INTRODUCTION

In 1930 the Grain Futures Administration published data pertaining to the volume of trading, open commitments, and prices of wheat futures for the period of January 3, 1921, to December 31, 1929. The publication containing these data is Department of Agriculture Statistical Bulletin No. 31. Since then additional figures have become available for the years 1930-32, which are presented in this bulletin.

Since 1929 two additional markets have been licensed under the Grain Futures Act for trading in grain futures, and, therefore, some of the data contained in this bulletin cover 12 markets instead of 10. Future trading on the Omaha Grain Exchange, as a contract market, began on June 16, 1930. Trading in futures on that exchange, however, was suspended by its board of directors on December 7, 1932. Trading in wheat futures on the Hutchinson Board of Trade Association of Hutchinson, Kans., began on May 16, 1932.

Trading in United States wheat futures on the New York Produce Exchange was discontinued on December 31, 1927. On March 3, 1931, however, trading in bonded Canadian wheat futures was begun.

SOURCES OF INFORMATION

All of the statistical data presented in this bulletin relative to volume of trading and open commitments have been compiled from reports furnished the Grain Futures Administration by the clearing members and the clearing associations of the exchanges. The prices represent the official quotations of the Chicago Board of Trade for "round lots" of 5,000 bushels or multiples thereof supplemented in a few instances by data secured from brokerage houses.

VOLUME OF TRADING

SALES EQUAL PURCHASES

The figures on volume of trading represent the sales, or one side only of each transaction, according to the practice followed by the New York Stock Exchange, and a practice almost universal in reports concerning the volume of trading in commodities. For every sale there is, of course, a corresponding purchase, so that the volume of trading figures in the bulletin may be accepted as representing either purchases or sales.

FOR LIFE OF FUTURE

The volume of trading on the Chicago Board of Trade during the life of each future expiring during the years 1921 to 1932 is presented in table 5. The life of the future includes the period of time elapsing between the first trade in the future and the end of the delivery month.

As most of the trading in wheat futures is done on the Chicago Board of Trade, the data covering the daily volume of trading in each of the principal futures and in all futures combined have been restricted to that market. The daily volume of trading, open commitments, and prices of the 1930, 1931, and 1932 May wheat futures at Chicago are shown in figures 2, 3, and 4, respectively.

At intervals during the years 1930-32 there was trading in both "old style" and "new style" wheat futures. The periods when such was the case are as follows:

1930 December wheat future, old style and new style, October 14, 1930, to December 31, 1930.

1931 March wheat future, old style and new style, October 14, 1930, to March 31, 1931.

1931 May wheat future, old style and new style, October 14, 1930, to May 29, 1931.

1932 July wheat future, old style and new style, March 12, 1932, to July 30, 1932.

1932 September wheat future, old style and new style, March 12, 1932, to September 30, 1932.

The need for the designation of the terms "old style" and "new style" wheat futures was occasioned by the changes made with respect to the grades deliverable on futures contracts. The grades of wheat deliverable on contracts for future delivery on the Chicago Board of Trade at a premium, at contract price, or at a discount, from September 1, 1924, to December 31, 1932, are shown in the following tabulation:

<i>Deliverable at premium</i>	<i>Deliverable at contract price</i>	<i>Deliverable at discount</i>
Premium, 2 cents per bushel: *No. 1 Hard Spring ¹	*No. 1 Hard Winter	Discount, 2 cents per bushel: No. 2 Dark Northern Spring. ²
Premium, 1½ cents per bushel: *No. 1 Dark Hard Winter	*No. 2 Hard Winter	Discount, 3 cents per bushel: No. 2 Northern Spring. ³
No. 1 Dark Northern Spring ⁴	*No. 1 Yellow Hard Winter ^{1,4}	Discount, 5 cents per bushel: No. 3 Dark Hard Winter. ⁵
Premium, 1 cent per bushel: *No. 1 Dark Northern Spring	*No. 2 Yellow Hard Winter ^{1,4}	No. 3 Hard Winter. ⁵
Premium, ¼ cent per bushel: *No. 2 Dark Hard Winter	*No. 1 Red Winter	No. 3 Yellow Hard Winter. ⁵
No. 2 Dark Northern Spring ¹	*No. 2 Red Winter	No. 3 Red Winter. ⁵
	*No. 1 Northern Spring	Discount, 8 cents per bushel: No. 3 Dark Northern Spring. ⁵
	No. 2 Northern Spring ¹	No. 3 Northern Spring. ⁵

¹ Adopted Sept. 14, 1925; deliverable on futures contracts beginning Oct. 1, 1925.

² Grade eliminated Sept. 14, 1925, effective Oct. 1, 1925.

