prophesy as to India, I take it?—No, I can only offer an estimate.

441-2. I think I remember that Lord Rothschild and Mr. Daniel, of Messrs. Mullens and Marshall, the Government brokers, gave evidence to the Mackay Commission that probably 10,000,000*l.* was as much as you could raise in London?—I think that was said.

443. Have you any wish to express an opinion as to the possibilities in England to-day?—It is very difficult to express any opinion when conditions are in such a fluid state, but I endeavoured, in writing this note, to take a rather long view of the position from such knowledge as I have and information I have been able to obtain. I think that it is thought, in competent quarters, that present conditions will not go on indefinitely and that we may hope some day for a change to conditions in which Indian loans may again be welcomed. In writing this note I have not had in view this year or the next year, but a long range of time over which the Committee's recommendations will presumably operate, and in that period, I hope, there will arise conditions in which Indian loans will be welcomed and as readily accepted by the investing public as they were in the past.

444. (*Sir Henry Burt.*) In England?—Yes.

445. (*Chairman.*) You have extracted an interesting note from the *Evening Standard*, the effect of which is that the gap which was quite small between the Indian securities and English securities has widened?—Yes.

446. Do you wish to express any opinion upon that? I suppose it is a fact?—It is undoubtedly.

447. We may assume it to be the fact?—Yes. Detailed figures are given in Statement II. of this paper. One must make some allowance for the decreased purchasing power of money so that a 10*s.* gap to-day may mean a purchasing power gap of 5*s.* before the war. That is one point, but the fact that there has been a gap of increasing divergence is notorious, and I think most people would agree that to some extent the decline in the popularity of Indian investments has been due to a certain amount of apprehension on the part of investors as stated in this extract. I hope this is a passing phase.

448-9. It is an allowance, in the phrase in the note, for the theoretical investment risks of the two securities, which the writer thinks is a more than generous allowance?—Yes, and I may say that I agree with his opinion.

450. Can you tell us what is the total debt of the Government of India to-day?—On 31st March 1920 the total debt of India, including short-term debt, was somewhat in excess of 400,000,000*l.*, of which the sterling debt was about 170,000,000*l.*

451. The total is trifling compared to the resources?—The total unproductive debt was formerly very small, but owing to India's contribution to the war, this portion of the debt has risen substantially in the last few years, and on the

31st March 1920 stood at about 100,000,000*l.* These figures include Treasury Bills and short-term bonds. The debt figure includes the productive debt of about 300,000,000*l.*, which represents the capital which the Government has invested in its railways and canals.

452. Paying a high rate of interest?—Yes.

453. Then you deal with the question of the liabilities of the Indian Guaranteed Companies, showing that it is a total of 65,000,000*l.*, and I think your Statement V. divides it up into detail?—Yes. In the latter part of paragraph 10 reference is made to the fact that "existing capital to the "nominal value of 65,000,000*l.* has been raised "by the Guaranteed Railway Companies taken "together."

454. 65,000,000*l.*, of which more than half, nearly two-thirds, is debentures of some kind. Is there any importance in distinguishing between debentures and debenture stock?—The debentures are bonds of short currency, which may or may not be renewed by the Secretary of State. They are at present mostly two-year bonds, but the debenture stock is practically all irredeemable.

455. The debentures are short-term notes, as the Americans would call them?—Yes, most of them now are for two years, maturing over a period of time to suit our convenience, but the debenture stock is practically entirely irredeemable.

456. Entirely irredeemable—it is perpetual?—Yes.

457. That is quite important, I think?

458. (*Mr. Tuke.*) I take it at the option of the Government?—Certainly.

459. (*Chairman.*) I suppose the Government can redeem it at par?—Except in case of 3,500,000*l.* 4½ per cent. debenture stock issued by the East Indian Railway Company in 1915, the stockholders cannot claim redemption. The Government has the right at certain periods to pay off.

460. At par?—Yes.

461. It is not likely to be exercised at present?—No.

462. You said the debentures are short currency?—Yes.

463. And the Secretary of State could redeem?—The debentures must be met at maturity unless the holders are willing to accept the terms which the Secretary of State may offer for their renewal.

464. He could pay off?—Yes, they mature periodically. He either pays off or renews them.

465. I observe that some are 5 per cent., or one of them at least, and others 4¾ per cent.?—Since these tables were prepared we have had to renew debentures with a running rate of interest of 6½ per cent. Statement V. only runs up to March last.

466. It is fairly clear that these are two years' debentures, and they are all nearly under 5 per cent., none over. The interest on those would be quite considerably higher as they get renewed?—Certainly, under present conditions.

467. The share capital shows something over 24½ million pounds. Is that the original capital as from the date of the current contracts?—I think I am correct in saying that in none of the cases mentioned has the profit-sharing capital been increased since the constitution of the several Companies under their latest contracts.

468. The East Indian, for example, under the new five years' contract, presumably just retains its old capital?—Yes.

469. It was not worth talking about for five years?—That is so.

470. Frankly, I do not understand this point which Sir Arthur Anderson calls attention to. What is the difference between a deferred annuity and an ordinary share—is it not the case that the deferred annuity is pushed aside for the time and the amount of it is treated as the share capital as long as the Company continues working under the contract?—Yes, that amount was the capitalised value of a certain amount of annuity that was deferred, and the amount of the annuity that was deferred became the profit-sharing capital of the Company as constituted under their contract.

471. So that the owner of any portion of this 6,550,000*l.* has not the certificate of an ordinary share, but the certificate of a deferred annuity. Is that what it would be?—That is a technical point upon which I should prefer not to offer an opinion, but the position is that while the East Indian Railway Company endures he is the holder of a certain amount of profit-sharing capital.

(*Mr. Tuke.*) There are different kinds of annuities.

(*Chairman.*) Yes, I know there are many.

(*Mr. Tuke.*) Some have sinking funds, and some are wasting annuities.

472. (*Chairman.*) Yes, I know that is so. None of those are in here?—The position may be stated in this way. When the contract of purchase was made the investors whose interests were bought out were to be paid off by annuities, but a certain amount of that annuity was deferred and has been represented to date by a capitalised value, 6,550,000*l.* When the Company ceases to exist as a company those people whose annuities were deferred will revert to the position of annuitants, and the 6,550,000*l.* will disappear as an operative figure. They will become entitled to receive annuities instead.

473. As Mr. Tuke says, there are a number of annuities quoted on the Stock Exchange?—That is so.

474. They are people who are wiped out as far as anything to do with the railways is concerned. They are mere annuitants?—Yes, that is so.

475. Whose interest is charged on the revenues, of course?—The Secretary of State has to meet the annuities.

476. He has to meet them?—Yes.

477. He claims from the Indian Railways the money to meet them?—They are charged on the revenues of India as a whole, of which the railway revenue forms a part.

478. We have to appreciate this, I think, that the railway capital, the railway revenue and the railway expenses are all integral parts of the capital debt, the revenue and the expenses respectively of the Government of India as a whole?—Yes.

479. There is no separate railway budget? Am I right in thinking that the money received from rates and fares is paid over to the Government?—It will pass through the Government accounts. It passes into the account as a receipt of the Government.

480. Payment of the stationmaster's wages is expenditure of the Government as a Government?—I do not know the machinery, whether they use the money they take in the station to pay the station clerks.

481. It appears as expenditure?—Ultimately it is incorporated entirely with the Government's accounts.

(*Sir Henry Burt.*) They have to be paid into the Government Treasury?

(*Chairman.*) Even the private unguaranteed railways?

(*Sir Henry Burt.*) They are all paid into the Government Treasury.

(*Sir Arthur Anderson.*) That is a convenience I suppose?

482. (*Chairman.*) Do you care to express an opinion upon that?—It seems to be a matter of administrative convenience.

483. (*Sir Arthur Anderson.*) With regard to these annuities, there is a portion of the East Indian annuities that has an interest in the working of the line?—Those are the people whose annuity is deferred and who form what one describes in other Companies as the ordinary stockholders of the Company.

484. That interest would cease if the contract comes to an end. It would be continued as an ordinary annuity?—That is so.

485. (*Mr. Hiley.*) Now they share in the extra profits?—Yes.

486. (*Chairman.*) They will relapse from 7 per cent., or whatever it is, to $3\frac{1}{2}$ per cent.?—$4\frac{1}{2}$ per cent.

(*Chairman.*) Whatever the guarantee is.

487. (*Sir Henry Burt.*) My impression is that the deferred annuitants who form the shareholders of the East Indian Railway did not change their status. They were still annuitants except that their interest, instead of being, as it was previously, guaranteed at $4\frac{1}{2}$ per cent., was lowered to 4 per cent., and then they get beyond that their share of the surplus profits?—That is so.

488. (*Chairman.*) On an estimated capital which was estimated by capitalising their annuity?—Yes.

489. How were these share capitals fixed? Take, for instance, the Bombay, Baroda; has not that passed away from the original contract? Is not that a renewed contract?

489A. (*Sir Henry Burt.*) It is renewed?—May I refer you to Statement IV, under column 2. It gives a general idea of how that particular case is worked out. There is a brief summary there of the contract of October 1913 as to the Bombay, Baroda.

490. (*Chairman.*) I do not think that deals with my question, if you will forgive me saying so. The point I am upon is this. The Bombay, Baroda was constructed under a contract we will suppose dating from somewhere about 1850 or 1860?—Some date in the remote past.

491. At the end of 50 years it passed into the possession of the State?—The Secretary of State exercised his option to purchase.

492. His power to purchase?—Yes.

493. How is it that there is a profit-sharing capital in that case instead of deferred annuitants, as in the case of the East Indian? That is the question I want to put to you?—I can give my answer by a general example as to how a railway is dealt with when its contract expires. You will understand that the sum required for purchase can be paid either in the form of annuities or as cash down. Assume at a particular moment there is a Railway Company of which the private shareholders hold 1,000,000*l.* of capital, when its contract comes to an end. The method of dealing with it would be this. Assume we wish to renew the contract with the Company, one would discover what the net earnings of that line are and make an estimate of what they are likely to be in the future. Assuming the rate of interest to be provided was to be 4 per cent., one would multiply the net earnings by 25 and thus get a certain figure, say the figure might be 60,000,000*l.*, which would form the assumed capital of the Company. Then one would say that in future 1,000,000*l.* of this shall be the Company's share, and the Secretary of State shall have 59,000,000*l.* as his share. The Secretary of State shall get $\frac{59}{60}$ths of the surplus profits and the Company one-sixtieth. A guaranteed rate of interest would be prescribed according to the monetary conditions prevailing at the time and taking into account the estimate of profit-earning possibilities.

494. The only thing you leave out there is how do you ascertain the proportion of interest, you see the sense in which I am using the word interest, of the Secretary of State and the shareholders respectively?—Having capitalised the line.

495. As a whole?—Say you want to make it produce 5 per cent. return; then you capitalise it by multiplying the net earnings by 20. You might, in order to keep the Company secure of a certain amount, make a guarantee of $3\frac{1}{2}$ or 4 per cent. Suppose the capitalised result was 60,000,000*l.*, then the Company, on the assumption that the private stockholders' capital was 1,000,000*l.*, would be entitled to one-sixtieth of the surplus profits and the Secretary of State to fifty-nine-sixtieths.

496. I do not follow on what basis you give one-sixtieth? Why not one-hundredth or some other figure?—You would, in the hypothetical case taken for illustration, have assumed that on the basis of the net earnings the capitalised value of the undertaking was 60,000,000*l.*

497. That is so?—The Company would have actually put in 1,000,000*l.* of capital and you would then assume that the Secretary of State had put in the balance, viz., 59,000,000*l.* He may have put in 30,000,000*l.* or 40,000,000*l.* and the line might have been extremely productive, but for the purpose of dividing surplus profits under the new contract, you assume that his interest is 59,000,000*l.* and the Company's 1,000,000*l.*

498. In the case of the Bombay, Baroda the 2,000,000*l.* figure is presumably the survival of what its old capital was?—The 2,000,000*l.* was the portion of the purchase price of about 11,000,000*l.* which was left invested in the undertaking.

499–501. (*Sir Arthur Anderson.*) The effect of these conditions is that the interest of the Government and the working company are the same?—In proportion to their capital.

502. One draws 5 per cent. and the other draws 5 per cent.?—Yes.

503. If one draws $5\frac{1}{2}$ per cent. the other draws $5\frac{1}{2}$ per cent.?—Yes, except in the case of a Company that does not earn its guaranteed interest.

504. Where there are no surplus profits?—Certainly.

505. (*Chairman.*) The question I was going to put was this. The assumption at the end of the period is that the Secretary of State has the power to buy at 25 years and he does buy?—Yes.

506. At the end of the period the Company, if it is allowed to carry on, has no goodwill whatever?—No.

507. The whole of the goodwill is surrendered as soon as the Secretary of State buys. He takes the whole of the goodwill?—Yes. That is a most important point, and I am glad to have an opportunity of emphasizing it. Under the most recent form of contract the Secretary of State has the option to repay, but the Company has not the option of demanding; therefore, if conditions work out adversely to the Companies the Secretary of State would not, so far as financial considerations go, buy them out. He would leave them alone to continue their work as we have done in the case of the Assam-Bengal Railway Company, mentioned in paragraph 12 of my note, which does not get any surplus profits. If we terminated that contract, if we were unwise enough to do so, we should have to pay off a stock valued in the market at 40*l.* at par.

508. You are looking at this from the point of view of the Secretary of State?—Yes. An important consideration from his point of view is that he

should not be under an obligation to repay the private capital in a line at a fixed date. Compulsory repayment might conceivably be a very inconvenient liability, and it is to be remarked that such repayment entails a heavy demand on the capital resources available for railway construction.

509. The point that is clear is that in the case of the old Companies who would say—we need not discuss whether accurately—that they bore the burden of the heat of the day and developed the traffic, and at the end of 25 years you took it from them and claimed the whole of the goodwill for the State.

(*Sir Arthur Anderson.*) And revalue it at its increased earning power.

510. (*Chairman.*) That is, you have taken the whole of the goodwill for the State. Secondly, in the revised contracts you not only claim this, but you say, "Heads we win, tails you lose, if not, "we will let you wait with nothing but your "guaranteed interest." Is that right?—That is a broad and general way of looking at it.

511. That is how the City investors presumably would look at it?—Possibly.

512. It is not disputed that that is the bargain that is offered to an English investor.

(*Sir Arthur Anderson.*) It is rather worse, because the earnings of the line which presumably have increased during the currency of the original contract are taken at the end of the period and the line is capitalised on a 4 per cent. basis, or it has been in the past. It is on that basis that new capital is fixed.

(*Chairman.*) That is what I call goodwill. You capitalise goodwill in effect. Have I put it fairly, Mr. Tuke?

(*Mr. Tuke.*) I agree.

513. (*Chairman.*) That will be a large part of the case that I suppose the Directors will make?—I think they have always recognised that risk when they enter into these contracts. The India Office has to remember the point of view of the taxpayer. After all, the Secretary of State, who puts up the bulk of the capital, has to protect the taxpayers' interest, and if the Railway Companies are prepared to accept these terms it is their business.

514. I am not expressing any opinion that it is unwise, I am only trying to see how it would strike the investor?—Quite so.

515. The only profit in it is the difference between the guarantee and the surplus profits which last for a few years, 25 or something of that sort?—Yes.

516. Which *ex hypothesi* will be very small at the beginning?—Which may be small at first unless there is an unusually rapid traffic development.

517. *Ex hypothesi* it will normally be small? Yes, at first.

518. It may run up to 3 or 4 per cent. at the end, or it may not?—Quite so, and is liable to any of the accidents that may upset railway finance.

519. The only thing he can rely on is his $3\frac{1}{2}$ or 4 per cent. guarantee?—Yes.

520. Are there any cases in which the railways who receive notice to terminate their contracts have declined to negotiate for a new one or where negotiations for a new one broke down?—The only case of the kind I can recollect is that of the Indian Midland a few years ago. In that case the negotiations for a continuation or renewal of the contract failed to mature and the shareholders were paid off by the Secretary of State.

521. I think Mr. Stantiall this morning gave us somewhat analogous cases on lines that the Government had bought themselves and that they tried to lease. Was it the Rohilkund and Kumaon?—The Oudh and Rohilkund and the Eastern Bengal.

522. The Government tried to lease to a Company and they could not find the Company to take it.

523. (*Sir Henry Burt.*) On the terms offered?—Yes.

(*Sir Henry Burt.*) I think it may be said that in addition to the disadvantages which the shareholder suffers, as put by the Chairman, there is the additional disadvantage that his property is not properly developed for want of funds. Do you think that is fair? He does not get sufficient capital from the Government to develop his property under the financial arrangements of the contract.

(*Mr. Hiley.*) He always has the option of declining if he does not like the terms.

524. (*Chairman.*) We are assuming a case where, after he has taken it, it cannot be developed to a higher degree because the capital cannot be raised. We may carry that a stage further?—The suggestion being that if the Company could go to the market and offer, say, 8 per cent. cumulative preference shares it would get the money.

525. Calculating that it would gain more than 8 per cent. on it?—Yes.

526. Is it a fact that a Company is not allowed to raise capital? The Secretary of State has, I believe, in some cases at least, refused to allow a Company to raise the capital for improvements that it had asked to be allowed to raise?—All raising of capital by guaranteed Companies has to be on terms subject to the approval of the Secretary of State.

527. (*Sir Arthur Anderson.*) In practice a Company has never increased its share capital after its first inception?—Not as far as I recollect. Since the latest contracts there has not been any increase.

528. The Secretary of State makes advances from time to time. I see a case here where 2,000,000*l.* borrowed at $3\frac{1}{4}$ per cent. has been transferred as capital of the undertaking?—That, no doubt, has now been incorporated in the capitalised value of the Secretary of State's share in the Company as determined under the latest contract.

529. In this particular case the Secretary of State had originally 11,500,000*l.* That is now apparently about 13,000,000*l.* or 14,000,000*l.* share capital?—Yes.

530. So that he borrowed at $3\frac{1}{2}$, puts it into the development of the system and gets 9 or 10 back which is denied to the shareholders?—Yes, if they wish to increase their profit-sharing interest they must issue further profit-sharing capital and put it in. That has never yet occurred.

531. That has never been allowed?—No.

532. (*Chairman.*) You have given us here a statement that 40,000,000*l.* odd have been raised by the Companies as debentures or debenture stock. The short-term debentures clearly are issued from time to time, but do the Companies continue to issue debenture stock?—The Secretary of State calls upon them to issue debenture stock as it suits his requirements. The Companies do not themselves initiate the issues of debenture stock on their own. When they issue such debenture stock the proceeds are paid to the Secretary of State and form part of the fund available for the use of all the Railway Companies. Such money, although it may be raised through the stock of the particular Company, is not earmarked for that Company.

533. Do you mean to say that the Secretary of State can say to the South Indian Railway "You are to raise *x* million pounds of debenture stock," and

then spend it on the Assam Railway?—If the Company is not in debt to the Secretary of State, he would pay them interest on the extent to which he is obtaining funds upon which they have to pay interest without enjoying their use.

534. I understand that all the debentures are guaranteed by the State, are they not?—The interest on debenture stock and the debentures are guaranteed by the Secretary of State.

535. In effect it is guaranteed, whether it is formally or not—if you guarantee the ordinary stock the ordinary stockholder must pay the debenture holder before he can take anything?—Yes.

536. But it is formally guaranteed?—Certainly, it is a trustee security.

537. I am right in saying that he can use the South Indian Railway as a mere conduit pipe to convey debenture money for use in Eastern Bengal. I am not asking whether he does or not?—Theoretically he could do that. He might have to pay the Company interest in the contingency mentioned above.

538. I follow that?—Not only in the sense of guarantee, but he would make a payment to the Company from general revenues in consideration of the fact they were having to pay interest on debenture stock issued to raise funds of which they had not had the use.

539. Suppose the amount of the payment the South Indian had to make was 100,000*l.*, would he pay them more than 100,000*l.*?—The rate he pays the Company would be dependent either on market conditions or the terms laid down in their contract.

540. Suppose they borrow on debentures an amount of money that implies an annual service for the debentures of 100,000*l.*, he will pay that 100,000*l.*?—That is the idea of it probably.

541. Does he pay them for the use of their office and the trouble?—That comes out of working expenses?—That comes out of working expenses. It is necessary to add that in most of these cases the Railway Companies are already heavily overdrawn on the Secretary of State. When they raise a loan of this sort, the effect is to cancel a previous debt of their own.

542. He does it at his time; he initiates and not they?—Certainly.

543. (*Sir Arthur Anderson.*) It is the Government loan under another name?—It is a different form of appealing to the City adopted for various reasons. I should like at this point to get on the record the reason for adopting this method of finance. It is suggested that this issue of debenture stock through railway companies is merely an alternative to Government borrowing. That is so in a sense, but the adoption of this method has certain advantages. Experience has shown that the amount of India stock (which is the only direct stock that is issued by the Secretary of State) that the market will absorb at one time is limited. We often have to borrow a considerable amount in the course of the year, and if we had to rely entirely on India stock it might mean two issues in the course of one year. Assuming that two issues of the same stock in the course of one year are undesirable we might have to make unwieldy large single issues. The adoption of the Railway Companies as a means of borrowing enables us to place on the market a security of a different type. The yield is slightly higher than on India stock, and it has another advantage to which importance is attached in the City, namely, that the railway debenture stock is by its name shown to be required for productive purposes. The issue of India stock does not bear that on its face. Some investors attach importance to the fact, especially in these days of heavy unproductive Government expenditure, that the loan should be earmarked for productive purposes and should bear evidence of this in its description.

544. They have tangible assets instead of credit of the Government?—The credit of the Government comes behind the tangible assets in both cases. There is not much in it from the point of view of security, but some investors do attach importance to the fact that the money is earmarked for a railway purpose.

545. Do you know whether the debenture gives an enforceable charge on anything corresponding to the putting in of a receiver?—Happily, that has not ever arisen as a practical point.

546. You do not know whether theoretically there is?—No, before that would occur the general revenues of India would be called into play.

547. I understand that, but the decision then really is this, that, so to speak, the East Indian Railway puts its name on a bill which is drawn on the Indian Government?—That is very largely it.

548. It does not add much to the credit of the Indian Government, but the Company does put its name on the bill, and does not get a commission for doing so?—No.

549. You laid stress on the point of the double method of borrowing. Has the question of making the railways purely separate from the Government, as is done, for instance, in the case of the Swiss Railways, ever been raised?—I think it was discussed before the Mackay Committee. It has been raised at various times, but it has always been rejected because the railway accounts are so entirely mixed up with the Government accounts, and railway revenue forms a definite portion of the necessary revenue of the Government of India. The budgetting for railway capital expenditure shows the close connection between railway finance and general finance, because in the past a large part of the money available for expenditure on Indian railways has been found from Government balances which have at times been swollen to large figures by abnormal causes, such as exceptional receipts from opium.

550. Do you care to say anything about the much-discussed question of the great disadvantage of the dependence of the railways on the fluctuation of general Indian finance? I do not know whether you wish to say anything about it, but it is a thing that we shall hear a great deal about obviously?—So long as the railways are mainly dependent on the State for the provision of funds I feel that in this respect it is very difficult to get away from the considerations that have determined policy in the past. Moreover, so long as Government finance depends largely on the growth of railway revenue, it would be difficult to dissociate railway accounts from the general revenue accounts.

551. Let us understand what that means. Is your point that the omelette has been mixed and it is very difficult to unscramble it, or are you dealing with the future?—I am considering the future, which, as far as I can envisage it, will stil find railway and Government finance in close relationship.

552. Do you think that there would be no serious difficulty in setting out a balance-sheet of debtor and creditor as between the Government and the railways at the present moment, starting it afresh? Would there be any practical difficulty in doing that? I am not discussing terms. For the sake of argument you can imagine a new railway budget in which the railways undertake to pay 6 per cent. on the money supplied by the Government?—I can imagine that being done.

553. So that the Government *qua* Government would not lose. Leaving that out, would there be any difficulty in setting up an account that cleared it up?—I am inclined to think there would be, because the transactions of the past are exceedingly complicated. The conditions under which the purchase of lines has been undertaken and the expenditure on meeting capital charges entailed by purchase which are not shown in these figures, would introduce serious complication.

554. Of course, that is a kind of thing that, if it were an arbitration between two people at arm's length, might be exceedingly complicated and difficult; but assuming that the Railway Board, if it were to become independent, was really the Government of India under another aspect, it would be a perfectly friendly arbitration. There would be no reason why either side should desire to be unfair to the other?—I imagine it would be possible to produce some sort of figures.

555. Suppose, for the sake of argument, that this were done, how would a separate railway undertaking with a capital of, say, 300 million pounds showing a return of 8 per cent. for the current year—how would an entity of that kind be able to finance itself?—The Government of India rely on the railway revenue for their general purposes to a large extent.

556. Assume a settlement made by which it was recognised to be fair that although the Government had supplied the money in the past at $3\frac{1}{2}$ per cent., for years past it had been getting 5, and therefore the Railway Board's debt to the Government should be recognised as a 5 or 6 per cent. debt—assume that, I am concerned with the question, how would the Railway Board be able to deal with its finance itself? It wants millions of money for new loans?—I do not think it will be in as favourable a position for finance as it is at present. Parliament has recognised the securities guaranteed by the Secretary of State as trustee securities. They probably would not at once be willing to recognise as such securities of the Indian Railway Board.

557. (*Sir Arthur Anderson.*) Guaranteed on the securities of the properties?—They would not be regarded as trustee securities under the existing Trustee Act.

558. (*Chairman.*) There are no securities outside the British Isles recognised as trustee securities except certain Government securities. That is the present position?—I think so. It is a great thing for the Indian railway securities to be trustee securities; it enables them to appeal to a certain class of investor, and also to get their money on cheaper terms than they otherwise could.

559. Have you any idea what the difference is? What is the difference between an Argentine railway, a first mortgage of the Buenos Aires Great Southern Railway and an Australian loan?—I cannot say.

560. That is a real point?—It is a very important point.

561. Now about whether the Indian Railway Board could finance as easily as the Secretary of State with the two strings to his bow?—I feel that this point about trustee securities is of the greatest importance in considering the whole question of Indian railway finance. These securities that are issued here by the guaranteed sterling Companies are able to be reckoned as trustee securities because they are guaranteed by the Secretary of State. The position of such securities would be altered at once if the management were not under the control and in direct touch with the Secretary of State.

562. Not necessarily, I think. For instance, is not there a Turkish tribute loan? That is a trustee security because guaranteed by the English Government?—If so, it is guaranteed at the expense of the British taxpayer. The guarantee of the Indian taxpayer can only be properly given by the authority who controls Indian policy in its widest sense.

563. (*Sir Arthur Anderson.*) In the case of new capital, could not that be guaranteed in the same way as the old?—Guaranteed by the Secretary of State?

564. Yes?—But I think people in London who lend money for Indian purposes like to feel that the authority to whom they lend that money has also some control over the way the money is spent and the way in which the undertakings in which it is, are run. Similar considerations are also of importance to the authority who gives the guarantee.

565. (*Chairman.*) This guarantee is the Secretary of State in respect of the Government of India?—Yes.

566-7. The English Government does not guarantee?—No.

568. You do not care to express an opinion how far such a pre-eminently Indian security would appeal to the Indian?—If you imagine the Railway Board issuing rupee securities or sterling securities?

569. Both. You have told us what you think about London?—Yes.

570. Have you any view as to how it would affect India?—It is very desirable to devise fresh methods for issuing rupee securities in India with a view to raising funds for railway purposes. I think one of the most important tasks before this Committee is to explore the possible means of increasing the various channels for getting money in India.

571. Let us carry that a little further. Two channels would be either the existing method of issuing a rupee loan in India?—Yes.

572. Or of issuing rupee capital, whether shares or debentures, for the individual railways?—Yes. It is worth while to complete the story. The terms for the construction of branch and feeder lines already make some provision for getting money for railway purposes in India.

573. They are comparatively small in money?—Yes.

574. The suggestion of a Railway Board with a general stock secured on the whole Indian system would be a third method?—Yes. The rights and privileges of existing stockholders would, of course, have to be carefully considered. I suppose such a security would be issued in India?

575. Available in India?—Yes. On that it is important to say that the Government of India are faced with growing charges in future and rely in part on a growing railway revenue. Therefore, the fixed guarantee that was suggested of, say, 7 or 8 per cent. on the amount of capital invested, would not suit the Government of India at all. They hope to get a continuously rising revenue from the railway just as they do in this country from income tax.

576. Have you ever heard of a railway when it was earning 8 per cent. which was allowed to devote its further profits to dividends instead of putting them into the road in some way? I suggest to you that you will find that a railway stands to be shot at, and if it is earning 8 per cent. the pressure that it shall improve its services or reduce its rates is so great in every country that in fact they never can increase. I doubt whether the Indian Government can safely rely on that source of revenue.

577. (*Sir Arthur Anderson.*) In the Canadian Pacific it goes up to 10 per cent.?—There may be a limit to the amount the Government can get out

of the railways. But it is fair to say that they have had in past years an increasing amount from the railway revenue. I took out some figures from the Railway Report, and in 1914–15 the percentage of net earnings to total capital outlay was 5·33, and in 1918–19, 8·09 per cent. The Government hopes to get a growing increase.

578. It is the fact that the Indian Government relies on its railway earnings; in fact, it depends on the railway budget for its balances. It is that fact that has led railways into the difficult position they have been in for securing funds?—It is only one element in the sources of Indian revenue, which comprise land revenue, customs, income tax and other heads, but it is a very important receipt.

579. It is a very important item?—Yes.

580. (*Mr. Hiley.*) The land receipt depends on the extension of the railways?—Yes. Most sources of revenue benefit, I think, from improved communications.

581. (*Chairman.*) I do not think you have given any figures about the branch railways?—I have mentioned in paragraph 11 the amount that was actually raised up to 31st March 1919, viz., 10 crores of rupees.

582. That is not related to any miles of railway?—No.

583. Mr. Stantiall will give that?—Yes, that is more in his line of country than mine.

584. Have you any suggestions? I think the Committee obviously agree with you that it would be very valuable if you can suggest methods of raising money in India?—Nothing I can suggest will be particularly new. I think the idea of getting subsidiary work done by special Companies created in India is worth pursuing. A case that occurred the other day was the electrification of certain lines in India. I believe the Company has already made its arrangements for this. I happened to see the chairman, and said that I thought that class of work would be suitable for a separate Company, who would put up a power-house and supply electric power and relieve funds in that way. I think that kind of enterprise and any other subsidiary work connected with the manufacture of rolling stock might also be developed on independent lines.

585. That is to say, if the railways cannot get enough money it is desirable to keep them as strictly as possible to pure railway business?—I think it would be a good thing to do.

586. To take the side shows off their shoulders?—Yes, that is one suggestion worth exploring.

587. That will not touch the question of the building of new lines?—For that, I think, the branch line terms require revision in the light of the changed monetary position. Guarantees of 3½ per cent. to 5 per cent. are not going to appeal greatly to the Indian investor who has competing channels for investing his money.

588. What would they be? Would they be subordinate Companies or small nominal Indian Companies, being really controlled by the parent English Company?—I speak with diffidence in front of your colleagues with so much greater knowledge of Indian conditions. But if it is true, as people have said, that India could profitably double the amount of line mileage it has, I suggest that there must be room for both new Companies and for subsidiary Companies working in close association or affiliation with the parent Company. I think both these avenues ought to be explored.

589. (*Sir Arthur Anderson.*) Branch line terms are not suitable for main lines?—I should like to see an Indian guaranteed Company raising its capital in India to build a main line.

590. (*Chairman.*) Do you think a country that has only 35,000 miles of lines wants more than 10 main line Companies? Is it desirable to get new ones?—When one looks at the map one sees enormous tracts that appear to be quite undeveloped from a railway point of view. But it may be that for geographical or other reasons it would be better in most cases to employ existing companies than to create new ones.

591. Do you think it desirable to start a new Company to do it?—I should have thought, having regard to the enormous size of India and the length of some of the lines, that there was room for some new enterprise, but I do not offer any strong opinion in view of your greater knowledge of these things.

592. After all, nowadays two or three thousand miles of line is a small concern?—Yes. But I think it would be attractive from the point of view of capital raising if you could produce one or two new lines to call for money as well as attempting to raise it through existing companies.

593. A new Indian Company, and see what they would make of it?—There would be attractions from the point of view of the investor. One ought not to be afraid to give the investors in such a line a handsome return on their money. To encourage the investment of Indian capital in railways it will be necessary at first to hold out the prospect of good yields, just as was the case with investors in this country. When the Government of India first attracted British capital to India the guarantee was 5 per cent., and later on it was reduced to 3½ per cent. It would be a mistake to be too cheeseparing in the return to the investor if the attempt is to have a fair chance of success.

594. Would you do it always? You have said more generous terms, and there are at least three ways: a higher guarantee, a larger participation in profits, possibly a longer tenure and a share of the goodwill at the end. Would you give more generous terms in all or in some respects?—Sometimes the investor does get with these minor lines a share in the goodwill at the end, because the terms of purchase give back more than the actual capital.

595. (*Sir Henry Burt.*) 25 per cent. extra?—Yes.

596. (*Chairman.*) You would be inclined to be generous on all points?—I should certainly in trying to start a new policy of attracting money in India.

597. How far would you carry it? What kind of limit in your mind would you put?—Do you mean as regards the currency of such contracts?

598. No, as regards the generosity of the terms. Undoubtedly you can attract capital at a price, but it might be too much to pay?—I think you must ensure that the line is going to be a paying one when it is developed. I would not have subsidized railways to the extent of inviting capital from the Indian public, carrying a high rate of interest and running the railway at a loss. That I would not tolerate.

599. We need not translate it into money figures because nobody knows what the price of money will be. Your view would be that if you saw the prospect of earning interest on their guarantee, however high a figure it was fixed at, at the end of five years, you would be satisfied?—I should be inclined to think so.

600. You would not do it unless something like that was in fair prospect?—No, I attach the greatest importance to preserving the railways as a productive asset, and no terms which would lead to them becoming unproductive ought to be entertained. Rates and fares ought to be on a remunerative basis, and if necessary should be raised so as to cover increased working costs and capital charges

601. To put it in another way round, the indirect return on railways is no doubt large, but you cannot afford to live on it?—No.

602. (*Mr. Hiley.*) You would give a Government guarantee in that case?—Yes.

603-4. Because you got it cheaper in that way?—Up to a certain amount and hold out considerable profit-earning potentialities if the line proves a success. I think that is of the greatest importance.

(*Sir Henry Burt.*) He would give a firm guarantee and would look to the profits of the railway for paying the guarantee within a certain period.

605. (*Chairman.*) Would you be prepared to give the same terms to an English investor, whatever they be, or would you give preferential terms to Indian capital?—I would frame these terms to attract Indian capital. There is nothing to prevent a British investor remitting funds to India, and investing it in such concerns. But I would not offer special facilities to attract British capital into concerns of that sort; I would leave it open to anyone who wished to send his capital to do so.

606. (*Sir Arthur Anderson.*) Does that apply to a proposal such as that put forward by the Railway Board wherein they suggest Indian Companies affiliated with the existing main line Companies and propose that the existing Companies allow the new rupee capital to rank with the old and thus enable the native investor to see what he had looked forward to from the beginning?—Yes.

607. (*Mr. Hiley.*) Would this method of raising money with a guarantee from the Government not conflict with your present system of borrowing for a common railway purse? Here you would have a new railway raising money for its own benefit pure and simple and getting preference over railways who raise money which goes into the common fund?—In this case the first issue of capital presumably would be the share capital of the Railway Company, which would properly go into the construction of the line. If that Company made issues of separate capital in India for its own constructional purposes, to give the scheme a working chance you must enable a company to use money for its own purposes, at any rate in the initial stages. I think the contracts should provide for that. It is most important, both on economic and political grounds, that some method of enabling Indians to participate freely in railway finance should be found. The economic and industrial development of India is regarded by many as one of the most important problems of the day, and in this development the railways can play a very valuable part. It is for this, among other, reasons, that I have laid stress in my note on the urgency of maintaining and developing all the available means of raising capital both in England and in India.

608. I rather gather from what you said that you did not see any great objection to any individual Railway Company raising funds in India on a guarantee from the State for present lines, for instance, the equipment of the line with additional rolling stock?—Are you referring to an existing Company?

609. Yes?—I see no objection in principle to a sterling Company raising rupee capital in India, but a grave difficulty presents itself under present conditions owing to the British income tax provisions. We have been advised that the interest on rupee capital payable to Indian investors would be liable to both British and Indian income tax.

610. If resident in India, a nominal Indian Company?—If a separate Company were formed in India then the position would depend on the form of relationship of the two Companies. I imagine that it would not be difficult to devise a scheme under which Indian stockholders in an affiliated Company domiciled in India were not liable to British income tax.

611. (*Chairman.*) The Treasury would have a good try to bring them in. They have caught a good many who thought they were out. Have you any views as to the importance of the proportion of the total capital that belongs to the Company? Questions are being raised that it is not right to entrust the management to the people that own only one twenty-fifth, or whatever the fraction be, of the capital?—I would say that that kind of statement which is made in certain quarters does not take full account of the facts. It has to be remembered that the sterling Companies are under control, not only of the Indian Legislature by the Indian Railway Act, but also under the control of the Indian Railway Board; and furthermore, under the control which is established by their contracts. It is not a case that people with only one-fiftieth part of the interest in the line are managing the line according to their own sweet will.

612. That is true, but with respect I do not think that quite touches the point, because so far as they are uncontrolled they do manage. How far that is we need not discuss, but so far as they are uncontrolled they manage. Is a one-twenty-fifth part less likely to make you do your best than a one-tenth or a one-fifth?—I do not think the past history of the guaranteed Companies suggests that they do otherwise than their best to make the lines as remunerative and efficient as possible. I do not think that the conduct of the lines suffers from that particular element in their constitution.

613. I think as you represent the Finance Department I should like to know what you say about a point that has been brought to our notice this morning. As we understand it, all receipts and expenditure are vouched in India, and are audited by Government officials?—Receipts and expenditure are brought to account and audited by the Companies' staff. But an officer of the Indian Finance Department acts as Government Examiner and applies a test audit on behalf of Government.

614. All receipts and expenditure here are audited by the Government officials, namely, I believe this Office?—Yes, by an officer of the Accountant-General's Department. The Accountant-General at the India Office forwards the English figures to the Railway Board in India.

615. It is only by the Company and never by the Government that the two sets of accounts here and at home, and the disposition of the balance and so forth, is brought into single focus on a balance-sheet?—Do you mean that the Indian and the British portion of the Company's accounts are not combined except under the Company's supervision?

616. That is so?—Both estimates and accounts as combined come under the scrutiny of the Accountant-General for Railways and the Railway Board. The Comptroller and Auditor-General, moreover, includes the results in the final Government accounts.

617-9. Is there anything else you want to say? Has there been any suggestion of proposals for amalgamation of the Companies? I am not speaking of the things the Government puts together; the Southern Mahratta and Madras they put together, but has there been a proposal by the Companies themselves for amalgamations?—I cannot at the moment recall one.

620. (*Sir Arthur Anderson.*) I know one to my knowledge, but it never came out officially. It

was discussed between themselves?—I cannot recall ene.

(*Sir Henry Burt.*) I cannot recall one.

621-2. (*Chairman.*) Is the double income tax a serious obstacle to English investment now?—Less serious now that some relief has been granted.

623. It is a great deal of extra trouble?—Yes.

624. An enormous amount of extra trouble to small investors, as I have reason to know?—Yes. But a large amount of British capital could still find profitable employment in India, if it were available.

625. Not with income tax at 6*s.* and supertax. It makes the complication so great?—There is relief for the double income tax.

626. Up to 3*s.*?—Yes, up to one-half; that is the maximum.

627. What is the Indian income tax to-day?—One anna in the rupee, that is one-sixteenth.

628. That is about 1*s.* 3*d.*?—Yes.

629. Does that mean if I invest in India my total income tax is 4*s.* 3*d.*, or that I am only relieved up to 3*s.* if I have paid so much?—You would pay 6*s.*, but you pay 1*s.* 3*d.* to India and 4*s.* 9*d.* here. That is how it would work out.

630. The maximum relief that you get is 3*s.*?—Yes.

631. What you get is what you have paid up to this limit?—Yes.

632-3. (*Sir Henry Burt.*) There is an extra anna now on the rupee?—You refer, I presume, to the supertax on Companies, the rate being one anna in the rupee on taxable income in excess of Rs. 50,000?—Yes.

(*Chairman.*) I do not think I want to ask you anything more.

634. (*Sir Arthur Anderson.*) I gather the general impression from your note is that the sums the Government of India is likely to be in a position to hand over to the railways will not be more, if they are sufficient, than to meet betterments?—It looks rather like it.

635. All new concerns required to be financed from other sources?—I base that opinion on the Railway Board's statement. I know nothing about the technical side of the question, but I take that from the Railway Board.

(*Sir Henry Burt.*) Probably not sufficient for that.

636. (*Mr. Hiley.*) Have you considered the question from your point of view of the railways being able to form a five years' programme? It is a financial question very largely?—It has been considered in the past, but in the present uncertain financial conditions I do not think it is any good looking as far ahead as that.

637. I did not mean that for the moment. Can you suggest any scheme by which the railways can work on a longer programme?—The only scheme I can see would be on the lines proposed by the Inchcape Committee, which arrived at a 12½ million programme for a number of years. The railways could, if you could see your way to provide a fixed sum for a number of years, make their programme to fit that provision.

(*Sir Henry Burt.*) The Railway Board tried to work on a three years' programme, but it was generally upset in connection with shortage of funds.

638. (*Mr. Hiley.*) If you are going in for large terminal alterations or expense with regard to rolling stock you must be able to look practically five years' ahead and to go on with steady consistent work?—I look forward to a time when we shall not be struggling with the hand to mouth kind of existence with which we are now faced, but I think that at the present moment the most one can hope to do is to struggle with our difficulties through the next few years and hope one day to get into calmer waters.

639. (*Chairman.*) You have a programme of urgent necessity and 25 million pounds a year and no prospect of finding it?—I am afraid that is so, while existing conditions continue.

640. That seems to me the position. I do not know where I have seen this, the East Indian was very short of rolling stock some years ago and the Secretary of State was not able to find money. Is it a correct story that they offered to raise it and were not allowed?—I should like to refer.

641. I wish you would because I have seen that assertion made.

(*Note by witness.*—I have made enquiries, but have been unable to trace any case of the kind.)

(*Sir Arthur Anderson.*) The Bengal-Nagpur have a system of ordering rolling stock on deferred payments, have they not?—Yes. Even that is not a very satisfactory system because the time comes when you have to make the deferred payments and you are short that year.

642. It is an expensive way?

(*Mr Hiley.*) You have to pay severely for your wagons?—Some years ago, when we were very short of rolling stock, we placed an order with a wagon manufacturing company for a supply of rolling stock, payment being made by seven-year debentures. The amount was about half a million pounds. The Company were given these debentures, which matured this year, with the inconvenient result that they were not able to renew more than a small proportion. The debentures to which the Chairman called attention are an unsatisfactory method of financing railways. They are always coming round for renewal or redemption, and with present day monetary conditions it is difficult and very expensive to renew them. On the other hand, non-renewal means a further demand on our inadequate capital resources.

643. (*Chairman.*) They are two years' Treasury Notes. That is what they are?—They are. We have had them in the past for five years, but at present rates of interest we are only renewing for a short term. It is an unsatisfactory method of financing railways, and I should like to see them wiped out over a term of years. The issue of debentures was a method of finance adopted in order to eke out a somewhat slender programme in the past, and we are unfortunately not able at the present moment to dispense with them.

644. The real thing is that somebody has to tell us how you can raise money. We know how you cannot, the question is how you can?—Yes.

645. (*Chairman.*) Nobody has so far been very sanguine as far as I know. We are exceedingly obliged to you; you have given very valuable evidence and you are going to supply one or two things more?—Yes.

(The witness withdrew.)

(Adjourned until Monday, 15th November, at 11 a.m.)

SECOND DAY.

Monday, 15th November 1920.

PRESENT:

MR. W. M. ACWORTH (*Chairman*).

Sir HENRY BURT, K.C.I.E., C.B.E.
Sir ARTHUR ANDERSON, KT., C.I.E., C.B.E.
Mr. E. H. HILEY, C.B.E.
Mr. JAMES TUKE.

Mr. WILLIAM GAULD (*Assistant Secretary*).

STATEMENT TO BE MADE TO WITNESSES.

You will appreciate that in inviting your attendance we are in some difficulty. Unless we obtain evidence as to the point of view of what I may call Financial London, we cannot examine Indian witnesses in reference to it. If the hearing of evidence in London were postponed till our return from India, Indian witnesses would then be entitled to complain that they had had no opportunity of seeing it.

At the same time the Committee has not met, and it has not been possible for those of us who are in London to obtain the approval of the Committee as a whole to our hearing witnesses on their behalf. You will, therefore, understand that statements made now must be regarded as preliminary and not as formal evidence, unless the full Committee hereafter should agree to adopt them as such.

It is possible that after our visit to India we may find it necessary to ask all or some of the gentlemen now appearing before us to return for further examination.

13th November 1920.

Sir MARSHALL REID, C.I.E., called and examined.

See Written Statement No. 2. Vol. IV.

646. (*Chairman.*) The Committee are very much obliged to you, Sir Marshall, for coming and helping us. You have seen the statement that is to be made to the witnesses, setting out the conditions under which we are taking evidence?—Yes, I have seen it.

(*Chairman.*) I think, if the Committee agree, we ought to print the "Statement to be made to Witnesses," at the head of to-day's proceedings, and then we need not print it each day, so long as each witness has the statement put before him before he gives evidence. Do the Committee agree to that?

(Agreed to.)

647. (*Chairman.*) We know, Sir Marshall, that you have been a merchant in India all your life. We also know that you have been a member of the Viceroy's Legislative Council in India, and that up till recently you have been a Member of the Secretary of State's Council here at home?—Yes. I was also Chairman of the Chamber of Commerce in Bombay.

648. At present have you any connection with Indian railways?—None whatever.

649. You have never been a director of any of them?—No.

650. You mention that, having been in Bombay, you have had very little personal experience of State railway management; that has not come within your direct experience?—That is so. I have been in Calcutta and Madras, but I was never very much associated with the railways.

651. Your everyday experience has been with the two railways centring at Bombay, both of which are companies?—Yes.

652. Then you state that you are personally a believer in private management as distinguished from State management?—Yes.

653. You further say that continuity of traditions and progress and efficiency are more likely to be found where there is a considerable measure of independence?—That is so.

654. I do not know whether you had any definite meaning in putting in that phrase, "considerable measure of independence." Would you describe the Companies in India as possessing a considerable measure of independence?—Very much so, in my opinion. The agent, whoever he may be, at the head of the railway, has really got the control, as far as the public are concerned, to begin with. Undoubtedly he exercises a very great measure of control. He is subject, of course, as we know, to general orders or general instructions and very often particular instructions from his Board.

655. Let us take it in two ways: First of all, in regard to the Company *vis-à-vis* the Government, are you satisfied with the measure of independence there given?—I think so.

656. Then take, secondly, the agent and his responsibility, not only to the Government, but to his own Board at home?—My feeling and experience have been that he has been perhaps unduly hampered by the Board at home.

657. We have already been told that there is considerable difference between Company and Company?—That is so.

658. One Board of Directors gives a larger measure of freedom to its agent than others?—That is what I have understood.

659. May I take it that your view is that it is desirable the agent should have a large measure of independence?—That is my definite view.

660. You speak, in the fifth paragraph of your proof, of political considerations influencing railway policy and management. Do you care to say anything on that point?—In these days there is much talk of nationalisation. As a matter of fact, the railways in India do practically belong to the nation, so that as far as that point is concerned it is complete. But, as is natural in all countries which are undergoing a change such as is taking place in India, politicians or public speakers make a very important plank in their platform of the acquisition of power for themselves and making more Indian the things which are in India. I do not think that is unreasonable; it is only natural; but I think there is a very great danger, if they are led to do so or encouraged to do so, that great harm may be done to a business concern like a railway.

661. It may be possible to distinguish between what we may call policy, which naturally belongs to the Government, so to speak, and management, which essentially must be what we may call commercial in actual day-to-day work?—That is so.

662. Is there in India much pressure for the kind of things about which, for example, a great fuss has been made in the newspapers here, such as excursion trains, which really means reducing charges? Does anything of that kind happen in India?—I have not been there for five years, so that my experience is not very recent, but I should not regard public opinion on such things as you mention, public convenience, as being at all undesirable. On the contrary, it is very desirable. But to influence the general policy of the railways on account of so-called political opinion, is, I think, very dangerous.

663. Is there much pressure on such subjects as the reduction of the rates or the obtaining of specially low rates for a commodity that is exceptionally important to the community—we will say cotton in Bombay and jute in Calcutta?—I have read of agitations in connection with local industries as against imported goods.

664. That, so to speak, is a political issue; that comes back on to fiscal policy?—Yes.

665. But, broadly, would you say there is much pressure brought to bear on the railway company to make concessions to special classes of the community, that after all have to be paid for by the bulk of the community?—I have not had sufficient experience to answer that.

666. With regard to Company management, you say that theoretically it is better to manage on the spot than in London. Will you kindly give us your views on the pros and cons of London management and Indian management, assuming it to be company?—The main advantage, to my mind, in the London Companies is the retention of experienced administrators whom you cannot well retain in India. That is the first point. There is also some little advantage in remoteness in that it prevents the ill-effects of possibly undesirable pressure being put on a local authority. With regard to finance, I do not think there are any functions now carried out by the Boards in London which could not equally well be carried out by the Secretary of State or the India Office, or by a bank such as, for instance, the Imperial Bank, which will be starting in two or three months. I do not lay any stress at all on the financial point.

667. You mean to say that in your judgment the use of one of the Boards at present in London to raise money for that particular undertaking, one of the big Companies, does not really amount to anything?—Not in my opinion.

668-9. I presume you have had considerable experience in Bombay not of railway Companies but of ordinary commercial Companies?—Yes.

670. Is it possible to get good Boards of Directors for those undertakings?—It is a very difficult question, because the Companies vary so enormously, and I think very often the agents of Companies do not all desire the same class of director.

671. I am asking about the commercial Companies, not the railway Companies?—Yes, I appreciate that point. They do not all desire the same class of director. I think, as you know, most Companies there are run through managing agents who promote the Companies. They are not, as in this country, Companies working on their own with their own secretary, and therefore the general control of the Company is very much more in the hands of the firm of managing agents than it is in the hands of the Company itself.

672. That goes through all Indian business, does it not; I know it happens in some cases?—I think it goes practically through all business there. There may be one or two exceptions.

673. Your firm, for example, may be managing agents for half a dozen cotton mills?—We are for two cotton mills now.

674. And the management really is with the managing agents?—It is, under the control of a very small Board of Directors, who in many cases are nominated by the managing agents, as they are called.

675. Would it be wrong to say that the directors' functions become almost formal?—I would say in many cases they have become formal.

676. How would that experience and habit of Indian business life apply if the management of one of the railways was transferred from London to Bombay?—My own opinion is that there is no class of man existing in India—I speak of Indians particularly—qualified for controlling directorships in the way that they are in this country.

677. One could hardly imagine a big railway Company being handed over to a commercial firm as managing agents?—It is quite inconceivable to my mind.

678. Therefore, you would require a Board of Directors carrying on the same class of work that the Directors of an ordinary English railway Company perform?—Yes.

679. And that, you think, could not be supplied from India?—That class does not exist to-day.

680. Not even in Bombay?—No.

681. (*Sir Arthur Anderson.*) You said that you referred particularly to Indians in that connection. Could you find Europeans to do that class of work?—No, I do not think you could, for the reasons I have given here, that people's careers there are very much like my own and that of Sir Henry Procter, who is following me to-day. We were not asked to do any public work till about our last four or five years. People do not ask you until you come to the head of things and make some little mark. When you get there they overwhelm you with requests to accept responsibilities; and any such time as, for instance, the two I have mentioned could give to the management of a big railway is quite inadequate. The work would be practically in the hands of the agent.

682. (*Chairman.*) Forgive me pressing you but an English Railway Board generally meets only once a month. They may possibly meet the previous afternoon for Committee work, which is confirmed by the Board the following day, but I think you might safely say that the ordinary English railway director does not give more than a portion of two days a month to the work. Would not people like yourself and Sir Henry Procter be able to do that?—We could. I had imagined that something very much more was expected of a director if he was going to take a practical interest in the work.

683. (*Chairman.*) I do not think so. I think you will find that, roughly speaking, the ordinary Railway Board meets once a month. It may have Committee meetings in the morning of the day on which the Board meets in the afternoon, or it may have Committees overnight in some cases, the Board meeting the next morning; but I think if you said the equivalent of one day a month you would quite fully represent the time that the ordinary director gives to a big English railway. Do you agree, Mr. Hiley?

(*Mr. Hiley.*) I agree.

(*Witness.*) I do not think you would have great difficulty in that case. I quite misunderstood

the responsibilities lying with the director of a railway.

684. (*Sir Henry Burt.*) Of course, you could get no railway experts?—No.

685. So that the Board would have to rely on the knowledge of the agent?—Yes.

686. (*Chairman.*) What is your view about experts? You have laid stress on the point that the Boards of the Indian railways in London, or at any rate many of them, possess experienced retired Indian railway men?—That is so.

687. Clearly, if you are thousands of miles away from your agent it is very necessary for the Board to have what we may call technical experience?—That is so.

688. But is it your view that it is necessary for a Board, to be really useful as the ultimate authority, to have technical members?—Yes, a certain number, in my opinion, but I do not know that my opinion is very valuable on that point. I should imagine, however, it is most essential.

(*Chairman.*) What I mean is this. I think the theory of the Board of the Bank of England is that nobody on it is professionally a banker—that is correct, is it not?

(*Mr. Tuke.*) That is so.

689. (*Chairman.*) (*To the witness.*) You see what I mean?—Yes, I see what you mean.

690. What would you say from that point of view?—I have held—perhaps without sufficient justification—a very strong view that Boards here should have among their number a few men with great Indian technical experience.

691. If in London?—If in London.

692. What I am asking you is: would that apply to the same extent supposing the Board was in Bombay and the agent was there to give them the technical information hot and hot as they required it,—if the Board were sitting there with its agent present instead of its agent being 5,000 miles off and unable to be consulted on the instant? You see my point?—I see your point, but it seems to me that the agent has no one to lean upon and no one to keep him right, no member of ripe experience.

693. Is it not better that one man should carry the main responsibility?—That is my view of things generally.

694. Supposing you have an agent and two or three experts on the Board, do you not make it very difficult for the agent to take the responsibility?—I suppose you do.

695 (*Sir Henry Burt.*) It often happens on Indian railways that the agent has no engineering knowledge at all?—I know there are cases of that kind.

696. (*Sir Henry Burt.*) There are several cases of the kind.

(*Mr. Hiley.*) Has he not a chief engineer?—Yes, he has his own staff.

697. (*Chairman.*) It really comes to this, I think. Supposing the Board to be in close contact with their agent, which is better—to have the agent as the head of a competent staff, bringing up the subject to men of business capacity and experience, or that there should be people above him, who may be inclined at least to interfere with him on technical questions of management?—I would rather have the agent almost independent, myself.

698. Then you only need a Board of persons like yourself, men of business experience, and not railway men?—That would be so.

699. Can you produce enough of such men in Bombay, assuming the day a month that I mentioned before?—Yes, I think so.

700. Among the Europeans?—Yes.

701. What about the Indians?—On the lines you have put forward, I think you could probably get Indians as well.

702. (*Sir Henry Burt.*) Sufficient for two Boards, because in the case of Bombay it would come to two Boards, would it not?—If the calls on the time of the Board were as limited as the Chairman has indicated they might be, I think you could get such Boards.

703. (*Chairman.*) A couple of them?—Yes, I think so.

704. (*Mr. Hiley.*) In such a case as that, I suppose, you would suggest that the agent would probably be given more power, and would occupy a more valuable position?—Yes. I am not sure you would not make him the Chairman of the Company on the lines put forward.

705. (*Chairman.*) That is the American system—the Chairman of the Board?—That was what was present to my mind. It seems to me he would be the Chairman of the Board.

706. (*Chairman.*) The Chairman of the Board in America, who is called the President, is the operating head of the railroad; he is a whole-time official?—Yes.

707. That makes him almost a dictator, because he is not under his Board but over them; whereas here we have a Chairman who is a layman and a general manager who knows all about it?—Yes.

708. (*Sir Henry Burt.*) I suppose there would be very constant changes of personnel of these Boards, would there not?—Undoubtedly.

709. After a man reaches the position which you have just described he does not stay very long in Bombay or in Calcutta; he comes home fairly quickly, to put it vulgarly, directly he has made his pile?—Yes.

710. I suppose no fee such as would be offered a Railway Director would induce such a man to stay on in the country?—No.

711. (*Chairman.*) I think we must assume that, but I think we may also assume, may we not, that you would have been a very competent Director for a great many years before you retired?—You would not have an opportunity of being because you retire so soon after you are invited to become a Director. You would not have a generation of Directors coming on one after the other as you have here.

712. Do you not think a man would retire at the age of 55 or something of that kind. That is the sort of age at which you would expect such a man to go home, is it not?—A merchant comes home before that.

713. Say at 50?—45.

714. As early as that?—50 or 45. He comes home to work, not to retire and live at his ease.

715. For how many years before that might he be useful as a Railway Director—say 10 years?—I do not think he would be invited to join until, as I have already tried to picture to you, he came to the top. Then people say, "Come and do everything," as they always do.

716. But there are people in England who are overwhelmed with invitations to Directorships. You have told us that you think you could get the men but you might not be able to keep them very long?—Four or five years at the outside. I think five years would be a fair period to say.

717. Can you tell us what happens in regard to the Presidency Banks?—They are very much on the lines which you have been picturing for the railways. The Secretary, as he is called, more or less runs the Bank, and he consults the Board on well-defined things.

718. He is what we should call a General Manager?—Yes. He has got a Committee of two

Directors who come every day to the Bank and who have got to approve of certain things. He occupies a position very much on the same lines as the agent we have been speaking of.

719. If he says, "I want to advance Rs. 1,00,000 to X.," I suppose they formally approve; they rely upon his judgment?—They give him a limit within his discretion; anything beyond that has to go to the Board. That is the procedure.

720. How many Directors are there of the Bombay Bank?—I should say there are six or seven—it may be eight.

721. Are they partly English and partly Indian?—In Bombay I think there are three Europeans, and in addition there is a Parsee, a Mahommedan and a Hindu. They actually represent every class there.

722. Are they appointed by the shareholders?—Yes.

723. You mentioned that you know of certain Indians who would be quite satisfactory Directors?—Yes.

724. But there are not very many?—No. I do not think so far that men have been brought up for that line of business and that sense of responsibility and independence which, in my opinion, a Director should possess.

725. (*Mr. Hiley.*) When you drafted your memorandum you were fixing a higher standard for the Director than that which has been put to you by the Chairman?—Yes.

726. (*Chairman.*) You were thinking both of a larger number and of more time being given to the work?—That is so.

727. Assuming the sort of idea we have been discussing, and assuming that there are two Boards, could you find three Indians for each?—Yes. They might not be very good at first; they would make mistakes as we have all got to make mistakes, but I think they could be found.

728. (*Sir Henry Burt.*) Do you think in the case of the larger railways like the Great Indian Peninsula, the Bombay, Baroda, and the East Indian, that Boards such as you would be able to get in Bombay and in Calcutta would have any knowledge of up-country requirements, and the interests of the railway in regard to development and so on, bearing in mind that these railways pass through several provinces?—No, I do not think they would have a great deal of knowledge in that way, but on the plan the Chairman has indicated the need for the Board having definite personal control disappears.

729 They become purely an Advisory Board?—They do.

730. (*Sir Henry Burt.*) There is one other point I would like to put to you. I am not so familiar with Bombay as you are; I know Calcutta better. Is it not the fact that nearly all the firms in Bombay have very intimate business connections with the railways?—They have.

731. They undertake contracts with the railways and so on?—Yes.

732. Do you attach any importance to that, or do you think there is any objection, from that point of view, to local Directors being appointed?—If you take the analogy of the banks you are in the same position. The Director merely retires when that particular proposition is being discussed.

733. They would all be very interested in the question of rates either as exporters or importers, would they not?—Yes.

734. In Calcutta I know that the question of relationship with the railway people is more marked than it is in Bombay?—In my time it had not come very much to the front. I never came across it very much.

735. (*Mr. Hiley.*) To return for a moment to the Board in India, how early do agents of the English Companies begin to take responsibility—35 and 40, and that sort of thing?—Do you mean the agents to the English Railway Companies?

736. No, the agents of commercial firms in India?—They grow up. It varies very much. I should think 35 was a very early age.

737. They are coming through at about 40, are they?—Yes. At 40 a man may get to the top of his firm, but the firms vary enormously in size and responsibility. Forty years is a fair age for a man to come to the top.

738. So that men would be of note in their own circle in Bombay or Calcutta, wherever it may be, if they were coming through, at about the age of 40?—Yes.

739. And it would not be impossible to select men who would be useful directors, on a scheme such as we have been discussing, at about that age?—I think that is probably so.

740. And you would get perhaps 12 or 15 years' service from them?—I said 5, because they begin to go at 45. Men do not stay out there all their time; they come back to the firm at home.

741. I thought 55 was about the limit?—That is the Government rule.

742. You think between 45 and 50?—I should say 50 or, as an average, 46 or 47.

743. The effect of a selection such as I have suggested would mean that you would have younger Boards; would that be a disadvantage in business?—Of course you have got to get public confidence, and I think it would be very desirable in a Board of a Company such as this that the Directors should carry complete confidence, and I do not think they will until they rise above their fellows.

744. They would be rising; they would be in charge?—I would rather answer that shortly by saying that I consider a man would have about five years of life at the top. I do not think it would be much more. I could tell you of cases where it has been 10 and 15, and I could give you cases where it has been two. I think it, broadly, you take it as 5 years, it is the limit you could count on for the men you want particularly.

745. (*Chairman.*) Assuming a Board elected by the shareholders, with a substantial interest in the success of the Company, would you be afraid of people getting on the Board because they were vocal?—I should very much.

746. You think there would be a fear of people getting on because they were vocal in denouncing what they would call railway abuses or promising lower rates or something of that sort?—They would be vocal in any particular line that they fancy would influence the shareholders most.

747. Do you think the shareholders would be influenced by what we may call the general political attitude, or would they be influenced by the desire to get a substantial dividend? Which would be the main influence on the shareholders in electing a director?—I think the Director himself would be the main influence—his way of going about it. The personality of the Director himself would be the main point. I think the shareholders would overlook for the time being any particular increase of dividend, or any improvement of rates, or that sort of thing.

748. You think, in other words, that the shareholders would really elect a man because he was a man?—Or because he wanted to be or managed to get elected.

749. (*Sir Arthur Anderson.*) You know that the lines of the Indian railways generally go over several provinces, as Sir Henry Burt mentioned. If you had headquarters controlled by a local

Board, would there not be a danger of the more remote provinces through which the railway is run being neglected in matters of development to the advantage of the province in which the controlling authority was more directly interested?—I think the answer to that is what has already been suggested, that places like Cawnpore, for instance, would have a representative on the Board, and all the important towns in the same way, especially if the Board only met once or twice a month. Any big town or big district would have its own representative.

750. (*Chairman.*) The theory on the English railways is that most of the Boards have men on them taken from the different important centres served by the railway?—Yes.

751. Then you say something about dual Boards—a Board in London, as I understand it, with a second Board in India, and gradually the Indian Board becoming more important and the home Board less important. That is your view, I take it?—Yes

752. Have you any definite views as to how the co-ordination between the two would take place? Would you give certain powers to one and certain powers to the other, or would the Indian Board in the first instance be purely subordinate?—In my view the Indian Board would be purely subordinate. The home Board would delegate, so to speak, different items of its control to the Indian Board as they were able to maintain them.

753. Assuming the agent has certain powers already, would the Board delegate something beyond that to the local Board?—Under the picture we have been drawing, the agent would be almost the chairman, but in conditions as they are to-day I should say they would have powers which they would exercise over the agent.

754. So that there would be three classes of powers; there would be the powers of the agent; above him further powers delegated to the local Board; and further powers reserved to the home Board; that is your idea?—Yes, that is my idea.

755. You think that if that were done, if we went by steps of development, the responsibility could gradually be wholly transferred to the Indian Board?—That is my view. I do not think you can help it. It is the evolution of things.

756. It is the Montagu-Chelmsford Report applied to the railways, is it not?—I would rather not commit myself to that.

757. It is the same theory. The underlying theory of the Report is gradual transference of powers?—Yes.

758. Then you speak about the existing Railway Board. In your view you would like it to have a head who should be a member of the Executive Council?—That is so.

759. Would that head be like the head of an office here, the War Office or what not, who is not a technical person, or would it be a technical person like the Minister of Transport is at this moment?—In my view he ought to be a technical man.

760. He ought to be a real first-rate railway man, with the rank of a member of the Executive Council?—That it so.

761. (*Mr. Hiley.*) In other words, would you suggest that the present President of the Railway Board be made into something like Minister of Railways on the Executive Council? Would you make the same man the President of the Board and Minister?—Yes, as I put it here, the man who is the best they can get in India.

762. (*Chairman.*) We assume that the President of the Railway Board is the best man that they can get there, and your view is that he should be a member of the Executive Council, with the same position as any other member?—Yes, I hold that very strongly. When I mention "communications" here I do not refer to anything more than posts and telegraphs, not to canals and waterways.

763. You keep them separate?—Yes.

764. So far as river steamers or connections are run by railways, they would come in?—Yes.

765. I take it that in India canals are primarily irrigation schemes?—That is so. I really meant the inclusion of posts and telegraphs as a possibility and not a recommendation.

766. Of course there is this difference, that the posts and telegraphs belong absolutely to the State and are under its administration, whereas the railways are, to a considerable extent, controlled by people that do not belong, or only partially belong, to the State?—Yes.

767. One knows in England that when the Cabinet met once a week the Minister had time to attend to his Department. At present, with the Cabinet meeting so very frequently, he is very much diverted from his own department to general government. Is the business of a member of the Executive Council, as such, very important? Does the Council meet very frequently?—That I cannot tell you. I have no personal experience.

768. At any rate, you do feel that the railways suffer from having to appear before Council through a member who only knows them at second hand?—Yes, I think so.

769. You suggest that, given that power and position, the Railway Member of Council would naturally have a staff round him?—Yes.

770. Would you make them a Board or would you make them merely his staff?—I think according to Indian practice they would probably be Secretaries to Government, or something of that sort, or equivalent to Secretaries to Government. Sir Henry Burt knows more of the machinery than I do, but I imagine they would occupy some such position as that rather than members of a Board.

771. (*Sir Henry Burt.*) If you had the President of the Railway Board holding the position of member of the Executive Council, the others would be, as the Chairman suggested, his secretaries?—Yes.

772. Not a Board?—No. That is what I suggest.

773. (*Chairman.*) They would be distinctly his subordinates?—Yes.

774. He would be a Cabinet Minister, but he would be a technical expert—that is really your point?—That is my view.

775. (*Sir Henry Burt.*) He would be both a Cabinet Minister and an executive officer?—That is so.

776. (*Chairman.*) Then you lay stress on the point that whereas 20 years ago it was impossible, it is now very desirable that railway finance should be separated from the general finance of the country?—Yes.

777. What does that mean? Would you say to the Finance Minister: "You have an investment "of x millions in the railways; we will pay you "5 per cent. or 6 per cent. on your money, and that "is all you have got to do with it?" Is that your view?—According to my view, the property of the railways would be handed over not to another person, but to a section of the Government to be dealt with—the whole block. They are not giving it to another party. There is no loss to Government. I have for 20 years been convinced that the railways have had no chance in India because they have had to depend on the variations in revenue and on budget surpluses and have not had any independence in the matter of raising capital.

778. The Indian Government, for example, last year took 4 per cent out of the railways for general Government purposes: they got 4 per cent. on their capital?—You mean the return on the capital?

779. Yes?—On that point I should like to say that I mentioned 20 years ago because then the railways were worked at a loss, and I think if the Government were handing over the whole block to a department, their own department, they would be entitled to see that they got more or less paid back for those losses. They paid about 3½ per cent. for some time, I think, and latterly they have paid a great deal more, and I should think the accounts are getting pretty well cleared up. But before handing them over—my idea is rather a crude one, perhaps—I think the Government should say, "We have lost so much and we have taken so "much out of the railways: the account is now "about clear, and we shall hand it over to this "department to work."

780. There is a revenue, we will say, of 8 per cent. on the admitted capital?—Yes.

781. Would you fix a line? Would the Government get 6 per cent and the railway keep the rest and do what it likes with it? There are two or three ways of doing it. A Government cannot always operate through a series of years at the same rate.

782. I want to get out first of all what you do with the revenues?—I was answering your question, in this way. I think it would be difficult to fix a rate, such as, for instance, 5 per cent., because the railways would have to pay the Government in the first case the amount that the railway cost the Government from time to time, and having done that the railways would retain what we call the profit.

783. Assuming the present capital, and no new capital, they would say this: "We will give "you 6 per cent. and we will keep the rest, and "you have nothing to do with how we earn it." That is your view?—Yes.

784. How would you raise your new capital? Would you regard railways as a separate organisation? Would you raise the capital as Indian railway loan, or raise it, as at present, as a Government loan?—I should as far as possible allow the railways to raise it themselves, the Railway Department, but I should not like to say in advance what method would be the best. There are various classes of the investing public. One likes gilt-edged Government loans, which they know. Another one prefers something with a little more uncertainty and the possibility of a higher rate. Another one likes a higher rate with equal certainty, which they get in railway debentures, because they have a pledge from the Government. My own view is that they should be allowed to raise money to their full requirements according to the method which they, in consultation with the Government of India, consider best, always bearing in mind that it would not be desirable that the railways should act without consultation with the Government of India as to the rate they should pay, the form the loan should take, and the time at which they floated their loan. I should endeavour to leave it with as few restrictions as possible, subject to general consultation.

785. I suppose it is common ground that a great deal of money requires to be raised for capital purposes on the railways?—Undoubtedly.

786. Development is urgently needed?—Undoubtedly.

787. Do you think that a loan, a specific charge on the railway surpluses, net revenues, which at present show 4 per cent., would be an attractive security?—I do not see any particular reason why there should not be the same security as there is at the present time—the full security of the Government of India.

788. You will still have the Government of India behind it?—I cannot see how you can take them out. They must stand behind the railways in the last resort.

789. If you hand over the property, if you vest the estate of the railways in a Railway Board or in a Railway Minister, what would happen?—It is still in the hands of the Government. You are not handing it to a third party. I am looking at it from the point of view of doing the best for myself with my own property. I take one section of my property and put it into one particular place, but I cannot divest myself of the ultimate responsibility and therefore there is no separation to my mind.

790. *(Sir Henry Burt.)* You would leave it to the railways to raise the money?—Subject to reservations which are easily arrived at.

791. Do you think the Boards in India that we have been talking about would be able to raise the money?—The Company Boards—I do not think they come into that question.

792. *(Chairman.)* You are not proposing, whether they remain English Boards or whether they become Indian Boards, greatly to alter the status of the existing Company: it is to be very closely controlled by the State?—Very closely. I cannot in my mind separate the two.

793. In that case if the Railway Board took the responsibility it might raise it as a Railway Board Loan or it might raise it as an East Indian Railway Company loan or as a Bombay, Baroda loan?—Yes. It is very difficult to foresee in what way it would be best to raise it.

794. *(Mr. Yoke.)* Do you propose that the finances of one Company should be kept distinct from those of another Company?—Yes. I propose that the accounts should be kept distinct.

795. So that there might be a surplus in one Company and a deficit in another?—Very likely, as there is to-day.

796. *(Sir Arthur Anderson.)* You suggest very much what exists at the present time except that it would be transferred from the Secretary of State to the Railway Department in India?—From the Financial Department in India to the Railway Department in India. That is all my proposal amounts to, that the finance shall be removed from the Financial Department.

797. Supposing this department were formed and put on the footing that you suggest, do you mean that it should have the power to go to the market to raise loans independent of the Finance Department?—Subject to certain reservations. A Local Government might do it, for instance.

798. *(Chairman.)* At present no loan is raised without the sanction of the Secretary of State at home?—That is so.

799. Would you remove that power from him?—Not unless he delegated his authority. That really belongs to another sphere of things. It matters not to me personally whether the Secretary of State does it or the Government of India.

800. If you come back to the Secretary of State he is bound to tie up general finance with railway finance?—No. I do not think so.

801. He may say: "I want a loan to some extent for something else"?—May I put it to you, Sir, that the more money is raised by the Railway Board the less money would be required from the public for general purposes. India, generally speaking, manages to balance its budget. It only wants to borrow for capital requirements. I have not the figures before me, but you gentlemen have

them in the books, and I think you will find that the borrowings of the Government of India have in normal times been almost entirely, if not entirely, within a few millions for railways and for irrigation. Therefore when you hand over to the Railway Department an authority to finance themselves you *pro tanto* remove from the Government of India the need to borrow. I am speaking of past history. I do not know what they would do under the new schemes. Therefore you would not have the Finance Department saying "You are spoiling the market," because it did not have a market except for the railways and irrigation.

802. Then you say: "The recent Bombay "Development Loan affords a useful object lesson in "this connection?"—Yes. They raised a loan of 8¾ millions at 6½ per cent. the other day. It is the first big loan raised by a Local Government in India.

803. Was that a rupee loan?—Yes.

804. Purely?—Yes.

805. Was it locally subscribed?—Yes.

806. Do you know whether anybody sent money from England to put in the loan?—They were very speculative if they did with the exchange between 1*s.* 6*d.* and 2*s.* 6*d.*

807. It is now 1*s.* 7*d.*, is it not?—1*s.* 8*d.*

808. Would you have got English money at that rate of exchange?—You might.

809. I am talking about the general question: if you floated a loan in rupees in India for railway purposes, would you be likely to get English money?—You certainly could not count on it until exchange is stabilised.

810. If exchange were stabilised, I suppose the terms that would attract English investors would have to be a little higher in percentage than they could get in London?—They probably would be, but I do not see why the Railway Board should be prevented from borrowing in the London market through the Companies.

811. What I was asking was this. Supposing 6½ per cent. will bring in money in rupees and exchange were stabilised, would it attract London money because similar investments in London would only produce 6 per cent.?—Not ½ per cent. difference, certainly not, particularly with the uncertainty that prevails.

812. (*Sir Henry Burt.*) Was the 8,000,000 loan a short-term loan?—I think it is for 10 or 15 years. It is 6½ per cent. free of tax—the tax is nothing there.

813. (*Chairman.*) You mention one other question. You say, "Private enterprise should be restricted to feeder lines." I take it that that means independent of Government?—Independent of Government.

814. Your view is that the main line work should be done by Companies closely controlled, but the branch line work you would leave to much more independent finance?—That is so. There is nothing but finance in those feeder lines. They are all built by the main lines, as you know. They are built by the Companies.

815. The actual physical construction is done by them, is it not?—Yes, and the control and management in most cases. It is merely the raising of the money and certain office work that is done by the private Companies.

(*Chairman.*) Thank you very much. Sir Marshall, for your evidence.

The witness withdrew.

SIR HENRY PROCTER, C.B.E., called and examined.

See Written Statement No. 3, Vol. IV.

816. (*Chairman.*) We are much obliged to you for coming and helping us in this matter. You have seen the "Statement to be made to Witnesses," and you appreciate the position that we are in with regard to the matter?—Quite.

817. Will you please put on the note who you are and the name of your firm?—I am a partner in Killick, Nixon and Company. I went out to India in 1888, 32 years ago.

818. As a Bombay merchant?—Yes.

819. I do not think you have been a Director, or are now, a Director of any of the railways—I do not refer to feeder railways?—No.

820. But your firm have been very active in the promotion of guarantee railways?—Yes.

821. Are your firm merchants?—We started in the old-fashioned way as East Indian merchants, but we have gone now into all the local trades. We have cotton mills, cement works, manganese mines shipping, &c.

822. You are not in any special trade?—No. We have a good number of trades.

823. I see from your note that you are in favour of management through a Company domiciled in India, and with a Board sitting in India?—Yes.

824. You also say that you were one of the trustees of the Port of Bombay?—Yes.

825. And your experience there leads you to recommend this change?—Yes.

826. Would you mind telling us first your experience as one of the trustees of the Port of Bombay?—I was on that for 11 or 12 years, and I do not think I ever knew work done better than was the work done by that body. It was almost entirely European at first, but later on a larger number of Indian members was introduced. I think the Board of 12 was enlarged to 16 or 17.

827. How are they appointed?—The Government appoint most of them. The Chamber of Commerce have the right of appointing five members. Then they gave that right to the Indian Chamber of Commerce and, I think, the grain merchants.

828. You do not mean that they took the right away from the English Chamber of Commerce?—No, I meant in addition. They enlarged the Board.

829. By the addition of representatives of the Indian Chamber of Commerce?—Yes, and the Piece Goods Dealers' Association. There were three additional Indian members.

830. Are the Indian and English members roughly half and half in number nowadays?—I should not like to say half and half. I think there are still more Europeans than Indians.

831. But there is a substantial number of Indians?—Yes. The Government nominees are generally Indians—a Parsee, a Mahomedan and a Hindu. There are five from the Chambers of Commerce, and the Government nominate, I think it is the Collector of Customs and the Municipal Commissioner. That makes seven.

832. You call them "trustees." Are they the actual Port Authority?—Yes.

833. The constitution of the Bombay Port Authority, except for the fact of there being both Indian and English members, is very much like the constitution of the Port of London Authority. A certain number are nominated by Government and

certain number are appointed by the different bodies specially interested?—Yes.

834. Your experience has satisfied you that that works well?—I think it works magnificently.

835. You have mentioned in your note that you were on it for 12 years?—Yes.

836. Sir Marshall Reid has just told us that he did not think we could rely on an English member, who became well known enough to get on to an authority of that kind, remaining in India for more than five years afterwards: you are an exception?—I do not know. I was the chairman of the Chamber of Commerce in 1906 and I remained in Bombay until 1914. I have been there since, but I really left in 1914.

837. That is eight years from 1906 to 1914, and you became chairman in 1906?—Yes.

838. Do you think that the five years mentioned by Sir Marshall Reid is rather a short period?—I think so.

839. You think a man would be available for a little longer than that?—Yes. As I have said in the notes of my evidence. Bombay and Calcutta have gone ahead tremendously in numbers, and I do not think we make sufficient use of the Europeans. I am speaking of Bombay because I do not know Calcutta well. I think there must be a large number of Europeans to draw upon if you look for them.

840. And Indians?—Yes, Indians are increasing undoubtedly.

841. On the Chambers of Commerce you have found them valuable coadjutors?—No, I am afraid I cannot say that. When I was chairman of the Chamber I was a strong advocate of putting Indians on our Committee as members, but I was over-ruled. The result was that they formed their own Chamber of Commerce.

842. I beg your pardon, I said the Chamber of Commerce; I meant to say on the Port Trust?—On the Port Trust some of them were quite valuable.

843. You did get valuable help from them?—Undoubtedly.

844. On the strength of that you believe you could get satisfactory Boards in India to manage the big railways?—I think so.

845. How would you propose to make the transference?—From London.

846. Yes. You say you think it could and should be carried out. How would you do it?—I must confess I have not thought of that.

847. I am not objecting that you ought to have thought of it; I am only asking if you can help us. I know it is a very difficult question, as you appreciate?—Yes, I am afraid it will take some thinking out.

848. Of two things, one; either you must go through an intermediate state of establishing a second Board in India, retaining the old Board, or you must switch across all at once?—Yes. Of course, a good many Companies have been transferred to India from England, I mean not Railway Companies, but Companies like the Bombay Electric Company.

849. But in this case all the shareholders' money is English money?—Yes.

850. What would you do?—I should have thought it could be transferred on the same lines as the Bombay Electric Tramways.

851. What happened there?—That I cannot tell you because I am not on the Board, and I am not a shareholder, but it was transferred from London to Bombay.

852. (*Mr. Hiley.*) The Board?—All the Company, I think. It is an Indian Company now.

853. (*Sir Henry Burt.*) I think it was transferred, lock, stock, and barrel?—Yes.

854. (*Chairman.*) Did it mean that the Indian people offered a price for the shares that the English shareholders accepted, or how did it happen?—I cannot tell you because I am not a shareholder, but I fancy the shares remained in the hands of the English shareholders until they sold them, and until in the natural course of events a market was formed for them in India. I know the price of the shares went up.

(*Chairman.*) If it were put to me as an English shareholder in the Bombay, Baroda Railway: "Would you like the seat of the Board transferred to India?" naturally, I should say: "Why should I want it?"

855. (*Sir Arthur Anderson.*) But in the case of the Bombay tramways was it not a fact that a large body of the shareholders were Indians?—Very possibly.

856. It was more with the object of escaping the English income tax than anything else that the transference was made, was it not?—Yes.

857. (*Sir Henry Burt.*) Entirely?—I understood from the Chairman that he wanted to know what procedure could be adopted in changing over from English to Indian.

858. (*Chairman.*) It would mean, would it not, that Indian capital would have to buy out the English shareholders until there was a majority in India and then they would resolve to do it?—I have not thought of this point at all. I had only thought of the point of when the lease fell in and you had the right to transfer.

859. That comes a good many years hence in most of the railways, does it not?—Yes.

(*Chairman.*) I think I am right in saying that it is in 1945 or 1950, am I not?

(*Sir Henry Burt.*) It is five years in the case of the Great Indian Peninsula.

860. (*Chairman.*) Would you wait, in the case of the Great Indian Peninsula, for five years, and then let the Secretary of State exercise his right to pay off the old shareholders, the English shareholders?—And re-form in India?

861. Yes?—I think so.

862. And then let it be a Company with rupee capital?—Yes.

863. What would you do in the case of the Companies where there are 30 years or something of that kind to run?—I suppose that would have to be a matter of negotiation with the shareholders.

864. Would you be inclined to go so far as to offer such terms to surrender as the shareholders would be glad to accept, because there is no power to terminate at any moment, you know?—I do not know. I should not like to give an opinion on that.

865. I see you say that you do not think you could run dual Boards?—I do not think so.

866. (*Sir Henry Burt.*) You say in the middle of paragraph 1 that you think the Boards should be composed of an equal number of European and Indian members, and that for some years to come the chairman should be a European having some knowledge of railway matters. Where would you get him? Would you make a special appointment from home? Is it in your mind that he should be the agent of the railway?—No, I was not thinking of the agent.

867. You had in your mind, I take it, the bringing out of a man from England?—Not necessarily.

868. Or some retired railway official; it is rather an important point?—The agent is the person that I look on as the worker, and the Board an advisory one to assist him.

869. The Bombay Board would always be an advisory body; you would never have any railway experts on it?—No.

870. So that these questions would always be in the hands of the agents, would they not?—Yes.

871. Apart from that, you think in the first instance it should be somebody else other than the agent, a chairman, with knowledge of railway matters?—Yes.

872. (*Chairman.*) Now I want to take you to the Railway Board. You say you have had a good deal to do with it?—Yes.

873. I suppose your negotiations for feeder lines have been conducted with them?—Yes, all of them. Then in connection with the Chamber of Commerce, we had a great deal to do with them.

874. You think that its position under the Minister of Commerce is a disadvantage?—I think so.

875. You would like, as Sir Marshall Reid also said he would like, to have a Minister of Railways?—Yes.

876. And instead of having colleagues on a Board, he would have a staff?—Yes.

877. As the agent on a railway has beneath him. Is that your view?—Yes. He could not be an expert either on traffic or on engineering and would want expert advice. My experience in dealing with the Railway Board was that they were constantly hampered and retarded by difficulties with either the Department of Commerce and Industry or Finance.

878. Would he be, so to speak, like an English general manager—the person who is expected to know all about it—or would he be merely the hand of an expert staff and represent them on the Council?—He would be like the Parliamentary Member as compared to the executive staff.

879. You would not necessarily expect him to be a railway man at all?—No.

880. He would be a man of high business capacity?—I think the great thing is that you want a man with a vision of the future requirements of India.

881. (*Mr. Hiley.*) You do not think he need be a railway trained man?—I do not think so.

882. (*Chairman.*) You would make it an entirely separate department?—Certainly, especially in connection with finance.

883. I take it you share the view with everybody else that a large railway development policy is necessary?—Yes.

884. You say railway finance should be kept separate and money for new construction raised by the same methods as those for other industrial enterprises?—At present it is almost entirely dependent on the surplus revenue.

885. You say raised by shares and debentures. Of what, of new Companies?—Yes, or in connection with the lines and the main lines themselves. I suggest they should have larger powers of raising their own money.

886. They could raise any amount by debentures, we will assume. Would you allow them to increase their ordinary stock which shares in the profit?—I should not have any objection myself.

887. Do you think that would tend to direct attention to India as a profitable field for investment?—I should think it would. I understand they always consider they have been hampered by not being allowed to do so.

888. You would like to give them more freedom to raise capital?—I should.

889. Would you grudge them a substantial reward?—In what way?

890. Do you think it a good thing to make it worth the while of the investor to come in on a large scale? That is what it comes to?—Yes, I think it is probably the only way you will get them in.

891. Would you put it that it does not pay the State to make too good a bargain?—That is my opinion.

892. That is what I take your point to be?—It is my point. We have just seen the result of that policy in the Bombay Development Loan. They have floated the loan at 6½ per cent. free of income tax and got nearly eight crores already.

893. Did they ask for any specific amount?—I think they asked for 6½.

894. And they got?—They got 7¼ according to the last mail report.

895. They floated what India would call a very large loan?—Yes.

896. It was over subscribed?—Yes. They did not put any fixed amount in their prospectus.

897. And they are still ready to receive?—Yes, I had a letter from Sir George Lloyd and he said that if they got 9 crores they would not go to the public again next year, not for two years. It has been very successful.

898. (*Mr. Tuke.*) It is a short-term loan, is it not?—I think it is 1945. No, I think it is 10 or 12 years.

899. Is it issued at par?—Yes.

900. 6½?—Yes.

901. (*Chairman.*) You say main line Companies should be given larger powers for raising money for their own requirements and the construction of feeder lines should be left to private enterprise. Does that mean that main line Companies are to be restricted to their present length and only to raise capital for improvements on the existing lines?—No, not necessarily. I mean they should build their own main line extensions; they should not be concerned with feeder lines.

902. What is the difference between the extension of a main line and a feeder of a main line? I do not follow?—If you have a line running from Bombay to Delhi and carried on from Delhi to Lahore that would be an extension of a main line, but if you brought a line from one of the sides at right angles between Bombay and Delhi that would be a feeder.

903. Is not that rather an artificial distinction?—I do not think so.

904. Take an English case. If the Great Western when it gets to Reading splits and one line goes through Newbury and another through Swindon and a third through Oxford, which is the feeder?—And comes to the same place?

905. No, they spread out?—You have your Great Western main line and anything on either side would be feeders.

906. The Great Western would tell you that they have at least five main lines?—One distinction, if you want a distinction, is the difference of gauge.

907. I was wondering about that?—My feeling is this. Take the Great Indian Peninsula line. We have several feeders in the Central Provinces, and further extensions coming on. Those are on a different gauge to the main line. I look on the main line to Calcutta as a main line artery and these are veins feeding it the whole way down.

908. Do you know what proportion of the feeder lines are broad and narrow respectively?—One so-called feeder line we made was the Tapti Valley—it is not now a feeder, it is a chord line, we provided the money for it. It started as a feeder from Surat to Nandurbar, and then on to Amalner and then joined on to the Great Indian Peninsula. That began as a feeder.

909. What is it now?—It is a chord between the Bombay, Baroda and Central India and the Great Indian Peninsula.

910. (*Sir Henry Burt.*) An alternative route?—Yes.

911. Between Calcutta and Bombay. That is what it comes to?—Yes. It is more an alternative route from the north.

912. (*Sir Arthur Anderson.*) It is on the same gauge as the main line?—Yes.

913. (*Chairman.*) Is it part of the Great Indian Peninsula undertaking to-day?—No.

914. It is a separate Company?—It is worked for us by the Bombay, Baroda and Central India.

915. Most of the feeders are worked by the main line Company?—Yes, all of ours except one.

916. Do you maintain separate Companies for each of them?—Yes.

917. With the Company organisation?—Yes.

918. Practically the Company's job is to receive dividends and so forth, and if necessary to vote new capital?—Yes, and also to visit the line regularly and bring to the notice of the working agency——

919. That is you as agents?—Yes.

920. You have a Board, I suppose?—Yes.

921. The Board really do very little?—They meet once a month.

922. And deal with very formal business?—Yes

923. Transfers and things of that kind?—No, they have nothing to do with transfers—yes, they have, but that is not very much business; they are useful in bringing grievances to our notice from the Indian people.

924. How many feeder Companies have you? You mentioned a big figure?—I think we have eight of our own and two of Gillanders, that is 10.

925. Has that document you have the names of the Companies on it?—Yes, I can leave this.

926. May we put this on the note?—Certainly.

927. It would be quite interesting, it has the names of the Companies and the mileage, and so on. The Tapti Valley is 155 miles, and the Central Provinces Railway 139½?—The Central Provinces are two lines, one north of the Great Indian Peninsula Railway and one south, and we have extensions for both of them in view.

928. Is there any connection between these except that you are agents. Have they any joint staff of any kind?—No.

929. So far as technical matters are concerned, you rely for those on the main line Company?—Yes.

930. There is a very strong feeling on the Continent that it does not do to entrust the management of what they call light railways to main line railways, because they have large ideas and expensive methods of doing things. Have you anything to say on that point?—I think that is quite correct from our experience From the instance I gave about the Sara Railway and the Eastern Bengal I do not think the feeder line gets the attention from a main line its own line gets.

931. That is not my point, that is a separate point. My point is this, that the Continental people concerned with light railways always say that you must keep them separate from the main line Companies because the main line Company has magnificent ideas. Our railway is a cottage, and you must not run it as if it were a mansion—that is their point. What do you say to that?—I think feeder lines have been built at too expensive a standard. It is very difficult to build them cheaper.

932. The Continental plan is very largely to have a number of feeder lines, not necessarily locally connected, but connected by the parent organisation which has an expert staff of its own. You have nothing of that kind?—We run the Guzerat Railways ourselves and we have our own engineers for that.

933. Is it one Company?—There are three lines under one Company. This is an instance. Then we had our lines in the Central Provinces for carrying manganese, which we are not working now because the Bengal-Nagpur Railway has taken them over, but we ran them on much cheaper lines than a State railway would. We carried an enormous traffic, but the line was not built up to standard dimensions or requirements; it would have cost us far more to put down those lines in accordance with the Railway Rules. As we were not under the Railway Board in that way—we had not any contract with the Government—they allowed us to build them our own way.

934. (*Mr. Hiley.*) Did not you have to pass a standard before you were allowed to carry passengers?—No, we did not carry passengers; it was a mineral line.

935-6. (*Chairman.*) Are all these narrow gauge?—No.

937. Will you give the gauges?—Yes, the Tapti Valley is broad gauge, the Ahmedabad-Dholka Railway and Ahmedabad-Prantej are metre; the Amritsar-Patti-Kasur, the Sialkot-Narowal, and the Mandra-Bhon are broad. The Guzerat and the Central Provinces are 2 ft. 6 ins. The Sara-Sirajganj is broad and the Mymensingh-Bhairab-Bazar is metre.

938. (*Chairman.*) Will a main line Company work a 2 ft. 6 in. line?—Yes.

939. You speak of the 30,000 existing miles, it is now about 35,000 growing to 100,000 or more. A large proportion of that would be, in effect, main line?—I expect so.

940. You would not propose that that should be given to feeder Companies?—No. I suppose there would be no objection to giving a main line to an Indian Company. Assuming you wanted another main line built in India, there would be no objection to raising that money in India?

941. You think it can be done, I take it?—It is all a matter of terms. There is no doubt there is lots of money in India if you can only get it out.

942. May we take it that 6½ per cent., free of income tax, which, after all, is only Indian income tax, which really means 7 per cent., or something of that kind, is the kind of terms that would raise lots of money?—I have suggested that 6½ per cent. and sharing with the Government above, as we do now over 5 per cent., ought to raise money.

943. (*Mr. Hiley.*) Paying income tax?—Yes, because they have the opportunity of making more than 6½ per cent.

944. There is a Government guarantee?—Yes.

945. (*Chairman.*) You think on those terms that a lot of money could be raised in India?—It is very difficult to say. At the present moment there has been such a rush for industrials in India and the profits the industrials have been making are so enormous that people have turned away from feeder lines.

946. That is the difficulty?—Yes, but I think they will come back to them.

947. From the industrials?—The industrials will probably not pay what they expect them to pay.

948. You think they will not continue?—They may have bad times like everybody else.

949. (*Mr. Hiley.*) They get unfashionable?—Yes. All our feeder lines have gone down to a discount, they are about 30 per cent. discount now. They are splendid investments.

950. (*Chairman.*) Because the price of money is changed?—Therefore it is difficult to raise fresh capital at the moment at par.

951. On 5 per cent. terms?—Yes. I think they will come back to 6½. It will depend on the state of the money market whether we shall want 6½ or 7 or 6.

952. I want to put it in this way. You think that there is a substantial amount of investment money available in India for these schemes at a commercial rate?—I think the position in India to-day is very much what it was many years ago when we started these feeder lines. The argument we used was this. There are three kinds of investors in India, the investor who has to invest in trust money and goes for consols or Government paper.

953. You are speaking of India?—Yes.

954. The Indian investor do you mean?—Yes. There is the investor who has to invest in trust funds first; he must go for trust securities. Then there is the other extreme, the man who goes for industrials and for a gamble; then there is the middle man who wants a safe investment and likes to have the possibility of getting more than he can get from trust funds. That middle class we say we can tap for feeder lines.

955. That class in your view can produce a substantial number of crores per annum?—I think so. I think that has been shown by the development loan.

956. What do you think you could get, 20 crores per annum or something of that kind?—I should not like to express an opinion.

957. Could you give any kind of figure; how long did it take you to raise your four crores and the two crores you raised?—It was spread over different times. When we raised the money for the Sara Railway, we raised it jointly with Gillanders. Government would not allow us to raise more than 80 lakhs at that time. We only wanted the 80 lakhs, but we had applications for over one crore. In Bombay we had 70 and they had 40 in Calcutta.

958. Theirs was Calcutta money?—Yes, ours was Bombay money.

(*Sir Henry Burt.*) It is admitted that the railways will require in the immediate future somewhere in the neighbourhood of 25,000,000*l.*

(*Chairman.*) That is only open lines.

959. (*Sir Henry Burt.*) Yes, only for open lines. Do you think you would get anything like that sum? That is apart from new lines and feeder lines, it is simply for open lines, for development purposes which you admit in your note are very sadly in arrears?—Yes

960. It is estimated that the requirements amount to 25,000,000*l.* per annum at least for that purpose only. Do you see any chance of getting that amount?—On what sort of terms?

961. That is the point. Do you see any chance of getting that amount in India at such terms as you have suggested here?—6½.

962. Yes?—No, I was not thinking of big amounts like that.

963. Those are the figures one has to deal with.

964. (*Chairman.*) Put the terms this way, as much better than 5 per cent. as the market has changed since you raised it at 5 per cent. Those are the terms I take it?—That would be about 2 per cent. I should think.

965. Call it 7. How much could you get at 7 per cent.?—It is very difficult to say.

966. That is main line only saying nothing about feeders?—I was thinking more of raising feeder line Companies one by one.

967. To some extent they appeal to a very small local public?—Yes.

968. If you go down the Tapti Valley you attract the people who want a railway down that Valley?—There were not any people there when we went.

969. I have taken a bad instance?—We have not had much success in that way on the spot. When we started in the Punjab I went to Amritsar to have a meeting to collect shares, and two people turned up. We raised the money in Bombay. Since it has been a success people in the Punjab have been buying the shares, and we have had much better results.

970. (*Sir Henry Burt.*) Feeder lines undoubtedly boomed very considerably?—Yes.

971. (*Chairman.*) I am afraid we must put it in this way. You could not say that you could get 25 crores per annum for main lines, and a large sum in addition for feeder lines?—We certainly could not at present.

972. Even though India is very much richer?—No.

973. (*Sir Henry Burt.*) In other words without indenting on the London market?—Yes, certainly not at present. It might come gradually.

974. (*Chairman.*) Can you suggest any way in which you can get the money without going to London?—I cannot think of any other way except gradually working up a clientele in India as the feeder lines are started.

975. Those 5½ crores that you and your coadjutors have raised, is that native money or Indian money proper or a considerable part of it from European houses in India?—I forget the proportion, but I should think three-fourths of it was Indian. At the present moment certainly, because, owing to the rise in exchange, so many English people have sold out their shares and Indians bought them.

976. How do you suggest that the Government can encourage private enterprise beyond what it is doing?—I think by helping negotiations to come to a conclusion quicker than they have in the past. We had to fight for our terms; they have taken months and years. For instance, if we had had more encouragement in the past, we should have floated more companies by now before the war took place.

977. Is it that they do not want you or that the process is dilatory or the terms too bad?—I do not know whether they want us or not. It has been very half-hearted.

978. (*Sir Arthur Anderson.*) I think there has been a little misunderstanding about the conversation you referred to here. I take it that I am the person you refer to?—Yes.

979. So far as my knowledge goes I have never objected to the enlistment of private enterprise as such for the extension of railways. What I personally have been against is the multiplication and spreading all over the country of small private Companies, which often regard themselves as entitled to a sphere of influence, and whose interests may conflict, not only with each other, but with the main line as well, and in the end produce a very complicated position. I have never objected, to my knowledge, to private enterprise being utilised for the development of railways; it is the particular form of it?—I understood you to say that the time for private enterprise had gone, and that you could raise the money yourselves.

980. No, you misunderstood me entirely?—That is what I thought.

981. (*Chairman.*) Let me raise a point arising out of something Sir Arthur says. If you have all over the country innumerable small undertakings

which claim a sphere of influence, are you not bound to have constant disputes?—I do not think the feeder line wants to claim any sphere of influence.

982. We have a gentleman representing feeder lines this afternoon who very distinctly does, and he says that he has been very badly treated because his sphere of influence has been invaded. Must it not necessarily happen? If the railways get closer and closer together, the lines approaching a district perhaps from three directions, will not each complain if one of the other two pushes forward?—The genesis of our railway business arose in this way. Five feeder lines, the Tapti, the Dohlka, and the Prantej, and two others, were examined by Mr. Little years ago for the Government of Bombay. They were all feeder lines in connection with the Bombay, Baroda and Central India. The Bombay, Baroda and Central India had not the money to construct them, and the Government would not find it, and somebody suggested to my partner, "Why do you not ask for a concession, and raise the money?" That is how it began. We do not want to go to a main line and say: Will you build and manage a line you do not want, or which is going to be a chord which will bring trouble in the future as it has done in certain cases. We want the main line to say: "Here are a certain number of feeder "lines wanted in connection with our system; will "you raise the money for them, and we will build "and work them for you?" That is the attitude we have always assumed.

983. Take this case, there is the Great Indian Peninsula going out from Bombay and there is the Southern Mahratta. You build a line there and get to a place, and there is another place further on and you get there, and then this place says, "We want this connection too." Will not that always make difficulties?—Yes, but that is a difficulty surely to be settled by two main lines. We do not want to interfere as a feeder.

984. My point is this, if you have a certain number—you know French railway geography, for example?—A little.

985. You have Paris there and the spokes of a wheel, and between that spoke and that spoke is one Company, and between that spoke and that spoke is another Company, and when you have only five it is easy to deal with it; but if you have not only 10 main line Companies, but innumerable little Companies in between, does it not make a difficulty?—The feeder line is always a feeder to the main line and nothing to do with those administrative questions.

986. The question of the sphere of influence is what I have in my mind.

(*Sir Arthur Anderson.*) No railway once started can stand still.

987. (*Chairman.*) That is the point?—No, but still there is a clause in all our contracts that if our line is extended and becomes a main line chord they have the right to take the feeder line over at a year's notice.

988. The main line Company?—Yes.

989. How about the other main line Company you have been helping them to poach on?—That is for the two main lines to put up before the Minister of Railways and get settled. It is not a thing we want to fight about.

990. If I may put it respectfully I have in fact imagined a main line using you as a stalking horse to get into the other man's territory?—Possibly.

991. (*Mr. Hiley.*) The check on that is the Railway Board, I suppose?—Yes.

992. (*Chairman.*) It is a very difficult thing for a Board, because the circumstances change. You see what I have in mind?—Yes.

993. It has not become a burning question at present, I take it is your answer?—I do not think so. The three main lines we deal with are the North-Western, the Bombay, Baroda and Central India, and the Great Indian Peninsula. In the case of the North-Western they are pure feeders. They are like veins to a main artery. The North-Western has had control. There has been no question of policy on our part; we have not been connected with any policy. They are feeders wanted by the country, which the North-Western or the Government have not had the money to build. In the same way with the Great Indian Peninsula, they are feeders asked for by the country, and they bring traffic on to the Great Indian Peninsula.

994. Do not assume that I am objecting, I am trying to check it?—I want you to understand; if you have a gentleman coming this afternoon who takes that line, we do not take it.

995. You have not any grievances in reference to spheres of influence?—No.

996. You mentioned the case of the Sara Sirajganj Railway; that is in Eastern Bengal territory?—Yes.

997. Apparently your Company did not get this traffic properly developed?—No.

998. What is the explanation?—I should think the explanation is that the Eastern Bengal Railway did not look after it properly. They built this line up to the standard of a main line; it was a most expensive line.

999. Had you no control over that?—No, the estimates came forward for this line, and the traffic prospects showed it would earn 5 per cent., and there would be an additional 5 per cent. from interchanged traffic to insure the 5 per cent. It seemed an excellent proposition, and we got the capital over-subscribed at once.

1000-1. (*Sir Arthur Anderson.*) That was an estimate which you as promoters surely had some responsibility in the matter of its correctness?—I think they were correct if the line had been properly managed. What happened? When the line was opened the receipts were negligible and we paid $3\frac{1}{2}$ per cent. instead of 5 per cent. The rebate was negligible. So we sent Mr. Bagley, the engineer, over the line and he found that they were not getting the wagons they indented for, very few wagons were coming to them; he found with the passenger traffic that half the people were not taking tickets—running away at the station was the report—but the principal thing was that they made no arrangements for cross traffic.

1002. (*Chairman.*) Cross traffic is a phrase I do not know. Does that mean exchange traffic?—Traffic that comes from foreign lines across our line to the Eastern Bengal.

1003. Merely passing across your line from railways at the two ends?—Yes.

1004. "Through through," as we should say in England?—This line ends at Sirajganj, that is on the banks of the river, and all the traffic comes in boats. They did not finish the line to the ghaut, that is the landing stage; they stopped short at the station, therefore no traffic could get from the ghaut. Here was a line built for main line requirements fit for express trains and it ran one train a day at six miles an hour.

1005. (*Sir Arthur Anderson.*) It is well known that the main line, the Eastern Bengal, has its own route for the same traffic?—Our contention was that these estimates which you mention as incorrect were correct, because they included the interchange traffic.

1006. That is a disputatious question?—It has been settled in our favour now.

1007. As a matter of fact the Eastern Bengal had good grounds for their contention, but in this particular matter the Railway Board ruled it in your favour?—I know you did.

1008. I do not see that there is any grievance?—My grievance I put up here is this: it ought not to be necessary for us to fight and worry the Railway Board over matters like this in order to obtain the results that are held out to us in the estimates, and which ought to have come if the line had been properly worked.

1009. (*Chairman.*) Was it not your responsibility to keep them up to their engagements? Do you regard that as a function of the Railway Board?—No.

1010. Your grievance is against the management of the State railway?—Yes.

1011. Do you not take responsibility for allowing them to build a light line to the standard of a main line?—This is not a light line.

(*Sir Arthur Anderson.*) It has been built to an expensive standard.

1012. (*Mr. Hiley.*) Was it not built to an agreed specification?—We wanted it built to the standard; we wanted to carry a through traffic.

1013. (*Chairman.*) Did you expect to carry a fast traffic?—Yes, they now have got a fast through train for passengers. It is a shorter route to Calcutta.

(*Sir Arthur Anderson.*) That is one of the arguments. They contend that the line would not have been built to a high standard if it had not been going to get the traffic.

1014. (*Chairman.*) It seems to me that you caused it to be built to a main line standard in order to get the traffic the Eastern Bengal was carrying, and the Eastern Bengal did not intend to let you have it?—I do not think you can put it in that way.

1015. It looks like that?—Sir T. R. Wynne was chairman of the Railway Board at that time, and they were anxious to get the line built. We had applied for a concession and Gillander's had. They made us take it jointly instead of giving it to one or to the other. The line was wanted for jute traffic and through traffic; it was not built primarily for local traffic, but for the through jute traffic to Calcutta. That was the real reason for its being built to the standard it was, but having been built to that standard they only ran one train a day and did not connect it with the ghaut and it could not get the traffic it was built for. As soon as we found this out we did make representations, and because we did not get satisfaction with the Eastern Bengal, we went to the Railway Board and got satisfaction.

1016. You spoke about the shortage of wagons. There is no doubt about that, I suppose. You lay stress on that?—I brought a statement in case you wanted any further evidence. These are the telegrams we have got this year of the wagons supplied from our manganese mines to Calcutta and Bombay. Here is a list of them.

1017. Will you put in it?—Certainly.

1018. Can you give us the gist of it in a word or two?—Yes, it begins on 9th January: "Bengal-"Nagpur Railway inform us impossible any des-"patches manganese ore to Bombay at present, we "are taking up the matter." 12th January: "No "despatches likely at present: Mining Association "energetically protesting." 30th January: "Cen-"tral expect to despatch 100 tons daily from "1st February." 4th February: "Great Indian Peninsula Railway wagon supplies discontinued." 5th February: "Bombay, Baroda and Central India Railway wagon supplies discontinued." And so on right through.

1019. Is it true to say that wagons have always been short?—As far as I know, right back to 1905.

1020. They are now very much shorter?—Yes, on account of the coal traffic.

1021. They are now much shorter because the inland coal traffic is so much narrowed, and it has been impossible to keep up normal supplies during the war?—Yes.

1022. (*Mr. Hiley.*) The coal traffic was getting preference, was it not?—Now they are making us bring it round by sea to Bombay. My point was that up to the war we never had a sufficient supply of wagons. The point I raise now is that these new industries started during the last two years which will be ready to work at any time will be frightfully handicapped if there is no better supply of wagons.

1023. (*Chairman.*) Your broad conclusion is this, that the Government will have all they can do to develop the main lines fast enough, and you would leave everything but the main lines to develop independently?—I think so.

1024. (*Sir Arthur Anderson.*) You say for the construction of feeder lines there has been a steady opposition to private enterprise on the part of the parent Companies. I take it that you are referring to the Guzerat lines and the Bombay, Baroda and Central India?—Not particularly. As regards the Bombay, Baroda and Central India, Sir William Bisset always took a strong view about feeders.

1025. They did object to give assistance to the Guzerat railways, and in the end the Government had to give it themselves?—Yes.

1026. I think there is something to be said for the main line view if you look at the results of the working of these lines. The Godhra and Lunawada branch was completed in 1914–15. During the four years up to 1917–18 the gross earnings amounted to Rs. 2,16,593, and the working charges for the same period were Rs. 2,06,881. The rebate paid by the Government amounted to 2¼ lakhs. In 1915–16 and 1917–18 the working charges exceeded the gross earnings, but with the help of the rebate the branch was able to pay 4·91 per cent. to its shareholders. There is something to be said for the disinclination of the Bombay, Baroda and Central India to give assistance to that line?—Yes, I am glad you mentioned that.

1027. If that is one of the cases you refer to as opposition?—I was not thinking of that, but I am glad you mention that so that I can explain it. We wanted to build a line from Nadiad to Kapajvanj. That was part of the Guzerat Railway, and we also wanted to build from Champaner Road to Shivrajpur.

1028. (*Chairman.*) What are your branch line terms as to duration?—33 years, I think it is—30 years' lease.

1029. Then they can buy you out?—Yes.

1030. At cost?—No, not at cost, 20 per cent. above it is based on.

1031. 25 years' purchase based on the net earnings of the last three years?

(*Sir Arthur Anderson.*) The average of the previous five years.

1032. (*Chairman.*) Plus 20 per cent.?—The maximum is 20.

(*Sir Henry Burt.*) Subject to a maximum.

(*Sir Arthur Anderson.*) And a minimum of 100.

(*Sir Henry Burt.*) They cannot get less.

1033. (*Chairman.*) Is there any restriction of your dividend?—No, there is a restriction that we share with the Government above 5 per cent. They

give us a rebate to make up 5 per cent. and we share above.

1034. (*Sir Arthur Anderson.*) It is practically a guarantee of 5 per cent., and the profits above that they share. How do you share?—Half-and-half.

1035. What is the most prosperous branch line that you know?—The Tapti Valley, from our point of view at the moment. It pays 9 per cent.

1036. Do the shareholders get 9 per cent.?—Nine per cent. last year, but now the lease falls in next year, and we have agreed to accept an increase of working expenses from 44 to 55 per cent. If the shareholders accept this it will knock the dividend down 1½ or 2 per cent.

1037. That will recover again?—Yes, I expect so.

1038. You do not know any Company that has earned more than 9 per cent.?—Yes, the Amritsar Patti paid 11 or 12.

(*Sir Henry Burt.*) 11, I think.

1039. (*Chairman.*) I think the Darjeeling Himalayan has paid 14. Is that a branch line?—I think it is. They run it themselves. Might I reply to Sir Arthur's question? I was rather interested in it. We wanted to build these two lines I mentioned, the Nadiad and the Champaner, and the Government of Bombay said they would not agree to our having the concession unless we included the Godhra Lunawada. We only included the Godhra Lunawada at the distinct request or orders of the Government of Bombay. That line has been a handicap ever since. The Guzerat consists of three lines. At present the Nadiad and the Champaner pay well.

1040. (*Sir Arthur Anderson.*) The interest on the Champaner line for the first three years without the rebate was 1·12 per cent., 1·71 per cent. and 2·42 per cent. It has been better than the other?—Yes.

1041. With the rebate you were able to pay your shareholders, I suppose, about 6?—The Godhra Lunawada has been a millstone round the other two.

1042. (*Chairman.*) Your rebate is in the form of 5 per cent., is it not?—The original rebate on the Tapti and the first three lines was up to 10 per cent. of the earnings of interchanged traffic.

1043. Of the gross?—Yes. Now it is up to the full extent of the net earnings on interchanged traffic.

1044. I do not follow?—Suppose the main line make a lakh of rupees on the interchanged traffic?

1045. Earned gross?—Yes, they deduct working expenses 55 and we can claim up to the other 45 for rebate if we want it.

1046. To make up the 5 per cent.?—To make up the 5 per cent.

1047. Suppose you are above 5 per cent., how does it work?—We share above 5 per cent. with the Government.

1048. Can you claim any rebate if you are over 5 per cent.?—No.

1049. It drops flat?—Yes.

(*Sir Arthur Anderson.*) There is another point; they are worked at 50 per cent.

(*Chairman.*) That is part of the bargain. I presume that varies in each case.

1050. (*Sir Arthur Anderson.*) Yes?—That is going to be altered in the Tapti now.

1051. (*Chairman.*) Which is really of importance, to get the railways or the method in which you get them? What would the opinion of business people be?—To get the railways.

1052. By the right means if possible, but by all means get railways. Is that the view you take?—Yes, the most important thing is to develop the main lines sufficient to carry the traffic.

1053. (*Sir Arthur Anderson.*) At present the main lines are suffering from a plethora of traffic. Do you agree to that?—Yes.

1054. By rapid construction of branch lines you are accentuating that evil?—Branch lines to-day are a secondary point.

1055. The first thing is the main line?—Yes.

(*Chairman.*) Many thanks to you for coming to give us your evidence.

The witness withdrew.

(Adjourned for a short time.)

MR. LEONARD L. COHEN called and examined.

1056. (*Chairman.*) You are a Director of the Bengal and North-Western Railway, and, I think, two other railways?—I am. The others are the Rohilkund and Kumaon Railway and the Delhi-Umballa-Kalka Railway.

1057. The Bengal and North-Western Railway is a private railway?—Yes.

1058. The Rohilkund and Kumaon is what?—It is also a private railway.

1059. And you work the Rohilkund and Kumaon Railway?—Yes.

1060. Do you work the Delhi-Umballa-Kalka yourselves?—No, the East Indian Company work that.

1061. It is an extension of the East Indian in the direction of Simla?—Yes.

1062. And you do not work it?—No. They work it at a percentage, which is 45 or 48 per cent., I think.

1063. (*Sir Arthur Anderson.*) 48 per cent.?—Yes, 48 per cent.

1064. (*Chairman.*) You have been a Director for some time?—Yes, I really do not remember how long. I was first a Director of the Bengal and North-Western Railway, either 12 or 15 years ago.

1065. You have no personal connection with India?—None.

1066. You were in business for many years in the City in your own firm, which I believe was Louis, Cohen and Sons?—Yes. See Written Statement No. 4, Vol. IV.

1067. You are confining yourself in your evidence, I see, to financial considerations?—That is so.

1068. I do not know whether you consider it financial, but do you wish to express any opinion on the question of the State *v.* Company?—I did not deal with that point, which is marked "A" in the terms of reference, because primarily political issues are involved in it, and the financial considerations are indirect. Another reason why I did not deal with it was because I had not time to do justice to that point.

1069. It is entirely for you to say. Do you wish to say anything about it from aspects other than political?—I can only make one or two general remarks, such as that the experience of those countries which have adopted the system of direct State management of railways has not been particularly fortunate. An illustration of that has recently been furnished by the alleged desire of the Chilian Government to surrender the direct management of State railways and to hand them over to a private Company. The two reasons being given are: (1) that they anticipated that a private

Company would be able to raise capital more easily, and (2) that when the administration was handed over to a private Company there would be less political pressure, undue influence, exercised in various directions on the Company than was exercised on the Government.

1070. I suppose the application of the second of those to India would hardly come before you, but on the first, the question of raising capital, have you anything to say—I mean with the two systems contrasted?—I have dealt with that in my paper.

1071. With regard to Point 3, "To consider "the arrangements for the financing of railways "in India, and the feasibility of the greater "utilisation of private enterprise and capital for "the construction of new lines"?—That is a quotation.

1072. Yes. You say: "I am not competent to "give any assistance to the Committee from want "of familiarity with the conditions in India." I certainly have read, and I think the Committee will read, that as meaning for the financing of "Indian railways"?—Of course the second sentence which you read is with the implication in the first sentence, that it meant financing the railways in India. To put it bluntly, I do not know sufficient of the conditions in India.

1073. It is the feasibility of greater utilisation of private enterprise. It might be private enterprise from England or not. Let us take No. 3 as meaning financing of Indian railways?—Then the rest of my paper would come in. Paragraph 4 of my paper refers to the question of financing Indian railways at the present time and in the immediate future, and says that it is rather academic. That is without elaborating the theory.

1074. Ignoring the present abnormal conditions, you call attention to the fact that you cannot afford to pay $9\frac{1}{2}$ per cent. for money, so to speak?—Not quite that. I state that our ordinary stock yields $9\frac{1}{2}$ per cent. and their respective preference stocks $7\frac{1}{4}$ to $7\frac{1}{2}$ per cent., and, presumably, a mean between those two rates would probably represent the rate at which you would have to borrow.

1075. The rate of interest is such at this moment that it is difficult to contemplate new finance of anything but urgent necessities?—Quite so.

1076. That is a question of world finance, and we can leave that. When more normal conditions prevail you speak of an appeal to the London market, and in paragraph 6 you express the view that you do not think an English investor would provide any capital for a Company domiciled in India with a Board sitting in India?—That is my view.

1077. We had witnesses this morning who were inclined to favour the concentration of the management—I will put it in the vaguest terms—of the whole of the railways under an organisation that was much more independent than at present. Suppose we call it, for the sake of argument, the Indian National Railways. Would the same objection that you take to raising capital for an individual Company with a separate Board apply to raising capital for the railways as a whole, with a record of dividends behind them?—I should want a good deal more information as to the powers of the new organisation; I should want to know a great deal more about the financial independence that was going to be given to them. On the mere sketch I am unable to express an opinion which seems to me to be of any value.

1078. Let us assume that it had great financial independence: would you then care to express an opinion?—I suppose you imply that this great organisation was to be domiciled in India?

1079. Yes. I should have considerable doubt as to whether the British public would supply money which was under the complete control of a concern domiciled in India. It seems to me that there is only a difference in degree between the two things. At present I have only a very sketchy idea of what was contemplated by the witness.

1080. The point I would ask you to direct your attention to is this: whereas you could imagine a single one of eight Companies being imprudently financed, if they were all, as it were, joined in their finance would you still think the risk as big?—I cannot accept your assumption under existing conditions. If I might explain what I mean I would say this. All the existing Indian railways are under very tight control, with regard to the executive or administrative action in India, by the Railway Board, and, as regards financial and other matters in London, by the presence of a Government Director on their Boards; so that I cannot imagine the condition which you suggested arising.

1081. I am assuming, for the sake of argument, that the whole control was removed to India, that, whether more or less control over the individual Company continued, the point would be that there would be a Board largely autonomous responsible for the whole of the finance. I do not want to press you if you do not wish to give an opinion?—I do not mind giving an opinion, but I would rather have had a considered scheme upon which to give an opinion than a hypothetical scheme, the details of which do not seem to have been thought out.

1082. That is to say, they have not been set out?—Yes, that is better; they have not been set out.

1083. Let me put it to you in this way. Assuming that the pecuniary inducement was sufficient and that there was no trouble with regard to double income tax and variations in exchange, do you think a Government of India rupee loan would be an attractive security?—I do not.

1084. Does it not come to this, that your view is that the English investor invests under the control either of an English Board or of the English Secretary of State?—Yes.

1085. You attach very great importance to that?—In giving my opinion as to what the English investor would be inclined to do, yes.

1086. I see you say that an Indian Board—we are now coming back to the theory of a Board of an individual Company—would be liable to represent local interests, which might not be the same as the interests of the Company as a financial concern?—That is so.

1087. And in reference to a Board sitting in London under, presumably, a second Board of some kind in India——?—It does not commend itself to me. That is what is called in the terms of reference a combination of B and C. It was so very vague that I did not deal with it, but I believe there are cases of the kind which have not been very successful.

1088. Could you give us instances, because that would be very valuable?—I could only do it by borrowing from the evidence of Colonel Gracey, who refers to the Egyptian Delta Railway. What I said was a little different from what you quoted with regard to the Company domiciled in India with a Board sitting in India. After dealing with the want of experience and so on, I said that the prospective stockholder would feel that his prospective dividends would depend too much upon persons with divided interests, or who might at any

rate be exposed to strong local pressure exercised to the possible detriment of the shareholders. That is slightly different from what you quoted, I think.

1089. I meant the same thing, and I should be glad if you could point out any difference?—I forget exactly the words you used, but they struck me as having a slightly different meaning from what I wished to convey.

1090. In the next paragraph of your statement you say that you do not think the combination of a Board sitting in London with the Company domiciled in India would be desirable. I assume that would imply some representation in India of the Company?—I do not know what it really implies. There are several ways of doing the thing, of course.

1091. I am taking your own phrase?—The phrase of the reference is "a Company domiciled in India." That might mean a nominal share capital or the whole of the share capital in India, or it might mean a portion of the share capital held by the Secretary of State and another portion held by the public.

1092. There is no suggestion in the reference to a Company domiciled in India with a Board sitting in London?—That is my theory of what was meant by a combination of B and C. It might easily be that.

1093. Imagine a combination of B and C—would it not imply some representation in India of the nature of a Board with some powers at least?—Yes.

1094. Do I gather that you think an English Board and an Indian Board could not work together?—I think it would be difficult. The Indian Board, if the Company were domiciled in India—by which I understood it to mean that the shareholding would be in India—would be under the pressure of the Indian shareholders, and very easily acute differences might arise in the Indian Board under those conditions.

1095. An Indian Board representing shareholders with two interests, dividends *v.* local pressure?—Quite so.

1096. Whereas the English Board would only have one interest?—Yes.

1097. And you do not think they could work together?—I think it would be difficult.

1098. You have no experience, I suppose, of the Argentine Local Boards?—No. I believe "Committees" is the technical name for them. The only knowledge I have is that as a shareholder I receive their reports, and they do not reveal very much.

1099. But you have not any personal knowledge?—None.

1100. We are getting a gentleman from the Argentine to tell us. You say that if the Government were to exercise its option to purchase, it would have either to buy out or to make a new contract and attract the existing shareholders?—Or a new public.

1101. Your view is that if the Board of your Company was transferred to India it would imply that the new public would be an Indian public and not the old English public?—If under the new contract the Board were an Indian Board.

1102. In connection with what you mentioned in your paper, shall I call it a misunderstanding between the Great Indian Peninsula and the Government?—Yes.

1103. What would you say as to that?—I do not want to add anything to what I said when I was examined in 1908 by the Mackay Committee.

1104. I have not had a chance of reading that?—If you remember, there was a dispute as to the methods of calculation of the basis of the annuity. It went before one court and the shareholders who were to become annuitants lost the case and did not pursue the matter any more. Although I said the contract was interpreted legally, it did not prevent a sense of grievance being cherished by the quondam stockholders—I say "quondam" because most of them became quondam from that moment, as they dispossessed themselves of their holdings as soon as possible. Another cause—which was not peculiar to the purchase of the Great Indian Peninsula, but which was common to the purchase of all Railway Companies giving in exchange an annuity—was that the value placed in the market on the annuity on the day that the stockholder received it was 10 to 15 per cent.—I think so, but I am speaking from memory—below the market price at the moment of Indian Government stocks, with which it was compared, the security being identical, plus the security of the railway. That soreness remained for years.

1105. What is the explanation of that discrepancy?—The explanation of that discrepancy was that the form of annuity in which, if you took the B form, a sinking fund had to be provided, was unpalatable and not congenial to the British temperament. Attention was called to that in 1885 in a letter which was afterwards published as a pamphlet. It was written by my father to the *Times*, *à propos* of some previous conversation, but apparently his warning fell upon deaf ears.

1106. It was partly that people did not want an annuity that they disposed of their holdings instead of converting them?—Their selling was not the cause of the discrepancy between the annuity and the Indian Government stock, because that discrepancy had existed in the case of some other annuities which had existed prior to the purchase of the Great Indian Peninsula.

1107. It comes to this,—that they were paid off in a form they did not like?—Yes, and also they had a grievance against the Government, legitimate or otherwise, that the calculation for the annuity was on a different basis from that which they had expected.

1108. May I take it that your general view is that in the long run, having to deal with the market, the action of the Secretary of State was not financially wise?—Certainly it was not wise.

1109. It would have been wiser to sacrifice a little revenue for the sake of keeping a satisfied body of investors?—The Secretary of State in seeking capital for Indian railways then and now is in no different position from the trader who must conciliate and not alienate his customers. I dealt with that point in 1908.

1110. I want to get it here, because it will come to people who will not refer to 1908. Is your view generally that it would be wise to keep a pleased clientèle?—Certainly.

1111. Would you say the same thing in reference, for example, to the terms of a renewal of a contract?—Certainly. You have not read this 1908 document. In the beginning of the paper I put in I called attention to the different ways in which the contracts had been renewed, and that most of them were not such as to secure, or certainly not to enlarge, the connection of the Secretary of State with the investing public.

1112. May we put it on the notes in this shape then—that you expressed these opinions 12 years ago, and you still hold them?—Yes, I have said so in paragraph 11 of my paper, where I say:—"My "views generally upon the utilisation of private "enterprise and capital in England for the exten- "sion of the Indian railway system have not

"materially changed since I gave evidence in 1908 "before the Mackay Committee."

1113. You call attention to the fact that you could not enlarge upon the matter because you had not the time. The Chairman, equally, naturally could not enlarge the purview of his enquiries, because he had not the time. What I want to record in this inquiry is that you think it is practically necessary to retain an English investing public?—Yes.

1114. And you do not think that the procedure which has been adopted in the past has tended to produce that desirable result?—No, I do not. To begin with, the simplicity of contract which an ordinary intelligent reader and a possible investor can understand is a desideratum which has never been appreciated by the financial authorities at the India Office.

1115. In reading the contracts, I am impressed by the fact that they all vary in small particulars or tend to vary in small particulars?—I will not take up the time of the Committee, as I have another appointment, but if I am allowed to refer to the Company with which I am most familiar, the Bengal and North-Western Railway, I think I shall be within the mark when I say that we are operating our present system under contracts numbering between 13 and 14, that is to say, we have got as far as No. 14 contract.

1116. Are they all financial?—No, they comprise everything. In order to get to the financial articles, you have very often to labour through a lot of other sections which are only indirectly touching finance, but which you must study in order to get any intelligent view of the particular clause you are after.

1117. And when you get to contract 14 you are not quite sure that you have read it right?—When you get to contract 14 there are a lot of cross-references going back to other contracts, say Nos. 3, 5, 7, 11, clauses so-and-so.

1118. May I put it then that your criticism on the big question would be in the first place, make things more simple, more easily intelligible, to the would-be investor or to the broker?—I should put it in the first place not to be so niggardly when a contract is to be renewed or when a new contract is to be made. If I might put it in my way, I should say: "Do not limit the duration of the contract "to 25 or 30 years, and if you do, do not make "the results so that the more profitable the con- "cern becomes the less profitable it is to the "investor, and I should say that the duration of "the contract should be not less than 50 years." In that I am actually supported by the Mackay Committee, because they came to the conclusion, after hearing various witnesses, that 50 years was not an unreasonable period.

1119. These contracts which run for 25 years have no provision for a break in the interval. The French contracts, and as far as I know, the contracts of most countries, make provision for what might happen if the Government at any time desired to resume possession. If you made it as long as 50 years, would you not desire to put in terms on which the Government could resume at any time?—No, I should protect the Government in another way by making the stock repayable at par at the termination of the contract.

1120. Would you provide that the Government could break at any time on terms?—I do not think the investor cares—or he did not care before the war—for a short-dated security.

1121. Take our case. We are asked to advise what to do. According to the contract the Government cannot do anything with the Bengal-Nagpur until 1950, and that is clearly a disadvantage from the Government point of view?—But they get a share of the profits.

1122. But they may desire to change their policy. Do you not think it is reasonable that the Government should have power to break the contract provided the terms are generous to the shareholders?—It may be reasonable, but if it is reasonable and it is carried out in practice, it will alienate a large number of people who do not care about that provision.

1123. Even although it is a plum to them to be bought out?—I think it is a better policy to do as I say, that is, to give a term of 50 years with the stipulation that they would only get par at the end of the period.

1124. Do you think a debenture issued at 100, repayable at the option of the Company at 115 at any time, is an unattractive offer?—No, but I have never contemplated that sort of thing.

1125. I want you to contemplate it. I have followed the point of the 50 years, but against that you have to set the fact that a great deal happens in 50 years, and Government policy might change. Is it reasonable to ask them to tie their hands?—I do not think it is unreasonable, because the Government have got a *quid pro quo*. If their policy changed, and their policy was based on purely financial considerations, it would be only because the line had become more profitable that they wanted to buy it. They get the other advantage of sharing in the prosperity of the line and having to go on for another period of years.

1126. Take this case. There are two lines running out of Bombay, the Bombay Baroda and the Great Indian Peninsula, and the Government might think they would like to amalgamate them. They cannot do it?—That is a little unfortunate instance, because the Great Indian Peninsula contract terminates in 1928 or 1925.

1127. The Bombay-Baroda may say that they will not have it on any terms?—You cannot have your cake and eat it. If my view is correct that there are more investors who want a 50 years' untouched investment than there are who want the sort of investment which you indicate, they ought to look at the matter and weigh it carefully. I say you must weigh the two advantages to the Government, and decide which horse you are going to ride.

1128. You have not quite answered my question, which was really this. Given a debenture—call it a debenture for the sake of argument—with a 50 years' currency, repayable at par at the end of the period, would it decrease its attractiveness if there was added to it a right to repay at 110 at any time?—It might be attractive to some people but not to others.

1129. Do you think there would be people who would be repelled by that condition?—Yes, trustees, for instance.

1130. Did you deal with the three points?—I got as far as the third, but I was going to add a fourth, which came out, however, in the course of the discussion. I was going to say that I advocated repayment at par and not at any figure which depended upon an abstruse calculation at the end of the period.

1131. That is a sub-head of your point of simplicity?—Yes.

1132. In connection with the question of generosity, the Great Indian Peninsula instance, I suppose, may be taken, that it is not always a good policy to press a legal right?—You would find another instance, if you had time to read the paper that I handed in to the Mackay Committee, in connection with the Bombay-Baroda contract, in which up to a certain period the holders of the stock which was apparently given in exchange for

the Bombay-Baroda were to enjoy one-tenth of the surplus earnings, and if they got above a certain figure they were only to earn one-fifteenth on the amount above the original figure; that is to say, the more the undertaking prospered under the management of a Board in London the less the people whose interests the Board were looking after were to get out of it.

1133. After all, it is the principle of the super-tax?—*Absit omen!*

1134. Do you think that is unfair as a general principle?—If we are to discuss the application of the super-tax I should not be able to keep my appointment.

1135. (*Mr. Hiley.*) With regard to the advisory or subsidiary Committees in India, I see from your evidence you are not in favour of them, but I should like to get some idea of the extent of your disfavour. Supposing the agent of the Company was chairman of the local Committee, do you think it would be absolutely dangerous to the interests of the shareholders in England if such Committees were formed, advisory Committees in India working with limited powers as subsidiary to the London Committee?—I should not like to give a very definite answer to that. I think you could get it better from the witness from the East Indian Railway, which has been operating under such conditions. I understand that there has been a Committee, although I do not think quite in the form which you suggested, with the agent as chairman. They might tell you their experience, but I have not considered the matter.

1136. Do you think there would not be some advantages in having a local advisory Committee intimate with the local conditions, that might be able to strengthen the hands of the agent, provided, of course, in the case I put, that the agent is not interfered with?—As a person with a conservative temperament, looking at such a proposal I always look to see what are the advantages—what are going to be the advantages over the existing system? Under the existing system an aggrieved local trader can address himself to the agent. It seems to me the possible disadvantage from the system suggested in your question might be that it would provide machinery by which an undue pressure could be put upon the Company through the agent by the local traders, and I do not think that is particularly desirable.

1137. (*Sir Arthur Anderson.*) Conceivably there are times when it might be an advantage, as in the case of labour troubles with a strike going on. The agent may or may not have powers to come to a settlement, and the home Board may or may not agree with his recommendations, which in any case would take time, but with the assistance of a Board of local men the home Board would know that the matter had been considered in all its bearings, and the opinion of a body like that would be sufficiently weighty to be acted on at once?—I do not think any Board in London would divest itself of its powers and delegate them to a local Board in any question of raising the standard of wages right throughout the shops or throughout the traffic department. It would be divesting itself of responsibility, and that it would not care to do.