³ Eliminated from deliverable grades Oct. 6, 1930, effective on all contracts after June 1, 1931, deliverable prior to that date on "old contracts" only.

⁴ Adopted as deliverable grade Mar. 11, 1932, effective on all contracts after Oct. 1, 1932, deliverable on "new contracts" between July 1, 1932, and Sept. 30, 1932, both inclusive.

⁵ Adopted Sept. 14, 1925; not deliverable on futures contracts after Oct. 1, 1925.

An asterisk (*) indicates grade deliverable under rules existing on Dec. 31, 1932.

OPEN COMMITMENTS

The figures representing open commitments are for one side only, as for every long commitment there is a short commitment of equal amount. Inasmuch as the figures relate to the market as a whole, including all the members of the clearing house, the aggregate of the long commitments and the aggregate of the short commitments open should balance exactly, not only for each day and for each month but for the life of each future. This balance is not affected one way or the other by the fact that some contracts are eventually settled by the taking in or putting out of grain by delivery. Every such settlement, of course, affects both an outstanding contract of purchase and an outstanding contract of sale. The monthly range in open commitments in wheat futures on the Chicago Board of Trade from July 1923 to December 1932 is shown in figure 1.

PRICES

As previously indicated, the price data presented are the official quotations of the Chicago Board of Trade, supplemented occasionally by data obtained from brokerage houses. Few trades are made early in the life of a future. The prices at which they are made are

FIGURE 1.—Monthly range of open contracts in wheat futures at Chicago from 1923 to 1932, inclusive.

FIGURE 2.—Daily volume of trading, open commitments, and prices of the 1930 May wheat future at Chicago.

FIGURE 3.—Daily volume of trading, open commitments, and prices of the 1931 May wheat future at Chicago.

FIGURE 4.—Daily volume of trading, open commitments, and prices of the 1932 May wheat future at Chicago.

sometimes not called to the attention of the quotation department of the Chicago Board of Trade and, therefore, are not entered into the official price record of the exchange. In those instances prices have been secured directly from the brokers by the Grain Futures Administration and are included in the price data presented in the bulletin.

The daily opening, high, low, and closing prices paid for the March, May, July, September, and December futures on the Chicago Board of Trade are to be found with the net change in price from day to day in tables 27 to 31. The net change in price from day to day is the difference between the average of the closing range of a given future on one day and that of the previous trading day. The change in price is expressed by a plus or minus sign, the former indicating an advance in price as compared with the previous close and the latter a decline.

The high and low prices and the dates on which they were paid on the Chicago Board of Trade, the price range for the future, and the average daily price range during the life of each of the principal futures are shown in table 18. The monthly high and low prices, the average daily range, and the average closing price are given in tables 19 to 23.

HIGHS AND LOWS

The official high and low prices quoted by the Chicago Board of Trade include not only the highest and lowest prices paid during the trading session but also the bid and asked prices which are higher or lower than those paid, providing, however, that they follow a trade made in the pit. Whether the high or low is a bid or asked price is not indicated in the quotations of the Chicago Board of Trade sent out on the public wires.

CLOSING RANGE

The closing range usually relates entirely to prices prevailing at 1:15 p.m. (12 m. on Saturdays). There are times, however, when the closing range also includes prices paid a few minutes before 1:15 p.m. This usually occurs when a broker has a large order to fill reading "to buy at the close" or "to sell at the close." In that case the broker informs the Board of Trade representative that he has a large order to fill "at the close" and wishes to have prices paid by or to him, depending upon whether he is going to buy or sell, included in the official closing range. All trades made by him shortly before and at 1:15 p.m., are then included in the closing range for the day. Any bid or asked prices quoted at 1:15 p.m., are included in the official close and are shown by the letter "b" for bid, and "a" for asked.

Few, if any, closing prices are shown in the tables during the early life of a future. This is due to the fact that the trades made are few in number with none coming at or near the close of the market.

SPLIT QUOTATIONS

Fractions on the exchanges are expressed only in eighths of a cent and multiples thereof. By virtue of a special provision of the Chicago Board of Trade rules (repealed June 29, 1933), however, trades were permitted at so-called "split prices," equivalent to prices in sixteenths of a cent. This, however, was possible only if even multiples of a lot were dealt in. Under such circumstances it was permissible to buy or sell one half of the entire quantity at one eighth cent above the

remaining one half. For example, a trader selling 10,000 bushels at \$1.54½ split actually sold one lot of 5,000 bushels at \$1.54½, and the other 5,000 bushels at \$1.54½. While this was equivalent to a price of \$1.54½ for the entire trade, the split involved the quantity rather than the price. The price quotation for such transaction would have been expressed by using an equal sign (=) after the lower of the two prices, viz, \$1.54½=.

In recording the highs and lows in the Chicago Board of Trade Yearbook, split quotations are not designated as such. In this bulletin split quotations are shown as such by the use of the equal sign (=).

AVERAGES

The monthly averages of daily volume of trading found in tables 8 to 13 are based on the total number of trading days in the month, regardless of whether or not trading occurs each day.

The monthly average closing prices found in tables 19 to 23 are based only on quotations sent out on the public wire by the quotation department of the Chicago Board of Trade. Prices quoted by the board on round-lot trades previous to the time the quotation committee instructs that the quotations be sent out on the wire are not included in the averages for the following reasons: In the early life of a future, trading is small and at irregular intervals. Such trades, unless made at the beginning or closing of a trading session, have only the high and low recorded. If these prices were included in the averages for the month or for the life of the entire future, the average close might be higher than the average of the highs or lower than the average of the low quotations. A few instances also occur when volume of trading in round lots has been reported to the Grain Futures Administration for which no price has been recorded by the Chicago Board of Trade. This omission on the part of the board may be caused by the failure of the pit trader to report to the market reporter the price at which the transaction was made. In such cases the price is obtained by the Grain Futures Administration from the firms who made the trade. It is then entered as a high and low price in the records and designated as a price received from the firms. Such price figures are excluded from averages.

Occasionally, opening, high, low, and closing prices are quoted by the board of trade, but no volume of trading has been reported to the Grain Futures Administration to cover these prices. This may be due to an error on the part of the firms in failing to report the trading or on the part of the exchange which may have sent out a job-lot quotation, buyers or sellers price (bid or asked price) through error. Inasmuch as an opening, high, low, and closing wire quotation has been recorded by the exchange, however, it signifies that a trade has been made and such quotations, therefore, are included in averages.

OBSERVATIONS CONCERNING FUTURES QUOTATIONS

AVERAGE OF THE HIGH AND LOW QUOTATIONS

In this bulletin are presented the opening, high, low, and closing prices of wheat futures on the Chicago Board of Trade. These four types are the only ones which are widely published but it should be remembered that they are only a few of the many quotations which

are commonly registered daily in each active future. Several hundred quotations are usually established per day in the most active future during the 225 minutes of the trading session (150 minutes on Saturdays) and they tend strongly to fluctuate in wavelike movements so that no one quotation can be fully representative of them all. Careful examination of the readily available types of quotations has disclosed that no one type is best suited for all purposes. For rough comparisons the differences between the various types may not be significant, but if a detailed analysis involving futures quotations and other data is to be made it is necessary to consider the character of the other data (e.g., volume of trading) in connection with the nature of the type of the quotation chosen for the purpose.

The average of the high and the low quotations corresponds more closely, on the whole, to the average of all the quotations for a day than does any other readily available type of quotation.⁶ This may seem surprising at first in view of the disadvantages of such figures in most kinds of data but it may be seen that in futures quotations the daily high and low quotations are not affected by isolated high or low items. This is true because the contracts to which the quotations refer are very highly standardized and also because the large number of traders involved in the futures market helps to give continuity to the quotations.

CLOSING QUOTATIONS

The closing quotations are more widely used than any other type of quotations, both by the grain trade and by others, but they are unsuitable for many detailed comparisons. They have the advantage of being the final quotations for the day and thus of reflecting changes in the market situation which may have become known late in the trading session, but they are only roughly representative of the average of all the quotations for the day and they exhibit much wider fluctuations over a period than does the market as a whole. In part this is due to the fact that on one day the closing quotations may be found at or near the crest of one of the wavelike fluctuations and on the following day at or near the trough but it also appears that at times the change from one close to another may be affected by such influences as a rush of scalpers to close out their contracts before the end of the session or by heavy trading connected with privileges. A further objection to the use of closing quotations is that frequently they indicate that prices moved in the opposite direction from that which would be shown by a comparison of all the quotations. For example, the closing prices for a day may be lower than those of the previous day, while the market as a whole was higher than on the previous day, or the reverse may be true. Such was found to be the case on an average of 1 day out of 4 during the periods studied. For some purposes the closing quotations are the best type available, but their characteristics should be carefully considered before employing them in a detailed analysis.

⁶ The data on which these conclusions are based are presented together with additional conclusions in an unpublished manuscript in the files of the Grain Futures Administration.

1932 December	2,145,511	13,990	()	7,846	.37	2,529	1- 849	1-3.10

¹ This column shows the quantity settled by delivery and paid for, whereas the figures in the column to the left, giving the volume settled by notices passed, show the amount settled by delivery but not paid for, the notices being passed on to others.