1138. One of the grievances that have come to the front at different times is that in time of trouble the agent has said that he was prepared to make certain recommendations, but he was awaiting the decision by his Board. The public have no one to go to beyond the agent. It takes time in that way to come to a settlement. If there was a body of advisers or a local Board, or whatever name you choose to give it, to appeal to on the spot, do you not think it would have a beneficial effect?—Do I understand you to mean if the labour leaders had a local Committee to which they could appeal?

1139. No, not exactly. I mean an Advisory Board or Committee to whom they could appeal to and lay their grievances before?—It would not be much use their appealing to the local Committee unless the local Committee had power to deal with the subject.

1140–2. Presumably the local Committee would be composed of men on whose judgment the Home Board could rely and would have power to deal with the situation?—Therefore we come back to where I started from, which was that, if the suggestion was that this local Committee should have power to deal with the rates independently of the London Board, then it is a proposal that would not commend itself to me.

1143. (*Mr. Hiley.*) Does not the agent now in practice have to settle the question with regard to rates of pay practically independently of his Board? His Board's control must be very nominal in London on questions of that sort?—There we should differ.

1144. We are not differing. I am asking you for the practice on your railway?—On our railway the control of the Board is far from being nominal.

1145. In regard to disputes as to rates of pay?—We have given him latitude in that within a limit, but the limit, as far as I know, has been always fixed by the Board

1146. (*Sir Henry Burt.*) During the recent labour troubles and within the limits which have been given by other railways our agents have been given authority to act as regards increases of pay?—By the Board, the Board always being the paramount authority.

1147. (*Chairman.*) Do you really think, as a business man in England, that in practice you would feel that your opinion on the subject of whether Rs. 30 or 35 a month was a reasonable wage was of great moment?—No, but the opinion of three or four of my able colleagues might be extremely valuable, because they have been all on the railway.

1148. But they are not on the railway to-day?—No.

1149. You think that is a subject that can be profitably decided at home?—Within limits. As I said, the final decision is with the Board, but the recommendations come from the agent.

The witness withdrew.

COLONEL T. GRACEY, C.S.I., R.E., called and examined.

1150. Have you had the reference which we are asking witnesses to consider?—I have not had a copy, but I saw it outside.

1151. I will not trouble you to read it, but no doubt you will kindly do so later. I will now ask you some questions about your statement.—I should like to begin by adding one thing to what I have already said (*handing paper to the Chairman*).

1152. "At the present time the arrangements for financing Indian railways are not so important as the fact that railways could not afford to use them except for very special purposes. As an instance of

See Written Statement No. 5, Vol. IV.

what is meant, before the war the Bengal and North-Western R. Co. wished to build a bridge over the Ganges at Mokameh at a cost of 1¼ crores, which was equivalent to 1,000,000*l.* sterling at the exchange of the day. This million the company could then have raised without difficulty at a cost of 42,500*l.* per annum"—that is, 4¼ per cent.—" with the enormous rises in prices and interest, the bridge would now cost 3½ crores or, at 2*s.* per rupee, 3½ million pounds. If the company could raise this now, the interest charged would be about 8 per cent., or in all 280,000*l.* per annum"—that is, practically seven times. "The company were quite willing to face the 42,500*l.* per annum, but 280,000*l.* per annum is obviously a very different proposition." You have assumed what rate of interest in cost?—The increase in ironwork would be about 250 per cent.

1153. Take it overhead?—It is difficult. It is rather a long explanation. The ironwork is 250 per cent., then during construction we would have the interest on the money running up and the cost would be increased 50 per cent. Altogether I estimate the cost would be about 350 lakhs instead of 150.

1154. That would be the money expended in India?—When we put it down in India the money expended would be about 3½ crores.

1155. As against 1½.—Yes.

1156. That is 133 per cent. increase?—I did not work out the percentages.

1157. 1½ to 3½, I think that is correct. That seems to me small?—What I was telling you about was the absolute impossibility of carrying out the work.

1158. You have not been in India very recently?—I was in India immediately before the war.

1159. You cannot tell us at first hand about the increase in labour cost?—We know the increase in labour cost that we have had to sanction to our establishment in India.

1160. Can you put that in a percentage?—No, I cannot.

1161. You cannot give us the wages bill before and after?—I was Chairman formerly, and I am growing an old man, and I gave it up, and Sir Henry Burt succeeded me.

1162. (*Sir Henry Burt.*) Quite 100 per cent. in the lower grades and 30 to 40 per cent in the higher grades?—These small details, I am sorry to say, I have dropped since he took over.

1163. (*Chairman.*) Will you tell us something about these three Companies. They are all what are called private Companies?—Yes.

1164. But as a condition of your concession you are only given it for a limited period?—Yes.

1165. Your dividend is unlimited?—Yes, our dividend is unlimited.

1166. But you may only raise as much capital as the Government permits you to raise?—Yes, that is so.

1167. As for your rates and fares you are subject to the same control as any other railway?—Yes.

1168. You have a maximum and a minimum?—Yes.

1169. I am thinking of the Bengal and North-Western Railway. You are not an unprosperous Company?—No. That also applies to the Rohilkund and Kumaon.

1170. They have not suggested that your dividend is so substantial that they would like to reduce your maximum?—Reduce which maximum.

1171. Your maximum power of charge?—No.

1172. Has that ever happened on an Indian railway? There are not many, I suppose?—As a matter of fact, I do not think we charge the maximum for anything except articles that do not count.

1173. If the Government were to reduce your maximum it might cut off the tops of a good many of your charges?—We are everywhere so much below the maximum that I do not anticipate any difficulty in that.

1174. You are not afraid of it happening?—No; I am not afraid of that.

1175. (*Sir Henry Burt.*) The bulk of the traffic is carried below?—The bulk of the traffic is carried at much below the maximum. I will give you an instance of fares. Now for the third class it is 2 pies per mile, or say one-ninth of the English charge. On most of the other railways it is 3 or 4 pies.

1176. (*Sir Arthur Anderson.*) They vary according to the services?—They may vary, but we have no variation. We have a universal rate of 2 pies for the lowest class passengers. I was looking the other day, and I see that the Bengal-Nagpur are 4 and 4½ pies for the same service.

1177. (*Chairman.*) You have drawn a comparison between the financial results of the Oudh and Rohilkhand; that is a State railway?—Yes; but, understand me, I have not drawn this comparison.

1178. You have extracted the comparison from the official figures?—These are the Government figures.

1179. You put them together?—I brought them together.

1180. Let us be sure about it, because those of us who are not familiar with India may make a mistake. The Oudh and Rohilkhand is a State railway?—It now is. It was formerly a Company's railway.

1181. Then the State section of the Bengal and North-Western Railway is Tirhut?—Yes.

1182. Then the Rohilkund and Kumaon. What is that?—I am a director of it; I was formerly Chairman.

1183. That is a private Company?—Yes; the only difference between that and the Bengal and North Western is the purchase terms on the Government taking over.

1184–5. Your table shows this, that whereas on the Tirhut Railway which is worked by a private Company, the Government has made a large profit, a large net gain, on the Lucknow-Bareilly Railway which is the State section of the Rohilkund and Kumaon Railway and worked by that line there is a small profit?—I do not know what you call a small profit.

1186. 76 lakhs?—76 lakhs on the capital expenditure of about 2 crores is a very big profit.

1187. But, as I understand, it is spread over 30 years?—Just so, but about half the capital has been paid back in surplus profits.

1188. If you spread it over 30 years it is not a big sum per year?—If we took such a sum per year as that out of it, would you say that our rates were too high?

1189. And on the third case, which is a railway worked by a State railway, you show a loss?—The Government figures show a loss.

1190. Your table, compiled from the Government figures, shows a loss?—Yes.

1191. You say further that when your private Company took over the Tirhut Railway you converted what had been a loss under State management into a profit under your management?—If you look at the figures you will see above 1890 there was a continuous loss; after 1890 there were continuous gains.

1192. Now you lay stress on a matter; you say that during the war, the Oudh and Rohilkhand Railway's ratio of working expenses decreased because they carried nothing to reserve for depreciation?—I believe that is so.

1193. You did on the Bengal and North-Western carry something?—We carried a very large amount to depreciation.

1194. Did you carry sufficient to replace at the price when you carried it normally to meet what

would have been normal replacements?—As closely as we could estimate it, we did; you must remember that we wanted to do more, but the Government would not allow us.

1195. Do you mean to say you wished to put larger sums to depreciation reserve?—We wanted to put larger sums and the Government would not agree to larger sums. We had to show by figures what we proposed to do and what it would cost. I think the Government were quite right.

1196. Why?—What they allowed us to do was to keep our railway in the same state as it was when the war commenced. I think that was reasonable.

1197. The Government takes no share of your profits?—Through the Tirhut I think they do. I must explain to you that we can spend not a half-penny without the Government sanction.

1198. I quite understand that?—Because of the Tirhut Railway. If we did not work the Tirhut Railway we could spend what money we pleased and do what we pleased.

1199. I will not go into the reasons. You think you did make a reasonable provision according to the prices as they then were?—We did our best to make a reasonable provision.

1200. I suppose it has turned out insufficient because prices have continued to go up?—We have been regulating our provision pretty well to as near an estimate as we could of what it would cost us to carry out certain works; for instance, we wanted to renew some 80 engines and 1,300 goods vehicles. We put away sufficient to enable us to renew them within the time that we thought they ought to be renewed.

1201. Then you are really up to date?—We hope so.

1202. You express the opinion that there is not much in the contention that expert railway men lose touch with Indian conditions after they have been home for some years?—I adhere to the opinion I have expressed there.

1203. I am representing you accurately, am I not?—Yes, quite accurately.

1204. You think that railway problems are the same all the world over?—Are they not so?

1205. Do they remain the same?—We have an agent there who keeps us in touch with any changes.

1206. That is not quite the point, is it? You say you remain?—As far as our Board is concerned, a member of the Board is now and then going out to India to keep in touch.

1207. That may keep him in touch, but does it keep the rest of the Board in touch?—We hope so. I have been out three times.

1208. I wish you could communicate to me all your knowledge of Indian railways as easily as that.—I have been fifty years at it, and I think I have some store of knowledge.

1209. I see you say at the top of page 3 of your proof that you carry 63 passengers third-class for every 100 seats?—Yes.

1210. And you say that they may be sometimes slightly uncomfortable?—Yes, slightly overcrowded.

1211. Do you think slightly?—Yes. Part of my service was spent as Government consulting engineer on open lines on the railways, and I made a point of examining the trains to see where the overcrowding commenced, and I found that the overcrowding commenced when the ratio was 60 per cent.

1212. Do you know the Tube trains in London?—I know nothing about their ratios.

1213. Would you agree that they are overcrowded?—I beg your pardon.

1214. They tend to be slightly uncomfortable?—I have travelled on them, and I have travelled on them packed so tight that we could not get in or out of the carriages.

1215. Do you know that their ratio is just half 62?—You are not comparing things that are equal.

1216. I do not suppose that it is quite like that?—For a short time they are so packed that you cannot get in or out of the carriages. Then for a considerable time they run empty and so it goes on, but in India your trains are pretty well the same all the year round.

1217. I am glad I asked the question, because I was puzzled at the figure.—When such a thing as a festival occurs we run special trains in addition to our ordinary trains.

1218. May one take it from that that your traffic is much the same in both directions?—I think you may take it it is much the same.

1219. Much the same every day of the week under normal conditions?—Your neighbour on the right can answer as well as I can.

1220. I suppose nothing of the rush-hour type?—No, nothing whatever. There may be something in Bombay and Calcutta, but as far as my experience goes, on all our up-country railway sthere is no rush except at festival times when extra trains are put on.

1221. Your companies are, I suppose, the most important of the independent companies?—For practical purposes there are no others.

1222. The Southern Punjaub is about equally important?—The Southern Punjaub does not work its own line.

1223. I was thinking of the point of view of being independent of guarantee. Can you tell us how much money your three companies have raised in the London market?—The Bengal and North-Western have raised about 6½ millions; the Rohilkund and Kumaon about 1½ millions.

1224. That makes 8 millions?—And the Delhi-Umballa about 1,300,000.

1225. We have got to something like 9½ millions. For how long a period?—We commenced in 1890.

1226. You stopped raising money, I suppose, after 1914?—No, we commenced in 1882.

1227. For thirty years?—It is about thirty years.

1228. I was taking between 1882 and 1914?—If you want to go into that it is a long question. We started and did not pay, and could not raise anything more. That went on for about ten years. Then in reality most of what we have done was done in the last twenty years prior to 1914.

1229. Before the war could you get all the money you wanted?—I think we sometimes borrowed on better terms than the Government.

1230. You could get all the money. It was a security London was inclined to take?—Before the war we had no difficulty in getting what money we wanted.

1231. How did you place it?—It was all issued by the Company through underwriters.

1232. You raised fresh share capital?—No, we raised preference capital. The Bengal and North-Western has 6,000,000*l.*—3,000,000*l.* ordinary and 3,000,000*l.* preference.

1233. You have practically no debentures?—We have some outstanding now, some 300,000*l.*

1234. How did you place those. Did you issue them on your own account, or through an issuing house?—We sent for our broker, and we sent him round to get underwriters. When he said he had got the underwriters we issued it.

1235. Direct from your own office?—Direct from our own office.

1236. Is that true of the Delhi-Umballa-Kalka?—There are exceptions, but for practical purposes it is true of all our issues.

1237. You think you could, if you wanted it, have got more money in that way?—We could have got plenty of money before the war, but everything has changed now. Then Indian securities

were looked upon with favour, and we could have got any amount of money we wanted. Now Indian securities are a drug on the market; the Stock Exchange will not look at anything, and I doubt if even the Secretary of State would get any money at reasonable rates.

1238. What do you think it is, because it is India, or because of the exchange difficulty?—I think it is simply because of political matters, with which I would rather not have any concern.

1239. In reference to the suggestion of a company domiciled in India with an Indian Board, provided it had a substantial capital, what would you say?—I cannot see where they are going to get directors who know anything about railway management.

1240. Do you not think they could have got half-a-dozen in Bombay and half-a-dozen in Calcutta?—I do not; I do not see where they could get any. The men who direct the Indian Railways are men who retire a year after 55. They would not stay in the plains of India after 55.

1241. But the Indians would?—Yes, the Indians would. I doubt whether there are any Indians much above the grade of executive engineer now on the railways.

1242. I suppose an Indian Director of a jute mill is not necessarily an expert in jute?—The expert managers must be experts.

1243. We are talking about directors?—I was talking of expert managers.

1244. I am asking you about directors?—On every railway I am acquainted with nowadays two or three of the directors are expert railwaymen.

1245. You are aware that is not a common thing in most countries?—I think myself on all railways it is now the rule instead of being uncommon.

1246. You would not say that there were expert railwaymen on the English Railway Boards?—I say that they are steadily increasing. At one time there were none, and I think that was one of the great reasons why English Railways were allowed to fall so far behind.

1247. Is it your impression that there are expert railwaymen on most of the English Railway Boards?—I am under that impression, but I may be wrong.

1248. Anyway, you think it is desirable?—I do not see how a railway can be managed without it.

1249. You do not think those people could be got in India?—I do not think those people at present can be got in India.

1250. Leaving aside experts and considering men who were taken not because they were experts, but because they were sound business men, could you get them in India?—I would not like to say definitely, but I doubt myself whether you could get Englishmen to remain.

1251. I quite see that point. Then you speak about the Egyptian Delta Light Railways. Have you any knowledge of that?—The only knowledge I have was being asked to subscribe to them when they first came out.

1252. Because you mention they apparently had a combination of Local and Home Boards?—They sent me the prospectus when they first came out, and I looked at it and said it was impossible.

1253. You do not know how it worked out?—I know they got rid of it. Colonel Marryat, with whom I was closely associated, was Managing Director of the Egyptian Delta Light Railways, and I knew for practical purposes that they got rid of the Egyptian Board. Now they have no Egyptian Board.

1254. You have not any detailed knowledge?—No, I have no detailed knowledge of the working, but that could be easily got, because the Egyptian Delta Light Railways have their headquarters in London

1255. Perhaps we might enquire whether they can give us any information?—You know Mr. Home, Sir Henry, do you not?

1256. (*Sir Henry Burt.*) Yes?—Mr. Home is the managing director, but you will have to get him at once, because he goes to Burma in a day or two.

1257. (*Chairman.*) We had better try and catch him. You are not in favour of the double Board in any shape?—All I know is this, I have never yet heard of a double Board working together. The staff use one Board against the other.

1258. Anyway, you are not prepared to propose a working scheme?—I am certainly not. I am prepared to oppose all such schemes on our own account.

1259. You say that your experience leads you to think that the double system in India of State and Company Railways should be preserved?—Yes.

1260. You say in supporting State Railways you assume that politics will be kept out?—No; I say if politics are not kept out there is no use in talking about management.

1261. You say that you like to keep the State Railways for the sake of emulation. Then you say: "It is assumed that politics will not be allowed to enter into railway management"?—Yes.

1262. Do you not think that the Company Railways as we have them now are more likely to be kept out of politics than the State Railways?—I should think now possibly not, but the Companies' Railways as you have them now, with the exception of the Bengal and North Western and the Rohilkund and Rumaon, are not allowed to call their soul their own. Every single thing they do is dictated to them.

1263. Are you speaking of the guaranteed Companies' Railways?—I mean the Companies' Railways. Everything they do is dictated to them. They are not allowed to call their soul their own because they have short contracts, and they are always afraid of being broken up at the end.

1264. Is what you would like to give the Companies greater freedom?—I think myself that the Companies undoubtedly ought to have longer contracts.

1265. And more freedom at the time?—And a great deal more freedom. They ought to be left alone in unimportant matters and strictly controlled in important matters. The number of circulars one gets from the Government Department is astonishing.

1266. Do you think if the Companies had more freedom than they have at present they would be more likely to be kept independent of politics than the State Railways?—I think if they had long contracts they would keep clear of politics themselves. No railway wants to have anything to do with politics.

1267. You are very strongly of opinion that it might be a great injury to the railways if politics did interfere? Is there any country in the world in which politics has not been the ruin of railways. I put that to you.

1268. Then the answer is that it does not matter because you get it anyway?—I cannot tell you. I am only protesting against politics entering into the management of railways.

1269. You think that the old system of railway secretary and consulting engineers was better than the modern system of a Board?—All I can tell you is this. I myself was secretary in the railway branch of the Government of India and I had infinitely more real power than the Railway Board has now, simply and solely because I could ascertain beforehand what the policy of the Government was and so long as I stuck to that policy I was not interfered with.

1270. What is the fault now, that the Government has not a policy or that the Board cannot ascertain it?—You have now a Board which I do not think has any power and great responsibilities and it is an impossible position.

1271. What is the reason for that?—The reason is that the Finance Department have taken possession of everything. I am not saying a word against keeping accounts most strictly, because accounts must be kept most strictly or the railway would fail, but where the Finance Department comes into everything in connection with a railway it is sure to fail.

1272. That means the interference of other branches of the Government or another branch?—When I was secretary there was an honourable member I used to talk to and he was quite ready to fight the Finance Department and we very frequently got the better of the Finance Department. Now there is nobody to fight the Finance Department.

1273. (*Sir Arthur Anderson.*) Do you speak from personal knowledge?—Of which?

1274. That there is no one to fight the Finance Department?—I speak from personal knowledge of what it was in my time and I also speak from what I see now is happening outside.

1275. (*Chairman.*) Do you think that would be amended if the Chairman of the Railway Board were a member of the Council?—I think it would be a very great improvement.

1276. That is to say you think the Railway Board has not a fair chance?—But on the other hand the multiplication of members of Council renders the Council impossible to work.

1277. They have not got to the English Cabinet of twenty-three yet?—The Indian Council; I do not know what it is now, but in my days the Indian Council was a Council that took into consideration everything that went through it.

1278. On the whole your view is that you had better go back to a Railway Secretary?—On the whole, in addition to the Railway Secretary, my first idea is that the Accountant-General in the Railway Branch ought to be at once transferred back under the Executive Authority of the Railway Board. Then if that is done I think the Finance Department will not be able to interfere in details so much as it does. On the whole I think a Secretary, if you get hold of a member of the Council who knew anything at all about railways, would be the best, but the difficulty is to get somebody as a member of the Council who either knows or cares anything about railways.

1279. What do you say to making a railwayman a member of the Council as such?—My opinion is that the railwayman should, whenever a railway case comes up on the Council, come up and be allowed to support his view.

1280. Support his own chief?—No, support his own views.

1281. He would have a chief?—He would have a chief, but even if he went against his chief he ought to be allowed to support his own views. I think that in other Departments has been done, and I think the Member for Industries is allowed to although he is not a Member of the Executive Council.

1282. Is the Member for Industries, although not a member of the Council, allowed to attend in reference to his own cases?—I think so, and that he is allowed to defend his own cases.

1283. To support his cases?—Yes; other people are allowed to attend but not to say anything. I understand that is the case here in London that people are allowed to appear before the Cabinet and advocate.

1284. You say you do not want anything altered in reference to rates and fares?—It has worked very well.

1285. Nobody has said anything about it so far. You say subject to the law against undue preference, which is enforced in all civilised countries—how is it enforced in India?—Apparently it is not enforced at all except under the authority of the Railway Board, and the Railway Board appear to be the first to break it. We are all told that we must not give undue preference to anyone, and the next thing we see is that the Railway Board break it themselves.

1286. As a matter of fact am I right in believing that there is provision for a tribunal to settle questions of undue preference?—Yes, there is a tribunal.

1287. But it has never met?—The conditions are such that it is next door to impossible for it to meet.

1288. In fact, it has never met?—It has never met.

1289. We need not ask what it is?—You will find it in the Railway Act.

1290. I do not think I need ask you anything about the undue preference to coal. After all, that is not inside our reference, except as an illustration, and we have got it. Now, about the taxation of Indian railways, do you suggest that they should be entirely untaxed by local authorities?—No, my principal objection to it is being compelled to collect the taxes.

1291. To act as collectors for an octroi duty?—Being asked to collect taxes at all seems to me to be contrary to English principles.

1292. You object just as people in England object to sticking stamps on their servants' insurance cards?—I do not object to sticking stamps on the servants' insurance cards.

1293. You have that objection, that is what it comes to?—No, it is a different thing; you collect from other people.

1294. (*Sir Arthur Anderson.*) You are paid for collection, are you not?—That has nothing to do with it. For practical purposes it is not voluntary.

1295. (*Chairman.*) Do you suggest that Indian railways are unfairly taxed by the local authorities, and that they have to pay more than their share?—I suggest it is coming now to be the case that they will be unfairly taxed. We are asked now to collect a passenger tax to whole heaps of places. At first we were asked to collect to Benares, and we did it under certain conditions. Now it is getting to be the case that a terminal tax on all passengers will be practically levied. In the case of goods we have had such heavy taxes put on by the local authorities that our goods have been lodged at a station six or seven miles outside and carted into the place to escape the tax.

1296. These are taxes levied by the local authorities on the goods and that you collect on behalf of the local authority?—A passenger tax would be like this, if you take a ticket from Brighton to London and the local authority collected a tax of, say, 6*d.* on every ticket.

1297. It has been the case in France all my life.—I do not know about France. Do local authorities there collect taxes from railways?

1298. It is a recognised system. It is happening in America now.—It seems to me, if it is so, that it ought not to be in individual cases, it should be everywhere and imposed by the Government of India.

1299. You object to having to act as agent?—I object to be a tax collector.

1300. I want to understand, do you take any objection to the taxes that are levied on the Company, and that the Company has to pay?—I take objection to some of the taxes that are levied by the municipalities. In one case it has occurred that the tax was so heavy on piece-goods that the stuff was consigned to a station 6 miles out and carted in.

1301. That was not a tax on you. That did not come off your dividend?—That is theory. In fact it comes off the railway earnings.

1302. As you know, in England, an English Railway Company is rated for the relief of the poor.—That may be.

1303. Have you anything of that kind in India that you complain of?—In some places we are rated, but the rates are not heavy.

1304. Then in effect you do not complain of that?—I have not done so when they are equally imposed. They do not interfere with us. These taxes do not interfere with our rates. We have a right to ask for those extra rates from the public instead of quoting our minimum. What is the use of quoting low rates if somebody else sticks it on?

1305. You say that a great deal more rolling-stock is required. I think that nobody questions that, and I need not ask you about it?—Of course it is the most serious thing there is just at present.

1306. Have you a remedy, because certainly we will ask you about it if you have?—The remedy is to order it.

1307. How to pay for it?—They must find the money somewhere.

1308. We want you to tell us how?—If the Secretary of State cannot raise money, who else can? He has no business to have anything to do with the railways if he cannot.

1309. If he cannot, and if no one else can—how then?—All I say is that for the last ten or fifteen years the supply of rolling-stock has been totally inadequate.

1310. That, I think, is common ground?—I happen to be a Chairman of a Company that exports a very large quantity of manganese ore, and we engage sea freights, and we cannot get our stuff to the port. The thing is hopeless.

1311. We agree to that, but can you say how money can be raised?—I cannot say how the Secretary of State can.

1312. Mr. Cohen says frankly, "I do not think it can be raised under present conditions, except to a small extent?—I am not sufficiently acquainted with finance matters in the City to tell you how it can be raised.

1313. (*Sir Arthur Anderson.*) As far as the immediate present goes, you are aware, I suppose, that the orders placed last year were far in excess of the deliveries?—All I can tell you is this, that the Bengal and North-Western have had no difficulty whatever in placing contracts for the rolling-stock they want.

1314. (*Chairman.*) How lately?—And we are getting it delivered.

1315. When was the last contract you placed?—We placed a contract only the other day for 500 waggons, or the best part of 500.

1316. When are you promised delivery?—I really cannot answer you straight away, but it is quite within a reasonable delivery. A statement giving the information asked for is furnished (attached to witness's written statement).

1317. Do you believe you will get it?—I am sure we will.

1318. (*Mr. Hiley.*) Are you paying for those out of revenue?—We are paying for those out of revenue.

1319. (*Chairman.*) Out of revenue reserved?—Out of what we have reserved. What we are doing is: we are renewing 500 wagons with new wagons and using the old ones for special purposes. We are keeping them running.

1320. Those are really half way between capital additions and replacements?—These will gradually disappear off the line altogether. They will be surplus stock.

1321. Meanwhile we may regard them as renewal in advance of requirements, in advance of programme so to speak?—I do not think that would be right. In the management of a railway, there are heaps of wagons required for ballast purposes. Formerly the open line used to lend those, now we will hand them over to the engineers. We have a great deal of sugar-cane work. These old wagons will be quite serviceable for sugar-cane work in the busy season of the year. In that way the old wagons will be nearly as useful to us as the new wagons.

1322. (*Mr. Hiley.*) They take the place of new ones, but will not mix with the ordinary traffic?—They will not be allowed to leave the home line.

1323. (*Sir Arthur Anderson.*) I understood you to say that under the present system, since the Railway Board has been in existence, the guaranteed Companies have not been allowed to call their soul their own?—I stick to that.

1324. Do you think the previous system under consulting engineers interfered to a lesser or greater extent than the Railway Board?—I can only speak from my own experience, and when I was consulting engineer. In the first place, when I joined a railway, I had a set to with the agent, but we very soon came to working terms, and if he were alive now he would tell you when I was of great service to him. He was one of the best agents in India. The principal point that I want to make is this, and it is a very important one. In the old days we had a man who was on the railway on the Government behalf, who knew all about it and its ins and outs, finance and everything else, and worked direct under the Railway Board. Since he was abolished we have nobody, and I may say, as far as my recollection serves me, no member of the Railway Board has ever inspected, or even officially visited, the railways of which I am a Director.

1325. (*Sir Arthur Anderson.*) Since the formation of the Railway Board there has been no one?—So far as I am aware, no member of the Board has ever made an official inspection of the railways. He may have come on a casual visit, he has never made an official inspection of the railways of which I am Director. I may add that they have given us more abuse than anything else simply because we are independent.

1326. (*Chairman.*) The Mackay Committee complained that the Board spent too much of its time wandering about instead of stopping at home, but you do not agree?—I say if you never have had a visit from the controlling authorities of Indian railways for ten years, there is something wrong.

1327. (*Mr. Hiley.*) Would your point be met if the Railway Board had district inspectors again?—They have now what they call a Government inspector. The consulting engineer dealt with everything, but now practically all that great part of his business is handed over to a Government examiner, who knows nothing whatever about working railways. If the consulting engineer was a properly selected man, he worked with the railway people and helped them. Colonel John Trevor knew more probably about Indian railways than anyone I know of. He always said that he liked the Government consulting engineers because, as a director of a Company, they gave him a good deal of independent information that he would not otherwise get.

1328. If the Railway Board remains, you would prefer that Board should have attached to it something in the shape of the old consulting engineers?—Somebody who was their representative.

1329. Who is of course an expert railway man, not necessarily an accounts man?—He would be high up in the railway hierarchy.

1330. A railway man as distinct from an accounts man?—A railway man, but the audit must be there too.

1331. Distinct from that?—When I was a consulting engineer all the executive work of the accounts came to me.

1332. (*Sir Henry Burt.*) I think one point you want to make as between the old system of administering railways and the present system is

that the Railway Board have not the same information available now as they used to have in the past?—That I have stated in my note. As a consulting engineer I was continually sent for every now and then by the secretary, who said, "I do not understand this business; will you tell me all about it?" and I told him all about it. He said, "All right; I understand now and can go on."

(*Chairman.*) I gather you do think it necessary that the Government should have some machinery to investigate locally?

1333. (*Mr. Hiley.*) They should keep in touch with local requirements?—The Government authority is exercised now without sufficient information.

1334. (*Chairman.*) I quite understand that?—That is the point, and they should have a man on the spot who has that information and can give it.

1335. You think they should have a man on the spot?—I have always thought so, and I was always strongly opposed to getting rid of the consulting engineers.

1336. There are two alternatives—one is that they should have a man on the spot who is competent in the matter; the other is that they should say, "It is no part of our business to interfere at all, and we will not go down into the locality"?—But they cannot.

1337. They cannot say that?—If you read one of our contracts—even our contract—you will find the Government has a right to interfere in everything. They could object to our putting on a coolie at 6 rupees monthly.

1338. I want you to tell us is it desirable that the Government should retain that power. We are asked to advise whether any alterations should be made?—I think they should have the power but it is most inadvisable that they should exercise it except something serious is going wrong. The way the Government contracts used to be worked when I was secretary was that you never took up anything with a Company unless it was a serious matter.

1339. It comes to this, does it not, you think they should retain the power that the contracts give them?—They should retain the power.

1340. But they should not exercise it except when they think there is something wrong or when it is a serious case. Is that putting it right?—Yes.

1341. Or if they think things are going wrong?—If anything is going wrong of course it is a serious case.

(*Chairman.*) Thank you very much, we are much obliged to you for your evidence.

The witness withdrew.

(*Adjourned till to-morrow morning at* 11 *o'clock.*)

THIRD DAY.

Tuesday, 16th November 1920.

PRESENT:

MR. W. M. ACWORTH (*Chairman*).

SIR HENRY BURT, K.C.I.E., C.B.E.
SIR ARTHUR ANDERSON, KT., C.I.E., C.B.E.
MR. E. H. HILEY, C.B.E.

MR. WILLIAM GAULD (*Assistant Secretary*).

MR. GEORGE ARTHUR ANDERSON and MR. DAVID CHARLES WILSON, called and examined.

1342. (*Chairman.*) Mr. Anderson and Mr. Wilson, we are much obliged to you for coming to help us in this inquiry. You have both received, I understand, a copy of the "Statement to be made to Witnesses" dealing with the conditions under which we are hearing evidence?—(*Mr. Anderson.*) No. (*Mr. Wilson.*) No.

(*The statement was then given to the witnesses.*)

1343. I take it that you two gentlemen will give evidence together, so to speak. If there is anything you desire to say separately, of course you will say it, but we will take it as the evidence of the Company?—(*Mr. Anderson.*) Quite so.

1344. Will you, Mr. Anderson, be kind enough to tell us your position? You are the Chairman of the Barsi Light Railway Company?—Yes

1345. What is you experience? Are you an Anglo-Indian?—Yes, I was 33 years in India. I went out in 1875 as a State Railway man. For over seven years of the time I was with a Company, the Bengal-Nagpur Railway, to which, at present, I belong.

1346. You were lent to the Bengal-Nagpur by the Government?—Yes, years ago.

1347. In what capacity?—Assistant Agent and Chief Engineer. I had over seven years there. See Written Statement No. 6, Vol. IV.

1348. You are an engineer, I take it, by profession?—Yes, Cooper's Hill.

1349. You also went into the traffic side?—No, I never went into the traffic side.

1350. I understood you to say that you were Assistant Agent?—Yes, Assistant Agent and Chief Engineer.

1351. In the capacity of Assistant Agent had you nothing to do with traffic?—Yes, in that way, but I was never in the Traffic Department.

1352. When you were on the Bengal-Nagpur Railway you must have had experience of traffic questions?—Yes, of course.

1353. Now, Mr. Wilson, will you tell us your experience?—(*Mr. Wilson.*) I have not been in India. My knowledge of Indian railways has been obtained in London only, from 25 years' experience of analysing their accounts and finances.

1354. Are you a director of any other Companies?—No.

1355. Only of the Barsi?—Yes.

1356. Mr. Anderson, are you a director of any other Companies besides the Barsi?—(*Mr. Ander-*

son.) Yes, the Bengal-Nagpur and the Burma Railways.

1357. Mr. Wilson, may I take it that you are in business in the City?—(*Mr. Wilson.*) Yes, as a chartered accountant. My firm have been the secretaries of the Barsi Light Railway from its foundation. We are also auditors of some of the other Railway Companies.

1358. Your firm is W. A. Browne & Co.?—Yes.

1359. Lest I forget it, may I ask you this question in order to avail myself of your knowledge of accountancy? As far as we have been informed, the Company has what we may call its operating accounts in India?—Yes.

1360. And they are checked by Government auditors?—Out there.

1361. The Company, as a financial organisation, of course has its accounts, its balance sheet and its profit and loss account, in London?—Yes.

1362. Those are checked by the Secretary of State for India?—Only as far as capital expenditure goes. He does not check anything relating to revenue items at all in any way.

1363. Who checks them, then?—The Company's auditors, who are, like the auditors of any other Company, a firm of chartered accountants. They do the whole of the accounts and books in London.

1364. The Secretary of State does not have need to check, in your case, the revenue and expenditure of the London office?—No, not in any way.

1365. (*Chairman.*) You are a private Company?—Yes, we are a private Company; he is not interested in any way in our Revenue Account.

1366. (*Sir Henry Burt.*) What about the other railways?—In regard to this railway the only thing they would check would be expenditure on special stores for capital account in this country.

1367. (*Chairman.*) I think you said you were the auditors of some of the London Companies?—Yes.

1368. The guaranteed Companies?—Yes.

1369. Take your mind to a Company of that kind. There the Secretary of State would have to see that the London office did not waste money?—Quite.

1370. And, of course, he would also check big items of capital?—Yes, all capital items.

1371. A point that has been brought to our notice is that, whereas the auditors of this Company bring the thing together into focus so that it is dealt with by one auditor, the Government does it in two halves and never brings it together?—That is so, more or less.

1372. That is correct, is it?—Yes. We furnish the Government auditors here in London with what we call a capital balance sheet, the items which relate to him only, which bring all the capital into focus, but he does not look at the revenue at all.

1373. The accounts as a whole are not audited by the Government?—No.

1374. I thought I should like to get that from you, because you are sure to be accurate?—Yes.

1375. Now, if I may go back to Mr. Anderson, what is the open length of the Barsi Light Railway to-day?—(*Mr. Anderson.*) 117 miles.

1376. What was the original length of the Barsi?—22 odd miles.

1377. It is a 2 ft. 6 ins. gauge line, connecting with a broad-gauge railway?—Yes.

1378. Your connection is still only with the Great Indian Peninsula?—That is all.

1379. You, I gather, have always imagined yourselves developing southward and making a connection with the Madras and Southern Mahratta?—Yes, we have for many years.

1380. I think you will agree that the details of your long argument with the Government as to your rights in a certain area do not concern this Committee. We are not enquiring into that question; we are not sitting in judgment on any Government action or on any Company action?—Quite so.

1381. We are dealing with the question simply from the point of view of experience showing us where things might perhaps be bettered?—Entirely, and that was our sole reason for sending this.

1382. I quite appreciate that you say it was not sent by way of complaint?—Not in the least.

1383. My point is that you will agree that this Committee should not go into the details of the matter here?—Quite.

1384. I have no doubt that my colleagues, like myself, have carefully read your note. You sum the whole thing up by saying practically that the difficulties arise from imperfect acquaintance with the conditions, dilatory procedure, and the neglect of antecedent engagements?—Yes.

1385. Would you enlarge a little more on what you mean by imperfect acquaintance with the conditions? Does it mean local physical conditions?—Yes, principally. I think I have summed it up on page 7 of the note. Take the physical features. We have sent you a little map which will show that point. The Railway Board represent the Nira River as a hard and fast boundary dividing the interests of the two Companies, our Company and the Baramati Company.

1386. How far south is it from your line?—It is not south at all: it runs across from east to west.

1387. I take it that your line starts from Kurduvadi on the main line?—Yes.

1388. And you run south to Pandharpur?—Yes.

1389. What is the length of that, 50 miles?—33 miles.

1390. Your point is that the limit of your area, shall we call it, ought to be where?—I am afraid I cannot answer the question quite in that way. Would you kindly look at the map. You see those two red dotted lines from Pandharpur to Lonand and Miraj: those are our proposed extensions. Our point is that if the Dhond Baramati was allowed to extend as was proposed on the black dotted lines which you see on the map———

1391. We have not any black dotted lines. There is a line marked in pencil?—I put them very carefully on the map we sent you. Those black dotted lines rob us not only of any prospect of extension, but of our present traffic. That was our point. Pandharpur, to be brief, is a great pilgrim centre. The line was extended to Pandharpur for pilgrims primarily; they are our great staple. If that Baramati line is allowed to extend down to near a place called Akluj, on the Nira River, our traffic is really broken, because that 33 miles from Akluj to Pandharpur is perfectly level country across which pilgrims will walk. There is the Nira River at Akluj. The habit of pilgrims after a long journey would be to get out in the morning at the river, bathe and do their ablutions, form their processions, and march into Pandharpur so that the whole of the traffic that would otherwise come to us from Poona and Dhond *viâ* Kurduvadi on the Great Indian Peninsula, and then down our line to Pandharpur, would come by the rival line *viâ* Poona, Dhond, Baramati, to Akluj, and then they would walk in. So much for passengers. As for goods the Nira River was set down by the Railway Board as a natural boundary between the two districts north and south of it. It was stated by the Railway Board that the north and south practically had no connection. That is not the fact. They have always had a connection

The traffic can always go across. The Nira River may look like a formidable river on the map, but for over seven months in the year that river is really no barrier at all. There are five well-known fords across the river by which traffic can go up to the Great Indian Peninsula. I am talking of present traffic. The consequence is that if a railway was allowed to extend down close to the Nira River north bank all prospect of traffic from the Pandharpur Lonand line would be gone. That traffic would go straight across up to the Great Indian Peninsula.

1392. It is quite obvious that it would not be possible for them to build from Phaltan to Pandharpur and you to do the same thing from Lonand?—No.

1393. That clearly would be impossible; we can see that?—Yes.

1394. Apart from that question, you do not charge any deliberate breach of faith, so to speak?—On the part of the Government?

1395. Yes?—Not in the least. I think they were misled for want of local knowledge. If you will allow me to say so, I was for 10 years first Under Secretary in Simla and afterwards Secretary in Bombay and Madras. I know Bombay pretty well. I was seven years there as Secretary to the Government and consulting engineer, and afterwards in Madras. In my time there were five deputy consulting engineers in the Bombay office, and I allowed no project in my circle to go on without looking into it myself; in fact, on the Southern Mahratta alone we had a special deputy and he went out himself and looked into proposals on the ground. In the same way when the Itarsi-Nagpur was started a special deputy was sent to camp out and go over the line, in order that we might be sure of the conditions, so as to be able to inform the Government of India.

1396. It comes back to this—that you think the Railway Board as at present constituted has not sufficient eyes and ears about the country?—Precisely. That is my own opinion and I give it as my own opinion, because I do not wish to make my Board responsible for my views. They are my own views from my own experience of 10 years in the centre of the system of Government control.

1397. Things being what they are, the old system of consulting engineers having been abolished and a Board existing, what would you propose now?—I should simply propose to give the Railway Board further means of securing local knowledge; I do not think Joint Secretaries or Secretaries to Government are exactly what you want. The Secretary to a Local Government may be the Public Works Secretary, a Joint Secretary, if it likes to keep him.

1398. The Secretary to the Local Government?—Yes.

1399. How would that fit in? How many Local Governments does that mean? It means a dozen, does it not?—Not so many as that. What is in my mind at the present moment is Bombay and Madras, the old Presidency Governments.

1400. Does that fit in with the new scheme?—I think it would be a great mistake to upset any of the present arrangements. I have no doubt that in some ways the Railway Board is an improvement on the old regime. What has struck me, not only in this case, but in other cases—because I have had experience of several other cases—is this, that the Railway Boards are asked to undertake an impossible job.

1401. My colleagues who know India, which I do not, will correct me if I am wrong, but am I right in thinking that the Government of India is now to be localised in about eight centres?—That may be so.

1402. Would you have Railway Board representatives at the headquarters of each of the Local Governments?—Yes, that was my idea, and not only so, but in places where there is a big centre of railways apart from the Local Governments. Putting it briefly, I am looking at the question of railways only apart from the Local Government. Putting it briefly wherever it was necessary, wherever the system was big enough to make it worth while or advisable that there should be a person on the spot capable of advising the Board in every way, there there should be a Railway Board agent or a Government railway agent.

1403. That is a question of railway local inspection?—In the note that we sent you I was very careful to put it apart from inspection. Government inspection must be ruled out of this.

1404. Call it what name you like. Would you agree to the words "local representatives"?—Yes, local representatives.

1405. (*Sir Henry Burt.*) They would not be connected with any Local Government?—No; I am talking of purely railway machinery.

1406. You are not suggesting any decentralisation of the control?—Not in the least.

1407. It would all go back to the Railway Board at the Government headquarters?—Yes, that is the point.

1408. (*Sir Arthur Anderson.*) It strengthens them?—Yes, they would assist the Railway Board with local experience.

1409. (*Chairman.*) They are the eyes and ears of the central Board localised; that is your point?—Yes.

1410. There is another question arising out of that. We know that competition has existed in regard to the railway Companies in England, where each Company was independent and each Company earned its living as best it could and fought its neighbours?—Yes.

1411. In India you have not that system; you have the Government with a close control over everything. Do you think it is possible to assign areas for good and all at any one time nowadays—to draw a map and say: "We will confine the "Barsi Railway to this area, and we will confine "the other railway to such an area?" Is that a possible policy?—Put in that way, I should say decidedly no.

1412. What I am thinking of is this. You started in your original line on the Barsi Light Railway to go north-east to Barsi?—Yes, that was the original line.

1413. Then you started to go south?—Yes, but that gives rather a false impression. We only went to Barsi in the first instance because the Great Indian Peninsula would not make that a siding. The road from Kurduvadi to Barsi was made purposely to take a railway, and for some reason or other for years (you can judge how many years when I tell you that I made the survey of the road and its bridges in 1881, and we did not open this line till 1896) in all that interval the Great Indian Peninsula were jibbing at this shuttle service to draw the traffic of the Barsi district down through this rich cotton centre. That line was made on its own for a certain fixed purpose. The construction from Kurduvadi to Barsi you may take as first starting the 2 ft. 6 ins. gauge, but not in any sense as limiting or giving direction to our future efforts. We always wanted to go to Pandharpur.

1414. I am not in the least objecting. The point I am on is this. When you originally got permission from the Government to go to Pandharpur would it have been possible for the Government then to draw a definite line and say: "This is your area, and beyond that we reserve it for somebody else"?—No, I do not think so. In a sense it is rather a difficult question to answer, because interests crop up, do they not?

1415. That is my point?—You cannot define, in the year 1900 say, areas the significance of which may be entirely altered in 1910. The significance of this district, for instance, has been altered by that shaded line which is shown on the map, the irrigation from the Nira river. To answer the question raises great difficulties because it all depends on conditions.

1416. (*Sir Arthur Anderson.*) Besides, I think one reason for the development or the spread of the Barsi Light Railway has been the fact that, as a private company, it has been in a position to furnish funds, whereas the other lines were financed by the Government, were they not?—That is one of the reasons. There is another reason which, we think, favours our development. Neither of the two main lines as you see from the map are exactly in a position to develop this area. If an intermediary should come in to make lines in it, both main lines must be equally satisfied, and that was the position we took up in 1910. We said: "Neither of these lines, probably, have got money to spend on this area; it is a famine area."

1417. (*Chairman.*) By the lines you mean the Great Indian Peninsula and the Southern Mahratta?—Yes. "We will come in between these lines." Neither of them like to come into it; a sort of Tom Tiddler's ground, but they both feel they have an interest in it. We are a third gauge, and there cannot be any question of competition by a third gauge, a 2 ft. 6 ins. line. There is no question of competition there. We will come in and charge equal rates to all junctions on both lines, leaving them to compete. That was the position we took up.

1418-19. The position, from your point of view is that it is a good thing for a railway company to have two strings to its bow, so to speak?—Our position was that if we did not get on somebody else would.

1420. (*Chairman.*) Your position was that it was a good thing for the Company to have two strings to its bow?—Our position was that if we did not get on in developing the district somebody else would. You cannot leave an area to be perpetually threatened with famine. Although Poona has 36 inches of rain in the monsoon that area gets only about 7. It is an area liable to famine. The public would cry out for something to be done there. If we did not get on the public voice would force somebody else to get on, and if we let them come in our existing traffic would be absorbed.

1421. You see my difficulty. I am trying to understand how the Government can help doing what you say was treating you badly, if new conditions arose to which the old bargain does not apply?—Yes, but there is more in it than that.

1422. I am trying to get you to help us with regard to the policy for the future, which is our business?—Yes, quite so; but you said that you do not want me to go into details about this special case and you do not want any recrimination, neither do we. It is sufficient to say that, mistakenly or however it happened, we consider we were not treated fairly; the reasons for thinking so are given in our note.

1423. At the same time you agree with me that there is great difficulty in laying down an area and saying that belongs to such and such a railway and nobody else must go into it?—Generally speaking.

1424 What is the remedy, how is it to be dealt with?—As a general question, do you mean?

1425. Yes?—That is rather a big order.

1426. That is what we have to consider?—Quite so.

1427. I want your help?—You have to remember that there are several things. The first thing you have to remember is certainly any antecedent engagement. I am talking from the point of view of private enterprise. Private enterprise has been very much sought by the Government, we have had encouraging speeches made about it since the railway year one, and rightly or wrongly, we think that we have a right to rather special protection from the Government; therefore whatever the conditions may be in other circumstances, with guaranteed railways, their own property, we think the interests of public enterprise should be rather specially guarded. In this instance, what we were faced with was that when we asked in January 1911 whether this line was really being projected—of which we had a rumour—in spite of an antecedent engagement made in 1899 (three years after we opened), we were given information which was entirely misleading The Government, the Secretary of State, that is, told us that only one line was contemplated in this area, viz., Dhond to Baramati, nothing further, and the Great Indian Peninsula told us the same, that they were only interested in one line, Dhond to Baramati. As stated in the note we have sent you we discovered three years after (in 1913) that not only were all these schemes shown in black dotted lines on the map, on the tapis, but that the capture of the whole Nira valley had been in the mind of the Great Indian Peninsula for the last three years, and that during that period those proposals had been before the Railway Board many times without any objection made. We had never been told of this, and knew nothing of it.

1428. You have told us for the first time that the Dhond-Baramati line is Great Indian Peninsula?—It is in the pocket of the Great Indian Peninsula; it is an independent Company worked by the Great Indian Peninsula.

1429. It is what you call one of the branch lines?—Yes.

1430. What is the remedy? Let us assume that the Government would accept your statement of the case. What is the remedy?—The remedy is, do not do it. The remedy is, do not keep things up your sleeve for three years.

1431. How are you to get them down your sleeve?—Speak at once.

1432. I suppose we may presume when the Secretary of State says it is not being done he thought that it was not being done?—Quite so.

1433. How are we to get to close quarters with the subject? How are we to avoid difficulties of this kind in future?—I know of no other way than what would happen between two individuals.

1434. We assume that bad faith is out of the question. It was not a deliberate deception, we must assume that?—Of course it was overlooked, and that comes to the point; I do not think any body of men could have overlooked that if they had not been too hurried or overworked. I cannot imagine it happening in the old secretarial times.

1435. It comes back to the question of better local eyes and ears?—Yes, it comes back to that.

1436. (*Sir Arthur Anderson.*) I cannot recall the earlier history of this line, with which I had nothing to do, but has not an undertaking been given, and the Dhond-Baramati been told, that this will not be allowed?—We have one now.

1437. (*Mr. Hiley.*) That they should not cross the river. You say the Nira river is a poor boundary and that it is not sufficient protection?—That is so; it is not sufficient protection. There comes in what we complain of. In their original proposals the Railway Board said, "The Dhond-Baramati line will be allowed to extend to the East as far as Indapur only"—if you follow on the map you will see Indapur—"and not extend

at all to the south across the Nira river," &c. (*reading extract*). The point we raised was that this is not sufficient protection, it is indeed no protection at all. If it means that extensions may at any time be made south of the Baramati line to the Nira north bank, provided they do not cross the Nira, there is, as we have pointed out, no protection.

1438. (*Sir Arthur Anderson.*) It seems to me that your principal grievance is that the Dhond-Baramati line was started at all. It started in the same way as yours, a small branch which extended into a considerable system?—That the Dhond-Baramati Railway was started at all is no grievance of ours, as you will see from the note we sent you, and it is not the case that this line has extended into a considerable system. It threatens to do so, and our objection is to these extensions, and for the reasons given in the evidence.

1439. (*Chairman.*) On the other hand, Baramati to Pandharpur is about 60 miles?—Nearer 80 miles, I should think.

1440. It is a big area to leave vacant?—Yes, we do not intend to leave it vacant.

1441. Your line from Lonand to Pandharpur is 40 miles south of the Great Indian Peninsula?—Barely, but there or thereabouts.

1442. Where would you reach Indapur from?—We should not touch Indapur. That was our alternative proposal. When we were suddenly faced with the fact that these black dotted proposals had been going on for three years unknown to us, we said, if that is what you wish for, we will send in the alternative proposals mentioned in our note. We said, if you like it better we will make a line from Pandharpur to Baramati *vid* Velapur with a branch to Indapur, only do not let our traffic be stolen from us.

1443. Obviously, as you say, a Company raising money and developing an Indian railway service is a public benefactor, and ought to be very well treated?—Yes.

1444. You agree. But if the public interest wants a line that is not in the interest of the Barsi Railway, it seems to me that there is a real difficulty. Do you see what I mean? You practically have to work from your existing junction?—Yes.

1445. You agree. Suppose that district—I am not saying that it can, I am expressing no opinion—can be better served by Dhond—suppose that is the best development, having regard to the fact the traffic wants to flow to and from Bombay, it seems to me that is a real difficulty?—There is no difficulty in this case.

1446. Let us assume that there is not, but assume my view that the proper way to carry all this traffic is to go through this valley westward and bring it in at Dhond. I am trying to see how to reconcile it?—Assuming it is the best.

1447. Yes?—We have provided for that. We connect with the Baramati line at a point on our Pandharpur Lonand extension which is equidistant from Bombay by both the Great Indian Peninsula and Madras and Southern Mahratta Railway.

1448. You deliver it to the Madras and Southern Mahratta?—At Lonand and to the Great Indian Peninsula at Baramati.

1449. Suppose the interest of the private Company, which ought to be well protected, is different from the interest of the public, what are you going to do about it? Suppose it is in the interest of the public to make a line that does take away traffic from the Barsi Railway?—But you are asking me a question which does not arise.

1450–1. Let us say it does not arise, let us wipe out this case?—Broadly speaking, in fact speaking in any way, I should have no hesitation in saying that if the public interest were in conflict with the interest of a Company the public interest must be first of all served. You then have to adjust matters as best you can so as not to damage the interests of the Company.

1452. To put that generality into particulars, how are you going to do it?—In this case?

1453. No, if the case arises?—You have first of all to consider the interest of the public and then to adapt the interest of the lines as far as you can to meet it, doing as little damage as you can; but the interest of the country must come first.

1454. What are you going to do; what steps are you going to take; to buy out the light railway on reasonable terms or compensate it for the traffic it loses out of revenue?—I do not think it should ever come to that; in my experience it never has. These things are always manageable by a little goodwill on both sides by pooling and traffic arrangements. I have never known a case yet where that could not be adjusted.

1455. You say pooling?—Yes, that is one possible way.

1456. Is there any case where it would be reasonable to buy the Company out? Let us suppose that the Barsi Light Railway or some other light railway really blocked a scheme that had developed as desirable since it came into existence; is there any case of a Company of that kind being bought up so that it has protection by selling out on good terms? Is there any case of that kind?—I cannot remember any case of the kind.

1457. (*Sir Henry Burt.*) I do not think there is any case?—I cannot remember any case. As I said, I do not think that there is any necessity for pushing the thing as far as that. I do not think it has ever arisen. There has always been room enough and latitude enough to adjust matters without going to those extremes.

1458. (*Chairman.*) Remember you have only got 36,000 miles of railway in India?—Yes.

1459. And they say that they want 100,000 or more?—Yes.

1460. The more railways you get the more they will cut across each other's sphere of influence?—Yes.

1461. The question will come, will it not?—It has come in the south of India already. There are conflicting interests there, but I have never known a case up to the present where it has not been adjustable.

1462. You think that it is adjustable on a revenue basis?—Yes, I do. I think the Government of India in their policy generally, have been very wise in adjusting these matters, and with the good sense of the Companies concerned they have been adjusted in a very satisfactory way. It is not as difficult as in this country. The network is not so close, but even in the south of India, where it is pretty close, some questions have arisen of that kind, and they have always been adjusted up to the present. I can see no reason for thinking that within the life of anybody in this room the extreme measure suggested is likely to happen. I cannot see it. You are asking me rather problematical questions, perhaps I ought not to answer them so freely.

1463. We have to face the future. It is no good going to India to enquire as to what exists; our business is to find out what is to be done in the future?—Yes.

1464. In the south of India is it only the guaranteed line?—No, there are a lot of small district railways. That has been the trouble.

1465. Your point is, where the guaranteed South Indian interests conflict with those of small

branch lines a fair adjustment has been made?—Yes.

(*Mr. Hiley.*) That is by arbitration?

1466. (*Sir Arthur Anderson.*) In that case there is a clause in the South Indian contract which safeguards them?—Quite so. You will find where you get Local Government that there is a danger, it inside the Local Government there are District Boards in which the Local Government are naturally interested. There is a tendency for them to pick out likely lines which will get good traffic, to push for them, and the Local Government backs them up. From the Imperial point of view that is an unadvisable thing to do. You want to open the country and not short-circuit in the interest of certain people.

(*Chairman.*) Will you tell us what is the clause?

1467. (*Sir Arthur Anderson.*) I am speaking from recollection. If any part of the South Indian system is short-circuited by new independent construction the South Indian are entitled to the earnings it would be done out of; would be entitled to claim the earnings as if that new line did not exist. Is not that it?—Yes, roughly.

(*Chairman.*) From whom? Who pays it?

(*Sir Arthur Anderson.*) The earnings are paid over to the main line.

(*Chairman.*) The new line would be an independent private Company?

(*Sir Arthur Anderson.*) Yes, or a District Board.

(*Chairman.*) It would be a Company that would take its earnings.

(*Sir Arthur Anderson.*) Its earnings from such traffic would come to the South Indian Company. The South Indian would keep the proportion of the earnings that it would have had, had the new line not existed.

(*Chairman.*) It gets it out of the pocket of the branch line that earned it.

(*Sir Arthur Anderson.*) The branch line does not get it.

(*Sir Henry Burt.*) I am not sure of that.

(*Chairman.*) It must collect the receipts.

(*Sir Henry Burt.*) The concession would not be granted to the branch line unless it agreed to these terms.

(*Chairman.*) To what?

(*Sir Henry Burt.*) To assign to the South Indian.

(*Chairman.*) As much as it previously got from the short-circuit traffic?

(*Sir Henry Burt.*) Yes.

(*Chairman.*) Now I understand. I think we had better leave that subject.

(*Sir Arthur Anderson.*) It is the only case in which a clause like that occurs in a contract.

1468. (*Chairman.*) I think it is very important We have dealt with these two points; now about co-operation of private enterprise. Can you make any new suggestions on that point, that the Government should give more liberal terms?—That, of course; I think everybody is agreed that the present terms are absolutely useless, the financial terms.

1469. Conditions have changed and the terms have not been revised?—Yes.

1470. We may assume that if 5 was reasonable, it is now 7, but that does not matter?—Yes.

1471. What else?—The financial terms we are agreed about, it is what you may call the general terms. I can only say what I have said already, that they want special watching to guard against any injustice being done to private enterprise if it is desired to encourage it.

1472. What I was meaning was terms to induce capital to go into the business. Are they satisfactory?—Those will be the financial terms.

1473. They are not the only terms?—Those are the terms that prevail in the agreement itself. If you are dealing with a man and say, "I want you to come into a job," you give the financial terms. You do not promise, "I will take the greatest care of you," because he will say, "Yes, because you want me in." That will come afterwards.

1474. For example, the period of concession must make a great difference?—Yes, to a certain extent it would, of course. Take our own line; it is a good example from that point of view. We asked for an extension and they gave us a very short one. If you are going to add 170 miles to 117, you are weighting the undertaking very heavily, and if that extension is in a famine stricken country which will develop gradually you will want very many years to mature. So that those conditions should be borne in mind always in inviting private enterprise, and the agreement should be proportionately long or short.

1475. What would you put into the agreement that is not there at present?—I have not got the agreement before me.

1476. What modification in terms fits that case?—Merely the modification of length of tenure.

1477. You believe in a long tenure?—Certainly, in many cases. In certain branch line cases the tenure goes as long as the main line goes, with ordinary branch line terms. I think you may take it as long as there is an agreement made with the main line, and as long as the main line goes that agreement goes.

1478. But we were told yesterday—— ?—Is not that a fact?

(*Sir Henry Burt.*) No, the agreement will be made with the Government of India.

1479. And the Secretary of State?—Take an ordinary branch line made off a main line, and the main line being a guaranteed Company, the main line gives those terms, ordinary branch line terms to a branch line, do not those terms hold good as long as the main line or are they limited?

1480-6. (*Sir Arthur Anderson.*) No, its contract might run out in five or six years?—As long as the main line contract goes, so long does the branch line agreement stand.

1487. (*Chairman.*) There is one thing that may happen to private enterprise. Its cost of construction may be so heavy that it never pays. Have you any doubts on that subject? Does the Board ask for an unreasonably high standard of construction?—The Railway Board do you mean?

1488. Yes?—No, they used to, I will not say the Railway Board, but it was one of the main faults of Government in the past to expect too high a standard for branch lines. Whether that exists at the present time I cannot say, because I have been out of India for over 12 years now, and I do not feel competent to say what is going on now as regards the standard of equipment.

1489. Is your point that as you knew it 12 years ago it was unnecessarily high?—As I knew it, I remember an example in about 1904. A branch was made to a main line, and the contract was that it should be up to the standard of the main line. That is a mischievous policy. Had that line been built to that standard it could not have paid. It was with considerable difficulty that the contract was modified to admit of a standard of equipment that should develop with the development of traffic. The initial standard was reduced and the first year the line made 4½ per cent., which was good in those days. I am glad you have mentioned this point; it was one of the faults of the old Government system. I do not say that it

is so now, I am not here to judge but we all know that it is a mischievous thing.

1490. (*Sir Arthur Anderson.*) In the days you are speaking of, take the Bellary Rayadrug. Was that in your time?—No.

1491-2. That is laid along the road?—I do not say that it holds in every case.

1493. (*Chairman.*) We may take it from your evidence that there were cases where an unreasonably high standard of construction was insisted on but whether that still exists you do not know?—Yes.

1494. It is a serious point to consider?—It is a very serious point to consider.

1495. Are there any others of that kind that occur to you?—Not at this minute.

1496. Had you entire freedom in raising your capital?—The Barsi?

1497. Yes?—Yes, we had.

1498. You could raise it by debentures, or preference or ordinary just as you pleased?—Absolutely. (*Mr. Wilson.*) Subject to the sanction of the Secretary of State. We had to get permission here for the amount and for the terms of underwriting and brokerage, printing and stationery, the amount we could spend on preliminary expenses and everything.

1499. (*Mr. Hiley.*) And the rate of interest?—Yes.

1500. That had to be approved?—Yes. (*Mr. Anderson.*) There was freedom in the market. (*Mr. Wilson.*) Yes.

1501. (*Chairman.*) The Secretary of State's ground for interfering in these matters is, that at the determination of the contract he has to pay what you have spent?—Exactly.

1502. Therefore he protects himself?—Yes.

1503. What do you say to that. With the longer contract if you suffered for 50 years from your own extravagance, probably you would not want to be extravagant; the Secretary of State might say that for 25 years you will not mind suffering because you look for a plum at the end; but if you had to suffer for 50 years presumably you would care more about revenue than the final settlement. Would it in your view be reasonable for a longer period that you should be less in leading strings?—I do not think it would make any difference as regards that point, certainly not, under our contract, because we get back at the end what we spend, nothing more and nothing less.

1504. Suppose you spent too much you would suffer for it for 50 years?—Yes.

1505. Is not that a sufficient inducement to make you economical without anybody looking after you?—It would help if necessary.

1506. In fact, does this reference to the Secretary of State of so many things from which an English Railway Company is free, hamper you, or is it more or less formal as long as you proceed on what you may call normal lines?—I think it is more or less formal, it would not interfere with us too much.

1507. It did not in fact?—Naturally the terms which the Secretary of State was not prepared to sanction we should not think worth while going on with. It might be a difference of a very small sum between us and nothing more.

1508. We have dealt with the question about the localisation of control, and I think that is all I want to ask you Mr. Anderson. Do you want to add anything to which I have not referred?

(*Mr. Anderson.*) No, I think not.

(*Chairman.*) Mr. Wilson, do you wish to say anything separately?

1509. (*Mr. Hiley.*) I should like to ask you one question. Have you a Local Board for the Barsi Railway?—(*Mr. Anderson.*) In India?

1510. Yes?—No.

1511. You have merely got your agent?—That is all.

1512. You do not have any Local Advisory Board?—No.

1513. (*Sir Henry Burt.*) Do you think that there would be any advantage in a Local Advisory Board?—It would be very mischievous. It would not help us in the least. What it would mean would be that you would put up an authority against the agent in India. That is what it would probably come to in the end.

1514. (*Mr. Hiley.*) There is one other point upon which I should like your opinion from your experience of light railways. Have you ever prepared any figures for use in your argument for increasing the length of your light railways, or other purposes, as to the value to the Government indirectly in the increased railway facilities for the district, that is to say, increased values of land or rateable values?—No, I do not know how you could put it into figures very well. It is a very large thing.

1515. From your experience of the Barsi Railway, could you now give any evidence showing the increased value of the land in the neighbourhood since it had railway facilities?—Hardly from the Barsi Railway as it is now. On the two extensions, one could, I think, give an idea in the areas brought under traffic. You might be able to, but it would be difficult.

1516. (*Sir Henry Burt.*) It would depend when the next settlement is made?—Yes, it would be a very difficult thing to do.

1517. Have you had any settlement since the Barsi Railway was opened?—I do not think we have. (*Mr. Wilson.*) It does not touch the Barsi Light Railway.

(*Sir Henry Burt.*) It is a very important point from the Local Government point of view.

1518. (*Mr. Hiley.*) Would your agent be able to help us when we get out there by indicating the effect the light railway has had on land values and rateable values?—(*Mr. Anderson.*) I think as a matter of fact the collectors would be better people to help you, the collector of Sholapur might. It is not quite in an agent's line.

1519. Except as a matter of interest; he might want to use the argument in furthering your railways?—He might try to do it. (*Mr. Wilson.*) The Agent would only get it on hearsay. (*Mr. Anderson.*) He has not the information that the collectors and their subordinate officials have.

1520. (*Mr. Hiley.*) I do not know whether the point has been raised before?—We have considered it through and through during the recent years, and we have tried to make estimates of increased values. But they are estimates only and are based largely on the usual formulæ one applies to railway extensions.

1521. It is an argument that you might wish to use if you desired the sympathy of the Government in extending railways?—We may say with confidence that we have the sympathy of the Government in these extensions. The chairman was saying just now in discussing the matter as to whether it was against the interest of the country to extend. There is no question of that in our instance. I think we have got sufficient from the Railway Board to enable us to say that our two extensions with the connections that we desire to make serve that bit of country better than anything else that could be advanced. *Per contra* were we debarred from extending by an invasion of the Nira valley, we

should be disabled for opening up the country we propose to serve. If we were not able to make the Pandharpur Lonand line because of other people coming in and tapping and diverting our traffic, present and prospective, it would not be worth our while to make the other line and the country would be the poorer by a line that nobody else would want to make.

1522. (*Chairman.*) You have a full staff of your own?—Barsi?

1523. Yes?—Yes.

1524. You have an agent and local engineer, a permanent way engineer and all the rest of it?—The usual staff.

1525. It is usual I understand that the branch is worked by the main line?—Ours has always been independent. We have never been worked.

1526. But the other is usual?—Quite customary.

1527. Is it not somewhat of a handicap for a small line with light traffic to have the headquarters staff of its own?—We have not found it so.

1528. It is so many rupees clearly. How many?—I do not know what it is, but you get the whole profit.

1529. (*Sir Arthur Anderson.*) Yours is a good paying line?—Yes. Many branch lines could not afford to do it, of course.

1530. (*Chairman.*) Would you agree as far as possible that branches unless they differ a bit are better worked by the Company with which they connect?—Certainly in the majority of cases in India.

1531. I am not suggesting that you are not right in your particular case?—As I have told you our case was quite peculiar. We started with an assured traffic. Very few branch lines do that.

1532. Why did not the Great Indian Peninsula make it?—Why did they not.

1533. Want of money?—Want of everything I think.

1534. (*Mr. Hiley.*) Want of local touch?—I do not know what it was they were in want of, but it was a marvel to me and everybody else why they did not. However, they did not do so.

1535. (*Sir Henry Burt.*) As regards those local representatives that you suggested should be appointed, would you suggest that they should take on the work of the Government inspectors?—No, in the note I sent you, I made a very careful point with regard to that. I pointed it out as briefly as I could in the following passage: "Its delegated "subordinates in the provinces and on large "railway systems should be revived, and when "revising them an inherent defect in the old "secretariat system should be remedied. Under "that system the consulting engineers to Govern-"ment were also the Government inspectors of "railways, and it was largely due to this confusion "of 'administration' and 'control' that the "system fell into disrepute, &c., &c."

1536. (*Chairman.*) You would leave the Government inspectors to deal with questions of engineering and safety, physical questions?—Quite so.

1537. The other people would deal with it from the point of view of development?—Policy, generally.

1538. And administration?—As assessors and aiders of the Railway Board, or whatever the centralised authority was on matters requiring local information.

1539. You would attach these men to a district rather than let them roam over India?—Yes, I would put them wherever the system of lines is big enough to warrant their appointment.

1540. That is the French system; the Government has an inspector-general with a certain number of subordinates from each of the main systems?—Yes.

1541. That has always been the French system, and he does know all about the system?—Yes.

1542. Your view is that it should be something of that kind?—It seems to me essential.

(*Chairman.*) Thank you very much.

The witness withdrew.

MR. FELIX FIGHIERA, called and examined.

1543. (*Chairman.*) We are exceedingly obliged to you for coming; it is entirely outside your own business, so to speak?—I am only too pleased to help in any way.

1544. We thought that you could help a great deal on the question of local Boards and some connection with Boards sitting in London?—Yes.

1545. You are secretary of the Central Argentine?—I am.

1546. I think I have known your name in connection with it for some time?—Yes, about fifteen years, I think, now.

1547. Do you know the Argentine personally?—Yes.

1548. The Central Argentine is a line of considerable magnitude?—3,305 miles.

1549. The whole capital, I suppose, has been raised in London?—Yes.

1550. And the control naturally is with the London Board?—Yes.

1551. I am going to ask you one thing before we come to the connection. Some of us know what the ordinary English Board is like; it does not attempt to have on the Board experts in railway management or railway engineering, it is supposed to be representative business people, broadly we may say?—Yes.

1552. Is that the same in the case of the Argentine?—If you take our own case, we have as chairman Sir Joseph White Todd, an ex-banker in Cuba, then we have Sir Guy Granet, an ex-manager.

1553. He is a railway man, of course. He is a very new comer?—I agree. Then Mr. Charles Pearson, who is leaving the Argentine, our ex-general manager, who is coming on to the Board now. Sir Archibald Williamson, a merchant in South America. Then there is my predecessor, Mr. Theobald, who was secretary for many years and then went on the Board. Mr. Darbishire, who is an old Argentine merchant and lived out there for very many years, and the latest comer on to the Board is Mr. H. A. Vernet, of Messrs. Robert Benson & Co.

1554. With the exception of Sir Guy Granet, whom we now regard as a financial person rather than a railway person, that is a Board of business men?—Yes, you have the same on the Southern and Western Railways. You have in those cases Sir Sam Fay on those two Boards.

1555. (*Sir Henry Burt.*) The late general manager you have in addition?—Yes, he is a railway man.

1556. (*Chairman.*) May we put it that it is common to put on an ex-general manager when he comes home, if he is suitable?—Yes; I would not say it is common, it is not necessarily the usual thing.

1557. It is not necessary, but it is not uncommon?—We have had a case previously. The late Mr. Jason Rigby, who was manager of the Buenos Ayres and Rosario Railway before the amalgamation, came on to our Board and was on the Board of the Southern, of which he became chairman. He was an ex-manager. Then the Cordoba Central, of the narrow gauge group, have Mr. Follett Holt, who was manager of the Entre Rios Company, and he is to-day the chairman of this Company.

1558. And I think they have Lord Farrer?—Yes. In the case of the Pacific they have Mr. Goudge, the managing director who for some years was the acting manager in the Argentine. I was with them originally; I was 21 years with them before I came to the Central Argentine.

1559. May we say broadly the bulk of the Board are business men, with no special railway knowledge?—I agree.

1560. That is what I wanted to get from you. I understand by law the Argentine railways have to have representatives in Buenos Ayres?—Yes.

1561. Would you tell us what the law says first? Can you leave us a copy of the law?—Yes, I have brought the only copy I have in English. I have some in Spanish. I am going to hand you this, you may find it useful to go through. This was the law passed——

1562. May we keep it?—Certainly (*handed*). The Argentine law merely stipulates that——

1563. This is the famous Mitre Law?—Yes. You have in the first place in starting a Company on the other side to obtain what they call *personeria juridica*; that is, you have to be recognised by the Government, which is done by the approval of the Statutes, the Articles of Association and so forth, which are presented by the Local Committee. The Local Committee are gentlemen who are invited to act on that Committee and who are subsequently appointed by the Board, removable at any time, but they are provided with a full and ample power of attorney. As a matter of fact, I have not got it yet. I have been rather busy with my general meeting, but I am having a translation made for you of the last power of attorney which we sent out on the appointment of Mr. Howard Williams in place of Mr. Pearson. It is a reproduction of every power of attorney we have ever sent out. I am having that translated into English for you and I will send it along to you.

1564. Mr. Howard Williams being your new general manager?—Yes.

1565. Is the power of attorney in his name?—It is in the name of each one of the members of the Committee.

1566. Joint and several?—Joint and several. That power of attorney is then presented to the Government for registration and the Government then issues a decree recognising Dr. So-and-So, Mr. So-and-So, and Mr. So-and-So as the attorneys and legal representatives of the Company. That is the constitution of the Local Committee as far as it goes. The functions of the Local Committee—shall I go on or would you like to ask me questions?

1567. I will put in a question first to clinch it. These gentlemen have the ample powers one is accustomed to give to people in a power of attorney?—Very ample indeed.

1568. On the other hand, they hold office absolutely at the pleasure of the home Board?—Yes.

1569. Therefore, whether they really have great power or whether they have really no power depends on practice?—That is so.

1570. That must be so because if they have power to do everything and the Board lets them do it, they can do it; on the other hand, if they quite understand, the first time they exercise any power, that the home Board have not definitely told them to exercise their power of attorney will be revoked, they have not much power?—That is so in practice.

1571. That must be so on the documents?—Yes.

1572. Now, will you tell us the practice?—The functions of the Local Committee are governmental.

1573. Are they paid?—Yes. The functions are governmental and legal mainly; they are in no sense technical except to this extent. I take the constitution of our own Local Committee. The chairman of our Local Committee was the secretary of the Supreme Court of the Argentine, and he is an eminent lawyer.

1574. You do not mean that he held both positions?—No, he came to us from there. He is well versed consequently in pretty well every branch of law, and although we have lawyers appointed by the Local Committee for the purpose of attending to all our business claims, land, and so forth, he has a general supervision of all these documents to make sure that our titles are right and our claims well put forward, or claims against us well defended, and so forth.

1575. He is what the American railways would call their general counsel?—Probably.

1576. (*Sir Arthur Anderson.*) Is he a full time official?—In our case he is. Then we have a Mr. Iturbe; he is an engineer. Of course we have our chief engineers, both civil and mechanical, but the trouble out there is that they usually demand that anybody signing plans for new extensions or anything like that shall be someone who has taken his degree in the Argentine University. Consequently Mr. Iturbe, who is an extraordinarily level-headed all-round business man, fills that engineering function. If there is any trouble with the Government he signs the plans, although usually in our own case, especially as our chief engineer has been there many years and has done good work, the Government recognise the fact that he is the engineer and, as often as not, accept his signature; but there are times when you get an official who is troublesome, and if it is signed by the Argentine engineer nothing more can be said about it. A third member of the Committee, Mr. Hale Pearson, is a member of the firm of Samuel B. Hale & Co., large estancia owners and business people generally. He is a very rich man and a man of great influence socially, and there is a great deal of social work to be done.

1577. (*Chairman.*) Has he, so to speak, a department?—No, the President of the Local Committee, as he is termed, is a whole-time man.

1578. That is your lawyer?—That is our President and a lawyer. The engineer, Mr. Iturbe, has been authorised to sit on the Local Committees of two other undertakings out there, but he has an office in our building and sits there all day. Mr. Hale Pearson's own offices are on the same floor as the Local Committee, so that he is always available if he is wanted. They meet once a week and their minutes are sent home to us regularly, and the object of the ample powers is because there is so much of a local nature that takes place which obviously a London Board would hardly be competent to adjudicate upon. Therefore all that the Board does is to authorise a policy; it is not tied down. The London Board will authorise the policy, for instance, the London Board will authorise an application for certain

branches and extensions of which we have had full reports and plans, and we have studied them. We say, "Those you can apply for." The functions of the local Board are to see that those petitions or concessions are brought before the House. They are there to answer any technical or other questions. They have to see that they are put through, and, having been put through, then they have to see that the proper deposits are made in cash or bonds, that the plans are prepared and presented within the terms of the concession, and things of that kind. There, obviously, they have nothing whatever to do except to get those concessions through if they can. I say if they can, because sometimes Congress introduces clauses which are unacceptable to us and we say, "Thank you, we do not want the concession, keep it." Probably in a few years they ask us to build and we say, "You cut this out, and we will build the line and will not do it otherwise," and we get it in that way.

1579. As it seems to me, the functions of the local Board as to power are not very important?—Individually I agree; it is greatly individual. Their functions are important to this extent, everything comes before them. The general manager is for the time being *ex officio* a member of that committee because he is their technical assessor on questions of traffic, accountancy, and so forth. Individually they have their little compartment to look after. Week by week they meet in committee, as a matter of fact they meet day by day; they are all in the same building, but they have a formal committee meeting in which they record all they do, which comes on to us in London.

1580. They have daily meetings and discuss it, and somebody draws a minute which they pass once a week. One knows how those things are done?—Yes.

1581. You have not said anything about rates and fares. I do not know how the Government controls rates and fares. Have you maximum rates?—The Government control rates, or are supposed to control rates and fares under the provisions of the Mitre Law, which is before you. The rates and fares according to the letter of that law may be anything that we like so long as our maximum earning power of 6·8 per cent. is not exceeded in three consecutive years.

1582. That is on your whole capital?—On the capital they recognise.

1583. On the recognised capital?—Yes.

1584. It is 6·8 per cent. overhead on the whole of it?—On the whole capital. It is 17 per cent. in gross receipts on the recognised capital.

1585. What about the 17 per cent.?—It is 17 per cent. measured in gross receipts upon the recognised capital, working expenses being taken at 60. That gives you 6·8 per cent. That is the way they work it. If the gross receipts exceed 17 per cent. for three consecutive years on the recognised capital and the working expenses do not exceed 60 per cent., then the Government shall intervene to revise the tariffs.

1586. What does the Government do?—It has never had an opportunity of doing it yet, and from the very time this law went through, which I had much to do with in 1908, when I was out there, we have always laid it down to the general manager and to the Local Committee to watch our rates year by year, and if ever we get two consecutive years in which we have exceeded the 17 per cent. and we look like doing it a third year, then we must reduce our tariffs where it suits us. That is the way one gets round that difficulty or will get round it if the time ever comes. As against that, the contention which has been put forward by all the chairmen here in speeches and by some of the representatives on the other side, that our tariffication is absolutely in our discretion so long as we do not exceed those limits, is disputed by the Government, and I say rightly disputed, because the original railway law, which is not derogated by that Mitre Law except so far as it amends it, stipulates that the Government's function is to see that all rates are just and reasonable, and I think that is the proper position. We are the biggest maize carriers there and have had our rates increased this year. Until recently it hardly paid to carry maize except in tremendous bulk. Hence one might say, "I do not want to carry maize, I am going to put such a rate on to stop the growing of maize." That would be wrong and a railway ought not to have that power.

1587. Have the Government any machinery for seeing that rates are just and reasonable? Have they anything of the nature of a Commission?—No, they have no Commission. I do not know any Government office with a Railway Board that has a more complete and thorough knowledge of the penal portions of every railway law in the world than the Argentine Government. Their railway law is an accumulation of all the penal parts of every law in the world. If you go into the Government House in Buenos Ayres they will produce the German book of tariffs, the Italian, the French, all the English, the Yankee, the whole lot. They are very good in that way.

1588. They have these rods put away apparently in pickle in jars and not taken out?—No, may I say very candidly on the question of tariffs and things of that kind we have not been badly treated; that is to say, we have had to put up a fight, yes.

1589. How did you have to fight?—The Government department.

1590. Is there a department of railways?—Yes, under the Ministry of Public Works you have what they call the railway department, the Department of Ways and Communications. You have a Director there and he is the man who calls on you for all kinds of things.

1591. He has no definite machinery?—He has a tariff section under him, which does nothing but tariffs.

1592. Which does nothing but say to you, "Do not or we may do something," but does not do anything?—No, I do not think it is quite that. Suppose we want to amend a tariff, we have to give a month's notice publicly. We first of all submit it to the Railway Department and say: "That is what we are going to do."

1593. You say: "What we are going to do"?—That is what we propose to do anyway.

1594. The onus is on you?—If he thinks the rate unjust or unreasonable he will discuss it with us. Perhaps we have to go from him to the Director, and the Director may back up his underling; we may have to go from the Director to the Minister, and perhaps the Minister will say: "Put your heads "together, and if you cannot do exactly this see if "you can find something which satisfies everybody," and one gets at it in that way.

1595. Suppose you said you would not, they cannot force you?—The Government has a very long arm.

1596. Has he executive machinery that he can put in force? What would happen, I suppose, is that he would introduce a law into Parliament to give him powers. That is probably what would happen if you were recalcitrant?—I think myself the Railway Companies would put up all the opposition they could in Parliament through the members. After all, there are things which get through in Parliament to whip you up, but they

never get any further, because there are other means. Out there you negotiate one thing and another; you give away something here and take something there.

1597. To come back to the Railway Board, I think we follow how it works. In effect, the law which requires you to have attorneys out there does not result in your putting more authority on the local Board than a Board of wise business men would probably put on their local manager in any case?—I agree. The only thing is that your manager, if he is well advised, will attend to his own business of railway management, and not visit Government House unless he is sent for. I have heard it laid down, and I am not sure that I do not agree with it in many instances, that we should probably do as well if we had two or three Englishmen, assuming they had knowledge of the country and of the language, as members of a local committee as against the Argentine. The advantage of the Argentine man is that he keeps you right as far as the law is concerned, that he has got undoubted influence with his own countrymen because he is not a foreigner. On the other hand, when we put up a fight, and it was a pretty acute fight with regard to tariffs, the trouble is that the Argentine will say to the local Director: "I am "astonished at you, an Argentine, putting forward "a thing like this, when you know it will affect our "country all the way through." That is the other side of the medal. On the whole, I think it would be very difficult indeed to get Englishmen who had a knowledge of the country and of the language, and particularly of the Latin character, who could worm themselves into society and take the place of these men; but if such men could be found, they would be the ideal men to get there, because I think they would not be criticised for putting forward things while some of the Argentines are.

1598. Your local Board is quite small, is it not—only three?—Three, plus the general manager.

1599. Who takes the chair?—The president.

1600. The president of the Board?—Yes. We call them Local Committees as a matter of fact. The Southern call it a Local Committee and the Western call it a Local Committee. The Pacific are the only people who call it a Local Board.

1601. Is there any difference?—No.

1602. May we take it from you that what you have told us about the Central Argentine is typical?—It is.

1603. This legal obligation must apply to all?—Yes.

1604. And for practical purposes the system is the same in all the Companies?—Yes.

1605. As I see it, you have got a local Board whose business, so to speak, is to represent local opinion?—Yes.

1606. These gentlemen exist to know local opinion, and to put the London policy through by means of their local affiliations; is that correct?—Yes.

1607. There might be quite a different opinion about a local Board that existed for the purpose of inducing the London Board to follow the opinion of the locality?—Of course, one does get instances where they recommend a policy. Sometimes it is accepted and sometimes it is not; it all depends.

1608. This Local Committee has, as you say, only three members?—Yes, three.

1609. And two of them have definite functions?—Yes.

1610. The third man is an Englishman?—No, he is an Argentine too, although his name is Pearson. He speaks English as well as we do, but he is an Argentine. He is of Yankee descent, many years ago.

1611. He is now an Argentine citizen?—Yes.

1612. If you wanted the Board to be a mirror to reflect local opinion back to London you would clearly put more men on it, would you not?—No, I do not think we would.

1613. If that was your object you would, would you not?—It is the object in general terms, but there is a great deal more in their work than merely that. There again the three Argentines with a British general manager *ex-officio* as a member, who always attends—I speak for our own people to-day—may put forward a suggestion, and the general manager will explain to them that it is not likely to be accepted in London. He will give them reasons why in his opinion it would not be accepted in London, for instance, because the thing would merely please the public. Very often in that way we do not get things sent forward to us which have been discussed at the Local Committee.

1614. Could you get a report from the Local Committee saying "We recommend this," and a dissenting report from the general manager saying "I entirely disagree." Could that happen?—Speaking for the Local Committee as at present constituted, I do not think that would ever happen because the Committee would not recommend an extension, for instance. They might say: "We "have been approached; it has been suggested to "us that you should build a line from so-and-so to "so-and-so," but that is the utmost they would do. The general manager might say: "All right, I think "there is something in this line," and he would send an engineer out to survey it and report, and it is for us to decide whether we will go forward with it or not. They would not commit us in any way.

1615. Would they commit themselves?—No, I think not.

1616. Who would the report come from?—What report, on the line?

1617. Suppose the engineers went out and surveyed the line, and the question of whether it should be made or not had been discussed at the Board?—The survey of the line is made jointly by one of the civil engineers, a representative of the Traffic Department and the land agent, and they make their joint report or individual reports as the case may be.

1618. To the general manager?—To the general manager. The general manager would then write to the Local Committee: "I enclose you the "report about a certain line which it is suggested "may be made," or "The line about which I had a "conversation with you the other day. I have had "the line surveyed and enclosed are the details," and so on. Then they pass them on to us.

1619. He would probably say, I suppose: "We "will discuss it next week at the next meeting of "the Committee"?—The whole thing comes to us in London.

1620. The report?—The whole thing.

1621. With a covering letter from whom?—There will be a report from the chief engineer and a covering letter from the Local Committee enclosing the general manager's letter with the reports that have been made to him.

1622. It comes from the Local Committee and not from the general manager?—Yes, as a rule.

1623. The essence of your story comes to this, that full control remains in London?—Yes.

1624. Do your London Board ever deal with the question of wages?—No, except that of the officers

1625. What do you mean by the officers?—The officers on the other side.

1626. It is left to the officers on the other side?—No. The wages are dealt with on the other side. I was referring to the principal officers.

1627. The board officers?—Yes. For instance, the local committee could not alter the salary of the general manager, the traffic manager, the chief engineer, the chief mechanical engineer, nor the chief storekeeper.

1628. You appoint them from London?—Yes, we send them out from here as a rule, with very few exceptions.

1629. The general manager has full power over wages?—Yes, as he has over tariffs.

1630 What about stores bought in England?—We buy all we can in England, which is very little just now, but we buy everything that we can in England naturally.

1631. What is your machinery?—We have our own stores department here with our consulting engineers. When we get a requisition from the other side, either for running stores or for special stores, as the case may be, we invite tenders from firms that we have been doing business with perhaps for the last 50 years. They quote; their quotations come in, and they are opened by a Director. They are then tabulated as to price and delivery. Sometimes we get prices from the Continent, sometimes from the States, but we always put a heavy premium in favour of the British manufacturer whenever we are allowed to. Unfortunately we are getting to the stage when things are becoming impossible. I have had two letters from firms this week, who write to say that having regard to the uncertainty as to what the Government may do with wages and things of that kind, they regret that they are unable to quote. That is the difficulty. It is a difficult thing to-day to get a hard-and-fast quotation or date of delivery.

1632. And when you get it you do not like it?—I quite agree. It is all rings.

1633. Who drafts the specification for a new engine? Does that come before the Board at all?—It comes before our Stores Committee, which is really the Board as a matter of fact. They give us all the leading details from the other side if it is a new class of engine. If it is an old class of engine we have the details at home, but if they desire to make any variations they come to us attached to the indent. They then go to the engineers who draw out their specifications, which are supplied to the tenderers, and the tenderers quote.

1634. The Board does not attempt to deal with matters of that kind?—Oh no.

1635. I think we now fully appreciate your system. We are very much obliged to you for what you have told us. How far it is applicable to India remains to be seen?—Of course, I can express no opinion on that because so much has to do with local conditions in all these things. I sent you a copy of the Articles of Association a few months back.

1636. It has not reached me, but I have no doubt the Secretary has it. Is there anything special in it?—No, except that it deals with the Local Committee—how it is appointed.

1637. When did you send that in?—Back in September.

1638. If we could have a copy of that for ourselves we should be grateful to you?—I will give you this copy (*handing in copy of Articles of Association*).

1639. As far as I know the communications with regard to this Committee only date from the 4th November. That is the first we have cognisance of?—The first letter we had from the India Office, from a Mr. Haines, was dated the 6th November 1917.

1640. I think there was an idea of appointing this Committee some time ago, but the war got too serious, and it has only been appointed now. That is what I think has happened?—I wrote a letter of the 20th November 1917, which recites the functions of the Local Committee. I can give you a copy of that.

1641 (*Chairman.*) Sir Henry Burt has copies of the correspondence, and we will look at them, thank you?—If it is of any use I can let you have a copy of this new map showing the various railways out there, broad gauge and various other things. If it is of any use I will leave it; if not, I will take it away.

1642. I do not think it will be of any use to us, thank you; we have the general idea of the railways there?—There is only one other thing I might mention. I was asked on that occasion for standing orders. We have a book of standing orders for the local representatives and management. I have a copy of it here, but it is the only copy I have got. I am afraid these standing orders are more honoured in the breach than in the observance. If you will kindly look at this copy and tell me if it would be of any use to you I will have it typed out for you, but I cannot part with the only copy I have got. (*Handing copy of the book to the Chairman.*) I do not think you will get very much out of it.

1643. I do not think the book of standing orders will be of any particular value to us in this case?—That is so. I only mentioned the standing orders because they were mentioned in your communication to me. As a matter of fact, we do not take the slightest notice of them. They have power to do everything under the power of attorney.

1644. They must have power, but they do not use it except in conformity with the policy of the Board, which is laid down in London on the advice of the local committee. That is what it comes to?—Yes.

1645. (*Sir Henry Burt.*) But for the law requiring the establishment of the local committee, would you think it worth while to keep up the local committee or would you then from choice prefer to leave the conduct of local affairs in the hands of the local railway officials under the general control of the Board?—I do not think it would work there.

1646. You think the local committee is necessary?—Yes, it has so many functions to perform.

1647. (*Mr. Hiley.*) Do you regard it as of value?—Yes, it is of great value to us from several standpoints. Take, for instance, such a question as the Railway Pension Law, which was a tremendous business. We fought that for years. Then the Mitre Law is another one. In contentious matters of that kind it would be hopeless for us to try and get them through unless we had Englishmen qualified to deal with the matters, and they are very difficult to obtain.

1648. Then there would be a local committee?—Yes. It is too big a thing to deal with otherwise. We have 3,300 miles of lines taking 60*l.* per mile per week. The general manager out there is entirely different from a general manager in this country. He has the whole burden on his shoulders; he has to run the whole thing himself, and he really has not time for Government House business.

1649. (*Chairman.*) These people are really a liaison Board between two nationalties?—Yes.

1650. (*Mr. Hiley.*) The general manager does not find in practice that the local Board is irksome to him?—Not at all.

1651. (*Chairman.*) I am very glad you have raised the point. These gentlemen are all paid

officials of the Company, and it is their business to act, so to speak, as liaison officials?—Yes.

1652. You would not favour a Board consisting partly, at any rate, of unpaid representatives who would represent, we may say, local pressure?—No.

1653. You do not think that is desirable?—Not out there. I do not know what it might be in other countries, but out in the Argentine, no.

1654. (*Mr. Hiley.*) You mentioned the question of the advocacy of members of Parliament on your behalf?—Yes.

1655. They, I suppose, would be interested because they are shareholders?—No. There, again, it is purely a question of personal friendship. It is the Latin race all over.

1656. Friendship, assisted by the local committee, I suppose?—Yes. I have just come back from the Argentine, where I have been for four or five months. I know a great many of these people, and they will do it for you personally.

1657. (*Chairman.*) We are very much obliged to you for your evidence.—I am entirely at your disposal if you want information on any other point that occurs to you. I am always ready to help if I can.

1658. Thank you very much. You have read the note which says that you are liable to be recalled if necessary?—I shall be only too happy to assist in that way. I am always very interested in railways.

The witness withdrew.

Correspondence between the India Office and F. Fighiera, Esq.

India Office, Whitehall, S.W. 1,
16th November 1920.

Sir,

The Committee of Enquiry into Indian Railways desire me to say that there are three questions which they omitted to ask during the interview you had with them, but they would be very greatly obliged if you could furnish them with written replies to them. The questions are:—

1. What would you or your Board say to—
   (A) allowing the actual management to be in the hands of an Argentine Board, reserving only financial affairs to the London Board;
   (B) eliminating the London Board altogether. Could a purely Argentine Company raise money in London?
2. Could you give us the total Central Argentine Railway capital raised in London, and maximum amount raised in periods of most rapid development? Lord Rothschild and Mr. Daniel (of Messrs. Mullins and Marshall) told the Mackay Committee of 1907 that India, both directly by Government and through Companies, could not expect to raise more than 10,000,000*l.* a year in London. Can you explain why the Central Argentine Railway has less difficulty?
3. What has the Central Argentine Railway done in reference to renewal reserves for maintenance unavoidably postponed during the war?

As the Committee are proceeding to India next week, they will be greatly obliged if your reply could be sent by the end of this week.

I am, Sir,
Yours faithfully,
W. GAULD,
Assistant Secretary to the Committee.

F. Fighiera, Esq.

CENTRAL ARGENTINE RAILWAY, LIMITED.

3A, Coleman Street, London, E.C. 2,
17th November 1920.

Dear Sir,

In reply to your favour of yesterday's date:—

1.—(A) Allowing the actual management to be in the hands of an Argentine Board, reserving only financial affairs to the London Board, would, in my opinion, not work at all. In the first place there are no men of sufficient experience available for such a purpose. The Argentines, as a rule, are farmers, cattle breeders, doctors of law, engineers, architects, or men of independent means. They are, save very few exceptions, not business men in the sense of qualified persons for sitting on a Railway Board, such as we understand those qualifications. It must be remembered, too, that their railway experience is in the main that of the traveller and not of the administrator. There would, further, be the tendency to give the principal positions to Argentines, irrespective of their lack of practical experience in railway operation. The English and French owned lines are, or should be, managed by the best trained English or French railway men, who should, as to their heads of department, be assisted also by qualified technical men. Except theoretically, those experienced men are not procurable from among Argentines. The merchants and business men are almost exclusively foreign—German, Italian, English, French, &c. Roughly, this is the order of the importance of the nationalities in the ordinary trading sense.

(B) I would very much doubt that a purely Argentine Company could raise capital in London to the extent of financing a large railway. In the first place, would the shareholders agree to such a change? I imagine not. After all, the shareholder looks almost as much to the respectability, responsibility and competence of a Board as to the reasonable probability of securing a steady and safe return on his investment. A purely Argentine Company would entail all the objections mentioned in the previous paragraph. In the Argentine one of the most striking features of business is that the great bulk of successful so-called Argentine industries are financed and worked by foreigners. Electric light and power, tramways, manufactures of matches, paper, boots, clothes, &c. fall into this category. The only defectively managed and worked railways in the country are the State-owned lines, because the political element comes in there. Jobs are found for people without any regard for competence or suitability. Some few years ago they strove to reorganise the administration of those railways by constituting a body of men supposed to act more or less on the lines of our London Boards. They were to receive reports and recommendations from the several State systems—they are not all physically connected—and they were to determine what should be done. The scheme has proved a complete

failure, and those railways continue a by-word of inefficiency both administratively and in their operation. This is, perhaps, a common experience where the State embarks on a specialised business such as railway management, but I am confident that the elimination of the London Board in favour of an Argentine Company would, from the trader's, public's and shareholding standpoints, prove disastrous.

The Argentine does not invest his money in the Argentine railways, although he accuses them of paying excessive dividends. He gets a far higher rate of interest from his land, and will, therefore, not take up railway capital except very occasionally as a speculation.

2. The total Central Argentine Railway capital is tabulated on the enclosed statistical card, and will be found in the attached report and accounts to 30th June last. It was all raised in London except $15,000,000 Ten-year 6 per cent. Convertible Gold Notes issued in U.S.A. This particular operation was made in New York to replace notes issued in London, which were, at the request of the British Government, called in under the Regulation of Exchanges Scheme.

The amounts raised since 1905 are as follows:—

	£	
1905 - - -	1,600,000	Consolidated Ordinary Stock
1906 - - -	1,760,000	" " "
1908 - - -	2,500,000	" " "
1911 - - -	3,000,000	" " "
1912 - - -	3,000,000	4½ per cent. Preference Stock
1913 - - -	3,000,000	Consolidated Ordinary Stock.
	£14,860,000	

Beyond this share capital, there was issued in debentures—

	£
1904 - - - - -	150,000
1905 - - - - -	350,000
1910 - - - - -	2,500,000
1914 - - - - -	2,500,000

and in notes—3,000,000*l.* of which was replaced by the above $15,000,000 gold notes—

	£
1914 - - - - -	1,000,000
1915 - - - - -	2,000,000
1917 - - - - -	500,000

The latter figure of 500,000*l.* 6 per cent. five-year notes is still outstanding in London, as will be seen by the Capital Account.

These figures apply to the Central Argentine only, but, of course, over that period issues were made by the other large Anglo-Argentine lines, and probably more or less to about the same amount.

In our issues we do not appeal to the outside public. We allot the shares—converted into stock when fully paid—*pro rata* to our stockholders who either take them up (the usual course with the majority) or dispose of their rights. We have over 50,000 proprietors. To-day we cannot, of course, issue either preference, ordinary or deferred stocks, all being below par.

The only reason I can suggest for the comparative ease with which this Company raised capital is that it allotted the shares to the existing stockholders at par when they were at a premium, thus avoiding the expense of underwriting and giving to the existing stockholders a tangible advantage.

3. The Mitre Law lays down the maximum that may be set aside from the revenue of the railway in any year, viz., 2½ per cent. on the value of the wasting assets, the list of which is mutually agreed between the Railway Department and us. From the Annual Report above referred to, it will be seen that from the difference in exchange, Renewals Fund was strengthened by a further contribution of 300,000*l.*, leaving the balance in Renewals Fund Account at 30th June last at 3,041,571*l.* 6*s.* 1*d.* I enclose copy of the Report of Proceedings at our Annual General Meeting in which I have marked the explanation in regard to the Renewal and other Funds which were strengthened during last year.

I avail myself of this opportunity of enclosing the translation of the power of attorney which I yesterday promised the Committee I would send.

I remain, Dear Sir,
Yours faithfully,
F. FIGHIERA, *Secretary.*

W. Gauld, Esq.,
Assistant Secretary to the Committee.

(Adjourned for a short time.)

LIEUT.-COLONEL G. HUDDLESTON, C.I.E., V.D., called and examined.

1659. (*Chairman.*) I think you are the Chairman of the Nizam's State Railway?—Yes.

1660. You are, I see, an Anglo-Indian?—Yes; I think I may call myself so.

1661. Was your service in India originally in the service of the Government?—No; I was in the service of the East Indian Railway Company.

1662. In what capacity?—On the traffic side. I had a long service in all the traffic grades of the East Indian Railway Company.

1663. Had you anything to do with the Nizam's Railway before you came home?—No, I had not.

1664. You first had to do with that when you retired?—Yes. When I retired I was invited to a seat on the Board of the Nizam's Railway.

1665. How long ago was that?—That was in 1911, after retiring in 1910.

1666. You then joined the Board, and have now become its Chairman?—Yes.

1667. (*Sir Henry Burt.*) You are also connected with other Indian Railways, are you not?—I am the Managing Director of the Assam-Bengal Railway, but I am going to deal with that later.

1668. (*Chairman.*) You and your Chairman are coming to tell the Committee about that Railway?—Yes.

1669. I dare say you will not mind if, when we have exhausted the Nizam's Railway, we take you on to a few general questions relating to your experience, so that we may save time hereafter?—Not at all.

1670. I suppose in a sense the Nizam's State Railway is outside our reference?—Absolutely, because we are only indirectly under the Government of India, that is to say, we are subject to maxima and minima rates. Apart from that, the Government inspector inspects the line every year for safety and so forth, but otherwise we are quite independent of the Government of India, and we are financed in a totally different way.

1671. I presume the Nizam's guaranteed State Railway is an English Limited Company?—It is a Company domiciled in England and the bulk of the capital was raised in London.

1672. Would you mind telling us what the capital is?—I think it is about 6½ million pounds—I cannot tell you the exact figure. Out of that, as far as I remember, 4½ million pounds were raised in London in the form of capital stock and debentures.

1673. Ordinary stock?—Yes, ordinary stock, capital stock and debentures; and the balance of the capital was taken up by the Government of the Nizam in the form of debentures.

1674. In India.—No, in London.

1675. Also in London?—They lent us the money here.

1676. Your security is that of the Nizam's Government and not of the Indian Government?—That is so.

1677. Your debentures are guaranteed by the Nizam's Government?—Yes.

1678. Your ordinary shares are also guaranteed?—They were originally, but the guarantee has expired now.

1679. Are you now at liberty to earn all you can?—In a sense, but there are two agreements. One relates to the broad-gauge section of the line and one to the metre-gauge section of the line.

1680. What is the total length of the line?—Under 1,000 miles.

1681. Of which how much is broad gauge?—It is about half and half.

1682. The broad gauge was, I suppose, the original?—Yes. With regard to the broad gauge, the Government guaranteed 5 per cent, and when the Company was not earning 5 per cent. the Government had to advance the money.

1683. What was the date of the foundation of the Company?—I cannot tell you straight off; it was in the early eighties, I think.

1684. That is near enough—practically 40 years ago?—Yes. With regard to the money that they advanced, we have to repay them out of surplus earnings, and the consequence is that there is what is called a contingent liability of about 2,250,000*l.*, which they cannot call on us to pay except by giving them half the surplus earnings of the line. It is a misnomer really, because a contingent liability is something that may arise, but this may be wiped out.

1685. What is the period of your concession?—There are various periods. They can terminate the contract in 1934 or in 1954 or in 1988. I think those are the three varying periods. You will see them in the Administration Report.

1686. (*Sir Arthur Anderson.*) Do you earn any earnings beyond the guarantee?—Oh, yes.

1687. (*Chairman.*) Let us get the other point clear first. Supposing the Company was formed in 1880, that would have been a 56 years' contract as a minimum?—Yes.

1688. During the currency of the contract half of anything you earn beyond 5 per cent. goes to the Nizam's State up to the point when you have repaid the sum which is outstanding?—That is right.

1689. What are your respective rights if the contract is terminated in 1934?—The Government then have to buy us out by buying the stock and debentures at par plus a premium of 25 per cent. I am talking of the broad gauge now.

1690. That is entirely irrespective of whether you were earning 6 per cent. or 20 per cent. or nothing?—Entirely. They take over the whole of the rolling-stock and the lines as they stand.

1691. They buy you out lock, stock and barrel for 25 per cent. more than you have spent?—Yes.

1692. That is for the broad-gauge line?—Yes.

1693. (*Sir Arthur Anderson.*) The line was built before 1880, because it says here that up till the end of 1878 the line was worked by the Great Indian Peninsula Railway?—Yes. I am talking of the time when the present Company took it over.

1694. From 1879 to 1884 it was worked by State Railway agency and from January 1885 by the Nizam's guaranteed State Railway?—Yes.

1695. (*Chairman.*) Then your Company dates from 1885?—Yes. I see it says here: "The Govern-"ment may also terminate the agreement and "purchase the railway rolling-stock, &c., on the "1st January, 1934, or the 1st January, 1954, by "giving 12 months' notice."

1696. That is to say, it was a 50 years' contract—from 1885 to 1934?—It is really meant to be a 99 years' contract.

1697. With a break at 50 and another break at 70?—Yes, that is about it.

1698. What is the history of the narrow-gauge railway?—The metre-gauge railway was built out of debentures issued on the security of the broad gauge, and on its own line—entirely by debentures; there is no other capital.

1699. You are of course very familiar with the ordinary arrangements between the Government of India and the Indian Companies?—Yes.

1700. We see that your contract is different from the contract of the East Indian Railway Company, for instance?—Yes, entirely.

1701. It seems to me it is more like one of the branch-line contracts—power to purchase at the end of a certain period for cost, plus 25 per cent. That is the branch-line type?—Yes.

1702. What have you to say for your own contract? What is your opinion in comparing the two types?—I cannot say that I have ever compared them. You mean in regard to finance?

1703. What we have to do is to recommend future policy. Does your experience lead you to say that the Nizam's contract is better or worse than the Indian Government contract?—I cannot say that it is better or worse. I think it is quite a good contract. It works exceedingly well. We have not the same difficulties in raising money, and so forth.

1704. We will come to that later. On the form of contract itself you have no special observations to offer?—We have no complaints to make about the contract.

1705. Are the conditions for the termination of the narrow-gauge contract the same as for the broad-gauge contract?—There is one essential difference—that we have not got any contingent liability. When the contingent liability on the broad gauge is all wiped out, the whole of the surplus earnings will be given to us, but we have a different agreement for the metre gauge, under which we have to give half the surplus earnings to the Government, although there is no contingent liability on the metre gauge.

1706. You say you raised the capital by debentures charged on the old line?—Partly on the old line.

1707. Charged on two securities?—Yes.

1708. So that I presume the old line has to bear the liability if the new line cannot?—Yes.

1709. In that case you have made the old line liable for the full interest from the very beginning?—Only partly so in regard to the old line, because the debentures were a primary charge on the new line.

1710. But supposing the new line earned 1 per cent. and the debentures received 5 per cent., the balance of 4 per cent. had to be found all the way through by the old Company before it could divide anything?—Yes, but that position has never arisen.

1711. I daresay not, but that was the position?—I think it might be said the position is that the old line did accept a liability.

1712. It took the whole of the liability of whatever was the debt charge of the new line?—Yes.

1713. (*Sir Arthur Anderson*) The old line guaranteed the new?—Yes, but I should mention that the Government guaranteed the new line for the first twenty years.

1714. (*Chairman.*) You do not want to offer any observations on the point of the different forms of the two guarantees, the Indian Government and the Nizam Government respectively, but you were going to say something about your being freer to raise capital?—What I wanted to say was that we had probably not the same difficulties in raising capital as exist in India with the Indian railways generally.

1715. Will you explain why?—Because we get our capital direct from the State, from the Nizam's Government. They advance it against debentures. We simply issue more debentures and they advance the money. We get the funds in that way.

1716. Where do they get the money?—From heir own State funds.

1717. Do they raise loans in India?—No.

1718. They take it out of surplus revenue?—They take it out of what they have.

1719. Where do they get it?—From their revenues.

1720. They are able to find the money for the debentures out of the surplus annual revenues?—I suppose so, unless they have some reserves.

1721. That means previous surpluses?—Yes.

1722. They do not issue Indian loans?—No, they do not issue any loans that I know of.

1723. You say that you issue debentures in order to give the Government a charge, and you issue them to the Government at par at 5 per cent.?—At a certain discount nowadays. They do not give us 100*l.* per 100*l.*

1724. You issue on the market terms?—Yes.

1725. You issue sterling debentures?—Yes, and the Government take them up.

1726. But the sterling money is never found in London in that case?—No, not in this case—not since 1907.

1727. What did you do prior to 1907?—Prior to 1907 the whole of the Company's capital funds were raised in London.

1728. Were you free to do it yourselves, or does the Government control your finance?—No; we were quite free to do it, but we had to get their guarantee to enable us to do so. They guaranteed the capital.

1729. If they guaranteed the capital it is clear they must in some way have checked the amount of it?—Yes, I suppose they did. We could not issue it without their assent.

1730 Clearly they would fix the amount, because that is what they had to guarantee?—Yes.

1731. Did they fix the terms of issue; did they interfere with whether you floated debentures or ordinary stock?—It was a matter of agreement between the Company and the Government as to the form of issue.

1732. Can you tell us how you issued it?—I can tell you that we issued in London, prior to 1907, 1,500,000*l.* capital stock, 1,158,000*l.* 4 per cent. debentures, and 1,800,000*l.* 3½ per cent. debentures.

1733. Can you tell us what the machinery was? You have not a prospectus with you, have you?—No.

1734. You do not know whether you issued it through a bank or an issuing house, or whether you put out your own prospectus?—I cannot tell you now.

1735. Would you mind looking that up before you come again?—I will do so.

1736. What does the Company earn now?—Last year we paid 5 per cent., plus 2 per cent. bonus, and we might have paid 10 or 11 per cent., but as a matter of fact we are building up reserves.

1737. You say you paid 5 per cent., plus 2 per cent. Did you pay back, in discharge of your liability, another 2 per cent to the Nizam's Government?—The Nizam's Government get half the surplus earnings.

1738. The surplus earnings were divided into three?—No, they were divided into two. There were the Company's share and the Government's share, half and half.

1739. But the Company's share was subdivided again between what you divided and what you put to reserve?—Yes, between what we paid as bonus and what we put to reserve.

1740. What has your Company done in reference to the money which, under normal conditions, you would have spent on renewals, but which you could not spend because you could not get the material?—We created a deferred maintenance account, as we call it, and that accumulated until we could get the material. I am sorry to say it is going pretty rapidly now, but it was a godsend to us.

1741. Did you get enough?—Yes. It was a splendid move, I think. I think the Nizam's Railway was rather unique in that respect.

(*Chairman.*) Not quite. We have heard of another. The Bengal North Western did the same thing.

1742. (*Sir Henry Burt.*) And the Rohilkund and Kumaon did the same.—I had not heard of that. We thought it was our own speciality.

1743. (*Mr. Hiley.*) How long have you been accumulating this fund?—Since 1917. In 1917, 1918 and 1919 we put by to this reserve practically 72 lakhs of rupees.

1744. That is about ¾-million pounds sterling?—Yes.

1745. (*Sir Henry Burt.*) Which you charged against the working expenses?—Which we charged each year against the surplus earnings.

1746. (*Chairman.*) You charged no part of that against the Nizam's Government?—Yes, the Nizam's Government contributed towards it.

1747. (*Mr. Hiley.*) You deducted it from the gross earnings before declaring the surplus available for dividend?—Yes.

1748. (*Chairman.*) The reserve comes in front of what we may call the surplus available for dividend?—Yes.

1749. And then out of the surplus available for dividend the Nizam takes one-half?—Yes.

1750. That is not quite as you put it before. The 2 per cent. bonus corresponds to what you paid to the Nizam?—We simply thought that our surplus earnings were so large that we could equitably distribute a 2 per cent. bonus and at the same time put a considerable sum to the deferred maintenance and other reserve accounts.

1751. You have other reserves also?—Yes.

1752. (*Sir Arthur Anderson.*) Am I right in understanding that the Nizam's Government contributed their share to the deferred maintenance

reserve?—Yes, inasmuch as the surplus earnings were not so large.

1753. (*Chairman.*) It really was not surplus earnings at all?—It was not. It was money that should have been spent.

1754. It was money that was earmarked for a special purpose?—Yes.

1755. How long have you been in that state of exuberant prosperity?—I think we have followed a very conservative course in building up several reserve funds. We have always been fairly prosperous.

1756. For quite a good many years?—Yes, ever since I have been with the Company.

1757. I am asking you that because you told us that there is a contingent liability on the part of the Company to the Nizam's Government of over 2,000,000*l.*, which represents the accumulated failure to pay the stock and debenture interest which they guaranteed?—To pay the 5 per cent. in the first days of the Company.

1758. It must have gone on for a good many years to reach that figure?—It did go on for many years.

1759. When did you turn the corner?—I should say we turned the corner since we have earned over 5 per cent. It has been ever since I have been there—probably 12 or 15 years or more.

1760. For a considerable period of time, at any rate?—Yes, ever since we have paid our 5 per cent.

1761. The line was constructed in the seventies, and it was not till after 1900 that it paid 5 per cent.?—I am not sure it was 1900, but thereabouts probably. It was some considerable time before it paid at all.

1762. That is important as a sample of the speed of development. I take it you do not wish to express any opinion on the various Governmental connections?—With the Nizam's Railway?

1763. Or generally. We cannot divide you into watertight compartments. You are a director of the Assam-Bengal Railway as well?—You mean in regard to finance?

1764. I want to know if you have any observations to offer on the relation of the Secretary of State or of the Government of India, or of the Railway Board to the guaranteed companies?—As far as the Nizam's Railway is concerned, as I have said, we are only subject to this question of maxima and minima rates, the construction of new lines, and agreements in connection therewith, the annual inspection, and sanction for the undertaking of works where any question connected with the safety of the public is concerned.

1765. Of course it is necessary in all those things that the Government of India as a whole should have control?—I quite agree.

1766. Have you any suggestions to make from the point of view of a director of a guaranteed company?—I do suggest that the Government of India have on occasions interfered too much in rate questions.

1767. Rates and fares?—Yes. I once wrote a little history of the East Indian Railway, a copy of which I have here. I cannot hand it in, because it is the only copy I have got, but as far back as 1882, when competition first started in India, the Government of India wrote a despatch in which they said the question was chiefly in regard to competition between Calcutta and Bombay, the two big competing ports in those days. The Government then said: "The Government of India certainly have no wish to "favour either the port of Calcutta or that of "Bombay in this matter." Shortly put, what it amounted to was that the Government of India were going to leave it to the railways to settle all rate questions themselves and not to interfere with or favour one railway or one port against another. Then, as the outcome of a long controversy, the Government introduced what were maxima and minima rates. The railways were not allowed to go above the maxima rates or below the minima rates, and for years when I was out in India the Government, I think very wisely, left these matters entirely to the railways themselves; they never interfered. There was strong competition that went on for many years not only between Calcutta and Bombay but Karachi and other points of competition came in, with the result that the railways came down to very low rates and trade and traffic developed enormously. Latterly the Government have not left it entirely to the railways to settle these questions of freights among themselves, but have stepped in and interfered where I think it would have been far better for them to have left it, as they originally did, to the railways.

1768. Can you give an instance of that interference?—Yes, I can. I would give the instance of the Hyderabad-Gadag Railway. I will give you a little sketch of the district, which may perhaps help you to understand the position. I think Sir Arthur Anderson was on the Railway Board at the time and will remember it. (*Handing sketch to Chairman.*) You will see Secunderabad, which is the headquarters of the Nizam's Railway. The Nizam's Railway sends its traffic chiefly to the port of Bombay. Bombay has been unable to take all the traffic offering, because of the congestion on the line that intervenes, the Great Indian Peninsula Railway. It intervenes between a point called Wadi and Bombay. As the Great Indian Peninsula Railway has been unable to take the traffic, they have restricted it and said: "You must only hand over so much per day or per "week." Consequent, partly on the restriction of the traffic, the Nizam's Railway and the Government of the Nizam wanted to find an outlet at some other port, and they thought that if they could make a connection down *viâ* Gadag they would be able to get to the port of Marmagoa. Marmagoa is, I believe, a port of very great possibilities, but it is a place without any market. It is not like Bombay, where you can send goods and they can be bought and sold. Anything that goes to Marmagoa has to go direct on board ship and go away from there. Therefore Marmagoa would, in a sense, never be a competitor of Bombay. But Bombay—in other words the Great Indian Peninsula Railway, which leads to Bombay—thought that they saw in this proposed railway a line that would compete with them. They raised objections to the line being constructed, and said to the Government of India: "If you are going to allow this line to be constructed "to Marmagoa port, you will divert the traffic from "Bombay, and we must have an agreement in regard "to rates." The Railway Board then, instead of leaving the Great Indian Peninsula Railway, the Nizam's Railway, and the Southern Mahratta Railway, who were all interested, to settle this question of rates between themselves, were approached, and although an agreement was ultimately come to they interfered in this question. I say it would have been far better for them to leave this question alone.

1769 (*Sir Arthur Anderson.*) This occurred two or three years ago, did it not?—Yes. I think you were there.

1770. Were not the Railway Board invited in the first instance to give assistance in the matter, and did not the traffic managers of the three railways have a meeting in Simla and come to an agreement more or less?—Yes, they may have come to an agreement, but the whole time the Nizam's Railways felt that the Railway Board should not have taken any action. The Railway Board said, as far as I remember: "We are doing this in order to prevent "the competition that will follow, and the agreement "that will ultimately result from it."

1771. (*Chairman.*) To make this new route, you would have had to build 176 miles of new line, would you not?—Down to Gudwal.

1772. You would have had to build from Gudwal through Raichur to Gadag; that is a total distance of 176 miles?—Yes.

1773. You could not build that without the sanction of the Government of India, could you?—Oh, yes; that is all in the Nizam's territory.

1774. (*Sir Arthur Anderson.*) Not all in the Nizam's territory, is it?—It is practically all. We should have had to get the sanction of the Government of India.

1775. (*Chairman.*) I thought so, because you said you had to get the sanction of the Government of India for building any railways, even in the Nizam's territory?—Yes, that is so.

1776. So that you could not build this line without the sanction of the Government of India?—That is so.

1777. Were they not justified in setting out the terms? I do not say whether they were wise terms or unwise terms. I do not know?—I say that they are justified certainly in making terms, but I do not think they are justified, or at least that it is necessary for them to go into detailed questions of the rates that are going to be charged.

1778. But surely the rates are at least as important as the weight of rail?—I do not think they are. If the Government had laid down maxima and minima rates, and had said: "You can do anything you like within those rates," I say all they have to do is to say: "Very well."

(*Chairman.*) Those of us who have been brought up in Western countries know that the question of rates is vastly more important than the question of the construction specifications.

1779. (*Sir Arthur Anderson.*) Has your Company made any protest against the action of the Railway Board in this matter?—I do not think they have. I do not think it would be any use to make a protest.

1780. (*Chairman.*) We will remember the point; it is the first time that anybody has mentioned it. I have been struck with the fact that Government control of rates is really so little?—They certainly do control them very little, but it is a very wise policy, which has answered.

1781. You say that, little as it is, it has sometimes been too much?—I think myself it is unnecessary.

1782. You have not built this line?—No.

1783. Are you building it?—No. We are building an alternative one. We have built it down very nearly to Gudwal, and then we go down by Kurnool, and the moment we propose to go there the Great Indian Peninsula Railway again objected and said: "We must have a rate agreement." We had a meeting with the Railway Board and the Railway Board have thrown out the Great Indian Peninsula Railway contention.

1784. (*Mr. Hiley.*) It did not unnecessarily interfere on that occasion?—No.

1785. (*Chairman.*) You say that all the capital that has been raised from the public has been raised in London?—That is so.

1786. Have you ever tried raising rupee capital in India?—I have never tried it, but I have heard it talked about.

1787. What is your view in regard to that matter?—I think it is a very good solution in regard to the Nizam's State.

1788. It should be easier, I should have thought, in a Native State?—I think at the present time it would be easier, but you have to remember that the Government of the Nizam may also want to raise capital, and if you were to go into the market of Hyderabad to raise capital for feeder lines or anything like that you might be interfering with the raising of capital by the Government.

1789. In your view, is a substantial amount of capital available there that can be obtained on reasonable terms?—You mean a substantial amount of capital for short feeder lines?

1790. No; I mean for big lines?—No; I do not think so.

1791. You think that India will not supply capital for more than the local feeder lines?—I do not think it will. I do not think you will get the money.

1792. Why? Because they do not want to invest?—I think they can invest in much better ways.

1793. That is what most people tell us. Your Board is a purely London Board, is it not?—Yes.

1794. Have you an ordinary English agent in Secunderabad?—Yes.

1795. And you manage your line exactly in the same way that any of the big Company lines are managed?—Exactly in the same way.

1796. You have no method of bringing the Indian community into any closer connection with the railway than any of the other Companies have?—We have none.

1797. And the Nizam's Government practically does not interfere with the management?—No; but we are in very close touch with them.

1798. But there is no official machinery of control?—Yes; they have their own Government examiner.

1799. What does he examine?—The accounts. He passes our accounts out there in the same way that the Government of India examine and pass the accounts of the railways in British territory.

1800. The physical inspection is done by the Government of India?—By a Government of India inspector.

1801. In reference to what I may call policy, service to the public and things of that kind, there is no official machinery for controlling you?—No.

1802. (*Sir Arthur Anderson.*) Has any desire been expressed on the part of the public to have a say in the management of the line?—Never. I think they are only too glad to have it managed for them.

1803. (*Chairman.*) Have you any views as to the possibility of getting a limited number of Indian gentlemen of business standing who would be useful directors?—You mean if there were Boards in India?

1804. Yes?—I think it would be very difficult to get them.

1805. We had a very representative gentleman from Bombay yesterday, who told us he thought a limited number could be obtained, but not many?—I dare say that is so, but I do not think you would get a great number who have any knowledge of railways.

1806. After all, is it necessary for a railway director to be a technical railway man?—No.

1807. He very rarely is in this country?—I do not say he is.

1808. He never is in America?—No. I do not know whether English Railway Boards are models of what they ought to be.

1809. I am not saying they are. Would you say the Indian Boards were?—Yes.

1810. You would?—Yes, I would. I think they are very excellently constituted.

1811. We may take the typical Board of an Indian railway as representing broadly retired Anglo-Indians either with business experience or with railway experience?—That is so.

1812. The theory of an English Board is that it does not manage?—Yes.

1813. The theory of your Boards is that they do manage?—They take a considerable part in the management, leaving to their agents a very free hand.

1814. I think we may consider that the difference between calling a man a general manager and calling him an agent is represented by a difference in the position?—I should not think there is a great difference in the position.

1815. I think there is a real difference. An English general manager manages the concern?—Yes.

1816. He asks his Board's advice on very important matters and that is all?—Yes, and I think you might say very much the same of an Indian agent.

1817. Would you say that the Indian agent asks his Board's advice or receives his Board's instructions?—I think that, as a rule, there is a very good and intimate relationship between the Board and the agent. You can call it receiving their instructions or confirming his actions or something of that sort, but it amounts to the same thing in the long run.

(*Chairman.*) I think not. With respect, I think you will find it is really different in practice.

1818. (*Sir Henry Burt.*) There is one point I should like to clear up for the information of the Committee, and that is as regards the formation of Indian Boards. Assuming, for the sake of argument, that it may be possible in the case of the G.I.P., the B.B.C.I., and the East Indian Railway, I think it may be said that it would be quite impossible in the case of an inland line like yours. You could never get a Board at a place like Secunderabad?—No, I quite agree.

1819. Assuming that it would be possible in other cases, it never could be done in the case of a railway line like the Nizam's?—That is so. It is purely a matter of opinion, but if you are going to make any change, why not make a change with the State Railways? Why not take the Eastern Bengal, for instance, an important commercial line running into Calcutta, and managed by the State, and form a local Board there to run the Eastern Bengal Railway and see how it works? There are three or four main points in your terms of reference. The first point you have to consider is direct State management—I do not know whether you want any evidence on that. The second is the question of management through Companies domiciled in England with a Board sitting in London. The third is management through a Company domiciled in India with a Board sitting in India. The fourth is management through a combination of the last two. I admit that there may be difficulties, but my own opinion is that it is a matter of compromise. I think if you can arrive at a combination of these two the whole difficulty might be met, and the only way I can see of doing that is that your Board which sits in London—which some people object to and say it should sit in India—should also sit for a period each year in India. My idea is that a quorum of the English Board should go to India every year, and sit there, say, for a couple of months—that is quite long enough—in order not only to get in touch with the whole of the staff, so that they may know them much more intimately than they can and do at present, but also to get to know the requirements of the line at first hand. They should also get in touch with the Chambers of Commerce, commercial people and so forth, and give those people an opportunity of knowing the Board. That is my own personal opinion. I am quite convinced that everybody will object to it and see difficulties in the way.

1820. (*Chairman.*) I can put to you one difficulty?—I admit there are difficulties.

1821. A good many of the Directors would not be both able and willing to go?—If the Government agreed to a thing of this sort they would certainly have to pay people a much better remuneration than they give at present. I cannot believe there is any Board of which at least two members could not go out. Hitherto the system has been to send a director out to India. Even that system has been very badly utilised in the past. I have been for years on a railway where no director has been sent out for eight or nine or ten years or more. Then a director has come out, and it has done no end of good. He stirs up the whole of the staff.

1822. Even a single director?—Yes. I have no hesitation in saying that the staff welcome him and are glad to see him. He spurs them on to better endeavours and efforts in the future. If that is so, would not it be still more so if you could send a Board who are able to come to proper decisions, and not merely a director who simply says, "This is a "difficult question, and I must refer it home"?

1823. You mean a Board with power to act?—A Board with full powers to act.

1824. Would you make it a rule that if anybody refused for three or five consecutive years to go to India he must retire?—No, I would not, because, even if one refused, there would be somebody else who would accept.

1825. But if it was always the same directors who went, would not that be a difficulty?—I do not think so.

1826. (*Mr. Hiley.*) They would take the full power of the Board with them?—Yes. The Board could practically be in abeyance, as it is during the vacation for a couple of months every year.

1827. (*Chairman.*) Would not the effect of it be that the directors who refused to go would gradually cease to be of any use?—I think in the course of years that might be so, but you are always replacing them. They are not there permanently for ever.

(*Chairman.*) They are there for good long periods.

1828. (*Mr. Hiley.*) It would have the effect of bringing in fresh blood?—Yes.

1829. (*Chairman.*) I think that is a very valuable suggestion; nobody has made it in that form before?—I put it forward as my own personal opinion without any authority from my Board.

1830. (*Sir Henry Burt.*) Do you think that such a scheme as you suggest could be applied to the Nizam's Railway?—Yes.

(*Sir Henry Burt.*) You think you could get a Local Committee there?

1831. (*Mr. Hiley.*) It would be a London Committee?—I am talking of a Committee or quorum of the London Board.

1832. (*Chairman.*) You would not propose to have local members to meet the Committee of the London Board; it would merely be a case of the members of the London Board going out there?—When they get out there they would meet all the constituted bodies.

1833. But they would be the only people with authority?—Yes.

1834. (*Sir Arthur Anderson.*) Would it be possible for Indians to join these Committees and eventually be made members of the Board?—You could co-opt Indians to join your Board temporarily out there. The whole idea is very rough, but I think if it was beaten out it would be found that there is something in it.

(*Chairman.*) I am very glad that you suggested it.

1835. (*Mr. Hiley.*) I conclude under the scheme we are discussing that if you did find it desirable or necessary to co-opt Indian members temporarily, your view is that it would be less objectionable from the point of view of some London Boards than the appointment of a Standing Local Board, because when the English members returned to England they would, under this scheme, take their powers back with them?—Yes, they would simply go on with the

Board in London. My idea is to try and get a solution such as is suggested here without my knowing what it means.

(*Chairman.*) We want as many suggestions as possible. Probably none of them will be adopted as they are put forward, but we hope that something will grow out of all the differences.

1836. (*Mr. Hiley.*) Have you a Government Director on the Board of the Nizam Railway Company who acts in a similar way to the Government Director on the Indian Railway Boards?—Yes, we have.

(*Chairman.*) Thank you very much for your evidence.

The witness withdrew.

MR. FREDERICK SCHOOLING, F.I.A., called and examined.

1837. (*Chairman.*) Will you tell us your position?—I am a past president of the Institute of Actuaries, at present a director of the Prudential, and late joint manager and actuary.

1838. You are going to speak, I take it, from the investor's point of view?—Yes.

1839. Purely from the investor's point of view?—Yes. I think as investors our first consideration is that our existing holdings in Indian railways should not be jeopardised in any way.

1840. Are the Prudential large holders?—We hold about 3 millions in Indian railways. Part of it is in annuities—about half of it.

1841. There you are entirely disinterested in profits and development?—Yes. We hold debentures 341,467*l.*, Guarantee Stock 755,670*l.*

1842. What does that mean?—That means like the ordinary guarantee, the ordinary stock with the guarantee—Preference Stock 382,650*l.*

1843. What is that in?—Some in the Bengal and North Western, and the Ordinary 96,000*l.*

1844. Is that Bengal and North Western also?—No, Bengal Dooars and others, and annuities we have 116,000*l.* per annum.

1845. That probably cost you 2 millions at any rate?—No, I hope not, but not very far off. We are large holders of both the A and *B* annuities.

1846. Will you tell us roughly when you acquired these holdings?—Over a long series of years.

1847. You have been steady investors?—Yes.

1848. Now we want to know your position?—I think I read the first note—as investors our first consideration is that our existing holdings in Indian railways should not be jeopardised. Our second consideration is that an investment field should not be closed against us.

1849. Take the first point. Most of the things you have—anything except the private companies, investments—have the guarantee of the Secretary of State?—To an extent of 3½ per cent. in most cases.

1850. The guarantee is by the Secretary of State?—Yes.

1851. Do you attach importance to that as compared with the guarantee of the Government of India?—Perhaps.

1852. One witness said that the guarantee of the Government of India is not a trustee security. The guarantee of the Secretary of State is. Or the guarantee of the Government of India would not be, because I do not think there are any stocks so guaranteed at this moment; but suppose it was a guarantee of an Indian Railway Board: which is a suggestion, he said that would not be a trustee security. That does not touch you?—No, we are not limited by trustee securities.

1853. Would you attach any importance to the difference?—I am afraid I cannot answer that off-hand. It depends what meaning is put into the Government of India.

1854. In what sense are you raising that?—Do you mean the Government of India as it stands at present? I should say that we should be content with it.

(*Chairman.*) As it stands with all its possibilities of course it must be.

(*Sir Arthur Anderson.*) The Government of India securities are surely trustee securities?

(*Chairman.*) All the securities—the Rupee Loans and so on—are under the authority of the Secretary of State. Is not that correct?

(*Sir Arthur Anderson.*) They raise them under the authority of the Secretary of State, but they are issued by the Government of India.

1855. (*Chairman.*) Do you think the difference in name, the guarantee being by the authority of the Government of India instead of the Secretary of State, would make any practical difference?—I do not think it would. The Prudential in the past, as large holders of the stock of Indian railway companies, has had the privilege of having direct access to the directors of the various companies, and I can give examples of the usefulness of this. I might mention that I was a member of the Committee of the Bombay Baroda Company, which negotiated the present contract; also that at the termination of the last contract for the same company, under the terms of which the railway was to be purchased by the Government of India on the annuity plan, or, in other words, to be paid off by equal annual instalments over a given number of years. Such annuity was to be calculated at a rate of interest depending on the rate yielded by Indian Government securities. The India Office proposed only to take into account India stocks. The Prudential was consulted, and the matter was put into my hands. I at once pointed out that the Great Indian Peninsula annuities were as much an obligation of the Government of India as were India stocks. Sir Lionel Abrahams, whom I saw on many occasions, disputed this, and the Bombay Baroda Company then took steps to enforce their views, and consulted the present Lord Haldane on the Chancery side and Mr. Asquith on the Common Law side, who advised as to the necessary legal action. An offer founded upon altogether a different basis was made by the India Office and accepted by the Bombay Baroda Company, so that it was a glorious British compromise that prevailed there. Another case where the fact of having a London Board was of service to investors was that of the Indian Midland. A provisional agreement for a new contract had been entered into between the India Office and the directors of the Indian Midland Company. The terms of this agreement were submitted to the Prudential, and we told the secretary of the Indian Midland that we should oppose it. Here the question was simple, for the contract terminated by payment in cash, hence investors should have something which must be considered a little better than cash under a new contract. We submitted a proposal, which was refused by the India Office; we then circularised the stockholders, and obtained an overwhelming majority of votes. When this became known the India Office desired to accept our offer, but it was too late, and the stockholders were paid in full in cash. Then we have always had cordial relations with the Great Indian Peninsula and the Madras and Southern Mahratta

Railways, as well as others, and we were consulted and took part in the legal negotiations necessary to enable the Great Indian Peninsula trustees to purchase their own B annuities. I mention these points to show how necessary we consider it that we should have a Board of Directors accessible to large investors such as we are.

1856. Are we to take that as evidence that you are not in sympathy with any proposal for transferring the management to India?—That is so.

1857. When you say you called in Lord Haldane and Mr. Asquith to advise, that rather implies that the contract is pretty difficult of interpretation?—Those old contracts I think were.

1858. I think you will agree that the contracts are very detailed?—Yes.

1859. And very complicated?—Yes.

1860. And all different?—Yes.

1861. Supposing instead of that you had—call it a Railway Board for the sake of argument—a railway body representing the Government of India issuing loans on simple terms like the War Loan, which has been put on half a sheet of paper—the prospectus, I mean—those difficulties would be got rid of, would they not?—They would not be issued as with any specific charge on a railway.

1862 They would be issued with a specific charge, say, on all the railways. For the sake of argument, I am not making a proposal, one could imagine we will call it the Indian Railways Debenture Stock, and that it had a charge on the whole of the railways of the Government and the guarantee of the Indian Government behind it if you like. With a thing of that kind you could issue what you wanted, and the terms would be simple, clear and uniform?—A great deal of the value of the security would depend, would it not, if it was a charge on the Indian Railways, as to whether the railway companies were managed by a Board of Directors in London, or perhaps by native boards in India.

1863. You attach great importance to that?—Yes.

1864. Am I to take it that you do not think that a security on the railways that was perfectly plain for all folks to see and understand would be good if the management was in India?—Without a Government guarantee apart from the success or failure of the railways I do not think it would.

1865. You think it would be necessary and that the loan would be floated on the Government guarantee and not on the railways?—That is so.

1866. Although the railways last year earned 8 per cent.?—Yes.

1867. (*Sir Arthur Anderson.*) The railways are Government property taking them all round. The proposition Mr. Acworth is putting would be a Government Railway Loan?—I am not enamoured with Government management of anything.

1868. It would be really a loan of the Government raised in the name and on behalf of the railways?—If in addition to the security of all the railways the Government made a heavy loss on the railways, yet the interest on the amount advanced would be secure, it is a different thing.

1869. Against the revenue of the country?—Yes.

1870. I take it it would be?—I think investors, as a rule, would not venture their money on an unknown future.

1871. (*Chairman.*) I gather you want things left as they are from that point of view?—Yes.

1872. Pertaining to the point about lack of uniformity and complication, do you think Indian railway securities would get a freer and better market in England if the terms were more simple and more uniform?—Yes, I really have a note on that point. It is beside your point; it is the utilisation of private capital for the construction of new lines.

1873. Let us get rid of the other point first. You were going to say something in answer to what I said. Would you get a freer market and better opportunities of issuing capital if the terms were more of the type that is familiar to the Stock Exchange?—There is not very much difference, is there, at the present time; of course, they are abnormal.

1874. Leave out the present time altogether; take a prospectus of an ordinary Argentine railway asking for 2,000,000*l.* preference; that was a very simple document, and everybody knew what it meant?—Yes.

1875. You cannot compare it with those documents, the Indian Contracts.—No.

1876. Does not that handicap the investment of money in the Indian Railways?—To an extent, yes, but I think as pointed out in an article here the investors in Indian Railways to a large extent are small investors in the country.

1877. Exactly.—They put their money into these concerns on the advice of their banker or solicitor probably.

1878. I put it to you, you are an expert, should you say that the ordinary person with a capital of 10,000*l.* or 20,000*l.* was at all likely to have any part of it in Indian Railways. They would probably have some in Argentine Railways and some in various Government loans and Colonial loans and so on, would they not?—Yes.

1879. Do you think they would be likely to have anything in Indians.—Some would.

1880. Would it be common?—No, I do not think it would.

1881. Why not?—Because of the complexity of the contract.

1882. You agree?—Yes.

1883. What would you do in the direction of simplification and making them attractive?—Still with the Government guarantee?

1884. I am asking you?—I have a note here. I say: "If the Government desire to retain an "option to take over the holdings of the private "investor, the terms of such option should be quite "definite and subject to no misconstruction, the "payment to the stock holders should be made in "cash, and at a substantial premium on the issue "price of the stock."

1885. That is a plum?—Yes. As a rough indication we will assume the Government guarantee at 5 per cent. per annum—and stock issued at par; the guarantee by itself would be approximately equivalent to a market price of 80, that is 20 points below par. The premium on redemption should therefore be 120, that is 20 points above par. A simple transaction like that, I think, would probably draw investors.

1886. There are two points there; in the first place it is something that anybody can see and understand?—Yes.

1887. In the second place, there is a plum?—Yes.

1888. The Government of India, as far as you know, have never given any plums?—No; I agree, and the Government of India would only exercise their option if the railways were a success; if they were a failure they would not do it, so that they could afford to pay a premium.

1889. At present they exercise it if they are a success, and when they pay off at par there is nothing. But if it is a failure they say, "Keep your "concern," which does not attract the ordinary investor?—Yes.

1890. How are these Government issues made, because they are really Government whether called

East Indian debentures or Government loans?—They have been made in a variety of ways.

1891. Who issues them, the Bank of England?—The Bank of England has issued some.

1892. I assume they are never underwritten or anything of that kind.—I do not think so. They have not in the past, but now we find even the English Government underwriting loans.

1893. Again, this is abnormal. They never were underwritten.—No

1894. I suppose if it was in Argentine they very likely would be underwritten.—Sure to be.

1895. That tended to get it pushed?—Yes.

1896. Under the other system it is nobody's interest to push it.—Yes.

1897. Are there any jobbers in the Indian Railway market, can you tell me?—There are only three I think.

1898. How many do you suppose there were in the Argentine market—the South American market?—I really do not know, but certainly three times as many.

1899. It all tends the same way: the issue is not made attractive.—Yes; there is no free market.

1900. The reason is that it does not attract the public at large?—No.

1901. Assuming that the market was encouraged. I daresay you know Lord Inchcape's Committee, the Mackay Committee, of thirteen years ago?—Yes.

1902. The Mackay Committee were told by Lord Rothschild and Mr. Daniel, of Mullens and Marshall, that the London market could not take more than 10,000,000*l.* a year. How does that strike you, leaving out the present abnormal conditions?—I should be very sorry to disagree with two such eminent authorities. It is only a personal opinion, but I should think, with an attractive Indian security, that you could double the 10,000,000*l.*

1903. Have you any idea how much Argentine they got with any issue?—I should not like to commit myself.

1904. It used to be said that Canada was taking 100,000,000*l.* before the war?—Yes.

1905. Can you see any reason in the nature of things why, if it could get 100, India should only get 10?—No. Of recent years the wonderful possibilities of India have been very strongly brought home to me.

1906. Will you please go on with what you have there?—Then with regard to this issue of new money, I think it is necessary that all surplus profits on the part of the capital subscribed by the private investor should go to the shareholders. The reason for this is that, owing to the suspicion and uncertainty which has arisen in the minds of the stock-holders, both in English and Indian railways, any other course would result in the money not being obtained. Moreover, it must be borne in mind that no surplus dividends will be payable during the period of construction, that is, with regard to the new capital. That does hold now with regard to the existing companies, such as the Bengal-Nagpur. There the surplus profits on the part of the capital subscribed by the private investor does go to the shareholders.

1907. Up to the limit of their nominal investment?—Yes.

1908. Let me see if I understand. There should be no limit to the possibility of a dividend?—That is so.

1909. That is the Indian practice?—Yes, then there must be an absolute guarantee that investors in Indian Railways should not have to pay a higher rate of income tax than if they invested in home securities.

1910. Is not that safe now?—At present it is.

1911. If the Indian income tax went to 4*s.*, then you would have to pay 7*s.*?—You might. There is no knowing what future legislation can do.

1912. Under the present English law if the tax remained at 6*s.*, and the Indian was 4*s.*, the English authorities would allow you to deduct 3*s.*, and you would have to pay 1*s.* in Indian and 6*s.* in English?—That is so.

1913. That you think clearly is a barrier?—Yes; I think nowadays everyone is so alive to the question of income tax that it is one of the first things an investor enquires about.

1914. Have you any information as to issuing free of income tax?—At the present time it would be most attractive.

1915. We have been told that the Bombay Improvement Trust have issued free of Indian income tax and got 6½ crores?—How would that affect an English investor? Would he not still have to pay?

1916. They have got it all in India?—I beg your pardon.

1917. You would not care to speak, I suppose, about the potentiality of the Indian investor with a lower income tax?—No.

1918. Will you please go on?—In recent cases, of course, we have had this rebate, and the companies that have accepted and adopted the rebate have been successful, have they not?

1919. You are speaking of the branch line companies?—Yes.

1920. Have you any money in them?—Yes, some.

(*Sir Arthur Anderson.*) In rupees?

1921. (*Sir Henry Burt.*) It would be rupees; it must be?—Yes.

1922. (*Chairman.*) Ordinary stock or debentures?—Preference and ordinary.

1923. Do you think the great fluctuations of exchange of the last year have scared the English investor?—No, I do not know that it has.

(*Sir Arthur Anderson.*) It has not been to the good.

(*Chairman.*) It is rather startling to bring one dividend home at 2/9 and the next of 1/7.

1924. (*Sir Arthur Anderson.*) But still the investor originally expected only 1/4?—It has all been to the good of investors in Indian Railways.

1925. (*Chairman.*) Even the 1/7 is better than usual?—Yes. Then I have drafted a note on the Terms of Reference.

1926. Will you tell us anything you think there is in it that is germane to your experience. We shall be very grateful for that?—The first part, I am afraid, is not so much from the big investor's point of view. "Direct State Management. This, "from the point of view of the private investor, "might mean either of two things: (1) purchase of "the stockholders' holdings by the Secretary of "State, or (2) the State managing the railways and "still paying the stockholders their proportion of "profits. Experience has proved that the first course "is invariably inimical to the stockholders' interests. "The second course would be even worse, for it "seems impossible for a Government Department to "work any business on a profit-yielding basis. Most "State concerns tend to become economically "unsound, eventually throwing a burden on the "taxpayer, and investors are averse from engaging "in any enterprise which is economically unsound. "As an example of this, the case of the present "Corporation Housing Bonds may be mentioned, the "hesitation on the part of the public to subscribe "for the Bonds being due to the knowledge that "the scheme, in addition to being on an unsound "economic basis, is largely under the control of the "State or the Municipal authorities. It should also "be borne in mind that the present-day tendency is "to give an increasing share in the government of "the country to the native Indian; and in view of "the possibility of the ultimate grant of complete

"autonomy to India, the stockholders would probably "be unwilling to place their undertakings under the "direct management and control of the Indian State. "The alternative of the British Government owning "the railways in an Indian self-governed State "would appear to be unworkable. For example, "imagine the position of the Canadian Railways if "they were directly owned by the British Govern- "ment. Another objection to direct State manage- "ment lies in the temptation for the Government to "use the railway for its own purposes regardless of "the interests of the stockholders, *e.g.*, the construc- "tions, for strategic purposes, of lines that would be "unremunerative for ordinary traffic. From the "private investor's point of view the present "methods of Company management with a Board "sitting in London have worked admirably, and the "onus of proving that any alteration would give "better results should fall on those proposing such "alterations. In those cases a fixed rate of interest "on the stock is guaranteed by the Secretary of "State, and, after payment of a fixed rate on this "share of the capital, the surplus profits are divided "in agreed proportions between him and the "Company. The directors and management have "thus a direct incentive to administer the railway "with efficiency and economy in the interests of the "stockholders, while the interests of the general "public are safeguarded by the Government "through the Railway Board and the Government "director. Then (*b*) and (*c*). (*b*) is management "through a Company domiciled in England and "with a Board sitting in London; (*c*) is "management through a Company domiciled in "India and with a Board sitting in India. As "between methods (*b*) and (*c*) preference must be "given to the former, as at present in operation in "the cases of several of the principal Indian "Railways, as it has the advantage both of simplicity "and efficiency. The Secretary of State being "resident in London has direct access to the "Directors and Management in London through the "Government Director; and the Directors, in their "turn, have access to the local officials in India "through the Company's agent. It might be argued "that a Directorate and Management domiciled in "India would be more conversant with local "conditions and methods, but it should be borne in "mind that the Directorates and Managements as "at present constituted include many men with an "extensive personal knowledge of India, and the "Company's agent spends the whole of his time there. "Further, the Directors' duties being mainly con- "cerned with wide questions of policy, they can exer- "cise their functions as well as, if not better than, they "could if resident in India, technical and detail matters "being dealt with by competent local officials with "wide powers. Again, the majority of the holders "of stock, being resident in England, and having the "power of electing their Directors, should have the "opportunity of being in close touch with them. "Generally speaking, an English investor in the "stock of a Company, with a London Board, which "either wholly or in part is dependent upon the "profits earned, as distinguished from a fixed "interest-bearing security, should not subsequently "be deprived of his privilege of direct access to the "Directors of such Company. A further objection "to the choice of India as the domicile of the "Company lies in the fact that it would thereby "become subject to the Indian Company Law."

1927. I know nothing about that. Is there anything in that?—There might be.

1928. Do you know anything?—No, not at the present moment; it is only possibility.

1929. It raises an uncertainty in the investor's mind?—That is so. "From these considerations it "would appear that, from the point of view of the "private investor, method (*b*) is preferable to either "(*a*) or (*c*) and that no useful purpose would be "served by the combination suggested under method "(*d*)."

1930. I expect you have some bonds in the Canadian Northern. You know the constitution of the new Canadian National Railways?—Not well.

1931. It is merely this, the whole of the stock of the Canadian Northern Railway, every penny of it, belongs to the Dominion Government; and the Dominion Government has constituted a body called the Canadian National Railways, and as they hold all the stock they can appoint any Directors they like. They have appointed a Board of Directors such as you and I would appoint if we wanted our property properly managed, well-known business men and so forth; they manage the railways for the benefit of the public, at least that is what they are supposed to do, subject to the fact that the Government of the day could vote them out of office at the next General Meeting if they liked. Have you felt tempted to sell your bonds?—We have sold, I think, a large amount of them. We hold some now. We only hold the prior charges.

1932. It was not on that ground you sold them, I take it?—No, we had a favourable opportunity with the dollar securities.

1933. Have you any view as to how something of that kind might act?—Would you get this wonderful Board to accept such a position?

1934. Yes. I suppose it may be better to be the servant of one shareholder than 10,000; I do not know, but I understand it is an unexceptional Board and they manage the railway?—They might get such a Board in Canada, but would they get such a Board in India.

1935. That is another question; you have raised that point; it is a question of the constitution here.

1936. Is that the end of your memorandum?—Yes.

1937 Is there anything else on the terms of reference that specially comes to your mind?—No, I think not.

1938. I do not remember that there is. You do not want to go into Indian details and the constitution?—No.

(*Chairman.*) Then I think that is all I need ask you. We are very much obliged to you for coming.

The witness withdrew.

(Adjourned until to-morrow at 2 P.M.)

FOURTH DAY.

Wednesday, 17th November, 1920.

PRESENT:

MR. W. M. ACWORTH (*Chairman*).

SIR HENRY BURT, K.C.I.E., C.B.E.
SIR ARTHUR ANDERSON, KT., C.I.E., C.B.E.
MR. E. H. HILEY, C.B.E.

MR. WILLIAM GAULD (*Assistant Secretary.*)

SIR CHARLES ARMSTRONG and MR. A. MUIRHEAD, called and examined.

See Written Statement No 7, Vol. IV.

1939. (*Chairman.*) Sir Charles Armstrong, you are the Chairman of the Great Indian Peninsula Railway Company?—(*Sir Charles Armstrong.*) I am.

1940. I understand that previously you were a merchant in Bombay?—I was for over 30 years.

1941. Will you tell us what firm you were in?—Lyon, Lord & Co.

1942. Mr. Muirhead, I understand that you are a Director of the Great Indian Peninsula Company?—(*Mr. Muirhead.*) Yes.

1943. What were you formerly?—I was the agent of the South Indian Railway, and previous to that, since 1884, I was in both the State Railways' and Companies' employ.

1944. Were you on the traffic side all the time?—Yes, entirely, until I served as the agent, which is a general managership.

1945. Were you ever on the Great Indian Peninsula as an officer?—Yes, I was General Traffic Manager.

1946. And subsequently agent to the South Indian Railway Company?—Yes.

1947. Then you came home and became a Director of the Great Indian Peninsula?—Yes.

1948. Sir Charles, the first point you raise is the advantages resulting from competition?—(*Sir Charles Armstrong.*) Yes.

1949. As I understand that, you mean between the State Railways and the private railways?—We do mean that, but we also mean between the Company worked railways themselves. the competition, say, of our railway with the East Indian and the Bengal-Nagpur Railways.

1950. That is, competition for the traffic?—Yes.

1951. It is competition from the producing centre in the same market to get the traffic in two different directions in that case?—Yes.

1952. Which can be carried either eastwards or westwards?—Yes.

1953. (*Sir Henry Burt.*) Mainly to the ports?—Yes, it is port traffic.

1954. (*Chairman.*) That of course is not the same thing as what one understands in England or America, where there may be three Companies, each starting, say, from the Nagpur source and all arriving at Bombay?—That is so.

1955. You have not anything of that kind?—No, we have not the same sort of thing in India.

1956. May I ask you a question, which has been in my mind a good deal, in regard to a point that you have raised? Is there anything in the statement that is made that the tendency of the Companies, partly, I take it, because of their English affiliations, has been to attach undue importance to through import and export traffic and less importance to the development of purely local traffic?—I do not think there is really anything in that. It is a point that has been very often raised. I was Chairman of the Chamber of Commerce for seven years, and that was a point that frequently came before me, but I do not think there is really anything in it.

1957. Do you mind giving the years when you were the Chairman of the Chamber of Commerce?—I was Chairman of the Chamber of Commerce from about 1906 until I left India in 1914.

1958. May I put the question to you in this way? I am sure you will not object to it. As a Bombay merchant, your interest might be to consider export and import as of great importance?—That might be so, yes, certainly.

1959. And people might say you were prejudiced?—They might.

1960. But, as far as you know, there is no ground for the statement that the development of local traffic is neglected?—There is no ground for the statement as far as I know.

1961. Now I am going to ask Mr. Muirhead to answer the same question?—(*Mr. Muirhead.*) The question has been raised several times. I noticed that only the other day in Bombay they were agitating that the reduced rates for export and import traffic should be withdrawn. I quite agree with Sir Charles Armstrong that, looking at it from the railway point of view, there is nothing in it, and that the rates for export and import traffic are not unduly favourable at the expense of the local traffic.

1962. You say, "looking at it from the railway "point of view," I expect every railway man, speaking as a railway man, would say that, however low the through rates are, the through business is generally more profitable to the railroad than the local business, however high the local rates are. That is a sort of railway opinion all the world over; the big bulk business is always the profitable business?—Quite so.

1963. But looking at it not from the railway point of view but from the point of view of the development of the country, what do you say?—I think the export and import traffic is very important to the development of the country, and that it is wise to encourage exports and imports by putting the rates on as favourable a basis as you can. Of course, I do not hold that local traffic is of no importance. I can conceive of local traffic being of far greater importance than the through traffic in certain cases.

1964. Are the proportions varying?—Yes, they are.

1965. That is to say, local traffic is becoming increasingly important?—Yes.

1966. You are clear in your own mind that the rates are such as fairly develop that traffic?—They were at the time I left, and I do not think there has been any great change since.

1967. How long have you been home?—Since 1919—about 1½ years.

1968. I think, Sir Charles, you have only recently returned from India?—(*Sir Charles Armstrong.*) I

came home in 1914, but I was out in India again this last cold weather a few months ago.

1969. May I ask you a question that we raised at some length with Sir Marshall Reid, the question of the manning of Local Boards? Sir Marshall Reid told us that a few people, whether Indians or Englishmen, suitable for railway directors might be found in a place like Bombay at any rate, but one of the great difficulties was that from the time when a man got sufficiently high up to be recognised as important enough to be put on to a Board to the time when he left India was a very short period—he thought on the average not more than five years.—That is so.

1970. Would you agree with that in every respect? Would you agree that there was a certain number of men to be found?—I agree that there are a certain number of suitable men. I take it you are speaking of Indians as well as Englishmen?

1971. Yes, both.—I agree that there are a certain number of men who are quite capable of being railway directors, but they have not got the experience.

1972. But they are men of business?—Yes.

1973. They are capable of going on to a Board?—Yes, they are capable men. At the same time they are very busy men. They have got their own business to look after. I have had a great deal of experience in Bombay of public companies—I was a director of several—and my experience is that men could not give more than a very short time to a Board meeting.

1974. We put it to Sir Marshall Reid that an English Railway Board did not take up the time of a director more than a day in a month roughly. If a banker or a big manufacturer or a country gentleman is on one of the English Railway Boards, it does not really mean more than, roughly speaking, a day a month. They could give that, I take it?—My xperience of my own Board in London is that it takes a great deal more time than that.

1975. I think you do a great deal more than they do. You do things that our English Boards do not do, because you have not your agent on the spot, and you would probably get through your business quicker if that were the case than when you have to refer and discuss correspondence, and so on?—Yes, but my experience of a great many of the Boards of Joint Stock Companies in India is that, owing to the fact that the Directors are very often Directors of many other Companies and busy men, they have not really got the time to give to the work, and become Boards for confirming the acts of their agents. They do not exercise much directing power.

1976. Do you think that is wrong? Does the Company suffer?—Yes. Of course most public Companies in India are worked by agents, and they are generally experienced men. They have a big financial interest in them, and of course it is to their interest to run their concerns properly. I was a Port Trustee for ten years. The conditions as regards the Bombay Port Trust are different, because the handling of ships and the handling of import and export cargo is part of the business of the merchants. On the Port Trusts the merchants have a real power, and their advice is extremely valuable, because it is their work and they know what they are doing. But in connection with other Companies that I have been on, my experience has been that the Directors really do nothing more than confirm the acts of the agents.

1977. That is where you have a Managing Agent, you mean?—Yes. That is the general system.

1978. Where you have a company like an English company (I do not know whether there are any of them in India) where the Agent corresponds to our General Manager, do you see any objection to the real management being in the hands of the Agent, subject to general control by the Directors?—If you put it from the point of view of a railway, I think it is a very great responsibility to throw upon one man.

1979. On the other hand you would agree that it is impossible for a Board of Directors to adjust rates to suit traffic as it grows and changes?—Yes.

1980. And you would agree that they cannot interfere with engineering matters?—All engineering questions are closely examined by the Board in consultation with their consulting engineers.

1981. They certainly cannot interefere with methods of operation; they do not understand them?—Yes, they can and do, as the Home Boards are composed of experienced men.

1982. That is a different system?—They can give very valuable advice. They are in touch in the City of London with most experienced men and modern methods, consulting engineers and so forth, and they can help the agent very considerably; otherwise he has not always got the requisite knowledge and facts.

1983. Now let me get an answer to the second part of the question. Is Sir Marshall Reid unduly pessimistic when he says that, whenever you become really valuable you go away in five years?—Yes, I think that is a correct statement as regards India.

1984. It is quite a short period?—It is.

1985. Of course, that five years does not apply to an Indian merchant on the spot?—No. During those five years an Englishman is extraordinarily busy. He is generally a Director of many companies; he has his own business to look after, and he has endless outside interests to attend to.

1986. It is rather regarded as a distinction to be a Director of the North Western Railway in this country. Do you not think a Directorship of the Great Indian Peninsula would attract first-class men?—It might attract them, but it would not induce them to stay any longer in the country.

1987. I agree; but they would give a certain modicum of time to the company for those five years?—Yes, but I think there is a great danger in continually changing the Directors. A railway wants continuity of policy, and I think it is very unwise for the Board always to be changing.

1988. Now let me take you back to the question of competition. You have explained what you mean by competition between railways which may be privately owned for the output from a market or, it may be, on the other hand, for supply to a consuming centre from two possible port sources. That is one kind of competition?—Yes.

1989. If I understand you aright you also use competition in the sense of rivalry in efficiency?—Yes.

1990. From that point of view you object to sheer State management because you think it would not secure it?—I do.

1991. I do not know that I quite carry in my mind what your view is with regard to the maintenance of the dual system?—I think the present system, the dual system, is advisable.

1992. On principle?—I think one helps the other. I think the competition of the company lines with the State lines is all for the general good.

1993. You speak of the dead level which would result from the State management of all railways?—Yes.

1994. But you do not think the State Railways will be at a dead level as long as they have Companies alongside of them?—It is impossible that they should be. They have to compete. (*Mr. Muirhead.*) There has been no experience in India of State Railways alone.

1995. Has the North-Western any competition to speak of?—Yes. It is in competition with Company.

lines in the way of rolling stock, speed of trains, convenience to passengers.

1996. I should call that rivalry in efficiency; it is not quite competition?—That is so.

1997. What I meant was that the basin from which the North-Western obtains its traffic is pretty well a preserve of the North-Western line, is it not?—Yes.

1998. (*Sir Henry Burt.*) There is a certain amount of competition for Bombay and Karachi is there not?—(*Sir Charles Armstrong.*) Yes. (*Mr. Muirhead.*) Take the competition between ports, each Company is working for its own port. The Great Indian Peninsula for Bombay, the East Indian for Calcutta and the North-Western for Karachi.

1999. Against Bombay?—Yes. If they were all State Railways, how would that competition be brought about and adjusted. (*Chairman.*) The point I want to get at is this. If the traffic from the north-west, the Punjab wheat, goes to Karachi or goes to Bombay, in both cases it originates, does it not, with a State Railway system. (*Sir Henry Burt.*) Oh no. (*Sir Charles Armstrong.*) No. There is a very large area in the Punjab where this wheat grows and there are other railways there.

2000. (*Sir Henry Burt.*) Even as far down as Bareilly there are competing points?—Yes, many competing points.

2001. There is a large area around Bareilly for which both Karachi and Bombay are in competition?—Yes.

(*Chairman.*) If it goes by one route, it would go by the State Railway to Karachi.

(*Sir Henry Burt.*) Partly State and partly Company.

(*Mr. Muirhead.*) There would be only a very small Company mileage to Karachi, the major portion of it would be State.

2002. (*Chairman.*) On the other hand, if it came to Bombay it would be a Company line all the way?—Yes.

2003. And therefore the State Railway is stimulated by that direct competition?—Yes.

2004. I would like you to say exactly in your own words what you wish to say on the subject of the economic and commercial interests of railways being subordinated to political influences. Does that happen at the present time on the State lines?—(*Mr. Muirhead.*) Yes, I should say it does. The question whether Government can commercially work a railway as advantageously as Company lines has been discussed, as you know, among many people, and you yourself have expressed views upon it. With regard to what you say about politics, I assume you are talking about political influence on the railways?

2005. Political influence might be used in regard to rates, either in the reduction of rates or by using the rates as an engine of taxation. We have a case in point in Ceylon. The railway rates in Ceylon are much higher than in India, simply because there is no land taxation in Ceylon, and they use the railways for the purpose of raising revenue. In India the question of the Salt Duty has also had an influence on rates. The Government are interested in the Salt Duty, and they made propositions to the Railway Companies (I am talking from recollection, and this occurred some time ago) that the salt rates should be unduly reduced, and, I think, insisted upon it, in spite of the protests of the railways.

2006. On the ground, I suppose, that salt was a necessary of life?—Yes. The Government did not want to reduce the tax on salt.

2007. They wanted to make salt a reasonable price, and they preferred to do it by reducing railway rates?—Instead of by reducing the duty. Those who know India know that the political changes there are more acute than they are likely to be in other countries. If the State worked the railways there would be manipulation for the reservation of compartments for castes and creeds—there are all sorts of castes and creeds—and you would get political influence at work. You will have reduced fares for higher officials and all classes there. The whole railway may be used for purposes other than commercial.

2008. What you told us about the salt happened very many years ago?—Yes.

2009. But the things you are now mentioning are things that are now happening?—They are things which may happen to-morrow. They cannot urge these points with Company lines, because Government are always in a position to say, as they have done on many occasions to my knowledge: "This "is a matter the Government cannot deal with; it "is a matter for the Railway Companies." They are able then on their own State Railways to resist political pressure and political agitation.

2010 Do you say you think it may be difficult or that it has been difficult?—It has been difficult, I think, in the past.

2011. Have they resisted anything?—Yes, they have resisted.

2012. They have managed to resist?—Yes.

2013. If I understand you aright, you would put it in this way: that the pressure is considerable and increasing, and the Companies are likely to be able to resist it longer?—The Companies are likely to help Government to resist—that is my contention—because the Government reply would be that this is a matter for the Railway Company.

2014. What would the Government do on a State railway?—They will follow the companies.

2015. They would say: "If you cannot "persuade the companies that it is reasonable we are "not going to do it"?—Certainly. (*Sir Charles Armstrong.*) May I state my view, Sir?

2016. Certainly.—My view is that so long as there is dual control the railways will not be subject to great political pressure.

2017. As long as the dual system exists?—As long as there is a dual system, partly State and partly Company, I do not think the railways will be subject to very strong political pressure. The argument which has been put forward and very strongly urged in India for several years past by at any rate one very prominent man is that the railways should practically be run without profit for the benefit of the community generally. I have argued that question with him when travelling in the train to attend Council meetings at Delhi. That is his view, and it is very powerfully put. I think myself it would be a very great disaster to the trade of the country if the railways were all under State management, because they undoubtedly would be subject to very severe political pressure—pressure which Government would not be able to resist. The efficiency of the railways would most undoubtedly suffer, and rates, as Mr. Muirhead has just said, would be manipulated in favour of particular trades or for the interests of particular people.

2018. Have you ever turned your mind to a scheme under which we suppose that the Government of India is told: You have got 200,000,000*l.*, or whatever it is, invested in the railways; the railways shall pay you 6 per cent. on it or any other figure that might be reasonable, and that is all you have got to do with it. The management of the railways shall be left to a Board largely independent of the Government.—(*Mr. Muirhead.*) That is the scheme proposed in another country. But there again you see the difficulty of the Government would be increased by having a Board in India, and Sir Charles Armstrong's remarks on that subject apply with great directness to that position.

2019. Supposing there were a single Railway Board in India, you think they would still put pressure on the Board?—I think the strongest argument on the subject is in your own article, in which you said that the Government would have the appointment of that Board, and therefore the Board would do as they are told. That is quite sound, and I agree.

2020. (*Sir Henry Burt.*) Supposing, for the sake of argument, the London Boards were abolished and Indian Boards were started, do you think you would get the same assistance from the Indian Boards in maintaining the management against political influence?—(*Sir Charles Armstrong.*) In resisting political pressure, do you mean?

2021. Yes.—No, you could not.

2022. (*Chairman.*) Or even in resisting commercial pressure?—No, you could not.

2023. That almost seems to go by itself. The interest of the Company directors in London is, broadly speaking, higher dividends. The interest of the directors representing Indian business might be the getting of lower rates as much as the getting of a higher dividend?—I do not know that I altogether agree, at any rate so far as my own railway is concerned. You say the interest of the directors in London is to get a higher dividend. As a matter of fact, my own company has such a very small share in the undertaking that, whilst we are very glad to have a higher dividend, I do not think that is our main point at all. We try to work the railway for the benefit of the trade of the country.

2024. But on the capital you have you get a higher or a lower dividend?—Yes, but the capital is so small that that hardly influences us. In our railway we only have a capital of about 2½-million pounds.

2025. You make a point which a great many other people have mentioned about the inconvenience of the State system through the transfer of an official from a job that he knows to a new job?—Yes. (*Mr. Muirhead.*) Before you go to that, may I just add, with regard to the question of securing men for the Boards, that you realise that that would only be possible in Bombay, Calcutta and possibly Madras. You could not secure them up country, in Delhi for instance.

2026. (*Sir Henry Burt.*) Do you think, Sir Charles, you could get two Indian Boards in a place like Bombay, seeing that it would be necessary ultimately to have two Boards if we followed out the policy of Indian Boards, one for the Great Indian Peninsula and one for the Bombay, Baroda and Central India?—(*Sir Charles Armstrong.*) I am doubtful. Of course there are a good many capable men in Bombay, Indians as well as Englishmen, but they have not got the particular experience which is absolutely necessary for a railway.

2027. I should like to put a question to you which I put to Sir Marshall Reid. I take it that most of the gentlemen who would become directors in Bombay have very intimate business relations with the railways?—Yes.

2028. In many instances they are contractors for the railway?—Clients or contractors.

2029. Do you think that that makes any difference? What importance do you attach to that?—We have said in this statement that the interests of many of the directors may not be in accord with those of the railway.

2030. Yes, I see you do say that, but what importance do you attach to it?—Interests frequently clash and this is not desirable.

2031. That is your experience as a Bombay merchant?—Yes.

2032. You would not welcome a few of the Bombay merchants being directors, say, of the Great Indian Peninsula if your firm were left out; that is what I mean?—It comes to that.

2033. There would be a good deal of competition for them?—Yes. We say on p. 3: "Were "the Boards to be situated in India they would "necessarily be composed of men who would be "engaged in other active employment, whose interests might not always be identical with those of "the railway." There is no doubt that that is so.

2034. (*Mr. Hiley.*) Did you find that an objection on the Bombay Port Trust?—Not exactly, because the working of the Port Trust is a matter for the merchants and the shipping people. It is to their interest to see that the ships are properly berthed, that the discharge is quick, that the exports are brought into the dock and loaded properly, and that the imports are discharged and sent out. It is part of their business. So that if they are working for their own interests they are working for the benefit of the community generally. Of course I have seen cases of a man trying to urge his own particular interests.

2035. (*Sir Henry Burt.*) And the rates, generally speaking, are uniform?—Yes.

2036. That makes a difference?—Yes, it is a different thing on a railway.

2037. (*Chairman.*) I was asking you about the State-managed railways and the transference of officers. Is that a necessary part of the system?—I understand it is.

2038. I understand there have been instances of a gentleman being transferred to a new post, because it carried a larger salary?—I think that is so.

2039. You would get over that difficulty if you paid him the same salary?—Sir Henry Burt can deal with that question better than I can, because he knows the Government system, but that is what happens.

2040. It does not seem an essential part of the system, does it?—No, but it is part of the system. (*Mr. Muirhead.*) It is suggested it can be got over by giving him a higher rate of pay. The pay of a railway officer on State Railways is not fixed by his market value or his value to the railway, but in relation to some other Government service.

2041. You appreciate that our job here is to suggest to the Government possible changes. It is not necessary that the Government system of payment and promotion should continue to be what it is now?—No.

2042. (*Sir Arthur Anderson.*) At the present moment the higher State railway officials, say the agents, do not draw their grade pay; they have special rates of pay for those particular appointments?—Yes, but it is fixed by the scale drawn by other people in other departments.

(*Sir Henry Burt.*) The unfortunate part about it is that if it is now what it was when I was in India the pay of the Eastern Bengal man is lower than the pay of the North-Western man, and therefore when a vacancy occurs on the North-Western Railway there is a demand by an officer of the Eastern Bengal Railway, if he is the senior, to come to the North-Western Railway.

(*Sir Arthur Anderson.*) I think the pay of the agents of the North-Western and of the Eastern Bengal is now the same. The O. and R. is slightly less.

(*Sir Henry Burt.*) Supposing you admit that the pay of the Eastern Bengal and the North-Western happened to be the same, it means that there is really a difference of 500 rupees a month, because it costs 500 rupees a month less to live in Lahore than it does in Calcutta, and therefore there is a difference of 500 rupees in the pay.

(*Sir Arthur Anderson.*) On the other hand, the North Western is a much bigger charge.

2043. (*Chairman.*) Anyway these are not essentials; they can be altered?—(*Sir Charles Armstrong.*) Yes, but unless a man is permanent he cannot get to know his staff, and I think that causes trouble.

2044. I see you say: "It might also be advisable to obtain the advice of residents in India who "are specially interested in railway matters by the "creation of consultative or advisory Boards in "India"?—Yes.

2045. There would not be less difficulty in getting a man to serve on a consultative Board than in getting him to serve on something that was more important?—I think a man would serve on these consultative Boards, and I think in many ways they are advisable, because then there would be a point of touch between the people of the country and the management of the railway. We had a consulting Board on the Bombay Tramway Company. I was one of the members of the consulting Board. We only had a meeting once a month, and that a very short one, but at the same time it was a link between the people who used the tramways and the Company itself.

2046. Will you tell us what number of members there was on the Board?—I think there were five.

2047. How many Indians and how many Englishmen?—I think there were two Indians—I do not think there was any fixed number—Sir Sassoon David and two Englishmen, myself and the Managing Director.

2048. You picked them because of their merits and not because they were of a certain creed?—They were chosen for their merits and for the advice which they could give. We had one meeting a month, quite a short meeting, when advice was given on local affairs.

2049. And you found that really useful machinery?—Yes. The Committee did not do very much, but they advised on coal contracts and local matters—points which were brought to their notice by their friends and others who used the tramway service.

2050. They kept the London Board in touch with local opinion as well as doing a certain amount of work?—They did.

2051. Had they any powers?—No; they had no powers.

2052. All the powers were in the hands of the agent?—All the powers were in the management of the Tramway Company under the orders of the London Board.

2053. That is what you think might be useful for the railways?—Yes; that is my idea.

2054. You would not give them any powers?—Yes, perhaps they might have small powers, but not at first. (*Mr. Muirhead.*) I do not think they should have executive powers. I would give them advisory powers, that is all.

2055. Do you think you would get good men to accept that position?—(*Sir Charles Armstrong.*) Yes.

2056. Were your Board paid?—Yes; it was a very small fee. There was as a rule one meeting a month and a 50-rupee fee per meeting, but the meeting did not take more than three-quarters of an hour.

2057. (*Sir Arthur Anderson.*) Your control is at the present time wholly centred in London, under the Board?—Yes.

2058. Do you not think there is a danger, with authority centred so far away, of local opposition increasing?—No doubt you know there is a strong feeling of opposition growing to home Boards?—I know that.

2059. Do you not think there is a strong likelihood of that opposition increasing, and possibly of British interests suffering from claims having as their object the transfer not only of control over administration, but also of finance, from London to India?—I am afraid I do not quite follow the point.

2060. There is a considerable amount of opposition to home control growing up in India?—Yes. I think probably it is political opposition.

2061. With control solely centred in London. If that system is continued, do you not think it will give a handle to strengthen that opposition to the home Board?—Yes, I think the people of the country will agitate and agitate.

2062. You have at present no Indian shareholders?—No.

2063. They are practically all English?—They are all English.

2064. As long as that continues it is to the Indian practically foreign control and foreign ownership?—It is.

2065. Do you not think it would be advisable or wise, seeing the present movements that are taking place in India, to give encouragement to Indians to become part owners in the undertaking?—We shall be very glad if Indians will put their money into the railways; but the railways do not give a sufficiently good return.

2066. They could only put it in through money being raised in India. I mean through rupee shares?—Yes, shares or whatever it may be—debentures and so forth. (*Mr. Muirhead.*) Do you not think the control of the railways will follow the purse? If you raise the money in this country you can hardly transfer the management to some other country.

2067. (*Chairman.*) What is your share capital?—(*Sir Charles Armstrong.*) Shareholders' capital, 2,575,000*l.*

2068. Supposing a similar amount of share capital were raised in rupees throughout India, how would you represent that capital on a Board in London?—(*Mr. Muirhead.*) I am afraid you would not get the capital, because the rate of interest is too low.

2069. We will assume the terms were such that they did raise the capital. I presume you need capital, like everybody else?—(*Sir Charles Armstrong.*) Yes.

2070. Supposing the Indian Government said, "We will issue 2½ million pounds of capital in rupees "and we will give such good terms—as good as the "Bombay Port Trust—that the money will be "raised." Then you have Indian money and English money—half and half. How would you then represent the Indian interest?—It would be very difficult to represent it in London, I admit, but, of course, you must have your Board somewhere. It must either be in London or out there, and I think, from a great many points of view, it is very wise for the Board to be at home. It is away from political pressure; it is away from pressure of a very awkward character which would very often be put upon the agent.

2071. (*Sir Arthur Anderson.*) But cannot you imagine the creation of an affiliated Board, retaining the London Board, but having another local Board to work with it?—We have suggested a sort of advisory Board.

2072. What I was suggesting was an administrative Board up to a certain point—that you should transfer certain of your powers to them, but that they should remain under your supreme control, you still being centred in London?—That could be done, of course, but I think I should start it first of all, if anything of the kind is going to be done, in the way of an advisory Board.

2073. (*Chairman.*) You would agree with me that an absentee owner is not a popular person?—I agree with that.

2074. He appears, wrongfully very often, to be taking something out of and bringing nothing back to the country?—That is so.

2075. If you had an Indian Board with Indian capital, would not that protect the English shareholders also from the fact that there would be no local hostility to them?—I doubt very much if London would put money into Indian railways if there was an Indian Board.

2076. That is another Board. For the capital that is in at present, would it not be a protection to you to have Indian capital alongside it with local people to look after it?—It would be a great help to us to have Indian capital.

2077. (*Mr. Hiley.*) And it would be a protection against political influences, perhaps?—(*Mr. Muirhead.*) I am afraid the pressure would be worse.

2078. (*Chairman.*) I agree. On one side you have the disadvantage that you are more liable to local pressure, but on the other side have you not the advantage that you would have local sympathy with you, because they would agree that you were entitled to a living wage?—Yes. I think you would.

2079. It has got to be looked at from both points of view, if I may say so. You say that the Boards in London deal with the matters that come before them entirely without bias. Will you forgive me if I ask you this: Is not a man accustomed to managing things according to what he no doubt thinks were the best methods when he was in India biased in favour of his own old methods, although things may have changed?—(*Sir Charles Armstrong.*) I do not think so. I think men go with the times.

2080. Do you not think we all tend to trust our own old experience rather than the other man's new experience—is not that the tendency of human nature?—Yes, but I think so long as a Director or Directors go out to India every year there is no fear of our getting into a groove. I went last year; our Managing Director is going next week. So long as we keep in constant touch with the line, as I think we ought to do, I do not think there is any fear of our getting into a groove.

2081. Can we trust you to do that?—Certainly, so far as our railway is concerned, you can.

2082. So far as your railway is concerned you are quite sure that some member of the Board will go to India every year?—I personally shall insist upon it more or less every year.

2083. It is not a recognised practice now?—It has not been in the past, but as soon as I became Chairman I said I considered it absolutely necessary that somebody should go every year, and I still hold that opinion; in fact, I think it is most essential.

2084. I am afraid it is a system under which the zeal sometimes waxes cold after a time—of course, I am not speaking of your railway?—I agree, but I think it is most essential.

2085. (*Mr. Hiley.*) We had a proposal put to us yesterday, I think by the Chairman of one of the railways with a Board in London, which he had been considering on his own account, namely, that they should take out every year or every other year—I forget exactly the periods, but at any rate very frequently—the whole powers of the London Board to India as represented by two or three Directors, who would travel the district covered by the railway, consult with their Agent and officers, get to know their staff, confer with Chambers of Commerce and persons of importance on their railway, and deal with the matters decisively at the time precisely as if they were the Board sitting in London. The gentleman who put that suggestion forward had in his mind the agitation raised in India for direct representation in India, and that was one of his suggestions as a solution of the difficulty. His idea was that whilst the Board was in India they should co-opt, to assist the Board, influential European and Indian merchants, but, of course, retaining their own powers, and they would have the advantage of being able to deal decisively with all matters that were put before them. Of course, when they returned to London they would bring the powers of the Board back with them. How does a suggestion of that sort appeal to you?—I do not think it is necessary.

2086. Do you think it is feasible?—I think it would be very difficult.

2087. You have talked about your Directors going out and getting in touch, but they have got to come back again before they can do anything?—I do not agree there. For instance, when I went out last year, knowing the views of the Board, I was given practically a free hand on a great many questions. I went out particularly to arrange about the electrification of the suburban services, and I made very considerable progress, knowing that my Board would approve of what I did.

2088. (*Chairman.*) But you are the Chairman?—I quite admit that I am the Chairman.

(*Chairman.*) Another Director clearly would not have the same power to say "I am practically the "Board."

2089. (*Mr. Hiley.*) You took the powers of the Board with you on that occasion?—The Board on various important questions gave me practically full discretion, but I knew the views of the Board, and I should not have gone materially outside them.

2090. (*Chairman.*) You had not any Board minute conferring special powers on you?—No.

2091. You merely had the powers of a Chairman, which we all know in practice are very substantial when he has the confidence of his Board?—Yes.

2092. But clearly another Director would not be able to take as strong a line as you would do?—Possibly not; but at the same time there are some of our Directors, men of great experience, to whom we should be very pleased to give the power.

2093. (*Sir Henry Burt.*) I think it is fair to say that when Directors do go out they do so with very full powers, whether they are Chairmen or not?—Yes. For instance, Mr. Dallas is going out, and if Mr. Muirhead went out we should be very pleased to leave a great many things to him.

2094. (*Chairman.*) I am afraid we must get on, as another witness is waiting. You, like a great many other people, say that the real power to act is left to the Railway Board, but they are required too much to report and obtain sanctions?—Yes.

2095. I think that is so much a general view that I will not ask you any more about it. You also say that you think the Railway Board ought to have its own representative, who can express his own views in the Executive Council?—I think that is advisable.

2096. That also is so common that I will not ask you about it. Then you speak of the constitution of the Board, which you say would comprise a President and what you describe as "colleagues"?—Yes.

2097. Would they be colleagues, or would it be like the agent of the railway with chief officials under him?—(*Mr. Muirhead.*) It all depends upon the powers that are delegated to the Railway Board. If you gave them full powers the President would have the right of overruling his colleagues.

2098. In fact, he should have a staff?—Yes, there should be two other members of the Board, but he could overrule them, if necessary. (*Sir Charles Armstrong.*) He would have colleagues.

2099. You want him to have colleagues?—Yes.

2100. And then in addition to his colleagues he would have a working and executive staff?—Yes.

2101. The colleagues would be the Board that would discuss matters?—Yes.

2102. Supposing there was an engineering colleague, he would give the directions to the

engineers?—(*Mr. Muirhead.*) Yes, you can divide the work as you like. As a matter of fact they do divide it.

2103. Coming to finance; you refer to the question of raising the fares and rates. Your dividend has not been affected yet?—(*Sir Charles Armstrong.*) No. I should like to say a few words about that. Last year we paid 7 per cent., which is the highest dividend the railway has ever paid, but 1 per cent. of that was made in exchange. We got our surplus profits remitted home at about 2*s.* 4*d*, which is a very high rate to-day. Another 1 per cent. was due to the fact that we had had to put aside for the two previous years a sum of money each year for possible excess profits duty. The question took a very long time to decide, and it was eventually decided that we were not liable, so that we were able to augment our last year's dividend in that way.

2104. That was really a deferred dividend?—It really was. As regards this year, the prospects are very poor, I think. The percentage of working expenses just before the war was about 62 per cent. of the gross receipts; at present it is nearly 80

2105. That is a very large figure for an Indian railway, is it not?—Our railway is an exceedingly difficult one to work. We have a mountain section, the Ghaut, which is very expensive. Our percentage at the present time is just under 80. We have been urging on the Railway Board for some time—we have written very strongly on the matter—that they should agree to an immediate raising of rates and fares.

2106. You are not proposing to go above your contract maximum, are you?—We must. We are getting to the position where we feel we shall not be able to go on otherwise.

2107. Has there ever been any case of the Government agreeing to raise the maximum during a contract?—(*Mr. Muirhead.*) No, I do not remember any case.

2108. It is a new point?—They may have done it during the war.

2109. By how much per cent. have your rates and fares gone up; have you any idea?—I should say roughly about 33 per cent.

2110. I should imagine that that is probably lower than any other country in the world?—Yes.

2111. (*Sir Arthur Anderson.*) Are you working to the maximum now on the passenger fares?—(*Sir Charles Armstrong.*) Not quite.

2112. Are you working to the maximum in any chief commodity?—On the goods rates, yes, many.

2113. Up to the limit?—Yes.

2114. You said you divided 7 per cent. last year?—Yes.

2115. Have you any reserves?—None. We have just 20,000*l.*, which is also excess profits money, which I kept possibly for this year, but we have no reserves.

2116. (*Chairman.*) I gather you did not place any reserve to a fund for deferred maintenance?—We were unable to do so, although we were quite prepared to do so. Our share is only 1/20, and we were quite prepared to put something aside provided Government would also put their 19/20 aside. The Government said No, so that we felt that to put our little 1/20 share aside would really be of no avail.

2117. You could not allocate it to your 1/20 of the railway, so to speak?—That is so.

2118. And you were not prepared to pull the chestnuts out of the fire for the Government?—That is so.

2119. You agree it is bad finance?—I agree it is bad finance. It should have been done, certainly.

2120. (*Mr. Hiley.*) You put it to them officially, did you?—Yes, certainly, and they turned it down.

2121. (*Sir Arthur Anderson.*) I do not quite follow that. If the Government finds the money for renewals to meet their share of the deferred renewals, you, with your share of the increased expenses, would have no balance over as you are already working at 80 per cent.?—Everything depends upon "if" the Government are able to find the money, and they are not. We are told that for the next two years there will be hardly any money available for the railways. That is what we have been given to understand. At any rate, the amount available will be very small.

2122. (*Sir Henry Burt.*) Do you know how much your capital grant was last year?—(*Mr. Muirhead.*) A little over 3,000,000*l.*, eventually reduced to 1,000,000*l.*

2123. Was it spent?—No, not fully.

2124. Was that for rolling-stock that you could not get?—Yes, we could not get it.

2125. (*Sir Arthur Anderson.*) The Government grant includes charges which will ultimately go against revenue?—Yes.

2126. As a matter of fact, you could not get the materials for your renewals?—No. (*Sir Charles Armstrong.*) That is for last year, but this year they are rolling in. (*Mr. Muirhead.*) We could not get the money.

2127. You had the money last year, but it was not spent?—(*Sir Charles Armstrong.*) But the conditions were exceptional.

2128. (*Chairman.*) This is the story of the lapse of grants?—Yes.

2129. (*Sir Henry Burt.*) Many of the larger Railway Companies have been told by the Railway Board that indents for rolling-stock are to be largely reduced?—(*Mr. Muirhead*) We have been told that there is no money. (*Sir Charles Armstrong.*) We are in this position, that unless we can get a further over-certification grant from the Government we shall not know what to do. They allow us under over-certification to place orders in anticipation of funds which will be received in the next financial year, and we have applied for an additional amount but have not yet got it. I do not know whether we shall get it; if not, we cannot place a single order between now and the 31st March. We have had many tenders sent in during the last few weeks and we have had to put them aside because we have not got the money.

2130. And that is the same on the Bombay, Baroda?—Yes, on several railways.

2131. (*Chairman.*) You cannot carry the traffic, because you have not got the trucks?—We are short of practically everything—engines, trucks—everything.

2132. You cannot earn money to pay the dividend, because you have not got the trucks to carry the traffic that is offering?—A very great deal of traffic had to be held up during this last season, because we had to carry an immense quantity of coal.

2133. That is off your back now; now it is going round by sea?—Some of it is.

2134. (*Sir Arthur Anderson.*) The point I wanted to bring out was that last year—I cannot say anything about the current year—you had the money, but could not spend it?—We placed the contracts, but could not get delivery.

2135. (*Chairman.*) Then this year you cannot place the contracts because you cannot get authority to do it?—No. (*Mr. Muirhead.*) There is one contract we have placed which is for the electrification of railways, and now we are told that there is no money for it. (*Sir Charles Armstrong.*) We have made a contract with the Tata Hydro Electric Company at Bombay to supply us with power within about two years from now and we are sending out our men. They have just gone to prepare the scheme for electrifying the suburban railways. The success of

Sir George Lloyd's experiments in developing the northern part of the Island of Bombay depends on the electrification of our line and a constant service, and we have been told that we may expect no money for this work next year.

2136. What will happen?—I do not know what is going to happen, but it is a very serious position indeed I can give you another instance if you like. When I went out to Bombay I lunched at Government House, and Sir George Lloyd told me the first thing we had to do was to remove our shops out of Bombay. He said, "I want the whole "of the place for housing." I told him that it was impossible, and that it would cost millions, and could not be done. I saw his point of view, and it was a very sound one. Then he asked me whether we would consider it, and we did, and we came to the conclusion that whilst we might keep our repairing shops and erecting shops in Bombay we might move out of Bombay above the ghauts our manufacturing shops, when we might have one place to manufacture for the whole line. That, I think, is a very first-class scheme, but it will cost a great deal of money and we cannot get a penny. We are blocked all round.

2137. Then with regard to the methods you suggest for consideration that the Company should be allowed to raise share capital as recommended by the Mackay Commission?—Yes.

2138. That would be the English Companies to be allowed to raise new capital in England?—Yes.

2139. On terms sufficiently attractive to get it?—Yes.

2140. That would be clearly something better than the old terms?—Certainly.

2041. Secondly, you suggest, as I understand it, that the Trustees of the Railway Annuity Sinking Fund should invest their money in new debentures. Is that the idea?—Yes; but the difficulty is about the English income tax. The idea is that instead of the Trustees of the Sinking Fund putting the sinking fund deduction and the interest which accrues every half-year into War Loan or some other stock of that kind, it should be put into Indian Railways.

2142. That is open to you to-day?—No, we have no means of putting it in. There is no channel for it.

2143. There is no opportunity for subscription?—No; there is no way of doing it. At present all the money that we want is loaned to us by the Secretary of State.

2144. That is what I want to understand. As trustee of an annuity fund your business is to do the best you can for the annuities?—Yes, we must do so.

2145. Clearly you would rather as annuitants, other things being equal, put it into War Loan because it is regarded as a better security?—We could put it into any trust security.

2146. We were told by Mr. Kisch, the financial representative of the India Office, that, whereas the difference between an Indian Government Loan and Consols before the war was ½ per cent., the difference is now 1½ per cent.—That may be so, but I have not gone into it.

2147. My point is that the Secretary of State, or whatever the Government issuing authority was, would have to offer better terms to justify you putting it into an Indian Loan.—I think if the Secretary of State gave his guarantee in the matter that——

2148. That is what Mr. Kisch told us, that the Secretary of State guarantee is worth 1½ per cent. less than an English Government guarantee.—If that is so, then I must accept that position, but it might not always be so.

2149. If instead of getting 5½ per cent. for War Loan he offered you 7, you would do it?—Yes, we should be very glad to take it.

2150. Then thirdly, your No. 3 is this?—There is an objection to No. 2. The objection would be the redemption liability on the Secretary of State. If he issued debentures they would be repayable in 1948 when our annuity fund falls in. There is that objection. To meet that objection we have suggested No. 3; that, of course, no doubt would require an Act of Parliament, but I should think that it is a feasible scheme. At least I think a great many of the annuitants would be very glad of it.

2151. In fact your view is that the Secretary of State like every other borrower nowadays has to attract the capitalist instead of condescending to receive his savings?—That is so undoubtedly now.

2152. He has to compete in the market where there is very little borrowing money available?—That is so.

2153. Then No. 4 I think we have had in other shapes, to relieve as far as possible railway finance by financing through independent companies?—Yes.

2154. Which would be closely connected with the parent company, but would be rupee capital raised in India?—Yes. The whole point there is that the dividends of that rupee capital must not be subject to English income tax. This is a scheme for getting over that.

2155. I take it that if you had the Great Indian Peninsula Electrification Company (Limited) probably your Agent could be Chairman of it?—I do not know that we could call it the Great Indian Peninsula. That is a Company registered in this country.

2156. You could register it in Bombay?—Yes, you could.

2157. Your Agent would be Chairman and its business would be done at your office?—Yes, that is exactly what I have in my mind: the Accountant-General, and one or two Bankers and so forth.

2158. With regard to undue preference, we are told that there is a law providing for a Commission to decide questions of undue preference, but the Commission has never been constituted and there has never been a case?—Yes, that is so.

2159. I do not think we need say anything about that.—(*Mr. Muirhead.*) No, it is in the contracts, too. I should like to add this, that, besides the Act, the Government exercises wide control over the railways. They have control practically of everything except the appointment of staff.

2160. And except your power to vary rates inside of the maximum.—They can alter that by giving notice.

2161. There has never been an instance of it being done?—No, there has never been an instance in which the trader has called for a Commission.

2162. You are speaking of undue preference?—Yes.

2163. I am speaking of your power to vary your rates within the minima and maxima. The minima and maxima have never been altered.—No.

2164. Although there are companies paying over 10 per cent.?—Yes, that is so.

2165. Not guaranteed companies?—Yes.

2166. (*Sir Henry Burt*) Do you give your Agent a very free hand?—(*Sir Charles Armstrong.*) Yes, we do.

2167. (*Mr. Hiley.*) He settles wage disputes on the spot, I suppose, without reporting to you?—Yes, but he keeps the Board advised; we leave things to him in that way because he is on the spot. We do not hamper our Agent, that is one of our great points.

2168. (*Sir Henry Burt.*) To give him a very free hand?—Yes.

2169. (*Chairman.*) That you feel is the right line to go upon?—Yes.

2170. We are told that there is considerable difference between the companies?—Yes, there is I have no doubt, but that is my view. (*Chairman.*) Thank you very much, Sir Charles, you have helped us a great deal, if I may say so.

The witnesses withdrew.

SIR DAVID BARBOUR, K.C.S.I., K.C.M.G., called and examined.

See Written Statement No. 8, Vol. IV.

2171. (*Chairman.*) I think we all know that you have been connected with India all your life?—Yes, for a great portion of it at any rate.

2172. You went out as a Civil Servant in 1863?—Yes.

2173. You were in India for roughly something over 30 years?—Yes.

2174. And were Finance Minister and a member of the Executive Council?—Yes.

2175. Since you have been home you have been a Director, practically from the time you came home, of the East Indian Railway Company?—Yes, pretty nearly.

2176. And you are now Chairman of that Company?—Yes. Since I drafted the abstract of the evidence which I sent to the Secretary, I have noted down a few points upon which I should be prepared to give evidence if you thought it worth while.

2177. I have a special reason to remember that you had a good deal to do with London traffic?—I was Chairman of the London Traffic Commission, 1903–5.

2178. You were a member of the Mackay Committee, of which we have heard a great deal?—Yes.

2179. You think that on the whole the Indian Railways have no ground to be ashamed of their record?—That is my decided opinion, which I have held a good many years.

2180 You would agree with me, I think, perhaps, that however good they are, there are very few of them?—If you take the area of the country the mileage of the railway is not very great certainly, but if you consider the circumstances of India altogether I do not think progress has been unreasonably slow.

2181. I think it was your Mackay Report that said they wanted 100,000 miles?—Very likely. To go back a little into the history of Indian Railways, there were great doubts at first, that is before the middle of the last century, whether Indian Railways would be a success, and I had a conversation on this subject with the late Sir Macdonald Stevenson many years ago. He took an interest in the question of railways for India, and he told me he went out to Calcutta and became the editor of a newspaper with the object of advocating their construction. He worked up the question there until he got the Government and the public ready to accept the railways. That was the first start. Shortly after the construction of railways was begun came the mutiny, and one result of the mutiny was to leave the Government in great financial difficulties for years, and the railways did not pay at first. Consequently progress was rather slower than it might have been. When the financial position improved, which it did about the time Major Baring, Lord Cromer, was Finance Member of Council, an impetus was given to the construction of railways, and then came the difficulty about exchange. It came like a thunderstorm on a blue sky. In consequence of the fall in exchange and the uncertainty of the future, great objections were raised to further borrowing in England, and that hindered the prosecution of a more active railway policy. Therefore there is some reasonable excuse for the railways not progressing more rapidly.

2182. It is not our business to judge things?—No, I confess if I had to form a judgment about those who managed affairs in those days, I should let them off very easily.

2183. Do you consider that the original system of Companies, the subsequent change under the altered circumstances to State Railway policy, and the subsequent reversion under again altered circumstances to a further Company policy were each of them wise at the time?—I think they were quite reasonable and proper at the time.

2184. To come to more recent times, the Mackay Committee said in 1907 that you wanted 100,000 miles?—Of course, that must only be taken to mean that a great many more railways than were existing in India could with advantage be constructed. Nobody could say whether it was 100,000 or 120,000, but there was evidence in the opinion of that Committee that a great many more railways were required.

2185. They had then over 30,000?—Yes, I daresay.

2186. And they have now about 35,000?—Yes, I suppose so.

2187. It is not a very rapid rate of progress, is it?—Had they 30,000 miles at the time of the Mackay Committee?

2188. Yes, I think so. That is not a rapid rate of progress in 13 years, even allowing for the war, is it?—No. When I was in the Financial Department, a long time ago, 30 or 35 years ago, I came to the opinion that a railway made anywhere almost, anywhere in India, economically and under reasonable conditions, would at any rate pay the interest on the money. The rate of interest was low then. That was my conviction 35 years ago, which I came to from experience.

2189. Have you any reason to doubt that it was correct?—Not the slightest.

2190. In other words, you want all the money you can get, and more than you think it is possible to get, and you still will not have enough for what is a profitable business?—My opinion is that you might spend money very largely, supposing it were done judiciously, on Indian railways, and be quite certain of getting the interest on the money expended, and perhaps something more, and in addition there would be indirect benefits to the country.

2191. You say, being a Government official yourself, that you formed a strong opinion that no Government department can successfully manage a commercial business?—Yes that is my belief.

2192. But dealing with facts as they are, you are prepared to allow the State management on certain railways to continue?—I think if a State is to manage railways they should put them under a Board as independent of the Government as can be found practicable, or a Commissioner or somebody of that sort.

2193. Would the Board that directly managed the State railways be the same Board that controlled the Company railways?—I think it would be advisable.

2194. You think it should have both capacities?—I do. In dealing with India we must recollect that the great bulk of the railways, nearly the whole, are owned by the State, and therefore the arrangements we make should recognise that condition of affairs.

2195. You have on the Company lines another wheel in your coach between the Railway Board and the agent. On a Government railway there is nobody?—Nobody.

2196. Between the Railway Board and the agent of the Company Railway there is a Company Board?—Yes.

2197. You do not see any objection to the same head organisation dealing with both?—No, I do not, and it has never occurred to me that there would be any objection.

2198. Several witnesses have told us, that in their view the Chairman of the Railway Board should be a member with a seat on the Executive Council, and rank as a Member of the Government?—On that question I hold a very strong opinion, which is contrary to the view which you have stated. If the Chairman of the Railway Board is a Member of the Government from that point of view it seems very nice, as the Chairman of the Board may conceivably be able to induce the Government to provide more money for railways On the other hand, if that arrangement is made it follows that a Member of the Government would be Chairman of the Railway Board, and the Railway Board would practically become a Department of the Government, which, I think, is open to the strongest objection.

2199. Quite so?—That is my objection to the proposal and I think that that idea of making the Chairman of the Railway Board a Member of the Government has arisen in this way. There were difficulties in getting all the money that was wanted for the railways, and it was thought that if the Chairman was made a Member of the Government you would get more money. I am not sure that would be the case, but I am strong in the belief that the Railway Board would become a mere Department of the Government.

2200. (*Sir Henry Burt.*) As a matter of fact the Board is now a Department of the Government?—Very much so; too much so, in my opinion.

2201. (*Chairman.*) You want to detach it?—Yes, as far as is found practicable.

2202. How are we to do it?—That is a very difficult question. It would be best done if you could manage it by leading the Government to that frame of mind in which it thought it was best not to interfere with the Board, but to do it by means of Rules and Regulations is very difficult.

2203. Here is, I think, your real point, that somehow you must have a liaison between the Railway Board and the Government?—There must be a connection of some sort; after all, the Government is, and must remain, supreme.

2204. How are you going to do it?—If you ask me how it can be done with complete success by means of rules and regulations.

2205. No, not by means of rules and regulations; but can you give me a rough outline of the situation? If you cannot help us few people can.—I do not think I can help very much, but I think the Government ought to find a certain amount of money for the railways, and the less they interfere with the Railway Board the better.

2206. How would it be to let them do their own financing on the security of the railways?—I would much rather not have continual interference by the Government with the Railway Board. I think it would be possible for the Railway Board to arrange its own finance.

2207. The gentleman who controls the purse strings can do a great deal?—Yes.

2208. If you left them to receive their own revenue, to expend their own revenue and raise their own capital, they would not want to talk to the Government of India?—A difficulty might arise if they failed to raise enough money to meet their liabilities, they would have to go to the Government to get it. I do not say that it is an insuperable difficulty, but there would have to be some control over the Board, I think. Or the Government might want a new strategic railway or something of that sort, and that would interfere with the programme and finance of the Railway Board.

2209. Clearly. I assume that the India Council is like a Cabinet here which concerns itself with important questions from every Department, week by week as they come up. Would you let the Chairman of the Railway Board go to the Cabinet when there was railway business to be discussed?—First of all I would try and keep railway business out of the Cabinet as much as possible.

2210. But if there is an occasion upon which it is being discussed?—I see no reason why he should not be asked to go and state his views. I think that can be done at present.

2211. Ought he to be a big enough person to meet them as equals?—I would pay him well and give him high rank.

2212. You would make him rank as a Member of the Cabinet?—I am doubtful about his ranking as a Member of the Cabinet, but I would give him a status equal to that of a Member of the Cabinet.

2213. And that he should go there with full power to discuss with his equals when it was railway business but that he should be allowed to mind his own business when the Government of India was touching other matters?—When the Cabinet chose to ask him to come.

2214. Your view is that he should be entitled to go if they were talking railway business?—I do not know that I would give him power to insist on going. I do not think that would do any good.

2215. But that should be the understanding that he should be there when railway matters were discussed?—I do not object to his getting the same rank as a Member of the Cabinet, or even higher pay or rank, but I do not want him to be a Member of the Cabinet.

2216. Is there any difficulty in a thing of that kind? Does it cut across established methods of organisation in a dangerous way?—I should not think so; I do not see any difficulty.

2217. Then you speak about political pressure?—Yes.

2218. Your idea, I take it, is that, if the Board was as you suggest, political pressure would come on the Government, and the Government would absorb a good deal of it before it reached the Board?—If the Board was made independent of the Government, the political pressure on the Board would be reduced, but if the Chairman is a Member of the Government, the political pressure will come with full force on the Board.

2219. That is why you want him not to be a regular member of the Government?—Yes.

2220. (*Sir Henry Burt.*) You think that the working and the management of the railways should be free from political influences?—It should.

2221. You think it should most certainly.—Most certainly.

2222. (*Chairman.*) You say you view with alarm the prospect of all the railways on the Continent of India being worked in the future under the control of a Board appointed by the Government, liable to be interfered with by the Government and to be subjected to increasing political pressure. That is on the theory we have been discussing?—It will be extremely difficult to get a Board that is not subject to political pressure.

2223. It always is?—Yes. I do not say it is impossible, but the more you can relieve the Board from that political pressure the better. If you try to relieve them from political pressure and fail the whole scheme fails.

2224. One of your reasons for accepting the maintenance of certain railways under State management is that it affords a training ground for the sort of men who would be required by the Central Board as its officers?—That is the conclusion I have come to from practical experience and from noticing the working of the railways.

2225. You speak about the Boards of Directors of the State-owned railways. You believe that they should be in London rather than in India.—At the present time I think that you could get men for the London Board such as you cannot get in India.

2226. We have had two gentlemen of experience from Bombay, both of whom told us, if I may translate what I understood them to say, that if you wanted one or two Boards of seven members or some number of that kind, and the understanding was that it meant about a day's work a month or something of that kind, you would have no difficulty in getting prominent business men, Indians and English, in Bombay?—To begin with, I do not think you would get men of the same experience of railway business.

2227. Do you think that it is necessary for a Director to have experience of railway business?—I do not think it is necessary for all the Directors, but it is essential for some of them to have experience of railway practice. You could get men no doubt as Directors in Bombay, but that would not of itself amount to very much. I do not think they would take much interest or do much work; perhaps it is not desirable that they should, but they might be useful in their way. I think that at the present day you could get a better Board of Directors in this country.

2228. Do you recognise that there is a disadvantage in an absentee owner?—In the Board being in this country, do you mean?

2229. Yes?—Yes, but on the other hand there is an advantage. If you have a Board in India there will be a certain want of reality about it in the first instance. It will be a Board not for purely commercial and industrial purposes, but for the purpose of managing a railway that already exists and is owned by the State. It will, I am afraid, be somewhat artificial in character. The amount of capital that it will represent as compared with the total capital of the railway will be very small; for instance, the capital of the East Indian Railway Company, at present at 1/8, is about 63 million sterling. A Board appointed in Calcutta to manage that railway would necessarily have a very small capital in proportion to the total capital of the railway; it would not be in a strong position, and if it is under a Railway Board subject to political pressure it would practically have no power at all. I think that a Board in this country is a little less subject to that pressure.

2230. On the other hand you have the reverse of the picture, that it is not accessible to local opinion?—It is susceptible.

2231. It is not accessible to local opinion, a Board in this country?—It is more accessible than you might imagine.

2232. Shall we say that the people in India do not think that it is as accessible as they wish it to be?—That, I think, is quite possible.

2233. It is true, is it not, that the local people sometimes ask for reasonable things?—They do certainly, but then the East Indian Railway has a Consulting Committee in Calcutta.

2234. Will you tell us about your Consulting Committee, because you are the only railway that has one?—The Committee meets periodically, and the agent puts various matters before them and hears what they have to say, and they can bring to his notice anything which they think necessary.

2235. How many are there?—Five.

2236. Are they paid?—Yes, a small sum, not much. They are men of undoubted position in the commercial world.

2237. Are some of them English and some Indian?—Yes, some are Indians.

2238. I understand there are three English and two Indians?—Yes.

2239. Have they any powers?—No, only powers of recommendation. People have talked of giving them powers and of having a second Board there, but I think in practice that would be found impracticable.

2240. I think we agree that you cannot have two co-ordinate Boards?—No.

2241. Do you think you could go further and delegate certain powers?—No, I do not think you could with advantage.

2242. Then there was another suggestion which was made that it should be an understood thing that two or three members of the Board went out from England to India every year and had a mandate from the Board—a formal mandate—authorising them to deal with certain matters as though they were the full Board?—I think that goes much too far, at least further than is necessary. I do not think it is necessary that two or three members of the Board should go out every year, but I do think that a member of the Board should go at least once every two years. Once every year might possibly be better, but hardly seems to me necessary. Practically the member of the Board who goes out in that way is given power to settle things in consultation with the agent, and he can always communicate with the Board by cable. I do not think you could draw up formal rules with regard to that.

2243. You do not give him any powers?—Not formally. Matters are talked over with him before he goes.

2244. You say to him, "You settle that, we "shall accept it"?—Yes, we say, talk to the agent and see what can be done, and he can refer to the Board by telegram if he wants to. For practical purposes that is the best way, I think.

2245. One member going out every two years does not mean a very close touch?—It does not mean a very much closer touch, because the touch is close already if the railway is properly managed. I get a private letter from the agent every week, and I write one with my own hand every week, and I do not think there is any question with regard to the management that is not before me.

2246. Do you not think that the fact of a Director being on the spot and travelling over the line and it being known that he is there would be a good thing?—Certainly. I was merely suggesting once every two years, but I admit that it would be better if he went every year.

2247. It would be better if two Directors went than one?—No, I do not think so. I would give the same power to one especially chosen for the purpose.

2248. I am looking at it from the point of view of public appearance. You cannot say that one man is a Board, but you might say that two men were a Board?—If you come to the question of appearance, it might be better to send two or three. But I should not be surprised if a peripatetic second Board of this nature came in time to be looked on in India as a fifth wheel in the coach.

2249. Do you think your Directors would do it?—No, I do not think they would, but we might make it a condition of appointment. Such a condition would somewhat limit our choice.

2250. I am afraid that would be a real difficulty? Yes, I do not think they would be expected to do so, and certainly you would have to pay men better.

2251. You spoke of the capital being 63 millions. All the capital that the shareholders represent is 6½ millions?—They only represent that nominally.

2252. That is all that is in any sense interested in the development of the line?—It is in a sort of way interested. If we got a share of the surplus profits proportional to our 6½ millions I would say we were interested, but we do not get such a share. To a large extent it is a nominal interest.

2253. All except 6½ millions which means 57 millions are mere receivers of the interest on the loan?—The railway is vested in the Secretary of State for India, the whole 63 millions.

2254. I mean the 6½ millions that represents share capital has an interest in development?—Very little.

2255. It is a very short one in your case, but take a Company that has a contract for thirty years. It has a special interest in development?—If it gets a proportional share of the surplus profits; but we do not get a proportional share. Our contract is a temporary makeshift, and as a normal contract would be an absurdity. It is only for five years and we get one per cent. of the surplus profits. If we develop the railway and make 1 million extra a year we get £10,000 and the State gets £990,000, but if on the other hand we lose one million a year by bad management, we would suffer to the extent of £10,000 and the State would have a loss of £990,000. It is only a temporary makeshift.

2256. You never would have taken it as a contract?—As a new contract, never.

2257. It is that you do not want to break up the concern at present?—Yes, and we recognise that it is a temporary arrangement.

2258. Take an ordinary Company like the Bengal-Nagpur with about 30 years to run or something of that kind, the shareholders have a substantial interest. What I wanted to put to you was this: would there be any difficulty in the East Indian Company raising in India as much capital as the share capital of the East Indian Railway Company at present?—Do you mean raising 63 millions?

2259. No, raising 6½ millions. We may call the whole 57 millions as mere debentures?—If I were to look back at what was the case when I left India twenty-six or twenty-seven years ago, it would be difficult to raise much money there for railways, but there is no doubt there has been a great change and there is a good deal more money to be got in Bombay and Calcutta than there was in those days. 6½ millions would be a good deal to raise, but it might be done, I should think.

2260. Bombay has raised it for a Port Loan quite recently without difficulty.—Yes, something like 7 millions.

2261. Calcutta is much richer and has more accumulated wealth?—I really do not know; I do not think that loan could have been raised in my time, but things have changed and therefore my opinion is not worth very much on that point.

2262. Suppose that could be done would it not be desirable to get Indian share capital? Do you not think so?—I think it would certainly be desirable if you got it cheaper than English capital. And I think it would be a good thing apart from that, even on the same terms.

2263. Or even it might be to pay Indian terms which would be higher?—It would depend to the extent they were higher.

2264. Anyway you would agree that it is desirable?—Yes, I see no objection to that. Quite the contrary.

2265. If you got it, how would you represent it?—How could you represent it? One way of getting money—you could not get representation—would be for the Government to raise it in India.

2266. That is a mere loan?—That is a mere loan.

2267. I thought you agreed that it would be good to get it as share capital?—If you ask me if it would be good to get it as share capital with the object of establishing an Indian Board, I should be somewhat doubtful about the answer, but if you get it as share capital, leaving the Board in this country, I see no objection. There are difficulties in it; first of all there are no shareholders in the East Indian Railway Company now; we are deferred annuitants who have made a contract with the Secretary of State for the working of the railway.

2268. So to speak you are shareholders under another name as long as you exist?—Yes, you may call us shareholders; we are sometimes called shareholders. I suppose you could raise money in India and you would pay a certain rate of interest and give a certain addition from the surplus profits.

2269. Then the question of representing their interest would arise in a very difficult form?—It might if you wished them to be represented; I do not see quite how it could be done; there may be a way which does not occur to me by which it could be done. After all, the shareholders really interfere very little with the management of the railways in any Company. As a rule they do not do anything until something goes wrong.

(*Sir Henry Burt.*) They do not turn up in force to the meetings.

2270. (*Mr. Hiley.*) Not if you are paying good dividends?—No.

2271. (*Chairman.*) You say here that you do not think the present time is a favourable time for making a great change?—Perhaps I did not put that accurately, because you do not propose to make a great change immediately, you could not make a great change until the railways fall in. What I wanted to bring forward strongly was that at this moment the urgent necessity is to find some more money for the railways, because we are in a shocking bad state and cannot carry the traffic, and the pressure for funds seems to get worse and worse in India. The railways are cut down in all directions, and it is a great pity that urgent wants cannot be met. The railways have fallen into arrears and we cannot carry the traffic. A special burden was thrown on the railways by the transfer of the coal traffic, which used to go by sea from Calcutta to Western India. Owing to the war ships are not available, and that traffic has been thrown on the railways.

2272. That is getting off the railways now?—Yes, to a slight extent.

2273. Still the East Indian Company has not had enough rolling-stock for many years?—I think so, and other railways have been worse.

2274. Is that so?—Yes, I think we are better off than most.

2275. They expect a higher standard from you?—I have given you the figures; you probably have read what Colonel Gardiner says. Do you not think it remarkable?

2276. The growth?—Yes, and the charges made.

2277. We have always known that the Indian charges were extraordinarily low?—Yes, I do not pretend to say that it is entirely due to the London Board, because the East Indian Railway was so very well made in the first instance, and occupied a most favourable position, running right up the valley of the Ganges, but at any rate it shows the management has not been altogether a failure.

2278. We all agree that it is a good record of progress?—Extremely good. And I should like the figures given by Colonel Gardiner to form part of the evidence.

2279. I suppose you would agree that if you had spent more money on the development of your system it would have earned its keep very successfully?—Yes, it would have appeared much better.

2280. What have you done about reserve for renewals you could not carry out?—We have not formed a reserve.

2281. Does that commend itself to your sense of financial propriety?—It is a question of degree. I think. It is safer to form a reserve, but it mattered very little to the deferred annuitants.

2282. Is there any justification for dividing as dividend, because you could not buy rails, money that you would have devoted to buying rails?—So far as the Company is concerned, we got so little that it did not really matter much—after all, the bulk of the surplus went to the Government. It was much more a question for the Government.

2283. A witness from one of the companies has told us that they said it ought to be done and the Government said, "We will not do it", and thereupon they said it is not worth putting a reserve by of one-twentieth part of the rails if there is no reserve for the other nineteen-twentieths?—I do not think it was so improper as you might think at first sight. Practically it does not make so very much difference because the transactions of a Government are very numerous and cover a wide field. A loss in one case is balanced by a gain elsewhere. And as the Indian Government was borrowing to meet war expenditure, if it had formed a reserve for the railways, it would in practice have had to find the money in borrowing.

2284. It is a very serious matter for the English railways?—I agree that it would be a very serious matter for them, but for a State railway it does not matter so much. The Government transactions are so big they can lump them all together and the loss on one covers the gain on another.

2285. (*Sir Arthur Anderson*). The State would look at it much as insurance?—Yes, I think so. A wealthy company might say, "It is not worth while "to insure, my business is so big that if I lose I am "not likely to lose more than the insurance premiums "would be."

2286. Then here is your new statement, which I have not had the opportunity of reading. You think the Company should have a substantial portion of the total capital?—I think so; it gives them a real interest in it; it is better than having a sort of fictitious Company with no real interest.

2287. Suppose one-third of the capital was raised in ordinary shares, the Company could have half of that; something of that kind would be the meaning?—My idea was that it should have, at any rate, one-fifth of the total capital—something substantial.

2288. That would be something like two-fifths of the ordinary capital?—Yes, something of the sort.

2289. Secondly, that the contract should be a long term of years?—Yes. I am very strong on that.

2290. Would not it be necessary to put in what the Secretary of State has not put into his contracts—power to break in at any moment on terms that were liberal to the shareholders?—If he thought it necessary to have a clause of that sort, I think the terms given should be liberal.

2291. I presume he would do it by an Act of Parliament?—Yes. I do not see any objection to that; not put in with the intention of breaking in, but a sort of stand-by in case of need.

2292. To give him a free hand if he changes his policy?—Yes, I do not see any objection to that.

2293. No, sufficiently generous—paid off let us say at 15 per cent. premium?—Yes, I think so. In the contracts made with the railways from time to time. I think the poison of the Government Department comes in. They are not prepared to accept the Companies as partners in the business; they want the last farthing out of them. It looks well at the time, but in the long run, if you consider that the Company have to manage the railway for a series of years, it is better that they should be partners. I am sure that if two private institutions were dealing with a matter of that sort, they would, in their own interest, acknowledge that each was a partner in the business and they would not drive too hard a bargain.

2294. A business man agrees that a satisfactory bargain is one that the other fellow is satisfied with?—Yes, in the long run.

2295. Your view is that the State has driven a hard bargain?—Yes, I think so; when I was in the Financial Department and trained in Government methods of doing business, I feel sure that if any Railway Company had come to make a bargain with me I should have driven a hard bargain, but, looking at the matter with a wider experience, I am not sure that I should have done right. Of course, you ought not to waste the Government money, but in dealing with railways it is advisable to take a long view.

2296. Do you think, on the whole, that the Government could have done as well for itself if it had a *clientèle* which said that Indian Government stocks are good things to go for?—I think so, and it could raise more money for the railways.

2297. That is what it comes to?—Yes, in the long run, over 50 years, if the Government had made a different bargain and given the Companies more and greater powers of raising money the results would have been better.

2298. We were told yesterday, which seems to carry out your view, that there are three people recognised as jobbers in the Indian railway market, whereas there are at least nine in the South American market. That seems to imply a limited investing public?—I think so. I do not know that Indian stocks are very much in demand. When the Secretary of State bought the East Indian Railway he paid by annuities. Now there are the "A" annuities and the "B" annuities and the deferred annuities, and the deferred annuities class "D," and it is most complicated.

2299. Do you understand them?—I do to a certain extent.

2300. I have been trying to for a long time?—If anybody applies to me for information I always go to the Accountant. The other day a man did come to me for information about the "D" annuities. He thought of investing trust money in them. I had a good general idea of it, but before I answered him I got the Accountant to go through the whole thing for me. That is not a good class of security: for the Stock Exchange you have to have something quite simple. Who is going to take the trouble to try to solve a financial puzzle before he makes his investment? There is the deferred annuity class "D" and we have a contract for four years more, which gives the holder something extra, and at the end of that time we go back to our old 4½ per cent.; in that case the annuitant will begin to get an abatement on account of income tax, and the value of that abatement depends on the rate of income tax for the time being, and the proportion of abatement increases as time goes on, and then there is a sinking fund calculated to pay off the whole thing in 1953, which in practice will not be sufficient to pay off the whole thing in 1953, but probably sufficient to pay off the amount you would pay for the annuity at the present day. How is the ordinary investor on the Stock Exchange to follow all that?

2301. Is there much beyond that it is necessary to understand?—I think that is enough. That is not the sort of thing for the Stock Exchange.

2302. It comes to this, if you think you have understood it sufficiently to invest and have invested and subsequently want to sell you will have a difficulty in finding many people who under-

stand it also so as to want to buy?—Yes, that is so: you cannot get a free market. If I, as a private person, wanted to make an investment, and a broker came to me with a thing like that, I should not look at it. I like the sweet simplicity of a 2½ per cent., or 3 per cent., or 5 per cent., or 6 per cent. loan.

2303. You lay stress, as everybody does, on the necessity for an adequate programme over a series of years that is stuck to?—Yes.

2304. The Mackay Committee said that you could only get 10,000,000*l.* here in London?—At that time they put down 10,000,000*l.*, but who can say whether it will be 10,000,000*l.* or 15,000,000*l.*? I rather think Lord Rothschild gave evidence that there would not be any difficulty in getting money at that time.

2305. I think 10,000,000*l.* was his figure?—Very likely it was, but I dare say, if pressed, he would have said that you could get 15,000,000*l.*

2306. It was a smallish amount. You want a good deal more than 10,000,000*l.* or 15,000,000*l.* a year?—I am not in favour of going in for an enormous programme of new construction of railways in India. Experience has taught me that if you go in for a very big programme, something is sure to occur to break it down. My plan is a moderate scheme for new works and no breakdown, but I do not wish to put any limit to the amount of money to be raised in order to put the existing railways in a proper condition.

2307. We are told that 25,000,000*l.* is wanted for some years ahead each year for mere development of existing main line without additional lines?—I should not think it was so much, but I am not in a position to give an opinion on the subject.

2308. That is double pre-war cost?—Yes, there is that fact which makes a great difference.

2309. How are you going to get it? Do you think that there should be any difficulty if the public are approached in a liberal manner in getting it, or do you think that it is too big a sum?—I think that for some years at least there would be great difficulty in raising such a sum. In any case, there must be considerable difficulty.

2310. At present you will have to live from hand to mouth?—Yes, I think you will have to. I do not know what they could do in India, but I should not like to see 25,000,000*l.* put on the market for Indian railways at present.

2311. At present the thing is impossible, but anyway your view is that there should be a broad programme for development years ahead and efforts made?—To keep to it.

2312. To keep to it?—Yes, that would be my point. If it comes to a question of what money can be raised in London at the present time you should consult the men who can tell you: you should consult the brokers and people who have to do directly with such matters. Personally I am not sanguine.

2313. You think that the Government of India, or whatever be the Government for this purpose, should adopt commercial methods in getting the capital it wants?—It must give such terms as the public will require to find the money.

2314. And meet the public demands by giving something the Stock Exchange understands?—The simpler it can be made the better. I am sure about that.

2315. You say you think that the whole Indian system should be worked in a series of large groups?—I think this should be the case in any big country such as India; I came to this conclusion many years ago that to have a number of small railways here and there competing with each other was a mistake. The whole system should be in large groups.

2316. I am impressed with the fact of the number of Companies. I think I am correct in saying that the revenue of the Pennsylvania Railroad is considerably larger than the revenue of all the Indian Companies and State Railways put together?—Very likely, and I came to the conclusion that that was the proper system when I was considering the way they worked railways in America. I came to the conclusion that it was better to have big groups.

2317. Would you amalgamate the existing Companies?—In India?

2318. Yes?—I am not prepared to give an opinion upon that point. It might be looked into to see whether anything could be done, but already each railway system covers a considerable extent of country.

2319. Judging by size in other countries, they are small systems?—Do you think so? They cover a considerable area.

2320. Yes?—I would rather leave that to the railway experts; I do not think I could give a useful opinion upon that question.

2321. Your view is that the systems should be large?—I do not want to see a number of little independent railways.

2322. You do not sympathise with the system of branch line Companies; you regard them in the way of machinery?—People said that I was opposed to private enterprise, but that is not really private enterprise. There is a branch line to be made; somebody gets up a Company, which costs money; the Company finds the money, and the big line makes the railway, works it, and pays over the profit. It is an expensive way of getting money, and I think the Government could always get the money more cheaply. If the Government will not raise the money, there may be cases where it is better to go to that expense and have a branch line made.

2323. Have you any belief in the system which has been suggested. I do not know whether there is any idea of electrifying the Calcutta suburban lines, but do you think that a thing, for example, like the electrification of the Bombay suburban lines might be financed through an independent Company?—I have not formed any opinion on the question of electrification in Bombay.

2324. There is no point of electrification, but the point of a separate Company financially?—I can only speak as regards Calcutta, where electrification is also required. I am not sure that it would not be the best plan to place all the city and suburban traffic under one company, apart altogether from the main line railways. I think that is worth considering.

2325. From that I take it you might more easily raise rupee capital in Calcutta?—I think so.

2326. That would be like the system adumbrated by the Transport Minister's White Paper of a group system for London?—I think that is worth considering. The electrification of the Suburban traffic and the City traffic in Calcutta should not be considered altogether apart from the main line.

2327. You would leave the delivery of the goods in the main line Companies?—Yes. If any Suburban passenger chose to use the main line let him, but the general system ought to be laid out apart from the main lines. I speak with some diffidence on the subject, because I have not sufficiently studied conditions in Calcutta in the present day.

2328. (*Mr. Hiley.*) Could you tell us whether you have received instructions from the India Office to cancel your orders for new rolling-stock. We have just heard that another Railway Company had received that instruction?—I do not know that I can blame the India Office, I think we have ordered a little more than we ought to have and undoubtedly now it is well known that the Government of India are in difficulties about money, and we are not placing all the indents that come home. There is undoubtedly difficulty about money, that is unquestionable and

therefore we are not getting things we intended to get.

2329. Have you had to cancel contracts?—I do not know that we have actually cancelled a contract.

2330. You are keeping them back?—Yes.

2331. (*Chairman.*) There is a question that has been raised about the powers the London Boards give to their agents and we have been told that some companies give a much freer hand than others?—We give very free powers. We give full powers to our agents.

2332. You give them full powers?—Yes, I think so. If you go to India you can ask the agent there. I do not think he would ask for anything more; he has full powers.

2333. As far as you know you give as full powers as any other company?—Yes, I think we do.

2334. (*Mr. Young.*) I am not sure whether the powers with regard to spending capital are quite the same?—The powers are full.

2335. (*Chairman.*) That would be only a question of amount?—Yes, I do not think there is any harm done in that direction. My idea of good administration in a big business is that the head should not interfere in everything. If you choose good men, trust them and support them in their work. I do not believe that any big business can be carried on properly if the head is always interfering with his subordinates.

2336. (*Mr. Hiley.*) I notice in the speeches made in regard to the East Indian Railway contract in India that reference was made to the employment of Indians in the higher positions, and the East Indian Railway Company was cited as employing more Indians in responsible positions than the majority of other Companies. Could you say anything with regard to your experience in that respect?—We are employing Indians in increasing numbers, and I recollect that the question was up in Colonel Gardiner's time, and I think the conclusion we came to then was that we were quite as far advanced in that direction as any of the other railways, I certainly think as far as the State Railways.

2237. (*Mr. Young.*) We promised to do what the State Railways did?—We worked in that direction.

2338. (*Sir Henry Burt.*) You are almost as good as the State Railways?—I think so.

2339. (*Mr. Hiley.*) How high do the Indians get in the service? What is the most responsible position they hold on the railway now?—They do not hold very high positions yet. It takes time for a man to rise. There are district and assistant engineers, and they will get higher.

2340. (*Sir Henry Burt.*) There is no idea of keeping them back?—No, they are not kept back because they are Indians. The policy has been only in force for a certain time, and unquestionably they will rise to higher positions as time goes on and they show their fitness.

2341. I think you are exceptional in having an Indian in charge of a locomotive running shed.—Perhaps so.

(*Sir Arthur Anderson.*) They are impossible to get, as a rule.

(*Chairman.*) We are very much obliged to you, Sir David, and I think a good deal of what you have told us we shall have to think about seriously.

The witness withdrew

(Adjourned until to-morrow at 11 A.M.)

FIFTH DAY.

Thursday, 18th November 1920.

PRESENT:

MR. W. M. ACWORTH (*Chairman*).

SIR HENRY BURT, K.C.I.E., C.B.E.
SIR ARTHUR ANDERSON, KT., C.I.E., C.B.E.
MR. E. H. HILEY, C.B.E.
MR. JAMES TUKE.

MR. WILLIAM GAULD (*Assistant Secretary*)

SIR WALTER LAWRENCE, Bart., G.C.I.E., G.C.V.O., C.B., called and examined.

2342. (*Chairman.*) I think you have had your attention called to the printed notice in reference to the conditions under which we are taking evidence?—Yes.

2343. You have seen it and appreciate the position we are in, and that we have to regard the evidence as informal and provisional, pending the decision of the full Committee in India, as to how it is to be treated?—I quite understand.

2344. I think we all know that you have been connected with India in various capacities?—Yes.

2345. Were you a civil servant?—Yes, I began as a civil servant. After 16 years I resigned the service. I went out with Lord Curzon as his private secretary for five years. I became a member of the India Council, but I resigned after two or three years, I think. I have been out with the King as his Chief of Staff in the tour of India, and I have made many tours. I have been all round India, and served in every part of India. I have had 21 years out there.

2346. You are now a director of the Madras and Southern Mahratta?—Yes.

2347. And of the Assam-Bengal Railways?—Yes, and of the Assam Railways and Trading Company, where we have over 100 miles of railway; that is a private Company. I have been on the Barsi Light Railway, and on the Bombay, Baroda, I have been a director, and in a kind of way I have been interested in and known railway men in India.

2348. You are a director of the Peninsular and Oriental?—Yes.

2349. So that you maintain the liaison between India and England?—Yes, and I was on the *Times* staff for three years for Indian affairs, and in a general way I have been interested in India.

2350. We are going to have a witness from the Madras and Southern Mahratta Railway, and the Assam-Bengal, who will speak more particularly as to the railways. You prefer to leave that to them?—Thank you, I should prefer to do so.

2351. You were also a member of the Mackay Committee in 1907?—Yes.

2352. I have no doubt you have seen our terms of reference?—Yes.

2353. I think the most useful thing I can do is to ask you to express your own opinion first of all on the main question of a future railway policy?—Might I say as regards that, my views about all changes in India are these: that it should not be applied to the whole of India; in other words, if you are going to make changes you should experiment in various parts. When you get out there you will see what a huge thing it is; and as in civil administration, so in railway administration, there are parts of India where certain things suit—I am talking now from the native point of view, the public point of view—what is good policy in the Punjab is not necessarily a good and comfortable policy in Madras. If you want to know the Indian point of view, and you went to a place like Morvi in Kathiawar, you would see what is the Indian idea. That is a little railway where the train starts when the passengers wish and stops when they wish. The Indians are very particular. When they have their meals they like to have them in their own way, and they are a very peculiar people.

2354. That would not apply in the neighbourhood of Calcutta?—No. Another thing which is very important in India is the construction of the third-class or Indian carriages, the form of latrines; in fact, the form of seating. An Indian will never sit except on the ground, not even an Indian chief. I have lived a good deal in Native States, and it bores an Indian chief to tears to have to sit in a chair. If you are a friend of his he will sit on the ground. All their ways and habits are different from ours, therefore it is very necessary, I think, to take them into counsel when you are considering things like the construction of railway carriages, the halts and the speed of the railway carriages, that is if you are going to cater for them rather than for the first-class passengers.

2355. (*Sir Arthur Anderson.*) In the third-class carriages these native arrangements are given effect to?—Yes, they are. They are very greatly improved, but even now if you ask a native, he would make other suggestions.

2356. (*Chairman.*) Do you think that the native point of view is somewhat too much brushed aside?—I have left India some years, but I think in the past it was certainly brushed aside. I know that some officers knew the natives and some knew their language, but I am afraid as in the Civil Service, so also in the railway service, very few men who get control speak the language or could talk in the way they should. They make themselves understood, but they cannot get into the Indian mind. A very great change has come over India in that respect.

2357. Is there any difference in that respect between a State railway and a railway managed by one of the English Companies?—Of course, there again I am thinking of very ancient days. I used to think one of the best run railways I ever saw was the old Rajputana State Railway. It was a State railway. There they had a very good manager, a man who took a lot of interest and who was somewhat of a statesman, and I think he got on very well with the native chiefs of Rajputana and knew them. I do not think you will find, I certainly could not say as a passenger and traveller, that there is very much difference between a State railway worked by the State and a State railway worked by a Company, in fact the officers are interchangeable practically. They are all the same class of men, who do their work splendidly and do nothing but their work. If you ask any railway expert he will say, "I worked "just as hard and happily on a State railway as "I did on a Company," and *vice versâ*. There is not much in the difference.

2358. What I may call the sympathetic attitude of the Rajputana State Railway official and his staff was a matter of personality and not a matter of organisation?—This man was a statesman and had a very good staff and he infected the staff with his ideas

2359. (*Sir Arthur Anderson.*) You are speaking of a number of years ago?—Yes.

2360. The railway has been worked by a Company?—Yes, in those days it was a State railway.

2361. (*Chairman.*) Assuming first of all—we will get to the bigger question later—that what we may call English management continues. What can you suggest in order to give Indian ideas a fair hearing?—The idea I suggest is an idea that has worked very well in the Indian cavalry. We have there every day the officers and the native officers sitting in durbar, which is an old Indian institution. Any man in the regiment can walk in if he has anything to say or has not anything to say; if he has any suggestion to make he comes in and it is listened to. I think there is nothing more efficient in the whole world from the point of view of British administration in India than that system.

2362. That is to say, informal personal touch?—The man feels he can have access. He very rarely says anything. I have sat in durbar often and often.

2363. How can you apply that in the case of the Bombay, Baroda or the Great Indian Peninsula, where the chief people are all in Bombay and even district superintendents are only in one or two places? How are we to get the personal touch?—My idea would be this. Take the Bombay, Baroda. I would appoint, to begin with, 10 Railway Durbaries, call them. They would have to buy a qualification of, say, 1,000 rupees stock. They would be given 100 rupees a month, they would be given free passes, they would wear a distinctive badge. If they come on to a platform every official on that platform, the stationmaster, and so on, would treat them with dignity, in other words they would salaam to them. The agent would be a kind of chairman or would preside when the Durbar is held, and the Durbar to begin with should be held quarterly. It may be held in Bombay, Ahmedabad, or Ajmere. That is another matter for the agent.

2364. It would be a meeting in one place once a quarter?—To begin with.

2365. The agent would bring presumably his ——?—He would bring only his traffic people to begin with. I think the appointment of those men is an important thing, and I hope you will bear in mind that they should be appointed by the agent and the district officer, what we call the collector, or the deputy commissioner. If the Government will not allow that, then the commissioner should do it. I would not allow the Government to do it, and I would not allow the India Office to do it. They should have nothing to do with it, but keep it from being in any sense political.

2366. I do not think I follow sufficiently the difference between the commissioner and the collector?—I ought to explain that. India is divided into districts and the district is the important unit, nothing else counts really. The man who runs India is the collector or the deputy commissioner. In what they call the old regulation provinces he is called a collector. In Bombay he is a collector and in Bengal; in some provinces, like the Punjab, which is a non-regulation province, they are called deputy commissioners, but he is the district officer.

2367. It is the two names for the same thing?—Yes. They are grouped. We have three or four or five under a commissioner. I should prefer at the beginning that the district officer should nominate, he and the agent should talk it over and say: "That man is a good man, he is a big landowner, he is looked up to." Everybody knows who the big men are. You should make much of him.

2368. Do you think that Indian opinion would be satisfied with nomination? Clearly election is impossible?—Indian opinion will never be satisfied with anything. The people in the district will be very satisfied and very pleased, and I think you will find that there will be a great competition to become what I call a railway Durbary. There again it will depend very much on the agent; he may feel that it is a great nuisance to him to have to give up more time to this, which may seem so him more or less form; there is a lot in India in form. It is all form.

2369. Just once more a detail, why do you ask for a shareholder's qualification?—For this reason, the time is coming when you may have to look to India for raising capital.

2370. I thought it had come?—Quite so. Some are men of great wealth, and if he begins to put his 1,000 rupees in his friends may follow suit. They are all like sheep there. That is one reason. Another reason is I think the tendency of the present Indian Government is to give these men enormous power without any stake or responsibility.

2371. After all an investment of 1,000 rupees is very little?—Yes, but still it is something.

2372. It implies a connection?—Yes. That is something to argue about; it may be 10,000 if you like.

2373. The figure might be different presumably, it might easily be bigger in Bengal than in the south of India and so on?—Quite so.

2374. There is a little difficulty; there are no such things as rupee shares?—No, that is a question. That is a detail which you will be able to work out when you get out there.

2375. I wanted to raise the point with you for this reason, it carries us further. At present in the Guaranteed Companies there is a fixed amount of ordinary capital, which the Secretary of State would not allow to be increased, and it is all in sovereigns?—That is true.

2376. Do you see any way of bringing in rupee capital into that organisation?—Yes. I think with this qualification which I would suggest. Suppose it were a Company line. there should be an issue in India of a rupee; it may be 5 per cent. I do not know what rate will attract these people. The biggest industry in India is railways, and no native has any voice or say or stake in it, he is merely a traveller. I should suggest, if you think about this scheme of Durbaries, or whatever you like to call it, that you might begin by experimenting on the three State lines. For that purpose you would have then to consider whether the Government of India could issue some kind of stock. I think it would pay them to issue stock, say 5 per cent. free of income tax to begin with.

2377. You could not very well have shareholders in an organisation that was owned by the State. It would have to be something in the nature of participating debentures?—Something of that sort.

2378. I saw participating debentures advertised within the last few days, and never saw the name before. That is the kind of thing it would have to be?—The natives would be pleased with that, especially if you made it free of income tax.

2379. I take it if the railways continue to earn anything like the net income they are earning at present, 8 per cent. overhead as it did last year, that you can very well afford to make this security really attractive?—Absolutely.

2380. You would regard the getting in of Indian money as important and worth sacrificing some income to get it?—Yes.

2381. That is what it comes to?—Yes, naturally it would be for a term, but I think at first you must make it attractive. I am a life member of the Bengal Chamber of Commerce, and I think you will find that they have suggested the co-operation of the commercial community, including natives. That is one of their points.

2382. You are entirely in sympathy with that?—Yes, they have allocated certain functions to them; some may be dangerous, but the kind of work I should give the durbaries at first would be this: I should make much of them, and I should ask them to consider the feeder roads; I should ask them to keep an eye on trade and on new industries. I should go out of my way to let them talk and make much of them, make them think they are very important. One of the functions they would be most valuable in is this: I have seen myself men selling tickets at a ticket office, and I have taken a man there at midnight—very often the trains start at midnight—and said, "You buy a ticket for a place." The price of the ticket was Rs. 3. 4. The man went and I stood close to the guichet listening. The man said: "You are a very clever man, it is "Rs. 3. 4, but I am very busy to-night, and you "will not get a ticket; come to-morrow If you "want a ticket to-night, it is Rs. 4." It is a very common thing to see a ticket collector—I have seen it, and had men punished for it—a Eurasian ticket collector, when the trains are very hot in the hot weather, and the third-class carriages are packed like sardines, drag them all out, although not getting out at that station, and make them pay before they can go back again. I have seen that with my eyes. Of late years they have improved the Traffic Department, and they have some very good young men. They will not get them quite so easily now, but they cannot control this, although they go up and down the line trying to stop it. It makes us most unpopular in India and is a most dangerous thing. If we had these railway durbaries and they were encouraged, I think the better class Indians would lend a hand in that work and stop this infamy. It is impossible for our people to stop it, they have no time, and they are tied to office works and forms—endless forms.

2383. This Durbari system that you suggest would be on both Company and State lines?—Yes.

2384. There is no reason for the difference?—No, none at all.

2384*a*. Now to come to another point, we have had much evidence from representatives of the Company on the question of Boards in England and Boards in India?—Yes.

2385. I think the general opinion is that as long as the money is English the Board in India can only be advisory. Would you accept that?—

Yes, I would accept that, but as regards the British element on the Board the thing cannot work because the British population changes every five years; that is to say, if you could induce one of the seniors say in Calcutta or Bombay to give his time to be a director out there, I doubt whether you would unless you paid him an enormous fee, and even then you would only have his service at most for about three years for the cold weather months.

2386. Sir Marshall Reid told us he thought five?—Five is the term. I have watched it carefully all my life at Simla and at Calcutta, and it is an absolutely safe thing, everything changes. I put three, because three is in five.

2387. There is not much in the point, and I only call attention to it?—At any rate you would have no continuity except on the native side.

2388. Do you think you can get anything beyond? Assume control remaining in England, can you give any powers to a local Board? Sir David Barbour told us that they were very useful, but they had not any powers, they advise the agent?—If you do not give powers you do not get good men. That is the trouble with all these things. You make these appointments and they are shams. I should give them powers. I may say briefly if you want to popularise the Indian railways and bring the Indian element into it you must be prepared for much falling off in efficiency, but I think that owing to the changes in India you have to face that.

2389. After all, you may buy efficiency too high?—That is the trouble.

2390. If it is so taut that it snaps, so to speak, you do not obtain the result?—I think the problem is how to do it without very great danger. I believe if you go in for nomination to start with and give the agent a very strong grip and the district officer, who are both men who know, you will get a good class of men. I should be inclined first of all to encourage them to watch the way the third-class people are treated and to make suggestions about their own districts. There are many little ways in which they can be useful, and gradually you could give them powers. I was Railway Magistrate for the whole of British India, and I was able to see a great deal of that little Rajputana line and to help a great deal. Those men might avert a strike, which is likely to be a very common occurrence in India. A good man may be invaluable. You have no idea how ignorant we are in India. We of the Civil Service know a good deal more than the railwaymen know, but we have to work through natives. We talk of running a district, but we do not; the natives run the district and run us. If we get good Indians the thing goes well. So with the railway; if the railway agent gets some of the splendid Indians who are to be found in every district he must wink at little things.

2391. Now turn from the durbavies and turn from the question of a local Advisory Board and come to the question of assuming the Companies to continue, transferring the headquarters of the Company and the control from London to India. Sir Marshall Reid told us that in his view you could in Bombay, at any rate, constitute—I think he put it that was about as much as you could do—two Boards for the two big Companies, half and half, English and Indian. Indian people would naturally be more continuous, but you could get five years' service out of good English people. How does that appeal to you?—I imagine the agent would be the chairman of that Board.

2392. That was a tentative suggestion?—I think if the agent were chairman of the Board it would not make much difference. I have seen a good many people and there is a general consensus that there is lack of continuity in India and remoteness from London, and they are not near consulting engineers, the India Office and so on. The whole thing seems to me to turn on one thing alone, that is, finance, and also what power you give them and how far the Secretary of State is going to have his dead hand on all railways.

2393. Let us assume that the Secretary of State drops into the background, representing merely what must remain until India obtains a responsible Government, the ultimate control of the British Parliament. Assuming he is dropped in the background?—If he is dropped into the background and decisions can be given in India it seems to me that there is no object whatever in going on with the Boards at home, provided the agent and the general traffic manager are members of the Board and the agent is chairman.

2394. That is, as you probably know as well as I do, the American system: the President and Vice-Presidents are whole-time executive officers and also members of the Board, and the President is chairman. That, you think, would work?—Absolutely, but I must make one proviso.

2395. You have spoken of the consulting engineer. To begin with I will assume that India will more or less supply its requirements?—I think it will.

2396. In the second place, is there any need for the importance attributed at present as I understand to the consulting engineer?—We do lean a great deal on the consulting engineer. The old consulting engineer was a man we all loved; he had known India well. I do not think there is anything important, whether it is new work or a contract, that ever comes through without our going to the consulting engineer. Perhaps we go too much.

(*Chairman.*) Mr. Hiley will correct me if I am wrong, but as far as I know the Dominions, that is to say, Australasia and South Africa, buy very largely in London, but I do not think they have anybody who takes a prominent position as consulting engineer. Is there anybody with that title?

(*Mr. Hiley.*) They buy though the High Commissioner.

(*Chairman.*) Who takes advice?

(*Mr. Hiley.*) Who takes advice when there is a new technical problem arising. Then he takes it to the consulting engineer for engineering advice.

(*Chairman.*) I mean to say that there is nobody who is consulting engineer to the railways with a formal appointment and put on to the reports.

(*Mr. Hiley.*) The railways have a consulting engineer, but that consulting engineer is only brought in when his technical advice is required in regard to the quality of steel, or some technical point of that sort. He is not consulted on ordinary stores contracts.

(*Sir Arthur Anderson.*) He does not make his recommendations on tenders sent in?

(*Mr. Hiley.*) No, the tenders go out, as a matter of fact, to New Zealand and Australia to be opened, and the Railway Commissioner generally states if he wishes the consulting engineer consulted. The consulting engineer is usually only employed for technical duties such as testing steels and duties of that description. He is not asked to interest himself in the acceptance of merely stores tenders.

(*Chairman.*) You might consult one man if it was a question of electrical appliances and another man if it was a question of locomotive design?

2397. (*Mr. Hiley.*) That is a very good instance. In the case of electrical design the Australia and New Zealand Railways would go

past the scheduled consulting engineer and would nominate to the High Commissioner another engineer to be consulted on that particular point?—It is not a great point, because the consulting engineer firms would move out to India. If the Secretary of State will only drop out the thing will be simpler, that is, of course, provided finance can be arranged.

2398. (*Chairman.*) I gather that the idea that the powers of the Secretary of State should only be exercised in the last resort has your approval?—Absolutely.

2399. Clearly, if that is done the importance of the London Boards being in touch with him very greatly changes?—Yes.

2400. Can you help us by telling us how to get rupee capital? You have seen the reference. We are informed that the question of the transfer of the East Indian Railway to Indian control has been decided on?—Yes.

2401. The phrase is this: The Committee will take note of the decision to remove the management of the East Indian Railway to India?—That is five years hence.

2402. That is at the termination of the present contract, which is 1924?—Of course, it is very interesting, but I have seen so many decisions made that have been absolutely rescinded within a year or two that we must not trust too much to that.

2403. I am not discussing how far we are bound by that, but let us assume that policy to be carried out, the share capital of the East Indian, which is called annuities, but which is in effect share capital, will be paid off. What next? Assume it is to remain a Company, how is it to be done?—I thought it was going to be made a State Railway.

2404. That is clearly not decided; that is what we have to decide on. Do you see any difficulty in raising a substantial rupee capital and then entrusting to the shareholders the management of the line in the same way as it is at present entrusted to the English Company?—That is a very difficult thing to answer; so much depends upon what money there is at the time. Suppose there is money.

2405. Assume you have to pay 10 per cent., it does not matter because it is not a large proportion of the total capital?—I think it is a pity that it should be the first line to be dealt with, because it is such a very important one. I would rather see it started if possible with a smaller line. It will have to be safeguarded from a military point of view, that is essential. It falls within the Eastern Command, it comes from Delhi down to Calcutta. That is a matter you will have to talk about in India.

2406. The military authorities must tell us?—Yes. I know this, when we had the Mackay Committee we suggested that one or more of the lines worked directly by the Government of India should be leased to a Company formed under this scheme, the Eastern Bengal. That was the idea I think we had, that they should be made over to a Company just as you make over this thing to a Company. I know then at that time there are several firms in Calcutta quite big enough to manage that. I think they would have managed it very largely with Indian capital.

2407. By "manage," you mean put the transaction through?—Manage to finance it, but I cannot say now. There is one thing that will militate against it, that is the enormous amount of capital going into industrials now in India.

2408. Let us ignore the temporary difficulty because circumstances will probably change before we come back from India. Let us assume that the capital can be raised, and I think you have already agreed that it is worth paying the price to get it?—Certainly.

2409. It may be a little higher?—Yes.

2410. Assuming you have got it you would merely constitute a Board in Calcutta which would take a contract and which would take over the same functions that the English Company carries on to-day?—They would take over much greater functions. I imagine they would be much freer. We are only a little fly on the wheel and our little capital is nothing compared to the State capital.

2411. It happens that the East Indian Company finance almost exactly 10 per cent. of the total capital, 6¾ millions out of 63 millions, or as near as may be?—I imagine they would buy up the whole thing, the Government share and everything.

2412. I was not suggesting that, but what is your view of that? Is there any reason why they should take more than 10 per cent.?—I think so. If you want to try the benefits of company management versus State management you should have a real Company which owns the whole line. As it is now, I daresay you know that these Companies are run by men who have run the Indian railways, and that is the reason they are so safe and so economically run. They are very slow, undoubtedly, but that is no fault of the Companies, it is the fault of the system. We have the check here in the India Office and in India in the Railway Board. The agent there and the chairman here have been through the hoop out there, and they know they are patient, we are all patient, but no man like yourself would care to sit on an Indian Railway Board. You have to have the patience of the East to do it.

2413. Anybody accustomed to an English Board does appreciate that there is a very great difference?—Yes. You will see it when you get out there, but it is a very good system, and it has paid in the past. My idea would be if you are going to make great changes that you should nationalise, that you should get rid of the Companies. The capital they have is so small that I should say make the whole thing State railways and then you will have to work with the Indians. That is what it is coming to.

2414. When you say make the whole thing State Railways, you mean to say the State to begin with pays back 6½ millions and wipes out the English Company?—Yes.

2415. What next?—Then put it under the Railway Board; but the Railway Board should be enormously enlarged and should be very well paid.

2416. First and foremost the Railway Board should operate it as directly as they do at present operate the North-Western. Is that your meaning?—Yes; to do that they will have to have branches of their Railway Board established in Calcutta, and perhaps in Cawnpore.

2417. This is a system of State Railways, sheer?—Absolutely.

2418. Your Board could only be an Advisory Local Board in Calcutta to the real Executive Authority, the Railway Board at Delhi?—Out of this little idea of mine of the Durbaris, you will gradually train up men who will some day be able to act as really valuable men; call them Boards if you like, but the question will be what money stake you can give them in the railway. That may come by what you have been talking about.

2419. It comes to this, that you are not in favour of (C) in our reference, which is management through the Company domiciled in India with a Board constant in India?—I am not very

much in favour of it, but provided the Secretary of State absolutely disappears——

2420. Let us assume he is wiped out?—Provided you could get all you want which we now get from our consulting engineer out in India—provided that the whole thing changes from England to India, including finance, I do not see any object in having a Board here.

2421. And having a Company?—If you can get a Company, well and good. I began by saying that I should be inclined to recommend experiments. Do not have it all one. If all one, there is only one thing, make it State Railways worked by the State.

2422. You would like, also, to experiment further, but whether the East Indian is a proper experimenting ground is another question?—Yes.

2423. But you would like to experiment with Companies domiciled in India working under State control?—No, I do not want to be working under State control. If you want to have an Indian Company, and give it a fair chance, it should not be in any sense working under State control. It should run its own railway under the Railway Act under the laws of the country. I would not have the Railway Board, for instance, sitting on them and telling the Board what they have to do.

2424. I quite understand, and I did not mean that when I said State control. Let us take that the method would be like that by which the French Railway Companies, which are guaranteed by the State, are worked under the control of a Ministry of Public Works?—I would not mind that control.

2425. Now I want to come to the Railway Board. You say much magnified, much better paid, a real service which attracts first-class men?—Yes.

2426. Which is the right system? Of course I know what the Mackay Committee said—that the Chairman of that Board ought to be able to overrule his colleagues. He ought to be really the executive head himself?—Yes.

2427. You still hold that opinion?—Yes.

2428. There must be an executive head, but he must be a very big man—one of the biggest men?—In the railway world.

2429. In India, if you could get him?—You may get him in India, I think you will, probably, but I do not know—yes, it is quite possible he could be got in India.

2430. If not you would have to import him?—Yes.

2431. He would be a really big man and you would try and keep him more than five years?—Yes.

2432. You would make it worth his while to stop?—Yes.

2433. There is a good deal in the question of what is to be his position. Is he to be a member of the Executive Council?—No. There are objections to his being on the Viceroy's Executive Council. He would be snowed under with work.

2434. He would have to deal with ordinary Cabinet business?—He has to deal with every box of every Department.

2435. You would, I take it, give him Cabinet rank and enable him to deal with them on terms of equality?—Yes, very high rank, the precedence of a Member of the Viceroy's Council.

2436. And when there was a railway question he would not merely attend the Cabinet as a subordinate, but would come there as an equal and discuss it with them?—Certainly?

2437. That would be your view?—Certainly, he should speak on equal terms with them all. I do not know whether he should have the power of claiming the right to attend but they would naturally summon him when there was a railway matter on.

2438. Suppose a development where English Companies have disappeared, do you think that under the regime we are discussing the Board could obtain sufficient autonomy, or would the Government as a Government interfere too much?—The Board will not obtain autonomy. No scheme of this sort will work until you separate railway finance from the general finance of the country. They will cling to it and the financial department will fight and fight. If you want to give railways a chance that must be done.

2439. We must get rid altogether of the railways being tied to the tail of the Budget?—Absolutely. There is another thing. You know the lapse, that is maddening, wasteful and everything.

2440. If the Peninsular and Oriental were to make a programme for a year ahead and then cut it off because they could not afford to finish a steamer on the stocks—we need not argue about that?—The extravagance at the end of the year is awful.

2441. People on the one hand spend money in order to avoid this lapsing and on the other shut off a contract half done?—That is true.

2442. I do think, if I may speak for myself, that we need much convincing, but you think it would be possible to make a Board autonomous, a financial entity managing its own business?—Certainly there is no difficulty whatever.

2443. How would you deal with the investment of the Government of India which is some hundreds of millions? Would you say you shall have 6 per cent. or whatever is reasonable, and that is all, and you have nothing to do with how we earn it or spend the balance?—It might be either that, or if the Government of India were well advised, they would do as they do now, they would take a share in the profits. You mean to say to the Government of India you will take a fixed rate of 5 per cent. for ever.

2444. That is what I want you to say?—If I were the Government of India I would say no, I will stand in.

2445. Turn it round the other way then. If the Government of India is allowed to have a share in the profits they would say that you are not to dissipate them?—I should not dissipate them; I should double them.

2446. You agree that it would mean saying to the Government of India, you raised a lot of money and have been out of interest on it for many years, therefore you are entitled to a substantial return, now that it is earning good money, but what you get is fixed and you will get nothing more?—Yes, if you could do that it would be a very good bargain for the railway.

2447. How are you going to induce the Government, if you are running near the margin and it looks as if they were not going to get their 6 per cent., to refrain from interfering?—You cannot. The Government in all these matters is finally all powerful.

2448. It comes to this, I take it, you would erect as many and as strong barriers as possible, and hope that they would not be surmounted very often?—I am certain of one thing, if the railway policy keeps very much as it is now, even with certain allowances for a fall in efficiency, even then I think the Government of India need not have any doubt as to their interest being paid. I believe enormously in the future of Indian Railways. I should like to say one thing, although I dare say you have heard it from other witnesses. There is one thing always to bear in mind when you are

looking at a railway proposal. You should always bear in mind the land revenue that is behind it. I have been what they call a settlement officer, and have seen the enormous change in the rates I can put on land. I do not hesitate to say that in any part of India where the land is fairly easy, and you have not very great bridges, it is a 15 per cent. proposition, if you take into account the increase in land revenue and the direct Indian Railway revenue.

2449. I wonder if you know of the existence of any statistics? Somebody was asking whether we could get any statistics showing the increase in value of land revenue when a new railway came?—No, but you can get it out of the Settlement Reports. If you were to write to Sir Thomas Holderness, who was here as Under Secretary, he would be able to lay his hands on it.

(*Chairman.*) Where is he now?

(*Sir Henry Burt.*) He is a Director of the Bengal and North-Western Railway.

2450-2. (*Chairman.*) If raw materials remain anything near their present price there will be a great leap further in land revenue?—Yes.

2452. Let us assume that we have got a powerful Railway Board partly controlling Companies, partly directing operating railways, you do not take any objection to their duplicate functions?—I do. That is what we tried to get out in the Mackay Committee. Suppose there is a case between a State railway worked by the State and a Company line, I do not see how the Railway Board could be impartial.

2454. They say they have been?—I think they have been good, but in theory they cannot be impartial. There are all sorts of little troubles in their dual position. You will hear about their raising the salaries of certain of the staff without telling the Companies and embarrassing the Companies. The fact is, I think, they are probably too much overworked.

2455. Broadly, it is a difficulty, but it will have to be dealt with. It may have to be tolerated for the present?—I do not think it is a burning grievance, but that was the idea we had, either State railways worked by the State, or all Company lines. I thought when we had this Committee in 1908 we should get it all Company lines because there were only three State railways then.

2456. You would like to do that if you could? I should like to have one thing or the other. From the present temper of India you will probably find what will come is that it will be worked by the State.

2457. (*Sir Henry Burt.*) You would prefer that?—I prefer one or the other.

2458. You would give the preference to the State?—From the Indian interests it would be better to do that because we do not hold enough capital and the predominant partner can always check us.

2459. (*Chairman.*) Are we to take it that the development of Indian national sentiment has rather caused you to change your view from what it was 12 years ago?—Yes, my view is this. If you want to switch the Indians off from politics you have to give them something to do and here is this spectacle which you will see going through these long thousands of miles of railway. There is not a single Indian who has any direct interest in the railways.

2460. Assume this great Board is a really dignified and important body. You spoke in the Mackay report of thousands of miles of line being needed, but they have made very few since you returned and they are still immensely behind?—Yes, it is lamentable.

2461. It is a question of hundreds of millions of capital. Is the Railway Board to raise it by an Indian Government loan?—No, an Indian railway loan. I would give it an absolute name of itself If there comes a question of clashing between the Finance Minister saying that you are spoiling the Government loan by your terms, you must appoint somebody to decide between the two. There will always be a conflict between them as there is now. There is always a conflict going on in the Finance Department.

2462. It is suggested to us that if you take the railways off the hands of the Government of India the amount they want to raise is very trifling. It is only one million or so for irrigation. Their capital requirements are very small?—That is true.

2463. So that there would not be a serious competition?—I had forgotten that; but we must remember that India is now taking to extravagance. We used to be thrifty and economical.

2464. (*Sir Arther Anderson.*) Whatever name you give to the loan it will still in effect be a Government loan?—It is a Government loan, but the security is the railway, and after that the Government.

2465. (*Chairman.*) You would put the Government behind it?—Yes.

2466. It would not be a mortgage on the railway, there would be the Government guarantee behind it?—Yes, but I am not sure that it would be necessary.

2467. Are you not bringing the Finance Minister in again by the back door?—Yes, you are going to call financial experts, and I should prefer to say nothing on this point. I think the public would come in on the security of the railways themselves.

2468. You would raise your money in India if you could get it, or in London?—Yes, anywhere, in America if you can get it, and I think you will get money from America eventually.

2469. In that case you would be getting it as a State loan in the first instance, unless you subsequently determined to hand the whole thing over to independent Companies, but we are imagining it all gradually getting swept into the State net?—Yes.

2470. It might get out again and possibly would?—This is only an opinion; it is one thing or the other. I think you had better have a good many things in India, either a real Company owning the whole capital——

2471. Of course leaving the State as a debenture holder?—Yes, or the State, one thing or the other. This Company system, although it has worked smoothly owing to having a most loyal body of men, has got Boards at home, men with the patience of angels and who have been through the hoop in India; it has worked wonderfully well, but if you knew the delays for years past, with regard to things essential to the line, they say, "You are going to have it," but it never comes. You would not like that if you were on those Boards. I do not think the thing will go on. I am not sure that the class of men will not dry up that used to provide the Boards. Therefore I would urge most strongly, if you are going to talk of Companies, let it be a real Company where they are not overshadowed by the predominating partner who holds nearly all the ordinary stock.

2472. You have experience of both kinds. I think the Directors we have had before us have pressed the point of the advantage of having experts on the Board?—Yes.

2473. You have experience of both kinds of Companies?—Yes.

2474–5. You have experience of the Company where the Directors are business men, but do not pretend to know how to build ships, for example, or that kind of thing. On the other hand, you have had experience of the Indian Board with the expert sitting with the non-expert Directors?—Yes. Speaking as a non-expert, I prefer for Indian railways a Board which is run by experts.

2476. That is to say, your co-directors?—Yes, my chairman and my deputy chairman. They know the thing from A to Z, and one feels sure that with the reports of the agent from India, and constant demi-official correspondence, you know things are going pretty well. But supposing this class of agents in India were to be dried up—and it may dry up if they are not better paid, because they do not pay them properly—then a big man, an agent, will say, "I will not sit on an Indian "Railway Board in England; I can get much "bigger pay if I go into some bigger thing." There is that danger. It surprises me sometimes to think that a man like my old friend Sir William Bissett, who is dead, was so patient in the face of constant delays and opposition.

2477. (*Sir Henry Burt.*) And these delays would be just the same with an Indian Board under the existing financial conditions?—Yes. If the present financial conditions are not altered your Committee might just as well not go out.

2478. You were saying that on the whole you preferred State management. Do you think that under State management political influence would become too pronounced?—It will become very pronounced.

2479. You think you would have to face it?—Yes.

2480. (*Chairman.*) The constitution of your Railway Board would consist wholly of experts; you would not put on business directors?—I do not think it would be wise. You might co-opt for a time a good chairman of a Chamber of Commerce, but I do not think it would be wise. Then, of course, you must be prepared if you are going to have an enlarged Railway Board with, as I say, local branches or provincial branches, which they must be, to put natives on.

2481. Your contact with public opinion would really be through your railway system?—Yes.

2482 And experts with an organised machinery for bringing public opinion to bear on them all the time; that is the essence of it?—Yes. I think under the constitution at present you have a civilian, have you not? Was not Sir Robert Gillan on it?

(*Sir Arthur Anderson.*) Sir Robert Gillan has retired.

(*Sir Henry Burt.*) And the arrangement is not going to be perpetuated. The Board have got now a financial adviser outside the Board. I would like to ask you this question about the Board. You have talked about an enlarged Railway Board. Have you thought out how you would recruit them, because you may take it from me there is difficulty at present in recruiting three men. Very often it works out in practice that it is not a question of recruiting one man a year, as you may think, but very often three men in one month.

(*Sir Arthur Anderson.*) That happened this year.

2483. (*Sir Henry Burt.*) And it has happened before. There is the greatest difficulty in finding suitable men?—That will be met by a very large increase of pay, and izzat. I do not know if you know that word. Izzat means honour status precedence.

2484. (*Sir Arthur Anderson.*) What do you call a large increase of pay—10,000 rupees a month?—Yes. If the Government of India say "It is monstrous; our people do not get that." I should say, "I do not care twopence."

(*Sir Arthur Anderson.*) That is exactly what will occur.

2485. (*Mr. Hiley.*) The salary be governed by the market price for brains?—Yes.

2486. (*Sir Henry Burt.*) You recognise that you must get men from England?—At first you might, but if you get a big man out there—if there is such a thing—he might gradually train a number and form a school. I should let him have personal assistants.

2487. (*Chairman.*) It is possible that the agent of the X.Y. railway might be thought good enough to be taken on the Board?—Yes, certainly.

2488. And that would stimulate the growth of the agent class?—Yes. My idea is that the Board at present cannot get round India. They cannot go and see things. I should also rather encourage the idea of branches. I would have an outpost of the Board at Calcutta, and another at Bombay.

2489. (*Mr. Hiley.*) I would like to ask you a question or two in regard to the durbaries. It is an interesting suggestion. You said, I think, in your evidence that it would be advisable to start it in stages?—Yes.

2490. And that you would suggest starting it in the first case on the State railways?—Yes.

2491. Would not that rather have the effect of emphasising the popularity with Indians of the State railways as against the Company railways?—There might be that danger, I had not thought of that. But I should be equally happy to see it started on two railways, say the North Western and the Bombay Baroda.

2492. It seems advisable, does it not, in order not to make the cleavage of opinion greater?—Yes.

2493. (*Sir Arthur Anderson.*) It would be free to any railway to take it up if they liked?—Yes.

2494. (*Chairman.*) The Great Indian Peninsula contract falls in in 1925?—Yes.

2495. The contracts of some of the big railways do not fall in till 1945 or 1950?—Yes.

2496. Can you imagine the two systems going alongside each other for 30 years?—Yes. I can also imagine the State, if they were politically pressed, paying compensation and getting rid of the contracts.

2497. You are aware, no doubt, that the contracts do not provide any terms for a break otherwise than at fixed periods?—Yes.

2498. Anything else has not been contemplated?—No.

2499. Presumably if anybody offered you to-day a handsome douceur to go away you would be quite ready to do so?—Yes.

2500. (*Sir Henry Burt.*) It is a question of money, after all?—Yes.

2501. (*Chairman.*) If you were representing the finances of India would you think it good business to make the English shareholders satisfied that they had been liberally dealt with?—Undoubtedly, because you would want money for the railways afterwards.

2502. You would want them to be ready to put money into the railway lines in the future?—The railways would want money, and many people would put it back into them at once.

2503. (*Mr. Hiley.*) Assuming that durbaries are to be started on certain railways, do you think it would be helpful to this scheme if the agent's hands were strengthened in dealing with the matter, by English members being co-opted as well as Indians?—I meant that, certainly. What the Bengal Chamber of Commerce wanted was that the commercial community should be interested in

the matter, and I think that would be very wise. I suggested 10, off-hand, to begin with. That would be an expenditure of Rs. 1,000 a month, which, by the way, as it is really for the purpose of Government rather than the purpose of the actual railways, I think Government ought to pay for. I should think that very likely three out of the number might very well be British people living at the Presidency towns, Bombay or Calcutta. But the men I want to get hold of are the men living up-country. Take the Bombay Baroda line, or even the East Indian line, there are men on that line like the Maharajas of Gwalior, Bikanir, and Jaipur, who would consider it a very great honour to be asked, "Will you join this railway durbar" --(of course, they would have special seats in the durbar)—"or will you let your Diwan join?" Men like the Maharaja Darbhanga in Calcutta, and the Raja of Burdhwan, are the sort of men who should always be on it. These men have large wealth under their control, and therefore it would politically be a sound thing to do. But you must give them certain functions, and the agents out there will be able to tell you what functions could safely be given to them. There is one other point I would like to mention, namely, that apart from the question of these durbaries, we have been talking for generations in India of educating men in technical things. A certain amount has been done, but now if we want men as subordinates in many departments of the railways we have to send an indent home for them. That indent goes to the consulting engineer, and he finds a man for us. I think you ought to stop that. You ought to have proper schools. It is not the fault of the Companies —they have nothing to do with it; it is the fault of the Government of India and the Education Department.

2504. (*Chairman.*) There ought to be technical schools?—Yes, there ought to be technical schools for the locomotive part of the business and for many other branches—telegraphy, signalling and so on. It ought to be absolutely unnecessary for them to send a native home to England for education—it ruins him. You ought to offer Indians facilities for learning, and for being able to qualify themselves for work on Indian railways.

2505. Would you put those schools under the Railway Board or under the Government?—I should not mind a bit putting them under the Railway Board—far better, I think.

2506. (*Sir Arthur Anderson.*) There are a certain number of schools already?—You have not provided many yet.

2507. There has been a great impetus given to them during the last year or two?—Give them more impetus.

2508. The foundation has been laid?—I am glad to hear it. In Madras we were always wanting men, and it is a terrible political danger to bring out low-class Europeans.

2509. (*Mr. Hiley.*) That is in the subordinate grades?—Yes.

2510. I was very much interested in the proposal you made with regard to the durbaries. I gather you deprecate any leap in the dark?—Yes, I am afraid of it, but I think you have to make that leap.

2511. Do you think these durbaries might perhaps postpone the day of transferring the Companies entirely to India?—No, I do not think it would. I think the durbaries, if the railway Companies became State railways, might some day form the nucleus of bodies to which the State could delegate a lot of their work. There are lots of little ways in which they could help you. I have mentioned one or two, but I could give you dozens of other ways in which they could help. They would help you in one thing with regard to the present system. The present system, splendid as it is, is like the whole of the Indian Civil Service. It is very efficient, very slow, and very steady, but it has kept the people out altogether.

2512. You do not think a durbari will be accepted by Indian political opinion as a reply to their demand for local representation?—No, but it is something. There is not much real better-class opinion in India, but I think it will be welcomed by better-class opinion. It is a very strange thing that the railway industry is the only industry in which the Indians have no share whatever.

2513. A suggestion was made by one of the railway representatives that the London Boards should send out directors with their full powers every year to confer with the Chambers of Commerce and their staffs and to keep better in touch with conditions of the country?—And to get to know the Indians.

2514. If this deputation of Directors could confer with the durbaries it would probably go a long way towards what the advocates of Indian representation require. It would give the durbaries for the time being very much greater power than it might be safe to give them at the beginning?—That is an excellent idea.

2515. You understand the suggestion—the representatives of the London Board would go out and take their powers with them?—The only trouble about that is that you will not get the men to go out.

(*Chairman.*) That is what I ventured to suggest.

2516. (*Mr. Hiley.*) Would they not go if they were paid adequately?—The deputation fee is so small for a man going to India, that he could not afford to go out year after year. The Boards are very small in number, and it would mean that many men would have to go out year after year.

2517-2617. The reply one Director made to that was that the Board could nominate a Director who would have the perfect confidence of all the Board, and who could take the powers of the Board with him?—You must have two to form a quorum.

(*Chairman.*) Thank you, Sir Walter; we are exceedingly obliged to you for your valuable evidence.

The witness withdrew.

MR. J. M. RENDEL and COLONEL G. HUDDLESTON, called and examined.

2618. (*Chairman.*) Mr. Rendel, you are the Chairman of the Assam-Bengal Railway Company?—Yes.