² The larger volume of contracts settled by notices passed as compared to the amount of contracts open at the beginning of the delivery month is due to the fact that additional contracts made and held open during the delivery month were also settled by notices passed.

³ Passing of notices was discontinued Jan. 6, 1926, when the new clearing house began to function.

⁴ Number of bushels of actual wheat involved in the delivery not known.

TABLE 17.—Highest and lowest prices paid for wheat futures on the Chicago Board of Trade from January 2, 1877, to December 31, 1932¹

Future	Highest price per bushel	Date high was made	Lowest price per bushel	Date low was made
May wheat	\$3.25	May 11, 1917	\$0.43 $\frac{1}{4}$	Dec. 28, 1932
July wheat	2.75	May 12, 1917	.43 $\frac{3}{4}$	Dec. 28, 1932
September wheat	2.46	May 12, 1917	.44 $\frac{1}{2}$	Sept. 30, 1931
December wheat	2.75	July 13, 1920	.41 $\frac{1}{2}$	Nov. 25, 1932

¹ No complete record of future transactions available prior to 1877. From Aug. 27, 1917, to July 14, 1930, on account of the World War trading in wheat futures was suspended.

TABLE 18.—Highest and lowest prices, range, seasonal and average daily range in prices for the life of each of the principal wheat futures traded in on the Chicago Board of Trade, and expiring during January 3, 1921, to December 31, 1932¹

¹ The smallest volume of trading was 4,004,000 bushels on Saturday, Dec. 24, 1932.

² The largest volume of trading was 156,126,000 bushels on Thursday, Oct. 24, 1929.

TABLE 25.—Dates on which the principal wheat futures became dominant on the Chicago Board of Trade during the period Jan. 3, 1921, to Dec. 31, 1932¹

Year life of future ended	May future	July future	September future	December future
1921		Apr. 25, 1921	June 21, 1921	Aug. 16, 1921
1922	Oct. 20, 1921	Apr. 26, 1922	June 24, 1922	Aug. 11, 1922
1923	Nov. 6, 1922	Apr. 11, 1923	June 25, 1923	Aug. 17, 1923
1924	Nov. 13, 1923	Apr. 28, 1924	June 12, 1924	Aug. 15, 1924
1925	Nov. 1, 1924	Apr. 24, 1925	June 12, 1925	Aug. 7, 1925
1926	Oct. 22, 1925	Apr. 30, 1926	June 30, 1926	Aug. 16, 1926
1927	Nov. 16, 1926	Apr. 30, 1927	June 13, 1927	Aug. 18, 1927
1928	Nov. 26, 1927	Apr. 3, 1928	June 9, 1928	Aug. 8, 1928
1929	Nov. 19, 1928	Apr. 17, 1929	June 13, 1929	July 24, 1929
1930	Nov. 12, 1929	Apr. 26, 1930	June 17, 1930	Aug. 4, 1930
1931	Nov. 7, 1930	May 11, 1931 ²	June 17, 1931	Aug. 4, 1931
1932	Sept. 21, 1931	Apr. 12, 1932	June 4, 1932	Aug. 1, 1932
1933	Nov. 2, 1932			

¹ March wheat did not become a dominant future during this period. The date the future became dominant represents the first day that the open commitments exceeded those of any of the other futures and remained greater. As open commitments figures were not reported until July 9, 1923, the dates indicated prior to July 9, 1923, represent estimates.

² From the standpoint of open commitments the 1931 May future was dominant until May 11, 1931. Normally the dominant future is also the most active with respect to the volume of trading. This, however, was not the case with the 1931 May future. Because of the stabilization activities of the Farm Board agency, trading was diverted to the July future somewhat earlier than usual. With respect to volume of trading the July future became the most active as early as January 1931.

TABLE 26.—Daily volume of trading and open commitments in all wheat futures combined and the closing price of the dominant future on the Chicago Board of Trade, Jan. 2, 1930, to Dec. 31, 1932¹

[In thousand bushels; i.e., 000 omitted]

* From the standpoint of open commitments the 1931 May future was dominant until May 11, 1931. Normally the dominant future is also the most active with respect to the volume of trading. This, however, was not the case with the 1931 May future. Because of the stabilization activities of the Farm Board agency trading was diverted to the July future somewhat earlier than usual. With respect to volume of trading, the July future became the most active as early as January 1931.

TABLE 26.—Daily volume of trading and open commitments in all wheat futures combined and the closing price of the dominant future on the Chicago Board of Trade, Jan. 2, 1930, to Dec. 31, 1932—Continued

[In thousand bushels; i.e., 000 omitted]