2619. Your colleague, Colonel Huddleston, has refrained in his previous evidence from saying anything about the Assam-Bengal Railway in particular. Have you any Indian experience?—No, my experience is only English.

2620. Are you connected with India in business?—No, not in business. I have plenty of Indian connections, but no personal knowledge of India.

2621. What are you by profession?—By original training I am a barrister, not practising.

2622. Have you any other business connections besides those?—I am connected with other Com-

panies. I am a Director of the Southern Punjab and of the Nizam's Railway. That is all.

2623. You are not connected with any non-Indian Companies?—No, except a very small concern called Dennison House, Ltd.

2624. You devote your attention to Indian railways?—Yes.

2625. You have seen the notice containing the conditions under which we are hearing evidence?—Yes.

2626. You have not sent in a *précis* of the evidence you wish to give. We do not want to ask anything about the Assam-Bengal Railway in particular; that is not our business; but if you desire to express any opinion on any of the points in the Reference will you please do so?—I should prefer to be asked questions. It is so much a matter of opinion, and such a very wide field is involved.

2627. There are really two big things. The first is the big question of policy. What is your view on that?—My view, for what it is worth, is that you have got to choose between one or other of the two present systems. As a matter of fact, they are really, in my view, very much the same system, one of very strict bureaucratic control either directly by the State managing its own railways, or through the agency of Companies which are really not independent.

2628. They have very small financial responsibilities?—And very small initiative powers indeed.

2629. As Sir Walter Lawrence has said to us just now, if they had not been broken to the system in India they would not put up with it?—So far as my own opinion is concerned, and so far as it is worth anything, the third proposed alternative of doing the thing through Boards in India appears to me to combine the faults of both and the merits of neither system.

2630. I take it you do not see your way to have two co-equal Boards, one in India and one in England?—You will have two Kings in Brentford.

2631. Brentford is a smaller place than the gap between India and England; still, you do not see your way to doing it in that way?—No. I do not, but it is not necessarily impracticable because I do not see it in that way.

2632. Do you see your way to the Board remaining in London and delegating to an Indian body a substantial amount of the powers that you at present possess?—No, I do not.

2633. You would be left between the upper millstone of the Government and the lower millstone of the local body, so that there would be nothing left for you to do?—It would very much depend on how it was done. It would depend really on what was left to us and what was delegated.

2634. Is there anything that you could delegate that is substantial?—I do not think there is. As things are at present the Indian Government and the Indian Railway Board do all and more than all that could be delegated to a local representative.

2635. Then you come back to this, do you not? If you are to make a change it means transferring the real control to India?—It does, where it largely is at present.

2636. But it means transferring the whole thing, does it not?—I suppose so.

2637. Do not let me put it into your mouth?—No; I suppose it does, but I am impressed with the feeling that there is very little substantial control at present.

2638. When does your contract end?—No definite date, but as a matter of fact it is terminable by the Secretary of State at the end of 1921 and subsequently at 10-year intervals, but the India Office has announced to us that it does not intend to exercise its powers to terminate it in 1921.

2639. You are referring to the Assam-Bengal Railway?—Yes. They would have had to have given us notice by 31st December this year, and they have told us that they are not going to do so.

2640. Then you have a 10-year contract?—Yes.

2641. Your Company does not earn its dividend?—It does not.

2642. So that the Secretary of State has no interest in turning you out?—Unless he thought he could do it better.

2643. At any rate there is no financial interest in turning you out?—No.

2644. (*Sir Arthur Anderson.*) The financial interest is rather the other way, because if he did turn you out he would have to pay you back at par?—I do not know whether he thinks it would be of financial interest to him. He would pay us off at par in sterling, and a very much smaller number of rupees would be necessary to provide the sterling at par now than was the case some years ago.

2645. Is that a term of the contract?—Yes; he has to pay us off in sterling at par.

2646. (*Chairman.*) And your shares stand at present at 45?—Yes; they simply stand on a gilt-edged basis, and nothing else.

2647. (*Sir Arthur Anderson.*) May I ask one question with regard to the transfer of the Board, about which you have been speaking? If you had a dual Board, one here and one in India, the home Board would still require to deal with supplies, would it not?—You are thinking of Colonel Huddleston's scheme.

2648. No; I am thinking of what you were speaking about just now. You said that a certain number of powers could be delegated to the Indian Board if you had an affiliated Board there?—Yes.

2649. But England at present being the large source of supply, and likely to be for a number of years to come, all supplies would require to be dealt with from here?—Are you speaking of capital money or stores?

2650. Stores?—That, I suppose, is the case, except in so far as India is able to supply herself.

2651. They can only supply a comparatively small amount at present?—Stores would have to be purchased in Europe, in England, in America—wherever they might be obtainable from.

2652. (*Sir Henry Burt.*) Or Germany?—Anywhere. They would have to be supplied. The contracts for stores would have to be made by the home Board with the sanction, as always is the case, of the Government Director, and the money for purchasing them would have to be supplied by and sanctioned and guaranteed by the Secretary of State.

2653. (*Chairman.*) Have you anything to say on the question of direct State management in India? Have you any special views on the point?—No. Of course, one can find fault with the existing system, but on the whole it is not a bad one. It is capable of being very good.

2654. What do you mean by the present system—the mixed system?—The mixed system, under which you are controlled by the Government of India and the Secretary of State. One fault of it is that it is slow in its methods—that if you want a thing done you have got to convince a great many people it ought to be done.

2655. And it does not find money?—It does not find money, and questions are shelved. That is inevitable, I suppose. But after all, the man who finds the money calls the tune.

SERVANTS OF INDIA SOCIETY'S
BRANCH LIBRARY

2656. Meanwhile the traffic does not get moved, because there is not enough rolling stock?—I do not think we could say that on our line.

2657. You think that is not so?—I do not think it is so on our line.

2658. What is your third Company?—The Southern Punjab.

2659. (*Sir Henry Burt.*) In that case you have nothing to do with the supply of rolling stock?—It is an owning and constructing, not a working Company.

2660. (*Chairman.*) Is the Southern Punjab full of traffic?—A great deal of traffic runs over it. It is a very complex traffic: that is to say, the traffic that we get in the Southern Punjab is an artificial traffic. So much general traffic passes over it in the administration of the railway that we are entitled to receive under the contract. We get traffic that does not pass over our line, and we give up to the Government traffic that does.

2661. It is a pool?—Yes.

2662. Apart from what we may call administrative difficulties which possibly might be got over, you have no special preference for State management or Company management?—Speaking quite abstractedly and looking at it not as a Director of this line or that but as impartially as I possibly can, I should say: "Yes, either system. It all depends on how it is worked."

2663. Nor have you any great objection to the two systems going on alongside?—Not a bit. What I do feel is that the alternative system of trying to combine the merits of both by having the Company in India is getting the faults of both without the merits of either. By having an Indian Company instead of an English Company I do not see what catch there is in it.

2664. In other words it comes to this, you rule out replacing an English Company by an Indian Company?—Yes, as far as I can judge.

2665. And you do not see your way to a combination of a double system, a Company half Indian and half English?—I do not see the advantage of a Company located in India.

2666. If the management is to be transferred to India, you would make it a State railway?—I should undoubtedly. I should have an honest State railway. You must run railways in India on bureaucratic lines, to my mind, and if the thing is done in India you had better leave it in the hands of the Government.

2667. Let us assume it is a State railway. A great many of the witnesses who have appeared before us have said (I forget whether Colonel Huddleston gave his opinion on the point) that the Railway Board must be much more independent and much more important, and the ordinary Government must stand aside?—I am sure of it.

2668. You agree with that too?—Certainly. There is no doubt that one of the great difficulties at present is the complete subordination of the railway management to Indian finance The whole of the railway earnings go into the general pool of Government receipts.

2669. You would cut the whole thing loose and make it stand on its own footing by itself, with the Indian Railway Board separate from the Government?—If I could, certainly.

2670. We may assume that vast amounts of money are wanted as new capital for the railways?—Yes.

2671. You would raise that capital, I suppose, in India or in London, as the case may be. You would raise Railway Board loans?—I should.

2672. Speaking as one who knows the city, do you think that security would appeal to English investors?—I should think probably it would. Practically the Government of India would be at the back of it.

2673. You are assuming that there would be a Government guarantee behind it?—I am assuming that it is what we call gilt-edged; that it has a Government guarantee behind it. We know that some forms of Government guarantee are not as good apparently as others; some do not catch as well as others. For instance, to emphasise what I mean, there is no difference whatever between the Assam-Bengal Railway stock and Government stock, but, it being a narrower market and a smaller thing, it does not command the same price.

2674. What guarantee have you got?—Three per cent.

2675. And you stand at 45?—Yes.

2676. (*Sir Arthur Anderson.*) The Assam-Bengal Railway stock is really at present in the position of a Government of India debenture?—That is what it is.

2677. (*Chairman.*) What do India 3 per cents. stand at?—I forget what they stand at, but I think they are probably rather higher.

2678. One witness told us that an Indian loan that was not issued by the Secretary of State but by the Government of India would be regarded quite differently in London?—I have no experience or knowledge to enable me to say, but I cannot see why. I would not make any difference myself. I would just as willingly invest in one as the other.

2679. One knows that there is a market opinion?—Yes, I should think there is a good deal of fashion in it myself.

2680. Indian investments are not popular?—Not for the moment.

2681. They never have been popular in the sense of having a large clientele?—I believe not.

2682. You never see much of them in the financial news from day to day?—No.

2683. You never see that Indian railways are flat or are active in the same way you see with regard to Argentines?—No. There is not much speculative interest about them.

2684. Do you think that is partly due to the break-up of the market, so to speak, into a number of separate markets, that every stock has its own contract conditions and its own periods of life and so on?—Yes, I think so. I think that is a point. I think the Indian railway contracts are so complicated that people do not know about them.

2685. Nobody but an expert who very much trusted his own opinion would think he knew what the contracts said?—And even then he does not always know.

2686. You have applied both long practical experience and legal training to the question. Do you think you can understand the contracts?—I cannot understand them very often.

2687. If you cannot, who can?—Exactly. Very often they are not well drafted.

2688. I think we have got your views on the two main points of the Railway Board and the question of management? You have also told us that you would finance the railways through direct Railway Board loans guaranted by the Government?—There is no alternative really.

2689. Is there any other point you would like to raise?—No, I think not, Sir. As I say, the real trouble under the present system is the difficulty of getting things done. I suppose that must happen in any case under Government control; and there are also frequent changes in the constitution of the Railway Board.

2690. That, of course, you would agree would be largely altered if you made it worth a man's while to stop in India?—Yes.

2691. A man goes home because he has served his time and is entitled to his pension, but if you gave him a very handsome salary to stop there he would do so?—Yes.

(*Sir Henry Burt.*) The Government limit is 55 years.

2692. (*Sir Arthur Anderson.*) That rule does not apply in the Railway Board?—There is one other thing I would like to say. I have long felt that the scale of salaries paid is not adequate.

2693. (*Chairman.*) You are restricted in that respect, You cannot pay your agent a big salary without the permission of the Secretary of State?—No. They are not intended to have the amount of independence that a railway man in the Argentine has, for instance, or I think in this country, and they are not paid on that footing. You get tremendously big concerns like the East Indian Railway Company and you pay the agent something very much less than on the other railways of the world.

2694. What do the East Indian pay?—(*Colonel Huddleston.*) Rs. 4,000 a month. (*Mr. Rendel.*) It was Rs. 3,500, it is now Rs. 4,000.

2695. That is the equivalent to something like 3,000*l.* a year?—Yes.

2696. What would a general manager in the Agentine get?—I expect double.

2697. (*Mr. Hiley.*) 5,000*l.* is about the minimum. I know one man who has 5,000*l.* and he was not general manager of one of the big Companies?—It illustrates that we are very much in the hands of a bureaucracy.

2698. (*Chairman.*) The position, I take it, is this. If you get an agent and you think he is worth Rs. 7,000 a month, you cannot pay him that unless you convince the Finance Minister of India that he should receive it?—That is the position; nor can you delegate to him a degree of responsibility which perhaps would justify a salary on that scale.

2699. Do you delegate all you can practically?—Yes.

2700. We hear that some Companies delegate less than others, but they never appear?—We believe in delegating as much as we can. You have got to get a good man and trust him.

2701. Is there anything else you wish to say?—No.

2702. Now, Colonel Huddleston, will you tell us what you have to say?—(*Colonel Huddleston.*) When I was here before you asked me to let you have particulars showing how the capital of the Nizam's Railway was raised.

2703. Yes. You are now going to speak on behalf of the Nizam's State Railway?—Yes.

2704. Will you kindly tell us all you can about the way in which the capital was raised?—The Company was formed in 1883 and capital stock amounting to 1,500,000*l.* was raised by a prospectus in 1884. Then at various dates, partly by prospectus and partly by Issuing Houses further capital was raised in the form of first mortgage debentures. All this money was raised for the broad gauge railway. The total issued in London was 2,658,400*l.*

2705. Did the ordinary capital remain at 1,500,000*l.*?—Yes.

2706. Then there was a little more than 1,000,000*l.* of debentures?—Yes. Further broad gauge capital was issued in the form of debentures taken up by the Government.

2707. By "the Government" you mean the Nizam's Government?—Yes. Then in addition the Nizam's Government at the time the Company was formed, were paid 500,000*l.* in fully paid up shares as part of the purchase price for the line that existed in those days.

2708. The Nizam had started to build the railway on his own account?—They had a railway—I think it was constructed by the Government—that ran from Secunderabad to Wadi only, a distance of 121 miles. That was worked, I think, by the Great Indian Peninsula Railway. That line had to be taken up, and when this new Company was formed it was for the purpose of taking it up and extending it.

2709. You mean, taking it over, not pulling it up?—Taking it over and extending it.

2710. You bought what was on the spot at the rate of 4,000*l.* a mile?—Yes. With regard to the metre gauge we issued through prospectus in London 1,800,000*l.* 3½ per cent. debentures. They were issued at a discount, at 94 and 94½. That was in 1897 and 1899. Since 1907 we have issued to the Government of H.E.H. the Nizam 475,000*l.* in the form of debentures up to the present date.

2711. To the Government?—Yes. They have taken up the debentures and given us the money to finance the line with.

2712. You have got a total capital of something like 5,000,000*l.*?—About 4,250,000*l.* broad gauge, 2¼ million metre gauge—total 6½ million.

2713. (*Sir Henry Burt.*) There is one point I should like to ask Mr. Rendel. You expressed a preference for State management as against the transfer of the Boards to India?—(*Mr. Rendel.*) Yes.

2714. I suppose you assume that the control of the Railway Board would remain as it is now?—Yes, exactly.

2715. Is your preference for State management therefore this—that there would really be no necessity for a Company Board in India?—That is one reason, certainly.

2716. You see my point?—I do.

2717. That the control of the Railway Board is such, there is so much control that there is not much left for a local Board to do?—What is left is better done here than it can be done in India, in my opinion. If, therefore, you are going to destroy the English Boards you had better take the whole thing.

2718. Because the local Boards would not be of any great help or assistance?—I believe very little. You would lose the advantage, whatever it may be, of the English Railway Boards—you may think it much or you may think it small; but whatever it is you would lose it, and I do not think you gain anything in return.

2719. (*Chairman.*) The English Boards have grown up with a system they understand?—Yes.

2720. If anybody were to ask you to join the Board of a Company and you found when you got there that it had as little power to do things as an Indian Board you would say "Well, I think I will retire." Is not that rather what it comes to?—I am afraid I do not quite follow you.

2721. The Boards of Indian railways know what their position is. They have all practically been connected with India; they know that their functions are very limited, and they accept that position?—Yes.

2722. If you were asked to join the Board of an Argentine or English railway, and you found your powers were as limited as those of an Indian Company's Board, you would be inclined to say, "Thank you, it is not good enough," and go away?—Unless I wanted the fees very much.

2723. That is not a reason why they should invite me?—Not at all.

2724. (*Mr. Hiley.*) Have you established any reserve fund to deal with deferred renewals?—Not

on the Assam-Bengal. We are practically a State railway.

2725. Altogether State?—Yes.

2726. Have you attempted to establish one with the concurrence of the Government?—I have never thought of such a thing. It is quite outside the usual practice.

2727. (*Sir Arthur Anderson.*) Has the Company ever paid its guarantee?—Oh, no, but even if it had, I do not think any guaranteed Company has a reserve fund.

2728. Oh, yes?—A reserve renewals fund? I think they pay as they go.

2729. (*Chairman.*) It is deferred maintenance reserve. I think the English railways have got the right name for it.—I do not know that any Indian railway does that.

2730. (*Mr. Hiley.*) Anyway, you have not?—No.

2731. (*Sir Arthur Anderson.*) You really have no interest in that as a Company?—I would not say that. To have a fund on which you can draw when you want it, instead of having to ask the India Office to supply the money when they are very hard up, is something.

2732. Under existing conditions?—We want to do our work properly, and if we had a reserve fund and if we were not subject to the usual Indian railway finance, all Indian railways would be in a stronger position.

(*Sir Arthur Anderson.*) Have you formed a reserve fund out of your revenue?

2733. (*Mr. Hiley.*) Or have you asked the Government to do so?—No. It would be idle to do so.

2734. (*Chairman.*) Surely the position is this: you pay over your net revenue, whatever it is, to the Government in relief of the guarantee?—Yes.

2735. You have paid over more than you ought to have paid because you ought to have kept cash in hand to buy your rails when you could buy them. That is what it comes to. They ought to have taken only so much from you; they ought to have left money available for buying the rails and not have taken it as revenue?—They have never done that. They accept the obligation of providing the capital when it is required.

2736. (*Mr. Hiley.*) Do they carry that obligation out?—I should say so.

2737. (*Chairman.*) You agree it would have been better if it had been liquid in your own hands?—Or somebody's hands. I should think so. It is really a question for the financial authorities in India. They do not proceed in that way. They work to an annual budget and all expenditure lapses at the end of every year.

(*Chairman.*) Thank you very much for your evidence.

The witnesses withdrew.

(Adjourned for a short time.)

COLONEL W. V. CONSTABLE, R.E., and SIR DONALD ROBERTSON, K.C.S.I., called and examined.

See Written Statement No. 9, Vol. IV.

2738. (*Chairman.*) Colonel Constable, you have seen this notice?—Yes.

2739. You are Chairman of the Madras and Southern Mahratta Railway Company?—Yes.

2740. You will appreciate the conditions under which we are taking evidence?—Quite.

2741. We have had this morning Sir Walter Lawrence, who is, I think, one of your Directors?—Yes.

2742. I do not think he spoke on behalf of your Company in any way?—No.

2743. You say that your Board are strong advocates of the retention of the Home Board?—Yes.

2744. You agree that there is a considerable opinion in India against abolishing it?—Yes.

2745. You consider that this opinion is founded on a misapprehension. You also say that you think the efficiency of the railways is better secured by the present arrangement?—Certainly.

2746. Would you agree if people preferred less efficiency—this is a question that might be raised in various parts of the world—if people preferred a less efficient system of their own to a more efficient system supplied to them from outside, there is something from their point of view to be said for it?—Quite so.

2747. Turn to another matter. Assuming, for the sake of argument, that the Companies are liberally treated, leave the Company view for a moment, if you were to speak for a shareholder you would say, "As long as I get at least as good as "my bargain I have no grievance?"—I do not think that is the way the Boards look at it. I am on the the Bombay Baroda Board, and we always claim to be agents of the Government as well as representatives of the shareholders. The Bombay Baroda own 1 share and the Government 22. We own 5 millions out of 16¼ millions capital. To put it in another way, we own four-thirteenths of the capital exclusive of advances by the Secretary of State. This proportion is greater than other Indian Railway Companies hold; that was arranged by the Government when the amalgamation took place, and we had nothing to do with it.

2748. *Qua* shareholder suppose you get all you bargain for. If there is any question between you and the Government and you are liberally treated, has a shareholder any grievance?—We have not looked at it from that point of view.

2749. I want to see what you say from that point of view.—If it is going to be less efficiently managed there will be less return, and both Government and shareholders will suffer.

2750. Assuming the shareholders were given all that they bargained for—assume that in money, and that the shareholders would then disappear; they have not got a grievance?—I do not know.

2751. Suppose you and I own a business—a boot manufacturing business or any other business; if a big Company buys us up on good financial terms, we, as shareholders, are satisfied.—Yes, we are not managing the Company only in the shareholders' interest, but in the Government interest too.

2752. Assume that the Government says: "We "want to take this thing back into our hands, and we "will give the shareholders satisfactory pecuniary "terms," do you agree with me that the shareholders then have no grievance?—I do not think they would. In the last paragraph of the memorandum in the General Conclusions I say as the Companies' contracts fall in, if the Government wish to manage themselves they can do so.

2753. Let us take it in that way. Your contract terminates a long way ahead?—Yes, 1937.

2754. I am putting a purely suppositious case: Suppose before 1937 the Government said—to-morrow for instance—"We will give you terms to break the "contract to-day which will make your share a more "valuable thing than it is to-day." Say that the share

stands at a certain figure—suppose it is 100*l.*—and they say "We will pay you off at 110*l.*," would you have a grievance?—I may say, with reference to your remarks, that none of the Companies understood what the English meant in the first paragraph of the Terms of Reference: "As and when the existing "contracts can be determined."

2755. That clearly means that you are there until 1937?—That is the line the South Indian took, but we say it is not English, and we want to know if it meant if we behaved well that the Secretary of State could terminate the contract. We do not know what that means. You are rather arguing as if it were; suppose the Government terminated the contract and made it up to the shareholders, would we object? I do not know.

(*Chairman.*) I am trying to get your opinion, I am not arguing for anything. I ask what you would say if that happened.

2756. (*Sir Arthur Anderson.*) The point is would the shareholders be likely to agree?—I do not know.

(*Sir Arthur Anderson.*) If they did not agree they could not be forced to.

2757. (*Chairman.*) They could be only forced in the event of their not voluntarily accepting an offer as in any other case of compulsory purchase I will not carry that point any further.—Speaking personally, I am an old State Railwayman, and I believe in State Railway management. I did until all these troubles arose and the war came; now I think the present arrangement is the best, but it is open to the Government as the contracts fall in to take them over. If they could raise the money in India for other lines we do not object, but if you ask whether the shareholders would object, I do not know; I cannot tell you.

2758. Will you tell us what has caused the change in your opinion?—I was on the State Railway lines except 4 years on the Bengal Nagpur, I was on the Eastern Bengal Railway in the consulting engineer's office, and on the North-Western as deputy-manager, and so on, and it seems to me in ordinary times it is reasonable that the Government should get the whole of the profits. I consider in the old days that the State lines were managed as well as the Companies' lines. We are most of us State lines with a small interest in them, and now that there is political pressure and we do not know what the future is going to be, I think it a good thing to keep up the Company system under which we are as much under the control of the Government as the State lines are. They settle what the expenditure shall be; capital and revenue; they have control of the rates and the fares; and we are State lines with a little interest in them. The Indian railways have been earning 8 per cent. lately, but that is not going to last, because there are 60 million of arrears to be made up in renewals and there will be tremendous increases in wages. We made 3 per cent. of our dividend this year by a fortuitous rise in exchange. To-day it is between 1*s.* 7*d.* and 1*s.* 8*d.* I do not think that will continue, but I do not know.

2759. I do not think any of our opinions on exchange will be worth much. We will leave that. Where do you get the figure of 60 millions of arrears?—I am on the Bombay Baroda, and their estimate for the next three years is that they want 11½ millions of capital and capital share of renewals.

2760. (*Sir Arthur Anderson.*) You mean 60 millions for the whole of the railways?—Yes; the whole of the lines. That is outside the annual amount. All the representatives said they thought, instead of 12 millions a year being required for normal expenditure, the capital required would be 20 millions a year.

2761. (*Chairman.*) Do you mean by extensions improvements on existing lines or do you mean both improvements and new construction. You said 12 millions for extensions?—That I am not certain of, but the normal 12 millions that was raised before the war will now, owing to the rupee being higher, require to be 20 millions, and they want 60 millions besides to bring the lines into the same state as they were before the war.

2762. Let us be sure that we understand each other. You require 60 millions in order to carry out works of revenue maintenance?—No, not revenue maintenance, but for renewals. During the last 4½ years, the accumulated arrears of necessary work must amount to 40 million pounds at pre-war prices. That is bringing the lines into the same condition as if there had been no war.

2763. That is purely revenue?—No; necessary capital works and capital share of betterments in connection with open lines.

2764. Revenue renewals?—Yes.

2765. (*Sir Henry Burt.*) Part of that would be capital, but it is not a very important point?—Some portion would be capital. If you get a better engine or a better rail than before, some portion is charged to capital.

2766. (*Chairman.*) That is not a renewal?—To put the line in a normal condition 60 millions will be required.

(*Sir Arthur Anderson.*) The Indian system is that if you renew a unit with a unit of exactly the same type it goes to revenue, and if you have an improved type you put the difference to capital.

2767. (*Chairman.*) Can you divide that 60 millions? How much is expenditure that ought to have been made out of revenue?—No. I could not do so here. None of that is real revenue expenditure.

2768. The precise figure does not matter?—You might get the Bombay, Baroda and Central India figures, but I have not my figures. They have what they want for the next three years.

2769. (*Sir Henry Burt.*) I should say it was about two-thirds?—I do not think that is an overestimate, because the lines including the State lines earned 8 per cent. lately. That is not a fair profit, and there are reasons for it.

2770. (*Chairman.*) Did your Board raise the question with the Secretary of State in any shape or form that you ought to be allowed to keep this as a liquid reserve?—As far as I know the only railway that has made a special provision for renewals—reserve renewals—has been the Bengal and North-Western.

2771. The Government does not share in the profits on that line?—It was discussed by the other Boards—I think there was a difficulty about excess profits and income tax—and the others have been keeping up their reserves, particularly those lines which have a long period to run. Our reserve has gone up 500,000*l.* I warn the shareholders every time a meeting is held that the reserve will be required to maintain the dividend presently, as wages rise and expenses increase. There is an increase in establishment of over 1 crore in working expenses between 1917–18 and this year.

2772. What are the total working expenses. A crore is what percentage?—I have not brought those figures but the increase is 38 per cent. over 1917–18 expenditure on the Southern Mahratta. That does not comprise the enormous increases in establishment that are coming on due to the increase of wages.

2773. (*Sir Arthur Anderson.*) That is merely wages?—No, that is the total. You know Sir H. Freeland on the Bombay, Baroda and Central India says their estimate of establishment is going to be 1½ crores over last year's figure.

2774. (*Sir Henry Burt.*) Establishment only?—Yes. It is not right for the people out there who want to criticise to say that we pay 8 per cent. and

that the State ought not to have companies earning that, but the State is benefiting also.

2775. (*Chairman.*) When they say that they ignore the fact that a small part of that 8 per cent. goes to you and a large part goes to the Government?—The reason the Bombay, Baroda and Central India have not kept up such a big reserve is this. Their capital is 2 millions against our capital of 5 millions, but they have practically completed their programme of renewals of heavy rails and strengthening bridges. The Southern Mahratta were going to start as the war broke out. We are keeping a big reserve to equalise dividends as the net profits decrease from all these causes.

2776. When you speak of half a million reserve is that a reserve that has got past the Secretary of State. That is your own property?—Yes, that is our own property.

2777. It is really a dividend equalisation reserve?—That is why we are keeping it higher than usual because we do not know what is going to happen.

2778. (*Sir Arthur Anderson.*) You said that the Bengal and North Western was the only one who had formed a renewal reserve. I thought we were told that the Nizam had two?—I do not think any of the State lines have special renewal reserves.

2779. (*Chairman.*) A gentleman from one Company told us, as their share was so small and the State's share was so large, if the Secretary of State did not choose to keep a deferred maintenance fund to provide for nineteen-twentieths of the postponed expenditure they were prepared to follow behind him. That is practically what he told us. You say that if there is to be a change the railways should be handed over not to Companies in India, but to the State direct?—That is what we think. I think all the Companies practically think that. It is the old custom, but sometimes they change; sometimes they buy out a Company, and sometimes they do not; but it seems to me that it is better to have all State lines as the contracts fall in.

2780. It is hardly likely that you would start again with the system of a Company that had so small an interest. What would you say if there could be a Company formed in India that really was substantially the owner of its line?—I think it would be a very good thing. We have received a paper on the subject this morning—a proposal for subsidiary Companies.

2781. No, I do not mean that. You say if the East Indian Company is to disappear it had better go to the State to manage direct?—Better than have the Board in India.

2782. When you have said that, I gather you are thinking of an Indian Board having the same kind of financial interest and responsibility for the East Indian Company as to-day?—Yes, the home Board, only located in India

2783. Instead of that, suppose there could be formed in India a Company holding, say, one-half of the 63,000,000*l.* of the East Indian capital and half of it held by private shareholders, would that commend itself to you at all, or would you still prefer the State?—All the Companies have discussed it together, although we are sending you separate memos., and we all give reasons why it is not possible to get as good Boards in India as in this country. There are not the leisured men to do it.

2784. We had evidence that, provided a Board was small and it had not detailed work to do and only needed a small part of the Directors' time, you might make one or two Boards in a place like Bombay. Would that be contrary to your experience?—You may say the Bombay, Baroda and Central India. What would happen to the main home Board?

2785. Suppose the Bombay, Baroda and Central India was handed over, could you get a Board in India of seven men who would be competent to manage and ready to manage, on condition that they were not asked to give too much of their time?—I do not think you could get a competent Board; much better have a State line.

2786. Your view is clearly that if the English Companies are to disappear, the alternative is direct State management?—Quite so, but I think it all depends where the Board should be as to where you are going to get the capital from.

2787. Do you think that it would be possible to get a substantial large capital in India?—I am a good railway man, but I am not a financier, and what has happened in this country as regards railways now is this: We tried to renew some debentures during the last 18 months, and the Bengal-Nagpur had to renew some also. Before that we raised for the Secretary of State 2½ millions debentures at 4 per cent. It has run out and when we tried to renew these debentures the other day at a cost of 7½, and I think the Bengal-Nagpur at 7½, the Secretary of State had to take up from a half to two-thirds. We could not get anybody to take them up.

2788. That is in England?—Yes. You ask me about money out there. I do not know. I read in the "Times" this morning—I know Bombay, I was in the consulting engineer's office and lived with Sir William Bissett, and was on that line for many years—that they have just raised 9½ crores, 9½ million, you may say, at 6½ per cent.

2789. That is the Bombay Port Trust?—The Bombay Improvement Trust. There is a good deal of patriotism about that. It would be a very paying thing to get more land. The idea is to get more land, to drive the sea back and get more land, but I doubt if you wanted to raise capital for railways whether you would be able to get it at 6½ per cent. I do not think anybody knows what money can be raised in England and at what rates, and what it can be raised at in India.

2790. We all agree that nobody knows at this moment, but imagine things to have settled down again, would not the same patriotism that induced people to subscribe to the Bombay Improvement Trust induce them to subscribe for Indian railways?—I do not know about patriotism. There may be patriotism, but I have been out of India for a long time and I do not know whether there is any. That is why I fear people will not subscribe in this country.

2791. There is no question that in this country at this moment India is out of fashion?—Yes, the Southern Mahratta are going to pay 9 per cent., but 3 per cent. of that is due to the favourable rate of exchange. Here you can buy at 94½ or 95 to-day, but it was standing at 114 until nine months ago, and I thought it would go up to 120.

2792. You are not alone in that misfortune; some of us know the English Railways. You can buy English Railway Stocks, which before the war you bought at 4½, at 9½ now?—I am aware that you know all about English Railways, and I have also taken a great deal of interest in railways and attended the International Congress. I do not think much of English Railways.

2793. I do not think we must encourage you to enlarge upon that.—I do not know whether you are going to raise money in India or not. That is the great point that you will have to consider. If you can raise the money then you do not want Home Boards; but can you?

2794. Do you care to say anything upon that, Sir Donald?—(*Sir Donald Robertson.*) No.

2795. We will assume that you have as many State Railways as you have in India at present and

probably more: that is your view—that is the development of the future?—(*Colonel Constable.*) Yes.

2796. Under these circumstances will you say in your own words how you would like to give a voice to the local community?—For the State lines?

2797. Yes.—I have had a long experience of State line management and my opinion is this: I do not know what the Boards think; you are asking me for my personal opinion?

2798. It is for you to say for whom you are speaking.—I have not derived any benefit from commercial assistance. The heads of all the railways in India, at the ports at any rate, are on the Chamber of Commerce. I was on the Chamber of Commerce and the East Indian man was also. We had an agenda, and when there was anything of interest to the railway, any dispute or a question of rates or conditions of carriage in which the railways were interested, we took it up, but most of the business did not concern me. I do not think it does concern railwaymen. Why I think the railways of India are the best in the world is because they are managed by railwaymen. In this country we have on my railway one Bombay merchant and Sir Donald Robertson, who was political and knows Bangalore (we work most of the Bangalore and Mysore Railways). We have Sir Walter Lawrence with general experience, and then there is myself, a railwayman, and Mr. Sawyer, who is also a railwayman, and Mr. O'Connell, who is an Indian Railway auditor, and the Secretary, who is a very competent railwayman, as good a man as myself. I think we manage better by not having too much of the commercial element. All our troubles are administrative.

2799. I quite follow that the Bombay Chamber of Commerce brings you in touch with the needs of Bombay?—Yes.

2800. The Bombay Chamber of Commerce does not tell you much of what the people up country want—do you get as far as Mysore?—Yes, we go as far as Poona, and we are going to make a railway into Bombay I hope.

2801. A large part of your line is in a purely agricultural district?—Yes, we are not much of an industrial country.

2802. How do you get in contact with the local opinion of the agricultural classes?—I do not know about that, but I am suggesting that the traffic men along the line, right over the line, should be members of the Indian and European Chambers of Commerce, and they would bring to the agents' notice what is wanted.

2803. I take it that the Indian agriculturalist, even if he is a comparatively big man, is not a member of the Chamber of Commerce. He would not be here?—They had no natives on the Chamber of Commerce when I was there.

2804. There were no agricultural members I suppose?—No. I had a difficult post as Manager of the Eastern Bengal for four years. There you are up against all the commercial men, and we carried most of the jute of the world on that railway. I think I satisfied them: I did not give them reductions of rates, but I improved the line. I cannot say that I derived any particular advantage from the commercial community, and I do not think it is wanted; my business was to carry the stuff well.

2805. Surely it is your business to know what the whole community are thinking and feeling. They may be thinking something quite wrong about you?—If your traffic man and agent and the traffic men all over the line are all on the Chambers of Commerce, would you get that information?

2806. I am not pretending to have an opinion, but I am asking you whether you would get in that way the opinion of the non-commercial classes?—In my day they did not make themselves felt. The European firms dealt with all that. (*Sir Donald Robertson.*) In my judgment that is a doubtful point.

2807. (*Sir Arthur Henderson.*) Do not the district officers keep in touch with all the local Boards and agriculturalists? (*Colonel Constable.*) Yes, but they should be on all Chambers of Commerce also.

2808. (*Mr. Hiley.*) Are they on now?—In some cases, I think at Cawnpore, and wherever they are, more up in the north, but I do not know that we have any on my line.

2809. (*Sir Henry Burt.*) There are very few Chambers of Commerce.—Where there are do you think they ought to be on?

2810. So they are, I think?—(*Sir Donald Robertson.*) I suggest to this Committee when they go to India they will be faced with the fact that Indians have nothing to do with their railways. I think it will be a wise move even though nothing immediately might be expected, still as time went on they would take more and more interest in railway management, and you would find that they would give some voice to the demands of the country. Even if no immediate good is derived from it, there is a very strong probability that there may be good hereafter, and you are bound to go in for some conciliatory measure when you go to India. It seems to me, as an outsider, that the Committee will be face to face with this very large volume of opinion, but the formation of these Consultative Committees must be accompanied by some appreciable mark of preference such as a pass all over the system of the Indian railways. That would act as a great inducement to a man to come forward. Combination in management would be impracticable. You come at once up against a difficulty there. There would be a great advantage in having a Consultative Board at the headquarters of the railway and the agent sitting as the Chairman, and the principal men up country and at the Presidency town on a Consultative Board to voice the opinions of people whose views the agent or the district officer (the Deputy Commissioner or the Collector) might not voice.

2811. (*Chairman.*) I think that Sir Walter Lawrence practically elaborated that this morning?—I know Sir Walter Lawrence very well, and he and I are entirely in accord on that subject.

2812. I can take it that you would attach just as much importance to the action of these gentlemen as individuals meeting somebody in the local town and representing their opinion by letter to the agent, as you would to their action as a body sitting together?—Yes, first of all they will make all sorts of ridiculous requests, that rates may be reduced to this place, and that the people employed should get passes, but after discounting that, I think you will have a solid residuum of local opinion which will be to the good.

2813. You sympathise fully with the view that the railways ought to get more in touch with their customers?—Most certainly. (*Colonel Constable.*) The conditions in India are very different from what they are in England. When you get out there you will find that the whole of the goods rates are in two books, which you can buy for 6d., with the rates from the junctions to every place. We have an Indian Conference which settles conditions out there. There is only one little thin book for all the passenger fares. They are very simple; it is not like millions of rates in England.

2814. You have mentioned the Indian Conference and we have had some papers about it. What is it? Is it a meeting of the Executive Officers?—A meeting of all the representatives. It was started by the Boards here at home. The State lines and each Company's lines are represented at an Indian Conference, which meets annually. The important thing is that by a three-fourths majority they can

settle all the conditions for interchange of traffic. They have nothing to do with rates and fares unless any particular railway agrees to that.

2815. It is rates and traffic rather than policy?—Nothing to do with policy.

2816. Who takes the chair?—It is taken in rotation by agents.

2817. It is purely an Executive Officers' meeting. The Railway Board has nothing to do with it?—No, they are under the orders of the Railway Board.

2818. The Conference is a Conference of people who are operating and managing and not of policy?—They can discuss other things but their main function is to make the working of through traffic easy.

2819. I wanted to understand what was the function of it?—They have it now in America. I made a report to the Government of India about it, but I pointed out there that we settled these things. They said: "Did you ever get your wagons back?" I said: "Always." "Did they ever pay you the penalty?" I said: "Of course they did." They said: "We do "not do anything of the sort, when we catch "somebody else's wagon we stick to it, and they "stick to ours, and we do not see our wagons for "years. Since then they have got rules like we "have."

2820. One knows that the Conference of the Railroad Association in America have an enormous influence on standardising and methods of operation and management?—The Indian Railway Conference discuss other things besides the interchange of traffic; if the Government puts anything before them they discuss it.

2821. You have heard, Colonel Constable, what Sir Donald says. Do you agree with it?—I do not thoroughly agree with him or with Sir Walter Lawrence. I have no objection to a consultative Committee, provided that they do not interfere in the administration. All our trouble is this, nine-tenths of my time and that of the Home Board and of the agent is taken up with staff matters, and what can a commercial man know about it? A railwayman with railway training would know all the conditions of the work. What does the commercial man know about a driver's work and a man's work in the shops, and what pay and leave he should have?

2822. It would be useful to tell how far you would have the support of your customers if there was a strike. I take it that even in England public opinion has a great effect?—Do you think that has any effect in England.

2823. Yes, I think you will find it has. It is useful to know how the public will regard a strike, whether they will sympathise with the management or with the men. You do think that in reference to a policy of Industrial Development Advisory Committees might be useful?—Yes, provided they do not interfere in administration.

2824. It is not their business how the traffic is to be carried?—I have said, although we are not strongly in favour of it, that we think the agent is the man to say whether he would like it or not. We do not want to impair his authority.

2825. We will agree upon that, but do you think that it would be useful to have local opinion on questions such as whether this or that industry is going to develop, and whether it is worth while providing siding accommodation for it, or what not?—Yes, I have an open mind.

2826. They have no power to settle?—I think it depends whether the agent thinks he could get on with these Advisory Boards. He has such a lot of Committees, because of staff troubles, that it would be hard to give him more work. I think it would increase his work, but I have no objection to it. I think it can be tried.

2827. (*Sir Henry Burt.*) Your point is that the existing traffic department keeps the agent fully employed as regards development?—I think so, and as the rates are so simple every native knows what he is to be charged from one place to another place.

2828. (*Chairman.*) We hear a good deal of what they call block rates. They may be simple, but they are very efficacious systems of effective development in one direction or another?—There is not much of that in India.

2829. I do not pretend to know about it?—I do not think there are many.

2830. We hear of them?—After all, the Government can interfere and put it right.

2831. The Government never orders you to alter a rate, I understand. They have not the power to do so, and you are free.—Within the maxima and the minima.

2832. Yes. They have never altered the maxima or the minima, so we have been told.—Did not they alter the maxima during the war for something?

(*Sir Henry Burt.*) No, an extra war charge was put on.

2833. (*Chairman.*) If you have power within the maxima and charge 4 pies a mile for traffic in one direction and 8 pies in the other, both of which are within the maxima and the minima, you can influence the flow of traffic.—I know certain railways that do it. I think the Government could stop it if they liked.

(*Sir Arthur Anderson.*) By mutual agreement, by request really. I have known cases where the Companies have agreed; on the Government pointing out that they sympathise with the complaints, the Companies have done it.

2834. (*Sir Henry Burt.*) I think I am right in saying that no railway in India would charge 4 pies in one direction and 8 in the other for equal mileage.—No. I know one railway has always charged more in one direction than in another. I do not know that that is right, but I suppose the Government do not object to it. I think that is within their power.

2835. (*Chairman.*) I only gave that as a sample of what might happen within your powers.—Yes.

2836. I think we all understand the point of finance. After all the amount the Companies receive from India, if you take off from it the amount that the Government would have to pay if they had raised the money as loans, is very small?—I think so. We have pointed out that the Government have 370 million pounds in the railways and the main lines, and 27½ millions is owned by the Companies.

2837. (*Sir Arthur Anderson.*) That is share capital?—Yes.

2838. (*Chairman.*) I do not think anybody has given us those figures. It is 370 millions to 27½ millions?—That is about the latest. I think the Companies have 27½ millions.

2839. That is about 7 per cent.?—Yes. There is a total capital outlay of 370 million pounds in the Administration Report of 1918-19, and the Companies have 27½ million pounds only.

2840. It is about 7 per cent.?—It is on page 5 under "Finance."

2841. You lay stress on the fact that India is becoming more and more one, and that in matters such as fixing salaries and things of that kind it ought not to be done on State lines without consideration of other lines?—I have particularly brought that in, as we have received so much criticism as to why we delay and do this and that because all this can be altered by a stroke of the pen. In the old days it did not matter what salaries they gave on the State lines. There was no unrest and the Companies managed those things themselves,

but now the moment you start giving a man in Assam some salary or alter his condition of service the man in Madras says: "Under the Trade Union "principle I am going to have that." There is one railway which has taken the lead in starting things like that without consulting others. I will not mention the name, but that railway can say the Government does the same. There is nobody in the India Office who represents the State Railways; we do not know what they are doing until we receive a private circular saying that those are the conditions of service, say, of the engineers and their pay. We are not consulted before.

2842. (*Sir Arthur Anderson.*) Is not there an informal meeting with the agents and the Railway Board before these increases take place?—It is a pity Sir Arthur mentioned that, because I was told five agents met the Railway Board and that Government showed them the scale fixed for engineers. They said: "You may like to do the same." They also told them of a revenue scale proposed for the other officers, such as traffic and locomotive men, which was to be sent home. Our agent sent it home, and when I discussed it with Sir Arthur, he said: "We "did not approve of that." Anyhow, it has been held up thirteen months.

2843. (*Chairman.*) What is the revenue scale?—Locomotive and traffic officers chiefly. The State engineers are pensionable, but all other establishments and all ours are non-pensionable. I can give you any number of examples where one railway or the State takes action before consulting other railways, and it gives a lot of trouble and is very costly.

2844. I take it as in England standardisation is always standardisation upwards?—That is so.

2845. Your general conclusion from the individual instances is that there ought to be harmony in making all these arrangements, and that you must treat India as becoming more and more a single country?—That is so; we all think that on the railways. Sir Henry Burt referred the case on behalf of his railway. The change can be made by stroke of the pen, but this is an opportunity for pointing out that we have a good deal of trouble because the State takes the action brought to notice.

2846. Do you suggest that it is always the State?—No.

2847. Whoever it is, it is equally objectionable. The status of the Railway Board, you agree with almost everybody, ought to be much higher?—Yes; I think they want more men to begin with.

2848. A larger Board with a chairman?—Yes; who ought to be a member of the Viceroy's Council.

2849. Is the chairman to be merely chairman of a Board, or what he was for some years, with the right to decide——?—Do you mean that the chairman should be able to overrule the others?

2850. Yes.—I do not offer any opinion on that.

2851. When you say that he should be a member of the Viceroy's Council, do you suggest that he should be one for all purposes for taking part in discussions on military matters?—No.

2852. He should have the status and a right to be there?—For railway matters.

2853. And to speak on an equality and not as a subordinate called in.—That is what we think.

2854. He would not be represented through anybody else, but would be there in his own right?—Yes.

2855. (*Sir Henry Burt.*) You would increase the Railway Board in numbers, I take it?—Yes.

2856. Where would you get those men from? Do you not agree that there is a difficulty now in making a Board?—It is my Board's view; I do not know much about the Railway Board, but I think three men, considering they have to look after the State lines, are not enough; you ought to be able to send a man about. If we have a row with the Great Indian Peninsula you ought to be able to send the man out to settle the dispute.

2857. You agree that it is not easy to get three men?—You have here some men, so you need not stick to India. You might get a man like Sir Eric Geddes.

2858. (*Chairman.*) Would you approve of paying the price?—Yes, I think the Railway can afford to pay anything.

2859. You would pay a commercial salary?—Yes.

2860. We have been told that it is a great objection that the Board changes so frequently. If the salary was sufficient would he tend to stop longer?—If you are going to have all railways State lines you must have a Railway Board. I have never been against it, and I do not see how else you could manage it.

2861. When you speak of inspecting something on the Great Indian Peninsula, is not that a function that ought to be for an officer and not a member of the Board?—Yes, they have inspectors all over the country.

2862 You would give them, I take it, an adequate staff?—They do not belong to the Railway Board, do they?

2863. (*Sir Henry Burt.*) The Government inspectors, you mean?—Yes.

2864. They belong to the Railway Board?—The Inspector used to be consulting engineer and inspector as well. You want them.

2865. (*Chairman.*) You want inspectors?—Yes.

2866. They need not be merely inspectors concerned with Ways and Works, you would make them also people who would be competent to deal with traffic questions and development questions and so forth?—Yes, personally I have always liked them to be consulting engineers and inspectors, but for some reason there was some row about it, and they decided to take away the power of the consulting engineers. We got local assistance under the old system. What do you think, Sir Henry? A good many think that; I do not know what my Board thinks.

2867. You do not know that the Indian Companies could raise money in London?—No, I do not, but I do not know that the English Companies can.

2868. Assume that we are going to get back to normal conditions, do you think that Indian Railway Boards would have a good prospect of raising money in England?—For State Railways, you mean?

2869. No, Boards of Indian Companies?—I think the general impression of the Home Boards is that they could not.

2870. Do you think a competent Railway Board, being able to charge the whole interest of the Government with the Government guarantee behind them, would be able to raise money freely in England?—The Indian Railway Board to make the lines with State lines or——

2871. The National Railway Board controlling any lines of a company operating any lines of the State, and having vested in them the whole of the property which is now in the Government—do you think they could raise money?—I should think so. (*Sir Donald Robertson.*) It is very difficult to say, times are abnormal. When you return to more normal times I do not see why you should not. If the money market changes you might, but I do not think anybody could pronounce an opinion on the point.

2872. Would you be inclined to put the formal guarantee of the Government of India behind the Railway Board? The Railway Board, so to speak, would give a mortgage of its property?—Yes.

2873. Would you be inclined to put the guarantee of the Government of India behind?—Instead of before?

2874. I mean in addition. Is it necessary?—Yes, the guarantee is the Secretary of State, is it not?

2875. It remains to be seen how far it is removed to India?—I think those terms might be got.

2876. The guarantee at present is by the Secretary of State as representing India and not England, so that it does not matter whether you call it the Secretary of State or the Government of India. Would you desire to have that in addition, do you think?—I think so. (*Colonel Constable.*) Before the war the Secretary of State could get all the money he wanted for State lines in England.

2877. He got it very slowly?—I think he was afraid; he could have got more if he wanted it.

2878. If he had given more liberal terms?—I do not know that the terms were bad. He thought he was involved in too much responsibility to increase the debt.

2879. You think it was timidity?—I think he could have got more money.

2880. What about the entire separation of the railway budget from the budget of the country as a whole?—That depends. Everbody would like that, but there has been a great objection to it.

2881. That is Governmental objection?—Yes.

2282. That is practically the unanimous view of the Boards?—I think so. (*Sir Donald Robertson.*) It has not only impeded work, it is very expensive. (*Colonel Constable.*) That was about the budget. (*Sir Donald Robertson.*) It is mixed up with the working of the budget system. We are having changes on the 31st March.

2883. You want that system got rid of altogether?—Yes.

2884. And a system under which the Railway Company does what a prudent commercial Company would do. It would say: "We have had a good "year; we will keep the extra profits," and so forth, and would plan development years ahead, as any great manufacturing business would. That is your view?—Yes. (*Colonel Constable.*) The railways would finance themselves, not the Government of India raise loans, and if there was a famine on or that sort of thing—at present the Government take any surplus.

2885. That you want to stop?—Yes.

2886. Your Board would have to say to the Government "6 per cent. or some other figure on "your advance is a fair charge; the rest we retain." That is your view? (*Sir Donald Robertson.*) Certainly.

2887. In that case, I take it you would get rid of the control of the Finance Minister altogether?—(*Colonel Constable.*) I should think so.

2888. (*Chairman.*) There would be presumably a Finance Member of the Railway Board?—Yes.

2889. You would get rid of the Finance Minister for India altogether?—We thought in normal times that the Indian Railways were so sound, and could pay such good dividends; that they could raise their own money, and that it should not be raised and placed with the general revenues of India and disposed of as they thought proper. What can be done in the future I do not know.

2890. You say that the control of the Government over rates and fares has been capricious?—You asked us in the Terms of Reference to say something about it; I do not think there is much to complain of.

2891. You talk of the Conference rules doing something; that is the Government action, is it not?—That is the Railway Conference I was talking of.

2892. That is not a question of Government control?—I think a rule like that is subject to Government approval.

2893. Have you agreed that a three-fourth resolution binds the minority?—Yes, but only for interchange of traffic.

2894. Not for rates?—No. Two or three railways can settle amongst themselves, and it has to be confirmed by the Boards, but in the other matter, *i.e.*, intercharge of traffic, the Boards do not interfere at all. At present the Government has absolute control of rates and fares, and it has been a very good thing too.

2895. I must have understood you wrongly, because I do not understand that the Government has?—Control of maxima rates and fares. Some are asking that the maxima rates and fares should be raised.

2896. That is another story?—That is what I mean. If they wish to work on some other policy than that of a commercial nature, Government could make the maxima rates and fares low and reduce the net return so as to get a very small dividend.

2897. You mean they could reduce the maxima?—Yes; it was open to them at any time to alter the rates and fares.

2898. So far in seventy years' experience they have never done it?—No; but some of us think if you were to have too much Indian influence out there they might be able to exert sufficient pressure to reduce rates and fares for the general good of the country. Then the railways would be in a bad way.

2899. How are you going to stop that? What do you propose?—I think it is an advantage to have some Boards at home who would resist that pressure.

2900. They can only object; they cannot stop it because your contract is that the Secretary of State may do it?—Yes.

2901. You can only say that it is very unfair and very unwise; you cannot say, "You shall not"?—That is why we think that the Companies should not be bought out and turned into State lines now.

2902. Now they make protests which may be futile?—No, nor that they make protests which might have some effect. They may say, "You will "not get more capital if you treat us like that."

2203. You have only reserved for them the power of protest?—That is all they can do at present.

2904. (*Sir Arthur Anderson.*) Do I understand you to say that the Boards are contemplating asking for the maxima to be raised?—Yes.

2905. Do you think it might be an awkward precedent if it were to be acted on and taken advantage of for lowering it again later on?—Even below the present. You know all over the world rates and fares have been increased. Wages have gone up everywhere. Why should the Indian railways be the exception?

2906. I am merely putting that these present conditions have been in force for many years without being altered. If they are altered in one direction that may facilitate their being altered again in the reverse direction?—We should not object to that.

2907. (*Sir Henry Burt.*) It is a question of the cost of working?—Yes, but if you have no money coming from this side and no Boards here there might be political pressure put on that side, never mind whether the railway pays or not. People in this country say you ought to travel on trams free and all sorts of things of that kind. They may hold those ideas by and by, and the more boards you have on this side with a little interest in it the better it would be, I think.

2908. (*Chairman.*) I will not go into the question of rates and classification. We have tried to keep ourselves to general considerations here in England, and we shall deal with the other subjects

in India, so that I will leave it now. You say you do not know why this Committee is sitting. You will not blame us for that. It is sitting.—Every Company here will say the Boards ought to be here, and all the people in India who want to get on the Boards and all the Indians will say they ought to be out there.

2909. We have to form an opinion between the two. You suggest that if Indians want to have Indian railways they had better subscribe the money and make them?—Yes.

2910. Does that mean that you would suggest there should be a new Indian trunk line?—May I refer to a letter which has come to hand this morning?

2911. Yes.—I believe it has been held up in the India Office. But this morning I got a letter telling us that the question of forming Companies in India affiliated to the main lines has been considered by the Government of India, and they say that they are going to bring it before this Committee, and that we are to write out to our agents to get their views to present to the Committee. That reached me this morning, although it might have been sent months before. That is no fault on the Companies' part. I should like that to be placed on the notes as one reason why we should not be blamed for these delays. I think the proposal that is made is a good one but it will take a lot of time to consider it. We shall have to wait for the other Companies to discuss it. We shall probably have to alter our Articles of Association and have shareholders' meetings. The Board, of course, have not seen the letter yet, as I only received it this morning, but I think personally it is a good proposal, namely, that Indian rupee capital shall be raised through the agency of a Company domiciled in India but affiliated to an Indian guaranteed Railway Company domiciled in London; that they shall share in every way in the dividends earned by the main line Company, but that they shall be paid in rupees. They will escape English income tax and the old Company will get its dividend in sterling.

2912. I do not think I quite follow this.—Have you not seen this letter, Sir?

2913. No.—May I read it to you?

2914. You have put the point before us. We are rather running over our time. Let me see if I understand. Suppose an extension of the Bombay and Baroda is required from A to B, a capital of, say, half a million in rupees will be wanted?—What is said here is: "The formation of an affiliated Indian "domiciled Company with a local directorate com-"posed largely of Indian gentlemen of standing, "the affiliated Company to bear the same name as "the London Company." It is not only to make extensions and branch lines, but it is to provide money for the main line Company.

(*Sir Arthur Anderson.*) It is with a view to getting out of English income tax.

2915. (*Chairman.*) I have not seen that letter—It says: "All capital raised by the Indian Company "will be raised in agreement with the London Com-"pany's Board and under the sanction either of the "Government of India or of the Secretary of State. "All rupee share capital so raised shall rank in all "respects with the sterling capital of the London "Company both in respect to guarantee and in "the distribution of profits earned by the combined "undertaking. The sole difference between the "sterling capital of the London Company and the "rupee capital of the Indian Company would be that "dividends in respect to the latter would be payable "in rupees only and in India. Investors outside "India would not be debarred from subscribing to "or from owning shares." Provision is to be made for the Company to be under the control of the London Board in all matters affecting the policy and working of the combined undertaking. The agent in India of the London Company is to be *ex officio* Chairman of the Indian Company. The chief work of the Indian Company is to be the examination of promising projects for the extension and improvement of the main system and of devising means for financing such.

2916. In other words the Indian Company is to raise capital and hand it over to the English Company to do what it thinks proper with it?—Yes.

2917. (*Mr. Hiley.*) Where does that suggestion come from?—It is a Railway Board proposal. The letter says: "As the Railway Committee "are shortly proceeding to India it would also "be desirable in order to save time if your "Company could simultaneously either instruct "your agent in India as to the views which they "desire to put before the Committee on the subject "or, if preferred, communicate direct with the "Railway Board in the matter." I very much doubt whether you will get the views of the Board in time, because it will take a lot of time to think it out. Personally I think it is a good proposal.

2918. (*Chairman.*) I take it you would be entirely satisfied if somebody provides you with capital and leaves you the control of it. There is no reason why you should object?—No, none of us do. If you can raise capital in India by all means raise it, or raise a portion of it.

2919. Turn the proposal the other way round. Would you personally be prepared to raise capital and hand it over to people to deal with so that you had no control over it whatever?—(*Sir Ronald Robertson.*) In the scheme it is mentioned that the rupee Company will have the privilege of suggesting schemes and ways in which the property can be developed.

2920. (*Mr. Hiley.*) But no control?—No control. (*Colonel Constable.*) It says, "The chief work of the "Indian Company to be the examination of promising "projects for the extension and improvement of the "main system, and for devising means for financing "such."

2921. (*Chairman.*) That is quite a different proprosal from what you have in your memorandum, that if Indians wish to make and work railways they can carry out that policy immediately by subscribing the money?—That is another way.

2922. That is that Indians should manage their own capital?—I hope the Committee will be able to get them to do so.

2923. (*Mr. Hiley.*) In competition with existing railways?—Yes, why not?

2924. (*Chairman.*) In competition?—Yes. The control would be just the same over them as it would be for us.

2925. Competition consists in two Companies with routes from A to B struggling for the traffic?—But you are not to be allowed to make a second line from A to B until you have heard the views of the other Company and the matter has been well considered.

2926. I thought you desired to do that?—No. If there is difficulty in raising enough money in England by all means raise some in India, but have the same control over it as you have over it here.

2927. You used the word "competition." That is why I raised the point?—I thought you meant competition in raising capital.

2928. Do you favour this capital being raised in India for other Companies in preference to capital being raised to assist the Companies at present in existence. There is only a limited amount of capital that can be raised in India?—I do not know.

2929. You can presume that?—The Board said at the end of their memorandum that they considered that if Indians chose to subscribe the money out there, they could make any lines they liked; but, of course, they would be under the same control as the Com-

pany lines here. The control would not be different. But this morning another proposal comes in which my Board have not seen yet. Personally, I say I think it is a good idea.

2930. When you say Indians can make any lines they like, that means to say any lines that the Government allows them to make?—Yes.

2931. Do you think it is desirable to make new main lines?—The Bombay and Baroda has just had a proposal for a new line up near Delhi towards Bombay.

2932. Do you think it desirable that that should be a separate independent Company?—I do not know.

2933. If you have not an opinion I do not mind?—The Great Indian Peninsula will say they would like to make it and the Bombay, Baroda and Central India will say the same. The Government will go into it, and they have the decision in their hands.

2934. If you were the Government of India you might hesitate whether you would give it to the Great Indian Peninsula or the Bombay and Baroda?—Yes.

2935. Would you be inclined to give it to quite a new separate Company?—I would let them have a shot at it. They have to stand the same examination as either of the other Companies who want to make this shorter route. The proposal will all be examined, and it will be seen how much it affects the other lines; and it will be arranged that they cannot divert all the traffic.

2936. You do not see any objection in itself to adding to the already considerable number of separate undertakings?—I think, on the contrary, that some of the administrations might be doubled up. I think they are too small.

2937. Then you do not want to get new ones?—There may be places in India where they want new lines and no Company has offered to make them yet.

2938. Would you reach them by an extension of an existing Company or the creation of a new Company for the purpose?—I think it ought to be by an extension of an existing Company, if it could be managed more cheaply.

2939. I think most railwaymen would agree with that answer?—I think this last proposal is a good one.

2940. I have not seen it. Is it a covering letter of a Railway Board despatch?—(*Sir Donald Robertson.*) No; it has just come from the Secretary of State.

(*Chairman.*) Is the whole thing one letter from the Secretary of State, or does it cover a Railway Board despatch?

2941. (*Sir Henry Burt.*) I believe it covers a report from the Railway Board and a despatch?—(*Colonel Constable.*) The Secretary of State says he has received a suggestion from the Government of India for raising rupee capital, and so on.

2942. (*Chairman.*) What is the date of it?—Yesterday.

2943. What is the date of the despatch to which it refers?—They take care not to tell us that.

2944. (*Sir Henry Burt.*) It was received in March last as a matter of fact?—I am asked this morning to put it before the Committee and tell my Board what I think of it. The letter says that an outline is attached, "The suggestion will be brought "to the notice of the Railway Committee, before "whom your Company will later have the oppor- "tunity of expressing their opinions on them."

(*Chairman.*) I have not had a copy of it.

(*Sir Arthur Anderson.*) I have a copy of it.

2945. (*Chairman.*) None of the gentlemen who have given us evidence in the past few days could have seen it, because the letter was not received until this morning?—If I do not bore you, may I make one remark with reference to this. Sir William Bissett, who was a very good financier and the Chairman of the Southern Mahratta and Bombay and Baroda some years ago suggested a scheme something like this for the branch lines, but he proposed that the capital should be raised in this way—that the ordinary capital should be chiefly held by the main lines, and he was going to use the provident fund and the Company's reserves for that purpose. The other share capital was to be participating preference capital out there. The Government did not like it, and it is dead now, because the Bombay and Baroda and the Madras and Southern Mahratta have made all their provident fund assets over to the Government, and they cannot use them. For reasons I have told you before, I do not think the Madras and Southern Mahratta can pledge their reserves. (*Sir Donald Robertson*) I should like to congratulate the Committee on the appearance of this letter, which will much facilitate your work in India. Had it been published before it would have rendered the assembly of this Committee largely unnecessary.

2946. It is only one scheme?—It is a very important scheme.

(*Chairman.*) Thank you both very much for your evidence.

The witnesses withdrew.

MR. ROBERT MILLER, called and examined.

See Written Statement No. 10, Vol. IV.

2947. (*Chairman.*) You are appearing on this occasion in one of your capacities as the Chairman of the Bengal-Dooars Railway Company?—Yes.

2948. You are also Managing Director of the Bengal-Nagpur Railway Company, are you not?—No, I am the Chairman of that Company also.

2949. Have you any other railway affiliations?—Yes. I am an ordinary Director of the Burma Railways Company.

2950. You have been in India all your life?—I went to India in 1869.

2951. As a merchant in Calcutta?—First to Madras, and I shifted to Calcutta in 1871.

2952. What is the name of your firm?—Hoare, Miller and Company, London.

2953. You are speaking to-day on behalf of the Bengal Dooars Company?—Yes.

2954. The only clause of the terms of reference in which the Directors of that railway would appear to be interested is Clause 1—that is, the method of organisation and policy; State ownership and operation; Company domiciled in England, Company domiciled in India, or a mixed Company, partly Indian and partly English?—Quite so.

2955. With regard to the Bengal-Dooars Company, you are mainly concerned with jute, are you not?—Tea mostly, and jute and passengers.

2956. You have sent in a précis of the contracts, and statistics and a statement of the capital expenditure. We will not deal with those now You are purely an independent Company?—Absolutely.

2957. And you can pay any dividend you can earn?—Yes. There is a certain limitation imposed upon us. If we earn beyond a certain amount in gross receipts, then the Government of India have the power of coming in in connection with special rates and fares and charges which we may make to our customers. They will say "You have made

"more than a certain interest gross on your capital, "therefore you must now come down," or, "We "may ask you to come down in the rates and "fares you charge to the public." But that contingency has not yet arisen.

2958. Is that specially so expressed in the contract?—Yes.

2959. The ordinary contract is in the form of fixing maxima and minima?—They have fixed maxima and minima for us; but they say, "If you "make more than certain gross earnings, and if you "also work up to the maxima, we may interpose and "say, 'You must reduce your maxima'" But, as the contingency has not arisen, it is practically a dead letter.

2960. In the other Companies there is apparently a power to reduce the maxima and to increase the minima at the sole pleasure of the Secretary of State?—I believe so.

2961. In your case it is coupled with a condition?—Quite so. I think I am accurate in saying that.

2962. (*Sir Henry Burt.*) I think yours is the only contract drawn in those terms?—I believe it is. I may tell you that the Railway is a peculiar one. It was created, you may say, under the influence of certain owners of tea gardens in the Dooars. Those tea gardens were very inaccessible. The rivers are subject to flood—in fact, they are subject to disappearance altogether; the roads were in an alluvial soil, and were very bad. The tea owners were obliged to carry their tea by cart under difficult circumstances, or by means of dug-outs—boats—lashed together and liable to be lost. As they said, the land up there was beautifully situated for tea, and the tea gardens were susceptible to great extension. They said, "We cannot put up with "this; we had better make a railway"; and after considerable difficulty in those times—because the policy of the Government in the matter of building railways and assisting railways has been somewhat of a vacillating character, and not always the same—a railway was built.

2963. Your railway is practically thirty years old?—Yes.

2964. What dividend do you pay now?—8 per cent. We gave a bonus last year. The issue capital of the Company is 928,000*l.*, just short of a million.

2965. That is the total capital?—That is the total capital of the two lines For some reason or other there are two contracts—one for the original line, and then when we wanted to extend we got another contract on other terms. I do not quite know why.

2966. The Bengal and North Western has 14, so that I do not think that you have very many?—928,000*l.* is our total capital, but of that sum capital owes to revenue 168,000*l.*; so that instead of putting our money away towards depreciation, we have put it into the railway.

2967. You have put it into the road?—Yes.

2968. So that now the revenue can afford to meet extra maintenance?—We have no debts.

2969. That was only by the way. You were telling us about your difficulty in getting land for the original construction and for rights of access?—There again I shall have to quote ancient history. At the time Sir Charles Elliott was Governor. I do not know whether he knew that part of the district or not, but at any rate he said in emphatic terms that not a yard of land should be given to the railway beyond what was necessary to lay the rails and build the platforms; that he would not allow the land of a single native cultivator to be expropriated more than was absolutely necessary for the purpose of the railway. I know the country fairly well, as I have been there several times; and seeing that a large proportion of it was swamp, where the cultivator went about in a boat and set his rice seed on the surface and let it sink gradually so that it became a rice crop when the land dried, and another large portion of it was jungle, we could not understand what the object of restricting us in the matter of the acquisition of land was.

2970. I suppose the Lieutenant-Governor was not a railway expert?—I knew him personally and I believe he was not a railway expert.

2971. I assume since you have had a Railway Board that kind of thing would not happen?—The Railway Board is not only composed of men of business, but also of acute engineers, who know what a railway is. They would not have stumbled in that way.

2972. Then you say in your précis that the widespread tea-lands in the foothills were isolated from the State Railway, that is the Eastern Bengal?—Yes.

2973. Your view is that the Eastern Bengal should have gone up there, but they did not?—Certainly they might have gone up there.

2974. Apparently it would have been good business to have gone, as has been proved by your success?—Yes, it would have been. At one period of our history a proposal was made that the Eastern Bengal should take us over, but the then manager (I think he was called manager at the time) of the Eastern Bengal demurred to it on the ground that if he took it over he would have to raise the standard of the line very much.

2975. Of your line?—Yes, which is below the standard of the Eastern Bengal. The Eastern Bengal is a very well-constructed line—heavy ballast, heavier rails, and all that sort of thing. It has to carry very much heavier loads than we have to carry. I cannot remember what the weight of our rail is at the moment, but compared with the Eastern Bengal it is a light rail.

(*Chairman.*) Can you give us an answer, to go on the note, Sir Henry, to this question? Is there more than one standard of construction of railways in India? Are there recognised A, B, C standards?

(*Sir Henry Burt.*) Yes, I think you could say so. You would not necessarily make the branch lines up to the standard of the main lines.

(*Chairman.*) There is a recognised specification, so to speak?

(*Sir Henry Burt.*) I am not sure whether there is an actual specification.

(*Sir Arthur Anderson.*) No, not exactly.

(*Sir Henry Burt.*) The Chairman was referring to a definite specification.

(*Sir Arthur Anderson.*) There is no actual specification.

(*Chairman.*) Are all the State lines made up to standard A, or up to the same standard?

(*Sir Henry Burt.*) Speaking generally, yes.

(*Mr. Hiley.*) All the broad-gauge lines would be built to one standard.

(*Sir Henry Burt.*) All the main lines. Yes.

2976. (*Chairman.*) Is your line a broad gauge or a narrow gauge?—Metre gauge.

2977. What is the Eastern Bengal?—There is also a metre-gauge railway where we join it.

2978. (*Sir Henry Burt.*) The portion which connects with the Dooars line?—As I was saying, the General Manager of the Eastern Bengal Railway demurred to taking over this branch on the ground that if he did so he would have to raise the standard of the Dooars Railway up to his standard, that he would have to heavily ballast it, increase the weight of the rails, and do all manner of things which, for the purpose for which the Bengal-Dooars Railway was constructed, would be quite unnecessary, because the traffic was tea, unbaled jute and passengers.

2979. (*Chairman*) Not heavy loaded stuff?—Bulky, but not weighty; and in order to do that

such capital expenditure would have to be incurred as, in his estimation, would not remunerate him.

2980. That seems to be a very good reason?—It is a good reason, with a big defect in it, because he did not remember that the line is good enough for its purpose, and that by low capitalisation and low working expenses traffic bred traffic, and that it fed his main line, for which we get no kind of return whatever.

2981. From the point of view of the Manager, it was a good answer, because he did not wish to take it over on its present basis?—I take the liberty of saying that it was an exceedingly narrow-minded reply.

2982. Then you say there is a strong objection to State management in the constant changing of of the superior staff?—I do not say constant, but "very frequent."

2983. Is that in any way essential?—How do you mean?

2984. In the case of a Civil Servant in England, he certainly does not change very frequently. The thing does not seem to have any necessary connection with the fact that the railways belong to the State?—It happens.

2985. If that system continued it would be an argument against State Railways?—Yes.

2986. Do you see any reason why the system, being bad, should not be altered?—I have never been in the Government service; I have never been a Government official; and I am not competent to answer that question. Out of my own inner conscience I think there may be very grave reasons against it. I look back on the Bengal-Nagpur Railway, with which I have been familiar for thirty-three years; the personnel of that line is practically the same to-day that it was thirty years ago. The customers of the line, the traders, merchants and manufacturers, and the adjoining railways, are familiar with that railway, because they have practically the same people to deal with and the same policy. The same atmosphere has existed in that railway from the start up to the present time.

2987. You keep your staff?—Yes.

2988. How do you do it? Do you pay them higher salaries?—Not at all. We will not pay our men more than our neighbours pay theirs. We cannot bribe a man away.

(*Chairman.*) How do you do it? Is the reason because they like to stop with you?

2989. (*Mr. Hiley.*) Is it because of a pension fund?—Oh dear, no.

2990. (*Chairman.*) There is no special advantage; it is a matter of personality?—We have got a very good *esprit de corps*—a very sound *esprit de corps*. People like coming to us, and they do not like leaving us.

2991. That I understand from you does not happen—but it surely could happen, on the State Railways?—Without mentioning any names, on the Eastern Bengal State Railway there was a certain Manager who greatly pleased his customers in Calcutta. It is a jute line and a tea line; it is not what you call a mineral line. His practice was this. I know it, because I was backwards and forwards to Calcutta during his régime. I found that the jute merchants and the tea merchants when they had a dispute with him settled it by interview mostly. It was not a case of long correspondence. In the course of the alteration of the Managers throughout the State Railway system, the premier post fell vacant, and this man happened to be first on the list. Therefore, being the first on the list, he had to go to the premier post. I do not know why I say "therefore." At all events, the Bengal Chamber of Commerce, the National Chamber of Commerce, and the different bodies said: "Please allow this gentleman to stay here." "No, being premier officer, he "must go to the premier post," and another man came in.

2992. You do not know whether he wanted to go?—I did not ask him.

2993. Anyway, he was moved, as a matter of fact?—Yes, greatly to what I may call the disgruntlement of the Calcutta people.

2994. Presumably he got a higher salary?—I do not know.

2995. You think continuity of policy in a railway is of real importance?—It is of real importance.

2996. (*Sir Henry Burt.*) The point that you are making now was taken up very strongly in Mr. Robertson's report?—I believe it was. I met Mr. Robertson in Calcutta at the time, and we had a great deal of conversation about that. Supposing you are the head of a great organisation like a commercial undertaking, would it not be a very important factor in your mind to keep your staff in good discipline and known to you? That is the idea in our line.

2997. (*Chairman.*) Apart from the Bengal-Nagpur, do you think a Company organisation tends to do that more than a State organisation?—I think so. I have had very little, in fact no practical opportunity of knowing what other Railway Companies do. I have always paid attention to our own.

2998. Coming back to the broad policy question, have you anything to say on the removal of Company management to India?—I do not think I can give a broad comprehensive answer to that I think in some cases it may be advantageous.

2999. Let us take a concrete example. You know Calcutta?—Yes.

3000. All the capital of the Bengal Dooars Company is English capital, is it not?—Yes.

3001. Supposing, for the sake of argument, somebody made a satisfactory offer and bought up your shares. Supposing Indian capitalists made an offer that you think it would be worth while for your shareholders to accept, what would happen?—I think anyone who did that might be buying a pig in a poke, because he might buy the control of the shares easily enough in London by offering an adequate price, but when he took his business in hand in Calcutta he would then have to deal with the tea-planters and the tea agents who are the customers of the line, and they might say, "We are extremely well satisfied with "the way the Board at home treated us." The Board at home treat their agents in this way; they get the best agent they can find, and they give him what we may call plenary powers. Speaking as the Chairman of the Bengal Dooars, we recognise that any man may make a mistake, but our present man has not made any mistakes. He is in constant conference with us; we give him full powers; and we told him when he was home the other day, "Look here, make "as few mistakes as you can. Do not make any if "you can possibly help it; keep us well informed; "ask our advice, but never tell your customers 'I "'must refer home to my Board'; if you do that "you are wrecked. You are to all intents and "purposes so far as you and your customers are "concerned 'the Board.' All we ask you to do is to "tell us what you are doing or what you are "proposing to do, and why you are doing it."

3002. Supposing the capital was transferred and the agent remained, would you be able to form a Board in Calcutta to manage the railway?—I think the people who own the gardens up there, who are the principal customers of the line, would form a Board of their own.

3003. They would all be English, of course?—They might be, unless some Indian capitalist or Indian speculator bought the shares.

3004. You think they could form a Board. Would your agent have any difficulty in carrying that Board with him?—It depends on the Board.

3005. I want your experience of Calcutta?—I think he would get a very good Board in Calcutta for that particular railway.

3006. Carry it a stage further. What would you say supposing it was proposed to make a Calcutta Board for the East Indian Railway?—That is a totally different proposition. I do not think it is a feasible proposition. I was many years resident in Calcutta. I was a Port Commissioner; I was a Director of the Bank of Bengal; at one time President of the Chamber of Commerce, and I entered into those duties in my own interests—the Port Commission because I was the consignee of a line of steamers; I was on the Bank of Bengal because I wished to learn the movements of money; and I was, very much against my will, President of the Chamber of Commerce, but this was all in the direct path of my daily business. But to take the position of a Director of a great undertaking like the East Indian Railway, it would not have paid either myself or the railway. I should have had to get the permission of my partners at home, which they certainly would not have given me. They would have said: "We sent you out to manage our "business, not the business of India." I do not believe it is practical to get men who have at one and the same time the ability and the leisure.

3007. How much time are you assuming a Director would give to the East Indian Railway Company's affairs?—It depends on what he was asked to do. There has been a consultative committee in Calcutta for many years. One of my partners, who is now dead, was on the consultative committee, and I asked him what he thought of it, and he said: "It was interesting but ineffective."

3008. Supposing the Board acted in the manner that the Board of an English railway company acts, and that the members gave the equivalent of one day a month to the work, would you have hesitated to give that amount of time or would your partners have refused to let you accept the position?—It would have been taking the position under false pretences. I should have occupied a false position.

3009. Do not say that, because many respectable people in England do it.—I only know intimately one Director of an English railway, and he is kept pretty busy.

3010. Of course there are a few, but I think you may take it that the average Director, who may be really a very useful man to his Company, does not give more than one day a month to the work?—I think self-interest must answer the question. Suppose I am a resident in Calcutta and in active business as a senior partner of a firm in Calcutta; suppose I am asked to go on the Board of the East Indian Railway; I say to myself, "I am not a railway "man; I am not familiar with the engineering or "the very intricate and very important traffic "questions which arise every day, and which a "traffic manager has to try, probably with a wet "towel round his head, to solve and solve with im-"partiality. I am not familiar with such problems, "but there is the temptation that, being a merchant "in commodities, wheat, linseed and that sort of "thing, I might be able to use influence to get the "lowest possible freight imposed in getting my stuff "from Delhi to Calcutta." That would put me into a double position and men would dislike it.

3011. You are not going to tell me you would go on the Board from that point of view. Do you think it might be a temptation?—I certainly think it would be—a temptation that all upright men would resist; but then the best men have other things to do.

3012. Does it come to this, then, that if the management of, say, a great Company like the East Indian is to be transferred to India, it must be transferred to State management?—No, not necessarily.

3013. I gather that is the opinion of the Indian Directors as far as we have gathered it from them?—I think so, a partner having been on that Consultative Committee for some years.

3014. That is the East Indian Consultative Committee?—Yes; I think that function could be perfectly well performed by the Bengal Chamber of Commerce or by the National Chamber of Commerce.

3015. Did your partner imply that he was no use?—Not exactly, his function was chiefly to listen.

3016. Sir David Barbour took another view. I think he would have said that your partner disparaged his value. Clearly they had no functions, but their advice is valuable.—I do not think they were consulted very much. They were told what had happened rather than what was going to happen.

3017. Even that is a useful function sometimes.—He did not think he was made as much use of as he might have been.

3018. That is very clear to you?—Yes.

3019. Have you any views with regard to the constitution of the existing Railway Board in India?—Yes. Frankly, I am somewhat disappointed in the Railway Board. I do not believe it was the fault of the Railway Board, but I was disappointed because I hoped that the Railway Board as constituted would act as a guardian, a watch-dog, a protector, a policeman, on behalf of the great railway asset, would stand as a buffer between the great railway asset and the financial departments. I hoped that it would.

3020. Your feeling is that the buffer has got pushed in?—I think so. The financial department, being after all the essential department of any Government, was a bit too strong.

3021. Would you be inclined to support the suggestion that the railway organisation shall administer and manage its own finance?—Yes, I should very much prefer that.

3022. You would then say to the Finance Minister, "You have invested so much capital, we "will give you such and such a return on it. How we "earn the interest that we owe you is our buisness "and not yours." That is your attitude?—That is a strong way of putting it, but it comes to that.

3023. We may just as well say what we do mean. Have you any views about how the Railway Board should be constituted?—Yes.

3024. Clearly it would have to be given a stronger position?—There would have to be a Railway Minister entitled to sit in the Executive Council of the Viceroy.

3025. Would you force him to sit there for all purposes?—That is a matter of detail. Yes.

3026. If you do, of two things, one, it seems to me: say whether you think I am right. If he is going to be a Minister, he has got to be a man of affairs; he has got to concern himself with land revenue, War Office business, and every other business that comes before the Government of India?—Is that so?

3027. Is not that so if he is a Minister?—Is that so?

3028. As I understand, the Executive Council is a Cabinet, and our Cabinet discusses Home Office business one day and Colonial Office business the next, and so on.—I speak with great diffidence on such a subject as that, but it was in my mind that some question of that sort arose quite recently in connection with Mesopotamia. I think the then Finance Minister was roundly accused of all the crimes connected with the Mesopotamian disaster, and I think his reply was somewhat thus: "I was consulted on the finance of the matter. I "was not consulted about the military arrange-"ments, or whether this thing ought to be done or "not. When I was consulted about the construc-

" tion of a railway they tried to put it on me that " the railway would pay, and I did not believe it " would, and that is the reason why I objected to " it. I objected to it within the limits of my own " authority."

3029. I have seen despatches from the Government of India, and they are signed by all members of the Executive Council, so that there is a collective responsibility?—Yes, I suppose a very strong Minister for Railways would say: " I " will sign a minority despatch," or something of that kind.

3030. The real point is which do you want—a man of business, not necessarily a railway man, or do you want a Minister who is a real railway man, and who confines his attention to the Railways and takes no responsibility for general government?—Would he be strong enough to stand up to the Finance Minister? Therefore I want the Railway Minister to be a man of business, a man of affairs, a man who is capable of and who actually realises how vital it is to a country to possess a sound railway system and who can balance his view in connection with finance. Up to now the railways have subsisted on the scrapings of credit. I want a Railway Budget.

3031. If it is his own job.—Yes. Would he be strong enough?

3032. That is a question of personality, is it not?—Yes.

3033. He could say to a Finance Minister, " So long as you get your twenty millions a year " interest on your debt, that is all you have got to " do with it "?—That would be a very good way of putting it, I think.

3034. The Finance Minister has nothing to do with how he earns it?—Who is to give him the money, the Finance Minister?

3035. That would assume he had his own budget, an independent budget entirely.—I would sooner myself see a Minister for Railways with full power to speak for himself in Council.

3036. I think every witness has said he would have that, but whether he should take part in the Council proceedings only as representing the railways is another matter.—I think he would be in an inferior position unless he was a full colleague of the other members of the Viceroy's Council. Otherwise I think he would be looked upon as second class.

2037. You do not think you could do that by giving him a definite position?—I do not think so. My opinion is not worth much on the point.

2038. Have you any special view about the possibility of having a duplicate Board in England and in India, or a conjoint Board, or anything of that kind?—The suggestion is new to me.

2039. Did you ever know that sort of thing anywhere?—No, the suggestion is new to me. Would the collective London Board have control?

3040. I do not know. I am asking you whether you can see any way of either dividing authority with definite barriers between the two, or on the other hand sharing it?—I really do not see any way better than the existing way. If you have a Company domiciled in London with a London Board, and an agent and an establishment in India working thoroughly in harmony, the two together with constant access to and conference with such bodies as the Port Commissioners, Chambers of Commerce, Banks, and so on, ought to do good work.

3041. That is giving the Indian public no formal voice in the management of their own railways?—It is open to that objection.

3042. Is that a practical policy to continue?—I am of opinion it must be amplified.

3043. And how are we to get something that will satisfy them?—You do not see your way to share it with an Indian half of the Company, so to speak, and gradually to transfer. How, then, is it to be shared?—I do see an opening for a half-way house.

3044. If the Indian people say: " We must be allowed to share "; you go further, and say: " You must take it all." Is that what it comes to?—That is taking a pessimistic view. I take a more hopeful view. I think that would be sheer disaster for this country, and for India too. I do not think they are capable of doing it. They might be capable after many years of tuition, learning, and bitter experience. I do not take such a pessimistic view. There may, after all, be a half-way house. The half-way house would have to be in the nature of a Railway Committee sitting in India to deal with a distinct sphere of duty. For instance, a Railway Committee sitting in Calcutta might deal with the Eastern Bengal State Railway, a good portion of the East Indian Railway, and practically the whole, I think, of the Bengal-Nagpur Railway. But to make a Committee of that nature dealing with all the East Indian Railway, which runs into I do not know how many different countries, would, I think, be an impossibility.

3045. You would at least, I presume, in the first instance allow this Committee to consist of nominated members?—Yes.

3046. What functions would you give them?—Consultative, but not executive.

3047. Sir Walter Lawrence suggested a system to us this morning, and Sir Donald Robertson agreed with it, under which, along the line of a Company, there would be a certain number of representative Indians whose names would be put forward by the local Collector and the District Superintendent, probably jointly, and they would form a body that the agent would meet occasionally and discuss matters with. At the same time, they would be on the spot in their own local centres.—That is much what was wandering about in my own mind, a local committee to deal with a certain sphere of territory, which would be composed of men representing certain districts within that sphere, but without executive authority.

3048. I think his view was that their position as local intermediaries between public opinion and railway organisation would be almost more important than their membership of a committee that met at intervals. Would you differ from that?—I think that has some foundation of a good scheme.

3049. And his idea was that they would be gentlemen of position; that they would be given a nominal salary; that they would be given a pass on the railway; and that they would be given some decoration to prove their official position. That seems to you a satisfactory kind of scheme?—I think it is the foundation of one.

3050. And that clearly can be applied equally to a State as to a Company system?—Yes. After all, it is a scheme I have often thought of. I have never discussed it, because there is so much difference of opinion; but I have always had it at the back of my head that having regard to the progress of India, this country cannot go on

developing India so far as telegraph and steamer services are concerned, and then expect the people to remain in the same condition that they were in fifty years ago. It is impossible. I do honestly think that there must be some point of contact between the people who live in the country and the railways by which they are served. But I do not believe in a Local Board of Directors. I believe that is too big a job. You will not find the right people to occupy that position. They would be too fond of interfering with the Agent, and there would be all sorts of corruption in various shapes and forms; but a consultative committee would be useful to connect with public opinion.

3051. So far as it is a meeting of a committee it is in line with what has been done in a good many countries—Germany, for instance—with conspicuous success; but so far as I know the novelty of Sir Walter Lawrence's suggestion is the localisation of it, and recognising the local gentlemen in the local towns as the natural medium of communication between the organisation and the public.—I have no practical knowledge at all of South India, but I cannot conceive of a little parliament, so to speak, that would equally and effectively represent the south part of India and the Bengal part of India. I think you would have to divide India into spheres of influence.

3052. It would really have to be in connection with the railway organisation, would it not?—Quite.

3053. It would have to be railway geography, not political geography?—Yes. I think there might be readjustments if it is possible under existing contracts, of the Railways themselves. I think in all probability the breaking up or the transfer of the East Indian Railway might offer an opportunity for that being done. I never could see why there should be an Oudh and Rohilkund State Railway and an East Indian State Railway. The one is a feeder to the other; the one is a branch line into a main line.

3054. You would throw them into the Eastern Bengal; you would throw them together?—The Eastern Bengal has peculiarities of its own. It is devoted to a particular sort of traffic. It runs through a country of rivers. It is more or less of a special undertaking.

3055. (*Sir Arthur Anderson.*) A suggestion has been put forward which arose chiefly because of the difficulties that are likely to be experienced in raising capital in this country for Indian Railways, and offering means whereby it could be secured in India. It had its idea in the continuation of the Company management in India. Take for instance the East Indian Railway, London. You have the East Indian Railway with a domicile in Calcutta and a local Board there; and the terms applying to the Calcutta Company would be precisely similar to those applying to the London Company—guarantees and all that. You would have a local Board in Calcutta with the Agent as its Chairman, who would be subservient to the home Board; but the idea is that the home Board would transfer part of its powers, administrative or otherwise, to the local Calcutta Board. Money for the extension of the railway would be raised by the local Board under the sanction of the Government of India and the Secretary of State, and in concurrence with the Home Board. The net earnings of the Company as a whole, including its extensions, would be divided between the rupee capital and the sterling capital in proportion to the amounts held by each. That roughly is the idea.—It seems to be introducing a fifth wheel to the coach.

3056. The Indian capital that could be raised there could be raised at a lesser rate than in London, as it would not be liable to English income tax?—Why not.

3057. Because the Company would have an Indian domicile?—I do not know how, except by special legislation *ad hoc*, the two companies, the East Indian Railway Company, Ltd., London, and the East Indian Railway Company, Ltd., Calcutta, are going to avoid that.

3058. It could not avoid it if a shareholder had an English domicile, but the Indian shareholder would not be liable. I may say the point was referred to the legal advisers of the Government of India and was very carefully considered by them, and they gave it as their opinion that it was not liable to the two income taxes?—I do not believe it is practicable.

3059. (*Chairman.*) Is there anything else you would like to say?—It is rather outside the scope of my note, but the fact is, this morning I had to make the annual speech at the General Meeting of the Bengal Nagpur Railway, and, if you take the trouble to read that speech in the *Times* to-morrow morning, you will see that I endeavoured to show, with the full concurrence of my colleagues, what a very fine scope there is in India for private enterprise, for the development of the Indian railways by means of branch railways. I think the point was put pretty clearly in that speech. The existing terms, 3½ per cent. guarantee or 5 per cent. rebate, are hopeless; they have gone by the board altogether. In the case of the Bengal Nagpur Railway there is an enormous field for development in directions which would appeal to people on the spot—traders, mining people, manufacturers, Indians, the Tatas—great local undertakings which are growing. Thanks to Tata and thanks to some very enterprising men in India (Sir Thomas Holland has put this into the heads of people) there is great scope for assistance from the Indians and from Indian money in connection with branch railways. Heaps of opportunities occur and those opportunities ought to be taken advantage of at the present time. You would get Indian money comparatively easily, and you would get help from Indian Directors comparatively easily, the parent line having control in the matter, saying, "You may do that, "and you may do that." A very successful development could be made in the direction of branch railways. The formation of a Branch Line Company or a series of them seems to me to be a step towards a half-way house. Each of the series might have a geographical area appropriated to it. Give the branch line suitable and generous terms, attract Indian capital, attract Indians to the service, gradually create a class of Indians capable of management, distract the young men from the legal profession, which is gravely overdone, and from Government service, which is equally overdone, and thus gradually breed up a class of Indians trained to the railway profession.

3060. Just let us understand how you would work it. You would form a separate Company?—Yes.

3061. That Company would raise its own capital?—Yes.

3062. With a guarantee from the Government?—No; no direct guarantee from the Government—only a guarantee from the Government of India derived through the parent line. For instance, I have in my mind a certain branch 100 miles in length that would cost, say, so much. The local traffic would be very considerable, not sufficient by itself to justify the construction of the line as a separate undertaking, but, having regard to the fact that that line of, say, 100 miles in length would give a lead on the main line of 300 or 400 miles perhaps, the main line could therefore afford to give back to the branch a portion of what it was earning. It could afford to be generous because unless the branch were made the main line would not get the traffic at all.

3063. I suppose there would be a guarantee under which the Government agreed to pay their share of the 5 per cent. or 6 per cent., or whatever is necessary to get the money?—Yes.

3064. Who would build the railway?—The parent line would build for the branch.

3065. It would build it as a contractor on behalf of the branch?—Yes, at actual cost, and work it on behalf of the branch, and manage all the traffic and all the accounts. There would be no separate establishment created for that purpose. The main line would work it for the branch line, and would get for its portion the additional traffic which the branch line would bring in.

3066. (*Sir Arthur Anderson.*) That is the branch line system?—Yes, it is an amplification of the branch line system, the amplification being not in the nature of the 3½ per cent. guarantee.

3067. It is the rebate system?—I suggest very much better terms.

3068. (*Chairman.*) In that case you would have a local Board, who would have nothing to do except to see that their line was properly looked after?—Precisely.

3069. And the Directors would get to know the routine of company business?—It has been hammered out until one got tired of writing about it.

3070. Why did not it get done before the war?—We were not allowed to do it.

3071. Who was not allowed?—We could not do it.

3072. Why?—I do not know why; it was not encouraged.

3073. (*Sir Arthur Anderson.*) I do not understand that. A number of companies have been floated on almost exactly the same terms.—It was always done with difficulty.

3074. (*Chairman.*) It was not very rapid?—It was done with difficulty.

3075. (*Sir Arthur Anderson.*) The only difficulty that has arisen was whether the existing guarantees were sufficient?—That was a very great difficulty even before the war.

3076. (*Chairman.*) We will assume, for the sake of argument, that the value of money has gone up 2 per cent. The old guarantee was 3½ per cent.—That is not nearly enough.

3077. You would say that 5½ per cent. was not enough; you would want something a little more generous?—Yes.

3078. And it is worth while to do it?—Certainly.

3079. You believe that it would pay for the development of India to throw out several sprats to catch a whale; that is what it comes to?—I got badly sat upon here at the India Office some years ago, when I was being examined on this very point. I do not remember who was in the Chair.

3080. Was that the Mackay Committee?—Yes, I think it was Sir James Mackay's Committee. I rather think he agreed with me, but I remember Sir Lionel Abraham's comment. It is worth while throwing out something more than a sprat overboard to catch that, because you are not only feeding the main line, but you are feeding every earning department in India. You are feeding stamps, you are feeding telegraphs; you are feeding trade in every direction; you are feeding banking. If you take the railway by itself it is good enough, but when you add to the railway the enormous increase in the development of the country, there can be no doubt about the desirability of it.

3081. You have left out the land revenue?—An article was written some little time ago and published in the "Railway Gazette," showing the growth of railways from 1881 to 1919. There was shown in a little table the mileage of railways in 1881 and the mileage in 1919. As far as I remember the mileage increased nearly four times.

3082. What was the increase in the passenger and goods traffic?—I forget now what the increase was, but I think it was about five or six times. Then with regard to coal as far as I can remember the tonnage of coal carried by the railways in 1881 was something short of 1,000,000 tons. In 1919, I think it was 283,000,000 tons. The increase has been something enormous.

3083. Your view is that it would have been even greater had more encouragement been given to the development of railways?—If the Government of India had been bolder and more able to afford funds, the railway mileage instead of being what it is now would have been twice as large with a corresponding increase in the development of the country. I do not think you ought to measure the advantage merely by the revenue return from a particular railway.

3084. At any rate when your railways are earning a handsome percentage, and further railways are wanted there seems to be a good opening for making them?—Yes, but as long as your State Finance and your Railway Finance are tied up together I do not see how you are going to get out of it.

(*Chairman.*) Thank you very much for your evidence.

The witness withdrew.

(Adjourned until to-morrow at 11 a.m.)

SIXTH DAY.

Friday, 19th November, 1920.

PRESENT:

MR. W. M. ACWORTH (*Chairman*).

SIR HENRY BURT, K.C.I.E., C.B.E.
MR. E. H. HILEY, C.B.E.
MR. JAMES TUKE.

MR. WILLIAM GAULD (*Assistant Secretary*).

MAJOR A. D. G. SHELLEY, R.E., and MR. T. J. BENNETT, C.I.E., M.P., called and examined.

3085. (*Chairman.*) Major Shelley, you are, we know, Chairman of the Bombay, Baroda, and Central India Railway Company?—Yes.

3086. Will you tell us your previous experience?—I commenced railway life in India in 1888.

3087–8. On the Indian Staff Corps?—No, in the Royal Engineers. From 1888 to 1895 I was in the Madras Secretariat as Deputy-Consulting Engineer, acting-Consulting Engineer, Under-Secretary to the Government, and for a short time Secretary to the Government in the railway branch. I then took over the agency of the South Indian Railway Company for eleven years, and from there I went to the Bombay, Baroda and Central India Railway Company for eight years as Agent, and I have been for six years a Director of the Company, during the last four of which I have been Chairman.

3089. How long is it since you ceased active service?—In India?

3090. Yes.—I came home in 1914, the year of the war.

3091. You have not been in India since?—No.

3092. Mr. Bennett, I think we know you were in Bombay?—(*Mr. Bennett.*) I was in Bombay for 18 years and for the greater part of that time as the editor of the "Times of India."

3093. With which you are still associated?—Yes.

3094. You are a Member of Parliament?—Yes.

3095. When did you leave India?—In 1901, but I have been there about half-a-dozen times since.

3096. You are a Director of the railway?—I have been for 3 years on the Bombay, Baroda and Central India.

3097. On the first page of your statement that is before me, you have summarised, I think very fairly, the points that are made in favour of a change of system, and we have it before us.

3098. I need not ask you about that, because I think we have the point fully before us. Then you go on to say that, supposing the Board was transferred from being a London Board to being an Indian Board, the same method of control as at present exists would remain?—(*Major Shelley*) Yes, in the main.

3099. Which is, of course, a very close control by the Government of India?—Yes.

3100. You have not contemplated that that control might be altered?—No.

3101. If it was not altered it would not be altered, that is clear, but have you anything to say as to whether it should be altered, supposing, which I do not understand you to advocate, the Boards were transferred to India. Would you suggest that it should be altered?—No, I do not think so. See Written Statement No. 11, Vol. IV.

3102. (*Sir Henry Burt.*) That would involve an alteration of contracts, would it not?—Yes.

3103. Very largely because the control comes under the terms of the contract?—(*Chairman.*) It is part of the terms of the contract, but still, one must contemplate always that in some way, either by effluxion of time or otherwise, the contract might have to be altered were it only by the fact that the English Company with which it was concluded might disappear, if the capital were transferred to India.

3104. (*Sir Henry Burt.*) Ultimately. On expiration of the contract.

3105. (*Chairman.*) Yes, or of course it is possible to conceive that the Secretary of State might say to the present people: "You have a "contract for 30 years, or whatever the period "be, you are of course entitled to everything "that we have contracted for, we will offer you "something which we think is better worth your "while having, if you like to take it." You always might be in that position?—Yes.

3106. Presumably if the terms were sufficiently good you would say, yes?—I presume we should.

3107. There is a price at which we would all sell our own house, that is what it comes to. Then you point out which we have also had before us from many other witnesses, the conditions under which the English-owned Companies—the guaranteed Companies—work. Your last words on that are that these restrictions limit the development to such works as the Government find money for. That is what it comes to?—Yes.

3108. Have you anything to say on that. Does the Government find enough money?—No, the Government at the present time cannot find nearly enough money.

3109. Let us assume that the present time is abnormal. Was the Government finding enough money for the 10 years before the war or was development being delayed?—I think on the whole the Government was providing sufficient money for the wants of the open lines.

3110. Do you know how much was being spent on extensions by the main lines taking 7 years before the war?—I have not the figures by me. Do you mean extensions of the railway system?

3111. Extensions as distinct from improvements on open lines?—I have not those figures here.

3112. I think you will find it averages less rather than more than 2,000,000*l.* a year. Does

that seem to you sufficient for the development of India?—On all Indian Railways?

3113. Yes?—No.

3114. That was the amount spent on new lines 2,000,000 a year?

3115. (*Sir Henry Burt.*) I think for a considerable number of years past there have been no extensions in the strict sense of the term to the Bombay Baroda and Central India, apart that is from the feeder lines?—Very small, very trifling.

3116. (*Chairman.*) Is that satisfactory?—No, we are desirous of extending the system in several directions.

3117. You are blocked for want of money?—Yes.

3118. That means want of money owing to whatever causes?—Yes.

3119. Suppose the Bombay, Baroda and Central India continued as a Company, do you suggest that adequate sums for extension could be provided assuming the present emergency conditions are past?—I had not intended to offer myself for examination upon matters of finance. The question has been only before us practically since yesterday morning.

3120. Would you care to say anything on that point, Mr. Bennett?—(*Mr. Bennett.*) Do you mean specifically on this scheme that has just been put before us?

3121. No, the reference to us is to suggest whether various changes that are indicated might be made. Then we are asked specially to advise as to methods of raising capital. I ask you assuming the existing Company system to continue, can you suggest any way in which adequate capital could be raised?—We should look naturally to the Government of India for extensions to help in financing extensions to the main line. The ideal I have had in mind has always been that the building up and development of a feeder system should be properly the work of rupee capital and that every encouragement should be given to Indian capitalists to provide money for that particular work. With regard to this scheme that has just been before us I can only give my individual view of the matter, which has not been before the Board. It seems to me that this scheme, the rupee Company scheme, contemplates an invasion, I do not use the word in an invidious sense, of the existing administration which might not be to our advantage. It seems to me that if Indian capital were directed towards the provision of new lines, feeder lines many of them, and others more important lines, Indian finance would be associated with railway development in a manner which might not be very beneficial. But my view *prima facie* of this scheme for associating rupee Companies with the development and management of the existing main lines is that it might lead to great confusion and we must look to the Government of India to help us to provide so far as they can such capital as is necessary for the extension and development of the main line.

3122. We may fairly say that if before the war they really only found it possible to produce something—I think it is under—at any rate, call it 2,000,000*l.* a year for the extension of new lines they have failed?—Yes.

3123. Can you suggest anything in its place?—The Mackay Committee recommended, I think, an expenditure of something like 20,000,000*l.*

3124. 12½ million?—With additions in India which would bring it nearer to 20,000,000.

3125. (*Mr. Hiley.*) I do not think they went so far as that?—12½ million in this country.

3126. (*Chairman.*) I think they said 10,000,000*l.* in this country. The Government never lived up even to the Mackay Committee's recommendation?—No.

3127. Practically four-fifths or something of that kind of what they did get was absorbed in the necessary improvements here and there on the main line of the existing systems?—Yes.

3128. What I am upon is extensions.—Yes.

3129. You agree that they are wanted?—We look primarily to the Government of India to provide that capital, whether or not by economies in other directions they can find the money; for instance, I hope it is not irrelevant to say so, but we are confronted with at all events the possibility of a very large increase in military expenditure.

3130. The Mackay Committee said thirteen years ago that you wanted to extend from 35,000 to 100,000 miles. You do not suggest that can be done out of economies in revenue?—No; it is something towards it; it is one of many means.

3131. Imagine a surplus of 5 million.—Yes.

3132. It is a large imagination?—It is.

3133. Where is the rest?—Further, I should look for the further co-operation of capital in this country by avoiding such changes in the administration of India as would create a want of confidence in English capitalists. I should be very careful to preserve the confidence of the English investor in Indian Railways.

3134. There was no question of want of confidence in the English investor when the Mackay Committee met. That had not been raised?—No.

3135. They said they thought 10 million pounds was as much as you could get out of this country in a year?—Yes.

3136. Is that going to be adequate?—Well, scarcely!

3137. We have seen that 10 million pounds is wanted at least for mere improvements on the existing roads?—Yes.

3138. How are we to get it? Confidence did not do it?—By an improvement in the financial condition of India. The revenues are steadily developing; it is true that the expenditure is developing too, but I should not altogether shut out the hope that the revenues of India may be so developed that more generous budgeting may be made for the Railways.

3139. But that is revenue?—No, for capital expenditure.

3140. How are you going to raise the capital—that is what I want you to tell me? The investor did not come forward. What do you suggest to induce him to come forward?—He is coming forward in India in a way that we never expected, as in Government loans, for instance.

3141. You are talking of the Indian investor. Stick to the Englishman first?—I am looking at both sides.

3142. Can you give me any method by which the English investor can be encouraged to come forward much more readily?—Show him a good return for his money. I cannot say anything better than that.

3143. What does it mean in practice?—It means a generous percentage in these days, of course.

3144. What does it mean, a higher guarantee or a bigger share in the profits, or what?—I cannot make any suggestion.

3145. Now let us turn to India. You say there is Indian capital to an extent one never thought of?—Yes.

3146. How are you to get it?—By offering a good return by showing that there is a good return to the rupee investors.

3147. I gather you are representing your Board in that? You say that the English investor will not care to put his money in under Indian control?—I am afraid he will not. That information reaches me from various quarters; of course, I do not think I ought to read any letters that have reached me on the subject; that would be an indirect way of getting evidence which you would rather avoid.

3148. That is the view of your Board?—Yes.

3149. I am not disputing it for a moment. Do you think that the Indian investor is not more likely to put his money into Indian enterprises than into a London company?—Yes, in such enterprises as this. I am contemplating that the Indian investor should break new ground comparatively, that is, that he should put his money in large new enterprises.

3150. Such as?—For instance, there is the Tapti Valley Railway, a rupee undertaking with a capital of 1,500,000*l.*, which has paid 9 per cent. the last two or three years. There is a temptation to the Indian investor; he has made a line there which is more than a feeder line. We do not want to give him a small subordinate position, it is really a trunk line.

3151. Would you suggest that Indian capital should be devoted to building entirely new trunk lines, separate Companies?—Largely—"entirely" is a hard word; I should say, as far as possible.

3152. Take a specific instance. You have three main lines coming into Bombay at present. Would you desire to put in a fourth main line with Indian capital to compete for business with the existing lines?—That is a problem I have not contemplated.

3153. I want you to help us as to how we are to get Indian capital interested in Indian development.—If you can find projects equivalent to the Tapti line, which has been a very successful line.

3154. Of two things, one, either it is to be a new main line, in which case it must lead to Calcutta or Madras or Bombay, practically?—Yes.

3155. In that case it must compete with the existing lines. That is one alternative?—Yes.

3156. That, you say, you have not contemplated?—If you could show me a line which would develop new traffic and open up new country to the exporting——

3157. Wait a moment, that is one kind of line, and I do not think you desire that for Bombay. It does not appeal to you very much as a proposition?—No; it has not been pressed upon me, at all events.

3158. I think we may assume that the Boards of the three English Companies would not welcome it. The alternative seems to be confined to small local lines, feeders, in some shape, large and small feeders of the existing Companies?—To answer that question one should have a map and the programme before one and point out which are the areas which might be best developed by important lines; lines with full gauge, for instance, I am not thinking of 2 ft. 6 in. lines.

3159. If they are full gauge, if not allowed to reach Bombay, Madras, or Calcutta, in effect, they are feeders, however big they are. They are dependencies of one of the lines that does?—I should not say that they are not allowed to, but "if held they are not necessary."

3160. If they do not, let us put it in that way, then they remain dependencies?—With autonomy of their own, I take it.

3161. But still a second-class system?—One need not call them second-class.

3162. But they would be. Is that an attractive prospect for the hypothetical Indian investing public?—Yes, if there is 8 per cent. in it.

3163. Do not you think there is a certain amount of sentiment in these things?—No one is more open to recognising Indian sentiment than I am. Sentiment rules in many more things than we are willing to admit, but I do not think that there is much sentiment in railway development. I look out for that element if I can, but at this moment I cannot recognise it.

3164. You would agree that the hard business attitude of "What will it pay?" is more likely to be found in the City of London than in India, would you not?—I do not know if you know the Bunnia. I think Sir Henry Burt will tell you something about him.

3165. I do not suppose that you expect to get 7 per cent. money from the Bunnia?—No.

3166. He is not going to advance money at 7 per cent.?—There are some Indian investors who are very glad to get what they get out of the Tapti Valley.

3167. Will not that class of person—the rich land-owner and the Rajah—have a sentiment in their investment?—I do not know; Scindia is a large investor in various undertakings, I think simply as a man of business. I do not see the element of sentiment in his investments. However, I would not shut my eyes to that.

3168. Now let me turn to another point. On page 3 you say with regard to (*b*), which is the question of raising the capital, that first of all the agent makes his suggestion for the expenditure of capital; secondly, that proposal comes back to the Board to be considered?—Yes.

3169. Thirdly, the Board send back the considered proposals with their decision to the agent?—Yes.

3170. Fourthly, the agent approaches the Railway Board?—Yes.

3171. Fifthly, the Railway Board, after considering it, puts it into the programme?—Yes.

3172. Sixthly, the programme comes home for the Secretary of State to consider?—Yes.

3173. Seventhly, the English Board of Directors and the Secretary of State negotiate terms?—Yes.

3174. Eighthly, it goes out to India with an authority to execute it provided that the money is forthcoming when it is all settled?—Yes.

3175. That is the process?—I think that is it.

3176. That is a fair description of the process?—I think so.

3177. It is not a rapid one; it cannot be a rapid one?—No.

3178. How long do you think it takes? Major Shelley, you can tell us from practical experience, I think?—(*Major Shelley.*) Is this with reference to new lines?

3179. Capital expenditure?—The whole of that programme is not followed in every case.

3180. What do you cut out?—For instance, it depends on the amount of capital expenditure involved in the work.

3181. I am assuming that it is something substantial. What is your limit of expenditure without permission?—The agent has generally had power to spend up to Rs. 50,000, but the present incumbent, as a personal sanction, has increased powers up to Rs. 100,000.

3182. Rupees?—Without even consulting the Board. Yes.

3183. And what are the Board's powers?—The Board has power to sanction capital expenditure up to Rs. 100,000.

3184. The Board can spend, we will call it 10,000*l.*, which does not go far in railways. Suppose it is 20,000*l.*, is my description of the process right?—No, not quite. The estimate would be prepared in India and submitted by the agent to the Home Board. Their approval being obtained, he would submit it to the Government of India, and unless it exceeded a large sum the Government of India would sanction it without reference to the Secretary of State.

3185. What is the sum the Railway Board in India can sanction?

(*Sir Henry Burt.*) A large sum, but I am not certain as to the amount. No reference would be required to the Secretary of State if the amount had come in to the programme.

(*Chairman.*) This is getting an item on to the programme?

(*Chairman.*) You can tell us, Sir Henry, what is the figure that the Board can approve?

(*Sir Henry Burt.*) The programme would be compiled from information already in the possession of the Railway Board. I think I am right in saying that the Railway Board would arrange by telegram or in correspondence with the Secretary of State provisional sanction to a total figure, and having got the Secretary of State's sanction to work to a provisional figure, they would then deal direct with the agent in working up to that total. There would be no further reference to the Secretary of State as regards details.

(*Chairman.*) Would not the contract be settled in London between the London Board and the Secretary of State, if there was any question of new terms?

(*Sir Henry Burt.*) Yes, for say a new line, or a big extension then it might.

(*Chairman.*) That is what I was thinking of. I was not supposing that it was necessary to do that for a trifle, but if it is an expenditure of even one crore of rupees on an extension, that is what happens?

(*Sir Henry Burt.*) Yes, but there has not been expenditure like that for extensions, involving new terms, for some years.

3186. (*Chairman.*) How long would the process take if it had all to be gone through?—It is rather difficult to say, but I have known a line practically got through within a few months, the Agra Bayana.

3187. (*Sir Henry Burt.*) What was the expenditure involved in that case roughly? What is the length of it at any rate?—About 50 miles.

(*Sir Henry Burt.*) About Rs. 46 lakhs.

3188. (*Chairman.*) It does in some cases take quite a long time.—Sometimes it is a very lengthy process especially if there are conflicting interests.

3189. If you will forgive me, I will not ask you because we have had it from other witnesses (unless you specially desire to say anything about them), about one or two of these questions here, for example the question whether the Indian Boards are likely to be in closer touch. I would like to ask you this. I see you say that Boards composed of gentlemen in a Presidency Town would not know the up country conditions?—Yes.

3190. Is there any reason why a representative from Delhi or Cawnpore should not be on the Board of the East Indian?—It means long railway travelling, and it would be difficult to get a Cawnpore gentleman to leave his business for 2 days to attend a Board Meeting.

3191. It happens constantly in England.—England is a small place.

3192. If a man comes up from Edinburgh for a Board Meeting it does mean two nights in the train.—You are speaking of an English Director?

3193. Yes?—He is a more or less leisured man in a way. He has not to keep his nose down to business as the Indian merchant has to.

3194. It might be more difficult to arrange, but still there is no necessity that a Director of a Railway in Bombay should be resident in Bombay if you could get one from up country?—I doubt if you could get one.

3195. (*Sir Henry Burt.*) I think it is only right to say this, I am sure a leading person in a sufficiently high position to take up a directorship would, if he were up country, look upon it as a very serious matter to have to travel down to Bombay or Calcutta from Cawnpore say in the hot weather.—Yes, that is a point I want to emphasise. You must remember that hot weather travelling would have to be faced.

3196. It is dangerous to health?—Yes. An elderly gentleman would hesitate to undertake a 2 or 3 days' journey in the heat.

3197. (*Chairman.*) Does that affect the Indian as much as the Englishman?—Perhaps not as much, but they do feel it. (*Mr. Bennett.*) Some of them feel the heat more than we do.

(*Sir Henry Burt.*) It is dangerous to health, you cannot get away from that. In the cold weather it is all right, except for the interruption to business.

3198. (*Chairman.*) You spoke of visits to India made from time to time by members of the English Boards.—(*Major Shelley.*) Yes.

3199. Have any of your Board been in India lately?—Sir Henry Burt was there last year, and will be there again this year.

3200. I did not know that Sir Henry was one of your Directors.—I shall probably be going next year or the year after.

3201. Has it been a regular practice of your Company that somebody goes out?—Not every year but frequently; the late Sir William Bissett was out twice, and Sir Charles Olivant went out twice, I think when I was agent for the railway.

3202. Sir Charles Olivant has to do with the Bombay Tramways, I think?—He had; I do not know what is his connection with the Tramway Co. now.

3203. There has been a suggestion made to us that the directors should officially go, say two directors should be formally authorised by the Board to go, to take with them the powers of the full Board and to stay in India for a month or two

and travel about the line with the power of the Board in their hands. What should you say to that?—I hardly think that is necessary now the cable is working again between England and India without any delay. Orders can be issued very promptly. I think, however, it is desirable that a director should frequently go out to India and get to know exactly the local conditions obtaining from time to time.

3204. Do not you think that personal contact is of real importance?—That would ensure personal contact.

3205. I mean personal contact with a body that could do things there and then.—My experience as agent was that the main delay in disposing of projects did not result from reference to England, but references in India.

3206. I am not thinking of the delay, I am thinking of the point of personal contact. We hear a great deal here of deputations to Ministers. —Yes.

3207. If a deputation goes to a Minister and gets a sympathetic answer, "Yes, I entirely "sympathise with you, you will see my difficulties "are so-and-so, but I will do my best to remove "them, and let you know in a week what progress "I have made"; that deputation comes away very pleased. Is not the same thing true in India?—I do not think there is the same number of instances in India as there are in England in that direction.

3208. There cannot be the instances because there is not the opportunity, but do you not think that they would welcome the opportunity?—I am doubtful; they might in some cases, but I would not like to generalise upon it. Further, I think it would be difficult to get English directors to give up 2 or 3 months in the year to the work. (*Mr. Bennett.*) Do you mean stating grievances or making representations?

3209. (*Chairman.*) We shall all agree that this world is a somewhat imperfect place, and it is possible that on an Indian railway there are things that could be made better if you got together and talked about them. We need not call them grievances, they might never reach grievances if they were dealt with. What do you say to that, Mr. Bennett, do you sympathise with it?—(*Mr. Bennett.*) You remember Lord Palmerston's definition of a deputation. He called it a noun of multitude which signifies many but not much. I do not know whether the deputation would follow that description.

3210. (*Chairman.*) I almost hesitate to ask you, Major Shelley, about your description of the work of the Board in England because it seems to me so wonderful. Do they really read technical newspapers and make abstracts for the benefit of the staff in India?—(*Major Shelley.*) I personally read the technical papers, and I have reason to believe that the technical members of the Board do the same. Several papers of this nature are always available for perusal in the Board's offices.

3211. And make abstracts for the benefit of the people in India?—I do not think there is any such claim in the Board's printed evidence, but the Staff in India are supplied with technical publications.—(*Mr. Bennett.*) The Indian newspapers record and comment upon railway matters and policy very fully, and I think most of us do follow those discussions in the Indian papers. Personally, I do, and I have no reason to suppose that my colleagues do not.

3212. That I fully believe. Then I think you make, if I may say so, a very real point. Local Governments as representing local opinion do in all probability ask the companies to do what the companies cannot do and blame them for not doing it?—Yes.

3213. Is not the moral of that that you want to get into contact with them and let them see that you are not to blame?—I think that the agents have very free and frequent access to the Governor. I am sure they do; I know they do.

3214. To the Governor?—Yes, and the members of the Government; almost daily contact more or less informal.

3215. Do you think that is sufficient?—I think so.

3216. Does not your own statement that they blame you for not doing what you cannot do rather prove that the contact is not sufficient?—They might do it officially; personally, they know things are otherwise.

3217. What would you say to a system which has been suggested and supported by one or two directors of local persons of importance and representative position along with the railway being given an official connection, being paid a small fee and given a pass over the line, given a special decoration to prove their connection and being invited to act as intermediaries between the public and the Company, and meeting, we will say, only three or four times a year in the Presidency Town with the Agent in the chair as a committee, but all the time having that recognised position?—Major Shelley can speak on that as a practical question. I can see advantages in it, but I can see possible inconveniences.

3218. What do you say to that, Major Shelley?—(*Major Shelley.*) My own personal view is that the closer the contact maintained between the Agent in India and the community served by the railway the better, provided that his freedom of action is not hampered in any way thereby; I mean that his executive functions in controlling the railway are not hampered in consequence.

3219. I take it that you would give these people no executive functions but a position as officially recognised advisers and intermediaries? —I see no objection to that.

3220. Do you think it would have a good effect?—Possibly it might.

3221. There would be, I imagine, considerable emulation to become one of these?—Yes.

3222. You would have a dozen friends scattered over the line?—Yes.

3223. That would be a distinct advantage?—As a matter of fact, when I was in Bombay I had a native friend who did keep me advised of many little points quietly.

3224. He was only a private friend as it were?—Yes; except that he was occasionally given free passes.

3225. You think that would be a good system?—I think it would.

3226. One knows that passes are, as a rule, valued far beyond their intrinsic value in cash; it is a curious experience that I suppose we all have. You would not surely say that the delay in reference to London in railway matters is no more than the delay of a private firm?—Except where questions are affected by contract obligations I think there is no more delay.

3227. If a firm in Bombay have English partners, I imagine what would happen is that

they would send home a scheme of what they proposed to do to the English partners and say: "Wire reply," and the English firm would reply: "Yours of such and such a date—right, "go ahead." Would not that be practically the thing—it would be settled within a day of the letter reaching London?—Yes, that is very often done in management by a London Board.

3228. Could you imagine that done by the Secretary of State?—Not by the Secretary of State possibly. I have not much experience, of course, of the Secretary of State's dealings, but, so far as the London Boards are concerned, many matters are dealt with as promptly as in your illustration.

3229. No doubt; but, as you mention, the railway's powers of doing things without the Secretary of State are very limited?—Nine-tenths of the references from India would certainly not require any reference to the Secretary of State.

3230. But the one-tenth are the important ones?—Yes.

3231. And they take a long time?—Sometimes.—(*Mr. Bennett.*) You have dealt with some important wages questions by cable promptly?

3232. (*Chairman.*) Yes, I hope so.—Recently. It was circularised to the directors, that is how sanction was given, by circular.

3233. Will you tell us what this refers to on page 8: "If local governments would shoulder "part of the financial obligations as is done in "Assam, this would be a great step in advance"?—(*Major Shelley.*) As a matter of fact that is a reference which was formulated at a meeting of the representatives of Indian railways which it was intended should be submitted by most of the railway companies to this committee.

(*Sir Henry Burt.*) I think I can explain that. In the feeder line terms one of the alternative conditions is a 3 per cent. contract guaranteed instead of a rebate. The Government of India, I think, said that if a local government considered 3 per cent. was not sufficient to attract capital in the province owing to it being undeveloped and so on, the local government might guarantee from their own resources and own responsibility an additional, I forget what the figure was, but I think it was ½ or ¾ per cent.

3234. (*Chairman.*) The local government increased the subsidy in effect?—That is practically what happened in Madras also.

3235. Then you quote another thing, and perhaps we shall have to come to Sir Henry for that: "The acceptance of the general policy of "the Madras Government towards District Board "railways would also be of great help"?—That was, I take it, very much the same. I have served in Madras.

(*Chairman.*) Can you tell us what that refers to, Sir Henry?

3236. (*Sir Henry Burt.*) No, I am not certain.—It refers to very much the same thing.

(*Sir Henry Burt.*) I think that is very likely.

3237. (*Chairman.*) We must try and get hold of it in some shape. Whoever put it in no doubt could tell us.—(*Mr. Bennett.*) I think that refers to a guarantee given by the Madras Government towards the district boards.

3238. The district board made its own line with Government help.—Yes. (*Major Shelley.*) The district boards levy a special land cess for railway development. When the accumulated cess, supplemented by the profits from opened sections, amount to a sufficient sum, further railway extensions are put in hand.

3239. On that money did the Government give a certain guarantee of interest.—I do not know if this is the case.

3240. That is the policy that has been adopted to a considerable extent in Ireland. Then you welcome any augmentation of opportunities for the agent being kept in closer touch with local interests?—Yes.

3241. You would not be hostile to the theory we have been discussing of local representatives. You say in your view that the maintenance of the Company and the State railways alongside is desirable.—Yes.

3242. I do not think I have followed this. You say this on page 9. "The removal of Com-"pany direction would involve Government in "the heavy expense of a very large and ever "increasing department of State to perform the "duties now discharged by the Home Boards." As I understand the system, the Railway Board is over them all. The Railway Board directly instructs the agent on a State line, but between the agent on a Company line and the Railway Board there comes in the Board of Directors.—Yes.

3243. It would seem to me, I am not arguing whether it is desirable in other respects, if you took out the Company and the Government Board dealt directly with all the agents, you would simplify rather than complicate the machinery.—The projects have to be examined and looked into by the Companies Boards in London with the assistance of their consulting engineer.

(*Sir Henry Burt.*) I think the Chairman is referring to general work.

3244. (*Chairman.*) I understand it that if there is a project on the State railway there are only two people concerned, the Railway Board and the local people. If it is a project on a company railway there are three people concerned. Cutting out the middle person, it seems to me, would simplify rather than complicate.—That is as regards large projects for extension only, which is a very small part of the Company's work.

3245. Why not other projects?—A great many of these projects have to be studied in consultation with the engineers we employ in England.

3246. Suppose you cut them out?—Somebody else would have to do the work.

3247. Does not the Railway Board check everything you and your engineers do?—I have never been on the Railway Board, but I have very grave doubts on that point.

3248. Is it not their business to do so.—I think they only exercise a general control and trust the Companies very largely with all the detail work.

3249. Put it in this way. Do you think that the business of the State Railway, the North-Western, occupies more of the work of the Railway Board than the business of a company of the same magnitude?—I think so.

3250. We had better get evidence on that in India, I think. Then you raise objections, as everybody does, to the transfer of officers from one State railway to another.—Yes.

3251. And frequent absences. Are the absences larger with the State Railway servants than with the Companies' servants?—Very much.

3252. Why is that?—I think I am correct in saying that one year on the Eastern Bengal Railway there were four changes in the agency.

3253. Is one of the State Railway officers entitled to a larger percentage of leave?—No, I think the leave rules are practically the same.

3254. Why is the State agent more often absent than the Company agent?—Possibly he gets transferred to another State Railway, and so is absent from his substantive appointment.

3255. It is then a question of transfer?—Yes.

3256. I understand you say that he is not away from his job altogether for a larger time, but he may shift his job?—He is on another job.

3257. Quite so, but you do not suggest that he is more out of India than if he were a Company's agent?—No.

3258. Your view we have heard of very often; I will take it as accepted. You would like, whatever be the system, what you call permanent distribution of the staff. Half a man's value is local knowledge and associations. That you agree, I take it?—I do not quite follow you.

3259. You consider that the fact that a man knows his ground is of great importance?—Very great importance.

3260. You give a quotation from the National Chamber of Commerce. Can you give the date of that quotation?—(*Mr. Hiley.*) It is one of the replies to the circular sent round by the Railway Board asking for criticisms or suggestions regarding railway administration.

3261. (*Chairman.*) Is it a year or two old?—(*Mr. Bennett.*) Two years old.

3262. What is the National Chamber of Commerce. Is it a European body?—No, purely a native body.

3263. But the Chamber of Commerce for the whole of India?—No, it is mainly Bengal. (*Major Shelley.*) It is Calcutta.

3264. (*Chairman.*) It is Calcutta, and two years old. Then on page 10 you say that any change in the Company's system would tend to diminish public interest in Indian undertakings, and be a retrograde step. We know that the directors of the various Indian Railways are to a very large extent the same men. There are a good many men who are directors of several companies, but there are not a large number of separate directors. Is not that very much the same with the shareholders?—(*Mr. Bennett.*) I am not able to say.

3265. What should you say? Should not you say it is so?—(*Major Shelley.*) I think there is a good deal of that.

3266. My impression is that whether you speak of directors or shareholders they are practically all people who have Indian affiliations?—So far as our individual shareholders are concerned a large amount of the stock is held by the large Insurance Companies.

3267. That is true, I should have remembered that, but among the private shareholders they are very largely persons of Indian connection in some shape or form.—There are a great many, of course, but there are a great many who have never been to India.

3268. I mean who have some connection in some way. A director may have a cousin or that kind of thing. Would you say that there was a large number of the investing public at large that took any interest in Indian Railways at present?—That is a difficult question to answer.

3269. We are all accustomed to look at the financial intelligence in the newspapers, and you would agree with me, would you not, that you see something about Argentine Railways every day? Before the war you saw a good deal, and you still see a good deal about what the railways are doing in New York. Do you ever see, or do you often see, any reference to Indian Railways?—No, not very often.

3270. It is what the Stock Exchange call a very dead market?—A limited market.

3271. You say so far as this railway is concerned there has been no hesitation in the promotion of competent Indians. Do you lay stress on the fact, as far as this railway is concerned, of there not being any bar to the employment and promotion of Indians?—No, we want the best men.

3272. There is no bar from the fact that a man is an Indian if he is competent?—No, but have not been very successful, I must say. I appointed comparatively recently 3 Indian engineers, 2 of them have gone.

3273. (*Mr. Hiley.*) Mechanical or Civil Engineers?—Civil Engineers.

3274. (*Chairman.*) They failed?—We are not prejudiced against the employment of Indians. As a matter of fact one of the best Traffic Officers we ever had was an Indian gentleman, but it is very seldom that we get a really good Indian officer.

3275. You really are quite pleased to get them?—Yes, provided they are good men.

3276. Do you think you go further in that direction than the other Companies?—No, the East Indian with which I am connected appoints many Indian officers.

3277. Well, we have dealt with the method of bringing local bodies closer together, and that local bodies should be given a freer hand to raise development funds for their lines, but you have not told us how you would do it?—No. The finance part of the question has not as yet been fully considered by my Board; but we are prepared to give evidence upon that matter later on.

3278. You will know then what the other Companies have said, and if you care to give us any suggestions as to the way in which capital should be raised in England, we should welcome it. You can send it as a memorandum to India?—Yes.

(*Sir Henry Burt.*) I would suggest that you should send it to your Agent in India.

(*Chairman.*) Anyone who can help us by suggesting a method which has not yet been tried will be doing a public service.

3279. (*Sir Henry Burt.*) The Companies will be placed in a difficulty in connection with this reference, which has come from the India Office at the eleventh hour, and which only reached them yesterday. I would like to ask you one question. The question has arisen with some other witnesses as to the necessity of having on the London Boards so many Directors with expert knowledge of railway affairs. Would you like to express any views on that point?—I think it is very desirable that some of the Directors should be possessed of practical working knowledge of the business they control. I believe that on several English railways there are such Directors.

(*Sir Henry Burt.*) The question has arisen, and it has been pointed out that the London

Boards of Indian Railways are singular in having so many railway experts as Directors.

3280. (*Chairman.*) I think they certainly carry it further.—On the London and South Western, the London and North Western, the Great Northern, the London Brighton, the Midland, and the London Electric Railways I believe there is one Director at least who has practical railway experience.

3281. I happen to be a Director of the London Electric. Who are you referring to there?—Lord Ashfield.

(*Chairman.*) Yes, but he is Chairman and Managing-Director of the whole concern. That is quite a separate case.

3282. (*Sir Henry Burt.*) I suggest to you—you will correct me if you think I am wrong—that the necessity for having so many Directors on the London Boards of Indian Railway Companies with railway administrative knowledge is due firstly to the complexity of the Indian contracts, and secondly to the close control which is exercised by the Government of India, involving constant references of a highly technical nature. Do you think that is correct or not?—I think that is correct.

3283. (*Chairman.*) Supposing your Agent, who is a technical person, was sitting by your side instead of being 5,000 miles off, would the need for technical Directors be equally great?—Not quite so great, perhaps, but I think the want would be felt if you had not technical knowledge. An Agent as a rule has precise knowledge of only one department of railway working.

3284. He has to know something about engineering, has he not, if he is to be a proper head?—Not necessarily: Auditors for instance have been Agents of Railways before now, and they have been successful.

3285. (*Mr. Hiley.*) They would be picked because they were capable men of affairs?—Yes, undoubtedly—men of brains.

3286. Therefore they were considered competent to control a railway, otherwise they would not be selected?—That is so.

3287. There are two points you do not refer to at all in your memorandum on which I should like to ask you some questions. The first is in regard to No. 2 of our terms of reference: "To "examine the functions and status and constitution of the Railway Board, and the system "of control exercised by the Government of "India over the railway administration"; and the second in connection with No. 4 of our terms of reference: "To report whether the "present system of control by Government of "rates and fares and the machinery for deciding "disputes between railways and traders are satisfactory." First of all, with regard to the Railway Board, have you any remarks to make in regard to their working with you?—I have always had my own ideas as regards the Railway Board. Would you like me to express them?

3288. If you please.—They are purely personal views.

3289. We will take them as your personal views.—I have always thought that railways ought to be controlled by small local boards situated at convenient centres, such as Madras, Bombay, Calcutta, &c. These Boards should finally dispose of all the comparatively small matters of railway management, and the relations with the local public, so as to filter off from the main Railway Board in Simla a large number of small detail questions which they now have to settle.

3290. Of course, they would be subordinate to the main Board?—Yes.

3291. But they would act independently on small matters, I suppose?—Yes. They would have power to dispose of all small matters. For instance, as an agent, I had a reference from the Railway Board sending a complaint from a passenger who had lost his box at Delhi, and asking me to try to trace it. It is rather the function of a subordinate than of a supreme Board to deal with such small matters.

3292. You have experienced the same difficulty which most of the other witnesses have voiced to us, that is, the lack of local touch with a Railway Board situated at Delhi?—My suggestion gets over that.

3293. Do you feel that the gap that was caused by the removal of the consulting engineers, who, of course, were more than actual technical engineers, as they kept in touch with the general working of the railways, has never been satisfactorily filled?—Yes.

3294. (*Sir Henry Burt.*) Your proposal is really a revival of that system, more or less?—Yes, except that it ensures continuity of policy which was not obtained under the one-man control of a Consulting Engineer.

3295. (*Mr. Hiley.*) You suggest that local representatives of the Railway Board should be located in the Districts—it does not matter whether they are engineers or not as long as they are capable railwaymen and are closely in touch with the Railway agents?—The Local Board should consist of Government technical officers who should be in touch with the public and the local Government.

3296. Do you think this scheme would obviate a great deal of correspondence that at present takes place between the Companies and the Railway Board, and that in that way things will be more quickly dealt with?—Yes.

3297. Have you any other suggestion to make with regard to the functions and the working of the Railway Board?—One hears in India that they are too much under the control of the Secretariat Department, and that they do not have sufficient independence.

3298. Has your Board any views as to how that independence could be secured?—No, we have not considered that. I am only giving you my personal views.

3299. Have you any opinion yourself as to how that independence could be secured?—No. I do not know that it would be much improvement on the present system if the Chairman of the Railway Board was a member of the Viceroy's Council. You have to remember that a member of the Viceroy's Council would then be Chairman of the Railway Board.

3300. A suggestion has been made that he should have the entree to the Council and deal as an equal with the other members on purely railway matters, but not be burdened with the general administration of India. Does that appeal to you?—Yes, provided that he is not too directly under Government influence. If he were a member of Government I am afraid the railway administration would be altogether too much under Government.

3301. You would desire him to be as free from Government control as possible?—Yes.

3302. But at the same time he should be able to voice matters of railway administration as an equal in the Council ?—Yes.

3303. (*Sir Henry Burt.*) You think he should be more than a titular head ?—Yes.

3304. (*Mr. Hiley*). He should be really chief in his own department ?—Yes.

3305. Have you anything to say in regard to the fourth reference: "To report whether the present system of control by Government of rates and fares and the machinery for deciding disputes between Railways and traders are satisfactory" ?—No. On the whole, I think the present procedure works fairly well.

3306. You have nothing to say on that ?—No.

3307. (*Chairman.*) I have been looking up, Mr. Bennett, the Mackay Committee's recommendation as to the amount of new capital to be obtained. What they say is, they think it would not be imprudent for the Secretary of State to contemplate raising in London in normal years 9 millions, making with the 5 millions usually obtainable in India a total provision of 14 millions for all capital purposes, of which all but about 1,500,000*l.* would be available for capital outlay on Railways. Those 1,500,000*l.* were taken off mainly for irrigation, so that they contemplated in India and in England together obtaining 12½ millions per annum for railway development?—(*Mr. Bennett.*) Yes.

3308. (*Mr Hiley.*) That money is worth only half its value now ?—Yes.

(*Chairman.*) Thank you very much for your evidence.

(The witnesses withdrew.)

Sir Felix Schuster called and examined.

3309. (*Chairman.*) We are very much obliged to you, Sir Felix, for coming to help us. The members of the Mackay Committee have been very good; two of them have been before us; you are the third; Lord Inchcape is coming in a day or two, and as we all know, Sir Lionel Abrahams is dead; so that we have had all possible assistance from that Committee. You have read the notice containing the conditions under which evidence is being taken here?—Yes.

3310. We all know that, in addition to being on the Mackay Committee, you have been for years Chairman of the Union Bank, and that you were the financial member on the Council of the Secretary of State?—That is so.

3311. I do not know whether you have refreshed your memory of the Mackay Report?—I am afraid I have not.

3312. Let me remind you what it says. You said, after using your own experience and taking evidence from Lord Rothschild and other people, that you thought you could get 9,000,000*l.* a year out of London and 5,000,000*l.* out of India for capital purposes for India. That meant 14,000,000*l.*, and of that 14,000,000*l.* you had to take off 1,500,000*l.* for other than railway purposes, which meant that you thought the Government would be able to see its way to provide 12,500,000*l.*, partly by its own direct loans and partly through the Companies?—Yes, I remember that.

3313. In the first place, nowadays 12,500,000*l.* will only do the work that 5,000,000*l.* or 6,000,000*l.* would have done when the Mackay Report was written?—I think we all felt that we could have done with a great deal more than 12,500,000*l.* in those days, but we had to measure the amount according to the state of the money markets, which even then was not so very favourable. The Committee had to consider what amount it should fix as a reasonable figure which they thought could be obtained, and I believe we have done so.

(*Chairman.*) Speaking without the book, I think that something near that figure was raised. My impression was that it was about 11,000,000*l.* a year.

(*Sir Henry Burt.*) I think in only one year the 12,000,000*l.* figure was reached.

(*Mr. Hiley.*) It averages about 10,000,000*l.*

3314. (*Chairman.*) I have no doubt Mr. Hiley is right. Call it 10,000,000*l.* Out of that certainly less than 2,000,000*l.* per annum were available for extensions; the rest was used, though it was not nearly sufficient for additions on open lines?—If my memory serves me aright, my impression was—and the experience gained subsequently confirms that view—that we thought the money had better be spent on improvements of existing lines for the time being, until they got into proper working order, than on extending the railway system.

3315. I think you and I know that a railway never gets into proper working order in the sense of not wanting more capital spent on open lines?—That is so.

3316. The Committee said that the country could do very well with 100,000 miles of railway. Obviously, it would never get that mileage if only 2,000,000*l.* a year is available; that is clear?—But that was not the intention, that only 2,000,000*l.* was to be available.

3317. The subsequent history shows that the additions to open lines have year after year swallowed almost the whole 10,000,000*l.* up?—Yes.

3318. The question has developed since that Report was written. What can you suggest now? We can hardly talk about approaching the London market now except at a rate that it would be difficult to imagine the Government of India paying; but, assuming things to have settled down, what can be done to get a much larger supply of capital?—That is a question which is extraordinarily difficult to answer. I myself should not be afraid of going to the London markets for the amounts we mentioned then, or even for somewhat larger amounts.

3319. To-day?—Yes, to-day. You have to make your minds up to give a suitable rate, but I think you would get the money.

3320. Would you alter your figure of 9,000,000*l.*?—Why name a figure at all?

3321. Look at the position. Supposing the figure was 10,000,000*l.*, the Government before the war were using up 8,000,000*l.* merely on open lines?—Yes.

3322. 16,000,000*l.* at least would be wanted to do the same work to-day?—Yes, but will that 8,000,000*l.* or 16,000,000*l.* on open lines have to

continue? We thought by spending a good deal on open lines that might come to an end.

3323. There are many millions of arrears to catch up on things that were kept back during the war. I will not mention a figure, but we have had a pretty stiff figure given us?—It must be a question for the experts to decide what is the more essential for the general service of the country.

3324. I think you may assume that unless you can raise very much more than 9,000,000*l.* a year somewhere, there is not one penny for extensions and never will be?—Considering the amount of new capital that has been issued at home lately, I do not think we need be too nervous about the future. I think you will get a considerable amount here.

3325. You think we could get a considerable amount?—I do, on suitable terms. Of course, a great deal depends upon other questions which have been raised in the Terms of Reference. If you depend on the London money market I think the constitution of your railways will have to be of such a kind that it appeals to the London money market.

3326. Will you please go on with that point? What is the constitution that you think would appeal to the London money market?—Alternatives are given in the Terms of Reference: "(*a*) Direct State management; (*b*) Management "through a Company domiciled in England and "with a Board sitting in London; (*c*) Manage- "ment through a Company domiciled in India "and with a Board sitting in India; and (*d*) "Management through a combination of (*b*) and "(*c*)." I may at once say I would rule out (*a*) altogether—direct State management.

3327. Would you go so far as to take away from the State the lines which it is already managing?—I would.

3328. The Company Directors are against you. They all say, or certainly most of them say, "Leave us as we are; we each show a shining "example of efficiency to the other." Now the question I ask you is whether you would leave the lines which are at present under State management under that management, and you say No? —That is so. What lines are under direct State management at the present moment? Are there a great many of them?

(*Chairman.*) There are three. The North-Western is the biggest system in mileage of all the railways.

(*Sir Henry Burt.*) Over 5,000 miles.

3329. (*Chairman.*) The two others are much smaller.—I am afraid I could not give you an opinion about that; it is comparatively small.

3330. Anyway, you are very definitely a Company man?—Yes, definitely, for a great many reasons which I had better not give. Of the alternatives suggested, under all the circumstances, (*d*) a combination of management, with perhaps a local Board in India, associated with the Board in London, appeals to me most.

3331. How are you to apportion or to combine the powers of the two Boards?—The central power should be here. I would look on the Board in India as what we call in banks local directors, people who have not perhaps the full authority of the Board, but who can represent to the Board the local views on the needs of the district which they serve. Of course, the management is out there, and those views could be represented through the management.

3332. If you tell us a little more as to the extent to which English banks delegate power to their Local Boards I think it would be useful. Mr. Tuke no doubt knows all about it, but I do not think the rest of us know much about the inside of bank management?—The constitution is rather loose, but technically they have no power at all. The Board does not delegate any of its powers officially to them.

3333. Are you speaking about your own bank, or is that the general practice?—I can only speak from my own experience.

3334. So far as you know it is the usual practice that the Local Boards technically have no powers, but——?—But at the same time they act as representatives of the Board, and they are a closer link between the locality and the Board than is given by the ordinary manager. Perhaps you will allow me to say I favour this view as a concession to local feeling, which I know exists in India, and I think some account ought to be taken of that feeling. Residents in a particular district may have complaints or suggestions which they wish to put before the Board, and if there are local directors on the spot perhaps those views are more likely to be listened to.

3335. Let me see if I have got in my mind how it works. A local manager, has, we will say, power to give an overdraft up to 20,000*l.* in a particular case. We will suppose that he wants to give 25,000*l.*, and he says to the local directors: "You agree?" They say: "Yes, we "will bear you out," and he does it. Is that the sort of thing that would happen?—I do not think the cases are exactly parallel. I am referring in banks, not particularly with regard to one single transaction. A man wants an overdraft and we must say Yes or No, but that would go through the ordinary channels. But supposing there is a merchant or manufacturer who wishes to extend his premises, and he will give his schemes confidentially to one of the local directors and ask for advice, and they represent those views, then the matter is considered in the initial stages. I think that is where the local directors come in—the personal touch between the customers and the bank.

3336. This is what I was trying to get at as a general principle. The agent's powers are limited on a document which says: "You may "do this, that, and the other"?—Yes.

3337. Would the agent, with the backing of his local directors, be safe in going beyond his technical limit in reasonable cases?—Not more so than without them. They are not part of the executive at all; they are advisory.

3338. So that it really comes to this, that the important thing is the local touch?—Yes.

3339. It is rather that than making the exercise of emergency powers easier?—Yes.

(*Mr. Tuke.*) What Sir Felix says exactly tallies with the general practice. The local Boards, as a rule, have no power at all; they simply act as Sir Felix says. They are merely consultative, and they are there for the purpose of keeping in closer touch with the various surroundings of the district. In fact, as Sir Felix says, I do not think the local Boards have any more power in any case than the local manager has himself. I think that is the general practice.

(*Chairman.*) Thank you very much for that precedent. It is always useful to get as many precedents as we can in different directions. Your preference, then, you say, is for (*d*),

although I do not know whether you would call it (*d*). Do you call that a combination of Indian and English? It hardly goes far enough to call it a combination. It is really a supplementary addition to (*b*).

(*Mr. Hiley.*) Is it not (*d*) exactly?

3340. (*Chairman.*) I was asking whether Sir Felix thought the local people had sufficient power to be regarded as a combination?—"Management through a combination of (*b*) and "(*c*)" goes too far.

3341. That is what I thought you would say. You are not prepared to go further than you have suggested?—No.

3342. Sir Henry Burt asks me: What would you say to a proposal that the London Board confines itself to finance, and everything else is done locally?—That would not appeal to me. Finance and general policy are so closely interwoven that there must be one authority.

3343. Now let us come back to money. What do you think should be done to enable India to raise money more freely? I cannot help being impressed with the fact that Canada raised before the war enormous sums of money for railways largely that did not pay, and India raised very small sums of money for railways that did pay. Argentina had no difficulty in getting money?—When you refer to Canada, of course, you had one great railway in Canada which paid extremely well after a period, and you have nothing corresponding to that in India.

3344. Is it your feeling that an important reason why India has had difficulty in raising money is that the Government has not treated the shareholders sufficiently liberally?—Yes. The terms were not sufficiently liberal to induce subscribers to come in freely.

3345. Do you remember the case of the termination of the Contract with the Great Indian Peninsula?—Yes, I do.

3346. In that case we have been told that after litigation it was established that the interpretation of the Secretary of State was in strict law correct?—It was correct.

3347. But it was quite contrary to what the shareholders had commonly understood?—That is so.

3348. Did that give a shock to investment in Indian railways?—Unquestionably.

3349. In your view, has that been a short-sighted policy, in that it saved small sums of money at the time, but that it had the result of driving away larger sums of money thereafter?—That is my view.

3350. Do you still think (you said so in the Mackay Committee Report) that it would be wise to raise more money by allowing the Companies to issue further share capital with the right of participation in surplus profits?—That is my view.

3351. That would be, so to speak, a plum for them; that would be something that would please them?—That would be an attraction to them.

3352. It is good business?—Yes.

3353. The Government, for example, has to deal with the termination of the G.I.P. Contract in 1925. If the shareholders are in a dissatisfied frame of mind they will claim their money, and the Indian Government will have to find it?—Yes.

3354. If the shareholders are in a good humour and feel that they have been well treated and that they are offered good terms they will leave their money with the Indian Government?—They will.

3355. And the Indian Government will then not have to find money to pay them off, but can use it for new developments?—That is so.

3356. That is worth paying a price for?—It is.

3357. You have said you would raise some capital by means of shares?—I do not know that you would raise very much money by shares without some Government guarantee.

3358. I was assuming that the present conditions of a minimum guarantee prevailed; with a full share of the profits?—Certainly.

3359. Do you see much difference between raising it by Company debentures guaranteed by the Government, and raising it as a direct Government loan? You said in the Mackay Report that in this way you had two strings to your bow?—My present view is that I would rather raise it through the Companies.

3360. Because that does not, so to speak, establish a scale of interest for Government?—My reason goes perhaps beyond the immediate railway question, I am thinking of the credit of India generally, and I do think it is better to keep what is looked upon as Government debt as low as possible, in order to use that string in case of need for other Government purposes, and confine your railway borrowing through the Railway Boards. Perhaps I might be allowed to say that the public do not sufficiently recognise, in my opinion, how extraordinarily prosperous the financial condition of India was certainly until the war, and even now is. They know there is a certain amount of public debt, but they do not know that it is represented by public works and railways. I think myself it is better for the credit of India that the Government loans should be on their own for ordinary Government purposes, and railway loans through the railways.

3361. If the Government of India had been a private Company appealing for capital you would have put a little more about the progress of the Company on the prospectus, would not you?—Yes, unquestionably. The public are not aware of the really extraordinarily prosperous condition of India.

3362. Do you care to express any opinion as to what London money would say to investments in Indian concerns, whether in Indian Companies or Indian Government loans, but in rupees issued in India?—The London public would have nothing to say to them at all; they would give them the cold shoulder at present.

3363. Even a Government rupee loan?—Yes.

3364. Is that purely a question of exchange, or is it a question of credit?—It is a question of exchange.

3365. It is too dangerous?—It is too dangerous. They do not know where they are. Look at the fluctuations that have occurred in the rupee in the last couple of years.

3366. If you had invested with the rupee at 2*s*. 9*d*. and you now find it is 1*s*. 7*d*., it would be a rather serious position?—Of course, it would have been very nice to have had large investments in rupees during the war, but the public does not want uncertainty. You always have to pay more for your money if there is any uncertainty.

3367. I do not suppose you care to express an opinion as to what Indian capital will do to-day?—No; I could not express an opinion on that.

3368. You would not care to say anything about that?—No, I could not. Things have changed so much.

3369. Things have obviously changed very rapidly?—Very much indeed. I could not give an opinion on that. When I was here we tried in various ways to sound people, and we tried to see if we could not raise money in India locally, but the result of our inquiries has not always been encouraging.

3370. If you had been told when you were sitting on the Mackay Committee that Bombay had raised in a few weeks 9 crores, you would have been surprised, would you not? The Bombay port improvement authority have raised 9 crores within a few weeks at 6½ per cent., free of Indian income tax?—Of course, that is a very good rate. Yes, I should have been surprised—that is surprising.

3371. That is quite a considerable sum?—It is. Of course, during the war there have been times of inflation. I do not know whether in the future you would be able to reckon upon equally large supplies.

3372. We shall have to get evidence on that in India. Is there anything else you would like to say to us? Your Report did discuss the Railway Board. Do you wish to say anything about that?—No, I do not think so. My opinion on that must be very stale.

3373. (*Mr. Tuke.*) Your feeling is that money could be raised in London at the present time, or in normal times, for the Indian Railways?—It is, given a fair inducement and stable political conditions.

3374. It would have to be a condition that money had got easier and that the political position was secure?—Of course, we get on to delicate ground here. The public knows that there are great constitutional changes pending in India at present. They cannot quite estimate what the outcome of those changes is going to be, and until they do know perhaps there might be a little reticence in finding the money. I think that has to be taken into consideration.

3375. Would you say that at the present time an investment of money in Indian Railways was not popular in the London market?—There has been no opportunity of testing it lately, has there?

3376. Except the prices to which Indian Railway securities have fallen.—I attach no value to quotations. I judge from enquiries that come to one from time to time about the security, or whether exchange will affect the security of investments, that the public are following those developments with a certain amount of interest. They know that the administration of India is not going to be exactly as it was before, and they want to see how it works.

3377. Then the suggestion has been made that one possible plan would be to issue shares with a certain amount guaranteed by the Government, the balance to depend upon the profits from time to time of the Company. In view of the increased value of money, would you raise the percentage at present guaranteed by the Government?—Yes, certainly that would have to be done.

3378. On account of the guarantee I fancy that those shares would remain trustee securities; would the profit-earning provision take them out of that class?—I am afraid I cannot answer that.

3379. That is an important question?—Are they not trustee securities now?

3380. If they are guaranteed by the Government they count as trustee securities.—Then they remain such. The additional interest would not affect their position.

3381. I am not quite clear upon that point.—Perhaps you had better take a Stock Exchange opinion upon it.

3382. If that is the effect, it would take away a considerable number of investors who are authorised to place money in trustee securities?—Yes.

3383. (*Chairman.*) Instead of increasing the minimum guarantee, would an alternative method be to give them a larger share of the profits over the minimum?—I think you will have to increase a minimum such as 2½ per cent. or 3 per cent., because these are rates much below those which the British Government does give now. I think you would have to give a reasonable amount of guarantee, so that if the investor in a bad year only gets the minimum he still gets something, in order that trustees may put their money into it. You have other trustee securities competing with you. If you can get 6½ per cent. out of a trustee security, a 3 per cent. guarantee would not be of any good, but a 4½ per cent. or 5 per cent. might, with an appeal to the speculative element. I think the speculative element carries the day.

3384. It is very much the same idea as the American Convertible Bond, is it not?—Yes, very much the same idea.

3385. Sir David Barbour told us yesterday that, under the present temporary contract with the East Indian Railway, if his Company earns an extra million for the State, they get 10,000*l.* of it. Does that seem to you good business from both sides?—I should have thought it was not worth mentioning; you had better leave it out altogether.

(*Chairman.*) Thank you very much for your evidence.

(The witness withdrew.)

Adjourned for a short time.

MR. W. O. GRAZEBROOK, called and examined.

3386. (*Chairman.*) They have given you the notice about the conditions upon which we are taking evidence?—Yes.

3387. It is very good of you to have come at short notice, but we felt that we ought to have evidence from your firm if we could. You are Gillanders, Arbuthnot & Company.—I prepared a short note of my qualifications to speak about Railways in India.

3388. It comes to us in this way. We have had Sir Henry Procter, and he told us about the branch lines that he had been responsible for at the Bombay end, and he said that in partnership with your firm he had also constructed one or

two branch lines on your side.—Yes, I have given the particulars there. Two of them were floated jointly.

3389. I see that you have only just returned from India and are now a partner at home.—Yes, that is so.

3390. You were a member of the East Indian Railway Local Consulting Committee for 3 years and also a member of the Eastern Bengal Railway Local Consulting Committe since its formation?—Yes.

3391. Sir David Barbour told us something about the East Indian Committee. He told us there were 5 of you.—Yes.

3392. Partly Indian and partly English?—Yes, there were 2 Indians.

3393. And 3 English. That is how he put it?—Yes.

3394. You have no formal powers.—We are only a consulting Committee, we have no Executive powers at all.

3395. You sit together with the agent?—The agent and his secretary and usually the traffic manager attend these meetings.

3396. Attend at fixed meetings—how often?—Until recently the East Indian Railway Consulting Committee was only called together occasionally at infrequent intervals, but at the beginning of last year we suggested to the agent that it would be more useful to us, and possibly more useful to him, if we met every month, and since early in last year that Committee has met every month and I think that the agent would admit that he has found the Consulting Committee of some use to him.

3397. Are you all Calcutta or were you all Calcutta?—Yes, we were all Calcutta.

3398. You had not any people from Cawnpore or Lucknow or further up?—No, it would be difficult for them to attend meetings.

3399. I was going to ask you about that. Do you think you could persuade people to do that?—Yes, I think you could. They might not be very regular, but I think they would attend, especially if there was something important about their own district.

3400. Sir Walter Lawrence made a suggestion of a larger body who were not merely to meet as a Committee, but who individually would represent important points or districts on the line, who would be distinguished as definitely appointed and would be given a pass and would carry a decoration, they would be mostly native gentlemen in that case, and who would all over the line be recognised as people in a responsible position. Their business would be not merely to meet at intervals formally in a Committee with the agent, but also to be intermediaries between public opinion and the company. How does that recommend itself to you?—Except as regards the decoration that is the practice now. The two Indians who are on the East Indian Committee frequently bring up matters to which their attention has been called by their fellow-countrymen.

3401. (*Sir Henry Burt.*) Do they get passes now?—Yes.

3402. (*Mr. Hiley.*) I suppose they get information from native sources which would not be open to the Englishmen?—That may be so.

3403. And would be the first to hear of native grievances?—Certainly.

3404. (*Chairman.*) You think that is really a useful system and works well. Do you think the Agent would support that statement?—I think that the present system certainly is proving useful now that the Committee meets regularly and carries on its business regularly from one month to another. I think it certainly is useful.

3405. What have you done about that?—You keep your file of Minutes of the previous meetings and if anything has been deferred or you want to know more about it, you make a note and ask about it.

3406. (*Sir Henry Burt.*) There is a record of the meeting?—Yes.

3407. (*Mr. Hiley.*) Do you prepare an Agenda?—Yes; there is an Agenda sent round a few days before and Minutes of the meeting are circulated directly after.

3408. (*Chairman.*) Do you think that could be extended further with a Board still sitting in England?—Yes.

3409. Would it be possible to give them any power or would it be desirable as well as possible?—I do not think myself it would be desirable.

3410. That I think pretty nearly everybody has told us, that whatever be the form of a Local Committee, it must be merely Advisory?—Yes.

3411. You do not think it would be possible to give them powers within limits and beyond that to go back to the Board?—I should not myself give them any powers at all. I think you may take it for certain that any legitimate grievance that is represented to the Agent by these Consulting Committees is promptly dealt with

3412. (*Sir Henry Burt.*) Does the Eastern Bengal Consulting Committee work on the same lines?—Not precisely on the same lines. In the first place, it meets once a quarter. It has only lately been appointed and it is a new institution. The members of the Eastern Bengal Consulting Committee are appointed, some of them by specific interests, one by what is called the Loose Jute Association, and another one is supposed to represent the Calcutta Jute Mills. I was appointed on it in connection with Branch Railways and general business.

3413. You have sat then on both Committees?—Yes.

3414. (*Chairman.*) I notice that you have been Vice-President of the Bengal Chamber of Commerce, and also President of the Bank of Bengal. That seems rather to carry out what other witnesses have told us, that there are not enough good men to go round if business is to be transferred to India.—That is quite true. As regards the suggestion to move the Board entirely to India, I have made a few notes which perhaps I might read.

3415. Yes?—I am opposed to removing the domicile of the Railway Companies such as the East Indian Railway Company to India because you could not get in India suitable personnel to form a Board; there is no supply of retired officials with railway experience such as is available in London. You would have to form your Board from the members of mercantile firms. Heads of mercantile firms in India are busy men, and directorship of a Railway Company could only be one of many activities. Directors would not be able to give anything like the same time and consideration to the business of the railway as could a Board in London, nor would they have the experience of railway administration necessary for the purpose. They would thus be too ready to confirm the action

of the executive staff. There is also another and a growing objection to Boards being situated in India, that is, they would be subject to great local and political pressure. This would especially be the case in respect of directors of Indian nationality.

3416. You do not, in other words, think that your successful Committee could be the nucleus of a real managing Board?—No. I think they fulfil very useful functions as they are. Enlarge them a little if you like, but always remember that a very large Committee is an unwieldy body.

3417. It is not so much a question of size, I think, as of power?—I should not give them any executive power.

3418. That, in other words, seems to bring us to this. As you may observe, our reference says: "The Committee will take note of the decision "to remove the management of the East Indian "Railway to India which was arrived at." If that be so, does that, in your judgment, mean if that is carried out the East Indian must pass over to direct State management?—I had not thought of it in that way. I had imagined that what had been intended when the East Indian Railway contract was renewed was, that the railways should become domiciled in India and have its executive Board in India, not pass to State management.

3419. I thought your point was that you could not get a competent Board in India?—You could not, that is my argument for leaving the Board in London.

3420. Assume, for the sake of argument, that we do not attempt to convert the Secretary of State or that we do not succeed, then I think your position does mean State management, does it not? The Secretary of State says management in India. You say management by a Board in India is not possible. That means management by the Government in India, does it not?—Yes, I suppose it does, but when the Secretary of State proposed this he was not prepared to admit, nor do I suppose he is now, that management by an executive Board in India is impossible or would not be efficient.

3421. You and I may both disagree with the Secretary of State, he may be wrong, but assume he has decided and that we are bound, and that the management does go to India, under those circumstances I gather you think direct State management is the best?—No, I think I would rather make an attempt at the other than have direct State management of the East Indian.

3422. You would make an attempt at a local Board?—Yes, rather than have State management.

3423. In other words, you distinctly are against State management?—Decidedly.

3424. (*Mr. Hiley.*) That is the worst alternative of the three?—Yes, I think that is the worst alternative of the three.

3425. (*Chairman.*) Have you sufficient knowledge both of the actual management as you have seen it on the State Eastern Bengal and on the Company East Indian Company to draw a comparison?—Yes, I think I have. I have lived in Calcutta for many years and I have travelled on both railways.

3426. I take it that you have been a shipper, which is more important perhaps?—Yes, I should certainly say that the management on the East Indian is decidedly better than the management on the Eastern Bengal Railway.

3427. In what respect?—In particular that the East Indian has its regular officials who grow up on the line. The Eastern Bengal Railway is for ever changing its managers; we have done better in that respect lately: we have had Mr. E. A. S. Bell, who was there some considerable time—that, I think, was partly due to protests from the Chamber of Commerce.

3428. That was when they shifted a manager, an agent we know about?—They were always shifting their managers.

3429. Do you think that is a necessary evil of the State system?—It seems to be necessary in all Government service. Whether it is necessary or not, it seems to be the practice.

3430. Suppose you could break that practice down, the two are on a par as far as that is concerned?—Yes.

3431. In what other point do you think that the East Indian is better?—They are more generally alive.

3432. In the matter of facilities or in the matter of varying rates to suit developments?—In the matter of facilities.

3433. They give you better facilities?—Yes.

3434. The Eastern Bengal, I suppose, is a very important line for heavy jute traffic?—Extremely important. Almost the whole jute traffic of Calcutta comes over it, that is to say, what comes by rail.

3435. Is that traffic adequately dealt with?—From time to time it is, and from time to time it is not. It depends so largely on the manager for the time being.

3436. You think it is a question of management, not a question of shortage of facilities for want of money?—Yes, I think it is largely a question of management.

3437. We know that the East Indian has been crying for more money to improve its facilities for years past. Do you think they have done all they could with the facilities that they have?—Generally, I should say that they have.

3438. Do you think there is any difference in what I may call accessibility to public complaint?—No, I do not think so.

3439. It is a charge often made against State management generally. You were a big shipper and in an influential position and could make yourself heard. What do you think about the ordinary customer? Would there be more complaints on the Eastern Bengal?—I should not have said so, but I am a little diffident in expressing any decided opinion about it.

3440-4. It rather tends to come to this, does it not: managers frequently changed, the natural result of that, less efficient management?—Yes.

3445. Prevent the constant change of manager and you may get as efficient management as on the East Indian where you never have the constant change? That might be the answer?—I think that might be so if you could extend it to all the officials or pretty well all the officials.

3446. Have you any special knowledge of the Railway Board?—I have had dealings with them for a good many years.

3447. Have you any views?—Yes, I think that the present system of working the Railway Board is not good. The Railway Board has not sufficient status. The President in my opinion should be a member of the Executive Council of the Government of India. The Board is entirely at the mercy of the Finance Department, and it

would not be so if the railways were a watertight compartment, about which I would like to say something later on, nor so much so if the status of the Railway Board were improved.

3448. You consider in the first place that the Railway Board ought to have a more dignified status?—Certainly. It is a very important department in the development of India.

3449. You thing that the President of the Railway Board ought to be a member of the Executive Council?—That seems to me the best way to improve their status.

3450. Would the President in your opinion best be a skilled man of the world who was trusted as an Administrator, or an expert railwayman?—The ideal in my opinion would be to get a man who was as you say a skilled man of the world.

3451. You would not mind even if he did not know railways in detail?—No, I should not. I do not think that would be any hindrance to him.

3452. Then in that case you make him a member of the Executive Council and you take up a considerable portion of his time with the general affairs of the Government of the country?—I had not thought of that point of view. My idea in suggesting that he should be a member of the Executive Council was to improve the status of the Railway Board.

3453. Quite so, but you appreciate that if you make him a full member you make him unable to give his whole time to his own department?—Yes, that I suppose is so.

3454. On the other hand, if you do not you suffer the corresponding disadvantage, that though you may say he is a member of the Executive Council, when railway matters come on it always leaves him somewhat of an outsider, and he is not quite in the same position as the other people who are full time members?—Yes, that would be so.

3455. Your inclination is to make him a full member?—Yes; the idea of doing so being to improve the status of the Railway Board, but if you can get to that in some other way, very well.

3456. Now come to the watertight compartment.—The Railway Board should, in my opinion, be a watertight compartment and the profits thereof should be devoted to capital expenditure on further railway development.

3457. You cannot develop fast enough on the mere surplus revenue?—No; but at present, railway profits are used for anything.

3458. What would you do? Would you say to the Secretary of State: "You have put in "200 million pounds, we will give you 6 per cent. "and you may go away and leave us alone"?—That sort of idea was in my mind.

3459. How is the Railway Board to get its new capital? Is it to raise it on its own credit, or is it to be raised with a guarantee of the Government of India behind it?—I think it would have to be raised with the guarantee of the Government of India behind it.

3460. Then the Government of India clearly must control the raising?—Yes.

3461. They must, in fairness. You must admit this means that they must settle the terms and settle whether the Government of India can afford to take the responsibility at any moment for a given amount?—Yes, that follows.

3462. You do not think you could rely on doing it cutting the railway undertaking sheer adrift and raising your new capital on the responsibility of the Railway Board?—I do not think you could. This is more a matter for the Government to speak about than myself. I think in that case you would have the danger of there being two Richmonds in the field; that is to say, Government loans and Railway loans.

3463. That is one point and there would be less security?—Yes, if you only had the security of the Railways there would be less security.

3464. With regard to the raising of capital have you anything special to say about the raising of capital in England?—At the present moment, as we all know, it is practically impossible.

3465. Let us assume that we have got into smooth waters again.—The time will come when it will be possible to raise money in England again, I should say.

3466. Assuming the thing to become much more Indian and much less English, I will put it that way, do you think then English capital would be freely put in?—You mean if India becomes much more of a Home Rule country. Is that what you mean?

3467. Not only India as a political entity, but Indian Railways especially.—I do not quite understand the question.

3468. Let us take it in this way, assume that the East Indian Railway management is transferred to Calcutta and it is run by a Local Board, and the Railway Board puts out a prospectus asking for a loan of 5,000,000*l.* which it says it proposes to spend on development on the East Indian Railway. What would be the attitude of the investing public in England?—I should say that they would not be disposed to support it.

3469. You think the fact that it was local would be a great difficulty?—I think the removal of the Board from London to India would be almost a bar against continuing to raise money in London.

3470. Even though it was raised by the Railway Board of India with a property valued at some hundreds of millions earning a substantial rate of interest.—If you put it exactly on a par with the Government of India Loans then there would not be.

3471. You require that it would have to have the security of the Government behind it to do anything in London?—Yes.

3472. What about raising the money in India. Suppose your Indian Board of Directors are appealing for rupee capital on a prospectus of the East Indian Railway proper.—They would not be able to raise all the money they want.

3473. What do you think they could raise?—It is a very difficult question to answer. There was a loan in Bombay, I saw the other day, and they got a little over 9 crores, which I should say was very good indeed.

3474. I take it that surprised you?—It did; the amount of it did surprise me.

3475. If Bombay can raise 9, what can Calcutta do?—Not so much. I do not think so in a case like that.

3476. If it had been a Calcutta development loan apart from a railway—there is more money in Calcutta, is there not?—There is more money in Calcutta, but in Bombay the money is very largely in the hands of Indian traders. That makes a difference.

3477. In Calcutta it is very largely in the hands of the old English firms.—Yes.

3478. When people go home do they intend to take their money with them, to transfer their investments to home investments?—To some extent, and recently with the high Exchange they have been more inclined to.

3479. The 2/9 rupee upset everything, I suppose?—Yes. Before the rise of the rupee, when it was fixed at 1/4, a great many people left money in India.

3480. You do not think that they would be tempted to invest it under Indian control, even though they left it there. Is that your view?—I should doubt that.

3481. You think a good deal of native money can be get, but not enough.—Not enough.

3482. What do you think would be the position? One knows that there are some very rich landowners in Bengal who could put large sums of money in.—But they do not.

3483. Do you think what we may call patriotism would encourage them to support a thing like that, a great development of Indian local management?—I doubt if it would in Bengal. It has done so in Bombay.

3484. You think with regard to the 9 crores a great deal of it was patriotism?—I think so.

3485. Do you not think you would get the same thing in Bengal?—Not from the Zemindars.

3486. Not even from the prominent ones?—No. Perhaps I may mention an instance. Two of our railways, the Sara and the Mymensingh, run through Zemindaris owned by rich Zemindars, but they did not take up any shares.

3487. Did you try to get them in?—Yes, I sent men specially to see them.

3488 And they did not do so?—No.

3489. That is the general case. Now tell us about your own branch lines, the Sara.—The Sara and the Mymensingh were floated jointly with Messrs. Killick, Nixon and Co.

3490. He told us about the Sara Serajganj. Is there any thing special to say about the others? Are they successful?—The Mymensingh promises to be very successful, and the others are now doing well.

3491. You have got 270 laks altogether?—In those railways in that comparatively short time, 2 years.

3492. I did not follow that from your statement. You mean from April of 1918?—No, from early 1913 to May 1915. Since 1915 the war has prevented flotations.

3493. In the two years before the war you got 2¾ crores?—Yes.

3494. That was rather a boom period all over India for these branch railways?—Yes.

3495. Have they turned out well?—We had great trouble with the Sara Railway over the terms of the contract with the Railway Board, but now it is doing well, and the Mymensingh Railway has done well from the start. These Railways always take a little time before the Indian gets to use them.

3496. You have something better than your minimum guarantee out of them already?—We have not divided anything above the minimum guarantee. We have on the Mymensingh. That was only 3½ per cent. We are making 5, and I hope this year we shall do better.

3497. On the whole they have developed quite as fast as you can have hoped. May I put it in that way?—Yes.

3498. Have you any criticism or suggestions to offer on the question of rebate terms or guarantee terms?—Do you mean as to the merits of the contract?

3499. Yes, or as to a better system or any modification of the existing system?—No, I think the rebate and the guarantee terms work quite reasonably well. You can choose whichever you like.

3500. Of course we are not arguing, but the guarantee terms would have to be revised if you had to start again. A 3½ per cent. guarantee would have to be translated into 5½ per cent. or something of that kind?—I find it difficult to say what terms, but 3½ is quite out of the question.

3501. If the war had not come, would the boom have gone on or was it dying out?—Yes; I think it would have continued very fairly well for a time.

3502. In other words, there really is a reasonably remunerative field for enterprise of this kind?—Yes.

3503. There seems no reason why, if financial terms were revised, you could not go ahead again?—No; India has recently had an industrial boom, but that, I think, has died away.

3504. So we are told.—And one would suppose that the public will be more inclined to return to more sober investment.

3505. Your firms are managing agents of all these little lines?—Yes.

3506-7. Practically, the Board does not do very much. The Board is a more or less official Board, in cases where there are managing agents, I understand?—Yes. The Board meets once a month and discusses anything that is of interest.

3508. We want to know the real picture, not the nominal one?—In India you probably know that the system of managing agency is in force. This is something unknown in this country, but in the Indian conditions it works well.

3509. One thing, of course, it does: it ensures continuity, because, though you go home, you have talked it over very fully with your partner, who is taking your place before you go?—Yes.

3510. And it is really Gillanders Arbuthnot & Co. all the time. The individual may change, but the firm does not as regards policy?—No, that is so.

3511. These lines are all worked by somebody?—Yes; we work the Darjeeling Railway and the Darjeeling Himalayan Extension. There is a general manager under our orders and the orders of the Board of Directors. That is a very old Company, floated in 1881, and now there is an extension of it as well.

3512-3. I have known the Darjeeling Himalayan for a long while, except in the flesh.—We are agents for the Darjeeling Himalayan Railway Company.

3514. But you have a manager?—There is a general manager and we manage the line, under the orders of the Board of Directors.

3515. The others are worked by Main Line Companies?—Yes. The Darjeeling Extension is worked by the Darjeeling Railway.

3516. Then as managing agents in other cases where a main line Company or a State Railway works, do you have to buy stores?—We do during construction, but not after that is finished.

3517. You clearly do not have anything to do with the working; you do not interfere in that?—No. It is provided in our contract that we are not to "interfere" in the working; but I might say, as regards the working, that we keep a man to keep a watch on traffic, &c. He travels frequently over the line, and keeps his eye on traffic development and gives us reports. To that extent we interfere, but the responsibility for management is with the State Railway which works it.

3518. In the same way, I suppose, he might represent that he wanted rates altered?—He does frequently.

3519. He cannot alter them himself?—No, he can only report to us.

3520. One can quite see that, under the peculiar conditions of India, where practically the main line could not raise the capital, it was highly desirable that these lines should be made. You rendered a real public service in making them. We will all agree about that. Suppose the main line had been able to raise the capital, would it have been better that you should do it or that the main line should do it, and have no complication of outside Companies?—I do not think that the main line could have raised it.

3521. I quite agree, but assume that the main line could.—If they could do everything that we do there would be no occasion for the branch lines.

3522. First of all, you were able to raise the capital. That was a great service, we agree; but besides that you watch that they develop your line?—Yes.

3523. Clearly if it was their line they would themselves watch that they developed it?—Presumably.

3524. I want to know, is there any special advantage, apart from the raising of capital that could not be raised otherwise, in the existence of these separate Companies?—No, but in these Branch Line Companies we have a large number of Indian shareholders; we tap, I think, a field which is not tapped by other investments. In that way I think they do useful service.

3525. Imagine once more the East Indian Railway with an Indian Board and that advantage would be gone?—Assuming that the Indians would subscribe equally freely.

3526. Would they not?—I should doubt it.

3527. Do you really get local capital in these cases on the line?—Yes.

3528. You do not think you would get that for a big Company?—I doubt whether they would get it. We sent men with prospectuses round the district when the Mymensingh was being floated and when the Sara was being floated, but particularly the Mymensingh, and we got quite a large amount of local capital.

3529. You do not think the East Indian Board could have done it?—They would not have done it.

3530. Even though an Indian Board?—I do not think so.

3531. That is a strong point?—I do not think they would have done it.

3532. Have you any idea what proportion you got in that way?—I could not tell you that without reference.

3533. You have a rough idea—half, or a quarter or three-quarters?—No, it may be a quarter.

3534. Of course, that is substantial. In this case that represented 31 lakhs?—Yes, I should think that is not excessive over all those lines.

3535. That is obviously a considerable advantage for the Branch Company?—Yes, in favour of the Branch Company as against doing away with it altogether.

3536. That would apply even though the parent Company could raise the money?—I think it would.

3537-40. The Board of a Railway being domiciled in London you think is no bar to raising money in India?—I do not think it is any bar.

3541. Do you suggest that the East Indian Railway Board remaining in London could float a rupee issue?—Yes.

3542. On their own?—You mean they might want the help of a firm in Calcutta?

3543. I do not know, that is what I want you to tell me. Do you think if Gillanders Arbuthnot put out a rupee loan of a couple of crores for the East Indian Railway in Calcutta it would be a success?—I could not speak as to that at the present moment.

3544. If they had done it in 1914?—Yes, I think it would have been.

3545. Nobody has suggested that to us, I think?—I think that a suitable firm would find it easier to raise money than the East Indian Railway by itself.

3546. I quite follow that. You say that the Railway Board is apt to be too stingy?—Yes; I dare say Sir Henry Proctor would tell you the same thing.

3547. What does that mean. Does that mean drove too hard a bargain in making a contract?—Yes, not so much in the terms of the contract as in the flotation commission that they are prepared to sanction, or possibly in the rate of interest. The rate of interest would be more a matter for the Finance Department.

3548-9. That is a matter the public settle for them?—Yes; the market settles it.

3550. Have you any objection to saying what the terms are. Is it public?—I do not mind telling you, but I would rather you did not publish it.

3551. The commission is a long way from being net?—Yes.

3552. You are allowed to treat it as part of the capital?—Yes, it is paid out of capital.

3553. You say that you pay underwriting, printing and flotation expenses?—We pay for all that.

3554. All that comes out of the commission?—Yes.

3555. You say that it would be wiser to make it more liberal?—They were often trying to get it down below the figure I mentioned, but we declined to consider anything less.

3556. You get no money out of that commission to let a big man have a discount?—On taking up the shares?

3557. Yes?—No, except in what may be paid for underwriting.

3558. (*Sir Henry Burt.*) With reference to No. 4 of the Terms of Reference, "To report "whether the present system of control by Govern- "ment of rates and fares and the machinery for "deciding disputes between railways and traders "are satisfactory." Have you anything to say on that point as regards your branch lines? Do you think that the Railway Board treat you fairly and satisfactorily from your point of view?—In the matter of rates, yes, I think so. We have had trouble sometimes with the Company that is managing the line—for instance, the North-Western; we have had trouble about their starving our Hoshiarpur Doab Railway. The North-Western Railway is the State Railway which works the Hoshiarpur line. We have had trouble with them for starving the traffic by not giving enough trains. We have had great trouble over that in particular.

3559. (*Mr. Hiley.*) You say that if the Board of a Railway was located in India you doubt whether they would get Indian capital. I think that is what you said. Take the East Indian, if their Board was domiciled in India you expressed doubt as to whether they would get Indian capital?—They would get Indian capital, but not nearly enough. You cannot raise in India enough for the requirements in India. I think that is admitted anyway, whatever you do.

3560. I thought you said they would not get Indian capital?—They would get some, but not enough.

3561. (*Chairman.*) Thank you very much

(The witness withdrew.)

SIR HENRY KIMBER and MR. A. MUIRHEAD, called and examined.

3562. (*Chairman.*) Sir Henry, you are, as we know, Chairman of the South Indian Railway Company?—I am.

3563. I think you have also various financial connections in London?—Yes, as Chairman or Director or Trustee of several large commercial undertakings.

3564. I think you used to be a Director of the South Western Bank, did not you?—Not the South Western, but the Capital and Counties Bank, now amalgamated with Lloyd's. I have been for over 30 years, and still am, a Director of that Bank.

3565. We shall be very pleased to hear any statement you desire to make to the Committee?—My own immediate connection with the Indian railway system commenced with the Indian Tramways Company, Limited, a company unguaranteed, projected in 1862 on a plan invited by Government to construct tramways as feeders to railways. Its first line was opened in 1865, Arkonam, on the Madras Railway, to Conjeeveram. Sir Macdonald Stephenson, C.E., pioneer of Indian railways, asked my co-operation. As a financial operation it was not successful. At my instance, application was made to the Government for improved conditions, and in 1867 the Government agreed temporarily to guarantee 3 per cent. on its capital of 100,000*l.* from 1st January 1868, and invited us to undertake the Carnatic Railway in 1869, which absorbed the Indian Tramways Company, which was wound up, and its capital represented by 60,000*l.* stock of the Carnatic Company guaranteed. The Carnatic was afterwards amalgamated with the already partly constructed Great Southern of India Railway in the same Presidency by Act of Parliament passed in 1874 called "The South Indian Railway Act, 1874," and the three undertakings became the South Indian Railway Company. I cannot claim Indian residential experience, but have considerable capital invested in India; have been in India many times, and have travelled some thousands of miles there. I have many business and personal connections there. I am chairman of, and a large shareholder in, two important tramway undertakings in India, not guaranteed, but both successful. One the Calcutta Tramways Company, and the other the Karachi Tramways (East Indian Tramways Company), in which I am a large shareholder, I think the largest. That also is a successful undertaking in another respect, it being worked on a new principle, the motor rail principle, invented by our engineer, Mr. J. D. Abbott, a nephew of mine. I also became acquainted with the irrigation schemes of the Government in Madras and Orissa and their Executives. I and my co-directors negotiated, and in 1878 concluded a contract with the French Government for the construction with French capital of the Pondichéri Railway, a short line (7·85 miles) in the flourishing French Colony of Pondichéri, from the town of Pondichéri on the coast to the River Gingi, where the line connects with the South Indian Railway, by which it is worked successfully as a branch under our direction and management. Our concession was for 99 years, which expires in 1978. In our other great Colonial Dependencies I have had much to do with railways, both State-owned and otherwise. Outside of India I was largely interested as a shareholder and director in the New Zealand (Wellington and Manawatu) Railway, which was ultimately sold to the Government. In 1883, deputed by an eminent body of merchants, bankers and others in London and Paris, I went to Australia and negotiated a contract with the Queensland Government for the construction of an Australian Trans-Continental Railway, 1,200 miles, on the land grant system. The contract was concluded and actually signed by myself and by the Governor of Queensland in the name of the Queen. My principals were to find all the capital, but the project was never carried out, not because of any default on the part of my principals, but by the Colonial Government then in office going out of power on political issues. The succeeding Government cancelled, not the contract we had made, but the Act of their Legislature under which it had been authorised. I was also interested in the projection of railways in the Union of South Africa, and am a considerable investor in Rhodesian railways and in other undertakings of South Africa, in one of which I am a large investor and chairman. I have sons and their families settlers and land owners there. In North Africa I am well acquainted with the Egyptian railways and the works on the Assouan Dam, in the finance of which I took part and subscribed to. In America I crossed the United States and Canada in their trans-continental railways, sleeping twice on the Rockies. In the course of my discussions with Colonial Ministers, I may mention as relevant to one of the subjects referred to your Committee, that, in the opinion of Ministers and others, ownership and management of railways by Governments led to very great political difficulties. Special pressure was put upon Ministers by individuals and voters seeking for situations or places, and for sanction to branch railways unremunerative in themselves, and only serving private interests. As regards foreign railways, I was chairman of the Royal Swedish Railway and a director of the Turin and Savona Railway through the Alps, both with London capital and headquarters. In England, my experience of railways and their finance has been considerable. During 28 years as a Member of the House of Commons, it became often my duty to preside over Committees on private Bills of railways and other companies in which financial and other questions arose. As regards my connection with other Indian railways, I happened professionally to have the conduct through Parliament of one of the first Indian Railway Bills that was passed. I refer to the Scinde, Punjab and Delhi Railway. In the same year I think the East India Railway had a Bill before Parliament.

3566. Do you remember the year?—It must be 50 years ago.

3567. I think it was more than that?—I think it was in one of the 60's.

3568. It was one of the 50's, I should think?—I am speaking only from memory, but can supply you with all those details.

3569. Do not trouble if you have not got them handy.

P.S.—(*Note by Sir Henry Kimber.*) The Scinde Railway Company's Amalgamation Act was in 1869. *Inter alia*, it amalgamated the Scinde Railway, the Indus Steam Flotilla, the Punjab Railway and the Delhi Railway. The Scinde Railway Company was incorporated by a previous Act of 1855.

3570. (*Chairman.*) Sir Henry Burt, who knows a great deal about these things, says that all the Indian companies have Acts of Parliament.

3571. (*Sir Henry Burt.*) The earliest ones?

(*Sir Henry Kimber.*) Yes.

3572. (*Chairman.*) Why did they get an Act of Parliament? What special powers did they need that they could not have got as an ordinary

limited company?—I am not quite sure at this distance of time, but I think it was to authorise or confirm guarantees or special contracts.

3573. Was that done by a Private Bill?—Yes. I think Sir James Cosmo Melville was then the standing counsel for the India Office as he had been also for the East India Company.

3574. You think the reason was that Parliamentary authority had to be obtained for the Secretary of State to give guarantee?—Yes, or to confirm contracts which gave guarantees. I think there was a doubt at the time whether it was within the powers of the then Government of India as a sort of Colonial dependency to give guarantees.

3575. I am afraid we are getting wrong in our history. It was not the Secretary of State at all; it was John Company. We are going back before the Mutiny. It was the East India Company that must have given the guarantee. It must have authorised the Board of Control to do so?—You may be right.

3576. The Mutiny was in 1857, was it not?—Yes. I had forgotten the dates. But it was thoroughly well agreed between the Government and the legal and Parliamentary authorities that all the Acts were necessary, and I may remind you that all such Private Bills contain in their preamble a statement that these objects "cannot be effected without the authority of Parliament."

(*P.S. by Sir Henry Kimber.*) The East India Company transferred its rights and liabilities to the Secretary of State by an Act passed in 1859.

I understand that the most pressing and important of the four subjects referred to your Committee is that of future capital requirements, or, as defined in your reference "to consider "arrangements for the financing of railways in "India and the feasibility of the utilisation of "private enterprise and capital for the construction "of new lines." As an old banker familiar with such matters, I take great interest in the subject, and the extreme pressure of the very limited time you can allow us to prepare a "synopsis" as you desire, confines me now to a conversational statement on this subject, leaving the other three subjects for subsequent addition and transmission to India if time permits. My opinions as to providing money are these: First, money required on revenue account for maintenance and upkeep; and, secondly, money required for railway extensions and improvements. The first I consider the companies can settle themselves if allowed to. The second is a very different thing. Consider the facts as to both. Indian railways, as a whole, are now in themselves self-supporting and profit-producing institutions. They do not need, as formerly, the assistance of the State, which was originally necessary to bring them into existence and to nurture them until their self-maintenance and income-making power was proved. They can now run alone and maintain and upkeep themselves out of their own earnings. It should no longer be necessary to encumber Government accounts and budgets with their annual, or, rather, their daily, current incomings and outgoings. The maintenance and upkeep could be managed by the existing directors and their executives, and paid for entirely out of the railways' own earnings. One of the difficulties of the present situation arises from this system of book-keeping in India. All the earnings of the railways are received by the Government and treated as Government revenue and inserted in the National Budget. Secondly, as to the raising of new capital for capital purposes of railways, that is, for extensions and improvements. The existing railways of India, as a whole or as individuals, being now assets of proved value worth much more than they cost, or stand at, producing large annual income, and therefore, either as a whole or as separate undertakings, could be made ample security for any further capital required, even without any guarantee by Government either of dividend or of capital. The guarantee of India could be added if found expedient at the time. If a statement of the security and its value and product were laid before the centres of finance in Great Britain and in India, it would, in my opinion, be sure to meet with acceptance, of course "upon terms" according to the rates ruling the money market at the time of borrowing. The number of the stockholders and bondholders now in Britain can easily be obtained by enquiry. They may be reckoned by tens of thousands. Government, as Government, has no capital of its own, and if for State reasons they wish to subscribe capital for railway undertakings, they have to get the money from other sources. If they already hold in the Treasury any shares or stocks or bonds obtained by redemption of capital out of the earnings of the railways, or other profits, they have a security of value in hand which must far exceed any probable further requirements for extensions for some time to come. Such an operation could probably be carried out by the companies themselves, if allowed to do so, in London, where their directors' well-known names and their bankers by consortium would be able and very willing to assist. I have myself tentatively discussed this matter with my own bank colleagues, and I find a general concurrence with my opinion. The difficulty I before alluded to, viz., of the Government Budget embodying all our earnings in gross are treated as income of the State. No provision is made for repairs and renewals delayed by circumstances such as the war. No reserve is made, such as is always made in every commercial company of any kind, for outlay that ought to have been incurred for upkeep in a particular year, and which you are unable to carry out *de anno* in *annum* for insuperable reasons. How is it dealt with in Government accounts? The surplus of earnings in the year over actual expenditure, without deducting or making any allowance for postponed renewals and other upkeep, is divided between the Company and the Government in proportion to their respective shares and interests in the capital of the undertaking. The Government presumably use up their share in their general Indian expenditure. The consequences are shown by the present situation. Millions of arrears of upkeep are overdue. No money has been set aside, but the postponed upkeep, being a liability of the undertaking, comes on to the subsequent years, when the war or other cause has passed away, and is deducted from the future years' earnings to which it did not properly belong. Down would go the dividends of the Companies, and the undertaking is discredited. But in a commercial company it is provided for in this way: it would be put in as a liability, *i.e.*, a debt for expenditure that has got to be incurred, and a reserve would be made for it out of the earnings reserved before division of profits, and held in suspense in order that the works that were due and ought to have been done, but could not be executed for reasons temporarily beyond control, should be done. But what do we find here? The sum that ought to have been set aside and kept at the bankers, either of the Company or of the Government, has not been kept at all, but has been divided as if it were net profits between the Company and the Government. That is altogether wrong. My Company endeavour to mitigate the possible

catastrophe by not dividing all our share as dividend, but reserving to a special reserve account of our own against the otherwise inevitable future reduction of dividend and discredit of the undertaking.

3577. I think you need not endeavour to convince the Committee on that point. We have had the point before us, and we have held up our hands in horror, and will do so again if you like, but we are quite satisfied that it is utterly wrong finance. Two different companies have told us:—"We agree that it is bad, but we only own one-"twentieth of the line, and it is no good our "maintaining one-twentieth of the rails if the "Government will not maintain the other nineteen-"twentieths." It is entirely bad finance. I take it you would agree that it is the result of a copy of the English method of presenting Budget accounts as mere cash statements instead of balance sheets. That is what it all comes back to?—The National Budget must be so, that is a different thing.

3578. Is, anyway? — And that might be improved, but I need not pursue that point.

3579. I think not?—Then may I say a few words in regard to the redemption, in effect the extinction, of capital by terminable annuities? The principle of converting debt into terminable annuities was, I think, originated by Gladstone during my time in Parliament, repeated afterwards by Goschen, for the reduction of the National Debt. It is quite legitimate and a good plan for any nation to adopt as regards its National Debt, but it is quite otherwise if you apply it to writing off a valuable asset. It is writing off so much from the value of your property in your own ledger as if it were a loss, or was worth less than its cost or its value. The East Indian Railway plan might be a very good one so far as it enables the chairman of the Company to say, as Colonel Gardiner did three years ago, that they had paid off 16,500,000*l.* by annuities. To 16,500,000*l.*, in order to get a fair idea of what a financial success the undertaking had been, should properly be added the Government share of surplus profits of 30,000,000*l.*, making a total of 46,500,000*l.* of Government profits from the undertaking during the period 1879 to 1917. Instead of paying off capital you might keep it in existence as good bonds or stock certificates, which, in that sense, would be money or a power for raising new money.

3580. I think you may take it that the Committee pretty much agree with you there. What these companies have done is, although they have not enough capital available, they take 500,000*l.* to write down the existing capital, which is obviously worth more than its book value?—Yes.

3581. It seems a pity to do that if you want new money?—Yes.

3582. (*Chairman.*) I think you agree with me, Mr. Tuke?—(*Mr. Tuke.*) Yes, I agree.

3583. (*Chairman.*) As far as we are concerned, you have made your case there?—With regard to the raising of new money, I received last night a letter from the India Office containing a certain proposal.—(*Sir Henry Burt.*) The Chairman has not seen it.

3584. (*Chairman.*) I hope the India Office will manage in the course of a little while to let me have a copy of it?—May I hand you my copy? (*Handing copy to the Chairman.*) It is a scheme apparently recommended by some gentlemen in India to the Indian Government, but it does not give us any names so that we may judge of their financial ability, but I have no doubt it is a serious proposition.

3585. It comes from the Government of India. The Government of India apparently take the responsibility?—That is what I am in doubt about. You will see that they merely forward it.

3586. It begins:—"I am directed by the "Secretary of State to inform you that he has "received from the Government of India a "suggestion," and then he goes on to explain the suggestion?—A suggestion from someone outside.

3587. It does not say so. I think the Government of India must be taken to be responsible for making the suggestion themselves.—(*Mr. Hiley.*) We have only just heard of it.

3588. (*Chairman.*) We heard of it yesterday. Some day we shall get a copy of it.—Shall I read it to you?

3589. Just give us your comments on it, because we know what the effect of it is. The effect of it is that the money may be raised through the agency of a company domiciled in India but affiliated to one of the existing guaranteed Companies. That is the essence of the story?—It does not help us from the point of view of where and how the money is to be raised. Consider the effect of having capital raised in India in rupees by a company affiliated to a company in England already on a sterling basis. How are you going to arrange the exchange? Is it to be fixed or dependent on the rates of the day? Exchanges are a sort of thing you can never coin into an exact and always stable figure. It depends upon the action of all sorts of causes and individuals. A new business has arisen since the war arising out of these exchange difficulties. If the capital raised is in rupees, it is not likely to be marketable in Britain or other European or American countries. Or is it to be exchangeable for sterling capital, and if so on what terms? The statement before us is too obscure at present. However, it is only a suggestion, not a proposition, and it will be worth considering when it is developed or converted into a proposition, and my company will be happy to examine and consider it. We are replying to the India Office by separate letter, of which a copy shall be sent to your Committee. My own opinion is that any plan for providing future capital for all the railways of India in one Finance would be preferable to separate plans for each undertaking. It would at least avoid competition against one another in the same money markets. I think, too, it would be more feasible. There is one point I should like to refer to which the Government of India will have to face if they want to carry through the removal from London to India of the direction of these companies. What does that involve? The exclusion of the representatives of the actual subscribers in this country of all the capital raised here, tens of thousands in number. The shareholders of the companies have not been consulted by the Government in connection with the present scheme, or with regard to their representation. It has not, perhaps, been considered necessary up to this point, but I hope it will be considered necessary by-and-by. The shareholders will want to know how they are to voice their views if the management and direction of the companies is moved from England to Calcutta or elsewhere in India. How are these thousands of part owners of the railways and their shares and bonds to make their voices heard? Are they not to have accounts rendered to them, with opportunity to criticise, and to have them examined by their own auditors in this country? And to have power to interrogate their future representatives on the Boards of Directors and their auditors? The question of the audit system is a very serious one indeed. The duties of auditors have been defined by Act of Parliament in this country, and the audits of companies' accounts which are made in England

and the making of auditors responsible to the meetings of the shareholders and to the law, is an institution that the subscribers of English capital will not forego. A shareholder, even of a couple of thousands of pounds, is not likely to leave a stone unturned in order to have a voice in some effective way, otherwise he will do all he can to take his money out. This would discredit Indian railways in these markets.

3590. Do you think the ordinary shareholder would object if he were offered handsome terms to surrender his property?—Everybody is always willing to sell on good terms.

3591. Supposing you and I had a stock—I do not care what it is—and it is standing in the market to-day at 70; if we were offered 85, we should be very much inclined to look at it, unless there was something exceptional against it?—No doubt.

3592. Therefore there need not be any hardship on an English shareholder?—If they are paid off on terms they are willing to accept.

3593. You agree there?—Yes, but is that the present question, and where is the money to come from to pay them? What is wanted is new money. Who is the man or the men who will offer the shareholders such terms? And find the new money as well?

3594. Take the Bombay Baroda Railway, nineteen-twentieths of the capital belongs to the State already. With regard to the remaining one-twentieth, if you gave it a 20 per cent. bonus it would only increase it 1 per cent. more, would it not? It would not be a big sum.—No, that may be, but where is the money to come from? You are leaving outside the question which is the groundwork of the position: where are you going to get the *future* capital required?

3595. Let me put it to you in this way. Supposing you have got 1,000,000*l.* of guaranteed stock, and it is standing at 100, let us call it. If I offer you 1,100,000*l.* in debentures, you would probably take it, if the interest was right?—Most likely.

3596. There is your capital. You have not had to raise any fresh money.—But that applies only to the existing asset. Anybody will pay its value on terms. It is already marketable. America would step in and buy on terms—they are doing it now. I do not know whether you have time to watch the money markets from day to day; very few people have.

3597. The Americans are not buying Indian rails, are they?—I have no doubt they are. They are buying thousands of British securities of all kinds. But the point is this. The question of what a man will part with his present interest for has nothing to do with the necessity which is upon his country or company of raising hundreds of millions of fresh money for the future. What market is he to come to? Is the man who has been bought out and has no longer any interest in the concern likely to find sufficient money or is the new man expected to find it?

3598. I am going to ask you a question about that. If I had an Indian investment and the Government came along and gave me a handsome bonus, the next time the Government asked me to lend them more money I should be inclined to say "Yes, I will, because you may give me another handsome bonus some day."—He might, but might is only a word of possibility, not certainty, or even probability. He would certainly say, "What "security or terms are you going to give for the "further advances than that which we have got?" I grant that the markets of the world are open to all. Anybody can go anywhere and try and sell his stuff, and the Indian Government can go where it pleases; but what is it proposed to offer and on what security and terms when the management and the supervision of the men who have hitherto done the work has gone? What will it do if it has to admit the fact that things are under a different régime, and not under the direction of their fellow countrymen?

3599. The Government have raised a great deal of capital for employment on the State railway, which is managed in India?—Yes, by Government officers, mostly British.

3600. There has also been raised a great deal of money for the Company railways, which are managed to some extent in London. Has it been easier to raise money to be spent on the East Indian Company's Railway than to raise money to be spent on the North-Western State Railway?—I should like to know what the position is.

3601. Has that been the experience of the past?—I cannot say without knowing the cases that have happened in the past.

3602. We know the Government has raised large sums of money to be spent on the State Railway.—I suppose they have, and probably or partly from British subscribers or houses.

3603. And that is managed in India?—Yes, by Englishmen and Scotchmen.

3604. Has it had any difficulty in raising that capital?—I think not, but it is for the Government to say. I have no knowledge or particulars of how they raised that money, except that I suppose it must have been by borrowing.

3605. You know quite well. You have seen it done for many years past. Has it had any more difficulty in raising money in that way than in raising it through East Indian Railway debentures?—I think it has. They cannot get the money at the present.

3606. That is not fair. Before the war had they any difficulty? Had they any more difficulty in the one case than in the other?—What they did in that way before the war was a very limited matter, and an easier one.

3607. Quite so, I agree, we all agree that the figure is small.—When they want to do it on a larger scale, or on a national scale—and that is what I infer the Government want now to do—we shall be very pleased to help them to do it.

3608. I think we all agree that this Committee is set a very hard task?—It is.

3609. They ask us to tell the Government how to find more capital when there is less than ever to be got?—No; there is plenty to be got.

3610. At a price?—At a price, yes.

3611. You cannot put out Bank of England stock under 6 per cent?—No, that is true. You must pay a reasonable price; money has a market price which varies from day to day, according to the time for which it is wanted and the terms and security offered. (*Mr. Muirhead.*) With regard to the last question that you mentioned, Sir, I should like to say that the money raised in India is on the revenues of India, not on the railways alone.

3612. That is quite true.—I think your question implied that they raised it on the State railways.

3613. They raised it for the State railways?—They raised money and applied it to any railway.

3614. Let us put it in this way. Did the fact that an East Indian debenture was first a charge on the East Indian Railway, and secondly, had the guarantee of the Government of India, make it more acceptable to the investor than the money that was raised by the Government of India straight away?—That I cannot tell you. I would say, ordinarily, that if the revennes of India were

guaranteed, you would get the money sooner than if you had only the guarantee of the railway.

3615. No, you are unfair to yourself. The East Indian debenture guarantee was double—it was first the Company and secondly the Government?—Yes. It all depends upon how it is put.

The State railway money had a Government guarantee only. Was there any real difference in the difficulty of raising it?—I should not think so, but I don't know the fact.

(*Chairman.*) Is that your opinion, Mr. Tuke?—(*Mr. Tuke.*) I would have thought it would have been easier to have raised money by, say, a debenture stock guaranteed by the Government of India than upon a pure and simple Government loan.

(*Chairman.*) What difference would you put it at in money before the war?—(*Mr. Tuke.*) Not very much difference.

(*Chairman.*) But it would have helped a bit?—(*Mr. Tuke.*) I think it would have appealed more to the general public.—(*Sir Henry Burt.*) That is a debenture stock issued by a Railway Company with a guarantee by the Secretary of State?—(*Mr. Tuke.*) Yes. It would be more acceptable to a larger circle.

(*Chairman.*) One witness put it to us that a man liked to feel that his money was going into productive enterprise with an unearned revenue behind it.—(*Mr. Tuke.*) Yes, and they know there is a tangible asset there in the form of a railway.

(*Chairman.*) Thank you very much for your evidence.—(*Sir Henry Kimber.*) Would you like my co-directors and myself to send forward anything further that may occur to us on the other points?

(*Chairman.*) Certainly, if you wish to do so; but we are leaving for India in a few days.

3616. (*Sir Henry Burt.*) If your Company has anything further to say on the other points mentioned in the terms of reference apart from the evidence you have given, perhaps you would send them out to your agent in India, and they can then be communicated to the Committee in India.—Very well.

(The witnesses withdrew.)

Adjourned to Wednesday next, 24th November at 3.30 p.m.

POSTSCRIPT.—Sir Henry Kimber subsequently furnished the following notes to the Committee.

(*Note No.* 1.)

As regards the other three subjects referred to your Committee by the Secretary of State, and upon which you invite our opinions, I have to say:—

That as regards the first subject, which was to "advise as to the policy to be adopted as and when the existing contracts with the several railway companies can be determined," it appears to us, as that period cannot arrive in the case of this Company until, at the earliest, 1945, and that if this Company's contract is then terminated the Company itself will then be no longer in existence, the question proposed as to what should be the then subsequent management of the railway, appears to this Board one which, in its terms, really cannot affect this Company's interests. Have we misunderstood the question?

As regards the next question, which is to advise on the "functions and status and constitution of the Railway Board," we think that, as the Railway Board is simply a department of the Government, it rests with the Government itself to settle their own rules in the same way as they would in any other Department of State, giving to the Companies the right to a voice upon any points which we might desire to suggest by way of improvement, avoidance of friction or other difficulty.

As regards the question of "Rates and Fares," it is obvious that these must be dealt with on the spot, *i.e.*, in India, and be settled by our Railway Executives there, after mutual conference between all the Companies or their agents with the Railway Board. If any alterations are proposed which would exceed the maxima fixed by our respective contracts, any decision must, of course, be subject to the approval of the Government.

(The following is a copy of my Board's reply to the letter from the India Office above referred to.)

Letter No. 1583, *dated* 18*th December* 1920, *to the India Office.*

I have to acknowledge receipt of Mr. Stantiall's letter No. P.W. 4951/20, dated 17th November 1920, enclosing a suggestion "from the Government of India for raising (through the agency of a "Company domiciled in India but affiliated to an Indian Guaranteed Railway Company domiciled in "London) rupee capital to be utilised in the extension and improvement of the latter, that is the "London Company's system in India," and enclosing a memorandum or outline of six main details of the suggestion.

My Board have considered the matter.

My suggestion, shortly stated, is that a separate Indian Company be formed with a rupee capital affiliated to and working with each of the London Companies, the local directorates of the Indian Companies to be "composed largely of Indian gentlemen of standing." The reference to the Advisory Committee on the predominant question of finding fresh capital for all the railways seems to us to permit of a larger conception of one Indian company or organisation to grapple with the finding of future capital for extensions and improvements on the whole of the railway requirements of India for all its existing railway undertakings. The latter plan seems to us to be preferable to that of forming a number of small additional companies. It would avoid the competition against one another which might arise from several of the Companies going to the money market at the same time, which would be disconcerting to desiring investors and tend to reduce the price obtainable for our bonds, and a waste of human energy and troublesome in many ways, especially as regards the security which could be offered in the larger case and difficult in the smaller one. In such larger company or organisation the agents of the principal railways, as a part of the directorate of the larger concern, would have the advantage of having different schemes of extensions and improvements compared together as regards urgency or necessity or otherwise.

We have no sort of objection to the raising of rupee capital, or of a company based upon that, and would wish well to it, doing anything we could to help the Government in the matter, but we do not think it will ever become marketable in this country, or exchangeable with our sterling stocks. And the following reflections upon the particular suggestion now under reply cause us to think that for other reasons it will be found to be impracticable.

In the first place, No. 1 of the six details suggests that the proposed Indian Company should have the same name as the existing London Company to which it is to be affiliated. Two companies with exactly the same name and with the same or somewhat different objects, even if with different domiciles, we consider would occasion many practical inconveniences. This difficulty might, however, easily be got over by calling the Indian Company "The [South Indian] Railway Extensions Company."

Nos. 2, 3 and 4 require more definition before any final conclusion can be arrived at, but, in principle, they do not seem objectionable.

As to No. 5. This paragraph seems to contemplate that the Indian Company may have a part of its capital in rupees and part in sterling. Whether that be so or not, the suggestion involves a fixed rate of parity of value as between the rupee and the £ sterling at which the two kinds of capital are to rank for dividend. That rate would have to be continuous and permanent throughout the existence of the Company. But the same para. 5 stipulates that the rupee capital of the Indian Company is to rank "in all respects" with the sterling capital of the London Company in respect to guarantee and in the distribution of profits. Can this be, if, as is also stipulated, the dividends on the Indian Company's rupee capital are to be payable in rupees and the profits of what is called the "combined undertaking" would be subject to exchange on remittances of the share of the sterling capital shareholders? The profits attributable to the sterling capital would probably have to be remitted to London at the exchange rate of the day, which would be either in favour of London or against London, and would involve either a profit or a loss on the amount remitted, according to which way the current rate was quoted on the day of the remittance. The effect would be to differentiate between the dividends, notwithstanding the stipulation in para. 5. This might be serious in amount as, in fact, it has been in recent years. (It would also probably affect the question of Income Tax.) Profits made by exchange on remittances can hardly be considered earnings of the railway, nor could losses be charged as expenses of the railway. The object and the condition seem to be mutually destructive.

As to No. 6, which suggests that the Indian Company should be exempted from the payment of British Income Tax, it appears to us that this point will require much consideration. That tax must inevitably attach to whatever share of profits is payable to British holders either of rupee or sterling capital.

Mr. Stantiall's letter expresses the desire of the Secretary of State for an early expression of our Company's views, "especially on those aspects which relate to the connection between the London "Sterling Company and the Indian Rupee Company, and the consequential modifications required in "our Company's present constitution." This, it appears to us, cannot be undertaken until a more complete definition of the Indian Company's constitution is before us.

For myself, as an old lawyer and legislator, I have grave doubts whether it would not be *ultra vires* for our existing Company to alter its constitution on all the conditions outlined. According to our (English) Joint Stock Company Law, an existing company can only alter its constitution within very limited conditions, and then only with the sanction of special meetings of the shareholders and with the consent of the High Court. But in compliance, as far as possible, with your request, we have stated the above preliminary observations for whatever use they may be, if any, and entirely without prejudice, and with the desire to assist the Government of India in any way in their financial object, and subject to further consideration, if desired, when we can be supplied with a further definition of details.

(*Note No.* 2.)

I beg to add to my evidence before your Committee while at the India Office, London, on 19th November 1920, which has since been printed and forwarded to you in India.

Regarding one of the subjects referred to in my evidence—viz., the method prescribed by Government of keeping the Railway Companies' Cash Accounts in India, and incorporating in its own State Revenue the gross earnings of the several railway undertakings, I send you enclosed a condensed table as regards our South Indian Railway, compiled from our audited accounts received from India for the year ending 31st March 1920.

This table shows, by averages, for each month of the year—in three columns: (1) Our gross earnings received by the Government in India; (2) the expenses we were allowed to draw for current outgoings, including payments for debenture interest; and (3) the balances remaining in the hands of the Government at the end of each month. The totals show: (1) Receipts by Government during the year, Rs. 4,01,49,515; (2) total expenses, Rs. 2,32,00,155; and (3) balance of cash at end of the year, Rs. 1,69,49,360. Some explanatory notes are added at the foot of the table. You will observe that the cash balances in the hands of the Government accumulated at the rate of, roughly, 14 lakhs of rupees monthly, or at parity of exchange Rs. 10 to the £ sterling—(our Company's share of the profits for that year were remitted at the rate of 25 pence to the rupee)—140,000*l.* monthly throughout the year, and in such a case bankers would allow "deposit rate," which is at present 5 per cent., on the whole of the daily balances, less a free balance of probably 5,000*l.*

These balances, and the like balances of the other Indian railway undertakings, are utilised by the Government, who, in effect, act as the Companies' bankers, and the Government doubtless make a very considerable profit by use of them. But a reasonable question is whether the profits which the Government make upon these balances during the year should not be added to the total surplus profits which at the end of the year they divide with the Companies?

The Companies are the actual managers of the undertakings, and if the management of the undertakings' receipts and payments during the year were to be left in the hands of the Companies, their own bankers would make a handsome allowance on the account, which would show the working of the undertakings to be even more profitable than their present showing makes them out to be. Their dividends would be better, and consequently their presentment to the financial world would show a better and more *attractive* security for any further wants of capital.

TABLE compiled from the audited accounts of the South Indian Railway Company, Ltd., showing Cumulative Totals, by averages, of (1) Earnings, (2) Expenses, and (3) Balances at the end of each month, and at the end of the year, and their ultimate division between the Government and the Company, for the year ended 31st March 1920.

Month.	Earnings.	Expenses.	Balances.
	Rs.	Rs.	Rs.
April - - -	34,08,742	17,19,607	16,89,135
May - - - -	68,17,484	34,39,214	33,78,270
June - - -	1,02,26,226	51,58,821	50,67,405
July - - - -	1,36,34,968	68,78,428	67,56,540
August - - -	1,70,43,710	85,98,035	84,45,675
September - - -	2,04,52,452	1,03,17,645	1,01,34,807
October - - -	2,37,35,296	1,24,64,730	1,12,70,566
November - - -	2,70,18,140	1,46,11,815	1,24,06,325
December - - -	3,03,00,984	1,67,58,900	1,35,42,084
January - - -	3,35,83,828	1,89,05,985	1,46,77,843
February - - -	3,68,66,672	2,10,53,070	1,58,13,602
March - - -	4,01,49,515	2,32,00,155	1,69,49,360

Of this balance of Rs. 1,69,49,360, with an adjustment adding Rs. 57,948 thereto, making together Rs. 1,70,07,308, the total divisible profit for the year:—

Rs. 1,57,78,914 was retained by the Government, and

Rs. 12,28,394 has been paid over to the Company, less guaranteed interest on Company's capital of 1,000,000*l.* at 3½ per cent. paid in advance.

	Rs.	Rs.
The Company's share of - - - - - - -		12,28,394
has been dealt with as follows—		
Interest on Company's capital of 1,000,000*l.* at 3½ per cent. paid in advance - - - - -	4,35,813	
Indian Income Tax payable to Government on remainder -	53,462	
		4,89,275
	Rs.	7,39,119
Add surplus profits due to revision of half-years 31st March 1915 to 31st March 1919, as per Accountant-General's views - - - - - - -		17,336
Net amount remitted - - - - - - -	Rs.	7,56,455

This sum of Rs. 7,56,455 was remitted to London at the rate of 25 pence per rupee, and realised 78,797*l.* 8*s.* 2*d.*

Notes in reference to the foregoing table.

1. The "Earnings" ignore revenue uncollected, which at any moment may be said to be 8 lakhs of rupees.

2. The "Expenses" treats the whole of the expenditure as money actually disbursed in the period, which is not the case for salaries and wages, and only partly so as regards stores.

3. "Expenses" include interest on debenture bonds and debenture stock, but not the interest guaranteed by the Secretary of State at 3½ per cent. on the Company's capital of 1,000,000*l*

4. For the compilation of the "Table," one-sixth of each half-year's "Earnings" and "Expenditure," including debenture interest, has been taken as the cumulative monthly figure.

SUMMARY FOR STATE RAILWAYS worked by State as well as State Railways worked by Companies.

Year ending 31st March 1918.

Gross Receipts in Rs.	Working Expenses in Rs.	Net Earnings in Rs.
68,92,13,000	31,35,81,000	37,56,32,000 = 37,563,200*l.* at Rs. 10 to £.

SEVENTH DAY.

Wednesday, 24th November 1920.

PRESENT:

SIR W. M. ACWORTH (*Chairman*).

SIR HENRY BURT, K.C.I.E., C.B.E.
MR. E. H. HILEY, C.B.E.
MR. JAMES TUKE.

MR. WILLIAM GAULD (*Assistant Secretary*).

MAJOR RALPH GLYN, M.P., called and examined.

3617. (*Chairman.*) We are much obliged to you for coming at such very short notice. I do not know that we shall be able to do anything more than to have a talk. You have not a formal proof or anything of that kind that you wish to put in?—No, I am afraid I have not.

3618. I think I may introduce you as a Member of Parliament who travelled through India last winter?—This summer. I came back only last month.

3619. You were there during the hot weather?—Yes. The object I had in going out there was

because some of us felt that the political unrest in India is to a large extent due to the industrial backwardness of the country.

3620. Whom do you mean when you say "some of us"?—Some of us in the House of Commons who have been working on Indian matters. We wanted to find out what were the most urgent needs in India in order to foster industrial development, and by that means get over to some extent the unrest that is due to Indians not getting employment and so forth.

3621. Do you mean the ordinary coolie failing to find a job, or do you mean there not being scope for development in Indian hands?—Yes, I mean not so much the coolies as the educated Indians.

3622. No openings?—No openings. The Indian is trained in a Government technical college, he advances up, and when he comes to go through the shops at Elswick or Barrow, or wherever it may be, the door is closed to him. He cannot get on, but a Britisher can. He then goes back to India and becomes an agitator. I thought it was very necessary to find out the cause of that, and one of the main reasons why we got on to the railway question was that the present backwardness of railway development is the main obstacle to the industrial development of the country.

3623. You are speaking of technically trained men?—Yes.

3624. Do you think that any of them who come home and go through a course at Elswick, at Barrow, or elsewhere, have any idea of remaining in England, or do they go there merely with the idea of eventually going back again to India?—I think in every case it is with the idea of getting thorough proficiency in order to go back to India.

3625. The block is in India, not at home?—The block to a certain extent is at home, because Armstrongs, Vickers, and all the large firms naturally say: "If we have no interest in India "why should we take time and trouble in training "a man who is going to take our secrets out to "India?"

3626. So that first of all it is due to the fact that they do not get the same opportunity of training?—Yes.

3627. And in the second place to some extent when they get back to India they feel that they ought to get higher than they do?—Yes. We want to open the door. I think the first thing I had better say is that when I was in Simla I had the advantage of several interviews with Col. Waghorn, of the Railway Board, and Mr. Bell. I put three questions to them. One was whether the normal railway development of the country could be done by the existing Companies without any outside private enterprise being engaged. What I mean is, if it is going to be confined to the engineers and personnel of the existing Companies, is it possible to overtake the development that must be overtaken? They told me that in some cases they thought the work could be done by outside private enterprise. I then put forward the suggestion that if private enterprise under certain conditions could be encouraged it would mean the quicker development of the country; it would not be inimical to the interests of the railway Companies, because one may suppose that the normal development has been retarded during the war, and it would occupy the full attention of all their personnel. But what one is up against at once is the question of finance. The whole problem is a financial one.

3628. When you say that the whole problem is financial, are you reporting what other people have said or are you expressing your own opinion?—It is my own opinion and it is supported by what they told me. The next question that I asked them was whether it would be possible to make out a list of the various projects which had been put forward to the Government of India for approval by various Companies, concerns, and bodies generally, for the sanction and approval of the Government of India, especially the Railway Board, for the purpose of opening up the country in order of priority.

3629. Do you mean schemes put forward neither by the State railways nor by the existing guaranteed Companies?—It includes all, because I thought if I could get such a list I would see the amount of work there was to be done and what chances there were of the existing Companies, with their personnel and their normal facilities, overtaking it. They gave me a list which I look upon as a most valuable document, because it is the first time these facts have been produced by the Railway Board.

PRIORITY LIST OF LINES PROJECTED BUT NOT UNDER CONSTRUCTION FOR WANT OF FUNDS.

Name of Railway.	Length.	Gauge.	Estimated Cost.	Estimated Return on Capital.	Remarks.
	Miles.	Ft. ins.	Rs.	Per cent.	
Sirhind-Nalagarh -	43·03	5 6	54,80,000	5·8	Papers are in the Press, and hence the figure cannot be verified.
Trichinopoly-Ramnad.	108·24	3 3⅜	54,23,686	4·15	Estimate prepared in 1912. Now under revision.
Agra-Karachi -	569·02 (from Hyderabad to Gungapur).	5 6	6,83,31,169	—	Estimate 1920.
Narowal-Amritsar -	40 (approx.).	5 6	50,00,000 (approx.).	—	No details available.
Ta Hapalai-Namtu	36	3 3⅜	68,03,288	Net profit of 7½ per cent. after paying 5 per cent. interest on capital expenditure.	The Agent, Burma Railways, has been asked to ascertain from the Burma Corporation whether they are willing to finance the project under Branch Line terms. His reply is awaited.

Name of Railway.	Length.	Gauge.	Estimated Cost.	Estimated Return on Capital.	Remarks.
	Miles.	Ft. ins.	Rs.	Per cent.	
Shahdara-Narowal-	48·81	5 6	29,96,000 (including junction arrangements, excluding land and rolling stock).	About 5	Estimate prepared in 1918 at pre-war rates. The estimate is now under revision.
Chittagong-Akyab-	211·08	Metre	3,34,90,930	4·07	Estimate of 1918.
Bombay-Sind connection.	Viramgam to Barmer 216 (approx.).	5 6	3,24,00,000	—	Under survey.
Ishurdi-Rampur-Boalia-Nachaul.	64 (approx.)	5 6	84,00,000	About 4	Estimate of 1913 under revision. It is expected that the line will cost 105 lakhs at present rates.
Raiwind-Lyallpur-Khushab.	144 (approx.)	5 6	1,80,00,000	—	——
Gangapur-Gwalior-Kalpi.	160 (approx.)	5 6	2,40,00,000	—	Under survey.
Hardwar-Karnprayag.	84 (approx.)	2 6	2,00,00,000 (approx.)	$2\frac{1}{2}$	——
Nandurbar-Barwani-Indore-Goona-Sipri-Jhansi.	424 (approx.)	5 6	6,36,00,000	—	Under survey.

3630. (*Mr. Hiley.*) Can you give us the order of priority fixed by the Railway Board?—It is in this order: "Statement of lines under construction for which funds have been or are being provided." That is the first category. The next category is: "List of lines being or to be financed by Indian "States." That is the second category. The last is: "Priority list of lines projected but not under construction for want of funds."

3631. Who fixed the priority there?—I assume the Railway Board.

3632. (*Chairman.*) Just look at your second list. I am wondering whether "State" means extensions of existing State operated lines or whether it means State either through its own direct organisation or through its guaranteed companies?—All those mentioned are the concerns of native States.

3633. Native States?—Yes. For instance, this Hyderabad development and so on.

3634. That, of course, would not come on the funds of the Government of India?—Does not that come on the funds of the Government of India? Is it not a question of operating?

3635. The Hyderabad line is controlled and largely financed and operated by the Nizam. It is the Nizam's State Railway?—But a line which is an extension of an existing Indian line, for instance, the N.G.R., which goes through Hyderabad, presumably would not be financed or operated by the Nizam. That is only a supposition. I should like to say that the third part of that list to my mind is in a way the most important.

3636. (*Sir Henry Burt.*) That is the lines projected for which funds have not been provided at all?—Yes.

3637. (*Chairman.*) Can you summarise them in miles or lakhs or anything of that kind, so that we may have an idea of their importance?—I will give you one or two of the items.

3638. Take the biggest?—There is the Sirhind Nalagarh, 43·03 miles, 5 ft. 6 ins. gauge, estimated cost Rs. 54,80,000, estimated return on capital 5·8 per cent.; the papers are in the Press, and hence the figure cannot be verified. There is the Trichinopoly-Ramnad line, 108·24 miles, metre gauge, estimated cost Rs. 54,23,686, estimated return on capital 4·15 per cent. I asked in each case for the estimated return, because on that depends the possibility of encouraging private capital. The third is the Agra-Karachi line, which is 569·02 miles long, on the 5 ft. 6 ins. gauge. That is a very important line and will cost a very large sum. As a matter of fact, there are, as you know, tenders in for that now from outside.

3639. (*Sir Henry Burt.*) I think Messrs. Bolton Brothers are in for that?—Yes, I believe so.

(*Chairman.*) Is that a proposal made by private capital, when you say that tenders have been made for that from outside?

3640. (*Sir Henry Burt.*) They are putting forward proposals to find the capital to make the line, the line to be worked by the existing Main Line Companies?—Yes.

3641. (*Chairman.*) It is not a tender in the sense of contracting for carrying out the work?—Yes, it includes that.

3642. It is a contract that includes finance?—Yes.

3643. It has not yet been accepted?—I do not know.

3644. It is before the Railway Board?—Yes, and as a matter of fact I think it is very nearly passed.

3645. That is much the biggest, I suppose?—I think that is the biggest.

3646. It is a real trunk line?—Yes I went over these matters as carefully as I possibly could, as I have been interested in railways for some time, and there are all sorts of small things which would

be an improvement. There is one little section, a question of about 50 miles altogether, which will make the whole difference for haulage. It connects three dead ends.

3647. (*Sir Henry Burt.*) That is a question of grade, is it not?—As a matter of fact, that particular one, the Narowal-Amritsar, is a very important one indeed. It is a triangular section which joins up the dead ends. May I say this before we leave the subject? I do think it is of vital importance to realise that in India now there is an immense amount of capital available for investment. There is in the minds of a great many Indians considerable distrust, rightly or wrongly, at handing those funds over to the manipulation of Government pure and simple. On the other hand, all those Indians to whom I spoke—and I spoke to a great many of them—said, "If you will show us "a group of firms whom we all know, whose repu- "tation will not stand being humbugged about by "indifferent agents out here, we will support them "through thick and thin."

3648. Who did they mean by a "group of firms"?—They mentioned big firms of contractors like Sir John Jackson, Sir John Norton Griffiths, Paulings, and all those sort of people. I said, "You "mean you would really back them up on the "strength of their reputation and name," and they said, "Certainly."

3649. They would propose to form an Indian Company with Indian capital and employ an English contractor, just as the North-Western Railway may employ a contractor, give him a job and pay him?—Yes, not in a lump sum, but on a percentage basis in every case. They would pay on a commonly agreed estimate and not a lump sum, because that means that capital goes out of the country and the work may be scamped.

3650. (*Sir Henry Burt.*) Leaving the working of the railways to the existing Companies?—Yes.

3651. This would be only a contract for working?—Yes.

3652. (*Chairman.*) To one of the existing guaranteed Companies?—Yes. They would let them do the operating of the railway.

3653. Let us get a little more to close quarters, because this is very interesting. Where did you meet these Indian people?—I met them in Calcutta and in Bombay, chiefly. I will mention one of them, for instance, in Bombay, Sir L. Samueldas. He has got a great deal of money; he is in touch with a great many other people who have a great deal of money. He is interested in the co-operative development of sugar growing. I went round with him whole areas where the ground is ready, but there is no communication. He wants to find a firm which will put down a metre-gauge railway—not only he himself, but others. He wants to find a firm who will put down that railway, get it done and be done with it, and link it up to the existing railway, which in that case is the Great Indian Peninsula, and then he will be able to develop his sugar.

3654. Is Calcutta as ready to do such things as Bombay?—I am talking now as one who had never studied it from this side when I was in India before. Calcutta is exactly the opposite to Bombay in that the main finances there are British, whereas in Bombay they are Indian. But they are both united in this; they realise that lack of railway communication is holding up development, and Indians and British will put up money for schemes which mean development of their own properties.

3655. Did you get in touch with Agra at all?—I was at Agra.

3656. I am told—no doubt Sir Henry Burt knows it to be a fact—that there are very powerful financial people in Agra?—I know there are.

3657. Did you come across any of them?—I came across some of them there, and also from Cawnpore.

3658. (*Sir Henry Burt.*) In Cawnpore more than in Agra?—Yes. In all that central part there is a large number of influential financial people.

3659. (*Chairman.*) You have been speaking as though, in your view, they would do this as good business?—Yes, but I think I should like to add this—not necessarily good business resulting from the working of the system as making their other property profitable.

3660. (*Sir Henry Burt.*) I want to ask you one question with reference to what you said about Sir L. Samueldas. Do I understand a gentleman like that in Bombay has no confidence in a firm like Killick Nixon, the scheme being dealt with as a branch line?—No, I should say he had complete confidence in them.

3661. Why then should that not be done?—There is no reason in the world except this. They are not at all sure what the future railway policy is going to be in the country, and they feel that if they put down a line themselves until the railway policy is more clearly understood there is always a chance of its being left out in the cold or not properly thought of if they deal for ever with the Company with whom they made the original arrangement, in this case the Great Indian Peninsula.

3662. As regards the working?—Yes.

3663. Are they afraid that the Great Indian Peninsula will be made over to State management?—Nobody knows what will happen. They are very uncertain about it.

3664. If this uncertainty were removed they would have no hesitation in going to a firm like Killick Nixon who have undertaken so many branch lines?—I can see no reason why they should not. I quite agree that Killick Nixon have done most admirable work and are most excellent contractors. It seems to me the work in India has been a little bit retarded because there are not more Killick Nixons. If you are going to have more Killick Nixons, what some of us would like to see particularly would be branches established, or Indian Companies of very large British firms. May I emphasise this point because I think it is the crux of the whole matter? You are aware that owing to the shortsightedness possibly of the Government encouragement has never been given to private interests to go to India. The profits that can be made in South America and several other parts of the world are engrossing the attention of the best of our engineers and contractors. Since I have been back I have spoken to several of them and they say: "We shall certainly not go to India; we "are bothered to death by regulations; we are "harassed by officials; the future of the country is "uncertain and the profits that we shall get are "very doubtful. We prefer to go to South "America." "Very well," I said, "that means "that the Americans or the Japanese will come in. "Somebody will come in because the thing has got "to be developed." They say: "Let anybody go "who likes; we make more profits elsewhere." That is an impossible position. It is a position that we must not take up, and the only place where it can be changed is in Parliament.

3665. (*Chairman.*) I was going to put that question to you?—India does not possess a Parliament of her own, and we are responsible in the House of Commons.

3666. What will be the position of the Secretary of State for India if he is attacked on the ground that he has given an unreasonable commission to people who supply the money, or that he has allowed contractors to make an unreasonable profit? He is liable to be shot at, is he not?—Yes, but I think I can quote the Viceroy in regard to this. When I was staying at Simla the Viceroy was good enough to let me put forward these things in front of him. Sir Thomas Holland, Sir George Barnes and Mr. Hailey and I had about five conferences, and we came to the conclusion that you must have three conditions. The first condition is that a Company formed must be registered in India.

3667. This is the contracting Company, is it?—Yes. It will include, we hope, Indians, British skill, and Indian capital as well as some British, and it will assemble out there for development work generally. It should be registered in India, with any restrictions you like in registration to make it a *bonâ fide* Company. Secondly, it must be rupee and not sterling capital. Thirdly, it should have what we have loosely called the Japanese system of contract, by which I mean it will be understood that an increasing number of Indians are employed in positions of responsibility year by year as long as the efficiency of the work done does not suffer. Such firms as are in association with the group at home shall open up their shops or yards and their works for the instruction of Indians, so that this technical training which the Government has spent lakhs on will not have the dead end which it has got now, but will say, "Here we "are. Here is a yard here and a yard there. "You fellows come home and we finish you off. "We will put you through our shops and send "you back to a job."

3668. There is no more difficulty that I can see in Vickers or Armstrongs doing that just as they run the Esolda works. You mean the same kind of thing as that?—Yes, with Indian and British capital.

3669. You think it would be welcomed if it chose to come in that form; there is no desire to keep it out?—You cannot restrict it.

3670. You would not desire to?—No.

3671. Provided it came in under Indian conditions as rupee capital?—Yes, it must be on a rupee basis, otherwise you get the question of exchange troubling you seriously and you do not get the proper results.

3672. Will you kindly repeat your three points?—Registration in India; rupee capital; and the increasing employment of Indians in positions of responsibility so long as the efficiency of the job does not suffer.

3673. How are you going to secure that?—You mean the increasing employment?

3674. Yes. Would you leave it to an honourable understanding?—I would not lay down any hard and fast rule there.

3675. You cannot make it a sort of percentage?—No. That depends on the Indians themselves.

3676. (*Mr. Hiley.*) What is the Japanese rule? Is that a hard and fast one?—I will tell you why I called it Japanese; Sir Thomas Holland and Sir George Barnes know what I mean by it. When the Japanese first started to build ships on the Clyde there was a stipulation in connection with the ships built in a certain yard that a definite number of Japanese should be employed the first year, and an increasing number the second year. That was on the first ship. They started the second ship with the whole of the people who had been trained on the first. The result was that they now build ships in Japan on account of the knowledge we gave them on the Clyde. That is the secret of the growth of the Japanese shipbuilding programme. We have got to face the fact that as far as I know we have got to let India develop herself by herself for her own good. There is the old school that wants to keep the markets of India for Britain and not let her develop her own markets, and that is what has led to agitation in India. Ghandi says: "I cannot "buy a screw in India of Indian manufacture, on "account of the selfishness of the English." That is the feeling that runs through the whole thing.

3677. (*Chairman.*) Is it your feeling that the agitation that appears in the newspapers is very largely on an economic basis?—I am sure it is. I am convinced of that.

3678. You think you can really seriously tackle it from that end?—I am absolutely certain of it.

3679. You are speaking from contact with the Indians themselves?—Yes, with some of their leaders and agitators. The whole of their programme is: "What have we got? You have "promised us all sorts of things. You are not "developing the country by ourselves for our own "good; everything is going into the pockets of "people in England."

3680. One was always told that the amount of capital in India was very limited, and that it could get so much more profitable investment in purely private enterprise that it would not touch railways. No doubt the capital there is much larger now, but what reason have you to think that Indian capital would go in large volume into concerns that would pay 6, 7 or 8 per cent., or something of that kind?—Simply this. Take the case, for instance, of Assam: in Assam you will not get anything like 6 per cent., I think; but what you will do is that you will make profitable large tracts of tea and all kinds of things which both British and Indians have secured, and which until a railway comes are not profitable. That means that it is to the advantage of persons interested in tea or sugar, or whatever it may be, as part of their original capital expenditure, to get communications. Those people will put money up, but they will never put up money for the Government of India—never in the world—because they say: "It may be used for "another railway which we do not care the "slightest bit about, but we will put up money "for a definite scheme which is going to make our "investments pay."

3681. Forgive me for pressing you, but I have had a good deal of experience of the private person who wants a railway line made in England to serve, say, his collieries. He comes to the House of Commons Committee and says: "This is a "magnificent scheme; I support it with both "hands; it is what is needed in the public inter-"ests." Then he is asked by the cross-examining counsel: "How much are you willing to put into it?" and his reply is: "I have not made up my "mind on that subject; I shall have to consider "that when the time comes." He may get the line or he may not, but he certainly does not put the capital in. Any Parliamentary counsel will tell you that that is common form. Are you sure that you really will get a man who has got a tea plantation, and who hopes to make 20 per cent. out of it, to divert a great deal of money, which he might use in developing tea, into a railway, from which other planters will get as much benefit as he himself?—To a great extent it depends on the exact position of his plantation. He may be able to do his haulage by road transport.

3682. He cannot afford to build a railway for himself?—No.

3683. His subscription of a lakh or whatever it is will not make a railway. Can you rely on enough of them coming together to make the whole railway?—All I can say as regards Assam is that I do know that if we can get that railway down there we can get the money to-morrow.

3684. What length of line is involved?—About 55 miles.

3685. (*Sir Henry Burt.*) That is a feeder of the Eastern Bengal?—Yes.

3686. (*Chairman.*) What is the estimated return on the capital in that particular case? My point is this. Would they put up money supposing in a backward province like Assam the return only came out at 2½ per cent. to begin with?—On the pure railway running?

3687. Yes, that is an important point?—That is exactly the point on which the Railway Board are obstructing—not wilfully, but because they cannot get the finance changed by the Government of India.

3688. What would you suggest in a case like that?—I think you would have to work on branch line terms. You know the ordinary branch line terms?

3689. They are not sufficient?—They are absolutely inadequate. I should like to say this on that point; I asked the Secretary of State if I might mention it. The most important line to be made in India to-day in my humble opinion is the line for the development of the iron and steel all round about Asansol.

3690. (*Sir Henry Burt.*) Those are rather the rival schemes to Tata's, are they not?—It will help Tata too. I think we must not take a narrow view.

3691. There are competitors in the field now, are there not?—I can show you the exact place; I have it on this map. (*Exhibiting map.*) This is the secret of India. There is this huge coal deposit.

3692. (*Chairman.*) Is this where the Bengal coal is at present?—Yes.

3693. The Bengal Coal Company are working here, and there are further people in the same field?—Yes. There is no railway here at all. The blue line shows the proposed railway. The Bengal-Nagpur are working where it is marked red. That is engrossing most of their engineers.

3694. Is *this* coal too or iron (*showing*)?—That is iron.

3695. You want to connect them?—Yes, we want to get this line. A complete survey has been made from A to B, and a reconnaissance from B to C. Everybody in Simla wants to see that line made. We can get that made by private enterprise at once on branch line terms and get the whole thing done.

3696. (*Sir Henry Burt.*) You mean on revised branch line terms?—Yes. When I spoke to Mr. Montagu on my return about that, he said: "Very well, let me hear what the revised branch line terms are." So I went to these people, and I said: "It is no use simply talking; come down to "hard facts. If you are prepared to finance the "whole of that railway, what are the revised "branch line terms that you want?" These are the terms; they are being cabled to India to-day. I asked the Secretary of State to have a cable sent to know whether or not these in any way come within the possibilities of the situation as seen by the Government of India, because the matter is vital. Armstrongs cannot start their locomotive factory; Vickers cannot start their carriage and wagon works; none of the steel works for steel construction can be made until that line is built. That line is the secret of India's industrial development, and why it has never been made between the Armistice and now I do not know. I should defer everything else in India and make that line; it is so vital. The programmes are all approved by the different companies; the money is allotted to it, and here is a chance of making a thing where the capital is available by private enterprise—and have done with it.

3697. (*Chairman.*) It is a matter of something like 60 or 70 miles?—That is all.

(*Chairman.*) I suppose that does not mean a a great amount of money?

(*Sir Henry Burt.*) 60 lakhs, perhaps.

3698. (*Chairman.*) Will you let us hear the terms?—"(*a*) It is permitted to form a Company "with Indian domicile to finance the construction "of the proposed line; (*b*) that the concession "should be on the existing branch line terms "subject to the following alterations:—(1) The rate "of guaranteed interest should be ¼ per cent. less "than the interest at which the Government of "India is able to place its loans each year; "(2) the rate of rebate to be 8 per cent. instead of "5 per cent.; (*c*) that as the proposed line would "form a chord of the Bengal-Nagpur Railway "Company's system, the Companies should be "offered terms similar to those which govern the "Southern Punjab Railway in respect of traffic "working and traffic on which rebate should be "calculated." The Southern Punjab Railway arrangement was a very good arrangement to make the book-keeping simple. It is a very ordinary arrangement. It is used on the Cheshire lines and the North Western Railway Company in this country.

3699. (*Sir Henry Burt.*) It means free running for the competitive traffic?—Yes.

3700. There would be no payment whatever to the branch line for the traffic in question?—No. The difference this line will make in the cost of coal at Calcutta and Bombay is phenomenal.

3701. (*Chairman.*) How do you regard that clause about ¼ per cent. less than the price at which the Secretary of State places his loans? Is that to be a different price for each 100,000*l.*?—It is a sliding scale which is adjustable to the world's money market, which I think you must have at the present time.

3702. I do not follow. Supposing the new railway spends 100,000*l.* at a time when the Secretary of State has borrowed at 6⅓ per cent., then this rebate is carried up to 6¼ per cent. Then it spends another 100,000*l.* when the Secretary of State is borrowing at 6 per cent., so that the rebate is carried up to only 5¾ per cent. Is that what you mean, or how is it going to work out?—I think it will have to work in that way, but this particular railway is such a short length that one could get it through in about a year, so that it will save all that variation.

3703. (*Sir Henry Burt.*) You do not mean you would have a varying rate of interest year by year?—At the present moment, as the exchange is fluctuating to such an extent I do not think you can expect the Government or any private firm to agree to a fixed rate of interest.

3704. It would vary from year to year?—Yes, it is bound to.

3705. (*Mr. Tuke.*) And within the year?—Possibly within the year.

3706. (*Chairman.*) We all of us know as business people that if we can place a contract with a man he will give us a firm price if there are no conditions and variations of wages and so on to be kept in view. Is not the kind of term you have mentioned very unattractive? You do not know how it works out in practice, as I understand it?—This is an alteration of the existing branch line

terms. It is already in the branch line terms in this form; it simply varies the rate of interest and adjusts it to the modern situation with its huge fluctuations. It merely fixes it at ¼ per cent. less.

3707. I do not think that you and Sir Henry Burt are quite dealing with the same thing. As I understand it, the existing branch line terms are a fixed rate—it may be more in one case than in another. The rate for a particular branch is fixed at *x*. The proposal here, as I understand it, is that the branch line may have some of its money at *x*, some at *x* plus 1, some at *x* plus 2, and it may be some at *x* minus 1?—That is so.

3708. That is immensely more complicated?—One hopes that the thing will not fluctuate. Mr. Hailey in India and people here are doing their best to prevent it fluctuating.

3709. My point is that, if I were asked to look into that, I should say: "Heaven knows what "will be happening some years hence when I want "money to double my line, and I do not know "where I shall be"?—May I point out that this is only for this particular line?

3710. But it will want capital. If it is going to fulfil all the hopes that are expected of it, one day it will probably be very much developed from the shape it originally took?—This is simply to form a company to construct the line. Once the line is constructed the thing stops.

3711. No, forgive me. Once a line is constructed the next thing is to go on adding to it to all eternity out of capital?—This line is a chord to an existing railway.

3712. But supposing it is anything like as prosperous as you contemplate, it will constantly need new capital spend on it?—I confess I contemplated that, once it was built, the Bengal-Nagpur would include it as part of its system in the ordinary way.

(*Sir Henry Burt.*) Not as regards capital?

3713. (*Chairman.*) It would find the new capital for the improvement of it all the time. Do you appreciate that, at this moment, the Government of India for a series of years has been finding about 11,000,000*l.* per annum for the railways? Out of that amount 9,000,000*l.* have gone for the improvement of existing lines and 2,000,000*l.* only have been available for additions?—Yes.

2714. That is railway experience all the world over?—Quite; I admit that; but that very fact contains its own condemnation. A country with nearly 350,000,000 people has only 10,000 miles of normal railway track.

(*Chairman.*) India has got nearly as many miles of railway as Canada has with a population of only 8,000,000. That is the position.

3715. (*Sir Henry Burt.*) At any rate your opinion is that the money would be forthcoming at ¼ per cent. less than Government pays for its loans?—The money is there if they only choose to say "Yes, alright."

3716. (*Chairman.*) Is the Secretary of State prepared tentatively to negotiate on that basis?—No. What he has done, as I understand, is to cable to India to-day asking how they view that proposal, on the understanding that it is not to be taken as a precedent; that it is simply in order to get money which is exceedingly urgently required for work which should have been done long ago, and for work which should be pushed forward as fast as possible.

3717. (*Sir Henry Burt.*) The money to be applied to this particular line?—To this particular line, and that line only, until your deliberations are completed.

3718. (*Chairman.*) Do you think we may regard these as terms that the Secretary of State would think excessively favourable? If they were given to one line would it not tend to check the development of other lines if equally good terms were not given?—Can you point to any place in India so vital to the interests of India as that?

3719. Is there not something to be said for the question I put to you?—I am afraid there is, but you have to bear in mind the astonishing importance of that particular project and private enterprise.

3720. Will you explain this to me? Is it the enormous increase in the cost of imported coal, or is it the discovery of seams that they did not know of there which has prevented this line being made years ago?—The development was held up as the result of the war.

3721. After all that is only six years?—It is a new coalfield altogether.

3722. (*Mr. Hiley.*) Newly discovered?—It has been prospected in the last three years. I have a map here of the Bengal-Nagpur system. Bermo is one of the main centres of it now. I would like to emphasise this fact from what I have seen of it and the conversations I have had with individuals. The old type of Indian railway official has every reason to be proud of what he has done with the means that were available, but he forgets, and he is bound to forget, that in those days he was a representative of British capital in India. Now British capital is not available for India and will not be available for India. Therefore the methods of the past are perfectly useless for the future, and I think the Indian will not be at all anxious to see a continuation of the normal rate of development of the existing railway Companies.

3723. (*Chairman.*) I think there is universal agreement that, if it could be secured, more rapid development is urgently required. I think that may be taken as common ground. When you say that English capital is not available, do you include in that both direct borrowing by the Secretary of State in England and financing through the Companies?—I was thinking more of the possibility of raising further share capital for Indian railways in the open market at home.

3724. Do you not think that if existing English Companies were allowed to raise new share capital, with a guarantee and possibly a bigger share of the profits, you would get some?—I think politically it would be a mistake, for two reasons. There is a feeling in India that the people in India do not want the money that they say they contribute or make to go home to people at home. That is why the rupee capital system is so important.

3725. Do you think they go as far as saying they do not want English capital which may have been made in Africa or anywhere else outside of India?—At the present moment there is an astonishing feeling in India that Indians want to run India for Indians. How long it will last I cannot say.

3726. There are many countries that want to run their own countries, but they are very glad to have other people to give them money with which to do so?—I agree; but at the moment there is no doubt as to the large amount of money available in India.

3727. You are very clear about that?—I am perfectly clear. One of the proofs is, when you get to India you will get it, the enormous amount of silver that has been passed back to the Treasury. At first, as you know, the paper currency was at a discount, and silver was being hoarded. Now you can hardly store the silver at the speed with which it is being returned to the Treasury and the paper being taken up. I said, "Why do you go in for the absurd gamble you do?" and they said,

"You never gave us a chance for a profitable investment to help us."

3728. I am not talking of trustee securities, but the sort of thing people put their money in, those securities which we used to regard before the war as 5 or 6 per cent., put it, under changed war conditions?—I think 8 to 10 per cent. interest. The railway which gives you that return is incidentally helping their other property.

3729. If it is a railway that is helping their concern and they have only to get 3 per cent.——?—Then still they would do it, I think, in certain cases.

3730. Take the person who has not any interest in the development, who is merely investing for the sake of income. Do you think you can get much from him?—A great deal from him when you go into the whole question of the incidence of taxation. I think Mr. Hailey, when he frames his future Budget, will probably have to contemplate preferential terms to persons who invest their money in certain trustee stocks; that is what it comes to. It should be subject to a rebate of income tax or of the rebate of some tax which would encourage the investment in things that do not normally return a high percentage.

3731. Perhaps more like what they call tax free loans in America which are very often State loans, sometimes Federal loans, tax free?—You get an exact example of that in Sir George Lloyd's Bombay loan. I was with him when that loan was going through, and we were doubtful as to the result, but he got 3 or 4 crores more than he expected.

3732. That is tax free?—That happened to be tax free at 6½.

3733. That does not mean more than another ½ per cent.

3734. (*Sir Henry Burt.*) About ½ per cent.?—About ½ per cent. as things are at present.

3735. (*Chairman.*) Your idea is to carry it further?—It may be necessary if you have for a list like this. You say that these things are necessary. How is it to be done?

3736. Your argument would be that it would pay the State to remit income tax on investment in things that are for the direct development of the country. That is of the essence of the scheme?—Yes, because this country of India has not been scratched.

3737. Have you discussed that with Indians?—Yes, at great length, and one of the things they feel very bitter about is the fact that the Railway Boards are in England and not in India. You will find that all through.

3738. You may assume sympathy with the view that development is desired. What is the remedy for the Railway Boards in India? We could see the disadvantages, but how are we to deal with it?—I would not dare say that. I have thought about it, and I do not pretend to have sufficient knowledge to make any statement, but I should say this, the only possible excuse for the Board being here is that so far it has been sterling and not rupee capital.

3739. And also that the Secretary of State is here?—Yes. Of course, there is this to be remembered, and it is a point that we ought to remember—the Secretary of State is the first to admit it—the House of Commons and only the House of Commons is responsible for India, not the Government of India, not the Secretary of State. We forget that too often, and the consequent responsibility of the House of Commons. They are responsible, not the Government of India, for India, and it is no use blaming the Government of India; they are the servants of the House of Commons.

3740. Is not the moral that you can see the advantage of the Companies that are working the railways being next door in England instead of 5,000 miles off their real master?—Yes, one could say that, but on the other hand I should like to know how far they are in touch actually with the new conditions.

3741. That is another story. If you say the House of Commons is the ultimate authority cannot you understand the railway Companies being desirous of being able to get at it?—The unfortunate thing is that the railway Companies are so tied up by red tape that they could approach nobody. I have asked how long it takes for a scheme to be put up and sanctioned, and I do not think in the history of man it has taken less than 18 months and usually five years. We shall lose India in 10 years unless we do something quickly. I think it is desperate.

3742. (*Sir Henry Burt.*) This question is intimately connected with finance?—Absolutely.

3743. We have had it in evidence that India requires for some years at least 25 millions a year for improvements on open lines only?—Yes.

3744. That is not a penny for development?—Quite true.

3745. You were talking about the amount of money that could be obtained in India, and you said that the ground had not been scratched yet. Do you think that India will run to 40 million?—For purely fresh development work?

3746. For the development of existing lines and new construction work.

3747. (*Chairman.*) 25 millions for keeping lines open?—Maintenance.

3748. No, not maintenance, but additional, widening lines. A mass of new rolling stock is required?—Normal improvements.

3749. (*Mr. Hiley.*) Duplications on and additions to the existing system?—25 millions to that and 15 millions to the other.

3750. (*Sir Henry Burt.*) Do you think India can run to that?—To 15 millions, certainly not the lot.

3751. That is the difficulty, and admitting that fact is it not necessary to keep in touch with the London market?—It is; and what I should like to point out with all respect is this.

3752. So as to be able to draw on both sources of supply?—You have got great groups of financiers with whom are associated contractors in London. Those groups are prepared to go to India and fulfil any conditions that may be imposed by the Government of India as regards registration and opening up for capital and get Indian money in. I believe you would get all the money you want for entirely fresh work, leaving the burden to be found by Mr. Hailey in the Finance Department of the Government of India for the sanctioning of the normal programme schemes of the country. Might I make myself clear? At the present moment, if you say that the existing Companies have to include their normal system of development plus the nearest extensions, brand new work, that has to come out of the ordinary programme and it cannot be done.

3753. Admittedly?—Which are you going to cut off? Obviously you must give private enterprise to new people.

3754. (*Chairman.*) Let me turn it round. If you raise your 15 millions for development in India and say to the Finance Minister that he has to find 25 millions for normal improvements, either he has to get it in England or in India. You say Indian opinion does not want it from England. Then in

that case he has to poach on the market of the contractors?—Yes, I think one may say this, a lot of the ordinary normal development system which you put as high as 25 million——

(*Chairman.*) It is not mine.

3755. (*Sir Henry Burt.*) It is the present cost of material and so on?—When you get the increased volume of trade that is beginning now, and one hopes will continue, the whole question of freight rates in India as between system and system and cross through rates has not been touched, and the most ludicrous anomalies exist at the present moment. The railways could be keyed up to be made more profitable than they are now, and they ought to earn their way for that improvement of system which can be met by their existing staff. I would like to say this: I have talked to Sir Trevredhyn Wynne besides other people, and nobody knows more about Indian railways than he does, and I do feel from a political point of view and from every point of view that we want to get fresh blood into the development of things in India. It is not enough to say that work can be overtaken by the existing Companies. It will be, I am sure, one day.

3756. (*Chairman.*) We are exceedingly obliged to you if I may say so. The real difficulty is what you put, more money is wanted than you see your way to find, and there is an objection to finding it from England even if you can find it?—I do not say that there is an objection, but it is preferable to find it from India.

3756A. (*Chairman.*) We are all agreed upon that?—On the other hand, you will find a proportion of it from England if you can get those groups interested.

The witness withdrew.

LORD INCHCAPE OF STRATHNAVER, G.C.M.G., K.C.S.I., K.C.I.E., called and examined.

3757. (*Chairman.*) I think we ought to put on the notes how much we are indebted to you for coming at considerable personal inconvenience to help us, but it was the last possible day for us. I do not think we need put anything on the notes as to your qualifications. Apart from anything you may be good enough to tell us in general, we would like you, if you would, to cast your mind back on the Mackay Report and tell us how far you still agree with the views you expressed then and what further experience would help you to say on the subject. One thing you laid stress on then was the transference of the State Railways to Companies?—That is so.

3758. Do you retain the same view on the subject?—Absolutely.

3759. Most of the witnesses from the Companies who have come to us, as far as I know all of them, have said it is. I do not know whether you have seen the Terms of Reference, they probably sent them to you?—No.

3760. Let me call your attention to this. In the Terms of Reference the Secretary of State adds this, that the Committee will take note of the decision to remove the management of the East Indian Railway, on the conclusion of the present contract I think the words are, to India?—Not the management.

3761. The domicile?—Yes, the domicile.

3762. Most of the Company witnesses who have come have said that is too big a thing to entrust to a new Company, breaking with the past it is too big a task to put on to new people, and if it is to be domiciled in India, it must be managed as one of the State Railways. Those men were at the same time anxious to maintain Company organisation where they have it at present?—Yes, I think that is very likely. Of course, it is an enormous line, the biggest in India, is it not, Sir Henry?

3763. (*Sir Henry Burt.*) Yes, the North-Western has a larger mileage, but there is a lot of non-commercial mileage on the North-Western which hardly counts?—The idea being that it would be a mistake to hand it over to some new directorate.

3764. An Indian directorate?—Yes, men who have had absolutely no experience of railway management.

3765. (*Chairman.*) That is what they say, that there are no people?—There are no people, and you will never get them. They do not continue, it is a floating population.

3766. That point has been pressed a good deal?—Men go out to India at 22 or 23; they go out as youngsters, and they probably get up to be partners after they have been there 15 or 16 or 17 years. Then they remain perhaps seven to eight or 10 years and they are home in the interval every two years, sometimes every year, they are all extremely busy with their own concerns; you have not got the men of leisure you have at home here, to take up the work of the directorship of railways.

3767. Do you think that it is the best men who always refuse big work?—No, but they are so constantly changed.

3768. The shortness of tenure?—It is the busiest men who can always do the most, I admit.

3769. Do you not think you could get English people for eight or 10 years or six years, whatever the period is?—I doubt very much if they will be able to give the attention to it. Have you been in India?

3770. No?—It is an extremely trying climate for nine months in the year, and for men to leave their offices and attend at a railway meeting for four or five hours a day—I do not think you will get them to do it, it is out of the question altogether, I think.

3771. What do you say about the Indian directors?—He has no experience whatever, he is a child at that sort of thing. He will have to learn, he will come along in time.

3772. I expect you would not care to express any opinion about the financial requirements You asked for very much more money than I think you expected to get in your report, certainly much more than you in fact got?—Yes, we asked for——

3773. 12½ million pounds?—Yes.

3774. It never reached 12½ million pounds?—The highest it came up to was something like 10 million pounds.

3775. I thought it got up to 11?—Yes.

3776. (*Sir Henry Burt.*) It averaged 10 million?—Yes.

(*Mr. Hiley.*) Just under 10 million.

3777. (*Sir Henry Burt.*) It was 12 millions in one year, I think?—We should like to have got 20 million pounds, and we felt at the time that 20 million of money spent in India on railways would have been excellent reproductive work.

3778. (*Chairman.*) I do not know whether you are aware that the last seven years up to the war the amount available for new construction was

about 22 million, which is obviously absurd, to reach your standard of 100,000 miles?—Yes.

3779. You then said that you did not think more than 9 or 10 million pounds could be got out of London in a year?—Yes.

3780. What is your view about that now?—I do not think you will get anything like it now. There is nothing obtainable at the rates of interest we were paying in 1907. I do not suppose that the Secretary of State could borrow now in London under 7½ per cent.

3781. Is it worth paying 7½ per cent.?—I doubt it very much. I should be disposed to hold my hand until things become more normal. It is a very different matter investing money in railway construction when you can borrow at 4½ and 4 per cent., as we were able to do in 1907 when my Committee reported. If you have to borrow now at 7½ per cent. or probably more it is very doubtful.

3782. You would not apply that, I take it, to the money required for carrying on business?—That you have to provide whatever it costs you.

3783. If that was 10,000,000 which was not enough before the war, you want at least 25,000,000 to-day without allowing anything for new construction?—I suppose you do.

3784. How are you going to get it?—Owing to railway material having gone up and machinery having gone up and labour having gone up. Of course, what we are all doing in shipping, for instance, is we are holding our hand, we are waiting in the hope that prices will come down. There is evidence that the fall is coming.

3785. You have placed a good many orders for new tonnage since the war for the Peninsular and Oriental?—About five years ago we placed orders for some ships, but I am placing none now. I am buying a few, I bought some of the standard ships and I bought some of the German ships; but as to going in for new construction, a ship I could build for 145,000*l.*—I built several of them—in 1912 and 1913 is costing to-day about 625,000*l.*

3786. It is not as bad as that in India, apparently it is less than 100 per cent. increase?—For labour.

3787. Take it all over?

3788. (*Sir Henry Burt.*) In India it is 100 per cent. and 200 to 250 per cent. in the case of material procured here?—But the labour in India has gone up.

3789. Our trouble is to find out how we can get at least 25,000,000*l.* In India at present, the trade of the country is really absolutely throttled for want of rolling stock and other improvements on the open lines. It is estimated that at least 25,000,000*l.* are required for that purpose alone without considering new railways. Our difficulty is to find the money?—Yes.

3790. As you said just now, for that purpose the money will have to be found whatever the interest may be?—It is not going to cost 25,000,000*l.* surely to keep your lines going?

3791. (*Chairman.*) Yes?—Without extensions?

3792. Without addition to mileage, that is what it means?—You want it for rolling stock.

(*Sir Henry Burt.*) For station improvements.

3793. (*Chairman.*) And new shunting yards, doubling lines where the traffic is getting too heavy for the single line, and so on?—I do not know where you are going to get the money.

3794. (*Sir Henry Burt.*) I suppose at a rate England would be available for some part of that?—I do not know whether you would get an Indian loan underwritten if it were brought out at less than about 7 to 7½ per cent. at the present moment.

(*Sir Henry Burt.*) You see what Bombay did in connection with the loan for the improvements of Bombay. The terms were 6½ per cent. free of income tax, and they got about nine million.

3795. (*Chairman.*) Rupee loan, of course?—Of course, the Governor whipped up a good deal there. I know he whipped me up with a telegram. I took some of it, but it was 6½ per cent. free of income tax—7½ per cent. not free of income tax is not so good.

3796. (*Mr. Hiley.*) It is free of Indian income tax only?—If the loan is here it is subject to income tax.

3797. (*Chairman.*) You would pay less Indian income tax here?—I do not think much English money is going into that, it is Indian money. A lot of us have money out there.

3798. I think your view in your report was that it was desirable to be more generous in dealing with the English investor?—Yes.

3799. I have been reading to-day the evidence, which I daresay you may remember, of Mr. Cohen, who was one of the representatives of the Company who pressed the point very much. Do you think it is desirable to allow people who invest in India to feel sometimes that they have got a plum?—You mean in this country?

3800-1. Yes?—I forget what the rate of interest was 13 years ago, probably 3½ or 4 per cent. We advocated, if I remember rightly, not to stick for 1 per cent., but to get the money and invest it in the railways. What we would have liked to have done would have been to have spent not 12,500,000*l.*—Abrahams cut me down, you will remember, he was the Financial Secretary here—we would like to have spent 20,000,000*l.* if we had had our way. I did not like to press him too much, he was more or less responsible as Financial Secretary to the Secretary of State. We said, "Get your money if you are going to pay another 1 or 1½ per cent. for your railways."

3802. You still hold to that view?—I am a little doubtful, now that it has gone up to 7½ or 8 per cent.

3803. You would be ready to pay 7½ or 8 per cent., if necessary, rather than leave the crops rotting on a local railway because you had not trucks?—Yes, I would.

3804. (*Sir Henry Burt.*) That is the position?—If I had a railway and wanted the money, and saw the trade there, I should raise the money, even if I had to pay 7½ or 8 per cent.

3805. Major Glyn, who has been out in India, has been telling us that in his view you could raise the money for new developments in India, and you would get it partly from the people who did not necessarily rely wholly on the income they were getting, but relied largely on the development of their trade, and therefore you might get it on better terms?—Sentimental.

3806. Not sentimental?—Not altogether.

3807. Partly sentimental, but also subscribing to a railway to reach their own tea plantation or their own coal mine?—I should get all the money I could in India, and all I could here, to keep the railways going.

3808. Have you still any view as to the comparative advantage of obtaining it through the Companies and obtaining it by a direct State loan?—I think it better to get it through the Companies.

3809. In that case it is clear you would have to be much more generous, because the Companies will not jump at any offer now unless it is much better than they have been accustomed to?—They are wise and pretty level-headed men, and they are all anxious to see the lines develop. They would be ill-advised, I should think, if they did not get the money to develop their lines.

3810. The Great Indian Peninsula is only a four years' contract?—You will have to extend the contract on condition that they develop the lines.

3811. Would you allow them to put in a substantial amount of new ordinary capital with a guarantee and a chance to substantial profits thereafter?—I certainly would.

3812. You think that is worth doing?—It is an incentive to good management and to development.

(*Sir Henry Burt.*) That was one of your recommendations, but I do not think it was ever worked to.

(*Chairman.*) No, it was not.

3813. (*Sir Henry Burt.*) There has been no new share capital for years. That was one of your distinct recommendations?—It is highly important. I do not know how many miles there are in India to-day.

3814. (*Chairman.*) 35,000 or 36,000?—There is room for 100,000.

3815. You said that 13 years ago?—Yes.

(*Sir Henry Burt.*) It has only gone up some 3,000 miles or so.

3816. (*Chairman.*) It was well over 30,000 when you spoke?—They ought to have borrowed 100,000,000*l.* then.

3817. You spoke a good deal about the Indian Railway Board. I do not know whether you care to say anything about that now. That is a piece of internal machinery?—I do not think so. I always had the impression, although I think Sir Henry was chairman of it——

3818. (*Sir Henry Burt.*) Yes?—That it was the fifth wheel to a coach and they would have done equally well if they had left the Secretary to the Government of India in the Railway Department.

(*Chairman.*) You propose to solve the difficulty the other way to by getting rid of the original fourth wheel and putting it on as the real fourth.

3819. (*Sir Henry Burt.*) At any rate at the time your Committee did lay very great stress on the point that the President or Chairman of the Railway Board should be more than a titular head, he should be the head of the Railway Board and should have the deciding voice in the various questions that came up before the Railway Board. You know that has been altered now?—He has got more power now?

(*Sir Henry Burt.*) No, he has lost it.

3820. (*Chairman.*) Your recommendation was carried out and then it was reversed, and now they are equal on the principle of *primus inter pares*. Does your experience lead you to recommend a chairmanship divided between three co-equal authorities?—I could not carry it out myself.

3821. (*Chairman.*) You spoke also, I notice, of the question of branch lines, and you say, as far as possible trunk lines should own as well as construct and work all branch lines. I suppose one is right in saying that the trend of modern business is big organisations?—Yes, we regarded it as rather a wasteful arrangement to have these small branch lines here really guaranteed by the trunk line and worked by the trunk line and equipped by the trunk line. We said it would be better if all these branches were made by the trunk line itself.

3822. We had one gentleman before us who had made 10 companies, and nearly all of them were, as you say, financially separated, but otherwise——?—No management, no control, no nothing; they simply drew their revenue, a certain percentage of the revenue that passed over the line.

3823. It is pressed upon us, which is a new point since your day, that you cannot expect rupee capital put into an English guaranteed Company subject to English income tax, and therefore that independent branch line Companies with rupee capital have a distinct advantage from that point of view?—You could get over that difficulty by letting the Government of India raise a railway loan, a rupee railway loan. It is not subject then to English income tax. Let the Government raise a separate railway loan, paying whatever is necessary in order to get the money.

3824. Then the Government——?—The Government could then lend this money to the Companies.

3825. Then the Company would merely pay interest on it?—The Company would pay interest on it at the same rate as the Government or perhaps a little more.

3826. Would you make it a separate loan?—Call it the Government Railway Loan.

3827. When it came to lend it to the Great Indian Peninsula for a branch, which would you do, would you lend it to the Great Indian Peninsula as a Company or would you lend it earmarked as belonging to the *ry* extension?—I do not think that matters. The Government of India now provide a large amount of the capital for the Indian railways. It is purely a matter of bookkeeping, is not that so, Sir Henry?

(*Sir Henry Burt.*) It is so.

3828. (*Chairman.*) The objection to that which they put to us—Major Glyn has put it more strongly than any witness, and he says that his Indian friends say: "I am not going to subscribe for a railway line to be spent at the other "end of nowhere; I want to subscribe for the "branch at my door that I want"?—I do not think that amounts to very much. I should not think there is very much in that.

3829. He is very strong that in some places you can get a good deal of local money to develop the local line. It would not affect Calcutta?—The big money is in the big centres. They look to the rate of interest and to the security.

3830. You do not think local patriotism, apart from local profit, will help at all?—I do not think so.

3831. (*Sir Henry Burt.*) Do you not think that perhaps the most helpful way of getting additional money, so far as this country is concerned, would be to give the Companies the power to raise additional capital, not by means of these debentures, as they have been doing in the past, but by additional capital which would be secured with possibly a small guarantee behind it?—Undoubtedly.

3832. And a share in the profits?—Yes, and with the chance of a rising revenue.

3833. (*Chairman.*) Your impression clearly was in this report, if I read it correctly, that the Indian railway finance had been prudent to the verge of timidity. Is that putting it too strongly?—No, it is not.

3834. Have you changed your view?—No.

3835. If I gather except that you would go more slowly——?—I would go slowly just now on new construction.

3836. Except for that you still hold the same view?—I hold the view that you ought to keep your railways equipped. Even if you have to borrow money at 7½ per cent. I should do so. You cannot let your business go to pieces.

3837. (*Sir Henry Burt.*) The business is going to pieces at present for want of funds?—You will average down. If money gets cheaper you will be able to borrow again.

3838. (*Chairman.*) Some of the Indian officials, taking the official view, have put to me very strongly that if the Government of India borrows at 7½ per cent. it has permanently damaged its credit?—Not at all.

3839. Not even if it is a permanent loan? Would you care to have 8 per cent. debentures in the Peninsular and Oriental?—No. Take the case of the Colonies. I remember only a year or two ago, or perhaps seven years ago, giving out some Colonial 6 per cent. and 7 cent. securities from the National Provincial Bank which had matured. They were then borrowing to replace them at 4. It is purely a matter of the money market. If you cannot get money at 5 per cent. you must pay more. When money gets cheaper, and there is a glut in the market, you will be able to borrow at a lower rate. I do not see how the Government of India is going to ruin their credit by paying 7 per cent. just now.

3840. This is, I take it, the way they would put it. If five years hence the normal rate has dropped 2 per cent., the fact that you had borrowed at 7 per cent. would keep it a little higher than if you were starting afresh?—Not a bit. I do not believe that a moment.

3841. That has been pressed very strongly?—I do not believe it.

3842. (*Mr. Tuke.*) Do you think that a rupee Government loan is likely to find a good subscription?—In India?

3843. Yes?—They used to put it down that we could borrow about three crores a year, but I think they can get a great deal more than that now. There is no doubt that people have more money now.

3844. You think that a Government loan would be successful there?—I think so, if it is at an attractive rate of interest.

3845. Of course, the loan might be a short-dated one?—Yes, you might have a short loan for 10 years, but the worst of these short loans is that they are always coming back on you.

3846. And at an unfortunate time?—Yes.

3847. (*Chairman.*) They have a good deal of railway money out on two or three year debentures?—Here?

3848. Yes. There is a considerable amount of money that the Government has raised. That has been raised on railway debentures?—That they have always been doing. I suppose they are paying through the nose for it.

3849. Six and a half?—Three year bonds, 6½ per cent.; it is a short-dated security. They are always coming back on you. If they were to borrow that amount by, say, 15 year notes in India, a rupee loan, I think they would get rid of that high rate of interest in 15 years.

3850. (*Chairman.*) Do you think it desirable in a country with the enormous potentialities of India to be paying off a railway debt? They are paying off in the shape of annuities the capital cost of the East Indian Railway at half-a-million a year. Does that seem to you necessary?—No, it was part of the bargain, of course. Then they become proprietors of the line.

3851. Is there any reason why you should take that money when you want money for development so badly; that you should use it for that purpose apart from contract?—No reason whatever. The idea was to get the line back into the hands of the State and pay for it by annuities. It has been a very good bargain.

3852. If you pay off capital debt with one hand and borrow new capital for development of the same line with another, which you must do——?—Perfectly true. I noticed in this note when I read it——

3853. (*Sir Henry Burt.*) That is the note initialled by Mr. Kisch. He is the present Deputy Financial Secretary?—It is clause 13, "Those "who are concerned with the provision of funds "for Indian railway enterprise would welcome "any suggestions that may help to increase the "means for obtaining fresh capital. The con-"clusions to which this note tends are that in the "years ahead India is likely to require all the "capital that it can obtain from every source, and "that while the development of fresh sources of "supply in India is of the highest importance, it "is also essential to maintain the link with British "capital, which has done so much in the past for "the development of the Indian railway system." I entirely endorse that. I think that is perfectly sound.

3854. Do you think you could not maintain that connection unless you had London Boards in some form or shape?—I think the London money market would dry up to a large extent.

3855. Unless they were maintained in some form or shape?—Yes, I think the money market would be very likely to dry up. Take all these Argentine Railway Companies, all their head offices are here and they can borrow money.

3856. (*Chairman.*) They borrow money very much more easily than India and much larger amounts?—Yes.

(*Sir Henry Burt.*) We have had the Secretary of the Central Argentine Railway here as a witness, and it is quite clear that they borrow with much greater facility than India borrows.

3857. (*Chairman.*) In the memo I was speaking of which he mentioned to the Committee, one of the Argentine Railways had then raised five millions straight off without any difficulty, a single company at a simgle stroke. That is much bigger than anything India has ever done?—They were too cheese-paring here.

3858. (*Chairman.*) It seems to me there are these methods of raising money: allowing the Companies to issue fresh guaranteed shares, sterling loans, or, if necessary, sterling debentures, so that there is really no difference; rupee loans for the railways as a whole, and also rupee capital, whether in loans or shares for private branch lines, for separate Companies if you can get new money in that way. You approve of those?—Yes. If you take the total amount for branch lines, it is something very small.

(*Chairman.*) Relatively small.

3859. (*Sir Henry Burt.*) You have had some experience of branch lines?—It is a bagatelle.

3860. (*Chairman.*) Will you tell us anything else, because anything you can tell us we shall be grateful for?—I do not think so. I have not been thinking of the subject for 13 years. I am otherwise occupied. I went out on an enquiry for the Secretary of State.

3861. (*Sir Henry Burt.*) That was in 1912?—Just after I left the Council.

3862. (*Mr. Hiley.*) 1912 is the date that report is known by. The report was the spring of 1912?—Of course there has been a good deal of water under the bridges since then.

3863. (*Sir Henry Burt.*) That was to settle certain difficulties which had arisen between the London Boards and the Railway Board. There was a good lot of trouble and difficulty about that just at that time?—Yes

(*Sir Henry Burt.*) It was all smoothed out, thanks to you.

(*Chairman.*) We are exceedingly obliged to you for coming to give evidence.

The witness withdrew.

NOTE.—Intermediate numbers, 3864 to 6677 inclusive, refer to the evidence taken by the Committee in India, and will be found in subsequent volumes.

PART II.—Further Evidence taken in London.

FIFTY-EIGHTH DAY. (LONDON.)

Friday, 13th May 1921.

PRESENT:

SIR WILLIAM M. ACWORTH (*Chairman*).

SIR A. R. ANDERSON, KT., C.I.E. C.B.E.
SIR H. P. BURT, K.C.I.E., C.B.E.
SIR G. C. GODFREY.
MR. E. H. HILEY, C.B.E.
SIR H. LEDGARD.
SIR R. N. MOOKERJEE, K.C.I.E.
MR. PURSHOTAMDAS THAKURDAS, C.I.E., M.B.E.
THE HON. MR. V. S. SRINIVASA SASTRI.
MR. J TUKE.

MR. T. RYAN, C.I.E. (*Secretary*).
MR. E. R. POLE (*Assistant Secretary*).

MR. H. F. HOWARD, C.S.I., C.I.E., Controller of Finance, India Office, called and examined.

6678. (*Chairman.*) You are at present, as we know, Controller of Finance in the India Office?—Yes.

6679. Sir Lionel Abrahams was called "Financial Secretary," I think, was he not?—Yes. He was originally Financial Secretary—that is, a Departmental Secretary—and subsequently he was Assistant Under Secretary. My appointment is not analogous exactly to his or to anybody else's. The India Office lost by death nearly all their senior financial staff, including Sir Lionel Abrahams and subsequently Mr. Lucas. Mr. Newmarch, who had previously been the Financial Secretary, had also just died at the time, and it left rather a gap. I was asked to come in temporarily as Controller of Finance, a sort of fifth wheel in the coach. I am neither Assistant Under Secretary nor Financial Secretary, but I combine some of the duties of both—not all of them.

6680. Then there is no Financial Secretary now?—No, not on that side of the financial department. There were two Financial Secretaries; at the moment there is only one, but he does not deal with railway matters.

6681. When we had evidence in regard to finance from the India Office last November, Mr. Kisch was, I think, called Acting Financial Secretary?—I think his correct title at the present time is "Deputy Secretary." I do not know what the intention as to the future may be; the post of Financial Secretary will presumably be restored, but I do not know about that.

6682. Anyway, for practical purposes we may take it that you represent the Office from the financial side?—That is correct, but I should like to make a qualifying remark with regard to it. I should like to be taken this morning as expressing my own personal views only, and not those of the India Office in any way.

6683. When it is a case of opinions, they are yours; when it is a case of facts, we may take it that you are giving us the official facts?—Yes, but it obviously would be undesirable for the India Office to form an opinion at this stage.

6684. Quite clearly it is our business to form the opinion; I quite agree. It would be better, I think, to get on the Notes particulars of the previous appointments you have occupied, although probably all the members of the Committee know the particulars. You were Secretary to the Government of India in the Finance Department, and I think for some time were the acting Financial Member of Council?—Yes. I also acted as Commerce Secretary at one time; I was Collector of Customs at one time and also Controller of Currency, so I saw a good deal of trade questions from the trade side.

6685. You are an Indian Civil Service man?—Yes.

6686. The first point I want to ask you about is one which I have no doubt you are well aware has been raised by pretty nearly every witness all over India who was in a position to raise it. The separation of the Railway Budget altogether from the ordinary Budget of the country is done in a good many other countries, is it not?—I have never been able, speaking quite frankly, to understand what that means, and I have never yet met anybody who could explain to me clearly what it means. Possibly you may be able to tell me what the witnesses who have appeared before you did mean in that respect.

6687. Let me put it to you in terms of practice. For example, take the Union of South Africa railways. I read in the *Times* or some other paper—yesterday, I think it was—that Mr. Jaggers, the Minister of Railways, introduced the Railway Budget—an entirely separate budget, there being practically no connection between the Finance Minister and the railways, the railways by Act of Parliament being bound to fix such rates and fares as will enable them to carry their own expenses, sinking fund and debt. If they run short they are required to put up their rates immediately; if they have too much they are required to dissipate their surplus either by the reduction of rates and fares or by improved facilities at the same rates, it being specially provided that, if Parliament as Parliament requires the railways to do something the effect of which in their opinion would be to upset their budget, they are entitled to call for an arbitration by the Accountant-General, I think it is, or the Auditor-General. If they can satisfy him that it would cost them 200,000*l.* out of pocket, we will say, to comply with the requirements of Parliament, he reports to that effect, and thereupon Parliament is required to vote by the ordinary method 200,000*l.* as a subsidy to the railways. There is a practical instance of how it is working at this moment and has been working for 10 years past.—That is to say, the railways of South Africa are entirely State-owned lines and the capital is State capital?

6688. Yes, absolutely, but it is treated as a separate entity, independent of the tax revenue and the expenditure for ordinary purposes. There are other instances that I need not trouble you with in a good many other countries; the matter has been

referred to in some detail by the witnesses, who have suggested various points; but that is the idea?—I take it that the railways in South Africa are free to raise capital to an unlimited extent to meet their requirements and to raise it independently of control by the South African Government. I have occasionally seen in the South African papers grave complaints about the shortage of rolling-stock in South Africa very similar to those made about the shortage in India, and it has been impossible to obtain any additional capital.

6689. I was in South Africa three years ago, and, although the war was causing difficulties, the conditions there were very unlike the conditions existing in India. This much is clear, that the Minister is a member of the Cabinet?—As in India, Sir George Barnes, the Railway Member, was a Member of the Council. The position is the same there.

6690. In South Africa he is a Railway Minister and not a Commerce and Railways and Industries Minister. He is a Railway Minister pure and simple, and presumably if he wants a loan, as he no doubt does, he talks about it to the Cabinet. Presumably the Finance Minister would express the opinion in the Cabinet "This is a very bad time to raise a loan," and things of that kind, but whether it would be raised as a pure Government loan I do not know; that, of course, is a matter for discussion. Will you tell us what you feel about that?—I take it you would like me to express my opinion from two points of view, both from the revenue side and from the capital side, because they are more or less distinct.

6691. Yes, and from the administrative side?—I think that will be found to be bound up with the other two. Firstly from the revenue side, the Government is, of course, as you say is the case in South Africa, by far the largest shareholder in the railways.

6692. It is the only shareholder. I thought you were speaking of India?—Yes. In India Government is the predominant shareholder in some and it is the only shareholder in others.

6693. May I stop you there for a moment, in order to get the point clear? Who are the other shareholders?—The other shareholders are the shareholders in the Company's capital in lines which participate in the profits in a proportion corresponding to the proportion of capital created by the Company and the capital held by the Government, that is to say the majority of the Company lines which have the more modern contracts.

6694. But are they shareholders?—I think they are in law.

6695. I would like you to enlarge upon that. I will not trouble you with all the different statements we have had placed before us, but what we have been told is this: Shall we take the East Indian, or shall we leave that out?—I am rather doubtful whether the East Indian would correctly be described as falling within that category.

6696. Then take the Great Indian Peninsula?—The Great Indian Peninsula is in the same category as the East Indian. Take the Bengal-Nagpur or the Bombay, Baroda and Central India.

6697. We have been told that the Bengal-Nagpur, for example, belongs lock, stock and barrel to the Indian Government; that the people who are called the shareholders in the Bengal-Nagpur Railway have a right, in consideration of a subscription which is used for the purposes of the line, to a share in the profits according to the terms of the contract, but that the property is wholly in the Government?—Perhaps I was wrong in saying that I thought that was the case in law; perhaps I should have said that I believed that to be the case as a practical matter, though it may not be the case in law. They are shareholders in the undertaking, I understand. The railway as a railway is described as "the undertaking" in most of the contracts.

6698. Do you agree that the undertaking as a whole is the property of the State?—That is a legal question about which I should not like to express an opinion definitely without consulting one of the law officers at the India Office.

6699. I think we shall have to get the law officer to tell us something about the question, because that is what we distinctly gathered, that the State is and claims to be the sole owner of the undertaking. Please go on, but I interrupted you lest I forgot to mention the point?—I think I was at the point that the Government of India are, at any rate, the predominant shareholder, and they draw a very large portion of their increasing revenue from these lines. I quite recognise that, as a theoretical proposition, it may be correct that all profits from railways should be put back into the railways, whether in the form of increased facilities or reduced charges, or possibly in an economical concern for capital or sinking fund purposes. But in the present position in India we have to face more or less the facts that under the new constitution the provinces have been allotted certain ear-marked sources of revenue, and the Government of India have also been allotted certain ear-marked sources of revenue. Apart from the ear-marked sources of revenue which the Government of India have been allotted, they are financed at the outset to a considerable extent by contributions from the Provincial Governments, which at present amount to something between 9 and 10 crores a year, in round figures. There is an undertaking that these will be progressively reduced; in fact, the provinces will insist on this, because they are all very short of funds, and they have very large claims on them for development in directions such as improved educational facilities, sanitation and many other important matters. In view of the continual pressure on the Government of India from this direction, they will have to curtail their revenues progressively during the next few years. On the other hand, their own sources of revenue are now strictly limited. The most important of these, from the point of view of yield, is customs, which in the coming year (I should like to explain that I am using the figures in the Budget as presented, because I have not yet got the final figures of the Budget as passed) are estimated to be about 37¾ crores. The next most important head is the tax on income, which is estimated to produce 18½ crores. I may say here that the Government of India will not enjoy the whole increase on the tax on income as that source of revenue is further developed by better assessment and improved methods, because a quarter of any increase in the revenue due to those methods and not due to an actual enhancement of the rate of taxation is to be distributed among the provinces. The other heads for the most part bring in smaller amounts. Salt is estimated to bring in 7 crores: opium 3¾ crores. There are obviously great objections to any further increase in the salt rates, in fact continual pressure is being brought to bear for their reduction. With regard to opium, the revenue derived from this source is partly received from the opium supplied to the provinces at more or less cost price, the provinces taking any profit on the actual excise monopoly, and partly from sales to foreign Governments. There was some free export, but that has been greatly curtailed and is a diminishing figure.

It may be expected that the exports to certain foreign Governments, such as the Straits Settlements and so on, will tend to decrease, so that that is a dwindling source of revenue. I have gone into this question in some detail, because I think it bears considerably on the present position. There are certain other very minor sources which I need not specify, but under the railway head the net receipts were about 27¼ crores. Against that, railway interest and miscellaneous charges are 23 crores 17 lakhs, that is to say a difference of about 4 crores net. In addition to that, under the head of "Miscellaneous," about 667 lakhs is estimated to be received from the freight tax, but that will be shortly merged in the railway revenues—it is expected during the course of this year—when the necessary steps have been taken to raise the railway rates all round, so as to enable that particular tax, which has been held to be not very desirable in its incidence, to disappear. So that it may be taken that roughly the estimated receipts to the State from railway revenues are about 10¾ crores.

6700. Do you agree with me that the 4 crores raised by charging railway rates beyond what is necessary to cover expenses and interest is really equivalent in its effect to what you have called the freight tax? Would you agree with me that the 10¾ crores is really a tax on transport?—I would agree that that is part of the truth, and probably it is a considerable part of the truth. The other part of the truth is that it is a yield on an investment, in the same way that the large profits made, for instance, by big industrial shipping companies go to a private shareholder; they are a return on his investment.

6701. I am not arguing with regard to the morality of the proceeding You would not dispute, would you, that the 6,000,000*l.* which the British Government got before the war from the Post Office was a tax on postal communications?—I would not dispute it as a popular way of expressing the position.

6702. Just let us take it in that way. If you go back a year or two, my recollection is that Mr. Hailey said that the 4 crores—which we may call 10¾ if we add the 6¾—had dropped from 18. I think I am right in saying there was a net profit during the war of 18 crores in one year?—I am not certain about the exact figures, but that is substantially correct.

6703. I think it was 18, but it may have been 16. Would you say that in your view that is a good way of raising revenue for the Government of India permanently, or would you only say that it is necessary at the present moment?—I was just about to come to that point, sir, only I had inevitably to go into rather a long discourse on the subject.

6704. Would you rather I did not interrupt you?—No. I was just about to answer that particular point you are asking me now.

6705. If you would rather go straight ahead without my interrupting you, please say so?—No, I have put down a few notes, but I am quite prepared to take them in any order that is convenient to you. I think I admitted that theoretically any tax of this kind is undesirable. The difficulty is that I have always felt that any form of taxation, except possibly taxes on luxuries and imposts such as the excise on liquor, have inevitably their disadvantages. A customs tax has its disadvantages; high taxes on income have their disadvantages, and with every Government it is purely a choice of evils in determining what direction their taxation should take. Having regard to that I do not know that I feel that, inevitable as it is that the outgoings of Government have to be met by some receipts, the realisation of these 10 crores from railways is other than the least objectionable method of raising it in the present circumstances. Were the Government of India not receiving this at the present time, it would have been necessary for them to impose 10¾ crores of taxation in some other direction.

6706. And you are inclined to say that you could not have found a less objectionable direction?—It is extremely difficult in India, with the field of taxation so circumscribed as it is now by these new provincial settlements. Practically the only other directions are by a still higher tax on incomes. A tax on incomes in India is at best not a popular tax, and there, as elsewhere, if you push it beyond a certain height, it is a definite restriction on industry.

6707. Customs taxes are not so unpopular, as far as I can gather?—They are very popular among certain sections of the community.

6708. I should like to be sure that I have got your answer clean. Is your answer, which broadly is that it seems to you rather less objectionable than any other form of raising it, meant to apply to a permanent position or to a temporary position?—You have put down my actual answer which I intended to convey in rather a tame way, sir.

6709. I am very sorry?—I would say as regards the position that it is extremely difficult, if not absolutely impracticable, to devise immediately any other form of taxation which could replace the Government railway revenue. I recognise that high taxation on communications, if the railway revenue received by Government is regarded as such a tax, is *per se* theoretically undesirable. It is impossible to say what may be the best thing as regards the future. For example, pressure from the Provincial Governments in connection with purposes which are in the opinion of a very large body of persons *per se* as desirable as railway development, may make it impossible for the Government of India to eliminate from their revenue receipts the return which they at present get from the railways.

6710. Permanently? — Permanently. It is impossible to diagnose, I think, the form that constitutional development in India will take, and that must necessarily have a very considerable bearing on the question.

6711. Let us leave it at that. Now we come to this. There is nothing in the nature of things to prevent a settlement on this basis. The railways are expected out of their charges to cover working expenses, reserves, and so forth, interest on capital, and 10 crores tribute to the Government of India. That is quite a possible solution, is it not? You can still get an independent budget on those lines, that part of the expenses that the railway organisation has to budget for is the contribution of a tribute to the general budget?—I think there are two considerations that bear on that. The first is that the railway head is at present a growing head of revenue, and you would deprive that, I take it, of any growth in the revenue. That I think is a very serious consideration.

6712. There, once more, it might be put on a sliding scale. It might be a fixed sum or it might be put on a sliding scale. I will not ask you to discuss it, but that is all consistent with a perfectly independent budget, is it not?—That part is, yes. Then there is a further important consideration. Suppose in India there was a prolonged strike on the railways, as there might conceivably be, extending to three months, and the railways from their revenues were unable to meet the 6 per cent.

Would the other side of Government be compelled to make up this liability?

6713. Which 6 per cent.?—I meant the 10 crores. In mentioning 6 per cent. I was thinking of some fixed rate of yield on the Government's capital in the lines.

6714. At present if there was a strike it would hit the Finance Member very hard, would not it?—Quite so, but with a separate budget I take it your intention is that it should not hit the Finance Member.

6715. Do not credit us with having any intentions at this stage?—The intention of the idea underlying the provisional scheme which you have put before me would be that the Finance Member should be immune from any such risks?

6716. I think it rather depends on how hard a bargain you drive. If he was content to take the interest on his money, obviously there would not be any fear of that not being provided. If he expected a tribute of 10 crores there might be more risk, and he would accordingly have in some way to take a risk, at least of a postponement; but that would not be a greater risk than he suffers at present?—No, but he does not at present ask to have it both ways. He gets the advantage of an improvement in the railway yield and he takes the risk of a setback in the railway revenues.

6717. And when he does not get it on the railway rates then he puts it as a tax on freight?—That is not the Finance Member; that is the Government as a whole, as a result of their military policy.

6718. All this finance must be matter for the Viceroy in Council to decide. Supposing that were done, I think your point is a good one—it is a point that we clearly have to bear in mind—about the possibility of his not getting what they contracted to give him, so to speak?—That has happened in the past. As you probably are aware, there has been at least one year in which the railways were run at a loss, and there have been others in which the profit was negligible.

6719. As you know, most solvent and wisely managed companies, either in a specific form, which they enter in their balance-sheet, or in some form that does not show itself in their accounts, have something in the nature of an equalisation of dividend reserve. It is quite clear that the railways might build up a reserve of money on which the Finance Member had a lien?—Would not that be rather a doubtful policy in India? It would mean that the railways, or the Government rather, instead of economising by pooling their actual balances, were keeping large balances and at the same time borrowing—were keeping large balances in hard times when, hypothetically, borrowing might be more difficult.

6720-1. I do not think dividend equalisation reserves are always kept in banks; I do not think they are always actually in money on call at the bank?—We are not talking of a relatively small company here; we are talking of one very large branch of the State with property worth 300,000,000*l.* or 400,000,000*l.*

6722. It is not substantially bigger than some other railway companies. Let me now put a question to you from the other point of view. You must be aware that the amount of money made available for the railways from one year to another for capital purposes has varied very widely?—Yes.

6723. You recognise, I am sure, the disadvantage of a permanent policy of that kind?—I think everybody must readily admit that.

6724. You will also, I am sure, recognise the exceeding disadvantage of the system of what you call programme expenditure, which is a n... ture of revenue and capital expenditure. The mixing up of that with the ordinary finance has resulted in renewals long overdue being postponed, which is not good business—not even good finance?—I realise, sir, that very often it has not been possible to find all the money required for the purposes of the railways, but I do not think I can at once admit that that is due to mixing up the railway finances with the ordinary finances.

6725. Take the cases that we know occur; the Railway Board accept the estimates that so many crores are wanted?—Yes.

6726. Then the Finance Member says:—"I cannot find all that"?—In the last three years I do not think that has been the case.

6727. You remember the figure of £12½ millions proposed by the Mackay Committee as the amount of capital which should be supplied annually?—Yes.

6728. I think I am right in saying that in no year was the 12½ millions supplied, and on the average it was very much less?—I think I can supply figures which Sir Arthur Anderson will confirm. In 1919-20 we asked the railways to state the maximum sum they wanted and could actually spend. The sum asked for was Rs. 26½ crores. We supplied that, and the railways actually spent 14 crores. That is nearly double the figure mentioned by the Mackay Committee.

6729. I am thinking of the years from 1907 onwards till the outbreak of the war. Of course, you can put against that 26½ crores the 2½ supplied in 1917-18?—In 1920-21 we again asked the railways to state the complete amount that they required and that they had a reasonable hope of spending, and to my belief we supplied that figure in full, and I believe it was actually spent. The actual revised figure that was spent was 25½ crores. We also allowed the railways to over-certify during the year, so that there was a pretty large throw forward. I will now come to the war figures which you mentioned.

6730. Is it necessary?—I think it is necessary, because here, I feel, is definitely a point at which the question of State control must necessarily intervene, if you have separation of railway budgets or no separation of railway budgets If those years are considered, I do not think they help one way or the other.

6731. I quite agree. Here in London people were forbidden to build houses. There is no question about that. If the railways had been independent they would have been told they were not to try for new capital. Go back to the period from 1907 to 1914?—I admit that in most of those years the Government of India of that time did not spend up to the standard in question, and, if I may express a personal opinion, their failure to do so in the earlier years was unwise and short-sighted, because in the years 1907-08 to 1909-10 very substantial sums were raised in the London market in pursuance of the policy of the Mackay Committee. The policy pursued during those two or three years actually led to a piling up of balances which might have been spent on the railways and were not spent. That led to very severe criticism of the Government of India's practice of keeping large balances in London, and that, in its turn, led to the appointment of the Chamberlain Currency Commission. But in the last year of the period, namely, 1913-14, 12 millions, which was practically the figure budgetted for, were spent, and in the Budget preceeding the war, that is for the year 1914-15, 12 millions, were budgetted for and about 11½ millions spent.

6732 Have you the figures for the earlier years?—I have the figures for the earlier years in Mr. Kisch's note. I think Mr. Kisch supplied you with those figures.

6733. My recollection is that the figure goes down as low as 5 millions?—Not in the figures from 1908–09 onwards.

6734. What is the lowest figure?—The lowest was 7¼ millions in 1910–11. It was 8·4 millions in 1909–10, 7·5 millions in 1910–11, 7·86 millions in 1911–12, 9·9 millions in 1912–13, 12·3 millions in 1913–14 and 11·4 millions in 1914–15.

6735. We must take that as having been the policy of the Government of India?—Quite so.

6736. You agree that as a concomitant, and you might say as a consequence, of the treatment of railway receipts and expenditure and capital outlay as a part of the finances of the country, money was unwisely underspent?—For a brief period of years.

6737. Can you give me the figures for 1921–22? Do you know what the demands were and what the Finance Minister has undertaken to supply?—I do not know what the demands were; I know what he has undertaken to supply—17·8 crores.

6738. Where did you get that figure from?—I took it from his Budget statement.

6739. (*Sir Arthur Anderson.*) Is that crores or millions?—Crores.

6740. (*Chairman.*) His figure in the Budget was 15, I think, but he undertook to take the rupee at 1*s.* 8*d.* That probably makes the difference?—This is the figure, sir. (*Showing statement to Chairman.*)

6741. (*Sir Arthur Anderson.*) 17½ crores at 1*s.* 8*d.* would be about 15 millions?—The Chairman was thinking of it, probably, as 15 millions.

6742. (*Chairman.*) Yes, you are right?—I expect the figure you had in mind was 15 millions.

6743. Very likely. I do not know if Mr. Ryan knows what the demand was? (*Sir Arthur Anderson.*) The preliminary forecast was for 35, but the demand was reduced to 28 crores.—(*Witness.*) I should like to make one or two general remarks about the capital side, which may appear to be somewhat discursive, but I think they are rather important. We have to remember at the present time the actual financial position of India as a whole. She has at present a short-term debt of 100 crores, in round figures, which matures between now and the summer of 1930. She also had outstanding with the public floating debt in the form of Treasury Bills of between 50 and 60 crores—at the present moment very nearly 60 crores. I saw the figure of 57 crores a few days ago, but I think the last return is 60 crores; at any rate, it is between 50 and 60. All this debt, both the short-term Treasury Bills and the War Bonds, has obviously as it matures either to be paid off or else renewed. If it is not paid off or renewed, the position can only be met in one conceivable way, and that is by printing fresh notes. It is obviously of the highest importance from all points of view to take steps for a very early funding of this debt. The revenue figures which I have given show that it is impossible to hope that any material part of the short-term debt can immediately be paid off at maturity. It must therefore be funded, and that is the most we can hope for. If Government cannot fund its obligations and cannot renew them, and has to inflate further, the immediate results can only be of the most serious kind. This is not merely a theoretical question; it is a most practical question, with which the big spending departments and the big earning departments (such as the army, as a spending department, and the railway, which is both a spending and an earning department) are very directly concerned. Our inflation during the war resulted in a very considerable rise in prices, and as far as the railways are concerned that has meant a huge increase in the cost of their establishments, and in the cost of working the lines throughout India, and that is reflected in the wages bill and their expenditure demand on the capital side. It increases the cost of material, the cost of working the lines and the cost of new construction alike; and unless we can, on the ordinary side, follow a policy of sane, sound and sober finance, it will affect our railway finance very intimately and very directly; in fact, if we go on inflating we bankrupt our railways, amongst other things, and we entirely get rid of the question of whether the State is going to draw the profits or whether they are going to be put back into the lines. It seems to me, therefore, that if it is contemplated there should be a new sort of diarchy set up within the Government itself, both sides of which will borrow independently, you merely increase the numbers of borrowers. You do not get any more money, and you make it more difficult for the Finance Department—or I should more properly say, the Government—you make it more difficult for the Government in its non-railway finance operations, to carry on the finances of the country on their non-revenue side in the only way in which it is proper to conduct them.

6744. (*Chairman.*) I think we need not assume, for the purpose of this discussion, that anybody proposes that the railways should borrow independently. It has been suggested that there might be a special railway loan, but obviously I do not think any serious person can contemplate that the Railway Minister was at liberty to take a decision of such importance as to whether he should put out a loan of, say, 20 millions, except as a member of the Cabinet?—The point seems to me to be very material in this way, that unless it is hoped that the railways in this way will obtain more funds, I am not quite certain that the suggestion made takes us any further, because the inherent object of the scheme was to obtain more funds, I take it; and as the scheme has appeared to me, from the reports I have seen of it in the newspapers (which are, no doubt, very garbled reports), it proposes to do that by creating additional borrowers. It has always appeared to me that it is not additional borrowers we want to find, but additional lenders. We want to create some sort of new security, which will tickle the palate of these new lenders. As long as it is merely a Government loan, that is to say a fixed interest-bearing loan, I do not see how we are going to get that.

6745. Will you kindly address yourself to this point: assume that the borrowings of the railway organisations are under the control of the Government of India. I do not think it is any use for this Committee to discuss the particular form in which money would be raised; we are not financial experts. Do you agree with the testimony which has been given to us in India, that the railways have suffered from—let us call it—the uncertainties, the ups and downs, due to being tied to the ordinary budget? Do you think that is a true statement?—I think, really, there are two questions there. I admit that the railways have suffered owing to the difficulty of obtaining funds, but I do not believe that that difficulty of obtaining funds could be eliminated merely by the device of giving the railways a separate budget.

6746. Let me put to you a specific instance. There is a certain Itarsi-Nagpur Railway that was begun in 1908; they are still constructing it, and

they hope to finish it in 1922 or 1923, I forget which. By the time it is finished the interest on capital will amount to 40 per cent. of the construction cost. Do you think that independent railway management would have done that?—I do not. To my mind the solution lies not in creating a separate railway budget but in entrusting the companies with very much greater power and liberty of raising funds as distinct from direct Government borrowings. I think in that direction lies the greatest hope, not of creating, as I have said, additional borrowers, but of finding new lenders, because there you will be able to have your securities dressed up in rather more attractive form.

6747. There is no company whose shares stand at par at this moment, is there?—I admit that.

6748. Therefore you would have to allow them more favourable terms of participation for the new capital?—That might be secured in various other ways. It might be open, for instance, to a sterling company to raise money in India in the form of rupee debentures. The Government could afford to let the companies borrow at a higher rate of interest on debentures ear-marked for the company's purposes without necessarily deteriorating the Government's general credit in the way that would be involved by a direct loan, and it might, in cases of that kind, be in the interests of the company to pay much higher interest. Again, I hope that in the case of these sterling companies it may be possible to adopt some such device as a profit-sharing rupee debenture. We have had that question under consultation with the Inland Revenue authorities here. We have not quite come to any conclusion, but at present I am hopeful that it will be possible to adopt some device of that kind without this particular form of borrowing being liable to double income tax.

6749. Are they showing any signs of being ready to surrender the tax on profits made by an English domiciled company?—This is, I think, roughly the position we have got to, but I am not quite sure about it; it is unofficial at present and unauthoritative. We believe it to be the case that if the Secretary of State borrows money from non-residents in the United Kingdom on the security of bonds or debentures—that is to say they would be a loan to the company and not a security of it——

6750. If the Secretary of State borrows?—Yes. That point we are not at present clear about, whether the company would be the borrowing agency or the Secretary of State.

(*Mr. Take.*) It makes rather a difference.

6751. (*Chairman.*) I think it is a very important point?—In any case, with or without a specific mortgage or floating charge on the undertaking, the interest paid to such investor, whether fixed or dependent upon the profits of the undertaking, will not be liable to United Kingdom income tax. We are still pursuing that, and I am hopeful that we shall be able to put the word "company" in the place of the words "Secretary of State" there.

6752. We have had very strong evidence indeed that any strengthening of the position of the London Companies would be exceedingly unpopular in India. Has your attention been called to that?—It has. Personally, I have certain views of my own on that point, but they are dictated primarily by financial considerations and not by administrative or sentimental considerations.

6753. You agree that that is a point this Committee has to take into consideration?—Such views as I hold follow those sentimental considerations rather than run counter to them. I have never yet been able to see why anybody should attempt to say that the whole question must turn on making all companies sterling companies or all companies rupee companies, and that there is no middle way. The companies have been able to perform great services in the past by borrowing in London, and there is no reason why that should not be continued, but I think it would be a very great advantage to have a certain number of the companies domiciled in India for the purpose of exploiting rupee capital, and I should very much like (these are purely my own personal views) to see the matter pursued on those lines.

6754. Is that contemplating transferring to India that rather artificial entity, the shareholder? I think you are bound to agree with me that the thing which calls itself a shareholder in the undertaking is not a shareholder in the undertaking. Would you start a new company which was a real railway company?—If there was a new project, I would have no hesitation whatever, provided that certain administrative difficulties would not arise, in allowing it to start as a new company with no shareholders but private shareholders. For instance, I know at the present time it is desired to construct a railway from Delhi to Karachi. Apart from administrative considerations, I should be perfectly willing to put the whole of that business in the hands of a private company, but I believe (and the railway members who are present will probably be able to supply you with information on the point) that there may be some practical difficulties owing to the fact that that route might short-circuit other lines and interfere with some vested interests. If any difficulties of that kind could be got round it would be, in my view (I am speaking entirely for myself), a good thing to welcome a scheme of that kind.

6755. You would allow it to have a fair field to get all the traffic it could?—Yes, except so far as it competed with certain vested interests. For instance, it might compete with certain rights possessed by the Southern Punjab, which is a private company. Apart from existing company lines I would see no objection, in fact I see great advantages, in bringing a State line, such as the Eastern Bengal State Railway, also under company management. The existing holding might be capitalised at a fixed sum, and a company created to have the responsibility for raising fresh capital and for working the line.

6756. To buy out the State?—Not to buy out the State, but I would not perhaps object to their buying out some portion of the State's share. The demand for new capital is, however, such that I think it would be preferable that the company should devote its energies to raising new capital, and I would permit them to do that to any reasonable extent that was necessary.

6757. Let us assume that the capital of the Eastern Bengal would be valued at £25 millions, would you leave that as a Government debt, or make them buy a proportion of it, or how?—Let us put it on a rupee basis. I do not know the exact figure, but probably it is somewhere in the neighbourhood of 35 crores. That would be treated as State capital.

6758. As income earning capital?—As share capital. The company would be formed—possibly constituted under an Act, in the same way that the Presidency Banks and Port Trusts in India are constituted under an Act—or possibly under some form of contract—I have no particular preference—to raise new capital for the line and to work the line. They may raise that new capital in any form they like.

6759. What amount?—I think it would probably be desirable to put some initial limit on the amount and to provide, for the purpose of illustration (because I am not wedded to any particular figures) that they must in the first instance on the constitution of the company raise at least three crores, and they may raise without the consent of the Government capital up to a total of, say, 10 crores; that they may subsequently raise further instalments of capital with the prior consent of Government, and after allowing the Government, if necessary, the option of increasing their own capital *pari passu*. Apart from the initial capital they would be able, after the first issue, to raise further instalments, either in the form of preference stock, secured on their own portion of the earnings, or if they liked to obtain Government sanction and the Government thought this suitable, in the form of a debenture stock secured on the whole undertaking.

6760. Then in a new company the outside shareholders, the private shareholders, would be owners of a proportion of the total undertaking, beginning at something under one-tenth and going up possibly to one-third; they would be real owners of that amount?—Yes.

6761. Would you entrust to the owners of the one-tenth the management of the ten-tenths?—I would in this way. Owing to the extent to which the State is a shareholder it would be desirable possibly to embody the constitution of the line in some form of enactment, and such an enactment might lay down, as for instance it does in the case of the Port Trusts or the Presidency Banks, that the Government should have a certain right of representation. For instance, it might be prescribed that the first managing director should be appointed by Government or should be appointed by the Board subject to the approval of the Government. I think probably where the Government is such a large shareholder it is desirable that they should have the right of approving the appointment of the managing director. That I think is secured to us in the case of the Presidency Banks by the new Act.

6762. In other words, the Government, being nine-tenths owners of the concern, would insist on being the manager; is not that what it comes to?—No, I do not think so. We do not insist on being managers of the Presidency Banks, but their general managers must be appointed on the nomination or recommendation of their Board subject to the approval of the Government.

6763. Does not that ultimately give Government the control?—It gives them a control, but I do not think necessarily it gives them the control. I would propose that on the Board itself there should be a liberal representation of the shareholders other than Government.

6764. "A liberal representation," I do not care what you call it, but ultimately one side or other must in the last resort be able to force through its will. Is that not so? Supposing you come to a difficulty, one side or the other must have power to over-rule?—That is so.

6765. On which side are you going to leave the power?—Ultimately, in the case of the railways in India or in any other country, Government must have the control.

6766. Let us stick to the illustration you gave of transferring the Eastern Bengal to a company. Who is ultimately to have the control if it comes to the vote, the Government or the private shareholders?—I think it depends entirely on what the matter is that is being fought for. Ultimately in any country Government must have the control in respect of the railway administration.

6767. We are not talking of Government as a political organisation; we are talking of Government as owner of the undertaking. In that capacity who is to have the ultimate control, the Government with the nine-tenths or the private shareholders with the one-tenth? Who is ultimately to say: "I will have my way on so and so"?—I think that depends entirely on the question that arises.

6768. Let us say on all important matters?—On an all-important matter I think Government must have control, and I think at present, even with the private lines it would have to insist on that control.

6769. You were speaking a few moments ago about debentures and the discussion you were having with the Inland Revenue authorities. Our attention has been called to the curious position of Indian debentures. The debenture prospectuses are put out in the name of the company?—Yes.

6770. On the face of them there is a guarantee of principal and interest with certain modifications sometimes by the Secretary of State?—Yes.

6771. The money is handed to the Secretary of State?—Yes.

6772. The money, as we have been told, is spent by the Secretary of State where he wants to invest capital?—That is only a very general and popular description of it. The money is actually ear-marked for the individual companies by whom it is raised. The Secretary of State decides how and when each should raise its money. When that money is raised it is deposited with the Secretary of State, who acts as bankers for those companies—that is rather a popular description—and it is there earmarked for that company. For example, a company may raise a loan of three millions. At the present time it is overdrawn with its bankers to the extent of one million.

6773. Its bankers being the Secretary of State?—Yes. The three million is applied in this way. It repays to the Secretary of State the one million overdrawn; it is allotted one million for its current expenses in that year, and the other one million is ear-marked to its credit, and the Secretary of State pays it interest on that further sum until it draws it in the next year.

6774. Or the next year, or the next year, or the next year afterwards, or any number of years afterwards?—I can answer that question at once. The answer is, no, because all these companies are enormously overdrawn. Their actual overdrafts at the present time amount to about 50 millions, so that the question I was asked about having money actually placed at their credit does not exist. They are all largely overdrawn. The Bengal-Nagpur is overdrawn nine millions.

6775. (*Chairman.*) What does it mean, overdrawn? (*Mr. Tuke.*) I do not understand it. (*Witness*) The general position is that none of these companies are responsible for taking the initiation in raising capital. What actually happens is that the capital is raised by the Secretary of State in the first instance and not by the companies, and the Secretary of State then makes advances to these companies.

6776. (*Sir Arthur Anderson.*) It has not been the fault of the companies that they did not raise the capital; they have not been allowed to do so.

(*Chairman.*) You are talking of shares.

(*Sir Arthur Anderson.*) Yes.

(*Mr. Tuke.*) Shares are quite different?—I am not talking of shares. I was using the word "capital" very loosely for the raising of funds for the railways.

6777. (*Chairman.*) I expect that Mr. Tuke has the same difficulty in his head that I have.

What is the difference between the Secretary of State making advances and the Secretary of State investing? As I understand it, the great bulk of the money in all the guaranteed companies has been found by the Secretary of State, and that is what the Indian Government loans have been devoted to, money put into the railways?—In most cases, I think practically in all cases, that money is simply advanced to the railways, and it is open to them (I speak subject to correction because I am not very familiar with all the details of the contracts) to redeem those advances as they raise further funds.

6778. As they raise further funds?—Yes.

6779. (*Chairman.*) But they have not power to raise funds. They have no power to go to the public for a farthing of share capital or a farthing's worth of debenture capital, so we have been assured.

(*Sir Arthur Anderson.*) Not without the permission of the Secretary of State.

(*Mr. Tuke.*) How do these overdrafts arise?—Because the Secretary of State has advanced money to the companies for the prosecution of capital works on the lines.

6780. (*Sir Arthur Anderson.*) Is it not the case that occasionally the Secretary of State transfers these advances to share capital? I think it has been done?—May I take a note of that question, because I find myself in a little difficulty in this respect. I was first asked about the companies raising loans and money being put into them, and I was told shortly afterwards that the company have no right to raise these loans. I do not quite know exactly what point I am being asked at the moment.

6781. (*Chairman.*) The point that they have no right to raise loans?—I was assuming that these companies had raised loans and that there was that right, and that it was in furtherance of those rights that these funds were raised.

6782. Let me see if there is any difference between us. The Secretary of State can authorise or instruct the East Indian Railway to raise 5 millions in debentures to-morrow?—Yes.

6783. The point I put was that the East Indian Railway has no right to raise anything on debentures unless it has been told to do so by the Secretary of State?—Quite so.

6784. That is correct?—That is quite correct. Two or three questions were asked me, but I am not quite certain which is the most logical order to answer them in. Mr. Tuke asked me one question.

6785. (*Mr. Tuke.*) I asked the question, how do these overdrafts arise? It seems to me it is a question of book-keeping. The railway belongs to the State; the State has purchased it. Is it a fact that they call so much capital and so much overdraft?—I speak subject to correction by one or two members of the Committee who have greater railway knowledge than I have, but I think, roughly speaking, it may be said that there are two separate kinds of contracts, namely, the East Indian and the Great Indian Peninsula have a contract in which the profits are divided in certain fixed proportions. With the majority of the lines the profits are divided according to the proportion which the Government's capital in the line bears to the amount of the company's capital. The Secretary of State does not ordinarily make any permanent increase in his own capital, but makes advances to the company for the purpose of capital construction.

6786. Why does he advance it to the company and not to himself?—Because the company carries out the actual work on the line. The Secretary of State has no direct management of the line. The company buys the wagons and the company's officers actually disburse the money. The company carries out all the operations connected with the line.

6787. (*Chairman.*) I think there is a point between Mr. Tuke and yourself which is not clear. To the company as an operating machine money has to be given to buy rails and so forth?—Yes.

6788. But to the company as a financial concern does the State make advances? Is not that the point that wants to be cleared up?—To the company as a financial concern for these purposes mentioned the State makes these advances.

6789. Is it paid into the company's bank to the credit of the company?—The companies all bank, for this purpose, with the State.

6790. (*Mr. Tuke.*) And by so doing, the shareholders' or debenture holders' interest in the company is increased. If you advance money to them, you must increase their financial interest in the railway.

(*Sir Arthur Anderson.*) You advance the money for the purpose of the undertaking.

(*Mr. Tuke.*) If you advance money to the shareholders and give them an overdraft you surely increase their interest in the undertaking?—You mean with the advance you increase the company's share of the profits?

6791. You increase the shareholders' interest in the company if you give them a capital advance. Before the company can owe the money they must have received the *quid pro quo*. They cannot owe money for nothing. You have therefore increased the company's interest in the railway by the amount of overdraft that has been granted to them. Does the State charge interest for these overdrafts?—Yes.

6792. (*Mr. Tuke.*) I must say I have some difficulty in following the position.

(*Sir Arthur Anderson.*) The interest on the overdraft is usually paid by the undertaking, not by the company?—It is paid by the undertaking. It is a charge against the undertaking.

6793. (*Mr. Tuke.*) You are mixing up the company with the undertaking.

(*Sir Arthur Anderson.*) All these advances made by the Secretary of State are charged against the undertaking.

(*Mr. Tuke.*) They are therefore created by overdrafts—to the undertaking and not to the company.

(*Chairman.*) Sir Arthur Anderson, who should know, says that these advances are a charge against the undertaking. If the undertaking belongs to the Secretary of State, how can he advance money himself and make a charge against himself? I give it up.

(*Mr. Tuke.*) So do I.

(*Sir George Godfrey.*) It is the Secretary of State, it is true; but it is purely a verbal matter. The actual words are:—"All moneys which shall "after the 31st day of December 1910 be required "for capital expenditure on the undertaking shall, "at the option of the Secretary of State, be "provided either by means of advances by the "Secretary of State (in which case he shall be "entitled to require the company at any time "afterwards to raise money for the repayment "thereof) or by the issue as the Secretary of State "shall decide of debentures or debenture stock of "the company or by the issue of further ordinary

"shares to be converted when fully paid into "ordinary stock of the company."

(*Mr. Tuke.*) The point is this, the undertaking and the company are not synonymous.

(*Sir George Godfrey.*) That is quite correct?—As far as I understand the question, the point which Mr. Tuke has put to me is rather a legal point than one which I can properly answer. As an answer to the man in the street, I think the passage which Sir George Godfrey had just read out really supplies generally all the information which I can give. Mr. Tuke's question deals with rather a technical legal point.

6794. (*Mr. Tuke.*) I think there is a very great difference. If you have a company raising money to pay off an overdraft of that company I can understand it; but, I gather, this is not an overdraft of the company but an overdraft of the undertaking, which I think is a different thing. The overdraft is not given, as I understand it, to the company; the overdraft is given to the undertaking. Is that not so?—Yes, I understand that is the case If I used the word "company" there I was speaking loosely. I thought of the undertaking as a whole.

6795. (*Chairman.*) Then the position is this. Take the case of the Bengal-Nagpur. The Bengal-Nagpur Company asks the public for money?—Yes.

6796. The money is paid to the Secretary of State?—Yes.

6797. It is not paid to the Bengal-Nagpur Company. The prospectus says that the money is required for the general purposes of the company?—Yes.

6798. Supposing that the Secretary of State had advanced one million to the Bengal-Nagpur Company?—He has advanced 9 millions.

6799. Supposing at the date of this prospectus he had advanced one million, and the issue is for two millions. Clearly the repayment of one million would be for the general purposes of the Company, as described in the prospectus?—Yes.

6800. Supposing the Secretary of State keeps the other million, what remedy have the debenture holders? They have lent the money to the company; the company has not got the money, and cannot get it. There is no privity of contract between the debenture subscriber and the Secretary of State?—I think the answer to that is two-fold: firstly, that the Secretary of State would not and does not collar indefinitely the money advanced for the purposes of the company, which is practically, as I take it, in this case synonymous with the purposes of the undertaking. It is applied to the purposes of the undertaking. In the event of it not having been actually disbursed on that count, undoubtedly it would be ear-marked for this purpose by the Secretary of State paying to the undertaking interest in respect of those funds.

6801. Would it be a fair description to say that the directors of the company, not having immediate use for money which they had borrowed for the general purposes of their undertaking, were putting it on deposit with the Secretary of State until they called for it?—Generally, that would be a fair description, provided you eliminate the words "not having a use for it."

6802. "Not having an immediate use for it?"—Yes, I accept that.

6803. Take a further case. Supposing, for the sake of argument, the Financial Member of Council or the Government of India for an indefinite number of years refused to sanction any capital expenditure on the Bengal-Nagpur Railway, and for an indefinite number of years that one million pounds is never applied to the purposes of the Bengal-Nagpur Company?—I can only say that that would be, in my opinion, wicked. Is that the answer you wished to elicit?

6804. That is what the system does not prevent, so to speak?—Quite. In theory, I admit your criticisms of this system, and that there are difficulties and objections and misconceptions which the system lends itself to. I do not say it is not possible of improvement, but what I do wish to say is that these criticisms, which I have seen put forward elsewhere, do not take cognisance of the actual facts, namely, that these companies or undertakings——

6805. (*Mr. Tuke.*) Please do not use the words as meaning the same?—— are at present very largely overdrawn. The overdrafts, I think, amount to something like 46½ millions, even excluding the Assam-Bengal Railway. The Bengal-Nagpur Railway is overdrawn by 9 millions, the Bombay, Baroda and Central India 6½ millions.

6806. (*Chairman.*) I think we are getting away from the point, which, I confess, I am very anxious to understand, and which I do not in the least understand at present. Does that mean sums that the Secretary of State has determined he will call upon the several companies to raise independent of himself to repay him?—I think that is nearly it. I would rather put it in this way—sums which the Secretary of State can call on the company to repay him.

6807. How far back does that 46 millions go?—It is the estimate on the 31st March 1921.

6808. You cannot tell me how long it has been accruing; that is what I want to know?—I cannot say off-hand.

6809. This is my point. The total investment in the railways is something like 370 millions?—About that.

6810. (*Chairman.*) I suppose about 270 millions, or thereabouts, is the investment of the Government in the companies; the companies' own investments are about 20 millions, and the companies' debentures, I think, are about 40 millions?

(*Mr Tuke.*) 41 millions.

(*Chairman.*) There are, roughly speaking, 200 millions of the Secretary of State's money in the guaranteed companies' railways, and you say that 46 millions of that is advanced to the companies?—Yes. (*Note by witness.*—The 46 millions mentioned does not include the advances to the Assam-Bengal Railway.)

6811. (*Chairman.*) Is the remaining 154 millions a fixed investment by the Secretary of State?

(*Mr. Tuke.*) I think you are mixing it up with the advances to the undertakings.

(*Chairman.*) Let us put it in this way: what is the difference between advances to the undertakings and investments in the undertakings?—I am afraid I cannot give you the exact figures at the moment that are treated as permanent capital.

6812. Will you kindly make a note of that? Adding together the guaranteed companies' share capital, debentures and debenture stock, and 46 millions described as the Secretary of State's advances to the undertakings, there is still a very large margin between those amounts and the total sum invested. How is that to be described?—I will make a note of that.

The witness withdrew.

SIR R. HIGHET called and examined.

6813. (*Chairman.*) We all know that you are Managing Director of the East Indian Railway. You know that we have had Mr. Hindley before us in Calcutta, and I think you know what he has said?—Quite so. I did not prepare a written statement, because if I had replied to the questionnaire my answers would have been very much on the lines of those of Mr. Hindley. Taking Mr. Hindley's evidence, I should like to emphasise one or two of the points. If you will take Part 3 of the memorandum of replies to the questionnaire—I think it is on page 10—he said: "The slowness "with which the mineral resources of India have "been developed is mainly traceable to lack of "railway extension," and I want to point out, in regard to that, that the railways can scarcely be held responsible. I will instance a case which happened some years ago, before the Railway Board was constituted—it was under the old régime. I did not lay my hands upon the papers until after Mr. Hindley had given his evidence. It is a brief history of the East Indian Railway's efforts to open up the Jherriah coalfield. I will read a few paragraphs of it:—

"The first proposals to extend the East Indian Railway across the Barakar river were made in 1886. These were the outcome of attempts by the coal companies interested to obtain permission to lay a tramway connecting the Barakar Railway station, by way of the road bridge over the river Barakar, with the coalfields on the west of the Barakar river, lying in the fork between the Barakar and Khudya rivers. The accompanying map (1) shows the collieries affected.

"In the course of the investigations connected with those proposals to extend across the Barakar river into the Barakar coalfield, attention was drawn to the Jherriah field. Mr. G. Sam, District Traffic Superintendent, in his report dated the 25th February 1888, made the following reference to it:—

> "'About 20 miles from Barakar, in the direction of the proposed extension of the railway, lies the large and valuable Jherriah coalfield, at present unworked because of the want of cheap transport; and it is only a question of time before this field also is made accessible to the port of Calcutta and to lower Bengal.'

"A project was then prepared for a bridge across the river and a branch to the Khudya Nullah, a total length of six miles, and estimates were submitted for sanction in February 1889, the amount being Rs. 12,07,484.

"The Government of India, however, in Public Works Department letter No. 1201 R.C. of the 23rd December 1889, intimated its decision to take no further action regarding the project for the present."

6814. What is that date?—That was in 1889. It was started in 1886.

"Notwithstanding this decision, attention was, without delay, given to the larger question of the opening up of the Jherriah coalfields; and an examination of the field was made in March 1890 by Mr. T. H. Ward, Assistant Colliery Manager, East Indian Railway. The report was submitted on the 7th August 1890. It stated that 17 seams of coal had been traced out, and that from the best seam alone the quantity of coal available, at a less depth than 800 feet, was, after deduction for loss in working, about 159 millions of tons.

"The report was forwarded to the Board of Directors, who commented upon it in their letter No. 184 of 1890 (to the Agent in Calcutta), and amongst other remarks observed that:—

> "'The report establishes beyond question that the area surveyed by Mr. Ward contains a field of very great extent and value, both in respect to the quantity of coal and its quality.
>
> "'The Board cannot doubt that the time has come when a further effort should be made to extend railway communication into this area, the expediency of which, as you are aware, has for a considerable time been recognised by them.'

"In communicating their views on the report, the Board expressed a hope that, with the approval of the Government of India, it would be possible at a very early date to give effect to their instructions to extend the railway into the field.

"The Government Consulting Engineer, Calcutta, in forwarding the correspondence to Government, in accordance with the wish expressed by the Board of Directors, gave it as his opinion that the line was not at the time required. The Government of India, however, agreed to a survey for a line being undertaken."

(The Consulting Engineer in those days was the medium between the company and the Public Works Department.)

"On the permission thus given by Government, it was arranged to prepare a complete project for an extension from Barakar to Jherriah, serving both the Barakar and Jherriah fields. The survey was commenced in March 1891, and a complete report, with estimates and plans were submitted on the 8th August 1891, providing for:—

"(*a*) the full development of the Barakar field.;
"(*b*) a line to serve the Jherriah field.

"It was remarked in the report, as regards the Jherriah field:—

> "'At Jherriah itself, of course, no operations for raising coal have been commenced, from want of carriage, but there has been considerable activity in taking up land and exploring, so soon as it was known that a line was proposed.'
>
> * * * * *

"The Board of Directors, writing in August 1891 on the subject of bridging the Barakar river, remarked (para. 14 of letter 114 of 1891):—

> "'It is clear that the sanction to the construction of the bridge must be dependent on that of the line beyond it, for which the approval of Government is necessary. The Board have for a long time past desired the construction of this extension, but have hitherto been unable to obtain the assent of the Government of India thereto, although several references on the subject have been made. The Board request that you will endeavour to obtain an expression of the views of the Government of India on the subject at an early date, and, subject to their approval, the Board authorise the commencement of the preliminary works as soon as the season admits of it.'"

The Government of India still refused their sanction.

"The Board, at the same time that they sanctioned the estimates, addressed the Secretary of State for India, pointing out that they had been desirous for several years past of extending the railway across the River Barakar so as to serve the collieries in that locality, and added—

> "'As Lord Cross is aware, the Board have recently, with his Lordship's assent, made important reductions in the coal tariff, with a view to doing all that was in their power to develop and assist this important industry, and they think it is no more than reasonable to look forward, if proper facilities are provided, to the possible future development of a large export trade of coal from Calcutta, the commercial value of which, if successful, it would not be easy to exaggerate.
>
> "'With this in view, they will continue to do all in their power to extend and facilitate the economical working of the Bengal coalfields, and they regard the present project as likely to be highly advantageous to the community generally, and at the same time to add to the fair profits of the undertaking.
>
> "'I am, therefore, desired by the Board to express the hope that the Secretary of State in Council will be able to address the Government of India on the subject, with a view to making provision of the funds required for the early commencement of the works.'"

To this letter the following reply was received from the Under Secretary of State for India in his letter No. P.W. 2039, dated 10th November 1891:—

> "I am directed to acknowledge . . . . In reply, I am desired to say that the Secretary of State in Council has addressed the Government of India in support of this proposed extension of the undertaking."

That seemed to have stirred up the Government of India, and they then gave provisional sanction to the survey being made, but I take it that they could do nothing until funds were provided. I mention this to show that there was a real desire

on the part of the Board of Directors of the East Indian Railway to open up this coalfield, but they were met with opposition on the part of the Government.[1]

6815. I do not think there was any suggestion that the Company was backward?—I merely bring it forward to show that in some respects the Board of Directors in this country can be of service in furthering commercial enterprises of this kind.

6816. The thing seems to be that you knocked very hard on the door and it continued closed?—It continued for a time, but it was not until there was intervention through the Secretary of State that the Government of India did anything at all in the matter.

6817. Perhaps you will let us have it?—Certainly. I have only one copy, but you are welcome to it. It is now past history.

6818. I suppose construction did begin. When was this bridge opened?—Construction was commenced in 1892 and the line to Dhanbad was opened at the end of 1894. Then there was also another matter which Mr. Hindley referred to in his evidence, with regard to the delay in obtaining sanction for additional facilities in the Jherriah coalfield. It was perhaps brought forward at an inopportune moment when we were engaged in the war and funds were scarce, but there was no doubt whatever that the coal was an imperative necessity, and it seems that every effort should have been made to afford additional facilities with the object of giving increased supplies. When the Railway Board did sanction this scheme in 1916, they cut out what were really very essential requirements. They reduced the estimates from 39½ lakhs to 26 lakhs, and they cut out certain works which were very material to the project.

6819. Will you just particularise what they did cut out?—They cut out the doubling of the line between Kusunda and Katrasgarh; they cut out the Dhanbad station remodelling; and they cut out alterations to stations at Bansjora and Sijna, and they reduced very considerably the extent of the remodelling of Kusunda and Gomoh stations.

6820. You say that that cutting down from 39½ lakhs to 26 lakhs, which was a cutting down of exactly one-third, hampered the proper handling of the coal traffic?—Certainly.

6821. In what year was that?—1916.

6822. The question naturally occurs: were you not at liberty to divert some of your grant from some possibly less urgent requirement in order to carry out the whole scheme that you thought desirable in connection with the 39½ lakhs?—No, I do not think it would have been possible. The grant was so small that there was no margin to go on. No pruning was possible.

6823. (*Sir Arthur Anderson.*) Were any special reasons given by the Railway Board?—Simply want of funds. The Railway Board called for a long explanation in regard to the necessity, which was rather unnecessary, I think, because these improvements and facilities formed a recommendation of the Coal Traffic Conference of 1912, and the President of that Inquiry was the President of the Railway Board.

6824. (*Chairman.*) Which President was that?—It was Sir Trevredyn Wynne. I had also explained the thing to two members of the Railway Board after this, and I thought that they quite understood and admitted the necessity and that there might be a possibility of making a special effort to provide funds for such an urgent work, because there was a great difficulty in obtaining ample supplies of coal, and I am satisfied that if these works had been provided at that time a great deal of the congestion now occurring would have been avoided.

6825. I understand you to say that the President of the Railway Board, Sir Trevredyn Wynne, found himself compelled by lack of funds to refuse to carry out a work that he as President of the Conference on the railway question had regarded as necessary?—No. Sir Trevredyn Wynne was President of the Coal Traffic Conference of 1912, and in that capacity he was good enough to arrange that we got a supply of 12,000 wagons, which was also a recommendation of that Committee, but unfortunately before these estimates for the additional facilities went up Sir Trevredyn Wynne had retired from his office and there was another President of the Railway Board.

6826. The Railway Board had to refuse on the ground of want of money, and in your view that was, strictly speaking, a war expenditure?—I looked upon it as such.

6827. (*Sir Arthur Anderson.*) Was it represented as war expenditure?—I would not say so; it was, however, well known that coal was an essential requirement of the time, and that we could not get more coal out without these additional facilities. Then I might instance the case of the doubling of the line above Allahabad, which is another case where we have met with opposition. We first asked for that in 1914, but we have not got any further forward yet. It is only a matter of permanent way. The formation had been made for the second track.

6828. (*Chairman.*) When was the line made double up to formation level?—In the original construction. It was then estimated that the cost of the second track would be Rs. 60,000 a mile.

6829. (*Mr. Hiley.*) What is the mileage?—It is 260 miles from Allahabad to Tundla. The estimate for the whole of the doubling was Rs. 1,57,85,000. The cost per mile was Rs. 60,713. We cannot buy the permanent way material now for Rs. 60,000 a mile. The reason that the Railway Board gave for refusing sanction to that was that any surplus traffic which we had could be diverted to the Oudh and Rohilkhand Railway at Mogulserai. Our argument was that it was much better to keep it on the East Indian Railway as long as possible, and that the Oudh and Rohilkhand had quite enough traffic of their own. We were overruled in that. In connection with that, complaints have been made from time to time that the Oudh and Rohilkhand Railway have not been able to take over the number of trains that we wish to give them at Mogulserai if congestion is to be avoided on the East Indian Railway above Allahabad. Only last week the Agent in his letter to the Chairman said:—

"The usual weekly note on the wagon position is enclosed. You will see that the difficulties on the Oudh and

[1] The witness subsequently drew attention to the following further extract which he had intended also to read to the Committee:—

"Later, in consequence of this and subsequent recurring difficulties in obtaining funds to admit of the provision of extensions and facilities the trade of the country served by the railway demanded, the Board applied for and obtained Parliamentary powers to raise from time to time, with the permission of the Secretary of State for India, such money as might be required. But even this was afterwards found to afford little help inasmuch as it was apparently held that the total outlay in India on Public Works was limited by Parliamentary orders, and that consequently the operations of the East Indian Railway must necessarily be restricted—a ruling that has had a serious hampering effect."

Rohilkhand Railway are still having a very cramping effect on our traffic. Not only are we continually compelled to restrict booking, but the inability of the Oudh and Rohilkhand Railway to take coal traffic for the North-Western Railway necessitates this going by our main line, and still further restricting our capacity. Unfortunately we have a suspicion that when conditions do improve from time to time the Oudh and Rohilkhand Railway are more anxious to move their own local goods than to carry through traffic. This is perhaps natural, but it works unfairly when we have to heavily restrict our local traffic because the Oudh and Rohilkhand Railway cannot take over trains. It is quite obvious to me that in the interests of the country at large we should have some power of control over the traffic working of the Oudh and Rohilkhand Railway in times such as the present, when they have to curtail trains."

6830. Were any steps taken towards doubling this section?—None.

6831. You raised the question in 1914 but never got any further?—We prepared estimates and we have been pressing for it repeatedly since.

6832. The Government made an answer which has something in it?—Undoubtedly.

6833. The Railway Board having said you ought to relieve the line by diverting to the Oudh and Rohilkhand, have the Railway Board ever taken any steps to bring them together and press you to come to terms?—We had no difficulty in coming to terms. We arranged that the Oudh and Rohilkhand should take so many trains a day, but they are not able to do it now, and have not been able to do it for some time.

6834. They told us that if they had two more engines they could take one more train?—But that is no use.

6835. It is quite obvious that the line is emptier than yours?—I do not know now.

6836. There is another question, that they could by shortening block sections and so on take more traffic?—No doubt.

6837. What I want to get at is this. The Government said that there was another policy?—Yes.

6838. Did the Government really take any steps to see that that policy, which they said was the proper one, was put through or did they merely leave you to make arrangements?—They merely left us to make arrangements.

6839. (*Sir Arthur Anderson.*) As far as my recollection goes, the Oudh and Rohilkhand complained that they never got notice from the East Indian Railway in time to make arrangements necessary to avoid delay in the haulage of coal diverted over their line?—That is a complaint I never heard of.

6840. (*Chairman.*) The Oudh and Rohilkhand Agent said that they had to make hand-to-mouth arrangements for diverting something one day and something another when they were overflowing?—They would not agree to give any fixed number of trains.

6841. There is no arrangement for a permanent apportionment of traffic so as to fill both lines?—No. The result is that we get into a bottleneck at Allahabad.

6842. (*Sir Henry Burt.*) I suppose, having regard to what is said in that last letter, the present position is affected a great deal by the strike on the railway?—I thought so when I first read it, but I do not think so now. I think it is quite clear it has nothing to do with the strike.

6843. The strike is still on, as far as I know?—I think it is settled.

6844. (*Chairman.*) They wanted to take care of their own local traffic first?—It has been reported to us from time to time that the same difficulty has occurred. I know from my own experience when I was Agent that the same thing happened.

6845. (*Sir George Godfrey.*) There is a little misunderstanding. As far as I can remember, the position the Government took up was that the war had broken out and that they could not allot money for the work, although it had been under consideration. There was the Oudh-Rohilkhand alternative route and they said that had better be used. As far as I can remember, every effort was made to use that alternative route. Then came the period after the war, during which progress has not been made, and that is no doubt due to the shortage of money. I do not think, as far as I can remember, that the Railway Board ever said that you did not require that doubling?—They did, most certainly. Sir Arthur Anderson will vouch for that.

6846. (*Sir Arthur Anderson.*) What I think they said was that this alternative route existed and that in the circumstances then ruling it should be made use of to the fullest extent?—Yes, and that was said before there was any question of a war. The thing originated in 1912.

6847. (*Mr. Hiley.*) Have you continued to represent it as an urgent work?—We have got tired of saying anything since 1916. It is put into our budget every year.

6848. And does it get struck out?—Every year.

6849. (*Sir Rajendranath Mookerjee.*) Have you reported that to your Board here?—Yes, but we cannot help ourselves.

6850. Have they taken any steps?—They wrote very strongly about it for several years, but you cannot keep on doing so for ever.

6851. I suppose the Grand Chord is even more urgent?—I should say the Grand Chord was even more urgent.

6852. How much have you got for it this year?—I am afraid I have not the figures here, but I think they were given in Mr. Hindley's evidence. They are both extremely urgent.

6853. Could you tell us when the Grand Chord is likely to be completed and ready at the present rate of progress?—I think it will be completed by the end of this year, up to near Gya practically. They will not get into Gya, as there is some heavy work to be done there. There is also another point I wish to refer to. Boards in this country are sometimes useful, I think, in checking extravagant expenditure and in putting a stop to schemes of doubtful utility, and I should like in that connection to quote the Delhi station.

6854. We have had that in evidence already, unless you want to add to it?—I only want you to understand that if the Board of the East Indian Railway had not exerted themselves to put a stop to that extravagant scheme it would probably have been proceeded with.

6855. (*Sir Henry Burt.*) You are referring to the terminal station at Delhi?—I am. There was no opposition raised to it in India, except on the part of the East Indian Railway. There was a scheme got out in connection with the new city developments, and they proposed to put a station, at the cost of something like 1½ or 2 crores, in a part of Delhi that would have been no use for probably a century to anyone except the people who were going to live in the new capital.

6856. (*Chairman.*) That was to be on the site where the new city is. Do you mean the last New Delhi or the last New Delhi but one?—The latest New Delhi. The result of this scheme was that the Boards here, headed by Colonel Gardiner, who was then Deputy Chairman of the East Indian Railway, had a meeting with the Secretary of State, in March 1914, with the result that a very much better and cheaper scheme was put forward. For years to come there will be no necessity for any-

thing like the expenditure that was contemplated at the time the station was first proposed. Then with regard to technical education, I was present in Calcutta when Mr. Chowdhury gave his evidence, and I think he said that we did not cater for the Indian who wanted a mechanical training. It is true to some extent that we do not at present for the better class, but we have been very anxious to do it for some time. Sir Rajendranath Mookerjee knows that there was a scheme put forward some considerable time ago which has not got much further. I suppose it is blocked by the Education Department.

6857. We were told it was for want of money to build residential hostels for the students?—I do not know how it really stands. I made enquiries when I was in Calcutta last cold weather, and they said it was the Education Department of Bihar and Orissa that was holding it up. It is a very desirable thing.

6858. (*Sir Rajendranath Mookerjee.*) You want a grant?—We want them to share in the expenditure on certain conditions.

6859. They said they had no money?—I think Mr. Hindley has given the details of the scheme to you. I only mention it because I think it is very desirable that it should be pushed forward. We have great difficulty in getting covenanted employees from this country and when we do get them out they give us a great deal of trouble in differentiation in connection with leave, allowances, passage home, and that sort of thing, between them and the people who are trained in the workshops in India. I have it on the best authority that some of our employees who have been trained in the Jamalpur workshops, our own apprentices, have risen to quite as high positions in the subordinate grades and are quite as capable as the men we have been getting out from this country. It is only a matter of extending the training.

6860. (*Mr. Purshotamdas.*) When did you start training these people in the workshops at Jamalpur?—It probably started about five years ago.

6861. And the East Indian Railway has been in existence for 70 years now?—Yes.

6862. Why was not an effort made earlier?—Because there was no desire on the part of the Indian of that class to take up this kind of work or to extend his knowledge in this direction.

6863. You mean that there was no desire expressed?—Yes.

6864. Or no experiment was made with them until it was found that they were ready to assert themselves?—No, I do not think so. It is only in the last few years that the Indians of the class we want to train have shown any marked desire to take up this line of employment. You know quite well that, as a rule, they do not care for soiling their fingers.

6865. I am afraid that has been said several times, but I do not agree with it. Twenty or thirty years ago you could find Indian engineers of the best kind?—I do not think they were inclined to go through the course of apprenticeship that a good many of them are doing now and bear the rough and tumble of an apprenticeship.

6866. (*Chairman.*) We have had a good deal of evidence that the Indian feeling in reference to civil engineering and mechanical engineering is quite different, that they are quite ready to be civil engineers but not ready to have the rough workshop training of a mechanical engineer actually working at the bench?—That is my experience.

6867. (*Mr. Purshotamdas.*) That is with the Indian graduate?—Yes.

6868. Are your apprentices all educated men?—Yes, they must be.

6869. Are they all graduates?—No, they are not educated as far as graduates. They come from the class which may be described as the sub-inspector class of the Public Works Department.

6870. Have you any idea what the education standard is? Do they know English up to any standard?—Yes.

6871. (*Sir Rajendranath Mookerjee.*) The times have changed now, you think?—Yes, I hope the Government of Bihar and Orissa will do something to help us.

6872. (*Chairman.*) Your own feeling is that it is in the interests of the Railway Company to get them trained?—Undoubtedly.

6873. You feel that it is not only a debt that you owe to Indians but a benefit to yourselves?—Quite so. I look at the thing as much from the one point of view as the other.

Although I have not put in a statement in reply to the questionnaire, I have a few remarks which I might perhaps make now as a sort of summary of my views. In any scheme for a combination of English and Indian management ultimate control must rest either with the board in England or with the board in India. My own opinion is that the control should continue to be exercised by the home board, as in the case of the East Indian Railway. This has been eminently successful in the past. I should, however, be prepared to extend the system of appointing Consultative or Advisory Committees in India, and to include in such a wider representation of public interests where this was considered advisable. Even assuming that much of the business now done by London Boards, such as stores, appointments, &c., could be done by the High Commissioner for India, I think it is extremely doubtful whether the results would be equally satisfactory. If experience and knowledge of requirements count for anything—and personally I attach a great deal of importance to this—I think the work would be more efficiently managed by the London boards than by the High Commissioner. In regard to stores, the boards have a very intimate knowledge of requirements and can keep their Agents up to date in the latest developments. In the matter of engaging staff, I venture to say that greater care is exercised in selection than is possible in a Government Department, and the staff become better known to the board than in the case of State railways. The home boards can rely upon recruiting directors who have had a long and intimate experience in responsible positions of the working of railways in India, and the knowledge of their requirements must surely be a valuable asset. It has been shown that in the past the home boards have been of considerable service by useful criticism of schemes which had been proposed in India and in checking expenditure on works of doubtful utility, and this function, exercised by an impartial body of men who are qualified to judge the question at issue, is, I think, of considerable value to both the Government and the public. If, therefore, it is decided, for political reasons, that the management of the railways should be transferred from London to companies domiciled in India, I am very strongly of the opinion that the home connection should not be entirely severed. The knowledge and experience of Indian railways, which is available in this country, and the policy which has resulted in successful management in the past, would be extremely useful to a railway company domiciled in India, even if the functions of the London board were only of an advisory nature. To completely sever all connection with the personnel of which the home boards are largely comprised would, in

my opinion, be a somewhat dangerous experiment, as the Indian directors will not have the requisite knowledge and experience, and the management would be left almost entirely with the agent, who would presumably be the chairman of the new board. In saying this I do not mean to imply that the agents of the railways in India are not capable, but to undertake such responsibility would, I think, be throwing too much on the shoulders of one man; and speaking from my own experience and knowing the many intricate problems which such management involves, I was always glad to obtain the views of those who, from intimate knowledge of the conditions, were able to give sound advice.

6874. (*Chairman.*) You say that you have checked unwise and extravagant schemes?—I have instanced them.

6875. You gave us Delhi. Can you give us any more? You have given us plenty of instances where you endeavoured to get more money spent, but I think Delhi is the only instance of endeavouring to prevent money being spent?—That is true.

6876. As I understand it, your view is that ultimate responsibility must rest in one place?—Yes, with one body.

6877. If you have a board in England and a board in India you can conceive the Indian board being advisory, or you can conceive the London board being advisory, but you cannot conceive two boards each having powers?—That is so.

6878. (*Sir George Godfrey.*) Having full powers or any powers.

(*Chairman.*) Having irrevocable powers?—I believe it has been done—I believe railways have been managed on those lines, but I am very doubtful if it is possible.

6879. What have you in your mind?—I was thinking of the Egyptian Delta Railways.

6880. That evidence was of no value. We were told that the Argentine had boards with some powers, and we investigated that subject and they turned out to be people merely holding a power of attorney revocable at a day's notice. I do not know of an instance, unless you can suggest others?—I am sorry to say that I cannot.

6881. Will it be possible to delegate financially and irrevocably any specific powers? It has been suggested, for example, that you could delegate powers to fix the wages of the subordinate staff?—I would rather do it in an advisory sense.

6882. (*Mr. Purshotamdas.*) Would the Indian board be advisory or the English board be advisory?—I think it would entirely depend on where the capital lay. If you got much capital in India then I think the ultimate control would have to go to India. On the other hand, if you are disappointed in getting funds in India and you have to raise money in this country, I think the control should lie with the board in this country, and that the Indian board, in that case, should be only advisory.

6883. Supposing we got the cheapest money in America, would a board in America be necessary? Would you think it reasonable that a board was necessary in America because the money was got from America?—Certainly not.

6884. Has not London lent a large amount of money outside the Empire?—Yes. There would be no reason why in time Americans by financial interests should not control a board in Calcutta, but not by a board sitting in America.

6885. With regard to this question of the difficulty of the board here in rejecting the scheme with regard to Delhi, I do not wish to minimise the credit due to the board here, but I wish to ask you whether, if there was any adequate Indian representation on railway matters in India, you do not think they would have protested against it still more vehemently than you did earlier, and perhaps I will not say with greater economy, because probably you went to the extreme of economy in the suggestion you put forward. With some sort of adequate Indian representation on railway matters, either in the shape of State management or company management, do not you think they could have done it at least as well as the boards in London?—I do not think there would have been any opposition.

6886. Why not?—I was the only one that did oppose it myself, and I could not get any support in India.

6887. What were the conditions then—that the Government of India and the Railway Board put up the scheme and you were to approve of it. If you, the Company's Board, had not done that, I do not know what would have been said to you. If there was an Indian board or Indian State management, and the Council had any sort of voice in the matter, they would have done equal justice to it, if not more?—I certainly hope so.

6888. I do not want to take anything away from the credit due to you?—That is quite possible.

6889. Regarding the other point you mention, that you think the boards here are very useful, I almost thought you said they were necessary for the purpose of purchasing stores and machinery?—I did not say necessary. I am quite prepared to admit that the work could be done by the High Commissioner or the Stores Department of the India Office, but I do not think it would be so efficiently done.

6890. May I ask if for the purchase of railway stores for Australian, New Zealand, Canadian or African railways they have boards here, or do their High Commissioners do the work fairly well for them?—I do not know.

6891. I understand they have no boards. These Colonies have not found it necessary to have boards for the purchase of stores, and if they can rely on their High Commissioners may not we take it that India would be equally satisfied?—These are State railways. It is done by the State railways in India now. What I maintain is, that it is more efficiently done by the company boards. I think the cost is not any greater than it would be if it were done by another agency.

6892. Please do not mix up the question of costs at this stage. The various other parts of the Empire have not found it necessary to establish boards in London for the purpose of inspection or purchase of stores and machinery; why should there be one for India? The High Commissioner can do it as well for the Indian railways as he can do it for the various Government departments?—It is only my opinion. You have an indent being scrutinised by a person who has an intimate knowledge of what the article is going to be used for, whereas in the other case you have the same indent being scrutinised by someone who has no idea of what it is to be used for.

6893. (*Chairman.*) Do you think that as a matter of practice the stores and equipment required for the North-Western are bought less economically or less efficiently than the stores required by one of the other railways?—I could not say, but I should be much surprised if they were bought more cheaply.

6894. From your experience have you any reason to think that they are bought less successfully by the State railways?—I think so.

6895. (*Mr. Purshotamdas.*) Could you oblige me with one or two instances of the direction in which you think the East Indian Railway buys better material or at lower rates than the High Commissioner does for

the North-Western?—I could not give you any instance except one case which came to my notice when in India. We were very short of rails and we wanted something like 150 miles for developing yards, sidings, branches and so on. Mr. Hindley heard from the Railway Board that a firm in Calcutta were offering them, I think, 10,000 tons of rails lying in France at 17*l.* a ton. Only a few months ago he knew that the price was 25*l.* a ton for new English rails, and we had bought 100 miles of them at that price just before I went to India. The Railway Board had been considering the offer from the firm in Calcutta for something like three weeks, and Mr. Hindley wrote to me and asked me what I thought of it, and I wired home asking the price of rails, and the reply came back within a couple of days that it had dropped to 17*l.* a ton, which was exactly the price that the firm in Calcutta wanted for second-hand rails. They were rails that had been rejected in France and were lying in a heap. When the vendor was approached he said that there must be no inspection of rails, and they must be taken as they stood. That is a case where, I think, the board was of some use, and my knowledge was of some use, because I knew that the price was falling rapidly. The Railway Board were within close touch of taking them. In fact, it is not quite settled yet whether there will not be litigation over the matter.

6896. (*Sir Arthur Anderson.*) They had been thinking over it for three weeks?—Yes, and they had plenty of time to wire to the High Commissioner.

6897. But they hesitated?—Yes.

6898. (*Chairman.*) It seems to me, after all, that a telegram to the editor of a trade paper would have brought information without the need of a board?—Exactly, but I, as a member of the board, happened to be in Calcutta.

6899. (*Mr. Hiley.*) If you had been in London perhaps you would not have heard?—I think I would.

6900. (*Mr. Purshotamdas.*) There is an association, called the Indian Engineering Association, at Calcutta, and their chairman, in giving evidence before this Committee, said that the company railways did not encourage local manufacturers in India of machinery or stores, or did not buy from them, and he said that it was only during the period of the war that they got any sort of orders at all for wagons. Do you think that more could have been done in that direction in the past, or do you think what was done is the best that could have been done?—I am very glad you have mentioned that, because it is wrong to say that it was only during the war we tried to place orders in India. After the Coal Traffic Conference of 1912 the Railway Board were graciously pleased to give us sanction for 12,000 wagons on the recommendation of the Coal Traffic Conference, the President of the Conference being the then President of the Railway Board, and at the request of the Railway Board we placed an order for 750 wagons with Messrs. Burn & Co. for delivery in Calcutta. It cost the East Indian Railway Company 10,000*l.* more than would have had to be paid if the wagons had been obtained from England through the board, that is to say, the experiment cost us 10,000*l.*, and it was two or three years before the wagons were supplied. There was not a single scrap of material manufactured in India. All Burn & Co. did was to put the wagons together, which we could have done ourselves in our own workshops. Everyone knows that at the present time it is quite impossible to get materials for wagons in India. I think the time will come, and when it does we shall be very pleased indeed to order things in India of that kind. At present it is only putting money into the pockets of a firm in Calcutta or Bombay, who have to obtain the material from England.

6901. You said that you were in favour of the London boards?—Yes, I should prefer them.

6902. London boards mean a total absence of Indian opinion on the boards, do not they?—Yes.

6903. Do not you think that is a very great handicap to an organisation that has to be run in India and serve Indians, generally speaking, both commerce and the public?—I do not think so, because the board keep themselves in very close touch with the conditions in India. You must remember that we have a Consulting Committee, and we hear their views, and the agent conveys their views to the chairman of the board. We get papers from India and we know what is going on. A member of the board frequently goes to India and gets first-hand information of the conditions there. I do not think it is anything of a handicap. I should like very much to extend the system of Advisory Committees and to give them more power. I must plead rather guilty in regard to Cawnpore—I think we should have started an Advisory Committee there, but I never had time to work it up.

6904. In your opinion a total absence of Indian representation on the board is not a handicap, and not a thing against which the Indian public is justified in protesting very strongly?—For the reason that the decisions are come to by an absolutely impartial body.

6905. It is not a handicap in your opinion?—I do not think so.

6906. And the Indians should have no grievance on that score?—No. I am quite sure my board would give every consideration to anything put forward.

6907. What sort of questions do your Advisory Committees deal with?—It is their option to bring forward complaints. They know what is going on. We have meetings monthly, and the members are consulted when there is anything to discuss.

6908. But they can only discuss what the agent brings up, and certain statements I understand—I speak subject to correction—are only put before them and things have to be recorded, and if the agent wishes to bring up any other subject then it is discussed?—Yes, but we always welcome any criticism.

6909. Have they given you any useful assistance or have they helped you to understand the Indian point of view better?—I think so. Matters have been frequently brought forward in connection with passengers' complaints, fares and rates. I should like to extend the scope of the work which they have to deal with and have meetings more frequently and spread them out in other directions.

6910. Your warehouse at Howrah is being used by grain merchants, and you have put up the rate of wharfage lately very high?—We were obliged to do that.

6911. The grain merchants at Calcutta protested against it very strongly?—I daresay they did.

6912. And there was a conference between the grain merchants' association and your general traffic manager?—I am speaking of the time when we had the Coal Traffic Conference.

6913. I am speaking of something which happened last December?—I am afraid I am not aware of the facts, but I believe there was some trouble.

6914. It was a question of a tug of war between the railway and the grain merchants, and it was never put before the Consulting Committee there. Do you think any Consulting Committee

like that could adequately satisfy Indian interests or Indian requirements?—I know something of what happened before. They were making a convenience of our sheds and godowns and were not taking delivery, and we had to raise the demurrage rate to get them to take their goods.

6915. I do not want to go into details, but there was an important question between the Grain Merchants' Association and your railway, so important that the Grain Merchants' Association finally appealed to the Railway Board, and a question of that importance was not put before the Consulting Committee of the East Indian Railway at Calcutta?—I think it is a matter which might be usefully discussed. I do not know the details.

6916. (*Sir Rajendra Nath Mookerjee.*) If there were rupee capital there would be no need for contact between the Secretary of State and the home board?—It is within the powers of the East Indian Railway with the sanction of the Secretary of State to raise rupee capital now. I think probably what you mean is, if the management was transferred to India?

6917. Yes, that is so. Your board would be only useful for appointing the superior staff?—I think I have said that it is quite possible these duties could be performed by the High Commissioner. What I do maintain is that the experience of the board is of some value and ought to be taken advantage of.

6918. I quite admit that, but the public opinion in India will be to have this company after the termination of the present contract domiciled in India with rupee capital. Assuming that to be the fact, can you suggest anything from your experience of so many years in India as to having some sort of link between the present London board and the new board in India, say a board constituted of nine members, three in London and six in Calcutta, the work being divided and important matters settled by correspondence between the two boards?—I think it would be an excellent arrangement if it could be managed. I doubt if it is practicable, as there might be jealousy and conflict to some extent.

6919. (*Mr. Hiley.*) You said in your evidence that one board would have to be purely advisory?—That is my opinion.

6920. It could not be more?—I do not think so.

6921. (*Sir Henry Burt.*) Do not you think that possibly the usefulness of these Advisory Committees would be increased if the agent was definitely required to bring forward for consideration all subjects of importance?—I do.

6922. At present he has no definite instructions in the matter at all—it is just left to him. Take a case like that Mr. Purshotamdas was referring to. If it were laid down that all important questions were to be referred to the Advisory Committees it would very greatly extend their usefulness?—I think so, and I should like to extend the representation on the board.

6923. (*Sir George Godfrey.*) In connection with the suggestion made just now with regard to enlarging the powers of the Advisory Boards or giving them more work to do, you said you would look on them as being merely Advisory Boards and not having any powers, the London board having the final powers. Would it not be possible to delegate to local boards certain powers under the London board, that is to say, give them certain powers to dispose of work, but if there was disagreement between the local board and the agent, then the home board should have the ultimate decision?—Yes, I think that is quite possible.

6924. I think when one begins to consider these matters one is rather put off by direct questions as to who has the ultimate control. Of course the ultimate control must be with the Government of India. The home board have certain powers, but they are modified and restricted, and when you talk about the ultimate control that ultimate control is either with the Government of India or with the Secretary of State. But that does not remove the fact that railways are being managed by companies as companies, even although the decision is with somebody higher. Could not you have a local board which could do a great deal of useful work and yet have the ultimate control in London? You might give them powers, for instance, over the local staff, over the adjustment of rates and fares, passenger accommodation, traffic facilities and matters of that sort?—I think it might be possible, but it would be difficult.

6925. (*Chairman.*) As I understand Sir George's suggestion, the agent would have suspensory powers on any decision?—This is very much the lines the Government Director has with the home boards. I think if the larger portion of the capital is subscribed in India the ultimate control must be with the Indian board.

6926. (*Sir Rajendra Nath Mookerjee.*) Supposing the capital came from India would you have the Advisory Board here?—I think that is the only way it could be managed.

6927. (*Chairman.*) I have heard a rumour that Mr. Hindley is leaving the service of the East Indian Railway?—I am very sorry to say it is true, and I should like very much if this Committee would record their disapproval of such action on the part of semi-public bodies. It is a matter of more pay. The position of Agent of the East Indian Railway is much more important to the Government than that of Chairman of the Calcutta Port Commissioners.

6928. May we take it as definite public knowledge that he has resigned?—He has.

6929. And that he has gone to the Calcutta Port Trust?—Yes.

6930. And we may presume that that is not a more important function?—I think it is much less important.

6931. We may, therefore, take it that the reason is one of emolument?—Entirely. The East Indian Railway was quite prepared to give him the terms if they could have got the consent of the Government. We were trying to get him an extra Rs. 500 to bring his salary up to Rs. 4,000, and we were in hopes of getting that, but if we tried to get the Rs. 5,000 which he is to get with the Port Authorities, we might as well cry for the moon.

6932. We may put it this way. As it is a point of definite public importance, you regret losing one of your men who has gone to a position of less importance because the emoluments in his old post are entirely inadequate?—Yes.

6933. You have no objection that being part of your evidence?—None whatever.

6934. (*Sir Arthur Anderson.*) The salary the Port Trust is giving is sanctioned by the Government, is it not?—By the Local Government.

6935. (*Mr. Hiley.*) You have not yet got approval to increase it from Rs. 3,500 to Rs. 4,000?—Not yet.

6936. (*Sir Arthur Anderson.*) The pay of the position was formerly Rs. 4,000, was it not?—No, Rs. 3,500, with a personal allowance of Rs 500.

The witness withdrew.

Adjourned to Wednesday next at 11 a.m.

SERVANTS OF INDIA SOCIETY'S BRANCH LIBRARY

FIFTY-NINTH DAY. (LONDON.)

Wednesday, 18th May 1921.

PRESENT:

SIR WILLIAM M. ACWORTH (*Chairman*).

SIR A. R. ANDERSON, KT., C.I.E., C.B.E.
SIR H. P. BURT, K.C.I.E., C.B.E.
SIR G. C. GODFREY.
MR. E. H. HILEY, C.B.E.
SIR H. LEDGARD.
SIR R. N. MOOKERJEE, K.C.I.E.
MR. PURSHOTAMDAS THAKURDAS, C.I.E., M.B.E.
THE HON. MR. V. S. SRINIVASA SASTRI.
MR. J. TUKE.

MR. T. RYAN, C.I.E. (*Secretary*).
MR. E. R. POLE (*Assistant Secretary*).

MR. H. F. HOWARD, C.S.I., C.I.E., Controller of Finance, India Office, was recalled and further examined.

6937. (*Chairman.*) I just want to ask you a few questions on one or two points before the other members of the Committee question you. Looking at your previous evidence, I see that you spoke of the Secretary of State as the banker of the companies?—Yes, in one sense. That is one aspect of his relations.

6938. Am I not right in thinking there is a very essential difference? Supposing the London and North-Western Railway raised 3,000,000*l.* of debentures, clearly the moment the money was paid in they could draw a cheque and take it out again?—Yes, that is so. That is an essential difference.

6939. You agree that that is an essential difference: the other people cannot get it back?—Yes, I agree with that. Sir, before the other members ask me questions there are one or two loose ends in my previous evidence I should like to say a word or two about, and if you will permit me to do so I should also like to make one or two general remarks. Incidentally the question of the South African railway facilities happened to be touched upon when I gave my evidence last Friday, and I rather gathered that my remarks on that point were questioned, or at any rate my evidence might be read as if it were questioned. On my return home I looked up certain papers that I have. I find in the report of one of the South African colliery companies this statement in reference to railway working.

6940. What is the date of the report?—It is the report of the proceedings held on the 28th January 1920. This statement is made: "Loss "of time through shortage of railway trucks "was again a prominent feature. There were "spasmodic improvements in this respect, but "unfortunately no general improvement is as yet "apparent." I have not any personal knowledge of South Africa, but I have followed this and similar reports for a good many years before the war, and if the Committee would like any further confirmation of what I have said I shall be very glad indeed to try and get it from some of these South African colliery companies which I believe have offices in London. I think this point is rather relevant, because the advocates of a separate budget, I take it, from what was stated the other day, base some of their arguments at any rate on rather *post hoc ergo propter hoc* grounds, and if it can be shown that in one case where a separate budget is in force the result has been no better than in India that fact will have, I think, quite a material bearing on the general question.

6941. (*Mr. Hiley.*) Does not every English colliery company grumble about the shortage of wagons? I have had a good deal to do with English colliery companies, and I have never heard of one of them that has not grumbled. I think you will find that all over the world; it does not prove anything?—If you admit that, that is exactly my point—that it does not prove anything as to the particular system of management.

6942. (*Chairman.*) With great respect, is not there an enormous difference between the grumble of a particular trade, even supposing it continues over a series of years, and a grumble from every trade all over the country?—I quite admit that; I think that is a fair criticism on what I have said. My point was that the vital failure of Indian railways is in respect to the collieries, and the vital failure, as I take it, of the South African railways is in respect to the collieries. Those are the two key trades.

6943. You say: "The vital failure." I do not think that is our evidence. Our evidence is that Madras is no better than Asansol. We shall be glad to have any evidence you like to give us, but I think what Mr. Hiley said may be taken as the view of the Committee, that there is a great deal of difference between a particular trade and all trades?—Quite so, but is it not partly the necessity for diverting a very large volume of rolling-stock to meet the urgent demand of collieries and connected industries in India that has resulted in the shortage of wagons for general purposes there?

6944. Are you now going to give us evidence that the collieries have absorbed all the wagons and left the Cape agriculturists high and dry?—I am afraid I am not familiar enough with South Africa to deal with that question.

6945. That would be the analogous case?—I am merely anxious to mention this point because I thought as my evidence stood it might look rather as if I had spoken loosely and without any sense of responsibility for the statements that I had made.

6946. Oh no, surely not?—The second point to which I wish to refer relates to a much more general matter. It has been suggested, I understand, that separated budgets would, apart from the question of the treatment of railway revenues, help to secure to the railways a larger or more regular supply of capital. I think it might be useful in connection with this suggestion to place on record, if the Committee does not already possess the information, what is the actual method of procedure leading up to the settlement of the railway capital grant as distinct from the railway

revenue grant. I do not know whether you have had that point in evidence, sir.

6947. Yes, I think we have had the process very fully described. We had a very full memorandum from Sir Henry Freeland; but we should be glad to have it again from your point of view?—I do not wish to give it in any detail. If the general procedure is known to you, I can deal with that matter very briefly.

(*Chairman.*) You may take it that we know all about July forecasts and provisional grants.

6948. (*Sir George Godfrey.*) I think he means as between the Railway Board and the Finance Department?—The particular matter to which I wish to refer is the manner in which the budget is settled by the Government of India *qua* Government. After these preliminary discussions to which you have referred between the Railway Department and the Finance Department, the proposals ultimately come to a head, when the budget proposals as a whole are put before the Viceroy's Executive Council at the beginning of January. The point I wish to make then is that the decision there arrived at is the decision of the collective Government in which all members of the Governor-General's Executive Council have an equal say. There is no question of the grants being settled by the *ipse dixit* of the Finance Member nor, of course, the Railway Member, any more than there is any question of the Army grants, for instance, being settled by the Finance Department alone or by the Commander-in-Chief alone. They are common decisions of the whole Government, which are settled very often after considerable and protracted discussion, and after hearing everything that all the members who are interested in the subject have to say. In fact, in any case if there is a difference between the Finance Member and the Railway Member, who is at present, as you mentioned the other day, also the Commerce and Industry Member—but the same would be the case if he was merely the Railway Member—if there is a difference between those two members or any members of the Viceroy's Executive Council on any question, that question must automatically be referred to and be determined by the Government as a whole. That is of course the case in any Cabinet Government, but I think it is rather important to emphasise this particular point, as some of the advocates of separate finance are rather apt to ignore it, and such an important question as the settlement of the railway grant, which always gives rise to a great deal of discussion, both among the general public and also in the Legislative Council as it was, and in the Legislative Assembly as it is now, would inevitably, apart from it being a budget question, be considered on its merits by the whole Council beforehand. What it seems to me some of the advocates of a separate budget system have in view is that the Railway Member should by some means or other be enabled to ensure that his views will be adopted by the Governor-General's Council as a whole. Personally, I find considerable difficulty in seeing how there can be any difference in this respect under a system of separate budgets. The question is ultimately one of individual personality, and it must continue to be so, whether the Railway Member is solely entrusted with the charge of the Railway Department or whether he also has, as at present, charge of other departments. As regards the appointment of a Member of Council for Railways alone, which I rather gather is part of the scheme in the minds of some of its advocates, in so far as I can gather from the reports in the newspapers, this is a matter which is bound up rather with the more general question of the distribution of the portfolios in the Viceroy's Council. There have been similar suggestions for a re-separation of the Commerce and Industry Department on the ground that the interests of those two branches of the Government are in some way conflicting. But it has to be considered that every increase in the Members of Council tends to affect the despatch of business. At any rate, there are certain advantages in the Railway Member also having charge of a department like Commerce or Industry, since he is thus enabled to be perhaps more intimately conversant with their requirements than he would be if he was solely attending to the railways, since the railways, of course, do not exist for themselves alone; they exist in order to meet the requirements of trade and industry generally.

6949. (*Chairman.*) May I just ask a question arising out of that? As we know, the organisation of the Commerce and Industry Department is an ordinary organisation, with the Secretary of the Government under the Minister?—Yes.

6950. The organisation of the Railway Department is different?—Yes.

6951. In that case there is a board?—Yes.

6952. Would it be true to say that the effect of his having, so to speak, direct contact with the whole office on the commerce side and less direct contact with the railway part of the business would tend to make the Minister regard commerce as his own child and the other subject as, let us say, his step-child? Is there anything in that criticism?—I think there is perhaps something in that criticism. I think that must depend to some extent on the affections and personal inclinations of the member in charge of the department. Personally, I have not any very strong views about this question of a separate Member for Railways; I do not wish to express any strong views about it or to press any particular suggestion with regard to it. What I was concerned to show was rather that the mere creation of a separate department with a separate member would not, in so far as I could diagnose the position, materially change the ability of the railways to secure more funds or more favourable treatment.

6953. When you say there is something in what I have called for short the "step-child" position, that rather implies, does it not, that if there were a separate Minister for Railways it would be his own child and not a step-child?—Quite so, but at the same time as that separate Member for Railways becomes a member of the Government as a whole it also becomes his duty to consider any problems arising in connection with the railways in their place in the administration as a whole as well as from the point of view of railways.

(*Mr. Sastri.*) I rather thought we began from the point of view of the consideration of the question of a separate budget for railways; we are now drifting into the consideration of the question of a separate Minister for Railways.

(*Chairman.*) It is both, a separate Minister with a separate budget.

6954. (*Mr. Sastri.*) You could have a separate Minister without a separate budget?—My point was that a separate budget implied a separate Minister. The question of a separate Minister was raised in connection with the proposal for a

separate budget, and I merely wished to represent that the fact of having a separate Minister would not necessarily secure for the railways all that the advocates of a separate budget *cum* separate Minister hoped that it might give. The next point with which I wish to deal is that at which you left me at the end of my previous evidence. You then asked me to let you have certain figures which I have got out, but before I hand them to you it might be convenient if I continued my answer to a question which you asked me—and which I never finished answering—about the system of advances to the companies. I was proceeding to answer that question when one or two technical points cropped up, and we were still pursuing those when the Committee rose. I said in general terms that the advances in order to provide for fresh capital construction were made by the Secretary of State to the companies.

6955 (*Mr. Tuke.*) I think you said "overdrafts"?—I used both words.

6956. They are two different things?—In strict technical terminology it is possible that advances and overdrafts are two different things, but we use either term generally to cover the particular transactions which I am describing.

6957. I am quoting the expressions used in the Railway Administration Report; they are there classed under different heads?—I stand corrected on that point. I am not sure what the classification is in the Railway Administration Report.

6958. Perhaps you would like to see it. I have it here?—Yes, I should like to see it, but may I complete my answer to the question first; otherwise I shall never get to the end of it? Perhaps you will kindly ask me afterwards about the different kinds of advances; I did not know they were classified in detail as overdrafts and advances, or what exact difference was made between them. I was rather taken up the other day on my mentioning "advances made to the company." That is an expression which has been generally used, perhaps loosely used. The exact position is that the advances are made to the company for the purposes of the undertaking. Perhaps I can meet another difficulty which Mr. Tuke raised the other day by a loose and perhaps not altogether accurate description of the relations between the Secretary of State and the companies in the matter. They stand perhaps in the form of two partners, as it were, in a firm, of which one partner advances money. He does not advance it to the other partner and thereby increase the latter's capital; he advances it to the firm, though it passes through the hands of the other partner for the purpose of spending it. The exact method of treatment of the advances depends on the contracts with the companies. The contracts fall roughly into two groups. The older group contains the East Indian Railway, the Great Indian Peninsula, and the Assam-Bengal. In the case of that group, the surplus profits are divided in some fixed ratio. The other group is a later group and may be described roughly as the partnership group.

6959. (*Chairman.*) Would you mind waiting till I clear my mind on this point? You say the ratio is a fixed one?—The ratio is fixed by the contract.

6960. In the case of the East Indian Contract it is 5 lakhs certain, then a smaller proportion and then a much smaller one again, is not it?—Yes, that is it. That is what I meant by a fixed ratio. The ratio is fixed irrespective of the capital that each has in the line. The later group may be described loosely as the partnership group. Under this the profits are divided in proportion to the amount of capital which the Secretary of State and the Company respectively hold in the line.

6961. (*Sir Rajendra Nath Mookerjee.*) The holding of the Secretary of State and the Company respectively at the time?—Yes, the holding at the time. That will be clear when I come to explain how these advances are treated.

6962. (*Mr. Tuke.*) Perhaps you will allow me to quote from a handbook for use in the office of the Accountant-General of Railways, in which the statement is made:—"The following railways "were purchased by Government on the dates "mentioned against each and are now the absolute "property of the State:—(1) East Indian Railway, "1879; (2) Eastern Bengal Railway, 1883; (3) "Sind, Punjab and Delhi Railway, 1885; (4) "Oudh and Rohilkhand Railway, 1887; (5) South "Indian Railway, 1890; (6) Great Indian Penin-"sula Railway, 1899; (7) Baroda and Central "India Railway, 1905; (8) Madras Railway, 1907. "The position of Government with respect to "these Companies is that Government is the "owner and lessor of the lines and the Companies "are the working agents or lessees." There is not a word about partnership?—There may or may not be anything about partnership in the Accountant-General's description of it. I safeguarded myself by saying that these contracts might loosely be regarded as partnership contracts. I did not intend it to be a legal or technical definition; I was merely describing them in that way for the purpose of explaining exactly what was done in the case of these advances. In the case of what may loosely be described as these partnership companies, where there is an advance or an overdraft this is temporarily treated as part of the Secretary of State's own capital.

6963. (*Chairman.*) Profit-sharing capital?—Profit-sharing capital. When a company raises money at the instance of the Secretary of State and this is more than sufficient to wipe out the overdraft and is not immediately spent, the balance remains on deposit with the Secretary of State, who credits interest to the undertaking at a rate corresponding to the rate at which the money was raised. In the case of companies under the old contracts, these have always had large overdrafts, or perhaps I should say advances—I am not quite certain which is the technical term in accordance with the Railway Report—and no provision exists in these contracts as to the way in which unspent funds raised by the company should be treated. As a matter of fact, there never have been in these cases any unspent funds, so that the question in practice has not arisen.

6964. That means, in other words, its debentures, because there has been no new raising of shares?—That is so.

6965. Does that mean to say that the issue of debentures has never been sufficient to wipe out the whole advance from or overdraft on the Secretary of State at the time it was raised?—That is so in the case of these older companies. In respect to these overdrafts, interest is charged against the undertaking with reference to the rate of interest at which the Secretary of State was raising money at the time when the advance was made.

6966. In this case it is the price the Secretary of State was paying at the time he made the advance; in the other case it is the price at which the debentures were originally raised?—That is

so. Now, perhaps, sir, I might give you these figures for which you asked me. They are as follows :—

COMPOSITION OF CAPITAL AT CHARGE IN RAILWAYS. FIGURES AS IN 1919–20.

Statement No. 51 *in Finance and Revenue Accounts*, 1919–20.

	£	£
State worked lines.		
Eastern Bengal	26,000,000	
North-Western	64,000,000	
Oudh and Rohilkhand	17,700,000	
		107,700,000
Indian Branch Lines.		
Companies		5,000,000
Guaranteed Companies.		
Companies' capital	24,600,000	
Debenture stock	33,000,000	
Debentures	8,000,000	
	65,600,000	
Advances :—		
Permanent	7,500,000	
Other	32,000,000	
	39,500,000	
Other Government capital excluding advances	147,200,000	
		252,300,000
		365,000,000

I should like first of all in one or two words to explain why these do not quite give the figures which you mentioned. I have taken the total of 365,000,000*l.*, which was the figure in a statement in our Finance and Revenue Accounts. That figure does not, as a matter of fact, represent the exact expenditure up to the end of 1919–20, because I have taken it from a statement for the composition of capital at charge in the railways ; that is, so to speak, the expenditure at charge in the middle of the year.

6967. "Capital at charge"—that includes the State-worked lines, the Indian branch lines, and the guaranteed companies. The branch line figure is 5,000,000*l.* Does that mean the capital found by the branch line companies in regard to which there is a responsibility on the Secretary of State?—That is so, guarantee or rebate or something of that kind. There is another point. Because I have taken the figures for 1919–20, which are based on a particular statement, my figures for advances do not correspond with the figures which I gave you the other day, which were the figures at the close of 1920–21.

6968. I do not think that matters ; we only wanted to get at the idea on which the figures were based?—There is one other general remark I should like to make. The Government capital allows for the construction cost of the railways purchased and not the actual purchase price.

6969. Had not we better go down this statement first of all?—With regard to the 107,700,000*l.* for the State-worked lines, that clearly means the total capital cost of those three railways?—Yes, the capital cost of those three railways, including the price which the Government may happen to have paid for them, plus the amount subsequently expended on them. I beg your pardon ; it is not the price which the Government paid for them, but the capital which the companies which originally owned them had raised for the purpose plus subsequent Government expenditure.

6970. The price at which the Government may have taken over the line at par at the conclusion of the contract?—May I give a rough example which does not relate to any railway? Suppose a railway had been built by a company and they had spent 10,000,000*l.* on building the railway. The Government may have had to pay 12,000,000*l.* for securing that railway, and subsequently they spent another 10,000,000*l.* on it. The capital here would be shown at 20,000,000*l.* and not at 22,000,000*l.*

(*Mr. Purshotamdas.*) Where would the other 2,000,000*l.* be shown?

6971. (*Chairman.*) We will get that later on in the table?—No, sir, I am afraid you will not. I will complete the explanation now. These particular figures have not consequently a direct relation to the actual Government debt, and they require considerable explanation to be reconciled with it, because on the debt side we do not show our annuities which we have not paid off. There are something like 65,000,000*l.* of those outstanding at the end of the year which we do not actually show in our statement of capital debt in the form of permanent or other loans.

6972. (*Mr. Purshotamdas.*) Will you kindly give us a separate figure later on showing how much premium was paid which is not included in these figures?—I can get out the figures for that.

6973. (*Mr. Tuke.*) According to the Administration Report, the total State outlay on these lines is 113,000,000*l.* In that 113,000,000*l.* there is included in round figures 10,000,000*l.* of annuities which you say are not included in your statement?—Which statement?

6974. I am taking it from the Administration Report for the same year as these figures that you have given. I want to try and ascertain where the difference lies, because one has a little difficulty in following your figures?—Being a finance man I am afraid I usually go to the figures in our Finance and Revenue Accounts, and I believe there are some differences arising from differences in classification between those two reports. I personally have never attempted to reconcile them, but probably I shall be able to get it done if desired.

(*Mr. Tuke.*) I think it might be advisable to be able to trace these figures and to show that they are reconcilable. I should like to see how these figures correspond with the Administration Report and wherein the difference lies.

(*Chairman.*) Perhaps you could help a little on that by mentioning the points where you have noticed divergencies.

(*Mr. Tuke.*) Yes.

6975. (*Chairman.*) Then they would be able to get at it?—I should like to say about these figures and accounts generally that they are extraordinarily complicated and very difficult of comprehension. Every time I deal with them I have to spend a very long period in trying to get the figures which I want. The complicated character of these statements has been recognised for many years. We have revised the system, and I hope that in the next edition of the Finance and Revenue Accounts these figures will appear in a more simplified form. Unfortunately the revision could not be done during the war, but it has been carried out since.

6976. (*Sir Rajendra Nath Mookerjee.*) You made a statement in regard to the annuities which I did not understand,—1.7. There are no annuities in the State-managed lines?—I was speaking about these lines generally, whether State lines or companies lines.

6977. (*Mr. Hiley.*) Annuities are excluded in each case?—The question of annuities does

not arise in connection with this statement, which merely relates to the actual cost of constructing the line, firstly by means of the company, if any, which constructed it, and subsequently by any later expenditure by the State or the guaranteed company on it.

6978. (*Chairman.*) You have called this statement "Composition of Capital at charge in Railways." As I understand this, it might be headed: "Cost of Construction, whether by Companies or by Government." Would not that be correct?—Yes.

6979. (*Mr. Tuke.*) That explains it much better, and possibly also the difference between the 365,000,000*l.* and the 380,000,000*l.*?—Where is your figure of 380,000,000*l.*?

6980. In the Administration Report, 1919-20?—I can explain part of the difference at once. My figure contains the total expenditure to the 31st March 1919 plus half the expenditure incurred by March 1919-20. I gave it in this form because I could get the figures promptly in this form from one of our published statements, and I was afraid if I got the figures for the end of the year I might not be able to give the details to you so readily.

6981. (*Chairman.*) Supposing we had the figure for the cost to the Government of these railways, it would be bigger than the 365,000,000*l.* by any premium the Government might have paid for the railways on acquisition?—Yes. If I were making what was purely a guess I should say that the difference, taking the railways as a whole, might be 15,000,000*l.* possibly. (*Note.*—The witness subsequently reported that the total gross amount of the premium was about 30,000,000*l.* in round figures; the totals in Appendix 5 of the Railway Administration Report being based on the total paid by the Government in purchase of the lines less a deduction representing the amount of capital paid off by means of annuities.)

6892. (*Mr. Tuke.*) That is just about it. There is a difference of 15,000,000*l.* here, your figures being the actual cost and these being the book entries?—Yes.

6983. (*Chairman.*) In the case of the East Indian Railway, for example, the share capital was increased by 25 per cent. on purchase. They purchased a 100*l.* share for 125*l.*?—Yes.

(*Sir George Godfrey.*) Is not there some set-off in connection with the partnership railways, as you loosely describe them? The Secretary of State said: "My capital invested at the present "time is really 12,000,000*l.*, but I am going to "call it 15,000,000*l.* for the purpose of sharing in "the surplus profits"?

(*Sir Arthur Anderson.*) They capitalise the earnings.

6984. (*Sir George Godfrey.*) That figure is not here?—These figures have not been prepared on that basis. I have taken these from the Finance and Revenue Accounts on the basis of (*a*) the original capital raised by the companies, and (*b*) subsequent Government or companies' expenditure.

6985. (*Chairman.*) An English railway company has raised capital which stands in its books at, say, 100,000,000*l.* Of that 100,000,000*l.*, they say 80,000,000*l.* is the cost of construction and 20,000,000*l.* is the cost of the rolling-stock, and they make up the 100,000,000*l.* in that way. But they have never really got 100,000,000 sovereigns, because their 100,000,000*l.* of nominal capital was raised partly below par and partly above par. When you take the cost of construction by the Government or by the companies, is it sovereigns or is it nominal capital? Can you answer that?—I cannot answer it as regards the original expenditure by the companies, but as regards the subsequent expenditure by Government, these figures here in our accounts are figures for outlay and not figures for any loans that we have raised.

6986. You can answer it as to the second half, but not as to the first?—Yes.

6987. (*Sir Arthur Anderson.*) In a case where the Government purchased a railway at a less cost than the company expended on it, it is the Government purchase figure that would appear?—Is that so?

(*Sir Arthur Anderson.*) I take it that it would be so. It is the actual figure, the actual sum expended by the Government. Take, for instance, the Simla-Kalka Railway, which was purchased at about 70 per cent. of the cost.

(*Mr. Purshotamdas.*) Is there a case of the Government having purchased at less than cost?

6988. (*Chairman.*) The Simla-Kalka Railway?—I am not quite sure. In the figures from which my statement is compiled, it is said: "In "the purchase of the railways the figures repre-"sent sterling capital issued by the companies "before purchase."

6989. Then a full 100 would be put in?—I take it that that would be the case.

6990. But in the case of the East Indian, where the railway was bought at 125, it is 100 that is put in and not 125?—Yes.

6991. Going on with this statement, the Indian branch lines capital is not capital raised by the Government, but capital for which the Government has taken the responsibility of finding the interest in some shape or form?—Yes.

6992. With regard to the guaranteed companies, I do not think there is anything in regard to them that I need ask you; they are quite clear. I think you might explain to us what the "Advances, permanent and other" mean?—May I describe the "other advances" first? The advances on the East Indian Railway and the Great Indian Peninsula are of old standing and extend back for several years, probably at least 20 years—I have not been able in the time to verify the exact period—and though they have been reduced from time to time by the proceeds of debenture stock they have been continually growing. The Bengal-Nagpur and the Bombay and Baroda advances date back only to the beginning of the present partnership contracts, about 1910, 1911, 1912 or thereabouts, and have been similarly reduced, prior to 1914—that was at the beginning of the war, before borrowing was curtailed—by the issue of new debentures or debenture stock, but they have never actually had sums at their credit.

6993. They have from time to time been reduced, then they have grown again, and on balance the Secretary of State is always a creditor?—Yes. The Madras and Southern Mahratta and the South Indian Railway raised money in 1913 and 1914 by which their overdrafts were extinguished. Their present overdrafts are only of recent reappearance. The Assam-Bengal overdrafts from time to time have, I believe, been wiped off from year to year and treated as part of the Secretary of State's capital—they are always in deficit—so that at the end of a particular year they are not shown probably

as possessing any overdrafts. I excluded specifically from the 46,000,000*l.* which I mentioned the other day, the Assam-Bengal figures.

6994. (*Mr. Tuke.*) Mr. Kisch, in his evidence, gave the figures for two advances, one for 2,900,000*l.* to the Bengal-Nagpur Railway and one for 2,129,000*l.* to the Madras and Southern Mahratta Railway, and in a footnote he said that these were now incorporated in the Secretary of State's capital invested in the undertaking?—May I just complete my statement in regard to the temporary advances first? I am just coming to that particular point.

6995. You mentioned the Assam-Bengal, so I took the opportunity of quoting those figures?—The Burma Railways have never actually apparently been in credit, but the present overdraft is small and of comparatively recent date. The next point I come to is the point which Mr. Tuke has just raised. The figures which I have given for advances, and which I mentioned the other day, excluded certain so-called permanent advances which are mentioned in Mr. Kisch's statement, and my figures were intended to be merely supplemental to that. These permanent advances in the case of the Bengal-Nagpur Railway and the Madras and Southern Mahratta Railway represented advances outstanding when the more recent contracts were made and re-capitalisation took place, and were definitely treated as part of the Secretary of State's capital in the contracts. The Great Indian Peninsula has similarly 2,500,000*l.* of a so-called permanent advance, which is not included in the figures for ordinary advances. This arrangement is not, so far as I can gather, included in the contract, the Great Indian Peninsula contract being of older date; but there was some definite understanding that the advance in question should be treated as of a permanent character and consequently should permanently be treated as part of the Secretary of State's capital. It stands, therefore, on rather a different footing from the temporary advances outstanding, which I have already given you in a separate total. That, I think, answers your point.

6996. I am sorry to say I do not quite follow it; I may be rather dense. I may, perhaps, later on, with the Chairman's permission, ask one or two questions to try and clear up what is really meant by advances and by overdrafts, because the overdrafts in the Administration Report amount only to 1,400,000*l.* and the debt outstanding amounts to 48,000,000*l.* I tried, when I was at Delhi, to understand what was meant by the words "debt outstanding," and the answer I received was: "The figures entered "under the heading 'Amount outstanding of "Debt incurred for the Purchase of Railways,' "in Appendix 5 of the Railway Administration "Report, represent the total amount of debt "incurred in the purchase of railways by "Government, less that portion of the debt "redeemable by annuity payments. The amount "under this head is reduced by sinking fund "payments and by the discharge of debentures "taken over."—That is quite a different question altogether to this question of advances.

6997. Where do the advances appear in the Administration Report?—I am afraid, as I have already mentioned to you, I am not familiar with the Administration Report. The statement which you have read out to me relates to arrangements made at the time of the purchase of the companies and in connection with their purchase. These advances are made subsequent to the purchase from the companies, as an arrangement for the purpose of supplying the undertaking with fresh capital from time to time.

6998. They surely must appear somewhere in the Administration Report, do they not?—I am afraid I am not the best person to interpret the Railway Administration Report, with which I never had anything to do, but I will do my best to explain or to secure an explanation of any part of it about which you wish for an explanation.

6999. Of course, if there are certain things missed out of the Administration Report, I can know nothing about them; but I should have thought that if there are advances to the companies, as you say there are, they would have appeared somewhere?—They are included in our Finance Account.

7000. My efforts have been devoted to trying to get an explanation of where they appear, in what column they appear. There are two columns, debt outstanding and overdrafts, and if they appear under neither of these, where do they appear?

7001. (*Chairman.*) Is there anybody who, so to speak, puts together the finance knowledge and the railway knowledge? It seems extraordinarily difficult to follow. You are speaking from the financial point of view and the Accountant-General, Railways, in Delhi was speaking from the railway point of view, and the two points of view do not seem to converge at any point?—I think Mr. Ryan can answer that question informally as your Secretary. I think he is very familiar with the points. He is a financial expert who is familiar to the *n*th degree with the preparation of the Railway Report and the correlation of the Railway and Finance Departments' statistics.

(*Chairman.*) What do you say, Mr. Ryan?

(*Secretary.*) As a matter of fact I had nothing to do with the preparation of the figures contained in the Railway Administration Report, and I am quite unable to explain these discrepancies. As far as I know, the only person who is able to explain them is the Accountant-General of Railways, from whom I believe the information just quoted was obtained. I do not know whether there is anybody in the India Office who could throw any light on the Railway Administration Report's figures; I very much doubt it.

(*Witness.*) For our finance figures we rely on the figures prepared by the Accountant's officers both in India and at home. Therefore presumably they originated to some extent from the same source.

7002. (*Chairman.*) In effect the position is this—that there are two balance sheets prepared by two separate sets of accountants, and nobody apparently brings the two sets of accountants together. Is not that the case?—That may be the case. The position, as I imagine it probably is, is that as regards our financial statements these are authoritative statements of our accounts to show the actual financial position. Possibly the figures in the Railway Administration Report are figures prepared primarily with the object of showing certain salient and interesting statistics for public consumption. They may not necessarily be as exhaustive as the other figures are.

7003. But the difficulty is they do not fit in with each other. You get one set of figures from one and another set of figures from the other. I have no doubt they are reconcilable when you

come to analyse them?—I naturally find some difficulty in reconciling the differences between two very complicated sets of statistics in a cross-questioning of this sort. If Mr. Tuke is interested in the point I shall be very glad to meet him at any time afterwards and to go into the figures with him, and if necessary to try to ferret out the cause of the difference.

7004. (*Mr. Tuke.*) I am sure you appreciate my difficulty. As the Chairman was mentioning, what I should like to arrive at is how these two things are reconcilable. On the face of it they are different, and what I should like to know is in what the difference consists. They should both agree, even although looked at from different standpoints?—I admit they should agree, but I have hardly ever used any statistics in the Railway Administration Report except statistics of traffic and that kind of thing for purposes of general interest. I have never gone into the financial figures at all there, and I am afraid I cannot answer the question off-hand.

(*Chairman.*) Obviously two sets of accountants would draw up a balance-sheet in different ways; that is what you would expect. Sometimes they would deduct a thing from the asset side and sometimes they would enter it on the debit side, and so on. We can easily understand that.

(*Sir R. N. Mookerjee.*) But the figures should be reconcilable.

7005. (*Chairman.*) The figures of the balance-sheet should be reconcilable, but two different people might draw them up in such a way that you could not see how to reconcile them by laying the figures on the table. I suppose we must leave it at that. (*To the Witness.*) Before we leave the question of the permanent 7½ millions, I should like to put one question. You spoke of the 2½ millions of the Great Indian Peninsula and said that that was part of the Secretary of State's capital. Is that profit-sharing capital or loan capital?—Profit-sharing capital.

7006. And with regard to the whole 39½ millions advances, is that all profit-sharing capital or is it partly one and partly the other. That is the permanent and the other put together?—No. I answered your last question incorrectly. That 2½ millions of the Great Indian Peninsula is not profit-sharing capital, but is a loan to the undertaking at a fixed rate of interest of 3¼ per cent. per annum.

(*Chairman.*) Then may we take it that the whole of the 39½ millions is advances on loan.

(*Sir H. Ledgard.*) I think it was previously explained that two of the items were incorporated in the Secretary of State's capital, namely, Bengal-Nagpur and Madras and Southern Mahratta.

7007. (*Chairman.*) This is all incorporated in the Secretary of State's capital, but is it profit-sharing capital or is it all loan capital?—May I take your figure of 39½ millions? That is divided in the statement into two figures. One is the permanent 7½ millions. Of that 7½ millions the advances to the Bengal-Nagpur and the Madras and Southern Mahratta are, I believe, treated as part of the Secretary of State's profit-sharing capital, those companies having partnership contracts. The 2½ millions to the Great Indian Peninsula is a loan bearing a fixed rate of interest of 3¼ per cent. I believe that to be the fact, but I am not quite certain now that you put to me the question.

7008. Partly loan and partly profit sharing. Now with regard to the other 32 millions?—The other 32 millions depends on whether the company has a partnership contract or one of the other contracts.

7009. That also is partly one and partly the other?—Yes.

7010. Now "other Government capital, excluding advances"—your remaining figure of 147 millions. What does that mean? Is that all profit-sharing or is it also mixed?—That must depend on the terms of the contract with the company.

7011. The origin of that, as I understand, is that whereas the advances are sums provided since the contract was made, the other capital is the capital that was credited to the Secretary of State at the time the contract was made. Is that right?—I do not think that is quite correct. I do not think this figure of 147 millions will correspond to the amount of capital shown as the Secretary of State's capital in the contracts, because this is the figure which works up to the total of the actual amount of expenditure which has been incurred on the lines. When these contracts were framed, I believe (the Railway Members present will be able to correct me if I am wrong) that the actual amount of capital assumed as the Secretary of State's capital for the purpose of the contract did not necessarily represent the previous State expenditure on the line. Therefore these figures will not correspond necessarily to the actual figure for the Secretary of State's capital mentioned in the contract.

7012. No, because clearly the Secretary of State capitalised the goodwill of both parties when the contract terminated, and took it all to himself?—You can put it like that.

7013. I am not expressing an opinion on the rightness or wrongness of it, but that was so. Clearly if the construction cost was 30 millions, and it was reckoned with goodwill as 40 millions, the extra 10 millions would not be in here because this is construction?—Yes. I had to give here the figure which works up to the total, that total representing two particular items: (1) the original amount of capital floated by the companies, and (2) subsequent expenditure; and that figure will not, of course, tally with the other figure which you asked me about.

7014. How can we get into our minds what "Government capital excluding advances" means, if it be not that which existed at the date of the contract?—You might say it represents the balance of the expenditure on the lines which have been found from State funds.

7015. The balance of expenditure on lines that are now in the hands of the guaranteed companies, because you have the State lines up above?—It is the balance of expenditure on the lines of guaranteed companies now in State hands, whether found originally from companies' capital or subsequently from State capital, but now representing State capital.

7016. Shall we be safe in describing it in this way—as all the money invested by the Government in the guaranteed companies' lines other than in the form of . . .?—That is correct, if you add as a qualification "omitting actual premium paid on purchase."

7017. (*Sir R. N. Mookerjee.*) Why should that premium be excluded? I cannot understand why it should be omitted?—These figures might be presented in a dozen different ways. I was endeavouring to work up to the total which the Chairman mentioned of 370 millions, and I took the figures, generally speaking, from a statement which I assumed was the one he had in mind, in which that figure is arrived at.

7018. But that is not your correct book figure?—It is the Government book figure for

this particular purpose; that is to say, for determining what the earnings of the lines are.

7019. I do not follow you there again. If you have paid 2 million crores for purchasing a certain portion of the line, as I know you have done, if you do not take it into account, how can you get at your profit or loss?—I admit there is a great deal to be said for your view point. I think what the Government probably had in their minds in adopting the course they have adopted (I do not know whether this is the right explanation; it is something that happened many years ago) was that they wished, in showing the values of their railways in their accounts, not to over-value them, to adopt a conservative figure, namely, the figure for construction plus subsequent expenditure, rather than show possibly a somewhat inflated figure which they may have had to pay for goodwill. I am merely attempting to explain what may have been in the minds of the Government originally when they adopted this form for their statistics, but I cannot say that it is correct.

7020. In other words this 2 million may be debited to the profit and loss account?—When you come to the actual money we have provided for the purpose, it would probably be shown as unproductive debt, or included in the capital represented by the outstanding annuities.

7021. (*Chairman.*) May I put it this way—that it is an endeavour to give the actual cash put in, but it is vitiated by the fact that you cannot tell where the 10 million——?—I am sorry I did not catch your question.

7022. This is an endeavour to give the cost of the railway?—That is so.

7023. But it is vitiated by the fact that the companies' capital may not have been pure cost; it may include something else, it may include what is commonly called "water"?—That is what I assume must have been in the mind of the person who prescribed the form of this account many years ago.

(*Mr. Hiley.*) Can we get the total cost?

(*Chairman.*) Can you get the figure of what would have to be added for premium?

7024. (*Mr. Hiley.*) We want it under each of these heads. The figures must be available?—I will make a note of that.

7025. (*Chairman.*) Will you also make another note—to give us what is the total indebtedness of the Government of India to-day?—I can answer that up to 1920. The figure on the 31st March 1920 was 375 millions debt of a more or less permanent description, and of 35 millions in the form of Treasury bills and short term debt.

7026. 410 millions?—Yes. That does not take into account the various railway annuities which are outstanding, which amounted at that date to about 65 millions, or the Post Office Savings Bank deposits.

7027. Then it comes to this: the companies have put in 65 millions. That leaves 300 millions almost exactly. The Government has invested in railways 300 millions plus x premiums, and its total debt is 410 millions?—Might I answer your question in a slightly different way? In these figures which I have given you the Government productive debt on railways is shown at 253½ millions. I was prepared to be asked a question on this point, namely, as to the discrepancy between that and the other figure which you mentioned. The discrepancy is due to these two factors, which was my reason for mentioning them incidentally before: firstly, that part of our property in railways is represented by this 65 millions roughly of outstanding annuities at that time, from which should be deducted the premium on payment for the railway, on purchase of certain railways, and if you take account of those two figures also it roughly explains the difference between this 253½ millions and the figure which you mentioned of something like 300 millions.

7028. I got at it in another way. I am neglecting the annuities and putting on a guess of 10 millions for premiums, and I get a difference of just 100 millions in rough figures. In other words the total debt of India—and this is the figure I want to have in my mind—is only 100 millions?—That is about right, although we arrived at our figures in different ways. My figures for ordinary debt which I have got here, outside railways and irrigation, is 112 millions.

7029. Irrigation accounts for the 12 millions?—No. Irrigation accounts for 45 millions.

7030. There again you are bringing in annuities?—Yes, I am bringing in annuities. Now if you will permit me I should like to make a few general remarks. What I am rather afraid of is that the Committee will think that a good deal of what I have said has been rather negative and even destructive in character. If this is so I hope the Committee will feel that it is not because I underrate the importance of the problem or that I am not most enthusiastic in trying to get at anything that can be done to further the object which the Committee has at heart.

7031. I am sure, if I may say so, we are very much obliged to you, because we have heard it all from one side. The stronger you can put the case from your side the more we ought to be, and I am sure shall be, grateful to you?—If on this particular point of a separate budget I have pressed what is rather a destructive view, it is because I believe that those who have advocated this scheme to you did not take full account of all the factors of the situation, and because I also feel that some of the advantages, if not a great many of them, that they anticipated which they may secure by the adoption of a separate budget, are to some extent illusory. My feeling is that a scheme of separation will not secure the real objects which we have in view if we reduce them to the lowest denominations; that is to say, larger funds for the railways and greater continuity in railway finance. The inherent difficulty of the problem is that there is at the present time a definite limit on the amount of capital which Government can raise by direct borrowings on terms which will generally be accepted as reasonable. Our Indian problem is in some ways very similar to the problem which the Home Government have to face; that is to say, they have an inordinate and dangerous volume of temporary and floating debt. Although the figures are smaller, our Indian problem is complicated, because the British Government is able to say: "We will have no new borrowings at all for any purposes except for funding." We concurrently in India have that necessity for funding, but we also have before us the necessity for raising, in addition to as much money as we can get for funding, money for productive purposes. If we had a clean sheet in respect of funding, we could say: "We desire to borrow "every penny we can get for productive pur- "poses." We are, and shall have to be, in the market year after year as a continuous borrower, and as a continuous heavy borrower.

That makes the Indian problem a very much more difficult one than the British problem. But in both countries you have this factor—that there is a definite limit to the amount which can be raised by fixed interest bearing securities of a particular type. It is true that on this side there is a very large market for them, and that, as a result of industrial and other troubles, the investor is probably turning more to permanent securities of the gilt-edged type; but even so, the Government so far have been able to tackle only a fringe of the problem. They have still their 1,100 millions of Treasury Bills, and just at present they are attempting to tackle some of their early maturities in the National War Bonds. We do not hear how that is going on, but even if they get 300 or 400 millions in that way, they have a very long and uphill road to go. Our position in India is exactly the same. During the last few years the Government of India have been endeavouring in each year to raise all the money they can, and the result has been rather serious. In each successive year, for the last three years at any rate, they have had to raise money on progressively more favourable terms to the investor. The result has been that existing securities have naturally tended to undergo progressive deterioration. As you probably heard when you were in India, that has been the subject of very much comment both in the public Press and among the public generally, and I think in the Council of State and in the Legislative Assembly, while I am not quite certain whether some local Legislative Council did not also debate it. There is no doubt whatever that it is a matter which has excited profound attention in India. I do not know whether the Indian Members of this Committee will bear me out, but I think Indian feeling generally is that as regards the rate of interest, Government has gone nearly, if not quite, as far as it can go in the rate of interest that they should pay on their securities in India. Possibly it might be argued that it would be reasonable to offer slightly more attractive terms—say another ½ per cent.—to the investor. Even so, I think there is very little doubt that with securities of this type you will very soon reach the limit of the attraction which you can legitimately offer, and of the extent to which you can get further funds in this way. The position in this country is of course rather different. I do not know whether you would wish me to enlarge on the question of our raising money in this country at a different or a higher rate from that at which we borrow in India. There is a good deal to be said upon that point, but probably I need not take up the Committee's time with it. The conclusion that has been inevitably forced upon my mind is, that we have two considerations. The amount which we can get by Government's direct borrowing at a fixed rate of interest is definitely limited. That is the first consideration. Concurrently with that we have the second consideration, which is equally important, namely, that it is essential that we should provide from some source or another more funds for our railways. These apparently conflicting considerations have been exercising me personally for a very long time, and the only solution which I have been able to see—it may not be the right or the best one—lies in the direction of allowing greater initiative and independence to the companies in the matter of borrowing. I have already mentioned incidentally that I thought some advance in this direction might be made by converting, say, the Eastern Bengal Railway into a company; but that was merely one possible aspect of the case. I understand that it is more or less settled that the control of the East Indian Railway will, on the termination of its present contract, be transferred to India. If so, I think advantage might well be taken of that by constituting that company on a rupee basis and on very much the same lines as I proposed in speaking of the Eastern Bengal Railway. That would introduce into the Indian market a borrower, who would to some extent dip his hands in the same pool as Government borrowings, but who would be enabled to adopt different methods, possibly paying a fractionally higher rate of interest than Government paid, who would be able also to issue securities which tickled the fancy of the speculator slightly more. He would be able to issue share capital, and consequently his securities would have the advantage of appealing to the class of person who does not want to put all his money into securities bearing a rate of interest fixed to a specified figure in perpetuity.

7032. May I just ask one question at this point? The East Indian Railway is obviously the pick of the Government basket?—I think so.

7033. Do you think the withdrawal of the East Indian Railway from the total Government railway assets would tend at all to increase the price which Government had to pay?—It is very difficult to say. It must react on the rate which Government would have to pay in the same way as the flotation of large industrial companies react on Government borrowings; but I do not think it would react on the rate of interest which Government would have to pay, or the amounts which they would receive by direct borrowing, appreciably more than the flotation of a large number of industrial companies in India requiring the same amount of capital.

7034. I was thinking of it from this point of view. When you issue a debenture the investor looks at what the assets behind the debenture are. If you diminish the assets behind the Government loan, would it affect the price of the Government loan at all?—I do not think it would, for that reason. I think the entry of an additional borrower into the market offering attractive terms is really the factor that would most react on the rate at which Government could borrow. To continue—I must be understood not to be myself an advocate of Indian rupee companies versus sterling companies or *vice versâ*. I have a very open mind on the subject. But the Great Indian Peninsula contract falls in at the beginning of 1925, and I think it will be found very difficult to resist Indian opinion that the control of that railway also shall be transferred to India. I think there might be considerable advantages if you had here three companies, the Eastern Bengal, the East Indian, and the Great Indian Peninsula, as more or less independent borrowers in the Indian market. Some control might possibly have to be exercised over their operations in order to ensure that they did not compete unduly with Government, for instance, as to the time when their loans are put on the market, and in order to ensure that they did not compete too much among themselves by bidding against one another. Perhaps I should rather say that there should be some control exercised with the object of co-ordinating their borrowings than otherwise.

7035. (*Sir R. N. Mookerjee.*) Would you allow them to issue shares and pay dividends?—I think I explained when I made the suggestion with

regard to the Eastern Bengal Railway the other day, that my idea would be that at the outset they should certainly issue capital, subject to some minimum limit before starting the company and possibly subject to some provisional maximum, retaining possibly to Government the right after that maximum is reached to contribute, *pari passu* with the company, any new capital raised.

7036. Assuming that the East Indian Railway Company at the termination of its present contract is domiciled in India with rupee capital, and also taking 75 crores as the present capital of the East Indian Railway, would you propose to make the new company with rupee capital of, say, 125 crores, and at present issue 25 crores shares to be called by four yearly instalments?—Taking your figure of 75 crores, I would require a company to raise at least 5 crores at once in the way of fresh capital. I would give it the right to raise up to 25 crores, but allow it the option, if it saw a favourable opportunity, of obtaining money on cheaper terms. I would not deny it the power to issue other forms of security also.

7037. If the shareholders be given the option of subscribing the share capital in four years, paying one-fourth only in each year, the investors will have great facility in making payments, and a new field of investors will thus be opened, and a new field will be tapped which will relieve Government from finding any money, at least for this company; and if it is found successful the Eastern Bengal State Railway may then be converted on the same line, and other companies, on the termination of their present contracts, may be treated similarly, and I am confident Government will gradually be greatly relieved from finding capital for these railways?—I think your point is that, assuming the shares are Rs. 500 shares, a subscriber should merely pay up, say, Rs. 100 on his share on allotment, Rs. 100 in the second year, and Rs. 100 in the third year. That is a matter of detail about which I do not hold very strong views, but I feel that some investors might be deterred from taking up shares with these large future calls upon them and that it might be preferable to raise 5 crores of your 25 crores in the first year and have a definite separate issue of fully-paid capital the next year.

(*Chairman.*) Would you give the company the same freedom in management—neither more nor less—when it had one-twentieth of the total capital as when it had one-quarter of the total capital?

7038. (*Sir R. N. Mookerjee.*) My view is that there should be nine directors, three of whom should be put on by the Government and the others elected by the shareholders. The Government should have the right to nominate a president from the nine directors, who will have a casting vote, and Government will hand the management of the concern to the Board of Directors, as commercial concerns generally do. Government would, or could, always have its voice heard by Shareholders, being the owner of three-fourths share capital, and the Legislative Assembly will be able to control Government when necessary.—I have not any special views to which I am wedded as to the exact constitution of the directorate. I think I outlined a possible constitution the other day in the case of the Eastern Bengal Railway. I contemplated that the matter should be worked, perhaps, somewhat on the lines I suggested. I am not wedded to exact details. I thought that possibly control of Government might be secured by some such arrangement as that which has been adopted in the case of the new Imperial Bank of India formed by the amalgamation of the Presidency Banks. The Government of India interfere very little—practically not at all—with the management of that Bank. They have to approve the Managing Directors, who are nominated or elected by the Central Board. The Government also have stipulated that the Controller of Currency, or one of their officers, shall have a seat on the Central Board. He will not ordinarily have a vote, but I think in matters gravely affecting or possibly prejudicing the Government policy as a whole he is entitled to call upon the other Directors to suspend action until the matter has been reported for the information and, if necessary, the action of the Government.

7039. (*Mr. Tuke.*) In connection with the Presidency Banks, I take it the Government are not the sole shareholders?—They are not shareholders at all there.

7040. That makes a little difference. The railway belongs entirely to the Government?—You put that point to me, Mr. Tuke. I neither accept it nor attempt to rebut it, because it is a legal point with which I am not able to deal; but I must not be taken to be accepting what you say as necessarily being the case. I hope you will not think that by silence I admit, because I am not sufficiently qualified to speak of the legal position of the matter. I imagine that, if a company was constituted in India in the way proposed, that matter must necessarily turn to some extent on the manner in which either the Act constituting it or the contract between the State and the company as a whole is drawn.

7041. I am only quoting the statement of the Accountant-General and the Administration Report?—The Accountant-General is not a constitutional lawyer. You must remember that.

7042. (*Chairman.*) I should like an answer to my point. You were contemplating a comparatively small investment by the outside shareholder to start with—small compared with the total value of the property?—If I contemplated that it would be small at the outset, it would only be limited by the needs for raising immediate capital. I have no desire that it should be small.

7043. But it would be under the scheme as you proposed it, to start with?—Yes, relatively small.

7044. The investments of the outside shareholder would be a small percentage of the whole to start with?—Yes.

7045. It would gradually increase until it became a substantial percentage?—Yes.

7046. Are you contemplating that the outside shareholders holding only a small percentage should have just as much, or as little, control as the shareholders when their percentage became substantial, or would you gradually give them more power as their investments increased?—I have contemplated that they should possess throughout the maximum amount of freedom in managing the line which it is possible to give them. Here, again, I am not wedded particularly to the details.

(*Mr. Purshotamdas.*) I am afraid this will require considerably more discussion, because Mr. Howard is now putting forward a constructive scheme, which some of us might want to have elaborated and gone into thoroughly.

(*Witness.*) There were only one or two other points with which I wanted to deal. So far, I have only dealt with the question of rupee companies. If I contemplate the transfer of certain sterling companies it is not because I wish to express any view as to the relative merits of their administration or other things, or to depreciate in any way from the advantages which have been derived from the administration by sterling companies in the past. There is the question of the remaining companies which I have not so far mentioned. No further contracts fall in until 20 years from now. 1941 is the earliest.

7047. (*Chairman.*) The Assam-Bengal might fall in in 1931. That is rather a special case?—I would contemplate the retaining of the existing arrangements without raising any question of principle at this stage. But in the meanwhile I would like to see these companies also accorded a very much greater initiative and independence, in so far as this is possible, in their borrowings. I feel that the State can only find the funds which are urgently required for their finance to a limited extent; and I entirely agree, if I may say so, with what I understood to be the purport of some of the suggestions that were put to me, not necessarily as your own, sir, but as the substance of suggestions which have been made to the Committee—to the effect that the existing system might to some extent profitably be relaxed; that is to say, instead of a company having to wait until the Secretary of State required it to borrow, the accepted position should be that the company might say, "The State "only offers this entirely inadequate amount for "expenditure on the undertaking this year. We "require at least three millions more than that. "We should like to raise that sum, if we can, "either by debentures in India or by borrowing "in the London market, in order to meet this "necessary expenditure." Here, again, it is probable that the continuance of some control would be necessary. The Secretary of State—or the Government of India—is a large investor in these lines, and, to take a cognate case, one cannot imagine Lord Inchcape permitting the Peninsular and Oriental, and the British India, and the Orient lines to go into the market at inconvenient moments to outbid one another. We do not want these companies to act as entirely independent entities. They are part of the same financial group, and a friendly coordinating control will probably be necessary. I should like to see, personally, the principle of greater initiative and independence in the financial operations of these companies recognised. As I mentioned the other day, I hope that it may be possible to meet the difficulty of their being able to raise loans in India without giving rise to the double income tax difficulty, and in that case I would let them have a try on that side also. I think that is the substance of what I wish to say.

7048. You have restricted yourself to the word "borrowing." I think we had better have your opinion as to whether the companies should also be allowed to raise share capital?—Yes. I have been using the word "borrowing" in a general sense and, I admit, in an inaccurate sense. I contemplated also that they should be allowed to raise share capital; but as you yourself mentioned the other day, there is a difficulty at the present moment, inasmuch as I think most of the important lines' shares at present stand below par.

7049. You would allow them to issue shares with the same guarantee that attaches to existing shares?—I am not perfectly certain on that point. Is there not some objection to companies issuing shares at a discount?

7050. It is not so with English railway companies, but it is generally so. Then you would have to guarantee a bigger sum or a bigger share of the profits, one or the other?—I would not object to some device of that kind being considered.

7051. When you use the word "borrowing," we understand that it means raised capital, either shares or loans, as the case may be?—Yes.

(Adjourned for a short time.)

7052. (*Chairman.*) I think you had finished your statement in chief, so to speak, had not you?—Yes, but there was just one question you asked me at the end of it that I should like to refer to, because I am not certain that I returned a completely correct answer to the question that was asked me. You asked me whether the Government had any capital in the Imperial Bank of India, and I said no. The position is perhaps somewhat different from what that answer would seem to convey, because the Imperial Bank is entrusted with very large State deposits, and for that reason the Government exercise some indirect control, apart from the control imposed by the provisions of the Bank Act with the object of securing sound financial methods for the Central Bank, as it were.

7053. They regulate them just as the Bank of England is regulated by the Bank Charter Act of 1844; and it is also the Government banker?—That is so, generally speaking.

7054. (*Sir Rajendra Nath Mookerjee.*) I understood you to say that the Government have no capital in the banks?—The Government have no capital in the banks—that answer is correct; but I am not quite certain that the implication which might be drawn from my answer entirely explained the object of my general comparison between the constitution of the banks and the railways.

7055. Supposing your suggested system is carried out and the State gradually gives up the railways, will there be any difficulty in the separation of the railway budget, according to your view, from the general budget? I understood you to say that the State would not be able to raise money whether there is a separate budget or not. If the Government gets the required capital from the public will there still be the same difficulty in having a separate budget for the railways?—Before directly answering your question, I do not think that I necessarily suggested that all the State railways should be made company railways.

7056. I did not mean that; I meant gradually in the next few years. Take, for instance, the Eastern Bengal?—The Eastern Bengal was the only State railway that I suggested for the moment. I have quite an open mind as to whether the process should be extended further to cover the other two Government lines.

7057. You would take the Eastern Bengal first, then gradually the Great Indian Peninsula and so on; there would be rupee capital and the Government would raise money for those railways. Will the difficulty that you commented on to-day, of the separation of the railway budget from the general budget, be the same, or will it be lessened by that process?—If the

transfer of the East Indian and the Great Indian Peninsula were carried out, this would not be a transfer of State railways in the sense in which I was using the term, to company railways. It would be a transfer from sterling-managed companies to rupee-managed companies. I do not really think that that transfer affects the question. The State, in so far as its return from any of these lines is concerned, would continue to receive the return attributable to the State's portion of the capital held in these lines.

7058. I understood you to say that the State would be in a difficult position in the future, so far as raising railway loans is concerned, owing to their having loans which have already been contracted for. If these two railways are taken over as Indian companies with rupee capital then the State would not have to find any money for those two railways?—I did not necessarily imply that. My point was that I apprehended very seriously that the State is not likely to be in a position during the next decade or possibly more to raise by direct borrowing anything like all the capital that is required to secure the adequate development of the railways without hopelessly prejudicing its own credit. But even if some modification of existing methods were made on the lines which I have suggested I would not preclude the possibility of the State devoting to railways any funds which it was able to raise for the purpose. The State will still probably be able, though it may not go in for a policy of attempting to obtain absolutely all the funds required for the purpose, to raise funds to some extent at a cheaper rate than companies could borrow at, and if it can do so in excess of its immediate requirements for meeting its own temporary debt and so forth I think there might be great advantage in the State applying some of those funds to railways.

7059. If the State is willing to raise money, when they can do so, to help other existing interests, I do not quite follow how a separate railway budget would prevent them doing so?—It would not prevent them doing so or help them to do so.

7060. Your point was, if I understood it aright, that a separate railway budget would greatly interfere with the State raising money for railways?—I think you have rather turned my statement round. My point was that a separate railway budget would not enable the State to raise any appreciably larger funds for the railways.

7061. I presume you would not require the State to raise any large share for these big railways during the next decade. Therefore what is your objection to separating the railway budget from the general budget?—I do not think I can return you an absolutely direct answer. The difficulties which I felt about the separation of the railway budget from the general budget were twofold. Firstly, on the revenue side the general budget is—and must, I fear, inevitably continue to be—inextricably mixed up with the railway budget; and secondly, the mere separation would not provide the railways with additional capital funds. I have no objection *per se* or on principle to separation, but my point was rather that I did not think that a separation would secure the objects at which we are endeavouring to arrive.

7062. I am sorry I do not follow you. At present you reserve that railway income without letting the public know about it openly. If it is separated, and if certain help is given from the railway revenues to the railways, the public will know that they have benefited from the railways, and therefore the obligation upon them to raise money will be all the stronger. The effect will be the same. If the Government require money from the railway revenue they will take it, but they will take it openly. They will tell the public: "We are taking so much money from the railways"?—I think the public must be aware from the budget of the extent to which the Government rely on the railways for a portion of their revenues. There is no attempt at concealment.

7063. Even you, an expert in finance, and Mr. Tuke, cannot understand how the Government keep their records. Do you think, therefore, the ordinary public will be able to find out how much has been taken from the railway department?—I am afraid I cannot help Mr. Tuke not agreeing with me as to the manner in which the Government keep the accounts, because I am perfectly clear as to the exact number of rupees which the State draw from the railways in any particular year about which you ask me, for the purpose of supplementing their revenues. I think the point which Mr. Tuke raised was the particular form in which certain advances made by the Secretary of State to the railway companies for the purposes of the undertaking are shown in a particular set of accounts, but I do not think there was any difference between us, or any doubt in my mind, as to the particular amount of revenue which Government received in their revenue budget year by year from the railways. I should have no difficulty in supplying that figure.

7064. Apart from the difficulty of raising money by Government or the limits of Government borrowing, are there any other difficulties in separating the railway budget from the general budget? We understand the difficulty of the Government in regard to its limitation of borrowing; are there any other difficulties from an administrative point of view?—I am not clear that any particular difficulties would arise. So far as I can see, it would be possible to prepare without any difficulty the current railway revenue accounts in one statement and to carry one net figure or two or three or more net figures forward to the other statement. There would be no actual physical difficulty in preparing the accounts in two separate sets of papers.

(*Sir Henry Burt.*) I take it from your evidence that you think there are insuperable difficulties in the way of a complete separation of the railway accounts from the imperial accounts. Do you think that any partial separation is possible, at least to the extent of recognising that the grant for each year belongs solely to the Railway Department, and, if not spent in that year, remains at the disposal of the Railway Board? Do you think there is any objection to that? I am referring to the system of lapses.

(*Chairman.*) And you might couple with that the abrupt alterations of allotments, upwards and downwards.

7065. (*Sir Henry Burt.*) Especially at the end of the year, which leads to a lot of extravagance in my view?—Personally, I have always felt that we might very profitably abolish the present system of not carrying forward lapses. It leads to a great deal of misapprehension, and, I think, embarrassment, and I would personally strongly favour following up that idea of yours. But it must be recognised that merely carrying forward lapses will not by itself give the railways any more money. Under the present system a lapse

takes place. That is added to the other funds which Government can make available for the railways in the following year.

7066. But, of course, it does not belong to the railway on which it lapsed; that is the point?—Quite so.

(*Chairman.*) And it does not necessarily belong to the railways at all, if in the following year the Government says: "We cannot afford to "give so much, and, therefore, you must take "the 4 crores of rupees as part of your grant for "next year." That really is the present position. Theoretically, there are 4 crores more available, if there is a lapse, but there is no certainty that those 4 crores will be spent on railways at all, still less that they will be spent on the railway where the lapse occurred.

7067. (*Sir Henry Burt.*) And where it may be most urgently required; so that it leads to a tremendous amount of uncertainty on individual lines as to what the financial position is?—I should think that is probably quite correct, and personally I should strongly favour that question being followed up, with the object of doing away not only with the lapses but with some of the excrescences which have grown up on that system, such as over-certification of indents and a lot of other troublesome questions of that kind. I do not think there would be any practical difficulty in doing that, provided it is understood that merely carrying forward these lapses will not perform a miracle. It will not necessarily give us any additional funds.

7068. You see the point,—that it now deprives individual railways of money which they may have contracted to spend, which places them in a very awkward financial position?—Yes. I have always imagined that that was probably the case. I have never been absolutely certain it was, but if that is the case, that it does embarrass the individual railway, that is a strong additional reason for modifying the system.

7069. (*Chairman.*) As the technical phrases are rather puzzling, let me ask you this: is over-certification of indents the same thing as pre-indents?—I am not quite certain that I can give you the strict technical definition of over-certification of indents, but what happens is roughly as follows. The railways have a grant of, say, 20,000,000*l.* in a particular year. During the course of the year they think they are going to have lapses of 5,000,000*l.* At that point the Railway Board, or it may be the Railway Board with the concurrence of the Accountant-General and their spending organisation in England, certify that 5,000,000*l.* of that grant will not be spent during the year, and that consequently the railways may place additional orders for 5,000,000*l.*, which they hope they can get carried out during that year, so that they may utilise the full amount of their grant.

7070. During that year or the next year?—That year.

(*Sir George Godfrey.*) The other thing is an advance for the following year.

(*Sir Henry Burt.*) I do not think there is such a close connection between the anticipated lapse and the over-certification, is there?

(*Secretary.*) Over-certification really means that you certify forward more indents than your grant would cover, knowing from experience that you cannot possibly get all your indents complied with in that year.

7071. (*Chairman.*) Then we may understand that over-certification refers to the current year, whereas pre-indents are practically a drawing on the next year, in the case of orders which, in the nature of things, because of their largeness or because of the time required for execution, cannot be carried out within the financial year. They are not the same?—That is so. One effect of over-certification is to re-grant the lapse for the next year. That is what it ultimately amounts to.

7072. I thought you said it meant to re-grant the amount to be spent elsewhere in the same year?—To re-grant the amount of the lapse in that year, but the fact that orders have been placed in respect of the full grant, though you do not expect the whole of them to be carried out in that year, means that the Government recognise that the amount thrown forward shall actually be spent and paid for. It is a roundabout way of expressing it, but ultimately it amounts to a recognition that the amount lapsed shall be honoured in the following year.

7073. (*Sir Rajendra Nath Mookerjee.*) And not necessarily on the work for which the lapse took place?—Not necessarily, but if orders have been placed they cannot be repudiated.

7074. (*Chairman.*) It is a more complicated system than exists in a commercial company here?—Yes, and frankly I think it is an unjustifiable complication.

7075. (*Mr. Tuke.*) I want just to return to the difficulty we had in making the Administration Report and your little statement agree. Might I suggest that you should be good enough to make up a statement of similar data with the Administration Report, and then show in detail wherein the differences arise?—I shall be most happy to do so if you will be kind enough to come round to my office to help me. I have already explained to the Committee that I am not at all familiar with the Railway Administration Report. I have never had any responsibility for it, and I do not know that I have sufficient intimacy with the details of the figures to know exactly what you want or, knowing exactly what you want, to be able to supply you with the information which you ask for. As a matter of fact, both these reports are compiled in India. The Railway Administration Report is forwarded printed to this country. In the case of the Financial and Revenue Accounts, all the Indian information is forwarded to us by, I think, the Controller and Auditor-General, and we complete the Report here with such information as is compiled on this side. But in the case of the Railway Administration Report, I may not be able to go down to the bedrock figures, as it were, so as to be able to explain exactly how these differences of compilation have arisen.

7076. Is there no one in the office here who can explain these matters?—It is possible that there may be. Perhaps if you would come round or I come round to your room you can show me exactly in the report itself which figures you find a difficulty about.

7077. You have a copy of the Administration Report, have you not?—We have no doubt got copies in the office.

7078. Will you be good enough to turn to Appendix 5? You will find there the totals under the various heads. What I suggest is that you should draw up your figures that you know more about to correspond with the data in this Report, and then show wherein the difference lies. I am afraid I cannot help you with that because I am not acquainted with the India Office and its various forms?—Frankly, I find it extremely difficult merely on a general

statement on your part that there is a considerable difference between the figures——

(*Mr. Tuke.*) Pardon me, it is not a general statement on my part; the figures are in the Administration Report. It is not my statement; it is the statement of the Government of India.

(*Mr. Hiley.*) There is a difference of millions.

7079. (*Chairman.*) It is quite possible, as you say, that the information may not be here, but the Public Works Department is, one assumes, in some sense responsible for the railway side?—Yes.

7080. It really comes to this, does it not? If the Public Works Department, with your people, will compare your statement, which is extracted from the Financial Report, with Appendix No. 5 in the Administration Report, that will meet the case?—Statement No. 5, is it?

7081. (*Mr. Tuke.*) Appendix No. 5, page 32. If you approve, sir, we might perhaps leave that particular point?—Which particular figures do you wish to be reconciled?

7082. First, the total of the State lines. On the preceding page you will find the various lines set out, the Eastern Bengal, North-Western, Oudh and Rohilkhand, followed by the other lines, the Assam-Bengal, and so on. You will find the totals of the State outlay, the capital to be repaid by annuities, the debt outstanding, the overdrafts, the advances by the Secretary of State, and the total State interest. You will find the capital of the companies stated and also the debentures, making a grand total of 380,000,000*l.* as against 365,000,000*l.*?—I have already explained a portion of the difference. My figures of 365,000,000*l.* are mean figures.

7083. Exactly so, but it would be more satisfactory, I think, if we had a statement to that effect just showing exactly how difference arises?—It is on record, I think, that mine are mean figures.

7084 (*Chairman.*) Yes, I think we know that. That, no doubt, would explain some portion, but I do not think it will explain 15,000,000*l.*?—It explains about 5,000,000*l.* or 6,000,000*l.*, I think.

7085. (*Mr. Tuke.*) Then there is the question of advances and overdrafts; they should come out in the same way. In looking through some copies of the prospectuses of the issues of debenture stock by some of the guaranteed companies, I find it is usually stated that principal and interest are guaranteed by the Secretary of State for India out of the revenues of India?—Yes.

7086. Have the debenture holders any other security than the obligation of the Government of India?—I find it rather difficult to answer that question. The Government of India, I believe, in this country has no legal entity; the legal entity is the Secretary of State in Council, who is defined as such by Act of Parliament, and that is the legal guarantee for the debenture holders. They are therefore secured on the revenues of India as defined in the Government of India Act. The Government of India under the old Government of India Act, I believe, would not find a place in a contract entered into in the United Kingdom.

7087. There being no other security, are not these debenture stocks to all intents and purposes practically a loan to the Government of India?—They are a loan to the Secretary of State for India.

7088. And the Secretary of State is the representative of the Government of India?—The Secretary of State is not legally the representative of the Government of India. He is not legally the representative of India, but he has a certain constitutional position under the Government of India Act and a power of control over the Government of India. The control of the revenues of India is ultimately by Act vested in the Secretary of State for India in Council. The words of the Act are: "Subject to the "provisions of this Act, the Secretary of State "has and performs all such or the like powers "and duties relating to the government or "revenues of India, and has all such or the like "powers over all officers appointed or con-"tinued under this Act as, if the Government "of India Act, 1858, had not been passed, might "or should have been exercised or performed by "the East India Company, or by the Court of "Directors or Court of Proprietors of that "Company," and so on.

7089. May we put it in another way: are not these debenture stocks to all intents and purposes practically a loan to the Government of India or its representative?—I think as a popular description of the facts that is probably, generally speaking, correct, but I doubt whether it is an explanation that would satisfy a lawyer who had regard to the provisions of the Government of India Act.

7090. In these prospectuses it is generally stated that money is required for the general purposes of the company. Would it not have been more strictly accurate to have said that the money was required for the general purposes of the undertaking?—I think that is probably the case.

7091. In one of these prospectuses I see that the results of the previous two years of the whole undertaking are given, although it is a prospectus of the company. That was some years ago, in 1902. I also find, in looking through the copies that I have here, that in only one case is it put down that the money is required to repay advances. I understood from you that, generally speaking, the money was used for the purpose of repaying advances?—I think there are really two questions involved in what you have put to me. The first is the question of the company *vis-à-vis* the undertaking. I believe if you take legal opinion you will find that the undertaking is not a legal entity; that the company is the legal entity brought into being by the contract entered into by it with the Secretary of State. The undertaking in itself is not a corporate body or anything of that kind.

7092. The sole owner of which, as I hold, is the Government of India?—I am not prepared to enter into any discussion as to whether the owner of the undertaking is the Government of India or the Secretary of State in Council. That is a legal point which I do not desire to express an opinion upon.

7093. The Government of India, or again I say its representative; but I do not think the company is the owner to any extent at all?—I have nothing further to add on that point to what I have already said.

7094. With regard to the raising of money, I understand that the greatest hope you have of finding new lenders is to give the companies much greater power in the way of raising funds by dressing up the securities in rather more attractive form. What do you suggest in that way? I do not quite follow what you mean by "dressing up the securities in rather more attractive form"?—I thought I had explained

what I meant, namely, firstly that, by the creation of additional companies in India, it would be possible for the companies to raise additional share capital, and that it would also be possible for them to raise money on debentures or other forms of security other than capital on which——

7095. (*Chairman.*) Securities other than shares?—Securities other than shares—on which it would be possible for them to offer a fractionally higher rate of interest than Government could do in the case of direct borrowing, without unduly depreciating the whole corpus of their outstanding debt and also without prejudicing their future borrowing operations for the purpose of funding or otherwise; similarly in the case of sterling borrowings in England that the companies should be allowed a freer hand, when circumstances permit, in raising either additional share capital or debentures or debenture stock, as the case may be.

7096. (*Mr. Tuke.*) Do you not think that would be rather an expensive way of raising money, looking at the return which the ordinary stocks of railway companies give on the London market at the present time?—It would be an expensive way of raising money, but I do not think it would be a more expensive way of raising money than by endeavouring to obtain the whole amount by direct borrowing, in regard to which I fear that if the total amount desired is to be obtained it would be necessary to raise the rate of interest for those direct borrowings.

7097. Does an increase of interest in all cases represent a depreciation of security? Does not the rate of interest largely depend on the value of money for the time being?—I am not quite certain that I have caught exactly your point. You mean to say that if Government do offer more it does not necessarily follow that the security is depreciated?

7098. Quite. Would you say that the security of the British Government had depreciated because it gives more when the value of money is materially higher?—I do not think I said that the Government of India security had depreciated. I said that they could not borrow more without depreciating their existing securities. I was thinking of their debt which was outstanding.

7099. Does not that depend upon the value of money?—I think there is a considerable difference between direct Government borrowings in India and the Government of India borrowings in London in that particular respect.

7100. Has there been any depreciation of the securities of Governments which have not borrowed at all in recent years?—May I answer your first question first, before you put it in the other way? I think that, if we do distinguish between Indian Government borrowings in India and the Secretary of State's borrowings in London it can correctly be said, as regards the latter, that it is the case that Indian securities are relatively speaking merely a drop in the bucket.

7101. (*Chairman.*) In London?—In London.

7102. You mean a fraction of the total amount outstanding on the Stock Exchange?—A fraction of the total amount of securities of a more or less similar character outstanding on the Stock Exchange. From time to time there is necessarily a certain variation in the level at which Indian credit stands compared with the credit for other securities of, generally speaking, the same type, but subject to those temporary variations the price level and the yield of Indian securities will be governed by and largely conform to the general money rates prevailing at the time. I think that is the point Mr. Tuke wished to put to me, and that is why I said I wanted to answer his question first in the form in which he put it to me first. The issue of an Indian security in London at the present time at a high rate would therefore not necessarily prejudice our future borrowings, because that security would adjust itself roughly to the general interest rate and yield level, and it would not unduly depreciate our past securities, because the value and level of those past securities would be determined by the general level in the London market for similar securities. Where, however, you come to borrowing in the Indian market, the Indian Government loans are more or less the predominant security of that character. There are some Port Trust borrowings and other borrowings on a small scale, but if the Indian Government now were to issue a loan at, to take an absurd figure, 8 or 10 per cent., it would be a permanent shock to all their existing securities. It would shake the confidence of the past investor, who is not so accustomed to a change in the level of quotations as the investor in England is, and it would prejudice their future borrowings with regard to both rate and amount. I think I have made the difference between the two markets clear, and I think I am correct on the point, but it is merely a personal diagnosis, and I hope that that really answers the point which Mr. Tuke had in mind.

7103. (*Mr. Tuke.*) In fact you refer entirely to borrowings in India. Do I understand from your remarks that raising a loan at a high rate of interest when money is dear would affect the Indian market and not the London market?—When I was talking about the depreciation of their securities I was referring primarily to borrowing in the Indian market.

7104. That is what I wanted to bring out?—May I say, in order to complete that, that I think that necessarily affects the rate at which you can afford to borrow in London, because I doubt whether it would be legitimate to offer a materially higher rate in London than you are offering in India. There would certainly be considerable sentimental criticism on that point, even if there were no possible practical objections to it. I do not know whether you would like that point developed? There is a good deal to be said about it.

(*Mr. Tuke.*) I think it is one on which different opinions may be held.

7105. (*Chairman.*) We have come to this—that what we have called depreciation of the Government credit might take place in India, but would not, at any rate not at all to the same extent, take place in England. That, I gather, is what you say?—That was my point. The determination of the relative yield of Indian securities in London is governed by a totally different set of circumstances.

(*Chairman.*) Starting from that premise it would seem to follow that the rate of interest in London would not tend to go up as much as in India, and therefore there would be no great fear of the cost of a loan in London getting higher than in India. Am not I right? Do you see what I mean? The borrowings in London depreciate Indian credit to a much smaller extent?

(*Sir George Godfrey.*) Do you mean credit or value?

7106. (*Chairman.*) They cause India to borrow at a higher rate—put it in that way. Therefore it seems to me you may expect not that

you may need to borrow in London at a higher rate, but you might expect to borrow, if not at the same rate, at a lower rate than in India?—I think that must vary from time to time.

7107. Of course, but is not that the sort of general effect—that there is no fear of having to borrow in London at a higher rate than in India?—I would not be at all afraid merely on general grounds of paying a higher rate, if necessary, to secure the capital in London, but I can see there are certain serious objections to paying a higher price except as a purely temporary arrangement in London.

7108. My point is that I cannot see there is much fear of them having to do it?—That all depends on how much money you want to get in India. There is a limit to the amount of money which can be taken out of the money market at a particular price for Government borrowing. That limit, I should think, would not begin to operate very quickly with regard to borrowings on this side. Before the war, in India our borrowings were relatively cheap, possibly cheaper than London, because our loans issued year by year were, relatively speaking, minute in amount—two crores or three crores—with the result that the prices of Government securities in India at that time were kept up by what I might call almost artificial scarcity.

7109. (*Mr. Tuke.*) There is only one other question I should like to ask you. I understand that quite recently a loan by the Indian Government for railway purposes was successfully floated?—Yes.

7110. The issue was a direct loan by the Indian Government, and not a debenture stock issue of an Indian railway company, a course which I understand you prefer?—We should certainly have preferred to have made it a long-dated security, but we were advised that we could not float a long-dated security except at a rate of interest which would have been relatively penal for a security of such long currency.

(*Sir George Godfrey.*) I am very sorry we did not hear Mr. Tuke's question; will he kindly repeat it?

7111. (*Mr. Tuke.*) The point with regard to the loan was this. The issue was a direct loan by the Indian Government, and not a debenture stock issue by an Indian railway company, a course which I understand Mr. Howard prefers. The question I ask him is: Is he at liberty to tell me why the one course was chosen and not the other?—In the first place, I do not think I have said that I prefer raising funds by debenture stock. I prefer raising funds by the cheapest course available. The point that I have desired to make has rather been that the amount that we can obtain by direct borrowings is limited.

7112. And cheaper?—And cheaper. Direct borrowing is cheaper. We should have had on the present occasion, in order to raise a loan through the companies at the present time, to have offered a higher rate, and I doubt whether it would have been possible to raise a loan of any large size attributable to a particular company exceeding, say, 2½ million or 3,000,000*l.*, or something in that neighbourhood, and we should have had to pay more for it. Even in that case I doubt whether we could have raised a loan to take the form of debenture stock, which means practically a permanent security, except by paying a relatively penal rate.

7113. (*Mr. Purshotamdas.*) Can you tell me approximately what percentage of the borrowings of the Government of India in any year relate to non-railway purposes? Is it 10 or 5 or 15?—Would it answer your question if I gave you the total borrowings up to date in two particular years?

7114. In two particular years?—Yes. I was thinking of giving you the distribution of our total borrowings between railways, irrigation, and other debt, say, in 1914 and 1920, that is, the total outstandings.

7115. Could not you separate the irrigation from it?—I have separated irrigation from it. For instance, what I meant to offer to you was that on the 31st March 1914 our railway debt was 222,000,000*l.* the irrigation debt was £39⅔ million, and the other debt, including a small amount for Delhi, was £12¾ million.

7116. That would represent about 52,000,000*l.* for purposes other than railways, and 222,000,000*l.* for railways?—That is right.

(*Mr. Purshotamdas.*) Which means four times more for railways.

(*Chairman.*) More than four-fifths.

7117. (*Mr. Purshotamdas.*) It means that 20 per cent. of the borrowings up to that year was for non-railway purposes and that 80 per cent. was for railway purposes. Is that approximately right?—Yes. In normal years, apart from Delhi, we have not borrowed for any non-productive purposes. Any non-productive debt that we had outstanding before the war can, I think, be said to be the relics of some period of heavy expenditure such as the Afghan war. That non-productive debt has been gradually disappearing owing to our practice of devoting any of our revenue surpluses to railway and irrigation construction, and treating that as a transfer of the productive to the non-productive debt. So that in ordinary years before the war it may be said that, apart from a small sum for Delhi, in recent years we have borrowed for productive purposes only.

7118. If I may bring it up to date, one might say that the major part of the borrowings of the Government of India—to the extent of 75 per cent. at least—has been for railway purposes. Will you agree to that?—The position has changed very considerably during the war, owing to the fact that we have had several successive deficits which in effect have meant borrowing for ordinary current expenditure. I mentioned the figures incidentally a little earlier to-day. Shall I repeat them?

(*Mr. Purshotamdas.*) No. I only wanted to get at the approximate division between railway and non-railway borrowings.

7119. (*Chairman.*) Will you give us the figures for 1920?—Railways, £253⅓ million; irrigation, 45,000,000*l.*; ordinary or non-productive debt, 77,000,000*l.*, to which must be added floating debt, 35,000,000*l.*

7120. Roughly speaking, 25 per cent. is non-productive?—Roughly speaking, yes.

7121. (*Mr. Purshotamdas.*) Your objection to a separate railway budget, as I understand it from your replies, is not on administrative grounds. You thought on administrative grounds it would not be difficult to present the railway budget separately, and to transfer three or four main items instead of transferring all the separate items to the main budget, if I understood you correctly?—I think you have put into my mouth rather more than I said. It is not that I so much object to a separate budget. My point has rather been to endeavour to show that

a separate budget would not attain the particular object which I—and, I believe, the Committee—are most anxious to secure.

7122. You were talking about more money for the railways. I was coming to that next. I only want to know whether I understood you correctly when you said you did not see any administrative objection to a separate budget. On administrative grounds you see no objection to a separate budget for railway purposes. I have tried to remember exactly the words you used, which were, I think, that you saw no objection to transferring three or four main items to the main budget instead of transferring all the minor details in the main budget?—May I put it like this? I do not think there would be any difficulty in preparing a self-contained statement of the railway revenue and expenditure and receipts and issues, and merely carrying forward certain consolidated figures to the ordinary budget.

7123. That was my impression, and I think we may take it that that is about what you said. If that is so, then the expedient which you suggest, of forming these existing State-owned railways into private companies, is for the purpose of enabling the railways to get more money?—Yes.

7124. In suggesting that expedient do not you think you are suggesting a course which absolutely sacrifices the policy followed by the Secretary of State ever since the first railway contract fell due and was renewed by him when he bought out the major part of the shareholders here? The main object of your expedient is to make available more money for the railways. As to whether you make that money available cheaper or not is a matter I will come to immediately, but I just want to point out to you that what strikes me is that in suggesting that expedient you are sacrificing the most important underlying principle which every successive Secretary of State has stood for since 1850, and you are suggesting it at a time when the whole question is one which, in my opinion—you may differ—does not admit of much difference of opinion as far as the Indian point of view is concerned. However, we will leave that aside. Is not your expedient sacrificing the underlying principle which, up till now, has not been challenged anywhere?—I do not think it is, and if you consider that I have suggested that, I do not think you have apprehended quite clearly what I propose.

7125. The underlying principle, to my mind, is this. Every Secretary of State has said that the proprietary ownership of the line shall be vested in the Government of India or in the Secretary of State. To that end they bought out the shareholders—the actual real shareholders—who floated and owned a railway when the railway was started. In one case they bought out 99 per cent.; in another case 94 per cent.; in another case 95 per cent., and in another case 70 per cent. In fact, the proprietary interests have been kept so low that to suggest at this stage that that policy should be gone back upon, and that the proprietary interests should be given out to people, is a subversion of the policy which has been followed by successive Secretaries of State during the last 70 years?—I do not think I am proposing anything which will necessarily have the effect of differing from the Secretary of State's past policy. In the case of these new companies which I have suggested, there is not, I think, in my proposal anything inherently different in character from that of the companies which the Secretary of State has, in pursuance of his policy, set up.

7126. May I interrupt you? The Secretary of State up till now has never issued any share capital or allowed any railway to issue share capital?—I was coming to that. The main difference in practice which I have suggested is that the domicile of these companies should be in India and not in the United Kingdom. In all the modern contracts, I believe, entered into by these companies with the Secretary of State, provision has been made for the raising of additional share capital as well as for the raising of funds in other forms, and consequently in making the suggestion that share capital should be raised I am merely following an idea that the Secretary of State has actually had embodied in the existing contracts.

7127. He has the option, but he has never exercised it. The Secretary of State has an option to call upon companies to raise capital, or to authorise the companies to raise capital, but has he in any one instance exercised that option? If he has not exercised it during the last 70 years, may not we conclude that the policy has been not to increase the proprietary interest of anybody in these various companies?—I cannot form any conclusion as to policy, but I think there is one consideration that has a bearing on the point; that is to say, that up till the time of the war, funds could be raised on such reasonable terms—one might say on such cheap terms—in the form of debenture capital that possibly the Secretary of State of the time might have considered it expedient to raise his funds in that form, so as to secure the greatest possible return to the State of his own portion of the capital. But if a time has come when the Secretary of State's return on his portion of the capital is being curtailed, owing to the difficulty of obtaining funds for the development of the line, I do not see why it should be a departure from that past policy to adopt a method of raising those funds which has not been exercised up to the present, but which may be the easiest and cheapest method of obtaining new funds in the circumstances of the present time.

7128. The Secretary of State has that option to-day. He had that option before this loan was floated. If there was any advantage in that method he would certainly have done it with the existing railways. Instead of that he preferred to float a debenture loan in the city here?—May I answer that particular point? I think at the present stage, with this Committee sitting, it can at any rate be suggested that the Secretary of State would not wish to prejudice any issues by raising new share capital for individual companies while the question as a whole is before the present Committee.

7129. If I may put it in other words, the Secretary of State did not want to make any departure from the policy which he had followed up till now while the Committee was sitting. Therefore what may be suggested in the new scheme would be a departure from his policy. However, we will leave it at that?—I think you have read rather more into my statement than I intended to say. The easiest method of raising a substantial sum in one operation is obviously direct borrowing.

(*Mr. Purshotamdas.*) I will drop the point.

7130. (*Chairman.*) Surely Mr. Purshotamdas is merely putting historical facts. The Robertson Report recommended that the companies should be allowed to raise capital. They were not

allowed to do so. The Mackay Report again recommended that companies should be allowed to raise capital, and they recommended that £12½ million should be raised by the State. Though the State failed year after year to raise the £12½ million, still the companies were not allowed to subscribe new share capital. Surely that was a policy?—That may or may not have been the policy. I am not in a position myself to say whether there was any deliberate policy underlying what was done. As I think I mentioned on the first occasion on which I was examined, the difficulties arose not so much from the necessary funds not having been raised in the first three years after the Mackay Report was published, but through the Government of India not immediately spending those funds on railway construction.

7131. Whether they raised it or not is irrelevant. They did not spend it on railways. The Mackay Committee said £12½ million ought to be spent Even though the Government were not spending it, they did not let the companies provide it. That surely represents a historical fact, does it not?—It represents a historical fact, I admit, if you say the Secretary of State did not require the companies to raise it.

(*Chairman.*) I think we have had evidence that the companies were willing and anxious.

7132. (*Mr. Purshotamdas.*) I think it was in the London evidence?—I can only say this. Sir Lionel Abrahams was a member of the Mackay Committee, which recommended that the companies should be permitted, on occasions when that course seemed desirable, to raise share capital. I can hardly believe that he, as the Secretary of State's adviser whose views certainly carried considerable weight with the authorities of the India Office at the time, would have definitely stood in the way of the policy underlying the report (to which he himself was a party) being followed.

7133. (*Sir Rajendra Nath Mookerjee.*) Has not the Secretary of State departed from that policy by allowing branch lines in India to raise share capital in the last few years?—May I put my answer, such as it is, in this way? I myself have not heard it mentioned that on any ground of policy the companies have not been requested to raise additional funds in the form of share capital. I was not aware that that was a deliberate policy.

7134. (*Mr. Purshotamdas.*) I assure you that it is not my intention at all to read a word more in your evidence or in your statements or in the valuable information which you have given us than you meant to convey, and I shall be very pleased if you will correct me if I infer anything to which you do not agree?—I quite understand. I am afraid that I did not express myself quite clearly.

7135. Now I will go on to another question, namely, cheaper money—whether the companies would be able to get cheaper money or not. Do you think that any company which may have to be floated will require a guarantee from the Government of India or from the Secretary of State, or do you think that a company on the lines enunciated by Sir Rajendra could be floated without a guarantee of a dividend from the Government of India?—I have rather an open mind on the question, but, generally speaking, I have a feeling that it might be advantageous for the Secretary of State or for the Government of India, as it probably would be if the borrowing was in India, to give a guarantee not necessarily for a very high figure, but something well within the certain earning powers of the company; because if such a guarantee is given the security would then be a trust security. Without such a guarantee it would not have that character.

7136. Do you think it would be possible to float such shares in the market at the present time or within the next two or three years, if you like, on a guarantee similar to the guarantee of the existing shareholders in English companies—in some cases 3½ per cent., in some cases 4 per cent., and in one or two cases 5 per cent.—or do you think a higher guaranteed rate of interest would be necessary?—I speak with some diffidence, since in order to answer your question one would have to have immediate first-hand knowledge of Indian conditions, and to consult the Imperial Bank and so forth; but, generally speaking, I think the answer depends to some extent on the amount at which the Secretary of State's existing holding in a company, such as the Eastern Bengal Railway, is capitalised, and on the authoritative published figures which could be given as to the past earnings of the line and its future prospects. I think a satisfactory statement of the actual essential facts and prospects of the line would be the primary consideration.

7137. Supposing I put it the other way, which is a very fair way to put it. The Indian Legislative Assembly is getting very jealous of any outside control except its own on the railways. That is a thing which is patent and it is admitted. The Government interest in the share capital of a railway company to be formed according to your suggestion would be fairly substantial. Therefore any subscribers to such shares would say: "Unless we have a substantial guarantee it is "quite possible we may not earn anything "reasonable. We might earn only 2 or 3 or 4 "per cent. and not more." Your share capital would never be subscribed at present unless you give an adequate assurance, say 6 per cent. interest guaranteed. I was told by a person who ought to know that at least 6½ per cent. guaranteed interest would be necessary for these shares at present. Let us take it at 6 per cent. What would be the sort of lease that a company would want? How many years' contract would they want for that? Would they be satisfied with a 20 or 25 or 15 years' contract? In the evidence taken in London the various company directors stated that they thought a 50 or 100 years' contract was desirable. I just mention these points as they strike me. Another point is: Would these railway companies allow the Government of India to buy them out later, and if so, would a premium be necessary for that? When you put all these points together, do you think the money thus obtained would be cheap money?—First as regards the term of the contract, I have not any very strong view as to that point. I think Sir Rajendra Nath Mookerjee would really give you more valuable advice on that point than I could.

7138. I have told you that the directors who were examined here in London expressed the opinion that they would like long contracts, and the presumption is that, if you negotiated the floating of any companies with share capital, it would be a necessary condition. It would be necessary to have a contract. The Secretary of State would not issue shares in a railway company to anybody without a sort of contract enunciating the terms on which they were given?—The evidence which you received in London relates, I take it, to the grant of or to the renewal of contracts in London. I do not know that it necessarily follows that the conditions necessary as to terms

would be the same in India. As to that I cannot express any competent opinion. I cannot imagine it would be wise, or that one could hope to secure any adequate results in the case of a company with a contract for less than at any rate 50 years.

7139. Take it at 50 years. That makes it dear enough with a 6 per cent. guarantee?—As to the rate of guarantee, if Government themselves can borrow on a fixed interest bearing security at 6 per cent. or 6½ per cent., I find it rather difficult to believe that a guarantee up to practically the same figure would be necessary if the shareholders had at the same time the prospect of participating in any profits that were made by the company. Surely in that case the shareholders who insisted on those onerous terms would be asking to have it both ways.

7140. Do not you think financiers are the same all over the world, whether in England, America, or India? A group of financiers in India would be about as shrewd men at making a good bargain as a group of financiers in England. If I may go on to my next point, I would just like to read out to you what Mr. Stantiall said in his evidence:—

> "(*Q.*) Then you mention that as regards the lines other than the North-Western, it was proposed to hand them over to companies, and that negotiations were carried on?—(*A.*) Yes, at different times. (*Q.*) But they fell through?—(*A.*) Yes. (*Q.*) Can you tell us the reason?—(*A.*) We failed to come to terms with the applicants. (*Q.*) You could not find a company that would take them over on the terms that the office thought were reasonable?—(*A.*) No. (*Sir Henry Burt.*) There were plenty of companies willing to take them over?—(*A.*) Yes, negotiations were entered upon on several occasions. (*Q.*) It was all a question of terms?—(*A.*) Yes."

So that negotiations were made on such lines before, and it was found that the Secretary of State and the companies could not come together, and things fell through. If negotiations are to be resumed at this stage again when there is—what we all hope—and I suppose you will not differ from it—a temporary tightness of money, would it be right to enter into something which has not been good enough for the Secretary of State for the last 70 years? That is how it strikes me. Now, you mentioned regarding borrowing outside India that you thought depreciation in the existing Government securities up till now necessitated the Government keeping the borrowing rates of the future low. Are you aware that there is a strong feeling in commercial and industrial circles in India that, in borrowing outside India at rates higher than those at which money can be got in India, the Government are giving a preference to non-Indian investors? It may be a wrong impression, but it is there. Have you ever heard that such an impression is gaining ground in India?—I am not able to speak for India with reference to the last year or so, but I have heard it suggested by one or two gentlemen that the offer of a higher rate on a recent occasion in London was resented by certain persons. Whether that information is correct or not, I am not able to say.

7141. That was put to us by several Indian commercial witnesses. I wanted to bring to your notice that there is a feeling growing in India that, when the Government borrow outside India at rates which are higher than those at which they borrow in India, people construe it as giving a sort of preference to non-Indian investors. If you knew of that feeling, which unfortunately is gaining ground, perhaps you might feel that, with the best of intentions, the Government of India would not support the policy of borrowing outside India in order to prevent the depreciation of the pre-war securities, because after all that is a matter which adjusts itself according to the supply and demand of money?—The actual rate which the Government of India can afford to offer—the actual extent to which they can afford to depreciate their pre-war securities—is a matter for their consideration. I do not feel myself qualified to offer an opinion as to the rate which they could suitably offer in India. But I certainly agree with you that as a general proposition it is not desirable to offer a higher rate in this country than that which is offered in India. There are various general considerations with which the Committee must be acquainted. It would be unjustifiable as a permanent practice to pay higher rates for loans outside a country than are paid within it, but obviously, if a country has industries such as railways which are starving for capital, it is economic for that country to borrow the amounts necessary for the protection and conservation of those industries, either inside itself or, if it cannot obtain the necessary requirements inside itself, outside itself.

7142. On that score I think we agree absolutely?—But the rates paid in this country have not been appreciably higher than the rates paid in India The rate for that loan, which we have the right to redeem after five years, was 7 per cent. The rate offered by the Government of India last year was 6 per cent. free of tax, which was practically 6½ per cent. The rate offered for the Bombay loan was 6½ per cent. free of tax, which was practically 7. There is not any very material difference.

7143. When any of these shares are to be issued—take the East Indian Railway—do you think the Secretary of State ought to re-value that line at what it is worth to-day, or do you think that he ought to value it just as it is in your books—the cost to the company? What would be the basis on which he should float a new company?—Frankly, I have not any very decided opinions about the matter. What I should do from the commercial point of view if I was looking into the question would be to look to the amount of money that had been spent on the line. I should then look to the actual yield on the line and what that would amount to if capitalised for various periods. I should then compare the various figures so arrived at with the actual outlay on the line, and see how they worked out. Then I should have to consider the terms on which the public would be likely to take up new share capital in the lines. But in advance of having made a detailed examination of the figures in that kind of way with regard to the circumstances of the time, I would not like to commit myself to any particular opinion as to the basis which could most suitably be adopted by the Secretary of State's policy.

7144. The Secretary of State had to pay 25 per cent. premium when he bought out the old shareholders, and if the company was to be started again, according to the Financial Revenue Accounts the premium would not be there at all. So it would hardly be right to omit that substantial premium which was paid?—I certainly think it would be reasonable to take that

into account. That is not, however, a percentage on the total expenditure put into the line up to date.

7145. (*Sir George Godfrey.*) I have very little to ask, because so many questions have been put to you in different ways that many of mine have been included in them. But I should like just to clear up the question about India's indebtedness. You told us it was, roughly, 410,000,000*l.*, of which about 300,000,000*l.* have been invested in railways, if we deduct the 65,000,000*l.* or 70,000,000*l.* which has been found by company capital. That being so, only 110,000,000*l.* is the indebtedness of India outside the security of her railways. Is that correct? I do not mean within 5,000,000*l.* or 6,000,000*l.*, but is that, roughly, the position?—That is not quite the position, because the figure of 300,000,000*l.* which you mentioned includes the 65,000,000*l.* on account of annuities, roughly speaking. So that if you deduct annuities, and make allowance for the premium paid at the time of the acquisition of the lines, you arrive at this other figure which I mentioned as the amount of debt counting as railway debt, apart from annuities, as £253½ million out of our total of 410,000,000*l.* In mentioning these figures I might perhaps say that they are figures of the 31st March 1920, which appear in the explanatory memorandum of the Secretary of State which he presented to Parliament. (The Command Number of the paper is 892.) I am using these as the most up-to-date authoritative figures which we have got.

7146. By what figure might one describe India's national debt, taking away the securities she has on her railways?—That, I think, is easier to answer—157,000,000*l.*

7147. (*Chairman.*) That is including the still more remunerative debt of the irrigation?—That includes 45,000,000*l.* for irrigation.

7148. (*Sir George Godfrey.*) Irrigation may also be regarded as a security because it is a productive expenditure?—It is even more productive than the railways.

7149. So it comes down to 110,000,000*l.*, roughly?—That is correct, yes.

7150. The business man in the street of Calcutta or Bombay or Madras looks at a figure like that, and he looks at the return which the railways have earned, and he says: "By a little "increase in rates surely you can make certain that "your railways will bring in a return of 7 or 8 "per cent. Why cannot the money be raised?" Will you just shortly tell us what the answer to that is? It is really, I think, if I might use your own words, that the Government of India cannot make more direct borrowings without depreciating their existing securities, and thereby their credit?—I think the real inherent difficulty arises from this fact; at any rate to my mind it arises from this fact. I should think nothing of that 110,000,000*l.* of debt provided it was in permanent debt, and that we had no obligation to repay for another 20, 30, 40 or 50 years. But the difficulty with all this debt is that it is practically all floating debt, or something very little better than floating debt. That is our real crucial difficulty.

7151. It is a short-term debt?—And floating debt.

7152. (*Chairman.*) Let me get this right. I understood you gave two figures—77,000,000*l.* and 35,000,000*l.* What is the 77,000,000*l.*?—77,000,000*l.* is ordinary or non-productive debt.

7153. Is not that long-term?—No. I speak subject to correction, but I think, according to our category, we only classify anything less than five years as a short-term debt.

7154. 77,000,000*l.* is partly a shortish-term debt?—Yes.

7155. How much is funded?—I would not like to attempt to divide that particular figure, but I can give you the up-to-date figures. We have of debt maturing between now and 1930 100,000,000*l.*

7156. That would make 65,000,000*l.*, and the rest is 12,000,000*l.*?—And our outstanding Treasury bills apart from that amounted, according to the last return, to 60 crores.

7157. You gave it as 35,000,000*l.*?—The figure of 35,000,000*l.* was that of the 31st March 1920. The other figures I am mentioning are the figures of to-day, which really affect our present position as regards borrowing. They are the immediate figures with which we have to deal for that borrowing purpose. So that the fact is really that probably some of our expenditure on railways has been financed by this very short-term debt.

7158. (*Sir George Godfrey.*) As you told us on the first day, in round figures 100 crores mature between now and the summer of 1930. That is 10 years?—That is 10 years, but if you take the individual years we have 25½ crores which mature this summer in 1921 bonds and for next year we have another 11½ crores. In addition to that at the moment we have 60 crores of Treasury bills which mature within the next 12 months.

7159. (*Sir Arthur Anderson.*) The whole of the unproductive debt is a post-war debt?—That is substantially correct.

7160. (*Sir George Godfrey.*) Therefore, really the time has come when, in spite of the railways being a sound financial proposition for the investment of money, the Government of India or the Secretary of State cannot find the money that is required?—That is my personal view. I am merely expressing throughout my own personal views.

7161. Therefore the State, having accepted responsibility hitherto for raising the capital required for Indian railways, has failed. Circumstances, or whatever it may be, have been against it, which in itself would create sufficient justification for departing from previous policy, if there has been such?—That is my view.

7162. (*Sir Henry Ledgard.*) In reading through the evidence which was given to the Committee in England before it proceeded to India, I noticed that several witnesses stated that the amount of money that can be raised in England for India is limited. One witness put it at 10,000,000*l.*, and two other witnesses named higher figures. Does not the result of the last 7 per cent. loan rather alter those views? Did not the applications for that one loan amount to a very much larger figure than those witnesses estimated as being the money likely to be available?—That is probably the case, but if we had floated a loan of 20,000,000*l.* it does not necessarily follow we should have had that applied for. Personally I should very much have liked, if it had been possible, to raise a larger sum than £7½ million at home here, but I understand that the Secretary of State was advised that there would be considerable difficulty in obtaining even that sum at present rates of interest.

7163. I am afraid there has been that opinion, but is it not the case that in the London market you can get almost any amount of money, provided you are prepared to pay a suitable rate

of interest?—I should think that that statement within limitations is probably correct.

7164. The second point on which I wish your view, if you could kindly give it to us, is this: I think you have seen the evidence which Mr. Cook gave us in Delhi. He expressed his view that, bearing in mind the very large obligations by the Indian Government on what we will call short-term loans, say up to 1930, which amount to such a very large figure, further loans which might be required for Indian railways and irrigation had better be raised in the English market, or markets other than the Indian market, reserving India for funding or replacing these large loans falling due in India during the next 8 or 10 years. Is it your view that such should be the case, or do you think that the Indian market might equally be available for railway loans?—I intended to convey very much the same idea as, I understand, Mr. Cook has had in mind, namely, that the Government of India will find the greatest possible difficulty in raising the necessary amounts to fund their own debt in India at anything like a reasonable rate of interest, apart from raising the large sums which are undoubtedly required for railway purposes. It is primarily for that reason that I personally hold the view that it is desirable if possible to endeavour to employ the agency of companies for raising the additional funds required.

7165. But you have no objection, other than that, that money which is required in India for railways should be raised in India, if it can be raised at the same rate of interest?—I think Mr. Hailey mentioned in his budget that he did not intend to restrict the limit of his borrowing this year to 15 crores. The figure was entered in his budget as an estimate only. If the actual amount received should prove to be widely in excess of this figure this will be all to the good. The problem would be on the way to being solved.

7166. I asked that question because it has occurred to me that the lender of the money in India is so much better off than the lender of the money in England. The lender of the money in England at 7 per cent. gets only a net 4·9 per cent. after income-tax has been deducted, whereas the lender of money in India at 7 per cent., after the Indian rate of income-tax has been deducted, gets approximately 6½ per cent., which is a much more attractive figure, and one which I should have thought would have been more likely to attract large sums in India than the figure of 4·9 per cent. in England?—The investment habit in India has so far not been developed to anything like the same extent as it has in Western countries, though I certainly believe it has increased very considerably as a result of the intensive campaigns that we had for the purpose of getting the Government of India's loans taken up during the war, and I hope that as time goes on, and with the improvement of banking facilities, it will be possible to tap an increasingly wide field of investors; but I fear that the extension of that field can only be gradual, that we cannot at once break down the habits of a great many years past.

7167. Supposing companies of Indian domicile were formed with rupee capital, to take a considerable share in, say, four undertakings which I will mention, namely, the East Indian Railway, to which you have referred, the Great Indian Peninsula Railway, also the East Indian Railway might eventually absorb the Oudh and Rohilkhand Railway, and a separate company be formed for the Eastern Bengal Railway; such capital being raised over a period of years up to an aggregate of 70 or 80 crores of rupees, which would give a reasonable share or interest in those four companies, to be expended for construction—capital expenditure—do you think that that would materially assist the general financial difficulty?—I do not particularly wish to particularise individual companies, and in particularising certain companies I did so primarily with the object of illustration. I certainly feel that any amount that can be raised by companies by direct borrowings of that kind must largely tend to relieve the burden which Government might otherwise be expected to bear in respect of the financing of new capital expenditure on railways.

7168. The interest, I presume, would of course be guaranteed by the Secretary of State, and be at a lower rate of interest than money could be raised at at that time, and the shareholders would participate in a proportion of the profits in excess of the guaranteed rate?—I think I dealt with that particular point in answering Sir R. Mookerjee.

7169. (*Mr. Tuke.*) There is one question of general interest which I should like to ask. By whom are these short-term loans held at the present time?—We have got two classes. There is the Treasury Bill or Floating Debt, of which I said there are about 60 crores. I think the Banks must be among the large holders of those. I fancy, however, that a good deal even of Treasury Bills are held by private investors, including business firms, or important Indian concerns and private like the Marwaris. When you come to the other short-term debt, including short-dated War Bonds and similar issues, a portion of those is possibly held by the Banks, but the bulk of the issues, I imagine, is held by private investors in various forms. Certain large blocks of them were taken up by industrial concerns as a matter of patriotism during the war. I do not know how far they have got rid of them since and passed them on to the general public, or how far they still hold them.

7170. What occurred to me was this, that the funding, say, of 100 millions was nothing like so difficult as raising a new 100 millions, because those people who hold the present loan may exchange it into a new loan, and therefore I do not think it is quite so black as, perhaps, you paint it?—I quite agree it is not so difficult to raise a funding loan of 100 millions in replacement of old debt as it would be to raise a new 100 millions; but at the same time it is not an easy proposition, in the present state of money markets, to raise a large amount of new capital in addition to the funding of your present outstandings.

7171. Of course they are not all due in one year. They are due gradually, are they not—the 100 millions?—That is so. We have an embarrassingly large figure this year, and again next year. We have 25½ crores within a few months from now, and another 11½ crores next year.

7172. I think it is not quite the same as new money?—It is not quite as bad as if we had to raise all that in new money as well.

7173. (*Chairman.*) I just want to clear up one or two points before we separate. Has the attention of the Finance authorities ever been called to the inconvenience of paying off capital in the form of annuities at a time when you have difficulty in borrowing the new money? Has anything ever been thought of on that subject to

see whether something could not be done to make it worth the holders' while to continue them?—To compound with them for some permanent debt, do you mean?

7174. No. I mean to say to postpone the repurchase of the capital and merely pay the interest. You would clearly have to give them better terms. Has that ever been in contemplation?—I have never actually seen that suggested. On the other hand, though I have not seen it discussed, I imagine the amount of the capital portion of the annuity payments has been looked upon as relatively inconsiderable as compared with our total requirements. It is about 1 million a year.

7175. Ever since the beginning the Railway Account has been debited with the paying off of a million of capital for the benefit of the ultimate position of the State?—Yes. On the other hand, there is one consideration (I do not know how far it has carried any weight), and that is in our Railway Account we show nothing of any kind for depreciation, and this might be held to be, as it were, a depreciation fund on our railway asset generally. I do not know that that is any justification, but I have heard it mentioned as a consideration bearing on the point.

7176. I do not know whether you can answer this. If you cannot, would you mind getting it for us from the proper authority? Is there any objection caused by a provision in the Government of India Act, or anything else, so that legislation would be needed for a separation of the budget? Perhaps that is not a fair question to ask you off-hand?—I think it is. So far as I can ascertain, no legislation would be required. The Secretary of State might have to pass some separate rules which were subject to the approval of Parliament, but I do not think there would be any legislative difficulty. Of course, it would necessarily be the case that the Railway Vote under a separate budget would come before the Legislative Assembly in exactly the same way as if it were included in the whole budget.

7177. That is statutory clearly. By cutting the budget into two you cannot deprive the Legislature of the control of one half. While you were answering Mr. Purshotamdas about the guarantee to the companies, you said you thought that in view of their participation in the profits they would take a guarantee a good deal lower than the total interest on the Government loan?—That was my general idea.

7178. This is what I want to ask you; it came into my head as you were saying it. Do you appreciate that since the 1st March there is a new risk to the guaranteed company? Whereas hitherto it has been the interest of the Government of India that the earnings of a Guaranteed Company should be large, because they took nearly the whole, in future they may take the whole by a traffic tax, and under this system the interest of the Government clearly is that the Guaranteed Company should not earn more than its guarantee?—You are putting that question on the assumption that this traffic tax in its present form will continue?

7179. I am assuming it might continue. They have got a warning that there is something they did not expect before?—I do not think that that is the intention, and to the best of my recollection Mr. Hailey in his financial statement said that that was not the intention. I understand that the intentions of Government as regards the future of that tax had been made clear.

7180. You see my point? It is really a new risk to a guaranteed company. I think I ought to say this to you. In all the evidence we have had on the advantages of separating the two budgets, stress has not, I think, mainly been laid on the benefit of having two strings to your bow in raising capital, but on the administrative and executive difficulties of the constant interference of an extraneous motive. We have the disadvantage of not having our Indian evidence in print, but I think it is right to say that. That I think has really been the main point of view of the witnesses. The railway men have constantly told us of the injury to their proper administration by such a battledore and shuttlecock arrangement?—I cannot speak with any knowledge on that. I do not know exactly where the shoe pinches on the side of the railway administration. I have naturally been thinking of the question from that aspect of it that interests me most.

(*Chairman.*) I think I ought to have called your attention to it sooner. We are very much obliged to you for all the help you have given us.

The witness withdrew.

P.S.—The following letter was subsequently received from Mr. Howard:—

I return herewith the proof of my evidence, and in doing so must express my acknowledgment for the admirable way in which it has been reported. I much regret that in the statement which I handed in some clerical errors crept in in respect of the totals of State outlay on State and guaranteed companies' lines. I have corrected these and also have ventured to make similar corrections in the references made to the figures in questions put to me. These do not affect the general purport of the statement or the force of the criticisms which Mr. Tuke made as to the differences between my statement and that in Appendix 5 of the Railway Administration Report. The differences may be summarised as follows:—

	My statement as it now stands.	Appendix V.	(figures in millions).
State worked lines - -	107·7	113·3	+ 5·6
Branch lines - - -	5	—	—
Company worked lines - -	252·3	267·4	+ 15·1
	365	380·7	

Firstly, then, my figures, though working to a smaller total, included branch lines, which Appendix 5 apparently does not.

The elimination of the branch line figures widens the gap requiring reconciliation to between £20 or £21 millions. As I surmised, the difference is accounted for by two causes, namely:—

(*a*) The fact that the total of my figures, as I mentioned, were "mean" figures, *i.e.*, they included only half the new capital expenditure incurred in 1919–20. The difference here involved

is nearly £5 millions, of which roughly £1½ millions may be set against State worked lines and £3½ millions against company worked lines.

(*b*) The fact that my figures were based on the original amount of capital raised by the constructing companies whose lines were taken over by the State, whereas the figures in Appendix 5 are based on the amounts paid by Government for the lines (including the premium on purchase); these latter figures, however, have a large deduction made from them corresponding to the amounts of capital already paid off by annuity payments up to date. In round figures the amounts of premium in the purchase price over the capital raised by the companies were £30 millions, including £4·8 millions in the case of the State worked lines and £25·2 millions in the case of the company worked lines.

In the case of the State worked lines, the outstanding difference of £5·6 millions represents about £1½ millions due to cause (*a*) above and the balance due to cause (*b*), viz., £4·8 millions, from which latter figure must be deducted the amount of capital already paid off by means of annuity.

In the case of the company worked lines, the corresponding adjustments are roughly (*a*) 3·5 and (*b*) 25·2 less nearly 15 millions of annuities redeemed, *i.e.*, about 13·5 millions in all, against a gap of 15 millions between the two sets of figures. The slight discrepancy remaining is doubtless due to the readjustments of capital made at the time of purchase,[1] but it would be difficult to show exactly what was done without going into great detail in the case of each individual line or to make the position clear without very great elaboration and considerable labour.

Some detailed points of difference in the case of the company worked lines, to which attention may be directed, are shown below:—

	I. My statement.	II. Appendix 5.
(1) Companies' capital	24·6	18 (column 11).
(2) Debenture Stock	33	41 (column 15).
(3) Debentures	8	
Advances.		
(4) Permanent	7·5	2·5 (column 19).
(5) Other	32	2·0 (columns 16 and 21).
(6) Other Government capital, &c.	147·2	204 (columns 7, 8, 9).
	252 in round figures.	267 in round figures.

Of the above entries, under Item (1) Appendix 5 excludes £6·5 millions deferred annuity in the case of the East Indian Railway, which is presumably included in the entry against the East Indian Railway in column 7 of Appendix 5.

Items (2) and (3) correspond.

Under Item (4), Appendix 5 includes only the advance to the Great Indian Peninsula Railway, excluding £5 millions in the case of the Bengal-Nagpur Railway and Madras and Southern Mahratta Railway, which, as also the bulk of the other advances (Item (5)), are presumably included in its column 8, State outlay. *See* for example footnote to column 8 against the Bengal-Nagpur Railway, which specifically says that the figure there given "includes *Overdrafts and Advances*, which are now treated in the accounts as State outlay." It is not clear why a differentiation of treatment is made of the relatively small figures for overdrafts in column 16 and advances in column 18, and there seems no particular reason for this. We have thus in the case of Appendix 5 to take together the figures in columns 7, 8, and 9 to obtain a comparison with those given in my statement of State outlay, *plus* certain advances, &c. The total of these columns in Appendix 5, namely, about 204 millions, includes the following items in my statement (the reference numbers are those taken from the table immediately above).

	£ millions.	
(1) East Indian Railway deferred annuity	6·5	
(4) Permanent advances to Bengal-Nagpur Railway and Madras and Southern Mahratta Railway	5·0	
(5) Other overdrafts and advances	30·0	(32 *less* 2)
(6) Other Government capital	147·2	
(*a*) Above half new outlay in 1920–21	3·5	
(*b*) Above premium on purchase, *less* annuity payments	10·2	
	202 (in round figures).	

The small difference remaining is due to the cause already mentioned. I cannot, it is true, offer any explanation of the particular form of grouping adopted in Appendix 5 of the Railway Report, and, so far as can be judged, its classification of overdrafts and advances is purely arbitrary, viz., some of them are shown in separate columns, some under column 8, State outlay, with a footnote, and some without a footnote. But I hope that the above reconciliation is sufficiently close to give Mr. Tuke what he requires. I am afraid that it would not be possible for me to get any nearer without going into very intricate and elaborate details, which it would take a good deal of time and labour to get out, and which presumably Mr. Tuke will not want.

[1] It is, I believe, partly covered by the item of £1·1 millions in column 17 of Appendix 5, which is not deducted in arriving at the total in column 22 of that Appendix, though the heading of the latter column might be understood to imply that the deduction had been made.

SIXTIETH DAY. (LONDON.)

Monday, 23rd May 1921.

PRESENT:

SIR WILLIAM M. ACWORTH (*Chairman*).

SIR A. R. ANDERSON, KT., C.I.E., C.B.E.
SIR H. P. BURT, K.C.I.E., C.B.E.
SIR G. C. GODFREY.
MR. E. H. HILEY, C.B.E.
SIR H. LEDGARD.
SIR R. N. MOOKERJEE, K.C.I.E.
MR. PURSHOTAMDAS THAKURDAS, C.I.E., M.B.E.
THE HON. MR. V. S. SRINIVASA SASTRI.
MR. J. TUKE.

MR. T. RYAN, C.I.E. (*Secretary*).
MR. E. R. POLE (*Assistant Secretary*).

MR. HARTLEY WITHERS called and examined.

7181. (*Chairman.*) You are, as we know, Editor of the *Economist*?—Yes.

7182. I believe I am correct in saying that before you occupied that position you were for some time Assistant Financial Editor of the *Times*?—I was City Editor of the *Times* for some years.

7183. I remember that during one period of the war you occupied the temporary position of Financial Adviser to the Treasury?—That is so.

7184. So that you have been for a good many years in close touch with the city?—Yes, since 1890 or 1891.

7185. Since you left Oxford, in fact?—Yes, as a journalist or in other capacities I have been in close touch with the city all the time.

7186. We want you to be kind enough to give us an impression, so to speak, derived from a long experience, on the question of the interest that the city takes in Indian finance, and especially Indian railway finance. If I may explain what I mean, I see in the *Economist* week by week an article on city doings; one sees that there has been a good deal of business done in this, that and the other class of securities?—Yes, we have a weekly review of the stock markets.

7187. I did not remember for the moment what you called it. Do you often have anything there about India?—Very seldom.

7188. Can you tell us why?—India has been chiefly an investment market. As investments Indian securities are of very great importance. They are largely held by trustees, and the Indian railway debentures, those "floaters" that the Indian railway companies used to issue, were largely held by the professional dealers in money.

7189. You are speaking of debentures which are of short currency, as distinct from debenture stock which is permanent?—Yes. Those short-dated floaters were naturally a very convenient holding for people who wanted to have their money in something which they knew to be easily realisable. The short date makes a great difference to a market in the security. The securities which interest the public and the city are, of course, the speculative securities, and the market for Indian securities has suffered to a certain extent from being too respectable. As investments the Indian Government and railway stocks were very comfortable, but the markets which interest people are those which jump about—that is what it comes to—and also those in which the public gets what it calls a run for its money. The Indian railways have been financed in such a way that the Government always retained a considerable share of the profits, or very nearly always. The public was not interested by the fluctuations in the fortunes of the companies, not as much interested, for instance, as it has been in the railways of America or Canada or of Argentina. The Australian railways, of course, are never heard of at all, because there are not any railway securities that are dealt in. The Government borrows the money and puts it into the railways; there are thus created Australian Government securities which are among the gilt-edged variety and which consequently do not interest the speculator or the man who wants to have a fair run for his money as a speculative investment. That is, I think, the chief reason why one never hears of Indian railways as an interesting item in the day's history. They do not fluctuate, and there is no public interest in them; there is little market in them. One never heard of Indian railways ever being carried over from one account to the other in the old days when that system was in vogue, whereas in American railroads there was a huge account, and in Canadian Pacific, which were dealt in with them, there was also a huge account. In the Grand Trunk market there was a very big speculative account, and in the Argentine railways to a certain extent the same thing, though not certainly as free, because the Argentine railways were in the old days rather steadier than either the American or the Canadian. In America you used to get receiverships and all kinds of wickedness, and Canadian railway finance you know a great deal more about than I do; it more or less has a past. Whether it is desirable that India should get a market in its railway securities by having a future of that same kind I leave to the Committee, but there is no doubt that to get public interest in a market you must have fluctuations. You must have ups and downs; you must have an arrangement by which the public gets a real chance of making money out of the market or as investments out of the securities. I think that is really the reason why one has heard so little of Indian railways in the past.

7190. I follow very much what you say so far as the Canadian and the United States railways are concerned; but taking Argentina, the Great Southern and the Central and so on were most respectable, steady-going concerns from year to year, were they not?—Quite so, but they had very great seasonal fluctuations. They had weather and they had locusts. If interest in the market were dull, it was always

very easy to stimulate it by means of a telegram about locusts, because locusts came every year.

7191. So do monsoons in India?—Yes, monsoons occur in India. If you had the same public that you had in Argentina, you would, I think, have had a considerable amount of interest in speculation at the time of the monsoons.

7192. In India, as you understand, all these companies had a fixed guarantee?—Quite.

7193. They only depend on weather, and so on, for a margin—it may be big or it may be small—but they had a certainty. I suppose that very much tended to steady them, because it made them trustee securities?—Quite. You see the same principle coming in in foreign Government securities. The Argentine Government securities used to have a considerable public interest in them because they were speculative—Egyptian Government securities likewise at the time of the Mahdi revolt. Brazilian Government securities, at one time, were quite speculative. It is, I think, true that directly you get a security too stable and the public not making anything out of it, you cannot get public interest in it. It was the same thing in home rails. There used to be a most interesting market in Dover A and Brighton A and Little Chats., and things like that which were gambling counters. In London and North Westerns there was always an account open, but there was not the same speculative interest in it.

7194. That is, so to speak, from the public point of view. There is another point of view, which is what may be called the professional city point of view. Were the Argentine issues underwritten as a rule; was there a turn for the market in them; that is the point I am at?—My recollection is that they were underwritten, but I should say, though I do not know, that most probably you would find that the dealers in the market were fed in the same way as the dealers in the railway market were fed by the home railway companies, which used to make issues of ordinary stocks simply through the dealers.

7195. The point I want to get at is this. Was there a greater inducement to the class of dealers, jobbers or brokers, as the case may be, to deal in Argentina, which is perhaps the best comparison, than there was to deal in England?—Do you mean as supplied by the people responsible for issuing securities?

7196. What I mean is this. Was there a satisfactory commission on the flotation of an issue and that kind of thing? Was there any difference in that respect?—Not that I have ever heard of, but on that point I should think your technical witnesses can tell you much better than I can.

7197. We have had evidence from one gentleman, who I think was the secretary of an Argentina railway company and who told us that, as far as he knew, there were only three jobbers who dealt in Indian securities, and there were certainly nine, at any rate, who dealt in Argentina; that is the point I am on?—Whether that was owing to the greater business on the part of the public, or because they were more judiciously fed by those responsible for the securities, I am afraid I cannot tell you.

7198. Turning to another point, you have been good enough to give us a table of the actual amount of money raised in London over a series of years for Canadian railways and Argentine railways?—Yes.

7199. You may remember that the Mackay Committee sat at the India Office in 1907 and reported in 1908. Taking first the Canadian railways, if you look at the figures in your table you will find that the Canadian railways raised over 13,000,000*l.* in 1908, 8,000,000*l.* in 1909, £6½ million in 1910, £19½ million in 1911, 8,000,000*l.* in 1912, £9½ million in 1913, and £18½ million in 1914. The Argentine railways had been raising 11,000,000*l.* each year before the Mackay Committee sat. In the year the Committee sat they raised nearly 10,000,000*l.*, and in the following years they raised respectively 13,000,000*l.*, 12,000,000*l.*, 12,000,000*l.*, 10,000,000*l.*, 9,000,000*l.*, 6,000,000*l.*, 9,000,000*l.*, and so on. When that was happening in those two countries, Lord Rothschild and Mr. Daniells of Mullins and Marshall told the Mackay Committee that they did not think they could raise more than 9,000,000*l.* for India. Do you understand the reason for that?—I can only suppose that it is owing to India having adopted the wrong system of getting money out of the British public. It seems to me there is no reason why Canada and Argentina should be able to get any more money out of the British public than India—in fact, rather otherwise. India has always been regarded by the British public as a place where there is a great deal of wealth and a great deal of promise, and in which it is very much interested by means of the Imperial connection. Argentina has no connection of that kind at all, and Canada is much more modern. India takes one back to the time of Burke and so on, as we all remember. I should have thought that India ought to be a name to conjure with in the Stock Exchange, if proper use were made of that sort of glamour which exists in the mind of the ordinary Englishman on the subject of India. So far as the facts of the case are concerned, you have in India an enormous population, not rich per head, but the possibilities in India should surely be very great if they were properly worked and if there were real co-operation among all the parties to the necessary arrangements.

7200. Investors had the guarantee of the Indian Government, and that Government before the war had no debt practically except debt that was actually earning much more than it was costing?—Yes.

7201. It seems a strong position?—Immensely strong.

7202. You have referred to the wrong system adopted by the Indian Government. Will you say what you think would have been or would be the right policy?—That is much more difficult, Sir William.

7203. We want your help in regard to the matter?—It is easy to say that there must have been something wrong and that it ought to have been easy to get the money. I should have thought the line of enquiry would be to see what is the difference between the methods employed by the three countries that have been mentioned. The obvious difference is that in Argentina and in Canada the railways were owned by the stockholders, who were consequently interested and who got all the profit that was to be had after the Governments had taken their due share—or, as the shareholders sometimes thought, their undue share—in taxation. The Argentine Government must have done extremely well out of the railway companies by leaving them in private hands. In Canada much of what the public got from the Grand Trunk was loss, but even there there were speculative debenture stocks which made an

appeal to a man who liked to feel that he had an investment and at the same time it had a spice of speculation. That is, I think, the psychology of the investor. He always likes to believe that he is an investor, though he is really a speculator at the same time. If you issue securities with a Government guarantee and either no share in surplus profit at all or very little, you do not attract your speculative investor, and I think he is the person whom you want to get. That seems to me to be clear from the different results obtained by these three countries by these two different methods, because, as you say, the advantages from India's point of view seem to be very much on the side of India. I cannot suggest anything else except that if you really want an interested railway market in the city you have got to start a quite new system of financing Indian railways. Of course, it may now be too late, but I do not see why it should be. The opportunities for railway development in India you know much more about than I do. I should have thought they are very great, and that if railway companies could be formed on the lines of the Central Argentine or the Canadian Pacific there ought to be a considerable public for them.

7204. That is to say, if the existing guaranteed railways—with the details of which I will not trouble you—which are almost creatures of the State, were very much freer, with the State as a partner and that kind of thing, you think then they would have no difficulty in raising money, with a prospect in front of them?—I should think not.

7205. Turning it the other way round, supposing the Government does it direct, do you think the Government would have had any difficulty if they had put their case in this way: we have no debt except on railways, and they are abundantly profitable, and we want the money to go on keeping them profitable?—You mean to say that the Indian Government could itself have borrowed much more than it did if it had put its position more clearly before investors?

7206. That is my point—if it had appealed on a prospectus, so to speak?—I think it certainly could have borrowed a great deal more than it did, but of course there is rather a limited market for strict trustee securities, and these appeals from Governments in the years before the war were very general. There was a good deal of competition with Governments like Argentina and Brazil, which had considerable prospects, and in which there was always a very well organised market outside the trustee circle and rather speculative, but consequently rather more interesting because there was a higher rate of interest attached to it.

7207. The speculative money—not the trustee money?—Yes.

7208. Australia, as you have said, borrowed direct and spent it on its railways?—Yes.

7209. We have not any figures showing how much Australasia as a whole did borrow, but clearly the amount would be very large?—Certainly.

7210. Did the fact which one often sees stated in the utterances of public men in Australia that the Australasian Government loans were to a very considerable extent for productive purposes, help them to get the money, or was it merely lent on the credits of the respective Governments?—I should say almost entirely on the credits of the respective Governments, and the fact that they are trustee securities.

7211. You do not think the fact that it was being spent on development really helped the sale of the securities?—Of course, it must have among reasonable investors, there is no question about that; but investors are extraordinarily happy-go-lucky and rule-of-thumb. If they are told a thing is a trustee security, that is good enough for them, but of course it must have had some effect.

7212. It must have been a factor in contrast with Brazil or some countries of that kind where you never knew where the money went?—Yes.

7213. There is one other point I want to put to you. You know, of course, that the Indian Government issued £7½ million the other day at 7 per cent., and the money was subscribed in a few hours; the lists were closed?—Yes.

7214. Can you tell us anything about the atmosphere of that? Clearly that loan went very easily?—Yes.

7215. Was that trustee money?—I am afraid I cannot tell you about that. The fact is that there have been such a lot of things for an unfortunate financial journalist to look after in recent weeks, as you know as well as I do, that I am afraid I cannot tell you anything about that particular point. I should think the Indian railway dealers and stockbrokers, whom no doubt you are asking about these things, will be able to tell you. I should be inclined to say that it would be practically entirely trustee money.

7216. And you regard the fact that it promptly went to a premium as evidence that there was more money available?—More money available for India?

7217. If the loan had been for a bigger amount, they would still have got the money? I am asking this question because it is the sort of thing that I thought you might be familiar with. If an issue is immediately over-subscribed and goes to a substantial premium, does that imply that more could have been got?—Yes.

7218. Does it imply a special effort?—I think it may imply a special effort, but it surely shows that the special effort was very successful, and that they might have got more. But it is very hard to say where the marginal thousand or million comes in.

7219. Is there anything more you have in your mind that you wish to say?—No.

7220. (*Mr. Purshotamdas.*) You mentioned something about speculative debentures?—Did I use that term?

(*Chairman.*) You were referring to the Grand Trunk Railway at the time.

7221. (*Mr. Purshotamdas.*) Can you tell us what is speculative in that debenture?—It was only speculative because the dividend on the common stock had never been paid, and because the dividends on the preference stocks that came behind the debenture stocks were, to a certain extent, doubtful. Consequently, the interest on the debenture stocks was not nearly as well secured as in the case of the Indian railways, and the investor got a very high return by investing in them.

7222. Because the preference stock and the ordinary stock had got nothing until the debentures were floated. Did that give any special value to the debentures?—No. I am afraid I have put the matter wrongly.

7223. It is quite possible I may not have understood you?—It was not that they had got nothing until these debenture stocks were floated. I imagine that these debenture stocks were floated when the company was first brought out, but in my recollection there was much more interest in the debenture stocks of the Trunk

Railway, because they were more or less speculative, as the prospects of the company were quite uncertain.

7224. Therefore the speculative element was due to the risk ?—Yes.

7225. They had gone to a discount ?—Yes.

7226. It was a question of touching the bottom ?—It was a question of buying a thing which was called a debenture stock, and that gave it a certain respectability in the eyes of investors who do not look very closely into things. The rate of interest was 4 per cent., and the price went to about 90 in 1913. People thought that the Grand Trunk Company was going to pull round, and that there was a great future before it. Anybody who bought these debentures might have seen them go up to 110 or so when the prosperity which the Grand Trunk Company hoped to secure was once brought about. The consequence was that these Grank Trunk stocks had a good deal of possibility about them.

7227. The debenture by itself had no particular speculative "catch" about it ; it was because it had gone to a discount, and there was some sort of prospect of the company improving, that there was a speculative interest about it ?—Yes.

7228. That is not the sort of thing you would recommend in connection with any railway organisation nowadays, is it ?—No ; I should not suggest that railways would be likely to be in default.

7229. Just one more point. With regard to the Indian loan that was floated at 7 per cent., do you not think it was popular because of the options that were given for conversion at various stages during the next five or seven years ?—Yes, certainly that was part of the attraction.

7230. And perhaps the most valuable part of it ?—Perhaps.

7231. Since then I dare say you have seen the prospectus of the Norwegian Government loan, issued at 6 per cent. at 88*l.* odd, giving a return of £6 16 per cent. ?—Yes.

7232. In that case the options are all with the borrower, and there are none with the lenders ?—Quite.

7233. And the rate of interest is not as high as in the case of the Government of India loan ?—That is so.

7234. So that if the Government of India loan went well, it was because very full terms were given ?—Yes.

7235. (*Mr. Hiley.*) The Norwegian loan went very well too ?—Yes.

(*Mr. Purshotamdas.*) The Norwegian loan gives a return of £6 16 per cent. ; no options are given to the lenders ; all the options are with the Government, the borrower.

7236. (*Mr. Hiley.*) I think that loan was closed quite early, was not it ?—Yes, that was closed in quite a few hours.

7237. (*Mr. Purshotamdas.*) If the Norwegian loan was a success, no wonder then the Indian one was ?—My recollection of the Norwegian loan is that it was for a comparatively short period. It was a 40-year loan.

7238. The Indian loan is for 10 years ?—The Norwegian loan is for 40 years ; the issue price was 88, and the loan is to be redeemed at par. That is the sort of thing that people like, because they think they will escape income tax.

7239. Putting it all together, it brings in a return of £6 16 per cent. ?—Yes, but it is only on the 6 per cent. that you pay income tax, and you escape on the 12*l.* capital increase during the course of the loan.

7240. You pay at the end when you get the capital ; they do not let you off then ?—As thing are at present they let you off.

7241. That is a loophole they have left at present ; they may close it at the end of 40 years ?—They may.

7242. (*Mr. Tuke.*) You rightly pointed out, I think, that the railways in Canada until quite recently and the Argentine railways really belong to the companies themselves, but the railways in Australia belong to the Government, which is practically the same position regarding the big lines in India ?—Yes.

7243. The money required for the railways in Australia has been borrowed by the Government, but if you are going to increase the speculative interest in Indian railways you practically require to form new companies ?—Is that quite so ?

7244. If they belong to the State, the State would have to divest itself of a portion of its interest, would it not, if you are going to have joint partners ?—Yes, I suppose that is so. I was wondering whether ingenuity could not produce a security, even in connection with a State-owned railway, which would give the public something ; but it would be very difficult.

7245. You see the difficulty there ?—Quite.

7246. That is just the point where the difficulty of dealing with the Indian railways comes in, the question of reorganising the system ?—Do you suggest that I should find a way out of it ?

7247. That is one of the difficulties we are up against ; it alters the position very materially, to my mind ?—Do you mean to say that you practically cannot get out of the present system, by which the Indian railways are too respectable for public interest ?

7248. That is the position in which we find them. It is not as though we are starting a new system. We find a certain system in operation ?—I should have thought that with ingenuity such as the India Office and this Committee have at their disposal, it ought to be possible to provide new securities which would give the public at any rate a much larger share in the fortunes of the railways.

7249. If you make them shareholders ?—Yes.

7250. If the Indian Government is going to give up its share, would it not require to be paid for it ?—If the Indian Government wants to attract a different kind of money from London, it ought to be able to issue securities which would prove attractive to that kind of money, without asking to be paid anything for so doing. It is the shareholder who has to be attracted by the prospect of payment. I think it ought to be possible to do it.

7251. (*Mr. Hiley.*) Have you in mind the Government issuing a sort of profit-sharing security ?—Yes, that is one obvious way of doing it. Is not there some analogy we can find, something like the participating preference securities of rubber companies, or some such issue on those lines, more or less ?

7252. (*Chairman.*) I believe some company has recently issued a profit-sharing debenture ?—If they have not, they are pretty sure to soon.

7253. (*Sir Henry Burt.*) I rather gathered that, in your view, a fixed guarantee with no speculative inducement must always tend to limit the market ?—Yes.

7254. With reference to Mr. Tuke's questions to you, the existing companies have a small capital in the undertaking; sometimes only one-twentieth, but still they have some capital in the undertaking?—Yes.

7255. You would see no objection to that capital being increased?—No; I think that would be the way to do it.

7256. On the same footing that it is now, with profit-sharing?—Yes.

7257. The Government of India still holding the property as its own?—Yes.

7258. That is the position at present?—Quite.

7259. The money is, in fact, lent to the Government of India?—Yes.

7260. (*Chairman.*) Would it be possible for you to get out for us, on the same lines as the table you have already sent in, another table relating to Australasia as a whole?—Certainly.[1]

7261. If you can do that for us without going to a great deal of trouble, we shall be exceedingly obliged to you?—I will do that.

(*Chairman.*) We are very grateful to you. Thank you very much for your evidence.

The witness withdrew.

(Adjourned for a short time.)

The Hon. C. W. BIDDULPH called and examined.

7262. (*Chairman.*) We are much obliged to you for coming. May we have on the notes the name of your firm?—Gordon, Askew and Biddulph.

7263. You are jobbers, are you not?—Yes.

7264. Do you specialise in any particular market?—The War Loan, the Colonial and the Indian railway markets.

7265. You have not a written statement, I take it?—No. I have here a few lists which I can give you if you care to have them.

7266. I think you know what we want. There is no doubt that a great deal of money has been wanted in the past which has not been found, and a great deal of money is wanted at present, for Indian railways. What we want you to tell us is why it was not found in the past, and also with regard to finding it in the present. First of all will you tell us about the pre-war circumstances?—Indian railways have gradually become rather unpopular for several reasons.

7267. You are speaking of pre-war?—Yes. One reason was the Great Indian Peninsula case in 1900—the unfavourable terms on which the annuity was based.

7268. That was the case where there was a law suit and where the Secretary of State obtained a verdict to the effect that the contract meant something different from what people believed it meant. Is not that roughly the story?—Yes, that was roughly it. It was a complicated case. The annuity was very unfavourable, and the interpretation of the annuity was unfavourable.

7269. Did you ever understand the contracts yourselves?—Some of them.

7270. Can you mention those which you did understand?—The Bengal North-Western—that is not a Government line—the East Indian to a certain extent, the Great Indian Peninsula, the Bengal-Nagpur and the South Indian.

7271. Can you carry in your head the difference between the A, B, C and D Indian annuities?—Yes, I think so, as far as they concern the investor. As far as we are concerned I understand them, I think.

7272. You agree, I take it, that they are complicated; they are rather a special study?—Undoubtedly. That is one of the reasons which make Indian railways a little unpopular. They are so complicated that the ordinary investor will not trouble to listen to the difference between a B and C annuity or an East Indian D annuity, especially the latter.

7273. What about the ordinary broker? Does the same thing apply to him? I suppose that if he recommends an English debenture or an Argentine debenture or an American bond he knows what he is talking about and can explain it without much trouble?—Some of them know what they are talking about. Some of them make a study of it and they know pretty well all about it, but a great many of them will not take the trouble to explain it to their clients. They say, "This is too complicated and I would rather you had something more straightforward."

7274. Are there many jobbers who make a speciality of Indian railways?—No, there are only two of us; there is only one other firm besides my own.

7275. How many jobbers do you suppose there are in the Argentine market?—I have not been there for some time, but I should think there are half a dozen or perhaps ten. [P.S.—The witness subsequently wrote that he had ascertained that there are six firms.]

7276. These complications with regard to Indian railways do tend to restrict the buying by and selling to the public?—Yes, but if there was more business there would be more jobbers dealing in Indian railway stocks. There were three jobbers, I think, about two years ago, and then one dropped out; he found he could not do any good at it and he went to another market.

7277. Then it is the fact that the number of people who know the business is small?—Yes.

7278. Now I will come to the brokers. Do the big investment firms understand the A, B, C and D annuities?—Not without being coached in them. A few of them come and ask us the details of an investment, and then they very soon pick it up.

7279. There again to some extent that tends to restriction. It is more natural for a man to recommend a North-Western debenture, which he does understand, than to recommend an East Indian annuity which he does not understand; it saves trouble?—Yes.

7280. Now I come to the investing public. We will imagine that they look up the Stock Exchange Year Book and see what is said about A, B and C Indian annuities. Is it easy and intelligible?—No. I think very few of them study it. There are just a few people who follow it very closely indeed.

7281. Supposing I went to the Stock Exchange Year Book for the first time; do you think I should be able to satisfy myself precisely what the security was and what its conditions were?—If you were accustomed to studying that sort of thing, you might.

7282. You will not put it higher than "might"? I will frankly say that I have on

[1] Reproduced in Chapter II. of Committee's Report.

several occasions as a trustee looked down the trustee list and I have seen that some of these appear to pay a somewhat higher rate of interest, and I have then gone to the Stock Exchange Year Book and found out that I could not understand them, and I have never bought any. That has been my own personal experience. Do you think that would fairly represent the experience of the more or less intelligent investor?—I should think so—those who would study the book—and they would not be very many.

7283. That presupposes a certain amount of intelligence?—Yes.

7284. What happened in fact when new money was raised—I am still asking you about pre-war—either directly by Government loan or by debentures or by debenture stock, or, in an earlier day, by ordinary stock of the companies? How was it got out?—Generally, Mullins and Marshall did the Government loan and Indian railways. The ones I remember best are the East Indian debenture stocks. They were generally at fixed prices according to the rate of money of the day, but occasionally I think in some of them they were by tender price. Most of them, however, were at fixed rates, and they were underwritten generally—1 per cent. for underwriting.

7285. They normally were underwritten?—They were all underwritten, yes, and as a rule I think they went. With some exceptions they were all taken up by the public.

7286. Would it be accurate to say that the price was cut fine?—It was generally about the right price.

7287. Mr. Withers said—I forget what his technical phrase was—that there was nothing in it for the subscribers?—No, there was no big premium afterwards.

7288. That again of course restricts it to investors who, putting in their own money, are willing to leave it there?—Yes.

7289. There would be no interest to people to take up a loan with the knowledge that they could probably make a turn of it?—Only to a few of what we call "stags." In some of the loans, a little bit more favourable than these perhaps, there were a few people who applied in order to sell at a premium, but not to any great extent.

7290. Did they get out satisfactorily?—I should think so. There were not many which went to a discount, anyhow.

7291. I think you said none of them went to a premium worth talking about?—No.

7292. It was placed in fact then at the price at which you could get that amount of money?—Yes, that was it.

7293. Supposing the price had been somewhat more favourable and had left a turn for somebody; would you have been able then—I am talking of pre-war still—to get considerably more money?—No, because the thing is that the trustees, who are the chief investors, have not got the money ready. The stock has to be underwritten because the trustees have money to invest but they have never got it ready at the actual moment. They have either to sell something or money has not come in or they are waiting for somebody to die or something of that sort.

7294. The loans were not restricted to trustees?—No.

7295. Is it true that practically nobody but trustees invests in these loans?—Very few people, I should think, invest in them except trustees.

7296. Supposing it had been on a little better terms, would you have got any more money?—Yes, if the yield had been better you would have got other people's money besides trustees' money.

7297. Either the yield or the price?—One is dependent on the other.

7298. You think you could have got more money?—If the terms had been more favourable?

7299. Yes?—Yes.

7300. I wonder if you could answer this question. Supposing you can get *x* millions for 3½ per cent., how much would you get by putting it up to 3¾ per cent.?—Supposing the issue was at par?

7301. Yes, assuming it is issued to pay 3½ per cent.?—At the moment you would not get anything at all.

7302. I am asking strictly pre-war?—As long as it was a trustee stock it would be based on the yield of the day of trustee stocks, that is to say, if trustee stocks were yielding 3½ per cent.——

7303. Then you could issue trustee stocks enough to take up the trustees' floating balances at 3½ per cent.?—Yes.

7304. But supposing you went to 3¾ per cent., would that bring in a lot of fresh money?—It would bring in a certain amount of additional money, but not a great amount, for the reason I have already stated, that trustees have not got the money ready.

7305. Leave out the word "trustee." Supposing you went to 3¾ per cent., would you attract non-trustee money?—No. An extra ¼ per cent. would not do it.

7306. What would? What difference would you have to make if you wanted to get a lot?—Nowadays?

7307. No, pre-war. Carry your mind back 10 years?—I suppose the ordinary stocks of Indian railways were paying then round about 6 per cent.

7308. I am assuming it was a debenture or Indian Government stock?—Guaranteed stock by the Government?

7309. Yes, or that in some shape or form it was a secure 3½ per cent. and you put up the security to 3¾ per cent?—It would bring in a certain amount of additional money, nothing to any great extent, I think.

7310. What would happen if you went to 4 per cent.?—Pre-war you would have brought in a good bit of money then.

7311. Two or three times more, or something of that kind?—Yes.

7312. We had evidence about the very large amounts that were obtained for Argentina and for Canada and so on. Of course a great deal of that was ordinary stock, but there was also a great deal which was bonds and debentures. Why was there a so much freer market in those stocks than in Indians?—I suppose they were at a considerably higher yield.

7313. Am not I right in saying that the Great Southern debentures were round about 4 per cent. as against 3¾ or something of that kind? Was it purely the difference in rate or was it partly the freedom of dealing or keeping the thing before the public?—I should think it was partly the freedom of the market.

7314. Should we represent you accurately if we said that if there had been more publicity Indian stocks would have gone better?—I can hardly say without testing it. I rather doubt

whether you would have got a great deal more money.

7315. But you think you would have got some ?—You might have.

7316. Then you think the difference in popularity of Canadian bonds or Argentina debentures and Indian railway stock was very largely a question of price ?—Yes.

7317. Was there then any hesitation about investing in India from the point of view that it was not a white man's country, broadly ?—Yes. There is always that feeling amongst some people. They go back to the Mutiny when they come to invest their money. There is a certain prejudice against Indian securities amongst a certain set of people, and that of course has increased very much with the trouble during the last few years.

7318. Do you think that has a serious effect on London investment ?—Undoubtedly, on Indian investments it has.

7319. Would that apply more or less to Government stocks as compared with railway stocks ?—It would apply much less to the Government stocks.

7320. In other words, if India wants to sell, that is the thing that sells ?—Yes.

7321. Will you tell us about the loan the other day ? What was the city feeling about that ? Did it do better than it was expected to do or as well as it was expected to do ? You people know when you see a prospectus what the public will say about it ?—The Indian 7½ million loan the other day went very well indeed. I think it was considered rather a cheap loan. It has gone now to 4 premium.

7322. (*Mr. Hiley.*) It was a cheap loan with good interest, you mean ?—A high yield. It has the highest yield of any of the Indian stocks—much higher than India 3's. It had the effect of putting the Indian Government stocks up.

7323. (*Chairman.*) It was a proof of confidence in India ?—A successful loan like that draws attention to Indian stocks.

7324. That loan was closed within a few hours, was it not ?—It was closed the same day. It was closed at 3 o'clock in the afternoon.

7325. Does the Stock Exchange close at 3 or 4 o'clock now ?—At 3 o'clock.

7326. That means, I assume, that they had got all the money and something more ?—Yes.

7327. May we assume that if the loan had been for a good deal more money it would have been got ?—I should think it would have been got.

7328. I gather your feeling is that at a price they have been able to get with ease a considerable sum, and in your view they could have got a good deal more ?—Yes.

7329. But you also say you think it would have to be a Government security ?—Yes.

7330. We have had a good deal of evidence in India—some of it English and some of it Indian evidence, mostly English—in favour of rupee companies in India; either a transfer of an existing English railway company to an Indian company or a sort of dual company, with one half of its capital in India and the other half in England. Would either of those arrangements in your view be able to get money in London ? Would you get money invested in rupee capital in any shape or form ?—I do not think so, no. We have had one or two rupee loans—not Government securities—in our market and they have never been at all successful. I do not think the public would look at a rupee loan, unless it was very exceptional.

7331. Were those cases where you got your dividend in rupees and brought it home at your own risk, or was the exchange taken for purposes of dividend at a fixed amount ?—The rupee was fixed at 1*s.* 4*d.*

7332. But in spite of that it did not go ?—No.

7333. Do you think there is any prospect of getting any money in London that way ?—I should say not. I should say the rupee loan would not be popular here.

7334. Not loan necessarily, but an investment in a company, in stock that would earn a dividend ?—Dependent on the exchange, would it be ?

7335. I suppose it would be—either fix the rupee or leave people the pleasure of speculating about it ?—I have had no experience of that, but I should think not.

7336. You would not recommend it as a convenient way of raising money ?—I should not think it would be a popular way with the English investor.

7337. I do not think anybody has told us it would be, but I just wanted to get your view. That is really all I want to ask you. Do you wish to add anything on any of my questions ?—No, except with regard to the yield of an Indian railway loan now. The yield of the Indian railway debenture stocks is about 6*l.* 10*s.* now. The stocks we are offering always stand lower than the Indian Government stocks, although there is no reason why they should. They are not quite such a free market. The Indian 3½ Government loan stands at about 57, and the Indian 3½ railway debentures, which are guaranteed, now stand at about 55. Sometimes there is a bigger difference than that.

7338. That difference is due partly to people thinking that they want the unadulterated article instead of the electro-plated article, so to speak, and partly to the fact that there is a smaller market ?—Yes, and it is registered stock. It is not transferred at the Bank of England like Indian Government stocks.

7339. Is that an advantage or a disadvantage ?—They like it transferred at the Bank of England, where you can deal up to a pennyworth of stock. They can invest up to a pennyworth as a rule in the Indian Government stocks.

7340. On that I would like to ask you this. As you know, practically the debentures are issued at the request, as I will put it, of the Secretary of State. The company cannot do anything on its own account. In other words, the Secretary of State is borrowing through an intermediary. Does he gain anything ? He loses something in interest—some trifle—but does he gain anything in tapping a different class of investor ?—No. Some Indian railways are more popular than others; the better known names are more popular. For instance, you would find it more difficult to bring out a Bengal Dooars guaranteed stock than you would a Great Indian Peninsula.

7341. Is there any difference between East Indian and South Indian ?—Yes. The East Indian is more popular than the South Indian. It is a bigger line.

7342. And it is better known ?—Yes.

7343. You and I quite understand that there is no difference in risk between the two investments, because we know the security is the same, and we would save 2*l.*; but what, on the other hand, has the Secretary of State gained by giving us the 2*l.* ?—I do not think he gains anything, does he ?

7344. That is what I want to know. Does he gain anything ?—I should not think so.

7345. You do not think he attracts a new lot of investors?—No. You would get a bigger lot of investors for a Government loan than you would for a railway loan.

7346. It has been put to us by some people that, if the Secretary of State issued a direct loan at a somewhat lower price than he had issued one at five years previously he would be damaging his credit, but that on the other hand if he issued an East Indian debenture he would not damage the credit of India?—Every loan would have to have a yield a little better than the existing one. That applies both to a Government loan and to a railway loan.

7347. Do you follow why, market price being what it is, it should damage the credit of the Secretary of State to issue a direct loan at 57 more than it would be damaged by the issue of a loan guaranteed by him at 55?—I should not think it would make any difference.

7348. (*Sir Henry Ledgard.*) I should like to ask your opinion regarding two distinct and separate forms of loan. We will suppose, for instance, that at the present time the price of money for trustee loans is 5 per cent. We will take that as a basis. The Government has before it two schemes, one to issue a certain amount at 5 per cent., by which, evidently, the Secretary of State will appeal to the trustee lenders, and which may not offer a sufficiently high return to appeal to the more speculative markets. If, on the other hand, he decides it is better to appeal to these more speculative markets, and says: "I will issue a guaranteed loan at 4 per "cent. instead of 5 per cent., and will give the "lenders the opportunity of sharing to the "extent of one-half the profits that are made in "the company over and above the 4 per cent.," the companies may be making 7 per cent., 8 per cent., 9 per cent., or 10 per cent. The speculative opportunities would be that instead of getting only 4 per cent., or even the 5 per cent., they might get 6 per cent. or 7 per cent. or 7½ per cent. Which of those two forms of loan would appeal to the bigger market: would there be a larger number of people interested in the trustee loan or in the one of a somewhat speculative nature?—At the moment, undoubtedly, more would be interested in the trustee loan. We have several of the other sort—the Bengal-Nagpur, which is guaranteed 3½ per cent., plus share of surplus profit; the Madras and Southern Mahratta 3½ per cent., plus share; the South Indian and the Burma. In all those cases the yield of those stocks is from 8 per cent. to 9 per cent. at the moment, as against a yield on the trustee stocks of 6*l.* 5*s.* per cent. to 6*l.* 10*s.* per cent., and there is very little demand for those guaranteed stocks now.

7349. You use the word "now": does that mean at the present time, or generally?—At the present time. Sometimes it has been the other way about. There has been a demand for these guaranteed stocks yielding a high rare of interest.

7349a. Covering a period of 10 or 20 years, which has had the bigger market?—I think, on the whole, the trustee stock, fixed rate of interest.

7350. Yet I think you told the Chairman there is only a very limited market for those, and that no more could probably have been put on the market than have been put on?—Not to any great extent. I said they could not have got out much more stock at the same price.

7351. But with the speculative element in it of being able to get 1½ per cent. to 2 per cent. more than they would otherwise do, does that open up a new set of purchasers who would look for the change in the market and take advantage of any favourable conditions that might exist during the year?—It might, but it does not now. The additional rate does not attract people now.

7352. Now the conditions may be a little abnormal, but I am speaking generally. I want to take a more general view than "now." Now, we know, people are looking for something very secure?—It is most difficult to say what will happen, or what the feeling of people will be.

7353. What has happened? — They want security more than a high rate of income now—trustees do.

7354. I quite believe they do now, but has that been your experience in the past?—Not always. Sometimes there has been a bigger demand for these high yielding stocks which share in surplus profits than there has been for the fixed rate stocks. The Madras and Southern Mahratta, for example, is a particular instance. That is paying 9 per cent. at the moment, and the yield is about 9*l.* 12*s.*, and there is no demand for the stock, which is a trustee stock.

7355. I know that trustee stock at the present time is in greater demand?—That is a trustee stock. It is yielding about 9*l.* 12*s.* The Bengal Nagpur is yielding about 8*l.* 12*s.*

7356. (*Sir Arthur Anderson.*) Last year these stocks were quoted 110*l.*—112*l.*?—The Madras and Southern Mahratta stood at 110*l.*—112*l.*, yes.

7357. For about the same return as they are getting now?—Yes.

7358. (*Sir George Godfrey.*) When you say there is no demand for the stock, I suppose you mean there is no market for it?—Yes; you can deal in it.

7359. There are no sellers really, are there?—Yes; I should be very glad to sell some.

7360. I thought the amount was so small that perhaps there were not sellers. I thought the quantity of stock available was so small, and that probably they were so little known, that you had neither buyers nor sellers?—I have not got the Bengal Nagpur details with me, but we are offering 20,000*l.* of them now at 94. It is an 8 per cent. trustee stock at 94, and we are also offering 5,000*l.* or 10,000*l.* Madras and Southern Mahratta at 95 and South Indian at 95.

7361. Those are sellers?—We are offering the stock, yes.

7362. (*Chairman.*) Is the market all that way?—In those particular stocks it happens to be.

7363. Have you got any substantial amounts of the guaranteed debentures?—No, we are very short of the debenture stocks.

7364. But of these guaranteed ordinary stocks, have you got any railway in which you want to buy only?—No, none we are really very short of. We want to buy Burmas at the moment, but only to a comparatively small amount.

7365. (*Mr. Hiley.*) You are short in debenture stock?—Yes; there is a great demand for the debenture stock.

7366. (*Sir George Godfrey.*) About 1914, before the war, I was trying to buy, for a certain purpose, about 20,000*l.* worth of Bengal Nagpur railway stock at different times, and could not get them on the market. Occasionally a small lot would appear?—There was a pretty good demand at that time for those stocks.

7367. So that the condition now is a sort of after-war condition. It is not the normal position?—Yes, I think it is caused by the political trouble, probably. People like the guaranteed interest—a fixed interest rather than the uncertainty of the other.

(*Chairman.*) We are very much obliged to you for your evidence. Please do not think that because we have not asked you many questions we are not grateful. You have really told us just what we wanted to know, and we are very much obliged to you.

The witness withdrew.

SIXTY-FIRST DAY (LONDON).

Monday, 29th May 1921.

PRESENT:

SIR WILLIAM M. ACWORTH (*Chairman*).

SIR A. R. ANDERSON, KT., C.I.E., C.B.E.
SIR H. P. BURT, K.C.I.E., C.B.E.
SIR G. C. GODFREY.
MR. E. H. HILEY, C.B.E.
SIR H. LEDGARD.
SIR R. N. MOOKERJEE, K.C.I.E.
MR. PURSHOTAMDAS THAKURDAS, C.I.E., M.B.E.
MR. J. TUKE.

MR. T. RYAN, C.I.E. (*Secretary*).
MR. E. R. POLE (*Assistant Secretary*).

SIR CHARLES CAMPBELL MCLEOD called and examined.

7368. (*Chairman.*) I think you have spent most of your life in India?—Yes.

7369. What was the name of your firm?—McLeod & Co., Calcutta.

7370. I think you are now resident in England?—Yes.

7371. I believe at the present moment you are chairman of the Eastern Section of the London Chamber of Commerce?—That is so. May I make a very short statement before you proceed to ask your questions?

7372. Certainly?—Previous to the war I was in fairly close touch with what was going on in the railway world in India. The advent of the war and the work that I was doing elsewhere have made me feel rather rusty, and I therefore want to warn you that I may not be able to answer questions just as I could have done then. I would also like to say that in the second statement I handed in, I omitted to say that my remarks did not apply at all to State-managed strategic railways.

7373. You have started your memorandum of evidence by saying that you are not in favour of direct State management, except, as you have just said, for strategic railways?—That is correct.

7374. You give various reasons for that opinion. You say first of all that it removes the element of competition. Where is there competition in India at present?—There is a certain amount of competition. There is competition between the Great Indian Peninsula and the East Indian Railway.

7375. For traffic to Bombay and Calcutta respectively?—Cawnpore mostly.

7376. That is to say, for traffic carried in different directions?—That is so. I would add to competition, emulation.

7377. Assuming that the Great Indian Peninsular and the East Indian were both in the hands of the State, do not you think the respective agents would still be moved by what you have accurately called emulation?—I very much doubt it.

7378. You put that in your memorandum in another form. You say: "The State railway "loses the vital force which raises company-"managed lines from the dead level of State "management." So far as it is what we may call a general desire to do one's best, that applies to both?—Certainly. See Written Statement Nos. 85 and 85A, Vol. IV.

7379. So far as it is a desire to show that you are an efficient person in order to get on, it applies to both?—Yes, to a certain extent.

7380. Where does the precise difference come in?—I look upon it in this way. In company managed railways they are not tied down by any "red tapism," if I may so call it, to select their managers and their staff; and the railway being out for commercial purposes to make profits, they can afford to pay those men, so long as they get the right ones, any reasonable salary. I do not think the State can do that.

7381. We have just heard in the last few days of the agent of one of the big railways leaving because he was not paid a reasonable salary, which his directors desired to pay, but if they had done so they would have had to pay it out of the shareholders' pockets, because the State, which owned the line, refused to allow it. The State fixes the salary for the agent of the railway company, does it not?—That is so.

7382. How can the company pay higher then than the State?—Take, for instance, directors of companies; the State does not fix their remuneration.

7383. The State allows the company a certain amount for directors' fees. If the directors get any more, it comes out of the very small share of the shareholders in the total profits; the State will not pay its share?—Might I ask if the State would go as far as to regulate the salaries of directors absolutely?

7384. Not absolutely, but take the case of the East Indian. In the East Indian Railway the shareholders get 1 per cent. of the profits. If the shareholders put up the fees of the directors beyond what the Secretary of State is prepared to pay, the whole of the addition has to come out

of their 1/100 of the profits?—It might pay them to do so.

7385. I am only saying that that is the position?—Quite so.

7386. Were you talking of a company such as one is accustomed to in this country, say the London and North-Western Railway Company, where they pay the directors what they like, or were you talking of a company such as exists in India, where the Secretary of State or the Government of India interferes in fixing agents' salaries and everything else, because there is a difference?—Yes. Clearly, we are talking of Indian railways.

7387. Under those conditions can there really be a difference in salaries?—From what you say, there is not.

7388. Do you know of any case where an agent of a railway is paid out of the shareholders' pockets more than the Secretary of State is prepared to participate in?—No; I cannot answer that question now.

(*Sir Arthur Anderson.*) I think at the same time it must be accepted that the companies' lines pay their agents a higher salary than the State railways do.

(*Chairman.*) Do they in fact do so?

(*Sir Arthur Anderson.*) Yes. They have always been willing to take the lead.

(*Chairman.*) There is one case within my knowledge where the agent gets Rs. 3,500 and Rs. 500 as a special allowance.

(*Sir Arthur Anderson.*) There are several.

(*Chairman.*) No doubt there may be others, but is that the extent of the difference?

(*Sir Arthur Anderson.*) It has generally been about Rs. 500 a month more on the principal companies' lines than on the Government.

(*Mr. Hiley.*) That is not so now.

7389. (*Chairman.*) Except where there are special allowances; the normal salaries on the railways are the same. However, we will leave that point. (*To the witness.*) Is there anything more you desire to say on that particular point?—No.

7390. Do you attach any importance to the argument that with regard to a company which has a terminable contract it is to its interest to make profits during its tenure, whereas the State continues and its interest is the permanent welfare both of the undertaking and of the country? Do you attach any importance to that argument?—No.

7391. You think the temporary and the permanent interest are identical?—I do. I would rather like to put it in this way, that I do not think the directors and managers of the terminable arrangement would be any less keen than if it was a permanent arrangement as a State railway, or any less careful of the company's future.

7392. You make another point. You say a company managed line is less likely to be influenced by political considerations, or rather, putting it the other way round, that a State line is more likely to be influenced by political considerations?—Yes. The State line is more likely to be influenced by political considerations.

7393. Will you explain what you have in your mind there?—I do not want to enlarge on any political part of this argument, but what I say is this: that the State management, being in the hands entirely of the Government of India, is more apt to be influenced by political considerations than if it was in the hands of a body of directors under company management.

7394. What are the sort of conditions that you have in your mind that might influence the Indian Government contrary to the interest of a railway?—I do not know that I have got anything very pointed in my mind, but there have been questions raised in the Legislative Council in India that to my mind were inimical to a well-conducted railway, that might interfere with it, and I think that would be accentuated if it was State managed.

7395. Will you give us an instance?—I am afraid I cannot, but members of the board will remember the questions that were raised in Simla, I think it was three or four years ago, by Sir Ibrahim Rahimtoola.

7396. (*Sir Rajendra Nath Mookerjee.*) I think the question was raised at the Council in Bombay?—I cannot say exactly where it was, but that is what was in my mind when I made this statement. I think Government of India State-managed railways are more likely to be influenced politically than railways managed by a board of directors in London under company management.

7397. (*Chairman.*) I take it that that would be common ground?—Yes.

7398. Because the point the Indian witnesses have made to us is (I am putting it not as my view but as their view): "What we object to is "that we cannot get at these English directors; "we cannot influence them." That is their view. That is the other side of the picture. What I want you to tell us is: Can you give us any instance in the past where political influence has been exercised injuriously?—No, I do not think I can. It is merely my opinion.

7399. Then you deal with another point in your memorandum. You say that in State railway management there is no continuity of officers, which is so essential to the success of a railway, and you mention the Eastern Bengal Railway taking away a man just when he had proved himself useful?—On that point, sir, I am very emphatic. During my residence in Calcutta the Eastern Bengal State Railway was managed by a considerable number of men. In one instance, the gentleman sitting on your right (Sir Henry Burt) got the railway into first-class order. It was well managed, he was in constant touch with the commercial community and with the Indian trading community. He knew exactly what they wanted, and did it. He was removed because, as his record showed, it was so good that they wanted him elsewhere.

7400. He was removed to a larger sphere of usefulness, where a larger number of the public got the benefit of his sterling qualities: is that correct?—That is so. The sequence was this. I do not know whether it was his immediate successor or the following one, nor can I remember names very well, but I know that subsequently another man, the late John Manson, was appointed and did exceedingly good work on the Eastern Bengal State Railway. In fact, we all said "We are coming back to the days of Burt again." But no sooner had he got a thorough grasp of the thing than he was removed to what you have called "a larger sphere of usefulness."

7401. Let me put two points to you on that. Supposing instead of the Eastern Bengal we take the East Indian, which is a company; there is an extremely efficient District Traffic Manager at Allahabad, and he is promoted to be District Traffic Manager at Calcutta: must not that happen everywhere?—Certainly.

7402. You would not have taken the gentleman you have mentioned, and said that he was to be tied all his life to the small concern, would you?—No. The real point is that it was too frequent—much too frequent.

7403. I do not disagree with you. We know it exists. We have had a great deal of evidence, I may say, that people are moved too freely on the State railways. Is that any necessary part of State management?—I do not quite understand you. Do I take you to mean this, is it necessary that that should be done in the future, that State management recognises that it is a mistake?

7404. Yes?—No, certainly not.

7405. The Railway Board told us: "We agree that it has been done too much; we are trying to check the practice"?—If it was really changed, of course that would meet this argument of mine.

7406. It is done on the State railways, and I am trying to see, is it necessary it should be done because it is a State railway? Must this system of promotion by seniority always be regarded as something sacred?—No.

7407. Do you think it is necessary?—It generally does happen in State management, whatever it is.

7408. So that if you had State management, it would be a thing you would have to fight against?—Yes.

7409. Would not you agree with me that to promote a very efficient man to a bigger job is right?—Certainly.

7410. It is right, in your view, to have promotions on the ground of efficiency?—Certainly.

7411. That was the case in the instance that you have alluded to?—I do not object to that at all.

7412. I think your objection really is to promotion on the mere ground of seniority, because that is what has caused a great many shifts?—That may have been the cause of it in some cases, but my objection is that it is too frequent.

7413. So far as it is promotion to a bigger post for an efficient man, you would not object; that is commercial business?—No, I would not object.

7414. Supposing the English North Western takes away the General Manager of a small railway because it can offer him a bigger salary, you would not object?—I could not object, but I should say it was up to the company which let him go away to see that an equally efficient, or as nearly as possible equally efficient, man was put in his place. That is where the failing has been.

7415. You cannot help it that the bigger posts which can afford bigger salaries tend to get the best men: you agree that that is right?—Yes.

7416. Do you wish to say anything more about your objections to State management? I think I have dealt with all the points as you have put them in your memorandum?—There is just this last sentence which has some bearing on the question that I should like to quote: "The State "cannot be a business concern, and in placing "the management in the hands of companies it "commands the services of keen and capable "business men, who have been trained on "commercial principles." I think that is a strong point.

7417. You are now referring to the directors in England?—Yes, and the people whom they appoint, the whole staff.

7418. Let us keep them separate, if you do not mind. Would you put it that the staff of the railway companies, from the agent downwards, are, generally speaking, more efficient than the staff on the State railways?—That is a very difficult question to answer. I would put it in this way. I think the railway directors of companies take more care to produce more efficient staffs than State management does. They are commercial men and they are out to make a profit.

7419. You think they take more care?—I do.

7420. Do you think their care produces that effect—that they do get a more efficient staff?—I do.

7421. So much for the staff; now take the directors. Would you describe them as keen and capable business men?—I would.

7422. Do you think they are really useful in managing the concern?—I do.

7423. You have said that it is useful to have them to select the local staff. What other special points do you think they are useful for?—The other special point comes in under the question of finance, or rather comes in under the domicile of the company. These men, if you take them now in connection with several railways here, are men well known in the city of London; they command respect from their experience; they are efficient in dealing with these railways; they have a following in the market when they want to raise money. That is all important, I think.

7424. Just take the point you have mentioned last—when they want to raise money. Can they, or do they, raise money? How long is it since an Indian railway company has raised money?—They are not allowed to raise money.

7425. Quite so. In order to get the benefit of their keenness and capability in financial matters you would need to emancipate them from their present trammels?—Not altogether, because I think the fact of their being there has enabled money to be raised where it otherwise might have been difficult.

7426. Do you mean to say that the loan which has been issued in the past fortnight, which was a loan to the Government of India, was helped by the existence of the keen and capable business men on the boards of the Indian railway companies in London?—Yes, I think I can say that had some influence on it.

7427. Not great?—Of course, that loan was unique. It was a loan floated on extremely favourable terms, more favourable, I should think—certainly in my experience—than those on which any other loan has ever been floated.

7428. I am afraid that is the tendency of loans nowadays?—It is; I agree with that.

7429. Is there any other point where their qualities are of value?—No.

7430. I do not deny the existence of the qualities?—I think that is all I can say on the subject.

7431. You have dealt, in the next place, with the different kinds of companies. I will take first, if I may, the ones you do not approve of, as mentioned in (*c*) on page 2 of your memorandum, and when we have cleared the ground there I will come back again. You say that management through a company domiciled in India, with a board sitting in India, is not feasible or desirable?—"Is not a feasible or desirable departure." That is rather different.

7432. If I understand you aright, it might be a good plan if it were new, but you do not

want to change to it; is that the meaning?—Not quite; it is partly. The following sentences, I think, bear out exactly what I wish to say on that subject.

7433. I wanted to understand what the special point of the word "departure" was?—Because it has not been done.

7434. Will you give us the reasons?—I give the reasons here. "There are few Europeans "who can devote sufficient time, outside of their "own work, to what would be required by a "large railway company." That, I think, is one very strong reason. There are members of the Committee here who know perfectly well that those of us who go out to India do so to manage our own business, and if we attend to it it takes all our time, and we can devote very little time outside of it—I mean real time, real energy and real push, and getting to know the facts. There are many business men in the big towns in India who are directors of companies, but they are probably not called upon to have such an extent of knowledge as is the case with railway boards.

7435. Forgive me, but you would agree, would you not, that most men who are well-to-do and have made their position in England regard it as their duty to devote some part of their time to public service?—I am very glad to know, sir, that there are more men who regard it as their duty to do so now than they did in the past.

7436. You do not suggest that the Englishman who goes out to Calcutta thereby becomes less patriotic than his brother who stops at home?—No, I do not suggest that for a moment, but they are so wrapped up in their own business that I do not consider they have the time to devote to a domiciled large railway company. Then I come to the second point. "It might be "difficult at present to find a board of Indian "gentlemen who have the experience of such "work." I am quite willing to stand corrected here if men like Sir Rajendra Nath Mookerjee tell me that that is not the case now, but I should think there are very few Indian gentlemen who have studied this question and are capable of dealing with it in such a manner as, for instance, Sir Rajendra Nath Mookerjee, who is an expert in these matters.

7437. You could not make a board out of him?—No; that is just my point—I could not make a board out of him. He will be able to tell you far better than I can how many colleagues he could raise with anything like the knowledge that he possesses himself. I do not know them, and I do not think there are sufficient of them yet. It will come, no doubt.

7438. You would hesitate to let them go into the water until they had learned to swim?—No, I would not go quite as far as that. I think there are other ways of bringing them forward than putting them straight on to railway boards. I think they have to learn the business.

7439. I gather from clause (*b*) that you would be inclined to put it in this way—that if you were satisfied there were enough competent Indians and enough Europeans who would sacrifice their own business, you would then be prepared to accept the Indian domiciled company?—I could not object to it. I might put it like that; it is a new departure. But might I suggest this? In your questionnaire, with regard to your terms of reference, you inform witnesses, like myself, that "In con- "sidering the question of the East Indian "Railway, the Committee will take note of the "decision to remove the management of that "railway to India, which was arrived at when "the contract with the present company was "extended on the amended terms in 1919."

7440. That is not our questionnaire, it is an instruction to us?—My view at present would be—without the knowledge, as I have explained to you—that here you are making a new departure. Give it a chance to show that it is a success. Then, if it is, there is no objection whatever to going on with it in the case of the other railways.

7441. You will appreciate that that is not our doctrine; that is an instruction from the Secretary of State—that we are to take note of the fact that he has decided in that way. It is competent to this Committee to say: "We "understand you have so decided, but we think "you are quite wrong." It is not our document at all?—I see. I did not look at it in that way. I looked at it that that was settled. There is a splendid opportunity.

7442. I suppose it is settled, but it still would be competent to us to say: "You have settled it wrongly." I do not say we shall do so; I only say it would be competent to the Committee to do so. Assuming the domicile is to be transferred to India, which would you prefer, a local Calcutta company subject to the disadvantages you have spoken of or State management?—You ask me which I would prefer, State management or a local board in Calcutta managed by merchants and Indians.

7443. Such people as you could get in Calcutta?—I should prefer to have it in Calcutta.

7444. As a company?—As a company.

7445. That deals with your para. (*c*); that is what you say about the company. You see great objections to it, but if the East Indian is to be managed in India you would like it to be managed by a company of that kind and see what the result was before dealing with any others?—That is my point.

7446. Para. (*d*) is a proposal for a double company, an affiliated Indian company retaining the English board, and in some method apportioning the responsibility between them. What is your view about that?—What I have stated here in one sentence embodies my view, that if you had dual control one side or the other would constantly be jibbing. There would be friction between them, and I do not honestly see how it could work.

7447. Who do you think would have to have the deciding voice?—I do not see who could have the deciding voice. Supposing you had an equal board in Calcutta and an equal board in London, unless the Secretary of State had a deciding voice I do not see who else could have it.

7448. Then you would have a permanent system with compulsory arbitration?—Exactly.

7449. And that does not commend itself to you?—Not a bit.

7450. Do you think it would satisfy Indian aspirations to have such a position that the Indian domiciled board really could not do anything—that the London board could stop them and refer them to the Secretary of State? Do you think that would satisfy Indian aspirations?—Would you kindly repeat that again because I did not catch your question properly.

7451. Supposing a condition such as you have suggested, with two boards, who, if they could not agree, would refer the matter to the Secretary of State in London, do you think that would satisfy Indian public opinion? Indians,

as you know, are demanding a larger share in the management of their own affairs?—It is very difficult for me to say. I should think it is the only alternative, if I may put it like that.

7452. Now let us go back; you have given us your objections to the other two schemes. We now come back to para. (*b*), in which you say: "Management through companies domiciled "in England is calculated to meet all that is "essential for the best and most important "considerations railway undertakings have to "face." That is your view?—Yes.

7453. You began your evidence by saying: "I have been out of India for some years and am "rusty." Would that remark apply to the London boards?—Not to the same extent, because I have been out of India for some years and am rusty. But I am rusty not so much because I have been out of India but because I have been out of touch owing to the war and the amount of work I have had to do otherwise. I have not kept in the same close touch that I did up to 1913. These boards are in constant daily touch with what is going on in India.

7454. You think it would have been possible for you not to have become rusty if you had confined your attention in the last few years to Indian matters?—That is so; I do not think I would have become rusty under those conditions.

7455. You say the directors are responsible business men who have acquired ripe experience in India. You would not sympathise, I suppose, with the view that has been put to us by some witnesses that the experience is over-ripe?—That the experience of some of the directors on this side is over-ripe?

7456. That is the view that has been expressed to us?—Does that mean that they are not progressive enough, or that some of them are too old?

7457. They are the different views that have been put before us. I think "over-ripeness" rather represents the view that has been put to us?—No, I would not consider that it was over-ripe.

7458. You say that they are "in a position to grasp the many difficulties that occur from day to day and deal with them promptly"?—I do.

7459. Later on you speak, on another subject, of the waste of time in obtaining the financial sanction of the Secretary of State?—That is under the heading "Railway Board."

7460. Yes. If it takes time to refer to the Secretary of State in London, will not it take time to refer to the board in London?—It takes a certain amount of time, undoubtedly.

7461. Is not "promptly" a little strong?—What I meant was that it was promptly dealt with when it came before them. It is not a question of how quickly they were able to get any particular thing through, but the moment it came to them they were in a position, from their knowledge, to deal with it promptly. That is what I meant.

7462. You have already made the statement that "they are in touch with the financial world, "and can command the use of capital from share-"holders who have faith in their conduct and "management." I think you will agree that you cannot put much weight on that if they are not allowed to command the capital?—No, but they would command the capital if they were allowed to do so.

7463. You are aware, no doubt, that there is no Indian guaranteed company at this moment whose shares stand at par?—I believe that is so.

7464. If there had been a certain jump I think we should have heard of it, but they were certainly below par, although they are paying very substantial dividends. Supposing the Secretary of State withdrew his inhibition, do you think you could raise much money on the share capital of the guaranteed companies?—I think so. You mentioned just now that the shares were not at par, but what is at par? Everything has gone down tremendously. They have been at par, I think I am right in saying, but everything has gone down. If you asked these railway company directors just now to get finance for the railways without the help of the Secretary of State, they would be able to get it, but the terms would undoubtedly be onerous at the present moment.

7465. What do you think they would have to pay? What do you think people would expect as a return on share capital in an Indian railway?—On ordinary shares?

7466. Ordinary shares, with or without a guarantee. There would clearly be a little difference?—I should say that with the guarantee they would expect 7 per cent., and without it they would expect 10 per cent.

(*Chairman.*) I think the Bengal North-Western pays more than 10 per cent., does not it?

(*Sir Henry Burt.*) 11 per cent.

(*Chairman.*) And that has gone to 102, I think.

(*Sir Henry Burt.*) 107.

7467. (*Chairman.*) That seems to bear out what you say. There is a very substantial line with a long record behind it paying 11 per cent. and standing at 107; it was lower. That seems to bear out your view. Supposing, however, a guarantee were given, you think 7 per cent. would be about the right figure?—Yes, I think 7 per cent. would do it.

7468. Then how do you account for the fact that at present the companies pay much more, some of them 8 per cent. and 9 per cent., and yet their shares stand below par?—Some of which companies?

7469. (*Mr. Tuke.*) Some of the guaranteed companies?—It is very difficult to say why it is just now, because everything in the share world is so upside-down. People have to sell in order to pay income tax.

7470. (*Sir Arthur Anderson.*) Has not the drop in exchange also had an influence, because the profits remitted home this year will thereby be less?—That is so.

7471. (*Chairman.*) The point is this, that as a very experienced man of business you recommend as a convenient way of raising money for Indian railways at present the issue of guaranteed shares?—The issue of shares guaranteed by Government.

7472. You recommend that the company should issue guaranteed shares?—At the present moment?

7473. Yes; we all know that money is urgently wanted?—Yes, I would recommend that because I think money is so urgently wanted that you must get it.

7474. And you would pay 8 per cent. or 9 per cent. to get it through guaranteed companies?—No, I do not think it would be necessary to pay 8 per cent. or 9 per cent. with

the guarantee; I think 7 per cent. would command it.

7475. Why, then, do not the existing shares stand on 7 per cent. basis?—They are in the market, and they have been in the market for years. People, no doubt, have been forced to sell them as being a thing they can realise. I do not think that is a true criterion just now.

7476. You would agree with me surely that it is a sort of axiom that if you are issuing a new batch of the same security you have to offer a little better terms?—I think if you asked a well-known man in the Stock Exchange he would tell you that there are cases, just as you have stated, where it would be better for a man to buy the shares that were paying 9 per cent. at a discount than to subscribe for new shares or new bonds or new debentures, whichever you like to call them, at 7 per cent.; but all the same the fact remains that they will subscribe for new things and ignore the value of the old.

7477. Take the case of a company AB, whose shares, which are paying 9 per cent., are standing at 97; do you think a man will subscribe at par for new shares?—The same man who holds them might not, but I think the public would.

7478. If a member of the public gave such an order to his broker, would not the broker say: "Do not subscribe for the new shares, buy the old?"—As a matter of fact a very small demand for the old would soon send them flying away above par; you could not get them.

7479. Then you say, "the State is fully "protected by its contract with such companies "against mismanagement." The companies appoint their own staffs?—Yes.

7480. Assume for the sake of argument that they appoint an inferior man and that he does mismanage the property, has the State any power to get rid of him?—I think it is part of the contract that they can call upon the company to get rid of him.

7481. I do not think that is so?—I understood it was so.

7482. We did not so understand from the Railway Board?—What I understand is that in all these contracts between the companies and the State there is a clause by which they can either cancel or bring them to an end if they are satisfied that the companies are not managing them properly. It is on broad lines.

7483. You would not seriously argue that the State would cancel the contract with the XY railway because they did not like the agent?—No.

7484. It would have to be for something very broad and patent, would it not?—Undoubtedly, but still it is a protection.

7485. Some. Do you think the State is fully protected against mismanagement? Let me put this to you. In your time did you never hear it said, "The XY company is very badly managed"?—Oh, yes.

7486. Was the State fully protected?—I do not know what the terms of the State contract were with the XY railway.

7487. It was a common saying, was it not, in various parts of India, "The XY company is very badly managed"?—That is so.

7488. That means to say, does it not, that the State was not fully protected?—We do not know whether they took any notice of it.

7489. Then it was not protected? You mean it might have protected itself but did not?—That is my point.

7490. You think that if it chooses to exercise the powers it has they are sufficient?—Yes, to protect it against what I have previously said in para. (*d*).

7491. Now let us come to the Railway Board. There you say you think they ought not to have to wait for the Secretary of State's interference; you think the real control ought to be in India?—I do.

7492. You do not offer any suggestions as to the constitution and that kind of thing?—All the suggestions that I offer are that the Board should consist of experienced men versed in all the different phases of railway work, such as traffic, engineering, rates, finance and so on. I should like to go one step further and say that a member of the Board should be on the Council.

7493. That is to say the railways should rank as a full department of Government instead of as a subordinate department?—Yes. As I understand at present, while the Railway Board official or a member of the Railway Board can attend and hear what is said, he is not allowed to speak. I may be wrong there, but I think that is so.

7494. That is correct; the chairman of the Railway Board has the powers of a Secretary to Government; he is not a member; but he may attend. Practically your opinion is this, is it not, that the machinery is right, broadly speaking, subject to your point about the chairman being a member?—Yes.

7495. Broadly speaking, you say that the machinery seems to be right, but the experience is that it has not worked as well as it might have been expected to; that is, broadly, your statement?—That is so.

7496. You go on to say that finance is really the burning question, and you quote some of the points you placed before the Currency Commission. You emphasised the very great importance of the railways and the need as it existed then for a policy being adopted of spending a liberal amount of money on the railways?—That is so, and there is a much greater need now.

7497. There was a policy of starvation of the railways before the war and naturally through nobody's fault the war has made things worse?—Yes.

7498. You say in your statement: "The "railway finance policy has for many years past "been very far behind the times. Traffic has "overtaken the railways and left them behind "it. The demands of Indian railways have "quite overgrown the provision made for their "betterment and extension, and it appears to me "that if a very drastic change is not made in "the arrangement for the regular provision of "funds for railway expenditure, India will "suffer and her rapidly increasing industries be "throttled"?—That was seven years ago.

7499. Nobody will question that her industries have been throttled?—Her industries have been throttled. The throttling of them is no doubt a much more serious question than previously, because India herself has taken her industries in hand to a very large and increasing extent. Money had been put into industries in India by Indians to a very small extent when I read this before; money has now been put into those industries in a very large way.

7500. This Committee have heard quite enough from one side of India to the other about that throttling of industries, so that I need not ask you about that question at all; there is no question it is terribly serious. You say that if a

very drastic change is not made in the arrangement for the regular provision of funds for railway expenditure India will suffer. What is your view of the drastic changes that should be made?—There are one or two points connected with that question that I should like to mention. The drastic change is that more money must be provided. That is the first one. Then there is the question of providing money by Government for one year, and if it is not spent it lapses. That to my mind is a very bad arrangement. I say in my memorandum: "To enable the "railways to arrange a comprehensive and "economical programme of development, it is "necessary that they should have an annual "allotment fixed over three or five years of the "minimum amount they would have, with such "additional amounts given each year as Govern-"ment may find possible."

7501. If you were going to say anything in favour of the lapse policy it would be very interesting?—In favour of it?

7502. Yes?—No, I do not want to say anything in favour of it.

7503. You need not say anything against it, because we have heard 150 witnesses, and they have almost all spoken against it, so that you need not enlarge on that?—I will not say anything more about it. I will say this, however, that the question of finance is the burning question. Without finance nothing can be done. Without finance these railways that are now working in India cannot do anything like the work they ought to do. They are not equipped; there is no provision to carry anything like the traffic that is offering.

7504. Two things are required—more money and more continuity?—That is so.

7505. How are we to get them?—The first question is, how are we to get more money? That is only possible in two ways. The Government must continue to raise special loans for the railways, or you must allow the companies to raise their own money for expenditure on their railways. I think the companies can do it, but if they are not allowed to do it you cannot say that they cannot do it until they have been tested.

7506. You have said that you think the guaranteed companies could get new money possibly on a 7 per cent. basis?—I think so.

7507. Supposing they could not? Supposing they wanted more, how far would you let them go? Would you let them raise it on a 9 per cent. basis?—I do not know that that would be very wise, but I think I should be very elastic. I would not confine it to exactly 7 per cent., because there is a great difference when you get above 7 per cent. to 7½ per cent., 8 per cent. and so on.

7508. Would this be a fair statement, in your view, that you would be inclined to raise money through the companies as well as by the Government, provided it could be obtained at only a small cost above the Government loan cost?—Yes.

7509. (*Mr. Hiley.*) With a guarantee?—Yes.

7510. (*Chairman.*) You would offer terms which, by the combination of guarantee and share of profits, would probably yield something more than the interest on a direct Government loan, but not very much more?—That is so.

7511. I have been asking you questions about how the money is to be raised. Now how are you to get continuity?—Continuity of money?

7512. Continuity of providing money, so that the railways can make an adequate programme and stick to it?—It would have to be done in exactly the same way. If the Government made an annual grant for, say, five years they would have to undertake that they raised that money for five years. There is no other way of doing it except to allow the companies to do it, and, of course, that has to be proved. I think they can do it, but I am only giving a personal opinion.

7513. A very great many witnesses have said to us: "We have tried this dependence on the "budget year by year; it has broken down, and "here is the result. We want the railways "cut adrift; we want the railways to have "a separate budget of their own, and only "carry the net income on the capital to the "credit of the ordinary Government, and inside "that leave them to run their own show." Have you thought of that?—Yes, I have thought of that. I think that would be feasible. I think if you gave the companies a free hand to arrange for their own finances, with the Government behind them, they would be able to do it in a satisfactory manner. For instance, I understand there is a railway which requires a very large amount of money.

7514. Is there only one?—I was going to mention one particular case that I have heard of, in which a railway has been offered a very substantial part of what it wants by a large firm in India.

7515. In what form?—It does not exactly say what form.

7516. A subscription to their ordinary capital?—In the form of a subscription to whatever scheme is put forward. For instance, supposing the railway was putting forward a scheme for several crores, these enterprising people (there is no necessity to have any secrecy about it; it is Tata's) have offered to raise a very considerable sum of money. It has not come to so close a matter as terms yet, but their ability to raise the money is, I think, undoubted, and they recognise the fact that it must be raised.

7517. That offer would be to subscribe to a Government loan?—Well, sir, what is railway finance but a Government loan, if it is guaranteed by the Government?

7518. If any given investor would subscribe to a Government loan at 7 per cent., would you encourage him to invest instead in shares where he could get more?—I do not know; I do not think I can answer that, because to give encouragement like that or advice like that would be a very difficult thing.

7519. One does not see why, if the Government, which is responsible for the Indian railways, could get the money at 7 per cent., they should encourage people to put it in a form where they would get 8 per cent.?—No, but the Government guarantee is a very valuable thing. It is looked upon, especially in India, as a most valuable thing.

7520. But yet people do expect a higher rate of interest and a higher return if they put it into guaranteed shares than if they put it into a direct loan?—That is so, because presumably it is earmarked for a certain purpose.

7521. Then you say: "With the increased "cost of material and labour it will be seen by "comparison that anything less than a grant of "20 to 25 million pounds per annum would not "meet the present needs." That is double the Mackay Committee figure of £12½ millions?—Yes.

7522. That is to say, you would only get what the Mackay Committee said was needed in 1907?—That is so.

7523. Do you think £12½ millions would have been enough in 1907?—I think that if from the date of the report of the Mackay Commission they had given £12½ millions a year, I think it was for several years, things would have been very different later on.

7524. You think that if they had spent £12½ millions they would have about kept going?—Yes, I do.

7525. Therefore, you would want on the same basis to-day £25 millions to keep going?—Yes.

7526. But since 1913, anyway, a terrible amount of arrears has accumulated?—Yes.

7527. So that your £25 millions makes no provision for catching up arrears; it only provides for current expenditure?—I have not the arrears so much in mind as current expenditure. My figure was entirely based on current expenditure.

7528. I quite follow, but you see my point?—Yes, I do.

7529. I am not suggesting that they could get more, or that they could spend more, but more wants spending?—Yes.

7530. In fact, I take it you are not in the least afraid that if the Government could raise £200 million it could not spend £200 millions?—That is so.

7531. (*Sir Henry Burt.*) Supposing an Indian company were formed in Calcutta, do you think you could raise money in India with a guarantee something below the rate which Government has to pay for its own direct loans, and with some share in surplus profits?—It is very doubtful at present. Two or three years ago it would have been more feasible; at present it would be difficult. It may come again.

7532. The Chairman has already put to you the statement you have made in your memorandum, "With the increased cost of material "and labour it will be seen by comparison that "anything less than 20 to 25 million pounds per "annum would not meet the present needs." Having regard to what you have said with regard to the companies being given power to raise money, I take it you hold the opinion that Government will not be able to raise that money itself by loans?—This £20 to £25 millions?

7533. I think it will probably be £30 millions, having regard to what the Chairman said?—That is my fear.

7534. That they will not be able to raise it?—Yes. I do not say they will not be able to raise it, but that is my fear.

7535. (*Mr. Hiley.*) "Will not" or "cannot"? Do you think they will not be prepared to raise it, or cannot raise it?—Both, perhaps. I think it will be very difficult for you to convince them on the larger sum, and I think it may be a little difficult for them to raise it straight off.

7536. (*Mr. Purshotamdas.*) In the third line of para. 1 (*a*) of your memorandum you say that "State management removes the useful element of competition." Is there any competition at present?—I have already dealt with that point, and you will be able to read it in my evidence. There is competition. For instance, there is competition between the Great Indian Peninsula and the other railways coming down to Calcutta.

7537. At whose expense?—At the expense of the lines themselves.

7538. The owners of the Great Indian Peninsula and the Bombay, Baroda and Central India Railways are the State. Where is the competition? Competition is between competitors who have a stake in a different capital. Here it is done at the expense of the same capital, namely, the Indian Treasury: 95 per cent. of the Great Indian Peninsula and Bombay, Baroda and Central India Railways are owned by the Indian Treasury. Is that competition?—That is true, but you were not here at the beginning of my evidence, when I informed the Chairman that competition, in the sense that I used it, was qualified by the word "emulation."

7539. If you qualify it by the word "emulation," that is a different matter, but there is not competition in the sense in which the word is understood in England?—There is not competition in the sense that there are two different companies working for separate interests.

7540. If there is any sort of cutting of rates it is at the expense of one common proprietor?—It is at the expense of the shareholders of either company.

7541. Who represent 5 per cent. of the total?—More.

7542. It is mainly at the expense of the common proprietor, the Indian Treasury, who own the majority of the shares?—Entirely.

7543. Then you say that State management is apt to get into a system of "red tape grooves." I suppose while you were in Calcutta you had something to do with the Port Trust there?—No, I had not.

7544. You must have heard a good deal about it?—I know all about it.

7545. Do you think the Port Trust suffers from "a system of red tape grooves"?—No, I do not think they do.

7546. And the Port Trust has no proprietary interest?—No.

7547. Therefore there is no reason why the Indian railways should suffer from it, because the Port Trust has no proprietary interest. Is proprietary interest a necessity to keep out of red tape grooves?—Yes.

7548. Lower down you say, "It is also much more likely to be influenced by political considerations." Do you mind telling me what political considerations you are referring to?—I have gone over all that in the answers I have already given.

7549. Perhaps, as I was absent then, you would not mind repeating them for my benefit?—I shall only be too delighted to if I can; but I am afraid I cannot quite recall my answers beyond saying this, that State-managed railways in India are more likely to be influenced by political considerations than company-managed railways. That is the point.

7550. What is the meaning of "political considerations" there?—It means this. You have seen questions raised in the Legislative Council in India with regard to railways, which I hold would not be raised if they were company managed; and I think these questions would be raised much more frequently and pushed more than they are now, if they were State managed and not company managed.

7551. Do you think it is to be regretted that these questions were raised, and that something should be devised to stop them?—No, I do not think that. It is a free world, and I think every person has the right to give their opinion on any subject; but there is that point. That is the only point I want to make, and, as I previously explained, I do not really want to enter into any political question.

7552. The questions that are raised in the Legislative Councils and Assemblies reflect the

opinion of the public in the ordinary course, do they not?—I do not know that they did. I hope they will do so more now.

7553. Up till now you do not think they reflected the opinion of the public?—I do not say that they do not reflect the opinion of a part of the public, but I do not think the public were really very much concerned with some of them.

7554. In the future, under any State-managed scheme, it would mean that there would be more questions about it in the Councils, which you think is not desirable?—You can put it in that way.

7555. I am trying to get at what you have in your mind. I do not want to put it in any way that you do not want to express?—I have informed you in quite a careful way that a State-managed railway in India is more likely to be influenced by political considerations because of the political conditions in India at the present time.

7556. Is it wrong that the Legislative Assembly should raise questions about the railways in view of the fact that the share of the Treasury is so big in the capital of the line?—Oh, no.

7557. Then any method that is devised to make the Legislative Assembly not discuss these questions is a method which is not desirable?—You can put it in that way if you like.

7558. That is the Indian view that has been put before us, and I thought I would put it before you?—I am not against the Indian view.

7559. This is the Indian view that has been put before us, and therefore I say that any scheme by which you prevent the Legislative Assembly from discussing the railway question is a scheme that is not desirable, because so much of the Indian taxpayers' money is invested in it, so that the question of political considerations would hardly be an important point against State management; in fact, it would be a very desirable point in favour of State management, and would not be a handicap in any way. Lower down you say, in reference to State railways, that there is no continuity of officers, and you explain how that has been brought about. Is it impossible to get continuity of officers under State management?—It has been, so far.

7560. But is it impossible?—Oh, no.

7561. It would be possible with a separate railway service, with rules and regulations like the company railways have adopted up till now?—Certainly.

7562. It is not a difficulty which cannot be got over; it is only a question of a change?—I am very sorry you were not here at the beginning of my evidence, because I gave certain answers in connection with that which you will be able to read afterwards.

7563. If you do not care to repeat them, I will not press you?—They are very long.

7564. With regard to para. (*b*), if the boards of the companies are in London there can be no persons on the boards who are in touch daily with Indian trade and commerce. With the boards in London, you cannot have on them people who are in touch with Indian trade and commerce and their requirements from day to day. You can only have gentlemen who have retired from work in India and are at present in London?—That is so.

7565. Do not you think that is a handicap?—No, I do not.

(*Sir George Godfrey.*) I do not think we ought to ask witnesses to repeat answers that they have already given, simply because one of the members of the Committee was unfortunately absent. I can the more readily say that because I was absent part of the time too.

(*Mr. Purshotamdas.*) I was not away on private business; I was paying my respects to His Majesty the King.

(*Witness.*) I do not for one moment object to the questions.

7566. You have been very good to me so far?—The only point is that the chairman has put questions to me, and has followed them up along many different avenues which I cannot possibly remember, or give you intelligent replies.

7567. I came in when you were dealing with para. (*b*), so that I have heard your evidence on that point, and there is no fear of my not knowing what the chairman asked and what you answered. In a Committee like this there is some little repetition, which I am afraid cannot be helped. If you have boards in London it means the complete absence of Indian members from the boards. That has been so up till now, and will be in the future?—I would not like to say that.

7568. It has been the case up till now?—Undoubtedly.

7569. And probably will be so in the future?—I would not like to say that.

7570. You could only have retired Indians, and retired Indians would not be here?—Why not?

7571. Retired Indians? Are there very many Indians who retire who come to stay in England?—A good many of them.

7572. Still, you would not have the workingmen?—Oh, no. I understand what you mean.

7573. The handicap with the boards in India is that the European there is not available freely, and when available there is not a continuity of office?—That is so.

7574. Both are handicaps; which is the lesser of the two?—You mean, which is the biggest handicap; there being no retired Indian gentlemen in London who can go on to a railway board, or, on the other side, that those who are fit to go on railway boards have to leave India. Is that it?

7575. Yes?—And you ask which is the lesser of the two?

7576. Yes?—It is impossible to say at present, for a reason that I gave, which is this. Up till now there are few Indian gentlemen who have studied railway questions and who have been connected with railways in the same way that the directors on the boards in England are at present. I think you will admit that, and until that takes place I say that the lesser evil of the two is to have the railway boards in London.

7577. Shall we follow that up a little further? Railways have been serving India for the last 70 years. If up to now there are not many Indians who can participate in the management of the railways, what is the reason?—What is the reason for it?

7578. Yes?—They must answer that themselves.

7579. Shall I answer it for you, as it has been put to me in India—that Indians had no opportunity of getting in touch with the administration of railways? For 70 years the boards were here; they had no voice in the matter. If the same is to continue for 100 years more, the same complaint will hold good. Is it not time

they began ?—I think it is full time they began, but they have to learn first.

7580. And in learning perhaps a little leniency would not be out of place, would it ? They have learned English banking, they have learned about the ports, they have learned about the mills and about iron and steel ?—And they have learned about railways. Sir Rajendra Nath Mookerjee is a splendid specimen for you.

(*Mr. Purshotamdas.*) You say in para. (*c*): "Moreover, and this is important, capital in India "could not be raised under such conditions to "any very large amount." I suppose you mean under present circumstances, when the money market is tight ?

7581. (*Chairman.*) That is to say, through a company domiciled in India. It is not that capital could not be raised in India, but capital could not be raised in India through a domiciled company ?—I do not think a domiciled company in India could raise capital on such a large scale as this.

7582. (*Mr. Purshotamdas.*) On such a large scale as it could be done in England ?—Yes. There are not the same facilities.

(*Mr. Purshotamdas.*) Did you ask the witness any questions with regard to No 4, the present system of control by Government of rates and fares ?

(*Chairman.*) No, and, if I may suggest it, I do not think Sir Charles McLeod would say that he is an expert on that point. I do not think there is any difference of opinion on the Committee on that point.

7583. (*Mr. Purshotamdas.*) Then I will pass to para. 5, the last sentence particularly : "Under "existing conditions I think encouragement "should be given to Indian companies producing "wagons and other railway accessories." You mean only for the time being ?—No. The important point is this : The chairman did not ask me any questions about the feeder lines, and I would like to say something on that point, because I think feeder lines are very necessary to the trunk lines in India. I put the figure here at 5 per cent., but that is only just a figure. It used to be 3½ per cent., but there is a lot of money in India for feeder lines with a Government guarantee. Then I go on to say that I think encouragement should be given to Indian companies producing wagons and other railway accessories. You are quite well aware that during the last—what shall I say—10 years there has been a tremendous increase in Indian industries themselves in the way of making wagons, making carriages, and making all sorts of railway accessories which might be done in India on the spot without having to wait to get them out from here, and which support these industries in India which you want to support. That is my point there.

(*Mr. Purshotamdas.*) You mean from hereafter.

(*Chairman.*) There should be a full stop after the words "under existing conditions."

7584. (*Mr. Purshotamdas.*) There is just one more general question I should like to ask, if you do not mind. It has been admitted practically by all, at any rate of the non-official world, that Indian railways until now have been starved for capital by the Government. But the companies here say that they have pressed the Government to raise more capital themselves, that is, that the Government themselves should raise more capital for railways, and give it to the companies, or allow the companies to raise capital. Perhaps you know the attitude of non-official members in the councils of Delhi and Simla as they existed before 1920; there was a sort of opposition to much capital being raised for railways. If Indians had opportunities to know from within the conditions and the great necessity for capital in railways, do you not think that the country as a whole would have benefitted, and the Indian non-official members in the Viceregal Council would perhaps have been a great source of strength to the railways in getting more capital ?—If what you say is correct, it would.

7585. If what is correct ?—If so and so and so and so have taken place.

7586. I am only giving you the facts. Gokhale and everybody else said : "You are spending too much on the railways." I am talking about what happened before the year 1914. It is on the records of the councils, and you can take it that that is correct. The railway boards asked for more money. The Government of India or the Secretary of State did not budge. Do not you think the non-official Indians would have been a source of great assistance to the railway boards in getting more money from the Government if they had had any inside knowledge ?—Of what was going on ?

7587. Of what was going on, and how the railways were being starved or the development being kept back ?—I think that is quite possible.

7588. (*Chairman.*) There is one question on feeder lines which I missed that I should like to ask you. I suppose there is no dispute that a very large new mileage of branch and feeder lines is required ?—No, I do not think there is.

7589. I do not think there can be any argument about that. Assuming that the parent company or the State, where it is a State railway district, could find the money themselves, which do you think would be better, that it should be built as a part of the parent line or that it should be built by a separate feeder company ?—By a separate feeder company.

7590. Do you think that is an advantage ?—Yes, I do.

7591. Will you tell us why ?—I think it has several advantages. You see, branch lines are privately managed.

7592. They are mostly operated by the company with which they connect ?—The money has been found by private companies. The branch lines benefit the Government in its revenue, as you are aware, and the populations of the district which they serve and the district boards and the main lines which they feed also benefit. There are only the shareholders of the branch line company left, and they provide the money. The railways have not to provide the money at all.

7593. That was not my question. My question was : if you can imagine a state of things in which either the big companies or the Government were in affluent circumstances and prepared to find the money for the necessary branch lines, would you still prefer that it was found by a small independent company ?—I am afraid I cannot answer that question, for this reason. I would like the private companies myself, because they have been successful so far, and they have opened out a great deal of country. My great fear would be that the big lines would not open anything like the country that the private lines would.

7594. That is not quite my question. Assume that a branch line from A to B is wanted, and that it is going to join up with the Great Indian

Peninsula. The Great Indian Peninsula is prepared to make it, and a branch line company is also prepared to make it. Which, if you were the Government of India, would you employ for the purpose, the Great Indian Peninsula or the new company?—That is a very difficult question to answer; there are so many points attached to it. If the main line were going to make the line themselves, that means a lot more money which is not procurable even for the main lines. I have not considered that point of view.

7595. (*Sir George Godfrey.*) There are just one or two questions I would like to ask you. I must apologise for having been absent at the beginning of your evidence, but I have followed it very closely since I came in. I think I have correctly caught your view, which is mainly that Government has failed over the course of many years to raise sufficient money for the railways, that we cannot rely on Government doing so, and that therefore company sources should be exploited: that was practically your argument?—Yes.

7596. You said that it would be quite impossible at present, with financial conditions as they are, to lay down a hard and fast policy which might hold good for several years, but you think that the companies could, under certain conditions, raise the money?—I do.

7597. Independent of Government, but with Government guarantee?—Yes.

7598. I suppose it may be necessary to pay high rates at the present time, and in that case, probably, short-term loans would be advisable?—That is what I would advocate if I had anything to say about it.

7599. (*Chairman.*) Loans?—Bonds.

(*Chairman.*) So far you have only discussed the question of shares.

(*Sir George Godfrey.*) That is the point I was about to clear up.

(*Chairman.*) Do not let us get mixed. We have not mentioned the question of debentures.

7600. (*Sir George Godfrey.*) In that case, would it, in your opinion, be possible or advisable to raise money by short-term debentures?—I think it would, if you cannot get the money otherwise from Government.

7601. In view of the conditions of the Indian railways at present, I suggest it would be advisable to pay any price to get the money?—Any reasonable price, I should say.

7602. Any reasonable price. It might be necessary to go above what the Government is paying?—Yes, it might.

7603. And it would be worth doing even then?—Yes.

7604. There is only one more point I wish to refer to, and that is with reference to what Mr. Purshotamdas said just now, in which he rather gave the impression that competition between railways might result in loss of revenue. It is not an important point, but is it not within your knowledge that competition may result from attractiveness of service, which may even mean an economy in working? It does not necessarily mean a loss of revenue to the State or to the railway combined?—No, it does not.

7605. I think you qualified your remark in that connection. You said that what you really meant was a sort of emulation?—That is so.

7606. (*Chairman.*) I would like to go a step further in what Sir George Godfrey said about debentures. What is the security for an Indian railway debenture?—I do not think I could tell you offhand.

7607. Will you take it from me that broadly the security is not the property, because the property does not belong to the company; the security is the guarantee of the Secretary of State?—Yes.

7608. So that the position would be this. If the Secretary of State can borrow at 7 per cent. on his own flat promise to pay, he might borrow at 7½ per cent. or some other figure, certainly higher, through the office of the company?—Yes.

7609. And you think that would be worth while?—I do.

(*Chairman.*) Thank you very much.

The witness withdrew.

(Adjourned for a short time.)

SIR GERALD H. RYAN, Bart., called and examined.

7610. (*Chairman.*) You are Chairman of the Phœnix Assurance Company?—Yes.

7611. Which you modestly describe as "one of the larger companies"?—It is as well to be on the safe side.

7612. We will leave it in the way you describe it. As you say in your statement, you are very large investors and therefore you are constantly considering questions of suitable investments?—Yes.

7613. I suppose one may say that the great bulk of your money is invested in what are, or closely approach, trustee investments?—The majority of it would not be in trustee securities.

7614. But your investments are of the class of trustee securities; not technically, but they are high-class securities?—Yes.

7615. There is no limitation on your powers of investment?—No.

7616. You do return them, as a matter of fact, to the Board of Trade?—Yes.

7617. You mention in your statement that the return which you furnish includes Indian and Colonial railways under the same heading?—Yes. The Parliamentary Return includes them together. See Written Statement No. 86, Vol. IV.

7618. You are not able to help us as to the division between these two classes of investments in the case of other companies?—No.

7619. But you do know that, in the case of your own company, 10 years ago you held 8 per cent. of your total funds in Indian railway securities as against 4½ per cent. at the present moment. In order to be quite sure that I understand it, may I ask whether, in taking Indian railways, you mean investments in railway stock so called?—The percentage given includes all Indian securities, including Indian Government.

7620. Can you tell us why there has been that reduction?—The falling off in the percentage of investments in Indian securities would arise mainly from two causes. In the first instance, we are dealing with the period from 1910 up to the present time, with the war period, when there was a very great demand on the part of all capitalist bodies to support British Government loans. That would in itself have led to a larger proportion of the investments being in British

Government securities and consequently a smaller proportion in other classes of securities.

7621. We are talking about Indian railways proper, and, as I understand your statement, you held 8 per cent. of your total investments in Indian railways, but now it is 4½ per cent.?—The 8 per cent. includes Government securities

7622. There might be two things. Rupee paper might be sold to invest in sterling loans, and Indian railway debentures might be allowed to run off?—That I should say was commonly done. That is one reason—what you may call the general effect of war finance. Another reason is that in seeking suitable channels for investment, Indian railway securities are not as popular as they were, say, 20 or 25 years ago.

7623. On that I should like to ask you this. One always thought that the advantage of people like yourselves over the rest of us outsiders was that you were able to choose things that were not popular and therefore were relatively cheap, having regard to their intrinsic merits?—That is so, certainly.

7624. You say they are less popular. I should have thought that, if a security was of a given quality, the fact of its being unpopular would rather encourage you to invest?—I would say in answer to that that India has not had a very good name during the last 10 or 12 years. There have been a good many disturbances. People have shrugged their shoulders at the internal position of India, and so on. I have found, generally speaking, people less inclined to regard Indian railway securities as an attractive form of investment than before.

7625. That reason has influenced you?—Yes.

7626. You see my point in distinguishing between the scientific investor and the man outside?—Yes.

7627. That is one of the reasons you have given under the head of unpopularity. That is your reason (*d*), political and social conditions?—Yes.

7628. That really has affected you to some extent?—Yes.

7629. Now may we go back to (*a*)?—If you please. In dealing with (*a*), as you say, we are scientific investors, and we do not mind a whole lot of these things which are very potent reasons and causes for the attitude against Indian railway investments taken up by ordinary investors and other people; but it often has been pointed out that the guarantee of the Government of India is not the same as the British Government guarantee, and people do not know exactly why it should not be and what constitutes the difference. If there is a difference they do not know how to assess the importance of the special guarantee of the Indian Government, and that in itself is a reason militating against the acceptance of these Indian railway loans. They say: "We under-"stand the British Government guarantee, but "the Indian Government guarantee, that is, the "guarantee of a dependency of the British "Government, we do not understand. We do "not see exactly what it really means."

7630. You know what a Canadian Government stock means or a New South Wales Government stock. It means the responsibility of that Dominion or that State or whatever it is and not of the British Government. The same is true of India?—I agree.

7631. There is my point. Before the war, say 15 years ago, the price of India 3's was roughly the price of English 2½'s. There was a recognised ½ per cent. for an extra risk, or for what was regarded as an extra risk?—Not only extra risk, but relative unmarketability.

7632. I agree, but there was that sort of standard difference between them for various reasons. Has that changed?—I should think it has.

7633. We know it. Why has it changed?—It has changed because of a variety of reasons which are not exactly assessable, but which do exist.

7634. The reason you give in (*a*) is ignorance as to the effect of the true nature and value of the guarantee of the Government of India. That would affect the outsider; it would not affect you?—Quite so. My only point there—I do not attach very great importance to it; I only put it down as it occurred to me—is that you do not seem to me to get full value for the guarantee which you give in the market price or in the market estimation of your stocks. You do to insurance companies and those who know thoroughly, but to the outside investor I doubt whether you do.

7635. We may sum up (*a*) as being want of intelligibility in effect?—Yes.

7636. And (*b*) is really another form of the same thing?—No, I should like to dwell a little more on (*b*). In (*a*) we are dealing with the constitutional position. When we come to (*b*) we are dealing with shortcomings or weaknesses in the appeal of your securities which are not constitutional, which you have chosen yourselves in past times very likely for good and sufficient reasons, but which remain to-day as a difficulty in the way of the attractiveness of Indian Government railway securities.

7637. If you will forgive me, you have put (*a*) as difficulty of understanding the guarantee ——? —— appreciating the value.

7638. You might of course have put something in front of (*a*). The guarantee is not a guarantee of the British Government. That is a fact?—Yes.

7639. The other is a misapprehension of the fact. So far it is want of understanding. That is the difficulty—that the thing is puzzling. Now we will go on to (*b*)?—The difficulty in (*b*) arises from the fact that, owing to the conditions under which your stocks were issued ——

7640. I think I must be allowed on behalf of this Committee to disclaim the word "your" which you use. We are pure outsiders invited to consider what "they" have done?—I beg your pardon. The position is this. In the past, owing to the peculiar conditions under which capital was raised for Indian railways in India, a form of investment was devised which I have no doubt at the time was excellent (I have nothing to say against that), but which, when we come down to the present day and consider it as a form of investment which has to compete with other forms of investment, one is bound to say is very complicated, very unpopular, difficult to understand, and not calculated to produce full value to the Government. Take, for example, the East Indian Railway Company, with its A, B, C and D annuities—a terribly complicated thing.

7641. We had a witness before us a few days ago who told us he understood them?—I understand them, but I do not think it makes them any the more popular for all that. The system finds itself in a position where its obligations are of an unusually cumbersome and unattractive form.

7642. We may assume, as you have put it, that each stock as it was issued was calculated to

get the money on the lowest possible terms—on the best possible terms for the borrower?—Yes, I think so.

7643. But would it not be better to issue 50,000,000*l. en bloc*, at a price that was slightly more expensive to the borrower, rather than to issue 20 different stocks, getting a slight advantage in each but making them afterwards unmarketable or less marketable?—I doubt very much whether they got any advantage by adopting this method of finance. I do not think they would get any advantage whatsoever. It may have been fair and proper at the time. Let me put as an illustration this point. You are going to raise money for a new railway, the future of which is uncertain. You say: "Very well. We "cannot get investors in unless we guarantee a "certain rate of profit, say 3 per cent. We will "guarantee 3 per cent. We do not know what "profit it is going to make. 3 per cent. is a fair "guarantee and we can get money if we put that "guarantee on." Very well. Say in the course of time you find that the profit realised by the railway is 5 per cent., 6 per cent., 7 per cent., or 8 per cent. You have still got that form of investment in which a portion of the interest is guaranteed. If you take that as a system of raising money to-day, with the results of the railway and the possibilities of the railway well established, it would be a different thing altogether. My view is that it would be a very undesirable mode of attempting to raise money, because, unless the Government guaranteed right up to the rate yielded by the railway, you would not find the guarantee worth much. If the State guaranteed right up to the yield it would obviously be running risks in respect of its guarantee. Take the terminable annuities again. Those terminable annuities, as I understand, were granted to the shareholders of the railway companies, on the assumption of the railway companies, by the Government. It may have been a right and excellent way of doing it at the time. Eventually the annuities terminated; and the fee simple, as it were, remained with the Government. It may have been very good, but when you come to regard that as a possible form of appeal for new money, or when you come to consider whether those securities are or are not popular, you arrive at the conclusion at once that they are unpopular, although they may have been the best mode of dealing with the situation as it then existed.

7644. Let us go into the question of the guaranteed shares a little further. I think it is correct that the India Office has not allowed the companies to issue any new guaranteed shares for a good many years past. It has been suggested to us, money being immediately needed, that the companies should be allowed to issue new guaranteed shares now, and that that might be a suitable way of raising the money. I gather your point would be this—that if the company is already earning 7 or 8 per cent. you are throwing away your guarantee?—Quite so.

7645. On the other hand, you could not be expected to guarantee 7 or 8 per cent., because you could raise the money at a lower price straight away. That is your view?—Yes, that is my view.

7646. To sum up, it does not pay to have so complicated and multifarious a system?—I have no doubt about that myself.

7647. If all the companies had had similar stocks, and it was understood that, whether you bought one company's stock or another company's stock, the conditions were substantially similar, you would have had a freer market?—Yes.

7648. Now we will deal with (*c*)?—I want to go into (*c*), with your permission, a little bit more fully. I did not attempt, when I produced this very rough memorandum, to do more than, as it were, pass the thing rather casually through my mind; but I have since had some figures brought out which I think will be interesting. If you approve, I should like to hand them in. (*The following statement was handed in*):—

122,652,000 (21 Railways).									

TOTAL (in round figures), *say*, £122½ millions.

Total Capitalisation of (in round figures) :—

	£	
(1) Canadian Pacific Railway	128,000,000	($1 = £·207)
(2) Central Argentine Railway	58,000,000	

I say in my rough statement:—"(*c*) The large "number and often small subscribed capital of "Indian railways present an obstacle in the way "of popularising these investments. In many "cases the capital is very small," and so on. You cannot have a free market. I have an official list here, and I have summarised the Indian railways as shown in that list, with the capital dealt in against each railway. There are 21 railways here. There are 63 different securities and the total amounts of capital at present subscribed and outstanding amount to 122,652,000*l.* I should like the Committee to take a note of that figure, because some comparison may be made.

7649. (*Sir Henry Ledgard.*) It is an average for each railway of 6,000,000*l.*?—Yes. The 21 railways include a railway where the investments on the market are of eight different denominations; that is, the East Indian Railway Company, split up into annuities A, B, C and D, deferred annuity capital, deferred annuity class D, debenture stocks, and so on. It also includes various small lines where the capital is of a twofold or of a threefold nature. I would ask the Committee to consider how they can expect a system of investments—£122½ million amongst 21 railways, subdivided into many different denominations and groups—to be anything like as popular as, let us say, the Canadian Pacific Railway, which has 128,000,000*l.*, or more than the whole of the Indian railways put together, and where the stocks are in two or three groups.

7650. (*Chairman.*) I think I am correct in saying that the Midland Railway Company has a capital of, roughly, 180,000,000*l.* nominal in 5 per cent. stocks, 2½ per cent. debentures, 2½ per cent. guaranteed, 2½ per cent. preference shares, 2½ per cent. preferred ordinary, and deferred ordinary. That is the same point?—I should like to hand this statement in, because I think it does illustrate in a concrete form one of the causes of the present unpopularity of Indian railway securities. The Central Argentine has 58,000,000*l.* of capital, which is about half of the total Indian railways' capital, and their denominations and subdivisions of capital are not very numerous. You cannot possibly have Indian railways popular if you deal in handfuls of stock. If you turn to your daily paper any day you will find a very large number of people buying and selling Canadian Pacific and Central Argentine shares. The element of speculation is there, whether it is a debenture stock or whether it is an ordinary stock. There are optimists and pessimists. There are people who, whether they are holding their stock or wishing to dispose of their stock, like to see it moving about, who like to see what it is worth. How can you expect some of these Indian railway companies, which you scarcely ever see mentioned as being dealt in on the market, to have anything like the popularity of these mobile stocks of the great trunk systems outside India? I submit you cannot have it. It is one of the constitutional difficulties.

7651. Mr. Withers of the *Economist* spoke to us about this question of the few dealings in Indian railway stock. He was rather inclined to tell us that you could not expect to have a brisk market in a stock unless it had a considerable speculative variation?—I do not agree.

7652. You do have, for example, a brisk market in Consols and War Loan, where it is only a question of what the price will be to-morrow. It is not a question of whether the interest is safe?—I would say that the element of speculation in regard to securities is twofold. It is either the uncertainty of income or it is the uncertainty of price, and I think there is just such a speculative element—I will not say the speculative element is equal—in buying the Central Argentine 4 per cent. debenture stock at 63 as there is in buying some of the ordinary stocks at some other price. I do not think the point sought to be made has very much to do with this question of popularity, but Mr. Withers is a man whose opinion I very highly esteem.

7653. He took me so aback by his answer that I forgot to put him the question I have just put to you?—I differ from him there, with

deference. The popularity very largely turns upon the frequency in dealing and upon the ease with which you can buy and sell. If you have a very large number of shareholders in a stock, there will be people who want to get in and there will be people who want to get out. There will be people who simply want to see whether they can get out or whether they can get in. All those elements go to make the popularity of a stock. All those elements are absent and always will be absent from Indian railway securities.

7654. The fact that the stock is constantly quoted tends to get it in front of the ordinary person?—Yes.

7655. And when a new issue of old stock is put on the market you have a number of people, so to speak, with interest in it?—Certainly.

7656. Do you think the effect of a stock being frequently dealt in is to cause its value to be increased?—Oh, yes.

7657. Taking two stocks of equal security, if one is frequently dealt in, which means a free market, it will be worth a little more than the other, which you have to sell at a margin of three points?—Yes. Marketability is an element in price.

7658. And that depends on free dealings?—Quite.

7659. (*Sir Henry Ledgard.*) And it depends upon the amount as well? The bigger the amount the greater the number of shareholders and participators?—Yes. Take Central Argentines, for example, with 58,000,000*l.* of capital. They have 51,000 shareholders. That means that the stock is known to 51,000 people and a lot of their friends. Some of those 51,000 want to buy more or want to sell from time to time.

7660. In other words, it is difficult to have a commodity in ready sale that is only for a small amount and with a limited number of holders?—I am sure of it. You referred just now, Mr. Chairman, to the insurance companies. Supposing somebody were to bring to us an out-of-the-way new Indian security, we would look at it and we might be perfectly satisfied with the security, but we would say, "Well, we want a "considerably more favourable price for this, "because it does not appeal to many people." It is not competed for by others at the present time and if we wanted to sell we might have a difficulty in selling. So that non-marketability —a limited market, let us say—very directly controls the terms upon which capital can be placed.

7661. (*Chairman.*) You deal with a different point in No. 4 of your statement. You have been dealing so far with, so to speak, the attractiveness of the security?—The popularity of that class of investment.

7662. In No. 4 you come to the methods of attracting the public—assuming the security to have a certain value—the methods of selling it for all it is worth. What do you say on that?—In the past no attempt has been made to popularise Indian railway securities any more than any particular attempt has been made to popularise Consols, we will say. The thing was taken for granted. The Government was behind them and they did not want any of the adventitious aid of advertisement or anything of that sort. That is all very well as far as it goes, but it meant that the man in the street, the small investor and hordes of medium investors, did not understand the matter. They had no pamphlets. No explanation was given of the strength of the financial position of these railways. Their merits were left alone to be dug out just as the investor or his adviser chose to do it. It is impossible to make anything attractive or popular on those lines. I think you could have made out for these Indian railways a very excellent tale, but it has never been done. That is so far as the advertising goes. I quite well understand that in the old days, if we go back 25 years, it was looked upon——

7663. Carry your mind back, not 25 years, but, say, 15 years, when the railways of Argentina and Canada were borrowing very largely in the London market. Did they advertise their wares more energetically?—Fifteen years ago, yes.

7664. Say the period between 1905 and 1910?—I imagine so. The Canadian Pacific Railway Company had a great office in King William Street with maps of its lines and all sorts of things.

7665. With brokers coming in for information and all the rest of it?—Yes, I daresay. That is one of the factors in the case. It was, I dare say, considered rather beneath the dignity of the Government to go and explain how very excellent their railways were as an investment. If people wanted them, there they were, and if they did not want them it did not matter.

7666. It is very much the same as the difference between the methods of insurance adopted by the Post Office and the methods adopted by the private companies, is it not?—Yes, very much indeed, with very much the same results.

7667. Now we will turn to the future needs and methods of raising capital?—I have passed this through my mind again and I want to put forward a variation upon the suggestion which I have made in my rough memorandum. I do not know whether it will be within the sphere of the terms of reference of the Committee or whether it is a matter that I should not deal with here, but, if not, you will probably correct me. It occurs to me that, inasmuch as the railway system of India requires 10,000,000*l.* or 20,000,000*l.* a year, I suppose, for some years to come——

7668. You will be safe in assuming that figure?—You have got to see how that can be easily and cheaply obtained. Therefore it may be desirable for you to consider whether there are any new means of doing it, and not necessarily bind yourselves to the precedents of past methods of finance. I mention here the analogy of our Local Loans Stock, which avoids the difficulty of small municipalities coming forward to borrow money, and where the Government borrows on the authority of the State and applies the proceeds to such good purposes as they think a case has been made out for. I wonder whether it would be possible for a new body, a controlling and financing body, to be raised in India in connection with Indian railway investments. I suggest something like an Indian Railway Board. Upon that Indian Railway Board might be represented—of course the idea is hypothetical —some of the directors of the various lines, some Government nominees and some of the Finance Members of the Council or other persons in close touch with the finances of London.

7669. This is a board in London?—An Indian Board attached to the India Office here.

7670. It is a body sitting in London, not in Delhi?—Yes. If it were feasible to raise a body of that kind, the control of the railways might eventually pass under the Secretary of State, to such a body. Instead of 21 boards of directors you might eventually have perhaps a smaller

number of boards of directors with corresponding saving of expense; but the great thing, in view of your special mission of obtaining money for the Indian railway system, is that you would have a means of getting a very large consolidated and comprehensive stock placed on the market through a body under the authority, of course, of the Secretary of State, in close touch with financial channels in London. It seems to me that that might be a way by which the large sum which you require in future in financing the Indian railway system might possibly be best obtained.

7671. This is a modification of your suggestion of doing it through the existing Secretary of State's Council?—Yes.

7672. You appreciate, I have no doubt, that the East Indian Railway Company or the Great Indian Peninsula, or whatever it is, is at this moment the property of the Secretary of State absolutely?—Yes.

7673. It is not the property of the company?—Quite so.

7674. And you have said that in your view the raising of new funds by guaranteed shares is not an economical way of raising them?—Yes, except for new concerns.

7675. By guaranteed shares in existing guaranteed companies, yes. The other way then of raising through the companies would be by debentures?—Yes.

7676. Those debentures hitherto have always been guaranteed by the Secretary of State and obviously as an indirect guarantee it is always a little less attractive than a direct obligation. It has always cost a little more to get the money that way. Do you see any advantage in raising money from debentures under the names of specific companies?—No.

7677. Then we come to this, that the money has got to be raised directly by the State?—Yes.

7678. Do I take your point to be this, that the State should raise it as a direct railway loan and not as a general Government loan?—A direct railway loan with the specific security of the State's interest in the railways.

7679. We have had gentlemen before us who rather took the other view, who said: "Do not "complicate the thing. Everybody knows what "the security of the Government of India is. "We had better have the whole security and not "a part of it"?—In my judgment much better backing would be given to a loan issued by the State with the added security of the railway interest, and it would also simplify the finance of the railways. The railway company otherwise might want money just when the State wanted money, and the railway company might have to stand aside while the State got its money for its purpose. In a railway loan there would be no competition between the two.

7680. It would all be in one hand really. One person would be doing it. There is no competition at present, because the companies cannot issue except with permission. You say, "on the security of the railways"?—Yes, the State interest in the railways.

7681. You could not have, so to speak, a trust deed assigning the revenues to trustees "for the benefit of," could you?—I have not thought of the particular machinery, but for the purpose of such a discussion as this if the State were to give as security not only its own guarantee, but its interest in the railways, in some cases, for instance, in the Great Indian Peninsula, it has already a vested interest, but in others it has not——

7682. It is the owner of all the guaranteed companies?—They only have the option in some cases.

7683. No. The position is this. They own the assets. The Great Indian Peninsula Company does not own?—I agree, but I am speaking of some of the other companies.

7684. As far as we are informed all the guaranteed companies are in the same position. The ownership of the property is in the Secretary of State. Really, the shareholders, as they are called, are a syndicate having a beneficial contract, so he can pledge them all if he likes?—If the State's interest, whatever it may be, is vested and complete, so much the better.

7685. I take it he could not assign to trustees. That would not be consonant with the dignity of the Government?—No.

7686. How could he pledge his interest in the railways?—This, I take it, would be an Indian Government railway loan, secured with Government guarantee on the proceeds of the railways. You say by what machinery would it be conveyed? That wants a little thought.

7687. My point is this. Of two things, one: either if the railways fail you go back to the Government, in which case it is Government in both cases, or it is merely on the security of the railways, and, if so, it is something less than Government?—It could never be less than the Government.

7688. If it was only secured on the railways without a Government guarantee behind it?—No. There would be the Government guarantee. There would be this additional security. I am bound to say I have not thought out how it would be conveyed. But the advantage if a scheme can be devised is by no means small, because the railway system would then stand by itself and its own needs could be dealt with. The Government's demands, from whatever cause they might arise, would have to be dealt with in the ordinary way.

7689. I think, if I may say so, the thing that is of great value in your evidence is that you think a specific loan, with a connection on the face of the documents with the railways, would be attractive?—Yes.

7690. More so, in your judgment, than a plain Government loan saying nothing about how they were going to spend it?—Yes. There is just one other thought which has occurred to me in connection with this. If we can assume such a scheme as I have very roughly indicated as feasible, by that means you are going to have a big Indian railway stock. You might get rid of some of the smaller stocks by giving them an option of conversion into this stock, so as to clear up a lot of small holdings, not so much on account of the desirability of getting rid of these individual holders as of enlarging the basis of the railway stock, which means securing an increase of marketability and of popularity. If such a thing were feasible, it does not seem to me rash to assume that you could get your money very much cheaper and very much more easily, and you would be able to make an effective appeal to the investing classes here in a measure which is utterly impossible under the present conditions.

7691. You tell us that the official list shows 21 companies with 122,000,000*l.* of capital. Can you tell us how many different quotations there are for each of the different stocks which

are quoted?—It is all in the document which I have handed in.

7692. Is there anything more you would like to say?—I think the point has been raised—I do not know whether you would like to examine me upon it—as to whether it would be better to attempt to raise new capital in India or in London. I do not know whether you would wish for my opinion on that point.

7693. Most certainly?—In regard to that, it occurs to me that it is eminently desirable that the new issue should take place in London. In the first place, London has probably a bigger reservoir of available capital for loans of that sort than any other place in the world. In the second place, we have a steadier bank rate, although it has been pretty high lately. If we leave out of account the last few war years, we find that in India the bank rate varies from seasonal causes very widely. It does not mean very much—it is something like a child's temperature going up and down rapidly—but it may interfere very much with the flotation of a loan in India. I think if your desire is to raise money, as no doubt it is, as easily and as cheaply as possible, London would be the better centre.

7694. On that I should like to ask you this. It has been suggested to us that there should be Indian railway companies which might be constituted either by transferring an existing English company into an Indian domiciled company—transposing the thing, or by having an affiliated company, with the Indian half of the company with rupee capital, or it might be even an independent Indian company. In either of those cases the company would be one with rupee capital. Do you think the rupee capital of an Indian domiciled company would be a saleable security in the London market?—It would not have such a direct attraction for English investors. I doubt myself whether you would get the money as cheaply. I suppose the idea would rather be, if you split up the capital of a company into rupee and sterling, to confine the proportions to the amount which you thought could be raised respectively in the London and Indian markets.

7695. Take this case. The contract of the East Indian Company (the present English company) runs out in 1924. Supposing the Government made a new contract with a Calcutta company with a rupee capital, and that Calcutta company wanted money that it could not conveniently raise in India, would it be able to make a good appeal in the London market?—On a rupee capital?

7696. Yes?—I should doubt it. The finance houses would be the only source of capital, I think, for a loan of that sort. I do not think the ordinary investor would go in for it.

7697. Do you mean they would take it to hold or that they might place it?—I daresay some of the big companies, the trust companies and insurance companies, and Indian banks and so on, would take it if the terms were attractive, but I do not think it would appeal to the ordinary investor. It would be a thing like a short-term loan of a very important company that did not want to make a public issue.

7698. You could not make a public issue?—I should not think so.

7699. (*Sir Rajendra Nath Mookerjee.*) Are insurance companies empowered by the Act to invest their money in securities other than trust funds?—Yes.

7700. They can do so?—Yes. Now-a-days nearly all insurance companies have power to make such investments as the board of directors thinks fit.

7701. (*Sir George Godfrey.*) You gave us your reasons for the unpopularity of Indian railway stock. There is just one question on that point which I should like to ask you. Leaving out complicated things like the different annuities of the East Indian Railway Company, if a guaranteed company whose contracts were better understood were allowed by the Secretary of State to increase its capital by double or treble under the existing terms, do you think that would appreciably popularise the stock on the London market?—So long as you have so many railway companies, and a lot of them very small, you are not going to get a popular stock, because you are going to have an unmarketable stock. If you double the stock of these railways you are still going to have a very small amount.

7702. Perhaps you are talking of the very small ones that are not of much account?—I doubt very much whether by any means of that sort you are going with all these railway companies to popularise them with British investors. Let me remind you once more of the fact that the whole of the railway companies' capital at present dealt with on the market is only £122¼ million, whereas the Canadian Pacific alone has £128 million.

7703. (*Sir Henry Burt.*) What is the smallest line you have there?—The Shahdara (Delhi), 200,000*l.*

(*Sir Henry Burt.*) That has a rupee capital.

7704. (*Sir Rajendra Nath Mookerjee.*) And it is a feeder line?—No. I have got here on the official list an entry of 200,000*l.* stock, 4½ per cent. debenture stock. Then I have the Barsi, 519,000*l.* Then there is the South Behar, 669,000*l.* Then there is the Delhi Umballa Kalka, 1,298,000*l.* Then there is the West India, 1,350,000. Then there is the Rohilkund and Kumaon, 1,600,000*l.*, and then there is the Eastern Bengal, 1,700,000*l.* They are extremely small when you divide them up into several denominations of capital. If you could get one consolidated and comprehensive stock and induce a lot of existing holders to come in on terms of conversion and advertise the security properly and explain the cheapness of the construction of your lines—(and your lines were very cheaply made; you have a lot of advertising points which are not appreciated)—I think by such means you might make the investment popular and get your money on good terms.

7705. You think that even if a few were picked out, five or six of the most important, and a combined loan raised for them, much on the same terms as the Government contract on those important lines, it would make it much better?—Yes. An amalgamation like that would certainly strengthen it.

7706. (*Chairman.*) We are very much obliged to you, Sir Gerald. We know you are a busy man, and you have taken a good deal of trouble to help us, and you really have helped us a good deal?—I have done the best I could, though I cannot profess to be very deeply learned in this subject.

7707. The whole difficulty is that the doctors disagree, and you and another doctor disagree a good deal?—I hope he is right.

The witness withdrew.

SIXTY-SECOND DAY. (LONDON.)

Friday, 3rd June 1921.

PRESENT:

SIR WILLIAM M. ACWORTH (*Chairman*).

SIR A. R. ANDERSON, KT., C.I.E., C.B.E.
SIR H. P. BURT, K.C.I.E., C.B.E.
SIR G. C. GODFREY.
MR. E. H. HILEY, C.B.E.
SIR H. LEDGARD.
SIR R. N. MOOKERJEE, K.C.I.E.
MR. PURSHOTAMDAS THAKURDAS, C.I.E., M.B.E.
THE HON. MR. V. S. SRINIVASA SASTRI.
MR. J. TUKE.

MR. T. RYAN, C.I.E. (*Secretary*).
MR. E. R. POLE (*Assistant Secretary*).

MR. WALTER HOME, called and examined.

7708. (*Chairman.*) I think you are both Chairman and Managing Director of the Burma Railways Company, which is one of the guaranteed companies?—Yes.

7709. I have been told—I do not know whether it is correct—that you are also a director of the Egyptian Delta Light Railways Company?—Yes.

7710. And of the Jodhpore State Railways?—No.

7711. You built them, did you not?—Yes, I built them.

7712. We had evidence—I forget from whom—that you built them extraordinarily economically, and that it would have been a good thing if some of the State railways had adopted your economical methods. Have you kept at all in touch with their position at the present time?—Yes, I was there last winter, in passing through India.

7713. Are you satisfied that you were right in the method you adopted?—Yes, quite satisfied.

7714. I gather that what happened was that you adopted the same course as was adopted in the west of America; you got the line through somehow, and improved it afterwards?—My principle was to get the rails down and to put in improvements afterwards in accordance with the requirements. To commence with I put in nothing that was not absolutely required at the time.

7715. It is a narrow gauge system, is it not?—A metre gauge. I ought to say that the country lends itself to economical construction, because it is practically rainless; at least, there is a very small rainfall, and it is very level except in the northern part of Bikanir and in the southern part when you get down to Sindh. There there are small sandhills, but there is no heavy bridging.

7716. I think as a matter of fact you did not bridge the stream beds, but allowed the traffic to wait when there was a freshet?—I built causeways with narrow openings which allowed about 3 ft. 6 ins. or 4 ft. of water to pass below the rails. The line was tied down into a causeway built across the river. We used to let about 15 inches of water pass over the rails while the trains continued running; if it got deeper than that traffic had to stop. One of those bridges is in existence at this day.

7717. I suppose you saved a good deal of money in that way?—Yes, undoubtedly.

7718. Can you give us an idea of what the capital cost was when the essential part of the system was opened?—When the railway was first opened to Jodhpore—64 miles, I think—it cost 16,000 odd rupees a mile—between 16,000 and 17,000. See Written Statement Nos. 87–87A, Vol. IV.

7719. (*Sir Rajendra Nath Mookerjee.*) Including rolling-stock?—Including rolling-stock. Of course the rolling-stock supply was very small, because the traffic on the line was very light.

7720. (*Chairman.*) What was the weight of the rails?—Do you mean the axle loads?

7721. No, the weight of the rail that was put down?—36 lbs.

7722. It was done extraordinarily cheaply?—It was, because it was practically a surface line. I may add that when the line was opened through to Hyderabad, Sindh, the capital cost ran to about Rs. 25,000 a mile over the whole.

7723. We may call it 1,500*l.* a mile all through?—Yes.

7724. In your judgment, is that idea of laying a line as cheaply as possible and improving it afterwards as the traffic develops applicable to many other parts of India?—I think you must differentiate between what is going to be a through line and a branch line. In the case of branch lines I say yes, but there are very few parts of India where you can get lines with so little bridging.

7725. Leaving out the question of the cost of Rs. 25,000 a mile, the point I want you to consider is this: are there many parts in India where the principle that you applied of making the railway as cheaply as possible in the first instance, and subsequently improving it, would be a suitable principle?—I think so.

7726. I suppose one might say that the construction of an average line costs two or three times that amount before it is opened?—Yes, I should think so. There, again, it varies with the district. In Burma I am trying to bring that principle in as far as possible with the new branches that we are constructing, but the conditions there are so entirely different that you cannot work to such low costs, or anything like them, because there you get heavy rainfall and these low-level bridges are not admissible.

7727. Do not let us talk about the cost; the point is the principle. Are you adopting the same principle in Burma? Are you making branches that are adequate for the traffic of the moment, but which you appreciate will have to be improved in standard as the traffic increases?—Yes, we are just now.

7728. In your view is that the right principle to adopt?—In my view it is.

7729. Could money have been saved in the past, and can it be saved in the future, by adopting your principle, or are they adopting it

already?—I am afraid I cannot say sufficiently what the other railways are doing.

7730. You must know; you must have ideas on the subject?—I think money could be saved. I think engineers as a rule are too prone to want to make a good job without thinking what the traffic is going to be.

7731. In Burma you have had to conform, of course, to the standard that the Railway Board will accept?—Quite so.

7732. Have you found that they have put pressure upon you beyond what you think is reasonable?—No, I do not think so.

7733. It is not, then, a question of State interference? You are agreed that there have been unnecessarily high standards at the outset in some places?—I think so.

7734. But that you ascribe to the individual engineer rather than to the system?—I think it is a little of both. The individual engineers probably did not know what the future requirements were, and the system was wrong in not pointing it out to them and keeping them in control from that point of view.

7735. What you would say is that the Government authority did not do what it might have done to keep down the standard, but you would not say that the Government authority has pressed up the standard?—No, not to my knowledge.

7736. Forgive me for picking your brains generally, but I should like to ask you one or two questions about the Egyptian light railways. I think we were told, at the very beginning of our enquiry last November, that the Egyptian railways had, or had had, an advisory board or a local board?—It was a local board.

7737. Was that in your time?—Yes.

7738. Can you tell us anything about it?—The local board was not satisfactory. It was called the Egyptian section of the board. It had practically the same powers as the London section. They could not pass any resolutions without getting them ratified in London and *vice versâ*; the London board had to get all their resolutions ratified by the Egyptian section. It worked very badly; it caused delay and friction of all kinds, and when the war broke out three of the members of the Egyptian section were found to be enemy aliens. Of course they disappeared.

7739. And you seized the opportunity to alter the machinery?—Quite so. The fourth member was an Egyptian Copt. He was an old gentleman who had had some railway experience. He still remains, but does not interfere in the administration.

7740. Would you say, from your experience, that the system of having two boards with equal powers living in two different places was an impossible system?—I should say it was a very wrong system.

7741. That is the result of your experience with the Egyptian Delta Railway—that the system does not work, as far as you know?—Quite so.

7742. You mentioned that three of the board were alien enemies. Did they object to things simply for the sake of objecting?—The direction in which friction occurred was very largely in regard to the purchase of materials locally in which the various members of the boards were personally interested.

7743. (*Mr. Hiley.*) Will you tell us what were the powers of the respective boards?—They were equal.

(*Chairman.*) The London board could do nothing without the consent of the Egyptian board, and the Egyptian board could do nothing without the consent of the London board.

7744. (*Mr. Hiley.*) What happened in the case of a dispute?—In the short time that the board was in existence while I was on the line no dispute reached a deadlock, but we had delays. Eventually one side or the other would give in to a certain extent, but the main trouble was the delay.

7745. Was there any machinery for coming to a final decision in the event of neither board giving way—Not that I know of. It never came to that in my time.

7746. (*Chairman.*) There was nothing in the nature of a standing arbitrator, or anything of that kind?—No.

7747. (*Sir Rajendra Nath Mookerjee.*) How many years ago did this happen?—That board practically ended when the war broke out.

7748. (*Mr. Hiley.*) It is nominally in existence now owing to this old gentleman being alive?—Yes, but he takes no part in the work.

7749. (*Chairman.*) You assume his assent?—Yes, but he was always a reasonable man. He had been employed on the Egyptian State Railways for most of his life.

7750. (*Mr. Hiley.*) What was the system of selection in the case of the Egyptian board?—Some of the members came on the board when the Egyptian Delta Railways absorbed another little railway, and took over some of its directors. But that was before my time.

7751. (*Chairman.*) Before we leave the point of local purchases, you say in your proof that there may be objections to a local board making local purchases?—I had what I have just told you in my mind when I wrote that.

7752. Suppose it was put from the other side: "Yes, there may be, but why should not "there be the same objection to a London board "making London purchases?" What would be your answer?—My answer is that the London board are in a somewhat different position to a local board. They are not connected with local manufacturers and local agencies for materials.

7753. But they might be?—I do not know of any that are.

7754. There is no reason why you should not be a director of, we will say, the North British Locomotive Company?—I do not know of any instance of that kind. I know for my own part that I refused a seat on the board of a train electric lighting company because I did not consider that one should be interested in a business which might tender for our contracts.

7755. Of course I am not making any suggestions against them. Your point is that it would be more difficult to get local directors in India who are not connected with contracts?—I should say so.

7756. Clearly that a man should contract with himself is undesirable, even though it be in the form of a limited company?—Yes, I consider it most undesirable.

7757. You have given us help in two directions for which we are very much obliged to you. Now I propose to bring you back to your own proof. You express the opinion that the guaranteed railways would not be as remunerative to the State under State management as they are under the present system?—I rather put it in the form of a question. Personally I do not think they would be.

7758. Why do you say that?—For the reasons I have given—that a large central administration has not got the same interest in giving its attention to a business as a board which is solely identified with that business has.

7759. Are you making that as an *à priori* argument, or do you find, in fact, to take two railways alongside of each other, the difference between the North-Western Railway and the Bombay, Baroda and Central India is very remarkable in the amount of attention they give to economy and efficiency? Has that been Indian experience—that the State railways are inferior in management?—I would not like to say that. The State railways are face to face with company management all round them, and the result is that there is a certain amount of emulation between them. I feel pretty sure that the State railways derive benefit from the example of the company railways round them.

7760. Let me put it in this way: do you think the Oudh and Rohilkhund Railway may not be stimulated by emulation to obtain the same results as on the North-Western Railway just as much as the results on the East Indian Railway?—I think so.

7761. In that case it does not require to have a company railway alongside, so long as you have a railway?—There are both.

7762. You see what I mean?—I see your point, but when you have all State railways, under one central administration, I do not think there would be the same emulation as at present.

7763. You would not say from your own experience that the three State railways were conspicuously better or conspicuously worse than the guaranteed railways?—I would not, but at the same time I cannot speak from experience, because I have never worked in contiguity with them.

7764. When you were at Jodhpore you must have been between the different systems?—I must say that when I was at Jodhpore I found the Bombay, Baroda and Central India Railway far easier and more businesslike in their dealings than the North-Western. I had two junctions with the North-Western and two with the Bombay, Baroda and Central India.

7765. How far do you think that is a matter of the personality of the agent and the staff?—That I am not prepared to say.

7766. Do you think the company system tends to get more energetic officials?—I think so. I think it tends to get more individual attention.

7767. You say in your note: "State management is liable to political pressure which is not "always in the interests of successful railway "working. Company management is not so "susceptible to such influence." Will you tell us what you have in your mind under the name of "political pressure"?—Pressure as to engagement of staff, chiefly. That is what was in my mind.

7768. I will tell you why I am asking the question. I can understand political pressure in England, where the local Member gets up and makes himself disagreeable in the House of Commons, but how is political pressure in fact exerted, or likely to be exerted, in India?—In the various Legislatures.

7769. You are afraid of their having too great power over details of management?—I am afraid of their having too great power in the way of—one does not quite know how to put it—in the way of their exerting pressure in the selection of staff that may not be in the interest of the railway.

7770. You think that is really a risk which must be contemplated in the near future?—That is what is in my mind as far as State management is concerned.

7771. Then you refer to the question of management by an Indian board *versus* a London board. I presume you would agree that, other things being equal, a board on the spot is better than a board 6,000 miles away?—Other things being equal.

7772. You would accept that?—Yes, I would not deny that. That is merely a question of distance.

7773. Yes, taking that point only; but that disadvantage in your view is more than counterbalanced by the advantages of London?—I think so.

7774. You say: "In the case of a board "located in India it would be difficult to obtain "the same class of railway expert, and impossible "on anything like the scale of pay now ruling." Take the case of the East Indian Railway; as you know, we are specially asked to report on that. We are told that the Government have decided that it is to be managed in India. Supposing they decided that it was to be managed in India by a company, and supposing in order to get one or two expert directors on the board it was necessary to pay them a couple of thousand rupees a month, does that matter? Is it worth bothering about in a big railway company?—Scarcely.

7775. Supposing you did offer Rs. 2,000 a month, we will say, to one or two experts with special qualifications, would you have any difficulty in getting them in India?—Not at that scale of pay.

7776. You agree on that?—I am rather doubtful whether 2,000 would be sufficient.

7777. Well, 3,000?—Yes, 3,000.

7778. It really does not matter?—Your point is that it is such a bagatelle that it is of no consequence what you pay the board?

7779. Yes?—If you put it in that way, yes.

7780. The ordinary type of director who is not an expert—financial and business men—you think you could get?—Yes.

7781. You have already raised the point that you see a difficulty about local contracts?—Quite.

7782. Because the society is small in Calcutta and Bombay and there is not the same pool to fish in that there is here?—Yes.

7783. I have put that clearly, have I not?—Quite.

7784. I will not ask you about the detailed work of Railway Boards in London because we have had evidence on that from many people. You say the London boards are in touch with the Secretary of State. Looking at that from the point of view of the people in India, whether it be users of the railway or whether it be the Railway Board, do you think there is anything in their point of view that it is not quite fair that, while they can only write to the Secretary of State, you can go and talk to him, so that you get an unfair advantage? Is there anything in that point of view?—I do not think so.

7785. Would not you rather, if you wantto persuade a man, go and talk to him than write to him?—Yes, but you are arguing——

7786. I am not arguing; I am only putting the point to you?—You are putting it on the supposition that the interests of the two are opposed.

7787. No; I am putting it from the point of view that two competent people, you in London and the president of the Railway Board in India, differ, and you appeal to the Secretary of State to decide between you. You have an advantage because you can talk to the Secretary of State and the other man can only write?—I was not thinking of that so much as questions relating to the contracts and agreements with the Secretary of State. I was not thinking of appealing against the Railway Board or against the Administration in India at all. That was not in my mind.

7788. Let us clear that point up first. Can you understand why they should grumble in a case like that? If you did appeal against the policy of the Railway Board, can you understand why that would be regarded as a hardship on the Indian side?—I do not think so.

7789. With regard to the contracts, if you in London have a contract with the Secretary of State in London, of course you deal with him; that is obvious. Then we come to the question of capital. You say the companies are in touch with the Secretary of State in the matter of the raising of capital?—Yes.

7790. Do you raise capital?—We have, but not lately.

7791. Have you ever raised any share capital since your original contract?—Yes, we raised one million share capital.

7792. When?—In 1909 I think it was.

7793. What is your total share capital?—Three millions. When the company was originally formed it was two millions That was in 1896 or 1897, and in 1909 we raised an extra one million of share capital.

7794. I have not the Burma contract so much in mind as some of the other contracts. Was it part of the original contract that you were given a right to raise that capital *pari passu* with the Secretary of State?—We did not alter the contract, so I presume it was.

7795 It was a right and not a thing that you asked from the Secretary of State?—No. It was a thing arranged with the Secretary of State, so far as my recollection goes, by verbal discussion.

7796. "But shall at his option enable the company to raise"—then he did give you permission to raise one million?—Yes.

7797. How much capital has been raised for the undertaking since then?—None. Since then the Secretary of State has exercised his right to supply capital.

7798. You misunderstood me. I do not mean how much capital have you raised; I meant how much has been raised for the undertaking: how much has been supplied?—Something like 1½ millions.

7799. And that has all been supplied by him?—Yes.

7800. Have you asked to be allowed to have a share?—No. What we have asked is whether the Secretary of State desires us to raise capital or not, and the reply has been "no."

7801. I imagine that that is the last share capital that has been raised for any of the Indian railways so far as we have heard. I do not know of any that has been raised since the report of the Mackay Committee?—I have not heard of any other share capital being raised since.

(*Chairman.*) Does any member of the Committee know of any other case since the Mackay Committee Report where one of the guaranteed railways has been permitted to raise share capital?

(*Sir George Godfrey.*) I do not remember one.

(*Sir Arthur Anderson.*) I can give you an instance in which the share capital has been increased, but it was really due to the absorption of an existing company.

7802. (*Chairman.*) That is a different point. If you are not to raise capital, if the Secretary of State confines it to himself, that advantage of the contact of the board with the Secretary of State disappears?—Yes.

7803. With regard to contracts, materials and rolling-stock, those are points that have been dealt with by other representatives of the Indian railway companies, and I do not think I need ask you about them. If any member of the Committee likes to, he will of course do so. You say that the placing of contracts and arranging for shipping and insurance could not be done at all without the establishment of an office or agency in London?—Yes, some agency.

7804. Would not the High Commissioner's office be quite capable of doing all that?—That would be an agency in London. You would have to have some arrangement. I daresay it might be done in that way.

7805. Presumably it would be cheaper and easier to fix the contracts for the eight companies through one organisation than to do it through eight organisations, and that organisation is in existence at present?—I can only speak from my experience of that organisation, which is not a happy one. After the war our contracts were let through the Stores Department of the India Office. I may not be quite fair towards it, because it was rather snowed under, but we were very glad when we were asked to take up the work again ourselves.

7806. It was taken over during the war, was it not?—At the close of the war the Secretary of State asked us to permit the India Office to arrange the contracts, with the idea, I suppose, of properly distributing them, as they were very numerous. At any rate the actual experience was that the India Office department got snowed under.

7807. Was that a failure of organisation in the India Office or a failure of the manufacturers to carry out the contracts?—I think it was a failure of the organisation in the India Office. I am not complaining here against the organisation; the fact is that it was not sufficient to cope with the work. There was a large amount of extra work put on them which their staff was apparently not sufficient to carry out.

7808. Do you see any objection in principle to its all being done by a single agency, supposing it was adequately staffed?—No.

7809. I should like to ask you a question or two more about the application of your experience in regard to the Egyptian Delta Railway Company to the Indian problem. From the experience you then gained I understand you are not inclined to recommend duplicate boards?—No, I am not.

7810. You think it would result in overlapping and disputes?—Yes. I cannot see any object in it.

7811. The unfortunate agent would not know which master he had to obey?—Quite so. We found that difficulty in Egypt.

7812. I see you say that you do not think you want an Advisory Board attached to the agent? You think contact through Chambers of Commerce suffices?—That is so.

7813. I think more evidence has been given us about passenger grievances even than traders' grievances; anyway, there is a great volume of

it. The local Chambers of Commerce would not touch that, would they?—No.

7814. The local Chambers of Commerce do not take up things like the running of a train or the alteration of a train to meet changes in or growths in passenger traffic. The Chambers of Commerce would have no special opinion on such a thing as that?—No.

7815. You would not object to an Advisory Board?—I do not quite see the point of an Advisory Board for a matter of that sort. Anything of that sort is very quickly brought to the notice of the agent by outside opinion.

7816. Supposing one outsider writes a letter, and the agent does not attach very much importance to it, and the letter is brought up before the Advisory Board and three different members say: "We know there is a very strong "public opinion about this; that man represents "a great many besides himself, and we think "you had better pay attention to him"—cannot you imagine that kind of thing happening?—I can imagine that kind of thing happening, but I think the agent is at present quite sufficiently get-at-able by public opinion. I am speaking as far as my experience goes. Possibly we may be better situated in Burma, but there are very few complaints there either from the public or through the papers.

7817. The Burmese third-class passenger may be treated better or he may be less vocal than his Indian brother third-class passenger?—We do not hear many complaints. I do not think he is less vocal. With regard to any complaints that may occur, I do not think it will require the existence of a board to bring them to the notice of the railway authorities.

7818. Assuming that for the sake of argument Indian public opinion is very anxious to get this, would you refuse it?—No. I should deprecate it, but I would not refuse it.

7819. With regard to the question of finance, of course you will agree—it is hardly necessary to ask you—that more capital is required?—That is so.

7820. Are you averagely badly off, or are you worse than the average or better than the average?—I think, from what I saw in India this winter, that we are somewhat better off than the average. As a matter of fact the Local Government, as I say in my written evidence, is financing branch lines, and we are busy constructing them.

7821. That is out of your rice profits?—Yes. That, of course, has eased the position.

7822. How much money is the Local Government finding?—They are going to find, I think, something like 3 crores.

7823. And they are going to use that as share capital?—Yes.

7824. They are not going to use it as interest; they are going to use it as capital?—I am not sure about that. First of all the idea was that they were going to use it as capital. When I was in Burma I saw there was a discussion going on as to whether they should put the whole of the rice money into a trust and invest it.

7825. Anyway, are they filling up the whole of the necessities of the province?—As far as new construction at present goes, yes, but there was a line that we were very anxious to make which we could not get money for, and it has rather fallen out now. It was to be made for the Burma Corporation traffic. They have large zinc and lead mines, and we have been trying, unsuccessfully, to get capital from the Railway Board for constructing a line to the mines. They admitted that the line ought to be made, but could not supply the money. The Burma Corporation have informed us lately that they have reduced their operations, so that I do not think there is any call, at least any great call, for this line now.

7826. (*Sir Henry Burt.*) They have reduced their operations because they cannot get the line?—That is what they say. We telegraphed to them a few months ago about that, and they replied that, owing to this line not being made, they were reducing their operations.

7827. (*Mr. Hiley.*) Is it not part of the scheme that they are transferring some of their operations to Jamshedpur?—That is knocked on the head entirely. They were going to smelt zinc at Jamshedpur. What has happened I do not correctly know.

7828. It has fallen through?—It has fallen through completely.

7829. We went to Jamshedpur; they have spent a great deal of money there?—So I am told.

7830. (*Sir Henry Burt.*) The point I wanted to get at was whether development was arrested because they could not get the line?—Certainly, I should say it was.

7831. (*Sir Arthur Anderson.*) Is the existing line being worked to its full capacity?—I believe it is. It certainly was last year when I was there.

7832. (*Chairman.*) So that the position is this, that you do not need extensions, except of lines that are being provided through the Local Government?—That is so for the present.

7833. But for the existing lines provision is short all round—rolling-stock, workshops and so on?—Yes. For open line capital.

7834. What grant are you getting this year—can you tell us?—I cannot tell you offhand; I can let you know.

7835. Have you got the figures for the separate phases, the forecast, the provisional grant and the final grant? I think you probably have, and perhaps you would kindly let us have them. Can you tell us whether you got what you wanted?—Do you mean for this current year?

7836. Yes, the amount for the year now commenced?—It is a little difficult to say, because it is so mixed up with what your carry-over is from the last year. So far we have not had to curtail any orders.

7837. You are speaking now of rolling-stock and supplies from England?—Yes.

7838. But what about, for instance, the remodelling of station yards? That is very largely a question of the expenditure of money in wages on the spot?—Yes. I cannot say that we have had any difficulty this year in that way, but that must be qualified by this, that we have just got a very large estimate home for remodelling station yards, which has not been sanctioned yet. Whether we shall get the money or not is open to question.

7839. Would you mind letting us have a little memorandum showing what your forecast was and what you have in fact got—showing if the forecast has been considerably cut down, and what works have been cut out. You see what I mean?—Quite. I will get out particulars of that for you. (*P.S.*—The witness subsequently informed the Committee that the demand for capital works was Rs. 65 lakhs, the provisional grant was Rs. 42 lakhs, and this was subsequently increased to Rs. 57 lakhs.)

7840. Some parts of India told us that the Railway Board do not take much interest in them because they are a long way off. Can you tell us when you last had a visit from any member of the Railway Board?—It is a long time ago. I think it was before Sir Henry Burt's time. Was not Sir Stephen Finney the last member who visited us?

(*Sir Henry Burt.*) I visited you as President.

7841. (*Sir Arthur Anderson.*) I was there, too, and Mr. Couchman was there?—Mr. Couchman?

7842. Yes; I rather think he came twice?—Mr. Couchman never visited Burma, did he, when he was on the Railway Board?

7843. I think so. I certainly did?—Yes, certainly you did. I think you were the last member. Mr. Couchman came to Burma last year, but not as a member of the Railway Board, nor did he go into any railway questions at all.

7844. I may be wrong, but I was under the impression that he had gone there?—He went there last year as a member of the Stores Committee, but he did not go over the line, or make any enquiries of any kind. I think you were the last member who visited us.

7845. That was during the war some time?—That was some years back.

(*Chairman.*) Can you tell us the date?

(*Sir Arthur Anderson.*) I think it was about 1916. Certainly it was during the war.

7846. (*Chairman.*) If this visit took place in 1916, you do not think there has been a member there since?—I think not—I am pretty sure not. There was one occasion on which the Chief Engineer of the Railway Board came, but that was in connection with a particular question of a river.

7847. The important point is this: do you think that you are left out in the cold?—I cannot say that I do.

7848. You are happy without them?—We are quite happy as far as that goes.

7849. You have no grievance on that head?—No, I cannot say that we have.

7850. From the other point of view, it has been said by the public: "If the Railway Board came here, they would keep the company in order"?—Quite.

7851. Have you got a public that would be inclined to say that about you?—I do not think so. I have been in Burma the last two winters, and I do not think there are any complaints—none that I have heard of. Of course, you will always find small complaints.

7852. You have not got an indignant public in your neighbourhood?—Certainly not.

7853. You say that funds for what you call "open line capital" should, in your opinion, be provided by the Secretary of State or by debenture loans raised by the companies?—Yes.

7854. Not by share capital?—I would not like to dogmatise about that. I have no doubt there are cases in which share capital could advantageously be raised. At present, as far as Burma is concerned, I would not suggest raising fresh share capital.

7855. You think it should, therefore, be provided either by the Secretary of State or by a debenture?—Quite so.

7856. What is the advantage of a debenture over a direct State loan?—None that I can see. The Secretary of State, however, may not want to put so large a loan on the market as would satisfy everybody, in which case the companies might be used as a second string.

7857. With the disadvantage that if he raises a debenture loan he is equally responsible for the money, and he has to pay a good deal more for it?—Yes, something more.

7858. You would not do it if you could help it?—I think the Secretary of State can raise it at a lower rate of interest. I should prefer that, provided always that he did not overdo the market.

7859. There is no special advantage that you can see in a debenture?—No.

7860. With regard to branch lines, branch lines have found capital that otherwise would not have been found in the past?—I believe so.

7861. Assume this situation. The Burma Railways are ready to find the money for a given branch; a separate company is also ready to find money for the same branch; which do you think would be the better way to do the work?—I should prefer to make it on the part of the Burma Railways.

7862. Is there any advantage in a branch line company, unless it be that it does find money that the main line company cannot find?—I do not know of any advantage, but I must say that I have had no experience of branch line companies.

7863. Some people have told us, for example, that it stimulates local interest, and so forth?—That may be so, but, as I say, I have had no experience of branch line companies.

7864. The last point you mention is that the system under which capital is doled out for expenditure in accordance with the exigencies of the Government of India's finance is detrimental to the interests of the railway?—I think so.

7865. We have been looking for somebody who would tell us it was advantageous?—I dare say.

7866. I wonder if you can tell us anything new on that subject?—I am afraid I cannot.

7867. From the railway side, can you see any possible advantages in that system?—I cannot.

7868. From the railway side, can you see any difficulty in making the railway finance independent?—No. I cannot say one way or the other. That is a question that Government has settled from its own point of view. I merely say from the railway point of view that I think it is harmful. May I give you a very recent instance?

7869. Please?—We had a line in Burma that was being constructed by Turkish prisoners. The earthwork and part of the masonry of the bridges was being done by the Turkish prisoners. At the beginning of 1919 the Turkish prisoners were withdrawn, and Government stopped the work. Our people in Burma were very averse to stopping the work, because it meant getting rid of the staff.

7870. The supervising staff?—The supervising staff. But money was not forthcoming, and the staff all had to be got rid of.

7871. Can you tell us in what month the work stopped?—In the early part of the year. In December the Railway Board suddenly gave us 5 lakhs of rupees to spend, and, of course, we could not spend them. We had to struggle to collect the staff and start the work again. That is obviously not a business nor sound arrangement.

7872. Could you have gone on without any difficulty with local labour?—Yes. It was local labour that we used eventually.

7873. You could have got the local labour at that time?—Yes. There was no question about the possibility of getting labour.

7874. That is a concrete instance of the way in which the thing works?—It is a very recent instance.

7875. You say you could not spend the money. Did not you start to spend it?—Yes, we started at once. As a matter of fact, the line is open now.

7876. But you could not spend the whole 5 lakhs?—We could not spend the whole 5 lakhs at the time. Of course, we did our best.

7877. Some part of it lapsed?—Again I cannot give you the figures, because I do not know exactly, but I know we could not spend it all within the financial year.

7878. Will you kindly make a note of that, and give us the particulars a little more in detail?—I shall have to find it out from Burma.

(*Chairman.*) I am afraid, then, that will be too late.

7879. (*Sir George Godfrey.*) What year was this?—The beginning of 1919. We got the grant in December.

7880. (*Chairman.*) Did you get a re-grant in the following April 1920, that enabled you to carry through?—Yes.

7881. The line was not again interrupted?—No. There was an interruption for about eight or nine months, roughly. As I say, we had to get rid of the staff, and then re-engage a fresh staff.

7882. (*Sir George Godfrey.*) From your experience you would not describe the Indian railways, the bigger lines, as being over-equipped or over-capitalised, would you?—As to capital, I cannot say, but they are certainly not over-equipped.

7883. Why did you say that you thought, in many cases, construction engineers in India had spent money without paying any regard to the traffic-earning capacity of the line they were building? Those two things seem to me to be inconsistent?—I said the traffic exigencies of the line. I can give you an instance on the Rajputana-Malwa Railway. That was built in the ordinary way by an engineering staff. You will find, if you go down the Rajputana-Malwa Railway, engine changing stations that were built at the beginning on a large scale that have been abandoned because they did not fit in with the traffic working. I was on another section once in its early days, where they built ordinary water-tanks at every station and sunk wells at every station, which were never used afterwards. Money was wasted in that way.

7884. Those things do not represent a great deal of money, do they?—No.

7885. As a general proposition you would not say that the railways were over-equipped?—Oh, no. I did not suggest for a moment that the railways were over equipped. What I suggested was that in the early days of a railway you should begin it—especially on branch lines—in the way that I mentioned.

7886. My opinion is that we have been over-economical in India?—I quite agree with you; we have been over-economical. But you are dealing with trunk lines, and I am referring more to the construction of branch lines and lines that are not through lines, such as the Jodhpore-Bikanir Railway originally was. What I think is that there has been a want of sense of proportion between the requirements of a trunk line and a branch line.

7887. That has happened in some cases, at any rate, within your knowledge, but it has not happened generally?—No, not generally.

7888. (*Chairman.*) May I ask a question trenching on a subject that we really have nothing to do with, except indirectly. The Jodhpore-Bikanir line has now become a through route, has it not?—Yes, it has been now for a pretty long time.

7889. Had you known that, would you have made it 3 ft. 3 ins.?—Yes, because it was in connection with a 3 ft. 3 ins. line at the northern end.

7890. If you had known what you know now, that it is a part of a big through route, would you have made these hundreds of miles of narrow gauge, or faced the alteration of a little bit of narrow gauge and made it a broad gauge line?—I would not have made it a broad gauge line under the circumstances. Had the Rajputana Railway been a broad gauge line I might have made it a narrow gauge line, because it would not have paid as a broad gauge. It would have been obviously absurd to commence a broad gauge line as a branch line off a metre gauge.

7891. Of course, but what was the length of the narrow gauge line starting from Agra? As a matter of fact, did the narrow gauge line with which you were connected start from Agra, or where?—It started from Agra and Delhi.

7892. How far from Agra and Delhi was it before you picked it up?—I picked it up at Phalera—I suppose about 250 miles.

7893. To have made it broad gauge would have meant widening quite a large section?—Precisely.

7894. (*Sir Arthur Anderson.*) With further reference to the point that Sir George Godfrey was speaking about, if you take the case of the line in the Southern Shan States, which is a branch off the main Burma line, what percentage of saving would have been effected by building that branch to a light standard instead of to the ordinary standard?—On a branch of that sort you would not save anything. It is quite a different kind of proposition. That is a mountain railway.

7895. (*Chairman.*) You have no broad gauge in Burma?—No; it is a metre gauge system from beginning to end.

7896. (*Sir Henry Burt.*) You have answered one of the questions that I intended to put, but I want to be clear on one point. Assume for the sake of argument that the London board ceased to exist; from your knowledge of Indian railway administration would you definitely advocate State working or company working, with Indian boards, I mean?—That is a very difficult question to put. You see, there is nothing to compare with. *Primâ facie* I think a company-managed line is better than a State-managed line, but now you are putting the position of all the London boards being transferred.

7897. I am assuming, for the sake of argument, that they ceased to exist at some time; then would you advocate universal State working or company working in India, with boards in India?—I should advocate both systems.

7898. You would like the present system, some of one and some of the other?—Yes, I think it is useful. I would not abolish State railways, and I would not abolish company lines.

7899. In order to keep up the emulation to which you have referred?—Precisely.

7900. (*Chairman.*) What would be your solution in regard to the East Indian Railway, which has got to be faced?—I have no personal experience of the East Indian Railway.

7901. But you have a large experience of India. What would you say if you had to answer

the question which I suppose we have to answer: do you recommend the Secretary of State to hand over the East Indian to a company or to the State?—I should personally leave the East Indian as it is.

7902. Assume that is ruled out?—Then you ask me, would I hand it over to a company or to the State?

7903. A company in India or the State?—On the whole I should hand it over to a company, I think, although I do not like to say definitely.

7904. (*Sir Rajendra Nath Mookerjee.*) With regard to your statement that it is difficult to find Indian directors who have no personal interest in contracts, are you aware that, according to the Indian Limited Companies' Act, if a man joins a board of directors he has first of all to declare his interests in any other concern, and, secondly, that he is not allowed to vote on any question decided by the board in which he has an interest?—No, I was not aware of that.

(*Chairman.*) What is the name of that Act?

(*Sir Rajendra Nath Mookerjee.*) The Indian Limited Companies' Act. According to that Act, if anyone joins a board of directors he has first of all to give a declaration stating his interests in all the concerns with which the board may have to deal. Secondly, if the board wants to purchase anything from a concern in which he is interested, he is not allowed to vote; if he does he is liable to be criminally prosecuted. That prevents anyone in India using his personal interest to vote for the purchase of things from a firm in which he has an interest.

(*Chairman.*) This is new, and it is rather important. Can you tell us whether that would apply to a director of the East Indian buying from the X. Y. Company, Ltd., in which he is a shareholder?

(*Sir Rajendra Nath Mookerjee.*) If the directors of the East Indian Company were in India, then the Indian Act would come into force.

(*Chairman.*) Supposing the company is domiciled in India, can a director buy from a limited company of which he is a shareholder, because in England he can?

(*Sir Rajendra Nath Mookerjee.*) Yes, he can, provided he declares beforehand that he has an interestin it.

(*Chairman.*) We had better get a copy of this Act.

7905. (*Sir Rajendra Nath Mookerjee.*) The next question I would like to ask you is this. From your long experience in regard to the construction of railways you admit, do you not, that a very small fraction of the capital is expended in India. The purchase of rolling-stock, rails and other such materials are made in India, and that for many years they will have to be purchased in England?—Quite so.

7906. So that in regard to the major portion of the capital of any railway company, the money will have to be expended in England and not in India?—That would depend a good deal on the kind of line. In a line like my old Jodhpore-Bikanir Railway that is so most certainly, but in a line like the one Sir Arthur Anderson was speaking about, the Southern Shan States Railways, it is the other way round, because there the subgrading and bridging is exceedingly expensive. It costs a great deal more than the amount spent on materials from Europe or elsewhere.

7907. In Burma you mean?—Yes.

7908. How is the work done there: do you call for tenders?—We generally get tenders from petty contractors. As a rule our work in Burma is done by petty contract. We do not employ large European or other contractors as a rule.

7909. Then supposing a Burman is a director of the Burma Railways Company, he will have no interest in that at all?—That is so.

7910. So that the position you have put before us, that in India the directors will have personal interests in those concerns, does not exist?—Certainly not as regards that kind of work.

7911. Assuming that Europeans who join any particular board are free from such interest in any concerns, has it not been exposed by newspapers that even Ministers of the Crown in this country had interests in concerns with which the Government had to deal?—I am afraid I do not know that. I am not able either to deny or confirm it.

7912. So that your objection to having an Indian board, because the members will have an interest in the purchases made locally, has, after all, not much in it?—I said that might be the case. We found that difficulty in Egypt, and that was really what was in mind when I made that statement.

7913. (*Chairman.*) There you were dealing with Germans?—Germans and Austrians.

7914. Not Indians?—No, not Indians. I was speaking quite generally; I was not referring to anyone in particular.

7915. (*Sir Rajendra Nath Mookerjee.*) I only wanted to clear up the point?—Quite so.

7916. (*Mr. Purshotamdas.*) Do you mind telling me how many shares the Secretary of State holds in the Burma Railways Company?—The Secretary of State has his own capital.

7917. How much is it?—It is nearly six millions—5¾ millions.

7918. And you have three millions?—Yes.

7919. Which means that the stake of the Secretary of State is almost double that of the company?—Yes. Our share is twelve thirty-fifths.

7920. In reply to the Chairman you said that the political pressure that you apprehended was, as far as the Councils are concerned, pressure regarding the engagement of the staff for the railways?—Yes.

7921. I suppose you know a good deal about other bodies in India which are under State control. Have you heard any complaints about pressure in regard to the engagement of staff owing to those bodies not having boards in London?—No. I really do not know what you are referring to.

7922. Take, for instance, a body like the Port Trust. That is a Government body. Have you heard any complaints about pressure there?—No, I cannot say that I have.

7923. Why do you apprehend then that on railways that pressure will be exerted?—I have seen in the newspapers demands for the employment of Indians without reference to their special qualifications. You see demands for certain percentages, and I do not think that is a sound way of working. I should employ the best man, irrespective of whether he was an Indian or otherwise. I do not think a fixed percentage is a business-like proposition.

7924. Not under present circumstances perhaps?—Nor under any other circumstances.

7925. Why do you apprehend that the Councils will take the same view as some of the letters you have read in the Press?—That is the view I take of it.

7926. You make the statement: "The "officers of a State railway are liable to be "transferred from time to time from one system "to another, and cannot have the same personal "knowledge of, or interest in, the particular "railway they may find themselves attached to." Is it not possible to have a special railway service under which those things can be avoided?—I daresay it would be possible; I am not prepared to say, but it certainly has not been so hitherto.

7927. Because there have been company railways and State railways, and the company railways have been more numerous than the State railways; but that is a thing that can be got over?—Possibly.

7928. Lower down on the same page you say: "The board of a railway is composed, first "of men with expert railway experience, then "of financial and business experts." I suppose you mean by that the present constitution of the various boards?—Yes.

7929. These business experts are men who are still carrying on business, are they not, or are they retired men?—On the board of the Burma Railways Company they are mostly retired men.

7930. Do you object to men actually engaged in business being on boards?—No.

7931. I suppose you would prefer business men who have had experience of Burma?—Certainly.

7932. Business experience?—Certainly.

7933. Men who may have some sort of commercial interest in Burma?—I would rather like to qualify that. Commercial interest might possibly be wrongly exercised; I am not saying that it would be.

7934. I am trying to get at what you had in your mind when you wrote this note?—There are various commercial interests that are not always agreeable to each other. A big commercial interest might want you to arrange rates that possibly would not be in the interests of the other part of the community.

7935. Practically, in your opinion, merchants who have some sort of stake in Burma should be avoided as far as possible?—I would not go so far as to say that? No, I would not say that.

7936. You would pick and choose them according to their stake in Burma?—Quite so.

7937. If a man had some sort of interest in the mining industry you would try and keep him out, because you would say that he might be biased?—Yes, I should certainly agree with you there. Take the Burma Corporation, for instance, that is a large company having an interest in the north of Burma which has to despatch its goods backwards and forwards I should strongly object to a member of the Burma Corporation being on the board of the Burma Railways.

7938. Then your board would consist of merchants who are ignorant of the commercial requirements of Burma?—Oh dear no; not necessarily.

7939. Why not?—I exclude this particular company which has a distinct interest like the Burma Corporation because they might bring pressure to bear on the board to reduce their rates, and I do not think it would be right.

7940. But surely when you look out for a merchant to sit on the board of the Burma Railways you look out for a merchant with some sort of standing?—Certainly.

7941. You would look out for a merchant belonging to a biggish firm, and not to a small one and a big firm would have big interests?—I would not take on the board a member of a firm that was so directly interested as in the instance I have mentioned. I would not object to members of firms coming on the board.

7942. Small firms?—Not necessarily small firms. This is a big firm whose whole business has to go over the railways, and I do not think it would be wise.

7943. I should have thought generally speaking any firm of considerable standing would have a good deal to do with the railways?—So it would.

7944. Generally speaking you would not mind taking on to the London board the representative of a commercial firm which has interests in Burma?—Certainly not.

7945. You do not think that he would be biased?—Not necessarily.

7946. But you think that the Indian merchants out there would be biased?—No; I have never mentioned the Indian merchants.

7947. Excuse me; you say on page 3: "The "Indian board would consist of local business "men, who might have local axes to grind"?—I did not mean Indians.

7948. You say the "Indian board"?—I was talking of a board in India.

7949. If there was a board in India the commercial men there would be biased, but if there was a board in India composed of men who might have commercial interests there it would not be biased?—No; I think that is carrying what I have said a little too far. A board composed entirely of business men who are actively engaged in India might possibly be biased. The board in London is generally composed of men who have left India, in fact is always composed of men who have left India, and who are not open to the same personal bias.

7950. When you say they have left India it means, does it not, that they may have left it physically, but they may have business interests in India?—Not as a rule, but I would not debar a man because he had business interests in India.

7951. Then you would have on your board merchants who have retired from India and have no business connections there?—I would not debar them from all business connections.

7952. In the next paragraph you say: "Financial and business experts with local ex- "perience could be obtained, but they would be "men whose time was taken up with their own "business," that is in India?—Yes.

7953. Does not the same happen with regard to commercial directors on the London boards?—As far as my experience goes, no. Our board is composed of men who have retired from business.

7954. I was referring to the English railway companies. Do not the boards of those companies contain men who are actively engaged in business?—Yes, I have no doubt they do.

7955. They manage to give a sufficient amount of time to the work, and to do it fairly satisfactorily, do they not?—Personally, I would not hold up the English railways as something to be imitated entirely.

7956. Then you say with regard to the London boards that "they must keep up to date "in all matters connected with improvements in "railway working," &c. How do the Colonial railways manage? Do not they manage to keep up to date in the working of one thing and another without a London board?—You are talking of the State railways now?

7957. Yes?—I have no doubt they have their representatives in this country.

7958. They do not need a board?—I do not know; I have no experience of them.

7959. They have not any boards?—I gather that they are State railways.

7960. We have ascertained from the High Commissioners that they have no boards here. One officer does the work, and the same might be done in the case of the Indian State railways?—Possibly, but whether it would be as advantageous is another matter.

7961. Do you remember Mr. Ryan sending to you a few questions with regard to the purchase of stores for the railways, to which you kindly replied in a letter?—Yes.

7962. You said in your first letter that when the lowest United Kingdom tender has been only slightly higher than the lowest foreign one, the United Kingdom tender is accepted?—Yes.

(*Mr. Purshotamdas.*) That was followed by another letter requesting you to let us know what "slightly higher" meant. You have very kindly given us a great deal of information, but that has not been mentioned. Could you tell us how much it represents?

(*Sir George Godfrey.*) I have not seen this letter. Is it a public document belonging to the Committee?

(*Mr. Purshotamdas.*) It was a letter sent through the Secretary.

(*Sir George Godfrey.*) Has it been circulated?

(*Chairman.*) What is the letter?

(*Mr. Purshotamdas.*) They are questions sent to the railways through Mr. Ryan with regard to their purchase of stores, and a reply has been received to that letter.

(*Chairman.*) I have not seen it.

(*Mr. Purshotamdas.*) It has gone through the Secretary.

(*Chairman.*) I am not complaining, but like Sir George Godfrey, I have not seen the letter.

(*Sir Arthur Anderson.*) I have not seen it either.

(*Chairman.*) Apparently you wanted some information. It will be alright if you will let us know what the information is, instead of assuming that we know it.

(*Mr. Purshotamdas.*) Shall I read the paragraph from the letter, or would you rather I did not do so?

(*Chairman.*) I do not know what it is, so that I have no opinion on the matter. The Committee must know, however, what we are talking about.

7963. (*Mr. Purshotamdas.*) What we are talking about is this. What I asked for was, were tenders called for by the railways from foreign countries, and if they were so called for did the contracts always go to the lowest tenderers, and the Burma Railways say in their reply: "In the cases where firms outside the United Kingdom obtained orders, it was because "their rates were the lowest. In a few cases "foreign tenders, though lower than British, "have been passed over: (1) when material "supplied under previous orders has been found "unsatisfactory; (2) when their delivery dates "have been too long; (3) when the material "offered could not be recommended by our "consulting engineers, and (4) when the lowest "United Kingdom tender has been only slightly "higher than the lowest foreign one." I was asking Mr. Home to tell us what "slightly higher" meant?—We have no percentage rule. Since the war, as far as I know, we have given one contract abroad, to Belgium. Before the war we gave a considerable number. For instance, there is a large bridge at Rangoon which went to Germany; it was completed just before the war On various occasions we placed contracts with Krupps and other firms for steel material, tyres and wheels, when they were considerably lower than the lowest English tender. The highest bridge in India was built in America, the Goteik Viaduct on the Burma Railways.

7964. Have you purchased any machinery or stores for the Burma Railways from October last to the end of March last?—I cannot tell you straight off, but I could let you know if you want to know.

7965. I should be obliged if you will kindly let us know the total amount of stores and machinery bought by the Burma Railways from the 1st October last to the 31st March last?—You mean ordered?

(*Mr. Purshotamdas.*) Yes, of course. (*P.S.*—The witness subsequently advised the Committee that the contracts let by the company in London between the 1st October 1920 and 31st March 1921 amounted to 140,000*l.*)

7966. (*Chairman.*) You have said that your share of the profits is $\frac{1}{5}\frac{2}{5}$ths?—Yes.

7967. When the Secretary of State advances new capital, does he advance it in the form of loan capital at a fixed rate of interest, or does it become part of the profit-sharing capital and so change the ratio?—No, it is loan capital and it is the first charge on the earnings of the undertaking.

7968. Is that the bargain, that you shall retain $\frac{1}{5}\frac{2}{5}$ths of the profits?—We retain $\frac{1}{5}\frac{2}{5}$ths of the surplus profits.

7969. Have you a right to prevent him putting in money as share capital instead of as loan capital, because if he put it in as share capital he would dilute your ratio?—Such a point has never come before me. I do not think he can do so.

7970. (*Sir Henry Burt.*) I do not think it would happen in practice?—It never has happened in practice.

7971. (*Chairman.*) What are the rights in the matter? Anyway, he does advance money as loan capital?—Yes.

(*Chairman.*) We can see in the return whether he has a right if he choses to advance it as participating capital. We can find that out for ourselves.

7972. (*Sir George Godfrey.*) Do you know whether your $\frac{1}{5}\frac{2}{5}$ths is a fixed proportion?—Yes, I can tell you that. It is fixed on the ratio of the Secretary of State's capital to ours and it works out at $\frac{1}{5}\frac{2}{5}$ths.

(*Chairman.*) It is not a fixed ratio, it is a ratio depending on the capital.

7973. (*Mr. Hiley.*) It is the present ratio?—Yes.

(*Chairman.*) We are very much obliged to you.

(The witness withdrew.)

(Adjourned for a short time.)

MR. M. M. GUBBAY, C.S.I., C.I.E., called and examined.

7974. (*Chairman.*) You are now General Manager of the Peninsula and Oriental Bank?—Yes.

7975. I believe you were an Indian civil servant?—Yes, I have been invalided out of the Civil Service.

7976. You have held, I believe, all kinds of posts?—Yes, the last post I held in India was that of Financial Secretary to the Government of India. Before that I was Controller of Currency; previous to that I was Wheat Commissioner; previous to that I was Collector of Customs at Bombay, and previous to that I was Under Secretary in the Commerce Department.

7977. So that you have had a very wide experience in India of everything which touches finance?—Yes. Out of the 21 years' service which I spent in India, 19 were spent in departments connected with commerce or finance.

7978. As Wheat Controller, I take it you were a great deal concerned with the movement of traffic?—Yes.

7979. What was your experience?—We were able to secure at that time preferential arrangements for the despatch of wheat from the wheat districts to Karachi, to Bombay and to Calcutta; but I ought to explain that at the time when I was in charge of the wheat operations, which was in the early years of the war, the pressure of traffic on the railways was nothing like so great as it subsequently came to be. There was a time in Karachi when the railways brought down enough wheat practically to fill the Kiamari Yard. My recollection is that 150,000 tons came down and filled up the wharf and we had to hold up further despatches.

7980. You are talking of the early days of the war?—Yes.

7981. (*Sir George Godfrey.*) About 1916?—1915.

7982. (*Chairman.*) You said you had to get preferential accommodation?—Yes.

7983. That naturally means that other people would have to get deferred accommodation?—I was not in the least concerned with what other people got.

7984. Can you tell us anything from your own knowledge as to how much the deferred people suffered?—I could not say that at all.

7985. But you had to claim priority in order to get through?—Yes, I claimed priority on the ground that it was Government traffic.

7986. I am not arguing the point; I was trying to see whether you could help us on the point of what happened to the other people. I do not know whether we may take it as accepted that the railways are short of facilities?—You may take that from me, certainly. That has been my experience both then, subsequently, and prior to that.

7987. Prior to the war?—Prior to the war too.

7988. Can you say whether since that time it has got much worse on account of the great development of traffic?—Yes. Prior to the war my experience was that which I gained in my position as a Government nominee on the Bombay Port Trust. There we constantly received and heard of congestion up country.

7989. What date was that?—I was on the Bombay Port Trust from 1910 to 1913.

7990. Was that equally the case on both railways?—I think so, but my recollection is that it was more particularly on the Great Indian Peninsula.

7991. (*Sir George Godfrey.*) Was not that seasonal congestion?—Undoubtedly.

7992. (*Chairman.*) And not all the year round?—Not all the year round, but seasonal congestion.

7993. Each year?—Yes.

7994. May we take it that the reason of that is insufficient capital expenditure?—I would not say that that alone was the reason. You mean insufficient railway capital expenditure?

7995. Yes, insufficient railway facilities?—I do not know whether I am heterodox in this matter, but I rather thought that the railway terminal facilities at the port in Bombay were not good and our new docks were not then ready. I am speaking purely from memory here, but I think I am also correct in saying that the Port Trust and its administration for some years before 1910 had been antagonistic to a proper system of railway facilities within their domain.

7996. That is to say, facilities for which they were responsible?—Yes.

7997. It would not be fair to say that the railways were subject to congestion if the congestion was caused through the port not being able to take its traffic?—That is my reason for making that qualification. I believe if there had been a proper development of port facilities the congestion up country could have been minimised. I do not say it would have disappeared entirely. The wagons could not be turned round quickly enough because of the situation of the docks and the way in which they were built.

7998. That was not the railways' responsibility?—No.

7999. Looking at the situation as it is to-day, from your general knowledge have you any doubt that the facilities of the railways of the country are inadequate?—As a general proposition I should agree with you that the railway development has not kept pace with the necessities of the traffic.

8000. That means inadequate capital, I assume?—I take it it means inadequate capital expenditure.

8001. What in your judgment is the reason, assuming it to exist, for the inadequate capital expenditure?—I do not think the rupee capital market in India was sufficiently exploited. I think there was a certain lateness in estimating the possibilities of that market.

8002. I suppose we may assume that the resources of that market, or at least the available resources, have increased very much in the last few years?—Undoubtedly.

8003. The authorities have not grasped it promptly enough; that is how you put it?—I have a definite recollection that in one of the years between 1910 and 1913 I was informally asked my opinion as to the possibility of raising, I think, five or six crores through a rupee loan, and my general feeling was that there would be no difficulty in raising this amount, but I think the Government loan that year was considerably short of that amount. There was a certain hesitation about going full tilt at that market.

8004. In other words, you think the Government had been a little unnecessarily timid in exploiting the Indian market?—That was certainly the case before the war—in the last two or three years before the war. During the war,

of course, that hesitation at once disappeared. I was concerned with the raising of the loans of 1917 and subsequent years right down to 1920, and on those occasions we found that our reasonably sanguine estimates of what the market would put up were always exceeded.

8005. In other words, you became a little less timid and still you kept behind the available capital?—We took it all.

8006. You did get it all?—We took all that was offered.

8007. But I thought you said you still lagged behind?—In our estimates. We issued our loans as open loans.

8008. And you got more than you hoped for?—Yes.

8009. Though your hopes had risen from what they would have been a short time before? Is that right?—That is so. I should like to qualify that by saying that with regard to the loan of 1920, the last loan in which I was concerned, the issue of the 10 years 6 per cent. Bonds of the Government of India, we got very near the mark as to what was the likely amount the market would absorb of those bonds.

8010. Those, of course were War Loans. Do you think the fact that they were, so to speak, patriotic loans made any very great difference?—Undoubtedly. That was one of the main reasons.

8011. From that point of view you would expect an ordinary loan not to bring in quite so much?—Quite.

8012. On the other hand, the financial resources are developing rapidly?—I would mention as the second of the reasons, after the patriotic stimulus of the war, the fact that we borrowed on short term, and therefore enabled a good deal of money which had been made in war profits to be invested for periods of three, five and seven years on favourable terms. Thirdly, the whole network for tapping the market in India was considerably enlarged. We had the loan open practically at every Treasury in India, and we also changed our system of receiving applications, so that anybody who wished to lend money to Government got his scrip at once, instead of having to go through the elaborate formula of application, allotment letter, and so on. Then we also must recognise—and this is part of the first consideration—that we were very materially helped by the assistance of non-official agencies such as the War Loan Committees.

8013. What is your view as to the prospects of the future for loans that will not be for war purposes?—I believe in the first place that the tendency on the part of the Indian capitalist, and I mean the small capitalist as well as the large——

8014. How low do you mean to go when you say that? Do you mean the ryot?—No. I will say the Indian investor. The tendency on the part of the Indian investor now is to put his money in investments rather than uselessly hoard it. I think there is definite evidence on that. Furthermore, I have seen industrial enterprises in Bombay and in Calcutta of a magnitude and size that would not have been dreamed of 10 years ago, now successfully floated. So that on the whole I think the basis of the investing market in India has been very largely broadened. Like all investing markets, it has its own tastes, and the question is, what is its taste for the time being? There is no more finality with regard to the taste of the investor than there is with regard to the taste of any other purchaser of commodities. He changes from time to time. Probably one of the difficulties in the past has been that our loans were stereotyped in the form of a 3½ per cent. security, in regard to which the only varying element was the rate at which the tender should be put in from year to year. I believe there is a very great possibility of finding money in India under certain conditions, and for railway purposes there are certain special conditions which will probably have to be taken into consideration.

8015. The first point is that you ought to offer various baits in various forms, instead of offering one big bait?—Quite so.

8016. The old loans were issued wholly through the Presidency Bank. You widened that during the war in various directions. You employed other banks and you issued straight to the investor, and so on. Could you go further? Did you get every agent who was likely to be useful in collecting money?—Yes. We employed almost every form of agency, with the exception of the fellow who would go round touting. We employed Indian agencies as well as European agencies and banking firms. We gave a commission on all applications which bore the stamp of any recognised broker, and we drew up a very wide list for that purpose. I imagine that possibly a non-Government loan put on to the Indian market might be applied for through other banks than the Presidency Bank, and applications might be received at all their points; but the banking development of India is still in its infancy. I believe there is great scope for future borrowings.

8017. May we put it in this way—that as the banking facilities are growing in India and are getting down to touch the lower stratum, from the financial point of view, so those agencies should be used to get in touch with the people as far as possible?—That is so. On the other side of the shield, you must provide facilities for the conversion into cash of scrip when the holder wishes to sell. Stock Exchanges in India are very limited, and the up-country seller of scrip has to send it down to Bombay or to Calcutta, and he does not quite know how to check the price at which he is told his scrip is sold.

8018. I daresay you may have observed—I very often have—in the smallest provincial towns in France you are pretty certain to see put up the price of the day for *rentes* or the local railway stock or for some other big investment of that kind. That is your idea?—That is my idea.

8019. In regard to the Government loans. Supposing Government telegraphed every morning all over India what the price of such and such a loan stood at, you would assume that any bank would take it at that price on a commission?—Yes. I think as a matter of fact we did consider and work out some very simple arrangement of that kind in connection with the War Loans, but it came to nothing.

8020. That is a thing which is difficult to provide but which can be applied. Now, you referred to men who went round to tout?—May I amplify that for a moment? I was Controller of Currency at the time, and I received a few—the number would not reach 10, but there were certainly four or five—applications, which came in a batch (it looked to me like a trial), on the part of certain people unknown to me in up-country places, who guaranteed to obtain sums varying from Rs. 10,000 to 15,000 provided they were given the brokerage which we were

allowing to recognised brokers. I had their application by the local authorities, and they advised that on the whole it would be best not to take advantage of that opportunity, for the reason that one did not know what form the pressure would take which these brokers would apply on the investor, and as it was a Government loan we thought it might be regarded as a form of levy or war contribution from people. That particular objection would not apply in the case of a loan raised for industrial purposes, but there are always certain objections to unrecognised and *ad hoc* brokers suddenly going round and securing subscriptions.

8021. Those objections, I take it, would be minimised if you prepared long in advance and, so to speak, moved your men under the local authorities. Some of them might be trustworthy and others might not?—I should say in the bigger towns the necessity is for the bringing into existence of a Stock Exchange with its attendant paraphernalia.

8022. What about the little towns, in the rich areas of the irrigated Punjab, for instance?—I do not think you need go down quite as low as that. I was thinking of such places as Cawnpore and Lucknow, which are without Stock Exchanges. I think you ought to tap those first.

8023. But you cannot put a local Stock Exchange in such places as Montgomery. How will you tap them?—I should tap them through Lahore. My recollection is that Montgomery is not very far from Lahore, and I should think Lahore would be sufficient for that purpose.

8024. But must you not have a personal appeal? It cannot be merely a notice that they can subscribe to a bank at Lahore. You want to get somebody in touch with them?—I assume that in Montgomery you would have a branch of a bank, because that is a necessary antecedent to the existence of a Stock Exchange.

8025. What about propaganda, advertising, and so on?—I have not very great faith in propaganda work with a view to the general education of the investing public. I think that ought to be left entirely to the members of the Legislature. If the Legislature approves of a policy of active railway propaganda the members of the Legislature ought to canvass their constituencies and put before their constituencies the advantages of railway development, and educate their constituents to that point of view.

8026. How are the Government going to prevent rupees from being hoarded?—That is a very complicated question, and one to which I have given a lot of personal attention. Roughly speaking, the cause of the hoarding of rupees in India is in no way unexpected or startling. It is due to the fact primarily that there is no opportunity on the part of the holder of money which has been received in exchange for commodities of putting that money out in any other way than either gold or silver. The cheque is still in its infancy. The banking system is still in its infancy, and where you have got a cheque system and a banking system you have not solved the question of vernacular cheques. Another point which ought to be taken into account is the reluctance, or in some cases the resentment, on the part of the Indian who banks with a bank to submit to the small charges which banks will make. I have been told that if the one anna stamp was removed from the cheque it would popularise the cheque. I have also been told that if banks were not to make charges for the transfer of money, which they do, people would undoubtedly use the banking system for the purpose of transmitting funds from one part of India to another, instead of transmitting them by currency notes. Roughly speaking, you can take it that a man has until quite recently had to put his rupees into silver rupees when he has received them on the sale of his wheat or jute or any other commodity. He keeps a certain amount of them for his own personal use, and if he has to transmit the rest to anywhere else he exchanges them for currency notes, transmits the note in two halves to the place of destination, and uses the currency notes in lieu of a cheque. Therefore you do not get the accumulated funds of the public in the hands of institutions which could in themselves lend them out to others for the purpose of taking up loans or for the purpose of putting them into industrial development.

8027. Clearly the railways cannot wait until the banking system has been reformed and extended. How can we get that accumulation of funds straight into Government loan?—You would like to apply a magic wand to this money and say: "Let them be brought forth and be put into a railway loan." I see no way of doing that.

8028. You cannot open a shop in the bazaar, and put up a notice: "20 rupees of scrip in return for 20 rupees down," with the statement that it carries so much interest?—I do not think so

8029. (*Sir George Godfrey.*) Do you think that those people invest their money in the Post Office Savings Bank?—Yes, I think in the industrial centres a good deal of the money which is paid out weekly and monthly to the wage earners is going into the Post Office Savings Bank.

8030. (*Chairman.*) But the total is small, is it not?—I forget the exact figure. I think it was about 18 crores. I forget the number of investors. I think it reached about 200,000.

8031. Eighteen crores out of 300,000,000 of inhabitants is not much?—You must remember the rate of interest which is paid.

8032. The amount per head is very small?—Yes. You must also realise the competition of private lending. Money in a small village can be turned over at a much higher rate.

8033. The bulk of the money that has built the railways has been raised in England?—Yes.

8034. We have now discussed the possibilities of India. Why cannot they get more in England?—As a mere business proposition I imagine Government could have raised considerably larger sums if they had been prepared to pay a higher rate.

8035. You are talking of before the war?—Yes; but, on the other hand, there are other reasons which ought to be taken into account. One is that there is a natural disinclination to hold a large amount of foreign debt.

8036. In the earlier days the American railways, and in the later days the Argentine and Canadian railways, got almost all their money in London. You say that India could have got more money if she had been prepared to pay for it?—Yes.

8037. As I read the accounts, there never was a time for many years past when the earnings of that money put into railways did not do more than carry themselves. When they were borrowing at 3 or 3½ per cent. the railways were earning 4½ and 5 per cent.?—I hope you will get evidence from Sir William Meyer on that

point. We took out for him some years ago figures for the purpose of satisfying, I think it was the Bengal Chamber of Commerce on that point. I think we found that over a series of years the general taxpayer had got little more from the earnings of the railway than he had paid out in interest or guarantee.

8038. Do you suppose we could get hold of that paper?—I imagine that Sir William Meyer may refer to it in his evidence before you.

8039. Do you remember how far back it was?—I cannot lay my hands on it, but I am almost certain he will be able to tell you.

8040. One knows that in the early days the railways had to be nursed by the taxpayer?—I am talking of the whole period, from the inception to a certain date. It must have been subsequent to 1914.

8041. I do not know whether your memory enables you to answer this question. For a good many years before the war, say, the seven years from the Mackay Committee to the war, the railways were a good deal more than carrying themselves, were they not?—I should say they were.

8042. Therefore, if you had earned 4 per cent., and you had paid 4 per cent. instead of 3½ per cent., would it, in your judgment, have been good business to do so?—I always think it is a good thing to spend 16*s.* when I know I am going to get 1*l.* afterwards.

8043. Is not that the answer? You do not refuse to apply that somewhat general principle of finance to the special case?—No. I am ready to spend 16*s.* if I am going to get 1*l.* afterwards.

8044. (*Sir Henry Burt.*) I have some sort of recollection that about 1914 Sir William Meyer, in his financial statement, put in a table which made out that the railways only returned 1½ per cent. Do you remember that?—I cannot recollect that.

(*Sir Henry Burt.*) After all charges had been paid. That was the profit.

(*Chairman.*) The profit after interest?

(*Sir Henry Burt.*) Yes.

8045. (*Chairman.*) In other words, you were investing nothing to earn your 1½ per cent. After you had paid all interest on loans, and also paid off about a million sterling of capital through terminable annuities, you still had a net surplus of 1½ per cent. (*To the witness.*) What is your view about the present as far as borrowing is concerned, assuming that you need more than you can get in India? What is your view about borrowing in England?—I should like to ask at this stage whether I am correct in assuming that it is purely as a business proposition that this question is put, and that it is not with reference to objections such as those which I have just recently mentioned to you, of holding debt in the form of sterling instead of in the form of rupees, and also the objection which I know to exist amongst Indians about borrowing in England as opposed to borrowing in India?

8046. Let us suppose that the railways are really merchant concerns?—I think you could raise more money here if you were prepared to pay for it.

8047. You think you could get what you urgently needed, at any rate?—With regard to the last Government of India loan of £7½ million, I should have imagined that that amount could have been materially increased.

8048. The city were rather surprised, were they not, at the response? It did go more quickly than people expected?—Undoubtedly.

8049. It does prove that money can be got at a price?—Yes.

8050. If you can earn 8 per cent. on it, it is worth spending 7 per cent. It is the same story?—Yes. I do not know myself the inner history of that particular operation, but I assume in that particular case the advantage of borrowing at the present moment was due to the fact that it was anticipated the rupees necessary ultimately to pay off this loan could be brought over to this side at a higher rate of exchange.

8051. One thing which has been impressed upon us, mainly by official witnesses, has been: "You must not borrow except very cautiously for fear of depreciating the credit of India." What is your view as a banker? As long as you trust a borrower's solvency, do you feel that he has less credit if he is prepared to borrow at 6 per cent., whereas 10 years ago you would lend him the money at 3½ per cent.?—The tests I should apply in a case like that are, firstly, the purposes for which the money is being borrowed; secondly, the rate at which money generally is being borrowed and lent at the time; and, thirdly, the application of his previous borrowings by the same borrower, and the use to which he has put money lent to him. There is, of course, an upper limit to the amount of borrowings by anybody. You have indicated that in a general form by your remark: "Subject to his solvency not being in doubt." Assuming his solvency is not in doubt, and it is a question of his requiring, for an immediately or very nearly immediately reproductive operation, sums in addition to those he has already borrowed, he must pay the market price for them. His credit is not affected by the fact that he is paying a higher price for his borrowing if the market has changed, nor is his credit improved if he borrows at a lower rate when the market has improved.

8052. Take this case. The London and North-Western Railway 3 per cent. debentures before the war stood at 90 something. They stand at 62 or thereabouts to-day. Would you advise them to refrain from raising new debenture money for urgently needed improvements, if they thought it would pay them directly, for fear of damaging their credit?—No, I should not give that advice.

8053. Does it seem to you a reasonable position to take? Would you consider they were damaging their credit?—No, I do not think one's credit is damaged by an operation of that kind.

8054. (*Mr. Tuke.*) In this connection perhaps I may be allowed to ask a question. We have heard from certain quarters that the paying of a higher rate is rather apt to depreciate the security: Is it not a fact that, as the result of this recent loan by the Indian Government, the old 3½ per cents., 3 per cents. and 2½ per cents., instead of being reduced in value, have actually increased in market price?—Yes. This recent loan has done a good deal to draw attention to Indian borrowings, and not an unfavourable attention.

8055. Instead of depreciating securities it has rather improved them?—Yes, I understand that is the case.

8056. (*Chairman.*) You have used a phrase that is worth pursuing for a moment. You spoke of "drawing attention." I suppose the Peninsular and Oriental Bank is as likely to be in touch with Indian investments as most people?—Yes.

8057. Do you find that much attention is paid to Indian railway investments as apart from Government borrowings?—No.

8058. Is that want of attention or want of attractiveness?—I could not say. I should say probably the competition of other securities.

8059. Which are more attractive intrinsically or which are better advertised?—I think there is a certain hesitation at the present moment about investing in India. I think there has been a certain element of—what shall I say—a desire to wait on events.

8060. Do you think in the past they have suffered from want of attention?—I could not say. I was out in India for the greater part of the last 20 years.

8061. Then I need not ask you the question. Now let me come to quite a different point. As I daresay you are aware, there is a very strong feeling in India in favour of State management, which has been expressed to us by a great many Indian witnesses. On the other hand, I think we may assume that there is a fairly strong feeling in English public opinion against State management at this moment. How do you think that sentiment one way or another will affect the investing public in India and in England? Let me put it in this way. Would an Indian investor be more inclined to invest if they were State railways rather than company railways?—Do you mean companies with a London board?

8062. Yes—or take it both ways, with an Indian board or with a double board?—We have never had a large railway company with an Indian board, but I should be very curious to learn the effect on the mind of the Indian thinker of the transfer to India of the directorate, with a view to seeing to what extent that transfer would induce him to put money into Indian railways.

8063. I think we may almost assume that if he was a believer in India managing its own affairs he would be inclined to put money into anything which served the interests of India. I think we may take that for granted?—I think so.

8064. Carry it a stage further. Do you think he would differentiate between a company railway managed in India and a State railway managed in India?—I believe there is a good deal of feeling in India in favour of State management on the part of people from whom and in places where I would not have expected to find that opinion. I have never myself found very clear or convincing reasons on their part favourable to State management. My own feeling undoubtedly is this—I have never disguised it and I have always maintained it—I should like to see company management with boards in India. It is only through that change in the system that I can see any real chance of finding more money in India on the scale on which it is required.

8065. Do I understand you think that companies managed in India would get more money than the State would get if it managed direct?—Yes, not because of the greater attractiveness of company management over State management, but because I believe you are following a sterile line of thought—sterile at any rate for the next 8 or 10 years—if you are going to rely on the State to find capital for railway development.

8066. Do you only mean from India?—From India.

8067. You are not applying that to finding money in London?—No.

8068. Is your view that you could get money in India for Indian company railways?—There would be a greater chance of your finding money for railway development if you had Indian company management than there would be if you had Indian State management, for this reason and this reason only, that the Government for the next few years must devote itself to the funding of its debt.

8069. It must devote its Indian resources?—No, it must devote itself to the funding of its debt, and an operation for a funding of a debt cannot be carried through on the same terms as an operation for the purpose of raising money for railway development. It is like having two pairs of shoes, a pair of walking shoes and a pair of dancing pumps. You cannot use your dancing pumps for walking out in the mud, nor can you use your walking shoes to dance in. That is the problem which we have to face in India. It is a problem which, as Financial Secretary, I was constantly faced with, and I had on more than one occasion considerable discussion with the present Finance Member upon it. The Government of India, Finance Department, has a difficult financial future in front of it for the next few years, and the whole of its energies must be concentrated on the funding of its debt. The Railway Department, on the other hand, is anxious to develop the railways, and is prepared to pay more in order to get money for the development of its railway property. In the one case naturally you want to fund on low terms; in the other case you are prepared to go to higher terms. If you pool the two operations, as is done now through State management of the railways, it is quite clear you cannot get enough money for this particular purpose of developing the railways.

8070. I do not think I quite follow. Does that lead to this, that if the North-Western State Railway and the Eastern Bengal Railway want a lot of money you would turn them into companies and get it in that way?—I should certainly turn the Eastern Bengal into a company.

8071. And let it finance itself?—Yes.

8072. I still do not think we have got it quite clear on the notes. The funding operation would not, as I understand, affect the London market?—No.

8073. Do I understand you correctly in this—that you would like the borrowings on the London market to be in some shape earmarked for the railways? Would you earmark the Indian Government borrowings in London for the railways?—I cannot conceive that the Government would borrow in England for any other purpose except for railways or irrigation.

8074. You are speaking of two different terms of interest?—The debt which has to be funded is a rupee debt.

8075. That keeps it clear and we may ignore it when we are talking about borrowing for railway purposes. Now I follow, I think. You say you desire company management. Does that mean you desire the present methods? I mean this. The East Indian Company as it exists in London is very closely regulated and controlled by the Government. It has very little initiative; it cannot raise capital without permission; it cannot spend that capital except in ways in which it is permitted to spend it; and it cannot appoint new officers without permission, and so on. Are you contemplating transferring that to India or are you contemplating changing the position?—I should like to see a freer hand given, subject of course to a control of rates.

8076. That of course would be done, as it is done in any country where the railways are purely the owners of their own property?—The extent of the capital they would be allowed to

raise would be a matter of negotiation on the transfer of a particular railway to a company.

8077. We know that the capital invested in the undertakings ranges from something very small in the case of the East Indian to something over a third in the case of the Burma?—Yes.

8078. Would you entrust the same amount of independence to a company having only a very small portion as you would to a company having a substantial portion of the money invested?—Yes, I do not think I would make any differentiation on the basis of the amount of the Government capital in the undertakings. The control we are discussing is a control of their expenditure, a control over their fresh capital issues. The fresh capital issues, I take it, would be limited by some automatic method.

8079. In other words, you do not attach importance to the argument, which might be put in this way:—If I own a third of the capital I ought to have a freer hand than if I only own one-twentieth?—No. I think the Government, as a shareholder in any particular railway, would be naturally entitled to be represented on the local board of directors.

8080. But surely if I held one-third of the capital of a given company and it had nine directors, I should expect a bigger representation on the board than if I held one-twentieth?—Yes.

8081. But in the case of the Indian company you would be prepared to say that the same arrangement would be suitable for both?—Yes. I do not regard the numerical representation on the board as of value, as long as Government is represented on the board.

8082. Are you assuming he is a director with a veto?—No. I am not assuming he has a veto, but I am assuming he will have powers of reference to the contract or the charter under which the railway would be operating.

8083. Supposing the charter gives the company power to appoint its own agent, and supposing they want to appoint Jones, and the Government says his salary is to be 3,500 per month, and Jones says: "I will not come under 5,000," practically the Government refuses to allow them to appoint Jones?—I would not apply control to matters of that kind.

8084. In other words, you would give them greater freedom in that matter, at any rate?—Yes; that is to say I imagine that all these questions must necessarily be approved by the legislature.

8085. You mean these alterations?—All these alterations. That is a limitation which seems to me to govern the whole of the terms of the enquiry by this Committee—that the Indian Legislature is in a position to make itself effectively heard on this question. The point was raised in my mind by your question about the appointment of an agent. There is no question that for the last four or five years considerable attention has been paid in Legislative Councils and in the Legislature to the extent to which Indians are represented on the staff of the railways, and the terms on which they are paid, and I believe you may find that the Legislature will require a very considerable control over the personnel.

8086. Then that will mean greater interference by the Government?—Yes, that is so.

8087. I was asking you whether you would be willing to relax that interference?—I gave you my opinion, but, as I say, that opinion is possibly not capable of application in practice.

8088. Supposing it be that the Legislature were predominantly in favour of State management and you did keep the companies in fact. Do you think the companies would, from the fact that they were kept on, suffer from interference by the Legislature, and always have to overcome prejudice?—I believe so.

8089. Is that a real point in deciding between the two?—I think it is a point to be taken into account.

8090. Now I want to bring you to your special point, if I may. One thing we have heard is that the railways have suffered from the power of the Finance Department to interfere inside—to alter their estimates—and that in every way the railways are really controlled by the Finance Department. What is your evidence about that?—My view as to the facts, do you mean?

8091. Let us put it in this way, in order to clear it up and see where we start from. There is no difficulty in imagining a system under which the Railway Department was entitled to say: "The Government has found 300,000,000*l.* "for us. The interest on that at 5 per cent. is "15,000,000*l.* The Finance Minister is entitled "to regard us as his debtors for 15,000,000*l.* per "annum. How we raise it is not his business." I presume you can imagine that system?—No, I find some difficulty in imagining it.

8092. Despite the fact that it does exist in so many countries?—I regard the Government as indivisible and not capable of partition.

8093. Let us get it a stage further. It is quite competent to the Viceroy's Council to say: "Under the exigencies of the present moment "the railways will please furnish an extra "2,000,000*l.*" just as it might increase the salt tax?—How do you suggest the salt tax is increased?

8094. By proposing it; by passing it as part of the budget?—The original proposal for raising the salt tax comes from the Finance Department, although the Salt Department is not administered by the Finance Department.

8095. It is a scheme agreed to by the Council. The Finance Minister submits his budget to the Council and they discuss it. The Council agree that he shall propose to the Assembly an increase in the salt tax. Why cannot the Council agree also that he shall propose the railways shall pay something more than the 5 per cent? Is not that right?—No. I regard that as quite a different proposition. The salt tax is a tax and it is imposed by the will of the Legislature. The question of the amount which ought to be spent by railways on capital expenditure——

8096. I am not talking about new capital expenditure at all. I am only, at this stage, discussing what returns the railways shall make on the capital that the State has invested. If we want to carry further the question of the expenditure of capital, that is quite simple also. It is quite possible that a proposal to spend a certain amount of capital may be made by the Railway Minister or it may be made as an annex to the budget. In Switzerland, for example, the proposal would be made by the Railway Minister and not by the Finance Minister?—Perhaps I have not got your point quite right. Your proposition is that, say, 15,000,000*l.* is contributed by the Railway Department to the general purse?

8097. Yes, that is to say, they pay the interest on the debt which has been incurred on their

behalf?—And any net earnings in excess of that should go where?

8098. That is a matter for the railway administration. They may reduce the rates or say to the Government as a whole: "Here we "have a surplus of 3,000,000*l.* We can safely "borrow 15,000,000*l.* against it."—And in the converse case, as has occurred in the last year and in the last two or three years, when the Government as a whole is faced with a deficit?

8099. Not on railways?—With a general deficit. Then it can turn round to this Railway Department and say: "You have to meet a portion of it?"

8100. You will observe this. If the railway has paid the interest on its old debt, anything paid to the Government beyond that is in effect taxation of railway traffic. It is not for the use of the railways. It is taxation of railway traffic. You would agree with that?—I would not use the word "taxation."

(*Chairman.*) Then what is it?

8101. (*Mr. Tuke.*) It is called a surtax, is it not?—That is the name for the particular form of railway charge which has recently been put on.

8102. (*Chairman.*) It really is making the customers of the railways pay for the commodity which they get, namely, transport, more then it costs?—Do you regard the reserves which have been accumulated by an Argentine railway company as taxation—as being built up out of taxation of the railway traffic in the Argentine?

8103. I think it all depends what they are. If they are reserves for replacement of rolling-stock they are merely part of working expenses. If they are reserves for equalisation of dividends, yes, they are something more than is necessary. —It comes to this, if you regard that as taxation, that any undivided surplus which a railway possesses is taxation.

8104. Any undivided surplus of the railways, taken from railway purposes, is taxation—not as long as it is kept for railway purposes, because *ex hypothesi* it may enable you to reduce rates hereafter; but if it had been offered to the Finance Minister to spend on the Afghan Frontier it is taxation. You do not differ, do you?—Yes, *in toto.* I cannot conceive the railways having it both ways. If the railways have been built, as they have been, on the credit of the general taxpayer, and on the general credit of the Government of India, it seems to me that the latter are entitled in lean years to require the railways to increase their charges and in good years to take such surpluses for the general benefit as they may deem to be necessary.

8105. I do not think there is very much between us. Is not that another way of saying, that that is the manner in which money can be raised for the benefit of the State with the least pressure, that is, the money for the needs of the State can be met with the least general disadvantage to the public? That is your point?—No. My point is that the general taxpayer looks all round to his various sources of revenue for relief, and this is one of them. He is the owner.

8106. You think theoretically that is the right system?—I think it is the right system, and I go further than that. I do not say it gives you any larger capital borrowing powers.

8107. No, I do not suppose anybody would argue that it did, but you have a great deal of experience of the system under which the finance control of the railways works?—Yes. One likes to avoid personalities on this question, but what one felt was that the Railway Department rather relied, like many other departments—in fact, I might say all other departments—on the critical examination of the Finance Department to keep them straight from the financial point of view.

8108. In what way do you mean—auditing?—No, not only in auditing.

8109. You mean to keep them straight in the sense that they always came up against a blank wall and they had to stop there?—No, to keep them straight in the sense that they did not outrun the constable in their expenses.

8110. But you have agreed with me that for a good many years before the war the railways were always earning 1½ per cent. more than they cost?—I never agreed to that. I believe it is the case they did earn in recent years more than they cost, and if they did I think it was due to the critical examination of the Finance Department.

8111. As I understand you now, you say the Finance Department has been helpful in getting an orderly development of railway facilities?—No, I do not say that. I said the Finance Department helped them in an orderly development of their financial resources.

8112. It has certainly hampered development. Development has been hampered. We agreed that facilities had been inadequate?—Yes, we have agreed that facilities are inadequate.

8113. And to attain this result the Finance Department has been helpful?—I did not make that point.

8114. It seems to me so, adding the two statements together?—You are taking two statements which have reference to quite different propositions. You put to me the question just now whether the Finance Department's critical examination of the railway financial arrangements from time to time, namely, their estimates ——.

8115. Capital or revenue?—You limited it to revenue—was helpful or not.

8116. Yes. Mr. Cooke satisfied us that the Finance Department was able to guide the Railway Department as to the probable earnings and receipts for months ahead. The Railway Board admitted it. That was in respect of current revenue. What was in my mind was capital?—What critical examination on the part of the Finance Department is objected to?

8117. I do not think anybody is objecting to the examination?—Does not it come back to the original question that there was not enough money raised?

8118. Yes, in a sense?—How does it help, to keep the railway budget away from the other budget under a system of State management?

8119. Is not the point largely that the Finance Department in the nature of things looks at the railways from the finance point of view and not from the commerce point of view? It says: "You must not spend money," although the railways would say: "But we can earn revenue on it twice over?"—I do not think it is quite that. I think the Finance Department and the Government of India as a whole are timid about borrowing. The same argument applies to railways as it does to irrigation.

8120. Take another point. What about the question of lapses? That is a regular system of the budget?—Yes.

8121. And it touches the railways?—Yes.

8122. What do you say about it?—I think on the whole that the system of lapses is one which has been attended with bad results. I do

not see how you can get away from it entirely under any scheme.

8123. Clearly you would get away from it if there was a separate budget, would you not?—No, not entirely. You would get away from it if you had a separate banking arrangement, but that is quite a different matter from the budget.

8124. What is the distinction in your mind?—If you put into a different account in the Presidency Bank all the railways' earnings and said that so much of the railways' earnings was to be used by a particular railway and the rest of it was to be put to the general Government account, then you might be able to avoid the question of lapses.

8125. It is not a revenue lapse but a capital lapse?—It is the same thing with capital lapses. If you raised 3,000,000*l.* in London to-morrow and you said "1,000 000*l.* is for the East Indian Rail- "way, 1,000,000*l.* for the Great Indian Peninsula, "and another for the Bombay, Baroda and Central "India, and we do not want to touch your money "at all." It should not go into the ways and means of the Government of India. It is not a question of budgets; it is a question really of ways and means.

8126. Supposing you put it into the bank and it was earmarked and the Finance Department had no control over it, it could not be annexed?—The only point is whether you are going to adopt the system that every department shall depend upon itself for its own ways and means.

8127. Is there any other department comparable to the railways both with regard to its magnitude and for the separate nature of its work?—Yes, I think the Army Department and its expenditure. How would the railways exist but for the army?
